M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1955. * Including bonus. (b) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 500 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 500 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page 671*)

as the most suitable one by the Italian technicians. During the first stage, the factory proposes to manufacture staple fibre, importing the main raw material, cellulose (disso'ving pulp). It will be followed by the production of rayon filament yarn. Imports of cellu'ose will be of the order of 7,500 tons per annum. At the second stage, the Company has a programme to produce dissolving pulp from cotton linters which will be used for the manufacture of staple fibre and dissolving pulp from eucalyptus and bamboo for the manufacture of rayon yarns.

While the entire output of viscose rayon yarn is to be sold in the market at the ruling price, the present estimated production of 8 million lbs. of staple fibre is to be al'otted to the various mills in the South sponsoring the Company under a special agreement with them. In the event of production of staple fibre exceeding 8 million lbs. per annum, the surp'us will be sold by the Company in whatever manner it thinks fit. The selling price of staple fibre has been fixed at cost (plus 12½ per cent. profit), or the market price, whichever is less. The entire output of viscose rayon yarn will be sold in the market at the ruling prices.

The financial outlay on the factory is estimated at Rs. 8.4 crores. Given normal trading conditions and, provided the factory works to capacity for a fu'l year, the Directors anticipate that the Company will be able to pay a dividend of 10 per cent. on its equity capital.

JUTE

(*Concluded from page 682*)

about the revival of the seasonal demand for burlap in that country, the chief market for Indian hessian. The total consumption up to the end of September is a shade lower at 617 million yards, as compared with 622 million yards a year ago. The total stocks of burlap at the close of last month show a decline, from 230 million yards (at the end of August) to 221.1 million yards; the corresponding figure a year before was 227 million yards.

These favourable trends in September have not brought any cheer to the market. For the ready positions are still quoted at a discount. More anxiety is felt over the low prices of raw jute. The reactionary trend in fibre is due to the expectations that the 1958-59 jute crop will be higher than the previous season's output. In fact, the All-India first estimate of jute for 1958-59 places the area under jute at 1,647,000 acres, an increase of 174,000 acres or 11.8 per cent. over the corresponding adjusted estimate of 1,473,000 acres for 1957-

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2485 BOMBAY, 1st NOVEMBER 1958 PRICE: Re. 1.50

CEILING ON LAND-HOLDINGS

IT is gratifying to find that the All-India Congress Committee at the meeting held at Hyderabad last week did not commit the mistake of straightaway deciding in favour of a ceiling on land-holdings. Instead, it wisely voted for a further study of the subject by adopting a resolution urging the appointment of a sub-committee to consider all aspects of agricultural production, including the aspect of land reforms having a bearing thereon. The sub-committee has been asked to submit its report to the A.-I.C.C. at its next session in Nagpur due to be held in January 1959. Some may regret the delay in coming to firm decisions on land reforms, as a state of suspense about the rights to land is an impediment to intensified agricultural production so essential for the rapid economic development of the country. But it is better to devote more time for a thorough study of the suggested reform than to hurry through dubious reforms from which a retreat will be a political impossibility. A few State Governments have already made some moves in the direction of fixing a ceiling on land-holdings, as, for instance, Andhra where a Bill, restricting the quantum of land that a farmer can own on the basis of a maximum annual income per family, is before the Select Committee of the State Legislature. These State Governments will doubtless find the A.-I.C.C. decision rather embarrassing. Nevertheless, they would be well advised not to proceed further, until the A.-I.C.C. comes to a final decision.

Ceiling on land-holdings is a reform far different from all the land reforms already implemented. There was good justification for abolishing *zamindars, jagirdars* and *inamdars* as also for eliminating other types of functionless intermediaries. There was also a need for regulating tenancies and rents payable to landlords, for there is no gainsaying the fact that the actual cultivator suffered from insecurity of tenure and had to pay a disproportionately large share of his produce by way of rent to owners of land. The Congress Governments in all the States had the general support of the public for these reforms. In fact, no fair-minded person could object to them, though, in the sphere of tenancy reforms, most of the State Governments have gone too far and have created a sort of vested interest among the tenants which is not conducive to efficiency in agriculture. It will be no exaggeration to say that the current rate of return on investment in land by a person who does not take to self-cultivation is of the order of six to eight per cent. This cannot be considered excessive, having regard to the hazards involved and the average tax-free returns that can be had on equities, and fixed-yielding industrial investments. Indeed, the return on the traditional form of investment in land has become so unattractive and risky that capital has to be coaxed, if it is to move into agriculture. The laws pertaining to agricultural debts have also made investors shy in lending to farmers, with the result that agriculture is suffering from shortage of both short-term and long-term capital. Institutional credit has not made any significant headway, though much has been spoken and written about it. All this has happened at a time when agriculture needs more capital for intensive cultivation, for converting dry land into wet land and for bringing fallow and culturable waste lands under the plough. There is thus urgent need for an impartial investigation of the effects of land reforms already implemented on agricultural production.

The imposition of a ceiling on land-holdings has neither economic nor moral justification. It is a reform that is sought to be introduced purely for political considerations. The Communists and the extreme type of Socialists have been advocating abolition of private property. A certain section of Congressmen seem to believe that the only way in which these extremists can be kept out of power is to steal their thunder by themselves initiating the reforms advocated by them. To do so is to indulge in political opportunism. It may enable the Congress Party to remain in power, but it will not necessarily lead to an improvement in agricultural productivity. Looked at from this point of view, ceiling on lands will not yield sustained results even as a political expediency. For, ultimately, it is only increased production that will bring about an improvement in the economic standards of the people. Accordingly, the Congress Party should be bold enough to give a correct lead to the people and expose the hollowness of the leftist ideals and reforms rather than allow itself to fall a victim to them.

Ceiling on land-holdings implies acceptance of a dangerous philosophy. It means placing a limit on incomes and wealth. Prime Minister Nehru himself has often expressed his opposition to such ceilings. But, on the subject of land reforms, he has been speaking in a contradictory fashion. He is reported to have told a closed session of Congress members at Hyderabad that he considered a ceiling on land as essential, though it would be wrong to limit incomes. It is hard to understand this statement, unless he meant that one was free to make as much as possible out of the specified size of land that one could own. Surely, this is not possible with all the laws on tenancy and land rent. Mr. Nehru contends that, from a social point of view, it is not good to have large farms. This is also not understandable, unless he means that a large landholder is an eyesore to the rural population and a cause of discontentment among them. But this reasoning tantamounts to placing a premium on the deplorable human weakness of jealousy. Further, if this policy is pursued in rural areas, urban areas cannot be free from it for long. It will soon give strength to the cry that a ceiling be placed on urban investments and incomes as well. And the only way in which that cry can be satisfied will be State capitalism.

A big landlord is neither a *zamindar* nor a *jagirdar*. He is a person who has come into possession of land either through his own or his forefathers' savings. In other words, he has paid for the lands he has. If he cultivates all the land himself, the country will be having the benefits of large-scale cultivation which invariably means higher productivity per acre. If he has leased out a part of his lands, there can be no exploitation of the tenants, because the tenancy laws and the growing conscience of their rights among the tenants will make it impossible for him to do so. Indeed, for all practical purposes, the tenants today are the virtual owners of land. If, however, there is exploitation in some parts of the country, this can be easily stopped through effective enforcement of tenancy laws. If a big landlord gets a large income, it can be siphoned off through taxation of incomes in the same way as the large non-agricultural incomes are taken care of. There is thus no reason to believe that a big landlord is an anti-social being in the society and that he, therefore, deserves to be eliminated by dispossessing him of all but a few acres of his land. It is true that those who are advocating land ceilings say that compensation should be paid for the excess land taken over from the owners. But, in actual practice, the compensation is unreasonably low, so low, indeed, that the reform is not different from expropriation. Even assuming for argument's sake that fair compensation will be paid, are there no better outlets for the resources involved which, ultimately, will have to come out of the pockets of taxpayers and/or the savings of the people? Has any attempt been made to calculate the financial resources that will be required for a land reform of this type? It may be argued that the compensation amount will be collected from those to whom the lands are redistributed. But this will involve considerable time lag, besides a lot of bad debts. It must not be forgotten that the land is to be given to the poor, that is, to those who will not have resources even for cultivating the land.

The assumption that the country is ridden with big landlords is not borne out by such facts as are available. It has been admitted by many in the Congress Party itself that ceiling on land-holdings is no solution to the problem of landless labour. Mr. Kala Venkata Rao, Revenue Minister for Andhra, who is piloting the Bill for placing a ceiling on land-holdings, agreed that "land hunger cannot be solved by this reform." "I do not think," he averred, "that even by expropriating all lands in India, land hunger can be satisfied on the basis of the present-day population." If, nevertheless, he chose to pilot the Bill on land ceilings, it was because he was convinced that it would lead to the abolition of disparities in income and wealth in the rural areas. Here is a clear admission of the ideological character of the reform. Again, the National Sample Survey conducted by the All-India Statistical Institute came to the following conclusion:

"If every household should have some land and the minimum is fixed at two acres, a simple calculation will show that the total area of land required for those who do not own land or own less than two acres, would be about 10 million acres. If the ceiling is fixed at 20 acres and all households owning more than 20 acres are required to hand over the area owned by them in excess of 20 acres, then the amount of land available for distribution would be about 63 million acres. In other words, the surplus land that can be acquired for redistribution on the basis of the comparatively low ceiling of two acres would be just sufficient for building up a ridiculously tiny holding of the size of two acres which itself is palpably uneconomic."

We dare say that none can level the charge that the Statistical Institute has been inspired by the landholders or the champions of private enterprise to make the aforesaid observations.

The foregoing quotation ought to provide a convincing answer to those who argue, apparently knowing full well that there is not a large number of big landlords, that, if the ceiling on land is fixed at a sufficiently low level, it will solve the problem of landless labour to a considerable extent. And yet the Economic Secretariat of the A.-I.C.C. still makes this point. Thus, in a note officially circulated to the members of the A.-I.C.C. at Hyderabad last week, the following remark is found:

"..... the measures adopted by the State Governments in regard to the fixation of ceilings of existing land-holdings have been slow and halting, with the result that the surplus land available for redistribution among the landless labour will be insignificant. It will be possible to obtain a sizable surplus for redistribution only if the level of ceilings on land-holdings is on the low side. Fixing high ceilings would amount to the implementation of the letter of the law and not its spirit. This policy of low ceilings will have to be pursued on a more or less uniform basis in all the States."

It would have been helpful if the authors of this note had given concrete data to prove their contention.

There is enough evidence to show that, even in the Congress Party, opinion is sharply divided on the subject of ceiling on land. The fact that the A.-I.C.C. deferred a decision on it, pending the findings of a sub-committee, is proof of it. Further, the Agricultural Minister for Andhra, has publicly denounced the proposals for a ceiling on land. The Madras Government has rightly chosen to impose agricultural income-tax on large incomes in preference to a ceiling on land, though it has not stated that it has given up the idea. The U.P. Government, too, is not in favour of ceiling on land. In an interview to the Press about two months ago, the U.P. Revenue Minister stated that his Government was opposed to the Planning Commission's suggestion for fixing a ceiling of 50 acres on large holdings. He observed: "By fixing the upper limit of holdings at 50 acres, the Government can secure a total of only 570,000 acres. There are, on the other side, 6,000,000 tenants with uneconomic holdings and 800,000 landless agricultural workers. It is obvious, therefore, that distribution of the surplus acreage (available through ceiling) will not meet the gigantic problems of either converting the uneconomic holdings to economic or distribution of fresh economic holdings to the landless agricultural workers." Accordingly, the U.P. Government has preferred to subject large holdings to a graded scale of tax. The tax has been so fixed that, after a certain size of holding, retention of big estates becomes prohibitively expensive.

At the Hyderabad meeting of the A.-I.C.C. itself, several members expressed themselves against ceiling on land. Mr. Mahavir Tyagi said that, when the aim was to step up agricultural production considerably, they should not hurt those owning land but create the necessary enthusiasm among them for higher production. The Chief Minister of the Punjab asserted that a peasant whose land did not yield sizable production had no right to own it. The most impressive arguments against ceiling on land came from Mr. C. Subramaniam, the Madras Finance Minister. He pertinently asked as to why agricultural production had not increased to the extent expected, though 90 per cent. of the holdings in the country were in the hands of small peasant proprietors. He stated that productivity of small holdings was smaller than that of larger holdings, that, by cutting up large holdings and handing them over to landless labour, they would only be increasing the number of ryots who had no resources, and that the proposed reform of ceiling on land would, therefore, only intensify the problem of increasing agricultural production instead of solving it. These are wise words and reflect careful thinking. All that the sub-committee to be appointed by the Congress President has to do on this question is to concur with them and reject ceiling on land as a worthless reform.

AIR TRANSPORT

THE world has travelled a long way since the romance entitled "Round the World in Eighty Days" was written, for one can now complete a global tour in less than half of as many hours. In this annihilation of distance, air transport has made a unique contribution. Its speed, which is continuously increasing, has brought the world together in a way which would have seemed incredible only a few decades ago. The development of science and technology has been so fast that even interplanetary travel seems to be a possibility in the not distant future. And it looks as though the use of the phrase "to cry for the moon" to indicate something that cannot be had will lose its effectiveness.

There are many angles from which world history may be viewed. But, as Mr. Nehru, with his characteristic historical insight, pointed out in his address to the fourteenth session of the International Air Transport Association (I.A.T.A.), held at New Delhi this week, one of the most rewarding methods of study is to trace the impact of the gradual evolution of communications on the growth of civilisation. In the history of modern life and civilisation, a factor of great influence has been the development of air transport. And the I.A.T.A. has played a no mean part in developing air transport as an international means of communication. Perhaps, it is not without significance that the I.A.T.A.'s session is being held for the first time in an Asian country. This suggests how fast the world is shrinking. Appropriately enough, Mr. J. R. D. Tata who, as Mr. Nehru, in the course of a tribute to him, said, is "not only a pioneer in aviation in India but perhaps one of the very first pilots," was elected President of the session.

Established in 1945, the I.A.T.A. is intended mainly to promote better, safer and cheaper air travel for the peoples of the world. It is, therefore, the collective voice of the 85 international air carriers who account for over 90 per cent. of the world air traffic. It has been rightly described as an international pool of experience and information. It is the successor in function to the previous International Air Traffic Association, organised at The Hague at the commencement of regular air transport in 1917. It draws its legal existence from a special Act of the Canadian Parliament, passed in 1945. It is closely associated with the International Civil Aviation Organisation (I.C.A.O.) which was also established in 1945 as the international agency of Governments to lay down world standards for the regulation of civil aviation. The I.A.T.A. is a non-political and democratic organisation. Thus, each airline, irrespective of its size and standing, has a single vote in its councils. In many matters, and especially in those which require a binding agreement from members, the decisions must be taken unanimously, and, in most of these cases, the decisions cannot become effective without the concurrence of interested Governments. Each member thus carries a vote as well as a veto.

The I.A.T.A.'s expenses are met from fees paid by members, which are in proportion to the part of the total traffic they carry. Its administration is carried on under the Director-General from his head office at Montreal, while its Clearing House and Technical Liaison Office are housed in London and the administrative headquarters of its Traffic Conferences are located in New York, Paris and Singapore. Of the I.A.T.A.'s Committees, mention must be made of the Financial Committee, the Legal Committee and the Technical Committee. The Financial Committee's function is to examine the common financial problems, such as currency and exchange, taxation and insurance and also to settle the business between the airlines. The Legal Committee studies the growing volume of the new branch of law—the law relating to air transport. It also formulates and represents the views of airlines on the basic international conventions regulating the liability of air carriers. The Technical Committee and its annual Technical Conference deal with the engineering aspects of air transport equipment. No less important than these committees is the Clearing House set up by the I.A.T.A. in London. A ticket for air travel issued by any of the member-lines enables the holder to use any of the airlines. The accounts between the companies, arising from the use of this facility, are settled at the Clearing House. The growing importance of the services rendered by this agency will be evident from the fact that the monthly clearance totals have risen from an initial $728,000 in 1947 to over $30 million today.

Among the topics to which the I.A.T.A. has vigorously addressed itself is the subject of elimination of Governmental red-tape which often holds up the movement of goods and passenger transport. It is gratifying to note from the report submitted by Sir William P. Hildred, Director-General of the I.A.T.A., that the airlines' campaign against international red-tape has made good headway in many parts of the world. It would, however, appear that similar success has not attended its efforts in Asia. He said: "However, progress is being made in India whose tourism department is aware of what India has to gain from the development of tourist travel and appreciates the fact that tourists will go where travel is the easiest." Elimination of the need for passenger manifests on most flights in Europe and of visas for a large amount of tourist traffic between the countries of South and North America are some of the recent significant developments. The I.A.T.A.'s activities in the sphere of facilitation—the official name for international effort to reduce paper work and streamline the precedences of customs, immigration, public health and other authorities at airports—have served to increase the speed of transhipment and the onward march of cargo from airports. Asia, however, has a great deal to learn in the matter of simplifying these rules. It may well turn for its lessons to Europe where many countries have abolished the visa for tourists and written baggage and currency declarations; several countries have even abolished passport requirements for each other's nationals and introduced customs inspection on a sampling basis.

Although air traffic is increasing year by year—last year, the I.A.T.A.'s airlines, which operate under the flags of 50 nations and account for 90 per cent. of all scheduled world air traffic, flew some 1.3 billion miles, linked 3,500 cities, carried 65 million passengers, 270 million ton-miles of mail and 830 million ton-miles of cargo—the airlines are faced with losses in their operations. Sir William Hildred estimated the 1957 revenues at $4,100 million and operating expenses, at $4,050 million; this would leave a net margin of 1.2 per cent., as against 2.4 per cent. in the previous year. These overall figures, however, conceal individual losses. The prospect for the current year and immediate future years is particularly dark, what with the heavy investment in new jet airliners; the airlines now have on order almost 900 new jets and prop jets worth nearly $3,000 million. Sir William urged greater attention to the development of cargo traffic, because many piston-engined aircraft now carrying passengers and fill-in cargo would be put to all-cargo service when the jets replaced them. There will, as he pointed out, be "a flood of cargo space." Airlines will do well to consider how best this space can be utilised with advantage to themselves and world trade.

There are quite a few reasons why airlines continue to make heavy losses. In the first place the traffic is not increasing as fast as it should. Normally, it should increase at the rate of 15 per cent. per year. Not in all countries has this rate been maintained. Secondly, there is a slump in second-hand airlines which reduces the return from sale of old aircraft. Thirdly, the costs of operation are moving up. The Financial Committee's report pointed out that "at a time when the airlines are striving to hold the line on fares and rates, they have been hit by a tide of mounting costs and air navigation facilities charges, airport landing fees, higher taxes and the possible increased insurance rates threaten the industry in the months ahead." The introduction of jet aircraft has also created some new financial problems, for the heavy investment in this type of aircraft can yield an economic return only if the traffic increases rapidly.

In the final analysis, the solution of the problem of uneconomic operation of aircraft lies only in attracting larger volume of traffic. If operation costs were kept down and economies effected, without, of course, sacrificing safety, it might be possible to lower the fares. At present, in all countries, air travel is still a luxury which only a few can afford. Perhaps, far too much reliance is placed on speed, as if speed were an end itself. Again, it is necessary to tap vast populous areas of the economically underdeveloped world. This could be done only through a reduction in fares. It is noteworthy that the Executive Committee of the I.A.T.A., after referring to the fact that all airline operators were faced with grave financial problems and dilemmas, said: "Airlines must be ready to impress upon Governments that low fares make for general prosperity and, in particular, consequential benefits to the governments and the populations concerned." After all, so long as air travel remains a luxury beyond the reach of even men above average means, air transport must continue to face difficult financial conditions. Even air transport must pay its way before it can progress.

SHARE MARKETS STILL STEADY

INCHCAPE GROUP—KERALA PLANTATION STRIKE

THURSDAY, 5 P.M.

MARKET GOSSIP

BARRING cotton textiles, other scrips on the Stock Exchange have been ruling steady to firm. Textiles have been quiet because of the discouraging news from cloth markets. Offtake of cloth has failed to pick up and, despite fall in production by about 10 per cent. and reduction in the mill selling prices, stocks with mills are piling up. This is not surprising, as the fall in production has been nearly offset by the marked decline in exports. Even the Minister for Commerce and Industry said about a fortnight ago that he was puzzled by the plight of the cotton mill industry and that he did not know what to do. The share market in Bombay took an unduly optimistic view of the outlook for this industry and blindly went on marking up prices in the fond hope that the Government would come to its rescue. The consensus of opinion among those who are fully aware of the profit-margins on cloth is that at current levels most of the textile scrips are overrated. As for the other shares, the bullish fervour is not as strong as it was a week ago. Investment demand has slackened and speculators with heavy long positions appear to be making clever manœuvres to lighten their commitments without forcing the market against them. The rise in the value of some of the miscellaneous counters may be attributed to this development. There has also been some gradual selling by big investors of scrips of companies which are issuing new capital.

There has been a sudden spurt again in the value of Belapur shares. Apparently, some in the market are hoping that the Company would pay higher dividend for 1957-58, the financial results for which are due to be announced in a few days. Considering that the Company's production during the last crushing season was a little less than in the previous season and that manufacturing expenses were on the high side in all industries, it would be a matter for pleasant surprise if the market expectations of higher dividend were to materialise. Or, it may be, that some speculators might have pulled up this scrip, too, in order to create a favourable atmosphere for liquidating their holdings in other scrips.

* * * *

Prime Minister Nehru's reiteration of the socialist pattern of society as the goal of the Congress Party in his speeches at the Hyderabad meeting of the A.-I.C.C. last week was taken by the share markets calmly. Mr. Nehru, of course, gave no new definition of his concept of socialism and the markets have got accustomed to it. The feeling is that the socialist pattern is already in full implementation and that the worst has been done. Taxation is at the maximum level and nationalisation of existing industries and services has ceased to appeal to socialists all over the world. The only inference that one can draw from Mr. Nehru's statement at Hyderabad is that the prospect of any relief in the novel forms of taxation introduced on doctrinaire grounds during the past three years is slender. In this context, the following quotation from the note circulated by the A.-I.C.C. Secretariat to the members attending the Hyderabad session is of some importance:

"The existing system of taxation on the urban incomes is in the right direction and the expenditure, wealth and gift taxes, in addition to the estate duty, will gradually bring about greater equality in urban incomes. The present evasion and avoidance of taxes on a large scale will, however, have to be checked effectively."

It is not suggested that this review necessarily means that there will be no change in the fiscal policy of the Government in favour of investors. There are signs that some members of the Congress High Command at least are beginning to realise that people will become tired of ideological propaganda and policies, unless positive economic results are shown. They are, therefore, bound to exert their pressure on the policymakers in favour of more realism and to bring about a climate that will be conducive to increased production. The decision of the All-India Congress Committee that the highly controversial proposals for ceiling on land should be examined afresh is a heartening change in the attitude of the ruling party.

* * * *

The imposition of such redistributory taxes as wealth tax, capital gains tax, estate duty, gifts tax and expenditure tax on top of income-tax and super-tax at heavy rates has doubtless begun to yield results in the form of wider distribution of ownership of industries. Quite a few families have released their shareholding in companies owned by them to a large number of persons, mostly their friends and relations. A couple of months ago, for instance, a part of the shares of a leading sugar company in the Deccan, closely held as a family business, was quietly released to the public and listed on the Bombay Stock Exchange. This trend has become almost universal. A report from London, for instance, says that Lord Inchcape's family businesses in the East and elsewhere are being consolidated into a holding company, called Inchcape and Company, and introduced to the London Stock Exchange. The object of this move is "to protect Lord Inchcape's group against death duties." It is stated that Lord Inchcape and his family are selling only the minimum amount of shares necessary to obtain a stock exchange quotation. In the absence of such market value, the assets of the group will be valued on the basis adopted for private businesses when they come to be assessed for the purpose of estate duty. In that event, the burden will be so heavy that the whole group will disintegrate.

Of the share capital of Lord Inchcape's holding company amounting to £1.800,000, only £350,000 are being placed on the market at a price of 25s. which, on the basis of a dividend of 11 per cent., gives a yield of 8.8 per cent. per annum—a tempting rate, indeed, considering that first class shares in India today do not offer more than 5 per cent. per annum. That the Company's shares belong to the blue chip class will be evident from the fact that its 11 per cent. dividend is covered nearly twice by its net profit.

Besides the offer of aforesaid shares, the Company is also placing on the market £760,000 out of £850,000 of 6½ per cent. loan stock. The issue price is at par. The principal of the loan stock is covered 7½ times by assets and the interest on it is covered more than nine times by profit.

The aforesaid development in the London capital market is of some interest to India, because, of the net assets of Lord Inchcape's group, nearly a third—22.4 per cent., to be precise—is in this country. Perhaps not many in India know that the group's interests are varied and include the two well-known textile mills in the South, namely, the Buckingham and Carnatic Company and the Bangalore Woollen, Cotton and Silk Mills Company. The group has large interests in Pakistan too.

It is stated that the group has no intention of reducing its interests in India. This is significant of Lord Inchcape's confidence in the future of India. In fact, a spokesman of the group is reported to have said that, as and when the group grew further, its interests in India also might grow alongside new developments in other parts of the world.

* * * *

The chances of a conciliation and settlement of the labour dispute in Kerala plantations have brightened with the suspension, from 30th October to 3rd November, of the twenty-five-day-old strike by the Communist-led plantation workers in the High Range and other areas. The decision to suspend the strike has been taken, it is stated, consequent on the assurance given by the State Labour Minister that "the management is prepared for a negotiated settlement" and that he was convening a conference on 31st October to discuss all outstanding matters, including bonus for 1957. The strikers were so far adamant in refusing to call off the strike. Nor would they agree to refer the dispute to adjudication, as was suggested by the management of the estates and the I.N.T.U.C.-led Union. They have now agreed to a truce on lines similar to those adopted by Communist China in its war of nerves against K.M.T. China and the U.S.A. Their reason for doing so is their belief that the attitude of the management has changed, in that it is prepared "to settle the dispute through negotiations," that is, outside the court. How far this is true, time alone will reveal. Evidently, the Communists want to show to the workers that they are winning. Similar stunts tried by them at the T.I.S.Co. strike in Jamshedpur failed, because the Company and the State Government took a firm stand and refuse to recognise the Communists' claims. But, in Kerala, the Communists and the State Governments are hand in glove. It is noteworthy that the strike has not been withdrawn, but only suspended for a brief period of a few days. This means that the sword is kept hanging and is nothing short of pressure tactics. One fails to understand what sort of work can be done in an atmosphere of uncertainty and suspense.

The attitude of the State Government in having allowed the strike to continue for such a long time, involving heavy loss of precious foreign exchange to the country, to the workers by way of wages and to itself by way of agricultural income-tax, is deplorable and provides an object lesson to those workers who are misled. The workers' demands which led to the strike were not put forward by the Communist Union alone; they were raised by all the major trade union organisations, I.N.T.U.C., A.I.T.U.C., R.S.P., P.S.P., and others. But it is only the Communist Union that forced the strike.

The total number of demands are thirty, while some unions have added a supplementary set of another twelve demands. The main demands are:

1. Annual bonus for 1957 should be paid at the rate of 25 per cent. on the total emoluments of the workers.

2. Wages for the holiday availed by the workers on 1st May 1956 and 1957 should be paid.

3. Gratuity should be paid at the rate of one month's average wages to all workers at retirement and to the dependents of the employee in case of death.

4. Dependents of the permanent workers should be provided with employment.

5. Average wages should be paid for annual leave with wages (the average should be calculated on the basis of one year) with retrospective effect.

6. The rate of incentive wages for over-pounds both in tea and rubber should be enhanced.

7. Workers in tea estates should be supplied free of cost one pound of good tea per head.

8. Tappers' task should be fixed at tapping of two hundred trees per block in case of single pannel and hundred trees per block in case of double pannel and carrying latex not farther than four furlongs. No other items should be included in the tappers' task.

9. The employers' share in the contribution to workers' provident fund should be enhanced from the existing 6¼ per cent. to 8⅓ per cent.

There was no need for a strike or even a threat of strike, for all the major issues were already under consideration of special tripartite committees constituted by the Government. The question of wages and bonus was being studied by a special committee constituted for drawing up rational wage-rates and a formula for bonus in the plantation industry. All the major trade unions are represented on this Committee. Sometime ago, this Committee considered the question of bonus for 1957, but it was unanimously decided that the question should await the finalisation of a formula. When the question was again referred back by the State Government to the Committee, the latter did not alter its earlier decision. The Committee was almost at the end of its labour, but, in the absence of co-operation from the labour representatives, who did not attend the meetings regularly, it could not finish its work. The other issues were before the Government Tripartite Plantation Labour Committee, constituted for the purpose of securing negotiated settlements of disputed issues.

In utter disregard of these facts, the I.N.T.U.C. and the A.I.T.U.C. served notices of strike in the High Range (Munnar) area and implemented their decision on 4th October. On that day, the Chairman of the Kanan Devan Planters' Association agreed to submit four of the major issues for adjudication, if the strike could be withdrawn. While the I.N.T.U.C. Union agreed to the proposal and withdrew the strike, the Communist Union refused to join in the arrangement. The Planters' Association and the I.N.T.U.C. requested the Government to refer the four major issues for adjudication but to no purpose. The A.I.T.U.C. continued the strike, which spread to Mundakayam Valley on 13th October and to Peermade-Vandiperiyar on 15th October.

The State Government has not so far referred the matter for adjudication under Section 10(1) of the Industrial Disputes Act. Even the request of the Central Government to do so has been brushed aside. Even apart from the request by the Planters' Association and the I.N.T.U.C. to refer the matter for adjudication, the State Government should have done so after the strike started, as this was a major dispute detrimental to public interest. It is thus clear that the State Government failed to do its duty. It was interested more in helping the Communist Party to gain control of plantation labour than in ensuring industrial peace and preventing economic loss to the country as a whole.

At the Plantation Labour Committee meeting held after the strike started, the workers wanted *ad hoc* settlements across the table, even though they were aware that the issues under dispute were before the respective committees concerned. The A.I.T.U.C. flatly turned down the proposal to refer the disputes to adjudication. What is more surprising is that the State Labour Minister himself advised the Planters' Association to agree to *ad hoc* settlements. By doing so, he identified himself with the intransigent stand taken by the Communist Union.

The strike was also in utter disregard of the "Code of Conduct" drawn up at the Naini Tal Session of the Indian Labour Conference, as (1) the existing machinery for settlement of dispute was not utilised, (2) sufficient notice was not given before the strike was launched, and (3) the strikers resorted to violence to induce other unwilling workers to join the strike. It is claimed that, if peaceful conditions had prevailed, 90 per cent. of the workers would have reported for duty, as the majority of the workers belonged to the I.N.T.U.C. and did not want to participate in the strike. While the strike in the three areas referred to above continued, a general strike of all plantation workers in the State was called for on 25th October, but it was suspended the next day till 3rd November, "to create a peaceful atmosphere for settlement." Really speaking, this kind of pressure tactics amounts to intimidation and is not conducive to a fair settlement.

A notable feature of the strike is that it was called in the most strategic areas of the State. For the High Range and the Peermade-Vandiperiyar comprise the largest tea areas in Kerala, producing quality teas, and the Mundakayam Valley constitutes the richest rubber district in the State. The output in the High Range is approximately 800,000 lbs. of green leaf per day and the tea estates in this area support more than 31,000 workers. The strike in the Peermade-Vandiperiyar area was spread over 7,000 acres. In the Mundakayam Valley, where the strike started on 13th October, over 10,000 acres of rubber were involved. The cost of the strike in these areas cannot, therefore, be easily judged. A broad idea of the loss to the country can, however, be had from the fact that the suspension of the work in the High Range would cost the country Rs. 20 lakhs per week in foreign exchange alone. The loss resulting from a strike lasting more than a week would, it is stated, be very much more than might be apparent, because once plucking for more than a few days is given up, tea bushes have to be skiffed or pruned lightly and would not be ready for plucking again for about six weeks to come. According to Mr. J. R. Soutar, General Manager of the Kanan Devan Hill Produce Company, which owns 32 out of the 33 estates in the High Range, "most of the tea crop in the several estates have overgrown and, therefore, become useless. This is the best season for the quality production of tea, but they will have to prune the present bushes. This will mean loss of work for another three months, apart from the loss in foreign exchange of millions of rupees." The loss of rubber in Mundakayam Valley is esti-

SHARE MARKET FIRM

TEXTILES, HOWEVER, RULE QUIET

(From Our Own Correspondents)

BOMBAY, *30th October*

THE rally in the share market noted last week was extended further this week with a further spurt in values, except in the textile section which continued to be a drag on the whole market. The delay in the announcement of the Government's decision on the Textile Enquiry Committee's recommendations and on the export promotion scheme and the none-too-encouraging advices from the cloth trade chilled the enthusiasm of the operators in textile shares. Though there was no heavy selling pressure in these counters, prices gave way and this decline was accelerated by the profit-taking reaction in other sections during the last two days. Despite the setback lately, the undertone of the market remained bullish on good speculative activity induced by the bright outlook for industries in general. Keen support was in evidence in Bombay Burmahs, Belapurs, National Rayons, Premier Constructions, Larsen and Toubros, Mahindras, etc., which, as a result, scored smart gains over the week.

In the steel section, Tata Ordinaries were lifted up from Rs. 180.75 to a high of Rs. 185 on Tuesday, but, on heavy profit-taking, they slided down to Rs. 182.75 at the close today. The new shares gathered, over the week, Rs. 2 to Rs. 178. Indian Irons moved up to Rs. 27.80 from last week's closing of Rs. 27.55, but the subsequent reactionary trend brought them down to Rs. 27.40.

In sympathy with the general bullish trend, textiles too moved up early in the week, but this was not sustained in the absence of support. Bombay Dyeings picked up from Rs. 58.60 to Rs. 59.10, before receding to Rs. 58.10. The closing was done at Rs. 58.40. Centurys finished at Rs. 441.50, after gaining ground from Rs. 448 to Rs. 453. Kohinoors lost over the week Rs. 5.50 to Rs. 261. Central Indias were unchanged at Rs. 90, while Finlays dropped Re. 1.50 to Rs. 280, Gokaks Rs. 3 to Rs. 141 and Indu Ordinaries 36 nP to Rs. 8.56. Khataus were done Rs. 4 lower at Rs. 175. While Models were a fraction better at Rs. 170, Morarjee Mills were unchanged at Rs. 249 and New Greats at Rs. 217. Osmanshahis were a shade quiet at Rs. 43, while Azamjahis gained Re. 1.50 to Rs. 59. Shree Niwas Cottons had transactions Re. 1 lower at Rs. 151. Simplex were featureless at Rs. 177.25. Standards declined by Rs. 6 to Rs. 408, while Svadeshis improved by Rs. 2.50 to Rs. 194.50 and Tata Mills by 25 nP to Rs. 37.

Bank shares presented a mixed pattern, but the variations in prices were confined to a narrow range. Barodas rose by 75 nP to Rs. 122.50, while Centrals shed 70 nP to Rs. 58.30 and their new shares 50 nP to Rs. 60.30. Bank of Indias looked up a little to Rs. 140.50 and their new shares to Rs. 142.25. Punjab Nationals were a shade better at Rs. 62.50, while Union Banks lost 14 nP to Rs. 7.56. United Commercials were unchanged at Rs. 69.30.

Business in insurance shares was restricted. New Indias were prominent with a rise of Re. 1 to Rs. 49.50. Vulcans, which staged a spurt last week, suffered a reaction from Rs. 20.52 to Rs. 19.76. Indian Mercantiles were unchanged at Rs. 48.25, as also British India Generals at Rs. 14.24.

Electricity shares fluctuated within a narrow groove. Ahmedabad Electrics were fractionally lower at Rs. 99.20, as also Bombay Suburbans at Rs. 109.50. Surat Electrics were done at Rs. 114.50 *ex-div.* (final dividend: Rs. 4.50), as against Rs. 117.50 *cum-div.* a week ago. Tata Hydros were steady at Rs. 123 and Tata Powers at Rs. 1,250. Andhra Valleys, however, picked up Rs. 7.50 to Rs. 1,212.50.

Sugar shares were active. Belapurs were conspicuous with a rise of Rs. 7.50 over the week to Rs. 322.50; the highest level touched during the week being Rs. 326.50. Phaltans hardened by Rs. 2 to Rs. 180.50 and Maharashtra Sugars by Rs. 2.25 to Rs. 189.25. Changdeos were steady at Rs. 33.50, while Walchandnagars were marked up by Rs. 5 to Rs. 295. Cement shares were featureless. Associated Cements rose from Rs. 160.50 to Rs. 162.25 before giving way to Rs. 159.50. The new shares suffered a drop from Rs. 159 to Rs. 156.50. Digvijays were lower by Re. 1 at Rs. 142.50, Ashokas by 44 nP at Rs. 8.48 and Jaipur Udyogs by 28 nP at Rs. 11.20. In the engineering and mining group, Alcocks looked up by Rs. 2.50 at Rs. 283.75. Tata Locomotives attracted good attention and rose from Rs. 160 to Rs. 165.50, but reacted to close at Rs. 163.50. Premier Constructions were again prominent on interested buying, jumping up further from Rs. 239.25 to Rs. 255.25. Larsen and Toubros gained 32 nP to Rs. 17.40 and their Rights 24 nP to Rs. 5.52. Mahindras advanced by 72 nP to Rs. 18.28. Brady Engineerings changed hands at Rs. 62.50 and Cooper Engineerings Re. 1.50 higher at Rs. 127.50. Structural Engineerings advanced by Rs. 6.75 to Rs. 223. Shivrajpurs lost Re. 1 to Rs. 93 and Indian Coppers 4 nP to Rs. 3.98.

Premier Automobiles suffered a loss of Rs. 2 to Rs. 88.70 and Hindustan Motors were a shade quiet at Rs. 7.92. Scindias were in good form, though the closing levels were below the week's best. They advanced from Rs. 21.88 to Rs. 22.56 before giving way to Rs. 22.28. Great Easterns disclosed a gain of 25 nP at Rs. 28.15, while Bharat Lines were a fraction lower at Rs. 13.52.

In the miscellaneous group, Bombay Burmahs (old) provided the highlight with a jump from Rs. 499.50 to Rs. 524.00 on Tuesday. In the subsequent reaction, they came to Rs. 513.50. The Partly-paids dipped from Rs. 180.62 to Rs. 178.75. National Rayons were another prominent feature with a sharp rise from Rs. 255 to Rs. 263 before closing at Rs. 259.75. Gwalior Rayons were a shade better at Rs. 15, while Tata Chemicals were quiet at Rs. 16.36. Hindustan Levers changed hands 75 nP higher at Rs. 25.75. Tata Oils were quiet at Rs. 39.25. Killick Industries gained a rupee to Rs. 149, while Voltas lost Re. 1 to Rs. 142.25 and Wimcos Rs. 4 to Rs. 190.50.

Madras Stock Exchange

MADRAS, *28th October*

A mixed trend prevailed in the Madras Stock Exchange during the week under review. Selective plantation shares attracted support early in the week, but towards the close buyers became hesitant and cautious. In fact, the shares of tea estates affected by the strike in Kerala came under pressure. The efforts made to call off the strike did not have any effect on the planting scrips, because of the apprehension about the strain on companies by the four-week-old strike, let alone the loss of foreign exchange to the country. Investors and speculators were not in a position to assess the additional financial burden that might be cast on them if the demands of labour, even partially, were to be met. Dull conditions characterised the textile section. The categorical statement made by the Union Minister for Commerce and Industry in his reply to the Kanpur industrialists that there would be no further reduction in the excise duty on cloth adversely affected the sentiment of operators. Sugar, electric and miscellaneous industrials were fully steady.

Among tea shares in the planting section, Twyfords evoked good support and climbed up by Re. 1.10 to Rs. 17.50. United Nilgiris rallied 56 nP to Rs. 18.56. Balanoors advanced by 50 nP to Rs. 17.75. Waterfalls improved by 19 nP to Rs. 3.72. Neelamalais gathered 3 nP to Rs. 4.96 and Kil Kotagiris 2 nP to Rs. 6.28. Peermades, on the other hand, declined by 75 nP to Rs. 21.50. Nonsuch Teas receded by 19 nP to Rs. 28.06, Haileyburias by 15 nP to Rs. 18.35 and Periakaramalais by 9 nP to Rs. 3.91.

In the rubber group, Nenmenys rallied from Rs. 15.10 to Rs. 15.62. Nilamburs and Kalpettas gained 25 nP each to Rs. 14.25 and Rs. 14, respectively. Thamaraipallys advanced by 50 nP to Rs. 27. Nellithanams strengthened by 10 nP to Rs. 13.10 and Teekoys by 5 nP to Rs. 7.30. T.R. & Ts declined by 30 nP to Rs. 7.35, Rajagiris by 25 nP to Rs. 18.65, Kallas by 13 nP to Rs. 4.95 and Midlands by 10 nP to Rs. 12.70.

Deals in coffee shares were put through at lower rates. Consolidated Coffees receded by 15 nP to Rs. 27.10. Anaparais eased by 13 nP to Rs. 5.42. Coffee Lands shed 10 nP to Rs. 33.40 and Badras a like amount to Rs. 4.40. Bababudins, however, put on 25 nP to Rs. 12.60.

In the textile section, R. C. Ambikais were pushed down by Rs. 6 to Rs. 118. Vijayeswaris slumped by Rs. 5 to Rs. 85. Vasantas dropped Rs. 2 to Rs. 228. Maduras declined by a rupee to a new low of Rs. 29.75. Loyals were quoted 25 nP lower at Rs. 34.25. Adonis softened by 5 nP to Rs. 7.75. Pankajas were dull at Rs. 40, Rajalakshmis at Rs. 68 and Ranga Vilas at Rs. 58. Venkatesas, on the other hand, advanced by Rs. 5 to Rs. 115. Metturs hardened by Re. 1.50 to Rs. 338.

In the sugar group, Cauverys provided a feature rising by Rs. 4 to Rs. 104. Deccans strengthened by 68 nP to Rs. 10.43 and Travancores by 37 nP to Rs. 11.90. Kirlampudis were steady at Rs. 48. Indias, however, lost 35 nP to Rs. 12.25.

Among miscellaneous industrials, T. Stanes and Standard Motors rose by 50 nP each to Rs. 25 and Rs. 11.50, respectively. Ashok Leylands moved up by 35 nP to Rs. 6.10. General Papers advanced by 25 nP to Rs. 12.50. Aluminium Industries by 61 nP to Rs. 17.40, Parry's Confectioneries by 23 nP to Rs. 3.93 and Spencers by 22 nP to Rs. 19.87. Textools, however, dropped a rupee to Rs. 200. Rallis were quoted 50 nP lower at Rs. 37.25.

Notice

THE BELAPUR COMPANY, LIMITED

NEWS IN BRIEF

THE first coke oven battery consisting of 65 ovens at Bhilai steel plant was heated up on 28th October.

The Working Committee of the All-India Congress Committee has authorised the President, Mr. U. N. Dhebar, to appoint a committee of experts to suggest social and economic objectives for the third Plan.

The All-India Handicrafts Board has decided to provide further financial assistance to handicrafts co-operative societies by advancing hem loans as working capital and granting subsidy for purchase of equipment and machinery.

Delhi has been included in the northern rice zone which at present comprises the Punjab and Himachal Pradesh. The step has been taken with the object of ensuring free flow of rice to Delhi from the Punjab and eliminating marked disparities in rice prices in this region.

A two-member official delegation from Denmark has arrived at New Delhi to discuss with the Finance Ministry the conclusion of a double taxation avoidance agreement. It may be recalled that preliminary discussions regarding this question were initiated last summer when an offical Indian delegation visited Denmark in the course of its tour of Europe.

The Government of India has decided to extend the validity period of the export quota of H.P.S. groundnuts upto the end of March 1959. It will be recalled that an export quota of 20,000 tons of groundnut oil and 10,000 tons of H.P.S. groundnuts had been released on 3rd June last, with allotments valid for shipment upto the end of September 1958.

The "cash-your-ideas" scheme introduced for the employees at the State-owned industrial coach factory at Perambur, Madras, is bringing an average of one suggestion from a member of the staff every day. Fifteen suggestions were qualified for awards during the first eight months of 1958 as against only three suggestions which received awards during the first two years.

The West Bengal Government has, under its anti-profiteering ordinance, fixed the maximum retail prices for wheat at 37 nP, wheat flour at 56 nP, *atta* at 41 nP and *suji* at 59 nP a seer. The maximum prices have already come into force in the Calcutta industrial area. The maximum prices to be charged by producers and wholesalers (except in the case of wheat) have also been fixed. For a maund of flour, a producer may charge Rs. 20.81 and a wholesaler Rs. 21.31; for *atta* Rs. 15 and Rs. 15.50; and for *suji* Rs. 22 and Rs. 22.50 respectively.

With a view to expediting the introduction of the metric system on Indian railways, arrangements are being made to set up "metric cells" at the Railway Board's office and the headquarters of zonal administrations. The maintenance of coordination among the various branches affected by change-over and careful planning to avoid confusion will be the main functions of the cells. Besides the setting up of these cells, the question of training the existing staff in various engineering stores and commercial branches, etc., is also engaging the attention of the railway authorities.

An agreement for the establishment of an oil refinery near Gauhati in Assam with a capacity of 750,000 tons was signed in Bucharest on 20th October between the Government of India and the Government of the Rumanian People's Republic. Mr. K. D. Malaviya, Union Minister for Fuel and Mines, who signed on behalf of the Indian Government, had talks with oil specialists and technicians to be deputed to India. It is said that not only Russia but also Italy is interested in assisting India in setting up the proposed second refinery for Assam's crude at Barauni in Bihar.

An official Indian trade delegation, led by Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Industry and Director-General of Foreign Trade, left New Delhi for Moscow, with a view to negotiating a new trade agreement between India and the U.S.S.R. It will hold talks with the representatives of the host country on possibilities of further developing bilateral trade between the two countries on a balanced basis. The existing five-year trade agreement is due to expire in December 1958. The delegation will also visit Poland and the German Democratic Republic for trade talks.

An agreement between India and the Federal German Republic for the establishment of a prototype production and training centre for small-scale industries at Okhla, New Delhi, has been signed on 25th October. The W. German Government will supply free of cost the plant and machinery for the centre, valued at about Dm. (Deutche marks) 3.15 million, and also provide about 25 technical experts for a period of three years, at an estimated expenditure of about Dm. 2 million. The Government of India will spend an equal amount in rupees towards the cost of land, buildings, Indian technicians, raw materials and stipends for trainees. Besides manufacturing prototypes of machines, the new centre will give training to technicians.

A new code of conduct, embodied in standing orders, has been prescribed for the sugar industry in the U.P., accommodating the viewpoints of both labour and industry. The new rules will be observed by every vacuum pan sugar factory in U.P. for one year in the first instance. Under the revised rules, facilities to labour fall under such headings as leave, play-offs, termination of service and disciplinary proceedings. The employers will find the new standing orders helpful in dealing with absenteeism and misconduct. Besides, the orders also bring the definition of the workman in the sugar factory in line with the description adopted in the Industrial Disputes Act and assure relief to apprentices by providing a time-limit to their training period.

A pilot project, designed to impart general education to industrial workers, will shortly be introduced by the Government of Bombay, under the auspices of the Institute for Labour Welfare Workers, Nigam. This is the first attempt of its kind in India. Its objectives are to improve the efficiency of workers, to promote better industrial relations, to enable workers to understand modern economic and other trends, and to discipline their mind and develop their thinking power and latent potentialities. A nominal fee of Rs. 2 per trainee will be charged for the full course. Classes will be held from 5-30 p.m. to 7 p.m. on three days in a week. The first three-month session will commence on the 17th inst. Successful trainees will be awarded the Bombay Workers' Education Certificate.

A sub-committee has been set up by the Steering Group on Wages which will analyse the problem of labour costs in relation to the cost of production in industry, in order to arrive at a satisfactory definition of "wage costs." This study is expected to take into account the export capacity of the country, especially in the light of present foreign exchange difficulties, the surplus required in industry for financing expansion and the cost of manufactured goods to the consumer. Further, a research programme on "Replacement costs in Indian industries" will be entrusted to the National Council of Applied Economic Research. The programme will cover the cement, jute, sugar and heavy chemical industries. The report will recommend appropriate methods of financing the replacement and modernisation needs of industries, generally, and export industries, in particular. Besides, it is expected to indicate a methodology applicable to similar studies elsewhere.

From Abroad

The Ceylon Government has refuted rumours that it is considering devaluation of the rupee or revision of principles of taxation proposed in the last budget which includes new levies on wealth, expenditure and gifts.

The Government of Indonesia has seized all K.M.T. Chinese banks and placed their contents and documents under State control. The administration of the banks will be directed by an organisation already controlling Dutch banks taken over a year ago.

The West German motor output has gone up to 1,097,983 units in the first nine months of the current year, as against 886,570 units in the corresponding period last year. Exports stood at 534,440 units, as against 415,470 units. Thus, the proportion of total production exported rose from 46.9 per cent. to 48.7 per cent.

The State-owned North-Swedish Steelworks, Norrbottens Jarnverk, has received an order for 11,000 tons of rails from Sudan. Rails constitute a new product of the plant, which will eventually make Sweden self-supporting in this field. A delegation from Sudan, representing its industry and cotton growers, visited Stockholm last week.

Norwegian ship ladders made of aluminium are becoming more and more popular, and they are in increasing demand on the world market. The firm, Marine Aluminium, Haugesund, specialises in this field, and has so far supplied aluminium accommodation ladders to a fleet of 10 million tons. Its production capacity is now being expanded in order to cope with the heavy international demand.

The French Government has under consideration a proposal to establish a State investment company with an initial capital of Frs. 10 million for intensifying the oil exploration drive. It will be a financial holding company to supply the Government-controlled oil exploration concern, Bureau des Recherches de Petroles (B.R.P.), with all necessary funds required for oil exploration.

PERSONAL

MR. M. C. Chagla, India's Ambassador-designate to the U.S., left Bombay for London *en route* to Washington on Saturday, 25th October 1958.

Mr. J. Van der Gaag, the new Consul-General of the Netherlands to India, arrived in Bombay on 24th October to take charge of his assignment here.

Mr. Lewis L. Strauss has been named by President Eisenhower as the U.S. Secretary of Commerce, *vice* Mr. Sinclair Weeks, who has resigned.

Mr. K. D. Malaviya, Union Minister for Mines and Oil, returned to New Delhi on 25th October after a four-week tour of Russia, Eastern Europe Italy and Switzerland.

Mr. V. K. Krishna Menon, Defence Minister and leader of the Indian delegation to the U.N. General Assembly, returned to New Delhi from New York on 24th October.

Mr. B. R. Bhagat, Union Deputy Minister for Finance, left Bombay for Geneva *en route* to Canada on Monday last. He will be the leader of the Indian delegation to the Colombo Plan conference to be held at Seattle, U.S.A., on the 10th inst.

Sweden proposes to raise its contribution to the U.N. Technical Assistance Programme to Kr. 15 million, more than a threefold increase in its existing quota of Kr. 4.5 million. The sum will be distributed between the extended technical assistance programme and the special fund to be established under a recent decision by the U.N. General Assembly.

A new fastening device, described as "zipperless zipper," has been demonstrated at New York by its manufacturers, American Velcro, Inc. The fastener contains two strips of nylon fabric. One strip has thousands of tiny hooks; the other is a mass of tiny loops. When the strips are pressed together, the fastener closes, and opens when they are pulled out. The device is already being applied in clothing.

Successful development of nitro-paraffins as a substitute for motor fuel could double automobile and aircraft engine power output and cut engine size and weight by half, according to Mr. Ernest S. Starkman, an engineer of California University. The preliminary tests showed that the energy output of the compounds compared favourably with conventional petrol. He noted, however, that the compounds are at present relatively expensive.

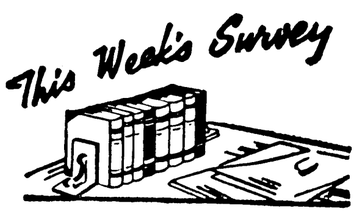
Oil sales in the U.K. is still above last year's level, despite falling industrial production and other unfavourable seasonal factors. But the rate of increase has been declining. Sales in the first half of 1958 were 30 per cent. higher than in the same period of 1957 but, by the end of September 1958 the improvement dropped to just over a quarter. The oil industry, however, seems to be confident that sales this year will be by 20 per cent. higher than in 1957.

World trade in manufactured articles was four per cent. lower, in terms of value, during the first half of the current year, as compared with the corresponding half in 1957. Smaller shipments from the U.S. accounted for 90 per cent. of the reduction. Britain's exports were lower by 2 per cent. but its share in world trade rose from 18.3 per cent. to 18.4 per cent. West Germany and Japan also were able to increase their share.

A loan of I.£20 million (£4 million sterling) is being made available by the U.S. Operations Mission in Israel to the Government of Israel for increasing the amount of credits available for the development of indigenous industries. The entire sum will be invested in non-voting 4 per cent. preference shares of the Israel Industrial Institution, a recently created industrial development bank. The loan, which represents funds obtained from the sale of U.S. agricultural products to Israel, will bring the capital of the Institution to I.£32 million.

An electric motor which has been operated for 1,000 hours at a temperature more than twice that of the burner on a kitchen stove—about 1,000 degrees Fahrenheit—has been demonstrated at Pittsburgh, U.S. Scientists of the Westinghouse Electric Research Laboratories said the motor foreshadowed continuous flight at near red heat. They believe the motor will have important uses in space travel and atomic energy. The motor uses insulating materials that withstand extreme temperatures together with a system of graphite bearings.

A floating exhibition of Swedish export products—the second of its kind and larger than the Swedish East-Asia Line's successful "Bali" expedition to Asian ports last year—is to tour South African and Portuguese East African ports next month. It has been arranged by the Swedish Transatlantic Line on board its newest merchant vessel, the 7,600 tons d.w. *Elgaren*, in collaboration with the General Export Association of Sweden. Some 250 exhibitors are taking part and the 175 individual displays represent a wide range of Swedish quality products from matches and paper to engines and motor cars.



LABOUR PROBLEMS

THE wave after wave of labour unrest now sweeping over the country does not augur well for India's economic future. In recent months, the strikes at Jamshedpur and in the major ports have caused considerable damage. There is no knowing what the strike in Kerala's plantations may mean to national economy. The final reckoning has still to be made. It was once believed that the Code of Discipline, which was adopted at the tripartite conference, held at Naini Tal, in May last, would be a preclude to a period of industrial peace. Events have falsified this hope. Small wonder, then, that the Union Labour Minister, Mr. Gulzarilal Nanda, in the course of his address at the seventeenth session of the Standing Labour Committee, held this week in Bombay, averred that "it would, of course, be worse than useless if the provisions of the Code are not implemented at all levels to the utmost extent possible." It would appear that the Government proposes to undertake case studies of strikes, with a view to determining where the responsibility for the breakdown of the Code lies and taking appropriate action in order to prevent recurrence of such breakdown. Such a survey may prove useful. But it should be clear that, unless labour leaders in this country are willing to eschew excessive demands and aggressively agitational methods, there can be no lasting industrial peace of the kind which is necessary in the interests of rapid material advancement.

Mr. Nanda did well to deprecate the undertaking of fasts by trade unionists and the frequent reference of labour issues to courts. He rightly suggested that fasts, undertaken by workers in order to bring pressure on employers, are a violation of the Code, because they constitute a form of "intimidation and direct action." He added: "It is being urged that recourse to such coercive acts is the direct outcome of the frequent approach by the employers to High Courts and the Supreme Court which cause excessive delays and frustration and thus undermine the confidence in these procedures. I do not brush aside this plea or deny its relevance but a hunger-strike or *satyagraha* can furnish no solution of this problem." He warned that, if they persisted in adopting these methods, it might "destroy the whole system of peaceful settlement of industrial disputes which has been labouriously built up during the last two decades." At the same time, he urged the employers and the workers to resist the temptation of going to Courts on the slightest provocation. Only important issues which cannot otherwise be resolved, as he pointed out, should be referred to courts.

Proceeding, Mr. Nanda referred to the movement for workers' participation in management. He said that it was "only on the basis of genuine partnership between workers and the management that peace in industry of a true and enduring kind can be established." He added:

"It will be recalled that, at my request, the workers' representatives agreed to drop their insistence on making such participation compulsory by law. What we are seeking to achieve through this new relationship between workers and management is not simply the absence of strife but positive collaboration for raising industry and the economy of the country to higher and higher levels. I had explained then that to me workers' participation in management which was going to be introduced on a voluntary basis in a number of establishments was not of the nature of an experiment. I have taken it for granted that it will become a universal feature of our industrial organisation in this country, and I am not anticipating a very long period to elapse before we arrive at this stage. I have had to say this now, because I am not satisfied with the rate of progress in this direction. Since the time of the Seminar in January this year, when 30 units enlisted themselves voluntarily for this scheme, only one-third of these units have so far constituted the Joint Management Councils."

Although the slow rate of progress in the implementation of the scheme for workers' participation may be deplored, it cannot be gainsaid that such participation has been rendered difficult by the attitude of labour itself. A period of industrial unrest is hardly the appropriate time for ushering in new changes in the relationship between employers and workers. Indeed, if the changes are introduced at the wrong moment—that is, before the relations between the two sides have become normal—the movement may receive a severe setback. Nor can one ignore the fact that, in the context of the continuing political bias in trade unions, the movement may easily take a political turn, and thereby lead to deplorable results from the point of view of the industry as well as the community. It is not so much the speed with which the reform is tried that matters as the success which attends it in the few centres where it is implemented. The saying that "slow and steady wins the race" applies to this labour reform more than to any other.

DOUBLE TAXATION

International movement of capital, incomes and profits will receive the impetus it deserves only if double taxation of incomes—that is, taxation of incomes in more than one country—is avoided. In the context of the great need for capital in many parts of the world and the importance of promoting free multilateral trade, the question of avoiding double taxation assumes a new significance. It may be useful to recall here that the history of this question is of comparatively recent origin and progress in solving the problems involved in avoidance of double taxation has been transferred by the economic disturbances in the inter-war, war and post-war years. The first model convention for avoidance of double taxation was formulated by the League of Nations in 1928; it took nearly eight years to hammer the convention into shape. The work of the League of Nations resulted in Model Conventions of Mexico (1943) and London (1946). Nevertheless, much remains to be done in this sphere. For one thing, there are many countries which have not adopted these conventions. Secondly, the increasing interdependence of national economies calls for fresh appraisal of the whole range of problems involved in eliminating double taxation.

Against this background, the work of the Fiscal Committee of the Organisation for European Economic Co-operation (O.E.E.C.), which was set up in 1956, will be widely welcomed. The Committee has done much commendable work in mapping out an area for possible agreement among member-countries of the O.E.E.C. Clearly, such agreement is absolutely necessary for that closer economic co-operation envisaged in the plans for economic integration of Western Europe. In its report entitled *The Elimination of Double Taxation*, the Committee reveals that it has reached agreement on the first four questions which it studied—(1) listing and definition of taxes on income and capital (including taxes on estates and inheritances) which should be covered by double taxation agreements; (2) concept of permanent establishment; (3) concept of fiscal domicile; and (4) tax discrimination on grounds of nationality or similar grounds.

The agreement reached on the first of these questions is intended to render the terminology and nomenclature relating to the taxes covered by each agreement acceptable and precise, to ensure identification of the taxes covered by the convention and to widen the coverage of the convention. The concept of permanent establishment is designed to ensure that industrial and commercial profits accruing to an enterprise of one of the contracting parties cannot be subject to tax in the other contracting State unless the enterprise carries on a trade or business in that other State through a permanent establishment situated therein. The concept of fiscal domicile is an essential concept in double taxation conventions, because it serves to determine the individuals and legal persons contemplated in them. The Committee has defined, under the expression "resident of a State," the individuals or legal persons who, under the natural law of that State, are liable to taxation therein by reason of the connection they may have with that State and has also laid down the consideration which must apply to an individual who is a resident of more than one State. The last topic, namely, tax discrimination, is not strictly related to the issue of double taxation. Nevertheless, the Committee feels that the principle of adhesion to the principle of "no discrimination" should be clearly embodied in double taxation conventions.

The Committee is now engaged in the study of other fiscal questions such as the taxation of income of shipping, inland water transport and air transport, taxation of personal services and income from immovable property and royalties, definition and apportionment of profits between the head office of an enterprise, its permanent establishments and its subsidiaries and taxation of interests and dividends. It is aware of the many difficulties which must be overcome before "co-ordination can be established and maintained in the complex field of international taxation relations." Nevertheless, it is confident that very "substantial results" can be obtained in the next few years. This confidence is based on its experience which suggests that there is "considerable identity" of views among member-countries of the O.E.E.C. over the measures to be adopted in order to avoid double taxation. In any case, the Committee hopes to be able to submit, by July 1961, a draft convention for the avoidance of double taxation in respect of taxes on income and capital as well as concrete proposals for its implementation. There is no doubt that the work of the Committee will prepare the way for multilateral fiscal agreements not only among O.E.E.C. countries but also in the rest of the world.

AID FOR ASWAN DAM

The U.S.S.R. has, after blowing hot and cold for the last two years, made up its mind to grant sizable aid to the United Arab Republic for the construction of the Aswan High Dam. The proposed aid, in the shape of 400 million roubles (£33 million sterling) credit, is probably the biggest single investment undertaken by the U.S.S.R. outside the Red bloc. It will be utilised for the purchase of machines, equipments and other materials from the U.S.S.R. The Soviet loan, which equals more or less the sum once jointly offered but subsequently withdrawn by the U.S. and the U.K., is of vital significance to the economic development of the U.A.R.

The construction of the Aswan High Dam will doubtless provide a new impetus to the overall development of Egypt. The project will be located in southern Egypt, just south of the present Aswan Dam. It is expected to back up 140 to 216 billion c. yds. of Nile waters, irrigating an additional area of 2 million acres of arable land. Besides, the project seeks to generate hydro-electric power of about 10 billion kw. annually. The scheme was to be put through at an estimated cost of £500 million sterling, over a period of about 15 to 18 years. A relatively modest version of the plan, however, was formulated last year, envisaging the extension of the cultivable acreage only by one million acres over a period of five years. The first stage of this scheme, it is computed, will incur an expenditure of about 60 million pounds, foreign exchange components of which constitute about 50 per cent. Apparently, the promised loan from the U.S.S.R. will meet this part of the total cost.

It must, however, be admitted that, in order to cover the entire cost of the scheme in its original form, Egypt will have to tap other sources. For the Soviet loan covers only a fraction of the aggregate expenditure involved in the construction of the original blue-print for the dam. It remains to be seen whether any of the free countries will come forward to cooperate in the project. There is yet another bottleneck. When the project is commissioned the water that it will impound will flood large areas of adjoining Sudanese territory requiring evacuation of some Sudanese towns and villages. The two Governments have consistently been at loggerheads on this issue. It is to be hoped that both the countries will iron out their differences and work out an agreed formula which will expedite the construction work of the dam.

Per capita bank deposits in Switzerland is the highest in the world. Thus, as at the end of 1956, bank deposits in Switzerland were $899 per head of population, as against $708 in the U.S., $549 in Sweden, $453 in Great Britain, $233 in Belgium, $152 in Italy, $115 in France and $110 in Germany. In this comparison, however, it must be borne in mind that Switzerland is reputed to be the centre for a large amount of fugitive capital from several parts of the world.

AMERICAN LETTER

ECONOMIC RECOVERY RAPID

CONTINUED BOOM IN EQUITIES BAFFLES MANY

From Our Special Correspondent

NEW YORK, *24th October*

THE economic climate is improving rapidly. Steel production has risen from a 1958 low of about 50 per cent. of capacity to 75 per cent. Steel executives believe that if the 1959 models of automobiles, which are being presented to the public this month and next, result in many sales, the output of steel may reach 90 per cent. of capacity before the end of the year. It is, of course, completely unpredictable what the public will do. The standard models of the new cars are both wider and longer. The new Cadillac has now reached a size where public garages in major cities of the United States refuse to house it, because it takes too much room. General Motors and Ford, as stated before, work on the theory of planned obsolescence—more gadgets and more automation to whet the consumers' appetite.

Chrysler and the foreign car owners play up utility and economy. Some cars are now so low that it requires contortions to get in and out. Thus, Chrysler has devised a swivel arrangement for the two front seats which eliminates much of the contortions. It is sensible and practical, but just what will be the greatest sales incentive remains to be seen.

Other factors entering into the steel picture are rockbottom steel inventories record increases in building and construction and a definite gain in consumer buying, accompanied by a boost of instalment credit. This, however, has not slowed the accumulation of savings.

Up to this point, consumer buying favours soft goods rather than durables. Here are a few highlights. Private housing starts in September spurted to an annual rate of 1.2 million units, the highest since October 1955. This brought the rate for the first nine months of the year 7 per cent. ahead of the 1957 period.

Telephones Busy

The Bell Telephone system, headed by American Telephone and Telegraph Company, reported that, for the first time in 1958, the gain in telephone installations (700,000) exceeded that of a year ago. Long-distance calls jumped 5 per cent. Chain stores sales in September were 6.3 per cent. above those of a year ago. It was the biggest gain since November 1957. And August shipments of gas heaters, radios and television sets topped those of July.

Along with these developments, it is not surprising that rail freight traffic pushed into new high ground for the fifth consecutive week—at this writing. Car loadings aggregated 686 000 cars, the largest since November 1957. One railroad, the Chesapeake and Ohio, reported the highest September revenues in its history.

Overall industrial production climbed in September for the fifth straight month. Marked curtailment of automotive activity, owing to strikes and model changeovers, however, gave the Federal Reserve index a boost of only 1 point to 137 of the 1947-49 average.

Boom in Stock Exchange

Psychologically, one of the most bullish factors in the economy has been the rise of American stock prices on the various exchanges. Traders and investors alike are baffled, since the prospect of 1958 earnings hardly support such an upswing. Thus, it is no wonder that the short position on the New York Stock Exchange which is reported every mid-month is about double from what it was a year ago.

There are some plausible explanations for this rise in prices. One is the popular obsession that inflation is inevitable so far as the long-range is concerned. Another is the steady accumulation of investment plans and funds which grow by statutory contributions cumulatively.

Hence, one-third of all investors on the New York Stock Exchange today are institutional and unemotional. They practise dollar averaging and adjust their positions as readily in a declining as well as in a rising price trend. This has been one of the greatest cushions in either direction. One might surmise that short of a national or international catastrophe, the markets are, thus, panic-proof.

The recent increase in margin requirements to 90 per cent., outside of an immediate shakeout has had very little effect. The fact of the matter is that the inflation-consciousness has led to more and more buying of common shares rather than fixed income obligations. In the blue-chip area, a scarcity of investment media has been developing which is another reason for the price increases.

Bountiful Harvest

A more than bountiful harvest this year produced declines in wholesale food prices. They are now at a new 1958 low for the third successive reporting period. The reading this week is the lowest since November 1957. Conversely, there are surplus problems that Washington will have to cope with in the ensuing months. While some industries remain behind 1957 in earnings, others are considerably ahead. Grand Union, a food chain, for example, operated at a record in sales and profits in the six months ended 30th August 1958 and so did Proctor and Gamble. General Electric's third-quarter profits set a record for the period.

After the pessimism which was prevalent a short six months ago, it is astounding to find so much unqualified optimism. Said George M. Humphrey, Chairman of National Steel and former Secretary of the Treasury, "increased consumer buying has done the trick." A Federal economist jubilantly exclaimed, "there are no weak spots in business activity."

Retail executives from coast to coast say department and apparel stores throughout the nation are looking ahead to their biggest autumn and Christmas business in their history. Sales thus far in October are on the plus side. Moreover, all signs seem to point to an even higher rate of customer activity in November and December.

No Decline Seen

It is particularly significant that no retailer forecasts a decline for the rest of the year. Perhaps, this is natural, since this is normally the biggest buying season, anyway. The latest survey made shows this is the first time in 1958 that all store executives are agreed business would either match or top comparative 1957 figures for three consecutive months. Of course, the majority can be wrong, too.

In such an atmosphere, millions of U.S. voters will go to the polls early in November to elect State Governors and a goodly portion of Congressional representatives. There has been a big swing towards the Democrats in recent by-elections. Yet, President Eisenhower's personal popularity remains unimpaired. However, whether his current campaigning will influence voters towards other Republican candidates is another question. The President is regarded as very much above politics. He stands on his previous record as an historical figure, but not necessarily as a Republican hero. Besides, the differences in Democratic and Republican programmes are so diminutive that the average man hardly understands them.—*All Rights Reserved.*

U.S. INCOME SHOWS "SUBSTANTIAL" RISE

A slight mid-year rise in the national income and a substantial rise during the third quarter reflect the U.S. progress in economic recovery, according to its Commerce Department. National income for the second quarter is estimated at an annual rate of $352,500 million—a rise of about $2.000 million. National income estimates for the third quarter still await reports on corporate profits. It is "clear," however, that the larger part of the 1957-58 decline in national income has now been recovered. (National income is the aggregate earnings of labour and management, inclusive of taxes, in the production of goods and services required by the national economy.) Annual rate of employee compensation for the third quarter this year was $255.500 million—an increase of $4.500 million, or nearly two per cent., above the second quarter level. This advance wiped out about two-thirds of the previous reduction in this category.

Meanwhile, the Labour Department reports that consumer prices held the line in September for the second straight month, with lower prices for food, personal services and recreation. At the same time, the "take-home" pay of American workers and the buying power of that pay increased one per cent., because of the price stability and because of increased hourly earnings.

September "take-home" pay—pay remaining after deductions for federal income and social security taxes—hit a record average of $77.25 per week for workers with three dependants and a record average of $69.80 for single workers.

September spendable hourly earnings were some 65 cents higher than in August and about $1.80 above September a year ago, according to the Labour Department. In a statement commenting on the Labour Department report, President Eisenhower said:

"It shows that, for the second successive month, the retail cost of food to the American housewife is down. To be sure, some retail prices have gone up in recent months, but others are lower than they have been in a year or more. This means that the recent gains in weekly earnings of American workers represent real increases in buying power, not just offsets against higher prices These earnings have increased more than five per cent. since February. Their actual buying power is higher than it has been for well over a year and is 15 per cent. above what it was in 1952. Most important to all Americans, it confirms the fact that recovery is possible without inflation. We must preserve this stability in the value of the dollar without recourse to stifling controls."

ECONOMICS OF TRACTOR CULTIVATION

RESULTS OF ENQUIRY IN THE PUNJAB

From Our Special Correspondent

NEW DELHI, *28th October*

DELHI LETTER

IN the 10-year plan for food production recently publicised by four leading industrialists—Sir B. P. Singh Roy, Mr. Tulsidas Kilachand, Mr. C. H. Bhabha and Mr. B. M. Birla—mechanised farming on a large scale is visualised. The authors of the plan have, however, not gone into details regarding the economics of tractor cultivation. In this connection, a recent survey report issued by the Board of Economic Inquiry, Punjab (India), has acquired topical relevance.

It is stated at the outset of the report that "the desirability of introduction of tractor cultivation on a large scale is questioned by some from the point of view of employment, while there are others who doubt its utility from the point of view of costs. Both have good arguments to support their contentions. As against this, the number of tractors seems to be increasing daily. This adds to the conviction that tractors are economically a more paying proposition than bullocks, at least under certain circumstances. Therefore, the question deserves serious consideration. For this reason, it was thought fit to conduct an investigation into the working of a few farms cultivated with the help of tractors and thus find out how far tractor cultivation has justified itself on economic grounds. It was also intended to find out the difficulties faced by mechanised farms and ways and measures to overcome these difficulties.

In this report the accounts of two farms selected at village Khera near Jagadhri (District Ambala), where cultivation is carried on with the help of tractors, were studied. The period under study was one year, from 1st June 1954 to 31st May 1955. These farms are identified as Farm A and Farm B. The survey results regarding Farm A alone are given below. The report has also drawn pointed attention to some problems of tractor cultivation which would need to be solved, if mechanised farming is to succeed in Indian conditions.

Farm A: The net cultivated area of this farm during the period was 119.6 acres (including 10 acres taken on rent), the whole of the area being in one compact and consolidated block. The farm had three tube-wells installed in it and the whole area was irrigated. The gross area under crops (both food and commercial) was 146.7 acres, giving 122.6 per cent. intensity of cropping. The area cropped per permanent worker was 17.3 acres and the area cropped per pair of bullocks was 41.9 acres. As compared with purely bullock-operated farms, an average worker and a pair of bullocks thus controlled more area at the tractor-*cum*-bullock cultivated Farm A.

The cost of tractor cultivation at this farm has been worked out as Rs. 4.38 per working hour in general. It was also found that the costs per acre of performing different operations by tractors were less than by bullocks. The gross income from the farm during the year was Rs. 36,394 and the total expenditure Rs. 20,457, giving a net income of Rs. 15,937 for 119.6 acres or Rs. 166 per acre.

The most important single factor contributing towards the success of big farms is the success of their mechanisation. The organisation of big farms on modern lines is done with two aims in view: first, to have advantages of large-scale production and, secondly, to escape the drudgery of farming with animal labour alone. In certain other cases the aim of the landlord in organising big farms is self-cultivation of their lands. During investigation many types of difficulties of the tractor owners came to light, which need the maximum of thought for their solution. The following are the problems and the suggested solutions:

The repair of agricultural machinery and supply of spare parts is a problem which stands out conspicuously. All the tractor owners, including individuals and co-operative societies in the State, may be organised into some sort of organisation or co-operative society. There may be some membership fee. This organisation should carry out a census of all the farms which have mechanised cultivation and thus be in a position to see the overall position regarding total requirements of spare parts and repair facilities. This organisation should have a central office with a big workshop attached to it. Here it should give mechanical and operational training in driving the tractors and tube-well engines to the representatives of member farmers and to others who may feel interested in it for the sake of training for a job. This will help the farmers in understanding their machinery and will also give trained drivers to those who need to keep paid persons to operate their tractors.

In the Central Workshop, major repairs of a few tractors may be done and efforts should be made to explore as far as possible the scope for the manufacture of spare parts. This organisation for agricultural mechanisation should have regional workshops at convenient places where the tractor repairing should be done. These regional workshops may be located at district headquarters. In addition, there may be sub-regional workshops depending upon the number of tractors in a particular area. At these sub-regional workshops, there should be a team of mechanics and blacksmiths. The area of each field mechanic should not be large and may include at most 25 tractors. The member farmers should contribute towards the salaries of these mechanics.

The Price of Oils and Lubricants: The second point worth consideration is the price of oils and lubricants. Farming as such is not remunerative enough to pay the price of oils and lubricants which usually prevails in the market after competition with other industrial undertakings. This has long been established and, in most of the Western countries, special subsidies are given on oils and lubricants used for genuine agricultural purposes. In our country, instead of reducing the burden of taxation on oils used for agricultural purposes, the import duty has been further increased. This is telling upon the economy of mechanised farms and it seems only fair that the taxation structure is revised in favour of agriculture.

Supply of Trained Drivers and Mechanics: At present, the shortage of trained drivers and mechanics is a problem facing those who wish to have paid workers. Any person who can start the tractor engine and control the steering, claims to be a trained driver. The knowledge of working the implements and maintenance of tractors is considered superfluous. This is specially the case with people who are new entrants into the field of tractor farming. The result is that mishandling of the tractor brings about heavy financial losses in farming and may cause the eventual collapse of such farm. Special schools and training centres may be organised in the State where individuals may be given proper training in the use and handling of the machinery, namely, the tractors and the tube-wells. Such training classes may, with advantage, be started on big mechanised farms under the supervision of the Agriculture Department where, in addition to engine mechanism, knowledge of scientific farming may also be imparted. The people trained in these schools or training centres will, on return to their respective village, prove very useful and will help agricultural development on proper lines.

Reduction in Area of Fodder Crop: Another point worth consideration in tractor (mechanised) farming is the decrease in the area under fodder crops. Under conditions of bullock cultivation, a good proportion of the farmland is put under fodder crops. A part of this area becomes available for growing of commercial crops when the tractor is brought on the farm. There is thus an increase in the marketable surplus of the farm. This gives rise to the problems of proper utilisation of this area for the growth of commercial crops and the actual marketing of the produce to the best advantage of the cultivators.

(*Concluded from next column*)

the trend is sharply accentuated, then obviously production in this country will be affected. But a surplus of balance of payments can still emerge even though the balance is achieved at a much lower level of activity.—*All Rights Reserved.*

A NINE-MONTH TRADE PATTERN

From Our Own Correspondent

LONDON, *24th October*

LONDON LETTER

THE figures of Britain's overseas trade for the first nine months of the year are now available, and they present a most useful addition to the picture recently given of the balance of payments for the year ending last June. The addition of the third quarter of 1958 makes it possible to discover a trend which indicates that the year ahead is not likely to show as favourable a position as the year ending last June, but on the other hand it would be pessimistic to assume a rapid deterioration—unless, indeed, the economy as a whole takes a rapid turn for the worse. The visible deficit for the first nine months of this year averaged £33 million a month, against £57 million a month in 1957. The expression "visible deficit" in this context is, of course, the difference between imports on a c.i.f. basis and exports on a f.o.b. basis. Because if one simply takes the visible trade account as used for balance of payments purposes, then against the visible deficit of £172 million in the first six months of the year (difference between imports c.i.f. and export f.o.b.) the balance of payments on trade account shows a surplus of £137 million. A simple way of getting a true appreciation of the difference between this year and last is to take merely the change in the position—this shows a reduction of the visible deficit of £24 million a month or £216 million over the nine months to the end of September. The figures must, however, be broken down into quarters to realise what is happening. For the first quarter of this year, the visible deficit averaged £24 million a month, for the second quarter £33½ million a month and for the third quarter £41½ million a month. Even if one allows for the seasonal movement in these figures, there is a deterioration.

The explanation is to be found very largely in price movements. Eighteen months ago, import prices and freights stood at a peak level from which they fell about 10 per cent. to the beginning of this year. The fall continued for a further three months, since when the import index has been stable at about 98 per cent. of the level of 1954 and at an average of 9 per cent. below the level of a year ago. The *volume* of imports has remained around the level of last year, so that the gain in the import bill has been entirely on prices.

But, although the volume of imports has remained stable, its composition has changed significantly. Industrial material imports in the first nine months of this year have indeed been about 10 per cent. below their volume of a year ago. This has been due in part only to the running down of stocks; about 2 per cent. is attributable to the fall in the level of industrial production, comparing this year with last; and the rest reflects industry's view to a continuing decline in production activity. Some of the major industrial materials, for instance, cotton, wool, rayon pulp, jute, steel-making materials, steel, tin ore, soft wood and vegetable oils and oilseeds are down by a seventh or more in quantity.

On the other hand, imports of finished manufactures have continued to rise strongly this year and have totalled 10 per cent. above their level of a year ago. This reflects in part the increasing investment in plant and machinery and has been made possible by the progressive reduction in import restrictions.

Export prices have remained remarkably stable over the past year but the volume of exports, which had been rising in an unbroken curve for some four years, began to turn down just a year ago. Over 1958 to date, the fall in volume has been 4 per cent. but in the last few months it has, indeed, been as high as 6 per cent. The reduction has been spread generally over most markets though particularly Western Europe, but shipments to North America have happily continued to rise. The principal contributory to this has been the strength of the export trade in motor vehicles, shipments of which have been running about 4 per cent. above the level of a year ago.

The greatest weakness on the export side is naturally that the primary producing countries may be obliged drastically to cut down their purchases. Signs have been seen already in Australasia, South Africa and Latin America and, if

U.S. BANK RATE RAISED FURTHER

NO MOVE TO RESTRAIN CREDIT FOR THE PRESENT

FOR the second time within a space of ten weeks, the U.S. Federal discount rate (corresponding to the Bank rate in India) has been stepped up. The first occasion was on 14th August last, when the Federal Reserve Board authorised the Federal Reserve Bank of San Francisco to raise its discount rate from 1½ per cent. to 2 per cent. effective on the following day. This was followed later on by the other Federal Reserve Banks with a similar increase. The second instance was the further rise of ½ per cent. to 2½ per cent. in the discount rates of five Reserve Banks, namely, Philadelphia, Richmond, St. Louis, Minneapolis and Dallas, on 23rd October 1958. This is expected to be followed by the other seven Reserve Banks, resulting in a general hardening of interest rates.

The stepping up of the U.S. discount rate was not unexpected. For banking circles in New York had been talking about the prospect of a further rise in the Bank rate during the past few weeks following the sharp jump in Treasury Bill rate and the widening disparity between this rate and the U.S. discount rate. The surprising element in the latest move is perhaps the extent of the rise. Judged by U.S. standards, a rise of ½ per cent. is considered high; the general expectation was only a rise of ¼ per cent. This is not, however, the first time that such a sharp increase has been effected. In August 1957, it will be recalled, the discount rate was stepped up by a similar extent to the peak of 3½ per cent. The first move in the direction of cheaper credit to arrest the recession and to stimulate business activity was made in November last, when the discount rate was cut from 3½ per cent. to 3 per cent. It was successively brought down, first to 2.75 per cent. in January this year, then to 2.25 per cent. in March and still further to 1.75 per cent. in April last. It was in August last that a reversal in the interest rate policy was made, following distinct signs of the flattening out of the recession and the resumption of business activity.

The latest increase in the U.S. discount rate, which is described in official circles as a "technical adjustment," does not necessarily mean that the Federal Reserve Board has simply followed the trend of interest rates in the market. For the hardening of the interest rates in general was itself due, to a large extent, to expectations of a change in the official monetary policy. It will be interesting to note here that the Treasury Bill rate has climbed up during the last three months from a low of 0.98 per cent. for the week ended 28th July last to a high of 2.93 per cent. (the highest rate since December last) on 10th October. The rate has since slightly tapered off to 2.8 per cent. This year's high of 2.93 per cent. is, however, very much lower than the 1957 peak of 3.64 per cent. touched in the week ended 19th October 1957, from which level it had slided down almost continuously to 0.98 per cent. in July this year. A feature of the recent trend in Treasury Bill rate is the widening of the gap between it and the discount rate, the former standing, prior to the latest increase in the discount rate, at more than one per cent. above the latter. This gap has since then been considerably narrowed down, consequent on the slight fall in the Treasury Bill rate and the rise in the Federal discount rate.

The rise in the Federal Reserve discount rate is expected to lead to an increase in the commercial banks' prime lending rate from 4 per cent. to 4½ per cent. and give a further push to Treasury Bill rate. It is difficult to foresee the effect of the upward trend in short-term rates on Government bonds. Normally, a rise in short-term rates would have a hardening effect on the long-term rates, thus leading to a decline in bond prices. But the bond market is already depressed due to fears of inflation. If the investors are convinced that the latest official move is another firm step to fight inflation and to safeguard the dollar, the bonds are likely to gather strength. In order to check undue credit expansion in the stock market, the Federal Reserve Board raised, on both the occasions, prior to the two successive increases in discount rates, the stock margin requirements. On 5th August last, the margin was raised from 50 per cent. to 70 per cent. and on the 15th ult. further to 90 per cent. The Federal Reserve Board is said to be reluctant to enforce any new restrictive moves at present, but the Vice-Chairman of the Board has warned that the Board might advocate a return to direct consumer credit controls, if there were another "radical easing of credit terms as in 1955, while credit demand and consumer spending were rising." There has, however, been no large-scale expansion of bank lending after the business recovery set in. On the contrary, the demand for bank loans is said to be surprisingly low, despite the business recovery. So far this year, the business loans of New York City banks, for instance, show a fall of $1,172 million to $10,623 million, as against a rise of $178 million to $11,649 million in the corresponding period of 1957. The recovery so far has not been of such magnitude as to offer a threat to price stability. Though national income is expected to reach record levels during Christmas, productive capacity is said to be still well above the demand and unemployment remains at a high level. In short, the present indicators show that there is no immediate threat to price stability.

While raising the Federal Reserve discount rate to 2½ per cent. the U.S. Government must have surely kept in mind the twin object of making money dear without making it scarce and of finding the sources for financing its large public debt. A sum of $80,000 million of old debt is due for repayment over the next year and the Government has to find some way of getting the money. The general expectation is that the Government may not enter the long-term capital market so long as the bond market remains depressed. The only other way is to borrow on a short-term basis for the time being. An indication of the official policy in regard to the Government's borrowing is provided by the recent successful marketing of special bills of the value of $3,500 million due for repayment in May and December 1959. This is no doubt only an expedient, but a confirmation of the Government policy will be found when the Treasury announces its borrowing programme in a few days' time.

U.S. EXPORT-IMPORT BANK

A special representative of the U.S. Export-Import Bank may soon be stationed in New Delhi to work out details of the $150 million credit extended to India in June as well as for lending to private concerns the rupee equivalent of $60 million from the sale proceeds of the latest P.L. 480 agreement, according to Mr. Samuel C. Waugh, the Bank's President. "This is the first time that we have considered stationing a representative of the bank outside Washington," Mr. Waugh said, "since India is half-way around the world from the U.S., and small industrialists here cannot be expected to send an agent to America to negotiate a loan from the bank."

Since the World Bank and the U.S. Development Loan Fund are better suited to extend credits in the public sector in India, he said, the Export-Import Bank will concentrate on making loans to the private sector, particularly medium-size industries. The Bank hoped to extend such loans to Indian industries through the guarantee of private Indian banks.

Answering a question, Mr. Waugh pointed out that his Bank was required by law to finance and encourage American exports, and as such it could not be expected to extend credits for purchase of capital equipment from other countries. Other countries able to sell capital goods to India, he said, were also financially quite sound now, and should be ready to extend any credit arrangements required by India.

Stressing the importance for a large country like India with a growing population to exert every effort to develop its agriculture to the point of self-sufficiency in food, he said the Export-Import Bank would sympathetically consider extending credits to projects in the private sector for setting up fertiliser or tractor-manufacturing plants.

The Bank had under study one or two projects in the private sector for possible loans, Mr. Waugh said, but he declined to discuss the nature of the projects. The scope of the Bank's future operations in India would depend on the ability of particular projects to make or save dollars, he said, inasmuch as the Bank made loans in dollars and collects repayment in dollars.

Discussing prospects of increased American private capital investment in India, he said that the "rather complex" tax structure of India frightened foreign business men not familiar with its impact on new ventures. He said he had discussions with Indian Government officials in this regard and they had agreed to study the question of simplification of the tax structure to attract more foreign private capital.

• • • •

The recent $238 million sale of U.S. reserve agricultural commodities to India will provide the Export-Import Bank with the equivalent of nearly $60 million in rupees for lending to private concerns in India, according to Lynn U. Stambaugh, First Vice-President and Vice-Chairman of the Bank. Sale of agricultural commodities to India is made under Public Law 480. A section of that law provides that the Export-Import Bank may receive, for lending, to certain types of firms, up to 25 per cent. of local currencies paid for such purchases. The agreement, which was signed on 25th September 1958, provides for financing the sale of 2,800,000 metric tons of wheat, 100,000 metric tons of corn and 200,000 metric tons of grain sorghums. The agreement also provides that the Indian rupees accruing under the agreement will be used for loans to the Indian Government for the financing of economic development projects, some grants and for meeting U.S. expenditure in India.

U.S. DEVELOPMENT LOAN FUND

The U.S. Development Loan Fund (D.L.F.) has approved loans or earmarked funds for projects aggregating $563,808,000 in the first year of operations which ended on 20th October 1958, including $75 million for a variety of projects in India. The D.L.F. has a lending fund of $698,680,000, all of which is expected to be obligated by early next year. Loan applications on hand are from 45 countries for a total of $1,549,397,000. As against this the approved loans are:

Ceylon: $3.25 million for railroad, road, and irrigation projects. *India*: $75 million for railway, road, cement and jute projects. *Israel*: $15 million for development projects. *Pakistan*: $70.2 million for water and sewage, electric, railway, harbour and multi-purpose projects. *Turkey*: $10 million for Industrial Development Bank. *Iran*: $40 million for its Development Plan Organisation Projects. *Liberia*: $3.19 million for sawmill and communication projects. *Sudan*: $10 million for a cotton textile mill. *Tunisia*: $2.4 million for a national railway project.

CENTRAL BANK FOR MALAYA

The Federal Legislative Council in Kuala Lumpur has passed legislation for setting up a Central Bank of Malaya. For the time being, the Bank's area of operation will be limited to the Federation, but the question of extending it to Singapore and other territories will be considered at a later stage. Its main functions include the issue of currency, the safeguarding of the currency and influencing credit to the benefit of the country. The Central Bank will also prescribe the minimum liquid assets which the commercial banks might hold. Besides, it is entitled to recommend to the commercial banks that they maintain a prescribed percentage of their deposits in the form of assets held in the Federation. The Central Bank, however, will not act as an issue bank until the present Currency Board ceases to have authority for this purpose.

AUSTRALIA BORROWS IN NEW YORK

Australia successfully floated last week in New York a Commonwealth cash loan of $25 million. The loan, which has a maturity of 25 years, bears interest at the rate of 5 per cent. and the issue price was 97½ per cent. The issue was over-subscribed.

A loan for a like amount was raised by Australia in New York in April this year, but the rate of interest was 4½ per cent. The higher rate offered for the latest loan was caused by the steep increase in yields of fixed-interest securities on the New York market this year. It may be noted that in 1954 Australia was the first foreign Government to borrow in New York since 1947, and since then it had raised $120 million of the $243 million borrowed by all foreign Governments combined.

STORY OF ITALY'S ECONOMIC REGENERATION

VAST STRIDES IN PETROCHEMISTRY

By The Correspondent of Swiss Bank Corporation, Basle

[There has been widespread publicity to the economic achievements of West Germany. While the progress of this continental country during the last 10 years has been astounding and much of the world's admiration for it is deserved, very little has been said and written about the remarkable post-war gains made by Italy, which had also suffered heavily during the war. It is true that Italy's achievements are less spectacular as compared with its Prussian neighbour, but they are remarkable nonetheless, having regard to Italy's deficiency in natural resources and the heavy odds it had to face in the initial post-war years. This will be evident from the article on this page, published by the kind courtesy of the Swiss Bank Corporation Bulletin. *This inspiring story of Italy's economic progress should be of particular interest to this country, because Italy, too, was a relatively less developed country as compared with others in the West. It is noteworthy that, in the underdeveloped Southern Italy, there has been a forty per cent. increase in agricultural productivity. Another notable achievement of Italy which holds out a lesson for India is in the field of petrochemicals, including fertilisers. We commend this article to the attention of our economic planners.—Ed.]*

BY almost superhuman effort, never relaxed, against odds that seemed all but insuperable less than 10 years ago, the Italian people, in their upward climb, have now reached that stage of economic achievement that justifies the belief in the feasibility of reaching the goal in view—a standard of living for all in Italy equal to that prevailing elsewhere in Europe.

In 1957, for the first time since World War II, the Italian balance of payments showed a surplus. Against a deficit of L. 482 milliards in the balance of trade, there was a surplus of L. 440 milliards in the balance of services, so that the net deficit in the balance on current account, L. 366 milliards in 1952 and L. 136 milliards in 1956, had shrunk to only L. 42 milliards in 1957. Taking into account foreign aid, which, in 1957, was only L. 76 milliards as against L. 82 milliards in 1956 and L. 151 milliards in 1952, the surplus in the balance of payments was L. 34 milliards.

Expressed in real terms, the gross national income in 1957 was 5.6 per cent. above that in 1956, in which year the rise was 4.1 per cent. *Per capita*, the national income rose steadily, year by year, from $296 in 1950 to $428 in 1957. In purchasing power, the increase in average income from 1948 to 1957 was 50 per cent.

Ten years ago, the handicaps that made a solution of the economic problems of Italy seem almost insoluble were:

1. *Overpopulation*: Owing to rapid natural increase, despite continuous emigration, the number of workers has always been about 2,000,000 more than could be gainfully employed. As fast as new jobs were created by the expansion of the economy, the number of workers in search of employment grew. In 1955, the population was 48 million. Today, the figure exceeds 50 million. By 1965, the number is expected to be 52.5 million and by 1975 54 million. Only continuous industrial expansion could absorb the increase.

2. *No abundant natural sources of raw materials exist*: Italy has only meagre supplies of coal of inferior quality and little iron ore of her own.

3. *Only about half the energy consumed is obtainable from sources inside Italy itself.* (O.E.E.C. 1956): All figures on the Italian energy balance, present and future, are necessarily only rough estimates, indicative in order of magnitude. The coal equivalent of the hydro-electric power generated in 1957 (32 milliards kw.h.) was about 13 million tons. Hydro-power accounts for about 30 per cent. of all energy consumed in Italy (O.E.E.C. 1956). The coal equivalent of the energy of all kinds consumed in Italy now is about 43 million tons. Of that, Italian coal accounts for only 1.1 million tons.

In 1947, sources of natural gas were discovered. This led to a swift expansion of many Italian industries, above all the chemical industries for which natural gas is not only a fuel but also a prime raw material. As natural gas is cheaper than other fuels, this facilitates Italian export. By 1956, the natural gas recovered and used as a fuel was equivalent to about 3.5 million tons of crude oil or 5 million tons of coal. By 1965, the output of natural gas is expected to be equivalent to 6.9 million tons of coal and by 1975 to 8.7 million. Experts, however, believe that these deposits of natural gas will be exhausted in about 25 years' time.

By 1965, when all sources of waterpower in Italy have been developed, the energy output from this quarter is expected to aggregate about 50 milliards kw.h., equivalent to about 21 million tons of coal. Natural gas and waterpower together would then yield the equivalent of about 28 million tons of coal, and in 1975 about 30 million, while the energy needs in 1965 are estimated at about 46 million tons and in 1975 at 84 million.

Up till now, the energy deficit of Italy has been covered by the import of coal and oil. Crude oil costs about the same in Italy as in the U.S.A., but coal costs in Italy three times as much. This imported energy must be paid for out of the proceeds of the export of industrial products. To be competitive on the world market, the price of Italian exports must be kept low. This will be difficult. For Italy must obtain most industrial raw materials from the same sources and at the same prices as her competitors. Obviously, production costs in Italy must be held very low. Large production units and low cost production plants must be installed, processes simplified and rationalised and the organisation of industry be modernised.

That, in brief, surveys the perpetual problem. What Italy has done to offset the lack of natural sources of raw materials is vividly illustrated by the gigantic strides made by the chemical industries since World War II. "Air, water, sand, salt, limestone and pyrites" were almost the only raw materials existing in abundance until the discovery in North Italy of natural gas—almost pure methane—in 1947. Research done since by Montecatini—the great Italian chemical concern—has led to the discovery of processes whereby methane could be converted into ammonia used for making synthetic fertilisers and plastics at prices lower than any in the world. In 1948, the aggregate value of products of the Italian chemical industry was L. 414 milliards at present prices. In 1957, the corresponding figure was L. 1160 milliards.

In 1953, a vast stride forwards was made through the Montecatini researches in petrochemistry, starting a revolution in the field of plastics. The raw material is the residue of the refining of crude oil. The development of the Italian oil refining industry which now has an approximate capacity of 30 million tons of crude per year—about half of the products of refinement being exported—has opened up new possibilities for the Italian chemical industry. Cheap synthetic products made from the residues of refining will take the place of many natural raw materials until now imported.

Polypropylene is the chemical, and Moplen the trade-name of the new plastic developed by Montecatini. Moplen is the lightest plastic ever made. Even at high temperatures, Moplen is highly resistant to heat, acids and alkalis and has excellent dielectric properties. The surface is extremely hard. Among its chief uses are for making: New synthetic fibres having all the characteristic properties of cotton and wool but costing only a fraction of these, very low-priced artificial rubber having quite exceptional properties, pipes and tubes for use in the building trades, to replace those of iron and steel, elastic film of great tensile strength, bottles, flasks, toys and parts for radio and television sets.

At Ravenna, where the new petrochemical works of the A.N.I.C. are situated, the output of artificial ruober of the conventional GR-S type made from natural gas is to be 60,000 and that of nitrogen fertilisers 750,000 tons yearly. Italy itself uses about 73,000 tons of rubber yearly, 27 per cent. of which is imported synthetic rubber. About 30,000 tons of the Ravenna output is destined for sale in Italy itself and 30,000 for export. Doubtless the expectation is that a large part of the surplus available for export will be saleable to the countries of the Common Market of Six.

Still more formidable is the problem of closing the ever-widening energy deficit. For a time, the increase in the output of natural gas and of hydro-electric power will help to check the increase of imports of coal and oil. But, after 1965, no great augmentation of the supply of natural gas or water-power is to be expected, whereas the continuous increase of export will augment the consumption of energy at a faster rate than ever.

Beyond all doubt, the only real solution of the energy-supply problem is to develop processes for the generation of nuclear power at economic cost. Recently, an Italian industrialist described the task as "a chase after cheap kw.h." One great handicap is the extremely heavy cost of nuclear research. Reactors built now would be solely for the purpose of conducting research. A reactor costs at least three times as much as a thermal power generating work, and takes quite four years to be built. So nuclear power for industrial use even in small quantities could not be expected before 1965.

Nevertheless, the problem is being attacked vigorously. As far back as 1955, the Edison-Volta—Societa Elettronucleare Italiana (S.E.L.N.I.), Milan, decided to build the first atomic power plant of high capacity, and chose the PWR-Yankee type fuelled with slightly enriched uranium. The State-owned E.N.I.-I.R.I. decided to build three reactors, one in North, one in Central and one in South Italy. Besides that, Montecatini and Fiat have joined forces to conduct nuclear research for industrial purposes. On 2nd May, 1958, Agip Nucleare di Milano signed an agreement with the Nuclear Power Plant Company of Great Britain for the delivery of a reactor of the Calder Hall type, to be completed by 1962.

As far back as 1950, the Italian Government began to grapple in earnest with the formidable task of raising the productivity of South Italy to the same level as that existing in the North. Government funds were made available through a special agency known as the Cassa del Mezzogiorno. Over a period of 15 years, the equivalent of $3,200 million was spent on land reclamation, drainage, water conservation, irrigation, road and railway building, construction of power works and industrial plant. Up till the end of 1957, expenditure totalled $1600 million, of which $238 million in loans had been furnished by the World Bank. Agricultural productivity has been raised by 40 per cent. This has stimulated a demand for industrial products of all kinds.

In the U.S.A., the potentialities of this new market for the sale of American products was immediately recognised. How American and Italian foreign trade has expanded in consequence is clearly shown by the steady development, year after year, of the Milan Trade Fair.

Number of Displays at the Milan Trade Fair

Year	Total	Foreign	Italian	German	American
1950	8,428	3,096	5,332	923	433
1954	12,336	3,585	8 751	1 196	579
1956	13 153	4 034	9,119	1,389	640
1958	13,315	3,378	9,937	1,148	621

Every year, the American collective display attracts larger and larger crowds because: (1) the American products displayed are chosen to stimulate the desire of Italian people for a higher standard of living, and (2) a large staff of American trade experts and practical business men are on hand offering their services, free of charge, to show Italian firms how to increase their sales in the U.S.A. At the American national display, in 1958, 50 American firms exhibited over 200 new products, seen for the first time outside the U.S.A. Skilled Italian-speaking demonstrators were in attendance. Over 50,000 people passed through the display daily. One upshot of these enterprising American methods was that in 1957 the volume of trade between the U.S.A. and Italy was an all-time record.

TEXTILE FEDERATION ON WAGES

LINK EMOLUMENTS TO PRODUCTIVITY

THE Central Wage Board for the Cotton Textile Industry, which is now engaged in evolving a wage structure for the industry, is certainly faced with a difficult task. For one thing, since the cotton mill industry is the largest employer of labour, accounting as it does for over 800,000 workers on its pay-rolls, any schedule of wages for the industry will have wide repercussions on the general level of industrial wages in India. Secondly, it is enquiring into the wage structure in the industry at a time when several units in the industry have either closed, or are about to close down and many other units continue to work at a meagre margin of profit and not a few of them are confronted with actual loss. Surely, the current period can by no means be regarded as a normal one for the industry. The time is hardly propitious for that elaborate and comprehensive examination of issues which must necessarily precede the establishment of correct norms for wages in India's premier industry.

Generally speaking, the wage structure in an industry should be related to the overall national level of wages, to the financial capacity of the particular industry and the level of productivity of the workers employed therein. Appropriately enough, the importance of these factors has been neatly emphasised in the comprehensive memorandum submitted to the Board by the Indian Cotton Mills' Federation. At the outset, the Federation has examined the financial capacity of the industry. It points out how the industry, as a whole, incurred heavy losses in 1957. The fact that in a brief period of seven months ended 31st July 1958, the Government found it necessary to adjust excise duties on three occasions is "an eloquent testimony to the serious plight in which the industry finds itself." Because of the continuing strain on the consumers' purse, thanks to the rise in food prices, the series of recent reductions in excise duty "have not helped the industry to do better than in the last two years."

Excise Duty

The annual revenue on the basis of the current scale of excise duties is placed at Rs. 48 crores or Rs. 20 crores more than the actual revenue in 1955-56 and Rs. 3 crores more than the calculated revenue on the basis of March 1956 rates. It is, however, true that the revenue on the present basis of excise duty is less than the Rs. 72 crores which the industry would have had to pay if the excise duty rates had been retained at the high September 1956 levels. But excise duty is not the only burden on the industry. In recent years, new burdens have come to stay, such as the special excise duty levied in lieu of sales tax which has resulted in an additional burden of Rs. 4 crores per year and sales tax imposed in some States on stores and materials (additional burden of Rs. 2 crores). Further, in the context of the consumer resistance to high prices, mills cannot pass on to the consumer the whole or the major portion of the burden. The reduction in excise duty was effected in the hope that it would prove to be of some relief to the mills. Judging from figures relating to accumulation of cloth stocks, this expectation has not materialised. At the end of September 1958, stocks with mills aggregated 592,800 bales (of 1,500 yards each), as against 565,200 bales at the end of June 1958 and 583,000 bales at the end of January last. The industry, as the Federation points out, is "still not out of the woods."

If internal offtake of cloth is sluggish, external offtake is no better. Exports of cloth, on the basis of actual export in the first half of the current year, are running at an annual total of 630 million yards, as against 854 million yards in 1957 and 788 million yards in 1956. The industry had to contend so far with competition from the U.K., Pakistan, Hong Kong and Japan. But it has now to contend with China too. In this connection, the Federation says: "When a formidable exporter like Japan has begun to quail before the Chinese onslaught and has started in terms of reducing its production so as to equate it to reduced demand, it is needless to dilate on the effects of Chinese competition on India."

In view, however, of the serious foreign exchange position with which the Indian economy has been confronted, the Federation points out, India should, far from being disheartened, actually treat these difficulties as a challenge to redouble its efforts to maintain, if not expand, its exports. In the Plan, cotton textiles are expected to earn for the country foreign exchange of the value of Rs. 75 crores per annum, as against the actual average of Rs. 65 crores in the last four or five years. If, instead of increasing exports of cotton textiles as visualised in the Plan, they suffer a precipitate fall, that will have serious repercussion on the country's economy. Even assuming that India is successful in securing foreign loans to meet the foreign exchange gap in part or in full, it would be essential in the interest of India's economy and, taking a long-term view, to make all-out efforts to increase India's exports, as otherwise "prospects for the Third Plan, with so many loans to be repaid, will be very bleak."

The Federation recalls that, since 1947, wages in India have increased from time to time "without due attention being paid to workload or productivity." In Bombay, the total wages increased from Rs. 69.87 (basic wage Rs. 34.50 and average D.A. for 26 working days Rs. 35.37) in 1946 to Rs. 123.56 (basic wage Rs. 49.56 and D.A. Rs. 74.00) in 1957 and still further to Rs. 134.74 (basic wage: Rs. 50.14 and D.A. Rs. 84.60) in October 1958. Apart from increase in wages, the mill workers have been granted several benefits such as provident fund, retrenchment or lay-off compensation, improvement in working conditions, gratuity, State Insurance scheme and paid holidays. The cumulative burden of these benefits per worker per month is estimated at Rs. 35.36—employers' contribution to State Insurance Scheme Rs. 1.68; bonus Rs. 7.50; provident fund Rs. 8.42; gratuity Rs. 3.12; leave with pay and four paid festival holidays Rs. 8.20 and retrenchment and lay-off compensation Rs. 6.46. Thus, the total monthly earnings of a worker in October 1958 aggregate about Rs. 170.12.

Minimum Wages

The minimum wages (including D.A.) in the textile industry compare favourably with the level of minimum wages in other industries. In other countries of the world, wages for textile workers are among the lowest as compared with other industries. The hourly earnings of textile workers in India in 1949 were 107 per cent. of the average hourly earnings of all industries whereas similar figures in other countries were: the U.S. 85; the U.K. 85; Japan 48 to 52 and Italy 86. The productivity of labour in Indian textile industry is of the lowest. In many cases, wage increases have been granted purely on psychological grounds. The industry has been insisting that wages should be linked with workloads, and duties of all occupations more clearly defined. The labour unions on historical or tactical grounds have been opposed to the idea. The Industry Tribunals, which should look to the future of the industry, have been reluctant to accept workload assessments by time and motion study experts and have dealt with these issues in an *ad hoc* manner. It is possible that the Industrial Tribunals may not be prepared to accept a particular finding of an expert. But to reject workload as a basis of determining wages appears to be an unsound practice. Even where Industrial Courts have fixed workloads on a rational basis, the workers have not implemented these decisions and have resorted to strikes.

Wage rates in the U.K., and the U.S.A. are very much higher than in India, but their wage cost per yard of cloth or per lb. of yarn are comparable, and in some cases, even less than India. As compared with Japan, India's wage cost per yard is at least 50 per cent. higher. The cost of wages in Hong Kong is very much lower. The wages of Indian workers "can be maintained at the present level and even increased, only through an increase in productivity, that is, by rationalisation of labour complements." Further, mills in upcountry centres have in the past been established on the basis of lower wages than mills in Bombay and Ahmedabad. However, they have been employing a very large number of workers and substantially more, as compared to the number of workers employed per spindle and per loom in Bombay and Ahmedabad. During recent years, there has been a steep rise in the wages in these centres and all the advantage of lower wages has been completely wiped out. In fact, they are today in a much worse position because the number of persons employed by them cannot be reduced without agreement with the unions and these agreements have been few and far between. The upcountry units are also not equipped to meet the changing demand, and have to struggle for their existence, caught as they are between high costs and distress sales.

The Federation emphasises that it is "not at all averse to paying higher wages; in fact, it is keen on raising the wage level, provided it is linked with higher productivity." To the extent that the industry is unable to replace its old and antiquated machinery by modern equipment, a worker must look after more machinery units than at present. An enduring solution of the problem, however, lies in a "quick replacement of obsolete machinery by modern machines." The Textile Enquiry Committee observed that "a large majority of the machines in existence today were installed more than 40 years back and have outlived their usefulness." It has also pointed out that, if such machinery is not replaced at an early date, its effect would be felt in the form of low production, bad quality of production, engagement of large number of workers and high cost of production. The Federation refers to the fact that the industry's rehabilitation requirement, according to the returns submitted to the Rehabilitation Commission, are in the region of Rs. 400 to Rs. 500 crores for purposes of bringing its machinery on par with that of the modern mills abroad. Although it is obvious that the industry cannot hope to undertake a rehabilitation programme on this scale, every effort must be made to enable the industry to undertake as large a portion of it as possible. Several specialised financing agencies have been established. Nevertheless, the industry must be enabled to have annual surpluses from which it can raise its own finance or pay due instalments on loans. This points to the directions in which the wage cost must be adjusted.

Taxation

Rehabilitation has to be financed from taxed profits. The rate of tax on companies which stood at 43.4 per cent. for six years (1951-52 to 1956-57) was raised to 51.5 per cent. in 1957-58. Wealth tax of ½ per cent. on paid-up capital and reserves has also been imposed. A much larger trading profit has, therefore, to be made in order to have the same retained profit as in earlier years. In all this analysis, no account has been taken of the rise in other elements of cost. The prices of stores, colours and chemicals have risen, thanks to severe curtailment of imports. Rates of electricity, coal, furnace oil and freight have gone up. The industry has thus been caught between a rise in costs and a fall in realisation, and from the present indications, it will be quite some time before the industry can earn at least its depreciation and development rebate. If further deterioration in the situation and closures of mills or shifts are to be averted, the cost of production must be brought down not only to increase the competitive position of the industry's products in the export markets, but also to bring its price within the means of the consuming public.

The Wage Board, therefore, has been urged by the Federation to "give a bold lead by definitely linking stipulated workloads to wages and give certain time to mills as well as employees to come to the specified workload." In the event of labour refusing to accept this workload and insisting on a lower workload, scales of wages as well as dearness allowance should be correspondingly reduced. In many centres, according to the Federation, the workloads are manifestly sub-normal—for instance, working of one loom to a weaver or a single side to a spinner. The Federation's submission is that where the workloads are sub-normal, they should be brought to a normal level without involving any additional remuneration. The present remuneration settled in most cases by Industrial Tribunals is a fair remuneration according to impartial opinion, but if the industry is not getting a fair day's work for a fair remuneration, it is only just that the workload should be brought to the normal level without any change in remuneration. The Federation further submits that where in relation to the present workloads there is a clear case for reducing basic wage rates, the Wage Board should not hesitate to make the necessary adjustment. In order, however, to maintain peaceful and harmonious industrial relations, the Federation would have no objection to the existing workers continuing to get the prevailing basic wage rates, the excess being treated as the personal pay of existing workers. As and when new workers come in, they will get wage rates fixed in relation to workloads.

MR. MACMILLAN'S ADDRESS TO MILLOWNERS

CHINA STEALS A MARCH OVER INDIA

From A Special Correspondent

MANCHESTER, 21st *October*

THE cotton trade's annual conference, held as usual at Harrogate and organised by the Cotton Board, was memorable this year for the presence of the Prime Minister and the speech he made to the assembled delegates. In view of the absence of any definite settlement in the negotiations continuing between Lancashire textile interests and Hong Kong, it was not expected that either Lord Rochdale, the Cotton Board Chairman, or the Premier would be able to deal with the matter on more than general lines.

MANCHESTER LETTER

Mr. Harold Macmillan urged the conference, which was attended by more than 1,000 textile executives, managers and trade union officials, to consider "some of the deeper issues involved." The threat to the future of the cotton industry from duty-free manufactured goods from the Asian Commonwealth sprang from the way in which the whole political and economic structure of the Commonwealth had developed. The Prime Minister continued:

"Some of these countries—independent members of the Commonwealth like India and Pakistan—are struggling with many social and political consequences of poverty and low standards of living. For them the production and export of manufactured goods is vital to their employment, their future and their development.

"We are going to have to face this difficult and human problem in the years ahead in many fields. How are we to reconcile, on the one hand, the fact that the desperate needs of the poorer countries in the Commonwealth can only be met if they can expand their trade, with the risk, on the other hand, that increased exports of manufactured goods will threaten to disrupt long-established industries in the richer countries, with honourable traditions of skill and effort?"

Not Only Economics

Stressing the political aspect of the problem, the Prime Minister referred to the new and powerful movements in Asia and Africa since the Second World War of nations determined to secure for themselves some of the benefits of modern science and technology. All this had led to great turmoil and confusion as well as much progress.

"These peoples have set their hearts on progress and, broadly, they admire and are keen to associate with any group of advanced peoples who are prepared to help them to achieve it. At the same time, the great powers have been ranged into two opposite groups, the Soviet State, its allies and satellites, and the groupings of the British Commonwealth, U.S., and their allies and friends.

"It is of vital importance to the future of our civilisation and indeed for its survival and of all that we believe in that these new communities should be drawn into our ambit and not repelled from it, and it is in this respect that the political concept of the Commonwealth has a unique role to play in the years that lie immediately before us. That this brings to us difficulties is, of course, true, but great as they are and harsh as they are in some of their incidence, they are not comparable with the disaster that we should suffer if this struggle for the soul of the uncommitted peoples were to go the wrong way."

Adjustments Needed

If these new territories were to raise their internal standards, they must both manufacture and export. Both in the short run and in the long run this, of course, would mean many adjustments in our country as well as in theirs.

The Montreal Conference emphasised how important it was that obstacles should not be placed in the way of the export of manufactured goods from the poorer Commonwealth countries. It also emphasised that, whenever problems arose, because sharp increases in such exports threatened to disrupt an established industry in the importing country, solutions should be found through consultations between the industries concerned directed towards an agreed and orderly evolution of the trade.

That was the proper Commonwealth way of doing things. That was the basis of our policy. "We do not believe," the Prime Minister said, "that the right way of settling arguments within the Commonwealth family is by threats."

A Simple Choice

During the course of the conference Mr. W. T. Winterbottom, President of the International Federation of Cotton and Allied Textile Industries, gave the industry a simple choice—"Get on or get out." Urging the need to get more in line with modern industrial methods, he said: "Now is our great chance to do this by taking immediate advantage of the technological changes which have taken place just at the time when the cycle of replacement of the Lancashire cotton industry is upon us."

Figures showed that the industry was faced with a problem of obsolescence and not one of redundancy, he added. On the basis of 750,000,000 lbs. being the quantity of cotton yarn required to satisfy minimum requirements in the future, an industry consisting of 10 million ring spindles would be needed—or 6,000,000 spindles on double shifts each of 38¾ hours.

At present, the spinning trade consisted of 10¼ million ring spindles, of which about 3½ million had been installed since the war. "I suggest the industry needs another three million spindles within the next five years," declared Mr. Winterbottom, "giving a total of 6½ million modern rings. It is essential to move on to shift working as early as possible. New machinery is expensive and must be worked intensively if capital costs are to be covered."

Assessing prospects, Mr. Winterbottom said: "Home market consumption is not likely to fall and should steadily rise, both through the growth in population and an improved standard of living. No substantial increase in exports can be foreseen, in spite of our most strenuous efforts; on the other hand, there is hardly any room for a further decrease."

"Big Buying" Dangers

The growing importance of big buyers in the distributive trade encouraged a vertical set-up in the industry, he continued. The most serious danger was that, if the bulk buyers should decide to support a policy of buying from the Commonwealth rather than from Lancashire, the effect on the home industry could be catastrophic.

Some of the more astute buyers were already breathing the words "Hong Kong" down the necks of spinners, weavers and knitters. Between the wars, it had been "Japan," but the effect was just the same. If the idea of a free economy was accepted, agreement over the limited field which had been the subject of the recent negotiations could not be regarded as the final answer to the problem. "First we had Indian goods in our home market, then Hong Kong, then Pakistan," said Mr. Winterbottom. "Is the queue to continue, with East Africa, the West Indies, Nigeria, Ghana?" he asked, amid applause.

Changes in marketing and distribution of textiles were discussed by Mr. Eric Kann, a Director of Marks and Spencer Ltd. He instanced several favourable factors which offered opportunities to the textile trade. More than five million families had a net income after tax of at least £750 a year, double the number in 1938. Spending on goods and services had been trebled in the last 20 years. Fashion consciousness had increased under the impact of films, radio and television and foreign travel had broadened the outlook of many potential consumers.

A significant change had occurred in the age composition of the population, he added. The post-war bulge was now entering the age group of greatest importance to the textile industry. By 1967, the number of young people between 19 and 29 years of age would be over a million higher than at present.

Hong Kong "Sensitive"

During a special question-and-answer session, Sir Cuthbert Clegg, Vice-President of the Cotton Manufacturers' Association and a member of the Hong Kong mission, said he found that the millowners in the Colony were extremely sensitive about criticisms of their trading tactics being "unfair." He believed that, if any agreement was reached, sentiment in Lancashire towards Hong Kong would rapidly alter.

Sir Alfred Roberts, Secretary of the Card-room Workers' Amalgamation, said the action committees which had been set up in several

STABILISATION OF MARKETS FOR PRIMARY PRODUCTS

RECOMMENDATIONS OF G.A.T.T. EXPERTS

ELSEWHERE in this issue, *vide* page 736, we have summarised the findings of the panel of four economic experts, appointed by the members of G.A.T.T., on trends in international trade. We give below an account of the recommendations of the experts designed to improve the share of primary producing countries in an expanding world trade, as well as of their comments on the commercial policies adopted by the industrialised and less industrialised countries. This is a subject of vital importance to all those interested in the well-being of the world. The suggestions of the experts are sound and will go a long way towards improving the lot of underdeveloped countries, if they are implemented:

The avoidance of business cycles and the maintenance of a steady rate of domestic growth are the most important contributions which the highly industrialised countries can make to the stabilisation of the markets for primary products. Although the present recession in the United States has been somewhat more severe than other post-war recessions, it has been nothing like as severe as fluctuations in the inter-war period. All governments without exception now have the intention and the means of preventing serious depressions.

Nevertheless, the present recession in the United States has had serious effects, and action to prevent recessions can and should be further improved. A basic problem in the highly industrialised countries is to find ways to prevent inflation (particularly of the cost-push type), so that a high and growing level of production and employment can be maintained without a perpetual inflation of prices.

The less-developed countries may be able to make a modest contribution to the problem of general economic stabilisation through their own domestic financial policies.

International Liquidity

The present monetary reserves of countries outside the United States are now much lower, relatively to the value of their imports, than they were in 1937; but they are about as high as they were in 1928, and are now supplemented by increased liquidity through institutions like the International Monetary Fund and the European Payments Union. However, since countries are now less willing to deflate domestically as a means of meeting balance-of-payments deficits, they need higher international reserves than in the 1920's, in order to meet temporary strains without the use of exchange controls, import restrictions or exchange depreciations.

The last two recessions have not in fact caused a loss of reserves by the rest of the world to the United States. But the distribution of reserves among the other countries has become unbalanced. We think that an increase in international liquidity is desirable and consider that something like a doubling of the resources and drawing rights under the International Monetary Fund would be the best way to bring this about.

In considering the needs of various countries for increased liquidity through the International Monetary Fund, stress should be put upon the variability as well as the size of a country's international transactions. A country which relies on one or two primary products for the greater part of its export earnings may be subject to especially large variations.

Commercial Policy

Protectionist policies should, as far as possible, not be used to relieve the domestic and external pressures which arise during a temporary recession. It is desirable to supplement general stabilisation policies with measures for the stabilisation of particular commodity markets, where such measures are practicable and are innocuous on other grounds. But there are real practical difficulties in this field.

National measures designed to stabilise agricultural markets should, whenever possible, be based upon the "buffer-stock" principle (of buying into an official stock when the price is low and selling when the price is high) or upon the "variable levy-deficiency-payment" principle (of varying the rate of tax or subsidy in respect of the product concerned so as to keep the producer's net return steady) rather than upon the principle of stabilising domestic prices through controlling imports or exports.

A country which exports a primary product can stabilise the price received by its producers by operating a "buffer-fund" (by taxing exports when the price is high and using the funds so accumulated to subsidise exports when the price is low). The "buffer-stock" principle has the social advantage of carrying the product physically from a time when its value is low to a time when its value is high. There is no technical reason why an exporting country should not operate a combined "buffer-fund-buffer-stock" stabilising device.

Stabilisation devices should not be too ambitious. By supporting for a time a price which is really too high, the authorities may in the end actually de-stabilise the market, especially in the case of a buffer-stock which may be left with an unmanageable surplus stock for disposal. If practicable, a stabilisation scheme should cover a whole group of commodities in those cases in which the commodities are closely related in production or consumption.

International Commodity Agreements

We endorse the principle that international commodity agreements should allow for equal representation of importing and exporting countries, though this may have made it more difficult at times to reach agreement on such schemes. Provided that the technical problems did not become too great, agreement might be facilitated by simultaneous negotiation on a number of commodities, since a country which has an exporter's interest in one commodity often has an importer's interest in another.

Where costs of storage are not too heavy, a buffer-stock scheme has advantages over schemes based upon long-term contracts or export quotas. A buffer-stock is most likely to work successfully if its operations are not based on any rigid price formula. Serious attention might be paid to the possibility of getting close co-operative action between a number of otherwise independent national buffer-stocks covering a commodity or group of commodities. It is important that the main importing countries should take part in any such scheme; and these countries might publish the value of any stocks so held side by side with their reserves of gold and foreign exchange. The non-ferrous metals might prove suitable for such treatment.

Protectionism in Industrial Countries

A number of underdeveloped countries are now exporting low-priced manufactures, the markets for which depend upon moderation in industrial protectionism in the highly industrialised countries.

Agricultural protectionism in the industrial countries is the outcome of a complicated system of agricultural support schemes, whose object is stabilisation as well as protection. The most satisfactory measure of the degree of agricultural protectionism in such schemes would be a comparison between the total return actually received by the domestic farmer for his production and the return which would correspond to the ruling world price. We recommend that the F.A.O. and the G.A.T.T. should make a joint study of the possibility of measuring degrees of agricultural protectionism on these lines.

Since in North America and Western Europe as a whole net imports of agricultural products represent the relatively narrow margin by which their large domestic consumption exceeds their large, but not quite so large, domestic production, a relatively small restraint on domestic production or stimulus to domestic consumption could lead to a large percentage increase in their net imports. For this reason, much could be achieved by some moderate change in the direction of the agricultural policies of the highly industrialised countries.

A moderation of present high levels of agricultural protection should be accompanied by measures to improve the structure of land holdings, to ease the process of elimination of uneconomic forms of production, and to find alternative occupations for redundant agricultural workers.

The countries which would gain most from a moderation of agricultural protectionism in North America and Western Europe would be the outside producers of competing temperate-zone foodstuffs, such as cereals, meat, and dairy produce; and most of these countries are relatively rich. But there are some relatively poor countries which export such products; and there are also some products, such as tobacco, cotton, sugar, and oilseeds, whose production is protected or export is assisted in the highly industrialised countries and which are exported mainly by the poorer, underdeveloped countries.

Agricultural protectionism in the highly industrialised countries may actually benefit some outside countries at the expense of others. Subsidised exports are unreliable and hurt low-cost producers. Agricultural protectionism should, therefore, be moderated in exporting as well as importing countries, and should be combined with a shift towards giving economic aid to underdeveloped countries more and more in direct financial grants and less and less in the form of low-priced exports.

In order that agricultural protectionism may have the least adverse effect upon consumption, we would recommend, wherever possible, a shift away from "price-support" towards "deficiency-payments" methods of agricultural protectionism.

Buying agricultural products by official stockpiling agencies is often the best form of national stabilisation measure. But it is the worst form of national protective measure since it is likely to end in an unmanageable surplus stock. Where such stocks arise, as much care as possible should be taken to dispose of them by means which involve additional consumption and do not hurt the interests of competing low-cost producers. But the only basic cure is a moderation of the degree of protection and a shift to other forms of agricultural policy which do not involve continuous stockpiling.

Revenue Duties

The level of taxation on the main primary products, such as coffee, tea and tobacco, which are subject to revenue duties in the industrial countries of Continental Western Europe appears to be sufficiently high to act as a major restraint on consumption and import demand. There is little justification, other than the weight of fiscal traditions, to impose the main burden of taxation on non-competing imports in the form of "special internal taxes," less accessible to the bargaining process applicable to ordinary customs duties under G.A.T.T.'s rules. As long as this situation exists, the Havana Charter's rule for negotiation of revenue duties should be made applicable to the G.A.T.T. negotiations procedures.

Some of the reasons that render difficult a substantial moderation in policies of agricultural protectionism in industrial countries—namely, the political, social and security pressures in favour of protecting important sectors of domestic food production—are not generally applicable to *revenue duties*, which, moreover, bear particularly on the export potentiality of some of the "poorest" of the underdeveloped countries.

A substantial contribution could be made by the industrial countries, through the alleviation of revenue duties, to give to non-industrial areas better access to their markets and therefore assist them in securing larger export proceeds to finance the import requirements of their development programmes.

The application of protectionist measures in favour of their mining and oil industries limits access to the domestic market in some highly industrialised countries; and this reduces the earning capacity of primary producers, preventing them from enjoying their natural competitive advantage in that field.

European Economic Community

In so far as the European Economic Community leads to higher productivity and real incomes in Europe, it will tend to increase the European demand for raw materials and foodstuffs. There will also be some diversion of trade away from outside sources on to European sources. These dangers of trade diversion will be the less,

(i) the greater the number of countries covered by the common market;

(ii) the lower is the common tariff on goods imported from outside, and

(iii) the greater the range of commodities (agricultural as well as industrial) opened to free trade within Europe.

The agricultural arrangements in E.E.C. will be of special importance for the prospects of outside producers of primary products. The Treaty of Rome itself does not lay down in detail how the agricultural marketing arrange-

MOUNTING COAL STOCKS IN EUROPE

E.C.S.C. COUNCIL EVOLVES A PALLIATIVE

THE two-day meeting of the Council of Ministers of the six-nation European Coal and Steel Community, held recently in Luxemburg to discuss the crisis in the European coal industry and evolve a solution, had no easy task before it. After heated exchanges over the E.C.S.C. High Authority's accusation against Belgium for not having played its part in preparing for the end of the initial transition period in February last, the meeting decided upon certain measures, which are expected to go some way to solve the problem. The malady from which the E.C.S.C. member-countries are suffering is the mounting stocks of coal with them, due to large imports of cheaper U.S. and Polish coal and the decline in the demand for E.C.S.C. coal. The worst sufferer from this malady is Belgium, and, as a consequence, this member-country called for a meeting of the E.C.S.C. Council, with a view to persuading the other member-countries to declare a state of "manifest crisis." Such a declaration would, under the terms of the Schuman Treaty, enable the E.C.S.C. High Authority to ban imports of coal and impose restrictions on output. The High Authority and the other member-countries do not seem to have favoured such a drastic step. The Council of Ministers, however, decided to take some moderate steps to ease the situation.

In accordance with the decisions taken at the Council of Ministers' meeting, Belgium has agreed to set up a special commission consisting of the High Authority's nominees to chalk out a reorganisation scheme for its collieries within a week. The scheme involved concentration of workings and closure of uneconomic pits producing several million tons of coal per annum. In return for Belgium's undertaking to introduce reorganisation, it would receive help in three directions. They are: (1) The High Authority of the E.C.S.C. would provide aid up to $8 million towards financing additional stocks, provided the Government of Belgium also does the same. Other countries faced with a pithead stock problem are also eligible to participate on the same terms. (2) The Authority would use its good offices in the U.S. in an attempt to secure cancellation or deferment of deliveries under long-term contracts with Belgium. (3) If the coal supplied to Belgium by the other E.C.S.C. countries should exceed the present level of 200,000 tons per month, these countries would take action to prevent the increase and the Authority would sanction such action.

Probe into Import Policies

Another important step taken at the meeting to prevent a further deterioration in the position was to obtain a guarantee from the Netherlands and Italy, the two main importing countries within the Community, that they would not reduce their imports from the other member-countries below an agreed level. Yet another decision was to set up a commission to investigate the import policies of the six member-countries of the E.C.S.C., presumably with a view to evolving a co-ordinated policy in respect of imports.

The High Authority of the E.C.S.C., which has now been considerate enough to come to the rescue of the Community members, has, however, made bold to blame the Governments, as well as the colliery owners, for many of the present difficulties. Speaking at the six-nation European Parliament held last week at Strasbourg, M. Paul Finet, President of the High Authority, reviewed the remedial measures suggested by the High Authority to avoid such a situation at a time when the coal crisis had not reached high proportions. He blamed the Governments concerned for having failed to permit joint financing of stocks by rejecting the compensation scheme proposed by the Authority to aid the stocking of about 27 million tons and prevent short-time working. M. Finet also blamed the coal producers for not having used the facilities granted to them by the High Authority to reduce their prices to their competitors' levels without having to alter their published price lists. Commenting on the decisions of the Council of Ministers, the President of the High Authority, said that, of all the measures proposed by the High Authority prior to the meeting of the Council of Ministers, only one, namely, the maintenance of regular offtake by major consumers, had been taken decisively enough to ease the situation. "In general, the behaviour of the principal parties concerned—the Governments and the producers—had met neither the expectations of the High Authority nor the needs of the market." He, however, welcomed the Council's acceptance of the High Authority's proposals for limiting unemployment by collating import plans and by a limited measure of aid in financing additional stocks. The Governments had also agreed on the need for action on prices and a special sales effort to meet competition from other sources of energy. They had promised to do everything in their power to ensure that the consumers took as much coal from the Community during 1958-59 as they did in the preceding boom period.

The whole problem of the European coal producers, therefore, centres round the mounting level of stocks. It will, therefore, be of interest to record here the present stock levels in some of the countries and how the stocks came to be accumulated. The unsold stocks at the pitheads of the E.C.S.C. coal producers amount now to 22.2 million tons, having risen from 6.2 million tons at the end of 1957. If the stocks held by consumers are also included, the level would be at about 44 million tons; this represents nearly two months' internal consumption at 1957 levels. In Belgium, the stocks amount to 6 million tons or two months' supply. In France and Germany, pithead stocks stand at about 7 million tons each, but they represent a smaller proportion of total supplies.

Larger Imports

The main cause of the present surplus is the high level of imports. Imports from outside the six countries during 1957 aggregated 44 million tons, those from the U.S. alone being 38 million tons. In the last period of recession faced by the industry, imported coal amounted to no more than 13 million tons, of which 6 million tons came from the U.S. Total imports into the Community this year are still expected to reach 31 million tons, of which the U.S. alone would account for 26 million tons. The high level of imports during 1957 had become necessary, because output in the six countries, at 247 million tons, was less than the consumption amounting to 281 million tons. There were also some exports from the E.C.S.C. amounting to 5 million tons. Imports during the current year into the E.C.S.C. are necessary, as consumption is unlikely to fall below the output. Besides, U.S. coal has proved to be more competitive.

Normally, the cost of production of coal in the U.S. is cheaper than in Europe, but, on account of the high cost of transatlantic transport, its price in Europe used to be higher than European coal. The slump in freight rates, has, however, caused a fall in the price of U.S. coal in Europe to a level at which it can underquote European coal in any of the six E.C.S.C. countries. Another advantage which the U.S. has gained over the European coal producers is that it had entered into long-term contracts with the European importers for the supply of coal. During 1956, particularly during the Suez crisis, and during the early months of 1957, there was a shortage of coal. On expectation that this would continue, many German and Belgian importers entered into long-term contracts with the U.S. exporters for the supply upto, in some cases, 1960, in spite of the fact that U.S. coal at that time was costlier than European coal.

Threat from Fuel Oil

The effect of the accumulation, however, came to be felt in the first half of 1958, when the output of coal was higher than that in the corresponding period of 1957, while the trend of industrial production, in general, and of steel, in particular, tended to decline. Consumers, who had kept their stocks at a very high level throughout 1957, began to run down their stocks when it became clear that there would no longer be a shortage of coal and that prospects of an industrial recession could not be ruled out. There was, therefore, a fall in the offtake of European coal. Yet another factor for the fall in demand for coal is the increasing use of fuel oil. Though the threat from the latter to coal is of a long-term nature, the rate at which the consumption of fuel oil is going up is somewhat disquieting, the advantage in favour of fuel oil being that its energy content is much more than that of coal. In these circumstances, it remains to be seen whether the steps taken by the Luxemburg Conference would ultimately yield a satisfactory solution to the European coal problem.

COAL PRICES REDUCED

SEQUEL TO TRIPARTITE COMMITTEE'S DECISION

THE Government of India has revised the prices of coal and coke payable to the producers with effect from 17th October 1958. by effecting a cut in the price increase granted to them in May last. It will be recalled that the industry was given an increase of 75 nP per ton for coal and of Re. 1 for coke with effect from 17th May 1958, in order to meet the higher cost of enhanced dearness allowance payable to colliery workers with effect from 1st January 1958 in terms of the award of the Labour Appellate Tribunal, 1957. Since then, the colliery owners, miners and the Government have come to an agreement that the enhanced dearness allowance is payable from 1st April 1958 onwards, instead of from 1st January last. Accordingly, the increase in prices of coal and coke has been reduced to 41 nP and 55 nP, respectively. In revising the prices thus provision has been made for the enhanced dearness allowance which the industry will have to pay from 1st April 1958 to 31st March 1959, after adjusting the increase already granted from 17th May to 16th October 1958.

The Labour Appellate Tribunal, it may be noted, had awarded an increase of Rs. 4.87 per month in the dearness allowance of coal miners for a full month's work. In awarding this increase, the Tribunal laid down a scheme of variable dearness allowance, under which, if the average of the monthly figures of the all-India average consumer price index number for each half-year from January to June and from July to December of each year should rise by more than 10 points over 102, the dearness allowance of colliery workers for the succeeding half-year shall be raised by a flat amount of Rs. 4.87 per month for every such rise of 10 points. As the average index number for the half-year July to December 1957 had risen by more than 10 points over the base figure of 102, colliery workers became entitled to the enhanced dearness allowance from 1st January 1958. The industry could not, however, announce payment of the increased D.A. for the half-year ended 30th June 1958 until 17th May 1958 as the necessary data were not available, as we shall show presently.

Meanwhile, the workers had become restless over the non-implementation of the Tribunal's award and miners of about 600 coal mines in West Bengal and Bihar controlled by the I.N.T.U.C. and those controlled by the Colliery *Mazdoor Sangh*, had given notice of strike with effect from 19th May 1958. The delay in the payment of dearness allowance, it was explained by colliery owners. was due to the non-availability in time of the official statistics of consumer price index for every month up to December 1957, from which the average figure of index for the half-year had to be worked out for the purpose of paying D.A. In fact, it was only at the beginning of May last that the final revised figure of index number for December 1957 was available. When the figure was available, it was found that the average for the six months ended December 1957 stood at 113.2, more than 10 points above the basic figure 102.

Following the announcement of the payment of a D.A. of Rs. 4.87 per month, the Government increased the prices of coal and coke (except in the case of Assam where the Appellate Tribunal's Award was not applicable) by 75 nP and Re. 1 per ton respectively. with effect from the date of implementation of the award, that is, 17th May 1958. to enable the industry to bear the incidence of this enhanced D.A. The amount of increase in prices comprised the prospective cost of implementation of the award in respect of enhanced D.A. and an amount sufficient to cover the retrospective implementation from 1st January to 16th May 1958.

The problem of delayed payment of D.A. on account of the inevitable time lag involved in assessing the rise in consumer price index has been a perennial one. A solution was, therefore, sought by the industry. This was examined by the tripartite meeting of the Industrial Committee on Coal Mines held on 3rd August last and it was decided that in view of this difficulty. the increased dearness allowance payable to workers in terms of the Appellate Tribunal's award would thenceforth be payable only during the half-years 1st April to 30th September and 1st October to 31st March. instead of the half-years 1st January to 30th June and 1st July to 31st December in each year. It is in the light of this decision that the coal prices have been revised, as mentioned at the outset.

EFFECT OF STRIKE ON RUBBER PLANTATIONS

WORLD PRICES MOVE UP ON RUSSIAN BUYING

CONSUMERS of natural rubber in India are in a quandary now, thanks to the general strike of plantation workers in Kerala, on the one hand, and the upward trend in world prices of rubber, on the other. The strike began on 25th October 1958 and, after lasting for two days, remains temporarily suspended up to 2nd November, in order to give an opportunity to employers to negotiate and settle the dispute. The object of the strike is to secure for workers an increase in the quantum of annual bonus and provident fund contribution, provision for employment of all dependants of the permanent workers, etc. If the strike is resumed on 3rd November, it would seriously affect the supply of rubber to the rubber goods manufacturing industry and the gap can only be filled by an increase in imports. Larger imports of rubber would mean a drain on foreign exchange and dearer raw material because of the rise in world prices.

In the course of a statement on the effect of the strike on rubber, Mr. A. V. George, Vice-Chairman of the Rubber Board and a prominent planter, said that the present demand of workers, so far as the rubber estates were concerned, could be met only by increasing the controlled prices of rubber. If, however, the present demands of labour were met without a rise in the price of rubber, Mr. George added, the rubber estates would not be able to survive. This would ultimately end in the loss of the huge capital invested in the rubber plantations and the ruination of a large number of labour employed in these estates.

Country Cannot Afford

Mr. George pointed out that India imported over Rs. 6 crores worth of rubber during 1957. If the strike situation were to continue and spread, the domestic output would be affected during the months of peak production, thus necessitating more imports of rubber and drain of valuable foreign exchange, which the country could not afford at this critical stage. The Rubber Board Vice-Chairman made it clear that the present controlled price of rubber was fixed by the Government on the basis of the cost of production at a reasonable margin of profit as recommended by the Tariff Commission. Since the last revision of prices, the cost of production of rubber had soared due to rise in wages, provision of provident fund and other amenities, enhancement of the rate of income and agricultural taxes, etc. Mr. George, therefore, desired that, if the present demands of labour were to be met, a fresh enquiry by the Tariff Commission should be undertaken and the prices of rubber should be enhanced.

It may not be out of place to note here that India had to step up its imports of rubber last year by 50 per cent., that is, from 6,463 tons to 9,671 tons, as the domestic output did not go up very much—this aggregated 23,797 tons, as against 23,447 tons in 1956—while consumption rose from 28,996 tons to 30,865 tons. During the current year also, imports have been stepped up further, as the pace of increase in consumption is higher than that in production. Thus, imports during the first eight months of the year aggregated 7,728 tons, as against 5,895 tons in the corresponding period of 1957. Production during this period has risen only slightly from 12,882 tons to 13,671 tons, whereas consumption shows an increase from 20,335 tons to 22,871 tons. The next few months of the year usually constitute a period of higher production in rubber estates, as pointed out by Mr. George. Unless, therefore, the strike is averted by timely intervention of the authorities, production will fall short of last year's output.

Larger Imports at Dearer Prices

If such a contingency were to arise, India would have to import a much larger quantity of raw rubber and that too at a higher price than it paid during the last few months. For the price of natural rubber abroad has considerably gone up, particularly during the last few weeks, consequent on the widespread buying of all grades in the Malayan rubber market by the U.S., Russia, the U.K., China and Continental countries. There was, no doubt, a drop in consumption of rubber in Western countries, as a result of which the price in London fell from 27d. per lb. in the summer of 1957 to 21d. in April this year. The decline would have been more pronounced but for the Russian buying. Since then, there has been a recovery, the price moving up to 24d. towards the end of September. The rise was not, however, steady, the trend having been interrupted by fluctuations during the Iraq crisis. Thereafter, it moved up further to a high of 26½d. per lb. last week, but the closing on Saturday was a shade lower at 25⅞d. After a lapse of 14 months, the price in Singapore market crossed the 90 Malayan cent mark on the 15th inst., having gone up by about 7 cents in the course of a week. The latest price is 90½c.

Just as the Russian buying prevented a sharp reaction during the last recession, it has been mainly responsible for the minor boom in the last few weeks. A distinguishing feature of the recent Russian purchases is said to be that they are being made at rising levels, unlike the previous purchases when the U.S.S.R. was keen on low prices. The purchases are mainly confined to the Singapore market and, as such, prices there are quoted at a slight premium over the London quotation. The recent improvement in the prospects of American economy leading to increased demand from that country has provided another bullish factor.

Russian Offtake

During the first nine months of the year, Russia's direct purchases of rubber in the Malayan market are said to have aggregated 20,918 tons, as against 7,426 tons for the corresponding period of 1957, and China bought 64,036 tons, as compared with only 4,521 tons. Russia and China accounted for nearly 11 per cent. of the total offtake during this period. The offtake from the U.K. rose by 11 per cent. to 152,488 tons, while the U.S. purchases, at 82,421 tons, show a drop of 20½ per cent. Similarly, Japanese purchases are lower by 4.7 per cent. at 79,704 tons. According to the preliminary estimates of the International Rubber Study Group, the Russian imports of natural rubber during January-August period amounted to 139,250 tons, more than double last year's figure of 62,700 tons. Consequent on this heavy Russian buying, world consumption dropped by only 17,500 tons to 1,257,000 tons, despite a fall in the U.S. from 364,565 tons to 301,407 tons and in the U.K. from 115,416 tons to 113,816 tons.

The heavy Russian buying is presumably due to the fact that the Iron Curtain countries are far from self-sufficient in rubber supplies, despite the setting up of synthetic rubber plants in Eastern Europe. Even if the proposed synthetic rubber plant in Italy fructifies, it is quite possible that supplies to Russia from other countries will include Italian synthetic rubber. The short-term outlook for natural rubber thus depends on Russian buying and the trend of American economy, particularly the progress of the automobile industry. In the long run, if such heavy purchases push the price of natural rubber to unduly high levels, there will be a switch-over from natural to synthetic rubber. As the Russian buying has varied markedly from year to year, it is not wise to depend on their purchases. In short, the long-term prospects of natural rubber depend only on the general growth of world economy and its ability to keep prices more or less stable at a competitive level.

(Concluded from next column)

14,485 tons, compared to 18,102 tons at the end of 1956-57. Out of the total stocks at the close of 1957-58, hessian accounted for 4,058 tons, sacking for 10,177 tons and other goods for 250 tons. The corresponding figures for 30th June 1957 were 4,974 tons, 12,729 tons and 399 tons.

Exports of jute goods rose by 26,693 tons in 1957-58 to aggregate 107,928 tons over 81,235 tons in the previous 12 months. Out of the total exports during the season under review, hessian accounted for 33,747 tons, sacking for 73,801 tons and other goods for 380 tons. South Africa was the leading buyer during 1957-58 with an offtake of 47,955 tons, followed by the U.S. and Burma which took 15,942 tons and 12,029 tons, respectively. Among the other customers for Pakistani jute goods during the 1957-58 season, the more important were: Iran (4,243 tons), U.K. (4,206 tons), Belgium (4,007 tons), West Africa (3,939), Netherlands (2,835 tons) and East Africa (2,188 tons). Consumption of raw jute by the mills in East Pakistan during 1957-58 amounted to 941,000 bales, as compared with 809,000 bales in the previous year and 734,000 bales in 1955-56.

EXPORT PRICES FOR PAKISTAN JUTE

FLOORS REIMPOSED

THE Pakistan Government has fixed, with effect from 20th October 1958, the minimum export prices for various grades of raw jute on the basis of £90 per ton for export Firsts, c.i.f. U.K.-Continent. The minimum price for Narayanganj cuttings has been fixed at £34 per ton for overseas and at Rs. 65 per bale for India. It was only in September last that the Pakistan Jute Board reimposed the minimum prices for the export of jute cuttings to India, the U.K. and the Continent at the above levels, but evidently the change-over to Military Government since then and the abrogation of the country's Constitution made the P.J.B.'s decision ineffective. The minimum export price was originally fixed in January 1956. Since then, export prices for Narayanganj cuttings had gone below the minimum fixed by the Board.

No details are available as to how the minimum price scheme is to be enforced. If past experience is any guide, it offers no solution to the Pakistan jute industry's problem. Under the previous arrangements, the authorities found it difficult to stick to the minimum prices originally fixed by them and had to alter them daily on the basis of the prevailing market prices. They were invariably lowered, on account of the pressure of supplies, and at times the market prices ruled below the floor levels. This added to the uncertainty of the jute trade. In view of the difficulties involved in enforcing the minimum prices, it is doubtful whether the Pakistan Government's minimum price scheme would be a success.

The long-term outlook for the jute industry depends on the general world economic trends. If a high level of economic activity is ensured over a long time, then the jute industry can look forward to sustained prosperity. Even so, much depends on how far jute goods prove to be competitive with other substitute packaging materials and how far the industry takes up to new fields of production. For, in recent years, the introduction of cheaper paper bags and bulk handling methods have affected to a large extent the demand for jute bags. At the same time, the growers must be ensured a fair price, lest the cultivation of raw jute should be adversely affected.

The fixation of higher minimum export prices for raw jute and jute cuttings did not have any marked effect on the Calcutta jute market. No doubt, the sentiment was initially bullish, but prices fell back again. India has almost reached self-sufficiency in raw jute (including mesta) and is interested only to a limited extent in Pakistan's cuttings. The latter were quoting just before the fixation of export minimum prices at about Rs. 55 per bale, that is, Rs. 10 below the floor of Rs. 65 per bale. If freight, insurance and other incidental charges are added to the minimum, the landed cost of Pakistani cuttings in India would come to Rs. 88 per bale or Rs. 18 per maund. Even at this level, Pakistani cuttings would be slightly cheaper than the Indian raw jute of comparable quality, which is quoted at about Rs. 20 per maund. This price advantage should normally weigh with the mills in India, but the quantity of cuttings to be imported will depend on the licensing policy of the Government of India. At present, Indian mills are taking only the absolute minimum quantity of Pakistani cuttings. As the Government of India is keen on restricting imports, Indian mills have to increase their consumption of jungli Bihar jute of similar quality. It should also be noted, in this connection, that India is the only market for Pakistani cuttings, which will be difficult to be sold at controlled prices. The authorities have, therefore, to ensure that they are not smuggled into India.

PAKISTAN'S JUTE INDUSTRY

The jute industry in Pakistan is steadily expanding its foreign sales. Increased offtake overseas have enabled the industry to step up production of jute goods and yet close the season ended June 1958 with reduced stocks. Production of jute goods in 1957-58 recorded a sizable increase to 154,059 tons, as compared with 144,534 tons in the previous season and 130,209 tons in 1955-56. Out of the total production during the 1957-58 season, hessian accounted for 38,242 tons, sacking for 110,191 tons and other goods for 5,626 tons. The corresponding figures for 1956-57 were 35,682 tons, 105,356 tons and 3,496 tons, respectively. Notwithstanding the increase in total production of 9,525 tons in 1957-58, the jute mills in East Pakistan reported their end-season stocks lower at

ROLE OF FOREIGN BUSINESS IN DEVELOPING COUNTRIES

ITS FUNCTIONS AND RESPONSIBILITIES

By J. L. S. Steel

DIRECTOR FOR ECONOMIC PLANNING, I.C.I. LTD., LONDON

[In our issue dated 18th October, we published Dr. Gunter Henle's paper on the Climate for Private Enterprise, contributed to the Panel discussion organised by the International Finance Corporation, at New Delhi. In the following week, we published the paper of Mr. Neville N. Wadia on the Role of Private Enterprise in Economic Growth. Another topic which was discussed at the meeting was the Responsibilities of Foreign Business in Developing Countries. Mr. J. L. S. Steel, Director for Economic Planning, Imperial Chemical Industries Ltd., London, led the discussion, with a paper in which he stressed the need for mutual respect between the foreign interests and the government of the country where they work. In view of the great importance of foreign capital to the development of economically backward countries, Mr. Steel's observations deserve wider publicity. The following is the text of Mr. Steel's address.—Ed.]

IN dealing with this subject, I am making the assumption that some special industrial project has been examined and found to be a sound economic proposition and the technical difficulties and commercial prospects of the enterprise have been carefully examined and the political risks assessed. The project as a whole, has been found acceptable to the authorities, and in harmony with the trend and pace of the country's economic development. Licences, if necessary, have been obtained. As a result of taking all these factors into consideration, a clear decision to go ahead has been reached.

I think then that the first responsibility of the parent organisation is to back the project with wholehearted support and to pursue it with resolution and determination, in spite of those minor setbacks that are bound to occur. Quite clearly, a decision of the kind I have described is of a long-term type, though conditions, perhaps political, may sometimes change so radically that a change in policy inevitably follows. Normally, however, investment in a developing country is intended and expected to be permanent.

From the earliest stages, endeavour must be made to persuade the developing country that a project or industry is an integral part of the economy of the country itself and not a vehicle for exploitation. The parent organisation should do everything possible to encourage, foster and sustain a sense of partnership and of mutual interest. It is not always easy to do this, and there is no common rule. Yet, I would suggest that some of the means of attaining this objective involve making the best use of local resources whether in the form of manpower, brainpower, locally produced raw materials and intermediates and, of course, local capital to the extent that it may be available and also prepared to take a part. Inevitably the parent organisation will normally supply expertise and technical knowledge of the processes involved. For this, a reward is naturally expected, which will normally take the form of a return on the capital investment and/or payment for technical knowledge, patent rights and know-how.

Return

Parent companies may also reasonably expect that the return on their investment will not be less than the return they might expect for a corresponding investment at home. It is a matter of general experience too, that in a number of cases losses in the early years may well have to be faced. This is something which should not deter the investor, but he will naturally take it into account when estimating the likely prospects of the concern.

As far as the utilisation of local resources in the form of manpower and brainpower is concerned, generally speaking the business should aim at providing employment for the nationals of the country concerned; but in the early stages, and in some cases for years after, key members of the staff may have to be provided from the parent organisation. The long-term objective should be to recruit and train nationals of the developing country, and in due course to promote them simply and solely on grounds of merit and calibre. In some developing countries, the rate of industrial development is faster than the build-up of the industrial tradition, and it is this that makes the assistance of staff, not necessarily "technical" in the narrow sense, from the parent organisation necessary for a number of years after the starting-up period. It is not very difficult to find men to go out on an initial assignment of, say, six months to three years in connection with the erection and starting up of a plant, provided they get the necessary incentive, but it may be quite a problem to find replacements to manage a going concern if it seems to them that they are really just training and providing experience for nationals of the developing country to take over their posts. Few people are enthusiastic about working themselves out of a job.

In order to obtain men of the right calibre to work in a developing country, particularly with a tropical climate quite different from that experienced at home, it is necessary to offer considerable inducements, over and above what might be called the basic remuneration for the post, especially to the young man who so often nowadays already has a family. If he is of first-class calibre, he should have no difficulty in getting a first-class job in his home country, and the sense of adventure which in years past encouraged young men to emigrate and start life in a new country, has been to some extent modified by progress of welfare States and changes in social structures at home. In any case, the individual who moves to a developing country is inevitably faced with a higher level of expense which results from living in unfamiliar, strange surroundings, and he must be provided with facilities and money for home leave, for the education of his children in his own country and other inevitable expenses. This means that the cost of sending an expatriate to a job in a developing country will be more than the corresponding pay of a national of that country, on the assumption they are both of equal calibre.

Gross Income

There will, therefore, be cases where the gross income on nationals of a developing country will be less than the gross income picked up by a foreigner in a similar position. Any undue or unfair disparity, however, is most unlikely to persist for any length of time, for the parent company itself will clearly have powerful economic reasons for training and appointing a national of the country as soon as one can be found who is wholly adequate for the job. Statutory obligations in regard to the employment of local nationals, whether as to the proportion by number or the proportion of the total salary and wage bill, do not contribute to operating efficiency. It is surely preferable for industry to be left to realise its obligation towards the employment of nationals of the country.

Industry in fact is compelled to adopt this attitude to the utmost possible extent for technical staff, owing to the shortage which exists in most countries of the Western world, quite apart from the very high cost of employing expatriate staff to which I have already alluded. Heavy capital expenditure, especially on projects in isolated locations, must be faced in respect of housing, educational facilities, medical services and other welfare items. The amount which it is necessary to budget for varies enormously from place to place and is clearly dependent on what may be already available from Government and municipal investment in the infrastructure, but these facilities are seldom cheap.

I can give one example from a works engaged in Africa in the extraction of natural mineral deposits, where the total expenditure on housing hospitals, schools and other welfare items amounted to over 60 per cent. of the original cost of the plant. It is not surprising, therefore, that the foreign investor feels that much of this is really the responsibility of the country in which he is investing his money, and he is only prepared to take the full responsibility willingly in cases where the factory is in an extremely isolated and wholly undeveloped area, where other industrial enterprises are most unlikely to go. It is perhaps not only the capital cost of these items which is of importance, but their running cost. I know of a factory, not a thousand miles from Delhi, where the annual cost of supplying medical services alone for the employees adds about 8 per cent. on the total wages bill.

Investment

The question is often raised as to the investment of profits made by a factory in the country concerned. Trading profits are normally split into three parts, namely, that taken by taxation, that retained in the business for expansion or replacement of plant, and that remitted overseas to the parent company. It is certainly the opinion in industry that industry itself is the best judge of allocation of profits. Statutory obligations in this respect are not welcome. It is, however, an undoubted fact, that a very high proportion of the profits earned by subsidiary companies is in practice retained in the business and used for expansion or replacement of fixed assets. In fact, this has become one of the most important single pieces of industrial investment. Yet to impose as an obligation, some arbitrary figure, would almost certainly act as a powerful deterrent to some potential investor. Other ingenious devices, such as high taxation on dividends or distributed profits may produce similar reactions!

I have been asked to say one or two words about the adjustment of the products of a factory to the special requirements of the overseas markets. The necessity for attention to the design of a product to meet the special requirements and tastes of a foreign market is as obvious as it is essential. It is perhaps less generally realised that quality standards should be as high as those adopted by the parent company in its home market.

In order to maintain and improve standards of quality, factory operation and development, exchange of visits should regularly take place between the top officials of parent organisation and those of its local subsidiary, whether expatriates or nationals of the country. It is highly desirable to have similar exchanges for senior technical personnel to ensure the continuance of the highest possible standards of technical efficiency, and also by some of middle seniority, whether in commercial positions or technical specialists. This is the best way of assuring an identity of outlook between the parent organisation and the overseas subsidiary and of ensuring that the parent organisation is kept fully informed of changes in conditions in the developing country.

As regards respect of customs, traditions and sensitivities of people in the country of operation, you will not expect me to discuss this subject in great detail, but I would like to emphasise the responsibilities of the parent organisation for the most careful selection of employees who are seconded to the overseas country and the need for proper qualifications and training and the right outlook on going overseas. This also applies to wives of the employees, who must be prepared to live the life of the new country in an appropriate fashion. I need hardly refer to the desirability of learning the local language, of studying something of its history and traditions and of the necessity to avoid any prejudice on account of race or religious belief. I am doubtful as to whether adequate facilities exist in the developed countries for what might be called a course of practical instruction on the problems which employees are bound to meet in the developing country. Such facilities should be extended to wives of the employees and might well take the form of short residential courses, in as informal an atmosphere as possible and covering subjects such as health, hygiene and general conduct. *Savoir faire* is not an inherited characteristic.

Local Investors

The extent to which local participation in a developing country can be encouraged clearly depends in the first instance on the existence of owners of capital able and willing to invest in manufacturing industry, as distinct from real estate, mineral rights etc. In furtherance of the general aim that the business should form an integral part of the economy of the foreign country, and should manifestly appear to be such, it is most desirable that any wish on the part of nationals for a financial participation should be recognised when it arises. If it is not recognised, results may be unhappy.

The extent to which local participation should be encouraged or agreed, must clearly depend enormously on the type of venture. In many cases, the parent organisation will not willingly allow its equity interest to fall below 50 per cent., for it will then lose effective control of the enterprise which has been built up by its own initiative. There will, however, be cases where a company from abroad will be content to hold a minority interest, possibly where this is accompanied by a royalty agreement or an agreement for the provision of technical service. Yet the making of arrangements which amount to a partnership with business interests in the developing country can give rise to awkward problems. Sometimes national and natural pride is against a minority holding on the part of the nationals of the developing country, yet 50-50 arrangements are often difficult to operate. There is clearly a need on both sides for recognition of both points of view and for agreement to be reached without jealousy and on a sensible practical basis. Statutory obligations regarding the proportion of local capital are not helpful. They are inevitably rigid and fail to take account of the extreme variation in circumstances in individual cases.

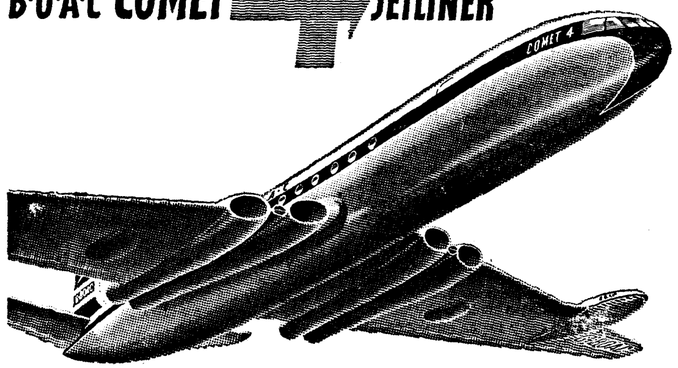
My remarks so far have been concerned primarily with foreign business in developing countries but some of the responsibilities to which I have alluded are equally applicable to business which arises from purely local enterprise. It is no less essential for local business to make the best possible use of local resources and in this way to make the maximum contribution to the economic welfare of the country. A long-term view must be taken; the "here-today-and-gone-tomorrow" outlook or "make-hay-while-the-sun-shines" policy may provide quick wealth for a few lucky ones, but does nothing to promote the well-being of the community on which it fastens.

