While the provision for depreciation has been slightly lowered from Rs. 2.65 lakhs to Rs. 2.41 lakhs, that for taxation has been raised from Rs. 5.42 lakhs to Rs. 7 lakhs. Out of the net profit, the Directors have transferred Rs. 3.78 lakhs to the reserves, as against Rs. 3.04 lakhs a year ago. A breakdown of the year's provisions shows that dividend equalisation reserve gets Rs. 65,000, reserve for repayment of loan from the Industrial Finance Corporation of India Rs. 2 lakhs, reserve for rehabilitation Rs. 50,000 and development rebate Rs. 62,639. The allocations in the previous year were: general reserve Rs. 25,000, gratuity reserve Rs. 30,000, dividend equalisation reserve Rs. 30,000, reserve for repayment of loan from the I.F.C. Rs. 2 lakhs and development rebate Rs. 18,590. The Directors have declared a dividend of 10 per cent. on ordinary shares which is the same as that paid for 1956-57 and 1955-56. The dividend on the ordinary shares absorbs Rs. 2.26 lakhs and on the 6 per cent. cumulative preference shares Rs. 24,149, leaving a sum of Rs. 20,286 to be carried forward, as against Rs. 18,706 brought in.

As stated earlier, the Company's sale proceeds of finished goods and raw materials showed good progress over the previous years. Thus, from Rs. 33.38 lakhs in 1955-56, they rose to Rs. 37.24 lakhs in 1956-57 and further to Rs. 56.64 lakhs in 1957-58. The Directors say that the policy followed by them in adding the latest types of machinery from year to year has been fully justified as they have not only been able to improve production but also to maintain a high standard of quality of all their products. The construction of buildings for the hardboard factory is fast progressing and shipments of machinery are expected to start shortly. Most of the formalities of foreign exchange requirements in this connection are now over and the delivery of the plant is expected to be completed in the next few months.

The Company has a paid-up capital of Rs. 33.17 lakhs, of which Rs. 27 lakhs are accounted for by ordinary shares of Rs. 100 each and the balance by 6 per cent. tax-free cumulative preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 11.02 lakhs. The current liabilities amount to Rs. 15.16 lakhs. The gross block of Rs. 32.27 lakhs stands written down at Rs. 10.10 lakhs. Miscellaneous expenditure and losses amount to Rs. 80,155. The current assets aggregate Rs. 48.46 lakhs.

The Rs. 100 fully paid-up ordinary shares are currently quoted at Rs. 135 *ex-div.* at which rate and on the basis of the dividend for the year, the yield is 7.4 per cent. per annum.

OTIS ELEVATOR COMPANY

A new Bombay elevator plant, in which a New York company is investing, will contribute substantially to the elevator manufacturing capacity of India and thus reduce the country's imports. The U.S. firm—the Otis Elevator Company of New York—has purchased a guaranty of convertibility of up to $460,000 from the International Co-operation Administration in connection with boosting its investment in the Otis Elevator Company Private Limited. The Otis Elevator Company of New York has long been associated with the Indian firm in the installation and maintenance of elevators and escalators throughout India.

The Indian firm has recently issued new capital stock for the purpose of establishing manufacturing capacity in a plant in Bombay and the New York firm now is purchasing with dollars an additional block in new stock. The I.C.A. guaranty covers the convertibility of its investment back into U.S. dollars in the event of its sales for Indian rupees and also assures the convertibility of long-term rupee earnings on the investment.

It is the intent of the American investor to supply the Bombay plant with the latest production techniques applicable to its industry.

The convertibility guaranty is in line with an investment guaranty agreement signed several months ago by the Indian and U.S. Governments. This agreement permits the International Co-operation Administration, under congressional authority, to sell investment guarantees for convertibility of local currency receipts to American private business wishing to invest in India.

CENTRAL INDIA COALFIELDS

PROGRESS MAINTAINED

THE results of Central India Coalfields Ltd. (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) for the year ended 31st March 1958 are encouraging. Both production and turnover made rapid strides over those for the preceding year. As a natural corollary, the Company's profit also showed a further rise. The gross profit at Rs. 10.24 lakhs has advanced by Rs. 1.90 lakhs from Rs. 8.34 lakhs for the previous year, to which level it had increased from Rs. 7.32 lakhs for 1955-56 and Rs. 2.76 lakhs for 1954-55. It will be seen from these figures that the Company's progress in recent years has been quite steady. Indeed, in the context of unremunerative prices fixed by the Government of India for coal, against mounting costs of production, this performance of the Company is remarkable.

The net profit, at Rs. 3.34 lakhs, also stands higher, as compared with Rs. 2.48 lakhs for 1956-57. This has been arrived at after providing Rs. 4.80 lakhs for depreciation, as against Rs. 5 lakhs in the preceding year and Rs. 1.35 lakh for taxation (including Rs. 25,000 for wealth tax), as against Rs. 22,500 for wealth tax alone in the previous year. The Directors have created a new development reserve, with an initial contribution of Rs. 82,210 out of the year's profit, representing 75 per cent. of the estimated amount of development rebate in respect of additions to plant and machinery during the period from 1st January to 31st March 1958 in accordance with the provisions contained in the 1958 Finance Act. The dividend to shareholders is proposed to be maintained at 5 per cent. for the third year in succession, to which level it had been stepped up from 2½ per cent. for 1954-55.

The following comparative table provides a synoptical view of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	57.28	26.45	22.73	17.19

Carry forward	0.11	0.08	0.10	0.14

* Provision for wealth tax.

The Company's sale proceeds during the year under review at Rs. 57.28 lakhs is more than double that (Rs. 26.45 lakhs) in 1956-57. It is, again, more than thrice that (Rs. 17.19 lakhs) in 1954-55. This improvement in sales proceeds has, however, been neutralised to a great extent by the sharp increase in raising and establishment expenses from Rs. 35.66 lakhs in 1956-57 to Rs. 48.06 lakhs. The total raisings during the year increased from 156,342 tons in 1956-57 to 310,054 tons and despatches from 155,456 tons to 297,201 tons.

The Directors' report draws attention to the inordinate delay on the part of the Coal Price Revision Committee in submitting its findings. This Committee was appointed by the Government to suggest changes in coal prices to cover the enhanced cost of production. It was expected to submit its report within two months after its appointment in May 1957. But 18 months have passed and yet there are no signs of the Committee coming to any conclusion. The Directors observe that there is necessity for an immediate price increase to meet the increasing cost of almost all the items involved in the production of coal. They state that the Government's policy, in framing and executing its price control, has always been based on the direct wages cost only, ignoring the effects of all other important cost factors, thereby leaving the industry always in an unbalanced position.

According to the Company's balance-sheet as at 31st March 1958, its paid-up capital is unchanged at Rs. 49.98 lakhs, all in ordinary shares of Rs. 10 each. It has practically no reserves as the little that it has being only Rs. 92,979, of which Rs. 82,210 represent the amount transferred to development reserve out of the year's profit, the balance being the surplus carried from the profit and loss account. The gross block of Rs. 55.20 lakhs has been written down to Rs. 37.60 lakhs. Additions during the year were of the order of Rs. 8.86 lakhs. The current assets aggregate Rs. 27.51 lakhs, against which there are current liabilities amounting to Rs. 14.21 lakhs.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 7.94 *ex-div.*, at which rate the shares provide a yield of 6.3 per cent. per annum. The Company belongs to the Birla group. It was registered in 1944 and owns collieries in Madhya Pradesh, Bihar and Orissa. It started paying dividend at the modest rate of 2½ per cent. from 1953-54.

Points From The Chair

New Indian Projects

"OUR affairs in India continue to progress, to the satisfaction of ourselves and our Indian partners, Messrs. Murugappa and Sons. The works of Tube Products of India Ltd., opened last year, got well into their stride in producing electric resistance welded steel tubes of good quality, and are already operating to capacity. I visited the factory in February, and was impressed by the high standard of work and methods attained so quickly. In consultation with our Indian colleagues, we decided to install, as soon as possible, a second E.R.W. tube mill, to double present capacity, also, a mill for cold rolling strip for which there is a growing need as India's industrialisation gains pace. Extensions are also in hand at the works of T.I. Cycles of India Limited which when completed will double its capacity. A substantial degree of self-sufficiency is desirable in the production of bicycles, especially in countries where foreign exchange difficulties restrict imports. We are, accordingly, planning for the production in India of cycle saddles, chains and lamps. The extensions and new projects will cost nearly £2,000,000, of which some £1,400,000 will be needed in foreign currency for payment of imported equipment. In addition to taking up our agreed proportion of the additional equity capital to be issued, we have agreed to provide the balance of sterling necessary by way of a loan to the Indian company, until such time as India's foreign exchange position permits repayment."

SIR IVAN A. R. STEDEFORD,
Tube Investments Ltd., Birmingham.

Rise in Manufacturing Costs

"The continuous rise in manufacturing costs not only in our industry but in almost every industry in the country, is a symptom of a disturbing ailment which, if unchecked, may grievously hamper the further rapid development of the country's economy which forms the principal aim of our Five-year Plans. Apart from the increased cost of imported materials and machinery, one of the main causes of rising costs in India can be traced to a continuous increase in labour costs unaccompanied by a corresponding rise in labour productivity. Considering the low level of wages in the past, an increase in the earnings of workers is both welcome and essential to India's transformation into a modern industrial nation. Unless, however, such higher earnings are accompanied by increased labour productivity, the cost of materials and products made in our country will continue to rise until they are beyond the reach of the mass of consumers, and become totally uncompetitive in export markets. No industry can afford both high wages and an excessive labour force, particularly where expensive mechanical equipment has been installed. We have already begun to suffer in our country from an inadequate appreciation of this fundamental point. Until recent years India was a low-cost producer. It is now a high-cost producer or well on the way to becoming one, and the arrested growth in the consumption of such essential indigenous products as cloth, or soap, on the one hand, and our increasing inability to compete in foreign markets on the other, are both warning signals, which we can ignore only at our peril."

J. R. D. TATA,
Tata Chemicals Ltd.

Sugarcane Prices

"At the conclusion of the last season the growers agitated for an increased price for cane. All sight seems to have been lost of the fact that cane is a commodity which is offered for sale to a factory at a price that is either negotiated or fixed by the Government before the season commences, and there can be no justification for pressure to coerce the buyer to pay more after he has consumed and paid for the cane. In the case of this factory our offer to the growers was made on the 27th September 1957 after the tripartite conference held on the 20th of that month. Consequently, the conditions of sale governing the cane tendered were known to the growers. Even if this principle did not exist, it would surely be unreasonable to ask it of the shareholders of this Company who, by reason of the paucity in the supply of cane coupled with the very low recovery that was possible by reason of the quality of the cane, enjoyed no ordinary dividend from 1948 to 1954 and who over the past 10 years have in fact only received a total of 37½ per cent. by way of dividend—an average of less than 4 per cent. per annum."

G. N. NOEL-TOD,
Travancore Sugars and Chemicals Ltd.

COMPANY MEETINGS AND DIVIDENDS

INDIAN DYESTUFF INDUSTRIES LTD. Annual General Meeting, Bombay, 1st December 1958. Transfer books remain closed from 28th November to 12th December 1958, both days inclusive.

BLUE MOUNTAIN ESTATES LTD. Annual General Meeting, Madras, 5th December 1958. Dividend: 12½ per cent. or Re. 0.25 per share, free of tax, payable on 6th December 1958. Transfer books remain closed from 21st November to 5th December 1958, both days inclusive.

MEGNA JUTE MILLS CO., LTD. Interim dividend of 50 nP per ordinary share, for the year ending 31st March 1959. Transfer books will remain closed from 1st to 15th December 1958, both days inclusive.

PHILIPS INDIA LTD. Additional dividend of 1.4 per cent. free of income-tax, for the year ended 31st December 1957. Transfer books will remain closed from 1st to 13th December 1958, both days inclusive.

MYSORE TOBACCO CO., LTD. Dividend of 12½ per cent. or Re. 1.25 per share, for the year ended 31st March 1958. Transfer books will remain closed from 5th to 17th December 1958, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. Final dividend of 13 per cent. or Re. 0.65 per share (includes a special dividend of 3 per cent. or Re. 0.15 per share), for the year ended 31st May 1958. Transfer books will remain closed from 2nd to 16th December 1958, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Ad-interim dividend of 4½ per cent. on ordinary shares, for the year 1958-59. Transfer books remain closed from 22nd November to 6th December 1958, both days inclusive.

MIDLAND RUBBER'S PROFIT DECLINES

AMALGAMATED ELECTRIC STEPS UP DIVIDEND

Midland Rubber and Produce Co., Ltd., (and Reduced)

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submit the audited accounts of the Company for the year ended 31st March 1958.

Crops: Against an estimate of 13,00,000 (11,80,000) pounds of tea, the crop obtained for the year 1957-58 was 16,71,400 (14,43,900) pounds of tea. The rubber crop amounted to 10,44,367 (10,92.140) pounds against an estimate of 10,35,000 (10,70,000) pounds. The above rubber crop was obtained from the Company's three estates, viz., Mukampala; Perinaad and Sittar.

Tea: It is satisfactory to report that the tea crop on Arnakal continues to be good. The average yield for the year works out at 1,482 lbs. per acre which compares very favourably with the district average. The cost of production ex-estate was Rs. 1.28 as against Re. 1.25 for the previous year. The average sale price realised during the year amounted to Re. 1.70 per lb. as against Rs. 2.08 per lb. in the previous year.

Rubber: The rubber crop secured amounted to 10,44,367 lbs. as against 10,35,000 lbs. estimated and 10,92.140 lbs. harvested last year. The decrease compared with last year's figure was due to the replanting programme on Perinaad and Sittar, resulting in a reduction in the tapping area. The cost of production for the year was 86 nP per lb. against an estimate of 84 nP per lb. (and 76 nP per lb. for the previous year). The average sale price realised during the year was Re. 1.53 per lb. as against Re. 1.52 per lb. in the previous year.

The net profit for the year after allowing for the usual depreciation and outgoings amounted to Rs. 9,18.532 (Rs. 15,84,836). Out of this, a sum of Rs. 5.28,000 (Rs. 9,00.000) has been provided for income-tax, and Rs. 39.282 (*nil*) to reserve for development rebate. With the amount brought forward from the previous year of Rs. 1,48,976 (Rs. 6.97,340), and Rs. 10,505 (*nil*) transferred from bad debts reserve being excess provision, makes a total of Rs. 5,10,731 (Rs. 7,92,176 after providing Rs. 50,000 to staff gratuity and pension fund and paying a dividend of 20 per cent. for the year 1955-56 absorbing Rs. 5,40,000) available for distribution. Out of this sum, the preference dividend for the year amounted to Rs. 1,03,200 (Rs. 1.03.200 and the balance is recommended for distribution as under:—

To payment of a dividend 10 (20) per cent. dividend for the year 1957-58 on equity shares of the value of Rs. 40,50,000 (Rs. 27,00,000), including the bonus issue Rs. 4,05,000 (Rs. 5,40,000) and to carry forward to next year Rs. 2,531 (Rs. 1,48,976).

Estimates for 1958-59 have been framed for a tea crop of 14,00,000 pounds at Re. 1.22 per pound and a rubber crop of 9,65,000 pounds at 90 nP per pound.

In accordance with the resolutions of the extraordinary general meeting on 30th May 1958, bonus shares have been issued and allotted to equity shareholders on the basis of their holdings as on 15th July 1958.

There has been a steep fall in the price of tea in auctions which accounts for the poor lower average price realised. The heavy expenditure and the continually increasing cost of wages and amenities to labour and staff on the estates have been responsible for the rise in cost of production in spite of the substantial additional crop.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,20,000	Gross block ...	86,11,082
Reserves ...	29,09,139	*Less*—Depreciation ...	10,30,522

Amalgamated Electricity Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. N. C. Javeri & Co., Bombay) submit the audited accounts of the Company for the year ended 31st March 1958.

The gross profit for the year amounts to Rs. 17.59.278 (Rs. 16,47,370). After appropriating Rs. 6.55,767 (Rs. 6,11,844) to depreciation, Rs. 18,346 (Rs. 10.920) to arrears of depreciation, Rs. 59.513 (Rs. 60.677) to contingencies reserve, Rs. 1,25,500 (Rs. 56.000) to staff retiring gratuity fund, Rs. 40,398 (*nil*) to development reserve, Rs. 61,716 (*nil*) to wealth tax and after writing off Rs. 19,963 (Rs. 19,963), Rs. 14.750 (Rs. 14,750), Rs. 9,523 (Rs. 6,266) from purchase consideration, electric license expenses, preliminary and amalgamation expenses respectively and loss of Rs. 12.223 (*nil*) on sale of investments and with the addition of Rs. 15.48.223 (Rs. 15,13,265) brought over from the last account and of Rs. 83,479 (Rs. 9.087) from tariffs and dividends control reserve there is a balance of Rs. 23,76.971 (Rs. 23.62.618). From this has to be deducted *ad interim* dividend, free of income-tax, of Rs. 2.75 nP per share on 5½ per cent. preference shares, Rs. 2.50 nP per share on 5 per cent. preference shares and 43 (37.5) nP per share on ordinary shares which together absorbed Rs. 4,28,948 (Rs. 3,89,072). The balance now available amounts to Rs. 19,48,023 (Rs. 19,73,546) which the directors recommend to appropriate as follows:—

To payment of a final dividend, free of income-tax for the second half year ended 31st March 1958:—At the rate of Rs. 2.75 nP per share on 24,150 preference shares (making 5½ per cent. for the year) Rs. 66.412 (Rs. 66,413), at the rate of Rs. 2.50 nP per share on 20,314 preference shares (making 5 per cent. for the year) Rs. 50.785 (Rs. 50,785) and at the rate of 42 (42.5) nP per share on 7,25,000 ordinary shares [making 8.5 (8) per cent. for the year] Rs. 3.04,500 (Rs. 3,08,125) leaving a balance to be carried forward of Rs. 15,26,326 (Rs. 15,48,223).

The following table indicates the development of the sale of energy since April 1955:

Year	Units generated	Total load in K W	Consumers
1955-56	3,32,15,557	24,123	51,006
1956-57	4,04,80,991	26,862	55,772
1957-58	4,35,88,561	28,576	62,455

The high rise in the cost of generation due to rise in the diesel oil rate and in the cost of purchase of energy has raised the expenditure by 5½ lakhs and there is a further rise of about 2½ lakhs in expenditure under various other heads, viz., depreciation, interest, provident fund, gratuity, etc., but with the rise of about 8 lakhs in the income, the Company has been able to meet the said rise in expenditure. The Company has made some reduction in prompt payment rebate at Jalgoan, Malegaon and Bhusawal branches.

As the clear profit fell short of the reasonable return allowed by the Electricity (Supply) Act, 1948, in respect of some branches, a total sum of Rs. 85,642 has been drawn from tariffs and dividends control reserve as permitted by the Act. In respect of some branches, provision of Rs. 40,398 has been made for development reserve. The writ petition filed in the Rajasthan High Court under Article 226 of the Constitution of India challenging the validity of the notice from the President of India to acquire Ajmer Undertaking with effect from the midnight of 18/19 January 1958, the date of exercising the option to purchase, was decided against the Company. The Company has since filed an appeal in the Supreme Court of India. which is pending hearing.

Karanpura Collieries, Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 28th February 1958.

Raisings and Despatches.—Raisings were 1,67,051 tons and despatches 1,64,095 tons compared with 1,45,448 tons and 1,45,991 tons respectively in the previous year. Permission to work the Lower Semana Seam was granted in October 1957, and this Seam was given a Selected 'B' grading.

Transport.—Wagon supplies showed a slight improvement on account of the 10 wagon increase in the capacity of the Patratu Pilot but they were nevertheless still irregular.

Labour.—Although there has been occasional agitation at this colliery generally inspired by the Communist element, the labour situation has on the whole been reasonably satisfactory.

The profit and loss account after providing for all charges and making a provision of Rs. 1,74,016 (Rs. 64,016) for taxation, Rs. 30.000 (*nil*) for wealth tax and Rs. 1,51,761 (Rs. 1.30.000) for depreciation shows a profit of Rs. 2,12.742 (Rs. 77.072) to which is added the balance brought forward from the previous year of Rs. 1,962 (Rs. 6,965) making a total of Rs. 2,14,704 (Rs. 84,037). From this amount is deducted the amount transferred to tax contingency reserve Rs. 32,600 (Rs. 18.200), to development rebate reserve Rs. 29,000 (Rs. 26,200) and to statutory development rebate reserve Rs. 4.200 (*nil*) leaving a balance available of Rs. 1,48,904 (Rs. 39,637). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the cumulative (taxable) preference shares of 5½ per cent. per annum after deduction of income-tax payable by the Company Rs. 37.675 (Rs. 37,675) by payment of a dividend on the ordinary shares at the rate of 5 (*nil*) per cent. per annum without any deduction for income-tax payable by the Company Rs. 1,00,000 (*nil*) and by carrying forward Rs. 11,22 (Rs. 1,962).

Asher Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Setna & Co., Tirupur) present the audited accounts of the Company for the year ended 30th June 1958.

The year's trading has resulted in a net loss of Rs. 1,95,136 (net profit of Rs. 6,57,404 after providing Rs. 6,860 for donations) after providing Rs. 2,37,277 (Rs. 1,04,342) for depreciation, normal and extra-normal, at income-tax rates and deducting Rs. 15,000 (Rs. 74,809) as the managing agency remuneration, being the minimum payable to them. Out of a sum of Rs. 3,64.224, consisting of Rs. 3,48,211 (*nil*) withdrawn and transferred from the general reserve and a sum of Rs. 16,013 (Rs. 3,566), the surplus brought forward from the previous year, the following appropriations are recommended:—

Loss for the year written off Rs. 1,95,136 (*nil*), donations paid in the year Rs. 6,164, interim bonus paid to employees for the year ended 30th June 1957 Rs. 91,008 (*nil*) and the proposed dividend at 6 (12½) per cent. income-tax free absorbing Rs. 71,916. (From a net profit of Rs. 6,60,970 the directors paid dividend at 12½ per cent. absorbing Rs. 1,49.825; transferred Rs. 2,55,132 for extra depreciation and development rebate; provided Rs. 2,25,000 for income-tax; Rs. 15,000 for wealth tax and carried forward Rs. 16,013).

Due to the extremely adverse trading conditions in which textile mills and especially, mills spinning coarse and medium counts have been working, the year's trading has resulted in a loss. While the price of raw materials remained more or less steady at a high level, the price of yarn has been steady at low levels throughout the year. Besides, the production cost also went up as the Company had to meet heavier wages bill, and to pay surcharge on electric energy and compensation for lay-off to the workers due to power cut. The power cut which commenced with 15 per cent. was raised to 75 per cent. This is the first time when, in the history of electric power supply, the cut was imposed as early as January and not removed until after six months. This resulted in much dislocation of production and heavy labour charges. An additional sales-tax on cotton purchases from ½ to 1 per cent. also added to the cost. It is on account of these circumstances that the Company sustained loss in the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,98,600	Gross block	45,17,191

Kasthuri Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. C. N. Venkatapathy Naidu & Co., Singanalur, Coimbatore) submitted the audited accounts of the Company for the year ended 31st March 1958.

The year's trading has resulted in a net loss of Rs. 2,54,551 (net profit of Rs. 3,08.541) after providing a sum of Rs. 30.000 (Rs. 50,370) towards remuneration payable to the managing agents in the case of absence or inadequacy of profits as sanctioned by the Central Government and a sum of Rs. 2,31,302 (Rs. 2,38,487) towards depreciation. Setting off the previous year's surplus carried forward amounting to Rs. 3,187 (Rs. 184) the balance of loss works out to Rs. 2,51,364 (profit of Rs. 3,08,725 from which the directors provided Rs. 1,51,938 for taxation; paid a dividend of 12 per cent. or at Rs. 3 per share, on the equity shares absorbing Rs. 93,600. Transferred Rs. 60,000 to contingencies reserve and carried forward Rs. 3,187) and this is proposed to be carried forward.

During the year under report the prices of raw materials ruled high and more or less steady and the prices of yarn showed a continuously declining tendency with the consequent accumulation of stocks in the absence of a regular and steady demand. The Company had to meet heavier wage and electricity bills than last year on account of an increase in the basic wages of operatives and the levy of a surcharge on electric energy consumed.

The production also suffered considerable dislocation on account of the imposition of a power cut for a period of nearly two months in the year. The textile industry as a whole suffered a severe setback in its profit earning capacity when compared with the previous year on account of circumstances beyond its control and this mill was no exception to the general trend of events. The directors regret that the heavy loss sustained by the Company could not be avoided. The directors report that the prospects for the current year are also not encouraging.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,80,000	Gross block	32,05,650

Rs.	22,61,451	Rs.	22,61,451

Dishergarh Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1958.

The accounts show a profit, after charging all expenses, of Rs. 8,19,095 (Rs. 5,92,878). Of this amount provision for taxation requires Rs. 2,88,581 (Rs. 1,80,000) *less* debited to contingencies reserve in accordance with the provisions of the Electricity (Supply) Act, 1948 Rs. 18,581 (*nil*) leaving a balance of Rs. 5,49,095 (Rs. 4,12,878). The balance brought forward from last year was Rs. 8,28,636 (Rs. 9,14,296) making a total available for appropriation of Rs. 13,77,731 (Rs. 13,94,933 including Rs. 67,759 transferred from contingencies reserve). The directors have transferred to contingencies reserve Rs. 24,501 (Rs. 23,239) and to general reserve Rs. 1,00,000 (Rs. 1,28,258). From the balance of Rs. 12,53,230 (Rs. 12,43,436) the directors recommend that the following dividends be paid:—Rs. 5.00 per share on "A" preference shares absorbing Rs. 80,000 (Rs. 80,000), Rs. 4.50 per share on "B" preference shares absorbing Rs. 54,000 (Rs. 54,000) and Rs. 7.00 (Rs. 6.50) per share on ordinary shares absorbing Rs. 3,02,400 (Rs. 2,80,800) leaving a balance to be carried forward of Rs. 8,16,830 (Rs. 8,28,636).

Units of energy sold during the year amounted to 91.20 million compared with 83.76 million during the previous year. This represents an increase of 8.9 per cent.

During the year the Company was notified by the Damodar Valley Corporation that the offtake was to be restricted in view of a shortage of generating capacity. All consumers were accordingly advised to limit their load to the maximum demand drawn during the previous 12 months. Subsequently the D.V.C. agreed to meet additional offtake to the extent of 4 M.V.A. over the Company's contract demand of 9 M.V.A., from June 1958, onwards. To utilise the maximum availability of power within the Contract K.V.A. demand by improving the system power factor, capacitors have been ordered from abroad which, it is hoped, will be installed during the current year., In view of the above, restrictions of power to the consumers have now been withdrawn.

In conformity with the Electricity (Supply) Act, 1948, as amended, the Undertaking's selling rates were increased with effect from 26th January 1958.

Bharat Nidhi Ltd.

The directors of the above Company (Chairman: Mr. Shital Prasad Jain, Calcutta) presented the audited accounts of the Company for the year ended 31st December 1957..

There has been no improvement in respect of the Company's affairs in West Pakistan and due to non-receipt of their proper statements, it has again not been possible to incorporate the accounts of Lahore Office. Besides a sum of Rs. 4,88,888 (Rs. 2,32,807) credited to investment reserve, the year's working has resulted in a surplus of Rs. 18,99.359 (Rs. 16,97,949 including refund of income-tax of Rs. 7,086). Out of this amount is deducted payments against claims and bad debts written off (net) Rs. 42,312 (Rs. 11,530) leaving a net balance of Rs. 18,57,047 (Rs. 18,79,491 including Rs. 1,95,379 transferred from general reserve). The directors propose appropriation of this amount as follows:—

To provision for taxation Rs. 8,90,000 (Rs. 7,70,000), to dividends for the year 1957 on 53,572 preference shares at 6 per cent. (less income-tax), i.e., 4.11 (4.11) nP net per share absorbing Rs. 2,20,181 (Rs. 2,20,181), on ordinary shares at 5 per cent. free of income-tax on 8,06,844 fully paid ordinary shares at 50 (50) nP per share absorbing Rs. 4,03,422 (Rs. 4,03,422), on 26,83,262 partly-paid ordinary shares at 12.5 (12.5) nP per share absorbing Rs. 3,35,408 (Rs. 3,35,408) and on 338 ordinary shares to be issued in exchange of fractional share coupons Rs. 169 (Rs. 169) leaving a balance to be carried forward of Rs. 7,867 (*nil*).

The directors further propose that holders of ordinary shares be given the option to receive payment of aforesaid dividend in the form of old ordinary shares (cum-dividend) of Rs. 10 each in New Central Jute Mills Co., Ltd., at par value, i.e., one ordinary share in New Central Jute Mills Co., Ltd. as dividend for every 20 fully paid or 80 partly-paid ordinary shares in the Company provided, however, that if the dividend on ordinary shares, whether fully paid or partly-paid, or any portion thereof amounts to less than the equivalent of one ordinary share in New Central Jute Mills Co., Ltd. on the basis aforesaid, cash shall be paid for such dividend or portion thereof. Deficit arising out of distribution of ordinary shares in New Central Jute Mills Co., Ltd. valued at par is proposed to be adjusted out of investment reserve.

Downward trend in the share price has been reversed during the current year. Price index of variable dividend shares has improved to 142.6 at the end of August, 1958 as against 120.2 at the close of December, 1957 (base 1952-53=100). Appreciation in the Company's investments as at the end of August, 1958, amounts to over Rs. 70 lakhs. Dividends on the Company's investments also generally continue to be satisfactory and the directors expect that the working results for the current year should be still better.

During the current year the Company's shares have been admitted for dealings and quotation on the official quotation list of the Calcutta Stock Exchange Association Ltd.

INSURANCE

(*Concluded from page 887, col. 1*)

adverse effects of this past faulty management. This intervention is not in favour of the former managers themselves of these weaker units, but in favour of their policyholders, who cannot, in any way, be held responsible for the past mismanagement. It must have been due to some such consideration that Government agreed to bear the initial deficiency in the case of deficit companies, and it would amount to just stretching this policy to its logical conclusion if a suitable minimum rate of bonus is guaranteed to all participating policyholders. Since groups showing differential bonuses higher than the minimum guaranteed bonus are not in any way to be affected by this guarantee, the cost of which is to be paid entirely out of what may be called Government's share of the surplus, there need be no objection on the part of the stronger units to this guarantee. It is needless to add that the with-profit policyholders in the weaker units have no claim to such a guarantee, and it is for Government alone to consider whether, on the whole, it would not be expedient to give it.

Plea for Publicity

The Life Insurance Act 1956, requires 'regulations' to be published in the *Gazette* for classifying policies for differential bonuses, and item 7 of the second part of the Fourth Schedule to the Insurance Act, 1938, requires a statement to be given of the 'general principles' adopted in the distribution of profits among policyholders. It is not certain whether these 'regulations' and 'general principles' will give enough information to a with-profit policyholder, in order to get himself satisfied about the reasonableness of the differential bonus granted to him; and, even if they were to give all the necessary information, it would be available at a very late stage. It is important to see that there is general satisfaction about the scale of differential bonuses adopted by the Corporation, which is going to affect its with-profit policyholders for a long time to come. The Corporation authorities would readily admit that equity should not merely be administered but should be shown as being administered; and this latter they would be able to do if any with-profit policyholder, if he so desires, can have access to a statement containing (i) the broad outline of the method adopted for the exhaustive investigation the Corporation has carried out into the profit-earning capacity of the different units, (ii) the results arrived at after this investigation and (iii) the conclusions reached from them. This exhaustive investigation is in the nature of so many supplementary valuations and, just as a policyholder could get a report of a valuation under. private enterprise, so also he should now get a report of these supplementary valuations. If such a statement or report could be published by, or under the directions of, the Central Government before it approves of the conclusions reached by the Corporation, it would be possible for interested members of the public to place before the Government, in time, certain suggestions regarding these conclusions to be considered by them before according their approval to the findings of the Corporation. Differential bonuses are one of the items, and, indeed, a very important item, of the scheme of amalgamation of the various different insurers into the L.I.C. consequent on nationalisation. Section 36(1) of the Insurance Act, 1938, ensured widest publicity for the details of any such scheme of amalgamation and also ample opportunity for any of the interested parties to be heard before sanction was accorded to the scheme. If the Corporation had come into existence by voluntary amalgamation on the part of all the insurers any scheme like that of differential bonuses would have come within the purview of this Section 36(1). Is it, therefore, too much to expect that what was guaranteed as a matter of right to every policyholder in respect of a scheme of amalgamation entered into by private parties will not now be denied to him when such a scheme is introduced as a Government decision?

PENSIONS IN W. GERMANY

Pension payments within W. German social insurance schemes (except miners' pensions) for non-self-employed increased by another 1,000 million DM. in the January-August 1958 period. Against 6,930 million DM. in the same period last year, they now have reached the remarkable total of 7,790 million DM. Simultaneously, contributions increased by 905 million DM.—or 135 million less than expenditure—and attained the 7,098 million DM. mark. The remaining gap between income and expenditure has mostly been filled by Federal Budget Funds.

Notices

THE AHMEDABAD ADVANCE MILLS LIMITED

NOTICE

THE FIFTY-SIXTH ANNUAL GENERAL MEETING of THE AHMEDABAD ADVANCE MILLS, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday, the 26th December, 1958, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1958, and the audited Balance Sheet as at 30th June 1958.
2. To declare Dividends.
3. To appoint a Director in place of Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for reappointment.
4. To appoint a Director in place of Mr. Jaykrishna Harivallabhdas who retires by rotation and is eligible for reappointment.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and The Associated Building Company Private Ltd. (associates of the Managing Agents, Tata Industries Private Ltd.) for letting to the Company, on a monthly tenancy, office space and storage space in Bombay House, 24, Bruce Street, Fort, Bombay, owned by the Associated Building Company Private Ltd. and for facilities of air-conditioning, Board and Conference rooms and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of Rs. 420 per month, plus a varying charge for air-conditioning facilities not exceeding Rs. 8,000 per annum, with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."

To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that subject to approval of the Central Government under the provisions of the Companies Act, 1956, the Company hereby reappoints Tata Industries Private Limited as the Managing Agents of the Company as from the 16th day of August, 1960, for the period, at the remuneration and upon the terms, provisions and conditions set out in the draft Agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Limited of the second part and Tata Sons Private Limited (as guarantors for the observance and performance of the terms and conditions of the said Agreement by Tata Industries Private Limited as Managing Agents) of the third part and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the said Act, to vary or alter such of the terms provisions and conditions of the said draft Agreement before execution (other than the provision regarding the remuneration of the Managing Agents) as may be or become necessary in order to give effect to any conditions or requirements of the Central Government."

Notes:—(a) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 6 and 7 set out above, are being posted to all shareholders.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(c) The Transfer Books of the Company will remain closed from Monday, the 24th November, 1958 to Tuesday, the 23rd December, 1958, both days inclusive.

(d) If dividends on shares, as recommended by the Directors, are passed at the meeting, payment will be made on and after Saturday, the 27th December, 1958, to those members whose names are on the Register of the Company on the 23rd December, 1958.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *24th November*, 1958.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

CALCUTTA, *18th November* 1958.

"OILSEEDS ANNUAL" 1956

The Bombay Oilseeds and Oils Exchange Ltd. has just brought out its fifth issue of *The Oilseeds Annual* pertaining to the year 1956. The publication provides a comprehensive account of the major developments in the field of oilseeds and oils trade in India in the year under review. Hedge-trading in Bombay had been permitted only in castorseeds in the beginning of the year. Subsequently, the year saw the commencement, after the lapse of about 13 years, of hedge-trading in groundnuts, linseed and cottonseed. This has naturally provided a new impetus to the expansion of trade in oilseeds. The *Annual* also contains statistics relating to area, production and exports and monthly price fluctuations. Graphs, representing fluctuations in the prices of four major oilseeds, namely, groundnuts, cottonseed, linseed and castorseed, constitute an additional feature of this issue. Because of its informative coverage, the *Annual Number* will be found useful. It is, however, to be hoped that the Exchange will not only continue this publication year after year, but also bring it out expeditiously, thereby reducing the time-lag between the close of a year and the publication of the *Annual* relating to that year.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *26th November*

Extremely comfortable conditions came to prevail in the short-term money market during the week under review. With no sign of any revival of seasonal demand for credit, banks had a surfeit of funds, which were unlendable. This is indicated by the fact that, deposits of banks with the Reserve Bank of India during the week ended 21st November 1958, swelled by no less than Rs. 22 crores. With a net rise of Rs. 6 crores in net deposits in the preceding week and a fall of over Rs. 3 crores in total advances, banks were able to reduce their inter-bank borrowings by nearly Rs. 10 crores.

The aforesaid conditions had their effect on inter-bank call money rates. The rate among the Exchange banks and big Indian banks, which had dropped from 2¾ to 1½ per cent. last week, declined further this week to 1 per cent., lenders over. The corresponding rate among the smaller Indian banks also moved down from 2¾ per cent. to 2-2½ per cent. Surprisingly enough, there was no fall in the rate on house money at seven days' notice, which was continued to be quoted at 3½ to 3¾ per cent. Similarly, short-term deposits also continued to fetch the self-same rate of 3½ to 4 per cent.

Consequent on the further easing of the money conditions, the response to this week's Treasury Bill tenders was more favourable than in the previous week. The total amount offered was Rs. 5.50 crores against an invitation for Rs. 3 crores, while in the previous week the offerings aggregated Rs. 5.02 crores, the amount invited being Rs. 4 crores. Tenders at Rs. 99.390 and above were accepted in full and those at Rs. 99.385 allotted approximately 35 per cent. The average rate of accepted tenders was 2.442 per cent. per annum, which represents a slight decline from last week's rate of 2.458 per cent. During the period 19th to 22nd November, the sales of intermediate Treasury Bills aggregated Rs. 63.75 lakhs. Tenders for next week's sales are unchanged at Rs. 3 crores. Intermediate sales are to be held between 26th and 29th November at the fixed rate of Rs. 99.406 per cent.

The Reserve Bank of India's statement for the week ended 21st November 1958 discloses a contraction of Rs. 23.24 crores in notes in circulation and a rise of Rs. 24.51 crores in notes held in the Banking Department. The consequent increase in total notes issued is covered by a corresponding rise in rupee coin. In the Banking Department, deposits of the Central Government have declined by Rs. 11.31 crores, while those of other Governments and banks have gone up by Rs. 6.31 crores and Rs. 22.05 crores, respectively. In contrast to the rise of Rs. 4.11 crores noted in the preceding week, balances held abroad have shrunk by Rs. 1.48 crores in the week under review.

The Scheduled banks' statement for the week ended 14th November 1958 shows a rise of Rs. 9.55 crores in demand deposits and a fall of Rs. 3.49 crores in time deposits. Inter-bank borrowings have declined by Rs. 9.72 crores. Advances and bills purchased and discounted are also lower by Rs. 3.46 crores. Cash balances have shrunk by Rs. 1.34 crore and money at call and short notice by Rs. 8.70 crores.

The Gilt-edged market ruled steady during the week under review. The easy money conditions, the Reserve Bank's action in stepping up its selling rates of some securities and the Life Insurance Corporation's continued support to select issues in State loans buoyed up the sentiment. There was also a good turnover of business. 3 per cent. 1986 Conversion Loan looked up by 5 nP to Rs. 73.20. Proximity of half-yearly interest payment attracted enquiries for 3 per cent. 1963-65, which as a result gained 10 nP to Rs. 96.75. 3 per cent. 1964 was marked up by 5 nP to Rs. 96.70. 3 per cent. 1966-68 was unchanged at Rs. 94, while 3 per cent. 1970-75 advanced by 15 nP to Rs. 90.35. 3½ per cent. 1962 moved up by 5 nP to Rs. 99.20 and 3½ per cent. 1961 by a similar extent to Rs. 100.15, the rise in the latter being due to proximity of interest payment. The Reserve Bank put up its selling price of 3½ per cent. 1967 by 10 nP to Rs. 100.60, while it continued to offer 3½ per cent. 1968 at Rs. 100.40. 4 per cent. 1960-70 gained 5 nP to Rs. 100.70. The Reserve Bank of India raised its selling price of 4 per cent. 1972 by 20 nP to Rs. 100.90 and of 4 per cent. 1973 by 5 nP to Rs. 100.65. Among State loans, 4 per cent. 1967 Bombay rose by 10 nP to Rs. 100 and 4½ per cent. 1971 by a like amount to Rs. 100.80. West Bengal 4 per cent. 1964 moved up by 5 nP to Rs. 100 and 4½ per cent. 1970 by 5 nP to Rs. 100.30. Madras 4 per cent. 1967 and 1968 put on 10 nP to Rs. 99.55 and Rs. 99.50, respectively. 4½ per cent. 1970 gained 5 nP to Rs. 100.30. Andhra 4 per cent. 1967 and 1968 rose by 5 nP each to Rs. 99.50 and Rs. 99.45, respectively. 4½ per cent. 1970 was marked by 10 nP to Rs. 100.25. U.P. 4 per cent. 1967 was higher by 10 nP at Rs. 99.50, 1968 by 5 nP at Rs. 99.40 and 4½ per cent. 1970 by 5 nP at Rs. 100.25.

Indicative of the extremely easy money conditions was the heavy rush for the 4½ per cent. 10-year bonds issued by the Industrial Finance Corporation of India for Rs. 4 crores at 99 per cent. This issue was heavily oversubscribed within an hour of the list opening on the 24th inst.

In contrast to the improvement noted last week, sterling suffered a setback this week. Thus, in New York, spot sterling gave way from $2.80.31.32-2.80.23/32 to $2.80¾-2.80.7/16 and three months' forward from $2.80¼-2.80.3/16 to $2.80-2.80.1/16. Transferable sterling declined from 279.55-279.65 cents to 279.25-279.35 cents before recovering to 279.40-279.50 cents. In consonance with this trend, the rupee also weakened, banks' selling rate of ready U.S. dollars having risen from Rs. 477 to Rs. 477.50 per $100. Their buying rate also rose by a similar extent to Rs. 474 per $100.

MARGINS IN BULLION

(From Our Own Correspondent)

BOMBAY, *26th November*

After presenting a distinctly firm trend on Thursday and early on Friday, the bullion market developed a sagging tendency thereafter which persisted till today when there was some improvement. The initial firmness was sustained by renewed speculative buying and nervous short-covering, while offerings were limited. There was also hectic buying by option dealers. Consequently, both gold and silver registered a handsome improvement. The yellow metal touched a high of Rs. 114-8 on the opening day. As the closing rate on that day was Rs. 5 above the starting rate of Rs. 108-5, margin at the rate of Rs. 7 per tola became operative in *Kartak* delivery (26th November settlement) in accordance with By-law 33 C (1) A. Despite the margin, gold continued to rise early on Friday due to persistent short-covering and buying by option dealers. In sympathy, silver also made a strident advance.

Higher levels, however, attracted realising pressure and prices tended to move down. The decline gathered further momentum in the subsequent sessions, following quieter advices from commodity markets and sales by option dealers. On Monday, there were reports of large arrivals of silver—estimated at 200 bars—from Kanpur and rumours of a possible payment of import duty on 250,000 Tibetan coins. Prices, therefore, suffered a setback. As the *badli* in favour of bears widened to Re. 1-2, as against As. 15 on Saturday, the bears in *Kartak* delivery (27th November settlement) were required to deposit a margin at the rate of Rs. 1,000 per bar as per the provisions of By-law 33 (1) (ii).

Today, however, the bullion market put on a steady appearance on account of replacement buying, and the closing rates of the two metals were higher than those at the end of last week.

Forward silver (27th November settlement) opened firm at Rs. 189-12, as against Rs. 189. After spurting to Rs. 190-13 on Friday, it receded to Rs. 189-2 yesterday, but recovered markedly to Rs. 190-15 today before finishing at Rs. 189-11. The net gain over the week was As. 11. The next settlement (29th December) rose from Rs. 189-15 last week-end to Rs. 191-12 on Friday. It declined to Rs. 190-4 yesterday, but recovered to Rs. 190-14 today. The net gain over the week was As. 15. The *badli*, which was As. 15 against bulls last week, widened in the course of the week to Re. 1-3 today.

Ready silver improved from Rs. 188-15 to Rs. 190-10 on the 21st inst. and, after declining to Rs. 189-5 yesterday, finished higher at Rs. 189-11 today. The daily average arrivals were of the order of 17 bars, while the offtake was nine bars per day on an average. The floating stocks of silver are reported to be 1,400 bars.

Gold for forward delivery (26th November settlement) met with excellent buying support induced by reports of large seizure of contraband gold and practically no arrival of smuggled metal. It forged ahead from Rs. 112-15 on Wednesday the 19th inst. to Rs. 114-14 on Friday. After easing to Rs. 113-2 yesterday, it tended to move up again and ran out today at Rs. 113-13. The second settlement (27th December) was quoted today at Rs. 114, as against Rs. 112-10 last week-end. The *badli*, which was As. 5 against bears last week, turned in favour of them in the course of the week and stood at As. 3 today.

Ready gold strengthened from Rs. 113-3 to Rs. 114-13 and, after declining to Rs. 113-4 on Monday, recovered subsequently to Rs. 114-5 today. The premium on first settlement widened from As. 4 last week to As. 9 today. The daily average arrivals and offtake were 4,400 tolas and 2,300 tolas, respectively. The floating stocks of gold are estimated at 30,000 tolas.

Spot silver in London, which stood at 77¼d. throughout the week, eased to 77⅛d. yesterday, while forward was unchanged at 76⅞d. Gold prices tended to move up from 250s. 1½d. to 250s. 4½d. The price of silver in New York was unchanged at 90½c.

The following comparative table shows at a glance the trend of the market during the week under review:

	26-11-58	Highest	Lowest	19-11-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COW HIDES IN GOOD DEMAND

(From Our Own Correspondent)

MADRAS, *22nd November*

There has been no change in the Madras kip market. U.K. importers seem to have realised that higher prices will have to be paid in view of the strength of the markets at origin. Trading continues to be patchy in F.A.Q. marks, but a fair volume of sales has been booked in cow hides—premium standards. Demand for cow calf and buff calf has been good, but sellers' quotations are frightening the buyers.

Prices of tanned goat skins are firm for lights, unchanged for mediums and weak for heavier averages. There has been brisk clearance of tanned sheep skins medium classes in the local market, and prices are firm.

FURTHER RISE IN COTTON FUTURES

(From Our Own Correspondent)

BOMBAY, *26th November*

Further rise in prices was recorded by the cotton futures market during the week under review. The market received fresh bull support prompted by reports of untimely rains in cotton-growing areas and optimism regarding the outcome of deliberations of the Cotton Textile Consultative Board. The Board, at its meeting on the 22nd inst., recommended, among other things, (1) the setting up of a three-man committee to examine the practical aspects of the question of each mill exporting a minimum quantity of its cloth production, (2) extension of liberal credit facilities to the textile industry, and (3) adoption of immediate measures for the disposal of the large accumulated cloth stocks. It also recommended that the prices of cotton should be kept under constant review so as to ensure that it did not fall below a certain level. The question of concluding special payments agreements with countries like Japan and France in order to speed up export of raw cotton was also commended as deserving active consideration. Traders noted these recommendations with satisfaction. In view of the active interest now being shown by the Government in solving the textile crisis and stepping up exports, operators were inclined to take an optimistic view of the fortunes of raw cotton. Steady support based on these considerations led to a smart rise in values. But the improvement would have been more marked but for poor export demand and the lack of encouraging news from the piecegoods market.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 626, as against the previous close of Rs. 620.75 and, after having improved to Rs. 629.50 on Friday, eased to Rs. 620 on Monday. The market was closed yesterday on account of the election to the Board of Directors of the East India Cotton Association. Commencing today's session at Rs. 627 the contract gathered Rs. 2.50 before finishing at Rs. 626. The net gain over the week was Rs. 5.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

26-11-58	*High*	*Low*	19-11-58
I.C.C. Moglai Jarilla (March 1959) ...	626	629.50	620	620.75

In the spot section, demand for staple varieties of both new and old crop cotton was well maintained. Smaller arrivals in the wake of better demand led to a hardening of values. Good business was reported in popular styles like Digvijay, Vijay, Laxmi, CO2, Surti, finer quality Jarilla, Khandesh and Berar.

The export front was quiet. Foreign demand did not show any sign of improvement. The rise in price of exportable varieties following the duty reduction seemed to have offset the effect of the cut in duty.

The export licensing procedure for the latest quota of 650,000 bales has been notified. The broad features of this procedure are the following: (i) 15 per cent. of the quota released has been reserved for co-operative societies; (ii) provisions for bank guarantee and other forms of evidence remain unchanged; (iii) shipment period for Bengal *Deshi* and cotton stapling not above ¾" is between 1st April and 31st August 1959, even though sales can be registered now. If, however, the quotas for these two categories issued in October are fully utilised, the question of allowing shipments for the new quotas under these two categories before 1st April will be considered; (iv) in so far as export quota of 50,000 bales of cotton stapling below ¾" is concerned, allotment letters will be issued valid for shipment up to 31st August 1959.

The uncertainty regarding the cotton import policy was ended by the announcement of Mr. Lal Bahadur Shastri, at the meeting of the Cotton Textile Consultative Board on Saturday, that the Government would allow import of 95,000 bales of American cotton under P.L. 480.

The only regret is that, to begin with, only half of this allocation would be immediately available for distribution to mills on "quota" basis and the balance will be available at a later stage to exporting mills. A section of the trade points out that the entire allocation should have been made available for distribution instead of linking half of it with export of textiles. Importers are optimistic that the allocation under the quota basis would be quickly absorbed since no import allocation for East African cotton appears to be in sight in the near future. Large business had already been done in American cotton in the past few months subject to availability of import licences but since these were not available in time, business thus concluded has been, to a large extent, cancelled.

In the foreign section, spinners showed interest in Sudan cotton. Egyptian cotton lacked buyers while selected East African varieties were readily absorbed. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closings:

Bengal *Deshi* 610 (600); Berar Jarilla 670 (665); Khandesh 645 (635); Vijay 845 (830). *Delivery Contracts*: Bengal 575 (572); Mathia 575 (568).

The recovery noted in the Karachi cotton futures market towards the close of last week gathered further momentum during the week under review and the market ruled firm. Foreign enquiries were better and local spinner demand encouraging. Hopes of a likely reduction in export

duty influenced some speculative support. Cotton futures values registered a smart rise. N.T.R.G. January improved from Rs. 63-12 last week-end to Rs. 65-8. The March position firmed up from last week's close of Rs. 64-14 to Rs. 65-12 on Monday but reacted to Rs. 64-14-6 yesterday. The spot section ruled steady. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 54-4; Punjab *Deshi* 53-8; 4F Punjab Roller 63-3; S.G. 66-11; L.S.S. Punjab Roller 64-3; S.G. 68-3; N.T.R.G. (new) 67-3; S.G. (new) 77-11; 289F Punjab Roller (new) 71-11; S.G. (new) 81-3.

Alexandria cotton futures market ruled easy during the week. Values declined in slow dealings. Increased competition from Sudan, following the recent reduction in reserve prices of the Gezira Board, and lack of foreign demand imparted weakness to the market.

Sales and shipments of Egyptian cotton since 1st September this season are larger as compared with last season. Total sales during the first two months of the season, namely, September and October, aggregated 244,690 bales as against 198,114 bales during the same period last season. Shipments from 1st September to 4th November amounted to 101,555 bales, as against 158,056 bales in the same period last season. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.00; January 72.00; March 72.05.

Ashmouni: December 62.80; February 62.60.

Cotton futures in Liverpool scored further gains during the week on trade buying and some American support to near deliveries. Sudan cotton contracts were inactive, as traders were hesitant to enter into commitments in view of the unstable political situation in Sudan. The latest available quotations—in pence per lb.—are as under:

American Cotton One Inch Staple Contract: December-January 23.80; March-April 23.45; May-June 23.00; July-August 22.25. *American Cotton Mixed Growth Contract*: December-January 24.10; March-April 23.70; May-June 23.15; July-August 22.25. *Sudan*: November-December, January-February, May-June 26.75.

Easy conditions prevailed in the New York cotton futures market during the week. Increased hedge selling and long liquidation prompted by favourable harvesting weather met with only moderate trade buying. Values consequently sagged.

Entries into the 1958 cotton loan for the week ended 14th November aggregated 401,027 bales while repossessions were only 9,527 bales. Net loan stocks with the Commodity Credit Corporation aggregated 2,619,745 bales. Exports from the commencement of the season till 4th November were of the order of 790,617 bales which is 444,125 bales less than what it was during the same period last season.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	25-11-58	18-11-58	12-11-58
Spot	36.10	36.20	36.30
December	32.50	35.91	36.02
March	36.16	35.39	36.48
May	36.01	36.12	36.17

SUGAR RALLIES

(From Our Own Correspondent)

BOMBAY, *26th November*

There was a perceptible rally in the sugar market during the week under review. This was mainly due to the meagre monthly release for sale in the free market which amounts to 96,000 tons, as against the normal release of 160,000 to 170,000 tons. Although the Union Food Ministry has assured the public that it would issue further release orders shortly, sugar markets all over South India and Gujarat have been ruling distinctly firm, the ex-mill values having risen by Re. 1-8 per bag. The report that about 30,000 bags of sugar were being immediately despatched to the Bombay port for export before the month was out also imparted strength to the market.

The floating stocks of sugar in Bombay were slim, thanks to poor arrivals in the wake of heavy demand from the Malabar coast. Arrivals of sugar by rail into the city were no more than 7,000 bags, as against 11,400 bags in the previous week.

Small grain sugar spurted by Rs. 2 to Rs. 108 per bag. Medium grain advanced by a like amount to Rs. 109-Rs. 111. Large grain gained a rupee to Rs. 112-Rs. 118.

COTTON YARN STEADY

(From Our Own Correspondent)

BOMBAY, *26th November*

Easy conditions prevailed in the yarn market during the week under review. In particular, art silk yarns were weak, thanks to persistent selling of export promotion licences by manufacturers as well as dealers at a reduced premium of 40 per cent., as against 85 per cent. until recently. These sales led to fears of heavy imports of foreign yarns. Already, the arrivals of such yarns had gone up considerably. The total imports of art silk yarn into Bombay port during the month of October 1958 aggregated to as much as 4.29 million lbs., as against only 1.69 million lbs. in the previous month. In sympathy with rayon yarns and following poor enquiries from consuming centres, despite low and attractive prices, staple fibre yarns tended to move down. Cotton yarns, however, were fully steady, on firm advices from the cotton market.

Among art silk yarns, 120 Italy fell by 30 nP to Rs. 5.25. 150 Italy declined by 19 nP to Rs. 5.31. 120 Japan receded by 7 nP to Rs 4.68. 150 Japan, however, gained 6 nP to Rs. 5.31. Among indigenous yarns, National Rayons 150 bright cones first grade shed 3 nP to Rs. 4.47. 120 bright cones first grade lost a naya paisa to Rs. 4.49.

Staple fibre yarns (40×2) December delivery eased by Rs. 3 to Rs. 616. February delivery dropped Rs. 4 to Rs. 622. In the spot section, 40×2 Citys were neglected at Rs. 3.19, as also Kohinoors at Rs. 3.25, and Centurys at Rs. 3.19. Among foreign yarns, Paramounts declined by 16 nP to Rs. 9.50 and Fujis by 25 nP to Rs. 9.44.

In the cotton yarn section, finer counts were well supported. Sixty counts Finlays gained a rupee to Rs. 63.50. Among eighty counts, Moderns rallied Re. 1.25 to Rs. 72.50. Finlays put on a rupee to Rs. 80. Ten counts Moderns were fully maintained at Rs. 13.25 and Podars at Rs. 12.19. Twenty counts Moderns were done at Rs. 16.25. Among thirty counts Hinds were quoted a naya paisa lower at Rs. 18.75. Forty counts Moderns were steady at Rs. 25.25. But Minaxis lost 25 nP to Rs. 24.19.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago:

	26-11-1958	19-11-1958
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 Japan (per lb.)	4.68	4.75
150 Japan (per lb.)	5.31	5.25
120 Italy (per lb.)	5.25	5.55
150 Italy (per lb.)	5.31	5.50
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 December	616.00	619.00
40 × 2 February	622.00	626.00
40 × 2 Kohinoor (per lb.)	3.25	3.25
40 × 2 Century (per lb.)	3.19	3.19
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	12.19	12.19
20s Modern	16.25	—
30s Hind	18.75	18.76
40s Minaxi	24.19	24.44
60s Finlay	63.50	63.50
80s Modern	72.50	71.25

SEEDS EASY

(From Our Own Correspondent)

BOMBAY, *26th November*

The oilseeds market, after remaining steady in the early part of the week, turned easier towards the close of the week under review. Groundnuts, castorseed and linseed lost considerable ground over the week, though cottonseed was relatively steady. On 22nd November, the Government of India announced the release of a further quota of 25,000 tons of H.P.S. groundnuts up to 31st March 1959, for exports to all destinations excluding the Portuguese possessions in India. A Press note issued by the Joint Chief Controller of Exports in Bombay stated that the quota would be allowed to established shippers or their authorised agents to the extent of 25 per cent. of their basic exports. Exports against this quota would be allowed in the form of kernels only. This announcement failed to enthuse the market, thanks to heavy arrivals; Gujerat interests continued to remain sellers.

The groundnut February 1959 contract opened on a cheerful note. Lower arrivals, reports of smaller crop, encouraging reports of uptrend in certain overseas markets and persistence of rumours regarding the release of a quota for H.P.S. groundnuts served to improve sentiment. There was good buying support. The February contract which stood at Rs. 164.37 last Wednesday, moved up to Rs. 165.50 on Friday. The margin system came into operation when prices rose above Rs. 165, at the rate of Rs. 15 per candy on open bull position. In later sessions, groundnut tended to be easy due to profit-taking. Favourable weather reports also induced speculative selling. It fell to close at Rs. 164.00, and still further to Rs. 162.50. Bold ready fell in sympathy to Rs. 33.00. Khandesh quality rallied by 37 nP to Rs. 34.62 on Friday, but closed today somewhat lower at Rs. 34.25. Groundnut oil, in the hope of a sizable foreign demand, moved up from Rs. 18.25 to Rs. 18.37 on Friday. It was quoted today at Rs. 18.00. Similarly, railway receipts declined by 12 nP to close today at Rs. 18.00.

Castorseeds section was characterised by firm trends in the earlier session. A bearish undertone, however, came to prevail in subsequent sessions. Castorseed May 1959 improved from Rs. 143.00 to Rs. 143.75 on Friday, on reports that export business of over 500 tons of oil with the U.S.A. had materialised. As later trends indicated, Brazil continues to be a competitor in castor oil. Its offerings were well below Indian prices. May contract, after fluctuating within a narrow range, closed today at Rs. 141.75. Ready Madras sagged by 12 nP to Rs. 28.62 over the week. Kanpur quality encountered narrow fluctuations and recovered today at Rs. 27.50. Castor oil B.S.S. closed at the same level of last week-end, i.e., Rs. 16.37. Commercial quality, however, lost 6 nP to touch Rs. 14.56 today.

Linseed section ruled listless in the absence of encouraging advices. Linseed May 1959 contract advanced from Rs. 30.44 to Rs. 30.56 on Friday, but relapsed in subsequent sessions. The contract closed today at Rs. 30.19. Bold ready, in contrast, moved by 75 nP to Rs. 34.50 over the week. Linseed oil closed today at Rs. 17.56 after presenting irregular trends throughout the week.

The distinctly firm trends in the cottonseed section provided a redeeming feature of the week. Good buying support by the Punjab and Akola operators, tight position in the spot section and brighter prospects for cottonseed oilcakes account for the substantial rise in values witnessed in this section. Under these conditions, cottonseed February 1959 contract which stood at Rs. 112.00 rallied to Rs. 114.00. Among other seeds, kardiseed remained unchanged at Rs 21.00. Nigerseed Madras quality receded by Re. 1 over the week to close today at Rs. 30.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	26-11-1958	19-11-1958	13-11-1958
	Rs.	Rs.	Rs.
Groundnut **—**			
Feb. 1959	162.50	164.37	159.25
Bold ready (per cwt.) ..	33.00	33.50	33.50
Linseed **—**			
May 1959	30.19	30.44	29.75
Bold ready (per cwt.) ..	34.50	33.75	34.00
Castorseed **—**			
May 1959	141.75	143.00	138.87
Madras (per cwt.) ..	28.50	28.50	27.62
Cottonseed **—**			
Feb. 1959	114.00	112.00	105.75
Groundnut oil* **—**			
Ex-mill ready (per quarter) ..	18.00	18.25	18.00
Castor oil† **—**			
Commercial (per quarter) ..	14.56	14.56	14.37
Linseed oil† **—**			
Ready	17.56	17.37	17.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, *25th November*

Although fair business in jute goods was done for export during the week under review, prices moved down due to selling pressure in the futures market. Raw jute prices also sagged, in view of offerings having exceeded demand. Shipment figures in respect of jute goods also caused dissatisfaction. For, between 1st and 10th November, hessians shipped were only 10,000 tons, as against 13,000 tons in the same period in October, and sacking goods 9,000 tons, as against 13,000 tons. Earlier in the week, there was the good news that U.S. burlap consumption in the last month had increased to 78.7 million yards from 75.7 million yards in September. This report had its mark on the market for some time, but liquidation by bulls in hessian was so heavy that ready hessian prices fell in a marked way.

Trade circles noted with cheer the statement of Mr. J. I. Jamieson, Chairman of the Indian Jute Mills Association, who returned to Calcutta on Friday last after leading a jute delegation to New Zealand, Australia, Hongkong, the Philippines, Thailand, Vietnam, Indonesia and Singapore. Mr. Jamieson was confident that exports of jute goods to these countries would be increased substantially, if only the industry took a little more initiative. Indian jute goods did not face any competition in these countries, and with increasing industrial development, demand was also moving up. In the short talk with the Press at the airport, on his return, Mr. Jamieson could not naturally discuss details, but the jute delegation's report was awaited with interest. For, if only India could find a market for the surplus sacking goods, the jute industry would be placed on a better footing, averred trade circles. The South-East Asian region mainly consumed sacking goods, and in this view the delegation's detailed impressions were awaited in the market with interest.

In the same talk, Mr. Jamieson put forward the view of mills when he said that, although fibre production had increased, the country was not yet in a position to export raw jute. He added that this should not lead to any inference that the industry was reluctant to export raw jute. Until last year, India was dependent on Pakistan, and only this year fibre production reached a stage of self-sufficiency. Opinion in the market was that if only prices could be well maintained there was no need here for the suggestion to export. That this was not so was only clear from the movement of prices in recent weeks. Week after week, and with no exception during the week under review also, fibre prices have been touching new bottoms. Unless this state of affairs were remedied, the trade apprehended that this year's much-advertised self-sufficiency would prove a passing affair only. Production of the inferior varieties of raw jute had been so enormous that all these could not be consumed within the country. It was only under these circumstances, market circles pointed out, they had suggested the need to export.

On Tuesday last, although there was scattered business done with markets overseas, prices could not be maintained at opening levels, in view of limited activity in the futures market. Ready B. twills declined to Rs. 95.95 from Rs. 96, and hessian 40" 10 oz. to Rs. 43.70 from Rs. 43.75. At lower levels, speculative support was released, enabling hessian 40" 10 oz. to recover to Rs. 44 and B. twills to Rs. 96.40 on Wednesday. On the next day, conditions were affected by bull liquidation, and despite the news of higher burlap consumption in the United States, hessian 40" 10 oz. gave way to Rs. 42.35 and in sympathy B. twills lost to Rs. 95.40. It was now the turn of B. twills to be affected by selling pressure in futures. This had an effect on hessian prices too. On Friday, therefore, B. twills, at Rs. 94.10, touched the lowest rate for the week, recovering to Rs. 94.60 over the week-end and to Rs. 95 yesterday. Hessian 40" 10 oz. lost to Rs. 42.00, but recovered to Rs. 42.15 yesterday.

With fresh arrivals at the outstation agencies on the increase, and sellers pressing for business, fibre prices touched new low levels. Assam bottoms declined from Rs. 22.50 to Rs. 21.50 and Daissee bottoms from Rs. 24 to Rs. 22.50. Weakness in jute goods restrained mills from taking more interest in raw jute. The latest quotations for the different varieties of raw jute, November-January delivery are:

	Middles Rs.	*Bottoms* Rs.
Pakistan:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	23.25	20.75
Assam	24.00	21.50
Orissa	26.50	24.00
Desal	22.50	20.00
Murshidabad ...	21.50	19.00
Jungli	21.25	18.75
Daissee	25.00	22.50
Uttar Pradesh ...	21.25	18.75
Daissee mesta ...	21.50	19.00
Bimli f.a.q.	Rs. 19.25	
Pucca bales ...	Rs. 142.50 per bale.	

GOOD DEMAND FOR TEA—PRICES LOWER

(From Our Own Correspondent)

CALCUTTA, *25th November*

This week's trend in tea auctions was not different from last week's, as, although there was good demand, prices were easier. It looks as though, without a further reduction in excise and customs duties, trading conditions would not improve. Viewed thus, market circles consider it unfortunate that the Minister for Revenue and Civil Expenditure dismissed the recent demand, so ably put forward in the Lok Sabha, for the complete abolition of the export duty on tea as benefiting only the foreign consumer, particularly at a time, when in auctions, the duties were proving an unmistakable drag on sales.

Although world consumption is increasing, it is difficult to believe that this year's increase in world production, amounting to 40 million lbs. so far, can be absorbed fully. Market circles have noted with interest the tour impressions of Mr. A. N. Chatterjee, Chairman of the Tea Board, who recently visited the United Kingdom, Ireland, Egypt and Iraq, on a tea promotion drive. For he said here a week ago that, in the British market, competition from Africa against Indian common teas was growing. Africa commenced tea cultivation in 1948, and the present output was only 70 million lbs., as against India's 700 million lbs. But, with cheaper labour and more favourable climate, Mr. Chatterjee thought that Africa could become a significant competitor. While in Egypt, the Ministers there asked Mr. Chatterjee if it was not possible for India to cut down tea prices. Chinese competition was also slowly developing. Mr. Chatterjee added that Chinese black tea was available in Egypt and other foreign markets at rates lower than the cost of production. Ceylon's black tea was particularly popular in Egypt and Iraq, and the Tea Board would soon collect samples with a view to growing such tea in North India. There was the need for improvement in the quality of Indian tea to be made more acceptable in the U.K.

On offer yesterday were 71,375 chests. Despite good general demand, prices were lower. "Teas for price" gave way by 4-8 nP, plain fannings by 10 nP, medium B.Ps and P.Fs by 8 to 10 nP, orthodox medium Assam B.O.Ps by 10 to 20 nP, and O.Fs. by 10 to 15 nP. In the last-mentioned item there were withdrawals. C.T.Cs were irregularly lower. Medium C.T.Cs possessing ordinary liquors were subjected to heavy withdrawals. Leg-cut Dooars fell by 6-8 nP. Whole leaf grades shared the general trend, but tippy teas and Darjeelings, though irregular, were fully sold. The quotations were: Best Assam C.T.C. fannings Rs. 2.10 to 2.15 (nominal), best C.T.C. B.P. Rs. 2.00 to 2.05, clean black pekoe Re. 1.95 to 2.00, medium fannings Re. 1.78 to 1.82, plain B.P. Re. 1.58 to 1.62, plain fannings Re. 1.70 to 1.76, and medium B.P. Re. 1.72.

Export quota changed hands at 1¼ nP and the price soon improved to 1½ nP.

During the internal auctions held on Wednesday last, dusts offered amounted to 20,372 chests. The general demand was good, but prices were lower. Orthodox teas dropped by 2-4 nP. Darjeelings and C.T.Cs were irregular. Among the latter, the poorer teas fell by 10 nP and mediums and better varieties by 15 to 20 nP. The rates were: Best Assam C.T.C. Rs. 2.70 to Rs. 3.00 (nominal), Assam C.T.C. Re. 1.95, medium Dooars Re. 1.86, medium Assam grainy dust Re. 1.88, and medium Assam C.T.C. Re. 1.95.

Leaf on offer amounting to 1,374 chests met with fair general demand at irregularly lower rates.

A tea sale was held in Chittagong on Wednesday last. Leaf offerings were 14,348 chests and dusts 4,681 chests, in addition to a supplement of 225 chests. Prices for the cheaper-priced teas improved by As. 2 to 3 on expectations that the Government would fix retail price for tea in packets to enable some profit margin for the trade. In view of this, the costly teas were paid less attention, and after an initial easing tendency a small improvement was in evidence. The rates were: O.P. Rs. 2-1-6 to 2-2, O.F. Rs. 2 to 2-0-6, P.F. Re. 1-14 to 1-14-6, B.P. Re. 1-12, Pekoe Re. 1-14 to 1-15, B.O.P. Re. 1-14 to 1-14-6, and B.P.S. Re. 1-13.

DUST TEAS DECLINE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *20th November*

A little over 662,000 lbs. were on offer in Dust Sale 'X' which was held on Tuesday, 18th November. The larger selection of teas met with less demand than in previous weeks. Prices were irregularly lower for the milled and low medium dusts and these descriptions declined 15 to 20 nP. All other teas were irregularly 10 nP easier. Buyers' orders were limited and there were a number of withdrawals.

London Market: *Sale of 17th November 1958*:—Best liquoring strong to dearer. Others more enquiry and better market than at close last Wednesday.

Sale of 18th November 1958:—Good demand firm to dearer, though little irregular.

Colombo Market: *Sale of 17th November 1958*:—Strong demand. Highgrowns firm to dearer. Good mediums steady. Plainer mediums declined 5c. to 8c. Small leaf lowgrown brokens steady. Gulf types down 5c. to 10c.

Sale of 18th November 1958:—Strong demand. Useful liquoring, fannings and grainy dusts slightly dearer. Other sorts steady.

Calcutta Market: *Export*:—Good general demand at bottom commons 4 to 6 nP and low medium Assams 10 to 15 nP lower. C.T.Cs weakest features. Poorer kinds unwanted.

Internal:—Good general demand at slightly easier rates, orthodox 2 to 4 nP down, poorer C.T.Cs 10 nP down and better C.T.Cs 15 to 20 nP below last rates.

Export Quota:—The market continued to be quiet, but on easing the quota quotation resulted in a fair amount of business being done at 1½ nP. The latest quotation is sellers 2 nP buyers 1½ nP.

Forthcoming Auctions:—Dust Sale 'Y' will be held on Tuesday, 2nd December 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 33:—1,900,000 lbs. Considerably less demand. Market opened 10 to 15 nP lower for low mediums and medium, but declined further towards close with heavy withdrawals. Fair demand for better liquoring sort at lower rates, following quality."

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *25th November*

Steady conditions were in evidence in the metal market during the week under review, despite lower consumer demand. The steadiness was due to the delay in the issue of licences for import of virgin metals to actual users under the new import policy. The copper position in respect of industrial consumers was actually bad. Even when the import policy was announced, it was pointed out here that, although Government had stated that licences would be speedily issued, the time would apparently expire before the new system got into working. It was noted that, in both London and New York, copper was moving up, in view of keener demand.

Virgin lead opened here at Rs. 83.50 and, after being higher at Rs. 85, closed steady at Rs. 84.50. The rate in Bombay was even higher at Rs. 91, and, in view of this, Calcutta stockists were able to secure some orders which would have normally gone to Bombay. Locally, there was little demand even so. Electrolytic zinc opened at Rs. 90 and closed at Rs. 90.50. At one time, the quotation was higher at Rs. 91. Tin was quoted at Rs. 581, as against Rs. 586 earlier.

COMMERCE AND INDUSTRY

(*Concluded from page 888*)

with difficulties arising in international trade in these two metals, including the possibility of drafting a short-term multilateral arrangement and to prepare such material as it considered desirable. The membership of this Committee was expanded and includes at present Australia, Belgium, Belgian Congo, Canada, France, the Federal Republic of Germany, India, Italy, Japan, Mexico, Morocco, Peru, Poland, Spain, Sweden, Union of South Africa, U.S.S.R., the U.K., the U.S., and Yugoslavia.

The views of various Governments regarding reduction of exports and of production of lead and zinc were also considered by the Conference. As regards reduction of exports, some representatives felt that it would be necessary to take into account the situation arising from the reduction in imports made by the United States. Some Governments indicated that, in their cases, export reductions would not be practicable or appropriate. The principal producing exporters, after discussions amongst themselves, advised the Conference that, with the introduction of import quotas by the United States, consideration of the London proposals in regard to reduction of exports reduced itself to the question whether exporters should reduce or limit their shipments to markets other than the United States. They advised, however, that, while they were unable to agree as to what action might be appropriate in the present circumstances, the Governments concerned were keeping closely in touch with industries and would be aware of industrial adjustment to the changing situation. They noted with satisfaction that consultations would continue through the Lead and Zinc Committee.

As regards reduction in production, the Conference noted that although some Governments were, in principle, in favour of such reductions, others saw practical difficulties. It also noted that, in any event, consultation on the matter of short-term action relating to production or exports could, likewise, continue with the Lead and Zinc Committee. Discussion also took place on the possibility of multilateral action being taken to maintain long-term stability of prices and sound conditions in the world's markets, and it was suggested by a number of delegations that such action with participation by most of the exporting and importing countries was desirable.

NORWEGIAN-CANADIAN ALUMINIUM CONTRACT

A/S Aardal og Sunndal Verk, Norway's Government-owned aluminium works, has signed a N.Kr. 2 billion (U.S. $280 million) contract with a Canadian company, which will assure a major part of its basic raw material requirements until 1978. The four million tons of aluminium oxide to be supplied under the agreement will be processed in the firm's electrolytic furnaces to produce aluminium metal worth about N.Kr. 7 billion, at current prices.

Providing for payment in aluminium ingots, the 20-year contract was signed with Aluminium Union Limited, a subsidiary of the Canadian Corporation, Aluminium Limited. Most of the aluminium oxide will come from Jamaica. The Norwegian Company has a similar, though not as comprehensive, agreement with Aluminium Company of America.

The price to be paid for the raw material is pegged to the value of the finished product at the time of delivery of the raw material, thus providing substantial protection against any decrease in prices. For example, if the market quotation for aluminium metal should decline by 50 per cent., the price of aluminium oxide would be adjusted accordingly.

CHINESE EXPORT DRIVE

China is making every effort to establish a large 'economic' sphere of influence in the Asian-African regions, according to a recent *Economic Review* (weekly) published by the Japan Trade Association. The review points out that China has already extended about $840,000,000 in credits to the underdeveloped Asian-African nations, presumably to gain a financial foothold in this region. China has also entered into trade agreements with India, Ceylon, Indonesia, Cambodia, Nepal and Afghanistan. It has also been purchasing large quantities of local products, such as tin, palm oil and sugar in exchange for such Chinese products as textiles, bicycles, cement, plate glass and secondary iron and steel products. There has also been a rapid rise in Chinese exports to many Afro-Asian countries of such capital goods as textile mill equipment, rice polishing and oil extracting machinery, dynamos, diesel and petrol engines as well as radio valves.

CREDIT CURB IN PAKISTAN REMOVED

The State Bank of Pakistan has removed the restrictions on bank credits with effect from the 15th inst. All commercial banks in the country have been asked to liberalise their policy in regard to advances against goods. The step was taken following representations that Pakistani trade and industry were in need of temporary additional financing facilities. Commercial banks have been assured facilities for counter finance. Restrictions on credits were imposed last year.

MARKET GOSSIP

(*Concluded from page 867*)

seriously out-distanced by the producers of fibres for the remaining one-third."

At present, programmes of market research, sales promotion and public relations for cotton exist only in a few countries. In the U.S., the National Cotton Council operates such a programme and spends $1.4 million a year to stimulate cotton consumption. In addition, the U.S. cotton industry, with the help of the Department of Agriculture, supplies another $1 million annually for promotion of cotton through the Cotton Council International to cotton industry organisations in Austria, Belgium, Finland, France, Germany, Italy, Japan, the Netherlands, Spain, Switzerland and the U.K. The only other raw cotton producing countries supporting cotton promotion work outside their own borders, even in a limited way, are Egypt and Sudan.

This co-operation by the United States and other producing countries with the processing industries, according to the Federation, is having a beneficial effect on cotton and on all phases of the textile trade by stimulating a greater interest by consumers in apparel and household products. This in its opinion, is one of the forces which promises a bright future for all who produce, process and merchandise cotton.

It, however, feels that the present level of international cotton promotion is not adequate. In order to encourage the major cotton growing and exporting countries to give their support to the programme in market research and cotton textile promotion which are currently being carried out in various consumer markets throughout the world, the Federation has submitted a statement on cotton textile promotional activities to trade associations representing cotton growing and exporting interests and competent Government departments in various countries. The Federation points out that cotton textile promotion should be promptly initiated in many markets where such programmes do not exist. In addition, it suggests, the present co-operative programmes should be stronger and more effective. The Federation, therefore, recommends that all raw cotton producing and exporting countries should study the present programmes of cotton promotion and invites them to consider the possibility of participating, financially and otherwise, in these activities.

Producers of raw cotton all over the world have a direct interest and responsibility in these efforts to maintain and increase the consumption of cotton textiles. It is to be hoped that the Federation's suggestion and invitation will receive wide response. We commend them to the attention of the Government of India, the Indian Central Cotton Committee and the Indian Cotton Mills' Federation.

TEXTILES

(*Concluded from page 876*)

the Government urging it to drop the proposal, meetings were held condemning the move, processions of weavers were organised and *hartals* were held.

The Tariff Commission's observations on the art silk industry have evoked bitter comments from the Silk and Art Silk Mills Association. In the course of a statement issued to the Press, the Association has drawn attention to the several handicaps confronting the industry in which small units account for as much as 75 per cent. Special mention is made of shortage of yarn supply, high cost of yarn, excessive import duty on foreign yarn, scarcity in supplies and high cost of colours and chemicals, heavy burden of excise duty and high weaving cost. The Association points out that several units have already gone out of existence due to the uneconomic working and many units continue to operate despite losses because of their inability to pay the necessary retrenchment compensation to the labour force. It has, therefore, pleaded for a reconsideration of the whole issue. It wants the Government to continue protection to the industry, give priority to import of raw materials, completely ban imports of all finished goods and turn down the suggestion for enhancing excise duty.

MANCHESTER LETTER

(*Concluded from page 877*)

the larger groups, have been trading at a loss. Among these are Horrockses, Crewdson & Co., Ltd., whose net loss of £70,000 during the past year included a deficit of £57,000 arising from falls in raw cotton prices, and Crosses and Heatons Ltd., which has deferred payment of an interim dividend, reporting a "substantial loss" on the past half-year's trading.

Several other companies have lately passed their interim payments, presumably hoping that some ground may be regained in the second half of their trading periods. In this group are Slack Mills, Hartley Fabrics and the Eclipse Mill. Other interim or final payments have been reduced, indicating less favourable conditions in the case of the Falcon, Goyt and Shiloh Mills.

A deficit on trading has been announced by United Indigo and Chemical, amounting to £5,639, while a profit of over £35,000 earned by Fred Taylor & Co. last year has turned to a loss of £14,000. Indicative of the difficulties being encountered in the fine spinning trade, the Swan Lane group recorded a net loss of over £10,000 during the past half-year, bringing the total year's profit down from £78,500 to below £9,000.

Just in time for inclusion in this melancholy chronicle come the results of Combined English Mills, recording a loss of £186,462, as against a profit of £318,835. Throughout the list, not a single company has improved on its previous performance. Among the best attempts were those of the Iris Mill, whose net earnings, at nearly £49,000, were only £3,000 lower than in the previous year and Bury Ring Mill whose profit was within £2,000 of the 1957 figure at £18,734.

In many cases, however, net earnings have dropped to about half their previous level. In this category come Werneth Spinning, Haighton Holdings and the Barber Textile Corporation, while substantial reductions in profit have been announced by Yorkshire Dyeing and Proofing, Belgrave Mills and the merchanting firm of Paterson, Zochonis.

Fortunately for most companies, the reserves built up during a decade and more of prosperous trading have not been dissipated by the recessions which have been encountered since the end of 1951. Yet a continuation of such an adverse period as that through which the industry is now passing could sap its strength.—*All Rights Reserved.*

COAL

(*Concluded from page 879*)

The development of "local collieries," that is, medium and small mines built and run by the local authorities or by farm and handicraft co-operatives, is also one of the important factors responsible for the big rise in output during the current year. It is estimated that new local mines, with a total capacity of 50 million tons, will come into production. In the first six months of 1958, local coal mines with an annual capacity of 25.8 million tons came into being. The total production of all local mines this year will amount to 60 million tons, representing an increase of 24 million tons or 34.3 per cent. of the rise in total production of the country. China believes that the surest way of increasing production rapidly lies in building and exploiting small local mines, because these can be easily done. Moreover, many of the Chinese peasants are said to be experienced coal miners.

Alongside the development of small coal mines, the Central Ministry of Coal Industry is building up giant new mines. It is stated that a number of these giant mines have already gone into production this year; their output is estimated at 16 million tons, accounting for 22.9 per cent. of the increase in the country's total production.

During the first Five-year Plan, China's investment on construction of coal mines aggregated, 3,288 million yuan. During this period, 38 old mines with a capacity of 11.34 million tons are said to have been restored and 92 renovated, giving an increase in capacity of 26.8 million tons. Sixty new mines went into production during the first Five-year Plan, with a total annual capacity of 25.4 million tons. In 1958, new mines with an aggregate annual capacity of 50 to 60 million tons, nearly equal to that achieved in the whole of the first Plan period, will be set up. This, together with the new local mines, will give a national total of 100 million tons. This is claimed to be more than 4.5 times the total capacity added to Britain's coal industry in the first 10 years of its nationalisation (1947 to 1956), that is, 31 mines with a total capacity of 22 million tons.

Technical innovation is also one of the key factors underlying the phenomenal growth of coal mine construction. By improving organisational work and construction technique, the Chinese coal industry has been able to save a lot of time. The time required for building coal mines in China has been shortened by a third or more. While it took 10 years for Britain to build an inclined shaft of less than one million tons capacity, China has been able to build a mine with an annual capacity of 300,000 tons within a year and a 600,000 to 900,000 ton mine in two years. The time required for developing the new mines to their full capacity has been shortened considerably and the output, it is stated, can even be made to exceed the designed capacity by tapping the reserve capacity.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVII. No. 2490 BOMBAY, 6th DECEMBER 1958 PRICE: Re. 1.50

SOCIAL JUSTICE THROUGH CEILING ON INCOMES?

THE general expectation, following the Hyderabad session of the All-India Congress Committee, that the approach of its Sub-Committee on agriculture would be informed by realism, has just been belied. The Sub-Committee has already met once or twice at New Delhi and drawn up a note for circulation to the State Chief Ministers and Presidents of Provincial Congress Committees. This note is of far-reaching importance, as it will form the basis of the final policy decision scheduled to be taken at the meeting of the All-India Congress Committee next month. This note falls into two parts, one pertaining to land reforms, under which comes the proposal to fix a ceiling on land-holdings, and another to ceiling on urban incomes. It is clear from this note that top Congress leaders have neither learned nor unlearned anything. It is also clear that the members of the Sub-Committee have forgotten the wise words spoken by Prime Minister Nehru in Parliament in the summer of 1956, on ceiling on incomes in general.

To take land reforms first. It was only in our issue of 1st November 1958 that we commented at some length on the subject of land reforms, with particular reference to ceiling on land-holdings. Nevertheless, a further reference to it has become necessary, because of certain misconceptions and serious implications of the proposals of the Sub-Committee to the community in general. For instance, at one place the note says that surplus lands derived from the imposition of ceilings should be farmed on a co-operative basis; at another place, it says that such surplus lands should be assigned to landless labour. These statements appear contradictory. If they are not, they can mean only one thing. And that is that what is contemplated is not individual peasant farming by the former landless labourers but joint farming of the surplus lands assigned to them. If distribution of lands to agricultural labour is accompanied by the condition that they should be farmed jointly, that would be tantamount to coercion. What difference is there then in this approach of the Congress Party pledged to democracy from the method followed by the Communists in China?

Whether the Sub-Committee's claim that land redistribution of that kind is conceived in the spirit of social justice can be substantiated is the next question. It passes one's comprehension why landless labour should have been suddenly brought into the picture, while the second Plan's land reform policy itself has not held out any hope for them. If landless labour is now to be promised land, what will happen to uneconomic holders and cultivating tenants who have been any day more land-hungry than landless labourers? How can redistribution of poverty be claimed to be in conformity with the spirit of social justice, when the just needs of sub-marginal holders and cultivating tenants cannot be satisfied by any such land distribution programme? It has only to be recalled, in this connection, that, according to one optimistic estimate, as yet unverified, even at a possible low ceiling of 20 acres, only about 65 million acres of surplus land can be released and even these would not be sufficient to go round all the sub-marginal holders and tenants.

It would be very advisable for the Congress agrarian reformers and Communist agitators, who have seized upon the phenomenon of "land hunger" to propagate the related slogans of "land to the tiller," "equitable redistribution of lands" and "land for the landless," to examine the nature of that phenomenon more closely. If they do, they may well realise that they have mistakenly taken land hunger as a purely economic phenomenon, in the sense of a uniformly prevalent economic desire on the part of tillers to own the land they till. The universal desire is not for land but for jobs at a living wage. And it is universally accepted that agriculture, carried out in whatever way one likes, cannot provide jobs for all those who are now landless. The reformers may also find that, while the land problem as such is an economic problem, its most prominent manifestation, namely, land hunger, is not a purely economic phenomenon. For, if there are tillers who intensely desire to own the land for the economic consideration of larger returns which, in their estimation, they are likely to get, there are also tillers, who, with equal intensity, desire to own the land for such non-economic considerations as pride of possessing land, equality in status with some landowning sections and psychological feeling of security associated with landed property.

There are, again, some tillers who quail from the responsibilities of ownership and who are interested only in securing cultivation of some land or other for a living. Besides, there are instances of tenant-cultivators who are more prosperous than peasant proprietors. There are also innumerable instances, of course, under the *ryotwari* system, where land-owners have become landless peasants and where landless labourers have become landlords not through any dishonest means but through hard work and diligence. There are, again, numerous sharecroppers and labourers without any tradition, sense or consciousness of landownership, most of whom are probably interested only in larger returns for work turned out on the farm. There may be exceptions, but they are mostly those who have been fortuitously led by agitators to entertain desires for land. What is more, if land hunger had been so real, so extensive and so intense, nothing could have prevented the landless peasants from launching out on any large-scale movement for land grabbing. While this does not rule out the possibility of some such movement in future, aided by the stimulus of organised agitation, at the moment, it certainly speaks for the pacific qualities of our landless peasants. It is on this pacific character of our peasantry that a democratic government should rely for weaning them away from the influence of agitators who mislead them into believing that an owned holding, however tiny it be, will raise the standard of living of the tiller. To kindle exaggerated aspirations in their minds, instead of so weaning them away, would be the height of folly, for, in the resulting "revolution of rising expectations" (to borrow Mr. Adlai Stevenson's pregnant phrase), a veritable Frankenstein's monster will have been created.

It is not realised as well as it should be that any kind of land reform aimed at equal distribution of lands after virtual expropriation cannot provide all those now cultivating them as owner-farmers, tenants, or permanent or temporary farm servants with peasant farms of an adequate economic size which is commonly suggested as five acres of wet or 10 acres of dry land. If the object of such redistribution is, as it ought to be if it is to be sound and rational, the creation of economic holdings owned by the tillers themselves, there would be no sense in a process of revolutionary expropriation which could only lead to chaos, without the saving merit of any rational objective being achieved. The A.-I.C.C. Sub-Committee's insistence on quick imposition of ceilings on future and existing landholders alike and distribution of surplus lands to resourceless labourers is by no means expedient or realistic in the present situation which demands a line of approach consistent with the supreme objective of maximising food production. The A.-I.C.C. has to be reminded of the sound opinion expressed in the First Plan document that "any large-scale and sudden attempt to break up existing holdings may give rise to such organised forces of disruption as may make it extremely difficult to bring about the very transformation in the organisation of agriculture which is needed."

The A.-I.C.C. Sub-Committee has also failed to look at the problem from the long-range point of view. India's population is rising at the rate of 5,000,000 per annum. The bulk of this increase—anything between 70 and 80 per cent.—is taking place in rural areas. After the proposed redistribution of land among the existing generation, how will social justice be done to the generation now growing and the ones that will follow? Assume, for instance, that a piece of five acres is given to a landless labourer with six children. From where will all his children get land when they grow up and need jobs? How will their land hunger be solved? How will further fragmentation of land be prevented, with all children enjoying equal right to property under the revised law of the land?

Another controversial statement in the A.-I.C.C. Sub-Committee note is that "the question of social justice is indivisible and must guide our actions in all spheres of the country's life and economy without distinction of urban and rural areas." The Sub-Committee, therefore, feels that "the question of social justice will have to be considered in respect of urban incomes also." It is also stated that, "for the first time, the Congress is moving in the direction of a policy of ceilings on urban incomes." This is most surprising, because even Mr. Jawaharlal Nehru has, up till now, discounted any such idea of limitation of urban incomes. The demand for a ceiling on urban incomes was vociferously voiced in 1955 and early 1956. Earlier, the Taxation Enquiry Commission (Chairman: Dr. John Matthai) had considered the idea and stated the practical difficulties involved in implementing the idea. The Commission was of the view that the upper limit to income should be related to the average income and that, in any case, there could not be

a rigid formula, since "equality in the context of a socialist pattern of society must be dynamic as well as realistic." The then Finance Minister, Mr. C. D. Deshmukh, had said that a ceiling on incomes implied a ceiling on property and that a limit on incomes through a ceiling on property was not a "feasible proposition, since it would involve payment of compensation." The Planning Commission, for its part, regarded a ceiling on incomes as the end product of a process, rather than a beginning, and a floor for incomes, or a guarantee of certain minimum natural standard of the essentials of civilised life, as being "no less important than a ceiling at top levels." The pith of the Commission's conclusion was "a ceiling cannot be imposed merely by legislation."

The views expressed by Mr. Nehru in Parliament in the last week of May 1956, where resolutions were moved favouring the imposition of a ceiling on incomes, are worth recalling. Emphasising that, for an underdeveloped country like India, the most important thing was to increase production, he remarked:

"Socialism is not something which can be defined as a dead level of poverty. I do not think socialism can be equated with poverty. You may call it a dead level of poor people in the country. That is not an ideal to be aimed at. Socialism only becomes socialism, when there is something worthwhile to socialise, when the productive apparatus is functioning, so that it produces wealth which does not concentrate in the hands of a few. Therefore, it becomes quite essential for a country like ours where the level of living is low to produce more wealth and to see that more wealth is properly distributed. The most important thing is production of wealth. Everything else is secondary or tertiary."

He strongly deplored, it may be added, the use of the word socialism to justify all kinds of suggestions as if "socialism means cutting off of the head of everybody who is above a certain height."

As production of wealth is the most important task before the country, it would be unwise to talk of placing a ceiling on incomes, whether urban or rural, because such ceilings would adversely affect individual savings and undermine the drive for industrialisation which alone, in the final analysis, would absorb the vast mass of surplus labour from rural areas in gainful employment.

RICE ECONOMY

NO single commodity is of greater importance to Asian living standards than rice. This will become clear when it is realised that Asia accounts for nearly 93 per cent. of the world production of rice and also for 90 per cent. of its consumption. Many Asian countries are not only large rice-cultivating areas but also net rice importing regions. Rice is the staple diet of Asia's teeming millions. To an average Asian, its abundant supply signifies prosperity and peace, and its scarcity the worst of evils that can befall him. Rice is the fulcrum around which the simple economy of the Asian rural home revolves. It has thus more than a mere economic significance. It evokes endless emotional responses which may vary from blissful contentment in a period of abundance to sheer despair in periods of drought and famine.

Being an inveterate rice-eater—it is easier for a leopard to change his spots than for a rice-eater to change over to some other food—the Asian citizen found the war and the immediate post-war years, with their relative scarcity in rice, a period of great stress and strain. Although production has considerably expanded in several areas, the increase in population—there seems to be some biological relationship between rice-eating and fecundity—has prevented any significant improvement in *per capita* consumption. Nevertheless, in Asia, the *per capita* consumption of rice at 86 kilograms is only slightly below 88 kilograms, the pre-war average. But it is definitely higher than the low 73 kilograms to which consumption had receded in the early post-war period (1948-52). Perhaps, the picture will change when the efforts that are now being made for increasing the area under rice and improving the methods of cultivation bear fruit. Much will, however, depend upon the trends in population.

World rice output in 1957-58, according to the latest report on rice issued by the U.N. Food and Agriculture Organisation, aggregated 206.8 million tons in terms of paddy, as against 215.5 million tons in 1956-57. (It may be noted here that the yield of rice from paddy varies from country to country; the conversion factor ranges from 60 to 74 per cent.). Harvests were reduced by prolonged drought over a large area in South-East Asia, particularly in Burma, Thailand, India and Pakistan, as well as in countries such as British Guiana. In 1957-58, Asia accounted for 192 million tons, as against 203.1 million tons in 1956-57. These figures include the estimates of output in communist countries, China, North Korea and North Viet Nam, the production of which is placed at 88.2 million tons in 1957-58, or some 500,000 tons more than in 1956-57. China, which accounts for about 40 per cent. of the total world production, had an excellent crop of some 84 million tons. South America, as the table on the next page will show, comes far behind Asia, with 5.27 million tons to its credit. Africa produced some 4.78 million tons and North America 2.81 million tons. Europe accounted for 1.60 million tons.

An analysis of production trends in the leading exporting and importing countries shows some interesting trends. In ten leading exporting countries—Burma, Cambodia, Taiwan, Thailand, Viet Nam, Br. Guiana, the U.S., the U.A.R., Italy and Spain—the output of rice, in terms of paddy, in 1957-58 aggregated only 22.4 million tons, as against 26.93 million tons in 1956-57. The world's largest exporters, Burma and Thailand, were badly affected by drought. The harvest in Burma was estimated at 5.23 million tons, as against 6.46 million tons in 1956-57. Viet Nam's crop is placed at 3.17 million tons, or 200,000 tons less than in the previous year. Thailand's crop was officially estimated at only 5.7 million tons, as against the bumper 8.2 million tons produced in 1956-57. The U.S. accounted for only 1.95 million tons, as compared with 2.24 million tons in the previous year. This reflects the operation of the Soil Bank programme.

The fall in production of the chief exporting countries was also accompanied by a similar fall in production in the nine chief importing countries—India, Indonesia, Japan, Malaya, Pakistan, the Philippines, South Korea, Cuba, and West Africa. In these countries, rice production, in terms of paddy, was 83.69 million tons, as against 89.33 million tons in 1956-57. The largest decline, relatively and in absolute terms, was in India. The total Indian harvest was only 37 million tons, as against 43.1 million tons in the previous year. Indonesia's crop was somewhat higher at 11.8 million tons. Japan's crop rose by nearly 700,000 tons to 14.33 million tons, the wider use of new varieties which mature before the threat of typhoon damage, it is stated, has reduced fluctuations in production in this country. But, in Pakistan, it fell from 13.72 million tons to 12.5 million tons. Drought reduced the crop in the Philippines by 5 per cent. to 3.2 million tons.

It is too early to estimate the total world exports in 1958. In view of the smaller crops and low carryover stocks, there was a substantial decline in exports from Burma, Thailand and the U.S. in the first half of 1958. Exports from Burma fell sharply, dropping to only 800,000 tons during January-June 1958, as compared with over 1 million tons in the same period of 1957. Thailand exported 704,000 tons, as against 869,000 tons. Egypt's exports, however, rose from 180,000 tons in the first half of 1957 to 304,000 tons in the first half of 1958. Between the same periods, the U.S. exports fell from 475,000 tons to 258,000 tons. In view of the reduction in export supplies of rice, the larger import requirements this year have been met mainly by other foodgrains. So far as 1957 is concerned, world exports, as the relevant table on the next page shows, remained unchanged at 5.5 million tons. Generally speaking, world exports have continuously risen in post-war years; they were only 4.30 million tons in 1948-52 (av.) before they rose gradually to 4.6 million tons in 1955 and to 5.5 million tons in 1956. India became the world's largest importer of rice in 1957. At 748,000 tons, net imports were more than double the previous year's level.

World consumption of milled rice aggregated 140 million tons in 1956-57, or 30 per cent. above the pre-war level of 107 million tons; Asia alone accounted for 130.5 million tons, as compared with 101.21 million tons in 1934-38. In general, the world rice consumption has kept pace with the increase in population. This suggests that, on a *per capita* basis, the same amount of rice is eaten now as before the war. *Per capita* consumption in 1956-57, as the relevant table on the next page will show, was 55 kilograms in 1956-57 (the same as in 1934-38), as against 47 kilograms in 1948-52 (av.). In other words, *per capita* consumption, after an initial fall in early post-war years, has recovered its pre-war levels. Rice consumption per person varies from country to country. For Asia as a whole, it is 86 kilograms. But there are also regions of higher consumption. In Thailand, it is 176 kilograms and in Cambodia 168 kilograms. In India, it is only 74 kilograms, or somewhat lower than in 1934-38 when it was 78 kilograms. Japan's *per capita* consumption is larger at 110 kilograms, though it is lower than what it was in 1934-38 (146 kilograms).

Discussing the factors which influence consumption of rice, the report notes that the growth of population is probably the dominating factor, especially since it is growing relatively fast in the rice-growing regions. About 90 per cent. of the striking increase in total consumption over the last 20 years reflects the rise in population. Secondly, the impact of population growth, it is stated, will probably be accentuated by a tendency for consumers to spend more on rice as their incomes grow. An analysis of household surveys in India and Ceylon suggests that expenditure on rice rises roughly by 5 per cent. with a 10 per cent. increase in real incomes. In rice-eating countries where incomes are high, such as in Japan, the increase in expenditure on rice is smaller, about one or two per cent. Thirdly, in low-income countries, even relatively small changes in price can be an important influence on consumption. A fall in price, however, has a more direct effect on quantities purchased than a price increase. In many countries, when rice prices increase, consumers tend to purchase lower grades and there is a tendency to mix more brokens with the higher grades in order to reduce costs. As regards variations in the price of other foods relative to the price of rice, the short-term effect on demand is generally very small. This is because consumer preferences are strong among rice-eaters. But the purchasing policies of Governments, which frequently take the responsibility for supplementing domestic supplies through imports, are much more sensitive to changes in relative prices in international markets.

Finally, the pronounced effect on rice consumption of changes in population, incomes and prices has induced Governments in virtually all major rice-eating countries of Asia to adopt some form of direct or indirect control over distribution. Such schemes have, however, had only very limited effects in India and Pakistan. But, in Japan, the strict rationing of rice, together with the provision of free school lunches consisting of other cereals and complementary foods, has influenced the pattern of demand for rice. Thus, although population is 28 per cent. higher and real incomes well above pre-war levels, total rice consumption in Japan today is no higher than in 1934-38. Outside Asia, consumption habits have been influenced by war-time scarcity. Thus, for many years, in W. Europe, people had to substitute other food for rice. This has probably left a permanent effect on the demand for rice.

Discussing the crop prospects for 1958-59, the report points out that it is still too early to judge whether or not world production will recover from last season's decline. The U.S. crop is likely to be somewhat larger than last year. Early indications of crops for harvest are favourable in most Asian exporting countries. Despite reports of disastrous floods in the northern areas in China, the summer harvest has been estimated at an unprecedented 40 million tons. China has also ambitious plans for expanding paddy acreage by 10 million acres this season. Crop conditions in Asian importing countries also seem to be brighter. If the 1958-59 harvests turn out to be larger in importing countries, it will not necessarily mean a reduction in imports of rice. This is because total demand should continue to rise, reflecting increasing populations and, in several countries, incomes. However, stocks are high in many importing countries and severe balance of payments difficulties may limit imports. Nevertheless, the report predicts that the volume of international trade in rice is likely to be sustained in 1958-59 by a continuing high level of demand. An important factor is bound to remain the commercial export prices. Early indications are that these prices are likely to be subject to the pressure exerted by the overall improvement in world supplies. If these prices are attractive, they will be able to stimulate larger demand and exports.

L.I.C.'S INVESTMENT POLICY

INDIAN IRONS QUIET—RECORD RICE CROP EXPECTED

THURSDAY, 5 P.M.

A LISTLESS debate on the revised investment policy of the Life Insurance Corporation, announced in Parliament by Mr. Morarji Desai on 25th August 1958, took place in both Houses of Parliament this week. The policy statement was not put to vote, but it was apparent that it enjoyed the support of the vast majority of the members of both Houses. Excepting the Communists, who have been following a policy of criticising the Government for the sake of criticism, the others who spoke tried to make constructive suggestions. But they were so vague that Mr. Morarji Desai was right when he said that nothing specific was mentioned, so that the Government could give careful thought to it and profit by it.

MARKET GOSSIP

The following were some of the suggestions made in the course of the debate pertaining to the L.I.C.'s investments:

(1) A part of the L.I.C.'s funds should be utilised for financing agriculture. The requirements of small and cottage industries should not be neglected.

(2) Greater attention must be paid to meet the financial requirements of the relatively underdeveloped parts of India.

(3) There must be a wider diversification of investments, so that the latter might not be confined only to the industries concentrated in the already well developed parts of the country.

(4) The House must be given information about the investments of the L.I.C. at least once in six months, showing, among other things, particulars of investments on a regional basis.

The Government spokesmen agreed to consider the last mentioned point favourably. As regards the first three, Mr. Morarji Desai, Finance Minister, gave the fitting reply that, to the extent the Corporation invested in Government securities and approved investments in the public sector—this at present is 70 per cent. of the Corporation's funds—the Corporation was really helping agriculture, irrigation, power, small industries, etc. This surely is so obvious that it is surprising that some Members of Parliament found it necessary to stress it.

A few members felt that the Corporation should take renewed interest in mortgages. The Government's spokesmen answered that, as soon as the Corporation was free from its preoccupation with handling a large number of bad mortgages acquired in the past, the Government would ask the L.I.C. to give earnest consideration to revive this facility to the public and policyholders. According to Mr. B. R. Bhagat, the Deputy Minister for Finance, the L.I.C. has inherited bad mortgages, numbering 3,435, involving an aggregate loan of Rs. 30.50 crores. More than 400 suits have been filed for recovery of the dues under these mortgages and 200 more suits have to be filed. At present, the Corporation's hands are too full with all these suits.

Disclosing the position of the Corporation's investments as at the close of September last, Mr. Bhagat said that investments in the public sector amounted to Rs. 273.18 crores or 70.10 per cent., an increase of a mere 0.50 per cent. over the position before nationalisation. His contention was that the Corporation's investments in the private sector were being maintained at the same rate at which they used to be before.

There appeared to be general agreement with the thesis that, in investing the funds of the Corporation, the interests of policyholders should have first claim. Only the Communist members asserted that there was no contradiction between the interests of policyholders and the larger interests of the community. It is worthwhile recording here what exactly Mr. Morarji Desai said on this point. Here are his remarks:

"I agree with my friend, Mr. Asoka Mehta, that, whereas security of investment must be the primary consideration, it must not be made such a fetish that the whole activity becomes very static. Some risks have to be taken somewhere, but the risks ought to be reasonable and not as would land the Corporation and the Government in trouble. Therefore, that has got to be taken into consideration and safeguarded, and that has got to be done, and that will be done; but, consistent with that, the L.I.C. certainly will try to see that the investible funds are utilised in the best manner possible for the good of the community as a whole and not merely for a profit motive."

The aforesaid statement of the Finance Minister is rather vague and can be stretched like India-rubber. The term "good of the community" can be interpreted to cover investment in almost anything, from atomic power plants to Ambar Charka or from aircraft to handcart, from printing machinery to printing of school books. But Mr. Desai has stated that it is not possible "for the Corporation to invest its funds in different small sectors in different parts of the country" or to finance agriculture directly. It is, therefore, clear that he does not expect the Corporation to finance those lines of activities, such as Ambar Charka, handlooms and other cottage industries or irrigation and power projects, the return on which is either small or deliberately restricted for social considerations. The application of Section 27A to the Corporation limits the scope for investing its funds in uneconomic ventures. It is true, as Mr. P. V. Krishnamurthy pointed out in an article to this journal a fortnight ago, Section 27A is not so foolproof as to prevent a repetition of the Mundhra episode. One must, however, have faith in those who administer this country and the Corporation.

The Finance Minister's observations on the Corporation's investments in equities and fixed-yield securities quoted on the stock exchanges are as satisfactory as they can be. He said:

"What is wrong if the L.I.C. invests its funds in a company, if it finds that the shares are selling at a low rate? It can buy them and make profit for the policyholders. I do not see why there should be anything wrong in it. Of course, this should not be done in a careless manner or in a continuous manner as speculators do. There is no question of any speculation by the L.I.C., if it buys when the prices are low and sells when the prices are high. I do not agree that, once the L.I.C. purchases the shares, it should never part with them at any time; or, when it parts with them, it should never purchase them again. I do not see that is a proper business transaction at all. Several times it may be necessary for the L.I.C. to change its stock. If it is profitable to do so and, incidentally, if it helps in stabilising the stock market, it cannot be called speculation at all."

There is nothing objectionable in the aforesaid quotation. The L.I.C. has to buy and sell equities, preference shares and debentures in a judicious manner, without importing extraneous considerations. To be successful in this direction, it must equip itself with the right type of know-how, in which it seems to be sadly lacking at present.

On the subject of the L.I.C.'s role in stabilising share markets, Mr. Morarji Desai's views are distinctly less satisfactory. Let us first quote what he said:

"As a matter of fact, it is in the interest of the L.I.C. itself to see that the stock market is stabilised, because it is the largest holder of shares. By its very nature, it is bound to be the largest holder of shares. It is the L.I.C. which will suffer most if the stock market crashes. So, I am bound to see that the L.I.C.'s activities are such as to help in stabilising things rather than not stabilising them. But it is not the purpose of the L.I.C. to play on the stock market or to utilise its funds mainly for stabilising the stock market."

It is, in our view, none of the business of the L.I.C. to stabilise stock exchanges. If, as a result of its judicious investment operations, some stability comes to prevail in the markets, it is an incidental advantage. It will land itself and its owner—the Government of India—in trouble if the L.I.C. buys and sells shares and securities with the object of stabilising the market. There will be many Mundhra episodes in future, if the L.I.C. has this business as one of its objectives. This, however, does not mean that, if prices of any scrip in which it has investment go up to unmerited high levels as a result of cornering, the L.I.C. should not take advantage of that position. Similarly, if there is a bear raid purely as a result of speculative manipulations, the Corporation can enter the market as a buyer, provided the scrips involved are sound in all other respects. These operations, however, have to be conducted carefully and in a tactful manner. But, when market stability is disturbed as a result of either Government's policies or actions of God, or grave political developments, it will be a grave mistake if the L.I.C. takes upon itself the responsibility of ensuring stability.

Being the owner of the L.I.C., the Government must be more interested than before in seeing that stock exchanges function smoothly and efficiently. By following appropriate economic policies, the Government can minimise the scope for upsets and wide fluctuations. The Government should also regulate the working of stock exchanges on lines similar to those followed in the U.S. There is thus need for fresh thinking on this subject.

There is a view that the L.I.C. should invest less in the shares and securities of existing companies by buying them from the stock exchanges and divert more resources for encouraging establishment of new industries or for the expansion of existing industries. This question deserves to be examined carefully, with due regard, at the same time, for the interests of policyholders. Some notable suggestions were made by Mr. Krishnamurthy in the aforesaid article to this journal. Their adoption, however, presupposes certain changes in the Corporation's policy pertaining to the issue of various types of policies. But Mr. Desai, it is clear from his speech in the Lok Sabha, is not in favour of any such changes. He is all for the continuation of the *status quo*.

It is gratifying that Mr. Desai has reiterated that the Government will not resort to back-door nationalisation of industries by buying shares of companies through the L.I.C. He, of course, did say that, if any company in which the L.I.C. had investment was mismanaged, it would invite Government intervention, so that things might be set right. This is fair enough. If intervention is of the right type and at the right time, it will doubtless help others also who have invested their savings in the companies concerned, not to speak of those employed by them.

* * * *

The Press report from New Delhi to the effect that the Indian Iron and Steel Company, Ltd., has been given sanction to issue the proposed bonus shares in the ratio of 1 : 5 has not had any bullish effect on the Company's shares in today's trading. On the contrary, there was some selling pressure on Calcutta account and the shares dipped to a low of Rs. 25.90 before closing at Rs. 26, as compared with Rs. 26.45 touched on Monday this week when the new account opened. This may be attributed partly to the heavy floating stock of the scrip and partly to the fact that this news had been discounted in prices earlier and only confirms Mr. Biren Mookerjee's statement at the annual general meeting of the Company held on Friday last that he did not forsee any difficulty in obtaining the Government's permission for the issue of bonus shares. He added that it was expected in a few days' time.

The annual general meeting of the Company provided an opportunity to the shareholders to

EQUITIES QUIET

SELLING PRESSURE AT CLOSE

(From Our Own Correspondents)

BOMBAY, *4th December*

TRADING on the Bombay Stock Exchange was dull during the week under review. The trend of prices was irregular, though the range of fluctuations was narrow. There was, however, a slight setback today over a wide front on heavy unloading in steel shares and weaker advices from Calcutta, despite the encouraging production by Tata Iron and Steel Company during the month of November. The output of saleable steel was substantially higher at 83,600 tons, as against 76,900 tons in the previous month and 65,600 tons in November 1957. This has brought the total production during the first eight months of the current financial year of the Company to 519,000 tons, as compared with 506,000 tons. One explanation for the incongruous trend in prices of Tata Ordinaries today is that it was generally expected that production would gradually go up, thanks to the modernisation and expansion programme, and the news had already been discounted in prices. The market did not also take note of a Press report from New Delhi that the Indian Iron and Steel Company, Ltd., had been granted permission to issue bonus shares in the proposed ratio of one share for five shares.

Normally, these two reports would have had a bullish effect on the market, but speculators and investors were inclined to be somewhat on the cautious side, anxiously awaiting the speech of Mr. Morarjee Desai, Union Finance Minister, at the annual meeting of the Associated Chambers of Commerce to be held tomorrow at Calcutta at which he is expected, as usual, to make an important pronouncement. The anxiety was greater because of the Finance Minister's recent statement that there would be no further reduction in taxation. Consequently, operators preferred to lighten their holdings on the eve of the meeting.

Tata Steel Ordinaries were marked up from Rs. 177 to Rs. 180 on Monday, when the new account opened, but thereafter they drifted lower. The downward trend was more pronounced today, taking the shares to a low of Rs. 176.50 at the close. The new shares closed at Rs. 173.25 after touching a high of Rs. 175.50 on Monday from last week's closing of Rs. 173.25. Indian Irons gained ground from Rs. 25.80 to Rs. 26.45 and, after reacting to Rs. 25.90 today, finished at Rs. 26.

Though there was no heavy selling pressure, textiles ruled quiet, in sympathy with steels. Bombay Dyeings advanced from Rs. 57.20 to Rs. 57.70 before giving way to Rs. 56.80. Centurys lost over the week Rs. 3 at Rs. 429, the highest and lowest levels touched being Rs. 436 and Rs. 427.25. Kohinoors moved between Rs. 253.50 and Rs. 249, before closing at Rs. 249.50. The Tata group of companies provided an exception to the general trend. Central Indias gained over the week Rs. 4 to Rs. 90, Svadeshis a like sum of Rs. 207 and Tata Mills Re. 1.75 to Rs. 36.75. Finlays were marked down by Rs. 3 to Rs. 267, while Gokaks were dull at Rs. 129.50 and Indu Ordinaries at Rs. 8.72. Indore Malwas disclosed a loss of Re. 1 at Rs. 103, whereas Khataus were unchanged at Rs. 160. Morarjees were lower by Rs. 2 at Rs. 236, as also Podars at Rs. 132. Shree Niwas Cottons shed Re. 1.50 to Rs. 143.50. Standards presented a firm front and recorded a rise of Rs. 12 to Rs. 411. Simplex finished with a loss of Re. 1 at Rs. 172.

Barring a few exceptions, bank shares were dull. Barodas were a fraction lower at Rs. 119.50, as also Centrals at Rs. 58. Centrals (new) were unchanged at Rs. 59.50 and Bank of Indias at Rs. 137. Bank of Indias (new) had business at Rs. 139. Bikaners were done at Rs. 24, as against Rs. 22.48 previously. Jaipurs gained Re. 1 to Rs. 46, as also Punjab Nationals to Rs. 56.

In the electricity section, Ahmedabad Electrics were done at Rs. 95 *ex-div.* (final dividend Rs. 4), as against Rs. 99.10 *cum-div.* Bombay Suburbans were a fraction better at Rs. 110.75, while Surat Electrics dropped a rupee to Rs. 112. Tata Hydros were unchanged at Rs. 122.50 and Andhra Valleys at Rs. 1,202.50, while Tata Powers shed Rs. 5 to Rs. 1,225.

Sugar shares suffered a further setback, Belapurs moving down from Rs. 305.50 to Rs. 300. Phaltans declined by Rs. 8 to Rs. 165 and Walchandnagars by Rs. 2 to Rs. 278.50. Changdeos were done a fraction lower at Rs. 32.75. Maharashtra Sugars were marked down by Re. 1.25 to Rs. 175.50. Cement shares presented a mixed pattern. Associated Cements, after moving up from Rs. 153.25 to Rs. 154.75, reacted to close at Rs. 151.75. Digvijays recorded a gain of Rs. 2 at Rs. 131.50 and Orissa Cements 12 nP at Rs. 12.12. Dalmia Cements were dull at Rs. 9.20. In the engineering and mining group, Alcocks receded from Rs. 260 to Rs. 256.25, while Tata Locomotives stood Rs. 3.50 higher at Rs. 158 and their Rights gained Rs. 3.50 to Rs. 45. Premier Constructions were lower by Rs. 4 at Rs. 243.50. Larsen and Toubros were a shade quiet at Rs. 16.88. Guest, Keen, Williams were unchanged at Rs. 38.75 and Mahindra and Mahindras at Rs. 18.52. Shivrajpurs shed Rs. 3.20 to Rs. 88, while Indian Coppers were steady at Rs. 3.78.

After moving up from Rs. 21.24 to Rs. 21.48, Scindias gave way to close at Rs. 20.96. Great Easterns, however, gained over the week 25 nP to Rs. 27. Bharat Lines shed 16 nP to Rs. 13.28 and Malabar Steamships 52 nP to Rs. 15.24. Premier Automobiles were a fraction lower at Rs. 85.50 and Hindustan Motors at Rs. 7.08.

Among miscellaneous industrials, Bombay Burmahs (old) moved up from Rs. 497 *cum-div.* (interim Rs. 7.50 per share) to Rs. 506 *ex-div.*, before reacting to Rs. 492.50 today. The partly paid-ups gained Re. 1.25 to Rs. 180. National Rayons gathered strength early in the week from Rs. 240.75 to Rs. 244, but subsequently lost ground to Rs. 239.50. Gwalior Rayons were dull at Rs. 13.90. Tata Chemicals were placed at Rs. 15 *ex-div.*, as against Rs. 15.76 *cum-div.* a week ago. Tata Oils spurted from Rs. 38 to Rs. 43.75 on rumours of a bonus issue. Voltas were done Rs. 2 higher at Rs. 137 and Killick Industries were steady at Rs. 149.25.

Calcutta Stock Exchange

CALCUTTA, *3rd December*

Equities presented an irregular pattern on the Calcutta Stock Exchange during the week under review. On Wednesday last, settlement difficulties and the high carry-over charges for the speculative scrips depressed prices. These difficulties were soon got over and at lower levels, bear-covering developed, and by the week-end fresh support was in evidence. On Monday an all-round improvement was discernible following the annual meeting of the shareholders of the Indian Iron and Steel Company, Ltd., held on 28th November. Although information as to when the Company's 1 to 5 bonus issue would be made was not available, it was believed that the Government would soon sanction it, though the new shares would not, at any rate, be eligible for 1958-59 dividend. It was also understood that the investment company, which recently released a huge block of its holdings of Indian Irons in the market, did not propose to unload any more lots. In the absence of any incentive, the trend was again reversed downward yesterday. The Finance Minister's *Diwali* message that there was not likely to be any reduction of taxation is still ringing loud in the ears of investors and operators, and the market is not, therefore, anticipating any cheerful news from Mr. Morarjee Desai on 5th December when he addresses the Associated Chambers here.

In the meantime, advices from the commodity markets were depressing. Prices in tea auctions, despite the claim of Mr. Gopala Reddi, the Minister for Revenue and Civil Expenditure, that exportable types were being offered higher prices and that prices of common teas had gained by 10 nP per lb., continued to move down. Mr. Reddi also claimed that the recent revision of customs and export duties on tea had resulted in share prices improving. Market circles desired to know the premises for the Minister's inference. The table below giving latest quotations of scrips picked at random from the daily list of transactions and the rates that prevailed just prior to the revision is self-explanatory:

	Quotation as on or until 24-9-1958	*Quotation as on or until* 1-12-1958	*Difference*
	Rs.	Rs.	Rs.
Banarhat ..	321.00	283.00	—38.00
Bishnath ..	20.87	18.87	— 2.00
Dhelakhat ..	24.31	22.37	— 1.94
East India ..	21.12	21.44	+ 0.32
Gohpur ..	24.00	21.62	— 2.38
Grob 'A' ..	28.81	27.69	— 1.12
Hanscua ..	20.00	17.94	— 2.06
Hasimara ..	23.06	22.37	— 0.69
Hatilkhira ..	12.25	12.00	— 0.25
Huldibari ..	23.06	21.69	— 1.37
Methoni ..	19.06	19.50	+ 0.44
New Dooars ..	292.00	292.00	Nil
Teesta Valley ..	23.00	23.00	Nil
Terpore ..	15.25	15.87	+ 0.62

The fall in prices of jute goods retarded sentiment for some time, but since it was largely believed that the current accounting period of mills would show better results, selected counters continued to be bought at hardening rates. There would be a general meeting of the Calcutta Stock Exchange on 29th December 1958 to consider the question of recognition, but in the meantime the Government has granted one month's extension within which the Exchange should fulfil the conditions to qualify for recognition.

In common with the general trend, jutes gave way earlier in the week, but subsequently recovered. Thus, Anglo-Indias declined to Rs. 204 from Rs. 208 before improving to Rs. 216. Cheviots advanced to Rs. 221 from Rs. 207, and Dalhousies to Rs. 140.50 from Rs. 132. Aucklands were bought at Rs. 165, against Rs. 160 previously. Kamarhatties hardened to Rs. 177 from Rs. 174. Barnagores, after easing to Rs. 134, crossed the opening rate to quote Rs. 142. Nationals moved up to Rs. 23.37 from Rs. 22.25.

In an otherwise featureless coal section, New Beerbhooms, on investment support, rose to Rs. 19.44 from Rs. 19.12, and Central Indias recovered to Rs. 8.12 from Rs. 8.00. East Indias were quiet at Rs. 23.25. Bengals at Rs. 266 were lower by 4 points and Burrakurs eased to Rs. 16.62 from Rs. 17.

The star feature in the engineering section was the rise in Guest, Keen Williams to Rs. 39.97 from Rs. 38.37 following the confirmation that the Company would issue bonus shares in the ratio of 3 for 10. This would be done by capitalising Rs. 58.94 lakhs from the share premium account and Rs. 1.06 lakh from the general reserve. The settlement rate for Indian Irons on Wednesday last was Rs. 25.78. Thereafter, a small recovery set in and the rate improved to Rs. 26.40, but sagged yesterday to close at Rs. 26.05. From Rs. 20.90 Texmacos recovered to Rs. 21.20, but closed at Rs. 21.

Among miscellaneous industrials, India Steamships were featured with a rise to Rs. 14.91 from Rs. 14.12; subsequently they were quoted a shade lower at Rs. 14.84. Assam Saws were done at Rs 3, as against Rs. 2.87 previously, following the news of the offer of Messrs. Jalan Industries Private Ltd. to purchase these shares at the face value of Rs. 3 each. Orissa Cements at Rs. 12.06 were better with Indian Coppers recovering to Rs. 3.82 from Rs. 3.74 to close at Rs. 3.77. Indian Cables eased to Rs. 28.44 from Rs. 29.75, while National Rollings, at Rs. 13.25, were fractionally better and Dunlop Rubbers recovered to Rs. 30.50 from Rs. 29.62. Rohtas Industries were for a time lower at Rs. 19.94, but closed at Rs. 20.31.

• • • •

Madras Stock Exchange

MADRAS, *2nd December*

Barring coffee shares which elicited good buying enquiries, the Madras Stock Exchange ruled distinctly easy during the week under review. The operators were greatly disappointed at the Prime Minister's observations on the private sector made in the course of his public speech at Calcutta this week. Tea shares came in for selling induced by lower prices fetched at the London auctions and Mr. Gopala Reddy's statement in Parliament that there would not be any further revision in export duty on common teas in the immediate future. In sympathy, rubber shares also came in for selling. Coffee shares met with good support on better export prospects. Textiles continued to remain subdued, as offtake of both yarn and cloth was still low.

Among tea shares in the planting section, Nonsuch Teas dropped 50 nP to Rs. 24. Parksides receded by 30 nP to Rs. 21.50. Haileyburias retreated by 25 nP to Rs. 17.75, Twyfords by 15 nP to Rs. 17.25, Balanoors by 13 nP to Rs. 17.62 and United Nilgiris by 10 nP to Rs. 17.70. Kil Kotagiris, however, improved by 26 nP to Rs. 6.72 on special support. Devasholas advanced by 25 nP to Rs. 22.50.

In the rubber group, Vaikundams fell by 77 nP to Rs. 23.35. Malankaras moved down by 30 nP to Rs. 18. Midlands by 15 nP to Rs. 12 *cum-div.* and T.R. & Ts by 10 nP to Rs. 6.80. Thamaraparays, on the other hand, rallied 50 nP to Rs. 27.50. Mercaras strengthened by 25 nP to Rs. 8.80 *cum-div.* Cochin Malabars put on 5 nP to Rs. 5.52 and Thirumbadis 4 nP to Re. 1.62.

Among coffee shares, Consolidated Coffees and Coffee Lands were well fancied, spurting by 85 nP to Rs. 25.45 *cum-div.* and the latter by 50 nP to Rs. 29.50 *cum-div.* Rajendras advanced by a rupee to Rs. 14.25 *cum-div.* Anaparais gained 15 nP to Rs. 5.60 and Ouchterlonys 4 nP to Rs. 5.45.

Deals in textiles were put through at lower prices. Coimbatore Cottons fell by Rs. 7 to Rs. 140. K. Rajendras and Anglo-French dropped Rs. 3 each to Rs. 62 and Rs. 65, respectively. Rajalakshmis eased by Rs. 2 to Rs. 64. Rajapalayams lost a like amount to Rs. 119. Lakshmis shed Re. 1.50 to Rs. 94.50. Bangalore Woollens lost a rupee to Rs. 163.

A drop of Rs. 5 to Rs. 188 in the quotation for Textools was the feature of trading in the miscellaneous section. Rallis declined by Rs. 2 to Rs. 41. Mettur Chemicals receded by 28 nP to Rs. 11.22, Orissa Cements by 25 nP to Rs. 11.85, Parrys Confectioneries by 6 nP to Rs. 3.72 and F.A.C.Ts by 5 nP to Rs. 6.75.

ORDER TO WIND UP OSLER CO.

The Calcutta High Court has issued an order by consent that the respondent, F. & C. Osler (India) Ltd., be wound up by the Court. The order was in response to an application filed by the petitioner, the Indian Cable Co., Ltd., claiming a sum of Rs. 11.38 lakhs and odd against the respondent for the balance of the price of goods sold and delivered. The order of the Court was, however, not to have any operation till 15th January next. It was stated that, if, in the meantime, any scheme of settlement between the parties was arrived at for the payment of the respondent's debt to the petitioner, the terms of such settlement should be filed in Court, in which case the order for winding-up would stand vacated. The respondent's plea was that Mr. Haridas Mundhra and others were common directors of the respondent company and another company and that they had managed to put the burden of some of the latter company's liability on F. & C. Osler & Co. (India) Ltd.

RALLIWOLF PRIVATE LTD.