Industry and State

The relations between local industry and Government are inevitably close in a developing country. One of the most important aspects is the need for mutual respect at all levels between those who have the conduct of local industry under their command and those who bear responsibility in the finance and trade departments of Government. The operations of trade and commerce are so complex that their tasks are often not easy to perform, but governments can help by assisting civil servants to obtain knowledge of the industries which they are in a position to influence in such a striking way. Local business may have in practice a greater proportionate responsibility in a developing country than in a highly industrialised one inasmuch as by its very nature it is helping to create the conditions in which the economic life of the community is itself involved. Above all things, it must aim at the development of the highest possible standard of honesty and integrity. It should encourage and, by its own actions assist the creation of a sound business code of conduct, based on straightforward dealing and the fulfilment of obligations freely entered into.

The responsibilities I have discussed are dependent upon and associated with other features of this Panel Discussion, particularly as regards the proper climate for private enterprise. It is quite unrealistic to expect industry to realise its responsibilities in full in the absence of a suitable background for the conduct of private industry. The exercise of responsibility by industry and the attitude of governments to private industry in developing countries thus forms a mutual exchange. Both elements are difficult to define or generalise about and both are in the process of development. But surely it can justly be claimed that industry, since the two great wars, has become alive to its responsibilities in overseas territories in a manner which did not exist before. This sense of responsibility has been developed notwithstanding setbacks from time to time in the form of expropriation or nationalisation default in meeting financial obligations and deliberate policies of currency inflation. Nothing can contribute more to the further development of the responsibilities on the part of private industry than the disappearance of features such as these. Clearly, the responsibilities of private industry are more likely to be fully recognised and fully carried out in a free atmosphere rather than in an atmosphere of edict, official persuasion or excessive controls.

B·O·A·C COMET 4 JETLINER



FIRST ATLANTIC JET SERVICE!

BOAC are *first* across the Atlantic with a "pure jet" passenger service. Why? Because *Comet 4* jetliners have been delivered ahead of schedule... because the *Comet 4* which made this historic first flight is the most tested airliner the world has ever known...and because BOAC has years more experience with jets than any other airline.

Consider the record...

One hundred and twenty BOAC pilots have logged a total of 15 million *Comet* flying miles. This year alone, BOAC *Comets* have logged 3,700 flying hours and made some 50 more transatlantic jet crossings than any other commercial jet airliner. Months and months of careful, patient and prolonged testing, proving and training flights lie behind this great achievement.

Fly to London by jet-prop Britannia

Partner of the *Comet* in B.O.A.C.'s fleet is the magnificent *Britannia* airliner—the largest, fastest jet-prop airliner in the world. From India you can fly BOAC *Britannia* to London where you can transfer to the *Comet 4* for New York.

For further details consult your local BOAC Appointed Travel Agent or BOAC at Bombay, Calcutta, Delhi and Madras.

F. K. F. NARIMAN, *General Manager.*

ROAD TRANSPORT IN INDIA

HIGH TAXATION IMPEDES PROGRESS

THE amendment of the Motor Vehicles Act and the establishment of the Inter-State Transport Commission, together with the amendment of the State Bank Act (designed to facilitate the provision of credit for hire-purchase of vehicles) are some of the important measures which the Central Government has adopted in order to give a fillip to road transport. A great deal, however, remains to be done in the matter of removal of some of the inhibitory factors, such as the restrictions on the movement of vehicles, imposed by the Motor Vehicles Act and the Code of Principles and Practice, and the restrictions on permissible laden weight of vehicles, on the employment of truck/tractor-trailer combinations, and on private carriers. Insufficiency of viable transport units and delays in the issue of permits and the restrictions on movement imposed ostensibly in the interests of rail-road co-ordination are other discouraging factors.

By far the most important of the causes for the unsatisfactory pace of progress of road transport is the high taxation on motor vehicles and their operation. In its reply to the questionnaire issued by the Road Transport Reorganisation Committee (Chairman: Mr. M. R. Masani), the Indian Roads and Transport Development Association has clearly brought out the fact that taxation weighs too heavily on road transport. The taxation per vehicle, which stood at Rs. 611 in 1944-45, moved up to Rs. 1,906 in 1954-55 and now (for 1957-58) stands at Rs. 2,100. In 1956, the Study Group of the Union Ministry of Transport suggested an all-round reduction of 20 per cent. in the then existing level of taxes. "In today's conditions with an increase in the excise on motor fuels in 1957," the Association says, "we think that the reduction should not be less than 33 per cent. all round."

Receipts From Tax

It may be mentioned here that the total receipts from all taxes on motor vehicles during 1956-57, were about Rs. 79 crores. Of this amount, about Rs. 14.79 crores were on account of import duties on vehicles and thus became part of the Central revenues. Of the balance of Rs. 64 crores, about Rs. 22½ crores were spent on road maintenance and Rs. 4½ crores were contributed to the Central Road Fund, leaving about Rs. 37 crores as a net return to the Exchequer on the country's total investment in roads of about Rs. 456 crores by 1955-56. This works out to 8 per cent., as against 4 per cent. which is the return on the Railway's capital-at-charge (excluding that on strategic lines). Indeed, if the principle of equal treatment for all transport services were adopted, there is a case for a 50 per cent. reduction in taxes on road transport.

The Association has recalled that "every committee appointed by the Government, during the past seven years, which dealt with the question of taxation of motor vehicles directly or indirectly, has pointed out that the level of taxation in India is too high, there are far too many taxes, there is no uniformity in them and that the combination of these factors has been having a bad effect on the development of road transport." It adds: "These facts have been admitted at the Ministerial level also and yet, last year, the excise on motor fuels was raised by the Centre and recently, even a small reduction in prices as a result of a new agreement with the oil companies has been denied to the consumer!"

Many Taxes

At present, there is a large number of taxes on motor vehicles. These taxes are: (1) Motor vehicles—import duty, sales tax, registration fee, and vehicle tax (also wheel tax in cities like Bombay and Hyderabad) and excise on cars of 20 or more h.p. and carrying less than nine passengers, (2) tyres and tubes—excise duty and sales tax, in addition to import duty on raw materials, (3) parts and accessories—import duty and sales tax, (4) motor vehicle batteries—excise duty, (5) fuel-petrol, diesel and lubricants—import-excise duty and sales tax, (6) passengers and goods—taxed in some States, (7) tolls—in some centres, (8) octroi—at all cities in many of the States. The Association has stated that, except on Express Highways, tolls should not be collected, since they interfere with free movement. It is also against the imposition of octroi duties. In this connection, it observes: "The detention at octroi posts is a national waste which has to be avoided. It has been estimated by some people that such detention may work out to at least 10 per cent. of the time required by a vehicle per trip. If this time is saved, the country will require 10 per cent. less vehicles to carry the same volume of traffic." The Association has, therefore, suggested that a surcharge on sales tax be levied in lieu of octroi, the amount being equal to the present income from octroi. This suggestion, it further points out, was also made by the Taxation Enquiry Commission which said that it could be put into effect "when the sales tax system itself is well established and efficiently administered in the generality of States." The Association feels that now that the sales tax system has been in force for some years, the "time is ripe for this change."

Centralisation

The Association recalls that the Transport Commissioners Conference, held last year, recommended the centralisation of some taxes and the imposition of a ceiling on the tax on motor vehicles levied in States. It adds: "The Council of this Association has devoted considerable time to the study of this subject and is convinced that the only way to rationalise the present system of taxation is to centralise all taxes on motor vehicles, to specify authorities who should collect them on behalf of the Centre and to distribute the proceeds to States according to an agreed formula as in the case of income-tax." There is no doubt that, if this proposal were adopted in respect of at least the more important taxes on motor vehicles, it would eliminate the present diversity in the incidence and mode of taxation and thereby give a fillip to motor transport in the country.

METRIC SYSTEM IN OIL INDUSTRY

The petroleum industry in India is likely to change over to the metric system from 1st April 1960. A tentative decision to this effect was taken at a meeting of representatives of the industry held in the Ministry of Commerce and Industry in New Delhi last month. From the date of changeover, the metric units of weights and measures will be used for all purposes including sales, tenders and invoices. Quantities and prices will be shown in metric units. Service station equipment will be converted to the metric system. All meters, scales, weighing machines and weights and measures will be in metric units. Packages will be designed to hold a convenient quantity expressed in metric units. The entire accounting system will also be conducted in metric units.

Representatives of the industry, who had earlier suggested that the changeover should take place from 1st January 1962, said at the meeting that they would like to effect the changeover simultaneously with the Railways and the Central Board of Revenue with whom the industry had extensive dealings. Since the railways have decided to go over to the metric system from 1st April 1960 and the C.B.R. have also proposed to do so, the industry's representatives felt that the date for their changeover should be advanced. The industry would make preparations in the meantime for the changeover. These will include recalibration of petrol tanks at port terminals, of storage tanks at depots and service stations, railway tank wagons and tank trucks, education of the staff to make them conversant with the new weights and measures, laying down of standards for metal containers and installation of new dispensing pumps and other equipment.

The representatives of the industry stressed that foreign exchange should be made available for the purchase of equipment, particularly dispensing pumps, not indigenously available. They also emphasised that the two organisations with which they had intimate connection—the Railways and the Central Board of Revenue—should accept 1st April 1960 as the firm date for changing over to the new system. It was pointed out to them that the present foreign exchange position was very tight, but efforts would be made to meet their requirements as far as possible. For this purpose, the industry's representatives were asked to furnish details of the foreign exchange required and the equipment to be bought from abroad. An advisory Committee was set up at the meeting to study the problems involved in the changeover and keep in touch with the various Central, State and municipal agencies whose co-operation will be necessary to bring about a smooth changeover. Earlier, in his opening remarks, Mr. K. V. Venkatachalam, Joint Secretary, Ministry of Commerce and Industry, who presided, said that the first phase of changeover to the metric system had already begun. The petroleum industry, which occupied an important position in the country's economy, had to co-ordinate its programme of changeover with different Government agencies. He informed those present that a number of States had already introduced machinery to enforce the metric weights and measures while the remaining ones were in the process of doing so. Besides the representatives of the three major oil distributing companies and refineries and the Assam Oil Company, representatives of the Ministries of Steel, Mines and Fuel, Defence, Transport, Railways and Works, Housing and Supply and the Indian Standards Institution attended the meeting.

WORLD ROAD TRANSPORT

Improvements in the procedure for the licensing of international goods transport by road and amendments to the Set of Rules and Annexes to the General Agreement were again considered by the Sub-Committee on Road Transport of the Inland Transport Committee of the United Nations Economic Commission for Europe which met last month at Geneva. It was decided that the model licences for international goods transport by road should be reviewed by the Working Party on the International Road Transport Regime with a view to their final drafting. On the question of the Set of Rules and Annexes to the General Agreement, it was decided to make a number of changes and additions, it being understood that, in practice, these modifications would apply when the General Agreement came into force. The present position is that four countries have signed the Agreement—Greece, France, Italy and Norway. The entry into force of the agreement requires the signature of five countries; the representatives of several countries stated that their Governments intended to sign in the near future, and it is then that the proposed changes will be made.

After studying a document pointing out the increased risks of accidents due to the non-observance of the regulation of hours of work in road transport, the sub-committee noted that, from the standpoint of road safety, it had by no means been proved that the number of accidents caused by heavy lorries was out of proportion to their mileage. From the standpoint of observance of social legislation, it recommended that Contracting Party Governments strengthen their control measures for the enforcement of national labour legislation in respect of the crews of road transport vehicles and take appropriate steps to ensure the application of the provisions of the General Agreement. It further decided to request the I.L.O. to study the question of prohibiting the driving of vehicles at night and on Sundays.

The sub-committee studied the measures to be taken for signposting of camping and caravan sites, road markings and the implementation of the European agreement on road markings, signals on priority vehicles, approach signs for level-crossings without gates or with half-gates, heavy vehicles, caravans and trailers and trailers coupled to motor cycles. With regard to weights and dimensions of vehicles, it requested the I.R.U. to prepare a study on the comparative operating costs per kilometre travelled under load by vehicles and combinations of vehicles designed for a maximum load of eight tons per axle, and by vehicles and combinations of vehicles designed for a maximum load of 10 tons per axle; it also suggested that a study be made of the problem of increases in expenditure likely to be occasioned by raising the maximum permissible weight per axle from eight to 10 tons.

The sub-committee, it is stated, would like to see the establishment of a European Agreement supplementing the 1949 Convention; the latter in fact covers the whole world and is drafted in general terms, which might be more closely defined in an agreement applying specifically to European countries. It also studied the question of a distinctive sign for vehicles in international traffic. There is a certain risk that metal plates alone may not allow of the identification of a vehicle's country of registration. It, therefore, expressed the view that if States considered it necessary for foreign vehicles to carry distinctive signs they should impose them by law and inflict penalties for infringements. It requested Governments and tourist associations to remind motorists of the need for the distinctive sign.

The detailed project report on Thermal Power Station in Neyveli of a capacity of 250,000 k.w., has been submitted by the representatives of the Soviet Government to the Government of India. The establishment of a thermal power station in Neyveli based on lignite was included in the agreement concluded between the two Governments on 9th November 1957. The agreement provides for a credit arrangement of 500 million roubles for setting up five industrial enterprises in India. The other enterprises to be established are: a heavy machine building plant, a coal mining machinery plant, an optical glass factory and enterprises for mining and treating of coal. The preparation of detailed project report was the preliminary step to have been taken by the Soviet organisations under the terms of agreement.

A flying research vehicle with no wings is being developed in Detroit, U.S.A., for the Army Transportation Corps by Chrysler Corporation. The double-rotor, ducted fan aircraft, 20 feet by 10 feet in size, is powered by a 350-horsepower, six-cylinder, air cooled engine. It will be able to carry a load of 1,000 pounds. Lift and flight are directed by using vanes to deflect the air stream to the direction desired.

NEW PRODUCTS AND PROCESSES

New Type of Coal Mine

SOVIET engineers have designed a new type of coal mine, in which the main processes, it is said, will be automatised and the miner's labour immensely lightened. According to Mr. A. Geskin, Chief Engineer of this coal mine project, the new mine will have a very large capacity up to 10,000 tons of coal will be mined per day. This is almost double the production capacity of the largest mines in existence. Some 4,000-5,000 men would be needed for working an ordinary mine of the same capacity. The new mine will be manned by a staff of only 1,100-1,200 men. In the new mine the coal is transported into the drift via the scraper. Here it passes along a system of belt-conveyers until it reaches the trolleys. The project stipulates that heavy 20-24-ton electric locomotives be used for hauling the coal instead of the existing 14-ton locomotives. Timbering in the longwall will also be conducted without the participation of the miners. Hydraulic propping will be used for this purpose which will automatically advance along the longwall. The coal will be hauled to the surface by a powerful skip whose capacity is much higher than existing ones. A dressing plant for the mine is being designed according to the new technology. All the sections will be controlled by the chief despatcher and his two assistants from a central control desk. The mechanisms themselves will signalise all possible break-downs and hitches. Besides, the despatchers will have a special TV installation with which it is planned to control the work of the main sections of the mine's equipment and the dressing plant. This new type of mine, it is said, will result in radical changes in the work of miners. There will be no tunnellers, coal hewers, loaders, timberers. They will be replaced by highly skilled assembly men, adjusters and technician-controllers. The work of the miners will be restricted to inspecting and servicing mechanisms. The men will remain on the surface. Machines will do the work underground.

Machine for Oil Exploration

Soviet designers claims to have produced what is called the world's first stationary automatic machine for determining exploitation duties for large oil and gas deposits. The machine makes it possible to study with great accuracy processes taking place deep in the earth, thousands of kilometres away, and to make forecasts about striking oil and gas. The machine shows not only the current condition at the deposit, but also determines the changes that will take place in the oil layers within five to six years.

New Translation Device

Development of an electronic "brain" that can convert English verbs directly into electronic instructions for computers has been reported by the U.S. Air Force. The machine, called A.I.M.A.C.O., or Air Material Command Automatic Compiler, was developed by technicians of Air Material Command (A.M.C.) at Dayton, Ohio, and scientists of the Sperry Rand Corporation. Though A.I.M.A.C.O's vocabulary is limited at the present time, Air Force scientists hope to increase its range to a much wider use of the English language. The importance of A.I.M.A.C.O. is that it eliminates manual translation of the spoken word to machine language. The device uses a giant computer to make the conversion electronically for itself and for such other electronic "brains" as the Remington Rand U.N.I.V.A.C.

Soluble Resin

A resin which is soluble in hydrocarbons such as toluene, xylene, aromatic naphthas and vetones has been developed by British Geon, London. The material, which is a solution resin consisting of vinyl chloride and vinylidene chloride, can be used in the production of protective coatings. Coatings which are deposited from the resin, which is called Geon 222, are said to be able to withstand corrosion by acids, alkalis, salt water, oils and greases. The coatings are claimed to have excellent adhesion to metal, wood, paper and other materials. They are also said to be easy to apply by techniques such as spraying, dipping, brushing and roll coating.

New Leak-proof Seal for Gas Cylinders

Where cylinders containing medical gases are used in hospitals and surgeries it is often a problem to ensure that no leakages occur. A new leak-proof seal for use with these cylinders has been developed by the Medical Division of British Oxygen Gases. Called the Bodok Seal, it is a washer of yielding material bonded to a reinforcing metal ring which prevents splaying. The ring, it is claimed, will resist corrosion, and the seal is designed to ensure that a leak-proof joint can be made without excessive lightening. The seals can be fitted to both cylinder yokes and regulators, and are easily removed.

Picture Tube for X-Ray Use

A new, improved picture tube for use in X-ray operations has been demonstrated in Cleveland, Ohio, U.S.A. The tube contains a fluorescent screen. As the X-rays go through the body and vital organs throw their shadow dimly on the screen, the image is changed from light into electrons which, in turn, are given an extra charge to boost their power. The electrons then produce the picture on the viewing end of the tube. The picture is said to be 350 times brighter than the image on the screen itself. The tube is being manufactured by Rauland Corporation, a subsidiary of the Zenith Radio Corporation.

MUKAND IRON AND STEEL WORKS LTD.

STEEL FOUNDRY'S CAPACITY TO BE EXPANDED

ADDRESSING the Twentieth Annual General Meeting of the Mukand Iron and Steel Works Ltd. held in Bombay on 24th October 1958, Mr. Kamalnayan Bajaj, Chairman of the Company, said that, in view of the keen competition faced by steel castings, the Company had started producing a wider variety and intricate types of castings, some of which were being made for the first time in India. He disclosed that the Government of India had approved of the expansion of the Company's steel foundry capacity from 5,400 tons to 7,800 tons per annum.

The following is the full text of Mr. Bajaj's speech:

"LADIES AND GENTLEMEN,

"My cordial welcome to you all, and particularly to the new shareholders, to the twentieth annual general meeting of the Company. The accounts for the year ended 31st March 1958 and the Directors' report thereon have been in your hands. With your permission, I shall take them as read.

"You will be glad to know that the issue of new equity share capital of Rs. 20,47,250 was fully subscribed.

"Recently, there have been a series of political crises in a number of countries in Asia and the Middle East. The events in Burma and Pakistan, our immediate neighbours, are particularly of great significance to us. I sincerely hope that these changes may bring stability and prosperity to their people.

"It is encouraging to find that the advanced countries of the world are increasingly realising the imperative necessity of giving active aid to the underdeveloped countries to strengthen and stabilise the economy of the world. The stirring appeal made by our Prime Minister in his inaugural address at the joint meeting of the I.M.F., I.B.R.D. and I.F.C. at Delhi has created a profound impression among the leading economists, bankers and statesmen of the world.

Sound Economy

"In executing our second Five-year Plan, among other difficulties, we are confronted with a great shortage of foreign exchange. Moreover, our Government is unavoidably forced to spend large amounts of vital foreign exchange on food imports. In spite of these difficulties, it is heartening that the general economic position of our country is sound, and improving. Mr. Per Jacobsson, the Managing Director of the I.M.F., has said: 'India enjoyed a great advantage in her currency. Retention of a good currency is worth some sacrifice.' Mr. C. Douglas Dillon, Under-Secretary of State of Economic Affairs in the U.S.A., has expressed the opinion that the Indian rupee would become the hardest currency in the world in fifteen years. Mr. Eugene Black, President of the World Bank, has said that India has become 'the symbol of mankind's hope in economic development.' These statements, coupled with the large-scale aid assured to us by a number of countries, are indicative of the confidence in the inherent soundness of our economy and political stability. The recent successful foreign tour of our able Finance Minister has helped in further strengthening our economic ties with the outside world, and paved the way for a larger inflow of participating foreign capital into our country.

"There are indications that the target for steel production in the third Five-year Plan might be fixed at 15 million tons. This has been considered to be rather high. Steel is an essential item in every development scheme and, looking to our needs, it would indeed be good for us if this target can be attained. I am sure our planners would assess the target carefully in relation to our available resources at the appropriate time, so that unnecessary complications may not arise at a later stage.

Capacity to be Raised

"The pruning down of the second Plan and the slower tempo of its operations in several items, and, more particularly, the pegging of production of cement and railway wagons at lower levels, have resulted in some stagnation of demand for steel castings. Moreover, most of the older units are expanding their capacity and newer ones have commenced production. Steel castings are, therefore, facing keen competition. The Company, being alert to the situation, has already started producing a wider variety and more intricate types of castings, some of which are being made in India for the first time. You will be glad to know that the Government has approved of an expansion in our steel foundry capacity to 7,800 tons per year from the present 5,400 tons, and we are going ahead with the plans.

"The results of the rolling mills have shown further improvement. Our main difficulty has been the supply of billets, for which our country was dependent mostly on imports. When the T.I.S.Co's and I.I.S.Co's expansion plans are completed, and the three new steel plants start production, there will be substantial improvement of a lasting nature in the billets supply position. Meanwhile, arrangements for import of billets are being made by the Government, and it is hoped the situation will improve soon.

"The management of your Company have been taking effective steps to increase efficiency and productivity by carrying out considerable improvements in methods, plant facilities and layout. During the year, one of our Senior Executives has returned after attending the Middle Management Course at Harvard (U.S.A.) and two of our Technicians have successfully completed practical training in the U.K.

Accounts

"The loss of production due to breakdown in the steel plant for about three months, an increase of about Rs. 2 lakhs in the workers' emoluments, and a substantial cut by the Government in the conversion cost of rolled products resulting in a reduction of nearly Rs. 7.5 lakhs in earnings, have adversely affected the Company's profits. Moreover, several improvements which were made during the year resulted in temporary dislocation and loss of production. The benefits of these steps will accrue during the subsequent years. The Company has insured against loss of profits due to breakdowns in future. The Tariff Commission's report on conversion costs is expected and it is hoped we may get some relief.

"It is proposed that the dividend on ordinary and deferred shares be paid in *specie* by distributing fully paid ordinary shares of the Batala Engineering Company, Limited. After the partition of the country our factory at Lahore was lost, but by negotiations we were able to get the shares of B.E.Co. in exchange for this factory, and consequently B.E.Co. became a subsidiary of Mukands. Since then B.E.Co. has made considerable progress, and started paying dividends. With the proposed distribution, the benefit of such dividends will accrue to you directly in full. In my opinion, the interests of both the Companies would be served better, if B.E.Co. ceases to be a subsidiary of your Company.

"The Directors of the B.E.Co. have recommended a dividend of 7 per cent. on its shares for the year ended 31st March 1958. You will be entitled to this dividend to be declared at the ensuing annual general meeting of the B.E.Co.

Code of Conduct

"The recent tripartite conference of representatives of Government, employers and labour held at Naini Tal has recommended the amicable settlement of disputes by negotiations and voluntary arbitration and has also adopted a code of conduct for elimination of certain unhealthy practices, especially the rivalry of trade unions for winning the loyalty of labour by outbidding one another in making exorbitant demands and raising high hopes. I hope that these recommendations will help to create a healthier atmosphere and will be practised without reserve by all concerned for their common benefit.

"I am happy to state that the relations between the management and employees in your Company remained very cordial throughout the year. I express my appreciation and thanks to the executives, staff and workers for the efforts made by them during the year for the progress of the Company."

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

FIRE PREVENTION WEEK

ITS IMPORTANCE TO GENERAL INSURERS

FIRE prevention and fire fighting constitute a subject of utmost importance to insurance companies, apart from the national and individual interests involved in the prevention of fire damage and reduction in such damage. If fire hazards could be reduced to a minimum, it would certainly lead to lower claims against general insurers in the fire business. This in turn will enable them to make insurance cheaper and thereby to extend the protective cover wider. In fact, the only branch of business which sustains general insurance in India at present is the fire section. The other two branches, namely, marine and miscellaneous, are unremunerative and have of necessity to be subsidised by the fire section. Equally with other factors affecting the underwriting experience, a change in the rate of incidence of fire can mean much to insurers. Such a change can come only through the wider diffusion of the knowledge of fire prevention among the general public. From this point of view, the Fire Prevention Week, which is being observed in the first week of this month, should be of particular interest to general insurers.

Fire Hazards

The purpose of the observance of Fire Prevention Week is obviously to inculcate in the public a consciousness of the existence of fire hazards and the need to minimise them as far as possible. This is, however, a subject which has received very little attention in this country, despite the fact that the incidence of fire in India is by no means small. As industrialisation progresses rapidly and industrial units using highly inflammable chemicals and substances are established, fire hazards will increase greatly. Even in countries like Britain, where there is a well organised and efficient fire-fighting service in addition to voluntary non-profit-making organisations, such as the Fire Protection Association, offering technical and general advice on fire protection, the outbreak of fire is not uncommon. In fact, in Britain, there are between 200 and 300 expensive fires every year, costing over £10,000 each and the public fire brigades attend to over 10,000 fires in industry a year. It was estimated that, in 1956, the total damage due to such fires alone was £7 million. Each of them cost over £100,000 and one of these, involving a loss of over £1.4 million at a refrigerator works, was the largest loss ever suffered by the manufacturing industry in that country till that date. In February 1957, this figure was exceeded when a fire caused two million pounds damage to the stock and building of the main assembly shop at the Jaguar factory. A single fire in an American factory in 1953 cost £10 million. The extent of the damage caused by fire in India does not appear to have been measured in monetary terms, nor does it seem that even an approximate estimate of its magnitude has been made. But there can be no doubt that the incidence of fire and the losses resulting therefrom must be heavy.

Among the notable causes of fire is the ignition of dusts, and flammable liquids. Dusts and accumulations of rubbish present a common fire hazard, in that they can harbour smouldering, unobserved fires for long periods. An unextinguished cigarette falling in a heap of dust and other waste may start smouldering which may break into flame long after the premises have been left unoccupied. This is how many of the fires which are discovered in the early hours of the morning have been caused. Accidents in the use and handling of inflammable liquids are a very common cause of fires in industry. Even in very small quantities they are dangerous. In fact, accidents with small quantities are by far the most common, because insufficient attention is paid to the hazard. With very few exceptions, causes of fires can be attributed to a failure of the human element, careless use of a blow lamp or oxy-acetylene gas, lack of maintenance of electrical equipment resulting in a short circuit, etc. Others are less obvious, but nonetheless due to the failure of the human element such as the ignition of an accumulation of dust by a stray electric arc, spontaneous combustion in some chemical process and the discharge of static electricity in the transfer of flammable liquids.

The question of developing an adequate and efficient fire-fighting service in India had for long gone by default. Even as late as a couple of years ago, only a few big industrial and port towns had any organised fire-fighting service worth mentioning. Fire services in a few other places where they existed, were defective both in the matter of trained personnel and equipment. The majority of the towns and almost all villages were doing without any fire-fighting service at all. Fortunately, there has of late been a welcome awareness of the importance of fire prevention and the need for an efficient fire-fighting service. The most important step taken by the Government in this regard was the appointment, in 1950, of a committee of fire experts to study the question. The Committee recommended the establishment of a central institute for the training of fire fighters as a question of top priority, as there was hardly any place in the country for imparting systematic training in the techniques of fire fighting not only to the existing largely untrained service personnel but also to the increasing number of young recruits needed to man the expanding fire services. Accordingly, the National Fire Service College was established in July 1956. The College was temporarily housed at Rampur. Last year, it was shifted to its new and permanent home in Nagpur. The College has completed two years of existence. These two years were a period of intensive activity and rapid growth for this unique institution which is the first of its kind in India and, perhaps, the only organisation for systematic training of fire fighters in the whole of South-East Asia. During this short period, the institution has not only succeeded in building up a full-fledged training apparatus, but has also developed new techniques in the arduous and highly specialised art of fire fighting.

Rural Areas

It is obviously difficult to extend the benefits of fire insurance to rural areas. Whether these benefits are extended or not, rural areas are in need of fire-fighting services, considering that fire damage is not infrequent in these areas. But, as Mr. M. G. Pradhan, Commandant, National Fire Service College, points out, it is not easy to have fire services in rural regions, especially in centres situated at a great distance from towns. The only practicable solution is to take preventive measures and minimise the occurrence of fire accidents. He suggests that huts should be constructed, as far as possible, with non-combustible materials, such as thick mud, bricks or stones with roofs of metal, or asbestos sheets or tiles, particularly the portions around the kitchen fire and the roof above it. If split-bamboo is to be used in construction, it should be plastered with thick mud on both sides and limewashed to make it a little fire-resistant. Naked oil lamps or kitchen fires should never be allowed to burn when retiring to bed. Cigarette or *bidis*, as well as burning match sticks and kitchen fires, should be fully extinguished when done with. Straw and hay should be stacked away from the village roads or railway lines to avoid sparks falling on them. If fields are situated next to the roads or railway lines, a buffer belt of green field should be developed to keep the stacks at some distance. Hay stacks not more than 500 maunds in weight and 25 ft. in height should be built up and kept 60 ft. apart from each other or from other farm buildings.

Whenever waste material, grassland, rubbish, stubble, etc., are to be burnt, it should be done on a calm day while leaving enough space to serve as a fire break. To avoid spontaneous combustion, the newly-cut hay should be stacked from sides keeping a vertical opening through the centre which, before the stack is sufficiently high, should be filled in with loose straw. This will allow the internal heat to escape through the loose straw. All combustible storages such as fuel, wood, oils, paints, spirits, etc., should be kept in separate rooms detached from dwellings. Shopping areas and bazaars should be built with sufficient wide open spaces in between.

To deal with occasional accidental fires in rural areas, the villagers should be taught the elementary fire-preventive methods. The fright from their minds has to be removed as regards calling the fire service through the police or the village revenue officials assuring them that they would in no way be punished for such actions on their part. They should, on the contrary, be taught to consider this as their sacred duty to help their fellow villagers in their hour of peril. As soon as a fire has occurred, there should be an immediate alarm for far-off people to hear. Through fire buckets, dry sand or earth, fire beaters or brooms or fire bats of green twigs and shovels or spades, the fire can be fought. A few dwellings or huts around the fire may even have to be pulled down to achieve this object. Somebody should run up to the village police post or revenue official and give information to enable him to call the nearest available fire service, if possible. Fire-fighting implements such as stirrup pumps, buckets, scoops and rakes, fire beaters, hay knives, shovels and spades, etc., should be maintained at a central place, may be a *panchayat ghar* or a police post. A small payment for the maintenance of these equipment may be made to a group of young enthusiastic villagers who should occasionally visit the place of storage and clean the equipment so as to keep them in working order. These suggestions deserve to be implemented at least in some of the Community Development Project centres. This would help spread the knowledge of fire-fighting and awareness of fire risks in the rural areas.

EXEMPTIONS FROM STATE INSURANCE ACT

The Government of Bombay has exempted all factories situated in the area in which Chapters IV and V of the Employees' State Insurance Act 1948 are in force, and which are exclusively engaged in one or more of the manufacturing processes specified below or any other manufacturing process incidental to or connected with any of those processes, from the operation of the Act, except Chapter VA thereof, for a period of one year ending 30th September 1959. Re-drying unmanufactured leaf tobacco; rice milling; cold storage; salt manufacture; and oil mills, provided that the process of oil milling is subsidiary to any other manufacturing process which is seasonal and so long as the number of employees engaged in oil milling is less than 50.

The exemption also applies to factories exclusively engaged in any other manufacturing process carried on in a seasonal factory of the nature of cotton ginning, cotton or jute pressing, etc., as specified in section 2(12) of the Act. Chapter IV of the said Act deals with contributions of and their recovery from employers and employees, method of payment and general provisions related to it, etc., while Chapter V deals with various benefits accruing to the employees. Chapter V-A contains provisions regarding employer's special contributions and certain powers regarding the implementation of the Act.

Similar exemptions have also been granted to (*a*) any person employed directly by a principal employer or through an immediate employer on loading or unloading outside the factory or on loading or unloading of goods or material going out of or coming in at the factory gates or sidings, provided that if such person is employed directly by the principal employer continuously (but for breaks due to weekly or other holidays) for more than 15 days (including such holidays), the exemption will cease from the 16th day of the employment by the same principal employer; and (*b*) any person employed on work which is not ordinarily the work of the factory but is of a casual nature, that is, work which is not ordinarily carried on for more than 15 days in a calendar month and was not carried on for more than 60 days in the preceding calendar year; provided that any employee who is generally employed on any work other than that specified in (*a*) or (*b*) above shall continue to be covered under the Act irrespective of his temporary employment on the said work and also that, notwithstanding this exemption, any employee so exempted, shall continue to be entitled to such benefits under the Act to which he might have qualified on the basis of contributions paid before the date from which he gets exempted.

SICKNESS INSURANCE IN SWITZERLAND

The canton of Lucerne in Switzerland has introduced a compulsory sickness-insurance scheme for foreign workers employed in its territory. In Switzerland, there is no compulsory sickness insurance scheme covering the whole country. Under Article 2 of the Federal Act of 1911 respecting sickness and accident insurance, the cantonal and local authorities may declare sickness insurance compulsory either generally or for certain groups of the population, but only very limited use has been made of this possibility. As regards the canton of Lucerne, workers covered by the new Act must be members of an approved sickness fund. The insurance benefits comprise medical care (including hospital care) and allowances for incapacity for work of not less than 3 francs a day for men and 2 francs for women workers. Benefits are to be granted only so long as the worker is under treatment by a doctor practising in Switzerland. The waiting period for allowances in respect of incapacity for work may not exceed three days.

The insurance contributions imposed by the sickness fund of which the worker is a member are in principle to be paid by the worker. If the employer pays at least half the contribution he may deduct the allowance paid by the sickness fund in the event of incapacity for work from the wage paid while the worker is sick.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter 1853)
(Liability of Stockholders Limited)
Capital (Paid up) - - - £5,000,000
Reserve Fund - - - £5,500,000
Branches throughout India, Pakistan and the East
Branches of
THE EASTERN BANK LTD.
a wholly owned subsidiary of the Chartered Bank are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.
AFFILIATED BANK IN INDIA:
THE ALLAHABAD BANK LTD.
with over 70 offices in India
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:

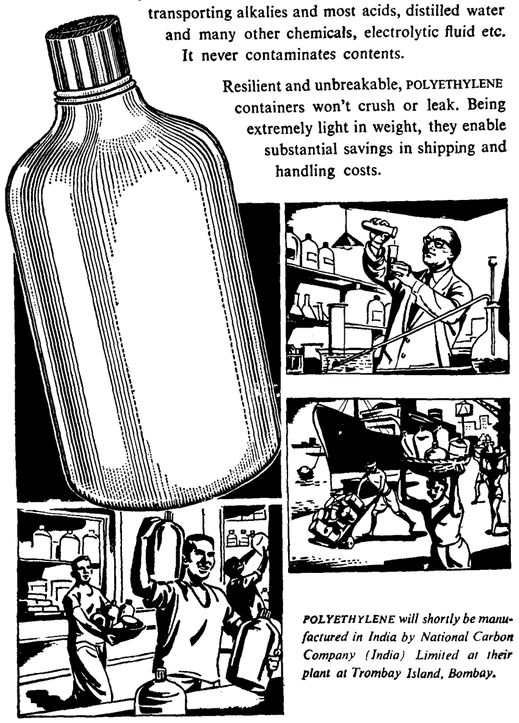
Safe way to store and handle corrosives
Carboys and containers moulded from POLYETHYLENE provide industry with a new, effective way to store and ship corrosives. Chemically inert, POLYETHYLENE is ideal for storing and transporting alkalies and most acids, distilled water and many other chemicals, electrolytic fluid etc. It never contaminates contents.
Resilient and unbreakable, POLYETHYLENE containers won't crush or leak. Being extremely light in weight, they enable substantial savings in shipping and handling costs.


POLYETHYLENE will shortly be manufactured in India by National Carbon Company (India) Limited at their plant at Trombay Island, Bombay.
CARBOYS AND CONTAINERS MADE OF

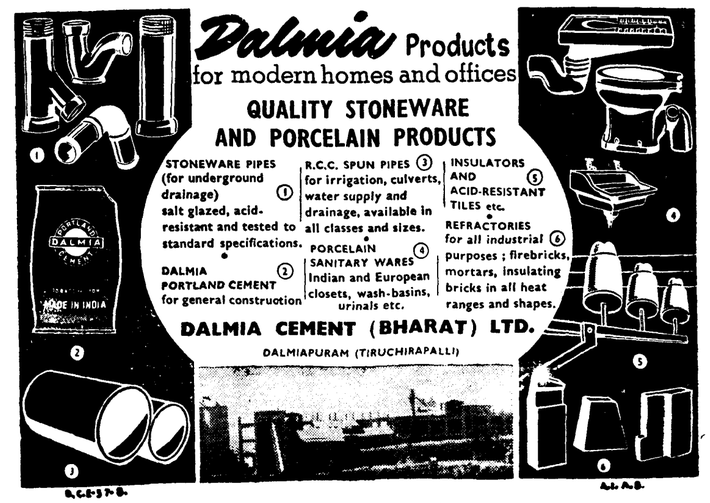
The term UNION CARBIDE is a registered trade mark of Union Carbide Corporation, U.S.A.



TRENDS IN INTERNATIONAL TRADE

ANALYSIS BY G.A.T.T. PANEL OF EXPERTS

AFTER a steady expansion in recent years, world trade began to suffer a setback from the third quarter of 1957. The recession continued in the first half of 1958 and all available indications are that it must have persisted in the third quarter also. Some in the West are confident that world trade will soon regain its upward momentum. The U.K. Chancellor of the Exchequer, for instance, averred in London last week that "the prospects for a resumption of the upward trend in world trade before long are pretty good." While we hope that this observation will not turn out to be mere wishful thinking, it must be mentioned here that the decline in international trade experienced in the past one year reflects the existence of some "disturbing elements," which, if not eliminated in time, will surely impede the progress of world trade and cause serious dents in the multilateral trading system. Some of these elements are: the prevalence of agricultural protectionism, expressed in restrictive measures in international trade in agricultural and food products, and the building up of large stocks of these products which have no outlet through the normal channels of trade; sharp variations in the prices of primary products, accompanied by wide fluctuations in the export earnings of primary producers; and finally the failure of the export trade of the underdeveloped countries to expand at a rate commensurate with their growing import needs. The problem is one that concerns both the developed and underdeveloped countries.

In this context, the report entitled "Trends in International Trade," embodying the views of a panel of experts, submitted to the thirteenth session of the G.A.T.T. held at Geneva in the latter half of October, is timely. It will be interesting to note that the panel consisted of four prominent experts. They are: Gottfried Haberler, Professor of Economics at Harvard University, U.S.A. (*Chairman*); James Meade, Professor of Political Economy, University of Cambridge, the U.K., Jan Tinbergen, Professor of Development Programming the Netherlands Institute for Advanced Economic Studies, Rotterdam, and Robert de Oliveira Campos, Director of the Brazilian National Bank for Economic Development and Professor of Economics at the University of Brazil. This panel of economists was appointed in November 1957 by the members of the G.A.T.T. to examine current trends in international trade, to glance into the future and to submit a report with suggestions for the removal of defects mentioned above.

Salient Features

The experts have made a thorough study of the problems and suggested a series of solutions. In this article, we propose to give a summary of the salient features of the recent trends in world trade while their recommendations are covered elsewhere in this issue.

The cause of commodity instability in international trade must be traced to both short-term and long-term fluctuations in their supply and demand position. The panel of economists has come to the conclusion that short-term fluctuations in the value of primary products, and, therefore, the export proceeds of the non-industrialised countries, taken as a whole, mainly reflect changes in prices rather than changes in volume. It, however, points out that the export proceeds which individual countries derive from specific commodities have varied as a result of fluctuations both in the volume and price. The changes in the volume reflect, according to the panel, not only the general business cycle, but also, *inter alia*, the particular conditions of supply prevailing in the exporting country and changes in the competitiveness of its production. Again, fluctuations in economic activity in the industrial countries have had their inevitable impact on the general price movement of primary products, taken as a whole. Such general price movements, however, have been far from uniform in respect of individual commodities. Since the end of 1955 (leaving aside the effects of the Suez crisis), the slowing-down in economic activity in North America and Western Europe has given rise to an average decline in the prices of primary products which in early 1958 reached 5 per cent. The adverse impact of this decline upon the position of non-industrial countries as a whole has been aggravated by the simultaneous rise—by about 6 per cent.—in the prices of manufactured goods.

The panel has viewed the long-term changes in world trade by a comparison of the developments in the 'fifties with those in the last 'twenties. Its study shows that the general structure of world trade had by the middle of the 1950's reverted to that of the late 1920's in several important respects. The growth in the volume of world exports between 1928 and 1955-57, however, fell considerably short of the growth in the world's commodity production. In other words, production rose faster than trade. The commodity composition of exports of non-industrial countries underwent a profound change during this period. Petroleum exports from the primary exporting countries rose nearly sixfold in volume between 1928 and 1955, the volume of exports of agricultural raw materials, tropical foodstuffs and minerals was about 40 per cent. higher, while non-tropical foodstuffs recorded a 15 per cent. decline. Indeed, these general tendencies were partly reinforced by the movement of prices which in 1955 were more than twice as high as in 1928 in respect of petroleum, tropical foodstuffs and minerals. The value of agricultural raw materials and non-tropical foodstuffs, on the contrary, was relatively lower, exceeding the 1928 level by about 75 per cent.

The primary producing countries have been classified into five categories, on the basis of their main export commodities, for, with the exception of some petroleum exporters, no country, according to the panel, relies exclusively on the export of any single commodity. The export proceeds of these five groups, in 1955, were: (1) roughly twice as large as in 1928 for the exporters of non-tropical foods and agricultural raw materials, (2) nearly four times as large as in 1928 for the exporters of tropical foodstuffs and minerals, and (3) about 12 times as large as in 1928 for the countries mainly exporting petroleum. It will thus be seen that petroleum producers have derived great benefits in recent years as a result of growth in international trade. Among these, the countries in West Asia stand foremost.

Two Other Factors

In addition to the commodity composition of exports, two other factors have had a significant influence upon export proceeds received by the non-industrial countries. First, the export earnings of group of "semi-industrialised countries" (Argentina, Brazil, Mexico, Australia, India, Union of South Africa, Finland, Yugoslavia) had between 1928 and 1955 risen only half as fast as those of "other non-industrial countries" taken together, that is, by 96 per cent. as compared with 176 per cent. Secondly, the export proceeds of those countries of the latter group which trade in "sheltered" channels (the countries belonging to the overseas sterling area and the territories associated with continental countries of W. Europe, as well as Cuba, have been considered as trading in "sheltered" channels) had developed much more favourably than those which do not enjoy a privileged position in their major export markets.

Since the late 1920's, the volume of imports into the non-industrial countries taken as a whole had risen more sharply than the volume of their exports. As the terms of trade of the non-industrial countries, though greatly improved since 1937-38, were in 1957 nevertheless at about the same level as in 1928, this divergent movement has been reflected in an increasingly adverse trade balance—in contrast with their large export surplus before the war. However, the petroleum exporting countries continued in post-war years to have a large export surplus—amounting in 1957 to one-third of their export proceeds. Among other non-industrial countries, the trade deficit exceeded the value of exports by about 10 per cent. in recent years, but rose to as much as 20 per cent. in 1957.

Transactions in Services

The non-industrial countries have also been in deficit on account of their international transactions in services, both in 1928 and in the 1950's. The flow of private long-term capital has, according to the panel, failed to develop in line with the value of world trade. But official grants and loans to the non-industrial countries have provided in total a substitute for private lending surpassing its previous level. The gold and foreign exchange reserves of the non-industrial areas taken as a whole were, just about as important in 1957 as they were in 1928, both in relation to the value of the trade of the non-industrial areas and in relation to world reserves.

The balance of payments position of the non-industrial areas as a whole is "not less sound than before the war," but this is not true of all the non-industrial countries. The position of some of them has deteriorated to such an extent as to be a source of anxiety. The main conclusions of the panel on the regional disparity in the balance of payments position are:

(1) The oil exporting countries have accumulated gold and foreign exchange reserves at a faster rate than most other countries. Also, they have attracted a large share of the private long-term capital flowing to the non-industrial areas.

(2) Among the remaining non-industrial countries, the semi-industrialised have had to face the greatest difficulties. Their reserves have been declining both in relative and in absolute terms during the post-war years. Only a small part of the total of official grants and loans has been directed towards these countries. As importers of private long-term capital, they maintained their share of the late 1920's but were affected by the comparatively lower level of private foreign lending.

(3) The position of the other non-industrial countries has undergone similar, though less pronounced, changes, but this group of countries has been receiving by far the largest share of international aid. However, within these areas the distribution of aid has been subject to political as well as economic considerations.

Main Findings

To sum up the main findings of the panel, its views on future import requirements and prospects for exports. Both cyclical and specific fluctuations have contributed to recent short-term movements in trade in primary products. Long-term developments in exports of such products are partly a consequence of the low average income elasticity of demand for these products. This has been further aggravated by the technological and structural factors such as the development of synthetic materials and the relative decline in the textile industries, though there have been some counteracting developments as, for instance, exploitation of bauxite, uranium, petroleum, etc. It is impossible, on the evidence now available, to conclude whether or not there has been an increase in agricultural protection in industrial countries in recent years. The imports of industrial countries have developed faster than world trade, and increasingly consist of capital goods. The terms of trade were more favourable to non-industrial countries in the post-war period than in 1938, but have turned against them recently though still on a level not far from the 1928 position.

The import requirements of non-industrial countries are likely to increase more quickly than the rest of world trade. This is especially so, if development programmes are carried out on a scale at least sufficient to avoid any further widening of the gap between incomes in the developed and the underdeveloped countries. The exports of non-industrial countries are very sensitive to internal policies of industrial countries and may well develop less quickly than the rest of the world trade. Finally, the panel has warned that it would be unwise to count on any improvement in the terms of trade of the non-industrialised countries to raise their ability to purchase imports. Admittedly, a permanent solution to the commodity problems that confront the primary producing countries can be found only by diversifying their economies and thus relieving them from their exclusive dependence on a few commodities for the great bulk of their export earnings.

AUTOMATIZED COW-SHED IN SWEDEN IMPROVES MILK QUALITY

Probably the most advanced of Swedish agricultural experiments—at least in the private sector—is the Simontorp farm in Skane, South Sweden. It is mainly an animal farm, and its most important product is milk. Breeding and feeding experiments are going on continuously, but what has made the farm particularly famous is its modern cow-shed, which is designed for the most exacting hygienic conditions. It is claimed that the bacterial content in the milk of Simontorp before pasteurization is only one-thousandth of that in average milk. In a deep-frozen state, it has been used on the Swedish American Line's vessels, and it is reported to have lasted four months in perfect condition on cruises.

The owner of Simontorp is Mr. Ruben Rausing, head of two large Swedish packaging firms, the Tetra Pak enterprise and A. B. Akerlund and Rausing. He set out as a farmer some 15 years ago,

INDIA PAPER'S PROFIT DECLINES

EXCESSIVE TAXATION AND HIGHER PRODUCTION COSTS MAIN CAUSES

A SHARP rise in excise duty on paper, an unrealistic price control policy by the Government, a sizable increase in manufacturing costs, and a drop in production, consequent upon a change in the types of papers manufactured, have been cumulatively responsible for a decline in the profit of the India Paper Pulp Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) for the year ended 31st March 1958. The lower output during the year under review, as compared with that for the previous year, was due to the manufacture of a higher proportion of lightweight papers to meet market demands and also to the experimental manufacture of speciality papers as a prelude to the starting up of the third paper machine. Indeed, all the factors responsible for the setback in the Company's earnings were beyond the control of its management. It is true that proceeds from sales of paper were appreciably higher but they were not such as to offset the effects of other adverse factors. Accordingly, the gross profit at Rs. 14.57 lakhs has dropped by Rs. 5.24 lakhs from Rs. 19.81 lakhs for the previous year, to which level it had modestly increased from Rs. 19.17 lakhs for 1955-56. It is also a shade lower than Rs. 14.87 lakhs earned in 1954-55.

A larger sum of Rs. 5.47 lakhs as against Rs. 4.30 lakhs a year ago, has been set aside for depreciation. The fall in profit has naturally meant a reduction in the *direct* share of the Government. Thus, the provision for taxation, including Rs. 64,000 for wealth tax, takes up Rs. 4.05 lakhs, as against Rs. 6.25 lakhs in the previous year. But this fall has been more than offset by the striking increase in the excise duty paid by the Company. The net profit works out to Rs. 4.51 lakhs which is equal to only 60 per cent. of that (Rs. 7.51 lakhs) for the previous year. In fact, the fall would have been greater but for the provision of Rs. 64,000 for wealth tax being met out of taxation reserve. Lower profit has meant smaller distribution to shareholders. Thus, the dividend for the year under review is proposed to be cut to 10 per cent. from 14 per cent. paid for the preceding three years. Indeed, the net profit is so low that even for paying this attenuated dividend, the Directors have had to withdraw a sum of Rs. 1.75 lakh from the dividend equalisation reserve. In the previous year also, in order to maintain the dividend at 14 per cent., they had to deplete the reserves by a sum of Rs. 1.50 lakh, that is, Rs. 1 lakh from the general reserve and Rs. 50,000 from the dividend equalisation reserve. It is a sad commentary on the position of the paper industry that even a first class company like the one under review has had to draw upon its reserves for the second year in succession and that for ensuring nothing more than a modest return to shareholders. And, as we shall show presently, this is largely due to excessive taxation (both direct and indirect) and defective control over prices of paper.

The following comparative table shows at a glance the main features of the Company's results for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sales of paper	105.86	99.10	93.65	80.37
Sales of by-products	0.84	0.66	0.43	0.07

Carry forward				

* Includes Rs. 64,000 for wealth tax met from taxation reserve built out of previous years' profits.

The table shows that the Company's sale proceeds of paper increased by Rs. 6.76 lakhs and crossed the one-crore mark to reach a total of Rs. 1.06 crore. As against this rise, manufacturing and other expenses increased by Rs. 4.85 lakhs and excise duty by Rs. 5.08 lakhs, both on a lower level of production. Indeed, the excise duty for the year under review at Rs. 14.55 lakhs equals the Company's gross profit at Rs. 14.57 lakhs. Since not all the rise in excise duty was covered by a corresponding increase in the selling price of paper, the result was a diminution in the profit margin of the Company.

The great handicaps under which the Company had to work during the year under review will be evident from the following quotation taken from the Directors' report:

"Production costs have again shown a significant rise, and for the latter part of the year under review were 7 naye paise per lb. more than for the corresponding period of the year ended 31st March 1957. Increases in the cost of raw materials, chemicals, coal and stores and higher labour charges have all been contributory factors. As the Bengal Electricity Duty (Amendment) Act, 1957, did not come into force until 1st February 1958, its effect is only partially reflected in these accounts, but it is estimated that, in a full year, the amount of additional duty payable by the Company under this Act will amount to approximately Rs. 1,40,000.

"In March 1958, the paper industry was compelled by rising costs to ask the Government of India for an average increase of 5 naye paise per lb. in the price of its supplies to Government, but Government was prepared to grant an increase of only 2 naye paise per lb. which was accepted by the industry under protest. At the same time, this Company and certain other companies increased the prices of their standard papers supplied to the civilian market by 3.5 naye paise per lb. Government has expressed the view that this price increase was excessive and it has recently been announced that the question of determining fair ex-mill and selling prices for the different varieties of paper manufactured in India has been referred by the Government of India to the Tariff Commission for its recommendations."

The Company's third paper machine came into production in June 1958. The Company has to rely on imported wood-pulp for its increased pulp requirements, pending the availability of pulp from the projected Assam pulp mill. This has enabled the Company, according to its Directors, to concentrate on the manufacture of special qualities of paper which have hitherto been imported. Negotiations for the finance and foreign exchange for the proposed pulp mill in Assam have reached an advanced stage.

The Company's balance-sheet as at 31st March 1958 reflects the progress of its development programme. Over the year, the gross block has gone up in value from Rs. 124.92 lakhs to Rs. 194.26 lakhs, an addition of nearly Rs. 70 lakhs. The total depreciation provided so far is Rs. 88.79 lakhs and the net block stands at Rs. 105.47 lakhs; a year ago, it stood at no more than Rs. 41.15 lakhs. This net addition of Rs. 64.32 lakhs to the block account has been financed by depleting the cash balances from Rs. 41.25 lakhs to a nominal figure of Rs. 99,789 and by taking unsecured loans amounting to Rs. 26.22 lakhs, of which Rs. 25.41 lakhs have been provided by the Managing Agents. Other current provisions and liabilities also have gone up by Rs. 6 lakhs to Rs. 33.45 lakhs. While the Company's expansion has thus affected its liquidity, it is noteworthy that current assets, aggregating Rs. 79.02 lakhs, exceed the total of current liabilities, provisions for taxation and dividends, and the unsecured loans by a comfortable margin of Rs. 19.35 lakhs. How has this been possible? The answer lies in the judicious policy of conservation of profits adopted by the management, a policy now being penalised by means of excessive taxation. The Company has a paid-up capital of Rs. 63 lakhs, all in ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 30.21 lakhs and share premium Rs. 31.61 lakhs. According to our classification, the reserves are almost equal to the paid-up capital.

The Directors say that they are considering the question of funding the Company's indebtedness.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 21.50 *cum-div.* (final dividend 50 nP). On an *ex-div.* basis, the shares provide a yield of 4.8 per cent. per annum. On the basis of ruling equity yields, this may appear to be somewhat low, but it reflects the confidence of investors in the future. Apparently, they feel that when the expansion programme is completed and the Tariff Commission settles the question of fair price in an equitable manner, the Company's profit-margin would improve, enabling it not only to restore the cut in dividend but even to pay a little more.

TRAVANCORE SUGAR REPORTS LOWER PROFIT

DIVIDEND, HOWEVER, SAME

A MODEST decline in gross profit and a marked fall in net profit are the chief features of the financial results of the Travancore Sugars and Chemicals Ltd. (Managing Agents: Messrs. Parry and Company Ltd., Tiruvalla, Kerala State) for the year ended 30th April 1953, as compared with those for the previous year. Coming as it does, against the background of a sizable improvement in sales proceeds, the recession in the year's profit is primarily accounted for by a corresponding rise in manufacturing and other expenses, as well as heavy incidence of taxation. Thus, as against a rise of Rs. 15.58 lakhs in sale proceeds to Rs. 125.53 lakhs during the year under review, expenses have increased by Rs. 16.79 lakhs to Rs. 107.93 lakhs. Hence, the gross profit at Rs. 18.48 lakhs shows a decline of Rs. 1.09 lakh from Rs. 19.57 lakhs for the previous year. It, however, compares well with Rs. 11.43 lakhs for 1955-56. Besides the aforesaid factors, another that adversely affected the results of the Company was a fall in production of sugar from 11,908 tons to 8,362 tons, a drop of nearly 21 per cent.

The fall in net profit is sharp. At Rs. 6.15 lakhs, it is only about half of that (Rs. 12.27 lakhs) for 1956-57. This marked fall is due to the rise in the provision for taxation from a mere Rs. 2.85 lakhs to as much as Rs. 7.72 lakhs. Explaining this provision, the Directors state that, while, in the previous year, the assessable profits for taxation purposes were reduced by carrying forward income-tax depreciation allowances not absorbed in previous years, no such carry forward was available for the year under review and therefore provision for taxation has been made on the full assessable profit for the year. This actually amounts to Rs. 8.04 lakhs (consisting of Rs. 4.60 lakhs for income-tax, Rs. 3.04 lakhs for super-tax and dividend tax and Rs. 40,000 for wealth tax) or 64.7 per cent. of the net profit before taxation.

The amount set apart for depreciation on fixed assets is a shade higher at Rs. 2.96 lakhs. This provision exceeds, we are told, the amount allowed for income-tax purposes, the tax thereon amounting to Rs. 45,000 having been drawn from the taxation equalisation reserve specifically provided in past years for this purpose.

The fall in profits has compelled the Directors to transfer only a modest sum of Rs. 2.10 lakhs to the reserves, as against Rs. 8.20 lakhs a year ago. This year's transfers consist of Rs. 1.44 lakh to provision for current repairs to plant and machinery, Rs. 16,000 to capital reserve and Rs. 50,000 to general reserve. The allocations in the previous year were taxation equalisation reserve Rs. 6.75 lakhs, provision for current repairs to plant and machinery Rs. 1.20 lakh and capital reserve Rs. 25,000.

The dividend on ordinary shares is, however, being maintained at 10 per cent. per annum for the third year in succession. This requires Rs. 3 lakhs. The dividend on the 5 per cent. preference share capital takes up Rs. 75,000, leaving Rs. 1,07,287 to be carried forward as against Rs. 77,353 brought in.

The following table will give some idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 30th April		
	1958	1957	1956
Sale proceeds	125.53	109.95	58.76
Closing stock of work-in-progress and finished goods	37.53	41.87	27.30
Manufacturing and other expenses	107.93	91.14	48.21
Gross profit	18.48	19.57	11.43
Managing Agents' commission ..	1.65	1.67	0.77
Depreciation	2.96	2.78	2.64
Taxation	7.72	2.85	—
Net profit	6.15	12.27	8.02
Transfer to reserves	2.10	8.20	3.98
Dividends—			
5% preference	0.75	0.75	0.75
Ordinary	3.00	3.00	3.00
	(10%)	(10%)	(10%)
Carry forward	1.07	0.77	0.45
Cane crushed .. .. Tons	100,664	134,337	87,323
Sugar produced .. .. "	8,362	11,908	7,931
Sugar recovery	8.31%	8.80%	9.07%

For the Company, the 1957-58 crushing season commenced on 10th October 1957 and finished on 20th February 1958, aggregating in all 131 days for the season. The quantity of cane crushed was lower at 100,664 tons, as against 134,337 tons in the 1956-57 season. Likewise the production of sugar fell from 11,908 tons to 8,362 tons. The average recovery was 8.31 per cent., as compared with 8.8 per cent. in the previous season. The lower tonnage and the lower recovery during the year were, it is stated, mainly due to climatic conditions and serious flooding of cane fields. This was again responsible for the late start of the season. The quantity of sugar sold up to the end of the year under report was 9,613 tons including the previous year's carry-over stock, as compared with 9,598 tons in the previous year. Sales of spirits as also sales of pharmaceuticals were maintained at a satisfactory level and, in regard to the latter, the year's working showed slightly better profits than in the previous year.

The balance-sheet as at 30th April 1958 shows that the Company's paid-up capital stands at Rs. 45 lakhs, composed of Rs. 15 lakhs in 5 per cent. cumulative preference shares of Rs. 10 each and Rs. 30 lakhs in ordinary shares of Rs. 10 each. The reserves and surplus aggregate Rs. 24.92 lakhs, of which the taxation equalisation reserve accounts for Rs. 12.40 lakhs. The current liabilities amount to Rs. 30.19 lakhs, including a provision of Rs. 10.78 lakhs for taxation and Rs. 3.75 lakhs for the proposed dividends. The gross block of Rs. 65.43 lakhs stands written down to Rs. 37.90 lakhs. The current assets aggregate Rs. 62.05 lakhs and are equal to more than twice the current liabilities and provision for taxation.

The Rs. 10 paid-up ordinary shares are currently quoted at Rs. 11.60 *cum-div.* and, on an *ex-div.* basis, provide a yield of 9.4 per cent. per annum.

JAY ENGINEERING'S RESULTS ENCOURAGING

The year ended 31st March 1958 was one more highly successful year for the Jay Engineering Works Ltd. [Managing Agents: Messrs. Madan Mohanlall Shriram & Co. (P.) Ltd., New Delhi]. The increase in production of both sewing machines and fans was fully maintained. Manufacture of heavy industrial machines was started. Sale proceeds made further rapid strides. The Company's profit also showed a rise which was fully in keeping with the encouraging trend in production. Indeed, the financial results would have been far more encouraging had it not been for the sharp rise in the cost of raw materials consumed and in other expenses relating to production and management.

The gross profit at Rs. 62.82 lakhs represents an advance of Rs. 7.20 lakhs from Rs. 55.62 lakhs for 1956-57. It is also Rs. 20.31 lakhs better than Rs. 42.51 lakhs for 1955-56. The net profit has jumped up from Rs. 17.76 lakhs for the previous year to Rs. 24.07 lakhs. This is after raising the provision for depreciation from Rs. 15.53 lakhs to Rs. 19.09 lakhs but after lowering that for taxation from Rs. 18 lakhs to Rs. 14.45 lakhs.

Although the profits have increased, the dividend on the ordinary shares has been lowered to 12 per cent. from 15 per cent. for the previous year, to which level it had been raised from 10 per cent. two years ago. It should, however, be noted that the year's dividend is on a higher capital. Although the rate of dividend has been lowered, the Directors have transferred a sum of Rs. 15.70 lakhs to the reserves, as against only Rs. 8.50 lakhs allocated in the previous year. The allocations made this year include Rs. 12.90 lakhs (Rs. 8.50 lakhs in 1956-57) for general reserve and Rs. 2.80 lakhs for development rebate reserve.

The table appended below will give a broad idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March		
	1958	1957	1956
Sale proceeds	468 33	386 57	302 83

Sale proceeds during the year (excluding hire-purchase sales) made a substantial rise of Rs. 81.76 lakhs to touch a high of Rs. 4.68 crores. But, as stated earlier, this commendable improvement was neutralised to a considerable extent by the sharp rise of Rs. 52.03 lakhs in the cost of raw materials consumed and Rs. 30.95 lakhs in other expenses. It is interesting to know that, in spite of increased cost of production, the Company reduced the price of its sewing machine from Rs. 175 to Rs. 160 with effect from 1st January 1958.

Referring to the Company's activities during the year under review and the progress achieved thus far, the Directors observe:

"The fan factory has been completely removed to the new area and is working satisfactorily. The shuttle plant is running quite satisfactorily. The

(Continued on page 741)

Points From The Chair

Power Consumption

"IN almost every case consumption has increased and I am glad to state that there were no major labour disturbances during the year. The increased demand for low tension industrial power reveals the activity of small works and factories, much expansion having occurred in the Calcutta and Howrah areas during the course of the last few years. It has been possible for the smaller concerns to manufacture many items which previously had to be imported; our sales increased from 85 million units to 91 million units. Consumption from public water works and sewage pumping rose from 65 million units to 73 million units and was mainly due to larger requirements from the Calcutta Corporation. There was again a marked increase from 43 million units to 50 million units in power sales for domestic purposes. Domestic power consumption has doubled during the last five years due to the growing use of domestic appliances and small air-conditioning units in private houses."

SIR HARRY BURN,
Calcutta Electric Supply Corp. Ltd.

Labour Legislation

"The Governments have further endeavoured to enforce vast and rapid improvements in conditions for labour, largely beyond the capacity of employers engaged in the tea and rubber plantation industries to meet, especially having regard to the relatively enormous sums exacted by the Governments by way of taxation. To force, in effect, owners of estates to borrow money (whether from Governments or otherwise) to meet the oppressive demands upon them is surely the road to ruin, not only of the individual owners but of the industry as a whole. Private enterprise cannot live if its life blood is withdrawn in endeavouring to meet impossible demands and it seems strange that the main concern of Governments in India in enacting labour legislation is to benefit almost entirely those who are already in employment, who constitute only a relatively small percentage of the total population—without equal regard for the fate of the great majority of the population who are without any regular employment."

H. W. HORNER,
Malayalam Plantations Ltd.

Steel Production

"There are indications that the target for steel production in the third Five-year Plan might be fixed at 15 million tons. This has been considered to be rather high. Steel is an essential item in every development scheme and, looking to our needs, it would indeed be good for us if this target can be attained. I am sure our Planners would assess the target carefully in relation to our available resources at the appropriate time, so that unnecessary complications may not arise at a later stage. The pruning down of the second Plan and the slower tempo of its operations in several items, and more particularly the pegging of production of cement and railway wagons at lower levels, have resulted in some stagnation of demand for steel castings. Moreover, most of the older units are expanding their capacity and newer ones have commenced production. Steel castings are, therefore, facing keen competition."

KAMALNAYAN BAJAJ,
Mukand Iron and Steel Works Ltd.

Textile Industry

"The reasons for the difficult trading conditions encountered during the second half of the year are complex, but it would seem as if the general decline in economic activity throughout the world has been more pronounced in textiles and clothing than in most other branches of industry. The widespread lack of confidence, the severe fall in wool prices, in some countries balance of payments difficulties and, particularly in the United Kingdom, the intensification, until recently, of credit restrictions, have together induced a widespread policy of stock reduction resulting in lower activity throughout the world. These trends have been followed automatically by a decline in employment in many countries, which has again worsened the situation. It would be premature to anticipate any solid improvement in textile trade until such time as confidence is strengthened and world economic situation generally shows a more certain upward trend."

THE RT. HON. LORD ROCHDALE,
Kelsall & Kemp Ltd., Rochdale

Code of Conduct

"One of the provisions recently added to the Code is the rule that requires collection of premiums prior to commencement of risk. This rule, although introduced only recently, has worked quite satisfactorily. The same cannot, however, be said about the other provisions of the Code. To my mind, the lack of success with regard to the other provisions is due mainly to the kind of unsuitable machinery that has been set up for implementing the Code and partly to some defects inherent in the Code itself. No voluntary scheme can succeed without the willing acceptance and active participation of the parties concerned. A sense of responsibility for the proper observance of the Code can be fostered only when the companies concerned are made to take a part direct or indirect in the administration of its provisions. This feature is entirely absent in the machinery that has been created for implementing the Code. The Code suffers also from over-elaboration and, at the same time an underestimate of the evils that can flow from some of its permissive provisions. The result is that the very evils which the Code is designed to eradicate are allowed to thrive under different colours."

M. CT. MUTHIAH,
United India Fire & General Insurance Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

BARNAGORE JUTE FACTORY CO., LTD. Annual General Meeting, London, 5th November 1958. Dividend: *Nil.* Transfer books remain closed from 23rd October to 5th November 1958, both days inclusive.

INDIAN GALVANIZING CO. (1926) LTD. Annual General Meeting, Calcutta, 6th November 1958. Dividend: *Nil.* Transfer books remain closed from 27th October to 6th November 1958, both days inclusive.

NATIONAL ELECTRICAL INDUSTRIES LTD. Annual General Meeting, Bombay, 7th November 1958. Dividend: 9 per cent. or Rs. 4.50 per share, payable on or before 22nd December 1958. Transfer books remain closed from 31st October to 7th November 1958, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 7th November 1958. Dividend: Re. 0.90 per share (includes interim dividend of Re. 0.40 per share). Transfer books remain closed from 1st to 7th November 1958, both days inclusive.

MACHINERY MANUFACTURERS CORPORATION LTD. Annual General Meeting, Bombay, 7th November 1958. Dividend: *Nil.* Transfer books remain closed from 24th October to 7th November 1958, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Annual General Meeting, Pamba River Factory, Tiruvalla, 14th November 1958. Dividend: 10 per cent. or Re. 1.00 per share. Transfer books remain closed from 31st October to 14th November 1958, both days inclusive.

CHAMPDANY JUTE CO., LTD. Annual General Meeting, Calcutta, 14th November 1958. Dividend: *Nil.* Transfer books will remain closed from 6th to 14th November 1958, both days inclusive.

HULDIBARI TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 14th November 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 1st to 14th November 1958, both days inclusive.

INDIA PAPER PULP CO., LTD. Annual General Meeting, Calcutta, 17th November 1958. Dividend: Re. 1.00 per share (includes interim dividend of Re. 0.50 per share). Transfer books will remain closed from 4th to 17th November 1958, both days inclusive.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 18th November 1958. Dividend: 75 nP per share, on old ordinary shares and 3.125 nP per share, on new ordinary shares, payable on and after 20th November 1958. Transfer books remain closed from 6th October to 3rd November 1958, both days inclusive.

KIRLOSKAR OIL ENGINES LTD. Annual General Meeting, Poona, 21st November 1958. Dividend: 10 per cent. or Re. 1.00 per share, payable on and after 21st December 1958. Transfer books remain closed from 31st October to 21st November 1958, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 27th November 1958. Dividend: Re. 0.45 per share, payable on or after 15th December 1958. Transfer books will remain closed from 13th to 27th November 1958, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Annual General Meeting, Calcutta, 28th November 1958. Dividend: *Nil.* Transfer books will remain closed from 14th to 28th November 1958, both days inclusive.

GANNON DUNKERLEY & CO., LTD. Annual General Meeting, Bombay, 10th December 1958. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 8th to 23rd December 1958, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Annual General Meeting, Bombay, 12th December 1958. Dividend: Re. 1.80 per share, on old ordinary shares and Re. 0.90 per share, on new ordinary shares, payable on 15th December 1958. Transfer books will remain closed from 3rd to 27th November 1958, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Annual General Meeting, London, 18th December 1958. Dividend: 2½ per cent. free of tax. Transfer books will remain closed from 5th to 18th December 1958, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Final dividend of Rs. 4.00 per share, for the half-year ended 31st March 1958 (making 6½ per cent. for the year), payable on 28th November 1958. Transfer books will remain closed from 3rd to 27th November 1958, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Interim dividends of Rs. 7.50 per share, on shares of Rs. 125 each and Rs. 3.00 per share, on shares of Rs. 50 paid up, payable on and after 24th November 1958. Transfer books remain closed from 31st October to 7th November 1958, both days inclusive.

COOPER ENGINEERING LTD. Dividend of Rs. 10.00 per share (includes bonus), for the year ended 30th June 1958, payable on 8th December 1958. Transfer books will remain closed from 17th to 27th November 1958, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Interim dividend of 12½ per cent. for the year ended 31st December 1958, payable on or after 14th November 1958. Transfer books will remain closed from 3rd to 14th November 1958, both days inclusive.

DAVANGERE COTTON MILLS LTD. Dividend of 9 per cent. or Rs. 9.00 per share, for the year ended 31st March 1958, payable on 17th November 1958. Transfer books will remain closed from 4th to 17th November 1958, both days inclusive.

T. STANES AND CO., LTD. Interim dividend of 7 per cent. or Re. 0.70 per share, for the year ending 30th September 1958. Transfer books remain closed from 1st to 15th November 1958, both days inclusive.

INDIAN GALVANIZING FARES BETTER

EAST INDIAN COAL BEING MECHANISED

Indian Galvanizing Co. (1926) Ltd.

THE directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year (including items relating to previous years) after providing for depreciation, was Rs. 3,49.237 (loss of Rs. 5,96,840) to which is added the balance brought forward from 1956 of Rs. 90.223 (Rs. 41,267) making a total of Rs. 4,39,460 (debit of Rs. 5.55.573. Against this debit balance the directors have transferred Rs. 2,30.000 from stock reserve and a sum of Rs. 4,32,743 being provision for taxation no longer required—written back, leaving a credit balance of Rs. 1,07,170. The Board recommends the payment of a dividend of 6 per cent. on cumulative preference shares amounting to Rs. 16,947 (Rs. 16,947) leaving a balance of Rs. 4,22,513 (Rs. 90,223) to be carried forward.

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—The profit is entirely attributable to the increased output and satisfactory working of the Bombay factory. In its circular letter of 24th April 1958 the Board advised members of the decision to close the Calcutta factory. In consequence, a heavy liability has been incurred in respect of retrenchment compensation and for this reason the Board is unable to recommend any dividend on the ordinary shares.

Plans for the profitable utilisation of the Company's assets have already been announced. At the extraordinary general meeting held on 23rd July 1958, a resolution was passed which empowers the Board to sell or otherwise dispose of the whole of the undertaking of the Company. Applications have been made to the Central Government for licences for the new companies which it is proposed will acquire the assets of the Company.

Accounts in brief are as under:—

East Indian Coal Co., Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th April 1958.

After making allowance for depreciation and provision for taxation for the year, the year's working has resulted in a net profit of £11,766 (£4,730) to which has to be added the amount at credit of profit and loss account at 30th April 1957, viz., £26,677 (£58,922) making a total of £38.443 (£63.652). Out of this sum there has been provided for wealth tax for previous years £1,012 (£9.975 including Indian income-tax and super-tax amounting to £6,750; leaving a balance available for disposal of £37.431 (£53.677).

The interim dividend paid on 25th April 1958 at 40 (50) naye paise per share, on 240.000 shares, without any deduction for Indian income-tax payable by the company, absorbed £7.200 (£9,000). The directors recommend a final dividend for the year at 60 naye paise (Re. 1.00) per share on 240.000 shares, without any deduction for Indian income-tax payable by the Company, absorbing £10,800 (18,000) leaving a balance at credit of profit and loss account, to be carried forward, of £19,431 (£26.677).

Raisings for the year at 524.535 tons decreased by 36.515 tons as compared with the previous year. Despatches were lower at 468.747 tons against 562.446 tons in the previous year—a decrease of 93.699 tons. Stocks of coal at the collieries have increased by 31,430 tons. The Coal Board has fixed the output target for the Company's collieries at 606,000 tons for 1958, against 564,000 tons for 1957.

As was stated in the report for the previous year, the Company's working was not profitable for the first half of the year now under review, due principally to reduced output. Though an improvement in raisings, as was forecast in that report, was obtained, persistent technical difficulties at the collieries limited its extent and over the full year the results have been disappointing although, with a reduced provision for taxation, the net profit in fact shows a slight increase.

The Company was again faced with a liability for retrospective wage increases, for which it has had to make provision from past retained profits and although the increase in price given to compensate for the cost of implementation of the Labour Appellate Tribunal Award was effective over the greater part of the year, the proceeds thereof were not sufficient to meet the cost of the necessary provisions. So long as inadequate sale prices are a continuing factor in the Industry, the earning of profits must remain subject to considerable uncertainty. The Coal Price Revision Committee, to the setting up of which reference was also made in the previous Report, has not yet concluded its deliberations and it is not possible to anticipate its findings. The necessity of an immediate price increase sufficient both to meet the increased cost of practically every item involved in coal production (of which only direct wages have in the recent past been taken account of by Government in framing and executing its price policy), and to leave a sufficient margin of profits for retention in the business to provide some part of the finance called for to meet the development requirements of the Second Five-year Plan is, however, strikingly apparent in the case of this Company's collieries.

The Company's mechanisation and expansion schemes are continuing to progress and have been scheduled for completion in 1961, although it is expected that their effects on profitability will be reflected in increasing degree before then. Work has started on the implementation of the sand stowing scheme for Bararee Colliery and all contracts for the first phase have been placed. Provided that the import of essential plant is not unduly delayed by import restrictions and that steel is made available to meet requirements for local manufacture, it is planned to have stowing in operation by mid-1959. Negotiations are meanwhile continuing with the Coal Board for a loan to meet the cost of this scheme and permission has been obtained from the Central Government to borrow the required amount.

The wagon supply position so far as this Company was concerned was unsatisfactory at various times during the year, particularly on the South Eastern Railway and it is clear that a further period may lapse before these difficulties are overcome to an extent which will enable the increased raisings which are projected to be despatched without involving accumulation of stocks.

While at this stage it is difficult to give any reliable forecast regarding profit prospects for the current year, it can be stated that to date raisings are appreciably up over the corresponding months of last year, with a consequent improvement in trading results. Continuance of this improvement is, however, contingent on the transport situation, a factor over which the Company has no control; but stocks which continued to increase until the end of June are now showing a slight seasonal decline. In view, however, of the difficulties confronting the Industry generally and the Company's development and stowing commitments, the directors consider it prudent to continue their policy of conserving the Company's resources and it is for this reason that they have again reluctantly had to recommend a reduced dividend.

Accounts in brief are as under:—

Liabilities	£	Assets	£
Capital ...	240.000	Gross block ...	1.070,637

£	866,418	£	866,418

Machinery Manufacturers Corporation Ltd.

The directors of the above Company (Managing Agents: Messrs. Mahindra and Mahindra Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year after providing for development rebate Rs. 46.644 (*nil*) and wealth tax Rs. 24.507 (*nil*) amounts to Rs. 8.95.629 (Rs. 9,72,445). Of this amount depreciation for 1956-57 absorbs Rs. 5.06,503 (Rs. 5.96,279) leaving an available balance for disposal of Rs. 3,89,126 (Rs. 2.76,166 from which the directors have paid arrears of dividends on special cumulative 4½ per cent. preference shares upto 31st March 1954 absorbing Rs. 1 12,500 and on cumulative 4 per cent. preference shares upto 31st March 1954 absorbing Rs. 55,818: leaving a balance to be carried forward of Rs. 1.07,848) which the directors recommend to be carried forward.

Operations.—The activities of the Corporation in the various spheres during the year under review were characterised by uneven trends. While there was marked improvement in manufacture and despatch, new orders declined considerably. Sonal Works manufactured 646 cards as against 565 in the previous year; 614 cards were despatched as against 545 last year. While the performance under manufacture and despatch shows improvement, new orders booked during the year dropped to 419 cards as against 614 in the previous year.

The halting supply of pig iron to which attention was drawn in last year's report continued throughout the year and proved to be one of the major obstacles in reaching the 75 card target, thereby imposing an extra burden of expenditure relating to the additional personnel and plant facilities commissioned for the higher production target. The year's trading results, therefore, reflect this imbalance.

The Company's Foundry has maintained its progress and during the year under review it produced approximately 900 tons of grey iron castings. The expansion of the Foundry which was referred to last year is under way. Of the total sum of Rs. 15 lakhs needed for the full expansion of the Foundry, the Corporation received a loan of Rs. 9 lakhs from the Industrial Finance Corporation in February 1958.

Under directions of Government's textile planners, various steps taken during the last two years were completed and resulted in the Company being ready early this year with a full complement of tools and trained operatives for production of 100 cards per month. But the programme never came into effective operation as the Company's order book position started to deteriorate from the autumn of 1957 and the plan to step up production was completely frustrated. If the licensing policy affected orders in past years, the situation was aggravated during the year by the serious depression in the country's textile industry. This has influenced the Company's sales and from the latter half of the year under review not only the number of new orders dwindled sharply, but frequent requests were received for cancellation and postponement of delivery. Out of 419 cards for which orders were booked during the year, no less than 264 have been postponed for an indefinite period.

Finance.—From the beginning of 1958 the overall position of the Company has become critical. Fresh orders of any volume are not forthcoming, and there continues a steady flow of requests from mill clients for cancellation, for deferred deliveries and deferred payments. The financial resources of the Company have been extended to the utmost. Since the year ended the Company reluctantly changed its Bankers, as the Lloyds Bank Limited were unable to grant increased credit facilities against liquid assets of the Company which were substantial. The directors are pleased to record that the United Bank of India Limited, the Corporation's new bankers, have come forward to assist the Company at this critical juncture. The directors are fully alive to problems of finance as well as of diversification, which will give the Company security against cyclical fluctuations in the demand for carding engines. In view of the investments of the Government of India in the Company, representations have been made to the Government drawing their attention to the present predicament of the Company both in the matter of cash and lack of orders. A detailed proposal has been submitted to the Government indicating the manner in which assistance is required by way of short-term financial aid as well as in the matter of development and diversification. The request involves reorganisation of the Company's present capital structure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	80,77,325	Gross block	1,36.84,630

Clive Row Investment Holding Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit, after charging all expenses, of Rs. 17,27,004 (Rs. 10,61.532) of which taxation provision requires Rs. 6.92.000 (Rs. 4,80.000) leaving a balance of Rs. 10,35.004 (Rs. 5,81,532). The balance brought forward from last year was Rs. 8,16.584 (Rs. 12.76.052) making a total available for appropriation of Rs. 18.51.588 (Rs. 18,57,584). An interim dividend of 25 (25) nP per share was paid on 12th April 1958, absorbing Rs. 3,47,000 (Rs. 3.47.000) and the directors now propose a final dividend of 50 (50) nP per share absorbing Rs. 6,94,000 (Rs. 6,94,000) leaving a balance to be carried forward of Rs. 8,10.588 (Rs. 8,16.584). As forecast in last year's report, the results for the year reflect the higher dividends received in respect of the tea industry's 1956 season. Dividends from the Company's investments in coal and miscellaneous companies continue to be satisfactory, but the difficult times through which the jute industry is passing have had their effect on the Company's income from its jute investments.

Notices

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the various departments of the Reserve Bank of India:—

(A) POSTS AND SCALES OF PAY

Rural Credit Officers, Agricultural Credit Department—Rs. 375-55-815 E.B. 55-925-60-1,045.

Probationary Assistants—Rs. 250-25-450 E.B. 25-650.

Economic Assistants, Agricultural Credit Department—Rs. 175-12.50-300 E.B. 20-440.

Note.—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMITS AS ON 1st NOVEMBER 1958

Rural Credit Officers—Candidates should not ordinarily be over 30 years of age but the age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

Probationary Assistants—Between 21 and 24 years.

Economic Assistants—Between 18 and 24 years.

The maximum age-limit is relaxable but not beyond 30 years in the case of—

(1) Probationary Assistants, possessing special qualifications and experience of value to the Bank,

(2) candidates with approved war service,

(3) ex-employees of Banking Institutions whose services had to be terminated for reasons of economy or as a result of the Banks going into liquidation,

(4) personnel retrenched from the Government Offices after *at least* one year's service applying through Employment Exchanges, and

(5) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS

1. Rural Credit Officers, Agricultural Credit Department

Applicants should possess very high academic qualifications of Indian or Foreign Universities (preferably post-graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

2. Probationary Assistants, Agricultural Credit Department

Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

3. Economic Assistants, Agricultural Credit Department

Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or Foreign University and have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

Note.—Experience in community development, small-scale and cottage industries, marketing, training and publicity, etc., will be given due weightage for the posts in the Agricultural Credit Department *and especially for the posts of Rural Credit Officers* and knowledge of regional languages such as Hindi, Bengali, Oriya, Kannada, Marathi will be an additional qualification.

4. Probationary Assistants, Department of Research and Statistics

Applicants should possess a first or high second class Master's degree in Economics or Agricultural Economics or Commerce of an Indian or Foreign University. A period of research work in one or more of the subjects, viz., (*a*) Agricultural Economics, (*b*) Co-operation, (*c*) Rural Sociology or experience of field investigation work, or experience gained in a responsible position in a co-operative institution or co-operative department will be considered as an additional qualification.

5. Probationary Assistants in Department of Banking Operations and on the General Side

Applicants should have a brilliant academic record with a first or high second class Master's degree of a recognised Indian or Foreign University in Economics, Commerce, Banking, Accountancy or Law as a special subject. Preference will be given to the candidates possessing practical experience of commercial banking in a supervisory capacity and who have passed the Institute of Bankers' Examination.

THE BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

2. Candidates selected must be prepared to serve in any office of the Bank in India and to undertake tours when required.

3. Candidates who wish to apply for more than one category of posts must submit *separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.*

Applicants for all the above posts except Economic Assistants must remit with their applications a fee of Rs. 7.50 for each category of post in each department by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by postal order. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. *The application fee is in no case refundable.* Bona fide refugee candidates *not in employment* applying through the Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Scheduled Tribes, the fee will be reduced to 1/4th.

Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow and Trivandrum accompanied by copies (*originals should not be sent*) of *at least* two testimonials, *and copies of statements of marks secured in Graduate and Post-Graduate Degree examinations* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before the 22nd November 1958.

Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so, with what result.

Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

4. Appointments will be subject to candidates being found medically fit for service in the Bank.

5. If any candidate desires to have his application acknowledged, he should send it by "Registered Post Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

6. Canvassing will be regarded as disqualification.

THE SINGARENI COLLIERIES COMPANY, LIMITED

By Order of the Board,

For and on behalf of
THE SINGARENI COLLIERIES CO., LTD.,
Industries (I.F.) Department,
Government of Andhra Pradesh,

R. DWARKA PERSHAD,
Secretaries and Treasurers.

"MEHER MANZIL,"
KHAIRATABAD P.O.,
HYDERABAD-DN., *17th October*, 1958.

Explanatory Statement of the Resolution under item 5(a)

(as required by Section 173 of the Companies Act, 1956)

Shri S. J. Tarapore who retires by rotation and offers himself for re-election has attained

the age of 65 years and accordingly his re-appointment, as Director requires to be approved by the Company in General Meeting under Section 281 of the Companies Act, 1956.

Shri S. J. Tarapore who is a retired Superintending Engineer of the Government has been a Director of the Company since 1948 and was Operative Director from 1948 to 1950. He has had considerable knowledge and experience of the working of the Company. Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company from a Member of his intention to move a Resolution at the Annual General Meeting.

NOTICE

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

ROHTAS INDUSTRIES LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the members of the above named Company will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 15th November, 1958, at 11-30 a.m., to consider and if thought fit, to pass, with or without modification the following resolutions, which will be proposed as Special Resolutions, namely:—

1. "Resolved that a sum of Rs. 16,20,209 being the amount of Share Premium and Rs. 6,59 791 being portion of the undivided profits of the Company standing at the credit of the General Reserve be capitalised and that this amount be used as a Capital Bonus which shall be applied for and on behalf of the holders of 22,80,000 Ordinary Shares of Rs. 10 each being the existing Paid-up Capital of the Company, in payment in full for 2,28,000 new Ordinary Shares of Rs. 10 each and that such 2,28,000 new Ordinary Shares created as fully paid up shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share to the holders of every 10 existing Ordinary Shares standing registered in the Register of Members on the 31st day of October, 1958 and that the said new shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they will not be entitled to dividend declared in respect of the financial period of the Company ended 31st March, 1958, and shall also be treated for all purposes as an increase of the Subscribed and Paid-up Capital of the Company."

2. "Resolved that pursuant to the above resolution and in satisfaction of the said Capital Bonus, the Directors be and they are hereby directed to allot and distribute 2,28,000 new Ordinary Shares of Rs. 10 each credited as fully paid up amongst the persons whose names stand registered in the Register of Members of the Company on the 31st day of October, 1958 as holders of the 22,80,000 existing Ordinary Shares of the Company in the proportion of one such new share of Rs. 10 each for every 10 existing Ordinary Shares of Rs. 10 each so registered in their names with the proviso that in the case of non-resident shareholders the allotment and distribution of newly created Bonus Shares shall not be made until such time as sanction is obtained from the Reserve Bank of India in this connection."

3. "Resolved that for the purpose of giving effect to the above the Directors are empowered to settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates on such terms as the Directors consider proper."

The Share Transfer Books of the Company will remain closed from 31st October to 15th November, 1958, both days inclusive.

By Order of the Board,
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, 18*th October*, 1958.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY NOTE

Necessary consent for the issue of Bonus Shares by capitalisation from the Share Premium Account and a portion from the General Reserve as aforesaid has been obtained from the Controller of Capital Issues. Requisite approval has been also obtained from the Industrial Finance Corporation of India.

An application has been made to the Reserve Bank of India seeking their consent for allotment of Bonus Shares to the non-resident shareholders.

The interest of the Directors and the Managing Agents of the Company in the proposed issue shall be to the extent of the shares they will receive in proportion to their holdings.

BANGALORE, 30*th September*, 1958.

Note:—The Board of Directors have recommended a Dividend of 15 per cent. on the paid-up Capital of the Company and the Dividend, if sanctioned by the General Body, will be made payable on and after the 25th November 1958. The Dividend Warrants will be posted to those shareholders whose names stand on the Register as on 10th November 1958.

Shareholders are requested to notify immediately any change in their address to the Company.

Any Shareholder who is unable to attend personally is entitled to appoint another person as his proxy to attend and vote instead of himself, and the proxy need not be a member of the Company. Such proxy should be registered with the Company at least 48 hours before the time fixed for the meeting.

COMPANY AFFAIRS

(*Concluded from page 739*)

bobbin case plant has been installed and has started working, although it will take time to come into full production. We have started the manufacture of our heavy industrial machine. The production is steadily increasing. We hope by December 1958, we will be able to produce 200 Nos. machines a month, and according to our information, India's total requirement is not above that figure. We, however, propose to increase the production and start exporting the same. We are also very glad to say that we have succeeded in making prototype of automatic zig-zag machine, and we will not have to pay any royalty or the price of know-how, or profit in partnership to any foreign firm. The work of preparing the drawings, tools, jigs, etc., has been taken in hand, and it is hoped that after about six months of receiving the licence for certain machine tools from the Government, it will be possible to produce these machines both for Indian and foreign markets. The special feature of this machine is that on the same machine innumerable designs can be made with the greatest ease.

"We are also glad to report that we have succeeded in getting orders from many highly industrialised countries such as America, Canada, Australia, New Zealand, England, Holland, Belgium, Italy, Yugoslavia, etc. In some cases, the orders are sample orders, and we hope once the sample consignments reach them, we will get repeat orders. We have sold to America through Yugoslavia 47,500 Nos. sewing machines."

During the year under review, the Company's paid-up capital was raised from Rs. 60.75 lakhs to Rs. 99.14 lakhs. The Company issued additional ordinary capital in 30.149¼ shares of Rs. 100 each on which Rs. 50 have been called up. It also issued, for the first time, redeemable cumulative preference capital carrying interest at 7 per cent. tax-free. The number of shares issued was 50,000 but the actual number subscribed and paid-up is 32,333⅓ of Rs. 100 each. The Company's reserves and surplus aggregate Rs. 52.17 lakhs. It has a debenture liability of Rs. 62.05 lakhs carrying interest at rates varying from 5 per cent. to 6½ per cent. The current liabilities stand at Rs. 256.19 lakhs, of which application money on preference shares and calls in advance on equity shares amount to Rs. 4.89 lakhs. The gross block of a value of Rs. 284.91 lakhs, including additions during the year of Rs. 57.96 lakhs, stands written down to a book value of Rs. 188.85 lakhs. In addition, machinery in transit accounts for Rs. 1.36 lakhs. The current assets aggregate Rs. 279.35 lakhs and exceed the current liabilities and the provision for taxation by a comfortable margin.

The Rs. 100 fully paid-up shares are currently quoted at Rs. 182 ex-div. at which rate, and on the basis of the year's dividend, the yield is 6.6 per cent. per annum.

TREASURY BILL RATE DECLINES

(From Our Own Correspondent)

BOMBAY, 29*th October*

Distinctly easy conditions continued to prevail in the short-term market for yet another week. There was no sign of any revival of seasonal demand for funds and the surplus money with banks was diverted partly to the Gilt-edged market, which looked up a bit during the week, and partly to Central Government Treasury Bills. There was very little activity in the inter-bank call money section and the common rate among the Exchange banks and big Indian banks was at 1½ per cent. Some business was reported done towards the close of the week even at 1¼ per cent., but this was after the clearing hours. The corresponding rate among the smaller Indian banks was 2-2½ per cent. House money at seven days' notice was placed at 3½ to 3¾ per cent. while short-term deposits for one to six months were offered 3½ to 3¾ per cent.

The conditions prevailing in the short-term money market are fully reflected in the results of 91-day Treasury Bill sales held yesterday. As against an invitation for Rs. 3 crores, the total amount offered was Rs. 8.75 crores, the largest amount to be tendered since the resumption of Treasury Bill sales in the first week of August last. The previous highest was Rs. 6.60 crores in the last week of August, against an invitation for Rs. 3 crores. Tenders at Rs. 99.380 were accepted in full and those at Rs. 99.375 were allotted approximately 31 per cent. The average rate of accepted tenders was 2.489 per cent., the lowest rate so far; the immediate previous rate was 2.521 per cent. In view of the heavy offerings, the authorities have stepped up the amount of tenders for next week to Rs. 4 crores.

For the second week in succession, the Reserve Bank of India's statement relating to the week ended 24th October 1958 show no notable variations in notes in circulation and notes held in the Banking Department. Foreign securities and rupee securities are also unchanged, while balances held abroad (in the Banking Department) are slightly lower by Rs. 33 lakhs. Deposits of the Central Government have declined further by Rs. 2.32 crores and those of other Governments by Rs. 4.16 crores. A sharp rise of Rs. 28.18 crores is noted in deposits of banks. On the assets side, investments are up by Rs. 1.57 crore, while Government Treasury Bills purchased and discounted show a drop of Rs. 4.29 crores.

The Scheduled banks' statement for the week ended 17th October 1958 shows a further drop of Rs. 2.59 crores in demand deposits of banks and an increase of Rs. 8.22 crores in time deposits. With this rise, the time deposits have gone up during the past four weeks by as much as Rs. 45.10 crores, while demand deposits have dwindled by Rs. 39.04 crores. The time deposits of banks now stand at over Rs. 850 crores, that is Rs. 155 crores above the demand deposits, a phenomenon not seen in the history of banking in India. Barring an outstanding balance of Rs. 28 lakhs, the Scheduled banks' borrowings have all been repaid. Banks' advances have declined by Rs. 1.53 crore, while bills purchased and discounted are up by Rs. 92 lakhs. Cash balances are higher by Rs. 2.72 crores, while money at call and short notice have declined by Rs. 2.64 crores.

The Gilt-edged market ruled steady with a slight change in sentiment for the better, on revival of institutional support. The demand was, however, restricted and the volume of business was, as a consequence, small. Select counters showed an improvement in prices varying from 5 nP to 10 nP. 3 per cent. 1986 Conversion Loan, however, continued to be on offer 10 nP lower at Rs. 73.15. 3 per cent. 1970-75 had buyers 5 nP higher at Rs. 90.05. 3 per cent. 1966-68 declined by 5 nP to Rs. 93.95, but recovered to close at Rs. 94. 3 per cent. 1964 gathered 5 nP to Rs. 96.65, while 3 per cent. 1963-65 was unchanged at Rs. 96.55. 3 per cent. 1959-61 dropped by 5 nP to Rs. 99.70, at which level the Reserve Bank of India appeared as a buyer. The Reserve Bank of India was also a buyer of 2½ per cent. 1960 at the quoted rate of Rs. 99. 2½ per cent. 1961 hardened by 5 nP to Rs. 97.15. 3½ per cent. 1961 had buyers, but the quotation was unchanged at Rs. 100.05. There were enquiries for 3½ per cent. 1964 and 1965, which as a result gained 5 nP each to Rs. 99.90 and Rs. 99.70, respectively. 3½ per cent. 1967 and 3½ per cent. 1968 moved up by 10 nP each to Rs. 98.95 and Rs. 98.70, respectively. 4 per cent. 1972 hardened by 10 nP to Rs. 100.60 and 4 per cent. 1973 by 25 nP to Rs. 100.60. Enquiries for State loans were limited.

There was a further weakening of sterling abroad and this was reflected in the rise in Banks' selling rate of U.S. ready dollars in Bombay from Rs. 476.75 to Rs. 477.00 per $100. Banks' buying rate was, however, unchanged at Rs. 473.50 per $100. In New York, spot sterling declined from $2.80.23/32-2.80.25/32 to $2.80.19/32-2.80.21/32. Three months' forward shed 5/32c. to $2.80-2.80.1/16, while transferable sterling improved from 279.10-279.20 cents to 279.25-279.35 cents before falling back to 279.15-279.25 cents.

WHEAT TOUCHES NEW HIGHS

(From Our Own Correspondent)

HAPUR, 27*th October*

Foodgrain prices continued steady to firm during the past week, mostly influenced by tight supply position and fresh demand for seeds. Fast dwindling stocks and firm advices from the ports following exports accounted for sharp gains in pulses. Oil and seeds market, however, was quiet.

Wheat prices here touched new heights to be quoted now at Rs. 25 per maund for average quality and upto Rs. 26.50 for farm produce. Daily arrivals from the rural producing areas continue small at an average of 50 maunds and sales through fair-price shops are attracting great rush, though the quantity and quality offered for sale are very poor. Demand for seeds is not being met fully, as the Government seed godowns are not supplying seed in sufficient quantity and good quality wheat for seed is not available in the open market. Preparation of *rabi* sowings is in full swing, thanks to sunny weather and westerly winds which has dried up large tracts of land which was hitherto waterlogged. Sowings of peas and coarse grains are brisk.

Rice prices registered further fall during the week, due to increase in new crop arrivals. The bumper rice crop is reported to have relieved the difficult food situation in east U.P. to a considerable extent and here, in west U.P. also, heavy arrivals of new rice and maize have gone a long way towards checking the further rising trend in grain prices. Week-end prices of rice were: Basmati sela Rs. 32 to Rs. 33, mainpuri Rs. 23.50, coarse quality Rs. 20 per maund.

Gram prices registered fresh gains to touch new heights on account of paucity of stocks and non-availability of supplies from the Punjab side. Barley and *bejhar* prices also improved further, as fresh demand for seeds in an understocked market has acted as a bullish factor. Maize, however, is reaching here in heavy quantities from outside and local stocks have swelled to 30.000 maunds, and, despite good consumer demand, prices eased slightly. *Jowar* and *guwar* prices were quiet and week-end quotations (in rupees per maund) were: Gram punjabi 19.50, barley 17.50, *bejhar* 17.50, maize 14.50 to 15, *guwar* 14.75, *jowar* 14.25.

Sharp gains were recorded in the prices of peas and *arhar* during the week, due to fast dwindling stocks. A ban on the export of gram and pulses from U.P. to other States has been demanded by the State Government from the Centre. Prices of other pulses also hardened in sympathy with peas and *arhar* and week-end prices (in rupees per maund) were: Peas *dara* 17.50, *khatti* 17, farm quality 19.50, peas *dal* 20.50, *arhar* 21.75, *khatti* 21, *arhar dal* 22.50, *urd* 20, *moong* 28, *massoor* 18.

Oil and seeds ruled quiet to be quoted now at: Sarson Rs. 26.50, oil Rs. 69 to Rs. 70, cake Rs. 13.31, tara Rs. 22, cottonseed Rs. 14.50, groundnut *desi* Rs. 20, oil Rs. 67, cake Rs. 11.50. kapas Rs. 25 to Rs. 26. Arrivals about 125 maunds daily.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, 29*th October*

Buoyant conditions prevailed in the bullion market during the week under the leadership of gold, prices made a further headway, but towards the close, there was profit-taking which erased a part of the earlier gains. The increasing pace of pre-*Diwali* offtake, expectations of a further broadening of demand as the season progresses and the diminished flow of unauthorised gold gave a fillip to speculative forces in the yellow metal. The sentiment in silver remained in fact in sympathy with gold. Despite the pressure of large arrivals from uncountry centres, the absence of supplies of Tibetan coins provided another helpful factor. Nevertheless, the "bears" in silver had the upperhand in the settlement which matured yesterday and managed to extract heavy penalties from the bulls, the backwardation charges having widened from As. 14-15 to Re. 1-3 at the close of the settlement. As the backwardation charges crossed Re. 1 on Monday this week, the bears had to pay a margin of Rs. 1,000 per bar on their outstanding sales in that settlement.

Silver forward delivery (28th October settlement) advanced from Rs. 189-3 to Rs. 189-15 before reacting to Rs. 189-4 at the close of the settlement. The next settlement (27th November) moved up from Rs. 190-1 to Rs. 190-15, but profit-taking towards the close brought it down to Rs. 189-9.

Ready silver shed on balance As. 4 to Rs. 188-5, after hardening to Rs. 189-11. The floating stocks of silver are estimated at 1.200 bars. While the daily average arrivals amounted to 45 bars (including unrefined metal), the offtake was no more than 12 bars per day.

Gold for forward delivery (27th October settlement) improved from Rs. 109-14 to Rs. 111-5, before the settlement ran out at Rs. 110-12. The next settlement hardened from Rs. 110 to Rs. 111-7, but, at the close, it drifted down to finish at Rs. 110-14.

Ready gold hardened from Rs. 110-3 to Rs. 111-10, but the closing was a shade lower at Rs. 111-2. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals was 3,000 tolas, which was matched by a corresponding offtake.

In New York, silver was unchanged at 90¼c., while in London there was a decline of ¼d. to 78¼d. for spot and of ⅜d. to 78¾d. for forward. Gold moved between 250s. ¼d. and 249s. 11¾d.

The following comparative table shows at a glance the trend of the market during the week under review:

	29-10-58	Highest	Lowest	22-10-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (99 fine Mint) ..	111 2	111 11	110 1	110 3

SHARP FALL IN COTTON

(From Our Own Correspondent)

BOMBAY, 29*th October*

During the week under review, the local cotton market witnessed a sharp decline in prices. This is attributed in the main to two factors. In the first place, the reported decision of the Government to abandon the currency retention scheme for promoting cloth exports came as a damper to the market which had for sometime now expected such a scheme to be put into effect. Secondly, cotton men's minds were dominated by the emergency meeting of the Indian Cotton Mill Federation which is being held today to discuss the "crisis" in the textile industry, arising out of the large-scale accumulation of cotton piecegoods. Stocks of cloth, it is stated, aggregate over 800,000 bales, as compared with slightly over 500,000 bales in May last. The millowners, it is stated, will consider measures designed to bring about a phased reduction in cloth production ranging from 7 to 10 per cent. The scheme might take the shape of either reducing working hours or closure of third shift or some other form. Any such scheme designed to curtail production will certainly affect adversely the demand for cotton.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 615.50, as compared with the closing of Rs. 618.25 last week and moved up on unfavourable weather reports and on hopes of early announcement of export promotion schemes to Rs. 620.50 on the same day. This recovery, however, proved short-lived. On the 24th inst. it moved down to Rs. 614.75, having fluctuated between Rs. 618.50 and Rs. 614.75. Some recovery ensued, thanks to the support at lower levels and the contract improved to Rs. 617.00 on the following day. A definite downward trend emerged from the beginning of the 27th inst., when the contract, after opening at Rs. 611.50, declined to Rs. 607.25 before closing at Rs. 608.25. In the following two days, the downward trend was more marked. The contract fluctuated between Rs. 609.50 and Rs. 599.00 and closed today at the lowest level of the week, namely, Rs. 599.00. The following table indicates the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	29-10-58	*High*	*Low*	22-10-58
I.C.C. Moglai Jarilla (March 1959) ...	599.00	620.50	599.00	618.25

In the spot section, mill and export enquiry remained subdued. Some business was done in small quantities of staple varieties, but mills were buying on hand-to-mouth basis.

The trade has welcomed the Government's decision to increase the quantity allowed for export of old cotton of 1957-58 and earlier seasons, stapling not above 25/32" (other than Bengal Deshi) on "first-come-first-served" basis from 30.000 bales to 50,000 bales subject to an individual quantitative ceiling of 10 per cent. of the quantity allowed. The procedure for the grant of export licences will remain the same as the one announced in August and September last.

The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are given below, the figures in brackets being last week-end rates. Bengal *Deshi* 500 (560). Berar Jarilla 580 (600), Khandesh 620 (640). Vijay 785 (800). Hubli Laxmi 810 (840), Jaydhar 740 (765). *Delivery contracts*: Bengal 560 (565), Mathia 550 (558).

In the absence of any encouraging news, the Karachi cotton market receded. There were fears of the possible effects of the prevailing political situation on exports of cotton in Karachi. N.T.R.G. January receded from Rs. 66-13 to Rs. 65-4 and March from Rs. 66-15 to Rs. 65-8. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 62-8; Punjab *Deshi* 59-8; 4F Punjab Roller 64-4; S.G. 68-4; L.S.S. Punjab Roller 65-4; S.G. 69-4; N.T. Roller 68-4; New 69-12; S.G. 77-4.

A steady trend was witnessed in the Alexandria cotton market. A good offtake from Russia and East European countries has been reported. The total supply of cotton for the 1958-59 season has been placed at 1.60 million bales (of 720 lbs. each), consisting of a crop of 1.35 million bales and carryover stocks of 273.000 bales. Of the carryover stocks, the Egyptian Cotton Commission is estimated to hold 141,800 bales. made up of 73.300 bales of previous crop and 68,500 bales of 1957-58 crop. The following are the latest available quotations—in tallaris per lb.—from Alexandria: *Karnak*: November 72; January 72; *Ashmouni*: December 61.90.

Renewed hedge selling pressure and absence of outside interest depressed the Liverpool cotton market. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 23.82; December-January 23.85; March-April 23.60; May-June 23.30. *American cotton mixed growth contract*: October-November 24.30; December-January 23.90; March-April 23.60; May-June 23 30. *Sudan*: November-December 28.25; January-February 28.25; May-June 28.25.

Fluctuations remained narrow in the New York cotton market. The market was featureless for the major part of the week. Traders believe that despite the movement of the cotton crop which is reaching peak proportions, hedging in futures remains very limited as farmers are placing a large part of their ginnings into the loan or holding them off the market for higher prices.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	28-10-58	21-10-58	14-10-58
Spot	36.25	36.20	36.25
October	—	—	35 74
December	36.15	36.11	36.09
March	36.42	36.58	36.87
May	36.36	36.31	—

YARNS WEAK

(From Our Own Correspondent)

BOMBAY, 29th *October*

Conditions in the yarn market continued to be easy during the week under review. Turnover was limited. For, operators were not inclined to enlarge their commitments due to fears of a further decline in prices. Towards the close of the week, however, there were some signs of returning confidence, possibly due to hopes that with the approach of *Diwali* and the New Year, demand would revive. Staple fibre yarn prices continued on their downward trend. Offtake from consuming centres was still not satisfactory. This was aided further by reports of accumulation of stocks with several mills throughout the country. In sympathy with staple fibre yarn, prices of rayon yarn also declined. There was no dearth in regard to supplies as arrivals of imported yarn against previous orders placed with foreign countries were getting heavier. Output from indigenous manufacturers was also received in larger quantities. In the result, prices received a further setback. Cotton yarns were dull as offtake from internal markets was slack. Handloom weavers were not prepared to augment their purchases until they were able to dispose of at least some of their accumulated stocks of cloth.

Staple fibre yarns (40 x 2) October delivery encountered selling and declined by Rs. 12 to Rs. 598. December delivery dropped Rs. 9 to Rs. 609. In the spot section, 40 x 2 Citys receded by 5 nP to Rs. 3.19. Kohinoors retreated by 6 nP to Rs. 3.22. Centurys shed 4 nP to Rs. 3.19. Among foreign yarns, Paramounts were neglected at Rs. 9.75. Fujis, however, gained 20 nP to Rs. 9.81.

In the art silk yarn section, 120 Japan declined by 12 nP to Rs. 5.19. 150 Japan eased by 6 nP to Rs. 5.56. 120 Italy and 150 Italy were both stagnant at Rs. 5.75 each. Among indigenous yarns, National Rayons 150 bright cones first grade climbed down by 10 nP to Rs. 4.31. 120 bright cones first grade were quoted 22 nP lower at Rs. 5.19.

Cotton yarns, ten counts Podars declined by 75 nP to Rs. 12.25. Moderns were neglected at Rs. 13.25. Among twenty counts, Moderns were dull at Rs. 16.75. Thirty counts Hinds shed 25 nP to Rs. 19.50. Among forty counts Minaxis eased by 6 nP to Rs. 25. Moderns were quiet at Rs. 25. Sixty counts Finlays changed hands at Rs. 59, same as for last week. Among eighty counts Mahendras dropped a rupee to Rs. 68. Moderns were on offer at Rs. 72. Finlays, however, gained a rupee to Rs. 79.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	29-10-1958	22-10-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	5.19	5 31
150 Japan (per lb.)	5 56	5 62
120 Italy (per lb.)	5 75	5 75
150 Italy (per lb.)	5.75	5.75
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	598 00	610.00
40 x 2 December	609 00	618.00
40 x 2 Kohinoor (per lb.)	3 22	3.25
40 x 2 City (per lb.)	3.19	3.24
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	13.00
20s Modern	16 75	16 75
30s Hind	19 50	19 75
40s Minaxi	25 00	28 06
60s Finlay	59 00	59 00
80s Mahendra	68.00	69.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 29th *October*

Easy conditions prevailed in the local oilseeds market during the last week. Presenting a distinctly firm trend during the initial sessions, the market staged a relapse on Monday, which showed no signs of abatement till today. The groundnut section ruled particularly buoyant in the beginning, but it subsequently lost ground. The other varieties of oilseeds and oils witnessed similar conditions.

The Government of India has decided to extend the validity period of the export quota of H.P.S. groundnuts only up to the end of March 1959, according to an announcement by the Chief Controller of Exports last Saturday. On 3rd June, Government released a quota of 20,000 tons of groundnut oil and 10,000 tons of H.P.S. groundnuts for export with allotments valid for shipment up to the end of September 1958. As was expected, this measure had little effect on the market.

Groundnut February 1959 contract which stood at Rs. 163.75 last week-end receded to Rs. 163.60 on the following day but forged ahead to Rs. 165.12 on Saturday, thanks mainly to the tight ready position which inspired bulls to support the market at lower levels. The position was further strengthened by persistent bear covering and strong buying support. Groundnut declined subsequently, as a result of lack of buying support from *vanaspathi* producers and heavy arrivals of new crop groundnuts. The price slumped to Rs. 162.12 today. Bold ready moved up from Rs. 38.00 to Rs. 38.50 only to touch a low of Rs. 37 at the close of the week. Coromandel spurted from Rs. 38.75 to Rs. 39.50 on Saturday and subsequently receded to finish at Rs. 37.37. Khandesh quality was active till Saturday when it closed at Rs. 39.37. It, however, fell to Rs. 37.37 today. Groundnut oil ex-mill ruled steady in the initial stages, presumably because of frantic *Diwali* demand. It subsequently declined to Rs. 20.87, as against Rs. 21.37 last week-end. Railway Receipts fell from Rs. 21.25 to Rs. 20.56 over the week.

Castorseed May 1959 contract was subdued for most part of the week. It fell by Re. 1 to Rs. 144.37 today. This was mainly due to liquidation by bulls and bear pressure. It is reported that the Conference Lines have decided to reduce the freight for oil by $5 per ton with immediate effect till 31st December 1958. It had no appreciable effect on the market owing to the marked disparity in prices prevailing here and in the U.S. Ready Madras, which stood at Rs. 29.00 last Wednesday, declined to Rs. 28.87 today, after climbing to Rs. 29.31 on Saturday. Kanpur quality fell by 15 nP over the week, to Rs. 27.75. Castor oil B.S.S. fluctuated within narrow ranges to close at Rs. 16.50. Commercial quality too showed irregular movements, but recovered to the last week-end level of Rs. 15.00.

Linseed May 1959 contract fell from Rs. 30.87 to Rs. 30.56 today. Linseed was quiet, despite shortage of supply and reports of Australian tenders for linseed oil. Bold ready, after rising by 25 nP from last week's quotation of Rs. 34.25, relapsed to Rs. 34.25 today. Linseed oil remained dull during the week on account of lack of fresh buying support. Today, however, it improved to Rs. 17.75, as compared with Rs. 17.62 last week.

Cottonseed May 1959 contract recorded some revival of activity. It moved up from Rs. 104.00 to Rs. 105.25 on Monday. However, it declined to Rs. 104.75 yesterday though it recovered to Rs. 104.00 today.

Among other seeds, kardiseed bold ready was quoted at Rs. 22 throughout the week, though today it declined by 25 nP to Rs. 21.75. Nigerseed Madras quality continued to be firm during the week. It, however, fell to Rs. 33.50 today, as against Rs. 33.75 last Wednesday.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	29-10-1958	22-10-1958	15-10-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	162 12	163 75	163 75
Bold ready (per cwt.)	37 00	38 00	39 50
Linseed—			
May 1959	30.56	30 87	31 06
Bold ready (per cwt.)	34.25	34 25	34 00
Castorseed—			
May 1959	144.37	145 37	146 87
Madras (per cwt.)	28.87	29 00	29 37
Cottonseed—			
May 1959	104 00	104 00	102 00
Groundnut oil—			
Ex-mill ready (per quarter)	20.87	21 37	21 50

† Rates exclude both excise duty and sales tax.

SUGAR STEADY

(From Our Own Correspondents)

BOMBAY, 29th *October*

The sugar market witnessed fully steady conditions as a result of the normal *Diwali* demand. Prices were fully maintained at levels reported last week. The undertone of the market is quite healthy. The Union Food Ministry announced the monthly release of 1.65 lakh tons of sugar soon after we went to press last week.

Arrivals by rail in the city during the week under review amounted to 11,400 bags. The prices for small, medium and large grain sizes are: Rs. 106, Rs. 108-Rs. 110 and Rs. 111-Rs. 117 per bag, respectively.

Ex-mill quotations in the Bombay Deccan mills were fairly steady. A few factories in the Deccan area have already commenced crushing and it is reported that at least six more mills will go into production before the next week is out.

* * * *

HAPUR, 27th *October*

Sugar prices ruled quiet during the week-end, following the release of a fresh quota of 160,000 tons for free sale by the Government. Superior quality sugar continued to be in good demand, while inferior quality small crystal was quoted by some factories at below the controlled price. Crushing for the new season in west U.P. has not yet begun, but some of the factories will commence crushing in the first week of November.

Sugar ruled quiet in the Muzaffarnagar market also, where the latest prevailing ex-mill delivery prices are: Amroha (D29) Rs. 35.31, Seohara (D28) Rs 35 37, Saharanpur (D28) Rs. 35 69, Kashipur (D28) Rs. 35.25. Rajakashaspur (E29) Rs. 35.62. The sugar market at Kanpur was active, due to festival demand. The prevailing prices at the time of writing were: Ex-mill controlled Rs. 36-12 per maund, spot per bag (C29) Basti Rs. 105, Gola Rs. 102-4, (D29) Gola and Burhwal Rs. 101-14, Waltergunj, Tulsipur and Balrampur Rs. 101, Lakhimpur and Hargaon Rs. 100-12.

Khandsari prices ruled quiet during the week and new production will begin after two weeks. Prices ranged between Rs. 30 and Rs. 34 per maund according to quality.

New *gur* arrivals here have mounted to an average of 5,000 maunds, but, due to good outside demand, prices have stayed steady and as yet there is no stock building. Arrivals are expected to multiply soon, as the land vacated from cane crop will be available for sowing *rabi* cereals. Prevailing prices are: Rs. 20 to Rs. 23 per maund.

The first All-India acreage report of cane for the year 1958-59 puts the area under sugarcane at 4,795,000 acres which shows a fall of 4.7 per cent. for the previous year at 5,031,000 acres.

The latest advices from the producing areas in the South gives the following information of *gur* prices in various markets: Shrirampur *gur* Rs. 14 to Rs. 19, wet Rs. 11, Malunja *gur* Rs. 14.50, Koppergaon *gur* Rs. 14 50 to Rs. 20, new Rs. 18 to Rs. 22. Arrivals daily 500 maunds. Baramati *gur* Rs. 14 to Rs. 22, new Rs. 18 to Rs. 22.50. Arrivals daily about 100 maunds, Ankappalli *gur* Rs. 15.50 to Rs. 19, Kolhapur *gur* new Rs. 18 to Rs. 24.50. Arrivals 1,000 maunds daily.

In the futures section, *gur* registered a steady trend in line with ready prices. *Gur* Fagun having opened at Rs. 13.43 last Monday and, after touching the lowest for the week at Rs. 13.41 the same day, improved in successive sessions to close at Rs. 13.62. The highest level for the week was Rs. 13.77.

STRONG DEMAND FOR TEA DUSTS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 25th *October*

500,034 lbs. were on offer in dust sale 'V', which was held on Thursday 23rd October. The slightly smaller, but useful, selection of teas met a very strong general demand. The lowest descriptions which were the strongest feature of the sale, showed advances of up to 20 naye paise over valuation. All other teas were irregularly 10 to 15 naye paise dearer.

London Market: Sale of 20th October 1958:—Good demand, with prices closely following quality. Orthodox Assams a strong feature.

Sale of 21st October 1958:—Generally steady. Poorest sometimes easier.

Colombo Market: Sale of 20th October 1958: Quieter demand. Uvas again lower following quality. Dimbula Dickoya B.O.Ps down 20 to 30 cents. Corresponding fannings frequently more. Mediums declined 10 to 15 cents. Lowgrowns opened barely steady, closed firmer.

Sale of 21st October 1958:—Stalky broken mixeds lower. All dusts strong. Demand generally dearer. Other off grades good demand steady.

Calcutta Market:—No sale this week.

Export Quota:—Due to holidays in Calcutta, the market has been fairly quiet, and not much business has been transacted. The latest quotation is sellers 3¼ nP, buyer 3¼ nP with last business going through at 3¼ nP.

Forthcoming Auctions:—Dust sale 'W' will be held on Tuesday 4th November 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 31:—1,725,000 lbs. Good general demand, particularly for low mediums, which are steady. Improved medium and good medium brokens dearer, but fannings weak. Best liquoring highgrown below valuations."

JUTE GOODS BETTER

(From Our Own Correspondent)

CALCUTTA, 28th *October*

After the *Durga Pooja* holidays, the jute markets reopened on Thursday last, and, since then, jute goods were steady, but, in the absence of support from mills, raw jute was quiet. The fixation of higher minimum prices for raw jute for export in Pakistan a week ago noted here, but this has no significance as far as India is concerned. For India's production of fibre is considered more than sufficient to meet internal needs during this year, and also, in view of the Government of India's understandable anxiety to ensure that mills consumed the indigenous jute to the maximum extent possible, imports from Pakistan are severely restricted and confined only to cuttings. It was noted that Pakistan had raised the price of cuttings to Rs. 65 per bale from Rs. 55. Even after adding transportation and other charges, including insurance, etc., Pakistani cuttings should still be cheaper as compared with the equivalent variety of Indian jute. Therefore, jute circles here felt that the rise in export prices in Pakistan would affect cost of production in Dundee, and, in this view, Pakistan's action was bound to be of indirect "protection" to Indian jute goods in foreign markets. At the same time, there was also an apprehension here that the increase in prices might lead to a curtailment of export of raw jute from Pakistan and thereby indirectly encourage substitutes and bulk handling.

Mills here felt that any further decline in raw jute prices in India should be avoided, as this would have a disastrous effect on the next season's crop and Indian dependence on Pakistan would be revived. Viewed thus, it was good that the increase in Pakistani prices steadied sentiment in jute goods here on Thursday last. An uptrend set in both heavy goods and hessian, and ready B. twills hardened to Rs. 96.65 from Rs. 96.10, and ready hessian 40"x10 oz. to Rs. 42.20 from Rs. 41.70. China was a heavy buyer of heavy Cee bags for the near delivery position. The earlier report that burlap consumption in the United States in the month of September rose by nine million yards to 76 million yards was still having a bullish effect, although support from American buyers was restricted. Also, burlap stocks in the U.S. at the end of September were lower by eight million yards at 222 million yards. On Friday, business was done in cornsacks on Australian account, and it was anticipated that more orders from Australia for this variety were in the offing. It was also anticipated that Government of India's requirements for heavy goods in the near future would be considerable. Unless these expectations materialised, the statistical position in heavy goods would continue to be unsatisfactory. Over the week-end, hessian 40"x10 oz. hardened to Rs. 42.40, and in sympathy ready B. twills at Rs. 96.85 added a few nP.

An event noted here with satisfaction in the week was the departure of a jute delegation on 18th October to Australia, New Zealand and the Far East on a five-week tour, with a view to examine if sales of Indian jute goods to these countries could be stepped up. As these countries mainly consumed different varieties of sacking goods, any improvement in their offtake from Calcutta would ease the statistical position of heavy goods. The delegation is rightly headed by the Chairman of the Indian Jute Mills' Association, Mr. J. I. Jamieson, who said, on the eve of the delegation's departure from here, that the delegation would compare cost of production in India with the cost of production in the visiting countries. The chief task of the delegation would be to assess both the short and the long-term aspects of business in jute goods, in addition to studying economic developments in these countries. It would be remembered that the I.J.M.A. sent a similar delegation to the above countries in 1953, and the very valuable contacts it made in the countries visited by it were of considerable help to the jute industry and trade here. Similarly, it was hoped here that the present delegation's attempt to increase exports would be crowned with success.

Raw jute prices were quiet, although there was business done here and there. Assam bottoms were quoted at Rs. 23.25 against Rs. 23 prior to the holidays. Sellers were anxious to do business.

* * * *

The need for a centralised control organisation to handle the jute market in Pakistan was stressed by Mr. Ghulam Faruque, Chairman of the Pakistan Industrial Development Corporation, at a Press Conference in Dacca last week-end. This, according to him, would arrest jute prices from declining and put the market on a stable footing. He attributed the recent lull in the Pakistan jute market and the consequent fall in its prices to lack of co-operation and understanding among various organisations dealing in jute. The P.I.D.C. chairman pointed out that strong centralised control bodies were functioning in countries like the U.K. and Belgium, against which the various organisations in Pakistan had to work. He was of the view that there was great scope yet for expansion of the jute market abroad. This could be achieved only through a centralised control organisation.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 28th *October*

The week under review in the metal market was a very short one in view of the *Pooja* holidays. Even so, the earlier uptrend following the news of delay in the announcement of the import policy continued, and consumer support was significant. Reports that there was a possibility of the State Trading Corporation becoming the main importer of non-ferrous metals were circulating. The rumour that the import policy would be more beneficial to actual users than established importers also hardened sentiment of stockists. A strong feature was provided by electrolytic zinc which rose to Rs. 74.50 from Rs. 72.75. There was good demand, as the poor nature of arrivals and the uncertainty in import policy caused anxiety among consumers, who were desirous to keep adequate stocks. Further, London advices alerted industrial consumers here. Lead was also fully firm, and the quotation was above Rs. 70, as against Rs. 68.50 in the previous week. Shortage of supplies, as well as good demand on Government account, contributed to the uptrend. On the other hand, tin was featureless, in view of good arrivals. Higher advices from both London and New York in copper were noted here. In the U.S. custom smelters increased the price by 1 cent to 28½ cents per lb.

KIPS DULL

(From Our Own Correspondents)

MADRAS, 27th *October*

The Madras kip market was stagnant. Arrivals were small and prices unchanged. Shippers were unable to buy at lower prices in order to fall in with U.K. importers' bids. Shipment business consequently remained small. Demand for lower selections for inland trade revived and prices were firm.

There was good call for tanned buff hides from exporters to U.K.-U.S. and prices were steadier.

THE

Branches
BOMBAY MADRAS CALCUTTA
AHMEDABAD KANPUR HYDERABAD
AJMER AMRAOTI JALGAON

In the tanned skins section, the market was unchanged. Buyers were asking lower prices which tanners resisted. Shipment business was small.

In the London public auctions, demand for sheep was irregular. Lightweights were in moderate demand, but other lines declined 3d. to 6d. as compared with August levels were sold.

* * * *

KANPUR, 27th *October*

During the week under review, the condition of the local hides and skins market was more or less stable. The volume of the new arrivals was considerable. Floods in the Western Uttar Pradesh region having subsided, there was in the market a fair proportion of goods of that area. Madras dealers were lukewarm during the week, whereas the country tanners were active. The main purchases of cow and buff and goat were effected by the local tanners and the exporters. The latest quotations are as follows:

Wet salted cow 1st grade Rs. 360 and 2nd grade Rs. 275 per score, wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee, goat 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces, sheep 1st grade Rs. 250 to Rs. 300 and 2nd grade Rs. 200 per 100 pieces.

MANCHESTER LETTER

(*Concluded from page* 725)

Lancashire towns to stimulate the use of locally-made cloth shou'd not be disbanded in the event of an agreement being signed with the Eastern countries involved. There would still be the same necessity to urge local authorities and other big buyers of textiles to keep on purchasing Lancashire cloths.

Mr. Ernest Thornton, M.P. for Farnworth, spoke of the growing strength of the Chinese cotton industry both in the production of raw cotton and finished goods. Quoting figures of current output of 7.000 million yards of cloth annually, he said that China was already a bigger producer than India and planned an expansion to 10,000 million yards by 1962. "They will be able to flood the Asian markets with textiles," he warned, "and then Hong Kong will be all the more dependent on the British home market."—*All Rights Reserved.*

The world cotton output will go up by 2.1 million bales to 42.3 million bales in the 1958-59 crop year and would exceed consumption by one million bales, thereby reversing a two-year trend, according to a forecast by the U.S. Agricultural Department. Increases are expected from the U.S., Sudan, Egypt, Mexico, Uganda, the U.S.S.R. and Communist China.

The Soviet bloc countries accounted for more than 57 per cent. of Egyptian cotton exports since the season began in 1st September, as compared with about 17 per cent. during the corresponding period last year. China and the Soviet Union have taken 22 per cent. and 20 per cent. respectively, of the total cotton exports. The aggregate exports were as much as 256,000 kantars, as against 64,000 kantars. About 72 per cent. of the total exports consisted of long staples.

A ceiling on profits earned by the trade on textile goods in East Pakistan has been fixed under an agreement reached at a conference of representatives of the Martial Law Administration, the provincial Government and members of the Price Advisory Committee. Items listed include cotton, silk and woollen piecegoods manufactured in East and West Pakistan as well as those imported. Prices, based on these profit ceilings varying from 3 per cent. to 10 per cent., came into force from 27th October.

Notice

THE MYSORE COFFEE ESTATES LIMITED

No. 18, Second Cross Road, Shankarapuram BANGALORE-4.

To

ALL SHAREHOLDERS

Special Notice of Resolution under Sections 224 and 225 of the Companies Act, 1956, Regarding the appointment of Auditors for the year 1958-59.

NOTICE IS HEREBY GIVEN THAT (1) SRI D. V. Dasappa and (2) Sri S. Ramanathan, shareholders, have given notices intending to move at the next Annual General Meeting of the Company to be held on 20th November 1958, Resolutions with regard to the Appointment of Auditors of the Company for the year 1958-59.

The respective Notices and Proposed Resolutions are as under:

1. Notice dated 18th October 1958 from Sri D. V. Dasappa, Coffee Planter, Belagunda Estate, Somwarpet, Coorg:—

   "Take notice that I, D. V. Dasappa, a member of the Company, intend pursuant to Sections 224 and 225 of the Companies Act 1956, moving the following resolution at the coming Annual General Meeting to be held on the 20th November 1958.

   'RESOLVED to appoint Messrs. Brahmayya & Co., Chartered Accountants, Mysore Sugar Company Buildings, Jayachamaraja Road, Bangalore-2, as the sole Auditors of the Company to hold office until the conclusion of the next Annual General Meeting.'"

2. Notice dated 20th October, 1958, from Sri S. Ramanathan, 7, Narasimharaja Road, Bangalore:—

   "I hereby give you notice pursuant to Sections 224 and 225 of the Companies Act 1956, that I intend proposing the following Resolution regarding appointment of Auditors at the forthcoming Annual General Meeting of the Company to be held on 20th November 1958:

   "RESOLVED that Mr. J. Srinivasan, A.C.A., Chartered Accountant, 24/1, Narasimharaja Road, Bangalore-2, be appointed as the Auditor of the Company either solely or jointly with the retiring Auditors or with any other Auditor or Auditors for the Accounting year 1958-59 on such terms and conditions as may be decided at the Meeting.'"

(*Concluded from page 715*)

mated at 20,000 lbs. per day. If the strike had continued or is resumed on 3rd November, the loss on account of fall in rubber production would be very much greater, as the months of September to December constitute a period of high yields.

In view of all this and the heavy loss to the workers themselves, it is to be hoped that the present negotiations will prove fruitful and normal work on the plantations will be resumed soon.

* * * *

Norwegian banks have introduced a new kind of cheque, called a cash cheque, which may be drawn on an interest-bearing savings account. The new system, introduced last month (October), is said to be the only one of its kind in the world. Any holder of a savings account may draw "cash cheques" for upto Kr. 2,000 (£200). The cheques have a face value of Kr. 50, 100 and 300 and the banks guarantee payment on them. Like a traveller's cheque, the "cash cheque" has to be signed by the owner both when it is issued and when it is cashed. The banks regard the new cheque as a combination of an ordinary cheque, a traveller's cheque and a bank remittance.

STABILISATION OF MARKETS FOR PRIMARY PRODUCTS

(*Concluded from page 726*)

ments and the long-term contracts of the E.E.C. will be applied; but it is important that they should not be so applied as to reduce the European demand for imported agricultural products.

The association of the overseas territories with the E.E.C. gives rise to the danger that the European demand for tropical foodstuffs and beverages from outside sources will be reduced. Other regional trading arrangements must be judged on the same principles as the E.E.C.; and it is of special importance, therefore, that the E.E.C. should operate in a "trade-creating" and not a "trade-diverting" manner.

Conclusion

We have discussed at some length a number of important measures which might be taken to improve the prospects in international trade of the primary producing countries. Our main recommendations are:

The extension of more economic aid;

more adequate domestic measures against business recessions;

the provision of greater international liquidity;

the provision of funds for buffer-stock action;

a reduction of certain revenue duties in countries consuming tropical foodstuffs and beverages;

a moderation of agricultural protectionism in Western Europe and North America;

a shift of methods of agricultural protection in such countries away from price support towards deficiency-payment systems;

a reduction of protection against the import of minerals, and

the avoidance of trade-diverting measures in regional economic arrangements such as the European Economic Community.

Policies Adopted by Industrial Countries

It will be observed that the implementation of these recommendations requires action primarily (and in some cases solely) by the highly industrialised countries. We would like to stress the fact that, even so, the great majority of these measures would be to the long-term interest of the highly industrialised countries as well as of the primary producing countries.

The highly industrialised countries require a steady and expanding market for their products in the other countries of the world, and measures which will expand and stabilise the markets for primary products in the industrialised countries will encourage the primary producing countries to expand their exports of primary products to, and their exports of manufactures from, the highly industrialised countries, to the general benefit of both groups of countries.

There is at present a special circumstance which reinforces this view. Many of the primary producing countries are of the opinion that the rules and conventions which are at present applied to commercial policy and international trade show a lack of balance unfavourable to their interest. The main development which has brought this feeling to a head is the continued application of quantitative restrictions against imports of agricultural products by a number of highly industrialised countries, who are no longer in balance-of-payments difficulties. The G.A.T.T. rules permit quantitative import restrictions on balance-of-payments grounds, but not on agricultural grounds, and, so long as this situation persists, the exporters of competing agricultural products can legitimately claim that they are not getting the treatment for which they bargained when they first became contracting parties to G.A.T.T.

This feeling is reinforced by the prospect that, in the European Economic Community, one set of rules may be applied to industry, but another to agriculture. Combined with this is the feeling that subsidies to production are in fact much more easily used by rich countries to promote their agriculture and mining than by poor countries to promote their industry, and that the fact that general subsidies to production are permissible thus works unfairly to the advantage of the rich, highly industrialised countries. Similarly, domestic revenue duties are a more important obstacle to the expansion of the sale of some agricultural products (in particular, tropical beverages) in the industrial countries than they are to the expansion of the market for industrial products in the primary producing countries; and difficulties in the way of bringing revenue duties into tariff negotiations thus act as a special limitation on the expansion of export markets for the primary producing countries.

Moreover, many primary producing countries feel that, in tariff negotiations, insufficient account is paid to the fact that a reduction of duty on the import into a primary producing country of manufactured products for which the demand is responsive to a fall in the price may have a considerably greater effect upon trade than an equal reduction of a duty on the import into an industrialised country of a primary product for which the demand is not very responsive to a reduction of price.

Without attempting to pass judgment on every detail of these arguments, we believe that there is substance behind this feeling of disquiet on the part of exporters of primary products. If it is not met in negotiation by the importers of primary products, the general system of clearing the channels of trade by a general all-round negotiated reduction of trade barriers (a system which is typified by the G.A.T.T.) may suffer a serious setback; and this would certainly be to the disadvantage of the highly industrialised as well as of the primary producing countries.

While the underdeveloped primary producing countries have valid reasons for making a rather freer use of trade controls than the highly industrialised countries, in a number of cases protective policies have been carried too far by these countries; and these countries also have used for the protection of their industries a number of special weapons which are not normally the subject of negotiation with other countries. We have not examined in any detail these problems of protectionism in the non-industrial countries.

We would, however, like to express one general conclusion. The underdeveloped primary producing countries have an interest in obtaining from the highly industrialised countries aid and easier access to markets for their exports. The highly industrialised countries have an interest in the effects upon trade of these economic development policies of the underdeveloped primary producing countries. The only chance of a successful outcome is a negotiated settlement, involving a gradual shift away from undesirable policies on both sides. This is without question to the long-term advantage of both; but it requires on both sides a broad-minded approach as to the elements in their total economic and financial policies which they would be willing to make the subject of international discussion and negotiation.

COMMERCE AND INDUSTRY

(*Concluded from page 736*)

without having previous professional knowledge as a breeder or arable-farmer. He maintains that thanks to his complete inexperience, he came to the task with an open mind, ready to try out any new ideas without regard to what had previously been done in this field.

The cow-shed has such unusual features as a grooved rubber flooring covering the entire floor space and so treated as to have no bacteria-collecting cracks or joints. All joints are vulcanized together. The cows lie down directly on the rubber flooring and there is no litter in the stalls. Every 15 minutes the dung is washed away automatically, disappearing into a special air-tight concrete tank, where it is treated so as to be available for manuring directly. By means of a slight electric-shock system, the cows are made to withdraw from the stall into the manure groove when they arch their backs to leave-off the dung.

The building which contains 200 cows, is constructed of prefabricated light concrete. It has no windows, but is lit by a lantern roof. A ventilation system is built into the roof. Five large tower silos are connected with the cow-shed through a feed room containing special concentrated-feed pockets and a chopper and mixer. Feed is distributed by means of stainless-steel containers suspended in the ceiling and driven electrically.

The transportation of the milk from milking machine to consumer-packed product is achieved without contact with the air. Milk pails and tanks are carefully sterilised between uses and the milk —after being pasteurised and homogenised—is sucked directly into sterile Tetra Pak paper-plastics containers for distribution to the consumers. The hygienic arrangements include regular veterinary inspection of the animals by a resident veterinary surgeon, and the staff are subjected to regular medical survey.

The Simontorp farm is run on strictly economical principles, and Mr. Rausing is continuously experimenting with the crops, in order to get the best paying production. He has found that it is not economical to let the cattle graze and, therefore, even in summer, feeds them at special outdoor pens, while the fields are used for the production of leguminous and other high-yielding crops. Tank wagons, with specially designed distributors and earthing discs, are used for manuring the fields, the dung being pumped up into the tanks from the central manure tank below the cow-shed. The new system is thus put to a very rational use with a minimum of labour.

NORTHERN CUSTOMS UNION PROPOSED

Concrete proposals for the establishment of a duty-free Northern market for a range of goods have been put forward in a supplementary report issued by the Northern Economic Co-operations Committee. Among the goods listed are iron- and metal-ware, cars, textiles, leather goods, ceramics and glassware, chocolate, tobacco, fish and fish products. The question of including agricultural products is meanwhile being postponed pending clarification of a European Free Trade Area.

The report also contains a statement as regards the attitude of a Northern Customs Union in relation to a European Free Trade Area, and stresses that the Northern countries, by taking a united stand, will strengthen their position during negotiations with other countries in the proposed Free Trade Area, and that a Northern Customs Union will have an independent importance also within a free trade area. This supplementary report, together with the main report published in 1957, will be discussed at the forthcoming meeting of the Nordic Council to be held in Oslo in November.

FIVE "MUSTS" FOR GROWTH OF FOREIGN INVESTMENT

If outside private investment is to contribute to the prosperity of countries rich in natural resources, there are five major points that must be kept in mind, according to the October issue of *Oil Progress*, quarterly Caltex publication. They are:

1. There must be a more widespread recognition of what foreign investment does in building up a nation's economy and standard of living. There is more than tax revenue to be considered—local businesses are created, technical and managerial skills are developed, foreign exchange is generated.

2. Local governments must adopt consistent and equitable policies toward foreign investors. Under the best of conditions, risks for the investor are great. But strict adherence to contracts freely entered into between Governments and investors, regardless of shifts in political winds, will do much to aid the free flow of capital.

3. There is a need for adequate and effective legal recourse for settling honest differences of opinion between Government and investor.

4. It must become clear that overlapping efforts of private capital and public funds only impede economic development. The Government's field should be in roads, harbours, irrigation, public health, and social amenities; the foreign investor in development of resources, and production of consumer goods. Where Government competes with domestic industry or foreign investor, orderly economic growth is hampered.

5. There is a world-wide need for relaxation of trade barriers, since short-sighted protectionist policies dam up the channels through which trade must move to world markets. The European Common Market is a good start in removing tariff walls.

"Attainment of these few objectives," *Oil Progress* concludes, "will by no means remove all the obstacles to continued foreign investment growth. Their realisation, however, even in part, will go far to reduce attendant risks for the investor to the level inherent in any business enterprise."

COMMERCE

*"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."*
William Blake.

OUTLOOK FOR TEXTILE INDUSTRY

THERE has been no improvement in the plight of the cotton textile industry. On the contrary, it seems to have worsened. The hope that, following the relief given in excise duty in July last, the mills would fare better has not materialised. Stocks of cloth with mills at the end of May 1958 stood at 504,800 bales of 1,500 yards each, the lowest level since the end of 1957, when they were at 660,000 bales. Since then, they have steadily risen, excepting for a slight fall in August. Thus, they were 565,200 bales at the end of June 1958, 580,900 bales at the end of July, 576,200 bales at the end of August and 592,800 bales at the end of September last. These figures cover cloth sold by mills but delivery not taken by traders and also cloth unsold. Both the categories have accounted for the rise. The monsoon months usually constitute the slack period for the cloth trade and conclusions based on stock figures pertaining to this period necessarily require to be qualified. But the trend of trading in October, when the demand for cloth usually looks up on account of *Pooja* and *Diwali*, has not been as encouraging as it ought to have been. Moreover, the fact that stocks have been rising despite fall in production has disheartened many producers. In the first nine months of 1958, production of yarn was at the annual rate 1,662 million lbs., as against 1,780 million lbs. in 1957, a year of record production. The fall works out to a little over 6 per cent. During the same period, production of mill-made cloth was at the annual rate of 4,900 million yards, as compared with 5,317 million yards in 1957, a drop of 417 million yards or 7.8 per cent. A part of the accumulation in stocks is explained by the recession in exports from 854 million yards in 1957 to an annual rate of 630 million yards in the first eight months of the current year. The slump is not confined to composite mills alone. It has spread to other sectors also, namely, spinning mills, handlooms and powerlooms.

It is hard to say whether or not the present position of the cotton textile industry is comparable to the darkness before dawn. The short-term prospects of this industry are more closely linked than those of any other to the fluctuations in the general economy of the country as well as of the world. During the last two years, that is, ever since the Government launched its campaign to restrain consumption of cloth, the offtake has been running at a slower pace. This has coincided with the fall in agricultural production, particularly in the output of food. There are sufficient indications that, in the 1958-59 season, agricultural output will be better. Accordingly, it is just possible that the coming months may witness a rise in the offtake of cloth. Further, many people, who had deferred fresh purchases of cloth for some reason or other, may find it necessary to replenish their wardrobes. The cycle may thus change for the better. The next four months are crucial for the industry.

It will be interesting to note, in this connection, that there is a school of thought which contends that there has been no perceptible fall in the consumer offtake and that most of the present difficulties of the industry are the result of (a) its exaggerated expectations of the rate of rise in *per capita* consumption, (*b*) the overoptimistic trading in cloth during 1955 and the first eight months of 1956 which itself is traceable to the widely held fear of scarcity, and (*c*) the steep rise in excise duty in September 1956 which precipitated the consequences of a bull market and made its correction a very painful affair. In this process of correction, the trade has suffered so heavily that it is unwilling to carry any sizable stock. This, it is said, is the main reason why the mills have to nurse a larger volume of stocks now. Accordingly, it is argued that it will not be desirable to seek a solution in terms of lower production.

Two more arguments are advanced in support of this view. One is that a cut in production will reduce the surplus available for export and thereby encourage producers not to attempt the difficult task of winning and sustaining export markets. The other is that, in the context of heavy expenditure envisaged under the second Plan, a good part of which is being deficit-financed, it will be inadvisable to curtail production and prune the supply of an essential item like cloth. Plentiful supply of cloth, it must be noted here, is an anti-inflationary weapon. It is needless to add that the rise in cost of living during the past twelve months would have been higher than it was had there been a scarcity of cloth too. These are sound arguments. Just as millowners and traders were inclined to be too optimistic in 1955 and 1956, so also they may be unduly pessimistic now. This is borne out, to some extent, by the fact that most of them have now quietly accepted the Joshi Committee's view that the *per capita* consumption of cloth is unlikely to exceed 17.5 yards even by the end of the second Plan period (that is, March 1961), as against the Planning Commission's estimate of 18 yards and their own figure of 22 yards by which they were swearing even at the commencement of this year. It is now four months since the report of the Joshi Committee was published. Not one millowner has cared to refute its conclusion on the issue of *per capita* consumption in the coming years.

Whether or not any of the aforesaid considerations weighed with the Committee of the Indian Cotton Mills' Federation in rejecting, last week, the suggestion for an organised cut in production, we do not know. But we have not the least doubt that the Committee was right in nipping in the bud all thoughts of a restrictive negative approach. For some weeks before this decision was taken, some millowners were seriously canvassing support for a concerted attempt by the industry as a whole to restrict mill production of cloth by sealing a certain percentage of looms and spindles. They naively argued that this remedy was being successfully adopted by the jute textile industry, ignoring the fact that there are serious structural and locational differences between the two industries. Further, it must be remembered that not all are agreed that the remedy tried by the jute industry to regulate production was a sound one. Apart from that, the application of this remedy to the cotton mill industry would amount to compelling the efficient units to shoulder the burden of inefficient ones. It would surely be a case of placing a premium on inefficiency and dishonesty, while penalising efficiency and honesty. There is absolutely no case for asking a mill, which has taken the trouble of investing large sums in modernisation, doing market research and spending large sums on publicity in

order to popularise its products, to curtail its production, so that another mill which has not bothered to do any of these things may survive. Again, the step proposed tantamounts to forcing the consumer to pay more by inducing artificial scarcity. Two other suggestions having the objectives of an organised cut in production were that all mills should close for a specified period, say, for a fortnight, by giving the workers a paid vacation or abolish one shift. These too suffer from the same defects, though they may not be as bad as the first one to be tried, albeit as a palliative, in a very desperate situation.

The Committee of the Indian Mills' Federation rightly feels that "unless the present high cost of production is brought down, it is going to be difficult for the industry to get out of the malaise from which it is suffering." It is essential to bring down costs for stimulating both domestic demand and exports. The fall in exports so far during the current year, despite plentiful supplies, clearly shows that mere availability is no guarantee that exports will be maintained at previous levels, let alone increased. It will be recalled that one of the objectives of the Government in nearly doubling the excise duty in 1956 was to compel mills to sell their production for export rather than for domestic consumption. The failure of this device is patent now. In fact, its adoption has brought about disastrous results, as subsequent events have shown. The best means of developing export trade is to enable the mills to increase their competitive capacity not through such pseudo-incentive methods as currency retention clauses but through a real reduction in their cost of production.

The question to which the industry and the Government have, therefore, to address themselves now is: How to bring down production costs? The cost is made up of various elements, such as raw materials, stores, fuel, freights, wages and administrative expenses. Now, which of these elements is amenable to a cut without impairing the incentives necessary for ensuring their adequate supply? The price of cotton has fallen appreciably during the past few weeks on reports of an impressive increase in production. This should help the mills to a considerable extent. But a marked fall in the price of cotton will not only affect the capacity of its growers to buy cloth but also its production in the coming season. Most of the stores are in short supply and the prospects of their prices coming down are limited. Prices of fuel are controlled by the Government which is unwilling to accept a lower level of taxation on such items as oil and electricity. Freight rates have gone up, reflecting the general inflationary pressures in the country. In the context of labour's present mood and high cost of living, to talk of a reduction in wages, or in amenities to workers, is to indulge in unrealism. All that one can work for is a fall in dearness allowance through a reduction in cost of living. But at the moment this does not appear to be a possibility in the near future. The same is true of administrative expenses, too.

The only other alternative is to effect economies by introducing modern machines. One thus comes to the much discussed subject of rationalisation of production and modernisation of machinery, including introduction of automatic looms. This is more easily said than done. In the first place, labour has practically vetoed the adoption of this solution by putting forward impossible demands and conditions. If any worthwhile progress is to be made in this direction, if the level of employment and wages are to be maintained, and if the mill industry is to make its contribution to the country's economic growth by providing fresh savings, labour must give up its obstructive policies and readily co-operate with employers. Indeed, it is labour which ought to insist upon employers introducing modern machines, as is being done in other parts of the world, including the Communist countries. The fact that it does not do so is a commentary on its backwardness and the short-sightedness of its leaders, who seem to think that the only way by which they can retain their hold over the rank and file is to keep up a continuous flow of disputes, whether relevant or irrelevant. The time is fast coming when they will have no workers to lead, unless they turn a new leaf and recognise the irrefutable economic fact that no source of employment can be kept alive for ever, unless what is produced is sold at a profit.

In some of these respects, the Government is no different from labour leaders; some of the Ministers today were themselves labour leaders once. Here is a second handicap to modernisation of cotton mills. The Government wants to please not only labour leaders but also those who claim to represent handloom weavers and *charka* spinners. Its policy towards the cotton mill industry is governed not by hard economic facts but by political sentiments most of which are the creations of the party in power. Even where it allows modernisation of weaving, it imposes so many impractical conditions that no producer is willing to go in for new machinery. The Government's resolution, announced this week, on the recommendations of the Joshi Committee on this particular question shows a slight change for the better. But it does not go far enough. It has recognised that the introduction of automatic looms for increasing the competitive capacity of the industry in export markets should be accelerated as suggested by the Committee. This, however, is only a partial recognition of the advantages of modernisation of weaving, for the Government is still unwilling to permit domestic consumers, who take up 80 to 84 per cent. of mill production, the benefits of automatic looms.

A third handicap to modernisation of mills is lack of foreign exchange. Not all the types of modern textile machinery are produced in the country nor are even those that are made adequate, both quantitatively and qualitatively, for the industry's needs. Again, the indigenous textile machinery producers themselves will need foreign exchange for buying some of their requirements abroad, in order to meet the accelerated demand for machines from the mills. A fourth handicap is shortage of rupee funds with mills. Even if the Government is prepared to help them to get a part of the finance, the mills should be able to provide at least a substantial part of it from their own resources. This means that they must be enabled to make a profit which will contain a margin for covering a part of the cost of modernisation.

Even supposing that by some magic all these impediments are quickly overcome, it will take a fairly long time, say, a few years, for rationalisation and modernisation to be successfully completed. They do not, therefore, provide an immediate solution to the industry's present plight. The cloth that is piled up in the mills' godowns must be made to move. And this will not be possible, unless confidence among traders is revived. It is obvious that no amount of credit facilities will do the trick, unless they get that confidence. They will be lacking in that confidence, so long as excise duty is retained at levels which are out of tune with current economic conditions. As a tactical move at least, the Government could announce a substantial reduction in excise duty for a specific period, say, for the next four months and raise it again after this period is over. This will help the mills to reduce the stocks to normal levels, as it will encourage the dealers to resume their normal function. Once the excess stocks are worked off and move into consumption, the present imbalance will be automatically corrected. If, at the same time, steps are taken to implement rationalisation and modernisation on realistic lines, the cotton mill industry may be placed on a sound economic base. If, on the other hand, the Government chooses to follow its present policy of "no more reduction" in excise duty, there is little hope of the industry attaining stability in the foreseeable future or in an orderly fashion. Further, in a year of plentiful supply of cotton, which the 1958-59 season promises to be, this policy of stubbornness will hurt the cotton grower badly. Indeed, there are already signs of this happening. Is it the intention of the Government that the cotton grower should bear the brunt of the tax burden on cloth?

JET TRAVEL

AIRMEN'S minds today are dominated by what the jet age may have in store for them. It is now widely recognised that the jet era is definitely with us to stay. The pure jet plane and the prop-jet plane (a combination of both pure jet and conventional piston plane) are going to revolutionise the world of transport. The world is likely to shrink by 40 per cent. through the introduction of jet air transport. A typical jet plane cruises at over 500 miles per hour at an altitude of over 36,000 feet. Speed is easily one of the jet's most striking characteristics. Actual flight hours in a jet for a trip round the world, some 24,000 miles, will be about 32 hours or 2 hours less than today's scheduled flying time from New York to Bombay. This high speed may well play strange tricks of time with a jet traveller who may find himself served with breakfast at his starting point as well as destination. Thus, a jet-liner, leaving New York at 7 a.m., may arrive 4½ hours later in California where it is only 8-30 a.m. and still breakfast time. The jet will travel at an attitude of six to eight miles above sea level so that the most turbulent weather clouds will be at least 20,000 feet below. Altitude sensation will be erased by the pressurised cabins of the planes. Further, the jet age, according to all accounts, promises to be safer than even the piston-engine era, now drawing to a close. In any case, the passenger in the jet plane, it is stated, can board the plane with the assurance that the powerful engines that carry him through space have been subjected to most rigorous ground and flight tests. In what follows, the features of a jet like the B-707 are compared with those of a conventional plane like the DC-7C, in brackets:

Cruising speed 575 miles per hour (353 miles per hour); passenger capacity: 86 first class (56 first class); 143 tourist class (76 tourist class); 165 economy class (104 economy class); overall length 144 ft. 6 in. (113 ft. 4 in.); fuel capacity 17,398 gallons (7,824 gallons); maximum gross weight 247,000 lbs. (143,000 lbs.); cargo space 1,670 c.ft. (651 c.ft.); payload 40,000 lbs. (20,000 lbs.); operating altitude 25,000 to 40,000 ft. (20,000 to 25,000 ft.); range 4,400 miles (5,000 miles).

The introduction of jet aircraft poses several new problems, both physical and financial. Among the physical problems mention must be made of the alteration in runways which will now have to be lengthened in order to provide for the operation of jet aircraft. The jet has higher floor level which implies that higher loading stands have to be provided. Again, because the jet consumes more petrol than an ordinary piston-engined plane—the former consumes 2,000 gallons per hour, as against 400 by the present piston-engined planes—there is need for rapid work in the matter of reducing the waiting time for a plane. An inevitable concommitant of jet transport is the increased noise which makes it an irritating experience for the community. Noise suppressors are being built in order to tackle this problem. Finally, because the jet can travel very fast, there is the possibility that it will be widely used for the carriage of perishable commodities. If it is so used, there will be need to erect more storage accommodation.

By far the most intractable problem is that of financing the change-over to jet aircraft. Each of the pure jet planes, it is stated, will range in cost from $4 million to $6 million or more than double the cost of the latest model piston-engined planes. Turbo-props will cost between $2 million and $3 million each. To finance the jet age, the airlines will have to press into service all their internal sources of income and reserves as well as external sources. In the U.S. alone, the jet age will cost some $2,800 million for equipment and facilities in the next five years, almost double the valuation of all U.S. airlines equipment today. As Mr. J. R. D. Tata pointed out, at no time since commercial aviation began have such significant and costly changes taken place as will take place during the next two years when new fleets of jet and turbo-prop aircraft will come in. At the same time, fleets of piston-engined aeroplanes, still capable of many years of reliable and economic service, are being rendered obsolete. Mr. Tata rightly observed that the process of change-over imposes a serious financial strain on the airlines. In view of the large investment needed for ushering in the jet age, the question arises whether the airlines will not be justified in raising fares and freights. At the conference of the International Air Transport Association, held at New Delhi, the representatives of the various airlines were evenly divided on the issue of imposing a surcharge for travel in jet planes. It would appear those who favour the levy of surcharge suggested that travellers by jet planes should pay at least 10 per cent. more than what they are paying now. However, no decision was reached on this question. A final decision is likely to be taken before 31st March 1959 so that it would be enforced during the next financial year. Clearly, it is a very difficult question. Only experience can possibly show a way out of the difficult impasse. It is necessary to balance the need for earning a reasonable return on investment against the equally imperative need for making larger and larger sections of world population air-minded through attractive levels of air fares. The jet age may be expected to solve its physical problems without much difficulty. It is the financial weather that may prove somewhat inclement for the jet

SHARE MARKET RULES STEADY

BELAPUR DIVIDEND—WAGE STRUCTURE IN STEEL INDUSTRY—TATA-MERCK VENTURE

THURSDAY, 5 P.M.

THE share market has turned steady once again, after the setback from last week's closing levels. There has been a moderate recovery in prices during the last three days under the leadership of steel shares, which provide the main prop of the market. Steels have derived strength from the encouraging production figures of Tata Iron and Steel Company, Ltd., for the month of October 1958, which provide an indication that the Company's expansion programme has started yielding results. The Company's output of saleable steel for the month amounts to 76,900 tons, an increase of 10,400 tons over that in the previous month and of 17,900 tons over that in the corresponding month of last year. It is encouraging to note that this is the highest output in any month in recent years, if not an all-time record. If this trend is maintained during the rest of the current year, the output for the whole year can be expected to be sizably higher than in the previous year, despite the substantial fall in output in May last due to strike.

MARKET GOSSIP

Indian Irons have also been encountering some speculative support, particularly from Calcutta, on rumours that the Company has received or is about to receive sanction from the Controller of Capital Issues for the proposed issue of bonus shares out of the share premium account. The belief is held that, in addition to the issue of bonus shares from the share premium account, the Company may capitalise its reserves. These hopes have arisen out of a misreading of Mr. Biren Mookerjee's statement. The I.I.S.Co. Chairman is clear on this point. "Our reserves," he says, "which are already substantial in relation to capital, will increase from year to year as profits are set aside to provide for repayment of our heavy indebtedness and it would normally be the policy of your Directors that a part of these reserves should be capitalised from time to time by means of bonus issues. The present penal tax on bonus shares, however, effectively precludes such a course being taken and the bonus issue for which application has now been authorised, being made out of the share premium account and not accordingly attracting the tax, represents the maximum extent to which the problem can, under the existing taxation structure of the country, be resolved." In other words, Mr. Mookerjee has ruled out the possibility of capitalising the reserves, so long as the penal tax on bonus issue continues. The prospect of this tax being abolished or reduced is not yet in sight.

• • • •

The announcement of the eagerly awaited dividend of the Belapur Company, Ltd., last evening was greeted by the share market today with an appreciation of Rs. 3.50 to Rs. 322.50 in the price of its shares. This rise wiped out the loss made in the earlier sessions of the week. The Directors of the Company have recommended a distribution of Rs. 20 per share (or 40 per cent.) for the year ended 30th September 1958, as against Rs. 18 per share paid for 1956-57. Though an increase in distribution by the Company was generally anticipated by the market, the surprising element of the Directors' announcement is that, instead of a straight rise in dividend, they have proposed to split the distribution into a dividend of Rs. 18 per share and a cash bonus of Rs. 2 per share. In doing so, they have evidently chosen to toe a cautious line which has been a feature of their dividend policy.

This is the second year in succession for which the distribution on the present capital is being raised. Last year, the dividend was raised from 32 per cent. paid for 1955-56 on the increased capital of Rs. 70.50 lakhs, raised in February 1956 by the capitalisation of Rs. 23.50 lakhs and the issue of one-for-two bonus shares—the the bonus shares ranking for dividend for only six months of the year—to 36 per cent. per annum. In recommending a higher distribution for the year under review, the Directors have kept up the Company's excellent dividend record. For during the last nine years, the dividend has not been pruned. The last occasion when the dividend was cut was in 1949, that is from 18.65 per cent. to 16.75 per cent. for the year 1948-49, following a 50 per cent. drop in the Company's net profit. Since then, the dividend has been either raised, when profit permitted and the prospect of the higher dividend being maintained appeared good, or maintained despite the fluctuations in profits.

• • • •

If Mr. Biren Mookerjee, Chairman of the Indian Iron and Steel Company, Ltd., did not draw a reassuring picture of the outlook for heavy industry, in general, and the steel industry, in particular, in his annual statement to the shareholders, it was because he preferred to look at the shape of things to come with clear-eyed realism. He did not hazard a forecast for the steel industry nor did he feel it safe to predict economic, financial and industrial trends in the country. But he felt reasonably sure that the future of the steel industry, as far as the portents already present indicated, was uncertain. This, according to him, was mainly due to the "absence of the correction of adverse circumstances which persisted in many directions." Some of these were the direct result of the Government's injudicious policies; others, although they did not flow directly from Government policies, were fraught with more dangerous possibilities.