Rallis India Limited of Bombay and Wolf Electric Tools Limited of London announce the start of a new industry in India to manufacture portable electric tools. Rallis and Wolfs are collaborating in the manufacture of a representative range of twenty-five of the world-famous Wolf Electric Tools and for this purpose a new Company, styled Ralliwolf Private Limited, was registered recently. Freehold land has been acquired at Mulund near Bombay and building operations have been started. It is expected that the new factory will be ready for occupation in the middle of 1959, and it is planned that by 1962 the tools will be almost entirely manufactured in India.

NEWS IN BRIEF

THE U.P. Government has decided to take over and run the Atherton Cotton Mills, Kanpur, shortly. The mill employs about 3,000 workers.

The Government of Kerala is discussing with Birlas the question of speeding up the establishment of the rayon pulp factory at Nilampur, according to Mr. K. P. Gopalan, Minister for Industries.

The Finnish experts, who recently made a survey of the forests in the Beas river basin in the Punjab, have suggested the establishment of a newsprint mill and a sulphite cellulose mill, each with a capacity of 30,000 tons.

The diamond mines at Panna, Madhya Pradesh, will be nationalised as soon as adequate funds are available for the purpose, according to Mr. Shambunath Shukla, the State's Minister for Natural Resources.

The Government of India has accepted the Tariff Commission's recommendation to discontinue protection for bleaching powder after the 31st inst., but to continue protection for caustic soda for three more years, that is, till the end of 1961.

The aluminium smelter now being set up at Hirakud by the Indian Aluminium Company, Ltd., Calcutta, is expected to go into production in February 1959. The smelter has an installed capacity of 10,000 tons of aluminium ingots per year.

A fresh export quota of 2,000 tons of rice bran of Andhra origin has been released for export from ports in Andhra Pradesh to all permissible destinations upto the end of March next year, on the principle of first-come-first-served basis.

The Government of Australia supplied in October 1958 about 9,450 tons of wheat (c.i.f.) valued at about Rs. 31 lakhs to India as a gift under the Colombo Plan. The question of how the sale proceeds of this wheat are to be utilised is under the consideration of the Government of India.

The Central Committee on Community Development, which met at New Delhi on 27th November, decided that most of the welfare schemes under the Community Development programme should henceforth be carried out only through *panchayats* and other village institutions.

A proposal to set up a ten-ton plant in Mysore for extracting oil from rice bran, using alcohol as solvent, is under the consideration of the Council of Scientific and Industrial Research. The manufacture of activated carbon from paddy husk has already been undertaken in India.

A Swedish firm has submitted an outline of a scheme to manufacture paper and pulp machinery in India in collaboration with an Indian firm. Revealing this in the Lok Sabha last week Mr. Manubhai Shah, Union Minister of Industry, stated that the Indian firm was expected to apply for licence with full details of the scheme for the consideration of the Government.

Several major steel mills in Japan have concluded contracts with the India Supply Mission, Washington, for export of steel products. The amount of the steel products to be imported from Japan was 99,717.31 long tons. The contracts are subject to the India Supply Mission's standard conditions of contract and the regulations of the U.S. Government relating to foreign purchases.

Problems concerning employees in the public sector would be considered at a bipartite conference which the Central Government has decided to convene shortly. Disclosing this, Mr. Abid Ali, Union Deputy Labour Minister, stated in the Rajya Sabha, recently, that the Code of Discipline drawn up at the Naini Tal session of the Indian Labour Conference should be applicable to the public sector also. He added that the position of the railways *vis-a-vis* the code was under examination.

Approximately 3,100 wagons were built in India during 1947-48, 6,388 in 1952-53 and 17,390 in 1957-58, according to the Deputy Minister of Railways, Mr. Shah Nawaz Khan. The capacity of the fabricators of these wagons is assessed generally in accordance with their actual performance. The overall price of the wagons has gone up by approximately 20 per cent. to 25 per cent. from the year 1951 to 1957, on account of heavy increase in the price of steel and wages, in spite of increased production.

The validity of the schedules attached to the Indo-Swedish Trade Agreement concluded in May 1955 has been extended upto 31st December 1959. A few more commodities have been added to the list of items available for export from India. During the year 1957 and the first eight months of 1958, imports into India from Sweden amounted to Rs. 11.92 crores and Rs. 5.96 crores, respectively. During the same period, India's exports to that country amounted to Rs. 1.68 crore and Rs. 96 lakhs, respectively.

The Government of India has decided to grant rebate of excise duty on cotton scarves exported from India. The rebate is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrella cloth, chaddars, pillow cases, table covers, embroideries, laces, tarpaulins, mosquito nets, ground sheets, cotton sola hats, cotton flannel, motor car dusters and cotton quilts. The manufacturers of cotton scarves, who wish to export them out of India, are required to contact the Collector of Central Excise in whose jurisdiction their factory is situated for further detailed information.

The Government of India has decided to constitute a pool for temporary placement of well-qualified Indian scientists and technologists returning from abroad until they are absorbed in suitable posts. Persons with Indian qualifications having outstanding academic records will also be eligible for admission to the pool in not more than 25 per cent. of the total number of posts in the pool. Meanwhile, the Council of Scientific and Industrial Research has reviewed the terms and conditions of service of scientific officers and staff in the National Laboratories and has taken decisions governing the promotion of scientific workers to higher grades, special merit promotions, advance increments to scientific workers, etc.

In a written reply to a question by Mr. V. K. Dhage in the Rajya Sabha on the 1st inst., the Finance Minister, Mr. Morarji Desai, said that there was no proposal at present for a further credit from Japan, in addition to the 18-billion yen credit (about 50 million dollars), an agreement regarding which was concluded in February 1958 and the 10-million dollar credit offered by Japan later this year. Mr. Desai added that the Government had seen reports of an interview given by the President of the Bank of Tokyo in this matter. Mr. Dhage, in his question, had invited the attention of the Finance Minister to an interview given to the Press by the President of the Bank of Tokyo on or about 11th October at Bombay, in which he was reported to have said that the State-owned Export-Import Bank of Japan would advance a loan of 50 million U.S. dollars to India.

CORRECTION

It was stated in these columns a fortnight ago —*vide* page 825—that India had entered into a supplementary trade agreement with West Germany. This is incorrect. The agreement referred to was with East Germany.

From Abroad

The U.S. maize farmers have voted in favour of ending Government controls on the planting of maize, which have been in force for the past 25 years.

The United Arab Republic proposes to launch a Five-year Plan next year for the rapid industrialisation of the country. The total outlay is estimated at 250 million Egyptian pounds.

The volume of shipping that has remained idle in U.K. ports as a result of unemployment is about 1.5 million gross tons, according to the British Chamber of Shipping.

An American firm, Dow Chemical Company, has agreed to buy 27 million tons of Russian benzene in 1959 and a similar quantity in 1960 at a price equal to 24 or 25 cents a gallon, as compared with the current U.S. price of 31 cents.

Venezuela has agreed to participate in the first Arab oil conference and exhibition proposed to be held at Cairo in April next. The other countries which have agreed to participate are the U.A.R., Libya, Lebanon, Iraq, Yemen, Jordan, Saudi Arabia, Qatar and Kuwait.

Exports of Japanese ships have touched 522,000 gross tons valued at $133 million since 1st April last. The figure exceeds the target of 500,000 tons originally set for the whole year 1958-59. Export authorisations for the year are expected to touch 800,000 tons.

An agreement has been signed between the U.S. and Pakistan Governments, under which the U.S. will supply to Pakistan farm products worth $69.75 million. The products include 850,000 tons of wheat and wheat products, 20,000 tons of soya beans and cottonseed oil, 50,000 tons rice and 5,000 bales extra long-staple cotton.

As a measure of economy, President Eisenhower has called on all U.S. Departments and agencies to observe both the spending limits ordered for the current year and those laid down for the next fiscal year beginning in July 1959. Accordingly cuts made by the Federal Budget Bureau for the current year are to be followed in the ensuing year also, except where they would "impair the security or welfare of the U.S."

The Irish Bank rate has been cut from 4½ per cent. to 4¼ per cent. with effect from 28th November 1958. This reduction follows the ½ per cent. cut made in September last from 5 per cent., a rate which had been in effect from the end of May 1958. This also brings the Bank rate in Ireland down by 1¾ per cent. within the last 14 months from the peak of 6 per cent. established at the end of September 1957. Following last week's cut in Bank rate, the Irish Banks Standing Committee announced a reduction in the rate of interest on deposit accounts in banks in the 26 counties of the country by ½ per cent. per annum. The new deposit rates are: 1 per cent. per annum on amounts under £25,000 and 2 per cent. on amounts of £25.000 and over. The ordinary lending rate for advances has also been pruned by ½ per cent. to 5¾ per cent. per annum, with similar changes in certain other lending rates.

The Government of Denmark proposes to provide 534,000 kroner (about Rs. 26,700) for a plan to send Danish agricultural experts to India as part of a U.N.E.S.C.O. project to strengthen links between East and West. The Danish agricultural team will give training in Mysore to young Indians who will later become farming teachers and consultants in India. The Danish team of five will include specialists in all aspects of agriculture, dairy work and gardening.

PERSONAL

MR. Rajeshwar Dayal, Indian High Commissioner in Pakistan, presented his credentials to the President, Gen. Ayub Khan, on 28th November, 1958.

Mr. F. K. Heller and Mr. A. B. Parakh have been elected President and Vice-President, respectively, of the Indo-German Chamber of Commerce.

Mr. R. B. Turakhia, a noted manufacturer of plastics, will represent the Plastics Export Promotion Council at the Economic Conference of Afro-Asian countries to be held at Cairo next week.

Mr. M. K. Mathullah, Managing Director of the Government-owned Hindustan Machine Tools, who was on a tour of European countries to explore the possibilities of new production lines, returned to India last week.

Mr. N. T. Mone, I.C.S., Secretary to the Bombay Government, Finance Department, has taken over the Chief Secretaryship of the Bombay Government from Mr. K. L. Panjabi, I.C.S., who has retired from service.

Mr. G. D. Birla has agreed to be the Chairman of the Rehabilitation Industries Corporation, proposed to be set up by the Government of India, to establish industries either in the public sector or in partnership with private enterprise, with a view to providing employment to displaced persons from East Pakistan.

Mr. C. A. Pitts, Commercial Director of I.C.I. (India) Ltd., has been appointed a Director of the Alkali and Chemical Corporation of India Ltd. After obtaining a first class Honours Degree in Classics in 1938 from Cambridge University, Mr. Pitts joined I.C.I., Billingham, the same year and came to India in 1940. After the war, he returned to the Company in 1946 and served again in Bombay and Madras before joining the I.C.I. (India) Board in 1956.

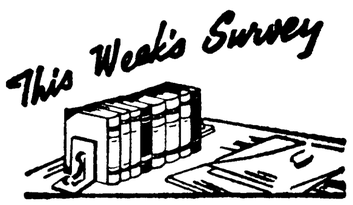
A three-man tribunal, appointed by the British Board of Trade, has rejected the plea of the plastics manufacturers for raising the existing import duty of 10 per cent. *ad valorem* on certain thermoplastic materials so as to bring into line with the 33⅓ per cent. key industry duty imposed on the imports of four polymers, namely, polythene, polyvinyl chloride, polystyrene and polymethyl methacrylate. The rejection is on the score that polymers are not synthetic organic chemicals and are therefore not entitled to the key industry duty.

The U.K.'s sterling debts to foreign countries and international organisations as on 30th September 1958 amounted to £3.902 million, precisely the same figure as at the end of June last, and £123 million less as compared with 30th September 1957. The aggregate sterling holdings of other sterling area countries fell by £44 million to £2,580 million in the third quarter of the year, of the colonies by £11 million and of other countries by £33 million. The holdings of non-sterling countries, however, rose by £39 million, as also those of the O.E.E.C. countries by £44 million.

Discussions are in progress regarding the offer of share exchange to be made by the Hongkong and Shanghai Banking Corporation for the capital of the Mercantile Bank. The Mercantile Bank, formerly known as the Mercantile Bank of India, has a paid-up capital of £2.94 million in shares of £1 each and the Hongkong and Shanghai Bank's authorised and issued capital is $50 million in shares of H.K. $125 each. Meanwhile, the Boards of Directors of both the Banks are meeting this week to discuss their intentions regarding the final dividends for the year 1958.

The U.K. has entered into a new trade agreement with New Zealand, under which the latter country will be allowed to lower substantially the preference margins enjoyed by the British exports in the New Zealand market. The new minimum preference margins will be 5 per cent. for such items as aircraft and engines, tractors, iron and steel products and uncompounded chemicals, 7½ per cent. on certain welfare and producer goods, including pharmaceuticals, a wide range of machinery and textile piecegoods and 10 per cent. on all other items. The U.K. will continue to enjoy preferences at the rate of 90 per cent. on the same volume of its trade as hitherto.

The U.K. Co-operatives' Special National Congress has approved of the setting up of a separate Co-operative Retail Development Society to establish national chains of specialist shops in certain dry goods trade, to provide expert technical services and advice on marketing techniques to retail societies, to act as a recognised channel of approach for societies needing capital for new large-scale development and to set up an economic "general staff" advising co-operative societies on where to enter new fields of trading. The capital expenditure involved is put at £200 million extending over a period of 10 years. The implementation of the measures is expected to double the share of co-operatives handling non-food trades and to raise its food trade by one-third during the next decade.



CONTRIBUTIONS TO POLITICAL PARTIES

DISCUSSION again took place last week in the Lok Sabha over the subject of contribution to political parties. A non-official Bill, which had been partly discussed at the last session and came up again for debate, stated that the contribution to political parties be limited to Rs. 5,000. Speaking on behalf of the Government, the Union Deputy Minister for Commerce and Industry, Mr. Satish Chandra Gupta, gave the assurance that, when the proposed comprehensive Bill on Company Law Amendment was brought before the House, suitable amendment would be included in it to ensure that contributions to political parties by companies should be shown in their profit and loss accounts. He recalled that the judgments of the Calcutta and Bombay High Courts had generally upheld the legality of the companies' contributions to political parties; only, they had stressed that no secrecy should be attached to these contributions and that they should be published. He further stated that the Viswanath Sastri Committee, to which the question had been specifically referred, had also expressed the view that companies should mention their contribution to political parties in their accounts.

The Minister's assurance that this recommendation would be implemented through a suitable amendment to the Company Law should allay the fears of some political parties that corporate enterprises might sway political opinion too far on their side. Actually, the private sector has little to be thankful for in the Government's present economic policy. It is idle to suggest that they have in any way tried to influence political parties. Indeed, it could be more justly argued that they could and should help develop a genuine rightist party, wedded to democratic and welfare ideals. However, the present move to restrict companies' contributions to political parties does not stem from any great devotion to democratic way of life, considering that it has been supported by political parties which have shown scant regard for democracy. Mr. Satish Chandra rightly suggested that the fact that a similar Bill had already been debated in Parliament on two previous occasions "would go to show that this subject matter is being utilised to the fullest extent to cast all sorts of aspersions on Government." He added: "I am sure that candidate for candidate the expenditure incurred by the Congress Party during the elections is much less than what was incurred by any other political party or independents. That is an unchallengeable statement."

There is no doubt that the Congress has never been influenced by its patrons. Its financial record, as the Minister pointed out, is a public document, whereas other parties have never disclosed their accounts. In fact, a public enquiry into the finances of all parties would throw much light on the way some of them are able to get the money they need. In particular, it would be interesting to know how a foreign country is able to publish attractively got-up literature at amazingly low prices and what happens to the sale proceeds of this well printed nonsense. The finances of some political parties in this country are still shrouded in mystery, or to vary the metaphor, hidden behind the most impervious of iron curtains.

TRACTORS

The Defence Ministry is busy beating the sword into the ploughshare. Under an agreement concluded between the Government of India and the Japanese firm, Kamatsu, the latter will enable the ordnance factories under the Defence Ministry to undertake the manufacture of tractors. Actual production is expected to start during the period 1959-62. According to a statement made by the Deputy Minister of Defence, Mr. K. Raghuramiah, in the Lok Sabha last week, the question of manufacturing various types of earthmoving equipment is under the consideration of the Government, though only tractors will be taken up in the first instance. The Japanese firm, he said, had agreed that tractors produced in India could be exported abroad, subject to payment of royalty. The Indian ordnance factories would need additional equipment valued at Rs. 40 lakhs for purposes of producing the tractors. The Minister envisaged a saving of Rs. 110 lakhs a year in the next four or five years as a result of the tractor manufacturing programme undertaken by the Defence Ministry.

Some interesting issues were raised in the Lok Sabha over the new agreement. The Government was asked why it had sent its team of engineers to Japan after (instead of before) the conclusion of the agreement. The Minister, in the course of his unconvincing reply, stated that an American firm with which it had negotiated for long finally broke away on the ground that it would not be able to work with Government-owned factories. This does not answer the question why the Government rushed into an agreement with Japan before undertaking an on-the-spot investigation in Japan by its own technical men. Again, the Government was asked whether the Food and Agriculture Ministry had been consulted. All that the Minister could say was that the Ministry concerned in this matter was the Commerce and Industry Ministry which had been consulted. It is not clear why the Agriculture and Irrigation and Power Ministries were not consulted, considering that they are also directly concerned in the manufacture of tractors.

A few important issues still remain to be settled. It is not clear what equipment other than tractors will be manufactured under the agreement. A report from New Delhi suggests that the ordnance factories will produce, besides tractors, bulldozers, scrapers and motor grader sets. Not all this machinery can be regarded as military equipment. In a larger sense, anything can be treated as of military value, from a pin to an atomic ship. There is no compelling reason why the Defence Ministry should spend its time, energy and resources on producing all it wants or may want in a time of emergency. It is no part of the Defence Ministry's job to carve out an economic empire for itself. It is true that the Industrial Policy Resolution reserves for the State sector the item entitled "arms and ammunition and allied items of defence equipment." But this item must be interpreted from a strategic, rather than an ideological, angle. Why should the Defence Ministry burden itself with industrial administration through extension of its activities into fields reserved for the private sector, such as motor transport and other equipment? The least the Government should do is to consult the private sector which has already some capacity and equipment for producing tractors and earthmoving equipment before it finalises the blue-print for its programme for manufacturing similar equipment. By dissipating its energies through undertaking an overambitious industrial programme, the Defence Ministry may conceivably find itself less able to perform its more legitimate functions.

MONOPOLY IN BUSINESS

It is regrettable that some politicians continue to take delight in urging the Government of India to adopt measures to restrict the powers and activities of "monopolistic concerns." They are not confined to the purely leftist parties but include also a few Congress men. Actually, a Communist member from Andhra Pradesh, Dr. R. B. Gour, moved in the Rajya Sabha on Saturday last a resolution pleading for the appointment of a committee of Members of Parliament to suggest measures for curbing monopolistic trends in the economy. The House did well to reject the resolution. The credit for this must go to Mr. B. M. Chinai, a Congress member from Bombay, and Mr. Manubhai Shah, Union Minister for Industry, who it was that ably and convincingly sought to explain as to why the resolution could not be accepted.

Moving the resolution, Dr. Gour declared that:

"Despite the directive principle of policy calling for prevention of concentration of wealth in a few hands and the adoption by the Government of a socialistic pattern of society as its goal, there is an unmistakable tendency towards concentration of the means of production in fewer hands. A tendency to eliminate competition at the marketing stage is also discernible. The existence of company law curbing managing agency does not materially change the situation. Such curbs are avoided by owners dividing assets among their family members. There is a strong case for the investigation of the whole matter."

The resolution was supported, as is only to be expected, by other Communist members. One of them pointed out, for instance, that 72 per cent. of Rs. 100 crores invested in the tea industry was held by a few non-Indian concerns. Another member cited the instance of cigarette manufacturers. He said that the bulk of virginia tobacco grown in Andhra was purchased by a foreign concern which dictated the price the cultivators must accept and that this concern was controlling supplies to tobacco manufacturing concerns.

The charge levelled by the Communist members that the problem of monopoly in business is very much there and that it will grow more serious in future is clearly exaggerated. In none of the major industries such as textiles, sugar or cement, as Mr. Chinai stated, is there domination of any unit by one particular group and the Government has powers to control and regulate prices and distribution of several commodities. If those who have exaggerated fears of monopoly in business were to peruse carefully the series of provisions in the Industries Development and Regulation Act, they would realise that the Act confers wide powers on the Government to regulate industrial activity.

The aforesaid Act and the series of legislative and executive instruments with which the Government has armed itself are actually hampering the progress of industries by scaring away capital and enterprise. In fact, private enterprise is groaning under the impact of official fiscal and economic policies based on highly ideological considerations. At any rate, the scope for monopolistic trends in business and industry is very limited. As Mr. Manubhai Shah pointed out, the Industries Development and Regulation Act enables the Government to take over concerns if they are found to be working to the detriment of the public; the Tariff Act vests the Government with power to control prices; the Indian Patents and Designs Act ensures proper utilisation of the best productive processes and prevents suppression of technological invention; the prices of consumer goods are kept under check by means of the Essential Commodities Act; and the Companies Act contains a whole string of provisions aimed at preventing anything like cartels. Mr. Shah revealed that, out of the 9,851 concerns, the number of companies managed by 17 managing agencies was just 270. "This shows," to quote him, "that the quantum of concentration is hardly 3 per cent. of the entire economic orbit. The Indian economy does not at all contain any large monopoly combines nor will Parliament or Government tolerate such combination."

The foregoing account will show that the fears regarding monopolistic trends in business and industry are exaggerated. If, however, there is a trend towards concentration of economic power, it is largely due to the defective economic policy pursued by the Government. Again, a considerable element of monopoly, as Mr. Chinai pertinently said, is prevailing in the public sector through institutions such as the Life Insurance and State Trading Corporations.

CO-OPERATIVE MOVEMENT

Some interesting and useful suggestions were put forward by the State Registrars of Co-operative Societies at a meeting convened recently by the Union Ministry of Food and Agriculture. One of them related to training. The Registrars urged the Reserve Bank of India and the All-India Co-operative Union to make arrangements for accelerating the pace of training and enlarging the number of trained co-operators. This is certainly a very important recommendation the implementation of which is particularly necessary, considering that many sections of opinion favour the Co-operative Movement being free from official control and supervision. If the Movement is to develop speedily and fulfil the objectives set before it, it is imperative that there should be an adequate number of people properly trained to carry out the co-operative development programme.

Another important recommendation made by the State Registrars was that the programme of co-operative marketing, processing and storage should be accelerated very considerably in the year 1959-60 itself. The recommendation assumes great significance in the context of the targets to raise the membership of primary societies and enlarge the supply of credit. The Registrars rightly stressed the need for additional allotment of funds, as well as simplification of the present procedure governing the registration of societies and grant of loans. It is the State Governments which should, as the Registrars aptly stated, decide for themselves how best the existing laws and procedures could be simplified to suit local conditions and needs.

The question of co-ordinating *taccavi* loans with co-operative credit figured prominently in the discussions at the meeting of the Registrars and three notable conclusions emerged from these discussions. First, distress *taccavi* should be given by Government and this should not come under the purview of co-operative credit. Secondly, the amount of production *taccavi* should be placed at the disposal of co-operative financing agencies. Thirdly, the loans should be issued by the co-operatives to cultivators as co-operative loans and the co-operatives should charge a uniform pooled rate of interest to all borrowers who must be recommended by the society.

The State Registrars noted the importance attached by the National Development Council to the role of co-operative marketing societies in stabilising prices and to the linking of marketing with credit in the expansion of credit facilities. The two specific proposals made in this regard cover appointment of the existing 1,000 co-operative marketing societies as procurement agents of the Government for the area in which they operate and extension of the programme of co-operative processing, particularly in the sphere of food crops. The Registrars urged that all future licensing of processing of food crops should be in favour of co-operatives. They recommended the grant of subsidies to co-operative processing societies (other than sugar co-operatives) for employment of managerial and technical staff, the subsidies being admissible to both marketing-*cum*-processing and separate processing societies.

As regards co-operative farming, the Registrars considered the requirements of societies such as short-term credit, provision of block capital, and assistance for technical and managerial staff. For purposes of short-term credit, it was felt that the co-operative farming societies should be treated on a par with the credit societies, while, in the case of medium-term loans for block capital, the State Governments might undertake to guarantee a certain percentage of the losses arising from loans advanced by the central co-operative banks. Alluding to the assistance for technical and managerial staff, the Registrars stated that such should be provided and, even in the initial stages, subsidies must be given to meet the full cost of the managerial staff and for training of personnel by the Government. In other words, they wanted more spoon-feeding for the Movement.

MYSORE LAND REFORMS BILL

In a spirit of out-heroding Herod, the Mysore Government has built in more "socialism" into its Land Reforms Bill than what its counterpart in neighbouring Andhra Pradesh has attempted. Thus, while the Andhra Pradesh Ceiling on Holdings Bill prescribes a ceiling of 4½ times "family holdings," giving a maximum net annual return of Rs. 5,400 to existing holders, the Mysore Bill seeks to fix the ceiling at a mere three family holdings, giving a net return of Rs. 3,600 for a family of five members. Land in excess of the ceiling shall be taken over by the Government on payment of compensation and distributed among the landless. While the ownership rights of about 2,500,000 acres will be transferred to the tenants under the provisions of the Bill, we are told that hardly 200,000 acres of surplus land under personal cultivation are expected to be available for distribution. Clearly, our rural areas are not afflicted by the disease of "giganticism" in the sphere of land holdings to the extent the politicians would have us believe it is.

The Mysore Land Reforms Bill, which was introduced in the Legislative Assembly by Mr. Kadilal Manjappa, the Revenue Minister, is generally modelled on the recommendations of the Mysore Tenancy and Agricultural Land Laws Committee, presided over by Mr. B. D. Jatti, the present Chief Minister, with some changes effected in the light of suggestions made by the central committee on land reforms constituted by the Planning Commission. The Bill seeks to fix the ceiling limit on land holdings at three "family holdings." A family holding is defined as an area which, on an average, fetches a net income of Rs. 1,200 annually. Where the family of an owner or tenant consisting of more than five members is engaged in personal cultivation for every additional member in excess of five, one family holding may be held in addition, subject to the condition that the total held shall not exceed nine family holdings in the case of an *Alia Santhana* family and six in the case of other families. The ceiling will not apply to plantations, orchards consisting of reasonably compact areas, specialised farms set apart for cattle-breeding, dairying, wool-raising, etc. Sugarcane farms owned by sugar factories, and efficiently managed farms which consist of blocks whose break up is likely to lead to a fall in production, are exempted from the ceiling. The ceiling will apply to future acquisitions also.

Land in excess of the ceiling shall be surrendered to the State. The total extent of land leased out to tenants is 6,140,000 acres. The ownership of about 2,500,000 acres will be transferred to the tenants under the provisions of the Bill. The compensation payable will amount to Rs. 37.50 crores at an average of Rs. 150 per acre. The Bill provides for the recovery of compensation from all tenants in 20 annual instalments with interest at 4½ per cent. per annum. Compensation to landowners is payable in instalments spread over 20 years or in the shape of negotiable bonds carrying interest at 4½ per cent. and redeemable over a period of 20 years. In the case of lands owned by religious and charitable trusts and institutions, universities, educational trusts, etc., the compensation recovered from the tenants will be retained by the Government and non-redeemable and non-negotiable bonds, carrying interest at 5 per cent. per annum, will be issued

Some of the other salient features of the Bill are as follows:

(1) In future, leases will be permitted only in respect of lands held by persons suffering from some disability or persons serving in the armed forces or persons whose holding does not exceed a basic holding; (2) in respect of lands leased out at the commencement of the Act, the right of resumption is generally regulated in such a way that a tenant is left with a part of the holding, except where the land leased out is itself less than a basic holding and cannot be sub-divided; (3) the rate of rent will be one-fourth of the gross produce in irrigated lands and one-fifth of the gross produce in the case of other lands, subject to the condition that the existing rents are not liable to enhancements; and (4) the extent of land which a landowner cannot resume for personal cultivation will vest in Government on a notified date and the tenants who are actually cultivating such lands will be given occupancy rights, subject to payment of 15 times the rent minus land revenue which amount will be paid to the owner as compensation.

According to the financial memorandum appended to the Bill, the Bill does not impose any additional burden on the finances of the State, except in respect of compensation payable to educational trusts and institutions, universities, religious and charitable trusts and institutions to which the State will have to pay interest at the rate of 5 per cent. on a sum of Rs. 37.50 lakhs which will work out to an annual recurring commitment of Rs. 1.87 lakhs.

The Bill contemplates the setting up of a Land Commission which will consist of a Judge of the High Court nominated by the State Government who shall be the Chairman of the Commission, two persons nominated by the State Government from among persons having special knowledge or practical experience in agriculture or land problems, one officer of the State Government having experience in land revenue administration and another officer of the State Government having expert knowledge in agriculture. The Commission shall determine the standard yield of each of the principal crops raised for each grade of each class of land in every local area specified. It is stated that 25 full-time land tribunals presided over by an officer of the status of Assistant Commissioner will be necessary for the entire State at the rate of one tribunal for each district, with the districts where the work is heavy having a second tribunal.

The foregoing account is an outline of the main provisions of the Bill. To take only one aspect for comment, namely, the compensation payable. It is common knowledge that, by an amendment to Article 32 of the Constitution, compensation has been made non-justiciable—that is, the Judiciary has no say in the matter. The Executive will determine what is fair compensation and get the sanction of Parliament or State Legislatures as the case may be. The pathetic condition of property owners in this country is that they have to look to the Government for justice in the fixation of compensation. The way the Congress Government purveys justice is evident from the Mysore Government's decision to fix the compensation for land in excess of the ceiling surrendered at about Rs. 150 per acre. This probably is the average of Rs. 100 per acre of dry land and Rs. 200 per acre of wet land. This is an absurdly low figure and bears no comparison with market rates. Can one get an acre of land for Rs. 150 in Mysore? Such arbitrary decision is nothing short of expropriation through legislation and will open the floodgates for Communism. The immediate result of the legislation will be a landslide in values with all the disastrous consequences it implies to the credit-worthiness of cultivators, on which hinges the whole of the Government's pet scheme of co-operative credit.

It would appear that, in their blind prejudice against all middlemen, irrespective of the economic functions they perform, the powers-that-be are not able, or unwilling, to distinguish between a *zamindar* and a landlord. The former might have acquired right over land by an accident of history. The tendency in vogue with the vast majority of populations is to equate the landlord with the *zamindar* and to think that his land dropped into his hand like the unexpected manna from fabled Olympus. The fact that it represents the savings of a lifetime of his father or of his grandfather, or of his own is conveniently overlooked. The Bill, if it comes into force, is sure to result in complete dislocation of rural economy. Production will certainly be the first casualty. It will aggravate the flow of savings and talent to urban centres to the detriment of agriculture.

Further, the Mysore Government's claim that the Bill does not involve any sizable financial outlay is a gross understatement. First, the Government itself has estimated that a total compensation of Rs. 37.5 crores will have to be paid in negotiable bonds, carrying interest at 4½ per cent. per annum. This straightaway adds to the indebtedness of the Government and reduces its capacity to borrow for other purposes. Secondly, it means, in effect, utilising current savings, of which there is no surplus, for implementing an unproductive ideological reform. Thirdly, since land is sought to be transferred to people of smaller or no resources at all, more agricultural credit will have to be created and channelled through institutional lenders. This, in turn, tantamounts to adding to inflationary forces in the country.

FRANCE AND FREE TRADE AREA

With barely three weeks for the Common Market of the Six in Western Europe to come into force, available indications suggest that the long-drawn-out negotiations for establishing a Free Trade Area have not been fruitful. France has rejected the concept of "Free Trade Area." It would appear that Germany has decided to follow the French lead. Last month (on 26th November) there was a meeting between General de Gaulle and the W. German Chancellor, Dr. Adenauer, at Bad Kreuznach, W. Germany. A *communique* issued after the meeting contained joint proposals for a "multilateral association," between the Common Market and other eleven members of the O.E.E.C. The cautious use of the word "multilateral association," instead of the Free Trade Area, apparently conveys, covertly or overtly, an impression that the latter concept, as upheld by the U.K. and others, has been conveniently set aside on the eve of the birth of a Common Market. The *communique*, at any rate, observed that co-operation between the "Six" (Common Market countries, namely, France, W. Germany, Italy and Benelux countries) in no way contradicted co-operation between themselves and other European States. At the time of writing, these proposals are under consideration by the other Common Market countries at their Ministerial Council meeting at Brussels. In all probability, the proposal for a new "association" is bound to find favour with the other countries of the Community.

It would appear that the Six, particularly France, feel reluctant to make any categorical declaration as to the setting up of an "association," with the express purpose of avoiding discriminatory commercial policies among O.E.E.C. countries. On the contrary, the French thesis is that the discrimination is inevitable between members and non-members of the Community and that there can be no firm undertaking to accept at this stage a multilateral association between the Six and their neighbours, as desired by the latter. This thesis is gaining ground, with Germany having been won over in its favour. Germany, it is understood, also accepted interim proposals, which represent France's maximum concessions. They include an overall 10 per cent. reduction in tariffs by the Six towards all members of the General Agreement on Tariffs and Trade, extension of the 20 per cent. increase in quotas agreed to under the Rome Treaty to all members of the O.E.E.C.—of course, applicable only to selected sectors of imports—and the restriction of the Rome Treaty obligation for increasing quotas to three per cent. of national production to the signatories of the Treaty alone. It is also learnt that France will agree to the liberalisation of tariffs by the Six to the extent of 50 per cent., and not 75 per cent. as required of France under the O.E.E.C. Code.

LONDON LETTERS

BRIDGING THE GAP

From Our Own Correspondent

LONDON, 24*th November*

THE British Government has been far more worried than appeared publicly about the complete breakdown of the negotiations for a Free Trade Area in Europe. The Common Market countries were accused of discrimination: they were tearing up G.A.T.T.—which requires countries to extend most-favoured-nation treatment to all its members, i.e., a tariff reduction to one should mean a tariff reduction to all. They were destroying N.A.T.O., in which many see an economic future overriding the military present. Above all, they were disintegrating the O.E.E.C., for it could not survive in two European camps. It was, in short, utterly selfish for the six countries to seek to improve their own position at such a cost to the whole European community.

These accusations fell on sympathetic ears in Belgium, Holland and West Germany, the most all-European minded of the Common Market countries. Indeed, had these countries been charged with the Free Trade Area negotiations, they would never have broken down in the dramatic way they did. But they would not let France down in her battle with Britain. Nevertheless, they would do their utmost to bring about a *rapprochement*.

Their spokesman, Western Germany, would discuss the problem with France at top level and seek somehow to bridge the gap between the Common Market and Britain's concept of a Free Trade Area, all in the interests of European unity. The Belgians had already suggested that the blow of the entry into force of the Common Market on 1st January should be softened by extending the first round of tariff reductions due that day to all the O.E.E.C. countries.

The position now looks as if it will develop as follows:

1. The Common Market will definitely come into operation on 1st January. On that day, a tariff reduction, expected to be 10 per cent., will be made by all the Common Market countries to each other on all goods crossing their common frontiers. Quotas, where they exist, will be increased mutually.

2. The Free Trade Area is for the time being dead. There will be none such on 1st January. The British Government's proposal for a Free Trade Area sharing all the tariff and quota benefits of the Common Market has been too well knocked down by the French to be stood up again just yet.

3. Behind the scenes negotiations will continue first among the Common Market countries themselves and later with Britain to see to what extent some sort of Free Trade Area concept can be reborn—in other words, to preserve some sort of common economic interest among the whole of the O.E.E.C. countries.

There is thus a year of grace in which negotiations can continue before the next round of Common Market tariff reductions is due. A year in which Britain also will be busy rethinking. Such re-thinking is most essential, since the Common Market can hardly go on extending its trade concessions to the other O.E.E.C. countries without a full measure of reciprocity.

CAPITALISTS ALL

LONDON, 29*th November*

The U.K. Government believes that the answer to Socialism is to make everybody capitalists. It is encouraging house-owning by offering unlimited money to the building societies at half per cent. less than the mortgage rate recommended by the Building Societies Association (this half per cent. will be their turn on re-lending) and requiring them to lend up to 95 per cent. of the purchase price of any properly constructed building no matter how old. So that even a house costing £3,000 can be bought by the working man for only £150 down.

But what the Government has been really after is offering industrial ownership to the working man. It has long been possible to buy Government stocks across the Post Office counter, but it is not so easy to extend such a simple principle to industrial stocks. The would-be small investor does not want to incur brokerage costs, even if he knew what a broker was, how to find one, what to ask him for, when to hold and when to sell.

The unit trusts which spread investment over a wide range of industrial securities are an excellent way of risk spreading for the small man, but, even then, only for the small man who has some idea of what small investment is all about and does not mind watching booms and slumps with comparative equanimity. They do not yet mean anything to the working man. Nevertheless the offering of unit trust shares by banks across their counters—one of the latest forms of competitive service in which the Banks are indulging—will enormously widen interest in such investment by anyone having a bank account.

But finance houses have now hit on a new idea to make share buying even more attractive. One can buy a house by instalments, a motor car on hire-purchase—then why not stocks and shares? The first of these new adventures requires the buyer to put down only 25 per cent. and spread the balance of the price over a period. But what is it going to be like paying off the instalments of equity shares if the market is taking a nose dive?

The development dearest to the heart of big industry is to get workers to invest in shares in their own businesses. The idea which two firms have just put into practice is to form "shop" companies attached to the firms concerned. These tame companies will buy up on the market shares in all the firms in the scheme. Against these shares, they will issue new bearer shares and sell these bearer shares (carrying less stamp duty and no transfer charges) to the workpeople across the counter—either for cash or by weekly deductions from the pay packet. They will be prepared to buy the bearer shares back at any time, but, of course, at current market prices. Opinion is divided among observers about the wisdom of this development and proverbs are brought in for and against: "Do not invest your savings where you have already invested your job," say some and others reply, "Put all your eggs in one basket and watch the basket."

Meanwhile, one big new unit trust has just been formed with units priced as low as 10*s*. Two more are on the way, and the hire-purchase of these units is also being arranged. There is no doubt that it is being made as easy as possible for anyone to become a little capitalist, though the message has yet to be carried to the working man who must become convinced that it is in his interest to use his money in this way and submit himself to the risks of a Stock Market slump at the very time his own job may be endangered.—*All Rights Reserved.*

FOR INTERNATIONAL EXPERIENCE & SERVICE...

Fly to KARACHI by PIA *The airline for top-flight service*

PIA offers you more than speed and efficiency. It believes in offering you the ultimate in luxury air service. Its seasoned commanders, gracious and trained hostesses bring safety and grace in your air travel.

Immediate connections with PIA's luxurious Super Constellation flights on Tuesdays and Saturdays to TEHERAN, BAGHDAD, DAMASCUS, ROME, GENEVA and LONDON.

Stop-over en route at no extra fare.

Refreshments and full bar service (outside Prohibition Areas) on all flights.

Reserved Air Cargo Space is available on all PIA flights: fast transit and prompt delivery is assured.

AMERICAN LETTER

NEW HORIZONS IN WORLD TRADE

MR. B. K. NEHRU'S ADVICE TO AMERICANS

From Our Special Correspondent

NEW YORK, 19*th November*

ONE of the outstanding events of the week was the forty-fifth annual National Foreign Trade Convention held here at the Waldorf Astoria. It was attended by some 2,000 persons, bankers, industrialists, traders.

One of the most thought-provoking speeches was delivered on Tuesday by Mr. B. K. Nehru, Commissioner-General for Economic Affairs of the Government of India, Washington, D.C. He spoke on "New Horizons in International Trade." Instead of dwelling on the minor irritations" of foreign trade, he suggested that "it should be possible to raise the volume of foreign trade to heights hitherto unprecedented and undreamt of." This should be done, he said, by capital exports to economically underdeveloped countries which would raise the standard of living and create vast new demands.

"The major trading nations of the earth," he said, "are the highly industrialised trading nations of Western Europe and North America. In area and in numbers, these are a fraction of the earth's surface and represent a fraction of its population which is 2,700 million. The population of Western Europe," he added, "and of North America is no more than 450 million. Excluding for the moment the Communist world, the population of the non-industrialised non-Communist world consists of 1,200 million people."

"It might interest you to know," he said, "that American trade with the countries of South Asia which contains one-fourth of the world's population is exactly 2 per cent. of America's total foreign trade."

"The basic proposition I have to put to you," Mr. Nehru declared, "is that these 1,200 million people form an enormous and inadequately developed market for the goods that are produced in this country and in Western Europe and that, if this market could be developed even to a small extent, the effect on the volume of international trade would be stupendous."

"I suggest to you," he added, "that, if the productive capacity of India could be increased and the consequent purchasing power of the people of India could be increased to even a respectable fraction of that of the people of the United States, the entire manufacturing capacity of the motor-car industry, the steel industry and undoubtedly a large number of other industries would be kept fully employed for many years to come."

Mr. Nehru also touched on the anomaly of commodity surpluses. "It seems to me that it is illogical and meaningless to talk of a surplus of wheat while there are millions of human beings on the earth surface who do not have enough to eat. There is not a pint of milk that is surplus, while mothers have to put their babies to bed at night—hungry." He contended that "the problem is not a problem of the surplus of commodities; it is a problem of the deficiency of purchasing power."

"The game of international trade, however, soon comes to an end, as the British Prime Minister remarked not so long ago, if all the chips get centered on one side of the table. And the reason why we have this phenomenon of encumbering surpluses, when so many countries of Asia and Africa are so short of these very commodities is that these countries have too few chips with which to play the game," according to Mr. Nehru.

So far as the development of India is concerned, he said the immediate, as well as ultimate, increase in world trade depends entirely on the extent to which capital flows into the country.

On the subject of foreign-aid programmes, Mr. Nehru acknowledged, in part, the give-away character of some of them. He added: "They are based partly on moral reasons, for the human conscience is no longer prepared to tolerate the incredible discrepancies in material standards of living that exist between one part of the earth's surface and another."

He also submitted that these programmes are motivated, in part, by political reasons, which, in the "modern world, turn asunder, as it is, into opposing factions, have very considerable justification. These other objectives, sometimes cause considerable distortions in the distribution of aid," he maintained.

He characterised aid programmes which are designed for economic development as "very directly fruitful for both their immediate and ultimate effect is an increase in foreign trade for the benefit not only of the recipient but also of the donor. I would suggest to all those who are interested in the growth of international trade, that these foreign aid programmes should have their unstinted support."

The second and very important method of developing markets in the underdeveloped countries, Mr. Nehru pointed out, is through the investment of private capital. "I would suggest," he said "that the leaders of the business community take a greater interest than they have done so far in examining the possibilities of developing markets by setting up manufacturing enterprises where conditions are favourable—to the great good of foreign trade in general."

Mr. Nehru then spoke of "the problem of the fluctuation in commodities prices which still remains with us." He characterised it as "a major threat to the development and growth of international trade on a stable basis. Some form of stabilisation of these prices through the creation of buffer stocks or otherwise, is an urgent need, if foreign trade and economic activity is to develop on an even keel."

In conclusion, Mr. Nehru addressed himself to the subject of closing markets to products of the underdeveloped countries by reason of tariffs, quotas to protect home industries. He also pointed out that immigration laws prohibit a better distribution of labour into areas where they could be economically useful.

So far as the "unfair competition from cheap labour" is concerned, he said "the solution seems to be not in refusing to buy the products of so-called cheap labour, but in enabling wage rates in these countries to move up through the injection of more and more capital."

One of the basic characteristics which has made the United States great, Mr. Nehru contended, "is that the American people have always pushed back the frontier, territorial or other, which tended to limit the sphere of their activity. What I have suggested is that they now push back the frontier of international trade and open up for themselves and the world vast, unlimited new horizons. It may be that I have looked a bit too far beyond the immediate present, but the future, it is said, belongs to him who prepares for it."

I have devoted almost the entire "American Letter" of this issue to Mr. Nehru's remarks, because not only I, but most of the 1,000 people who heard it, regarded the speech as "constructive" and "significant" as well as "farseeing" and "analytical." It undoubtedly did some good.

Another speaker, Ambassador Howard Beale of Australia to the U.S., supported Mr. Nehru's comments on commodities. He urged suitable "multi-lateral arrangements to protect against violent price fluctuations." Underlying his remarks was "the proposition that we are at this moment engaged in World War III." He cited the various open declarations of economic war which had been made by Russian leaders. "The outcome could be just as disastrous as a shooting war," he declared, and he called for preparedness and understanding of what is at stake.—*All Rights Reserved.*

TREND OF BANKING AND MONEY IN BURMA

CREDIT RESTRICTIONS TIGHTENED BY RAISING RESERVE RATIO

THE Burmese economy is purely an agricultural one, depending, to a very large extent, on the production of rice, of which Burma was the world's largest exporter before the war. The fluctuations in the country's economy closely follow those in the rice crop from year to year. The partial failure of this crop due to drought conditions during the year 1957-58, for instance, caused a setback in the economy. The total outturn of paddy during the year suffered a drop of 19.1 per cent., that is, from 6.36 million tons to 5.15 million tons, with the result that exports of rice and rice products declined from 2.01 million tons to 1.65 million tons and foreign exchange earnings thereof from K.90.13 crores to K.71 crores, according to the annual report of the State Commercial Bank, Burma, for the year ended 30th June 1958.

The decline in rice exports brought in its wake an adverse trend in external payments position. This was accentuated by heavy payments which the country had to make for its imports during the year against licences issued previously. In order to arrest this trend and strengthen the foreign exchange reserves, the Government of Burma found it necessary to take various measures, including import restrictions. Fortunately, however, in spite of import restrictions, the State Commercial Bank's report adds, the prices of essential consumer goods, such as clothing and foodstuffs, continued to fall. This was partly due to the tightening of commercial bank credit by the Union Bank of Burma in the form of doubling the reserve ratios to be maintained by banks and partly on account of heavy arrivals of goods ordered abroad during the previous year. "In such ameliorating circumstances," the report goes on to point out, "the cost of living, as reflected in the consumers' average price index, showed some improvement."

Another step taken by the Government during the year to regulate the marketing of imported essential consumer goods and to check excess profiteering by private importers was the creation of more joint venture corporations to share with the existing corporations the monopoly for the import of essential consumer goods. The result was that the large body of one-time importers, now deprived of import licences, has had to adjust themselves to the new status of distributors and retailers. In short, commercial activity in Burma during 1957-58 was generally slack not only on account of the tight money conditions and restricted imports but also because of the fact that, with the advent of joint venture corporations, the business community was uncertain of their future and was, therefore, hesitant to part with its stocks.

In the monetary and banking field, there was an expansion in money supply and bank deposits during the year under review. The decline in money supply noted in the first half of 1957 persisted during the rest of the year, bringing it down from K.155.8 crores (as at the end of June 1957) to K.140.5 crores at the close of December. This decline was, however, confined to the private sector, where, due to heavy payments for imports, the money supply dropped substantially from K.135.1 crores in June 1957 to K.111.7 crores at the end of the year. The money supply in the Government sector, on the contrary, recorded an increase from K.20.7 crores to K.28.8 crores during this period. The general trend was reversed in the first half of 1958, the total money supply going up from K.140.5 crores to K.166.3 crores. There was expansion in both private and Government sectors, due to restrictive measures imposed on imports under O.G.L. towards the close of 1957 and curtailment of Government development expenditure abroad.

Deposits of commercial banks increased during the year from K.72.8 crores to K.85.8 crores, the greater part of this increase was accounted for by Public Law 480 funds transferred from the Union Bank of Burma to the State Commercial Bank. With a view to curbing further expansion of commercial bank credit, which was tending to exert an unhealthy influence on the money supply, the Union Bank of Burma required all commercial banks to maintain the minimum reserves with it at double the then existing rates. The new rates are 16 per cent. of demand deposits and 6 per cent. of time deposits. As these minimum reserve ratios became effective from 31st August 1957, this measure to curb bank credit had its desired effect, bringing bank advances down by K.70 lakhs to K.25.90 crores as at the end of June 1958. The commercial banks' investments in Government securities were raised during the year by 83 per cent. to K.43.8 crores. At the same time, the reserves held by the banks in excess of the statutory minimum amounted to K.9.6 crores.

With funds available in the money market restricted, there was a general hardening of interest rates during the year. Inter-bank call money rate, which had stood at 1 per cent. in July 1957, rose to 1½ per cent. in August. In December last, it advanced sharply to 2½ per cent. and February this year witnessed a peak of 3¼ per cent., the highest on record in the monetary history of Burma. By April 1958, however, the rate rapidly declined to 1½ per cent. The minimum rates allowed by commercial banks on 6-month and 12-month deposits rose by ¼ per cent. in each case to ½ per cent. and ¾ per cent., respectively. The rate on 9-month deposits was, however, unchanged over the year at ¾ per cent. The maximum rate on both 6-month and 9-month deposits was steady at 2½ per cent., but that on 12 month deposits hardened from 3½ per cent. to 4 per cent. The minimum rate on savings bank deposits was raised by ¼ per cent. to 1 per cent.

The Government's borrowing rates were, however, unchanged at 1 per cent. against three-month Treasury Bills, 2½ per cent. against three-year Treasury Bonds, 3 per cent. against five-year Treasury Bonds and 3½ per cent. (compound interest) on 12-year savings certificates.

The Union Bank of Burma raised its rate of interest on advances to banks against Government securities from 2 per cent. to 3 per cent. in November 1957. Its rate of interest on advances against Trustee securities and Commercial paper was, however, unchanged at 3 per cent. throughout the year.

While there was practically no change in the minimum and maximum rates of interest as shown below, the actual rates charged by most banks were either the maximum or close to the maximum, due to the tightness in the money market.

The rates of interest charged by commercial banks on loans and advances covered by various types of security were as follows:

(Per cent. per annum)

Security	*Minimum*	*Maximum*
Stock Exchange securities ...	4	6½
Government securities and bullion	4	7
Title deeds of immovable property	4	9
Stock-in-trade	4	12
Gold ornaments and precious stones	4	9-12*
Unsecured	4	12

* Reduced to 9 per cent. in the last quarter of 1957.

The banking system in Burma has undergone vast changes in recent years. State-owned and State-operated banks, assisted by new legislation and regulations, have taken over many fields from the old-established British and other foreign banking institutions. The most important change was the setting up of the State Commercial Bank in 1954. The Bank came into being, because it was felt that the then existing British banks would not even provide adequate domestic service. Further, foreign banks, hampered by their inability to accept immovable property as security, concentrated on the import-export side of the business, which meant, in practice, confining their activities to Rangoon.

As at the end of June 1958, the deposits of the State Commercial Bank aggregated K.40.91 crores, having risen from K.23.55 crores a year before, and represented 48 per cent. of the total deposits of all commercial banks. Total advances and bills purchased and discounted were, however, unchanged at K.7.55 crores. The decline in import business is reflected in the fall in acceptances, endorsements, etc. from K.25.49 crores to K.9.88 crores. Investments stand strengthened from K.15.16 crores to K.28.51 crores and cash balances from K.6.93 crores to K.10.22 crores. The capital of the Bank is unchanged at K.2 crores, as against which the reserves amount to K.50 lakhs. The profit of the Bank for the year under review is a shade higher at K.1.22 crores (as against K.1.17 crores). After providing for taxation and setting aside K.15 lakhs to reserves and contingencies, the dividend has been stepped up from 10 per cent. to 12 per cent., which absorbs K.24 lakhs, leaving to be carried forward K.24.86 lakhs, including K.22.48 lakhs brought in from the previous year.

I.M.F. MISSION IN INDIA

A three-man mission of the International Monetary Fund has arrived in India for the usual annual consultations on economic matters with the Government of India and the Reserve Bank. The mission is headed by Mr. Richard B. Goode, Assistant Director of the Fund's Asian Department. The other members of the mission are Mr. N. A. Sarma, Chief of the South Asian Division of the Asian Department of the International Monetary Fund and Mr. Roland Kalivoda, an economist of the Fund.

The mission is now holding discussions with the Reserve Bank of India at Bombay (from 1st to 6th December) and will thereafter visit New Delhi for consultations with the Government of India. During their 10 days' stay in the capital, members of the mission will hold discussions with officials of the various Ministries including Finance, Commerce and Industry, Food and Agriculture, Labour and Employment and officials of the Planning Commission.

Under the Articles of Agreement of the Fund, member-countries who maintain exchange restrictions on payments and transfers for current international transactions are required to hold annual consultations with the Fund either in Washington or in the country concerned. Last year, the consultations were held in India. This year again, these consultations with India are being held here.

CONVERSION OF HYDERABAD CURRENCY INTO INDIA GOVERNMENT CURRENCY

The facilities offered by the Government of India for the conversion of Hyderabad currency into Indian currency ceased on 31st December 1956. Since then, a number of applications have been received by the Central and State Governments and by the Reserve Bank of India and the State Bank of Hyderabad from the members of the public, especially belonging to the rural areas, for the exchange of Hyderabad currency on the ground that they were unaware of the time limit prescribed for the termination of the facilities. As the grievance appears to be genuine, the Government of India has decided to revive the exchange facilities on a selective basis for a further limited period. Under this scheme, which has come into effect on 1st December 1958, and will remain in force upto the 30th June 1959, holders of Hyderabad currency who desire to exchange their holdings will be required to submit their applications in triplicate, in the form prescribed for the purpose, to the nearest branch of the State Bank of Hyderabad. The application forms can be obtained from any branch of that Bank. The exchange will be effected by the State Bank of Hyderabad after obtaining the sanction of the Reserve Bank who will consider the applications on merits. As the facilities will be finally withdrawn on 30th June 1959, the holders should take advantage of this opportunity and get their holdings converted into Indian currency at the standard rate of exchange (India Government Rs. 100 equal to O.S. currency Rs. 116.10.8) as early as possible and within the prescribed time.

SUBSCRIPTIONS ARE INVITED FOR

	Amount of Issue	Issue Price
4½% 1966-73 - 15 years - -	Rs. 30 Lakhs	At par
4½% 1968-78 - 20 years - -	Rs. 50 Lakhs	99%

The Issue is open for subscription for one month from 28th November, 1958 and will be closed earlier when approximately the full amounts of the series are received.
"The Debentures are Trust Securities under the Indian Trusts Act and are also Approved Securities under the Insurance Act, 1938 and the Banking Companies Act of 1949. Separate Redemption Funds will be constituted to pay off each series of debentures on maturity."
Full amount has to be remitted with applications. Other particulars and application forms can be had from the Secretary or any Broker or Co-operative Central Banks in the State.
O. V. CHINNASWAMY,
Secretary.

He tears paper all day long!

HE'S not destructive by nature; it's his job to tear paper wrappers . . . *scientifically*, to test their strength.
Wrappers, containers, cartons and packing cases are subjected to exhaustive testing at Hindustan Lever! As for the products themselves—they are also constantly undergoing the most gruelling tests. From raw materials to finished product, experts, scientists and technicians are sampling and checking.
But why all this testing? Well, we know that you expect *unvarying* high quality of a Hindustan Lever product. The only way to maintain it is by quality control at every stage. This quality control also enables us to conserve precious national resources and vital production time.

PROTECTION TO SERICULTURE FOR FIVE MORE YEARS

PRODUCTION RISES, BUT QUALITY POOR

TO the long period of over 25 years' protection enjoyed by the sericulture industry, five more years have now been added. The Government of India has accepted the Tariff Commission's main recommendation to extend protection until the end of December 1963 at the existing rates of protective duty. (35 per cent. *ad valorem* plus a specific duty of Rs. 4 per lb. on raw silk and 35 per cent. *ad valorem* plus Rs. 5.28 per lb. on yarn spun from silk waste). On the face of it, the decision appears somewhat surprising. For, despite the protection for over a quarter of a century, the production of Indian raw silk has not increased to any significant extent and the quality has still not attained the grade of international standards, nor has the cost of production been brought down to the level at which foreign silk is imported in the country. The average fair ex-works price of raw silk produced in the country comes to Rs. 32 per lb., as against the landed cost (without duty) of Rs. 19.52 per lb. of white A grade raw silk imported from abroad. Moreover, the incidence of competition from imported raw silk is not much, thanks to quantitative regulation of imports and their controlled distribution. Nevertheless, the Tariff Commission points out that there is a *prima facie* case for continuance of protection so long as the main objectives of protection are not accomplished.

Two considerations have weighed with the Commission in recommending extension of protection to the sericulture industry. First, looking to the progress which other countries like Japan and China have achieved in the past, there is no reason why the industry in India should not succeed in its efforts to increase its output and thereby bring down the cost of production. The Commission is also of the opinion that the quality of Indian silk can be improved, with the financial and technical assistance now being made available to the industry in a large measure. It is estimated that a sum of Rs. 2 crores has been spent on implementing the various development schemes during the two years 1956-57 and 1957-58 and another Rs. 2.83 crores are to be spent in the subsequent three years. Secondly, the withdrawal of protection at this juncture will cause a setback to sericulture, especially when various schemes for its development are in progress.

Previous Enquiries

The sericulture industry was first granted protection in 1934 on the recommendation of the former Tariff Board. Subsequently, four tariff enquiries were undertaken—three by the Board in 1938, 1948 and 1951 and one by the Commission in 1953. In its report submitted to the Government on 4th July 1953, the Commission suggested continuance of protection for a further term of five years, that is, till 31st December 1958, and reduction in the rate of protective duty from the then existing levels to 30 per cent. *ad valorem* (exclusive of surcharge) on raw silk and silk cocoons, silk yarn (including thrown silk warps), yarn spun from silk waste, and silk fabrics. The Government accepted the former suggestion but rejected the latter.

Since the last enquiry in 1953, the sericulture industry, it is stated, has achieved a measure of progress. The total production of raw silk has gone up from 2,488,000 lbs. in 1953 to 3,138,000 lbs. in 1958, representing a rise of about 26 per cent. The improvement has been shared by both mulberry and non-mulberry silks, as the following table shows:

(In thousand lbs.)

	1957	1956	1953
Raw silk:			
Mulberry filature	296	320	285
Mulberry charkha	2,180	1,991	1,683
Total	2,476	2,311	1,968
Non-mulberry *Tassar*	315	284	276
Non-mulberry *Eri*	167	138	113
Non-mulberry *Muga*	190	185	159
Total	662	607	520
Total raw silk	3,138	2,918	2,488
Silk waste:			
Mulberry	1,168	1,142	955
Non-mulberry	567	597	493
Total	1,735	1,739	1,448
Spun silk yarn*	65	63	40
Noil yarn	59	46	61

* The Mysore Spun Silk Mills Ltd., Channapatna, is the only unit producing spun silk yarn.

It will be seen from the above figures that the output of filature raw silk has increased in absolute terms from 285,000 lbs. in 1953 to 296,000 lbs. in 1957, but the ratio of this silk to the total mulberry raw silk has dropped from 14 per cent. to 12 per cent. While on filature silk, the Tariff Commission has recommended that, so long as the present installed capacity of silk filatures in the States of Mysore and Kashmir are not fully utilised, no new capacity should be licensed. The trend of silk waste production has been more or less similar to that of raw silk. The percentage output of silk waste per lb. of mulberry raw silk, which had declined from 48.5 in 1953 to 46.6 in 1954, has since been moving up, the figure for 1957 being 47.2.

Raw Silk and Silk Waste

An idea of the production of raw silk and silk waste in the different States during the year 1957 can be had from the following statement:

	Mulberry sector		Non-mulberry silk	Silk waste
	Filature silk	Charkha silk		
Mysore	150	1,715	..	841*
Jammu and Kashmir	144	..	..	115*
W. Bengal	..	412	13	214*†
Punjab	..	21	..	..
Assam	..	28	315	409‡
Bihar	..	2	148	93‡
U.P.	2	..	..	..
Andhra Pradesh	..	2	..	..
Madhya Pradesh	..	..	150	50‡
Orissa	..	..	36	13‡
Total	296	2,180	662	1,735

* Mulberry silk waste.
† Includes 150,000 lbs. of non-mulberry silk waste.
‡ Non-mulberry silk waste.

Sericulture is at present carried on in 16 States, but, only in four States, namely, Mysore, West Bengal, Jammu and Kashmir and Assam, it forms a major occupation of a section of their population. Among them, Mysore State alone produces about 60 per cent. of the total output of raw silk in the country. In Mysore, West Bengal, Jammu and Kashmir, Madras, Punjab and Himachal Pradesh, production of silk is mainly of mulberry type, while in the States of Assam, Bihar, Manipur, Madhya Pradesh and Orissa, sericulture is largely of non-mulberry type. In Kerala, Tripura and Bombay, sericulture has been introduced only recently.

The total area under mulberry cultivation in Mysore State has risen steadily in recent years; it was 155,000 acres (including 25,000 acres in Kollegal area transferred from the former Madras State) in 1956-57, as against 110,000 acres in 1951-52. The average yield of mulberry leaves has also improved by 40 per cent. generally and by 50 per cent. from 14,000 lbs. to 21,000 lbs.) in Government institutions. The area under mulberry cultivation has increased in West Bengal also, from 11,850 acres in 1953 to 14,000 acres in 1957. The entire mulberry plantation in Jammu and Kashmir is of the tree type. The number of trees in 1956-57 was 2.20 million, which compares favourably with 1.75 million in 1952. The number of mulberry trees in the Punjab in 1957 was 150,000, the average yield in a well-matured tree being 60 lbs.

The cost of mulberry leaf, it may be noted here, accounts for about 60 per cent. of the cost of cocoons. Efforts have been directed to reduce the cost by improving the yield and quality of mulberry leaf through the introduction of improved grafts in the place of existing mulberry. The Tariff Commission has done well to urge the State Governments to take steps for better coordination between their Agricultural and Sericultural Departments in the work of replanting mulberry by improved grafts. The Commission has also done well to emphasise the need for giving constant attention and care to the rearing of silk-worms, including seed and cocoon production. Special mention is made of the importance of distributing only examined seeds for industrial rearing; maintaining improved stock of silkworm by selection of cocoons and moths used for seed production; and cross-breeding and selecting the silk-worm races which can be acclimatised in the temperate and tropical regions. In this connection, the Tariff Commission has put forward the following four notable suggestions:

(1) All sericultural States should give high priority to the setting up of necessary organisation for production and distribution of disease-free layings through Government and aided grainages to meet the full requirements of silk-worm seeds in their areas.

(2) The Central Silk Board should give the highest priority to its scheme for the organisation for silk-worm seed production and take appropriate steps for establishing the Central Foreign Race Seed Station as early as possible. The Board should also see that the State Governments establish matching organisations in their respective areas for the evolution of suitable cross-breed races and take appropriate steps for their rearing on a commercial scale.

(3) The suggestions of the Japanese experts, Dr. Y. Tazima and Mr. S. Karasawa, with regard to rearing of silk-worms with a view to producing cocoons of better quality should be carefully considered by the Central Silk Board and the State Governments concerned and implemented as far as possible, having regard to the local conditions of each sericultural region.

(4) The State Governments should take positive steps to encourage formation of rearers' co-operative societies for *chowki* rearing and for marketing of cocoons.

The Government of India has taken note of these suggestions and steps, we are told, will be taken to secure their implementation "to the extent possible." The Government has also accepted the Commission's proposal for continuing the present concession of duty-free imports of silk-worm seed.

Silk Weaving

A brief reference may now be made to the latest position regarding the silk weaving industry. There are at present 8,306 powerlooms and 106,146 handlooms engaged exclusively or mostly on weaving of silk fabrics. The actual production is at an annual rate of 23.4 million yards. The table below shows the State-wise distribution of looms and date of output:

	No. of looms		Annual production (thousand yards)		
	Power-looms	Hand-looms	Power-looms	Hand-looms	Total
Mysore*	8,000	7,634	3,600	4,000	7,600
W. Bengal	Nil	4,000	Nil	2,280	2,280
Jammu and Kashmir	150	912	400	1,150	1,550
Assam	Nil	34,000	Nil	1,600	1,600
Bihar	25	1,000	144	684	828
Madras	Nil	25,784	Nil	2,190	2,190
Bombay	109	N.A.	430	N.A.	430
U.P.	22	25,000	100	4,600	4,700
Orissa	Nil	4,000	Nil	528	528
Andhra Pradesh†	Nil	2,500	Nil	757	757
Madhya Pradesh‡	Nil	1,316	Nil	985	985
Total	8,306	106,146	4,674	18,774	23,448

* The looms are engaged in art silk also.
† Few of the looms use power.
‡ The looms weave *Tassar* silk fabrics.

The Tariff Commission has estimated the current demand for raw silk of all types at about 4.0 million lbs. per annum and for spun silk yarn at 200,000 lbs., as against 3.5 million lbs. and 150,000 lbs., respectively, in 1953. The Commission feels that, so long as the price of raw silk remains high at the prevailing level, the domestic demand will not exceed 4.0 million lbs. in the next three or four years. The demand, however, is likely to go up, if development schemes so far undertaken by the States tend to reduce the present high production cost and bring about a distinct improvement in the quality of filature raw silk. As regards silk fabrics, the Commission has not attempted to estimate either the current or the future demand; the demand had been estimated at 1.5 million lbs. in 1953.

The quality of raw silk produced, as stated at the outset, has not yet attained the grade of international standards. The average quality of the bulk of the raw silk produced in Mysore is said to be inferior, particularly in its evenness, when compared to the quality of imported silk. The quality of filature silk, it is stated, cannot be compared even to the D grade of imported raw silk. The silk can be used only for weft and not for warp, it contains slabs, and it is uneven in thickness and fluffy, resulting in the production of defective fabrics in more than one way. Indeed, it is said that consumers prefer imported silk even at a premium ranging from Rs. 2.80 to Rs. 10 per lb.

Drawing attention to these points, the Tariff Commission has called upon the Governments of Mysore and Kashmir to take appropriate steps to enforce compulsory testing of filature silk produced in their States. Further, it has asked the filature units to introduce immediately the system of grading cocoons and produce raw silk of different grades. According to the Commission, when new hybrid races are being produced, it is essential to standardise the cocoons by restricting industrial rearing to one or two races during one season so that silk of uniform quality can be produced. Unless these preparatory processes are brought up to a high standard of efficiency along with the modernisation of reeling equipment, the efforts for the improvement of quality of raw silk may not achieve the anticipated measure of success.

FALL IN TEXTILE EXPORT EARNINGS

MILLS TO SEEK OFFICIAL HELP TO SOLVE UNEMPLOYMENT PROBLEM

From A Special Correspondent

MANCHESTER, *25th November*

MANCHESTER LETTER

AFTER some months in which exports of Lancashire cotton goods have more than held their own against the rising tide of arrivals of similar products from foreign countries, October saw a sharp reversal of the situation. Fears have returned that the full figures for 1958 may barely show a balance in favour of Lancashire's exporters. For the 10 months, arrivals of all types of cotton cloth amounted to 314,530,000 square yards, as against shipments abroad of 323,259,000 square yards.

Imports during October exceeded comparable exports by more than 10,000,000 square yards, arrivals aggregating 37,933,000 square yards and outgoing cloth shipments 27,286,000 square yards. The main suppliers of grey cloth continue to be Hong Kong and India, each of which sent about 13,000,000 square yards. Over the ten-month period, Hong Kong has stepped up shipments from nearly 58,000,000 square yards to 89,346,000 square yards, while arrivals from India have dropped from almost 160,000,000 yards to 100,623,000 square yards.

Earnings from exports of cotton yarns and woven fabrics for the 10 months only just exceeded £60,000,000 and are now over £14,000,000 lower than at the same time a year ago. The cost of imports has declined slightly from £27,881,000 in the first 10 months last year to £26,306,000 in 1958. No substantial change has occurred in the sales to individual countries, although most of the major outlets show a slight decline in takings.

Cotton yarn exports in October reached the 2,000,000 lbs. mark, but, over the 10 months, they amounted to only 22,706,000 lbs., as against 32,037,000 lbs. in the same period last year. Australia and New Zealand have absorbed slightly larger quantities of Lancashire-made cotton yarn but much smaller supplies were sent to India, Nigeria and several European spinning centres.

Sudan Cotton Prices

Political and industrial developments often conflict in these days and almost invariably overlap. In the changed circumstances in the Sudan, there were doubts as to whether the new system of disposing of the local cotton crop by private as well as public auctions would be introduced as planned. In fact, the revised arrangements have proceeded relatively smoothly. Sharp cuts in the reserve prices at the outset of the readjustment were followed by similar reductions in spot rates in Liverpool and in the quotations for yarn spun from these qualities. Some of these amounted to as much as 5d. per lb. and, as has frequently been the case in the past, the finer counts were chiefly involved.

During the past 15 months or so, the price situation affecting Sudan cotton and equivalent yarns spun in Lancashire has undergone a marked change. The downward trend which has occurred since the beginning of the 1957-58 cotton season is portrayed in the following table:

(In *d.* per lb.)

Date	Liverpool spot: Sudan Sakel C6	Liverpool spot: Sudan Lambert 6	Yarn quotations: 60s Carded Twist	Yarn quotations: 80s Combed Twist	Yarn quotations: 2/100s Combed Bundles
1957					
Aug. 1..	44.25	41.75	87.75	120.50	208.75
Nov. 22..	37.00	34.00	78.75	110.75	196.50
1958					
Jan. 2..	36.50	34.00	79.00	110.75	196.00
Apr. 1..	34.00	32.00	77.75	106.25	188.25
July 1..	32.50	31.60	76.75	106.00	187.50
Sept. 1..	31.50	30.60	75.75	103.50	184.50
Oct. 1..	31.50	30.35	75.75	103.50	184.50
Nov. 3..	30.50	30.00	75.75	103.75	183.25
" 14..	30.50	29.25	75.75	103.75	183.25
" 21..	27.90	27.90	74.50	99.25	178.50

As usual in a falling market, the tendency has been for users to hold off in the hopes of obtaining even more favourable terms as time goes on. This has been the basic influence affecting the activities of customers for at least the period covered by the above figures. The experience of spinners and manufacturers of fine goods has been far less satisfactory than the state of trade encountered in other branches—bad as that has often been.

Aid for Jobless

More financial help from the Government to help to ease the growing problem of unemployment in Lancashire is to be sought by industry leaders. The General Council of the Lancashire and Merseyside Industrial Development Association decided in Manchester this week to urge the President of the Board of Trade, Sir David Eccles, to amend the Distribution of Industry (Industrial Finance) Act, 1958, so that firms in more Lancashire towns hard hit by unemployment can secure financial aid to build extensions or buy new machines. A spokesman said after the meeting that the present basis for financial aid was a figure of 4 per cent. wholly unemployed in an area for a period of 12 months. The Association wanted this altered, so that firms qualified in areas where the number of workers temporarily stopped brought the unemployed figure above 4 per cent.

Mr. G. F. S. Ritson, Director of the Association, said: "We want to see more help for towns like Bolton, Oldham, Rochdale, Blackburn and others in North-East Lancashire, where the employment situation is difficult and where the bulk of workers affected are only on short time. This means that firms in these areas just cannot get financial aid."

Lancashire M.Ps are to meet the Prime Minister next week to discuss the problems caused by the shrinkage of the cotton textile industry and the Association plans to ask them to raise the question of financial help with Mr. Macmillan. It is also intended to ask the new Parliamentary Secretary to the Board of Trade, Mr. J. C. Rodgers, to meet the Association to discuss Lancashire's employment problems.

Japanese Tour

Members of a Japanese trade mission now touring Europe met leaders of the Manchester Chamber of Commerce for an exchange of views on mutual trading problems when they visited the centre of the Lancashire cotton trade last week. Informal talks took place on topics connected with the textile industry and also the importation of canned food into the United Kingdom. The delegation's visit was brief and did not allow the Japanese to see a cotton mill, but trade problems were under review, including the operation of the Design Centre established by Japan in 1955. The visitors saw the British Cotton Board's Colour, Design and Style Centre and inspected an exhibition of men's wear fabrics on show there.

Mr. Kureo Sasabe, President of the Nagoya Chamber of Commerce and Industry, leader of the delegation, said: "In our talks with the President and members of the Manchester Chamber of Commerce, we agreed that there were many difficulties facing both countries in the textile field in the future. We felt that we should co-operate to help each other." Mr. Moriyuki Shirakawa, Director of the Toyo Spinning Company, said that the Japanese cotton industry was now working at only 70 per cent. of capacity. Severe cuts in output had been organised and competition was being met in South-East Asia, especially Indonesia. Chinese competition in Asiatic countries was growing and the Chinese cotton industry had the advantage of rapidly increasing production of raw cotton at its disposal whereas Japan had to import all her raw cotton supplies.

Trade Problems

The Economic Secretary to the Treasury, Mr. F. J. Erroll, spoke in Manchester last week about the problems facing British industries—not only the Lancashire cotton industry—as the newly developing countries expand their export trade. These problems will have to be faced, he said. To try to stop an increased flow of manufactured exports from the newly developing countries would have disastrous consequences for the free world in the long run.

Mr. Erroll was addressing the convocation of the Textile Institute. He said that the newly developing countries were claiming, and in many cases obtaining, an increasing share of world trade in textiles. That was a process that must go on; if these countries were to succeed in narrowing the wide gap between their standard of life and that of Western Europe or North America, they simply must be allowed to increase their export earnings.

Pointing out that the speeding up of technical change in the textile industry gave the more advanced industrial countries the opportunity of meeting the challenge of competition, Mr. Erroll said: "We in the United Kingdom should take the lead in this development as we did in the first technological revolution. So far as basic research in textiles is concerned we in Britain can, I think, reasonably claim that we lead the world.—*All Rights Reserved.*

EXTRA-LONG STAPLE COTTON

LARGER SUPPLY IN PROSPECT

EXTRA-LONG staple cotton, that is, cotton of staple length over 1⅛", being a class by itself, does not generally move in step with other staples in respect of trends in acreage, production, exports, prices, etc. The marked decline in production of extra-long staple cotton in 1953-54, as against the marked increase in other staples, the failure of extra-long staples to share in the general expansion of cotton consumption in recent years, lower exports in 1956-57, as against high level of exports in other staples and the marked rise in extra-long staple prices in 1956-57 when cotton prices were generally declining, all go to show that the factors which engender these trends are different from those which influence other staples. Fundamentally, these divergent movements between extra-long staples and other cottons reflect differences in supply and demand but the influencing factors may be, to some extent, autonomous by virtue of the greater concentration of production and consumption of the former in a relatively small number of countries.

The present extra-long staple cotton situation is one of surplus supplies. According to the International Cotton Advisory Committee, Washington, stocks are likely to be accentuated this season. The Committee estimates the stocks in producing countries on 1st August 1958 at 685,000 bales (of 478 lbs. each), same as those a year ago, but still the highest level since 1953. Based on the present offtake, these stocks represent over seven months' supply. The restoration of a fair degree of balance between production and offtake last season was, to all intents and purposes, fortuitous and mainly the result of crop failure in the Sudan. This brief respite appears to have been short-lived, for, as far as the 1958-59 season is concerned, stocks are on the high side, while the prospects are for a marked increase in production.

The following table indicates the supply position of extra-long staple cotton:

Supply Position of Extra-long Staples

(In 1,000 bales of 478 lbs.)

Country	1958-59	1957-58	1956-57	1955-56
Stocks, 1st August—				
Egypt	305	160	100	190
Sudan	240	430	185	280
Peru	10	10	10	15
United States ..	115	82	107	140
Others	13	10	8	6
Total ..	683	692	410	631
Production—				
Egypt	1,184	848	614	552
Sudan	450	165	554	390
Peru	105	90	108	70
United States ..	78	80	49	42
Others	33	33	29	31
Total ..	1,850	1,216	1,354	1,085
Supply—				
Egypt	1,489	1,008	714	742
Sudan	690	595	739	670
Peru	115	100	118	85
United States ..	192	112	156	182
Others	46	43	37	37
Total ..	2,532	1,858	1,764	1,716

The excess supply at the beginning of the present season was found mainly in Egypt, where stocks were nearly double that a year ago, despite a relatively high level of exports. Conversely, stocks in the Sudan were nearly halved but were probably somewhat above average holdings for that time of the year. The improvement in stock situation in Sudan was brought about mainly by the much smaller crop and, to a lesser extent, by increased exports. Stocks of American-Egyptian cotton in the United States on 1st August aggregated about 117,000 bales. Of this amount, the C.C.C. held 81,500 bales, including 41,000 bales being the balance of the 50,000 bales transferred from the stockpile at the beginning of the 1957-58 season, and the balance of the loan programmes for 1957 and earlier years.

Variations in stocks in Peru and several smaller producing countries are of little significance to the global situation. Peru, however, invariably exports all its production. Much the same is true of other countries like Aden, British W. Indies, Italian Somaliland and Israel.

Stocks in importing countries have declined from over half a million bales in 1954 to under 300,000 bales in the last two years, with most of the reduction in the U.K. and India. In addition, on 1st August 1958, there were 59,000 bales of Egyptian cotton and 19,000 bales of Peruvian cotton awaiting entry into the U.S. under the quota system and some 219,000 bales, principally Egyptian, sealed off in the U.S. stockpile built up from purchases made several years ago.

There is every chance that the area planted to extra-long staples in the free world will exceed 2 million acres this season. In Egypt alone, area is up by nearly a quarter of a million acres. Area devoted to the Karnak and Menoufi varieties has more than doubled in the last five seasons. Also, the pattern of production, variety-wise, has undergone a significant change during this period. In 1954-55, extra-long staples comprised roughly 37 per cent. of the total acreage, whereas, at present, this percentage is 59, almost a complete reversal of the 1953-54 distribution. Finally, Karnak, until recently the main extra-long staple variety, has given way to Menoufi and, during the present season, significantly more acreage was planted to the latter than the former variety. To a large extent, this can be attributed to the fact that Menoufi yields are much higher than Karnak.

The acreage potential in the Sudan is increasing with the development of irrigation. However, extra-long staple acreage can vary significantly from year to year, depending on water-supply from the Gash and Tokar rivers. During the present season, with the completion of the first phase of the Managil extension scheme, acreage is expected to increase, though probably not to the record 1956-57 level.

In relation to the world supply, production of extra-long staples in other countries is small, amounting, in normal years, to about 200,000 bales or about 15 per cent. of world production. In recent years, however, irrigation developments in Peru have enabled growers to plant a fairly constant area to extra-long staples, whereas, previously, there were marked fluctuations in acreage, depending on the water-supply from the Piura/Chira rivers. There is little change in the 1958 acreage sown to these staples.

In 1957, extra-long staple acreage in the U.S. was about doubled in return for producers' accepting a lower rate of price support. This year, the acreage allotment was reduced slightly to 83,286 acres and, on 1st July 1958, 78,600 acres of American-Egyptian cotton were in cultivation, about 7 per cent. less than a year earlier.

As regards yield, no fixed trend is discernible. Karnak yields in Egypt are lower than what they were a few years ago, but this has been offset by greater concentration on the higher yielding Menoufi variety. After two years of very high yields, the yield per acre in the Sudan dropped last season to near an all-time low. Yields in Peru and the United States, too, were lower than for several seasons. It is difficult to reconcile such marked fluctuations in yield from one season to another with the fact that almost all the world supply of extra-long staples is grown under irrigation, but a key factor must be the susceptibility of this cotton to insects and disease.

The trend of production has been upwards in recent years and, given anything like normal yields, aggregate free world production of extra-long staples will set a new record this (1958-59) season. The first official report from Egypt estimates production of extra-long staples at 1,184,000 bales, as compared with 848,000 bales in 1957-58. This increase in production of 40 per cent., while acreage has increased by only 23 per cent., means that yield per acre is much higher than last season, an estimated 482 pounds as compared with 422 pounds in 1957-58. There has been a noticeable deterioration in the Menoufi crop, but early arrivals of Karnak are superior to last year's. According to the official report, Karnak yields are higher than for several seasons past but Menoufi yields are apparently lower than in 1957-58.

Early insect infestation is evident in several of the cotton-growing districts in the Sudan, but so far crop prospects are considered to be favourable. Ground preparation was done very thoroughly this year, following last season's disastrous crop. Although it is still too early to have any definite idea of production, the increased acreage, given average yields, would produce a crop somewhere in the region of 450,000 bales. The Pima/Karnak crop in Peru is tentatively placed at 105,000 bales. This is significantly higher than last year. Production of American-Egyptian types in the United States is estimated at 78,000 bales, a fraction lower than in 1957-58.

Aggregate free world production this season is estimated at 1,850,000 bales, which are over 600,000 bales, or 50 per cent., higher than the outturn in 1957-58. A combination of relatively high stocks and a marked increase in production assure a record supply of extra-long staples during the present season. On present estimates, supply in producing countries would be about 2.5 million bales, as against 1,858,000 bales in 1957-58. The main increase, as is evident from the above table, is in Egypt, where, on the basis of the official estimate, supply will be close to 1.5 million bales, as against one million bales last season. Available supply in this country alone, therefore, could be quite sufficient to cover world requirements this season.

FIXING MINIMUM PRICE FOR SUGARCANE

SUCROSE CONTENT SHOULD FORM THE BASIS

THE first meeting of the reconstituted Joint Sugarcane Board for Uttar Pradesh and Bihar was held in Lucknow recently, Dr. Sampurnand, U.P.'s Chief Minister, presiding. The Board reviewed the cane supply position in the sugar factory areas and examined the prospects of crushing in the current season, that is, 1958-59. It also discussed a number of issues having an important bearing on sugar production. They included sugar policy for 1958-59, minimum price for cane in 1959-60, Government of India's formula for linking the cane price with sugar content, measures for augmenting per-acre yield of better varieties of cane, and steps for fighting pests in cane-growing areas.

While details of the final decisions arrived at at the meeting are not available, it is reported that the Board failed to reach agreement on the question of minimum cane price, as also on the cane price evolved by the Expert Committee. It, however, decided to refer the two issues to the Indian Central Sugarcane Committee, with a special plea for the expansion of the Committee so as to include the Chief Ministers of the two States as well as the representatives of millowners and cane growers.

The lack of agreement on the question of cane price is not surprising, considering the marked divergence of views between the cultivators of cane and the sugar factories. The former continue to agitate for a steep upward revision in the existing minimum price (Re. 1.44 per maund for cane supplied at the mill gates and Re. 1.31 per maund at rail centres), whereas the latter point out that the price is unduly high having regard to the low sucrose content of sugarcane. The agitation on the part of cane growers for higher cane price is an old game that has gone on for several years in both Uttar Pradesh and Bihar in utter disregard of the economies of the sugar industry. What is worse, the game has all along been played not merely by the leftist groups but also by those in the Congress organisation. It will be recalled that, last year, the Bihar Legislative Assembly adopted a resolution urging the Centre to raise the cane price from Re. 1.44 to Re. 1.75 per maund. The State Government endorsed the resolution and conveyed it to the Centre for acceptance. This move was followed by the adoption of a similar resolution, moved by a Communist member, in the U.P. Vidhan Sabha in July this year, but the State Government did not support it.

Plea Unjustified

The plea for an increase in the minimum price of sugarcane is unjustified, especially in the present context when the sugar industry is suffering from a rigid cost-price structure and when India is trying to build up an export trade in sugar. The cost of cane per ton of sugar produced is already high in all conscience, being as much as Rs. 405, which represents over 88 per cent. of the total price of sugar realisable on export. This aspect has been brought out by Mr. P. Hadfield, President, Indian Sugar Mills Association, in an article on sugar export difficulties contributed to *The Hindu Survey of Indian Industries* supplement. Mr. Hadfield rightly emphasises that cane cost should be reduced, if India is to compete successfully with other sugar-producing countries. This, in his opinion, can be done only by the following two methods:

The first is a straight reduction in the price of sugarcane, but this can only be brought about when the yield per acre in North India, currently about the lowest in the world, has been increased by better methods of cultivation.

The second is to interest the cane grower in the production of higher quality cane, to reduce the number of tons of cane required to produce a ton of sugar and so reduce the cost of production.

The production of higher quality cane is essential from another point of view also, according to Mr. Hadfield. The length of the crushing season, which has been the most important single factor responsible for the increased production of sugar in the past three years, has now reached the limit in most factories and, in many cases, factories in recent years have continued crushing in periods where low recoveries made it unprofitable. "This explains," to quote Mr. Hadfield, "the reduced recoveries . . . no further increase in production can be expected from extension of the season. The number of factories working and the capacity of the factories cannot be expected to increase to any considerable extent, as long as present difficulties in importing machinery and low profit margin continue. The only way in which production can be substantially increased is by increasing the recovery in existing factories and this can only be done by interesting growers in the supply of better quality cane."

Present Method Defective

There is considerable force in the above observations of Mr. Hadfield. It was only last week that we drew attention in these columns to the fact that, notwithstanding all the stress laid on sugarcane development during the past several years, the quality of cane actually grown continues to be generally poor; the all-India average recovery per cent. of sugar in cane is not more than 10. What is this due to? The reason is not far too seek. The present method of paying for cane is defective, in that it is based only on the weight of cane without taking into account the quality of it. As Mr. Hadfield says, the cane grower is paid a flat price of Rs. 39.20 per ton for any cane he delivers to the factory regardless of whether it will yield a 5 per cent. recovery of sugar or a 12 per cent. recovery. Naturally, there is no enthusiasm on the part of the cultivator to grow superior quality cane. If the recovery of sugar is to be improved, it is imperative that the cane price should be linked to both quantity and quality, instead of to weight alone as at present. Moreover, such a system would be in the larger interest of the cane growers themselves. Stressing this point, Mr. Hadfield makes the following notable observations:

"In the North where, generally speaking, holdings are small and the cultivator is unable to invest heavily in fertilisers and irrigation, the standards of quality have remained reasonably high, but, in most southern factory areas where there is adequate water available for irrigation at a reasonable cost and where holdings are larger, the cultivator is able to invest large sums in fertilisers and produce high yields of cane of very mediocre quality. In some factory areas, yields of as much as 60 tons of cane to the acre, with recoveries of as low as 7 per cent., are not uncommon in the early part of the crushing season. The 4.2 tons of sugar per acre so produced could, without difficulty, be produced from a 42-ton crop with a 10 per cent. recovery and, if the grower was paid for sugar and not for cane, he would obviously prefer a system of cultivation which would produce this. Not only would his own saving in fertilisers, transport costs and labour costs for harvest be considerably reduced, but, from a national viewpoint, fertilisers, at present being used to produce increased tonnages of valueless vegetable matter, and fuel and materials being used to transport it would be available for more vital purposes.

"Again, if payment was based on the sugar content of the cane, the grower would be compensated for additional attention to the crop which, though it might not increase the yield, would improve quality. In the past, various methods of payment on profit-sharing principles have been used and, in these methods, the price per ton bore a direct relationship to the recovery of sugar obtained at the factory. The price so calculated, however, was an average for all cane delivered to the factory, and the individual grower obtained no direct return for efforts to improve the quality of his cane. The fruits of such an effort were shared by all cane suppliers. The higher price available to the grower as a result of such methods of calculating cane price has served only as an incentive to increase his profit by increasing the tonnage of cane produced."

The scheme for linking the price of cane to its quality in addition to weight no doubt bristles with difficulties, as it involves testing each grower's cane, especially in North India where holdings are very small and individual consignments are too small to test easily and successfully. But these difficulties are not unsurmountable.

MR. NEHRU ON SUGAR CO-OPERATIVES

Addressing the villagers in an open field surrounded by a lush sugarcane crop at Shukr Tal (Uttar Pradesh), Prime Minister Nehru observed:

"The time is past when the villagers can just look upon Government to solve their problems. The attitude of keeping their hands folded and waiting for somebody else to solve their problem will be disastrous. The villagers have to develop a spirit of self-reliance and learn to work in a co-operative way in every field. They should get together and even make a beginning in co-operative farming. I would like even sugar mills here to be run by co-operatives of *kisans* and the benefit from these mills should go to the *kisans*. I do not like any kind of middlemen taking away all the advantage. The middlemen should be abolished from every aspect of life of villagers. But the villagers must take the initiative in this respect and start a co-operative way of life. You must also increase the yield per acre. This can be done easily with a little initiative. The villagers should take rein of their affairs in their own hands. The Government can help here and there, but essentially you have to stand on your own feet. Community development projects are there for the purpose. But the villagers should not look upon them as agencies to do everything for them."

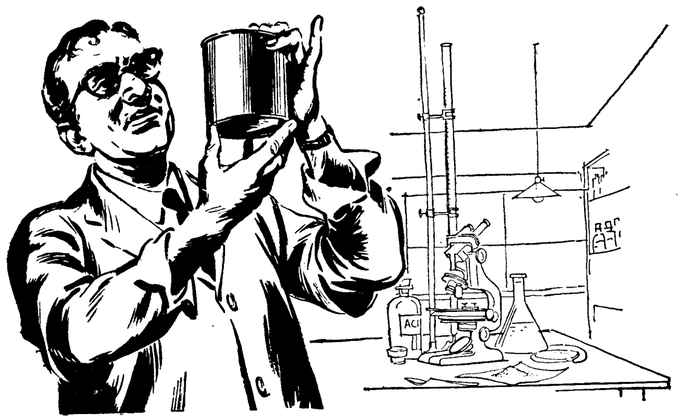
research leads the way . . .



Several factors must be taken into account in the designing of a container for any product. Precisely what material should be used? How best can it be printed and fabricated? Will it stand the rigours of the climate and provide long shelf-life for the product?

In research lie the answers.

The Metal Box Company of India Ltd probe into every aspect of packaging before recommending a container to their customers. The container should be strong yet light, should be pilfer-proof and attractive. Above all, it should be chemically inert to the contents it packs. The efficient and superbly printed containers produced by Metal Box are mainly the result of their painstaking research into packaging processes, raw materials, internal lacquers, printing inks and external finishes. Research, conducted by Metal Box in India and by their associates abroad, is perhaps the largest single factor that has helped them to give the lead in the manufacture of containers and closures.

As India's economy expands rapidly, an increasingly greater and more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

EXPORT DUTY ON INDIAN TEA

MR. GOPALA REDDY'S STATEMENT IN RAJYA SABHA

THE Union Minister for Revenue and Civil Expenditure, Mr. B. Gopala Reddy, held out an assurance last week in the Rajya Sabha that the Government would not hesitate to take appropriate measures in the matter of giving relief to the tea industry to meet any changing situation, if its experience suggested that the matter required to be reconsidered in the larger interests of the industry. He, however, wanted to wait and see whether the present favourable indications as a result of the relief already granted continued and whether they had achieved the objective the Government had in view, namely, that of strengthening the competitive position of the common teas in foreign markets and speeding up their exports.

The Government was also considering measures, in consultation with the Reserve Bank, to finance the tea industry and hoped that a decision would be taken soon, so that the industry might get assistance in rehabilitating some of the estates. Disclosing this in reply to a member's demand that it was time for the Government to consider the establishment of a finance corporation to help the rehabilitation of common tea estates, the Minister said that the Government would also look into the question of affording relief to factories exclusively dealing with common tea which had been placed in another zone with a different quantum of relief.

Moving the Tea (Alteration in Duties of Customs and Excise) Bill, as passed by the Lok Sabha, Mr. Gopala Reddy said that the relief granted to the tea industry under the Bill had been in operation for only about two months now and already there were reports of better production, better clearances, better exports and better prices. It was, of course, too early to draw any conclusions or to attempt to gauge the effect of the proposed measures, but he added that there was unmistakable evidence that, during the month of October, anyway, the reaction of the market was clearly favourable. Exporters, he said, were reported to be offering higher prices for true exportable types from the Dooars and Assam and the prices of common and low teas were reported to have advanced in October by "as much as 10 nP per lb." He, however, assured the members that the Government would not stand on prestige, if further relief to the industry was justified.

Mr. Gopala Reddy went on to state that the Government was no less anxious than planters that the position of supremacy enjoyed by India in the tea export trade should be maintained. The figures of exports did not suggest to him that there was any reason for an alarmist view. "Our share in the U.K. market remains practically undiminished," he said, "and belies the fear expressed by some that we are being displaced from that market by other countries. The Government are constantly watching the trend of prices in foreign markets in respect of this important commodity and are also mindful of all other relevant factors, such as the interests of traders, consumers and workers."

Welcoming the Minister's assurance about further action to meet any changing situation, Mr. B. Shiva Rao said that the former's optimistic assessment of the present position did not seem justified. While there was some increase in tea exports, he added, there had been a fall in the prices of tea sold to the U.K. According to Mr. Shiva Rao, the foreign exchange through sales in the London market had registered a drop of £14 million in the first nine months of this year, as compared with the previous year. He suggested that tea producers would benefit more if the Central Government could get the Assam and West Bengal Governments to abolish the transit and octroi duties they levied at present in lieu of full compensation by the Centre to these two States, without sacrificing more revenue than it was doing at present under the Bill.

Mr. Gopala Reddy, however, denied that the earnings out of tea exports had decreased and said that the earnings this year were more by Rs. 5 crores over the same period last year. Judging from all figures available with the Government, there was no need to feel depressed about the future of the tea industry. It is not known what period of this year the Minister referred when he said that the foreign exchange earnings were higher by Rs. 5 crores.

A perusal of the Foreign Trade Statistics, published by the Department of Commercial Intelligence and Statistics, however, shows that, during the first eight months of 1958, India exported 280 million lbs. of tea valued at Rs. 73.5 crores, as against 256 million lbs. of the value of Rs. 71.6 crores in the corresponding period of 1957. It will thus be seen that, while the quantity of tea export up to the end of August was higher by no less than 24 million lbs., the value shows an increase of less than Rs. 2 crores. It is not strictly correct to go by the quantum of exports and foreign exchange earnings realised on it and judge the industry's competitive capacity. It is the earning per lb. of tea exported which is more important. This has, in fact, gone down from Rs. 2.79 to Rs. 2.62 per lb., as will be seen from the trade figures quoted above. This is obviously due to the lower prices fetched in London auctions, as was pointed out in these columns last week and referred to by Mr. Shiva Rao also. Again, it will be misleading to draw conclusions from a comparison with the previous year alone. As was pointed out in these columns, the export performance of tea so far in 1958 compares unfavourably with that in 1956.

Mr. Gopala Reddy's contention that India's share in the U.K. market has remained practically undiminished and that there is no reason to believe that it is being displaced from that market by other countries is not borne out by facts. His argument seems to be based on the trend of exports in recent months. But the competitive position of Indian tea should be judged from exports from various countries over a period of years. A recent study by the Indian Tea Planters' Association, Jalpaiguri, West Bengal, shows that not only India but Ceylon and Pakistan, which also levy export duties, are slowly giving place in the U.K. market to countries which do not levy export duties, as will be seen from the following table:

Imports of tea by U.K.

	Average of 8 years 1949-50		Average of 8 years 1950-57	
	Quantity (000's lbs.)	Percentage to total	Quantity (000's lbs.)	Percentage to total
India	276.55	65.9	310.84	58.1
Pakistan and Ceylon	126.17	30.1	144.05	26.8
		96.0		84.9
East Africa	11.74	2.8	86.93	6.9
Hongkong, Malaya, Singapore and other C'wealth countries ..	0.72	0.1	5.78	1.0
Formosa, Indonesia, Mozambique Netherlands and other countries	3.93	1.1	38.20	7.2
	419.11	4.0	535.80	15.1

It will be noted that, within a few years' time, exports to the U.K. from India, Ceylon and Pakistan have dropped by 11 per cent., of which India alone accounts for 8 per cent.

U.A.R'S OFFTAKE OF INDIAN TEA

The U.A.R. would like to increase its imports of Indian tea, provided the quality was good and the price reasonable. Disclosing this Mr. Kamal Diab, leader of a five-member United Arab Republic tea delegation, which arrived in Bombay last week, said that the U.A.R. Government had received complaints about the bad quality of Indian tea, and one of the tasks of the delegation would be to discuss this aspect with the Indian authorities. Mr. Diab, who was speaking at a reception by the Tea Centre, said that the delegation would next visit Ceylon, Indonesia and China which also exported tea to the U.A.R. He added that factory workers and farmers in Egypt drank tea all day, while the middle and upper classes drank coffee, with the result that more tea was drunk in the country. He disclosed that the U.A.R. would shortly open tea purchasing offices in Calcutta, Ceylon, Indonesia and China. The Tea Board of India, it is understood, will open a tea centre in Cairo early next year.

EXPORTS OF NORTH INDIAN TEA

The following table, showing the trend of exports of North Indian tea to various countries during the period 1st April to 15th November of the last three seasons, speaks for itself:

(In million lbs.)

	1958-59	1957-58	1956-57
U.K.	148.6	132.8	181.2
Eire	5.8	6.5	5.5
Russia	11.7	8.3	8.4
Europe	7.7	7.5	8.0
America	14.3	15.6	21.6
Middle East	32.3	22.5	24.1
Far East	0.5	0.6	1.4
Others	0.3	0.7	1.2
Total ...	221.2	194.5	251.4

RAW JUTE PRICES

I.C.J.C. RECOMMENDS FIXATION OF "FLOOR"

THE Indian Central Jute Committee, at its annual general meeting held on 29th November 1958, under the chairmanship of Dr. M. S. Randhawa, Vice-President of the Indian Council of Agricultural Research and Additional Secretary, Union Ministry of Food and Agriculture, has urged upon the Government of India to fix immediately a floor price for each grade of raw jute and mesta. It has also recommended the setting up of an appropriate machinery for the enforcement of the floor price which, in the opinion of the Committee, is of utmost urgency in the interest of jute growers. India had a good jute crop this year, but the decline in raw jute prices has rendered growing of the golden fibre uneconomic. It is, therefore, felt that, unless growers are ensured a reasonable price, production in the next season will be adversely affected and this, in its turn, will have adverse repercussions on jute goods.

Though India has attained near self-sufficiency this year in respect of its raw jute requirements, production during the last one decade has experienced wide variations from year to year, as a result of the combined influence of price and weather. This, as Dr. Randhawa pointed out in his presidential address, has rendered a planned approach to the problem of raising the production and improving the quality of raw jute difficult. "The matter is receiving the attention of the Government, which is concerned about the present position, particularly over the depressed prices prevailing in Bihar," he added. The position of the jute grower as a buyer of paddy had suffered considerably from unfavourable cost-price relationship between jute and paddy. The production cost of jute, he admitted, was rather high in relation to the price received for the fibre. The introduction of improved methods aimed at raising the technical levels of jute agriculture and reducing costs of production, which is sure to play a large part in jute development, can only supplement and not substitute measures of price stabilisation and support.

It is these considerations, in the context of a steep fall in prices of raw jute this year, that have prompted the I.C.J.C. to recommend to the Government of India the fixation of minimum prices. In accepting the I.C.J.C. recommendation, the Government of India should take into account all the relevant factors which have contributed to the fall in raw jute prices. It is not the bumper crop alone that has depressed the prices. The mills' buying policy is no less a contributory factor. It is common knowledge that, for a long time, mills have stopped buying raw jute for more than seven to eight weeks' consumption, while, in pre-war days, they used to have stocks equal to four months' "cut-up." This change in mills' buying policy has to a large extent been influenced by the offtake of jute goods from mills. Buyers of gunnies operate now on a hand-to-mouth basis and this has its unavoidable reaction on mills' purchases of raw jute, which are bought in very limited quantities on contract. Even the I.J.M.A.'s recent recommendation to mills, as a measure of support to the raw jute market, to extend their purchases to three months' requirements, does not seem to have had any good response. If mills have not done so, they have good reasons. A large part of their working capital is locked up in the excessive stocks of sackings. Though simultaneous business in raw jute and manufactured goods is disadvantageous to mills, they do not seem to have given up this practice, because, at the current prices of raw jute, mills have a larger margin of profit. In the ultimate analysis, it is the offtake of goods, particularly from overseas countries, which is influenced by business conditions, that determines, to a large extent, the trend of raw jute prices. It is needless to add that only a high level of economic activity will bring prosperity to the jute industry and jute growers.

Another aspect of the question which the Government should bear in mind, when it considers the I.C.J.C. recommendation, is the effect of minimum prices for raw jute on those of manufactured goods and their consequent consumption abroad. It is significant to note, in this connection, that the recent revival of business activity in the U.S. is tending to peter out. The problem is, therefore, one of finding out a *via media* and fixing a price at a level which will at the same time be remunerative to jute

MISMANAGEMENT IN EXECUTION OF STEEL PROJECTS ALLEGED

SARDAR SWARAN SINGH'S DEFENCE

ALLEGATIONS of waste and inefficiency against the Union Ministry of Iron and Steel in the matter of execution of the three public sector steel projects at Rourkela, Bhilai and Durgapur were made last week in the Lok Sabha. The execution of these projects was described as a "story of bungling, lack of vision, lack of vigour and lack of good and sound planning." The increase in estimates of the cost of these plants came in for sharp criticism. It was alleged that materials and stores meant for the steel projects were finding their way into the markets in towns situated near the steel towns. In his remarkably sober reply to the debate, Sardar Swaran Singh pointed out how the three projects were the biggest of their kind undertaken simultaneously anywhere in the world. He admitted that efforts should be made to eliminate delays and described the difficulties which the authorities had had to encounter in executing the projects.

In the course of the debate, the point was made that the estimates of the cost of these projects had risen by about Rs. 157 crores over the original estimates. The delay in the execution of the project, it was stated, was deplorable, since it would mean continued imports of steel by India for a much longer period than was originally envisaged. Other allegations were: (1) contractors had been paid more than what they were entitled to under the terms of their contracts; (2) in one case, equipment had been hired at a cost of Rs. 75 lakhs, whereas it would have been more economical to have purchased it; (3) training facilities for Indians were inadequate and (4) high wages had been paid to foreign technicians; the Government had imported 32 carpenters at a cost of Rs. 21 lakhs per year. Apart from these allegations, some suggestions were made for improving the administration of the projects. It was suggested that private investors should be allowed to participate in the capital of the projects and popular representatives should be associated with the management of the steel plants.

Estimates

By and large, it is true that the estimates of the cost of the three projects have gone up. Even so, the increase in cost is not as large as the critics made out. According to the original estimate, the cost of Rourkela, Bhilai and Durgapur steel plants was placed at Rs. 128 crores, Rs. 110 crores and Rs. 115 crores, respectively; it has now been revised, according to the Government, to Rs. 170 crores, Rs. 131 crores and Rs. 138 crores. The cost of townships, which had not been mentioned in the original estimates, is now placed at Rs. 120 crores for all the three projects put together. The authorities will do well to see that the cost of the plants does not exceed the estimates they have now given. The cost of building up a township is an unavoidable part of the project expenditure, considering that towns, with all necessary amenities, have to be created in inhospitable regions. But, even here, the Government should aim at minimum comfort necessary, rather than spend too lavishly on townships in the initial stages. The authorities should lay down a strict order of priorities for the development of townships.

It is, however, disappointing to note that the Government is uncertain as to when the steel plants will go into production. The Union Minister, Sardar Swaran Singh, said: "I cannot say exactly when we can start making iron but that day is not far off." He, however, added that he expected that there would be "substantial production and sale of steel before the end of the second Plan period." It would appear that the steel projects are now approaching the peak period of construction; there are 45,000 men at work in Rourkela, 60,000 at Bhilai and over 25,000 at Durgapur.

Giving details of the progress of the projects, the Minister revealed that, in Bhilai and Rourkela, more than two-thirds of the equipment was already at site. The first battery of the coke oven plant had been heated up at Rourkela and Bhilai and the actual production of coke would start in December 1958. He also expected that, by the end of December, the physical erection of the first blast furnace and other installations necessary for producing iron would be practically completed both at Rourkela and Bhilai. In this connection, it may be recalled that in September last, Sardar Swaran Singh, speaking in the Rajya Sabha, threw some light on the progress of the construction work in the three steel projects. According to the information then made available, the first blast furnace in Rourkela will be ready by the end of December 1958, the second by August 1959 and the third by November 1959. The open hearth furnaces will be ready between May and July 1959 and the L.D. convertors by October or November 1959. In the blooming and slabbing mill, there will be a delay of about three months; they will be ready by about September 1959. The plate mill, the strip mill and the cold rolling mill are to be ready in 1960. In Bhilai, it is expected that the first coke oven battery will be commissioned by the end of December 1958 with the first blast furnace closely following it. The second and third blast furnaces will be ready in the second and third quarters of 1959. The open hearth furnaces, the blooming mill and the rail and structural mill are scheduled to be commissioned towards the end of the third quarter of 1959. The continuous billet mill and the merchant mill are to be ready for operation by the end of December 1959. In Durgapur, the progress of work encourages the belief that the plant will be commissioned, according to schedule, the first blast furnace in October 1959 and the third blast furnace with the rolling mills by the end of April 1961.

Ore Mines

Satisfactory progress has been made in the work of construction of the Barsua iron ore mines for Rourkela. For the construction of the Rajhara mines for Bhilai, there has been difficulty in getting suitable contractors. Preliminary survey and layout of the mines in Bolani to supply Durgapur have been completed. Bolani Ores Ltd., a private limited company with Government having a controlling interest, have selected the plant and equipment. It does not appear that there will be any difficulty in getting ore in time for the Durgapur steel plant. In the limestone quarries, for Rourkela, nearly 35,000 c.ft. of overburden was removed. Blasting operations are going on and 2,700 tons of limestone has been raised. A number of samples were collected and analysed. The Ministry of Railways will construct a portion of the future Bondamunda-Ranchi line to connect the limestone quarries with Rourkela. Work on the limestone quarries in Nandini, for Bhilai, came to a temporary standstill due to the outbreak of cholera. For Durgapur, limestone will be obtained initially from Birmitrapur and Hathibari. The firm, which is now supplying the works in Jamshedpur and Burnpur, has agreed to supply enough limestone for the operation of the first blast furnace of Durgapur. Investigation of alternative sources of supply continues.

Contractors

To revert to Sardar Swaran Singh's reply to the debate last week. He explained that the contract for the civil engineering work of the rolling mills had to be entrusted to a firm which had the necessary resources and technical know-how. Open tenders had failed to secure the services of such a firm. The contract had been given on a "target price" basis to an Indian firm with German collaboration. He revealed that the technical consultants of the steel projects were not always suppliers of machinery. There were as many as 24 or 25 suppliers. Again, wherever the Government decided to place any orders with firms which had any connection with the consultants, the latter dissociated themselves from the examination of its quotations.

In conclusion, he admitted that foreign technicians were costly. He said: "Normally, any foreigner who comes here costs us a minimum of Rs. 3,000 a month." At the same time, he expressed gratitude for the training facilities provided by the Soviet Union, the U.S., the U.K., Canada, W. Germany and Australia. He said that in India, too, the private sector in the steel industry was rendering assistance in the matter of training personnel for the Government's steel plants. It is to be hoped that the Government will continue to explore new avenues for training Indian technicians both in India and abroad, so that a nucleus of highly trained men could be built up for use not only in the three steel projects but also in any new plant that may be set up in the third Plan.

ATOMIC POWER

In reply to a question on atomic power station in the Rajya Sabha, last week, Mr. Nehru stated that the Atomic Energy Commission had recommended that one million kilowatts of nuclear power should be installed by the end of the third Five-year Plan period and that this could be done by setting up two atomic power stations, each station consising of two units of a quarter million kilowatts each. It was estimated that each of these units would take about four years to build. The Government had decided that a minimum of 250,000 kilowatts of nuclear power should be included in the power programme of the third Plan. Exploratory talks with manufacturers of atomic power stations in other countries were in progress. As regards location, the matter was still under consideration. Asked about the cost of atomic power, Mr. Nehru said that, even now, the cost of atomic power would be comparable, provided it was away from the coalfields. Further, the cost of production of atomic plants was becoming cheaper now. He added:

"Apart from our need for atomic power, because we have not got, in the long run, enough coal power or water power, it is essential to have atomic power in the future. It is hoped that there are inexhaustible supplies and we may produce it even from such things as sea water, one of the elements but our main supply will come from thorium. We cannot build a plant straightaway from thorium. We have to remember that the first plant will be a little expensive but as soon as we shift over to thorium in the second or third stage, we will have a very large supply and it will also be cheaper."

LADEN WEIGHT OF VEHICLES

The restriction on the laden weight of transport vehicles has been relaxed so far as the Bombay-Poona and Bombay-Nasik National Highways are concerned. As a result, transport vehicles, the laden weight of which does not exceed 27,000 lbs. can now ply on these two roads provided the registered laden weight recorded in the certificate of registration is not exceeded. The limit of 19,000 lbs. of laden weight prescribed in respect of roads in the pre-reorganisation Bombay State will continue to be operative, except on these two roads, and the assignment in the certificate of registration of any higher registered laden weight to any transport vehicle will not entitle the owner to drive the same on these roads in excess of the laden weight permissible. Transport vehicles in respect of which the registered laden weight recommended by the manufacturers in Form 'F' exceeded 19,000 lbs. but which were assigned the registered laden weight of 19,000 lbs. only in view of restrictions of the laden weights prescribed by the Government, can be assigned on request for a higher registered laden weight in the certificate of registration for the purpose of plying on the Bombay-Poona and Bombay-Nasik National Highways. Owners of transport vehicles who do not get a higher registered laden weight assigned to their vehicles, will not be entitled to drive them on the Bombay-Poona and Bombay-Nasik roads with a laden weight exceeding the present registered laden weight recorded in the certificate of registration.

POWER IN S. ZONE

The Technical Committee which is engaged in the study of the co-ordinated development of power resources of Madras, Andhra, Kerala and Mysore, is expected to submit its report to the Southern Zonal Council next year. The Committee consists of representatives of the Union Ministries of Irrigation and Power and Commerce and Industry and the Chief Electrical Engineers and the Development commissions of the States. Similar technical committees are being appointed for the Northern, Eastern, Western and Central Zones.

The existing installed power generating capacity and the additional capacity to be created during the second Five-year Plan (in million watts) respectively in the four States are: Andhra: 178; 103.4; Madras: 287: 535.0: Kerala: 110; 83.0: and Mysore: 197; 67.2. The length of transmission lines and grid systems (in miles) respectively are: Andhra: 4,200; 1,100: Madras: 13,000; 3,000: Kerala: 2,750; 750 and Mysore: 4,200; 1,700. By the end of March 1961, about 93.5 per cent. of the installed generating capacity is expected to be connected to the grid system, as against 81.5 per cent. as at the end of 1955. An advantage of the grid system is that power distribution facilities can be speedily extended to small towns and villages within the grid region.

CONVENTION ON TRANSISTORS

In the decade since the invention of the transistor such rapid and spectacular advances have been made that the radio and telecommunication section of Britain's Institution of Electrical Engineers has planned an international convention on transistors and associated semiconductor devices, to be held in London from 25th to 29th May 1959. The holding of such a meeting is timely, in that it will enable the various techniques in production and the use of such devices to be discussed and assessed. It will also provide a basis on which future developments can be foreseen and planned. The convention will be the most comprehensive ever held on the subject, and will cover design, manufacture, basic theory, characteristics, measurements, applications and equivalent circuits. Now that the transistor has established its position and can cover the more obvious electronic applications, the main requirement of the industry is to consolidate past progress and introduce these developments into adjacent fields.

NEW PRODUCTS AND PROCESSES

A New Catalyst

A NEW spherical mineral kaolin cracking catalyst which is designed to decrease catalyst use and reduce equipment maintenance costs, has been developed by the Houdry Process Corporation of Philadelphia for use in chemical manufacturing and petroleum plants. The catalyst is said to provide maximum octaine value when petroleum chemicals are treated at low cost, with high activity, and sulphur resistance. It is also stated to have high thermal stability and excellent regeneration, or activation renewal properties. The spherical form sharply reduces catalyst chipping and loss in fines. Less maintenance is needed because the spherical catalyst material does not have sharp edges that may cause equipment erosion. The new spherical form is expected to provide refiners, especialty catalytic crackers, with a more economical method of operation while retaining all the advantages of the high-octaine low-cost Houdry mineral kaolin. The catalyst is expected to be especially effective for catalytic cracking units using Houdriflow, and other types of moving-bed catalytic cracking units.

New Man-Made Fibre

What is claimed to be a cheap new man-made fibre has been developed by Russian scientists. The fibre, which is called Saniv, is said to have exceptional resistance to attack by acids. It can also, it is claimed, be stretched out to an unusual extent under conditions of high temperature. The fibre is made by modifying a copolymer of acrylonitrile and vinylidene-chloride. Its relative cheapness is said to depend on the use of a novel production process which is far cheaper to operate than that involving the use of dimethyl-fomamide. The fibre is expected to find many important applications in chemical plants and in other types of industrial applications. Development work on the large-scale production of the fibre is now being undertaken.

Long-lasting Paper

By using radioactive carbon, a peaceful product of atomic energy, the life span of books, newspapers, magazines and other printed matter could be extended to as much as 20,000 years, reports Dr. Willard F. Libby of the U.S. Atomic Energy Commission. According to Dr. Libby, in recent experiments it was found that when a small fraction of radioactive carbon was added to alanine, an amino acid containing carbon that enters into plant structure, the extremely slow rate at which the alanine decomposes could be measured—about one part in 5,000,000 days. "We could do much the same experiment with a sheet of book paper," says Dr. Libby. "The technique would be to place a sheet of the paper in a closed container and collect the carbon dioxide liberated by oxidation due to the attack by air and compare this with similar tests on other sheets of paper treated with different additives." "By these techniques," according to him," "it probably would be possible to prepare a paper which would last however long one wanted, perhaps 20,000 years."

Gas From Oil Shale

Oil shale can be converted directly into heating and fuel gas by an efficient new process that has been laboratory tested, according to the Institute of Gas Technology in the United States. The process is described as one in which crushed oil shale is treated with hydrogen at high temperature and pressure. It produces gas that is about as efficient and economical as natural gas, and more efficient and economical than most manufactured gases. An important advantage of the new process is said to be that it by-passes the step of first converting the oil shale into liquid oil. In addition, the process converts between 90 and 100 per cent. of the active matter in oil shale into fuel. Existing oil extraction processes utilise only about 80 per cent. of the active organic matter in the shale.

A New Kind of Fastener for Clothes

After several years of research and experiment, carried out in collaboration with a Swiss firm which manufactures looms for the weaving of ribbons, a Swiss inventor, Mr. Georges de Mestral, of Nyon, has just completed a new kind of fastener for clothes, etc., which had already aroused enormous interest throughout the whole world and is bound to have a great future. The Velcro closure, which is somewhat similar to the well-known "zip" fasteners, will, it is said, prove very useful for clothes, furniture, packing and for a great many other things. It consists of two ribbons, one of which is furnished with a quantity of tiny hooks made out of nylon (there are about 60 per every cm. 2) whilst the other ribbon is covered with a kind of looped nylon velvet (which has something like 800 loops per cm. 2). When these two ribbons are placed so as to touch each other, the hooks enter into the loops and thus ensure a remarkable adhesion. The ribbons then seem as if they were glued fast to each other, and can resist a traction of about 14 pounds per square inch; in spite of this, they can be detached from each other very easily and without any effort, if one goes the right way about it. Tests have proved that the Velcro closure can be used 10,000 times, without suffering any apparent deterioration, which shows that its life expectancy is much greater than that of the articles to which it will be applied. Among the many advantages possessed by this new invention, particular mention may be made of the simplicity of its use and application, the absence of any rough places or bits of metal, and to the possibilities it offers for boiling, dry cleaning, sterilisation, ironing and dyeing. Moreover, Velcro ribbons can be cut to the required length, without any waste. Velcro is said to have aroused tremendous interest in the whole world, as soon as it was put on the market and new possibilities for its use are being found every day.

SINGARENI COLLIERIES COMPANY LIMITED

CHAIRMAN, MR. S. J. TARAPORE'S SPEECH

SPEAKING at the Thirty-seventh Ordinary General Meeting of the Singareni Collieries Company, Ltd., held in Hyderabad-Dn. on 24th November 1958, Mr. S. J. Tarapore, Chairman, disclosed that the terms of financial assistance from the Government of India for expansion purposes have almost been finalised and that the Company would, therefore, be in a position soon to order the plant and machinery required for raising output to catch up with the planned target.

The following is the full text of Mr. Tarapore's speech:

"GENTLEMEN,

"This is the thirty-seventh ordinary general meeting of the shareholders of the Singareni Collieries Company, Ltd., and I have great pleasure in welcoming you, particularly because this is the last time that I shall be addressing you as Chairman. The annual report and accounts have been in your hands for some time and I take it that you have found time to peruse them carefully and I can consider them as read. I will, however, be glad to answer any questions that you may have to ask.

Higher Output

"During the year, our production increased by 14.1 per cent. over the production of the previous year, while the corresponding figure for the coal industry as a whole was 10.82 per cent. This increase in production has in turn reduced our overheads and narrowed the gap between the actual cost of implementing the Award of the All-India Industrial Tribunal (Colliery Disputes) and the inadequate increase in the selling price of coal granted by the Government. Although there has even been a slight increase in the profit per ton from Re. 0.99 in 1956 to Re. 1.08 in 1957, the margin of profit candidly is totally inadequate for a wasting asset like the coal mines. The Government of India have appointed a Coal Price Revision Committee to examine and report upon the costs of production of coal and coke and to take into account all relevant factors which have a bearing on the coal production programme envisaged in the second Five-year Plan, and to recommend changes in the present price structure. The relevant information has been placed before the Committee, and it has also investigated the production costs of some selected collieries. We now anxiously await the outcome of their finding and recommendation.

Expansion Scheme

"It is our aim to increase our annual production from 1.5 million tons in 1955 to 3 million tons in 1961. Our target for 1958 is 2.16 million tons and we are quite hopeful of achieving it. But it will be difficult to work to the planned programme the year after, although I have no doubt that we will catch up with the planned targets in the subsequent years. This perhaps needs an explanation. Because of lack of funds, we refrained from entering into commitments for some of the most essential, but expensive items required for achieving the planned target, such as sand stowing plant, coal cutting machines, mechanical loaders, without which it is not possible to do intensified mining, railway sidings, without which it is difficult to bring the increased output from the pit-head to the rail-head, and housing for the workers near the new mines. I am glad to be able to say that details of terms for the financial assistance by the Government of India have now been almost finalised and that we shall soon be in a position to go ahead both with ordering the plant and entering into contracts for the civil works and catch up with the planned targets as soon as the necessary plant is received, and civil works completed.

Labour-Management Relations

"I am happy to be able to record that during the tenure of my office as Chairman, the Company has shown a sustained progress. This is mainly due to co-operation between staff of all grades throughout our lines of management inborn of a realisation by all, of the basic fact, that their welfare is tied up with the welfare of the Company, and a conviction that their claim will not be overlooked at the time of apportioning the benefits. It may be relevant to mention here the impression that our President Dr. Rajendra Prasad got when he visited our mines at Kothagudium on 11th July 1958. While addressing the members of the Colliery Employees' Recreation Club, which I may mention is open to all grades of workers, he said:

"'I find that your collieries are making progress and that your activities are expanding.

"'The nation is going ahead rapidly and we are making all-round progress. Our country is going in for mechanisation. Where the work is turned out with hand, machines are now increasingly used. I find the same thing happening here. I have just paid a visit to your power house and I have also seen mining machinery and equipment. From what I have seen I could say that you are making progress and working hard and that you are also showing initiative in your work.

Industrial Peace

"'The industrial peace brought about in the collieries by improving the lot of the workmen and the resulting increase in the production of coal would enable the country to go ahead uninterruptedly with the programme of industrial expansion. I would advise all those connected with this premier and every-growing industry to continue to work with zeal and enthusiasm to reach the Plan targets. I am glad to see that you are all prosperous and happy.'

"As you must have noted, the result of the working of the Company for the year under review has been good, and your Directors are in a happy position to recommend to you to sanction a dividend of 15 per cent. I have no doubt that, with the progressive management, with the excellent team of officers, with understanding workers and with your co-operation, the results will continue to be better and better year after year.—*Jai Hind.*"

EXPORT OF METALLURGICAL COAL

The Government of India has decided to increase the export of metallurgical coal by 200,000 tons during 1958 and by 500,000 tons during each of the next three years. Disclosing this, in reply to a question in the Lok Sabha last week, Mr. Swaran Singh, Union Minister for Steel, Mines and Fuel, said that, during 1958, about 560,000 tons of metallurgical coal would be available for export. The expected foreign exchange earning from the export of metallurgical coal during the year was approximately Rs. 2.80 crores.

BANKING SERVES INDUSTRY, TRADE AND COMMERCE

71 Offices throughout Andhra Pradesh and at Madras, Tiruppur (Madras State), and Bellary (Mysore State).

Banking service of every description offered, including Foreign Exchange.

Agents all over India and abroad.

HEALTH OF INDUSTRIAL LABOUR

REGIONAL APPROACH TO PROBLEM NECESSARY

ALTHOUGH countries which have recently started their industrial career have the advantage that they can freely draw from the vast reservoir of experience and knowledge accumulated over the past two centuries by the advanced nations of the West, they have certain handicaps too. In no other field is this disadvantage more glaring than in the field of industrial and occupational health. In countries of the West, where industrialisation progressed at a steady pace in the past, safety and other protective measures for industrial workers also proceeded apace. In Asian countries, which are trying to compress the industrial experience of two centuries into a few decades, there is the risk that the rising tempo of industrial development may quickly outgrow the organisation and facilities available in the sphere of industrial health. That the existing arrangements for ensuring industrial safety are not adequate to cope with the progress being made in the field of industry is evident from the high and rising trend of accident in industries. In India, the accident rate per 1,000 workers employed in industries increased from 20.56 in 1939 to 44.56 in 1956. This figure does not include the accidents in many of the more hazardous occupations such as dock work, building works, etc. The problems has, therefore, to be tackled in an intensive manner.

In the field of occupational health, conditions as near perfection as possible have been achieved in Western countries partly through continuous and intensive research and partly through the keen awareness on the part of management, organised labour and Government of the tremendous responsibilities which they have to share jointly and severally. Considerable knowledge is available today to deal with, in one way or another, almost every hazard that may be inherent in a process, equipment or material used in industry. There is no reason why, just as the many technological advances made in industrially advanced countries are imported in the form of men and equipment, underdeveloped countries should not draw as freely on the pool of knowledge and experience in occupational health too. But the real question, as Mr. G. L. Nanda, Union Minister for Labour, pointed out, in the course of his inaugural address to the South-East Asia Conference on Industrial and Occupational Health, which began its one-week session in Calcutta on 23rd November, is as to how much of that knowledge the underdeveloped countries can adopt straightaway and how much over a future period in a planned and orderly manner. The Conference, it may be noted here, is being held under the joint auspices of the I.L.O. and W.H.O. It is the first of its kind to be held in this region. As Mr. Nanda rightly emphasised, when the problems were vast, a system of priorities became inescapable.

A point which Mr. Nanda particularly stressed was that, however adequate the policy might be or however ideal the list of priorities laid down, that might founder on the rock of effective implementation. The existence of rigid regulations and even of machinery for inspection or enforcement might not amount to much, unless there was available in the countries concerned properly trained staff for carrying out occupational health measures. In other words, the limitations were not always in respect of finance alone. In India, for instance, the enactments relating to work in factories, mines and docks and the detailed rules framed thereunder are in themselves of adequately high standard and generally modelled on internationally accepted regulations. Measures relating to industrial hygiene health and safety are all provided for in adequate detail. The law relating to sickness and accident insurance, through a statutory corporation, namely, the Employees' State Insurance Corporation, has been a pioneering venture in South-East Asia. But the problem here is one of implementing the laws which had already been framed. Due to inadequate inspectorate staff and other reasons, implementation has not been satisfactory.

But neither the lack of finances nor of trained personnel, Mr. Nanda felt, were any excuse for not providing workers in hazardous occupations with the necessary protective equipment. For, a trained worker, according to him, was no less valuable an asset than the capital invested in an industry. In fact, every trained worker, he pointed out, was a planned investment. Further, industrialisation could be a success, only if accompanied by high productivity, and efficient working, leading to high productivity, could not be obtained if the worker was constantly exposed to risks which could be avoided.

Occupational safety and health are problems which should be tackled on a regional and co-operative basis. The I.L.O. and the W.H.O. have done well to impress this aspect on these countries. Co-operative endeavour can confer on every individual member far more advantages than is possible if each has to rely entirely on its own without any system of sharing of knowledge. The problem is of such magnitude and complexity that even the most advanced country with abundance of resources could not by itself attain all that is needed in the field. The need for co-ordinated endeavour is more pronounced in a region where the resources of individual countries are limited. Apart from being a free forum for exchange of ideas and knowledge, a conference of the kind now held in India can do a great deal in facilitating the solution of problems arising from the maintenance of occupational health.