But the most hazardous and a grave hindrance to industrial production, according to the Chairman, was the almost daily occurrence, frequently accompanied by violence, of strikes in industry, transport, administrative and other services. The Company's production during the year ended 31st March 1958 was adversely affected by the growing lack of discipline on the part of workers generally and the marked deterioration in the effort put forth by them. For instance, although the new open hearth furnace 'E' contributed an output of more than 20,000 tons, the total production of ingots in 1957-58 fell short by approximately 25,000 tons, as compared with the previous year.

He disclosed that, as a result of the strike in February last, the completion of expansion programme of the Company would be delayed, involving a loss of foreign exchange to the tune of Rs. 5 crores. Some of the more recent strikes were organised by the Communist Party for political purposes and for supplanting existing recognised unions. The lack of effective measures to reduce the cost of living, to produce more food and to augment the supply of cheap cloth, housing and other indispensable necessities of life, according to Mr. Mookerjee, fostered an atmosphere in which labour indiscipline thrived.

Warning against arbitrary rise in wages, Mr. Mookerjee observed that increase in money wages was no remedy for the rising cost of living. It merely accentuated inflation. The grant of increased wages, irrespective of productivity, to some industries or services which appeared to have become a corollary to a strike could, he averred, only encourage disruption in other industries and the vicious circle, instead of breaking, would continue to grow larger, paralysing in turn every national activity.

He, therefore, rightly emphasised the need for a uniform formula for the determination of wages in the industry as a whole. The industry, as is common knowledge, is at present saddled with a most complicated wage structure which is the result of many divergent tribunal and adjudication awards. This, Mr. Mookerjee said, "threatens to entirely disrupt the wage and cost structure in the industry." As the State-owned units started production, the position within the industry would, in the absence of a uniform formula for a wage structure, "possess the makings of a labour agitator's paradise and lead to most serious adverse consequences on production." Further, as a large part of the huge capital expenditure involved in the industry constituted foreign liabilities, if production did not progress as per schedule, the consequences will be disastrous. From this point of view, the plea for a wage tribunal made by Mr. Biren Mookerjee, deserves utmost consideration. He said that a statutory wage-fixing tribunal should be set up without delay to determine a wage structure on the basis of (1) an evaluated basic wage in relation to productivity and world standards for each particular class of work which would consolidate most of the multifarious allowances now being given by the private sector, (2) a zonal dearness allowance, (3) an incentive bonus and (4) an annual bonus based on the financial results achieved.

• • • •

The requirements of drugs and pharmaceuticals for a country of the size and population of India are very large. The effective demand is, however, dependent on the facilities available for medical treatment and the cost of the drugs. The medical facilities available to people at present are by no means adequate and the cost of the drugs is certainly not within the means of the common man. With the expansion of medical facilities and the increase in population, the demand for drugs can be expected to rise appreciably during the next few years. The demand for some of the essential drugs would also increase very much, if they could be made available at cheaper prices. Up to the beginning of the second Five-year Plan, the development of the drug industry was confined to the manufacture of simple drugs and the processing or refining of imported intermediates and penultimate products. Under the second Five-year Plan, however, steps were taken to expand production of penicillin and other antibiotics. Several other schemes were also undertaken in the private sector for expanding the production of various other drugs.

The progress of the programmes undertaken so far has no doubt been satisfactory, but this still leaves a vast field uncovered. The main difficulty that retards the progress of the drug industry is the paucity of basic chemical industry to supply the needs of synthetic drug manufacture. The production of these drugs also calls for a high degree of technical know-how and experience.

A big step forward taken in this direction lately is the proposal to set up a factory for the manufacture of the drugs and pharmaceuticals of the well-known American firm of Messrs. Merck, Sharp & Dohme International of New York. The factory will be owned by Merck Sharp & Dohme (India) Private Ltd. which is being promoted in association with Tata Sons Private Ltd. The Company will be a subsidiary of the American firm. The Government of India has approved of the project and granted a licence to the U.S. firm. The new Indo-U.S. venture will not only provide a closer link in the industrial relationship between the two countries but constitute the largest drug manufacturing operation in India in the private sector, the only other comparable firm being the Government-owned Hindustan Antibiotics Ltd.

The authorised capital of the Company will be Rs. 4.2 crores and the paid-up capital Rs. 2.1 crores. The paid-up capital will be shared by Mercks and Tatas and their associates in the ratio of 60 : 40. The American firm will make its investment in U.S. dollars or their equivalent. The new company will, in the first instance, manufacture Vitamin B12 and steroids together with many of its well-known pharmaceutical products. The initial manufacture, which will be carried on in temporary premises at Tardeo, Bombay, is scheduled to commence early next year. When the permanent plant, which will be situated at Thana, is completed, it will provide for more basic production of Vitamin B12 and steroids, sulfa drugs, chlorothiazide—Mercks' important new drug for use in the treatment of heart disease and high blood pressure—and other medicinals. The new facilities will include a flexible production unit adaptable to production of a wide variety of organic chemicals. Such a provision will enable the Company to produce immediately in India any new drugs that will be discovered in Mercks' research laboratories in future.

The House of Merck, Sharp & Dohme has a well-earned reputation, not only in the U.S. but all over the world, as one of the pioneers in the field of vitamins, steroids, sulfa drugs and antibiotics, and many of the currently used products were first discovered in their research laboratories. The Company is spending Rs. 7 crores per annum on research directed towards the discovery of new products of benefit to the health and nutrition of man as well as animal and also for the improvement of agriculture. The benefits of this research will be available to India immediately, as a result of Tata's association with the American firm. It is noteworthy that the new Company proposes to have a research laboratory of its own to conduct research primarily for the development of drugs uniquely needed in India and for processes using raw materials most available in this country.

EQUITIES RECOVER AT CLOSE

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, *6th November*

THE share market staged a recovery during the latter part of the week under review, after suffering an earlier setback. The earlier recession was attributed to lack of support and liquidation, particularly in textiles. The market failed to be inspired by the liberalisation of import policy, which permits import of raw materials and spares for industries and maintains—even liberalises in some cases—the special facilities for exporting industries. For instance, mills exporting cloth have been allowed special facilities in respect of their requirements of dyes, chemicals, machinery and cotton up to a certain percentage of their export earnings. The allotment in regard to imports of machinery will be made substantial if the deferred payment arrangements extend over a period of five years on an agreed basis. Large quantities of imported cotton will be made available to those who are able to bring about an increase in exports of cloth. These measures did not make any impression on the market. Reports that the outlook for the cement industry was not bright, thanks to the decline in offtake and the accumulation of stocks, also subdued sentiment. The Government's decision on the Textile Enquiry Committee's report was well received, but it remains to be seen how far the liberalisation of advances to the trade against cloth stocks will result in a lessening of the burden on mills and lead to the quicker movement of stocks.

In the last three days, however, sentiment was slightly better under the leadership of steels. The encouraging production figures of the T.I.S.Co. for the month of October and reports that some of the mills had lately been able to sell large quantities of cloth provided the bullish factors. Prices, therefore, staged a good recovery, closing levels, being well above the week's low.

In the steel section, Tata Ordinaries receded from Rs. 182.75 to Rs. 179.25 before improving to close at Rs. 182. Their new shares were lower by Re. 1.50 at Rs. 176.50. Indian Irons were marked down earlier in the week from Rs. 27.40 to Rs. 26.80, but strong buying from Calcutta lifted them up to Rs. 27.60 at the close.

In the textile section, Bombay Dyeings shaded off from Rs. 58.40 to Rs. 57.90, but, in tune with the general trend of the market, gained to Rs 58.60. Centurys dipped from Rs. 441.50 to Rs. 433, but the loss was partially made good when the shares finished today at Rs. 438.75. Kohinoors were subdued, coming down from Rs. 261 to Rs. 254.50. They, however, gained ground to Rs. 258 at the close. Central Indias lost over the week Rs. 3 to Rs. 87, Edward Textiles Rs. 2.50 to Rs. 227.50 and Gokaks Re. 1 to Rs. 140. Indu Ordinaries were better by 28 nP at Rs. 8.84. Indore Malwas declined by Re. 1.75 to Rs. 101 and Models by Rs. 2 to Rs. 168. Morarjee Mills were quiet at Rs. 248. Simplex shed over the week Re. 1.25 to Rs. 176 and Standards Re. 1 to Rs. 407. Svadeshis looked up, gaining over the week Rs. 2 to Rs. 196.50, while Tata Mills were a fraction lower at Rs. 36.75.

In the sugar group, Belapurs were quiet in the earlier part of the week, moving down from Rs. 322.50 to Rs. 317, but the announcement of a higher dividend of Rs. 20 per share, including a cash bonus of Rs. 2, pushed them up to Rs. 322.50. Changdeo Sugars were unchanged at Rs. 33.50, while Phaltans lost Rs. 2.50 to Rs. 178 and Walchandnagars Rs. 4 to Rs. 291. Kesar Sugars gained by 70 nP to Rs. 61, while Maharashtra Sugars declined by Rs. 4 to Rs. 185.25. Among cements, Associated Cements gave way from Rs. 159.50 to Rs. 154 50 before improving to Rs. 157.50 at the close. Their new shares were unchanged at Rs. 156.50. Digvijay Cements declined from Rs. 142.50 to Rs. 138 50. Orissa Cements lost 28 nP to Rs. 12.32, Dalmias 44 nP to Rs. 9.40 and Jaipur Udyogs 44 nP to Rs. 10.76. In the engineering and mining group, Alcocks suffered a drop of Rs. 6.25 to Rs. 277.50, while Tata Locomotives, after dipping from Rs. 163.50 to Rs. 158, improved to close at Rs. 160.50. In contrast to the sharp rise noted in the previous two weeks, Premier Constructions declined by Rs. 4.25 to Rs. 251. Larsen and Toubros were quiet at Rs. 17.08 and their Rights at Rs. 5.36. Mahindras were dull at Rs. 18.32, while Brady Engineerings were marked down by Re. 1.50 to Rs. 61. Indian Coppers were unchanged over the week at Rs. 3.98, while Shivrajpurs disclosed a loss of Re. 1 at Rs. 92.

Scindias were a shade quiet declining from Rs. 22.28 to Rs. 21.84 and Great Easterns, too, drooped 35 nP to Rs. 27.80. Bharat Lines were unchanged at Rs. 13.52. Premier Automobiles were featureless at Rs. 88.50, as also Hindustans at Rs. 7.84.

In the miscellaneous group, Bombay Burmahs (Old) receded from Rs. 513.50 to Rs. 500 before recovering partially to Rs. 507 at the close, while their partly-paids were unchanged at Rs. 178.75. National Rayons lost ground from Rs. 259.75 to Rs. 252.50, but soon recovered to close at Rs. 256. Gwalior Rayons had business 28 nP lower at Rs. 14.72. Tata Chemicals were a shade quiet at Rs. 16.20, while Hindustan Levers picked up 60 nP to Rs. 26.35. Tata Oils showed no change at Rs. 39.25, but Voltas were marked down by Re. 1.75 to Rs. 140.50. Killick Industries were dull at Rs. 148.50. W. H. Bradys provided a feature with a jump of Rs. 16.25 to Rs. 297.50. Wimcos were steady at Rs. 190.25. Dhrangadhra Chemicals were done Re. 1.50 lower at Rs. 101.50, while their new shares gained Re. 1 to Rs. 100.

• • • •

Calcutta Stock Exchange

CALCUTTA, *5th November*

The Calcutta Stock Exchange reopened on Wednesday last, after the long spell of *Pooja* holidays, on a firm note. However, soon an irregularly lower trend set in and on the whole quotations were lower on balance. The one exception to the general trend was provided by jute shares which were bought at hardening rates throughout the week. For, it was believed that jute mills were working more satisfactorily than in the previous accounting period, and the announcement of higher fibre prices in Pakistan and the consequent upward revision in yarn and cloth prices in Dundee meant that the Indian goods gained further competitive strength in foreign markets. An encouraging view was taken of the import policy, which provides for marginal increase in the import of raw materials. It was hoped that the special schemes for the textile industry would stem the decline in cloth exports. Of more importance to Calcutta in the import policy was the reduction in the import quotas of certain engineering goods and chemicals, the indigenous production of which had increased. Already, import restrictions were aiding certain domestic industries, but this factor did not have any effect on trading during the week. This was because of the expectation that this advantage might not be reflected in working results of companies, thanks to higher taxation and increasing cost of production. The earlier report of increased profits in the working of the Indian Iron and Steel Company, Ltd., for the year ended March last evoked enthusiasm for a time in the speculative counters which subsequently came under pressure. Coals were still groaning under the disappointment caused by the Government's decision to prune the increase in coal and coke prices granted earlier from 75 nP and Re. 1 to 41 nP and 33 nP., respectively. In this background, the Union Railway Minister's assurance of improvement of transport facilities for movement of coal from pitheads was hardly noted.

As stated, jutes improved sizably and the most important gains are as follows:

Scrip	Week's Quotations		Gain Plus
	Opening	Closing	
	Rs.	Rs.	Rs.
Alliance	106	109	3
Champadany	115	128	13
Caledonian	153	180	27
Cheviot	185	197	12
Belvedere	146½	157	10½
Delta	165	172	7
Gourepore	362	367	5
Kamarhatty	165	179	14
Kanknarrah	87	95	7
Lansdowne	121	138	17
Kinnison	174	183	9
Nalhatti	77½	78½	1
Khardah	148	153	5

Coals lacked enthusiasm and reflecting the general trend Burrakurs moved down to Rs. 18.50 from Rs. 19.00. Central Indias at Rs. 8.06 were lower by a few nP and Pench Valleys declined to Rs. 24.75 from Rs. 25. South Karanpuras finished quiet at Rs. 12.94, as against Rs. 13.00 earlier. Dhemo Mains, at Rs. 9, and Equitables, at Rs. 30, recorded a fractional improvement.

Engineering shares were lower on profit-taking. Indian Irons opened at Rs. 27.47 and gradually fell to Rs. 26.95. Jessop & Cos. declined to Rs. 25.87 from Rs. 26, but soon regained to rise to Rs. 26.12. Texmacos eased to Rs. 22.10 from Rs. 22.65. On the other hand, Burn & Cos. were supported at Rs. 384, as against Rs. 378 earlier.

Teas attracted little buying. At Rs. 15.75, Terpores were lower fractionally. Ranicherras lost to Rs. 15.75 from Rs. 16.62. Patrakolas were pushed down to Rs. 156 from Rs. 159.

Selected features were recorded in the miscellaneous industrials section. Titaghur Papers realised Rs. 44.12, as against Rs. 43.87 earlier. Metal Boxes were in request and rose to Rs. 31.62 from Rs. 30.87. Hindusthan Levers moved up to Rs. 26.31 from Rs. 25.12. National Cables firmed up to Rs. 34.19 from Rs. 33.97. National Pipes and Tubes, a new entrant, were brought to business at Rs. 15.44 and remained fully firm at that level on expectations of encouraging dividend for the year ended September last. Indian Oxygens were at one time as high as Rs. 24.50 before closing at Rs. 23.62, while Orient Papers, after being higher at Rs. 36, closed at Rs. 34.50.

Madras Stock Exchange

MADRAS, *4th November*

Easy conditions prevailed in the Madras Stock Exchange during the week under review. Transactions put through were small and prices showed moderate losses. Select plantation shares attracted some enquiries but the price trend was generally lower. Although prospects of a settlement of the labour unrest in the Kerala plantations appeared bright, operators were chary of enlarging their commitments on fears that, in view of the active support extended by the State Government to the workers, further recrudescence of trouble might follow. Textiles were distinctly easy. The announcement by the Government of India of its scheme for promoting export of textiles failed to enliven sentiment, as it fell short of market expectations. In sympathy with planting and textile scrips, miscellaneous industrials were dull. The sugar and electricity sections, however, proved an exception to the general trend.

Among tea shares in the planting section, Peermades were marked down by Re. 1.13 to Rs. 20.37. Hailey burias receded by 25 nP to Rs. 18.10. Nonsuch Teas declined by 31 nP to Rs. 27.75. Chembras eased by 15 nP to Rs. 3.70. Alageswars shed 3 nP to Rs. 2.62. United Nilgiris were quoted 31 nP lower at Rs. 18.25. Neelamalais were a shade lower at Rs. 4.95. Mlamallays were neglected at Rs. 36, Nilgiris at Rs. 7.80 and Stanes at Rs. 14.80. Amalgamateds at Rs. 14.80. Cottanads, on the other hand, were marked up by Re. 1.20 to Rs. 15, on special support. Coonoors rallied by a rupee to Rs. 26.

In the rubber group, Vaikundams fell by 80 nP to Rs. 24.20. Highlands declined by 40 nP to Rs. 11.50. T.R. & Ts receded by 25 nP to Rs. 7.10, Teekoys by 15 nP to Rs. 7.15, Pullangodes by 5 nP to Rs. 1.63 and Puthuttotams by a like amount to Rs. 2.93. Kalpettas eased by 25 nP to Rs. 13.75 *cum-div.*, reflecting disappointment of operators over the cut in dividend to 10 per cent. for the year ended 30th April 1958, as against 20 per cent. in the previous year. Midlands have declared a dividend of 10 per cent. for the year ended 31st March 1958, as against 20 per cent. a year ago, and the shares were quoted 14 nP lower at Rs. 12.56 *cum-div.*

In the coffee group, Sangameswars receded by 6 nP to Rs. 2.70. Ouchterlonys eased by 4 nP to Rs. 5.43 and Sheveroys by 2 nP to Rs. 2.10. Coffee Lands were neglected at Rs. 33.40.

Textiles, as stated earlier, were subjected to heavy selling. Anglo-French were pushed down by Rs. 4 to Rs. 72. Coimbatore Pioneers climbed down by Rs. 3 to Rs. 247. Lakshmis, Metturs, and Radhakrishnas shed Rs. 2 each to Rs. 100.50, Rs. 336 and Rs. 139, respectively. Bangalore Woollens eased by Re. 1.50 to Rs. 167, Buckinghams by a rupee to Rs. 178.50. Coimbatore Spinnings by 88 nP to Rs. 47.12, Loyals by 75 nP to Rs. 33.50 and Maduras by 25 nP to Rs. 29.50. Rajalakshmis, however, put on a rupee to Rs. 69.

Among miscellaneous industrials, Textools dropped a rupee to Rs. 199. Orissa Cements lost 25 nP to Rs. 12.35 and Dalmia Cements 20 nP to Rs. 9.75. Ashok Leylands shed 15 nP to Rs. 5.95, Travancore Cements 8 nP to Rs. 9.27 and Mysore Papers 5 nP to Rs. 17.60. Rallis, on the other hand, spurted by Re. 1.75 to Rs. 39.

Notice

THE CONSOLIDATED COFFEE ESTATES (1943) LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Pollibetta, South Coorg, at 10.30 a.m. on Friday the 28th November 1958, when the following Resolution will be moved as a Special Resolution.

SPECIAL RESOLUTION

RESOLVED that Mr. E. R. W. Walker be permitted to continue to hold a place of profit in the Company as the Field Manager from the 17th October 1958 from which date he has been co-opted as a Director of the Company by the Board of Directors in place of Mr. M. S. Mandanna resigned.

By Order of the Board,

THE CONSOLIDATED COFFEE ESTATES (1943) LTD.,

C. I. MACHIA,
Secretary.

Note:—1. Any member of the Company entitled to attend and vote at the meeting of the Company shall be entitled to appoint any other person (whether a member or not) as his proxy to attend and vote instead of himself.

2. Individual notices and the explanatory statement under Section 173 of the Companies' Act 1956 are being despatched separately to all shareholders.

POLLIBETTA, 3rd *November* 1958.

NEWS IN BRIEF

LARGE reserves of coal capable of yielding about 200 million tons have been located near Kamptee, Nagpur.

Foodgrains sold through Government fair price shops in U.P. which were hitherto subject to payment of exemption fee, have been granted total exemption from sales tax. Foodgrains sold through other shops will, however, continue to be liable to payment of the requisite exemption fee.

The Government of India has recently issued a licence for the establishment of a factory at Baroda for manufacturing earthmoving equipment like bulldozers, angle dozers and scopp dozers and construction machinery such as concrete mixers and self-priming pumps. The Government of Bombay has acquired about 50 acres of land for this factory. The factory is under *construction* on this site.

The installation of 200 new telephone lines in Jaipur City, Rajasthan, will be undertaken shortly by the Post and Telegraphs Department, in pursuance of the recommendation made by the Telephone Advisory Committee of Jaipur Division. Equipment for the conversion of the present manual telephone system in the city into an automatic one is being received and it will take about a year to complete the installations.

The total output of iron ore in India was lower at 430,000 tons in the month of August last, as against 450,000 tons in the preceding month. The largest output was reported from Bihar and Orissa with 170,000 tons and 138,000 tons, respectively. Mysore, Madhya Pradesh and Andhra Pradesh accounted for 63,000 tons, 33,000 tons and 11,000 tons, respectively. During the month 294,000 tons of iron ore were despatched to the iron and steel plants and 140,000 tons to the exports markets.

The Government of India has announced an average increase of Rs. 20 and Rs. 5 per ton in the retention prices of steel and pig iron, respectively, payable to the Mysore Iron and Steel Works. The increase will be applicable to the period 1st April 1955 to 31st March 1959. It may be recalled that in July 1956, the Government had announced the retention prices at Rs. 405 per ton of steel and Rs. 195 per ton for Standard Foundry Grade I Pig Iron, effective from 1st April 1955.

The Rs. 10.75-lakh milk union scheme of the Madhya Pradesh Government, envisaging supply of 250 maunds of milk per day for the State capital, has been approved by the Union Government. The scheme will be taken up in two stages. The first stage will consist of construction of a building and installation of a pasteurisation plant. In the second stage, 10 co-operative societies of milkmen will be established. The pasteurisation plant will be received as a *gift from the U.S.* under the Technical Co-operation Mission Programme.

The U.P. Government is reported to have approached the Government of India for locating in U.P. four of the five drug and pharmaceutical projects, now under negotiation with the U.S.S.R. The State Government has claimed that special facilities are available in the various parts of U.P. Essential raw materials are also easily available in the State, which include medicinal plants and herbs, alcohol and allied products. The Central Drug Research Institute, located at Lucknow, is cited as an additional advantage.

The U.P. Government has earmarked a sum of Rs. 1.21 crore for distribution as *taccavi* loans among cultivators to be utilised for minor irrigation works as part of the current *rabi* campaign in the State. Of the total amount provided, Rs. 18 lakhs are proposed to be spent on the construction of masonry wells, Rs. 6 lakhs on boring of wells, Rs. 5 lakhs on installation of persian wheels, Rs. 15 lakhs on subsidising the construction of private tube-wells and Rs. 6 lakhs for the construction of new *bundhies* and for repairing of old ones. The residue of Rs. 65 lakhs will be given in *taccavi* to farmers in such areas in the districts of Gorakhpur, Basti, Faizabad, and Ghazipur where *chaks* have already been formed.

• • • •

From Abroad

The Indonesian Government has decided to nationalise all Dutch business enterprises in the country.

A 4,350-mile oil pipeline linking the European region of Soviet Russia with the Asian region is under construction.

Yugoslavia has applied for an associate membership of the G.A.T.T., instead of continuing its present status as an observer.

Pakistan has been sanctioned a loan of $60.5 million by the U.S. Development Loan Fund. This brings the total loan granted by the Fund to Pakistan to $70.2 million.

The restrictions over hire-purchase and rental agreements in the U.K. have been lifted with effect from 29th October. Goods which had remained subject to control were, in the main, cars and radio and television sets.

The Martial Law Administrator of East Pakistan has prohibited any agreement whatsoever for conversion of Pakistani currency into foreign currency or the transfer of Pakistani money, securities, etc., to any foreign country except with the permission of the State Bank of Pakistan.

A new laboratory, Nuclear Metals Incorporated, described as the world's largest, devoted to privately financed metallurgical research and development, has been opened at Massachussets (U.S.) recently. The Company so far has had such tasks as development of uranium melting techniques and missile nose cone materials for re-entry into the earth's atmosphere.

Electrical washing machines are becoming an important element of household mechanisation in W. Germany. Last year's production value of the 1.4 million washing machines aggregated 433 million DM., 8.4 times more than in 1952. In the first seven months of the current year there has been another rise of about 23 per cent., as against the comparable period last year. Every tenth W. German household is estimated to have an electrical washing machine by now.

A new trade agreement is expected to be signed between Japan and W. Germany, following the visit of Prof. Erhard, W. German Chancellor, to the former country. It will evolve measures to redress Japan's unfavourable trade balance with Germany. Japan's export to Germany accounted for £21 million in 1957, whereas its imports during the same period were as much as £51 million. This gap is apparently due to the severe restrictions Germany has imposed on Japanese sundries and textile exports.

Price controls on imported goods, indigenous manufactures and selected foodgrains will be introduced with effect from 17th inst. in Pakistan. The ceiling on retail prices of imported goods is placed at the level of landed costs plus percentages varying from 20 to 50. For goods manufactured in Pakistan, ex-mill price will be so fixed as to allow a tax-free dividend of not more than 6½ per cent. to the producers. Retail prices of goods manufactured in Pakistan will not be permitted to exceed the ex-mill prices plus percentages varying from 20 to 50.

Hellenic Lines Limited has announced that on 15th October 1958 the keel was laid in the shipbuilding yard of Rheinstahl Nordseewerke in Emden, W. Germany, for the ninth of a series of 11 new cargo liners augmenting the Company's fleet. This vessel will have a deadweight capacity of 10,800 tons. Diesel engines of 8,000 h.p. will enable the vessel to maintain a service speed of 17 knots. This vessel and two sister ships will be delivered by the same yard in 1959 to join the other modern vessels of Hellenic Lines Limited in the regular cargo services maintained by the Company from the U.S.A. Gulf and North Atlantic ports to the Mediterranean, Red Sea, Persian Gulf, Pakistan, India, Ceylon and Burma.

PERSONAL

DR. S. Radhakrishnan, the Union Vice-President, left Bombay on 30th October for Paris to attend a meeting of the U.N.E.S.C.O. there.

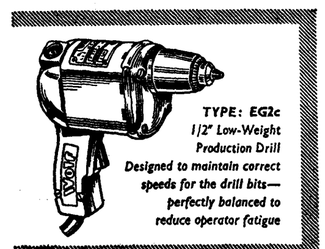
Mr. J. N. Khosla, Ambassador-designate to Indonesia, left New Delhi for Djakarta last Saturday to take up his new assignment.

Messrs. Maneklal Ujamshi, Jivanlal Chhotalal and Biharilal J. Nevatia have been elected President, Vice-President and Honorary Secretary, respectively, of the Bombay Sugar Merchants' Association.

Dr. W. T. Kroese, Managing Director of the Royal Textile Mills, Netherlands, has been appointed President of the International Federation of Cotton and Allied Textile Industries.

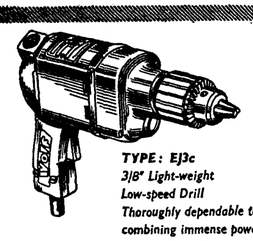
Mrs. Vijayalakshmi Pandit, Indian High Commissioner for the U.K., who has been concurrently appointed Indian Ambassador to Spain, presented her credentials to General Franco at Madrid on 30th October.

Mr. Fergus Roy Perry and Mr. Frank Harvey Foster, two U.K. technological experts, are expected to arrive in India shortly under the Technical Co-operation Scheme of the Colombo Plan. Mr. Perry, an electrical engineer of the Metropolitan-Vickers Electrical Company, will conduct post-graduate teaching and research in high-voltage cables and insulation at the Indian Institute of Science, Bangalore. Mr. Foster, a noted architect, will organise post-graduate courses and research in the architecture and regional planning department of the Indian Institute of Technology at Kharagpur.

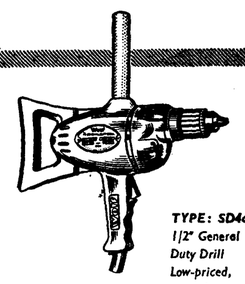


TYPE: EG2c
1/2" Low-Weight Production Drill
Designed to maintain correct speeds for the drill bits—perfectly balanced to reduce operator fatigue

A FINE PRODUCTION TEAM

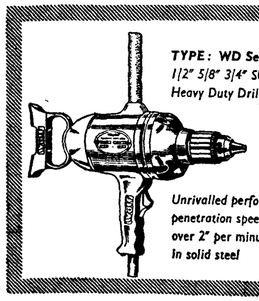


TYPE: EJ3c
3/8" Light-weight Low-speed Drill
Thoroughly dependable tool combining immense power and stamina with extra lightness and portability



TYPE: SD4c
1/2" General Duty Drill
Low-priced, rugged, versatile

Wolf
Portable Electric Drills
Worldwide reputation for performance, efficiency, reliability
NOW MADE IN INDIA
"Wolf the work"



TYPE: WD Series
1/2" 5/8" 3/4" SUPER Heavy Duty Drills
Unrivalled performance—penetration speeds of over 2" per minute in solid steel

GOVERNMENT'S DECISION ON JOSHI COMMITTEE'S REPORT

THE Government has done well to accept some of the principal recommendations of the Textile Enquiry Committee (Chairman: Mr. D. S. Joshi). In particular it has recognised the need for modernisation of equipment in mills. This was one of the chief points made out by the Joshi Committee. However, as has been pointed out in our leading article this week, it may be wondered whether, in the absence of a more comprehensive policy for modernisation of textile machinery, it will be possible to set textile matters right. The Government's decision gives the impression that the authorities have accepted modernisation as a grudging concession to some disagreeable necessity rather than as a positive good for the industry. The Government agrees with the views expressed by the Committee that "our exports will continue to fall steeply unless we export cloth produced on automatic looms." It feels that a proper psychological climate should be created within the country in order to facilitate the introduction of automatic looms within a specified period. It is hoped that it would be possible to evolve a simple procedure for such replacement on a phased programme in an accelerated manner.

A source of great concern alike to the Government and the industry is the large number of mills which have ceased working. On this question, the Government has accepted the suggestion made by the Committee. It may be recalled that the Joshi Committee pointed out that the main reason for closure of mills seemed to be bad condition of machinery, in many cases neglected continuously without proper attendance and repairs and replacement. In order to enable the closed mills to reopen, particular stress is laid by the Government on the need for replacing outmoded and obsolete machinery and for the proper balancing of uneconomic units. The Government, however, is of the opinion that the managements have contributed in large measure to the present state of affairs. It expresses the hope that, in future, they will take care to see that deterioration is not allowed, thereby obviating the necessity for intervention by the Government. As regards the major recommendation of the Enquiry Committee, namely, the establishment of an autonomous corporation to take over the management of textile mills if such a course is absolutely essential, the Government feels that such a body is neither necessary nor desirable. It is pointed out that the intention of the Government is to assist the various mills that may be in difficulties and help them to stabilise their position. The Government, it is stated, would have to concentrate its attention on this aspect rather than on the creation of an autonomous corporation for taking over closed units. Referring to the Committee's observations on the levy of sales tax on cloth, the Government states that it would not be proper to fetter the discretion of the State Governments. The practice in regard to grant of concession on the supply of raw materials to industry varies from State to State. The Government, therefore, feels that the State Governments should maintain the *status quo* in regard to this concession. Every possible assistance and facility, it is further stated, would be given by the Government for the promotion of exports of cloth and yarn.

A notable decision is the one relating to the setting up of an Advisory Committee. The Government has decided to constitute a committee to advise the Textile Commissioner on matters vitally affecting the industry as a whole or any unit in particular. The proposed Advisory Committee will be representative of all interests and of important textile centres. Along with this Committee, a Rationalisation Sub-committee will also be set up which, assisted by Regional Sub-committees, will advise the Government on policies and principles governing rationalisation. The Government has also accepted the recommendation of the Committee in respect of setting up a machinery for a more continuous and sustained study in the field of marketing intelligence and research for cotton textiles. But it is pointed out that this should be the legitimate function of the industry itself. As regards the problem of uncleared stocks with the mills, the Government feels that the total stocks with the entire trade have shrunk considerably; in order to facilitate normal free movement of stocks, the trade has been urged to co-operate with the industry by increasing its holdings. At the same time, the Government has recognised the need for allowing adequate and even liberal credit facilities to the industry. It is proposed to request the banks to extend such facilities to mills. It is to be hoped that the necessary credit facilities will be forthcoming not only to the mills but also to genuine traders in cloth so that the burden of accumulated stocks could be eased.

ECONOMIC CONTROLS IN U.K.

The well-known political maxim warns us that power corrupts; absolute power corrupts absolutely. Nevertheless, in times of emergency, like war, the Executive is compelled to assume virtually unlimited powers of control. There is, however, no excuse for its continued existence in a free country during peace-time. Small wonder, then, that the U.K. has decided in favour of doing away with certain emergency powers of economic controls, bestowed on the Government under the war-time Defence Regulations. The U.K. Government introduced a Bill—the Emergency Laws (Repeal) Bill—in Parliament to this effect last week. This seeks to prevent future Governments from enforcing widespread economic controls without the explicit sanction of Parliament. Explaining the new Bill, the White Paper says:

"The Bill does not itself complete the process of reducing or revoking emergency powers, though the powers still exercised are few. What it does is to establish that powers should not exist in peacetime, unspecified as to their scope and purpose, which a Government might use at its discretion without the explicit authority of Parliament. It represents an affirmation of the principle that Parliament should be asked to grant only specific powers for specific purposes."

There are 13 substantive defence regulations in force at present. Of these, only three will be allowed to lapse without replacement. These three cover control over the carriage of goods by sea, or voyage licensing, the setting up of the Industrial Disputes Tribunal, the end of which has already been announced, and the control of cultivation and termination of agricultural tenancies. Another batch of four regulations have already been replaced by the Land Powers (Defence) Act, 1958, and by the Open Cast Coal Act, 1958. The Factories Bill, which will be introduced in this session, will replace the fifth regulation.

The new Bill has sought to reserve the rest of five regulations, regarded as "essential," to be exercised by the Government without any alteration. They include: Defence (General) Regulation 55, covering general power to control industry for wide purposes and the provision empowering the Government to secure the necessary information for the same purpose; and 55 AB giving power to control prices of goods and services. Also remaining are Defence (Finance) Regulation No. 2A, which enables the Government to impose certain controls in addition to those in the Exchange Control Act, 1947 and Defence (Armed Forces) Regulation No. 6 giving authority for employing members of the armed forces on agricultural or other urgent work of national importance. The powers available under the amended Ministry of Supply Act 1939, it is stated, will be severely restricted. Except for the power to trade in jute and jute goods, the Minister's trading powers will be abandoned and he will no longer be able to use his defence powers in competition with civil industry. Besides, the power to control transfers of ships under the Ships and Aircraft (Transfer Restriction) Act, 1939, will be reduced to apply only for defence purposes.

No doubt, these measures have once again sought to bring into prominence the supremacy of Parliament over the Executive in matters of exercising economic controls. One, however, fails to know why the Government waited for over a decade after the war to repeal these controls. The express purpose of the step is presumably to make it impossible for a future Labour Government to resort to economic controls "at the flick of a switch." The fact remains, however, that, as things stand, these powers now diminished could be widened, if any Government intends seriously to do so.

Another Bill, namely, the Town and Country Planning Bill, introduced by the Government, has evoked wide interest in the U.K. According to it, compensation for land compulsorily purchased by the State will be based on current market values. In other words, the owner of the land will get the very amount he will be offered in the open market. Market value in this case will take into account the use allowed by the planning authorities and the use to which the purchasing authority intends to put the land. Hitherto, compensation was paid on the basis of the current market value of the land for its existing use plus whatever potential value the land had for development in 1947. The new Bill, it is hoped, will relieve the owners of land, particularly of those regions on the fringes of developed areas, of many hardships to which they were subjected hitherto. It is also expected that the number of compulsory acquisitions will now be reduced, for, the owners of land will be more willing to sell to the State on the improved compensation terms. These two Bills, it must be admitted, are bound to have considerable popular appeal, as they are particularly liberal in character.

AIR TRAVEL

The decision to make earnest efforts to reduce the costs of air transport operation with a view to reducing the fares and rates to the lowest possible level was taken at the 14th Annual General Meeting of the International Air Transport Association (I.A.T.A.) which concluded its five-day session at New Delhi last week. Explaining the results of the discussions at this session, the President of the I.A.T.A., Mr. J. R. D. Tata, in the course of a Press conference at New Delhi, said that world airlines would explore every new development which promised important increases in economy and efficiency. He added that they would also continue, in co-operation with Governments, to work for the simplification of formalities which still hampered the international movement of passengers and cargo. Mr. Tata said that every possible effort would be made to persuade Governments to adopt and implement a policy of positive control of air space which would put both military and civil traffic under the same regime in any given area.

As Mr. Tata himself pointed out, the holding of the I.A.T.A. session in New Delhi has enabled the managements of the world's airlines to have an opportunity to see something of India and of what it offered to the world tourist. He gave the assurance that the airlines would continue to encourage every development which assisted the growth of international tourist traffic as a primary source of benefit to national economies. It is gratifying to note that the next session of the I.A.T.A. will be held in another Asian country, namely, Japan. The next session will commence on 12th October, 1959, at Tokyo, under the presidentship of Mr. S. Yanagita, head of the Japanese Airlines.

To revert to the I.A.T.A. session at New Delhi. It adopted two resolutions relating to air space control and collision convention. By one of the resolutions, it urged all States as also the International Civil Aviation Organisation (I.C.A.O.) to take all available means to provide a system or systems of positive air space control over national territory and over the high seas, which might ensure that both military and civil aviation could perform their tasks under a single Air Traffic Control Authority in the respective air traffic control areas. The resolution added that the various airlines should approach their respective Governments to give this matter their immediate attention in order to ensure that adequate steps were taken towards achieving this essential co-ordination, both nationally and internationally. The other resolution requested the Legal Committee of the I.C.A.O. to give first priority to the preparation of a draft Collisions Convention to be submitted to a diplomatic conference and thereafter to the several States for ratification. The scope of such a convention, the resolution added, should include both civil and State aircraft. The meeting elected various technical committees for the next year.

DEVELOPMENT OF PORTS

The importance of port development to a country's industrial advancement can never be too strongly stressed. Appropriately enough, the Union Government is fully seized of the need for developing Indian ports. A graphic description of the measures taken by the Centre towards achieving this objective was given by the Union Minister for Transport and Communications, Mr. S. K. Patil, in his inaugural address at the seventh meeting of the National Harbour Board, held at Madras last week.

Tracing the course of developments since the last meeting of the Board, the Minister pointed

1,50,000 seers of milk every day!

Modern dairies, equipped with the latest processing units, are fast replacing the old, unhygienic systems of milk distribution—are supplying more and more people with wholesome, pasteurised milk.

Among other important projects of the Second Plan, are the Government's large-scale milk supply schemes. And Larsen & Toubro Limited are proud to have helped in this by planning and installing 44 model dairies—some of them the largest in the country. The Kaira Dairy plant at Anand, for instance, processes 1,50,000 seers of milk every day —enough for 1,92,000 families—produces butter, milk powder, ghee, condensed milk and casein.

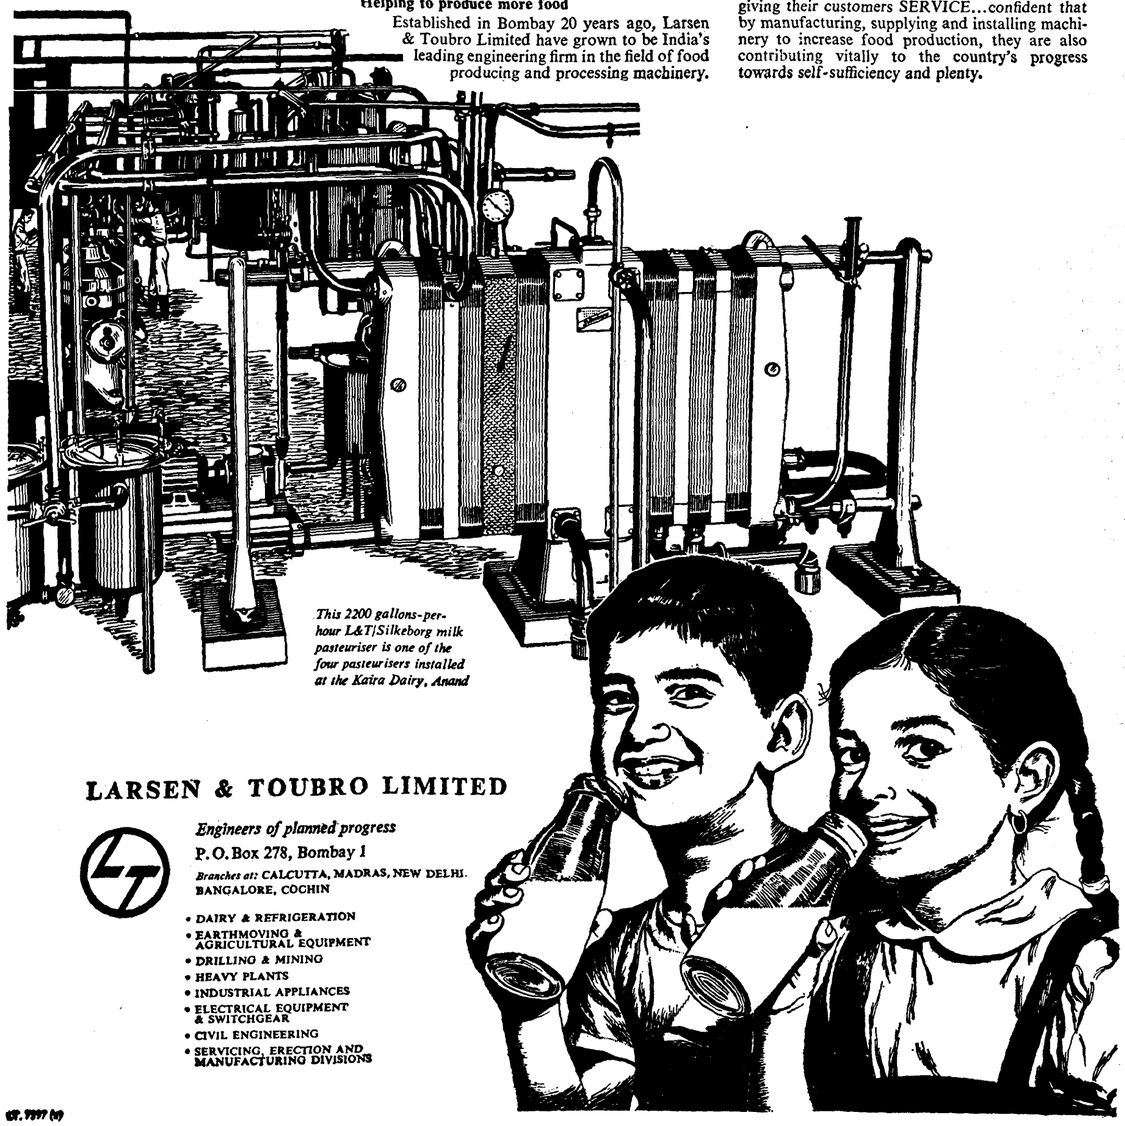
Helping to produce more food

Established in Bombay 20 years ago, Larsen & Toubro Limited have grown to be India's leading engineering firm in the field of food producing and processing machinery.

Pioneers in dairy engineering, Larsen & Toubro Limited now manufacture dairy machinery, milk tanks, butter churns and other dairy equipment. From the largest spray-drying installations for milk powder, down to the smallest lactometers for testing milk, Larsen & Toubro Limited serve the needs of the nation.

Service for our customers

With a thoroughly trained and efficient staff of engineers and technicians...modern workshops for servicing of machinery ... and a nation-wide organisation of stockists and dealers—Larsen & Toubro Limited, now as always, are confident of giving their customers SERVICE...confident that by manufacturing, supplying and installing machinery to increase food production, they are also contributing vitally to the country's progress towards self-sufficiency and plenty.



This 2200 gallons-per-hour L&T/Silkeborg milk pasteuriser is one of the four pasteurisers installed at the Kaira Dairy, Anand

IMPORT POLICY FOR CURRENT LICENSING PERIOD

ACTUAL USERS URGED TO SUBMIT ALL RELEVANT INFORMATION

From Our Special Correspondent

NEW DELHI, *4th November*

DELHI LETTER

THE import policy, just announced for the current licensing period (October 1958—March 1959), involves only marginal adjustments in the matter of imports of industrial raw materials. This has all along been expected. The present foreign exchange allocation of Rs. 150 crores for this purpose is only a shade higher than that in the previous half-year, the increase being about Rs. 4 crores. Even this increase is the result of further concessions to exporting industries. As the recently negotiated foreign aids and loans cover prior commitments, there is little prospect of any additional imports of raw materials and spares being financed from that source. In the circumstances industrial production in general will, at best, be maintained at the same level as in the previous six-month period.

In the Press note issued by the Ministry, it is stated that "during the current half-year, while the foreign exchange resources available for maintenance of the economy have not increased by any significant figure, some relief is likely on account of the availabilities from the Development Loan Fund and the Export-Import Bank Loan and additional imports on rupee payment." This statement could be interpreted to mean that additional imports of industrial raw materials and spares would be possible. Surely, such relief as is expected cannot come from sources other than rupee-payment arrangements with some countries because those other sources are predominantly tied to the financing of imports of capital goods and equipment. What is probably meant here is the level of commercial imports in a broader sense and not in the specific sense of raw material imports, for what is referred to here is the "maintenance of the economy" and not the maintenance of the level of industrial production.

Industrial Production

Industrial production will be maintained at about the same level as in the previous six-month period if, as the Commerce and Industry Ministry has promised, the actual users' applications received in response to the public notice of September last come to be disposed of expeditiously "to facilitate an even flow of raw materials." While the maintenance of the general level of industrial production may thus be possible, it looks as though this would involve expanded production in some newer or exporting industries and reduced production in older industries.

The Commerce and Industry Ministry's Press note has described the main features of the new import policy as follows:

"As during the last licensing period, it is proposed to give special facilities to the exporting industries. A licensing scheme to help exporting textile mills and handloom co-operatives to import their requirements of dyes, chemicals and machinery is being announced separately. Under this scheme, special licences will be issued to the exporting mills upto a certain percentage of their export earnings for imports of dyes and chemicals. A substantial amount will also be made available to mills for modernising their machinery provided they are able to obtain this machinery on deferred payments, spread over five years. Raw cotton will continue to be licensed as hitherto but a certain proportion thereof will be allowed to be imported by exporting mills direct subject to such conditions as may be prescribed by the Textile Commissioner.

"Quotas have been reduced for certain items on account of greater availability from indigenous production as in the case of ball bearings, electric motor starters, certain chemicals, engineering items like twist drills, metal working saws. For textile dyes and chemicals, quotas have been reduced on account of additional direct licensing to exporting mills as mentioned above. The quota for camphor has been deleted and the quotas for betelnuts and cloves have been reduced.

"Quotas have been increased for spares of a few important items, e.g., earth-moving equipment, refrigeration and air-conditioning machinery, etc. Quotas have also been enhanced for certain types of tools and some chemicals. Small quotas have been given for packing and wrapping papers, artificial silk yarn, plate glass, etc., quotas for which were *nil* last half-year. Imports of milk foods for infants, timepieces, liquid paraffin, photographic goods and X-ray films have been somewhat liberalised.

"In the case of non-ferrous virgin metals like copper, zinc and lead, quotas have been withdrawn, but provision has been made to ensure adequate supplies to actual users both in the scheduled as well as non-scheduled sectors. There need be no apprehension regarding shortages in the case of these items. In the case of metal scraps—copper scraps, brass scraps and German silver scraps—quotas have been provided for the established importers.

"Even though specific mention has not been made in the Red Book, import will be allowed upto a limited footage of exposed cinematographic films from countries having special rupee payment arrangements with India.

"It is hoped that this import policy will help maintain the economy of the country and at the same time step up the level of exports by providing greater facilities to exporters who have a very important role to play in the future economy of the country."

The Press note has referred to the possibility of expeditious processing of actual users' applications. Actual users, it is stated, have been defined as those who require raw materials or accessories for use in an industrial manufacturing process. The additional condition (which has been in operation since July-December 1952) limiting the scope of actual users to undertakings employing not less than 50 workers, will not be enforced strictly during the current licensing period.

It has been noticed, according to the Ministry, that in a large number of cases the disposal of actual users' applications for import licences for raw materials, or plant and machinery/equipment is delayed as no prior reference is made by applicants to indigenous producers to check up the indigenous availability of the articles applied for. In order to facilitate expeditious disposal of applications, all applicants seeking import of either capital goods or other stores for industrial projects should ensure that their requirements cannot be met from the firms whose names are given in the *Handbooks of Indigenous Manufacturers* published separately by the Development Wing. Factual evidence indicating the inability of such manufacturers to meet the applicants' requirements should also be attached to the application.

Raw Materials

The licences for raw materials will ordinarily, be issued on the basis of certified requirements for six-months' consumption; but the certified requirements will be scrutinised by the licensing authority and an appropriate reduction will, where necessary, be made after taking into account the following factors:

(i) the stock held on the date of application and the expected arrivals against licences in hand;

(ii) the quantum of imports likely to be available through commercial channels;

(iii) the quantum of similar goods or substitutes likely to be available from indigenous sources; and

(iv) the past imports of the item in question by the actual users.

Normally, the applications from actual users who are applying for the first time would be rejected. In the case of actual users who have been making imports of the items in question against actual users' licences granted to them against earlier periods, licences in excess of their average past imports will not normally be granted.

It has been reported that a number of actual users have diverted to other channels/or uses the raw materials and consumable stores licensed for use in their factories. Attention of the actual users is drawn to the condition which is endorsed upon each licence to the effect that the goods will be utilised only for the purpose for which they have been obtained, in the licence-holder's factory, and that no portion thereof will be sold to, or permitted to be utilised by, any other party. Steps are being taken to ensure that this condition is strictly observed. If any holder of a licence infringes the aforesaid condition, he will be liable to be debarred from obtaining any licences in future, without prejudice to any other action which may be taken under the Imports and Exports (Control) Act, 1947, and the Imports Control Order, 1955.

Actual user applications will not be entertained and should not be made for raw materials, etc., required for the manufacture of new items unless a licence for such manufacture has been obtained under the Industries (Development and Regulations) Act, 1951. When making applications, actual users should certify that the raw materials, etc., for which they are applying, are not intended to be utilised in the manufacture of new items for which a licence has not yet been obtained under the aforesaid Act.

In view of the low level of quotas for established importers, licences for actual users will continue to figure substantially in the current licensing period. If there is to be an even flow of industrial raw materials, spares and accessories, actual users' applications, as the Commerce and Industry Ministry has itself pointed out, should not omit any relevant information. It is stated that, very often, the disposal of actual users' applications is delayed on account of the failure on the part of applicants to provide all the information called for.

SMALL INDUSTRIES

Orders for more than Rs. 84 lakhs for the supply of goods to Government Departments have been secured for small-scale industries with the assistance of the National Small Industries Corporation in the first six months of the current financial year. The Corporation has been set up by the Government of India to provide marketing and other assistance to small industries. The items reserved for procurement exclusively from small-scale units include padlocks, metal boxes, signboards, metal buttons, badges, belt leather, cash bags, chappals and sandals, leather boxes, and leather bags. Efforts are being made to add some more items to this list. There are also other items which can be procured both in the large-scale and small-scale sectors. For items in this group small units are given a price preference up to 15 per cent. over the acceptable quotations received from large-scale units, depending on the merits of the goods.

During the period under review, 1,220 small-scale units, considered capable of supplying various stores required by Government Purchase Departments, were enlisted with Small Industries Service Institutes. With this the total number of units on the list comes to 2,980. Sales of products of small industries, effected through the mobile vans of the Corporation fetched about Rs. 1.5 lakhs during the first half of 1958-59. In addition, sales through the wholesale depots set up by the Corporation, during the period, were valued at over Rs. 4.67 lakhs.

Under the van operation scheme, launched towards the end of 1955, there are now three vans operating in each of the four regions with headquarters at Bombay, Calcutta, Delhi and Madras. The wholesale depots help solve some of the marketing difficulties peculiar to small industrialists, such as the limitations imposed by lack of standardisation and lack of trade names. There are seven wholesale depots, at Agra for leather footware, at Khurja for pottery, at Bombay for paints and varnishes, at Calcutta for hosiery, at Renigunta for glass beads, at Aligarh for locks and hardware and at Ludhiana for sewing machines, cycles and woollen hosiery.

INTERMEDIATE PORTS DEVELOPMENT COMMITTEE

The Government of India has constituted a committee, known as the Intermediate Ports Development Committee, for the selection of suitable intermediate ports in India for intensive development in order of priority. The Committee will also determine the extent of development required at these ports as well as allied transport developments, having regard to the needs of the entire area to be served, and the financial implications involved. In the selection of ports for intensive development, the Committee will take into account broad national considerations as well as regional requirements—engineering aspects with emphasis on economy of construction and maintenance and traffic potential of the hinterland and transport costs.

Mr. H. P. Mathrani, Development Adviser and ex-officio Joint Secretary in the Union Department of Transport, will be the Chairman of the Committee. The other members are: Mr. K. P. Ranganathan, Deputy Secretary in the Department of Transport; Mr. D. Sandilya, Joint Secretary in the Ministry of Commerce and Industry; a representative of the Ministry of Railways: Mr. K. N. Srinivasan, Chief Engineer, Madras Port Trust; Mr. M. S. Venkataraman, Administrative Officer, Cochin Harbour; Mr. H. P. Oza, Principal Port Officer and Engineer, Bombay State; Captain M. L. Advani, State Port Officer, Mysore State; Mr. C. Sankunni, State Port Officer, Madras State, Mr. L. T. Yettie, State Port Officer, Andhra Pradesh; Mr. G. Madhavan, I.A.S., Secretary to the Government of Kerala; Dr. H. B. Mohanty, ex-officio Additional Secretary to the Government of Orissa, and Commissioner to the Port of Pardip and Mr. S. N. Haji, Bombay representative of shipping interests Mr. I. G. Chacko, Officer on Special Duty (Minor Ports), Department of Transport, will be Member Secretary. The Committee will submit its recommendations before July, 1959.

COMMERCIAL BANKS IN AUSTRALIA

NOTABLE CHANGE IN ROLE IN POST-WAR YEARS

AS in many countries of the world, the role of commercial banks in Australia during the earlier years of development, particularly up to the thirties of the present century, was largely confined to the acceptance of deposits and providing loans to customers. Banks were the traditional lenders of capital to individuals and companies for development purposes. A notable feature of bank advances in those years, especially to primary producers, was that they were, in theory, repayable at call, but, in practice, they tended to be of a long-term nature depending upon the seasonal requirements of the borrowers. Up to 1939, the Australian banks were the main source of capital to industries. The war and post-war years brought about a significant change in the role of banks from the traditional pattern. The post-war period, in particular, has seen marked changes in the type of business undertaken by the trading banks, an interesting account of which is given in the October *Quarterly Survey* of the Australian and New Zealand Bank Ltd.

The most notable change is that the Central Bank has concentrated consistently on the necessity of the trading banks limiting their activities, as far as reasonably possible, to the supply of working capital, leaving market sources to provide funds for fixed capital purposes. The effect of this development has been to control trading bank liquidity and to limit bank lending to a narrower sector of the capital market, thus encouraging the provision of fixed capital by the market mechanism outside the banking system. Striking a note of warning on the possible danger of such restriction, the *Survey* observes: "While negligible in times of business activity, the dangers could assume significant proportions in periods of business recession. The authorities would be well advised to bear this in mind before pressing too hard for continued restriction of bank lending."

The spread of banking habit has emphasised the growing importance of the account-keeping function of the banking system. To many, the keeping of a bank account provides far more than a convenient method of payment; it carries with it significant ancillary services, the most important of which is the availability of bookkeeping facilities which provide a permanent record of individual transactions. In recent years, banks in Australia have extended their range of services, with a view to attracting more deposits. The new facilities, to mention only a few, are comprehensive travel services, advice on business development, nominee and registrar departments. These are, however, only changes in the internal functions of banks. "There have been other far-reaching changes in the capital market which are causing fundamental readjustments in the banking system, the earliest of which is the growth of hire-purchase finance and the extension of borrowings by the major companies specialising in this form of activity.

The expansion of hire-purchase finance naturally led to a broadening of the activities of the hire-purchase financing houses in the capital market, more so when the Central Bank restricted bank advances for this purpose, with a view to controlling inflationary pressure. By offering to borrow against debentures and similar securities, for varying terms, at relatively attractive rates of interest, the hire-purchase finance companies successfully tapped the growing volume of short-term funds which hitherto had little outlet. However, banks in Australia came to be closely associated with this type of business. Giving an account of this, the A. and N. Bank *Survey* says:

"The reaction of the trading banks to this new set of circumstances, when it came, was definite and to the point. All the major trading banks entered into close association with a hire-purchase institution, by acquiring a share in the capital structure, or, in one case, by establishing a wholly-owned subsidiary. This step was logical. Hire-purchase is a rapidly growing field of activity, closely associated with banking. It is worthy of note that, in the United States, some 40 per cent. of the total hire-purchase business of the country is handled direct by the banks. By maintaining close association with one of the important institutions operating in this field, each bank can ensure that it will retain its share of the funds, which might otherwise drain away from it through transfers from term deposits with the banks to short-term investments with hire-purchase finance houses. Finally, close association with a hire-purchase organisation has enabled the banks to add a further substantial service to the growing list of services offered by them to attract the public."

The second major extension of trading banks' activities in Australia has been into the savings bank field. This is only a natural development. Trading banks in the U.S. and Canada have long been closely associated with savings through their own savings bank departments and this movement has long been delayed in Australia. The savings bank operations are controlled by restrictive clauses in the licences under which new savings banks operate in order to ensure that these banks adhere to the established pattern of savings bank operations.

The latest development, which is likely to affect the Australian banking structure more fundamentally, is the move to establish a discount house system. This system, when completed will, as the A. and N. *Survey* points out, take Australia, in one long stride, from a country with a developing, but still more or less immature, monetary and banking system, to one with a sophisticated financial organisation of the type which has been developed in the older economies of the Western world. Commenting on the prospect of this move, the *Survey* adds:

"The move holds out the prospect of providing a service of considerable importance to the trading banks themselves, as well as mobilising funds for the capital market. Discount houses have, as their objective, the gathering for investment of short-term funds, including even money borrowed on overnight, day-to-day and weekly terms. These are now in Australia the early signs of specialised institutions appearing, such as those operating in the old-established and highly developed money market of London, aimed at tapping all possible resources of short-term, idle funds and ensuring that they will be used to advantage, even though for a matter only of hours.

"There are, however, a number of pre-requisites, which must be fulfilled before such a system could be developed to full maturity and form a major part of the financial mechanism. The most important of these pre-requisites is that the Central Bank must accept, unequivocally, the role of lender of last resort. A highly specialised, short-term money market cannot hope to function properly unless the members of the market have, in the background, a lender to whom they can always turn, if they are faced with the necessity of realising their investments to meet an unexpected calling up of funds placed with them."

Another major step which the A. and N. Bank advocates for the development of the Australian short-term money market, is the issue of Treasury Bills to the public. The issue of these bills has so far been restricted to the Central Bank, which, in turn, will issue them only to the trading banks, when the latter have large surplus funds for investment in these bills. These bills carry interest at the rate of only one per cent. per annum (as against 2.458 per cent. in India at this week's auctions) and their volume fluctuates during the financial year. Explaining the advantages arising out of a broadening of the market for Treasury Bills, the A. and N. Bank observes:

"There is a large volume of Commonwealth bonds maturing in 1958-59. By issuing Treasury Bills and short-dated Commonwealth bonds, it should be possible for the Treasury to convert a relatively large part of the maturing loans to new securities, carrying considerably lower rates of interest than those which would have to be offered for long-term loans. Thus, even though the rate on Treasury Bills would have to be considerably higher than the existing rate, the Treasury may well make an overall saving on the whole transaction.

"There is a further important reason why it would be desirable to broaden the market for Treasury Bills and extend their issue beyond the banking system. Each year, the ebb and flow of Treasury Bills constitutes a problem for the Australian trading banks."

The need for special measures to safeguard the banking system against undue liquidity during the period of heavy tax gathering, such as in the U.S., where in such emergencies the Treasury places funds on deposit with the trading banks, is advocated by the A. and N. Bank. The Bank feels that a short-term money market should be useful in this connection. "There is every reason to expect, as well," the Bank adds, "that, as discount houses become more firmly established in Australia, they will grow increasingly interested in commercial bill transactions. Here, too, it seems probable that they will be able to assist and provide added elasticity to the banking system." But the more important factor in materially influencing the liquidity of the banking system is the technique of making the short-term Government securities available to the discount houses. Elaborating this point, it says:

"If the securities were issued to the discount houses direct by the Central Bank, out of its existing holdings, the cash resources of the trading banks would be reduced, because the discount houses would pay for them by cheques drawn on their own banks, and these would be debited through the Clearings to the accounts of those banks at the Central Bank. From the trading banks' point of view, it would be preferable, if short-term loans to discount houses were to form a part of their investment portfolios, that the Central Bank should agree to these loans being included among L.G.S. assets. If the discount houses buy the desired securities from existing holders, the funds will remain in the banking system, because those holders will pay the proceeds of sales of the securities into their bank accounts."

In conclusion, the Bank points out that, from a long-term point of view, shortage of capital will undoubtedly be one of the major pre-occupations of Australia and any development, such as a short-term money market, which assists in mobilising capital resources, is to be welcomed.

U.K. INVESTMENT IN FIRST HALF OF 1958

Investment in factories, plant and machinery in Britain rose by 3½ per cent. in the first half of this year, as compared with that in the first six months of 1957, according to the quarterly estimates of national income and expenditure published in the October issue of *Economic Trends*. Further key figures of spending and production in the first half of this year compared with the same period a year ago show a decrease of 1 per cent. in production and of 2 per cent. in Government and local authority expenditure, and an increase of 2½ per cent. in purchases of consumer goods and services. All these figures are in real terms, that is, they exclude price changes.

In the second quarter of this year, compared with the same period a year ago, investment in factories, plant and machinery rose by 3 per cent., and wages and salaries were up 4 per cent. (the lowest increase for some years). These quarterly estimates of national income and expenditure, it is pointed out in London, are part of the new series of more up-to-date economic indicators which the Central Statistical Office now issues.

Among the more interesting of the indicators are the facts that the 4 per cent. increase in wages and salaries was the lowest for some years, and that personal saving in the first half of this year was about 11 per cent. of disposable income, which was at approximately the same high level as a year earlier. These two facts give some measure of the success of the Government's policy in checking inflationary trends during the period covered.

AID TO CANADIAN GOLD MINES

A Bill passed recently by the Canadian House of Commons provides for the continuance of cost-aid payments to Canadian gold mines through 1960 and an increase of 25 per cent. in the scale of payments, retroactive to January 1958. The 25 per cent. increase will be aided to the amount of aid computed according to the present formula. This formula provides a cost-aid of two-thirds of the amount by which the cost of production exceeds $26.50 per ounce, and is being granted on two-thirds of the output of all mines whose revenue is derived at least 70 per cent. from gold production. Cost-aid payments have been around $9 million during each of the past three years. Payments in 1958 are estimated at approximately $12 million.

GOLD OUTPUT IN RUSSIA

Gold production in the U.S.S.R. is to be increased by improving methods of production and by mining high-grade deposits which have been kept in reserve for future exploitation. Soviet gold reserves were estimated by the Federal Reserve Bank of New York in 1949 at about $2,625 million, and by Samuel Montagu & Co. early in 1955 at $7 billion. Production in the three-year period 1955-57 is estimated at $1,750 million: as U.S.S.R. gold exports during this period were about $550 million, reserves in 1958 are likely to exceed $8 billion.

FOR INTERNATIONAL EXPERIENCE & SERVICE...

Fly to KARACHI by PIA

The airline for top-flight service

PIA offers you more than speed and efficiency. It believes in offering you the ultimate in luxury air service. Its seasoned commanders, gracious and trained hostesses bring safety and grace in your air travel.

Immediate connections with PIA's luxurious Super Constellation flights on Tuesdays and Saturdays to TEHERAN, BAGHDAD, DAMASCUS, ROME, GENEVA and LONDON.

Stop-over en route at no extra fare.

Refreshments and full bar service (outside Prohibition Areas) on all flights.

Reserved Air Cargo Space is available on all PIA flights: fast transit and prompt delivery is assured.

From BOMBAY: (Tourist)
DAILY CONVAIR FLIGHTS
Ex Bombay: 14.30 hrs. arriving Karachi 16.45 hrs.
Ex Karachi: 10.30 hrs. arriving Bombay 13.45 hrs.

From DELHI: (Tourist)
FOUR CONVAIR FLIGHTS A WEEK
(MONDAY, TUESDAY, WEDNESDAY & SATURDAY)
Ex Delhi: 11.25 hrs. arriving Karachi 14.20 hrs.
Ex Karachi: 07.15 hrs. arriving Delhi 10.45 hrs.

BRITISH TEXTILE MACHINERY INDUSTRY

SOME LATEST DEVELOPMENTS

By A. Tayler

THE most important event of 1958 for Britain's textile machinery industry is the *Textile Recorder* International Exhibition of Textile Machinery and Accessories, at Belle Vue, Manchester, held from 15th to 25th October. Taking part in the event were 350 exhibitors from 14 countries, occupying more than 150,000 sq. ft. of exhibiting space. Machinery, accessories and ancillary equipment for every section of the textile industry, other than knitting machinery, were displayed, including many entirely new machines manufactured in the United Kingdom.

One of the most interesting exhibits in the machines for the preparatory and spinning section of the industry was the "Clean-o-matic" blowroom line. This new machine comprises a completely new blowroom line, specially designed to produce laps of maximum openness, cleanliness and regularity. Interesting features are automatic doffing, automatic waste removal, pressure lubrication and electro-magnetic control. The hopper opener, developed by Tweedales and Smalley Ltd. in conjunction with the British Cotton Industry Research Association, is a new approach to the problems of pre-opening and pre-cleaning cotton. Embodying many modern engineering developments, this blowroom line provides trouble-free running, better working conditions for the operative and lower wage costs.

The "Hartford" high-production combing machine, developed by Platt Brothers (Sales) Ltd., is a six-head machine with an output of up to 44 lbs. per hour. Laps of 20 to 40 pennyweights may be processed and slivers of 40 to 60 grains per yard produced with either single coiling or bi-coiling. Excellent fibre fractionation, two-over-one drafting at the draw box, master settings for nipper and top combs, automatic lubrication and sensitive stop motions, are some of the features of this machine which has been designed for operational simplicity and reduced maintenance.

"New Bradford" System for Worsted

Developments in worsted drawing and spinning were featured in the exhibit of Prince-Smith and Stells Ltd. The full range of machines in their "New Bradford" system comprises a Raper autoleveller intersecting gill with delivery into large diameter coiler can, a Raper autoleveller drawbox, 10¼-in. pitch with 14-in. by 7-in. bobbins, and a drawing finisher of 8-in. pitch with 10-in. by 5-in. bobbins. With this system of only three operations, level rovings are produced for "Ambler Superdraft" spinning.

Also demonstrated by this maker was the "Megaflex"—Ambler "Superdraft" ring spinning frame, model K.M.F.2, a 3¾-in. pitch, large package-ring spinning machine incorporating Ambler "Superdraft" and embodying the latest design improvements—including automatic underwinding. The machine employs the "New Bradford" system for weaving and hosiery yarns. The Ambler "Superdraft" spinning is the only method enabling the full count range to be spun from one roving weight.

A new sizing unit from Joseph Hibbert and Company, Ltd., seen by the trade for the first time, has been developed with a view to simplicity of operation, ease of maintenance and high-production potential considerations. It comprises three units, a model A4 headstock (28-in. diameter beam), a multi-can drier (63 in. on face of can), and a 56-in. double roller size applicator.

The new type headstock incorporates a patented mechanical drive, which provides a constant predetermined tension throughout the build-up of the beam, operating over a ratio of bare barrel diameter to full diameter of up to 1:5.5, and supplied to work with bare barrel diameter from 4 in. to 5 in., 5 in. to 6 in., and so on.

The only electrical equipment is a squirrel-cage motor and its associated control gear. A hydraulic variable-speed gear is employed to control the machine speed and provide any winding speed within the range of 0 to 100 yds. per minute.

Shirley Automatic Loom

Several of the machines displayed at the exhibition owe their origin to Britain's textile research institutes. Of particular interest is the Shirley automatic loom which has been developed by the British Cotton Industry Association in collaboration with the well-known firm of Wilson and Longbottom Ltd.

This is undoubtedly a machine of outstanding interest and of completely new design, being intended primarily, but not exclusively, for weaving a wide range of filament man-made fibre yarns. The loom has a 48-in. reed space and is equipped with a 16 shaft, fully positive, low-built dobby and a two-box weft mixing motion with stationary battery. Among new refinements is a much improved and simplified picking mechanism and a special pneumatic picking stick buffer motion. Suction weft control enables low weft tensions to be used without danger of slack picks arising—a feature of particular importance in the weaving of delicate and fine wefts.

Another improvement is the cloth take-up motion with optional extended roller. The loom sides are of the box type in which are contained the majority of the loom mechanisms; another feature of the machine is the late operating centre weft fork. This United Kingdom loom is covered by more than 60 world-wide patents.

To demonstrate the principles and possibilities of fluid bed drying machines, a development which is the outcome of extensive research in the British Royal Research Association's laboratories, four exhibits had been arranged.

One of them was a pilot plant fluid bed drying machine, in which the steam-heated fluid bed was shown drying a fabric 12-in. wide. The function of the exhibit—which is not commercially available—was to demonstrate the good heat-transfer properties of fluid beds.

Then there was a pilot plant double-pass fluid bed which demonstrated another possible design of fluid bed machines.

The third exhibit was a small open fluid bed, showing the physical and mechanical properties of fluid beds of small particles.

The fourth item was a demonstration piece showing the comparative heat transfer properties of air and a fluid bed.

As is well known, the firm of Standfast Dyers and Printers Ltd., has become famous for its molten metal dyeing inventions. On the firm's stand were two machines. One was a single-strand, patent, continuous molten metal vat dyeing range for narrow fabrics up to 1¼ in. wide. Designed for the dyeing of tapes and ribbons in fast colours, the machine also offers facilities for quick change of shade. For bulk lots, a multi-strand machine is available which will dye up to 12 strands simultaneously.

Also to be seen was a combined padding and molten metal dyeing machine for the determination of dye recipes for use on the continuous dyeing ranges. This permits dye solutions to be made up in anticipation of the requirements of the large machines, which can thereby be maintained in continuous operation.

INCENTIVES FOR TEXTILE EXPORT

A scheme providing for incentives to textile exporting mills and handloom co-operatives was announced by the Government of India last week. Under the scheme, special licences will be issued to the exporting mills upto a certain percentage of the export earnings for import of dyes and chemicals. A substantial amount, it is stated, will also be made available to mills for modernising their machinery, provided they are able to obtain this machinery on deferred payments, spread over five years. The mills will have to give an undertaking for improving the quality of their manufacture and for increasing their exports.

As regards raw cotton, the official announcement said that it would continue to be licensed as hitherto. But a certain proportion of it would be allowed to be imported by exporting mills direct subject to such conditions as might be prescribed by the Textile Commissioner.

The announcement said that mills exporting cotton textiles and yarn would be granted licences for import of coal-tar dyes, textile chemicals and gums, specified in the import licensing notification. Licences would be issued on the following basis:

(1) Against exports of grey cloth or yarn upto four per cent. of the f.o.b. value of exports and upto eight per cent. of the value in the case of exports to the U.S., West Germany and Scandinavian countries;

(2) against exports of dyed or processed cloth upto six per cent. of the f.o.b. value of the exports and upto eight per cent. in the case of exports to the U.S., West Germany or Scandinavian countries.

The All-India Handloom Fabric Society, the State apex societies of handloom weavers and other co-operative organisations dealing with weavers, would be granted licences for the import of cotton yarn of counts 100 or above and of textile dyes specified in the annexure to the public notice equal to 10 per cent. of the f.o.b. value of the exports of handloom cloth. Licences would be granted only once in a quarter on the basis of exports affected in the preceding quarter and will be subject to the conditions applicable to actual users' licences.

As regards the import of textile machinery for spinning yarn, for weaving cloth or for processing and finishing the woven products, licences would be granted to such mills exporting cloth or yarn which give an undertaking to the Textile Commissioner, Bombay, for improving the quality of their manufacture and for increasing their exports. The textile machinery intended for modernisation and/or rehabilitation of the productive equipment in the mill, would be allowed subject to the condition that the prior approval of the Textile Commissioner is obtained as regards the type or kind of the machinery sought to be imported.

The machinery would be allowed to be imported from any country in the dollar and soft currency areas against deferred payment terms on the basis that not more than 20 per cent. of the cost of the machinery would be allowed to be paid in cash of the five years following the issue of the licence. Such machinery could also be allowed to be imported from the U.S. against the Export-Import Bank loan subject to such conditions as might be prescribed from time to time under the Export-Import Bank programmes.

Automatic looms of a type of quality not at present in indigenous production, would be allowed to be imported under the above scheme. Where the looms were intended for replacement, they would be allowed to be imported subject to such conditions as might be prescribed by the Government from time to time. If such automatic looms were required for installation in addition to existing looms, then import would be allowed subject to the fulfilment of the conditions mentioned above, and in addition, an undertaking to the effect that the entire production from the additional automatic looms would be exported in addition to at least 50 per cent. of exports made by the applicant mill in any of the three years, 1954, 1955 or 1956.

INDISPENSABLE FOR EVERY FACTORY AND BUSINESS HOUSE

FACTORIES AND LABOUR MANUAL

BY R. MATHRUBUTHAM AND R. SRINIVASAN

FOREWORD BY Hon'ble Mr. R. VENKATARAMAN (*Minister for Industries and Labour, Madras Government*)

Third Edition : REVISED AND BROUGHT UP-TO-DATE

This book contains all the Central Labour Acts with Rules and Notifications under all the Acts. Exhaustive Notes and copious case-law make this book, on an ever-growing and complex subject, indispensable. Every Factory should be equipped with a copy of this book.

An appreciation :

"It is undoubtedly a book of reference to all including those in charge of the administration of the labour laws as it gives at a glance not only the various Acts as amended up-to-date but also the rules framed thereunder by the Central and the State Governments."

• • • • • • • •

"The exposition of the principles contained in the various Acts is clear and lucid."

V. BALASUNDARAM, I.A.S., *Commissioner of Labour, Madras.*

PROSPECT OF AID TO COTTON MILL INDUSTRY

LIVERPOOL MARKET HELD AN ANACHRONISM

From A Special Correspondent

MANCHESTER, 28th October

MANCHESTER LETTER

TRADE union leaders in the Lancashire cotton industry decided to summon a special meeting of delegates representing more than 200,000 cotton workers immediately a report is received from the Cotton Board on the outcome of the negotiations now in progress with Hong Kong on the question of textile shipments to the United Kingdom. This was announced by Mr. James Milhench, Secretary of the United Textile Factory Workers' Association, after a meeting at Manchester.

The trade union leaders will then decide what further action is called for on the part of the unions. Officials at the meeting refused to comment on the voluntary limit reported to have been submitted to the Cotton Board delegation by the Hong Kong industry.

Meanwhile, the mists have closed down again on the negotiations after a further meeting of the consultative committee, sponsored by the Cotton Board which authorised the three former negotiators to continue their discussions with Hong Kong. Lord Rochdale, Chairman of the Cotton Board, would disclose no details of the arrangements except that they would be continued at long range. It is understood that there is no intention of resuming direct conversations with textile leaders in the Far East. Speculation on the developments has been widespread in the mill towns but it seems the cloud of secrecy will encompass any further exchange of cables for some little time ahead.

Aid at Last?

Whatever the outcome of the further negotiations, Lancashire traders did get a crumb of comfort from the Prime Minister during the course of questions he answered following his speech at the Cotton Board's conference. Mr. Macmillan did not preclude financial assistance to the industry.

A speaker drew his attention to the help being offered to the shipbuilding industry in the shape of tax concessions under certain conditions. Could the cotton industry hope for similar treatment, he asked, especially if spinners and weavers scrapped their old machinery and made every effort to raise their efficiency. The Prime Minister's answer was encouraging. Without assuming the mantle of the Chancellor of the Exchequer, he suggested that an approach should be made to the Government urging that tax concessions should be accorded to those industries which could make out a case for special treatment.

Alternatively, direct Government aid could be sought to finance reorganisation schemes and internal re-arrangement within an industry. If such an appeal was put forward, the Premier promised, it would receive the Government's careful and sympathetic consideration.

Liverpool's Future

Amid the welter of words which invariably arises from any conference which lasts for a full week-end, certain aspects of the topics under review must get submerged in the discussion of particular problems. The imported cloth situation so dominated the recent conference at Harrogate that even Mr. W. T. Winterbottom's scheme to "cut out the dead wood" had to play second fiddle.

Another part of his paper created interest in some directions but was overlooked by many of those who were engaged in the producing and processing branches. This referred to the future of raw cotton marketing in this country, about which there was keen and uncompromising controversy up to a few years ago.

It has become increasingly clear that many sectors of the industry now regard the Liverpool Cotton Market as an anachronism. Hints have been thrown out that the system of operating futures markets no longer fits in with current conditions and despite all the efforts of the Liverpool Cotton Association the position of raw cotton trading has declined noticeably over the past 12 months. Mr. Winterbottom referred to the economic importance of the raw material to producer countries which had made Government interference in prices and marketing almost universal.

Mr. Winterbottom said: "In sharp contrast to this state of confusion is the outstanding simplicity of trade in man-made fibres." He added: "Prices are stable over long periods and supplies are available with complete regularity without the need for carrying large stocks. Unless Government interference with the marketing of cotton, especially in the United States, Egypt and the Sudan, becomes more practical and realistic, this trend is bound to continue. Then perhaps some means can be found to provide adequate hedging facilities."

Alternative Procedure

The sharply contracting industry in Lancashire was scarcely in need of a futures market of the size in operation before the war, Mr. Winterbottom continued. The only satisfactory hedge against fluctuations in raw cotton prices was a healthy order book and post-war experience had suggested that a spot stock of cotton was no longer essential for trading conditions in which spinners and manufacturers had few orders.

The alternative, already practised under the post-war Labour Government, was the establishment of a Raw Cotton Commission, whose revival has already been advocated by Mr. Harold Wilson, M.P., in his "Plan for Cotton." To this, Mr. Winterbottom replied: "It is high time that this idea was exploded and that energies were devoted to looking over other alternatives."

Other European countries, he pointed out, were supporting cotton industries at least as prosperous as that in Britain without the help of their own futures market or of State buying. The one that looked most helpful to him was that used in France where the Inland Revenue Authorities allowed profits on raw cotton price fluctuations in one year to be carried forward and set against losses in future years. Over a period these speculative profits and losses would cancel each other out, he asserted.

It could hardly be expected that these comments would be received without some justifiable alarm by members connected with raw cotton affairs who attended the conference. Several speakers urged some clarification of his views and were unconvinced that either futures or spot markets could be withdrawn without creating a vacuum adversely affecting the spinning and weaving trades. Both Sir Cuthbert Clegg and Col. Whitehead agreed that the provision of a spot market was most desirable, although it was admitted that the larger combines could carry on more effectively without such facilities than the smaller units in the industry.

A Losing Battle

It was generally accepted, however, that the current situation, particularly in the United States, was the major factor in restricting the activities of raw cotton markets both here and abroad and that, while existing policies were pursued, the markets were fighting a losing battle.

As an indication of the problems involved, some raw cotton experts in Liverpool have had to discontinue their classes for trainees which have been in progress each week since 1951. Their confidence that the market would be reopened was justified but in the ensuing years the situation has so deteriorated that the number of men ready to learn the intricacies of raw cotton trading has declined to a marked extent.

Trade chiefs in another section of the Lancashire textile industry are wondering how to scale down their plant as trade tapers off. This time it is the finishers—they dye, bleach and print the textiles the spinning and weaving mills produce—who are taking a closer look at their future size.

Mr. Roger Lee, Chairman of the Calico Printers' Association, called the trade to action last week. "I suggest that urgent action must be taken by all sections of the finishing trade to deal with this problem of redundancy," he told the annual meeting in Manchester. He added: "We are not proposing to deal with this problem alone. But we are willing and anxious to co-operate with other firms in both the calico printing and dyeing industries."

Two months ago, the Association shut the printing section of its Broad Oak works employing 350 workers at Accrington—"one of the greatest tragedies we have had to face," said Mr. Lee. He explained after the meeting that the Association would be putting forward a concrete scheme for gradually dealing with the redundant plant in the textile finishing trade which would eventually mean more economic textile printing.—*All Rights Reserved.*

STRUCTURAL PROBLEMS FACING G.A.T.T.

NEED FOR RELAXING CURBS ON EXPORTS FROM UNDERDEVELOPED COUNTRIES

THE General Agreement on Tariffs and Trade (G.A.T.T.) has, during the short span of its existence of well over a decade, become a major force to be reckoned with in the realm of international trade. By endeavouring to safeguard the post-war world from relapsing into destructive and discriminatory national economic policies, it has filled a great need. It has furnished a uniform code of conduct for the constituent members, serving as a guide to commercial policies. The General Agreement has, thus, sought to dedicate itself to the task of strengthening and stabilising world trade by providing an instrument of co-operation, based on empirical methods. Further, it has tackled strange, and often complex, problems in a fast changing world. The pattern of world trade itself tends to change, giving rise to knotty structural problems. For instance, the various schemes for regional alliances currently being worked out and the restrictive import policies pursued by certain countries are bound to have considerable influence on the nature and growth of international trade. Appropriately enough, Mr. L. K. Jha, Chairman of the Contracting Parties of the G.A.T.T., in his opening speech at its plenary meeting held at Geneva recently, drew pointed attention to the new challenges—both political and economic—which the organisation has to face at present.

Mr. Jha made particular reference to the Treaty of Rome, which conceives the evolution of a common market for six European countries. It appeared to be an energetic move towards liberalisation of trade for which the G.A.T.T. had always stood. He hastened to add, however, that a good deal of concern had been expressed about the possible impact of the application of some of the provisions of this Treaty on the trade of countries outside the Six. He pointed out that these six countries had given assurance that it was their intention to contribute to the expansion of trade generally and, therefore, they looked forward to taking a vigorous part in the activities of the G.A.T.T. directed towards this end. It is gratifying to note that these countries have agreed to consult the G.A.T.T. about the problems that will crop up as the Common Market begins to be realised.

Regional Developments

Mr. Jha also referred to the similar movement towards the regional liberalisation of trade through the initiation of discussion among a broader group of European countries to form a Free Trade Area, and such other movements developing in other regions. As he pertinently observed, these important steps in the direction of freeing trade must be accompanied by a vigorous pursuit of the efforts of the G.A.T.T. towards the liberalisation of trade in its broader framework. Apparently, the harmonisation of regional and broader programmes which is engaging the attention of the G.A.T.T. is a move in this direction. Such efforts, according to him, will lead to a climate of expansion which will facilitate adjustments necessary to take account of the various developments towards regional organisations.

Another important matter with which he dealt at some length was the failure of the less developed countries to develop their trade as rapidly as the more advanced nations and to keep pace with their own growing needs. In this connection, he said:

"Very substantial efforts are being made in various international organisations to promote and assist this process and to bring about a flow of capital and skills which are essential to it. It remains, however, a hard fact that the success of this effort depends to a very large degree on the ability of the less developed countries to expand their exports, and thus increase their earnings of the foreign exchange needed to finance the growing volume of imports. The efforts of the less developed countries themselves will be unavailing unless other countries, and especially the highly industrialised countries, are sensitive to the urgent necessities of those less favourably placed, and endeavour in their own policies to facilitate, so far as lies in their power, the export trade of the less developed countries. Whilst I cite this as a necessity in the name of economic development, we should not forget that this is also a policy in the enlightened self-interest of the industrial areas themselves, since the developing countries are in themselves important markets and offer the brightest promise for continuous expansion in the future."

Speaking about the recession in the U.S.A., which has now subsided, he considered it legitimate to claim some credit for the G.A.T.T. that "on more than one occasion when there has been a threat of a recession there has been no general intensification of restriction on imports." At any rate, there have been certain developments, especially in the case of non-ferrous metals, which give room for anxiety. The instability in the commodity markets, often reflecting the slowing down of activity in the industrial countries, compels the primary producing countries to introduce certain restrictions. In this connection, Mr. Jha observed:

".... Then again one must not forget that a decline in business activity in a major industrial country even when it is not accompanied by an increase in import restrictions can and does have serious effects on the world outside and reduces the export earnings of many countries, particularly primary producers. If, as a result, any country gets into serious difficulties, not only does it have to take action to restrict its imports, but it also might resort to short-term remedies of doubtful value. Thus, some countries are driven to bilateral arrangements in an effort to sustain exports and to provide for the imports essential to the economy. Then again in such a situation, nations often turn to the grant of subsidies and other similar devices in the hope of improving their export trade. The fact that many countries are outside the G.A.T.T. and not subject to its discipline makes the temptation for seeking such remedies even stronger. It is, for these reasons, of the utmost importance from the point of view of all of us that we should apply our minds to the special problems of trade in primary products, particularly its instability. It is, I think, a mistake to imagine that this instability affects the trade of the primary producers only. Their partners in trade are also equally though less obviously affected."

Agricultural and Food Products

Another problem that confronts the G.A.T.T. is the tendency on the part of many countries to disregard its provisions in respect of trade in agricultural and food products. For reasons which are well known, most countries feel a need to take special measures for the protection of agriculture. Mr. Jha is of the opinion that unless G.A.T.T. can find a *modus vivendi* which is acceptable both to countries relying heavily on exports of agricultural products as well as to the industrialised nations, "the prospect of maintaining a world-wide multilateral trading system is doomed."

While the broad contours of the structural problems in world trade are thus set out in the Chairman's speech, a detailed picture of how these problems affect particularly the underdeveloped economies is brought out in a subsequent speech by Mr. N. Kanungo, Minister of Commerce of India and the leader of the Indian delegation. He concentrated his attention on the line of policy and action which should be pursued to accelerate the pace of economic development in these countries. He hoped that, as in other international conferences, the Contracting Parties of the G.A.T.T. would agree upon policies affecting trade which would give underdeveloped countries "a chance to survive." Almost all the underdeveloped countries had to face serious balance of payments crisis, when they set about increasing investment in their respective countries. This was aggravated by the unfavourable terms of trade. A lasting solution would have to be found by stepping up exports from underdeveloped countries. Discussing this question, Mr. Kanungo said:

"Countries in the course of economic development have a chronic tendency to run into difficulties of balance of payments. This is because, for their development programmes, they must rely heavily on imports of capital goods as well as techniques. Another factor is the upsurge in demand for all kinds of things, which follow the slightest increase in national income and which must, until domestic production goes up, be met by imports if a serious inflation is not to result therefrom. Under Article XVIII of the G.A.T.T., this problem has been specifically recognised. The same article also draws attention to a contributory factor in the balance of payments difficulties of underdeveloped countries, namely, the instability in their terms of trade. This results from the violent fluctuations to which commodity prices are subject. A solution which Article XVIII has to offer is of a negative kind. The permission to restrict imports, though essential, only results in a shrinking of world trade rather than its expansion which is what the G.A.T.T. stands for. A real solution should be sought through measures which will increase the exports of underdeveloped countries rather than through steps to enable them to curtail their imports."

Mr. Kanungo sought to highlight the fact that the quantitative restrictions on trade imposed by the advanced countries still continued to hamper and limit the volume of exports to these countries from the underdeveloped countries. The advanced countries had been generous enough to help the latter countries, particularly in financing their development programmes. It was not too much to ask of them that they should not prevent the less developed countries from earning what they could from their meagre exports. Stressing the need for eliminating such restrictive measures, he observed:

"I appreciate that these restrictions are the result of a desire to protect their domestic industry. We cannot obviously question their right to do so. But there are two points which I must make. First of all, protection through quantitative restrictions is not permissible under the G.A.T.T. Time and again, our near neighbour, Ceylon, has come to the Contracting Parties to get special authority to impose quantitative restrictions in order to help her young industries. If countries in Europe and America, rely on this form of protection for industries, in which they were the pioneers, the whole basis of the General Agreement is undermined.

"The second observation that I would permit myself is that by protecting these industries in this fashion, they are in effect preventing the expansion of their capital goods industries. For, if we could earn more by exporting cotton textiles, jute fabrics and other similar products to Europe, we could import even more of plant and machinery. It is this exchange of goods, and the belief that it leads to greater prosperity which is the very foundation of the General Agreement. I recognise that problems of transition will arise. We should certainly think of ways and means of making the process less painful. But, to attempt to resist such change is in fact to prevent the expansion of international trade and to slow down the process of economic development. In any event, I do hope that when governments in the more prosperous parts of the world find themselves moved by the possible short-term distress which the shrinking of an old established industry might cause, they would not forget the conditions in which the vast majority of human beings are still living in the twentieth century while determining their domestic policies."

Many of the impediments which the underdeveloped countries face in the expansion of their export trade, according to Mr. Kanungo, arose not from the desire of the more advanced nations to help their domestic industry but because of the pursuit of traditional lines of fiscal and revenue policy. Referring to effects of high taxes on tropical foodstuffs and beverages on the economies of underdeveloped countries, Mr. Kanungo said:

"These high duties on tea, coffee and sugar inhibit their consumption and reduce the export earnings from them. I have been told that one of the difficulties in the way of the more advanced nations investing enough in the underdeveloped countries is the high and rising level of domestic consumption. I accept this point as legitimate. But I would urge that if domestic consumption in the advanced countries has to be curtailed, it should not be of the products on which the underdeveloped nations are so much dependent. These duties are not negotiable under the G.A.T.T., but a reduction in them is very necessary if international trade between the developed and underdeveloped countries is to be balanced at higher rather than lower levels.

"I would, therefore, hope that this meeting of Ministers will agree that as a matter of general policy, the developed countries should facilitate the export of goods—whether they are manufactured articles or raw materials, agricultural products or mineral—from the less developed areas of the world and that they should review their policies of protection to domestic industry and taxation of the domestic consumer, with due regard to the advantages, economic, social and political, to the world as a whole, of an improvement in the low standards of living in the underdeveloped countries."

Unfair Competition

Alluding to the various unfair means of competition still adopted by a few countries in the world, Mr. Kanungo observed:

"We have, in our thinking on the subject, always made a distinction between competition from a country whose costs of production are low and competition which is based on unfair commercial practices. We wonder that the former, whether it is due to cheap labour or to more efficient machinery or more economic production of raw materials is a form of fair competition, against which no discriminatory measures can be taken. On the other hand, when exports are pushed without regard to domestic costs merely for the sake of capturing a particular market or earning a particular currency, then a situation arises in which goods can be said to be sold at artificially distorted prices to which the point made by my colleague from Germany could legitimately apply. There is in the world today growing evidence of competition of this kind. In the main, it arises outside the countries which belong to the G.A.T.T., but it nevertheless affects our trade in the most serious way. While measures can be taken in such circumstances to protect domestic industries in the domestic market, third countries naturally turn to the cheapest source of supply with some enthu-

INTERNATIONAL SUGAR AGREEMENT

BRAZIL, PERU AND INDIA JOIN

THE thirty-three-day deliberations of the International Sugar Conference, convened under the auspices of the United Nations and held in Geneva, concluded on 24th October last, after adopting unanimously the 48-article International Agreement for regulating world sugar prices through a system of export quota. This agreement will replace the existing one, due to expire at the end of December 1958, and will remain in force for a further period of five years. The new agreement is, in principle, the same as that of the current one and even maintains the existing level of prices at which the quota system will operate. The negotiations, which resulted in the signing of the new agreement, were mainly devoted to ensuring the maintenance of the existing quotas among the present producer-members. If, however, there is an expansion of world trade as a result of new importers joining the agreement, the expansion should, according to the agreement reached at the Conference, be shared by new exporters who join the agreement.

There are, however, some distinguishing features in the new agreement, the most important being that it covers a wider area, following the accession of Brazil, Peru and India as new members to the agreement. These three countries are not signatories to the existing one. Thus, the efforts of the members of the current agreement to include Brazil and Peru, two of the major exporters of sugar in the world, accounting as they did in 1957 for 800,000 tons of the world supplies to the free market, have been successful. It is claimed that the absence of these two countries, as well as some others, which supplied no less than 1.8 million tons in the aggregate, or 29 per cent. of the total, to the free market last year, was mainly responsible for the unsuccessful working of the 1954 agreement, due to expire at the end of 1958.

It will be recalled that the existing agreement, before it was amended in 1956, provided for the regulation of exports from producing countries, with a view to keeping the world price within the range of 3.25 to 4.35 cents per lb. This was to be achieved by estimating the world requirements and fixing each year initial export quotas that would be in line with the estimated requirements. These export quotas would be modified in accordance with price movements in the markets. This stabilisation mechanism worked successfully for about two years until November 1956, with prices being maintained around the floor of 3.25 cents. There was a decline in world stocks from 13.9 million tons to 12 million tons, thus eliminating what was considered to be surplus stocks. At the same time, world consumption rose from 36 million to 41 million tons.

From November 1956 onwards prices began to harden, mainly on account of the Suez incident. The International Sugar Agreement was amended, replacing the price ranges by a provision for automatic quota adjustments at points within the price range of 3.12 cents to 4 cents. It was also stipulated that all quotas and limitations on exports should become inoperative, should the price cross 4 cents per lb. In the meantime, the price reached a peak of 6.85 cents per lb. in April 1957 and remained at about that level till July 1957. However, by the time the amended sugar agreement came into force, the demand and supply position had changed markedly in favour of buyers and the free market prices had begun to fall steadily. The downward trend continued till February 1958 after which prices began to stabilise at about 3.50 cents per lb. The participation of Brazil and Peru to the new agreement should, it is hoped, contribute a great deal to the stabilisation of world prices.

As already pointed out, there has been no change in the level of prices at which the quota system will operate. Explaining the reason for keeping the price level unchanged, the Chairman of the Conference, Mr. Eric Roll of the British Board of Trade, said that a short-term view of the high prices reached in 1957 might have warranted a change in the ceiling price. However, a long-term consideration of the market fluctuations justified the intervening price levels remaining unchanged. A new element has, however, been introduced in the price mechanism. This is as follows:

"When the prevailing price exceeds 3.75 cents pound, the Sugar Council will meet to consider the market situation and to take appropriate action. In the absence of an agreement by the Council on the action to be taken, the quotas in effect shall be increased by 2½ per cent. If, after action decided by the Council has been taken, or if after the quotas are increased by 2½ per cent., the prevailing price still continues above 3.75 cents, then the Council will meet again for further consideration. When the prevailing price falls below 3.75 cents the quotas shall be restored to the level at which they were before the above-mentioned increase.

"If the prevailing price is below 3.25 cents, the quotas shall be reduced by 2½ per cent. and the Council will meet within seven days to decide whether any further reduction shall be made. If they cannot agree, the percentage of the reduction shall be raised to 5 per cent. provided that reductions do not take the quotas below 90 per cent. of the basic export tonnages, unless the prevailing price is below 3.15 cents, in which case further reduction may be made."

The main object of the aforesaid arrangement is clear. It is to make the agreement more effective than it has been so far by taking appropriate steps for regulating the flow of the commodity into world trade. The new levels at which certain action has to be taken are something like warning bells. If the warning is not heeded, the automatic provisions built into the agreement will operate. With this safety device and with the inclusion of two more important producers, the new agreement promises to fare better than the one due to expire shortly.

In order that the market regulated by this agreement should be better equipped to face situations of scarcity, the immediate stocks to be held by the producing countries have been raised from 10 to 12½ per cent. of the annual production. The maximum allowed is 20 per cent.

A new article has been added to the agreement which provides for multilateral arrangements.

As already stated, India is a new member of the Sugar Agreement and has been allocated an export quota of 100,000 tons. The following are the basic export quotas for the first three years:

Country	Quota Tons	Country	Quota Tons
Belgium (including Belgium Congo) ..	55,000	India	100,000
Brazil	550,000	Indonesia	850,000
Colombia	5,000	Italy	20,000
Cuba	2,415,000	Mexico	75,000
Czechoslovakia ..	275,000	Netherlands ..	40,000
Denmark	75,000	Peru	490,000
Dominican Republic ..	655,000	Philippines ..	25,000
East Germany ..	150,000	Portugal (including overseas territories	20,000
Formosa	655,000	Poland	220,000
France	20,000	Turkey	10,000
Haiti	45,000	Soviet Union ..	200,000
Hungary	40,000		

India has become a signatory to the World Sugar Agreement not because it has surplus sugar to export, nor are its exports going to influence world prices. It has forced itself to become an exporter on a small scale, just to earn some foreign exchange. Even to export a few thousand tons it has had to sacrifice a sizable amount of internal resources. Further, it is doubtful whether India will be able to utilise even its full quota of 100,000 tons. For its average cost of production is much higher than world prices. Even the maximum price of 4 cents per lb. is not high enough to enable India to export sugar except at a loss. The only helpful factor is that the likelihood of a further depression in world prices is less than in the past, thanks to the coming in of Brazil and Peru, which, together with the leading exporter of sugar in the world, namely, Cuba, account for more than 50 per cent. of the total world export quota.

SUGAR PRODUCTION AND STOCKS

The total sugar production in India up to 30th September, 1958, according to the Indian Sugar Mills Association, was 1,972,000 tons, as against 2,024,000 tons during the corresponding period of last season.

The offtake of sugar from factories during the month of September 1958 was 190,000 tons (including despatches for exports), as against 143,000 tons (including despatches for exports) during the corresponding period last season. This brings the total despatches from factories upto 30th September 1958 to 1,895,000 tons, as against 1,942,000 tons (including despatches for exports) during the same period last season.

The total closing stock of sugar with factories on 30th September 1958, was 517,000 tons, as against 624,000 tons on the same date last season.

RELEASE OF SUGAR FOR SALE IN FREE MARKET

The Government of India has released a further quantity of 165,000 tons sugar for sale in the free market from 1957-58 season's production.

In case of factories in U.P., North Bihar and Punjab, the sales are to be effected at prices not higher than the ex-factory price fixed in the Government of India notification dated 30th July 1958.

COAL INDUSTRY IN THIRD PLAN

ASSESSMENT OF TECHNICAL PERSONNEL

MANPOWER has been rightly described as a nation's first resource; much more so is technical manpower. This does not belittle the importance of material resources. In fact, the Planning Commission, while drawing up the second Five-year Plan, had realised that effective utilisation of material and human resources was of vital significance in planning. It was also conscious of the fact that, in order to achieve the requisite tempo of development, it was essential that the task of matching human resources, on the one hand, with material resources, on the other, should be taken up with as much precision as may be possible. The need for assessing requirements and availabilities of technical personnel was keenly felt in 1953 when it was found that the employment situation had deteriorated and at the same time, non-availability of sufficient technical manpower came in the way of expanding employment opportunities. An effort in this direction was made earlier by the Scientific Manpower Committee, but its assessment had been made before the first Five-year Plan was drawn up. As the first Plan progressed, its provisions relating to the facilities for training in different fields were further enlarged, resulting in an improvement in the situation at the beginning of the second Plan.

During the second Five-year Plan period, steps were no doubt taken to meet shortages of manpower at supervisory levels, to organise apprenticeship schemes of training on a large scale in the public and private enterprises and to extend training facilities in business management in universities and other institutions. Despite these efforts, it is common knowledge that there is a shortage of technical manpower in the country, which along with the paucity of other material resources, is retarding the progress of the second Plan. So far as the mining industry is concerned, an acute shortage of mine surveyors and managers is being felt. Unless something is done urgently to train larger numbers, the shortage of technical personnel is bound to interfere with the implementation of mineral plans. But this needs a proper assessment of the country's requirements well ahead of the actual utilisation of such manpower.

The Production and Preparation Committee of the Coal Council of India has, therefore, done well in taking steps to assess, much in advance, the technical and other manpower requirements during the third Five-year Plan. The Committee's assessment is based on the tentative target of 100 million tons of coal production fixed for the next Plan. The additional production of 40 million tons during the third Plan period will come mostly from 120 new mines that are proposed to be opened. Of this, 14.5 million tons will come from open cast mines and 25.5 million tons from underground ones. In order to handle this additional production, the Committee estimates that no less than 3,000 additional mine managers will be required by the end of 1965-66.

According to the Committee, 150 drills will be required for the third Plan period. To man these drills about 132 geologists and 2,070 drilling engineers and other personnel will be necessary. The Committee believes that recruitment and training of these personnel will not present any serious problem. Further, it has estimated that 4,120 engineering personnel are required, besides 470 graduate engineers and 3,610 supervisors. These technical personnel will be needed for purposes of coal production alone.

There is another section of the industry, namely, coal washeries, which requires separate class of engineers, whose services will be required in an increasing measure. The coal preparation engineers, as they are called, who are to take charge of the washeries, can, it is stated, be selected from mechanical engineers or mining engineers and should be given a course of intensive training abroad, as facilities for such training in India are meagre. The Committee estimates that about 60 coal preparation engineers and about 300 supervisors will be needed by 1965-66. Besides, the Committee says, about 13,200 junior technical personnel, that is, surveyors, overmen, sirdars, shot-firers, etc., will be needed.

As regards the requirements of lower technical personnel, out of the 14 training centres recommended in 1955, arrange-

DISPUTE IN KERALA PLANTATIONS

CONCILIATORY TALKS ADJOURNED—BRITISH PLANTERS' IMPRESSIONS

THE talks between the representatives of the plantation industry in Kerala and those of the workers' unions, in regard to the dispute in the industry, held in Ernakulam on 31st October and 1st November, under the auspices of Mr. T. V. Thomas, Labour Minister of the State, proved inconclusive. It was decided that the discussions on the disputed issues, namely, increased bonus for 1957 over and above the 4 per cent. already paid by the managements and other demands of labour—a list of the main demands was given in our previous issue—should be resumed on 6th inst. Meanwhile, a three-member Committee, consisting of the Labour Minister and a representative each of the planters and workers, will make a sample scrutiny of the trading results of ten plantation companies, five suggested by employers and five suggested by employees. A factual statement will be prepared and a discussion will be initiated on 6th inst. This scrutiny is for the purpose of discussing the question of bonus. The other outstanding issues will also be taken up for discussion on the 6th inst. and, if possible, an overall statement covering a period of three years will be made. This suggestion made by the Labour Minister was unanimously accepted by both the planters and workers. The resumption of conciliatory talks on the 6th inst. would mean that the suspension period of the strike would be extended till the talks yield some result.

British Planters' Views

Despite the suspension of the strike, the situation in the High Range is said to be tense. Reports of scuffles between the erstwhile strikers and workers in other estates and sabotage continue to come in. If the present conciliatory talks are to succeed, the Government should take steps to maintain law and order in the estates and to ensure safety of life and property. It will be interesting to record, in this connection, the impressions of three Directors of the English and Scottish Joint Co-operative Wholesale Society Ltd., U.K., who have just made an on-the-spot study of the situation in Kerala plantations. They were on a month's visit to India, inspecting the tea estates and other properties in Assam, Madras and Kerala States, and have left for Ceylon, where they are expected to make a similar inspection of the properties in that island.

In the course of a Press note issued on the eve of their departure to Ceylon, the three Directors expressed the view that a much firmer hand was required to keep union activities legitimate and reasonable. "At present, union leaders," the Press note added: "are permitted to vilify the managements with impunity and to call for strike or go-slow action on little or no excuse and without giving the required notice. While labour officials will take up the vaguest complaint by unions and require the presence of managers at points distant from their estates, despite complete written explanations, the representations of the management are, in the main, either ignored or rejected by the local labour officers. Until such time as the officers of the Labour Department learn to be strictly impartial, there is bound to be indiscipline in the ranks of the workers."

No Justification for Strike

The Directors of the E. and S. Joint Co-operative Wholesale Society Ltd. felt that neither in Madras nor in Kerala was there any justification for the present strikes and threatened strikes. In Madras, both the 1957 bonus question and the *maistry* question were under discussion on a governmental level and in Kerala all the major demands were being examined by Government-constituted committees. The impression was that the majority of labourers had no grievances and had no desire to strike and that the present situation had been brought about by the tactics of the extremists, i.e., the Communists. They added that with the openly expressed approval of the Communist Minister for Labour, the Communist unions in Kerala were completely out of hand.

The touring British planters referred to a few other problems concerning the plantations, in general, and tea, in particular. Commenting on the tax burden on plantations, they observed:

"Taxation by the Central Board of Revenue is regarded as reasonable; made on logical assessments. Taxation by Madras State in the form of agricultural income-tax would also be reasonable if assessments were made by accepting those of the Central Board of Revenue. Made by local agricultural income-tax officers, however, unfair and unjust assessments are often made, which necessitate long-drawn-out appeals before they can be rectified. In Kerala, the pattern of agricultural income-tax assessment is obviously designed to inflict penal taxation on the large concerns and, if unchecked, will inevitably mean closure or fragmentation."

They, therefore, suggested that the Centre should either take over the levy of agriculture income-tax or insist on the States (*a*) accepting the Central assessment and (*b*) levying tax equitable on both large and small concerns.

Quality of Tea Must be Raised

The British planters are of the opinion that the solution to the difficulties of gardens producing poor quality teas does not lie in a restriction of their production put in an improvement of the quality of tea. In this connection, they observe:

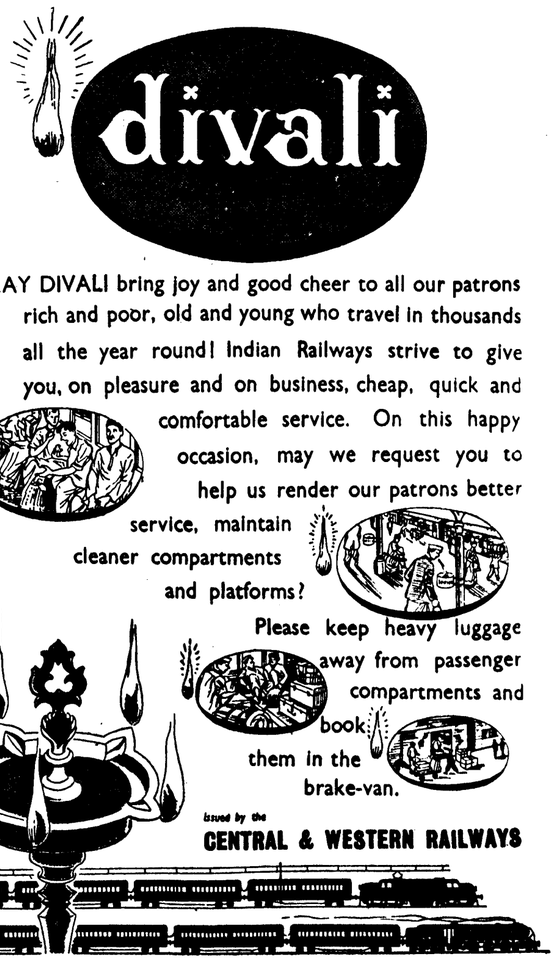
"While the difficulties of the gardens producing poor quality teas are appreciated, it is nevertheless a fact that, especially in South India, any teas conforming to a reasonable standard of quality will find a profitable sale and it is our opinion that the solution to the present situation is, in the first place, an improvement in quality, which in itself will bring about a reduction in production and, in the second place, a further relaxation of taxation.

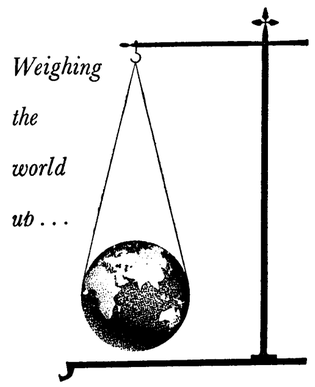
"For India and Ceylon, and possibly Pakistan, to conclude an agreement to restrict production in the hope of improving world markets is an open invitation to the new producing countries and Indonesia, China and Japan to step up their production of export teas."

The general outlook for the plantation industry, according to the touring British planters, is not bleak. In fact, they see no reason why the industry should not only survive but prosper, provided the Government of India and the State Governments take a realistic view as to what taxation the industry can stand, take a firm line with unruly elements in the trade unions and ensure that both unions and management get a fair deal at the hands of the Labour Department.

The Planters' view that the present labour trouble in Kerala plantations had the backing of the State Government is not without foundation. In fact, the Government spokesmen have made no secret of it. Speaking at the 38th anniversary of the All-India Trade Union Congress held in Palghat on 31st October, Mr. E. M. S. Namboodripad, Chief Minister of Kerala, said that he and his Government fully endorsed the view of the State's Labour Minister, Mr. Thomas, that the strike in the High Range was completely justified and that the Government primarily stood for all the just rights of workers and was prepared to go the whole hog to protect the interests of not only the workers in the plantations but of all the working classes and the agriculturists as well. He added: "It is wrong to say that the Government of Kerala is supporting a wrong case. The agitation of plantation labourers at Munnar and other estates is for getting their legitimate grievances redressed, and it is the duty of managements to concede these rights of the labourers instead of forcing them to strike work." Mr. Namboodripad was sure that the management had erred in refusing to concede the legitimate demands of the workers. The Government of Kerala had recognised the demand of workers as "reasonable and right."

It is a pity that the Government, instead of holding the scales even as between employees and workers, as any Government should do, is taking a partisan interest on the side of labour. The Kerala Chief Minister's stand, quoted above, is certainly not helpful to bring about a settlement between the workers and the management, particularly when his Government is represented in the conciliatory talks. With Government backing to the workers, it will not be surprising if these talks ultimately end in failure and the strike is resumed.





....even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

Foreign Exchange

— a top most priority

Never before has India stood in such dire need of foreign exchange as today. The country's development projects on which our future prosperity depends, call for straining every resource to earn this. Indian White Sugar Industry has risen to the occasion by increasing production, thus making white sugar available for export. But the present poor yield of cane per acre and its low sugar content make the cost of sugar production high. Yet in the national interest, Indian White Sugar must be sold abroad even at a loss—a burden to be shared by the Industry and people alike.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

POWER DEVELOPMENT AND BOMBAY STATE ELECTRICITY BOARD

NEED FOR A REALISTIC POLICY

THE Administration Report of the Bombay State Electricity Board for the year 1956-57 records a deficit of Rs. 12.5 lakhs for the year (after taking into account interest and depreciation charges), as against a deficit in the budget estimates of Rs. 24 lakhs. This improvement in the actual deficit has been due "to the early completion of the revenue-yielding major grid schemes and extensions thereto" and to "the renovation or closing down of some of the old and uneconomical diesel power stations and connecting them to the grid system." This somewhat satisfactory picture has since been vitiated by the comparatively more uneconomic electricity schemes in the Vidarbha, Saurashtra, Kutch and Marathawada forming part of the new Bombay State Electricity Board constituted subsequent to the reorganised bilingual Bombay State coming into being.

Because of its delayed presentation, the report embodies estimated figures of capital structure and revenue receipts and expenditure covering the entire State. The revenue estimates for the year 1957-58 (including Chola Power House), covering the entire State, has been reckoned at *minus* Rs. 48,64,939 (after taking into account all revenue expenditure—including contingencies—and capital charges covering interest and depreciation). This deficit is expected to be brought down to *minus* Rs. 40.78 lakhs during 1958-59 (excluding Chola Power House sold to the Central Railway).

The weakest links in the chain are the Vidarbha and Saurashtra Systems, as, unlike other areas where the deficits would be smaller in 1958-59, as compared with the previous year, the revenue estimates reflect an accentuation of deficits in Vidarbha and Saurashtra from *minus* Rs. 20.65 lakhs and *minus* Rs. 11.46 lakhs to *minus* Rs. 29.09 lakhs and *minus* Rs. 12.55 lakhs, respectively.

Board's Difficulties Increase

The need to proceed with rural electrification has added to the Board's difficulties, and, consequently, "substantial annual deficits would be a recurring feature" of the Board's budget. Annual subsidy from the State Government is, therefore, unavoidable; otherwise the Board would be obliged to meet the recurring deficits from loan funds advanced by the State Government which would have the effect of curtailing "not only the rural electrification schemes but also other schemes of the Board."

As against a request for a loan of Rs. 900 lakhs to cover development for 1958-59, the anticipated sanction from Government for the year was Rs. 575 lakhs. In addition, a sum of Rs. 24 lakhs was expected to be available from the Agricultural Department for giving service connections for agricultural pumps.

The total capital structure of the enlarged Bombay State Electricity Board as at 1st April 1957 was of the order of Rs. 3,112 lakhs, the breakdown area-wise being:

	(Rs. in lakhs)
Old Bombay area (excluding Karnatak)	1,391
Vidarbha area	1,205
Saurashtra area	458
Kutch area	35
Marathawada area	23
Total ..	3,112

With a plant capacity of 173,754 kw., and a maximum demand of 154,612 kw., the Board sold during the year 59,19,13,014 kw.h.

The budget estimates for 1958-59 give a summarised position of the capital expenditure during the second Five-year Plan commencing from 1st April 1956, in the following terms:

	(Rs. in lakhs)
Bombay area	1,130 65
Vidarbha area	819 91
Kutch area	174 10
Marathawada area	37 72
Saurashtra area	475 00
Total ..	2,637 38

With rural electrification being generally uneconomic, the Board has endeavoured to introduce a measure of realism in respect of schemes not sanctioned for inclusion in the second Five-year Plan. This has taken the form of the Board formulating a somewhat practical scheme. The scheme is to apply in respect of small towns and villages which are "within a distance of 10 miles from the Board's nearest supply point." Its highlights are:

(a) In respect of villages within a distance of 1 mile of the existing high tension distribution line, a guarantee is forthcoming for a minimum of at least three consumers inclusive of street light per L.T. and H.T. pole totally erected for the village, and in addition an agricultural and/or industrial load of at least 15 h.p. is guaranteed. Further, the cost of electrification for all purposes on transmission and distribution lines and service connections to be borne by the Board does not exceed Rs. 25,000 per village.

(b) In respect of villages and towns situated at a distance exceeding one mile, but not exceeding five miles, the requisitionists agree to bear initially the full cost of the transmission line and transformer substation, etc., as in the form of an interest-free loan, refundable in equal instalments after five years' deposit period, that the cost is not more than Rs. 50,000 to Rs. 1 lakh (depending upon the size of the town), that the estimated agricultural and industrial load is not less than three times the number of L.T. distribution poles in the town.

(c) As far as towns and villages at distances exceeding 10 miles, an interest-free deposit is given to the Board equal to the total cost of the transmission line from the Board's nearest point of H.T. supply, the amount being repayable by the Board without interest in five annual instalments after the expiry of the five years' deposit period, and that the total cost of the transformer stations and lines in the town does not exceed Rs. 1 lakh.

The above, in brief, are the salient features of the working of the Bombay State Electricity Board and it may be appropriate here to touch upon some thoughts which the statistics outlined above engender.

The losses have been explained by the Board in its report as being due to the fact that "with all remunerative urban areas in the State already covered by the various licences granted by Government, only the unremunerative rural areas are left to the Board for development." While such a sweeping justification is not without some basis, it would be a policy of despair if concrete practical remedies are not formulated so as to bring down the deficits progressively and make the financial working of the Electricity Board as a whole viable as quickly as possible. Otherwise, the Board will be only giving away capital to consumers.

General Principles

It would be appropriate to make a reference here to the general principles governing the State Electricity Board's finances laid down in the Electricity Law. Section 59 of the Electricity (Supply) Act stipulates that the Board "shall not, as far as practicable .... carry on its operations under this Act at a loss. . . ." The section further casts an obligation on the Board to "adjust its charges from time to time" having regard to the basic stipulation mentioned earlier. The law also provides, under section 68, for a depreciation reserve to be set up by the Electricity Board and this is to conform to the scale of levies prescribed in the Seventh Schedule to the Electricity (Supply) Act—a common feature applicable to the entire electric supply industry.

That supplies to rural areas are unremunerative, at least in the initial years, is an accepted principle by all concerned, but, nevertheless, it is only appropriate that the State Electricity Board, while giving due regard to the objective of the legislation, which is to take measures conducive to the electrical development of the country, should give adequate weight to the general principles governing its finances, namely, not to run, as far as possible, at a loss. Maybe, the two approaches are contradictory for the present.

The generally accepted position here is that a public utility, whether operated by a licensed undertaking or by a statutory corporation, should not stray on to dangerous ground involving political or sociological considerations in determining its rate-making policy.

One practical consideration here is that the existing supply systems could be encouraged to extend into the surrounding rural areas, if necessary by offering some financial assistance. After all, whichever authority proceeds with electrification, the return on capital is now strictly controlled by law. The test here should be that expansion should be undertaken by the authority who is best situated and who could do the work cheapest and not be influenced by doctrinaire considerations.

Dealing with rates for electricity, there is always loose talk about 'cheap' power. Although electricity prices have increased in some power systems, the increase is appreciably smaller than that of the general cost of living index, so that, in comparison with the immediate post-war situation, electricity is still relatively very cheap. Another point to be made here is that, with increased cost of new plant and equipment, charges for electricity cannot but increase, in that efficiencies incidental to more modern plant and greater operational economy are not sufficient to bridge the gap, at least in the context of the sizes and pressures of plant the country's economy could at this stage justify.

Repercussions

The economic and social repercussions of increasing electricity rates, it would appear, have been exaggerated and, in this connection, it may be relevant to refer to a recent study made in Australia. On the basis of a 25 per cent. increase in electricity price, the impact on various consumers has been reckoned as follows:

	Per cent.
Domestic consumption	0 3
Agriculture	0 3
Industry (average)	0 6
Iron and steel	1.0
Paper-making industry	1.0
Fertiliser industry (nitrates)	2.0
Electro-chemical industry	4.4

Surely this increase is bearable, if, in the process, an important basic industry like electric supply is placed on a sound footing. The continuous losses sustained by the Electricity Board will have unwelcome economic and other effects, and it is, therefore, only proper that the State should come to the Board's assistance by subsidies instead of compelling the Board to continue supplying power at a price which no longer covers the cost. Such a solution would bear a healthy resemblance to the economic situation without endangering the profitability of an important sector of the electric supply industry.

Summing up, the important point to be borne in relation to the general principles governing the Board's finance is that the task of extending electric supply service to less unremunerative areas is Herculean. While this task should not be lost sight of, economic realities, circumscribed as they are by availability of resources, postulate that plans for power supply service in rural areas should match real demand and should be tailored to induce greater productivity and not attempt at what is spectacular. Unless the State Electricity Board takes a realistic view of the issues involved, there is little prospect of the Board attaining a measure of viability for a considerable time to come.

ROLE OF SIMON-CARVES IN INDIAN STEEL INDUSTRY

The second Five-year Plan envisages a three-fold increase in the production of steel in India. This is a very ambitious plan, indeed, involving an expenditure of about Rs. 600 crores. But judging from the progress made so far, it looks as though the aimed target of six million tons steel will be reached by 1961 or 1962.

The history of Simon-Carves' activities in India is very intimately connected with the Indian steel industry and the firm is proud of having played a not insignificant role in the development of this industry. 1958 is a particularly significant year, since the first coke oven battery was built by Simon-Carves at Giridih, for the East Indian Railway, exactly 50 years ago. Since then, the firm has been engaged in building coke oven batteries for various steelworks and collieries. This half a century of construction work in India by the firm is indicative of the trust placed in Simon-Carves by the Indian industrialists.

At present, practically all the steel in India is made with coke from Simon-Carves ovens. With the completion of work in hand at Burnpur, Jamshedpur and Durgapur, the number of Simon-Carves coke ovens in India will be well over 1,000, with a total carbonising capacity of 6 million tons of coal per year. With the exception of one small battery at Jamshedpur, the firm has been responsible for the design and erection of all the coke oven batteries at the two exising steelworks at Burnpur and Jamshedpur as well as for the new steelworks at Durgapur. It is estimated that, even after the completion of the three new steelworks in the public sector now under construction, about 70 per cent. of the entire Indian steel will still be made from coke produced in Simon-Carves ovens. By the end of the second Five-year Plan, India is expected to produce six million tons of steel per year, out of which about four million tons will use coke from Simon-Carves ovens.

In addition to coke ovens, Simon-Carves have built in India many other plants required for a modern steelworks, for example, coal handling plants, coal washery, soaking pits, calcining plant, steel melting shop and by-product plant. In view of the not unlimited reserves of good coal, there is bound to be greater emphasis on coal washeries in the future.

Among the other specialities of this firm, mention may be made of sulphuric acid and other chemical plants, power plant including nuclear power plant as well as effluent treatment plants.

As a result of 50 years' experience with the Indian conditions, the firm has steadily increased the proportion of materials bought from Indian firms and, at present, only specialised equipment need be imported. In some of the recent coke oven installations in India, the cost of the imported equipment is estimated to be only about 40 per cent. of the entire equipment cost. The use of indigenous materials has involved close co-operation with various Indian manufacturers to ensure that the resultant parts are suitable for the arduous duties inevitable in coke oven operation. In particular, in the field of refractories, the Indian brickmakers are now able to make silica and fireclay shapes to stringent specification limits and these are equivalent in quality to any in the world. In addition to these most of the fabricated steel and castings are also obtained locally.

It has been the practice of Simon-Carves to build their coke oven plants in India with Indian labour and supervision and to provide only a minimum force of experts for supervision from the United Kingdom. These experts are in general control of the overall direction of that work on the site which is in their own field. All the work is done under their direct control and the majority is supervised by Indian engineers and foremen who have considerable experience of building Simon-Carves coke oven plants in India and have been connected with them for a number of years. Simon-Carves have at their disposal, therefore, an efficient and mobile nucleus of skilled men in India, all available at short notice.

As indicated earlier, with the exception of one small battery at Jamshedpur, the firm has been responsible for the design and erection of all the coke oven batteries at the two existing steelworks at Burnpur and Jamshedpur as well as for the new steelworks at Durgapur. Thus, out of the five large steelworks operating at the end of the present Plan period, Simon-Carves would have built almost all the coke ovens for three of them.

The last battery forming part of the Indian Iron and Steel Company Limited's 1953 extension was lit up, one month ahead of schedule, on 5th August, and started pushing coke on 8th October. About a month later, the last phase of the extensions at the Tata Iron and Steel Company Ltd., Jamshedpur, was completed, when the rebuilt battery No. 3 was lit up.

At the Durgapur steelworks, the firm is responsible for the following sections of the plant, in addition to the coke ovens and coke handling plant:

Coal washery, blending and handling plant, by-product plant, including sulphuric acid plant, and benzol rectification and tar distillation plants, power station including boilers, turbo-blowers and turbo-alternators, and inter-connecting services throughout the steelworks for gas, steam and tar.

When the plant is in full production, about 5,200 tons of coal will be carbonised per day and the resulting 75 million cubic feet of gas per day is expected to yield the following by-products (per day):

Ammonium sulphate 57 tons, benzene 6,240 gallons, toluene 885 gallons, xylene 180 gallons, solvent naptha 145 gallons and crude tar 155 tons.

The sulphuric acid will be produced in a contact type plant with a capacity of 60 tons per day. The power plant will consist of three 5,000 kw. turbo-alternators with provision for the future installation of one 20,000 kw. unit.

GLOBAL HARNESSING OF SUN'S ENERGY

The first world survey of solar radiation—the harnessing of the sun's rays to heat or cool homes, cook food, operate factories, generate electricity, irrigate arid land and drain swamps—will be undertaken in two years. The survey will be made by two U.N. agencies—the U.N. Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.) and the World Meteorological Organisation, according to the current issue of the U.N.E.S.C.O. *Courier* discloses.

The most suitable sites for plants to capture the energy which the sun spills on the earth's surface, estimated to be equivalent to 4,690,000 horsepower per square mile, will be studied.

Though there is no cheap and simple instrument for measuring solar energy, the U.N.E.S.C.O. will provide funds to develop such an instrument as well as for testing other solar energy equipment.

The U.N.E.S.C.O. magazine reviews solar energy projects in Israel, the Soviet Union, the French Pyrenees, the Sahara Desert, the United States and other areas.

Westinghouse Electric scientists in the U.S. claim that uranium has yielded a new "family" of compounds which are unique in science. The new compounds belong to a group of substances called superconductors. They are capable of permitting an electric current, once started in them, to flow in undiminished and continued strength. They are already being used in midget computers of the type useful for space rockets. The superconductors are known as inter-metallic compounds and are alloys of uranium and another metal.

I'm one of the 5,000 men working to keep 80,000 employed

Here a man stacking tinplate in the godown. . . there a mechanic making dies on a precision machine-tool . . . in the printing room a skilled operator working on a high-speed press . . . in the laboratory a chemist experimenting on a container lacquer . . . *plus* artists, salesmen, clerks . . .

Having commenced operations in 1933 with only a handful of men, Metal Box have increased their staff to 5,000 in the short span of 25 years. And today, Metal Box supply a wide range of containers and closures to over 1,000 packers and bottlers *who together employ more than 80,000 workers!*

As in any progressive company, the strength of Metal Box lies largely in their attitude towards their employees many of whom have been with them for over 20 years. Nearly forty promising young men have received training abroad in order to contribute better to the Company's activities.

As India's economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

THE INDIAN IRON AND STEEL COMPANY LTD.

SIR BIREN MOOKERJEE'S ANALYSIS OF FACTORS LEADING TO LOWER OUTPUT

"OUTLOOK FOR THE INDUSTRY UNCERTAIN"

THE Annual General Meeting of the Indian Iron and Steel Company, Limited, will be held at 12, Mission Row, Calcutta, at 3 p.m. on Friday, 28th November 1958. The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' report and audited accounts for the year ended 31st March 1958:—

"It has been the custom in the past for the Chairman in a speech at the annual general meeting to supplement the Report of the Board of Directors with additional information regarding the year under review and to deal at the same time with matters affecting the general interests of the Company. It is, however, thought that it would be more advantageous to shareholders and assist in a better understanding of the accounts and the position of their Company that this further information should be made available to them at an earlier date. The innovation is, accordingly, being introduced this year by issuing this statement which will take the place of my previously customary speech and will enable shareholders to attend the annual general meeting with a fuller knowledge of matters affecting their interests. If this meets with general approval, it is intended to adopt this procedure in future years.

Production

"There was a reduction in the production of saleable steel of no less than 31,679 tons in 1957-58, compared to that in 1956-57, as has been stated in the Directors' report. I shall now explain some of the more important causes which led to that result. There was an unavoidable diminution in the use of purchased steel scrap during the year on account of difficulty of procurement which largely accounts for the fall in the output of ingots relative to the increased availability of hot metal. The output ratio of saleable steel has registered a decrease due to the fact that in 1957-58 more steel was produced in fully finished form, commanding a higher realisation price but involving naturally a lower overall yield per ton of ingot.

"As foreshadowed last year, the disorganisation of production by reason of the extension works gradually increased throughout the year and has since reached the point where the maximum effect on current production is being felt. It has to be realised that the new constructional works have involved diversions of normal supply routes for raw materials, the reorganisation of the movement of semi-processed and other materials within the works, interference with the distribution of gas, water and power and a general congestion of the entire works area. This has been inevitable and, looking back, I may say that it reflects the greatest credit on all concerned that, for so long a period of the construction, the effect on production has been kept at such a remarkably low level.

Lack of Discipline

"Another factor of a graver character, however, operated during the year under review to affect adversely production. This was the growing lack of discipline on the part of the workers generally and the marked deterioration in the effort put forth by them. We are, together with the other main producer, being made to suffer by reason of Communist plans to foster discord in an endeavour to supplant the recognised labour unions. What this effort to gain control of a key industry can lead to has been demonstrated in a most unfortunate form by the chaotic conditions that were brought about at the Jamshedpur Works of the Tata Iron and Steel Company, Ltd., in May last. In our own case, there were seven sporadic strikes and a two-day lightning strike in the melting shop earlier in the year. It is most disappointing that the workers who had previously established such a good record of production in this section in the face of many difficulties, should have allowed themselves to be led astray by agitation. In their case unrest centres primarily around the question of production bonus which they claim should be based on total shop output irrespective of additions to the capacity of the plant, a proposition which is clearly untenable.

"The result of these factors will be apparent from the production figures set out in the Directors' report from which it will be seen that, although the new open hearth furnace 'E' contributed an output of more than 20,000 tons, the total production of ingots in 1957-58 fell short by approximately 25,000 tons compared to the previous year. This is a regrettable state of affairs and I can only express the hope that the workers will quickly come to realise where their true interests lie and to appreciate that to allow themselves to be swayed by political agitators can result only in detriment to their own welfare and the complete disruption of the country's planned progress.

Strike

"In February 1958, there was a strike of workers employed by the contractors engaged on the construction of the 1953 and 1955 extensions which lasted from 24th February to 21st March and spread to the Company's own contract labour both at Burnpur and Kulti, the ostensible issue being the question of permanency of employment. This had a further detrimental effect on plant operation by reason of increased disorganisation and the general lowering of morale throughout the works. The consequences of this strike will delay the completion date of the expansion programme and it is estimated will involve a loss in foreign exchange to Government to the extent of some Rs. 5 crores.

"With the virtual completion of the first stage of the 1953 extensions, the melting shop capacity is now approximately 62,500 tons of ingots per month, against which production is only averaging some 44,000 tons, as a result of the unsatisfactory and continuing conditions I have explained above. In terms of the imported cost of the equivalent saleable steel this means a loss of foreign exchange to the country of approximately Rs. 95 lakhs for every month that these conditions continue.

Employees' Welfare and Emoluments

"In the Chairman's speech of last year a full account was given of the Company's policy in respect of its employees' emoluments in cash and the many free amenities at Burnpur, Kulti and the Ore Mines. At the same time, information was given to you as regards minimum and maximum daily and monthly earnings of several classes of your Burnpur employees. Since then a general increase has been made in the rate of dearness allowance to all workers and a considerable improvement effected in the scale of incentive bonus payable to departments of the iron section to bring this more in line with that applicable to the steel section. In the case of the steel section, it is disappointing to record that, despite the high scale of incentive bonus, production was such that the bonus earned by the workers showed appreciable decline in all departments with the exception of the sheet mills, the creditable performance of which beat all previous records and enabled the workers to earn a higher production bonus than ever before.

Housing

"Up to the end of March 1958 approximately a crore of rupees had been spent on the provision of additional housing accommodation. The Company's programme for 1958-59 is set at an expenditure of some Rs. 88 lakhs. It is the policy of the Company to continue the extension of housing facilities subject to the availability of finance, building materials and labour.

"In lieu of quarters the Company continues normally to pay a monthly house allowance.

Medical Facilities

"Your Board attach great importance to the provision of amenities in kind to the Company's workers and perhaps that in which we take some pride is the provision of free medical services not only for the workers themselves but also for their families and dependents. Although very adequate medical facilities are maintained at Kulti, the ore mines and the collieries, under constant supervision from headquarters, the centralised medical services are located at Burnpur where we have now a hospital which will compare favourably with any in the country. Under the supervision of the Chief Medical Officer, Major General P. P. Chowdhry, the hospital is manned by a staff of fully qualified medical officers and with the recent enlargement is now equipped with 260 beds. The growth of the medical services will be apparent from the following statement of the number of patients treated:

	1956	1957
Indoor	35,985	56,691
Outdoor	152,389	214,896

"While the work of the medical department is, of course, intended primarily for the benefit of employees and their families, the expansion of the Company's activities has inevitably brought with it responsibilities extending considerably further. Satellite townships have arisen in the works neighbourhood and for the protection of the Company's workers and their families it has been found necessary to undertake the task of epidemic control in these areas involving widespread inoculation and vaccination against cholera and small-pox and the control of mosquito and other disease-carrying pests.

Kulti

"Under the 1955 extensions programme, it was decided that, with the large amount of pig iron available from the two additional blast furnaces at Burnpur and from the blast furnaces of the Government plants, the two old, obsolete and uneconomic blast furnaces at Kulti with their coke ovens and ancillary plant would be scrapped and the requirements of the Kulti foundries met from Burnpur. With the bringing into operation of No. 3 blast furnace at Burnpur on 11th October 1958, one of the Kulti furnaces was accordingly closed down and this will be followed by the closing down of the second towards the end of 1958 to synchronise, as nearly as possible, with the bringing into operation of the blast furnaces at two of the Government plants. Workers affected, who are not absorbed at Burnpur, will receive full retrenchment compensation and the services of these men have been offered for the manning of the Government plants, which have, therefore, the opportunity of commencing operations with a solid nucleus of trained and experienced workers. It is disappointing under these circumstances to have to record that the closure of the first Kulti blast furnace was seized upon by Communist elements to incite general unrest leading even to attempted interference with the inauguration ceremony of the new No. 3 blast furnace at Burnpur, performed by the wife of an American official closely associated with the World Bank. Our thanks are due to the authorities, both of Delhi and West Bengal, for the prompt measures taken to ensure that these plans were thwarted and the good name of the country preserved with an institution that has done so much for the development of India.

Future Prospects

"It will take a bolder person than a mere business man, who is not a politician, to venture on any forecast of the future of this key industry or of the trend of economic, financial or industrial development of the country as a whole. This much, however, I think, can be reasonably said, that the prospect is uncertain in the absence of the correction of adverse circumstances which persist in many directions, of which I would mention a few. The most hazardous and a grave hindrance to industrial development is the almost daily occurrence, frequently accompanied by violence, of strikes in industry, transport, administrative and other services. It cannot be denied that some of the more recent strikes have been organised by the Communist Party for political purposes and for supplanting existing recognised unions. The material for these and other strikes is greatly fostered by the lack of effective measures to reduce the cost of living, to produce more food and to augment the supply of cheap cloth, housing and other indispensable necessaries of life.

"The present level of direct taxation, both corporate and individual, has, undoubtedly, destroyed incentive to a great extent and reduced the desire to earn more and to save for industrial investment to a negligible factor. The heavy burden of indirect taxation, both Central and State, is borne almost entirely by the common man who falls an easy victim to the promises and propaganda of careerist labour leaders.

"Whatever the foreign aid by way of loans, gifts or technical assistance may be, it will not help India to achieve the overemphasised and unduly speedy development of its heavy industries, whether in the public or in the private sector, unless immediate and adequate remedial measures are set in train to counteract the general sense of frustration now prevalent in all classes of the people of this country.

"The worker must feel that he and those dependent upon him have security and a reasonable condition of life. Increase in money wages is no remedy and merely tends to the creation of more inflation. The grant of increased wages, irrespective of productivity, to some industries or services which appears to have become a corollary to a strike can only encourage disruption in other industries and the vicious circle, instead of breaking, will continue to grow larger, paralysing, in turn, every national activity.

Uniform Formula for Wages

"In the case of the steel industry, there will be a very large increase in the number of workers when the Government plants in the public sector come into operation, and it would seem essential that, if future labour unrest is to be eliminated, there must be a uniform formula for the determination of wages for the industry as a whole. As a legacy from the past, existing producers are already saddled with a most complicated wage structure which has been activated by the many divergent Tribunal and Adjudication Awards in the face of constant demands for greater emoluments, in addition to new demands of every description. This threatens to disrupt entirely the wage and cost structure of the industry. With the advent of the Government plants, the position within the industry would, in the absence of a uniform formula for a wage structure, possess the makings of a labour agitator's paradise and inevitably lead to most serious adverse consequences on production. If the tremendous capital expenditure incurred on the expansion of the country's heavy industries does not produce the relevant increase in production, the consequences may well be disastrous. Apart from internal considerations, a fact which must not be lost sight of is that a large part of the expenditure involved will be represented by foreign liabilities which must be repaid. Repayment of these liabilities, together with the building up of the sadly depleted foreign exchange balances, can only be achieved by exports. This being so, it is absolutely essential, as a first step, that a statutory Wage Fixing Tribunal be set up without delay to determine a wage structure on the basis of (a) an evaluated basic wage in relation to productivity and world standards for each particular class of work, which would consolidate most of the multifarious allowances now being given by the private sector; (b) a zonal dearness allowance; (c) an incentive bonus; and (d) an annual bonus based on the financial results achieved.

Accounts

"Whatever may be one's views on the equity of the new levies on companies, wealth tax now finds its place in the profit and loss account for the first time as an added burden on profits, in addition to the heavy rates of current corporate taxation. The Act relating to this new imposition makes a provision for two years necessary in the accounts under review, by reason of the fact that it was passed in September 1957 with retrospective effect.

"Regarding the amounts of Rs. 16,50,000 and Rs. 1,04,83,856 set aside from profits to development reserve (tax rebate) and development rebate reserve (statutory), respectively, I would explain that it has always been our practice voluntarily to place to reserve the tax saving arising by reason of the allowance of development rebate in respect of new plant installed and the two amounts in total represent the tax saving on this account in respect of the year under review. The Finance Act, 1958 has, however, introduced a provision that in respect of plant installed after the 31st December 1957, a prerequisite to the grant of development rebate shall be that an amount equal to 75 per cent. of such rebate shall be charged in the profit and loss account and set aside to reserve. The transfer of Rs. 1,04,83,856 to the statutory reserve has, accordingly, been made in terms of this requirement and after allowance for this sum the balance of the tax saving for the year amounting to Rs. 16,50,000 has been set aside to development reserve (tax rebate). In future, it will be necessary to set aside to reserve 75 per cent. of the entire development rebate claimable in respect of plant installations for any year in order to qualify for the tax remission. At current rates of taxation the tax remission amounts to 51½ per cent. of the development rebate and it is, accordingly, difficult to understand why the compulsory reserve transfer should have been enacted at 75 per cent. although this represents a considerable improvement on the rate of 100 per cent. that was proposed in the original Finance Bill.

Development Reserves

"In the past, we have maintained a number of separate reserve accounts relating to various aspects of the general development of the Company's undertaking. It is considered unnecessary to continue to maintain this segregation and, as you will see from Schedule B to the balance-sheet, a number of accounts have now been amalgamated under the head of general development reserve. To this reserve has also been transferred the balance standing on the Kulti blast furnaces plant rehabilitation reserve, in view of the decision taken under the 1955 extension programme to close down these two very old and uneconomical furnaces with their ancillary plant before the end of the current year and to supply pig iron to Kulti from Burnpur.

"Consequent upon the redemption of the 4¾ per cent. first mortgage sterling debentures, the balance of Rs. 66,03,147 standing to the credit of the debenture sinking fund on the 31st March 1957 has now been transferred to general reserve.

"In the Chairman's speech last year there was fully explained the reason for the maintenance of the taxation contingencies reserve and the principles governing the write back to profits from this account. As a result of the special depreciation allowable for the year under review, a sum of Rs. 41,00,000 has been credited to the reserve, while the amount to be brought back to profits in respect of the calculated adjustment upto the 31st March 1958 is Rs. 14,00,000.

Capital Structure

"The balance-sheet now presented shows the effect of the changes mentioned in the 1957 report of your Directors. Following upon the release by the trustees of the mortgaged properties, the former charge securing the 4¾ per cent. first mortgage sterling debentures disappears from the schedule of secured loans, the small balance of debentures not yet surrendered for repayment being now included in Schedule D under the head 'Debentures of past issues redeemed but not paid.' As a result of the rights issue of ordinary shares last year, the subscribed capital of the Company is increased to Rs. 13,06,69,560 by inclusion of the par value Rs. 5,18,37,080 of the rights shares, while the share premium account is raised to Rs. 2,42,88,327 by inclusion of the premium of Rs. 3.50 per share at which these shares were issued. Requests have been received from a number of shareholders that the share premium account should be utilised for an issue of bonus shares. Your Directors are in full agreement and I am pleased to confirm that, as already publicly notified, the Board have authorised application to be made to Government for their consent to the capitalisation of the major portion of the share premium account to cover an issue of bonus shares in the proportion of one bonus share for every five ordinary shares held at a date to be determined in due course by the Board of Directors, with the intention that the new shares shall rank in all respects *pari passu* with the existing ordinary shares, save and except that they will not participate in any distribution of dividend in respect of any period ending on or before 31st March 1959.

Policy in Respect of Bonus Issue

"This bonus issue, however, touches only the fringe of the problem of the Company's capital structure. It is desirable that a reasonable relationship should be maintained between share capital and reserves and that, in turn, share capital should reasonably reflect the value of the net assets of the undertaking. Our reserves, which are already substantial in relation to capital, will increase from year to year as profits are set aside to provide for repayment of our heavy indebtedness and it would normally be the policy of your Directors that a part of these reserves should be capitalised from time to time by means of bonus issues. The present penal rate of tax on bonus shares, however, effectively precludes such a course being taken and the bonus issue for which application has now been authorised, being made out of the share premium account and not accordingly attracting the tax, represents the maximum extent to which the problem can, under the existing taxation structure of the country, be resolved.

"Since the close of the year under review, the security for the second loan of $20,000,000 from the World Bank has been legally constituted. The security takes the form of a first mortgage of the Company's undertaking as security for bonds issued or deemed to be issued against withdrawals on loan account and has been merged with the security for the first loan of $31,500,000, so as to constitute security for a single consolidated series of bonds to the extent of the equivalent of $51,500,000 issuable against withdrawals on both the loan accounts. In this connection, I would express our appreciation of the action of the Government of India and the State Bank of India as holders of the equal ranking second charges in having agreed to the introduction of the further charge of $20,000,000 ranking in priority to their own security.

Share Holdings

"As a matter of interest, I have had an analysis made of the Company's share registers at the 31st March 1958. The position disclosed is illuminating as showing the wideness of distribution of the share capital and is summarised in the following table:—

Ordinary Shares			Preference Shares		
Number of shares held	Number of holders	Percentage	Number of shares held	Number of holders	Percentage
1 to 100 ..	5,489	41.58	1 to 10 ..	2,573	49.25
101 to 500 ..	5,693	43.12	11 to 50 ..	1,981	37.91
501 to 1,000 ..	1,110	8.41	51 to 100 ..	401	7.67
Over 1,000 ..	909	6.89	Over 100 ..	270	5.17
Total ..	13,201	100.00	Total ..	5,225	100.00

Acknowledgments

"In conclusion, I should like to express on behalf of your Board our appreciation of the services rendered by the General Manager, Mr. J. McCracken, his senior executives and other supervisory staff throughout the year under the very difficult and frustrating circumstances that have existed."

ROLE OF MANAGEMENT REVIEWED

By Vicente de Paula Ribeiro

PRESIDENT, D. L. R. PLASTICOS DO BRASIL, S.A.

[In the following address, which was delivered at the I.F.C. Panel Discussion, to which our readers' attention has been drawn by means of three articles published in our issues dated 18th October, 25th October and 1st November, the speaker, Mr. Vicente de Paula Ribeiro, President, D. L. R. Plasticos do Brasil, discusses the ingredients of free enterprise and the role of management therein. He emphasises that "when human dignity is served and honoured everywhere, then there will be freedom and peace in the world." He also urges the need for co-operation between capital and labour and holds that management is the key to successful private enterprise.—ED.]

IN our daily business life, we come across problems that do vary in form. We, in Brazil, at this stage of development, are concerned with difficulties different from those of business men in England, Germany, the United States and India. However, there is one challenge beneath our various problems which is the same for all of us. It is the decisive battle for human justice and freedom that is being waged in all parts of the world. And the front equally important with all others—which particularly calls for our experience, skill and courage—is the economic front. Our greatest power weapon on this economic front is private enterprise. I have no doubts, moreover, that its driving force can develop the tremendous unutilised human and natural resources throughout the world, suitably improving living conditions for mankind in the less or underdeveloped areas, to a standard compatible with our basic beliefs of human dignity. When human dignity is served and honoured everywhere, then there will be freedom and peace in the world.

The dynamic force of private enterprise is strengthened considerably by initiatives such as the International Finance Corporation, with the purpose of furthering economic development in less developed member-countries by investing—without government guarantee—in association with private business. Thus it accelerates its spread and process of growth by acting as a catalyst. Let us analyse here how private enterprise should work at its best.

Management

Under the modern industrial system, business seems no longer to be stimulated principally by markets. It now acts in the role of the stimulant. It is highly competitive, ever growing and changing in the continuous search for new ways and means to stimulate markets and create new ones. No business can expect to survive by remaining as it is today. It can no longer hope to be nursed passively by making a product and allowing the customer to buy it. It must promote sales with skill and initiative. It is, in fact, becoming highly complex. The complexity and the growing inter-dependence of private business with human, social, political and economic problems, has given rise to the need for the professional manager, who will inexorably take the place of the traditional owner-manager.

Management nowadays must embrace all of the many elements of business. It goes far beyond technical skills or "know-how" in research, engineering or development. In the sense of planning ahead on short or long term, it is the "know-what"; and as business requires constant changes to meet competition, it is the "know-when." To "know-what," to "know-when" and to "know-how" that is the challenge! Good management is in far shorter supply than capital everywhere.

Capital is universal, basically speaks one and the same language, performs only one job. Because it is sophisticated, cautious and wise, capital becomes apparently more scarce as it withdraws itself from less selective purposes and searches for better opportunities in productive enterprises in places where the climate and conditions are best, so that it can build, produce and earn a profit. Capital, in varying amounts and forms, exist almost everywhere. It is principally up to private enterprise through good management to induce it into useful employment.

In newly industrialised countries, such as Brazil, this process of inducement is a slow one which requires patience and tenacity. A new investor is usually more concerned with a record of existing capital investments. In Brazil, because such investments are of recent origin, the capital market is even more competitive. However, the more critical shortage still remains in good, competent, well-trained managers.

In a free competitive economy, good management will succeed. It is the top brass in the battlefield of the economic front. It is, therefore, fundamental to multiply the number of effective managers throughout the world. Much has been accomplished already through important initiatives by governments, private industry, trade associations, educational institutions and private foundations. Much more must be done, particularly by the industrialised countries, to assist underdeveloped nations.

Know-how

Technological know-how is quickly becoming a kind of universal currency. It has contributed the most in speeding up the process of economic growth in less developed countries, and it is, with the free world, promoting effectively the economic integration among nations. The immense, almost incredible, advance of technology in the last 50 years has polarised the material needs of modern life into the form of certain commodities that have become intimately woven into the complex texture of our civilisation. Many commodities, once considered luxuries, have become necessities. As they become necessities, the urge for speeding up economic development is emphasised to the point of restlessness.

In Brazil, in all fields—power, fuel, transportation, food processing and marketing, electronics, textiles, clothing, home appliances and so many others—business men are firmly and resolutely meeting the challenge. However, the main tool of our industrial development has been the imported technological "know-how" from the more industrialised nations.

We, in Brazil, realise the infinite importance of such "know-how" which is the fruit of countless years of inventiveness, research and engineering. As a result we have put in the market all kinds of products, locally manufactured, which would look quite familiar to you and will prove to be quite similar in quality. This technological co-operation between private enterprises from different parts of the free world has created a highly useful and profitable partnership and makes accessible to less developed areas the treasure of the best research and engineering resources. Thus it accelerates progress, improves living conditions and standards, increases employment, and ultimately, to a great extent, promotes the integration of economies through sound international understanding and partnership.

However, here again, management appears as the key to success. Caution must be taken in assuming that a particular technique or machine that performs well in one nation is the best for another.

Research of Local Conditions

Technology requires research of local conditions. It demands from management a broad view of the country in which it is operating, an assessment of immediate and long-term probabilities in relation to wages, purchasing power, marketing possibilities, capital requirements and earning prospects. Only too often, modern machinery, efficient in one country, cannot compete with the relatively low wages of another country; and only too often automation techniques successfully adopted in one nation multiplies the output to the point of making marketing impossible in another. The proper balancing of these factors to meet the adequate belongs to the "know-what" in close co-operation with the "know-how." But what is adequate today may soon become inadequate. Here the "know-when" has to keep management in readiness to change.

Here again, it might be opportune to emphasise the importance of the partnership between private enterprises through various existing types of agreements to provide manufacturing licences and technical assistance. The availability of such help to enterprises in less developed countries grants the licensee some security of continuity and keeps him up-to-date with developments and research in his particular field. This provides management with a broad outlook into the future and enables planning ahead necessary changes.

Because business is ever growing, ever changing, it is imperative, in order to meet the burden of expansions and adaptations, to keep the enterprise in a healthy financial condition. In underdeveloped countries, the task is not always easy for management. Inflation and artificial monetary practices by some governments result often in deceiving circumstances that distort figures and create the illusion of profits that might really turn out to be losses.

Besides, inflation might drive the enterprise to higher brackets of income-tax as currency depreciates and nominal figures rise accordingly, with the ill effect of crippling the normal process of capital formation through excessive taxation. The impact of inflation on replacement costs must keep management alert to promptly readjust prices and financially prepared to re-equip plants and replenish inventories. This vigilance can be effective only through sound financial control.

Good bookkeeping is essential within the complexity of modern business. It tells you where you've been, where you are and where to go. However, bookkeeping is more of an art than a science. Often, figures tend to be interpreted too dogmatically and formally. The art of bookkeeping, as we know it today, was born in Scotland and is still in kilts. I heard once this is why in most communities throughout the world one will find a St. Andrew's Society even before a bank is established.

I venture to say that it should be less conservative at times, in order to meet special or local circumstances. Only too frequently one must adapt patterns utilised elsewhere to meet the reality in one's own country. For example, special care must be taken by management to provide suitable reserves and depreciation charges to offset the effects of inflation. All in all, sound bookkeeping and audits are still one of the most important and effective tools for efficient management. It is the compass that makes it possible to guide the ship to profitable destinations. Only by knowing how and when profits are being made, can one effectively promote sales.

Salesmanship

Sales promotion is the most dynamic of management activities. Once an art, it is becoming more and more of a science. It requires continuous market study and research and involves conquering the loyalty of consumers who are free to make choices between competitive goods and services. It is intimately connected to advertising which today is world-wide in the hands of professionals and demands very specialised skills. It is an expensive service and must be carefully planned and weighed within price possibilities and policies.

However professional they may be, advertising men need the close and expert co-operation of management because there is no better substitute for its experience in its own business field. This is true also for market research. Although at times management might retain the services of professional researchers, practice has shown us, in our own particular fields, that only by properly assisting them are the results effective and useful. Specialists might provide certain research pattern acquired through experience in different fields and supply adequate personnel to perform the job. However, the most essential information to guide researchers in their surveys must nearly always be provided by management.

Market study and research must be a permanent job. It enables business to increase its sales and profits through better promotion, contributes towards an expanding volume of trade and aids significantly the general economic growth. This economic growth will ultimately translate itself into welfare of individuals and their families through gains in the betterment of health, food, housing, education and culture, which only an increased income can make possible. Private enterprise bears a great responsibility to community and country.

Welfare

A sound and expanding private economy means a great deal more in terms of individual welfare than government programmes. Truly, it is frequent nowadays that governments must heavily contribute for the development of economic infrastructures, particularly in power and transportation. However, in most instances, the necessity of government promotion is not

(*Continued on page 791*)

PROTECTION TO ANTIMONY INDUSTRY

EXISTING DUTY TO BE REDUCED BY 25 PER CENT.

THE antimony industry will continue to receive tariff protection. In pursuance of the recommendation made by the Tariff Commission, the Government of India has decided that protection granted to the industry should be extended by a further period of five years ending 31st December 1963, subject to a review of the position by the Commission in 1961. The protective duty on antimony will, however, be reduced from the existing rate of 60 per cent. *ad valorem* to 45 per cent. *ad valorem* or Rs. 45 per cwt. whichever is higher. The reduction of customs duty has already come into force with effect from 27th October 1958. Protective duty on crude antimony will be continued at the existing rate of 25 per cent. *ad valorem*. The Government has taken note of certain other recommendations of the Commission for assistance to the industry and will take suitable steps to implement them as far as possible.

The Star Metal Refinery Private Ltd., Bombay, is the only manufacturer of antimony in the country. Its annual rated capacity is 1,000 tons on triple-shift basis. The Refinery is at present working only two of its precipitation furnaces for maintaining output of Star Metal at around 600 tons. It produced 588.70 tons of antimony in 1956, 502.10 tons in 1957 and 270 tons in the first half of the current year. The Company has plans to install two more precipitation furnaces to keep them ready for commissioning in case domestic demand rises above 600 tons per annum. Further, the Refinery has been selling its products at prices which are somewhat lower than the landed costs of antimony from the cheapest source. The Commission has, therefore, held the view that "so long as the indigenous industry is meeting the internal requirements at fair prices, there is no need to import antimony metal beyond what is essential for national economy." It may be noted that ever since protection was accorded to this industry, it has endeavoured to secure antimony ore at economic prices. The average price of the ore per cwt. of metal is lower than the c.i.f. price of imported antimony metal.

Supply of Ore

The antimony industry was started with the object of exploiting indigenous ore at Chitral with active assistance and encouragement of the Government. Unfortunately, no sooner had the Company got into stride than partition was brought about and ore mines were left in Pakistan. In spite of repeated efforts it was not possible to obtain ore from that source and the Company lost both its investment in the mines and the principal advantage of securing ore at economic prices. The industry has been protected (since 1947) because it produces a strategic material which is used by railways and other departments and important industries in the country.

In the resolution of the Government, the attention of the Star Metal Refinery Private Ltd. has been invited to the Commission's recommendation that it should reorganise its financial position as early as possible, but, in any case, before 30th June 1959, and report the same to the Commission. The financial position of the Company has "continuously deteriorated" during the past three years. The Commission had recommended in 1954 that the Company should fix the price on the basis of the then existing landed cost of imported antimony. Consequently, it reduced its price from Rs. 187 to Rs. 167-8 per cwt. in March 1955. The price had been fixed in relation to landed cost of antimony from European sources and the protective duty was also determined on the basis of landed cost of imports of metal received from Belgium. Subsequently, however, China emerged as a supplier of antimony at very cheap rates. The Company was forced to bring down its price to Rs. 162-8. The Commission in 1956 worked out the fair selling price of the indigenous product at Rs. 166 per cwt. which was exclusive of selling expenses and recommended the imposition of protective duty at 60 per cent. But the Company, owing to various "moral as well as psychological reasons," did not consider it expedient to raise the price. This has, no doubt, accounted for a major portion of the loss suffered by the Company. The Commission has pointed out that a part of the loss was due to heavy interest charges which the Company had to incur on borrowings to carry on its business. There is thus an imperative need to reorganise the present "unstable and unsound" financial position.

As regards selling prices, the Commission has impressed upon the manufacturers the necessity to fix them in fair relation to costs. It has been said that most of the consumers were satisfied with the selling prices of the Company. A comparison of the landed costs of imported antimony and the prices charged by the Refinery shows that the prices charged by the indigenous producer were considerably lower than the landed costs. On the basis of cost investigation, the Commission has concluded that a fair selling price of Rs. 156.50 per cwt., which provides Rs. 3 as selling commission, is reasonable. The Commission has also recommended that the Star Metal should try to maintain a stock of about 30 tons of antimony metal and submit every month to the Commission, along with the statements of production, sales, stocks of metal and selling prices, reports of stocks of ore, prices at which ore is purchased, country of origin and other relevant information so as to enable the Commission to keep a continuous watch over selling prices of antimony metal produced by it. In order to ensure an efficient distribution system, the Government Departments have been asked to plan their orders for antimony and its alloys from year to year in an even manner.

The Tariff Commission has estimated that the average domestic demand is about 600 tons at present. It is expected to rise to 700 to 800 tons in the next three years. This has been computed on the basis of the actual deliveries in the past two years (both indigenous production and imports) and the current trends in consumption of virgin metal. In this connection, the Commission has observed that if the demand for virgin antimony metal rises owing to increased tempo of industrialisation, the Star Metal would be in a position to meet it by increasing its output.

Major Problem

"The major problem that confronts the industry, as already indicated, is with regard to the availability of its raw materials. The principal raw materials required for the production of antimony metal are antimony ore, soda ash, iron scrap, and furnace oil. The supply position of iron scrap, soda ash and furnace oil has been fairly satisfactory. The Star Metal depends on imports for its entire requirements of antimony ore. It has imported the ore mainly from Bolivia, Peru, Iran and Turkey. It has managed to locate a new source last year in Australia. Although there has thus been no great difficulty in obtaining regular supplies, the stability of the industry depends upon securing supplies of ore from indigenous sources. The Commission has recommended that the Geological Survey of India sould give the highest priority to the further work to be done at Kolari area (Nagpur) so as to prove the possibility of commercial exploitation of the ore from there and that the Government should invoke the relevant provisions of the mining licence and ensure that the present lessee carries out his obligations regarding prospecting and exploitation of antimony ore in Kolari without any delay, and if he fails to do so, the licence should be transferred to another who is prepared to operate it.

The quality of the antimony metal produced by the Star Metal is reported to be generally satisfactory. Its metal conforms to the Grade C in the tentative standard specification published by the Indian Standards Institution. The Company claims that it has the necessary equipment and technical experience to produce antimony of Grades B and A in conformity with the latest version of the Standard.

Imports of antimony were 78 tons (valued at Rs. 1.70 lakh) and 21.21 tons (Rs. 0.89 lakh) in 1956 and 1957, respectively. The bulk of the imports during the last two years were from China. In order to assess the quantum of protection needed by the domestic industry, the Commission has adopted the latest and actual c.i.f. price of Rs. 103.00 per cwt. The fair exworks price of indigenous antimony is computed at Rs. 153.50 per cwt. The landed cost exduty of the imported antimony (including clearing charges Rs. 5.15 per cwt.) aggregated Rs. 108.15. The difference between the two prices is Rs. 45.35. Expressed as a percentage of c.i.f. price, it works out at 44.03 per cent. It is on this basis that the Commission recommended the reduction in existing duty of 60 per cent. *ad valorem* to 45 per cent. *ad valorem* or Rs. 45 per cwt. whichever is higher.

REPORT ON CUSTOMS REORGANISATION SUBMITTED

The Customs Reorganisation Committee has submitted the main parts of its report, including the recommendations that it was requested to make in its terms of reference, to the Government of India on 31st of October 1958. It has dealt with practically all aspects of the work at present performed by the Customs organisation and the first volume of this report contains separate and self-contained chapters on such subjects as tariff structure, import trade controls, valuation for duty purposes, assessment of mixed goods, bills of entry, cargo examination, analytical tests, detentions of goods, guarantees and bonds, bonded warehousing, foreign postal parcels, stores for Government organisations, exports, drawback, tourist and passenger traffic, penal proceedings, steamer agents, air traffic problems, custom house agents, advisory bodies, information services and public relations, improvements in the entire customs organisation to achieve more efficient performance, and other important subjects including special features of land customs.

The Customs Reorganisation Committee, it will be recalled, was appointed by the Ministry of Finance, Government of India on 23rd January, 1957. It consisted of Mr. F. C. Badhwar (retired Chairman, Railway Board), Managing Director, Messrs. Bird & Co., New Delhi; Mr. S. M. Shah, President, All-India Importers' Association, Bombay; Mr. E. J. Benjamin, Director, Messrs. Robert MacLean & Co., Calcutta, and Mr. W. Saldanha, Officer on Special Duty, Central Board of Revenue, New Delhi. While Mr. Badhwar was Chairman, Mr. V. S. Ramaswamy, Assistant Collector of Customs, was the Secretary of the Committee.

While it took some time to provide the Committee with office accommodation and a secretariat, the members of the Committee met informally and decided on the form and scheme of the enquiry. It was realised that the interests affected by the customs organisation were not only importers, exporters, passengers and tourists, but also agencies concerned with steamers and airlines, shipping and clearing operations, and travel arrangements. Likewise, on the side of Government, organisations such as the Chief Controller of Imports and Exports, the Port Authorities, the Foreign Post Office, the Reserve Bank of India, Government Purchase Departments, Government departments engaged in commercial activities, public corporations, foreign diplomatic missions and U.N. agencies, are closely concerned or linked with the customs operation. It was, therefore, decided to prepare two sets of questionnaires, one for the trading public and the other for Government departments, in order to collect the fullest data and suggestions in regard to customs problems.

The size and scope of the enquiry as it emerged from the voluminous material collected was large and wide, and it soon became apparent that considerably more time than originally scheduled would be required to ensure a through analysis and detailed study of the data; in addition, there was the obvious need for personal discussions on important points with representatives of numerous Chambers and Trade Associations, Port Commissioners as well as of Custom Houses and many other Government Departments. At the same time, the Committee's programme had to be designed to fit in with the commitments of members in connection with their own business occupations. It, therefore, became necessary for Government to extend the life of the Committee first to the 30th April 1958 and later to the 31st October 1958.

Subjects of general interest were contained in material on certain points received through the foreign missions at New Delhi and direct from trade interests abroad. This was supplemented by discussions which the Committee's Chairman held with the authorities in the U.K., Eire, France, Germany and Italy in the course of his visit to Europe in connection with the London session of the Commonwealth Chambers of Commerce in the summer of 1957.

The Committee held 21 official meetings and had several other discussions with representatives of different commercial organisations and Government Departments, the Collectors of Customs and the Director of Inspection, Customs and Central Excises. The Chairman and individual members also held informal consultations with representatives of various Ministries, Port Commissioners, Custom Houses and trade interests. Visits were paid to main ports and the customs organisational set-up and its working were examined in detail on the spot.

During the course of the enquiry, certain urgent and important matters of public interest were stressed and the Committee felt it necessary to give these priority consideration. As a result, advance recommendations were submitted to Government regarding them, so that immediate reforms could be introduced.

The Report is divided into three volumes. Volume I is practically self-contained and constitutes the main report. Volume II contains purely procedural arrangements which the Committee have proposed mainly in implementation of their main proposals in Volume I. Volume III contains the texts of the Committee's advance recommendations, copies of its questionnaires, lists of Chambers and Associations who furnished data. It also includes certain other information such as the lists of organisations and officers interviewed, which will serve to indicate the compass of the investigation undertaken by the Committee.

TATA CHEMICALS' SALES IMPROVE

PROFIT, HOWEVER, DECLINES

THE working of the Tata Chemicals Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) during the year ended 30th June 1958 has yielded results which differ from the encouraging performance noted in the previous year in one important respect, namely, profit. Despite a satisfactory record of production and a sharp rise in sale proceeds, the profit has suffered a marked fall. The sale proceeds for the year under review shot up by as much as Rs. 76.11 lakhs or 29 per cent. to a new high of Rs. 3.42 crores. It may be noted here that, in 1956-57, the rise in sale proceeds was only Rs. 27.43 lakhs and that in 1955-56 was no more than Rs. 19.33 lakhs. Thus, the pace of growth in sales was substantially greater than in the preceding two years. And yet the gross profit has fallen from Rs. 54.79 lakhs for 1956-57 to Rs. 45.98 lakhs, a drop of 16 per cent. Such a decline in profit, as in the case of several leading companies reviewed in these columns in recent weeks, is due to higher manufacturing charges, consequent on increases in the cost of coal, coke, furnace oil, packing materials, wages and salaries, etc., that is, factors over which the management has no control. The fall in profit has resulted in a curtailment in the dividend level from 8 per cent. to 7½ per cent. Indeed, even payment of this lower distribution has been possible only with the help of a withdrawal of Rs. 2.80 lakhs from the general reserve.

Although the profit has declined, the Government's share in the Company's earnings does not show any reduction. On the other hand, it has gone up. Thus, the provision for taxation had been stepped up from Rs. 7.97 lakhs to Rs. 12.42 lakhs. The latter amount is inclusive of Rs. 1.48 lakh for wealth tax. The provision for depreciation has been lowered from Rs. 26.56 lakhs to Rs. 17.25 lakhs, thereby more than offsetting the increase in the tax provision. Nevertheless, because of the bigger fall in gross profit, the net profit is lower at Rs. 13.45 lakhs, as compared with Rs. 17.45 lakhs for 1956-57. In fact, it is the lowest for the past four years and is insufficient to cover the dividend on the 5 per cent. preference shares and the proposed ordinary dividend both of which require Rs. 13.66 lakhs. The net profit, it will be interesting to note, is equal to only 3.8 per cent. of sale proceeds.

The reduced dividend of 7½ per cent. on ordinary shares is equal to that paid for 1955-56, that is, the maiden dividend declared as many as 17 years after the Company's inception. No wonder that the short-lived increase of ½ per cent. in the dividend last year has greatly disappointed the investors and belied the optimistic expectations of the share market. It must, however, be noted that the Directors have proposed a small payment at the rate of 3.125 nP per share on the new ordinary shares (including interest payable out of capital at 4 per cent. per annum, amounting to 1.667 nP per share, as sanctioned by Government). A sum of Rs. 2.30 lakhs, equivalent to 75 per cent. of the development rebate earned from 1st January 1958, has been transferred to the development reserve, as against Rs. 3 lakhs made in the previous year. The provision for retiring gratuities has been lowered from Rs. 50,000 to Rs. 25,000. A provision of Rs. 10,000 has been made as reserve for bad and doubtful debts, as against *nil*. The total amount thus retained in the Company's business out of the profit for the year under review is Rs. 2.55 lakhs. But this addition has been more than neutralised by the withdrawal of Rs. 2.80 lakhs from the general reserve, as mentioned earlier.

The following table brings out the salient features of the Company's results for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale of products	341 70	265 59	238.16	218.83

* For 4½ years ended 30th June 1956.

The Directors state that, during the year under review, the production of soda ash which was maintained at 160 tons per day would have been higher but for major repairs in the latter half of the year to some of the units of the plant which had been subjected to heavy wear and tear on account of continuous operation. The Government of India allocated to the Company 5,000 tons of imported soda ash for sale, thus releasing an equivalent quantity of the Company's own ash for the manufacture of chemical caustic soda. The output of electrolytic caustic soda showed a small increase as a result of additional cells being put into operation. The Directors, however, state that since the fair prices of the Company's principal products, namely, soda ash and caustic soda, had been fixed by the Tariff Commission, it was not possible to pass on any part of this increase in costs to the consumers.

Referring to the Company's operations during the year under review and to some of the projected new activities that it has in view, the Directors observe thus:

"The benzene hexachloride plant worked throughout the year, and, owing to a growing demand for this product, an expansion of the plant has been taken in hand and is expected to be completed early in 1959. The copper oxychloride plant was first commissioned in November 1957, while the total production of salt increased by as much as 40 per cent. which was a new record for the Company. The output of bromides was adjusted to the offtake in the country, and the manufacture of a new bromine product, ethylene dibromide, was undertaken on a small scale at the instance of Tata-Pison. This is used as a fumigant for protecting foodgrains in storage against vermin and insects. Additions are also being planned to the bromine and hydro-chloride acid plants.

"Projects for the manufacture of copper sulphate, ferric chloride and caustic potash have been approved by the Government of India and sanctioned by the Board. Some of these products are expected to be put on the market in the current year."

The schemes referred to above would naturally involve a large financial outlay. Alluding to this aspect, the Directors point out that the expansion schemes, which had been estimated in the previous year to involve an expenditure of Rs. 424 lakhs, is now expected to increase to about Rs. 510 lakhs owing to the inclusion of new projects and also because the plant and equipment required for the expansion of the soda ash and allied plants have had to be purchased in the U.S.A. In this connection, it is noteworthy that the Company obtained an allocation from the Government of India of Rs. 1 crore of dollar exchange out of the loan granted by the Export-Import Bank of the U.S.A. In terms of these arrangements, the Company has placed orders in the U.S.A. for the bulk of the plant required for the expansion programme.

One of the greatest handicaps of the Company is the inadequate supply of fresh water. Since this factor has a great say on the Company's profit-margin, readers will be interested in the following observations of the Directors:

"After last year's failure which led to a serious water shortage, the monsoon this year was extremely good and both the main reservoirs at Bhimgaja and Mithikhadi overflowed. The water-supply position is now assured until the next monsoon and is adequate for meeting the Company's increasing requirements. Long-term measures for dealing with this recurring problem in accordance with the advice given by our experts are now before the Government of Bombay for consideration and approval before they can be implemented."

The Company's distribution of revenue shows that, in 1957-58, materials consumed accounted for 45.58 per cent., employees 18.09 per cent., freight and handling 8.39 per cent., administration 7.92 per cent., Government 7.14 per cent., depreciation 5.43 per cent., proposed dividends 4.29 per cent., repairs and renewals 2.41 per cent. and reserves 0.75 per cent.

According to the Company's balance-sheet as at 30th June 1958, its paid-up capital stands raised from Rs. 199.96 lakhs a year before to Rs. 255.96 lakhs on account of issue of new capital. In January last, the Company issued 1,120,000 new ordinary shares of Rs. 10 each, on which Rs. 5 have been called up. This issue was oversubscribed. The Company now has 1,399,599 old ordinary shares of Rs. 10 each fully paid, 1,120,000 new ordinary shares of Rs. 10 each of which only Rs. 5 is paid-up and 59,970 preference

KIRLOSKAR OIL ENGINE DOES WELL

ADDITIONAL CAPITAL ISSUED

ENCOURAGING results are disclosed by the audited statement of accounts of Kirloskar Oil Engines Ltd. (Managing Agents: Messrs. Kirloskar Sons & Co., Poona) for the year ended 31st March 1958. There has been a sizable rise in the Company's sales over the year, the gross profit has gone up by more than a third, that is, from Rs. 15.56 lakhs to Rs. 20.99 lakhs, a sizable addition has been made to the reserves and the dividend is being stepped up again from 9 per cent. to 10 per cent.

With the rise of Rs. 5.43 lakhs during the year, the gross profit has nearly trebled itself in three years. In conformity with the rise in the gross profit, the net profit also has increased, that is, from Rs. 3.39 lakhs earned a year ago to Rs. 8.08 lakhs. The provision for depreciation at Rs. 2.37 lakhs is lower, as compared with Rs. 6.89 lakhs for the previous year, but the latter amount is inclusive of Rs. 4.80 lakhs, being arrears of depreciation in respect of previous years. The provision for taxation has been raised from Rs. 4.02 laks to Rs. 8.69 lakhs and this includes Rs. 44,116, representing taxation payments in respect of the previous year, including wealth tax. The better profits for the year under review have not only enabled a larger allocation being made to the various reserves but have also resulted in a modest upward revision in the rate of dividend distribution. Thus, after transferring Rs. 1.25 lakh to Mr. L. K. Kirloskar's Memorial reserve, the Directors have been able to allocate Rs. 4.30 lakhs to the reserves, as against only Rs. 1.50 lakh made a year ago. This consists of Rs. 57,500 to development rebate reserve, Rs. 250 to general reserve No. 1, Rs. 2.50 lakhs to general reserve No. 2 and Rs. 1.23 lakh to deferred taxation reserve. The dividend has been raised to 10 per cent. from 9 per cent. for the previous year, to which level it had been successively stepped up from 5 per cent. paid in 1954-55.

The following comparative table will give an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	133.87	99.38	67.51	56.76

† Include also stores.
* Approximate.

The Directors state that the production of diesel engines recorded a marked progress during the year and that the demand for engines is continuing to be satisfactory. This is reflected in the further rise in sale proceeds from Rs. 99.38 lakhs in 1956-57 to Rs. 1.34 crore in the year under review, representing a rise of Rs. 34.49 lakhs over the year. Construction work of the new factory building which the Company is putting up for housing some of its expansion schemes is expected to be completed within a few months.

Encouraged by the good progress made by it in recent years, the Company has undertaken several expansion schemes, namely, increasing the production of the present range of engines, developing the manufacture of bi-metal bearings and bushes and also taking up the manufacture of engines in the range of 50 to 200 h.p. In order to finance the expansion schemes, the Directors have, in the first instance, issued a few weeks ago additional capital to the extent of Rs. 12.50 lakhs. The issue is made up of 125,000 ordinary shares of Rs. 10 each and has been offered to the existing shareholders in proportion to their holdings.

The paid-up capital of the Company as at 31st March 1958 stands at Rs. 24.23 lakhs, all in ordinary shares of Rs. 10 each. As against this, its reserves and surplus aggregate Rs. 10.23 lakhs. The current liabilities and provision for taxation have gone up substantially from Rs. 52.21 lakhs to Rs. 86.16 lakhs. This is mainly due to the increase in credit availed of to provide working capital and to finance expansion schemes. While the secured loan from the I.F.C. of India has declined from Rs. 14 lakhs to Rs. 12 lakhs, loans from banks have risen from Rs. 15.31 lakhs to Rs. 32.29 lakhs. Unsecured loans too are higher at Rs. 11.14 lakhs, as against Rs. 2.78 lakhs a year ago. The gross block of Rs. 48.81 lakhs stands written down at Rs. 28.14 lakhs. Additions during the year were of the order of Rs. 8.60 lakhs. Besides this, building works under construction account for Rs. 5.57 lakhs. The current assets aggregate Rs. 86.91 lakhs and are just enough to cover the current liabilities and the provision for taxation.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 17.52 *cum-div.* and on an *ex-div.* basis, the yield on the shares works out to 6.05 per cent. per annum.

NATIONAL ELECTRICAL INDUSTRIES LTD.

A rise in sale proceeds and a modest improvement in the gross profit are the features characterising the working of the National Electrical Industries Ltd. [Managing Agents: Messrs. Navin, Kumar, Hansraj (Private) Ltd., Bombay] during the year ended 31st March 1958. The Company's gross profit for the year under review at Rs. 6.65 lakhs stands slightly higher, as compared with Rs. 6.21 lakhs for both 1955-57 and 1955-56. The net profit has also improved, that is, from Rs. 1.89 lakh in the previous year to Rs. 2.23 lakhs. This is arrived at after providing for Managing Agents' commission, depreciation and taxation. A sum of Rs. 1.21 lakh has been provided for depreciation, as against Rs. 1.24 lakh in the previous year. The provision for taxation, which also includes wealth tax, takes up Rs. 2.60 lakhs, as against Rs. 2.50 lakhs.

Adding the sum of Rs. 20,852 brought forward from the previous year and refund of income-tax for the years 1948-49 and 1955-56, amounting to Rs. 1,805, to the net profit, there is a total amount available for appropriation of Rs. 2.46 lakhs. From this, the Directors have transferred Rs. 1.30 lakh to the reserves, as against Rs. 1.10 lakh a year ago. This consists of Rs. 15,010 transferred to development rebate reserve, Rs. 90,000 to dividend equalisation reserve and Rs. 25,000 to depreciation reserve. The allocations in the previous year were: reserve fund Rs. 50,000 and contingencies reserve (including gratuity) Rs. 60,000.

The Directors have declared a dividend of 9 per cent. on the ordinary shares for the year under review which is the same as that paid in the previous year. The dividend on the 4½ per cent. tax-free cumulative preference shares absorbs Rs. 24,390 and on the ordinary shares Rs. 69,993, leaving a sum of Rs. 21,600 to be carried forward.

Both production and sales made satisfactory progress during the year under review, having improved from Rs. 68.72 lakhs and Rs. 68.36 lakhs, respectively, in 1956-57 to Rs. 75.80 lakhs and Rs. 74.95 lakhs. The cost of raw materials consumed has increased from Rs. 44.26 lakhs to Rs. 48.23 lakhs. Other expenses, however, have slightly decreased from Rs. 20.47 lakhs to Rs. 19.93 lakhs. Closing stocks are also a shade lower at Rs. 10.84 lakhs as compared with Rs. 11.79 lakhs at the end of 1956-57.

The Company has a paid-up capital of Rs. 13.30 lakhs, made up of Rs. 5.42 lakhs in 4½ per cent. tax-free cumulative preference shares of Rs. 100 each and the balance in ordinary shares of Rs. 50 each. This is supplemented by reserves and surplus aggregating Rs. 7.93 lakhs. The Directors have transferred the sum of Rs. 3.10 lakhs, treated hitherto as contingencies reserve, to a new modernisation and rehabilitation reserve. Secured loans from the I.F.C. against mortgage of machinery, materials, etc., account for Rs. 7.15 lakhs and from bank for Rs. 4.49 lakhs. The other current liabilities and provisions stand at Rs. 24.58 lakhs. The gross block of Rs. 24.49 lakhs stands written down to a book value of Rs. 14.13 lakhs. The current assets aggregate Rs. 43.32 lakhs.

The Rs. 50 fully paid up shares are being currently quoted at Rs. 75 *cum-div.* and on an *ex-div.* basis, the yield is 6.3 per cent. per annum.

(Concluded from previous page)

shares of Rs. 100 each fully paid, carrying 5 per cent. cumulative dividend. In view of the chequered career the Company has had, its reserves and surplus are very small, being no more than Rs. 17.23 lakhs. Even this includes Rs. 7.62 lakhs belonging to the share premium account. The Company has a debenture liability amounting to Rs. 25 lakhs. Secured loans (other than the debentures) account for Rs. 15.40 lakhs and unsecured loans for Rs. 110.78 lakhs. The other current liabilities and provisions for taxation, dividend, etc., amount to Rs. 102.69 lakhs, having increased from Rs. 82.34 lakhs a year before. The current assets aggregate Rs. 241.21 lakhs. The gross block of the value of Rs. 457.36 lakhs has been depreciated by Rs. 171.48 lakhs to a book value of Rs. 285.87 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 16.28 *cum-div.* On an *ex-div.* basis, the yield works out to 4.8 per cent. per annum, free of tax.

Points From The Chair

Future Prospects for Industries

"IT will take a bolder person than a mere business man, who is not a politician, to venture on any forecast of the future of this key industry or of the trend of economic, financial or industrial development of the country as a whole. This much, however, I think, can be reasonably said, that the prospect is uncertain in the absence of the correction of adverse circumstances which persists in many directions of which I would mention a few. The more hazardous and a grave hindrance to industrial development is the almost daily occurrence, frequently accompanied by violence, of strikes in industry, transport, administrative and other services. It cannot be denied that some of the more recent strikes have been organised by the Communist Party for political purposes and for supplanting existing recognised unions. The material for these and other strikes is greatly fostered by the lack of effective measures to reduce the cost of living, to produce more food and to augment the supply of cheap cloth, housing and other indispensable necessaries of life. The present level of direct taxation, both corporate and individual, has undoubtedly destroyed incentive to a great extent and reduced the desire to earn more and to save for industrial investment to a negligible factor. The heavy burden of indirect taxation, both Central and State, is borne almost entirely by the common man who falls an easy victim to the promises and propaganda of careerist labour leaders. Whatever the foreign aid by way of loans, gifts or technical assistance may be, it will not help India to achieve the over-emphasised and unduly speedy development of its heavy industries, whether in the public or in the private sector, unless immediate and adequate remedial measures are set in train to counteract the general sense of frustration now prevalent in all classes of the people of this country."

SIR BIREN MOOKERJEE,
Indian Iron and Steel Co., Ltd.

Renault Vehicle Exports

"In 1957 Renault exported 91,060 vehicles to countries outside the franc area, representing over 29 per cent. of total output. In effect, the number of vehicles exported increased by 69.5 per cent. over the previous year. By exporting 48.2 per cent. of the total of French vehicles sold outside the franc area—51 per cent. of the percentage is confined to cars alone—the Corporation consolidated its position as the leading French motor-car exporter, a position which it has held since 1949. By so doing, it also amply fulfilled its self-imposed export quota under the agreement which, in common with other motor manufacturers, it had made with the Government at the beginning of the year. This required the manufacturers not only to maintain the export ratio achieved in 1956 but to export at least two-thirds of any subsequent increase in output. Renault's exports in fact accounted for 90 per cent. of the increase in production achieved during the year."

M. PIERRE DREYFUS,
Regie Nationale des Usines Renault.

Taxation

"Sometimes one is at a loss to understand the working of the political brain, whether national or local. For example, although this is not strictly speaking a question of taxation, what can be said for the mentality of the Borough of Barking, who on 4th February 1958 asked for tenders for porcelain enamel baths, and specified that they were to be of Hungarian manufacture and to be made to British Standard Specification 1189? In other words, apparently a deliberate attempt to put British workers out of a job, and increase the costs of the British product, because any reputable British bath manufacturer could supply baths to this requirement. It would be very interesting to know whether the houses for which these Hungarian baths were required were subsidised in any way from public funds, which of course can only come from taxation. Taxes are part of a company's cost of living, and only when they are paid can a company begin to show a net profit. If a company cannot make a profit, it cannot stay in business and provide jobs."

J. E. V. JOBSON,
Qualeast Limited (Derby).

Wolfram Prices

"In order to illustrate this feature of the wolfram market I may mention that, whereas the prices of copper, lead and zinc fell between 1st January 1957 and 1st September 1958, by 24 per cent., 39 per cent. and 36 per cent. of their respective prices at the former date, the price of wolfram fell during the same period by no less than 72 per cent. The general fall in metal prices has caused difficulties for most producers of base metals, but, as the above figures show, their difficulties have been small compared with those which wolfram producers have had to face. The high wolfram prices of recent years, the effect of which was intensified by long-term Government contracts at high fixed prices, brought many high cost producers into the market and led to the opening up of entirely new areas, the additional supplies from such source, made a severe drop in the price inevitable as soon as world demand began to fall. Most of these high cost producers have now been compelled to close their mines, but offerings of wolfram from Bolivia, where wolfram is largely a by-product of tin production and from Southern Korea, and of various tungsten products from behind the Iron Curtain, have been sufficient during recent months to satisfy the limited demand."

F. GATES,
Beralt Tin and Wolfram Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

CHAMPDANY JUTE CO., LTD. Annual General Meeting, Calcutta, 14th November 1958. Dividend: *Nil*. Transfer books remain closed from 6th to 14th November 1958, both days inclusive.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 18th November 1958. Dividend: 75 nP per share, on old ordinary shares and 3.125 nP per share, on new ordinary shares, payable on and after 20th November 1958. Transfer books were closed from 6th October to 3rd November 1958, both days inclusive.

MYSORE COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 20th November 1958. Dividend: 15 per cent. Transfer books will remain closed from 10th to 20th November 1958, both days inclusive.

DIBRUGARH CO., LTD. Annual General Meeting, Calcutta, 20th November 1958. Dividend: Rs. 2.50 per share. Transfer books will remain closed from 11th to 20th November 1958, both days inclusive.

HINGIR-RAMPUR COAL CO., LTD. Annual General Meeting, Bombay, 21st November 1958. Dividend: *Nil*. Transfer books remain closed from 3rd to 21st November 1958, both days inclusive.

HATTIKHIRA TEA CO., LTD. Annual General Meeting, Calcutta, 21st November 1958. Dividend: *Nil*. Transfer books will remain closed from 17th to 21st November 1958, both days inclusive.

KIRLOSKAR OIL ENGINES LTD. Annual General Meeting, Poona, 21st November 1958. Dividend: 10 per cent. or Re. 1.00 per share, payable on and after 21st December 1958. Transfer books remain closed from 31st October to 21st November 1958, both days inclusive.

SINGARENI COLLIERIES LTD. Annual General Meeting, Khairatabad, Hyderabad-Deccan, 24th November 1958. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books will remain closed from 10th to 24th November 1958, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 26th November 1958. Dividend: Re. 4.00 per share final (making 6½ per cent. for the year), payable on and after 28th November 1958. Transfer books remain closed from 3rd to 27th November 1958, both days inclusive.

DEJOO VALLEY CO., LTD. Annual General Meeting, Calcutta, 27th November 1958. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 18th to 27th November 1958, both days inclusive.

TYROON TEA CO., LTD. Annual General Meeting, Calcutta, 27th November 1958. Dividend: Rs. 3.00 per share. Transfer books will remain closed from 18th to 27th November 1958, both days inclusive.

TELOIJAN TEA CO., LTD. Annual General Meeting, Calcutta, 27th November 1958. Transfer books will remain closed from 20th to 27th November 1958, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 27th November 1958. Dividend: Re. 0.45 per share. Transfer books will remain closed from 13th to 27th November 1958, both days inclusive.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 27th November 1958. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 14th to 27th November 1958, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Annual General Meeting, Calcutta, 28th November 1958. Dividend: *Nil*. Transfer books will remain closed from 14th to 28th November 1958, both days inclusive.

BOMBAY CYCLE AND MOTOR AGENCY LTD. Annual General Meeting, Bombay, 28th November 1958. Dividend: Re. 1.00 per share, payable on and after 2nd December 1958. Transfer books will remain closed from 14th to 28th November 1958, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 28th November 1958. Transfer books remain closed from 1st to 28th November 1958, both days inclusive.

BLUE MOUNTAIN ESTATES LTD. Annual General Meeting, Madras, 5th December 1958. Dividend: Re. 0.25 per share or 12½ per cent., payable on 6th December 1958. Transfer books will remain closed from 21st November to 5th December 1958, both days inclusive.

WATERFALL ESTATES LTD. Annual General Meeting, Madras, 5th December 1958. Dividend: 12½ per cent. or Re. 0.25 per share, payable on 6th December 1958. Transfer books will remain closed from 21st November to 5th December 1958, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Annual General Meeting, Bombay, 12th December 1958. Dividend: Re. 1.80 per share, on old ordinary shares and Re. 0.90 per share, on new ordinary shares, payable on 15th December 1958. Transfer books remain closed from 3rd to 27th November 1958, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Interim dividend of Re. 1.00 per share, free of income-tax, on ordinary shares, for the year ending 31st December 1958. Transfer books will remain closed from 14th to 27th November 1958, both days inclusive.

INDIAN CABLE CO., LTD. Dividend of 15 per cent. on ordinary shares (includes a cash bonus of 2½ per cent.) free of income-tax for the year ended 31st March 1958.

CHAMPDANY JUTE REDUCES LOSS

PROFIT OF BIRLA COTTON DECLINES

Champdany Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. James Finlay and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit of Rs. 1,78,054 (loss of Rs. 26,43,053) after charging Rs. 8,53,019 (Rs. 8,93,779) for depreciation and taking credit for the following extraneous items:—reserve for taxation contingencies Rs. 78,026 (*nil*) and refund of West Bengal sales-tax in respect of previous years Rs. 1,37,370 (*nil*). The net debit balance of Rs. 7,24,043 (Rs. 26,43,053) in the profit and loss account at the commencement of the year has now been reduced to Rs. 5,45,989 (Rs. 7,24,043 after taking into account the credit balance brought forward of Rs. 19,010 and transferring Rs. 19,00,000 from general reserve) and is being carried forward.

Despite the absence of any revenue surplus, it has been necessary to raise a "Development Rebate Reserve" to the extent of Rs. 14,250; this statutory reserve is in conformity with the provisions of Section 10 (2) (vib) of the Indian Income-tax Act, 1922, as amended by the Finance Act, 1958.

General.—During the earlier months of the year under report the market prices of raw jute and those obtainable for manufactured goods remained at, on the whole, unprofitable levels and the Company consequently continued to work at a loss during those months. Later these price levels changed to the extent that the Company was able to work at a small profit which did not quite balance the losses incurred during the earlier months of the financial year. Manufacturing costs continue to be kept as low as possible.

Arising out of the investigation which the directors and the managing agents had made into the running of the Mills it was decided to operate the new preparing and spinning machinery at Champdany Mill on three shifts per day instead of two shifts as heretofore and to transfer the machinery thus rendered surplus from Champdany to Wellington Mill where it would eventually be operated also on three shifts. It was also decided to complete the modernisation of the preparing and spinning departments of Wellington Mill on a triple shift basis and this work is now in hand. By operating the preparing and spinning departments of both Mills on three shifts per day the maximum possible use of the smallest amount of the latest machinery is made possible, and in addition substantial quantities of valuable machinery have been made available for disposal. The directors are confident that when this work is completed, probably by the end of September 1959, a marked reduction in manufacturing costs will be achieved.

In accordance with the provisions of the Indian Jute Mills Association working time agreement the unsealed looms at both mills worked 48 hours per week. 12½ per cent. of the total loomage at each mill continues to be sealed in accordance with the provisions of the working time agreement. As mentioned above the preparing and spinning departments at Champdany Mill are working three shifts. The preparing and spinning departments at Wellington Mill are presently working a double shift and it is intended that these departments will operate on three shifts whenever progress in the transfer and direction of machinery allows.

Birla Cotton Spinning and Weaving Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Delhi) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account shows a surplus of Rs. 11,32,321 (Rs. 28,59,166). Out of this amount provision has been made for depreciation Rs. 7,04,395 (Rs. 7,04,486), for development rebate reserve Rs. 76,000 (Rs. 77,000) and for taxation Rs. 2,50,000 (Rs. 15,75,000) leaving a sum of Rs. 1,01,926 (Rs. 5,02,680). To this amount is added the balance brought forward from the last year of Rs. 8,768 (Rs. 5,56,088). Indian State profits transferred Rs. 1,79,636 (*nil*) and dividend on fractional shares not payable Rs. 57 (*nil*) making a total available for disposal of Rs. 2,90,387 (Rs. 10,58,768). The directors recommend dividend on 3,50,000 ordinary shares of Rs. 10 each at 75 nP (Re. 1.50) per share, free of tax absorbing Rs. 2,62,500 (Rs. 5,25,000) leaving a balance of Rs. 27,887 (Rs. 8,768). With the Jaipur branch profits not transferred to Head Office amounting to Rs. 76,320 (*nil*), the total balance to be carried forward to next account will be Rs. 1,04,207 (Rs. 8,768 after paying Rs. 5,25,000 as dividend for the year ended 31st March 1956).

The working results of the textile mills are not considered satisfactory. The heavy incidence of excise duty on mill cloth and increase in the cost of production without corresponding increase in selling prices adversely affected the profits. Since the close of the year the Government of India has granted some relief by way of reduction in excise duty and it is hoped the current year's working will not show any further deterioration. Still much has to be done by the Government if the textile industry is to be got out of the present difficulties. The Company's tent factory and the ginning and pressing factory at Malout worked satisfactorily.

Rajapalayam Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Ramco Agencies Private Ltd., Rajapalayam) present the audited accounts of the Company for the year ended 31st March 1958.

After deducting all expenses and providing for depreciation a sum of Rs. 1,86,578 (Rs. 1,86,823) the year's working has resulted in a net profit of Rs. 1,83,582 (Rs. 7,74,977). Out of this, a sum of Rs. 15,350 (Rs. 26,367) has been disbursed by way of donation leaving a balance of Rs. 1,68,232 (Rs. 7,48,610). Adding to this a sum of Rs. 15,404 (Rs. 10,510) being the balance of profit brought forward from last year, the total amount available for allocation is Rs. 1,83,636 (Rs. 7,59,120). The directors recommend to allocate the same as follows:—

To pay a dividend at 8 (12) per cent. (tax free) absorbing Rs. 1,29,144 (Rs. 1,93,716), to transfer to employees' gratuity reserve Rs. 10,000 (*nil*) and to provision for taxes Rs. 44,492 (Rs. 3,50,000 for provision for taxes, and Rs. 2,00,000 to machinery replacement reserve leaving to be carried forward the balance of Rs. 15,404).

During the year under report, the prices of cotton were ruling steady at high levels while yarn prices were falling down day by day. Further, yarn stocks were not moving freely especially during the latter half of the year. The Mills had therefore to sell its yarn at reduced rates. These factors have accounted for the fall in profits.

The directors state that good progress has been made in the expansion programme since the last report. Blow-room, carding and preparatory machineries have been erected and are now under trial running. As for ring frames, the Mills have received only part supply from the manufacturers. The directors are planning to start production in the new mills with the available ring frames and hope to complete the first stage of expansion within a few months.

Accounts in brief are as under:—

Tirupati Cotton Mills Ltd.

The directors of the above Company (Chairman: Mr. C. R. Srinivasan, Madras) present the audited accounts of the Company for the year ended 31st March 1958.

The directors state that the Mill was inaugurated with the first instalment of 6,000 spindles by the Hon'ble Chief Minister of Andhra Pradesh on 29th August 1957. Since then the remaining 6,000 spindles also have been commissioned and as on date the mill is working with the full complement of 12,000 spindles.

The general recession in the yarn markets resulted in the Mills not being able to get the anticipated margin. The Mills are mainly producing 20s yarn. In September 1957 the average selling price was Rs. 17-6-0 per bundle of 10 lbs. which by December 1957 gradually fell to Rs. 16-2-0 per bundle of 10 lbs.

Further, delivery of Texmaco ring frames having been delayed till March 1958. The Mills could work only 6,000 spindles during the period under report and such working was highly uneconomical. The directors are still awaiting delivery of some of the preparatory machinery of indigenous manufacture which is very necessary for an efficient working with the full complement of 12,000 spindles.

The yarn produced by the Mills has acquired a reputation for quality almost from the inception and is well in demand in the surrounding handloom centres. It shall be the directors' constant endeavour to maintain high standards in the quality of yarn.

The directors are confident that with the full complement of 12,000 spindles and increased production, the working of the mill during the current year will yield better results.

The Company has now availed itself of a total loan of Rs. 18,00,000 from the Industrial Finance Corporation of India. There is a balance of Rs. 1,50,000 to be received as and when the directors raise the paid-up capital to Rs. 22,50,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,62,195	Gross block	37,84,098
Liabilities ...	34,81,998	Stock-in-trade	12,06,295
Profit and loss account ...	1,000	Stores, spare parts and loose tools	2,79,817
		Debts, deposits and advances ...	1,07,733
		Investments	10,175
		Cash ...	11,913
		Miscellaneous expenditure and losses	45,162
Rs.	54,45,193	Rs.	54,45,193

Barnagore Jute Factory Co., Ltd.

The directors of the above Company (Secretaries: Messrs. McLeod Russel & Co., Ltd., London) present the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year amounts to £39,291 (loss of £122,694) against which has to be placed depreciation of fixed assets £61,676 (£68,053) and provision for doubtful debts £8,669 (£14,039) making a net loss of £31,054 (£204,786). From this is deducted refund of profits tax distribution charge 1956 £750 (*nil*) and profit on sale of land £11,030 (£3,096) leaving a debit balance of £19,274 (£142,597 after deduction provision for taxation no longer required of £44,654 and £14,439 being rent receivable in respect of previous years.) To this amount has to be added the debit balance brought forward from 31st March 1957 of £156,293 (£13,696) making a total debit balance £175,567 (£156,293) which has been deducted from the revenue reserves as shown in the accounts.

Compared with the previous year, trading conditions have shown some improvement and the trading profit, as shown in the profit and loss account, of £40,394, before providing for depreciation, has been achieved after making non-recurring payments, amounting to £29,000, in the form of retrenchment benefits and gratuities to workers rendered surplus by the operation of the new machinery. Payments in respect of retrenchment will not continue on this scale in future.

The fullest advantage of the new machinery was taken throughout the year by concentrating all production in East Mill and working the mill machinery on a triple shift with a double shift in the weaving department. This procedure has proved satisfactory and the South Mill buildings and equipment are now considered surplus to the Company's requirements and negotiations are proceeding to dispose of these surplus assets.

Although the Government of India have not yet reached their target of self-sufficiency in jute within India, the increased availability of the raw material and the realisation by the market that the current year's crop would prove comparatively plentiful has resulted in raw jute prices being maintained at a level at which it has generally been possible in recent months to buy jute and sell goods simultaneously at a profit. It will be appreciated, however, that the Industry, being largely dependent on the export of its products overseas, is particularly vulnerable to any general recession in the volume of international trade throughout the world.

The over-all hessian stock position is satisfactory but there has been a gradual rise in stocks of sacking goods. They do not appear, however, to have reached a level at which they are likely to constitute a danger to the price structure of the market. Having regard to all these factors, the directors feel it is possible to expect some further improvement in the results of the Company during the ensuing twelve months.

Accounts in brief are as under:—

Liabilities	£	Assets	£
Capital ...	475,000	Gross block*	1,640,294

	£1,705,580		£1,705,580

*Reserves are shown after deducting the debit balance in the profit and loss account amounting to £175,567.

Huldibari Tea Association Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

General.—Drought condition early in the season retarded growth and a crop of 17,36,848 pounds of tea was made as against 17,53,608 pounds in the previous year. The total net average sale price was Re. 1.59 (Re. 1.87) per pound and the working cost per pound of tea produced was Re. 1.43 (Re. 1.35). Market conditions were unfavourable for common teas which to a considerable degree sold below production costs.

Government introduced a compulsory provident fund scheme for plantation labour with effect from May 1957, which together with the high price of concession foodstuff enhanced the working cost.

The gross profit for the year is Rs. 2,79,892 (Rs. 8,77,547) out of which the directors have provided Rs. 72,434 (Rs. 2,06,755) for taxation less an adjustment of Rs. 71,595 on account of previous years and Rs. 1,06,901 (Rs. 1,17,705) for depreciation and replacement of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 1,36,559 (Rs. 4,69,124) and a total balance of Rs. 2,38,802 (Rs. 5,68,493) on this account. Out of this the directors have allocated Rs. 25,000 (Rs. 2,35,000) to renewals and additions reserve leaving a balance of Rs. 2,13,802 (Rs. 3,08,493) which, the directors propose to deal with as follows:—

To pay a dividend of 12½ (25) per cent. free of income-tax absorbing Rs. 1,03,125 (Rs. 2,06,250) and to carry forward to 1958 Rs. 1,10,677 (Rs. 1,02,243).

Estimates for 1958 have been based on a crop of 21,500 maunds of tea at a total cost of Rs. 25,33,044, equal to Re. 1.47 per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,25,000	Gross block ...	22,13,183

Rs.	35,85,652	Rs.	35,85,652

Basmatia Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit after charging all expenses, of Rs. 1,94,580 (Rs. 2,85,381) of which taxation provision requires Rs. 89,000 (Rs. 1,22,000) leaving a balance of Rs. 1,05,580 (Rs. 1,63,381). The balance brought forward from last year was Rs. 53,593 (Rs. 66,736) and excess tax provisions in previous years written back amounted to Rs. 25,000 (*nil*) making a total available for appropriation of Rs. 1,84,173 (Rs. 2,30,434). The directors have transferred to general reserve Rs. 50,000 (Rs. 75,000). The directors now recommend payment of a dividend on the ordinary shares at Re. 1.75 (Rs. 2.00) per share absorbing Rs. 89,250 (Rs. 1,01,841) leaving a balance to be carried forward of Rs. 44,923 (Rs. 53,593).

Wealth tax in respect of the years ended 31st December 1956 and 31st December 1957, is estimated to amount to Rs. 9,595 and this has been provided for by transfer from general reserve.

A record crop of 8,593 maunds was sold at an average price of Rs. 2.08 per lb. This compares with a crop of 7,104 maunds in season 1956, which sold at an average price of Rs. 2.57 per lb.

Estimates for the current season have been framed for a crop of 8,500 maunds to cost Rs. 12,66,596 and, provided normal conditions prevail, it is expected that a crop of approximately the estimated amount will be secured.

In the report of the directors for the year ended 31st December 1956, members of the Company were advised of the application which had been made to the Controller of Capital Issues for permission to capitalise a sum of Rs. 5,10,000 out of the amount standing to the credit of general reserve. In October 1957, a letter was received from the Controller of Capital Issues sanctioning the bonus issue applied for. Since then the Board have given the matter careful consideration, but in view of the present level of tax on bonus issues, have decided to take no action for the present.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,10,000	Gross block	13,89,143
Reserves ...	10,25,405	*Less*—Depreciation	5,88,787

		Debts, deposits and advances ...	1,85,217
		Investments	77,497
		Cash ...	2,80,928
Rs.	22,37,614	Rs.	22,37,614

*Includes provision for wealth tax of Rs. 9,595.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notice

INDIA STEAMSHIP COMPANY LIMITED

ORDINARY GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Ordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Monday, the 22nd December, 1958, at 4 p.m., in order to transact the following business:

(1) To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1958.

(2) To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1958.

(3) To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1958.

(4) To appoint a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has attained the age of 71 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(5) To consider, and if thought fit, to pass the following resolution as Special Resolution, in respect of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

(6) To appoint a Director in place of Maharajadhiraja Sir Udaychand Mahtab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.

(7) To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.

(8) To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 1st December, 1958, to 22nd December, 1958, both days inclusive.

By Order of the Board,
A. MUKERJI,
Assistant Secretary,
India Steamship Company Ltd.

CALCUTTA, *1st November,* 1958.

The dividend if sanctioned will be made payable to those Shareholders whose names stand on the Register of the Company, on the 1st December, 1958, and the Dividend Warrants will be posted from the 20th January, 1959, onwards.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

Explanatory Statement as Required by Section 173 of the Companies Act, 1956

(1) In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), has attained the age of 71 years and hence this needs your approval by a resolution in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Sir A. Ramaswami Mudaliar joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company, by retaining him as a Director of the Company.

(2) In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), as a Director, be made and/or be approved in accordance with the provisions of the Companies Act. The Managing Agents of the Company, Messrs. Lionel Edwards (Private) Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), became a Director of the Company in the year 1947, and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been the Chairman since the date of his appointment. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his appointment as a Director be made and/or approved by a special resolution in accordance with the provisions of Section 261 of the Act.

SALT FARMING IN THE U.S.

In the State of Utah is a brilliant blue lake about 75 miles long and 50 miles wide. This is the Great Salt Lake, or inland sea, whose waters have eight times more salt than the ocean, and the salt is so buoyant that no one can sink in the lake. Geologists have estimated that there are about 5 billion tons of salt in the lake, or enough to supply the world for a thousand years. Water from mountain streams and melting snow pours into the lake but escapes only by evaporation. The lake has no outlet.

In 1847, when the first Mermon settlers came into the Salt Lake Valley, they began to take salt from the lake waters, using crude methods. Now a large salt "farm" has been established, and salt is harvested as other farmers harvest their crops. Salt water is taken out of the lake in the spring, left to dry out in the long hot summer days, and brought in to the factory in autumn. Large pumps take the water from the lake at the rate of 10,000 gallons a minute, and pipes or flumes carry it to the salt farm four miles away. The water is then left in what are called evaporation beds during the summer months. When the sun has evaporated all the water, it is covered with fresh water. When this water has evaporated pure salt is left. Then the harvest begins. Tractor-drawn ploughs break up the beds of rocklike salt. Harvesting machines follow with mechanical buckets which scoop up the salt, 700 lbs. at a time, and pile it in huge piles.

The salt piles are left for several months, then loaded in cars and taken to the factory where the salt is dried and cooled in huge revolving drums. It then enters a rotary dryer where a hot flame takes the moisture from the salt. After the salt has been heated, dried and cooled, it is crushed and screened to the proper size grains for its intended use. Iodine is added to the salt used to season food, and calcium phosphate is added to salt used for cattle.

There are more than 14,000 known uses for salt and for the 34 elements which come from salt. In the medical world, salt is used to help make insulin, and in manufacturing other medicines and drugs. It is used to season food, to cure meat, and to preserve vegetables. Industry uses salt in making soap, plastics, cloth, and to bleach paper. Cows must have salt to give milk. The need for salt has influenced history. Wars have been caused by taxes on salt. Towns and cities have risen near salt deposits. Salt has been used by many countries as a medium of exchange. Neither men nor animals can live without it.

Notices

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Forty-first Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m. on Friday, the 28th November 1958, for the following purposes:

1. To receive and adopt the audited Accounts for the year ended 31st March 1958, and the Directors' and Auditors' Reports thereon.
2. To confirm as the final dividend for the year ended 31st March, 1958, the interim dividend on the Ordinary shares declared by the Board on the 12th August, 1958.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider, and, if thought fit, to pass the following Resolution as a Special Resolution.

"That Article 113 of the Articles of Association of the Company be altered in manner following:—

The first two sentences in lines 1 to 13 shall be deleted and the following substituted therefor:—

Remuneration of Directors.—"Unless otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending Meetings of the Directors a fee of Rs. 100 for each Meeting attended by him. Each Director shall also be entitled to receive a share of a commission (to be divided among the Directors in such manner as the Directors may determine and in default of such determination equally) of one per cent. of the net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the Companies Act, 1956 in any financial year. The commission payable to the Directors shall be payable for a period of five years up to and including the financial year ending on the 31st March, 1961, but this provision may be renewed or reviewed from time to time in accordance with the provisions of any statutory enactment from time to time in force and applicable thereto."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED,

F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, 4*th November*, 1958.

N.B.—Explanatory Statement for Resolution No. 5 as required by Section 173 of the Companies Act, 1956, has been sent to all shareholders.

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

THE REGISTERS OF MEMBERS AND transfer books of the Company will be closed from 8th to 25th December, 1958, both days inclusive, in connection with Final Dividend for the second half-year ended 31st March, 1958, payable on or after 26th December, 1958.

By Order of the Board,

For THE AMALGAMATED ELECTRICITY CO., LTD.,

FOR N. C. JAVERI & CO.,

N. C. JAVERI,
Partner,
Managing Agents.

BOMBAY, 30*th October* 1958.

THE KARANPURA COLLIERIES LTD.

NOTICE IS HEREBY GIVEN THAT THE Fortieth Annual General Meeting of THE KARANPURA COLLIERIES, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 29th November, 1958, at 10-30 a.m., for the following purposes:—

(*d*) Cash Bonus on Ordinary Shares at 2½ per cent. free of Income-tax.

Note.—Ordinary Shares issued as Rights or Additional Shares during the year are not eligible to participate in the above Dividend and Cash Bonus.

By Order of the Board,

B. J. WOODLEY,
Chairman.

CALCUTTA, 30*th October* 1958.

COAL

(*Concluded from page 764*)

ments have been made to open 11 schools only, that is, four by the N.C.D.C. and seven by the Ministry of S.R. and C.A. and the question of starting the remaining three schools is yet to be decided. The N.C.D.C has already started four schools, one each at Giridih, Kargali, Talcher and Kurasia for the training of fitters, foremen, supervisors, overmen, shot-firers. Of these four schools, only one is imparting training to surveyors. The first batch of 592 trained personnel will be available by 1959. The N.C.D.C. schools are residential schools at the collieries and it will not, therefore, be difficult to give practical training to students. The schools operated by the State Governments are said to be situated in the coalfields, but at a little distance from the mines. It has, therefore, been found that necessary arrangements should be made for practical training of the trainees at these schools, as well as those to be operated by the industry.

MONEY RATES DECLINE

(*From Our Own Correspondent*)

BOMBAY, 5*th November*

The response to this week's sale of 91-days' Government of India Treasury Bills provided an indication of the persistence of easy conditions in the short-term money market. As against an invitation for Rs. 4 crores, the amount offered aggregated Rs. 10 crores, as compared with Rs. 8.75 crores in the previous week against Rs. 3 crores invited. The average rate of accepted tenders showed a further drop from 2.489 per cent. to 2.458 per cent., per annum. Tenders for next week are unchanged at Rs. 4 crores.

Barring a slight pre-*Diwali* demand towards the close of the week, the short-term money was devoid of any activity. The inter-bank call money rate declined from 1¼ per cent. to 1¼ per cent. per annum among the Exchange banks and big Indian banks, but even at the lower level banks were not interested in borrowing. The rate among the smaller Indian banks was 2 per cent. House money at call continued to be quoted at 3½ to 3¾ per cent. and short-term deposits at 3½ to 2¾ per cent. for one to six months.

A contraction of Rs. 10.26 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 31st October 1958. Notes held in the Banking Department are higher by Rs. 11.44 crores and the consequent rise of Rs. 1.18 crore is covered by small increases in rupee securities and rupee coin. The Central Government's deposits have enlarged by Rs. 22.75 crores, presumably due to month-end receipts. Deposits of banks have declined by Rs. 31.37 crores in contrast to the rise of Rs. 29.18 crores noted in the previous week. On the assets side, the only notable feature is the drop of Rs. 15.08 crores in investments.

The Scheduled banks' statement for the week ended 24th October 1958 discloses a substantial rise of Rs. 24.84 crores in demand deposits and of Rs. 18.98 crores in time deposits. While advances have gone down by Rs. 8.10 crores, bills purchased and discounted are higher by Rs. 4.09 crores, investments by Rs. 5.95 crores and cash balances by Rs. 49 33 crores. Money at call and short notice has also risen by Rs. 1.73 crore.

The Gilt-edged market continued to rule steady, with a further slight marking up of prices in selected counters. The volume of business was, however, small, in the absence of any sustained buying. Despite the continued easy money conditions, institutional support was conspicuous by its absence. 3 per cent. 1986 Conversion Loan had sellers at Rs. 73.15. The Reserve Bank of India continued to be a buyer of 2½ per cent. 1960 at Rs. 99 and of 3 per cent. 1959-61 at Rs. 99.70. 3 per cent. 1963-65 had buyers 5 nP lower at Rs. 96.60 and 3 per cent. 1964 at Rs. 96.65. 3 per cent. 1966-68 was unchanged at Rs. 94, while 3 per cent. 1970-75 gathered 5 nP to Rs. 90.10. 3½ per cent. 1961 hardened by 5 nP to Rs. 100.10 and 3½ per cent. 1963 by a similar extent to Rs. 100.05. 3½ per cent. 1964 found sellers at Rs. 99.90 and 3½ per cent. 1965 at Rs. 99.70. 3½ per cent. 1967 was unchanged at the Reserve Bank's selling price of Rs. 98.95. 3½ per cent. 1968 was on offer at Rs. 98.70 and 3½ per cent. 1967 20 nP higher at Rs. 100.50. 3½ per cent. 1968 picked up 15 nP to Rs. 100.40. The Reserve Bank was a seller of 4 per cent. 1972 10 nP higher at Rs. 100.70. State loans too were dull, with no activity.

In the foreign exchange section, the slight improvement in sterling abroad imparted strength to the rupee. Banks' selling prices of ready dollars declined from Rs. 477.00 to Rs. 476.75 per $100 and their buying price from Rs. 473.50 to Rs. 473.25 per $100. In New York, spot sterling gained from $2.80.19/32-2.80.21/32 to $2.80.23/32-2.80.25/32 Three months' forward was unchanged over the week at $2.80-2.80.1/16, while transferable sterling improved from 279.15-279.25 cents. to 279.30-279.40 cents.

FOODGRAINS QUIET

(*From Our Own Correspondent*)

HAPUR, 3*rd November*

Quiet conditions were witnessed in the foodgrain market during the week under review, due to increasing pressure of new *kharif* crop arrivals, although renewed demand of *rabi* sowings was also being felt. Wheat prices here ruled steady at almost unchanged price level of Rs. 24.50 per maund for average quality and up to Rs. 25.50 for farm produce. Arrivals were slightly better both from rural areas and also by road from unauthorised sources. The State Government is trying to increase supplies and the wheat saved by restricting its sale in the rural areas of east U.P. is being diverted to western districts where more fair-price shops are being opened. Sowings of *rabi* crop still continue in full swing and will finish in a week's time.

Harvesting of paddy is nearly finished and new crop rice is reaching the markets in increased quantities. Prices of superior quality improved slightly, while those of inferior quality were mostly unchanged at: basmati sela Rs. 33 to Rs. 34, mainpuri Rs. 23.25, coarse quality Rs. 20 per maund. Gram prices were slightly depressed during the week due to fall in demand which is now being concentrated to new maize crop. Barley and bejhar prices also declined slightly. Maize is reaching here in large quantities from outside destinations and local stock has increased to about one lakh maunds. Demand is fairly heavy, but under pressure of arrivals, prices have declined fractionally. Jowar and guwar prices ruled quiet and prices (in rupees per maund) were: gram Puniabi 19, barley 17.50, bejhar 17.50, maize 15 to 15.50, jowar 14.37 and guwar 14.25.

Peas ruled quietly steady during the week as local stocks left were poor at 5 *khatties*. Arhar continued to attract good demand in the form of pulses and barring Hapur, arhar stocks in other centres have gone down considerably. Prices of other pulses were quietly easy during the week due to better supplies in the market and prices (in rupees per maund) were: peas dara 18, farm quality 19.50, peas dal 19.75, khatti 17.50, arhar 21.75, arhardal 26.25, urd 19.25, moong 23 to 24.50, massoor 18; stocks peas 5; arhar 70 *khatties*.

Oil and seeds market was depressed during the week in the absence of new driving forces and prices eased slightly in all sections to be quoted now at: Sarson Rs. 26, oil Rs. 68, cake Rs. 13.50, groundnut *desi* Rs. 19.25, oil Rs. 65.50, cake Rs. 11.50. *Kapas* arrivals were at an average of 150 maunds daily and latest prices were upto Rs. 26 per maund for best quality. Cottonseed was quoted at Rs. 14.12 and tara Rs. 22 per maund. *Vanaspati* oil futures and cake baisakh eased in line with ready prices at *Vanaspati* Rs. 36.8 and cake baisakh Rs. 10.40.

GOLD SPURTS AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 5*th November*

A spurt in gold price today was the main feature of the trading in the bullion market during the week under review. Trading during the week was dull with fluctuations confined to a narrow range. Despite the approach of *diwali* demand in both silver and gold was low. Rumours to the effect that duty for import of Tibetan coins had been paid and weaker advices from Calcutta kept the sentiment in silver subdued. Persistent large arrivals of unrefined metal without any corresponding expansion in offtake provided another dampening factor in silver.

Gold, too, was docile during the major part of the week under review, in the absence of any expansion in offtake; in fact, there was a slight contraction in demand in the ready section. Today, however, the yellow metal firmed up, on reports of a haul of a large quantity of contraband gold in Karachi, which it was feared would have otherwise found its way to India. Bulls were somewhat active on this account.

Silver forward (27th November settlement) slowly receded from Rs. 189-9 to Rs. 188-10. After a slight improvement to Rs. 189 on Monday, the white metal reacted again to Rs. 188-10 at the close today.

Ready silver softened from Rs. 188-5 to Rs. 187-7 before closing at Rs. 187-8. The floating stocks of silver are reported to be 1,200 bars. While the daily average arrivals were of the order of 70 bars (including unrefined metal), the offtake was no more than 10 bars per day.

Gold for forward delivery (26th November settlement) gave way from Rs. 110-14 to Rs. 110-5 on Monday, before shooting up to Rs. 111-7 today. The closing was done at Rs. 111-4.

Ready gold came down from Rs. 111-2 to Rs. 110-7 before improving to close at Rs. 111-6. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was slightly lower at 2,500 tolas.

In New York, silver was unchanged at 90.½c., while London prices were reduced again from 78¼d. to 78*d.* for spot and from 78¼*d.* to 77⅞*d.* for forward. Gold improved from 250s. ¼*d.* to 250s. 2*d.*, before finishing at 250s. 1¼*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	5-11-58	Highest	Lowest	29-10-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	111 6	111 9	110 7	111 2

GOOD DEMAND FOR QUALITY TEAS

(*From Our Own Correspondent*)

CALCUTTA, 4*th November*

A mixed trend was in evidence during yesterday's export sales, when offerings aggregated 64,901 chests. The general demand was good, and "teas for price" were keenly sought. The strongest feature of the sales was provided by whole leaf grades, particularly of Assam origin. There was also good demand for the lots possessing bright liquors in orthodox B.O.Ps and O.Fs, but other categories in these varieties eased by 10 to 20 nP. An easy trend was recorded in plain and low medium B.Ps and fannings, while the lots possessing better liquoring and fannings were sold at higher rates. Among C.T.Cs, withdrawals were heavy as the price receded by 35 nP. Legg cut teas also recorded a declining trend. Darjeelings received fair interest.

The quotations in rupees per lb. were: Best Assam C.T.C. fannings 2.50 to 2.70, best Assam C.T.C. B.P. 2.30 to 2.40, clean black pekoe 2.04 to 2.12, medium fannings 1.95 to 2.05, medium B.P. 1.90 to 1.95, plain fannings 1.84 to 1.90, and plain B.P. 1.70 to 1.76.

Export quota changed hands at 2¾ nP. Towards the close the rate hardened to 3 nP.

SLIGHT RECOVERY IN COTTON

(*From Our Own Correspondent*)

BOMBAY, 5*th November*

After last week's sharp decline in prices which continued during the earlier part of the week under review, there was a slight improvement in the last two days of the week. This improvement is attributed to some support which was forthcoming at lower levels and also to rumours of prospects of early abolition of export duty in cotton. There were also reports of crop damage from certain cotton-growing regions. The Export Promotion Scheme which was announced this week has not been received with any great enthusiasm. It is believed that this scheme by itself will not ensure larger consumption of cotton by mills. An encouraging factor from the point of view of the cotton market is that the Committee of the Indian Cotton Mills' Federation, at its meeting held in Bombay on 29th October 1958, has rejected the proposal for a cut in textile production which appears to have been suggested by a certain section of the cotton mill industry. The Committee unanimously felt that unless the present high cost of production was brought down, it was going to be difficult for the industry to improve its position.

I.C.C. Moglai Jarilla March 1959, after opening the week at Rs. 600.50, improved to Rs. 607.75 the same day. On Friday the market was closed due to the death of a member. On 1st November, the market witnessed a sharp decline in prices, the contract declining to Rs. 593.50. On 3rd November it opened at Rs. 596.50 and moved up to Rs. 598.50 on the same day and still further to Rs. 601.75 on the following day. Today, the market was particularly buoyant, the contract touching a high of Rs. 607.75 before closing Rs. 607.25. The following table indicates the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	5-11-58	*High*	*Low*	29-10-58
I.C.C. Moglai Jarilla (March 1959) ...	607.25	607.75	593.50	599.00

In sympathy with the forward section, the spot section also was steady. Some business was done in staple varieties. The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are given below; the figures in brackets being last week-end rates:

Bengal *Deshi* 570 (500); Berar Jarilla 640 (580); Khandesh 725 (620); Vijay 785 (785). *Delivery contracts*: Bengal 565 (560); Mathia 555 (550).

A slight improvement has been recorded from the Karachi cotton market. N.T.R.G. January improved from Rs. 65 to Rs. 65-4 and March from Rs. 65-5 to Rs 65-11. The following are the latest available quotations—in rupees per maund of 82 lbs—for a few popular varieties of Pakistani cotton prevailing at Karachi:

Sind *Deshi* 61; Punjab *Deshi* 58; 4F Punjab Roller 64-14; S.G. 68.14; L.S.S. Punjab Roller 65.14; S.G. 69-14; N.T. Roller 68-14; New 79-2; S.G. 75-14.

Steady conditions prevailed in the Alexandria cotton market during the week under review. Total export sales in new crop up to 15th October aggregated 208.656 bales of 720 lbs. each, as compared with 146,529 bales in the corresponding period in the previous year. The following figures give the export sales of new crop with figures for the sales of previous season's crop:

Karnak: 17,850 (35.361); Menufi 106,243 (35.361); Giza 30 7,193 8,584); *Ashmouni* 51.377 (55,969); Dandera and others 25,993 (859)—Total 208,656 (146,529).

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.00; January 72.00. *Ashmouni*: December 63.55; February 63.17.

Dull trading with continued offerings led to some decline in the Liverpool cotton market. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 22.00; December-January 23.60; March-April 23.40; May-June 23.15. *American cotton mixed growth contract*: October-November 22.13; December-January 23.65; March-April 23.35; May-June 23.10. *Sudan*: November-December 28.25; January-February 28.25; May-June 28.25.

Fluctuations continued to be narrow in the New York cotton market with routine trade buying orders. Weather in the cotton-growing regions is reported to be dry but cold. The latest crop survey by a leading spot firm indicates that cotton picking has made good progress over virtually the entire belt. Ginnings during October were at a record pace with 55 to 60 per cent. of the crop already harvested in the central belt.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-11-58	28-10-58	21-10-58
Spot	36.35	36.25	36.20
December	36.32	36.15	36.11
March	36.73	36.62	36.58
May	36.51	36.36	36.31

YARN STEADY

(*From Our Own Correspondent*)

BOMBAY, 5*th November*

After witnessing easy conditions lasting over several weeks, the yarn market ruled steady during the week under review. The announcement by the Government of the new import policy for the period October 1958-March 1959 would appear to have had no effect on the market. The steadiness was induced by the approach of *Diwali* and the New Year and the prospects of better offtake dur-

ing that period. Stocks at many of the consuming centres were also reported to be lower.

In the art silk yarn section, 120 Japan was steady at Rs. 5.19, and 120 Italy at Rs. 5.75. Among indigenous yarns, National Rayons 150 bright cones first grade improved by 16 nP to Rs. 4.47.

Staple fibre yarns (40x2) December delivery was a shade lower at Rs. 606, as against Rs. 609 last week-end. In the spot section, 40x2 Kohinoors climbed up by 6 nP to Rs. 3.28 and Citys by 3 nP to Rs. 3.22.

In the cotton yarn section, ten counts Moderns were maintained at Rs. 13.25 as also forty counts Moderns at Rs. 25. Among eighty counts Mahendras went up by 50 nP to Rs. 68.50.

The import policy for artificial silk yarn to established importers for the period October 1958-March 1959 period was announced on the 31st October. Under this policy, 5 per cent. quota of art silk yarn for six months has been given to established importers. Established importers should notify the Textile Commissioner, Bombay, the actual import of art silk yarn effected by them against their quota licences granted to them in the October 1958—March 1959 period, and its sales should be made at the prices fixed by him. Imports of goods now prohibited are: (*a*) art silk yarn of deniers between 101 and 119, 121 and 149 and 151 and 160; (*b*) double and fourth quality yarn; (*c*) art silk thread; (*d*) acetate yarn of 120 and 150 deniers; (*e*) bright viscose yarn of 150 deniers.

Acetate yarn, both of bright and dull quality of 120 and 150 deniers, can be allowed to be imported only up to 10 per cent. of the face value of the licences. Import of 120 deniers bright will not be allowed more than 10 per cent. of the face value of the licences.

The import of staple fibre yarn under the above licences is banned. However, staple fibre yarn of 80 counts and above on an *ad hoc* basis may be allowed in consultation with the Textile Commissioner. Normally, licences of actual users will be valid only for the import of art silk yarn. Request for import of synthetic yarn against these licences can be considered only on an *ad hoc* basis in consultation with the Textile Commissioner. Such permission will not, however, be granted for a value higher than 15 per cent. of the licences for the current licensing period. Such permission will be granted only to those mills which have used such yarns in the past or have installed special equipment for such synthetic yarns. A specific ceiling has also been set apart for licensing of art silk yarn under the Export Promotion Scheme.

A quota of 7½ per cent. for six months has been fixed for the import of combed cotton yarn of 80 counts and above. The quota licences will be subject to the condition that the established importers will ensure that goods imported against their licences are sold by them and/or their agents at prices not exceeding the pre-October 1958 level.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	5-11-1958	29-10-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Jaran (per lb.)	5.91	5.91
150 Jaran (per lb.)	5.44	5.56
120 Italy (per lb.)	5.75	5.75
150 Italy (per lb.)	5.62	5.75
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October		596.00
40 x 2 December	606.00	609.00
40 x 2 Kohinoor (per lb.)	3.28	3.22
40 x 2 City (per lb.)	3.22	3.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	12.25
20s Modern	16.75	16.75
30s Hind	19.00	19.50
40s Minaxi	24.91	25.00
60s Finlay	59.00	59.00
80s Mahendra	68.50	68.00

LANDSLIDE IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, 5*th November*

Distinctly bearish conditions prevailed in the local oilseeds market during the week under review. Lack of foreign demand and heavy arrivals brought about a landslide in prices of oilseeds. The bearish undertone that prevailed in the spot market aggravated the declining trend in futures.

Groundnut February 1959 contract suffered a serious setback during the week. While the tight ready position offered good support during the previous week, the tables were turned against buyers abruptly and prices continued to slump during the major part of the week. Arrivals from Khandesh and Mysore were large. Buyers were hesitant in view of the expectations of a sizable fall in prices, especially after *Diwali*. As a result, groundnut February contract which stood at Rs. 162.12 last Wednesday slumped to Rs. 160.75 today. Bold ready fell from Rs. 37 to Rs. 34.50. Coromandel variety, similarly, declined from Rs. 37.37 to Rs. 35.12. Khandesh quality receded, in sympathy, from Rs. 37.37 to Rs. 34.50. Groundnut oil ex-mill, after fluctuating within a narrow range, receded from Rs. 20.87 to Rs. 18.62. Railway receipt lost a like amount to finish at Rs. 18.50.

Castorseed May 1959 contract moved down considerably over the week owing to lack of any fresh buying support. The marked disparity between the futures prices of groundnut and castorseeds would appear to have brought selling in the latter. The reduction of freight rates by $5 per ton effected by the U.S. Conference Lines, it was expected, would bring about a revival of U.S. demand for castor oil. These hopes have not so far materialised and this affected sentiment in castorseed. At any rate, castorseed came down from Rs. 144.37 to a low of Rs. 140.75. Ready Madras finished today at Rs. 28.25, as against Rs. 28.87 a week before. Kanpur quality, which stood at Rs. 27.75, relapsed to Rs. 27.12. Castor oil B.S.S. declined from Rs. 16.50 to close at Rs. 16.25. Commercial quality fell by 50 nP to Rs. 14.50.

Linseed May 1959 contract continued to be subdued throughout the week and the quotation dropped from Rs. 30.56 to Rs. 29.94 today. Rumours regarding fresh Australian orders were in the air, and in spite of these expectations, prices failed to hold ground. Bold ready fell from Rs. 34.25 to Rs. 33.75. Linseed oil fell from Rs. 17.75 to Rs. 17.56.

Cottonseed February 1959 contract, after ruling dull throughout the week, closed at Rs. 103.50, as against Rs. 104.00 last week-end. Among other seeds, kardiseed bold ready receded by 25 nP to Rs. 21.50 today, as compared with last Wednesday. The Government of India has extended the validity period of the export quota of 5,000 tons of kardiseeds released on 23rd July 1958, up to the end of March 1959. A press note issued in this connection says that nigerseed and kardiseed, the export of which was licensed hitherto on "first-come-first-served" basis, would hereafter be allowed to be exported against registration of contracts entered into with foreign buyers with the port officers concerned. Exporters found to have registered non-genuine contracts will render themselves liable to blacklisting. This announcement had no effect on the prices of kardiseed. Nigerseed Madras quality was subjected to irregular movements and declined from Rs. 33-50 to Rs. 33.00 over the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	5-11-1958	29-10-1958	22-10-1958
Groundnut—	Rs.	Rs.	Rs.
Feb. 1959	160 75	162 12	163 75
Bold ready (per cwt.)	34 50	37.00	38.00
Linseed—			
May 1959	29 94	30.56	30.87
Bold ready (per cwt.)	33 75	34.25	34 25
Castorseed—			
May 1959	140 75	144 37	145 37
Madras (per cwt.)	28 25	28.87	29.00
Cottonseed—			
Feb. 1959	103 50	104.00	104.00
Groundnut oil—			
Ex-mill ready (per quarter) ..	18 62	20 87	21.37
Castor oil—			
Commercial (per quarter) ..	14 50	15.00	15.00
Linseed oil—			
Ready	17 50	17.75	17.87

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 5*th November*

In the context of low spot stock position and active festive demand for sugar, spot values ruled very firm during the week under review. Ex-mill values are fully maintained with the notable exception of one prominent Deccan miller who has slashed his ex-mill price in 'D' grade sugar to Rs. 101.25 which happens to be the lowest price available in Bombay-Deccan area.

Arrivals of indigenous sugar into the city by rail amounted to 22,100 bags and the prices for small, medium and large grain sizes are: Rs. 107, Rs. 108-109.50 and Rs. 110-Rs. 117 per bag respectively.

The undertone of the market is fully steady.

* * * *

HAPUR, 3*rd November*

Sugar prices ruled quietly steady, thanks to pre-*Divali* demand. The supply position was reported satisfactory. Crushing for the new season here in west U.P. is to start shortly in some factories. Latest prevailing prices for crystal mill delivery wholesale in the Muzaffarnagar market were: Deoband C29 Rs. 35.25 to Rs. 36. (damaged quality), Amroha D29 Rs. 35.81, Bijnore E29 Rs. 35.56, Seohara C29 Rs. 36.37, Dhampur D29 Rs. 35.62, Kashipur D28 Rs. 35.62.

Sugar prices in the Kanpur market remained steady on renewed demand and prevailing prices were: Ex-mill controlled Rs. 36.12 per maund. Spot per bag C29 Basti Rs. 105, Gola Rs. 102-4, D29 Gola and Burhwal Rs. 101-4, Waltergunj, Tulsipur and Balrampur Rs. 101, Lakhimpur and Hargaon Rs. 100-12.

Khandsari prices ruled quietly steady. New production has not yet begun as crushers prefer to manufacture *gur* due to prevailing high prices. *Khandsari* prices ranged between Rs. 29 and Rs. 35 per maund according to quality.

New *gur* arrivals have mounted to an average of 5,000 maunds daily, but due to good demand from consuming areas, prices are steady. Total arrivals from the beginning of the current season were put at 45,000 maunds, the corresponding figure last year being 21,000 maunds. High prices are the main attraction for producers to manufacture *gur*. Prevailing prices were: Rs. 20 to Rs. 22.50 per maund according to quality.

Gur arrivals in the Muzaffarnagar market have gone up to an average of 2,000 maunds of *gur* and equal amount of *shakker* and latest prices were: *Gur* chakku Rs. 22 to Rs. 23 per maund, Khaupapar Rs. 22 to Rs. 23, *shakker* dara Rs. 24 to Rs. 27, masala Rs. 27 to Rs. 28.

Gur future prices ruled steady during the week in heavy speculative bouts of buying and selling. Opening at Rs. 13.62 on Monday last, *gur* delivery, after touching the highest of the week at Rs. 13.87, was today quoted at Rs. 13.71.

PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 5*th November*

Pepper in Bombay is much below replacing parity. Hence, Malabar black pepper, both in specific delivery and in A.S.T.A. ruled steady. December and February specific delivery moved between Rs. 500 and Rs. 520 and Rs. 510 and Rs. 530 respectively. Cochin ruled steadier under support by the bulls who in anticipation of sizable demand from the U.S.S.R. in the near future, were continuous buyers for garbled for December in the forward ring. Improvement in the imported spices in view of the New Import Policy proved a supporting factor.

Though bears are making exaggerated estimates of the new crop of Malabar pepper, analysts put it at not more than 26,000 tons. Exportable quality of the new crop is not likely to come in the market before the end of November. Bears are cautious when making short sales in December delivery.

The overall import from Singapore and India into the U.S. during September was in the vicinity of 760 tons which was much below the monthly requirements of about 1,500 tons during the autumn. Spot in New York failed to improve in view of the grinders lack of interest in expectation of lower prices when the new crop Malabar starts moving in the market.

Singapore is reported firm. Sarawak Black is quoted at Str.$73 and white at S.r.$126. There are inquiries from the Continent for Sarawak white and black as traders there have not bought pepper for a long time now. Pressure of arrivals from Lampong is reported to be on the wane. Russia is likely to make purchases of Lampong on barter basis with Indonesia as China did in rubber.

The future of pepper appears to be promising as the over-all supply is likely to prove short of the world requirements. It is only a question of time before this factor asserts itself against sentiment.

Ungarbled at Alleppey and Cochin is quoted highest and lowest at Rs. 575 and Rs. 550 respectively. Calicut moved between Rs. 580 and Rs. 600.

In A.S.T.A. December was done at $0.23½ and November at $0.24. In specific delivery, December, after going down to Rs. 500, improved to Rs. 520.

Today's nominal quotations are: Ready Rs. 72 per Bengal maund; December 1958 Rs. 520-25 and February 1959 Rs. 527-32 per candy of 5¼ cwts.

LOW MEDIUM TEAS IN GOOD DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 30*th October*

1,722.044 lbs. were on offer in Sale No. 31 which was held on Tuesday 28th October. Teas from the Nilgiri district continued to be very useful with some flavoury types on offer. Low medium teas generally showed improvement. The sale opened to a good general demand, particularly for low medium types, which were steady. The improved medium and good medium brokens were dearer, but the equivalent fannings were a weak feature of the sale. Best liquoring highgrowns met with some support, but sold below valuation and buyers followed quality closely. Whole leaf teas met with a useful enquiry and were irregularly dearer. Tippy teas met some competition, but prices were barely steady. The quotations were: Low medium Re. 1.55 to 1.65; medium Re. 1.70 to 1.95; good medium Rs. 2.10 to 2.40; and quality Rs. 2.90 to 4.75.

The average price realised in sale No. 31 was Rs. 2.18 per lb., as against Rs. 2.25 in the previous sale and Re. 1.86 per lb. in the corresponding sale of last year.

London Market: Sale of 27th October 1958.—Best C.T.C. and orthodox Assams strong to dearer. Poorest sorts irregular and sometimes easier.

Sale of 28th October 1958.—Irregular and easier.

Colombo Market: Sale of 27th October 1958.—Strong active demand. All kinds dearer, Dimbula Dickoya brokens up 20 to 30c., mediums up 10 to 15c., small leaf lowgrown brokens up 10c., Gulf types up 15 to 20c.

Sale of 28th October 1958.—Best dusts barely steady. All other off grades strong demand firm to dearer.

Calcutta Market.—No sale this week.

Export Quota.—The market has been rather quiet during the week, and our last business was done at 3 nP. At present, there are sellers at 3¼ nP and buyers at 3 nP.

Forthcoming Auctions.—Sale No. 32 will be held on Wednesday, 12th November 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Dust sale W.*—425,000 lbs. Strong but irregular demand. Coloury mediums dearer. Others steady, except best liquoring, which are easier."

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 4*th November*

While there was a small improvement in the prices of jute goods, the fibre market was extremely quiet during the week under review. An encouraging sign relating to jute goods was that U.S. buyers were now gradually increasing their activity. This was in accordance with earlier expectations and went to show that industrial activity in the U.S. was picking up. The report of increased burlap consumption for the month of September and the decline in stocks in the United States continued to encourage sentiment. The price of hessian improved and, in sympathy, a fractional improvement was also noted in the prices of heavy goods. Even at the higher level the price of ready B. twills was below the I.J.M.A. minimum level. Reports that buying interest in hessian from Argentina was developing also enlivened sentiment. Already, hessian stocks were pitiably low, and the statistical position continued to be of standing strength. This suggested the need for more sacking looms to be transferred to hessian. This shift has been in progress since the past three months, but its effect on the sacking goods statistical position has been negligible.

Production figures for the month of October, as well as stock details as at the end of last month, are awaited with interest, but the likely decline in production on account of the holidays for the *Pooja* spell was also a factor which contributed to a better trend in sacking goods, although business with foreign countries was negligible. It was noted here that following the recent announcement of increased prices for raw jute for export in Pakistan, cloth and yarn prices were revised by manufacturers in Dundee. Even before this increase, producers in Dundee and other countries were unable to meet competition from India. In view of this it is expected that export of jute goods from Calcutta should considerably increase within the next few months. There is a section of the trade here which believe that the improvement would be by such an extent as to force mills to increase production by putting into operation the sealed looms also. Such an eventuality cannot, however, be expected in the near future, since the current stock of sacking goods with mills represents production of a few months.

After the *Lakshmi Pooja* holidays, the markets reopened on Wednesday last on a steady note in jute goods, hessian 40" 10 oz., at Rs. 42.55, being quoted higher than the rate prevailing on the eve of the holidays. The hardening tendency was due to increased activities in the futures market. However, at these levels business did not follow, and on Thursday hessian 40" 10 oz. declined to Rs. 42.35 and B. twills to Rs. 95.85. At this stage, buying interest developed in B. twills, the ready position of which improved to Rs. 96.45. Ready hessian 40" 10 oz., although unchanged, was steady at Rs. 42.35. This was on Friday. Over the week-end, prices for both the constructions improved, hessian 40" 10 oz. being quoted at Rs. 42.75 and B. twills at Rs. 96.60. On good reports from futures, hessian 40" 10 oz. rose yesterday to Rs. 97.00, and on new business in heavy Cee with China, ready B. twills hardened to Rs. 43.10.

With little or no buying support, raw jute was featureless. Assam bottoms gave way to Rs. 22.75 from Rs. 23. and Daissee bottoms to Rs. 25 from Rs. 25.50. The announcement of higher prices in Pakistan did not have any effect on raw jute prices here. However, it was time that prices of raw jute here improved, and growers rewarded for the bumper crop which has made India self-sufficient in this season. Since most of the crop in Pakistan had passed away from growers' hands to Pakistani cultivators. The latest quotations for the different varieties of raw jute here for November-December delivery are:—

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	30.00	27.00
Northern	30.00	27.00
Indian:		
Northern	24.50	22.00
Assam	25.25	22.75
Orissa	27.75	25.25
Desal	23.75	21.25
Murshidabad	23.00	20.50
Jundil	22.50	20.00
Daisee	25.50	24.00
Uttar Pradesh	22.50	20.00
Daisee mesta	23.00	20.50

Pucca bales 1st marks	.. ..	150.00

METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, 4*th November*

Prices of base metals registered a sharp rise during the week under review, mainly due to higher demand. The market was disappointed with the latest import policy for the six months to March 1959, announced on Friday last. The cancellation of quotas in respect of copper, zinc, and lead (all virgin) was regretted, as this would put out of business the established importers. Only actual users, both in the scheduled and non-scheduled industries, would in the future be granted licences for the import of the abovementioned metals in virgin form, and this would mean very little need for market dealings in the virgin metals. The established importers would have to get themselves busier with importing scraps, since they have been allowed quotas for importing scraps of copper, brass and German silver. Recently, industrial consumers obtained licences for the import of copper, brass, nickel and other metal scraps. The point mentioned in market circles was that the established importers had gained considerable experience in the import of virgin metals. Not to make use of their experience would be a loss to the actual consumers. It was hoped, therefore, that actual users getting licences could entrust the actual import operations to the established importers. Such a method would save the actual users much valuable time, and might prove to be of mutual benefit. It was realised here that, unless licences for actual users were issued with speed and acumen, shortages could not be avoided. The Government's policy announcement no doubt stated that the procedure for submission of application forms had been revised with a view to speeding up the issue of licences.

In electrolytic zinc, there was good demand and transactions were plentiful. In the result, the price shot up to Rs. 82 from Rs. 78.50. A shortage was naturally felt, although fresh arrivals were anticipated. The fact that the Bombay price was a few points lower than the Calcutta rate diverted some business from here to that centre, but a fair quantity from Bombay was on the way to Calcutta to participate in the higher price. From Rs. 69.50, lead hardened to Rs. 72.00, mainly in sympathy with zinc. The price for copper in both New York and London was moving up, due to loss of production in the Rhodesian mines on account of the strike, and to labour troubles in some mines in Canada and the United States. Locally, tin was steady at Rs. 567, as against Rs. 556 earlier. Demand was, however, dull, but the improvement in the price was due to higher advices from Singapore and London.

LINSEED QUIETLY STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, 3*rd November*

Owing to the intervening holidays, trading has been almost at a standstill; prices have shown hardly any change, but the undertone has remained quietly steady. Present stagnant conditions are the outcome of scarcity of seed and lack of crushing parity. None of the larger crushers are operating with a resultant local shortage of oil and oilcakes. The oil market has suffered a further setback and the local demand is negligible following a sharp decline in mustard oil prices. It is reported that Bombay shippers have made some sales to Australia at marginal prices. The latest quotations are as follows: Ready Rs. 25-14 and November Rs. 25-12 per maund.

BRISK DEMAND FOR KIPS

(From Our Own Correspondents)

MADRAS, 3*rd November*

U.K. enquiries for kips have been brisk; and on certain lines half to one penny per lb. advance has been paid. Demand continued selective and emphasis was on light weights and lower grades. Due to the military regulations in Pakistan, raw stocks from East Pakistan have not been available for E.I. tanners. In North India, merchants have been holding their raw stocks for higher prices. Prospects of obtaining higher prices from the U.K. are not bright, because sales of finished leather in U.K. have been slow.

There were good enquiries for lower grade tanned hides and calves for inland trade, and prices improved a little which prevented sales to the U.K. There was some buying of buff hides and calves from exporters to the U.S.

Prices of tanned goat skins were steady though shipment business was small. Arrivals of medium tannage sheep skins have been large and prices look weak.

* * * *

KANPUR, 3*rd November*

During the week under review the hides and skins market ruled steady. The trend of prices as far as the main categories of wet salted cow and buff were concerned was upward. There was a keen demand for superior buff as well as the fresh goats and sheep. The main purchasers were the local tanners and Madras dealers. The latest quotations are as follows:—

Wet salted cow, 1st grade Rs. 400, 2nd grade Rs. 360 and 3rd grade Rs. 275 to Rs. 300 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. 1 oz. per rupee; goat, 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces; sheep, 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces.

SURVEY

(Concluded from page 754)

out that port operation and development had been the subject of study by two expert missions from abroad. The first mission deputed by the U.K. Government under the Colombo Plan in October 1957 visited the major ports of Calcutta, Bombay, Visakhapatnam and Madras and gave advice on cargo handling and other port operational problems. Accordingly, orders for a large portion of the equipment recommended by the mission were placed by a special purchase mission headed by the Transport Secretary. One of the important recommendations made by the U.K. mission was the appointment of general managers for port administrations in order to co-ordinate the activities of the heads of departments and enable the chairmen of the port trusts to give more time to important matters of policy. Such an officer was appointed at Calcutta and recently in Bombay. Appointments at other ports are expected to follow.

The second mission was an expert team sent by the World Bank to make an on-the-spot study of the development projects of the ports of Calcutta, Madras, Visakhapatnam and Bombay. The mission came in response to the application made by the Government of India to the Bank for a loan to cover the foreign exchange component of the expenditure estimated at Rs. 40 crores. Negotiations with the Bank for the grant of loan to the above ports proved successful and agreements were executed between the Bank and the two port authorities of Calcutta and Madras. The loans were for an amount of 29 million and 14 million dollars in various foreign currencies to the two port authorities of Calcutta and Madras, respectively. These loans carry interest at the rate of 5½ per cent. per annum, a commitment charge of ¾ per cent. per annum on the amount of loan not withdrawn from time to time and are repayable in 15 years commencing from 1st April 1963. The loans have been guaranteed by the Government of India. The Minister stated that the foreign exchange requirements of practically the entire development programmes of the two ports would be met by these loans.

The requirements of Bombay and Visakhapatnam ports were not taken up for consideration by the Bank. The reason for excluding the latter port was that it was not run by an independent statutory port authority but administered by the Central Government and hence the question of the Bank giving a loan to that port did not arise. The Minister, however, hastened to add that the provision of facilities for stepping up ore exports through Visakhapatnam port would be covered by aid of Rs. 2 crores from the U.S. President's Asian Development Fund. He said that the balance of the requirements for the port would be met from the free resources, "meagre though they may be." As regards Bombay, the main outlay is on two large schemes—dredging of the main harbour channel and the modernisation of Prince's and Victoria Docks. The World Bank Mission opined that these schemes were not ripe enough for the consideration of a loan from the Bank. It would appear that the trustees have been asked to formulate and finalise their schemes quickly for presentation to the Bank. The Minister revealed that the Government was securing foreign assistance to the extent of five million dollars for the purchase of two suction dredgers for Bombay port and three dredgers for catering to the dredging requirements of the new major port of Kandla and of a selected number of minor ports.

As regards Kandla and Cochin, the Minister observed that the first stage in the development of Kandla port comprising the construction of four cargo berths and allied facilities was practically over and that the construction of two additional berths for facilitating the export of the new-found ore from Rajasthan had been taken up. The Cochin port administration had made good headway with the execution of the schemes covered by the Plan and it was thought that almost the entire plan programme of the port would be executed by the middle of 1960.

The Minister also disclosed that the Government had decided to constitute a dredger-*cum*-survey launch pool consisting of three dredgers, a fleet of survey launches and other equipment costing over Rs. 2 crores to deal with the problem of siltation. Each of the dredger units would be based at the ports of Kandla, Bombay and Visakhapatnam and would be employed for undertaking dredging work at Kandla and at selected intermediate ports, numbering eighteen. When the dredging, as contemplated, was carried out, the minor ports would be able to come to the aid of major ports in times of congestion and other difficulties. A few of the minor ports were being developed to the requisite standard so as to cater to the requirements of additional ore export traffic. It is noteworthy that, when the works now contemplated are executed, the port capacity will rise to a level of about 40 million tons.

MEASURES TO CURB RISING PRICES OF DYES

A meeting of the manufacturers, established importers and consumers of coal-tar dyes was held in Bombay on the 30th October, Mr. D. S. Joshi, Textile Commissioner, presiding. They discussed ways and means of curbing the rapidly rising prices of imported dye-stuffs and the possibility of controlling the imported articles at reasonable rates based on c.i.f. rates. A small sub-committee was appointed to frame a code of fair trade practices for the industry. The recommendations made by the working group set up earlier were accepted. The meeting adopted its principal recommendation that steps should be taken to ensure that mills and other consumers did not hold stocks of dyes of more than two months' consumption in view of the increased availability of indigenous production.

In order to ensure increased production of certain items, particularly the solubilised vat dyes, the meeting felt that adequate provision should be made to secure raw materials. The working group had suggested that raw materials should be procured for items like fast colour salts, fast colour bases and some naphthols. It was also suggested that the small-scale manufacturers of dyes should be assured of adequate supply of raw materials.

The meeting suggested that the indigenous producers and established importers should broad-base their pattern of distribution particularly of items which are in short supply. The office of the Textile Commissioner will periodically scrutinise consumption trends and advise producers regarding the need for modifying the pattern of production.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 31st October 1958

BANKING DEPARTMENT

LIABILITIES	Rs.	Rs.

* National income at factor cost—the aggregate of all income earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, June 1958.
† Preliminary estimates (at 1948-49 prices) are based on the fifth issue of the annual paper on national income issued by the Central Statistical Organisation.
†† According to budget-speech of Pakistan Finance Minister.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. *i*=Interim Dividend. *f*=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Includes bonus. (R) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954 § On old Capital.
‡—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. F.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17·6 includes an interim dividend of Rs. 7·5 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

GROWTH OF CORPORATE FINANCE

RESERVE BANK'S SURVEY

AN article published in the October 1958 issue of the *Reserve Bank of India Bulletin* analyses the balance-sheets and profit and loss accounts of 1,001 companies for the years 1955 and 1956. A similar article, based on statistics pertaining to the finances of 750 public limited companies for the years 1950-55, was published in the September 1957 issue of the *Bulletin*. But as these statistics did not include many large public limited companies, which started functioning during the first Plan period, and also some very large private limited companies converted into public limited companies during the same period, the scope of the analysis has now been enlarged by including such companies. The new series of statistics pertain to 1,001 companies, comprising approximately three-fourths of the sector covered. Many important series relating to rates of capital formation, profits, etc., obtained by the present analysis for the years 1955 and 1956, are shown along with those of the earlier sample of 750 companies for the years 1951 to 1955 for purposes of comparison.

The study reveals a very marked increase in assets, which carried the rate of the increase of both fixed assets and inventories to the highest level for the post-war period. This expansion was accompanied by a sizable rise in sales, profits, tax provision and dividends, with virtually no change in retained profits. In the financing of capital formation, a feature was the emergence of external sources, in place of internal sources, as the major contributing factor.

The following table gives the chief indicators of the growth of the 1,001 companies:

Growth of the 1,001 Companies

(Amount in crores of Rs.)

	1955	1956	Percentage Increase
Paid-up capital plus free reserves (net worth) at the end of the year ..	7,42	8,09	9.1
Gross Fixed Assets at the end of the year ..	9,32	10,65	14.3
Net Fixed Assets at the end of the year ..	5,25	6,21	18.2
Inventory at the end of the year ..	4,17	5,06	21.4
Total Assets (net) at the end of the year ..	14,20	16,38	15.3
Total Income during the year ..	16,03	18,19	13.5
Sales during the year ..	13,88	15,51	11.8
Profits before tax during the year ..	1,17	1,28	9.7
Profits after tax during the year ..	66	70	5.0
Dividends during the year ..	39	42	9.0
Retained profits during the year ..	28

VOL. XCVII. No. 2487 BOMBAY, 15th NOVEMBER 1958 PRICE: Re. 1.50

MORE REGIMENTATION AHEAD?

IGNORING the advice of the Planning Commission, the Central and State Governments have decided that the public sector's outlay on the second Plan shall be Rs. 4,500 crores. This is the meaning of the decision reached by the National Development Council at its two-day session held at New Delhi early this week, for the Council consists of Central Ministers and the Chief Ministers of all State Governments. It is, therefore, the highest body competent to take final decisions on issues of national importance. Nevertheless, it sounds rather unrealistic that the recommendations of the Planning Commission, of which the Prime Minister, the Finance Minister and the Labour Minister are the principal members, should have failed to weigh with the Council, of which also they are members. There is, however, no need for surprise at this incongruity, as such things are not rare in this country. Indeed, this has been the feature of the second Plan right from the beginning and the virtue of flexibility has been quoted in support of it. "Aim high; never mind, if you fall and break your limbs in your attempts to reach the goal." This has been the policy of the Government. The risk of not being able to reach even a relatively modest goal as a result of injury to the limbs has not deterred it. And those who sounded a note of caution to this effect have been scoffed at. Nor has the Government's experience in the past three years made any impression on this policy.

It may be argued that the Council's decision to stick to the figure of Rs. 4,500 crores reflects a new determination to carry the Plan through. But this argument is not very convincing in the light of the Planning Commission's reasons for pitching the target at a lower figure and of the professed inability of State Finance Ministers to raise additional resources through taxation. It may be recalled that, in the Planning Commission's appraisal of resources placed before the National Development Council in May last, the total resources at the Centre and the States for the five-year period was worked out at Rs. 4,260 crores. Yet the Council decided that the total outlay should be maintained at Rs. 4,800 crores, but that the Plan be divided into two parts, Part A of the Plan involving an outlay of Rs. 4,500 crores and Part B with an outlay of Rs. 300 crores. It was stated that Part A would include projects and programmes directly related to an increase in agricultural production, "core" projects and projects which have reached an advanced stage and other "inescapable" schemes. The rest of the projects and programmes would constitute Part B of the Plan. It was understood that the latter part would be taken up as and when additional resources became available. But even Part A was fixed at a level Rs. 240 crores in excess of the then estimated available resources, including a provision of no less than Rs. 1,200 crores to be raised through deficit financing. It was, therefore, obvious that there was no chance at all of Part B being taken up for implementation before March 1961, the end of the second Plan period. Now none talks about Part B, and Part A has become synonymous with the second Plan. Indeed, towards the close of September, Mr. Gulzarilal Nanda, Minister for Planning and Labour, firmly told Parliament that the Government had no intention of exceeding the limit of Rs. 4,500 crores. By that, he virtually meant that Part B had been abandoned. Almost everyone knew that this would happen. And yet why was Part B created by the National Development Council? Why were not the people straightaway told that the second Plan of the public sector had had to be cut to Rs. 4,500 crores? Politics, the desire to save face, was the only obvious answer.

In September and October last, the Planning Commission reviewed the position, held talks with the State Governments and tried to estimate the outlay and resources for the next two years—that is, 1959-60 and 1960-61—in the light of performance so far since the commencement of the second Plan. Following this study, the Commission has come to the significant conclusion that it will not be safe to resort to deficit financing to the tune of Rs. 1,200 crores, as was expected in May last. It has given several pertinent reasons for holding this view. It may be noted here that, of the total outlay of Rs. 1,496 crores in the first two years of the Plan (Rs. 635 crores in 1956-57 and Rs. 861 crores in 1957-58), nearly half or about Rs. 702 crores were found through deficit financing. The outlay in the third year (1958-59) of the Plan is estimated at Rs. 960 crores, of which Rs. 220 crores are to be found through deficit financing. This means that, in the first three years of the Plan, deficit financing will have been of the order of Rs. 922 crores. Actually, it will be a little more, as a good part of the larger borrowings this year are of an inflationary nature, in that they have not been met from the savings of the people but from the deposits of commercial banks. If the May estimate of Rs. 1,200 crores to be found through deficit financing for the whole five-year period were to be retained unchanged, it would mean that not less than Rs. 280 crores should be found through created money in the fourth and fifth years. The price situation is not favourable for such a large dose of deficit financing.

The Planning Commission has rightly argued that, with prices at the present high levels and with growing pressures for increase in wages and salaries, it is necessary to avoid further deficit financing. Further, there is no longer the "cushion" of sterling balances to take care of the inflationary impact of deficit financing. Having said all this, the Commission has still provided for deficit financing of Rs. 1,092 crores for the five-year period, that is, Rs. 170 crores for the last two years of the Plan, on the basis of our aforesaid calculation of such financing in the first three years. Even this provision is on the high side. Apparently, the Commission has proceeded on the assumption that, in the next two years, there would be a substantial increase in food production and that prices of foodgrains would register a distinct fall. Although there are signs that the supply of food in the 1958-59 crop year would be slightly better and that food prices might come down to some extent, these assumptions are big. Accordingly, the estimates of the extent to which the country can safely go in for deficit financing are just guestimates. They are no less than a gamble. The fact that the Commission has placed the estimate of deficit financing at Rs. 1,092 crores, instead of in a round figure of Rs. 1,000 crores or Rs. 1,100 crores, shows that it has drawn up the resources budget not on the basis of what might be available but on the basis of the minimum amount required.

Even on the basis of this guestimate of Rs. 1,092 crores as the safe limit for deficit financing for the whole five-year period, the Commission has come to the conclusion that the outlay on the Plan could be no more than Rs. 4,220 crores, as against its May estimate of Rs. 4,260 crores. In doing so, it has taken Rs. 1,100 crores as external assistance and Rs. 2,028 crores as domestic resources, the corresponding figures in the estimate of last May being Rs. 1,038 crores and Rs. 2,022 crores, respectively. It will thus be seen that there has been a substantial increase of Rs. 62 crores in external assistance, a striking indication of the friendly interest in, and genuine concern for, India by foreign countries, especially those belonging to the free world. The increase in domestic resources is shown exclusively under those raised by the Centre. The States' share has actually fallen by Rs. 65 crores, from Rs. 774 crores to Rs. 709 crores, that is, by an amount which more than neutralises the increase in the estimated external assistance.

It will be noted from what has been stated so far that the earlier assumption of the resources that could be raised by State Governments has turned out to be too generous to be wholly true and that the scope for deficit financing is restricted to a far greater extent than was naively assumed six months ago. Even the latest revised estimate of the limit for created money errs on the high side. There could be no appreciable fall of a sustained nature in price levels if there were to be deficit financing of the order of Rs. 170 to Rs. 200 crores in the last two years of the Plan, for that would almost neutralise the impact on prices of the probable increase in agricultural production not only in the current season but also in the subsequent ones. Thus, the Planning Commission's condition, reiterated by the Finance Minister at the meeting of the National Development Council, that further deficit financing can be undertaken only if prices are brought down, is unlikely to be fulfilled in the spirit in which it is made. It will also be noted that the gap between the estimated resources and the investment target has widened from Rs. 240 crores in May last to Rs. 280 crores. Notwithstanding all this, the Council has decided, as mentioned at the outset, on an investment outlay of Rs. 4,500 crores for the public sector.

Is this a realistic decision? The Council seems to say that it is. Its reasons are the following:

(1) It has been decided that the wholesale trade in foodgrains should be socialised. By implementing this decision, food prices can be brought down.

(2) In order to energise the drive for more food production, a new and expanded programme of co-operative development on the basis of village co-operatives has to be formulated.

(3) The Governments, both at the Centre and in the States, could and should make determined efforts for achieving economies in construction costs. A saving of 10 per cent. in costs, the Prime Minister said, would yield a saving of over Rs. 400 crores which could more than wipe out the aforesaid shortfall in resources.

(4) The drive for savings should be intensified. The suggestion for securing compulsory contributions to saving schemes was discussed

by the Council and it was agreed that Chief Ministers and State Governments would examine the suggestion in favour of compulsory savings and that the subject should be considered at the next meeting of the Council.

Almost every one of the aforesaid proposals means a move towards further regimentation of the economy. This was what this journal feared when the Plan was drawn up on overambitious lines. It is said that, if the community is not prepared to accept this democratic form of regimentation in order to give the economy the minimum start necessary to bring about a large-scale industrial revolution, the alternative would be the much detested totalitarian form of regimentation, meaning thereby Communism. That is a hard choice to make. But the more important question is whether the further controls and compulsion envisaged in the proposals mentioned above will be successful and yield results in good time, so that the "core" of the Plan at least can be saved. We have our own doubts, but would be glad, indeed, if they turned out to be baseless.

By socialisation of wholesale trade in foodgrains, the Council meant "that the main wholesale traders in every State should be licensed and should undertake operation on behalf of the State Government who would take from them such proportion of their purchases as might be considered necessary." In other words, the wholesale traders in foodgrains would be reduced to the status of Government servants. If this proposal is to yield the results expected of it, steps should be taken to implement it immediately. Even then its success remains to be seen. No amount of controls will solve the problem of scarcity. Increase in production is the only effective remedy. Without going into the merits of the suggestion pertaining to co-operation, it looks as though it cannot be effectively implemented in time to be of any use for the second Plan. Economy in construction costs has been talked about for a long time and hardly anything has come out of it. If the present financial stringency were to force better results, it would be a real blessing. But a 10 per cent. saving will yield only Rs. 200 crores and not Rs. 450 crores, as nearly Rs. 2,500 crores out of the Rs. 4,500 crores have already been spent. Attempts to introduce compulsory savings in the past came to naught and there is no reason to think they will succeed in future, what with the sharp increase that has taken place in the cost of living and the heavy additions to taxation during the past three years. Indeed, to talk of compulsory savings, when deficit financing to the tune of Rs. 900 crores has already been incurred and another Rs. 200 crores is contemplated, is to indulge in euphemism. What else are deficit financing and excessive taxation of all sorts if they are not forced savings?

AGRICULTURAL ADMINISTRATION

FEW aspects of India's administration have received less notice than agriculture. This is deplorable, considering that agriculture is still the mainstay of Indian economy. Since the Royal Commission probed into agricultural problems in 1928, no important body enquired into these issues. And even the Royal Commission's report was never implemented in full. The result is that agriculture has continued to be the most under-administered of India's services. The reasons are many but not far to seek. In the first place, there is in all Governments an attitude which allows sleeping dogs to lie. The vast majority of farmers in India are not a slogan-shouting lot and so far have had less political pull than their confreres in other countries. They can, therefore, be neglected without serious political loss. Secondly, Indian agriculture seldom comes into prominence except in years of food shortage. And, when the emergency has been tided over, the authorities relapse into their traditional mood of masterly inactivity. Thirdly, it is somehow thought that, if plans are good on paper and resources are made available, agriculture will be able to deliver the goods. It is seldom realised that the best laid plans of men may go awry, if they are not well administered. The result of these and other factors has been that Indian agricultural administration, like the per-acre yield, has remained stagnant. With a dry-as-dust, unimaginative outlook, the administration betrays all the signs of senility. Some shock treatment which will inspire in it a healthy awareness of its responsibilities and some transfusion of new and more vigorous blood are clearly indicated. To delay this treatment any longer is criminal folly which will condemn Indian agriculture to exasperating backwardness.

Against this background, the Report of the Agricultural Administration Committee (Chairman: Raja Surendra Singh, Adviser, Agricultural Production, Union Ministry of Food and Agriculture) will be widely welcomed, for it spotlights the major weak spots in the administration and suggests concrete measures for toning up the departments. Its detailed recommendations will naturally require further consideration at State levels before they are implemented. But its general approach is characterised by a commendable zeal for reform of a service which is notoriously moribund, antiquated and fast developing into an *ancien regime*. The Committee deserves much credit for its forthright and clear analysis of the problem and its constructive suggestions which should go a long way towards making the administration a valuable lever for upgrading Indian agriculture. The Committee, it may be recalled, was set up in February, this year, following the conference of State Ministers of Agriculture, at Srinagar, in October 1957. It was decided at this conference that a committee should be appointed to recommend a model agricultural organisation in the States. By its terms of reference, the Committee was asked to suggest simplification of administrative and financial procedures in order to expedite the implementation of agricultural production schemes and to suggest a model agricultural organisation in the States.

The Committee's Report carries a powerful indictment of the way the agricultural administration has been allowed to drift. In the course of its enquiry, it was "struck by the prevailing low morale among the agricultural services and the frustration arising from the belief that agriculture hardly ever received the attention that it deserved, was treated in the past and is still being treated as a 'minor' department, only to be remembered in times of national emergency of food shortage." The Committee quotes approvingly the view that the "problem of increasing agricultural production in India is more an administrative problem than a technical one." It also quotes Dr. Esminger of the Ford Foundation to the effect that "there seems to be an almost total absence of any sense of urgency about increasing food production," and that "the conviction that the present agricultural methods must be changed and that it is the crucial business of the Agricultural Departments to change them does not seem to have taken hold."

The cavalier fashion in which the State Agricultural Departments have been handled will become clear from the fact that a large proportion of the posts, varying from 30 to 80 per cent., is treated as "temporary;" promotions are few and far between, and are given largely on the basis of seniority and seldom on the basis of merit. In this connection, the Committee observes: "Many who are competent have to struggle against a cumbersome and outmoded administrative machinery which not only makes it futile to strive to be competent but even encourages and promotes mediocrity, bestows on them responsibility without authority over either the budget or the individuals placed under them, wastes precious weeks and months in perfecting procedural niceties, relegates the field and the scientific worker to the domain of paper, files and accounts and denies technical leadership and recognition in the field of his specialisation." This is a sad commentary on the state of the agricultural administration in the country.

That the Committee's observations have not been formed on the spur of the moment is borne out by the fact that similar views have been expressed by the Indo-American Team on Agricultural Research. The Team observed that, though there was no question about the general competence of the non-technical men in agricultural services, their "knowledge of the deep-seated problems of agriculture was largely superficial and they could not provide the leadership and understanding necessary for the handling of the important technical matters in agriculture." According to the Committee, there are, at present, only a handful of senior competent officers available in the Departments of Agriculture and the gap between them and those who can take over after them is a "disconcertingly wide one." The country, it is stated, suffers from an "acute shortage of experienced agricultural officers who possess vision, initiative and drive." Its broad conclusion is that "technological competence and administrative efficiency are not at the level to be expected and the morale of the Departments of Agriculture is generally low." "Strong agricultural departments," it notes, "cannot be built up with third class human material."

Clearly, the first step towards the reorganisation of the agricultural services is to inculcate in the Government, the legislators, the Press and the public a sense of the importance of these services. The Committee deplores that "willingness to recognise the Agriculture Department as a major and important department appears to be still lacking." So long as this attitude persists there can be no hope of rapid improvement in agricultural production. What is necessary is for the Central and State Governments to declare that they attach the highest importance to the Agricultural Departments and that nothing less than the best talent should be attracted to them. The Committee has rightly suggested that the creation of an All-India Agricultural Service, with scales of pay and prospects on par with the I.A.S., would raise the "morale and efficiency of the agricultural services." We know that there are strong regional prejudices to the creation of such a service. But they should be made to yield to broader national considerations. While there might be some inevitable delay in reaching a decision on this question, it should be possible to reach early decisions on several other recommendations of the Committee, including those which relate to upgrading the intellectual level and broadening the experience of the existing incumbents in the Agricultural Department. Thus, the Committee has suggested the organisation of refresher courses and of job training, the supply of scientific periodicals to the staff and the institution of a system of periodical examination for purposes of selection for higher posts. A somewhat long-term suggestion, though no less important than any other, is that only those who have the necessary aptitude should be admitted to agricultural colleges. But, if the best talent is to be attracted to these institutions, the aspiring young men ought to be certain that their emoluments will not be less than those available in other services. This implies a reorganisation and upgrading of the salary scales in the Agricultural Department. Elaborate suggestions on this aspect of the problem have been made by the Committee. They deserve urgent scrutiny and implementation. The future of Indian agriculture will depend on the calibre and the enthusiasm of the young men who enter the agricultural institutions.

So much for what might be called the "personnel" aspect of agricultural services. Obviously, important as are the right personnel, the entire system too should be improved if the right men are not to be frustrated. The evolution of appropriate administrative procedures has received the attention of the Committee. Much emphasis is laid on co-ordination in "mind and action." For co-ordination to operate successfully, it is insisted that adequate authority and power should be vested in the co-ordinating body at all levels. The Committee deplores that inspection and supervision of the right sort have not been evolved and that they deal with procedures, accounts and irregularities rather than with technological standards. The Agricultural Departments, it is stated, should evolve plans for increasing agricultural production in every village, rather than remain content with executing the targets for distribution of seeds and fertilisers. If integrated plans for increasing agricultural output in each village are executed, the "targets prescribed for the second Five-year Plan will be taken care of automatically."

The familiar drawback in Government expenditure, namely, the concentration of the bulk of expenditure in the last quarter of the official year, is to be found in agricultural services too. A certain measure of relaxation of the rigour of financial procedure, enhancement of spending powers of officers, and organisational improvement in the shape of posting of internal financial advisers in State Agricultural Departments are advocated. This reform is particularly necessary in the agricultural sphere in which seasons cannot be made to wait on the slow-moving official routine.

In the context of continuing urgency of the need for increasing agricultural production, the reorganisation of State agricultural departments brooks no delay. It is of the utmost importance that the Committee's report should be considered at the highest levels, preferably at a conference of State Agriculture Ministers or State Directors of Agriculture and a phased scheme for its implementation is put into effect immediately. Resolute and prompt action on the lines suggested by the Committee will help improve Indian agricultural administration to a level of competence which will do justice to the country's major occupation.

TREND OF COMMODITY MARKETS IN INDIA AND ABROAD

STOCK EXCHANGE TURNS EASY

THURSDAY, 5 P.M.

MARKET GOSSIP

TRADING on the *Moorat* day has ceased to be of any great significance for some years now. Business done on that day is only of a token nature and does not represent any indication of the possible trend in the Hindu new year. In these days of socialist pattern, with the State interfering in every sector of economic activity, astrologers and chartists are at a great discount. The economic analysts are no exception, for, in view of the unpredictable nature of politicians, it is not easy for them to make any reasonable forecast of the future on the basis of available information on current trends. Even the volume of token business on the *Moorat* day has tended to shrink year after year, for more and more among the operators do not attach much importance to it. In fact, the younger generation is tending to regard the day as a holiday to be spent in more enjoyable places than in the trading rings of city markets.

Moorat trading this year was a dull and colourless affair in the share and bullion markets. The cloth market was a little more active than in the past year, apparently because some of the mills, burdened with heavy stocks, wanted to make the best use of this auspicious day by making tempting offers at lower prices. The increase in turnover on that day did not represent any cheerful view of the future. It made a false impression on the cotton market that day. This is evident from the easier trend depicted by raw cotton in today's trading.

* * * *

Almost all commodity markets in India are presenting a drooping trend now, because of expectations of bigger crops. This is particularly true of raw jute, the prices of which have gone down to levels which are the lowest to be seen since 1947. Indeed, these extremely low levels appear to be a source of concern to jute mill owners instead of gratification, for they are worried that, with rice fetching attractively high prices, farmers may switch over from jute to rice next year. If they do so, the price pendulum will swing far to the other side, which, in turn, will upset the outlook for jute manufactures. Obviously, wide fluctuations in prices of raw materials are not in the interests of any manufacturing industry, but it is even more so in the case of the jute industry which has to compete with strongly entrenched substitutes.

The story of raw cotton is not far different. It is true that prices at the time of writing are perceptibly above the lowest levels recorded last week, but they are also well below those touched on the *Moorat* day. Crop reports are encouraging. The latest estimates speak of a crop of about 5.4 million bales and weather reports are on the whole satisfactory. A bigger cotton crop is being harvested at a time when the mill industry is passing through a difficult time. Unless the Government takes off the restraints imposed by it on consumption of mill cloth, the cotton-grower will be badly hit this year. As compared with the prices prevailing a year ago, spot cotton varieties have sustained a fall of about Rs. 100 to Rs. 125 per candy in the short-staple group and about Rs. 130 to Rs. 150 per candy in the medium and long-staple groups. In fact, the heaviest fall has occurred in 13/16" and 23/32" varieties. Mills and traders know very well that the crop this year is a bigger one, that the demand for cloth is not picking up and that stocks of cotton at the end of the season will be in the neighbourhood of 2.5 million bales. None of them, therefore, is in a hurry to accumulate stocks. Moreover, quite a number of traders are said to have suffered heavy losses during the closing stages of the past season and are, therefore, reluctant to invest in the new crop.

There are reports of larger crop in oilseeds also. There has already been a sizable fall in this commodity, but it has not gone far enough. Since the prices of edible oil have considerable influence on cost of living, a further fall in them will be welcome and check the inflationary pressure. Moreover, as this commodity had gone up unduly high last year, a decline in its value will represent nothing more than a long overdue correction.

Among other commercial crops the prices of which are going down are pepper, tea and coffee. Notwithstanding labour unrest in Kerala plantations and the loss of production in the High Ranges, there was a heavy fall in prices of teas at Calcutta this week. Neither the world markets nor the domestic markets for these plantation products show signs of improvement in the near future.

It is a good sign that prices of foodgrains, sugar and *gur* are also going down. There is an urgent need for them to recede to more healthy levels. It is unnecessary for the authorities to take any steps for the present to arrest the downward trend in the prices of any of these food articles. A sizable increase in food production is indicated by unofficial crop reports, but it is unlikely to be so large as to cause a slump in prices.

After being listless on the *Moorat* day, the share market has turned easy. During *Moorat* trading, movements in prices were negligible, indicating thereby that operators did not expect any exciting developments in the near future. Today, when they began to function after taking two consecutive holidays, some of them became somewhat uneasy. The bulls preferred to reduce their commitments. A few big operators who had entered the market only recently were seen getting out in a hurry even at a small loss to themselves. The vast majority of counters have finished the week with losses, the closing rates being the lowest for the week in the case of almost all the leading scrips. Even Belapurs sustained a fall, despite the increase in the proposed distribution from Rs. 18 to Rs. 20 per share for 1957-58.

We would list the following as the reasons for the change in the tone of share market:

(1) Some time ago, the Reserve Bank issued a general, mild warning to banks that they should not help unhealthy speculation in share markets. It has now asked all the scheduled banks to explain the extent to which they are financing *badlas* in shares, the way in which such financing is shown in their books and the names of scrips against which they have been giving credit. This is interpreted in market circles as a preliminary to an attack on excessive speculation in shares. The Reserve Bank, it may be noted, has powers to extend selective credit control to advances against shares also.

(2) Reports from Calcutta show that the bulls in Indian Irons had to pay high carry forward charges: these worked out on an average to an interest rate of 10-11 per cent. per annum.

(3) The deliberations of the National Development Council contradicted the earlier report that the authorities would prune the Plan further. The Council has made it clear that the public sector's investment under the second Plan would not be below Rs. 4,500 crores and that both the Centre and the States should intensify their efforts at raising resources. The State Chief Ministers have agreed to study proposals for introducing compulsory savings and report favourably at their next meeting. In such an atmosphere, the chances of a reduction in taxation are practically *nil*. In fact, Mr. Morarji Desai, Union Finance Minister, told a public gathering in Bombay on Tuesday this week that there could be no reduction in the tax burden in the foreseeable future.

(4) The short-term money market has suddenly begun to show signs of stringency, with inter-bank call money rate shooting up from 1½ per cent. to 2½ per cent. Considering reports of larger agricultural crops, some bankers expect that the busy season which has just commenced will not be as bad as many seem to believe.

(5) The Congress Party has, once again, started talking about ideological reforms, especially for the rural sector. The principle of ceiling on agricultural lands has been finally endorsed by the leaders at the top and the need for enforcing it at an early date has been stressed. Ordinarily, this should act as a bullish factor for shares, but the spirit of reform is such that its effect on urban incomes may be the opposite. There is strong pressure on the Congress Party to apply a ceiling on urban incomes also, so that there may be no invidious distinction between the rural and urban sectors. Nothing immediate may come out of this move, but it is a straw in the wind. Prime Minister Nehru has already decried the tendency to pay big salaries to the administrative personnel in the private sector. He considers it as an unIndian tradition and blames the foreign employers for setting a bad example! He has also said, in effect, that foreign assistance is welcome, but not foreign advice. Another significant decision of the National Development Council is to "socialise" the wholesale trade in foodgrains. All these straws in the wind suggest that the hope that the various speeches made at the Fund-Bank meetings a month ago will influence the leaders of the Congress Party in favour of private enterprise is unlikely to materialise. The fact that, at its meeting this week, the National Development Council paid no attention whatever to the private sector side of the second Plan is an indication of the mind of the powers-that-be.

* * * *

The remarkable recovery in the world's leading stock exchanges, the London and New York markets, continues to attract the attention of financial experts. At this time, last year, world economy was confronted by the American recession which threatened to assume menacing proportions. The threat has virtually disappeared, yielding place to a buoyancy which would have appeared improbable only a few months ago. The *Financial Times* index number of industrial equities (Base: 1st July 1935=100) has touched a high of 212.1 as against the low of 154.4 recorded in February last and 165.2 a year ago. The Standard and Poor's index of American industrials (Base: 1941-43=10) is now standing at 56.24 as compared with a low of 42.76 this year. All this improvement reflects the confidence which has returned to the stock exchanges in these two important centres of world economic activity.

Although world commodity prices show no such remarkable improvement over the past 12 months, they have undoubtedly advanced sizably in the last few weeks. The *Financial Times* index number of commodity prices (Base: 1st July 1952=100) stands at 81.73, as compared with 78.83 and 82.07 a month and a year ago; the corresponding figures for the Dow Jones index (Base: 1924-26=100) are 160.25; 156.44 and 164.44. The overall index numbers conceal several individual variations. Notable instances of a strident increase in prices in the last few days are furnished by copper, lead, zinc and rubber. The recent upsurge in copper is attributed to a strike in the Rhodesian mines and a similar movement in lead and zinc to a demand from the U.S. The rise in rubber is a sequel to Russian buying. The following are the prices of a few commodities in the London market with figures in brackets indicating the prices a year ago:

(Prices per ton)

Aluminium £180 (£197); copper £257½ (£190); lead £76.11/16 (£86½); tin £763¾ (£730½); zinc £75½ (£68¾); jute £90 (£116); sugar £30⅝ (£32⅜); coffee (per cwt.) £226 (£255); cotton Am. Middling (per lb.) 25.20*d*. (26.70*d*.).

The outlook for commodities is determined—apart from supply considerations—by the state of the demand in the U.S. and Europe. So far as the U.S. is concerned, there is no doubt that the worst of the recession is now over. But European industry has not recovered very fast. This is an uncertain factor for commodities, especially in Asia for which Europe offers the largest market. Discussing the outlook for them, the London *Economist* points out that industrial output in western Europe reached its peak in the first quarter of this year, fifteen months after the United States had reached its peak; a slight fall in the second quarter has almost certainly continued into the third quarter. Though personal consumption has held up, expenditures on new plant and equipment in most European countries have declined, stockbuilding has slowed down and exports have fallen. A recent survey by the Economic Commission for Europe suggested that a renewed rise in total activity could only come from the rising trend of construction and Government expenditures. It said: "Whether they will suffice during the last part of the year to neutralise the downward pull in other fields, particularly industrial investment and exports, is doubtful." The further reflationary steps just taken in Britain, according to the journal, do not appreciably affect that judgment.

The journal, therefore, avers that it would be prudent for the primary producing countries to assume that the recovery in the United States will be party offset by a slight—not a severe—recession in Europe. In that event, commodity prices as a whole could still rise further, but not fully to match the rise in American demand. The main factors in favour of the primary producers are that stocks in consuming countries generally are not high, and that current rates of consumption of some commodities, notably copper, tin and rubber, are running comfortably ahead of world production. In the United States, the rebuilding of stocks is well under way; in Britain, the rate at which total stocks and work in progress were being increased was much lower in the first half of this year than it was in the first half of 1957, and at the end of June the volume of stocks was only 3 per cent. higher than a year ago.

As regards individual commodities, the outlook, according to the *Economist*, is mixed. Copper prices are unlikely to suffer from the ending of the Rhodesian strike, though any further rise will be held in check by increases in production. Tin prices "look reasonably safe." Lead and zinc prices are unlikely to hold their present levels, unless the producing countries, individually or collectively, make further cuts in production to offset import restrictions in the U.S. Natural rubber may not suffer through falling off in Russian buying, because American consumption will be substantially larger next year than this year. Analysing the prospects for other commodities, the journal observes:

"For coffee and tea, and for the fibres and grains, the prospect is not bright. Prices of coffee have fallen by roughly a fifth this year in face of the large surplus; the best that can be hoped for is that the agreement of Central and South American producers to restrict exports will avert a collapse in prices. World production of tea has increased this year and prices even of some better qualities have weakened. Cotton and wool are still suffering from the world-wide recession in the textile industries. Though some recovery may be in prospect, it may not do cotton much good. Nearly all growths of raw cotton produced outside the United States are selling well below the U.S. export price, mainly owing to fears that the subsidy on American cotton will be increased. Such price-cutting in turn makes it harder for the American Government to resist an increase in subsidy. And the new cotton legislation in the United States promises to bring about a larger crop, and lower prices, in 1959-60. Prices of wheat and coarse grains can hardly rise much in face of the massive surplus in the United States."

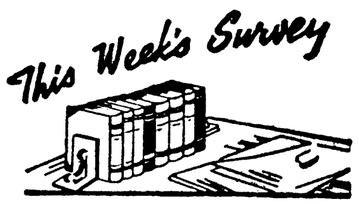
In conclusion, the *Economist* holds that the outlook for commodities, if not wildly exciting, is far from gloomy. Industrial output in W. Europe might revive in spring, even if it suffers a mild downturn in winter. On the whole, primary producers, it is stated, may fare better next year than in the current year.

* * * *

There is a paragraph in the latest Directors' report of the Ahmedabad Electricity Company Ltd. which is intriguing. It says: "Mr. K. G. Milne, Ex-officio Director and Chairman, resigned and Mr. P. D. C. R. Clark was appointed in his place in September 1958. Mr. E. D. Sheppard also resigned his seat on the Board in September 1958, and the Board have placed on record their appreciation of the services rendered by these gentlemen to the Company." The report is dated 23rd October 1958.

It will be seen from the aforesaid quotation that both the gentlemen resigned in the same month, and that only a few weeks before the Directors' report was signed. Both are senior members of the well-known managing agency house, Messrs. Killick Industries Ltd. Neither of them has retired from India and so far as our

(*Continued on page 820*).



CEILING ON LAND

THE movement for the imposition of ceiling on land has gained some fresh strength, thanks to the support lent to it by the Agricultural Production Sub-Committee of the All-India Congress Committee. One thought that the urgency of the need for increasing food production would induce the authorities to soften the emphasis on ideological land reforms. Apparently, nothing will deflect them from the principle of cutting up large holdings in land. Not even the thought that the time and energy spent in implementing a ceiling on land could be more fruitfully employed in other directions seems to weigh with them. Indeed, the Agricultural Production Sub-Committee of the A-I.C.C., according to reports from New Delhi, has insisted that legislation fixing ceilings on land must be expedited.

Mr. Nehru's agricultural thinking is still in favour of small peasants working under a system of co-operatives. At his Press conference this week, he said that there were only two ways of food production; "one was the way of big efficient landlords using modern techniques and the other efficient peasants working in co-operatives." He said the first one might produce good results but, "relatively speaking, it is oppressive to the peasantry." He added: "Therefore, we are driven to the second alternative. We have to consider not only food production but also human advance." He admitted that the imposition of a ceiling on land would naturally result in the cutting up of some of the large farms, "as it should, as it is meant to." Apart from this, the basic problem in India, he said, was that of very small holdings of one, two or three acres; the infinite number of small holdings should work co-operatively so that they could get the advantage of modern methods of farming.

The imposition of a ceiling on land will create more problems than it will solve—that is, if it solves any at all. If it is recognised that the real problem in this country is fragmented holdings, and not large estates, the solution for the problem of raising agricultural output will be seen to lie in creating the necessary enthusiasm among the peasants and making available the facilities they need, such as credit, superior seeds, fertilisers and marketing facilities. By reducing large holdings, the Government will be adding to the problem of fragmented plots, and creating a new problem in the shape of equitable distribution of surplus land. Besides, to dispossess a big landlord is fraught with serious social consequences which urban residents, with their relatively regimented life, can never fully appreciate.

Yet another defect in the Congress agrarian plan is its pathetic faith in co-operative farming. It is somehow thought that all the present ills of agriculture arise from peasant proprietorship and that co-operative farming would put an end to them. The diagnosis is fallacious and the remedy that is suggested is by no means an efficacious one. Experience in India shows that co-operative farming is no solution to our agrarian problems. This is confirmed by a survey conducted recently by the Punjab Government. According to a report from Jullundur, more than two-thirds of the registered co-operative farming societies—this is, by any reckoning, a large proportion—have been found to be "bogus" organisations. The survey disclosed that most of the 670 societies surveyed were a mere "family show" in which members belonging to a family formed themselves into a co-operative society. People in the rural areas have now found that co-operation is the road to personal prosperity at the expense of the taxpayer and the community.

In the course of a forthright article on co-operation, in *Kurukshetra*, Mr. S. S. Puri, the Registrar of Co-operative Societies in the Punjab, warns that "perversion of co-operative ideology has begun to manifest itself in various forms." Fiscal relief and other concessions have led to what the author rightly calls the "growing menace of spurious brand of co-operation." The promoters of "pseudo-co-operatives," it is stated, have been motivated by the consideration that the co-operative form of organisation may enable them to circumvent various unwelcome laws. It would appear that this is particularly true of co-operative farming societies which are formed with a view to getting over the "legal provisions relating to ceilings on land or to avoiding the full impact of tenancy legislation." He observes:

"From what has been stated above, it is evident that at least a part of the zeal for co-operation in India these days has a tainted source. It is arising from the general awareness that the co-operative form of organisation is a favoured child of Government. This is reinforced by the consideration that the co-operatives are understood to represent a certain degree of moral superiority and business integrity. This reputation has conduced to the development of pseudo-co-operatives not only in India but even in foreign countries. In this connection, W. P. Watkins has pertinently observed that 'the very success of the co-operative movement and its good standing amongst the common people offer temptation to those who would exploit, for their own ends, the good repute of the word 'co-operative' and profit by sailing under the co-operative flag.' . . . About religion it has been said: 'Men may write about it, speak about it, fight and even die for it, but very few live by it.' Co-operation in India is in the danger of being placed in the same category."

This pernicious trend towards pseudo-co-operation will get fresh momentum through the continuing emphasis on Government-sponsored co-operation. In particular, the imposition of ceilings on land will intensify this trend which, in its turn, will breed a new class of social parasites and destroy that personal interest in cultivation which alone can lead to enduring increase in agricultural production.

SMALL-SCALE INDUSTRIES

The view that, if the projects included in the "core" of the Plan were essential to national development, the small-scale industries formed the "core" of employment in the country was expressed by Mr. Manubhai Shah, in the course of his speech at the twelfth meeting of the All-India Small-scale Industries Board, held at Shillong, last week. Reviewing the progress of small-scale industries, he pointed out that production in these industries had gone up by 200 to 300 per cent. in the last three years. They, however, faced a real handicap in the shape of acute shortage of raw materials, particularly steel and non-ferrous metals. The Union Government, according to Mr. Shah, is determined to give preferential treatment to the small industries in the matter of import of raw materials, plant and equipment.

Among the measures taken by the Government in order to give a fillip to small-scale industries, mention must be made of the scheme for establishment of industrial estates. At present, 72 industrial estates have been sanctioned. Of these, 43 are under construction. Some 580 factories have started functioning already. The establishment of an additional 38 estates is under consideration, which will bring the total number of such estates to 110. Further, the Government proposes to set up several full-fledged major research institutes for small industries. By 1959, 14 such institutions, one for each State, will have been established. They will serve as centres of extension service for the development of small-scale industries. A technical centre will also be located at some industrial estate in each State. The Indo-German Machine Tool Prototype Centre at Okhla (Delhi) will be ready by 1960. Work on the T.C.M. Centre, Rajkot, is in progress. The establishment of a foundry and light engineering centre in Calcutta is the subject of negotiations between India and Japan. A Swiss team is expected in India for discussing the project for a technical training centre for watch industry. The French Government has offered its co-operation for setting up a precision instrument production centre at Guindy (Madras), while an Indo-Polish small industries centre is under study. A few other projects with foreign collaboration are under consideration. It is expected that, in the next two or three years, each State will have one specialised centre for the development of small-scale industries.

As Mr. Shah himself pointed out, an important reason justifying special treatment of small-scale industries is that they "provide spread of technology." If the industries are to perform this function they must not be allowed to remain a museum of antiquated technology but should be encouraged to use all available modern equipment. From this point of view, it is gratifying to note that the Government proposes to set up a "Board for Promotion of Small Inventions" which will award prizes ranging from Rs. 1,000 to Rs. 25,000 to successful inventors of new equipment and machines. This body should be able to provide considerable impetus to latent inventive genius of our technical men and engineers.

TOWARDS BETTER WOOLLEN GOODS

The technique of production employed in the woollen industry in India, particularly those in the cottage sector, stand in need of immediate reorientation, if the quality of its products is to improve. There is no doubt that the domestic demand for woollen goods, notwithstanding the fact it is at a relatively low level at present, is bound to go up in years to come. But an increase in production designed to meet the demand must be accompanied by an improvement in quality. In this context, the observations on the problems and prospects of our domestic industry made by Mr. H. K. P. Wood, Chairman of the International Wool Secretariat, during his recent visit to India, are quite pertinent. He has rightly emphasised the need for introducing new techniques in the industry.

The problem of rationalising the industry on modern lines is by no means an easy task. This is so, especially because of the prevalence of a large number of cottage units in the country, employing about 500,000 workers. Mr. Wood is aware of the magnitude of the problem of mechanisation in this sector, given to age-old and outmoded methods of production. He is of the opinion that the existing process of men treading on woollens is very slow and cannot help in the economic production of good cloth.

It is gratifying to hear from Mr. Wood that the International Wool Secretariat proposes to teach advanced methods of knitting and other woolcrafts in the villages through the existing Government training centres and provision of visual aids which will enable uneducated villagers to learn the craft easily. This campaign is bound to be of great value in raising the productivity and income of this important cottage industry. It may be mentioned here that carpets and rugs produced in this sector account for the major share of India's earnings from woollen products. The woollen mill industry, though relatively better placed and better organised, cannot be said to have set up standards comparable to those in advanced countries. In the opinion of Mr. Wood, much has to be done before India's wool and wool textile industries can be put on "a fully economic and up-to-date basis."

The International Wool Secretariat has done much to promote new techniques in the last 21 years of its existence. It has invented new processes such as solvent carrier dyeing, durable pleating and shrink proofing. During the past year, the programme of research supported by the Secretariat reached record proportions. There were 53 individual holders of scholarships and fellowships in Europe and the U.K. working on a wide range of wool topics. It would appear that the Secretariat proposes to establish a fellowship in India as part of its broad plan to assist in the development of its wool industry.

At present, India produces chiefly good hard wool from which only carpets can be made. But, as Mr. Wood pointed out, there is no reason why India should not produce soft pliable wool by adopting improved methods of sheep breeding. The absence of production of soft pliable wool has been a serious handicap to the wool textile industry in India. If such wool were produced indigenously, India could achieve a large degree of self-sufficiency in woollen goods.

COLOMBO PLAN

The five-point "programme for progress" outlined by President Eisenhower in the course of his address to the 18-nation annual meeting of the Colombo Plan Consultative Committee which opened in Seattle (U.S.A.) on the 10th inst. is a measure of the U.S. Administration's interest in the co-operative effort of the Colombo Plan countries to better the lives of their people through economic development. The measures proposed by him constitute a comprehensive programme for assisting the economic development of the Colombo Plan countries. The programme, which takes cognizance of the urgent problems of the region, is a thoroughly practical approach towards their solution. It is addressed, in the main, to five major requirements for economic development, namely, expanded international trade, technical skill, private investment, normal bankable loans, and finances to cover other sound projects which will afford the borrower flexibility regarding terms of payment.

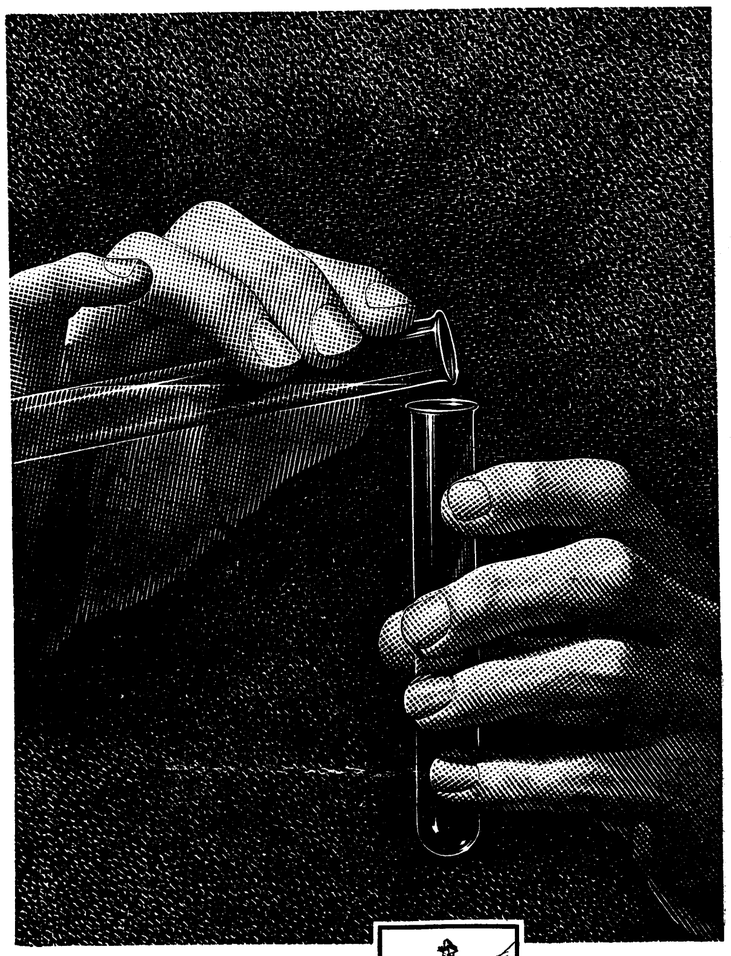
Men and Oil No. 2

THE CHEMIST



In many ways, the oil industry is a pure application of chemical knowledge. From the earliest stages of exploring for new oil deposits, through to controlling the great refineries, the chemist is a key man.

He examines rocks and oil shows collected during exploration, helps in drilling and cementing operations and assists in the interpretation of electrical well logs to identify oil and gas bearing zones. He also analyses formation fluids and oil-bearing reservoirs in order to estimate the total amount of oil recoverable from an oilfield, and studies means for improving the recovery efficiency.

The chemist, again, controls the technical operation of the refinery. At Digboi, for example, chemists are responsible for the production on specification of more than 100 products. From the Assam crude oil, the main products are motor spirit, kerosines, diesel, lubricating oils, and various grades of waxes. The chemist is also concerned with other products such as mineral turpentine, jute batching oil, tea drier oil, bitumen—all these being vital to India's economy.

Chemists in the oil industry must, therefore, possess very high qualifications. Indian chemists play an important role in the working of the Assam Oil Company.

NEED FOR COMPULSORY SAVING STRESSED

DEFICIT FINANCING TO BE CUT

From Our Special Correspondent

NEW DELHI, 11*th November*

THE National Development Council, at its latest session here over the week-end, has decided that the size of the second Plan in the public sector be limited to Rs. 4,500 crores at current prices. The Planning Commission's estimate—the latest—is that total resources would be only Rs. 4,220 crores. As the Council has also decided to have a cut of about Rs. 200 crores in the total provision (Rs. 1,200 crores) for deficit financing, the actual five-year outlay would be of the order of only Rs. 4,000 crores on the assumption that resources might not be found in their entirety to match the financial target of Rs. 4,500 crores. But the Council has made no such assumption, because there is still the vague hope that a gap of the order of Rs. 500 crores in resources could somehow be covered. How this gap is going to be covered is, however, not clear, despite the various suggestions considered at the Council's session.

DELHI LETTER

One of the suggestions accepted by the Council is to examine the feasibility of compulsory savings on a national basis; this is to be done at the Council's next session in the light of the State Chief Ministers' views. Another suggestion is that economies in the construction costs of buildings be achieved to the extent of at least 10 per cent.; this is to be done, according to a decision of the Council, by constructing fewer and cheaper buildings. Construction of new and large buildings in the Community Development areas is to be avoided as much as possible; wherever they have to be unavoidably constructed, they are to use local materials and their construction need not be entrusted to the Public Works Department which has higher standards and specifications. At the same time, the need for saving steel has been recognised; in this connection, the Council has suggested that the purposes for which steel might be used should be specified. But the suggestions regarding the possible wider application of the compulsory provident scheme and the issue of prize bonds have not taken any concrete shape. It looks as though the only feasible suggestion among these, as far as the last two years of the Plan are concerned, is to achieve a measure of economy in the construction costs of buildings. And it is extremely doubtful if any compulsory savings scheme can be instituted on a national scale, for, in the absence of a lower price level than what prevails now, it might only engender widespread resentment.

Ceiling on Deficit Financing

The most sensible decision taken by the Council is to limit deficit financing to a maximum of Rs. 1,000 crores in the entire five-year period. The views expressed by the Federation of Indian Chambers of Commerce and Industry in a brochure (entitled *Internal Resources and the Second Plan*) circulated and publicised on the eve of the latest session of the National Development Council do not appear to have found favour with the authorities. These views, incidentally, are as follows:

"The proposed level of resources to be created by deficit financing during the Plan period was Rs. 1,200 crores. . . . The budgetary deficits in the first two years of the Plan amounted to about Rs. 700 crores—Rs. 640 crores at the Centre and Rs. 60 crores in the States. The estimates for 1958-59 come to a total of Rs. 215 crores, out of which about Rs. 190 crores will be financed by the Centre. Thus the annual average for the first three years has been over Rs. 300 crores; *by and large there have been no untoward developments in the general prices situation and it may be quite safe to reach the target of deficit financing if the necessary precautions are taken* (italics mine).

"The recent rise in prices has mainly been confined to food articles and industrial raw materials. Much depends on maintaining the food prices at reasonable levels for holding the general price line; it is unfortunate that even a small short-term shortfall in food production tends to have a magnified effect on prices all round."

In view of the rise in prices in the current year, it may be that the Council's revised target of Rs. 1,000 crores for deficit financing will have been fully reached by the end of March 1959. In which case, there could be no further deficit financing in the last two years of the Plan. And this would mean that the sound advice of the World Bank and the International Monetary Fund has at last found favour with the Government of India. If the Council's decision regarding deficit financing is final, it would be good in its own way. It would ensure the success of public loan flotations as in the current year. The spectacular increase in the last one year and more in deposits with the banks, it may be recalled in this connection, has been attributed to the heavy deficit financing in the first two years of the Plan. If the injection of created money in the third year is also taken into account, it may be that the individually-owned deposits will go up further and ensure the success of loan flotations in the remaining years of the Plan. Incidentally, only a possible enquiry by the Reserve Bank of India into the ownership of deposits according to income groups could show whether or not the inflation resulting from created money has made the rich richer.

Federation's Views

There is *prima facie* evidence that it has, although the Federation of Indian Chambers of Commerce and Industry has slurred over this aspect of the matter in its latest brochure. Says the Federation:—

"... the (loan) results of 1958-59 seem to be quite encouraging. However, it should be noted that the comparative success of these flotations stems from a not-too-healthy feature, viz., *surplus funds with banks on account of a slackening of economic activity* (italics mine).

"Small savings have failed to register any marked increase, particularly in the rural and semi-urban areas as well as in secondary and tertiary employment. The need for having an efficient and economical organisation to mop up these savings-potential is recognised since the past few years but hardly any progress has been made."

The Federation's contention seems to be that the deposits with banks, by and large, do not represent savings while there are considerable untapped savings elsewhere. If that is so, the question is much too crucial to be answered one way or the other without a careful examination. It is to be regretted that the Federation has aired vague and unsubstantiated generalisations.

If the Federation's plea in the matter of deficit financing has not found favour with the National Development Council, its uninformed contention that "although half of the national income originates in the agricultural sector, its contribution to the pool of national resources is hardly 10 per cent." is not likely to fare any better. If at all there are any substantial savings that can be tapped from the agricultural sector, they can only be with substantial landowning families with 25 acres and more each who have larger marketable surpluses than medium or small landowning families. Such substantial landowning families (excluding non-resident landholders) number, according to the National Sample Survey Report on Landholdings, 2,305,000 with about 106 million acres of land. How much savings these landowning families may have after taking into account their cost of living which is determined, among others, by their long-accustomed standard of living and whether these savings would not have to be used for the much needed reinvestment in their lands, are matters which call for closer examination. Very often it would be misleading to go by percentages, the more so when the Federation is not sure of its ground.

PROTECTION TO SODA ASH INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's Report (1958) on the continuance of protection to the soda ash industry has been published in the *Gazette of India* dated 8th November 1958. According to that resolution, the Government has accepted the Tariff Commission's recommendation that protection to the industry should be continued for three more years, that is, till 31st December, 1961, and that the existing rates of protective duty, namely, Rs. 4.25 per cwt. (if manufactured in a British Colony), and Rs. 5.75 per cwt. (if not manufactured in a British Colony), should remain in force till that date.

The Government has taken note of certain other recommendations of the Commission for assistance to the industry and will take suitable steps to implement them as far as possible.

PROGRAMME FOR PROGRESS

From Our Own Correspondent

LONDON, 7*th November*

THE August index of production has just been published. This shows a fall of over three per cent., as compared with August a year ago and follows a fall of two per cent. in July. The turn of the economic tide is not yet. On the other hand, the end-October gold and dollar reserves show a jump of £20 million to a new high of £1,130 million.

LONDON LETTER

No wonder then that the British Chancellor could speak of "Operation Confidence"—meaning deflation—as having now to be followed by "Operation Re-expansion." "In one action after another," he said this week, "we have moved to set the economy expanding again. Bank rate is down from 7 to 4½ per cent. The limit on bank advances has gone and capital issues control has been eased. Initial allowances (tax relief) have been increased. Hire-purchase controls have been taken off. Public investment will start rising again. There is special help for the areas of relatively high unemployment. Overseas—where expansion matters most—there are to be new Commonwealth loans to help finance our exports, and international measures are in prospect that will increase world lending and enlarge credit. All this adds up to a considerable stimulus . . . what we want is reflation and not re-inflation . . . there is already some evidence of increased demand building up in the system. Business confidence has never shown much sign of weakening, and, as cheaper and easier money gets around, we shall begin to see the consequences."

Here we have both the Government's analysis of the economic situation and what they have done to apply a stimulus. But one looked in vain in the Queen's speech for any suggestion of direct measures. Indeed, the principal proposal of Her Majesty's Ministers was to complete the post-war dismantling of those emergency powers which give the Government wide economic control. There are thirteen of these emergency powers left—thirteen years after the end of the war. Eight of these are due to be abolished in the coming year and the remaining five are now to go as soon as new legislation can be introduced. And such new legislation is not in any case to be effective beyond 1964. As these powers go, the Government will not be able, for example, to impose price controls or to licence new building without going to Parliament and getting a special measure enacted. And, since Ministers are notoriously slow to seek powers from Parliament, it is evident that, as far as this Government is concerned, *laissez faire* is going to be the way out of the present recession.

Other measures in the Queen's speech provided for paying current market prices to the owners of land compulsorily purchased for some public purpose. In the past, such landowners have suffered—in 1957 they were underpaid about £10 million.

In order to ensure no financial brakes on new building, the Government is to make advances to building societies, enabling them to lend more money on new houses and thus increase the numbers of private dwelling house owners.

A realistic measure proposed is direct assistance to small farmers—mainly through limited-term loans—to help them make their holdings viable economic units. This measure will—or ought—to take the small farmers lobby out of the annual negotiations between Government and farmers about the right amount of subsidy assistance. Too much money has gone to help efficient farmers on the grounds that the same rates of subsidy were necessary for smaller and, presumably, less efficient men.

All in all, it does not look as if the Government will feel it necessary to do more than make lots of money available cheaply and rely upon business confidence to do the rest.—*All Rights Reserved.*

AMERICAN LETTER

ECONOMIC RECOVERY WELL MAINTAINED

ORDERS PLACED WITH INDUSTRIES UP

From Our Special Correspondent

NEW YORK, 4*th November*

THE pick-up in business has been well maintained so far. Thus, nearly everyone expects that the recovery will carry well into 1959. October sales in New York City's big department stores and their suburban branches throughout the New York and north-eastern New Jersey metropolitan area rose to the highest levels in history for that month. The gain in New York City in relation to October 1957 was 7 per cent. and for the entire metropolitan area it was 11 per cent. Public buying was particularly concentrated in soft goods.

This has given a boost to textiles, generally, and many stores are complaining that they may be running short of inventories in the forthcoming holiday season. Promotions have been effective where they had not been so a short few months ago, attesting to public confidence in the future.

Even the automobile industry has been blessed with good public demand. This, coupled with wild-cat strikes, has put a pinch on the new supply of cars in some areas where only a few weeks ago showrooms were overflowing.

Steel output in the first week of November was running at 75 per cent. of capacity, which compares with 79.7 per cent. a year ago. If popular demand for automotive products continues, steel production is apt to break through last year's levels in the near future.

Generally speaking, interest rates are still firming, prompted by another boost in the Federal Reserve discount rate. There are the usual complaints about it and some appear justified.

Mortgage money, for example, is getting tighter and this could very well lead to a slackening of now booming construction activity. But every one at Washington and throughout the country is so afraid of inflation that the risks involved in tightening credit are being taken.

With declining outdoor activities in the northern part of the United States, there has recently been an overall decline in employment. The October employment figure was 64.6 million, against 65.4 million in September and 65.7 million in October 1957. Registered unemployed last month were off, however, to 4.1 million, against 4.7 million in the preceding month and 2.6 million in October 1957.

Consumer income continues its miraculous rise. At the mid-October reporting date, it stood at $357,500 million, as compared with $356,100 million in September and $351,400 million in October 1957.

The decline in inventories has been quite healthy. In terms of dollars, stocks on hand have declined 10 per cent. in the last 12 months' period. Early in November, inventories were reported at $48,900 million, as compared with $53,600 million a year ago.

The stock market is, perhaps, the most confusing aspect of the U.S. economy. Although there are intermittent setbacks, the upward price movement continues. Wall Street is extremely jittery. This state of mind is best illustrated by the fact that the short position in stocks on the New York Stock Exchange is now double that of a year ago. As indicated in these columns before, two major influences are at work. One is the obsession with inflation and the other is an actual shortage of securities *vis-a-vis* accumulating funds. Nevertheless, brokers and traders are scared at the time of writing.

On account of the extraordinary large volume of trading, for some brokers October commission volume was the largest monthly income they ever had. Hence, year-end bonuses should be rich this year. The bond markets, too, have been better.

All this has created a receptive mood for the November U.S. Treasury operations which are of considerable magnitude. Yields on Government securities have now slipped back to where they were earlier this fall. The last time, the Treasury was quite generous in pricing its new issues, such as 3¼ per cent. bills and 3¼ per cent. notes.

Lower rates clearly are in order for this month's new borrowing of $3,000 million and a $12,200 million refunding. Secretary of the Treasury Robert B. Anderson will fix the terms of the offerings only after he gets the recommendations of his commercial and investment banker advisory groups. The insurance companies and savings banks also contribute their opinions of investment requirements. After all is said and discussed, Mr. Anderson still has to make up his own mind as to what is proper under the circumstances.

Apropos my previous remarks regarding the constant growth of investment funds, it may be observed as just one example that total combined assets of the 146 open-end investment companies and 24 closed-end ones which are members of the National Association of Investment Companies passed the $13,000 million mark during the third quarter of the year and totalled $13,283 million on 30th September. They were $11,984 million on 30th June and $10,280 on 30th September 1957. Shareholder accounts for member-companies totalled 3,777,262, against 3,169,812 12 months previously.

On the industrial front, it may be noted that orders placed with factories in September marked the first time this year that such volume was ahead of the same month a year ago. The volume in September came to about $26,800 million on a seasonally adjusted basis. This compares with $26,100 million in August and $26,600 million in September 1957. Primary metal and machinery producers were the chief beneficiaries. There is no indication that this pick-up in orders is Government-supported. In fact, there was a slump that month in defence orders for aircraft and other automotive equipment. Building materials, rubber, petroleum products and textiles also gained from this private spending.

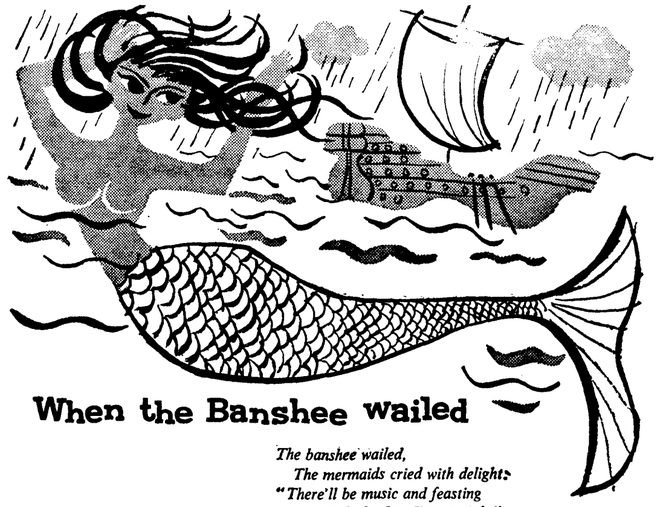
However, there is not wholly unadulterated optimism. Persistent unemployment substantially over and above previous years' levels is generally expected. Then, there are lagging industrial profit margins. There may be a moderate farm recession owing to a plethora of crops. Managements show no inclination to rush into new expansionary projects which would require large increases in expenditures for plant and equipment.

There is a general desire to play things safe, to make do with the present pay-roll by means of greater efficiency. This is prompted by smaller profit margins and reduced liquidity of corporate and bank balance-sheets.

The November elections in the U.S., in which a number of new faces appeared on the political horizon, brought no particular surprises. The outcome will have very little effect on business. Government spending will remain big and so will defence orders. Public projects will remain very high on the agenda. In short, very few changes may be forecast at this time.—*All Rights Reserved.*

There may be 272.6 million persons in the United States by 1980, nearly 100 million more than at present, according to the U.S. Census Bureau. The population on 1st July 1958, was about 174.5 million. In a book forecasting future U.S. population based on four different birth rates, the bureau estimated that, if the birth rate over the next 22 years is 10 per cent. above the current rate, the population in 1980 will be 272.6 million. There will be three million more women than men in 1980, compared with 1.5 million more women today, the Census Bureau reported.

Estimates are based on the assumption that there would be no unusual circumstances such as epidemic, war, or depression which would kill off great numbers of persons or reduce the birth rate. If the birth rate continues at the current level, the population in 1980 will be about 260 million. If it drops to the average rate in 1949-51 period the population will be 245.5 million; if it falls to the second world war rate it will be 231 million.



PATTERN OF SCHEDULED BANKS' DEPOSITS AND ADVANCES

SEASONAL FALL IN CREDIT GAINS MOMENTUM

IT is too early to say whether the slight rise in the demand for funds in the short-term money market noted last week marks the setting in of the traditional busy season, already delayed by two weeks. The trend of advances of Scheduled banks during the next few weeks will alone provide the answer. Meanwhile, the resources of banks have swelled to such an extent that they are well placed to meet a substantial expansion in the demand for credit during the 1958-59 busy season. In fact, banks can easily provide additional credit of the same magnitude as that witnessed during the busy seasons of 1955-56 and 1956-57, when bank advances rose by Rs. 165 crores and Rs. 148 crores, respectively, and that, too, without touching the high level of credit ratio registered in those seasons much to the discomfiture of Scheduled banks and the Reserve Bank of India. It is true that the level of bank advances at present is much higher than that at the end of the busy season 1955-56, but the spectacular accretion to bank deposits since then has made a lot of difference. Thus, assuming that the total net deposits will remain at well over Rs. 1,500 crores during the busy season, even a thousand crores of bank advances would only mean a credit ratio of no more than 66⅔ per cent., which is about 8 per cent. below the peak of 74.5 per cent. witnessed in April 1957. Indeed, even if the deposits were to fall to Rs. 1,400 crores, a thousand-crore of bank credit would mean a credit ratio of only 71 per cent. In addition, banks can supplement their resources by borrowings from the Reserve Bank which are practically *nil* now, as against Rs. 30 crores at the commencement of the last busy season and Rs. 58 crores at that of the 1956-57 busy season.

A better idea of the aforesaid statement can be had from the following table showing the position of bank deposits and advances at the beginning and end of the past few seasons:

(In crores of Rs.)

	Net deposits	Advances	Credit ratio %
24th October,1958	1,588.80	840.31	52.9
25th April, 1958	1,512.11	956.48	63.2
25th October 1957	1,363.55	867.20	63.6
26th April 1957	1,320.52	909.09	74.5
26th October 1956	1,087.41	760.67	70.0
27th April 1956	1,062.93	757.00	71.2
28th October 1955	1,020.98	592.52	58.0

It will be seen from the above table that, in the course of the last three years, while bank deposits have risen by Rs. 568 crores, advances are up by only Rs. 248 crores. Also, during the slack season of 1958, bank advances have declined by about Rs. 116 crores which is much more than the rise of Rs. 89 crores in the last busy season and very much more than the decline of Rs. 42 crores in the slack season of 1957. In the slack season of 1956, there was, in fact, a slight rise in bank credit.

The slow pace of rise in bank credit during the last busy season and the sharp fall during the subsequent slack season are due to many factors, such as selective credit control exercised by the Reserve Bank, lower agricultural production, drastic cut in imports and the slowing down in the pace of industrial production. These trends are fully reflected in the fortnightly analysis of secured advances of Scheduled banks conducted by the Reserve Bank of India. Such an analysis for the slack season of 1958 (figures for which are available, at the time of writing, only up to the week ended 12th September 1958) shows that secured advances accounted for Rs. 93 crores in the decline of bank credit upto that date, the fall in the corresponding period of 1957 slack season being Rs. 52 crores only. The decline in secured advances during the whole of the slack season 1957 (that is up to the last week of October) was actually smaller being Rs. 37 crores, as against a rise of Rs. 88 crores in the subsequent (1957-58) busy season and of Rs. 129 crores in the previous (1956-57) busy season. The comparative table at the foot of column 1 presents the pattern of variations in secured advances of banks classified according to their collateral during the last four seasons.

Variations in Secured Advances of Scheduled Banks

(In crores of rupees)

* From last Friday of April to second Friday of September only.
† Last Friday of October to last Friday of April of the following year.

Almost all the major groups of securities have shared the fall during the latest slack season, the largest decline being in advances against industrial raw materials (Rs. 51.37 crores). This wipes out very nearly the rise in this item during the last busy season. This is followed by manufactures and minerals (Rs. 32.33 crores) and foodgrains (Rs. 11.03 crores). A security-wise analysis of advances against manufactured goods shows that sugar and *gur* account for the largest fall (Rs. 30.32 crores), evidently due to their seasonal character. Further, the control on advances against sugar was made more strict in July last, in view of the rising trend in prices noted then, by raising the minimum margin required in respect of each credit limit and advance against security of sugar from 35 per cent. to 45 per cent. This restriction was made applicable to advances to both traders and factories. The pace of increase in advances against cotton textiles slowed down, as compared with the previous slack season. In contrast to the decline of Rs. 1.35 crore in the last busy season, advances against silk, art silk, woollen, etc., recorded a rise of Rs. 4.16 crores during this year's slack season. The downward trend in advances against iron, steel and other engineering products noted in the 1957-58 busy season, due to severe import restrictions, persisted in the following slack season also, albeit at a much slower pace. The cut in imports is also reflected in the drop in advances against chemicals, dyes, etc.

Advances against industrial raw materials show a much sharper fall in the slack season of 1958 than in the 1957 season, mainly on account of the decline of Rs. 28.23 crores in advances against cotton and *kapas*. The decline under this item in the corresponding period of 1957 was Rs. 17.21 crores. The other notable items of raw materials where the pace of decline in advances was greater than that in the past year, are groundnut, other oilseeds and raw jute.

The decline of Rs. 11.03 crores in advances against foodgrains is much more than the rise in the busy season 1957-58. This is evidently due to the continued restriction on advances against foodgrains, particularly in the surplus States. The directive issued by the Reserve Bank in December 1957, in supersession of the earlier one issued in June 1957, was extended to be effective up to the end of October 1958, by an order issued in June 1958. Under this directive, banks were asked to restrict their advances to certain levels. Subsequently, (in September last), the provisions of the credit control were made more strict, in view of the rising trend in prices of wheat.

With selective credit controls continuing and with large deposits at their command, the banks' problem today is one of profitable utilisation of their resources. The burden of carrying high interest-bearing deposits has proved very heavy for banks during the current year and is expected to be reflected in their profits for the year. It will be recalled that the profits of all major banks for the half-year ended 30th June 1958 suffered a setback and this is likely to be more pronounced in the current half-year, as a result of the sharp fall in advances.