GOVERNMENT ORDER IN BONUS DISPUTE UPHELD

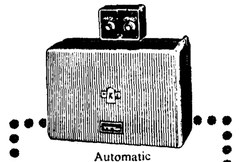
A petition filed by the National Engineering Employees' Union for directions against the State of Bombay to reconsider the report of the conciliation officer and make a reference of certain disputes between the workmen and their employer, Messrs. Sankey Electrical Stampings (Private) Ltd., to the Industrial Tribunal, was dismissed by Mr. Justice K. K. Desai at the Bombay High Court. On 22nd December 1956, the then existing union of the workmen of the factory made a demand for bonus for the year 1956. Thereafter, the petitioner union became a registered union and, in February 1957, it put up a demand for bonus for 1956. Without consulting the petitioner union, certain representatives of the workmen negotiated a settlement of the bonus claims. On 8th April 1957, a settlement was arrived at between the representatives of the workmen and the management.

The Union objected to the agreement and the matter was taken to the conciliation officer. No agreement was arrived at in the conciliation proceedings. The Government decided, under section 12 of the Industrial Disputes Act, that there was no case for reference of the dispute to the Tribunal on the ground that the question regarding the bonus for 1956 had already been settled by the agreement of April 1957 arrived at between the management and the elected representatives of workmen, which had also been approved by the works committees, and that about 80 per cent. of the workmen had accepted bonus in full and final settlement of their claims. The petitioner challenged the order of the Government contending that the reasons given were untrue and irrelevant.

In giving judgment, His Lordship observed that it was admitted by the parties that the agreement of 18th April 1957 was made on behalf of only 315 workmen out of a total of 633. But, for the purpose of this petition, it was conceded that 524 workmen out of 633 had accepted the bonus in accordance with the terms of the agreement.

His Lordship felt no doubt that an agreement was arrived at in April 1957 on behalf of 315 workmen. This was a binding agreement even in accordance with section 18 of the Industrial Disputes Act and was enforceable under the provisions of sections 29 and 33C of the Act. The question was, therefore, whether the Government was entitled to consider this agreement in arriving at its decision to refuse to make a reference to the Tribunal. His Lordship did not agree with the contention that the existence of the agreement was not germane to the dispute and held that the existence of the agreement was a fact which the Government was entitled to consider and mention as a ground for refusing reference to the Tribunal.

His Lordship held that, if 80 per cent. of the workmen had accepted bonus in full and final settlement of their claim, that must be, *prima facie*, a ground and relevant factor for the Government in deciding whether a reference should still be made to the Tribunal. The reasons mentioned in the Government's order had connection and bearing on the question whether the bonus dispute should be referred to the Tribunal or not. It was not for His Lordship to consider the weight or value or quality or adequacy of the reasons given by the Government. The petition was, therefore, dismissed with costs.



"UNFAIR LABOUR PRACTICE"

The practice indulged in by certain employers of hiring temporary workers for permanent jobs to avoid giving them the benefits of permanancy came in for severe stricture by Mr. Justice Dhavan of the Allahabad High Court. Dismissing a petition filed by J. K. Cotton Manufacturers, Ltd., Kanpur, for quashing the award of the Adjudicator holding the petitioner firm guilty of unfair labour practices and directing it to reinstate one of its workmen and pay him compensation for the period of unemployment, His Lordship observed that the Court would not permit Article 226 of the Constitution to be used as a weapon or licence for employers to inflict unfair labour practices on their workmen.

His Lordship, in his judgement, observed that the workman was given a job which was permanent but the company made him sign a contract limiting the period of his services to six months and extending this period from time to time. The Company was determined to deprive him of his claim to permanency. In other words, the company wanted to continue the unfair practice and decided that the workman must go. Consequently, they removed him on a trumped-up and vague charge of unsatisfactory work which had been held to be false, and the workman was victim of unfair labour practices.

His Lordship referred to a Supreme Court case in which Their Lordships of the Supreme Court had held that an industrial tribunal had the power to modify a contract in the interests of industrial peace, to protect legitimate trade union activities and to prevent unfair practices of victimisation and said that it was established law that an industrial court had the power to modify a contract and prevent an employer from dismissing his employee if it was of the opinion that such an act was in furtherance of or amounted to unfair labour practice.

His Lordship added that the petitioner company had been found guilty of a practice which must be considered reprehensible in the extreme.

"An employer who does not play fair with his workmen, is entitled to no consideration from this Court," His Lordship said. "He comes for relief which if granted would enable him to continue his unfair practice. If I were to grant relief demanded by the petitioner I would be virtually making this Court an accessory to the unfair labour practice of which the company has been found guilty." A suitor who seeks equity must do equity himself. Applying this principle to industrial disputes, an employer, who comes to this Court for relief against an award of an industrial court must not be guilty of unfair labour practices. The employer in the present case has been found to be so guilty in my opinion no relief should be granted. This Court will not permit Article 226 of the Constitution to become a weapon or licence for employers to inflict unfair labour practices on their workmen."

TRADE UNIONS OPPOSE MERGER OF COMPANIES

West German trade unions have denounced a move to merge six subsidiaries of the coal-steel-engineering concern, Mannesmann, into the parent company as an "enormous concentration of economic power." The unions fear that if the move to transform the subsidiaries into works departments of the parent company materialises, they will lose some 20 seats in the subsidiaries' supervisory boards and some labour directors' seats on the managing boards to which the unions are entitled under German co-determination laws. The trade union attack has been rejected as entirely unfounded by the management of Mannesmann which points out that the fusion, wholly legal under present laws and designed to streamline the concern's organisation will not add any outside company to the concern and thus not increase its economic power at all. The public, according to it, will henceforth be given an even better insight into the economic and financial status of the concern whose sales last year were valued at 2,700 million DM (of which 28 per cent. were to customers abroad), thus ranking high among big business in W. Germany. Mannesmann is owned by more than 66,000 shareholders of which 21 per cent. are housewives and widows and 34 per cent. employees. Out of about 72,500 people on the concern's pay roll, some 12,000 own shares of their company. After the merger, Mannesmann will again have a labour director and a supervisory board one half of which will consist of employees and trade union representatives.

The British Government has placed the services of Prof. J. H. Richardson, an expert in industrial relations, at the disposal of the Government of India under the United Nations expanded programme of technical assistance. Prof. Richardson, who has already arrived in India, will be in this country for about six months. He will advise the Government on various matters relating to industrial relations, particularly the programme of workers' participation in management. Prof. Richardson will also help in evolving concrete proposals for increased association of labour with management.

BRITISH OVERSEAS AIRWAYS CORPORATION

DELHI CLOTH AND GENERAL MILLS CO., LTD.

LALA BHARAT RAM FAVOURS HIGHER EXPORTS AT SOME SACRIFICE

FREEZING OF WAGES AND DIVIDENDS SUGGESTED

SPEAKING to the shareholders of the Delhi Cloth and General Mills Company, Ltd., at the Seventieth Annual General Meeting held on 27th November 1958, Lala Bharat Ram, Chairman of the Company, stated that the profits of the year were on the whole satisfactory, although the textile industry in India continued to face difficult conditions. The textile mills at Hissar and Lyallpur continued to improve, and the products of the silk factory were increasingly liked in the market. Keeping in mind the trends of economic development, plans of substantial expansion were under way in chemical units. The sugar units had also done better during the year, and the *vanaspati* section showed satisfactory results in spite of changing costs and prices.

Continuing, he said:

"I must refer in this context to the very high burden of excise and cane cess on the white sugar industry as compared to *khandsari* sugar. The production of *khandsari* is getting a benefit of Rs. 13 per maund which is payable as excise and cane cess on each maund of white sugar, the rate of which is controlled at Rs. 36 per maund, with some adjustments for different varieties of sugar.

"Unless the Government take immediate steps to remove this disparity the vacuum pan or white sugar industry is bound to suffer. The production of *khandsari* sugar is increasing at a rapid rate.

'Khandsari' Production

"The production of *khandsari* sugar is a dual loss to the State and Central Governments in the form of cess and excise not realised; and to the country on account of the waste of 30 per cent. precious food value involved in the inherently low recovery of sugar from cane by the process of *khandsari* manufacture. The argument that cane at places which are away from factories has to be used is not a good argument, as cane in these places can be turned into *gur*. By converting cane into *gur* there is no loss of food value. *Khandsari* is also not a labour-intensive industry, as has been sometimes claimed.

Sugar Exports

"A new welcome development which has taken place in the sugar industry in the year under review has been the Government's policy to export sugar under which every mill is required to export 2½ per cent. of its production, the individual contributions being pooled for sale abroad at whatever price is available. This element of compulsion in the matter of exports should be extended, I think, to many other industries in order to earn more foreign exchange.

"With your permission, I will offer some remarks on the economic situation in the country which naturally affects our Company as well. There are numerous problems facing the country, but I would like to highlight two problems which form the core of our economic difficulties. The two problems are the food situation and the shortage of foreign exchange resources.

"In my view sufficient attention has not been given to the increase in food production which has resulted in a whole chain of higher prices and costs extending to industrial wages where dearness allowance rates vary with the cost of living indices. Until food production is increased consistently and wastage of foodgrains in storage and transit avoided the economy will continue to be under strain, more so in a lean harvest year.

Exports Should be Raised

"While I do not underestimate the value of external help in the form of loans, grants and participation by foreign investors, it is necessary for us to realise that eventually we must stand on our own feet in the matter of earning foreign exchange adequate for needs of economic planning. It is a national task in which it is necessary for the Government, the manufacturer, the worker and the consumer all to make sacrifices. In fact, as is well known, in some countries, exports are being maintained and increased on the basis of prices which have no discernible relation to costs. Whatever the mechanics of the manner, it is my view that in any underdeveloped country like ours, engaged in a process of accelerating economic development, there is no alternative but to export—even at a sacrifice.

"I had earlier referred to the Government's policy with regard to export of sugar and it seems to me that unless a similar policy is followed also in the case of other industries we may not be able to increase our exports to the required extent or even to maintain at present low levels.

Textile Industry

"This applies as much to the textile industry which is passing, as you know, through very critical times. On the one hand, cloth is not moving in the internal market and, on the other hand, exports have been declining—on the basis of figures for the first half of the year, the exports during 1958 might not exceed 630 million yards, as compared to 854 million yards in 1957 and 1,000 million yards postulated in the second Plan. The Government have recently announced certain incentives for export. While I welcome the spirit behind these schemes, I doubt if these incentives will result in a substantial increase in the export of mill cloth. I am afraid that a substantial increase in our exports will come only if there is compulsion in the matter of exporting.

"I am glad to say that the exports by our organisation have been maintained—sometimes even at a sacrifice—in contrast to the sizable decline recorded for the country as a whole.

Wage Policy

"Before I conclude, ladies and gentlemen, I would like to invite your attention to some aspects of wage policy. As you all know, the greater part of the industrial worker's wage today changes with the cost of living index—it has no relation to the important question whether his productivity justifies a higher wage or not. It has also, very often, no relation to the wage levels generally prevalent in the same centres. In fact, I will present figures below to indicate that in recent years manufacturing wages have gone up at a rate that is almost two and a half times the rate of increase in *per capita* levels of income:

	Manufacturing wages per person Rs.	Increase Per cent.	*Per capita* income Rs.	Increase Per cent.
1948-49 ..	835		247	
1956-57 ..	1,213*	+45	294	+19

* Figures for 1956.

"This aspect of wage costs—their tendency to rise independently of boosts in productivity and at a rate substantially higher than the levels of national income—must be held in check in the larger interests of the country. I believe that for an underdeveloped and densely populated country like ours, we should follow a policy of low-cost and low-price economy. This policy will not only help our internal economy but will be the only permanent sustaining factor for maintaining and increasing our exports.

Freezing of Wages, etc.

Personally, I would suggest that emoluments of industrial labour be frozen at their current level for the next few years. This freeze on wages should be accompanied, in my opinion, by the imposition of a ceiling on dividends, and on managing agents' commissions. This policy will not only help our internal economy but will be the only permanent sustaining factor for maintaining and increasing our exports.

"To many of my friends, in industry and outside, these proposals might appear drastic. But I strongly feel that the alternative to old economic ills can only come from the conscious creation of a climate of all-round willingness to sacrifice in the larger, social interest.

"Ladies and gentlemen, as you are well aware, this is the first time I am addressing you as the Chairman of this Company. I am a successor—not without a very human measure of hesitancy—to a very distinguished predecessor, Sir Shri Ram, who has been the wise architect of this large organisation. I am glad, however, that some of our burdens will be less, because his counsel, as one of your Board of Directors, will still be available to us. On your behalf and mine, I would like to convey to him our gratitude and sincere good wishes. I am sure I will have your co-operation and goodwill to be able to maintain the high traditions of your Company.

"Before I conclude, ladies and gentlemen, let me convey my thanks to all my colleagues who form part of this organisation—the D.C.M. —whose efforts have been responsible for the satisfactory working of the Company even at such critical times."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

CENTRAL WAREHOUSING CORPORATION'S WORK REVIEWED

MR. DAMLE'S ADDRESS AT THE ANNUAL GENERAL MEETING

MR. K. R. Damle, Secretary, Ministry of Food and Agriculture and Chairman of the Central Warehousing Corporation, stated at the Corporation's annual general meeting in New Delhi on 17th November 1958, that storage capacity for about two lakh tons of agricultural produce was envisaged by the Central and State Warehousing Corporations by the end of the second Five-year Plan.

The Chairman described the year under review as "one of useful exploratory activity and of consolidating experience in the field." He said that, while the majority of the warehouses opened at seven centres, so far, in various States were in *kharif* areas, the experiment was now being extended to *rabi* States.

Inviting the Board of Directors to consider the report for the year 1957-58 as well as the annual accounts duly audited by two auditors appointed by the Central Government and the Auditor-General of India, the Chairman said: "You will no doubt have noticed from the annual accounts sent to you that, apart from the National Co-operative Development and Warehousing Board and the State Bank of India, the response to contributions to our share capital has been very encouraging from co-operative societies, and we are actively considering a proposal to augment the number of shares to which such societies may be held eligible. By the time we meet next year, the picture on this account may have recorded a great deal of improvement."

L.I.C. Takes Interest

"Our negotiations with the Life Insurance Corporation have also borne fruit and a substantial number of shares has been purchased by the Corporation and by one or two other insurance companies... The elimination of waste through scientific storage, enlargement of credit facilities through warehouse receipt and general improvement of trade, in particular of export trade, by the grading of produce and its scientific upkeep, are only a few of the obvious advantages of this enterprise and, as our business expands and the benefits of warehousing become more widely appreciated, the number of shareholders is bound to increase greatly from year to year."

Stating that "of the large amount of share capital received last year, more than half (i.e., Rs. 64 lakhs to be exact) had been contributed to the share capital of State Warehousing Corporations," the Chairman said that "the interest of State Governments in the success of the scheme is very great indeed, and linked as they are with the agriculturists, almost all of them are looking forward to the rapid and efficient functioning of warehouses. Latest indications about State Governments' undertaking wholesale trading in foodgrains seem to hold out further promise of custom to our warehouses."

The Chairman further said: "You will have seen from the report that the Corporation has undertaken no construction during the year under review but worked at a number of places by taking accommodation on hire. This is, indeed, as it should have been, because we had to make quite sure of the ground we were treading on at each centre, so that, if any was found unprofitable, it could be given up by terminating our lease and taking further steps to adjust our programme in the light of whatever experience we may have gained. Added to this was the need to evolve designs for our warehouses—both for bulk and bag storage—designs such as were most economical in the use of steel and also such as were most appropriate for the storage of agricultural commodities coming at the respective markets. I am glad to tell you that many of the hurdles have been cleared, and our construction engineer would soon be putting up our own structures not only for the storage of foodgrains but also for such patently important commodities like *gur*, cotton, groundnut, apple and potato."

Another feature of the report which may, perhaps, interest you, said the Chairman, was the step taken to bring the Corporations—Central and State, into closer contact with their respective Departments of Food and Civil Supplies. The discussions are continuing and the response from State Governments has been most encouraging.

Service Becoming Popular

"Our storage charge which was fixed at a rather high level in the beginning was also revised in February 1958, and has since remained unchanged. This change has apparently proved attractive to all classes of depositors and custom has steadily improved upto the end of the period under review. Another handicap from which we suffered in the beginning was the difficulty experienced by our depositors in obtaining credit from banking institutions. The availability of such credit has greatly tended to improve, and many of the delays which were encountered in the earlier days have now been greatly reduced. I have little doubt in my mind that a large number of storage agents are now availing themselves of this facility, because of the ready availability of credit on the basis of our receipt."

Concluding, the Chairman said: "I need hardly add that, if the scheme is to attract a large number of primary producers in equal measure, the marketing societies, wherever they exist, will need to be activated to a very great degree and their resources improved by adequate and timely credit from apex co-operative banks and their branches in the districts. Steps are being taken in this behalf in consultation with the State Bank and the Reserve Bank of India and I am very hopeful of their assistance."

A Great Sound of Machines...

WHEN BALBIR SINGH came to Jamshedpur from Bahrein in 1957, the site for the new Rs. 100-million Blooming Mill—a key unit of Tata Steel's Two Million Ton expansion programme—had just been cleared after levelling a large hillock.

Today this new 46" Blooming Mill, the largest of its kind in India, with a rolling capacity of two million tons, is all set to produce the blooms and slabs from which rails, structurals, plates, sheets and many other products will be rolled.

Despite the Suez Crisis which delayed vital supplies and other difficulties, the rapid completion of the Blooming Mill was made possible by the devoted service of men like Balbir Singh. He and hundreds of other Indians, assisted by American and German technicians, worked round-the-clock on this major expansion project to produce more steel to strengthen India's economy.

FOREIGN TRADE OF YUGOSLAVIA

EXPORTS MORE THAN DOUBLED IN PAST FOUR YEARS

By Milorad Konjovic

THE principles underlying Yugoslav foreign trade policy have their source in the decentralisation and liberalisation of the entire economy and in a series of fundamental principles of Yugoslavia's foreign policy, of a peaceful and friendly co-operation with the widest circle of countries on the basis of independence and equality and active coexistence. Contrary to the spirit of self-sufficiency, the Yugoslav foreign trade is an instrument of growing linking of exchange of goods with the world market and an ever closer co-operation, both trade and economic, in the broadest sense of the word, with all the countries willing to entertain such co-operation to mutual advantage.

The interest in, and the active contribution of Yugoslavia to, various international economic organisations, should be appraised from this viewpoint—in organisations which should contribute to closer and more intensive co-operation, to the removal of the still existing obstacles and impediments to a fruitful and all-embracing world trade.

In the domain of exchange of goods, Yugoslavia maintains bilateral trade relations with countries which apply this method in their commercial practice as well as multilateral agreements with a wide liberalisation of imports and the possibility of transferring her credit balances to various countries, for example, to the majority of E.P.U. countries on a complete or partial basis. On the other hand, within the limits of available foreign exchange—in volume and by pattern—Yugoslavia accepts in principle a liberalised foreign trade, reckoning, of course, with the foreign trade controls of her partners.

Powerful Expansion

Parallel with a powerful boom of her general economic development, particularly with the coming into production of new industrial plants, Yugoslav foreign trade in recent years lived to see a powerful expansion. The foreign trade during the period from 1953 to 1957 shows that Yugoslav exports during this period were more than doubled. The average rate of increase amounted to 21 per cent. per annum, while imports rose at an annual average rate of 16 per cent. In 1957, a record two-way trade was recorded totalling $1,055 million, exports amounting to 118,533 million dinars and imports to 198,354 million dinars. The most important rise, particularly in exports, was achieved in 1956 and 1957, amounting to 23 per cent. and 22 per cent., respectively, while, in 1957, imports too recorded a substantial increase.

The favourable pattern of Yugoslav exports facilitated easier overcoming of international market fluctuations and an easier compensation of high price oscillations of some products. The more important Yugoslav exports include nonferrous metal products, timber industry, livestock, tobacco, chemical industry products, nonmetallic minerals, etc., while, lately, the metal working industry, electrical industry, shipbuilding and food industry products have been gaining in importance.

Considered by production branches, industrial products contributed in recent years 70 per cent. to the Yugoslav aggregate exports, while the products of agriculture and forestry accounted for 30 per cent. In view of the perspective plan of development of agriculture, reduced imports of food products during the coming period, which accounted in the past for about one-fourth of the total imports, are anticipated together with a powerful strengthening of the raw materials basis as well as a gradual increase of participation of agricultural products in the exports.

In the imports, apart from the agricultural products already mentioned, the staple items are various machines and transport equipment (about one-fourth of the imports), mineral fuels and lubricants, raw material (wool, cotton, hides, rubber, synthetic fibres, etc.), chemical products, particularly fertilisers and various semi-manufactures for reproduction, particularly basic metals. In addition, various semi-manufactures for reproduction have been constantly growing, particularly basic metals. Various finished consumer goods have also been steadily rising.

The pattern of exports and imports in 1956 and 1957 by S.I.T.C. sectors is shown in the following table:

Area Pattern of Exports and Imports

(In million dinars)

Area	Exports		Imports	
	1956	1957	1956	1957
Europe	75,887	92,734	86,478	125,031
O.E.E.C. countries	42,713	61,210	54,983	82,158
East European countries	22,174	31,524	31,459	42,813
Asia	7,199	8,761	8,099	11,729
Africa	2,045	6,185	2,179	4,473
North America	8,525	10,191	40,501	53,130
South America	3,347	649	3,930	2,641
Oceania	8	11	1,056	1,390
Total	97,011	118,533	142,243	198,397

Exports and Imports by S.I.T.C. Sectors

(In million dinars)

Sectors	Exports		Imports	
	1956	1957	1956	1957
Food	24,886	29,236	45,265	44,043
Beverages and tobacco	7,896	8,044	14	311
Raw materials, except fuels	22,936	24,613	22,574	22,135
Mineral fuels and lubricants	1,287	1,966	14,077	19,600
Animal and vegetable oils and fats	14	20	1,692	3,885
Chemical products	4,344	5,818	9,913	14,505
Products classified by material	26,773	32,393	17,317	31,152
Machinery and transport equipment	4,471	8,025	28,321	50,372
Various manufactures	3,524	6,501	2,988	4,376
Various transactions and good n.e.s.	890	1,017	82	1,015
Total	97,011	118,533	142,243	198,394

A satisfactory development in respect of pattern of exports is manifested in the steady upward trend of manufactured products (sectors 5 to 8) which rose from 38.5 per cent. in 1955 to 46.1 per cent. in 1957, while the contribution of agricultural-raw products dropped in the same proportion. A similar tendency in the opposite sense or the increase of imports of primary products was manifested all along until last year when it was interrupted by high imports of capital equipment.

Exports Increase

Increased exports in 1957 were recorded in all the sectors, but they were particularly spectacular in the case of products classified by material: machinery and transport equipment and manufactures and in the food sector (livestock, maize, etc.). In the imports which likewise recorded a rise in all the sectors except food (drop of grain imports), the most prominent place is held by machinery and transport equipment, which recorded further efforts to expand the domestic industrial bases and communications. Here the imports under various credit arrangements and investment agreements played a prominent part. An import increase was also recorded by products classified chiefly by material: basic metals, textiles, and further by raw materials, mineral fuels and lubricants, and chemicals. The adverse trade balance was reduced in a commercial sense by deliveries under the long-term surplus credit arrangement and other products from the U.S.A. totalling about 35 million dinars.

In respect of area pattern, the number of countries—Yugoslav foreign trade partners—has been continuously growing. In 1957, again, Yugoslav goods were shipped to the markets of 80 countries, while goods were imported from 78 countries. However, by far the most important and trading area is that of Europe taken as a whole which accounts for approximately four-fifths of the total exports and approximately two-thirds of the total Yugoslav import. Geographical proximity, excellent transport facilities, complementary economies and traditional business contacts constitute the basic reasons of intense and naturally conditioned trade relations with this area. Approximately four-fifths of the total increase of exports and two-thirds of imports in 1957 were accounted for by Europe. Although the O.E.E.C. countries account for two-thirds of the total exports and imports, and the European and East European countries for one-third, it is nevertheless necessary to point to the extremely satisfactory development of trade between Yugoslavia and the East European countries which account for almost one-fourth (24 per cent.) of the total foreign trade of Yugoslavia. During the last two years, exports to these countries was trebled and imports from them quadrupled. In addition to the regular trade agreements with some of these countries, agreements governing trade for many years were signed as well as various investment agreements and credit arrangements and technical assistance agreements. In this way, the basis of economic relations was expanded to the mutual advantage of all concerned.

In addition to the regular commercial exports and imports, individual manufacturing co-operation contracts with a large number of producers made a considerable contribution to the augmented exchange of goods with the O.E.E.C. countries. In this way, Yugoslavia has obviously displayed a wish to strengthen her industrial basis by closer contacts with all the industrial countries who wish to co-operate on a basis of equality and mutual interests. Apart from this, the large degree of trade liberalisation with these countries and the possibility of transferability with some of them, have facilitated and acted stimulatingly on the increase of trade.

Trade With U.S.A.

In terms of volume and importance of trade next to European countries, the United States of America is the most important individual foreign trade partner of Yugoslavia. The exports to the dollar area last year recorded a considerable increase, thanks to the ever-growing range of Yugoslav export items which are finding a ready market in this area. Particularly satisfactory sales were recorded by iron and steel industry products, non-ferrous metallurgy products, metals, finished wooden products, tobacco, hops, etc. The U.S. participation in the imports was also very significant consisting of supplies of various goods under long-term credit arrangements.

The export trade with Asian and African countries is also showing a steady increase with an extending range of textile, metal, electrical industry, food and chemical industry products which are already well introduced on these markets. The increase of exports to India, China, Egypt and other Near Eastern countries is quite spectacular. The imports from this area have likewise undergone an incease, particularly raw rubber, copra, cotton, jute, phosphates, iron ore and spices which are items in growing demand among the Yugoslav importers.

Finally, although during the last two years the trade with South America fell to the lowest level as a result of the unsettled question of agreements with Brazil and Argentina, this year trade relations are expected to revive and increase to a considerable extent following the recently concluded trade agreement and a visit paid by Yugoslav trade delegations to these markets.

The most important countries in Yugoslav export and import trade during 1957 (exports and imports in million dinars) were:

Exports: Italy: 16,091; Western Germany: 15.755; Soviet Union: 14,675; U.S.A.: 10,022; Great Britain: 7,162; Austria: 5,748; Poland: 4,953; Switzerland: 4,495; Egypt: 3.958; and Greece: 3,890.

Imports: U.S.A.: 52,121; Italy: 23.640; Western Germany: 22.640; Soviet Union: 20.709; Great Britain: 12.560; Austria: 7,157; Hungary: 5,915; Poland: 5,762; Czechoslovakia: 5.685; and Switzerland: 3,326.

It is quite understandable that the predominant role in Yugoslav foreign trade is played by the neighbouring and industrially highly developed countries. But this fact in no way diminishes, as we have already seen, the importance and the role of less developed countries with which trade relations are being consolidated and developed from year to year.

EXPORTS OF MANGANESE ORE

Trade circles in Bombay have welcomed the abolition of export duty on all grades of manganese ore last week. This measure will naturally raise the competitive capacity of the indigenous ore leading to higher levels of export. It is gratifying that this relief has come at a time when sizable stocks are reported to have accumulated in the country. The present floating stocks are estimated to be about 600,000 tons, as against the estimated output of about 1.5 million tons. Besides, the State Trading Corporation and private interests have stocks on hand amounting to 150,000 tons.

It may be noted here that the value of exports of manganese ore have dropped by about 50 per cent. to Rs. 11.88 crores during the eight months ended August 1958, as against Rs. 21.62 crores during the corresponding period of 1957. India has received some orders for the low grade ore during the current year and it is expected that the U.S., Japan and Continental countries will increase their import of low grade ore from India, following the removal of duty. The prospects for the exports of high grade ore, however, do not seem to be bright, despite the abolition of export duty. The trade interests consider it unfortunate that the Government of India is yet in two minds on the issue of reducing railway freights to ports.

AGRICULTURAL POLICY OF THE COMMON MARKET

NO HARM IS INTENDED TO OTHERS

THE thirteenth session of the G.A.T.T. held at Geneva for over five weeks came to a close on 22nd November 1958. In retrospect, it is clear that the dominating theme in the deliberations of the session centred round the problems and prospects of world trade in agriculture. Trade in agricultural products, as is well known, is subjected to import restrictions and various measures of protection, which inhibits the free flow of trade in primary products. This problem has assumed greater significance in the context of the proposed establishment of a common market made up of six countries in Western Europe, from the beginning of next year. The agreement leading to this development is known as the Rome Treaty. There is much suspense and anxiety over the issue, particularly in the underdeveloped countries. In this connection, the views expressed by Dr. S. L. Mansholt, Vice-President of the Commission on the European Economic Community—otherwise known as Common Market—in the course of the plenary meeting of the Contracting Parties are of considerable importance.

It may be noted that a clear agricultural policy has not yet been evolved in the Rome Treaty. The Economic Commission is still engaged in the arduous task of laying down specifically the agricultural policy to be pursued by the Common Market countries in the light of the broad outlines provided for in the Treaty. Its proposals will be submitted not later than 1st January 1960. It may be recalled that an agricultural conference of the Six was held in Stresa, a few months back. This conference arrived at certain important decisions. Some of those decisions have a direct bearing on the question that was uppermost in the minds of various delegations that participated in the G.A.T.T. Conference, namely, "what will be the effects of the agricultural policy of the six on other countries, and especially, of course, on other exporting countries and what will be the effect, in general, on world trade in agricultural commodities?"

Structural Problems

It is said that the agricultural policies now being pursued by the various countries, consisting as they do of tariffs, quotas, subsidies, price guarantees, are not based on a realistic understanding of the structural problems of agriculture. Such extraneous means of assistance are nothing more than palliatives. The problem of farm incomes, in the ultimate analysis, arises from imbalance between production and consumption. According to Dr. Mansholt, the Common Market seeks to eliminate this imbalance and put agriculture on a strong and stable foundation. To quote him:

"What we want to develop in the Six countries is first of all that agriculture as a whole should be considered as a normal part of the economy and of social life. We want farm incomes not only to depend on the decisions of Ministers of Finance and Governments as to the rate of guarantees and subsidies and so on—we want to develop an agricultural policy that in itself gives the guarantees for a normal income in farming, for a normal trade, too, in farm commodities. What we want, too, is that production and consumption should, as far as possible, be in balance to avoid 'dirigisme,' to avoid a system of intervention and of agricultural aid. When I speak of that balance in production and consumption, we know that, on account of the various types of national intervention in agricultural commodities and agricultural policies, we do not always produce agricultural commodities, because there is a market demand for them, but because there are guarantees. And one thing we have learned up to now is that we cannot continue in this way, and so we have to develop an agricultural policy that is based on the reality and that stems from the nature of existing demand. And then we have to discover why, in which way, by which means and in what quantities we have to produce agricultural commodities."

There is no doubt that all these things can be achieved in a more or less protectionist policy by autarchy. Dr. Mansholt, however, stressed that the Common Market "cannot and will not be an autarchic community in the field of agriculture." No doubt, the Treaty sought to bring about a progressive development of trade within the community; but, he assured the delegates that the countries concerned would take into account the necessity of trade relations with third countries. He wanted them to note that "the Common Market envisages an expanding economy, with increasing population and increasing industrial power and that means the strengthening of trade with other countries." This, he said, would be impossible without imports of raw materials or agricultural products. "In other words, the best way to give a guarantee to farmers is," he remarked "to ensure industrial expansion."

Common Agricultural Policy

That is the first philosophy of the Common Market, according to Dr. Mansholt. The second philosophy is to establish a policy that leads to a balance between production and demand. This should take into account imports and exports. The first requisite for this purpose is to have a common agricultural policy. But how will such a policy affect other countries? Answering this poser, Dr. Mansholt said:

"First of all, we have to look at what the situation is now, what we now have in the Six countries. There are six national policies with a world market at this moment in agricultural commodities that has a burden of surpluses, together with low prices, where you find a very great difficulty in that there is no balance between production and demand. I do not say that there could not be a balance between production and demand. Demand is big enough but there is no balance between production and purchasing power and we all know that there is a very big demand for foodstuffs in the world. At this very moment there is a big struggle with this problem on a world-wide scale. We have in Europe six national policies with six ways and means of dealing with agricultural commodities, stabilisation schemes, guarantees, fixed prices, subsidies, monopolies and so on. What is the result in the Six countries? We see in the Six countries a production of commodities for which there is no real demand, and that creates surpluses. But the philosophy expressed in Stresa, aimed at a balanced production and a balanced agricultural policy. I think that we can make a step forward by creating a common agricultural policy. That will be a step forward for all of us not only on a world-wide scale but in all our interests. It will be a great benefit for all when there is a possibility of developing an agricultural policy that is placed on a sounder basis than it has been up to now. By the way, I would like to mention here, Mr. Chairman, quite clearly, that protectionism does not only take the form of import barriers, such as tariffs and quotas, but other ways and means, other ways and appearances, can give the same negative aspects as, for instance, subsidising the export of surpluses as practised by us all. We do it in Western Europe and it is done in North America. There are other systems of deficiency payments, but I will make it quite clear that all those methods of dealing with agricultural policy bring difficulties to trade in agricultural commodities. They all have negative effects."

The underlying cause for governmental interference with the market mechanism pertaining to agriculture is to be found in the structural problems of production and not elsewhere. These structural problems of agriculture in Western Europe, Dr. Mansholt averred, could be solved only by an increase in productivity, by productivity of soil, of capital, and, above all, of labour. How this increase in productivity will promote the cause of agriculture and call for more and more imports of primary products was explained by him in these words:

"What we have done up to now is to increase production without ascertaining that a corresponding demand existed. We have created surpluses. We will have to be very careful about this problem. On the other hand, there is the necessity of increasing the productivity of labour in agriculture and so we will have to do all we can, make every effort and concentrate on increasing productivity of labour by other means. When we follow this philosophy in our agricultural policy of expanding industry, of a balance in agricultural production and consumption, taking into account the relations with exporting and importing countries, and an increase in productivity of labour, then I am absolutely sure, Mr. Chairman, that, as the result of a common agricultural policy on a sound principle, there will be an expanding food market and there will be room for imports of basic products, primary products and food products, because we have an agricultural policy that is based on sound principles."

Alluding to the need for paying adequate attention to the plight of underdeveloped countries, Dr. Mansholt pointed out that a concentrated attack from various sides, such as economic and technical aid, is very essential, thereby enabling a greater flow of goods from those countries which are in unfavourable conditions to those who are in favourable conditions. He declared that the members of the Common Market were fully alive to the need for helping underdeveloped countries. But he maintained that an increase in the flow of trade could not be attained merely by breaking down tariff barriers. These barriers were only symptoms, and not the disease. What was needed was adjustment of the various economic policies. Free trade, according to him, would only drive out economic production. He contended that not all agricultural protectionist policies were wrong There was need for selectivity, for the formulat on of some sort of code of agricultural policy. Accordingly, he emphasised that what was necessary was moderation of agricultural protectionism, hand in hand with measures to facilitate sound reorganisation of agriculture, which would stabilise world trade in farm products. Admittedly, an increasing demand for industrial raw materials and foodstuffs will go a long way towards allaying the apprehensions of underdeveloped countries.

LAC IMPROVES

The sharp fall in the price of lac and the slump that overtook the industry was brought out in an earlier issue, *vide Commerce* dated 22nd November 1958. Some of the recent reports, however, indicate a gradual improvement in the overall position of the industry of lac. According to a statement of the Indian Lac Exporters' Association, Calcutta, the slow-down in the manufacture of shellac, its sale and export since July last was yielding place to normal and satisfactory progress. The export demand for shellac, the statement said, being of a seasonal nature, usually slackens after the rains. Manufacturing operations gather momentum again after the rains, normalcy returning around the *Pooja* days.

The Association has further pointed out that internal prices of shellac are appreciably above the minimum export prices. The State Trading Corporation has, during the past few weeks, found it difficult to secure supplies at minimum prices against 1,000-ton order. A scheme for maintaining buffer stocks for shellac is said to have been approved by the trade and is now under the consideration of the Government. Meanwhile, members of the Association had voluntarily imposed upon themselves a cess of Rs. 2 per maund for carrying out overseas publicity and research in lac and a variable cess for financing buffer stocks.

WORLD REVIEW OF ECONOMIC CO-OPERATION

With a view to promoting international co-operative action, the Economic Committee of the U.N. General Assembly recommended, on 27th November, a country-by-country stock-taking of experience and plans in the field of economic development The resolution, approved by the Committee, calls for reports from nations "in a position to assist the economic development of underdeveloped countries" as well as the newly developing countries. The proposal was carried, with 55 countries voting in favour, none against, but Ceylon, Tunisia and the Communist countries, except Yugoslavia, abstaining. Speaking on the resolution, the Soviet representative, Mr. G. P. Arkadev, termed it an impractical exercise and an infringement of national sovereignty. He said some nations, such as the U.S.S.R., "are considering, weighing future programmes which do not have to be necessarily made public." Mr. Mohammed Sopiee of the Federation of Malaya replied that he could see no reason why any country would want to keep secret its plans for economic development especially if they concerned assistance to less developed nations. He felt that the resolution was "a promise of more effective international assistance." A second resolution of the Committee, accepted unanimously, seeks to invite member-nations to state their views on the desirability of formulating "a statement on the economic objectives of the United Nations" and the way to attain those objectives.

HIGHER COSTS TELL ON T.I. CYCLES' PROFIT

EXPANSION PROGRESSING—FINANCES SOUND

THE financial results of the T.I. Cycles of India Ltd. (Secretary: Mr. N. K. Aiyer, Madras) for the year ended 30th June 1958 show a setback from the highly encouraging performance witnessed in the previous year. Although the Company's production of bicycles during the year reached the sanctioned capacity and sales showed a further impressive rise over the preceding year, its profits have sustained a fall. This is due to a sharp increase in manufacturing and other expenses. The gross profit at Rs. 72.99 lakhs is Rs. 8.98 lakhs or 10.9 per cent. short of Rs. 81.97 lakhs earned in the previous year, to which level it had shot up by Rs. 51.92 lakhs or as much as 172 per cent. from Rs. 30.05 lakhs for 1955-56.

In keeping with the fall in gross profit, the net profit (after taxation and depreciation) at Rs. 32.38 lakhs, also stands lower, as compared with Rs. 36.90 lakhs for the previous year. The decline in profit has naturally meant a drop in the Government's share in the Company's earnings. Thus, the provision for taxation has been lowered from Rs. 35 lakhs to Rs. 33 lakhs. It will, however, be seen that, even after this cut, the Government is taking away more than the Company's net profit. The provision for depreciation has been raised from Rs. 5.95 lakhs to Rs. 7.61 lakhs. The Directors have continued to follow their commendable policy of ploughing in the major portion of the distributable profit, so that the Company may have sufficient resources for financing its expansion programmes. Accordingly, out of a net profit of Rs. 32.38 lakhs, a sum of Rs. 25.22 lakhs or 77.8 per cent. has been taken to the reserves. A breakdown of the additions made to the reserves during the year under review shows that Rs. 12.50 lakhs, as against Rs. 5.50 lakhs a year before, have been credited to general reserve, Rs. 3.50 lakhs as against Rs. 6 lakhs to dividend equalisation reserve, Rs. 4.50 lakhs as against Rs. 23.51 lakhs to development, replacement and research reserve and Rs. 4.72 lakhs as against *nil* to development rebate reserve. The dividend has been maintained at 10 per cent. paid for the previous year, to which level it had been stepped up in that year from 6 per cent. per annum for 1955-56 and 1954-55. The Company started paying a dividend only from the half-year ended 30th June 1954 at the self-same rate of 6 per cent. per annum.

The Company's progress during the past four years is brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	3,04.70	2,70.67	1,38.14	1,45.71
Stock of finished goods and work-in-progress	8.24	6.95	5.70	52.35
Expenses	2,35.24	1,91.46	1,08.74	1,44.94
Gross profit	72.99	81.97	30.05	29.80
Managing Agents' commission ..	..	4.12	1.88	1.25
Provision for—				
Depreciation	7.61	5.95	5.30	5.87
Taxation	33.00	35.00	7.50	2.50
Net profit	32.38	36.90	15.87	20.18
To reserves	25.22	30.01	9.23	10.69
,, goodwill	..	..	2.50	5.00
Dividend	7.00	7.00	4.20	4.20
	(10%)	(10%)	(6%)	(6%)
Carryforward	0.64	0.49	0.59	0.71

Sale proceeds during the year increased by Rs. 34.03 lakhs to Rs. 3.05 crores. As against this, expenses increased by as much as Rs. 43.78 lakhs to Rs. 2.35 crores, thus more than neutralising the rise in sale proceeds.

As stated at the outset, production of bicycles during the year reached the sanctioned capacity. It may be recalled that the Company was permitted by the Government to manufacture 200,000 bicycles and 100,000 sets of bicycle components. Although the Government has permitted the Company to expand its productive capacity further, the production could not be increased due to restricted import of essential raw materials. The Directors, however, report that extensions to factory buildings to facilitate increase in output are under completion and additional machinery are on order to implement the expansion programme. They add that necessary arrangements to secure foreign exchange to finance the project have already been concluded. The Company has completed country-wide arrangements for marketing its products through its sole selling agents, Messrs. T.I. of India Private Ltd. Another development that augurs well for the Company's future is the conclusion of arrangements with Messrs. J. A. Phillips Cycles Ltd., Birmingham, and Brampton Fittings Ltd., Birmingham, for manufacturing and selling some of their products.

The financial position of the Company appears to be quite sound. Although the Company is only nine years old, its reserves and surplus, aggregating Rs. 85.12 lakhs, exceed the paid-up capital of Rs. 70 lakhs (all in ordinary shares of Rs. 100 each) by a handsome margin of 21 per cent. The gross block of the value of Rs. 157.17 lakhs, including additions during the year amounting to Rs. 68.52 lakhs, stands written down to Rs. 124.43 lakhs. The goodwill (at cost) of Rs. 10 lakhs has been practically written off, the amount left over being tiny at Rs. 16. The current assets aggregate Rs. 134.43 lakhs and cover the current liabilities and the provision for taxation amounting to Rs. 103.74 lakhs by a comfortable margin. Of the current assets, cash and bank balances have fallen from Rs. 36.65 lakhs a year ago to Rs. 2.77 lakhs; this reflects the large expansion that has been in progress in the Company's manufacturing capacity.

The shares of the Company are closely held and are not quoted on any of the Stock Exchanges in India.

NEW COMPANIES IN EASTERN REGION

During the period from 1st April to 30th September 1958, 207 public and private companies were registered in the Eastern Region comprising West Bengal, Bihar, Assam and Orissa under the Companies Act. Of these, 15 were public companies with an authorised capital of Rs. 10.02 crores and 192 private companies with an authorised capital of Rs. 10.84 crores. During the period, 68 companies in the region went into liquidation.

The largest number of companies was registered in West Bengal, namely, 14 public companies with an authorised capital of Rs. 5.02 crores and 163 private companies with an authorised capital of Rs. 5.20 crores. In addition, eight companies limited by guarantee were also incorporated.

The number of companies, public and private, registered in Bihar and Assam was 11 each, while in Orissa it was eight.

COMPANY REGISTRATION IN THE NORTHERN REGION

During the three months ended September 1958, 54 companies—4 public and 50 private—were registered under the Companies Act 1956, in the Northern Region. In addition, one association, which is not for making profit, was registered under the Act in Uttar Pradesh. The total authorised capital of the companies was nearly Rs. 2 crores. The Northern Region comprises the Punjab and Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan. During the same period, 32 companies in the region went into liquidation and the names of 71 companies were struck off the register under section 560 of the Companies Act.

NEW BOARD OF DIRECTORS FOR B.I. CORPORATION

The Board of Directors of the British India Corporation Ltd., Kanpur, consisting of Mr. Haridas Mundhra and six others, was suspended by Mr. Justice Upadhyaya of the Allahabad High Court on 26th November, 1958. The Court ordered that the Board shall not function as such, until further orders, and further directed that this order shall remain in force during the pendency of the petition under sections 397 and 398 of the Indian Companies Act filed by the Life Insurance Corporation of India. The Court also ordered that no mill or factory belonging to the Corporation may, however, be sold or otherwise transferred by the Chairman of the Board of Directors, without obtaining the prior sanction of the High Court.

The above orders were a sequel to an application filed by the L.I.C. under Section 403 of the Indian Companies Act, praying for the appointment of a special officer to take charge of the affairs and assets of the British India Corporation.

His Lordship appointed another ten-member board in place of the present Board of Directors consisting of the following persons:

Mr. H. S. Chaturvedi, Chairman and Managing Director (Retired Judge of the Allahabad High Court), Mr. H. L. Khanna, Deputy Managing Director (a retired officer of the State Bank of India), Mr. R. L. Powell, Deputy Managing Director, Rai Bahadur Sri Ram Narain (Retired Treasurer of the State Bank of India, Kanpur), Mr. Narendrajit Singh (Member of the old Board), Mr. S. T. Thadani, Deputy Director-General of Supplies and Disposals, Government of India, Kanpur, Sir Padampat Singhania (Industrialist and Banker, Kanpur), an officer of the Commerce and Industries Department, nominated by the Minister of Commerce and Industry, Government of India, any person having experience in banking, nominated by the Reserve Bank of India, Bombay, and an officer of the L.I.C. nominated by the Chairman of the L.I.C.

MYSORE CHEMICALS AND FERTILISERS

DIVIDEND MAINTAINED

DESPITE a slight decline in sales proceeds and the shut-down of a few important units in the factory for repairs and scarcity of water, the profit of the Mysore Chemicals and Fertilisers Ltd. (Chairman and Managing Director: Mr. T. Shamanna, Mysore) for the year ended 31st March 1958 is a shade better than that for the previous year. The gross profit for the year under review, amounting to Rs. 4.62 lakhs, compares favourably with Rs. 4.51 lakhs for 1956-57 and Rs. 3.10 lakhs for 1955-56. The net profit after depreciation and taxation works out to Rs. 1.42 lakh; this shows practically no change, as compared with Rs. 1.43 lakh for the previous year. The provision for depreciation has been cut from Rs. 1.62 lakh to Rs. 1.32 lakh but that for taxation has been raised from Rs. 1.46 lakh to Rs. 1.88 lakh. The latter amount includes a sum of Rs. 13,448 for wealth tax, the corresponding amount in the previous year being Rs. 15,000. Barring a sum of Rs. 1,284 transferred to development rebate reserve, no amount has been allocated to the reserves except the usual contribution of Rs. 12,000 to employees' retiring gratuity fund. There is no change in the dividend to shareholders which has been maintained at the modest rate of 5 per cent. for the past few years.

The following comparative table discloses the progress of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	26.17	26.76	19.77	N.A.
Closing stock of finished goods..	4.07	1.70	5.25	N.A.
Raw materials consumed ..	11.15	7.35	6.38	N.A.
Other expenses	13.05	13.63	10.91	1.16*
Gross profit	4.62	4.51	3.10	3.87
Depreciation	1.32	1.62	1.27	1.20
Taxation	1.88	1.46	0.55	1.18

To reserves	0.18	0.12	0.12	0.12
Dividend	1.24	1.24	1.24	1.24
	(5%)	(5%)	(5%)	(5%)
Carry forward	0.17	0.12	0.05	0.14

N.A.—Not available. * Incomplete.

It will be noted that sale proceeds during the year fell from Rs. 26.76 lakhs in 1956-57 to Rs. 26.17 lakhs. But cost of raw materials consumed increased from Rs. 7.35 lakhs to Rs. 11.15 lakhs, though other expenses declined slightly from Rs. 13.63 lakhs to Rs. 13.05 lakhs. The rise in the closing stock of finished goods from Rs. 1.70 lakh to Rs. 4.07 lakhs is a surprising feature of the accounts in the light of insatiable demand for chemicals and fertilisers reported during the year.

The following quotation from the Directors' report will enable readers to appreciate the financial results for 1957-58 in their proper perspective and to get an idea of the outlook for the Company.

"Irrespective of the shut-down of a few important units in the factory for brief periods due to the repairs to be undertaken to the hydrogen furnace boiler in the ammonia plant and stoppage of water-supply in the R.B.L.L. Channel by the Public Works Department for annual repairs and silt clearing of the channel, the working of the factory was satisfactory.

"The production of superphosphate in the factory is steadily increasing to meet the growing demand for phosphatic fertilisers. The Directors have, taking the present circumstances into consideration, decided to increase the production of superphosphate to a reasonable limit of 10,000 tons per annum and arrangements are already afoot in this direction. Production of mixed fertiliser and other chemicals, which the Company is already manufacturing on a small scale, is being stepped up as a result of good demand expected for these products.

"Both the new motor generator set and the cell plant have been commissioned into working successfully and they are working satisfactorily. As a result of this, it is anticipated that the production capacity of ammonia from the new cells will permit increased production of ammonium sulphate."

There is no change in the Company's paid-up capital as at 31st March 1958 which stands at Rs. 24.81 lakhs, all in ordinary shares of Rs. 10 each. As against this, the reserves and surplus aggregate only Rs. 6.88 lakhs. The current liabilities stand at Rs. 21.69 lakhs. The gross block of the value of Rs. 54.70 lakhs stands written down at Rs. 20.27 lakhs. The current assets aggregate Rs. 33.11 lakhs and cover the current liabilities and the provision for taxation by a wide enough margin.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 8.30 *cum-div.* On an *ex-div.* basis, the yield works out to 6.4 per cent. per annum.

RADIO LAMPS FARE BETTER

DIVIDEND ALSO HIGHER

THE performance of Radio Lamp Works Ltd. (Managing Agents: Messrs. Jamnalal Sons Private Ltd., Bombay) during the year ended 31st March 1958 is heartening. There has been all-round improvement in its results. Production, sales, profit and dividend have all gone up. The gross profit for the year under review amounts to Rs. 8.07 lakhs and compares well with Rs. 7.18 lakhs for the previous year and Rs. 4.81 lakhs for 1955-56. The net profit has also increased, from Rs. 2.60 lakhs for 1956-57 to Rs. 3.19 lakhs. The provision for taxation is naturally higher at Rs. 3.28 lakhs. as against Rs. 3.00 lakhs, but that for depreciation has been slightly lowered from Rs. 93,645 to Rs. 88,969.

Out of the net profit, a sum of Rs. 10,000 has been transferred to development rebate reserve and another Rs. 10,000 to provision for doubtful debts. In view of the fact that all arrears of dividend on the 5 per cent. cumulative preference shares were paid off in the previous year, the Directors have thought it fit to make a modest upward revision in the rate of distribution to ordinary shareholders from 7½ per cent. paid for 1956-57 to 9 per cent. It must be noted further that this enhanced dividend is on a higher capital of Rs. 25 lakhs raised by the issue of 4,999 ordinary shares of Rs. 100 each which were fully subscribed. Likewise, the dividend on deferred shares has been raised from 11.8 per cent. to 20.46 per cent.

The following comparative table will give the reader some idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March		
	1958	1957	1956
Sale proceeds	1,12.69	86.28	62.58
Closing stocks	43.01	21.12	18.89

	(9%)	(7½%)	
Carry forward	0.11	0.47	0.69

* For the years 1954-55, 1955-56 and 1956-57.
† For the years 1950-51, 1951-52, 1952-53 and 1953-54.

Sale proceeds during the year under review rose from Rs. 86.28 lakhs in 1956-57 to Rs. 112.69 lakhs. Cost of raw materials consumed was slightly lower at Rs. 18.38 lakhs, as compared with Rs. 19.89 lakhs in the previous year but other expenses shot up from Rs. 63.94 lakhs to Rs. 112.09 lakhs.

The Company has commenced manufacture of lighting fittings and chokes. They have also been appointed sole selling agents in India for Kassel's fans. In order to boost sales, three new sales offices have been opened at Bangalore, Wardha and Gauhati. The Company appears to have a bright future in view of the addition of new lines of manufacture and sales. The good progress that has been made, and the enterprise shown, in recent years suggests that the Company is in competent hands.

We are further told that Hind Lamps Private Ltd., in which the Company under review holds a 50 per cent. interest, has registered considerable increase in production in the various items of manufacture of lamps and components during the year ended December 1957 over those for the previous years. Hind Lamps have also obtained licences for the manufacture of 800,000 fluorescent tubes and an additional 2 million general lighting and 3 million miniature lamps and also for setting up an automatic bulb-blowing machine for glass shells. Incidentally, it may be noted here that this is the first plant of its kind in India. The expansion plans are expected to involve an outlay of over Rs. 50 lakhs for which Hind Lamps are negotiating for a loan of Rs. 35 lakhs, mainly in foreign currency, for machinery and plant. The balance will be met from their own resources. When the expansion scheme is completed, Radio Lamps will get its 50 per cent. share of the increased production of electric lamps and fluorescent tubes for sale.

The Company's paid-up capital as at 31st March 1958 stands raised from Rs. 29.10 lakhs at the end of 1956-57 to Rs. 34.11 lakhs, by the issue of new shares, as already stated. The reserves, including the surplus, are very small and amount to only Rs. 2.50 lakhs, of which Rs. 1.34 lakh represents the amount standing to the credit of the share premium account. The current liabilities stand at Rs. 93.08 lakhs of which secured loans from banks account for Rs. 38.95 lakhs and unsecured loans for Rs. 22.41 lakhs. The gross block at Rs. 12.62 lakhs has been written down to a book value of Rs. 9.16 lakhs. Miscellaneous expenditure amounts to Rs. 6,554. The current assets aggregate Rs. 120.47 lakhs, and exceed the current liabilities and the provision for taxation by a large margin.

The Rs. 100 fully paid-up shares are currently quoted at Rs. 121.75 *cum-div.* On an *ex-div.* basis, the year's dividend gives a yield of 7.9 per cent. per annum.

Points From The Chair

Aluminium Industry

"THE inherent defects of the aluminium industry in India of high cost of power and small capacities still continue. Further, because of the expanding economy in the country there are increases in wages, cost of raw materials and stores. But agricultural production has not kept pace with increase in population and rise in standard of living and, therefore, it is imposing new burdens on industries. Aluminium is a basic industry, highly capital and power intensive and involves complex technical know-how. Because of these characteristics, in aluminium industry one is limited to think of production in terms of thousands of tons whereas in other basic industries production is thought of in terms of million tons. Naturally the scope for absorbing the impositions of new burdens becomes limited. Further, the industry is protected and will have to remain protected as long as present-day conditions continue. Under these circumstances any rise in the price of aluminium will appear disproportionately high purely from the point of view of per ton price. But if one considers the effect of the increase quantitatively then it will be apparent that the increase in price is not high at all. The *per capita* consumption of aluminium in India is about 0.2 lb. while the *per capita* consumption of steel is about 15 lbs. In other words, a rise in price of steel of about Rs. 50 per ton imposes on the consumer a load 75 times heavier than that caused by an increase of Rs. 50 per ton in the price of aluminium."

LAKSHMIPAT SINGHANIA,
Aluminium Corporation of India Ltd.

Doubly Wasteful

"I must refer, in this context, to the very high burden of excise and cane cess on the white sugar industry as compared to *khandsari* sugar. The production of *khandsari* is getting a benefit of Rs. 13 per maund which is payable as excise and cane cess on each maund of white sugar, the rate of which is controlled at Rs. 36 per maund, with some adjustments for different varieties of sugar. Unless the Government take immediate steps to remove this disparity, the vacuum pan or white sugar industry is bound to suffer. The production of *khandsari* sugar is increasing at a rapid rate and is a dual loss—to the State and Central Governments in the form of cess and excise not realised; and to the country on account of the waste of 30 per cent. precious food value involved in the inherently low recovery of sugar from cane by the process of *khandsari* manufacture. The argument that cane at places which are away from factories has to be used is not a good argument as cane in these places can be turned into *gur* in which there is no loss of food value. *Khandsari* is also not a labour-intensive industry, as has been sometimes claimed."

LALA BHARAT RAM,
Delhi Cloth & General Mills Co., Ltd.

Import of Spare Parts

"Another matter which weighs heavily on the managements of public utility undertakings these days is the delay in obtaining import licences for even the most essential spare parts required in an emergency. We recently had the case of a relatively small item costing only a few hundred pounds where a delay of several weeks took place in receiving an import licence although the material was already manufactured and was awaiting transport by air. This delay cost the Company many times the value of the spare part concerned. It may be contended that the spare part in question should have been in ready stock. It will be easily realised that no organisation can afford to lock up capital by having in stock every possible spare part of the plant which would mean practically duplicating its cost. While a reasonable stock of spares has been provided by us in consultation with manufacturers for all possible eventualities, there is always the possibility of an unexpected item giving way or of a repeat failure. In such cases you can well appreciate the magnitude of the potential loss of production that would result from a single 15 M.W. machine being held up for a couple of months. It would, in fact, be equivalent to the loss in production from 15 mills working full blast over that period! In view of this it is to be hoped that the authorities in the Central Government would allow a reasonable latitude to the Central Water and Power Commission or similar Directorates to be invested with powers, within certain limits, to grant *ad hoc* emergency licences for spare parts required by important industrial undertakings, and particularly public utility undertakings."

P. D. C. R. CLARK,
Ahmedabad Electricity Co. Ltd.

COMPANY MEETINGS AND DIVIDENDS

KUMARDHUBI FIRECLAY AND SILICA WORKS LTD. Annual General Meeting, Calcutta, 12th December 1958. Dividend: Re. 1.25 per share, payable on or after 22nd December 1958. Transfer books remain closed from 28th November to 12th December 1958, both days inclusive.

INVESTMENT TRUST OF INDIA LTD. Annual General Meeting, Madras, 15th December 1958. Dividend: Rs. 5.00 per share. Transfer books will remain closed from 8th to 15th December 1958, both days inclusive.

GREAVES COTTON AND CO., LTD. Annual General Meeting, Bombay, 15th December 1958. Dividend: Rs. 10.00 per share, on old equity shares, payable on or after 22nd December 1958. Transfer books remain closed from 1st to 15th December 1958, both days inclusive.

EASTERN CACHAR TEA CO., LTD. Annual General Meeting, Calcutta, 16th December 1958. Dividend: *Nil*. Transfer books will remain closed from 10th to 16th December 1958, both days inclusive.

GROB TEA CO., LTD. Annual General Meeting, Calcutta, 16th December 1958. Dividend: Rs. 2.50 per 'A' ordinary share and Re. 1.25 per 'B' ordinary share. Transfer books will remain closed from 8th to 16th December 1958, both days inclusive.

BENGAL LUXMI COTTON MILLS LTD. Annual General Meeting, Calcutta, 16th December 1958. Dividend: *Nil*. Transfer books remain closed from 1st to 16th December 1958, both days inclusive.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 17th December 1958. Dividend: Re. 1.00 per share. Transfer books remain closed from 4th to 17th December 1958, both days inclusive.

BETJAN TEA CO., LTD. Annual General Meeting, Calcutta, 17th December 1958. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books remain closed from 1st to 17th December 1958, both days inclusive.

GAIRKHATA TEA CO., LTD. Annual General Meeting, Calcutta, 17th December 1958. Dividend: *Nil*. Transfer books remain closed from 1st to 17th December 1958, both days inclusive.

SELIMBONG TEA CO., LTD. Annual General Meeting, Calcutta, 17th December 1958. Dividend: *Nil*. Transfer books remain closed from 1st to 17th December 1958, both days inclusive.

TAIPOO TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 17th December 1958. Dividend: *Nil*. Transfer books remain closed from 1st to 17th December 1958, both days inclusive.

MYSORE TOBACCO CO., LTD. Annual General Meeting, Bangalore City, 17th December 1958. Dividend: Re. 1.25 per share, payable on or after 24th December 1958. Transfer books remain closed from 5th to 17th December 1958, both days inclusive.

ANANDA-BAG TEA CO., LTD. Annual General Meeting, Calcutta, 18th December 1958. Dividend: 5 per cent. or Re. 0.50 per share. Transfer books remain closed from 1st to 18th December 1958, both days inclusive.

JUTLIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 18th December 1958. Dividend: 17½ per cent. or Re. 1.75 per share. Transfer books remain closed from 1st to 18th December 1958, both days inclusive.

TENGPANI TEA CO., LTD. Annual General Meeting, Calcutta, 18th December 1958. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books remain closed from 1st to 18th December 1958, both days inclusive.

AMALGAMATED ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 18th December 1958. Dividend: Re. 0.85 per share (includes interim dividend of Re. 0.43 per share). Transfer books will remain closed from 8th to 25th December 1958, both days inclusive.

JOGTA COAL CO., LTD. Annual General Meeting, Calcutta, 20th December 1958. Dividend: *Nil*. Transfer books remain closed from 2nd to 19th December 1958, both days inclusive.

BENGAL ELECTRIC LAMP WORKS LTD. Annual General Meeting, Calcutta, 20th December 1958. Transfer books remain closed from 1st to 20th December 1958, both days inclusive.

PATRAKOLA TEA CO., LTD. Annual General Meeting, Calcutta, 23rd December 1958. Dividend: Rs. 10.00 per share (subject to funds being available in India). Transfer books will remain closed from 15th to 23rd December 1958, both days inclusive.

MYSORE GLASS AND ENAMEL WORKS LTD. Annual General Meeting, Bangalore City, 24th December 1958. Dividend: *Nil*. Transfer books will remain closed from 12th to 25th December 1958, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 26th December 1958. Dividend: Rs. 5.00 per share. Transfer books remain closed from 24th November to 23rd December 1958, both days inclusive.

MOZUFFERPORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 27th December 1958. Dividend: Re. 1.00 per share (includes interim dividend of Re. 0.35 per share). Transfer books will remain closed from 20th to 27th December 1958, both days inclusive.

JARDINE HENDERSON LTD. Annual General Meeting, Calcutta, 30th December 1958. Dividend: Rs. 2.50 per share. Transfer books will remain closed from 15th to 30th December 1958, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Interim dividend of 8 per cent. on ordinary shares, for the year ending 31st December 1958, payable on or after 15th December 1958. Transfer books remain closed from 1st to 15th December 1958, both days inclusive.

FALL IN PROFITS OF MYSORE TOBACCO

NEW MANBHOOM COAL MAINTAINS DIVIDEND

Mysore Tobacco Co., Ltd.

THE directors of the above Company (Chairman and Managing Director: Mr. M. Malleshayya, Bangalore) present the audited accounts of the Company for the year ended 31st March 1958.

The Company has earned a net profit of Rs. 85,534 (Rs. 3,24,041) after providing Rs. 52,662 (Rs. 91,694) towards depreciation and Rs. 51,500 (Rs. 3,60,000) towards income-tax and super-tax. The directors wish to state that while reckoning the depreciation allowance for the year, they have taken into consideration the special provision made during the year 1955-56 and made adequate provision for the balance during the current year. With the amount brought forward of Rs. 43,554 (Rs. 44,513) from last year, the total sum available is Rs. 1,29,088 (Rs. 3,68,554) and the directors recommend the following appropriations to be made out of the same:—

To declare a dividend of 12½ (15) per cent. or at Re. 1.25 (Re. 1.50) per share absorbing Rs. 1,25,000 (Rs. 1,50,000) and to carry forward Rs. 4,088 (Rs. 43,554 after transferring Rs. 80,000 to reserve fund; Rs. 80,000 to dividend equalisation fund and Rs. 15,000 to employees' gratuity fund).

The production of tobacco in the Company's barns was maintained at almost last year's level. But there was a noticeable reduction in the quantity of cured leaf that came to the possession of the Company from the private curers due to a reduced output and also due to competition from other buyers. Further, the shortfall in the production of grades fetching higher prices, due to adverse seasonal conditions and high incidence of spot disease was responsible for a reduction in the sale proceeds of the year and consequently to a reduction in the gross profits. The directors are actively considering the measures to be adopted for improving the production of higher grades of tobacco. The expert opinion and services of the Officers of the Tobacco Research Station at Hunsur are being availed of in order to control the several diseases that confront the tobacco crop and improve the quality.

The Company embarked in a new line of business this year by undertaking to process the tobacco of other agencies whereby it was possible to obtain a realisation of Rs. 26.739 during the year. This has enabled the Company to use the *Redrying Plant* for a longer duration than before.

The Company has been continuing to consign some grades of tobacco to foreign countries. The relationship with the local and foreign buyers continues to be quite cordial and encouraging.

A comparative statement showing the area directly under the Company's control and the quantity of cured leaf produced therefrom is furnished below:

	Area under cultivation	*Quantity produced*
	Acres	Lbs.
1956-57	3,350	14,54,804
1957-58	2,935	14,51,712

The quantity of tobacco acquired from the private curers during the year under report was 12,32,324 lbs. as against 17,77,273 lbs. during the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	18,04,172

* Includes provision for wealth-tax=Rs.6,000.

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The revenue and profit and loss accounts for the year ended 31st March 1958 show a profit of Rs. 29,232 (Rs. 1,03,489). After adding to this Rs. 1,43,499 (Rs. 70,222) being the balance brought forward from the previous year, and also Rs. 21,365 (debit Rs. 212) on account of sundry adjustments, and deducting therefrom Rs. 29,797 (*nil*), on account of additional salaries due as per decision of Labour Appellate Tribunal, and Rs. 77 (*nil*) for short provision of wealth tax for 1956-57, there is a balance of Rs. 1,64,222 (Rs. 1,73,499) at credit of the profit and loss account. The directors recommend that this balance should be disposed of as follows:—

To pay a dividend of 5 (5) per cent. for the year ended 31st March 1958, without any deduction for income-tax paid or payable by the Company Rs. 30,000 (Rs. 30,000) and carry forward Rs. 1,34,222 (Rs. 1,43,499).

Largely owing to the delay in installing the stowing equipment, referred to later in this report, raisings could not be maintained at the previous level. Another major factor contributing to the marked decline in profit during the year under review was the decision in May 1957 of the Labour Appellate Tribunal of India relating to the Award of the All India Industrial Tribunal (Colliery Disputes) involving the Company in extra expenditure on account of workmen and staff with retrospective effect from May 1956. The net effect of the Award is that the cost of coal raised increased by Rs. 3 per ton approximately whereas to meet the increased cost the Central Government sanctioned an increase in the price of coal of only Re. 1.50 per ton. A further burden came by way of the Coal Mines Regulations (1957) entailing appointment of extra staff and further expenses on safety precautions.

Raisings and Despatches:—The raisings for the year ended 31st March 1958 amounted to 1,25,845 tons, despatches being 1,07,733 tons. This compares with 1,43,485 tons and 1,20,744 tons respectively for the previous year.

Prospects:—The increased burden on the cost per ton of coal raised mentioned above has been offset to a great extent by introducing rigid economies at the Colliery and by raising the production target. As regards increased production through stowing referred to in the previous year's report, the directors regret that due to unavoidable circumstances the stowing equipment could not be installed as expected and this led to a temporary shortage of working places resulting in smaller output. The directors are glad to state that the stowing equipment has now been installed and production is increasing according to expectation. In view of this, the directors feel justified in recommending payment of a dividend of 5 (5) per cent. in respect of the past year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Gross block	33,16,076
Reserves ...	76,179	*Less*—Depreciation ...	22,81,014

Amluckie Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation, of Rs. 2,39,468 (Rs. 6,58,644) from which must be deducted—adjustment account Rs. 24,617 (*nil*), amount written off stores in respect of obsolescence, etc. Rs. 2,591 (*nil*), provision for taxation Rs. 40,000 (Rs. 2,90,000) and provision for wealth tax Rs. 8,500 leaving a balance of Rs. 1,63,760 (Rs. 4,00,783) from which the directors have set aside to buildings and machinery reserve Rs. 99,083 (Rs. 98,400) leaving an available balance of Rs. 64,677 (Rs. 3,02,383) which, the directors recommend, should be distributed as follows:—

In payment of a dividend of 7 (106.044) per cent. for the year ended 31st December 1957, on 7,500 cumulative participating preference shares of Rs. 10 each, absorbing Rs. 5,250 (Rs. 79,533) together with an additional dividend of 19.8093 per cent. for the year ended 31st December 1957, on 7,500 cumulative participating preference shares of Rs. 10 each, absorbing Rs. 14,857 (*nil*) and in payment of a dividend of 10 (50) per cent. for the year ended 31st December 1957, on 44,570 ordinary shares of Rs. 10 each, absorbing Rs. 44,570 (Rs. 2,22,850).

The saleable crop weighed out at 9,106 (9,635) maunds against an estimate of 10,400 maunds and was disposed of at an average price of Rs. 2.23 (Rs. 2.71) per lb.

The usual comparative statement for previous seasons is given below:—

Season	*Crop*	*Average price per lb.*
	Mds.	Rs.
1956	9,635	2.71
1955	10,669	2.12
1954	7,632	3.41
1953	9,484	1.98

Estimate 1958:—The saleable crop for season 1958 is now expected to amount to 9,600 maunds. The smaller crop made in 1957 was due to adverse weather conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,20,700	Gross block ...	18,89,035
Reserves ...	10,68,102	*Less*—Depreciation ...	6,45,732

West Coast Electric Supply Corporation Ltd.

The directors of the above Corporation (Managing Agents: Chandrie & Co. Private Ltd., Madras) present the audited accounts of the Corporation for the year ended 31st March 1958.

Acquisition of Cannanore-Tellicherry Undertaking:—The directors have to report that the Government of Kerala have still not settled the amount of compensation payable for the acquisition of the Cannanore-Tellicherry undertaking in spite of the Accredited Representative having carried out all the duties cast on him under the Madras Electricity Undertakings (Acquisition) Act 1954. The Government of Kerala have not complied with the rules and procedure prescribed under the Act to settle the compensation. As the directors felt that the Government have been delaying the settlement of the claim too long, they have addressed the Government direct expressing their grave concern at the delay and requesting the Government to settle and pay the compensation without further delay.

Calicut Electric Licence:—The restrictions imposed till recently have been completely withdrawn and the required additional power was allotted by the Board. During the year under review 690 (443) new consumers of all classes and 508 (181) street lights were connected to the system thus bringing the total number of consumers to 7,582 (6,892) and the street lights to 3,133 (2,625). Special mention must be made of the extensions to certain village and panchayat areas. To effect the above extensions the Corporation had to erect 3.7 miles of high tension lines and 12.2 miles of low tension mains and 4 additional substations during the year. Besides, steps were taken to improve the voltages in certain areas by increasing the capacity of substations and by strengthening the mains. A third point of supply was taken to extend supply to Guruvayurappan College and surrounding areas.

Improvements:—The capacity of three substations were enhanced to meet the growing demand and the industrial loads. A number of single phase lines were converted into three phase mains and the existing conductors were strengthened for voltage improvement at various points in the distribution system.

Mahe Electric Licence:—During the year 0.65 miles of L.T. lines were extended and 42 (48) consumers and 23 (72) street lights were added to the system. The undertaking is steadily developing and shows an improvement and the net profit is Rs. 2,484 (Rs. 109) after providing for depreciation, development and contingency reserves.

The comparative statement of energy sold and revenue realised, etc., given below shows the workings of the two undertakings:—

	Calicut Area		Mahe Area	
	1957-58		1957-58	
Energy purchased in KWH.	1,37,61,800	(1,26,38,830)	64,590	(48,090)
Energy sold for:—				
Domestic purposes ...	33,97,131	(29,43,618)	31,993	(21,988)
Industrial purposes ...	78,22,561	(74,39,134)	1,518	(813)
Public lighting	5,81,060	(5,04,185)	26,368	(18,960)
Gross revenue in rupees.	13,19,378	(11,96,222)	16,215	(11,696
Total No. of consumers.	7,582	(6,892)	150	(108)
Maximum demand in KW	2,880	(2,800)	39	(36)

Extension Programme:—The directors look forward to extending the benefits of electricity to Kunnamangalam, Kadalundi, Chaliam and Ramanattukara and other villages immediately the Corporation receives the amounts due from the Government.

The balance brought forward from the last year's account is Rs. 1,84,641 (Rs. 2,24,015 including excess provision for taxation amounting to Rs. 59,610). The net profit of the Company for the year 1957-58 after providing for depreciation on assets Rs. 1,14,325 (Rs. 1,79,949), provision for taxes Rs. 85,000 (Rs. 1,47,500), contingencies reserve Rs. 14,461 (Rs. 17,549), writing off of intangible assets Rs. 6,970 (Rs. 10,308), donation and charities Rs. 1,250 (Rs. 250), development reserve Rs. 23,029 (*nil*) and reserve for staff gratuity Rs. 20,000 (*nil*) is Rs. 92,918 (Rs. 1,63,191). With the balance brought forward there is an available balance of Rs. 2,77,559 (Rs. 3,87,206). The directors propose dividends for 1957-58 as follows:—

On preference shares at 5½ per cent. less income-tax Rs. 9,189 (Rs. 9,347) and on ordinary shares at 10 (10) per cent. free of income-tax Rs. 1,00,000 (Rs. 1,00,000) leaving a balance to be carried forward of Rs. 1,68,370 (Rs. 1,84,641 after paying Rs. 54,861 being final dividend for 1955-56; transferring Rs. 18,787 to tariff and dividend control reserve and transferring Rs. 19,569 to reserve for rebate to consumers). Out of this Rs. 72,574 (Rs. 72,574) is from Cannanore-Tellicherry undertaking.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Gross block	28,79,465

Amalgamated Coffee Estates Ltd.

The directors of the above Company (Managing Director: Mr. K. N. Neelakantan, Seetagundy Estate, Sitharkunda, Kerala State) submitted the audited accounts of the Company for the year ended 31st March 1958.

The result of the year's working after providing for the debenture interest and income-tax thereon and for depreciation on buildings, machinery, furniture, etc., is a net profit of Rs. 2,08,306 (Rs. 3,61,186) to which must be added Rs. 74,281 (Rs. 49,095) brought forward from last year's account, making a total of Rs. 2,82,587 (Rs. 4,10,281). Out of this, 6 per cent. dividend on preference shares amounting to Rs. 36,000 (Rs. 36,000) has been paid leaving a balance of Rs. 2,46,587 (Rs. 3,74,281) now available. The directors have appropriated this amount as follows:—

To provision for taxes for the year ended 31st March 1958 Rs. 84,655 (Rs. 2,82,000 for 1955-56 and 1956-57), to provision for dividend on equity shares at 6 (4) per cent. on Rs. 6,75,000 (Rs. 4,50,000) Rs. 40,500 (Rs. 18,000) and to carry forward to next year's account Rs. 1,21,432 (Rs. 74,281).

Crop and Price.—A total crop of 19,739 (22,529½) bushels of coffee which gave an outturn of cwts. 5,580-2-8 (5,969-3-18) cured coffee and 35,076 (37,918) pounds of cardamom were harvested during the year ended 31st March 1958. Coffee was produced at a cost of Rs. 156.41 (Rs. 126.59) per cwt. and cardamom at Rs. 5.86 (Rs. 3.80) per pound. Coffee realised an average of Rs. 196.87 (Rs. 163.24) per cwt. and cardamom Rs. 9.25 (Rs. 10.05) per pound.

The estimates for 1958-59 have been framed for a crop of 140 tons of coffee and 35,000 pounds of cardamom.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,75,000	Gross block	16,60,660
Debentures	4,75,000	*Less*—Depreciation ...	1,70,901

Rs.	23,96,582	Rs.	23,96,582

Teloijan Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation, of Rs. 4,03,144 (Rs. 5,19,593) to which must be added the balance of profit brought forward from 1956 of Rs. 64,681 (Rs. 62,549) making a total of Rs. 4,67,825 (Rs. 5,82,142). From this amount must be deducted—Adjustment account Rs. 6,991 (Rs. 17,576), provision for taxation Rs. 1,45,000 (Rs. 2,05,500) and provision for wealth tax Rs. 8,000 (Rs. 5,000) leaving a balance of Rs. 3,07,834 (Rs. 3,98,981 after writing off stores to the extent of Rs. 85). From this amount the directors have set aside to buildings and machinery reserve Rs. 50,000 (Rs. 1,25,000) leaving an available balance of Rs. 2,57,834 (Rs. 2,73,981) which, the directors recommend, should be distributed as follows:—

In payment of a dividend for the year ended 31st December, 1957, at the rate of Rs. 3 (Rs. 3.50) per ordinary share on 59,800 ordinary shares, absorbing Rs. 1,79,400 (Rs. 2,09,300), leaving to be carried forward Rs. 78,434 (Rs. 64,681).

The saleable crop weighed out at 10,300 (9,653) maunds against an estimate of 9,750 (10,000) maunds and was disposed of at an average price of Rs. 2.25 (Rs. 2.53) per lb.

The usual comparative statement for previous seasons is given below:—

Season	*Crop*	*Average price per lb.*
	Mds.	Rs.
1956	9,653	2.53
1955	10,032	2.10
1954	10,467	3.11
1953	8,508	2.01

Estimate 1958.—The saleable crop for season 1958 is now expected to amount to 9,800 maunds.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,98,000	Gross block	15,39,500
Reserves ...	12,48,874	*Less*—Depreciation ...	4,94,783

		Stock of tea	6,35,961
		Stores, spare parts, etc.	2,22,008
		Debts, deposits and advances ...	4,82,589
		Investments	61,497
		Cash ...	6,20,000
Rs.	31,06,859	Rs.	31,06,859

Pathemara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

Crop.—A crop of 5,815 (5,100) maunds was manufactured and was disposed of for sale in Calcutta for export 5,202 maunds and for sale in Calcutta for internal consumption 613 maunds. The average price per lb. realised was Re. 1.66 as compared with Re. 1.75 per lb. obtained for the previous season's crop. The Company's export quota for season 1957 was 3,856 maunds.

The revenue account shows a loss of Rs. 35,535 (Rs. 88,025) and after adding to this:—Manager's planting commission Rs. 561 (*nil*), pension Rs. 10,000 (*nil*), managing agents' remuneration Rs. 20,000 (Rs. 19,469) and depreciation Rs. 14,738 (Rs. 16,780) there is a debit balance of Rs. 80,834 (Rs. 1,24,274). From this amount is deducted the managing agents' remuneration voluntarily surrendered Rs. 20,000 (Rs. 10,000) leaving a net loss for the year of Rs. 60,834 (Rs. 1,11,638 after deducting Rs. 2,636 being excess provision for liability in respect of previous year). After adding to this the adjusted debit balance of Rs. 95,975 (Rs. 18,440) brought forward from the previous year, there is a debit balance of Rs. 1,56,809 (Rs. 93,198) on profit and loss account, which is carried forward.

The estimates for season 1958 have been framed for a crop of 6,500 (6,000) maunds at a total cost of Rs. 8,39,990 (Rs. 7,53,307) which excludes Rs. 1,28,700 (Rs. 51,600) being estimated capital expenditure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,59,050	Gross block	4,92,640
Liabilities ...	9,75,051	*Less*—Depreciation ...	68,988

Notices

ROHTAS INDUSTRIES LIMITED

THE TWENTY-FIFTH ANNUAL GENERAL Meeting of the Shareholders of Rohtas Industries Limited will be held at the Registered Office of the Company at Dalmianagar on Tuesday, the 30th December 1958, at 11.30 a.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the financial period ended 31st March 1958.

(2) To declare dividends.

(3) To elect a Director in place of Shri Nand Lall Poddar who retires by rotation but, being eligible, offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

(5) As special business

(1) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as Special Resolution of which special notice has been received:

"RESOLVED that Shri S. P. Jain, Chairman and Director, and an associate of Messrs. Sahu Jain Limited, the Managing Agents of the Company, be and is hereby appointed a Director of the Company liable to retirement by rotation under Section 261 of the Companies Act, 1956."

(2) To be proposed as ordinary resolution:

"RESOLVED that remuneration of Messrs. K. N. Gutgutia & Co., Chartered Accountants and Auditors for the financial period of 17 months ended 31st March 1958, be and is hereby sanctioned at Rs. 20,000."

The Share Transfer Books of the Company will remain closed from 25th December to 30th December 1958, both days inclusive.

By Order of the Board,

For SAHU JAIN LIMITED,

A. P. JAIN,
Director,
Managing Agents.

CALCUTTA, *2nd December* 1958.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY NOTE

Resolution No. 1

In accordance with the stipulations made by the Company with the Industrial Finance Corporation of India in respect of the loan of Rs. 1 crore obtained from them, the Corporation has nominated one Director as their nominee on the Board of Directors of the Company, whose office as such will not be liable to be determined by rotation. Shri S. P. Jain, Chairman, Sahu Jain Ltd., the Managing Agents of the Company, is already an ex-officio Director nominated by them on the Board of the Company, whose office as such is not liable to be determined by rotation under Section 261 of the Companies Act, 1956. The number of non-rotational Directors, however, cannot exceed one-third of the total strength of the Board of Directors. At the request of the Board of Directors, the Managing Agents have agreed to withdraw the nomination of Shri S. P. Jain as an ex-officio Director on the Board of the Company for the time being on his appointment as a Director. Under Section 261(1) of the Companies Act, Special Notice for the same has been duly received. Shri S. P. Jain, Chairman of Sahu Jain Ltd., is father of Shri A. K. Jain and Shri A. P. Jain who are Directors of Sahu Jain Limited. Approval of the shareholders is, therefore, solicited for the said appointment under the provisions of the Companies Act. Messrs. Sahu Jain Ltd., the Managing Agents, are interested in the said proposal.

Resolution No. 2

The Shareholders at the last Annual General Meeting appointed the Auditors on a remuneration of Rs. 15,000 for the year 1956-57. Since the financial period has been extended by 5 months and the Statements of Accounts have been now made and audited for the period of 17 months ended 31st March 1958, Auditors demanded an increase in their remuneration for the increased work which has been agreed to by your Board of Directors to Rs. 20,000 for the entire period subject to the consent and sanction of the shareholders which is hereby sought. The Managing Agents and/or the Directors have no interest.

FORT GLOSTER INDUSTRIES LTD.

ISSUE OF 42,000 ORDINARY SHARES OF Rs. 100 EACH AT PAR

(THIS IS NOT AN OFFER)

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have decided to install a plant for the manufacture of electrical wires and cables and to implement this project they have determined to issue 42,000 new Ordinary Shares of Rs. 100 each at par. The new Ordinary Shares will rank *pari passu* with the existing Ordinary Shares in all respects save and except that they will proportionately participate to the extent of the amount paid on each share in any dividend which may be declared in respect of the financial year ending 31st March 1959, and will be offered for subscription at par (on payment of Rs. 50 on application and the balance as and when call or calls is or are made by the Board of Directors in this respect) to the Ordinary Shareholders whose names are entered in the Register of Members of the Company on December 27, 1958, in the proportion of two new Ordinary Shares for every one Ordinary Share held by the shareholder on that date (The holders of the fractional shares will also be entitled to such Rights) with the right to renounce all or any of the shares so offered in favour of third parties, and the right to apply for additional shares at par subject to the condition that those shareholders who renounce their rights would not be entitled to apply for additional shares.

The Register of Members of the Company will remain closed from December 15, 1958, to December 27, 1958 (both days inclusive).

Persons holding shares on blank transfer deeds are advised in their own interest to lodge properly completed transfer deeds with the relative share certificates at the Company's Registered Office, 21, Strand Road, Calcutta, for registration of the shares in their names before December 15, 1958, in default of which no claim by such persons shall lie against the Company. Circular Letters setting out the terms of the offer and detailing the procedure to be followed and Letters of Rights with forms of Renunciation, Acceptance and Request for additional shares will be issued to the aforementioned members on December 27, 1958, or as soon as practicable thereafter.

By Order of the Board,

KETTLEWELL BULLEN & CO. LTD.,
Managing Agents.

21 STRAND ROAD,
CALCUTTA-1,
Dated: November 25, 1958.

THE PUNJAB NATIONAL BANK LTD.

CONSEQUENT TO THE GENERAL MEETING of The Punjab National Bank Ltd., held on 29th October 1958, having resolved to sub-divide the existing 8 lac shares of Rs. 25 each, whether issued or not, comprised in the Bank's Authorised Capital of Rs. 2 crores into 20 lac shares of Rs. 10 each, members of the Bank are requested to send their existing share certificates to the Regisered Office of the Bank at Parliament Street, New Delhi-1, for exchange with new certificates.

R. L. TULI,
Secretary.

29th November, 1958.

HUKUMCHAND JUTE MILLS, LTD.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Monday, the 29th December, 1958, at 4-30 p.m., for the following purposes:—

(1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1958.

(2) To declare Dividends.

(3) To elect Directors in place of those retiring.

(4) To appoint Auditors.

(5) To pass the following resolution as a Special Resolution:—

"Resolved that the draft Articles of Association of the Company submitted to this Meeting and signed by the Chairman for the purpose of identification be and are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles of the Company."

(6) To transact any other business that may be brought before the Meeting.

Dividends, if declared, will be paid to Registered Shareholders only.

The Share Transfer Register of the Company will be closed from the 17th December 1958 to 29th December, 1958, both days inclusive

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Managing Agents

CALCUTTA, *27th November*, 1958.

Resolution in item No. 5 of the above Notice is intended to bring about a number of changes in our existing Articles of Association in order to bring them in line with the provisions of the Companies Act 1956. A separate Explanatory Statement under Section 173 has been sent to all the Shareholders along with the Notice.

A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

ORIENT PAPER MILLS LTD.

NOTICE IS HEREBY GIVEN THAT THE Fortieth Annual General Meeting of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Tuesday, the 30th December, 1958 at 11 a.m. for the following purposes:—

(*a*) To receive and consider the Report of Directors and to adopt the audited Accounts of the Company for the year ended 31st March, 1958.

(*b*) To declare Dividends on Preference and Ordinary Shares.

(*c*) To elect Directors.

(*d*) To appoint Auditors and to fix their remuneration.

(*e*) To transact any other business capable of being transacted at the Annual General Meeting.

The Register of Members and the Share Transfer Books will remain closed from the 8th to 30th December, 1958, both days inclusive.

By Order of the Board,

Per Pro. BIRLA BROTHERS PRIVATE LIMITED

G. D. MAKHARIA,
Managing Agents

8, INDIA EXCHANGE PLACE,
CALCUTTA, *25th November*, 1958.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends, when declared, will be payable to registered shareholders as on the 30th December, 1958, on or after the 20th January, 1959.

TREASURY BILL RATE DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 3rd December

Activity in the short-term money section was sluggish during the week under review. While supply of funds continued to rise, there was no sign of the customary seasonal demand for bank credit picking up; there was, therefore, a predominance of lenders and the turnover was small. In the inter-bank call money section, lenders were over, but there was no further fall in the rate. It remained unchanged at 1 per cent. among the Exchange and large Indian banks and at 2-2½ per cent. among the smaller banks. House money at 7 days' notice was on offer at 3½ to 3⅞ per cent. and short-term deposits at 3½ to 4 per cent.

The easy money conditions are more fully reflected in the further decline in Treasury Bill rate this week from 2.442 per cent. to 2.423 per cent. per annum, notwithstanding a fall in the amount tendered. As against an invitation for Rs. 3 crores, the amount offered at this week's sales aggregated Rs. 4.55 crores, the corresponding amount tendered at the previous week's sales being Rs. 5.50 crores. This means that, though the number of applicants must have been small, those who applied must have been keener than last week in their desire to invest in these bills. Tenders at Rs. 99.395 were accepted in full and those at Rs. 99.390 allotted approximately 31 per cent. Tenders for next week's sales are unchanged at Rs. 3 crores. Sales of intermediate Treasury Bills held between 26th and 29th November amounted to Rs. 50 lakhs and sales of these bills will be held this week also at a slightly higher rate of Rs. 99.411 per cent. This will work out to a discount rate of 2.356 per cent. per annum, as against 2.376 per cent. per annum last week.

A drop of Rs. 7.51 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 28th November 1958. Notes held in the Banking Department are higher by Rs. 8.41 crores and the consequent small rise of Rs. 90 lakhs is covered by a similar increase in rupee coin. Deposits of the Central Government have gone up by Rs. 7.57 crores, while deposits of other Governments have declined by Rs. 34 lakhs and those of banks by Rs. 13.77 crores. While foreign securities are unchanged, balances held abroad have declined slightly by Rs. 89 lakhs. Loans and advances to Governments have risen by Rs. 1.12 crore. Investments are lower by Rs. 11.43 crores and Government Treasury Bills purchased and discounted by Rs. 3.79 crores.

The Scheduled banks' statement for the week ended 21st November 1958 shows a further substantial expansion in bank deposits, accompanied by a sizable drop in advances. Thus, demand deposits have gone up by Rs. 7.11 crores and time deposits by Rs. 5.82 crores. Advances and bills purchased and discounted are lower by Rs. 9.95 crores. With the rise in deposits and fall in advances, banks have been able to reduce their borrowings from the Reserve Bank by Rs. 3.59 crores and those from the State Bank by Rs. 1.60 crore. Investments are, however, lower by Rs. 1.93 crore, but cash balances have swelled by Rs. 19.71 crores.

The Gilt-edged market continued to rule steady during the week under review also. There was a further hardening of prices in select counters, thanks to persistent, albeit small, enquiries in the face of a shortage of floating stocks. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 73.20, while 3 per cent. 1970-75 gained 10 nP to Rs. 90.45, on enquiries following the rise in Reserve Bank's selling price of 4 per cent. 1972 last week. 3 per cent. 1966-68 held its own at Rs. 94. 3 per cent. 1964 gathered 10 nP to Rs. 96.80. 3 per cent. 1963-65 was placed at Rs. 96.80 *ex*-voucher, as against Rs. 96.75 *cum*-voucher last week. 3½ per cent. 1961 was quoted at Rs. 100.10 *ex*-voucher, as against Rs. 100.15 before payment of interest. 3½ per cent. 1964 was maintained at Rs. 99.90. 3½ per cent. 1965 hardened by as much as 15 nP to Rs. 99.85. The Reserve Bank put up its selling rate for 3½ per cent. 1967 by 10 nP to Rs. 99.05 and that of 3½ per cent. 1968 by 5 nP to Rs. 98.75. 3½ per cent. 1967 and 1968 were maintained at Rs. 100.60 and Rs. 100.40, respectively. Among the State loans, 4 per cent. 1967 and 1968 and 4½ per cent. 1970 loans continued to meet with good enquiries. 4½ per cent. Bombay 1970 gained 5 nP to Rs. 100.95. While 4 per cent. Madras 1967 shed 25 nP to Rs. 99.70. 1968 put on 10 nP to Rs. 99.60 and 4½ per cent. 1970 5 nP to Rs. 100.35. Andhra 1967 gathered 10 nP to Rs. 99.60. 1968 5 nP to Rs. 99.50 and 4½ per cent. 1970 5 nP to Rs. 100.30. U.P. 1967 and 1968 gained 10 nP each to Rs. 99.60 and Rs. 99.50, respectively.

There was a further setback in sterling abroad this week. In New York, spot sterling shaded off from $2.803-2.80.7/16 to $2.80.9/32-2.80.11/32, while three months' forward gained from $2.80-2.80.1/16 to $2.80.1/32-2.80.3/32. Transferable sterling also moved up from 279.40-279.50 cents to 279.45-279.55 cents. During the major part of the week, the rupee displayed some strength in terms of dollars, but weakened at the close. Bankers' selling rate for ready dollars declined from Rs. 477.50 to Rs. 477.25 before moving up to Rs. 477.50 per $100. Their buying rate closed at Rs. 474 after dropping to Rs. 473.75 per $100.

BASE METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, 2nd December

Following the delay in the issue of import licences to actual users under the new import policy, base metals recorded significant gains during the week under review. Even after this delay, consumers were able to get licences to cover only two months' requirements. Naturally, consumers were found to follow too little material available in the bazar, and, despite weaker advices from abroad, prices of base metals were moving up. The market noted Mr. Lal Bahadur Sastri's statement at the meeting of the Indian Non-Ferrous Metals Manufacturers' Association in Calcutta on Sunday that enough foreign exchange was not available to finance essential purchases from abroad for the maintenance of the country's economy and for raising industrial output. It was, however, hoped that the Minister's promise to look into the demand for conversion of import licences for copper scrap into those for ingots and *vice versa* would yield fruitful results.

Electrolytic zinc opened at Rs. 92.50 and hardened steadily to close at Rs. 96.00. Supplies were hardly available and the news that a licence for 20,000 tons of Russian zinc was issued in favour of the State Trading Corporation did not affect the upward trend. For it would not be two to three months before supplies under this licence would reach Indian ports. The State Trading Corporation would import this under the new Indo-Soviet Trade Agreement according to which payment would be in rupees to be adjusted against exports to the U.S.S.R. On the other hand, on the London Metal Exchange, spot price sagged from £76½ to £77. However, at the hardened rate, there were only a few transactions here and there. Virgin lead closed at Rs. 88.50, after opening at Rs. 86.00. Consumers gave more attention to lead scrap, as it was cheaper to be got for alloy-making. Tin reached as high as Rs. 606 from Rs. 581. The rise was attributed to export restrictions enforced by the International Tin Council. It was noted that the settlement price on the L.M.E. for copper declined from £235 to £225½. Customs smelters in New York reduced their selling price for copper by ½ cent to 29 cents per lb.

SILVER FIRM, GOLD EASY

(From Our Own Correspondent)

BOMBAY, 3rd December

There was a smart rise in silver during the week under review, while gold suffered a setback, although some recovery was in evidence today. The buoyancy of the white metal was whipped up by fears of scarcity in supplies, following the reported imposition of a ban on exports of Tibetan silver to India by the Chinese authorities. The operators noted the Prime Minister's reference to the ban in the Rajya Sabha on Monday, as also his observation that India could not do anything in the matter. This report, coming as it did when the floating stocks of silver were low and when demand from upcountry was showing signs of improvement, encouraged heavy speculative buying in silver, with the result that prices registered, as already mentioned, a marked rise.

The yellow metal depicted a downward trend, except towards the close. It encountered a fair amount of selling induced by remours of heavy arrivals of smuggled gold into the city. Yesterday, an operator was reported to have sold 5,000 tolas of gold at a discount of As. 4 under the forward, on apprehensions that additional stocks, estimated at 25,000 tolas, might be sold in the market. Consequently, prices declined. Today, however, there was some improvement on account of short-covering.

Forward silver (29th December settlement) opened the week at Rs. 190-8 and forged ahead on bull support to touch a high of Rs. 193-11 today before finishing at Rs. 193-2. The net gain over the week was Rs. 2-10. Business in the second settlement (end of January) commenced yesterday, the starting rate being fixed at Rs. 193-8. Today's quotation for the metal was Rs. 193-15.

Ready silver jumped up from Rs. 189-11 last week-end to Rs. 192-13 today. The closing rate was, however, As. 11 lower at Rs. 192-1. The daily average arrivals were of the order of 22 bars, while the offtake was 10 bars per day on an average. The floating stocks of silver are reported to be 1,400 bars.

Gold for forward delivery (27th December settlement), which stood at Rs. 114 last week-end, receded in the earlier sessions of the week, the rate at one time yesterday having gone down to as low as Rs. 112-4. Today, the settlement opened firm at Rs. 113-5 and closed at the same rate.

Ready gold came in for selling and dropped from Rs. 114-6 on Wednesday last to Rs. 112 yesterday. The price, however, recovered to Rs. 113-11 today before finishing at Rs. 113-5. The premium on the 27th December settlement, which was as wide as As. 9 last week-end, was wiped out today when both ready and forward were quoted on par. The daily average arrivals and offtake were 5,600 tolas and 2,400 tolas, respectively. The floating stocks of gold are estimated at 30,000 tolas.

Spot silver in London moved down from 77¼*d.* to 76¾*d.* and forward from 76¾*d.* to 76¼*d.* Gold prices, after declining from 250*s.* 4½*d.* to 250*s.* 3½*d.*, recovered yesterday to 250*s.* 4¾*d.* The price of silver in New York was unchanged at 90½*c.*

The following comparative table shows at a glance the trend of the market during the week under review:

	3-12-58	Highest	Lowest	26-11-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	113 5	113 11	112 0	114 6

COTTON FUTURES CHEERFUL

(From Our Own Correspondent)

BOMBAY, *3rd December*

Cheerful conditions prevailed in the cotton futures market during the week under review. Fresh support from Akola and Ahmedabad, extensive short covering and good Spot House buying led to smart rally in prices. The main influencing factors were encouraging news from the cloth market of better export and domestic sales, reports of untimely rains and cloudy weather in Khandesh, Vidarbha and Indore causing damage to the crop, and the firmness of the spot market. In fact, the adverse turn of the weather in some regions have necessitated a downward revision in the crop estimate. Latest private estimates place the crop at no more than 5.2 million bales, as compared with 5.4 million bales at the end of October. There was also fears that good quality cotton would get scarce as the season progressed. These factors prompted large-scale buying orders and prices firmed up. But for occasional technical setbacks, the market followed a steady upward trend.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 625.25, as against the previous close of Rs. 626 and steadily advanced to Rs. 639 yesterday. Opening at Rs. 637 today, the contract gathered Rs. 2 before finishing at Rs. 637.25. The net gain over the week was Rs. 11.25. The following table indicates the trend of prices of the contract:

(In rupees per candy of 784 lbs.)

	3-12-58	*High*	*Low*	26-11-58
I.C.C. Moglai Jarilla March 1959 ...	637.25	639	624	626

The spot section was active. Prominent mill groups re-entered the market and made purchases of staple varieties. With limited offering of staple styles and lower arrivals, prices firmed up. Khandesh cotton was in the limelight and business to the tune of two to three thousand bales was done in one day. Southern mills were keen buyers of Berar Jarilla. Other varieties which attracted attention were CO2, Rajapalayam 174, Vijay, Jayadhar, etc.

In the export section, prices of Bengal *Deshi*, especially superfine, were very firm. Rates of Bengal Fine also went up. This was attributed to local purchases and less arrivals. Foreign demand did not revive to any appreciable extent. Stray inquiries, however, were noted from Japan, Hong Kong and the Continental countries.

In the foreign section, mills made moderate purchases of Californians at reduced prices. Inquiries were also noted for Sudanese and East African styles. Egyptian cotton was neglected because of the high rates quoted.

The licensing procedure for the recent quota of 95 000 bales of American cotton stapling 1.1/16" and above is as follows: half of the quota has been earmarked for distribution under the "export promotion scheme." For the remaining half, the Textile Commissioner will issue allotment letters to actual users, i.e., mills, on the strength of the information already furnished by them previously. However, if any mills desire to submit additional relevant information which may not have been submitted so far, they may do so before 5th December. The contracting period begins from 5th November 1958 till 30th May 1959 whilst the shipment period is from 5th November 1958 to 30th June 1959 (inclusive). Contracts should be made on or before 30th May 1959 at a fixed price and should be registered with the Office of the Textile Commissioner. Mills which do not desire to import the quantity which may become due to them for allotment are advised to inform the Textile Commissioner accordingly not later than 5th December 1958.

According to an announcement made by the Joint Chief Controller of Imports, Bombay, the Government of India has decided to extend further the period of shipment for the import of 30,000 bales Sudan and Egyptian cotton and 40,000 bales of East African cotton up to 31st January 1959. These allocations had been permitted for import on 6th/7th August last with the shipment period up to 31st October which was subsequently extended up to 30th November 1958.

The following are the latest available quotations—in rupees per candy of 784 lbs.—the figures in brackets being last week-end quotations:

Bengal *Deshi* 610 (600); Berar Jarilla 680 (670); Khandesh 750 (740); Vijay 885 (840). *Delivery contracts*: Bengal 600 (575); Mathia 585 (575).

Cotton futures values in Karachi scored handsome gains during the week. Better foreign demand, especially from the U.K. and the Continent, and wider domestic inquiries were the influencing factors. The distant March contract, in particular, received speculative support and ruled firm. The quotation for the contract rose from Rs. 64-14-6 last week-end to Rs. 67-8-6. The January contract gathered As. 7 to Rs. 65-15.

Fully steady conditions prevailed in the Alexandria cotton futures market during the week. The steadiness was due mainly to firm advices from the spot market where premiums, especially for Ashmouni, hardened on active buying. Price fluctuations in futures market were narrow and turnover limited. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end quotations:

Karnak: January 72.08 (72.00); March 72.08 (72.05). *Ashmouni*: December 62.85 (62.80); February 62.50 (62.60).

Easy conditions prevailed in Liverpool. Prices declined on hedge sales against cheaper Mexican offers and local long liquidation. Offtake was mainly confined to trade covering. Lower New York advices and the absence of encouraging news from the yarn and cloth markets discouraged sup-

port. Values consequently gave way. The latest quotations—in pence per lb.—are given below:

American cotton one inch staple contract: December-January 22.95; March-April 22.60; May-June 22.19; July-August 21.40. *American cotton mixed growth contract*: December-January 23.90; March-April 22.80; May-June 22.29; July-August 21.35. *Sudan*: January-February, May-June, July-August 26.50.

Cotton futures in New York suffered a further setback during the week. Increased hedge offerings and lack of trade support led to a fall in prices. Lack of support, despite heavy entry into the Government loan, was attributed to fears that mill buying in the primary markets would slacken later in the season.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	2-12-58	25-11-58	18-11-58
Spot	36.00	36.10	36.20
December	34.96	32.50	35.91
March	35.53	36.16	35.39
May	35.46	36.01	36.12

YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, *3rd December*

For the first time in the history of the yarn market, forward trading in German Bamberg yarns (40, 60 and 80 deniers) and Japanese yarns (150 and 120 deniers) was started on the 1st inst. under the auspices of the Bombay Yarn Merchants' Association and Exchange Ltd. The delivery month for both the yarns is February 1959. No transactions, however, were reported to have been put through till the close today.

The yarn market depicted a distinctly firm trend during the week under review. Art silk yarns met with good buying support induced by enquiries from important upcountry consuming centres and bright prospects of art silk fabrics exports. The premium on export promotion licences which had gone down recently to 40 per cent. recovered this week to 60 per cent. Staple fibre yarns also attracted good attention of operators who feared that there might be a shortage of supplies in the coming weeks. It was reported that although the production capacity of staple fibre yarn had been increased to 60 tons per day, actual output was running at a rate of only 45 tons per day owing to inadequate supplies of raw staple fibre. Cotton yarns ruled steady, thanks to improvement in raw cotton prices. Sixty and eighty counts were particularly well favoured following the notification issued by the Import Trade Control authorities that any cotton yarns below 100 counts would not be allowed to be imported against licences for the current licensing period.

Among art silk yarns, 120 Japan advanced by 13 nP to Rs. 4.81. 150 Japan gained 6 nP to Rs. 5.37. 120 Italy climbed up by 19 nP to Rs. 5.44. 150 Italy gained 6 nP to Rs. 5.37. Among indigenous yarns, National Rayons 120 bright cones first grade strengthened by 13 nP to Rs. 4.62. 150 bright cones first grade, however, lost 3 nP to Rs. 4.44.

Staple fibre yarn (40 x 2) December delivery spurted by Rs. 14 to Rs. 630. February delivery rallied by Rs. 17 to Rs. 639. In the spot section, 40 x 2 Citys rose by 11 nP to Rs. 3.30. Kohinoors strengthened by 12 nP to Rs. 3.37 and Centurys by 15 nP to Rs. 3.34. Among foreign yarns Paramounts hardened by 6 nP to Rs. 9.56. Fujis put on a like amount to Rs. 9.50.

In the cotton yarn section, finer counts evoked excellent demand. Sixty counts Finlays picked up Rs. 3.50 to Rs. 67. Among eighty counts, Finlays increased by Rs. 3.50 to Rs. 83.50. Ten counts Moderns were firm at Rs. 13.25 and Podars at Rs. 12.19. Deals in twenty counts Moderns were put through 6 nP higher at Rs. 16.31. Thirty counts Hinds were fully maintained at Rs. 18.75. Among forty counts Minaxis rose by 12 nP to Rs. 24.31. Moderns gathered a like sum to Rs. 25.37.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago:

	3-12-1958	26-11-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	4.81	4.68
150 Japan (per lb.)	5.37	5.31
120 Italy (per lb.)	5.44	5.25
150 Italy (per lb.)	5.37	5.31
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 December	630.00	616.00
40 x 2 February	639.00	622.00
40 x 2 Kohinoor (per lb.)	3.37	3.25
40 x 2 Century (per lb.)	3.34	3.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.31	16.25
30s Hind	18.75	18.75
40s Minaxi	24.31	24.19
60s Finlay	67.00	63.50
80s Modern	—	72.50

LINSEED IN THE LIMELIGHT

(From Our Own Correspondent)

BOMBAY, *3rd December*

Firm trends prevailed in the Bombay oilseeds market during the week under review. Linseed, however, shot up considerably on reports of export demand from communist countries. There was sympathetic movement in other oilseeds.

The groundnut section ruled steady. Lower crop estimates and encouraging reports of foreign advices for oil, particularly from Hong Kong, provided the sustaining factors during the week under review. The rise in values would, indeed, have been slightly higher but for sizable offerings from Gujerat and Saurashtra. Despite the release of quotas, there were no sizable orders for exports of H.P.S. groundnuts, thanks to the lower prices quoted in world markets. The groundnut February 1959 contract which stood at Rs. 162.50, after fluctuating within narrow ranges, hardened to close today at Rs. 164.75. Ready prices improved in sympathy, bold ready, for instance, having gone up from Rs. 33.00 to Rs. 33.75. Oil ex-mill also advanced from Rs. 17.87 to Rs. 18.25.

Similar trends prevailed in the castorseed section. According to the U.S. Department of Agriculture, Brazil will have a bumper crop next year. If this forecast materialises, there is no doubt that India will face stiff competition from Brazil in castor oil. Be that as it may, the short-term immediate trends in the local market led to a notable gain in the prices of futures as well as ready. The outlook for exports of castor oil at any rate was not considered altogether unsatisfactory, although export enquiries were limited. The general steady undertone in the oilseeds market no less than the brisk activity in linseeds account for the marked improvement in the castorseed section. Thus castorseeds improved by Rs. 2.12 to Rs. 143.87. Ready Madras opening at Rs. 28.75 gradually picked up strength and closed today at Rs. 28.75. Oil B.S.S. moved up by 25 nP to Rs. 16.62.

The linseed section, as already pointed out, was characterised by distinctly bullish fervour. Its quotations spurted during the week under review, mainly owing to reports that about 400 tons of linseed oil were sold to Rumania. There are hopes of further foreign enquiries, particularly from the countries of the communist block. The gradual rise in prices of foreign linseed has further accelerated the tempo of activity. The scarcity of supplies and a virtual absence of stocks and the higher upcountry demands also pushed up prices. Linseed May 1959 contract shot up by Rs. 2.50 to Rs. 116.50 over the week. Bold ready moved up from Rs. 34.50 to Rs. 36 today. Linseed oil likewise, moved up from Rs. 33.25 to close today at Rs. 36.00. Cottonseed February 1959 contract, as a result of the firm trends in the cotton market, advanced from Rs 114.00 to Rs. 116.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	3-12-1958	26-11-1958	19-11-1958
Groundnut	Rs.	Rs.	Rs.
Groundnut February contract	164.75	162.50	164.37
Bold ready (per cwt.)	33.75	33.50	33.50
Coromandel ready	34.25	33.87	34.25
Khandesh quality	34.25	33.87	34.25
*Oil ex-mill ready (per quarter)	18.25	17.87	18.25
Railway receipts	18.00	17.81	18.12
Castorseed			
Castorseed May 1959	143.87	141.75	143.00
Ready Madras (per cwt.)	28.75	28.50	28.62
Ready Kanpur	27.75	27.37	27.50
†Oil B.S.S. (per quarter)	16.62	16.37	16.37
Oil commercial	14.62	14.50	14.62
Linseed			
Linseed May 1959	31.87	30.19	30.44
Bold ready (per cwt.)	36.00	34.50	33.75
Kanpur	36.00	33.25	32.50
†Oil ready	18.25	17.50	17.56
Cottonseed			
Cottonseed February 1959	116.50	114.00	112.00
Nigerseed	31.00	30.25	29.50
Kardi seed	20.50	21.00	21.00

*Rates include excise duty but exclude sales tax.
†Rates exclude both excise duty and sales tax.

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, *3rd December*

Malabar black pepper developed an easier tone during the week under review. A substantial decline in prices was noticed, thanks to pressure of arrivals which averaged 300 candies per day at Alleppey and Cochin. Demand from the U.S. remained patchy. Lower offers from India scared away the prospective buyers in New York who continued to revise lower their every next bid. New York, after buying December and Jan-Feb-March shipments from $0.22½ to $0.22, was reported to be quoting at the time of writing $0.21 for December shipment. Spot in New York came down to $0.23½, with small interest.

Garbled at Cochin came down from Rs. 94 to Rs. 85 in ready, while December moved from Rs. 93.50 to Rs. 86.50. Ready ungarbled slipped from Rs. 537½ to Rs. 481¼. One of the bulls who was reported to be long in December at Cochin came out to liquidate, as his expectation of sizable buying by Russia during November failed to materialise. Calicut was quoting Rs. 550, with small arrivals of light berries.

News of China putting restrictions on trade with Singapore and the Bank of China to suspend business in Malaya proved a depressing factor for pepper and rubber in Singapore where black came down to Str.$70 and white to Str.$126, with paucity of buyers.

The total export during the last season has been estimated at about 13,000 tons, as compared with 14,600 tons in the previous year. The increased demand from Russia and other Communist countries has provided an outstanding feature for the last season's export. Russia bought as much as 4,670 tons, while East European countries bought about 1,400 tons, the principal buyers being Rumania, East Germany and Hungary. Total purchases by the Communist countries account for about 46 per cent. of the total export. The take-up by the U.S.A. has shrunk to 2,750 tons, as against 3,300 tons during 1956-57.

The overall future tendency is at the moment downward and it is likely to remain so until the bulk of the crop is marketed. However, at lower level, support from Russia and the U.S.A. is expected. The fall in the prices will, therefore, be gradual and will be resisted by bulls among traders and the growers.

Following is the statistical position of Malabar black as available from the data collected from knowledgeable sources:—

(In tons)

Estimated carryover from 1956-57	2,000	
Crop estimated during 1957-58 ...	24,000	26,000
Less estimated export during the season 1957-58	13,000	
Less estimated inland consumption	10,000	23,000
Estimated carry-forward for 1958-59		3,000
Add crop estimated during 1958-59		27,000
		30,000
Less usual quantity to be held over by the growers for the next season		4,000
Overall estimated supply available for export and consumption during 1958-59		26,000

In the delivery section, prices slumped from Rs. 503 to Rs. 462 for December, while February from Rs. 510 to Rs. 468. In a declining market inland demand remained poor.

Today's nominal quotations are: Ready Rs. 6[illegible] per Bengal maund; December Rs. 470.75 and February Rs. 475.80 per candy of 5¼ cwts.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, *3rd December*

The sugar market continues to rule firm. Traders feel that the first release of sugar out of the current season's production, expected to be announced by the end of next week, may be meagre. This view is based on the fact that the mills in North and South India commenced crushing operations very late.

Only small quantities of sugar are arriving by rail in the city. The total of arrivals in the past week amounts to just 4,200 bags, as against 7,000 bags a week before and 11,400 bags in the week preceding it.

Large grain sugar has risen over the week by a rupee to Rs. 112-Rs. 119 per bag. Small grain is fully maintained at Rs. 108, as also medium grain at Rs. 109-Rs. 111.

Out of the 97,940 tons of sugar released on 24th November, U.P. alone accounts for 38,326 tons. The zone-wise supplies (in tons) in respect of other States are: Bombay 25,722; Andhra Pradesh 12,886; Bihar 6,094; Madras 4,580; Madhya Pradesh 2,869; Mysore 2,853; Punjab 2,615; Rajasthan 1,168; W. Bengal 472; Orissa 355. Commenting on the release, a sugar trader observes: "It is evident that adequate floating stocks in the free market must now be available, so that the normal demands of the different zones in the country may be met at reasonable price levels."

* * * *

HAPUR, *1st December*

Despite the release of 97,000 tons of sugar for free sale, the sugar market ruled quietly steady, as the sugar released is inadequate to meet the demand. Crushing for the new season is in full swing in all the factories in west U.P. and cane supplies are reported to be adequate.

Sugar prices were also steady in the Muzaffarnagar market. Business for 5,000 bags D29 quality Seohara Factory was done at the controlled price at Rs. 36 per maund. Besides, business for bold grain was done in a limited quantity for destinations in Gujerat. Stocks of dry sugar with most of the factories were reported to be exhausting. Almost all the factories have started crushing, but the recovery of sugar is reported to be below average. The latest prevailing ex-mill wholesale prices were:—Seohara D29: Rs. 36; Amroha D29: Rs. 35.87; Bijnore E29: Rs. 35.62; Bareilly E29: Rs. 35.81; Kashipur D28: Rs. 35; Shamli B29: Rs. 37.12.

The sugar market at Kanpur was inactive towards the week-end. The dealers were eager to sell at reduced rates. The latest prices were:—Ex-mill controlled Rs. 36-12 per maund; spot per bag (C29) Basti Rs. 104; Gola Rs. 102-8; D29 Gola Rs. 101; Burhwal Rs. 101-4; Waltergunj, Balrampur and Tulsipur Rs. 100-8, Haragaon and Lakhimpur Rs. 100.

Khandsari prices were quiet. Owing to fall in ready *gur* prices, *khandsari* production has started in most of the centres. New quality was quoted between Rs. 32 and Rs. 35 per maund.

A further fall of about Re. 1 per maund was recorded in the prices of *gur* during the week. Daily arrivals, which were modest earlier, improved later and were 8,000 maunds on Monday. Outside demand was fair. The fall in *gur* prices was due to heavy arrivals in all producing centres. About 200,000 maunds of *gur* were reported to have reached Hapur market since the beginning of the current season, as against 125,000 maunds in the corresponding period last year. Best quality was today lifted at Rs. 14.12, *dara* at Rs. 13.62 and *shakker* at Rs. 15 per maund.

Gur prices at Muzaffarnagar also were easy. Arrivals during the week were put at 85,000 maunds, making the total from the beginning of the season to about 300,000 maunds. Wagon supply position was reported to be satisfactory and the latest prices were:—*Chaku* Rs. 13.50 to Rs. 14.50; Khurpapar Rs. 13.50; Ladu Rs. 13.62; *shakker dara* Rs. 14 to Rs. 15; and *masala* Rs. 17 to Rs. 18.

Gur fagun delivery was depressed during the week in line with ready prices. Opening at Rs. 12.88 on last Monday, it touched the highest at Rs. 12.89 and the lowest at Rs. 12.61 during the week and was today quoted at Rs. 12.75.

DEMAND FOR TEA SLACKENS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *27th November*

Sale No. 33, with 1,944,557 lbs. on offer, was held on Tuesday, 25th November. Teas from the Nilgiris district showed a further seasonal decline, whilst teas from Travancore were disappointing, and showed a marked decline in leaf appearance. There was considerably less demand, and the market opened 10 to 15 nP lower for low medium and medium teas, but declined still further towards the close of the sale and there were heavy withdrawals. Good medium teas met with some support, but were generally easier by 10 to 15 nP. There was a fair demand for the better liquoring sorts at lower rates following quality. Whole leaf teas did not meet with the same competition as in previous weeks and were easier. Tippy teas were considerably lower and a few of these types had to be withdrawn. The quotations were: Low medium Re. 1.45 to 1.55; medium Re. 1.60 to 1.70; good medium Re. 1.90 to 2.20 and quality Rs. 2.50 to 3.90.

London Market: Sale of 24th November 1958:—Best liquoring several pence higher. Plain teas 1*d.* to 2*d.* dearer.

Sale of 25th November 1958:—Best firm. Others easier.

Colombo Market: Sale of 24th November 1958:—Quality declined. Best available highgrowns dearer. Below best 10 to 20c. lower. Best mediums steady. Below best 15c. lower. High and medium fannings below best down 30 to 40c. Gulf types slightly dearer. Small leaf lowgrowns barely steady.

Sale of 25th November 1958:—Good demand. Stalky and poor liquoring sorts 5 to 10c. lower. Better kinds steady.

Calcutta Market: Export.—With the exception of whole leaf grades, market irregularly lower.

Internal:—23,000 packages dust. Good general demand at easier rates. Orthodox 2 to 4 nP easier. Medium C.T.C. 10 to 15 nP easier. Better C.T.Cs. 20 to 25 nP easier. Few selected best grainy C.T.Cs. good demand.

Export Quota:—Very little business has been transacted at 1¼/1¾ nP. The latest quotation is sellers at 2 nP and buyers at 1½ nP.

Forthcoming Auctions:—Sale No. 34 will be held on Tuesday, 9th December 1958.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Dust Sale Y*:—900,000 lbs. Fair demand, but price irregularly 10 to 15 nP lower; sometimes more."

TEA FETCHES LOWER PRICE

(From Our Own Correspondent)

CALCUTTA, *2nd December*

Tea trade circles were surprised to read the Union Minister for Revenue and Civil Expenditure, Mr. Gopala Reddi's statement in Parliament, while turning down the just demand for further duty relief to the tea industry, that since the excise and customs duties were revised—this was done towards the end of September just prior to the adjournment of the monsoon session of Parliament—the industry was picking up and that there was no ground for undue anxiety. He also added that tea prices improved in October and that exporters were offering higher prices for Dooars and Assams. The Minister further claimed that prices of common and low teas had advanced by "as much as 10 nP in October" and export varieties had gained. The following comparative table, giving the prices fetched at both export and internal auctions held here just prior to the above revision and afterwards, however, repudiates Mr. Reddi's claim:

	Quotations as on			
	22-9-1958	13-10-1958	24-11-1958	Difference
Export auctions	Rs.	Rs.	Rs.	
Best C.T.C. fannings	3.00 to 3.40	2.80 to 3.00	2.10 to 2.15	—90 nP to Re. 1.25
Best C.T.C. Assam BP	2.70 to 3.10	2.60 to 2.70	2.00 to 2.05	—70 nP to Re. 1.05
Clean black pekoe	2.00 to 2.10	2.00 to 2.04	1.95 to 2.00	— 5 nP to 10 nP
Medium BP	1.85 to 1.90	1.90 to 1.95	1.72	—18 nP
Medium fannings	1.98 to 2.10	1.95 to 2.05	1.78 to 1.82	—20 to 28 nP
Plain BP	1.70 to 1.74	1.73 to 1.78	1.58 to 1.62	—12 to 16 nP
Plain fannings	1.80 to 1.88	1.86 to 1.92	1.70 to 1.76	—10 to 12 nP

	Quotations as on			
	23-9-1958	15-10-1958	26-11-1958	Difference
Internal auctions	Rs.	Rs.	Rs.	
Best Assam C.T.C. dust	2.50 to 3.10	2.80 to 3.10	2.60 to 3.00	+10 to nil
Medium Assam C.T.C. dust	2.10 to 2.30	2.10 to 2.25	1.90 to 2.20	—20 to 10 nP
Medium Assam grainy dust	1.78 to 1.80	1.88	1.86	+6 nP
Medium Dooars dust	1.76 to 1.78	1.86	1.84	+6 nP

The Minister for Revenue and Civil Expenditure further claimed that there were reports of "better production." It was true that output in North Indian gardens had increased by 11.3 million lbs. in the month of October. The revision in the tea export and custom duties was announced by the end of September, and tea trade circles could hardly think how the higher output in October could be attributed to the revision announcement just a few days before the beginning of the month surprised market circles. The consensus of opinion is that the increase in October was just seasonal in character and that when output figures for November and December would be obtained for the whole of India, the year's output would not after all amount to even that of 1957.

There was good general demand at last week's internal auctions; but prices realised were lower. Dusts on offer amounted to 22,681 chests. Orthodox teas eased by 2 to 4 nP, with powdery types receiving less attention. Legg-cut Dooars were quiet. C.T.Cs. were irregular. While the brown grainy exportable teas rose above valuations, the poorer and medium teas eased by 10 to 15 nP, and the better sorts by 25 nP. The quotations were: Best Assam C.T.C. Rs. 2.60 to 3.00, medium Assam C.T.C. Re. 1.90 to 2.20, medium Dooars Re. 1.84, and medium Assams Re. 1.86.

Leaf on offer amounting to 1,865 chests realised irregularly easier rates, although there was a good general demand.

It was noted here that tea stocks in the United Kingdom in the week ended 21st November increased by 2 million lbs. to 139 million lbs.

Export offerings during yesterday's sale, amounting to 67,698 chests, met with good general demand at lower rates. "Teas for price" gave way by 4 to 6 nP, plain and medium brokens and fannings by 6 to 10 nP, and orthodox medium Assam B.O.Ps. by 10 to 20 nP. There were heavy withdrawals in C.T.Cs, prices of which declined by 10 to 15 nP. Legg-cut teas were lower by 6 to 10 nP, while whole leaf grades were about steady. Darjeelings sharing the general trend were quiet. The rates were: Best Assam C.T.C. fannings Rs. 2.80, best Assam C.T.C. B.P. Rs. 2.10, clean black pekoe Re. 1.95 to 2.00, medium fannings Re. 1.70 to 1.74, plain B.P. Re. 1.56, plain fannings Re. 1.62 to 1.66, and medium B.P. Re. 1.64.

Export quota changed hands at 1¾ nP, although sellers afterwards raised the quotation to 2 nP.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, *2nd December*

Prices of jute goods moved within narrow limits during the week under review, as demand was poor and shipping instructions were also small. The raw jute market was naturally affected, and to the distress of stockists and cultivators fibre prices did not show any sign of improvement thereby increasing the anxiety felt by mills and the State Government. In contrast to the trend in jute prices, paddy and rice prices are being maintained at high rates. Surely, the paddy cultivator's fortune is considerably better than his compatriot in jute cultivation. Raw jute prices have now declined considerably below cost of production. Average production costs in recent years have varied from Rs. 20 to Rs. 25 a maund, against which the current selling price in the market is Rs. 21, basis Assam bottoms. It is believed that a good portion of the jute has by now passed from cultivators' hands, and even after taking the then prevailing prices into consideration and trade expenses, most jute has been sold at a loss to the cultivators. If stockists now sell to mills at the existing rates, they will also incur losses.

Trade circles considered the present situation very serious, and it was natural that this problem received considerable attention at the annual meeting held here on Saturday last of the Indian Central Jute Committee under the chairmanship of Dr. M. S. Randhawa, Additional Secretary, Union Ministry of Food and Agriculture. The meeting urged the Government of India to fix immediately floor prices for each grade of jute and mesta, as in the event cultivators failing to get reasonable prices, there was a possibility of jute-land being turned over to paddy cultivation in the next season. In such an event the country would have again to depend on Pakistani jute prices of which, it should be noted, are higher than the indigenous jute in respect of the superior varieties. The meeting appointed a nine-man sub-committee to examine the question of fixing the floor price and to evolve a formula. The sub-committee was asked to submit its report within two months. Trade circles were of the view that, if no action was taken by Government either to fix floor prices or to permit immediately exports of such fibre varieties as are unwanted by mills and Government waited for a further period of two months, the position was bound to deteriorate further. As pointed out at the above meeting of the I.C.J.C., the position of the jute grower as a buyer of paddy suffered considerably from the unfavourable cost-price relationship between jute and paddy. A planned approach towards stabilising jute production continued to be as difficult as ever in view of the unreliability on weather. From all reports, Bihar appeared to have been worse hit, and the growers there had demanded of New Delhi to appoint a commission to inquire into the jute crisis there.

Early in the week bulls liquidated their holdings in hessian, as a result of which ready hessian 40" 10 oz. declined to Rs. 41.50 from Rs. 42.15. In sympathy, ready B. twills were lower at Rs. 94.30, as against Rs. 94.60 earlier. The market was closed on Wednesday last on account of the Central holiday for *Guru Nanakji's* birthday, but there was business done with the United States in hessian. Consequently, the price of hessian 40" 10 oz. improved to Rs. 41.65. Some export business was also done in B. twills, but, as the quantity involved was too small, there was not a visible change in the quotation at Rs. 94.25. At this stage, the Government showed some interest in sacking goods, and on Thursday the price for B. twills moved up to Rs. 95.25 and hessian 40" 10 oz. improved to Rs. 41.90. Shipment figures showed that for the month as a whole the quantity of hessian shipped would not be lower than in October, although in the week under review shipping instructions were poor. By the week-end, hessian 40" 10 oz. improved to Rs. 42.80. However, this expectation was not entertained in respect of sacking goods, and by the week-end B. twills declined to Rs. 95. Yesterday there was business done in near delivery hessian with Argentina, but the quantity being small, ready hessian 40" 10 oz. eased to Rs. 42.25; B. twills lost to Rs. 94.40 as there was no business.