BILL MARKET SCHEME TO AID EXPORTS

During the last few months, the Government of India has announced several measures to promote and expand the country's exports. The latest step in this direction is the extension of the Reserve Bank's Bill Market Scheme to cover export bills in order to enable banks to provide finance to exporters on a liberal scale. This is in pursuance of the Export Promotion Committee's recommendation that "commercial banks should be enabled to rediscount increasingly through increased credits made available to them by the Reserve Bank." The scheme has been introduced on an experimental basis up to the end of September 1959. To begin with, the facilities under this scheme will be made available only at the Bombay and Calcutta offices of the Reserve Bank of India in regard to banks' loans against export bills at these centres.

The scheme is restricted to scheduled banks which are eligible to borrow under the Bill Market Scheme and which are authorised dealers in foreign exchange. As in other cases of advances under the Bill Market Scheme, accommodation under this scheme will be granted to eligible banks against the security of usance promissory notes/bills of their constituents in terms of Section 17(4)(c) of the Reserve Bank of India Act. The usance promissory notes should, however, arise out of loans granted by banks to their constituents against the security of export bills as have a usance of not more than 90 days and are drawn on any place in any country outside India which is a member of the International Monetary Fund.

In order that smaller exporters may also get benefit under the scheme, the minimum limit of a loan to be given to a bank at a time has been fixed at Rs. 2 lakhs and that of a promissory note at Rs. 20,000, as against Rs. 5 lakhs and Rs. 50,000 respectively, in the case of other advances under the Bill Market Scheme. The rate of interest charged on advances under the scheme will be the same as is applicable to other advances under the Bill Market Scheme (i.e., 4 per cent. per annum at present), but the Reserve Bank will bear half the cost of stamp duty on the usance promissory notes lodged with it. The effective rate of interest on advances under this scheme will thus work out to 4.10 per cent., as against 4.20 per cent. in the case of other advances under the Bill Market Scheme.

STERLING AREA RESERVES SHOW SIZABLE INCREASE

The central gold and dollar reserves of the sterling area rose by $54 million during October and stood at $3,174 million on 31st October. A sum of $28 million was paid to the European Payments Union (E.P.U.) in respect of September, and $3 million to creditors of the Union in bilateral settlements. On the provisional figures for the month, the United Kingdom had a deficit of £12 million with E.P.U. in October. This will fall to be settled in November as to 75 per cent. in gold or dollars and as to 25 per cent. by increase in the debt to the Union.

The October result is considered in London as a satisfactory one, particularly when account is taken of the $31 million paid to E.P.U. in respect of September. It is the thirteenth consecutive rise in the reserves, which now stand at their highest level since December 1951, and the size of the increase—compared with recent months—reflects the movement of the sterling area trade and payments system into a more favourable seasonal period after the pressures of the summer months. It is, however, some measure of the current strength of sterling that the reserves have actually recorded increases during the period of normally advanced payments movements. The E.P.U. result is also satisfactory, having regard to the time of the year, and, as in the case of the central reserves, foreshadows the growth of more favourable seasonal factors.

MR. COBBOLD'S TERM EXTENDED

The Queen has approved of the re-appointment of Mr. Cameron Cobbold as Governor of the Bank of England for a third term of five years, with effect from 1st March 1959. By next spring, Mr. Cobbold, who is 54, will have completed 10 years' service as Governor and a total of 21 years as a full-time member of the Court of the Bank.

Mr. Cobbold, it is understood, did not wish to serve for a further term of office, but agreed to do so, because of the desirability that there should not be a change of Governor before the Radcliffe Committee concludes its investigation into the credit-system. He allowed his name to go forward on an informal understanding that, save in exceptional circumstances, he will not be expected to complete the full five-year term.

The Radcliffe Committee, it will be recalled, was set up at the time of the 1957 budget to inquire into the working of the monetary and credit system and to make recommendations on it.

SMALL SAVINGS COLLECTIONS

A remuneration of one per cent. of the periodical collections of small savings will in future be paid to such employers and trustees of the provident funds as make the collections on behalf of their employees or members of the provident fund, as the case may be. The remuneration is payable in the cases where there is a regular arrangement for small savings collections and public savings demonstrably benefit from them and is designed to meet the cost of collection of the collecting parties.

No such reimbursement is, however, admissible to employers and trustees for deductions made towards investment in Treasury Savings Deposit Certificates, Annuity Certificates and Post Office Savings Bank, nor would any commission be paid in respect of collections routed through internal agents or other agents, even if the employer deducts the amount from the wages or bonuses.

With the increase of ½ per cent. in discount rate by the Federal Reserve Bank of New York, on 6th November 1958, the discount rate of all the twelve members of the U.S. Federal Reserve System has become uniform at 2½ per cent.

INDIA GETS A NEW INDUSTRY

COLLABORATION WITH I.C.I. BEARS FRUIT

ON Wednesday, 5th November 1958, a new industry of considerable importance was born in India. The scene of its birth was Gomia, a small rustic village nestling among the picturesque jungle-clad little hills in the Damodar Valley area of Bihar. The industry was commercial explosives, falling under the group of chemicals. Appropriately enough, the inaugural ceremony was performed by no less a person than the President of India, Dr. Rajendra Prasad, who specially came down to Gomia, all the way from New Delhi, for this purpose.

This new industrial unit belongs to a joint-stock company, called the Indian Explosives Ltd., jointly owned by the Government of India and Imperial Chemical Industries Ltd., London. The Government holds 20 per cent. of the equity capital and I.C.I. the remaining 80 per cent. There are six directors on the Board of the Company, of which one represents the Government and five represent I.C.I. The Chairman of the Company is Mr. J. M. Lall, an Indian Chartered Accountant who holds the unique distinction of being the chief of I.C.I. in this country. The authorised capital of the Company is Rs. 4 crores. So far, approximately Rs. 5 crores have been invested in fixed and floating assets. This figure is expected to rise to Rs. 7 to 8 crores in two or three years, when further extensions are completed. It will thus be seen that, in terms of capital invested alone, this is an industrial project of great magnitude.

The manufacture of commercial explosives is a great industry on other merits too. The commercial explosives are used for blasting purposes and, therefore, constitute a vital raw material for all those construction projects in which blasting has to be done. And these include such basic industries as coal, cement, steel and the building of big irrigation-power works, roads, rails, bridges, harbours, airports, tunnels, etc. As Mr. Lall pointed out in his speech on the occasion of the opening ceremony of Gomia Works last week, "construction needs power, and blasting explosives provide the power in a convenient and economic form. Power to shift rock and earth and to mine coal and iron ore and other minerals—that is the true product of this factory."

The following extract from the illustrative brochure produced by the Company for the inaugural function clearly brings out the key role of Gomia Works in the economic development of India:

"The contribution of explosives can be appreciated if one examines the second Five-year Plan. This envisages that Rs. 7,200 crores will be spent in the public and the private sectors—about half of it on industries and projects which use explosives, such as mining, irrigation and power, transport and communications. These industries will create new employment opportunities for more than a million people in this country.

"The mining industry has always been the major consumer of explosives. During 1956-66, the use of high explosives is expected to increase by four times, to increase the annual output of coal two and a half times and the output of limestone and iron ore by six to seven times.

"The next largest users are limestone quarries. Ninety per cent. of their output is used in the cement industry and most of the remainder in iron and steel. Production will be increased very rapidly as the demand for cement grows. The 1950-51 output of 2.7 million tons is scheduled to rise to 13 million tons in 1960-61 and to 31 million tons in 1975-76.

"The steel industry depends on powerful explosives for the production of iron ore, which is among the hardest deposits encountered by the explosives engineer.

"Other important mining industries are gold, copper, mica, bauxite and manganese ore. In 1956, 3,900 tons of explosives were used in all mining, including coal, etc., and in 1960 the second Plan envisages consumption being increased to 8,000 tons.

"Since the first Plan started, explosives have found a new field of application in the Central and State multipurpose projects. Major schemes include the Bhakra Nangal project and the Rihand Dam in the north, the Hirakud project and the Damodar Valley scheme in the east, the Koyna project and the Chambal project in the west and, in the south, the Tungabhadra and the Nagarjunasagar projects.

"Explosives are also being increasingly used in building railways, foundations for bridges, in driving tunnels, in developing harbours and excavating sites for airports. One important road project will improve communications with Kashmir. Twin tunnels each 1,200 ft. long are being blasted through solid rock at an altitude of 8,000 ft. in the Banihal Pass. One of these tunnels is already complete and will provide an all-weather route to Srinagar.

"Application of explosives in seismic prospecting work is a well-established and dependable method which has proved invaluable in locating oil and water-bearing strata, minerals and ores, and for determining depths of geological formations.

"In all these fields of activity, the new Gomia Works will play its part. Explosives made here will help engineers throughout the country to build the new India more quickly, more efficiently."

It will thus be noted that the Indian Explosives Ltd. is producing an indispensable product and will make a significant contribution to India's desire to attain economic self-reliance. All these years, this country has been dependent upon foreign countries, mostly Britain, for the supply of commercial explosives. It is estimated that, in the first full year's work, the new industry will save over Rs. 1.50 crore in foreign exchange. The growing demand for commercial explosives will be evident from the fact that, even before the plant came into operation, the Company found it necessary to raise the production target substantially from the original figure of 5,000 tons per annum. The factory as it stands today will produce over 7,000 tons per annum. Further, a plant to make safety fuse for use with explosives is under construction and plans for other explosive accessories are in hand.

The factory at Gomia is an absolutely modern one, with all the latest devices for making explosives incorporated in it. Special mention must be made here of the Biazzi nitroglycerine plant, fabricated in Switzerland. Gomia has the distinction of housing the first such plant in the whole of Asia. This elegant unit represents the acme among the equipments for producing very sensitive types of explosives by a continuous and virtually automatic process. The acid plants and the cartridging machines, in fact, the whole factory, are typical of the most up-to-date chemical engineering practice.

It is noteworthy that more than 90 per cent. of the factory's raw materials will be indigenous. Indeed, the reason why Gomia was chosen as the site for this factory is that it is not far away from the sources of raw material, apart from being within India's principal industrial belt and source of mineral wealth which provide the chief outlets for the finished products. Gomia is literally on the edge of India's largest coalfields, where the biggest markets for industrial explosives are found. The main raw material, liquid ammonia, is supplied by the fertiliser factory at Sindri which is only 50 miles away from Gomia. Glycerine, another principal raw material, comes from soap manufacturers in Calcutta. The Konar Dam lies only a few miles ahead of Gomia and the controlled flow of the river Konar provides a steady supply of water. Power is available in plenty from the

CHEVROLET

The greatest name in road transportation

Once again, transport operators in India have the opportunity to do business with unrivalled, world-renowned Chevrolet trucks and buses. And these broad-shouldered, big-muscled heavy-duty huskies are designed to take the toughest assignments without strain.

Features like four-speed transmission, heavy-duty springs, long-stroke 7-inch diameter hydrovac brakes, sturdy chassis frame with alligator-jaw cross members, heavy-duty rear axle and many others, make Chevrolet tops in truck and bus value.

These reliable and stronger-than-ever trucks and buses stay on the job and save on the job.

STANDARD COTTONS OF 1956-57

FIBRE AND YARN TEST RESULTS

THE results of various fibre and yarn tests carried out on the standard Indian cottons of the 1956-57 season at the Technological Laboratory of the Indian Central Cotton Committee indicated that, as compared with the test results of the 1955-56 cottons, three out of the 21 standard cottons tested registered definitely better results, 11 showed approximately the same results while seven showed definitely poorer results. The varieties which showed better results were M.C.U.1 Winter, Karunganni 5 and Parbhani-American. Surat 1027 A.L.F., Vijay, Kalyan, Virnar, H 420, Gaorani 12, Jaydhar, L.S.S., 320 F., Cambodia Co2 and Karunganni maintained their performance. The seven varieties which registered a decline in spinning value were Vijalpa, Buri 0394 and Gaorani 6 from Bombay State, Laxmi and Westerns I from Mysore State, M.C.U.2 (Summer) from Madras State and Nandyal 14 from Andhra. The test results on these cottons are embodied in detail in a bulletin entitled *Technological Reports on Standard Indian Cottons*, 1957, by Dr. R. L. N. Iyengar, Director, Technological Laboratory, Bombay, published by the Indian Central Cotton Committee. The report also contains extensive data regarding the test conducted on each variety of cotton, giving agricultural details, the grader's valuation report, spinning master's report, and complete information regarding waste percentage, yarn breakage and the fibre and yarn test results.

Standard cottons, as is common knowledge, are cottons which are kept as standards of reference for gauging the improvement in quality of cotton grown in the various tracts. They represent certain improved varieties which are definitely superior to those grown in any particular cotton area. They are selections made by cotton breeders at the various experimental stations and are grown each season from selected seed under as nearly the same conditions as possible. It may be noted in this connection that in 1955-56, standard cottons covered 52 per cent. of the total area under cotton cultivation in India.

Objects of Testing

The general objects of setting up such standards are fourfold: (1) to prepare a series of standards by which other cottons, newly evolved by the cotton breeders, could be judged, (2) to determine the extent to which seasonal variations in climatic and other factors affect the standard cottons, (3) to assist the marketing of these cottons by providing the cotton trade with detailed information concerning them, and (4) to accumulate data with the object of finding relationships between the fibre properties of cotton and its spinning value.

All standard cottons do not, however, continue to be standard for all time but they change from time to time as and when new and improved varieties are produced which replace the old ones. It may also be borne in mind that these standards have no relation with the trade standards which generally depend on the grade of cotton, i.e., its trash content, colour and staple.

The current list of standard cottons maintained by the Indian Central Cotton Committee contains 21 varieties which covered an area of 10.55 million acres. The following table gives the varieties included in the list, together with the area under cultivation:

Variety.	Area under cultivation (1955-56)
	Acres
Bombay—	
Vijalpa (2087)	642,000
Surat 1027 ALF	*Nil*
Vijay	1,054,000
Kalyan	730,000
Virnar (197-3)	2,148,000
Madhya Pradesh—	
H. 420	761,000
Buri 0394	225,000
Hyderabad—	
Gaorani 6	670,000
Gaorani 12	480,000
Mysore—	
Jaydhar	881,000
Laxmi	1,414,000
Westerns 1(41)	150,000
Punjab—	
Punjab American L.S.S.	180,000
P. A. 320F	497,000
Madras—	
Cambodia Co2	84,000
M.C. U1 (Summer & Winter Crop)	243,000
M. C. U2 (Summer)	20,000
Karunganni K 2	225,000
Karunganni K 5	120,000
Andhra—	
Nandyal 14 (Northerns)	35,000
Parbhani Amer can	134,000
Total	10,552,000

As regards past performance of standard cottons, those for 1930-31 gave, on the whole, much better performance than those of 1929-30, but this improvement was not maintained in the following seasons. The setback, however, proved temporary and the 1932-33 cottons registered better performance than those of 1931-32. This improvement was maintained in the following two seasons, and in 1934-35 the cottons yielded generally even better results than in the previous season. Thus, in a majority of cases, these cottons registered a steady improvement from 1930-31 to 1934-35. This improvement, however, suffered a setback in the 1935-36 season, from which there was a welcome change for the better in the 1936-37 season. The 1938-39 season witnessed an improvement in a few cases but this was offset by a decline in the performance of a larger number of cottons, while the 1939-40 season indicated a general improvement in most cases. This improvement was not maintained in 1940-41, but the 1941-42 season had given better results than the previous one which has been generally maintained in the next six seasons, 1942-48, but there was a setback in 1948-49 which was partially recovered in 1949-50. This recovery was to a certain extent maintained in the next five seasons, 1950-55, but it received a setback in the 1955-56 season. As regards the 1956-57 season, as noted above, the majority of cotton maintained their performance, three varieties showed better results, while the remaining seven indicated definitely poorer performance.

NEW COTTON STRAIN FOR U.P.

Uttar Pradesh is an important cotton-producing State. The area at one time under cotton in this State was as high as 1,049,000 acres, though in recent years this has dwindled to about 150,000 acres. However, with the release of improved varieties of cotton which can prove remunerative to the growers, there appears great scope for expansion of area and increase in production.

The Indian Central Cotton Committee had as far back as 1938 sanctioned a scheme for undertaking research work for the improvement of cotton in this State. As a preliminary step, a very extensive survey of the indigenous cotton-growing areas was conducted and two important strains, namely, C. 402 and C. 520, were isolated. They were under distribution for some years. Of the two, C.520 was found to be the most promising and it gained popularity not only in Uttar Pradesh but also in the neighbouring State of Rajasthan. However, selection work was continued with a view to improving the yield, staple lengths and spinning performance. It was found that another selection obtained from the survey material known as strain 35/1 was superior to C. 520 in acre yields and also in staple length and spinning performance. Consequently, the extra income obtained by cultivating 35/1 was estimated at about Rs. 34 over that obtained for C. 520 at Kanpur. The strain was thereafter tried on cultivators' fields in different localities and found to be consistently better than any other strain included in the trials.

The Indian Central Cotton Committee is at present financing a scheme for seed distribution and extension of improved cotton 35/1 in Uttar Pradesh since 1950 and it is estimated to have covered an area of 45,000 acres in 1955-56 and 64,000 acres in 1956-57. The estimated additional income that accrued to the cotton growers of this variety was estimated at Rs. 8,04,873 in 1955-56 and Rs. 10,49,350 in 1956-57. The object of the scheme is to cover an area of about 150,000 acres, with the improved cotton variety 35/1 in the districts of Meerut, Muzaffarnagar, Bijnor, Saharanpur and Moradabad. Arrangements are being made to declare the two districts of Muffarnagar and Meerut as a "protected area" for 35/1 cotton and the Cotton Control and the Cotton Transport Acts are intended to be passed as soon as sufficient seed in the two districts referred to had been collected. When the purity of this cotton is ensured, it is expected that growers will obtain better returns than what they are obtaining at present.

COTTON EXPORTS

The new cotton season, namely, 1958-59, would appear to have commenced on an optimistic note as far as cotton exports are concerned. Shipment of cotton from India during the first month, that is, September 1958, for which alone complete figures are available, showed a sharp improvement, as compared with the corresponding period of the previous season. It was as much as 24,335 bales (of 400 lbs.) as against a mere 1,875 bales shipped in the same month of last season. Destination-wise, Japan accounted for the bulk, its share being 19,025 bales. The Continent of Europe and Hong Kong accounted for 2,079 bales and 2,039 bales, respectively. The U.K. and U.S. took 285 bales and 282 bales, respectively, while others accounted for 625 bales.

TEXTILE-EXPORT INCENTIVE SCHEME

The Government of India has issued a clarification of the concessions announced by it on 31st October for importing coal-tar dyes, textile chemicals, and textile machinery against export of cotton textiles, yarn, etc. A notification in the *Gazette of India Extraordinary* says that import licences will be granted only in favour of the manufacturing textile mills against the sum total of their exports effected either directly by them or through their commission agents and/or other exporting houses. Registered processors will also be eligible to receive import licences against exports of processed mill cloth shipped by them. The mills which have manufactured such cloth will not be able to claim import licences.

Imports of coal-tar dyes and textile chemicals, etc., the notification adds, are intended primarily for consumption by the manufacturing mills. In cases, however, where the quantities imported are found to be in excess of their actual requirements, the licensees may effect the sale of such surplus quantities in favour of any other manufacturing mill for its actual use. This will, however, be subject to the condition that the transaction should be reported with sufficient details about stocks, quantities, and prices involved to the Textile Commissioner within seven days of the deal. Exports made in the three months, July to September 1958 will form the basis for issue of licences during the current quarter, namely, October to December, whereas exports made during the current quarter will be taken into account for issuing licences in the next quarter, January to March 1959.

The clarification has been generally welcomed by the trade. It has removed the earlier impression that only mills would be permitted to take advantage of the concessions. The trade has noted with satisfaction that import licences will be issued to mills against export not by them alone but by their commission agents and exporters too.

The ban on the import of all fully-manufactured wool items continues under the new import licensing policy for October 1958-March 1959. The decision has been taken in view of the continued shortage of foreign exchange. Actual users of raw wool, tops, noils and shoddy will be granted import licences with the prior approval of the Textile Commissioner. Licences will be granted to the extent of 12 months requirements, as was announced in the previous period. Licences for wool yarns (excluding handknitting wool) may be granted to actual users subject to application being considered by the Joint Chief Controller of Imports, Bombay, in consultation with the Textile Commissioner. Such licences would be valid for six months.

India is the giant among the countries manufacturing jute products. With a capital of about Rs. 100 crores and employing more than 3,50,000 workers, our jute industry accounts for over 50% of the world's total production. This 'golden fibre'—our best dollar earner—brings in annually Rs. 125 crores in foreign exchange.
Playing a significant part in the development of this major industry is Texmaco pioneers in many fields of engineering in India. Aided by the world's best know-how of its technical collaborators, Fairbairn Lawson Combe Barbour Ltd., of England, Texmaco, today is equipped to manufacture and supply the complete range of jute mill machinery, made to international standards.

MILL CLOSURES IN LANCASHIRE

STREAMLINING OFFICE PROCEDURE IN INDUSTRY

From A Special Correspondent

MANCHESTER, *4th November*

IN the earlier part of 1958 at least, Lancashire mills were being permanently closed at the rate of two a week, so that such news, however disquieting, became something of a commonplace. During the summer months, the rate of closures slackened, partly because of the automatic reduction in output due to the holiday season.

MANCHESTER LETTER

As the weeks passed by without any improvement in the trading position, however, it became obvious that further contraction must follow as output was so seriously in excess of demand. Now, the doors of more mills are closing behind the last operatives to work in them and it would be unimaginative to suggest that these will be the only ones to be so affected in the months ahead.

Local newspapers have carried reports of pending mill closures with such regularity that they tended to be overlooked except by those directly involved. The grim situation came back into the public eye last week when two of the larger groups in the trade announced concentration measures on successive days.

The need to shut such big units as those closed at Reddish by the Fine Spinners group, and the similar procedure adopted by Combined English Mills at Bolton, focussed the attention of the outside world on Lancashire's miseries yet again. Figures showing the full story of the loss of mills in Lancashire this year have yet to be published, but the loss in manpower is sufficiently drastic to provide an accurate guide to the number of idle buildings.

New Facts Told

It would be both improper and injudicious to comment on the progress of the investigation into the Yarn Spinners' Agreement which is at present being conducted by the Restrictive Practices Court. The trade as a whole must wait for a decision to be announced; this may well be delayed until near the year-end, as the hearing is expected to last for several weeks.

Certain information has been given during the hearing which throws considerable light on current trading conditions. For instance, it has been stated that the total forward commitments of spinners are around 200,000,000 lbs. of raw cotton, equivalent to an average of £20,000,000. This means approximately £100,000 per company and £200 per worker in the industry, roughly equal to three months' wages. Another interesting aspect brought out in the hearing was that spinning mills had spent £51,000,000 on modernisation and re-equipment during the past eight years, including £44,000,000 on plant and machinery.

That the cotton industry's labour force is far older than the average in other trades is no secret. Details now given indicate that men under 30 in the spinning trade represent 22 per cent. of manpower, against 37 per cent. in British industry generally. From 30 to 34 the figure is 24 per cent. against 33 per cent., while male workers of 45 and over represent 54 per cent. of the labour force, against 40 per cent.

Equivalent figures for female labour are 27 per cent. under 30 in spinning, against 41 per cent. in all British industry; those from 30 to 34 account for 29 per cent. against 28 per cent., and women of 45 and over represent 44 per cent. in spinning against 31 per cent. in other trades.

Other information about the loss of labour included the statement that after the 1952 slump only 40 per cent. of male operatives in spinning who were then laid off went back to the industry, while after the 1955-56 recession not one of the males then laid off went back. The number of unemployed women in the cotton industry in the North-West last year was six times the total number of other unemployed women in the region.

Not All Pessimists

In spite of dwindling trade in cotton products and recent reports of mill closures, Major J. A. Barber-Lomax, Chairman of the £3,000,000 Barber Textile Corporation, of Bolton, is not despondent. In his annual report he says: "It can reasonably be expected that the present poor demand will not exist over a long period."

The relaxation of the credit squeeze and a revival in confidence in cotton price levels could cause an improvement in trading conditions now long overdue, he adds. During the past year, the group spent £134,185 on new machinery and at the end of July had outstanding commitments of £81,051 for further items of new machinery.

Trading conditions during the 12 months had been very difficult, Major Barber-Lomax points out, particularly during the latter half-year. Weaving profits were poor due to unremunerative price levels set by the large quantity of cheap cloth and made-up goods coming in duty-free and without restriction from India and Hong Kong. Several spinning mills in the group had to reduce production and stop machinery owing to paucity of demand.

Another reason for buyers holding back orders was the investigation by the Restrictive Practices Court of the minimum price scheme for cotton yarns operated by the trade to avoid cut-throat competition and to give stability to the industry.

Combined net profit of the group for the year ended 31st July was £96,576 against £179,203 in the previous year. This reduction is attributed to the general recession in the cotton trade, shortage of demand, the credit squeeze and uncertainty of the level of raw cotton prices. A final dividend of 5½ per cent. is recommended on the ordinary shares making 11 per cent. for the year on capital as increased by a one-for-nine bonus distribution against the equivalent of 13½ per cent. for the previous year. The amount carried forward is raised by £43,700 to £331,205.

The position of preference shareholders of Vantona Textiles Ltd., the Manchester group with mills in the Bolton area, had been strengthened by the merger with Everwear Candlewick during the past year, the Chairman, Mr. Roland Dunkerley, said at the annual meeting in Manchester. Although the textile trade was in the doldrums at the moment, he believed the merger would be very beneficial for the group as a whole.

Drastic revision of the whole of the facilities of the group had been undertaken, he continued, since the merger, and a great deal was being done to enable the Company to march steadily forward with strength.

In the next few weeks, Mr. Dunkerley added, the group intended to put on the market some new products which would be something quite different. They would provide a "new look" in household textiles and included a cotton terry towelling which dried dishes with great absorbency, and a new bedspread.

The use of the term "productivity" has spread rapidly during the past decade and the devotees of the cult have made rapid strides in convincing most industrialists that much can be done to improve their rate of output by introducing well-thought-out schemes to encourage efficiency. The Cotton Board's own Productivity Centre has been far from backward in interpreting modern ways of improving mill methods and urging their wider adoption throughout the industry.

Office System

In the past, however, the Centre has been chiefly concerned with organising work-study training courses in the production departments of the mills. More emphasis is now being laid on office systems and procedures which are just as important to individual companies in order that the skill of the operatives should not be wasted at administrative level.

To encourage the use of work-study methods in the offices of spinning and weaving mills, the first of a series of courses is to be held later this month at the Centre. The intention is to simplify office procedure by streamlining existing methods and modernising systems which, like many others, can grow somewhat rusty with the years.—*All Rights Reserved.*

U.K'S WOOL TOP EXPORTS

Exports of wool tops from the United Kingdom are heading for a new record. At the end of nine months—according to the Trade and Navigation Accounts issued recently—they aggregated 66.4 million lbs. or nearly 3 million lbs. more than in the corresponding period of last year. If the recent rate of export can be maintained, the total for the year should exceed last year's record total of 83.2 million lbs. An important factor in this year's expansion is the considerable increase in shipments of tops to China. That country has thus far taken nearly 20 per cent. of Britain's total exports of tops this year, and the 12.6 million lbs. of tops shipped to China to date is 50 per cent. more than the total supplied to it during the whole of 1957. China is by far the largest customer for tops from Britain, the two next largest being India and Canada with 8.8 and 8.7 million lbs. respectively. Imports of raw wool into the United Kingdom continue to reflect the difficult trading conditions which have characterised much of the year. In nine months of 1958, they amounted to 454 million lbs. (actual), as compared with 530 million lbs. in the corresponding period of 1957. The term "actual" means that greasy wool is recorded at its greasy weight and scoured wool at its scoured weight.

SOLICITORS

MESSRS. KHAITAN AND COMPANY, 1B, Old Post Office Street, Calcutta

The Directors have decided to offer with right of renunciation for subscription at par 10,000—7 per cent. Tax-free Redeemable Cumulative Preference Shares of Rs. 100 each and 15,000 Ordinary Shares of Rs. 100 each to the Registered holders of Ordinary Shares whose names would appear on the Register of Members on the 13th day of November, 1958, in the proportion of 2 (Two) Preference Shares and 3 (Three) Ordinary Shares for every ONE existing Ordinary Share then held. The Shareholders are also given the right to apply for additional shares, the allotment of which will be at the absolute discretion of the Directors.

RIGHTS ATTACHED TO DIFFERENT CLASSES OF SHARES IN RESPECT OF CAPITAL AND DIVIDEND

The Preference Shares carry the right of fixed cumulative preferential dividend of 7 per cent. per annum tax-free on the Capital for the time being paid-up or credited as paid-up thereon. The holders of the said redeemable Preference Shares shall also have right in the event of winding-up to be paid all arrears of preferential dividends earned, whether declared or not, down to the commencement of winding-up and also to be repaid the amount of Capital paid-up or credited as paid-up on the Redeemable Preference Shares in priority to any payment in respect of the Ordinary Shares but shall not be entitled to any other rights in the profits or assets of the Company nor confer any voting rights.

As regards redemption, the Company may at its option after the expiry of five years from the date of issue, from time to time, redeem the said shares or so many of them as the Company may think fit, by giving not less than six months' notice of its intention to do so. If all the shares shall not be intended to be redeemed at one and the same time, the shares to be redeemed shall be determined by drawings. Notice of the intention to redeem shall be given at such time and in such manner and the drawing will be made in the presence of such person or persons and at such time and place as may be fixed by the Directors of the Company.

The new Ordinary Shares, for all purposes, shall rank *pari passu* with the existing Ordinary Shares of the Company save and except that the new Ordinary Shares shall not confer on the holders thereof any right to any dividend on the Ordinary Shares declared in respect of any Accounting year of the Company ended on or before 30th June, 1958.

VOTING RIGHTS

Subject to the provisions of the Companies Act, 1956 on a show of hands every member present in person or by proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him.

COMPANY'S ACTIVITIES

The Company was floated in the year 1953 and its Works are situated at Rishra, District Hooghly (11 miles from Calcutta). It manufactures Jute Baling Hoops and is catering the entire requirements of the Jute Mills in India, imports having been totally stopped. It has recently expanded its activities by starting the manufacture of Cold Rolled Strips, Box Strapping and Steel Wire Ropes which were hitherto imported from outside India. By manufacture of these very much needed engineering products, the Company is saving vitally needed foreign exchange of the country.

The Company's gross block and other liquid assets at the end of June 1958 stood at approximately Rs. 83,00,000 out of which a sum of Rs. 20,50,000 has been received from the Ministry of Rehabilitation.

The Company has paid dividend from its inception as under:—

Year ended June	*Rate of Dividend* Per cent.
1954 (for 23 months)	25
1955	12½
1956	12½
1957	12½

TAX BENEFIT

The Company is advised that companies subscribing capital under this issue will be entitled to obtain exemption from payment of super-tax provided in Section 56A of the Income Tax Act.

UNREST IN KERALA PLANTATIONS

COMMUNISTS' BID TO ESTABLISH CONTROL OVER WORKERS

THE Communist Party in Kerala is caught with the backlash of its own whip. It said too many things as an opposition party which today as the Government party it cannot fulfil. It cannot curb its followers who are clamorously demanding what they were promised. Its followers were trained in organised agitation and violence and they are now practising what they have been taught. Nothing could have embarrassed the Communist Government at Trivandrum more than the shootings on the High Ranges. Firing at labour in a Communist State is no new thing but Kerala is a special case. Here its Chief and other Ministers had made the working class its privileged citizens. Soon after the Communists took over power, they proclaimed that, in a dispute between workers and managements, the Government would always be on the side of the workers. They reconstructed history to establish that the police has been used in the past (prior to the Communist rule) to suppress working class and popular "movements" and promised that the police would not be used for such purposes whatever the form of the "movement." They released party men convicted and sentenced for crimes from the prisons to show how safe it is to commit a crime so long as party objectives are served and the party is in power.

As soon as the Communists came to power, they turned attention first to the consolidation and expansion of their hold on labour. Plantations were the largest field of labour activity because of its size. There are in Kerala some 160,000 workers in the industry, apart from about 30,000 in tertiary services. Bringing them under Communist sway was an attractive proposition, and most of the plantations scattered through the hilly districts of Kerala were subjected to a vigorous campaign of agitation, violence where there was resistance, intimidation, obstruction, assault and general disorderliness and hooliganism. Managements complained that there was very little of police help and that there was no protection against violence and destruction to property. The Chief Minister waited till 23rd July 1957, and then issued his famous statement in regard to the role of the police. It was indeed the Government's policy statement in regard to the role of the police in a Communist State, in the face of Communist-inspired and led agitation. This confirmed the general belief that the police has been given instruction not to interfere with labour action, unless it actually resulted in violence. In other words, the preventive functions of the police have been taken away and they were to enter the scene after a crime was committed. This allowed intimidation, obstruction and trespass to continue unabated on plantations in sufficient measure to cow down rival unions, render managements helpless and extend the sphere of Communist influence.

That violence has been let loose as a favourite tool of Communist expansion in Kerala cannot be doubted. The cheek of a rival union worker was gashed open on Wallardie Estate on the 12th July 1957. This was only one incident in the wave of Communist violence in plantations at the time. Estate managers were assaulted and before they could reach the police stations to prefer a complaint the activists would have already brought a dozen to the station to make charges against the affected planter. A mob of 350 were collected and lines inhabited by members of a rival union were stoned for 2½ hours until the roofs were smashed and 14 were injured inside the lines. There have been nine murders in or near estates and innumerable cases of wounding and maiming. At Arnakal, a worker walked up to a member of the staff supervising feld work and hacked off his arm. At Glenmary the grisly method of agitation was placing a corpse on the verandah of the estate manager's residence in the dead of night. At Guderale, a supervisor was attacked with a billhook three weeks ago and four stitches had to be put into the wound on his head. Rival union offices have been ransacked, inmates beaten up and the office files set fire to with impunity. While the Union Minister for Labour was listening to a deputation of planters at the Government House at Kottayam on 25th September 1957, a mob was forcing the release of a worker charged with rubber theft at Mundakayam, 30 miles away. On the day after the ministerial party had passed through Mundakayam, the assistant manager of the same estate was beaten up mercilessly.

The adverse publicity the party was receiving outside the State had a sobering effect on it and special measures were taken to curb the enthusiasm of party activists in plantation areas. By then violence was begetting violence and rival unions were getting into the habit of organising counter-demonstrations. However, the Devicolam by-election was preceded by comparative calm and the few incidents reported emanated from other labour groups.

For sometime, the party organisers in the plantation belt have been feeling restive and their representatives on the Plantation Labour Committee, an organisation set up by the Government to discuss industrial relations in plantations, ostentatiously resigned from the Committee. This was in September 1958 and, in the third week of that month, there appeared demand notices listing some 42 demands and the threat to strike unless the demands were met. The earliest to start a strike from the date of the notice was on 8th October but the strike in Munnar actually began on 4th October. Labour politics of Kerala plantations precipitated the strike and there followed all the unrest and violence which culminated in the firing on Nettigudi Estate, about seven miles from Munnar, by the police on a Communist mob in which nine constables were injured.

The Communist Union's notice contained four important demands relating to increased contribution to provident fund, increased bonus, increased holidays with pay and gratuity. For agricultural labour, plantation workers have a privileged position not matched even by industrial labour in India. It was early this year that their wages were increased by direct negotiations and the agreement is to run for five years. Substantial increases to staff salary scales and other terms were given under another agreement. Last year, plantation labour were brought under provident fund benefits. What upsets many planters is that those who have been trying to bring about a liberal settlement for some years are now no longer taken seriously, because the industry is finding that one series of settlements is promptly followed by a new catalogue of demands. But the impact of Communists' demands was different on the other unions in the State. It seemed to them as if the Communists were stealing the thunder. Munnar is the nerve-centre of the vast Kanan Devan planting district with some 33 estates and 28,000 workers. There the faction-ridden I.N.T.U.C.-led unions had found some semblance of unity under the direct presidency of the I.N.T.U.C. President only a few weeks ago. In order to reassert its position, the I.N.T.U.C. Union immediately went on strike on the 4th October. The Communist Union followed immediately. The Communist tactics again put the I.N.T.U.C. Union into a disadvantageous position. So, the latter negotiated for a settlement with the management for the reference of the major issues to adjudication and the management agreed to it by the morning of 5th October. A joint application under Industrial Disputes Act 10(2) was made by the management and the I.N.T.U.C. Union, as the Communist Union preferred to go on with the strike. The application is still pending before the State Government. The I.N.T.U.C.-led Union workers were willing to go back to work, but, by then, it was clear that not the demands on managements, but the strength of each union was at issue. The Communists were obviously well prepared for a show-down. They had six or seven loudspeaker-equipped vehicles patrolling the estates with relays of drivers exhorting workers to leave the fields and factories, rushing union-toughened picket men from one point to another to drive workers away from

OPERATING PROFIT OF AIR-INDIA INTERNATIONAL DECLINES

EFFECT OF FOREIGN EXCHANGE RESTRICTIONS

A DECLINE in operating profit, despite an increase in operating revenues, is disclosed by the annual report and accounts of the Air-India International Corporation (General Manager: Mr. B. R. Patel) for the year ended 31st March 1958. The operating revenues for the year under review were Rs. 10.82 crores, as compared with Rs. 9.65 crores in the previous year. The increase in operating revenue did not, however, keep pace with the rise in capacity-ton miles which advanced by nearly 16.3 per cent. This has resulted in the decline in operating profit which aggregated Rs. 71.67 lakhs, as against Rs. 87.90 lakhs in the previous year. This drop, it is stated, was largely due to the loss of traffic resulting from severe restrictions imposed by the Government since early 1957 on the issue of foreign exchange for travel purposes. An increase in service frequency along certain routes, the reorganisation of the Corporation's fleet and steady progress in the creation of facilities for the operation of jet fleet by 1960 are among the notable features of the working of the Corporation in 1957-58.

Profit

The fall in operating profit is, as already stated, to be attributed to the decline in load factor from 64.3 per cent. in 1956-57 to 59.1 per cent. in 1957-58. It may be mentioned here that load factor is the ratio of revenue-ton miles to capacity-ton miles; the former is the product obtained by multiplying the capacity (in tons) available for passengers, mail, and cargo by the distance in miles flown by aircraft, while the latter is revenue load of passengers, mail and cargo in tons multiplied by the distances flown in miles. The following table gives the salient features of the Corporation's operating and traffic statistics during the three years 1955-56, 1956-57 and 1957-58:

Operating Statistics

	1957-58	1956-57	1955-56
Revenue hours flown	26,306	23,808	19,696
Revenue miles flown (millions) ..	6.719	5.973	4.909
Capacity-ton miles (") ..	50.657	43.567	35.242
Revenue-ton miles (") ..	29.988	27.927	19.635
Of which Passenger	21.247	19.491	13.927
Mail	2.690	2.520	1.777
Revenue passenger miles (millions)	247.232	224.525	158.116
Load factors (Per cent.)			
Passenger	61.5	67.3	57.0
Overall	59.1	64.3	55.3
Revenue passengers ..	88,312	79,825	56,445
Mails carried (lbs. in millions) ..	1.475	1.354	0.975
Revenue cargo (") ..	3.302	3.256	2.288
Operating profit (Rs. in lakhs) ..	71.67	87.90	6.54
Operating revenue per C.T.M. ..	2.137	2.215	1.920
Operating cost per C.T.M. ..	1.995	2.013	1.901
C.T.M. per employee	12,387	11,897	11,292

The Corporation's non-operating revenue aggregated Rs. 111.68 lakhs, as against a deficit of Rs. 8.06 lakhs in 1956-57, the large surplus in the year under review being due to sale of its Constellation fleet and related spares. This, together with the operating profit of Rs. 71.07 lakhs, made a total of Rs. 183.35 lakhs. After taking into account the previous year's carry forward of Rs. 1.21 lakh and providing for deferred taxation to the tune of Rs. 57.25 lakhs, there was a disposable surplus of Rs. 127.31 lakhs. A sum of Rs. 41.50 lakhs has been transferred to equipment renewals reserve (as against Rs. 36.00 lakhs in the previous year). This amount, it is stated, is equivalent to interest at 4 per cent. on the Government's investment in the Corporation and the appropriation has been made in accordance with the "Government's wishes on the subject." Insurance fund absorbs Rs. 9.66 lakhs, while a sum of Rs. 6 lakhs has been utilised for writing off the balance of development expenditure. The additional depreciation on fleet claims Rs. 69.23 lakhs—this is an innovation in accounts—leaving a balance of Rs. 92,000 to be carried forward.

Explaining the provision for additional depreciation, the Directors observe:

"The Corporation has up to the present provided annually for depreciation on the basis of an assumed economic life for its equipment. As the re-sale value of long-range, multi-engined, pressurised aircraft has, ever since the war, remained at an abnormally high level owing to a world-wide shortage of such equipment, the provision for depreciation made from revenue each year by the Corporation proved to be more than adequate. However, with the impending introduction of large fleets of new jet airliners throughout the world, the market for second-hand piston-engined aircraft has already considerably weakened and it may be expected that re-sale values will drop substantially in the years to come as piston-engined fleets become increasingly surplus to requirements. The Board, therefore, consider it necessary, or at least prudent, to provide for additional depreciation on the fleet as rapidly as circumstances permit. In line with this policy, the Board have set aside to depreciation over and above the amount of Rs. 106.90 lakhs charged for the year to the profit and loss account, an additional amount of Rs. 69.23 lakhs available from the net surplus (after providing for deferred tax thereon) on the sale of the Constellation fleet. In addition, the Board have transferred the balance of Rs. 12.06 lakhs standing to the credit of the capital reserve to the depreciation fund which now stands at the figure of Rs. 335.50 lakhs, as against a gross block of Rs. 1,051.00 lakhs."

The Corporation's balance-sheet total has increased from Rs. 19.75 crores to Rs. 22.83 crores as on 31st March 1958. Assets include capital expenditure, including works-in-progress, of Rs. 10.68 crores, Boeing-707 project (Rs. 1.29 crore), spares and stores (Rs. 2.90 crores) and cash (Rs. 2.52 crores). On its liabilities side, the Corporation, besides a capital of Rs. 13.23 crores, has reserves aggregating Rs. 1.21 crore and provision for depreciation, obsolescence and doubtful debts amounting to Rs. 3.90 crores and for deferred taxation Rs. 1.17 crore. Loans and debentures account for Rs. 1.09 crore and other liabilities for Rs. 2.21 crores. Against the loans of $16.8 million (Rs. 8.00 crores) negotiated in the U.S. to meet the dollar content of the Boeing project, the total amount withdrawn upto the end of the year was $2.3 million (Rs. 1.09 crore). During the year under review, the Corporation received from the Government a sum of Rs. 47.94 lakhs on capital account in respect of various projects, while it refunded to the Government Rs. 47.44 lakhs. The 4 per cent. 1949-59 debentures amounting to Rs. 9.04 lakhs were redeemed during the year. The five-year moratorium on the payment of interest on Government's investment in the Corporation expired on 31st July 1958. It would appear that, at the instance of the Corporation, the question of further extension of moratorium upto the end of 1965 is under the consideration of the Government.

Fleet

The Corporation has disposed of its three 749A aircraft and equipment for $4.2 million (Rs. 2.00 crores) and placed orders for two Super-Constellations worth $4.2 million. The Corporation's fleet consists of 10 standard-sized units which, it is stated, ensure "greater flexibility and better utilisation." An agreement made during the year with K.L.M. and Air-France for the interchange of spares and tools is now in operation in Beirut, Delhi, Calcutta, Hong Kong, Bangalore and Tokyo. This arrangement, according to the Directors, has "resulted in economies and brought about greater understanding and co-operation between the participating airlines." Negotiations for enlarging the scope of this agreement to include power plants are proceeding. Work on the centralised workshop project has made good progress.

Summing up the results of the Corporation's working during the year under review, the Directors note that the year was "mainly one of further consolidation of the large expansion of capacity effected in 1955-56." In the meantime, the programme for setting up the additional facilities and creating the organisation required for the operation of the Boeing jet fleet early in 1960 has been set in motion. In this connection, the Directors observe:

"Apart from introducing entirely new types of aircraft and engines, requiring techniques and procedures in operation, maintenance and traffic handling materially different from those applicable to piston-engined operations, the Boeing project will involve an expansion of nearly a hundred per cent. in our annual capacity, expressed in terms of ton-miles offered for sale. How quickly the additional capacity can be filled will depend, amongst others, on some important factors beyond our control, such as the numbers and types of services offered and the corresponding pattern of fares adopted by the international air transport industry as a whole. It is a sobering thought that an increase in total capacity at least equal to our own, will take place simultaneously in almost every international airline in the world, as about two billion dollars (Rs. 950 crores) worth of new gas turbine-engined aeroplanes are added to the existing piston-engined fleets. The drastic increase in traffic required over a short period to provide an economic load factor on the greatly expanded aircraft capacity cannot be expected to come solely from the normal annual growth in total world travel or from the additional growth of traffic resulting from the extra speed of the new planes. A good part of the extra traffic must also be sought from strata of the travelling public which today cannot afford air transport."

The next few years, as Mr. J. R. D. Tata, Chairman of the Corporation, said, at the recent annual meeting of the International Air Transport Association, are going to be "crucial" for the air transport industry. In this connection, it is gratifying to note what the Directors have to say on the tasks ahead of the Corporation: "The maturity and professional competence of our organisation, coupled with the soundness of our financial position, built up over the last few years, should enable us to ride out any storm which may temporarily threaten the air transport industry in the coming difficult years." If Air-India International has to carve out an important place in the world's air map, it should not only maintain but improve its high traditions of service. At the same time, it should increase its technical equipment and personal, so that it could brave the rough weather of the jet age. No less important is the need for keeping the costs of operation under perpetual scrutiny, which alone can enable it to maintain attractive levels of fares and freights and thereby widen the market it serves.

DIGVIJAY CEMENT

The works of the Digvijay Cement Company, Ltd., and the power station with an installed capacity of 8,000 kw., situated at Sikka (near Jamnagar), constitute by far the biggest enterprise in the old Saurashtra State. The entire project of the cement factory was completed in 1949 when the plant was commissioned into production with an annual capacity of 100,000 tons, which incidentally marked the first post-war cement plant to go into production. Ever since, the Company has been embarking upon enhancing its production capacity, as would be amply borne out by the two extension projects rapidly succeeding each other, bringing the total installed capacity of the plant from 100,000 to 430,000 tons per annum. The Company has definite plans for increasing its rated capacity by an additional 200,000 tons per annum. Further, the Company has developed a fleet of its own and has been able to bring into existence a regular maritime traffic at this site.

A novel feature of the Company's achievements is the installation of two aerial cableways, one for transport of cement to the steamers and the other for bringing calcereous sea-sand to the factory. The former is 2½ miles long and is of the monocable type (one rope circuit for traction and carriage) designed to handle 60 tons per hour. This is, perhaps, the only one of its kind in India, the unique feature being that three-quarters of the entire length is in the sea. There are 96 trolleys of the tray type on the line, each loaded with 12 1-cwt. bags. The sand ropeway network is working on bi-cable system and has a capacity of 200 tons per hour. The trolleys are of the bucket type, each designed for a capacity of 1.3 ton of sand. There are 72 such buckets on the line. This plant is the most modern type, incorporating maximum safety necessary for a commercial installation and provided with automatic tilting mechanism for unloading the trolleys.

EFFORTS TO INCREASE EXPORTS YIELDING RESULTS

CHAIRMAN, MR. GOPIKISAN PIRAMAL, REVIEWS TEXTILE INDUSTRY'S PROBLEMS

THE Eighty-seventh Annual General Meeting of the Morarjee Goculdas Spinning and Weaving Company, Ltd., was held in Bombay on 8th November 1958. Addressing the shareholders on the occasion, Mr. Gopikisan Piramal, Chairman of the Company, made a brief analysis of the factors which adversely affected the textile industry and agreed with the Joshi Committee recommendation that there was need for a sustained and continuous study in the field of marketing research by the industry. He was of the view that this could not be undertaken by individual units. There must, therefore, be a concerted effort by all the units.

The following is the full text of Mr. Piramal's speech:

"GENTLEMEN,

"It is a pleasure to welcome you all to the eighty-seventh annual general meeting of the Company and place before you the Directors' report, audited accounts and the balance-sheet of the Company for your consideration and adoption.

"Today, we meet in an atmosphere laden with grief and sorrow on account of the sad and sudden demise of Seth Piramalji, the senior-most member of the Managing Agency firm of your Company. He was the inspiring spirit in the management of the affairs of your Company over the past 24 years. Many of you will remember that before the mill was taken over by Messrs. Ganesh Narayan Piramal in 1934, there was a serious economic crisis all round and this mill was in a most difficult position. The wages of the workers and the salary of the staff were not paid and even the bills of cotton and stores could not be regularly paid. The state of affairs of the mills was quite discouraging when it was taken over, mainly at the instance of the late Seth Piramal. It was in a very great measure due to his business acumen that the Company is steadily marching on the path of progress irrespective of difficult times and enjoys the position of prominence that it does today. In his death the Company and its employees have suffered an irreparable loss. As a mark of respect to the deceased, your Company was closed for a day and the workers also abstained from work on the subsequent day.

Company's Working

"I shall now report to you on the working of your Company. We are in the happy position of having done creditably well in the year ended 30th June 1958. The profit of the Company has recorded a sizable rise over that of the previous year. The gross profit for the year under review, at Rs. 34.11 lakhs, has risen by Rs. 12.20 lakhs from Rs. 21.91 lakhs earned in the previous year. Your Directors have provided for depreciation of Rs. 17.25 lakhs and Rs. 5.88 lakhs for development rebate for the period under review, as permissible under the Income-tax Act.

"You will observe from the balance-sheet that the fixed assets of your Company stand well written down from Rs. 275.33 lakhs to Rs. 74.91 lakhs, the difference, namely, Rs. 200.42 lakhs, being the total depreciation provided up to the end of the year of review. The net written-down value of the fixed assets includes Rs. 12.32 lakhs, being the cost of additions made to the gross block during the year. You may be aware that a sum of Rs. 30.09 lakhs had been spent by way of additions to the gross block in the previous year. I need not point out to you that these figures speak for themselves the financial soundness of the Company.

"Your Company is quite alive to the present-day need for the promotion of exports in order to earn more foreign exchange to finance the second Five year Plan. Efforts were made to increase the exports of our products by sending representatives to various customer-countries and I am glad to report that these efforts are yielding results.

"A Director of your Company was recently deputed to Japan for the purchase of more machineries and also to study the latest development and techniques.

"I shall now refer to the general economic trends of the year having relevance to our industry, which constitutes the oldest and the largest mechanised enterprise in India.

Industry is Ailing

"Though the wonderful world of textiles is now at the beginning of a challenging and dynamic age, the industry itself today is ailing and restless. It is true that this ailment is not peculiar to the industry in our country alone, but is a common feature all over the world. Right from the United States to Japan, the industry has had a setback during the year under review. Last year, on this occasion, I had referred to the drastic increase in excise duty, the burden of which proved to be more than what it could bear. I believe, that it was not only the extent of the duty levied that mattered, but that the time also was most inopportune. That proved to be the turning point in the textile trade. The industry was doing well enough for some time past when the levy forced it into a difficult situation. General conditions all over the world were becoming unhelpful and that levy proved to be the last straw that broke the camel's back. It ruined the morale of the industry and trade. The course of events during the year that followed bear out my statement.

"The Government too appreciated the situation, but rather belatedly. Though the excise duty has been reduced thrice during the last few months, it has not helped much. All that it has done is to reduce the speed of decline to some extent. Besides, the way these duties were brought on was rather tactless, and this created uncertainty in minds of the traders, wholesalers and retailers, who used to share the risks with the manufacturers by carrying substantial stocks. They are now hesitant to perform one of the prime duties of the middlemen. I may say that it is due to this bad forecasting and lack of planning that a wrong decision was taken which created this anomaly in the Indian economy, that while additional purchasing power was being created by the implementation of the Plan, the industry producing one of the most essential articles of existence, i.e., cloth, should have been forced into such a state. I agree that nature too has not been very co-operative, and the crops of foodgrains have been failing successively for the last few years. But this does not detract from the fact that Government's textile policy was totally innocent of the foresight and the nice balancing of considerations that constitute policy-making.

Export Markets Affected

"Besides the home market, the export markets are being adversely affected. All the under-developed countries are trying to start off on the road of industrialisation, and the first industry to begin with is usually textiles. During the year under review, communist China has invaded Asian markets by selling cotton piece-goods at low prices coupled with long credit terms and a flood of advertisement and propaganda. It is only a totalitarian country that can afford to do so, for obvious reasons.

"The challenge of man-made fibres is the other factor that the Indian textile industry has to take into account. We have not yet acquired the technique, know-how or equipment for producing the various man-made fibres, which are potent competitors of cotton, on which most of our textile industry is relying for the present.

"The biggest challenge facing our industry is modernisation of plant and equipment. Recently, our Government has also announced a policy for the modernisation of the textile industry. I am happy to report that we have met this challenge squarely and hope to keep on meeting it successfully.

"Management is the most single important factor that makes all the difference between the success and failure of an industrial unit. A scientifically trained and proficient management cadre is imperative in order to keep pace with the upheaval in our industry. I am happy to report that we have sponsored candidates for the post-graduate diploma course in business management, industrial administration and foreman supervisory training course. I have mentioned this only to bring to your notice that your Company is awake to the necessity of scientific management.

Textile Enquiry Committee's Report

"It is a happy sign that our Government appreciated the general situation and appointed the Indian Cotton Mills Industry Enquiry Committee under the chairmanship of Shri D. S. Joshi (Textile Commissioner) to study the problems facing the industry with a view to diagnosing the causes and to exploring and suggesting remedial measures. The Committee has submitted its report, which I trust, you have all gone through. The Government has started moving on the basis of these recommendations. I will draw your attention to only one of the recommendations which states: 'The question of the marketing of cloth forms an important field which guides producers in the changing tastes and preference of consumers. Marketing intelligence or research is an indispensable adjunct. There is a need for more continuous and sustained study in this field which may be undertaken by the industry and the Textile Commissioner's organisation.' I entirely agree with the views expressed therein, but I am of the opinion that this task cannot be performed by individual units, and I, therefore, feel that the Indian Cotton Mills' Federation, the Textile Commissioner and such other organisations must move together in the matter and co-operate.

"A further factor which continues to hamper our progress is the continuous rise in the cost of production, thereby increasing the burden on the industry. Foreign exchange stringencies have subjected stores items such as dyes and chemicals to high prices and scarce availability.

"After having detailed to you broadly the handicaps facing the industry, I would like to repeat that this year's progress of your Company could have been achieved only due to the willing and active co-operation of the people here—the administrative, technical and production personnel of the Company. Our personnel relations have been quite happy and cordial. I am sure you will join me in an expression of thanks to them all on this occasion. In the end, gentlemen, allow me to thank my colleagues on the Board and you all sincerely for the kind co-operation extended to me.

"With these words I move that the Directors' report and the audited statements of accounts for the year ended 30th June 1958, already circulated amongst the shareholders of the Company, be and are hereby adopted."

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

SUBSIDISED INDUSTRIAL HOUSING

The Union Ministry of Works, Housing and Supply, has sent a communication to all State Governments to the effect that projects formulated by employers under the Subsidised Industrial Housing Scheme will in future be technically scrutinised, sanctioned and processed by the State Governments themselves instead of being recommended by them to the Ministry. In pursuance of this decision, all employers who applied recently to the Ministry for financial assistance, are being advised to approach the State Government within whose jurisdiction the construction is contemplated. Similarly, projects now under the Ministry's consideration are being transferred to the State Governments for further action. The Ministry is also considering the question of transferring to the State Governments the processing of the projects submitted by private employers and already sanctioned by it.

The State Housing Ministers who met recently in conference at Darjeeling felt that the response from employers in the matter of constructing houses for their workers was poor. They noted that the efforts made by the States to secure the co-operation of employers had not met with any appreciable success. The conference was of the view that, unless employers could be persuaded to co-operate in the scheme, some measure of compulsion might have to be introduced. It was, however, hoped that the employers would be persuaded to take advantage of the liberalised terms now offered, namely, increase in the quantum of financial assistance, relaxation in the mode of disbursement of funds, longer period of repayment of loans and facility to obtain sanctions to their projects from the State Government. It was suggested that the results achieved should be watched for a year and the question of introducing an element of compulsion taken up for consideration, if necessary, at the next conference.

TARIFF PROTECTION TO COCOA AND CHOCOLATES TO GO

BAN ON IMPORTS, THE REASON

NORMALLY, an industry enjoying tariff protection is deprotected either when it has attained adequate competitive capacity comparable with its foreign confreres or when it has failed to fulfil its obligations as a recipient of protection. Neither of these reasons is applicable to the cocoa powder and chocolate industry. And yet this industry is to lose protection with effect from 1st January 1959, a verdict of the Tariff Commission fully accepted by the Government. The Commission's reason is that there is no point in extending protection, as imports of cocoa powder and chocolate are not allowed for balance of payments considerations. This may be a practical way of looking at the problem, but what does the country lose if tariff protection is retained? Further, by importing this new criterion, the Tariff Commission is speculating on the prospects of balance of payments situation. Supposing that balance of payments position improves and imports of cocoa and chocolates are allowed, the industry will have to come to the Commission again with a plea for reimposition of tariff protection. The Commission will then have to waste its time and effort in undertaking a fresh study of the problem. Indeed, since the Commission knew that there was a ban on imports of the industry's products, it could have very well dispensed with its last enquiry and straightaway told the industry that the question of extending the period of protection (beyond 31st December 1958) would be taken up if and when the ban on imports were lifted.

Be that as it may, the history of protection for the industry, as well as the industry's position and problems may be briefly stated.

The industry was granted protection, for the first time, in 1947, following an enquiry by the then Tariff Board. The revenue duty of 30 per cent. *ad valorem* on cocoa powder and covering chocolate prevailing at that time was converted into a protective duty at the same rate and the period of protection was initially fixed to cover up to 31st March 1950. In addition, assistance was given to the industry by remitting in full the import duty of 30 per cent. *ad valorem* on cocoa beans. Subsequently, there were three tariff enquiries, in 1949, in 1954 and 1956. And each time protection was extended. According to the last enquiry and recommendation, protection is to expire on 31st December 1958.

Since the enquiry in 1956, the industry has been making fairly satisfactory progress. At present, there are two units, namely, Cadbury-Fry (India) Private Limited, Bombay, and Sathe Biscuit and Chocolate Company, Ltd., Poona, which are engaged in the commercial production of cocoa powder and chocolate from cocoa beans. Two more producers, namely, Dr. Writer's Chocolates and Canning Company, Bombay, and Parry's Confectionery Ltd., Madras, have capacities to manufacture chocolate from cocoa beans and are producing that article on a small scale. In addition, there is a number of units engaged in the manufacture of confectionery from covering chocolate or in processing covering chocolates into eating chocolates. The following table shows the present annual rated capacity of the major units per single shift, as compared with the position at the time of the last enquiry in 1956:

(Volume: In tons)

Name of the company	Covering chocolate		Cocoa powder	
	1956	1958	1956	1958
Sathe Biscuit and Chocolate Co., Ltd.	450	450	150	150
Cadbury-Fry (India) Private Ltd.	340	340	125	125
Dr. Writer's Chocolate and Canning Co.	*Nil*	15	*Nil*	*Nil*

It should be noted in this connection that the capacity of Cadbury-Fry has already gone up to 300 tons of cocoa powder and 500 tons of covering chocolate per single shift. The firm's application for recognition of its higher capacity is under consideration by the Government. Besides, Dr. Writer's Company has installed certain plant and machinery which are stated to have raised its capacity on single shift to 132 tons of covering chocolate. It proposes to apply for Government recognition of this higher capacity.

Production, however, fell far short of the installed capacity. The representative of Cadbury-Fry stated at the enquiry that owing to initial difficulties connected with the starting of the new plant, his Company's capacity could not be fully utilised in the first half of 1957. During the latter half, acute shortage of raw materials accounted for the under-utilisation of capacity. The other producers could not utilise their capacity for lack of demand for their products. Recent trends in actual production are indicated in the following table:

(Volume: In tons)

Name of the unit	Production		
	1956	1957	1958 (January-April)
COCOA POWDER			
Sathe Biscuit and Chocolate Company Ltd.	33.00 (not in production)	41.00	9.00
Cadbury-Fry (India) Private Ltd. ..		118.62	33.45
Total ..	33.00	159.62	42.45
COVERING CHOCOLATE.			
Sathe Biscuits	73.00 (not in production)	64.00	14.00
Cadbury-Frys		256.81	87.88
Dr. Writer's Chocolates	0.70	1.91	0.15
Total ..	73.70	322.72	102.03

There are, as usual, varying estimates of demand for cocoa powder and chocolate. The Tariff Commission itself has placed the demand for 1958 at 300 tons of cocoa powder and 350 tons of chocolate. The representative of Cadbury-Fry was optimistic that, given adequate supplies of raw materials, he would be able to market 300 tons of cocoa powder and 400 tons of chocolate, but, as import of beans has been severely restricted, he could not hope to produce more than 100 tons of cocoa powder and 250 tons of chocolate. On the basis of production upto April 1958 and other latest information, the Commission has placed the production for 1958 at 150 tons of cocoa powder and 300 tons of chocolate. As regards future demand, the Commission received estimates ranging between 400 tons and 1,000 tons (including both cocoa powder and chocolate) for 1961. The Commission, however, considers it rather impossible to project any demand for these products in 1961, as their supply is bound to be restricted, owing to severe restrictions on imports of beans.

It is said that the quality of indigenous cocoa powder and chocolate has improved since the last tariff enquiry in 1956, and that it can now compare favourably with that of imported products. All the producers, it is stated, are keeping themselves up-to-date with technological developments in other countries.

The major problem facing the industry continues to be one of short supply of the raw materials, namely, cocoa beans, which are not available from indigenous sources and have, therefore, to be imported. Cadbury-Fry obtains its supplies from Ghana through its foreign associates, while Sathe and Dr. Writers import their requirements from Ghana, Brazil and Ceylon. Attempts are, however, being made to start indigenous cultivation of cacao, but even if they succeed in the near future, it will take several years for the cacao plantation to yield beans. Incidentally, it will be interesting to note, in this connection, that Mr. Urquhart, a former Director of Agriculture, Gold Coast, Ghana, was invited by the Indian Council of Agricultural Research to investigate possibilities of cultivation of cacao in this country. He came to India in May last and toured the States of Madras, Kerala and Tripura. He is of the view that Forastero type of cacao, namely, amelonado and upper amazon and hybrids of amazon, are the best types of cacao that could be cultivated in parts of South India. He appeared to entertain no doubt whatever that there are large virgin tracts in South India where the soil and climate are suited to cacao and that enough cacao could be grown to provide sizable quantities not only for meeting the internal requirements in full but also for export. The Tariff Commission had a special meeting with him and after discussing the problem of growing cacao in this country has recommended that steps should be taken to ensure that the examination of Mr. D. H. Urquhart's report on cacao cultivation is completed as quickly as possible and that, if his recommendations are acceptable to Government, they are implemented without any loss of time. If Government decide, on Mr. Urquhart's report, to develop cacao plantation, it may also consider the question whether, in order to achieve quick and satisfactory results, an assurance should be given to the cacao plantation industry that, if it is run on sound lines and is able to produce beans of grades required by the cocoa powder and chocolate industry, it will be given protection against unfair competition from abroad.

Imports of cocoa powder and covering chocolate, other than confectionery, have been banned since 1st January 1957. As regards beans, licences are issued on an *ad hoc* basis to actual users. In 1956, imports of cocoa powder and covering chocolate aggregated 128.85 tons valued at Rs. 5.78 lakhs, as against 269.65 tons, valued at Rs. 8.19 lakhs in 1951.

The other principal recommendations of the Tariff Commission are:

The present concession of duty-free import of cocoa beans should continue.

Whatever exchange quotas are fixed from time to time for the import of cocoa beans should be distributed amongst the existing units in such a way that each unit receives licences commensurate with its requirements for economic operation.

No new or additional capacity for the processing of cocoa beans should be established in the country, so long as the existing installed capacity is not fully utilised.

The Central Government has accepted the Commission's recommendation pertaining to im-

INDISPENSABLE FOR EVERY FACTORY AND BUSINESS HOUSE

FACTORIES AND LABOUR MANUAL

BY R. MATHRUBUTHAM AND R. SRINIVASAN

FOREWORD BY Hon'ble Mr. R. VENKATARAMAN (*Minister for Industries and Labour, Madras Government*)

Third Edition : REVISED AND BROUGHT UP-TO-DATE

This book contains all the Central Labour Acts with Rules and Notifications under all the Acts. Exhaustive Notes and copious case-law make this book, on an ever-growing and complex subject, indispensable. Every Factory should be equipped with a copy of this book.

An appreciation :

"It is undoubtedly a book of reference to all including those in charge of the administration of the labour laws as it gives at a glance not only the various Acts as amended up-to-date but also the rules framed thereunder by the Central and the State Governments."

* * * * * * *

"The exposition of the principles contained in the various Acts is clear and lucid."

V. BALASUNDARAM, I.A.S., *Commissioner of Labour, Madras.*

. . . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

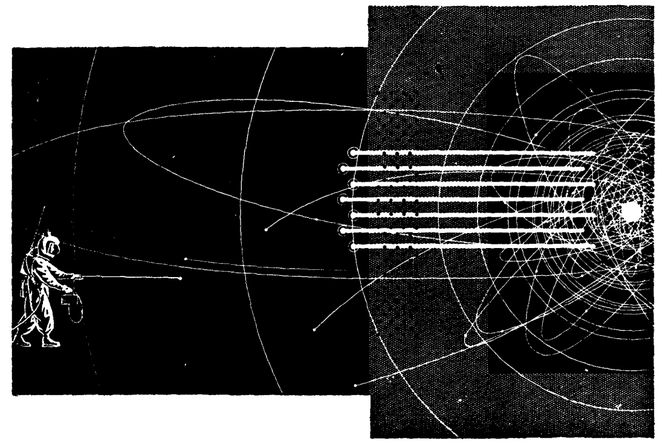
Shell meets the challenge



TO A WORLD HUNGRY FOR ENERGY, nuclear power brings rich promise. With it, inescapably, come complex new problems which can be mastered only by new thinking.

Conventional lubricants, for instance, are useless when exposed to radiation. They break down, thicken and form harsh solids. Yet the lubricants needed for mechanisms close to the reactor may have to withstand radiation 4 million times stronger than would kill a man. Some of them have to take such punishment continuously for two years or more, for the complicated mechanisms which they lubricate cannot be serviced without closing down the reactor altogether—a costly business with plant involving a capital outlay of some £50,000,000.

Here was the challenge...where was the answer? Shell was first to foresee the problem. In 1953, a special group was set up at Shell's Thornton Research Centre to study the effects of atomic radiation on lubricants. Searching tests took place there and under actual reactor radiation at the Atomic Energy Research Establishment at Harwell; and in 1957, after four years of research, Shell introduced the first-ever range of Atomic Power Lubricants, named Shell APL.

This is still the only range of proved radiation-resistant lubricants on the market. Oils and greases from this range, as well as other Shell Industrial Lubricants, are in daily use both at Harwell and at Calder Hall, England, the world's first full-scale nuclear power station. They have also been chosen by the Central Electricity Generating Board for the new British atomic power station under construction at Bradwell, Essex.

Here is Shell "Leadership in Lubrication", in action—anticipating a need, undertaking fundamental research, and finally developing the products to solve a problem of world-wide importance.

Shell lubricants are distributed throughout India by Burmah-Shell. *Thus we are able to meet India's requirements of fuel and lubricants, to help her to face the many challenges that are before her on the road to industrial progress.*

INDIAN IRON'S GROSS PROFIT SHRINKS FOR SECOND YEAR IN SUCCESSION

PRODUCTION, TOO, FALLS—OUTPUT BELOW CAPACITY

THE recent speculative activity in Indian Iron scrips has been mainly inspired by two beliefs. One is that, when the expansion plans are fulfilled, the total profits would go up and with that the dividend too. The other is the future prospect of the Company issuing bonus shares through capitalisation of reserves, as and when they swell in the years to come. They would appear to have overlooked some of the basic factors which were responsible for the setback in the Company's working during the year ended 31st March 1958—both production and earnings have fallen to the lowest levels in the past three years—and which are likely to affect future results as well, unless corrective measures are taken in time. It is the presence of these factors that made Mr. Mookerjee forecast an uncertain outlook for this key industry, in particular, and for the whole economy of the country, in general.

To take the results of the Company for the year 1957-58. The total production of steel suffered a drop of nearly 6 per cent., that is from 976,036 tons to 919,622 tons. The output of saleable steel, in particular, fell by no less than 31,679 tons to 412,042 tons. With this decline, the Company's output of saleable steel shrank by 48,971 tons in the last two years. The production of both steel ingots and saleable steel for the year under review was the lowest in the last three years. The output of steel ingots dropped from 532,315 tons in 1956-57 to 507,580 tons, mainly due to the unavoidable diminution in the use of purchased steel scrap during the year, on account of the difficulty of procurement. The output ratio of saleable steel recorded a decrease due to the fact that, in 1957-58, more steel was produced in fully finished form commanding a higher realisation price, but involving naturally a lower overall yield per ton of ingot.

It is, of course, true that, during a period of large-scale extensions to plant, output would be generally lower. It is gratifying to hear that the disorganisation of production by reason of the extension works has reached the point where the maximum effect on current production has already been felt. But it is not this factor alone that was responsible for the decline in production in 1957-58. Another factor of a "graver character," as Mr. Mookerjee pointed out, operated during the year to affect the production adversely. This was the growing lack of discipline among the workers generally and the marked deterioration in the effort put forth by them.

The smooth progress of both the 1953 and 1955 extension programmes was interrupted by a strike of the contractors' labour lasting from 24th February to 21st March last and this spread to the Company's own contract labour both at Burnpur and Kulti. The disorganisation caused is said to have inevitably delayed the completion of extension programmes by a period longer than the duration of the strike itself. It is also estimated to involve a loss of foreign exchange to the extent of about Rs. 5 crores.

Two more large open hearth furnaces in the melting shop are to be commissioned and this is to be done in the months of November and December this year, thus completing the 1953 extension programme. With the virtual completion of this programme, the capacity of the Company's melting shop now stands at 62,500 tons of ingots per month, but production is running only at about 44,000 tons on an average, as a result of the unsatisfactory and continuing conditions referred to above. The fall in the Company's output is duly reflected in the despatches of steel and earnings for 1957-58. Despatches of steel, which had dropped from 451,591 tons (in 1955-56) to 420,477 tons in 1956-57, further went down to 403,978 tons in the year under review, the lowest level since 1953-54.

The gross profit for the year under review amounts to Rs. 7 crores, representing a fall of Rs. 58 lakhs. This is on top of a decline of Rs. 60 lakhs suffered in the previous year. The net profit is, however, higher at Rs. 3.70 crores, as compared with Rs. 2.73 crores earned in 1956-57, but is still a shade lower than that (Rs. 3.75 crores) for 1955-56. These profits have been arrived at after taking into account a sum of Rs. 1.22 crore being the retrospective increase in steel retention prices, following the further increase of Rs. 14 per ton notified by the Government on 13th October 1958 and effective for the five-year period 1955-56 to 1959-60. It will be recalled that, in May 1957, the Government of India granted a provisional increase of Rs. 46 per ton in the retention price to offset the enhancement of the excise duty on steel ingots from Rs. 4 to Rs. 40 per ton, pending revision of the retention price to cover the higher cost on account of increases in railway freight, cost of coal and other raw materials and the rise in other charges. It is to cover the higher cost on account of these that the increase of Rs. 14 per ton was granted last month. Along with this, the Company was authorised to claim, with effect from 16th May 1957, adjustment in respect of the increase in excise duty at the rate of Rs. 45.74 per ton on the quantity of steel despatched from that date.

It is on account of the delay in announcing the retention prices that the Company postponed the presentation of the year's accounts to the shareholders by three months, as it was not considered desirable to work on estimates having regard to the magnitude of the sum involved. In order to avoid keeping the shareholders under suspense, the Directors declared an interim dividend of 10 per cent. in August last, but they made it clear that there was no intention to pay any final dividend. The Company has put forward further claims for adjustment of the retention prices of steel and pig iron and these are pending with the Government.

The rise in net profit noted above is due to a substantial cut in the provision for taxation from Rs. 3.19 crores to Rs. 1.62 crore, on account of the large tax allowances in respect of the new plant. The latter sum includes a sum of Rs. 27.40 lakhs being the provision for wealth tax in respect of the years 1956-57 and 1957-58, the liability on this account for the previous year being Rs. 11.73 lakhs. In view of the large additions to fixed capital expenditure during the latter part of the year, the provision for depreciation has been stepped up by Rs. 5 lakhs to Rs. 1.40 crore. The net profit has been supplemented by a sum of Rs. 14 lakhs transferred from the taxation contingency reserve.

In accordance with the recommendation of the former Tariff Board, a sum of Rs. 45.10 lakhs (same as in the previous year) has been transferred to the plant rehabilitation reserve and in terms of the Company's agreement with the Government a sum of Rs. 26.13 lakhs (Rs. 23.69 lakhs) has been added to the extensions special reserve. The Directors have also created a development rebate reserve (statutory by allocating Rs. 1.05 crore from the year's profit, in order to qualify for tax remission in respect of development rebate claimable on plant installed after 31st December 1957. After allowance for this, the balance of tax saving, amounting to Rs. 16.50 lakhs (Rs. 9.50 lakhs) in respect of the development rebate allowable on plant installations for the whole year under review, has been transferred to the development reserve (tax rebate). It is stated that, in future, the Company will have to set aside to the statutory development rebate reserve 75 per cent. of the entire development rebate claimable in respect of plant installations for any year in order to qualify for the tax remission. At current rates of taxation, the tax remission is said to work out to 51½ per cent. of the development rebate, but the Finance Act 1958 requires companies to set aside 75 per cent. of the development rebate claimable to the statutory reserve. To provide additional finance towards the cost of the expansion programmes and the due repayment of the indebtedness that is being incurred, the Directors have strengthened the general reserve by Rs. 32.97 lakhs (as against *nil* in the previous year).

These appropriations leave a balance of Rs. 1.18 crore out of the year's profit. From this sum, the Directors have set aside Rs. 1 crore to the general development reserve and replenished the distributable sum by transferring a similar sum from the profit earned in 1954-55. Explaining the object of these transfers, the Directors observe in their report as follows:

"Owing primarily to the very large allowances for taxation purposes in connection with the new plant installed, the percentage of taxable profits to gross book profits for the year is approximately 48 per cent. only. In order that this position should not operate to the disadvantage of shareholders in relation to their current dividends, Rs. 1 crore of the profits for the year has been transferred to general development reserve and a like amount which was set apart out of the profits for the year ended 31st March 1955 and credited to the works and ore mines new extensions reserve has been written back to the profit and loss appropriation account. The interim dividend at the rate of 10 per cent. on the ordinary share capital amounting to Rs. 1,03,67,416 and the dividend for the half-year ended 31st March 1958 on the preference share capital amounting to Rs. 6,74,885 are accordingly payable out of the sum of Rs. 1 crore so transferred to the profit and loss appropriation account and Rs. 10,42,301 out of the profits of the year under review. Dividend on the preference share capital for the half-year ended 30th September 1957 amounting to Rs. 6,74,885 has been paid out of the profits for the year ended 31st March 1958."

The following comparative table gives a bird's-eye view of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds (including items used in works)	35,04 53*	30,62 96	30,44 88	27,35.41

Steel	403,978	420,477	451,591	449,050

* Include retrospective increase in steel retention prices.
† Include provision for repairs and renewals.

A comparative study of the distribution of the Company's revenues during the two years 1956-57 and 1957-58 shows that the share of materials consumed has risen from 29.1 per cent. to 31.1 per cent. and that of working expenses from 16.6 per cent. to 21.4 per cent., while employees accounted for (in the year under review) 22.3 per cent., as against 23.5 per cent. in the previous year. The distributable profit has shrunk from 2.2 per cent. to 0.5 per cent. and administrative expenses from 1.2 per cent. to 0.9 per cent. In absolute terms, employees accounted for Rs. 7.94 crores in 1957-58, as against Rs. 7.29 crores in the previous year, the sharpest rise being seen in their salaries and wages, which have gone up by Rs. 45 lakhs.

The balance-sheet of the Company as on 31st March 1958 shows that reserves and surplus aggregate Rs. 17.23 crores (including Rs. 2.43 crores standing to the credit of share premium account), as against a paid-up capital of Rs. 13.07 crores and a net block of Rs. 23.67 crores. (Gross block Rs. 33.94 crores *minus* depreciation Rs. 10.27 crores.) It is these large reserves, as well as the prospect of further accretion to them in the coming years and the need for maintaining a proper balance between the capital account and the block account that have given rise to hopes of a further bonus issue in the market even after the proposed capitalisation of the share premium account is formally completed. The Company's secured loans have gone up by over Rs. 7 crores to Rs. 17.80 crores and unsecured loans (representing special advance from the Government of India) from Rs. 7.39 crores to Rs. 10.18 crores. Of the secured loans, the loan from the World Bank utilised so far accounts for Rs. 13.48 crores (out of the two loans aggregating $50.02 million granted by the World Bank). The current liabilities and provisions aggregate Rs. 17.41 crores. The capital work-in-progress amounts to Rs. 14.75 crores and other assets aggregate Rs. 37.26 crores.

The Rs. 10 paid-up ordinary shares are currently quoted at Rs. 27.35. At this rate and on the basis of a dividend of Re. 1 per share, the yield on them works out to about 4.4 per cent. per annum, after making allowance for the bonus right that is pending.

JIYAJEERAO MILLS PROFIT DOWN

FINANCIAL POSITION IMPRESSIVE

A TYPICAL example of the victim of slump in the cotton textile industry is provided by the working of the Jiyajeerao Cotton Mills Ltd. (Managing Agents: Messrs. Birla Gwalior Private Ltd., Birlanagar, Gwalior) during the year ended 31st March 1958. On account of a perceptible increase in cost of production, due to a rise in the price of cotton, stores, coal and dearness allowance to workers, in the face of a fall in sales realisations, the Company's profit curve has experienced a sharp downward trend. Indeed, there has been a landslide in the Company's profits in the past two years. The gross profit for the year under review at Rs. 43.58 lakhs shows a fall of Rs. 37.46 lakhs from Rs. 81.04 lakhs for the previous year. It is again less than half of Rs. 102.61 lakhs for 1955-56. The decline over the past two years is thus as much as over Rs. 59 lakhs or 57.5 per cent. The net profit, however, is slightly higher at Rs. 24.11 lakhs, as against Rs. 23 lakhs for 1956-57. But this is due to a substantial cut in the provision for depreciation from Rs. 21.20 lakhs to Rs. 16.33 lakhs and no provision at all for taxation, for which purpose Rs. 30 lakhs were set aside in the previous year. But the Directors have transferred Rs. 32.35 lakhs from the general reserve to the taxation reserve after taking into consideration the up-to-date tax liability, including the liability for the year under report.

In view of the fall in earnings, the dividend, which was only 3½ per cent. for the previous year, has been lowered further to 2½ per cent. for the year under review. It may be noted that, in 1956-57, the Company had to declare an additional dividend of 2.2/5 per cent. for the year ended 31st March 1956 under Section 23A(4) of the Income-tax Act which absorbed Rs. 11.13 lakhs. In order to meet this additional liability, the Company had to withdraw Rs. 10 lakhs from the tax provisions made during that year. Hence, no amount could be transferred to the reserves. For the year under review, however, a sum of Rs. 5.63 lakhs has been allocated to development rebate and another Rs. 25,000 to provision for contingencies. It is stated that the development rebate in the previous year was included in the amount provided for depreciation.

The following comparative table, presenting some of the salient features of the Company's working during the past four years, will provide an idea of its progress:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds of cloth, yarn, waste, etc.	467.56	496.04	507.53	422.70

† Other Sales.
‡ Additional dividend for 1955-56.

It will be seen from the table that sale proceeds of cloth, yarn and waste have progressively declined, from Rs. 5.07 crores in 1955-56 to Rs. 4.96 crores in the following year and further down to Rs. 4.67 crores during the year under review. Sales of raw materials, etc., have also fallen from Rs. 30.51 lakhs a year ago to Rs. 27.36 lakhs, as also other income from Rs. 20.50 lakhs to Rs. 18.84 lakhs. The Directors say that replacement of sales tax by an additional excise duty in December 1957 gave rise to difficulties and confusion in trade circles. Consequently, the offtake was less and stocks accumulated. The decline in the cost of raw materials consumed and in other expenses, as disclosed by the table above, apparently reflects the setback suffered by the Company in its manufacturing activities.

The Directors' report states that the construction of the soda ash and caustic soda factory at Porbandar is making good progress. According to the original plan, the factory should have commenced production during the year under review itself. But this could not be on account of late delivery of machinery. It is noteworthy that, besides the capital expenditure on the construction of this factory at Porbandar, the Company has spent about Rs. 20 lakhs on expansion, renewal and modernisation of its plants, machinery and buildings at Gwalior.

An impressive financial position is disclosed by the Company's balance-sheet as at 31st March 1958. The paid-up capital stands at Rs. 571.18 lakhs, having gone up from Rs. 563.65 lakhs as at the end of 1956-57 following the second issue of 7,531 5½ per cent. tax-free cumulative redeemable preference shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating Rs. 309.14 lakhs, of which the general reserve alone accounts for Rs. 287.41 lakhs. The book value of gross block is shown at Rs. 459.44 lakhs and total depreciation provided up to the end of the year of review comes to Rs. 329.33 lakhs, so that the net block is Rs. 130.11 lakhs. Additions to gross block during the year were of the order of Rs. 20.30 lakhs. Assets under construction at the Company's branch at Porbandar amount to Rs. 205.12 lakhs. While current assets aggregate Rs. 717.94 lakhs, of which investments in shares and Government securities at or under cost are Rs. 403.66 lakhs, cash and bank balances are a little under Rs. 13 lakhs. Of the investments just mentioned, Gilt-edged securities account for Rs. 116.02 lakhs and quoted shares for Rs. 151.95 lakhs, of which all but Rs. 31,000 are in equities. The market value of Gilt-edged securities and quoted shares is Rs. 275.45 lakhs, that is, Rs. 7.48 lakhs more than the book value. The investments in unquoted shares are Rs. 135.69 lakhs, of which nearly Rs. 75 lakhs are in the preference shares of Gwalior Rayon.

The Rs. 10 fully paid-up ordinary shares are currently quoted at Rs. 9.76 *cum-div.* On an *ex-div.* basis, the yield works out to 2.62 per cent. per annum.

COMMERCE AND INDUSTRY

(*Concluded from page 812*)

ports of beans. It has taken note of the others and promised to implement them as far as possible.

The Commission also worked out the fair ex-works prices of indigenous products and landed costs of imported products. On this basis, the rates of duties which will be required to protect the domestic industry from foreign competition will be 27 per cent. in the case of cocoa powder and 48 per cent. in the case of covering chocolate, which are slightly lower than the current rates of protective duty, namely, 35 per cent. *ad valorem* on cocoa powder and 50 per cent. *ad valorem* or Re. 1 per lb., whichever is higher, on covering chocolate. These calculations are, however, only of academic interest, as it has been decided to withhold protection for reasons mentioned at the outset.

GLASS AND CERAMIC RESEARCH

A chunk of dazzling, crystal-clear optical glass is a star attraction at the science pavilion, organised by the Council of Scientific and Industrial Research, in the India-1958 Exhibition. The optical glass has been made for the first time in the country at the Central Glass and Ceramic Research Institute, New Delhi. Certified as "A" grade by the Ordnance Factory, Dehra Dun, this glass is eminently suitable for optical instruments. Another product, developed in the laboratory and on display at the pavilion, is the foam glass, featherlight, multicellular, heat-insulating material which can replace imported cork used as an insulating material in refrigerating plants.

Mica brick is yet another product with a fascinating research and development history. Mica, a waste material accumulating as dumps in the vicinity of mica mines, has been processed for the production of bricks. These bricks, on account of their remarkable heat insulation properties, are invaluable for conserving heat in high temperature furnaces. Vermiculite bricks, made from imported vermiculite, were in use till now. The commercial production of mica bricks has already begun at a factory in Bhilwara, Rajasthan.

As a result of the research work carried out by the Institute, the bangle industry in Ferozabad, the largest unit in India, has now introduced a new process for utilising the indigenously available colourant, copper, in the manufacture of bangles, instead of the expensive imported selenium metal. This process has also been adopted in the production of red signal glasses, used for railway and traffic signals. Besides, the boron-free enamels developed by the Institute displayed in the Exhibition is capable of being used in enamelware production, with performance comparable to the conventional boron enamels.

SINGARENI COLLIERIES

RECORD OUTPUT AND PROFIT

THE year ended 31st December 1957 would appear to have been the most favourable one so far for the Singareni Collieries Company, Ltd. (Secretaries and Treasurers: Industries (I.F.) Department, Government of Andhra Pradesh, Hyderabad-Deccan). The Company's output of coal during the year exceeded all the previous levels and touched a new record. Despatches and sale proceeds, too, registered substantial improvements over the previous years. Gross profit also touched a new peak in the Company's history. The shareholders will doubtless be glad to know that the dividend has been raised further to 15 per cent. from 10 per cent. for the previous year and 7 per cent. for 1954. The dividend for the year under review is the highest that the Company has declared so far, the previous highest being 10 per cent. paid for 1956. The highly encouraging results for the year under review were due to (*a*) implementation of plans for expansion, (*b*) satisfactory supply of wagons for the movement of coal and (*c*) maintenance of cordial labour relations.

The gross profit at Rs. 61.68 lakhs is Rs. 9.04 lakhs higher than Rs. 52.64 lakhs for 1956. It is Rs. 8.28 lakhs better than the erstwhile record of Rs. 53.40 lakhs established in 1955. After making a higher provision of Rs. 38.18 lakhs for depreciation, as against Rs. 35.94 lakhs, and Rs. 8 lakhs (including wealth tax) for taxation, as against Rs. 7.75 lakhs in the previous year, the net profit also stands appreciably higher at Rs. 15.50 lakhs, as compared with Rs. 8.95 lakhs for 1956. The provision for payment of bonus to staff other than workers has been slightly raised from Rs. 1.75 lakh to Rs. 1.93 lakh. The dividend equalisation fund gets a higher amount of Rs. 3.50 lakhs, as against a mere Rs. 75,000 allocated a year ago. In addition, a sum of Rs. 32,073 has been provided for doubtful debts and another Rs. 30,000 for obsolescence (stores) as against *nil*.

The following comparative table shows at a glance the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Sale proceeds (net)	455.28	357.39	311.50	293.22
Colliery and other expenses	428.82	334.46	278.96	253.78
Gross profit	61.68	52.64	53.40	42.28
Depreciation	38.18	35.94	32.12	25.53
Taxation	8.00	7.75	7.50	7.70
Net profit	15.50	8.95	13.78	9.00
Provision for bad and doubtful debts	0.32	—	—	0.05
To reserves	3.80	0.75	2.75	1.00
To bonus (other than to workers)	1.93	1.75	1.75	1.50
To dividend	9.48 (15%)	6.32 (10%)	4.74 (7½%)	4.42 (7%)
Carry forward	0.17	0.21	0.07	—4.47

The Company's output of coal during the year under review amounted to 1,919,414 tons, as against 1,272,000 tons in 1953, 1,458,000 tons in 1954, 1,526,000 tons in 1955 and 1,681,000 tons in 1956. Despatches of coal during the year amounted to 1,815,601 tons, as compared with 1,566,000 tons in 1956 and 1,462,000 tons in 1955.

The reserves and surplus of the Company as at the end of 1957 amount to Rs. 104.44 lakhs, as against a paid-up capital of Rs. 63.21 lakhs, all in ordinary shares of Rs. 10 each. The provision for taxation stands at Rs. 11.76 lakhs. The current liabilities (excluding employees' provident fund contributions amounting to Rs. 11.67 lakhs) aggregate Rs. 336.02 lakhs, of which Rs. 120.76 lakhs represent loans from the Government of Andhra Pradesh secured by mortgage and hypothecation of the entire immovable and movable assets and Rs. 10 lakhs unsecured loans from the Government of India. The gross block of the value of Rs. 558.11 lakhs, including additions during the year of Rs. 90.42 lakhs, has been written down to a book value of Rs. 296.48 lakhs. The current assets aggregate Rs. 230.62 lakhs.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 17.25 *cum-div.* and, on an *ex-div.* basis, the shares provide a yield of 9.5 per cent. per annum.

DAVANGERE COTTON REPEATS DIVIDEND

SHARP FALL IN PROFITS OF HASIMARA TEA

Davangere Cotton Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. R. Hanumanthappa & Son, Davangere) present the audited accounts of the Company for the year ended 31st March 1958.

The result of the Company's operations during the year ended 31st March 1958 is a profit of Rs. 6,40,900 (Rs. 12,51,663) after providing Rs. 4,87,882 (Rs. 5,42,563) for depreciation on the fixed assets. Out of this profit a sum of Rs. 1,853 (Rs. 4,203) has been expended towards donation, and with the sum of Rs. 15,780 (Rs. 18,235) brought forward from the previous year, the balance of profit available is Rs. 6,54,827 (Rs. 12,65,695), which the directors propose to appropriate as follows:—

To general reserve Rs. 25,000 (Rs. 3,50,000), to reserve for development rebate Rs. 1,30,000 (*nil*), to reserve for repayment of mortgage loan Rs. 2,50,000 (*nil*), to payment of dividend for the year ended 31st March 1958 at 9 (9) per cent. per annum, on the paid up share capital, free of income-tax, absorbing Rs. 2,27,997 (Rs. 2,19,915) and to carry forward to next year Rs. 21,830. (Rs. 15,780 after providing Rs. 6,80,000 for income-tax, super-tax and wealth-tax).

During the financial year under consideration, the textile industry, in general, had to face many adverse situations. The incidence of high central and state Government taxes, the continued increase in the cost of manufacture and the poor demand from the consuming centres, resulted in accumulation of stocks with the Mills and consequent slashing down of prices. It is however a matter of satisfaction to report that in spite of these adverse factors the Company was able to dispose of the entire production, though at a lower margin of profit and also to reorganise their sales programme to meet the continued heavy demand from the consuming centres.

The Central Government has since taken measures to assist the industry by reduction of excise duty coupled with replacement of sales-tax by additional excise duty. It is hoped that these concessions will enable the industry to return to normal trading conditions.

The expansion programmes of the Company have almost been completed, except for 5,616 spindles to be received from the Indian manufacturers. But for the delay in the supply of machinery by the local manufacturers, the whole scheme would have been completed well before the end of the year. However the directors are confident of completing the project before the end of December 1958.

As the shareholders are aware, sanction was accorded for the issue of 5,536 shares. Out of these, the directors have since assigned 5,197 shares and also provided for the payment of dividend for the year in terms of Article 358 of the Articles of Association of the Company.

Accounts in brief are as under:—

Hasimara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

General:—Drought condition prevailed early in the season and a crop of 54,11,891 pounds of tea was made compared with 57,23,159 pounds in 1956, the crop being disposed of entirely on the Calcutta Auctions. The total net average sale price per pound of tea for teas realised from Hasimara divisions was Re. 1.82 (Rs. 2.00) and for Tumsong estate Rs. 3.32 (Rs. 3.31). The total working costs per pound of tea produced was as follows:—Hasimara divisions Re. 1.62 (Re. 1.56) and Tumsong Rs. 2.94 (Rs. 2.76).

The gross profit for the year is Rs. 10,40,053 (Rs. 27,17,751). The directors have transferred Rs. 3,25 000 (*nil*) from the general reserve and have provided Rs. 1,50 000 (Rs. 3,00,000) for bonus to labour, Rs. 5,37,079 (*nil*) for taxation (including an adjustment of Rs. 4,31,408 payable on account of previous years, against a substantial part of which appeals have been made) and Rs. 4,63,808 (Rs. 5,60,436) for replacements and depreciation of assets. Allowing for these and the other adjustments shown there is a credit balance of Rs. 2,50,920 (Rs. 14,75,344) and a total credit balance of Rs. 6,26,371 (Rs. 18,46,451) on this account which the directors propose to deal with as follows:—

To pay the preference dividend for 1957 absorbing Rs. 21,000 (Rs. 21,000), to pay a dividend of 7½ (22½) per cent. on the ordinary shares absorbing Rs. 2,40,000 (Rs. 7,20,000) and to carry forward to 1958 Rs. 3,65,371 (Rs. 3,75,451 after transferring Rs. 80,000 to staff reserve; Rs. 2,50,000 to general reserve and Rs. 4,00,000 to renewals and additions reserve).

Estimates for 1958 have been based on a total crop of 73,300 maunds at a total cost of Rs. 95,48,155, equal to a revenue cost of production of Rs. 1.63 per pound of tea.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Gross block	1,05,55,381

Gielle Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

General.—A short rainfall during the year and severe red spider affected crop and a total of 2,33,481 (2,28,183) pounds of tea was made against an estimate of 2,56,000 pounds. Quality generally was lacking, despite finer plucking, no good teas were made and with adverse market conditions, the net average sale price fell substantially. The total net average sale price per pound of tea was Rs. 2.68 (Rs. 3.01) and the total working cost per pound of tea produced was Rs. 2.80 (Rs. 2.69).

The State provident fund scheme was applied to plantation labour with effect from May, 1957 and this and the short crop made enhanced working costs.

The working for the year shows a loss of Rs. 26,929 (gross profit of Rs. 70,718) and after allowing for depreciation of assets, Rs. 24,568 (Rs. 32,273) and the other adjustments shown, there is a net loss of Rs. 51,717 (net profit Rs. 20,043) and a final debit balance on this account of Rs. 57,639 (Rs. 5,922) which is carried forward to 1958.

Estimates for 1958 have been based on a crop of 3,100 maunds of tea at a total cost of Rs. 6,52,314, equal to Rs. 2.63 per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Gross block	7,99,665
Reserves ...	2,42,096	*Less*—Depreciation ...	2,97,665

Rs.	8,62,527	Rs.	8,62,527

Tycoon Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation for 1957, of Rs. 3,91,352 (Rs. 11,80,038) to which must be added the balance of profit brought forward from 1956 of Rs. 86,908 (Rs. 98,341) making a total of Rs. 4,78,260 (Rs. 12,78,379). From this amount must be deducted depreciation in respect of previous year Rs. 42,317 (*nil*), adjustment account Rs. 59,581 (Rs. 7,643), provision for taxation Rs. 1,20,000 (Rs. 4,35,424) and loss on farming Rs. 13,718 (Rs. 14,166) and leaving a balance of Rs. 2,42,644 (Rs. 8,20,908 after writing off Rs. 238 on stores). From this amount the directors have set aside to general reserve Rs. 50,000 (Rs. 5,00,000 to buildings and machinery reserve) leaving an available balance of Rs. 1,92,644 (Rs. 3,20,908) which, the directors recommend, should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1957, at the rate of Rs. 3.00 (Rs. 4.50) per equity share on 52 000 equity shares, absorbing Rs. 1,56,000 (Rs. 2,34,000) and leaving to be carried forward Rs. 36,644 (Rs. 86,908).

The saleable crop weighed out at 16,082 (15,118) maunds against the revised estimate of 16,366 maunds and was disposed of at an average price of Rs. 2.16 (Rs. 2.90) nP per lb.

Estimate 1958.—Due to adverse weather conditions experienced early in the season, the saleable crop for season 1958 is expected to amount to 15,000 maunds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,20,000	Gross block	33,37,954

Dejoo Valley Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation for 1957, of Rs. 1,14,388 (Rs. 2,58,574) to which must be added the balance of profit brought forward from 1956 of Rs. 33,446 (Rs. 42,144) making a total of Rs. 1,47,834 (Rs. 3,00,718). From this amount must be deducted depreciation in respect of previous year Rs. 24,746 (*nil*), adjustment account Rs. 1,627 (*nil*) and provision for taxation (including provision for wealth-tax Rs. 45,000 (Rs. 81,136) leaving a balance of Rs. 76,461 (Rs. 2,19,446 after writing off Rs. 136 for stores, etc.) From this amount the directors have set aside to general reserve Rs. 25,000 (Rs. 1,50,000 to buildings and machinery reserve) leaving an available balance of Rs. 51,461 (Rs. 69,446) which, the directors recommend, should be distributed as follows:—

In payment of a dividend for the year ended 31st December 1957, at the rate of Rs. 2.00 (Rs. 3.00) per ordinary share on 12,000 ordinary shares, absorbing Rs. 24,000 (Rs. 36,000) and leaving to be carried forward Rs. 27,461 (Rs. 33,446).

The saleable crop weighed out at 4,045 (4,093) maunds against an estimate of 4,900 maunds and was disposed of at an average price of Rs. 2.42 (Rs. 2.76) nP. per lb.

Estimate 1958.—The saleable crop for season 1958 is now expected to amount to 5,000 maunds.

The smaller crop made in 1957 was due to drought and adverse weather conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Seeyok Tea Co., Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The accounts show a profit of Rs. 1,20,730 (Rs. 43,810). After adding the amount brought forward of Rs. 671 (Rs. 1,861) from the previous year, the profit and loss account shows a credit balance of Rs. 1,21,401 (Rs. 45,671). The directors recommend that this amount be appropriated as follows:

To transfer to the revenue reserve Rs. 45,000 (Rs. 45,000), transfer to the development reserve Rs. 15,000 (*nil*), transfer to the building and machinery reserve Rs. 15,000 (*nil*), transfer to the taxation reserve Rs. 12,000 (*nil*) and to pay a dividend on the ordinary shares at 10 (*nil*) per cent. tax-free, for the year ended 31st December 1957 absorbing Rs. 30,000 (*nil*), leaving a balance to be carried forward to the next year's account of Rs. 4,401 (Rs. 671).

Results of the season's working were satisfactory. Crop weighed out at 2.405 maunds as compared with 2,470 maunds in 1956, but the average selling price was Rs. 2.91 as against Rs. 2.82 per lb. in previous year.

Accounts in brief were as under:—

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE thirty-ninth Annual General Meeting of the Belapur Company, Limited, will be held on Wednesday, the 17th day of December, 1958, at 4-00 p.m. (S.T.), at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, to transact the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1958.
2. To declare a Dividend.
3. To elect a Director in place of Mr. Krishnaraj M. D. Thackersey who retires by rotation but offers himself for re-election.
4. To elect a Director in place of Mr. Maneklal Premchand, who has attained the age of 69 years and who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following, of which special notice has been received by the Company and is hereby given, as a special resolution:

   "That Mr. Maneklal Premchand, who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

The reasons which make this resolution necessary are set out in the statement of material facts annexed to this notice which shall be deemed to be incorporated in this notice.

5. To appoint Auditors for the current year and to fix their remuneration.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,

per pro W. H. BRADY & Co., LTD.,

F. EDWARDS,
Technical Adviser,
Managing Agents.

BOMBAY, *5th November*, 1958.

Notes: (i) The Transfer books of the Company will be closed from the 18th day of November, 1958 to the 17th day of December, 1958, both days inclusive.

(ii) The Dividend when declared will be made payable through the Bank of India, Ltd., Fort, Bombay, and will be negotiable at par at all its Indian Branches on and after the 3rd day of January, 1959. The Dividend Warrants will be posted to those Shareholders whose names stand on the Company's Register on the 17th day of December, 1958.

To the Shareholders of the Belapur Company, Limited and in particular to:

Mr. William Abel.

Messrs. Rajabali Hasom Paroo and Sons Ltd.

ANNEXURE

Statement of material facts and reasons in respect of items of special business in the accompanying Notice dated the 5th November, 1958.

Item No. 4: Mr. Maneklal Premchand, who retires by rotation and is eligible for re-election, has attained the age of 69 years and hence he can only be re-elected as a Director by a special resolution, notice of which has been received by the Company, in accordance with the requirements of Sections 190, 280 and 281 of the Companies Act, 1956. Mr. Maneklal Premchand has been associated with the Company as a Director for some years and his wide and varied experience have been most valuable to the Company during that time. It is therefore considered desirable that this association should be continued.

THE WEST COAST ELECTRIC SUPPLY CORPORATION, LTD.

Registered Office—Madras-1.

NOTICE OF THE TWENTY-FOURTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 24th Annual General Meeting of THE WEST COAST ELECTRIC SUPPLY CORPORATION, LTD., will be held at the Registered Office of the Company at No. 20, Second Line Beach, Madras-1, on Monday the 15th December, 1958, at 12 Noon.

AGENDA

1. To consider and adopt the Directors' Report and Audited Accounts for the year ended 31st March, 1958.
2. To declare Dividend on Preference and Ordinary Shares.
3. To elect Directors in the place of those retiring.
   (a) To appoint a Director in the place of Sri M. Subbaraya Aiyar who retires by rotation and to consider and if thought fit, to pass the following resolution which will be proposed as a Special Resolution of which a Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, has been received by the Company.

   "RESOLVED that the age limit under Section 280 of the Companies Act, 1956 shall not apply to Sri M. Subbaraya Aiyar who is aged 73 years and that he be appointed a Director of the Company by this Special Resolution as required under Section 261 of the Companies Act, 1956 notwithstanding the fact that he is an Associate of Messrs. Chandrie & Co. Private Ltd., who are the Managing Agents of this Company."

   (b) To appoint a director in the place of Sri S. Viswanatha Mudaliar who retires by rotation and to consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company.

   "RESOLVED that Sri S. Viswanatha Mudaliar who is a Director and a member of Messrs. Chandrie & Co. Private Ltd. (the Managing Agents of the Company), be and hereby is appointed as a Director of this Company by this Special Resolution as required under Section 261 of the Companies Act, 1956."
4. To appoint Auditors for the year 1958-59 and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 1st December, 1958 to 15th December, 1958 (both days inclusive).

By Order of the Board,

FOR CHANDRIE & Co. (PRIVATE) LIMITED,

S. VENKATARAMAN,
Director,
Managing Agents.

20, SECOND LINE BEACH,
MADRAS-1, *31st October*, 1958.

N.B.—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The Dividend when sanctioned will be paid on or after 15th December, 1958 to those members whose names stand on the Register of Members on the 30th November, 1958.

(c) The Explanatory Statement concerning the Special Resolutions referred to in items 3 (*a*) and (*b*) above have been posted to the members individually.

THE MEGNA MILLS COMPANY LIMITED

NOTICE OF INTERIM DIVIDEND

THE BOARD OF DIRECTORS OF THE above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at the rate of 50 naye paise per share (without deduction of Income-tax) in respect of the year ending 31st March, 1959, payable to those Members whose names appear in the Company's Registers on the 15th December, 1958, as the Registered Holders of Ordinary Shares.

The Share Transfer Books of the Company will be closed from 1st December, 1958, to 15th December, 1958, both days inclusive.

As the Members are aware, the following Resolutions were passed at the Annual General Meeting of the Company held on the 29th September, 1958:—

(*a*) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 100 each in the authorised capital of the Company be sub-divided into 10 shares of Rs. 10 each and that the 8,16,520 issued Ordinary Shares of Rs. 10 each resulting from such sub-division be credited as fully paid up.

(b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

Pursuant to the above the Members are requested to send their Share Certificates to the Company to enable the Company to issue new Shares Certificates after sub-division in their favour in terms of the aforesaid Resolutions.

By Order of the Board,

A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD, CALCUTTA,
Dated the 7th November, 1958.

THE INDIA JUTE COMPANY LIMITED

NOTICE OF INTERIM DIVIDEND

THE BOARD OF DIRECTORS OF THE above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at the rate of 62 naye paise per share (without deduction of Income-tax) in respect of the year ending 31st March, 1959, payable to those Members whose names appear in the Company's Registers on the 15th December, 1958, as the Registered Holders of Ordinary Shares.

The Share Transfer Books of the Company will be closed from 1st December, 1958, to 15th December, 1958, both days inclusive.

As the Members are aware, the following Resolutions were passed at the Annual General Meeting of the Company held on the 29th September, 1958:—

(*a*) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 125 each in the authorised capital of the Company be sub-divided into 10 shares of Rs. 12.50 nP each and that the 6,98,400 issued Ordinary Shares of Rs. 12.50 nP each resulting from such sub-division be credited as fully paid up.

(b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

Pursuant to the above the Members are requested to send their Share Certificates to the Company to enable the Company to issue new Share Certificates after sub-division in their favour in terms of the aforesaid Resolution.

By Order of the Board,

A. D. A. ALEXANDER,
Secretary.

Dated the 7th November, 1958.

MONEY RATES STIFFEN

(From Our Own Correspondent)

BOMBAY, 13*th November*

The short-term money market was active during the week under review and conditions were somewhat stringent. Thanks to the heavy subscriptions to the Treasury Bills and the broadening of the traditional *Diwali* demand for credit, there was a substantial shrinkage of the floating funds and banks turned out to be borrowers. The stringency persisted even after *Diwali*, but market circles are unable to say whether this marks the onset of the busy season.

Interest rates hardened and this was more perceptible in the inter-bank call money section, where the rate hardened from 1¼ per cent. quoted a week ago to 2¼ per cent. A sizable business was reported done today even at 2½ per cent. The corresponding rate among the smaller Indian banks was 2½-2¾ per cent., as against 2 per cent. a week ago. House money on 7 days' notice, as well as short-term deposits, was quoted at 3½ to 4 per cent.

This week's sale of ninety-one days' Treasury Bills amounting to Rs. 4 crores brought an offer of Rs. 7.20 crores. Tenders at Rs. 99.390 and above were accepted in full, the average rate of accepted tenders being 2.430 per cent., as against 2.458 per cent. per annum in the previous week. In addition to this usual sale, intermediate Treasury Bills were also sold to the extent of Rs. 3.50 crores from 5th to 7th November at the fixed rate of Rs. 99.401 per cent. This meant a yield of 2.396 per cent. per annum, which is lower than that obtained in the regular sales. Sales of intermediates are being held this week also (between the 11th and 15th inst.) at Rs. 99.406 per cent., giving a still lower yield of 2.376 per cent. per annum. Tenders for next week is unchanged at Rs. 4 crores. Maturities during the week under review aggregated Rs. 2 crores.

An expansion of Rs. 38.11 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 7th November 1958. Notes held in the Banking Department are lower by Rs. 11.08 crores. The rise in total notes issued, of the order of Rs. 27.03 crores, is covered by an increase of Rs. 30.02 crores in rupee securities and a drop of Rs. 2.99 crores in rupee coin. Foreign securities are unchanged at Rs. 164.67 crores, while balances held abroad are a fraction better, so that the total foreign assets stand at Rs. 178.89 crores. Deposits of the Central Government have declined by Rs. 9.54 crores and those of other Governments by Rs. 12.73 crores. Deposits of banks have dropped further by Rs. 27.85 crores, on top of a decline of Rs. 31.37 crores in the previous week. A rise of Rs. 3.49 crores is noted in loans and advances to Governments and of Rs. 3.38 crores in other loans and advances. Investments have gone down by as much as Rs. 50.59 crores. This is apparently due to the transfer to the Issue Department.

The Scheduled banks' statement for the week ended 31st October 1958 discloses a sharp fall of Rs. 30.29 crores in demand deposits and a rise of Rs. 18.78 crores in time deposits. On the assets side, advances and bills purchased and discounted are lower by Rs. 1.46 crores, while an addition of Rs. 17.58 crores is noted in investments. Cash balances have shrunk by Rs. 29.75 crores and money at call and short notice by Rs. 2.18 crores.

The Gilt-edged market ruled dull and the volume of business was small. Enquiries were confined to select counters and, in the absence of any offerings, despite the stringent conditions in the money market, the undertone was steady. The Life Insurance Corporation was reported to have bought some 4¼ per cent. State Loans, which kept sentiment in this section intact. 3 per cent. 1986 was done at the unchanged rate of Rs. 73.15. 3 per cent. 1963-65 was in demand and it hardened by 5 nP to Rs. 96.65. 3 per cent. 1964 was unchanged at Rs. 96.65 and 3 per cent. 1966-68 at Rs. 94. 3 per cent. 1970-75 picked up 10 nP to Rs. 90.20 while 3½ per cent. 1961 was stagnant at Rs. 100.10, 3½ per cent. 1963 was placed 5 nP lower at Rs. 100. 3½ per cent. 1965 held its ground at Rs. 99.70, 3½ per cent. 1967 at Rs. 98.95 and 3½ per cent. 1968 at Rs. 98.70. 3¾ per cent. 1967 was quoted at Rs. 100.50 and 3¾ per cent. 1968 at Rs. 100.40. 4 per cent. 1972 and 1973 were held at Rs. 100.70 and Rs. 100.60, respectively. Among State loans, 4½ per cent. Madras 1970 gained 10 nP to Rs. 100.25, Andhra 1970 5 nP to Rs. 100.15 and U.P. 1970 5 nP to Rs. 100.10. Madhya Pradesh and Bihar 1970 rose by 10 nP each to Rs. 100.

There was a slight weakening of the rupee in terms of the U.S. dollar, in consonance with the lower trend in sterling in New York. Banks' selling rate of ready dollar rose from Rs. 476.75 to Rs. 477 per $100 and their buying rates from Rs. 473.25 to Rs. 473.75 per $100. In New York, spot sterling dropped from $2.80.23/32-2.80.25/32 to $2.80.9/16-2.80⅝. Three months' forward shed ⅛c. to $2.79¼-2.78.15/16, while transferable sterling rose over the week from 279.30-279.40 cents to 279.40-279.50 cents.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, 11*th November*

There has been very little change, but owing to the poor demand for seeds and oil, a slightly easier tone has developed. Availability is still scarce, and with only limited enquiries from local crushers business has been negligible. In the oil market, with no appreciable stocks held by either manufacturers or dealers, prices have not shown much decline; the tendency, however, is quiet with sellers more in evidence than buyers.

The latest quotations are as follows: Ready Rs. 25-12 and November Rs. 25-10 per maund.

GOLD STEADY

(From Our Own Correspondent)

BOMBAY, 13*th November*

The exuberance and gaiety usually associated with *Diwali* festival were conspicuous by their absence in the bullion market during the *Moorat* session held on Monday last. Trading was dull and price fluctuations were narrow. The earlier sessions of the week and the subsequent session held today were no different. The only feature of the week's trading was the steady tone maintained by gold, while silver ruled quiet. Heavy selling by a leading Calcutta operator, who was reported to have lost heavily in commodity markets, and slackness in offtake were the main bearish factors in silver. In gold, too, the seasonal demand had become slack and was not very much more than the quantum of arrivals.

Forward silver (27th November settlement) shaded off from Rs. 188-10 to Rs. 187-11 early in the week. After a rise to Rs. 188-3, it reacted to Rs. 186-14 today. The closing was done at Rs. 187-3. The next settlement declined from Rs. 189-8 to Rs. 187-13 before closing at Rs. 188-2.

Ready silver was marked down over the week from Rs. 187-8 to Rs. 186-12. The floating stocks of gold are reported to be 1,300 bars. The daily average arrivals were of the order of 60 bars, including unrefined metal, while the offtake was no more than 10 bars per day on an average.

Gold for forward delivery (26th November settlement) was quiet early in the week, declining from Rs. 111-4 to Rs. 110-15, but it slowly recovered to finish at Rs. 111-9 today. The next settlement gained over the week from Rs. 111-5 to Rs. 111-12.

Ready gold moved up from Rs. 111-6 to Rs. 112-1, but closed lower at Rs. 111-13. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 2,900 tolas, while the offtake was 3,100 tolas per day on an average.

In New York, price of silver was reduced from 90¾c. to 90¼c. In London, too, spot silver declined from 78d. to 77⅛d. and forward from 77⅛d. to 77⅛d. Gold was a little erratic, but gained on balance ⅜d. to 250*s.* 2*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	13-11-58	Highest	Lowest	5-11-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	111 13	112 1	111 1	111 6

STRONG DEMAND FOR TEA DUSTS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th November*

The catalogues for dust sale 'W' which was held on Tuesday, 4th November aggregated 428,496 lbs. The smaller, but nevertheless useful, selection of teas met with a strong, but irregular, demand. Coloury mediums met with useful competition and were dearer. Other descriptions met with some demand and were steady on last rates. The sole exception were best liquoring dusts which were generally easier.

The average price realised in dust sale W was Re. 1.81 per lb., as against Re. 1.77 in the previous sale and Re. 1.56 in the corresponding sale of 1957.

Export Quota:—The market has been very quiet for the last week, with very little business being transacted. The latest quotation is sellers 2¾ nP, buyers 2¼ nP and last business was done at 2½ nP.

Forthcoming Auctions:—Dust sale 'X' will be held on Tuesday, 18th November 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 32.—1,700,000 lbs. Less demand medium, and medium barely steady. Improved quality good medium strong, but best liquoring highgrowns lower following quality."

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 10*th November*

The Madras kip market was firmer during the week following several U.K. enquiries, and ½d. to 1d. advance was recorded on certain lines. As tanners were not able to get sufficient raw stocks in North India, they were not keen to book at U.K. levels. Inland demand for low grade hides and calves revived and prices were firm. Arrivals of cow calf and buff calf were small.

Lightweight goat skins were in good demand, while medium weights were unchanged and heavy weights weak.

Shipments during October 1958 were: U.K. 2,478 bales tanned cow hides, 171 tanned cow calf, 35 tanned buff hides, 204 tanned buff calf, 631 tanned goat skins, 298 tanned sheep skins; Continent, 347 bales tanned goat skins and 161 tanned sheep skins; the U.S., 115 bales tanned buff hides, 11 tanned buff calf, 92 tanned goat skins and Japan, 275 bales tanned sheep skins.

COTTON MOVES UP FURTHER

(From Our Own Correspondent)

BOMBAY, 13*th November*

The recovery in cotton futures witnessed towards the close of last week gathered momentum during the week under review. The feeling of operators that the recent fall in prices was too sharp, the clarification issued by the Government regarding the textile export incentive scheme and the expectation of enlarged pre-*Diwali* cloth offtake, etc., prompted a large volume of short-covering and some fresh bull support. These considerations, together with reports that about 100,000 bales of piecegoods were sold in the *Mulji Jetha* market in *Moorat* session, influenced the trend of prices in *Moorat* trading in cotton futures which took place between 5-30 p.m. and 9 p.m. on Monday. The market developed firmness early in the session. Higher levels, however, met with selling with the result that prices suffered a break. Sentiment was also influenced by reports that mills sold cloth at a substantial discount. The Jarilla March contract which was quoted at Rs. 609.25 at the beginning of the *Moorat* session improved to Rs. 611.50, before closing lower at Rs. 608.25, registering a net loss of Re. 1. With the outlook for raw cotton remaining bearish, the *Moorat* session lacked the customary gaiety and business put through was comparatively small. Turnover approximated 8,000 bales. The market was closed on Tuesday and Wednesday on account of *Diwali* and Hindu New Year, respectively. The market ruled fully steady in today's session.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 604.50 and improved on short-covering and fresh support to Rs. 612 on Saturday. In the *Moorat* session, as noted above, the contract, after an initial firmness, eased towards the close. Commencing today's session at Rs. 609.75, the contract improved to Rs. 609.75 before finishing at Rs. 608.50. The trend of price of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	13-11-58	*High*	*Low*	5-11-58
I.C.C. Moglai Jarilla March 1959 ...	608.50	612	602	607.25

Moorat trading in the spot market was done today. The session was active throughout. Prominent mill groups purchased substantial quantities of new crop cotton. Turnover approximated twenty to twenty-five thousand bales. The export and import sections were quiet.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri, the figures in brackets being last week-end closings: Bengal *Deshi* 575 (570); Berar Jarilla 640 (640); Khandesh 715 (725); Vijay 800 (785).

Delivery contracts: Bengal 568 (565); Mathia 560 (555).

Easy conditions prevailed in the Karachi cotton futures market during the week. Foreign enquiries were few and far between. Lower spot advice, following new crop arrivals, adversely affected sentiment in the futures section. N.T.R.G. January declined from Rs. 65-4 last week-end to Rs. 63-6 and the March position shed Re. 1-5 to Rs. 64-6. The spot section also ruled easy.

A mixed trend was witnessed on the Alexandria cotton exchange during the week. While the long-staple Karnak contracts ruled fully steady, the medium-staple Ashmouni contracts suffered a break in prices on profit-taking. It would appear that the long-staple positions have stabilised around the figure of 72 tallaris per lb. The spot market continued to witness fair activity. Premiums were, however, more or less unchanged. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end closings.

Karnak: November 72.02 (72.00). January 72.10 (72.00). *Ashmouni*: December 62.95 (63.55); February 62.75 (63.17).

Cotton futures values in Liverpool drifted lower during the week under pressure of heavy hedge offerings against large purchases of East African cotton. The declining trend of spot prices also accelerated the downward trend. Sudan contracts were easy due to increased hedge selling. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: December-January 22.95; March-April 22.80. *Sudan*: November-December 26.25.

The most important development of the week as far as the New York futures market was concerned was the publication by the Department of Agriculture, on the 8th inst., of the fifth crop forecast for the season. The Department put the season's Government restricted crop at 11,764,000 bales (of 500 lbs.). This was 89,000 bales more than last month's estimate of 11,675,000 and compared with last season's crop of 10,964,000 bales and the ten-year (1947-56) average of 14,136,000 bales. The yield per acre was estimated at 472 lbs. per acre, as compared with 469 lbs. forecast last month and last season's figure of 388 lbs.

The higher crop forecast and favourable weather news prompted liquidation and hedge selling in the New York cotton futures market and prices sagged.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	12-11-58	3-11-58	28-10-58
Spot	36.30	36.35	36.25
December	36.02	36.32	36.15
March	36.48	36.73	36.62
May	36.17	36.51	36.36

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 13*th November*

Moorat trading in the yarn market on Monday this week was characterised by dull conditions. Trading was more of a formal nature to mark the auspicious occasion. The turnover was limited. Art silk yarns receded in view of expectations of enlarged supplies by incoming steamers as a result of import licences granted against exports of fabrics. The grant of a 5 per cent. quota to established importers for the import of art silk yarns during the current licensing period was also expected to further ease the supply position. Trading in staple fibre yarns was dull. Transactions were meagre since dealers were expecting the prices to decline further. As against this, cotton yarns were steady. This was aided by the drastic cut in the import quota for cotton yarns to established importers from 25 per cent. to 7½ per cent. during the October 1958-March 1959 licensing period.

As compared with last week's quotations, staple fibre yarns (40x2) December delivery dropped Rs. 2 to Rs. 604. In the spot section, 40x2 Kohinoors receded by 6 nP to Rs. 3.22. Centurys were neglected at Rs. 3.19. Among foreign yarns, Paramounts were dull at Rs. 9.75 and Fujis at Rs. 9.81.

In the art silk yarn section, 120 Japan climbed down by 16 nP to Rs. 5.03. 150 Japan eased by 7 nP to Rs. 5.37. 120 Italy retreated by 13 nP to Rs. 5.62. 150 Italy, however, gathered 13 nP to Rs. 5.75. Among indigenous yarns, National Rayons 120 bright cones first grade were quiet at Rs. 5. But 150 bright cones first grade gained 12 nP to Rs. 4.39.

In the cotton yarn section, among ten counts, Moderns were steady at Rs. 13.25 and Podars at Rs. 12.25. Twenty counts Moderns were fully maintained at Rs. 16.75. Among thirty counts, Hinds were unchanged at Rs. 19. Forty counts Minaxis gained 9 nP to Rs. 25. Moderns changed hands at Rs. 25, same as for last week. Among sixty counts, Finlays rallied by a rupee to Rs. 60. Eighty counts Moderns were firm at Rs. 71, as also Finlays at Rs. 79.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days ago:

	13-11-1958	5-11-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	5.03	5.19
150 Japan (per lb.)	5.37	5.44
120 Italy (per lb.)	5.62	5.75
150 Italy (per lb.)	5.75	5.62
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 December	604.00	606.00
40 x 2 Kohinoor (per lb.)	3.22	3.28
40 x 2 City (per lb.)	—	3.22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	12.25
20s Modern	16.75	16.75
30s Hind	19.00	19.00
40s Minaxi	25.00	24.91
60s Finlay	60.00	59.00
80s Mahendra	—	68.50

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 13*th November*

The oilseeds market ruled easy during the week. The declining trend noticed last week continued to persist. Groundnuts and castorseeds receded considerably. Large arrivals, lack of overseas demand and hesitant buying led to a fall in prices in oilseeds in general. Cottonseed, however, was steady. So was linseed. The market remained closed on Tuesday and Wednesday, on account of *Diwali*.

Moorat session on Monday was characterised by distinctly easy trends. Heavy arrivals of oilseeds and reports of good crops adversely affected the sentiment, giving rise to scattered selling and lack of buying support. Groundnuts declined. Castorseeds and oils also lost ground. Bear selling and bull liquidation led to a sharp fall in the value of castorseed. This was aggravated by the absence of any encouraging advice from abroad for oils. The successive lower offerings of Indian castor oil to the U.S. seem to be of no avail, in view of the marked disparity in Indian and foreign oil prices. Linseed was subdued as a sequel to liquidation and lower upcountry advices. In contrast, cottonseed ruled steady, thanks to bear covering and good demand from crushers.

Groundnut February 1959 contract, after having fluctuated within narrow ranges, came down from Rs. 160.75 during the last week-end to Rs. 159.25 today. Substantial bear-covering and upcountry support accounts for the relatively steady prices in futures during the initial sessions. Subsequently, however, the market gave way. Bold ready in the absence of fresh buying support declined from Rs. 34.25 to Rs. 33.50; Coromandel ready from Rs. 34.87 to Rs. 34.00; and Khandesh quality from Rs. 34.87 to Rs. 33.75. Groundnut oil ex-mill which stood at Rs. 18.00 last week-end, sagged to close at Rs. 18.00. Railway receipt also fell in sympathy from Rs. 18.37 to Rs. 17.87.

There was a notable deterioration in the castorseed section. Castorseed May 1959 contract continued to slump during the week, its price having fallen from Rs. 140.75 to touch a new low of Rs. 138.75 on Monday. It has, however, rallied to Rs. 138.87 today. Ready Madras moved down from Rs. 28.25 to finish at Rs. 27.62. The prices of Kanpur quality also relapsed from Rs. 27.12 to Rs. 26.50. There were fresh rumours that the U.S. Conference Lines would reduce the freight rates still further. It was also reported that Brazil is not likely to influence the market substantially, in view of its lower crop estimates and its obligations to supply large quantities of oil to the U.S.S.R. There was, however, no perceptible improvement in the prices of oils. The U.S. buyers are reported to have rejected Indian offerings of commercial oil at 12.75 cents, as Brazil continues to quote lower prices. Castor Oil B.S.S. moved down from Rs. 16.25 to Rs. 16.00 and commercial quality from Rs. 14.50 to Rs. 14.37.

Linseed May 1959 contract was irregular. The quotation rose from Rs. 29.94 to Rs. 30.00 on Friday. But it subsequently receded and closed today at Rs. 29.75. Rumours of fresh orders from abroad tended to influence sentiment, while the large arrivals set off a reaction in prices. Bold ready which stood at Rs. 33.75, after narrow fluctuations, advanced to Rs. 34 today. Linseed oil fell from Rs. 17.56 to Rs. 17.50.

Cottonseed ruled more or less steady over the week on good buying support. Cottonseed February 1959 contract rallied from Rs. 103.50 to Rs. 105.75. Among other seeds, kardiseed receded by 50 nP to Rs. 21. Nigerseed Madras quality declined by 88 nP to Rs 32.12 over the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of two previous weeks:

	13-11-1958	5-11-1958	29-10-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	159 25	160.75	162.12
Bold ready (per cwt.)	33.50	34.50	37.00
Linseed—			
May 1959	29.75	29 94	30.56
Bold ready (per cwt.)	34 00	33.75	34.25
Castorseed—			
May 1959	138.87	140.75	144.87
Madras (per cwt.)	27.62	28.25	28.87
Cottonseed—			
Feb. 1959	105 75	103.50	104.00
*Groundnut oil**—			
Ex-mill ready (per quarter) ..	18 00	18.62	20.87

Commercial (per quarter) ..	14 37	14.50	15.00
Linseed oil†—			
Ready	17.50	17.56	17.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

STRONG DEMAND FOR TEA DUST

(From Our Own Correspondent)

CALCUTTA, 11*th November*

There was no surprise here in the reported increase in the U.K. tea stocks to 128 million lbs. in the week ended 31st October from 121 million lbs. in the previous week. For, tea shipments from the Calcutta port have been heavy since the past two months and continue to be so. During the past week also, ready vessels to the U.K. were loaded with fair quantities of tea. That this feature would continue for some time more was indicated by the continued heavy despatches from upcountry gardens to Calcutta.

In the internal sales held on Wednesday last, offerings of dusts, amounting to 21,477 chests, met with strong general demand. Legg-cut Dooars rose by 2 nP to 4 nP with the stronger liquoring powdery teas in the orthodox varieties receiving fair attention. Keen competition was offered to a few selected lines of grainy exportable teas, prices of which as a result rose above valuations. Among C.T.Cs. mediums fell by 10 nP and the better liquoring teas by 20 nP. The quotations were: Best Assam C.T.C. Rs. 2.80 to 3.10 (nominal); medium Assam C.T.C. Rs. 2 to 2.20, medium Assam grainy dust Re. 1.88, and medium Dooars Re. 1.86.

Leaf on offer totalled 1,585 chests. General demand was good, but C.T.Cs declined.

Export quota changed hands at 2½ nP but soon sellers raised the price to 2¾ nP; at this stage buyers withdrew and offered only 2¼ nP.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 11*th November*

Steadier conditions were in evidence in the jute goods market during the week under review following increased overseas interest, bear-covering in the futures market and the announcement of a small decline in the stock of jute goods. Raw jute prices also registered a small improvement, but the fall in prices which cultivators were getting continued to cause anxiety in official as well as industry circles. Undoubtedly, this year's crop has been so high that the decline in prices has been more rapid and much more appreciable for this time of year than in the past, and even the cultivators, who generally had more holding power and usually waited till a few months of the jute season expired, got nervous on the fear that the movement in prices would be entirely different this season from previous years, in view of the abundant nature of the crop. Prices in the mofussil have moved down by such an extent that cultivators, pressed by cash needs and fear, are parting with their produce below the minimum cost of production. It was feared here that cultivators who had converted considerable land from paddy to jute would start the reverse process in the next sowing, and that this might as well make India once again dependent on Pakistan. Mills realise the seriousness of the situation, and mills have, therefore, increased their buying activity to which should be attributed this week's improvement in prices.

The fixation of minimum prices for jute goods by the I.J.M.A. has been an indirect support to raw jute prices. However, it has been apparent that these steps have not been sufficient to ward off depression from the mofussil trading centres. The position of farmers has become so bad that the State Government was reported contemplating recommending to the Centre to fix minimum prices. The Government of India's view would apparently appear to be opposed to this move, since New Delhi thought that to fix minimum prices for raw material to an industry which exported 80 per cent. of its products could not be a wise move. However, it was pointed out here that, if the Indian Jute Mills' Association could adhere to a minimum price policy in respect of jute goods—it should be remembered that India's production of jute goods is mainly exported and selling prices are determined through competition in foreign markets—minimum prices for raw jute also could work. Unfortunately, growers are not so well organised as the industry, but one welcome aspect which is likely to lead to the fixation of minimum prices here is the higher prices fixed in Pakistan and the subsequent rise in Dundee for jute cloth and yarn. Reportedly, this step in Pakistan has increased the competitive position of Indian jute goods.

The feature of the week's trading was the shortage of ready hessian, although there had been little demand for forward hessian, prices of which were much below those for spot. On Tuesday last, fair covering business was done and the futures market was very active. In the result, ready hessian 40" 10 oz. was steadier at Rs. 43.25. Heavy goods were, however, neglected, and the price for ready B. twills at Rs. 96.50 was lower fractionally. On Wednesday, prices for heavy goods shot up due to heavy buying in the futures market. Ready B. twills hardened to Rs. 97.10 and hessian 40" 10 oz. ready improved to Rs. 43.50. Reports from New York were highly encouraging, and this also aided sentiment here. Further, on Thursday, reports were circulating that Government would shortly be in the market for B. twills. B. twills improved further to Rs. 97.35, and hessian 40" 10 oz. to Rs. 43.80. At this stage, stock figures, as at the end of October, were announced. The total, at 107,100 tons, represented a decline of 1,900 tons from the previous month. While hessian increased by 800 tons to 17,800 tons and miscellaneous constructions by 400 tons to 12,200 tons, sacking fell by 3,100 tons to 77,100 tons. By the week-end, hessian 40" 10 oz. rose to Rs. 44.05, while B. twills at Rs. 97.25 were quiet. The market was closed yesterday on account of *Diwali* and *Kali Pooja*.

The improvement in raw jute market took the rate for Assam bottoms up to Rs. 23.25 from Rs. 22.75 November-December delivery. Mills showed fair interest. Sellers were reserved, and there was no change in the quotation for Daisee bottoms at Rs. 24.75 per maund.

FURTHER RISE IN BASE METALS

(From Our Own Correspondent)

CALCUTTA, 11*th November*

Base metals registered a further rise in prices during the week under review. Consumer demand was high, thanks to the import policy according to which the established trade can no longer import non-ferrous metals in virgin form. The trade is greatly disappointed, and has lost no time to make urgent representations to New Delhi. It was urged that it was wrong that the established trade should oppose issuance of licences to actual users, but that what quota Government could allot should be shared by all kinds of importers. The established trade had gained much valuable experience in world markets, and thus it was in a position to assess from where to import so that only the minimum foreign exchange was spent. Unfortunately for the metal-processing industries, the announcement of the import policy coincided with an upward spiral in prices in the principal world markets. In the result, what virgin metals are available with stockists are in keen demand both by consumers and other interested parties, although the Government has stated that import licences to actual users will be issued with speed. That explained the continued rise in local quotations. As a result of the representation made by the trade, it was expected that the Government would review the policy. The general expectation was that, for some time to come, the price of copper in both London and New York would continue to rise. For, irrespective of whether the strikes in one of Canada's big nickel plants and in the Rhodesian copper belt ended or not, the loss of production would have its impact in both demand and prices. Moreover, demand in the U.S. had broadened with the arrest of economic recession, and it was reported that Europe and Russia needed fresh purchases.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 10*th November*

Quiet conditions were witnessed in foodgrain prices during the past week, mainly influenced by pressure of arrivals of new *kharif* grains in the market. The food situation as a whole in the State of U.P. has improved, due to these increased arrivals, and the Centre has also raised the State Government's quota during this month to 89,000 tons. The State Government's stock position would be improved and arrangements are being made to sell milo and maize through fair-price shops at 3 seers 4 chs. per rupee.

Wheat prices at Hapur eased slightly during the week to be quoted now at Rs. 24.25 per maund for average quality and up to Rs. 25.25 for farm produce, thanks to increased arrivals both from authorised and unrevealed sources. Entire arrivals are being lifted by consumers and also for seed purposes. Sowings of *rabi* crop is still in full swing and barring small tracts of land still water-soaked, all available land will be sown for *rabi* grains in time, as weather in the last fortnight has been very favourable. Rice prices eased during the week by about Re. 1 per maund as increased quantities of new paddy and rice is reaching the market, and week-end prices were: Rice *basmati* Rs. 32.50, *mainpuri* Rs. 22.25, paddy Rs. 12.75 per maund.

Gram prices registered modest decline during the week due to fall in ready demand and pres-

sure of new maize arrivals in the market. Barley and *bejhar* prices also sought lower levels as demand for seed purposes has subsided and consumer demand is being concentrated to maize. Maize is still reaching here in heavy quantities and local stock has swelled to about 110,000 maunds and, despite good consumer demand, prices have eased fractionally during the week. *Jowar* and *guwar* prices ruled quiet and week-end prices (in rupees per maund) were: Gram, 18.75, barley 17, *bejhar* 17, maize 14.75 to 15.12, *jowar* 14, *guwar* 14.25.

Peas and *arhar* prices eased during the week, due to poor outside demand and local stocks were mostly unchanged. Prices of other pulses were also depressed in sympathy and week-end prices (in rupees) were: Peas *dara* 17.25, farm quality 19.37, peas *dal* 18.75, *arhar* 20.62, *arhar* dal 25.50, *urd* 19, *moong* 23 to 24.50, *massor* 18.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 10*th November*

Sugar prices ruled quietly steady during the week, due to good festive *Diwali* demand. Crushing for the new season has started in some factories in west U.P. and latest *ex*-mill prices in the Muzaffarnagar market are: Deoband C29 (damaged), Rs. 35.50 to Rs. 36, Seohara D29, Rs. 35.97, Amroha D29, Rs. 35.81, Bijnore E29, Rs. 35.62, Shamli A29, Rs. 37.75.

Activity in sugar was on the wane in the Kanpur market and latest prices are: *Ex*-mill controlled Rs. 36-12 per maund, spot (per bag) Basti Rs. 105, Gola Rs. 102-8, D29 Burhwal Rs. 102-4, Gola Tulsipur and Balrampur Rs. 101-12, Waltergunj Rs. 101-8, Hargaon and Lakhimpur Rs. 101-4.

Khandsari prices ruled quiet and new production will soon begin. Prices ranged between Rs. 34 and Rs. 28 per maund according to quality.

New *gur* prices declined by Rs. 2 to Rs. 3 per maund during the week to be quoted now at Rs. 20 per maund for best quality, due to heavy arrivals which mounted to an average of 7,000 maunds here. Arrivals here from the beginning of the season were put at 100,000 maunds which were substantially heavy when compared to the corresponding figure last year of 50,000 maunds, when *gur* was quoted at Rs. 14.50 per maund. The heavy arrivals this year has been due to the prevailing high prices of *gur*. *Gur* arrivals also mounted to an average of 15,000 maunds daily in the Muzaffarnagar market where prices eased during the week to be quoted at: *Chaku* new Rs. 18 to Rs. 20, *pansera* Rs. 18 to Rs. 19, *khaurpapar* Rs. 18.50, *shakker dara* Rs. 18 to Rs. 21, *masala* Rs. 22 per maund.

Gur futures also registered an easy trend in line with ready prices and *gur fagun* having opened at Rs. 13.71 last Monday was quoted near the lowest level of the week, at Rs. 13.49, on Saturday closing. Futures were closed today on account of *Diwali*.

MARKET GOSSIP

(Concluded from page 795)

information goes, do not intend to retire in the near future. It is strange that they should have resigned from the Board, especially as the Company has plans for expansion for which their experience and knowledge will be highly valuable. Mr. Milne, in particular, is well known for his expert knowledge of the affairs of electricity industry and has served the Company for well over two decades. What were the circumstances that compelled Mr. Milne and his colleague Mr. Sheppard to resign from the Board? It is a fair guess that there must have been serious differences between these two and other members of the Company's Board.

Several shareholders of the Company are already concerned over this development and we have no doubt that the more enterprising among them are bound to elicit information on the mystery surrounding these resignations. Consequently, one can expect the annual meeting of the Company, scheduled to be held on Wednesday, 26th November 1958, to be an interesting affair.

SURVEY

(Concluded from page 796)

The President said that the U.S. wished to pursue these measures energetically and that U.S. economy was expanding rapidly after its emergence from a brief period of readjustment. Its expanding resources should, therefore, permit vigorous prosecution of the programme. The programmes proposed, he added, was one in which not only the United States but any other free countries might participate. He expressed the hope that all countries would co-operate in assuring expansion of trade and in relaxing restrictions which had hindered its flow. To maintain a healthy world economy and the demand for primary commodities, there must be a high and expanding level of economic activity in the free world. The President was fully aware of the problems of primary producing countries arising out of falling commodity prices. He assured the meeting that, where special difficulties arose with respect to particular primary commodities, the U.S. was prepared to join in the discussion of such problems to see whether a solution to it could be found.

The President's programme, as was to be expected, was acclaimed by the delegates. Mr. B. R. Bhagat, Deputy Finance Minister and leader of the Indian delegation, observed that it was "not only a comprehensive programme but also a practical approach towards a solution of the burning problems of the area, the eradication of poverty and want." Particularly welcome was the President's reference to the need for increased trade through relaxation of restrictions and his appreciation of the problems of primary producing countries. Though the President's speech contained a promise of still greater aid and a programme on which to base the U.S. policy in this respect, there was a feeling among the delegates that the President would adopt a cautious attitude in committing the U.S. to definite financial outlays as he had to ascertain the mood of the Congress.

INDIA GETS A NEW INDUSTRY

(Concluded from page 801)

Bokaro thermal station of the D.V.C. which is within sight of Gomia. So far as transport is concerned, the factory is well served by the Eastern Railway. The works, administrative offices and housing for staff are spread over an area of 2,000 acres of hilly jungle. Since very little of this land was cultivable, the new industry has not deprived agriculture of anything and has not displaced anybody in the village. On the contrary, it has brought to them new sources of wealth and knowledge. Very soon, Gomia will be a modern town, without losing any of its rural character.

The Indian Explosives Ltd. is a typical venture of Indo-British economic co-operation. I.C.I. came to India as traders. Today, it is the largest manufacturer in the field of chemicals, though its trading activities are still quite sizable. It is interesting to note that this British company began its association with India as an importer and distributor of commercial explosives, the very product that is now being manufactured at Gomia.

The I.C.I. has provided not only the bulk of the capital needed by the Indian Explosives Ltd. but also all the technical know-how, besides assuming the responsibility for management. It is giving high priority to the question of Indianising both the technical and administrative personnel. The following quotation from Mr. Lall's speech will show what is being done in this important respect:

"To operate these schemes, we are engaging Indian technicians as rapidly as we can find men of the necessary high calibre. We are sending many of them for training overseas and, with the assistance of Government, we have brought out key technologists from our parent organisation for short periods to accelerate the pace of development and to communicate their experience to our new recruits, so that they can take their places in management as soon as possible. In many cases now, the greater part of the design of these new projects can be undertaken in India, with consequent saving both in time and foreign exchange. In the last two years, we have engaged 81 Indian officer technicians; 56 of these have foreign qualifications and 23 have been trained in I.C.I. factories in the U.K. and Australia. And here I might point out that the association of I.E.L. and our other companies in India with the parent I.C.I. organisation makes available to us within our sphere the technology not merely of the U.K. but of the whole Commonwealth and many other countries as well."

The Company has done its best for the comfort and convenience of its staff by providing beautiful and spacious houses, a large modern hospital, generous facilities for recreation and suitable arrangements for the education of workers' children. So well impressed was the President of India with all these arrangements that he paid a fine compliment to the Company's management. He said:

"I have been impressed by the details of production and your well-thought-out plans of construction of the factory premises and staff quarters. A good deal of thinking has gone in the planning of the whole estate and in it you have given importance not only to safety and security measures but also to the amenities that the workers should enjoy. It is not only in respect of technical equipment and technological processes that this factory is going to be modern and up-to-date; it may well be a model industrial undertaking with regard to the residential, recreational and other facilities also which you propose to provide to your staff."

A singular feature of the Indian Explosives Ltd. is that it is the first example of Indo-British collaboration, where a large foreign industrial organisation in the private sector has joined hands with the public sector, for implementing the plans for raising the standard of living of the people. It is to be hoped that there will be several instances of such collaboration between the two sectors in the fairly large number of heavy industries that are now exclusively owned and managed by the Government.

PLANTING

(Concluded from page 806)

the fields and a hard core of activists to organise musclemen in each estate. The clashes were between willing workers and small groups of Communist activists on each estate ready for anything upto violence. On 7th October, strong-arm groups went to the other side of Munnar town and belaboured the I.N.T.U.C. office staff, ransacked their office and beat up one of the leaders present. The same day oil worth about Rs. 2,000 was drained off a transformer and put out of function some six estates dependent on power supply from this transformer. Obstruction, assault and intimidation swept over a whole district and it was a miracle how some 12,000 workers actually harvested any crop during the days from 6th October.

October is a high flush month in tea. Some of the finest autumnal flush is harvested during October. The crop is heavy and fetches good prices unlike the monsoon flush of April and May. October crop is mostly exported and a week's crop from the High Ranges brings in about Rs. 20 lakhs in foreign exchange. That is not the only loss. Well over a quarter of that goes to the Union and State exchequers as revenue for taxes and duties on tea. Next year's bonus question will be even more difficult, because the companies operating in this district have lost heavily.

The strike is spreading to other districts where Communists have a foothold. The rubber centre of Mundakayam is one such. Last week, the district was losing 10,000 lbs. of rubber per day. India is spending her thin foreign exchange resources (Rs. 11 crores in 1957) to make up for our shortage of raw rubber. The strike will hit national economy precisely where it is most painful.

The present situation was in the making for some time. The issue is: which party has the greater following in the plantations? The disruption of an industry, damage to national economy, suffering of individual workers, undermining of industrial efficiency, none of them matter.

The State Government, whether Janus-faced or pressured by the party's labour wing, is following an equivocal policy. In order to deal with industrial relations, it set up a number of committees of enquiry and boards. Three such committees are directly related to the plantation industry. One has been dealing with the major issues raised by the Communist-led unions in their general demands presented in September. Another committee is engaged in framing a policy on the future of the *Kangany* system. The Plantation Labour Committee is a standing committee to consider and resolve disputes that might arise in the normal course of the industry's functioning. All labour unions are represented on all the committees. Why did the Communist unions think it necessary to by-pass these committees and resort to direct demands and action? What steps were taken by the State Government and its party to guide their labour activists back to the constitutional paths, leading to the committee rooms of the State-sponsored Plantation Wages and Bonus and other Committees? Or was it a strategy-dictated application of pressure at different points of the defensive perimeter of the opposition parties in Kerala? Anyone who is not for Communists is taken as their opposition and planters are therefore lumped with the opposition in Kerala.

In the whole confused mess of the tangled purposes and actions, the one significant item is the inexplicable delay in referring the issues of the dispute to adjudication. Such a reference on a joint application of the management and the I.N.T.U.C.-led Union would tantamount to accepting the I.N.T.U.C. unions as representing the majority of workers. Twenty-six days of frantic activities have gone on since the 4th October, in order to avoid accepting that proposition. In whose interest is the Kerala Government's persistent refusal to refer the dispute to adjudication?

COMMERCE

*"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."*
William Blake.

ROAD TRANSPORT—MORE TRUCKS AND CUT IN TAXATION NEEDED

INDIA'S transport system consists of railways, airways, coastal shipping, inland navigation and roads. The first two of these are nationalised enterprises. The next two are in the private sector. The last one is operated mostly by the private sector and partly by the public sector. It must be noted here that, in road transport, the public sector's participation is confined to motor transport and does not include bullock carts. For transport within the country, water affords only limited scope. The cut in the allotment in the second Five-year Plan for this mode of transport from Rs. 3 crores to Rs. 1.42 crore has reduced the scope for utilisation of water transport. Nevertheless, the Government is stated to be considering the recommendation of the Inland Water Transport Committee—popularly known as the Gokhale Committee—for improving inland water transport. In any case, the bulk of internal transport is shared by the railways and road transport. And, in the context of the admittedly limited capacity of the railways to lift all the traffic, mechanised road transport must be enabled to carry a larger proportion of the traffic.

There is yet another reason why road motor transport should come into its own. After all, roads imply a large investment which can yield an economic return only if they are fully utilised. It has been estimated that roads represent an investment of some Rs. 726 crores. The railways too constitute a national investment. But they are relatively more fully occupied. And, as Mr. A. D. Wenzel, President of the Indian Roads and Transport Development Association, pointed out, in the course of his speech at the latest annual general meeting of the Association, there need be no undue concern over road-rail competition. Mr. Wenzel said:

"Generally speaking, the railway freight structure in this country is such that, according to reliable estimates, more than 90 per cent. of the railway goods traffic is below the average economic operation of road transport. Of the remainder, a certain percentage will likewise be carried by rail, as it is in bulk and between destinations that the railways directly connect. With this in mind, there seems to be little reason for undue concern about competition between the railways and roads and no genuine justification exists for continuing restrictions on road transport. Freight rates in themselves are not the only consideration between the use of one form of transport *versus* another. If they were, then air transport would never have started, let alone made the substantial progress that it has upto the present time. In many cases, road and, for that matter, air transport will be preferred to rail or water transport even at their higher rates, because they are more suitable, convenient and sufficient. In particular, both are faster, since a road truck travels about three times as fast as a railway wagon, and an airplane many times faster. With the growing industrialisation of India, efficiency and suitability will become even greater factors in transport than they have been in the past and we feel that industry and all other sectors of the country's economy must be absolutely free to use the transport most suitable to their needs and likewise that this transport be freely available."

The development of road transport depends partly on the construction of new roads and the upgrading of the capacity of the old. It is gratifying to note that the Nagpur Road Plan, which aimed at raising the country's road mileage from 220,000 miles to 331,000 miles by 1963 is likely to be exceeded by 44,000 miles by 1960-61 itself. Any satisfaction arising from this quantitative achievement has, however, to be tempered by the consideration that several bridges have still to be built and the surface improved along many routes. Meanwhile, efforts are being made to draw up a road plan which will be in keeping with the developing character of India's economy. The chief engineers of the States, who met recently in Bombay, have prepared a road plan for a 20-year period, 1960-61 to 1980-81. The plan seeks to raise the mileage of roads from 379,000 to 657,000, with a provision of two-lane carriageways on National Highways and of stronger bridges in the various classes of roads. The plan also aims at doubling the intensity of roads from 0.26 to 0.52 mile per square mile of territory. Although this target is about half the intensity in the U.S. and less than one-fourth in the U.K., it represents a considerable advance over the present intensive use of roads in India.

It must be admitted that there has been a welcome realisation on the part of the Government that road transport deserves greater attention and support. On the purely administrative side, the Government has reorganised the advisory bodies on road transport. The former Transport Advisory Council, the Control Board of Transport and the Standing Committee of the Central Board of Transport have been replaced by the Transport Development Council, the Road and Inland Water Transport Advisory Committee and the Central Transport Co-ordination Committee. The Council is a purely Governmental body, consisting of the Union and States Ministers dealing with, or in charge of, the transport departments in their respective jurisdictions. It is a high-level body to advise the Government of India on all matters of policy relating to roads and road transport as well as inland water transport. The Road and Inland Water Transport Advisory Committee is designed to deal with problems relating to roads, road transport and inland water transport and make recommendations to the Transport Development Council for final decisions. The Co-ordinating Committee deals mainly with issues relating to co-ordination of transport.

Apart from setting up these bodies, which have a purely administrative significance, the Government has adopted a series of measures with a view to providing a fillip to road transport. The amendment of the Motor Vehicles Act and the establishment of the Inter-State Transport Commission, together with the amendment of the State Bank Act (designed to facilitate the provision of credit for hire-purchase of vehicles) are some of the measures, adopted recently by the Government, in order to ensure that motor transport comes into its own. The Government has also appointed an *ad hoc* committee, under the chairmanship of Mr. M. R. Masani, to conduct a comprehensive enquiry and make recommendations for the reorganisation

of the transport administration in the States. Nevertheless, there are several impediments to the more rapid expansion of road transport. The restrictions on the movement of vehicles, on their permissible laden weight and on truck-trailer combinations are only a few of the handicaps the industry has to face. More important than these are the high taxation on motor vehicles and the threat of nationalisation of transport. On both these issues, the Union Minister of State in the Ministry of Transport, Mr. Raj Bahadur, had some notable observations to make in his address to the first meeting of the Road and Inland Water Transport Advisory Committee, held last week at New Delhi. Mr. Raj Bahadur said that the Government of India had advised the State Governments not to "embark upon any scheme of nationalisation of goods transport till the end of the third Plan period, 1965-66." This had been done in order "to infuse a sense of security in the transport operators in the private sector." The case for nationalisation of goods transport rests on very insecure grounds. The State Governments will do well to abandon all thoughts of taking over goods transport. A categorical assurance on these lines will go a long way towards encouraging prospective entrants into the sphere of road transport and stimulating the movement towards the formation of viable goods transport units.

The other problem, namely, high taxation on motor vehicles, as Mr. Raj Bahadur himself confessed, continues to be as intractable as ever. Mr. Raj Bahadur said:

> "There are many impediments in the way of proper development of road transport, such as the heavy taxation on motor vehicles, restrictive licensing policies and restrictions on the free movement of motor vehicles. In regard to the vexed question of taxation, I have to state, with some regret, that, for the last many years, we have been striving in two main directions—to fix a ceiling for their incidence and to simplify the system of their collection, but, unfortunately, our efforts have not met with much success. The position has remained almost unchanged. This is not good at all. High-level conferences of this nature ought to produce positive results. I, therefore, appeal to you to make an earnest effort to resolve the stalemate. You may suggest a solution that may be the best as well as the most practicable."

The Committee has responded to the call of Mr. Raj Bahadur by adopting a constructive approach to taxation. It has urged the State Governments to take steps to consolidate the various motor vehicle taxes and fees and centralise their collection. It has also recommended that the ceiling on motor vehicle taxation should be fixed at 75 per cent. of the total existing rates in Madras State and that indirect taxes should be progressively eliminated. The need for abolishing double taxation in States was emphasised by the Committee. In this connection, the Committee did well to stress that the principle of single-point taxation should be accepted and acted upon in all States and to urge the States, which had not accepted the principle, to agree to it and implement it.

It is a pity that, despite repeated efforts by the Central Government and the ably argued memoranda submitted by the road transport interests, the taxation of motor vehicles continues to be intolerably heavy. The taxes per vehicle now amount to as much as Rs. 2,100, as against Rs. 1,906 in 1954-55 and Rs. 611 in 1944-45. Nearly all committees, which have gone into the question of taxation of motor vehicles, have recommended that the burden should be reduced. In 1956, the Study Group of the Union Ministry of Transport suggested an all-round reduction of 20 per cent. in the then existing level of taxes. Since then, the tax burden has increased, so that there is, in fact, a valid case for a larger reduction than the one suggested by the Study Group. In the interests of the development of road transport, it is high time the State Governments conceded the demand for a substantial reduction in taxation on motor vehicles.

Among the other recommendations of the Committee, mention must be made of the one which stresses the need for facilitating an increase in the number of goods vehicles and their unrestricted operation. The Committee said that goods vehicles should be allowed to operate freely within a State. Again, once the allocation of vehicles has been made on an inter-State route, the operation of vehicles on that route should not be restricted. Again, the Committee pleaded for a 100 per cent. increase in the existing number of goods vehicles during the Plan period. The implementation of this recommendation will naturally depend upon increased suppy of vehicles. Domestic production in the current year has actually fallen to an annual rate of 10,200 trucks from 11,900 trucks in 1957. This fall in output does not augur well for the future of road transport, especially considering that the demand for trucks is expected to reach 40,000 by 1960-61. Clearly, special efforts must be made towards increasing the output of vehicles. This ought to be the first claim on the attention of transport planners.

THE GIANT VS. THE PIGMY

IN a verbal combat between the squirrel and the mountain, according to an old fable, the former had the last word by insisting that, if it could not carry a forest on its back, the latter could not crack a nut. Perhaps, poetic justice demanded a clever retort from the squirrel to match the immense strength of the mountain. An impartial tribunal, however, would have dismissed the case without costs, holding that the mountain and the squirrel had each an important place in Nature's mysterious economy. It is not known whether the mountain has ever since raked up the quarrel. Only, a modern version of the controversy has been touched off by Mr. Nehru's indignant protest against "the disease of giganticism" in planning. The occasion was the annual meeting of the Central Board of Irrigation and Power, where Mr. Nehru deplored the emphasis on large irrigation projects; he pointed out that it was "the thousands of small projects, schemes and dams, waiting to be built, that will change the face of the country."

Mr. Nehru's indignant denunciation of "giant" projects must have come as an unpleasant surprise to those who have known his own earlier enthusiasm for these enterprises which he has often described as national shrines, as centres of national pilgrimages. If Mr. Nehru's intention was to shift the emphasis to minor irrigation, he might have done so without necessarily condemning the larger irrigation projects. As it is, he has given the impression that, nowadays, his approach to planning is guided by emotion, rather than reason. The fact is that large irrigation projects are not strictly comparable with minor irrigation projects. The former are multi-purpose projects, embracing a wide range of purposes, including irrigation, hydro-electric power and flood control. The minor irrigation works have no doubt a vital role to play in harnessing local enthusiasm and effort and have the additional advantage of immediate results at relatively less cost. But it is well to remember their twin defects. In the first place, apart from the fact that they are not multi-purpose projects, they have little value in periods of prolonged drought, of failure of monsoon in one year, let alone two or three successive years. Secondly, their success depends upon an efficient country-wide agricultural organisation which, as the recent report on Agricultural Administration showed, is sadly lacking at present.

It is, therefore, well to recognise that minor irrigation is a valuable adjunct to, not necessarily an adequate substitute for, major irrigation. The emphasis on large multi-purpose projects need not be whittled down merely for the sake of extending minor irrigation. No serious diversion of funds from major irrigation projects is implied in concentration of attention on minor irrigation schemes. If major irrigation projects have earned a bad name now, the blame cannot be laid at the doors of technologists or engineers. Actually, it is the politician who has whipped up much uncritical enthusiasm for these projects. Political leaders at the State level are often allured by the big and the spectacular, rather than by the modest and the enduring, projects. It is they who seek to convince others that life is not worth living without an oil refinery, a steel plant or a major irrigation project within their respective States. What is now necessary is to preserve a proper perspective in planning. A balanced approach which will strike a mean between major and minor projects will ensure that the advantages of both varieties of projects accrue to the nation.

In the matter of maintenance, both minor and major irrigation projects have their own characteristic problems. The minor projects need constant attention, in order to see that they do not fall into disrepair. Major projects are relatively easy to maintain because expert attention is available on the spot. Nevertheless, they call for high engineering skill at the stages of planning and maintenance alike. At the stage of planning and execution of these projects, as Mr. M. S. Thacker pointed out, in the course of his presidential address to the annual meeting of the Central Board of Irrigation and Power, it is necessary to collect precise data on rainfall, river flow, sedimentation, water discharge, groundwater level, subterranean drainage, surface evaporation, geology and topography of dam sites. Again, the blocking of natural flow of rivers brings in its wake such problems as silting up of impounded water stretches and water-logging in fields. Mr. Thacker pointed out that the sedimentation of reservoirs and alterations in the regime of rivers lower down are problems which require great attention. He added: "Another problem demanding attention is the loss of water in reservoirs through evaporation, seepage and deep percolation." In this connection, he cited the example of the Ganga canal in the U.P., where investigation revealed that, of the total supply diverted into the canal, 15 per cent. was lost in the main canal, 7 per cent. in the distributaries and 22 per cent. in the village watercourses. The prevention of such waste in the canal waters is a matter that should engage the attention of engineers.

Clearly, both major and minor projects have their major and minor problems in planning, execution and maintenance. The scope for extension of both varieties of projects is vast in a country which is fortunately blessed with not inconsiderable sources of water-supply. The fact that they are not evenly distributed all over the country implies that, wherever they are available and can be harnessed for purposes of irrigation and power, no effort should be spared for their execution. In terms of annual run-off, Mr. Thacker estimated India's water-supply at 1,357 million acre feet and, in terms of power potential, at 40 million kilowatts. Of this, only 6.9 per cent. is employed for irrigation purposes and only 3 per cent. for power generation. Surely, there is scope for reaching a higher level of utilisation of India's water wealth.

MR. DIEFENBAKER'S VISIT

THE Canadian Prime Minister, the Rt. Hon. John G. Diefenbaker, who arrived in New Delhi this week, is a distinguished guest of this country for about a week. As a member of the Commonwealth, India has special reasons to extend a cordial welcome to Mr. Diefenbaker who, as is well known, is among the best exponents of the Commonwealth concept. "The unity of the Commonwealth," he said at the recent Commonwealth Conference, "is in the things of the spirit and in a common adherence to the inheritance of political institutions." He added: "It is an association that is inclusive, not exclusive. It is ever-expanding, with the emergence of new nations into independence." Last year, he declared that his country was privileged to be able to extend a helping hand to those members of the Commonwealth who, through no fault of their own, had fared less well in the material things of life than in others. Appropriately enough, the first note he struck in his Press conference this week, at New Delhi, was economic co-operation between Canada and India. After describing the friendliness shown to him by India as "unforgettable," he spoke of Canada's desire to assist in the Five-year Plan and Colombo Plan on a continuing basis and pledged his Government to doing everything possible to strengthen the ties between the two countries.

Canada has given generous economic assistance to India. Such assistance is estimated at $167 million. Much of this has gone into specific projects under the Colombo Plan. The projects include transport, hydro-electric and atomic reactor. The Kundah project in Madras and the Canada-India reactor at Trombay are two most notable instances of Canadian assistance to India. Two loan agreements for supply of Canadian wheat have been concluded between the two countries. Under the first, Canada has agreed to make available $24.5 million worth of wheat, while, under the second, $8.8 million worth of wheat will be supplied. The terms of the loans reflect Canada's appreciation of India's balance of payments difficulties. Besides the fact that they carry a modest rate of interest, about 4½ per cent., the loan agreements provide that no principal will be payable in the first two years and the entire loan is to be repaid over a seven-year period. Again, India is bound to benefit by Canada's announcement, made recently, of a 50 per cent. increase in its assistance under the Colombo Plan and of its willingness to place such assistance on a firm three-year basis. This stems from Canada's keen interest in the economic development of the Commonwealth.

BIG BLOCK OF INDIAN IRONS SOLD

TEA EXPORT DUTY—SYNTHETIC RUBBER—SHELLAC RAW COTTON

THURSDAY, 5 P.M.

FOR the second week in succession, equities have retreated on a wide front. Almost all scrips have sought lower levels. In addition to the causes mentioned in these columns last week, two additional factors emerged this week in favour of sellers. One was the report that the Government would ask the cotton mills to curtail production to solve the problem of excess stocks. It would appear that, on this question, the Government does not see eye to eye with the leading representatives of mill-owners who only the other day rejected the plea of a section of millowners that there should be a uniform reduction in the output of all mills. The Minister for Industry, Mr. Manubhai Shah, is credited with the view that the cotton mill industry must seek its salvation on lines similar to that followed by the jute mills. High-level talks are scheduled to take place between the Government and the representatives of industry this week-end for exploring a way out for the industry's difficulties. Instead of imparting strength to textile shares, this news has only tended to depress them further. Apparently, some in the market believe that the suggested solution will place the well-managed, efficient mills at a disadvantage *vis-a-vis* the ill-managed and uneconomic units.

MARKET GOSSIP

The second new factor that has accentuated the downward trend is the report that the Dalhousie Holding Company, Calcutta, has unloaded 200,000 shares of Indian Irons, thereby adding to the already large floating stock of this scrip. This news has caused misgivings about the ability of parties, who are already long in Indian Irons to the extent of several lakhs of shares, presumably with the help of borrowed money, to stick to their holdings for long. It may be noted that, when the Steel Corporation of Bengal was amalgamated with the Indian Iron and Steel Company, Ltd., in 1952-53, the latter company had to hold, in a suspense investment account, its own shares amounting to 880,000, being the equivalent of 1,100,000 shares of "SCOB" held by it. Following the doubling of its paid-up capital through the issue of new shares a couple of years ago, this special holding must have doubled to 1,760,000 shares. This holding is bound to increase by one-fifth to 2,112,000 shares when the capitalisation of share premium account fructifies. All these shares are held by the Dalhousie Holding Company for the I.I.S.Co. With the I.I.S.Co. requiring more funds, there is no reason why it should not gradually cash this investment. According to reports in market circles, a big block of this holding was first offered to the Life Insurance Corporation at Rs. 27 per share, only to be turned down by it.

The aforesaid report has two implications. One is that the L.I.C. is unlikely to buy Indian Irons, at any rate for the present, at Rs. 27 or above. The other is that there may be further sales, from time to time, by the Dalhousie Holding. There are, however, unconfirmed (perhaps, unreliable) reports that the I.I.S.Co management will shortly issue a clarification on this subject and give an assurance that no further sales would be made. It remains to be seen whether this is wishful thinking or a fact.

Shares of electricity companies have been ruling quiet for some days now. It is said that the new Bill seeking to amend the Indian Electricity Act of 1910 has given rise to apprehensions that the way is being prepared to nationalise electricity undertakings. The reiteration of the demand for nationalisation by some of the left-wingers has strengthened these fears. The amending Bill, however, has no such objective. What the new Bill is seeking to achieve is to revise the provisions of the old Act to suit certain technical features governing supply of power and which are applicable to "licensees at large with the law enacted in 1948."

• • • •

The Bank rate in the U.K. has been reduced by a further ½ per cent. to 4 per cent. It was only on 14th August last that the rate was lowered from 5 per cent. to 4½ per cent. This is the fifth cut in the British Bank rate after it was suddenly raised from 5 per cent. to 7 per cent. in September 1957. The first reduction from this peak took place in March 1958 when it was fixed at 6 per cent. It was brought down to 5½ per cent. in May 1958 and to 5 per cent. in the following month. It was only about a week ago that Mr. Derick Heathcoat Amory, the Chancellor of the Exchequer, said at Bristol that the favourable trade returns for October 1958 were the latest sign that Britain's economic affairs were on a firm basis. He added: "The economy is in sounder shape today than for many a year. Our currency is strong, our industry competitive, and the price level at present relatively stable." Stating that the mood of business generally was one of confidence in the future, the Chancellor said that they would be careful not to generate another inflationary movement. He said that, if he were to see signs of that danger at any time, he would not hesitate to take what counteraction was necessary. This is the background against which today's reduction in the Bank rate has to be viewed. It is clear that, in the opinion of the U.K. Government, the main economic issue facing it is not risk of inflation but risk of a recession.

The news of lower British Bank rate has not had any significant effect on Dalal Street.

The plea made by some members of Parliament early this week for a further reduction in the export duty on tea came as a surprise to us, because it was contrary to recent trends. Hitherto, the vast majority of members of Parliament have invariably pleaded for an increase in taxation. What made the surprise a pleasant one was the fact that the plea for a larger cut in tea export duty was made by Congress men, socialists and an independent who is no friend of the business community. Even the communists did not oppose this plea. None was opposed to the relief which the Centre had already given. A Congress man from West Bengal went to the extent of advocating complete abolition of export duty on tea. In fact, almost all who spoke on this subject were in favour of further relief in export duty, as they realised that Indian tea was losing its competitive advantage rather rapidly. The occasion for these statements was provided by the debate on the Tea (Alterations in Duties of Customs and Excise) Bill introduced to secure Parliament's sanction to the changes in the export and excise duties made by the Government a few weeks ago with the object of pushing up exports of common teas which were finding it difficult to compete in world markets with similar teas from other countries.

It will be recalled that, after deliberating for over fifteen months, the Government hit upon an ingenious device for giving relief to common teas without sacrificing much of its reveune through export and excise duties. This it did on 28th September 1958 by introducing the aforesaid Bill before Parliament adjourned. The Central duties on tea consist of an export duty, an excise duty and an export cess. The export cess was Rs. 4 per 100 lbs. till 1st June 1958, when it was cut to Rs. 2 per 100 lbs. On the same day, the excise duty was also reduced from 6 nP to 3 nP per lb. on loose tea. The excise duty on tea packets upto 60 lbs., which was 25 nP per lb., was left unchanged. The export duty was on a slab system based on world prices—by which it was actually meant London prices. The slab system began on 1st March 1955 and had five slabs, with a minimum and maximum duty of 25 nP and 75 nP. A year later, the slabs were reduced to four by merging the second and third slabs into one and fixing the rate for this slab at 38 nP. The revised slabs were as follows:

Price per lb.	*Duty per lb.*
Upto Rs. 2.50	25 nP
Rs. 2.51 to Rs. 4.00	38 nP
Rs. 4.01 to Rs. 4.75	62 nP
Above Rs. 4.75	75 nP

In actual practice, "world" prices of tea moved in such a way that, throughout 1956-57, the export duty remained at 38 nP., excepting in December 1956 and January 1957, when it was fixed by the Government at 50 nP, instead of at 62 nP according to the slab. The rate continued to be at 38 nP right through 1957-58 and upto 27th September 1958, except in May, June and July 1957, when it came down to 25 nP.

Under the aforesaid system, no excise duty was payable on tea that was exported. The duties payable were the same on all grades of teas, whether they were fine, medium or coarse. But the prices realised by them varied to a considerable extent; the finer the tea, the better was the price. Consequently, the incidence of duties, especially the export duty, weighed heavily on teas that fetched lower prices.

Another defect in the slab system of export duty was the susceptibility of duty to fluctuate widely and frequently. This proved extremely irksome to overseas buyers and hindered the free and normal flow of tea exports. Although these defects were realised by the Government long ago and the industry's plea for rationalisation and relief was recognised as relevant, a solution was not found till seven weeks ago. The difficulty was due to the impracticability of distinguishing the different grades of tea for the purpose of levying duties in a way which would not lead to evasion. Finally, in September last, a way out was found as follows:

(1) The slabs for export duty were reduced to three:

Price per lb.	*Rate per lb.*
Upto Rs. 2.50	25 nP
Rs. 2.51 to Rs. 4.75	26 nP
Above 4.75	30 nP

By extending the second slab to cover a wide margin and reducing the duty applicable to it to 26 nP, the Government answered both the criticisms, namely, that the rate was unduly high and that the possibility of fluctuations in the duty hampered the free flow of exports. Trade circles expect that the export duty will now remain stable for a very long time at 26 nP per lb. and have welcomed this innovation.

(2) At the same time, the excise duty on loose tea, which had been uniform till then, was divided into three grades by distinguishing the tea-growing areas into three zones, the division being approximately on the basis of grades of tea. The single rate of 6 pies per lb.—the reduction made on 1st June was only temporary—yielded place to three, 2 nP, 4 nP and 10 nP, depending on whether the tea was grown in Zone I or Zone II or Zone III. In other words, the finer tea paid the highest excise duty, the medium tea paid the middle rate and the lowest grade tea paid the lowest rate. In addition, it was said that the maximum rate of excise duty leviable at any time would be 19 nP. The packed tea was to bear an additional excise duty of 21 nP per lb.

(3) The revised excise duty was made applicable to exports also. The result was that the net relief was only 2 nP to finer tea, 8 nP to the next lower grade tea and 10 nP to the cumbrously described common teas. By doing so, the Government extended to tea also its recent policy of asking the domestic consumer to meet the cost of measures taken for stimulating exports. The revised excise duty on fine teas, especially packed teas, is prohibitive to domestic consumers.

The method adopted to rectify the defects in the original basis of levying export and excise duties is about the best that could be evolved, though it is by no means perfect and many holes can be easily picked. So far as the extent of relief afforded is concerned, the consensus of opinion is that it is inadequate. The relief given to the industry is only Rs. 1.5 crore out of a total burden of about Rs. 22.50 crores in the form of export and excise duties alone. It was this point that was stressed by several members of Parliament.

The Government, however, firmly stuck to its September decision and would not agree to any further reduction in export duty. The Minister for Revenue and Civil Expenditure, Mr. B. Gopala Reddy, contended that the relief given to common teas was adequate and that those who argued that Indian teas would not be able to hold their own in export markets were spreading alarmist views. He stated that there had been no fall in exports so far this year and was confident that they would be substantially higher. If India gave further relief in export duty, its competitors like Ceylor could do the same thing. It would, therefore, gain little by way of exports, needlessly confer a benefit on the foreign consumer and lose a substantial amount of revenue. He, however, added that the Government would keep a close watch on the export position and would not hesitate to give more relief if warranted by a change in the situation. Whatever be the merits of his arguments, he succeeded in getting the consent of the Lok Sabha for the Bill, without yielding anything.

Mr. Gopala Reddy was right in saying that exports of tea in the current year have so far not suffered. But, in this matter, one has to look forward and not to the past. World production of tea is going up and new competitors are emerging. Besides East Africa, China also is offering stiff competition. India will miss the bus, if the Government is to pursue the policy of reducing export duty only after a setback in its exports of tea is proved. Already, India's tea exports to the biggest market, namely, Britain, has fallen to a considerable extent. Another important point to be borne in mind is that the profit-margin of most tea companies has shrunk heavily, owing to higher cost of production in the face of lower prices realised on the sale of their crop. Their financial position is steadily deteriorating, leaving little or no resources for replanting, expansion, and modernisation of factories. These trends will gravely undermine their capacity to compete effectively and to hold India's pre-eminent position in the world tea trade. The tea industry today is reaping the benefits of large amounts spent on improving the gardens in the early post-war years. This advantage will peter out in the next few years, unless it is enabled and encouraged to plough in fresh resources for improvement and maintenance of its basic assets. Mr. Gopala Reddy deplored the tendency on the part of some to take an "alarmist view" of the position of Indian tea. But equally undesirable is the tendency of Government spokesmen to take a complacent view of the future for this industry, ignoring the clear writing on the wall.

• • • •

The decision of the Government of India to permit the private sector to set up a synthetic rubber plant at Bareilly in Uttar Pradesh, as disclosed by Mr. Manubhai Shah, Union Minister for Industry, while inaugurating the Development Council for Alcohol and Fermentation Industries at New Delhi on Monday this week, will be widely welcomed. The project was originally included in the industrial development programme (1956-61) of the public sector. Even before the programme was formulated, the Ministry of Commerce and Industry had undertaken certain preliminary investigations in connection with the development projects to be processed by the National Industrial Development Corporation. The implementation of the project was, however, deferred on account of foreign exchange shortage and larger rupee expenditure commitments for several other projects. It is these factors which have now compelled the Government to allow the private sector to go ahead with the project. If the decision had been taken earlier, the project would have probably been completed and actual production started.

Details regarding the project are not known. From Press reports, it is, however, gathered that three firms are collaborating in setting up the plant. The name of Goodyear Tyre and Rubber Company of India Ltd. is mentioned as being one of the firms. The total capital outlay on the project is put at about Rs. 17 crores and employment potential at nearly 10,000 persons. Preliminary steps, according to Mr. Manubhai Shah, are already in hand and the factory is expected to go into production early in the third Five-year Plan period.

The establishment of the synthetic rubber plant is of very great importance for three reasons. First, to the extent synthetic rubber is produced, the gap between requirements and supplies of natural rubber can be narrowed. The gap at present is of the order of 14,000 tons and is bound to widen

EQUITIES RULE QUIET

TEXTILES HEAVILY MARKED DOWN

(From Our Own Correspondents)

BOMBAY, 20*th November*

THE share market ruled quiet during the week under review, with a further all-round marking down of values. The decline was particularly marked in textiles, sugars, engineerings and some prominent miscellaneous counters. After a temporary steadiness on the last day of the previous settlement, the market suffered a setback in the new account which commenced on Monday on heavy bull liquidation and bear selling. The uncertain political situation in Pakistan and sales of huge blocs of Indian Iron shares in Calcutta and Bombay on behalf of a holding company in Calcutta depressed sentiment further.

In the steel section, Tata Ordinaries retreated from Rs. 177.75 to Rs. 173.50 yesterday, but, with the abatement of selling pressure, they rallied to close at Rs. 176. The new shares were marked down over the week by Re. 1.75 to Rs. 172. Indian Irons looked up a little from Rs. 26.85 to Rs. 27.05 early in the week, but receded to touch a low of Rs. 25.60 yesterday. Today, however, they staged a minor recovery to Rs. 26.05 before closing at Rs. 25.90.

In the textile section, Bombay Dyeings dropped from Rs. 58 to Rs. 56.40 and after improving to Rs. 57, closed today at Rs. 56.80. Centurys suffered heavily with a decline from Rs. 433.75 to Rs. 423.50 before finishing at Rs. 426.25. Kohinoors dipped from Rs. 256.50 to Rs. 248. Central Indias lost Re. 1 to Rs. 85, Finlays Rs. 7 to Rs. 268 and Gokaks Rs. 6.50 to Rs. 132. Indore Malwas shed Rs. 2 to Rs. 102 and Models Rs. 6.25 to Rs. 167.50. Morarjee Mills were done at Rs. 235 *ex-div.* (dividend Rs. 15), as against Rs. 250 *cum-div.* a week ago. New Greats were depressed at Rs. 211, having come down from Rs. 219. New City Mills were unchanged at Rs. 95. Simplex Mills changed hands today at Rs. 170.50, as against Rs. 176 a week ago. Standards lost no less than Rs. 9 over the week to Rs. 395. Svadeshis Rs. 2 to Rs. 189 and Tata Mills Re. 1.50 to Rs. 35.

Bank shares followed the general pattern. Barodas shed a rupee to Rs. 121, Central Banks 30 nP to Rs. 58.20 and their new shares Re. 1 to Rs. 59. Punjab Nationals were done Rs. 6 lower at Rs. 55. While Union Banks were unchanged at Rs. 7.52, United Commercials had business a fraction lower at Rs. 68.

The highlight of the insurance section was provided by New Indias. The announcement of an interim dividend of Rs. 2 per share (of Rs. 15 each) for the year ending December 1958 was greeted by the market with a jump in the shares from Rs. 49.25 to Rs. 55.50. No interim dividend was paid by the Company in respect of the previous year, but a distribution of Rs. 3 per share was made for the year. Vulcans picked up 24 nP to Rs. 19.76, while Indian Mercantiles shed 25 nP to Rs. 47.25.

Electricity shares were subdued. Ahmedabad Electrics were done 30 nP lower at Rs. 99 and Bombay Suburbans 75 nP down at Rs. 110.50. Surat Electrics shed 50 nP to Rs. 114, while Poona Electrics changed hands at Rs. 111.25, as against the previous transaction at Rs. 117.50. Tata Hydros were also a shade lower. Andhra Powers gave way from Rs. 1,210 to Rs. 1,190 and Tata Powers from Rs. 1,237.50 to Rs. 1,197.50.

In the sugar group, Belapurs retreated from Rs. 319 to Rs. 308.50, thus maintaining the previous week's downward trend. The cumulative loss in the last two weeks is Rs. 14. Changdeos were a shade quiet at Rs. 32.75, while heavy declines were recorded in Phaltans and Walchandnagars, the former losing over the week Rs. 7.50 to Rs. 166.50 and the latter Rs. 7 to Rs. 283. Maharashtra Sugars receded from Rs. 185 to Rs. 178.

In the cement section, Associated Cements moved down from Rs. 155.50 to Rs. 152.25, but the loss was nearly made good when the shares improved to Rs. 154.50 today. Digvijays, however, lost Rs. 5.50 to Rs. 134. Orissa Cements dropped 28 nP to Rs. 11.96, Ashokas 84 nP to Rs. 7.50 and Jaipur Udyogs 36 nP to Rs. 10.32.

Engineering and mining shares, too, were depressed. Alcocks were conspicuous with a decline of Rs. 12.50 to Rs 257.50. Tata Locomotives gave way from Rs. 157 to Rs. 151.50, but they staged a partial recovery to Rs. 154.50 towards the close. Their Rights were quoted today at Rs. 43. Premier Constructions lost on balance Rs. 5.50 to Rs. 236. Larsen and Toubros were 16 nP lower at Rs. 17. Mahindras had business at Rs. 18.76, as against Rs. 18.80 a week ago. Cooper Engineerings provided an exception with a rise of Rs. 3 to Rs. 127. Shivraipurs lost ground from Rs. 4.90 to Rs. 86 and Indian Coppers from Rs. 3.90 to Rs. 3.80.

Scindias were relatively more steady, moving between Rs. 21.36 and Rs. 20.92. The closing was done at Rs. 21.16, representing a drop of 12 nP over the week. Great Easterns were marked down by 65 nP to Rs. 26.60. Bharat Lines were steady at Rs. 13.90. Premier Automobiles followed the general trend with a decline from Rs. 87.50 to Rs. 86. Hindustan Motors lost 50 nP to Rs. 7.16.

In the miscellaneous group, Bombay Burmahs (old) retreated from Rs. 495 to Rs. 480 before recovering to Rs. 485. Their Partly paid-ups shed over the week Rs. 2.50 to Rs. 178.75. National Rayons were conspicuous with a fall of Rs. 8.75 to Rs. 241.75 over the week; the lowest level touched during the week was Rs. 238.50. Gwalior Rayons declined by 56 nP to Rs. 14.16. Tata Chemicals lost 20 nP to Rs. 15.64 and Tata Oils Re. 1.75 to Rs. 37.25. Hindustan Levers had business 88 nP lower at Rs. 25 and Ceats Re. 1.50 down at Rs. 65.50. Killick Industries were unchanged at Rs. 148, while Wimcos gave way from Rs. 190.25 to Rs. 187.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 19*th November*

The week under review after *Diwali* was a quiet period for the Stock Exchange. All sections, including jutes, sagged and there was a fall in business too. The indication given by the Finance Minister, Mr. Morarji Desai, that there was going to be no lessening of the tax burden cautioned the otherwise enthusiastic buyers. Earlier, in view of the New Delhi report that the target for expenditure under the Plan would remain unaltered at the originally estimated figure of Rs. 4,500 crores, led to some expectation of relief in taxation. That this expectation was not correct led to hasty profit-taking. The recession in Indian Irons was attributed to reports that a large block of the shares was sold by an institutional holder. For a time, jute shares continued to advance, but became dull in consonance with the general dullness. Further, the reported possibility of Government permitting fibre exports caused bearishness as that would put up raw material prices, thus raising mills' cost of production. Coal shares were featureless, and the report of the Price Revision Committee was awaited. Tea shares trod a dull path following the lower prices in auctions. Note was taken of the tea industry's case for greater relief for common teas put forward in Parliament on the discussions on the Bill to revise the customs and excise duties.

Among coals, Burrakurs sagged to Rs. 17.25 from Rs. 18.37, but subsequently staged a recovery to Rs. 17.31. East Indians, after recovering to Rs 23.25 from Rs. 25.57, gave way to Rs. 23.19. Equitables were unchanged at Rs. 30. Pench Valleys realised Rs. 24.87, as against Rs. 24.75 earlier, but closed quiet at Rs. 24.50. New Beerbhooms were fractionally lower at Rs. 19.19.

Jutes disclosed a hardening tendency early in the week, but gave way subsequently. Agarparas improved to Rs. 12.06 from Rs. 11.70, but eased to Rs. 12.50. Kinnisons fell to Rs. 190 from Rs. 196, while Fort Glosters rose to Rs. 464 from Rs. 430. Aucklands had buyers at Rs. 166, as against Rs. 160 earlier, but soon the gain was lost. Naihattis fell to Rs. 87.50 from Rs. 95, and New Centrals to Rs. 13.62 from Rs. 13.75. Ganges were done at Rs. 77, as against Rs 78 previously and Howrahs at Rs. 20.56, as against Rs. 21.50.

In the engineering section, Indian Irons opened at Rs. 27.32, and gradually gave way to close at Rs. 26.26. Following suit, Texmacos sagged to Rs. 21.40 from Rs. 22.00. For the year ended November last, owing to a decline in profit in the working of the Kumardhubi Engineering Works Ltd., the dividend has been lowered to 15 per cent. from 20-2/3 per cent., and this explained the recession in the quotation of these shares to Rs. 8.85 from Rs. 9.12. Braithwaite & Cos. were unchanged at Rs. 31.25.

Although teas were generally neglected, the section was not devoid of features. Thus, while Hattikhiras eased to Rs. 12.06 from Rs. 12.31 and Methonis to Rs. 18.87 from Rs. 19.00, Banarhats picked up to Rs. 285 from Rs. 282 and Basmatias to Rs 28.12 from Rs. 27.56.

Miscellaneous industrials were quiet. At Rs. 29.37, Dunlop Rubbers were fractionally lower and National Cables eased to Rs. 33.50 from Rs. 34.25. National Pipes, after being lower at Rs. 15.06, staged a rise to Rs. 15.56. Indian Coppers were unloaded in larger lots and the rate, therefore, gave way to Rs. 3.80 from Rs. 3.92. Despite better prospects for the paper industry, Orient Papers lost to Rs. 33 from Rs. 33.70 and Tiaghur Papers to Rs. 43.50 from Rs. 44.12. India Steamships remained unchanged at Rs. 14.06. Martin Burns improved to Rs. 30.69 from Rs. 29.75, but receded to Rs. 29.50

* * * *

Madras Stock Exchange

MADRAS, 18*th November*

Barring the textile section, which ruled depressed, the Madras Stock Exchange depicted a steady trend during the fortnight under review. Despite continued labour unrest in the Kerala plantations, planting shares generally received support. Selected tea shares were particularly firm on reports of rising exports and better prices. Electric shares were fully steady. Sugars and Breweries received some investment enquiries, as also selected miscellaneous shares. Textiles, as already stated, were depressed, thanks to persistent reports of heavy accumulations of yarn and cloth. Even the drastic cut in import quota for cotton yarns to established importers from 25 per cent. to 7½ per cent. during the October-March licensing period failed to have any effect.

Among tea shares, Devasholas firmed up by 40 nP to Rs. 22.25. United Nilgiris improved by 35 nP to Rs. 17.90. Kil Kotagiris rose by 28 nP to Rs. 6.56. Cottanads gathered 25 nP to Rs. 15.25. Parksides were, however, down by 30 nP to Rs. 22.10 *cum-div.* Twyfords by 25 nP to Rs. 17.50 and Nilgiris by 10 nP to Rs. 7.70.

In the coffee group, Consolidated Coffees rallied 50 nP to Rs. 27.60. Anaparais gained 20 nP to Rs. 5.75 *cum-div.* Coffee Lands put on 15 nP to Rs. 33.55. Savamalais gained a like amount to Rs. 3.75. Kumergodes hardened by 3 nP at Rs. 7.10. Ouchterlonys were done a shade higher at Rs. 5.45. Bababudins found buyers at Rs. 12.60.

Among rubber shares, Be Bes strengthened by 25 nP to Rs. 4.00. Teekoys picked up 10 nP to Rs. 7.25. Thamrapallys were steady at Rs. 27.00. Highlands, however, lacked support and shed 35 nP to Rs. 11.15. Midlands receded by 11 nP to Rs. 12.45 *cum-div.* T.R. and Ts were done 10 nP lower at Rs. 7.00.

Deals in textile shares were put through at reduced rates. R.C. Ambikais fell by Rs. 13 to Rs. 105.00. Vasantas dropped Rs. 6 to Rs. 220. Dhanalakshmis climbed down by Rs. 7 to Rs. 165. Buckinghams and Anglo-Frenchs were quoted Rs. 4 lower at Rs. 174 and Rs. 68, respectively. Metturs shed Rs. 4 to Rs. 332. Coimbatore Cottons dropped a like amount to Rs. 149. Premiers found buyers Rs. 5 lower at Rs. 127. Radhakrishnas and Rajalakshmis receded by Rs. 2 each to Rs. 141 and Rs. 67 respectively.

Sugars and breweries received support. Cauverys put on Rs. 2 to Rs. 108. E.I.D. gained 30 nP to Rs. 30.40. Deccans were better by 12 nP at Rs. 10.87 *cum-div.*

In the miscellaneous section, Binnys evoked good enquiries and improved by Rs. 3 to Rs. 170. Rallis rallied Rs. 3.50 to Rs. 42.50. Hindustan Levers put on Re. 1.80 to Rs. 26.30. General Papers were done 50 nP higher at Rs. 13.25. Sen-Raleighs moved up by 60 nP to Rs. 14.50. Andhra Cements, on the other hand, receded by 40 nP to Rs. 10.10. F.A.C.Ts declined by a like amount to Rs. 7. Metur Chemicals shed 25 nP to Rs. 11.60.

KHANDELWAL FERRO ALLOYS LTD.

India has long been known for its huge reserves of manganese ore. It is the second largest supplier of the ore to world markets. It now bids fair to break new ground and emerge as an exporter of ferro-manganese, with the establishment of the plants to convert the ore into the indispensable alloy for the manufacture of steel. Recognising the importance of the industry, the Government of India has assigned a high priority to it under the second Five-year Plan and has given licences to half a dozen *entrepreneurs* in the private sector for the establishment of ferro-manganese plants with an aggregate capacity of 160,000 tons. Of the six units sanctioned, three have already gone into production, and two are in the process of being established. The sixth one, with a capacity of 30,000 tons, is to be set up by Khandelwal Ferro Alloys Ltd., a public limited company promoted by Messrs. Ramprasad Beharilal and Sons and Khandelwal Brothers Private Ltd., both of them having considerable experience as exporters of manganese ore and importers of steel and having wide contacts in the world market for ferro-manganese.

The total capital cost of Khandelwal's project is Rs. 1.15 crore. To meet this and provide some working capital, Khandelwal Ferro Alloys Ltd. proposes to enter the capital market shortly with an issue having a face value of Rs. 1.50 crore, made up of 100,000 ordinary shares of Rs. 100 each and 50,000 7 per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. Of this, the promoters, the Directors and their friends have already taken up 65,000 ordinary shares. The balance of 35,000 ordinary shares and the entire preference shares will be available for public subscription. In respect of the ordinary shares, the Company has received sanction from the Controller of Capital Issues to call in only 50 per cent. in the first instance and the Company proposes to call the balance only when necessary after the factory goes into production. The Company has the option to redeem the preference shares at par after five years from the date of issue in such parts as the Directors may decide from time to time by drawing lots. All the preference shares are, however, redeemable within 10 years from the date of issue.

The plant will be located adjacent to the Kanhan railway station, 12 miles from Nagpur, a place which is claimed to be ideal from the point of view of accessibility to raw material sources, water supply, transport facilities, etc. Orders have already been placed with a Norwegian manufacturer for the supply of an electric furnace, the payment for which will be on deferred credit basis.

In view of the abundant supply of manganese ore, the manufacture of ferro-manganese in India should be an economic one. The marketing of it abroad, it is said, will provide a high profit margin. Out of the total capacity of 160,000 tons (of all the six plants) about 60,000 tons will be required for indigenous steel production and the balance of 100,000 tons will be available for export. Khandelwal Ferro Alloys Ltd. has already entered into a forward sale agreement with an American firm for the sale of its entire output of 30,000 tons for a period of 7½ years. The agreement also provides for a "floor" price for the Company's ferro-manganese for a period of 4½ years, subject to an upward revision of price in accordance with the prevailing international market prices. Thus, the Company is assured of protection from possible adverse international market fluctuations and a minimum remunerative price for its production is guaranteed.

The Board of Directors of the Company is headed by Dr. A. Ramaswami Mudaliar. The Managing Agents are Khandelwal Industries (Private) Ltd. The Company is fortunate in acquiring the services of Mr. K. Sadagopan (till recently Chief Administrative Officer of the Government-owned Integral Coach Factory, Madras) as General Manager.

NEWS IN BRIEF

THE Government of West Bengal proposes to take over the wholesale trade in foodgrains, as suggested by the National Development Council recently.

The Madhya Pradesh Government has decided to acquire all rice stocks in the State, without in any way interfering with the normal retail trade.

The Government of Bombay has sanctioned the opening of 35 rural family planning centres in various parts of the State during the current financial year.

A thermal power plant will be set up in the Neyveli Lignite Project, Madras, by the Government of India with the collaboration of the U.S.S.R. The plant is estimated to entail a capital outlay of over Rs. 10 crores.

The annual general meeting of the Associated Chambers of Commerce of India will take place at Royal Exchange, Calcutta, on 5th December next. Mr. Morarji R. Desai, Union Finance Minister, will be the principal guest at the meeting.

In pursuance of the recommendations made by the Tariff Commission, the Government of India has decided to extend protection to the sericulture industry for a further period of five years ending 31st December 1963. The existing concession of duty-free imports of silkworm seed also will be continued.

A showroom to display a wide range of India's manufactured products is proposed to be set up by the Government of India in Afghanistan, with a view to promoting trade between the two countries. Details of this scheme were discussed with Mr. Ghulam Mohammed Sherzad, Afghan Minister of Trade and Commerce, during his visit to New Delhi last week.

A master plan for irrigation in Bihar has been drawn up by the Irrigation Department of the State Government. The proposed plan is concerned exclusively with the development of irrigation (and not with other water utilisation schemes like power production) which, it is claimed, will provide water to about 10 million acres in the State.

As a measure of export promotion, the Government of India has decided to allow drawback of customs duty paid on imported materials used in the manufacture of alabaster articles, cigar wrapper tobacco and artificial silk hosiery and garments exported from India. Rebates of customs and Central excise duty paid on materials used in the manufacture of piperzine syrup and certain steel products will also be made on export.

In order to implement an expeditious programme of restoring about 25,000 tanks in the four southern States of Andhra Pradesh, Kerala, Madras and Mysore, the Government of India has sanctioned an outlay of Rs. 25 lakhs for each State in the remaining four months of the current financial year. This sum is over and above the Rs. 300 lakhs originally provided. The additional allocation will be spent mostly for digging wells, extending power lines to lift irrigation and building small anicuts and pick-ups.

A new public corporation to set up and run the central heavy machine building plant and allied projects will shortly be constituted in India, with Dr. A. Nagaraja Rao, at present Chief Industrial Adviser to the Union Government, as chairman. The proposed undertaking will have an eventual capital of Rs. 200 crores. It will be the second largest Corporation in the country, the first being Hindustan Steel, with a share capital of over Rs. 400 crores. In addition to the machine building plant at Ranchi, the Heavy Engineering Corporation will be in charge of the foundry forge project, the heavy machine tool project and the coal mining equipment manufacture project.

An agreement has been reached between the Governments of Madras and Kerala over the Parambikulam river water. Under the agreement the Parambikulam Irrigation project, included in the second Plan, will be undertaken by the Madras Government at an estimated cost of Rs. 35 crores. The project covers construction of a dam in the upper reaches of the river, a long tunnel through the ghats to divert the water to the Madras border, another dam across the Aliyar river and a link between the two reservoirs. The Madras Government has agreed to ensure that this project will not hamper in any way the successful execution of Kerala's Sholayar river hydel project.

A central Board for Workers' Education has been constituted by the Government of India. It will hold its first meeting in New Delhi early next month. The Board, consisting of representatives of employees' and workers' organisations, educational institutions and Government, will lay down policy in regard to the scheme of workers' education and will administer the scheme. It will also organise programmes to provide instruction to workers in trade union consciousness, conduct of union-management relations, working of the industry and observance of the Code of Discipline in industry. Besides, arrangements will be made by the Board to give training to adequate staff for implementing the programme. It may be noted that a sum of Rs. 60 lakhs has been set apart for the workers' education scheme in the second Five-year Plan.

As a result of the negotiations which took place between West Germany and India, an arrangement supplementary to the trade agreement of 8th October 1956, the validity of which was extended upto 31st December 1959, has been signed by the two Governments. The arrangements reached provide for an increase in the exchange of commodities. West Germany will supply to India machine tools, polygraphic machinery, products of precision of the mechanical and optical industries, electrical equipments, textile machinery, as well as fertilisers, films, and a number of other industrial raw materials and equipments. The payment arrangements have been modified to provide for a central clearing account, so that the rupees earned by exports of goods from the German Democratic Republic are utilised for the import of Indian products. West Germany will import from India tea, coffee and preserved fruit, raw materials, semi-processed and finished products of the textile and leather industries as well as other consumer goods and handicrafts in 1959.

With the arrival of 16,035 long tons of American wheat in the Alexandra Docks on Monday, the total U.S. wheat unloaded in Bombay under the P.L. 480 commodities agreement between the two countries amounted to two million tons. The first P.L.-480 agreement was signed in August 1956. Two new P.L.-480 agreements were signed by the two countries early this year. Under these agreements the U.S. will provide India with 8,007,500 metric tons of foodgrains valued at Rs. 246.25 crores. Of this, wheat alone accounts for 7,307,500 tons (valued at Rs. 222.00 crores), rice for 200,000 tons (Rs. 13.20 crores), maize for 200,000 tons (Rs. 5.05 crores) and millet for 300,000 tons (Rs. 6.00 crores). From August 1956 to 30th September 1958, nearly 3,675,607 long tons of wheat had arrived at the various ports of India. Imports of rice and millet were about 194,177 long tons and 12,236 tons, respectively. In addition, India has received substantial quantities of milk powder, cotton and tobacco under the agreement.

From Abroad

Soviet and Egyptian airlines have signed an agreement on reciprocal air service between the two countries.

India topped the list of buyers of British aircraft during the first nine months of this year. Its purchases were valued at £14,917,584. Canada ranked second, with £13,331,199, and the U.S. third, with £9,680,009.

The British Board of Trade has published the Commonwealth Preference Regulations 1958 which lay down the conditions for eligibility under the Commonwealth Preference scheme. The regulations will come into force on 1st January 1959 and will replace the current regulations.

West German steel makers hope to receive orders amounting to DM. 250 million from the recent deal signed between the Argentine Government and a representative of August Thyssen Huette, involving an order of DM. 650 million. It will be shared among the six members of the Coal and Steel Pool.

A new chemical adhesive which reportedly can glue metal to rubber, enamel to rubber, and plastic to glass is being marketed by Eastman Chemical Products, Inc., a subsidiary of the Eastman Kodak Company, U.S. The adhesive is so strong that only a drop is needed to weld two heavy pieces of any material.

A process of manufacturing foamed metal lighter than cork or balsa wood and capable of floating on water has been developed by a company at Madison, U.S. In the process, bubbles of air are trapped within the structure of aluminium. It is expected that the product will be used in light construction and for telephone poles, rafts and furniture.

Visitors to the National Chemical Exposition in Chicago watched a demonstration of a tooth filling method which by-passes use of the dentist's drill. A liquid plastic was poured into a tooth crack and, in a few seconds, formed a hard surface. The surface, easy to clean, is said to seal the tooth so completely that no further decay takes place.

The Scandinavian Air Services and Air France have concluded a five-year pool agreement on traffic between Scandinavia and France. The agreement came into effect on 1st November. During the winter season, there will be two services each way daily on the Stockholm-Copenhagen-Paris route. Both the S.A.S. and Air France are planning to use the French-built Caravelle jet airliners on this route.

Two leading U.S. dairy companies have formed a Corporation to make dry milk products available for the first time to millions of people in developing areas of the world. The two firms have assigned to the new company all their patents for manufacture of instant non-fat milk, instant flavoured milk and related instant milk products. The patents will be made available to other companies in the U.S. and Canada and to about 20 leading nations under international treaty.

In the U.S., aircraft owned by individuals or by private business concerns outflew the domestic scheduled airlines in 1957. General aviation aircraft (business, commercial, instructional, pleasure and miscellaneous) flew 10.9 million hours and travelled 1,400 million miles. By comparison, the airlines on scheduled domestic flights flew 3.6 million hours for a total of 785 million miles. Business and pleasure flying accounted for the largest mileage in the general aviation category.

Work has started in New York on a $22.5 million housing project for middle-income workers which is being financed by the Hatters, Painters and the Brotherhood of Electrical Workers Union. The project is being undertaken both as an investment and as a means of providing needed housing for workers and their families. It is the fourth major housing development to be undertaken by labour unions in the New York area in recent years.

The continents of Asia and Africa have shown significant increases in commercial fishing since 1938, according to the Food and Agriculture (F.A.O.) *Yearbook of Fishery Statistics* published this week. During the period, Africa's fishing tonnage increased from 520,000 to 1,860,000 and Asia's from 9,360,000 to 12,880,000. The *Yearbook* noted that the world total commercial fish catch is still increasing and is now about 30 million metric tons a year.

The French Government has approved of the Saharan oil code. Its main provisions confirm previously existing arrangements. The code seeks to award permits to prospect for five years at the end of which period half the prospecting area has to be relinquished. The concession, which will be granted only when oil is struck, will then be extended to 50 years. The French State retains discretion in awarding permits and controls the percentage of foreign capital of prospecting companies. Profits are shared equally between the State and the Company.

Norrbottens Jarnverk, the State-owned iron and steel works at Lulea, North Sweden, has decided to carry through a large-scale expansion programme, which will require investments of some Kr. 83 million (£5.7 million). The scheme includes installation of a so-called Sendzimir hot-rolling mill, with a capacity of 90,000 tons per annum. It will later be supplemented by a cold-rolling mill and a tin-plating plant. It is said that a substantial part of the Kr. 83 million investment will be financed by the Company itself and by loans from private credit institutions.

Britain's power output has been given a further boost with the opening of a 600MW-station at Castle Donnington in the north Midlands. The station has six turbo-alternators, and each of the huge boiler units has a rating of 830,000 lb. of steam per hour. One of a chain of large power stations being built along the banks of Britain's River Trent, Castle Donnington power station has the reputation of representing the biggest single step forward in power-generation technique up to this time. It embodies the latest techniques for capital economy and high performance.

The Trans World Airlines' Jetstream Flight No. 791 operating from Manila to New York passed through Bombay early morning on 16th November, creating a new record flight timing between Manila—Bangkok and Bangkok—Bombay. The Jetstream flew from Manila to Bangkok in 4 hours, 30 minutes and then from Bangkok to Bombay in 6 hours 26 minutes. Trans World Airlines have introduced the long-range Jetstreams on their Far Eastern routes through Bombay, covering Colombo, Bangkok and Manila, twice weekly in either direction.

PERSONAL

MR. M. C. Chagla, Indian Ambassador to the U.S.A., has been concurrently accredited as Minister of India to Cuba.

Mr. D. E. Phelips and Mr. G. J. Asher have been elected President and Vice-President, respectively, of the Cochin Chamber of Commerce for the year 1958-59.

Mr. John Diefenbaker, Prime Minister of Canada, who is now on a world tour, arrived in New Delhi on the 18th inst. and is expected to leave on the 24th inst.

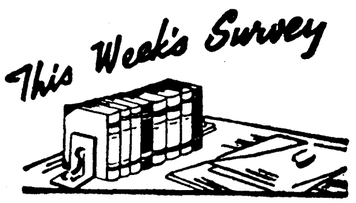
Dr. Jivaraj Mehta, Bombay's Finance Minister and leader of the Indian delegation to the International Conference on Social Work, left Bombay for Tokyo on Sunday last.

Mr. Rajeshwar Dayal, a member of the U.N. Observer Team in Lebanon and India's High Commissioner-designate to Pakistan, arrived in Bombay from Beirut on the 16th inst.

Mr. V. K. Krishna Menon, India's Defence Minister, left Bombay on the 13th inst. for London *en route* to New York to lead the Indian delegation to the United Nations.

Mr. E. J. Ellis arrived in Bombay from Colombo on 20th inst. to take up his appointment as Regional Information Officer, British Information Services, Bombay; he succeeds Mr. John Hyde, who left for the United Kingdom in September this year.

Mr. C. F. Cobbold, Governor of the Bank of England, left London on the 14th inst. on a one-month semi-world tour. He will visit Singapore, Malaya, Hong Kong, Japan, the U.S. and Canada, where he is expected to discuss several monetary questions with the authorities of the countries concerned.



LABOUR UNREST

THE persistence of chronic industrial strife in various key segments of the economy, even after the evolution of the code of conduct for industrial discipline and the enactment of several measures of labour welfare legislation, underlines the most important, but not sufficiently recognised, fact that discipline, whether it be among workers, students or the general public, cannot be instilled by legislative fiat. It has to grow from within, from a feeling of responsibility to the community and be nurtured by wholesome education on right lines. No legislation, however elaborate and well-thought-out, can establish industrial peace, unless workers, their unions and leaders agree to abide by a socially desirable code of conduct in letter and spirit.

A great deal of responsibility rests in this regard on politicians and trade union leaders professing to champion the cause of the working class. They must take it upon themselves as their duty to educate workers in their rights as well as responsibilities. Unfortunately, workers in this country seem to have been told too often and too much of their rights, with little regard having been paid to the other side of the medal, namely, their responsibilities. Day in and day out, the idea is dinned into their ears by politicians and careerist trade unionists that they are the victims of exploitation and a vicious conspiracy to deprive them of their deserts. The aim, it can be easily discovered, is not to secure to the workers higher wages and better working conditions, but to reap political gains for the party they represent. Further evidence that their intentions are mainly political—any advantage workers gain in the process being only purely incidental—is provided by the fact that the more organised and politically conscious a section of workers is, such as urban workers, the more keen the bid among political parties to gain control over them. In the result, rural labour, which deserves infinitely more sympathy than its much-flattered and most-favoured urban confreres, stands practically neglected in respect of organisation, wages, conditions of work, etc.

The evil effect of this unhealthy influence and misdirected education have already started manifesting themselves in the most undesirable way, and at a time when the nation is passing through one of the most critical periods of its development. Neither appeals to patriotism nor to their self-interest seem to be of little avail to stem the rot that has already set in.

It is, therefore, only natural if those who have no vested interests in the gains or losses of one political party or other but have only the interest of the country at heart, are pained at this undesirable trend. It is also not surprising if a few of the more sensitive souls among them are indignant at it. Mr. Gulzarilal Nanda, Union Minister for Labour, who has devoted the best part of his life towards building up a healthy trade union movement in the country, and who is, in a large measure, responsible for much that is healthy in the trade union laws and movement in the country, seems to have been in this mixed mood, when he addressed a conference organised by the Punjab Labour Advisory Board at Chandigarh. What he said on this occasion is of the utmost importance to the economic progress of the country.

Mr. Nanda, obviously indignant at the irresponsibility indulged in by certain sections of trade unions, thought it necessary to give a stern warning that the Government would not be cowed down by stoppage of work, hunger-strikes, and ugly demonstrations aimed at undermining industrial peace in the country. He correctly diagnosed much of the trouble in the labour field, when he pointed to (and deprecated) the tendency among certain unions to ignore the interests of workers and to utilise them for political ends. He said that violent and unseemly demonstrations did not fit into a progressive society and that those who encouraged disruptive activities were, in fact, deceiving the workers and frittering away their energies without getting them any benefit.

Mr. Nanda deplored, very rightly, the role of certain trade unionists who dangled the carrot of higher wages before workers in an effort to outbid rival organisations, when it was well known that the capacity of the employers to pay was limited. The correct approach to the question of improving the lot of workers, Mr. Nanda pertinently pointed out, was for labour to help in stepping up production which alone could usher in a period of prosperity for the nation. Unless this basic economic fact is sufficiently recognised by all concerned, the present *malaise* of industrial discord is bound to persist, with benefit to none.

In this connection, the recent constitution of a Central Board for workers' education by the Government of India is to be greatly welcomed. The Board will be a central organisation for laying down the policy for and administering the scheme of workers' education. The Board will consist of representatives of employers' and workers' organisations, educational institutions and Government. It will organise programmes to provide instruction to workers in trade union consciousness, conduct of union-management relations, working of industry and observance of the code of discipline in industry. The Board will also arrange for training of teachers and programme administrators to carry out the scheme and prepare suitable material in various languages for the education of workers. It is to be hoped that care will be taken to see that instruction includes as much emphasis on responsibilities as on rights of labour.

CO-OPERATION IN THE PUNJAB

The Co-operative Movement in India can be said to have at least a history of over half a century. It is not, therefore, a Movement in its infancy. But if, in spite of official patronage and guidance, it has not succeeded and if its performance has been juvenile, it is because of its limitations in the Indian context. A periodical review of the progress of co-operation will certainly reveal the defects and enable remedial measures to be taken.

The Board of Economic Inquiry in the Punjab has, therefore, done well to make a study of co-operative farming societies in the Punjab. Its report sheds some revealing light on the working of these societies. Although the official summary of the conclusions of the Board released to the Press does not give complete information, what it tells is sufficiently disturbing.

In the Punjab, there were 279 societies with a membership of 4,425 at the end of June 1955. Under the present study, 48 of the co-operative farming societies were surveyed in different districts of the State. It was found that 26 societies forming 54 per cent. of the total surveyed were organised on owned lands, although, in a few cases, land had also been taken on rent. Ten societies were run entirely on rented lands. Some 12 societies, forming 25 per cent., were reported as not doing joint farming at the time of investigation. The majority of these had failed after trying joint farming. Among the landowners' co-operative farming societies, 32 per cent. of the members were women, and 49 per cent. of the members had no land in the societies. In almost all cases, cultivation was done with the help of tractors and other machinery. Further, the societies have been mainly organised by big landlords or by those who are well connected. Most of the field work is done by hired workers in such societies.

The ex-servicemen's tenant societies were engaged, till the time of investigation, in the clearance of jungles from their areas. The work was mostly done by individuals or small groups. Absenteeism and lack of proper housing and irrigational facilities were the chief hindrances in the way of the smooth working of ex-servicemen's societies. In some cases, red-tape in the release of grant money was also causing hardships among the workers. Tenant societies of civilians were mostly run by paid workers. A few among the members did the supervisory work while the others were just sleeping partners.

In the societies not doing joint farming at the time of investigation, one society was doing credit business. It never had the intention of doing joint farming. Another two had not yet started working. Nine societies had failed in joint farming after trying it for some time. The chief cause of failure was the inexperience of members in mechanised and scientific farming which resulted in losses in certain cases. In some cases, the societies undertook projects too big for their resources which they could not manage efficiently. These failures, coupled with the general lack of organisational skill among the cultivating class, are responsible for a deep set notion among the villagers that co-operative farming can never succeed. This attitude, the study points out, can be changed only by demonstration of the actual working of model farming co-operatives. For this, according to it, something more than the mere organisation of societies will have to be done. To get full benefit, the farmer must have co-operative facilities for marketing, storage and processing, in addition to production.

This is certainly true and none can dispute it. But the same refrain has been heard right from the moment the idea of development of Indian agriculture on sound lines was born. And the situation has not improved. One wonders if there is not something fundamentally wrong with the Movement or the way it is guided.

OCCUPATIONAL HEALTH

The concept of occupational health is today much broader than it was some years ago. Thus, occupational health now not merely concerns with the pathological conditions arising in industry due to the nature of employment but also pays utmost importance to team work amongst various specialities such as medicine, psychology and personnel management. This aspect was well brought out by Mr. Jehangir Ghandy, Chairman of the Reception Committee, Second Asian Conference of Occupational Health, in his speech at the Conference held in Calcutta the other day. The need for such team work, Mr. Ghandy said, would be apparent from the fact that occupational diseases accounted for just 10 per cent. of the man-days lost through absenteeism in industry, while the balance of 90 per cent. was due to non-industrial diseases and injuries.

Expressing opinions more or less similar, Dr. A. B. Roy, West Bengal's Health Minister, who inaugurated the Conference, emphasised the importance of occupational health in the context of the industrial expansion programme. He declared that occupational health should not only concern itself with the prevention of diseases and reduction of industrial hazard but also promote educational schemes among workers. It is scarcely necessary to point out that physically and mentally alert workers are an asset to any industry.

In his address, Mr. Ghandy drew particular attention to the rapid, unplanned urbanisation, the one common problem arising from industrialisation that India has faced in common with other Asian countries. It was here that the speaker alluded to the housing shortage. According to him, in the 20 years from 1931 to 1951, India's urban population rose by 28.7 million, while housing went up by only 3.5 million units; the housing shortage in 1951 was estimated at 2.5 million units. Much effort has no doubt been made in the provision of housing facilities since the first Five-year Plan began, but the problem continues to be as intractable as before, thanks to further urbanisation.

Another problem confronting the Asian countries is that relating to rapid population growth. There is no exaggeration whatever in the statement of Mr. Ghandy that we can hardly expect any rapid improvement in standards of living, because the sharp increase in population reduces the proportion of current income that can be devoted to capital formation. Surely, there is, as Mr. Ghandy observed, no ideological dispute on the basic question of family planning. It may be noted here that such planning is being encouraged in Communist China just as in democratic India, the problem confronting both being similar.

HEAVY ELECTRICAL PROJECT

Although the Heavy Electrical Equipment Project was mooted four or five years ago, it was not until Saturday last week that the foundation-stone of the factory's main building at Bhopal was laid. The measures for the establishment of the Project had been envisaged in the second half of the first Plan. The preliminary work connected with the assessment of demand, demarcation between the public and the already existing private sector, and selection of technical consultants for the execution of the Project had even been completed by the end of that Plan. The snail's pace at which the implementation of the Project has progressed is a commentary on the so-called dynamism of the

public sector. It is to be hoped that the implementation of the project will be more rapid, at least in the future.

Now that the foundation-stone has been laid, earnest efforts should be made to complete the Project in as short a time as possible, for any delay in its implementation carries the risk of further "inflation" in capital outlay. Already, the overall investment on the project is put considerably higher than the original estimate—Rs. 61 crores, to be precise, as against Rs. 25 crores. Mr. Lal Bahadur Shastri, who laid the foundation-stone, did well to urge the reduction in the time gap between the three phases of the Project. Emphasising that every day was a valuable one and that no avoidable loss of time should be incurred, he offered to find as much steel as was needed for the Project, if the Project authorities would see to it that the time gap was reduced.

The aforesaid aspect must be specially mentioned, considering that huge sums of money—estimated at Rs. 22-23 crores—are being spent every year on imports of electrical equipment from abroad. This, as Mr. Shastri pointed out, is certainly a heavy drain on the foreign exchange resources and can be saved, if production in the Bhopal factory is expedited.

The foundation-stone-laying ceremony of the factory marks the beginning of the first phase of the Project and is expected to be completed during the early years of the third Five-year Plan, though a recent Press report says that the factory will go into production sometime in 1960. The first phase of the Project is believed to cost Rs. 28.7 crores, including a sum of Rs. 20 crores which represents the cost of factory (this will have two blocks—foundry and maintenance), tools and service. Of the latter sum of Rs. 20 crores, foreign exchange expenditure accounts for Rs. 6 crores. The Associated Electricals Industries Ltd. (A.E.I.), the consultants for the Project, is supplying the equipment on credit under a deferred payment system.

In its first phase, the Bhopal factory will manufacture switch gears, control gears, transformers and capacitators which, it is said, will result in a saving of Rs. 6 crores of foreign exchange annually. On the completion of the Project, the capacity for the production of different items of electrical equipment is expected to be as under:

- Hydraulic turbines and generators—175,000 kw. per annum.
- Generators for diesel sets—34,000 kw. per annum.
- Transformers 33 KV and above—500,000 KVA per annum.
- Current and potential transformers—Suitable numbers.
- Static capacitators—54,000 KVA per annum.
- A.C. circuit breakers—11 KV and above.
- D.C. circuit breakers—Suitable numbers.
- Switchboards and control desks—Suitable numbers.
- Direct current machines, generators and exciters, welding generators and motors—7,000 kw. per annum. The required number of units is 2,000 h.p. per annum.
- Traction motors, apparatus and equipment—75,000 h.p. per annum.
- A.C. industrial motors, ratings of 200 h.p. and above—50,000 h.p. per annum.
- Industrial motor control—Within the range of motor ratings for State Factory.

The Heavy Electrical Project will draw heavily on the available technical personnel. In the report of the Technical Consultants, the personnel requirements estimated in different categories are: administrative, 735; supervisory or trade personnel, 5,715; skilled technical, 4,550, and semi-skilled and unskilled, 6,200. The Consultants' agreement with A.E.I. provides for the preparation of a scheme for the training of Indian personnel after taking into account facilities available in existing workshops and advice on the establishment of a training centre.

The Project authorities have decided to start a training school immediately. The programme of training will begin in January 1959, when the first batch of 900 trainees will be admitted to the school. Already, 50 trainees who will occupy higher directional posts in the factory are undergoing training in A.E.I.'s factories in the U.K. The emphasis laid on training of workers is, as Mr. Shastri rightly declared, very commendable. It is needless to say that, only if the workers in the different branches of the factories are given adequate and proper training, will the quality and the output of heavy electrical equipment improve to desirable standards.

INDO-SOVIET TRADE PACT

Judged by the events of the past few years, it looks as though the U.S.S.R. is bent on stealing a march over the West in expanding its relative share in international trade. The U.S.S.R. has, in the last four or five years, made rapid strides in expanding trade with the non-communist world, particularly with Finland, the U.K., France, W. Germany and India. Indeed, India signed its first trade pact with the U.S.S.R. as early as 2nd December 1953, which has led to a phenomenal rise in the volume of trade between the two countries. Further, the U.S.S.R. has made available to India a credit for about Rs. 63 crores for the installation of the Bhilai steel plant and promised further credit for financing heavy machine-tools industry and the power project at Neively in South India. IRRIGATION AND POWER DEVELOPMENT

MR. NEHRU'S REMARKS SURPRISING

From Our Special Correspondent

NEW DELHI, 18*th November*

THE Planning Commission is setting up Study Groups as the first step in the formulation of the third Plan, and the question of priorities is slowly cropping up. Mr. Nehru who gave the lead in the matter of assigning high priorities to major irrigation and power projects and large industries in the first two Plans, has just stated that small irrigation projects and small industries spread all over the country would be preferable to half a dozen big projects in a few places. The Prime Minister's changed stand, to which he gave expression yesterday at the annual meeting of the Central Board of Irrigation and Power, should have come as a rude shock to the assembled engineers. After having encouraged the engineers and the country to think in terms of gigantic projects, it was indeed surprising that Mr. Nehru should have condemned outright the immense work of the last ten years in these words:

DELHI LETTER

"We are suffering from the disease of *gigantism*—showing off and doing things that way. It is a dangerous outlook. . . . Waterlogging and silting have resulted from construction of big irrigation projects. It is a bad show altogether. Something has gone wrong with our thinking. I do not know what this is due to. But my submission is that the engineers' work is not just confined to building the canals and things of that kind. They must think in terms of social and economic and human consequences. If doing one good work leads to consequences which are harmful, then the original work has not been done properly."

Major Irrigation

There is wisdom in this forthright condemnation, but it is wisdom after the event. Both politicians and engineers were responsible for the emphasis on major irrigation from the beginning. It is, therefore, hardly fair to single out the engineers for criticism and make them the scapegoats. After all, the emphasis on major projects has been more on power generation than on irrigation, and it is unfortunate that Mr. Nehru has forgotten to recognise that the hydro-power part of major projects has, by and large, come to earlier fruition than their irrigation part. That cheap hydro-power could be mostly produced on a large-scale only from major reservoirs, which could also provide water for irrigation, has all along been the guiding principle in this country. As it will be largely impossible to produce otherwise hydro-power on a large-scale in the conditions of this country one wonders if Mr. Nehru's present rethinking would involve greater emphasis on alternative methods of power generation. It looks as though ideas regarding irrigation and power are now thrown into the melting-pot. In his present mood of disappointment over major projects, Mr. Nehru appears to be swinging to the other extreme. Or, perhaps, he expects that a balance will be struck between big and small projects.

Swing in Pendulum

Whatever be the Prime Minister's expectation, Prof. M. S. Thacker at least should have intelligently anticipated the swing in the pendulum in the light of the controversy in the last one year and more, and faced the mounting criticism with reasonably convincing answers. He has, instead, chosen to say in his presidential address to the annual meeting of the Central Board of Irrigation and Power: "The blocking of the natural flow of rivers and streams for creating artificial lakes has brought in its wake several new problems and aggravated some of the known ones. Silting up of impounded water stretches, waterlogging in fields, soil erosion, flood damage, and changes in river course are among them. I do not propose to deal with all these problems in great detail today; but I must emphasise the need for their systematic investigation." By referring to these knotty problems in the way he has done, Prof. Thacker has unwittingly provided further grist to the mill of controversy. It is, again, unfortunate that only recently Mr. Kanwar Sain, Chairman, Central Water and Power Commission, stated that "the full benefits of the projects constructed so far have not yet been realised, as full development of irrigation takes usually 10, even 20 years after the project works have been completed."

Targets

In the circumstances, Prof. Thacker's reference to the target of 87 million acres of irrigated area (including the old and the new areas) by 1961 can only be described as wishful. Again, Prof. Thacker expects a total generating capacity of 15 million kilowatts by 1966, while Mr. Kanwar Sain himself has formerly estimated the maximum demand for power at 7.23 million kilowatts by 1966 and 11.06 million kilowatts by 1971. In this connection, the originally estimated Statewise maximum demand for power may be known from the following table:

State	Total simultaneous or aggregate demand in kw.	
	1965-66	1970-71
Andhra	402,467	595,020
Assam	51,752	77,972
Bengal (West)	1,078,000	1,565,200
Bihar	660,100	1,086,100
Bombay	1,574,230	2,351,474
Jammu and Kashmir	41,838	56,470
Kerala	289,730	457,040
Madhya Pradesh	402,439	407,699
Madras	587,925	766,295
Mysore	543,609	899,198
Orissa	287,100	442,720
Punjab	349,765	383,880
Rajasthan	156,922	269,652
Uttar Pradesh	607,522	1,128,335
Andaman and Nicobar Islands	885	1,173
Delhi	186,900	221,600
Himachal Pradesh	10,965	21,429
Manipur	1,120	1,464
Pondicherry Settlements	18,372	28,831
Tripura	1,320	1,904
Total	7,232,961	11,055,456

Prof. Thacker's view is that "the revision of the target for power generation to 15 million kilowatts by 1966, as against 7 million kilowatts originally planned, illustrates the fact that, in a developing economy, the power demand often exceeds anticipation." It is by no means clear that either projection of demand for power has been made on a sound and reliable basis. It looks as though, in the projection of demand for power at 15 million kilowatts by 1966, there is a larger element of what is eminently desirable than of what is feasible or what might be really needed. It has only to be recalled, in conclusion, that Mr. Kanwar Sain himself has estimated the financial implications of the higher target for power (which, may it be clearly noted, is mostly inseparable from major reservoir projects) as follows:

"Even assuming a modest figure of Rs. 300 for storing and distributing water necessary to irrigate *one* acre of land and distribution of *one* kilowatt of hydro-power, the total amount for providing irrigation facilities for 50 million acres and for generating and distributing 15 million kilowatts of power will mean a capital investment of Rs. 4,500 crores, *exclusive of utilisation cost which will be much more*" (italics mine).

(Concluded from next column)

basis on which the two groups of countries are likely to agree, and the so-called group of eleven countries outside the Common Market are hardly homogeneous. Greece, Turkey, Portugal and Switzerland are hardly integrable countries. Austria might well come into the Common Market later on. This leaves the Scandinavian group, who are closely associated already, and the United Kingdom. Clearly, the Common Market countries feel that strength in negotiation with the United Kingdom is on their side. But, if Britain is to be left alone in Europe, is it too late for her to turn outside and build up again the dismantled sterling area as a vast region where common investment and trade policies are still possible? Those who object that this will antagonise the Americans must then be asked: would they prefer Britain, in the long term, to become an economic American satellite?—*All Rights Reserved.*

NO FREE TRADE AREA

From Our Own Correspondent

LONDON, 15*th November*

THE British Government's attempts to secure a place for itself and the periphery countries of Western Europe in the new Central European economy have failed. The six countries of the Common Market (France, Benelux, West Germany and Italy) are to go on their own way towards economic integration from 1st January 1959 and the countries outside the Common market are to accommodate themselves to it as best they can.

LONDON LETTER

The Common Market countries will all have the same tariffs towards the outside world, and, while this will mean lower tariffs towards each other until all such tariffs are ultimately abolished, it will also mean higher tariffs in some cases for some member-countries to the outside world. Add to this the reduction in production costs within the Common Market as a result of economic integration and the fears of the countries outside these six that their exports will be frozen out can be understood. But this is bound to take time, though there is an immediate danger of higher tariffs. Even more specifically, on 1st January, the six countries of the Common Market will make their first cut of 10 per cent. in the tariffs between themselves, and this will immediately handicap the competition of British exports to the countries concerned.

Two Camps?

There is also, of course, the fear which looms so large in the minds of the British Government that, even if there is no trade war between the Common Market countries and the rest of Europe, the whole concept of the Organisation for European Economic Co-operation will break down as Europe finds itself in two camps.

The Free Trade Area was envisaged as an association of other countries with the Common Market, against which tariffs would not be raised and between the countries of which and the Common Market there would be progressive tariff reduction; the ultimate aim being, as the name implies, to have an area within which trade would be very substantially free. British policy provided the main stumbling block towards the realisation of such a free trade area (although Britain was foremost in demanding such an area), inasmuch as Britain wished to exempt agricultural produce and to retain Commonwealth preferences. But demand for agricultural exemption has since been largely given up. It is not known precisely what this means, but, in the words of Mr. Maudling, the British Minister in charge of the negotiations in Paris, Britain "has moved a great way" in amending her original policy, though the concept of Commonwealth preference has been retained.

Complaint of France

The French now appear to be complaining that the British proposals did not provide for a common external tariff for the whole Free Trade Area. This, however, can only refer to the British insistence on a measure of Commonwealth preference, since, if the whole Free Trade Area had a common tariff, it would virtually be an extension of the Common Market. The French are nevertheless saying that, although they see no purpose in pursuing the idea of a Free Trade Area associated with them on the basis of the present British proposals, they are prepared to go on exploring, but they are not prepared to postpone the entry into force of the Common Market on 1st January next.

The root of the trouble is that, while the United Kingdom Government has thought of the Free Trade Area simply in terms of tariff policy the Common Market countries think in terms of their own complete economic integration which means common investment policies and common social policies designed to achieve a common standard of living. They project this concept into the suggested Free Trade Area; but Britain is not at all ready for this sort of integration, even if it was in her long-term interests to unify herself so completely with Europe.

But Britain could have led the O.E.E.C countries towards a common investment policy. Perhaps, she still could organise such a policy in conjunction with the Common Market, but, if she cannot do this, then there seems to be no

SMALL SAVINGS LAG BEHIND

CUMULATIVE TIME DEPOSIT SCHEME TO BE INTRODUCED

THE fourth meeting of the National Savings Central Advisory Committee which was held at New Delhi on 15th November 1958 has served to focus public attention on the need for making people more savings-conscious and to augment internal resources through small savings at a greater pace than is being done now. The meeting, presided over by Mr. Tika Ram Paliwal, M.P., Chairman of the Committee, reviewed the progress of small savings during the first half of the current financial year and discussed measures to step up the small savings drive in the country.

The progress of small savings during the current year is of some special significance, in that it was only during 1957-58 that the Government took a number of measures to provide additional incentive for investments in small savings. Thus (1) the rates of interest on the various small savings investment were raised with effect from 1st June 1957; (2) the facility of allowing withdrawals by cheques in post office savings banks was introduced; (3) a scheme of gift coupons for presentation on auspicious occasions was also introduced on 1st July 1957, these coupons being made available in convenient denominations of Rs. 5, Rs. 10, Rs. 50, Rs. 100 and Rs. 1,000 and exchangeable for 12-year National Plan Savings Certificates; and (4) the formula for sharing the collections of small savings was further liberalised in favour of the States, so as to induce State Governments to take more interest in the small savings drive. Perhaps, as a result of these measures, the total collections of small savings in 1957-58, according to the Planning Commission's *Reappraisal of the Second Five-year Plan*, amounted to Rs. 69.6 crores, as against an earlier estimate of Rs. 55 crores, and the actual collections of Rs. 59 crores in the first year of the second Plan. "In the first four months of the current year," the Commission added, "the net receipts have not been encouraging, but it is hoped that the collections will improve in the later months." The figures of net collections during the first half of the current financial year (April-September 1958), which are available now, are distinctly better than those for the corresponding period of 1957, having gone up from Rs. 22.03 crores to Rs. 27.81 crores. The State-wise collections during the first half of 1958-59 are:

(In crores of rupees)

State	Amount	State	Amount
Bombay	8.30	U.P.	1.02
W. Bengal	4.88	Madras	0.91
Bihar	2.42	Mysore	0.82
Punjab	1.84	Orissa	0.49
Andhra	1.56	Kerala	0.44
Assam	1.38	Himachal Pradesh ..	0.22
Delhi	1.12	Jammu and Kashmir ..	0.14
Madhya Pradesh	1.10	Tripura	0.07
Rajasthan	1.05	Manipur	0.02

On the basis of the first six months' performance, the total collections for the whole year work out to about Rs. 56 crores. But such reckoning is not correct, for in the subsequent six months better results might be obtained. If one were to study the progress made in 1957-58, one would find that, while in the first six months of that year, the collections aggregated Rs. 22 crores, the total for the whole of that year came to Rs. 69.6 crores. But even assuming that the collections for the whole of the current year come to last year's level or even exceed it by a few crores, it will still leave a large gap to be covered to reach the original target of Rs. 100 crores per annum set in the second Five-year Plan. On the assumption that the 1958-59 collections would come to about Rs. 70 crores (same as in 1957-58), the total for the first three years would work out to less than Rs. 200 crores. This would leave a gap of Rs. 300 crores to be made good in the next two years of the Plan or Rs. 150 crores per annum, that is, more than twice as much as the collections assumed for the current year. While the task of fulfilling this target itself is thus a stupendous one, the Planning Commission has reiterated its earlier suggestion in the latest note submitted to the National Development Council a fortnight ago that, in addition to the original target of Rs. 500 crores, a sum of Rs. 60 crores should be raised by way of loans and small savings (mainly the latter) to cover a part of the shortfall of Rs. 280 crores in the resources for the Plan. The Commission is of the view that there is scope for substantially higher collections than in the first two years of the Plan and the small savings movement has to be organised on a national scale. This suggestion means that at least Rs. 175 crores, if not Rs. 180 crores, per annum will have to be raised through small savings in the last two years of the Plan. Is this a feasible proposition?

The National Savings Central Advisory Committee discussed at its meeting last weekend the various suggestions and recommendations made by the State Advisory Committees and the Central and State Advisory Boards of the Women's Savings Campaign to make small savings more attractive. One of the suggestions considered was that appeals should be made to employers, chambers of commerce and other institutions to encourage the formation of savings groups among their employees. It was decided to simplify the procedure regarding the identity slips and identification of investors at post offices. The Committee also considered the findings of an opinion survey made by the Reserve Bank among postmasters into the causes of decline in savings and suggestions made by them to improve the machinery of collection. Unfortunately, the results of the opinion survey have not been made public.

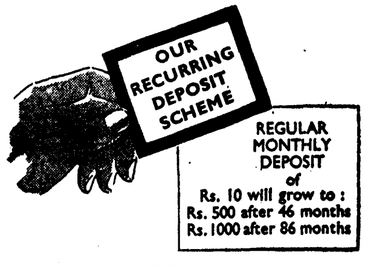
Meanwhile, the National Savings Organisation has decided to introduce a new scheme, known as cumulative time deposit scheme, throughout the country. The scheme is expected to come into force from the beginning of next year. The details of the scheme have not yet been finalised, but the main features of it are stated to be as follows:

A monthly deposit of Rs. 5, 10, 20, 50, 100 or 200 at a post office for a period of five years or 10 years will secure "a substantial return" at the end of the period. For instance, on a monthly deposit of Rs. 20 a depositor will get back Rs. 1,300 after five years or Rs. 2,900 after 10 years and proportionate sums for other monthly deposits. The interest part of the amount to the credit of the depositor, which will be returned at the end of the scheme, will be free of income-tax.

Regular deposits can be made at any time during a calendar month. The nearest post office with a savings bank will issue a pass book and deposits will be accepted even without the production of the pass book. Any adult or two adults jointly and a guardian on behalf of a minor can open an account and the limits are Rs. 100 per month singly or Rs. 200 per month jointly in a ten-year deposit account or Rs. 200 per month singly or Rs. 400 per month jointly in a five-year deposit account. The legal heirs or survivors can continue the account to maturity or discontinue further deposits and get a proportionate amount on maturity or take an immediate cash value at specified rates. It is pointed out that those in trade or business or in service without the benefit of provident fund can make this deposit scheme serve the purpose of a provident fund.

The double benefit of the scheme is, it is pointed out, that while savings under this scheme assist the depositor in planning for specific needs arising in the future, the country would also benefit by it and the money would go to finance the Five-year Plans of the Government.

A feature of the scheme is that withdrawals of sums in multiples of Rs. 10 subject to a limit of 50 per cent. of the deposits are allowed once in the case of a five-year account and twice in the case of a ten-year account after the account has been in operation at least for one-year. The amount withdrawn with compound interest thereon at 6 per cent. per annum will be deducted from the amount payable under the account.



I.F.C. TO ISSUE BONDS

Addressing the tenth annual general meeting of the Industrial Finance Corporation of India held on 27th September last, Mr. K. R. K. Menon, Chairman of the Corporation, indicated that "we intend to try and raise loans from the open market this year also, as we did last year." The Corporation has now announced its decision to enter the capital market next week for a four-crore loan. The loan, the subscription list for which will open on the 24th inst. and close on the 29th or earlier, will be in the form of bonds with a maturity of 10 years and will carry interest at 4½ per cent. per annum. The issue price will be Rs. 99 per cent.

The I.F.C. bonds are guaranteed by the Central Government in regard to repayment of capital and payment of interest and are also approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. They are eligible securities, as well, for the purposes of advances to Scheduled banks by the Reserve Bank of India under section 17(4) (a) of the Reserve Bank of India Act. The Corporation will shortly be making applications to the stock exchanges for permission to deal in, and for official quotation for, these bonds. This will doubtless provide greater negotiability for these bonds.

The timing of the issue may appear somewhat belated, in that a substantial portion of the floating funds in the money market has been absorbed during the last three months by the Government of India. Nevertheless, the issue can be expected to be taken up. For, after a temporary pull due to *Diwali* demand, the money market has again turned comfortable. Further, certain institutional investors have agreed in advance to subscribe to a substantial extent and the Corporation expects the general public, too, to contribute liberally to its new issue.

The I.F.C. has already issued two series of bonds for an aggregate sum of Rs. 12.37 crores, of which the last issue (10-year bonds) was made in November 1957 for Rs. 4.56 crores and the earlier one was in 1949 for Rs. 7.81 crores (carrying interest at 3½ per cent. and maturing in 1964). It will be interesting to note that last year's issue was intended to raise Rs. 4 crores, but the Corporation actually took up Rs. 4.56 crores. While the 1957 issue was privately placed and was kept on tap, the latest one is open for public subscription by individual investors, but will be kept open only for six days or even less if the issue is fully subscribed. Whereas the rate of interest on this year's bonds has been reduced by ½ per cent. to 4½ per cent., the issue price is unchanged at Rs. 99 per cent., at which rate the current yield on them works out to 4.29 per cent. and the redemption yield to 4.38 per cent., as against 4.55 per cent. and 4.63 per cent. on last year's bonds at the time of issue. The reduction in the rate of interest is evidently due to the change in the money market conditions in favour of the borrower during the last one year and the good demand for these bonds by institutional investors, trusts, provident funds, etc. For instance, the 4½ per cent. bonds of the Corporation are said to be in keen demand, so much so that they are not available even at the par value of Rs. 1,000 (which is, however, a nominal quotation in the absence of any business).

The new issue is intended to augment the Corporation's resources to meet the growing volume of demand for accommodation. It has so far sanctioned loans exceeding Rs. 63 crores. The disbursement of loans is also proceeding at a rapid pace, the amount disbursed during the last two years alone being of the order of Rs. 18 crores. The financial results of the Corporation have been encouraging, inasmuch as it has been paying the guaranteed dividend of 2½ per cent. on its shares out of its own profits during the last two years and has not relied on the Government subvention. What is more, it was able to return out of the 1957-58 profit, a sum of Rs. 5.45 lakhs to the Government towards the subvention drawn for payment of dividend during the earlier years.

LIFE INSURANCE INVESTMENT POLICY

A CRITICISM AND A POSSIBLE ALTERNATIVE

By P. V. Krishnamurthy

WE have it on good authority that the Government nowadays is in the hands of some tired and uninspired people, following the line of least resistance. There could be no better proof of that statement than the so-called new investment policy of the Life Insurance Corporation. Far from being anything like a new policy, it seems to be just a new resolution to be law-abiding on the part of our satanic civilians who have made a mess of Indian insurance, and their actuarial courtiers, who have been accustomed till now to enjoy being lawless for the benefit of their business friends, covering it up with indiscriminate use of such fine words as "being practical," "flexible," and so on.

We are also told that Section 27A of the Insurance Act, which the authorities have once again decided to abide by, subject to minor modifications, is something which has stood the test of time, both as regards freedom given, and the restrictions imposed. What test? What time? This section came into force only at the end of 1950, while nationalisation burst in in 1956, and the returns of the working of the section were not then available or scrutinised even for full five years. If the "test of time" was established in such a short period, one may well ask, where was the need for nationalisation, precipitated as it was by the Bharat Insurance Company scandal? Another "test of time" was the Mundhra scandal, when the Corporation claimed to be observing Section 27A *de facto*.

Or, is it after all the authorities' way of confessing that, while the section itself was not so bad at all, it was its administration that was so weak as to lead to the above events, as indeed it was alleged by some business interests, who first promoted the weakness of the administration by their wire-pulling in influential places, and then began to cry about it when the nemesis of nationalisation came. People, who talk now of what happens when the king starts trading, might remember how it is often the result of the traders themselves playing king-makers and law-breakers in their own various clever ways of private enterprise.

No Greater Protection

Be that as it may, it is obvious that the so-called new policy is no guarantee whatever that it will not lead to a repetition of the scandals which have provoked its birth. The condition of Section 27A, permitting investment in ordinary shares of a company, if it has paid 4 per cent. dividend over five out of the last seven years, could be satisfied by many a company, as the British India Corporation did at some point of its existence, even when the investment would be unsound on other grounds. What guarantee is there that such unsound investment will not continue, especially when "experienced" actuaries forget, under the pressure of their civilian or business patrons, the first text-book maxim of looking to the type of people behind the transaction? The Controller will not be able to go beyond the conditions of Section 27A, nor imagine all that the returns to him hide.

So, while the new policy offers no greater protection than hitherto to the policyholder, it has not even the merit of fulfilling the primary object of nationalisation. It was Mr. C. D. Deshmukh who said, in his famous broadcast announcing, Nasser-like (and contrary to the Prime Minister's protestation at that time that our ways are different from Nasser's), the following as the first reason for nationalisation:

"The Planning Commission drew attention to the necessity of fitting increasingly into the scheme of development visualised for the economy as a whole the banking system and in fact the whole mechanism of finance, including insurance, the stock exchanges and other institutions connected with investment. For, it is only thus they said, that the process of mobilising savings and utilising them to the best advantage becomes socially purposive. Principally, with a view to ensuring the spread of banking and credit facilities to the rural areas, the Imperial Bank of India was nationalised last year. *The nationalisation of life insurance is a further step in the direction of more effective mobilisation of the people's savings.* It is a truism which cannot too often be repeated, that a nation's savings are the prime mover of its economic development. With a second Plan in the offing, involving an accelerated rate of investment and development, the widening and deepening of all possible channels of public savings has become more than ever necessary. Of this process, the nationalisation of insurance is a vital part."

Again, Mr. Deshmukh went on to say:

"On the one hand, there has been a very general demand for the nationalisation of the entire insurance industry. On the other hand, the chairman of a large number of insurance companies have set out *in extenso* all the arguments that could possibly be adduced against nationalisation, and have endeavoured to show that insurance of every form can flourish best only under private enterprise and with the stimulus of competition. It is obvious that, in a short talk such as this, I cannot enter upon a discussion of these arguments and to explain why they have failed to satisfy us, and why we have, in spite of them, come to the conclusion that nationalisation of life insurance is *essential for the implementation of our Plan* and, therefore, required in the public interest." (Italics mine).

Be Plan-conscious

It is obvious from the above policy declaration that the new investment policy is to be judged by the extent to which it helps the implementation of the Plan, and not merely by the fact that Section 27A is so belatedly made applicable to the Corporation, as required by the Life Insurance Corporation Act. It is, indeed, unfortunate that Mr. Deshmukh, in his hurry over the Bombay issue, which perhaps had something to do with his sudden somersault over the nationalisation issue, since the days of his stewardship of the Reserve Bank, failed to see to what extent this high objective as set out in his declaration above was left unimplemented by the provisions of the L.I.C. Act. He had obviously no time whatever to think out how best to ensure that the life insurance funds will be available for the implementation of the Plan, for which they were considered vital, and that the mere application of Section 27A would hardly achieve that object.

Not only that, he also forgot his own learning from other countries that "wherever there has been a wholehearted attempt by the State, nationalisation has been an unqualified success .... failures, wherever they occurred, have been due to the half-hearted manner in which the experiments were tried." Apparently, events so far do not show that the implicit *sine qua non* of the wholehearted attempt has yet come to be made, judged especially by his own acceptance of an insurance potential of Rs. 8,000 crores to be achieved in about 10 years or so. (Not that this Rs. 8,000 crores stands scrutiny in the light of the implications of the great maldistribution of incomes in this country; and if it did, there is no reason why it should not go up to Rs. 10,000 crores, since we have 10 crores of earners from whom we are to expect the average sum insured of Rs. 1,000 per policy.) In any case, the first test of the success of nationalisation is how much it achieves the first object of helping the implementation of the Plan.

Remembering, therefore, this need to be a little Plan-conscious in thinking about what the correct investment policy should be, one becomes rather curious that there should be so much talk at all about a separate policy for the investment of Life Insurance funds. After all, what is the Plan itself but an investment policy for all the available internal and external resources, both in the public and the private sectors? Life Insurance funds are just one item of the internal resources, just like budget surpluses, borrowings, small savings, etc. Do we have a separate investment policy for each of these? Or is it contended that Life Insurance funds are something surplus to our internal resources which can be used for non-Plan investments? If so, the very bottom of Mr. Deshmukh's case for nationalisation is knocked out!

Birla Delegation

This isolation of Life Insurance funds from the direct needs of the Plan becomes rather ridiculous at a time when one hears so much on all sides, the latest being from the Reserve Bank in its recent report and also the Planning Commission, about the shortage of internal finance for the Plan. Last year, the Birla delegation on its return from America, made a big point of the shortage of internal finance for the private sector, and argued that, if only they could be sure of internal finance, they had no difficulty in getting all the foreign exchange they needed from their friends abroad. Why then use the internal finance available in the shape of Life Insurance funds for chasing the stock exchange, instead of using it all for new schemes of investment that fit into the Plan, both in the public and the private sectors, in the proportions allotted to each?

This does not necessarily mean that the interests of the policyholders should suffer in any way, at least not in comparison with the present policy. It is surprising that the Government have not yet thought of a machinery by which they could ensure the direct use of Life Insurance funds in the implementation of the Plan, without endangering the interests of the policyholders. If they had no other idea than to apply Section 27A as they have done now, it is really a case of much ado about nothing, a great fall from the sublime of Mr. Deshmukh's speech, to the ridiculous of the present policy.

It will no doubt be claimed that the purchase of investments on the stock exchanges is as good as helping the private sector for the internal finance it needs. What really happens is that the nationalised Corporation collects the savings of the people in the name of the development of the country and, instead of using the savings directly for development in terms of the Plan, it is handed over on the stock exchanges to a lot of de-savers in the remote hope that these de-savers would care for the Plan much more than the Government itself does. Nothing is impossible, but, if Government could trust private de-savers to finance the Plan this way, why not let them collect the savings too in the first stage? It can only follow on this basis that Government or their advisers are no longer enthusiastic about nationalisation, at least in the sense of its being essential for the Plan, as enunciated by Mr. Deshmukh. But they have not yet said so.

Other Savings

Life insurance funds are no doubt sacred in the interests of policyholders, but they are no more sacred than the provident funds of employees, or the small savings collected by Government. If those funds can be used directly for the Plan purposes in the public sector, why can we not devise a machinery even for Life Insurance funds, for their direct utilisation in both the public and the private sectors? To the extent these funds are invested in Government securities, this is already achieved in respect of the public sector, and all that remains is to think of a proper machinery for the private sector, without having to go through the stock exchange, which serves a different purpose altogether.

If the L.I.C. is going to reach its full potential of Rs. 8,000 or Rs. 10,000 crores as the case may be, or even half of those sums, which may be considered more realistic, remembering the implications of the great maldistribution of incomes in this country, it will not be long before life insurance development will clash with small savings development, and the two will have to be co-ordinated on a complementary basis, under a single agency, unless we are to have the same old story of wasteful competition once again. As it is, the Corporation still seems to be confining its attention to the relatively richer classes, since, despite the beginning made about *Janata* policies, the average sum insured per policy, as stated recently by its Chairman, has gone up from about Rs. 3,100 to Rs. 3,500. The test of its reaching the poor more than the rich is when the average sum insured per policy goes down towards Rs. 1,000.

This means, then, that, so long as the present state of affairs lasts, the life insurance savings of these relatively richer classes are to be dealt with differently as compared with provident fund accounts and small savings, so that the latter are to bear all the sacrifices for the Plan while Life Insurance funds are to be used to chase the stock exchange for getting a greater return for these rich men's savings. If, in future, Life Insurance development and small savings development become more and more co-extensive over the same section of the population, this question of treating the Life Insurance funds differently is bound to lead to anomalies, to the detriment of either or both. This obvious discrimination in favour of the relatively rich will not be tolerated. So it seems necessary from every point of view to think of a different investment policy for Life Insurance funds which would better achieve the object of nationalisation, without prejudicing the interests of policyholders. Probably, the same policy can also be applied for the employees' provident funds and small savings, so that those too can have the benefit of a higher yield, just like Life Insurance funds, in return for the common contribution they all make to the Plan.

The purpose of stabilising exchanges is to be ruled out altogether as a primary object, according to all shades of opinion now. Nobody

knows that stock exchanges will collapse or be unworkable if the Life Insurance Corporation did not operate regularly on the stock exchange. As for emergencies, it is the responsibility of not the Corporation, but of the Government towards not only the Coporation but all private investors, particularly the small ones, to keep the stock exchanges stabilised to the extent necessary for the economy, as a part of the overall regulation of investment institutions referred to by Dr. Deshmukh. Government could use for this purpose, whenever it is wise to do so, all the funds at its disposal and not merely Life Insurance funds, at the expense of the Corporation, especially when the lack of stability is the result of Government's own policy. This is not a suggestion for Government speculating on the stock exchange, but for discriminate support, as and when necessary, for particular scrips, in the same way it is done for Government securities, but all this is outside the field of the Life Insurance Corporation.

As already stated, to the extent Life Insurance funds are invested in Government securities, they are available for the Plan directly in return for a guaranteed yield over a number of years. Alternatively, in the Postal Life Insurance Fund, and till recently in some of the State Life Insurance funds, Government used to take over the investible balances from time to time in return for a guaranteed yield. Recently, the Corporation has arranged for the balances with State Governments to be exchanged into terminable securities over a number of years, no doubt for good reasons.

Alternative Outlined

It seems to the writer that the best way to utilise these funds in the private sector also would be to follow a method similar to the above arrangement. Government could form a fund, called the Private Sector Finance Fund, to which all sums available for the private sector from Life Insurance funds could be taken over in return for a guaranteed yield over a certain number of years, the yield being reviewed, once again, at the end of the term. The guaranteed yield will naturally have to be higher than the yield on Government securities, more in line with the current yield at the time of taking over the funds, on first class debentures, preference shares and ordinary shares, the yields of which are periodically calculated by the Reserve Bank. A weighted average of these yields with x% for debentures, y% for preference shares, z% for ordinary shares could be calculated periodically, and the weighted average yield should be guaranteed to the Corporation, according to the yield prevailing in the month or quarter in which the funds are taken over.

This idea of guaranteeing a yield to the Corporation allotted to and taken over for the Private Sector Fund introduces no new revolutionary principle requiring much clarification or justification. For 50 per cent. of the funds taken over for the public sector, this is already being done.

Actually, the percentage of new funds taken over for the private sector may, in fact, be more than 50 per cent. for a number of years to come, if the 50 per cent. condition for investment in Government (or approved) securities applies only to the total (not new) investments of the Corporation. Section 27A lends itself to this interpretation. In the total investments of the Corporation, the share of Government or semi-Government securities is now much more than 50 per cent., near 70 per cent., so that all new investments may be in the private sector, till the share of Government securities in the total comes down to 50 per cent. However, it is assumed that this is not intended, as Government is not likely to allow its borrowings to suffer to this extent.

Again, the principle of a guaranteed yield is implicit in the Government's guarantee of the sum insured, the yield here being the one assumed in the construction of premiums. So, going a step further, and guaranteeing a reasonable yield in respect of the funds taken over for the private sector also, should not shock the mind, especially if it is essential for implementing the primary object of nationalisation.

Need for Scrutiny

As these funds are taken over to the Private Sector Fund, Government could invite the private sector to submit all its schemes for investment in terms of the Plan for necessary scrutiny and sanction to them all the internal finance they require. Even today, schemes of the private sector come up for some scrutiny, under the Control of Capital Issues, and the Industrial Development and Regulation Act, but these scrutinies are non-committal on the part of the Government in many ways. This new scrutiny for the purpose of providing the internal finance required by the private sector, will have to be thorough, and similar to the scrutiny, to which the schemes of the public and the private sectors are submitted, by the foreign lenders, e.g., the World Bank.

It is possible that the private sector will not readily take to this idea on the plea that it does not want more Government, scrutiny, and possibly indirect control (though heaven knows that there is so little scrutiny in this country, as compared with the U.S.A. standards, even in the initial step of committing private enterprise to its pretentions in the shape of detailed, true, and punctual returns), as the provider of internal finance. Well, it is for the private sector to make the choice. If its story is true that it could do a lot more but for the lack of internal finance, it should rather jump for this idea, instead of objecting to it. The fear of indirect Government control is no more here than under the present policy under which the Corporation can take up 30 per cent. of the shares of any one company, and the Government may authorise it to take up even more.

No doubt the private sector would prefer its shareholders to be a scattered and helpless lot, whom, in the best cases, it treats like a pocket-borough, which is to play its role as a rubber stamp of the men in power in return for some dividend, if even that, irrespective of how the business is being conducted. But whether, in preference for such a scattered body of shareholders, the private sector would rather go without the requisite internal finance than get it through Government and go ahead with its own schemes with confidence in their merit, is for it to consider. At least, it can no longer say it could do this or that but for the lack of internal finance.

Separate Account

It will be for the Government to keep an account of all guaranteed payments of interest to the Corporation on behalf of the private sector, including in this context its own private limited companies, and credit to the same account the dividends received at a later stage from the various companies which it finances from the Private Sector Fund. This account will no doubt be in the red to start with, but, after a number of years, as the investment schemes financed by these funds begin to yield dividends, it must turn into the black within a decade or two. To doubt this is to doubt the Plan itself, or the quality of the scrutiny of the schemes before they are financed, or their sound working later under the management of the private sector, and the supervision of Government. Ultimately, everything depends on the character of the people. As and when the guarantee account gets into the black, there will be an opportunity for reconsideration as to whether the investment in the established industries should remain with the Government, through the Private Sector Fund, or how else they should be disposed of, and what variations should be made in the return guaranteed to the L.I.C.

The proposal thus far ensures that life policyholders will share in the rising prosperity of the country though they can no longer hope to have any profits of short-term speculation, or of taking advantage of opportunities to stabilise the market, etc., just as they will be spared the losses inherent in such operations. If they do not get anything more than their legitimate share of the rising general prosperity of the country, it is not the fault of this investment policy, but the inevitable result of the nationalisation policy for the benefit of the Plan. It may be that a few companies under private enterprise could do a little better at the expense of the rest of the country, but it is the very object of nationalisation and the socialistic pattern we are committed to, to prevent a few benefiting at the expense of many. What matters is that the yield to the life policyholders on this basis would not be any less than the overall yield of all life insurance companies for the whole country under a rigorously enforced Section 27A. Or again, the return to the policyholders will not be any less than the overall yield obtained by policyholders in other advanced countries like the U.S.A., the U.K., Canada, Australia, etc., under the 'free' investment policy pursued by life insurers of those countries. Even in the U.S.A., permission to invest in ordinary shares is only of recent origin, and it is utilised by companies only to a small extent. Debentures and preference shares predominate there. Anyway, the main question to be remembered from the policyholder's point of view in all such comparisons is not the percentage of investments in various categories but the overall average yield which the policyholders of that country get. On this test, policyholders will have nothing to complain of, by following the alternative suggested.

Business Principles

The question still remains whether this will ensure the maximum profits due to the policyholders in terms of the "business principles" which the Corporation is expected to follow. In the first place, the subjection of the Corporation to the conflicting requirements of (*a*) the needs of the community, (*b*) business principles, and (*c*) the interests of policyholders is itself rather questionable. The first two are also vague and liable to various interpretations.

The question of overall interest in the community is really a matter for Government, and it should be the Government's business to give directives to the Corporation whenever it wants to do something for the good of the community overriding the policyholder's interests.

As regards business principles, it is taken to be the same as maximisation of earnings, but one would think it no part of nationalisation to maximise earnings somehow as private enterprisers profess to do. This is really a poor view of business principles which are nowhere defined exactly. The correct approach to these business principles could be found in the address delivered by Mr. Henry R. Luce, Editor of *Fortune*, to an international association of business men, which was published in the August 1957 issue of *Fortune*, under the heading "The Character of the Businessman." He referred to the unflattering meanings attached to the words 'business' and 'businessman,' and emphasised the need for truth-telling—downright rugged truth-telling. He also pleaded recognition for the fact that every aspect of business had an element of public interest in it, wherefore all business transactions should be capable of standing, and stand public scrutiny.

Business men in this country, at least insurance ones, even the best of them, need this advice no less than those whom Mr. Luce addressed, and if business principles are understood in this sense, it would be something different than merely maximising earnings. Probably a better requirement in place of the vague and discredited business principles would be to insist on an actuarial soundness, remembering, and if necessary clarifying that actuarial soundness includes equity to the individual policyholder, and economy of management, with justice to the staff.

As it stands, business principles, alias maximisation of earnings, could in practice be very inconsistent with the objects of nationalisation and the socialist pattern. As a matter of fact, the writer knows how a member of the Forum of Free Enterprise suggested that the *Fortune* article be published as a Forum pamphlet, as a break from the stereotyped criticisms of Government, with a cleverer-than-thou attitude, as if all wrong was on one side only. Some introspection, some turning of the searchlight towards yourself, would do good sometimes and create the necessary balance. But the Director of the Forum dared not hold this mirror to his face. When that is the attitude of business men to business principles, the Corporation could also catch the infection.

Actually, it does not yet seem to have shaken off its inheritance in this respect, judged by the poor and belated information given out, about its operations. Why can it not take a leaf out of the book of the Reserve Bank and the Scheduled banks, by giving out comprehensive information regularly on a weekly or monthly time-table, instead of compelling the public to wait on some stray speeches or question in Parliament?

Craze for Bonuses

Coming again to the question of policyholders' interests, the only answer to any remaining cry that policyholders' bonuses will suffer by utilising the life funds for the benefit of the Plan, even with a guaranteed higher yield commensurate with those yielded by debentures, preference and ordinary shares, is to ask the counter-question as to what is the proper place of these so-called profits in life insurance. It is a negation of the principle of insurance to give an exaggerated importance to these profits. As a matter of fact, insurers themselves used to argue, in the past, while asking for tax-concessions, and Government have conceded it, that these profits are no profits at all, but only a return of the excess premiums paid by the so-called with-profit policyholders as a cushion against unforeseen contingencies. How such tax concessions, asked for and given in the name of small-policyholders, were utilised not wholly for them, but for benefiting the big-policyholders also, without the clever civilian ridden-Government, in unholy alliance with business men, lifting a finger for the small man, is a separate story by itself.

The bonus craze was something introduced by the private sector for its own purposes, giving a secondary place to the main object of insurance, as indeed the leaders of the private sector themselves used to say with all flourish when they were deploring the bonus competition years ago. Its spokesmen cannot forget it now, just because they would like the Corporation to continue work on the old system in the name of business principles.

The problem should be faced, therefore, that there is no warrant whatever in the nationalised set-up for continuing the myth of the with-profit policy which is really just a higher premium policy for the privilege of participation in profits. But, in the nationalised set-up, where all policies are guaranteed by the Government in respect of the sum insured, why should any policyholder pay a higher premium merely for the privilege of participation in profits? In principle, all new policies should be issued at the current non-profit rates and all policies should participate in profits, according to their respective contribution to the same. Distribution of profits on the Contribution Method has been in vogue for a long period in the U.S. and Canada, and there is no reason why we in India should remain wedded to the British reversionary bonus system, and habituated to that, or otherwise, maintain this fiction of with-profit policies, even while it is no longer necessary. No doubt with-profit policies continue in the U.S. and Canada, but they have no nationalised insurance there.

It would be useful to recall, in this connection, how these with-profit policies arose in the beginning of life insurance under private enterprise. Shareholders' funds were small, life insurance funds were growing fast, and fluctuations in the fortunes of life insurance funds in respect of mortality interest or expenses were too big proportionately to be borne by the shareholders. So the device is invented by which life-policyholders were charged an extra premium called the bonus loading, without any definite corresponding liability attaching to the insurer, but, instead, a right to participate in the profits was conceded to the policyholder. Policyholders thus came to bear themselves the burden of the fluctuations in the management experience, and things outside management control, and got back in the shape of bonuses whatever remained at the end of certain periods, according to the quality of the management. Shareholders, though they bore very little risk, continued to reap fat dividends at the cost of the growing life insurance funds at a rate unheard of in any other risk enterprise, commensurate with the risk taken, as was evidenced ultimately by the huge dividends and compensations given, e.g., in the case of the Oriental. Just another case of so few benefiting so much at the expense of so many for so little, and how!

Anyway, all that is now a story of the past, and what matters now is that, with Government guarantee of the sum insured, there is no justification whatever for maintaining the fiction of the present with-profit policies, and then for their sake have an investment policy which does not serve the primary object of nationalisation.

Existing With-profit Policies

If this idea of abolishing the present type of with-profit policy is accepted, it would call for a consequential measure in respect of the existing with-profit policies issued in the past. A once-for-all solution would be to increase the sum insured of the existing with-profit policies in proportion to the difference between the with-profit premiums they pay now, and the corresponding non-profit rates for the remaining term of the policy as at the last valuation. This is an actuarial problem that is easily solved. Where there is no definite term for the policy, as for the relatively small number of the whole-life policies, a notional term can be found which does adequate justice to those policyholders. The main thing is to see that all these policyholders get a once-for-all increase in the sum insured, commensurate with the excess premiums they are paying, after allowing for the bonuses already declared on the policies.

With the current with-profit policies adjusted as above, the present distinction between with-profit and non-profit policies will be abolished, and all new policies will be issued at the current non-profit rates, and all these policies, old and new, will be eligible to participate in the genuine profits that arise in future by way of improvement in mortality, savings in expense, and an interest yield higher than that assumed in the constructions of premiums.

Government could claim as a guarantor of the sum insured that the right to participate in profits should be abolished altogether, and all profits should go to the taxpayer in return for the guarantee given by him. But whether Government would care to go to this length is a matter for itself to decide. Since policyholders have no voice in the construction of premiums at all, or in the management, it is but right that they should continue to share in the real profits that arise after the elimination of the artificial profits, consisting purely of the excess premiums (called the bonus loading) charged on the present with-profit policies. Competition in private enterprise at least brought the premiums down and Government guarantee is the price paid for the elimination of competition.

Once the profit policies are rationalised as above, the cry of maximising earnings for the sake of profits also loses its force. Policyholders should be content with having their sums insured, guaranteed and getting their legitimate share in the rising prosperity of the country, just like all other savers—including those relatively poorer than themselves, all contributing to the development of the country in terms of the Plan.

The object of this article would be served if it stimulates thinking on how to make Life Insurance funds directly available to meet the

COTTON CLOTH IMPORTS INTO U.K.

LATEST ON "CEILING" REVIEWED

IT looks as though the protracted negotiations held by Lancashire millowners with the textile interests of India, Pakistan and Hong Kong on the question of duty-free exports of textiles from these countries to Britain have almost resulted in agreements. While the cloud of secrecy continues to hang on the exact details of the agreements, the scattered Press reports from Hong Kong and Lancashire aver that all the three Asian countries mentioned above have not only accepted the principle of voluntary limitation on textile exports to Britain but also agreed on the maximum quantum of goods that could be exported to the U.K. Thus, the annual ceilings on exports agreed to by India and Pakistan are said to be 140 million square yards and 35 million square yards, respectively; the ceilings cover made-up goods, as well as grey and finished cloth, retained for consumption in Britain, but excludes yarn. The corresponding figure proposed by Hong Kong is 150-160 million square yards (including made-up goods) in the first year of the agreement, 165-175 million square yards in the second year and 175-185 million square yards in the third year. As against this proposal of Hong Kong, Lancashire is said to have put forward a counter-proposal envisaging a flat rate for the three-year period rather than progressively rising ceilings. The final outcome of this offer is still kept as a secret.

The following table compares the proposed ceilings on exports of textiles from India, Pakistan and Hong Kong with the actual imports into Britain during the last three years:

(In million square yards)

	Grey cloth	Finished cloth	Made-up goods	Total
India—				
1956	85	5	8	98
1957	128	3	8	139
1958*	82	7	5	94
Ceiling	..	..	..	140
Hong Kong—				
1956	47	2	35	84
1957	60	4	38	102
1958*	87	3	46	137
Ceiling—				
1st year	..	..	..	150-160
2nd year	..	..	..	165-175
3rd year	..	..	..	175-185
Pakistan—				
1956	6	..	..	6
1957	6	..	..	6
1958*‡	1	..	..	1
Ceiling	..	..	..	35

* First nine months at annual rate.

SOURCE:—*The Economist*, London.

The above figures show that the proposed ceilings for exports of cotton cloth from Hong Kong and Pakistan to Britain are well above the actual exports during the year 1957, while, in the case of Indian exports, the ceiling is higher by just one million square yards. It is true that the ceiling proposed by Hong Kong, described as "expansionist" and not restrictive, has not been finally accepted by Lancashire millowners; as already stated, these millowners have made a counter-proposal envisaging a flat ceiling for the three-year period. But there are indications that this flat ceiling will be "a generous one," being close to Hong Kong's offer. If such indications were to prove correct, would the Indian millowners come out with a plea for a corresponding upward revision in the ceiling on their exports?

Ceiling Not Justified

Viewing the issue as a whole, however, this journal is opposed to enforcement of any limitation on cotton goods exports from India to Britain, and indeed, to any industrially advanced country. That there is no justification for imposing such restrictions on the poor countries in Asia has been clearly recognised by the leaders of the Western world. The solution sought to be enforced is in the interest of neither the Asian countries nor Lancashire. It will only buttress the uneconomic and inefficient manufacturers in both the exporting and importing countries. Many commentators in Britain itself admit that a mere limitation on imports of textiles into their country will not solve the difficulties of Lancashire mills. For the difficulties are of a fundamental nature. To quote the London *Economist*:

"Despite all the contraction of the industry in recent years, too many obsolete mills remain in operation, and too few thoroughly modern mills are working two shifts (in spinning) or three shifts (in weaving). . . . In any case, too much attention could be paid to the theoretically right size for the industry and to optimum mechanical efficiency. Salesmanship, design and styling, and imaginative exploitation of the new fibres and blended fibres are equally important. In spite of the excellent examples set by some firms—recently recognised by the awards won at the International Fabric Exposition in California—not all Lancashire is proficient in these qualities, nor are all the mechanically efficient mills. Contraction of the cotton industry is bound to continue, and Lancashire's job is to ensure that, with a smaller industry, it makes better cottons at lower cost than its comparable competitors."

This is certainly a correct assessment of the problem. If Lancashire succeeds in eliminating imports of cotton goods into the U.K. through the sheer weight of its efficiency, none can complain about it. Further, it will provide an object lesson to the cotton mill industry and the Government of India both of which vie with each other in placing a premium on uneconomic means of production under varying and various pretexts.

Ceiling for Hong Kong

Be that as it may, the Hong Kong Textile Committee—this consists of the leaders of the industry—has reluctantly accepted in principle the voluntary ceiling on exports to Britain as proposed by the Cotton Board. At its meeting held in Hong Kong on the 7th inst., the Committee decided to ask the Hong Kong Government to ratify and administer any voluntary agreement with the British Cotton Board for the limitation of the Colony's textile exports to Britain. It also decided to seek an assurance that, if the Lancashire quota proposal were accepted, Britain would not use this as a precedent for seeking limitations on other products. This is undoubtedly a wise step on the part of the Committee, for there is justification for seeking such assurance from Britain. Let it not be forgotten that the move made by the cotton mills in Lancashire is not the first of its kind in Britain. The jute mills in Dundee have long been enjoying similar protection against imports from Commonwealth countries. Did the millowners in India seek any such assurance from Britain, before agreeing to accept a ceiling on the exports of their manufactures to that country? We wonder. The thoughtfulness of Hong Kong millowners is commendable.

The Hong Kong Government has since given its approval to the proposal of the Committee to administer an export ceiling pact with Lancashire. The spinning and weaving sections are now discussing separately the problems on how such a ceiling would operate and how to distribute it fairly among the manufacturers. In particular, those who have been using imported Pakistan yarn over many years, it is said, want clarification. Further discussions of the Committee were held on Tuesday this week, but their outcome is not known at the time of writing.

Meanwhile, on the question of certifying the origin of textile exports, the Hong Kong Government is said to be doing "its level best" to apply strict rules of audit check. According to a member of the British Parliamentary delegation which is studying the Hong Kong industry, the problem is to ensure 100 per cent. adherence with a congested area, a long coastline, a roving population and varying standards of business morality.

The Government of India has accepted the Tariff Commission's main recommendation to discontinue protection granted to the artificial silk and cotton and artificial silk mixed fabrics industry with effect from 1st January 1959. The Government has taken note of the Commission's other recommendation that the Textile Commissioner, while taking appropriate steps to bring all powerlooms in legitimate operation to his register, should discourage the installation of discarded looms, and suitable steps, we are told, will be taken to implement it as far as possible.

(Concluded from next column)

or less unanimous that the Board did not enjoy the confidence of the trade and was incapable of bringing about any improvement in the affairs of the Association. Consequently, the Board of the Association was superseded by a Government-nominated Board for a period of four months. Later, a new Board was elected which devised ways and means of resuscitating the Association at the end of the year. Several amendments to the by-laws of the Association were suggested by the Board, with a view to providing better facilities for trading.

FUTURES TRADING IN COTTON

F.M.C.'S REVIEW

THE section on regulation of cotton markets contained in the Annual Report of the Forward Markets Commission for the year 1957 gives a review of the trend of the markets during the year, the various steps taken by the Commission to regulate trading in the commodity in Bombay, Ujjain and Indore and a vigorous defence of these measures. It also refers to the deterioration in the affairs of the Central India Cotton Association, Indore, the reasons thereof and how the Commission dealt with the situation. Of particular interest is the reference in the report to the measures taken to improve the representative character of the East India Cotton Association, Bombay. It is common knowledge that, since the responsibility for continuous regulation of the trade lies primarily on the governing bodies of recognised associations, it is essential to ensure the representative character of the bodies by earmarking seats on them for different panels and by providing panel-wise election to such seats. When the East India Cotton Association was recognised under the Forward Contracts (Regulation) Act in June 1955, the Commission permitted the existing system of grouping members and the manner of election to the Board to continue for the time being, pending a closer examination of its working.

Despite the nominal existence of the panel system at the Association, the interests concerned with the actual handling of the commodity continued to have a feeling that they did not get adequate representation on the Board of Directors, because of the numerical preponderance of brokers who numbered more than 400 out of the total membership of about 740 and who exerted undue influence in the election of representatives from other panels as well, thanks to the system of general franchise in practice by the Association. The Commission had received several complaints about the working of the panel system. The Forward Contracts (Regulation) Act was amended empowering the recognised associations to make suitable provisions in their rules for panel-wise classification of their members and representation of such panels on their governing bodies.

Panel System

The Board of the Association, at the instance of the Commission, finalised the proposals for the revision of the panel system. The main amendments suggested were: (1) full members of the Association should continue to be divided into three panels, namely, buyers, sellers and brokers; (2) the strength of the Board should be raised to 26; (3) for filling up the vacancies in the different panels arising from annual panel-wise retirement of directors, a dual system of election was proposed. The manner of election suggested was a compromise between the system of general franchise under which the E.I.C.A. was already working and the system of panel-wise franchise which the Commission considered desirable.

As regards the Central India Cotton Association, Indore, the Commission points out that the general working of the Association was far from satisfactory. There were mass resignations of members at the Indore ring and payments crisis at the Ujjain ring; certain principal operators failed to honour their obligations to the clearing house at the latter place. The deterioration in the affairs of the Association, according to the Commission, arose partly from the fact that, throughout 1957, there was intense jealousy and rivalry between the trading interests of Indore and Ujjain. At the time of recognition of the Association, it was hoped that the establishment of two rings, one at Indore and the other at Ujjain, managed by a single Board of Directors, would go some way towards bringing about *rapprochement* between the two centres and the Board would function effectively; but this expectation did not materialise. The Board often failed to function as a homogeneous body and individual directors failed to rise above their personal loyalties and parochial interests. Although the articles and by-laws were often violated by some members, the Board did not take any action against them. When the trading at both the rings came more or less to a standstill from April 1957, the financial position of the Association had deteriorated. Opinion amongst the trading public at Ujjain and Indore was more

TREND TOWARDS COTTON MILL MERGERS AND ABSORPTIONS REVIVES

TEXTILE SITUATION IN WEST AFRICA

From A Special Correspondent

MANCHESTER, *11th November*

FULL twelve months have now gone by without any sign of more than routine activity in cotton goods in the United Kingdom. At this time a year ago, producers were just beginning to become apprehensive about the failure of customers to follow up their sustained buying movement which caused a sudden summer spending spree. Subsequently, no progress has been made and the order lists held have dwindled almost to extinction.

MANCHESTER LETTER

So much is past history—and not particularly pleasant history at that. The situation of most producers in the industry is now severely strained, and the resources of individual firms are being depleted by drastic curtailment of output. As a result, it is not surprising that the trend towards mergers and absorptions has revived once more. Rumours of pending negotiations between relatively big firms crop up from time to time, and occasionally, a deal is completed. Within the past week or two, proposals for the acquisition of British Van Heusen Ltd. by Amalgamated Cotton Mills Trust Ltd. and the Lilac Mill by the Fine Spinners and Doublers Ltd. have been put forward. Such events, coupled with the elimination of uneconomic plants by some of the larger groups, are a clear indication of things to come.

The weaving section of the Lancashire cotton industry has always been noted for its relatively few public companies among a large number of privately-owned family businesses; the spinning section has been predominantly a public sector, with a fair sprinkling of single unit mills still operating successfully, despite the competition of the larger combines. Lately, the number of independent spinning mills has diminished either by liquidation or by absorption and, although it would be rash to predict that the groupings would completely swallow up all other firms within the next few years, the tendency towards more amalgamations is unmistakable.

"Big Buying" Trends

Such developments are not taking place solely in the productive branches; the distributive end of the trade is not immune from this influence. The number of small merchant firms is certainly very large, but the "big buyers," to which Mr. W. T. Winterbottom addressed some comments at Harrogate, have a very responsible part to play in maintaining the future well-being of the trade.

Ever since the home market assumed the increasing importance it now holds in relation to the activity of the mills, the policy of the major chain stores and other prominent consumers has had a vital bearing on the whole cotton textile situation. Efforts to persuade such customers to maintain an even flow of demand have not been entirely successful, but it must be admitted that, for every buyer, there comes a time when hasty purchases may be unremunerative.

Several matters which have been keenly exercising the minds of customers for months past are perhaps due to be resolved before very long. That confidence should be regained to get supplies on the move again is the essential factor. "Waiting for something to turn up" is a dreary experience for all concerned but signs are not lacking that some relief may be at hand.

Garment Workers' Move

The National Union of Tailors and Garment Workers announced this week that it was considering promoting a special trade union label for attaching to garments as part of the campaign to persuade shoppers to buy only textiles which have been manufactured in this country. Attacking "sweatshop" products from Asia in a union report, Mr. John E. Newton, General Secretary, said:

"We recognise that the labelling of goods 'Empire-made' may not be sufficient indication of the place of origin. We feel sure that the 8,000,000 trade unionists in this country, once they understand the circumstances, will welcome some indication on garments showing that they are made under good conditions of employment. We do not doubt that they will realise that the purchase of imported garments made under sub-standard working conditions may, in the long run, affect their own standards of employment."

Higher Pay

Maintenance mechanics and electricians employed in the Lancashire textile finishing industry have been given wage increases under a new agreement negotiated in Manchester. Both receive an extra 2d. an hour, equal to 7*s.* 4d. a week more for mechanics on the basis of a 44-hour week and 7*s.* 6d. for electricians on the basis of a 45-hour week.

Selling To West Africa

Those countries which nowadays purchase 30,000,000 yards of cotton cloth from Lancashire annually are relatively few. In 1957, only Australia, South Africa, New Zealand and Nigeria came within this category.

With this background in mind, the situation in West Africa is worth consideration; details of current trends are disclosed in an article from the *Nigeria Trade Journal* quoted by the *Empire Cotton Growing Review*. The rapid rise in the standard of living in this area since the last war has been reflected in greatly increased imports of textiles. Although cotton goods have played their part in the overall increase during the last two years, their popularity has shown a marked decline in favour of textiles woven from man-made fibres, particularly rayon goods.

An erratic trend has taken place in cotton cloth imports in recent years partly due to the fluctuations in the size of Nigeria's major export crops. Difficulties during the war and then a shortage of supplies immediately following hostilities kept the volume of imports at a considerably lower level. Another important factor has been the impact of materials made from synthetic fibres on the cotton trade. In 1956, imports of cotton goods fell from the previous year's all-time record of over 200,000,000 square yards to less than 150,000,000 square yards. Cottons were actually eclipsed in volume by rayons for which a consumer preference had been steadily growing since the end of the war. Sources in close touch with Nigerian trade believe that rayons will continue to gain in popularity but even rayon is likely to lose ground to other synthetic materials as these become more competitive in price.

Compared with conditions some 25 years ago, the value of cotton cloth imports into Nigeria has increased from little more than £2,000,000 to the current level of around £14,000,000. The peak purchasing period was in 1952 when goods valued at nearly £25,000,000 were obtained at an average price of 29*d.* per square yard.

Sources of Supply

India provided 70 per cent. of Nigerian imports of cotton grey cloth last year. In bleached goods, Lancashire obtained 28 per cent. of the trade, followed by India with 23 per cent. and Japan with 13 per cent. Most of the piece-dyed trade went to Lancashire, which provided 44 per cent. and Japan 23 per cent., but Japanese prints accounted for 39 per cent. of the business, with the Netherlands supplying 32 per cent. and Lancashire 23 per cent. In coloured woven goods, India held the major place with 62 per cent. of imports.

The use of rayon piecegoods in the area has increased from 84,000,000 square yards in 1954 to 150,000,000 yards last year. The report comments on the growth of textile trading arising from the post-war upsurge of national feeling shown by the popular reversion to the wearing of traditional native dress, which requires substantial quantities of cloth.

At present, the 34,000,000 people in Nigeria consume on average less than ten yards of cloth per head annually. So long as there is no falling off in the current level of prosperity, the demand for textiles should continue to grow.

Free Trade in Textiles

Not many months ago discussions on the effect of the European Common Market and the proposed Free Trade Area were all the rage. Few company chairmen with textile interests omitted a comment on the plan from their annual statements and most were apprehensive of the consequences. The clamour has lately died down despite the formal establishment of the European Economic Community from the beginning of the current year. Difficulties which are now being encountered in connection with the collateral Free Trade Area in Europe, in which Britain is a prime mover, may hold back the negotiations but it is reasonable to assume that in time some form of Free Trade Area will be achieved.

COAL PRODUCTION SLOWS DOWN

IMPORT RESTRICTIONS MAY AFFECT PRODUCTION FURTHER

THE statistics relating to raisings and despatches of coal up to the end of August 1958, the latest month for which figures are available, show that the upward trend in both noted in the previous four years is being maintained, but the pace of increase in output is slower than that in 1957. Thus, the total production during the first eight months of the current year amounts to 29.64 million tons, as compared with 28.32 million tons and 26.13 million tons in the corresponding periods of 1957 and 1956, respectively. In other words, the extent of increase in output up to the end of August this year was 1.32 million tons, as against 2.19 million tons in the first eight months of 1957. The break-down figures of output for the private and public sectors are not available for the whole of this period, but figures relating to the first half of the year show that the private sector accounted for, as is only to be expected, the bulk of the rise in output.

Total despatches during the period under review show an improvement to 26.50 million tons, having gone up from 24.81 million tons in the corresponding period of 1957 and 23.14 million tons during January-August 1956. A notable feature of the trend of despatches is that, while in 1957 the rise in despatches (1.67 million tons) lagged behind that (2.19 million tons) in raisings, during the current year, such (1.69 million tons) has outpaced the expansion (1.32 million tons) in output. This is due to the improvement in loadings, accompanied by the slower pace of increase in raisings.

The following comparative table shows the monthly trend of raisings and despatches during the first eight months of 1958 and 1957:

(In million tons)

	1958		1957	
	Raisings	Despatches	Raisings	Despatches
January	3.701	3.326	3.667	3.136
February	3.712	3.048	3.519	2.851
March	3.701	3.354	3.668	3.249
April	3.802	3.482	3.726	3.184
May	3.584	3.374	3.794	3.197
June	3.554	3.106	3.330	2.915
July	3.749	3.368	3.296	3.045
August	3.539	3.478	3.376	3.239
Total Jan.-Aug.	29.642	26.501	28.321	24.806

The overall transport situation for movement of coal shows an improvement, as stated already, the daily average loading for the first nine months of the year being 3,804 wagons, as against 3,643 wagons in the corresponding period of 1957, as will be seen from the following table:

Month	(Wagons per day) 1958	1957
January	3,716	3,533
February	3,713	3,586
March	3,805	3,726
April	4,018	3,786
May	3,843	3,587
June	3,685	3,354
July	3,901	3,576
August	4,101	3,794
September	4,176	3,847
Average ...	3,884	3,643

It is now generally accepted that the target of 60 million tons fixed for the second Five-year Plan will not be reached within the Plan period and that there will be shortfall of three to four million tons, though the collieries in the private sector have affirmed that they will be able to reach their target of 45 million tons. In fact, they had submitted plans to the Government and offered to raise as much as 65 million tons (that is, 30 million tons above the level of production at the end of the first Five-year Plan) by the end of the second Plan period, provided they were given adequate transport facilities and licences for stores, plant and machinery. But the Government of India, for reasons best known to itself, turned down this offer and decided that production in the private sector should be limited to 45 million tons by 1960-61 and that it should be confined to the existing workings and immediately contiguous areas. In view of this restriction, it is feared that production in the private sector during the third and the subsequent plans will automatically go down.

A fresh difficulty in achieving even the present target of 45 million tons in the private sector has now cropped up, on account of the drastic import restrictions. At a meeting of the Progress Review Committee of the coal industry held at Calcutta recently, under the chairmanship of Mr. P. M. Nayak, Coal Controller, representatives of the private sector in the industry represented that, in view of the difficulties in getting import licences for machinery and spares, etc., they were unable to keep up the tempo of production as committed under the second Five-year Plan. They submitted that the time had come when the Ministry of Steel, Mines and Fuel should take up the issue at a high level; otherwise, the private sector would find itself in a serious quandary. Mine inspectors, it is stated, insist, during their inspection, on installation of machinery consistent with the new Coal Mines Regulations, and, if this condition is not observed, mining operations are stopped. The colliery representatives, therefore, said that the situation required quick action.

According to the Government spokesman, licences to the value of Rs. 58 lakhs had so far been issued and more applications to the extent of over Rs. 1.5 crore were pending due to foreign exchange difficulties. The industry was, however, asked to avail itself of the loan from the Export-Import Bank, U.S., but its objection to this offer was that the prices of American machinery were far higher than those available from the U.K. and the Continent. The Ministry of Commerce and Industry would, however, appear to be inducing collieries to obtain their requirements of machinery from the U.S. alone, apparently because the Government is anxious to use the credit given by the Export-Import Bank. While stressing the need for making available the required machinery in time, it was agreed at the Progress Review Committee that some literature on the available American machinery should be obtained from the U.S. Trade Commissioner in India and from the National Coal Development Corporation.

The rates and conditions for the carriage of coal and coke have been revised with effect from 1st October 1958. Accordingly, all coal/coke dealers in Bombay State are being permitted to charge their customers this increment in the Railway freight on their sales of coal and coke out of consignments despatched from the collieries on and after 1st October 1958.

In June 1958, all coal and coke dealers were permitted to charge increase of 75 nP per ton on sales of steam coal and Re. 1 per ton on sales of hard coke and soft coke on account of increases in ex-colliery prices. With effect from 17th October 1958, the Central Government has decreased the ex-colliery prices of steam coal by 34 nP per ton and of soft coke and hard coke by 45 nP per ton. All coal/coke dealers in Bombay State are, therefore, being permitted to charge their customers an increase of only 41 nP per ton on sales of steam coal and 55 nP per ton of sales of soft coke and hard coke out of consignments despatched from the collieries on and after 17th October 1958. The dealers are being instructed to show the above increases separately in their bills and cash memoranda.

The Last Phase

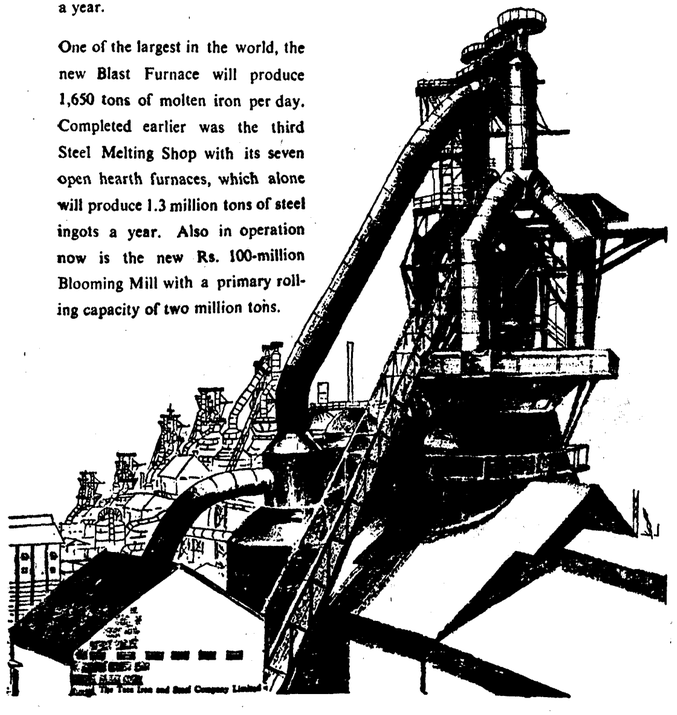
THE COMMISSIONING OF THE NEW Rs. 70-million Blast Furnace in Jamshedpur in October marks the beginning of the end of the expansion programme started in December 1955 to double Tata Steel's capacity to two million tons a year.

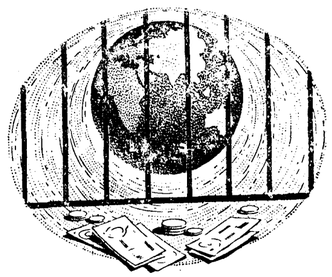
One of the largest in the world, the new Blast Furnace will produce 1,650 tons of molten iron per day. Completed earlier was the third Steel Melting Shop with its seven open hearth furnaces, which alone will produce 1.3 million tons of steel ingots a year. Also in operation now is the new Rs. 100-million Blooming Mill with a primary rolling capacity of two million tons.

Covering every phase of operation from the winning of ore to the rolling of finished steel, the expansion will be virtually completed by the end of 1958. The capital investment on expansion and annual replacements by Tata Steel over the five years 1955-60 is estimated at Rs. 1,330 million—more than one-fifth of the total outlay by organised industries in the private sector.

TATA STEEL

ON TO TWO MILLION TONS





The World's Cashier

Providing a complete banking service in south and east Asia is only part of our business. A bank whose scope was limited to one such area could not have the wide knowledge of financial conditions possessed by our world wide network of branches. With offices in Europe and the United States, the biggest bank established by the Far East for the Far East can indeed claim to be the World's Cashier.

To consumers today . . .

the package is as important as the product

TIME WAS when anything that held itself together—and another product within—served as a container. Shape, size and finish mattered little, the purity of contents even less !

Not so today. Apart from being attracted by the design and quality of the package, customers want to make sure that the contents are pure, unadulterated. Like the young lady above. She is making certain that the baby food she is about to buy is genuine. The unbroken diaphragm under the lid tells her that the contents have not been adulterated. *It is a pilfer-proof can.*

Thanks to pilfer-proofing techniques, packaged consumer goods — amongst them foods and pharmaceuticals on which the nation's health depends—are bought in large numbers, *their purity taken for granted.* Pilfer-proof containers protect the maker's name and guarantee that the buyer is getting his money's worth.

The Metal Box Company of India Ltd, in 25 years of operation, have given the lead in the design and manufacture of a wide range of pilfer-proof containers and closures. In the years ahead, as India's economy expands rapidly, an increasingly greater and more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

SHARP FALL IN OUTPUT OF JUTE GOODS

STOCKS TOO DECLINE—ANXIETY OVER RAW JUTE PRICES DEEPENS

A FALL of 5,500 tons in the output of jute goods is the main feature of the working of jute industry during the month of October 1958. The stocks with mills at the end of the month, too, were lower, but by a much smaller extent than that in production. This indicates that despatches from mills during the month must have been on a much reduced scale than in September. The total production during the month amounted to 81,800 tons, as compared with 87,300 tons in the previous month and 83,500 tons in October 1957, and is the lowest monthly output since June 1957.

The decline in production is due to fall in the number of hours worked from 209 to 192, consequent on the *Pooja* holidays, and is shared by all classes of goods. Hessian has shrunk from 35,900 tons to 33,300 tons, the lowest level for the last four months. At this level. the hessian output represents 40.7 per cent. of the total production, as against 41.1 per cent. in the previous month and 38 per cent. a year ago. Sacking production has declined from 45,700 tons to 43,000 tons (a level not seen since June 1957), but its ratio to total production is a shade higher at 52.5 per cent., as against 52.3 per cent. in September, though it is substantially lower than that (56.4 per cent.) in October 1957. The decline in the ratio of sacking output to total and the rise in that of hessian indicates the diversion of some of the looms from sacking to looms during the last few months, consequent on the accumulation of the heavy goods with mills. "Other varieties" have shrunk by 200 tons, as will be seen from the following comparative table of production of gunnies:

Production of Jute Goods
(In tons)

	Oct., '58	Sept.,'58	Aug., '58	Oct., '57
Hessian	33,300	35,900	35,400	31,700
Sacking	43,000	45,700	44,300	47,100
Others	5,500	5,700	5,500	4,700
Total ..	81,800	87,300	85,200	83,500

The total production during the first ten months of the calendar year amounts to 878,300 tons, an increase of 33,100 tons over that in the corresponding period of 1957. This increase is accounted for by sacking, which has gone up by 47,500 tons to 488,300 tons, and by "other manufactures" which have gone up by 3,200 tons. Production of hessians has, however, fallen by 17,600 tons to 331,200 tons.

Stocks of gunnies with mills at the end of October aggregated 107,100 tons, as against 109,000 tons a month before. This decline of 1,900 tons is much less than that noted in September. Nevertheless, this is the fourth month in succession when stocks have fallen, the cumulative reduction during this period being 26,900 tons. Variety-wise, stocks of hessian have risen by 800 tons to 17,800 tons, thus reversing, albeit slightly, the downward trend in the previous three months when they declined from 31,000 tons to 17,000 tons, while those of sacking have shrunk by 3,100 tons to 77,100 tons, thus maintaining the downward trend for the third consecutive month. Notwithstanding this decline, stocks of sacking are higher by 39,600 tons over the year. "Other manufactures" also have gone up by 400 tons to 12,200 tons, an increase of 3,200 tons as compared with those at the close of October 1957. The following table shows the stock position at the end of the last three months, as also at the close of October last year:

Stocks of Jute Goods
(In tons)

	As on 31st Oct., '58	As on 30th Sept. '58	As on 31st Aug., '58	As on 31st Oct., '57
Hessian	17,800	17,000	19,000	29,500
Sacking	77,100	80,200	86,400	37,500
Others	12,200	11,800	11,800	9,000
Total ..	107,100	109,000	117,200	76,000

The total stocks at the end of last month represented over five weeks' production. Of these, hessian stocks constituted 16.6 per cent., as against 38.8 per cent. a year before. Sacking accounted for 71.9 per cent. and "other varieties" for 11.4 per cent., the corresponding figures at the close of October 1957 being 49.3 per cent. and 11.9 per cent., respectively.

There has been a substantial decline in shipments of jute goods during the month under review, as will be seen from the following table:

(In tons)

	Bags	Cloth	Total
Hessian			
October 1958	2,825.1	25,719.7	28,544.8
Sept.	1,817.0	36,240.7	38,057.7
October 1957	6,300.8	29,103.1	35,403.9
Sacking			
October 1958	32,438.6	589.4	33,028.0
Sept., ...	41,314.0	799.2	42,013.2
October 1957	31,358.1	292.3	31,650.4

Despite the sizable fall in stocks of manufactured goods with mills, the overseas orders for them are not encouraging enough to induce mills to increase their offtake of raw jute. At the same time, reports about raw jute crop place the size of the crop at a high level. Consequently, there has been a setback in raw jute prices to levels which are the lowest for many years. This is causing anxiety not only to growers and traders but to mills. No doubt, the I.J.M.A., with a view to arresting the downward trend, asked its member-mills in September last to lend support to the market by accelerating their purchases to the extent of three months' consumption. This was followed by the declaration of a state of emergency by the East India Jute and Hessian Exchange Ltd. The Exchange also ordered that any sale in the futures market below Rs. 22.50 per maund had to be covered with an additional margin deposit of Rs. 2.25 per maund. Though these measures have, no doubt, brought some steadiness to the market, the prospect of a large crop during the 1958-59 season is restricting buyers.

According to some circles, the bid to attain self-sufficiency in raw jute is said to have led to indiscriminate sowing and, unless effective measures are taken in time to regulate sowings, the debacle in fibre prices may, it is feared, affect the 1959-60 crop as well. The representatives of jute growers have made several suggestions to arrest the decline in prices. While some have favoured the fixation of effective "floor" prices for raw jute at a level which would give them an economic price, the Bengal Jute Dealers' Association, Calcutta, has suggested that the Government of India should allow export of limited quantities of raw jute. In the course of a statement, the Association points out that there had been a record production of 6.5 million bales of jute (including mesta) this year, but the prices had fallen to between Rs. 15 and Rs. 17 per maund from about Rs. 25.50 at this time last year. The present price, it is stated, is below cost of production and unless growers are assured of economic return, they will switch over to production of other crops.

While the Central Government is said to be against fixation of minimum price for raw jute, the prospects for exports of raw jute, even if allowed by the Government, are bleak. For the bulk of India's raw jute is of a coarser quality than that of Pakistan and it will, therefore, be difficult to find an overseas buyer. But there is no reason why an attempt should not be made if, in certain varieties of jute, there is a real surplus, as is contended by a section of the trade. India, of course, cannot afford to export its limited production of superior quality fibre. If it does, it will only increase its dependency on Pakistan for this quality. Even now, India will have to buy anything between 700,000 and 1,000,000 bales of high grade Pakistani jute, because this variety is not grown by it. Due to geographical and climatic limitations, India cannot hope to attain complete self-sufficiency in all the varieties of raw jute required by its mills. Exports of certain coarse varieties of raw jute, if successful, will enable India to find a part of foreign exchange required to pay for imports of high grade Pakistani jute and also help stabilise the domestic prices of raw material.

East Pakistan has sunk crores of rupees on the so-called jute support scheme, which was introduced in 1952-53, according to Maj.-Gen. Umrao Khan, Martial Law Administrator of East Pakistan. The idea of price support was to help jute growers, but, in reality, cultivators never got any tangible relief. Disclosing this fact, in the course of a broadcast talk last week, Maj.-Gen. Umrao Khan said that the benefit was derived by middlemen and exporters. Out of the total investment of Rs. 18 crores on this scheme, he added, as much as Rs. 11 crores was declared as net loss.

RUSSIA BUYS MORE INDIAN TEA

LARGER CROP IN NORTH INDIA

THE North Indian tea market has just completed six months of the current season beginning from 1st May 1958, and a review of the market conditions during the first half of the season (May-October 1958) presents a satisfactory picture, despite the generally gloomy prospects for common teas early in the season. The mid-season study, presented by Messrs. J. Thomas & Co. Private Ltd., Calcutta, in their monthly report for November 1958, shows that the movement and disposal of tea were, on the whole, swift and the volume of exports up to the end of October, as well as the prices fetched at Calcutta sales, recorded an improvement as compared with those in 1957.

Throughout this period, the demand for North Indian tea from the U.K. was encouraging and domestic buying, too, was active. In fact, according to Messrs. Thomas and Company, it was mainly as a result of the sustained home demand that the price of common and low medium teas did not go down below Re. 1.70 per lb. The U.S.S.R. is also stated to have "operated on a heavier scale than during the previous season and teas suitable for this market enjoyed some excellent sales." The main beneficiary of the heavy Russian buying was Darjeelings, as no other market could compete with Russia at the level of prices the latter was willing to offer for these teas. The strong Russian buying resulted in a short supply of good orthodox Assams, which consequently realised prices well above last year.

Analysing the general trend of prices, Messrs. Thomas and Company observe that the season opened with common and low medium teas quoting at about Re. 1.85 per lb. As the season progressed, offerings at sales became heavier and the price steadily declined to Re. 1.70 by the end of August. There was a reversal of this trend in September and prices firmed up. There was a further recovery in October, with the result that there was little tea on the market below Re. 1.75 per lb., as compared with Re. 1.60 in 1957. Thus, "the usual seasonal decline in prices which sets in with the arrival of rains, teas on the market has so far been averted."

As in the previous season, the market for C.T.C. teas, the report says, opened strong and "some fancy prices were paid for the best offerings up to the middle of August." Thereafter, there was a setback and the market for these teas began to decline rapidly. The price level for the majority of the offerings at the end of October, however, was decidedly lower than in 1957. This was evidently due to a "glut of medium and inferior C.T.C. teas on this market," following the conversions to C.T.C. manufacture. Uttering a note of caution on the danger of this switch-over, if continued, Messrs. Thomas and Company say:

"Although conversion to C.T.C. manufacture may have proved profitable in the past years, a stage may have been reached when there is rather more of this kind of tea than the market can readily absorb. The situation needs to be carefully watched and, should the present trend continue, marginal estates with insufficient machinery would be well advised to discontinue C.T.C. manufacture."

The weekly offerings of dusts during the current season so far were somewhat larger than usual, but, in view of the satisfactory demand, the average prices realised compared favourably with those of the previous season. The prices for medium Dooars, for instance, were consistently higher than in 1957 and, at the end of October, common dusts were dearer by nearly 20 nP.

The following comparative table, showing the monthly averages of all export and dust teas sold on the Calcutta market and average prices realised therefore, up to the end of October:

	Export				Dusts			
	1958		1957		1958		1957	
	Chests	Average price	Chests	Average price	Chests	Average price	Chests	Average price
		Rs.		Rs.		Rs.		Rs.
May ..	14,669	2.88	16,438	3.09	126	2.27	....	....
June ..	48,665	2 48	48,378	2 06	57,506	2.06	12,085	1.60

BUILT TO CARRY MORE PASSENGERS

LEYLAND COMET
THE BIG CHASSIS FOR THE BIG JOB

The LEYLAND COMET is the longest wheelbase passenger chassis made in India. Its large body space accommodates at least six more passengers in every trip than any other make. Its low fuel consumption and easy maintenance have made it the ideal passenger transport vehicle everywhere. No wonder LEYLAND is the first choice in passenger transport in over 50 countries around the world.

INDIA'S SEARCH FOR MINERALS

RS. 15-CRORE DEVELOPMENT CORPORATION TO BE SET UP

THE growing demand for mineral products in the country serves to emphasise the importance of a vigorous prospecting campaign. India, as is well known, is deficient in a wide range of minerals, particularly non-ferrous metals and oil. Much concerted effort has been made to locate reserves of these minera's. Nevertheless, a great deal remains to be done. What the country needs is a sound mineral policy which will encourage private prospecting. It is true that the original rigour of this policy, which gave insufficient recognition to what the private sector could do, has been modified in some respects in recent months. But this policy has to be more actively pursued before it can yield results.

Although the Government came on the mining scene only recently, it has had some notable achievements to its credit. The tempo of coal mining, it is stated, is being stepped up, so that the public sector could reach the target of additional 10 million tons set for it. The existence of additional gold reserves in Kolar gold area, according to Dr. B. C. Roy, Director of the Geological Survey of India (not the Chief Minister of West Bengal), has been proved. The reserves are believed to be "appreciable." A detailed investigation of copper ore has been carried out in the Singhbhum district of Bihar. Further exploration has been undertaken in the Hebri copper belt in Rajasthan where "very promising" results have been obtained. Investigation in Andhra and the Himalayan regions of the Uttar Pradesh is now in progress. Drilling operations for coal have been launched in the Godavari Valley in Andhra and the Karanpura region in Bihar. A few fields rich in manganese ore have been located in Nagpur and Bhandara districts of Bombay and Madhya Pradesh.

Oil Prospecting

By far the most intensive among the prospecting operations is the one that has been carried out in the country for locating oil reserves. Much interest attaches to this development. For the demand for oil is now being met largely by imports, so that any discovery of new oil reserves will save the country much precious foreign exchange. At present, India's oil requirements have to be met through imports valued at Rs. 100 crores, of which crude oil accounts for some Rs. 40 crores and kerosene for Rs. 19 to 20 crores. In 1956, the Thacker Committee on coal assessed the total energy consumption of India at 225 million tons (coal equivalent), of which commercial energy accounted for only 20 per cent. Of the commercial energy, oil met only 12 per cent. of the country's requirement, coal nearly 83 per cent. and power about 5 per cent. On a conservative estimate, the Committee, on the basis of a 10 per cent. increase in the utilisation of commercial energy, assessed the requirements of such energy at 396 million tons (coal equivalent) by 1975. It also estimated the total oil requirement by 1975 at 40 million tons, as against the present requirements of about 7 million tons. Even by 1961, it has been estimated that India would have to spend some Rs. 142 crores on imports of oil. The Estimates Committee observed that the magnitude of the oil imports which would be needed in the context of the country's economic expansion "would clearly indicate the importance and urgency of making determined attempts to find oil and gas in the country as sources of energy, since the alternative is to slow down the proposed rate of industrial progress."

Reserves

Sustained efforts have been made to discover oil by the private agencies and the Government-owned Oil and Natural Gas Commission. In Assam, oil reserves have been located by the Burmah Oil Company. The State-owned Commission has been carrying on drilling operations in Jwalamukhi, Sibsagar and Cambay. Among these centres, Cambay has shown considerable promise. The Commission has located three oil-bearing strands at various depths at Lunej (Cambay). The well which has been drilled in that centre, has touched the Deccan strata. The next step is to provide a "casing" to the well. This will be followed by certain productive tests which will throw light on the commercial value of the present well. Two more wells will be dug in a year's time. Until all these steps have been taken, it cannot be said that drilling in Cambay area has yielded successful results.

During the last few days, reports from Baroda have been claiming that oil has been noticed at one of the experimental drilling sites at Vadser (four miles from Baroda), where a team of Indian experts has been carrying on investigations for the last six months. The Union Minister for Mines and Oils, Mr. K. D. Malaviya, in the course of a statement issued last week, said that the Oil and Natural Gas Commission had been drilling experimental holes in and around the city of Baroda for the last six months to obtain information regarding the subsurface geology of the area following indications of gas in some old tube wells in the town; the drilling programme was intensified after the discovery of oil in Lunej (Cambay). Till now, 12 shallow wells had been drilled in and around the city. While testing the twelfth well, oil was noticed in a horizon at a depth of about 105 metres. Mr. Malaviya said: "While the indications of oil have encouraged the technicians of the Commission in their programme of exploration, no premature hopes should be built around the discovery which should be received with caution. This does not necessarily establish that oil occurs in this region in commercial quantities. Further drilling will be necessary and the Commission are already intensifying their programme of exploration of the region. But for the excitement and jubilation caused by this discovery, I would have waited for a few more weeks to share the news with my countrymen till a clearer picture emerged. Nevertheless, this discovery tends to confirm the expectation of oil over a more extensive area than indicated by the discovery of the Lunej well."

This is a very carefully worded statement. What is confirmed by the discovery is not the existence of oil but only expectations of its existence. It is, therefore, premature for the country to congratulate itself. The oil exploration operations in Gujerat have yet to yield concrete results.

Demand for Oil

As stated at the outset, the demand for oil is growing every year. A considerable part of this demand is now being met through imports. Except for Digboi, the other three refineries—Burmah-Shell, Stanvac and Caltx—are refining imported crude oil. Although these refineries do save some foreign exchange, the fact remains that crude oil has to be imported. Plans for setting up two refineries in the public sector have been drawn up, one at Gauhati with a capacity of 750,000 tons and the other at Baruni (Bihar) with a capacity of 1,500,000 to 1,700,000 tons. The Gauhati refinery will, it is said, work with Rumanian collaboration. No details of the arrangement with Rumania have been given to the public. No decision has yet been taken with regard to foreign collaboration for Baruni refinery. Although these refineries, when they are set up, will go some way towards increasing the oil processed in the country, it is through location of fresh sources of supply that the country can reduce its foreign exchange expenditure. In the absence of fresh discovery of oil, India's imports of crude oil will grow in the context of the increasing demand for oil and oil products. In this connection, it is gratifying to note that the Petroleum Consumers' Advisory Council, which met early this month under the chairmanship of Mr. K. D. Malaviya, the Union Minister for Steel, Mines and Fuel, decided that long-term forward estimates of the country's requirements of petroleum products should be prepared. It also decided that all possible economy should be exercised in the consumption of petroleum products, with a view to reducing the drain on foreign exchange. It would appear that several suggestions were made for reducing the growing imbalance between consumption of motor spirit and high-speed diesel oil. The imbalance in regard to the various petroleum products, according to Mr. Malaviya, existed in all countries; only, it was more keenly felt in an economically backward economy like India's. A suggestion that was made for the purpose of reducing the imbalance in the utilisation of petroleum products was that increasing use should be made of furnace oil which is available in sufficient quantity. In the final analysis, however, the problem could be solved only through locating and exploiting new oil reserves. This is what gives the continuing efforts towards locating oil resources a national significance.

A New Body

A major decision in the sphere of Government's mineral policy is the announcement relating to the setting up of a new body entitled the National Mineral Development Corporation (N.M.D.C.), with an authorised capital of Rs. 15 crores for the exploitation of minerals in the public sector. The functions of the Corporation, according to a statement made by Mr. Malaviya at a Press conference, held at New Delhi last week, will be to take over all mining of minerals included in Schedule "A" of the Industrial Policy Resolution. It may be mentioned here that this Schedule, which refers to the economic sphere of the State, includes such minerals as coal and lignite, mineral oils, iron ore, manganese ore, chrome ore, gypsum, sulphur, gold and diamond, copper, lead, zinc, tin, molybdenum and wolfram and atomic minera's. To start with, the Corporation will undertake exploitation of iron ore in Kiriburu and other strategic minerals like copper, zinc, lead and sulphur pyrites. Existing mining operations of the private sector will not be disturbed. *But licence for their extension will normally not be given.* The Corporation will have power to set up subsidiary companies. Mr. Malaviya said that, if the private sector would like to associate itself with the Government in the exploitation of minerals on Government terms, its association would be considered. The personnel of the N.M.D.C. is expected to be announced in a couple of weeks. It will have a board of directors, consisting of officials and non-officials.

Mr. Malaviya emphasised that priorities for the development of minerals would depend on the demand for minerals. For instance, there was a great demand for iron ore, sulphur and copper ores. Copper mining would be started in the third Plan, though a beginning would be made in the current Plan period itself. Polish experts were willing to help India in regard to copper mining; a Polish team would be coming to India soon. The Government would shortly start exploiting sulphur pyrites. With regard to zinc and lead, the output of Zawei mines in Rajasthan was not satisfactory; they now mined 400 tons per day, as against a target of 1,000 tons. Diamond deposits in Panna were extensive; they would be fully exploited. A survey of the Bastar area in Madhya Pradesh would be undertaken soon. The Minister hoped that, in the not too distant future, India would be able to produce 10 million tons of iron ore. Under the present programme, the target for the second Plan was only six million tons, out of which India had already agreed to supply 2 million tons to Japan. He also revealed that both Italy and Austria were very anxious to purchase Indian iron ore and that it would be examined in detail later.

Monolithic

It is not clear why a monolithic corporation has been found necessary for the exploitation of minerals. In the first place, the problem of prospecting for minerals in a vast country like India, differs from region to region. A corporation, controlled by the Government, would not be able to cope with its tasks. Secondly, the position has been made worse by the Government's decision not to grant further licences to the private sector. This means that all further exploration for minerals, listed in Schedule A, will be undertaken only by the State. Has the Government the necessary resources and personnel? Presumably, even the limited "success" in Cambay has encouraged the Government to adopt an inflexible attitude. This is unfortunate from the point of view of wider national interests. This attitude is also opposed to the sober views expressed by the Estimates Committee. Referring to mineral oil, the Committee, while not denying the validity of the Industrial Policy Resolution, emphasised that "while direct exploration, etc., by Government agencies should continue and in fact should steadily expand for some years to come, private concerns should, to the extent possible, be given licences to undertake exploitation work, with or without Government participation." This advice, which is applicable to all minerals, has been unceremoniously rejected by the Government. The establishment of the Corporation, with wide powers to engage itself in the unchartered mineral sea, spells danger to the future of mineral exploitation in the country. The Government should at least ensure that private agencies are not prevented from making their contribution to mineral discovery and exploitation.

NEW PRODUCTS AND PROCESSES

Advance Determination of Sex of Cattle

A METHOD for determining in advance the sex of cattle and other domestic animals by means of separating centrifugally the female and male producing spermatozoa has been developed by Professor Per Eric Lindahl, of the Zoophysiological Institution at Upsala, Sweden. *It is based* on theoretical principles presented in 1946 by an American scientist Mr. Newton Harvey who, however, never completed his researches. The method, which has not yet overcome some practical problems fo not injuring the sperm cells in the process, is nevertheless, according to the Professor very promising. The determination of sex in the progeny is not the only practical value to be derived from the new process. It facilitates a quick propagation of certain propitious lineages in cattle breeding. The institution is also engaged in basic research on sperm killing preparations. This work is done in collaboration with a British organisation. At the Upsala centre a new method has been evolved for photographic registration of the reactions of the sperm to certain poisons. A group of the Institution's researchers is studying methods of influencing the capacity of agglutination of the spermatozoa, which may prevent fertilisation and thus be important as a means of limiting the birth rate.

Producing Steel "Directly" from Iron Ore

A process which is said by the scientists responsible for developing it to be capable of producing steel "directly" from iron-ore has been developed by the East China Chemical Engineering Institute. Few details of the operation of the process have been released, but it is reported that it renders it necessary to convert the iron-ore into pig iron as an initial stage of steel production. One of the essential raw materials for the operation is said to be natural gas, which provides the heat which is applied to the iron-ore and then, subsequently, to the conversion of the extracted liquid iron during its conversion into steel. As a result of the design of the plant—which has been tried out, it is claimed, on a pilot plant scale—the use of blast furnaces is said to be eliminated. Although very rapid speeds of processing the iron-ore and converting it into steel are claimed, the efficiency of operation of the process is believed to be relativly low.

Better Rubber

A series of synthetic rubber films based on the use of nitrile rubber latex which are said to have both excellent clarity and better physical properties have been developed in the U.K. The films are said to be suitable for leather finishes, paper sizing and finishing and for use where abrasion-resistant tough coatings are required. The production of the films depends on the use of a new curing system which employs sodium aluminate, which is a relatively cheap material and one that is easy to use. The use of sodium aluminate also has the advantage that it gives the film heat-resistant and light-resistant properties equivalent to those given by zinc oxide. The addition of mercaptobenzthiazole during the curing process when sodium aluminate is used improves these two characteristics, it is claimed, to an extent where they significantly exceed those produced by conventional curing processes.

Heavy-duty Plastic Covering

A new heavy-duty plastic coating has been developed in Britain. Comprehensive trials are said to have shown that the material can be applied, under adverse weather conditions, without there being any likelihood of subsequent failure. The new coating is based on the use of epoxy resins. Although a number of epoxy-based protective coatings have been developed in the past, many of them are said to have a relatively high proportion of failures when applied in adverse weather conditions. The latest coating, which is called Epiglo G, can be used on a very wide range of surfaces, including steelwork, concrete, brickwork and wood. It can be sprayed or painted on with a brush, or applied by dipping techniques.

High-speed Teletypewriter

A teletypewriter which prints 3,000 words a minute has been exhibited at New York by the United States Army. The machine consists in part of an electronic gun that shoots the letters onto a special paper. After a volley of words, each line of text passes over powdered ink and a heated roller. The words appear a split second later. In theory, the device could operate at a speed of half a million words a minute. Such speed will remain theoretical, however, until someone finds a way of running paper through the machine fast enough to keep up with the speedy flow of words.

Preventing Staining

A process for using fluorocarbon compounds to proof coloured shoes and fabrics against staining by oils and water-based staining agents has been developed for U.K. commercial application. The system can be applied, the scientists responsible for developing it claim, for use with both textile covered and leather shoes. It can also be applied to textiles.

The effectiveness of the treatment is said to be such that even dirty oil can be removed from the coated shoes, or textiles, in a few moments without leaving behind a grease ring of any sort. The operation of the process depends on the fact that certain types of fluoro-carbon chemicals will resist attack not only from oils, but also from water-borne oil compounds such as salad cream, or other sauces. Neither gravy, nor spilt cocktails will stain, it is claimed, the treated fabrics, or leathers.

THE BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

DR. B. N. GHOSE RECOUNTS OBSTACLES TO KEEPING UP OUTPUT

BOMBAY AND KANPUR FACTORIES TO BE EXPANDED

THE Fifty-seventh Annual General Meeting of the Bengal Chemical and Pharmaceutical Works Ltd., was held in Calcutta on 10th October 1958. Addressing the shareholders on the occasion, Dr. B. N. Ghose, Chairman, stated that the lockout in the Company's Bengal factory (due to labour trouble), continued rise in manufacturing cost, curb on import of raw materials, absence of facilities to produce basic chemicals, transport difficulties and congestion in the Calcutta port were the main factors which made the year ended 31st March 1958 a difficult one for the Company.

The following is the full text of Dr. Ghose's speech:

"GENTLEMEN,

"On behalf of the Board of Directors I have great pleasure in extending to you a cordial welcome to this meeting.

"It is with deep regret that we have to record the loss which we have suffered in the death of Mr. T. C. Ray, our Chairman of the Board of Directors, which took place on 21st January 1958. He was on your Board since 1940. His wise counsel was always available to the interest of the Company and he is greatly missed by all of us.

"The Directors' report and audited accounts for the year ended 31st March 1958 have been in your hands for sometime and, with your permission, I will take them as read.

"During the year, we had to face an extremely difficult labour situation. It is unfortunate that the strained relations with labour had resulted in three and half months of lockout and strikes with consequent loss of business to a considerable extent. In this connection I might tell you that the demand of increase in D.A. made by the labour last year is pending before the Supreme Court and the cases relating to the dismissal of the five labour leaders along with twelve charge-sheeted workers in connection with the last lockout and strikes are pending before the Tribunal. I cannot go into the details of the lockout and strikes as the matter is *sub-judice*.

Bombay and Kanpur Factories

"Gentlemen, after all these experiences your Board of Directors, in order to keep up the production and maintain the sale thereof, has decided to expand the Bombay and Kanpur factories without much loss of time. During the strike period both our Bombay and Kanpur factories gave their maximum output and we tried to meet the demands of our customers as best as we could. The effect of loss of business due to this year's strike will be felt in the current year's account.

"Apart from the labour troubles, last year has been a difficult year with the Company. There was continued rise in manufacturing cost, as the prices of raw materials were on the increase due mainly to rigid import policy of the Government. There was no dearth of orders from our customers, but want of basic materials was our difficulty. Salaries and wages continued to increase. Increase in D.A. and increase in contribution of provident fund on D.A. were amongst the other causes of increase in cost of production. The rate of taxation on profits has also, been highest in history.

Basic Chemicals

"Our Government, instead of giving priority to steel, should now turn its attention to other industries, for example, manufacture of basic chemicals, modern antibiotics, sulpha group of drugs, etc., which are needed by our country and are imported in large quantities. Very recently a Russian team came to explore the possibilities of manufacturing basic chemicals, etc., in our country and visited our factory. A few years back another team of experts from Russia also visited our factory, but we never heard anything about their report. I hope we shall have the privilege of being acquainted with the report of the Russian experts made this time and the Development Department will give effect to the suggestions made by them.

"Our transport problem has been solved to a great extent by private road transport concerns who carry our goods quickly and efficiently to distant places like Patna, Muzaffarpur, Kanpur and various other places from godown to godown quite safe and sound. Insurers are now readily covering such carriage of goods. We have not to complain any longer over the problem of despatch by railways. But our difficulty of getting shipping space is still continuing, in spite of our best efforts and this hampers to some extent our overseas trade. The present system of analysing and checking by the authorities of our drugs and chemicals after the goods have been sent to the jetties for export is also contributing to our export difficulty. We shall be thankful if the authorities would be good enough to devise easier and quicker methods for such analysis and checking, so that the goods are not unduly held up.

"Congestion in the Calcutta port, serious delay in clearance of vital raw materials, pilferages and thefts, unusual delay in the analysis of raw materials by the authorities concerned have hampered our planned production.

Import Policy

"If the import policy for essential basic raw materials could be more liberal and licences could be granted on a longer basis to the actual 'users' in preference to the 'established importers,' our production planning could be solved and we could expand our export business further in the countries of the Middle East and Near East.

"I would further request the Government to revise the present structure of duty on basic raw materials. I feel, there should be an overall reduction.

"During the year, there was good demand for our products, but we were not able to meet such demands to the full extent due to the reasons that have been stated before.

"I can assure you, gentlemen, that your Company has continued to maintain its position and reputation. Our products are all standardised and are known in the market to be of the highest purity and quality. When the Russian experts visited our factory last month they remarked that 'this is the only factory in India where we have seen raw materials coming in at one end and finished products going out at the other.'

New Production Lines

"I am glad to be able to inform you that our new alum plant at Panihati factory is now working in three shifts and we are producing approximately 30 tons of ferro alum a day which is the maximum capacity of the plant. Our two sulphuric acid plants are also working in three shifts. Still we are not being able to meet our demands.

"We have modernised our biology department by equipping it with automatic plants and having it fully air-conditioned. This has entailed a cost of about Rs. 2½ lakhs and we hope that the improved method of production and increase in output would bring us profits.

"Shareholders must have found it difficult to follow the accounts as given in the annual report. This has been drawn up under provisions of the new Companies Act, 1956 which have made the accounts very complicated.

"This year, you will find that no provision has been made separately for Acharya Prafulla Chandra Research Fund, but, as in other years, an equal amount will be spent for the purpose from our current year's income without earmarking any specific fund therefor. This has been done under advice of the auditor. Besides this provision for research work, we donate Rs. 3,000 to the School of Tropical Medicines for researches to be carried on by a research scholar under the Director of the School of Tropical Medicine. We also donate Rs. 3,000 for research work to be carried on in the University College of Science.

Profit and Loss Account

"Our net profit for the year compares favourably with that of last year and our sales recorded a further increase.

"Gentlemen, you will be glad to find that your Directors have recommended a dividend of 6 per cent., free of income-tax, on all ordinary shares, although our Maniktala and Panihati factories were closed for full one month on account of lockout and strike respectively during the year under review.

"Building up of our reserves has been maintained.

"Under the head 'consumption of raw materials' you will notice an increase as compared to last year's figure. This is because of increase in the price of raw materials as I have indicated before.

"'Bad debts' also show a big increase, as debts due from all parties beyond 1st April 1955 have been included under this head, though they contain many debts which are realisable as some of the parties are different departments of the Government, public dispensaries, etc.

"We have tried our best to effect economy, but certain factors being beyond our control such economy could not be all round.

"In freight and transport charges, though there has been an increase of 6¼ per cent. for consignments below 20 maunds on goods by railway transport and on parcels (which constitute the majority of our transactions), there has been a reduction by Rs. 63,000 approximately.

"In printing, stationery, postage, telegrams and telephones, etc., though there has been, as you are all aware, an all-round increase, we have effected some reduction.

Balance-sheet

"Current assets show a decrease. We have been showing so long the amount in the provident fund as assets of the Company. This amount does not really belong to the Company and so under the provisions of the new Companies Act, the sum of about Rs. 29 lakhs standing in the provident fund has not been included in our assets.

"Reserve and surplus show a decrease which is due mainly to deduction of provident fund assets as above stated.

"Secured loans show a decrease of about Rs. 11¼ lakhs due to there being no bank overdraft.

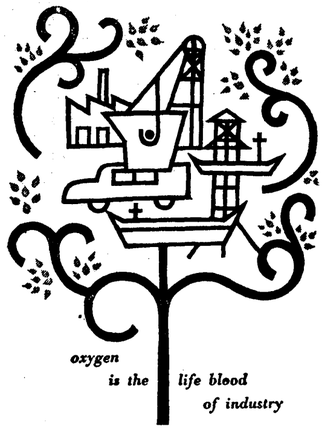
"Unsecured loans show an increase mainly due to increase in trade deposits and advances. There has been an increase in the income-tax provisions as there has been an increase in profit.