For the first time during the last several weeks, indications were in evidence of growers' resistance to offer jute at the existing low rates. For fresh arrivals in up-country centres registered some decline. As a result, although quiet conditions prevailed in the fibre market here, prices were about maintained at last week's levels. While Assam bottoms improved to Rs. 22 from Rs. 21.50 northern bottoms declined to Rs. 21.25 from Rs. 21.50, and *daissee* bottoms were maintained for a time at Rs. 23.50, although according to the latest report there had been a fall to Rs. 22.75. The latest quotations are:

Pucca bales 1st marks Rs. 145.00 per bale ready.

BRISK TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *1st December*

Trading in East India kips and calves was very brisk and good volume of business was done during the week under review. Buff calf attracted buyers from the U.S.A. at 76 cents for 2/2½ lbs. run and U.K. bought 1½/2 lbs. run at 69*d.* to 70*d.* Demand for cow calf exceeded supply. Arrivals were small.

Superfine tanned goat skins lights and mediums were in good demand and also for ordinaries, but arrivals of ordinary qualities dwindled of late, as raw prices were unworkable. Medium quality tanned sheep skins had good call from the U.K., the Continent and Japan, and prices ruled firm throughout.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, *1st December*

During the week under review, demand for upper grade buff and cow was strong. The Madras dealers were keen buyers of lighter cow and goat. The parties representing Calcutta exporters made considerable purchases of almost all categories of goat. The chief customers were, of course, the local tanners.

The latest available quotations are: Wet salted cow hides 1st grade Rs. 350 and 2nd grade Rs. 325 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 ozs. per rupee; goat 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

"KHARIF" GRAINS DEPRESSED

(From Our Own Correspondent)

HAPUR, *1st December*

Quiet conditions were witnessed in the foodgrains market during the past week. *Kharif* grains were depressed, thanks to good arrivals. The Union Food Ministry is believed to have urged the State Governments to procure about 1.5 million tons of foodgrains, including rice, wheat, *jowar*, *bajra* and maize, during the coming year and to aim at procurement of 2 to 3 million tons next year. Details of the scheme relating to State trading in foodgrains as recommended by the National Development Council is being worked out and it is understood that it will be implemented in two stages. The first would seek to license wholesale trade and regulate its functioning and the second would involve the setting up of a State-sponsored body to undertake large-scale purchase and sale operations.

Wheat at Hapur ruled quiet at almost unchanged level at Rs. 24 per maund for average quality and upto Rs. 25.25 for farm produce. Arrivals from the producing areas continued to be small and seasonal consumer demand, too, was slack, as it was being concentrated on maize and *bajra*. Sowings of *rabi* grains is finished and germination reports have been fairly good.

Rice registered a further fall of about Re. 1 per maund due to good supply position. Procurement operations for rice in the States of U.P., Madhya Pradesh, Orissa, Bombay and Bihar are to begin soon and prices on which the Government will purchase has been fixed. The prevailing prices of rice here were:—*Basmati sela* Rs. 28; *mainpuri* Rs. 20.50; inferior quality Rs. 18 per maund.

Gram ruled quiet, despite poor local stocks. For the demand was slack. The Union Government has rejected the U.P. Government's plea for imposing restrictions on the movement of peas and gram from U.P. Barley and *bejhar* prices were almost unchanged. Maize and *bajra* were depressed, thanks to heavy arrivals from outside and increasing stock position, despite brisk consumer demand. *Jowar* and *guwar* prices were quoted slightly lower. The week-end prices (in rupees per maund) were:—gram *punjabi* 19.37; *barley* 17.25; *bejhar* 17; maize 14.50 to 15; *bajra* 15.50; *jowar* 13.75; *guwar* white 15.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures. N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1955. * Including bonus. (b) Investments
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital
K—For William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend for 1954 and 1955 are on shares of Rs. 500 each
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page 903*)

seek some information from the Chairman about the reported sales in recent weeks of large blocks of the Company's shares held by the Dalhousie Holding Co. Private Ltd. Mr. Mookerjee confirmed that this holding Company had sold during November about 180,000 shares, in terms of the agreement with the Company's bankers who had provided the necessary credit for taking up the right shares of Indian Irons issued last year. He allayed the fears entertained in some quarters that further load of these shares would come on the market, by assuring that no further sales were contemplated for the present. He went on to add that the agreement with the bankers had provided for the repayment of the credit through a phased programme of sale of the right shares. This, he said, would be carried out in the course of 1959 and 1960. He, however, did not say, if the published reports are correct, as to when exactly the sales would be made in 1959. After all, 1959 is only 27 days ahead from now. Further, there is still a balance of 700,000 right shares to be sold. Even if they were to be sold in equal parts in the next two years, it would mean that 350,000 shares would be disposed of in 1959. This thought seems to be acting as a check on the market, especially because of reports of an already heavy overbought position and the high carryover charges in the recent settlements.

Be that as it may, here is a cheerful interpretation of the significance of the sale of the aforesaid holdings by Messrs. Chitra & Co., Madras, in the latest issue of their *Fortnightly Market Report*:

"The recent sale transaction is in effect an issue of capital at a premium, without the capital structure of the Indian Iron Company reflecting any such operation, because the issue has on paper been made already and held by the Dalhousie Holdings. The benefit of the added capital and premium are now available to the Company. The market has had bright second thoughts on this sale operation, as augmenting the Company's resources and treated it as a bull point—as revealed by the recovery in price observed."

To revert to Mr. Mookerjee's remarks at the Company's annual meeting. Referring to the current trend of production, he said that it was now running at the rate of 2,000 tons per day in terms of ingot and that the production in November was expected to be of the order of 60,000 tons. On the question of issue of fresh capital, he is reported to have said that the Company was not keen on issuing any right shares at present and that this would be decided only when the Company went in for further expansion.

* * * *

Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, must be the happiest man in the country at present. For, not long after his Ministry was made the target of a spate of criticism for the way it handled the food and agricultural problems, he could tell the very Members of Parliament who criticised him, in the Lok Sabha, the joyous news of a prospective bumper rice crop this winter. Whether it is the result of conscious efforts made by the Government to step up production or of the weather gods relenting, is immaterial. For, so long as the rice is there, irrespective of how it came, much of his headache, and of the country's, will vanish.

Members of Parliament, however, were not too enthusiastic at the news. Perhaps past experience has taught them to be more prudent by taking the Food Minister's words with a pinch of salt. But this time, it appears, Mr. Jain may not have to regret his optimism. For reports from the major rice-producing States in the country, such as Andhra, Bihar, Orissa, and West Bengal, indicate a markedly higher rice crop than last year. One estimate is that a record rice crop of more than 29 million tons will be harvested this year, as compared with the last year's crop of 24.8 million tons. The previous record was 28.2 million tons harvested in 1956-57. The output of other *kharif* cereal crops like *jowar*, *bajra*, maize and *ragi* is also expected to be higher.

This prospective bumper crop is already having its effect on the price trend for rice. For instance, the price of *Basmati* rice at Hapur, which was Rs. 33-35 per maund (of 82⅔ lbs.) at the beginning of last month, has come down to Rs. 26-27. The index number for rice (base: 1952-53=100) which had touched a peak of 118.9 in the week ended 20th September 1958, has come down to 102.6, as at the close of November 1958. In view of the fall in prices, the Government of India recently authorised the State Governments of Orissa and Madhya Pradesh to buy rice at Rs. 15 per maund for common rice. The U.P. Government also is to purchase 150,000 to 200,000 tons within the State. It is reported that the West Bengal Government proposes to purchase the entire surplus of rice from Orissa.

From Orissa, along with reports of "golden fields of paddy crop" promising a bumper crop, comes the disconcerting piece of news that the existing arrangements for dehusking the paddy and pounding the rice are hardly sufficient. For such a state of affairs, the Government has to thank only itself. It has been its avowed policy to encourage hand-pounding of rice through the co-operative organisation and ban establishment of new rice mills. About 95 such societies were formed in the State during the last three years. There are at present only 110 rice mills in Orissa, with a turnover of about 1,300 tons per mill annually. Not a single new mill could be established in the State during the last 12 years, because the Government did not want them to come into being. It preferred the co-oper

TAX PROBLEMS

THE inhibitory effect of high taxation continues to be one of the factors that tend to retard the growth of Indian economy. It threatens to give rise to a "depression" psychology, curbing initiative and enterprise and placing a virtual ban on further growth of the private sector that provides the bulk of the resources for development. Before this movement gains momentum, the authorities will do well to see where the tax burden weighs heaviest and provide the necessary relief. The multiplicity of taxes, together with their high rates and vexatious character, has served to dampen that enthusiasm for dynamic expansion which must characterise a developing economy. Small wonder, then, that the deliberations of the Associated Chambers of Commerce of India, which held its annual meeting last week at Calcutta, were dominated by a consideration of the importance of, and the urgent need for, fiscal relief.

The Union Finance Minister, Mr. Morarji Desai, who addressed the meeting, was no doubt suave, urbane and conciliatory in his address. But he yielded no ground. He raised no hopes of tax relief. Nevertheless, he admitted that the Government "has got to see that the capacity of those who pay goes on increasing in paying the taxes, even if their willingness does not go on increasing, because it is difficult for Government to increase the willingness of anybody to pay taxes." It could be definitely shown that the capacity to pay taxes is not increasing as fast as the taxes. Discussing the resources position in the private sector, the Planning Commission, in its report on the Appraisal and Prospects of the Plan, observed: "It is, however, open to question whether, in face of the measures being taken by the Government to mobilise resources for expenditure in the public sector, the private sector will be able to raise funds so readily in future." This is a studied understatement of the real position which is far worse than what the Commission has conceded.

The fact is that, so long as resources cannot be found for expansion, tax laws will remain on the statute book without necessarily leading to a progressive and sustained increase in revenues. Mr. Morarji Desai was somewhat impatient on the question of revenues. He stated, in effect, that he was willing to consider tax relief, provided ways were indicated for making good the loss in revenue. It is not true that such concrete suggestions have not been made in the past. For one thing, tax relief is itself a revenue-yielding proposition, in that reduced taxes will promote all-round economic activity and thereby increase incomes and the revenue from taxes on such incomes. Mr. Desai was not right in suggesting that taxpayers all the world over clamoured for relief and the Governments concerned always wanted to recover more taxes. As a general statement, there may be a grain of truth in what he said. But it ignores the decisive trends towards tax relief which have manifested themselves in recent years. As the Federation of Indian Chambers of Commerce and Industry, in its latest brochure entitled *Direct Taxation* points out, there are a number of countries where taxes have been reduced. In West Germany, the corporation tax on distributed profits was lowered from 30 per cent. to 11 per cent. and that on undistributed profits raised from 45 per cent. to 47 per cent. Canada announced tax relief in the year 1957-58 costing the Exchequer $178 million a year. Tax concessions have been given, among other countries, in the U.K., New Zealand, Australia and the Netherlands.

Again, the argument that every plea for tax relief should be accompanied by a concrete suggestion for increasing the Government's revenue implies that such revenue must be maintained at all costs. It is wrong to contend that a high level of Governmental revenue should be maintained, irrespective of its consequences to the economy. In any case, before this argument is put forward, the Government should ensure that there is no leakage of revenue from its own end. Such leakage could occur through the inability of the State-owned projects to yield adequate and prompt returns. It is for the Union Finance Ministry to keep a watch over the Government's investments, to ensure that the country gets value for the money that is invested in State enterprises. If the Union Finance Ministry undertook such a check even in a broad and general way, it would be able to stop considerable wastage of public funds arising out of delay in execution of projects and/or their inefficient administration. Above all, the most fruitful source of revenue is economy in public expenditure. In this connection, Mr. H. L. Murray, who moved the resolution on corporate and personal taxation, rightly asked whether it was not possible for the Government "to reduce non-productive expenditure in the interest of the rapid development of productive resources in the country." Surely, the pursuit of economy in Governmental expenditure should release sufficient resources for profitable investment and also enable the Government to grant appropriate tax reliefs.

Not only are Indian taxes burdensome but the fiscal principles on which they are based essentially defective. Discussing the reasons which deter foreign private capital investment in India, Mr. J. D. K. Brown, the retiring President of the Associated Chambers of Commerce, said: "I believe that, in very many cases even more than the actual financial impact of various features of the tax structure and just as much as the admittedly high levels in relation to practically all other underdeveloped countries, it is the rationale underlying some of these provisions which gives potential investors cause to think, and think again, before entering into further commitments in India." This applies as much to Indian as to foreign, investments.

In recent years, several new features have been built into the Indian tax structure. Although Mr. Kaldor had something to do with the changes which have taken place, his suggestions have not been implemented in their entirety. As the Federation's pamphlet points out, Mr. Kaldor's suggestion that the combined rate of income-tax and super-tax on individuals should be reduced to 45 per cent. has not been accepted. Secondly, a wealth tax on companies has been imposed, although Mr. Kaldor did not recommend it. Thirdly, whereas Mr. Kaldor recommended a gift tax in place of the Estate Duty, the tax has been imposed in addition to that duty. India has borrowed its tax

resolution on taxation, asked whether "this comparatively small amount of revenue can possibly be justified when measured against the enormous amount of trouble it must cause to the officers of the Department in trying to verify them." The other tax, which Mr. Brown singled out for special comment, was wealth tax on companies. He rightly said that this tax was regressive in its nature and inappropriate in a developing economy. The removal of these two taxes would not mean any great loss to the Exchequer. On the other hand, the advantages to the economy by the withdrawal of these taxes, as Mr. Brown claimed, would seem to be substantial, both "immediately and prospectively, through the stimulus which would be given; first by the withdrawal of the wealth tax on companies which will otherwise become an increasingly serious cause of capital erosion and, consequently, a powerful deterrent to capital formation; secondly, by the elimination of a cause of waste of valuable time among a section of the community, to most of whom that is particularly a scarce commodity." The Finance Minister, however, would not concede the need for removing the taxes. He justified the expenditure tax on the ground that it was intended to stimulate savings. This explanation is unconvincing. No country has relied upon an expenditure tax to promote savings which respond not to the negative deterrent of a tax but to the positive incentives in the shape of attractive interest rates and scope for profitable investment.

Many specific suggestions for tax reform capable and worthy of implementation were made at the annual meeting of the Associated Chambers. Among these, mention deserves to be made of Mr. Gorer's plea for a standard rate of income-tax for companies and for the abolition of the differentiation in taxation on Indian and non-Indian companies. He also emphasised the need for exempting from super-tax intercompany dividends in the hands of the receiving company. He said: "It is, to my mind, quite illogical that a dividend paid to one company by another out of profits which have already been subjected to the rates of tax applicable to company profits should again be taxed." Emphasising the need for removing the tax on bonus shares, he said: "I believe that nothing in the present tax structure is more harmful to the creation of fresh capital than this tax, because one so often finds that, to ensure the success of an expansion of capital by means of a fresh issue for cash, it is necessary to rationalise a company's existing capital by means of a bonus issue."

In the sphere of personal taxation, Mr. Murray suggested that much clerical effort would be saved, if the rates structure were revised by the imposition of tax at uniform slab rates, without the addition of any surcharge and if relief were granted by direct deduction from the total income of appropriate amounts, as is the case under the U.K. Income-tax Act. Mr. Gorer stressed the need for relief in respect of education of children. From the overall national aspect, he felt it would be wrong if parents were prevented from giving an adequate education to their children because of heavy taxation. Again, he pleaded for such measures as would enable the professional and self-employed classes to save for retirement. Clearly, such assistance is particularly needed in a country like India, where the State has not instituted elaborate schemes of social security.

While these and other suggestions made at the meeting, deserve examination by the authorities, it seems necessary to emphasise that an enduring solution to the fiscal problem cannot come except through a thorough-going reform. India's tax system is now an ill-assorted mixture of a large variety of complex taxes, at the Central and State levels. The imposition of these taxes has been justified on the ground that India should evolve an "integrated" system of taxation. But such a system of taxes, as the Federation points out in its brochure, is not a virtue in itself. It must serve some definite purpose. An impartial study of these taxes and their effect on the country's economy will reveal that they serve no economic purpose whatever. As pieces of fiscal curiosity, they may have some value. As sources of some immediate gain to the State, they may have a certain relevance. They may help those in power to serve the cause of an ideology which is alluring to the have-nots but is unlikely to transform them into the haves. But it would be bankruptcy of economic statesmanship to continue a system of taxation merely on the ground that they yield some revenue or serve a political purpose, ignoring its long-term effects on national economy.

DEFENCE MINISTRY'S TRUCK VENTURE

THE Union Defence Ministry is developing a strange passion for economic self-sufficiency. Hitherto, one thought that "self-sufficiency" meant national self-sufficiency. But it would now appear that the Defence Ministry is interpreting it as departmental self-sufficiency. Mr. Nehru clearly said at a Press Conference on Wednesday the 10th inst. that it had always been the intention of the Government of India to make defence requirements independent of the private sector. "We want Defence to be self-dependent," he averred. This means that the Defence Ministry is seeking industrial isolation, free from contact with the wider industrial sphere. If it wants tractors, it will make them itself. If it wants trucks, it will have no truck with private manufacturers but will set up instead a factory of its own for their manufacture. Cost and national economic considerations obviously count for little so long as the Defence Ministry can satisfy its new desire for developing an industrial sector of its own.

Nobody, of course, suggests that the Defence Ministry should not undertake manufacture of equipment it needs. Only, strategic considerations, which should in fact determine the Defence Ministry's policy and programmes, demand that the country's entire productive effort is widely dispersed and ably organised in a way that will enable it to be geared to defence needs at the time of emergency. It is not clear what strategic value is to be gained by the Defence Ministry's move to set up an automobile manufacturing unit under its auspices.

In the course of his strong, though not necessarily convincing, defence of the move towards the establishment of a truck unit, the Union Deputy Defence Minister, Mr. K. Raghuramiah, threw some light on the events which led up to the Government's decision. He gave one the impression that the Defence Ministry was reluctantly compelled to undertake manufacture of trucks. The Army needed trucks. Private manufacturers were not helpful: the Hindustan Motors went out of truck production in 1957; there was a strike in the Premier Automobiles and the Tata Locomotive and Engineering Company increased its prices of trucks. The Ministry's experience in 1957-58, Mr. Raghuramiah said, made it clear that "they could not rely any more on manufacturers within the country producing army trucks at reasonable prices." Further, the "hopes which the Defence Ministry had of getting 100 per cent. indigenously produced military vehicles from the local manufacturers have not yet been realised." It was in these circumstances that the Defence Ministry entered, in September last, into an agreement with M.A.N. of Germany for producing trucks with multi-fuel engine; the trucks will have 30 per cent. indigenous content to begin with, which will progressively rise to 90 per cent. in a period of five years. The figure mentioned, be it noted, is 90 per cent. and not 100 per cent.

A study of the Minister's statement reveals that the Ministry has allowed itself to be stampeded into automobile manufacture by the temporary difficulties it seems to have encountered in getting its truck requirements. Another explanation seems to be that it has turned these difficulties into a convenient excuse for embarking upon an automobile manufacturing programme. The Minister revealed that this programme had been examined several times in the past. Perhaps, the Government thought it could execute it now. It could also solve the so-called surplus capacity problem in ordnance factories. According to the Minister, it would help write off Rs. 80 lakhs of overheads now incurred by the Ministry. Surely, this "surplus capacity" argument can be overdone. What really matters is not surplus capacity but competitive capacity. The Government will do well to take a census of its plant and machinery in order to find out how much of its equipment is modern. The real solution to the problem of idle capacity lies in rehabilitation of plant and machinery and a productive programme geared strictly to defence equipment. The Defence Department does not produce armour; nor does it produce highly mechanised guns it needs, let alone tanks. There are a hundred defence items which it could, and in fact, ought to produce. Instead, it has chosen to concentrate on automobiles.

Technical experts are unimpressed by the Minister's special praise for the multi-fuel engine of the M.A.N. vehicle. The Minister said that, since the "multi-fuel engine had many strategic and operational advantages over the conventional petrol or diesel engine, the Defence Services were interested in this new engine." Now the multi-fuel engine is not a technological marvel developed by M.A.N. alone. Actually, other manufacturers have also developed such an engine. In any case, it would appear that the Telco itself could supply multi-fuel engine with its trucks. This variety of engine is not an innovation inaccessible to other manufacturers. Be that as it may, the Minister averred that, when the Government wanted to place an order for 1,000 3-tonner trucks with Telco, the latter increased its price by Rs. 8,000 and, even after "protracted" negotiations, would not reduce it by more than Rs. 650. This would mean that it was Telco's intransigence over the issue of prices that proved a determining factor in the Government's decision to undertake the manufacture of automobiles. If this is so, the Government has thrown away its inherent right both as a Government and as a consumer to order an investigation of the prices charged by Telco. In any case, the increase in price quoted by Telco has been explained with sufficient arithmetical clarity by its Chairman, Mr. J. R. D. Tata. In 1957, Telco, it is stated, supplied 300 trucks at Rs. 23,827 each, on which it actually suffered a loss of Rs. 1,556. In May 1958, it quoted Rs. 31,958 each for 1,000 trucks partially manufactured in India. The increase of Rs. 6,215 in its price reflects (1) an increase of Rs. 806 in the German factory price, (2) an increase of Rs. 769 being the additional cost of locally purchased tyres, as against the previously imported German tyres, (3) an amount of Rs. 2,936 representing the extra cost of indigenously manufactured components and (4) a profit element of Rs. 1,704. This explanation does not suggest that the Telco effected an unjustified increase in its prices of trucks.

The Government's decision to enter the automobile field raises several issues of policy. In the first place, has it not gone back on its own solemn assurance that it will not permit the installation of new capacity in the automobile industry but prefer to see the existing manufacturers expand their production? This assurance stems from the realistic appraisal of the admittedly limited nature of the Indian market for automobiles. To abridge the market further by screening off the Defence demand is hardly calculated to serve the cause of the automobile industry. It is true that the Defence requirements amount only to 2,000 vehicles, as against the estimated Indian market for 40 000 vehicles. Even so, the Indian market is limited in scope, so that any further artificial diminution in the market may prove a loss to manufacturers without a corresponding gain to the Government. Secondly, since the economies of mass production cannot operate with a production programme limited to 2,000 vehicles a year, it will be extremely difficult for the Defence factory to keep down its production costs. And yet, the Minister claimed that the trucks produced by the factory will be "far cheaper than those now obtained from the private industry." How is one to believe this statement? Thirdly, one wonders whether the Government has been correctly informed on the practicability of implementing a scheme of rapid increase in indigenous content of the vehicles it proposes to manufacture. This requires examination at expert level, if only to avoid future disappointment. In this sphere, percentage figures relating to indigenous content could be very misleading, for much depends on whether they refer to value or components and also on the possible variations in the cost of components from year to year.

Finally, if the Government is irrevocably committed to truck manufacture, the least it should do is to give an assurance that no further encroachment on the private sector is intended and also take appropriate measures for expanding the market for automobiles. This is not to suggest that monopoly considerations should prevail, much less that the private sector should develop a morbid fear of competition from the public sector. The fact is that the Indian automobile market cannot afford the luxury of far too many producers. This is not something peculiar to India, for, even in the industrially advanced countries, the automobile industry is regarded as a field in which a minimum number of strong units, rather than a large number of units with less than optimum capacity, should be allowed to operate.

GILT-EDGEDS IN GOOD FORM

ONE BANK ALONE INVESTS RS. 10 CRORES

THURSDAY, 5 P.M.

MARKET GOSSIP

AN outstanding feature of the week in the city markets is the firmness of the Gilt-edged. For the past ten days or so, there has been heavy buying of both Central and State Government loans by the Life Insurance Corporation and banks. It is said that one of the big Indian joint-stock banks bought at one stroke Rs. 10 crores worth of Central Government loans. The deal was put through direct with the Reserve Bank of India; no brokers were employed, but the Reserve Bank, it is believed, sold the securities at a price inclusive of the usual brokerage, thereby making some extra profit for itself, which means for the Government of India.

Seeing no signs of abatement of the demand for Government securities, the Reserve Bank has put up the selling rates further for several loans, as will be seen from the money market review on page 983 of this issue. In effect, this means a further sliding down of long-term interest rates. Whether the Reserve Bank is wise in doing so in an economy where the demand for long-term capital is greater than the supply is a question on which we have our doubts.

It will be interesting to note, at this stage, the changes that have taken place in the position of banks over the month of November. Leaving aside inter-bank borrowings, net deposits of scheduled banks between 31st October 1958 and 28th November 1958 declined by Rs. 1.83 crore, from Rs. 1,577.30 crores to Rs. 1,575.47 crores. Advances and bills purchased also declined from Rs. 838.85 crores to Rs. 832.45 crores, a drop of Rs. 6.40 crores. In other words, the decline in bank credit was greater than that in deposits. The ratio of bank credit to deposits at the end of November was, therefore, lower at 52.84 per cent., as against 53.18 per cent. a month earlier. There was little variation in balances with other banks in current account, but money at call and short notice shrank from Rs. 48.17 crores to Rs. 43.53 crores, that is, by Rs. 4.64 crores. No worthwhile variations took place in borrowings from either the Reserve Bank or the State Bank. The biggest variations, however, took place in investments in Government securities and cash balances (including balances with the Reserve Bank); the investments rose by Rs. 24.57 crores to Rs. 643 crores, while cash balances fell by Rs. 20 crores to Rs. 126.79 crores. Consequently, the ratio of the former to deposits was up from 39.21 per cent. to 40.81 per cent. and that of the latter was down from 9.30 per cent. to 8.05 per cent. The bulk of the increase in investments must have been in the dated loans of the Central and State Governments, for the net absorption (sales *minus* maturities) by way of 91-day Central Government Treasury Bills in the whole of November was no more than Rs. 6.64 crores.

A comparison of the State Bank's position will give an idea of the trends in scheduled banks other than the State Bank. During the month under review, the deposits of the State Bank declined by Rs. 3.70 crores, but its advances went up by Rs. 1.25 crore. Its cash balances contracted by Rs. 18.28 crores, while its investments in Government securities rose by Rs. 17.07 crores. It is common knowledge that the biggest supporter of Treasury Bills has always been the State Bank.

Having regard to the aforesaid variations in the affairs of the State Bank, it can be stated that, on a rough estimate, the joint-stock scheduled banks must have invested about Rs. 8 crores in Government securities during the whole of November 1958. This estimate is somewhat on the liberal side. The report that one joint-stock bank alone invested Rs. 10 crores in Central Government securities in one week and that, too, when the year-end is not very far off is, therefore, astounding. Since the commencement of this month till today, it may be noted in passing, there has been no net absorption by way of Treasury Bills, for an issue of Rs. 6 crores of new bills has been neutralised by maturities amounting to a like amount. Accordingly, the sudden spurt in the inter-bank call rate this week from 1 per cent. to 1½ per cent. must be attributed, among other things, to the large-scale investment in Government securities.

Why are commercial banks so keen on taking up Government securities, including the long-dated 4 per cent. 1972 and 1973 loans at a premium even when their cash ratio is so low as 8 per cent.? Have they forgotten what happened to them in 1951-52, when the cheap money cycle ended and the period of not-so-cheap-money period began? Or do they think that that history will not repeat itself some day?

The reasons why commercial banks are going in heavily for Government securities are not far to seek. In the first place, their expectations about the demand for bank credit have not materialised. Secondly, the public sector's commercial activity is growing and that of the private sector is not expanding owing to several restrictions. Some banks think that, if the wholesale trade in foodgrains were to pass into the hands of the public sector, their business would decline further. And, thirdly, most of them have secured deposits by paying rates of interest which are in the neighbourhood of 4 per cent per annum; they must, therefore earn at least that much: otherwise, their profit-margin will decline further.

What, however, cannot be easily explained is the tendency for short-term money rates to stay at the self-same levels of 3½-4 per cent. The banks continue to pay this rate for seven-day money as well as for one to six months' deposits. Hitherto, some of them used to blame the Exchange banks for keeping up the rates at high levels. Others used to throw the blame on the finance brokers on the ground that they were bidding one bank against another. Now the Exchange banks cannot be held responsible, for interest rates in London have fallen. Nor can the finance brokers play any tricks, especially in a market with lenders over. Why are the banks, then, offering 3½-4 per cent. for term deposits? Apparently, each bank is anxious to see that its deposits do not go to the other. But they can ill afford to indulge in this luxury for long, if the Reserve Bank pursues its present policy of bringing down the long-term interest rates by steadily pushing up its selling rates for Government securities. Perhaps, the joint-stock bank, which invested Rs. 10 crores in these securities in one shot, as it were, has taken a bullish view of the Gilt-edged market.

• • • •

The falling yields on Government securities has had no effect on industrial equities. Ordinarily, this should have imparted an upward trend to them. On the contrary, most of the leading scrips have declined a little. The few that have staged a rise have had the benefit of support from the L.I.C. The T.E.L.Co.'s, in particular, were patronised by this single largest investor in the country. Although equities, in general, have thus not looked up, the selling pressure, which was fairly sizable early in the week, following Mr. Morarji Desai's hint at Calcutta that no relief in taxation could be justifiably expected, has almost ceased. "The market is well liquidated, especially in Indian Irons." This is the view held in knowledgeable circles. It is said that the *budli* on Indian Irons at Calcutta yesterday was perceptibly lower than that on the last two occasions.

• • • •

From gunny production to cable manufacturing may be a far cry, but that is what the Fort Gloster has been forced to do by circumstances. A few other jute companies, too, have taken interest in fields which are in no way connected with jute manufacture. The Fort Gloster Industries Ltd., formerly known as Fort Gloster Jute Manufacturing Company, Ltd., is one of the oldest concerns in Bengal, having been set up in 1890 under the managing agency of Messrs. Kettlewell Bullen & Co., Ltd. After nearly seven decades of jute manufacturing, the Company decided last year to spread its activities to other fields as well, because the markets for jute goods had shrunk, resulting in a surplus capacity. Hence a change in the name of the Company was effected in June 1957.

Perhaps, the first new venture to be undertaken by the Company is the manufacture of electrical wires and cables. In this venture, the Company has secured the technical collaboration of British Insulated Callenders Cables Ltd. It is stated that the necessary finance for the plant and machinery has been secured on deferred payments terms. The factory, which will be located near Calcutta at the premises of one of its old jute mills closed some time back, is expected to go into production in the first half of 1959. It is proposed to manufacture rubber insulated cables, weatherproof wares, bare copper, stranded and solid conductors.

In order to finance a part of the capital expenditure, the Company proposes to raise fresh capital by issuing 42,000 new ordinary shares of Rs. 100 each at par to the existing shareholders in the ratio of two new shares for every one share held. The present paid-up ordinary capital of the Company is Rs. 21 lakhs in shares of Rs. 100 each. The new shares will rank *pari passu* with the existing shares, except that they will not rank for dividend for the year ending March 1959. The Company paid a dividend of 20 per cent. for the year ended March last, having raised it from 10 per cent. for 1956-57.

• • • •

In recent years, there have been several instances of changes in managements of companies. Many of these are the result of foreign investors wanting to repatriate their capital from this country. Occasionally, companies change hands due to inability on the part of the existing management to carry on the business. In the last ten days, there have been two take-over bids belonging to both the categories. One is the offer of Jalan Industries Private Ltd. to purchase the entire share capital of Assam Saw Mills and Timber Company, Ltd. The other is the offer of Clive Row Investment Holding Company Ltd. to acquire Andrew Yule & Co., Ltd., one of the oldest British managing agency houses in India.

The Jalan Industries' offer to take over the Assam Saw Mills and Timber is the result of the present managing agents of the Company, Messrs. Bird and Company (Private) Ltd., wanting to dispose of it, as they feel that the Company is no longer a profitable proposition.

The Assam Saw Mills and Timber Company was established in 1918. It has a Veneer Mill at Namsoi in the North-East Frontier Area for the production of 3-ply tea chests and general timber produce. It was doing well until 1952, whereafter it has been experiencing losses. It had a debit balance of Rs. 4.95 lakhs by the end of September 1956. The management of the Company does not foresee bright prospects, unless orders for tea chests increase considerably. Messrs. Bird & Co. propose to give up their managing agency of the Company from 31st March 1959. The Jalan Industries Ltd. thinks that the Company could be made to yield a good return, though the present management feels otherwise. It is, therefore, prepared to buy any number of shares of the Assam Saw Mills and Timber Company at Rs. 3 per share, that is, at par. The last date for acceptance of this offer is 23rd December 1958. This offer compares favourably with the ruling market rate of Rs. 2.81. In a circular to the shareholders of the Company, the Directors say: "Messrs. Jalan Industries are of the opinion that, provided they have control of the Company's capital, they will be in a position to effect economies, secure orders and place the Company on a profit-earning basis once more. They are, however, unable to carry out their proposals, unless they acquire a sufficient number of shares to enable them to secure control of the Company's finance." Accordingly, the Directors are advising the shareholders to accept the offer of Jalans. It is said that the Assam Government which holds one-third of the issued capital has accepted this advice.

The offer of Clive Row to take over Andrew Yule is the result of the owners of Andrew Yule wanting to take back home a good part, if not the whole, of their investments in India. It thus falls under the category of repatriation of capital. The circular containing Clive Row's offer is signed by its Directors—Mr. N. Stenhouse, Mr. S. Chaudhuri and Mr. B. P. Singh Roy. The following are the salient features of the offer:

The Clive Row Investment Holding Company has offered to the holders of 90,000 ordinary shares (of Rs. 100 each) of Andrew Yule & Co., Ltd. to purchase their holdings at Rs. 135 per share. The offer is subject to two conditions. First, it should be accepted on or before 20th December 1958 by the holders of not less than 90 per cent. of Andrew Yule's ordinary capital or such lesser percentage (not being less than 51 per cent.) as will be notified to Andrew Yule & Co. on or before that date. Secondly, it is conditional upon the approval of the Government of India to the change in the constitution of the membership of Andrew Yule & Co. and the consent of the Reserve Bank of India under the Foreign Exchange Regulation Act, 1947 being received on or before 15th January 1959 or such other date, not later than 4th April 1959.

The offer, if accepted by the shareholders of Andrew Yule, will involve payment of Rs. 121.50 lakhs and the Clive Row Investment has made arrangements for the necessary finance. The business of Andrew Yule & Co., Ltd., will continue as hitherto, but it will cease to be Secretaries of the Clive Row Investment. It will be noted here that Clive Row Investment Holding Company Ltd. was registered in November 1946 and took over the investments in companies chiefly under the managing agency of Andrew Yule & Co., Ltd. These investments still form the major part of the Company's portfolio and the Board of Directors of the Company feel that it is in the interest of shareholders that the Company should now acquire Andrew Yule & Co., Ltd.

It will be seen from the foregoing account that, when the offer goes through, Clive Row will have taken over its own managing company.

• • • •

It may seem rather unusual that, when cane crushing operations of sugar mills are in full swing, the sugar markets should be ruling firm. Over the past fortnight, prices of white sugar have registered a smart rise of Rs. 2 per bag in Bombay, the small grain sugar being quoted at Rs. 108.50, medium grain at Rs. 109-Rs. 112 and large grain at Rs. 113-Rs. 119. But this is not surprising, because the bullish fervour in the market has been fanned by two important factors, namely, dwindling floating stocks in the market and hopes of an upward revision in the controlled ex-factory price of North Indian sugar. The reduction in stocks is the result of better offtake and poor arrivals, thanks to the meagre monthly release by the Government two weeks ago; the quantity released was no more than 96,000 tons, as against the usual quota of 160,000 to 170,000 tons. Although the Union Food Ministry had told the public that it would issue further release orders shortly, no announcement has yet been made. It is reported that the first release of sugar out of the current season's production, expected to be announced in the course of next week, may also be too small to meet the normal demand.

Meanwhile, the sugar trade is awaiting the decision of the Central Government on the interim report of the Tariff Commission, believed to have been submitted to it last week. It will be recalled that, while referring the question of fixing a fair price for sugar to the Tariff Commission in September last, the Government requested the Commission to submit a preliminary report within three months (that is, before 20th December) on the allowances to be made for rehabilitation charges and profits while fixing the fair ex-mill price. The contents of the interim report are not known. It is, however, gathered that the report was considered by the Indian Sugar Mills Association on Saturday this week. The Association is understood to have urged the Union Food Ministry to enhance the control prices of North Indian sugar by at least 50 nP per maund. If the plea were to be accepted, the ex-factory price per maund of I.S.S. D29 grade sugar would be Rs. 36.50 for U.P. and North Bihar mills and Rs. 37.00 for mills in the Punjab.

Prices of sugar have improved in the world markets also. Spot Cuban raw sugar is now quoted in the New York market at 3.65 cents per lb. (f.o.b. Cuba), which compares favourably with 3.43 cents a fortnight ago. The rise is attributed largely to renewed rebel activity in Cuba, the biggest exporter of sugar in the world. If such activity continues unabated, deliveries of new crop sugar to the ports will be hampered or there will be an increase in the cost of deliveries. On either account, the world price of sugar will rise.

SHARE MARKET SLUGGISH

FURTHER SMALL SETBACK IN PRICES

(From Our Own Correspondents)

BOMBAY, 11*th December*

EQUITIES continued to rule quiet during the week under review also. Activity declined considerably. The Finance Minister's speech at the Associated Chambers of Commerce of India in Calcutta on Friday last, calling on business men and industrialists to bear in mind the limitations of the policy of participation of foreign private capital in India's development, and his indication that he could not hold out any hope of a reduction of wealth and expenditure taxes, was received with some disappointment. The business men's contention that it would be more profitable for India to rely on private foreign investment failed to convince the Finance Minister. Though the latter had ruled out, on prior occasions too, the possibility of a reduction in taxes, it was hoped that he might announce some concessions at the Associated Chambers' meeting. His reiteration of the Government's tax policy, therefore, chilled the enthusiasm of the operators in the market.

The official confirmation by the management of the Indian Iron and Steel Company, Ltd., that it had received sanction for the issue of bonus shares and the encouraging trend of the Company's production during November did not generate any great enthusiasm among operators. They, however, arrested the sharp decline in the price of this scrip. The Company's production of saleable steel last month aggregated 43,847 tons, as against 39,449 tons in October. Pig iron and steel ingot output also rose from 79,428 tons and 44,629 tons to 90,205 tons and 60,257 tons, respectively. Despatches of steel increased from 36,522 tons to 51,589 tons. Nevertheless, activity in this counter was subdued in view of the forthcoming holidays in Calcutta.

Tata Steel Ordinaries, after an initial rise from Rs. 176.50 to Rs. 177.25, drifted down to Rs. 173.75 on Tuesday. Subsequently, there was an improvement to Rs. 175 at the close today. The new shares were marked down over the week by Re. 1.75 to Rs. 171.50. Indian Irons slipped down from Rs. 26 to Rs. 25.50, but recovered to close at Rs. 25-70.

Textiles were featureless and the undertone was quiet, with an all-round modest drop in prices. Bombay Dyeings moved up early in the week from Rs. 56.80 to Rs. 57.30, but this improvement was not sustained on the subsequent days. On the contrary, there was a successive recession to Rs. 56 today. The closing was done at Rs. 56.20. Centurys gave way from Rs. 429 to Rs. 424, before closing at Rs. 425.75. Kohinoors suffered a sharp setback from Rs. 249.50 to Rs. 242 on heavy liquidation. Central Indias lost Rs. 2 to Rs. 88, Finlays Rs. 3.50 to Rs. 263.50 and Indu Ordinaries 16 nP to Rs. 8.56. Indore Malwas dropped by Re. 1 to Rs. 102 and Models by Rs. 2.50 to Rs. 172.50, while Morarjees gained Re. 1 to Rs. 237. New Greats were down by a rupee to Rs. 218 and Podars by Rs. 4.50 to Rs. 139.

Bank shares ruled steady, but business was few and far between. Barodas were a fraction better at Rs. 119. Centrals gained 40 nP to Rs. 58.40, while their new shares shed 30 nP to Rs. 59.20. Bank of Indias were done at Rs. 137.50 and their new shares at Rs. 139. Punjab Nationals were unchanged at Rs. 56, while United Commercials had business 20 nP lower at Rs. 68.

In the insurance section, New Indias declined by Re. 1.20 to Rs. 53.50, while Orientals were maintained at Rs. 3,800. British India Generals were better by 28 nP at Rs. 14.28, whereas All-India Generals lost 10 nP to Rs. 3. Indian Mercantiles shed Rs. 1 to Rs. 46.25, but Vulcans were a shade higher at Rs. 19.72.

Electricity shares were a shade easy. Ahmedabad Electrics declined by 30 nP to Rs. 94.70 and Bombay Suburbans by Re. 1.25 to Rs. 109.50. Surat Electrics were done at Rs. 111.75 and Tata Hydros at Rs. 122. Tata Powers lost Rs. 2.50 to Rs. 1.222.50, while Andhra Valleys were a shade better at Rs. 1,205.

There was a further recession in sugar shares. Belapurs recorded a rise from Rs. 300 to Rs. 302 earlier in the week, but subsequently they drifted lower to Rs. 296. The closing was, however, a shade better at Rs. 298. Phaltans lost Rs. 2.25 to Rs. 162.25 and Walchandnagars Rs. 6 to Rs. 272.50. In the cement group, Associated Cements were in request, due to proximity of dividend, and rose from Rs. 151.75 to Rs. 154.50, before closing at Rs. 153.75. Digvijays were, however, marked down by Re. 1.50 to Rs. 130. Jaipur Udyogs lost 44 nP to Rs. 9.92 and Ashoka Cements 76 nP to Rs. 6.80. Among engineering and mining shares, Alcock Ashdowns suffered a loss of Rs. 5 to Rs. 251.25, while Tata Locomotives were steady moving within a narrow range and closing at Rs. 158.75. Premier Constructions lost Re. 1.50 to Rs. 242. Larsen & Toubros 16 nP to Rs. 16.72 and Mahindras 28 nP to Rs. 18.24. Shivrajpurs were marked down by Rs. 2 to Rs. 86 and Indian Coppers by 18 nP to Rs. 3.60.

Scindias presented a steady front and gathered over the week 20 nP to Rs. 21.16. At one time during the week they touched Rs. 21.32. Great Easterns shed over the week 55 nP to Rs. 26.45. There was a sharp setback in Premier Automobiles from Rs. 85.50 to Rs. 81.70 and Hindustan Motors from Rs. 7.08 to Rs. 6.80.

In the miscellaneous group, Bombay Burmahs reacted from Rs. 492.50 to Rs. 485.50, before gaining ground to Rs. 490. National Rayons dipped from Rs. 239.50 to Rs. 235.75, before recouping to Rs. 239.25 at the close. Tata Chemicals shed 28 nP to Rs. 14.72 and their new shares 92 nP to Rs. 13.60. Tata Oils declined by Rs. 2.50 to Rs. 41.25 and Voltas by Rs. 2 to Rs. 135. Killick Industries recorded a rise of Re. 1.75 to Rs. 151 and W. H. Bradys Rs. 2.50 to Rs. 297.50.

• • • •

Calcutta Stock Exchange

CALCUTTA, 10*th December*

A dull and drab trend pervaded the Calcutta Stock Exchange during the week under review. Earlier, profit-taking had reduced prices, and it was at this stage that the Finance Minister, Mr. Morarjee Desai—who, it was remembered here, had told a New York audience in October that the Government's intention was to follow a more realistic taxation policy so that the country could attract more foreign capital—told the Associated Chambers of Commerce of India annual meeting on Friday last that more taxes, direct and indirect, were one of the principal sources of Government revenue. After this declaration, contradictory though it was, any expectation of tax relief in the coming budget was considered ruled out in market circles; on the other hand, the apprehension in the minds of operators and investors was the possibility of imposing further burdens on trade and industry.

In the present chill mood of New Delhi, as indicated by Mr. Desai on Friday last, it was difficult to hope the plea of Mr. J. D. K. Brown, who, as President of the Associated Chambers, in his reasoned speech, urged tax relief and all encouragement to the export industries—tea, jute, textiles and tobacco—on which the country must depend for foreign exchange earnings to pay for machinery and other essential imports, would be considered in the proper spirit. Further, Mr. Nehru's recent remarks at Calcutta on the expansion of the public sector were so soon followed by ordnance factories entering into competition with the private sector in the manufacture of trucks, lorries and tractors. Although the manufacture was intended to meet only Defence needs at present, the apprehension here was that expansion could always be done to compete in the commercial field also. The fear that the public sector could at any time enter into the private field had now come to stay. In the dull trend, some encouraging factors failed to produce any effect. They were the increased output in the Indian Iron and Steel Company's works in November following expansion, and the anticipated sanction by Government to the bonus issue. The fall in jute goods stocks as at the end of last month was also ignored, while the continued fall in prices during auctions lulled tea scrips, despite some good dividend announcements in the week. Miscellaneous industrials accounted for selected rises.

Transactions in the jute section dwindled and prices gave way. Agarparas moved down from Rs. 11.87 to Rs. 11.50 and Anglo-Indias from Rs. 216 to Rs. 208. At Rs. 136, Baranagores lost Rs. 6. Lack of interest drove down Kinnisons from Rs. 193 to Rs. 186, but Gourepores were unchanged at Rs. 360. Following maintenance of dividend at 2½ per cent., Belvederes were quiet at Rs. 150. Nationals, however, picked up to Rs. 25.25 from Rs. 23.37, but soon fell to Rs. 24.50. Ganges were quoted at Rs. 70.50, as against Rs. 77 earlier, and Alliances at Rs. 115, as against Rs. 124. It was announced during the week that, in technical collaboration with Messrs. British Insulated Callenders Cables Ltd., the Fort Gloster Industries Ltd. had decided to set up a cable factory to manufacture rubber insulated cables, bare copper, stranded and solid conductors, etc.

Coals exhibited the general trend. Burrakurs were unchanged at Rs. 17.12 for most part of the week, but declined subsequently to Rs. 16.56. East Indias recovered to Rs. 23.25 from Rs. 23.06, but Pench Valleys lost to Rs. 24.19 from Rs. 24.25, with Central Indias being lower at Rs. 7.87. At Rs. 19.37, New Beerbhooms were fractionally lower.

Among minings, Indian Coppers receded to touch Rs. 3.64 from Rs. 3.80. Orissa Minerals were unchanged at Rs. 7.25.

In the engineering section, Indian Irons opened at Rs. 26.22 and closed at Rs. 25.64. The floating stock has increased so suddenly with the recent release of a huge block of shares by an investment company that they are proving a strain to the market, despite good prospects and the issue of bonus shares. Jessop & Cos. were shaded to Rs. 25 from Rs. 26, with Texmacos being pushed down to Rs. 20.60 from Rs. 21.10.

Tea shares were neglected. Hasimaras moved down to Rs. 21.19 from Rs. 21.25 and East Indias to Rs. 20.75 from Rs. 22. Methonis at Rs. 19 lost 62 nP.

Clive Row Investments among miscellaneous industrials were the star feature this week, and the scrip improved to Rs. 11.94 from Rs. 10.12, following the proposal of this Company acquiring Andrew Yule & Co. Ltd. by purchasing the latter Company's 90,000 shares of Rs. 100 each at Rs. 135 each. Indian Cables lost further to Rs. 27.62 from Rs. 28.31. The dividend for Indian Cables has been maintained at 15 per cent., including a cash bonus of 2½ per cent., although profits for the year ended March last at Rs. 8.57 were lower by Rs. 43 lakhs, in view of expansion plans interfering with production. The capital was recently increased by a rights issue in the proportion of one to two and the anticipation was that the dividend would be maintained at 15 per cent. in future also.

AHMEDABAD ELECTRICITY EPISODE: MR. SHEPPARD'S REJOINDER

Apropos the statements made by some shareholders of the Ahmedabad Electricity Company, Ltd., at the last annual general meeting of the Company, regarding the orders for two boilers—*vide* page 867 of *Commerce* dated 29th November 1958, Mr. E. D. Sheppard, Chairman of Killick Industries Ltd., and a former Director of the Company, has issued the following rejoinder:

"Certain remarks made by some of the shareholders at the meeting of the Ahmedabad Electricity Company, Ltd., on 26th November 1958, were based on figures furnished to the Joint Honorary Secretary, Bombay Shareholders' Association, by the present Chairman of the Company comparing the price quoted for the boiler plant, etc., as between the International Combustion Ltd. and Babcock and Wilcox.

"Great emphasis was placed on the difference in price between the quotations received from the two boiler-makers and in the absence of any indication to the contrary one would naturally assume that the plant offered by both the parties were identical.

"This is not the case.

"The offer of the International Combustion Ltd. was for tri-drum boilers with forged drums, drainable super-heaters, etc.

"The offer of Babcock & Wilcox was for bi-drum boilers with welded drums and non-drainable super-heaters and there were many other differences.

"Therefore, the comparison given was misleading.

"Furthermore, the original estimated price for piping of £100,000 given by I.C.L. had long ago been substituted by a firm price of £73,500 but this information was withheld.

"One speaker made the point that Messrs. Merz & McLellan had confirmed that the I.C.L. price was higher by 25 per cent. which also is misleading as in a communication from Messrs. Merz & McLellan they had expressed their personal opinion that the price might have been high by the order of 10 per cent., although they would not have been surprised if it was as much as 15 per cent.

"It should, however, be noted that the protracted and diligent enquiry which has been made into this affair by the Company's own engineers has elicited factual evidence which establishes that the differential on a fully competitive and comparable basis and taking the most unfavourable view could not have been more than 4 per cent. or 5 per cent. This finding was by four out of the five engineers who took part in the enquiry. The fifth—Mr. Colaco—dissented. Pending the outcome of this enquiry steps were taken by the former Chairman to ensure that no final contractual obligations were incurred, as is fully known to the Government of India with whom full contact was maintained.

"It is surely a sad reflection on those concerned that they have found it necessary to rely on unfair comparisons and misleading figures and statements in an attempt to discredit others and elevate themselves in the public eye."

MINERVA MILLS LTD.

The Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur and Co., Private Ltd., Bombay) is raising additional funds through the issue of first mortgage debentures for an aggregate sum of Rs. 18 lakhs. The object of the issue is to finance a part of the Company's programme of renovation and modernisation. The debentures are repayable in 1967-70. They are in units of Rs. 500 each, carrying interest at the rate of 6½ per cent. per annum, taxable. They are secured by the fixed assets of the Company. The list will open for public subscription on the 15th inst., and close on or after the 29th inst.

The Company has no outstanding debentures at present. In 1932, however, it had issued a first mortgage debenture loan for Rs. 18 lakhs. This was renewed in 1938 for a sum of Rs. 15 lakhs and was finally repaid in 1945 from out of the profits made during the intervening years. The Company had made substantial additions to the plant, machinery and buildings to the tune of Rs. 52.79 lakhs during the twelve years 1945-56. Most of this expenditure was financed out of the reserves and profits made during this period, without calling for fresh capital. The Company is now launching on a programme of renovation and modernisation of plant and machinery involving large capital expenditure. The proceeds of the debenture issue will be utilised to meet a part of this capital expenditure and to replenish the working capital which has been locked up in the fixed assets of the Company.

The whole issue has been underwritten by the Canara Bank Ltd. For more details of this offer, readers may refer to pages 968 and 969 where the relevant announcement appears.

NEWS IN BRIEF

THE Andhra Pradesh Government has constituted an advisory board for small-scale industries to discuss all aspects relating to the promotion of such industries and to devise ways and means of assisting them generally.

The first coke oven battery at the Rourkela Steel Plant was formally inaugurated last week by Mr. G. Pande, Chairman of Hindustan Steel (Private) Ltd. Along with the battery, a portion of the by-product plant was also put into operation.

As a measure of export promotion, the Central Government has decided to allow drawback of customs duty paid on imported materials used in the manufacture of public address equipment exported from India. It has also authorised schemes for manufacture in bond of punch cards and ready-made garments from imported materials.

The U.S. authorities have conceded the request of the Government of India to waive the requirement of using of ships registered in the U.S. for the import of machine tools and machinery under the U.S. Export-Import Bank programme. Accordingly, this cargo can now be shipped in vessels registered in India but upto 50 per cent. of the total movement.

The Life Insurance Corporation completed Rs. 180.73 crores of life business upto 17th November 1958, as against the record business of Rs. 231 crores done in the whole of 1957. Disclosing this in the Lok Sabha recently, Mr. B. R. Bhagat, Union Deputy Minister for Finance, attributed the decline in business during the current year to adverse economic conditions.

A firm in Ernakulam, Kerala State, has entered into an agreement with a Japanese firm to start a cable manufacturing factory there, with a capital of Rs. 50 lakhs. Disclosing this in the State Assembly, Mr. K. P. Gopalan, Minister for Industries, stated the other day that the necessary licence for the establishment of the factory was issued by the Central Government in July last.

A small booklet entitled *Information for Small Industrialist* has been published by the Office of the Development Commissioner for Small Scale Industries, Ministry of Commerce and Industry. The booklet, besides describing the organisational set-up for the development of small industries, details a number of concessions and facilities offered by the Government to small industrialists.

A preliminary contour survey for India's fourth steel plant in the public sector at Bokaro has been done, according to Mr. Sardar Swaran Singh, Minister for Steel, Mines and Fuel. A sum of Rs. 5 lakhs is expected to be spent before the end of March 1959. Messrs. M. N. Dastur & Co. (Private) Limited, Calcutta, has been entrusted with the work of preparing a preliminary project report.

It has been decided to exempt Government companies from the requirements of section 13 of the Indian Companies Act 1956, under which companies registered as Private Limited Companies have to specify the nomenclature "Private" in their names. It will be remembered that Prime Minister Nehru strongly disagreed with State-owned companies being called as private limited companies.

In order to control the rise in price and to prevent hoarding of wheat in the States of Rajasthan and M.P., the Central Government has fixed, under Section 3 of the Essential Commodities Act 1955, the maximum price at which wheat shall be sold in any locality in these States at the average price of that commodity during the previous three months. The notification will remain in force for a period of three months.

A consortium of manufacturers is being set up in India to produce machinery required for sugar factories, according to Mr. A. P. Jain, Union Minister for Food and Agriculture. The projected consortium is expected to commence production in about two years. It has been decided that, instead of importing the bulk of machinery from abroad, sugar plants should be fabricated in the country by importing the minimum essential components and equipment that cannot be secured and manufactured indigenously.

• • • •

From Abroad

The U.S. Government has decided to stop its stockpiling programme for quicksilver with effect from the 31st inst.

The world demand for oil will grow by 6.3 per cent. a year during the ten years ending 1967, according to the Chase Manhattan Bank's petroleum department. The rate of increase is slightly lower than that achieved over the years since 1919.

The Japanese Government has approved of a 2,500 million yen loan from the Japan Export-Import Bank to the Arabian Oil Company to help it to commence drilling operations in the offshore area between Kuwait and Saudi Arabia next year.

The British Overseas Airways Corporation proposes to undertake sizable expansion in Comet jet airliner services in 1959. The provisional plans laid down at present provide for the operation of a service to Tokyo in April which will be followed by another service to Hong Kong in May.

For the first time in several years, the value of stocks held by the manufacturing industry in the U.K. declined significantly in the third quarter of the year. The total value of stocks at the end of September was £55 million or 1.2 per cent. less than at mid-year, according to a provisional estimate of the British Board of Trade.

W. Germany's balance of payments surplus has dropped considerably in spite of a growing export surplus. For the first nine months this year, it aggregated 3,000 million DM., or 2,000 million DM. less than in the corresponding period last year. This is mainly due to the fact that almost no short-term money (hot money) entered the country this year, while such an influx had amounted to 2,500 million DM. in the January-September 1957 period because of expected world currency changes.

West Germany has become the second largest producer of plastics in the world, the first place being held by the U.S. Its output rose by 13.5 per cent. in this year's first nine months, as against a 25 per cent. rise last year. Total production is expected to come close to the 630,000 metric tons, as against 561,000 metric tons in 1958. Plastics account for 11 per cent. of total sales of the W. German chemical industry, as compared with 9 per cent. three years ago.

A plea to the U.K. Government to abandon further experiments in nationalisation, unless some means of running the nationalised industries efficiently can be found, has been put forward in a pamphlet entitled *Nationalisation: A Great Dilemma*, published by the British Institute of Directors. The failure of nationalised industries is attributed to their monopoly position. The new scheme of the Government buying shares in public companies has also been criticised in the pamphlet on the ground that "there is no place for State in private enterprise boardroom."

After a three-hour visit to London to explain to the British Government the measures which the European Economic Community (the Common Market countries) propose to put into force on 1st January 1959, Dr. Ludwig Erhard, West German Minister for Economic Affairs, returned to Bonn on the 4th inst. Dr. Erhard, in his capacity as Chairman of the Council of Ministers of the European Economic Community, had a full discussion on the procedure for the Free Trade Area negotiations with the British Paymaster General, Chairman of the inter-Governmental Committee.

By amending its banking laws, the Government of Malaya has assumed powers to close down, after January 1959, banks operating in the country which are under the effective control of foreign Governments. Such banks will be given three months' notice. Under the previous law, the banks operating in the Federation had been required to have an issued capital of $M2 million, while those whose headquarters outside the Federation should have liquid assets aggregating $M2 million at least in the Federation, or an issued capital of $M5 million. The Bankers' Committee had agreed to this and the banks would be given 10 years to comply with necessary requirements.

PERSONAL

MR. A. C. Grover and Mr. Ralph Hiscox have been elected Chairman and Deputy Chairman, respectively, of Lloyds Bank Ltd.

Mr. M. C. Chagla, India's Ambassador to the U.S., presented his credentials to President Eisenhower at the White House on the 8th inst.

M. Andre Malraux, Personal Envoy of General de Gaulle, Prime Minister of France, left New Delhi for Tokyo on the 8th inst. after consultations with the Government of India.

Mr. Peter Thorneycroft, British M.P. and a former Chancellor of the Exchequer, arrived in New Delhi on the 4th inst. on a purely personal visit.

Dr. N. Das, I.C.S., until recently Secretary, Home (Anti-Corruption and Enforcement) Department, West Bengal Government, has been appointed Secretary-General of the Employers' Federation of India, Bombay.

Prof. Nicholas Kaldor, the noted British economist, will arrive in New Delhi on the 15th inst. After staying there for a few days, he will proceed to Ceylon to advise the Government of that country on the question of reorganising its tax structure. While in India, he is expected to tender evidence before the Tyagi Committee on Taxation.

TRANSFORMERS...

POWERFUL PARTNERS

IN INDIA'S EXPANDING INDUSTRIES

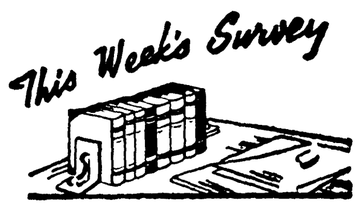
Today, more than ever, the partnership of Brush-Kirloskar Transformers is sought in furthering industrial expansion. Built for reliable service, Brush-Kirloskar Distribution, Power, Mining and Rectifier Transformers are in great demand all over India.

Range: Transformers - from 15 to 3000 kVA, 33 kV, are available from the manufacturers or the selling agents

MANUFACTURED BY: KIRLOSKAR ELECTRIC CO. LTD. BANGALORE-3

SOLE AGENTS: PARRY & CO. LIMITED — MADRAS, BOMBAY, CALCUTTA, NEW DELHI

Keymers PTZ-4



STATE TRADING IN GRAINS

FROM all accounts, the Government seems to be determined on introducing a system of State trading in foodgrains. This was one of the recommendations of the National Development Council which met in New Delhi in the first week of November. Since then, Mr. Nehru has reiterated the need for implementing this measure. The Union Food and Agriculture Minister, Mr. A. P. Jain, is reported to have stated, at a meeting of the All-Party Food Committee held last month, that the scheme of State trading in foodgrains was in a preparatory stage and that it would be ready within a few weeks. A few States have indicated their willingness to work the scheme, though it is not known whether all States favour it. Since Mr. Nehru has thrown the weight of his personality on the side of those who favour State trading in foodgrains, it is unlikely that the scheme will be shelved, though it may well be modified in the light of the many objections to any large assumption of responsibility by the State in the matter of foodgrains trade.

So far, little is known about the details of the scheme. Mr. Nehru has himself indicated that what is intended is not elimination of wholesale trade but the introduction of a system of licensed dealers who will function as agents of the Government. In the absence of details, it is difficult to visualise the shape of things in foodgrains trade under a system of State trading in foodgrains. There are many intricate problems which will demand solution. Will the free market in foodgrains be allowed to function? Is it possible for the State to take over procurement and distribution of foodgrains without creating an elaborate administrative machinery? In the absence of a free market, how will the Government fix the prices payable to producers? If prices are fixed arbitrarily or on the basis of *ad hoc* surveys of production costs, will it not mean the revival of all that agitation for higher prices which the authorities were compelled to face in the war years? These questions are suggestive, rather than exhaustive, of the intricate nature of the issues involved in State trading

It is not clear why the Government has developed a new sense of urgency about State trading in foodgrains. The rise in food prices is not a new phenomenon. It has been with us for over a year now. Till recently, the authorities seemed to be content with the success they obtained on the food prices front by measures such as credit control, the institution of a zonal system for foodgrains, building up of stocks and establishment of fair price shops. Is the Government's new enthusiasm for State trading an admission of the failure of the measures it has initiated? Again, if the price situation ever provided any particular justification for State trading, the latest trend of foodgrain prices should be said to have removed the justification, for prices have already begun to fall. Between January 1958 and October 1958, the index number of food articles (Base: 1952-53=100) rose from 102.5 to 121.2; by the middle of November, it had receded to 118.2. The index number of cereals advanced in the first ten months of the current year from 97 to 113.6; by the middle of November, it had declined to 111.0. A good rice crop is in prospect. The new crop is placed at a record high level of 29 million tons, as against the 24.8 million tons harvested last year. And when it moves into the market, prices are bound to recede further. To commence State trading in a period of falling prices might land the State in far too many difficulties.

Apart from these considerations, what should weigh with the Government is whether it is right for it to make a fundamental departure from its price and trade policy without having the whole question examined by an expert body. Only recently, the question was examined by the Asoka Mehta Committee which recommended State control and direction, rather than wholesale suppression of the wholesale trade in foodgrains. What the Committee advocated was a system of wise, directional control of food prices, analogous to the Reserve Bank's open market operations. It did not suggest that the Government should go the whole hog of State trading in foodgrains. It is not clear what new factors have emerged which justify the Government's move to take over the trading in foodgrains.

If the proposed State trading scheme does not go beyond licensing of wholesale dealers, it may not be unwelcome. Indeed, it may even be welcome in that it will put in the hands of the Government much valuable information about foodgrain movements. But if the Government assumes and puts into effect control over procurement, movement, distribution and prices, it will have taken upon itself more responsibility than it can discharge efficiently. As the Conference on State trading in foodgrains, convened recently by the Federation of Indian Chambers of Commerce and Industry, has pointed out, the State Trading move will "divert the attention of the Government and the public from policies and programmes to increase production, which is the real solution of the problem." The Conference has also rightly stressed that the abrupt displacement of traders in foodgrains will result in a "considerable disruption of channels of distribution which have been well organised for generations." The present situation, according to the Conference, does not demand anything more than "some regulatory provision pertaining to the operations of wholesale trade to enable the Government to have a physical check on available supplies." The Government's present move, if it signifies anything other than an acquisition of powers and creation of machinery for possible use in an emergency, is fraught with much real danger to the food economy. If a fraction of the time and energy now sought to be spent on perfecting a State trading system were utilised on the food production front, it may conceivably mean more food output, thereby eliminating any need for interference with the existing channels of supply and distribution.

STATE TRADING CORPORATION

The resolution, urging the Central Government to review the activities of the State Trading Corporation (S.T.C.) in such a way as to restrict them to well defined limits, adopted at the recent annual meeting of the Associated Chambers of Commerce of India, Calcutta, is not only quite timely but also very pertinent. Although it was generally believed that the S.T.C. would confine its trading activities to the Communist countries, it has made considerable encroachment into the trading sphere of the private sector. Indeed, within three years after its birth, the S.T.C. stands today as a "leviathan," with operations covering direct export and import of several commodities, distribution of goods imported directly by it as well as those imported by private parties, and distribution of cement produced within the country. That the working of the S.T.C. has already done incalculable harm to the country's trade was impressively described by Mr. P. Hadfield, who moved the resolution on the S.T.C. He said:

"It (the S.T.C.) has sought, often successfully, to obtain a monopoly of trade well established with a free country either by switching that trade to a communist country or itself dealing with the free country. In the process, it has unfortunately, encouraged undesirable and dangerous competition among all those involved in the export or import of these commodities. Not only are existing producers, traders and services being disrupted, the ever-expanding activities of the State Trading Corporation are deterring exporters from exploring new avenues of foreign trade. There is little incentive to build up a new export market, if the enterprising exporter has reason to fear that success will lead to elimination."

Apart from the disquieting effects of the S.T.C.'s activities on traders in general, the way in which this body has been conducting the transactions is disconcerting. To take the instance of cement. The S.T.C. has made a profit of several crores of rupees on cement distribution and the Government has stated that it is considering the question of using the profit for road development. Surely, this decision, as Mr. G. H. J. Clarke rightly pointed out in his speech while seconding the resolution, "would give the Corporation the aspect of a straightforward tax-gathering agency of Government." Moreover, why should the S.T.C. continue trading in cement, when there is plenty of indigenous supply and import is no longer necessary?

Another instance of the S.T.C.'s defective policy relates to the mining trade. While it is understandable that the S.T.C. should encourage newcomers in this trade, there has unfortunately been an increasing tendency to encourage newcomers among the exporters also. Such a tendency, Mr. Hadfield pointed out, not only meant inexperience and inefficiency but also cut-throat competition. The S.T.C. "appears," to quote him, "to be playing off the established miners, shippers and service contractors against each other and within unknown and inexperienced outsiders, which can well result in ruining those established in the trade and destroying the export demand for the commodity itself."

The position as regards imports is equally unhealthy. As was revealed by Mr. Hadfield, although adequate quantities of sulphur were being imported by established importers from the U.S., the S.T.C. aimed at monopolising this market by importing from China, but only the fact that the price was not competitive thwarted the move. The S.T.C. then turned its attention to rock phosphate which the established importers had imported from Egypt for many years with no complaints. "The result of this unwelcome intrusion," to quote Mr. Hadfield again, "are not yet clear; it (the S.T.C.) was, however, completely successful in obtaining a monopoly of the import of muriate of potash, a fertiliser ingredient, which had been traditionally imported by fertiliser manufacturing firms."

It is not simply a matter for complaint that established traders have suffered as a result of encroachment on their activities by the S.T.C. But the point is, as Mr. Clarke stated, there has been no corresponding gain to the consumer. In the case of commodities imported and distributed internally by the S.T.C., the consumer has suffered because supplies have been irregular and even prices higher as a result of inefficient procurement, ignorance of proper principles of distribution and lack of contact with consumers. Mr. Clarke was right when he declared that, even where it is desirable that the S.T.C. should import, the internal distribution should be left to those skilled traders of knowledge and experience, with built-up distribution systems, offices and trained staff available. After all, it will be recalled that the S.T.C. was formed not to supplant the private sector but to supplement it, in fact, to assist it, in expanding the foreign trade of the country. The Government of India will do well to take note of the Associated Chambers' recommendation and review the S.T.C.'s activities in order (1) to restrict its trading operations to well defined limits, namely, to transactions which are inaccessible or unsuited to private enterprise; and (2) to leave to the established and experienced traders the internal distribution of goods imported by the Corporation.

SALES TAX

What the Taxation Enquiry Commission said in respect of sales tax four years ago is as much true today as it was then. Referring to the lack of uniformity even in respect of definition of basic terms such as "dealer," "sales price," "turnover," "year" etc., the Commission had observed that this created unnecessary complications and hardships to trade and industry, particularly in regard to inter-State transactions and for dealers who had branches in more than one State. It had pointed out that, without conferring any advantage whatsoever, this diversity in regulation and procedure had led to many avoidable difficulties to trade, commerce and industry.

Not only has the situation not improved during the last four years but, if anything, it has only become worse. Every State now has at least one statute dealing with sales tax. The period of experiment with the basic structure of the tax does not seem to be over in most States and, consequently, the frequency of changes in legislation is disturbingly high. Rules under the various tax laws are varied and voluminous. The Government, in its anxiety to meet diverse points of view, tends to make them highly complicated and far from explicit. In addition, there is now the Central sales tax legislation, covering inter-State sales. Each State has issued its own rules under the Central statute and these, though substantially alike, are subject to varying interpretations by the State authorities. In short, the present picture of sales tax is one of "enormous complexity," frequent variations, conflicting interpretations and, of course, delayed assessments. No wonder, most people are baffled, consumers become irritated and dealers do not know what their tax liabilities are.

The Associated Chambers of Commerce of India have, therefore, done well to draw pointed attention to the fact that the variety and complexity of sales tax legislation continued to render the administration of this form of taxation an impediment to trade and industry. The present methods of assessment and collection severely curtailed the net revenue-earning capacity of the tax and disputes about the reimbursement of sales tax on purchases made by

Government still gave rise to a mass of unproductive correspondence and to financial loss. In a resolution passed at the annual general meeting held in Calcutta on the 5th and 6th inst., the Associated Chambers of Commerce have strongly urged the Government that these deficiencies should be removed by the introduction of a uniform and simplified Central sales tax legislation applicable throughout India. In effecting this reform, the resolution further adds, the Government should consider: (1) standardisation of collection, where appropriate, at the first point of sale, and (2) exemption of Government purchases from sales tax or automatic refund of the tax on such sales to the supplier.

Moving the resolution, Mr. K. Jowers, representing the Punjab and Delhi Chamber of Commerce, stressed the difficulties experienced by all those trades who deal primarily with the Government, both Central and States. All Government business, he pointed out, carried a relatively low margin of profits and, in order to avoid losses, it was essential that these transactions be speedily finalised. But this was rendered virtually impossible by the clause in Government contracts reading thus: "Prices are exclusive of sales tax, which, if legally leviable, will be in addition to the contract price." This simple clause, as any supplier knows, was most damaging both to himself and the indentor. Each and every contract carrying this clause meant that the formal acceptance of contract document must be submitted for amendment, first, to agree to the payment of sales tax and, secondly, to cover the exact amount of the tax. This led to unnecessary and avoidable delays. Since, in many cases, lakhs of rupees were involved, suppliers had to make provision to cover the cost of their money which had been paid in advance. This, according to Mr. Jowers, could well be avoided, if sales tax, where applicable, was included in the initial acceptance of contract. If this was not acceptable to the Government, he suggested that consideration should be given formally to exempt Government orders from the payment of sales tax. This would automatically reduce the need for the large staff engaged in effecting amendments in contracts to cover sales tax and allow suppliers to quote competitive rates.

Another feature which required immediate modification, according to him, was the requirement that suppliers in one State should send representatives, with their books, to another State for assessment. The position of a manufacturer or a dealer despatching goods to branches or agents in another State, Mr. Jowers added, was far from clear. Documents or title to goods were transferred many times while consignments were in transit which sometimes involved multiple levy of sales tax. Mr. Jowers made the following further points for the consideration of the Government: (1) incidence of taxation in various categories of goods should be uniform in all States, (2) appeals and revisions should be decided at district headquarters instead of at the State capital, (3) procedure for appeal should be simplified.

Seconding the resolution on behalf of the Bombay Chamber of Commerce, Mr. Vernon-Jones made a vigorous plea for uniformity in sales tax legislation. He suggested that, for this purpose, the Central Government should enact a law similar to the Indian Stamp Act, which should maintain uniformity throughout India in regard to the essential structure of the tax while leaving it to the States to change only the quantum, the classification for exemptions and such other matters which had to be adapted to regional needs. He did not deny the need for sales tax legislation by the States. But the structure of this legislation, he rightly suggested, should be generally uniform throughout India. Regional variations should not extend to the basic structure.

A uniform structure of tax, as Mr. Vernon-Jones pointed out, would indicate the stages at which tax was to be levied and the broad classification required for deciding the appropriate stage. It was now generally conceded that most articles should be taxed only at one stage, that this stage should be the first sale within the State in the case of most processed articles and the last stage in the case of goods which were inherently or largely ancillary to manufacture of other articles. Experience had shown that such a classification was both equitable to business and more efficient than other systems for the administration of the law and the collection of the maximum revenue. Mr. Jones added: "whether or not the residue of articles not falling into these two categories should be subject to tax only at one stage, as in some States, or at two stages, as suggested by the Bombay Sales Tax Enquiry Committee, is arguable." Whichever course was eventually adopted, he felt it should be valid throughout India for a definite period. These are by no means exacting demands and do not involve any loss of revenue. There should, therefore, be no difficulty in accepting the aforesaid suggestions and making the necessary changes in the laws, rules and procedures pertaining to sales tax. By doing so, the Governments themselves will derive considerable benefit.

CUSTOMS IN ASIA

An efficient and expeditious system of customs administration is a prerequisite for ensuring smooth flow of international trade. It is, therefore, a matter for some concern that customs procedures in some of the Asian and Far Eastern countries are cumbersome and involve irksome formalities. In view of the rapidly changing pattern of economic set-up and trade in the countries in this region, a judicious streamlining of the administration of customs has become a vital necessity. It is gratifying to note, in this connection, that, at a meeting held at Bangkok last month, the Working Party of the Economic Commission for Asia and the Far East (E.C.A.F.E.) on Customs Administration addressed itself to the task of examining, at some length, the scope for reorganising the entire system of customs. Participating in the conference were senior customs officials from 19 countries of the region. Besides, observers from Czechoslovakia, the Federal Republic of Germany as well as from the International Civil Aviation Organisation (I.C.A.O.), the Customs Co-operation Council (C.C.C.), the International Chamber of Commerce (I.C.C.) and the International Air Transport Association (I.A.T.A.) also attended the meeting. The final report of the Working Party, consisting of numerous practical recommendations to the customs authorities of the region, was unanimously adopted by the conference.

There has been a growing realisation in the countries in this region for bringing about improvements in the customs administration. The measures already taken range from increased participation in international conventions concerning customs matters to simplified examination of parcels sent by post. It must be admitted that still there are many avoidable customs formalities, which inhibit the free flow of imports and exports and tend to restrict the scope for developing tourist traffic. One of the principal recommendations of the Working Party, it may be noted, relates to the customs clearance of tourists as well as business men. It urged those countries which have not yet acceded to international conventions on this subject to do so. It also recommended that passengers should not be required to fill out forms for baggage clearance but verbal declarations should be accepted as far as possible. Among the other recommendations is the one that the examination of unaccompanied baggage be limited to the minimum and another that simplified forms and documents should be used

YOU and the METRIC SYSTEM

Whether you are a buyer or a seller, you will find that the Metric System of Weights and Measures makes calculations easier.

A single system of weights and measures for the entire country will not only help trade but also promote national integration.

Use of Metric Weights has become legal in selected areas of the States and industries from October 1, 1958. The reform will be gradually extended to other areas.

Commercial weights are of the following denominations

Cast Iron Weights			Brass/Bronze Weights					
Kilogram		Gram	Bullion only		Commodities and Bullion			
			Kilogram		Kilogram	Gram		
50	5	500	20	5	1	500	50	5
20	2	200	10	2		200	20	2
10	1	100				100	10	1

1 KILOGRAM=1,000 GRAMS=86 TOLAS

METRIC SYSTEM — *for simplicity and uniformity*

FEDERATION'S ADVICE TO GOVERNMENT

DEFENCE AND AUTOMOBILES

From Our Special Correspondent

NEW DELHI, *9th December*

THE Federation of Indian Chambers of Commerce and Industry has been very active last week, expressing forthright and cogent opinions on some questions of immediate public importance. It convened a conference on State trading in foodgrains to focus the opinion of the business community on the question; and it has issued a statement on the problems of the automobile industry and on the Defence Ministry's recent contracts with some foreign firms for the manufacture of trucks, supply of auto parts, etc. In the statement adopted by the conference on State trading in foodgrains, the opinion is expressed that the Government's decision to introduce State trading has been taken in some haste without objectively going into the matter or realising the implications thereof, although these implications which are of very grave nature are still fresh in the memory of the public on account of the over-prolongation of controls on foodgrains that were introduced during the war years.

DELHI LETTER

The statement has made the relevant point that the present decision may well divert the attention of Government and the public from policies and programmes to increase production. The second Five-year Plan is already suffering from strains on account of the paucity of resources, and the shift in the allocation of resources which this decision regarding State trading involves may further upset the smooth progress of planned development.

After pointing out that the increase in foodgrain prices, especially in the last one year, has been due to the increased pace of development and that, therefore, it would be unreal to attribute it entirely to speculative activities, the statement has specifically described the part played by wholesale trade as follows:

> The wholesale trade is primarily concerned with the services of the transport and distribution of foodgrains and earns its remuneration for such specific and specialised services. It cannot do much when the marketable surplus from the producers is itself reduced in quantity. In fact, the trade considerably assists in preventing the fluctuations in prices from being far more severe than they usually could be without their mediation. It ensures a reliable agency for disposal to the producer as well as a reliable and smooth supply of foodgrains of the quality which the consumer needs. The sudden displacement of traders in foodgrain transactions will result in a considerable disruption of channels of distribution which have been well organised for generations. The experience of the severe unevenness of prices between food zones already proves the likely effects of disturbing systems of distribution without fully realising their importance. The question of the retention of food zones also requires a very careful scrutiny.

The statement has uttered the warning that when the normal, market operations are suspended and a Government agency emerges as the sole purchaser of food supplies, the price structure will be distorted. It will also be accompanied by a deterioration in the quality and smooth flow of supplies available for distribution. The present situation does not demand anything more than some regulatory provision pertaining to the operations of wholesale trade to enable Government to have a physical check on the available supplies. The present reports indicate that the forthcoming harvest in rice will yield between 29 and 30 million tons of rice. The production of millets is also much higher than last year. The indications from the sowing of wheat also are optimistic. At such a juncture, the statement concludes, the authorities should concern themselves with the acquisition of reserve stock, a policy which has been urged by a large number of commissions and committees.

Automobile Industry

The Federation's statement bearing on the automobile industry in the context of the Defence Ministry's recent contracts has controverted the Deputy Defence Minister's statement in the Lok Sabha in the course of which he expressed dissatisfaction at the part played by the industry. This statement deserves to be quoted *in extenso*:

> "The progress of the automobile industry in India and its price policy have been reviewed by the Tariff Commission as well as by Government from time to time during the recent years and both expressed satisfaction in this regard. It is, therefore, surprising to hear a different view now. Even if Government have suddenly changed their opinion, the question still remains as to why the Indian automobile industry has not come upto expectations and where the responsibility lies.
>
> "The requirements of the Defence Ministry are important and they deserve every priority. Even so, they form part and parcel of the total needs and potential of the nation. In this connection, reference may be made to the observations of the Tariff Commission in their Report on the Automobile Industry submitted in 1953: 'From the point of view of production, it is most essential that the army demand should be combined with the civilian demand, especially as the army is the biggest single customer in the country. From the strategic point of view also, it is important that the civilian and army types should be combined, so that a minimum number of chassis and major assemblies are required for the production of civilian as well as army vehicles. In times of emergency, the manufacturing capacity can be switched over as far as possible for army vehicles and many of the vehicles used by civilians can be requisitioned for army purposes. Spare parts and repair services of these vehicles can be efficiently handled only if the civilian vehicles correspond to army vehicles as much as possible.'
>
> "The Deputy Defence Minister, however, said, *inter alia*: 'The multiplicity of types of vehicles in the Defence Services which resulted from purchases from different manufacturers, in order to keep up competition has increased the army's problem of maintenance. Standardisation of army vehicles was, therefore, considered essential and this could be achieved only by undertaking manufacture of trucks in the Defence establishments.'
>
> "The policy of Government to 'keep up competition' at one time as between imported vehicles and indigenously manufactured ones, and lately as between various firms licensed to manufacture vehicles within the country, has resulted in the multiplicity of types of vehicles and the problem of spare parts and maintenance. The same policy has also resulted in increasing the cost of manufacture. If it is desirable and feasible, as it is made out by the Defence Ministry, to get a 100 per cent. indigenously produced vehicle at a lower price, it is equally desirable in the case of other consumers. But the automobile industry can operate efficiently and economically only on a fairly large-scale.
>
> "If the demand for automobiles in a country is limited as in India currently, and that limited demand itself is to be met by a number of manufacturers, the costs will necessarily be high, that is comparatively speaking. The Minister for Industry, Mr. Manubhai Shah, in his statement in the Lok Sabha on 13th November 1957, pointed out: 'No country with a turnover of less than one lakh vehicles per year can make it really economical and the House knows the present turnover of vehicles in this country is 32,000 annually.' Regarding the indigenous manufacture of components the Minister informed the Lok Sabha on 14th November 1957, that '... even in the highly advanced countries in the West and the United States of America, no firm can claim more than 85 to 87 per cent. of indigenous components because some of the equipment, carburittonattery instruments and some of the attachments are invented newly over and over again and they have necessarily got to be imported by every manufacturer in the world.' He also added that 'before the end of the second Plan period, almost 75 to 80 per cent. of the components and the entire material used in every car and truck in this country shall be made within the country.'"
>
> One is amazed, therefore, to learn from the statement of the Deputy Defence Minister that the Ordnance Factories can produce their trucks cheaper with a programme of manufacturing a mere 2,000 trucks and will be able to achieve 90 per cent. indigenous production in the fifth year. The Federation has accordingly requested Government to reconsider its policy even at this stage and forthwith appoint a technical committee composed of independent experts to examine the various aspects of the problem.

The Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, stated in the Rajya Sabha that, in future years, a larger surplus of more than 200,000 tons of cement might be available for export. During the current year, it had been decided to export 200,000 tons of cement to neighbouring countries like Ceylon, Pakistan, Persian Gulf ports, Aden and Cambodia. Mr. Shastri said that it was very difficult to estimate with any accuracy the surplus of cement available for export, as it was directly related to the trend of internal demand, which, in turn, influenced the actual production from time to time. He added that the cost of manufacture of cement in India was generally somewhat higher than that in countries with which it has to compete in export markets.

INDUSTRIAL DISPUTES IN BRITAIN

NO MORE COMPULSORY ARBITRATION

By John Walton

LONDON, *4th December*

COMPULSORY arbitration in industrial disputes in Britain is to end. The Minister of Labour and National Service has announced that the Government will revoke the Industrial Disputes Order, under which more than 1 000 legally-binding awards on pay and conditions have been made in the past seven years affecting some 12,000,000 workers. This step does not alter such arrangements, for voluntary arbitration exists in a number of industries like coal mining and the railways. In all, some 10,000,000 workers not covered by the Order remain unaffected. They include employees in the various Government services (with their own highly developed negotiating machinery) and in industries covered by wages councils, whose decisions on pay and conditions, once officially confirmed, have the law behind them.

LONDON LETTER

Another form of voluntary arbitration still available is through the Industrial Court. But both sides must assent before a dispute goes before it, and its awards are not binding in law. Furthermore, in disputes, the conciliation services of the Ministry of Labour are still available to both sides, and the Minister has power, where he so decides, to set up a court of inquiry or a committee of investigation to find out the facts and report with a view to promoting a settlement.

The independent tribunal which the Industrial Disputes Order created replaced an earlier body, which came into being in 1940 and continued for 11 years. This previous tribunal was part of an emergency arrangement during World War II under which strikes and lockouts became illegal and which introduced compulsory arbitration into British industry.

Talks with both the Trades Union Congress (T.U.C.) and the British Employers' Confederation led to a revision of this war-time Order in 1951. The new Order lifted the ban on strikes and lockouts and modified the arrangements for compulsory arbitration. But the change was not made a law; it remained an administrative measure under the Defence Regulations. For seven years, the Industrial Disputes Order has allowed either party to take the other to arbitration without its assent. And the tribunal's award has legally bound both the employers and the workpeople concerned.

The Order has, however, operated only under certain conditions. First, the party which referred the dispute to the Minister had either to take part "habitually" in the settlement of wages and working conditions or to organise a substantial proportion of the workers or employers in the industry. Secondly, to ensure that available collective bargaining machinery was fully used, the Minister could only refer the dispute to the tribunal after he was satisfied that all other practicable ways of finding a solution had been tried.

Another important feature of the Order has been its offer of an avenue for a trade union or an employers' organisation which habitually has been a party to settling pay and conditions to take an "issue" before the tribunal. Such an issue could arise when a union reported an employer who was not honouring the recognised wage levels or other conditions of employment in the industry. By an award, the tribunal could legally oblige him to do so.

T.U.C.'s Views

The recent decision to end the Order arose from a Government wish to wind up the Defence Regulations under which it was made. Asked by the Ministry of Labour for its views on the future of the Order, the T.U.C. said that it would like its provisions embodied in legislation. While the Order was not perfect, it had worked well for seven years and the facilities it provided should not be dismantled. In September, the 1958 Congress added its unanimous weight to these views by calling for the appropriate legislation. The British Employers' Confederation, however, did not agree with the T.U.C. Its view was that arbitration on the model of the Order should be open only to those

AMERICAN LETTER

RECOVERY CONTINUING BUT AT A SLOWER PACE

LOSS OF GOLD CAUSING CONCERN

From Our Special Correspondent

NEW YORK, *4th December*

BUSINESS in the United States is increasing but at a somewhat slower pace than in preceding months following the low point of the recession. Management is still quite cautious. Production is being stepped up, but borrowings from banks, for example, early this month were only about $1,000 million above the July low. They still have about $2,000 million to go before they regain their September 1957 peak.

What is happening in the U.S. may be illustrated best by analysis of the component parts of the gross national product for the third quarter of the year. One of the sustaining forces during the recession was the item of personal consumption expenditures. They accounted for 55.5 per cent. of the gross national product in the third quarter of 1957 and they rose to 58 per cent. of the total in the third quarter of this year. The year-to-year gain was $7,600 million, or 2.7 per cent., although the G.N.P. fell $5,600 million, or 1.3 per cent. Personal expenditures show, of course, confidence.

Some explanation is also in order so far as the rising personal income figures are concerned. In the third quarter, they showed a gain of $5,800 million, or 1.6 per cent. over the corresponding period of 1958. It may be observed that this was more than accounted for by a $9,600 million, or 15.5 per cent. increase in Government wages and salaries and so-called "transfer payments." The latter represent chiefly veterans' insurance payments plus social security benefits.

In fact, personal income from non-Governmental sources showed a decline of $3,800 million.

The Government wage and transfer payment figure represented about 17.7 per cent. of total personal income in the third quarter of 1957, but jumped to 20.1 per cent. in the third 1958 quarter. It follows that spending by individuals could have hardly taken the course it did, had it not been for the increased Government participation in the economy of the country.

This shows up also in another component part of the G.N.P. The annual rate of Government expenditures for goods and services showed a year-to-year gain of $6,000 million, or 6.9 per cent. in the third quarter. They accounted for 21 per cent. of the gross national product, as compared with 19.6 per cent. in the like 1957 period.

There is no evidence or indication that the upward trend of Federal, State and Local Government expenditures will slacken. Indeed, with the increased strength of the Democratic Party, as a result of the last election, greater rather than lesser spending may be expected, if the past is any criterion. Economic activity and health, thus, is dependent, to a large degree, on Government expenditures, unemployment insurance payments and so on, which have played a large part in sustaining the non-durable goods and service industries during the recession.

Private spending is, of course, still the biggest factor. The most current figures suggest further recovery in personal consumption expenditures for durable goods. While there is a rising trend in this area, there seems little expectation that fourth quarter figures will rise to corresponding 1957 levels. It is possible, though, that some component parts in the private segment of the gross national product may show a gain over 1957 when the final tally for the year is in.

This is true particularly of building and construction which have been boosted by public projects, such as the Federal and State highway programme, school building and housing plans. Moreover, the construction award figures suggest that the annual rate of non-Government construction expenditures should score a further gain which, in all probability would raise the fourth quarter figure above that of a year ago.

Producers' equipment expenditures might also show a moderate improvement but no surveys of anticipated business capital expenditures would seem to indicate any great increase in this area either in the last quarter of 1958, or in the first three months of 1959.

There is one area of general concern among economists and bankers. It is the constant drain on U.S. gold stocks. There seems to be little ground for expecting any improvement in the U.S. foreign trade position. While the third quarter showed a favourable balance of trade of about $500 million, the fourth quarter may show an unfavourable balance.

This brings up a number of very broad questions—conditions in the United States, such as productivity, prices and earnings, *vis-a-vis* other industrial nations.

Many analysts seem agreed that some of the other industrially important nations of the world are likely too fare better than the U.S. Support has been provided for the statement that there has been a greater rate of increase in productivity in Western Europe and even in Russia than in the U.S. in recent years. Thus, industrial growth trends in Western Europe in, say, the next five years may be superior to those in the U.S. This might encourage foreign capital to leave the U.S. The same applies to American capital. It may mean a further reduction in U.S. gold reserves.

It's a very "hot" subject, both here and abroad. An English economist has published a pamphlet, entitled *The Coming Crisis* of 1959. He reflects the thinking of a wide group of foreigners who focus attention to more favourable growth trends in other countries than the U.S., to inflationary trends in the U.S. which may be accentuated by a Democratic Congress. In other words, questions are being raised whether dollar reserves are synonymous with gold reserves.

There is no question that inflation psychology is one of the main bullish factors on the New York Stock Exchange. The securities' markets are also influenced by the recovery trends in the economy and by better business and industrial earnings. It is also not subject to much dispute that retailers, generally, expect the biggest holiday business they ever did in terms of dollars.

As long as contrary forces are obscure, the elements may well continue to dominate Wall Street thinking and behaviour. Yet, sound investment managers do not ignore the fact that securities' prices are very high in relation to all conventional measurements and leave no elbow room for unexpected shocks which may come any day.

Forecasts for the ensuing year are beginning to make their appearance. The Departments of Commerce and Labour predicted that spending for new construction next year would cross the $50,000 million mark for the first time to reach a record of $52,300 million. Fourteen years ago, during the war, such spending amounted to only $5,259 million. As an aside, it may be mentioned that building costs, in recent years, have risen an average of about 3 per cent a year. Private family housing starts are now running at the annual rate of about 1,100,000 units, a considerable improvement over the 880,000 units earlier this year. For the time being, all seems well.

FOREIGN AID AND INVESTMENT

ASSOCIATED CHAMBERS ADVOCATE MORE OF THE LATTER

A WELL-REASONED plea for attracting more foreign private capital investment in India, instead of depending increasingly on further loans and aids from friendly countries was made by Mr. L. D. Mudie, on behalf of the Bombay Chamber of Commerce and Industry, at the annual general meeting of the Associated Chambers of Commerce of India held last week in Calcutta. Mr. Mudie was speaking on the resolution on foreign aid, investment and co-operation. The climate for attracting foreign investment, it was contended, could be made conducive by simplifying the tax structure and allied policies. The resolution adopted by the A.C.C.I. on the subject runs as follows:

"The Associated Chambers of Commerce desire to welcome the generous measure of financial assistance recently negotiated with the World Bank and with certain friendly countries. This assistance does much to resolve India's immediate problems of foreign exchange; and the Chambers consider that the Government of India, in order to consolidate this temporary relief and to achieve a more permanent and stable balance in the country's international trade, should

(1) reassess economic resources, both now and at the end of the second Plan, in order to determine the targets which can be achieved within these resources;

(2) adopt taxation and allied policies which will create conditions favourable to private foreign investment and thus develop the country's economic potentialities, while lightening the burden of the servicing and repayment of foreign loans."

Mr. Mudie struck a note of caution against the danger of accepting more and more loans, though well-meant, from friendly countries without first consolidating the achievements made so far and considering "the most formidable problem of serving the debts which are *already* outstanding." The problem of loan repayment and amortisation, Mr. Mudie pointed out, would be with this country for most of the working lives of those who control commerce and industry in this country today, though the aid so far received or promised did not represent additional resources for additional development, but was meant only to meet current liabilities to March 1959.

The magnitude of the problem can be judged from the figures quoted by Mr. Mudie. The total outstanding foreign debt of India, in both the public and private sectors, as on 1st January 1959, is estimated to be of the order of $1,396 million, including interest due. This may be reduced to $1,271 million on 1st January 1961, that is, at the beginning of the third Plan, and further to $800 million at the end of the third Plan period. This calculation is based on the assumption that no further commitments are made as from 30th June 1958. The Planning Commission in its reappraisal of the second Five-year Plan, however, takes credit for Rs. 600 crores of external assistance during the last two years of the Plan. "I would frankly describe the prospect as somewhat daunting" Mr. Mudie added, "but that must be the better reason for an acute and realistic appraisal of what the past has taught and what the future plans must be."

According to Mr. Mudie, as hopes of an export surplus have to be ruled out, there are only two ways by which some progress can be achieved in the next few years. The first one is to cut the coat according to the cloth. Dilating on this point, he said:

"With the limited information at our disposal, we cannot hope to anticipate the third Plan estimates, but we must strongly emphasise the need to re-tailor the second Five-year Plan to the foreign exchange available and to aim at incurring the very smallest possible amount of foreign debt in the period of the third Plan. It appears that the commitment of foreign exchange at the end of the second Plan period will be such as to leave nothing for the third."

The second one is to promote foreign investment. Instead of borrowing money which has to be repaid, it is suggested that India must attract money in the form of plant, machinery, raw materials, etc., the foreign exchange charge on which is only the remission of profits. The trend of foreign investment in recent years does not show an encouraging picture. According to statistics collected by the Reserve Bank of India, the average annual inflow of non-banking, private foreign business investment during the period July 1948 to December 1953 aggregated about Rs. 25 crores per annum. In 1954 and 1955, it dropped to an average of Rs. 16 crores. In 1956, however, it rose to Rs. 24.3 crores, of which the oil refineries more than accounted for the difference. The foreign investor does not look to the short-term prospects, but he sees, as Mr. Mudie pointed out, a long way ahead. If the foreign investment is to be improved, some long-term conditions have to be satisfied. The three main conditions outlined by Mr. Mudie are: (1) reasonable political stability and maintenance of law and order, (2) prospect of a profitable and continuing market, and (3) certainty of being allowed to remit profits and repatriate capital.

In regard to the first condition, India is no doubt well placed insofar as Asia is concerned, but, even in respect of political stability, it is not without its competitors. "There is a large queue for foreign aid and foreign investment stretching from Australia to Nigeria and Rhodesia to South America." India can also provide a profitable and continuing market, if the *per capita* income can be sufficiently increased. The record of India in respect of remission profits and repatriation of capital is "admirable," but "this incentive," Mr. Mudie pointed out, "is at the mercy of that very foreign exchange shortage which the foreign investor is being asked to help to solve." While fulfilling the conditions for attracting foreign capital, India has certain deterrents which have to be removed. These are:

"An unsure policy for industry and the part which the private sector is to be allowed to play; the existence of what will always appear to the foreigner to be potential danger to his existence—a State Trading Corporation encroaching on the private sector, official interference in development, finance, and labour relations, harassment through the Companies Act, danger to capital through the Fourth Amendment to the Constitution and, not least, the disincentives of the taxation of personal and corporate wealth and income."

The subject of taxation, which provides one of the major obstacles in the way of foreign private investment, was dealt with at length by Mr. H. Mackay Tallack, representing the Bengal Chamber of Commerce and Industry, who seconded the resolution. He endorsed the views expressed in the report of the National Council of Applied Economic Research on Taxation and Foreign Investment. The most striking feature of India's tax structure is the multiplicity of taxes. "Many of these taxes," Mr. Tallack said, "are more frightening in prospect and in potentiality than in reality. It is surely their complexity and their number that constitute an ever greater deterrent to the potential foreign private investor than their content." The Associated Chambers' plea is, therefore, for simplification of the tax structure, particularly in its relation to corporate bodies, as also for modification and relaxation of many of these fiscal provisions. Mr. Tallack significantly pointed out, in this connection, that "in the post-war world, the exporter of capital is operating in a seller's market."

Mr. Tallack referred, in particular, to two of the tax measures which affect foreign capital investment. First, the limitations on corporate capital formation imposed by section 23A of the Income-tax Act go far beyond the practical necessity. For instance, the private subsidiary in India of a foreign company that wished to accumulate reserves for development, he added, might, nevertheless, be forced by the penal provisions of section 23A to distribute—and thus remit out of India—the major portion of its profits. Thus, any short-term gain to the country will be more than offset in the long run by the inability of such companies to expand in the only way which is often available to them, namely, through self-financing. Secondly, the rates of personal taxation have a great impact on the inflow of private foreign capital. The limited relaxation of personal taxation granted to certain foreign technicians is not considered the full solution to the problem of securing foreign technical assistance. For "the three-year limit placed on the concession often means that a technician has to leave the country just as he has acquired sufficient local experience to double his technical worth."

STERLING AREA'S RESERVES

The sterling area's gold and dollar reserves recorded a rise of $41 million to $3,215 million during November 1958. This increase has been arrived at after taking into account the payment of $24.5 million to the European Payments Union (E.P.U.) in part settlement of the October deficit and of $2.5 million to creditors of the E.P.U. in bilateral settlements, as well as the repayment to Canada of the final instalment of $7.5 million on the interest-free loan of $700 million taken in 1942. Though the net rise in the reserves during last month is less than that of $54 million in October, it has kept up the upward trend in the sterling area's reserves for the fourteenth month in succession and taken the aggregate reserves to the highest level since September 1951, when they amounted to $3,269 million.

On the provisional figures for the month, the U.K. had a deficit of £6 million with the E.P.U. in November. This is due to be settled this month—75 per cent. in gold and dollars and 25 per cent. by addition to the debt to the Union. Britain's trade deficit with the U.P.U. in November was only half of that in the previous month. It is, however, to be noted that Britain has been having a trade deficit with E.P.U. every month since April last.

To revert to the sterling area's reserves. It is generally considered likely that the successive accumulation will be halted this month, as Britain will have to meet its annual commitment, amounting to about $180 million, on its U.S. and Canadian post-war loans. It is believed that Britain may not seek a further deferment of this annual repayment. Last year, following the monetary crisis, the annual repayment was postponed and Britain was given the right to defer payment again in seven other years during the rest of this century. In addition to this commitment, there is also the stand-by credit of $738 million from the I.M.F. due for renewal. This credit was first arranged in December 1956 and was renewed for a year in December 1957. An official statement is expected to be made shortly on these issues.

BRITISH LOAN TO PAKISTAN

In line with the policy of providing Commonwealth assistance loans, discussed at the Montreal Conference in September last, Britain will provide Pakistan with a loan of £10 million. An agreement between the two countries is expected to be signed shortly. Disclosing this in the course of his statement in the House of Commons last week, while presenting his first detailed report to the House on the outcome of the Montreal Conference and the New Delhi meetings of the I.M.F. and World Bank, the Chancellor of the Exchequer said that the amounts that could be lent (under the Commonwealth assistance loans) depended on the U.K.'s position and the borrowing situation of the Government concerned. There was, however, no intention of laying down fixed conditions. The rate of interest on such loans would be based on the rate at which the U.K. Government itself could borrow, *plus* a small management charge. These loans could be spent on U.K. exports, although they would not be negotiated in connection with any particular contract.

The U.K. Government was giving consideration to the announced proposal for a new system of Exchequer loans to the Colonies through the Commonwealth Finance Company. This, Mr. Amory added, however, depended on the further expansion of the resources of the Company. He expected that the resources would be expanded through the participation of Commonwealth central banks and other official sources and through a further contribution from the Bank of England. These were matters primarily for the Company, but the Government, the Chancellor assured, would be willing to help in any appropriate way. He gave an indication that the idea of a Commonwealth Bank had not been abandoned.

PERSONAL AND CORPORATE TAXATION

CASE FOR SIMPLIFICATION

By H. L. Murray

[This article is an adaptation of the speech made by the author at the annual general meeting of the Associated Chambers of Commerce, Calcutta, as the proposer of the resolution on personal and corporate taxation.—ED.]

NONE of us can have anything but sympathy with those whose task it is to face the dilemmas of taxation in an underdeveloped economy; the need to raise and channel resources as opposed to the necessity of encouraging personal initiative, broadbased investment and the creation of productive wealth; the need to do justice to the honest and to deal firmly with evasion; the need to create wealth and prosperity in a political atmosphere not altogether enamoured of the straightforward profit motive; the desire to increase employment without inflation or uneconomic sanctions; the inevitability of taxing those who not only are capable, monetarily and by education and training, of contributing most to the prosperity of the country by their own efforts, but who are also the only large source of direct revenue.

It may, therefore, be of service if I try to set out what canons of taxation ought to be observed when considering the need to simplify and rationalise the tax structure. The economic and political theories of the nineteenth century are, perhaps rightly, unfashionable in India just now; but I may be on safer ground if I cite Adam Smith whose thoughts are rooted in the eighteenth century—when the economy of the United Kingdom had a good deal in common (if only in miniature) with the Indian economy of today. I quote:

"Every tax ought to be levied at the time, or in the manner, in which it is most likely to be convenient for the contributor to pay it.

"The tax which each individual is bound to pay ought to be certain, and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor, and to every other person.

"Every tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible over and above what it brings into the public treasury of the State.

"The subjects of every State ought to contribute towards the support of the government, as nearly as possible in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the State."

Admittedly, these canons of taxation are those of the assessee. But it is the assessees who have made vast contributions to revenue in the past, and who pay the piper, even though they have to scan the newspapers each morning for the latest tune the piper has decided to play.

Let me examine for a moment just how important the corporate assessees are as revenue earners.

For the fiscal year 1956-57, out of the aggregate income of Rs. 935 crores assessed to tax (excluding dividends), the income assessed in the hands of corporations amounted to Rs. 236 crores and the tax levied on corporations amounted to Rs. 108 crores out of the total tax demand of Rs. 216 crores. In the same year, the number of corporations assessed to tax was only 10,780. Those figures do not include wealth tax. My contention is that corporations have to contribute out of all proportion to their numbers and capacity and that taxes on corporations are levied in an uncertain and inconveniently complex manner. Will the revenue from wealth tax on companies, for example, at the present rates really warrant the cost of collection and compensate for the disincentive and deterrent effect of what amounts to an annual capital levy?

Having said this, I am at once on the horns of the dilemma described at the outset. If the resources do not come from corporations, where *are* they to come from? The answer can only be that the question assumes that taxation to raise the same amount of revenue from one source or another is inevitable. But must revenue from taxation be maintained at its present level? Is it not possible to reduce non-productive expenditure in the interest of the rapid development of *productive* resources in the country?

It is not, perhaps, widely known that the planned increase in tax receipts for the Plan will be exceeded by Rs. 500 crores. Of this enormous sum, the revenue resources available for financing the *Plan* outlays are, however, expected to show an improvement of only Rs. 45 crores, as compared with the Plan estimate. The major part of the balance has gone to the States, through the Finance Commission's award, and to defence expenditure. I quote from the *Appraisal and Prospects of the Second Five-Year Plan* published in May 1958. Of all the extra that has been paid, less than 10 per cent. has gone to the Plan itself.

I should like to make a few remarks on the particular subject of disincentives and investment. It would be naive to suppose that the tax saved as a result of concessions would immediately and necessarily find its way into productive investment. My contention is, however, that this is not the immediate or necessary purpose of such concessions. The immediate and necessary purpose is to provide confidence, and the key to confidence is prosperity.

Private enterprise is "like a delicate, exotic fruit, pluck it and the bloom is off."—I misquote Oscar Wilde. It needs careful breeding, sowing in a good soil, fertilisation and, occasionally, weeding out to preserve the best and most fruitful growth.

The soil of private enterprise is the initiative, energy and willingness to risk of individual citizens; but it is the air the plant breathes which conditions its growth. If that air is the fresh, pure, air of general prosperity, the plant will take confidence and grow. The money saved by tax concessions will not necessarily all go to productive investment, but it will certainly help create an impression of well-being and confidence out of all proportion to its value.

This confidence will be infectiously attractive both internally and overseas. But prosperity and investment must begin at home and here I should like to suggest that, in a free democracy such as India's, major producers of wealth are bound to be private individuals partnerships and companies in the private sector; that corporations in this country are the greatest providers of employment in urban areas and that they are the providers of the consumer goods which are going to give the people of India the *tangible* evidence of her economic progress.

There have been times when Indian commerce and industry have not shown themselves ready to accept the responsibilities of free incentives but times have changed a great deal. Speculation and chicanery have their profits (*and* their losses) no less than honest endeavour but the market for them diminishes as the chance of straightforward profit increases.

Morever, the honest profit is the more durable and the more likely to recur.

The capitalists of the U.K. moved on from the South Sea Bubble to become the most respected financiers in the world.

I believe that Government is perfectly capable of dealing with the diseases which may still persist in Indian commerce and industry. But I think the time for the next stage has been reached, that is, the time for the active and positive encouragement of private enterprise through savings and investment by means of tax concessions and reduced Government expenditure.

With this end in view, I strongly urge that Government consider the simplification and

DON'T THEY LOOK CUTE ?

DON'T they look cute in their bright, gay dresses? In an era of mounting prices everywhere, Daddy is happy that RAYON, the wonder fabric that looks and feels like silk, costs so little.

We were the first to set up a plant in India for manufacturing rayon in 1950. Our production is constantly on the increase and it is helping to keep thousands of weaving establishments humming all the year round in many towns and villages of India. We now produce yarn in finer and bleached varieties, and also make available *coloured yarn* for the first time in our country. In pioneering the rayon industry in India and in fostering these new developments, we are happy that we continue to play a vital role in the developing economy of our country.

EXPORT TRADE IN COTTON TEXTILES

INSTALLATION OF 7,500 AUTOMATIC LOOMS IN THREE YEARS TO BE ALLOWED

IT is not surprising that every one who participated in the debate on the present trends in export trade and the state of the textile industry in the Lok Sabha last week expressed much concern over the marked setback to cotton textile exports of late. The estimated shipment of cloth—mill-made and handloom—during the current calendar year is placed at not more than 625 million yards, which compares very unfavourably with the actual export of 878 million yards in 1957, 956 million yards in 1954 and 1,120 million yards in 1950. This is certainly a depressing picture which must be set right, for, without a strong and secure export market, the expansion and development of the textile industry will not be smooth. While many members of the Lok Sabha recognised the importance of this aspect, it is deplorable that some members, not excluding the Congressites, sought to bring in politics into the debate.

Initiating the discussion, Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, explained the reasons for the drop in exports of textiles from India. According to him, there has been a shrinkage in world cotton textile trade; many countries are setting up their own textile mills; India has also to face competition in the shrinking field and some countries have to restrict their imports, because of foreign exchange difficulties. Whatever may be the external factors responsible for the downward trend in India's textile export trade, there is no gainsaying the fact that the competitive ability of the Indian cotton mill industry has itself deteriorated greatly, thanks to the compulsory cost inflation from which the industry is suffering, due, among others, to the low efficiency of equipment, most of which is old and outmoded, as well as direct and indirect labour costs. That there is no exaggeration whatever in this statement will be evident from the following remarks of Mr. M. M. Shah, Minister for Industry:

"In some cases, the situation is heart-rending. As one who has participated in the textile industry, I found that machinery as old as 1858 and 1898 is still being used in our country. One feels ashamed and even shocked at this. I would urge the industry to take a lesson from the industrial history of the rest of the world and to change and modernise wherever possible. No industry should have machinery older than 20 years. Today, the obsolescence is so fast growing that even machinery 10 years old is considered outmoded. So, having machinery which is 60 or 70 years old is something which cannot be understood nor tolerated by any section of the society."

It is thus obvious that, unless the industry is enabled to install latest machines and adopt modern techniques of production and management, it will have to struggle hard to maintain the markets it now has, let alone increasing them. Stressing, in particular, the imperative need for installing automatic looms, Mr. Shah said:

"Automatic loom has common relationship with all the three different types of political ideologies (capitalism, socialism and communism). Whether you go to China or Japan or U.K. or even America, automatic loom today has become one of the 'musts.' And I will give the House a few statistics to show what a big gap there is between where we stand today when compared to Japan or China or other countries in the field of automatic looms. In Japan, they have nine million spindles, less than three-fourths of our total spindles. Where we have 2,00,000, they have about 81,000 looms in the organised industry. They have reached a figure of 68 per cent. for automatic looms and we have only 6 per cent. automatic looms out of two lakh looms. . . . In China also, all the new installations as far as possible, for all these flawless cloth, are automatic looms.

"Therefore, I would urge that this is not a matter of politics. This is not a matter of trade unionism. This is not a matter in which political ideologies or philosophies are different. What we want is that our country should get a good name in the international market, our country should get a foothold for its products, and we should produce the best of cloth for our traditional markets in our spinning and weaving mills. The Dacca muslin and the Dacca mulmul were known throughout the world for the last 1,000 years. Therefore, we have got to retain that highest glory in the field of textile production in the whole world. So, I would urge that this matter of introduction of automatic looms should not be lost in the controversy of either trade union or industry and other disputes or one approach of the Government or the other."

Mr. Shah must, indeed, be congratulated for having presented the case for the installation of automatic looms in mills so well and in such a realistic way. It is gratifying to be informed by him that the Government of India has decided to permit, over and above the 3,000 automatic looms announced in the export promotion scheme, the installation of 7,500 automatic looms over the three-year period—at the rate of 2,500 looms per annum—as a pilot project. It is equally gratifying to be told that the top labour leaders in the country have accepted the principle of modernisation of the textile industry and agreed to discuss with the Government shortly the programme from the point of view of its effect on labour.

It is, however, not clear from Mr. Shah's speech whether the 7,500 automatic looms which the Government has decided to allow in the next three years will be in addition to the 18,000 looms covered under the existing scheme announced more than two years ago. It is also not clear what conditions the Government will impose on the industry for introducing automatic looms. As readers are aware, the conditions now attached to the licences issued to the mills for the installation of automatic looms are so onerous that even the mills which have been regularly exporting large quantities have not been able to benefit from the scheme. If the Government is really so earnest as Mr. Shah indicated about automatisation, it must at least relax these conditions to a considerable extent, if not totally abolish them.

Along with modernisation of equipment in mills, efforts must be diverted at making the uneconomic units more economic. Mr. Shah did well to emphasise this point. The Government, he said, considered that, if the textile units were to function economically, they should have 12,800

(*Continued on page 988*)

OFFTAKE OF COTTON GOODS SLOW

MILLOWNERS REJECT LABOURERS' "COMPENSATION PLAN"

From A Special Correspondent

MANCHESTER, *2nd December*

MANY attempts have been made within the past few months to describe, as dispassionately and adequately as possible, the causes and developments which have resulted in the widespread inactivity among buyers of cotton textile goods. Among the most recent authors writing on this theme has been Sir Cuthbert Clegg, Chairman of Combined English Mills Ltd., whose acquaintance with the situation has been sharpened by his direct contacts with textile leaders abroad and his wide connections in industry generally. His statement accompanying the accounts of the Atherton Mill group he heads is no *apologia*. It is a bare statement of fact and provides an ideal summary of the position in which many Lancashire firms now find themselves.

MANCHESTER LETTER

Twelve months previously, Sir Cuthbert referred to recurrent uncertainties affecting business, mainly the problems of unrestricted duty-free cloth imports from Commonwealth countries, Government interference in some major cotton-producing countries, and the inability of the New York and Liverpool cotton futures markets to provide effective hedging facilities. As he now reports, none of these problems has been resolved during the succeeding 12 months, although the cloth importation obstacle is nearer settlement, following the acceptance in principle by the leaders of the Hong Kong textile industry of a voluntary ceiling on exports to this country.

Commenting that the political importance of this last problem had overshadowed another, Sir Cuthbert blames the hearing before the Restrictive Practices Court of the case of the spinners' price agreement as being largely responsible for dwindling trade. "Whatever the outcome, the past year's trading was seriously affected by the uncertainty in the minds of buyers as to the trend of future prices if the agreement were to be declared as contrary to public interest," he asserts.

Reasons for Recession

In addition to these longstanding problems, activity during the year was also affected by the trade recession in textiles, the uncertain future course of world commodity prices, a period of prolonged bad weather affecting retail sales for the second successive year and the continuing change in trade demand from the use of high quality twofold poplin made from fine counts to single poplin cloth of a considerably coarser count.

Always a vital factor is the trend of raw material rates and a falling market such as that encountered for many months past is the most difficult in which to operate. Sir Cuthbert has compared the prevailing prices at the end of September this year with those 12 months previously. The fall in quotations of the main marks of Sudan cotton used at the combine's mills ranged between 8*d.* and 19.75*d.* per lb. during the period. The reduction in prices for supplies from other countries ranged between 5.10*d.* and 10.75*d.* per lb. In the two months which have elapsed since the end of the combine's financial year, there has been a further marked drop in prices of most qualities of cotton, particularly in the finer range.

Compensation Plan Turned Down

Employers in the Lancashire textile industry have rejected a union claim for compensation to be paid to workers whose mills close down. Their refusal—the second in four months—was announced in Manchester at the end of a joint meeting with leaders of the industry's 200,000 workers. Afterwards, one of the union leaders, Sir Alfred Roberts, General Secretary of the Cardroom Workers, said: "We are not prepared to accept the situation. We shall submit it to the Minister of Labour as a dispute."

The spinning and weaving employers issued a joint statement explaining why they had rejected the demand. This said that they still took the view that protection against the consequences of unemployment was a national problem and a collective national responsibility through State Insurance and Assistance to which everyone—including employers—subscribed. It would not be suitable or practicable to enter into a joint agreement putting upon employers an obligation and responsibility to supplement State unemployment benefits through payment of compensation to redundant operatives.

The employers' statement added: "We wish to make it quite clear that we are not against the voluntary payment of compensation by any firm which is willing to do so, but this decision and the scale of any such payment must be determined entirely by the firm concerned."

Leaders of nine trade unions in the Lancashire weaving industry decided in Manchester last week to hold talks with the two big spinning industry unions with a view to joining forces in a new industry-wide pay claim covering 200,000 cotton workers. Last mill pay increase—of five per cent.—was in August last year.

International Cotton Promotion

Examining the prospects for raw cotton consumption, as the International Cotton Federation has lately done, must call for some heart-searching. First of all, any investigation soon makes it clear that cotton's share of the fibre used throughout the world is slowly declining, in the face of increasing competition, mainly from the newer synthetics. Moreover, as the Federation points out, textiles in general have fallen behind the rate of growth of many other consumer goods.

Nevertheless, cotton still accounts for 65 per cent. of all textile fibres consumed, but a warning note is contained in a statement circulated by the Federation to 24 cotton growing and exporting countries, urging that more market research and trade promotion for raw cotton should be carried out by the producing nations. The investigation has shown that producers of man-made fibres, wool, silk, linen and jute are providing up to 10 times as much in funds for their fibres to stimulate promotion schemes compared with cotton producers.

Exceptions to this rule are to be found in the United States, where the National Cotton Council is spending about 1,400,000 dollars a year to stimulate cotton consumption, and also in Egypt and the Sudan. In addition, the American cotton industry is supplying another 1,000,000 dollars annually for promotional schemes in 10 European countries, including the United Kingdom as well as Japan.

This, the Federation freely admits, is having a beneficial effect on the textile trade generally by stimulating greater interest among consumers in apparel and household products, but the present level of international cotton promotion is not adequate. Not only must such schemes be launched at once in many markets where programmes are not in existence, but the present co-operative programmes need to be made stronger and more effective.

Machinery Setback

Although exports of British textile machinery in September were higher than in the corresponding month during the past two years, a further setback was encountered in October. So far, the quantity of plant shipped abroad this year has been 933,213 cwts., a drop of over 200,000 cwts. as compared with last year and nearly 450,000 cwts. below the 1956 level. Earnings from this source have declined from £38,000,000 in the first 10 months of 1956 to £32,878,000 this year.

The major reason for this development has been the slump in textile machinery exports to India during the past two years. Shipments have fallen from 345,000 cwts. in the 10 months to the end of October 1956 to only 106,000 cwts. in 1958. The value of this trade has dropped from £8,300,000 to £3,075,000.

Several other countries are now taking much smaller supplies of British textile plant, including Pakistan, Canada, the Soviet Union, France, the United States and Mexico. Bigger shipments have been sent to Australia, the Philippines and several South American Republics, while Egypt has now returned to the list, having absorbed 42,000 cwts. so far this year.

Sales Are Down

Wholesale textile sales in September showed a seasonal expansion as compared with the previous month but a fall of 5½ per cent. was recorded on the September 1957 figures. Sales over the nine months dropped by 5 per cent. as compared with the same period last year. It is significant that the only section which showed an improvement—and a very minor one at that—was that devoted to floor coverings, furniture and hardware, in which the textile content is not usually high.

The level of stocks held in September was the highest for that month since 1951, according to the figures issued by the Wholesale Textile Association. As compared with the same month a year ago, supplies held rose by 3.2 per cent., the major increase being 17½ per cent. in stocks of women's hose and children's socks.—*All Rights Reserved.*

OUTLOOK FOR LONGER STAPLE COTTON

CONSUMPTION FAILS TO KEEP PACE WITH PRODUCTION

ANALYSING the supply position of extra-long staple cotton, it was observed in these columns last week that the present situation was one of surplus supplies and that a prospective record crop in the current season 1958-59 was likely to swell supplies further. The surplus, it may be noted, has emerged mainly because of the failure of free world consumption to keep in step with production. It is true that the rise in consumption in communist countries during the last season more than offset the decline in the rest of the world, but world offtake was still below supplies. According to the estimates of the International Cotton Advisory Committee, Washington, from a high of 970,000 bales (of 478 lbs.) in 1955-56, free world consumption of extra-long staples declined to a little over three-quarters of a million bales, that is, 770,000 bales in 1957-58. The decline was general and virtually all importing countries were affected.

In the U.S. the decline in consumption of extra-long staples during the past two seasons has been more severe than in other staples. Consumption last season was more than 20 per cent. under the 1955-56 peak. Extra-long staple cotton faces competition from long-staple Upland cotton and synthetic fibres. With increased production and lower prices, domestic cotton represented 61 per cent. of total consumption of extra-long staples in the U.S. in 1956-57 but the proportion declined last season to 45 per cent., thanks to the comparative cheapness of imported cotton.

Consumption

The downward trend in consumption of extra-long staples in W. Europe became more obvious last season. The countries most affected were Italy, the United Kingdom, and Belgium but in many of the smaller countries, the decline was quite marked. France and the Federal Republic of Germany, where consumption seems to have been held stable along with Yugoslavia and Austria, were probably exceptions to the general trend. But the most serious decline in consumption in the last two seasons had taken place in Asia, mainly in India, the decline being as much as 40 per cent. Outside these main areas, consumption increased last season. This was mainly due to the fact that Egypt doubled its consumption of domestically produced cotton. The following table gives the trend of extra-long staple cotton consumption in the rest of the world.

Trend of Consumption

(In '000 bales)

Region	1957-58	1956-57	1955-56	1954-55
W. Europe	480	535	585	550
Asia	145	180	235	200
U.S.A.	95	110	120	110
Others	50	35	30	20
Total ..	770	860	970	880

Actual figures are not available for the communist countries, but on the basis of exports, the presumption is that there has been a marked increase in the consumption of Egyptian Karnak and Menoufi, particularly in Eastern Europe, which has more than offset the decline in the rest of the world.

Trade

Recent years have witnessed some rather significant developments in international trade in extra-long staples. During the last three seasons, aggregate exports have increased to an average of 1.1 million bales per year, as compared with about a million bales in the previous three seasons. But this has not been in response to any increase in free world consumption. The increase in demand has been from the communist countries. From only 10 per cent. a few years ago, these countries are now a market for nearly 30 per cent. of aggregate free world exports of these staples and this proportion is still growing. Last season, it is estimated that 330,000 bales of extra-long staples were shipped from Egypt and the Sudan to the communist countries. In contrast, trade between the free world countries is shrinking, reflecting lower consumption in Western Europe and Asia. In the last three seasons, exports have averaged about 825,000 bales per year, as against about 900,000 bales in the previous three-year period. Losses here, however, have been more than offset by gains in Eastern Europe and total world trade has been on a higher level.

The following table indicates the trend of exports.

Free-world Exports

(In '000 bales)

Region	1957-58	1956-57	1955-56	1954-55
Egypt	639	513	613	554
Sudan	356	304	476	262
U.S.A.	10	58	20	1
Peru	92	108	75	75
Others	32	29	36	26
Total ..	1,129	1,012	1,220	918

There have also been significant changes in the pattern of free world trade in extra-long staples. With an increasing share of exports from Egypt going to the communist countries (nearly 50 per cent. in 1957-58), the relative importance of this country in the trade with the rest of the world has declined significantly. In the early post-Korean period, between 60 and 70 per cent. of total free world consumption of extra-long staples came from Egypt but in recent years Egypt's share has fallen to under 40 per cent. Conversely, other countries, particularly the Sudan, have featured more prominently in free world trade. In the last three seasons, this country has become the largest supplier of extra-long staples to free-world consumers and aggregate exports from other producing countries have almost doubled recently.

In 1956-57, only a quarter of a million bales were shipped from Egypt to the free world and exports to the communist countries were actually larger than this. Total exports were slightly more than half a million bales. Recovered to 639,000 bales, last season exports, were about in line with the five-year average 1950-51 to 1954-55. Exports to the free world increased by 70,000 bales but were still much less than in previous years. Exports to the United States more than doubled and there were noticeable increases in shipments to France, Spain, Yugoslavia and Austria. On the other hand, trade with Belgium, Germany, Italy and the Netherlands continued at a very low level. Indian imports were about the same as in 1956-57 but considerably less than normal. Exports to Japan again dropped sharply. Eastern Europe has become an important market for Egyptian Karnak and Menoufi. Exports to the U.S.S.R. were much lower last season but China took considerably more. Total exports to the communist countries were a record 316,000 bales, or half the total trade in these cottons.

Exports from the Sudan last season were slow at first but picked up later to record a gain of over 50,000 bales, as compared with 1956-57. Increased interest from France, the Federal Republic of Germany and India resulted in larger exports from the Sudan last season which contributed to the return to more normal stock position on 1st August this year. The United Kingdom remains easily the most important single outlet for Sudan cotton with exports aggregating 154,000 bales last season. Prior to 1954-55, trade with the communist countries was negligible but since then it has averaged about 14,000 bales a year, still small in relation to total exports.

Price

As regards prices, there has been a sharp fall in extra-long staple prices during the last few seasons. Prices now are well under half what they were at the beginning of 1957 and the lowest for many years. Export taxes in most producing countries were sharply reduced. There have been successive reductions in reserve prices in Sudan. Guaranteed prices in Egypt remain unchanged but there have been modifications in exchange rates which have had the effect of lowering export prices. The following table shows the trend of extra long-staple prices during the past few seasons:

Trend of Prices

(In U.S. cents per lb.)

Season	Egyptian Karnak (F.G.)	Sudan Sakel (G. S. S.)	Peruvian Pima No. 1	U.S.A. Grade-2 (1⅛")
1951-52	104 47	87.88	71.98	103 73
1952-53	50 02	47 71	48 28	98 25
1953-54	54 80	53.46	47 80	71 79
1954-55	59 60	..	50 70	64 43
1955-56	64 65	54 41	53 49	59 35
1956-57	72 11	69 33	63 61	67 20
1957-58	40 57	48 51	40 19	64.40
1958-59*	38.73	39 60	36.81	..

* Average for first three months.

Last season, the surplus tendency in extra-long staples was relieved by crop failure in the Sudan and the restoration of equilibrium between production and offtake, therefore, was to a very large extent fortuitous. With anything like normal yields in the Sudan, the free world carryover on 1st August 1958 would have been close to a million bales. Actually, however, stocks were unchanged at roughly 700,000 bales but still on the high side, as compared with average holdings of less than half a million bales during the post-Korean period.

As things stand at the moment, the situation is doubtless one of surplus. Aggregate free world acreage is at a record 2 million acres, an increase of 15 per cent. from the 1957-58 level. Based on the official estimate from Egypt and assuming a return to more normal yields in the Sudan, production, presently estimated at over 1.8 million bales, is as much as 50 per cent. higher than last season, giving a record supply in producing countries of around 2.5 million bales.

In contrast to this, free world consumption of extra-long staples has declined by about 20 per cent. in the last two years and is now about three-quarters of a million bales annually. Offsetting this, however, has been the marked increase in exports (and presumably also consumption) to the communist countries. World offtake during the last three seasons has consequently been about 10 per cent. higher.

In the last three seasons, world exports have increased to an average of 1.1 million bales per season as against a million bales previously. As compared with this, production is of the order of 1.8 million bales. It is obvious, therefore, that there could be a large surplus of extra-long staples this season unless some way is found to stimulate demand.

From only 10 per cent. a few years ago, the communist countries are now taking nearly 30 per cent. of total exports. Last season, it is estimated that 330,000 bales of extra-long staples were shipped to these countries, mainly from Egypt. Egypt's share of trade with the rest of the world has fallen to under 40 per cent. as compared with the traditional 60 to 70 per cent. Conversely, the Sudan's share has increased and this country is presently the largest exporter to the free world.