"Current liabilities, therefore, show an increase of about Rs. 4½ lakhs which have been provided for income-tax and wealth tax.

"I should finish my statement with an expression of grateful thanks to those officers, staff and workers of the Company who have rendered valuable services. I would also thank my colleagues for their ungrudging help and our customers for their unfailing co-operation, without which successful results could not have been achieved.

"I would be failing my duty, if I do not acknowledge with gratitude the help, advice and protection that we received from the Government during those critical days of the lockout and strike period."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.



Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.
Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

TARGETS FOR STEEL

Six million tons a year is India's immediate target for steel—the absolute minimum for her present needs.
Eighteen million tons is the target for the Third Five Year Plan—it can be done.
India's deposits of iron ore, with the highest iron content in the world, can last a hundred years.
Adequate supplies of metallurgical coal and other raw materials abound.
The combination of technical skill and high quality materials makes India the world's cheapest producer of steel.
IISCO'S immediate target—eight hundred thousand tons of finished steel and two hundred and eighty thousand tons of pig iron.

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

PROTECTION FOR SODA ASH EXTENDED

SELF-SUFFICIENCY TO BE REALISED BY 1961

CHEMICALS have an important role to play in a developing economy such as India's. Appropriately enough, there has of late been a growing realisation in the country of the importance of achieving at least self-sufficiency in pharmaceuticals and heavy chemicals, if not of developing export markets. In this context, it is gratifying to hear that the Government has accepted the Tariff Commission's recommendation that protection to the soda ash industry should continue for three more years, that is, till 31st December 1961, at the existing rates, standard and preferential, of duty. The existing units making soda ash have registered substantial progress during the past few years and a number of new units are also coming into being. It is thus necessary to continue protection to them "until self-sufficiency to meet the country's requirements of soda ash is achieved sometime in 1961."

The soda ash industry, it may be recalled, has been enjoying tariff protection since 1949. The last tariff enquiry was conducted in 1955 and protection was recommended up to 31st December 1958. It was also recommended that, based on the tariff value of Rs. 14 per cwt., the standard rate of protective duty should be brought down to 30 per cent., the preferential rate being fixed in accordance wtih the Indo-U.K. Trade Agreement. It was further suggested that specific rates of duties should be fixed in preference to *ad valorem* rates. The Government accepted these recommendations and fixed the duties at the specific rates of Rs. 5-10 per cwt. standard and Rs. 4-3 per cwt. preferential with effect from 25th June 1955. By the Finance (No. 2) Act, 1957, the rates of duty were later revised to Rs. 5.75 per cwt. standard and Rs. 4.25 per cwt. preferential. These rates are to continue for three more years from the end of 1958, as mentioned above.

Existing Capacity

The Tata Chemicals Ltd., Bombay, and the Dhrangadhra Chemical Works, Ltd., Bombay, continue to be the only two units engaged in the manufacture of soda ash. The present capacity of the Tata Chemicals is 72,000 tons per annum on the basis of 200 tons per day calculated for 360 days. The Company has, we are told, plans to double its present capacity in stages to be completed by 1961. The present capacity of Dhrangadhra Chemicals is 43,200 tons per annum on the basis of 120 tons per day, calculated for 360 days. It has already installed equipment with a view to increasing its capacity to 150 tons per day or 54,000 tons per annum. The increased production will not, however, be possible until April 1959, when additional power supply to the extent of 330 kw. will be available from the Bombay Electricity Board.

Three new units have already been licensed for the manufacture of soda ash, namely, Saurashtra Chemicals, Porbandar (which is a subsidiary of the Jiyajirao Cotton Mills Ltd., managed by Birla Bros.), Sahu Chemicals, Moghalsarai, and Khan Bahadur H. M. D. H. Bhiwandiwalla & Co., Bombay. The construction of buildings of Saurashtra Chemicals and erection of its plant and machinery have reached a fairly advanced stage. Commencement of production is, however, subject to the installation of a Government power house which is to supply the requirements of power and steam. According to the Development Wing of the Commerce and Industry Ministry, this unit is likely to go into production in the second quarter of 1959. It proposes to manufacture 200 tons of soda ash per day (or 72,000 tons per annum), out of which 100 tons would be converted into caustic soda. The second unit, namely, Sahu Chemicals, did not care even to reply to the questionnaire issued by the Tariff Commission. This Company has, however, acquired the land required and is erecting the factory, with a capacity of 120 tons per day or 43,200 tons per annum. It is expected to commence production in the second half of next year. The third one, namely, Bhiwandiwalla & Co., proposes to establish a plant with a capacity of 200 tons per day or 72,000 tons per year. It would appear that the unit will start production by 1961, but upto the date of the Tariff Commission's report had not finalised negotiations in any direction.

Production of soda ash has been steadily increasing for the past few years. This trend is bound to continue in the years to come. The following table provides figures of actual production during 1956 and 1957 and estimated production for the whole of 1958, 1959 and 1960.

(In tons)

	1956	1957	1958	1959	1960
Tata Chemicals ..	53,340	58,820	59,000	63,000	87,000
Dhrangadhra Chemicals ..	30,893	33,944	35,000	51,300	54,000
Saurashtra Chemicals	Nil	Nil	Nil	35,000	69,000
Sahu Chemicals ..	Nil	Nil	Nil	10,000	36,000
Total ..	84,233	92,764	94,000	159,300	246,000

As regards heavy soda ash, the Tata Chemicals Ltd. has a plan to produce 80 tons of heavy soda ash per day as part of its expansion programme. In the first instance, it proposes to install necessary equipment to manufacture 50 tons of heavy ash per day by about the end of 1959 and increase it to 80 tons per day in 1961. We are also told that the entire production of soda ash at Sahu Chemicals will be of the heavy variety.

There has been a rapidly growing domestic demand for soda ash. The total availability (indigenous products and imports) of soda ash in the country amounted to 177,475 tons in 1957, as against 99,629 tons in 1951, 142,837 tons in 1954 and 175,229 tons in 1955. The major consumers of soda ash are glass industry, silicate industry, textiles, paper, bichromates, sodium bicarbonate, other chemicals and miscellaneous industries, chemical caustic soda and *dhobis* and laundries. After ascertaining the needs of each of these important consumers, the Tariff Commission has estimated the demand for soda ash in 1958, 1959 and 1960 at 179,000 tons, 204,000 tons and 239,000 tons, as under:

(In tons)

	1958	1959	1960
Glass industry	44,000	49,000	56,000
Silicate industry	16,000	18,000	20,000
Textile industry	9,500	9,800	10,000
Paper industry	4,000	4,500	5,000
Bichromates industry	4,000	4,500	5,000
Sodium bicarbonate	5,200	6,500	7,000
Other chemicals, miscellaneous industries and brine purification.	10,700	13,700	17,000
Chemical caustic soda industry ..	9,600	20,000	40,000
Dhobis and laundries	76,000	78,000	79,000
Total ..	179,000	204,000	239,000

The glass industry and bichromates, industry both use heavy ash. Their demand for for heavy ash during 1958, 1959 and 1960 will be 48,000 tons, 53,500 tons and 61,000 tons respectively. The balance of the demand will be for light soda ash and will aggregate 131,000 tons for 1958, 150,500 tons for 1959 and 178,000 tons for 1960.

Raw Materials

The raw materials required by the industry are salt, limestone, ammonium sulphate, sodium sulphide, sulphur and furnace oil and soda ash for brine purification. The fuels required are hard coke, coal and furnace oil. The industry has been experiencing difficulties in getting these raw materials in adequate quantities at a reasonable price.

The Tariff Commission had suggested in 1955 that the existing producers should take steps to bring down their cost of production through economy in the use of raw materials, introduction of better types of equipment and improvement in quality. The Tariff Commission is of the view that their performance has fallen short of its expectations, especially in regard to the use of raw materials. There has, however, been a general improvement in the quality of the product. Commenting on this subject, the Commission says:

"The manufacturers have stated that they are taking necessary steps to control the quality of the product so as to meet the standards specified by the Indian Standards Institution. The only complaints which they have received are in relation to the dull colour of the product and the higher moisture content. These deficiencies result from the very nature of soda ash which is subject to the weathering action of atmosphere containing moisture and carbon dioxide. Soda ash absorbs moisture and is decomposed to a small extent to sodium bicarbonate due to the presence of carbon dioxide in the atmosphere and this decomposition imparts a dull colour to the product. For almost all purposes this weathering is of no consequence as it does not affect the quality of the product. It has been suggested by Tata Chemicals that such of the consumers who require the product free from any weathering action may purchase their requirements in airtight packings such as drums."

Besides tariff protection, the industry has been enjoying the benefit of quantitative restrictions on imports necessitated by shortage of foreign exchange. Even the limited imports are strictly regulated. From the beginning of 1955 they were channelled through two importers—*cum*-distributors appointed by the Government. This was done, in order to prevent speculation and other undesirable activities in a scarce, essential commodity such as soda ash. Imports of heavy soda ash were arranged through Imperial Chemical Industries (Private) Ltd. Since 1st July 1956 imports of light soda were allowed only through the State Trading Corporation, which appointed four distributors, namely, Imperial Chemical Industries (India) Private Ltd., Tata Oil Mills Company Ltd., Chemical Importers and Distributors (Private) Ltd. and Chemical and Alkali Distributors Ltd. Actual imports of soda ash are indicated in the following table along with indigenous production:

(In tons)

Year	Indigenous production	Imports	Total
1951	47,528	52,101	99,629
1952	43,372	112,147	155,519
1953	56,833	35,506	92,339
1954	48,293	94,544	142,837
1955	77,272	65,985	143,257
1556	84,233	90,996	175,229
1957	92,764	84,711	177,475

The Tariff Commission has computed the fair ex-works price (plus freight disadvantage) of soda ash at Rs. 16.83 per cwt. The landed cost (ex-duty) of the product is shown at Rs. 8.86 per cwt. The difference between the fair ex-works price and landed cost ex-duty is Rs. 7.97, or as much as 96 per cent. of its c.i.f. price of Rs. 8.30. Thus a specific protective duty (standard) of Rs. 7.97 per cwt. of soda ash is required to meet the present situation as against the existing duty of Rs. 5.75 per cwt. The Commission, however, feels that it is not necessary to raise the level of protective duty. It has given a detailed explanation in support of this conclusion. One of the reasons mentioned is the limited and strictly regulated import of the product.

An important recommendation of the Commission relates to the need for ensuring satisfactory distribution of the product. The Commission has urged that arrangements should be made to import light soda ash to the extent of about 37,000 tons in 1958 and heavy soda ash to the extent of about 48,000 tons in 1958, 44,000 tons in 1959 and 7,000 tons in 1960. Apart from ensuring the importation of these quantities, efforts should be made to regulate their arrival and supply in an even manner.

RICE CROP OUTLOOK

Prospects for the 1958-59 rice harvest in Asia are particularly bright; according to the *Grain Bulletin* just published by the Commonwealth Economic Committee. Trade in rice in 1958, according to the journal, is now little below that a year earlier, the fall in shipments from Burma and Thailand and from Western Hemisphere countries being offset by larger consignments from other Asian countries.

One distinguishing feature of the trade in rice has been the appearance of Chinese rice in the world market. Thai export prices showed some further rise in September, but U.S. quotations showed little change.

Yields from the Indian autumn crop are described as "fairly good." The Chinese autumn crop is estimated at 57 000.000 tons—40 per cent. higher than last year—while the total rice crop is expected, with favourable weather conditions, to reach 180,000.000 tons, as compared with about half that total in 1957-58. About one-third of the crop remains to be harvested. The crop in Indonesia is expected to equal the large figure of 1954. Prospects in Thailand also continue to be good.

In Formosa, where a target of 2 500 000 tons of paddy has been set for 1958-59, the first crop is estimated at 1,221.000 tons—about 25 000 tons higher than last year. From Japan there are reports of a typhoon, but the extent of the damage is not yet known. The yield per acre in Australia this season is expected to be increased by 10 per cent. by the use of a newly introduced American variety which also shows greater resistance to cracking.

Details of trade in rice so far in 1958 indicate that exports are now running at a level a little below that of 1957. Shipments from Thailand during the first eight months of the year totalled 900.800 tons, as against 1,153,200 tons a year earlier, while those from Burma in January-July fell from 1,147,300 to 939.800 tons. Other Asian countries showed some increase in exports, those from Cambodia and South Viet-Nam in January-June rising from 118.600 tons and 84,000 tons to 154.700 tons and 108,700 tons, respectively.

Exports from Formosa in this period increased from 44.800 tons to 105,700 tons, while Malayan consignments in January-July rose from 65,300 tons to 134,500 tons. The rice export trade of China, as indicated by the trade figures of importing countries, has risen in the first seven months of this year to over 240.000 tons—about three-fifths greater than in the corresponding period of 1957. Shipments from the United States during January-July were reduced from 515.400 tons to 340,200 tons, and those from British Guiana fell from 25.500 tons to 8.900 tons.

DELHI CLOTH AND GENERAL MILLS FARE BETTER

RESERVES STRENGTHENED—DIVIDEND MAINTAINED

VIEWED against the general background of fall in profits, or no profits at all in some cases of the textile industry, the performance of the Delhi Cloth and General Mills Company, Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram & Co. Private Ltd., New Delhi) during the year ended 30th June 1958 must be regarded as encouraging. It is true that the D.C.M. is more like a holding company than one engaged solely in textiles, as it is a producer of (1) sugar and its by-products, (2) such heavy chemicals as caustic soda, acids and fertilisers, and (3) *vanaspati*. But textiles account for a major portion of the Company's business. Further, while sugar and chemical industries fared well in the year under review, *vanaspati* had a difficult time owing to inadequate supply and, consequently, high cost of raw materials. The Company's results for 1957-58 are, therefore, highly creditable to the Company's management.

The Company's profit—both gross and net—for 1957-58 is better than that for 1956-57. The dividend has been maintained, albeit at the modest rate of 8 per cent. A higher dividend could have been recommended by the Directors, but they have wisely chosen to strengthen the reserves, thereby following an appropriation policy in keeping with the advice of the Government.

The gross profit for the year under review works out to Rs. 228.97 lakhs, showing a small improvement of Rs. 1.88 lakh over Rs. 227.09 lakhs for the previous year. Although this improvement is by no means significant, especially as compared with the impressive rise of over Rs. 1.50 crore in sales proceeds and of a little over Rs. 3 lakhs in other income, it has the merit of having reversed the downward trend noted in the Company's earnings in the preceding three years in succession. It may be noted that the Company had earned a record gross profit of Rs. 324.39 lakhs in 1953-54. From this level, it steadily declined to touch a low of Rs. 227.09 lakhs in 1956-57, a fall of as much as Rs. 97.30 lakhs during a short period of three years.

As against the meagre rise in gross profit, the net profit at Rs. 68.27 lakhs is Rs. 30.64 lakhs higher than Rs. 37.63 lakhs for the preceding year. This is due to the substantial reduction in the provision for taxation and to some extent for depreciation as well. Thus, the taxation account has been credited with only Rs. 59.18 lakhs, as compared with Rs. 80.68 lakhs a year before. The amount reserved for depreciation has been lowered from Rs. 97.16 lakhs to Rs. 88.91 lakhs. But it is noteworthy that the entire rise in net profit, plus something more, has been ploughed back. Thus, the Directors have allocated a sum of Rs. 36.10 lakhs to reserves, as against nothing at all in the previous year. This allocation comprises Rs. 20 lakhs to development reserve and Rs. 16.10 lakhs to development rebate reserve. The dividend to ordinary shareholders has only been maintained, as stated at the outset, at the rate of 8 per cent. paid for 1956-57, to which level it had been lowered from 10 per cent. for 1955-56, after having been stepped up from 9 per cent. per annum for the preceding two years.

The following comparative table gives a bird's-eye view of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	29,41.60	27,84.38	23,61.13	18,86.51

* Approximate.
† Including excise duties.
‡ Includes provision for contingencies.

The gross sale proceeds for the year under review amounted to Rs. 29.42 crores, having risen from Rs. 27.84 crores for the previous year and Rs. 23.61 crores two years earlier. Other income has also increased from Rs. 11.96 lakhs in 1956-57 to Rs. 15.03 lakhs. As against these increases, manufacturing, establishment and other expenses advanced by Rs. 1.22 crore to Rs. 27.11 crores, due mainly to the high cost of raw materials consumed. Another significant factor responsible for the swelling of expenses was the expenditure relating to excise duties. On sugar alone, excise duty and sugarcane cess claimed Rs. 273.42 lakhs of the Company's revenue, as against Rs. 211.46 lakhs in 1956-57.

The rising costs and lower selling prices which have been the feature of the textile industry for the past two years has affected this Company's mills as well. The changing policy of the Government with regard to excise duty caused widespread uncertainty in the cloth markets. It is, however, gratifying to hear that the Company's mills at Lyallpur have shown satisfactory results. Schemes with regard to its renovation and modernisation are in hand. The working of the confectionery and the distillery plants was normal as also the sugar factories which did well during the year. The Directors state that, owing to the discriminatory policy in the matter of excise duty and cane cess amounting to about Rs. 13 per maund in favour of *khandsari* sugar, the production of *khandsari* is rapidly going up. They, therefore, fear that, in the coming years, *khandsari* sugar could be a serious threat to the white sugar industry. The chemical units of the Company showed all-round improvement during the year. It is proposed to further increase substantially the capacities of the Company's caustic soda, acids and fertiliser plants in the coming years. Despite higher production and better efficiency, the *vanaspati* section continued to be unstable, "on account of the basic speculative nature of the market for oil and *vanaspati*," according to the Directors.

A chart contained in the Directors' report on the Company's distribution of revenue for 1957-58 indicates that raw materials took up 61.7 per cent. of revenue, employees 15.8 per cent., Government 11.3 per cent., depreciation, development rebate, etc., 3.6 per cent., sales expenses 3.5 per cent., administration and operation, etc., 2.3 per cent., dividends 1 per cent., and reserves 0.8 per cent.

The Company's paid-up capital at Rs. 408.66 lakhs is made up of 1,353,449 ordinary shares of Rs. 25 each, 40,225 ordinary shares of Rs. 2-8 each and the balance in four categories of cumulative preference shares of Rs. 25 each of which only Rs. 10 per share has been called up on the fourth cumulative preference shares. Calls paid in advance amount to Rs. 2.09 lakhs. Reserves and surplus aggregate Rs. 364.35 lakhs. There is a debenture liability of Rs. 100 lakhs carrying interest at 5½ per cent. Secured loans and advances from banks have been reduced from Rs. 507.51 lakhs to Rs. 431.47 lakhs. Unsecured loans, including provident fund, fixed and other deposits, on the other hand, have increased from Rs. 181.01 lakhs to Rs. 206.25 lakhs. Other current liabilities, including the provision for taxation at Rs. 101.97 lakhs, account for Rs. 263.17 lakhs. The total of all current liabilities amount to Rs. 900.89 lakhs. The current assets aggregate Rs. 1,242.62 lakhs. The gross block of the value of Rs. 1,281.27 lakhs, including additions during the year of Rs. 111.48 lakhs, has been written down to Rs. 533.37 lakhs.

The Rs. 25 paid-up ordinary shares of the Company are being nominally quoted at Rs. 30.50 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 7.01 per cent. per annum.

JESSOP & CO., LTD.

In the course of our review of Jessop and Company's working during the year 1956-57, published in *Commerce* dated 18th October 1958 (vide page 658), it was stated that "the Company had paid a dividend of 12½ per cent. for 1955-56 as against 30 per cent. for 1954-55 . . . the dividend of 12½ per cent. for 1955-56 was on a higher capital of Rs. 102 lakhs. . . ." This is not correct. Though the Directors had recommended a distribution of 12½ per cent. for 1955-56, the shareholders agreed at the annual general meeting to forgo the dividend for the year in the interests of the Company. Accordingly, no dividend was paid for 1955-56.

AHMEDABAD ELECTRIC'S PROGRESS STEADY

EARNINGS IMPROVE

THE Ahmedabad Electricity Company Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) has had one more year of satisfactory operations in terms of both profit and turnover. The year pertains to the twelve months ended 31st March 1958. Revenue from sale of energy has increased further and so has its profit. Both these factors indicate that the Company had steadily maintained the upward trend in progress witnessed in the preceding years. The results for 1957-58 are not strictly comparable with those for the previous accounting period as it covered a period of only six months, that is, 1st October 1956 to 31st March 1957. It may be remembered that the Company had to change its year of accounting from 30th September to 31st March in order to comply with the provisions of Rule 26 of the Indian Electricity Rules, 1956. It should, however, not be difficult to form an idea of its progress since the Company's working preceding the six months referred to above is for a full one-year period. The gross profit at Rs. 117.03 lakhs is slightly better than twice that at Rs. 58.12 lakhs for the half-year ended March 1957. It is also Rs. 5.50 lakhs higher than Rs. 111.53 lakhs for the year ended September 1956. The net profit, after providing Rs. 44.28 lakhs for depreciation, as against Rs. 22.05 lakhs last half-year and Rs. 5 lakhs for wealth tax, as against Rs. 4.80 lakhs for wealth tax and Rs. 13,400 for other taxes, amounts to Rs. 63.59 lakhs, as against Rs. 28.68 lakhs for the half-year ended March 1957. It will thus be seen that the net profit for the year under discussion is much more than twice that for the previous half-year. The Directors have recommended a final dividend of Rs. 4 per share which, together with the interim of Rs. 2.50 per share paid earlier, works out to 6½ per cent. for the year, which was the rate for the half-year ended March 1957 and the year 1955-56. The Company had paid a dividend of 5 per cent. for 1954-55.

In order to maintain the dividend at 6½ per cent., the Directors have had to draw some amount from the reserve this year also. Accordingly, they have withdrawn Rs. 2.07 lakhs from the dividend equalisation reserve. Out of the net profit, a sum of Rs. 3.47 lakhs has been transferred to contingencies reserve, as against Rs. 3.40 lakhs allocated a year ago. The employees' retiring gratuities reserve gets a higher allocation of Rs. 3.66 lakhs, as against Rs. 2.65 lakhs. In addition, the development reserve has been credited with Rs. 1.30 lakh, as against nothing in the half-year ended March 1957.

Although the reserves have received an aggregate amount of Rs. 8.43 lakhs, in actual effect they amount to only Rs. 6.36 lakhs if allowance is made for the withdrawal of Rs. 2.07 lakhs from dividend equalisation reserve. This position is, however, better as compared with that a year earlier when as much as Rs. 6.20 lakhs were taken from the dividend equalisation reserve, as against an addition of only Rs. 6.05 lakhs to the reserves, thereby resulting in a net depletion of reserves to the tune of Rs. 15,000.

The following comparative table shows at a glance some of the relevant features of the Company's working during the year ended March last, against the background of its results for the half-year ended March 1957 and the two years ended 30th September 1956:

(In lakhs of rupees)

	For the year ended 31st March 1958	For half year ended March 1957	For the year ended 30th September	
			1956	1955
Earnings from sale of energy ..	399.99	177.89	386.46	299.18
Other income	7.45	3.58	2.95	5.81
Expenses	290.39	123.30	278.08	199.03
Gross profit	117.03	58.12	111.53	75.96
Managing Agents' commission.	4.10	2.46	5.37	1.80
Depreciation	44.28	22.05	44.05	36.84
Taxation	5.00*	4.93	—	—
Net profit	63.59	28.68	61.21	35.12

Promotion, share capital and other expenses written off ..	0.27	0.40	0.42	0.36
Transfer to reserves	3.47	3.05	13.46	3.83
Dividend	56.86	28.43	55.77	37.93
	(6½%)	(6½%)	(6%)	(5%)
Carry forward	Rs. 857	Rs. 1158	Rs. 440	Rs. 195

* Provision for wealth tax.

Sales of energy during the year under review amounted to 630.63 million kw.h., as against 548.69 million kw.h. for 1955-56 and 485.98 million kw.h. for 1954-55. During the year under review, 5,057 new consumers were connected, bringing their total number to 57,114. This includes 115 large high tension consumers and the North Gujarat Grid. Referring to the Company's progress in generating capacity, its transmission and distribution system, etc., the Directors state thus:

"With the exception of No. 5 (Asea) turbo-alternator which met with a mechanical failure in April 1957, the plant at Sabarmati has been kept in good operating condition and has given excellent service. The No. 5 set has since been thoroughly repaired and overhauled and is now operating satisfactorily. There has been no change in the total generating capacity which stood at 142,500 kw. The peak load at the station increased by 15,200 kw. to 128,600 kw. of which the North Gujarat Grid scheme accounted for 28,050 kw. showing an increase of 5,800 kw. over last year.

"During the year, 9.31 miles of H.T. mains and 19.25 miles of L.T. mains were laid. In addition, the H.T. ring mains were reorganised which involved replacing some 2 miles of cables by cables of a larger capacity. There has been no change in the 66 kv. system which remains at 27.91 miles. Two switch houses and four substations for general supply purposes and eight substations for rural electrification were erected and commissioned during the year."

The balance-sheet as at 31st March 1958 shows that the Company's paid-up capital is unchanged at Rs. 874.78 lakhs, all in ordinary shares of Rs. 100 each. As against this, the reserves and surplus aggregate only Rs. 79 lakhs. The comparatively low position of the reserves in relation to the paid-up capital is due to the large amount of additional capital raised by the Company in recent years to finance its large development schemes. Secured loans consisting of 4½ per cent. mortgage debentures, redeemable in June 1960, amount to Rs. 200 lakhs. The gross block of Rs. 13.90 crores, including additions during the year of Rs. 34.10 lakhs, stands written down at Rs. 10.76 crores. Capital work-in-progress (including plant and machinery in transit) amounts to Rs. 39.76 lakhs. Miscellaneous expenditure and losses account for Rs. 6.19 lakhs. The current assets aggregate Rs. 169.05 lakhs (of which cash and bank balances account for Rs. 12.18 lakhs only) and cover the current liabilities amounting to Rs. 137.77 lakhs by a sizable margin.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 99.30 *cum-div.* (final dividend Rs. 4) and, on an *ex-div.* basis, the yield is 6.8 per cent. per annum.

WORKING OF COMPANIES ACT IN SOUTHERN REGION

During the quarter ended 30th September 1958, 45 companies with an authorised capital of Rs. 89.60 lakhs were registered in the Southern Region comprising the four States of Madras, Andhra Pradesh, Mysore, and Kerala and all of them are private limited companies. The total investment during the period by way of increase in the paid-up capital of companies aggregated Rs. 221.12 lakhs. The largest number of flotations has been under the category of chit or *kuri* business which has accounted for 8 companies, followed by motion picture production and distribution business which has accounted for 5 companies.

During the period under review 79 companies, including a banking company and an association not for profit, went into liquidation and the total paid-up capital of the companies concerned was Rs. 83.75 lakhs. 28 companies were struck off the Register of Companies as defunct and the paid-up capital involved was Rs. 3.28 lakhs. A private company and a banking company have been restored to the Register of Companies.

APPLICATION FORMS UNDER COMPANIES ACT AMENDED

The basic form for companies to apply to the Central Government for approval of any matter specified in Section 411 (b) of the Companies Act has been amended by the Government. This has been done to provide, among other things, for the submission by companies of additional data relating to remuneration payable to relatives of managing directors, commissions and other earnings of managing agents under the relevant sections of the Companies Act.

Under the Companies Act, every company seeking approval of the Central Government in respect of any matter specified in Section 411 (b) of the Act is required to submit its application in the basic form No. 25 of Annexure A to the Companies (Central Government's) General Rules and Forms, 1956. Notifications amending the basic form have been published in the *Gazette of India*. Forms 28 and 29 have also been amended in certain respects.

A BOOK ON COMPANY LAW

Readers of *Commerce* will be happy to know that the series of articles on Company Law by Mr. F. R. Ginwalla, which appeared in this journal in eight successive weeks ended 21st June 1958, has now been published in book form. Entitled *Company Law and Problems of Corporate Enterprise*, the book can be had from Messrs. N. M. Tripathi Private Ltd., Bombay. It carries all the articles, revised and supplemented by additional information and index to sections and a general index. Mr. D. L. Mazumdar, Secretary to the Government of India, Department of Company Law Administration, has contributed the foreword to the book.

BELAPUR CROSSES THE PEAK

PRODUCTION AND PROFIT FALL—FINANCES IMPROVE FURTHER

IT is already well known that, for the year ended 30th September 1958, the Directors of the Belapur Company, Ltd. (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) have recommended a dividend of Rs. 18 per share *plus* a bonus of Rs. 2 per share or a total of Rs. 20 per share of Rs. 50 each, equivalent to 40 per cent. per annum. This is undoubtedly a record in the Company's history. Excepting in this one respect, the results for 1957-58 are well below the best and have failed to come up to the records established in 1956-57. Indeed, the profits are the lowest since 1953-54. Sugar production was down by 10 per cent., while expenses kept up their upward trend. The profit is still large enough to cover in full the increased distribution to shareholders. Only, the transfers to reserves have not been maintained at the generous levels of the previous years.

The following comparative table shows at a glance how the Company fared in 1957-58, as compared with three preceding years:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds of sugar (gross) ..	216.58	189.42	148.12	141.70
Other income	4.30	3.58	3.02	2.30
Closing stocks	34.49	47.68	48.69	32.46
Manufacturing and other expenses	81.52	76.09	73.78	71.75
Excise duty and sugarcane cess	69.13	42.94	28.28	24.89
Gross profit	57.04	77.96	60.32	59.36
Managing Agents' commission .	5.40	7.44	6.07	5.98
Provision for—				
Depreciation	2.77	2.57	3.16	4.19
Taxation	17.25	20.00	17.75	14.50
Net profit	31.02	47.95	33.34	34.69
Excess provision written back	8.27	0.71	..	..
Transfer to—				
Reserve fund	11.81	10.00	8.00	7.00
Other funds	..	10.80	7.00	12.00
Dividend	28.20	25.38	18.80*	15.04
	(D. 36% +B.4%)	(D 36%)	(D. 32%)	(D 32%)
Carry forward	2.88	3.00	0.53	0.99

* Dividend of Rs. 16 per share on the old shares and Rs. 8 per share on the new bonus shares ranking for dividend from 1st April 1956.

It will be noted that, though sugar production was lower by about 10 per cent., sale proceeds were higher by Rs. 27.16 lakhs. This is due partly to the higher opening stocks—the value of closing stocks shows a drop of Rs. 13.19 lakhs—and partly to the inflation in the cost of producing sugarcane and making sugar and, above all, to the steep increase in excise duty. In fact, the increase in excise duty and sugarcane cess alone is as much as Rs. 26.19 lakhs. It is, therefore, no wonder that the gross profit has markedly fallen, from the peak of Rs. 77.96 lakhs established in 1956-57 to Rs. 57.04 lakhs, a decline of nearly Rs. 21 lakhs or about 27 per cent.

Lower profit has naturally meant lower tax provision and managing agency commission. The transfer to depreciation has, however, been raised slightly.

After the aforesaid essential provisions, the net profit works out to Rs. 31.62 lakhs. This is Rs. 16.33 lakhs, or 33 per cent., smaller than that for the preceding year and is the lowest to be recorded since 1953-54 in which year a net profit of Rs. 30.74 lakhs was made. Low as it is, it is sufficient, as stated at the outset, to cover the 40 per cent. distribution to shareholders, requiring Rs. 28.20 lakhs.

As will be seen from the table, a sum of Rs. 11.81 lakhs has been credited to the reserve fund, that is, to general reserve, but nothing to other reserves. The total amount ploughed in is the lowest for the past several years. It must be noted that, as against Rs. 11.81 lakhs added to the reserve fund, a sum of Rs. 8.27 lakhs has been withdrawn from taxation reserve (shown in the balance-sheet under liabilities and provisions) representing excess provision made in previous years. Accordingly, the net accretion to total reserves is only Rs. 3.54 lakhs.

The relatively small addition to reserves and the payment of a higher dividend need not be regarded as contrary to the sound appropriation policy pursued by the Company's management hitherto. For the Company's reserve position is strong, as we shall presently show. If, however, the Company is not to evoke the envy of others and avoid misunderstanding among politicians, the vast majority of whom are socialists, it must think of investing its reserves in new lines of manufacture which will justify expanding its capital base. There are quite a few directions in which a financially strong sugar company, with its own sugarcane plantation, can expand. It is to be hoped that this question will receive the attention of Belapur's Board of Directors. If the Company does not evolve a positive policy in this respect, it will strengthen the hands of those critics who contend that private enterprise in India is not dynamic.

The fall in sugar production is due, according to the Directors of the Company, to unusually hot weather and shortage of rains, both of which combined to result in a lower tonnage of sugar per acre. Another interesting point disclosed by the Directors' report is that the Company exported its full quota of 503 tons of sugar under the Government scheme and that, if it had sold this sugar in the domestic market, its profit would have been better.

The balance-sheets of the Company in the past have always made pleasant reading, disclosing, as they did, a sound financial position. The latest one, as at the end of 30th September 1958, is no exception. Incidentally, few companies in India publish their balance-sheets and profit and loss and appropriation accounts within 45 to 50 days of the end of the financial year and pay dividends within three months. A sound financial position, a good dividend record and, what is more, prompt payment of dividend—it is these three factors that enable the Company's shares to hold a prominent position among the blue chips of India.

To revert to the Company's latest balance-sheet. The paid-up capital is unchanged at Rs. 70.50 lakhs. Reserves and surplus have gone up from Rs. 121.44 lakhs to Rs. 136.15 lakhs, and are very nearly double the paid-up capital. Of these reserves, general reserve alone stands at the impressive level of Rs. 113.37 lakhs. Gross block aggregates Rs. 103.92 lakhs, of which Rs. 3.45 lakhs represent additions made in 1957-58. These have been well depreciated; the total amount of depreciation provided is Rs. 58.72 lakhs, so that the net block is no more than Rs. 45.20 lakhs. Current liabilities and provisions amount to Rs. 65.87 lakhs. Over the year, they have declined by Rs. 24.26 lakhs. The current assets total Rs. 227.32 lakhs, providing a 3½-fold cover to current liabilities and provisions. Of the current assets, cash balances alone amount to Rs. 85.05 lakhs and investments in Gilt-edgeds a little over Rs. 23 lakhs. The rest are stores, spares, etc. (Rs. 28.17 lakhs), stocks (Rs. 34.49 lakhs), crop-in-progress (Rs. 48.05 lakhs) and book debts (Rs. 7.58 lakhs). It will thus be seen that, over the year, reserves and surplus have expanded, while liabilities have fallen. In other words, the Company's financial position has become stronger.

The Rs. 50 paid-up shares of the Company are currently quoted at Rs. 315 *cum*-dividend, to give a yield of a little over 6.6 per cent. per annum.

COMPANY REGISTRATIONS

FILMALAYA PRIVATE LTD. (First Director: Mr. S. Mukherjee.) Business: Production and exhibition of cinematographic films. Authorised capital: Rs. 5,00,000. Private company. Address: 'Grotto Villa', 2nd Floor, Hasnabad Lane, Santacruz, Bombay.

POISAR UDYOG PRIVATE LTD. (First Director: Mr. Harendra Ratilal Aslot.) Business: Manufacturers and dealers in motor vehicles. Authorised capital: Rs. 5,00,000. Private company. Address: Poisar, Borivili, Bombay.

BAKHTAWAR CONSTRUCTION CO. PRIVATE LTD. (First Director: Mr. N. M. Irani.) Business: To take over the business of "Associated Construction Corporation." Authorised capital: Rs. 5,00,000. Private company. Address: 134-136, Zaveri Bazar, Bombay 2.

COOPER ENGINEERING PAYS MORE

PROFIT OF KUMARDHUBI ENGINEERING LOWER

Cooper Engineering Ltd.

THE directors of the above Company [Managing Agents: Messrs. Walchand & Co. (Private) Ltd., Bombay] present the audited accounts of the Company for the year ended 30th June 1958.

The net profit for the year after providing Rs. 4.80,000 (Rs. 2.33,000) for taxation and Rs. 2,28,100 (Rs. 2,24,786) for depreciation amounts to Rs. 5.34,108 (Rs. 2,06,935) to which is added the amount brought forward from the previous year of Rs. 67,219 (Rs. 95,198) making a total of Rs. 6,01,327 (Rs. 3.02,133). The directors have allocated for development and special depreciation reserve Rs. 2,35,800 (Rs. 58.514) and for general reserve Rs. 50,000 (*nil*). The directors now recommend payment of a dividend on ordinary shares at 7 (7) per cent. plus 3 (*nil*) per cent. as bonus without deducting income-tax absorbing Rs. 2.52.000 (Rs. 1,76,400) leaving a surplus to be carried forward of Rs. 63.527 (Rs. 67,219).

The directors are pleased to inform that the Company has maintained the progress in sales of its products during the year under report. There is good demand for oil engines, machine tools and looms.

The directors are also glad to state that this year marks the completion of 25 years of manufacture of the diesel oil engines by the Company at Satara Road Factory.

The Company had taken part in the Exhibition held at Damascus and also sent one engine and pump for exhibition in the Government of India Show Room at Jeddah (Saudi Arabia) which created a good impression.

During the year under report, the Company has stepped in export of oil engines and pumps to Middle East and Far East countries. The Central Government has given permission to the Company to manufacture planing machines in collaboration with foreign manufacturers.

The Company has received sanction from the Controller of Capital Issues to issue shares and/or debentures of the total value of Rs. 20 lakhs. The matter is under consideration. The shares of the Company have been listed on the Stock Exchange, Bombay, with effect from 17th January 1958.

The income-tax assessments of the Company are completed upto year ending 30th June 1954. The Company has gone in appeal in respect of the assessment for the year ending 30th June 1954.

Accounts in brief are as under:—

Kumardhubi Engineering Works, Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th November 1957.

The profit and loss account after providing for all charges and making provision of Rs. 7,21,000 (Rs. 7,25 000) for taxation, Rs. 92.266 for wealth tax and Rs. 2.85,718 (Rs. 2.60,124) for depreciation, shows a profit of Rs. 5.69,214 (Rs. 8,88,675) to which is added the balance brought forward from the previous year of Rs. 25,110 (Rs. 21,425) making a total of Rs. 5,94,324 (Rs. 9.10,100). From this is deducted the amount transferred to reserve for bad and doubtful debts Rs. 18.895 (Rs. 24,062), reserve for tax contingency Rs. 80,000 (Rs. 88,000), development rebate reserve Rs. 11,000 (Rs. 57,000) and reserve for plant renovation Rs. 1,25,000 (Rs. 2.75 000) leaving an available balance of Rs. 3.59,429 (Rs. 4.66,038). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares of 5 per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 60 000 (Rs. 60,000), by payment of a dividend on the ordinary shares at the rate of 45 (62) naye Paise per share without any deduction for income-tax payable by the Company absorbing Rs. 2,76,480 (Rs. 3.80 928) and by carrying forward Rs. 22 949 (Rs. 25,110).

Referring to the observations in the auditors' report for the year ended 30th November 1948, the directors decided to revalue the fixed assets of the Company to a figure corresponding more closely to market values at that time by the addition of the sum of Rs. 12,93,000 and to create a reserve of similar amount named reserve for revaluation of assets, which would be used specifically for the purpose of making adjustments in the future value of the fixed assets.

The directors, therefore, feel that it is necessary to calculate depreciation on actual cost only and that, if a lower valuation of the fixed assets of the Company is called for in the future, a suitable adjustment may be made by utilising the above reserve.

General.—The Company's reduced profits occur for two main reasons. Lack of steel does not permit the Structural Shop to function at its best, and the change in pattern of demand for steel castings for wagon builders has required considerable expansion of the Company's Foundry layout, which expansion is not yet completed, with the result that during 1957 and 1958 the production capacity has been curtailed.

In addition, during the year there has been a marked deterioration in discipline in the ranks of labour and so far it has not proved possible to persuade them that decreased production inevitably long-term means less wages.

A quite impossible demand was put forward, but there are signs that a more reasonable mood may be appearing and a recently signed agreement covering these demands has indicated a willingness to abide by a code of conduct which should prove a basis for building up happier relations in the future.

Accounts in brief are as under:—

Karanpura Development Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co., (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1957.

General Report.—In 1955 the Coal Commissioner's organisation advised the managing agents that, apart from the actual areas which the Company proposed to work itself in the near future, the remainder of the Karanpura Coal Field would be developed in the Public Sector. In response, it was intimated to Government that the Company had decided to work Gidi A and Saunda B through its own resources and preliminary arrangements were made accordingly. At the same time, as an indication of the directors' desire to co-operate with Government, various geological reports, etc., covering a number of other areas, over which the Company held mining leases, were made available to the Coal Commissioner's staff at their request. This data represented results obtained after many years of detailed work, and substantial expenditure, and has not been returned.

In 1958 the Government of India notified the acquisition of Gidi A, Saunda B and Bacchra (held on mining lease by the Borrea Coal Co., Ltd.), under the Coal Bearing Areas Acquisition Act. This action has left the Company with the liability of minimum royalty on the remaining areas, while the Company is now prohibited from either working them itself or from sub-leasing them to others. This matter has now been taken up with the Government of India and it is hoped that an equitable solution will be arrived at.

Bihar Land Reforms (Amendment) Act, 1958.—The Bihar State Government, which formally recognised the Company's title to all these areas as recently as 1956, is now seeking under the Bihar Land Reforms (Amendment) Bill, 1958, to acquire the Company's royalty rights. If the Bill under preparation for presentation in the Bihar Vidhan Sabha is passed in its draft form, it is feared that any compensation that is likely to be paid will be trivial in amount and non-negotiable in form.

The average return to shareholders on their investment, since the inception of this Company, has not been higher than could have been realised without any risk from Government Securities. The Company's expectations that the Karanpura Coal Field would one day play an important part in the industrial development of the country are in the process of being fulfilled but the Company, which undertook all the preliminary surveys and other work in connection with prospecting, proving, planning, etc., while waiting for Railway facilities and markets to develop, over a period of 35 years, is now, unfortunately, debarred from further association with such development. It is to be hoped however that the Government of India will agree to compensate the Company on a just and adequate basis for the expenditure of time, money and effort it has incurred.

Raising and despatches.—During the period 995,323 (8.77,515) tons of coal were raised and 9.94,390 (9,10,836) tons yere despatched.

The profit and loss account after providing for charges and making provisions of Rs. 1.30.509 (*nil*) for taxation, Rs. 15.300 (*nil*) for wealth tax and Rs. 10.150 (Rs. 11.519) for depreciation including the sum of Rs. 5.496 (Rs. 17,839) brought forward from the previous year, shows an available balance of Rs. 1.75.861 (debit of Rs. 34.504. Against this the directors transferred Rs. 2.00.000 from general reserve; leaving a credit of Rs. 1.65.496. From this amount the directors have provided Rs. 1.60.000 as taxation for the previous year and carried forward a credit balance of Rs. 5,496). In view of the uncertainty of the future, both as regards the Company's royalty income and its capital assets, it has been decided by the directors to recommend that no dividend be paid from the profits of the year under review but that the matter be reviewed later in the light of developments.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Hingir-Rampur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1958.

Output.—The year's output amounted to 70,653 tons, which was won entirely from No. 11 Pit. This figure is not comparable with that of 178,950 tons for the preceding year as the lockout declared on the 17th June 1957 was lifted only on 31st October 1957 and production recommenced on 20th November 1957. Moreover the previous year's production was won from two pits, of which No. 10 Pit had to be abandoned on account of flooding by Hirakud Dam waters last year.

Sales.—The total sales for the year were 63,424 tons; for the reasons given in the preceding paragraph, despatches only restarted on 25th November 1957, and, therefore, this figure cannot be compared with that of the previous year amounting to 164,360 tons.

Coal prices.—In terms of Para 74 of the Labour Appellate Tribunal Decision, colliery workers became entitled to a flat increase in dearness allowance of Rs. 4.87 per head per month from January 1958, consequent on a rise in the cost of living index figure by 10 points over 102. To meet this additional expenditure, the Central Government has sanctioned a uniform increase of Re. 0.75 per ton in the price of coal for a period of six months with effect from 17th May 1958, after which the position would be reviewed. Thus the controlled prices for the Company's steam and slack coals are at present Rs. 21.81 and Rs. 20.81 per ton respectively.

Development work.—It was reported last year that No. 10 Pit had to be closed owing to flooding by waters from the Hirakud Dam. Consequently, energetic steps are being taken to develop two new districts in No. 11 Pit, in order to increase raisings as far as possible. It is hoped ultimately to restore raisings to the original level.

Unfortunately, the negotiations with the Central and State Governments on the question of compensation on account of the flooding of the surface area above No. 10 Pit workings did not produce the desired result, in consequence of which the Company had no recourse but to file a suit against the Central Government and the State Government of Orissa in the Court of the Sub-Judge, Sambalpur, on 8th September 1958 for damages and other reliefs amounting to approximately Rs. 29,52.000.

The directors are glad to report that the Hirakud Electric Grid has started supplying energy to the colliery from 4th August 1958, and the Company's generating equipment which has now become redundant, will be disposed of in due course.

Building programme.—The sub-station building for the utilisation of power from the Hirakud Grid was the only building work undertaken during the year. It has subsequently been completed and is at present in use.

The results of the year's working, after setting aside a sum of Rs. 1,35,483 (Rs. 1,78,230) for depreciation and amortisation, show a loss of Rs. 6,52,271 (Rs. 5,535). Adding thereto the loss brought forward from the previous year amounting to Rs. 4.391 (credit of Rs. 1,144) and deducting Rs. 1,911 (*nil*) and Rs. 20,545 (*nil*) credited back in respect of managing agents' commission and selling agents' brokerage, respectively, for the previous year, there is left a balance of loss of Rs. 6,34,206 (Rs. 4,391) which is carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00.000	Gross block	43,00.791
Reserves ...	65.000	*Less*—Depreciation ...	26.55.359

Rs.	35,73,247	Rs.	35,73,247

Teliapara Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The accounts disclose a net working profit of Rs. 2,25,738 (Rs. 8,28,828) of which the profit from Teliapara amounts to Rs. 1,04,499 (Rs. 5,08,629) and Satchurie Rs. 1,21,239 (Rs. 3,20,199). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 50,000 (*nil*) from buildings and machinery reserve, there is a balance at credit of the profit and loss account amounting to Rs. 91,499 (Rs. 2,72,429). It is proposed to pay a dividend of 6 (15) per cent. and to carry forward Rs. 37,499 (Rs. 62,429).

The provision for taxation is relatively high because additional super tax had to be provided for two dividends, i.e., seasons 1955 and 1956, paid during the year. The provision for tax on notional exchange profits, made in the accounts for season 1956 and referred to in the last report, is also retained since the Pakistani authorities have not yet clarified their policy with regard to this so-called exchange profit.

Every effort is still being made to secure remittance of the Company's Pakistani trading profits but in existing circumstances it would be unwise to expect any substantial transfer of funds to this country in the immediate future.

The crop from Teliapara estate amounted to 4,46,800 (6,56,880) pounds and from Satchurie estate the crop was 3,33,230 (4,41,200). The average selling prices obtained for the teas were as follows—Teliapara Rs. 2.06 (Rs. 2.10) per pound and for Satchurie Rs. 2.00 (Rs. 2.02) per pound.

Estimates for 1958 provide for a total crop of 10,40,000 lbs. at an outlay of Rs. 15,95,260, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Gross block	19,20,187
Reserves ...	20,73,827	*Less*—Depreciation ...	6,18,208

Liabilities ...	2,89,062	Stock-in-trade	5,22,763
Profit and loss account ...	37,499	Stores and supplies ...	2,93,321
		Loans and advances ...	1,38,736
		Investments	48,981
		Cash ...	20,79,139
Rs.	43,84,919	Rs.	43,84,919

Hatikhira Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

A crop of 16,239 (16,910) maunds of tea was manufactured and disposed of for sale in Calcutta for export 14,809 maunds and for sale in Calcutta for internal consumption 1,430 maunds. The teas realised an average price of Re. 1.67 as compared with Re. 1.77 per lb. obtained for the previous season's crop. The Company's export quota for season 1957 was 13,134 maunds.

Adverse climatic conditions were again responsible for the relatively small crop produced. The year 1957 opened with a severe drought in Cachar and this condition recurred towards the end of the season. Crop prospects for the current season are much better.

The revenue account shows a loss of Rs. 9,008 (profit of Rs. 1,79,666) and after adding to this gratuity and pension Rs. 4,867 (Rs. 5,491), managing agents' remuneration Rs. 25,000 (Rs. 40,450), depreciation Rs. 61,275 (Rs. 1,12.653), initial contribution to super-annuation fund Rs. 16,437 (*nil*), short provision for taxation in respect of previous year Rs. 5,000 (*nil*) and provision for wealth tax for 1956 Rs. 4,000 (*nil*), there is a net loss for the year of Rs. 1,25,587 (credit of Rs. 68,911 after adjustments). After deducting from this the adjusted credit balance of Rs. 18,736 (Rs. 14,113) brought forward from the previous year, there is a debit balance of Rs. 1,06,851 (credit balance of Rs. 83,024 from which a dividend of 5 per cent. was paid absorbing Rs. 63,000 leaving to be carried forward Rs. 20,024) on profit and loss account, which is carried forward.

The estimates for season 1958 have been framed for a crop of 20,000 maunds of tea at a total cost of Rs. 23,33,329 which excludes capital expenditure amounting to Rs. 98,171.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,60,000	Gross block	30,19,522
Reserves* ...	10,43,149	*Less*—Depreciation ...	12,69,051
Provision for taxation ...	35,812	Net block ...	17,50,471
Liabilities ...	4,84,920	Stock-in-trade	5,15,595
		Stores ...	3,14,280
		Debts, deposits and advances ...	2,01,568
		Investments	1,000
		Cash ...	40,967
Rs.	28,23,881	Rs.	28,23,881

*Reserves are shown after deducting the debit balance of Rs. 1,06,851 in the profit and loss account.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Holders of Blank Transfers are advised to have the shares registered in their names any time before the closing of the books.

By Order of the Board,
KARAM CHAND THAPAR & BROS.
PRIVATE LIMITED,
Managing Agents.

12, INDIA EXCHANGE PLACE,
CALCUTTA-1,
Dated the 12th November, 1958.

INDO-BRITISH TRADE

The aggregate value of trade between India and the U.K. was at a lower level during the first three quarters of the current year, as compared with the corresponding period last year. The value of India's imports from the U.K. fell from £135,085,000 to £116,355.000 and its exports from £116,981,000 to £94,739,000. India's exports of tea, the principal export item to the U.K., declined from £58,866,000 to £44,783,000. Similarly, exports of leather and manufactures and dressed furs receded from £10,671,000 to £7,221.000 and miscellaneous textile manufactures from £9,358,000 to £8,244,000. Shipments of tobacco and tobacco manufactures, however, improved a little from £6,524,000 to £8,789,000.

Although the value of total imports of India from the U.K. declined appreciably during the period under review, that of machinery (other than electric) remained more or less steady at £34,086,000, as against £34,429,000. There was, however, a perceptible fall in the value of imports of electric machinery, apparatus and appliances which aggregated £13,612,000, as against £17,339,000. Likewise, India's purchase of manufactures of metals from the U.K. was lower at £9.885,000, as compared with 12,953.000. In contrast, its intake of British vehicles and aircraft moved up by no less than £8.674.000 to £20.817.000.

PHILIPS INDIA LIMITED

NOTICE OF EXTRAORDINARY GENERAL MEETING

to be held on

Saturday the 13th day of December 1958

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the abovenamed Company will be held at the premises of the Bengal Chamber of Commerce and Industry, Room No. 1, 6 Netaji Subhas Road, Calcutta 1, on Saturday the 13th day of December 1958, at 11-30 a.m., for the purpose of considering and, if thought fit, passing, with or without modification, the following resolution as an ordinary resolution:

"That, as recommended by the Directors, a further dividend of 1.4 per cent. (free of Indian income-tax) be declared for the year ended December 31, 1957, by way of addition to the dividend already declared at the Annual General Meeting of the Company held on September 27, 1958, and be payable to those persons whose names appear as members in the register of members of the Company as on December 13, 1958."

The share register of the Company will be closed from December 1, 1958, to December 13, 1958, both days inclusive.

Dividend Warrants will be sent to registered shareholders or to their mandatees, registered in the books of the Company on December 13, 1958. Powers of Attorney, etc., where necessary should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,

P. C. VINK,
Chairman and Managing Director.

7 JUSTICE CHANDRA MADHAB ROAD,
CALCUTTA 20, *November 7, 1958.*

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY STATEMENT

Consistent with the dividend policy announced by your Company in the Prospectus published last year and having regard to current requirements in financing various expansion projects in the industrial field, your Directors recommended that a dividend of 2 per cent. should be declared out of the profits for the year ended December 31, 1957, at the Annual General Meeting held on September 27, 1958. At the time the dividend of 2 per cent. was recommended representations had been made to Central Board of Revenue as to the application to the Company of Section 23A of the Indian Income-tax Act in order to obtain confirmation that a dividend of 2 per cent. out of the profits for the year ended December 31, 1957 would fulfil the requirements of the section. The Central Board's reply has now been received and has led your Directors to conclude that it is desirable to declare a further dividend amounting to 1.4 per cent. out of profits for the year ended December 31, 1957, in addition to the dividend of 2 per cent. already declared, the balance of the undistributed profit of Rs. 63,842 being supplemented for the purpose by transferring to the Profit and Loss Account the Contingency Reserve amounting to Rs. 3,00,000.

It will be appreciated that the payment of such additional dividend absorbing Rs. 3,08,000 will affect your Company's liquid position which factor may have to be taken into account when your Directors come to consider the amount of dividend to be recommended in respect of the current year.

The Directors of your Company are or may be deemed to be interested in the above recommendation by virtue of their respective shareholdings in the Company. These shareholdings and the respective amounts which the Directors will each receive by way of additional dividends if this recommendation is adopted are as follows:

	Number of shares held	Amount of additional dividend
		Rs.
Mr. P. C. Vink ...	3	.42
„ D. P. Dundердale	1	.14
Dr. P. K. Kapre ...	1,001	140.14
Mr. H. R. Vorstman	1	.14
„ J. Zantman ...	1	.14

By Order of the Board,
I. A. MACPHERSON,
Agent.

VICTORIA HOUSE,
CALCUTTA, *11th November*, 1958.

MONEY TURNS EASY

(From Our Own Correspondent)

BOMBAY, *19th November*

The pull on the short-term money market noted last week proved to be a temporary feature and conditions turned comfortable again this week. This shows that the seasonal demand for credit to finance movement of crop and other trade requirements has not yet started in right earnest, even four weeks after the commencement of the usual busy season. The return of funds to banks was so large this week that they all became leaders. Inter-bank call money among Exchange banks and big Indian banks, which was bid up to 2¼ per cent. on Friday last, slumped to 1¼ per cent. lenders over today. Some transactions were reported even at 1½ per cent. The rate among the smaller Indian banks did not, however, decline much, the common rate being 2¼ per cent. House money at seven days' notice was taken up 3½ to 3¾ per cent. and short-term deposits at 3½ to 4 per cent.

Despite the change for the better in the conditions, the response to this week's Treasury Bill tenders was not as encouraging as in the previous week. As against an invitation for Rs. 4 crores, the amount offered this week aggregated Rs. 5.02 crores, the corresponding amount in the previous week being Rs. 7.20 crores. Tenders at Rs. 99.390 were accepted in full and those at Rs. 99.385 allotted approximately 83 per cent. The average rate of accepted tenders was 2.458 per cent. per annum.

After a lapse of three weeks, during which period the sales were at the rate of Rs. 4 crores per week, the authorities have reduced the amount for next week to Rs. 3 crores. In addition, the Reserve Bank of India has announced that intermediate sales at Rs. 99.401 per cent. will be held from 19th to 22nd November. There were no sales of these bills last week, though they had been offered.

The Reserve Bank of India statement for the week ended 14th November 1958 shows a further rise of Rs. 13.37 crores in notes in circulation, bringing the cumulative expansion in the last two weeks to Rs. 51.48 crores. Notes held in the Banking Department are lower by Rs. 4.30 crores, resulting in a rise of Rs. 9.06 crores in total notes issued. This is covered by an increase of Rs. 10 crores in rupee securities and a small contraction of Rs. 94 lakhs in rupee coin. In the Banking Department, deposits of the Central Government are higher by Rs. 1.12 crore, while those of other Governments have declined by Rs. 1.22 crore. Deposits of banks, too, have gone down by Rs. 2.95 crores. Balances held abroad show a rise of Rs. 4.11 crores, bringing the total foreign assets to Rs. 183 crores. A rise of Rs. 1.89 crores is noted in loans and advances to Governments and of Rs. 1.55 crore in other loans and advances. Investments have been further reduced by Rs. 8.67 crores, bringing the aggregate reduction in the last three weeks to Rs. 74.34 crores.

A contraction of Rs. 7.06 crores in demand deposits and of Rs. 1.06 crore in time deposits is disclosed by the Scheduled banks' statement for the week ended 7th November 1958. Borrowings from the Reserve Bank have gone up by Rs. 2.40 crores. Advances and bills purchased and discounted together show a rise of Rs. 5.70 crores. Investments have been further enlarged by Rs. 22.03 crores and this is reflected in a fall of Rs. 25.38 crores in total cash balances. Money at call and short notice has, however, gone up by Rs. 2.12 crores.

The main feature of the trading in the Gilt-edged market during the week was a spurt in the prices of 4 per cent. and 4½ per cent. State loans. There was good institutional enquiry for 4 per cent. issues and the Life Insurance Corporation was reported to have shown interest in 4½ per cent. loans. There was a general scarcity of floating stocks and this gave an additional fillip to prices. Central Government loans were dull with limited enquiries. There were no changes in quotations and whatever business passed was done only at quoted rates, 3 per cent. 1986 Conversion loans had buyers at Rs. 73.15 and 3 per cent. 1970-75 at Rs. 90.20. 3 per cent. 1966-68 had enquiries at Rs. 94. Small business was done in 3 per cent. 1964 and 1963-65 at Rs. 93.65. 3½ per cent. 1964 had sellers at Rs. 99.90, while 3½ per cent. 1965 was in demand at Rs. 99.70. Among State loans, 4 per cent Bombay 1964 gained 15 nP to Rs. 100.15 and 1967 20 nP to Rs. 99.90. West Bengal 1964 was marked up by 10 nP to Rs. 99.95 and 1967 by a like extent to Rs. 99.40. Madras 1967 and 1968 gained 5 nP each to Rs. 99.45 and Rs. 99.40, respectively. Andhra 1967 put on 5 nP to Rs. 99.45 and 1968 10 nP to Rs. 99.40. U.P. 1968 improved by 5 nP to Rs. 99.35 and 4½ per cent. 1970 rose by 10 nP to Rs. 100.20.

During the week under review, sterling gained some strength in terms of the U.S. dollar. In New York, spot sterling hardened from $2.80.9/16-2.80⅝ to $2.80.31/32-2.80.23/32 and three months' forward from $2.79¼-2.79.15/16 to $2.80.1/8-2.80.3/16. Transferable sterling advanced from $279.40-$279.50 cents to 279.55-279.65 cents.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, *17th November*

The linseed market remains dull with little price movement and very limited activity. Seeds prices are maintained, owing to poor supplies. Demand, however, has been negligible, with most of the local millers either closed or crushing other oilseeds. Demand for oil is very poor and absence of goods in the hands of either manufacturers or traders has not affected the prices owing to lack of enquiries from both consumers and dealers.

The latest available quotations are: Ready Rs. 25-14 and November Rs. 25-12 per maund.

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, *19th November*

The bullion market, which ruled dull throughout last week including the *Moorat* session, was livelier during the week under review, with a spurt in the prices of both gold and silver. In fact, gold touched a new high level since May last. The rise followed speculative buying, especially by up-country traders, induced by virtual stoppage of smuggling from Pakistan and firmness of commodity markets. The white metal advanced under speculative support. The ready demand was good, while offerings were limited. There was also sizable bear-covering. The net gain in prices over the week would have been more marked but for profit-taking in the middle of the week on reports of import duty payment on 80,000 Tibetan coins at Kalimpong.

Forward silver (27th November settlement) opened at Rs. 187-6 and gradually moved up to Rs. 189-4 today and closed at Rs. 189. The next settlement advanced from Rs. 188-2 on Thursday to Rs. 189-15 today. The *badli* remained unchanged at As. 15 against bulls.

Ready silver encountered good support and registered a gain of Rs. 2-3 over the week, today's closing rate being Rs. 188-15. The daily average arrivals were of the order of 19 bars, while the offtake was 11 bars per day on an average. The floating stocks of silver are reported to be 1,300 bars.

Gold for forward delivery (26th November settlement) hardened from Rs. 111-9 to Rs. 113-5 yesterday and, after receding to Rs. 112-12-6 today, wound up at Rs. 112-15. The net rise over the week was thus Re. 1-6. The next settlement, which stood at Rs. 111-12 on Thursday, was quoted at Rs. 112-10 today. The *badli*, which was As. 3 against bulls last week, turned in favour of them in the course of the week and stood at As. 5 today.

Ready gold hardened from Rs. 111-13 to Rs. 113-10-6 before finishing at Rs. 113-3. The premium on forward, after widening from As. 4 to As. 7, finished unchanged at As. 4. The daily average arrivals were 4,000 tolas, while the offtake was 3,500 tolas per day on an average. The floating stocks of gold are estimated at 30,000 tolas.

In London, spot silver eased from 77¼d. to 77⅛d. and forward from 77¼d. to 76⅞d. Gold fluctuated between 250s. 2½d. and 250s. 1½d. before closing at 250s. 1½d. The price of silver in New York was unchanged at 90½c.

The following comparative table shows at a glance the trend of the market during the week under review:

	19-11-58	Highest	Lowest	13-11-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	113 3	113 10½	112 0½	111 13

GOOD DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, *17th November*

During the week under review, the hides and skins market tended to be stable. Demand for upper grade cow and buff was strong. There was a slight fall in the prices of lower grade cow. The Madras dealers were keen buyers of goat and sheep with an inclination for fresh ones from the butchers. The main purchases of heavy stuff goods were the local tanners. Supply position was quite satisfactory.

The latest quotations are: Wet salted cow 1st grade Rs. 375 and 2nd grade Rs. 350 per score; Wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; Goat 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces; Sheep 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces.

HIDES FIRMER

(From Our Own Correspondent)

MADRAS, *17th November*

Arrivals of tanned cow hides and calves were moderate and clearance slow during the week under review. Prices locally ruled firmer and sellers were quoting two pence above U.K. levels. Trading was difficult with U.K. importers who had been sternly resisting higher prices demanded at origin. Increased prices, however, were established on certain marks of cow hides and buff calf skins.

In the tanned goat skins section, E.I. tanners found that prices in the raw centres were hardening. They were, therefore, not willing to sell their output at below replacing costs. There was a difference of 3d. between the buyers and sellers which prevented business. There was brisk demand for medium class sheep skins and the market was steadier.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *19th November*

The steady upward trend noted in the cotton futures market earlier in the week under review flared up into a bullish fervour on Monday, following the announcement on Sunday night of an export quota for 250,000 bales of cotton and reduction in export duty on all varieties of cotton stapling upto 25/32", including Bengal *Deshi*, from Rs. 50 to Rs. 25 per bale. While the duty reduction was not unexpected—it was anticipated for a long time—the generous quota of 250,000 bales certainly took the trade by surprise, coming as it did not long after the season's first quota for a like amount issued on 7th October. The present quota comprises 100,000 bales of Bengal *Deshi* 100,000 bales of cotton up to ¾" staple and 50,000 bales of cotton of stapling below ¾".

The trader's reaction to the announcement was reflected in a spurt in futures prices of as much as Rs. 15 from Saturday's closing of Rs. 615.75 to Rs. 630.75 on Monday. They felt that, now that 500,000 bales of cotton had been released for export, foreign buyers would be assured of continuity in supplies. Further, since the uncertainty regarding the export duty had been removed, foreign demand, it was expected, would pick up soon. This prompted large-scale support with the result that the market staged an impressive rally. A better trend in cloth offtake and enlarged spinner enquiries in the ready section imparted further strength to the market. The rise would appear to have been too sharp as it was followed the next day by a technical reaction and a break in values. Profit-taking led to a further fall in prices today. A part of the earlier gain was erased. Nevertheless, today's closing was Rs. 12.25 higher than last week-end quotation.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 606.50 and steadily advanced to Rs. 615.75 on Saturday, and to Rs. 630.75 on Monday but fell back to Rs. 622.50 yesterday. Commencing at Rs. 625.50 today, the contract improved to Rs. 629.50 before closing lower at Rs. 620.75. The net gain over the week was Rs. 12.25.

The trend of prices of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	19-11-58	*High*	*Low*	13-11-58
I.C.C. Moglai Jarilla (March 1959) ...	620.75	630.75	606	608.50

In the spot section, prices recorded gains. Activity was better but mills were still keeping off the market as the heavy accumulation of cloth stocks with them prevented them from making large purchases. New crop cotton continued to evoke moderate enquiries.

In the export section, following the quota announcement, prices of Bengal *Deshi* and other exportable varieties firmed up. The reaction of the foreign buyers to the quota and the duty reduction has not so far been fully assessed. Even after the reduction in duty, Pakistani *Deshi* varieties are said to be cheaper than comparable Indian cotton.

Although the immediate outlook for export is not considered bright, shippers are confident that foreign demand would revive and that the quota would be fully absorbed in due course.

The foreign section was quiet. Some enquiry was noted for Sudanese varieties following the reported reduction in the reserve prices of the Gezira Board. Importers consider the Government's silence over the question of U.S. cotton imports intriguing. The U.S. Government has already issued purchase authorisation in favour of India, covering about 78,000 bales of 'aid' cotton. They wonder why an announcement regarding imports is delayed so long, especially when the industry is starved of foreign cotton supplies.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end closings:

Bengal *Deshi* 600 (575); Berar Jarilla 665 (640); Khandesh 735 (715); Vijay 830 (800). *Delivery contracts*: Bengal 572 (568); Mathia 568 (560).

The Karachi cotton futures market, after a weak start, gathered strength towards the close of the week on speculative support induced by hopes that, since the Government of India released a large export quota and reduced the export duty on cotton, Pakistan might also follow suit. N.T.R.G. January improved from Rs. 63-6 last week-end to Rs. 63-12 and the March position gained Annas 8 to Rs. 64-14. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 57; Punjab *Deshi* 53-8; 4F Punjab Roller 61-10; S.G. 65-2; L.S.S. Punjab Roller 62.10; S.G. 66-10; N.T.R.G. New 65-10; S.G. New 76-2; 289F Punjab L.G. 68-2; New 70-2; S.G. 77-10; New 79-10.

Steady conditions prevailed in the Alexandria cotton futures market during the week. Fluctuations were narrow and turnover limited. The Karnak contracts were maintained at the 72 tallaris per lb. level. The Ashmouni contracts moved slightly higher on short-covering. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.01; January 72.07; March 72.08. *Ashmouni*: December 63.10; February 62.80.

The Sudan Gezira Board has announced its much-awaited Private Treaty sales policy. In accordance with this announcement, effective from the 12th inst., the present public auctions will continue from Tuesday to Friday; the reserve prices will be declared every Saturday morning. The Board will be prepared to consider offers from bulk buyers but will reserve absolute discretion regarding the extent of such private treaty sales. The unsold stocks of long-staple cotton in the Sudan are

reported to be of the order of 241,902 bales, comprising 87,864 bales of 1958 Gezira crop, 116,038 bales of 1957 crop and 38,000 bales of 1957 and 1958 Private Estate crop. The Sudan Gezira Board has also reduced its reserve prices on cotton.

Cotton values in Liverpool made modest gains during the week. A fair volume of mill fixation and trade buying more than offset the hedge offerings against recent purchases of East African cotton. The rise in price would have been more marked but for fears of higher U.S. export subsidy, following the fall in U.S. exports during the first quarter of the current season, as compared with the corresponding period of the previous season. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 23.35; March-April 23.10; May-June 22.80; July-August 22.05. *American cotton mixed growth contract*: December-January 23.85; March-April 23.45; May-June 22.95; July-August 22.05. *Sudan*: November-December, January-February, May-June 26.75.

New York cotton futures marked ruled subdued during the week. Prices sagged on increased hedge pressure against new crop purchases. The lower export figure for the first quarter of the season also adversely affected sentiment.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	18-11-58	12-11-58	3-11-58
Spot	36.20	36.30	36.35
December	35.91	36.02	36.32
March	35.39	36.48	36.73
May	36.12	36.17	36.51

STAPLE FIBRE YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 19*th November*

Barring staple fibre yarns which ruled distinctly firm, the yarn market presented an easy trend during the week under review. Art silk yarns encountered persistent selling on expectations of larger supplies following the recent issue of import licences against exports of piecegoods and grant of 5 per cent. import quota to established traders. Cotton yarns were generally dull. Fine and superfine counts, however, were well supported, the main reason being the drastic cut in import quotas from 25 per cent. to 7½ per cent. for the current licensing period. Staple fibre yarns evoked good buying enquiries and registered an improvement in prices. It was reported that the mills were not able to make sales in large quantities, pending the finalisation of allotment of definite quotas for raw staple fibre by the indigenous producers.

Art silk yarn prices suffered a setback. 120 Japan dropped 25 nP to Rs. 4.75. 150 Italy fell by 25 nP to Rs. 5.50. 150 Japan declined by 12 nP to Rs. 5.25 and 120 Italy by 7 nP to Rs. 5.55. Among indigenous yarns, National Rayons 120 bright cones first grade climbed down from Rs. 5 to Rs. 4.50, 150 bright cones first grade lost 9 nP to Rs. 4.50.

Staple fibre yarn (40 x 2) December delivery met with good support and rallied Rs. 15 to Rs. 619. February position gained Rs. 6 over the week, the closing quotation today being Rs. 626. Spot (40 x 2) Kohinoors gathered 3 nP to Rs. 3.25. Centurys were fully maintained at Rs. 3.19. Foreign yarns (80 x 2), however, lacked support and tended to move down. Paramounts eased by 9 nP to Rs. 9.66. Fujis shed 12 nP to Rs. 9.69.

In the cotton yarn section, ten counts Podars lost 6 nP to Rs. 12.19. Moderns were quiet at Rs. 13.25. Thirty counts Hinds receded by 24 nP to Rs. 18.76. Among 40s, Minaxis dropped 56 nP to Rs. 24.44, while Moderns gathered 25 nP to Rs. 25.25. Sixty counts Finlays were keenly sought, the rate advancing by Rs. 2.50 to Rs. 62.50. Eighty counts Moderns put on 25 nP to Rs. 71.25. Finlays were firm at Rs. 79.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago:

	19-11-1958	13-11-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	4.75	5.00
150 Japan (per lb.)	5.25	5.37
120 Italy (per lb.)	5.55	5.62
150 Italy (per lb.)	5.50	5.75
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 December	619.00	604.00
40 x 2 Kohinoor (per lb.)	3.25	3.22
40 x 2 Century (per lb.)	3.19	3.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.25
20s Modern	—	13.75
20s Hind	18.76	19.00
40s Minaxi	24.44	25.00
60s Finlay	62.50	60.00
80s Modern	71.25	71.00

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, 19*th November*

The oilseeds market was characterised by cheerful sentiment during the week under review after a prolonged spell of lull both in spot and futures. A major development of the week is the new export quota for oilcake allowed by the Government. The Government of India has decided to release a further quota of 20,000 tons of groundnut oil cake (expeller variety) for export during the period ending March 1959, according to a trade notice issued on 13th inst. by the Joint Chief Controller of Exports. It adds that established shippers will be given a quota equal to 20 per cent. of their basic exports, subject to a maximum of 400 tons per shipper from all the ports. Shipments will be allowed up to the end of March 1959. This aided the sentiment considerably.

Groundnut February 1959 contract which stood at Rs. 159.25 last Thursday spurted to Rs. 163.87 on Monday. It fell to Rs. 162.75 yesterday but it recovered today to Rs. 164.37. The modest revival in the spot demand, and reports of a small crop gave a fresh momentum to the bullish sentiment that prevailed in the futures market, following the announcement of Government's decision to allow substantial exports of groundnut oilcake. Bold ready, after fluctuating within narrow ranges, closed today at Rs. 33.50. Coromandel ready improved from Rs. 34.00 to Rs. 34.12 and khandesh quality from Rs. 33.75 to Rs. 34.25. Groundnut oil ex-mill also moved up in sympathy, its quotation having gone up from Rs. 18.00 to Rs. 18.25. Similarly, railway receipts improved moderately from Rs. 17.87 to Rs. 18.25.

The castorseed section ruled distinctly firm on reports that a sizable business, was put through with the U.S.A. in castor oil at 12.25 cents per lb. for December shipment. On substantial buying support castorseed May 1959 contract made rapid headway from Rs. 138.87 last week-end to Rs. 143.00 today. Ready Madras moved up from Rs. 27.62 to Rs. 28.50 and Kanpur quality from Rs. 26.50 to Rs. 27.12. Similarly, castor oil B.S.S. advanced by 31 nP to Rs. 16.37, and commercial quality by 19 nP to Rs. 14.56. Linseed May 1959 contract rallied in sympathy with other oilseeds and was higher today at Rs. 30.44, as against Rs. 29.75 last week-end. Bold ready fluctuated within narrow range and declined by 25 nP to Rs. 33.75. Linseed oil declined slightly from Rs. 17.50 to Rs. 17.37.

Distinctly bullish trends prevailed in the cottonseed section. Cottonseed February 1959 contract spurted by Rs. 6.25 to touch a peak of Rs. 112.00. This has been mainly due to the recent strident recovery in the cotton market. There was good buying support as well. Among other seeds, kardiseed remained steady at the closing rate of last week-end, that is, Rs. 21.00. Nigerseed Madras quality, however, fell from Rs. 32.00 to Rs. 31 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of two previous weeks.

	19-11-1958	13-11-1958	5-11-1958
	Rs.	Rs.	Rs.
Groundnut—			
Feb. 1959	164 37	159 25	160.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR STEADY

(From Our Own Correspondents)

BOMBAY, 19*th November*

The sugar market ruled steady during the week under review. Demand for small grain sugar from the Malabar coast was quite active. There were rumours of the I.S.M.A. making sizable purchases of medium grain sugar from Bombay-Deccan mills and traders at open market prices for shipment before the end of the month. There were also rumours of a slight delay in the normal monthly release, as a result of adjustment for the previous *ad hoc* releases.

Arrivals of sugar grain into the city during the week aggregated about 11,400 bags. An equal quantity arrived by trucks. Small grain was quoted at Rs. 106 per bag, medium grain at Rs. 107-Rs. 109, and large grain at Rs. 111-Rs. 118.

HESSIAN IMPROVES

(From Our Own Correspondent)

CALCUTTA, 18*th November*

A mixed trend was in evidence in the jute markets during the week under review. For, while hessian prices forged ahead following continued buying pressure in futures and a further improvement in the hessian statistical position, heavy goods were quiet and closed lower on balance, consequent on restricted buying interest and a not too encouraging stock position. So far as the raw jute market was concerned, mills purchased fair quantities in an attempt to stem the decline in prices, but since the offers far exceeded demand no improvement in the price trend was in evidence. This increased the anxiety in official circles. For, if growers were dissatisfied and failed to realise even a small profit, much jute land would go over to paddy growing and in the next season there would be acute scarcity of raw jute. The West Bengal Government is naturally seized of the importance of this problem, and it is understood that high level discussions have taken place in this connection. Trade circles considered it possible that, it having been proved that local buying would not alone lift up the prices, the Government of India would now be inclined to permit exports of the Indian varieties as unwanted by mills. Although mills in foreign countries require the best fibre which is only available in Pakistan as being surplus to it, the Indian inferior varieties in the quantities unwanted by mills here could be mixed up by Dundee manufacturers in certain proportions. Further, the Dundee industry had been so dissatisfied with the export-price policy of Pakistan that it would much desire India to export raw jute at least in token quantities in order to stabilise prices. Another possibility mentioned here was fixation of minimum prices. To enforce minimum prices, machinery is required and other problems may as well arise. Hence trade circles pointed out that export of raw jute was the better solution of the two. It is more than a month since the downtrend set in, and already growers in panic have disposed of considerable portion of their produce at the declining levels. Delay in action on New Delhi's part would mean further loss to growers.

An important event of the week was the discussion which the Forward Markets Commission, under the chairmanship of Mr. W. R. Natu, had with the Committees of the Indian Jute Mills Association and the Gunny Trades Association on the question of regulation of transferable specific delivery contracts in raw jute and jute goods. The Commission desired to bring the above contracts, which the Government of India temporarily exempted in April last when the futures trading was inaugurated, within the scope of the East India Jute and Hessian Exchange in order to establish an effective forward market on a long-term basis. The Commission explained the different aspects of the problem, and it is understood that soon the necessary by-laws and regulations would be ready.

Although the market was officially closed on Tuesday last, nominal quotations were available. Hessian 40" 10 oz. was quoted at Rs. 43.45 and B. twills at Rs. 97.50. On Wednesday, prices eased fractionally, following the announcement of lower shipment figures for the month of October. Hessian shipments at 26,000 tons were lower by 10,000 tons. and sacking shipped amounted to only 33,000 tons, as against 38,000 tons in September. As a result, the publication of lower output figures for the month received little attention. Total production amounted to 81,800 tons, as against 87,300 tons in September, and the decline was due to lower working hours, in view of the *Pooja* holidays. Compared to September, it was noted that the proportionate output of hessian declined to 40.7 per cent. from 41.1 per cent., while that of sacking goods increased to 52.6 per cent. from 52.3 per cent. This suggested that mills had not only discontinued transferring hessian looms to sacking, but that in October a reverse process was in motion. This was surprising, in view of the need to lessen sacking stocks and of increasing hessian. However, it is hoped that this would prove only a temporary feature, and thus the output figures for the current month would receive added interest. Hessian 40" 10 oz. fell to Rs. 43.35 and B. twills to Rs. 97.25. On Thursday, a further decline to Rs. 43.25 and to Rs. 96.95, respectively, was recorded, despite the fact that hessian was bought by Argentina and there was covering business on this score. At this stage, reports of steady burlap market in New York were received and this was soon followed by the announcement of a 2-million-yard increase in U.S. consumption of burlap in October. The effects of these reports on Friday were that hessian 40" 10 oz. shot up to Rs. 44.10. In the absence of business, B. twills sagged to Rs. 96.50. Yesterday, on account of selling pressure, hessian 40" 10 oz. fell to Rs. 43.75 and B. twills to Rs. 96.

Raw jute was weak. Mills continued to buy, but purchases were not enough to stem the decline in prices. Sellers were on the increase. Assam bottoms fell to Rs. 22.50 from Rs. 23.25. The latest quotations for ready delivery jute are:

	Middles Rs.	*Bottoms* Rs.
Pakistan:		
District	30.00	27.00
Northern	30.00	27.00

* * * *

Australia's expanding primary and secondary production shows that she will remain one of the biggest buyers of India's jute goods, said the Chairman of the Indian Jute Mills Association, Mr. J. I. Jamieson, in Canberra recently. Mr. Jamieson is leading a four-man trade delegation sponsored by the Indian Jute Mills Association. The other members of the delegation are the Jute Commissioner of the Indian Ministry of Commerce and Industry, Mr. A. P. Mathur; the Vice-Chairman of the Indian Jute Mills Association, Mr. D. P. Goenka; the Chairman of the Calcutta Jute Fabrics Shippers' Association, Mr. D. Duncan-Smith; and the Deputy Secretary of the Bengal Chamber of Commerce and Industry, Mr. T. R. Crook. They were accompanied by Mr. H. A. Suja, Indian Trade Commissioner in Sydney. The delegation arrived in Australia on 22nd October for a five-week visit.

Mr. Jamieson said that India hoped to share in Australia's economic development. "We are looking at the present market situation and attempting to assess future trends and prospects." Mr. Jamieson added that what the delegation had already learned indicated that Australian buying of jute goods would at least remain at its present level of 100,000 tons a year—10 per cent. of India's jute production. There were signs that it could be expanded. "Bulk handling and synthetics have effected India's jute markets, but we feel that the increased production in Australia, coupled with the modernisation of India's jute industry, and India's new-won self-sufficiency in raw jute, will offset this trend."

The trade mission is a follow-up of the one that visited Australia and New Zealand in 1953. The Vice-Chairman of the Indian Jute Association, Mr. D. P. Goenka, who is a member of the present delegation, was a member of the first mission also. "Much expansion has taken place in Australia since 1953," Mr. Goenka said. "Australia has grown in almost every way. The country's progress is really impressive."

During their current stay members of the delegation have had talks with Government officials in Canberra, Sydney, Melbourne and Adelaide. Thereafter they leave for New Zealand and East Asian countries. In Melbourne, the delegation discussed Australian jute requirements, particularly those of the wool trade. Wool-selling brokers and members of the Melbourne Corn Exchange discussed the manufacture of jute woolpacks. "Five years is too long to be out of personal contact with consumers," Mr. Jamieson said. "We hope to visit Australia more regularly in future."

PEPPER IMPROVES

(Messrs. Parekh and Co.)

BOMBAY, 19*th November*

We did not issue our usual weekly letter on Malabar pepper during the week ending 12th November 1958, it being Hindu New Year. There was a holiday feeling in the market during the entire period and fluctuations were very narrow.

During the early part of the week, Malabar black pepper ruled easy in sympathy with Singapore which reacted sharply after a spectacular advance in white and sympathetic improvement in black. Specific delivery in December at Bombay came down to Rs. 493. Garbled at Cochin went down to as low as Rs. 93. after touching the highest at Rs. 98 per cwt. for December delivery. Ungarbled touched Rs. 525. In the later part, however, market showed small improvement, following buying support by bulls who were expecting sizable Russian buying in the near future.

News of a five-year trade pact with the U.S.S.R. and possible "swing credit" arrangement with other East European countries proved supporting factors. The important news of the week was the Conference on Co-operative Marketing of spices at Trivandrum and its decision that inter-State and export trade in spices would be handled by the All-India Co-operative Marketing Federation in liaison with the State Trading Corporation. The final result of the recommendations will be worth watching.

Recent rains in the pepper belt in North Malabar improved the prospects of Tellicherry pepper. The overall estimate of the new crop is now placed at 27,000 tons. Light pepper has started coming to Calicut which means the harvesting of Tellicherry pepper will be much earlier than usual.

Arrivals of new crop at Cochin and Alleppey are increasing and unless sizable buying support from Russia is forthcoming very soon the market may go down further; America is buying on hand-to-mouth basis and sizable unsold consignments from Indonesia are acting as a check on the New York market.

New York spot came down to $0.24¼. After buying November and December-January at $0.23, dealers there are now indicating $0.22½. At the time of writing, the market is reported steadier at Cochin. Ready garbled is quoted at Rs. 94, December at Rs. 93.50 and January at Rs. 92.50 and ungarbled at Rs. 537.50 per candy. Calicut is quoting Rs. 580 for ungarbled.

Today's nominal quotations are: Ready delivery Rs. 71 per Bengal maund; December Rs. 503-508 and February Rs. 510-515 per candy of 5¼ cwts.

DEMAND FOR TEA WEAKENS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 14*th November*

There were 1,617,420 lbs. on offer in sale No. 32, which was held on Wednesday 12th November. The quality of high grown teas showed a slight seasonal decline, but teas from the Anamallais district showed an improvement, both in leaf and liquor. The market opened to less demand, and weakened as the sale progressed with export orders limited. Low medium and medium descriptions were barely steady, although the poorer types were firm. The improved quality good mediums met a strong demand, and were irregularly dearer. Best liquoring highgrowns were lower following quality, and prices were irregularly 25 to 35 nP below last rates. Whole leaf teas met with useful support, and were fully firm. Tippy teas did not meet with the same competition as in previous weeks, and were generally easier. The quotations were: low medium Re. 1.55 to 1.65; medium Re. 1.65 to 1.85; good medium Rs. 2.00 to 2.35 and quality Rs. 2.60 to 4.10.

London Market: *Sale of 10th November* 1958:— Better demand with prices firm to dearer.

Sale of 11th November 1958:—Fully firm to dearer.

Sale of 12th November 1958:—Plain tea again lower; others steady.

Colombo Market:—Strong demand. Highgrowns irregular, but generally dearer. Mediums fully firm. Lowgrowns firm to slightly dearer. Offgrades strong. All dusts and liquoring fannings dearer. Others fully firm.

Calcutta Market: *Export*:—Good general demand. Teas for price and whole leaf fully firm. Plain fannings well supported. Good medium Assams slightly easier. C.T.Cs again weak feature.

Internal:—19,500 packages dust. Strong general demand orthodox 2 nP dearer. C.T.Cs irregular. Top with few best continuing firm. Internal leaf good general demand at slightly easier rates.

Export Quota:—The market continues to be quiet, and last business was done at 2 nP. The latest quotation is sellers 2¼ nP and buyers 2 nP.

Forthcoming Auctions:—Sale No. 33 will be held on Tuesday, 25th November 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Dust Sale*:—650,000 lbs. Less demand; prices irregularly 15 to 20 nP lower for milled and low medium. Others irregularly 10 nP lower."

TEAS FOR EXPORT DECLINE

(From Our Own Correspondent)

CALCUTTA, 18*th November*

Although there was good general demand during the export auctions held yesterday, prices fell. This was attributed to the psychological effect of the increase of 11.3 million lbs. in the output of North Indian gardens during October. With this increase, the crop up to October 1958 was higher by 14.8 million lbs. However, a closer study of statistics revealed that during last year the crop here was exceptionally lower, owing to adverse weather and other factors, and as such comparison of this year's output with last year's would not show the real state of supply.

It was believed that when output figures for November and December would be obtained for the whole of India, the year's output would not after all amount to even that of 1957. Another adverse factor for this week's lower prices was the lower demand in Mincing Lane auctions following an increase in U.K. stocks to 131 million lbs. in the week ended 7th November from 128 million lbs. In contrast, the Colombo auctions held last week, witnessed a gain in prices following keener demand from overseas buyers, particularly the American.

So far during this season, demand and prices both for export and internal auctions had been satisfactory, and the better quality teas were not expected to present any problem. The inferior teas, however, continue to be a worry, and their excessive supply is reflected by the gradual decline in prices.

Export offerings yesterday amounted to 71,230 chests. Although there was good demand, prices realised were lower. Orthodox medium Assam B.O.Ps and O.Fs declined by 10 to 20 nP, medium B.Ps and P.Fs by 10 nP, and "teas for price" and plain brokens by 2 to 6 nP. Plain fannings, though in better demand, tended to fall. C.T.Cs declined irregularly by 10 to 15 nP followed by withdrawals. Legg-cut teas were pushed down by 8 nP. In whole leaf grades, excepting the well twisted pekoes, prices of which improved, other lots shared the general market trend. Darjeelings received little attention with prices easing. The rates were: best Assam C.T.C. fannings Rs. 2.20, best Assam C.T.C. B.P. Rs. 2.05, clean black pekoe Rs. 2.00 to 2.10, medium fannings Re. 1.88 to 1.92, plain fannings Re. 1.80 to 1.86, and medium B.P. Re. 1.80.

Business was done in export quota at 1¾ nP, when the price declined to 1½ nP.

In the internal sales on Thursday last, dusts on offer amounted to 19,495 chests. The general demand was good, and the feature was the higher prices realised by orthodox teas, of which the grainy exportable teas received more attention, keen competition was offered to the legg-cut Dooars, prices of which rose above valuations. Among C.T.Cs, medium kinds eased by 15 nP, but the poorest fibrous teas were firm at valuations. The quotations were: medium Assam C.T.C. Rs. 2.00 to 2.20, best Assam C.T.C. Rs. 2 80 to 3.10 (nominal), medium Dooars Re. 1.88, and medium Assam grainy dust Re. 1.90.

Leaf offerings amounting to 2,310 chests realised lower prices, despite good demand.

BASE METALS RISE FURTHER

(From Our Own Correspondent)

CALCUTTA, 18*th November*

Following continued tightness in supplies, base metals have recorded further gains in the past week. Thanks to the short-sighted import policy relating to virgin metals, acute scarcity prevails and there has been inevitable uptrend in prices. It is thought that it would not be until two months before fresh supplies would reach actual users under the current import policy. This interval will naturally add to scarcity.

Electrolytic zinc has reached a high of Rs. 92, after opening at Rs. 85. Dealings are, however, restricted, as there is not sufficient supply of metal. The stock position in Bombay, however, is better as the price there is only Rs. 88 and upcountry orders find their way to Bombay. Zinc prices in both London and New York are hardening. During the week, Tatas were again in the market with a tender for 1,500 tons of zinc. Tin has risen from Rs. 564 to Rs. 584, despite easier trend on the London Metal Exchange where ready tin has sagged from £763 to £755½ and 3 months from £763 to £758. In contrast to zinc, tin in Bombay at Rs. 600 is higher than in Calcutta and, even so, Calcutta has not received upcountry attention. Virgin lead has been pushed up to Rs. 84 from Rs. 78, with Bombay reporting even a higher rise at Rs. 87. The supply position is causing anxiety. It is noted that, in both London and New York, copper has declined. On the London Metal Exchange, spot copper has given way to £243½ from £260 and three months to £234½ from £246¾.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits — Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

1913-1957

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA.
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

P.C. 9752.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures. N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1958. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1954. ‖ On old Capital.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 100 each.
For 1958 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 500 were split into shares of Rs. 100 each. §—On increased capital.

(*Concluded from page 827*)

against this background, there is little that is strange about the five-year trade agreement signed between the two countries on Sunday last in Moscow. This followed the recent discussions between the representatives of the U.S.S.R. and the Indian delegation led by Mr. K. B. Lall, Director General of Foreign Trade. An important adjunct to the pact indicates that the U.S.S.R. has agreed to purchase Indian goods for the sums due from India in 1959 in repayment of Soviet credits granted to this country. This new pact, which seeks to further trade relations and extend the volume of commerce between the two countries to the "maximum extent possible," constitutes an important stage in the development of Indo-Soviet economic intercourse.

The new agreement is virtually an extension of the existing trade pact. There are, however, two notable additional provisions in the agreement. In the first place, the agreement provides, specifically, for the reciprocal application of the most-favoured-nation treatment in the trade between the two countries. Secondly, it seeks to establish a clearing account without necessitating the conversion of the rupees, in which our payments will be made for Soviet goods, into sterling or any other currency, as has been the case hitherto. Obviously, this is designed to ensure a balanced trade between the two, without any expenditure of foreign currency. This arrangement, according to Mr. Lall, will eliminate artificial barriers to the expansion of imports from and exports to Russia. Clearly, the system differs from the trade accounting with the countries of the sterling area where foreign currency has to be paid. The Indo-Soviet trade will thus turn out to be a system of barter in practice, involving a wide range of goods.

Under the agreement, India will import from the U.S.S.R. various capital goods, industrial raw materials and oil. They include drilling equipments, equipments for the coal industry, equipments for irrigation projects, various machine tools and instruments, tractors and farm machinery, ferrous rolled stock, non-ferrous metals, fertilisers, dyes, cellulose, paper, asbestos and other industrial materials and products, oil products, cereals, films, printed matter and other goods. India's exports to the U.S.S.R. will consist of such traditional exports as tea, spices, skins and hides, wool, tobacco, shellac, cashew nuts, vegetable and essential oils, as well as manufactures including specifically jute fabrics and sacks, leather goods, including footwear, woollen fabrics,

Calcutta at Rs. 59 per maund, as against Rs. 85 a year before and Rs. 163 in November 1955. What is worse, Indian lac is fetching lower prices in foreign markets, thanks to keen competition from Thailand in world markets and fast developing synthetic substitutes. During the first eight months of 1958, a maund of lac exported abroad earned on an average Rs. 87, which compares very unfavourably with Rs. 99 in the corresponding period of last year; the total value of exports was Rs. 418.93 lakhs (481.014 maunds), as against Rs. 484.80 lakhs (492.073 maunds).

The sharp fall in the prices of lac, a recent report from Jamshedpur avers, has forced the producers to sell their product at reduced rates in the absence of alternative markets and, ultimately, to close their factories. Already, as many as 35 units out of the 45 existing in the Palamau district of Bihar State are said to have closed down "throwing thousands of workers out of employment." Drawing the attention of the authorities to the continued instability in lac trade, the Palamau District Shellac Association has strongly pleaded for the maintenance of parity between internal and export prices and creation of an agency for purchasing and storing lac products.

This is not the first time that such suggestions have been made. Many months ago, no less an institution than the National Council of Applied Economic Research, New Delhi, recommended the fixation of maximum-minimum prices for lac and establishment of a statutory body to enforce price controls by devising suitable measures. But somehow, the Government has not done anything about them. Only it has set up the Shellac Export Promotion Council. If the Council is to carry out satisfactorily the task entrusted to it, it must take energetic steps to ensure stability in prices. The need for such stability is all the greater considering that the total available supply of lac in the world is expected to be 55,000 tons in 1961, a quantity which will be far above the projected world consumption of 46,000 tons. Thailand alone is reported to be making renewed efforts to augment its lac exports to 20,000 tons in the next two or three years.

* * * *

The long-awaited reduction in export duty on cotton has at last been announced. The Government of India notified on Sunday its decision to reduce, with immediate effect, the duty on raw cotton from Rs. 50 to Rs. 25 per bale. The varieties which stand to benefit from this cut are Bengal *Deshi*, Mathia, Kalagin, Dholleras, Central India *Deshi*, C.P. I and II, Oomra *Deshi* and other varieties of stapling up to and inclusive of 25/32". An export quota for 250 000 bales (of 400 lbs. each) comprising 100.000 bales of Bengal *Deshi*, 100,000 bales of cotton not above ¾" staple, 50 000 bales of cotton of staple length ¾" and below was also simultaneously released.

While the duty reduction had been anticipated for a long time, the generous quota of 250.000 bales came as a pleasant surprise to the trade. Not that a quota of this magnitude was entirely unexpected. There was every reason to believe that, considering the bleak textile outlook, the downward trend in mill consumption of cotton, the higher carryover at the beginning of the season and the prospects of a good crop indicating a comfortable supply position, the Government would persuade itself to release substantial quantities for export, especially in view of the urgent need to augment the foreign exchange earnings. Further, various expert bodies such as the Cotton Advisory Board, the Indian Central Cotton Committee and a number of trade associations had urged the Government to make known its policy and to release sufficiently large quantities for export early in the season. The only surprise, therefore, was that the present quota should have come close on the heels of the previous one for a like amount which was released on 17th October. Thus, in all, 500 000 bales of cotton have been issued so far in this season for export. This comprises 250 000 bales of Bengal *Deshi*, 200.00 bales of cotton not above ¾" in staple and 50.00 bales of cotton stapling ¾".

The trade has greeted both the quota and the duty reduction with cheers. The reduction in export duty is regarded as a belated step which has cost the country dearly by way of loss of export business. The indecision on the part of the Government of India was a boon to Burma and Iraq, not to mention Pakistan. Nevertheless, better late than never. More than the reduction in duty, the ending of uncertainty regarding it is considered more welcome. For, ever since the talk of the possibility of a reduction in the duty had started, foreign buyers were keeping off the market in the hope that it might materialise. The suspense has now happily come to an end. The release of a large quota, traders note, will assure a steady supply to foreign buyers and enable them to plan their purchases in advance.

The reaction of the market to the news was reflected in a sudden spurt in the price of the Jarilla contract on Monday by as much as Rs. 25 over Saturday's closing of Rs. 605 25. The spot prices of exportable varieties also firmed up by Rs. 5 to Rs. 10 per candy. After this initial bullish reaction, the market tended to depict a quiet trend, with the contract quoting at Rs. 625. This is probably a technical reaction, but a sustained steady trend can follow only if the domestic textile industry is able to step up its rate of production.

As regards the prospects for export, the consensus of opinion among shippers is that, while the immediate outlook is gloomy, the distant prospects are not unencouraging. Foreign demand so far has been very slack and buyers are reluctant to make large purchases. Competition from Pakistan is keen. Even after making allowance for the duty reduction, which works out to 1.15*d* per lb., Pakistan *Deshi* is still cheaper than comparable Indian cotton by about a penny per lb.

NIBBLING AT THE TEXTILE PROBLEM

THE affairs of cotton mill industry came up for a fresh review at the first meeting of the Cotton Textile Consultative Board, inaugurated by the Union Minister for Commerce and Industry on Saturday the 22nd inst. No striking decisions were reached at this meeting to solve the pressing problem of disposal of the accumulated stocks of cloth with the industry. Only a sub-committee of three persons—Mr. Krishnaraj M. D. Thackersey, Mr. Madanmohan R. Ruia, and the Textile Commissioner, Mr. D. S. Joshi—was appointed to confer with the Indian Cotton Mills Federation on the subject of stocks and promotion of exports. The fact that these problems are receiving the continued attention of the Government and its advisory bodies cannot be a matter of comfort for the industry or the investors, for there has been no dearth of discussions on these problems. What is needed is a way out of the mire into which the industry has been pushed by the Government's fiscal, labour and employment policies. There is, of course, no denying the fact that the misdemeanours of the managements of certain mills, especially in the States of Bombay and Uttar Pradesh, have also been responsible for the difficulties of cotton mills, but Government controls and regulations have only helped them survive rather than expose them to the fire of competition implied in a healthy system of private enterprise. It is strange that, while arguing that uneconomic or badly managed mills deserve to be closed and refusing to effect any further reduction in the burden of taxation on that score, the Government should be prepared to take over those very mills, once they close down, and run them as unemployment relief agencies at almost half the wages. By doing so, the Government is only delaying, if not preventing, the restoration of normalcy through the economic law of supply and demand. How can the stocks of cloth go down, if an uneconomic or inefficient unit which closes down is revived by inducing workers to forgo a part of their wages, allowances and amenities?

In his speech at the inaugural meeting of the Consultative Board, Mr. Shastri gave statistics to show that, after declining a little in 1956 and 1957, demand and consumption of cloth have been going up once again. He took for this purpose deliveries of cloth by mills, handlooms and powerlooms for civil consumption. Here is his comparison:

(In million yards)

Year	Mill cloth	Handloom and powerloom cloth	Total deliveries
1951	3,385	1,085	4,470
1952	3,697	1,404	5,101
1953	3,877	1,501	5,378
1954	4,047	1,616	5,663
1955	4,470	1,719	6,189
1956	4,176	1,773	5,949
1957	4,084	1,956	6,040
1958*	4,456	2,075	6,531

*Figures for this year estimated on the basis of latest available data pertaining to deliveries.

These figures show, according to Mr. Shastri, that the offtake of cloth has kept pace with the trend of national income. It must, however, be borne in mind that the years 1951 and 1952 were years of restriction on cloth consumption and that, even in 1953, certain controls on production and distribution were maintained. 1954 was, therefore, the full year of free market for mill-made cloth. If that year were taken as the base, it would be seen that, whereas consumption of mill-made cloth has gone up by about 10 per cent., that of handloom and powerloom manufactures has jumped up by as much as 28.4 per cent. It is also interesting to note that the estimated consumption of mill-made cloth for 1958 is actually 14 million yards less than in 1955, while that of handloom and powerloom cloth is higher by no less than 356 million yards. Another difference is that, whereas there has been a progressive rise in the consumption of handloom and powerloom cloth, such has not been the case with mill-made cloth. The bulk of the increase in consumption of cloth has thus been accounted for by the decentralised sector. This is not surprising, because of the heavy increase in the burden of taxation imposed on mill-made cloth and the large concessions shown to the products of handlooms. The generous subsidy given to handlooms at the cost of mills has been the real prop of the decentralised sector. The mill-made *dhoti*, for instance, has now been nearly priced out of the market, thanks to the heavy incidence of excise duty on it, on the one hand, and the handsome rebate given on the handloom *dhoti*, on the other.

The difficulties of cotton mills have been aggravated by a recession in exports, too. Accordingly, stocks of cloth with mills have been growing. As at the end of October last, they were 601,800 bales of 1,500 yards each, an increase of 9,000 bales over the September-end figures and 47,729 bales above the average for 1957. They are also the highest for 1958 so far. Mr. Shastri observed in his speech to the Consultative Board that, "generally speaking, it can be said that the present production of the mills is actually being lifted and it is only the extra accumulated stock which is acting as a drag." This conclusion is more or less similar to the one arrived at in these columns three weeks ago. It is only on the remedy to be adopted that the Hon'ble Minister and this journal differ. The Minister feels that the best way of liquidating these stocks is to push up exports. If this could be done, it undoubtedly would be the best solution. But that does not seem to be a feasible one, having regard to the sluggish world trade in cotton textiles and the growing competition from Japan, China and Hong Kong, not to mention the U.K., the Western Continent and the East European countries. Again, it is a moot point whether, of the stocks lying unsold, the bulk represents exportable varieties. Accordingly, it is not quite realistic to contend that the solution to the big drag on the cloth market should be sought in terms of increased exports. While, of course, every effort should be made to increase exports, a quicker and more effective solution to the problem of excessive stocks is to encourage domestic consumption by effecting a substantial cut in the excise duty for a short period of four to five months. This will, as was pointed out by us on an earlier occasion, induce the wholesale trade in cloth to lift stocks from the mills. The Minister has reiterated on several occasions in recent months that very considerable reliefs in taxation have been given to the mills and that no further relief in this direction could be expected. But he seems to forget that these reliefs constitute only a mitigation, albeit in part, of the unwarranted doubling of the excise duties in September 1956, which themselves were unconscionably high.

Another not very useful suggestion of Mr. Shastri is that the banks should be requested to extend greater credit facilities to cloth trade, so that the latter may be enabled to increase its holdings to nearer normal levels. If the existing extremely easy money conditions are not a sufficient incentive to banks to provide more credit to cloth trade, we do not know what else can be. Further, it is for the banks themselves to decide to what extent they can take risks while advancing the funds belonging to their depositors. No responsible bank would care to follow a liberal policy of advances in respect of goods the outlook for which is uncertain, if not

bleak. Who would make good the losses, if the banks were to suffer any as a result of following the Government's advice? Will the Government pay? Even if banks are prepared to lend more against cloth on the advice of the Government, the remedy will not work if cloth traders are reluctant to avail themselves of these facilities to the fullest extent. So what is more important is to revive confidence among the traders about the consumption outlook for cloth. How is this confidence to be created so long as the fiscal policy of the Government is such as to restrain consumption of mill cloth to the barest minimum?

If the cotton mill industry is not to suffer from a perpetual vicious circle, it is necessary for the Government and the trade unions to revise their attitude towards modernisation of the mills. The impossible conditions that are attached to the introduction of automatic looms should be lifted. It is gratifying to hear that the Government is beginning to appreciate this point. "I am sure," said Mr. Shastri, "there will be closer co-operation between the Government and the industry, so that there is modernisation of mills and they are able to stand in competition with mills in foreign countries." But it is not enough if the Government merely appreciates the correct point. It is action that is important. By delaying modernisation of mills, the Government is steadily adding to the future troubles of the industry and is weakening its capacity to compete successfully in world markets.

ALUMINIUM INDUSTRY

FEW metals have earned a greater reputation for versatility than aluminium. Even in India where its use has for long been confined to domestic utensilware, the metal has succeeded in entering new fields; it now commands a wide range of industrial uses. Elsewhere, the metal has proved equal to the challenge of industrial demand. The ingenuity of research workers continues to discover new uses for aluminium, which has already invaded the aircraft, the automobile, the electrical and the building industries. In his stimulating address, delivered at the Executives Club at Chicago, Mr. Nathaniel V. Davis, President of Aluminium Ltd., refused to accept the view that the industry was a "mature" industry, if by that was meant that the industry had reached its full development. Maturity for the industry, he said, "lies a long way ahead."

Clearly, the metal is in a period of growth. There is no knowing what laurels it will not win for itself. Although its growth has undoubtedly been rapid in recent years, such development may be dwarfed by what it may well achieve in future. Among non-ferrous metals, the production of bauxite, the chief aluminium ore, has expanded between six and seven times the pre-war level, whereas the increase in other metals has been only of the order of 33 per cent. to 400 per cent. Aluminium, according to the *Commodity Survey*, published by the U.N.'s Commission on International Commodity Trade, has gained not only from the great expansion that has taken place in the aircraft industry but also from the displacement of heavier metals—tin and lead in foil, copper as a conductor, zinc in castings, and various iron and steel alloys in sheet and structural shapes. World production of aluminium aggregated 3.25 million tons in 1957, as against 3.11 million tons in 1956. Because the U.S. is not buying aluminium for stockpiling purposes, there has been some decline in production this year in the U.S. and Canada.

In many countries, there has been a tendency for aluminium consumption to double itself every ten years. Between 1946-48 and 1953-55, the consumption of aluminium in W. Germany, the U.K. and the U.S. expanded from 1.17 million tons to 2.25 million tons. Metal men have little fear of any reversal of this rising trend in aluminium consumption. There is, however, a certain element of uncertainty in the immediate future for aluminium prices. It would appear that Hungary, Yugoslavia, Czechoslovakia and Norway have been able to offer aluminium at prices lower than those which prevailed till recently. Further, the U.S.S.R. which has entered the world markets has announced a strange guarantee. It told the U.K. that it would supply aluminium at a price which was guaranteed to remain below the Canadian price. Canada, the important aluminium producer, has promptly asked the U.K. for an anti-dumping duty. The Russian "guaranteed price" offensive has induced the U.S. producers also to ask for a rise in the import duty on aluminium.

In India, the aluminium industry, for which the Government, following the report by the Tariff Commission on the industry, announced last week the extension of protection upto the end of 1960, is of relatively recent origin. Convinced of the importance of producing aluminium within the country, the Government of India announced, in 1940, that those who undertook its manufacture would be "given such measure of protection against unfair competition from outside India after the war as may be necessary to enable them to continue their existence." This assurance, which has been implemented by the Government, has been an important factor in the development of aluminium industry. The two main producers of aluminium in India, the Aluminium Corporation of India Ltd. and the Indian Aluminium Company, Ltd., were both incorporated in the immediate pre-war years. The Corporation, which has a composite and integrated factory with power-house, an aluminium plant, a smelter, a petroleum coke calcining plant and rolling mills at Jaykaynagar (Asansol), has an annual capacity of 4,400 tons of alumina and of 2,200 tons of aluminium ingots. The Indian Aluminium Company, Ltd., which has its power station at Muri (Bihar), aluminium smelter at Alipuram (Kerala) and rolling mills at Belur (near Calcutta), has a capacity for 18,000 tons of alumina and 5,500 tons of aluminium ingots.

The total ingot capacity at present is thus 7,700 tons. The Corporation has plans for increasing the ingot capacity to 7,200 tons a year, though this cannot materialise until additional power becomes available from the Durgapur project; this expansion is not likely to take place before 1960. The Indian Aluminium Company has plans for installing in Hirakud a smelter with an annual ingot capacity of 10,000 tons, capable of further extension to 20,000 tons. This plant is expected to go into production early next year. Birla (Gwalior) Private Ltd. has applied to the Government for a licence to install an aluminium smelter at Rihand, with an installed capacity of 10,000 tons, in technical collaboration with Kaiser Aluminium and Chemical Corporation of the U.S. Thus, the only additional ingot capacity which will come into production in the immediate future will be to the tune of 10,000 tons, thanks to the proposed Hirakud smelter of the Indian Aluminium Company Ltd. By 1960, the total ingot capacity may be expected to go up from 7,700 tons to 17,700 tons.

The Tariff Commission, in its report on the continuance of protection to the aluminium industry, has discussed the estimates of demand for aluminium. The estimates of current demand vary from 30,000 tons to 34,800 tons and those of demand in 1961 vary from 37,200 tons to 45,500 tons. The Commission estimates the current demand at 35,000 tons and the demand in 1961 at 44,000 tons. It may be mentioned here that the Indian Aluminium Company places the demand in 1961 at 45,500 tons, made up of requirements for utensils (10,500 tons), A.C.S.R. and A.A.C. (20,000 tons), transport (6,000 tons), building and construction (2,000 tons), food and farming (1,000 tons), canning and packing (3,500 tons) and other industries (2,500 tons). It would appear that there has been a fall in the popularity of aluminium utensils. But the decline in demand for utensils, according to the Commission, will be more than offset in the coming years by the increased requirements of aluminium for industrial uses. Assuming that the installed capacity will go up to 17,700 tons in the near future, the gap between supply and demand, which is now of the order of 20,000 tons, will widen to 27,000 tons by 1961. This gap has to be met by imports which, at Rs. 2,400 per ton, would involve a draft on foreign exchange of Rs. 5 to Rs. 7 crores per year.

There is thus a clear case for expediting the execution of plans for augmenting the production of aluminium. Nature has endowed India liberally in the matter of raw materials for the industry. The principal raw material is bauxite which is available in abundance in various parts of the country. Deposits are found in Ranchi and Palamedu districts in Bihar, Amarkantak and Bilaspur districts in Madhya Pradesh, Belgaum district in Mysore and Shevaroy Hills in Madras. Other raw materials like cryolite, aluminium fluoride and fluorspar have to be imported from abroad. Although petroleum coke and caustic soda which the industry needs are produced in India, domestic production is not sufficient to cover the entire demand, so that some imports of these are necessary.

By far the most important factor in the development of aluminium industry is the availability of electric power at low rates. Discussing the current position of the industry, Mr. Lakshmipat Singhania, Chairman of the Aluminium Corporation of India Ltd., in his speech at the annual meeting of the Corporation, held this week, said: "The inherent defects of the aluminium industry in India of high cost of power and small capacities still continue. Further, because of the expanding economy in the country, there are increases in wages, cost of raw materials and stores." The importance of cheap power has been emphasised by the Tariff Commission too. How vital is low-priced power to aluminium industry has been brought out by the Commission which points out that the power requirements of an integrated aluminium factory with an annual production of 10,000 tons are about 26,000 kw. and "a variation in the cost of electric power by one naya paisa per kw. gives rise to a variation in the price of aluminium metal by about Rs. 260 per ton." After calling attention to the expansion schemes of the Aluminium Corporation and the Indian Aluminium Company and Birlas' proposal for an aluminium factory at Rihand in the U.P., the Commission observes: "Considering the urgency of the matter, we hope that the Government will take steps to ensure that negotiations for the supply of power or its charges do not hold up the early establishment of these capacities." We commend the observation to the attention of the State Governments which may be called upon to negotiate appropriate agreements with those who intend putting up new aluminium units or expand their existing capacity.

Besides producing aluminium, the two major units, namely, the Aluminium Corporation and the Indian Aluminium Company, have installed some rolling plants. There are also six other producers with capacity for rolling flat products such as plates, sheets, strips and circles. The present rolling capacity, including that of the two primary producers, is about 17,800 tons per year, made up of 8,000-9,000 tons of industrial sheets and the rest in circles. Some of these producers have plans for increasing the rolling capacity, though actual expansion may not take place before the end of 1960. In this connection, the Commission points out that the demand for flat products (other than circles) is estimated to go up to about 15,000 tons by the end of 1961. It discounts the view that, since there is idle capacity in copper and brass rolling industry which could be switched over to aluminium sheets, there is no need for additional capacity for aluminium sheets and circles. This argument, according to the Commission, overlooks the fact that the manufacture of certain types of industrial sheets and strips of aluminium demand precision workmanship of a high order and that aluminium sheets and strips of thinner gauges cannot also be rolled in the existing mills. Accordingly, it has recommended that the Government should give early consideration to the establishment of some additional capacity for rolling, say, 5,000-6,000 tons per year, which will help produce the types of plates, sheets and strips now imported from abroad.

The Commission did not undertake an elaborate examination of the production costs in the industry on the lines it generally conducts in dealing with the demand for protection. It was represented to the Commission that, inasmuch as significant changes were taking place in the structure of the industry, which were likely to affect materially the production costs, the present inquiry might be limited to the determination of the adequacy or otherwise of the existing scheme of protection. The Commission has come to the conclusion that it will not be able to make a fair estimate of the future cost of production. It, however, proposes to hold a fresh inquiry into the industry in 1960. On the basis of the data made available to it, the Commission has found that the import duty required to equate the fair ex-works price of indigenous ingot with the landed cost, ex-duty, of imported product is 28.97 per cent. in the case of the Aluminium Corporation and 12.57 per cent. in the case of the Indian Aluminium Company. The existing rate of duty, namely, 35 per cent. *ad valorem*, is more than what the industry would need by way of protection. It must, however, be remembered that aluminium prices, as stated at the outset, are falling. This consideration has weighed with the Commission in recommending the continuance of the duty at existing levels—a well-reasoned view with which the Government has rightly concurred.

KERB TRADING IN SHARES DECLINES

AHMEDABAD ELECTRIC EPISODE—OPTIONS IN COTTON—SYNTHETIC FIBRES *VS.* COTTON

THURSDAY, 5 P.M.

A SOMEWHAT steady trend has come to prevail in the share market, there having been no fresh bearish developments. Turnover, however, has greatly shrunk. In fact, during the week under review, no business was transacted during the first two days and rates were not available even for the popular counters. This was due to an informal strike by the authorised clerks of Stock Exchange members as a protest against the sudden disciplinary action taken by the President against some of them found doing business on the kerb, despite his repeated warnings and appeals against such unauthorised transactions. Disciplinary action of this nature was long overdue, for the kerb business had become so rampant and regular that almost everyone took it to be a customary feature of the Stock Exchange. The badgeholders, however, had some cause for resentment against the action taken by the President, because the kerb trading had been allowed to go on for so long without inviting the wrath of the President. If the President had taken disciplinary action of the type he took early this week at frequent intervals, instead of once in a blue moon, not only would there have been less kerb trading, but those found guilty would have less justification for complaint. It is to be hoped that, at least in future, the President would regularly punish those who commit breaches of rules and regulations of the Exchange and not after intervals of years. Be that as it may, the action taken by him this week has had a salutary effect so far and, since Monday last, the kerbs of Dalal Street are quiet, less crowded and more easily negotiable by both vehicles and pedestrians after the closure of the Exchange officially at 2-30 p.m. Even the corridors of brokers' offices in Aga Khan Building, which used to be jammed with shouting clerks, are not crowded. The only way in which business can be done now after the closure of the market is by making calls on the offices of brokers, which is undoubtedly very cumbersome. But it remains to be seen how long this restraint will last. In the past, it used to disappear after a few days. If, however, the Stock Exchange authorities take it into their heads to enforce their rules and regulations strictly and ensure discipline, it can last much longer.

MARKET GOSSIP

Another important reason for the fall in the volume of business during both official and unofficial hours is the discontinuance of teleprinter facilities given to private parties by the Government. Quite a few operators had obtained this service between Bombay and Calcutta, despite the heavy charges for it, in order to get minute to minute quotations from Calcutta and put through straddle business not only in shares but also in bullion and commodities. As the Calcutta Stock Exchange works longer hours, the trend of that market after the closure of the Bombay market provides an incentive to do business on the kerb. Since that quick means of communication is no longer available, the scope for kerb trading has considerably narrowed. It is said that, when the contract for the renewal of teleprinter service fell due this month, the Government refused to renew it on the ground that the facility provided by it had been misused in several ways to the detriment of the other sections of post and telegraph departments.

The chief reasons for the fall in the volume of business are, of course, the absence of any new developments and the tendency among investors to wait, as values are high and yields are low. The feeling that it is risky to buy at current levels is gradually spreading among them.

In an otherwise steady market, Indian Irons have been ruling quiet, because the floating stocks are large, the *budli* rate for the scrip has gone up to 12-14 per cent. in Calcutta, and there are rumours that the Government has not given permission to the Company for capitalising the share premium account and issuing bonus shares. It is not known how these rumours have arisen. But rumours could be lies.

* * * *

The annual meeting of the Ahmedabad Electricity Company, Ltd., held in Bombay yesterday, was a sad and unpleasant affair. When we drew the attention of readers in this column a fortnight ago to an intriguing para in the Directors' report of the Company conveying the resignation of its popular Chairman, Mr. K. G. Milne, and Mr. E. D. Sheppard, an ex-officio Director of the Company, little did we expect that some serious charges would be levelled against them at the meeting. The contention of some shareholders was that these gentlemen did not take sufficient care to protect the interests of the Company while placing orders with a British Company (*I.C.L.*) for the boilers required for expanding the capacity of its power station at Ahmedabad. They argued that, but for the discovery of one of the Indian engineers of the Company that boilers at a much lower price than those for which orders had been placed by the aforesaid gentlemen could be had from Babcox and Wilcox, another British concern, the Company might have been loaded with capital equipment costing about £140,000 more than necessary. We do not have the space to describe in detail about the allegations made against them. In any case, they have been reported at some length in a section of the daily Press. Suffice it to say that the largely attended meeting was worked up by the few shareholders who spoke on this incident to such an emotional pitch that, despite the explanations given by Mr. Sheppard and Mr. Milne, two resolutions were adopted, with only three dissenting which almost amounted to a vote of censure on these two gentlemen.

Both the resolutions were adopted as an amendment to the Directors' report. One resolution demanded that even the mild eulogistic reference in the Directors' report to Mr. Milne and Mr. Sheppard, reading that "the Board have placed on record their appreciation of the services rendered by these two gentlemen to the Company" be deleted. The other amendment was to the effect that the shareholders greatly appreciated the services rendered by Mr. P. D. C. R. Clark, the new ex-officio Director and Chairman of the Company, and one Mr. J. A. Colaco, the Indian engineer of the Company, who claimed to have discovered the high cost of the boilers ordered and persisted, despite the lack of co-operation and even opposition from his bosses, Mr. Milne and Mr. Sheppard, in seeing that the order with the I.C.L. did not go through. It was Mr. Colaco's claim that, as his bosses did not listen to his "expert advice" and that as he thought that the Company, as also the country, was losing something like Rs. 20 lakhs, it was his duty to speak to one or two other directors of the Company, and that for this "service" he was suspended by Mr. Sheppard, in his capacity as the chief of the Managing Agency Company, though he was reinstated at the intervention of other directors after an interval of nearly a month, and that without a contract.

From all that passed at the meeting, it appeared that Mr. Colaco was supported by Mr. Clark, the present Chairman of the Company, and the Chief Accountant of the Managing Agency Company, namely, Killick Industries Ltd. It was also apparent that Mr. Clark did not agree with Messrs. Milne and Sheppard and that this was true of some of the other directors of Killick Industries Ltd.

Mr. Milne's statement was that an extremely complicated technical issue was being distorted and that grave harm had been done to him by some of the shareholders. He said that orders for the plant had been placed with the I.C.L. with the unanimous consent of the Board of Directors of the Company on the basis of the unanimous advice of its engineers, including that of Mr. Colaco. He denied some of the statements of Mr. Colaco as being baseless.

Mr. Sheppard observed that it was he who had sent Mr. Colaco to London in the company of a director of the Company to investigate into the reports of higher cost quoted by the British Company (*I.C.L.*) with which orders had been placed. He averred to the effect that it was not true to say that, if Mr. Colaco had not persisted in his efforts, the order for the high cost boilers would have gone through, for he had taken the matter in his hand and was investigating it. His reason for suspending Mr. Colaco was the need for ensuring discipline in the office; if every member of the staff were to take up matters directly to the Board of Directors over his head, he could not be expected to run the office efficiently and in an orderly fashion. Since his stand, which was supported by Mr. Milne, was not endorsed by the Board, he resigned from it and so also Mr. Milne. Both of them said that their resignations were voluntary and none had asked them to do so. But all this explanation failed to convince the shareholders present at the meeting.

It is, however, noteworthy that Mr. Colaco refused to question the *bona fides* of Mr. Milne and Mr. Sheppard. Although a few shareholders spoke against them in a disparaging manner, used harsh words and said many irrelevant things, no *mala fide* intentions were attributed to either of the two Directors who had resigned. It is also noteworthy that the Company has not lost a single naya paisa. Another important point to be noted is that the statement of Mr. Milne and Mr. Sheppard that the orders for boilers had been placed with the unanimous consent of the directors and the unanimous advice of the Company's engineers was not disputed. Their contention that the comparison of prices was not like with like and that there were differences in the quality and types of boilers taken for comparison was slurred over.

The issues involved were highly technical, while most of the shareholders present at the meeting were laymen. Both Mr. Milne and Mr. Sheppard have a creditable record of service in their favour. They are still directors of the Managing Agency Company and chairmen and directors of other managed companies. They were contending, albeit in a polite and perhaps ineffective manner, that great wrong had been done to them. Their points of view surely merit a better hearing than the cursory dismissal they have had at the meeting. It would have been in the fitness of things and in keeping with sense of justice if the shareholders had adopted a resolution asking for the appointment of an independent committee of distinguished persons to enquire into the issues raised and report to them.

Again, no shareholder cared to enquire at the meeting for more details of the types of boilers ordered from the I.C.L. and those of Babcox and Wilcox taken for comparison later on. Also, no one sought to find out as to what were the views of the Government on this matter of boilers. After all, in a public utility enterprise of this nature, nothing can be done without the consent of the Government. We reliably understand that the Chairman of the Central Water and Power Commission had written to the Company some 10 days before the annual meeting that the boilers of the types mentioned by Mr. Clark in his speech would not be suitable and in keeping with the power plans of the Government.

We further understand that, at a Board meeting of the Company held today, a resolution was adopted afresh placing on record the valuable services rendered by Mr. Milne and Mr. Sheppard and that Mr. Milne was requested not to issue a statement to the Press which he wanted to do explaining his position. All this suggests that there is in this affair more than meets the eye.

* * * *

Mr. Madanmohan Ruia's plea at the annual general meeting of the East India Cotton Association Ltd., Bombay, held this week, for legalising and regulating option business or *Teji Mandi* has thrown the issue again into the arena of controversy. Option business is at present prohibited. In spite of the serious warnings of the Forward Markets Commission against indulgence in it, option business continues to be rampant in all the principal commodity futures markets, as also on the Stock Exchange. Despite its illegality, it is popular because it has its own attractions. Since it gives the trader a right to deal in a commodity at a fixed price for a specified period against the payment of an agreed premium, the option is an insurance against the risk of wide and unpredicable fluctuations in price. The objection to it is based on the argument that it increased the volume of speculative business. It is pointed out that, because of the limited risks involved in them, options embolden the speculators to operate on a much larger scale than otherwise they would. The Forward Markets Commission has repeatedly held option business to be responsible, in a large measure, for the wide fluctuations in the cotton market in particular and has even blamed the East India Cotton Association for not taking stringent action to prevent it.

But option business, according to some, is not an unmixed evil. According to Mr. Ruia, it is permitted in the U.K. and the U.S.A. He feels that, if trading in such business is regulated through enactment of suitable Bye-laws, it will help *bona fide* trade as an insurance against risk and also prove helpful to export business. He is not unmindful of the difficulties of controlling options by law. But he is of the opinion that the way in which it is going on at present puts an honest trader at a disadvantage, as compared with the one who does not care to observe the law. Further, prohibition of option business, according to him, has led to other forms of unauthorised business which are a real menace to *bona fide* trade and which are more difficult to control. There is, however, so much opposition to option business in this country that anyone who pleads for recognition of this type of speculation is, we are afraid, knocking against granite.

* * * *

A stage appears to have come when cotton, if it should retain its position as the premier textile fibre of the world, should not only defend itself against the inroads of man-made and other competing fibres but be on the offensive too. It is at present facing a twofold threat. Not only has textiles in general fallen behind the rates of growth of many other consumer goods but cotton's share in the total world fibre consumption is steadily dwindling. If this trend is allowed to continue, a time may come when cotton will find itself relegated to a secondary position.

What is the reason for cotton lagging behind other fibres? It is obviously not because it is inferior in quality, for cotton still remains the most versatile natural fibre of the world, nor because it is costlier, for its price compares favourably with that of other competing fibres. The answer lies elsewhere. Cotton's chief rival, man-made fibre, aided by modern methods of publicity and propaganda, is rapidly establishing itself as an important textile fibre and steadily ousting the natural fibre from its unchallenged position. The amount of money and effort spent by the manufacturers of synthetic fibres on sales promotion is said to be out of all proportion to its share in the total world fibre consumption. In countries like the U.S. and the U.K., for instance, where cotton textiles face the most serious challenge from synthetic fibres, the market is flooded by a wide range of apparel material made out of the latter. Enticed by the novelty and the technical perfection of some of these, the increasingly polished presentation of some others, and influenced by high-pressure sales techniques which invariably precedes their initiation to the market, the consumer is persuaded to devote an ever larger proportion of his budget to them. In the result, cotton has found itself losing its position in the consumer's scale of preferences. It appears that the full blast of competition from man-made fibres is stirring the producers and manufacturers of cotton out of their slumbers.

It is only natural that the International Federation of Cotton and Allied Textiles Industries, whose members represent almost two-thirds of the world's cotton spindles and looms and who consume 80 per cent. of the raw cotton which moves in international trade, should have taken interest in the matter. The Federation recently examined the prospects for raw cotton *vis-a-vis* other fibres. It noted that, in 1958, cotton still accounted for 65 per cent. of all textile fibres consumed in the world. But its percentage was slowly declining and it was faced with increasing competition from other fibres. It was also noted that producers of competing fibres such as wool, man-made fibre, silk, linen, and jute were providing market research and promotion funds for their fibres which were five to ten times as great as those now being provided by the producers of cotton. Thus, "the producers of fibres for two-thirds of the world's textiles were being

(*Continued on page 900*)

EQUITIES RULE STEADY

TEXTILES LOOK UP

(From Our Own Correspondents)

BOMBAY, *27th November*

THE share market ruled steady during the week under review. There was a slight broadening of activity and prices gained ground, the rise in textile shares being somewhat marked, in refreshing contrast to the subdued trend noted last week. The market would have presented a distinctly brighter tone but for the easy trend in Indian Irons, which proved to be a drag on it. This speculative counter was subjected to some selling pressure. The Company's annual general meeting is scheduled to be held tomorrow and the absence of any news regarding Government's sanction for the proposed bonus issue induced caution among the operators. There were also reports that there were payment difficulties in Calcutta in respect of this share, though they were soon got over.

The better tone in textile shares, which provided the main prop for the whole market this week, was attributed to reports of good activity in the cloth market, thanks to a broadening of overseas enquiries, following the recent announcement of export incentives for cotton textiles by the Government. The announcement of a bonus issue by Guest, Keen, Williams and the abolition of export duty on manganese ore provided additional bullish factors.

In the steel section, Tata Ordinaries moved up from Rs. 176 to Rs. 177.75 and after a setback to Rs. 176 recovered to close at Rs. 177. The new shares gained over the week Re. 1.25 to Rs. 173.25. Indian Irons staged a recovery earlier in the week from Rs. 25.90 to Rs. 26.40, but selling by weak holders brought them down to Rs. 25.65 today. The closing was done at Rs. 25.80.

In the textile group, Bombay Dyeings gained ground from Rs. 56.80 to Rs. 57.40. After a short-lived setback to Rs. 56.80, the shares moved up to Rs. 57.20. A similar trend was noticed in Centurys, but over the week the shares displayed a gain of Rs. 5.75 at Rs. 432. Kohinoors moved within a narrow range between Rs. 248 and Rs. 250 and closed at Rs. 249. Central Indias picked up Re. 1 to Rs. 86 and Finlays Rs. 2 to Rs. 270, while Gokaks suffered a drop of Rs. 3 to Rs. 129. Indu Ordinaries were steady at Rs. 8.72. Indore Malwas gained Rs. 2 to Rs. 104, while Khataus shed Rs. 2.50 to Rs. 160. Models rose by Rs. 2.50 to Rs. 170, Morarjees by Rs. 3 to Rs. 238 and New Greats by Rs. 5 to Rs. 216. Osmanshahis were better by a rupee at Rs. 43.50. While Shree Niwas Cottons lost Rs. 3 to Rs. 145, Simplex advanced by Rs. 2.50 to Rs. 173 and Standards by Rs. 4 to Rs. 203. Swans recorded a decline of Rs. 5 to Rs. 346, but Tatas were unchanged at Rs. 35.

Bank shares were listless. Barodas lost a rupee to Rs. 120, while Centrals gained 30 nP to Rs. 58.50 and their new shares 50 nP to Rs. 59.50. Bank of Indias declined by Rs. 2.25 to Rs. 137 and their new shares by Re. 1 to Rs. 139.50. United Commercials were unchanged at Rs. 68 and Union Banks at Rs. 7.52.

Electricity shares showed a mixed trend. Ahmedabad Electrics were a fraction better at Rs. 99.10, while Bombay Suburbans lost 50 nP to Rs. 110 and Surat Electrics Re. 1 to Rs. 113. Amalgamated Electrics were quiet at Rs. 11.36. Tata Hydros were a fraction better at Rs. 122.50. Andhra Valleys jumped by Rs. 12.50 to Rs. 1,202.50 and Tata Powers by Rs. 32.50 to Rs. 1,230. The Tata group of hydro electric companies have maintained the *ad-interim* dividend for the half-year ended 30th September 1958 at 3 per cent. (without deduction of income-tax).

Sugar shares suffered a further recession. Following the drop of Rs. 10.50 in the previous weeks, Belapurs declined by Rs. 3 to Rs. 305.50 this week. Bhopals lost 40 nP to Rs. 27.10, while Changdeos were a fraction better at Rs. 33. Phaltans retreated by Rs. 6.50 to Rs. 173 and Walchandnagars by Rs. 2.50 to Rs. 280.50. Cement shares too were easy. Associated Cements lost over the week Re. 1.25 to Rs. 153.25 and Digvijays Rs. 4.50 to Rs. 129.50, while Ashoks and Jaipur Udyogs were steady at Rs. 7.56 and Rs. 10.36, respectively.

In the engineering and mining group, Alcocks advanced by Rs. 2.50 to Rs. 260. On heavy short covering by those who had sold earlier on fears of lower dividend, Premier Constructions jumped up by Rs. 11.50 to Rs. 247.50. Tata Locomotives moved up from Rs. 154.50 to Rs. 156.25, but slided back again to Rs. 154.50 at the close. Their rights were done Re. 1.50 lower at Rs. 41.50. Mahindras lost 24 nP to Rs. 18.52 and Larsen and Toubros shed a fraction to Rs. 16.92. Following the announcement of a bonus issue in the ratio of three shares for every 10 shares, Guest, Keen, Williams shot up from Rs. 34 to Rs. 38.75. The abolition of export duty on manganese ore boosted up Shivrajpurs from Rs. 86 to Rs. 91.20 and their rights by Re. 1.50 to Rs. 67.50. Indian Coppers were steady at Rs. 3.74 and B.B. Petrols at Rs. 2.02.

Scindias advanced from Rs. 21.16 to Rs. 21.60, but suffered a retreat, following the announcement that the dividend for the year ended 30th June 1958 would be maintained at Re. 1.50 per share, while a section of the market had anticipated a higher distribution. Great Easterns gained over the week 15 nP to Rs. 26.75. While Bharat Lines were lower by 16 nP at Rs. 13.44, Malabar Steamships attracted attention and gained Rs. 2 to Rs. 15.76. Premier Automobiles were unchanged at Rs. 86, while Hindustan Motors were a shade better at Rs. 7.24.

Among miscellaneous industrials, Bombay Burmahs (old) provided a feature with a rise of Rs. 12 to Rs. 497 on demand from dividend hunters, as the shares will be listed *ex*-dividend on Monday next, when the new settlement opens. National Rayons were erratic, moving between Rs. 244.50 and Rs. 239.50 before closing at Rs. 240.75. Gwalior Rayons were done 16 nP lower at Rs. 14. Tata Chemicals were better by 12 nP at Rs. 15.76 and Hindustan Levers by 60 nP at Rs. 26.60. Voltas had business Re. 1.25 higher at Rs. 135 and I.C.I.C. Rs. 3 lower at Rs. 78. Killick Industries were better by a rupee at Rs. 149. Wimcos were listless at Rs. 187.

Calcutta Stock Exchange

CALCUTTA, *26th November*

Conditions on the Calcutta Stock Exchange during the week under review were depressed; however, a small recovery set in on Monday on unconfirmed reports of the imminent issue of bonus shares by the Indian Iron and Steel Company, Ltd., in the proportion of one to five existing shares. This recovery was short-lived as fresh selling emerged yesterday. The earlier bout of selling that developed in all sections followed the unloading of a huge block of shares of the speculative Indian Irons both on the Calcutta and Bombay markets by an investment company. Nervousness naturally developed, and pointers were raised as to the motive behind the release of the large block of Indian Irons. In the result, a healthier technical position resulted. The Indo-Pakistani border frictions caused anxiety and introduced caution. However, the earlier report to Parliament of the Finance Minister on foreign aid prospects was noted with satisfaction. The recovery in Indian Irons on Monday followed some investment support, as the share, at the currently quoted price, was considered undervalued, considering the possibility of not only the dividend of 10 per cent. being maintained in the future but also of a higher distribution when once the expansion plans were completed and the loans to the World Bank and the Government of India were repaid. Activity in the miscellaneous industrials section showed that the number of small investors was gradually increasing and the lightweights were becoming a growing attraction to this class of investors.

Coal shares recorded a significant drop in the number of transactions. Central Indias, for which a dividend of 5 per cent. has been maintained for the year ended March last, moved down to Rs. 8.09 from Rs. 8.19. Bengals were as low as Rs. 268, as against Rs. 270 earlier, before recovering to Rs. 270. New Beerbhooms, at Rs. 11.50, were lower by 50 nP. Burrakurs eased to Rs. 16.81 from Rs. 17.31.

In consonance with the general trend and reflective of the fall in jute goods prices, opportunity was taken to avail profits in the jute section. In the process, Anglo-Indias lost to Rs. 208 from Rs. 212, while Kamarhatties, after being pushed down to Rs. 167 from Rs. 170, improved to Rs. 174. Howrahs recovered to Rs. 20.44 after falling to Rs. 19.94 from Rs. 20.37.

Earlier, Indian Irons touched a low of Rs. 25.69, but soon resumed normalcy and the price recovered to Rs. 26.07. On the report of an imminent bonus share issue in the proportion of three to every ten existing shares, Guest Keen Williams shot up to Rs. 36.50 from Rs. 34.25. Texmacos, after recovering to Rs. 21.60 from Rs. 21.25, closed quiet at Rs. 21.30, while Jessop & Cos. were fully steady at Rs. 26.12.

Among miscellaneous industrials, India Steamships were noted for the improvement to Rs. 14.12 after being lower at Rs. 13.94. Indian Cables were on renewed offerings and declined to Rs. 29.69 from Rs. 30.19. On the recommendation of a dividend of 10 per cent. against 5-15/16 per cent. for the previous year, National Rollings were taken to Rs. 13.31 from Rs. 12.56, while Indian Oxygens were lower at Rs. 22.87. Dunlop Rubbers recovered to Rs. 29.56 from Rs. 28.75, while Martin Burns were quiet at Rs. 29.12.

Madras Stock Exchange

MADRAS, *25th November*

Distinctly easy conditions prevailed on the Madras Stock Exchange during the week under review. Buying enquiries were at a low ebb, while operators were generally eager to reduce their commitments, thanks to uncertain Indo-Pakistani relations and apprehensions of fresh tax proposals. Values of equities, as a consequence, tended to move down. Plantation shares particularly encountered selling, on renewed reports of labour unrest in Kerala plantations and following the categorical statement of the Union Minister for Revenue and Civil Expenditure that there was no case for further relief to common teas. Textiles also encountered selling induced by unhelpful advices from yarn and cloth markets. Sugar and miscellaneous industrials ruled easy.

Among tea shares in the planting section, Talayars dropped 40 nP to Rs. 9. Nonsuch Teas receded by 35 nP to Rs. 24.50. Parksides declined by 30 nP to Rs. 21.80. Chembras, Kil Kotagiris and Nilgiris lost 10 nP each to Rs. 3.55, Rs. 6.46 and Rs. 7.60, respectively. Periakaramalais shed 8 nP to Rs. 3.87 and Chandramalais 7 nP to Rs. 3.30. Neelamalais eased by 5 nP to Rs. 4.90. Coonoors were neglected at Rs. 26.25, Devasholas at Rs. 22.25 and Peermades at Rs. 19.62.

Coffee shares were heavily marked down. Coffee Lands fell by Rs. 4.55 to Rs. 29. Consolidated Coffees slumped by Rs. 3 to Rs. 24.60. Mysore Coffees declined by 30 nP to Rs. 3.45 and Mysore Plantations by 20 nP to Rs. 1.60. Ouchterlonys shed 4 nP to Rs. 5.41 and Sheveroys 2 nP to Rs. 2.08.

In the rubber group, Midlands declined by 30 nP to Rs. 12.15. Vaikundams receded by 13 nP to Rs. 24.12. Kailas eased by 18 nP to Rs. 4.72. Be Bes, Nelliampathys and T. R. & Ts decreased by 10 nP each to Rs. 3.90, Rs. 3.15 and Rs. 6.90, respectively.

In the textile section, Vasantas were subjected to heavy selling and slumped by Rs. 17 to Rs. 203. Buckinghams, Radhakrishnas and Ranga Vilas declined by Rs. 4 each to Rs. 170, Rs. 137 and Rs. 51, respectively. Bangalore Woollens dropped Rs. 3 to Rs. 164. Lakshmis climbed down by Rs. 2.50 to Rs. 96. Coimbatore Spinnings decreased by Re. 1.50 to Rs. 45.50, Coimbatore Cottons by Rs. 2 to Rs. 147, Loyals by Re. 1.25 to Rs. 31 and Rajalakshmis by Re. 1 to Rs. 66.

T.I. CYCLES OF INDIA LTD.

The Tube Products of India Ltd., Madras, manufacturers of electric resistance welded (E.R.W.) steel tubes, in collaboration with Tube Investments Ltd., Birmingham, U.K. (through its subsidiary Tube Products Ltd., Birmingham), is to merge with the T.I. Cycles of India Ltd., Madras, manufacturers of the well-known "Hercules" brand cycles (in association with Tube Investments Ltd. and the Hercules Cycle and Motor Company, Ltd., U.K.) subject to the sanction of the Government. Under the scheme of arrangement and amalgamation, the shareholders of the Tube Products of India Ltd. will be issued shares of the T.I. Cycles of India Ltd. in lieu of their holdings in the amalgamating company and will later on be issued additional shares after the amalgamation becomes an accomplished fact.

Before the merger, the paid-up capital of the T.I. Cycles itself will be doubled by the issue of rights ordinary shares at par, thus raising it to Rs. 1.40 crore, made up of 140,000 ordinary shares of Rs. 100 each. Later on, when the merger scheme is sanctioned, the shareholders of the Tube Products of India Ltd. will receive four fully paid-up shares of the T.I. Cycles for every five fully paid shares of Tube Products and one fully paid share for every five partly paid shares. At present, the paid-up capital of the Tube Products of India stands at Rs. 77.5 lakhs and conversion of the shares of this Company on the above ratio will mean an addition of Rs. 62 lakhs to the paid-up capital of the T.I. Cycles, bringing it up (after the merger) to Rs. 2.02 crores. It is proposed to raise the paid-up capital of the T.I. Cycles ultimately to Rs. 2.50 crores. In other words, there will be a further issue of T.I. Cycles shares to the extent of Rs. 48 lakhs.

The Tube Products of India Ltd. commenced production last year and soon got into its stride in producing E.R.W. steel tubes of good quality. It is now operating to capacity. It is proposed to double its capacity by installing a second E.R.W. tube mill and to set up a mill for cold rolling steel strips, for which there is a growing demand. Extensions to the works of the T.I. Cycles are also on hand to double its capacity for production of cycles and cycle components, as also to undertake new industries like manufacture of chains, cycle saddles and lamps. These extensions and new projects will cost about £2 million, of which about £1.4 million will be needed in foreign currency for payment of imported equipment. In addition to taking up the agreed proportion of the additional equity capital, the Tube Investments Ltd., Birmingham, has agreed to provide a loan of £1 million, so that the combined company may have the requisite foreign exchange available to it to undertake these new projects.

The working of the two companies during the current year is said to be satisfactory. The working of the Tube Products of India Ltd. during the first nine months of 1958 indicates that the loss brought forward from the previous year will be wiped out and the full year's working will leave a surplus.

ALLOTMENT OF I.F.C. BONDS

Subscriptions to the 4½ per cent Industrial Finance Corporation Bonds, 1968, amount approximately to Rs. 8.39 crores. Applications up to and including Rs. 10,000 will receive full allotment. Subscribers for amounts over Rs. 10,000 will receive allotment at 51 per cent. with minimum allotment Rs. 10,000 and rounded off to nearest hundred. The subscription list opened on Monday, 24th inst., and was closed within an hour of its opening.

INDIAN ALUMINIUM CO., LTD.

The Indian Aluminium Company, Ltd., Calcutta, has set up an aluminium smelter at Hirakud. The factory has an installed capacity of 10,000 tons of aluminium ingots per year. Disclosing this in the Lok Sabha on the 25th inst. Mr. Manubhai Shah, Minister for Industry, said that the factory was expected to go into production in February 1959. The scheme had been approved by Government.

NEWS IN BRIEF

A RS. two-crore-factory for the manufacture of insulin is proposed to be set up by the Government of India in collaboration with the U.S.S.R.

The Government of India has decided to release a quota of 5,000 tons of sesame seed for export during the period November 1958 to April 1959 by exporters who will effect shipment of sesame seed oil.

The Ganga Barrage Scheme is under advanced technical examination and is expected to be submitted to financial scrutiny shortly. There is no proposal for reinvestigating the scheme, as the main field investigations have been completed.

The Central Government has abolished the export duty on all grades of manganese ore with effect from the 24th inst. The duty prevailing was Rs. 10 per ton on manganese ore content upto 44 per cent. and Rs. 30 for ores with manganese content exceeding 44 per cent.

It is reported that about 4.4 million acres of land have been collected under the *Bhoodan* movement during the last seven years, of which 655,000 acres have already been distributed to landless agriculturists. Bihar alone is said to have contributed about half the total area.

The production of *Ambar Charkha* yarn, during the first nine months of 1958, was about 1,430,000 lbs., which represents just 15 per cent. of the target of 7,000,000 lbs., proposed for the whole of 1958. The Government of India has so far spent Rs. 326.05 lakhs in the form of grants and loans.

A new scheme for granting subsidy to selected cottage and small-scale industrial units consuming electric power has been drawn up by the Government of Bombay. The subsidy will be the difference between the actual rate paid and 9 nP per kw.h. subject to a maximum of 6 nP per kw.h.

At its meeting recently held in Bhubaneswar, Orissa, the All-India Farmers' Council endorsed in principle the nationalisation of wholesale trade in foodgrains as recommended by the National Development Council. It also supported the Asoka Mehta Committee's suggestions for guaranteeing fair prices for agricultural products.

A sum of Rs. 266.31 crores has so far been invested in the Hindustan Steel Private Limited by the Government of India. Of this, the value of equity capital accounted for Rs. 245.81 crores and loan for Rs. 20.50 crores. The loan bears interest (on current balances) at a rate not exceeding one per cent. over the Bank rate.

The Chemicals and Allied Products Export Promotion Council, Calcutta, has sponsored a three-man trade delegation, with Mr. C. D. Thakkar as leader, to visit Kabul, Teheran, Baghdad, Cairo, Khartoum, Entebee, Nairobi, Dar-es-Salaam, Mombasa, Addis Ababa, Djibouti and Aden, in order to explore the possibilities of augmenting exports to these countries.

A convention of West Bengal businessmen will be held at Calcutta in the first week of February 1959, with a view to co-ordinating the work of big and small industries and encouraging business aptitude among people. Sponsored by the Indian and Bharat Chambers of Commerce, the convention will seek, in particular, to expand the scope for assisting small industries with credit and banking facilities.

As against the planned overall procurement of 3,816 B.G. passenger coaches during the period of the second Plan, a total of 1,822 coaches have been entrusted to the Integral Coach Factory, Perambur, for production. Out of these, 501 coaches had actually been turned out from this factory by the end of September this year, including 179 turned out during the first six months of the current year.

The Government of India issue price for wheat from Central stock has generally been Rs. 14 per maund and for common rice Rs. 16. The open market highest wholesale prices of coarse rice and of fair quality wheat in the country since April 1958 have ruled around Rs. 28.00 and Rs. 24.00 per maund, respectively, except in a few instances of isolated character. During 1957-58, 3,033,000 tons of wheat and 607,000 tons of rice were imported.

A three-man U.N. mission will arrive in New Delhi next week at the invitation of the Government of India to evaluate the working of the Community Development Programme. The mission, headed by Mr. J. Coldwell, until recently President of the Canadian Co-operative Commonwealth Federation, will study the basic objectives of the programme and examine the organisation and training arrangements. The report of the mission is expected to be submitted by March 1959.

In order to develop the manufacture of electric multiple unit coaches in India, Jessop & Co. Ltd., Calcutta, has been given an order for part manufacture of 104 coaches. This firm is expected to develop manufacturing capacity for 50 to 60 coaches per year. The manufacture of electric traction equipment for these coaches at the Heavy Electrical Project, Bhopal, is under consideration. No order was placed during 1957-58 for import of these coaches. Foreign exchange consumed in 1957-58 against orders placed earlier was Rs. 4.35 crores.

A cheque for Rs. 1.9 crore for the Rihand Valley Development Project was handed over to Mr. A. K. Roy, Secretary, Ministry of Finance, at New Delhi on the 24th inst., by Mr. Howard E. Houston, Director of the U.S. Technical Co-operation Mission in India. In all, a total of Rs. 7 crores by way of rupee contribution to the Project has been made by the U.S. It is a reimbursement of the expenditure already incurred for the period 1st April 1954 to 30th June 1957. In addition, the Technical Co-operation Mission has provided $6 million worth of heavy equipment as well as the services of two technicians.

The average yields of paddy in India under the Japanese method of cultivation are reported to be between 28.88 maunds and 38.73 maunds per acre and these are subject to correlation in the light of variation in the practices adopted, according to the Union Minister for Food and Agriculture. In the so-called Chinese method of rice cultivation, some of the principles are diametrically opposed to those involved in the Japanese method. Trials will be conducted to verify the yield under the Chinese system and hence it is not possible at this stage to compare the yield under the two methods of cultivation.

The number of villages electrified in the Punjab between 1st April 1956 and 31st July 1958 was 917. The second Plan target is to electrify 2,100 villages in the State. The remaining 1,183 villages are expected to be electrified by the end of the second Plan period. The target for 1958-59 is 400 villages. During the period 1955-56 to 1957-58, the Government of India sanctioned loans amounting to Rs. 4.5 crores to the Punjab for schemes relating to expansion of power facilities for increasing employment opportunities and for development activities. Under the second Plan, a total sum of Rs. 75 crores has been provided for electrification of small towns and rural areas in India.

The maximum wholesale prices of coarse I and II varieties of rice in Madhya Pradesh have been fixed by the Central Government at Rs. 15.50 and Rs. 15.00 per maund, respectively. These prices are exclusive of the cost of gunny bags. Sale in wholesale quantities has been explained as sale in quantities exceeding 10 maunds in any one transaction. The prices fixed are for fair average quality of rice conforming to the specifications prescribed in the order. For rice below the fair average quality, the maximum prices shall be determined by deducting the prices fixed by the amounts of cuts indicated in the specifications applicable to the respective varieties of rice.

The United States will be represented at a symposium on petroleum resources and development to be held in New Delhi from 3rd to 16th December next under the auspices of the U.N. Economic Commission for Asia and the Far East. It will be the first of its kind held in this region. Its purpose is to discuss technical aspects of various subjects, including the petroleum industry of the E.C.A.F.E. region, petroleum exploration status and methods, recent developments in the search for oil in the continental shelf and technical manpower and equipment for exploration, production and refining. Most of the E.C.A.F.E. members are expected to be represented at the symposium.

The Visakhapatnam Port development project consists of two parts—construction of four berths (two for general cargo and two for ore) and provision of belt conveyor system and auxiliary facilities such as railway sidings, plants, etc., for handling ore. The project will cost Rs. 4.50 crores as now estimated and the foreign exchange component of it is put at Rs. 2.10 crores. Estimates for the construction of the four berths have been received from the Port Administrative Officer, Visakhapatnam, and are under consideration of the Government. A portion of the dredging required for the construction of the berths has, however, already been carried out. The design for the belt conveyor system will be finalised upon receipt of certain particulars called for from the railways and the State Trading Corporation.

The Hindustan Shipyard has so far built 23 ships. This was revealed by Mr. Raj Bahadur, Minister of State in the Ministry of Transport and Communications, during the question hour in the Lok Sabha the other day. Nine more ships are planned to be built during the second Plan period. The amount of foreign exchange spent on ships built so far during the second Plan period and the further amount expected to be incurred on nine more ships planned to be built during the rest of the Plan period is Rs. 355 lakhs and Rs. 588 lakhs, respectively. The amount of foreign exchange incurred or likely to be incurred on purchase of engines and boilers is estimated at about 50 per cent. of the total foreign exchange expenditure involved.

• • • •

From Abroad

The U.S. national product is currently running at an annual rate of $450,000 million which surpasses the previous record of $445,600 million set in the third quarter of 1957.

A group of business and financial executives of New York held a meeting on the 21st inst. and decided to form a new organisation for facilitating private investment abroad. The proposed organisation will seek to assist the underdeveloped countries through free enterprise channels.

Ten thousand dollars apiece has been awarded to two steel workers in Indiana, the U.S.A., who worked out a method to drain molten iron from slag. Application of the new method is estimated to result in a saving of $100,000 a year to the U.S. Steel Corporation.

The latest estimates of crude oil output in the U.S.S.R. for 1960 is put at 135 million metric tons, as against the actual production of 98 million metric tons in 1957 and 37.6 million metric tons in 1950. Despite increase in production, the export of oil from the U.S.S.R. has been very small. It is stated that Russia uses more oil than any other country except the U.S.

The Indonesian Government has requested the U.S. Export-Import Bank for a loan of $30 million to set up a chemical fertiliser factory. Negotiations regarding the loan are said to be nearing completion. Besides this loan, Indonesia has sought financial assistance for several other projects—$12 million to buy three U.S. Lockheed Electra civil airliners for the Garuda Airlines, $10 million to finance a thermal power station, and $5-6 million for expanding a cement factory.

The American Federation of Labour Congress of Industrial Organisations (A.F.L.-C.I.O.) has appointed an Atomic Energy Technical Committee to deal with the problems of the introduction of nuclear science in industry. Announcing the move, the A.F.L.-C.I.O. has said that the introduction of this new technology and science raises many problems for the workers in such places. Mr. Benjamin C. Cigal, General Counsel of the International Union of Electrical Workers, will be the Chairman of the Committee.

A pipeline in plastics for the discharge of acid containing waste water, believed to be the biggest of its kind in Europe, has just been put into operation at the new cellulose plant at Monsteras, South Sweden, owned by the Swedish Forest Owners' Association. The pipes for this installation which is about one mile long, were manufactured in continuous production and delivered in lengths of 33 ft. Their diameter is 3½ ft. and the thickness of the walls is 1/5 inch. The pipes were manufactured by the Swedish Hoganas Billesholm Company by means of machinery having a capacity of about 40 m. per day, specially designed and built by the company's own engineers. The material is glass fibre reinforced polyester.

The demand for engineering products continues to decline in Sweden, according to a survey by the Swedish Institute of Industrial Investigations. For the engineering industry proper, excluding shipyards, orders on hand, on the basis of working hours, were 20 per cent. smaller in August this year than at the same time a year before. As compared with February this year, there was a decrease of 8 per cent. At the shipyards, orders on hand in August this year were over 20 per cent. smaller than a year before at an unchanged proportion of export orders of about 65 per cent. New orders in the period March-August 1958 were very few and amounted to only 8 per cent. of the figure for the same months of last year.

In a bid to overcome overproduction, the Japanese steel industry is making efforts to expand exports. During the first half of the current fiscal year, the industry concluded contracts for the export of about 800,000 tons of steel products. This figure represents more than 60 per cent. of the export target of 1,319,000 tons set for the year. The industry continues to receive new orders. The Japanese concerns are at present negotiating with India for the export of 50,000 tons of steel in exchange for an additional 200,000 tons of iron ore, besides the 1.4 million tons agreed to under a recent agreement between the two countries. Another consignment of about 35,000 tons of steel is also expected to be exported to India under the 18 million yen credit. In addition, sizable orders have been received from the U.S.S.R. and Brazil.

PERSONAL

THE Maharao of Cutch, India's Ambassador to Norway, arrived in Bombay on Monday last.

Mr. Rajeshwar Dayal, India's High Commissioner-designate for Pakistan, left New Delhi for Karachi on the 24th inst.

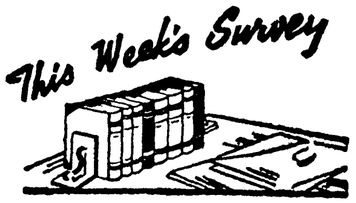
Mr. B. D. Garware, a noted industrialist, has been appointed Sheriff of Bombay for the ensuing year, *vice* Mr. J. C. Jain.

Mr. Justice Mohammad Hidayatullah, Chief Justice of Madhya Pradesh High Court, has been appointed a Judge of the Supreme Court.

Mr. B. R. Bhagat, Union Deputy Minister for Finance, who led the Indian delegation to the recent Colombo Plan meeting held at Seattle, U.S., returned to India last week-end.

Mr. C. V. Narasimhan, at present Executive Director of the Economic Commission for Asia and the Far East, has been appointed one of the two special Under-Secretaries for Political Affairs to the Secretary-General of the United Nations.

Mr. J. I. Jamieson, Chairman of the Indian Jute Mills Association and leader of the Indian delegation to the Far East, returned to Calcutta on the 22nd inst. after a five-week tour of Australia, New Zealand, Singapore, Manila, Saigon and Hong Kong.



FOREIGN AID

THE view that, as a result of the foreign aid secured so far, it would be possible for the country to "avoid any serious declines in our foreign exchange reserves" was expressed by Mr. Morarji Desai, the Union Finance Minister, in the Lok Sabha, last week. Mr. Desai, who was making a statement on foreign aid made available to India, emphasised that it was necessary not only to conserve these reserves, now standing at a level of about Rs. 180 crores, but, "if possible, to build them up again." In the course of his statement, Mr. Desai paid a just tribute to the countries which participated in the Conference organised by the World Bank in August last, which finally led to concrete measures of aid by the leading Western countries and Japan. "The friendliness shown at the Conference," he said, "was backed by concrete indications of the assistance to be extended to us for carrying forward the second Five-year Plan."

Giving specific details of the aid promised by the World Bank and Western countries, Mr. Desai said that the World Bank, which had agreed to give a loan of $25 million for the D.V.C. in July 1958, had also agreed to give another loan of $85 million for the railways. The Bank has promised to "give continuing consideration to our further requirements." The U.S. has agreed, in principle, to give a loan of $100 million from the Development Loan Fund. Negotiations are now in progress about the distribution of this sum among different development programmes. The U.S. has also indicated its willingness to defer the interest and amortisation payment due on the 1951 Wheat Loan over the next nine years. This will save the country some $7 million in foreign exchange every year. The latest P.L. 480 agreement with the U.S. enables India to purchase wheat and other agricultural commodities in the U.S. of a total value of $238 million against payment in rupees.

The U.K. has agreed to give India a credit of $108 million. The details of this loan, it is stated, are still under negotiation. The loan will be in two parts—$28 million by way of advance repayment of the amount due to India in lieu of the settlement of pension claims of the U.K. nationals who had served in India and $80 million which will be available for meeting the payment to the U.K. suppliers. Canada has announced an allotment of $17 million for assistance to India in the current fiscal year by way of Colombo Plan allocations; an agreement on the utilisation of this amount has already been reached. In addition, Canada has consented to grant a loan of $8.8 million for the purchase of Canadian wheat. West Germany has agreed to make available a sum of $40 million. The loan, the details of which are under negotiation, will be in two parts, the smaller part being of a shorter duration than the other. Japan, which had agreed to give a line of credit of $50 million through its Export-Import Bank, will give another loan of $10 million through the same agency. The details of the loan have not been settled yet.

As regards the foreign exchange requirements in the last two years of the Plan, namely, 1959-60 and 1960-61, Mr. Desai averred that the Government had advanced in its negotiations to a point "where our needs have been appreciated in general and where a proper forum exists for organising discussions with other countries and international institutions efficiently and expeditiously." Actual requirements of foreign exchange in the last two years of the Plan have been estimated to be of the order of $650 million, exclusive of assistance for the purchase of agricultural commodities. Mr. Desai said that several countries had indicated their readiness to participate in our developmental efforts constructively and on a continuing basis." In this connection, he cited the instance of W. Germany which had agreed to make available $60 million in the last two years of the Plan.