Prospects

As regards the future, any assessment must take into consideration the simple fact, namely, the tendency at the moment for production to exceed consumption on a world basis, which has contributed to the weakness in extra-long staple prices. If an equilibrium is eventually to be reached, in the short run, the present rate of acreage expansion will have to be curbed while, at the same time, intensifying promotion campaigns to increase consumption. Since 1952, free world acreage has been expanding at a rate of 14 per cent. per year culminating in this season's record 2 million acres. The present rate of increase in world demand has been but a fraction of this—probably of the order of 3 to 4 per cent. per year.

WOOL RESEARCH IN AUSTRALIA

The Australian Government has made an allocation of £1,600,000 from the Wool Research Fund for sheep and wool research and extension working during the 1958-59 wool season. The allocation will be shared among the Australian Commonwealth Scientific and Industrial Research Organisation, the State Departments of Agriculture, the Universities and the Bureau of Agricultural Economics. The 1958-59 research budget is £100,000 more than the previous year. Benefits accruing annually to the wool industry and the nation as a result of past research amount to many times this year's budget. Wool is the mainstay of Australian economy, earning as it does about 50 per cent. of the country's export income. Wool sold in Australia during 1957-58 realised £336.8 million or £141.1 million less than in the 1956-57 season, a fall of 30.2 per cent. The quantity of wool sold was 4,374,694 bales, the second highest for any year. It was 511,867 bales less than the record for 1956-57.

"THE WOOL ANNUAL"

The All-India Wool Trade Federation has done well in bringing out a special annual number containing a review of the various aspects of wool and wool trade (Chief Editor: Mr. Manoobhai Doctursee). The *Annual* contains an interesting article on the virtues and value of wool in India's economy written by Mr. Saradchandra Maheshwari. There are three other interesting articles—"Wool, the wonder fibre" by Mr Rasik M. Mehta, "In search of an organised wool market" by Mr. Bassarmal Gokaldas, and "India's wool and woollen industry" by Mr. R. T. Sapra. A number of statistical tables relating to sheep population and wool production in different countries, sheep numbers in India, labourers engaged in wool cleaning, grading of wool, foreign trade in raw wool and woollen goods, trend of prices, etc., is also included.

ECONOMICS OF SUGAR PRODUCTION

NEED FOR RAISING YIELD PER ACRE

THERE are no two opinions on the view that, if the price of sugar is to be lowered from the present high level, the burden of taxation must be reduced and the heavy incidence of cane price brought down. The reduction in price, in turn, can be effected in two ways. First, the existing defective system of linking the cane price to the weight of cane alone without taking into account the quality of it must be replaced by a system which relates the cane price to both weight and quality. Secondly, highest priority must be accorded to the need for intensifying cane development with a view to enhancing both the yield of cane and the sucrose-content per acre.

The latter aspect is especially important to the State of Uttar Pradesh, which accounts for more than 50 per cent. of India's sugar production and where sugarcane cultivation is still being carried on in a primitive manner. The quantity of cane raised from one acre of land in this State is on an average only 25 per cent. of what it should be. The average yield per acre and the sucrose-content of cane compare very unfavourably with those of the Southern States, as the following figures will show:

States	Per acre yield of cane (Tons)	Recovery of gur from cane (Per cent.)
	1957-58	1957-58
Bombay	27 1	10 43
Madras	25.7	10.95
Mysore	24.1	10 01
Uttar Pradesh	10.1	9.99

Unless the disadvantages stemming from poor quality and yield of cane are removed in Uttar Pradesh, the sugar industry of the State is bound to remain in a difficult position. This aspect was ably stressed by Mr. V. H. Dalmia, Managing Director of the Managing Agents of Raza Buland Sugar Company, Ltd., Rampur, in the course of his welcome speech at the 26th meeting of the Indian Central Sugarcane Committee held in Rampur recently; a detailed reference to the proceedings of the meeting and the decisions taken thereat was made in these columns two weeks ago. Mr. Dalmia urged provision of adequate irrigation facilities by the State Government, evolving of requisite varieties of cane with high sugar-content and arrangements for bringing the results of research work pertaining to the improvement of cane crop to the door of the cultivator as early as possible. In this connection, he said:

"By improving both the quality and the yield of cane per acre, the acreage under cane can be considerably reduced without affecting sugar production. This would release lands for food crops so urgently needed at this time. It is estimated that, by bringing the quality and yield of cane per acre in Uttar Pradesh to the level of those obtaining in the Deccan States, 1,500,000 acres of the present 2,700,000 acres under cane can be released for other crops.

"It is conceded that improvements cost money. I am sure, however, that, having realised the important issues involved, the money can and will be found. The Uttar Pradesh Government collects cess from the sugar industry to the extent of about Rs. 5 crores per year. The amount spent on cane development work, however, has been only about 14 per cent. of this. This has proved entirely inadequate and it is to be hoped that the State will make available much larger amounts for cane development work in the interest of the sugar industry from whom the cess is earned. In doing so, gentlemen, they will merely be looking after the goose that lays the golden eggs."

These are, indeed, very pertinent observations. Did not the former Tariff Board specifically declare as early as in 1950 that either the major proceeds of the cane cess should be spent on intensive cane development or the rates of cess must be reduced to a more reasonable figure, consistent with the requirements of cane development programme? Incidentally, it may be suggested that the cane development work itself can as well be entrusted to the sugar factories. In fact, some factories are already taking active interest in such work. For instance, the Raza Buland Sugar Company, we are told by Mr. Dalmia, introduced, in 1955, a scheme for giving interest-free loans to the cane societies for construction of masonry wells and tube-wells. For various reasons, however, the progress of construction of new wells continued to be very poor; in 1955-56, only 26 masonry wells were constructed and 15 Persian wheels were installed; in 1956-57, the corresponding figures were 19 and 12. After much discussion with the Local Cane Development Council and the Cane Union, the Company evolved, as a temporary measure in June 1958, a scheme under which, if a cane grower having a borrowing capacity upto Rs. 2,000 deposits Rs. 200 with the Cane Union, the Company would undertake to construct masonry well in his cane area and the amount spent on this construction, after adjustment of subsidy, etc., would be debited free of interest to the Cane Union for realisation. In the five months that have elapsed since then, 22 masonry wells with complete Persian wheels have been completed, 14 more are under construction, and applications for a further 28 are being processed.

Although the results obtained lately are somewhat more encouraging than those in previous years, even this rate of construction of wells is not sufficient. It is assessed, according to Mr. Dalmia, that the minimum requirement for the Rampur area is 5,000 masonry wells and, at the present rate of construction, it may take well over a decade for the entire requirement to be met. "Time," to quote him, "is the essence of the situation and it is most important that the rate of construction of new wells is stepped up to at least 500 per year... the use of masonry wells is, perhaps, the only solution for the Rampur area, since the canals dry up from the second half of April until the outbreak of the monsoons. Tube-wells are very costly and the water-carrying strata have not been found encouraging for this purpose." Mr. Dalmia called upon the State Government to increase the allotment of Rs. 50 lakhs for new masonry wells, out of the outlay of Rs. 115 lakhs on minor irrigation schemes now being scrutinised, to not less than Rs. 75 lakhs.

Proceeding, Mr. Dalmia pointed out that the achievements of the cane development councils had not come up to expectations. Stating that there was still considerable scope for improvement, particularly in regard to the work on the yield and quality of cane, he observed:

"Sugar factories are vitally interested in the work of cane development... It might, perhaps, be conducive to more efficient functioning and better results if the chairmen of the development councils were to be factory representatives. Cane societies in Uttar Pradesh are paid a commission of nine pies per maund on cane supplied to the factory. Of this, however, only three pies are given to the development councils, while the balance is retained by the societies and, if I may say so, is utilised for purposes which do not benefit the sugarcane development. It is hoped that the authorities will kindly take steps to see that a greater part of the funds derived from this commission is utilised for the development work by increasing the council's share in these funds and by the societies ploughing back into development work their surplus funds derived from this source.

"Cane supplies are not arranged maturity-wise in the North and, for this reason, factories are losing in recovery. The growers are allowed to supply unripe and immature cane. If the maturity-wise supplies are arranged, the growers will become variety-conscious and would grow only those varieties in proportion which would give maximum performance from start to finish. The cane societies should be advised departmentally to prepare maturity-wise calendars for cane supplies. One of the reasons for better recovery in the South is maturity-wise cane supply."

Availing himself of the opportunity, Mr. Dalmia denounced the wasteful process of sugar production by *khandsari* manufacture. The total quantity of *khandsari* actually produced in Uttar Pradesh during the past season (1957-58) is estimated at as high as 300,000 tons, as against 125,000 tons in 1956-57. Mr. Dalmia did well to draw attention to the fact that, while the sugar factories have to bear a tax burden of Rs. 13.20 per maund—this represents as much as 38 per cent. of the total price of white sugar—*khandsari* is exempted from such taxes and that the *khandsari* industry enjoys the advantage of being free from the restrictions pertaining to minimum cane price and quota releases. What is worse, the manufacture of *khandsari* is a wasteful process, since recovery is about 3 per cent. lower than that of sugar manufacture. At the present recovery rate of 10 per cent. in the case of white sugar, crushing of sugarcane for producing *khandsari* implies a loss of about 30 per cent. of sugar equivalent. On this basis, the loss in terms of white sugar during 1957-58 was more than 100,000 tons. In view of this loss and of the necessity for ensuring adequate supply of cane for white sugar factories, the authorities should impose effective restrictions on the manufacture of *khandsari*, especially in and around the factory areas.

SUGARCANE PRICE

It is gratifying that the Central Government has categorically rejected the plea for an upward revision in the minimum price of sugarcane for the current season—Re. 1.44 per maund for gate deliveries and Re. 1.31 for deliveries at rail centres. Speaking on an adjournment motion brought forward by a Socialist Member in the Lok Sabha last week, Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, rightly declared that it would be a pity if any political party or anybody were to incite the cane growers for demanding a higher price. He even stated that anyone who incited the cane growers to agitate for a higher price was not doing any service to the growers or the community. He added: "The policy of the Government has been announced well in time... Even with the existing prices, the area under sugarcane is increasing at the cost of foodgrains. This shows that the prices are remunerative. The Government have no intention of revising the prices for 1958-59." As for the ensuing season, that is, 1959-60, the Minister revealed that the question of fixing cane prices would come up for consideration before the Government shortly.

Apparently, this explanation did not satisfy the critics. This is evident from the unsuccessful attempts made by some of the leftist members of the U.P. State legislature to censure Mr. Jain. An attempt was made to bring an adjournment motion seeking to discuss Mr. Jain's refusal to raise the cane price in the U.P. Vidhan Sabha on the 3rd inst. But this was ruled out by the Speaker. The Chief Minister of U.P., it is reported, stated that the State Government had unavailingly urged the Union Government to enhance the price of cane and had also conveyed the U.P. Vidhan Sabha's recommendation in this regard. Answering a question, the Chief Minister said that the State had taken several steps, besides communicating the Vidhan Sabha's resolution on the subject, to induce the Centre to raise the sugarcane price.

BUMPER JUTE CROP IN INDIA AND PAKISTAN THIS YEAR

BIHAR SUPPORTS MINIMUM PRICE PLEA

THE trade estimates of a bumper jute crop during the current season (1958-59) have now been confirmed by an official announcement from New Delhi. The output of raw jute this year is estimated at about 5.2 million bales, the highest since Partition. This represents an increase of 1.1 million bales over the 1957-58 crop of 4.1 million bales, thus more than making good the fall of 200,000 bales in that year. But it falls short of the target of raw jute output of 5.5 million bales, albeit by only 300,000 bales. No estimate of the mesta output for the current year is available, but, even if one assumes that the 1957-58 crop of 1.2 million bales will be maintained, the total fibre production will be of the order of 6.4 million bales. In addition, India cannot altogether do away with Pakistani jute, as it still requires some of the top quality fibre grown in this neighbouring country.

The second estimate of the current season jute crop in Pakistan also shows a bumper harvest. While the area under jute cultivation is lower by 2.2 per cent., having shrunk from 1.56 million acres to 1.53 million acres, on account of drought and other climatic factors at the time of sowing, the production is estimated to have gone up from 5.75 million bales to 6 million bales, that is, by 4.3 per cent. This increase in crop is attributed to favourable weather conditions, timely rain and availability of sufficient steeping water. If the final estimate of crop does not show any notable variation, this year's harvest in Pakistan will prove to be the biggest since 1952-53, as will be seen from the following table:

Year	Area	Crop
	Acres	Bales
1951-52	1,779 000	6,331.000
1952-53	1.907,000	6,823.000
1953-54	1,760 000	2.503.000
1954-55	1,243.000	4.662 000
1955-56	1,635 000	5.592.000
1956-57	1,230.000	5,514 000
1957-58	1,563 000	5,701.000
1958-59	1,528,000*	6,000,000*

* Second estimate only.

To revert to India. The sharp increase in jute production is reflected in the higher arrivals of raw jute into Calcutta and at mill stations during the first four months of the current year, 1958-59. These aggregated 1.77 million bales, as compared with 1.67 million bales in the corresponding period of 1957-58. The rise is mainly accounted for by Indian crop, the arrivals of which have gone up from 1.44 million bales to 1.61 million bales, while those from Pakistan have actually dwindled from 230 000 bales to 160.000 bales. Member mills of the I.J.M.A. have stepped up their purchases of Indian jute during this period from 1 81 million bales to 2.19 million bales, while reducing the purchases of Pakistani jute from 308.000 bales to 147 000 bales. The total purchases of raw jute by I.J.M.A. mills during July-October 1958 thus come to 2 34 million bales, representing an increase of 220,000 bales over the year.

The consumption of raw jute by mills during the first four months of 1955-59 aggregates 1 97 million bales, having risen from 1.94 million bales in the corresponding period of 1957-58, reflecting the rise in production of gunnies from 337,300 tons to 344 100 tons. The stocks of raw jute with mills at the end of October amounted to 923.000 bales as compared with 776,000 bales a year before..

The substantially higher stocks with mills and the slackness in the offtake of jute goods by overseas countries are the main reasons why mills are not increasing their purchases of raw jute even at lower prices. Meanwhile, prices of jute are maintaining a somewhat steady tone, following the recommendation of the I.C.J.C. to fix a minimum price for raw jute. The case of jute growers in Bihar has also been taken up by the State Chief Minister, Dr. Srikrishna Sinha. After a tour of the Purnea District, he has assured the jute growers that he would prevail upon the Government of India to ensure a minimum remunerative price for raw jute grown in abundance in that part of the country. About one-fourth of the country's requirements of jute are being met by the northern districts of Bihar, the main share coming from Purnea. Expressing his concern over the depression in prices in Bihar, Dr. Srikrishna Sinha said that the peasantry, mostly raising jute, were now caught in an unenviable position. They could neither switch over to growing paddy or *rabi* nor feel enthused to risk another crop of jute next year. Unless jute growers in Bihar are assured of a remunerative price for their produce, it is feared that they may either switch over to growing paddy or even keep their land fallow rather than toiling and sweating over jute growing which has led them now to a blind alley.

In the pre-Partition year of 1946-47, the area under jute cultivation in Bihar amounted to 145,000 acres producing a crop of 451,000 bales. The area and crop steadily grew thereafter to a high of 487,000 acres and 956,000 bales in 1951-52. In 1954-55 again, these declined to 270.000 acres and 374.000 bales. In the 1956-57 season, the area under jute swelled to 665,000 acres producing a bumper crop of 1.38 million bales. Last year, there was again a setback, the area under jute shrinking to 477,000 acres and the crop to 778,000 bales. In fact, it was this huge decline in crop in Bihar that had contributed to the fall in the all-India crop. The current season, however, bids fair to yield another bumper crop. It will thus be seen that jute cultivation in this important district of Bihar has been widely fluctuating during the past several years. The yield per acre has also been varying from 2.80 bales per acre (in 1947-48) to a low of 1.39 bale (in 1954-55). It is felt that such wide variations can be reduced to some extent by assuring the growers a minimum remunerative price, though much depends on the weather.

Some indication of the Government of India's mind on this subject was given by Mr. Lal Bahadur Shastri, Minister for Commerce and Industry. He announced in the Rajya Sabha on the 4th inst. that the Government was considering steps for arresting the current slump in prices of raw jute. Earlier, however, Mr. Nityananda Kanungo, Minister for Commerce, had rejected the suggestion of a member for fixing floor prices for raw jute. He said that competent commissions, which had gone into the subject, had advised against fixation of floor prices, as they felt that it would be detrimental to the industry and the growers.

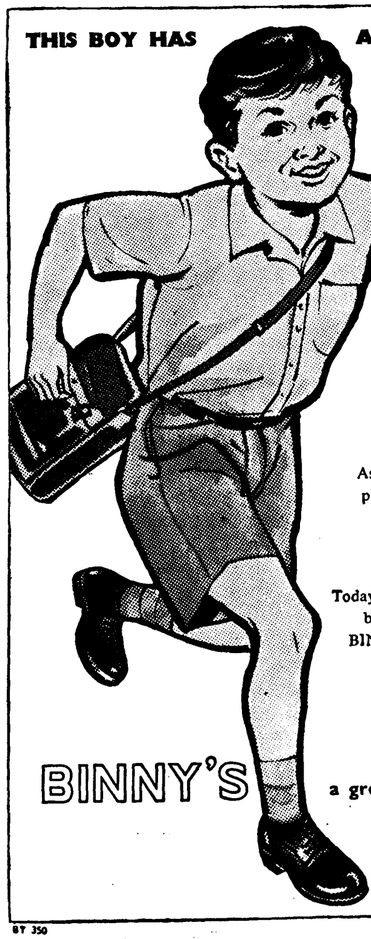
EXPERIMENTAL PLANTING OF RAMIE TO BE STARTED

The setting up of a research station at Sorbhog in Assam to start experimental cultivation of ramie, a perennial plant yielding the strongest and finest natural fibre known, was recommended by the standing Agricultural Research Sub-committee of the Indian Central Jute Committee, which met in Calcutta recently under the chairmanship of Dr. S. M. Sikka, Additional Agricultural Commissioner, Government of India. It was also decided to intensify the research on ramie at the Jute Agricultural Research Institute.

The Sub-committee felt that agro-climatic conditions in several parts of India were favourable for the development of ramie and a gradual increase in production of the crop on a commercial scale could largely remove the present shortage of long-staple cotton in the country by providing a far superior textile fibre, which could be used by the woollen industry as well as in the hand-spinning and weaving of specially strong decorative material. With ramie as the core mixed yarns with cotton, wool or silk could also be spun to yield a fabric that would excel both nylon and rayon in lustre, strength, absorbency, fineness, etc. At present China dominates the world trade in ramie. For many years decorticating and degumming difficulties have retarded industrial development of the fibre. Lately, these processing handicaps have been overcome by mechanical and chemical methods.

The Sub-committee recommended that the Jute Agricultural Research Institute should undertake varietal and manurial trials of jute in Tripura on the lines of those already in operation in other jute-growing States. A set of working papers projecting the picture of jute development over the next 15 years to guide planning and policy-making at the national level was accepted by the Sub-committee with slight modification. The Sub-committee also approved the extension of a research scheme on radiation mutation in jute under the Bose Institute, Calcutta, for another three years.

THIS BOY HAS A LOVING MOTHER



Mother knows that children's dresses are more than mere clothing; they are a measure of a mother's care. She takes no chances–they have got to be lovely, comfy and durable. Dressing a child well is a family tradition.

When BINNY'S started manufacturing their quality cloth nearly eighty years ago, young mothers in India discovered a new standard in textiles for their sons, for here was *variety* in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials, including anticrease suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for the reassuring BINNY'S trade marks on the cloth they buy.

BINNY'S

a great name in textiles

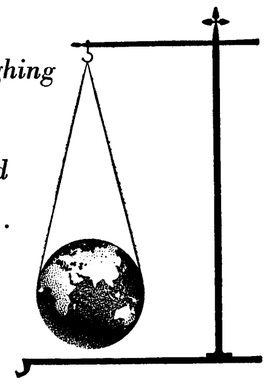
Weighing the world up . . .



. . . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

BRANCHES IN INDIA

ECONOMIC THEORY AND UNDER-DEVELOPED COUNTRIES

RELEVANCE OF WESTERN THINKING TO ASIA

By Hiroshi Kitamura

PROFESSOR OF ECONOMICS, METROPOLITAN UNIVERSITY, TOKYO.

IN his recent book,[1] Gunnar Myrdal, former Executive Secretary of the E.C.E., asks whether Western economic thought could be applied to the problems of the countries now engaged in laying the basis for industrialisation. He observes that Western thought is burdened by doctrinaire predilections, born of the historical conditions of the advanced countries in which it was formulated. As the direction of research is necessarily changed and economic problems are increasingly studied from the viewpoint of the underdeveloped countries, this "will imply the final liquidation of the old *laissez faire* predilections and, more specially, the free trade doctrine and the stable equilibrium approach."[2] Professor Myrdal sees here a historical challenge for young economists in the underdeveloped countries of today. In fact, he urges them not to be "led astray by the predilections of the economic thinking in the advanced countries" and to "have the courage to throw away large structures of meaningless, irrelevant and sometimes blatantly inadequate doctrines, and to start their thinking afresh from a study of their own needs and problems."[3] A bold statement—but, how right is Professor Myrdal!

A recent experience of mine in Bangkok gave a rather conclusive answer. I mean the fourth session of the E.C.A.F.E.'s Working Party on Economic Development and Planning, held from 2nd to 13th September 1958, which was attended by a considerable number of top-level economic planning experts from the countries within and outside the region. The composition of all E.C.A.F.E. meetings provides a unique forum, where the concepts of the advanced countries of the West and the experiences of the underdeveloped countries of Asia and the Far East meet with each other. In this particular case, there were, in fact, an especially fruitful two-way interactions of thought: questions were raised from the experiences of the actual development process, and, when views were exchanged, the Western economists were inclined to give some advice from their vantage points. But this process meant at the same time that the concepts were to be confronted with, and tested by, the facts of underdevelopment.

The difference in the economic outlook is, in many cases, reflected in different prescriptions of economic policy. In the countries, for example, where capital is in short supply, the profits of public enterprises tend to be regarded as one of the important sources for capital formation to be maximised. Such a policy would not be acceptable in principle for the public utilities in a society of the type of the United States. Whereas the majority of the Western economists, being concerned mainly with the problem of economic stability, take an alarming view of any inflation, some experts in the underdeveloped countries tend to recognise the inevitability of deficit financing. Major efforts are required to raise the economy out of the stable equilibrium of low income-low productivity, and, from this point of view, they say, a mild inflation is certainly better than stagnation.

From the theoretical point of view, there are largely three sets of problems on which concepts and facts clash against each other. First of all, the problem of factor proportions must be analysed afresh from the point of view of the underdeveloped countries. The wide discrepancy which exists between the economic concepts of the Western world and the economic facts of the underdeveloped regions became apparent at this session of the Working Party in connection with the discussion of two separate groups of problems.

One group of problems is related to the relative contribution of capital to economic growth. The recent tendency in the economic thinking in the advanced countries has been to reduce the relative importance of capital to economic growth, as opposed to such factors as technological changes, and to argue that the capital-output ratio, that is, the amount of capital required to produce a unit of output, has, in many cases, been grossly overestimated.[4] When applied to the industrialisation problem of the underdeveloped countries, the same reasoning would lead the Western economists to a denial that capital is the most important limiting factor for the development of these areas. Some of the economists from the West in fact argued that overall operational efficiency of the economy is more important than capital accumulation, and that much more in the way of economic growth could be gained by increased efficiency or employment than by changes in the availability of capital per head. However, in a different context of less industrialised economies, this argument proved entirely unconvincing. In order to raise the level of efficiency and employment, a large amount of capital must first be provided in this region, and the labour productivity is a function of capital used per head to a much greater degree than in the advanced countries. This complementarity of factors is one aspect of the problem which has largely been neglected in the Western economic theory in its traditional form of marginal productivity.

The theory of marginal productivity was also challenged in the context of another group of problems, the choice of labour-intensive or capital-intensive industrialisation. According to the traditional theory, the productivity of capital is relatively high and that of labour is relatively low, where capital is scarce and labour abundant. The relative factor endowments determine the relative factor prices, and it would seem more economical in such areas to use as much labour as possible and as little capital as possible. The theoretical choice would, therefore, be unequivocally for labour-intensive industrialisation. This prescription of the Western economic theory, however, was in flagrant conflict with the general policy approach adopted by the underdeveloped countries which seemed to put much more emphasis on capital intensity. The main reasons are as follows:

(1) There is a technological limit to the extent to which labour can be substituted for capital. The assumption of perfect divisibility and substitutability of the factors must be dropped.

(2) In so far as labour productivity is a function of capital used in the productive process, the adoption of labour-intensive processes means a low productivity and a disguised unemployment with its unfavourable social implications.

(3) Since a low productivity of labour means a small surplus over current consumption *per capita*, the further process of economic development is inhibited. Though possibly labour-displacing at the outset, capital-intensive industrialisation may increase employment in a relatively short time to a greater extent than labour-intensive low productivity approach.

The complementarity in the structure of capital itself, furthermore, has also led, in many cases, to the paradoxical situation that capital in the underdeveloped countries, though extremely scarce, has not always a high productivity and is not used with sufficient efficiency. On the contrary, the profitability of an investment depends to a large extent on the amount of capital already invested. This is also one of the reasons why capital does not seem to move in the natural direction, that is, from the capital-rich to the capital-poor countries. To the extent that the productivity of a factor does not depend upon its relative supply, the traditional theory of marginal productivity must be re-examined as to its validity in the underdeveloped regions.

Further, as applied to the conditions of the underdeveloped world, the free trade doctrine requires to be modified considerably. Although the merit of comparative advantages is theoretically recognised, the underdeveloped countries are not prepared to sacrifice economic development for the sake of international specialisation or to be bound to the traditional pattern of division of labour. Industrialisation is needed precisely to escape from the traditional reliance on unstable and inadequate export earnings. If, in addition, the opening up of the market for manufactures proves extremely difficult, the underdeveloped countries of Asia and the Far East will be faced with the imperative to foster consciously economic co-operation among themselves, especially in view of the increasing tendencies towards regional formations in other parts of the world.

It was one of the most important achievements of the Working Party just concluded that first signals have been given to some efforts in the direction of regional co-operation in trade and investment in the E.C.A.F.E. region. A further study was suggested into the possibilities along the line of the Central American and the Latin American schemes. Though less than in Europe, the intra-regional trade in Asia and the Far East occupies a relatively much more important place than in Latin America. Even if the lack of complementarity is felt in the economic structure of the underdeveloped countries of the region, this is, as one of their experts forcefully pointed out, exactly the justification for concerted efforts to create the complementary structures desired.

Last but not least, there is the concept of economic planning itself, which is one of the fundamental ideas underlying E.C.A.F.E's whole work programme. Reflecting largely the political awakening of Asia as it does, the concept of development planning finds virtually universal acceptance and support by the countries of Asia and the Far East. When Thailand ushers in a new era of the five-year Plan, there will be no major independent country in this region which has no economic plan or programme at all. In practically all countries, the State is taking over the major responsibility for promoting and planning for economic and industrial development.

Now, it is true that the idea of planning is today permeating into the major part of the Western world, the term being inceasingly interpreted in the generic sense as "an attempt at rational calculation and control in the use of scarce resources."[5] Economic planning does not necessarily mean a specific type of centrally planned society, but, especially in the underdeveloped countries, it does mean the end of the old *laissez faire* ideals. When an economist from one of the advanced countries reiterated at the Working Party session his personal *laissez faire* conviction and emphasised the importance of private initiative, the words fell largely on deaf ears. This could not be otherwise. The conviction expressed is exactly a kind of the predilections of the Western economic thinking, of which Professor Myrdal remarks that they are hampering the scholars in the advanced countries themselves in their efforts to be rational, but would be almost fatal to the intellectual strivings of those in the underdeveloped countries.

Theoretically speaking, the consistent free enterprise system is based on the assumption that the market fulfils perfectly its functions as a device of communication for allocation of resources. Where the price system is more or less elastic and efficient, a policy which makes the best use of this mechanism may be meaningful. But the markets in the underdeveloped countries are characterised by rigidities and imperfections. This is the basic reason why there can be no full or exclusive reliance on market forces and why programming and planning are needed. The actual market prices will, in many important cases, diverge from the equilibrium levels which would be reached under perfect competition. For the purpose of planning, therefore, conscious devices are required to correct the market prices correspondingly. "Accounting prices" and "shadow prices" are recognised as useful concepts in economic planning. In view of the existence of a wide range of external economies, the social productivity of an investment will differ considerably from its private profitability in the underdeveloped countries. Conceptual tools such as social cost need to be sharpened and utilised extensively in this context.

From this cursory survey of the salient points of discussion, it will be clear that the recent session of the E.C.A.F.E. Working Party fully vindicated Professor Myrdal's thesis. Here is, in the opinion of the experts of the underdeveloped countries in Asia and the Far East, an intellectual challenge of historical importance. It must be met.—*Exclusive to "Commerce."*

MANAGING AGENTS

MESSRS. N. SIRUR & COMPANY PRIVATE LTD., 70, Forbes Street, Fort, Bombay, 1.

HISTORY

The Company has been selling cotton textiles manufactured in its Mills at Bangalore.

The Mills commenced working in 1925 with 19,616 spindles. Further spindles were added from time to time and looms were also installed. By 1932, the Mill had 32,416 spindles and 440 looms working. In the year 1932, the Company found that the Capital Expenditure incurred exceeded the paid-up capital and a First Mortgage Debenture Loan of Rs. 18,00,000/- was issued. A Bleach and Dye House was also added for finishing the cloth produced at the Mills. The Debentures were renewed in 1938 for Rs. 15,00,000/- and were finally paid off in 1945 from out of the profits made during the intervening years. A Reserve Fund of Rs. 14,75,000/- was also built up.

During the 12 years from 1945 upto the end of 1956, further additions were made to Machinery and Buildings involving a Capital Expenditure of Rs. 49,19,000/-. After these additions, it was found that the old boilers did not have sufficient capacity to supply the required steam for the sizing and other processing departments and the new Humidification Plant. Hence a new Babcock & Wilcox Water Tube Boiler was purchased and is now almost ready for use. The cost of the Boiler was about Rs. 3,20,000/- and of the alteration to the Boiler House was about Rs. 40,000/-.

All the above Capital Expenditure to the tune of Rs. 52,79,000/- was financed mostly out of the reserves and profits of the Company made during the 12 years without calling fresh Capital.

SECURITY FOR THE DEBENTURES

The Company's immovable property at Bangalore consists of about 73 acres valuable freehold land, within the City limits of Bangalore close to the Bangalore City Railway Station, and of Mill Buildings, Godowns and Bungalows, all of pucca construction. The Mills have today 39,896 spindles, 704 looms and a Dyeing and Bleaching Plant. The book value of the 73 acres freehold land (including about 5 acres which were sold on 18th June 1958 for Rs. 27,510/-) as shown in the Balance Sheet as at 31st December 1957, stands at Rs. 1,75,915/21 nP. If the land is valued at even half the rates now prevailing in the neighbourhood, it should fetch about Rs. 25,00,000/-. The book value of the buildings as at the end of 31st December 1957 stood at Rs. 27,66,653/- and the depreciated value at Rs. 14,63,003/- (depreciation for the year ended 31st December 1957 is not provided for). The Gross Book Value of plant and other machinery including electrical machinery as at the end of 31st December 1957 stood at Rs. 62,99,613/- and the depreciated value at Rs. 24,40,316/- (depreciation for the year ended 31st December 1957 is not provided for).

OBJECT OF ISSUE

In addition to the Capital Expenditure incurred, the Company is launching on a programme of renovation and modernisation of plant and machinery which involves a large capital expenditure. To meet a part of such Capital Expenditure and to replenish the working capital which has been locked up in the fixed assets of the Company, this Debenture Loan of Rs. 18 lakhs is proposed to be issued. The balance of the Capital Expenditure required will have to be financed from future earnings or borrowings if necessary for the purpose.

FINANCIAL INFORMATION

Fixed Assets and Reserves: The written down value of the Fixed Assets as on 31st December 1957 is Rs. 41,21,724/-.

Note:—During the year 1957, the provision made for depreciation was only Rs. 3,931/- as against the normal and extra shift depreciation of Rs. 3,02,395/- estimated to be allowable for tax purposes. No adjustment has been made for this in the above figure of Fixed Assets.

As at 31st December, 1957, the Reserves of the Company amounted to Rs. 11,98,081/-.

Dividends paid for the last five years are:—

For the year ended	31-12-1953	..	Rs. 7* per share	not subject to deduction of tax,	Rs. 2,07,179
Do.	31-12-1954	..	Rs. 5	do. do.	Rs. 1,47,985
Do.	31-12-1955	..	Rs. 6	do. do.	Rs. 1,77,582
Do.	31-12-1956	..	Rs. 6	do. do.	Rs. 1,77,582
Do.	31-12-1957	..	Rs. NIL per share	.. ..	..Rs. NIL

* Including a Bonus of Re. 1/- per share.

UNDERWRITING

THE CANARA BANK, LIMITED, having its Registered Office at Lighthouse Hill, Mangalore, and its Administrative Office at 110-112, Silver Jubilee Park Road, Bangalore, 2, has agreed to underwrite the entire issue of Rs. 18 lakhs for an underwriting commission of 2½ per cent. on the entire issue.

Sub-Underwriters: The following three parties have agreed with The Canara Bank Ltd., to sub-underwrite the above issue to the extent indicated below:—

(a) Messrs. The New India Assurance Co., Ltd., to the extent of Rs. 5 lakhs.

(b) Messrs. Atlas Assurance Co., Ltd., to the extent of Rs. 1½ lakhs, and

(c) Messrs. N. Sirur & Co., Private Ltd., to the extent of Rs. 3 lakhs.

This Mill Company will not pay any commission to the Sub-Underwriters.

Brokerage: The Company will pay a brokerage of ½ per cent. to Brokers directly dealing with the Company on the nominal value of debentures allotted in respect of applications bearing their stamps.

APPLICATION

Application for the Debentures which must be for a minimum of Rs. 500/- or multiples thereof must be made on the official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to MINERVA MILLS, LTD., either at its Registered Office at Temple Bar Building, 70, Forbes Street, Bombay, 1, or at the Company's Mill Office at Venkatrangiengar Road, Malleswaram, Bangalore, 3, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges must be drawn either upon a Bank in Bombay or at Bangalore, as the case may be. If drawn upon a Bank elsewhere the appropriate bank charges must be included in the remittance, otherwise the application will be refused.

Cheques or Drafts should be made payable to MINERVA MILLS LIMITED and should for the applicants' protection, be crossed "A/C Payee only." A separate cheque or draft must accompany each application form.

Copies of Prospectus and Forms of Application can be had from the Underwriters Sub-Underwriters, Recognised Stock Brokers, the Company's Head Office at 70, Forbes Street, Fort, Bombay, or the Company's Mill Office at Bangalore.

JAPAN'S TEXTILE INDUSTRY TODAY

ITS CONDITIONS AND PROBLEMS

FOR more than a year, the Japanese textile industry has been experiencing the worst business recession in its history. Although all possible ways of solving the problem—including production control—have been adopted, there is still no sign of recovery and many operators have either gone bankrupt or closed down their mills.

The manufacturers, made up mostly of small operators, were hardest hit by the depression, and major operators have been affected recently too. And the effects of the depression are spreading to associated industries. The depressed condition of the Japanese textile industry has affected the country's export picture, the balance of international payments and, as the situation has become prolonged, the national employment situation.

The main blame for the present situation is generally regarded as the enormous expansion in production capacity undertaken by the industry. This was the largest ever undertaken, but, just as it was completed, the supply and demand situation was thrown off balance by the decline in demand resulting from the tight money policy introduced by the Government in the spring of 1957.

In addition, recession conditions throughout the world have hit the textile trade very hard. In particular, Japan has been hit seriously by the shortage of foreign currency in such nations as Indonesia and other South-East Asian countries—a major market for Japanese textile goods.

This situation has been aggravated by the marked increase in exports of textile products by Communist China. All these factors have caused a conspicuous decline in the exports of Japanese textile goods.

The recent drops in the prices of imported raw materials—particularly wool—have caused a drop in the price of manufactured goods—not only those products produced from the materials affected, but the whole range of textile products. This has made a poor market situation even worse and has prevented the recovery of the textile industry.

Countermeasures Against Recession

Faced by the business recession, the Government and private enterprise has tried the following countermeasures:

1. *Production Control*:

In order to restore the balance between supply and demand, and as a means of adjusting stockpiles, the Government issued, in April last year, an administrative advice to big enterprises to enforce voluntary production controls. At the same time, it issued an order based on the Recession Cartel provided by the Anti-Monopoly Law (in the case of larger enterprises), and on the Smaller Enterprises Organisation Law (which will hereafter be referred to as the Organisation Law) in the case of small and medium-sized enterprises.

The suggested production controls were observed by the entire industry and were strengthened from time to time. In parallel with the imposition of production controls, imports of raw cotton and wool were reduced.

2. *Liquidation of Weaving Machinery*:

The liquidation of a number of looms has been enforced since 1956 in the silk, rayon, cotton and staple fibre industries—all of which have been particularly hard hit—and this programme has been speeded up to cope with the deteriorating situation. In addition, the number of looms to be liquidated was increased, thus causing a raise in the rate and overall amount of the subsidy paid by the Government to lighten the burden of liquidation. The necessary expenditures for this were included in the national budget.

3. *Creation of Purchasing Agency*:

In order to cut excessive inventories, the Japan Rayon Textile Export Promotion Company was established last March for the purpose of buying three types of rayon products and exporting them. Similar purchasing agencies for woollen and cotton products have been established and there is currently a plan to set up an agency covering staple fibre textiles. As one countermeasure, cotton textiles amounting to 50 million yards have been frozen since August.

4. *Funds for Production Control*:

All the necessary measures have been taken to secure the funds necessary for enforcing and strengthening production controls. A special fund has been set up in the Commerce and Industry Central Bank and in the Smaller Enterprise Financing Corporation to cover especially the weaving division of smaller enterprises.

5. *Regulating Exports*:

In order to prevent dumping caused by the excessive competition inevitably arising from a business recession, textile exports have been regulated under the Export and Import Transaction Law and the Trade Control Law.

Together with the above measures, spinning frames and tenters must be registered in accordance with the Textile Industry Facilities Temporary Measures Law (which will hereafter be referred to as the Measures Law), which was introduced in 1956 as a fundamental measure to counter the installation of excessive production facilities.

In addition to registration, the liquidation of excess machinery is also being enforced. Knitting machines for textiles and hosiery are also being registered and restrictions imposed on the installation of further equipment. In addition to these legal means of preventing further increases in capacity, the industry itself is carrying out voluntarily a variety of restrictive measures.

Future Problems

With the prolonged textile recession, it is obviously necessary to study countermeasures from a broader viewpoint, instead of from the narrow standpoint of countermeasures in the production field. The overall problems facing the industry can be summed up as follows:

(a) *Prospects for Textile Demand*:

It is obvious that larger expenditures on clothing are being hoped for in the domestic market. However, it can be assumed that the consumption structure is bound to change through the expanding output of synthetic textiles and the growing demand for higher grade products. This would make the quantitative

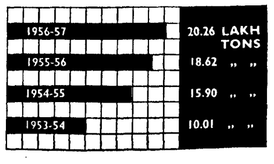
... target to be reached ahead of tim

Unparalleled in progress by any other industry, the Indian White Sugar Industry has doubled its production in four years—from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. This Industry is the second largest in India, and is a vital factor in the nation's economy. It is contributing substantially to the success of the Second Five Year Plan and the Plan target of 22.5 lakh tons of Sugar will be achieved well ahead of time.

Today, the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.



Indian WHITE sugar ...

ample for home market—with surplus for export too

OVEREMPHASIS ON STEEL MAY DEFEAT PLAN'S OBJECTIVES

IMPORTANCE OF TRAINED PERSONNEL

A COMPREHENSIVE review of the growth and development of the Indian iron and steel industry was given by Mr. S. K. Nanavati in the course of his presidential address at the twelfth Annual Technical Meeting and Defence Metallurgical Conference, held in Delhi last week. Although Mr. Nanavati admitted that there could be "no question regarding the scope and need for continued expansion of the steel industry," he pointed out that "overemphasis" on the development of basic steel industry in future plans has rightly caused some misgivings, as to whether such emphasis would not defeat the primary object of planning which is to create more wealth in the immediate future. This is a point of view which is well worth considering by the authorities before they commit the country to an overambitious steel production programme in the third Plan. It must be remembered that, from the point of view of employment and diffusion of technical training and knowledge, more benefit will accrue to the country through the development of secondary and tertiary industries than through exclusive pre-occupation with the steel industry.

First Attempts

Mr. Nanavati traced the development of the iron and steel industry from ancient times and referred to the first recorded attempts at steel making in 1799 and the construction of the first blast furnace in 1875 at Kulti (Calcutta). The Tata Iron and Steel Company commenced operations in 1907 and the Indian Iron and Steel Company in 1918. Mr. Nanavati made particular reference to the difficulties which the industry had to face in the inter-war period, despite the grant of a modest protection in 1924. The 1931 slump hit the industry hard. But it survived and recovered "well enough to produce steel at competitive prices in the years that immediately followed and more than amply repaid its debt to the country." After referring to the expansion schemes of the Tata Iron and Steel Company and Indian Iron, he described the Government's efforts under the second Five-year Plan to raise the total ingot steel capacity to six million tons a year, yielding approximately 4.5 million tons and the setting up of three State-owned steel plants.

An important question which Mr. Nanavati discussed was the determination of the scale of expansion of steel. In this connection, he observed:

"When one plans to increase the scale of production in an industry about threefold in a period of five years, it is important for one to know whether the magnitude of expansion envisaged has been based on actual needs or not. Such estimates are extremely difficult to make without an adequate knowledge of the increased requirements of steel, consequent to an all-out attempt to increase the standards of living in the country by large-scale industrialisation. It is not enough to know by how much indigenous production falls short of supplies and plan for producing the difference that is imported, because the supplies available, due to restrictions of import and general conditions of scarcity that prevailed, never satisfied the demands. When large-scale economic planning is aimed at increasing the existing demands that have remained unsatisfied and creating new demands for steel, any estimate of future requirements needs careful appraisal of the plan as a whole and cannot be based merely on a market survey, as one might be tempted to do. If based only on a market survey, the estimates would prove low. The targets for every industry—machine tools, shipbuilding, locomotive, transport, textile machinery, etc.—have been fixed at almost twice the pre-Plan level at the end of the second Plan. All these industries would need more steel and so would the increased activity in agriculture and building. It is also not possible to make an accurate estimate from the backlog of orders with the steel producers or from the requests for allocations during a period of scarcity. Often such requests are very generous and misleading and are not based on real needs. Another way of arriving at an estimate would be to study a group of industries, such as the steel processing industry, and forecast the total demands by employing a certain ratio that obtains in another country. Whatever method is employed at arriving at a figure of future demands, it can be, at best, an approximation. How close such an approximation is, only future events can tell. It will largely depend on how well the rest of the Plan works out and how far it stimulates increased consumption."

As stated at the outset, Mr. Nanavati admitted that the scope and need for continued expansion of steel was beyond question. He recalled that the most important single weakness in the first Plan was the scarcity of steel. This was being made good in the second Plan. But overemphasis on steel might defeat the objective of the Plan. He added: "It should be remembered that, amongst all industries, it is the iron and steel industry that require the largest capital investment per worker and per unit of output." He, therefore, urged the shifting of emphasis to secondary and finishing industries.

Location

Discussing the location of steel plants, he said they must be sited at the economic centre of gravity of the three principal raw materials—iron ore, coal and limestone. Availability of labour was another consideration. Although wages in India were low by Western standards, more men were needed to do a given job. The result was that total labour costs in India represented the same fraction of the cost of steel as in other developed countries. In recent years, the labour cost in the Indian industry had been steadily mounting while productivity had remained static. He said: "Although progressive management cannot refuse to consider the just rights of labour, the leaders of the labour unions in turn have to realise that too many imposts on the industry are liable to raise the labour cost, to preclude steel being made in this country at an economical price level."

Turning to the raw materials situation, Mr. Nanavati expressed anxiety about coking coal reserves. He hoped that the National Coal Development Corporation would, with its larger resources, undertake a thorough survey of reserves and take adequate steps for the conservation of coking coal. He also called for further research on the blending of coking coals with those of non-coking varieties. Work in this direction was begun at Jamshedpur in 1941 when Government set up, jointly with Tatas, a coal blending and coking research station. Work done here had made it possible to use Jharia coal more extensively for metallurgical purposes. Some concern was also felt by the industry about another essential raw material, limestone. Although the supply was abundant, the quality was not suitable. Good quality limestone was available at Katni and Maihar in Madhya Pradesh, but high haulage costs prohibit economic use.

Processes

Discussing the various processes of steel making, Mr. Nanavati said that the Linz-Donawitz Oxygen process offered a number of technical and economical advantages, particularly in the production of flat rolled products like sheets and plates. With experience that would be gained at Rourkela, where this process was to be used, it might be possible to employ it for increasing the output at other steel plants. He also referred to the possibility of making iron using low-grade coal and lignite. A process which offered great promise was the use of a low-shaft furnace. Such a furnace, on a pilot plant scale, would shortly come into operation at the National Metallurgical Laboratory, Jamshedpur. Data collected here will be of great value for the future development of the Indian steel industry, particularly in regions like South India, distant from the Jharia coal belt.

Urging the early establishment of a plant to manufacture alloy and tool steels, Mr. Nanavati said that this was necessary for the development of the engineering industries in the country. India had, however, poor resources of the common ferro-alloys that are required for the production of alloy steels. Considerable research would, therefore, be necessary to evolve a rationalised series of special steels based on ferro-alloys available in the country. He recalled that the Tata Works at Jamshedpur had successfully produced 110 varieties of special steels, including those required for aircraft and ordnance, during World War II. It was, however, difficult and unremunerative to produce these special steels in a large, integrated plant.

In conclusion, Mr. Nanavati rightly stressed the importance of trained personnel for the industry. He said: "Andrew Carnegie is reported to have said that, if all his steel mills were taken away from him and he was allowed to keep his men, he would have mills better than what he had before, running within a short time." This statement shows how important trained men are to the industry. To meet the requirements of operatives, arrangements have been made to train 450 operatives a year. A programme of training for about 2,000 senior supervisors in steelworks in the U.S., the U.K., Germany, the U.S.S.R., Canada and Australia has already made considerable headway. All this goes to prove, as Mr. Nanavati himself pointed out, how steel making is no longer a strictly national industry but an international profession.

ELECTRIC MOTOR INDUSTRY

Accepting the recommendation of the Tariff Commission, the Government of India has decided to extend the protection to the electric motor industry, scheduled to end at the end of the year, by a period of three years—that is, upto 31st December 1961. The rate of protective duty will remain the same as at present—15 per cent. *ad valorem* on electric motors and 20 per cent. on component parts of electric motors, excluding control gear. The duty indicated for equating the fair ex-works price with landed cost without duty is assessed at 10.54 per cent. Nevertheless, the industry faces competition in respect of special motors and motors of high ratings. Accordingly, the Commission recommended the continuance of protection at the present rate of 15 per cent. for electric motors and 20 per cent. for spare parts. This recommendation has now been accepted by the Government.

During the 10 years of its "protected" existence—the industry was first granted tariff protection in 1948—the industry has increased its output and improved its quality. Appropriately enough, the Tariff Commission has paid a tribute to the electric motor manufacturers by recording that, in the last 10 years, the industry "has achieved considerable progress." There are at present 15 units manufacturing electric motors, with an annual capacity of 359,100 h.p. There are also 31 small-scale units with a combined annual capacity of about 130,000 h.p. Production in this sector is placed at about 50,000 h.p. A few more units are engaged in assembly of electric motors and manufacture of a few spare parts. Actual production by the organised units in the industry aggregated some 475,215 h.p. in 1957, as against 359,062 in 1956. In 1958, production is running at an annual rate of about 600,000 h.p. The bulk of the production is in the range upto 10 h.p. This class of motors accounted for 62 per cent. in 1957, followed by motors of between 10 h.p. and 30 h.p. which accounted for 30 per cent.; the rest is made up of motors of above 30 h.p. Many of the units in the industry have expansion programmes. When these schemes are implemented, there will be an annual capacity of the order of 1.13 million h.p. The present demand for electric motors in the country is estimated at about 750,000 h.p. which is expected to rise to about 800,000 to one million h.p. by 1960-61. Generally speaking, the projected increase in the capacity of the industry should be able to meet the anticipated increase in demand.

The principal raw materials required by the industry are electrical steel stampings, synthetic enamelled wire, ball bearings, insulating materials, steel rods and bars and paints and varnishes. Sankey Electrical Stampings Private Ltd., which supplies stampings to the electric motors manufacturers, is expanding its productive capacity. When its Bangalore factory goes into production, the supply of stampings to the manufacturers in the South will become more regular. Since there is a shortage of electrical steel sheets, the Commission has urged the Government to "plan production of this type of steel in one of the plants in the public sector, so that the progressively rising demand for this important raw material may be adequately met in future." The position regarding the supply of synthetic enamelled wire has improved considerably. There have also been no complaints in regard to the quality of the product. Electric motor manufacturers, however, complained against the short supply, quality and high prices of ball bearings. The Commission observes that, since the production of ball bearings has gone up, it should be possible for manufacturers to reduce their production costs. Electric motor manufacturers are, however, given licences to import such bearings as are not made in India. Insulating materials, except micanite sheets and cotton tape, have to be imported from abroad. Efforts are being made to manufacture Empire sleevings, Empire tape and leatheroid. At present, the requirements of C and D class steel for electric motors have, to some extent, to be met by imports.

There seems to be general agreement that the quality of indigenous electric motors is satisfactory; they are produced in accordance with Indian Standard Specification. As regards motors manufactured by small-scale sector, the Commission was informed that only some of the units have testing facilities and take care to ensure that their products are tested. It says: "However, many small producers have no testing equipment and their products do not give satisfactory service." The Commission has, therefore, suggested that the Small Industries Service Institute should render necessary technical assistance to enable the small producers to manufacture electric motors in conformity with Indian Standard Specifications.

Although the industry has the necessary capacity for producing motors of high ratings (100 h.p. and above), it undertakes their manufacture only against specific orders. Consumers sometimes import motors of high ratings. The Commission points out that positive steps should be taken to encourage the indigenous manufacture of motors of high ratings. Considerable leeway has also to be made up in the matter of meeting the requirements of the country for fractional motors of single phase type and special motors. The Commission has rightly stressed that, in view of the present balance of payment position, it is essential that manufacturers should diversify their pattern of production, so that the demand for those types and ratings of motors which are still being imported can be met from within the country.

NEW PRODUCTS AND PROCESSES

Sound-absorbing Tiles

ACOUSTIC, or sound-absorbing tiles, are becoming increasingly important in modern industrial architecture. A new range of acoustic tiles with several unique features is being introduced by the Armstrong Cork Company of London. The tiles are made from strong, tough pine fibres and have a washable, white painted finish. This enables them to be maintained easily and also ensures, it is claimed, that they have an attractive finish and a high light reflection coefficient of 79 per cent. The tiles are being made in three types of patterns. One of these types can be fitted by a new method which is extremely quick and therefore more economical. It is made possible by the use of ½-inch tongued and grooved units. This enables the tiles to be nailed, screwed or mechanically stapled to wood furring strips which thereby make the tiles self-levelling. Another of the types, with butt-edges, may be installed by cementing to a firm, hard surface or by using one of the several mechanical suspension methods.

Moon May be Used for Phone Calls

Within a few years the moon may be used as a reflector for intercontinental telephone calls as the result of a study recently completed by scientists at the University of Michigan in the United States. The scientists found that very short-wave radar or radio signals can be used to bounce telephone conversations against the moon and then back again to earth, to a receiver half-way around the world. Radar signals travel in a straight line and cannot, therefore, be ordinarily used over long distances or to communicate with places that are out of sight because of the curvature of the earth. Now, however, by using the moon as a reflector, the curvature of the earth need no longer limit long-distance communications. It is only necessary that both the transmitting and the receiving equipment can "see" the moon. Success in developing the moon-reflection theory was achieved when the scientists, checking reports by other research workers, found that certain incorrect conclusions had been drawn. One of these was the assumption that, because of the jagged mountains and craters on the moon, the moon would present a rough surface to a radar signal. A shortwave signal, however, is reflected from an area of only a few square feet. The moon has such areas that are smooth. As a result, radar signals can be reflected without a loss in quality.

A New Watch for the Medical Profession

Among the watches intended particularly for use in certain professions, there is one which has just been produced by the Swiss firm Doxa S.A., of Le Locle. It is of great interest to doctors, nurses and other persons who have to deal with sick people. The control of the counting unit on this watch is operated by a single push which functions very freely in a three-time movement. After having pressed the button and counted 20 pulsations, the doctor can read the number of the patient's pulsations per minute on the least encumbered part of the dial, namely, around the hour of 12. This pulsimeter is provided with a circular magnifying glass, which greatly facilitates its use.

Electronic Heart

Electronic hearts may some day be as common as are hearing aids or false teeth today, according to Mr. David Sarnoff, Chairman of the Radio Corporation of America. In addition, according to him, defective kidneys, lungs, limbs and other bodily organs may be replaced by electronic devices. The probability that a man-made device would ever be able to perform the functions of a bodily organ would have seemed widly fantastic before the electronic age. But this goal has already been reached to a limited extent and has brought within the bounds of feasible surgery some operations that formerly were considered impossible. Electronic substitutes may be "the ordinary replacement for defective organs in future years," Mr. Sarnoff prophesied. In the future, he added "a man may walk around in apparent good health with several of his organs replaced by refined electronic devices."

Lightweight Concrete

A lightweight concrete building material that can be sawed, chopped and chiselled without losing its strength is now being marketed by the Continental Materials Corporation of Chicago, the United States. The Company says that the new product weighs only one-third as much as ordinary concrete and should enable builders to erect houses at 20 per cent. lower cost than with ordinary materials. The concrete, called Calsi-Crete, is made by blasting air through a wet mixture of concrete, silica, wood and asbestos fibres. The material then "rises," much like bread, and is moulded, baked, sawed to desired sizes and shapes, and polished. Calsi-Crete is easier and cheaper to ship and handle than ordinary concrete slabs because of its light weight. It is believed that it will be particularly useful for floors, walls and roof slabs.

New Process for Making Insecticides

The Regional Research Laboratory, Hyderabad, has developed a process for making insecticide by chlorinating turpentine, which compares favourably with D.D.T. as regards pesticidal action. The cost of production of this insecticide, is estimated to be about one rupee per lb. The present sale price for technical D.D.T. is Rs. 2.25 per lb. Arrangements for commercial development of the material are in hand. The raw material needed for the production of the insecticide is available in the country itself.

MORE ON L.I.C. DEBATE

CASE FOR ABOLISHING WITH-PROFIT POLICIES

COMMENTING upon the Lok Sabha debate on the investment policy of the Life Insurance Corporation of India, we observed last week that it was a "listless" debate. This was as much true of the critical side of the debate as of the constructive. Criticisms there were, no doubt, but they cannot be said to have touched upon the fundamentals. As regards the constructive side, that is, suggestions for possible improvement in the policy, the performance was worse. Mr. Morarji Desai was, therefore, justified in saying that there were no new suggestions as such for incorporation in the policy and that the only ones made were on interpretation of the policy rather than on departure from it.

But certain issues emerged from the debate and the Minister's reply to it, which, though not directly concerned with the investment policy, have an intimate bearing on the efficient functioning of the Corporation. Among these, special mention may be made of the question of abolition of with-profit policies. The Minister's justification for its continuance is hardly convincing. If the issue is considered in the context of the nationalised set-up, it is evident that, whatever the justification for issuing with-profit policies in pre-nationalisation days, its *raison d'etre* at present is very much in doubt. The Minister said that with-profit policies should continue as an attraction to the public for taking out policies. This might have been true in pre-nationalisation days, when there was intense competition among the companies and each company was striving to show the best business possible. But now life insurance is the monopoly of the Corporation and there is no need for its retention. The objective of the Corporation should be to provide cover of a nature sufficient to serve the purpose of life insurance and not to sell savings schemes, for which there are other institutions and other methods. From this point of view, it would be better if the Corporation were to lower the premium rates. This would make insurance cheaper and bring it within reach of people of smaller incomes as well. In these days of declining purchasing power of the rupee, insurance would make a better appeal if it can be shown that premium rates are definitely cheaper than they used to be before. In the U.K., for instance, the premium rates for whole-life policies today are lower than even the pre-war rates.

Perpetual Headache

The with-profit policies issued by the former companies and which are now centralised in the Corporation have widely varying terms attached to them. The computation of bonus on each kind of policy will present a perpetual headache to the Corporation already burdened with enough problems. There should not be any difficulty in doing justice to the policyholders who had taken with-profit policies. This could be done, as Mr. P. V. Krishnamurthy had pointed out in his article "Life Insurance Investment Policy," contributed to this journal (*vide* page 831 of *Commerce* dated 22nd November 1958), by increasing the sum insured of existing with-profit policies in proportion to the difference between the with-profit premiums now being paid and the corresponding non-profit rates for the remaining term of the policy as at the last valuation. All possible care must, of course, be taken to ensure that the interests of those who have taken with-profit policies are not let down in any way. But this is no more than an actuarial problem.

Where there is a definite term for the policy, as for the relatively small number of whole-life policies, a notional term can be found which does adequate justice to the policyholders. The important thing to see is that all these policyholders get a once-for-all increase in the sum insured, commensurate with the excess premium they are paying, after allowing for the bonuses already declared on the policies. With the present with-profit policies adjusted thus, the existing distinction between with-profits and non-profits policies should be abolished and all policies, old and new, should be made eligible for participation in the profit that accrues to the Corporation in future by way of lower claims and expense ratios and interest yields higher than that assumed in the construction of premiums.

A reform of this nature is essential if one of the main objectives of nationalisation, namely, to find resources for implementing the projects included in the Plan, is to be fulfilled in the best possible manner. Under this reform, the profit-motive in investing the funds of the Corporation need not be given an unduly high place and funds can be diverted to new industrial projects. From this point of view, the suggestion made by Mr. Krishnamurthy for the creation of a special fund for financing the projects in the private sector deserves careful examination.

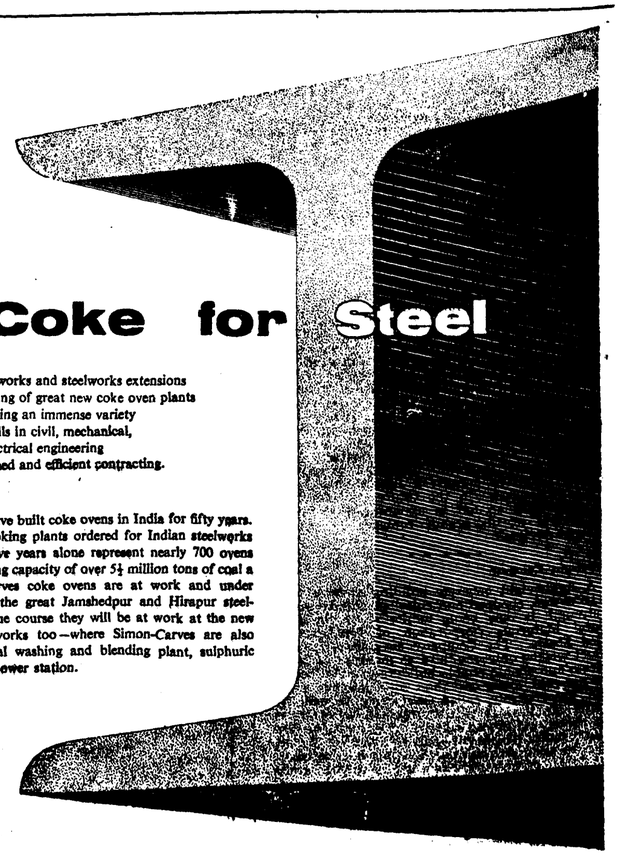
Splitting up the L.I.C.

Another subject raised at the Parliamentary debate related to the organisational set-up of the Corporation. It was suggested by some Members of Parliament that the Corporation should be split up into five different units or corporations. Mr. Morarji Desai turned down this suggestion and the reasons given by him are pertinent and convincing. First, the suggestion has come too late. The work of integrating the 240 and odd private companies into one organic unit, namely, the Life Insurance Corporation, has already advanced to such a stage that to retrace the steps and to undo the intensive work of more than two years, would be indulging in a ridiculous pastime. Secondly, if the plea for splitting up the Corporation is based on the argument that an organisation of the size of the L.I.C. cannot work efficiently, then it may be pointed out that there are other ways of ensuring efficiency than splitting it up. A degree of decentralisation will serve the purpose satisfactorily. As it is, the Corporation has been divided into five zones and steps are being taken to further decentralise the work in the different zones and in the different gradations of working. The monopolistic character of the Corporation is not going to be materially altered by dividing it into four or five units and letting each unit to compete with one another. As the Corporation is owned by the Centre, it is ridiculous to suggest that one of its units can offer better terms than another. The argument that a monolithic and monopolistic body such as the L.I.C. cannot function efficiently is very true indeed, but the answer to it lies in restoring life insurance to the private sector. But even a State-owned Corporation can function well, provided a large measure of competition from the private sector is permitted. Mr. Morarji Desai contended that there were examples in other countries of insurance companies bigger than the L.I.C. which have maintained the highest standards of efficiency. This is very true, indeed, but in the U.K., for instance, life insurance is a highly competitive business. Again, can it be seriously contended that the L.I.C. is being run on the same lines of efficiency as some of the biggest insurance companies in the U.K.? The latter are not run by persons who have no stake in them and who do not have to face the music before the annual general meetings of shareholders, or periodical meetings of policyholders. Nor are they managed with the help of honorary investment advisers.

Research Department

If the L.I.C. is to succeed, it must have a streamlined administrative machinery, manned by experienced staff of highest integrity and sense of responsibility. It must follow modern, up-to-date business methods in its dealings with the public. It must eschew bureaucratic attitudes. But we wonder how this will be possible in a Government-owned organisation, which has to please many masters. The least that the Corporation can and should do is to have its own investment research department, not merely to draw up charts of fluctuations in share markets or company profits, but also to be on the look-out for sound investments, to assess the prospects for the various shares which it has already bought and to follow developments in the

(*Continued on page 982*)



India's new steelworks and steelworks extensions require the building of great new coke oven plants —plants demanding an immense variety of specialised skills in civil, mechanical, chemical and electrical engineering and in well-planned and efficient contracting.

Simon-Carves have built coke ovens in India for fifty years. Simon-Carves coking plants ordered for Indian steelworks in the past twelve years alone represent nearly 700 ovens with a carbonising capacity of over 5½ million tons of coal a year. Simon-Carves coke ovens are at work and under construction at the great Jamshedpur and Hirapur steelworks, and in due course they will be at work at the new Durgapur steelworks too—where Simon-Carves are also building the coal washing and blending plant, sulphuric acid plant and power station.

DEPLETION ALLOWANCE FOR MINING AND OIL INDUSTRY

PROVISIONS IN U.K. AND U.S. TAX CODES

By S. S. Kothari, B.Com., A.T.I.I. (Lond.), F.C.A.

A RESUME of certain tax concessions agreed to be granted by the Government to a leading oil company operating in India, with the object of stepping up the pace of exploration and extraction of oil in this country, was recently given in Parliament by the Deputy Minister of Finance. It was stated that the necessary amending Bill to the Income-tax Act to implement the proposals would be introduced in Parliament in due course.

The principal concessions, according to Press reports, appear to be that a portion of the Company's losses, both revenue and capital, incurred in abortive exploration would be deductible from the Company's income; and that on the company achieving commercial production from its expansion projects, it would be granted as a deduction in the computation of its taxable net profits an additional annual allowance ranging from 25 per cent. to 45 per cent. of its net income obtained from production of oil. This is in the nature of depletion allowance for amortisation of capital expenditure on development, on what is known as the percentage depletion basis. The Company would not be entitled to the tax relief under Section 15C of the Income-tax Act.

That such concessions have been found necessary and the Government has agreed to grant them in a particular case, emphasises the real need for granting depletion allowance to the oil and mining industry in general. The computation of taxable profits of industries without providing for amortisation out of profits of the amount of capital expended upon the acquisition of wasting assets, their exploration and development, is inequitable; for the actual profits of oil and mining operations can only be determined after deducting therefrom depletion allowance in respect of the diminution in value of the oil-well or mine on account of exhaustion of mineral resources contained therein. Provision for such allowance in the income-tax structure would aid the expansion of these basic industries by enabling them to build up tax-free reserves for development of new oilfields and mines in replacement of the exhausted ones.

Depletion Allowance

The U.K. Income-tax Act and the U.S. Internal Revenue Code provide for substantial depletion allowance. It is significant that a large volume of British and U.S. capital has gravitated to the exploitation of mineral and oil resources, and rapid and extensive development of these industries in the home countries and overseas including the Middle East has taken place. Tax concessions have contributed to this development in no small measure.

The absence of allowance for amortisation of capital expenditure affects the finances of mining and oil companies in a detrimental manner; the capital invested in acquiring and developing a mineral property is virtually sunk and lost. The profits, arrived at after deducting current expenses and depreciation of tangible assets from current receipts, include an element of capital representing the value of portion of the mineral resources in the mine used up in earning that income. It follows that the dividend declared out of that income also includes that element of capital which in effect is being returned to the shareholders as a part of the dividend. Of course, it was laid down in *Lee* vs. *Neuchatel Asphalte Co., Ltd.*, that such a return is not prohibited by law. But, the effect is that when the mine or oil-well is exhausted, the shareholders' capital which was represented by the capital expenditure on acquisition and development of the mine or oilfield cannot be recovered, nor can it be replaced except with fresh capital. This emphasises the need for depletion allowance.

The present system of taxation of profits of the mineral industry in India is to tax revenue receipts after allowing revenue expenses, and usual depreciation allowances, including development rebate or initial allowance on plant and machinery. As regards mines worked purely on royalty on production basis, the royalty payable is allowed as an expense. Royalty paid as a share of profit earned, however, is not a deductible expense. Capital expenditure on acquisition of a mine or oilfield, its exploration and development, is not allowed to be amortised tax-free through depletion allowance, nor is expenditure on infructuous exploration allowable.

Output Formula

The U.K. Income-tax Act provides for annual allowance for amortisation of capital expenditure on exploration and development and on construction of works whose value would be reduced to practically *nil* when the mine is exhausted or the foreign concession comes to an end. Expenditure incurred on abortive exploration for mineral deposits is allowable as an expense when the exploration is abandoned. Besides, an investment allowance of 20 per cent. (or initial allowance at the taxpayer's option) is given in respect of capital expenditure on construction of works. Allowance for amortisation of the cost of acquiring a mineral area is, however, limited to such expenditure on mines developed overseas, i.e., outside the U.K. and only to the cost of the first British purchaser of such mines. The Royal Commission on Taxation of Profits and Incomes in the U.K. (1955) recommended that this restriction should be removed and the amortisation allowance be given for all expenditure made after the new system is brought into force for acquiring a mineral area in the U.K. or overseas by a first or subsequent purchaser on the residual value.

The calculation of allowance in the U.K. for amortisation of capital expenditure is in accordance with what has been described as the Output Formula. The allowance for a year is computed by multiplying the capital expenditure by the fraction whose "numerator represents the output from the source in question in the basis period for the year, and the denominator represents the sum of that output and the total potential future output of the source, estimated as at the end of that period." The fraction of any year is not to be less than one-twentieth. In other words, the allowance is taken to be a sum which bears the same proportion to the capital expenditure, as the output for the period in units of minerals produced bears to the sum of the output for the period and the reserves of ores in units in the mines, estimated to be recoverable, at the end of that period, or one-twentieth of the capital expenditure, whichever is greater. This formula enables the recovery of the cost over the total working life of the mine in an equitable manner. The same output formula is applicable for calculating allowance for amortisation of acquisition cost of overseas mines limited to the first U.K. purchaser. The Taxation Enquiry Commission in India considered this formula and has adopted it, while recommending the amortisation of the actual cost of acquiring mineral property and of the capital expenditure on exploration and development.

Cost Depletion Basis

The U.S. Internal Revenue Code, 1954, provides liberal depletion allowance in respect of capital expenditure on acquisition of mineral property. Two distinct methods of calculation of depletion allowance in respect of investment in mineral ore deposits including oil and gas wells, called the "cost depletion" and the "percentage depletion" bases, are laid down, and the assessee has the option each year of adopting the basis which gives him the greater relief.

A reasonable allowance for depletion of mineral resources of mines, their exploration and development, on the cost depletion basis is allowed as a deduction in the computation of taxable income of mines and oil and gas wells. Such depletion allowance is based upon the portion of the acquisition cost of the mine and development expenditure relating to the mineral deposit alone. This adjusted cost or investment (in dollars) is divided by the total number of estimated recoverable units (say tons) of the mineral in the mine at the beginning of the year, thereby giving the dollar amount or value of depletion for each unit sold. The number of units sold during the taxable year is then multiplied by the dollar value of depletion of each unit, and the total value arrived at gives the cost depletion of the assessee, which is the allowance he gets for that year.

Alternatively, the allowance may be a fixed percentage of gross income from the property after deducting rent or royalties paid. The percentage depletion rates vary from industry to industry and range from 27½ per cent. for oil and gas wells, 23 per cent. for sulphur and uranium to 5 per cent. for brick and tile clay, gravel, sand, shale and ordinary stone. It is 15 per cent. for other minerals not specifically mentioned. Such allowance, however, is subject to the proviso that it should not exceed 50 per cent. of the taxable net profits of the property before deducting depletion allowance. The allowance is granted over the full working life of the mine. The assessee may select the cost depletion method or this percentage depletion basis for the year.

Prior to 1st January 1954, when the current 1954 Code came into force, an alternative method of calculation of depletion allowance was in force, viz., "discovery depletion," according to which the fair market value (in place of acquisition cost) of the mine on or within 30 days of the date of discovery, as based on the reserve ore content of the mine, was allowed to be amortised or recouped by the original assessee, who discovered the mine, tax-free by annual allowance. Such allowance was to be calculated in the same manner as in the depletion cost basis, except that the value at discovery was to be substituted for acquisition cost.

Cost depletion method, which is more or less akin to the output formula, appears to be the most equitable, though difficulty may be experienced in calculating the total reserve ore deposits in units in the mine. Subsequent revision of the allowance based on revised estimates of reserve ore may be permitted. These methods enable amortisation free of tax of that portion of the development cost which represents the value of the mineral resources or units exhausted or used up for earning the taxed income during a year. The percentage depletion method is subject to the criticism that the allowance bears no relation to the acquisition cost, as the two limitations are on percentage of gross income and net profits. The result is that the aggregate of allowances over the full working life of the mine may exceed the cost. The discovery depletion method is more liberal than the depletion cost method, but is intended to be in the nature of a reward to the discoverer of a new mine or oil or gas well. This method is also not linked to cost, as it has the fair market value as the basis of calculation.

Revalorisation

Depletion allowance may also be calculated not on the acquisition or historic cost but on the basis of revalorised figures. By revalorisation is implied the adjustment of historic cost figures to reflect change in the purchasing power of money through change in price-level. It involves calculation of the depletion allowance on the basis of acquisition cost and then revising it in accordance with change in the price level—general or sectional; or in adjusting the historic cost on the basis of the price-level and calculating depletion allowance on the adjusted basis. The advantage of this is that the depletion allowance accumulated over the lifetime of the mine, calculated on the basis of revalorised figures, would at the end of the life of the mine, add up to an amount which would be equal to the replacement cost of similar mines. Under the cost depletion method, the accumulated allowance would add up only to the acquisition or historic cost and if the replacement cost of the mine has gone up, the amount would fall short. This method has been adopted to some extent in certain continental countries in granting depreciation allowance on capital assets after revalorisation.

There are, however, certain inherent difficulties in this method. The price-level index fluctuates widely from time to time and revalorisation of the figures of assets would involve changes in the basis of calculation year after year, and uncertainty in revenue estimates of tax would be introduced. Besides, the construction of an accurate and widely acceptable price-level index, and its frequent revision, would be a difficult task, and may hold up tax assessments. From the accounting point of view, the historic cost basis for preparation of accounts is far superior, inasmuch as it ensures consistency in

SETBACK IN INDIAN CABLES' PROFIT

MAJOR EXPANSION PROJECTS ALMOST COMPLETE—OUTLOOK FAIRLY BRIGHT

A DECLINE in sales and profit is disclosed by the accounts of the Indian Cable Company Ltd. (Chairman and Managing Director: Mr. B. J. Woodley, Calcutta) for the year ended 31st March 1958. The gross profit, for instance, has suffered a drop of Rs. 48.65 lakhs to Rs. 111.54 lakhs, thus reversing the upward trend noted in the previous three years, during which period the profit grew from a mere Rs. 35.47 lakhs (in 1953-54) to a record high of Rs. 160.19 lakhs in 1956-57. The profit for the year under review is even lower than Rs. 139.13 lakhs earned in 1955-56. The net profit, too, has declined over the year by Rs. 24.23 lakhs to Rs. 36.94 lakhs, the lowest level since 1953-54.

The setback in earnings has been due to (1) the fall in production on account of dislocation caused by resiting existing machinery and installing new plant for the expansion schemes, and (2) the continued steep fall in world price of copper which is the principal raw material required for the Company's production. The decline in profit has not, however, affected the distribution to shareholders, which is being maintained on the ordinary and participating preference shares for the third year in succession at 15 per cent., made up of a dividend of 12½ per cent. and a cash bonus of 2½ per cent. In recommending the same dividend for the year under review, the Directors have taken into consideration "the advisability of keeping a dividend level which can fairly be expected to be maintained on the increased capital which will require servicing in future."

A sum of Rs. 13 lakhs, being the excess provision for taxation made in earlier years, which is now no longer required, has been written back. At the same time, out of the net profit of Rs. 36.94 lakhs, the Directors have set aside Rs. 18.96 lakhs to the various reserves and provisions, leaving a disposable profit of only Rs. 17.98 lakhs. Even without writing back the excess tax provision, the dividend could have been maintained at the aforesaid level, but this would have meant a substantial drawing on the undistributed surplus brought in from previous years.

The writing back of excess tax provision has been rendered possible by the finalisation of the Company's position under Section 23A of the Indian Income-tax Act following the payment of a supplementary dividend of 4 per cent. on both the classes of shares in respect of the year ended 31st March 1956. Notwithstanding the steep fall in prices of copper in the world market, the Directors have not considered it necessary to draw any amount from the basic stock reserve of Rs. 30 lakhs which had been built up in earlier years to provide as a cover against any unduly adverse effect on trading from violent fluctuations in the copper market.

A synoptic view of the profit and loss accounts for the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	6,88.53	6,97.45	6,14.85	4,99.03
Closing stocks of finished goods and work-in-progress ..	48.48	60 59	46 29	38 74
Other income	9.77	11 19	4 50	0 06
Materials consumed ..	3,56.22	3,96.39	3,48 48	3,11 22
Other expenses including purchases of goods ..	2,80.28	1,66 83	1,40 69	81 92
Gross profit	1,11 54	1,60 19	1,39 13	90 10
Directors' commission ..	2 00	2 85	3 07	1 96
Depreciation	16 99	15 67	14 47	10 90
Taxation	55 00	79 50	68 00	33 02
Net profit	36 94	61 17	55 59	44 21
Debenture issue expenses ..	..	..	0 01	2 44
To reserves and provisions ..	18.96	26.53	25.66	11.76
Excess tax provision written back	13.00	..	..	..
Dividends—				
Preference	1 93	1 93	1 93	1 61
Ordinary	22 93 (D. 12½% +B. 2½%)	22 93 (D. 12½% +B. 2½%)	22 93 (D. 12½% +B. 2½%)	19 11 (D. 10% +B. 2½%)
Carry forward	41.30	35.19*	33.04	23.96

* After paying Rs. 6.68 lakhs as supplementary dividend at 4 per cent. on participating preference shares and ordinary shares in respect of the year 1955-56.

The shrinkage in production due to dislocation in works is fully reflected in the decline in sale proceeds, closing stocks and materials consumed during the year under review. The rise in expenses is accounted for mainly by purchases of goods which have gone up by Rs. 38.80 lakhs, duty, dock clearance and freight (Rs. 9.75 lakhs) and salaries, wages and bonus (Rs. 9.44 lakhs).

The decline in profit has naturally meant a cut in allocation to various reserves and provisions. The transfer to the general reserve has been pruned from Rs. 10 lakhs to Rs. 3.75 lakhs and the provision for bad and doubtful debts from Rs. 10 lakhs to Rs. 4 lakhs. The allocation to the latter has brought the total provision as at the end of the year to Rs. 20 lakhs, as against an outstanding sum of Rs. 38.42 lakhs under this head. Nevertheless, the Directors feel that this provision should be sufficient "to cover all contingencies under this head." It may be noted, in this connection, that a sum of Rs. 11.38 lakhs was due to this Company from F. & C. Osler (India) Ltd. In response to the Company's application claiming this sum from the latter, the Calcutta High Court has issued an order, by consent, for the winding-up of F. & C. Osler. The operation of the order has been kept in abeyance till 15th January 1959 to enable the parties to arrive at a settlement for the payment of the debt to the petitioner.

To revert to the allocations. A debenture redemption fund has been created with an initial transfer of Rs. 3 lakhs and, in accordance with the provisions of the Finance Act, 1958, a sum of Rs. 1.25 lakh has been set aside to the development rebate reserve. In consonance with the policy established two years ago, a further sum of Rs. 5 lakhs has been added to the reserve for replacement of fixed assets.

The Company's excellent financial position can be judged from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital (paid-up) ...	1,65,76,970	Gross block	2,56,09,150
Reserves and surplus ...	2,00,30 205	*Less*—Depreciation ...	1,03,47,239

		Debts and deposits ...	1,22,13,247
		Cash ...	21.87,210
Rs.	7,16,15,781	Rs.	7,16,15,781

Since the close of the year (in June 1958) the Company has raised the capital by issuing 828,848 new ordinary shares of Rs. 10 each at par, in order to provide the necessary additional working capital required for the increased production resulting from the expansion projects. The additions to the fixed assets during the year amount to Rs. 29.96 lakhs.

The following main points from the Chairman's statement appended to the Directors' report will give an idea of the Company's growth prospects:

(1) The second phase of expansion of the rubber insulated cable factory has almost been completed. This factory has already passed the maximum level of production previously obtained and will achieve a considerable increase over that level by the middle of 1959, when the expansion should have been fully implemented; (2) the Company has earned the distinction of being the first one to make paper insulated power cable. This unit has now successfully produced paper insulated cables of 1 100 volts, 3.3 kv., 6.6 kv. and 11 kv. (working voltages) of an aggregated length of over 130,000 yards; (3) all the plant for the new engineering division has been installed and the Company is now equipped to carry out the complete maintenance of all its production machines, as also to manufacture certain spare parts and the smaller types of production machines: (4) the contract department has successfully completed the installation and commissioning of about 250 miles of tele-communication cables for the Eastern Railway Electrification Project and the complete electrical installation for the steel melting shop with its seven new furnaces for the T.I.S.Co. 2 million-ton project; (5) other contracts include the cabling of the 90 m.w. thermal station at Korba which is to feed the Bhilai steel project and the complete electrical installation for the Barsua iron mines feeding the Rourkela steel project; (6) the Company's order book is full and production of certain items is already earmarked for supply after the end of 1959; (7) provided that raw materials, particularly copper, continue to be made available to it in adequate quantities, there is no reason why the Company should not maintain good results.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 28 26 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.6 per cent. per annum, free of tax.

TITAGHUR'S PROFIT LOWER

DISTRIBUTION ON SHARES MAINTAINED

DESPITE a smart rise in sale proceeds, following higher production and maintenance of cordial labour relations, the working of the Titaghur Paper Mills Company, Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta), during the year ended 31st March 1958 has resulted in a decline in profit. This is due to a sharp rise in manufacturing and other expenses unaccompanied by a corresponding rise in the selling price of paper. It is thus clear that the profit margin of the Company was narrower than in the previous year. The gross profit at Rs. 116.18 lakhs has dropped by Rs. 4.95 lakhs from Rs. 121.13 lakhs for 1956-57. It is, however, a shade better than Rs. 116.01 lakhs for 1955-56 and substantially higher than Rs. 91.21 lakhs for 1954-55. But these improvements must be attributed mainly to the steps taken by the Company to improve production through modernisation and expansion.

The net profit, after paying the Managing Agents' commission and after providing for depreciation and taxation, also stands lower at Rs. 34.43 lakhs, as compared with Rs. 41.11 lakhs earned a year ago. The decline here is greater (16 per cent.) than that (4 per cent.) in the gross profit. The sum available for distribution has, however, been strengthened by a sum of Rs. 9.72 lakhs, being the amount received from the Trustees of the pension funds on winding-up entirely the Indian clerical staff pension fund and in part the Indian workers' pension fund. From this amount, the Directors have set aside Rs. 15.21 lakhs to the various reserves. This is lower as compared with Rs. 29.25 lakhs conserved in the previous year. A breakdown of the year's provisions discloses that, reserve for taxation contingencies takes up Rs. 4.75 lakhs, statutory development reserve Rs. 3.46 lakhs and reserve for new mill project Rs. 7 lakhs. The Directors have proposed a dividend of 23¾ per cent. on the ordinary shares, which is the same as that in the previous year, consisting of a dividend of 17½ per cent. and a bonus of 6¼ per cent.

The following comparative table brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	8,10.43	7,03.92	6,44.86	4,89 68

Carry forward	1.17	0.93	1.23	0.89

Sales during the year under review fetched Rs. 8.10 crores, as compared with Rs. 7.04 crores for 1956-57. As stated earlier, the effect of this increase on profits was offset by a sharp advance in expenses from Rs. 5.72 crores to Rs. 6.97 crores. Of this, raw materials, chemicals and dyes consumed accounted for a rise from Rs. 176.91 lakhs to Rs. 221.02 lakhs and excise duty from Rs. 65.20 lakhs to Rs. 111.02 lakhs.

It will be seen that the provision for taxation has absorbed Rs. 2 lakhs more than it did in 1956-57. The transfer to depreciation also is a shade higher.

During the year under review, the mills continued to work to full capacity and a new peak in production was established.

The Directors report that, following the recommendations of an industrial tribunal, a workers' grading scheme was implemented on 1st April 1958. The Company will, therefore, have to meet an increased wage bill from the current year onwards. The increase in production during the year under review is attributed to the satisfactory progress made with renovations. It is stated that delivery periods from machinery manufacturers have shown a tendency to shorten. Stocks of bamboo and coal, however, fell to low levels on a few occasions, but, on the whole, conditions on the railways bringing supplies to the mills have recorded improvement. The land question for the Choudwar Mill still remains to be resolved. Nevertheless, it is reported, construction has continued. The Supreme Court is expected to take up the case at the end of 1958 or early in 1959. Advantage was taken of the closing down of the Standard Jute Mill to purchase the land and property in order to extend the mill area at Titaghur.

The financial position of the Company, as disclosed by the balance-sheet as at 31st March 1958, is strong. The reserves and surplus aggregate Rs. 386.84 lakhs, as against a paid-up capital of Rs. 142.92 lakhs. The current liabilities stand at Rs. 365.32 lakhs and include a provision of Rs. 80.59 lakhs for taxation. As against these, there are current assets aggregating Rs. 484.43 lakhs of which stocks at cost account for Rs. 243.47 lakhs, sundry debtors considered good for Rs. 79.46 lakhs and loans and advances for Rs. 147.10 lakhs. The gross block of the value of Rs. 669 lakhs, including an addition of Rs. 58.77 lakhs during the year, has been written down to a book value of Rs. 295.17 lakhs. Capital work in progress amounts to Rs. 111.03 lakhs and jobs completed but not in operation regarding Choudwar Mill Rs. 4.45 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 42.75 *ex-div.*, at which rate the yield works out to 5.5 per cent. per annum, free of tax.

COMPANY MEETINGS AND DIVIDENDS

INDIAN STEEL AND WIRE PRODUCTS LTD. Annual General Meeting, Calcutta, 22nd December 1958. Dividend: Rs. 4.00 per share, on ordinary shares of Rs. 10 each (includes cash bonus of Re. 1.00 per share) and Re. 0.40 per share, on ordinary partly-paid shares of Re. 1.00 each (includes cash bonus of Re. 0.10 per share), payable on or after 10th January 1959. Transfer books remain closed from 2nd to 22nd December 1958, both days inclusive.

GILLANDERS ARBUTHNOT AND CO., LTD. Annual General Meeting, Calcutta, 23rd December 1958. Dividend: 10 per cent. or Re. 1.00 per share. Transfer books will remain closed from 15th to 23rd December 1958, both days inclusive.

KINGSLEY GOLAGHAT ASSAM TEA CO., LTD. Annual General Meeting, Calcutta, 24th December 1958. Transfer books will remain closed from 17th to 24th December 1958, both days inclusive.

FERTILISERS AND CHEMICALS, TRAVANCORE LTD. Annual General Meeting, Eloor, Alwaye, Kerala State, 26th December 1958. Dividend: *Nil*. Transfer books will remain closed from 15th to 31st December 1958, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 29th December 1958. Dividend: Re. 1.50 per share. Transfer books will remain closed from 17th to 29th December 1958, both days inclusive.

RAMPUR DISTILLERY AND CHEMICAL CO., LTD. Annual General Meeting, Rah-e-Raza, Rampur, 30th December 1958. Dividend: 3 per cent. or Re. 0.30 per share, payable on or after 14th January 1959. Transfer books will remain closed from 17th to 31st December 1958, both days inclusive.

BOKARO AND RAMGUR LTD. Annual General Meeting, Calcutta, 30th December 1958. Transfer books will remain closed from 19th to 30th December 1958, both days inclusive.

ORIENT PAPER MILLS LTD. Annual General Meeting, Calcutta, 30th December 1958. Dividend: Re. 1.50 per share, payable on or after 20th January 1958. Transfer books will remain closed from 8th to 30th December 1958, both days inclusive.

CONSOLIDATED COFFEE ESTATES (1943) LTD. Annual General Meeting, Pollibetta, 30th December 1968. Dividend: 20 per cent. or Rs. 2.00 per share, free of income-tax. Transfer books will remain closed from 16th to 30th December 1958, both days inclusive.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD. Annual General Meeting, Pollibetta, 30th December 1958. Dividend: 20 per cent. or Rs. 2.00 per share, free of income-tax. Transfer books will remain closed from 16th to 30th December 1958, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 30th December 1958. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 25th to 30th December 1958, both days inclusive.

BALMER LAWRIE AND CO., LTD. Interim dividend of 5 per cent. or Rs. 5.00 per share, for the year ending 31st December 1958, payable on or after 23rd December 1958. Transfer books will remain closed from 17th to 23rd December 1958, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Interim dividend of Rs. 2.50 per share, for the year ending 31st December 1958. Transfer books remain closed from 10th to 19th December 1958, both days inclusive.

DELTA JUTE MILLS CO., LTD. Interim dividend of Rs. 2.00 per share, for the year ended 30th November 1958. Transfer books remain closed from 10th to 19th December 1958, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Interim dividend of Rs. 3.00 per share, for the year ended 30th November 1958. Transfer books remain closed from 10th to 19th December 1958, both days inclusive.

INDIA STEAMSHIP REPORTS IMPRESSIVE RESULTS

PROFIT AND FREIGHT EARNINGS A RECORD

YET another year of highly encouraging results has been annexed by the India Steamship Company, Ltd. (Managing Agents: Messrs. Lionel Edwards (Private) Ltd., Calcutta), to its record of innings. The year referred to is the one ended 31st March 1958. The results are excellent from every angle. The freight earnings have made a big stride over the record level reached in the previous year, thus taking them to a new impressive peak. Simultaneously with this and, despite the sharp rise in expenses, the profits have also gone up substantially and reserves have been considerably strengthened. It is true that, according to the Directors themselves, "the year under review was an exceptionally favourable one." Nevertheless, the highly gratifying results are, in a large measure, due to the Company's excellent management, for which the Directors can take full credit.

The Company's gross profit at Rs. 253.63 lakhs represents a striking increase of Rs. 86.55 lakhs or 51.8 per cent. over Rs. 167.08 lakhs for the previous year. It may be noted here that the previous year's profit itself was a record, having exceeded the erstwhile peak at Rs. 89.14 lakhs for 1955-56. The net profit at Rs. 162.97 lakhs has also gone up substantially from Rs. 92.22 lakhs for the previous year, the percentage of increase being 56.4. This increase is not as a result of any marked cuts in the essential provisions. It is true that the provision for taxation at Rs. 12 lakhs is Rs. 3 lakhs less than that in the previous year, but the transfer to depreciation has been raised by Rs. 11 lakhs. The low level of tax provision is apparently due to the high initial depreciation allowances and development rebate which for a shipping company is greater than that for other industrial enterprises.

The 1958 Finance Act requires companies eligible to development rebate to set aside at least 75 per cent. of the development rebate out of the profit, in case the profit is more than the rebate claimed. Accordingly, the Directors have set aside Rs. 53.37 lakhs, as against *nil* last year, to development rebate reserve. Notwithstanding this compulsory addition to the reserves, the Directors have made no reduction in the customary transfers to reserves. On the contrary, they have increased the allocations. Thus, they have credited the general reserve and dividend equalisation reserve with Rs. 40 lakhs and Rs. 28.25 lakhs, respectively, as compared with Rs. 35 lakhs and Rs. 23.75 lakhs, respectively a year ago. Further, they have raised the transfer to the fleet replacement reserve from Rs. 7.26 lakhs to Rs. 9.96 lakhs. The total amount ploughed back is no less than Rs. 131.58 lakhs, equal to 80.7 per cent. of the net profit.

Out of an increase of Rs. 70.75 lakhs in the net profit, the Directors have utilised no less than Rs. 65.57 lakhs for enhancing the transfers to reserves. This leaves Rs. 5.20 lakhs, which they could have used for raising the dividend to shareholders by, say, 2 per cent., that is, from 10 to 12 per cent. But they have resisted that temptation and only maintained it at 10 per cent. By doing so, they have abided by the Government's desire that shipping companies should conserve their profits rather than pay higher dividends, *vide* Mr. Lal Bahadur Shastri's speech at the last annual meeting of the Indian National Shipowners' Association. This is, indeed, a commendable action on the part of the Company's Directors, whose Chairman, Dr. A Ramaswami Mudaliar, has played a notable part in securing valuable concessions from the Government for shipping.

Although the dividend has only been maintained at 10 per cent., the sum required to meet it is higher by Rs. 2.25 lakhs at Rs. 24.75 lakhs owing to the capitalisation of the share premium account amounting to Rs. 22.50 lakhs by the issue of bonus shares in the proportion of one new ordinary share for every ten shares held. Nevertheless, the amount left to be carried forward is very much higher at Rs. 8.09 lakhs, as against Rs. 2.71 lakhs brought in.

The table below brings out the salient features of the Company's working during the year under review, against the background of those for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1958	1957	1956	1955
Freight earned	7,75 04	6,00 17	5,26 12	4,01 00

Depreciation	59 37	48 36	41 50	22 88
Taxation	12 00	15 00	1 00	0 45
Net profit	1,62 97	92 22	37 73	0.85
Transfer to reserves ..	1,31 58	66 01	15 00	..
Dividends—				
5% cum. preference	1 25	1 25	1 25	1.25
Ordinary	24 75 (10%)	22 50 (10%)	22 50 (10%)	..
Carry forward	8.09	2.71	0.26	1.28

The Company's freight earnings during the year under review amounted to Rs. 775.04 lakhs. This is said to be the highest amount earned so far, having gone up by as much as Rs. 174.87 lakhs over Rs. 600.17 lakhs for the previous year. Income from other sources has also risen from Rs. 4.87 lakhs in 1956-57 to Rs. 12.63 lakhs. As against such larger incomes, expenses have sharply risen from Rs. 437.96 lakhs to Rs. 534.04 lakhs. Salaries, wages and other staff welfare expenses alone have advanced from Rs. 47.64 lakhs to Rs. 59.06 lakhs. Similarly, port expenses (including marine dues, light dues, customs, etc.), have moved up from Rs. 185.82 lakhs to Rs. 209 95 lakhs, bunkers from Rs. 64.44 lakhs to Rs. 88.93 lakhs and repairs and maintenance of fleet from Rs. 28.92 lakhs to Rs. 36.97 lakhs.

Referring to the Company's working during the year under review and the prospects for the current year, the Directors state thus:

"During the period under review, 13 vessels of the Company were employed in the liner service in the India/U.K./Continent run and the India/Black Sea route. S.S. *Indian Commerce* was also employed in the Coastal trade of India; besides coastal cargo was also carried in our overseas vessels. In pursuance of the policy of the Company for expansion of its fleet, one more new vessel, m.v. *Indian Security*, which was built and delivered by Messrs. Howaldtswerke, Hamburg, in March, 1958, was added to the fleet. The earning of this ship has not been reflected in the freight earned during the year under review. According to the present programme, two more new ships will be added to the fleet of the Company by the end of this year and another three in the course of the next year.

"The year under review was an exceptionally favourable one. The general recession in international trade from the beginning of 1958 has had its effect on the international freight market both in the volume of the trade and in its value. There are, however, indications that the trend towards less volume of trade and lower freights has been to some extent arrested. Your Directors, therefore, do not take a pessimistic view of freight earnings in the current year."

The paid-up capital of the Company as at 31st March 1958 stands at Rs. 272.50 lakhs, having gone up from Rs. 250 lakhs at the end of 1956 57 by the issue of bonus shares referred to earlier. This is made up of 25,000 five per cent. tax-free redeemable cumulative preference shares of Rs. 100 each and 2,475,000 ordinary shares of Rs. 10 each. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 291.95 lakhs, of which the general reserve alone accounts for Rs. 140 lakhs. Besides this, there is a reserve for taxation of Rs. 35 lakhs. Loans secured from the Government of India by mortgage of ships included in fleet account have gone up from Rs. 7.98 crores to Rs. 8.21 crores. The current liabilities amount in all to Rs. 254.14 lakhs and are inclusive of incomplete voyages of Rs. 105.71 lakhs. There was an addition of Rs. 344.66 lakhs to the fleet account during the year, bringing it to a total gross value of Rs. 13.41 crores which, along with other assets, bring the total value of the block account to Rs. 15.19 crores. This has been written down to a book value of Rs. 11.86 crores. The current assets aggregate Rs. 4.89 crores.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 14.69 *ex-div.*, at which rate, the shares provide a yield of 6.7 per cent. per annum.

AHMEDABAD ADVANCE MILL REPEATS DIVIDEND

RESULTS OF INDIAN STEEL AND WIRE PRODUCTS

Ahmedabad Advance Mills Ltd.

THE directors of the above Company (Managing Agents: Tata Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1958.

The gross profit for the year before providing for bonus, depreciation and development reserve amounted to Rs. 4.28,612 (Rs. 2 54,066). Deducting therefrom bonus provision Rs. 1,25,000 (Rs. 1,00 000), depreciation Rs. 1,50,000 (Rs. 1,50,000) and development reserve Rs. 1,00,000 (*nil*) the profit comes to Rs. 53,612 (Rs. 4.066). To this is added the balance brought forward from the previous year's accounts of Rs. 11,155 (Rs. 17,089), transfer from general reserve Rs. *Nil* (Rs. 2,50.000) and transfer from general reserve No. 1 for payment of the proposed dividends for 1957-58 Rs. 2,50,000 (*Nil*) making a total amount available for disposal of Rs. 3,14,767 (Rs. 2 71,155). From this sum the directors have made the following appropriations:

To general reserve No. 2 Rs. 28,612 (*nil*) and to gratuity reserve Rs. 25,000 (Rs. 10,000). The directors have also recommended the following dividends for the year ended 30th June 1958, to be paid if declared by the shareholders: On preference shares at Rs. 5 (Rs. 5) per share free of income-tax, absorbing Rs. 50.000 (Rs. 50,000) and on ordinary shares at Rs. 5 (Rs. 5) per share without deduction of income-tax, absorbing Rs. 2,00,000 (Rs. 2,00,000) leaving to be carried forward Rs. 11,155 (Rs. 11,155).

The directors regret that the result for the year has been a disappointing one, even though the gross profit at Rs. 4,28.612 shows some improvement over that of the previous year. The poor result is mainly attributable to continued depression in the cloth trade and the rise in the cost of production—especially due to substantial increase in the prices of fuel, colours, chemicals and other stores, without any compensating increase in the value of manufactured goods. During the first half of the year, demand for cloth was extremely poor and there was heavy accumulation of stocks. Realising the gravity of the situation, the Government, while levying the additional excise duty to replace sales tax, announced, as a temporary measure, a reduction of six pies per square yard in excise duty on medium cloth, from the middle of December 1957. This measure, though inadequate to counter the paralysing effect of the excessively high rate of excise duty imposed in September 1956, did give a fillip to demand, and mills were able, by the end of January 1958, to reduce to some extent the burden of excess stocks.

In the accounts of the year the directors have transferred a sum of Rs. 6,87,067 from the general reserve to general reserve No. 1 and the balance of Rs. 12.12.933 from the general reserve to general reserve No. 2. This splitting of the general reserve into two parts has been done with the object of segregating in general reserve No. 1 profits which have already been taxed and which are available (if required) for payment of non-taxable dividends. General reserve No. 2 consists of other profits of the Company, viz., profits which have either not been taxed or which for income-tax purposes have been deemed to have been utilised for payment of non-taxable dividends in the past.

The profit being inadequate, the managing agents have kindly agreed to forgo their minimum commission of Rs. 50,000. For the same reason, it has not been possible to provide full depreciation for the year.

The supplies of Indian cottons during the year were sufficient, but prices were comparatively higher and the quality poorer than in the previous year. This was particularly the case in the Bombay State from where the Mills get the bulk of its Indian cottons. The supplies of all foreign cottons were insufficient, because of restricted imports on a quota basis, owing to the acute shortage of foreign exchange.

The mills' reorganisation and modernisation programme was carried a stage further during the year, involving a capital expenditure of about Rs. 17,00.000 on buildings and machinery. The installed capacity of the mills is 49,144 spindles and 1,016 looms.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Gross block	1,89,92,976
Debentures	30.00 000	*Less*—Depreciation ...	69.55.118
Reserves ...	27,78.612		
Provision for taxation	75 486	Net block ...	1,20,37,858

		Cash ...	4.62.928
Rs.	2,44 87 941	Rs.	2,44 87 941

Indian Steel and Wire Products Ltd.

The directors of the above Company (Managing Agents: Messrs. Indra Singh and Sons Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1958.

Following last year's pattern, the accounts have been drawn up to conform to the requirements of the Companies Act, 1956. The provision for payment of the wealth tax and the several increase in the manufacturing costs that have taken place during the year including increase in railway freight, wages and raw material costs have affected the results of the current year which show a further decline than what was reported last year. In particular, the increase of excise duty by the Government of India and of the cost of raw materials have materially contributed to those results. In addition, the increase in coal price and the consequent increase in power and fuel costs have also had their effects. Taking these factors into consideration, although the total sales figure is much higher, the actual tonnage of finished products is comparatively lower.

The net profit of the Company for the year, after providing for depreciation, taxes, bonus, managing agents' remuneration and also making provision for gratuities and development rebate amount to Rs. 18,40.630 (Rs. 24,12.799) to which is added the amount brought forward from last year's account of Rs. 9,45,363 (Rs. 9,71,508) making a total of Rs. 27,85.993 (Rs. 1,27.27,789 including Rs. 93,43,482 being excess provision made in respect of depreciation; taxation, etc., for previous year). The directors have made the following appropriation out of the above sum.

To proposed dividends Rs. 9,67,974 (Rs. 9,67,974) and to proposed cash bonus Rs. 3.22,658 (Rs. 3,22,658) leaving a balance to be carried forward of Rs. 14,95.361 (Rs. 9,45.363 after transferring Rs. 18.00,000 to general reserve; Rs. 38.16,794 to reserve for depreciation and Rs. 48,75,000 to deferred taxation reserve). The directors recommend the following dividends and also cash bonus for the year ended 31st March, 1958 to be paid, if declared by the shareholders at the annual general meeting, from the amounts set aside for the proposed dividends and cash bonus:—

A dividend at the rate of Rs. 3 (Rs. 3) per share, free of income-tax, on ordinary fully-paid shares and at the rate 30 (30) nP per share on ordinary partly-paid shares of the Company for the year ended 31st March 1958 absorbing Rs. 9 67,974 (Rs. 9,67,974) and a cash bonus at the rate of Re. 1 (Re. 1) per share, free of income-tax, on ordinary fully-paid shares and at the rate of 10 (10) nP per share on ordinary partly-paid shares of the Company absorbing Rs. 3,22,658 (Rs. 3,22,658).

Labour.—As already reported in last year's report, the Award of the Industrial Tribunal, Bihar in the Industrial Dispute referred to the said Tribunal has been implemented. In addition thereto, the administration, of its own accord, granted an *ad hoc* increment of annas four in the daily rates of employees whose daily rates were up to Rs. 3 and one slab of increment to the clerical staff. In terms of the Award of the Industrial Tribunal referred to above annual bonus is to be paid to the employees on the basis of four and a half months' basic wages as in the preceding two years. The directors have provided a sum of Rs. 6,02,080 for the year under report as annual bonus to be paid to the employees.

General.—With the Tata Iron and Steel Company's expansion programme nearing completion and the other major steel producing units racing against time to commence production and the numerous re-rolling mills that have been and are being installed at various vital centres it has become imperatively necessary for this Company not only to accelerate its expansion programmes with the least possible delay but also to devise ways and means whereby redundant operations could be eliminated as also to commission labour-saving devices so as to bring down the manufacturing costs within reasonable limits which will enable the Company to face successfully the growing competition in the line of its products. In this connection, Sardar Ajaib Singh, one of the directors, proceeded to the Continent during August 1957 to have preliminary discussions with the manufacturers of machinery necessary for modernising the Company's Works.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	32.26.580	Gross block	2,15,50,769
Reserves ...	3,11,02,205	*Less*—Depreciation ...	1,37.16,227

Vellore Electric Corporation Ltd.

The directors of the above Company [Managing Agents: Messrs. Chandrie and Co. (Private) Ltd., Madras] present the audited accounts of the Company for the year ended 31st March 1958.

Progress.—The working of the Corporation during the year under review has shown further progress in all directions. During the year under report the capital expenditure incurred on rural and other extensions and system improvements amounted to Rs. 4.9 lakhs. The Company's transmission and distribution systems were maintained well. Twenty miles of H.T. lines and 49 miles of L.T. lines were added to the system and 11 additional substations were erected and commissioned during the year. The following statement indicates the progress made during the last two years:—

	1956-57	1957-58
Total units purchased in K.W.H. ..	1,23,32,892	1,48,44,560
Total units sold in K.W.H. ..	1,07,82,055	1,31,81,511
Cost of units purchased in rupees ..	4,37,162	5,40,820
Gross revenue in rupees ..	10,91,677	13,05,080
No. of villages electrified ..	41	54
No. of consumers connected ..	9,702	10.610
H.T. Transmission lines:		
Overhead in miles	45.07	65.07
Underground in miles ..	1.50	1.50
L.T. Transmission lines:		
Overhead in miles	153.58	202.58
Underground in miles ..	8.31	8.31
Transformer substations ..	54	65
Maximum demand in K.Ws.:		
Vellore	1,580	1,690
Ranipet	1,500	1,680

The Company's tariff rates were slightly varied during the year owing to introduction of decimal coinage system.

The villages of Krishnavaram, Kaniambadi, Nelvoy, Pangalathu, Tengalatham, Puttuthakku, Kannikapuram, Narayanavaram and Kilminnal have been electrified during the year under review.

The profit and loss account shows a profit of Rs. 80,878 (Rs. 96,910) after providing for reserve for depreciation as per Supply Act Rs. 1,12,661 (Rs. 1,03,886), provision for income-tax, super-tax and wealth tax Rs. 40,000 (Rs. 30,000), provision for development reserve Rs. 41,440 (*nil*), provision for staff gratuity reserve Rs. 15.000 (Rs. 500) and provision for contingent reserve ½ per cent. Rs. 8,260 (Rs. 6,888). To this is added the profit brought forward from previous year after payment of dividends on ordinary and preference shares for 1956-57 of Rs. 2,39,655 (Rs. 1,45,068). After transferring to consumers' fund account Rs. 50,625 (*nil*) and taking into account the refund from Income-tax Department Rs. 3,171 (Rs. 45,177) there is a total available balance of Rs. 2,73,079 (Rs. 2,87,155). The interim dividend of 3 (*nil*) per cent. less tax on preference shares and 5 (*nil*) per cent. tax free on ordinary shares declared for 1957-58 absorbs Rs. 23,750 (*nil*). Out of the balance of Rs. 2,49,329 (Rs. 2.87,155) the directors now recommend the payment of a final dividend of 3 (6) per cent. less tax on preference shares and 5 (10) per cent. tax free on ordinary shares for the year ended 31st March 1958 which will absorb Rs. 23,750 (Rs. 47,500) leaving a balance to be carried forward of Rs. 2,25,579 (Rs. 2,39,655).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Gross block	32,88,648
Reserves ...	7,51,747	*Less*—Depreciation ...	8,56,797

		Miscellaneous expenditure and losses	6,604
Rs.	33,15,532	Rs.	33,15,532

Grob Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The following table shows the total crop made and the quantities sold for export and internal consumption:—

Gardens			*In Calcutta for export* Maunds	*In Calcutta for internal consumption* Maunds	*Total* Maunds
Doyang ..	..	..	4,848	1,672	6,520
Desoke ..	..	..	5,312	544	5,856
Kanu ..	..	..	9,195	2,085	11,280
Total	..		19,255	4,401	23,656

The average price per lb. realised was Rs. 2.18 nP as compared with Rs. 2.40 nP per lb. obtained for the previous season's crop of 24,712 maunds.

The revenue account shows a profit of Rs. 8,42.127 (Rs. 15,96.573) and after deducting from this: gratuity and pension Rs. 3,627 (Rs. 5.257), staff commission and bonus Rs. 37,805 (Rs. 1,10,601), managing agents' remuneration Rs. 66,591 (Rs. 1,45.803), provision for taxation Rs. 2,35,000 (Rs. 4,75,000), depreciation Rs. 1,75,654 (Rs. 1,28,426), initial contribution to superannuation fund Rs. 18,315 (*nil*), short provision of labour bonus, 1953-54, 1955 and 1956 Rs. 4,795 (Rs. 18,380 for 1953-54), there is a balance of Rs. 3,00,340 (Rs. 6,55,640 after deducting loss on sale of machinery and other minor items). To this amount is added the profit on sale of machinery Rs. 3,950 (Rs. 3,500), adjustment of Managing Agents' commission Rs. 2,012 (*nil*), stores written off in earlier years, now written back Rs. 6,628 (*nil*) and excess provision of liabilities in respect of previous year, no longer required Rs. 5,282, making a total of Rs. 3,18,212 (Rs. 6,63,181 after adding interest on investments Rs. 3,046 and dividends forfeited Rs. 995). After adding to this the adjusted credit balance of Rs. 1,04,298 (Rs. 38,571) brought forward from the previous year, there is a credit balance of Rs. 4,22,510 (Rs. 7,01,752) on profit and loss account. An *ad-interim* dividend of 25 (10) per cent. for season 1957, without any deduction for income-tax paid by the Company was declared by the directors payable to the shareholders registered as on 6th October 1958, and after deducting the amount of this dividend, viz., Rs. 2,75,681 (Rs. 1,10,272) there remains a credit balance of Rs. 1,46,829 (Rs. 5,91,480) on profit and loss account which is proposed to be dealt with as follows:—

Place to buildings and machinery reserve account Rs. 50.000 (Rs. 2,50,000) and carry forward Rs. 96,829 (Rs. 93,367 after paying a final dividend of 22½ per cent. absorbing Rs. 2,48,113). The directors do not recommend payment of any further dividend in respect of 1957 and the above *ad-interim* dividend should be considered as final.

Teen Ali Tea Co., Ltd.—In accordance with resolutions passed at meetings of the shareholders of the two Companies held on the 1st day of September 1958, and by virtue of the order of the Calcutta High Court promulgated on the 15th day of September 1958, the entire undertaking of the Teen Ali Tea Co., Ltd. was amalgamated with that of the Grob Tea Co., Ltd. with effect from 1st January 1958. The financial effect of the amalgamation will be reflected in the Grob Company's accounts for 1958. For the purpose of this report it is sufficient to record the Teen Ali Tea Estate (531.70 acres) is now regarded as a division of the Grob Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11.02.725	Gross block	42,29,083
Reserves ...	20,32,810	*Less*—Depreciation ...	10.39.875

Kumardhubi Fireclay and Silica Works, Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1957.

The profit and loss account after providing for all charges and making provision of Rs. 5.71,727 (Rs. 3.70,821) for taxation on income, Rs. 1,16,738 for wealth tax and Rs. 4,68.676 (Rs. 1,93,258) for depreciation shows a profit of Rs. 8 82.121 (Rs. 7,40,020). To this amount is added the balance brought forward from the previous year of Rs. 41,098 (Rs. 49.404) making a total of Rs. 9 23,219 (Rs. 7 89,424). From this is deducted the amount transferred to reserve for tax contingency Rs. 87 000 (Rs. 55.000), to development rebate reserve Rs. 90.500 (Rs. 1 88,500), debenture redemption reserve Rs. 1 00.000 (*nil*) and to capital redemption reserve fund (under Section 80(1)(d) of the Companies Act, 1956) Rs. 2,00,000 (Rs. 1.75.000 to plant renovation reserve) leaving an available balance of Rs. 4 45.719 (Rs. 3.70.168). The directors propose to dispose of this amount as follows:—

By confirming the interim dividend upto 8th March, 1957, paid in March, 1957, on the preference shares of 7 per cent per annum without any deduction for income-tax payable by the Company Rs. 2 573 (Rs. 14.000), by payment of a dividend on the redeemable preference shares of 5½ per cent. per annum, after deduction of income-tax payable by the Company Rs. 15.070 (Rs. 15.070), by payment of a dividend on the ordinary shares at the rate of Re. 1.25 (Re. 1.00) per share without any deduction for income-tax payable by the Company Rs. 3 75,000 (Rs. 3 00.000) and by carrying forward Rs. 53,076 (Rs. 41,078).

General.—The second stage of the expansion in the Firebrick Section was completed at the end of 1957 which has increased the Company's firebrick manufacturing capacity to 72,000 tons per year. The silica and sillimanite brick production stands at about 24,000 tons per year and the Company's order book is very full.

At the same time competition has undoubtedly increased with the commissioning of several new refractory works during the course of the past year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34 00.000	Gross block	1,59 89.144
Debentures	20.00 000	*Less*—Depreciation ...	48.82.827
Reserves ...	81,11.435		
Provision for taxation*	4.50.542	Net block ...	1,11,06.317
Liabilities	44,45.403	Work-in-progress ...	7.422
Profit and loss account ...	53,076	Stock-in-trade	18 09.287
		Stores and spare gear	14,57,420
		Debts, deposits and advances ...	38.41.043
		Investments	41.533
		Cash ...	1 97.434
Rs.	1.84.60.456	Rs.	1.84.60.456

*Includes provision for wealth tax=Rs. 57.214 for 1956 and Rs. 59,524 for 1957.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

JAPAN'S TEXTILE INDUSTRY TODAY

(*Concluded from page 970*)

increase in consumption proportionately smaller than the increase in value. In short, the rate of consumption would decline.

In the export field, it is necessary to raise the unit price of textiles by improving quality to meet the growing industrialisation of less advanced nations and the larger exports of cotton textiles by Communist China. To this end, detailed studies should be made for the promotion of exports to the United States and Europe.

(b) *Synthetic Textiles*:

It is obvious that the importance of helping the development of synthetic textiles is something that cannot be argued over. This is important from the point of view of the place this industry occupies in the nation's industrial structure with regard to foreign exchange expenditures, export potential and the fine quality of the industry's products. The problem is how to help the industry develop in an orderly fashion.

(c) *Natural Textiles and Chemical Textiles*:

Two main views are currently being expressed on this matter. One side believes that it is important to check imports of natural fibres in order to foster the growth of the chemical textile industry. The other side argues that it should be left to the consumers to decide which they prefer.

The solution here might be the encouragement of more mixed products.

(d) *Problem of Production Facilities*:

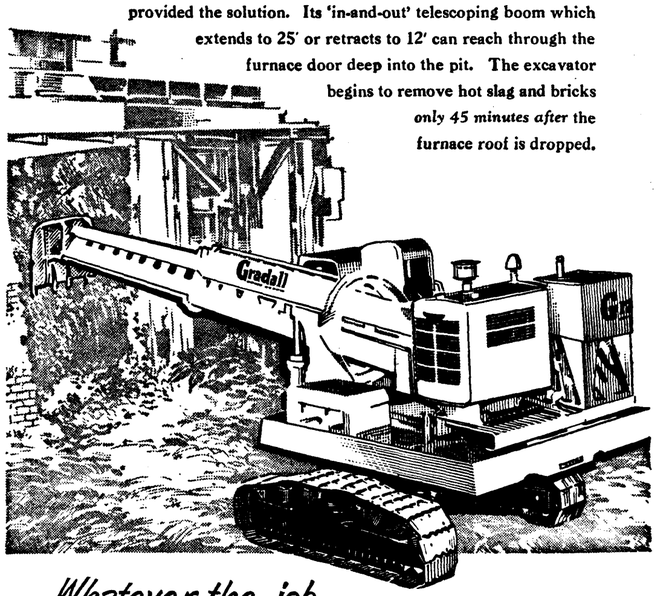
(1) At present, the installation of machinery is covered by extremely detailed legal regulations. However, it is considered necessary to ease these restrictions in order to give textile firms more "elbow room."

For example, the merger of cotton or rayon mills by the rational regrouping of existing "villages" (groups of mills specialising in cotton, wool, rayon, etc. are known as "villages" in the Japanese trade). In connection with this, there is also room left for restudying the application of the automatic approval system with regard to imports of raw materials.

(2) There is still the problem of whether to continue the existing method of production control or whether a completely new fundamental measure should be adopted. There is also the problem of how to regulate production facilities in different fields of the industry. Existing regulations must be extended and production controls on rayon yarn and staple cotton should be reconsidered if necessary. Again, the problem of how to rationalise production by concentrating output in the most modern mills must be solved. Together with this, there is still the question of how to liquidate excess facilities.—*Japan Trade Bulletin.*

Too hot to handle?

Quick cleaning of slag pits has always been a big problem for steel mill operators. Normally the pits must be allowed to get sufficiently cool before slag can be removed—this involves a waste of almost three hours of costly work-time. As on many other jobs the versatile GRADALL has now provided the solution. Its 'in-and-out' telescoping boom which extends to 25' or retracts to 12' can reach through the furnace door deep into the pit. The excavator begins to remove hot slag and bricks *only 45 minutes after* the furnace roof is dropped.



Whatever the job

Gradall

will handle it!

Notices

THE PHALTAN SUGAR WORKS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-seventh Annual General Meeting of THE PHALTAN SUGAR WORKS LIMITED will be held on Friday, the 9th day of January, 1959 at 5 p.m. (S.T.), at the registered office of the Company, Sangli Bank Building, 296, Bazargate Street, Fort, Bombay-1, to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1958.
2. To declare a Dividend.
3. To elect a Director in place of Shri Rasesh N. Mafatlal who retires by rotation but being eligible offers himself for re-election and to consider and if thought fit to pass the following resolution as a Special Resolution of which Special Notice has been received by the Company.

RESOLVED:

That pursuant to the provisions of Section 261 of the Companies' Act, 1956, Shri Rasesh N. Mafatlal who retires by rotation and who is an associate of the Managing Agents, be and is hereby reappointed a Director of the Company.

4. To elect a Director in place of Shri Himatlal Kantilal who retires by rotation but being eligible offers himself for re-election and to consider and if thought fit to pass the following resolution as a Special Resolution of which Special Notice has been received by the Company.

RESOLVED:

That pursuant to the provisions of Section 261 of the Companies' Act, 1956, Shri Himatlal Kantilal who retires by rotation and who is an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

5. To appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,
A. Y. JOSHI,
Secretary.

BOMBAY, *Dated, 1st December,* 1958.

Notes:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Transfer Books of the Company will be closed from the 22nd of December, 1958 to the 6th of January, 1959, both days inclusive.

The Dividend when declared will be payable through the United Commercial Bank Ltd., Fort, Bombay, on and after the 16th day of January, 1959 Dividend Warrants will be posted to those shareholders whose names stand on the Company's Register on the 22nd of December, 1958.

ANNEXURE TO THE NOTICE DATED 1st DECEMBER, 1958.

(Explanatory Statement under Section 173 of the Companies' Act, 1956.)

To

The Shareholders of
The Phaltan Sugar Works Ltd.,
Bombay-1.

Dear Sirs/Madames

In conformity with the Companies' Act, 1956, the following Explanatory Statement as required under Section 173 of the said Act, sets out all material facts relating to the Special business mentioned in the accompanying notice dated 1st December, 1958.

In respect of item No. 3, it is notified that Shri Rasesh N. Mafatlal is an associate of the Managing Agents and hence under Section 261 of the Companies' Act. he cannot be re-appointed as a Director on retirement by rotation except by a 'SPECIAL RESOLUTION' passed by the Company and hence the necessity for passing the resolution set out in the aforesaid notice. A Special Notice to move the resolution has been received by the Company from a member as required by the said Section 261. As it is in the interest of the Company that the Board should continue to receive the benefits of his advice, it is desirable that Shri Rasesh N. Mafatlal be re-appointed as Director of the Company.

In respect of item No. 4 it is notified that Shri Himatlal Kantilal is also an associate of the Managing Agents and hence under Section 261 of the Companies' Act, he cannot be re-appointed as a Director on retirement by rotation except by a 'SPECIAL RESOLUTION' passed by the Company and hence the necessity for passing the resolution set out in the aforesaid notice. A Special Notice to move the resolution has been received by the Company from a member as required by the said Section 261. As it is in the interest of the Company that the Board should continue to receive the benefits of his advice, it is desirable that Shri Himatlal Kantilal be re-appointed as Director of the Company.

By Order of the Board of Directors,
A. Y. JOSHI,
Secretary.

BOMBAY, *Dated 1st December,* 1958.

THE DEHRI ROHTAS LIGHT RAILWAY COMPANY, LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Shareholders of the Company will be held on Tuesday, the 30th December, 1958 at 11.00 a.m., at the Registered Office of the Company at Dalmianagar to transact the following business:

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1958.
2. To declare Dividend of Re. 1 per share free of Income-tax.
3. To elect a Director in place of Shri S. K. Bagla who retires by rotation but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock and Lewes, retiring Auditors, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 25th December, 1958 to 30th December, 1958, both days inclusive.

INSURANCE

(Concluded from page 974)

companies in which it has invested. It is needless to add that, if these functions are to be carried out satisfactorily, the department concerned should be composed of personnel having expert knowledge of company finance and the intricate working of the stock exchange mechanism. In order to obtain the right type of men, attractive terms should be offered and no sense of false economy should stand in the way of men with talent and training offering their services to the Corporation. So far the Corporation seemed to have pinned its faith on honorary advice. There is no harm in seeking disinterested advice got gratis on matters of broad policy but the Corporation should develop its own investment intelligence for guiding its investment operations.

How does the present-day cost of life insurance in Britain compare with that in pre-war days. One would naturally think that it must be much higher. But actually it is not so. According to Mr. C. F. Wood, the U.K. Manager of the Manufacturers Life Insurance Company, life insurance now is cheaper than in pre-war days. Presently, his company is offering a £1,000 whole-life no-profit policy to a male aged 30, for £14 2*s.* per annum, which rate is lower than the 1939 rate of £16 4*s.* The policy covers all risks, including aviation and war. The premium had been brought down in successive stages from a war-time high of £17 16*s.* 7*d.*

The tendency in the U.K., according to Mr. Wood, is to prefer endowment policy. He said that much greater cover could now be obtained for a comparatively small rise in premium on a whole-life policy with a guaranteed maximum protection.

At the extraordinary general body meetings of the Andhra Insurance Co., Ltd., and the Hindusthan Ideal Insurance Co., Ltd., held at Masulipatam, on 14th November 1958, resolutions were passed unanimously by the shareholders of both the Companies approving the amalgamation of the Andhra Insurance Co., Ltd., with the Hindusthan Ideal Insurance Co., Ltd. The main features of the scheme of amalgamation are that the Hindusthan Ideal Insurance Co., Ltd., will take over all the assets and liabilities of the Andhra Insurance Co., Ltd. In return, the Hindusthan Ideal Insurance Co., Ltd., will pay to the shareholders of the Andhra Insurance Co., Ltd., in exchange for their Rs. 50 paid-up share, one share of the Hindusthan Ideal Insurance Co., Ltd., fully paid-up share of Rs. 25 plus a cash of Rs. 27.50 nP.

DEMAND FOR MONEY PICKS UP

(From Our Own Correspondent)

BOMBAY, 10*th December*

The short-term money market experienced a slight pull during the week under review, thanks to a broadening of demand for bank credit. There were large investments in Government securities by some banks during the past few days. This, together, with subscriptions to Treasury Bills, had absorbed much of the surplus funds with banks, so that, when demand for credit picked up this week, banks stepped into the market as borrowers, while lenders were reserved. The result was that inter-bank call money rate hardened from 1 per cent. to 1½ per cent. among the Exchange and big Indian banks. There were some enquiries even at 1¾ per cent. The rate among the smaller Indian banks moved up to 2¼-2½ per cent. from 2-2¼ per cent. There was, however, no change in other rates. House money at seven days' notice continued to be bid at 3¼-3⅜ per cent. and short-term deposits at 3½-4 per cent.

The aforesaid conditions in the short-term money market are reflected in the response to this week's Treasury Bill sales. The total amount offered was Rs. 3.95 crores, as against Rs. 4.55 crores last week, the amount invited during both the weeks being the same, namely, Rs. 3 crores. Tenders at Rs. 99.395 and above were accepted in full and those at Rs. 99.390 allotted approximately 40 per cent. Lower tenders were rejected. The average rate of accepted tenders was Rs. 2.420 per cent. per annum, which was only 0.003 per cent. lower than that for the previous week. Maturities during the week aggregated Rs. 3 crores. Tenders for the next week are unchanged at Rs. 3 crores. Sales of intermediate Treasury Bills held between the 3rd and 6th inst., amounted to Rs. 65 lakhs and further sales will be held this week at Rs. 99.411 per cent., that is, at the same rate as in the previous week.

An expansion of Rs. 27.05 crores in notes in circulation is shown by the Reserve Bank of India statement for the week ended 5th December 1958. Notes held in the Banking Department are lower by Rs. 29.20 crores. The drop of Rs. 2.16 crores in total notes issued is covered by a similar shrinkage in rupee coin. While foreign securities are unchanged, balances held abroad (in the Banking Department) show an increase of Rs. 2.38 crores. The Central Government's deposits have gone up by Rs. 1.99 crore, while deposits of other Governments and banks have dwindled by Rs. 11.96 crores and Rs. 15.15 crores, respectively. There has been an increase of Rs. 3.04 crores in loans and advances to Governments, but investments are lower by Rs. 3.89 crores.

The Scheduled banks' statement for the week ended 28th November 1958 discloses a reversal of the upward trend in bank deposits noted for several weeks past. Thus, demand deposits have declined by Rs. 3.40 crores and time deposits by Rs. 9.29 crores. Inter-bank borrowings have gone up by Rs. 2.19 crores. There has been a rise of Rs. 2.55 crores in advances, while bills purchased and discounted are lower by Rs. 1.24 crore. Investments are higher by Rs. 3.62 crores. While cash balances have shrunk by Rs. 13.34 crores money at call and short notice shows an increase of Rs. 1.77 crore.