External assistance received by India is not confined only to the countries which are members of the Word Bank. India has received aid from other countries too. Besides the credit for the Bhilai steel plant, the U.S.S.R. has extended credit to the tune of Rs. 60 crores for certain industrial projects. India has concluded a deferred payment agreement with Rumania for the supply of an oil refinery at a cost of Rs. 5.2 crores and with Czechoslovakia for the forge foundry project at a cost of Rs. 8.5 crores. Negotiations for similar arrangements are under way at present with the U.S.S.R. for a new drugs project.

All this assistance is certainly commendable, in that it indicates how greatly other countries have given concrete proof of their willingness to assist India. Nevertheless, it must be admitted that if India pursues a more constructive and realistic economic policy, it will stimulate the flow of private foreign capital which will reduce, if not eliminate altogether, its dependence on foreign Governmental assistance. Again, to the extent the assistance now received, or promised to be given, includes loans, India has to be prepared to honour its commitments as and when they fall due. From this point of view, it is imperative that the loans received from abroad are put to most productive purposes and also export potential is continuously expanded, in order to ensure there is no recurrence of any foreign exchange crisis.

G.A.T.T.

After deliberating for well over five weeks, the 37 Contracting Parties to the General Agreement on Tariffs and Trade—G.A.T.T. for short—concluded their thirteenth session at Geneva on Saturday, the 22nd inst. The session was quite an eventful one, in that it marked the beginning of a new era in the history of world trade. At this session, the Contracting Parties drew up plans for an international programme to expand world trade (including the convening of a world tariff reduction conference in the summer of 1960), recognised the need for reducing restrictions on agricultural imports from the underdeveloped countries as well as for taking measures to promote the export trade of these countries, and approved the provisional admission of Cambodia and Switzerland. They also constituted three special committees to study the three main points discussed at the session: (1) proposals for a new round of tariff negotiations among the member-countries of the G.A.T.T.; (2) procedures under which the G.A.T.T. can overcome the obstacles to trade expansion inherent in national agricultural policies; and (3) measures for stimulating the export earnings of underdeveloped countries.

The aforesaid committees will commence work early next year and report to the fourteenth session of the G.A.T.T. to be held in Geneva from 11th to 30th May 1959. The deliberations of this session and the decisions taken thereat, as also at the fifteenth session to be held in Tokyo from 26th October to 14th November, will, perhaps, form the basis for the discussions at the proposed world tariff reduction conference in 1960. Meanwhile, it is reported that, at the conference, the U.S. will negotiate with other G.A.T.T. members 20 per cent. tariff cuts authorised under the extended Reciprocal Trade Agreement Act. The tariffs of Cambodia and Switzerland will also be negotiated at the conference prior to their admission as full members.

The recognition of the urgent necessity to help the underdeveloped countries is certainly a significant feature in the G.A.T.T.'s new programme. The growing need of these countries, as Mr. L. K. Jha, leader of the Indian delegation to the thirteenth session and Chairman of the session, very pertinently pointed out, is to have opportunities to expand, by trading with other countries, their export earnings and thus provide themselves with additional means to pay for imports "which are a matter of life and death for their hopes of economic expansion and a higher standard of living for their peoples." The success or failure of the new G.A.T.T. programme for trade expansion, as Mr. Jha rightly said, will largely depend on the leadership which is given by the principal trading nations; it is here that one looks to the U.S., the U.K. and the powerful economic entity taking shape as the European Economic Community. To quote him: "I am sure that, if these countries give us a strong lead in this enterprise .... a good many of the difficulties that threaten to divide us will be swallowed up in the general advancement which will then become a reality."

The call for more vigorous action on the part of the industrialised countries to help the underdeveloped countries to augment their foreign exchange earnings is not only timely but also very pertinent. This aspect must be stressed especially from the point of view of India. How India, an underdeveloped country, has been handicapped on account of import restrictions on its goods imposed by West Germany, a highly industrialised country, was described by Mr. Jha at the recent Geneva session of the G.A.T.T. Mr. Jha said:

"West Germany's import restrictions against Indian goods concern jute fibre, jute bags and sacks, leather goods, cotton yarn and cotton textiles. German imports of jute products aggregate 14 million Deutschemarks per year, but include only 3 million Deutschemarks from India. The remainder is imported mainly under bilateral trade agreements from Benelux countries, where jute products are manufactured with raw jute imported mainly from Pakistan. I am bewildered by West Germany's policy and think that it is designed to canalise trade in certain directions. I wonder whether it is possible that the European Common Market has something to do with it. I can find no explanation for the discrimination against India.

"West Germany's import restrictions strike at the root of the legal and moral obligations of the G.A.T.T. and reduce India's resources for the purchase of rice, machinery and capital equipment. Nevertheless, India has no intention of making use of G.A.T.T. provisions by imposing restrictions on Indian imports from Germany."

Mr. Jha has done well to highlight India's difficulties in the matter of exports to W. Germany. It is not India alone that is handicapped as a result of West Germany's import restrictions; a number of India's neighbours are also handicapped similarly. It is, however, comforting to be told by the West German delegate, Dr. Helmuth Klein, that his country is prepared to examine the Indian complaint "in a spirit of co-operation and will do everything possible to reach an understanding."

ASSAM REFINERY

A long-term credit to India and offer of training facilities to Indian technicians are features of the agreement which the Union Government has concluded with Rumania for purposes of setting up an oil refinery in Assam. Disclosing the details of the agreement, which followed the visit of a Rumanian technical team to India and the visit of an Indian team to Rumania, the Union Minister for Mines and Oil, Mr. K. D. Malaviya, stated in the Lok Sabha, last week, that Rumania had agreed to offer a long-term credit of Rs. 5.24 crores for building the refinery which, as is now well known, will be the first of its kind in the public sector; the next refinery in this sector will be set up at Baruni in Bihar. This long-term credit carries a low rate of interest, namely, 2.5 per cent. per annum, the same rate at which Russia gave credit for the Bhilai steel project. Under the agreement, 15 per cent. of the credit will be repaid in six instalments, the first one to commence 30 days after the signing of the agreement and the last 30 days after the refinery has been set up; the balance of the credit (that is, 85 per cent.) will be repaid in ten instalments, the first two instalments commencing on 31st December, 1961 and the last one ending on 31st December, 1965. The Rumanian Government has agreed to buy Indian goods as far as practicable against payment made under the agreement; the balance of credit not utilised in this manner will be converted into transferable free currency after 1st April 1961, if so desired.

Under the terms of the agreement, Rumania will supply the equipment and materials for the process units and auxiliary installations, ensure their erection by Rumanian engineers and technicians and train Indian technicians in Rumania. The Indian Government has undertaken to select the refinery site, furnish all temporary facilities for the construction and erection of the refinery, supply construction materials and provide the necessary transport for materials and equipment. Mr. Malaviya said: "I have no doubt that this collaboration with the Rumanian Government for the establishment of the first oil refinery in the public sector will pave the way for greater association with them in other projects as well."

The Assam oil refinery will have a capacity of 0.75 million tons per annum and the refinery in Bihar a capacity of two million tons. Mr. Malaviya said that the Assam oil refinery would be on stream by April 1961. He stated that the Government would soon take a decision on the offers of collaboration it had received for the construction of the Bihar refinery. The production and transport of crude oil to these two refineries in the public sector will be handled by Oil India Private Ltd. in which the Government of India holds one-third share of the capital, the rest being held by the Burma Oil Company and the Assam Oil Company. The operation of the two oil refineries depends upon the maintenance of crude oil supply and the construction of a pipe-line from the Assam oilfields to the Bihar refinery. It is to be hoped that Oil India Private Ltd. will ensure that the production of crude oil is maintained at the anticipated level of 2.5 million tons per annum and will also expedite the construction of the pipe-line.

TRADE UNIONS AND THE CODE OF CONDUCT

The President of the Indian National Trade Union Congress (I.N.T.U.C.), Mr. G. Ramanujam, has charged the All-India Trade Union Congress (A.I.T.U.C.) with having violated the code of conduct adopted at the Naini Tal Labour Conference. Addressing the General Council of the I.N.T.U.C. at Jamshedpur on the 22nd inst., Mr. Ramanujam pointed out that, from the very beginning, the A.I.T.U.C. and its affiliated unions were violating both the code of discipline in industry and the code governing inter-union relations. The latest example of such violation, according to him, was in Kerala, where communist unions had gone on a strike in the plantation estates of the High Ranges when the employers were prepared for adjudication. In utter disregard of the provisions of the code, the I.N.T.U.C. union's office in Munnar in Kerala was raided, furniture broken and trade union leaders assaulted. What was surprising, he pointed out, was the Kerala Labour Minister's declaration that the strike was justified and peaceful and that there was no breach of any code. All this showed, he added, that the Communists were paying scant respect for the code and it had become an object of mockery at the hands of their party, its trade unions and even its Government.

These charges should not be dismissed as the fulminations of one trade union leader against his rival union. For it raises issues which have a direct bearing on industrial peace in the country. There is no surer way of discrediting a law, a code or time-honoured practice than openly violating it. The Communists have found the code, which they themselves approved, probably to prove their apparent solicitude for maintaining industrial peace in the country, unsavoury and irritating. Presumably, they regard the code as an impediment to following their usual methods of gaining ascendancy in the labour field and dislodging rival unions. They do not appear to have ever taken the code very seriously, for even when it was being formulated, its spirit was violated by the A.I.T.U.C. in Jamshedpur. It is necessary to investigate the charges and, if found true, to condemn publicly violation of the code in unequivocal terms and take measures to ensure its observance.

Mr. Ramanujam did well to underline the need for trade union unity. He did not think it possible to unite on a sound footing organisations differing in purpose, direction and methods such as the I.N.T.U.C. and A.I.T.U.C. He suggested that organisations such as the Hind Mazdoor Sabha and the United Trade Union Congress should merge with a major organisation of their choice. The I.N.T.U.C. and the H.M.S. are both co-affiliated to the International Confederation of Free Trade Unions and the chances of their merger, according to him, should not be remote.

Defining the relation of the I.N.T.U.C. with the Congress, Mr. Ramanujam pointed out that, while ideologically the two organisations had considerable affinity, they were distinct entities and would not tolerate encroachment on each other's domain. He has done well to assert the independence of the I.N.T.U.C. for its identification in the public mind with the Congress Party has done much to weaken the organisation, at least in some States.

FAMILY PLANNING

The phenomenon of population growing faster than resources is now gaining recognition even in communist countries. Faced with the problem of a relentlessly rising population, communist China, for instance, was forced to do violence to Marxist theory, namely, that the "so-called" population problem was a capitalist fetish, and take effective measures to deal with it. Fortunately, in India, the need for population control through family planning does not seem to have been seriously questioned, barring, of course, a few intellectuals, to whom it was too much of an interference with marital privacy and individual liberty. Nor have there been any religious inhibitions against family planning. It is true that our womenfolk do not readily take to family planning, but available evidence shows that they welcome such planning. Their reluctance is due to shyness, and not to any conscientious objections. The reaction of the majority of rural mothers, the worst victims of improvident maternity, to family planning has been most encouraging. Given intelligent publicity and concerted efforts, the programme of family planning is sure to find general acceptance.

The surest way to ensure the success of the programme is to make the people family planning conscious. Planning one's family must become a habit, a way of life and a tradition. As Mr. D. P. Karmarkar, Union Minister for Health, pointed out in his address to the recent meeting of the Family Planning Board, it must take deep roots in the social fabric of our family life. The Minister rightly pointed out that the establishment of clinics and the like was important, but more important was the need for making every man and woman in the country conscious of the urgency of the programme in the interest of the community as a whole. In both the medical personnel carrying on the work of propagating family planning and the people in general, according to the Minister, there was a greater element of seriousness now than at the beginning of the programme.

In spite of the urgency of the problem and the presence of a number of official and non-official agencies to deal with it, it is regrettable that the second Plan provision of Rs. 4 crores for the Centre and Rs. 97 lakhs for the States has not been utilised to the extent one would have desired. Thus, the anticipated Central expenditure up to March 1959, the third year of the Plan, is Rs. 79.60 lakhs only. A provision for Rs. 320.40 lakhs is thus still available. Of late, however, there has been some improvement in the position. During last year, the whole amount allotted for family planning had been utilised and this year also it is expected that the money will not be allowed to lapse. The programme for the rest of the Plan period should, therefore, be drawn up, keeping in view the balance available out of the Plan provision. In view of the fact that there should be no interruption in the programme, more funds should be made available, if need be.

The progress of the programme, as judged by the number of family planning clinics opened, in the urban areas has been fairly satisfactory. The total number of clinics opened so far during the second Plan, according to the report of the Director-General of Health Services, is 578, which is four times those opened during the first Plan period. But in rural areas the record has been poor. A high priority should, therefore, be given to rural areas, where, after all, the need for family planning is most urgent. It appears that, apart from official and non-official agencies already in the field, private industrial employers can do much in popularising family planning by providing the necessary facilities at the disposal of their workers. Family planning clinics should be attached to hospitals meant for all workers, especially for those working in plantations, coal mines, sugar factories and other works situated in rural surroundings. Instruction in the benefits of family planning could be given to the workers, male or female, at these clinics. Once the fear of the idea of limitation of family, which might at first look new-fangled, is overcome, contraceptives should be distributed free of cost. The knowledge and experience gained by the worker or his wife would, by a natural process of diffusion, easily pass on to other members of the family and a larger number of people than receive direct advice would thus be benefited.

An aspect having a direction bearing on the success of the scheme, which Mr. Karmarkar particularly emphasised, is research on contraceptives. Attempts are being made to evolve a simple, effective, harmless and acceptable contraceptive. The Contraceptive Testing Unit of the Indian Cancer Research Centre, Bombay, is said to have developed a foam tablet. The All-India Institute of Hygiene and Public Health, Calcutta, claims a promising future for an oral contraceptive. While every effort should be made to accelerate the pace of research, it may be pointed out that the quest for satisfactory contraceptives need not be confined to the realm of modern medicine. It may extend to harmless indigenous medicine, too, provided, of course, its efficacy is not in doubt.

INDIAN STANDARDS INSTITUTION

Economic progress can come only through conscious efforts of a community to put the given resources to the maximum use. This presupposes a rapid improvement in the national output, not only in quantitative terms, but in qualitative as well. It is this latter function, perhaps less spectacular, but no less significant than the former, that is being undertaken by the Indian Standards Institution which held its fourth convention at New Delhi on the 24th inst. The Institution can look back upon the short span of its existence of about 11 years with legitimate pride. It has produced about 1,100 standards for a wide range of goods in the primary, tertiary and manufacturing sectors. Its work will, in due course, help create and sustain the confidence of the average consumer in the goods manufactured in India.

Of the numerous standards devised by the Institution, mention may be made of the standard specifications set for the various stages in the handling, transportation and storage of foodgrains which are said to have reduced substantially the incidental losses in this process. Similarly, the formulation of standards relating to grading and specification of various types of sugar has been of great importance to the sugar trade, particularly for exports. Besides, the Institution is at present exploring the possibility of laying down objective methods of evaluation of colour in collaboration with the National Physical Laboratory of India and National Sugar Institute, Kanpur. A series of standards were also published for pest-control products.

Apart from evolving these national standards, the Institution has been working in collaboration with the International Organisation for Standardisation. For instance, the I.S.I. has been participating in the deliberations of the I.O.S. Technical Committee for regulating the quality of such export commodities as oilseeds, spices and condiments. In the sphere of engineering industry, it has recommended a large number of standards, particularly in machines and small tools, automobile vehicles and internal combustion engines, bicycles, sewing machines, pumps, etc.

The Institution has also played a significant role in smoothening the change-over to metric system in the country. In this connection, it has taken up the task of preparing dimensional and other standards based on metric system. The formulation of conversion factors and conversion tables, conversion tables for ordinary use, and code of practice for general engineering drawings have been outstanding contributions.

These efforts towards bringing about rationalisation, uniformity and co-ordination in the various spheres of agriculture, industry and trade will go a long way towards making the Indian producer more and more quality-conscious. This will eventually enable the indigenous products to attain higher levels of competitive capacity. Prime Minister Jawaharlal Nehru, who inaugurated the meeting, rightly stressed the need for standardisation as a primary condition for stepping up exports. No doubt, much remains to be done to extend the scope of standardisation to various other branches of economic life in India. It is to be hoped that producers, consumers and other interests will co-operate with the Institution in expediting its drive for evolving standards and implementing them on a wide scale.

THE AHMEDABAD ELECTRICITY COMPANY LTD.

FORTY-SIXTH ORDINARY GENERAL MEETING

MR. P. D. C. R. CLARK ON RATE OF REASONABLE RETURN

THE view that the overall financial position of the electricity supply industry would continue to be almost the same as under the set-up before the Act was amended despite the rise in the rate of reasonable return from 5½ per cent. to 6 per cent. was expressed by Mr. P. D. C. R. Clark, Chairman of the Ahmedabad Electricity Company Ltd., in the course of his speech at the Forty-sixth Ordinary General Meeting of the Company held in Bombay on Wednesday, 26th November 1958. Mr. Clark pointed out that interest on borrowings which was hitherto admissible as a charge in arriving at the clear profit ceased to be so admissible under the new amendments. He, therefore, stated that such interest would tend to neutralise the benefit of the increase in the rate of reasonable return. The Chairman also dwelt on the need for removing the anomalies in the existing provisions of Income-tax Law and simplifying tax credit procedures.

The following is the full text of Mr. Clark's speech at the meeting:

"GENTLEMEN,

"The Directors' report for the year ended 31st March 1958 and the audited statement of accounts for the same period have been in your hands for some time now, and I shall confine my remarks at this meeting to such aspects of your Company's affairs and other policy matters as have not been included in the report, or are not covered in detail therein.

"The periods for the comparison of performance data and financial results are again not equal in that the previous period was for six months, i.e., October 1956 to March 1957. I shall nevertheless make an attempt to give a brief review comparing the results of the year ended 31st March 1958, with those in respect of the corresponding period ended 31st March 1957.

"The overall sales of energy for the year ended 31st March 1958, at 630.63 million kilowatt-hours, have registered an increase of 10.78 per cent. over the corresponding previous twelve months. Upon a class-wise basis, notable increases have taken place in the sales to the North Gujerat Grid and the Municipal Corporation, the percentage increases over the corresponding previous twelve months being 23.84 and 14.71, respectively. From the cost angle, the average delivered cost of coal per ton for the year under review was Rs. 43.44, as against the average cost of Rs. 39.61 per ton for the corresponding previous twelve months, and for the current year, namely, 1958-59, we expect the average coal cost to increase still further to round about Rs. 46 per ton. The main causes of this trend in cost of coal have been successive increases in railway freight and labour awards in the coal industry. This ever-rising spiral of costs in general is a universal one and, while your Company has so far consistently absorbed them with its increasing growth and increasing efficiency, there is a limit to its ability to do so indefinitely.

Rate of Reasonable Return

"You were advised at the last annual general meeting of the implications of the linking of the rate of reasonable return with the Reserve Bank rate ruling on the 1st of April each year, which had been done under the Electricity (Supply) Amendment Act, 1956. The rate of reasonable return for the year ended 31st March 1958 was 5½ per cent., but, for the current year 1958-59, this will be 6 per cent., since the Reserve Bank rate has increased by ½ per cent. You would doubtless like to ask me as to the anticipated financial results with the 6 per cent. reasonable return. I must point out in this connection that the interest on borrowings which was hitherto admissible as a charge in arriving at the clear profit ceased to be so admissible under the new amendments. Therefore, even with the 6 per cent. reasonable return, the overall financial position will be almost the same as under the pre-amendment set-up, since interest on borrowings, which will not be admissible as a charge in computing the clear profit, will tend to neutralise the benefit of the increase in the rate of reasonable return.

"Coming now to the topic which has been the subject of much preoccupation for the electricity supply industry, namely, the subject of grossing up of dividends in the hands of shareholders for the purpose of tax credits, I would like to tell you that the Federation of Electricity Undertakings of India has recently submitted certain proposals to the Direct Taxes Administration Enquiry Committee, which proposals, if accepted by the Committee and implemented by Government, would remove once and for all the anomalies in the existing provisions of law, and, at the same time, simplify tax credit procedures. The proposals envisage a deduction of tax at the Company rate from the gross dividends and the distribution of net dividends to shareholders, the tax deducted to be paid to Government irrespective of the position of the Company *vis-a-vis* the total income under the Income-tax Act, and, to the extent it is in excess of the current tax liability of the Company, to be treated as a deposit for adjustment against the Company's future tax liabilities as and when they materialise. On the strength of the tax withholdings from gross dividends, the shareholders would currently receive the benefit of full tax credit—in other words, restore to you the right to 'gross-up' your dividends from this Company which right, as you are so painfully aware, has been denied you in recent years. The Electricity (Supply) Act, of course, would have to be amended so as to admit the tax on gross dividends as a charge in the computation of clear profit. It has been shown to the Direct Taxes Administration Enquiry Committee that the proposals would not operate to the disadvantage of any of the three parties involved, namely, the State, the shareholders and the companies.

New Generating Plant

"At the last general meeting, a reference was made to the proposed addition of 30,000 kw. of generating plant to your Company's Sabarmati Power Station forming the first stage of the projected 'C' Station second half development. Your Directors, at their meeting held on 30th October 1958, decided, subject to the receipt of the requisite import licence, to place on order one 30 M.W. turbo-alternator set and ancillaries with Messrs. British Thomson-Houston Export Company, Ltd., two 200,000 lbs./hr. spreader stoker boilers with Messrs. Babcock and Wilcox Limited and ancillary coal handling plant with Messrs. Strachan and Henshaw Ltd. The requisite applications have been forwarded to the authorities concerned and are being followed up.

"I would like, once again, to express our thanks to the Central Water and Power Commission and to its newly appointed Chairman, Mr. M. Hayath. As you are, doubtless, aware, we, as a public utility company, and as constituents of the Bombay Association of Electrical Undertakings and of the Federation of Electricity Undertakings of India, have frequent recourse to the guidance and assistance of this department of the Central Government, and this has always been readily forthcoming, despite the great difficulties of the present situation.

"During a recent visit to Delhi, Mr. Hayath told us that the country as a whole must be reconciled to delays in the implementation of even urgently needed power projects. This was said in no spirit of defeatism but with a sense of responsibility and a full knowledge of the realities of the situation.

Rationalisation of Power Capacity

"This brings me to the subject of what may be termed 'rationalisation of power capacity' already available in the country. It is well known that the ability of a public electric supply undertaking to serve its consumers is, among other things, limited by the maximum demand which it is capable of meeting. In most undertakings, this maximum demand or 'peak' is created by the super-imposition of the lighting load on to the industrial load shortly after lighting up time. It will be clear that, if a careful survey is carried out in industrial establishments, there will be found certain loads or machines, not required for continuous operation, and which could be kept off the peak period (which in your undertaking is only of half to one hour's duration), and worked exclusively during periods of low load—in other words, 'off peak.'

"In your own undertaking, there is a further possibility of reducing the peak demand by a judicious staggering of the half-hourly evening rest interval in mills.

"The full exploitation of these demand-saving measures will, on the one hand, reduce the consumer's bill by reducing his individual maximum demand and improving his load factor and, on the other, release valuable power capacity to serve extensions in his own establishment or for other consumers. It is hoped that, with the co-operation of the Millowners' Association, it will be possible to achieve the maximum amount of load release by the judicious adoption of these measures without any loss of production and the minimum of inconvenience to labour and management. What I have just stated should not be construed to mean that it is possible to defer by the slightest extent the implementation of the first 30 M.W. phase of the "C-2" extensions which is being pressed forward with the utmost vigour.

Import Licences

"Another matter which weighs heavily on the managements of public utility undertakings these days is the delay in obtaining import licences for even the most essential spare parts required in an emergency. We recently had the case of a relatively small item costing only a few hundred pounds where a delay of several weeks took place in receiving an import licence, although the material was already manufactured and was awaiting transport by air. This delay cost the Company many times the value of the spare part concerned. It may be contended that the spare part in question should have been in ready stock. It will be easily realised that no organisation can afford to lock up capital by having in stock every possible spare part of the plant which would mean practically duplicating its cost. While a reasonable stock of spares has been provided by us in consultation with manufacturers for all possible eventualities, there is always the possibility of an unexpected item giving way or of a repeat failure. In such cases, you can well appreciate the magnitude of the potential loss of production that would result from a single 15 M.W. machine being held up for a couple of months. It would, in fact, be equivalent to the loss in production from 15 mills working full blast over that period! In view of this, it is to be hoped that the authorities in the Central Government would allow a reasonable latitude to the Central Water and Power Commission or similar Directorates to be invested with powers, within certain limits, to grant ad hoc emergency licences for spare parts required by important industrial undertakings, and particularly public utility undertakings.

"Unfortunately, in the early part of the current financial year, the demand on your power station reached a level which necessitated, as a short-term stop-gap measure, pending the commissioning of the fourth 15 M.W. turbo-alternator set in the first half of "C" station, the introduction of a system of staggering of load releases. I am glad to advise you that the fourth 15 M.W. set was commissioned on 24th October 1958 and, with this adoption, it is expected the situation will ease considerably. In a few months from now, it is hoped that further substantial relief to the station would be afforded by the South Gujerat Grid taking over the Baroda load.

Municipal Taxation

"Another matter on which I am inclined to offer some remarks at this meeting from the policy aspect is the question of municipal taxation, the latest position in respect of which has been reported to you in the Directors' report for the year 1957-58. The 'profit method' of assessment, which has been turned down as inappropriate both by the Small Causes Court and the District Court, is a method involving financial implications of considerable magnitude, and, from this point of view, the pending reference before the High Court is of particular significance both for yourselves and for the consumers.

"You will have seen several Press reports during the last few months about the prospects of an atomic power plant being installed in India and of the likelihood that its site will be between Bombay and Ahmedabad. Whatever be the final outcome of this proposition, the proposed 30 M.W. extension forming the first phase of the second half of your "C" power station would in any case have to be implemented, since it is required to cater for the anticipated load growth long before any atomic power could come into existence.

"Your management has been considering the prospects of introducing two-monthly meter reading and billing system, in place of the existing monthly meter reading and billing. The proposal has potentialities for economies in consumer costs, but, unfortunately, its introduction is being delayed on account of some technical difficulties under the Electricity Duty Act and Rules.

Labour Relations

"Labour relations have during the last year been cordial, as usual. A new union under the banner of 'The Ahmedabad Miscellaneous Industrial Workers' Union' filed an application for registration as the representative and approved union in place of the Ahmedabad Electricity Employees' Union and, after conducting investigations, the Registrar of the Industrial Court accepted the application.

"Your Company has become an ordinary member of the Administrative Staff College of India at Hyderabad, and a senior engineering executive has been deputed to attend the October-December 1958 training session of the College. Your Company has also become a joint subscriber, with the agency company, of the Personnel and Productivity Services.

"A Long Service Award Scheme has been formulated in consultation with your sister companies and is in the course of being implemented. The awards take the form of a gift and a certificate.

Accounts

"Coming to the audited statement of accounts for the year ended 31st March 1958, I feel that these are already straightforward in the form in which they have been presented to you. You will have noticed that, after meeting the usual appropriations and after transferring a sum of Rs. 2,07,000 from the equalisation of dividends reserve, a final dividend of Rs. 4 per share, making 6½ per cent. for the year, has been recommended, leaving a balance of Rs. 857 to be carried forward to next year.

"You will have seen from the Directors' report that Mr. K. G. Milne and Mr. E. D. Sheppard resigned their seats on your Board in September last and the Board of Directors have recorded their appreciation of the services rendered to your Company by these two gentlemen.

"In conclusion, I must refer to the good work performed by your Company's staff who have carried out their duties with zeal and energy, and I am happy to take this opportunity to thank them on your behalf.

"I now propose that the Directors' report together with the audited statement of accounts for the year ended 31st March 1958 be, and the same are hereby, approved, adopted and confirmed."

Note.—This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.

ATOMIC POWER IN RUSSIA

Mr. Vasili Emelyanov, head of the Central Administration for Utilisation of Atomic Energy under the Council of Ministers of the U.S.S.R., has contributed an article to the newspaper *Vechernyaya Moskva* on the construction of new atomic power stations in Russia and on the designing of various types of economical reactors by Soviet specialists. Two reactors will be installed at the atomic power station with a capacity of 420,000 kilowatts, now under construction in the Voronezh region. Another atomic power station of the same type is to be built in the Leningrad region. It can be expected, Mr. Emelyanov writes, that, in future, the steam generated by the reactors at such power stations will go directly to the turbines and make intermediate steam generators and other auxiliary equipment superfluous. The atomic power station of 400,000 kilowatt capacity now under construction in the Urals is based on the idea of obtaining steam directly in the atomic reactor. The four reactors to be installed at this station represent further development of the type of the reactor installed at the first atomic power station.

A very promising reactor on fast neutrons was launched last summer in the Soviet Union. The fuel in this reactor can be fully utilised for generating power. The fuller the physical deterioration of the fuel material, the cheaper becomes the electric power. This is so far the best way of rendering the atomic power stations more profitable. Work is also in progress to create mobile atomic power stations. The manufacture of a reactor and the rest of the equipment for such a station of two thousand kilowatt capacity is now nearing completion. The reactor of a mobile station is housed in a case about one metre in diameter and 2.2 metres high. Ordinary water under pressure of 120 atmospheres is used as a heat transfer agent and moderator. Experimental power reactors of various types are being built on the Volga for scientific and technical experiments in atomic power engineering. They will be tested in conditions of industrial use. Thus, a reactor with boiling water of a capacity upto 50,000 kilowatts is under construction in the Ulyanovsk region. Another reactor operating on heavy water with uranium in solution or suspension is also being built. An experimental reactor with molten sodium as heat transfer agent will be built in the same area. These experiments, Mr. Emelyanov concludes, will determine the scale of development of atomic power engineering in the U.S.S.R. for the next few years.

Announcing

One-Day Efficiency Course in Company Management

first of its kind in India

on Saturday, 24th January 1959, from 2-30 p.m. to 6 p.m.

at

INDIAN MERCHANTS' CHAMBER CONFERENCE HALL (air-conditioned), Churchgate, Bombay-1

•

Sponsored by:

INDIAN COUNCIL OF MANAGEMENT EXECUTIVES

(Registered under Societies Act, 1860)

POST BOX 1914, BOMBAY-1

INDUSTRY SECRETARY TO GOVERNMENT 1 - DEC 1958 INDUSTRY DEPARTMENT

BRITAIN CUTS BANK RATE AGAIN

ANXIETY TO AVERT RECESSION

FOR the fifth time in succession during the current year, the British Bank rate was cut last week (on 20th November 1958). As on the three immediately previous occasions, the latest cut was restricted to one half of one per cent., that is, from 4.5 per cent. to 4 per cent., bringing the cumulative reduction from the "crisis level" of 7 per cent. (established in September 1957) to 4 per cent. within a space of eight months. This has also taken the British rate to the lowest level since February 1955, when it was raised from 3.5 per cent. to 4.5 per cent. It is, however, noteworthy that, unlike on the previous occasions, the latest reduction was quite unanticipated and took the British public by surprise.

The following table shows the trend of British Bank rate since January 1955:

Effective date	*Rate (Per cent.)*
20th November 1958	4.0
14th August 1958	4.5
19th June 1958	5.0
22nd May 1958	5.5
20th March 1958	6.0
19th September 1957	7.0
7th February 1957	5.0
16th February 1956	5.5
24th February 1955	4.5
27th January 1955	3.5*

*Raised from 3 per cent.

The two main objects which the authorities might have had in mind when taking this quite unexpected step, are: (1) to help arrest the de-stocking trend in industry and to help facilitate investment in the private sector. It is expected to help local authorities to find the necessary funds to accelerate their housing and capital works programme; and (2) to help underpin the Gilt-edged market and facilitate the Government's proposed refinancing operation. It will be recalled that the reduction in Bank rate made in August last was itself something more than a technical correction. It was intended not only to arrest the increasing pace of decline in business activity in the country but to provide a stimulus. That a further cut in the Bank rate has come in a little over three months shows that this expectation has been belied and that the authorities are more worried about the prospect of a quick development of recession. The British Government would appear to be now convinced that the series of measures announced by it in recent months to stimulate business activity, namely, the cuts in Bank rate, the abolition of credit restrictions and of curbs on hire-purchase finance, the decision to provide more help to the Commonwealth nations, the new proposals for encouraging house purchase, and the lifting of the ceiling on local authority capital expenditure have not had the desired effect to the extent desired. On the contrary, there have been signs of renewed slackening in business activity. The slight slowing down of the recovery in the U.S. more recently has reduced the danger of inflation being imported into the U.K., as was feared by the Bank of England. It will thus be seen that the fear of a recession, more than the fear of an inflation, must have induced the Government to take the latest decision.

There are no doubt good reasons for the U.K. Government to view the outlook with some anxiety. For the index number of industrial production is now about 4½ per cent. below that a year ago. As the British economy is now mainly dependent on the prosperity of the motor-car and consumer durable industries, any setback in these two industries will result in a further marked fall in the general industrial production index. Both automobile trade and consumer durable goods trade are financed by hire-purchase system, in which British banks also have recently taken interest. The hire-purchase relaxations touched off a boom in both these cases, but it is feared that the boom may prove to be a short-lived affair and, with the approach of the Budget, hire-purchase business is expected to decline further in anticipation of a cut in purchase tax. Even otherwise, some decline can be expected after a few months, because consumers will not go on accumulating their hire-purchase debt. An indication of this is provided by the slight decline in production of automobiles during October.

A more disquieting aspect of the British economy at present is said to be the absence of any sign of improvement in the capital investment of private industries. In fact, it is stated that approvals for new factories during the third quarter of 1958 showed a drop of 30 per cent. as compared with that a year ago. Most of the industries are working below capacity and as such fresh private investments are not expected before the end of next year. The Government has, therefore, urged the local authorities to accelerate their own investment programmes in 1959.

So far as stocks are concerned, it is expected that the de-stocking movement, at least in steel and textile industries will come to an end. The Government probably feels that restocking should be carried further not only in the interests of the industries but also to benefit overseas sterling area economies and, therefore, the U.K. indirectly.

It is generally believed in Britain that there is a lot of concealed unemployment in British industries, and that unemployment would be on a larger scale next fear. The Government itself would appear to be worried that unemployment might rise above 3 per cent. this winter. So far as wages are concerned, the labour unions are on the defensive. They are worried more about the possibility of an increase in unemployment than about securing an increase in wages.

Following the cut in Bank rate, the London clearing bank rates have also been reduced by a corresponding extent. Thus, the rate of interest on deposits (seven days' notice) has been pruned from 2½ to 2 per cent. The rate for overdrafts for nationalised industries has been cut from 4½ to 4 per cent., for first class industries from 5 to 4½ per cent. and for other business concerns and private borrowers from 5½—6 per cent. to 5—5½ per cent. The rate on call money to the discount market has been reduced by only ⅜ per cent. to 2⅜ per cent. for what is known as "regular" money. For "non-regular" money the rates vary according to demand and supply.

The reduction in the Bank rate is expected to have its effect on interest rates charged by finance houses on loans for purchase of cars. While the maximum agreed rate of interest is 7½ per cent. on the total amount of the loan for a new car, the general level of rates has been 7 per cent. or slightly lower for some time. Following the abolition of Government control on hire purchase, two or three companies have been charging even as low as 5 to 6 per cent. and it is expected that the general rate will also move down to this level. The rate of interest charged by building societies on mortgages is not likely to go down below the present rate of 6 per cent. before the end of the year.

The fall in short-term money rates, following the cut in Bank rate, has so far had no effect on long-term rates. In view, however, of the fact that the former rates are well below the pre-crisis levels, it is considered probable that the long-term rates too will follow suit. It is argued in this connection, as "Lombard" does in the *Financial Times*, that, just as long-term rates did not move up to the same extent as short-term rates did last year, the downward movement in the short-term field since the middle of March has not hitherto had the effect of imposing any really pronounced downward pressure on long-term rates. "But now that returns in the short-term field are becoming very much more modest," "Lombard" goes on, "it seems likely that money will be diverted to an increasing extent to the long-term market, with the result that the tug on rates there will become more marked." Much, however, will depend upon the open market operations of the Government which have been holding the long-term rates at the present levels. It is suggested by London commentators that the Government should not be too anxious to check any downward trend in these rates. If it does so, they say, its borrowing for capital development, which is expected to be heavier in the period ahead, as well as for redeeming maturing issues, will be more expensive and that the present opportunity of letting the long-term rates too slide down should not be missed.

U.S. DEVELOPMENT LOAN FUND

The U.S. Development Loan Fund (D.L.F.) has received so far applications for loans from 45 countries, the active applications being for an aggregate sum of $1,600 million, according to Mr. Dempster McIntosh, Managing Director of the Fund, who has just finished a two-month trip round the world. Since the Development Loan Fund began making loans in 1957 it has negotiated loans or made commitments amounting to $449 million as of 31st October. In addition, a total of $123 million has been earmarked for loans pending final negotiation. By the end of January 1959, Mr. McIntosh said, the D.L.F. expects to have committed a total of $700 million.

Up to the present time, the D.L.F. Managing Director said, a large percentage of the loans had been made to Governments, but in the future the organisation would prefer to make loans to private enterprise. Mr. McIntosh added that he found everywhere "a tremendous interests in the Development Loan Fund." The countries he visited were greatly gratified with what they were able to accomplish with the D.L.F. loans and expressed the hope that the organisation would continue.

In each country visited, Mr. McIntosh reported, he had met with top-ranking officials and these meetings had afforded him an opportunity to set forth the objective of the D.L.F. which is primarily "to help other countries." He pointed out that the D.L.F. is able to help nations when other credits might not be available. It provides loans on long-term credit, can accept local currency in repayment, and does not place restrictions on where equipment purchases are made. This trip around the world, Mr. McIntosh said, "confirmed more than ever the role the D.L.F. can play. But, we must 'raise our sights' to do a really good job," he added.

FOREIGN EXCHANGE HOLDINGS

In reply to a question in the Lok Sabha last week, whether the Reserve Bank of India had asked persons residing in India who had acquired foreign exchange to surrender it to the Exchange Control Department within one month of such acquisition, Mr. Morarji Desai, Union Finance Minister, said that, in accordance with the notification issued by the Ministry of Finance, every person in or resident in India who owned or held or who may in future own or hold any foreign exchange, whether in India or abroad, had to offer the same or have it offered for sale to an authorised dealer in foreign exchange against payments in rupees at the rate for the time being authorised by the Reserve Bank of India. This had to be done before the expiry of one month from the date of this notification or in the case of a person who in future owned or held such foreign exchange within one month of the date of his so owning or holding. This order does not apply to (i) such foreign exchange held by authorised dealers within the scope of their authority; (ii) persons authorised by the Reserve Bank of India to hold such foreign exchange for business or other purposes within the scope of the authorisation in their favour; (iii) maintenance of, and operation on, any account in foreign currency maintained outside India by persons in or resident in India but not domiciled therein; and (iv) any sum held in an account expressed in pound sterling, provided that such account was in existence prior to the 8th July 1947.

Exchange control statistics maintained by the Reserve Bank did not indicate separate accounts in respect of foreign exchange sold to authorised dealers in response to this notification and the information with regard to the total foreign exchange surrendered up to the end of October 1958 was not available, the Finance Minister added.

WHY NOT AUCTION IMPORT LICENCES?

PROMISING SOURCE OF REVENUE

By Prof. B. R. Shenoy
DIRECTOR, SCHOOL OF SOCIAL SCIENCES, GUJARAT UNIVERSITY

THE auctioning of import licences may bring to the national exchequer all the additional revenues we are looking for and much more; it may fetch sums of the order of Rs. 300-400 crores per year. These sums are being dissipated, today, into the hands of anti-social elements, or are distributed as concealed subsidies among industrialists. To begin with, we may appropriate, through auctioning, the first category of this phenomenal figure—the amounts now realised by private parties on the importation and sales of import goods which are sold in the open market; the returns on this may amount to an order of Rs. 200 crores per year. From the experience gained, we may extend the device of auctioning to import licences, which are, today, issued to actual users of import goods (mainly industrialists); industries which are truly in need of subsidies may be, then, directly subsidised to compensate for the loss of benefits they now derive from the issue to them of import licences, the necessary funds being drawn from the auction proceeds.

Import licences, today, are issued to established importers, actual users, and the Government or Governmental establishments. Apart from illegal payments made to corrupt officials, the licences are issued free of charge even to private parties. But, because of the wide disparities which exist between the internal prices of import goods and their landed costs (i.e., the external prices multiplied by the rate of exchange), import licences fetch phenomenal prices in the market; these prices may vary from 50 per cent. to 500 per cent. or more of the face value of the licences, depending upon commodities. The recent cut in imports has driven these prices up. You cannot get rich quicker today than by getting import licences issued in your favour. One of these documents may bring lakhs of rupees, literally, overnight. This operation, which is remarkably simple if we have the right men in the right places in the right Ministries, is even more profitable than gold smuggling (which yields a gross profit of 73 per cent. on each act of smuggling), involves much less work, and carries next to no risks.

Indian imports on private account averaged per year during the past two years Rs. 743 crores. Open General Licences being restricted to a few items of imports from Pakistan, virtually the whole of these imports came under specific import licences. If the auction were to fetch an average price of 45-55 per cent. of the face value of the licences, it may bring in a revenue of Rs. 300-400 crores. But, perhaps, rather than upset all vested interests at once, it may be expedient to invite tenders, in the first instance, for the licences, which are now issued to established importers. The market prices of these licences are among the highest and the returns on them may amount to Rs. 200 crores per year. The amount may as well be, larger, considering the accounts of the prices offered for the licences for certain commodities. From the experience gained, the area of auctioning may be extended to cover all private imports.

This device is vastly better than the extension of State trading to imports, which has been suggested by some. State trading here would involve a great deal of organisational difficulties, which had better be avoided, considering the scarcity of personnel with the necessary talent, knowledge, experience, and, above all, integrity. Auctioning will bring to the national exchequer the cream of profits, while leaving undisturbed the existing private enterprise machinery of import trade.

These windfall receipts would represent 60-80 per cent. of the annual average of the tax revenues of the Centre for the past two years; they may not cause any undue strain on the national economy. In so far as the proceeds of the sales of the first category of licences is concerned, it would amount to no more than a transfer to the national exchequer of the ill-merited earnings of the anti-social elements among the public and in the Administration. If care is taken to ensure that monopolist purchases of the licences do not take place—this may be done by inviting tenders for the licences and wide distribution of the accepted tenders—it may not amount to any new burden on the consumers and the users of import goods as the auction of the licences would affect neither the effective demand nor the market supply of import goods.

It would, however, put a stop to the concealed subsidies to the industrialists, as the cost of the import goods would now amount to not merely landed costs, as formerly, but landed costs *plus* the prices paid for the import licences. But subsidisation of industries should be done on a more rational basis than through the issue of import licences; it should not be mixed up with the adoption of corrective measures for the balance of payments difficulties of the country.

The crux of India's payments problem is, on the one hand, to bring about a shift-back, to production for exports, from production for the home market and, on the other, to eliminate the vast gaps between the landed costs *and* market prices of import goods and between the internal and the external prices of gold. Stabilisation of the economy is not possible without this two-dimensional desideratum. The auction of the import licences would equate domestic prices of import goods to their external prices; the shift-back in production, which is necessary on a considerable scale, may be achieved by drawing on the auction proceeds of import licences to subsidise exports. This would serve the *ends* of economic justice as the ill-merited gains of the import trade are acquired mainly at the expense of the export industries.

The money value to exporters of the export promotion measures we have so far adopted being moderate, these measures may not achieve noteworthy results. They involve, moreover, a sacrifice of national revenues. Subsidies in the form of issues of import licences to exporters (e.g., issue of import licences for art silk yarn to exporters of art silk fabrics) has resulted in the sales of export goods abroad at below cost of production to the detriment of the national economy: the import licences are issued on f.o.b. valuation of the exports and their sales abroad take place at fancy low prices, as the exporters are able to more than cover the difference by the sale of the import licences. This is, in effect, a queer case of a poor economy, struggling for developmental finance, subsidising its not so poor customers (of art silk fabrics) abroad under pressure of scarcity of (foreign exchange) finance for the Plan. It illustrates that deep-seated economic maladies cannot be corrected by patch-work remedies.

Any attempt to implement the suggestion for auctioning import licences is likely to be opposed by the powerful vested interests which have grown around the existing arrangement of currency overvaluation and import licensing. But there is no justification for dissipating such large sums into (unmerited) private hands, in face of acute shortages of rupee finance for the second Plan.

RAILWAY FREIGHT CONCESSION

In order to help the drive to stimulate exports, the Railway Board has decided to allow, with effect from 5th December 1958, a rebate of 50 per cent. on freight paid on consignments of nine different commodities when booked from certain specified stations to ports of exports. The commodities included are motor vehicle batteries, dry cells and batteries, oil pressure lamps, hurricane lanterns, steel files, bicycles, textile machinery and parts, wood-screws and fruit and vegetable preserves.

The freight concession will be in the form of a rebate and will be allowed subject to the prescribed procedure for booking the consignments being followed and satisfactory evidence being furnished in the prescribed manner to establish that the consignments in respect of which the rebate of freight is claimed have been actually exported out of the country. The claim in respect of the freight concession must be preferred within six months from the date of delivery of the goods for carriage by rail. Necessary instructions have been issued by the Railway Board to all the railways, and further particulars will be available from the Chief Commercial Superintendents of the respective Zonal Railways.

NO MORE PROTECTION FOR ART SILK FABRICS AFTER DECEMBER

HIGHER EXCISE DUTY SUGGESTED

THE artificial silk and cotton and artificial silk mixed fabrics industry will not enjoy tariff protection after 31st December next. This is the result of the Central Government's acceptance of the recommendation made by the Tariff Commission. The recommendation is based on four important grounds. First, the industry has not produced any evidence to show that it would be at a disadvantage in regard to the weaving cost, if it could get adequate supply of raw material at reasonable cost; the real problem of the industry at present relates to the supply of the raw material. Secondly, the industry has nothing to fear about foreign competition. For there is no likelihood of art silk fabrics being imported so as to jeopardise the domestic industry until the foreign exchange position improves considerably, as these fabrics are considered to be a semi-luxury article. Thirdly, there is hardly any case to continue protection till such time as the supply and prices of raw materials are stabilised, so that it would be possible to ascertain accurately whether the industry requires any protection or not. Fourthly, the industry has been enjoying protection for nearly 25 years and the psychological effect of protection will only be to create a sort of complacency on the part of the industry.

Although protection for the art silk industry will be withdrawn, the import duties on fabrics will continue at the existing rates but as revenue duties. In other words, with severe restrictions on imports owing to balance of payments considerations and with no reduction in the level of import duties for considerations of revenue, the implementation of the Commission's recommendation only means abolition of protection only in principle.

The art silk industry was first granted protection in 1934 as incidental to the scheme of protection devised for the cotton textile industry. When protection for cotton fabrics was discontinued from 1st April 1947, the Government decided to continue protection received by the art silk fabrics industry, pending a detailed enquiry by the former Tariff Board. Since then, these fabrics have been the subject of three separate enquiries—in 1949, 1951 and 1955. Protection given on the basis of the recommendation in the report of 1955 is due to expire on 31st December 1958. The Tariff Commission undertook another enquiry early this year and it is this enquiry which reveals that there is no case for continuance of protection.

Improvement Remarkable

Thanks to the long period of tariff protection, the artificial silk industry has registered a remarkable improvement, both quantitatively and qualitatively, especially in the past four years. The total production of fabrics during the year 1957 was 366 million yards on the basis of six yards of fabrics per lb. of yarn, as against 300 million yards in 1955. As regards quality, the variety and designs of the fabrics particularly have made a striking stride and the industry is now said to be in a position to face its foreign competitors with confidence on these points. The machinery employed by some of the bigger units is of the latest type and corresponds to the progress in variety and designs of the fabrics.

The notable rise in the production of artificial silk fabrics in recent years has followed an expansion in the weaving capacity. The aggregate number of looms installed has gone up from 37,727 in 1955 to 44,500 at present. The expansion in loomage has been brought about by the establishment of a large number of new units. There are at present 3,883 mills producing art silk goods, as against 1,849 units in 1955. The striking growth in the number of units as compared with the slow rise in loomage indicates that there has been in operation a strong trend towards fragmentation, presumably to take advantage of exemption from excise duties to units with nine or less than nine looms. Drawing special attention to this, the Tariff Commission has made the following pertinent observations.

"... Fragmentation has serious consequences for the quality of the product, control of distribution of raw material, and enforcement of legal obligations regarding excise duties, protection of labour, etc. The magnitude of the problem will be appreciated when it is found that there has been over 100 per cent. increase in the number of units in this sector."

In addition to the aforesaid looms (these are called registered looms), there are at present 908 looms set apart by the cotton mills for the manufacture of art silk fabrics, 17,600 looms engaged in the handloom sector (11,300 looms for weaving art silk fabrics and 6,300 looms for mixed fabrics), and 8,000 unregistered looms. Altogether, there are thus 71,008 looms producing art silk and cotton and art silk mixed fabrics, with an aggregate capacity of 470 million yards. The capacity is assessed on the basis of an average output of 22 yards per loom shift, 300 working days and single shift.

Unregistered Looms

The number of looms which have escaped registration is, as already stated, 8,000. The non-registration is attributed partly to the failure to notify the authorities by the last date fixed for the purpose and partly to the practice in certain regions for ex-mill weavers to set up as new units scrapped and discarded looms obtained from textile mills. Alluding to this, the Tariff Commission has urged the Textile Commissioner to discourage the installation of discarded looms while taking appropriate steps to bring all powerlooms in legitimate operation to his register. The Government of India has taken note of this recommendation and steps, we are told, will be given to implement it "to the extent possible."

The Tariff Commission has not attempted to forecast the demand for art silk fabrics in the immediate future. In its last enquiry, the Commission had estimated the demand at 300 million yards. The estimates submitted at the latest enquiry were many, varying between 300 and 450 million yards which apparently left out the use of staple fibre for these manufactures. In view of the present trend of import restrictions and foreign exchange situation, it appears unlikely, says the Commission, that the acute raw material position of the industry can be relieved till sometime after 1960.

Yarn Supply

The principal raw material for the manufacture of artificial silk fabrics is viscose or acetate yarn. The total annual demand for yarn is placed at 80 million lbs. on the basis of six yards per lb. and for single-shift working. There are at present three units in India manufacturing viscose yarn, namely, the National Rayon Corporation, Century Rayon and Travancore Rayons and one unit, Sirsilk Ltd., which produces acetate yarn. The aggregate installed capacity (on single-shift basis) of the three producers of viscose yarn is 29.90 million lbs. and they have received licences for an increase of 10.4 million lbs. Century Rayon expects to achieve its increase of capacity (4.8 million lbs.) during the current year, while National Rayon (4.0 million lbs.), the expansion of which is meant exclusively for manufacture of tyre cord, expects to complete its expansion only in 1960. It is, however, understood that the expansion plan of Travancore Rayon (1.6 million lbs.) is not likely to be completed before the end of 1960. Four new units with an aggregate licensed capacity of 28 million lbs. are scheduled to commence production towards the end of 1959 or during 1960. As regards acetate yarn, the present installed capacity of Sirsilk Ltd. is 4 million lbs. Its plans to increase its capacity by another 4 million lbs. have not made any progress.

The actual production of viscose, acetate and staple fibre yarns in 1957 was only 60 million lbs. (single shift), as against the estimated requirements of 80 million lbs. (single shift). An addition of not more than 4.8 million lbs. is to be expected for purposes of fabric manufacture from existing units, while newly licensed units will go into operation only in 1960, perhaps even later. In view of this position regarding yarn, the manufacturers of yarn, it will be recalled, have, on the advice of the Textile Commissioner, agreed to an interim scheme of distribution. Under this scheme, the manufacturers deliver 70 per cent. of their output to actual users who are on the list of their customers on the basis of their purchases during recent years. The balance of 30 per cent. is allocated to dealers who have to sell 5 per cent. to new comers, that is, actual users whether members of associations or not, and the balance in proportion to their share in imported rayon yarn to handloom weavers and manufacturers of mantles, hosiery, etc. Manufacturers are not to charge for third, fourth and 'rejected' qualities more than the price fixed for the corresponding second quality and must ensure that the ultimate user has not to pay more than the price of the producer plus freight plus annas 3 per lb.

The Drawbacks

Commenting on the aforesaid scheme, the Tariff Commission has drawn pointed attention to certain drawbacks which, it urges, must be removed as early as circumstances permit. The drawbacks are as follows:

No account is taken of the import quotas already held by the users.

Past purchases do not offer a fair basis for distribution as compared with the genuine need as measured by loom-shift.

The extent to which staple fibre yarn is mixed with or substituted for other weaving yarn is another important consideration in the allocation of raw material.

It would be desirable to enquire into the extent to which yarn obtained by actual users finds its way into the open market for legitimate interchange of deniers and how far such activity leads to anti-social dumping.

Excise Duty

If, for any reason, it is not considered desirable to evolve a full scheme of controlled distribution, the Tariff Commission emphasises adoption of other measures. In this connection, it has suggested an enhancement of excise duty on art silk fabrics. For, according to the Commission, art silk fabrics are a luxury or semi-luxury -even for low-income classes. There is, therefore, no reason why a tax on consumption, which already exists in the form of excise duty, should not be suitably enhanced to mop up excessive profits which arise both at the yarn and fabric stages as indicated by market prices. Excise duty is already levied on art silk yarn (this varies from As. 2 to As. 8 per lb.), as well as art silk fabrics (six pies per square yard), but the scheme of levy on fabrics, the Commission says, leaves certain loopholes which enable nearly 76 per cent. of the units or 24 per cent of powerlooms to escape duty. The Government of India's resolution on the report of the Tariff Commission does not, however, make any mention about this suggestion.

The Government's silence on this subject is not surprising, for its attempt to impose a higher excise duty on art silk goods did not prove successful and had to be quietly modified. It would be recalled that there were strong protests and considerable resentment from the weavers of Surat and other places when the Government of India announced revision of the basis of levy of excise duty on rayon fabrics in December 1955. Scores of telegrams were sent to

FURTHER UNCERTAINTIES IN COTTON TEXTILE INDUSTRY

WORKERS TO CLAIM HIGHER WAGES

From A Special Correspondent

MANCHESTER, *17th November*

NUMEROUS uncertainties which have caused buyers of cotton textiles to withhold purchases of Lancashire-made goods for some considerable time past have been increased during the past week. Foreign political developments, particularly those affecting the Sudan, have been responsible for further anxiety as regards raw cotton supplies, while, nearer home, the possibility of complications in the wage structure has arisen.

MANCHESTER LETTER

The Weavers' Amalgamation, the largest trade union in the industry, has been considering whether to propose to the spinning unions that a joint approach should be made to the employers for higher earnings. The last time a wage advance was secured was in August last year when a 5 per cent. increase was conceded on current earnings. Mr. Lewis Wright, Secretary of the Weavers' Amalgamation, said that one of the points which would be raised with the employers was the way in which workers' wages were being depressed by the attitude of millowners in making low grade cloths to compete with Eastern rivals.

Claim Renewed

In the meantime, the trade unions have renewed their claim for compensation to be paid to workers whose mills close down. A joint meeting has already taken place with the employers in Manchester and a reply has been promised before the end of this month. Four months ago, the employers rejected the unions' claim for a central compensation fund on the grounds that the protection of workers against the effects of unemployment was a matter for the State. A statement by the employers at that time said that the rejection of a compensation scheme for the industry as a whole did not rule out individual firms making their own private arrangements.

In their original claim, the trade unions suggested that each mill should set aside, for payment into a central fund, a sum equal to a quarter of one per cent. of the weekly wages bill. This would be distributed on the basis of 1,3 weeks' pay for redundant operatives with more than five and less than six years in the industry, with an extra week's wage for every additional year of service up to a maximum of 50 weeks' pay.

At that time, union leaders said that they would not be prepared to accept the employers' rejection as the final answer. Now, they take the view that the situation has deteriorated considerably since the summer and that the human problems involved have become far more acute. It has been estimated that more than 350 Lancashire mills have gone out of business and the industry's labour force has fallen by more than 40,000 in a period of two years to a total of little more than 200,000.

Developments in the raw cotton markets are to a large extent mirrored in the prevailing uncertainty regarding the disposal of the finished products. Hesitancy among buyers of cotton textile goods creates problems for those involved in each link of the productive chain. So it is that raw materials needs at the moment are relatively light and the cotton salesman is as idle as his opposite number in the manufacturing and merchanting branches.

Future of Liverpool Market

Speculation over the future of the Liverpool market has been growing ever since trading in spot and futures became virtually deadlocked. The volume of business is insufficient to keep traders busy and, in many sessions, only nominal transactions have been recorded in recent weeks. The action of most of the major combines in by-passing the market and obtaining supplies direct from shippers abroad has accentuated the prevailing slackness.

It is not surprising that the members have decided to desert their vast trading floor (and so save thousands of pounds on rates) for a smaller room which will undoubtedly be adequate for their current needs. Whether this retreat "to prepared positions" is the forerunner of a more drastic decision will depend on conditions in the industry as a whole during the next few months.

In the meantime, the stalemate in raw cotton activity is being intensified by the movement towards larger supplies in a world where consumption is declining through lack of confidence. The position in America is complicated by legislation which seems designed to frustrate and mystify even the most courageous. In the Sudan, too, the Government has taken a hand to try to dispose of the larger supplies now coming on the market. In addition to the public auctions of cotton, private sales can now be arranged at undisclosed prices, with a weekly variation in the reserve rates. The decision to barter cotton for other goods needed by the Sudan is a further complication which can have far-reaching effects on Lancashire trade with an old-established supplier.

Output and Manpower

Holidays continued to affect production of yarn and cloth in Lancashire during September, but, in comparison with the summer months a year ago, output was distinctly lower. This is hardly surprising, in view of the number of mills which have closed and operatives who have drifted from the trade in the past 12 months. In this instance at least, figures describe the situation more forcibly than words and we give below tables of yarn and cloth output, with suitable comparisons, showing the trend of recent events:

Weekly Average

1957	Yarn Output (in million lbs.)				Cloth Output (in million yds.)		
	Total	Cotton yarn	Cotton waste yarn	Man-made and mixtures	Total	Cotton	Man-made and mixtures
Sept.	16.39	11.68	2.01	2.70	41.26	29.31	11.95
Oct.	17.61	12.48	2.16	2.97	45.56	32.76	12.80
Nov.	18.31	13.00	2.19	3.12	47.82	34.27	13.55
Dec.	15.82	11.13	1.89	2.80	40.92	29.40	11.52
1958							
Jan.	17.23	12.09	2.09	3.05	44.07	21.36	12.71
Feb.	17.38	12.12	2.12	3.14	45.23	32.08	13.15
March	17.14	11.82	2.13	3.19	44.56	31.56	13.00
April	15.00	10.15	1.92	2.93	39.80	27.99	11.81
May	15.03	10.07	1.96	3.00	40.52	28.23	12.29
June	14.75	9.90	2.02	2.83	41.09	29.01	12.08
July	12.11	8.35	1.66	2.10	27.42	19.24	8.18
Aug.	11.68	7.72	1.56	2.40	35.48	25.23	10.26
Sept.	14.30	9.50	2.01	2.79	35.11	24.80	10.31

Since the end of February the number of operatives in spinning and weaving mills has been falling steadily at a rate of rather more than 3,000 a month. This drain on the industry's resources is perhaps inevitable when so many firms are closing down, but it presents a problem for the future as soon as demand revives. However doubtful traders may be at the moment, they all agree that a time will come when consumer interest will return and the remaining mills will be busy. Whether it will then be possible to regain some of the labour which has left the trade only time will show, but the prevailing drift of manpower creates anxiety among managements, who forsee distant problems.

The following figures show the number of operatives on the books of employers at the month-end in each section of the trade:

1957	Total	Spinning	Waste spinning	Doubling	Weaving
September	242,820	98,940	7,500	21,120	115,260
October	242,670	98,840	7,580	20,950	115,300
November	242,490	99,110	7,590	20,720	115,070
December	241,160	98,750	7,520	20,560	114,330
1958					
January	240,790	99,220	7,510	20,300	113,760
February	239,180	98,440	7,440	19,990	113,310
March	235,750	96,550	7,470	19,470	112,260
April	231,910	94,610	7,450	18,900	110,950
May	227,660	92,820	7,400	18,230	109,210
June	224,380	91,810	7,390	17,600	107,580
July	221,150	90,600	7,390	17,370	105,700
August	217,620	89,710	7,420	17,130	103,360
September	214,430	88,020	7,490	16,770	102,150

Whereas in 1957, weaving suffered most in loss of labour, the spinning and doubling branches have borne the brunt of the current year's setback. As compared with 12 months ago, doubling mills have lost one-fifth of their labour force, but it is remarkable that the manpower in waste spinning has been untouched by the depression.

Reduced earning power disclosed in figures issued by Lancashire textile firms since the beginning of last month have turned the spotlight on the situation even more brightly than the spate of words written about mill closures and the foreign cloth controversy earlier in the year. In what the Prime Minister has described as a "buoyant economy," the cotton trade along with a few others, is running contrary to the general trend.

Looking down the list of those companies which have released financial information in the past six weeks or so, the first thing that strikes the eye is that several firms, including some of

EGYPTIAN COTTON—WHITHER?

By Mario Ludwig

DIRECTOR, INTERNATIONAL FEDERATION OF COTTON AND ALLIED TEXTILE INDUSTRIES

ONE of the most unexpected changes in the world's cotton situation since the Second World War is the completely different pattern of Egypt's foreign trade in raw cotton. For many decades, almost the whole of Egypt's raw cotton exports were absorbed by a few countries in the western world. These countries, led by the United Kingdom, were among the oldest cotton industrial countries and were, by tradition, spinners of long and extra-long staple cottons. Year after year, with clock-like regularity, they obtained their supplies from Egypt.

Today the situation is totally changed. The traditional customers for Egyptian cotton buy only a fraction of the crop. But more than 60 per cent. of the total cotton exports from Egypt go to Soviet Russia, China and countries in Eastern Europe.

There are two reasons for this change: certain political developments on the international scene had an influence on the foreign trade policy of Egypt, in general, and on its foreign exchange position and that of some of its traditional customers, in particular. However, the more important reason is the fact that today Egypt no longer has the virtual monopoly in long-staple cottons it previously enjoyed.

This fact is often overlooked when Egypt's cotton export potential is assessed. The change in the foreign trade pattern could and would not have taken place if it had not been possible for the traditional customers for Egypt's cotton to supply themselves with similar qualities elsewhere. One must also bear in mind that the substitution of Egyptian cotton by other growths had already begun before the Suez Crisis and was merely accelerated by the events which followed thereon.

What conclusion may be drawn from this fact? Today, it is of vital importance for Egyptian cotton to be more competitive than ever. Spinners throughout the world still consider Egyptian cotton as being one of the finest growths available, especially in its longer varieties; all those who used to process Egyptian cotton in their mills would like to continue to do so. But today a sale will no longer be made on considerations of quality and staple length alone. Price, relative stability of prices, the absence of arbitrary interference with price formation and regularity in supplies are equally important factors. Every cotton exporter must be able to satisfy his prospective customers on all these points, if he wants to make a sale. Otherwise, the spinners will turn to other growths or even to man-made fibres.

It is no doubt possible to maintain or increase the cotton export volume by barter deals, bilateral transactions or other measures of foreign economic policy. But, in the long run, Egypt's cotton exports will depend on those spinners who really want and need Egyptian cotton, who are qualified and equipped to process it and who are able to manufacture those types of exclusive textiles for which Egyptian cotton is the most suitable fibre.

It is, therefore, to be hoped that trade relations between Egypt and the traditional customers for its cotton will be resumed and strengthened at an early date. This may best be achieved by offering Egyptian cotton on world markets on purely commercial considerations. A competitive price, relative price stability and reasonable assurance of regularity of supplies will be decisive factors. With regard to quality, Egyptian cotton has always had a good record. The most urgent problem in this respect is, perhaps, the complete elimination of black specks. Buyers of Egyptian cotton also have the advantage of the use of the Egyptian Testing House at Alexandria and the new Spinning Test Laboratory at Smouha, two institutions which can be of real service to spinners abroad. Plans are now being made to reconstitute the Joint Egyptian Cotton Committee within the International Federation of Cotton and Allied Textile Industries, in order to provide an independent forum for the discussion of any commercial or technical aspects of Egyptian cotton. This Committee, incidentally, has been a powerful agent for the promotion of Egyptian cotton in the past. Another effective way of promoting exports of Egyptian cotton has been the financial assistance given by certain textile sales promotion campaigns in some of the leading consumer markets in Europe.

It is true that the position of Egyptian cotton in world trade does not only depend on Egypt; it depends in great measure on the world cotton situation in general, and on the policies adopted by the largest producing and exporting country of the world, the United States of America. In this respect, it may be interesting to recall that only recently, at its last annual meeting held at Stockholm on the 28th August 1958, the International Federation of Cotton and Allied Textile Industries unanimously adopted a "Statement on Raw Cotton Policy," which was later submitted to the Secretary of Agriculture of the United States Government. In this statement, the Federation reiterated that the continuance of any cotton marketing policy, even for a limited time, under which export selling prices can be arbitrarily changed at any time with or without notice, is detrimental to the free flow of cotton into consumption areas. It undermines confidence in forward buying and prevents traders throughout the world from reaching long-term dispositions regarding the importation and consumption of cotton and cotton goods.

Moreover, such policy renders it most difficult for futures markets to provide the traditional cover against price fluctuations. Unless there is a return at an early date to a one-price system and free marketing, the cotton futures markets in importing countries will cease to function, to the great detriment of the cotton merchanting and consuming world.

Therefore, in order to restore confidence in cotton and further to encourage a world-wide increase in consumption of cotton, the Federation urged the United States raw cotton industry, the administrative and legislative branches of Government to continue their efforts to eliminate the two-price system as soon as possible.

With regard to the raw cotton trade, in general, the statement stressed that "sudden arbitrary changes in export selling prices, changes in export taxes and abrupt alterations in rates of exchange in other producing countries also contribute to the prevailing uncertainty in the cotton consuming world. The Federation desires to impress upon the cotton interest groups and the Governments of these countries the widespread consequences of such actions and most emphatically urges upon them the necessity of adopting such policies as will remove these uncertainties."

What then should be done, in order to satisfy the mutual interests of the growers, exporters, spinners and manufacturers of Egyptian cotton? The aim should be to return to a complete normalisation of trade relations with all cotton consuming countries and to supply Egyptian cotton at a truly competitive price, to be formed in an open market, free from arbitrary interference with the laws of supply and demand. If these conditions are fulfilled, then the demand for Egyptian cotton will spring up again where it has fallen away and will increase elsewhere. Egypt will then again be able to serve its customers, old and new, who by the nature of their production would spin Egyptian cotton in preference to any other.—*The "Egyptian Cotton Gazette," Alexandria.*

TECHNOLOGICAL REPORT ON TRADE VARIETIES OF COTTON

Fibre and spinning tests carried out by the Indian Central Cotton Committee's Technological Laboratory at Matunga, on cotton samples belonging to the 1956-57 season, have now been made available for the benefit of the trade and industry in a publication entitled *Technological Reports on Trade Varieties of Indian Cottons*, 1957, by Dr. R. L. N. Iyengar, the Director of the Laboratory. The bulletin is priced at Rs. 2 per copy. The objects of the test are twofold: (1) to obtain reliable and accurate data regarding the waste losses and the spinning processes of the chief varieties of Indian cottons handled by the cotton trade and industry and to make them available for the benefit of consumers of Indian cotton in India and abroad, (2) to ascertain whether a particular trade variety of cotton maintains its quality or shows signs of deterioration from year to year in order to enable the breeder to take necessary steps to remedy this defect.

The present bulletin contains the test results obtained for the 1956-57 season cotton samples included in the list of trade varieties, along with those for the four preceding seasons. The data for each cotton are divided into the following categories: (1) ginning percentage, (2) fibre test results, (3) grader's valuation report, (4) spinning master's report, (5) spinning test results which comprise waste losses, number of end breakages in the ring frame, actual counts spun, lea strength and ballistic work of rupture of yarn, actual number of turns per inch inserted in the yarn, (6) estimation of yarn neppiness and evenness, and (7) details, such as front roller speeds, spindle speeds and drafts employed. The bulletin also contains the test results of three varieties of East African cottons, namely, A.R.B.P. 52, A.R. Busoga and A.R. Jinja as these cottons are consumed in large quantities by Indian mills.

SUDAN COTTON SALES POLICY

The Sudan Gezira Board has announced certain changes in the cotton sales policy it has followed hitherto. The changes became effective from 12th November. Under the changed policy, the present system of open and free public auction will continue as before. Auctions will be held four days a week, namely, Tuesdays, Wednesdays, Thursdays and Fridays. Reserve prices will be declared every Saturday morning and will be based on market fluctuations.

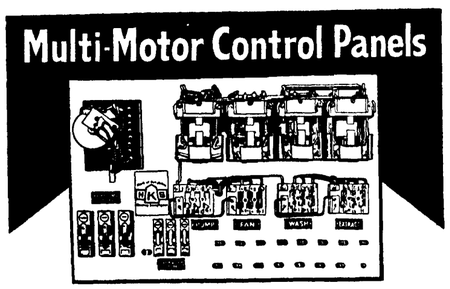
In order to facilitate sales to buyers who may wish to purchase large quantities of cotton, the Board is prepared to consider offers to buy such large quantities by private treaty. It will, however, have absolute discretion as to the extent to which it will make such private treaty sales. Such offers will be accepted for consideration every day before noon and a decision will be given as soon as possible.

Informed quarters believe that the change that has come over the set-up of the Government since the announcement, will not affect the cotton sales policy of the Board.

MILL CONSUMPTION OF COTTON

Statistics of raw cotton consumption by mills compiled by the Office of the Textile Commissioner indicate that during September 1958, the first month of the 1958-59 cotton season, consumption aggregated 382,499 bales (of 400 lbs.), as compared with 399,125 bales in the corresponding month of the previous season and 370,390 bales consumed in the previous month. It is noteworthy that the consumption during the month is the highest since February last. Foreign cotton consumption, however, showed a decline to 42,554 bales during the month, as against 44,873 bales in the preceding month and 49,310 bales in the corresponding month of the previous season.

Multi-Motor Control Panels



We can design and manufacture any panel to suit customers' requirements using our Standard Contactor Units and other Components. Enquiries are solicited.

SUGARCANE IN THE THIRD PLAN

NEW BODY SET UP TO FORMULATE DEVELOPMENT SCHEME

THE twenty-sixth session of the Indian Central Sugarcane Committtee held at Rampur (Uttar Pradesh) recently was a notable one. For, at this session, the Committee took some important decisions which have a vital bearing on cane research and development in the coming years. One such decision related to the appointment of an *ad hoc* Planning Sub-Committee to chalk out a proper plan for inclusion in the proposed third Plan. Tentatively, a sum of Rs. 3.60 crores on research and another sum of Rs. 3.00 crores on development were proposed to be spent under the Plan, and the target of white sugar output to be achieved at the completion of the Plan (1965-66) was fixed at 3.5 million tons. The Sugarcane Committee certainly struck a note of realism when it urged the Planning Sub-Committee to bear in mind, while formulating the cane development scheme, the present position of low acre yield and poor recovery of sugar, to fix practicable targets based on the available resources of material and technical personnel, and to keep in view the special needs of the different States.

The need for devoting utmost attention to augment not only the yield of sugarcane per acre but also its quality has been stressed too often to deserve repetition. The implementation of the cane development programme during the first Plan period and in the first two years of the second Plan has not been encouraging. Barring improvements here and there, the conditions obtaining in the cane economy continue to be unsatisfactory. The yield of cane per acre has not only not risen but actually suffered a setback, the all-India average for 1957-58 being 13.27 tons, as against 13.33 tons in 1950-51 (base year of the first Plan). Similarly, the all-India average recovery per cent. of sugar in cane is lower at 10.00, as against 10.03.

Trend of Cane Yields

It will be worthwhile to refer here to an analysis of the trends in sugarcane economy as contained in the article on agricultural productivity in India (1910-11 to 1956-57) contributed by Mr. V. S. Menon to the *Agricultural Situation in India*. This analysis shows that the period 1910-11 to 1945-46, especially the last 15 years, witnessed a steady increase in area under sugarcane in the States of Uttar Pradesh, the Punjab and Madras, as well as a rise in yield rates. In the next four years, both cane acreage and yield rates increased in Madras, while in the U.P. there was no perceptible change in area, but yield rates declined, and, in the Punjab, both area and yield rates suffered a setback. During the period 1949-50 to 1956-57, the Punjab, Madras and Andhra Pradesh reported an expansion of area, accompanied by improvement in yield rates. But, in the important cane-growing State of Uttar Pradesh, a rise in area was accompanied by a fall in yield rates. The table below gives the corrected estimates of average yield of sugarcane in terms of *gur* per acre in some States during the year 1956-57, as compared with 1949-50 and 1943-44:

(In lbs.—raw *gur*)

	1956-57	1949-50	1943-44
U.P.	2,554	2,810	2,852
Punjab	2,479	2,502	2,443
Madras	6,477	5,954	6,286
Andhra Pradesh ...	6,490	5,984	—

How vital is the importance of cane development was forcefully brought out by Mr. Mohanlal Gautam, Uttar Pradesh's Minister for Agriculture and Co-operation, while inaugurating the I.C.S.C. meeting. Mr. Gautam observed:

"A higher production of sugarcane has been achieved largely by increasing the cane acreage and this has adversely affected the production of foodcrops. There is an acute shortage of foodgrains in the country and we have, therefore, to achieve self-sufficiency in food, so that it may no longer be necessary to import foodgrains from other countries. I strongly plead for reducing the area under sugarcane and achieving higher per acre yield, thereby releasing land for growing food crops.

"There has been a steady increase in the consumption of sugar within the country. India is now emerging as a substantial exporter of sugar. We have, therefore, not only to achieve self-sufficiency for our own requirement but also provide for the export of sugar to foreign countries with a view to earning foreign exchange which is so badly needed for the implementation of our development plans. The export of even two lakh tons of sugar would earn 10 to 15 crores of rupees in terms of foreign exchange."

While it is doubtful whether India can compete successfully as a seller in the world sugar markets, there is no gainsaying the fact that, unless cane development is accorded the highest priority, the production of sugar cannot be expected to be economic. Mr. Gautam rightly emphasised that the problem of raising the yield per acre can be tackled by various means, the more important being varietal replacement, provision of adequate irrigation facilities, application of adequate quantities of fertilisers and manures, protection of cane crop against pests and diseases, and the like. On the subject of recovery of sugar, Mr. Gautam laid special emphasis on sowing better quality cane, protection of crop from pests and diseases, autumn planting, supply of sugarcane according to maturity, improvement in cane supply arrangements, better village communication, and renovation of machinery and equipment of factories.

Sugarcane in U.P.

In this connection, Mr. Gautam made a brief review of the trends in the sugarcane economy of his own State, Uttar Pradesh. The review reveals that the main impediments to the progress of cane cultivation are paucity of irrigation facilities, extensive waterlogging and lack of drainage. The yield per acre in some South Indian States is 25 tons, as against 10-12 tons in the U.P. This is due in large measure to better irrigation facilities in these States which have enabled the cane growers to make use of much larger quantities of fertilisers than in the U.P. Mr. Gautam stated that the U.P Government had no doubt taken up big irrigation projects, but it would take some time for them to come into operation. He, therefore, felt that the immediate solution to the problem lay in sinking a large number of masonry wells duly bored and fitted with Persian wheels.

Proceeding, Mr. Gautam gave some details. According to him, the requirements in the reserved areas of sugar factories in the U.P. are estimated at roughly 100,000 masonry wells together costing about Rs. 22 crores. This is not a small figure particularly when the resources of the State are very limited. The Central Government no doubt gives financial assistance through the I.C.S.C., but, in no case does it exceed 50 per cent. Once more irrigation facilities are provided, it will be possible to apply nitrogenous fertilisers in greater quantities to the sugarcane crop and this would undoubtedly increase the acre yield. Incidentally, this step would also help increasing the production of other crops, as it would enrich the soil. There is not likely to be much difficulty in providing adequate loans to the cultivators for purchasing fertilisers, as it is being contemplated to improve credit facilities by the organisation of large-sized credit societies in cane areas as well. The control of pests and disease is by no means a less important matter for sugarcane cultivation. Redrot disease has been playing havoc year after year in Uttar Pradesh, Bihar and to some extent in the Punjab. The High Power Committee, appointed by the Indian Central Sugarcane Committee at its meeting held in September 1957, devised a special scheme for co-ordinated campaign against this disease in the contiguous areas of Uttar Pradesh, Bihar and the Punjab.

To revert to the I.C.S.C.'s decisions. The Committee noted that most spectacular results all over the sugar world had been obtained through the introduction of improved varieties of sugarcane. It recommended the formation of State statutory bodies to register improved varieties which would satisfy rigid minimum standards and go a long way towards augmenting the yield per unit of land and improving the quality of cane. The Committee sanctioned four important schemes. They cover: (1) control of sugarcane borers by insecticides in the U.P., the Punjab and at one centre in South India; (2) research on application of phythormones and their role in relation to metabolism in cane at the Pusa research station; (3) establishment of a sugarcane research substation at Chittoor in Andhra Pradesh; and (4) intensification of *khandsari* research at Lucknow. Further, the Committee approved of participation in the World Agricultural Fair Exhibition 1959 to which the State Departments dealing with cane research and development will be fully associated. It also declared awards for the all-India cane crop competitions and decided to arrange the prize distribution function at the fifth Convention of Farmers' Forum to be held in New Delhi in February 1959.

COAL OUTPUT IN CHINA

LIKELY TO SURPASS THE U.K. LEVEL NEXT YEAR

THE rapid pace at which China's coal industry has been progressing ever since the Communists came to power shows that the country is set to become one of the largest coal producers in the world in the not distant future. In fact, the year 1958 marks the beginning of the "big leap" in this direction. The coal output this year, according to official sources in China, is expected to rise by more than 50 per cent., taking it to over 200 million tons, thus placing China nearly on par with Britain—the second largest producer in the capitalist world—which produced 227.2 million tons of coal in 1957. If the present pace of production is maintained next year, as it is expected to be, the Chinese coal production will far exceed the U.K. output.

An interesting account of the development of China's coal industry is provided by the Deputy Director of the Planning Department, Ministry of Coal Industry, in an article in a recent issue of *China Today*. In the first six months of the current year, China produced, according to him, 84.13 million tons of coal, which is 26.45 million tons or 46 per cent. more than that in the corresponding period of 1957. As more new mines are going into production and the potential of the existing mines are being exploited more fully, the expansion in production during the current half-year is expected to be much faster than in the first half. The aggregate increase during 1958 is estimated to be about 70 million tons over the production in 1957 placed at 130 million tons. It is stated, for the purpose of comparison, that it took Britain 22 years to raise its coal output by a similar extent, that is, from 132 million tons in 1875 to 202 million tons in 1897. Such a comparison may not be strictly correct, because mechanisation and technique of production were not as advanced 60 years ago, as they are now. It is, however, pointed out that Britain's coal production, which touched a peak of 292 million tons in 1913, declined steadily thereafter and was more or less stagnant at slightly over 200 million tons between 1931 and 1957, despite the vast progress in mechanisation and technique of production during this period. In the first five months of 1958, Britain's coal output was actually 3.6 per cent. below that in the corresponding period of 1957. Now that Britain is faced with the problem of surplus coal, it is unlikely that its output will rise much next year.

Main Factors

One of the important factors which have contributed to the rapid expansion in coal output in China is the introduction of modern techniques of mining and machinery. In fact, China has entered a new era of technical advance with the introduction of hydraulic mining. This is said to be the latest method of mining coal and only a few countries have adopted it. By using high pressure nozzles instead of coal-cutters or combines, production is made safer, productivity can be greatly increased and costs can be drastically reduced. Thanks to this innovation, China looks forward to an even faster rate of increase in coal production.

China is endowed with rich coal resources and coal deposits are said to be found in nearly 80 per cent. of China's 2,000 odd counties. Exploitation of these resources will naturally mean a substantial output. A more important factor is the human one and China, with its vast population, is fully exploiting this source of power. Many mines have revised their targets and workers of small mines have taken upon themselves the task of catching up with the bigger ones. Technical revolution with attention concentrated on extracting more coal from the working faces has also contributed to higher productivity. For instance, while less than one cycle of work, that is, from the cutting of coal to moving it away and removing props to let the roof fall, used to be completed in one day, now two cycles, three and sometimes even four cycles, are completed in a day. This has been made possible by improving the organisation of work and technique and shortening the time for subsidiary work.

Yet another factor which has contributed to the rise in coal production in China is the gradual modernisation of existing mines. Of the 70 million tons of coal to be added this year, it is estimated that 30 million tons or 42.8 per cent. will be accounted for by increase in productivity and fuller exploitation of existing mines.

INDIAN TEA FACING TOUGH COMPETITION

FALL IN LONDON AUCTION—EGYPT ASKS FOR CUT IN PRICES

THE failure of those members of Parliament who tried to get more relief for the tea industry by way of a further reduction in export duty does not mean that the hopes of obtaining some satisfaction in this direction are altogether lost. For the Minister for Revenue and Expenditure, Mr. B. Gopala Reddy, who piloted the Tea (Alteration in Duties of Customs and Excise) Bill assured, in the course of his reply to the debate on the Bill, that the Government would keep a close watch on the export position and would not hesitate to give more relief to the industry if necessary. In other words, the industry can hope to get relief in export duty only when the present upward trend in exports of Indian tea is reversed. The main reason why the Government does not want to reduce the export duty on tea is that Indian exports have not suffered on account of the present level of export duty; in fact, they have gone up and are "expected to be substantially higher than last year." The Government's contention is that the abolition or reduction of export duty would only benefit the foreign consumer and that the Government's revenue would diminish without any compensating increase in exports, as it feels that other competing countries like Ceylon are likely to adopt similar measures.

It is true that Indian tea has so far had a satisfactory season this year, with an expansion of exports and a rise in prices. But this should not lead one to take a complacent view of the outlook for Indian tea, as the aforesaid trends conceal some basic factors which have an important bearing on the future of the industry. The exports of North-east Indian tea during the first 10 months of the current calendar year have gone up by 11 million lbs. to 276 million lbs., but it should be remembered that they lag behind the exports during Jan.-Oct. 1956 by no less than 57 million lbs. Exports of tea from South India in the first eight months of 1959 are higher by 16 million lbs., at 65 million lbs., as compared with 49 million lbs. and 53 million lbs. in the corresponding period of 1957 and 1956, respectively. Though exports of tea from Ceylon during the seven months ended July are lower by 2 million lbs., at 226 million lbs., they are no less than 20 million lbs. above the level touched by the end of July 1956. Exports of Pakistan tea during the nine months ended September 1958 amounted to 31 million lbs., thus more or less maintaining the average level for the past three years. It will thus be seen that India has not fully covered the ground lost in 1957.

Even if one assumes that the present trend of exports will be maintained during the rest of the year, it must be remembered that it is not the only factor on which the fortunes of the industry has to be judged. The prices obtained in the local auctions for export and in the overseas market should also be taken into account. While the prices in the export auctions held in India have been higher than last year, the overseas prices are lower. Thanks to the rising trend in world production of tea—the current world crop so far shows an increase of 40 million lbs.—the prices obtained in London auctions have recorded a downward trend in recent months. During the year so far, the average price of plain teas has fallen by 25 per cent. Even better quality teas have been affected by the weight of supplies. Thus, plain teas have declined from an average of 4*s* per lb. in January last to a low of 2*s*. 6*d*. in the first week of November. The average price of quality teas, which had improved from less than 6*s*. per lb. to 7*s*. 9*d*. per lb. in the last week of April, has irregularly moved down to 5*s*. 9*d*. In view of the prospect of larger supplies, the demand from blenders has slackened. For this is the time of year when the weight of the North Indian tea comes forward. The stocks in London, including those awaiting customs clearance and afloat, have swelled by 26 million lbs. to 128 million lbs. in the course of the last one month Further, the peak quality season for North Indian teas is over and it is only exceptionally good quality teas that are able to obtain more than 6*s*. per lb.

Another important factor on which the fortunes of Indian tea depend is the competition from other producing countries, the latest competitor being China. It is stated that Chinese tea has just made its appearance in the London market, but it is too early to judge the prospects for Chinese tea. We have it on the authority of no less a person than the Tea Board Chairman, Mr. A. N. Chatterji, who has just returned from a tour of England, Ireland, Egypt and Iraq, that there is a variety of Chinese black tea now available in foreign markets that can be sold at a very low price, even at a price lower than the actual cost of production. Mr. Chatterji, who toured these countries on an export promotion drive, observed, in the course of a Press conference held in Calcutta last week, that Indian common tea was facing tough competition from African tea in the U.K. market. The Tea Board Chairman had suggested a survey of the U.K. market to ascertain how Indian common tea was faring in relation to the African tea. Although he said that Africa, with its annual production amounting to 70 million lbs., or 10 per cent. of the annual Indian output, had not yet become the principal competitor to India, it had all the potentialities of a big exporter. With cheap labour, a favourable elevation and climate, Africa could, he added, increase its production. Its only drawback, according to him, was that its tea labour was not so well organised or deft as Indian labour. It must, however, be noted that Africa started cultivation of tea only in 1948.

It will be noted with interest that British East Africa's (including Nyasaland) production during the first eight months of 1958 aggregated 41.7 million lbs., as against 40.1 million lbs. in the corresponding period of 1957. Of this, Kenya accounts for the largest output. In 1957, its total production amounted to 22 million lbs. having more than doubled from 10 million lbs. in 1948. What is more, Kenya bid fair to become one of the major producers of tea in the world, if its present experiment in converting forests into tea gardens succeeds. A team of research experts is now said to be on a seven-year experiment atop a mountain near Kenya's tea-growing centre to turn virgin forests into tea plantations, provided water catchment is not affected by this change-over. If the experiment succeeds, that is, if the forest can be cut down without dangerously changing the water balance and vital supplies to farmers and others, Kenya would make a big leap forward in tea production. In order to study the effects of converting forests into tea gardens, the research team has chosen two parallel valleys two miles long. In one, the great forest trees are being felled and tea bushes planted, while, in the other, the forest slopes are left untouched. So far, the forest reserves of Kenya have been left undisturbed, because of their value for water catchment. If the research work succeeds, then Kenya may reassess its forest reserves in order to allow them to be turned over to growing tea. It is, no doubt, a prolonged and painstaking study to ensure that no harm is done to the soil and the country's economy as a whole by the change-over Nevertheless, planters in India will keenly await the outcome of the experiment.

Mr. Chatterji was of the view that Indian tea would be more acceptable in the U.K. market if its quality was further improved, by better methods of planting and manufacturing, particularly in the Cachar, Dooars and Terai areas. He emphasised that the sales promotion drive in England should not be relaxed, though there was little chance of further increase in tea consumption there in the near future. The annual *per capita* consumption in the U.K. was 10.7 lbs., as against 0.5 lb. in India.

In Egypt and Iraq, Ceylon's black tea is said to be very popular. The Tea Board is collecting samples of this tea to see if that "black and bitter" variety can be produced in India. South India produces an almost similar variety. As the political climate in Iraq and Egypt, where Government controlled foreign trade, was extremely favourable for India, Mr. Chatterji suggested that efforts should be made to promote exports to these countries. The Tea Board has already undertaken measures to strengthen its sales drive. It would appear that some Egyptian Ministers whom Mr. Chatterji met pressed for reduction of Indian tea prices, on the ground that Egypt was passing through a period of austerity because of foreign exchange shortage. The Government of India would do well to take note of this. It should now consider whether it is not worthwhile to offer tea at a cheaper rate to a foreign consumer by a reduction of export duty and stabilise the ground (exports of North Indian tea to Egypt in the first 10 months of this year have gone up from 9.7 million lbs. to 17.3 million lbs.), rather than lose the market to another producer.

Speaking of the Irish market, Mr. Chatterji said that it had been consistently one of the best buyers of Indian tea and had been importing almost its entire annual requirement of 20 million lbs. from India.

The Tea Board Chairman drew attention to a chemical formula evolved recently in England, which would help producers standardise their products in respect of colour and strength. The research was financed by the Indian Tea Association in Britain. The Indian tea planters should take this opportunity to get the benefit of this research work, in order to improve their quality.

COFFEE GROWN AT MANGPOO

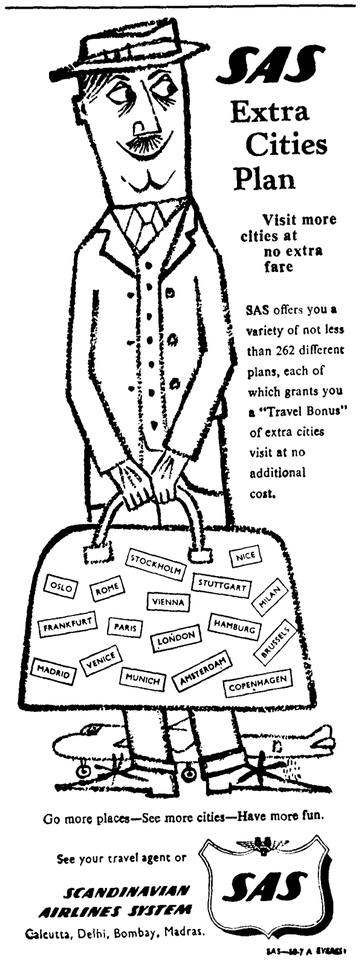
With the diminishing demand for quinine, the authorities of the Government Cinchona Plantation at Mangpoo in West Bengal are now experimenting on subsidiary crops, according to Mr. S. K. Chatterjee, Horticulturist, Mangpoo Experimental Wing.

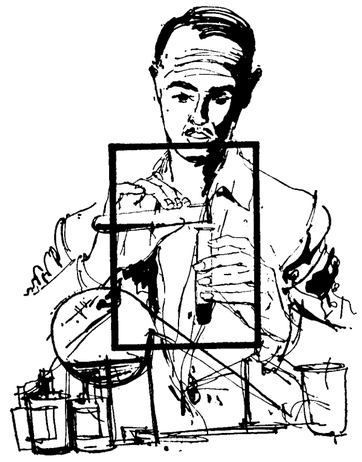
Coffee experts, who recently visited the experimental station, expressed satisfaction at the high quality coffee beans grown there. It is now envisaged substantially to extend cultivation. This, incidentally, is the first time coffee has been grown successfully in the hills. This might in future provide an alternative to the tea industry in the lower elevations.

Besides coffee, another new introduction is the small yellow variety of cardamom. This has a rich market all over India, and plants grown at the station have shown promising possibilities.

Cultivation of oil plants like lavender, patchouli, camphor, and eucalyptus, is also being tried with success. Experiments are simultaneously being carried out in growing sandalwood, clove, coco, vanilla, black pepper and nutmeg. The experimental stage in the cultivation of tung oil is over and extension is now planned.

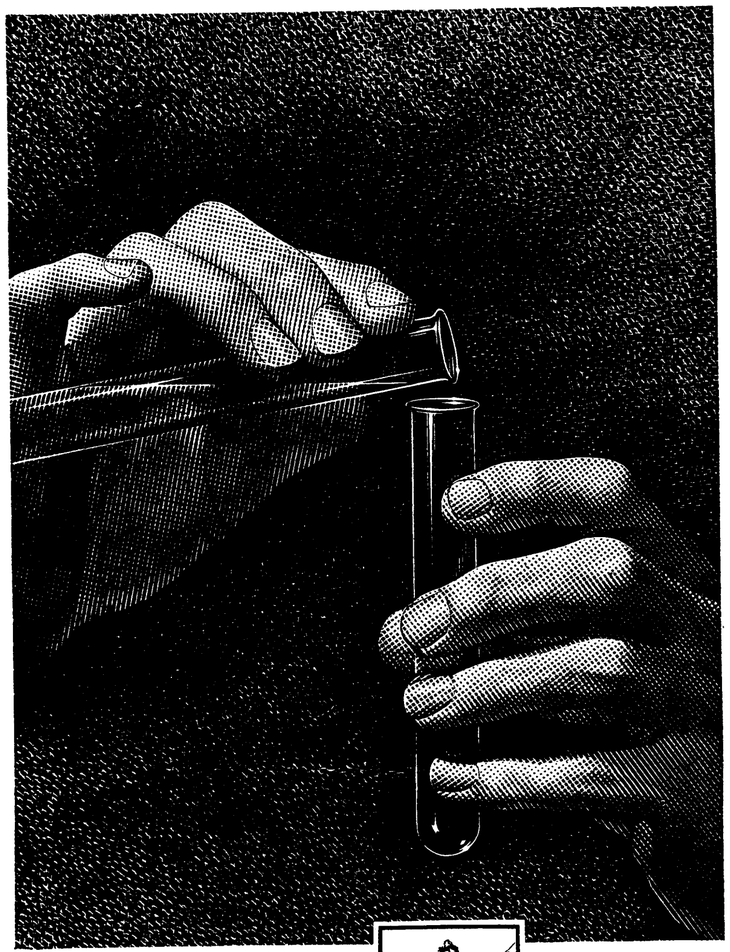
The Swedes are the world's leading coffee consumers per head of the population, according to a recent American survey. Consumption in Sweden amounts to 7.8 kg. per inhabitant per annum. Next follow the Danes with 7.3 kg. and the United States with 7.1 kg. Other large coffee consumers are the Finns with 6.1 kg., Norwegians 6 kg., Icelanders 5 kg., Belgians 4.6 kg., Swiss 3.9 kg. and the French with 3.8 kg.





Men and Oil No. 2

THE CHEMIST



In many ways, the oil industry is a pure application of chemical knowledge. From the earliest stages of exploring for new oil deposits, through to controlling the great refineries, the chemist is a key man.

He examines rocks and oil shows collected during exploration, helps in drilling and cementing operations and assists in the interpretation of electrical well logs to identify oil and gas bearing zones. He also analyses formation fluids and oil-bearing reservoirs in order to estimate the total amount of oil recoverable from an oilfield, and studies means for improving the recovery efficiency.

The chemist, again, controls the technical operation of the refinery. At Digboi, for example, chemists are responsible for the production on specification of more than 100 products. From the Assam crude oil, the main products are motor spirit, kerosines, diesel, lubricating oils, and various grades of waxes. The chemist is also concerned with other products such as mineral turpentine, jute batching oil, tea drier oil, bitumen—all these being vital to India's economy.

Chemists in the oil industry must, therefore, possess very high qualifications. Indian chemists play an important role in the working of the Assam Oil Company.

TRAVANCORE SUGARS AND CHEMICALS LIMITED

CHAIRMAN'S SPEECH AT TWENTY-FIRST ANNUAL GENERAL MEETING

HIGHER PRICE TO CANE GROWERS CONCEDED

THE Twenty-first Annual Meeting of the Travancore Sugars and Chemicals Ltd. was held at Tiruvalla on 14th November 1958. In the absence of the Chairman, Mr. G. N. Noel-Tod, Mr. P. Hadfield presided over the meeting and read the Chairman's speech. In the course of his speech, the Chairman regretted that cane growers should have resorted to *satyagraha* and picketing, in order to get a higher price. When the State Government, too, supported the growers' demand, the Company did not seem it justified to fight both the Government and the growers and conceded an increase of Re. 1.30 per ton in the price of sugarcane.

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"The accounts and the Directors' report for the year ended 30th April 1958, have been in your hands for the statutory period and, with your permission, I shall take them as read.

"It will be observed that the net profit before taxation has dropped by about Rs. 1½ lakhs on last year, notwithstanding an increase in sales of approximately Rs. 15½ lakhs. The principal reasons for this are the lower tonnage of cane crushed—100,664 tons this year, as against 134,337 tons last year—and the drop in the recovery from 8.88 per cent. last year to 8.31 per cent. this year.

"However, the net profit after taxation shows a small increase, notwithstanding the increased provision which it has been necessary to make this year for taxation on current profits mainly because, as forecast last year, no transfer to taxation equalisation reserve has been necessary this year.

Provision for Taxation

"Provision for taxation on current profits has been made after allowing for tax relief on the full amount of book depreciation provided on fixed assets and the tax on the excess of book depreciation over the depreciation allowed for income-tax purposes has been provided by a transfer of Rs. 45,000 from taxation equalisation reserve.

"Provided that taxation on companies is not further increased in future, we propose to make similar transfers from taxation equalisation reserve in future years which will provide for the tax on differences between book depreciation and tax depreciation.

"This year a further step has been taken in building up our reserves to meet inevitable expenditure in replacement of machinery by the transfer of Rs. 50,000 to general reserve, which now stands at Rs. 3 lakhs

"The Company's cash position continues to be sound and it will be noted that there has been a substantial reduction in borrowings, which is, of course, reflected in the lower charge for interest against profit for the current year.

Sugar Production

"Turning to the operations of the Company during the year under review, and, in particular, to sugar production, the performance corresponds closely to the Chairman's forecast last year, when he told you that the cane crop might not exceed 1 lakh tons, from which 8,500 to 9,000 tons sugar might be produced. I have already referred to the lower rate of recovery and, in actual fact, 8,362 tons of sugar were produced. Despite the late start of the season, due to the threat of strike, all the available cane was taken in. Last year's late start resulted in late planting and this is partly responsible for the low recovery of less than 8 per cent. being obtained in the current season which started on 3rd September. The other reason for the poor recovery is that the cane has been subjected to heavy flooding. There are, however, signs of improvement which it is hoped will be maintained. We expect a crush of about 125,000 tons. Here, I must apologise for a printing error in the Directors' report under the heading 'sugar.' The last sentence of the first paragraph reads: 'This was also responsible for the late start of the season' which should have read: 'This was partly responsible for the late start of the season.' Floods were experienced and would have made the starting of the season difficult, but the factory could have worked, even if not at its full crushing capacity. The principal reason for the late start of the season, as I have just mentioned, and as was clearly stated by the Chairman in his speech last year, was the threat of a strike by the staff and labour, and it was not considered advisable to start the season until the question of bonus in respect of the year 1956-57 had been settled. Crushing was commenced immediately a settlement had been arrived at, by which time the floods had also subsided.

"Sugar prices remain steady and there was no shortage of supplies in Kerala. Releases were made uniformly throughout the twelve months. The price paid for cane was Rs. 40.38, which figure is composed of the minimum price of Rs. 39.20 *plus* the average Brix bonus of Re. 1.18, probably the highest price paid anywhere in India for cane of equivalent quality.

"In June 1958, the Indian Sugar Mills Association, of which your Company is a member, negotiated an agreement with the Government whereby the Association was entrusted with the export of 50,000 tons of sugar. The quantity represented approximately 2½ per cent. of the total production of the country, and each factory was required to deliver 2½ per cent. of its sugar production for export. The share of this Company was 211.9 tons. In actual fact, our allotment was not exported, but was sold in the local market on behalf of the Association. The difference between what the Association has paid us and the market rate at which it was sold was used to finance the purchase of sugar from factories more suited to export.

Export Policy

"The Government's export policy in respect of the 1958-59 season, which is now in progress, has not been declared at the time of writing this report. The policy of financing exports by enhancing the local price is one that can only apply where sales in the local market are freely possible at the rates necessary in order to provide for the loss on export and it will be obvious that the higher the quota exported the more must be the margin earned on the balance sold internally.

"The situation would be eased if the Government would consider a reduction of the high rate of taxation on sugar, currently Rs. 291.20 per ton.

"At the conclusion of the last season the growers agitated for an increased price for cane. All sight seems to have been lost of the fact that cane is a commodity which is offered for sale to a factory at a price that is either negotiated or fixed by the Government before the season commences, and there can be no justification for pressure to coerce the buyer to pay more after he has consumed and paid for the cane. In the case of this factory our offer to the growers was made on 27th September 1957 after the tripartite conference held on the 20th of that month. Consequently, the conditions of sale governing the cane tendered were known to the growers. Even if this principle did not exist, it would surely be unreasonable to ask it of the shareholders of this Company who, by reason of the paucity in the supply of cane coupled with the very low recovery that was possible by reason of the quality of the cane, enjoyed no ordinary dividend from 1948 to 1954 and who over the past 10 years have, in fact, only received a total of 37½ per cent. by way of dividend—an average of less than 4 per cent. per annum.

Sugarcane Price

"Your Directors are fully appreciative of the part the agriculturist plays in the affairs of this country, but it was their opinion that, as trustees for the shareholders' money, these demands which were pressed by means of *satyagraha* and picketing should be resisted and the Government urged to provide adequate provision for the protection of your Company's property. On 12th November the Government called a tripartite conference of concerned Ministers, the Company's representatives, and growers. At this conference all arguments were brushed aside and it was against the frequently repeated statement of the Ministers that our failure to come to an agreement would result in a very difficult law and order situation that the Company's representatives conceded Re. 1.30 per ton costing Rs. 1,31,000 in this year's accounts. I should explain that *satyagraha* was started on 13th October, and picketting resorted to on 8th November. Senior officers were interfered with in token rather than in an effective manner and the police were at hand. One can interpret the Ministers' words in many ways, but in deference to their responsibilities for the safety of persons and property concerned and in the face of the statement by the Minister that the Government holds the view that an additional Re. 1.30 per ton was reasonable, to concede rather than to fight both the Government and growers does seem justified, except perhaps on the grounds that some day, in some circumstances, private enterprise must take a firm stand and the concomitant risks; otherwise each company in turn will be stripped of its profits and finally of its capital. In return for this promised payment we hold the written assurance of the growers' representatives that at the conclusion of this season they will accept the method of price fixation laid down by the Government of India.

"May I express the hope that the extra money the growers will shortly receive will be spent on improved methods of cultivation which are demonstrated at no small cost by the Company's cane staff and which would result in added profit to the growers and to the Company.

"The output from the distillery continued to be satisfactory and sales of foreign liquor remained at a uniform high level. The Company retained the Abkhari contract for the districts of Alleppey, Quilon and Kottayam.

Pharmaceutical Products

"Last year, the Chairman commented at considerable length on the Company's contract with the Government for the supply of pharmaceutical products. During the year under review, the Government did place indents on the Company for all their requirements, but the quantity was less than might have been expected, consequent upon the incorporation in the State of the Malabar District, which previously formed part of the State of Madras. It is gathered, however, there was considerable difficulty in estimating actual requirements. Since the date of the balance-sheet, the Government has entered into a fresh agreement with the Company whereby it undertakes to purchase 50 per cent. of its total requirements for the enlarged State from the Company, for the next three years and the Company is free to tender for the remaining 50 per cent. Although this is not unreasonable and will ensure the continuation of the Company's pharmaceutical business for at least the next three years on a small profit-making business, it is less favourable than was hoped for.

"Sales to the public remained steady during the year under review and are now showing a tendency to rise.

"I regret to have to report that the assurances required by our American associates from the Government of Kerala in respect of the starting of the proposed starch factory at Pamba river, have not been received and consequently this scheme remains in cold storage.

Concessions to Staff and Labour

"Some progress has been made regarding a settlement with staff and labour, and since we met last, I am happy to be able to report that agreements have been signed with the unions representing both staff and labour covering terms of service, but so far unfortunately, we have been unable to persuade the unions to accept a formula governing the award of bonus, and as a result, the question of bonus for the year under review is still pending with the Government Labour Conciliation Officer. The cost of the concessions already given by the Company in revising the grading scheme and calculation of dearness allowance to labour is estimated to cost the Company about Rs. 1 lakh per year. It is hoped, therefore, that the unions will appreciate the gesture made by the Company and be prepared to settle the pending bonus dispute in a friendly and reasonable manner.

"We also have on our hands a dispute with the boatmen carrying cane to the factory, who claim they are employees of the Company and should be treated accordingly. The Company feels strongly that their case is completely unsustainable, but as the matter is pending before the Labour Tribunal, I can say no more at the present time.

"In April this year, the staff club was opened, providing facilities for reading, indoor games, as well as football and volley-ball, and as recently as yesterday a club was opened for the officers of the Company. The Board recognises that such amenities are most desirable in the case of a factory situated in a rural area, such as this, and hopes that all concerned will find relaxation and pleasure.

"In conclusion, I should like on your behalf, as well as my own, to thank the staff and labour of the Company for their efforts during the year. We have had our differences as usual, but I must record that work has not suffered on this account. As regards the staff, the complexity of modern Government rules and regulations has not made their task any easier and many have shouldered additional burdens cheerfully and capably."

The report and accounts for the year ended 30th April 1958 were unanimously adopted and dividends on the preference and ordinary share capital of the Company, at the rates of 5 per cent. and 10 per cent., respectively, both free of income-tax, were declared, payable on 15th November 1958.

The retiring Directors, Mr. S. Chattanatha Karayalar and Mr. P. Hadfield, were re-elected and the retiring auditors of the Company, Messrs. Lovelock and Lewes, were reappointed on the same remuneration as for the previous year.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

Nearly two hundred years ago, an English boy, James Watt, seeing a kettle lid rise and fall as the water boiled, sat fascinated. He had discovered the power of steam. In India today, more than 50% of the power produced is derived from steam. Texmaco, the first to build a Lancashire boiler, has considerabiy expanded its range of production to include another first—the fabrication of water-tube boilers in India. In collaboration with the world's best technical know-how, Texmaco is now equipped to manufacture and supply a wide range of industrial Fire Tube, Water Tube and Locomotive boilers.

PROTECTION TO STEEL FILE INDUSTRY EXTENDED

RASPS, HOWEVER, TO BE DEPROTECTED

THE Government of India has accepted the Tariff Commission's recommendation that the period of protection to engineers' steel files industry, which is due to expire on 31st December 1959, should be extended by another year, that is, up to 31st December 1960 and that the existing table of protective duties should be substituted by a new one. The existing rate of protective duty varies from Rs. 7 to Rs. 34 per dozen for steel files and rasps of lengths ranging from 4" to 18" both inclusive. The new schedule varies from Rs. 7 per dozen for files not less than 3.7/8" and upto and including 5½" to Rs. 34 per dozen for those exceeding 14" but not exceeding 18". In recommending this level of duty, the Commission has taken into consideration several factors. Thus, it notes that the threat of competition from low-priced Polish files has not disappeared completely but may at any time assume serious proportions. The benefit of any reduction in duty at the present stage when import is controlled, is unlikely to be passed on to the consumer. Again, there is still considerable prejudice against domestic products. Since the industry has made considerable progress and has also plans for further development, any reduction of duty at this stage might act as a disincentive. The Government has also accepted the recommendation of the Commission that there is no need for protection to rasps since at present it is not manufactured within the country.

It may be recalled that the first enquiry into the claim of the engineers' steel files industry for protection was undertaken in 1954. Protection was granted in 1955. Since then, the industry has made good progress. Its installed capacity on a single-shift basis was 288,000 dozen in 1957 as against 55,000 dozen in 1954. Actual production in 1957 aggregated 206,267 dozen, as against 29,351 dozen in 1954. The percentage of capacity utilised has thus improved from 53.37 in 1954 to 71.62 in 1957.

Capacity and Production

Indigenous production is not sufficient to meet the demand. In 1957, the demand for steel files within the country was estimated at 500,000 dozen, as against 300,000 dozen in 1954. Domestic production in 1957 could meet only 41.25 per cent. of the demand but it showed an improvement over the 1954 figure, which was only 9.78 per cent. of the demand. The installed capacity is expected to go up to 468,000 when the additional equipment imported by John Baker and Sons and Harbans Lal Malhotra and Sons Ltd. is installed. Additional capacities licensed are of the order of 144,000 dozen, comprising 24,000 dozen for the J. K. Engineers' Files, 60,000 dozen for Hindustan Files, and 60,000 dozen for John Baker and Sons. At present, there are five units licensed under the Industries (Development and Regulation) Act which are engaged in the manufacture of engineers' steel files. Out of these, three are branches of large public limited companies, one is a partnership concern and the fifth is a private limited company. One unit has entered into technical collaboration with a foreign firm while another has secured the right to manufacture in India well-known brand of engineers' steel files of the United Kingdom. Three units have engaged foreign experts to train their workers and to improve the quality of their product. Two units are well laid out with modern equipment while others are cramped for space and operate mostly with old machinery some of which need urgent replacement.

The internal consumption of engineers' steel files in 1956 aggregated 455,619 dozen out of which 143,191 dozen were indigenous files and 312,428 imports. Internal consumption during 1957 is estimated to have been 500,000 dozen. In 1958, the demand for engineers' steel files of the protected categories is expected to be of the order of 600,000 dozen and it is estimated to rise progressively by 20 per cent. every year during the next two years. As regards the pattern of demand, nearly 65 per cent. of the total demand in recent years were for sizes 4" to 8", about 25 per cent. for files of intermediate size between 8" and 14" while the demand for sizes 14" and above did not exceed 10 per cent. This pattern is not expected to differ materially in future.

The principal raw material for the manufacture of engineers' steel files is carbon steel or chromium steel of special sections. The consumable stores required are grinding wheels and chemicals for hardening. All the raw materials and stores required by the industry, with the exception of grinding wheels of 24" diameter and below, are not produced in the country and have, therefore, to be imported. There has been complaints by the industry about the delay in the issue of licences for import of file steel and grinding wheels. The Commission has pointed out that the Iron and Steel Controller should expedite the issue of import licences for steel sections to the producers of engineers' steel files.

Future Plans

The industry has plans to produce 548,000 dozen of engineers' steel files in 1958, 626,000 dozen in 1959 and 729,000 dozen in 1960. The raw material requirements can be estimated at the rate of 200 dozen of steel files per ton of steel which is considered a fair rate of conversion. On the basis of these figures, the demand for steel sections required by the engineers' steel files industry may be estimated at 2,740 tons in 1958, 3,130 tons in 1959 and 3,645 tons in 1960. The average price of such steel at present is £95 per ton. This level of prices is expected to be maintained for some time to come. The total foreign exchange involved in the import of steel sections would, therefore, be about Rs. 35 lakhs in 1958, Rs. 40 lakhs in 1959 and Rs. 46 lakhs in 1960. As regards grinding wheels, their imports by the industry during 1956 and 1957 were of the order of Rs. 2 lakhs to Rs. 3 lakhs a year. Imports in 1960 might be somewhat lower as Carborundum Universal, Madras, is understood to have a plan to install in the near future a bigger press and a new kiln for the manufacture of the special types of grinding wheels required by the engineers' steel files industry. The firm expects to commence production at the end of 1959.

Thus, taking the requirements of steel and grinding wheels together, the foreign exchange required would range from Rs. 37 lakhs in 1958 to about Rs. 50 lakhs in 1960. Since the engineers' steel files industry is of vital importance to the national economy, it should enjoy a high priority in the programme of development. The cost of raw materials being a fraction of the cost of production of a steel file, it would be cheaper to import raw materials than the finished file. The Commission feels that "it is in the national interests that the steel files industry should be encouraged to maximise production and steps should be taken to ensure that the shortage of raw materials does not hold up the achievement of its targets of production." It, therefore, recommends that the requirements of the engineers' steel files industry for carbon or chromium steel sections and grinding wheels should be licensed in full to enable them to work at least one shift. It also suggests that the Government may consider the feasibiliy of the manufacturers' request that, in order to enable them to obtain better terms from overseas suppliers, licences should be issued for 12 months' requirements at a time with the stipulation that not more than one-half of the value of a licence can be utilised for import in a six-monthly period. It also urges that the Development Wing of the Ministry of Commerce and Industry, in consultation with the Director General of Ordnance Factories, the Man Industrial Corporation Ltd., Jaipur, and the engineers' steel files industry, should try to develop, as quickly as possible, domestic production of file steel sections required by the steel files industry.

As regards quality of the product, the consensus of opinion at the time of the last enquiry was that it was fairly satisfactory. The manufacturers have taken various steps to improve the quality of their product by installing additional machinery and by making improved arrangements for quality control. Nevertheless, some institutional consumers, such as the Central Railway, the Western Railway and the Naval Dockyard have expressed dissatisfaction with the quality of indigenous files. From the evidence received by the Commission it has come to the conclusion that (1) although there has been an appreciable improvement in the quality of the product, there is still scope for further improvement; (2) there is considerable prejudice against the indigenous product and that such prejudice has been due, in no small measure, to the sale of sub-standard files along with the standard product; (3) there is scope for the further growth and development of the industry and that such development should, in so far as the existing units are concerned, be secured by improved lay out and adoption of better techniques of production and supervision and replacement of old machinery by modern equipment. It has urged that the steel files industry should take immediate steps to modernise its equipment and improve its technique of production.

Price

A comparison of the fair ex-works price of the several sizes and types of indigenous files with the landed cost of corresponding imported files indicated that the rates of duty required to equate the landed cost without duty of flat and hand files with the fair ex-works price of corresponding indigenous files are lower than the current rates of protective duty. Half-round files, however, appeared to be still in need of nearly the same quantum of protection as exists at present. The Commission received a representation from the British File Trade Export Association to the effect that the current rates, converted into *ad-valorem* rates, vary from 62 per cent. to 77 per cent. of the f.o.b. value of British files and were, therefore, "penal." After taking into account all relevant considerations, the Commission has come to the conclusion that a lowering of the present rates of duty would not be justified. At the same time, it has reminded the industry of its obligations to the consumers and of the supreme importance of ensuring that its selling prices bear a fair relation to the cost of production. These prices, it points out, must not be fixed on the basis of either the selling prices of imported files, which command a premium in the market, or their landed cost with duty. It is to be hoped that the industry will bear the Commission's advice on quality and prices in mind in its manufacturing and selling operations.

INTERNATIONAL ASIAN HIGHWAY

The Sub-committee on Highways of the E.C.A.F.E., at its fourth session ended on 11th November 1958 at Bangkok, has recommended early action for the establishment of an international Asian highway system linking all the countries of the region between Viet Nam and Iran. The Sub-committee also adopted a series of recommendations for improving highway safety, stimulating construction of low-cost roads, setting up training facilities for the highway personnel and studying over-all problems of highway transportation. In adopting proposals for a special technical group, the Sub-committee suggested that the complex problems of international highway links in Asia could best be solved by area working groups or conferences. Thus, it was suggested that the first working group should meet in Bangkok to consider the road network of Viet Nam, Cambodia, Laos, Thailand, Malaya and Burma, the second group at New Delhi to study roads of Burma, East Pakistan, India, Ceylon, and Nepal and the third group at Lahore to cover the problems of West Pakistan, Afghanistan and Iran. The Zonal groups would make recommendations for the routes to be followed for international links, standards to be adopted, priorities to be sought and other pertinent factors. The Executive Secretary of the E.C.A.F.E. was asked to convene regional meetings and to seek financial and technical aid for the project as a whole and for the working groups from the United Nations Technical Assistance Administration or any other 'aid' agency.

All the delegates from 18 countries stressed the role of international highways which play an important part in economic development and the special importance road communications have for countries like Afghanistan, Laos and Nepal which are landlocked. They agreed that the establishment of the international highway network should be stimulated to promote trade and economic development and to strengthen regional co-operation.

According to the Chairman of the Sub-committee, Mr. H. P. Sinha, of India, the proposal for developing international highways network in Asia, will be of great significance for all the countries of the area. He hoped that the system could be completed in the not too distant future.

The special technical group of the Sub-committee was entrusted with the task of giving the project further study and with outlining the methods of collecting highway information from different countries as well as convening area conferences to discuss technical and other aspects of country-to-country links which need to be established within the proposed network.

NEW PRODUCTS AND PROCESSES

New Roofing Material

ONE of the most important new building products to be developed for a considerable time is announced by The Ruberoid Co. Ltd., London. The product is Ruberoid Copper Roofing, the development of which, it is said, represents a major step forward in roofing manufacture. The Ruberoid Company has succeeded in firmly laminating together copper sheeting and glass fibre based bitumen roofing. The result is a single sheet which combines all the outstanding weatherproofing qualities of bitumen roofing with the best features, including the characteristic appearance of the traditional copper roof. The new roofing now becomes available to architects and builders after exhaustive durability and weathering tests carried out in collaboration with the Copper Development Association. It will be used as the top layer of special built-up roofing specifications on all types of buildings requiring an economical, yet attractive, form of high quality roofing. Because it will normally be employed bonded with bitumen compound to an underlay of ruberoid reinforced glass fibre based roofing, all laps and roof details, such as flashings and aprons, will be fully sealed against water penetration. Side joints of sheets may be lapped flat or produced as standing seams or batten rolls as preferred. As with the conventional copper surface, Ruberoid Copper Roofing develops, as a result of natural processes, a surface film or patina forming a protection against atmospheric corrosion and eventually assumes the familiar colour of rich grey-green. A noteworthy feature of the surface is the pattern of small regular indentations which form a series of "built-in" expansion joints in the copper sheet. Ruberoid Built-up Roofs incorporating the use of their Copper Roofing will be fixed exclusively by the Company's own contract departments or contract agents overseas, as special techniques have been evolved for the application of this new material. Drumming is eliminated by the process employed in bedding the complete specification to the sub-structure.

New Model Conveyor Belt

A British firm, Distington Engineering Co., Ltd. which has specialised in making belt conveyors for many years, is now producing a new model. This has wire ropes and lightweight supporting stands instead of the more usual heavy structural framing. It uses chain-linked idlers instead of rigid idler assemblies. The new model, it is claimed, is quicker and easier to install and extend. Load-carrying is better because the hinged action of the linked idler rollers and spring action of the wire rope suspension allow the belt to "hug" the load and prevent it shifting when passing over idlers. This cuts down spillage; idlers can be spaced at greater intervals and, in many cases, a thinner ply belt can be used. The belt is given a longer life because there is more of a cushioning action than an anvil action at idler rollers. This considerably reduces impact damage to the belt as the load passes over. Belts can be supplied in widths up to 48 inches.

Plastic-lined Rubber Hose

A plastic-lined rubber hose for use in handling mineral acids has been developed by the Dunlop Rubber Company Ltd. The hose, which is lined with polyethylene, is said to be capable of withstanding attack from concentrated acids for long periods of time. Its flexibility is expected to give it a number of advantages over both rigid polyethylene plastic piping and stainless-steel piping for uses in the chemical and pharmaceutical industries. It is also claimed to be suitable for handling liquid foodstuffs and wines and spirits, as well as for the construction of temporary waste pipelines. The hose can be used at working temperatures of up to 60°C., and can withstand continuous pressures of up to 50 lbs. per square inch. It is being made available in diameters of from ¼ inch up to 3 inches, and in lengths of up to 60 ft.

New Synthetic Car Enamel

An entirely new synthetic car enamel, air-drying but having the superior qualities of baked enamel, has been produced by the Stockholm paint manufacturers, J. C. E. Gernandt. It is claimed to have 30 per cent. higher elasticity than other air-drying synthetic car enamels now in the market and four times greater resistance to chemical influence, sunlight, industrial atmosphere, etc. Called Gerylon, the new product was evolved by a team of Swedish engineers after more than 3½ years' work. It is in the first place intended for paint repair on cars but may as well be employed for first use in enamel baking ovens. Up to now the problem in repairing damage to synthetic enamels has been that the original baking enamel couldn't be used for the work, a completed car not being able to stand the heat of the oven. Thus workshops have been forced to employ special paint qualities lacking several properties of the baking enamel as regards strength and lustre. Reports from the major car-producing countries where tests have been made are unanimous in emphasising the notable properties of the new product.

"Rayescent Safety Light"

A new light bulb which emits a soft green light and lasts 10,000 hours has been developed in the U.S.A. by the Westinghouse Electric Corporation. The "rayescent safety light," flat in shape, gives off practically no heat and will burn for a year at a cost of less than a penny. The bulb is not intended for reading, but rather for use in hallways, bathrooms and stairways. It will be put on the market next year.

DIFFERENTIAL BONUSES BY THE L.I.C.

SOME SUGGESTIONS FOR SOLVING THE PROBLEM

By G. S. Diwan, M.A., F.I.A.

SECTION 42(2) (*k*) of the Life Insurance Corporation Act, 1956, provides that "the Corporation may, with the previous approval of the Central Government, by notification in the *Gazette of India*, make regulations... for the classification of policies, whether issued by the Corporation or any insurer whose controlled business has been transferred to or vested in the Corporation, for the purpose of declaring differential bonuses, wherever necessary." The results of the first acturial valuation of the Corporation are expected to be published soon, and a report based on official sources, published in a section of the Press, said that "the Corporation has conducted an exhaustive investigation into the profit-earning capacity of the various insurers and would shortly forward to the Government for its approval suggestions for classification of policies for the purpose of declaring differential bonuses." An attempt is made in the following article to discuss the various points that arise in a consideration of the question of differential bonuses for the L.I.C., mainly with a view to stimulating thought on the subject in interested quarters.

Reasons for Differential Bonuses: Major Reasons

As pointed out officially, "the profit-earning capacity of the funds brought into the Life Insurance Corporation of India by the policyholders of the different insurers would vary from fund to fund and equity demands that the profits contributed by each group of policyholders should be utilised for their benefit." On 1st September 1956, the day the Corporation began its activities, each insurer brought in a fund which was, in a majority of cases, in excess of the *net* value of the *contractual* liabilities, that is, sums assured together with the existing bonuses, but the rate of bonus that could be supported on the basis of this excess was not just the same for each insurer. The working of the various insurers before 19th January 1956, the date on which Government took over their business, differed from insurer to insurer first as regards each of the three elements of this working, namely, mortality of the lives insured, interest earned and expenses of management.

Broadly, it may be said that this difference was relatively the largest under the head of expenses and probably larger under the head of interest than under the head of mortality. The rate of bonus would be higher if either the rate of mortality experienced was lower or the rate of interest earned was higher or the level of expenses was lower, other things being equal in each case. Secondly, the rates of premium charged by the different insurers were also different. As a result of these various differences in the past working, the funds on 19th January 1956 of the various insurers were such as would produce bonuses at different rates even on the assumption that all these differences were to disappear entirely all of a sudden from 19th January 1956 onwards. In point of fact, these differences did disappear to a large extent after 19th January 1956, but there was one important exception. Though one and the same rate of premium applies to similar policies issued on or after 19th January 1956, yet the rates at which premiums are payable by the policyholders under similar policies issued before 19th January 1956 may differ not only between two insurers but also between two policies issued at different times by the same insurer.

In Life insurance, the premium payable under a policy is determined once for all at the outset and ordinarily continues to be payable throughout the duration of the policy, irrespective of any subsequent changes in the rates of premium for new policies. Thus, under similar policies in force today with the Corporation, but issued before 19th January 1956, premiums may be payable at variously different rates; and a layman expects that, under these conditions, the rate of bonus to be given to the policyholder paying the premium at the higher rate should exceed the same for the policyholder to whom the lesser rate applies. This principle of layman's equity is also theoretically correct, *ceteris paribus* (other things being equal). The difference in the rates at which premiums are currently payable under similar policies assigns a relatively different *net* value to the contractual liabilities of the different insurers on 19th January 1956; and, as has already been pointed out above, as a cumulative result of the differences in the past working, the funds of the various insurers on 19th January 1956 had a different profit-earning capacity even in the absence of any relative difference in the net value of their contractual liabilities on that date. Broadly speaking, it may, therefore, be said that the differences in the profit-earning capacity of the various insurers on 19th January 1956 are due to (*a*) the combined effect of the various differences in working prior to 19th January 1956, and (*b*) the difference in the rates of premium for similar policies current today but issued before 19th January 1956; and these are the major reasons for differential bonuses.

Minor Reasons

The different groups of current policies, issued by different insurers before nationalisation, are at present managed by what are known as "existing business units"; and the entire business of the Corporation, including even this existing business, can now be regarded as *broadly* conforming to the same pattern of experience, though premiums under similar old policies are even now payable at various rates. It may be useful to note in what respects this conformity is only broadly, but not strictly, present. For instance, the existing business of the different units will be still showing the same old divergence in its present and future mortality experience, inasmuch as this divergence is the result of varying standards of selection formerly adopted by insurers for accepting lives for insurance.

Again, in the past, different insurers may have followed different investment policies within permissible limits, some specialising in mortgages, some in house property and some in ordinary shares; and it would not always be possible or desirable to change investments suddenly so as to fit them into a common pattern. The relative differences in the investment portfolios of the different insurers on 19th January 1956 might, therefore, continue for some more time to affect the interest-earning capacity of the various funds brought into the common pool. Such variations in the current and probable future experience of the different units will, however, be almost entirely absent as regards expenses, except perhaps to the insignificant extent, if any, to which the Corporation may have been required to give personal pay to its employees as a result of their salaries under private enterprise.

It may also be pointed out that the existing business in the units is probably subject to the old policy conditions of the respective insurers or to the present policy conditions of the L.I.C., whichever are more favourable to the policyholder. This circumstance also affects, though again in a very minor way, the present profit-earning capacity of the different units. The above differences in the present and the probable future working of the units are not only inappreciable by themselves singly, but, even in the aggregate, they are very probably so. Theoreticians may argue that all such minor differences in the present and probable future experience should be allowed for in arriving at a scale of differential bonuses. There can be no objection to this, provided a sufficiently practical method of measuring, and allowing for, these minor differences is possible. If it is decided to allow for them, then the *net* value of the liabilities of the different units on 19th January 1956 will have to be estimated with due regard to them. It is important from the policyholder's point of view to know whether the Corporation is calculating this *net* value on the *same* actuarial basis for all units without allowing for these minor differences or whether different bases are in effect adopted for different units and if so how exactly they are correlated to the ascertained differences in the current and probable future experience of the units.

Differential Bonuses for the Same Unit

It may be noted that the Act allows differential bonuses not only for different units but also for policies issued at different times in the same unit. Indeed one of the major reasons, namely, difference in the rates at which premiums are currently payable under similar policies in the units, applies not merely as between similar policies issued by different units, but also, as has already been stated, to similar policies issued by the same insurer at different times. Probably the variation in the rates of premium for similar policies is *on an average* larger for current policies issued by the same insurer at different times than what it is for policies issued by different insurers at more or less the same time; and, if the latter variation is considered as sufficient to justify differential bonuses, it would be difficult to maintain, purely from the point of view of mathematical equity, that the former does not require differential bonuses. However, equity need not be considered only from the mathematical point of view. Expectations of a policyholder can legitimately be made to affect considerations of equity. For instance, if a policyholder has insured himself with an old-established company which has changed its rates of premium many times but which has consistently granted bonuses at the same uniform rate at any one time for similar policies subject to different rates of premium, then this policyholder can, in a sense, be held to have tacitly consented to uniform, as against differential, bonuses. It would, however, be difficult to make this tacit consent applicable to the position of all the units taken together after nationalisation, which event could not reasonably have been anticipated by a policyholder when he took the policy. There is, therefore, a case for differtial bonuses as between different units only, though uniform bonuses are given for the same unit. Where, however, the previous practice of an insurer was of differential bonuses, it might perhaps be necessary to continue it even now.

Differential Bonuses How Long

It is reported that when the subject of differential bonuses was discussed at a meeting of the Actuarial Society of India, a suggestion was made that "it may not be necessary, even in theory, to continue the differentiation in bonuses beyond the third or the fourth valuation of the Corporation." It is not clear why this should be so except on account of any special circumstances affecting equity as between different policyholders of any one unit. In any case it should be made clear beyond doubt whether the relationship between the bonus now declared for a particular unit and that for the Corporation is going to continue for the entire future duration of the existing policies in the unit or only for a fixed shorter period from now. Unless this is known, it will not be possible to assess the justifiability or otherwise of any differential bonus now declared. It is obvious that, if differential bonuses are to hold good for the entire future duration of a policy, and not merely for a fixed shorter period, the differential bonuses higher (lower) than the Corporation bonus will be lower (higher) than what they otherwise would be. Again, it is not unlikely that some policyholders would like to convert their existing policies into paid-up-policies once they know where they stand in the matter of differential bonuses, which they would be able to do only if the period for which the differential bonuses are to continue is made known to them.

Bonuses Prior to Nationalisation no Guide

Some people appear to be under the impression that differential bonuses will be based on the last declared bonuses of the different units prior to 19th January 1956. This, however, does not appear to be theoretically correct, for the *net* liability of different units on 19th January 1956 is now to be ascertained on a *common* valuation basis, except for any allowance that may be made for the minor variations pointed out above. Even with this allowance there will be nothing like the former differences in the various valuation bases, especially in respect of the provision for future expenses. It is not unlikely that, in the case of some of the weaker units, where a relatively higher provision for future expenses was formerly required, the common valuation basis now, even with the necessary adjustments, may involve lesser provision for future expenses and might, therefore, show a higher differential bonus than the last declared bonus for it. On the whole, the past bonus history of a unit does not appear to have any decisive relevance to the differential bonus now to be declared for it, except, perhaps, in indicating whether one or more differential bonuses should be declared for different sections of business in it.

Grouping for Differential Bonuses

Though the profit-earning capacity may be estimated separately for each unit, yet practical considerations might, perhaps, require grouping of units according to certain successive ranges of the measures of this capacity and then declaring the same differential bonus for each group so formed. Classification of policies may, therefore, probably have to be made only in broad groups, and it will thus not be strict equity that can be achieved but only broad equity. However, two important considerations arise in this respect, namely, the lengths of the successive group ranges of the measures of the profit-earning capacity and the unique values of this measure taken as representing the successive groups. These may at first sight appear to be academic details of no import in practical matters. However, they vitally affect equity which is the main question at issue. *Prima facie* it appears that the mean value of a range should be the unique value to represent it and the length of a range should be such that its end-points do not differ from this mean by more than a certain suitable predetermined number. Classification of the policies is for the purposes of ensuring equity and the reverse process of grouping, therefore, necessarily involves an element of inequity. The suitable predetermined number mentioned above has, therefore, to be selected at the outset on the basis of the degree of inequity one is prepared to tolerate, in order to get the practical advantages of grouping. There may be very good reasons for not following the above method, though it appears to conform most to the objective of equity. However, whatever method, if any, may be adopted in this respect, the reasons for it should be made known to the policyholders, so that they should be in a position to judge for themselves its appropriateness under the circumstances.

A Tentative Suggestion

The Central Government has already decided to make good the deficit in the case of those units whose funds on 19th January 1956 were less than the net value of their contractual liabilities on that date. Possibly no bonus can be declared in respect of these units now or in future; since it is the deficiency only in respect of the contractual liabilities that is made good by the Government and since bonus does not become part of the contractual liability, unless and until it is declared. In the case of an old policy which is thus entitled to no bonus now or in future, it is not unlikely that the policyholder may find it profitable to convert his policy into a paid-up policy and take a new with-profit policy for a suitable amount with the Corporation. This will enable him to run away from the "no bonus" group to the group entitled to the Corporation's bonus, and this may happen in the case of all groups getting a differential bonus less than the Corporation's bonus. Of course, not all the policyholders in these "lower bonus" groups will find it profitable to do so. However, to the extent to which such shifting takes place to the advantage of the policyholder concerned, it must ultimately mean that the "Corporation bonus" group and therefore probably all other groups will suffer a loss. The degree of this loss may, for aught we know, be very insignificant.

A suggestion is, however, being made here tentatively to the effect that the Central Government may, in addition to making good the above deficit, guarantee a differential bonus at a certain minimum rate for all participating policies. This minimum rate should be low enough so that the total cost to the Government of first making good the above deficit and, secondly, of guaranteeing the minimum rate of bonus should be well within the 5 per cent. portion of the surplus emerging from time to time, during, say, the 10 to 12 years after 19th January 1956, which may be roughly taken as the average duration of the existing business in the units. Under Section 28 of the Life Insurance Corporation Act, 1956, the Central Government has power to utilise a portion, up to a maximum of 5 per cent. of the emerging surplus for any purpose they think fit; and it is, therefore, suggested here that this portion may be utilised to help the weaker units to come up to a certain minimum standard.

Obviously, the minimum rate of bonus to be guaranteed will be less than the rate of the Corporation's bonus and will have to be fixed as a percentage of the latter. It should, however, as far as possible be high enough to make it unprofitable for any with-profit policyholder in a weaker unit to shift from his old policy in the unit to a new policy in the Corporation; and also high enough to compensate the policyholder for such portion of the loss in his bonus as may reasonably be attributed to faulty management in these units in the past. In a sense there is some justification for Government to intervene in this manner, with a view to wiping out the

(*Continued on page 893*)

INDIAN TRADE AND GENERAL INSURANCE COMPANY

SUBSTANTIAL EXPANSION IN BUSINESS

1957 was yet another year of substantial expansion in the business of the Indian Trade and General Insurance Company, Ltd. (General Manager: Mr. T. M. Telang). The total net premium income in all the three departments of the Company increased from Rs. 68.02 lakhs in 1956 to Rs. 79.35 lakhs in 1957, a rise of Rs. 11.33 lakhs or 16.7 per cent. This constitutes a significant record in the Company's history during the 14 years of its existence.

All the three departments shared the improvement in premium income but particular mention may be made of the miscellaneous department in which, as a result of the reorganisation undertaken by the Company, the premium income advanced by Rs. 7.65 lakhs, or 52.61 per cent., as compared with the previous years' Net premium in this department stood at Rs. 22.20 lakhs, as against only Rs. 14.55 lakhs in 1956. Premium in the fire department increased by 7.93 per cent. and in the marine department by 5.28 per cent. The fire business continued to account for a major portion of the business of the Company. Premium in the fire department was 44.14 per cent. of the total premium. The marine and miscellaneous departments accounted for 27.87 per cent. and 27.99 per cent. of the premium income.

An expanding concern that it is, the Company continues to incur expenses on the development of business in new territories, particularly in foreign countries. This has resulted in a small increase in management expenses, by reason of which the overall expense ratio now stands at 42.4 per cent., as against 41.4 per cent. in the previous year. Commenting on the rise in expenses, Lala Karam Chand Thapar, the Chairman of the Company, in a statement to the shareholders circulated along with the annual report and accounts, observes:

"Your Company continues to incur expenses on the development of new territories, particularly in foreign countries where we have hitherto been unrepresented. This also continues to impose upon the Company a financial strain but you have now seen in small measure the benefits which have been derived from such expenditure incurred in the past, and I may assure you, there is ample reason to look forward with optimism to the greater benefits that the Company will derive in time to come from the expenditure which is being incurred today. Meanwhile, the expenses that are being incurred on the development of our foreign business has resulted in a small increase in our management expenses, by reason of which the overall expense ratio now stands at 42.4 per cent. The progress that is being made in the foreign markets is satisfactory and as our operations in these countries continue to expand we can be sure of a steady increase in the volume of business as well as in the contribution we are making towards the foreign exchange earnings of our country."

As regards the claims ratio, while the position showed an improvement in the marine department it deteriorated in the fire and miscellaneous departments. While the ratio declined from 76.4 per cent. in 1956 to 69.6 per cent. in 1957 in the marine department, in the fire and miscellaneous departments it increased from 35.7 per cent. and 48.1 per cent. in 1956 to 43.8 per cent. and 50 per cent. respectively in the year under review.

The year's working has resulted in a net profit of Rs. 41,016. The dividend has been halved to Re. 1 per share, without deduction of tax, as against Rs. 2 per share paid in the previous year.

The following table gives the salient features of the working of the Company during the three years ended 31st December 1957:

(In lakhs of rupees)

	Year ended 31st December		
	1957	1956	1955
Fire:			
Net premium	35.03	32.46	28.87
Claims	15.83	11.57	12.94
Commission and expenses	16.50	14.80	13.03
Fire fund	17.23	16.23	14.44
Marine:			
Net premium	22.12	21.01	19.77
Claims	16.89	16.06	15.27
Commission and expenses	8.10	6.90	5.96
Marine fund	20.87	19.75	18.98
Miscellaneous:			
Net premium	22.20	14.55	9.96
Claims	11.10	6.99	5.19
Commission and expenses	8.69	6.23	4.56
Miscellaneous fund	11.10	7.27	4.99

As regards departmental results, net premium in the fire section aggregated Rs. 35.03 lakhs, as against Rs. 32.46 lakhs in 1956. Net claims paid and outstanding amounted to Rs. 15.33 lakhs. The loss ratio works out to 43.8 per cent. as against 35.7 per cent. in 1956. Commission and expenses of management and foreign taxes amounted to Rs. 16.85 lakhs, being 48.1 per cent. of premium, as against 46.3 per cent. in 1956. After earmarking Rs. 1,00,185 to the reserve for unexpired risk, which now stands at Rs. 17.23 lakhs or 50 per cent. of premium, the balance of Rs. 2.37 lakhs has been transferred to the profit and loss account.

Since marine insurance all over the world has in the past few years been going through increasingly difficult times on account of uneconomic rates of premium, the Company showed the greatest care in controlling expansion of business in its marine department. It has also been making a concerted effort to weed out unprofitable accounts. The rise in premium income in the marine department has therefore been only small, from Rs. 21.01 lakhs in 1956 to Rs. 22.12 lakhs in 1957. But it is noteworthy that there has been a welcome fall in the claims ratio from 76.4 per cent. in 1956 to 69.6 per cent. in the year under review. Efforts to improve the claims ratio are continuing but the fact remains that the rates of premium in the marine market is sufficient to cover only partial loss and a single total loss or large general adverse claim can affect the account adversely. Net claims paid and outstanding in the marine section amounted to Rs. 15.39 lakhs. Commission and expenses aggregated Rs. 8.10 lakhs, representing 36.6 per cent. of premiums, as against 32.8 per cent. in 1956. After strengthening the reserves for unexpired risks by Rs. 1.12 lakh, which now stands at Rs. 20.87 lakhs (94.35 per cent. of premium), the account shows a deficit of Rs. 1.89 lakh.

The volume of business in the miscellaneous department sharply increased, the net premium rising from Rs. 14.55 lakhs in 1956 to Rs. 22.20 lakhs in 1957. This has imposed a heavy burden on the resources of the Company, the amount required for strengthening the reserves for unexpired risks being as much as Rs. 3.83 lakhs. The underwriting deficit in this account is entirely due to this factor. In other respects, however, the account discloses a satisfactory position. Net claims paid and outstanding amounted to Rs. 11.10 lakhs. The claims ratio has gone up from 48.1 per cent. in 1956 to 50 per cent. in 1957. This was mainly due to the steady increase in the number of accidents on roads, in cost of repairs, etc. The Company, however, is making efforts to improve the claims ratio by means of more careful underwriting and eliminating undesirable accounts. Commission and expenses of management and foreign taxes amounted to Rs. 8.69 lakhs, 39.2 per cent. of premium, as against 42.8 per cent. in 1956. After strengthening the reserves for unexpired risks by Rs. 3.83 lakhs, which stands at Rs. 11.10 lakhs, a loss of Rs. 1.26 lakh has been transferred to the profit and loss account.

After providing for expenses not chargeable to other accounts a balance of Rs. 41,016 has been transferred to the profit and loss account. This, together with the net balance of Rs. 8,952 brought forward from the previous year and Rs. 15,000 provided in the previous year for taxation, gives in all Rs. 64,768. The dividend of Re. 1 per share absorbs Rs. 60,000, leaving Rs. 4,768 to be carried forward. The sound financial position of the Company is reflected in its capital and reserve position. Besides a capital of Rs. 24 lakhs, the Company has funds and reserves aggregating about Rs. 53 lakhs, comprising a fire fund of Rs. 17.23 lakhs, marine fund of Rs. 20.87 lakhs and miscellaneous fund of Rs. 11.10 lakhs, and a reserve for depreciation in investments of Rs. 2.26 lakhs, reserve for bad and doubtful debts of Rs. 1.15 lakh and income-tax reserve of Rs. 37,576.

U.K. PENSION PAYMENT TO INDIA

Britain has decided to make an advance payment of £10 million to India in respect of pensions. The payment represents an advance of instalments due in 1962 and 1963, and part of that due in 1964 under the Pensions (India, Pakistan, and Burma) Act of 1955. The £10 million is part of the sum of about £38.5 million which the U.K. Government offered to contribute as financial aid to India up to 31st March 1959, following the meeting in Washington arranged by the World Bank last August. The balance of £28.5 million will be in the form of a credit under Section 3 of the Export Guarantees Act, 1949. Discussions with the Government of India regarding the operation of this credit are in progress.

PROMOTING EXPORTS OF SPICES

SUGGESTIONS OF CONFERENCE ON CO-OPERATIVE MARKETING

FROM time immemorial, India is known abroad as an exporter of spices. Even now, spices constitute a group of important export commodities for India. In 1957, the value of exports of spices and cashew kernels amounted to as much as Rs. 24 crores. Thus, their contribution to India's export earnings is not inconsiderable. It must also be noted that spices earn the hardest of all foreign exchange, namely, the U.S. dollar. There has, however, been much concern in the country over the growing threat of foreign competition in India's export market for spices. Integrated efforts are, therefore, called for towards reducing the cost of production of spices so that India may be able to quote competitive prices in world markets. The Conference on Co-operative Marketing of Spices, Cashewnut and Arecanut, which met in Trivandrum on the 13th and 14th inst., under the presidentship of Dr. Punjabrao Deshmukh, Union Minister for Co-operation, devoted some attention to the problems of marketing of spices. It recommended the establishment of a Central Spices Board to act as a promotional and developmental body on behalf of the co-operatives. It also decided that inter-State and export trade in spices should be undertaken by the All-India Co-operative Marketing Federation in liaison with the State Trading Corporation. It is not clear as to why the Conference found it necessary to make this recommendation, as we shall show presently.

The representative of the State Bank, who attended the Conference, assured the co-operatives that the Bank would be favourably inclined to consider the needs for production and marketing finances in areas where central financing agencies have not got the necessary resources. The Managing Director of the State Trading Corporation stated that the Corporation would try to use the co-operatives to the maximun. extent possible in export trade, consistent with the capacity of co-operatives to discharge their obligations in regard to quality and prices.

Must be Competitive

Dr. Deshmukh, in his presidential speech, stressed the need for co-operatives in expanding India's trade in spices with other countries. He held the view that producers' co-operatives, if organised properly, would be in a better position than private dealers to expand their foreign trade to the great advantage not only of producers but to the general economy of the country. India still had a monopoly in respect of most commodities. In order to increase India's exports to these markets, it was essential, he said, to control the quality and reduce the prices. Marketing was a part of the producing process and marketing costs formed a part of overall costs of production. He observed that the present production costs were high, owing to the existence of too many middlemen, which was a serious handicap to the development of trade with foreign markets. He felt that it would be advantageous, if farmers themselves, through their own associations, arranged for joint marketing of their produce in foreign countries without the intervention of middlemen.

Proceeding, Dr. Deshmukh referred to the important role of co-operative marketing societies. In the second Plan, provision was made for the establishment of 1,900 co-operative marketing societies to cover practically all important *mandis* in the country. The scheme was fast being implemented. The amount of loans advanced by the agricultural credit societies had gone up to Rs. 100 crores in 1957-58, as against Rs. 23 crores in 1950-51. This expansion of credit, however, had not brought about a corresponding improvement in the marketing side. The success of co-operative credit, according to him, would largely depend on the strength of its affiliated units and their capacity to ensure adequate volume of business to it. He urged the setting up of primary marketing societies in all assembling centres covering major producing areas. In this connection, he pointed out that the Central Government would always be prepared to help co-operatives in countering any unfair competition that they might face from vested interests. In order to secure maximum benefit to producers, he averred, co-operative societies would have to undertake, in due course, processing and direct exports of processed products.

A substantial part of the import business in arecanut, according to Dr. Deshmukh, could be entrusted to co-operatives handling arecanut. These co-operatives would be able to regulate selling prices of indigenous and imported products in such a way that, while producers stood to gain, the burden on consumers was not increased. To control prices and to ensure that producers in particular areas did not stand to lose by such regulation of prices, he said, the entire work connected with import and distribution might have to be centralised and entrusted to a single body.

Too Much for Co-operation

The successful functioning of co-operatives in the sphere of exports depends largely on the extent to which they can develop business relations in foreign countries. Hitherto, the entire export trade was handled by private individuals and shipping firms, who as Dr. Deshmukh said, have acquired long experience and established wide business contracts in world markets. It is not clear in what way a co-operative organisation can facilitate export trade. It is true that, in such an organisation, the profit margin would be somewhat less. But the expansion of export trade is not a mere problem in reducing profit margin. Exploration of market and maintenance of steady supplies require initiative and effort which a co-operative organisation, by its very nature, cannot supply. It must be remembered that each variety of spices, whether it is cardamom or pepper, or cashewnut, has its own individual problems. No co-operative organisation, even if it is strengthened by separate committees for different spices, can undertake successfully the marketing and export operations for all spices. Again, co-operative effort by itself cannot help reduce prices, an important factor in export trade. Any reduction in prices of spices, which would increase their competitive capacity abroad, could come only through increased production. This is an agricultural problem which depends for its solution on the supply of fertilisers and manure and adoption of improved agricultural practices. Finally, export trade can gain a fillip through exports of quality produce. Men in the entire marketing trade should become quality-conscious. From this point of view, Dr. Deshmukh did well to stress the need for framing standard grades and grade specifications under the Agricultural Produce (Grading) Act. Thus, increase in production of spices, improvement in their quality and institution of a grading system for spices, rather than any special assistance to co-operative organisations, should claim the immediate attention of the authorities.

INDIA'S FOREIGN TRADE

India had a favourable balance of trade to the tune of Rs. 39 lakhs in September last, for the first time in any month since September 1955, according to the provisional official figures of foreign trade—by sea, air and land—on private and Government accounts. The consistent adverse balance of trade, recorded in the preceding months, turned into a favourable one, thanks mainly to increased exports, although imports too went up over the figure for the previous month. The value of total exports, including re-exports of merchandise, in September last, rose to Rs. 59.02 crores, the highest for any month of the current year, from Rs. 49.91 crores in the previous month. Of this, the value of re-exports actually fell by Rs. 46 lakhs to Rs. 68 lakhs. The value of imports of merchandise (exclusive of the value of certain consignments of Government stores awaiting adjustment) also increased from Rs. 55.92 crores to Rs. 58.60 crores, but was much less than the highest reached this year so far—Rs. 70.56 crores in March last. Imports of currency notes aggregated Rs. 3.70 crores. gold Rs. 3 lakhs and current coins (excluding gold coins) Rs. 1 lakh.

The following table shows the trend of trade, month by month, during the nine months ended September 1958, as compared with that in the corresponding period of 1957:

(Value: In crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1957			
January	78.00	55.27	—22.73
February	70.60	54.44	—16.16
March	79.41	53.94	—25.47
April	89.40	47.85	—41.55
May	85.38	52.83	—32.55
June	86.23	48.34	—37.89
July	81.13	55.78	—25.35
August	80.98	60.25	—20.73
September	83.29	61.55	—21.74
1958			
January	66.05	54.77	—11.28
February	66.21	41.98	—24.28
March	70.56	46.68	—23.88
April	59.98	41.73	—18.25
May	63.29	44.71	—18.58
June	63.93	28.11	—35.82
July	66.79	54.31	—12.48
August	55.92	49.91	—6.01
*September	59.02	58.60	+0.42

GLAXO'S NEW VITAMIN A VENTURE

Glaxo Laboratories are now manufacturing vitamin A palmitate in a separate factory at Worli, Bombay. In the initial stages, Glaxo vitamin A will be manufactured from imported chemicals, but, in time, it will be progressively manufactured from raw materials available in India. Vitamin A is a particularly suitable material for manufacture in India, as the basic raw material which is used by all foreign manufacturers is lemon-grass oil, large supplies of which are produced in this country. Glaxo will embark on a further stage in production from this starting raw material during 1959, and the process is expected to be complete by the end of 1960.

Vitamin A has not only valuable medicinal properties and is thus used extensively in pharmaceutical preparations, but is an important protective vitamin in foodstuffs. All *vanaspati* manufacturers add vitamin A to their product. The eventual completion of this project by Glaxo at the end of 1960 will not only save foreign exchange but may actually earn it also, by the export of an important intermediate called beta-ionone, which is produced from lemon-grass oil. Glaxo enterprise is thus making another important contribution to Indian economic advancement.

LEAD AND ZINC CONFERENCE

The United Nations Conference on Lead and Zinc, 1958, which was held at Geneva from 10th to 12th inst., with Sir Edwin McCarthy (Australia) as the Chairman, agreed unanimously that further inter-Governmental consideration of the problems affecting the two metals should be undertaken as a matter of urgency. The Conference was more or less a continuation of the exploratory meetings on lead and zinc held in London in September last. It may be recalled that certain suggestions were made at the London meeting regarding methods of dealing with both short-term and long-term problems of international trade in zinc and lead. As suggested at the meeting, the Secretary-General invited Governments to express their views on these problems. A Committee was also constituted to report to the Conference on the replies sent by the various Governments.

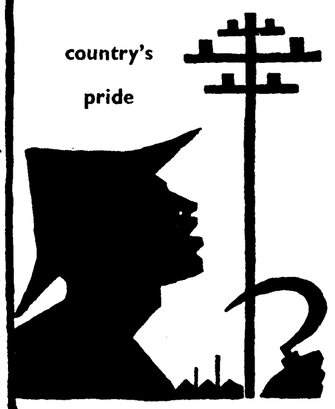
It is generally considered that, in the absence of any specific action, there might be surplus mine production in 1959 for both lead and zinc. With a view to taking steps to solve this problem of surplus, it was suggested that an inter-Governmental study-group should be established. While the majority of Governments were in favour of such a proposal, others did not agree to it. According to the latter group, the need for inter-Governmental consultation could be adequately met by the continuance of the Lead and Zinc Committee itself.

The general opinion of the Conference, however, was that the proposed study-group should be set up at an early date and that, pending the establishment of this body, the Lead and Zinc Committee should be continued to keep the position under review, to consider methods of dealing

(Continued on page 897)

He is the country's pride, the back-bone of our village—he is the Indian peasant.

He has observed in his village some over-head wires. He knows them as telephone, telegraph or electric wires, but knows no more. Surely, one day he will be more closely knit to the net-work of cables and wires and will learn all about these. Then, for millions like him, metals that go to make these cables and wires will have an increasing significance.



Innumerable are the ways we serve the country as the largest single importers of *non-ferrous metals and alloys.*

KOTHARI GROUP OF PLANTATIONS

BLUE MOUNTAIN'S PROFIT HIGHER BUT WATERFALL'S LOWER

A DIVERGENT trend is again disclosed by two of the Kothari group of plantation companies, namely, the Blue Mountain Estates Ltd. and the Waterfall Estates Ltd., Madras, in their earnings for the year ended 30th June 1958. While the gross profit of Blue Mountain has sizably increased from Rs. 14.71 lakhs to Rs. 22.36 lakhs, that of the Waterfall Estates has declined from Rs. 23.76 lakhs to Rs. 15.67 lakhs. Both are composite estates, having large interests in tea and coffee. One great advantage in having composite estates to plantation companies is that, if the earnings from one commodity show some recession, the other may mitigate that setback.

The year in question was one in which the tea industry fared fairly well. There was an appreciable increase in the tea crop of both the companies. This is attributed to favourable weather conditions, intensive cultivation and heavier manuring. While this helped keep the cost of production per lb. down in both the Companies, the net price realised was lower than in the previous year, "owing to inactive market for medium quality teas." The trend of coffee output varied between the two estates. While the output of Blue Mountain exceeded the previous year's levels to create an all-time record, that of Waterfall sustained a substantial fall. It will thus be seen that, through higher production of tea, the latter Company was able to make up, at least to some extent, the unfavourable results from coffee.

The trend of the net profit in the case of both the Companies is in accordance with their gross profit. The net profit of Blue Mountain has increased to Rs. 14.94 lakhs from Rs. 6.23 lakhs but that of Waterfall has dropped to Rs. 8.76 lakhs from Rs. 10.74 lakhs. Blue Mountain has raised the provision for depreciation from Rs. 90,174 to Rs. 1.32 lakh but lowered that for taxation from Rs. 6.20 lakhs to Rs. 4 lakhs. Likewise, the Waterfall Estates has provided Rs. 93,991 for depreciation, as against Rs. 72,453 and Rs. 4.50 lakhs for taxation, as against Rs. 10 lakhs. The rise in profit has enabled Blue Mountain to transfer a sum of Rs. 6 lakhs to general reserve and another Rs. 47,000 to development rebate reserve, as against nothing made in the previous two years. Waterfall, however, has had to reduce the allocation from Rs. 6.75 lakhs to Rs. 4.27 lakhs. The reduced provision consists of Rs. 3 lakhs to general reserve, Rs. 1 lakh to dividend equalisation reserve and Rs. 27,000 to development rebate reserve. Both the Companies have proposed to maintain the dividend at the rate of 12½ per cent. per annum, to which level it was lowered last year from 15 per cent. paid in 1955-56.

The detailed comparative table published at the foot of this page will enable the reader to have a clear idea of the progress made by the two Companies during the past three years:

The tea crop in both the estates increased. The increase was from 1.06 million lbs. to 1.61 million lbs. in the case of Blue Mountain and from 960,059 lbs. to 1.2 million lbs. in the case of Waterfall. The cost of production per lb. worked out to Re. 1.62 for Blue Mountain and Re. 1.41 for Waterfall, a fall from Re. 1.86 and Re. 1.51 respectively in 1956-57. But, at the same time, the net price realised by the former declined from Rs 2.13 to Re. 1.93 and that by the latter from Re. 1.96 to Re. 1.64.

The coffee crop of Blue Mountain increased from 13,918 cwts. to 14,301 cwts. But the output of Waterfall fell sharply from 16,167 cwts. to 8,083 cwts. The cost of production per cwt. increased for both the Companies, with the average price realised per cwt. descending to further low levels.

Estimates for 1958-59 are as follows:

Blue Mountain Estate: Tea 1.28 million lbs. at an estimated all-in-cost of Re. 1.57 per lb. and coffee 11,480 cwts. at a cost of Rs. 143 per cwt. Of the estimated coffee crop, Santawerry estate is expected to contribute 8,000 cwts. and Santagherry estate 2,800 cwts. It is stated that these two estates have proved very useful assets, as they are high yielding with bright prospects of increasing yields.

Waterfall Estate: Tea 1.22 million lbs. at an estimated all-in-cost of Re. 1.34 per lb. and coffee 12,500 cwts. at approximately Rs. 120 per cwt. Out of this, Coovercolly estate is expected to yield 10,600 cwts. and Kesinvurthy estate 1,400 cwts.

On the factory side, the Glendale tea factory of Blue Mountain has been extended by six bays at a cost of Rs. 75,278. One 4 ft. "Sirocco" drier, two rollers, one green leaf sifter and one made tea sorter have been added to the Glendale factory along with the oil firing unit. An oil firing unit has been installed in the Guernsey tea factory also. The tea factory building of Waterfall Estates has been extended by seven bays and improvements in artifical withering have also been effected. One new six-foot drier has been installed during the year. Two rollers were also installed in the factory during the year. Out of the existing new clearings, 32 have come into partial bearing. Permit for the extension of 75 acres was received, out of which work on 25 acres clearing is in progress.

The Rs. 2 fully paid-up shares of both Blue Mountain and Waterfall are quoted at Rs. 3.72 *cum-div.* On an *ex-div.* basis and on the basis of the dividend for the year, the yield on them works out to 7.2 per cent. per annum.

The financial position of the two Companies is indicated in the following synopses of their latest balance-sheets:

(As at 30th June 1958)

	Blue Mountain	Waterfall
	Rs.	Rs.
Capital	52,50,000	36,50,000
Reserves and surplus	24,26,391	29,88,792

	Rs. 98,08,506	88,71,276

WESTERN INDIA PLYWOODS

The accounts of the Western India Plywoods Ltd. (Managing Director: Mr. A. K. Kaderkutty, Baliapatam, Cannanore Dist., Kerala State), for the year ended 31st March 1958 show that the Company's working during the year was quite satisfactory. Both production and sales registered good progress over the previous years, resulting in a further steady increase in its profit. The gross profit at Rs. 15.70 lakhs has advanced by Rs. 3.27 lakhs from Rs. 12.43 lakhs for the previous year. It is also more than twice that (at Rs. 7.06 lakhs) for 1955-56. The net profit at Rs. 6.29 lakhs also stands higher, as compared with Rs. 4.36 lakhs for 1956-57 and Rs. 3.02 lakhs for 1955-56.