The Gilt-edged market ruled firm during the week under review, with an expansion in business too. There were good enquiries for all dated issues, mainly from the banks. This, together with the scarcity of stocks and the rise in the Reserve Bank's selling price (ranging from 5 nP to 30 nP) of several issues, imparted a bullish sentiment. The following table shows the securities and the prices thereof which were put up by the Bank during the week (from the 4th to 10th inst.):

Securities	*From*	*To*
	Rs.	Rs.
3½ per cent. 1967	99.05	99.15
3½ „ 1968	98.75	98.85
3½ „ 1967	100.60	100.80
3½ „ 1968	100.40	100.60
3½ „ 1974	98.30	98.35
4 „ 1972	100.90	101.20
4 „ 1973	100.65	100.90

3 per cent. 1986 Conversion Loan was unchanged at Rs. 73.20, while 3 per cent. 1970-75 hardened by 5 nP to Rs. 90.50. 3 per cent. 1966-68 held its own at Rs. 94, but proximity of interest payment attracted demand in 3 per cent. 1964, which moved up by 20 nP to Rs. 97. 3 per cent. 1963-65 was maintained at Rs. 96.80 and 3 per cent. 1959-61 at Rs. 99.70. 3½ per cent. 1961 showed no change at Rs. 100.10, while 3½ per cent. 1963 put on 5 nP to Rs. 100.05. 3½ per cent. 1965 shed 5 nP to Rs. 99.80. 4 per cent. 1960-70 gained 5 nP to Rs. 100.75, following the stepping up of the Reserve Bank's selling price of other 4 per cent. issues.

State loans, too, were in good shape. Almost all the 4 per cent. and 4½ per cent. issues were in good demand. The L.I.C. was said to have taken considerable interest in these loans. Bombay 4½ per cent. 1970 and 1971 each rose by 5 nP to Rs. 101 and Rs. 100.85, respectively. 4 per cent. 1970 added 5 nP to Rs. 98.75 and 1963 10 nP to Rs. 100.30. West Bengal 4½ per cent. 1970 gathered 10 nP to Rs. 100.40. 4 per cent. 1968 and 1967 rose by 30 nP each to Rs. 99.60 and Rs. 99.70, respectively. 4 per cent. 1964 was higher by 10 nP at Rs. 100.10 and 1963 by 20 nP at Rs. 100.25. Madras 4½ per cent. 1970 gained 15 nP to Rs. 100.50. 4 per cent. 1967 and 1968 each rose by 20 nP to Rs. 99.90 and Rs. 99.80, respectively. Among U.P. loans, 4½ per cent. 1970 was marked up by 25 nP to Rs. 100.50, 4 per cent. 1968 by 10 nP to Rs. 99.60 and 1967 by 10 nP to Rs. 99.70. 1964 also moved up by 10 nP to Rs. 100.10 and 1963 by 25 nP to Rs. 100.25.

In the foreign exchange section, the rupee was a bit erratic in terms of the U.S. dollar. Thus, the banks' selling rate of dollars, after moving up from Rs. 477.50 to Rs. 477.75, closed at Rs. 477.50 per $100, while their buying rate rose from Rs. 474 to Rs. 474.25 per $100. This is in consonance with the trend of sterling abroad. In New York, spot sterling moved between $2.80-5/16-2.80⅜ and $2.80.7/32-2.80.9/32, before closing at $2.80.9/32-2.80.11/32 with no change over the week. Three months' forward declined from $2.80.1/32-2.80.3/32 to $2.80-2.80.1/16, but gained again yesterday to $2.80.3/32-2.80.5/32. Transferable sterling fell over the week from 279.45-279.55 cents to 279.40-279.50 cents.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 10*th December*

The bullion market ruled irregular during the week under review. Thus, it opened the week on a firm note and, after ruling easy in the subsequent three sessions, staged a recovery yesterday. Today, however, the market developed a sagging tendency. The initial firmness was due to renewed speculative buying in silver on fears of scarcity in supplies following the ban on exports of Tibetan coins. Consequently, prices registered an improvement. The upward trend was checked on Friday when local and upcountry bulls were inclined to book profits. There was a further drop in prices on Saturday and Monday, owing to larger arrivals. But yesterday, silver met with good buying support induced by the virtual cessation of arrivals of Tibetan silver coin and expectations of better demand in the coming months. The white metal was somewhat subdued today, thanks to lack of follow-up support.

Gold ruled fully steady practically throughout the week. Despite rumours of large arrivals—estimated at 3,000 tolas—of contraband gold and reported sale of 4,000 tolas by a leading spot house, prices were held firm. For operators were generally inclined to believe that the long-term outlook was bullish. This view was based on the considerably reduced smuggling of gold from Pakistan side and prospects of good seasonal demand in the months ahead. Today, however, there was a slight decline in prices on technical considerations.

Backed by excellent bull support, forward silver (29th December settlement) spurted from Rs. 193-2 last week-end to Rs. 194-6 on the opening day. After gradually receding to Rs. 192-12 on Monday it recovered to Rs. 194-2 yesterday but finished easy at Rs. 193-8 today. The second settlement (end of January) opened the week at Rs. 194-11, as against Rs. 193-15, and advanced to Rs. 195-4. After declining to Rs. 193-10 on Monday, it recovered to Rs. 195-1 yesterday but moved down again today, the closing rate being Rs. 194-7.

Ready silver improved from Rs. 192-1 to Rs. 193-1 before closing at Rs. 192-6. The daily average arrivals were of the order of 25 bars, while the offtake was 12 bars per day on an average. The floating stocks of silver are reported to be 1,400 bars.

Gold for forward delivery (27th December settlement) firmed up from Rs. 113-5 to Rs. 114-2 yesterday. It, however, eased today, the closing rate being Rs. 113-12. The second settlement (end of January) opened at Rs. 113-9 and, after advancing to Rs. 114-6 yesterday, wound up the week lower at Rs. 114.

Ready gold was well supported, the quotation rising from Rs. 113-5 last week-end to Rs. 114 yesterday. Today, however, it encountered some selling and declined to Rs. 113-9. Ready was quoted at a discount of As. 3 under the 27th December settlement; on Wednesday last, it will be recalled, both ready and forward were quoted on par. The daily average arrivals and offtake were 3,800 tolas and 2,100 tolas, respectively. The floating stocks of gold are estimated at 36,000 tolas

Spot silver in London moved down further from 76¾*d.* to 76⅝*d.* and forward from 76½*d.* to 76⅛*d.* Gold prices, however, rose from 250*s.* 4½*d.* to 250*s.* 5¾*d.* The price of silver in New York was unchanged at 90½*c.*

The following comparative table shows at a glance the trend of the market during the week under review:

	10-12-58	Highest	Lowest	3-12-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 8*th December*

During the week under review, the hides and skins market was rather stable. There was a rise in the volume of buff as well as dead sukti cows. The demand for these was evenly matched by new supplies. There was a particularly heavy demand for upper grade cow which is subject to chrome tanning. The Madras dealers were active in the sector of lighter cow and goat. The main transactions were faltered by the local tanners.

The latest quotations were: Wet salted cow, 1st grade Rs. 375 and 2nd grade Rs. 350 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat, 1st grade Rs. 350 and 2nd grade Rs. 300 per 100 pieces; sheep, 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 10*th December*

The firm trend witnessed in the cotton futures market last week was completely reversed during the week under review. The market in fact ruled distinctly easy. Reports of heavy arrivals of new crop cottons in the Punjab, C.P., and Berar prompted large-scale bear selling. There was also nervous bull liquidation. Prices consequently suffered a sharp setback. Rumours of a possible devaluation of the Pakistan rupee adversely affected sentiment. It was feared that, should this materialise, Pakistan cotton, which was already cheaper than comparable Indian growths, would be made still cheaper. Easier advices from the spot market and a slowing down of mill activity also imparted weakness to the market. Over the week, cotton futures prices came down by Rs. 10.75.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 639, and after making minor gains on short-covering, met with heavy selling and declined to Rs. 626.75 yesterday. Commencing today's session at Rs. 627.50, the contract improved fractionally before finishing at Rs. 626.50. The net loss over the week was Rs. 10.75. The following table indicates the trend of prices:

(In rupees per candy of 784 lbs.)

	10-12-58 *High*	*Low*	3-12-58
I.C.C. Moglai Jarilla (March 1959) ...	626.50	642.50	625.25 637.25

The spot section was active early in the week and prices of staple varieties were well maintained. Towards the close, however, there was a reaction. The mounting volume of new crop arrivals exerted a downward pressure on prices. Mills preferred to keep off the market in anticipation of a further fall in prices. The main varieties which attracted attention of mills were Vijay, Khamgaon, 197/3, 0394, Laxmi (old crop), Rajapalayam, Berar, Surti, etc.

In the export section, rumours of devaluation of the Pakistan rupee had a dampening effect. Some stray business were reported in Bengal *Deshi* with Japan. Prices of Indian exportable varieties were still out of parity with overseas buying ideas.

Of the 148,500 bales of 1957-58 or earlier crop allocated for export on a first-come-first-served basis, about 84,100 bales are reported to have been passed for shipment up to 2nd December. Of the new crop quota of 4,025,000 bales on the first-come-first-served basis and 75,000 bales to the co-operative societies, sales have been registered for only about 28,800 bales while only 2,569 bales have been passed for shipment.

The import section was thick with rumours of import quota for Sudanese and Egyptian cotton. It was reported that a sub-committee of the Cotton Textile Consultative Board had already urged the Government of India to permit additional imports of these qualities. The probable quantity of the quota was placed at round 30,000 bales. About half this quantity, it was said, would be earmarked for import under the export incentive scheme for cotton textiles and the balance on quota basis.

Meanwhile, certain mills in Ahmedabad are reported to have urged the Government to issue further quotas for the import of foreign cotton so as to check the rise in price of indigenous cotton and to augment supplies of foreign cotton. Stocks of foreign cotton with mills, as on 30th September 1958, were only 117,029 bales, as against 213,055 bales on the same date last season.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 620 (610); Berar Jarilla 665 (680); Khandesh 750 (750); Vijay 865 (885); Jaydhar 850 (870). *Delivery contracts*: Bengal 600 (600); Mathia 578 (585).

The Karachi cotton futures market suffered a setback during the week under review. Easy upcountry advices, following larger arrivals, and slack foreign demand adversely affected sentiment. The recent withdrawal of the export incentive scheme also acted as a damper. Even rumours of devaluation failed to lift prices. N.T.R.G. January declined from Rs. 65-8 last week-end to Rs. 64-7-6 while the March position shed Re. 1-1-6 over the week to Rs. 63-3-6.

Since the beginning of the season till 27th November, export sales of old and current crop Pakistan cotton aggregated about 112,000 bales, as compared with 152,000 bales during the corresponding period in the last season, and about 300,000 bales two years ago. So far during this season, Far Eastern countries, principally Japan, China and Hong Kong are said to have taken 82,000 bales in all, as against 93,260 bales in the same period last season. European Continental countries accounted for 16,370 bales, as against 51,000 bales in the previous season. Of this season's sales, about 72,000 bales were staple varieties and 40,000 bales *Deshi* cotton, waste and linters.

Quiet conditions prevailed in the Alexandria cotton futures market. In the absence of any new development, trading interest was at a low ebb. Prices tended to decline in slow dealings. The following are the latest available quotations—in tallaries per lb.—from Alexandria:

Karnak: January 72.01; March 72.09. *Ashmouni*: December 62.25; March 62.70.

Cotton futures values in Liverpool tended to look down during the week. Commission House liquidation in the near deliveries and hedge selling in the more forward positions led to a slight easing of values. Buyers were keeping off the market in anticipation of lower prices. Both the American and American type contracts eased. Sudan contracts also declined on fresh selling. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing quotation:

American cotton one inch staple contract: December-January 22.70 (22.95); March-April 22.65

(22.60); May-June 22.10 (22.19); July-August 21.30 (21.40). *American cotton mixed growths contracts*: December-January 23.75 (23.90); March-April 22.65 (22.80); May-June 22.10 (22.29); July-August 21.15 (21.35). *Sudan*: January-February, May-June, July-August 26.26 (26.50).

The Crop Reporting Board of the U.S. Department of Agriculture, in its sixth and preliminary final report, issued on the 8th inst., estimated the 1958-59 cotton crop as on 1st December at 11,581,000 bales (of 500 lbs.). This compares with last month's estimate of 11,764,000 bales and last season's final output of 10,964,000 bales. The yield per acre is put at 469 lbs. as against 476 lbs. last month and last season's final yield of 388 lbs. The area under cultivation, as on 1st July, is placed at 12,375,000 acres, as against last month's estimate of 12,402,000 acres and last season's actual figure of 14,066,000 acres. The area for harvest is estimated at 11,858,000 acres, as against 11,960,000 acres last month and last season's 13,558.000 acres. The acreage abandoned is estimated at 4.2 per cent., as against last month's estimate of 3.6 per cent. and last season's 3.4 per cent.

The official estimate was below trade estimates. The average of the estimate of 54 members of the New York Cotton Exchange was 11,725,000 bales. The lower crop forecast influenced some speculative buying which imparted strength to the New York cotton futures market, which was easy during the early part of the week. A part of the earlier losses was made good. The week's closing was still well below last week-end quotations.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	9-12-58	2-12-58	25-11-58
Spot	35.75	36.00	36.10
December	34.40	34.96	32.50
March	35.02	35.53	36.16
May	34.86	35.46	36.01

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 10*th December*

In contrast to the firm trend noted last week, the yarn market ruled easy during the week under review. As fresh support was lacking, transactions put through were considerably restricted, and prices tended to move down. Art silk yarns were particularly depressed, thanks to selling pressure from indigenous manufacturers and reports regarding heavy arrivals of imported yarn. The upcountry consumers were inclined to postpone purchases on expectations of a further fall in prices. In sympathy with art silk yarn, staple fibre yarn also suffered a setback. The reports of encouraging offtake of 2/40s staple fibre fabrics received earlier in the week from important centres like Surat, Amritsar and Ludhiana were discounted later. Cotton yarns ruled dull with the exception of superfine counts which met with renewed buying support.

Among art silk yarns, 120 Italy fell by 19 nP to Rs. 5.25. 150 Italy dropped 12 nP to Rs. 5.25. 120 Japan receded by 6 nP to Rs. 4.75. 150 Japan lost a like amount to Rs. 5.31 Among indigenous yarns, National Rayons 120 bright cones first grade moved down by 9 nP to Rs. 4.53. 150 bright cones first grade were neglected at Rs. 4.44.

Staple fibre yarn (40×2) February delivery encountered heavy selling and slumped by Rs. 13 to Rs. 626. December delivery fell by Rs. 11 to Rs. 619. In the spot section, 40×2 Citys, Kohinoors, and Centurys eased by 6 nP each to Rs. 3.24, Rs. 3.31 and Rs. 3.28, respectively. Among foreign yarns, Fujis were marked down by 44 nP to Rs. 9.06. Paramounts were stagnant at Rs. 9.56.

In the cotton yarn section, sixty counts Finlays climbed up by a rupee to Rs. 68. Raghuvamshis were firm at Rs. 62. Ten counts, Podars were quiet at Rs. 12.19, as also twenty counts Moderns at Rs. 16.31. Thirty counts Hinds, however, went up by 25 nP to Rs. 19. Forty counts Moderns changed hands at Rs. 25.37, same as last week, while Minaxis shed 6 nP to Rs. 24.25.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago:

	10-12-1958	3-12-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 Japan (per lb.)	4.75	4.81
150 Japan (per lb.)	5.31	5.37
120 Italy (per lb.)	5.25	5.44
150 Italy (per lb.)	5.25	5.37
Staple fibre yarn (per case of 200 lbs.)—		
40×2 December	619.00	630.00
40×2 February	626.00	639.00
40×2 Kohinoor (per lb.)	3.31	3.37
60×3 Century (per lb.)	3.23	3.34
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.31	16.31
30s Hind	19.00	18.75
40s Minaxi	24.25	24.31
60s Finlay	68.00	67.00
80s Modern	—	—

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 10*th December*

The local oilseeds market, after presenting distinctly firm trends in the earlier part of the week under review, staged a perceptible relapse during the closing sessions. Buoyant conditions prevailed in all seeds and oils, particularly in the cottonseed section until Monday, when they started drifting towards lower levels. Over the week, all sections of the market lost ground.

In the course of a communication addressed to the Chief Commissioner of Exports, the Bombay Oilseeds and Oils Exchange has pointed out that since all quotas for groundnut oilcake expeller variety have been exhausted, further quantities can profitably be exported, if quotas are released immediately. It would appear that during these current winter months in the importing countries, large quantities of oilcake are needed as cattlefeed. At any rate, the world supply position is likely to improve by the end of January next. Therefore, an early decision on the matter will go a long way towards boosting India's exports of oilcake. By means of another communication, the Exchange has pleaded for extending the shipping period of H.P.S. groundnuts and groundnut oil at least upto June 1959.

After opening on a steady note, groundnuts and oils improved on reports of smaller crops, relatively low arrivals and good buying support from local interests. The increase in prices would have been more pronounced but for margin considerations. The market, however, encountered selling pressure subsequently and lost considerable ground. The hopes of a further export quota for expeller variety cakes prevented prices from dropping precipitously. Thus, after improving from Rs. 164.75 on last Wednesday to Rs. 165.12 on Thursday, the groundnut February 1959 contract receded on Saturday to Rs. 164.87 and Rs. 163.37 on Tuesday. Inspired by technical conditions, it recovered today to close at Rs. 163.62. Bold ready witnessed easy conditions, its quotation having lost one rupee over the week to Rs. 32.75. Oil ex-mills, which stood at Rs. 18.25 last week-end, finished on a weak note at Rs. 17.62.

The castorseed section also suffered marked setback over the week. There were rumours of demand for oil from countries of the communist bloc. Owing to lack of any definite orders from abroad, the earlier steady conditions gave way to easier trend. The castorseed May 1959 contract, after fluctuating between Rs. 143.00 and Rs. 144.50, eased today to Rs. 142.75. Ready Madras, in sympathy, rallied by 25 nP to Rs. 29.00 on Thursday, but later on, on heavy selling pressure, declined to Rs. 28.62 today. Oil B.S.S. moved down from Rs. 16.62 to Rs 16.50 on Saturday and recovered to Rs. 16.62 on Tuesday. The quotation declined to close at Rs. 16.37 today.

The tight supply position and good support from crushers lifted linseed prices in the initial sessions. Before the close of the week, the market, however, slumped on scattered selling and lack of fresh buying support. Linseed May 1959 delivery rallied from Rs. 31.37 to Rs. 31.62 on Friday but turned easy in subsequent sessions and sagged to touch Rs. 31.31 today. Bold ready hardened from Rs. 36 to Rs. 37 on Friday, but fell back to Rs. 36 before finishing today at Rs. 36.50. The value of oil, which was ruling at Rs. 18.25, moved irregularly between Rs. 18.00 and Rs. 18.06 and lost 19 nP over the week.

The cottonseed section also receded substantially, but not before witnessing distinctly cheerful conditions. The rally in prices was whipped up by sustained enquiries, both from local and foreign sources, for cakes. The reaction set in by Tuesday, presumably in sympathy with the cotton market. There was mounting selling pressure, particularly by Ahmedabad operators, during the close of the week. After spurting from Rs. 116.25 to Rs. 119.00, cottonseed February 1959, declined to Rs. 115.75 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	10-12-1958	3-12-1958	26-11-1958
Groundnut	Rs.	Rs.	Rs.

SUGAR RISES FURTHER

(From Our Own Correspondents)

BOMBAY, 10*th December*

The firm trend noted in the sugar market last week continued unabated during the week under review and prices registered further improvement. Traders expect that the first release of sugar out of the current season's output to be announced shortly would not be sufficient to meet the normal demand. There are reports that, early this week, the Indian Sugar Mills Association considered the interim report of the Tariff Commission on sugar prices and decided to request the Union Food Ministry to raise the controlled ex-factory prices of North Indian sugar by 50 nP per maund. Meanwhile, the ex-mill values of sugar in the Bombay-Deccan area have gone up by about 50 nP per bag.

Arrivals of sugar by rail into the market were quite large during the week; they aggregated 15.300 bags, as against just 4,200 bags in the previous week.

Medium grain sugar spurted by a rupee to Rs. 109-Rs. 112 per bag. Large grain advanced by a like amount to Rs. 113-Rs. 119. Small grain gained 25 nP to Rs. 108.25.

• • • •

HAPUR, 8*th December*

Sugar prices ruled steady to firm during the past week, as the current quota of 97.000 tons was reported to have exhausted and stocks with the factories were almost nil. Only damaged stocks were being quoted with some of the factories

The next quota out of 1958-59 production is expected to be released shortly and the trade is keenly awaiting the same. Crushing for the season is in full swing and cane supplies are adequate.

The prices of sugar improved in the Muzaffarnagar market also, due to paucity of stocks. The latest prevailing wholesale mill delivery prices were:—Bijnore E29 Rs. 35.72; Kessar D29 Rs. 36; E29 Rs. 35.81; Seohara D29 Rs. 35.31; (damaged) Rs. 34.94.

Sugar prices at Kanpur ruled quiet towards the week-end for want of support. The latest prices were:—Ex-mill controlled Rs. 36-12 per maund; spot per bag C29 Basti Rs. 104; Gola Rs. 102-8; D29 Gola Rs. 101; Burhwal Rs. 101-4; Waletrgunj; Bulrampur and Tulsipur Rs. 100-8; Haragaon and Lakhimpur Rs. 100.

The *khandsari* production is gradually increasing. The producers are buying cane at Re. 1-Re. 1-25 per maund, as against the minimum prices of Re. 1.31 to Re. 1.44 per maund. New *khandsari* is quoted at Rs. 34 and inferior upto Rs. 29 per maund.

Gur ruled steady, due to brisk outside support. Daily arrivals averaged 6,000 to 7,000 maunds and the total from the beginning of the season is about 2.50 lakh maunds, as against 1.65 lakh maunds in the corresponding period last year. Loading facilities are adequate and entire arrivals have been lifted for outside despatch. *Balti* quality is much in request from Gujerat side and is being sold at about Re. 1.25 per maund higher than *dara* quality. The Centre has refused to increase the price of cane for the current season as urged by the State Governments of U.P. and Bihar and the price of cane for 1959-60 season will soon be announced. The prevailing prices of *gur* here on Monday were:—Superior quality Rs. 14.25; *dara* Rs. 14; *balti* Rs. 15.25; *shakker* Rs. 15.50 per maund.

Gur improved fractionally during the week in the Muzaffarnagar market, due to good demand from Gujerat and Madhya Pradesh. Arrivals were at an average of 15,000 maunds daily and prevailing prices were:—*Chaku* new Rs. 14.25 to Rs. 15; *Khurpapar* Rs. 14 to Rs. 14.50; *Panesera* Rs. 14.50 to Rs. 15; *Ladu* Rs. 14.50 to Rs. 16; *shakkar masala* Rs. 18.50 to Rs. 20; *dara* Rs. 14.50 to Rs. 16.25.

Future *gur* ruled firm during the week on vigorous bull support. *Fagun* opened at Rs. 12.75 on Monday last, improved in successive sessions to touch the highest at Rs. 13.72 and was today quoted at Rs. 13.58, due to profit-taking at highest levels.

DUST TEAS DECLINE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 4*th December*

Approximately 900.000 lbs. were on offer in dust Sale 'Y,' which was held on Tuesday, 2nd December. The larger, but nevertheless, fairly useful selection of teas met with only a fair demand. At the easier rates, fibrous sorts were the strongest feature of the sale, but these showed a decline of up to 10 nP. All other descriptions were irregularly 10 to 15nP lower and sometimes more.

London Market: *Sale of 1st December* 1958:—Good tea and plain tea generally 1*d.* to 2*d.* dearer. Others irregular, though prices unchanged.

Sale of 2nd December 1958:—Market steady.

Colombo Market: *Sale of 1st December* 1958: Best available highgrowns strong demand dearer. Best coloury mediums firm. Lowgrowns steady, but others lower following quality. Off grades good demand about 10 c. lower.

Calcutta Market: *Export*:—Fair general demand at continued easier rates. Slightly more enquiry for the few better liquoring C.T.Cs.

Internal:—21,300 packages. Met fair demand, weakening towards close. Orthodox types opened 4 to 6 nP. closed 10 to 12 nP easier. Medium C.T.C. 10 to 15 nP easier. Best about steady.

Export Quota:—With the quota quotation showing a slight upward trend, a fair volume of business was transacted at 2-2½ nP. The market has shown a slight decline and there are buyers at 2 nP.

Forthcoming Auctions:—Dust Sale 'Z' will be held on Tuesday, 16th December 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Sale* 34:—2.250,000 lbs. Useful demand at the bottom. but prices generally 10 to 15 nP lower. Medium irregular and up to 20 nP lower. Better liquoring considerably easy, following quality."

TEA PRICES GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 9*th December*

If further evidence to the industry's claim for tax relief to tea is needed, it has been provided by the continued fall in prices in tea auctions. Appropriately, Mr. J. D. K. Brown, in his presidential address to the annual meeting of the Associated Chambers of Commerce of India held here on Friday last, presented the tea industry's just claim for tax relief, and emphasised the need to remember the history of the export duties on jute goods, with a view to ensuring that a tardy reduction in the duties on tea did not have similar effects. It will be remembered that the jute industry and trade had been representing to Government for nearly two years the need for cancellation of export duties; but the Government turned a deaf ear to these representations and it was not until the duties began to do permanent harm to India's export trade in jute goods that New Delhi acted.

This week's fall in tea prices at the auctions was attributed here to expectations of higher output. Already, in October production was higher by 11.3 million lbs. Pakistan's crop for 1958-59 is estimated to have increased by 20.2 per cent. to 53.5 million lbs. Supplies from other countries, such as China and Africa, are also on the increase in world markets. It should be noted that in the last auctions prices of commonest teas in Chittagong's sale improved.

During last week's auctions for domestic consumption, prices declined in such an alarming way that there were heavy withdrawals. Dusts on offer aggregated 21,096 chests and the general demand was only fair. Orthodox teas gave way by 4 to 6 nP. Best C.T.Cs rose above valuations, while plain and medium C.T.Cs declined by 10 to 15 nP. Darjeelings were irregular, and legg-cut Dooars eased by 6 nP. The quotations were: best Assam C.T.C. Rs. 2.40 to 2.80 (*nominal*), medium Assam C.T.C. Re. 1.90 to 2.15, medium Dooars Re. 1.78, and medium Assam grainy dust Re. 1.80.

Leaf on offer amounting to 3,596 chests met with an easier trend.

In the tea sale held in Chittagong on 3rd December, offerings amounted to 18,228 chests leaf and 4,767 chests dusts, in addition to a supplement of 104 chests. The demand for leaf was good. The strongest feature of the sale was the rise of As. 3 in commonest teas above invoiced prices. High B.O.Ps gained by As. 2, legg-cut fannings by As. 2½ to 3 and green teas by As. 4 to 5. The quotations were: P.F. Rs. 2-0 to 2-0-6; O.F. Rs. 2-3-6, Pek 2-0 to 2-0-6, B.P. Re. 1-14-6 to 1-15, B.P.S. Re. 1-15-6, and B.O.P. Rs. 2-0 to 2-0-6.

In the export auctions held yesterday, offerings amounted to 62,433 chests. At the beginning there was good demand, which weakened as the sales came to a close. Clean black fannings were a strong feature and the price improved. Medium B.Ps and P.Fs were firm at quoted rates. "Teas for price" rose by 2 to 6 nP. Orthodox B.O.Ps and O.Fs eased, but the clean black teas were in good demand and the tippy teas received good attention. Among C.T.Cs, the poorer lots were offered competition to realise higher prices. Legg-cut teas lost by 4 nP. Whole leaf grades were quiet, but the stylish lots were in better demand. Darjeelings were lower. The quotations were: best Assam C.T.C. fannings Rs. 2.20 (nominal), best Assam C.T.C. B.P. Rs. 2.10 (nominal), clean black pekoe Re. 1.95, medium fannings Re. 1.70 to 1.76, plain fannings Re. 1.66 to 1.72, plain B.P. Re. 1.56 to 1.60, and medium B.P. Re. 1.66. Rates include excise duty of 3.125 nP per lb.

SACKINGS IMPROVE SLIGHTLY

(From Our Own Correspondent)

CALCUTTA, 9*th December*

A feature of the jute goods market during the week under review was the fractional recovery in prices of heavy goods following the materialisation of an earlier rumour anticipating a Government order for a fair quantity of B. twills. Nevertheless, B. twills were below the floor, while hessian was throughout maintained above the ceiling. On the other hand, after an earlier recovery, raw jute receded, as bazar stockists showed only limited interest, although mills at one time purchased a fair quantity. Subsequently, the publication of the Government of India's *communique* also affected sentiment. For it claimed that this year's crop would amount to 5.2 million bales, a record production since partition, and only 300,000 bales below the second Plan's target of 5.5 million bales. However, trade circles were not at all optimistic about even this year's result being maintained in the next season, not to speak of realisation of the target, if action was not taken immediately to ensure that the grower got a fair return. For a time, after the Indian Central Jute Committee recommended the fixation of minimum prices for raw jute, prices improved. However, offerings also increased and the improvement could not be maintained. Also, it was believed that the Government of India would not take any immediate action on the Committee's recommendation. For a subcommittee would work out a formula, and it would not be before two months it could submit its report.

Subsequently, trade circles ruled out any possibility of Government fixing minimum prices. The Union Commerce Minister, Mr. Kanungo, in reply to a question in Parliament on the 4th inst., said that competent commissions were opposed to the fixation of floor prices, since such prices would be detrimental to the interests of industry and growers. At the same time, the Minister told his audience of Government's concern over the slump in fibre prices, and his promised statement was awaited with keen interest. Possible alternatives are export or improvement of marketing facilities for growers. Of the two, the first will not find ready acceptance in New Delhi. Co-operative societies might, it is thought here, be the answer. However, even if it is decided to set up co-operative societies and build warehouses in jute centres, it will take some time for these decisions to be implemented. These will not, therefore, affect the current season's marketing, and will mean the continuance of the slump with its possible disastrous consequences on the next season's crop. Market circles are fully appreciative of the Associated Chambers of Commerce of India resolution on export trade calling upon the Government to maintain the country's vital export industries, including jute, by promoting their prosperity. The resolution said that the country must depend upon the established export industries for foreign exchange earnings for years to come. The mover of the resolution emphasised the considerable scope for further expansion of the internal markets for jute goods.

On Tuesday last, the goods market ruled quiet with the U.S.A. purchasing in small lots only. Hessian 40" 10 oz. was lower at Rs. 42.10, as against Rs. 42.25 in the previous day. B. twills sagged to Rs. 94.20 from Rs. 94.40. There was covering demand for ready hessian, but the quantity involved was so small that it was not felt in the market. Thus, on the next day, hessian 40" 10 oz. gave way to Rs. 41.70 and B. twills to Rs. 94.00. However, anticipations of an imminent Government order for B. twills were so strong that B. twills improved to Rs. 94.50, but there being no activity in

hessian, the 40" 10 oz. closed at Rs. 41.50. This was on Thursday. On Friday, however, B. twills recovered to Rs. 95.10. This followed the announcement of Government's intention to buy 16,667 bales B. twills for delivery during this month and 10,000 bales for delivery during January. In the absence of any interest, hessian 40" 10 oz. lost to Rs. 41.15. Over the week-end, B. twills were maintained at Rs 95.10, but hessian 40" 10 oz. sagged further to Rs. 40.90. In the futures market, February B. twills opened at Rs. 95.80 and after moving down to Rs. 95.20 rose to close at Rs. 96.25. Hessian 40" 10 oz. February opened at Rs. 39.48 and declined to Rs. 39.04. Yesterday, B. twills were fractionally higher at Rs. 95.30, following the announcement of a decrease in sacking stocks by 2,000 tons to 75,500 tons at the end of last month. Miscellaneous stock, on the other hand, increased by 500 tons to 12.600 tons, but hessian declined by 500 tons to 17.300 tons. Yesterday, hessian 40" 10 oz. was lower at Rs. 40.45.

Although mills accorded fair support for a time and prices recovered, this was only a temporary feature. The bumper crop reports both in Pakistan and in India were such a heavy drag on the market that it was felt that, without some holding power, a recovery was difficult. Assam bottoms fell to Rs. 21.50 from Rs. 22.00, but recovered to Rs. 22. Mr. Lal Bahadur Shastri's statement in the Lok Sabha yesterday did not reveal anything new. He referred to the minimum prices fixed by the I.J.M.A. for jute goods, the fixation of margins in the futures market, and acceleration of purchases by mills. He thought that prices to cultivators had not moved down to below output-cost, in view of the higher outturn per acre. Further details are awaited in regard to the decision to export a limited quantity of raw jute through the State Trading Corporation. The latest quotations for the different varieties are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	23.50	21.00

Bimli f.a.q.	Rs. 19.00	

LINSEED EASY AT CLOSE

(Messrs. A. Bradley & Co.)

CALCUTTA, 8*th December*

The linseed market showed some improvement in the early part of the week and gains were registered. Seed was higher by As. 4 per maund and oil by As. 8. Prices, however, began to recede towards the close and the undertone of the market at present is quiet. In the oil section, some interest was shown by shippers and a fair turnover was reported. Although Indian prices are still well above U.K. parities, there is some prospect of shipment to Australia.

The latest quotation for ready December is Rs. 26 per maund.

BASE METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, 9*th December*

Thanks to the decline in consumer demand as well as to the fall in prices in foreign markets, prices of base metals in the Calcutta market receded during the week under review. In recent weeks, consumers had bought in a marked way, and hence they had built up a satisfactory stock position in order to carry on up to the time their supplies under the new import licences would be reaching them direct. On the London Metal Exchange, spot copper declined from £228 to £218 per ton and three months from £228 to £221. This was attributed to a fall in demand by buyers on account of Europe. In New York also, the price recorded a downward trend, spot declining to 27.50 cents per lb. from 28.25 cents. Following this, customs smelters reduced their selling price from 29 cents to 28½ cents.

Tin opened here at Rs. 607 and declined to close at Rs. 595. Consumer demand was insignificant, in view of the comfortable supply position with stockists as well as with consumers themselves. However, the fall in the price was made good use of by upcountry consumers who purchased their requirements from here. The price in Bombay fell so rapidly that it not only lost the difference with the Calcutta quotation but even went down lower than the latter. Electrolytic zinc receded from Rs. 97.60 to Rs. 94, and this fall was in consonance with the weakness in London and New York. Moreover, consumer demand was slack. For the same reason, virgin lead eased from Rs. 89.00 to Rs. 86.50.

POOR CLEARANCE IN HIDES

(From Our Own Correspondent)

MADRAS, 8*th December*

Arrivals of tanned cow hides were on the usual scale and clearance was poor, due to unworkable prices quoted by stockists. U.K. trading was small because of the high prices indicated by shippers. Inland demand continued for lower selections of cow hides, and sales to the U.K. were not possible. U.K. importers paid higher prices on cow calf top marks and U.S. buyers on buff calf.

There were several enquiries from the U.S. for tanned goat skins and the market was firmer as a consequence. U.K.-Continent buying was small, due to London auctions in progress. The tanned goat skins market was quiet.

In the December London auctions, prices of goat skins showed an advance of 3*d.* to 9*d.* on light weights and tapered off, as the average weight became heavier. Tanned sheep skins ruled firm.

Shipments during November 1958 were: To the U.K. 2,834 bales tanned cow hides, 212 tanned cow calf, 38 tanned buff hides, 168 tanned buff calf, 762 tanned goat and 393 bales tanned sheep skins; to the Continent: 9 bales tanned cow hides, 1 tanned cow calf, 556 tanned goat and 201 bales tanned sheep skins; to the U.S.: 5 bales tanned cow calf, 148 tanned buff hides, 77 tanned buff calf and 79 bales tanned goat skins; to Japan: 7 bales tanned sheep skins.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 8*th December*

Quietly steady conditions prevailed in the foodgrains market during the week under review. Barring *kharif* grains—maize, *bajra* and rice—the supply position of other grains is tight. Reports from all parts of the country, however, speak of a marked increase in production of all *kharif* grains during the current year and rice production is expected to touch the record figure of 29 million tons, as against 24.8 million tons last year and 28.2 million tons in 1956-57. Price of rice has slumped in many parts of the country. The Orissa and Madhya Pradesh Governments are to purchase rice on behalf of the Centre at Rs. 15 per maund and the U.P. Government is purchasing 1.5 to 2 lakh tons within the State. The Central Government aims at procuring 2 million tons of rice this year

Wheat prices at Hapur registered slight gains during the week to be quoted now at Rs. 24 37 per maund for *dara* quality and upto Rs. 25 50 for farm produce. The Union Government, under the Essential Commodities Act, has notified that the price at which wheat shall be sold in any locality in U.P. shall be the average for three months preceding notification. Such restriction already applies to Punjab. Wheat arrivals are small, but offtake is also slack, consumer demand having shifted to maize and *bajra*. *Rabi* germination report are satisfactory, but now winter rains are needed.

Rice prices ruled quietly easy, thanks to good supply position following ban on exports from the State. The latest prices were:—*Basmati sela* Rs. 28; *mainpuri* Rs. 20; coarse quality Rs. 17 per maund.

Gram ruled quiet. Barley and *bejhar* were unchanged Although the supply position of these grains is tight. demand is also slack. Maize and *bajra* are attracting good consumer demand due to comparative cheapness and favourable season for their consumption. *Jowar* and *guwar* prices were quiet and week-end prices were (in rupees per maund): Gram punjabi 19.37; barley 17.50; *bejhar* 17.25; maize 14.50 to 15; *bajra* 16; *jowar* 14.25; *guwar* white 15.25.

Pulses were depressed during the week. Peas stocks left were small, while *arhar* stocks are running down to be put at 54 *khatties* on Monday, as against 62 *khatties* on last Monday. *Urd* and *moong* prices had a sagging tendency, with arrivals of new crop in the markets and week-end prices (in rupees per maund) were:—Peas *dara* 18; farm 21; peas *dal* 20; *arhar* 22; *arhar dal* 26; *urd* 18.50; *moong* 21 to 22; *massor* 17.75.

DEPLETION ALLOWANCE FOR MINING AND OIL INDUSTRY

(*Concluded from page* 977)

the calculation of depletion allowance, and is opposed to adjustment of accounts on the basis of an uncertain fluctuating price-index, unanimity about the preparation of which would hardly be possible.

Basis for India

The foregoing consideration of the various prevalent methods of calculation of depletion allowance indicates that for this country, the advantage would lie in adopting (i) the output formula or the cost depletion basis and (ii) the percentage depletion basis, and giving the assessee choice of selection between these methods. If difficulty arises in the application of the first method in any case because the reserve ore deposits cannot be ascertained with accuracy, the percentage basis could be adopted, as has been done in the case of the oil company referred to earlier. If the first method is adopted, annual allowance should be given for amortisation of capital expenditure on acquisition of mines or oil wells, their exploration and development, and the construction of works whose utility would cease with the exhaustion of the mine. Expenditure on infructuous exploration should be allowed to be written off in the year in which exploration is abandoned. Capital expenditure on other assets would, of course, receive the usual depreciation and initial allowances. Depletion allowances, no doubt, would reduce revenue at first, but as development of the mineral industry takes place, revenue would be compensated and the best interest of the country served.

SURVEY

(*Concluded from page 955*)

for clearing commercial samples and advertising material.

The improvements in the customs procedures now suggested, it is needless to add, should be supplemented by adequate steps to promote intra-regional co-operation in all these matters. These countries stand to gain much by exchange of information on customs laws and procedures. Smuggling, which is rampant in this part of the world, can also be held in check if the various countries make a joint effort in this direction. In this connection it was recommended that the names of professional smugglers could be communicated to other Governments and one customs authority might warn another about the danger of a customs offence being committed at the other's end. An exhibition of photographs illustrating modes of smuggling could also be circulated among participating countries.

The Working Party was also alive to the need for, and the importance of, co-operative efforts among the countries of the region in the organisational matters of customs administration. The E.C.A.F.E. conference suggested that customs officials from neighbouring countries might meet periodically and that there should be an exchange of staff and facilities for training. It was also proposed that uniform customs terminology and procedures be evolved. Pointing to the importance of standard procedures, the conference drew attention to conventions already adopted in Western Europe to facilitate the movement of goods and passengers by road and rail, and to permit the temporary importation of commercial and private road vehicles. The Working Party suggested that contiguous E.C.A.F.E. countries might examine the possibility of entering into similar conventions to cover trade and travel among them. The E.C.A.F.E. secretariat has been asked to assist in the drawing up of such conventions, if specifically requested by member-countries to give such assistance. The E.C.A.F.E. Working Party considered problems in customs valuation but felt that this field was too complex to be dealt with adequately at that session.

LONDON LETTER

(*Concluded from page 956*)

industries where both sides agree in advance to contract into it. Such an agreement would, it was felt, put both parties under a moral obligation to honour the findings. Last January, talks at the Ministry of Labour failed to find a bridge between these different opinions. In face of this disagreement, between the two sides, the Minister had to take his decision.

In deciding to end the Order, the Minister acted on the grounds that it was out of keeping with the voluntary spirit of industrial relations in Britain to use, in normal times, a method by which one or other party could be coerced by law. Further, it had become plain that compulsory arbitration in its present form had features which did not command the support of many employers, and it had been understood at the outset in 1951 that the Order was an experiment to be reviewed at any time.

Protesting about the Minister's decision, the T.U.C. declared that, while trade unions always prefer joint agreement through collective bargaining and that while the vast majority of differences between managements and workers about wages were settled in this way, there is at times a need for arbitration; and, in the T.U.C.'s view, the Industrial Disputes Tribunal provided a method of arbitration which has given wide satisfaction for a long period, contributing much to industrial peace.

A particular feature of the Minister's decision which drew the fire of the T.U.C. was the loss of machinery to deal with "issues." It said: "The T.U.C. consider there were only minor differences between the British Employers' Confederation and themselves on the procedure for obliging all employers in an industry to abide by its jointly agreed conditions of work. But, even in this limited sphere, the good tradition of changing industrial relations legislation with the maximum agreement of two sides has been set aside on this occasion." Now, the T.U.C. is to make its own study of the problems of arbitration in industry through a special subcommittee which it has set up.

PERSONAL AND CORPORATE TAXATION

(*Concluded from page 959*)

rationalisation of the tax structure. In particular, the present method of calculating income-tax has been unnecessarily complicated by the imposition of a number of surcharges in addition to income-tax, super-tax and corporation tax, and the various grounds on which there are withdrawals of surcharges or withdrawals of reliefs. Thus, in the case of corporation tax, a basic rate of corporation tax is laid down and various deductions are allowed to various classes of companies. These reliefs are withdrawn to differing extents, if the companies have made an issue of bonus shares or have made distributions in excess of 6 per cent. of the capital employed, etc.

The situation is even more complicated in the case of assessments of individuals for the following reasons:

(1) Certain allowances are available only for the purpose of computing the rate of tax and others only for the purpose of income-tax and not for super-tax.

(2) The rates of tax applicable to income from salaries and from dividends are those applicable to one year and the rates applicable to all other income are those of the next year.

Much clerical effort would be saved if the rates structure were revised by the imposition of tax at uniform slab rates, without the addition of any surcharge and if relief were granted by direct deduction from the total income of appropriate amounts, as is the case under the U.K. Income-tax Acts. Again, wherever exemption from tax is granted, this should be available for all purposes including the determination of rates of tax. The rates applicable to all incomes other than unearned income should be uniform.

In general, I am opposed to the Kaldorian system which seems laborious and complex. I am certainly averse to grafting it on to an older, and perhaps more enduring growth.

The acquisition of wealth to which the income, expenditure, gift, and wealth tax laws apply is either through income or inheritance. The latter has its own legislation and it is suggested that the anti-evasion information obtained under the Kaldorian system could equally well have been provided for by a revision of returns to be made under the Income-tax Act, without the need to increase the number and types of taxes. The key to wealth is income and if income (in its broadest sense) is taxed, wealth, gifts and expenditure are taxed as well. This suggestion might still mean four returns—but only one assessment—and one set of appeals to follow.

A reconstruction on the lines suggested, for both corporate and personal taxation would also give an opportunity to revise rates and bring them to more reasonable levels. This undoubtedly would be the best method of controlling evasion. The principal cause of evasion is its profitability. The reconstruction would also assist in removing the second cause of evasion which is the delay, trouble and expense involved in assessment proceedings.

TEXTILES

(*Concluded from page 960*)

spindles and 300 looms. This specification is on the low side. A widely accepted conception of an economic mill is 25,000 spindles and 600 looms. A unit of the size mentioned by Mr. Shah will not be able to compete effectively with the big units in Japan and the U.K. having up-to-date plant and machinery and resorting to mass production. Mr. Shah was, however, right when he said that, since management was the kingpin of the textile industry, the millowners must see to it that it was put on a sound footing. Further, he called upon them to see that consumer preference was met. In this connection, he cited the example of American markets where psychological tests to ascertain consumer preference are commonly held and industrialists regulate production accordingly.

EXCISE DUTY ON ART SILK FABRICS

In the article on protection for art silk fabrics appearing in our issue dated 29th November 1958—*vide* page 876—it was stated that the excise duty levied on art silk fabrics was six pies per square yard. This is, however, exclusive of the handloom cess of three pies and the additional excise duty of 3 nP (in lieu of States' sales tax) per square yard. The combined excise duty on all three accounts is, therefore, 7½ nP per square yard.

William Blake.

VOL. XCVII. No. 2492 BOMBAY, 20th DECEMBER 1958 PRICE: Re. 1.50

CONGRESS HIGH COMMAND ON THIRD PLAN

THE draft resolution of the Congress Working Committee on planning and development reflects the same confused thinking that has characterised the second Plan. Its authors can, therefore, proudly claim that they are consistent in their approach. They have thereby made it easy for us also to be consistent in our comments. If this approach is maintained, the course of the third Plan is almost certain. The coming Plan will be conceived on a large scale. It will be overambitious. It will be flexible enough to permit frequent chopping and changing, with all the economic waste that is involved in such adjustments. It will lay more emphasis on the public sector. Despite ten years of economic development, the private sector will still be told that it is incapable of taking up heavy industries. The cost of the Plan will be put at a disproportionately low level in relation to the physical targets aimed at. It will ask the people to work harder and the only incentive it will offer will be the prospect of the next generation being happy and contented. The words that will be spoken by our leaders in the coming months are already ringing in our ears. "Eat and drink less. Tighten your belts. Consume less cloth. Use less cement and steel. Produce less children but more food and almost everything else. Save more and lend more to Government. But do not expect big profits or larger salaries or wages. Cut imports. Boost exports." The result will be, according to the planners in the Congress Party, more comforts for the next generation and more jobs for those who are jobless at present.

Some may say that these words sound familiar. Of course, they do, for they have been preached before and have also been listened to by the people, at least partly. It cannot be seriously contended that the people of this country have not been leading an austere life. There is not enough food to go round. There is plenty of cloth, but the people have not the means to buy it. There is a surplus of cement, but its consumption is restricted by non-availability of steel and funds. Taxes are high. Industrial profits are severely limited. They are either controlled by the Government or kept down by unfavourable market conditions and fiscal policies. The fact is that the techniques, principles and policies mentioned in the draft resolution have already been in force for at least three years, if not more, but the results have not been satisfactory. And yet the High Command of the Congress Party does not seem to have profited by this experience. On the contrary, it is planning to limit further the scope for individual initiative and enterprise by advocating co-operatives, having all the features of collectivisation, for the rural areas and by stressing the importance of the public sector for the urban areas.

There are, of course, some passages in the long-winded resolution which, taken by themselves, are quite pertinent. Thus, the need for a rapid increase in agricultural production and for attaining self-sufficiency in food is rightly stressed. Equally right is the suggestion that the Government should avail itself of the opportunity offered by the increase in the current season's rice and wheat crops to build up reserve stocks. Nor can one disagree with the proposition that the agriculturist must get a reasonable return for his labour; this can and should be ensured without detriment to the consumer. That prices of essential commodities such as cloth, foodgrains and some others should be kept within reasonable bounds is also a condition which cannot be disputed. Another indisputable statement in the resolution is that "wages and salaries should be dependent on work done and on production." The wording of this prerequisite may be imperfect, but the meaning is clear, that is, wages and salaries should be related to productivity. But the question of all questions is: How are these conditions to be ensured, if investments in projects, which yield dividends after long intervals, as also in projects which do not yield anything at all, are kept up at a rate far in excess of the available resources? Invariably, the answer will be: "Controls and self-restraint." These are, however, highly imperfect, if not theoretical, remedies. The country has had enough experience of them. Appeals for self-restraint have evoked only verbal sympathy. Controls have not prevented prices and wages from going up. Nor have they restrained claims from workers for more wages. There are no new signs to believe that, in future, the response will be different from what it has been hitherto.

The resolution says that the present rate of investment is too small in relation to the needs of the country and is not adequate to ensure the solution of the problem of unemployment. This is only partly true for three reasons. First, not all the investments under the first two Plans have been wisely made. The heavy expenditure on certain cottage industries have actually made a substantial contribution to unemployment and restrained the growth of capital formation. Secondly, the priority given to certain heavy industries has been faulty. And, thirdly, a wrong fiscal policy has been followed, with the result that the rate of development has been well below the optimum which this country could have easily had. The wrong fiscal policy is the result of (*a*) the adoption of an ideology that is inimical to the rapid growth of a democratic economy and (*b*) the belief that the heavier the taxation, the larger will be the resources and that excessive taxation does not lead to inflation. The neo-theory that, in an expanding economy, the law of diminishing returns cannot operate has already been effectively disproved. But, unfortunately, the policy-makers are either unable to see it or refuse to believe it. The simple truth that taxation does not create resources but only transfers them from the hands of the people to the State does not seem to have dawned on them yet. There are at least no signs in the draft resolution to suggest that they are fully aware of it. On the contrary, the resolution reiterates the current policy of the Government by saying that "public savings are the most effective method of stepping up domestic savings." Here, the words "public savings" are used to mean savings by the public sector, which, in turn, means that more and more resources must be concentrated in the hands of the State. The assumption that the public sector is more efficient than the private sector is not borne out by the progress of State-owned enterprises so far.

The resolution also betrays another lack of understanding of the fundamentals of the economic growth of underdeveloped countries, when it stresses that "a high rate of capital formation is the main determinant of the rate of economic development, apart from the population growth and the return by way of additional output on the investment undertaken." The availability of technical skill and know-how and the ability and willingness to absorb them are also vital determinants of progress. Failure to take note of this condition will bring the Plan to grief.

The Congress High Command says that "a very great part of the total investment must necessarily be financed from domestic savings, as too much dependence on foreign assistance is neither possible nor desirable." At the same time, it does not minimise the value of foreign loans and assistance. It regards them as essential for supplementing the efforts of underdeveloped countries to raise themselves economically. It then goes on to add that "foreign credits should not be tied up with any political or economic conditions." Hitherto, the stress was on political strings, and it was widely understood and respected. The addition of economic strings seems to be a new condition. Apparently, the proceedings of the annual meetings of the World Bank, the I.M.F. and the I.F.C. in October last at New Delhi must have provoked the High Command to include this condition. If by economic conditions it is meant that a country giving credit has no business even to tender advice as a friend, the High Command is surely placing one more impediment in the way of foreign credit. If foreign credits and assistance are to be obtained on economic considerations, there has to be closest understanding between the lender and the borrower, for credit can flow only on the basis of confidence and confidence can be created only if the lender is satisfied that the borrower is following the right economic policies and methods. The reference to "economic conditions" is, therefore, unwarranted and may even hamper the negotiations that will shortly begin under the auspices of the World Bank for finalising the terms of credit promised for the remaining two years of the second Plan. Indeed, there is no need for referring to any strings at all, political or economic, because none of the countries which have helped India so far has sought to interfere with the political affairs of this country. The inclusion of this condition in a policy resolution smacks of inferiority complex.

INDIAN SHIPPING

INDIAN shipowners and the Government of India have come closer to each other for more than a decade now. And, as the Union Minister for Transport and Communications, Mr. S. K. Patil, observed at the annual meeting of the Indian National Steamship Owners' Association, held at Bombay last week, there is a virtual identity of interests between the Government and the shipowners. The Government itself, it may be noted, is a shipowner. This, of course, does not mean that all that the shipowners want has been or should be, conceded by the Government. But it does

mean that there is agreement over a wide front, particularly over the importance of a rapid rate of progress in shipping. Broadly speaking, the Governmental thinking on the subject of Indian shipping reflects a lively sense of awareness of the fact that all past neglect should be replaced by a dynamic shipping policy which will ensure maximum acquisition of new tonnage, the only limiting factor being availability of resources.

The year 1958 will be long remembered as the period in which many significant developments took place in the sphere of Indian shipping. The enactment of the Merchant Shipping Act, the establishment of the Indian Register and the setting up of the National Shipping Board and the Shipping Development Fund are among the notable measures adopted by the Government, with a view to advancing the interests of the Indian merchant marine. Again, as Mrs. Sumati Morarjee, President of the Association, pointed out, the year has witnessed "splendid" progress in the expansion of Indian shipping. At the beginning of the current year, the Indian fleet consisted of 131 vessels with a total gross registered tonnage of 576,500. During the first 11 months of 1958, 13 vessels, aggregating 65,500 g.r.t., have been added to the fleet. After allowing for the obsolescence of three ships, the total number of ships stands at 141, with a total of 630,000 g.r.t. At present, there are under construction 20 vessels, with a total of 137,000 g.r.t. When these ships become part of the Indian mercantile fleet, the latter will swell to 767,000 g.r.t. The gap between the present tonnage and the 900,000-ton target under the second Five-year Plan is thus of the order of 133,000 g.r.t. Mr. Patil, on his part, expressed his confidence in India's ability to reach the target. He calculated that, in order to reach it, India would need some 30 ships—10 new and 20 "near-new" ships—estimated to cost about Rs. 27 crores. To begin with, some Rs. 5½ crores worth of foreign exchange may be needed in order to buy the ships; for the balance, deferred payment agreements could be negotiated. In any case, the difficulties in the way of acquiring the additional tonnage are not insurmountable.

In one sense, it should be particularly easy to reach the 900,000-ton target, because conditions are now favourable to buyers. Mrs. Morarjee said that "now is the most propitious period for tonnage expansion and we cannot afford to miss the opportunity." She added: "There has been a slight recession in international trade and the overdeveloped fleets of the leading shipowning countries are faced with the necessity of laying up a part of their fleet and even cancelling some of their orders for new ships placed when the freight rates were booming at the time of the Suez crisis." It would appear that the world's shipyards, in order to attract customers, are quoting fixed prices and offering credit facilities in a larger measure than before; in the second-hand and near-new tonnage markets, prices have fallen to attractively low levels.

Shipowners, according to Mrs. Sumati Morarjee, have experienced two difficulties in taking advantage of these favourable conditions. In the first place, the new Merchant Shipping Act provides that the mortgagee of an Indian ship must move the Indian High Court for sale of the ship in the event of the mortgagor failing to pay the amount secured. This condition is not generally acceptable to foreign sellers of ships. Secondly, the Government is averse to guaranteeing the foreign exchange deficit which might arise when a ship, bought on "pay-as-you-earn" basis, does not earn sufficient foreign exchange in a year to pay that year's instalment. It is clear that the first difficulty about the mortgage of a ship can be removed only through an amendment of the Merchant Shipping Act on the lines of the British law under which the mortgagee is free to sell the ship without approaching the court to realise the amount secured. The second difficulty could be overcome through suitable guarantees which it should not be difficult for the Government to give. But it would not be in the interests of shipowners to multiply their demands too fast. The demand for a 50 per cent. development rebate, as against the present 40 per cent., to which it was raised this year, may provoke some men to retort that shipowners have an insatiable thirst for aid. It must be remembered that excessive assistance from the Government may prove too much of a good thing, for it may well engender in certain quarters the feeling that, since the shipowners can do nothing by themselves, the industry is best developed by the State.

There is a great deal to be said in favour of giving the highest priority to shipping development and devoting attention to the programme for such development in the third Five-year Plan. Mr. Patil said that a practicable target for the third Plan would be 1.5 million tons. This is a modest target. If efforts are made from now, it should be easy to reach it. The position could be reviewed at a later date in order to determine whether a higher target could be aimed at. In the immediate future, what is needed is to see that shipping gets included in the "core" of the Plan. In the course of his speech at the annual meeting of the Great Eastern Shipping Company, the Chairman, Mr. A. H. Bhiwandiwalla, urging the inclusion of shipping in the "hard core" of the Plan, rightly argued that the development of shipping was as vital to national economy as the setting up of steel plants. It is gratifying to note that Mr. Patil has promised to do his "level best" to get shipping included in the "core" of the Plan. This should ensure for shipping prompt flow of internal and external resources required for its development.

Tramp shipping, as an adjunct to a regular mercantile marine, has great value. It should be possible to develop tramp ships which have the advantage of freedom from the restrictions which conference lines have necessarily to observe. Now that the Government has declared its faith in tramp shipping, it will do well to give a practical shape to its faith. Mr. Bhiwandiwalla, as the Chairman of the Company which has done much to develop tramping on its own, pleaded for freedom for adjusting the movement of tramps which would enable Indian tramp ships to compete with their foreign rivals who enjoy such freedom. He also reiterated the point he made last year, namely, that the Government should not discriminate against private shipowners in the distribution of State-owned cargo. It is a pity that the Government should have created the impression that it not only favours, but favours with a vengeance, the ships it owns when it comes to carriage of cargo over the transport of which it has control. The Government's aim should be to enlarge continually the opportunities for the carriage of goods in Indian bottoms rather than use its position to beat its rivals in what must necessarily be an unequal competition.

ELECTRICITY INDUSTRY

THERE is a certain inconsistency in the public, and even in Parliament's, attitude towards the electric supply industry. Whereas loud protests greet the emergence of power shortage, there is seldom a genuine appreciation of the fact that the industry is compelled to adhere to a charging policy which prevents it from raising sufficient resources for rapid expansion. In his address at the annual meeting of the Federation of Electricity Undertakings, its Chairman, Mr. K. G. Milne, rightly drew attention to the ideologically ambivalent role the industry has to play. When the question of the industry's "profit" comes up for discussion, the critics urge the industry to adopt "welfare" and "service" ideals. And yet the plain fact is that the industry has to function in an economy where investments respond not to the inviting voice of a social philosopher but to the more mundane considerations of adequacy of return. Nor does this consideration disappear in the event of nationalisation of the industry—not that there is any justification for it—for, as Mr. Milne pointed out, "whichever agency is entrusted with the task of power development in a given area, the rate should be so just and reasonable as to cover all operating costs, including a fair return on the capital invested in the power facilities, be that capital invested by the individual or by the community." There is little room—at least, there ought not to be any room—for ideological controversy over what constitutes an appropriate policy for fixing the rates to be charged to consumers.

Another important consideration that must be borne in mind in arriving at an economically correct charging policy for the industry is that its sources of funds for expansion are strictly limited. As Mr. Milne emphasised, the industry cannot turn to banks which, after all, cannot afford to tie up their short-term lendings with the long-term needs of this basic industry. Nor are the specialised industrial credit institutions of much use to it, for their lending rates are generally higher than the limit set by the electricity legislation. Even debenture loans are difficult to be raised, for they often carry rates above the standard rate of return allowed to the industry. This means the industry has necessarily to fall back upon self-financing or induce the investor to risk his savings. It cannot possibly do so, unless it is enabled to earn a profit which will facilitate the building up of reserves or pay steady dividends by which investors are attracted. It must be remembered that the investment in the industry, which aggregated Rs. 115 crores in 1956, is supposed to go up to Rs. 140 crores by the end of the current year. On this basis, the industry would need at least Rs. 15 crores every year for new development. It cannot possibly raise amounts of this order, unless the Government and the consumer do not grudge the industry the reasonable return it needs for development.

It must, however, be admitted that, more recently, there has been a welcome change in the attitude of the authorities towards the industry. This is reflected in the amending legislation for the industry which has sought to link the standard rate of return to the Bank rate and effect certain other favourable changes. But it would appear that the establishment of a relationship between the rate of return on the investments in the industry and the Bank rate "has not been able to absorb the shocks incidental to an inflationary situation, more especially as the mechanism of the Bank rate does not fully influence the interest rate in the money market at large." This development naturally calls for a further review of the position.

On behalf of the industry, Mr. Milne referred to the problem of tax savings arising from accelerated depreciation allowances. Since the Government has not conceded the industry's demand for appropriating these savings to a deferred tax reserve, it is now trying to find an administrative solution of the problem. The suggested solution takes the form of an adaptation of "the formula already formulated by the Taxation Enquiry Commission, so that 'gross-up' of dividends for tax relief once more becomes regularly available to shareholders." Mr. Milne explained that this suggestion amounted, in short, to ensuring that consumers of electricity make a proper and immediate contribution to Government's tax revenue, which "they are at present escaping at the wrongful expense of the investors." It is to be hoped that the suggestion will receive the attention of the Direct Taxes Administration Enquiry Committee which is engaged in the study of the tax administrative problems.

Another issue to which Mr. Milne referred was nationalisation. Fortunately, here too, the Government's policy has been expressed in a manner which gives the impression that there will be no nationalisation for the sake of nationalisation. This is welcome so far as it goes. It is gratifying to note that the Union Deputy Minister for Irrigation and Power, Mr. Jaisukhlal Hathi, in the course of his reply to Mr. Milne's address, reiterated the point that the "Government's policy in regard to acquisition of private licensee undertakings will be carefully considered on the merits of each individual case, having regard to all important factors associated with it." Although he did not commit himself on the specific fiscal and other issues raised by Mr. Milne, he gave the assurance that the Government would consider proposals for protecting the "legitimate interests" of the industry if occasions arose which demanded such protection. He said: "The Ministry of Irrigation and Power will earnestly safeguard your legitimate rights and extend to you such assistance as would be required for the proper discharge of your responsibility and for the protection of your legitimate rights." He also assured the industry that the Government was trying its best to see that the power supply industry was least affected by the shortage of foreign exchange. It is to be hoped that these assurances will be fully implemented in their right spirit. For one thing, it cannot be denied that the industry's long-term future is tied up with the provision of adequate capital which can come only through self-financing and/or investors' savings. Unless realistic decisions are taken on this issue, the electricity undertakings will find it extremely difficult to provide the motive power without which industrial progress will be held up. Secondly, in the immediate future, the implementation of the industry's expansion schemes will depend upon the allocation of foreign exchange. The basic character of the electricity supply industry justifies its demand for a high priority in the allocation of the admittedly limited quantum of foreign exchange at the country's disposal.

CONFIDENCE UPSET AGAIN

WORLD LOADED WITH SURPLUS COFFEE

THURSDAY, 5 P.M.

MARKET GOSSIP

AFTER the rude shock given by the Congress Working Committee's draft resolution on the third Plan to be moved at the Nagpur session of the All-India Congress Committee in the second week of next month, the share markets have steadied a little, albeit at substantially lower levels. Almost all the counters have wound up the week with a loss, but the closing rates are perceptibly above the lowest levels touched on Monday, when the Working Committee's resolution was made public. Mr. Morarji Desai's speech at the Associated Chambers of Commerce, making it clear beyond doubt that there could be no relief in taxation, had reconciled the operators to the view that, at the worst, the budget for 1959-60 at the end of February next would not lighten the tax burden. It is true that Mr. Desai had spoken of the need for augmenting resources for the Plan. But it was thought that he was mentioning this only to buttress his stand against reduction in taxes. The Working Committee's resolution, however, has moved a step further to the left from Mr. Desai's stand and has created fresh misgivings. The fear is that taxes may actually be increased. Naturally, confidence is at a low ebb, once again.

Between March and October 1958, speculators had cleverly played up the theory that the attitude of the Government towards the private sector had changed for the better. There was, of course, not much substance in this theory, but the small reliefs reluctantly given by the Government in excise duties and export levies were quoted as instances to support their theory. The fact that the reliefs were given not because of any love for private sector but because of the desperate need for boosting exports and arresting the increase in unemployment was ignored. Nor was the fact that profit-margins of most industries were narrowing down, thanks to the relentless rise in the cost of production, adequately recognised. The trend of the money market was also in favour of a rise in the value of shares and securities.

Now the Congress Working Committee's resolution has exploded the myth that there has been a change of heart in the party in power towards the private sector. If there are still any doubts on this point, one has only to read the speeches of Mr. Nehru in the past three weeks. He has stated that the public sector must grow and hold a dominant position in the economy. He has also stated that he will not be content with anything less than "full socialism." Is there any difference between "socialist pattern of society" and "full socialism"? The Working Committee's draft resolution provides the answer. More elucidation will surely be forthcoming at the meeting of the A.-I.C.C. at Nagpur, scheduled to be held from 6th to 9th January next.

Most people seem to think that what has upset the market is the Working Committee's statement that "the profits in the private sector should also be controlled." On the face of it, this statement as such is not so bad as the general approach of the Committee to the third Plan and the private sector. The statement on profits in the private sector is a natural corollary to the Committee's observation that wages and salaries should be linked to production and work done and is evidently intended to show that it is not partial to capitalists. It may, therefore, turn out to be a pious statement.

But profits of most industries today are already controlled and restricted in various ways. Surely, the Working Committee must be aware of this state of affairs. Why then does it speak of controlling the profits in the private sector as though such control does not exist? For an answer to this question, one must examine the motive of the Congress Party. It is the popular belief in this country that the surest way to win elections is to attack the rich and decry the desire to own property. It is no secret that Mr. Nehru himself has been saying for the past four years that the acquisitive tendency among the people is not a desirable one and must be curbed.

• • • •

Addressing a gathering of business men in New York only three months ago, Mr. Morarji Desai declared that the Government of India's attack was not on wealth but on poverty. Today there is heavy pressure on State Governments from the Congress High Command, of which Mr. Desai is a respected member, to introduce a ceiling on incomes from land and to take over the surplus land at rates of compensation which amounts to virtual expropriation. Is this an attack on poverty or wealth? It has been conceded even by top level Congress men that redistribution of land will not touch even the fringe of the problem of poverty and that the reform is being undertaken only to satisfy an ideological urge, which Rajaji has aptly described as a device for getting votes through mass bribery.

The victims of land legislation have already started a campaign against property-ownership in urban areas. A ceiling on urban incomes and ownership of industrial assets has been demanded. This clamour has not yet won the support of the Congress High Command, though the Sub-Committee which went into the question of land reforms had a sneaking sympathy for it. But there are reports that there is an opinion in the High Command itself that unearned incomes could be penalised further. It is not known how this cry for a ceiling on urban incomes and urban ownership also will end.

It is, of course, absurd to talk of a ceiling on incomes, whether they be rural or urban. It has been argued that a ceiling on landholdings is necessary as the supply of land cannot be increased. There is, however, no such limitation to investment and ownership in non-agricultural assets. If one has savings, one can buy any amount of shares and securities. There is unlimited scope for the creation of such assets by establishing industrial and commercial enterprises. But this scope will get limited, if a ceiling is imposed on urban incomes. This is not to say that at present there is no ceiling at all on non-agricultural incomes. The heavy taxes—both direct and indirect—on incomes as well as wealth are siphoning off the major portion of such incomes after a particular level. The adverse effects of this excessive taxation are already being felt by the country in the form of a slowing down in the provision of gainful employment opportunities. The position will definitely worsen if the levels of taxation are raised.

Although the demand for a ceiling on urban incomes is thus meaningless, one cannot say categorically that the Congress Party will not entertain it at some stage or other. Did anyone think, say, at the time of the Avadi session of the A.-I.C.C., at which the innocuous-looking resolution on the socialist pattern of society was adopted, that the Congress Party would introduce the penal tax on dividends, the capital gains tax, the wealth tax, the expenditure tax and the gifts tax on top of Estate Duty? It looks as though Mr. Nehru is bent on completing his programme of economic revolution by consent as quickly as possible. If assets in rural areas were to be pooled and held by the co-operatives and/or *panchayats*, it might not be long before a similar system of collective ownership comes to prevail in urban areas, too. The rural areas, it is pertinent to note in this connection, account for the majority of members elected to Parliament and State legislatures.

• • • •

Coffee is one of the very few commodities which have suffered from overproduction in recent years. World output of coffee, which was 42.2 million bags (of 132.276 lbs. each) in 1954-55, rose to 51.9 million bags in 1957-58, representing an increase of 9.7 million bags within a short span of three years. This is not all. The 1958-59 crop, according to the U.S. Department of Agriculture, bids fair to be yet another bumper one, at 58.6 million bags. If this estimate proves correct, the expansion in world output during 1958-59 would be equal to that in the previous year and would represent 69 per cent. of the rise in output during the three years 1954-58.

Brazilian output in 1957-58 amounted to 24 million bags, an increase of 6 million bags over the previous year. A further addition of 5 million bags to 29 million bags is expected in 1958-59. During the five years immediately following the war, Brazil accounted for more than 50 per cent. of the world total, but this proportion has of late been reduced a little on account of the rise in output in other countries. Thus, Colombian output has gone up by more than 50 per cent. since the beginning of the Second World War. Larger crops are reported from Central American countries. African output has risen at an average rate of 10 per cent. per annum during the last seven years. The expansion in the crop of the various African countries is traced back to the high prices of coffee prevalent in 1950, which attracted larger plantings. The Governments of the countries concerned also gave considerable support through provision of expert advice and distribution of high-yielding seedlings. Drought in French West Africa and Uganda and heavy rains in Ethiopia caused a

OUR NEXT ISSUE

The Annual Number of "Commerce" will be published in the first week of January 1959. Despite scarcity of paper and high cost of printing, we have endeavoured to maintain the standard of our previous Annual Numbers. The 1958 Number includes, besides our customary review of the developments during the year now drawing to a close, a large number of special articles on a variety of economic subjects of topical importance by eminent contributors. The Number is free to subscribers. But a limited number of copies are available to others at Rs. 10 per copy.

There will be no regular issue of "Commerce" in the weeks ending 27th December 1958 and 3rd January 1959, in view of our preoccupation with the aforesaid Number and the Christmas and New Year holidays. Our next regular issue will be the one dated 10th January 1959.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year.

EDITOR

AS OTHERS SEE US

EXPORTS IMPROVE FURTHER

From Our Own Correspondent

LONDON, 12*th December*

THE Organisation for European Economic Co-operation has just produced its report covering 18 months to the end of June this year and it is, perhaps, a tribute to the closeness with which economic affairs have been studied and commented upon in this country that the outlook as seen from Paris does not look very much different from that seen from London. The first impression which the O.E.E.C. has is that the British recession would get worse. But that impression dates back to six months ago and has already been justified by evidence. In other words, it is perhaps largely a terror that has passed or at least to which the worst weight has been felt. Production is now running at 4 per cent. below that of a year ago and unemployment in mid-November at 536,000 is double what it was a year ago.

It is a relief to find that the impression of the Economic Secretariat of the O.E.E.C. is that the situation in Great Britain is not likely to become a serious depression and, indeed, there will be some recovery in 1959. This hope is shared by British statesmen who will also derive encouragement from the advice that the economy can stand a further dose of re-inflation without endangering the pound. The O.E.E.C. see no prospect for an era of really cheap money.

As for the Government measures, the abolition of restrictions on hire purchase and the cuts in Bank rate are agreed as having helped to stimulate some consumer demand. But it is noted that these measures have had very little effect on production of capital goods or on investment.

The failure of this country to use its growing productive resources is noted and the fears expressed that production will continue stagnant as exports tend to fall. The improvement in the balance of payments is dismissed bluntly with the comment that it is due to the fall in import prices with their bad effect on the lowest developed countries supplying materials.

With this background, it is encouraging to notice the actual development of the country's external trade in the last quarter of this year. In November, imports c.i.f. dropped to £313 million, while exports *jumped* up to a total, including re-exports, of £304 million, the highest monthly figure for 18 months. This leaves a visible adverse balance of only £9 million and, when it is realised that this is the figure, after allowing for the shipping charges on imports but not allowing shipping charges for exports, it is obvious that the month has shown a very substantial real surplus on visible trade.

The following table shows the trends of imports and exports since the middle of the year, as compared with the same period a year ago:

(In million £s)

Monthly average	Imports c.i.f.	Exports and Re-exports f.o.b.	Visible deficit
1957			
3rd Quarter	332	275	57
4th Quarter	327	292	35
1958			
3rd Quarter	315	274	41
Oct./Nov.	321	292	29

The other gratifying feature is the buoyancy of exports to North America. Shipments to the United States and Canada were maintained in the third quarter of this year, as compared with the third quarter of last. But, whereas the fourth quarter of 1957 showed exports to the United States of £20 million per month and to Canada £15¼ million a month, for the nearest comparable period, that is the three months September/November 1958 the average has been £25 million to the United States and just over £15 million to Canada. So, while exports to Canada have only been held, those to the United States were 29 per cent. higher in October and November alone than in the corresponding period. And, for the whole of North America, the two months showed an improvement of 16 per cent. This is good dollar earning news.

EQUITIES TUMBLE DOWN

MILD RECOVERY TOWARDS CLOSE

(From Our Own Correspondents)

BOMBAY, 18*th December*

THE notable feature of the week's trading on the Stock Exchange was the severe shake-out on Monday last, the opening day of the new account. Values tumbled on heavy nervous selling and losses over the day were substantial. The morale of the market was shaken by the Congress Working Committee's recommendations in its draft resolution on planning for raising additional internal resources for financing the Plan, particularly the proposal to control profits in the private sector. These proposals, coming as they did hardly two weeks after the Finance Minister's speech at the Associated Chambers' annual meeting ruling out the prospect of a cut in corporate taxes, gave rise to fears of a more unhelpful attitude on the part of the Government towards the private sector. The Prime Minister's warning in the Rajya Sabha on Monday that any kind of aggression on Jammu and Kashmir would have to be met, as well as the possibility of extension of State trading, unnerved operators.

During the last two days, however, there was a mild recovery on short-covering, which trimmed to some extent the losses, but fresh buying enthusiasm even at attractively low prices was conspicuous by its absence. Though the technical position of the market is considered to be healthy, the undertone is still hesitant.

Tata Steel Ordinaries slumped from Rs. 175 to Rs. 168.75 on Monday, but subsequently recovered to Rs. 171.75 on Wednesday. The closing today was, however, a shade lower at Rs. 170.75, the loss over the week being Rs. 4.25. The new shares also suffered a decline of Rs. 4.25 to Rs. 167.25. Indian Irons, after an early rise from Rs. 25.70 to Rs. 25.95, drifted down to Rs. 25. In the subsequent recovery they came up to Rs. 25.40, before closing at Rs. 25.25.

Textile shares, which had already been lagging behind, could not escape the onslaught. Bombay Dyeings were marked down from Rs. 56.20 to Rs. 54.10, before they closed a shade better at Rs. 54.50. Centurys retreated from Rs. 425.75 to Rs. 410, but regained partially to close at Rs. 414.25. Kohinoors gave way from Rs. 242 to Rs. 230.50, but this loss was made good to some extent when the shares closed at Rs. 235. Central Indias lost no more than a rupee to Rs. 87, while Finlays shed Rs. 4.50 to Rs. 259 and Gokaks Rs. 2 to Rs. 127. Indu Ordinaries were only a fraction lower at Rs. 8.48. Indore Malwas declined by Rs. 2 to Rs. 100, Khataus by Rs. 2.50 to Rs. 157.50 and Morarjees by Rs. 2 to Rs. 235. Mysore Spinnings were marked down by Rs. 9.50 to Rs. 81.50 and New Greats by Rs. 6 to Rs. 212. Shree Niwas Cottons shed Rs. 4 to Rs. 135, Simplex Rs. 3 to Rs. 168 and Standards Re. 1 to Rs. 405. Svadeshis were done Rs. 2.50 lower at Rs. 204.50, while Tata Mills showed a gain of 75 nP at Rs. 36.

Bank shares were relatively steady, though the volume of business was low. Barodas provided a feature with a rise of Rs. 3 to Rs. 122. Central Banks were done 40 nP lower at Rs. 58, while their new shares were a fraction better at Rs. 59.30. Bank of Indias had business at Rs. 136.75 and Punjab Nationals at Rs. 56. United Commercials declined by Re. 1.50 to Rs. 66.50.

In the insurance group, New Indias reacted from Rs. 53.50 to Rs. 52.30 and their new shares came to be done at Rs. 52.80. British India Generals declined by 48 nP to Rs. 13.80.

Among electricity shares, Ahmedabad Electrics changed hands 20 nP lower at Rs. 94.50, while Bombay Suburbans recorded a gain of 50 nP to Rs. 110 and Surat Electrics rose by 75 nP to Rs. 112. Tata Hydros gained a similar extent to Rs. 122.50. Tata Powers declined by Rs. 5 to Rs. 1,217.50 and Andhra Valleys by Rs. 10 to Rs. 1.195.

The downward trend in sugar shares gathered further momentum this week. Belapurs dropped from Rs. 298 to Rs. 290, but improved to Rs. 295 at the close. Phaltans shed Rs. 3.25 to Rs. 159 and Walchandnagars Re. 1 to Rs. 271.50. Maharashtra Sugars had business Rs. 3.25 lower at Rs. 166.50 and Oudh Sugars Rs. 3 down at Rs. 148. The disappointment caused by the cut in dividend from Rs. 9 to Rs. 8.50 per share and general downward trend of the market pushed down Associated Cements from Rs. 153.75 to Rs. 147, but covering at lower levels lifted them up to Rs. 150.25 at the close. Digvijays shed on balance Rs. 2.25 to Rs. 127.75 and Orissa Cements 16 nP to Rs. 11.72. In the engineering and mining group, Alcock Ashdowns were marked down by Rs. 10 to Rs. 241.25. After a setback from Rs. 158.75 to Rs. 151.50, Tata Locomotives gained ground to Rs. 155.75. Their Rights were down Rs. 2 lower at Rs. 47. Premier Constructions suffered a drop of Rs. 9.50 to Rs. 232.50. Larsen & Toubros lost 56 nP to Rs. 16.16, while Mahindras were on balance 16 nP higher at Rs. 18.40. Shivrajpurs were a fraction down at Rs. 85.50, as also Indian Coppers at Rs. 3.52.

Scindias drifted lower from Rs. 21.16 to Rs. 20.56, but regained a part of this loss when they closed at Rs. 21. Great Easterns moved down from Rs. 26.45 to Rs. 25.05. Malabar Steamships were done at Rs. 15. Hindustan Motors lost 36 nP to Rs 6.44 and Premier Automobiles Rs. 2 to Rs 79.70.

In the miscellaneous group, Bombay Burmahs (old) moved down from Rs. 490 to Rs. 471. After a recovery to Rs. 479.50, they came down to Rs. 475.50 at the close. The partly paid-ups shed Rs. 4 to Rs. 175. National Rayons receded from Rs. 239.25 to Rs. 227.50, but gained ground to close at Rs. 231. Gwalior Rayons lost 48 nP to Rs. 13.52. Tata Chemicals shed 56 nP to Rs. 14.16, while Tata Oils, on expectations of a bonus issue, spurted from Rs. 41.25 to Rs. 43.75. Hindustan Levers dropped 20 nP to Rs. 26.25 and Killick Industries Re. 1 to Rs. 150. Ceat Tyres were done Rs. 2 lower at Rs. 63.50 and Wimcos Re. 1.25 down at Rs. 183.50.

Calcutta Stock Exchange

CALCUTTA, 17*th December*

Although the Calcutta Stock Exchange opened on a cheerful note, lack of follow-up demand and dull Bombay advices reduced turnover subsequently, causing a recession in values. The conditions worsened on Monday following rumours of a possible ceiling on the profits of joint-stock companies, thus indirectly limiting dividends. Memories of trading, when the dividends were statutorily limited to 6½ per cent. immediately after 1947, were soon recalled, and there was a wave of selling in an attempt to lessen commitments. The wild rumour followed the Congress Working Committee meeting. It was believed that, if there was any substance, something would be heard at the forthcoming Nagpur session of the Congress. Operators and investors had commenced preparing themselves for any budget surprises, and until the budget was out of the Finance Minister's bag, no visible improvement in sentiment was anticipated.

The market circles' emotion has now been worked up, and it is argued here that, if the Government were to contemplate any such measure, abolition of the private sector would be the straight method. A decline in activity in the private sector in view of limitation on profits, it is argued, would naturally reduce tax collection. Considering past experience and the Government's oft-repeated declaration of policy for a mixed economy, it is to be hoped that no serious thoughts are given in New Delhi for a measure of this type. However, the rumours have gained currency, and these are capable of causing irreparable harm, if an authoritative denial is not issued. It is particularly noted that this week's rumour closely followed the Working Committee's preference for land ceilings and the recent decision of the Government to take over the wholesale trade in foodgrains. Also, there is news of a plan for compulsory savings. All these appear to the market to be rather going much beyond the accepted "socialist pattern of society."

Earlier, the announcement of Government sanction for issue of bonus shares by the Indian Iron and Steel Company, Ltd., failed to develop a recovery since the announcement had long been anticipated and already discounted for even prior to the unloading of a huge block of Irons by an investment company recently. For the purpose of the bonus issue, the Company has announced that the ordinary share registers and transfer books would remain closed from 12th to 22nd January, both days inclusive.

* * * *

Madras Stock Exchange

MADRAS, 16*th December*

A bearish trend was in evidence on the Madras Stock Exchange during the week under review. The Prime Minister's recent observations on the role of public sector *vs.* private sector, the Congress Working Committee's suggestion to curb undue profits in industries and the statement of the Union Minister for Commerce, Mr. N. Kanungo, in the Lok Sabha last week regarding the enlargement of the scope and functions of the State Trading Corporation, greatly depressed the sentiment of operators. There was selling pressure and prices moved down. Tea shares ruled easy, as a result of lower prices fetched for both common and medium teas at the Cochin auctions. In sympathy, coffee and rubber shares also gave way. Textiles encountered selling. Sugar and electrics followed the general trend.

Among tea shares in the planting section, Haileyburias declined by 50 nP to Rs. 16.75. Nonsuch Teas retreated by 38 nP to Rs. 23.37. Twyfords receded by 25 nP to Rs. 16.75. Nilgiris and Kil Kotagiris shed 10 nP each to Rs. 7.40 and Rs. 6.65, respectively. United Nilgiris lost a like amount to Rs. 17.60. Chembras eased by 7 nP to Rs. 3.40 and Kalasas by 5 nP to Rs. 3.40. Woodlands were neglected at Rs. 8.62 *cum-div.*, reflecting disappointment of operators over the cut in dividend to 5 per cent. for the year ended 31st March 1958, as against 10 per cent in the previous year. Devasholas, however, spurted by 40 nP to Rs. 24.40, on special support.

In the rubber group, Kalpettas came down by 20 nP to Rs. 12.90 *cum-div.* Malabar Industrials receded by 15 nP to Rs. 15.60 *cum-div.* Cochin Malabars and T.R. & Ts softened by 5 nP each, the former to Rs. 5.42 and the latter to Rs. 6.70. Pullangodes eased by 3 nP to Re. 1.52 and Thirumbadis by 1 nP to Re. 1.59

Deals in coffee shares were put through at lower prices. Coffee Lands were marked down by a rupee to Rs. 27 *cum-div.* Kumergodes dropped 48 nP to Rs. 6.62. Cowcoodys climbed down by 35 nP to Rs. 6.85. Rajendras shed 10 nP to Rs. 14.55 *cum-div.* Consolidated Coffees, however, gained 15 nP to Rs. 24.40 *cum-div.*

In the textile section, Metturs slumped by Rs. 6 to Rs. 328. Lakshmis, Bangalore Woollens and Coimbatore Cottons eased by a rupee each to Rs. 93, Rs. 158 and Rs. 136, respectively. K. Rajendras moved down by 50 nP to Rs. 61.50. Loyals decreased by a like amount to Rs. 29.50. Maduras were quoted 15 nP lower at Rs. 28.60. Kotharis lost 10 nP to Rs. 9.90. Coimbatore Pioneers, however, proved an exception and rallied Rs. 8 to Rs. 273.

A PROMISING NEW ISSUE

The Sundatta Foods and Fibres Ltd. has announced the issue of fresh capital to the tune of Rs. 5.50 lakhs, made up of 6,000 equity shares of Rs. 50 each and 5,000 8 per cent., taxable but participating, preference shares of Rs. 50 each. Both the classes of shares are being offered at par to the public, with the concurrence of the existing equity shareholders of the Company. The issue will open for public subscription on 2nd January 1959 and will remain open until it is fully subscribed, but not earlier than 7th January. A sum of Rs. 25 per share is payable on application and the balance on allotment. Full details of the issue can be had from the prospectus published on pages 1014-1016 of this issue.

The new shares will rank *pari passu* with the existing shares and will be entitled for dividend from the date of allotment. The participating preference shares will be entitled to an extra dividend of 1 per cent., if the dividend on equity shares is 10 per cent. or more but less than 15 per cent., and an extra dividend of 2 per cent., if the dividend on equity shares is 15 per cent. or more. They are redeemable on or after 1st October 1971.

The objects of the issue are: (1) to bring the paid-up capital more in line with the fixed assets; (2) to provide adequate working capital for the Company's expansion, as also to provide funds for repaying, in due course, the short-term loans obtained through the U.S. Export-Import Bank; and (3) to enlarge public holding in the Company.

The Company's progress during the last few years of its existence has been satisfactory, though there was a setback in 1957. The working of the Company last year was adversely affected by the complete failure of the American variety of cotton in the area of the Company's mills, which is normally a rare occurrence. Consequently, the Company, after paying a dividend of 6 per cent. for each of the years 1955 and 1956, had to skip over the dividend on ordinary shares; even the preference dividend had to be held over. During the current year, however, the working of the cottonseed plant is said to be satisfactory and the Directors are confident of resuming payment of dividends when the accounts for the 15 months ended 31st March 1959 are finalised. It will also be noted from the prospectus that steps have been taken to ensure work for the Company's factory throughout the year, so that there can be no repetition of the type of failure witnessed in 1957.

The Company, formerly known as the Sundatta Cotton-Seed Utilisation Ltd., is the leading producer in India of cotton linters, which constitute the only indigenous cellulosic raw material commercially available and used in the manufacture of high-grade rayon. It owns a cottonseed mill at Hubli, with a capacity of over 100 tons of seed per day. It has recently installed an American-type continuous solvent extraction plant, the first of its kind in India, with a capacity of 100 tons per day.

The outlook for the Company is fairly bright, as the economics of cottonseed processing has been greatly improved with the setting up of the solvent extraction plant. The Government of India is also taking keen interest on the development of cottonseed industry and has provided all the incentives necessary. Export of cottonseed products is allowed freely and there is no export duty on the same. So far as internal market is concerned, the cottonseed oil is exempt from the excise duty of Rs. 112 per ton levied on other vegetable oils. The *vanaspati* industry has agreed to consume 5 per cent. cottonseed oil on a unit-wise basis from 1959 onwards.

TWO USEFUL CHARTS

Two charts, which must prove useful to investors and traders, have been published by Mr. Mukund Guruji, Mapla Mahal, 273, Girgaum Road, Bombay. The *Investors' Chart* depicts the trend of prices of a few important shares transacted on the Bombay Stock Exchange, from the beginning of 1952 up to 4th October 1958. The shares included are: Tata Steel, Indian Iron, Bombay Dyeing, Century, Kohinoor, Associated Cement, Bombay Burmah and Scindia.

The *Commercial Chart* indicates the fluctuations in the prices of cotton (Jarilla), gold (ready), silver (ready), groundnut (ready and forward), linseed, castorseed and cottonseed during the aforesaid period. A welcome addition to this chart this year is the statistics relating to cotton and oilseeds —area and production, consumption, export and import—for the last seven years.

The charts are attractively printed in two distinguishing colours and are priced at Rs. 5.50 each, excluding postage of 80 nP by V.P.P. and of 70 nP by registered post.

NEWS IN BRIEF

LEMON grass seed and roots are now being licensed for export on an *ad-hoc* basis.

The Central Government has already opened 49,000 fair price shops all over the country, which have distributed, since January last, 3.4 million tons of foodgrains.

The Government of U.P. has "frozen" 65 per cent. of rice stocks held by licensed millers as well as wholesale dealers in 23 surplus districts spread over its four food regions.

Under an agreement signed between India and the U.S.S.R. last week, the latter will supply various kinds of equipment required for the Technological Institute set up in Bombay.

The validity period of the unutilised licences issued for the export of sea salt in the current financial year has been extended upto the end of June 1959.

The report that additional gold reserves have been located in the Kolar area of Mysore State recently was confirmed by Mr. K. D. Malaviya, Union Minister for Mines and Oil, in Parliament this week.

A 6,000-ton (dwt.) vessel built in the Hindustan Shipyard, Visakhapatnam, was launched on the 12th inst., by Mr. B. P. Singh Roy, Director, Indian Steamship Company. This is the 25th vessel built in the shipyard.

The Government of India, on the recommendation of the Forward Markets Commission, has granted recognition to the Saurashtra Oil and Oilseeds Association Ltd., Rajkot, for a period of three years in respect of forward contracts in cottonseed.

The Integral Coach Factory, Perambur, has manufactured 212 shells for third class coaches up to the end of October 1958. The factory is expected to reach the target production of 350 coaches in the fourth year of its production ending September 1959.

The Bharat Electronics Ltd., Bangalore, has decided in principle to manufacture radio valves, according to the Deputy Minister for Defence. Negotiations with a foreign firm for collaboration have reached an advanced stage.

A State Warehousing Corporation has been set up at Jullundur in the Punjab. This will run a chain of 26 warehouses to be opened shortly in different towns in the State. The Punjab Government will hold half the share capital of the Corporation. The rest will be contributed by the Central Government.

Production of Indian razor blades at the three factories in Bombay and Calcutta is running at an average monthly rate of 25 million. The number of blades manufactured in India in 1957 aggregated 336.4 million. About 25 per cent. of India's production is being exported to Pakistan, Singapore, Malaya, Afghanistan, Nepal, Kenya and Ethiopia.

In order to facilitate quicker lifting of Indian tea for Alexandria port, the United Arab Republic will operate four of its fast freighters between its ports and Calcutta via Bombay and Colombo. These ships are already plying between Bombay and Alexandria. Out of the 40.32 million pounds of tea imported annually by Egypt, Indian tea alone accounts for 25 million pounds.

The Canada-India reactor at Trombay, Bombay, is expected to commence production early in 1960. The reactor building, including the pressure containment shell and the annulus, is already completed. Equipment erection, including the reactor core, is in progress. It is claimed that the reactor, which is bigger than the "Apsara," will be of tremendous help in furthering research for medical and other purposes.

India's purchase of American cotton under P.L. 480 was justified by Mr. Manubhai Shah, Minister of Industry, in the Lok Sabha on the 15th inst. The deal, the Minister said, was beneficial to both the countries. The cotton imported from the U.S. was medium staple, whereas cotton grown in Egypt, the Sudan and other East African countries was of somewhat higher staple.

The Government of India has decided to set up one central advisory committee for sailing vessels industry in Bombay and four regional committees, one each at the four regional headquarters of the sailing vessels organisations. The main function of the proposed central committee will be to recommend measures designed to stop anti-social practices on the highseas such as jettisoning of cargo.

The process of pre-heating the coke oven batteries at Durgapur started last week. The heating will be over by March 1959, when the plant will commence full production. Two main projects are under construction, namely, the steel project and a composite coke oven project undertaken by the Central Government and the Government of West Bengal, respectively. The Central Government also proposes to install a mining instruments factory and an optical glass factory in Durgapur.

The Union Government proposes to amend the memorandum of association of the State Trading Corporation with a view to enlarging its scope and functions, so that the Corporation may undertake the purchase, sale and transport of, and general trade in, goods and commodities in India or anywhere else in the world. The amendment will also enable the Corporation "to subscribe for, take, or otherwise acquire, and hold shares, stock, debentures or other securities of any other company."

No customs duty is levied by India on goods imported from or exported to Nepal. The Government of Nepal is free to have its own customs tariff. Such a course has been considered desirable for commercial, economic and political considerations. This information was given in the Lok Sabha by the Deputy Minister for Finance, Mr. B. R. Bhagat, on the 15th inst. He added that customs duty at the same rates as were prevailing in India was collected on foreign goods going to Nepal and credited to the Government of Nepal. There was, therefore, no likelihood of unfavourable competition to Indian goods in Nepal from goods of foreign origin.

The National Coal Development Corporation is considering a proposal to purchase heavy earth-moving machinery, spares and workshop equipment under the United States Defence Excess Property Scheme at five per cent. of their book value, according to Mr. Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel. The book value of these items amounted to $4 million. The purchase of these items, which will be through the Indian Supply Mission in Washington, will be conditional on the equipment being found suitable for Indian conditions. The Corporation is expected to send one of its technical officers shortly to the U.S. in this connection.

The sanctions to enforce the code of discipline in industry that have already been laid down will be imposed by the central organisation of employers and employees themselves in keeping with the voluntary character of the code. The central organisations have been asked by the Union Labour Ministry to bring the sanctions to the notice of their constituent units. It is stipulated that the central organisations to which the unit is affiliated will give notice to it in case of any infringement on its part. In cases of serious defaults, the organisation will warn and censure the unit concerned or impose any other penalty. Where there is persistent violation of the code, it will disaffiliate the unit from its membership.

A comprehensive scheme for reorganising the agricultural sector has been submitted to the Madras Government by its Registrar of Co-operative Societies. The scheme seeks to bring into the co-operative fold not only all the villages in the State, but also a larger section of the agricultural community, including cultivating families, by the end of the second Plan period. It is designed to improve agricultural production and to give increased attention to the agriculturists in the villages. It also seeks to provide the cultivating families with all the necessary facilities like implements, seeds, manure, etc., for better farming. Co-operative societies at present cover 83 per cent. of the villages in the State and provide credit to the extent of 20 per cent. of the total requirements. The proposal is to step up provision of credit to at least 50 per cent. by the end of the Plan period, covering all the villages in the State.

From Abroad

It is understood that the U.K. has offered a loan of £3 million to Yugoslavia, as against £10-15 million asked for.

Canada has offered three tons of natural uranium to the International Atomic Energy Agency as a free gift.

The South African Government has decided to introduce decimal coinage in the country; this will probably be in 1961.

Japan has been requested by the Australian Government to restrict its exports of toys to Australia. It is reported that imports of Japanese-made toys into Australia have reached a level which may threaten the indigenous industry. Sales of local manufactures have fallen by about 6 per cent. since the Japanese-Australian trade agreement was signed.

The prices of a few thinner grades of tinplate in the U.K. have been reduced with effect from Monday last, following the revision of the industry's price structure by the Iron and Steel Board. The move is designed to encourage a more economic use of tin. Following this reduction the tinplate industry hopes to strengthen its position in the competitive container and packaging market.

LLOYDS BANK LTD.

A Correction

It was stated in our "Personal" column last week that Mr. A. C. Grover and Mr. Ralph Hiscox had been elected Chairman and Deputy Chairman, respectively, of Lloyds Bank Ltd. This is incorrect. Mr. Grover and Mr. Hiscox became the Chairman and Deputy Chairman of Lloyd's, London, the world-famous organisation of insurance underwriters, following their election to these posts at a preliminary meeting of the Committee of Lloyd's held at London on 2nd December, 1958.

The error is regretted.—EDITOR.

PERSONAL

MR. Mangalyn Dugersuren has been appointed Ambassador Extraordinary and Plenipotentiary of Mongolia in India *vice* Mr. Puntsagyn, who has been recalled.

Mr. B. V. Vagh, Executive Vice-President of the Indian Roads and Transport Development Association, has been appointed a member of the Inter-State Transport Commission.

Mr. I. J. Bahadur Singh, Commissioner-designate of India in British East Africa, has been concurrently accredited as Consul-General of India in Belgian Congo and Ruanda-Urundi.

Mr. Surendra Kumar Jain, Executive Assistant to the Director General of the International Labour Organisation, has been appointed Director of the I.L.O.'s Near and Middle East Field Office at Istanbul, Turkey.

Mr. R. G. Rajwade, till recently India's *Charge d'Affaires* at Morocco, has been appointed India's Ambassador to Sudan. He arrived in Bombay on the 16th inst. from Genoa.

Mr. William T. Turner, the U.S. Consul-General in Bombay, returned from the U.S. after four months' home leave. During the absence of Mr. Turner, Mr. Leslie C. Tihany was the U.S. Consul-in-charge in Bombay.

Mr. C. V. Narasimhan, Under-Secretary-designate for Special Political Affairs to the Secretary General of the United Nations, will take up his new duties at the U.N. headquarters on 26th January 1959.

Mr. Leland Barrows, who has been associated with U.S. mutual security programmes since their inception, has assumed his duties as Regional Director of the International Co-operation Administration for South Asia and the Near East, in place of Mr. John O. Bell, who is now Special Assistant for Mutual Security Co-ordination, Department of State.

The U.S. Post Office says that the flying time for domestic air mail will be halved by the jet planes now coming into use on U.S. airlines. In some instances, a letter sent from a major city early in the day will be delivered in another city far away from it the same day. The officials do not expect airlines to be paid higher fees for the improved service.

The leaders of the British cotton industry discussed with the Prime Minister, Mr. Macmillan, last week the details regarding the voluntary ceiling on imports of cotton goods from Hong Kong into the U.K. Meanwhile, the Labour Members of Parliament have presented petitions in the Commons calling for official action to protect the cotton industry against competition from the Commonwealth countries.

The rate of increase in unemployment in the U.K. fell significantly between mid-October and mid-November last. The number of registered unemployed rose over the month by 22,000 to 536,000, as against the increase of 38,000 in the preceding month. In percentage terms, unemployment in November was 2.4, as against 2.3 in the previous month and 1.5 in November 1957.

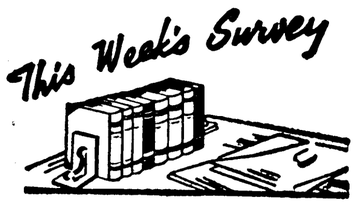
Japanese manufacturers of electronics products are receiving sizable orders from the U.S. Some of the U.S. concerns have recently ordered 7 million vacuum tubes from Hitachi, 8.2 million from Toshiba Electric and 3 million from Shin Nippon Electric. These Japanese firms have also received large orders from the U.S. for transistors, of which they were importers from the U.S. ere now.

The U.S. Department of Agriculture has announced issuance of an authorisation to India to finance the purchase of $69,363,000 worth of wheat and wheat flour from U.S. supplies. It provides for the purchase of 1,120,000 metric tons of wheat or wheat flour. The authorisation is part of an agreement signed in Washington in September to finance the sale to India of $238,800,000 worth of U.S. reserve agricultural commodities. That agreement provided for financing the sale, for Indian rupees, of 2,800,000 metric tons of wheat, 100,000 metric tons of maize and 200,000 metric tons of grain sorghums.

Life insurance policies in Sweden at the beginning of this year aggregated five million for an aggregate amount of Kr. 20,100 million (£1,386,207,000). After a drop in 1939, new life insurance in Sweden has shown a constant increase. Sweden's 20 life insurance companies received over Kr. 1,000 million by way of premiums in 1957. Their total advances to housing amounted to Kr. 4,100 million, while credits to trade and industry came to Kr. 2,700 million. Credits to the Government, primarily in the form of holdings of Government bonds, stood at Kr. 2,000 million and municipal credits for Kr. 1,900 million.

CORRECTION

It was stated in these columns a fortnight ago —*vide* page 905—that the Government of Denmark proposed to provide 534,000 kroners under a U.N.E.S.CO. project to give training in Mysore to young Indians as farming teachers and consultants. The rupee equivalent of 534,000 kroners was erroneously given as Rs. 26,700; the correct figure is about Rs. 3,70,200.



SYMPOSIUM ON OIL

MUCH interest attaches to the symposium on oil, held last week at New Delhi, under the auspices of the Economic Commission for Asia and the Far East (E.C.A.F.E.). The fragmentary Press notes issued by the Government do little justice to the importance of the issues discussed, though it must be admitted that the highly technical nature of the discussions on the subject does not permit extensive publicity. Perhaps, the E.C.A.F.E. will do well to undertake the publication of the full text of the papers contributed to the symposium for the benefit of the growing number of men interested in oil exploration.

Among the subjects discussed at the symposium, mention must be made of the suitability of the Tanjore basin in South India for exploration of mineral oil. Another topic was the "offshore potentialities on the continental shelves." It was pointed out that many basins in the E.C.A.F.E. regions extended beyond the land areas and beneath the adjoining seas. Exploration in such areas, it was stated, could be conducted by both geologic and geophysical survey methods; drilling could be undertaken from either fixed or mobile platforms. The scope for the utilisation of atomic energy for increasing the productivity of oil wells was another subject discussed at the symposium. It was explained that experience in Russia indicated that, although the wells where atomic energy was used might be lost, the production of oil in other wells in the area was stimulated.

Appropriately enough, the participants in the symposium devoted their attention to what was likely to prove practicable and beneficial in exploration of oil in the E.C.A.F.E. region. It would appear that spectacular results have been obtained by the use of hydraulic fracturing in Sumatra and Japan. In the U.S., the injection of gas has helped to produce oil at a very rapid rate; the same result has been obtained in Russia through water-flooding. At the symposium, the injection of solvent into the reservoir, as practised in Assam, was recommended for trial in other parts of the E.C.A.F.E. region. For reconnaissance work, wider use of aerial photography was suggested. This method, it was pointed out, was the best for purposes of preliminary exploration. But it was emphasised that photo-geology should be considered as an aid to field-geology.

A welcome disclosure was made by Mr. W. B. Metre of the Assam Oil Company. He revealed that they had discovered additional reserves of natural gas in the oilfields of Naharkatiya and Moran in Assam. In addition to the estimated output of 2.5 million tons of crude oil per year, there is a potential gas production estimated at 100 million cubic feet per day; in terms of heat value, it is equal to one million tons of oil per year. If this gas were utilised, it would help save Rs. 10 crores in foreign exchange now spent on imported oil. It is to be hoped that the utilisation of this newly discovered gas will receive high priority.

India, as is well known, will be compelled to spend increasingly larger amounts of foreign exchange on oil imports—it now spends about Rs. 100 crores every year—unless it locates and exploits new reserves of oil. Its requirements, according to Mr. Metre, will increase to about 50 million tons by 1975-76. But the attempt to reach self-sufficiency in oil involves heavy expenditure. Mr. Metre placed it at Rs. 3,000 crores in the next 15 to 20 years, made up of Rs. 1,500 crores on exploration and an equal amount on the creation of facilities for transport, refining, distribution and marketing.

Clearly, it would be difficult, if not impossible, for the Government alone to undertake an expenditure of the order of Rs. 3,000 crores. It should be possible to reduce the pressure on India's finances through agreements with foreign oil interests which are designed to promote oil exploration. Mr. Metre said: "The discussions at the E.C.A.F.E. symposium have shown that oil companies with world-wide experience are willing to assist in the development of the oil resources of the underdeveloped countries and to do so in close co-operation with the governments of those countries if reasonable terms are offered to them, and I am confident that foreign participation can be obtained on terms beneficial to the countries." It would be folly on the part of the E.C.A.F.E. region to spurn the offer of a mutually advantageous co-operation by the traditional oil interests. From this point of view, it is gratifying to note that, so far as this country is concerned, the Union Minister for Oil and Mines, Mr. K. D. Malaviya, emphasised that the Government's oil policy was neither inelastic nor doctrinaire but is connected with the integrated and overall economy of the country. Nevertheless, he was perhaps overstating the case for the public sector, when he said: "But the fact that we are emphasising more on the public sector so far as oil is concerned is mainly because we are convinced there is no other way of producing oil in the interests of one's economy and welfare." This argument ignores the fact that in nearly all oil-producing countries in the non-Communist world, it is the private sector which has been chiefly responsible for the discovery and exploitation of oil.

OILSEEDS

Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, certainly struck a note of urgency when he stressed, in his speech at the annual meeting of the Indian Central Oilseeds Committee held at Chandigarh the other day, that the Departments of Agriculture in the States should pay immediate attention to stepping up oilseeds production through intensive cultivation. Evidently, Mr. Krishnappa was prompted by the slow progress made in the implementation of the oilseeds development programme. The actual output of 5.91 million tons in 1957-58 (second year of the second Plan), though it is higher by 270,000 tons as compared with 1955-56—the base year—falls considerably short of the target of 7.55 million tons set for 1960-61. The gap that is left to be covered is, indeed, wide, being as much as 1.64 million tons, though there are two more years to go.

If the gap is to be covered, it is imperative that utmost stress must be laid on the adoption of various scientific practices for raising the per-acre yield. This is especially important in the case of groundnut which, as Mr. Krishnappa said, is an agricultural commodity with an ever-increasing demand. The all-India average yield of groundnut per acre is not more than 662 lbs., which compares very unfavourably with 1,613 lbs. in China, 983 lbs. in Brazil, 947 lbs. in Uganda, 919 lbs. in Indonesia and 895 lbs. in the U.S. To the extent the per-acre yields of groundnut and other oilseeds are stepped up, a large part of the land will be released for the cultivation of other crops and cost of production reduced. Further, it must be remembered that vegetable oils constitute a very important earner of foreign exchange; they are capable of earning between Rs. 20 and Rs. 30 crores a year.

The importance of the aforesaid aspect would be fully appreciated if one were to recognise the magnitude of the problem that has to be faced in the coming years. An idea of this magnitude was given by Mr. Krishnappa. His analysis reveals that the total oil requirements of the country at the end of the third Plan are estimated to be over 3.22 million tons—2,267,000 tons for internal edible purposes, 661,000 tons for domestic non-edible use and 293,000 tons for export. In terms of seed, the production in 1965-66 will have to be 12.60 million tons, which represents an increase of as much as 67 per cent. over the second Plan target of 7.55 million tons.

In addition to expanding production of the five major oilseeds—groundnut, castorseed, linseed, sesamum, and rape and mustard—it is also necessary to exploit the potential resources of non-edible oil-bearing trees growing in the plains such as *neem*, *mahua* and *karanj*. For, according to Mr. Krishnappa, while the demand for oils for edible purposes is steadily moving up, some edible oils are now being used for non-edible industrial purposes like manufacture of soaps, paints and varnishes. If these potential resources of non-edible oilseeds are exploited through economic collection and utilisation, they could be utilised for industrial purposes, which would help release more oil for edible purposes. Be that as it may, it is gratifying to be informed by the Minister that the Central Government, as recommended by the Oilseeds Committee, has sanctioned the scheme for exploratory trials to establish plantations of the African red oil palm in Kerala. The scheme is estimated to cost about Rs. 81,000 spread over a period of five years. The cultivation of the oil palm, we are told, will save foreign exchange to the tune of Rs. 2.5 crores annually, provide highly nutritive edible oil, and be useful in the manufacture of high grade soap.

INDIANISATION

Politicians are not wanting who take delight in decrying foreign-owned or controlled industrial and commercial enterprises in India, on the ground that they still retain their top executive posts as the exclusive preserve of non-Indians. It must, however, be noted that, since Independence, the process of Indianisation of the concerns in respect of personnel employed has steadily gathered momentum. The details of the latest position of employment of Indians and non-Indians in foreign-owned concerns have just been made available by the Government. An analysis of returns supplied by foreign concerns regarding their employment position as on 1st January 1958 shows that, as compared with the position in 1957, the employment of Indians in these concerns on salaries of Rs. 1,000 and above further increased both in absolute numbers and in terms of percentages. The table below indicates the position of Indians and non-Indians in the pay groups of Rs. 1,000 and above since 1947:

Year	Indians	Percentage	Non-Indians	Percentage
1947	504	7·9	5,844	92·0
1948	742	10·4	6,360	89·6
1949	1,085	13·9	6,709	86·1
1950	1,406	17·0	6,871	83·0
1951	1,784	20·4	6,953	79·6
1952	2,290	24·4	7,104	75·6
1954	3,346	32·3	7,008	67·7
1955	3,995	37·0	6,810	63·0
1956	4,685	41·6	6,566	58·4
1957	5,614	48·2	6,025	51·8
1958	6,704	54·3	5,652	45·7

The analysis reveals that the proportion of foreigners has registered a decline in all categories of companies while that of Indians has recorded a continuous rise since 1947. The total number of Indians has increased more than thirteen times in the last eleven years.

In the salary group of Rs. 1,000 to Rs. 1,500, Indians occupied 84.2 per cent. of the posts in 1958, as against 77.7 per cent. in 1957 and 67.9 per cent. in 1956. In the next salary group of Rs. 1,501 to Rs. 2,000, 62.2 per cent. of the posts were held by Indians, as against 54.2 per cent. in 1957. In the salary group of Rs. 2,001 to Rs. 3,000, 36.5 per cent. of the posts were filled by Indians, as compared with 29.4 per cent. in 1957. In the next higher salary group of Rs. 3,001 to Rs. 5,000, the Indians occupied 16.4 per cent. of the total number of posts, as against 13.7 per cent. in the preceding year. In the highest salary group of Rs. 5,001 and above, Indians held 6.0 per cent. of the posts, as against 5.1 per cent. in the last year.

The total monthly wage-bill for the 12,356 persons employed in the foreign owned/controlled firms in posts carrying salaries of Rs. 1,000 and above per mensem works out to about Rs. 2.85 crores. Out of this, about Rs. 1.08 crore is being paid to Indians, who account for 54.3 per cent. of the total employment, as against Rs. 1.77 crore to non-Indians forming 45.7 per cent. It may be noted that the salary group of Rs. 3,001 to Rs. 5,000 accounts for the largest part, that is, 26.5 per cent. of this total wage-bill, the salary group of Rs. 2,001 to Rs. 3,000 coming next with a share of 22.7 per cent.

The proportion of non-Indians in the salary groups of Rs. 1,000 and above has declined in all the groups of companies during the current year. In 1958, none of the groups of firms had three-fourths or more of the staff earning Rs. 1,000 and above, as foreigners. In 1957, there were two such groups of firms.

Foreigners held more than half but less than three-fourths of the posts in the following six groups of foreign companies as on 1st January 1958: (i) plantation and allied companies (74.4 per cent.), (ii) jute mills and presses (72.9 per cent.), (iii) banking (68.3 per cent.), (iv) transit and transport (55.2 per cent.), (v) other minerals, building materials, etc. (53.0 per cent.) and (vi) managing agency companies (51.0 per cent.). The proportion of foreigners is less than half in the remaining 14 groups of companies.

Of the total of 5,652 foreigners employed in foreign-controlled concerns in 1958, 4,027 (87.2 per cent.) are British. Americans constitute 3.5 per cent., their number being 200 in 1958. Italians, Germans, Australians, Chinese, Norwegians and Ceylonese have recorded small increases in their number, as against a diminution in the number of Britishers, Americans, Swiss, Greeks, Danish, French, New Zealanders, Dutch, Swedish, Austrians, Czechs, Japanese and Pakistanis.

It may be noted that the question of Indianisation of staff in foreign firms should be looked at from a realistic standpoint. Those who invest money in foreign countries certainly have a right to decide as to who should be put in charge of their concerns. Only, this right should not be exercised in a way that denies all opportunities of advancement to the nationals of the country where the capital is invested. The right of the country in which the investment is made for a fair representation of its nationals in these concerns should not be disputed. Indeed, wherever indigenous talent of the right type is available, it should be the policy of foreign investors to give priority to such talent over their nationals. It must, however, be conceded that foreign investors will prefer to keep a certain number of their nationals in key posts in order to ensure that their system of administration and standard of efficiency are kept up. That it is possible and desirable to reconcile these two rights is evident from the trend witnessed in this country.

UNEMPLOYMENT

It looks as though the problem of unemployment is becoming more and more acute. How else is one to explain the steadily rising number of applicants registered in the employment exchanges? The number in August 1958 stood at 1,128,741, as against 828,653 in the corresponding period of 1957, 647,100 in 1955 and 338,402 in 1951. A part of this increase reflects the rise in the number of exchanges, but much of it must be attributed to the fact that, while the number of persons seeking jobs is increasing fast along with the population in the country which itself is rising at an annual rate of 4.75-5.00 million, the pace at which new jobs are being created is rather slow. Unless the problem of unemployment is tackled effectively, it is bound to become intractable in the not too distant future. The whole question, as Mr. D. N. Jalan, President of the Indian Chamber of Commerce, Calcutta, stressed at a recent meeting of the Chamber, has to be considered from the point of view of augmenting the resources of the country so as to raise incomes and enlarge the demand for goods which alone can create more employment.

How can resources be raised? This is an issue that needs serious thinking, not academic discussion. It does not require an elaborate thesis to prove that the rising cost structure and the impact of the growing burden of taxation—direct and indirect—coupled with rising food prices, have adversely reacted on the savings of the people, leaving little for investment and development of new enterprises in the country. Mr. Jalan did well to make a pointed reference to this aspect. The basic problem, he declared, was one of capital formation, of augmenting the financial resources of industry and reducing the rigours of labour laws, company legislation and other restrictions. At the same time, attention should be paid to the problem of controlling the growth of population. The main solution to this latter problem, as Mr. Jalan said, lies in educating the people through effective propaganda, instruction in family planning and distribution of contraceptives on a mass scale.

Mr. Jalan put his finger on the right spot when he pointed out that the process of strengthening the labour-intensive industries, while it helps to a certain extent in providing employment, weakens the industrial structure; from the point of view of the earning capacity of the larger industries, it will react ultimately on the capacity of the country to increase employment opportunities. Considering that the unemployment problem is largely connected with the rural population which is not only unemployed but also underemployed, the need for strengthening the agricultural base of the country's economy cannot be overemphasised. What is wanted is, as Mr. Jalan averred, development of subsidiary industries, mechanisation of agriculture, and setting up of new fertiliser plants. It is these measures which would help increase agricultural production, create more purchasing power for the large population living in the villages, and widen employment opportunities, not measures designed to hoist the small-scale and village industries on the economically more efficient large industries.

T.C.M. PERSONNEL

When Mr. G. L. Mehta, the erstwhile Indian Ambassador to the United States, paid a well-deserved tribute to the Technical Co-operation Mission personnel working in India for the "spirit of dedication" displayed by them in their task, in the course of his address to the annual general conference of the T.C.M. held this week in New Delhi, he was not merely expressing a personal opinion. He was expressing the feeling of entire nation towards these silent men who, like hundreds of others from friendly countries, are helpmates in what the Prime Minister aptly terms as "the great adventure of building a new India." Their task in India, as Mr. Morarji Desai pointed out to them, was not only important for economic development but also for fostering mutual relations between the two countries. For this, they have to be not only experts in their specialised fields, but also shrewd students of men and matters, because, as Mr. Mehta pointed out, it is important to understand the attitudes of the people with whom they are working. The success of their work also depended upon the attitude and the capacity of the people to absorb willingly the technical knowledge imparted by the experts.

Mr. Mehta had a word of advice for the foreign experts and the recipients of their knowledge. The former, according to him, should take a human approach to the problems. They should be understanding without being patronising and be critical without being destructive. The recipients, on their part, should not be unnecessarily sensitive. Nor should they be overawed or subservient. He suggested that the technical co-operation programme, to be suitable to the needs of India, should be adapted to the conditions in the country. Mr. Mehta rightly emphasised that there should be selective borrowing to suit the needs of the country. From his own personal observations and those of others, Mr. Mehta came to the conclusion that Indo-U.S. technical co-operation had struck a right balance in this regard and had been operating smoothly and efficiently.

CALCUTTA STOCK EXCHANGE

FIFTY YEARS OF USEFUL SERVICE

INDUSTRIAL booms and slumps are common in a nation's economy. They may come and go in a cyclical manner, but the Stock Exchanges, which faithfully reflect these changes, go on for ever, because their functions are not to bear the imprint of these changes. They have a more important role to play in the economic progress of the nation by assisting in the mobilisation of savings and in channeling them into productive spheres. The Calcutta Stock Exchange has had the distinction of carrying on this function for half a century now.

It was in 1908, when Calcutta was the capital of India, that the stockbrokers of that city clubbed together to form what came to be known as the Calcutta Stock Exchange Association. It was the first time when they "organised themselves into a closely knit body to move indoors for protecting themselves from the perils and indignity of trading in public" and began to function under a constitution and set of rules framed by themselves. The very fact that there were stockbrokers at that time to form an association shows that the history of stockbroking dates back still earlier.

It is on record that transactions in the securities of the East India Company used to take place towards the end of the eighteenth century and business in corporate securities came to be done in the thirties of the last century. Though the number of shares traded in Calcutta went on multiplying during the last three decades of the nineteenth century, business was not done in an organised way, nor was there any code of rules for the guidance of brokers. The venue of their activity was under the shade of a *neem* tree, on the site where now stands the building of the Chartered Bank. The leading scrip of the time was the 4 per cent. Government Paper (converted into 3½ per cent. Paper in 1901), while the leading industrial securities were teas, jutes and coals. Among the miscellaneous shares, the blue chip of the day was India General, and transactions in them were as brisk as those in Indian Irons today. Business was done on a cash basis and "unhappy incidents were said to be few and far between."

Ups and Downs

Over the past 50 years, the business world has seen many ups and downs and the Calcutta Stock Exchange has experienced no less than six booms—the coal boom of 1904-08, the war boom of 1916-19, the world boom of 1929, the Indian Iron boom of 1937, the post-war boom of 1946 and the National Plan boom of 1955. The intervening periods were punctuated with slumps, the depressions of 1910, early 1920's and 1930's, the war-time slump of the early 1940's, and the most disastrous ones following the Liaquat Ali Khan Budget of 1947 and the Krishnamachari Budget of 1956-57.

The story of the Calcutta Stock Exchange is not merely that of alternating booms and slumps. The latter brought in their wake long periods of anxiety to and greater responsibilities on the authorities of the Exchange. An eternal vigilance for keeping the market going on efficient lines and thus serving the public interest was called for. In other words, the booms and slumps proved to be the testing periods and it must be said to the credit of the Calcutta Stock Exchange that it did not invite any official interference, enquiry or legislative control over its activities. Its efforts during the last five decades to help the development of industries by providing a free market for their securities did not show any sign of waning at any time.

Though the Calcutta Stock Exchange Association was formed in May 1908. with a membership of 150, it was in June 1923 that it was registered as a limited liability company, with an authorised capital of Rs. 3 lakhs, made up of 300 shares of Rs. 1,000 each. From June to August 1908, members were admitted free. but thereafter an admission fee of Rs. 50 was charged. At the time of its inception shares of no less than 236 companies used to be traded on the Exchange. On the eve of its incorporation as a registered body in 1922, the Association had a membership of 210 firms. with 442 individual members. In 1928, the Association moved into its own building, with a trading hall claimed to be the best in Asia. Even during the 1920's. the Association began to discipline its members by imposing a better code of ethical standards on them. It reprimanded its members for the "unprofessional conduct of publishing in newspapers under their names the quotations of transactions daily done in the market." In November 1928, the Association passed a by-law prohibiting members from advertising for business purposes or issuing circulars or business communications to persons other than their own principals.

Year Book

With a view to serving the investing public by presenting them with unbiased information relating to all stocks and shares known to the Stock Exchange, the Association decided in 1936 to publish an official year book of its own and the first issue of the same came out in 1937, thus earning the distinction of being the first stock exchange to the east of Suez to bring out such a publication. For many years it was the only one of its kind in this country. The only other association which followed suit—albeit after an interval of 17 years—is the Madras Stock Exchange Association.

The year 1944 witnessed a profound change in the mode of doing business on the Calcutta Stock Exchange. Till then, all business used to be done on the Exchange on a cash basis, which implied that any share bought in the market had to be taken delivery of against payment of value in full on or after the second day after the date of transaction. In the autumn of 1944, a system of periodic settlement of transactions in certain specified shares through the Clearing House was introduced. For a time after the debacle of 1946, the clearing system was suspended, but it was subsequently revived in April 1949. Since then, the clearing system has continued unbroken. In the first instance, when the clearing system was introduced, it was confined only to three scrips, namely, Indian Iron, Steel Corporation of Bengal and Howrah Jute. Today, transactions in equity shares of some eight companies are settled fortnightly through the Clearing House.

The year 1957 was one of "grave moment" in the life of the Association. For it was in that year, it first came under the control of the Central Government, following the enactment in Parliament of the Securities Contracts (Regulation) Act. The Act came into force on 20th February 1957 and, under it, the Calcutta Stock Exchange came to be licensed on and from 10th October 1957. Since then, a new set of rules and regulations has come into force and two representatives of the Central Government have also taken their seats on the Committee of the Association.

Biggest Exchange in the East

The magnitude of the role which the Calcutta Stock Exchange plays is indicated by the following facts:

It is perhaps the biggest in the East. It has over 1,000 members representing some 278 firms which employ a clerical staff of several thousands. For well over four decades, it has supported the securities of over 500 companies. It has on its official list 969 securities of 620 companies; the total nominal value of these is over Rs. 300 crores. In addition, it quotes 23 securities of the Central Government, 39 State Government Loans and 54 Municipal, Port Trust and Improvement Trust loans of an aggregate value of Rs. 1,800 crores. The companies quoted on the Calcutta Stock Exchange account for a major portion of India's national income in the corporate industrial sector of the economy.

To commemorate the historic occasion of its Golden Jubilee, the Stock Exchange Association has brought out, in a beautifully styled slim volume, a symposium on "The Stock Exchange." This publication contains interesting articles on the role of stock exchanges written by some of the leading financial journalists of India. Edited by Mr. A. K. Sur, the economist of the Exchange and author of quite a few publications on the capital markets in India, it is priced at Rs. 5.

HONGKONG AND MERCANTILE BANK DIVIDENDS

The Directors of the Hongkong and Shanghai Banking Corporation have announced their intention, subject to unforeseen circumstances, of recommending a final dividend of £1 17s. 6d. per share, in due course, making a total of £3 per share for 1958. For the year 1957, the Bank had paid an interim dividend of £2 per share, followed by a scrip bonus issue, and a final dividend of £1 12s. 6d. on the increased capital.

The Directors of the Mercantile Bank also have decided, subject to unforeseen circumstances, to recommend, in due course, a final dividend of 6¼ per cent. for the current year (same as that paid for 1957). The interim distribution for the current year was also 6¼ per cent. equivalent to the 1957 interim paid prior to the capital reorganisation.

The talks between the two banks regarding the possibility of a share exchange offer are still going on.

ROADWAYS FOR HEAVY TRANSPORT

AN EXERCISE IN CIVIL ENGINEERING

From Our Own Correspondent

LONDON, *5th December*

LONDON LETTER

IN the past two years, a new industry has grown up in this country which will, in time, revolutionise, though belatedly, road transport, particularly the carriage of heavy goods in this country, and provide a great body of experience and skill for carrying the same benefits into Commonwealth countries. It was nine years ago that the Government of the day authorised the consideration of special motorways, but it was only this week that the first of these was completed after being more than two years in building.

In itself, this week's achievement is a small thing; a mere eight miles of modern roadway have been completed in Lancashire, just enough to enable the Lancastrians to stick to their boast that what they do today the rest of Britain does tomorrow! The new roadway by-passes the cotton machinery-making town of Preston and is a stage in what will ultimately be a roadway from London through the great industrial conurbations of Birmingham and Manchester, and so up towards Glasgow.

A further seventy miles between London and Birmingham will be completed next year but the significance of this first little eight-mile stretch is that it has been the proving ground of new ideas in design and construction. Other countries who visualise the building of motorways of this new type, i.e., exclusively for motor vehicles, and who think not in terms of the few hundred miles which would satisfy Britain's transport requirements, but in terms of thousands of miles, would be appalled at the cost of this first stretch of no less than £500,000 per mile. But then the first stretch has had to tackle very difficult country and in eight miles there are no less than twenty-three bridges, since every existing road which the motorway has had to traverse is entitled to be continued either under or over the new road. So the twenty-three bridges include five rivers and streams in the eight miles, two railways and the rest roads or tracks; the latter normally taken at a high level over the new road. For the motorway must have no side roads coming into it whatsoever, except where there is what is known as the clover-leaf junction, that is, an arrangement whereby traffic can turn off the road or come on to it, without crossing existing traffic streams or impinging on them, and there is only one of these on the new road. Needless to say the new motorways are in effect two parallel roads so that all traffic on any one road is going the same way.

Of course, the building of modern roads and bridges is no new thing to British civil engineering firms, but what is new is the combination of the different skills involved in building the different types of bridges and culverts and using reinforced concrete and precast pretensioned beams and slabs. The whole thing is, indeed, an exercise in land clearance and reinforced concrete. But, in building a highway, there is a combination of firms engaged on different jobs and the successful completion of the project requires a civil engineering team effort—much more than the work of the main contractor.

Yet what this country has not yet learnt is the need, when such a team has been assembled, to keep it together and let it carry on some other section of the transport project. But Britain being divided into counties each with their local responsibilities for roads—even though the motorway projects are financed by the Central Government—it is for the local authorities to appoint their contractors and a team which has done work in one part of the country may, as in this case, be disbanded instead of being sent on to another part. However, the constructional lessons are being learnt and the much greater length of roadway to be opened next year will have its cost cut to £300,000 per mile. There is no reason why even allowing for difficult terrain this figure should not be further reduced with experience.—*All Rights Reserved.*

RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/-, postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/50 nP including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14.

SOME FEATURES OF AMERICAN BANKING

IMPRESSIONS OF AN INDIAN BANKER

IT will be recalled that a team of sixteen high level representatives of Indian banking visited the United States for three months last autumn under the scheme sponsored by the International Co-operation Administration for a study of industrial finance in the United States of America. Most of the members of the team have returned to India. The latest to arrive is Mr. Pravinchandra V. Gandhi, one of the youngest bankers and the Managing Director of Devkaran Nanjee Banking Company, Ltd. Mr. Gandhi said that the tour was very interesting and the team was greatly benefited by it. The objects of the I.C.A.-sponsored scheme were: observation and study of banking methods and techniques practised in America, with particular attention to the processes by which sound industrial loans are made. More specifically, the study included the following:

(1) methods used to determine credit-worthiness of borrowers;

(2) operating statements and balance-sheets acceptable to lending institutions;

(3) arrangements by the banking institutions for exchange of information regarding the credit-worthiness of potential borrower;

(4) working relationships between branches and their headquarters;

(5) periodic follow-up and routine checking of utilisation of extended loan funds, the general economic condition of the borrower and the rate of his progress; and

(6) additional financial and technical services made available to private industry, generally, and the borrower, particularly.

The participants in this scheme were given opportunities to observe the working of the commodity and stock exchanges, to become acquainted with the warehousing, merchandising, and other allied activities in support of industry, opportunities for informative contacts with appropriate U.S. agencies, small business associations and international banking institutions and lastly the day-to-day operations and policy formations of the banks and bankers most concerned with loans directly to medium-size enterprises.

After an initial week's stay in New York, the team was divided into groups of two, three and four and sent round in rotation to all the twelve Federal Reserve Banks and other banking institutions. Along with two others, Mr. Gandhi first went to Chase Manhatten Bank where he spent one week. He ended his tour with a visit to the Bank of America in San Francisco.

The members discussed with the American bankers mostly the subject of handling of commercial and industrial loans. They met leaders in the field of commerce, industry, and banking. They also toured the industrial area to observe and appraise the results of the local redevelopment activity.

Close Co-operation Between Banks

Mr. Gandhi stated that what struck him most was the existence of close co-operation between banks, though they were competing with one another for the available business. This co-operation was noticeable, particularly in regard to exchange of credit information prior to the sanction of loans and also in the participation of more than one bank in certain term loans. Bankers in India will do well to take special note of this feature of American banking, because it is one way of ensuring that the banking system as a whole does not overlend to any one particular party. for instance, as in the case of Mr. Haridas Mundhra. It is regrettable that, when a suggestion to this effect was made by the present Governor of the Reserve Bank of India, Mr. H. V. R. Iengar, about a year and a half ago, bankers paid no heed to it, on the ground that it would amount to violating the principle of secrecy and privacy in a bank's dealings with its client. Now that as many as 16 bankers of this country have seen for themselves how these matters are handled by their confreres in the U.S., they will, it is to be hoped, realise the value of Mr. Iengar's advice and take appropriate steps to implement it.

Another feature of the American credit system that impressed Mr. Gandhi was the fact that, notwithstanding the rather comprehensive role played by commercial banks in financing diverse kinds of economic activity, the U.S. Government has found it necessary to establish certain special financial agencies, such as (S.B.A.) Small Business Association, the Export-Import Bank, the Development Loan Fund, etc., to operate in areas of credit, where the risk elements are so large as to preclude the private agencies from operating and to close the gaps in the financial structure, particularly in the sphere of term credit to small business concerns and the promotion of the U.S.'s exports of durable producer goods and the import of essential metals and raw materials. Small Business Investment Corporations provide a good deal of scope for a large number of banks to participate in the financing of medium and long-term loans to small business enterprises.

Deposit Insurance

Mr. Gandhi was also very much impressed with the activities of the Federal Deposit Insurance Corporation which, at a negligible cost to the participating banks, has safeguarded the safety of deposits with the innumerable banks in the country, thus providing a good deal of stimulus to the phenomenal growth of bank deposits. This is also a feature of American banking which the Indian banks can emulate. *Commerce* has been advocating this step for long. A convincing case was made out by Mr. B. K. Dutt, Managing Director of the United Bank of India, in the report of the Shroff Committee of which he was an active member. But nothing has happened so far. If Mr. Gandhi and his colleagues take energetic steps for bringing into force insurance for deposits, they will have done a great service for the development of banking in this country.

Mr. Gandhi saw no overdraft system in America. Instead, there were fixed loans, term loans, secured and unsecured loans. The big banks have on their staff experts who have studied every industry very carefully. These experts know more about the industry than the industrialists themselves and are an asset to the banks, because they help the banks to study the scope for the industries wanting credit and to decide whether it would pay in the long run if loans were made to them.

American banks extend credit to both the industrialist and the consumer. An industrialist approaches a bank with a proposal to launch a venture. The bank studies the scope and the prospects for the industry. If necessary, it takes the assistance of experts from other banks in order to make a thorough study. If it is satisfied that there are reasonable chances of success, it extends credit facilities to the industrialist to go ahead with his venture. If the amount is too big, then the bank with which the industrialist is negotiating invites two or three other banks to participate in the arrangement, thus granting fullest facility to the client. The loan is broadbased and is divided between three or four banks.

If a consumer wanted to buy a particular article, he informs the bank with which he has an account. The bank makes the payment to the dealer who delivers the article to the consumer in question. The bank recovers the amount in instalments from its client. Thus, the citizen gets all the articles needed for leading a comfortable life. The dealer clears his wares, the bank gets its money back with interest in instalments and the consumer is happy. The American nation has thus been able to raise the standard of living through the credit system. The citizen exerts his best to honour the credit extended.

There are, according to Mr. Gandhi, two million small business enterprises which take advantage of the technical assistance and advice offered by the Small Business Association which employs experts to study the problems. The American Bankers Association has 17,000 members. This Association supplies information to every bank on every conceivable subject on earth. It is a highly democratic body. However big a bank might be, it has only one vote, like the smallest bank in the country.

Then Mr. Gandhi referred to a new feature, called Account Receivable Loans. Advances are made by banks on contracts obtained by business men. For instance, contractors who secure contracts from established parties, local bodies or the Defence department get credit from the banks on a guarantee of these parties. Similarly, small business men get advances from banks on the guarantee of the S.B.A.

Other features of American banking to which Mr. Gandhi referred to are the following:

Unlike in India, the board of a bank in America never sanctions loans. The officer-in-charge of loans is given full authority to extend credits upto the limits prescribed by the board. American banks do not insist on personal signatures of directors for loans in the case of public limited companies. They take personal signatures only when money is advanced to private limited companies.

The Bank of America has introduced school savings accounts to inculcate in children banking habits from early age. School children, even though they are minors, are allowed to operate this account and even a small sum of 10 cents is allowed to be drawn or deposited by these youngsters.

I.M.F. CREDIT TO PAKISTAN

Pakistan has arranged to draw the equivalent of $25 million from the International Monetary Fund during the next twelve months. This is said to be essentially a stand-by arrangement and it is not known when Pakistan would actually draw the money. The country's balance of payments position has been worsening for some time past, due to declining exports—both in volume and price—in staple commodities, such as jute and cotton, and to rising prices for imports of capital equipment and materials for economic development.

With a view to strengthening the country's economy, the Pakistan Government has invited Dr. W. Vocke, a former President of the Central Bank of Germany, to advise it on economic, financial and currency problems. Dr. Vocke is preparing a programme of practical measures, which will involve: (1) measures to strengthen productivity in Pakistan, especially food; (2) measures on import and export policy, including the adjustment of imports to the means of the country by establishing a list of import requirements and encouraging exports with all reasonable incentives; (3) measures to strengthen confidence in the national currency; and (4) measures to restore budgetary equilibrium and to stop the former practice of misusing the State Bank for fiscal borrowing.

If this programme is followed, according to Dr. Vocke, Pakistan has a good chance of regaining and strengthening its economic position.

WORLD BANK LOANS

The World Bank and an investment banking group headed by Kuhn Loeb & Co. and Ladenburg, Thalmann and Co., are joining hands in a combined operation to provide a sum of $50 million for various projects in Austria. The World Bank will lend the equivalent of $25 million to two Austrian public power corporations, while the investment banking group will raise a similar sum by offering for public subscription Republic of Austria 5¼ per cent. external sinking fund dollar bonds. The bonds have an average life of 9¼ years.

About half the net sale proceeds of the bonds will be utilised for financing some capital expenditure programmes and the balance will be relent by the Republic to the two power Corporations. The bonds are direct obligations of the Republic of Austria, the principal and interest on which are payable at the option of the bond holder in New York City in U.S. currency, in Vienna in Austrian schillings, in London in British pounds and in Frankfurt a/M in West German marks—in all cases at fixed exchange rates.

The World Bank loan is for a term of 25 years and will carry interest at 5¾ per cent. per annum, including 1 per cent. commission. Amortisation will commence on 15th March 1964 and will end on 15th September 1983. The loan is guaranteed by the Government of Austria.

By yet another combined operation, the World Bank and Dillon, Read & Co., Inc., as head of an underwriting syndicate in the U.S., have lent the equivalent of $50 million to the Union of South Africa. The transaction consists of a 25-million-dollar public issue of external loan bonds and a World Bank loan of $25 million in various currencies. The proceeds of the bond issue, which have different maturities at different prices and carry interest from 5—5¼ per cent., will be used to meet a part of South Africa's overall capital needs. The World Bank loan is for a term of ten years, with semi-annual amortisation beginning on 1st June 1961, and carries interest at 5¾ per cent. per annum, including a commission of 1 per cent.

WORLD BANK TO BORROW IN GERMANY

The International Bank for Reconstruction and Development has arranged to borrow $58 million in U.S. dollars from the Central Bank of Germany (the Deutsche Bundesbank). Of this sum, $25 million will replace the $25 million maturity due 16th January 1959 on a previous loan by the Bundesbank to the World Bank.

As evidence of its indebtedness, the World Bank will place with the Bundesbank an issue of three-year 3-7/8 per cent. Notes, dated 16th January 1959 and maturing on 16th January 1962. The new notes will be denominated in U.S. dollars.

Net borrowings by the World Bank from the Bundesbank, on completion of the current transaction, will amount to the equivalent of $348 million. Of this sum $300 million will be denominated in United States dollars and $48 million in Deutsche Marks (DM. 200 million).

The Malayan Bank rate has been reduced from 5¼ per cent. to 5 per cent. with retrospective effect from 1st December 1959. This is the lowest rate since early 1955.

A Tribute to Men of Vision

IN 1908, The Bank of Baroda was inaugurated—in response to a demand voiced by the people of Baroda themselves for a purely Indian bank that would cater for their requirements. And on the occasion of the Bank's Golden Jubilee, we pay glad tribute to its Founder Directors, men whose vision and initiative led to the Bank's establishment under the distinguished patronage of H. H. Maharaja Sir Sayajirao Gaekwad III...and to those who have guided it through fifty years of service and achievement.

All types of banking business

Started with a paid-up capital of Rs 6,92,700 and with one office employing fewer than 20 people, the Bank has today a paid-up capital of Rs 1,25,00,000 and over 83 offices in India and abroad giving employment to more than 2,800 people.

The Bank carries on all types of banking business and offers safe deposit locker facilities in thirty-six cities. Its Executor and Trusteeship Department in Bombay renders valuable services, and considerable foreign exchange business is handled through the Bank's foreign branches and correspondent banks. Its Golden Jubilee year has been marked by the absorption of the business of The Hind Bank by amalgamation, one result of which is that The Bank of Baroda now has an office in Pakistan.

Inspired by its past record, the Directors and Management of The Bank of Baroda look forward with confidence to a future of continuing service to the country...in the tradition so firmly established and worthily maintained during the past half-century.

CHINESE COMPETITION IN TEXTILES

PRODUCTION OF YARN AND CLOTH EXPANDS MARKEDLY

AT no time in the history of the Indian cotton textile industry was the need for installing latest machines and adopting modern techniques of production and management so urgent as it is today. For competition in the world textile markets is becoming more and more acute. It is clear that, unless suitable steps are taken to ensure manufacture of quality cloth at an economic price, the country will be completely edged out of its export markets by other textile-producing countries like Japan, Hong Kong and Communist China, in the coming years. In particular, competition from China is tending to be very severe. This country has already expanded its exports of cotton cloth to world markets, especially to the Asian countries, through attractive terms of credit for long periods, extremely low prices—the prices of cloth exported by China are said to be 15 per cent. lower than those of India—and energetic drive by emigrant merchants. Even a predominantly textile exporting country like Hong Kong is said to have been meeting with keen competition from China To quote a recent report from Hong Kong:

"One of the products at a local department store specialising in the sale of goods from Communist China is perfumed cotton cloth for women's clothing. The gaily coloured fabric, salesmen assure customers, will keep its heavy scent through five washings in cold water. The cloth is selling in large quantities, and its popularity is duplicated with a growing variety of other goods from mainland China now being marketed here. China is disposing of an increasing amount of its products in Hong Kong offered at prices 5 to 30 per cent. below those for similar articles made in Hong Kong or imported here from other parts of the world."

How China has been able to compete successfully in export markets has been well brought out by Mr. Takashi Murayama, Director of Research, All Japan Cotton Spinners' Association, in the course of a study on the present and future position of China's cotton industry published in the latest issue of the *International Review of Cotton and Allied Textile Industries*. According to the author, the Chinese cotton textile industry is highly profitable and operated by the State. Export business of cotton textiles is in the sole hands of the State-owned organisation. Under such a structure, it is quite easy to cut down the export price to a competitive level and meet the loss by reducing to a fraction the enormous profit that is earned in this monopolistic domestic business.

First Five-year Plan

The highly competitive character of Chinese textile exports has also been rendered possible by the notable expansion and development that took place under the first Five-year Plan, started in 1953. The Plan envisaged a rise of 47 per cent. and 38 per cent. in the production of cloth and yarn, respectively, as compared with the record output of 1952; the production target fixed for 1957 was 163.72 million bolts (1 bolt=40 yards) of cloth and 5 million bales of yarn (of 400 lbs. each). The targets were exceeded even before the Plan was completed, the actual output of cloth in 1956 being 174.89 million bolts and the production of yarn was 5.23 million bales.

The total production of cloth and yarn in 1957 was, however, lower at 149.00 million bolts and 4.6 million bales, respectively. The setback is attributed to shortage of raw cotton. Mr. Takashi Murayama says that, while importing a certain quantity of raw cotton, Red China depends on home-grown cotton to a predominant degree. Production of yarn and cloth is decisively influenced by the size of its own cotton crop. The production target for cotton yarn fixed for 1958 is 5.2 million bales. It may be noted here that the average count of yarn spun in China in the first half of 1957 was 23.6s., while it was 22.2s. in 1952.

The upward trend in cotton textile output has followed the marked expansion in the spinning and weaving capacity of the industry. The total number of operable spindles in place at present is estimated at as high as 8.0 million, as against 7.53 million at the end of 1957 and 6.81 million in 1952. Similarly, the weaving capacity has gone up, the number of looms rising from about 60 000 in 1952 to 180.000 at the close of 1956. It is, however, believed that nearly three-quarters of the cotton mills in China represent old type units. This is confirmed by the fact that, in determining the first Five-year Plan, China had decided on a policy under which existing equipment would be utilised in full in order to make the best use of the existing productive capacity.

Alongside of improvement in the capacity of the cotton textile industry, China has laid great emphasis on the manufacture of machinery. By July 1957, it is stated, China's ability had reached a level of 800.000 spindles and 20,000 looms a year. The production of spindles in 1958 is put at 2.0 million. Alluding to the progress in this sphere, Mr. Takashi Murayama observes: "China seems to be expanding at a rapid rate, and it may be that China has now established the ability to undertake large-scale new installation and replacement of cotton spinning and weaving machinery, although it would be affected by the requirements for other fibre sections."

Raw Cotton

China has also laid equal emphasis on the need for augmenting production of raw cotton. The efforts made in this direction have met with considerable success. Thus, the total cotton crop actually harvested in 1957 was 32.8 million piculs (1 picul=110.23 lbs.) which compares very favourably with 20.61 million piculs in 1951 and 8.89 million piculs in 1949. The target for 1957 fixed in the first Plan was 32.7 million piculs. China has been importing raw cotton at the rate of 150,000-350.000 bales (of 478 lbs. each) per annum, but it has never imported a sufficient quantity to supplement the shortage of domestic supply even in the years of poor crop. The main suppliers of cotton to China are Egypt, Pakistan, Brazil, Burma, Mexico, Sudan and Syria.

The Government of China has enforced control measures in the purchase and distribution of cotton textiles. Under this system, purchase and sales of cotton cloth is administered by the State agency or designated sub-agencies. Private wholesalers have been eliminated, whereas private retailers are permitted to survive, but this private business was confined to sales of cotton goods as supplied by the official organ to the general consumer at official prices. On the other hand, the Government is undertaking the controlled distribution of cotton goods for private, industrial and official use and the general public buys cotton goods by means of the ration card.

Cloth Ration

Over 85 per cent. of the total production of cloth in China has been allocated for civilian use in recent years, the quantity actually earmarked in 1957 being 127 million bolts out of the production of 149 million bolts. It is assumed that, under the distribution programme for 1957 (the cotton cloth distribution year is 12 months from September to August), some 22 million bolts (about 880 million yards at 1 bolt=40 yards) were set aside for the purpose of industrial use, army use, State stockpiling as well as export use, apart from civilian use as cited above. The national average *per capita* ration of cotton cloth was 6.8 metres in 1957. But, owing to the reduction in cotton cloth production, the Government took action, in August 1957, to cut down its distribution programme for 1958 to 5.33 metres per head, subject to an increase of the ration up to 6 metres, if the crop proved to be good. Since then, as an increased ration appeared possible, the cotton cloth ration seems to have been increased to the level of 6 metres a year since January 1958.

Mr. Takashi Murayama points out that China is offering in South-East Asia many types of cotton cloth that are competitive with similar Japanese cloth at a price lower by about 10-15 per cent. But he says that a definite answer cannot be given at the present moment as to whether cheapness is due to its export policy in

From A Special Correspondent

MANCHESTER, *9th December*

MANCHESTER LETTER

STATE of trade returns quoted in the latest review published by the International Cotton Federation from its headquarters in Manchester indicate that conditions in the third quarter of 1958 in many cotton textile manufacturing areas were far from satisfactory. In Britain, the position in the spinning industry continued to deteriorate, although output of yarn was affected by the annual summer holidays. Production was 16 per cent. below the level in the corresponding period in 1957. Yarn sales declined as compared with the previous quarter and were approximately 30 per cent. less than during the third quarter last year.

The order book position worsened as a result of this trend and cotton yarn exports were over 33 per cent. down on the similar period in 1957. Further contraction occurred in the number of spindles installed, the figure at the end of September being 25,810.000 mule equivalent spindles. For those weeks which were unaffected by holidays, only 65 per cent. of the spindles in place was actually running on average.

Continental Advices

Continental advices received by the Federation were equally discouraging. In Austria, the cotton industry was said to be suffering from severe pressure on prices and it had been found impossible to avoid more dismissals or the closing down of mill departments. Shortening of order books, for both domestic sales and exports, were reported from Belgium, together with short-time working. Uncertainty was said to be having a most unfavourable effect on prices.

The usual September business revival did not occur in the Federal Republic of Germany. Hand-to-mouth buying of yarns prevented spinners from making long-term plans for their production. Pressure on prices continued during the third quarter and imports at very low prices added to the uncertainty and reluctance to operate on the part of buyers.

The Italian cotton industry continued to produce only to a limited extent in relation to its manufacturing capacity, the report stated. Difficulties were encountered in selling yarns, and weavers were again uncertain in taking up supplies.

Assessing the prospects for the Japanese cotton mill industry, the report said that, although exports of cotton textiles were expected to increase seasonally during the fourth quarter, no material revival in export trade could be anticipated, because of the continued scarcity of foreign exchange in South-East Asia. Domestic sales were expected to decline seasonally.

Last month, the further sharp decline in prices of Sudan cotton prompted the compilation of figures showing the continued downward trend in the cost of supplies of long-staple cotton and the equivalent fall which has taken place in yarn quotations. In the second half of the current year, a similar movement, though not so drastic, has taken place in prices of American cotton. This trend has become intensified in the Liverpool futures market over the past few weeks and persistent selling pressure on the near positions has developed. Switching operations to distant contracts have been partly responsible for this adjustment in values but there is no mistaking the bearish sentiment which still persists in many quarters.

Irrespective of the outstanding problems which have played such a considerable role in deterring customers from making purchases except on a retail scale for more than 12 months back, the easier movement in cotton prices would in any case have acted as a brake on business. Belief that a surplus of raw cotton was again building up in world markets is a fundamental argument in restraining consumers from operating freely.

The Situation at a Glance

The following table illustrates the situation at a glance, indicating the steady downward trend in values, which has not as yet been halted:

(In *d.* per lb.)

	Liverpool futures		Spot American Onc-inch	American cotton yarns		
	American Dec.-Jan.	Mixed Dec.-Jan.		16s Cop Twist	36s Ring Beam	42s Cop Weft

„ 5 ..	22.60	23.70	24.35	41.94	61.26	57.71

Differential changes in American type yarn quotations have resulted in irregular adjustments to prices over the period, but it should be noted that the fall has not been as marked in the lower range of counts as in other qualities. In comparison with price movements in the Egyptian type section, however, the reduction has been relatively small.

"A Faithful Servant"

Part of a barrister's job is to create a picture of his clients to impress the jury when presenting his case. Whether the members of the Restrictive Practices Court were touched by the description of the cotton industry provided by its advocate, Sir Andrew Clark, Q.C., it is impossible to judge, but to cap all the depressing talk which has gone on in Lancashire for many months past, the story he told was indeed a melancholy one. After recounting the early post-war years of prosperity, Sir Andrew described the industry today as "sick and ailing." It would not be in the interests of the public, he said, "suddenly to snatch away the patient's crutch in order to see whether he can walk, regardless of the risk that he might break his leg in the process." Reaching out perhaps for the headlines, his final plea was:

"The cotton industry today is an old man who for 200 years has been a faithful servant to the public. Upon him depends the future of 150,000 men and women in Lancashire. Both he and they deserve better and more considerate treatment than that."

Most people would say that considerably more than 150,000 are vitally concerned with the future activities of the cotton trade. In any case the importance of keeping mills in correct running order is vital, in the event of any emergency requiring a sudden overwhelming call for supplies of cotton textiles. This, however, is an age of "gimmicks." Speakers constantly search for the telling phrase which will stick in the minds of readers or listeners. If they are sufficiently attractive to catch the attention of the public in the cotton industry's favour, so much the better, but sometimes the near-defamation of the industry by numerous commentators has done a great deal of harm in discouraging prospective entrants from taking jobs in the mills.

No "Jubilation"

As Lancashire still awaited a final announcement on the outcome of the negotiations with *Hong Kong on the* limitation of textile shipments to this country, Mr. Charles Schofield, General Secretary of the Operatives Spinners' Amalgamation, warned that it was not expected there would be any "jubilation" in Lancashire. In a report to members, he, however, said that, provided the figure agreed upon was unreasonable, the industry would benefit from knowing the volume of textiles which could be imported from Asia during the period of the contemplated agreement. "Without any limitation on the amount to be imported the industry would be in a vulnerable position and completely at the mercy of the three Commonwealth members concerned—Hong Kong, India and Pakistan."

Mr. Schofield welcomed the increasing concern shown by the Government about the present plight of the Lancashire cotton industry. But he said that, had that interest and concern been displayed during the early period of increasing imports four years ago, many thousands of textile workers, who were now out of work or in other less remunerative jobs, would still be engaged in cotton.

Pay Claim Rejected

Employers in the spinning and weaving sections of the Lancashire cotton industry have turned down an application for a wage increase of 3*d.* an hour for mechanics and electricians in about 1,000 mills. In refusing the claim, they pointed to the industry's present difficulties and the marginal increase in the cost of living since the last wage award.—*All Rights Reserved.*

PROSPECTS FOR WORLD COTTON

U.S. EXPORT OUTLOOK BLEAKER

THERE are clear indications that cotton is again moving in the direction of oversupply, as evidenced by the divergent trend in production and consumption. A significantly larger crop is in prospect and the opportunity for a marked expansion of acreage in the U.S. under the new Agricultural Act increases enormously the production potential for 1959-60. In contrast to this trend in production, consumption is declining and no marked improvement is likely in the immediate future.

The tendency of world cotton production to exceed consumption is likely to persist in the current season also, according to the International Cotton Advisory Committee, Washington. The Committee estimates that world production including that of communist countries in 1958-59 will increase by 2,100,000 bales to 42.3 million bales, while world consumption will probably level off or decrease to 41.7 million bales. Consequently, there will be a net addition to stocks of the order of 600,000 bales at the end of the current season.

Stocks Decline

Last season, free world cotton stocks declined by about 1.7 million bales. The decline took place chiefly in the United States where it was as much as about 2.7 million bales. This was offset to some extent by the increase in stocks in other free world countries. Most of the stock increases this season is expected to be in extra-long staples. Free world production of this type of cotton this season is estimated to be 60 per cent. higher than in 1957-58.

Importing countries as a whole are likely to reduce stocks this season because of large inventories of textiles and weaker consumer demand as well as the prospect of larger world supplies of cotton in the current and the next seasons. Stocks in most net importing countries are either adequate or slightly excessive in relation to normal needs.

Free world consumption of cotton is still declining. According to a report of the U.K. Cotton Board, aggregate cotton yarn output in the world during the second quarter of 1958 was about six per cent. less than that in the comparable period of 1957. The decline was general for all the major consuming countries except France. The report also indicates that cotton textile exports during the same quarter were running below the 1957 level. Consumption of cotton in the United States this season is expected to be about the same or slightly higher than the 1957-58 figure of 8 million bales. Domestic mill consumption in the U.S during the first two months of the present season was slightly lower than in the same period last season. Consumption during the first thirteen weeks of the current season aggregated 2,120,000 bales, as compared with 2,145,000 bales in the same period last season. Consumption in importing countries in the rest of the free world is likely to decline to 15.4 million bales, as compared with 15.9 million bales in 1957-58. Cutbacks in textile production are in prospect in such major consuming countries as Japan, the United Kingdom, India, France, etc., due mainly to lower domestic and export demand and larger stocks of textiles.

The depressed conditions evident almost throughout the textile industry thus far in the calendar year 1958 are, however, expected to show some improvement in 1959. Industrial activity and gold and dollar reserves appear to be strengthening and recent reports indicate that some improvement in consumer demand may be expected in the coming months. Despite some unfavourable features, consumption in a number of net importing countries might perhaps remain steady or decline only slightly for the season as a whole.

Exports From U.S.

The export outlook for the United States during this season, according to the Committee, is not as favourable as it was during the previous season, thanks to larger exportable surplus with net exporting countries in the rest of the free world, reduced consumption, large inventories of textiles, and continued weakness in prices. Further, about two-thirds of the increase in free world production this season is in the countries producing a large proportion of the relatively higher-priced extra-long staples. The bulk of U.S. exports is not directly competitive with the longer staple styles that are now in a surplus position. Nevertheless, it is expected that the U.S. exports this season will be of the order of 4 million bales, about 1.7 million bales below the 1957-58 level.

Exports from the rest of the free world countries, on the other hand, are expected to increase from 6.9 million bales in 1957-58 to about 7.5 million bales this season, an increase of 600,000 bales or 10 per cent. Thus the aggregate free world exports will be of the order of about 11.5 million bales, about 1 million bales lower than last season's figure of 12.5 million bales. Despite this increased trade, exportable surplus in these countries is likely to increase, thanks to higher production.

COTTON IN U.S.S.R.

Until recently, only limited statistical information was available concerning raw cotton and cotton industry in the U.S.S.R. Last year, however, there has been a general relaxation of the ban on this information and a considerable amount of data, including comparisons with earlier years, was released by the Soviet Government. The publication named *U.S.S.R. Industry* issued by the Central Statistical Administration, Council of Ministers, U.S.S.R., contains much useful information on cotton. In addition, the Soviet Government supplied the International Cotton Advisory Committee, Washington, detailed statistics on Soviet cotton trade since 1947.

From these materials the Committee estimates that cotton production in the U.S.S.R. has now reached a level of about 1.5 million metric tons or about 7 million bales per year. This estimate is based on official production figures in seed cotton converted to cotton fibre at lint yield ratios as published.

According to official statistics, there were 10,002,000 cotton spindles and 215,100 looms in the U.S.S.R. at the end of 1955, as compared with 8,592.000 spindles and 184,500 looms in 1950—an increase in each case of nearly 17 per cent. Production of cotton textiles has increased steadily each year since the end of the war, reaching a peak of 5.9 million metres in 1955. Production declined somewhat in 1956, reflecting the reduced cotton crop of 1955.

The most common textiles produced are linens, calico, gauze, and dress and clothing fabrics. Together, these items accounted for 62 per cent. of the entire cotton textile output in 1955.

From statistics on exports and imports of cotton, it is clear that the principal customers for Russian cotton are Poland, Czechoslovakia, and East Germany, with Hungary and Rumania also important users. In recent years, a number of West European countries have become rather substantial markets for this cotton, particularly Finland, West Germany, United Kingdom, and France. Total annual exports of cotton from the U.S.S.R. now average about 1.5 million bales per year.

Annual imports of cotton into the U.S.S.R. fluctuate considerably, but have increased substantially in recent years, even exceeding the high levels of 1948 and 1949. The chief source of imports has been Egypt, including, more recently, the Syrian region of the United Arab Republic. Increasing quantities are also being imported from Afghanistan through trade agreements concluded with that country.

A surprising feature of the official import statistics is the reported importation of 264,000 bales of United States cotton during the three years 1948 to 1950. Official export statistics of the United States show only 26,000 bales shipped to the U.S.S.R. in that period. Similarly, during the same three years, the U.S.S.R. imported 530,000 bales from Egypt. Official statistics of Egypt shows that exports to the U.S.S.R. amounted to less than 400,000 bales. A possible explanation is that there is re-export of substantial quantities of U.S. and Egyptian cotton from other importing countries to the U.S.S.R. in those years.

IMPORT QUOTA FOR COTTON

The import allocation for 195,000 bales of soft currency area cotton, comprising 55,000 bales of Sudan and Egyptian cottons of staple length of 1.3/16" and above and 140,000 bales of East African cotton of staple length 1.1/16" and above, announced by the Government of India on the 11th inst., has been greatly welcomed by the trade. The present quota brings the total so far issued during the season to 320,000 bales. This compares with 208,000 bales permitted last season.

Variety-wise, the quota issued during the current season comprises 150,000 bales of East African cotton of stapling 1.1/16" and above, 95,000 bales of U.S. cotton of stapling 1.1/16" and above under Public Law 480 and 75,000 bales of Sudan and Egyptian cotton of stapling 1.3/16" and above. Half the quantity of the present allocation has been earmarked for import under the export incentive scheme for cotton textiles.

BOMBAY GAS COMPANY LIMITED

PRODUCTION TOUCHES NEW RECORD

CHAIRMAN, MR. B. L. JALAN'S REVIEW

THE Annual General Meeting of the Bombay Gas Company, Ltd., was held at Bombay on 17th December 1958. The following are extracts from the speech of Mr. B. L. Jalan, Chairman of the Company. In the absence of Mr. B. L. Jalan, the speech was read by Mr. N. K. Jalan.

"You are aware that our country has been faced with food shortage for quite some time now. It has been officially estimated that the total production of food grains in 1957-58 declined by about 6 million tons. This has to be put against an increase of population of about five million within a year. The obvious result was an increase in prices of food articles, and indeed, of all other commodities. While a more rational and realistic solution of the problem lies in increased and steady production, primarily through short-term minor irrigation schemes on self-help pattern, the Government have recently announced their decision to introduce State trading in food grains. In the light of our past experience of price controls and rationing in the country, one does not feel optimistic about the results of such a venture. Moreover, while this does not solve the basic problem, State trading would become redundant if, as is hoped, we are going to have a bumper crop this year. At the same time, it will create a lot of unemployment and reduction in the incomes of large numbers of middle class people. I will only reiterate that apart from the efforts to increase food production, what the Government should do is to maintain adequate buffer stocks. It is through such stocks alone that the Government can hold the price line. We should welcome our Prime Minister's statement that the Government have decided to maintain, and not merely build up, stocks of two million tons of food grains and to operate in the market to prevent fluctuations in food prices.

Foreign Exchange Problem

"The increase in prices has been caused also by severe import cuts imposed during the last few quarters as a result of the dwindling of our foreign exchange reserves. It is, however, a matter of gratification that the Government have been trying to adopt all legitimate measures to improve the situation. As you are aware, a Creditors Conference was convened in Washington at the instance of the World Bank, and the friendly countries and the Bank promised further loan accommodation to help India tide over her difficult foreign exchange situation. It would not be out of place to mention here that the visit abroad of our distinguished Finance Minister, Shri Morarji Desai, proved a great success in this context.

"While it is likely that we have already arrested the unfavourable trend, the situation is yet far from being satisfactory. Our exports continue to maintain a low level, if not a downward trend. In 1957, our exports amounted to Rs. 643 crores, showing a monthly average of Rs. 54 crores. The average for the first eight months of the current year works out at Rs. 46 crores only.

U.S. Recession

"This unhappy feature in our export trade has been explained by various factors such as the recession in the United States in the early part of this year and economic war being waged by China by quoting below the lowest global prices. The economic climate in America, however, has greatly improved of late. The index of industrial production which had declined to 126 in July 1958 (base 1947=100) rose to 138 according to latest figures available for mid-November. The various fiscal and monetary measures undertaken in that country have enabled her to make up a large part of the lost ground. But the planned and extra-market competition offered by the Chinese shall have to be reckoned with. Government assistance in adequate measure can play a great role in maintaining our competitive position especially in the field of cotton textiles provided that in the meantime the textile industry is fully renovated and modernised.

"While it is true that our exchange position has improved it must be clear that this has been secured at great sacrifices. Such sacrifices have been made primarily in three directions. First, it has caused a considerable shortage of consumer articles in the country, which has also accentuated the rise in prices and general cost of living. Secondly, it has affected industrial production as a result of the shortage of raw materials and rise in the cost structure. This has also resulted in the growth of unemployment in certain important sections of the economy. Thirdly, it has greatly checked the growth of industry. A stage has been reached when several industrial projects have been or are being abandoned simply for want of Government permission, and such permission could not be given because it involves some foreign exchange expenditure. You are aware that sometime past the deferred payment system was invoked. It acted as a great deterrent to industrial expansion. Now even deferred payment system is not enough. It is generally required that a project should not involve any foreign exchange payment at all at least until 1961. Even after that date, expenditure of foreign exchange will be permitted in cases where it has been proved to the satisfaction of the authorities that the new unit will be able to save corresponding amount of foreign exchange. To say the least, this is an unenviable position for any country which has launched a programme of rapid industrialisation. I should make it clear at this stage that I am not commenting on such measures initiated by the Government. I am only trying to draw a factual picture of our present conditions and to state that instead of encouraging industrial expansion we have to abandon otherwise very fruitful and profitable industrial projects only because of our foreign exchange situation. This is just the opposite of what we sought all these years since we embarked on our planned development. If we are to achieve only a moderate rate of growth, let alone ambitious, we shall have to create a situation that no industrial project is abandoned simply because it does not save as much foreign exchange as it spends.

"One very effective way of solving this problem is to encourage flow of foreign capital into the Country. At this stage, we should distinguish between foreign assistance on loan basis obtained on Government account and equity capital. Our long-term exchange problem will be effectively solved only if we can encourage the flow of the latter.

Capital Limited

"On the occasion of the annual meetings of the International Monetary Fund, the World Bank and the International Finance Corporation in October in New Delhi, I met several financial experts from other countries. If I found any unanimity in their views on any matter it was that the fund of available international capital is limited and that the flow of private foreign capital would depend greatly on the investment climate of the recipient countries. A country which could present a welcome climate for such flow, would not, however, face a shortage of capital.

"The factors which constitute a favourable investment climate are quite well known: a fair return on capital, guarantee against risks of expropriation and non-convertibility, a reasonable level of taxation, an assurance against discriminating treatment, and an absence of restrictive labour laws. It is for us to see how far our economic policies conform to the international expectations in this regard. It is very clear, however, that imposition of taxes such as wealth tax on companies, which could not be justified on any plausible consideration, and like expenditure tax, which is not levied in any other country in the world, and the collection in respect of which would hardly compensate the expenditure and efforts involved in such collection, do not constitute factors which create the desired climate.

Internal Capital Resources

"While the problems of foreign capital and foreign exchange continue to be what they are, taxation, large Government expenditures and high level of spending as a result of rise in prices have greatly affected domestic savings and investments. The general investment climate in the country is reflected in the index of prices of variable dividend industrial securities, which declined from an average of 123.8 in 1956 (base: 1949-50=100) to 113.7 in January 1957, and to 97.2 in December of the same year. During the course of this year, the prices have advanced once again but this is reflective of the easy money market conditions caused by shrinkage in international trade and more particularly in imports and very much slackened industrial expansion. This is evident also from the rise in deposits of banks as against the fall in advances. Thus during the course of a year since the third week of November 1957, deposits of Scheduled banks rose from Rs. 1,359 crores to Rs. 1,575 crores and the advances and bills discounted actually declined from Rs. 847 crores to Rs. 841 crores. There was, however, a sizable gain in the case of investment in Government securities of these banks, from Rs. 407 crores to Rs. 641 crores. This clearly indicates that banks have invested more in Government securities and less in business and industry while expansion of industry and business is the burning need of the country. We should, in fact, follow the liberal Japanese method of providing credit facilities through which she has built up her disintegrated economy from scratch.

Rising Costs

"Coming to the affairs of our Company, the year under review has shown a balance of Rs. 1,61,466 in net revenue account. It was considered by your Board that such a small balance must result in a reduction in the rate of dividend payable this year as compared with the last, and accordingly a dividend of 4 per cent. free of tax is recommended. This will absorb a sum of Rs. 1,60,000, leaving only Rs. 1,466 as the amount to be carried forward to the next year. I cannot, therefore, say that the revenue position of the Company is satisfactory, but it is beyond the control of the management. The cost of coal, the main raw material required for our gas production and the freight thereon has been mounting and is a matter of serious concern to our industry. An increase of over Rs. 6.12 per ton came into effect in 1956 when the Company immediately approached the Government for revision of the price of gas. As a result of our representation made in September 1956, the Government of Bombay appointed an Advisory Committee to go into the matter, and after some hearings they submitted a report to the Government probably in July 1958. This report is under the consideration of the Authorities and the Company is not aware if any suitable increase in gas price to offset these mounting costs will be authorised. In the meantime, the ex-works cost of coal has increased again in 1957 and 1958, and we now have to pay Rs. 10.70 per ton more than we were paying in 1955. The financial position of the Company can only improve if a fair and reasonable rate is allowed to cover the increase in costs.

Increased Production

"The Company on its part has been making every effort to increase the production of gas to make it available to as many consumers as possible. The demand for additional gas continues and applications are received daily by the Company from now potential consumers. During 1957, 750 new gas connections were installed.

"On the production side, the volume of gas produced was again a record, and the following table sets out the comparative figures of gas produced in the years 1946, 1955, 1956 and 1957.

Year	*Total Gas Productions* (Cu. Ft.)	*Increase over 1946* (Per cent.)
1946 ..	1,115,949,000	..
1955 ..	1,511,849,000	35.5
1956 ..	1,529,221,000	37.0
1957 ..	1,581,389,000	41.7

"The gas production in 1958 upto October was 1,374,683,000 cu. ft. which was 5.2 per cent. higher than that of the corresponding period of 1957.

Expansion Programme

"New plant installed in 1957 included a third coal elevator, complete with overhead coal storage hopper and coal crusher, and a third retort charging machine. To deal with the increased coke produced from the retort house, which, you will recall was extended in 1956 by the addition of five new beds of retorts, a second coke quenching station and coke discharging ramp was put into commission. A fourth Lancashire boiler and a battery of three induced draught water coolers were also put into commission during the year.

Men and Oil . . . 3

The Driller

Drilling a hole into the earth's crust is usually the last stage in the long process of searching for oil. It is also the most important stage, for only by drilling can the explorers tell whether or not oil exists underground. Success or failure, one of the first men to know the result is the Driller. He is in charge of the operation at every new well, from the time the heavy cutting tools and drill pipe first enter the earth until the well is completed. Then, if oil is reached, the driller's task changes. He must prevent the escape of oil, and of the gas that is usually associated with it, and also not allow water to contaminate it. This is done by withdrawing the drill pipe and tools from the well and holding back underground pressure with specially treated mud. By the time production engineers are called in to produce the well, the driller and his crew have lined the hole with a protective casing of steel. All this work calls for training and experience, and many Indian drillers have learned the job with the Assam Oil Company. Many more are doing so today.

RAW JUTE TO BE EXPORTED

CENTRE'S JUTE POLICY FAILS TO ARREST DECLINE IN PRICES

THE Government of India is reported to have permitted the West Bengal Government to export raw jute. The quantity allowed to be exported is, however, not known at the time of writing, as no official *communique* has been issued on the subject. Nor is it clear why the State Government has been brought into the picture of export trade. In the absence of full details, comment on this aspect has to be deferred. Meanwhile, the Central Government's decision to allow exports of jute was first made known in the Lok Sabha last week. Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, told the House that a limited quantity of raw jute would be exported through the State Trading Corporation, with a view to arresting the present recession and stabilising the prices of the raw material.

The Union Minister made the statement in reply to a "call-attention" motion by 10 members on the plight of jute growers in the country due to the sharp fall in prices. He did not take an alarmist view of the situation. For he said that, though there had been some decline in jute prices in recent months, the return to the cultivator taken as a whole could not be deemed to be unduly low, because of the increased production per acre. In support of this contention, he pointed out that the production of jute and mesta had shown an appreciable increase during recent years. In 1953-54, the output amounted to 3,747,000 bales and the area under cultivation of jute and mesta was about 1,884,000 acres. The production in 1958-59 was estimated at 6.2 million to 6.5 million bales, while the area under cultivation was only 1,894,000 acres. Thus, on almost the same acreage, the production had, the Minister argued, shown a steep increase, due to the "special efforts made by the cultivator, coupled with the assistance rendered by the Government under the 'grow-more-jute' programme."

Alluding to the trend of prices, Mr. Shastri observed that the average price of Assam middle was Rs. 29.5 per maund in 1953-54. The price which prevailed in recent months for the same quality ranged between Rs. 24 and Rs. 27 per maund. The Minister did not regard this price as unduly low having regard to the increased production from the same acreage. Nevertheless, in view of the need for sustained rise in production and maintaining steadiness in price, certain measures were taken by the trade and the industry, namely, fixation by the East India Jute and Hessian Exchange of margins which would be payable if prices went below certain level and the fixation of the minimum prices for hessian and sacking by the I.J.M.A. The Association had also asked the member-mills to increase their purchase of raw jute up to three months' consumption. Mr. Shastri disclosed that mills were now being persuaded to purchase and hold stocks up to four months' consumption. The mills' purchases during the first four months of the current jute year, that is, July-October 1958, aggregated 2,194,000 bales, as compared with 1,814,000 bales during the corresponding period of 1957. The mills' consumption of jute during this period, it may be noted in passing, aggregated 1,973,000 bales, as compared with 1,944,000 bales in the period July-October 1957.

Mr. Lal Bahadur Shastri also referred to the drastic cut in import of raw jute introduced with the twofold objective of safeguarding domestic producers and conserving foreign exchange. "For a short period from the end of May up to the middle of July," the Minister said, "licensing was practically suspended. During the period 15th July to 15th November 1958, licences have been issued for the import of only 405,000 maunds, as against 1,500,000 maunds licensed during the same period in 1957. It has also been decided that import of raw jute should be restricted to qualities not produced in India, but needed essentially to meet the requirements of the foreign market."

The Minister informed the House that special measures were being taken to provide adequate wagons for the movement of jute from the producing areas to Calcutta. From a long-term point of view, consideration was also being given to the question of increasing the holding power of the cultivator by measures, such as acceleration of the programme for the establishment of co-operative marketing societies, warehouses and godowns. Mr. Shastri gave the assurance that the position was being closely watched by the Government and further measures would be taken, if found necessary.

The Minister's statement did not seem to have convinced all the members of the Lok Sabha. Mr. A. C. Guha, for instance, said that the position was very unsatisfactory. As the matter involved the rural economy of three eastern States, he wanted a discussion on the matter. The Speaker said that he would consider whether a debate on the subject was necessary. Nor has the Minister's announcement about the export of raw jute brought any cheer to the market. On the contrary there has been a further setback in prices, as will be seen from the following table:

(Rs. per maund)

	8-12-58	13-12-58
Assam bottoms	21.75	20.75
Northern bottoms	21.25	20.00
Daisee bottoms	23.25	22.50

This further recession in prices is explained by the fact that barring the decision to export limited quantities of raw jute, the Minister did not announce any new measure. Even the decision to export small quantities of jute, which had been demanded by the growers, has disappointed market circles, as the export business is to be handled by the State Trading Corporation. The Bengal Jute Dealers' Association, in the course of a statement on the Government's policy in respect of Jute, has called for a "more practical and streamlined jute policy," if the Government were to achieve its objective of helping growers and traders. The announcement regarding export of jute is considered as too vague at it does not specify the quantity and quality to be exported, whether the quantity would really help boost up prices. The Secretary of the Bihar Jute Growers' Association, Mr. P. D. Khaitan, is of the view that jute growers of Bihar cannot be saved until and unless a drastic measure is taken like "free export of jute with subsidy through an internal production tax on finished goods."

The West Bengal Government, too, is doubtful about the success of the export policy, as it feels that permission has been received too late. This may cause difficulty in securing a good market abroad. A spokesman of the West Bengal Government has made it clear that it is not considering the fixation of floor prices for jute as by so doing it will have to buy large quantities to enforce the minimum price.

OUTPUT OF JUTE GOODS RISES—STOCKS DECLINE FURTHER

Notwithstanding a sizable rise in production of gunnies during November, the stocks of goods with mills at the end of the month were lower. This shows that mills must have sold during the month more than what they produced.

The output of jute goods went up by 5,200 tons to 87,000 tons, thus nearly making good the fall in the previous month. Nevertheless, it is 4,900 tons less than that in the corresponding month of 1957.

The rise in production is shared by the three main groups. Hessian output, at 35,800 tons, is up

PLACE OF OIL IN ASIAN ECONOMY

NEED FOR AUGMENTING PETROLEUM SUPPLIES

THE production and consumption of oil in Asian countries are both strictly limited, especially when they are considered in relation to the size of this region and its production. Thus, in 1954, out of a world production of 940 million tons (coal equivalent) of petroleum, shale oil and natural gasoline, the share of the Far East (excluding China) was only 22.7 million tons, the respective figures for consumption being 842 million tons and 31.2 million tons. Proved reserves of oil in the region of the Economic Commission for Asia and the Far East (E.C.A.F.E.) are estimated "to be of the order of 40,000 million barrels, plus or minus about 3,000 million barrels." As industrialisation gains momentum in this region and living standards rise, the consumption of petroleum and petroleum products is also bound to move up. In all countries of this region, there is a general realisation of the importance of oil supply. This is reflected in the E.C.A.F.E.'s symposium on Development of Petroleum Resources in the Asian region, held at New Delhi last week. Over 100 oil experts from 29 Asian countries participated in it. In the course of his inaugural address, the Union Minister for Mines and Oil, Mr. K. D. Malaviya, rightly stressed that oil was bound to play a vital part in the industrial progress of the E.C.A.F.E. countries. Stressing the importance of oil in modern economy, Mr. Malaviya emphasised that not only as a fuel material, but also as a product used in hundreds of ways, for lubrication and chemical and petro-chemical industries, oil had assumed a significance in the modern world which was not likely to be replaced by any other substance for a very long time yet.

The expansion of existing facilities and establishment of new refineries has been among the notable developments in the E.C.A.F.E. region in the post-war period. The total capacity of oil refineries in the region was estimated at 1.35 million barrels a day at the end of 1957. More than one-third of this capacity is concentrated at Abadan refinery, another one-third in the 20 refineries in Japan and the balance in some other countries of the region, of which Indonesia and India have the largest capacity. The average daily consumption of petroleum products in the region in 1957 was about 1.07 million barrels, or about 6 per cent. of the world daily consumption. Japan and India are leading consumers of oil, whereas Iran, Indonesia and British Borneo are the principal producing countries, and also the chief exporters of crude oil and refined products. In 1957, production, in terms of barrels per day, in each of the chief oil producing countries of the region was: Iran 723,700; Indonesia 314,700; British Borneo 116,900; China (Mainland) 30,800; India 9,100; Burma 8,900; Japan 6,200 and Pakistan 6,000.

Iran

Iran ranks first among the countries of the E.C.A.F.E. region as a producer of petroleum. In 1957, it produced 263 million barrels, against 196 million barrels in 1956. Last year, less than half of the production was processed at the Abadan refinery for local use and export. Indonesia is second only to Iran as a producer of oil. Last year, it produced 114.1 million barrels, as compared with 56 million barrels in 1938 and 48 million barrels in 1951. It consumes about 13 per cent. of its production and exports the rest. In China, petroleum is still being produced from the large deposits of oil shale which were originally developed by Japan in Northern China before the Second World War; the present production from this source is estimated at 6,300 barrels per day. Discoveries of oil in various countries in the Tsaidam basin of Tsinghai province in Kansu province and in Sinkiang province have been made. It is claimed that these and other discoveries of oil may change the petroleum situation greatly in the near future.

Burma's present production of crude oil and its refining capacity are stated to be sufficient to meet its current requirements of petroleum products. In 1957, production of crude oil was estimated at 8.7 million barrels. Some of the crude oil is processed at the field refinery (capacity about 3,000 barrels daily) and the remainder is transported down the Irrawady river and processed in the new refinery at Syrian, with a daily capacity of about 3,500 barrels. Japan has developed its refining capacity very rapidly. Its own production of crude oil, however, meets only 3 per cent. of its consumption which was estimated at 100.6 million barrels in 1957. Japan's refining capacity, which is placed at more than 402,000 barrels per day, is now more than enough to satisfy the country's present requirements. In Pakistan, production of crude oil was 2.2 million tons in 1957. The crude oil is processed at a refinery near Rawalpindi which has a capacity of 5,500 barrels per day. The large Sui gas field, discovered in 1952, went into production in 1955; the output aggregates some one million cubic metres per day.

India

The present annual consumption of petroleum in India is about 5 million tons, of which it produces about 0.40 million tons, mainly from the Digboi oilfield in Assam. By 1961, the production of crude oil is expected to go up to 3 million tons, including the production from the newly discovered oilfields of Nahorkatiya, Hugrijan and Moran in Assam. The pattern of energy consumption in India indicates that domestic demand is likely to reach 7 million tons by the end of the second Five-year Plan and 14 million tons by the end of the third Plan. The main task of the Government of India is to narrow the gap between the demand for, and the production of, oil. An important consideration is that India, if it locates new oil sources, can save a great deal of foreign exchange, which must otherwise be spent on imports; it may have to import some Rs. 500 crores worth of oil by 1976 if it fails to discover oil wells.

Much attention has, therefore, been devoted in recent years to the discovery of oil in India. Technical experts believe that nearly 400,000 square miles, consisting of parts of the Punjab, the Ganga valley, Assam, W. Bengal, Gujerat, Cutch, Rajasthan and the East and West coasts, deserve to be explored for purposes of locating possible sources of oil. A great deal of planning is obviously necessary before exploration is undertaken. Prospecting and exploration are a costly process; a test well alone may cost upto Rs. 50 lakhs. In order to ensure that exploration is carried out by an expert body, the Government set up in 1955 the Oil and Natural Gas Commission which now consists of 1,600 personnel in its technical and non-technical sections. The Commission consists of three directorates, one for Geology, one for Geophysics and one for Engineering.

In the public sector, some initial success has been achieved through the strike of natural gas at Jwalamukhi at a depth of 2,500 feet and of petroleum at Lunej, near Cambay, at a depth of 5,000-6,000 feet. At a shallow well at Vadser, near Baroda, some gas and oil were found at a depth of about 500 feet. Oil sands near Sundernagar, south of Mandi, and at Muradpur in Jammu were also discovered in 1956. This was the first authentic occurrence of oil outside Assam. Referring to these developments, Mr. A. M. N. Ghosh, member, Oil and Natural Gas Commission, strikes a note of caution. He says: "It is too early to say whether these discoveries will lead to oil and gas fields of great commercial importance, as similar strikes in other parts of the world have not always had long lives."

Public Sector

The progress of oil exploration in the public sector in the different parts of the country is summed up below:

Punjab, Himachal Pradesh and Jammu: This region is thought to be an extension of West Punjab oilfield belt. Some of the structures resemble those of the Iranian oilfields. Two favourable structures which have been geologically mapped in the sub-Himalayas and another deciphered by geophysical methods in the Punjab plains near Hoshiarpur have been considered for drilling. One of them, namely, the Jwalamukhi structure, the been drilled to a depth of nearly 6,500 feet. One horizon interpreted as gas bearing in this well has been tested. The test proved successful and large quantities of gas, with probable industrial potentialities, have been discovered. Further drilling is being continued to its objective depth of about 10,500 feet. The test well near Hoshiarpur has reached a depth of over 10,000 feet. The third structure at Januari is expected to be drilled as soon as a drill is available.

Ganga Valley: Aero-magnetic surveys have indicated sediments of great thickness in these areas. Geological surveys have been undertaken in the sub-Himalayan region. Recourse has been made to geophysical methods for finding hidden underground structures. Exploration activities will be continued in this area.

Jaisalmer: Aero-magnetic surveys have indicated considerable thickness of sediments in western and south-western portion. On account of the inaccessibility, and extremely difficult working conditions, geological and geophysical investigations have so far been confined only to the more accessible areas. These surveys will be continued.

Cambay-Cutch: Geophysical investigations in Gogha and Cambay regions and the alluvial tracts of Gujerat indicated a good thickness of possible oil-bearing sediments, which are expected to occur at a comparatively shallow depth. A favourable structure near Cambay, outlined by geophysical means, is being drilled now. Oil has been struck at more than one horizon. The economic potentialities of this region have to be tested in detail.

Sibsagar, Assam: Seismic surveys have located two structures at a great depth near Sibsagar. Arrangements are being made to test one of these structures by deep drilling.

West Bengal: The Commission is maintaining liaison with the Standard-Vacuum Oil Company on behalf of the Government of India which is a co-partner in the Indo-Stanvac Project. Four holes have been drilled. The results have confirmed the existence of marine rocks. So far no commercial quantities of oil or gas have been obtained.

East and West Coasts: Good thicknesses of sediments are known to occur along certain coastal patches of the East and West coasts of India. Gas shows are reported from parts of the Cauvery basin and Kerala. The Commission proposes to undertake reconnaissance geological and gravity surveys in these parts in the near future.

The Oil and Natural Gas Commission has been at some pains to ensure that its personnel are properly trained. It employs foreign technicians and specialists who, in their turn, train Indian technicians under their charge. It has opened a technical school at Jwalamukhi which imparts to its students theoretical knowledge and practical training relating to oil-well drilling and maintenance and repair of drilling equipment. Officers of all categories, after they have received the necessary training in different subjects, are sent for higher training under the American Technical Co-operation Mission, the U.N. Technical Assistance Administration, the Colombo Plan and other technical aid schemes. Clearly, the progress of the Commission's operations will depend upon the ability of the technical men who work under it.

CONSTRUCTION CORPORATION

The National Projects Construction Corporation (Private) Ltd.—a State enterprise, sponsored by the Union Ministry of Irrigation and Power—has during the first year of its existence (1957-58) completed works costing Rs. 40.43 lakhs. The Corporation which was set up in 1957 with an authorised capital of Rs. 2 crores and a paid-up capital of Rs. 64 lakhs, undertakes construction of large-scale works which private contracting firms do not accept, either because of the risks involved or due to the inadequacy of resources available with them. In 1957-58, the Corporation earned a net profit of Rs. 3.29 lakhs. A dividend of 2½ per cent. has been declared in favour of the Government of India and the State Governments which have jointly contributed to its capital. It is estimated that the project authorities will save 8.3 per cent. of the value of the work done by the Corporation, inasmuch as the Corporation's rates are lower than those tendered by the contractors.

In 1957-58, the Corporation's major work was connected with a part of the Chambal project in Rajasthan and Madhya Pradesh. Work in Rajasthan, estimated at Rs. 91 lakhs, consists of the construction of seven miles of the right canal of the Chambal project. In the Madhya Pradesh, the work allotted to the Corporation, estimated at Rs. 118 lakhs, includes construction of 27 drainage and communication works. About 40 per cent. of the works in these two States has been completed. The programme of work for 1958-59 includes construction of the Waziabad barrage, which will ensure the supply of water to Delhi throughout the year; the cost of the work is over Rs. 60 lakhs. Other works which have been undertaken by the Corporation are the construction of the Kosi barrage and two head regulators of the canals in Bihar, which cost over Rs. 5 crores, of the Badua dam in Bihar, costing Rs. 63 lakhs and of additional masonry works on the Chambal right main canal in Madhya Pradesh.

Problems relating to the indigenous manufacture of stores required by Indian railways were discussed at the fourth meeting of the Indian Railway Equipment Committee, held recently at New Delhi. Inaugurating the meeting, the Deputy Railway Minister, Mr. S. V. Ramaswamy, pointed out that the purchases made by the railways from Indian manufacturers had gone up from Rs. 88 crores in 1951-52 to Rs. 130 crores in 1957-58. But, in 1957-58, Indian railways had to import stores worth Rs. 45 crores from abroad because they were not manufactured in India.

NEW PRODUCTS AND PROCESSES

Measuring Soil Density

"THE measurement of soil density is often an important factor in civil engineering. A device for measuring the density of soil down to a depth of 1,000 feet has been developed in the U.K. by Dynatron Radio, St. Peter's Road, Furge Platt, Maidenhead, Berks. The unit, which has been used to test the suitability of land reclaimed from the sea for airfield construction, is said to have an accuracy of about 1 per cent. The device depends on the use of a source of radioactive gamma rays, in the form of a quantity of caesium 137. This is separated by a cylindrical lead shield from a Geiger counter which detects the gamma radiation scattered by the soil. A unit for measuring the counting rate—which records the incidence of gamma rays—is connected to the Geiger counter by a cable. The source and Geiger counter unit are sunk in the soil whose density is to be determined. The same method, it is claimed, could be used for measuring the bulk density of other materials of industrial importance such as grain, silage, or sugar.

Cheque-signing Machine

Up to 500 cheques or other documents can be signed in an hour, it is claimed, with the Todd cheque signer, model 94, which has just been put on the market by Halsby and Co., of 53, Dean Street, Shaftesbury Avenue, London, W.1. Every signature printed by the machine is counted by a non-resettable counting mechanism and signatures can be controlled since two keys are required to unlock the machine for use, the executive responsible for signing the document holding one key and the operator the other. The signature plates are made to carry one or two signatures and they can be removed from the machine for safe keeping. Plates can also be supplied for printing single-colour signatures alone or for printing a multi-coloured background design as well. Trade-marks, monograms and other markings can be incorporated if desired. Halsby & Co. states that an important feature of the machine is that signatures are dry-printed on to the document from ribbon and they cannot smudge. Adjustment of a guide-plate at the side of the machine enables documents of various sizes to be signed and the signatures to be printed in any position.

New Type of Gramophone Record

A new type of gramophone record, being hailed as a revolution in the record industry, has been developed by a Düsseldorf firm. The flexible, unbreakable plastic disc is said to be impervious to damage so that even the most careless handling will not affect the tone. Produced at the rate of 50,000 a day, they sell for DM. 1,50. While production now includes only records with 45 r.p.ms. the firm plans to bring out long-playing records in 1959.

Electric Eye in New Camera

An automatic still camera, employing the electric eye principle to set automatically the lens for correct exposure, has been introduced by the Bell and Howell Company, Chicago. After setting the camera for black and white or colour film, all that is needed is proper sighting and pressing a button. Solar or light energy striking the photocell produces the electric current to set the lens opening.

New Nitrate Fertiliser

A new type of ammonium nitrate fertiliser which reportedly can be stored indefinitely, does not cake and is dust-free, has been developed by the Monsanto Chemical Company of St. Louis, Missouri, U.S.A. The new product has a higher density and, therefore, requires 20 per cent. less storage space than regular ammonium nitrate fertiliser.

Chlorinated Water Keeps Fish Cleaner

The value of chlorinated sea water in preserving the high quality of fish aboard fishing craft has been demonstrated by a series of tests in the North Atlantic fishery. It was found that fish rinsed in a spray of chlorinated sea water immediately after evisceration and transported in holds which had been thoroughly washed by a similar solution, were cleaner and fresher than fish coming from trawlers using only ordinary sea water. The trawler using chlorinated sea water left port at the same time, fished the same waters, and returned at the same time as other fishing vessels; therefore, comparisons between the old and new techniques were readily made. Owners of more than a dozen New England, U.S.A., fishing vessels are already interested in chlorinating equipment which is inexpensive and easily installed. It consists of a hypochlorinator metering pump and an electric motor which readily introduces chlorinated sea water into the vessel's existing wash-down system. Chlorine is provided by an eight per cent. solution of sodium hypochlorite which is metered into the wash-down system at the rate of 50 to 80 parts per million parts of water for washing the holds and pen boards. By regulating the metering pump, a solution of 10 to 20 parts per million can be used in rinsing the eviscerated fish.

New Heat-withstanding Material

A new material called Astrolite, which consists of a plastic reinforced with "fibres of sand," can withstand extreme heat much better than steel. It may be of value for use in rocket nose cones, which are heated to very high temperatures when they re-enter the earth's atmosphere. The material may also be used for other rocket parts and in space ships of the future. It is expected that it will be possible to use the new material at temperatures up to 10,000 degrees Fahrenheit. Astrolite is made by the H. I. Thomson Fibre Glass Company at Los Angeles, California. It is composed of a phenolic resin plastic and, fibres of pure silica. Silica, or silicon dioxide, in varying degrees of purity, is ordinary sand.

RADIO LAMP WORKS LIMITED

MR. KAMALNAYAN BAJAJ FORESEES A BRIGHT OUTLOOK FOR THE COMPANY

THE Nineteenth Annual General Meeting of the Radio Lamp Works Limited was held in Bombay on 15th December 1958. Addressing the shareholders on the occasion, Mr. Kamalnayan Bajaj, Chairman, said that, with the growing industrialisation and the need for greater efficiency and comfort the future demand for the Company's products should be very vast. He was also confident that the working of the Company in the coming years would continue to be satisfactory.

The following is the full text of Mr. Bajaj's speech:

"FRIENDS,

"My cordial welcome to you all, particularly the new shareholders, to the Nineteenth Annual General Meeting of the Company. The accounts and Directors' report for the year ended 31st March 1958 have been in your hands for some time. With your permission, I shall take them as read.

"The sales and profits before taxation for the last four years are:

Year	*Sales in Rupees*	*Profits in Rupees*
1954-55 ..	43,99,961	1,81,073
1955-56 ..	62,57,952	3,77,491
1956-57 ..	86,27,848	5,59,756
1957-58 ..	1,12,68,913	6,36,594

The demand for various products handled by the Company, except transformers, continues to increase rapidly. In fact, the sales of lamps, fluorescent tubes and instruments are now limited only by the sanctioned manufacturing capacities. With the coming into production of additional capacities for which licences have been granted, the sales and profits should further increase.

"The production figures of general lighting service and other similar lamps in India during the last ten years indicate a rapid increase in demand for lamps:—

Year	*Pieces in lakhs*	*Year*	*Pieces in lakhs*
1947 ..	74·14	1953 ..	197·79
1949 ..	136·55	1955 ..	235·87
1951 ..	154·47	1957 ..	320·33

"The Planning Commission has estimated that by the end of the second Five-year Plan in March 1961 the demand for G.L.S. and other similar lamps will be about 500 lakhs and for fluorescent tubes 20 lakh pieces per year. The consumption of lamps in India is at present hardly one-tenth of a lamp per person per year, as against about five lamps per person in Western Europe and ten in the United States. With the completion of the many electrification schemes all over the country, the future demand for our products should be very vast.

"With the growing industrialisation and need for greater efficiency and comfort, there is an ever-increasing light consciousness among the people. Progress is linked with good lighting. Better lighting is needed everywhere—in towns and villages, in factories and streets, in offices and shops, and in schools, hospitals and homes. The Company has started a lighting advisory service to serve this need.

"Hind Lamps Private Ltd., in which the Company has a 50 per cent. interest, commenced operations in 1952 as a result of technical collaboration and financial participation with Messrs. N. V. Philips of Holland and four British electrical companies. This new venture took over the Company's factory at Shikohabad and has since made a block investment of about Rs. 40 lakhs. Further expansion, for which licences are already received, is estimated to cost over Rs. 50 lakhs. Their negotiations are almost complete for a loan of about Rs. 35 lakhs to enable them to import plant and machinery, and provision is made to meet the balance of Rs. 15 lakhs from their own resources.

"Your Company will then receive its share of about 10 lakhs of G.L.S. lamps, 15 lakhs of miniature lamps and 3 lakhs of fluorescent tubes additionally per annum for sale. The expansion programme should also help in reducing the costs of production.

"Consequent on the curtailment of funds for the second Five-year Plan, the transformer factories in the country have been adversely affected, and we too had to curtail our production. This is obviously a temporary phase. Our progress in other lines should more than compensate us for the temporary drop in transformer business. I am confident that the working for the coming years will continue to be satisfactory.

"During the year, we have acquired the sole selling agency in India for Kassels fans. We have also put in the market chokes and lighting fittings for which manufacturing licence was granted to us last year.

"To achieve closer contacts with customers and wider distribution of our products we have recently opened offices at Bangalore, Wardha and Gauhati, and are shortly opening one at Patna.

"The progress made last year has been possible with the co-operation of the executives, staff and workers, and I express my appreciation for their efforts.

"The working of the current year so far shows that, when we meet next year, we should be able to record further progress."

Geared to the NATION'S ECONOMY

J. K. Organization is not content to rest on its laurels in a spirit of complacency. It is striving with all its vast resources at its command to meet the possible requirements of the country through various sectors.

COTTON TEXTILES	Dhoties — Sarees — Shirting — Longcloth — Coating—Mulls—Prints—Cotton Blankets in multi-check designs and colours and woollen finish — Mineral Khaki Drills — Tapestry—Canvas—Yarn, etc;	ENGINEERING	Engineers' Files—Baling Hoops for Jute and Cotton. Steel Wired Ropes and Box Strappings.
		CHEMICALS	Heavy Acids, Chemicals, Disinfectants, Insecticides. Ayurvedic and Unani Medicines, etc.
WOOLLEN TEXTILES	Woollen Worsted—Cord Suitings—Tweed—Flannel — Serge — Knitting Wool — Rugs—Blankets, etc.	PAINTS	Paints for Marine, Domestic and Industrial requirements, Enamels, Varnishes and Distempers.
JUTE TEXTILES	Canvas—Hessian—Bags—Twine—Chair cloth	MINES	Manganese—Soap Stone, etc.
RAYON	Viscose Filament	SUGAR	Quality "Majholia" Sugar.
HOSIERY	Underwears—Shirts—Knickers—Socks, etc.	STRAWBOARDS	Strawboards, Mill Boards, Corrugated Boards and Duplex Boards.
ALUMINIUM	Alloys—Sheets—Circles—Coil of Strips—Shots—Expanded Metal—Notched Bars, etc.	PLASTICS	Electrical Fittings and other household utility materials, etc.
STEEL	Bars—Rods—Steel Castings for Sugar Mills, Oil Mills and Railways.	FOOD, OIL, SOAP, ICE	Industrial Oils, Mustard Oil, Soaps.

GREAT EASTERN SHIPPING COMPANY LIMITED

FURTHER EXPANSION OF FLEET PLANNED

CHAIRMAN, MR. A. H. BHIWANDIWALLA, PLEADS FOR A DYNAMIC SHIPPING POLICY

ADDRESSING the shareholders of the Great Eastern Shipping Company Ltd., at their Tenth Annual General Meeting held in Bombay on 12th December 1958, Mr. A. H. Bhiwandiwalla, Chairman of the Company, expressed his hope that world trade would improve. He disclosed that the Company had decided upon a Rs. 4.5-crore plan to add over 50,000 deadweight tons to its fleet before 1960-61. He was confident that the foreign exchange difficulties would be solved to enable the Company to undertake this expansion scheme.

The following is the full text of Mr. Bhiwandiwalla's speech:

GENTLEMEN,

"It gives me great pleasure to welcome you at this tenth annual general meeting of your Company.

"We all miss today the inspiring presence of Mr. Manmohandas M. Amersey who passed away on 31st October 1958. Mr. Amersey was a stalwart in the commercial and industrial life of the country. His association with our Company dated right from its inception and his great business acumen and experience were highly valued by all of us—his colleagues on the Board. In Mr. Amersey we have lost a sincere friend and a valued adviser whose guidance often helped the Company in many of its major decisions and deliberations. You will, therefore, wish me to place on record our profound grief and a feeling of loss at the sad demise of Mr. Amersey.

Decade of Progress

"Your Company has completed ten years of its existence, a period, if I may say so, of all-round progress and development. You will recall that it was only a decade ago that, with a ship of about Rs. 23 lakhs as its sole asset, the Company took its first initiating step. Today, your Company owns fourteen ships worth almost Rs. 6 crores. By early 1959 two more ships will have been delivered by the shipyards where they are being built, and the fleet investment will be in the neighbourhood of Rs. 8.50 crores. This rapid rate of growth must be a source of envy even to the advocates of totalitarian planning. It should serve to strengthen our faith in the economic advancement of the country under democracy.

"In 1948-49, the total cargo lifted by your fleet was 152,763 tons and the freight earned was Rs. 39,99,366. During the year under review, the total cargo lifted was 843,278 tons in the coastal and overseas trades and the revenue amounted to Rs. 3,75,00,000. The gross profit rose from Rs. 5,50,000 in 1948-49 to Rs. 1,21,00,000 in 1957-58. This record gross profit has enabled your Board to recommend a 3 per cent. higher dividend on completion of ten years of its service in the field of shipping.

"In passing I would just list some of the firsts to the credit of your Company. Your line was the first to have two built-to-order ships in Japan in 1950-51, and the first to acquire an oil tanker. You were also the first to have a 13,000-ton dry-cargo ship, namely, m.v. *Jag Laxmi*, the largest dry-cargo ship on the Indian Registry. The motor ship *Jag Jiwan*, a still bigger dry-cargo ship of about 14,000 tons under construction in a German yard, will be delivered to your Company in February 1959. Under conditions of acute foreign exchange shortage confronting the country your Company was the first to initiate the self-financing scheme and acquire ships under it.

Self-financed Vessels

"Your Company was not only the first to acquire a ship under the self-financed scheme but also to purchase the largest number of ships under this scheme. In all, we have bought five ships under the self-financed scheme. We have raised overdrafts in London and paid the purchase price of the ships from the proceeds of these sterling overdrafts. With the Bombay Branch of our London creditors we have deposited rupee equivalent of the overdrafts granted by them in sterling and we are repaying the overdrafts out of the net foreign exchange earnings of the ships purchased by us. It gives me great pleasure to state that without drawing on our country's foreign exchange resources we have been able to add tonnage to our national mercantile marine.

"Incidentally, you will recall that a couple of years ago we were the only shipping company in India to have endeavoured in the United States for the release of U.S. war-built 'Liberties' for augmenting coastal tonnage and relieving the railways of the burden on their system anticipated as a result of the progressive execution and fulfilment of the second Five-year Plan. Although our efforts in the United States have not been so successful, we have almost achieved our target by purchasing five second-hand ships under the self-financing scheme. Before the country embarked on the second Five-year Plan your Company had seven ships with a total deadweight tonnage of about 50,000. At that time we formulated our expansion scheme under the second Five-year Plan. We had laid down the target of 70,000 tons deadweight which was to be achieved by the end of the second Five-year Plan, i.e., 31st March 1961. It is a matter of great pride to us that we have fulfilled our Plan two years in advance by reaching 120,000 tons deadweight and with the deliveries of further two ships in February 1959, we would have sixteen ships with a total deadweight of about 140,000 tons. We would have thus added nine ships with a total deadweight of about 90,000 tons.

Further Expansion

"With the international freight market in the doldrums and shipowners in the advanced maritime countries laying up part of their tonnage for lack of suitable employment, the decision of your Company to purchase five second-hand ships under the self-financing scheme and place them in international tramp trades for repayment of sterling overdrafts was a bold step. It is said that out of the estimated total world tramp tonnage of about 20 million gross tons, 5.2 million gross tons, i.e., over one-fourth of the total dry-cargo tramp tonnage, is laid up. The present estimated total world tanker tonnage is about 33 million gross tons of which, according to estimate, nearly one-fourteenth, i.e., about 2.4 million gross tons, is laid up. These statistics are merely guestimates. However, they would serve the purpose of giving you an indication of the depressed state of the freight market at present.

"In spite of these discouraging conditions your Company did not take a pessimistic attitude. During the last ten years the world trade has made great strides. Although for some time past there has been stagnation in the world trade, the underdeveloped countries cannot afford to vegetate. The world trade is bound to improve. More than that, underdeveloped countries must either take rapid strides and develop or face disaster. Our next-door neighbour, China, has been formulating ambitious plans and achieving phenomenal results. We must also prove equal to the enormous task that lies ahead and help accelerate the phase of shipping development. Whilst there have been second thoughts on the wisdom of building so many steel plants, there has always been unanimity of agreement concerning the targets to be reached in shipping under the third Plan. This underlines the importance of shipping in the economic advancement of the country. Therefore, a conscientious company like yours, as a part of its duty, must strive hard to expand even under difficult foreign exchange circumstances.

"Your Directors, therefore, as an act of faith, have decided on a rupee four-and-a-half crore expansion plan under which four dry-cargo ships of over 50,000 tons aggregate deadweight are to be built to order for delivery in 1960-61. There are great foreign exchange hurdles. It is, however, hoped that, with the assistance of the Government, the overseas yards, and the world financiers, we would be able to overcome these difficulties and be able to undertake the implementation of the expansion scheme. Let us hope that the rewards to be reaped will be in keeping with our sincerity of faith in this bold and glorious venture.

Future

"I do not wish to make a detailed review of the accounts for the year ended 30th June 1958. Our annual report contains a mass of statistics and it is not necessary for me to go over the field again. International freight rates today are below the operating costs and shipowners are laying up their own tonnage for the obvious reason that it cannot be operated without sustaining losses. Tramp shipping is, therefore, facing the great crisis. As part of your fleet is engaged in tramp activities, we cannot escape these repercussions. At the same time we have now a much bigger fleet. Three second-hand ships were secured almost by the end of the year under review and further brand new ships will be delivered in February 1959. It is difficult to foresee the financial results for the financial year 1958-59.

"Having dealt with the affairs of your Company, I would like to dwell upon some of the aspects concerning Government policy which condition the growth of shipping in this country.

Include Shipping in the Core of the Plan

"It is most disturbing to find that the Planning Commission and the Government have not included the development of shipping in the hard core of the Plan. It is admitted by all that shipping plays a great role in the development and enrichment of national economy. A national mercantile marine of an adequate size maintains and safeguards the flow of vital supplies like foodgrains, strategic materials and munitions in emergencies, such as famines and wars. In fact, shipping serves as a second line of defence. The navy of defence can function effectively only if there is an adequate navy of supply. Shipping has always played a very important part in earning precious foreign exchange which is sorely needed by a country in connection with the execution of its development plans. It is because of these reasons that the Western and other countries have given topmost priority to the development of shipping. However, we find that the Planning Commission and the Government have not given due weight to these elementary facts and the development of shipping has been denied the assignment of due priority. May I respectively suggest that development of shipping is as vital as the setting up of steel plants and other top-priority economic projects already included in the core of the Plan. It is earnestly hoped that the Planning Commission and the Government will reconsider the matter and include development of shipping in the core of the Plan without any further delay.

Formulate and Follow an Appropriate Shipping Policy

"It is observed with regret that, in spite of their best intentions the Government have still not been able to formulate a dynamic shipping policy conducive to the speedy growth of shipping. Although official spokesmen frequently talk of development of shipping, the issues that arise in connection with the growth of shipping are dealt with piecemeal as they come up. The minds of officialdom still move in the old grooves. It is essential that they study the post-war development of shipping in other countries and find out as to why countries like Norway have made such rapid progress in the field of shipping. Formulation of a long-term vigorous shipping policy is urgently necessary to accelerate development of shipping.

"I would broadly define some of the important considerations that must be taken into account in shaping and executing a dynamic shipping policy. All cargoes moving on account of the Government must be carried in Indian ships as far as possible. A directive should be issued to all the Government departments, Government-owned commercial and industrial corporations in the public sector, such as the State Trading Corporation and other statutory bodies, to arrange their shipments through Indian ships whenever they are available. Adequate finance and foreign exchange should be made available for building and purchase of ships according to the requirements of shipping companies. In fact, the present is the opportune time for building and purchase of as many ships as possible due to the present fall in the tonnage prices. The importance of development of tramp shipping must be fully appreciated and the special requirements of tramp shipping for modification of the Government licensing procedure and rules must be taken into account. Least of all there should be no discrimination between the Government-owned shipping corporations in the public sector and shipping companies in the private sector.

Importance and Special Procedural Requirements of Tramp Shipping

"I am going to deal at some length with the requirement for the development of tramp shipping and also with the question of discrimination between the public sector and the private sector in shipping, not only because of their bearing on the development of Indian shipping but also because of their relevance to the contribution your Company can make to the development of shipping.

"Although the importance of developing tramp shipping in India has been recognised by the Government, the policies followed by them do not show that there is an adequate appreciation of the vital role that tramp shipping can play in the economic development of the country. Development of tramp shipping is the quickest way of increasing our participation in the overseas trade. If we wait till the main Conferences admit us as members with substantial tonnage, we shall have to wait indefinitely. Growth of tramp tonnage is also the quickest way of building up of our overseas tonnage which is an essential prerequisite for admission to the various Conferences. Tramping offers much better opportunity for fuller employment of the available tonnage because of the unrestricted freedom which tramps enjoy for carrying bulk cargoes from one port to another all over the world. The Study Group of the consultative Committee of Shipowners appointed to examine the shipping target for the Second Plan estimated that, excluding the substantial oil trade, over a crore of tons are being carried as bulk commodities in the international trade of India and observed that 'there is a wide field for Indian tramp tonnage to participate in this trade.' Finally, development of tramp shipping would ensure a recurring big saving or earning of precious foreign exchange involved in payment of freight bills year after year.

"As the liner companies constitute the majority interest in Indian shipping and we perhaps are the only tramp shipping company, the Government thinking and policy is influenced and conditioned by the liner companies. There is lack of an adequate appreciation on the part of the Government of the peculiar problems posed by tramp shipping and its actual operational requirements. In fact, we submitted a memorandum in April 1955 to the Director General of Shipping on the subject of special requirements of a tramp shipping company and the need for procedural and other changes. However, up to now the matter has not received due attention from the Government.

Control Over Employment of Ships

"It is difficult to believe that even now in peace-time the Government exercises a rigid licensing control over the employment of ships under the Control of Shipping Act in much the same way as is exercised in times of war. For every voyage or fixture we must have the licence of the Government. I am unable to find a single valid reason for the exercise of this war-time control in peace-time. The officials merely continue to exercise control and powers to which they have become accustomed. Our liner friends who have set and scheduled services can easily comply with such a procedure. It is, however, next to impossible for tramp operators to function efficiently within the framework of the present licensing procedure.

"Efficient tramping postulates that there must be unrestricted freedom of operation. Tramp operators all the world over carry on their business on the basis of either (1) voyage fixtures, i.e., on a short-term voyage basis or (2) long-term fixtures with a commitment to carry several shiploads of cargo. Long-term fixtures may comprise contracts for the carriage of a particular quantity of cargo in a number of shiploads or charters on time basis. The tramp shipping companies in other countries also enjoy the full operational flexibility under which they not only employ their own vessels on voyage charters and time charters to others but also sometimes take vessels of others on voyage or time charter basis to fulfil their own commitments efficiently. Further tramping requires that the best opportunity for employment is seized without delay. Frequently, sudden enquiries are received over the telephone or by cablegram from our agents on the Baltic Exchange in London or from a shipper requiring a ship at a particular port on a particular day either on voyage charter or time charter basis. Generally, these offers are open for acceptance within 12 or 24 hours. On the Baltic Exchange there is international competition and if decision is not communicated promptly the business would be lost to tramp operators of other countries who are well placed to give quick decisions since they are not governed by licensing procedure. We are, therefore, frequently placed between the horns of a most uncomfortable dilemma: to abide by the prescribed official procedure and lose our legitimate business or to by-pass the procedure in the interest of securing the business.

Critical Situation

"At present the situation for tramp operators is critical. For want of employment opportunities many tramp operators are laying up their tonnage. If an employment opportunity is lost for want of receipt of Government approval in time, the tramp operator would be probably faced with the question of idling or laying up of the vessel involving him in heavy financial losses and the country in foreign exchange losses. We had, therefore, to take the liberty of informing the Government and closing the business before receiving their approval which takes some time, in the confident hope that the Government would indulgently consider such technical breaches, if any, arising out of the exigencies of tramp operation. The more so as the Government has unequivocally declared itself in favour of developing tramp shipping, which, however, cannot be fostered if the rules, as they now stand, are to be literally followed in every single case.

"As tramping involves international competition we cannot compete with foreign tramp operators, unless we possess the same unrestricted freedom for adjusting the movements of our vessels, as is enjoyed by our foreign competitors. If tramp shipping is to be developed in this country it is most essential that Government should modify, if not abolish, its licensing procedure and rules so as to suit the peculiar requirements of tramp shipping. In fact, some time ago the Government was considering the issue of global licences to ships. I suggest that Government introduce the system of global licences for tramp operators' ships and give the tramp operators full freedom to give on voyage or time charter their own vessels to others and take on voyage or time charter others' vessels according to their requirements. As there is foreign exchange scarcity at present, the question of release of foreign exchange to Indian operators chartering foreign vessels will have to be considered. I would suggest that the Indian tramp operators should be allowed to charter foreign vessels and the necessary foreign exchange be released to them if they have reasonable expectations that the business for which this chartering is done will not result in a net foreign exchange loss to the country. Subject to this condition applicable only in respect of chartering of foreign vessels by tramp operators, the Government must allow full freedom of operation to tramp operators. I submit that the existing Government rules and procedure which are not compatible with development of tramp shipping and which act as a restraining influence on the growth of tramp shipping be modified and adjusted, so as to suit the special requirements of tramp shipping.

Carriage of Burma Rice in 1958

"I would mention below one striking illustration of the vacillating policy followed by the Government. When the carriage of rice from Burma to India for the calendar year 1958 was under negotiation with the Government, our other shipowner friends were not in agreement with us in regard to allotment of quotas. Therefore, after notifying our shipowner friends we decided to negotiate the carriage of Burma rice independently with the Government. The Government, in view of the reluctance of the lines to charge reduced freight rates at the joint negotiations, made a separate approach to each of the carriers for reduction in the freight rates. Other carriers, however, refused to accept reduction in the freight rates as desired by the Government. When the Government approached us and inquired whether we would be able to carry the rice at the reduced freight rates we told them that we would do so. We felt that, in view of the international freight market and the fact that vital foodgrains were to be imported for our country, we should co-operate and charge reduced freight rates. The Government, thereafter, invited us to Delhi for finalising this carriage of rice. The Government decided to give us for carriage 250,000 tons out of the quantity of 350,000 tons Burma rice. After this arrangement was finalised the other three carriers in the field had an after-thought and made a representation to the Government that they would carry the rice cargo at the reduced freight rate agreed to by us, which at one stage was totally refused by them. Although the arrangement with us, because of our initiative in agreeing to the reduction in the freight has resulted in the saving of about Rs. 50,00,000 for the country by way of freight charges and the arrangement had been finalised in the presence of responsible and senior officers of more than one Ministry of the Government, the same was set aside and we were told that we would have to participate in this movement under a quota system along with others. We are glad that as a result of our initiative in agreeing to reduction in freight rates there would be considerable saving in the freight bill on Burma rice. The going back on the arrangement entered into with us by the Government can, however, only lead to euthanasia to initiative and enterprise showed by us in agreeing to co-operate with the Government by voluntarily accepting a reduction in the freight rate. I would only say that some of the vested interests and a few Government officials were disturbed by our bold action and gross injustice was done to us by depriving us of the agreed carriage.

Discrimination Between the Public Sector and the Private Sector

"Last year from this platform I had occasion to refer to the fact that there was discrimination in the allotment of Government cargoes in favour of a Government Shipping Corporation. I had also quoted a case in which our owned ship which was ready to load the railway cargo in Japan and which was first offered to the Indian Embassy, was not given this cargo. Instead the Government Shipping Corporation was allowed to charter a foreign ship and precious foreign exchange was unjustifiably released for this charter by the Government. The Chairman of the Corporation in his speech at the Annual Meeting misrepresented the matter and stated that 'as the tramp vessel failed to arrive on the due date and our vessel became available the Embassy naturally and rightly transferred the cargo to our vessel.' I would state here that our vessel was ready for loading on the dates required by the shippers. However, although we were the first in the field to offer our vessel to the Indian Embassy for the carriage of the cargo, the Embassy allotted this cargo to the vessel of the Government Shipping Corporation, which was chartered from foreigners after we had offered our own vessel to the Indian Embassy. We had, therefore, to idle our vessel for a long time and utilise this time for carrying out special survey repairs about three months in advance. A part cargo of 3,000 tons loaded by our vessel, to which a reference was made by the Chairman of the Government Shipping Corporation, was loaded after inordinate delay, because its original full cargo was wrongfully allotted to the chartered vessel of the Corporation and our vessel had to wait for a month to get this further cargo, which was beyond the capacity of the Corporation's chartered vessel to take it.

"In fact, the Chairman of the Corporation is not averse to this discrimination. In the same speech he publicly advocated that discrimination. He stated: 'It should also, I suggest, be recognised that, whenever possible, Government cargoes will be carried in Government vessels. Government is fully entitled to channelise its exports through its own shipping so as to ensure the optimum utilisation of its fleet.' In our opinion, if this completely erroneous principle espoused by the Chairman of the Corporation is accepted, there would not be any scope for development of tramp shipping in the private sector, because the majority movement of bulk cargoes nowadays is on Government account. The Corporation being essentially a liner company is not only not entitled to carriage of these tramp cargoes when ships of a tramp Indian shipping company are available but also it is beyond its capacity to cater to any large-scale movement of tramp cargoes. Indian shipping's share of carriage in our international trade is too small and I believe that there is

scope for both the private sector and the public sector in shipping to play their due role in the development of shipping. It is unfortunate that, instead of presenting a united front to foreign operators, the Government Shipping Corporation should advocate reservation of Government cargoes for ships of the Government Shipping Corporation and endeavour to achieve their expansion at the cost of shipping in the private sector.

Vesting of Control in Hands of Government Shipping Corporation

"The Government Shipping Corporation and ourselves jointly contracted in the proportion of 70 per cent. and 30 per cent., respectively for the carriage of about 175,000 tons wooden sleepers cargo from Australia to India on account of railways. The berthing of ships was to be co-ordinated by mutual consultation between the Government Corporation and ourselves. The Government Shipping Corporation went on booking cargoes out of this quantity and lifting the same from Australia in their ships without prior reference to us. In this way they lifted this cargo in two or three of their vessels. Thereafter we also booked a full shipload of cargo and ballasted our s.s. *Jag Vijay* from Calcutta to Australia. However, when the vessel was about to reach Australia the Government Corporation made the Railway Ministry issue instructions to the Australian shippers that the cargo that was booked for s.s. *Jag Vijay* should not be loaded in the ship, but should be held back for a ship of the Government Shipping Corporation which was calling at the Australia ports at a later date. Our s.s. *Jag Vijay* idled in Australia for a few days and then we were compelled to send the vessel away from Australia without any cargo for another employment. This unfortunate affair involved your Company in financial losses and the country in waste of national tonnage and loss of foreign exchange. Instead of the previously agreed joint control of both the Government Shipping Corporation and ourselves the Railway Ministry have left the entire control over the contracted cargo including that to be carried by us in the hands of the Corporation.

"Gentlemen, anyone can appreciate that when two companies have contracted jointly for carriage of a cargo, vesting of control in the hands of one interested company is bound to harm the interest of the other company. In fact, one of the main reasons for our entering into the arrangement for the carriage of this cargo was the need for evenly spread out employment for our overseas tramp ships. In view of the Government's vesting of control over the transport of this cargo in the hands of the Corporation it is not possible for us to secure employment when it is needed by our ships. In fact, the Corporation had the audacity to tell us that we can only get the overflow of the cargoes lifted by their ships. Had we known that we would have to work under such one-sided arangements, we would not have undertaken this carriage. The recent occurrences vividly brought out the dangers of interference of senior Government officials with autonomous Government-owned Corporations. It is, however, not realised that there is an equally serious danger of the Government-owned autonomous Corporation influencing the Ministries and Departments and preventing their competitors in the private sector from getting equal treatment from the Government. This is because senior officers of the Government are placed in charge of these Corporations and these officials are in a position to influence the Government Departments and Ministries. When the country is to advance economically through development of both the public and private sectors, it is most essential to realise the gravity of this danger and to ensure that the Corporations in the public sector do not develop at the cost of the companies in the private sector.

Director-General of Shipping

"We hold in very high esteem the present incumbent of the office of the Director-General of Shipping and Joint Secretary in the Ministry of Transport, who is a very impartial and hard-working Government official of high ability. However, it must be pointed out that it is against all canons of public policy to appoint the Director-General of Shipping and Joint Secretary in the Ministry of Transport as Chairman and Managing Director of one Government Shipping Corporation and Special Director of another Shipping Corporation. It is well known that the Director-General of Shipping has under his jurisdiction all the shipping companies. He exercises control not only over the purchase of ships, grants of loans to shipping companies for the purchase of ships, allotment of Government cargoes to shipping companies but also on the day-to-day operations of ships of all the shipping companies, because any employment of the ships has to be fixed after obtaining licence from him. He thus exercises great control and authority over the operations and working of the shipping companies. Whenever there is a conflict of interest between the Government Corporation and any shipping company in the private sector and the decision lies with the Director General of Shipping, he would be faced with a very awkward and embarassing position. However impartial the person holding the office of the Director-General of Shipping may be and however sincere may be his desire to act in an impartial way, his close connection with the Government Shipping Corporations would bias his outlook. It may also be pointed out here that it is unfair even to the person who has to do the whole-time and very onerous job of the Director-General of Shipping that he should be burdened with the additional responsibilities of managing and looking after the day-to-day working of the Government Shipping Corporations. It is hoped that the Government will see that the Director-General of Shipping is not burdened with the responsibility of being in charge of the Government Shipping Corporations or even being on the Board of the Government Shipping Corporations.

S.T.C. Ore Delegation to Japan

"The State Trading Corporation in 1956 contracted with the Japanese steel mills for the sale of 7.2 million tons of iron ore without consulting the shipping interests whether they would be interested in carrying part of this cargo. The entire sale was effected on f.o.b. basis and the control over the carriage of the cargo was transferred to Japanese hands. It was a God-sent opportunity for promoting Indian shipping by giving part of the movement to it and also earning or saving considerable foreign exchange to the extent of the carriage of the cargo in Indian ships. In spite of the S.T.C.'s failure to protect the interests of Indian shipping, we contacted the Japanese steel mills and secured a contract for the carriage of 60,000 tons of ore from India to Japan. We successfully fulfilled this contract.

"Another opportunity arose this year when the Union Ministry of Commerce and Industry decided to depute a delegation to Japan for negotiating the quantity of iron ore to be supplied to the Japanese steel mills in the year 1958-59 out of the overall contract and fixing the f.o.b. price for this quantity and trying and securing a definite commitment from the steel mills for the carriage of a specific quantity of iron ore in Indian ships. As this was tramp cargo and we were the only tramp shipping company in India and we had succesfully completed the contract of carriage during the previous year we were the obvious choice for representation of Indian shipping on this delegation. However, our claim for representation was turned down and the Government Shipping Corporation was given representation on this delegation. This delegation went to Japan and entered into an agreement with the Japanese steel mills. However, no commitment from the Japanese steel mills that they would give a specific quantity for carriage to Indian ships was obtained. They were only asked to make best endeavours and use Indian ships for the purpose. In view of lack of employment for Japanese ships themselves, the Japanese steel mills are not willing to give preference to Indian ships. The Indian delegation could have obtained a specific commitment from the Japanese before they entered into an agreement on other matters. The case of Indian shipping has, therefore, now gone by default and Indian ships have to approach the Japanese for the carriage of Indian iron ore cargoes to Japan. As the Japanese themselves are hard pressed for employment of their ships, there is no prospect of Indian ships getting ore cargoes according to their requirements at equitable freight rates during the year 1958-59. Another golden opportunity of promoting Indian shipping and earning valuable foreign exchange has been thrown away.

Shipping Co-ordination Committee

"About a year ago a Shipping Co-ordination Committee was formed by the Government to channel the country's international trade as far as possible through Indian ships. The object for which this Shipping Co-ordination Committee was formed is a very laudable one. The Government decided that the two overseas liner companies in the private sector should be represented on the Committee in addition to one representative of the Indian National Steamship Owners' Association. The latter seat also went to a liner company. In view of the large volume of cargo we carry in the international trade we should have been obviously and rightly given representation on this Committee. In fact, the subject of tramp cargoes loomed large during the discussions at the meetings of the Committee, and appeared to account for the greater part of the cargo movement. We were, therefore, specially invited to such meetings and I am pleased to say that among private enterprise we seem to be the largest contractor with the Government for the carriage of their overseas cargo. We contracted for nearly 52,000 tons of Australian wooden sleepers, 30,000 tons of fertilisers from Europe and about a similar quantity of fertilisers from Japan and China. The facts reveal that we are needed more than anybody else, but continue to be ignored and are asked not even to press for tramp representation. It also shows how the Government policies are under the influence of liner interests. Gentlemen, you will realise that facts are being ignored at the cost of the country. Our faith is, however, strengthened by the facts. Winston Churchill once said, 'Facts are better than dreams.' The shippers who comprise both Government Departments as well as private parties are well aware that they are able to secure the best services from us at most competitive rates. May we, therefore, even at this stage earnestly request the Government to recognise our claim for representation on the Shipping Co-ordination Committee.

Clear-cut Policy Needed

"Gentlemen, I have cited some examples from experience to show how it is most essential for the Government to eliminate friction between the public sector and the private sector and lay down a definite clear-cut policy which would hold the scales even between the public sector and the private sector and enable both these wings of shipping to make their rightful contribution to the development of shipping. Time and again the official spokesmen have said that the Government Shipping Corporations are there not to compete with but to supplement the efforts of the private sector towards development of shipping. However, in practice these assurances are not observed. There is a mistaken notion that Corporations are part of the Government and are, therefore, entitled to use of authority and backing of Government in their management and day-to-day operations. I would make bold to say that by giving Government backing and support in season and out of season they are adversely affecting the ability of the Corporations to grow up on their own and mature into virile, self-contained and prosperous business units. At the same time, such policies prevent the shipping companies in the private sector which have been the main pillars of strength of Indian shipping from attaining further strength and expansion in the interests of the country. It is hoped that the Government would carefully examine the position and clearly lay down principles which would be conducive to co-operation and co-ordination between the public sector and the private sector in the interests of development of Indian shipping.

"Gentlemen, let me now express my thanks to the Transport Ministry, the Director-General of Shipping and their staff for their co-operation and assistance. It has been my unpleasant duty to speak plainly on questions of policy and principle and where I have felt that the Government policy is wrong and harmful to the development of shipping, I have said so frankly without mincing matters. However, there are a number of ways in which the shipping companies are being assisted by the Government for the development of the national mercantile marine and it would be ungrateful on my part if I do not express the appreciation that is due to the Government Departments and Officers. You will no doubt wish me to express our appreciation of the loyal and devoted work put in by the shore as well as the floating staff. Our valued shippers and our precious network of agents have also done a mighty lot and we must express our gratitude to them.

"Thank you, gentlemen, for having given me a patient hearing. May I now move for the adoption of the Annual Report and Accounts for the year ended 30th June 1958?"

Note: This does not purport to be a record of the proceedings of the annual general meeting.

Authorised Capital - - - Rs. 1,00,00,000
Issued and Paid-up Capital - - Rs. 50,00,000

OFFERS COMPLETE BANKING SERVICE THROUGH A NETWORK OF 50 OFFICES SPREAD OVER ANDHRA PRADESH, BOMBAY, MADRAS AND MYSORE STATES

Head Office: HYDERABAD (Andhra Pradesh)

Our 3-Year Cash Certificates available in denominations of Rs. 100/-, Rs. 500/-, Rs. 1,000/- and Rs. 5,000/- (issue price Rs. 90.50 nP. for Rs. 100/-) offer attractive yield of 3½ per cent. per annum and constitute a safe and profitable investment for all.

Our Thrift Deposit Plan offers a systematic savings scheme, and can be subscribed in small monthly instalments of Rs. 5/- or multiples thereof.

Safe Deposit Locker facilities for protecting valuables from Fire, Theft and Burglary are available in air-conditioned vaults at our Main Office; also in our Branches at City Branch (Fathergatti, Hyderabad), Sultan Bazaar (Hyderabad), Mahbubgunj (Hyderabad), Aurangabad, Bhir, Bidar, Dharmabad, Gulbarga, Jalna, Khammameth, Kothagudium, Latur, Nizamabad, Nalgonda, Nanded, Parbhani, Raichur, Tandur, Warangal and Yadagiri.

Foreign Exchange Business of all types undertaken.

PARTICULARS OF OTHER SERVICES AND RATES FOR DEPOSITS MAY BE ASCERTAINED FROM ANY OFFICE OF THE BANK.

PROSPECTUS

The Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, and specified below has been delivered for registration to the Registrar of Companies, Bombay.

THE EQUITY AND PREFERENCE SHARES OF THE COMPANY ARE NOW BEING QUOTED ON THE BOMBAY STOCK EXCHANGE, AND HENCE SCHEDULE II OF THE COMPANIES ACT, 1956, DOES NOT APPLY TO THIS PROSPECTUS UNDER THE PROVISIONS OF SUB-SECTION 5(b) OF SECTION 56, SINCE THE SHARES OFFERED UNDER THIS PROSPECTUS ARE IN ALL RESPECTS UNIFORM WITH SHARES OF THE COMPANY PREVIOUSLY ISSUED.

The Subscription List will open at 10-30 a.m. on 2nd January 1959, and will remain open until closed, at the discretion of the Directors, but not earlier than 7th January 1959.

SUNDATTA FOODS & FIBRES LIMITED

(INCORPORATED ON 1ST MAY 1951 UNDER THE INDIAN COMPANIES ACT, 1913)

SHARE CAPITAL

AUTHORISED

30,000 Equity Shares of Rs. 50 each	Rs. 15,00,000	
20,000 8% Taxable Participating Redeemable 1971-76 Cumulative Preference Shares of Rs. 50 each	Rs. 10,00,000	
		Rs. 25,00,000

SUBSCRIBED AND PAID-UP

SUBSCRIBED CAPITAL		
24,000 Equity Shares of Rs. 50 each	Rs. 12,00,000	
10,000 8% Taxable Participating Redeemable 1971-76 Cumulative Preference Shares of Rs. 50 each	Rs. 5,00,000	
	Rs. 17,00,000	
Less : Calls in arrears	Rs. 825	
PAID-UP CAPITAL		Rs. 16,99,175
Add : Amount received on forfeited shares		Rs. 2,250

PRESENT OFFER OF Rs. 5,50,000 DIVIDED INTO 6,000 EQUITY SHARES OF Rs. 50 EACH AND 5,000 8% TAXABLE PARTICIPATING PREFERENCE SHARES OF Rs. 50 EACH OFFERED AT PAR TO THE PUBLIC, WITH THE CONCURRENCE OF THE EQUITY SHAREHOLDERS OF THE COMPANY.

PAYABLE AS FOLLOWS

(a) On Application	Rs. 25 per share
(b) On Allotment	Rs. 25 per share

Applications for shares by members of the public must be for a minimum of five shares or multiples of five shares. The application, together with the remittance of the Application Money of Rs. 25 per share, must be sent to either of the Company's Bankers—the Central Bank of India Ltd., or the Eastern Bank Ltd. at any of their branches in India, or to the Registered Office of the Company at New Citizen Bank House, Palton Road, Bombay - 1.

Allotment will be notified by the issue of Allotment Letters, but the Directors reserve the full and uncontrolled right to reject any application in whole or in part, and, where an application is rejected, the Application Money will be refunded to the applicant forthwith without interest.

Share Certificates in respect of the shares offered under this Prospectus will be ready for delivery in exchange for the Letters of Allotment within three months from the date of allotment.

The Equity and Preference Shares now being offered will rank *part passu* in all respects with the existing Equity and Preference Shares respectively, and will rank for dividend as from the date of allotment for the apportioned amount of such dividend as may be declared in respect of the Company's financial year in which the allotment is made.

The Preference Shares will confer on the holders thereof the right to a fixed cumulative Preferential dividend at the rate of 8% Taxable, on the capital for the time being paid thereon, and an extra dividend of 1% will be payable on such Preference Shares, if the dividend paid on Equity Shares of the Company is 10% or more but less than 15%, and an extra dividend of 2% will be payable on such Preference Shares, if the dividend paid on the Equity Shares of the Company is 15% or more. The said Preference Shares shall also have the right, in a winding-up, to payment off of such capital and all arrears of dividend accrued up to the commencement of the winding-up (whether earned or declared or not) in priority to the Equity Shares.

Subject to the provisions of Section 80 of the Companies Act, 1956, the Company shall be entitled on or at any time after the 1st day of October 1971 to redeem the whole or any part of the Preference Shares for the time being issued and outstanding out of any moneys which may lawfully be applied for the purpose at par together with a sum equal to the dividend thereon down to the due date for redemption thereof upon giving to the holder of the Preference Shares to be redeemed not less than three months' previous notice in writing. In the event of the Company determining to redeem a part only of the Preference Shares for the time being outstanding, the particular shares to be redeemed shall be selected by a drawing which the Company shall cause to be made by one of its officers at the Registered Office in the presence of a representative of the Auditors of the Company for the time being. Every such drawing shall be made in such manner as the Company shall (subject to the approval of the Auditors) determine is convenient for selecting the number of shares required to be drawn. Any of the Preference Shares not previously redeemed under the foregoing provision shall be redeemable on the 1st day of October 1976 at par together with all arrears of the dividend thereon (whether earned or declared or not) to that date.

LOAN CAPITAL—Rs. 9,56,992

Apart from temporary borrowings in the ordinary course of business, the Company had borrowed from the Industrial Finance Corporation of India three long-term loans aggregating Rs. 8,50,000 out of which Rs. 1,50,000 has been repaid by the Company, leaving a balance of Rs. 7,00,000 outstanding. The said loans are secured by a charge on the Fixed Assets of the Company aggregating in written-down value over Rs. 21,00,000, and are fully repayable by March 1969 in instalments which have been guaranteed jointly and severally by the Managing Director and Joint Managing Director in their personal capacities.

There are also two outstanding unsecured short-term loans aggregating Rs. 2,56,992 ($53,328) out of a total of Rs. 3,85,600 ($80,000) received from the Export-Import Bank of Washington and the French Oil Mill Machinery Co., U.S.A. These loans are fully repayable in instalments by November 1960.

HISTORY AND DEVELOPMENT OF BUSINESS

The Company was incorporated on 1st May 1951 under the name and style of Sundatta Cotton-Seed Utilisation Limited which was later changed in December 1957 to Sundatta Foods & Fibres Limited. The certificate for commencement of business was received on 22nd September 1951, and the Company has been in continuous business since that date. The Company started manufacturing operations in February 1953 at Hubli, now in Mysore State, making a modest beginning by processing cottonseed on a small scale at the rate of 12 tons per day.

In the course of the past five years, the growth of the Company has been rapid. It is now the leading producer in India of cotton linters, which constitute the only indigenous cellulosic raw material commercially available and used for manufacture of high-grade rayon. The Company's cottonseed mill at Hubli is capable of handling over 100 tons of seed per day, and is equipped with up-to-date American machinery for cleaning, delinting, hulling, cooking and expelling cottonseed. In addition, the mills have a complete locally-built refinery to fully refine cottonseed as well as other oils and an English compound milling plant, the only one of its kind in India, for producing balanced cattle-feed rations from the residual oilcakes and other ingredients.

The Company's mills are located in one of the major cotton and groundnut producing areas in the country. Recently, the Company installed the first American Continuous Solvent Extraction Plant in India for direct extraction of pre-treated cottonseed, with a capacity of 100 tons per day, to work in conjunction with the Cottonseed Plant between April and October, when cottonseed of high quality is available in quantity in the local area. During the slack season for cottonseed, the Solvent Extraction Plant will work on the de-oiling of groundnut cake between November and March, when the groundnut crushing season in the area is in full swing. It is also proposed to process cottonseed on a restricted basis during this period.

With the installation of the Solvent Extraction Plant which has now gone into production, the Company's mills at Hubli have attained the stature of a full-fledged industry, working throughout the year. In the past four years, the crushing of cottonseed has averaged 10,000 tons per annum, on a largely seasonal basis, which is expected to be nearly doubled from 1959 onwards. In addition, the Company's mills propose to extract about 10,000 to 15,000 tons of groundnut cake each year. The staff and overheads, other than interest charges, will, however, remain substantially the same.

The Company's net block of Fixed Assets, at present, stands well over Rs. 21,00,000 of which roughly half represents the investment on the new Solvent Extraction Plant. The gross block of fixed assets now aggregates nearly Rs. 25,00,000 and "normal" depreciation at 10% has been more than fully provided for in the published accounts up to 31st December 1957, as will be seen from the Auditors' Report forming part of this Prospectus. The Directors would like to point out, in this context, that whereas there has been a considerable increase in the price of imported machinery during the past five years, the Company has made no revaluation of its assets, nor is any such revaluation contemplated.

OBJECTS OF THE ISSUE

The main objects of the issue are :

(1) To raise the subscribed capital of the Company to Rs. 22,50,000, so as to bring it more or less in line with the fixed assets of the Company.

(2) To ensure adequate working capital for the Company's expanded operations, and to provide funds for liquidation, in due course, of the short-term dollar loans obtained through the Export-Import Bank of Washington, U.S.A.

(3) To increase the public holding in the Company's Share Capital.

DIVIDENDS

The Company has paid a dividend of 6% on its Equity Shares in respect of 1955 and 1956 for which years the ratio of untaxed earnings to paid-up capital was 19.4% and 30.5% respectively, after allowing for "normal" depreciation for the respective years. Owing to a complete failure of the American variety of cotton in the area of the Company's mills, which is normally a rare occurrence, the results for 1957 were adversely affected, and the payment of dividend on Equity Shares had to be passed over, and that on Preference Shares postponed. During 1958, the working of the Cottonseed Plant has been satisfactory, particularly after the commissioning of the Solvent Extraction Plant. In November 1958, the Solvent Extraction Plant was diverted to the de-oiling of groundnut cake, and by the beginning of December, a daily production rate of nearly 100 tons of groundnut cake had been achieved, and is being maintained.

The Company proposes to close its accounts henceforth on 31st March every year so that the accounting year will coincide with the Income-tax year, with the added advantage of being able to close the accounts before the commencement of the new cottonseed season in April. On the basis of the approximate working during 1958 and the anticipated results for the first three months of 1959, the Directors are hopeful of declaring dividends in respect of the period of fifteen months ending 31st March 1959.

FUTURE PROSPECTS

Cottonseed Processing : The economics of the Company's cottonseed processing has greatly improved with the introduction of the Solvent Extraction Plant, because of a 25% increase in oil recovery, coupled with reduced cost of manufacture due to a 100% increase in quantity of raw material processed. The Company need no longer restrict itself to processing only the American-type cottonseed, available on a large scale in the local area, and on which the Company was concentrating before, because of its high oil and linter content. It can also take up for processing the *Desi* variety of cottonseed, which is available in equally large quantities in the local market. This is of considerable significance to the Company's operations because there has never been a cotton season in the Karnatak, when both the *Desi* and the American variety of cotton have experienced a simultaneous crop failure.

Another important advantage of solvent extraction of cottonseed is the enhanced value and marketability, in the domestic fertiliser market, of the residual cottonseed meal after solvent extraction, because of its higher nitrogen content as compared with that of the residual cottonseed cake obtained from mechanical expulsion of the oil. In fact, the vast organic fertiliser market in India, which hitherto was closed to cottonseed cake because of its high price in comparison to its nitrogen content, is now wide open to solvent extracted cottonseed meal with a nitrogen guarantee of 7% (equivalent to that of groundnut cake) of which the Company's mills will be the sole producers in India for some time to come. Furthermore, the Company's compound mill, which is able to sell its entire annual output of compound cattle feed cubes in the local area, is another fruitful outlet for solvent extracted cottonseed meal in the production of a balanced animal diet.

To sum up, solvent extraction of cottonseed, apart from radically improving the scope, range and profitability of cottonseed processing, provides an adequate solution to the problem of internal marketing of the residual cottonseed cake. There is, of course, always the substantial export market for solvent extracted cottonseed meal, one of the few commodities that can be freely exported even without licensing. As for cottonseed oil and cotton linters, the other two major products of cottonseed processing, there has never been any marketing problem at all, in so far as the Company's mills are concerned, because of the high quality of its products and the ready demand for them in the domestic market.

De-oiling of Groundnut Cake : In regard to the de-oiling of groundnut cake which the Solvent Extraction Plant will be engaged in during the slack season for cottonseed from November to March, the Company's mills are particularly favourably situated. With the emphasis now placed by the Government on export of de-oiled groundnut meal to augment foreign exchange earnings, the margin on this operation is at present attractive, in view of the comparatively few such plants in India at present, and also due to the proximity of the Company's mills to the port of Karwar from which exports are expected to be made. However, even from the standpoint of internal markets, there is a lot to be said for the strategic location of the Company's Solvent Extraction Plant, as it is in the heart of one of the major groundnut producing areas and also close to the consuming centres for organic fertilisers which are principally in South India.

The majority of the Solvent Extraction Plants in India are at present working profitably even on the basis of an annual extraction of about ten to fifteen thousand tons of groundnut cake, which the Company's large-capacity Solvent Extraction Plant should be able to process within a period of five months during the groundnut crushing season in the area from November to March. The Company's mills are, however, in the favourable position of also being able to process cottonseeds which are locally available on a large scale during an exactly complementary season to groundnuts, i.e., from April to October. This latter operation by itself, as stated earlier, is fully capable of justifying the investment made on the Solvent Extraction Plant.

In the circumstances explained above, the Directors feel that, even after making due allowance for the present boom period for solvent extraction, the integrated and now diversified nature of the Company's activities should ensure a steady and fair return to the shareholders on the increased capital of the Company. The Company's annual sales turnover, which has averaged more than five times the paid-up capital in 1955 and 1956, should henceforth bear the same ratio to the increased capital; and is expected to aggregate well over one crore of rupees in 1959, of which approximately half should represent foreign exchange earnings.

GOVERNMENT ENCOURAGEMENT TO COTTONSEED INDUSTRY

The Government of India recently appointed an Ad-Hoc Committee on Cottonseed Industry, with the following terms of reference :—

(a) To examine the immediate problems of the industry and suggest ways and means for its speedy development.

(b) To examine the present position of the industry, e.g., installed capacity, annual production, etc., and suggest suitable locations for new units.

(c) To suggest fiscal measures which could give necessary incentive for crushing of cottonseed and the consumption of cottonseed oil as cooking oil and in the manufacture of Vanaspati.

(d) To suggest measures for developing the use of Decorticated Cottonseed Cake.

It is noteworthy that the Government of India is taking great interest in promoting the development of the Cottonseed Industry. Indeed, although the Committee's report is yet to be published, practically all the incentives necessary to the Industry have already been given. At present, there is free export of all cottonseed products without any export duty. And as far as internal consumption is concerned, cottonseed oil has been exempted from the excise duty of Rs. 112 per ton leviable on other vegetable oils. The Vanaspati industry has also voluntarily agreed to consume 5% cottonseed oil on a unit-wise basis from 1959 onwards, irrespective of price considerations.

FINANCIAL INFORMATION

AUDITORS' REPORT

The following is a copy of the Report of the Company's Auditors, Messrs. K. S. Aiyar & Co., Chartered Accountants:—

The Directors,
Sundatta Foods & Fibres Ltd.,
New Citizen Bank House, Palton Road,
BOMBAY - 1.

Dear Sirs,

We have examined the books and accounts of the above Company for the five years ending 31st December 1957 and report that the profits or losses of the Company are as set out below. These profits or losses have been arrived at after charging all the expenses of working and management, including provision for the amount of "normal" depreciation as allowable for taxation, subject to the notes below :

Year ended 31st December :	1953 Rs.	1954 Rs.	1955 Rs.	1956 Rs.	1957 Rs.
I. Profits or Loss before Depreciation and Taxation (as per audited Profit and Loss Account)	(7,173)	(59,463)	2,04,634	2,80,877	(26,057)
II. "Normal" Depreciation as allowed for tax purposes	38,276	74,274	60,355	50,976	49,793*
	(45,449)	(1,33,737)	1,44,279	2,29,901	(75,850)
				*Subject to assessment	
III. Rates of Dividend declared on Equity Shares (subject to deduction of Tax)	*Nil*	*Nil*	6%	6%	*Nil*
IV. TURNOVER : SALES	8,47,485	14,28,031	40,10,903	38,53,170	32,45,217
V. PAID-UP CAPITAL	7,02,280	7,43,430	7,43,430	7,52,330	12,49,150

NOTES :

1. The provisions of Schedule II relating to the Prospectus under the Companies Act, 1956, have been taken not to apply by the Company and hence this certificate is not given in accordance therewith.

2. No dividend has yet been declared on the Preference Shares of the Company which were first issued in 1956. The accrued dividend on these shares as on 31st December 1957 is Rs. 14,796.

3. Figures in brackets are losses.

4. Figures for 1953 are for the ten months ended 31st December 1953 as regular production started only from 1st March 1953.

5. Wealth Tax came into force from the assessment year 1957-58. No deduction has been made for this tax in the above figures. For that assessment year Rs. 1,822.84 nP has been determined as payable. The Company has appealed against this assessment.

6. Only "Normal" Depreciation of 10%, as defined in Section 350 of the Companies Act, 1956, has been deducted in arriving at the above figures.

7. Depreciation allowances and development rebate allowable under the Income-tax Act, but not deducted in arriving at the above figures are as under :

	1953 Rs.	1954 Rs.	1955 Rs.	1956 Rs.	1957* Rs.
(a) Initial Depreciation	1,36,067	32,994	..	..	491
(b) Development Rebate	..	..	3,286	3,657	34,381
(c) Additional Depreciation	37,432	71,430	58,031	48,921	44,992
(d) Multiple Shift Allowance	10,788	27,770	27,318	19,210	17,036

* Subject to assessment

8. Because of the unabsorbed depreciation allowances and development rebate referred to in 7 above, and allowed to be carried over, no income-tax has been actually paid or is expected to be paid for these five years. The unabsorbed development rebate and depreciation carried forward in the assessment for the year 1957 has been determined at Rs. 4,85,601.

9. The accounts for the year ended 31st December, 1957 being the last date to which the Company's accounts have been made up prior to the date of this report, as approved by the Board of Directors, have been audited by us and were adopted at the annual General Meeting of the Company held on 30th September 1958. Throughout the years under review, we have acted as the auditors of the Company.

The following are the Assets and Liabilities of the Company as on 31st December, 1957, subject to notes below :

	Rs.	Rs.
(1) FIXED ASSETS (Gross Block) :		
Land and Buildings	1,77,447	
Plant and Machinery (including Solvent Extraction Plant awaiting installation)	18,89,777	
Other Assets	44,119	
	21,11,343	
Less : Normal Depreciation to 31st December 1957	2,73,674	
		18,37,669
(2) INVESTMENTS		4,992
(3) CURRENT ASSETS, LOANS AND CASH AND BANK BALANCES		11,27,988
		29,70,649
Less		
LIABILITIES		
Secured Loans	7,41,355	
Unsecured Loans	6,10,683	
Current Liabilities and Provisions	3,59,048	
		17,11,086
NET ASSETS	Rs.	12,59,563
representing		
Share Capital	Rs.	12,49,150
Surplus	"	10,413 (See note 2 below)

NOTES :

1. There is a contingent liability of Rs. 19,400 not admitted by the Company.

2. For the five years under report, the total amount of normal depreciation debited in the above figures is Rs. 2,73,674 but the total amount of depreciation actually written off in the published accounts for the five years is Rs. 3,08,967, and hence the audited accounts for the year ended 31st December 1957 show a deficit of Rs. 24,880 whereas the above figures yield a surplus of Rs. 10,413.

Yours faithfully,
K. S. AIYAR & CO.,
Chartered Accountants.

BOMBAY : *16th December, 1958.*

EXPENSES OF ISSUE

Expenses of this issue, including brokerage, are estimated to amount to Rs. 50,000 and are payable by the Company.

UNDERWRITING

The shares now offered have not been underwritten.

COMMISSION

A commission of 2% was paid to the Life Insurance Corporation of India for subscribing or agreeing to subscribe or procure subscriptions for 3,000 Equity Shares of Rs. 50 each of the aggregate value of Rs. 1,50,000 during the year 1957. A commission of 2½% was paid to the New India Assurance Company Ltd., Bombay, for subscribing or agreeing to subscribe or procure subscriptions for 4,000 Preference Shares of Rs. 50 each of the aggregate value of Rs. 2,00,000 during the year 1958. Messrs. N. D. Sirur and R. R. Saraiya, Directors of the Company, are shareholders of the New India Assurance Company Ltd., and as such deemed to be interested in the above commission paid to the New India Assurance Company, Ltd. No other sum has been paid by the Company during the last two years by way of commission for subscribing or agreeing to subscribe or procuring subscription for any shares of the Company.

NUMBER AND CLASSES OF SHARES

Equity Shares

In the year 1951, a public issue of Rs. 5,00,000 was made by the Company when 10,000 Equity Shares of Rs. 50 each were offered to the public and were fully subscribed. Subsequently, a private offer of another 10,000 Equity Shares was made in February 1953 to the then existing shareholders of the Company or their nominees and 5,000 shares from the above were allotted and fully paid up prior to 31st October 1956 on which date the Paid-up Equity capital stood at Rs. 7,50,000, excluding a sum of Rs. 2,330 received on account of forfeited shares. The balance of 5,000 Equity Shares from the above issue was later allotted and Rs. 2,50,000 has been fully paid thereon.

A further 5,000 Equity Shares of Rs. 50 each totalling in value Rs. 2,50,000 were issued on 1st February 1958, and were offered, in the first instance, to the shareholders of the Company or their nominees as required by Section 81 of the Companies Act 1956. 4,000 shares out of the said issue have since been allotted. The majority of the Directors refrained from subscribing to their right shares, forming part of the said issue, with a view to permitting the remaining shares being included in the present offer to the public together with the new issue of 5,000 Equity Shares which the Directors have now made so as to reach the figure of the authorised Equity Capital of the Company of Rs. 15,00,000.

Preference Shares

The authorised Preference capital of the Company is Rs. 10,00,000 made up of 20,000 shares of Rs. 50 each. The Company issued on 31st October 1956 15,000 Preference Shares of Rs. 50 each at par, carrying a fixed cumulative dividend rate of 6% tax free, to the then Equity shareholders of the Company of which 5,000 Preference Shares were allotted during 1957. A further 5,000 Preference Shares have since been allotted during 1958, after the rate of dividend on the entire authorised Preference Capital was changed by the Company from 6% tax free to 8% taxable with participation rights. The remaining 5,000 Preference Shares in the above issue are being included in the present offer to the public.

CONSENT OF SHAREHOLDERS

The new issue of 5,000 Equity Shares made by the Directors is being included in the present offer to the public in pursuance of a resolution passed at the Extra-ordinary General Meeting of the Company held on 17th July 1958 whereby the Company approved of the said issue being disposed of by the Directors in such manner as they think most beneficial to the Company without the need to offer the same, in the first instance, to the Equity Share-holders of the Company, as would have been otherwise necessary under the provisions of Section 81(1) *(a)* of the Companies Act, 1956.

VOTING RIGHTS

Subject to the provisions of Section 89 and sub-section (2) of Section 92 of Companies Act, 1956,

(*a*) every member of the Company holding any Equity Share capital therein shall have a right to vote, in respect of such capital, on every resolution placed before the Company ; and

(*b*) his voting right on a poll shall be in proportion to his share of paid-up Equity capital of the Company.

The holders of Preference Shares shall have no right to be present or to vote either in person or by proxy at any General Meeting of the Company in respect of their holdings of Preference Shares except in the circumstances and to the extent provided in sub-section (2) of Section 87 of the Companies Act, 1956.

TRANSFER OF SHARES—RESTRICTION ON TRANSFER

The Directors may at their own absolute and uncontrolled discretion and without showing any reason decline to register or acknowledge any transfer of shares, but in such case they shall, within two months from the date on which the instrument of transfer was lodged with the Company, send to the transferee or transferor notice of refusal to register the transfer.

DIRECTORS

Number of Directors

The Articles of Association of the Company provide that during such time as the Industrial Finance Corporation of India have a right by virtue of Article 101-A to appoint not more than two ex-officio Directors on the Board, the maximum number of Directors shall be twelve, and when such right of representation ceases, the maximum number of Directors on the Board shall not exceed nine.

Share Qualification and Remuneration of the Directors

The Articles provide that the qualification of a Director other than a Debenture Director or an Ex-Officio Director shall be the holding in his own name of Equity Shares of the Company of the nominal value of at least Rs. 1,000.

Subject to the provisions of the Companies Act, 1956, the remuneration payable to the Directors under the Articles of the Company is as follows : The remuneration of the Directors for their services shall not exceed Rs. 50 per meeting of the Board. Additional remuneration may be fixed by the Directors to any one or more of them for services rendered in signing the Share Certificates of the Company. The Directors who are not *bona fide* residents of Bombay may be paid such sums as the Directors may consider fair for travelling expenses in addition to their fees for attending the meeting. The Directors also may be paid such remuneration as may be fixed from time to time to any of them appointed as a member or members of a Sub-Committee constituted by the Directors in terms of the Articles. The Directors called upon to do or perform any extra services for the Company may be paid such special remuneration either by way of a fixed sum or a percentage of profit as may be determined by the Board.

Management

The management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents nor Secretaries and Treasurers. Subject to the control and supervision of the Board of Directors, the business of the Company is administered by the Managing Director, Mr. N. D. Sirur, and the Joint Managing Director, Mr. Gopichand V. Sirur, who have been associated with the Company from its inception.

Interest of the Directors

Mr. N. P. Chandavarkar, a Director of the Company, has, by a special Resolution of the Company in General Meeting, been permitted to act as the Consulting Architect of the Company, and receives remuneration at standard rates in respect of each item of work entrusted to him. Mr. Chandavarkar also attends part-time to the Company's business in Bangalore, which is the capital of Mysore State where the Company's mills are located. For the latter services, he receives a fixed remuneration of Rs. 250 per month which has been approved by the Central Government as well as by the Company in General Meeting.

Mr. N. D. Sirur is the Managing Director of the Company, and receives remuneration for his services as such under a service agreement with the Company dated 16th August 1957 which provides for his appointment for a period of five years from the 1st of January 1957 upon a remuneration of 5% of the net profits of the Company computed in the manner referred to in Sections 198(1), 349 and 350 of the Companies Act, 1956, subject to a minimum remuneration of Rs. 1,500 per month. The Managing Director is also entitled to join the Company's Provident Fund Scheme that may be in force from time to time.

Mr. Gopichand V. Sirur is the Joint Managing Director of the Company and receives remuneration for his services as such under a service agreement with the Company dated 16th April 1957 which provides for his appointment for a period of five years from 1st January 1957, upon a remuneration of 3½% of the net profits of the Company computed in the manner referred to in Sections 198(1), 349 and 350 of the Companies Act, 1956, subject to a minimum remuneration of Rs. 1,000 per month, together with the use of a rent-free and unfurnished house and the free use of the Company's car at Hubli. The Joint Managing Director is also entitled to join the Company's Provident Fund Scheme that may be in force from time to time.

The remunerations payable to the Managing Director and the Joint Managing Director have been approved by the Central Government, *vide* their letter No. 41(68)-CL/56 dated 19th February 1957, as well as by the Company in General Meeting.

Subject to the restrictions in this regard placed by the Industrial Finance Corporation of India, requiring their prior approval, so long as the aforesaid loans granted by them to the Company remain outstanding and unpaid, both the service agreements between the Company and the Managing Director and the Joint Managing Director, respectively, provide that either party will be entitled to terminate the agreement at any time on giving to the other not less than twelve calendar months' notice. Subject to the provisions contained in Section 318 of the Companies Act, 1956, in the event of such termination of the agreement by the Company before the expiry of the period of five years, being the tenure of the respective agreements, the Company shall pay to the Managing Director or to the Joint Managing Director, as the case may be, by way of compensation for loss of office, a sum equivalent to the remuneration which would have been earned if he had been in office for the unexpired residue of his said term, or for three years, whichever is shorter, calculated on the basis of the average remuneration actually earned by him during a period of three years, immediately preceding the date on which he ceased to hold office as aforesaid, or if he held office for a period lesser than three years, during such period ; Provided that no such payments shall be made in the event of the commencement of the winding-up of the Company, whether before, or at any time within twelve months after the date on which he ceased to hold office as aforesaid, if the assets of the Company on the winding-up, after deducting the expenses thereof, are not sufficient to repay to the shareholders the share capital (including the premiums, if any) contributed by them.

MATERIAL CONTRACTS

Apart from the two agreements referred to in the preceding paragraph, entered into by the Company with the Managing Director and the Joint Managing Director respectively, the Company has, within the two years preceding the date hereof, entered into the following contract not being a contract entered into in the ordinary course of business, and which is or may be material :

Contract dated 8th August 1957 with Messrs. N. A. Sirur, Hubli, a partnership firm in which one of the Directors, Mr. Gopichand V. Sirur, is a partner holding 1/7th Share. The contract was for the purchase of immovable property comprising of the land and factory buildings which were previously held by the Company under a long lease, as well as additional adjoining land required for the Company's purposes. The purchase price of Rs. 1,56,000 was paid in cash to the Vendors on the basis of a valuation of the property in question made in that year by Messrs. Kapadia & Baria, Architects, Engineers and Surveyors of Bombay.

MAIN OBJECTS OF THE COMPANY

The main objects of the Company as set out in sub-clauses (1), (2), (2a) and (4) of clause 3 of the Memorandum of Association are as follows :

(1) To carry on the business of industrial utilisation of cottonseed, particularly the manufacturing and selling of linters through delinting, processing and converting cottonseed, the manufacturing, processing, bleaching and selling of chemical cotton, the manufacturing, processing, bleaching, dyeing, printing and selling of rayon yarn, cloth and other rayon fabrics, the decortication of delinted cottonseed and the manufacturing, processing, refining, hydrogenation and selling of oil, soap and other saleable articles capable of being manufactured out of the kernels and the utilisation, conversion, processing, disposing and selling of the "hulls" and "Seed-Cakes" and generally to carry on the business of utilisation, conversion, processing and manufacture out of cottonseeds every variety of useful and saleable merchandise.

(2) To carry on the business of crushing, manufacturing, refining, hydrogenating, preparing, buying and selling all kinds of oils, out of groundnuts, safflower, castor, linseed and all other oil-bearing seeds and generally deal in all kinds of oils and oleaginous and saponaceous substances and all kinds of unguents and ingredients.

(2a) To acquire, take over, promote, establish and carry on all or any of the business of seed crushers and manufacturers of linseed, cotton and other cakes, oil extractors by crushing, chemical or any other processes, including solvent extraction, cake and oil manufacturers, oil refiners, soap boilers, manufacturers of floor cloths and floor coverings of every description, makers and manufacturers of cattle food and feeding and fattening preparations of every description, makers and manufacturers of artificial manures and fertilisers of every description, meal manufacturers, manufacturers of foods and food products of all kinds and description whatsoever, grain and seed merchants, flax and cotton merchants, oil merchants, cake and corn merchants, millers and flour merchants, bakers, biscuit makers, hay, straw and fodder merchants, ice and ice-cream makers, nurserymen, shipowners, lightermen, carriers by sea and land, dock owners, wharfingers, warehousemen, manufacturing chemists and druggists, varnish makers, candlemakers and stearine and fatty acid and saccharine manufacturers.

(4) To carry on the business of manufacturing, bleaching, dyeing, printing and selling yarn, cloth and other fabrics made from raw cotton, jute, wool and other suitable materials ; and to carry on the business of cotton and spinning and weaving mill proprietors in all their branches.

DOCUMENTS

The consent in writing of the above-mentioned Bankers, Solicitors, Auditors and Managing Brokers to act in their respective capacities has been obtained. Messrs. K. S. Aiyar and Company, the Auditors of the Company, have also given and have not withdrawn their written consent to the issue of this Prospectus with their Report included in the form and context in which it is included.

The foregoing written consents have been attached to the copy of the Prospectus which has been delivered to the Registrar of Companies, Bombay, for registration.

INSPECTION OF DOCUMENTS

A printed copy of the Memorandum and Articles of Association of the Company, an Order of the Central Government giving consent to the issue, the Licence from the Central Government granting substantial expansion of the undertaking, copies of agreements with the Managing Director and the Joint Managing Director, the letter of approval of the Central Government in regard to the remuneration payable to them and to Mr. N. P. Chandavarkar, Director, the contract dated 8th August 1957 with Messrs. N. A. Sirur, Hubli, the report of the Auditors, and the audited accounts on which the report is made, may be inspected at the registered office of the Company, New Citizen Bank House, Palton Road, Bombay-1, during usual business hours, Saturday excepted, until the list has been closed.

BROKERAGE

Brokerage at the rate of 2% will be paid by the Company on allotments made in respect of applications bearing the stamp of a Bank or of a member broker of a recognised Stock Exchange. In addition, a brokerage of 1% will be paid by the Company to the Managing Brokers in respect of all acceptances of applications for the aforesaid Shares offered to the public.

PROSPECTUS AND FORMS OF APPLICATION

Copies of the Prospectus and Forms of Application may be obtained from the Managing Brokers at the address given above and from the Bankers named above at any of their Branches in India on and from 30th December 1958.

From the leading container makers come

pressed metal industrial components !

The Metal Box Company of India Ltd have become the leading container manufacturers in India in the short span of 25 years. Today, over a thousand packers and bottlers are using Metal Box products to package Rs 100 crore worth of consumer goods every year !

But that is not all. The manufacture of decorative containers and closures calls for specialisation in the forming of metal sheets to various shapes and within narrow tolerances. The experience gained by Metal Box in the pressing of steel, aluminium, tinplate, brass and other alloys, as well as in the impact extrusion of pure tin, lead alloy and aluminium is now proving useful in the production of deep drawn and shallow stamped as well as extruded industrial components. Covers for fan regulators and house meters, hub caps for automobiles, chassis and transformer cans for radios, lead capsules for insulators, parts for duplicators—these are but a few of the many components regularly supplied by Metal Box. Scrupulous attention paid to the quality of metals used and stringent quality control to ensure precision fitting, have been largely responsible for the components made by Metal Box gaining acceptance as the finest made in India.

India's programme of industrialization places a heavy and complex burden on ancillary industries, and Metal Box, the leaders in the packaging field, are ready to meet this challenge with all their resources and all their experience.

ANNUAL MEETING OF BELAPUR COMPANY LIMITED

INDIA MUST PRODUCE MORE SUGAR PER ACRE IF IT IS TO EXPORT PROFITABLY

SPEECH OF MR. F. EDWARDS

IF India is to export sugar successfully and at a profit to itself, it must produce more sugar per acre than it is doing now. This view was expressed by Mr. F. Edwards, Chairman of the Belapur Company, Ltd., in his speech at the Thirty-ninth Annual General Meeting of the Company held in Bombay on Wednesday, 17th December 1958. He hoped that the Ministers of the Government would realise the urgency of the situation, because work done in this direction, even if begun today, would not bring full reward for some years to come.

The following is the full text of Mr. Edwards' speech:

"GENTLEMEN,

"Before I deal in my speech with matters concerning the main purpose of the meeting, I cannot let this occasion pass without first referring to the death in October last of your Chairman, Sir Joseph Kay, K.B.E. This sad event has been referred to by the Directors in their report to you but I should like to add a few more words to what has been said. I think I am right in saying that, of all the companies under the management of W. H. Brady and Company Limited, of which Sir Joseph Kay was the Managing Director, this Company, The Belapur Company Limited, he considered one of his major achievements; the one which showed the greatest reward for the efforts he put into it in its earliest days, when the Company was, to say the least, faced with a very uncertain future. Having been Chairman of the Company for thirty-four years until his death, Sir Joseph saw the progress of the organisation through many phases and in the latter years of his life was able to take great and justifiable pride in seeing your concern develop as it has done in recent times. Those who knew Sir Joseph well, will recall how on many occasions he referred to the development of The Belapur Company as a 'Commercial Romance.' His passing leaves a gap which it will be difficult, if not impossible, to fill. But you may be assured that those who are left behind will diligently and forcefully endeavour to continue the development of your Company, with the ultimate aim of reaching still greater heights, inspired by the achievements of the late Chairman in its darker days, and which brought the Company to its present-day strength and stability. Before proceeding further, I would ask you to stand with me for a few moments in silence in memory of the late Sir Joseph Kay.

Fall in Profit Explained

"And now, before I propose a formal resolution for the adoption of the accounts, there are a few points I wish to make in connection with the year's results. As you will see, the nett profit for the year does not in itself, when compared with the results for the previous year, warrant an increase in the dividend to be paid to shareholders, but I will deal with this later when I refer to the proposed dividend. It is mentioned in the Directors' report that a combination of adverse conditions during the past year has been mainly responsible for the lower profits, and I should like to explain what is meant by that remark.

"In the first place, the Company's farms experienced one of the hottest pre-monsoon periods for several years, with the temperature on occasions reaching 110° F. To aggravate this situation, the rainfall, which was only just over 16 inches, was some 10 inches below normal. Further, we were experiencing difficulties with the Irrigation Department of the Bombay Government in getting sufficient supplies of canal water to meet our requirements, and, despite a recent arbitration award in our favour, so far as supplies are concerned, we are still not getting the water-supply we would like. All these circumstances resulted in a lower yield of cane per acre and a lower percentage recovery of sugar from cane, the final result being that our production of finished sugar for the year was about 20,000 bags lower than last year.

"On the other side of the picture, costs of cultivating and manufacture have risen quite steeply. Fertilisers of all kinds are much higher in price than they were at any time during the past two years and other expenses have also gone up, including wages and dearness allowance paid to workers. So sharply have overall expenses increased that the total amount spent during the past year for an output which was about 10 per cent. lower, was approximately the same as in the previous year when we were able to report a record nett profit.

"Still another factor contributing to the lower profit was the export of just over 500 tons of sugar under the Government Scheme. The considerable loss on this shipment, which of course had to be sold at the prevailing world market rate—a rate far less than that which could have been obtained in the domestic market—has had to be borne by the Company. I shall refer again to this question of exporting sugar in a few moments.

"I hope the explanations I have given will satisfy the queries which must have arisen in your minds, but, despite all our troubles and difficulties, I think we should not lose sight of the fact that the results as shown in the accounts now before you, suffer only by comparison with last year and cannot by any means be considered unsatisfactory. In fact, the nett profit compares not unfavourably with the results in any year prior to 1957, and I suggest it would not be fair to compare our present results only with record-breaking achievements, especially when Mother Nature plays such an important part in an organisation like ours. If she chooses to smile on us, as she did in 1956-57, then all is well, and the way is paved for new records; but, when she frowns, as she did in the past year, then no human effort can retrieve the situation. However, for those people interested only in records, another one will be created at this meeting if you pass the proposal to pay the dividend, as suggested by your Directors, and which is the highest ever in the history of your Company.

Shareholers Deserve the Bonus

"As I have already said, the nett profit does not appear to warrant any increase over last year's dividend, but, after due consideration, your Board feel that the financial stability of the Company is now so strong that they are justified in proposing that last year's dividend be maintained at Rs. 18 per share and that, in addition, a bonus dividend of Rs. 2 per share be paid out to the shareholders. A further factor which influenced your Directors in their recommendation is that more than eight lakh rupees, representing previous excess provisions for taxation, have been brought back into the accounts for appropriation. I might explain here that, for some time, I have been trying to get the Income-tax Authorities to bring our Company assessments more up-to-date and I am glad to say that, since the last annual general meeting, assessments have been finalised for four complete accounting years, leaving at this moment only the accounts for 1956-57 and 1957-58 to be dealt with. Under the provisions of the Companies Act, the amounts left over after final tax settlements cannot be retained in the account but must be brought back, hence the transfer of rupees eight lakhs odd to which I refer.

"One other matter to which I should call your attention is that, before presenting the past year's accounts to you, your Directors have thought it advisable to reduce the number of reserve accounts by transferring the balances standing in the 'Reserve against Investments,' 'Reserve for Contingencies' and 'Reserve for Housing' accounts, to the 'General Reserve' account.

Affairs of Sugar Industry

"Now to turn to the sugar industry in general. The 1957-58 season witnessed a slight break in the upward curve of all-India white sugar production. After successively rising from a little over one million tons in 1953-54 to 2,026,000 tons in the 1956-57 season, production fell by about 3 per cent. to 1,976,000 tons in the 1957-58 season. This fall was due mainly to two factors: (1) a drop in sugarcane production in U.P. and Bihar occasioned by adverse weather and excessive floods and (2) diversion of sugarcane to the manufacture of *khandsari* and *gur*, both of which pay neither excise duty nor sugarcane cess and, therefore, have a distinct advantage of about Rs. 13 per maund over white sugar. *Khandsari*, because of its closer resemblance to white sugar than *gur*, turned out to be a keen competitor of white sugar and its production rose from an average of 100,000 tons per annum to an estimated total of a little over 300,000 tons in the season just ended. *Gur* enjoyed attractive prices almost throughout the year and this enabled *gur* producers to offer stiffer competition with mills for cane supplies. Further, neither *khandsari* nor *gur* is subject to controls on price and distribution, whereas, in the case of white sugar, there is a 'gentleman's agreement' on ex-mill prices since July last and the stock releases from mills for free sale in the market are still strictly regulated by the Government. It is interesting to note that, over the year ended September 1958, the wholesale price of *gur* rose by as much as 29 per cent., while the increase in white sugar was no more than 10 per cent., the bulk of which was due to the levy of additional excise duty in lieu of sales tax.

Price Control

"Despite this modest, indeed negligible, rise in prices of white sugar, the Central Government has thought fit to subject the North Indian sugar factories to a control on ex-mill prices. It is true that, between May and July, prices of sugar went up a little, owing to some speculative activity prompted by expectations of a large quantity of sugar being earmarked for export, but this increase was by no means so excessive as to merit official control. Fortunately, the factories in the Deccan and the South were not brought under this price control, as the Government was apparently satisfied that they did not commit any breach of the "gentleman's agreement' on fair ex-mill prices informally reached between the Indian Sugar Mills Association and the Food Ministry.

"The question of fair price for sugar has now been referred to the Tariff Commission. The enquiry will cover the sugar industry as a whole and the future profits of your Company may be influenced, to a considerable extent, by the verdict of the Commission.

Place of Bombay State

"While the production of white sugar in the whole of India declined fractionally, there was actually an increase in the Bombay State of about 33 per cent. from 240,000 tons in 1956-57 to 320,000 tons in 1957-58. This increase was due partly to a substantial rise in the production of sugarcane and partly to further growth in crushing capacity, mainly in the co-operative sector. More co-operative factories worked in the season under review than in the preceding season, and, out of the 320,000 tons of white sugar produced in the Bombay-Deccan, the share of co-operatives was no less than 114,750 tons. Many more co-operative factories are expected to start crushing in the current year and in the following two years, so that by March 1961, these factories are expected to be producing 200,000 tons, that is, nearly as much as the company-managed factories. These are, of course, estimated figures but I venture to suggest that expectations will not be realised unless there is a considerable improvement, in the co-operative sector, in the standard of efficiency and general administration.

"With the substantial increase in sugar production during the season under review, Bombay State has attained the status of the second largest white sugar producer in the Indian Union, pushing down Bihar State, which has held that distinction all these years, to third place. In the 1957-58 season, the Bombay State's lead over Bihar was by about 45,000 tons, but, when the expansion plans now in hand are completed, in the next two years or so, this figure should increase to more than 100,000 tons.

Heavy Taxation

"No article of food is taxed as much as white sugar in India. On every rupee's worth of sugar (a little over two pounds) which one buys, excise duty and other levies on production account for 38 per cent. To be more specific, one pound of sugar costing about 44 nP bears an ordinary excise duty of 10 nP, a special excise duty in lieu of sales tax of 3 nP and a cess on sugarcane of 2 nP. Besides these taxes, a sugar

SOCIAL FACTORS AFFECTING PRODUCTIVITY

A U.N.E.S.C.O. RESEARCH STUDY

THE swelling current of migration of workers from the countryside to urban areas is a feature of industrialisation in Asian countries. In addition to making the cities congested and creating problems of transport and accommodation, this large-scale influx of people to the cities gives rise to many other social and economic problems. The worker who leaves his rural community to enter industrial employment has to face many difficulties in his urban environment. In the majority of cases, he still retains his attachments to his native village and does not entirely break with familiar ways of life all at once. This ambivalent attitude renders adjustment to urban conditions all the more difficult. His attitude to work, which has been conditioned by a flexible routine characteristic of village life, has to change. The regular cadence of factory work, where one man's job is a motion co-ordinated with those of hundreds, perhaps thousands, of others and of little use by itself, alone calls for quite a different attitude. His responses to these requirements are influenced, to a large extent, by his social and cultural background. The way he reacts to the new environment has an important bearing on his work attitudes and his work turnover. This is a subject in which there is need and scope for useful research.

The U.N.E.S.C.O. Research Centre at Calcutta deserves to be complimented for undertaking a study of the influence of social and cultural factors on productivity of industrial labour as its first research project. Some of the other projects at various states of progress include (1) small-scale industries, (2) inquiry into the growth of steel towns in India, (3) case study of balanced social and economic development in the D.V.C. area and (4) rural electrification scheme in Burma.

The results and conclusions of the study have been embodied in a report on Social and Cultural Factors Affecting Productivity of Industrial Labour to be published shortly. The objective of this study has been to ascertain the way in which several social and cultural factors affect the working capacity of industrial workers in India, and to examine whether they help in increasing their efficiency or in hindering the same.

Methodology

For the purpose of the study, workers having an industrial experience of ten years or more were selected from two cotton textile mills located in Calcutta and Bombay and from three culture-groups, namely, Bengalee, U.P. (part of the sample from Calcutta and a part from Bombay) and Maharashtrian and were divided according to level of productivity into high and low productivity workers. The main part of the study consisted of an inquiry among workers regarding their opinions and attitudes. The staff of the Centre also interviewed managers, personnel officers, supervisors, doctors and trade union officials of the two mills in order to obtain similar or additional information about workers. Besides, memoranda were obtained from experts regarding the social and industrial life in the two cities to give a proper focus to the study.

Although detailed data were collected by means of the schedule, some of the information obtained was not sufficiently significant to allow conclusions to be drawn according to culture-groups or levels of productivity. On several major matters, differences according to culture-groups and levels of productivity were too small or too unsystematic to enable any conclusions to be drawn according to these criteria. On some major issues, however, there were clear differences noticeable between workers in Calcutta and those in Bombay and between U.P. workers in Calcutta and those in Bombay under the influence of the indigenous culture-groups in each city. Within these culture-groups, differences were also noticeable according to the level of productivity of workers. It was also found that, in some matters, there were no differences among workers according to culture-groups or levels of productivity.

Workers in Calcutta and Bombay

The difference in the social and cultural background of the two cities had its impact on the workers. For instance, in social matters, workers in Calcutta tended to be more progressive. Workers in Bombay, however, were liberal in outlook and did not exhibit a feeling of being discriminated against. Workers in Calcutta had favourable expectations regarding their first factory job. They also had no difficulty in adjusting to the inherent aspects of factory life like congested atmosphere and noise of mills. More workers in Bombay were satisfied with their existing factory job than in Calcutta; fewer of them had difficulty in adjusting to discipline of work and supervision than in Calcutta. Economic attitudes and condition of workers also differed. Workers in Calcutta earned less and were anxious to supplement their income by working overtime. On the other hand, workers in Bombay had higher earnings and also higher debt. Bombay workers had a favourable opinion about changes in life brought about by the economic and social conditions and considered themselves better off than their forefathers; workers in Calcutta were more optimistic about the future and hoped to realise their aspirations regarding salary and status.

In India, as is common knowledge, workers in different places have different food habits and outlook. When labourers migrate from one State to another, they would be subject to the influence of the new places. This was the case with workers from Uttar Pradesh working in the two cities. Despite this, however, they were able to maintain their identity in several respects. Nevertheless, the influence of the city and the indigenous culture-groups were constantly operating on the U.P. workers, with the result that their responses tended in some respects to be similar to those of workers in the indigenous group in each city. Since the workers in all the four culture groups had been working in factory for ten years or more, the city and the factory influences had been sufficiently strong to bring about uniformity in their responses. For example, in their attitude to working with people of other castes and in their reading habits, workers did not differ according to city or culture-groups. About the same proportion of workers in each group in each city had knowledge of the machine they worked on and considered education to be useful.

In each group, the workers were divided according to the level of productivity into high and low productivity workers. In some respects, the responses of workers in each group differed according to their level of productivity. High productivity workers generally were those who had brought about a change in their personal and social life to suit the requirements of factory life; their ideas as regards traditional customs, their relationship with family members and their food habits had changed; their observance of religious practices had declined; they spent time on reading books and newspapers. As regards their attitude to factory organisation and work, they had been able to adjust to various inherent features of mill life like noise of mills. Economically, they were anxious to improve their condition by working overtime and had savings out of income. At the same time, they had more debts. They preferred urban life. On the other hand, low productivity workers did not appear to suffer from a feeling of discrimination on the ground of caste, group or State. In the factory, they preferred jobs requiring skill and ingenuity. They preferred piece-rate wages and were conscious of the advantages of the industrial age and of mechanisation.

On many matters, however, irrespective of the level of their productivity, workers gave the same response or their responses were in conflict according to the level of their productivity. Workers were not differentiated according to the level of their productivity in social matters, like following caste restrictions relating to marriage, preferring their company from their own caste or superior caste or own State, expenditure on rituals and the change in their religious practices. As regards their attitude to factory organisation and work, their opinions about the dangerous character of the machine, the suitability of shift, the factory discipline, the effect of their labour on factory production, and their feelings about changes in output, did not vary according to the level of their productivity. Their response did not differ with the level of their productivity in economic matters like their opinion about their economic condition, their desire for overtime and their preference for payment entirely in cash. Their hopes regarding the realisation of their aspirations also did not vary according to the level of their productivity.

Significant Results

The study has yielded some significant results both according to culture-groups and according to productivity. It should serve as a guide to methods and approaches for future research work on the subject. It is worth mentioning, in this connection, that the Centre has organised a regional seminar on techniques of social research; this is being held at Calcutta now. The purpose of the seminar is to bring together a group of social scientists of varying background who have carried out research in Asian countries, so that they can exchange their experiences and, in particular, to examine how far research techniques developed mostly in Western countries are suitable to conditions in Southern Asia. The participants in the seminar have been selected from various disciplines and from different countries. The U.N.E.S.C.O. Centre, together with the University of Calcutta, has also organised a series of lectures on social research, with a view to enabling the wider public to get acquainted with the purposes and possibilities of social research.

PROTECTION FOR CAUSTIC SODA TO STAY

BLEACHING POWDER, HOWEVER, LOSES IT

THE Government of India has accepted the Tariff Commission's recommendation that protection to caustic soda industry should be continued at the existing rates of duty for a further period of three years from the end of this year, while that for the bleaching powder industry should be discontinued. Accordingly, the protective duties on caustic soda, both solid and other sorts, will be retained at existing rates of 30 per cent. *ad valorem* (preferential) and 40 per cent. *ad valorem* (standard) till 31st December 1961. In case the present tariff value of Rs. 28 per cwt. on solid caustic soda and Rs. 45 per cwt. on caustic soda of other sorts is modified, the rates of duties will also be subject to corresponding adjustments. The bleaching powder industry will, however, cease to receive protection after 31st December 1958 and the quantum of revenue duty on the products may be fixed according to fiscal considerations. The predominant consideration which weighed with the Tariff Commission in arriving at these decisions appears to be that while the fair exworks price of indigenous caustic soda is substantially higher than the imported products, the indigenous bleaching powder industry is in a position to sell its products at competitive prices.

It would be useful to have a glance at the recent trends of both the industries with regard to installed capacity, production, consumption and imports. There has been a consistent rise in the rated capacity and production of caustic soda in the country during the past few years. There are, at present, fifteen units with an annual rated capacity of 67,185 tons, as against twelve units with a capacity of 39,317 tons in 1954, at the time of last enquiry. Production of caustic soda in all forms (solid, liquid and flakes) also went up from 28 993 tons in 1954 to 43,032 tons in 1957 and 26,291 tons during the first six months of the current year.

Schemes for Expansion

It is also gratifying to hear that there are schemes for a sizable expansion of the existing units as well as for the installation of new ones. The Tata Chemicals, the only unit producing chemical caustic soda, has definite plans to raise its capacity from 6,600 tons to 9,900 tons by the end of 1961. A new unit, namely, Saurashtra Chemicals Ltd., which has been licensed to produce chemical caustic soda to the extent of 20,400 tons, is expected to begin production by the second half of 1959. Many of the existing units manufacturing electrolytic caustic soda propose to expand their capacity for production. Three new units are also expected to commence production by 1961. They are: The Dhrangadhra Chemical Works Ltd., Tuticorin, with an installed capacity of 30.000 tons; J.K. Chemicals Ltd., Bombay (1,000 tons) and Atul Products, Bulsar (3,300 tons of sodium hydrosulphite). By 1961, the aggregate annual rated capacity for all types of caustic soda is expected to go up to 145,970 tons, of which 30,000 tons will be chemical caustic soda and 115,600 tons electrolytic caustic soda.

The domestic demand is expected to rise at a faster pace than production. The present demand is put at 124,000 tons and the anticipated demand in 1961 is placed at over 159,000 tons. The breakdown of the demand for caustic soda for the various industries is as follows:

(In tons)

	1958	1961
Soap	23,000	28.000
Textiles	34,000	38,000
Paper	26,500	30,000
Rayon	28,000	46 000
Vanaspati	1,800	2,500
Petroleum refining	3.000	2.700
Chemicals and dyestuffs ...	2,000	4,000
Aluminium	1 600	3,500
Rare earths and miscellaneous	4,100	4,300
Total ...	124,000	159.000

In addition, another 10,000 tons of caustic soda will be in demand for ensuring that pipeline and shelf requirements are taken care of. Thus, a shortfall in production of about 25,000 tons of caustic soda in 1961 is estimated by the Tariff Commission.

Imports

Imports of caustic soda, it may be noted, have continued to be at a relatively high level. In the year 1954, India imported 52,638 tons valued at about Rs. 3.18 crores; by 1957, they rose to 66,042 tons (Rs. 3.88 crores). During the four months ended April 1958, they amounted to 20,194 tons (Rs. 1.11 crore). The total availability of caustic soda during the past four years was as follows:

(In tons)

	1954	1955	1956	1957
Production ...	28.993	34,531	39,634	43,032
Imports ...	52,638	54,881	93,574	66,042
Total supply ...	81,631	89,462	133,228	109,074

To take up the bleaching powder industry now. This industry has made great strides. Production has gone up and there has been greater utilisation of installed capacity. The number of units engaged in this industry is unchanged, as it was in 1954, at three, namely, Mettur Chemical and Industrial Corporation Ltd. Rohtas Industries Ltd., and Tata Chemicals. It may be noted that Mettur Chemicals commenced production of stable bleaching powder in addition to unstable variety in 1955. The rated capacity of all these units stood at 10,020 tons in September 1958, as against 8,170 tons in 1954. Production, which was running at about 2,923 tons in 1954, moved up to 5,347 tons in 1957 and to 2.936 tons during the six months ended June 1958. The expansion envisaged is confined only to Mettur Chemicals. The present annual capacity of the units at 4,950 tons will be stepped up to 9,900 tons by 1961.

It is rather difficult, however, to estimate the future domestic demand for bleaching powder in view of the many substitutes for it, such as hydrogen peroxide, liquid chlorine and bleach liquor. The Tariff Commission, however, has estimated the likely demand for bleaching powder in 1961 at 12,000 tons, as against the current demand of about 8,000 tons. The total availability—including domestic production and imports—of bleaching powder is given below:

(In tons)

Year	*Production*	*Imports*	*Availability*
1954 ...	2,923	5.010	7.933
1955 ...	2,642	4,393	7,035
1956 ...	4.657	4,343	9,000
1957 ...	5,347	1,805	7,152

It is said that some of the units are making efforts to so diversify production as to raise their consumption of chlorine. Thus, there has been considerable increase in the output of liquid chlorine and hydrochloric acid. The overall consumption of chlorine was about 91 per cent. during the first half of 1958, as against 88 per cent. in 1957 and 72 per cent. in 1954. It is estimated that the internal demand for chlorine will be about 95,000 tons in 1961, as against a production of about 102,000 tons.

Quality

The quality of the indigenous products is stated to be generally satisfactory. In the course of the Commission's enquiry, some consumers, however, drew its attention to certain defects. These are: Low content of NaOH in caustic soda, high proportion of impurities in the products of certain producers, low availability of chlorine in bleaching powder (unstable) and defective packing of both products. The manufacturers, we are told, have agreed to take note of these complaints and strive to eradicate them, though they had contended that both caustic soda and bleaching powder were being produced to I.S.I. standards and that the quality of packing had greatly improved.

The principal raw materials required for the manufacture of caustic soda are soda ash and lime. As already stated, Tata Chemicals is the only producer of chemical caustic soda at present. It has no difficulty in getting these two materials. It uses its own soda ash, which, as a raw material for caustic soda, is expensive. Common salt is the principal raw material required for the manufacture of electrolytic caustic soda. While the supply of salt is plentiful, the cost of transport is heavy, as most of the existing units are located at considerable distance from salt-producing centres (Saurashtra, Kutch and Sambhar in Rajasthan).

Again, the marine salt available in the country contains much impurities. In this connection, the Commission has recommended that the large-scale salt works should undertake production of salt acceptable to the chemical industry. The other recommendations made by the Commission are: (1) an examination of the question relating to open wagon movement of salt, after taking into account the steps accepted in other countries for the purpose, should be undertaken by the Railway Administration in consultation with the representatives of the industries concerned; (2) the Railway Administration may take steps to provide an increasing number of tank wagons for the transport of caustic soda in liquid form and also consider the question of providing a few tank wagons on an experimental basis for the transport of liquid chlorine, and (3) the question of developing the manufacture of a dicalcium phosphate fertiliser should be kept in view when any fresh licence is issued for augmenting the production of electrolytic caustic soda.

UNILEVER INDIAN STAFF

Indian employees of Hindustan Lever Ltd. are being appointed to the parent company in Britain under a new work-while-you-learn training scheme. From January 1959, three members of the Bombay staff will take up posts with Unilever Ltd. They are Messrs. R. Subrahmanyam, P. G. Ramachandran, and B. Mahey. These new appointments are planned as the first of many. Mr. Subrahmanyan is being posted to the commercial side of Batchelors Foods Ltd., Sheffield; Mr. Ramachandran to the advertising side of Lever Bros., Ltd., London; and Mr. Mahey to that of Van den Berghs Ltd., London.

As a world-wide organisation, Unilever has long given training in Britain to many of its oversea staff, lasting from a few weeks to a few months. Now, for the first time, staff appointments of at least a year are being made. This is part of what Unilever calls its "-ization" policy—that is, the training of oversea staff so that they can eventually take over senior positions in their own countries. "-Ization" is a two-way process, with Asians and Africans contributing ideas and local knowledge as part of the international team, as well as themselves receiving training.

In India, Indianisation of the Company is already well advanced. Lord Heyworth, Unilever's Chairman, said in Delhi last year after an extensive tour of the country: "We have faith in India and her future, and we are interested in playing our part in her further development in those fields where we have skills to contribute."

COMMODITY PRICES

In a fresh bid to solve the problem of commodity prices, 11 members of the United Nations, including the U.K., Canada, Australia and the Federation of Malaya, introduced a draft resolution in the Economic Committee of the United Nations General Assembly, on the 9th inst., urging member-Governments to consider, commodity by commodity, what steps could be taken to solve particular commodity problems. The resolution appeals to all member-Governments to increase their efforts to promote conditions favourable to the expansion of international trade and to take into account, in their commercial policies and trade practices, any possible harmful repercussions which they might have, particularly on the trade of underdeveloped countries. The draft also expresses the hope that countries which do not adhere to, or co-operate with, established international trade arrangements will refrain from the use of unfair trade practices that would impede or prevent the satisfactory working of these arrangements. Mr. David Scott Fox of the U.K. said that Britain was ready to discuss problems on a commodity-by-commodity basis in the proper forum. Britain also looked forward hopefully to the meeting of the Commission on International Commodity Trade early in 1959. It would be difficult, he said, for the Economic Committee to go into all the intricate problems of commodity prices, but there were other United Nations' organs which could examine them more fully.

COTTAGE INDUSTRIES

Goods worth over Rs. 226 lakhs were produced in the 24 pilot projects for cottage and small-scale industries during the two years ended 31st March 1958. The projects today cover 12,300 villages, with an area of 16,800 sq. miles and a population of six million. The most significant performances were of Kakinada-Peddapuram (Andhra Pradesh) with Rs. 95.8 lakhs, Neyyattinkara (Kerala State) with Rs. 39.5 lakhs and Bihar Sharif with Rs. 25.3 lakhs. The growth of industrial co-operative societies in the pilot projects has been a marked feature of the programme. On 31st March 1958, there were 936 industrial co-operative societies, with a membership of 31,000 and a paid-up share capital of Rs. 9.6 lakhs. In addition, there were also 1,599 multi-purpose co-operatives functioning in the project areas, with a membership of 117.000 and paid-up share capital of Rs. 33.6 lakhs. The total amount of loans advanced by the co-operatives was about Rs. 20.6 lakhs, as against a paid-up share capital of Rs. 43.2 lakhs. Under the various schemes started in the project areas, nearly 25.000 persons secured full-time employment and 52,000 part-time employment.

BAKELITE

Imperial Chemical Industries (I.C.I.), the U.K., will shortly cease production of phenolic moulding powders—commonly known as bakelite—and, instead, concentrate on newer lines, particularly polythene. James Ferguson and Sons, a subsidiary of Wall Paper Manufacturers, is however, expected to take over production and marketing of the same grades of phenolic powders.

Phenolic powders, it is common knowledge, are one of the oldest synthetic moulding materials used in the manufacture of a wide range of products from ash trays to electrical fittings. It may be noted that production of this powder is still on a relatively large scale. But there has, of late, been a slowing down in the rate of growth in output, thanks to growing competition from newer thermoplastic materials which are more versatile and have other technical advantages.

GREAT EASTERN SHIPPING COMPLETES ITS FIRST DECADE

GROSS PROFIT TOUCHES FRESH RECORD

THE year ended 30th June 1958 marks the end of a decade of useful service and strident progress for the Great Eastern Shipping Company, Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay). During these ten years, the Company has come to own 14 vessels with a total deadweight tonnage of 120,918 and the investment thereon has grown from Rs. 22.78 lakhs (in 1948-49) to Rs. 583.58 lakhs. The cargo lifted (both coastal and overseas) recorded an increase from 152,763 tons in the first year of the Company's existence to 843,278 tons and the freight and charter hire earnings from Rs. 39.82 lakhs to Rs. 359.68 lakhs, though the latest year's earnings are slightly lower than the previous year's record. As if to crown these efforts, the Company has earned during 1957-58 a record gross profit of Rs. 121.66 lakhs, which represents an increase of Rs. 19.07 lakhs over the year. With this rise, the gross profit has gone up four-fold within the last three years. A more detailed picture of the Company's progress during the last ten years is presented in the table given below.

The net profit for the year under review, however, shows a decline of Rs. 2.65 lakhs to Rs. 64.97 lakhs from the previous year's high of Rs. 67.62 lakhs, thus reversing the upward trend for the first time in the last six years. This is due to (1) the increase in the managing agency commission from Rs. 8.31 lakhs to Rs. 9.28 lakhs, (2) the larger provision of Rs. 36.91 lakhs for depreciation, as against Rs. 26.66 lakhs set aside last year, and (3) the provision of Rs. 10.50 lakhs for taxation, for which no allocation had been made in the previous three years. However, a sum of Rs. 8.40 lakhs, being the excess provision for taxation made in the preceding years, has been written back; the corresponding amount in the previous year was Rs. 3.60 lakhs. After bringing this amount into account, the Directors have set aside Rs. 3.39 lakhs being the under-provision for taxation on income at foreign ports in respect of the previous year and made the following allocations to the various reserves, as compared with those a year ago:

(In lakhs of Rs.)

	1957-58	1956-57
Deferred taxation reserve ...	*Nil*	11.59
Development rebate reserve ...	28.65	*Nil*
General reserve	14.00	46.00
Dividend equalisation reserve	10.00	*Nil*

After strengthening the reserves thus, the Directors have recommended a dividend of 18 per cent. on the fully paid and partly-paid shares for the year under review, as against 15 per cent. paid for 1956-57. At the annual general meeting of the shareholders held on the 12th inst., the resolutions relating to the accounts and the declaration of dividends on the preference and equity capital were not adopted. The Directors were requested to reconsider the appropriation of profit, with a view to enabling the shareholders to get the benefit of maximum tax relief by meeting the dividends as much as possible from the tax-free portion of the profit and only the balance from the taxable part of the profit. As it is, the Directors have covered the dividend by taking a sum of Rs. 12.07 lakhs which is exempt from tax under Section 15c and another Rs. 5.50 lakhs from the sum of Rs. 9.15 lakhs which are assessable to tax. It was the contention of some shareholders that, under this procedure, they would find it difficult to get the dividend tax-free in their hands, as they feared that the tax authorities would consider the dividends to have been paid directly out of the net profit. The Company was, accordingly, advised to create two new reserves, one representing the exempted profit under Section 15c and the other representing taxable profit, and to meet the dividend amount from these two reserves in the proportion mentioned above. This advice was accepted and the accounts, as amended above, will be adopted at the adjourned meeting of the shareholders to be held on the 19th inst.

The operating earnings of the Company for the year under review have suffered a slight setback from Rs. 364.44 lakhs to Rs. 361.01 lakhs, mainly due to the fall in freight earnings from Rs. 299.21 lakhs to Rs. 286.93 lakhs, following the rapid decline in international freight rates, with the recession in world trade. "In spite of the international tramp freight rates ruling low during the second half of the year under report," the Directors observe, "the favourable conditions encountered in the first half of the year and advance booking of part of the freight even for the second half of the year under report ensured these good results." The earnings from charter hire show a sizable rise from Rs. 63.82 lakhs to Rs. 72.76 lakhs and interest earned on deposits from Rs. 3.20 lakhs to Rs. 8.94 lakhs. On the expenditure side, operating expenses have declined from Rs. 252.24 lakhs to Rs. 229.95 lakhs, thanks to the drop of Rs. 53 lakhs on hire of chartered steamers and of Rs. 5.58 lakhs in coal, fuel oil and water consumed.

During the year, the Company added four second-hand vessels to its fleet, bringing the total number at the close of the year to 14, with a deadweight of 120,918 tons. These vessels were bought at a cost of Rs. 1 crore under the self-financed scheme approved by the Government. The purchase prices of these vessels have been paid by arranging an overdraft facility with a London bank and by depositing an equivalent amount in rupees with their Bombay branch. The overdraft in London is repayable out of the net foreign exchange earnings of these vessels or their substitutes. This arrangement has been necessitated by the Government's inability to release any foreign exchange for the purchase of ships at present. The Company has so far bought five ships under this scheme. It is interesting to note that the Company is the first not only to acquire a ship under the self-financed scheme but also to purchase the largest number of ships under this arrangement. In addition to the four ships bought during 1957-58, two more are being built, one of which, with a deadweight of 14,500 tons, the largest ship on the Indian registry, is being built in W. Germany. It is expected to be delivered ahead of schedule, in February next. The other is being constructed at the Visakhapatnam yard; it is also expected to be ready for delivery in February 1959. This ship will be accepted by the Company, provided the important questions relating to price and stability of ship, which are under dispute, are settled. These two ships will bring the total deadweight of the Company's fleet to about 140,000 tons, representing an increase of 90,000 tons since the beginning of the second Five-year Plan, as against the target of 70,000 tons the Company had programmed to add during the Plan period.

Undaunted by the present slump in the international freight market which has caused a good part of the world tonnage being laid up, the Company has decided on a Rs. 4.5-crore expansion plan, under which four dry-cargo ships of an aggregate deadweight of over 50,000 tons are to be built for delivery in 1960-61. Though the Company is aware of the great foreign exchange hurdles, it proposes to go ahead with its plan as an act of faith in the importance of shipping in the economic development of the country. It is hopeful that, with the assistance of the Government, the overseas yards and the world financiers, it would be able to overcome these difficulties.

The outlook for the current year is uncertain, as will be seen from the following extracts from the Chairman's speech (published on pages 1010-12 of this issue).

"International freight rates today are below the operating costs and shipowners are laying up their own tonnage for the obvious reason that it cannot be operated without sustaining losses. Tramp shipping is, therefore, facing a great crisis. As part of your fleet is engaged in tramp activities, we cannot escape these repercussions. At the same time we have now a much bigger fleet. Three second-hand ships were secured almost by the end of the year under review and further brand new ships will be delivered in February 1959. It is difficult to foresee the financial results for the financial year 1958-59."

A broad idea of the Company's financial position can be had from the salient features of the balance-sheet relating to the year under review given in the table mentioned above.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 26.45 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 7.3 per cent. per annum, free of income-tax.

* On the increased capital raised by the capitalisation of Rs. 10 lakhs, as well as by the issue of 200,000 new shares of Rs. 10 each (Rs. 5 paid-up). The new shares were entitled for dividend from 1st January 1958.
† On the increased capital of Rs. 50 lakhs consequent on the new shares becoming fully paid-up.
‡ No dividend was paid, and in lieu of this a scrip bonus of one share for every five shares was given.

AHMEDABAD ELECTRICITY EPISODE : MR. CLARK'S STATEMENT

The following is the statement issued by Mr. P. D. C. Clark, Chairman, Ahmedabad Electricity Company, Ltd., in reply to Mr. Sheppard's rejoinder:

"My attention has been drawn to a Press statement issued on 8th December by Mr. E. D. Sheppard, an ex-Director of the Ahmedabad Electricity Company, Ltd., on matters arising out of the annual general meeting of that Company held on 26th November 1958.

"It is unfortunate that Mr. Sheppard should resort to statements in the Press to deal with the affairs of the Company. The question of boilers has been finally examined and analysed by Messrs. Merz and McLellan, leading firm of Consulting Engineers in the U.K., to whom the matter was referred by the Board of Messrs. Killick Industries Limited, of which Mr. Sheppard is the Chairman. In their report, Messrs. Merz and McLellan have upheld the opinion of Mr. Colaco, both in respect of price and performance of the equipment.

"Mr. Sheppard and Mr. Milne were present and spoke at the annual general meeting, but failed to carry conviction to the shareholders. In the light of this and of the report of Messrs. Merz and McLellan, I do not intend to join public issue with Mr. Sheppard."

INVESTMENT IN PETROLEUM INDUSTRY

The total investment in India in the petroleum industry is approximately Rs. 244 crores, out of which Rs. 214 crores represented foreign investment, while Rs. 30 crores represented the Indian capital invested. Disclosing this, in reply to a question in the Lok Sabha, Mr. K. D. Malaviya, Minister for Mines and Oil, said that the investment included working capital in the companies distributing major petroleum products and the refineries in the country including the Assam Oil Company, which has exploration and production activities also. The Standard-Vacuum Oil Company's estimate included the participatory scheme for exploration in West Bengal area.

Referring to the steps taken or proposed to be taken to increase Indian capital investment in the industry, the Minister said that the Government had already gone in for investment. They were taking action to set up two new refineries in the public sector and had made considerable investment in the oil exploration programme through the Oil and Natural Gas Commission. The Government had a 25 per cent. share with the Standard-Vacuum Oil Company, added Mr. Malaviya, in the participatory scheme for oil exploration in West Bengal. The Government would also have 33⅓ per cent. share in the rupee company to be incorporated with the Burmah Oil Company/Assam Oil Company as partners for production and transportation of crude oil from the Nahorkatiya oilfields in Assam.

GOVERNMENT COMPANIES TO DROP USE OF "PRIVATE"

It has been decided to exempt Government companies from the requirements of Section 13 of the Companies Act, 1956, under which companies registered as private limited companies have to use the word "Private" in their names. This was stated in the Lok Sabha during question time on the 3rd inst., by the Deputy Minister for Commerce and Industry, Mr. Satish Chandra. He drew the attention of the members to a draft notification laid on the table of the House on 17th November in accordance with Section 620 of the Act.

RESULTS OF RAGHUVANSHI MILLS

ALL-ROUND FALL

THERE is an all-round fall in the results of the Raghuvanshi Mills Ltd. (Managing Agents: Messrs. Ravindra Maganlal & Co. Private Ltd., Bombay) for the year ended 31st March 1958. There was a fall in sale proceeds, as compared with those for 1956-57. Expenses were higher. Consequently the profit is down and so also the dividend to ordinary shareholders which is no more than 3¼ per cent., as against 6 per cent. for the previous year. The adverse results of the Company for 1957-58 are not surprising, in view of the depression in yarn and cloth markets. The following quotation from the Directors' report will enable readers to view the Company's results for the year under review in their proper perspective:

"During the year under report, the Company suffered due to decline in the offtake of yarn coupled with a serious fall in yarn rates. The Company also suffered due to the higher rates it had to pay for its imports of cotton. It may be noted that yarn has been the principal product of your Company. In these circumstances, the Directors feel that the results achieved are quite satisfactory.

"In the last year's report, a reference was made about the Company having been granted a licence for the manufacture of art silk fabrics. The Directors are pleased to report that installation of all the 144 looms on art silk was completed by the end of the year under review and they have since been put into commission.

"Late during the year under report signs of deterioration of the foreign exchange position of our country were visible and, in fact, the position has now become acute, affecting the import of long-staple cotton and art silk yarn which are the principal raw materials required by the Company. With a view to meeting this contingency, the Government has introduced Export Promotion Schemes to promote export sales of cotton fabrics and art silk fabrics and they have announced facilities for the import of raw materials against such exports. The Company is trying to take advantage of these facilities, but it is feared that, in spite of all efforts, if the conditions of shortage of raw materials persists, the future working of your Company may be affected."

The gross profit for 1957-58 at Rs. 7.99 lakhs is less than half of Rs. 16.56 lakhs for the previous year. It may be noted that the latter amount, namely, Rs. 16.56 lakhs, is exactly 100 per cent. more than Rs. 8.28 lakhs earned in 1955-56. The net profit, on the other hand, stands appreciably higher at Rs. 5.05 lakhs, as against a mere Rs. 1.01 lakh for 1956-57. But this is due to a heavy cut in the provision for depreciation from Rs. 15.20 lakhs to Rs. 2.33 lakhs. The Auditors are of the opinion that the total amount of depreciation provided in the accounts is short by approximately Rs. 3,60,000 as compared with the total amount of depreciation calculated at the rate specified in the Income-tax Act, 1922. But the Directors do not agree with this view.

Out of the net profit, the Directors have set aside Rs. 43,313 to development rebate and Rs. 3.06 lakhs to capital redemption reserve fund. No amount has been transferred to gratuity fund which was the recipient of Rs. 1 lakh in the previous year. The capital redemption reserve fund now stands at Rs. 4 lakhs—equivalent to the Company's preference share capital—and the Directors have decided to redeem at par the entire lot of the 4 per cent. redeemable cumulative preference shares of the Company by 31st December 1958. The dividend to ordinary shareholders has been reduced to 3¼ per cent. from 6 per cent. for 1956-57, to which level it had been doubled from 3 per cent. paid for 1955-56.

The Company's results for the past three years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March		
	1958	1957	1956
Sale proceeds of yarn, cloth and waste	1,21.98	1,26.42	1,17.91

	(3½%)	(6%)	(3%)
Carry forward	0.02	0.03	0.02

* For the four years ending 31st March, 1956.

The sale proceeds of yarn, cloth and waste declined from Rs. 126.42 lakhs in 1956-57 to Rs. 121.98 lakhs. Cost of cotton and staple fibre consumed was lower at Rs. 66.18 lakhs, as against Rs. 67.16 lakhs in the previous year but that of art silk yarn consumed increased from Rs. 5.51 lakhs to Rs. 7.53 lakhs. Other expenses also rose from Rs. 39.70 lakhs to Rs. 40.78 lakhs.

The Company's paid-up capital, as on 31st March 1958, is unchanged at Rs. 44 lakhs, of which Rs. 40 lakhs are accounted for by ordinary shares of Rs. 100 each and the balance by 4 per cent. redeemable cumulative preference shares of Rs. 50 each. Half of the ordinary capital amounting to Rs. 20 lakhs and the entire preference capital represent the issue of bonus shares by capitalisation of reserves in the past. Reserves and surplus are no more than Rs. 4.47 lakhs. The gross block of Rs. 80.70 lakhs stands depreciated at Rs. 35.58 lakhs. Machinery in stock and under erection amounts to Rs. 5.62 lakhs. The current liabilities are of the order of Rs. 38.31 lakhs, against which the current assets aggregate Rs. 45.58 lakhs.

B.I.C.C. TELCON LINK-UP

There has over the last few years been a small but growing co-operation between British Insulated Callender's Cables Limited (B.I.C.C.) and the Telegraph Construction and Maintenance Company Limited (Telcon) particularly in certain overseas countries and on specific technical problems, which has been of mutual benefit. As a result of this experience and having full regard to the conditions now applying and likely to apply in their respective fields of activities, the Directors of both companies are convinced that a unification of their interests is desirable. Accordingly, at the request of both parties, an independent firm of chartered accountants, Messrs. Thomson McLintock & Co., were asked to investigate the position and suggest a basis upon which the respective interests might be merged. As a result, it is now proposed that B.I.C.C. should make an offer to acquire the entire share capital of Telcon on an exchange of shares basis and that Telcon with its fine name and long tradition should continue as a separate entity within the B.I.C.C. group.

From an overall aspect there is undoubtedly a need for some form of integration and rationalisation within the cable-making industry to meet the problems of over-equipment and the substantial costs of keeping abreast of modern technical developments. The main potential benefits to both companies are the broadening of their base on the metals side, their respective interests in these fields being complementary to each other; the benefits which can accrue through a co-ordination of research and development effort and the rationalisation of production and sales in fields in which both companies are interested, and the complete co-ordination of their interests in overseas investments. It will also give B.I.C.C. an interest in long continuous lengths of submarine telephone cables in which field B.I.C.C. can, through its wide telecommunications and submarine power cable interests, make a valuable contribution.

Both companies are convinced that their most effective approach to present and likely conditions in the industry is the achievement of maximum efficiency in the broadest meaning of that word and the sale of their products and services at a reasonable return. Both Boards believe that the coming together of the two companies will assist in the achievement of these objectives and thus be beneficial to shareholders, customers and personnel.

(Concluded from next column)

standing to the credit of debenture redemption fund to the general reserve. The gross block of Rs. 45.96 lakhs stands depreciated at Rs. 36.45 lakhs. Additions to the gross block during the year were of the order of Rs. 6.45 lakhs. The current assets aggregate Rs. 50.77 lakhs, of which cash and bank balances alone amount to Rs. 14.23 lakhs. The current liabilities and provision for taxation are no more than Rs. 24.79 lakhs.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 27.70 *cum-div.* On an *ex-div.* basis and on the basis of the dividend for the year, the shares provide a yield of 7.78 per cent. per annum.

ASHOK LEYLAND LTD.

There is a persistent demand from leading public transport operators in India for Leyland buses manufactured by Ashok Leyland Ltd. of Madras. The latest orders have been received from Delhi and Ahmedabad. The Delhi Transport Undertaking, which has always favoured British vehicles, has placed a further order for 39 Leyland Comet and 8 Leyland Royal Tiger Worldmaster passenger chassis. The order will bring their total Comet strength to 328 and that of their Worldmasters to 144.

Serving a population of over 750,000, the Ahmedabad Municipal Transport Service has ordered 10 Leyland Tiger Cub low-weight single-deckers with 351 cu. in. underfloor diesel engines and 2-pedal controls. This is also a repeat order, the A.M.T.S. already operating Tiger Cubs of the same specification as well as over 150 Comets.

MARKED FALL IN COFFEE LANDS' PROFIT

DIVIDEND REDUCED—FINANCES SOUND

THE performance of Coffee Lands and Industries (Mysore) Ltd. (Chairman: Mr. R. C. Paterson, Pollibetta, Coorg) for the year ended 30th June 1958 is disappointing. The output of coffee has fallen from the record level reached in the previous year and, with lower price realisation, the Company's profit has dwindled substantially. The decline in coffee production is understandable, as a bumper crop is usually accompanied by a lower output in the following year. But what is discouraging is the rather disproportionately big fall in the profit. This is due to factors beyond the control of the management. Thus, while the crop suffered a setback, there was an appreciable increase in expenses; at the same time, prices of coffee also declined.

The slump in profit has resulted in a drastic cut in the amount allocated to the reserves and also in the distribution to the shareholders. The latter will get a return of only 20 per cent. as against 40 per cent. in the previous year. It must, however, be mentioned that the proposed dividend is on a slightly higher capital following capitalisation of reserves to the tune of Rs. 4.50 lakhs.

The gross profit at Rs. 15.86 lakhs for 1957-58 has dropped by Rs. 13.39 lakhs or 45.7 per cent. from that for 1956-57. It is also Rs. 3.23 lakhs lower than Rs. 19.09 lakhs earned in 1955-56. The net profit (after taxation and depreciation) has touched a low of Rs. 6.82 lakhs, and compares adversely with Rs. 16.57 lakhs and Rs. 11.68 lakhs for 1956-57 and 1955-56 respectively. The provision for depreciation has been slightly raised from Rs. 1.18 lakh to Rs. 1.59 lakh but that for taxation has been lowered from Rs. 9.33 lakhs to Rs. 6.27 lakhs. Of this provision, agricultural income-tax and wealth tax take up Rs. 4.22 lakhs, as against Rs. 7 lakhs, and Union income-tax Rs. 2.05 lakhs, as against Rs. 2.33 lakhs. The transfer to general reserve at Rs. 1.50 lakh is Rs. 8 lakhs lower than that (Rs. 9.50 lakhs) set aside a year ago. The dividend, as stated earlier, has been halved to 20 per cent. from 40 per cent. for the previous year, to which level it had been raised from 18 per cent. and 25 per cent. respectively for 1954-55 and 1955-56.

A glance at the following table will clearly show why there has been a heavy fall in profits:

(In lakhs of rupees)

	For the year ended 30th June

* On a higher capital of Rs. 22.50 lakhs.

The Company's estate covers an area of 3,725 acres. Of this, the area under coffee is 2,720 acres (arabica 2,324 acres and robusta 396 acres). Of the balance, nine acres are devoted to oranges, and 16 acres to cardamoms.

The Company's works at Hunsur cured 3,360 tons of coffee during the season, as against 3,343 tons in the previous season.

A satisfactory financial position is disclosed by the Company's balance-sheet as at 30th June 1958. Its paid-up capital stands at Rs. 32.91 lakhs, having been raised from Rs. 28.41 lakhs a year before by the capitalisation of reserves as mentioned at the outset. This is made up of 225,000 ordinary shares of Rs. 10 each and 10,406 five per cent. tax-free cumulative preference shares of Rs. 100 each. Even after capitalisation, the reserves and surplus aggregate Rs. 29.52 lakhs at which level it is only slightly lower than the total paid-up capital. During the year, the Company redeemed its debenture liability amounting to Rs. 3 lakhs in full and, therefore, transferred an equivalent amount

ROHTAS INDUSTRIES FARE WELL

ORIENT PAPER MAINTAINS DIVIDEND

Rohtas Industries Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) present the audited accounts of the Company for the period of 17 months ended 31st March 1958.

After providing all overheads and interest charges, working results of the period show a surplus of Rs. 1 99,69,262 (Rs. 1,51,72,301 for the 12 months ended 31st October 1956). To this amount is added excess provision written back of Rs. 1,45,361 (*nil*) and the balance brought forward from the previous year of Rs. 49,402 (Rs. 4,91,624) making a total of Rs. 2,01,64,025 (Rs. 1,56,63,925). Out of this amount, the following appropriations have been made:—

To development rebate reserve Rs. 13,15,000 (*nil*), to depreciation Rs. 83,31,132 (Rs. 48,41,784), to provision for taxation (wealth tax and arrears) Rs. 10,00,000 (Rs. 32,00,000), to directors' and managing agents' commission Rs. 8,08,157 (Rs. 8,31,608), to sundry adjustments (donations, write offs, etc.) Rs. 3,04,175 (Rs. 22,79,681 including provision for bonus Rs. 13,00,000) and transfer to general reserve No. 2 Rs. 83,12,054 (Rs. 5,00,000) leaving to be carried forward a balance of Rs. 93,507 (Rs. 49,402). Since the Company's profit for the year under review is not liable to income-tax, the same has been put into a separate general reserve styled No. 2 in order to distinguish it from reserves constituted of accumulated profits subjected to tax in previous years. The directors propose payment of dividends as under (without deduction of income-tax) for the period ended 31st March 1958 out of general reserve No. 1. This should enable the shareholders to get under Section 49B of the Income-tax Act the benefit of the income-tax paid by the Company on such profits.

On 20,000 7-9 per cent. cumulative preference shares at 9 (9) per cent. per annum absorbing Rs. 2,55,000 (Rs. 1,80,000), on 85,047 cumulative preference shares at 4¼ (4¼) per cent. per annum absorbing Rs. 5,12,054 (Rs. 3,61,450) and on 22,80,000 ordinary shares at Rs. 2 (Re. 1) per share [i.e. 20 (15) per cent.] absorbing Rs. 45,60,000 (Rs. 34,20,000). The figures mentioned in brackets relate to the period of 12 months ended 31st October 1956. The Company's accounting year has been changed from October to March.

The Company's paper factory modernisation and expansion programme was almost completed by the close of the year under review. With the commissioning into production of the fine paper machine, manufacture of high quality papers hitherto imported or not adequately manufactured has commenced in the paper factory. A number of processing machines for making special varieties of papers and boards have been installed. The new coating plant makes air-finish quality art and chromo boards and coated papers. The vulcanised fibre plant of the Company has undertaken manufacture of seamless cans, tubes, rods and press-pahn insulating sheets for the first time in this country. During the current year machinery has been installed to manufacture for the first time in India stereo boards required for rotary printing machines. The new mercury cells caustic soda plant with mechanical rectifier is also now on full output. Full effects of production on all these units will be reflected in the current year, as most of them were completed only towards the close of the period. Production during the period was also adversely affected by the month old strike in September 1957.

The output of the different factories during the period as compared to the previous year and first half of the current year, is as under:—

	November 1955 to October 1956 (12 months)	November 1956 to March 1958 (17 months)	April 1958 to September 1958 (6 months)
	Tons	Tons	Tons
Paper and Boards	22,225	42,303	22,421
Cement	3,30,276	3,95,178	1,47,367
Clinker	3,19,938	4,19,709	1,50,496
Asbestos cement	7,626	14,553	5,032
	Mds.	Mds.	Mds.
Sugar	3,22,704	6,92,458	
	Tons	Tons	Tons
Caustic soda	1,774	2,575	2,352
Vanaspati	8,758	11,407	4,398
	Lakh KWH	Lakh KWH	Lakh KWH
Power	921	1,366	482

There has been a steady increase in the production of this Company's paper factory during the current year. Notwithstanding the increase in the paper and boards production capacity, the total output in the country, it appears, would continue to be short of demand.

The Company's new research laboratory has started functioning in its modern building with up-to-date equipment and constant attention is paid to quality control and improvement in production techniques.

The Tariff Commission has submitted its report on Cement Industry and the Central Government has allowed an increase of Re. 1 per ton in the retention price of the Company's cement with effect from 1st July 1958. The offtake of cement during the last few months has been poor. A reduction in the tax burden on the commodity might help the manufacturers' effort to improve the offtake.

The Company continues to experience severe handicap as regards production on its different units due to non-availability of the required supply of power from D.V.C. imposing severe strain on the Company's power and steam plant.

During the current year, the Company capitalised Rs. 16,20,209 being the amount of share premium and Rs. 6,59,791 from general reserve No. 2 and utilised same for issue of ordinary fully paid bonus shares of Rs. 10 each to the existing holders of ordinary shares in the proportion of one ordinary share for every ten ordinary shares held.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	3,32,76,170	Gross block	13,84,94,825
Share premium account	16,20,209	*Less*—Depreciation	4,66,67,580
Reserves	1,64,50,000	Net block	9,18,27,245
Debentures	1,22,00,000	Buildings-in-progress	17,67,661
Provision for taxation	28,19,890	Stock-in-trade	2,51,20,059
Liabilities	8,59,60,096	Stores, loose tools, etc.	1,15,85,049
Profit and loss account	93,507	Debts, deposits and advances	1,56,04,900
		Investments	55,99,950
		Cash	9,15,008
Rs.	15,24,19,872	Rs.	15,24,19,872

Orient Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) present the accounts of the Company for the year ended 31st March 1958.

The profit and loss account shows a profit on the year's working of Rs. 1,26,80,391 (Rs. 1,23,66,400). Out of this amount provision has been made for depreciation of Rs. 50,00,000 (Rs. 30,00,000), development rebate reserve Rs. 12,00,000 (*nil*) and provision for taxation Rs. 38,00,000 (Rs. 40,00,000) leaving a sum of Rs. 26,80,391 (Rs. 28,66,400 after placing Rs. 10,00,000 to dividend equalisation reserve and Rs. 15,00,000 to deferred taxation reserve). To this amount is added the balance brought forward from the previous year of Rs. 2,63,477 (Rs. 2,12,453) making a total balance available for disposal of Rs. 29,43,868 (Rs. 30,78,835). The directors recommend payment of dividend on 20,000 preference shares at 5½ per cent. per annum, free of income-tax absorbing Rs. 1,10,000 (Rs. 1,10,000, on 60,000 preference shares at 5½ per cent. per annum. subject to income-tax absorbing Rs. 2,26,050 (Rs. 2,26,050), on 51,856 (51,844) preference shares at 5½ per cent. per annum, free of income-tax, absorbing Rs. 2,85,117 (Rs. 2,76,933) and on 14,68,250 ordinary shares at Re. 1.50 (Re. 1.50) per share. free of income-tax absorbing Rs 22,02,375 (Rs. 22,02,375) leaving to be carried forward a balance of Rs. 1,20,326 (Rs. 2,63,477).

The mills worked satisfactorily during the period under review and the production showed an improvement over that of the previous year. There was further rise in the cost of raw materials, chemicals, railway freight and salaries and wages, etc., as a result of which the production cost went up further. However, in accordance with the policy of the Company the selling rates were not correspondingly increased with a view to maintaining the prices as far as possible. The result is that today the selling prices of this Company are the lowest as compared to other mills for the same quality of production. The question of fixing the fair selling prices for paper and board has recently been referred by the Government of India to the Tariff Commission.

The second paper machine was commissioned towards the end of the financial year and is now working satisfactorily. The programme for modernisation and extension of the board manufacturing plant is also progressing satisfactorily and it is expected that the plant would go into production during the current financial year. Since the close of the financial year under review, the second tomlinson plant, causticising plant, digesters and some other subsidiary pulp and paper machinery have been commissioned.

The Amlai Project in the State of Madhya Pradesh is progressing. The Company has already executed an agreement for having a part of the land acquired through the State Government. It is expected that the Company would get possession of the land and would be able to start construction work on the site at an early date. Negotiations are also in progress with the foreign suppliers for the import of machinery required for the said Project on deferred payment basis. Necessary application has been made to the Government and as soon as the approval of the Government of India is received, the Company would finalise these orders.

The entire paid-up share capital as at 31st March 1958 in the Orient General Industries Limited, Air Conditioning Corporation Private Limited and Hindusthan Cellulose and Paper Mills Limited was held by this Company and that in Motolite Limited by the Orient General Industries Ltd., a wholly subsidiery of the Company. The entire profits of the subsidiary companies except that of the Air Conditioning Corporation Private Limited and the Motolite Limited for the financial year as well as previous financial years which have not been dealt with in or for the purpose of the accounts of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,78,69,350	Gross block	8,20,10,763

		Cash	13,07,498
Rs.	10,04,72,830	Rs.	10,04,72,830

Jardine Henderson, Ltd.

The directors of the above Company (Managing Director: J. D. K. Brown, Esq., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account shows a balance of profit of Rs. 15,24,739 (Rs. 27,75,341) to which has to be added the amount of unclaimed dividends forfeited, less paid Rs. 7,308 (Rs. 6,223), provision for taxation no longer required Rs. 2,00,000 (*nil*) and the balance brought forward from the previous year, viz., Rs. 4,71,170 (Rs. 5,11,852) making a total of Rs. 22,03,217 (Rs. 35,74,414 including Rs. 2,80,998 being profit on realisation of investments). Out of this sum there has been provided for taxation Rs. 6,20,000 (Rs. 14,00,000), transferred to general reserve account Rs. 2,50,000 (Rs. 5,00,000), transferred to development rebate reserve account Rs. 2,100 (*nil*) and transferred to superannuation fund account Rs. 1,50,000 (*nil*) leaving a balance available for disposal of Rs. 11,81,117 (Rs. 11,73,983 after placing Rs. 5,00,000 to dividend equalisation reserve and Rs. 431 to loss on realisation of investments). The directors on the 29th August, 1957 declared an interim dividend in respect of the year ended 31st March, 1958, on the preference shares at the rate of 2½ (2½) per cent. absorbing Rs. 1,37,500 (Rs. 1,37,500) [*less*: income-tax thereon Rs. 43.312 (Rs. 36,093)] and on the 27th February, 1958, declared a second interim dividend at the rate of 2½ (2½) per cent. in respect of the above year, absorbing Rs. 1,37,500 (Rs. 1,37,500) [*less*: income-tax thereon Rs. 43.313 (Rs. 36.094)]. The directors now recommend the payment of a dividend on the ordinary shares of the Company at the rate of 2½ (2½) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 5,00,000 (Rs. 5,00,000) leaving a balance at the credit of profit and loss account of Rs. 4,92,742 (Rs. 4,71,170) to be carried forward to the next account.

As was indicated in the last previous report dated 28th November, 1957, the working of the Jute mill companies under the Company's management showed a satisfactory improvement, which has been fully maintained during the current year. It has continued to be necessary, however, to give substantial financial assistance to certain of these companies and, by reason of the earlier losses sustained, the Company this year again received no dividends from its very large investments in the mill companies while, having regard to the provisions of Section 349(4)(*l*) of the Companies Act, 1956, the management remuneration received therefrom was generally restricted to the minimum payable in terms of the managing agency agreements.

Earnings in the form of commissions and dividends from Tea Companies under the Company's management show a substantial reduction as compared with the previous year and reflect the uneconomic levels to which prices for plain teas have dropped, particularly those produced by estates in the Cachar and Dooars Districts in which the producing companies in the group have substantial interests. It is not anticipated that the earnings from these companies will show any material improvement in the current year.

The trading activities of the Company, as was foreshadowed in the last previous report, recorded a substantial reduction both in volume and in profits as the result of the tighter money conditions which prevailed during the year. While there has been some recovery during the current year to date earnings for the year as a whole under this head are unlikely to return to the level of the year ended 31st March, 1957.

The net result of the working of the Company's subsidiaries for the year was a small profit. The investment-holding subsidiaries suffered like the parent company on account of the absence of dividends from their jute mill holdings. The trading results of the other subsidiaries were satisfactory with the exception of The Behubor Company Limited, which encountered difficulties due to the shortfall in the crop and heavy interest charges.

Despite the diversification of the Company's activities which has been achieved in recent years its prosperity still depends in the main on the performance of the Jute mill companies under its management. As already stated, improvement in the working of the mills has been fully maintained but the necessity for the mill companies themselves to build up their liquid resources, which had been severely depleted through the implementation of large-scale modernisation programmes coincident with and followed by a period of trading losses during 1956 and the early part of 1957, is bound to have the effect of delaying the resumption of dividends from these companies at rates which will represent a reasonable return on this Company's capital invested in their shares. The directors, however, continue to have faith in the future of the units of the jute mill industry operating under its management.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,50,00,000	Gross block	40,05,018
Reserves	69,52,100	*Less*—Depreciation	13,40,678
Provision for taxation	1,89,322		26,64,340
Liabilities	4,56,92,970	Goodwill	25,00,100
Profit and loss account	4,92,742	Stock-in-trade	37,63,777
		Debts, deposits and advances	2,35,41,291
		Investments	4,56,09,048
		Cash	2,48,878
Rs.	7,83,27,134	Rs.	7,83,27,134

Gillanders Arbuthnot and Co., Ltd.

The directors of the above Company (Managing Director and Chairman: Mr P. E. G. W. Parish, Calcutta) submit the audited accounts of the Company for the year ended the 31st March 1958.

Despite the severe restrictions imposed on imports during the year, the Company's revenue from sales was maintained at much the same level as in the previous year. As indicated in the directors' report last year, however, as a result of these import restrictions, the pattern of the Company's trading activities in India is changing from a predominantly import business to one of trading in indigenous products for which the Company now holds a substantial number of valuable agencies. Under the circumstances, it is pleasing to note that the gross trading profit has recorded a small, but nonetheless welcome improvement. Trading conditions in Burma are also suffering from import control and with much less scope for internal expansion, it is feared that the activities of the Company's branch there will be adversely affected.

Commission and allowances again record a decrease which, as was the case last year, is mainly attributable to the cessation of income from those managing agencies for jute and tea relinquished during the previous year and to the effect of the provisions of the Companies Act, 1956. In addition, the income earned from the tea companies under the Company's management has dropped considerably in consequence of the decline in prosperity of the tea industry as a result of the recession in tea prices generally during 1957 and particularly the uneconomic prices paid for common teas. During the period under review the Company's position in relation to each of its managed companies was reviewed and brought into line with the requirements of the Companies Act and unless there are further restrictive measures incorporated in the Act or there is a drastic and unexpected slump in trading conditions, the directors do not anticipate any further substantial contractions in the earnings from these sources.

The income from investments records a substantial improvement over the previous year's figure, the increase being traceable to the better rates of dividend distribution as well as to increases in the Company's investment portfolio.

The profit and loss account shows a credit balance of Rs. 20,37,524 which compares with Rs. 24,05,483 for the previous year. After providing for income-tax, super-tax, wealth tax and agricultural income-tax and including a sum for the additional tax payable on account of the proposed dividend on the ordinary shares and adding the balance brought forward from the previous year, the amount available for disposal is Rs. 11,93,373 (Rs. 12,43,398) arrived at as follows:—

The profit and loss account shows a balance of profit of Rs. 20,37,524 (Rs. 24,05,483) to which has to be added the balance brought forward from the previous year of Rs. 1,68,398 (Rs. 89,541) making a total of Rs. 22,05,922 (Rs. 24,95,024). Out of this amount provision for taxation requires Rs. 10,12,549 (Rs. 12,51,626) leaving a balance for disposal of Rs. 11,93,373 (Rs. 12,43,398). Of this balance the following amounts have been utilised in paying in full the dividends for the year ended 31st March 1958, on the preference share capital:—

On 4th October 1957 Rs. 62,500 (Rs. 62,500) and on 1st April 1958 Rs. 62,500 (Rs. 62,500). The directors now recommend that the remaining balance of Rs. 10,68,373 (Rs. 11,18,398) be disposed of as follows:—

In paying a dividend on the 6,50,000 ordinary shares of Rs. 10 each at the rate of 10 (10) per cent. without any deduction in respect of income-tax payable by the Company absorbing Rs. 6,50,000 (Rs. 6,50,000), transfer to general reserve Rs. 1,00,000 (Rs. 2,00,000), transfer to contingencies reserve Rs. 72,003 (*nil*) and transfer to superannuation fund Rs. 1,00,000 (Rs. 1,00,000) leaving to be carried forward to next year Rs. 1,46,370 (Rs. 1,68,398).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	90,00,000	Gross block	29,50,904
Reserves	36,00,000	*Less*—Depreciation	12,41,168
Provision for taxation*	25,14,925	Net block	17,09,736
Liabilities	2,00,56,094	Goodwill	18,00,000
Profit and loss account	1,46,370	Stock-in-trade	30,17,409
		Stock of stationery, stores, tools, etc.	2,46,618
		Debts, deposits and advances	1,58,11,267
		Investments	1,07,57,301
		Cash	19,75,058
Rs.	3,53,17,389	Rs.	3,53,17,389

*Includes provision for wealth-tax Rs. 8,968.

Swinton Estates Co., Ltd.

The directors of the above Company (Madras) present their first report to shareholders, for the year ended 31st March 1958.

The Company's properties consist of 216 acres fully planted with *Arabica* coffee and 220 acres, partially fit for cultivation.

The Company was incorporated on 23rd August 1957 and certificate of commencement of business was obtained on 11th September 1957. The statutory meeting was held on 5th March 1958. The Company's estates are situated in Sheveroy Hills, Salem district, Madras State. The Company took possession of the estates on 14th September 1957. In terms of the agreement with the Vendors, they worked the estates from 1st April 1957 to the date of taking over, and for this period were paid the actual working expenses.

Crop: The crop secured is 46½ tons. against the prospectus estimate of 35 tons. The crop has been value at Rs. 165 per cwt.

After meeting all expenses and providing Rs. 2,574 for depreciation, the profit amounts to Rs. 62,938 on which provision for taxation comes to Rs. 35,000 leaving a net profit available for allocation of Rs. 27,938 out of which the following appropriations have been made or are recommended:

Transfer to general reserve Rs. 12,000; to payment of an interim dividend of 5 per cent. Rs. 6,250; and to payment of a final dividend of 2½ per cent. (proposed) Rs. 3,125 leaving a surplus to be carried forward to next year of Rs. 6,563.

General: A programme of intensive cultivation and manuring has been initiated, in furtherance of which capital expenditure amounting to Rs. 9,033 has been incurred in the purchase of power sprayers, pipes, fittings, etc.

While the 1957-58 crop has been well above estimates, the crop for 1958-59 which is now being harvested is expected to be in the region of 22 tons against the estimate of 30 tons. The shortfall is due to the unexpected damage caused by showers of hail. However, the directors are glad to report that as a result of intensified cultivation and favourable rainfall, the bushes are in excellent condition and that subject to timely blossom showers, prospects for next year may be considered promising.

In view of the unexpected shortfall in crop for 1958-59, the directors consider it prudent to conserve the resources of the Company and therefore regret that they are unable to recommend a final dividend of more than 2½ per cent. for the period 1957-58.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,25,000	Gross block	1,84,387
Debentures	75,000	*Less*—Depreciation	2,574
Reserves	12,000		1,81,813
Provision for taxation	35,000	Net block	19,458
Liabilities	69,914	Stores and spare parts	96,469
Profit and loss account	6,563	Loans and advances	1,577
		Cash	24,160
		Miscellaneous expenditure	
Rs.	3,23,477	Rs.	3,23,477

Nelliampathy Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) present the audited accounts of the Company for the year ended 30th June 1958.

The tea crop harvested was 11,36,900 (9,28,200) pounds against an estimate of 8,50,000 pounds. The cost per pound of tea produced was Re. 1.05 (Re. 1.07). It is very satisfactory to report that the tea crop on Manalaroo was 2,86,900 lbs. more than the estimate, the yield per acre being 1,756 lbs. The average sale price realised during the year, however, was only Rs. 1.72 per lb. as against Rs. 2.10 per lb. in the previous year.

The rubber harvested was 84,500 (75,300) pounds against an estimate of 65,000 pounds. The cost per lb. 77 nP. The rubber crop secured was satisfactory, being 19,500 lbs. more than estimate —the yield being 604 (602) lbs. per acre.

The coffee crop amounted to 222.78 (174.42) cwts. (cured Wt.) against an estimate of 200 cwts. The cardamom crop secured was 24,625 (26,257) pounds against an estimate of 20,000 pounds. Tea seed crop harvested was 30½ (38) maunds against an estimate of 35 maunds.

After providing for income-tax and agricultural income-tax amounting to Rs. 2,40,000 (Rs. 4,40,000) and payment of 6 per cent. preference dividend for 1957-58 amounting to Rs. 27,000 (Rs. 27,000), the net profit including the previous year's balance brought forward of Rs. 77,635 (Rs. 4,624) amounts to Rs. 2,63,439 (Rs. 3,17,635), available for distribution, which the directors recommend be disposed of as under:

To pay of a dividend of 15 (20) per cent. on equity shares absorbing Rs. 1,80,000 (Rs. 2,40,000), to transfer to dividend equalisation fund Rs. 50,000 (*nil*) and to carry forward a balance of Rs. 33,439 (Rs. 77,635).

Estimates for 1958-59 include a tea crop of 9,00,000 pounds at a cost of Re. 1.11 per pound; a rubber crop of 75,000 pounds at Re. 0.88 per pound; a cardamom crop of 30,000 pounds at Rs. 3.87 per pound; a coffee crop of 400 cwts. at Rs. 326.95 per cwt. and a crop of tea seed of 40 maunds at Rs. 132.68 per maund.

In spite of the increased crop and the consequent reduction in production cost for the year under report, the net profits of the Company are low on account of the poor sale prices realised during the year. There has been a steep fall in prices realised for tea, generally during the year under report. Rubber and cardamom production have been good and the prices realised for them have been satisfactory. Production of coffee has exceeded the estimate. The Company's estates have been regularly visited and are reported to be in satisfactory order and condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	16,50,000	Gross block	27,04,888
Reserves	4,90,000	*Less*—Depreciation	5,01,002

4, MISSION ROW EXTENSION,
CALCUTTA-1, *11th December*, 1958.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of Members of the Company will be held at its Registered Office, 63, Netaji Subhas Road, Calcutta, on Friday, the 9th of January, 1959, at 11-00 a.m., to consider and to pass the following, with or without modification, as a special resolution:—

"That the borrowing powers of the Board of Management be raised to Rs. 300 lakhs."

Explanatory Statement.—The New Coach Works and other extensions of the Company's manufacturing facilities are now in operation and will be reaching full capacity within the next few months. The orders already in hand and anticipated are such that the Company's greatly increased manufacturing resources will be fully utilised. This very large increase in the Company's business will require substantial additional finance, much of which it is proposed to find by borrowing from the Company's Bankers and other sources if necessary.

Consent of the Shareholders in a General Meeting is required in terms of Section 293(d) of the Companies' Act, 1956 to the Board of Management borrowing money in excess of the statutory limit. None of the members of the Board of Management is in any way interested in the proposed resolution.

By Order of the Board of Management,
D. D. MARKAN,
Secretary.

CALCUTTA, *11th December*, 1958.

Note.—A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT CONSENT has been accorded by the Controller of Capital Issues and the Reserve Bank of India to an issue of Bonus Ordinary Shares in the proportion of One Bonus Share for every five existing Ordinary Shares by capitalisation of the major portion of the amount standing to the credit of the Share Premium Account.

The Ordinary Share Registers and Transfer Books of the Company will be closed for the purpose of this Bonus Issue from the 12th to the 22nd January 1959, both days inclusive, and the issue of Bonus Shares if sanctioned at the General Meeting of the Company to be convened in due course for the 24th February 1959, will be made to those persons who are registered as holders of Ordinary Shares on the 22nd day of January 1959.

It is the intention that individual allotments of Bonus Shares shall be of whole numbers of shares only and that certificates covering such shares will be issued to the Shareholders promptly following the date of the General Meeting. It is further the intention that fractional entitlements shall be compensated in cash by distribution of the sale proceeds of the shares constituting the total of such fractions. Shareholders desirous of receiving their entire bonus entitlement in shares are accordingly advised that it will be necessary that the holdings in respect of which they are registered on the 22nd January 1959, shall represent exact multiples of five.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 16th December, 1958.

JUTE

(Concluded from page 1006)

by 2,500 tons; sacking (at 44,900 tons) accounts for a rise of 1,900 tons and "other manufactures" (at 6,300 tons) for 800 tons. Over the year, while sacking output has dropped by 8,300 tons, hessian is higher by 2,400 tons and "other varieties" by 1,000 tons.

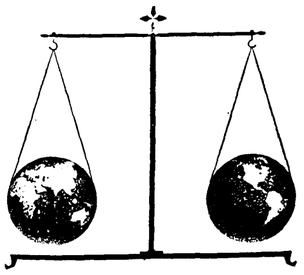
For the fifth month in succession, stocks of gunnies have declined and, with the fall of 2,000 tons in November, the aggregate shrinkage since June last is of the order of 28,600 tons. Despite this reduction, they are higher over the year by 34,400 tons, as the following table shows:

Stocks of Jute Goods

In tons

	As on 30th Nov., 1958	As on 31st Oct., 1958	As on 30th Sept., 1958	As on 30th Nov., 1957
Hessian ..	17,300	17,800	17,000	26,000
Sacking ..	75,500	77,500	80,200	25,200
Others ..	12,600	12,100	11,800	9,800
Total ..	105,400	107,400	109,000	71,000

The stocks of hessian have gone down by 500 tons to 17,300 tons, but this is offset by a corresponding rise in "other varieties" to 12,600 tons. The downward trend in stocks of sacking noted in the previous three months is maintained with a further fall of 2,000 tons to 75,500 tons during November. The statistical position of hessian has thus considerably improved, as their stocks represent less than half a month's production, while that of sacking is still far from encouraging. their stocks standing at well over six weeks' output. The position is expected to improve further during the current month if the present trend of Government purchases of heavy goods continues.



In both hemispheres...

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

The Last Phase

THE COMMISSIONING OF THE NEW Rs. 70-million Blast Furnace in Jamshedpur in October marks the beginning of the end of the expansion programme started in December 1955 to double Tata Steel's capacity to two million tons a year.

One of the largest in the world, the new Blast Furnace will produce 1,650 tons of molten iron per day. Completed earlier was the third Steel Melting Shop with its seven open hearth furnaces, which alone will produce 1.3 million tons of steel ingots a year. Also in operation now is the new Rs. 100-million Blooming Mill with a primary rolling capacity of two million tons.

Covering every phase of operation from the winning of ore to the rolling of finished steel, the expansion will be virtually completed by the end of 1958. The capital investment on expansion and annual replacements by Tata Steel over the five years 1955-60 is estimated at Rs. 1,330 million—more than one-fifth of the total outlay by organised industries in the private sector.

MONEY RATES HARDEN

(From Our Own Correspondent)

BOMBAY, *17th December*

Conditions in the short-term money market during the week under review were rather stringent, thanks to the keen demand for funds to meet the seasonal trade and year-end requirements. Banks were, therefore, keen borrowers in the market, but they were not able to get their needs in full even at higher rates of interest. Inter-bank call money rate, among the Exchange banks and big Indian banks, hardened from 1½ per cent. to 2½ per cent. The rate among the smaller Indian banks rose from 2-2½ per cent. to 3 per cent. House money at seven days' notice was, however, unchanged at 3¼-3½ per cent. and short-term deposits for one to six months at 3½-4 per cent.

Reflective of this trend in interest rates is the rise in the discount rate on 91-day Treasury Bills from 2.420 per cent. to 2.445 per cent. per annum, the highest rate for the last four weeks. The total amount tendered was Rs. 3.60 crores, as against Rs. 3.95 crores in the previous week, the amount invited being the same as in both the weeks. Tenders at Rs. 99.390 were accepted in full and those at Rs. 99.385 allotted approximately 58 per cent. There will be no further regular weekly sales of Treasury Bills for the rest of the year. The next tenders for Rs. 3 crores will be received on 5th January 1959. There will, however, be sales of intermediate Treasury Bills from 17th December 1958 to 3rd January 1959 at a somewhat better rate for the lender of Rs. 99.486 per cent., as against Rs. 99.411 per cent., though they may be stopped at any time without notice, if the Government thinks it necessary. Because of the good demand for money, there were no sales of these bills during the period from 10th to 13th December 1958.

A further expansion of Rs. 13.40 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 12th December 1958. Notes held in the Banking Department are lower by Rs. 3.68 crores. The consequent increase of Rs. 9.72 crores in total notes issued is covered by a rise of Rs. 10.01 crores in rupee securities and a small shrinkage of Rs. 29 lakhs in rupee coin. Deposits of the Central Government are higher by Rs. 4.66 crores, while those of other Governments have declined by Rs. 2.80 crores. Although there is no change in foreign securities, there has been a further rise of Rs. 1.61 crores in balances held abroad, bringing the total foreign assets to Rs. 184.62 crores. Loans and advances other than to Governments have gone up by Rs. 9.13 crores, while investments have shrunk by Rs. 8.29 crores. Government Treasury Bills purchased and discounted disclose a rise of Rs. 5.57 crores.

The Scheduled banks' statement for the week ended 5th December 1958 shows a sharp fall of Rs. 12.64 crores in demand deposits and a rise of Rs. 10.19 crores in time deposits. Inter-bank borrowings, too, have risen by Rs. 3.94 crores. Advances and bills purchased and discounted are higher by Rs. 8.48 crores, as also investments by Rs. 6.63 crores. Cash balances have swelled by Rs. 16.65 crores and money at call and short notice by Rs. 4.31 crores.

The Gilt-edged market ruled dull, with the volume of business at a low ebb. The demand from institutional investors declined, reflecting the year-end conditions and the reappearance of stringency in the money market. There was no further rise in the Reserve Bank's selling prices during the week. The State loans, however, continued to attract enquiries, especially from the Life Insurance Corporation. 3 per cent. 1986 Conversion Loan rose from Rs. 73.20 to Rs. 73.25 before dropping to Rs. 73.15, even at which price there were some sellers. 3 per cent. 1970-75, however, was further marked up by 15 nP to Rs. 90.65. 3 per cent. 1966-68 had sellers at Rs. 94, but there was no change in price over the week. 3 per cent. 1964 was placed at Rs. 96.90 ex-voucher, as against Rs. 97 cum-voucher. 3½ per cent. 1961 was unchanged at Rs. 100.10. 3½ per cent. 1963 at Rs. 100.05. 3½ per cent. 1964 at Rs. 99.90 and 3½ per cent. 1965 at Rs. 99.80. The Reserve Bank of India continued to be a seller of 3½ per cent. 1967 and 1968. 3½ per cent. 1967 and 1968, 3½ per cent. 1974 and 4 per cent. 1972 and 1973 at the prices indicated in this column last week. Among State loans, Bombay loans were in the limelight. 4 per cent. 1963 hardened by 20 nP to Rs. 100.50, 1964 by 35 nP to Rs. 100.50 and 1967 by 50 nP to Rs. 100.50. 4 per cent. 1970 put on 25 nP to Rs. 99. 4½ per cent. 1969 and 1970 picked up 10 nP each to Rs. 101.10 and 4½ per cent. 1971 5 nP to Rs. 100.90. West Bengal 4 per cent. 1963 rose by 5 nP to Rs. 100.30, 1967 by 5 nP to Rs. 99.75 and 1968 by 10 nP to Rs. 99.70. 4½ per cent. 1970 gained 20 nP to Rs. 100.60. Madras 4½ per cent. 1970 moved up by 20 nP to Rs. 100.70. Andhra 4½ per cent. 1970 by 15 nP to Rs. 100.55 and U.P. 4½ per cent. 1970 by 15 nP to Rs. 100.65.

In the foreign exchange section, the rupee displayed a hardening tendency in terms of the U.S. dollar. Banks' selling rate declined from Rs. 477.50 to Rs. 477 per $100 and their buying rate from Rs. 474.25 to Rs. 473.75 per $100. This is in consonance with the improvement in sterling abroad. Thus, in New York, spot sterling advanced from 2.80 9/32-2.80.11/32 to $2.80¼-2 80.9/16 and three months' forward from $2.80.3/32-2.80.5/32 to 2.80.15/32-2.80.17/32. Transferable sterling moved up from 279.40-279.50 cents to 279.60-279.70 cents before declining to 279.40-279.50 cents.

BASE METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, *16th December*

Prices of base metals hardened during the week under review, as supplies were short. It was noted that, on the London Metal Exchange, ready copper recovered from £220¼ to £222 as a result of Continental interest and more activity in New York. Reports from New York indicate that American consumption is expected to rise by 200,000 tons next year. Consumption in other countries, as in India, is also bound to increase. As such, the view that the estimated excess in world production in copper by 400,000 tons may not prove, after all, a drag on supplies is based on logical premises.

In the local market, there was good buying interest shown in tin, which opened at Rs. 599 and recovered to Rs. 606. The closing rate, however, was lower at Rs. 602. Electrolytic zinc opened at Rs. 95.50 and gradually improved to close at Rs. 98.50, in view of the tight supply position and higher demand. Lead was, on the other hand, quiet at Rs. 85.50, as against Rs. 86.00 earlier.

MARGIN IN SILVER

(From Our Own Correspondent)

BOMBAY, *17th December*

Easy conditions prevailed in the bullion market during the major part of the week under review. On the opening day, both gold and silver encountered selling on fears of a possible ban on trading in futures. The fears followed the Press version of the Union Commerce Minister's statement in Parliament on Thursday that the Government had refused to accept the Forward Markets Commission's recommendation for forward trading. The statement was, of course, clarified the same day. What the Minister had said was that, while the F.M.C. had suggested the bringing in of forward trading in bullion under the Forward Contracts (Regulation) Act, the Government rejected the suggestion and decided to maintain the status quo, that is, trading in Bombay would continue to be controlled by the Bombay Act. The clarification, however, failed to undo the damage done earlier, for, after a short-lived minor spurt, the market became quiet again. It was only yesterday that some recovery was in evidence, mainly because of better advices from Calcutta. As the carry forward charge in silver stood at Re. 1 against the buyer, the bears were called upon to pay a margin at the rate of Rs. 1,000 per bar, according to the newly amended by-law 33 D (1) (ii). Despite the margin, the carry forward charge widened today to Re. 1-1.

Forward silver (29th December settlement) opened the week easy at Rs. 193-2, as against Rs. 193-8 last week-end and came down on selling pressure to Rs. 192-3 on Monday. After recovering to Rs. 193-10 yesterday, it receded to Rs. 193 today before finishing at Rs. 193-5. The net loss over the week was As. 3. The second settlement (end of January) declined from Rs. 194-7 to Rs. 193-2 on the 15th inst. It, however, improved to Rs. 194-6 today.

Ready silver, which stood at Rs. 192-6 on Wednesday last, eased to Rs. 192 on Monday. After spurting to Rs. 193-2 yesterday on account of bull support induced by the Congress Working Committee's resolution on planning, it drifted lower subsequently on scattered profit-taking. Today, it finished at Rs. 192-13. It was quoted at a discount of As. 8 under the first settlement. The daily average arrivals were of the order of 25 bars, while the offtake was 12 bars per day on an average. The floating stocks of silver are reported to be 1,400 bars.

Gold for forward delivery (27th December settlement) was subjected to selling pressure on the opening day and the quotation came down from Rs. 113-12 to Rs. 112-15. After recovering to Rs. 113-15-6, it relapsed again in the subsequent sessions, today's closing rate being Rs. 113-8. The second settlement (end of January) fluctuated between Rs. 114-2-6 and Rs. 113 before finishing at Rs. 113-13. The carry forward charge, which was As. 3 against the bulls last week-end, widened to As. 5 today. Reports that the Congress Party was in favour of placing a ceiling on urban incomes also had a mildly bullish effect but only for a while.

Ready gold opened at Rs. 113-7, as against Rs. 113-9, and dropped to Rs. 112-11, owing to heavy selling. After recovering to Rs. 113-10 on Friday, it declined subsequently to touch Rs. 112-15 on Monday. It firmed up to Rs. 113-7 yesterday. A further gain of an anna was added today. Both ready and forward were quoted today on par. Daily average arrivals and offtake were 3,200 tolas and 2,200 tolas, respectively. The floating stocks of gold are estimated at 36,000 tolas.

The downward trend in silver prices in London continued unabated during the week. Spot declined from 76¾d. to 75⅞d. and forward from 76¾d. to 75¾d. Gold prices also receded from 250s. 5¼d. to 250s. 2¼d. on the 15th inst. Yesterday, however, the rate was higher by ¾d. The price of silver in New York, which was firm at 90¼ cents for many weeks, eased to 89.625 cents per fine ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	17-12-58	Highest	Lowest	10-12-58
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	113 8	113 13†	112 11	113 9

COTTON FUTURES STEADY AT CLOSE

(From Our Own Correspondent)

BOMBAY, *17th December*

The cotton futures market, after having ruled firm during the first half of the week under review, staged a sharp reaction on Monday. There was, however, a slight recovery yesterday which gathered momentum today on fresh support. The market closed steady. The earlier firmness was due to renewed bull support and large-scale short covering prompted by news of improvement in cloth offtake and firm upcountry advices, following a slackening of new crop arrivals. Monday's reaction was influenced by the precipitous fall in share values on the local stock exchange which turned bearish on reports of the A.I.C.C.'s move in favour of controlling profits of private companies. Nervous bulls rushed to liquidate their holdings and bears sold heavily. Prices consequently slumped. A slackening of mill activity in the spot section and the bright prospect for import of large quantities of foreign cotton as a result of the release of an import quota for 195,000 bales of cotton released on the 12th inst. imparted further weakness to the market. Towards the close, the market recovered partially, thanks to short covering and better spot advices.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 629, as against the previous day's close of Rs. 626.50, and improved to Rs. 636.25 on Saturday. The contract declined sharply to Rs. 629.50 on Monday. It again recovered to Rs. 630.50 yesterday. Commencing today's session at Rs. 629, the contract rose to Rs. 632 before finishing at Rs. 631.75

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	17-12-58	High	Low	10-12-58
I.C.C. Moglai Jarilla (March 1959) ...	631.75	637	626.25	626.50

The brisk buying of new crop noted in the spot market last week slackened during the week under review. Since most mills had covered their immediate requirements they were not inclined to make large purchases. Moderate business was, however, done in staple styles like Khamgaon, Punjab 320F, 216F 197/3. Southern mills were interested in Vijay. Today, however, there was renewed mill purchases and prices hardened.

The export front was devoid of much activity. Since the export quota for cotton stapling 25/32" is due to expire at the end of the month, there was some interest in 320F. The price of this variety improved as a consequence. Hong Kong was said to be interested in this cotton.

In the foreign section, mill buying of East African cotton was noted. The import quota for 195,000 bales of longer staple cotton was greatly welcomed by the trade and mills.

The present quota has some unique features. Import is allowed from any country, including the dollar area, so long as the cotton imported is within the prescribed staple limits. In other words, global imports of cotton are permitted. The general belief, however, is that the entire quota of 140,000 bales for cotton stapling 1.1/16" may be absorbed by East African cotton in view of its extremely cheap prices. It is felt that, since a separate quota of 95,000 bales has earlier been announced for American cotton, no mill will prefer to go in for this cotton out of the latest quota announced against payment in dollars. Half of the quota announced for cotton stapling 1.1/16" and above and below 1-3/16" and cotton stapling 1.3/16" and above is earmarked for distribution under the export incentive scheme. The remaining half will be distributed to mills on quota basis. It has also been decided to distribute a portion of cotton stapling 1.1/16" and above but below 1.3/16" on the basis of consumption of Egyptian and Sudanese group of cottons. This is evidently intended to compensate those consumers who obtain considerably less quota of Egyptian and Sudan cotton with extra supplies of cotton of 1.1/16" and above provided they can go a little coarser.

Imports of Egyptian cotton would continue to be paid for in rupees. The registration of contracts with the State Bank of India, which was necessary in the past, has been done away with. Import licences covering both these quotas would be valid for shipment till 30th April 1959.

The latest available quotations—in rupees per candy of 784 lbs.—from Sewri, are as follows, the figures in brackets being last week's closing rates:

Bengal Deshi 630 (620); Berar Jarilla 670 (665); Khandesh 760 (750); Vijay 885 (865); Jayadhar 840 (850).

The Karachi cotton futures market continued to rule easy during the week under review also. The mounting volume of new crop arrivals in the wake of poor export demand and domestic mill offtake exerted a downward pressure on prices. N.T.R.G. January declined from Rs. 64-7-6 last week-end to Rs. 63-10. The March position receded from Rs. 63-10. The March position receded from Rs. 63-3-6 to Rs. 65-7. The spot values also eased. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind Deshi 62-8; Punjab Deshi 57-4; 4F Punjab Roller 61-2; S.G. 64-10; L.S.S. Punjab Roller 66-10; S.G. 69-10. N.T. Roller 66-6; S.G. 75-2; 289F Punjab Roller 69-10; S.G. 78-10.

Quiet steady conditions prevailed in the Alexandria cotton futures market during the week under review. The pressure on prices of new crop arrivals was offset to a large extent by a fair volume of export business. Prices, consequently, tended to rule steady. In the spot market, premiums for Menofi hardened on good buying. But Karnak and Ashmouni were neglected.

Exports from the commencement of the season till 3rd December aggregated 195,476 bales which was 70,378 bales more than the quantity shipped during the same time last season.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 72.05; March 72.30. *Ashmouni*: January 62.10; March 62.50.

A mixed trend was witnessed on the Liverpool Cotton Exchange during the week. While the American cotton contracts registered improvement on short covering and trade buying, the mixed growths contracts declined. The weakness of the latter was prompted by reports that cotton crop in all the producing countries of the Northern Hemisphere was making good progress. The reluctance of spinners to replenish stocks in view of the bleak textile outlook also adversely affected the market. Sudan contracts were neglected. Values ruled unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: December-January 22.85; March-April 22.80; May-June 22.20; July-August 21.20. *American cotton mixed growths contract*: December-January 23.70; March-April 22.50; May-June 22.10; July-August 21.05. *Sudan*: January-February, May-June, July-August 26.25.

Cotton futures values in New York looked down during the week. Uncertainties about the new crop developments and the prospect of a large crop in the next season prompted selling in the more distant positions. There were also some liquidation and hedging in near months. The fall would have been more marked but for scattered Commission House support influenced by reports of heavy Soil Bank sign-ups.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	16-12-58	9-12-58	2-12-58
Spot	35.70	35.75	36.00
December	34.22	34.40	34.96
March	34.14	35.02	35.53
May	33.29	34.86	35.46

YARNS LISTLESS

(From Our Own Correspondent)

BOMBAY, *17th December*

The yarn market ruled listless during the week under review, in the absence of any fresh development. Turnover was greatly restricted and prices moved narrowly, the general tendency being downward. Rayon yarns were subjected to selling on reports that offtake at consuming centres like Sirat, Ludhiana, Amritsar, Calcutta and Bhagalpur was at a low ebb, resulting in accumulation of stocks. Staple fibre yarns came in for selling. It was said that some mills were trying to liquidate their stocks at reduced prices. The earlier fears regarding shortage of staple fibre supplies were discounted, following reports that the indigenous production of staple fibre was being stepped up. Cotton yarns continued to rule dull, thanks to slackness in demand from internal markets and uncertain export outlook.

Among art silk yarns, 150 Japan climbed down by 12 nP to Rs. 5.19. 120 Japan receded by 6 nP to Rs. 4.69. 150 Italy lost a like amount to Rs. 5.19. 120 Italy were neglected at Rs. 5.25. Among indigenous yarns, National Rayons 120 bright cones first grade retreated by 12 nP to Rs. 4.41. 150 bright cones first grade, however, gained 6 nP to Rs. 4.50.

Staple fibre yarn (40 x 2) December delivery eased by Rs. 2 to Rs. 617. February delivery, on the other hand, gathered a rupee to Rs. 627. In the spot section, 40x2 Citys shed 2 nP to Rs. 3.22. Kohinoors were dull at Rs. 3.31. But Centurys advanced by 6 nP to Rs. 3.34. Among foreign yarns, Paramounts fell by 44 nP to Rs. 9.12. Fujis dropped 18 nP to Rs. 3.67.

In the cotton yarn section, sixty counts Finlays were marked down by Rs. 3 to Rs. 65, while Raghuvanshis gathered Rs. 2 to Rs. 64. Among forty counts, Moderns were stagnant at Rs 25.37. But Minaxis rose by 33 nP to Rs. 24.58. Thirty counts Hinds were unchanged at Rs. 19. Among twenty counts, Moderns changed hands at Rs. 16.31, same as last week. Ten counts Podars, however, added 6 nP to Rs. 12.25.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago:

	17-12-1958	10-12-1958
	Rs.	Rs.
Art silk yarns (per case of 200 lbs.)—		
150 Japan (per lb.)	4.69	4 75
150 Japan (per lb.)	5.19	5 31
120 Italy (per lb.)	5.25	5 25
150 Italy (per lb.)	5.19	5 25
Staple fibre yarns (per case of 200 lbs.)—		
40 x 2 December	617 00	619 00
40 x 2 February	627 00	626 00
40 x 2 Kohinoor (per lb.)	3.31	3 31
40 x 2 Century (per lb.)	3.34	3 28
Cotton yarns (per bundle of 10 lbs.)—		
10s Podar	12 25	12 19
20s Modern	16 31	16 31
20s Hind	19 00	19 00
40s Minaxi	24 58	24 22
60s Finlay	65 00	68 00
60s Modern	—	—

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, *17th December*

The local oilseeds market witnessed mixed trends during the week under review. While castor, cottonseed and linseed were more or less steady on active bull support, groundnuts lost ground.

The groundnut section which staged a relapse during the close of last week, reversed that trend in the initial sessions of the week under review. Subsequently, however, the market eased once again. The smaller receipts of new crop and good buying support from crushers account for the earlier strength. The tables were turned around Monday on lack of fresh buying support. The hopes of release of export quota for oilcakes, expeller variety have not yet materialised. This further depressed the market. Groundnut February 1959 contract, which stood at Rs. 163.62 last Wednesday, rallied by about Re. 1.25 on the following day. Thereafter, it fluctuated within a narrow grove, with the undertone remaining bearish. It moved down to Rs. 162.50 today. Bold ready dropped 13 nP to touch Rs. 32.62 today. Oil ex-mill remained more or less steady and after experiencing minor fluctuations wound up the week at Rs. 17.62, the same closing rate as on Wednesday last.

The castorseed section began the week on a steady note on reports of pest damage to new crop in Gujerat and on encouraging developments in the export section. During the close of the week, the market developed dull conditions, thanks to selling pressure induced by reports of larger arrivals and lack of any overseas enquiries. Castorseed May 1959 contract spurted from Rs. 142.75 to Rs. 144.62 on Friday. The contract gradually receded to close at Rs. 142.87 today. Ready Madras hardened to Rs. 29.00 on Friday, but fell to Rs. 28.50 yesterday. It recovered today to Rs. 28.75. Oil B.S.S. forged ahead from Rs. 16.37 to Rs. 16.75 on Friday. But it gradually gave way to close at Rs. 16.37 today.

Distinctly buoyant conditions were witnessed in the linseed market. This trend was aided by the continued paucity of stocks and bright prospects for exports. Traders expect to receive sizable orders for oil from Australia. Prospects for export of oil to the U.K. and the Continent, however, still seem to be bleak. Linseed May 1959 spurted from Rs. 31.31 to Rs. 31.87, before closing today on a steady note at Rs. 31.75. Bold ready gained by Re. 1 over the week to touch Rs. 37.50 today.

Cottonseed ruled cheerful during the earlier part of the week, owing primarily to the strength in the raw cotton market and support from Akola operators and covering by Ahmedabad operators. In sympathy with the reaction in the raw cotton market on Monday, cottonseed lost strength. Cottonseed February 1959 contract rallied from Rs. 115.75 to Rs. 118.25 on Saturday and gradually drifted lower to touch Rs. 116.75 today.

The following table shows the closing prices of oils and oilseeds today, as compared with those of the two previous weeks:

	17-12-1958	10-12-1958	3-12-1958
Groundnut	Rs.	Rs.	Rs.
Groundnut February 1959 (per Khandy)	162 50	163 62	164 75

† Rates exclude both excise duty and sales tax.

SUGAR FULLY STEADY

(From Our Own Correspondents)

BOMBAY, *17th December*

The sugar market ruled fully steady during the week under review. Stocks in the city were very slim, thanks to continued poor arrivals. The total of these arrivals was no more than 9,700 bags, as against 15,300 bags in the previous week. The Union Food Ministry has still not announced the first release of sugar out of the current season's output.

Small grain sugar gained 25 nP to Rs. 108.25 per bag. Medium grain was firm at Rs. 109-Rs. 112, as also large grain at Rs. 113-Rs. 119.

The plea of the Indian Sugar Mills Association for an increase of As. 8 per maund in the ex-mill control price of North Indian sugar has been criticised by a section of the trade on two grounds. First, the acceptance of the plea will strengthen the cane growers' case for an upward revision in the price of cane from Re. 1.44 to Re. 1.75 per maund. Secondly, a rise in sugar prices will raise the cost of living further. This section also believes that the Government should release substantial quantities of new season's production and abolish the control on prices.

* * * *

HAPUR, *15th December*

Sugar prices ruled quietly steady. The saleable stocks with factories was almost nil, as fresh quota had not yet been released. Crushing operations at mills are in full swing, but there has been a growing propaganda to stop cane supplies to factories with a view to getting an increase in price.

Sugar prices ruled steady in the Muzaffarnagar market also, owing to paucity of dry stocks with factories and tight supply position due to the delay in the release of new sugar quota by the Government. The latest prevailing ex-mill delivery prices were:—Bijnore E29 Rs. 35.75; Kesar E29 Rs. 35.81; Seohara D29 damaged Rs. 34.44; Moist Rs. 35.37; Iqbalpur A29 damaged Rs. 37.19. In the absence of fresh urges, the Kanpur sugar market experienced generally dormant conditions and prices appeared to show little change as the ex-mill section was completely devoid of activity. The trade was following a "wait and watch" attitude in regard to its purchases, as the Government's policy about new crop sugar in regard to its price and export had yet to be announced. The latest prevailing prices were:—Ex-mill controlled Rs. 36-12 per maund; spot (per bag) C29 Basti Rs. 104; Gola Rs. 102-8; D29 Gola Rs. 101; Burhwal Rs. 101-4; Waltergunj, Balrampur and Tulsipur Rs. 100-8; Hargaon and Lakhimpur Rs. 100.

Khandsari ruled quiet, with an easy trend in prices of inferior quality with increasing new production. Prices ranged between Rs. 34 and Rs. 27 per maund. Cane crushers were buying cane upto Re. 1.12 per maund and were manufacturing gur as well as khandsari.

Ready *gur* ruled quietly firm, with a good demand from consuming centres. Arrivals averaged 5,000 to 6,000 maunds. The total arrivals since the beginning of the season were put at 275,000 maunds. Loading facilities were easy and the entire arrivals were sent to outside destinations. The latest prices on Monday were:—*gur pansera* Rs. 14.75 to Rs. 15; *balti* Rs. 15.75; *shakker* Rs. 16.50.

Gur also improved in the Muzaffarnagar market where arrivals averaged 15,000 maunds daily. The latest prices were—*Chaku* Rs. 15 to Rs. 15.50; khaurpapar Rs. 14 to Rs. 14.50; *pansera* Rs. 14.25 to Rs. 15.62; *ladu* Rs. 14.50 to Rs. 15; *shakker dara* Rs. 14.50 to Rs. 16.25; *masala* Rs. 17.50 to Rs. 19, khandsari Rs. 26 to Rs. 34.50.

Gur future prices continued perfectly bullish on vigorous support by almost all big operators. Fagun opened at Rs. 13.58 on Monday last, improved in successive sessions to Rs. 15.20 on Friday, but eased on profit-taking to Rs. 14.63. It was quoted today at Rs. 14.84.

HEAVY OFFERINGS OF TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.)]

COCHIN, *11th December*

This was the largest sale of the year and the catalogues aggregated 2,257,431 lbs. Teas from the lower elevation estates were of a poor appearance, due to the strike in October, whilst teas from the Nilgiris showed a further seasonal decline. In spite of the larger offerings, the sale opened to a useful demand. This demand was particularly noticeable at the lower end of the scale, where internal buyers showed interest at prices which were generally 10 to 15 nP easier. Medium descriptions were irregular and up to 20 nP lower. Good mediums met with fair support, but were 10 nP easier on last rates. The better liquoring highgrowns were considerably easier, following quality. Whole leaf teas continued to meet with less support, and were lower. Tippy teas met with some enquiry and were about steady. The quotations are: Low medium Re. 1.35 to 1.50; medium Re. 1.50 to 1.70; good medium Re. 1.80 to 2.10; and quality Rs. 2.20 to 3.65.

London Market—Sale of 8th December 1958.—Best liquoring often 1d. to 3d. dearer. Others fully firm, although a little irregular. Orthodox B.P. a weak feature.

Sale of 9th December 1958.—Best strong, others steady.

Colombo Market—Sale of 8th December 1958.—Strong demand. Better liquoring highgrowns and best coloury medium brokens firm. Plainer sorts lower. Lowgrowns steady.

Sale of 9th December 1958. Strong demand. All descriptions firm.

Calcutta Market—Export.—Stronger general demand for most descriptions, but weakening towards close. Teas for price and plain B.P 2 to 6 nP dearer. Clean black fannings strong feature. Medium Assams brokens and fannings about steady. C.T.Cs and whole leaf fairly well supported.

Internal.—22,500 packages dust. Fair general demand. Clean orthodox 6 to 8 nP easier. Fibrous orthodox often neglected. Poor and medium C.T.C. 10 to 15 nP easier, grainy C.T.C. firm to slightly dearer.

Export Quota.—The market has been fairly quiet throughout the week, and only a small amount of business has been transacted at 1¾ nP. The latest quotation is sellers 2 nP, buyers 1½ nP.

Forthcoming Auctions.—Sale No. 35 will be held on Tuesday, 23rd December 1958.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"Dust Sale Z.—800,000 lbs. Good demand, but prices irregular. Low mediums and mediums firm and occasionally dearer. Highgrowns irregularly easier."

TEA PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, *16th December*

Tea prices in export, as well as internal, auctions continued to decline. Common teas were the worst affected, as their supply far exceeded demand. The higher output in October was repeated in November, and this has raised North-east Indian production by 22 million lbs. There is little hope now of a fall in output in December, and market circles feel that this year's production would be 30 million lbs. more than 1957. For reports from districts have been very satisfactory.

In spite of recent Government declaration that the changes in export and excise duties are benefiting the tea industry gradually, the marketing of common teas continues to be difficult, as, the trend of prices in auctions shows. The industry has time

and again represented this matter to the Government. During the week, the representatives of the Tripura Tea and the Surma Valley Tea Associations met and urged the West Bengal Premier for tax relief to meet the desperate position of the gardens in the Tripura and Cachar areas. Dr. B. C. Roy told the deputationists that he could consider exempting teas from Tripura and Cachar from the West Bengal entry tax, if Assam and New Delhi agreed to grant relief from their levies. The Associations have already taken up the matter with the Governments of Assam and India. The average yield in Tripura is 4½ maunds per acre and that in Cachar 7 maunds, as against 13 maunds in Assam Valley and 12 maunds in Dooars.

Market circles are of the view that the quantity of exports would show an increase, but value realised would be lower, in view of the decline in prices. Further purchases by Russia is thought here to be in the offing. The Russians are said to have been satisfied with the quality of Indian teas. This later view was voiced by Mr. Nicolai Roinichvili, the leader of the Soviet tea delegation, who met last week the Committee of the Calcutta Tea Merchants' Association here. He, however, said that the packing was unsatisfactory, and that if handling in warehouses and in ports while loading could only be done mechanically and tea chests were covered with hessian, chances of losses by holes caused by hooks would be eliminated. The U.S.S.R. has already purchased 20 million lbs. of Indian tea this season.

The United Arab Republic is also likely to lift more tea from India. Trade circles have got this impression following the recent visit to India of a U.A.R. tea delegation. The delegation, in an attempt to accelerate movements of tea from Indian ports to Alexandria, has, on return home, arranged for U.A.R. ships also to carry tea from India.

Export figures fully supported the trade belief that the quantity exported this year would exceed last year's figure, although earnings from exports would not record such a trend. For, in the eight months to November tea exported aggregated 275 million lbs., representing an increase of 58 million lbs.

It was noted here that, despite increased offerings, there was keen competition in the auctions in Mincing Lane last week.

In the internal auctions held here on Wednesday last, dusts offered amounted to 22,328 chests. Demand was less leading to withdrawals. Prices of clean leaf orthodox teas lost by 6 to 8 nP, with legg-cut teas following suit. In C.T.Cs, the poorer and medium lots eased by 10 to 15 nP, but the better liquorings and the brown grainy exportables realised invoiced prices. Among Darjeelings, the poorer teas received little attention while the flavoury teas were about steady. The quotations, including export duty of 3.125 nP per lb., were: best Assam C.T.C. Rs. 2.40 to Rs. 2.80 (nominal), medium Assam C.T.C. Re. 1.85 to Rs. 2.05, medium Dooars Re. 1.72, and medium Assam grainy dust Re. 1.74 to Re. 1.76.

Leaf on offer amounted to 1.549 chests. C.T.C. teas were shaded, but orthodox teas realised valuations.

Export offerings during yesterday's sale consisted of 61 267 chests. Despite good general demand, prices eased. "Teas for price" gave away markedly, and plain brokens by 2 to 4 nP. The feature was the more support accorded to C.T.Cs, as a result of which the cheapest varieties were sold at higher rates and the few best liquoring teas tended steady. Clean black teas were on good demand at firm rates and the tippiest rates were keenly competed for. Orthodox O.Fs were irregular, but similar B.O.Ps lost by 20 nP. Medium P.Fs were firm, but similar B.Ps were pushed down by 4 nP. Although Darjeelings were in good demand, prices tended to be lower in accord with the general trend. Stylish whole leaf grades also recorded a similar trend. The rates including excise duty of 3.125 nP per lb. are: best Assam C.T.C. fannings Rs. 2.20 (nominal), best Assam C.T.C. B.P. Rs. 2.10 (nominal), clean black pekoe Re. 1.95, medium B.P. Re. 1.62, plain B.P. Re. 1.54 to Re. 1.58, medium fannings Re. 1.70 to Re. 1.76, and plain fannings Re. 1.64 to Re. 1.70.

Export quota was 1¼ nP buyers and 2 nP sellers. No business was, however, done.

JUTES STEADY AT CLOSE

(From Our Own Correspondent)

CALCUTTA, *16th December*

The outstanding event during the week was the permission accorded to the West Bengal Government by the Union Government to export raw jute. However, no information as to the quantity involved or the export procedure could be had in Calcutta. All the same, immediately the news of permission was available—and this was on Saturday last—raw jute prices began gaining strength, and latest quotations for the different varieties, given below and as could be had up to last night, were the best levels for the week under study. A week ago, i.e., on 8th December, making his statement on raw jute prices in Parliament, the Commerce and Industry Minister, Mr. Lal Bahadur Sastry, declared that Government had decided to permit raw jute exports in limited quantities through the State Trading Corporation. This declaration was so vague that prices not only failed to gain strength but were receding. The other measures which he announced were only steps the industry and market, on their own, had taken to prevent further fall in prices. When prior to the Minister's statement on the 8th, it was indicated by his Deputy that the matter was being looked into by the Government, the expectation here was that Mr. Sastry's statement would contain concrete action proposed to prevent prices from falling further. However, that was not to be, and even now it is not known whether the permission accorded to the West Bengal Government is in addition to the limited exports permitted through the State Trading Corporation.

Opinion in market circles was that the decision to export had been arrived at very late and that, if only a timely decision had been taken, better prices than now possible could have been realised from export. The help which growers may now get is also limited, since in view of their cash needs for the *Poojas* and afterwards and nervousness at the falling prices, those cultivators who have no holding power have already parted with their produce to middlemen and bazar dealers. Better late than never; the decision is welcomed, but the delay at working out the details awed market circles. There is no knowing as to why Government alone should participate in exporting. If only the normal trade channels can do this, they can obtain competitive prices. Perhaps, the Government is apprehending that, if the trade is permitted to export, there is the danger of the superior varieties also leaving the country. The feeling in the market is that by simple checking at customs and the adoption of other procedural measures, the Government can see to it that the higher varieties do not get mixed up in export. If exports are only proposed to the Communist countries then perhaps handling by the S.T.C. and other Governmental agencies would be in order. But most of the exports will actually be to mills in Dundee, and market circles state that there is no reason why private traders and farmers' agricultural co-operative societies should not directly export. If the export authorities can check quantity, then there is no reason why the Indian Jute Mills Association, whose member mills are most interested to see that the good quality fibre is all consumed within the country, cannot be asked to check quality and certify shipments. Such a procedure would mean quicker exports and better results than through Governmental agencies, and this would ensure relief, immediate and concrete, to the markets.

During the week the Committee of the I.J.M.A. met and considered the present discouraging trend in the jute markets. It then re-affirmed its decision to maintain the minimum selling prices for goods as fixed in February last. Opportunity was taken to fix minimum prices for constructions, which were not included in the minimum prices in February last. In the beginning of the week, the heavy selling pressure in futures affected the ready market, where, on Tuesday last, B. twills declined to Rs. 94.25 from Rs. 95.30, and hessian 40" 10 oz. to Rs. 40.00 from Rs. 40.45. Wednesday was officially closed. However, nominal quotations showed a downward trend, despite Australian interest in sacking goods. B. twills sagged to Rs. 93.20 and hessian 40" 10 oz. to Rs. 39.60. The information that business had been done earlier on Government account in respect of 44,000 bales of B. twills was available. At this stage, a recovery was made possible by export business. Business was also done in hessian with the United States, and in sacking with Australia. As a result, closing levels on Thursday, at Rs. 93.50 and Rs. 39.90, respectively, were higher on balance. These rates were unchanged on Friday, although more business was done with the U.S.A.

The output of jute goods in November, at 87,000 tons, was higher by 5,200 tons, as compared to the previous month. Hessian was higher by 2,500 tons, sacking by 1,900 tons, and other goods by 800 tons. Stocks at the end of October being 107,400 tons, total availability in November was 194,400 tons. Stocks at the end of November were 105,400 tons, and hence sales in November should have aggregated 89,000 tons or 2,000 tons more than output for the month. It was this consideration, along with the I.J.M.A.'s reaffirmation of minimum prices that made a significant recovery in the week-end possible. B. twills picked up to Rs. 95.00 and hessian 40" 10 oz. to Rs. 40.25. However, business was lacking, and yesterday B. twills sagged to Rs. 94.80 and hessian 40" 10 oz. to Rs. 40.15, although the undertone was steady.

Expectations of official measures to stabilise fibre prices contributed to a fractional hardening in prices early in the week. This was only short-lived, as the Ministerial announcement to permit export through the S.T.C. was vague. Thus, Assam bottoms sagged to Rs. 20.75 from Rs. 21.75, but recovered to Rs. 21.50 subsequently, following the permission accorded to the West Bengal Government to participate in fibre exports. The latest quotations for December-January delivery are:

	Middles Rs.	Bottoms Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	23.25	20.75
Assam	24.00	21.50
Orissa	26.50	24.00
Desal	22.50	20.00

Uttar Pradesh ...	21.50	19.00
Daisee mesta ...	20.50	18.00
Bimli f.a.q.	...	Rs. 18.75

Pucca bales 1st mark 144.00 per bale ready.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, *15th December*

A generally firm undertone prevails in the linseed market. Although trading is very limited, prices are well maintained. Supply of seeds and oil is poor; both buyers and sellers are reserved. The oil market is rather inactive, with buyers pausing.

The latest quotation for Ready-December is Rs. 26.12 per maund.

GOOD EXPORT DEMAND FOR HIDES

(From Our Own Correspondent)

MADRAS, *15th December*

The E.I. tanned hides and calves market remained firm during the week. Some U.K. factors probably took a view and paid penny advance in price, and this lent additional support. Sales to the U.K. were moderate, as some shippers booked orders at current rates in the belief that prices had touched top levels. Tanned cow calf was in short supply. Tanned buff hides and calves ruled firm due to good U.S. support.

The tanned goat skins market was firmer for light weights and steady for other averages. Tanned sheep skins was unchanged.

In the London auctions, prices of sheep skins were reported to be mostly unchanged on October levels, except on rejections which were 6d. to 12d. dearer. Only 50 per cent. of the total offerings was sold.

HIDES RALLY

(From Our Own Correspondent)

KANPUR, *12th December*

Thanks to heavy demand, there was a rally in the prices of wet salted cow. Fresh arrivals were not as considerable during the week as during the week previous. The Madras dealers were lukewarm. The main purchasers were the local tanners.

The latest quotations are: Wet salted cow, 1st grade Rs. 400, 2nd grade Rs. 360 and 3rd grade Rs. 300 per score; wet salted buff, 1st grade 2 lbs. 1 oz. and 2nd grade 2 lbs. 3 ozs. per *rupee*. Goat 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces; sheep 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces.

WHEAT PRICES RISE

(From Our Own Correspondent)

HAPUR, *15th December*

Quietly steady conditions prevailed in the food-grains market during the past week. *Kharif* grain supply position continues to be comfortable, while grain arrivals are scanty. The rice crop all over the country has been fairly good and, in U.P., the production is expected to mount to 2.6 million tons, of which at least 500,000 tons would be marketable surplus. The State Government is procuring 150,000 tons of rice at a price ranging between Rs. 14.50 and Rs. 18.25 per maund according to quality and 65 per cent. of rice stocks held on a specified date in 23 surplus U.P. districts will have to be sold to the Government at controlled price; such stocks have already been acquired in five east U.P. districts.

Wheat prices at Hapur registered modest gains during the week, due to tight supply position. *Dara* quality was quoted at Rs. 25 per maund and farm produce at Rs. 26. Arrivals continued to be scanty. *Rabi* sowings have been completed and germination reports are satisfactory, but winter rains are now needed.

Rice ruled quiet with better supply position. The week-end prices here were: *Basmati sela* Rs. 28; *mainpuri* Rs. 21.50; coarse quality Rs. 17 per maund.

Gram and other coarse grains ruled quiet. With a view to controlling the rise in prices and preventing the hoarding of gram, gram *dal* and barley in Madhya Pradesh, U.P., Punjab and Rajasthan, the Government of India has issued a notification, under the Essential Commodities Act, the effect of which will be that, when the Government requisition these stocks, the price at which they will be sold will be the average price prevailing during the last three months.

Maize was still reaching here in heavy quantities and, despite brisk consumer demand, local stock had swelled and was put at about 200,000 maunds. *Bajra* arrivals were below the requirements and prices improved further during the week. *Jowar* and *guwar* were steady. The week-end prices (in rupees per maund) were: *Gram punjabi* 19.50; barley 17; *bejhar* 18; maize 14.50 to 15; *bajra* 16.50; *guwar* 15.75; *jowar* 14.50.

Peas stocks left were very meagre and demand too was slack. *Arhar* ruled quiet and local stock was put at 49 *khatties*. Other pulses were quietly depressed, thanks to new crop arrivals in the markets. The week-end prevailing prices were: Peas *dara* Rs. 21; peas *dal* Rs. 22.75; *arhar* Rs.21.50; *arhar dal* Rs. 25.75; *urd* Rs. 18.50; *moong* Rs. 20.50 to Rs. 22; *massor* Rs. 18 per maund.

TEA COUNCIL OF U.S.

The Tea Council of the U.S.A., Inc., is planning to open a Tea Centre in New York City next year to further an industry-wide promotion effort. The new centre will provide facilities for food industry exhibits and seminars, product and cultural displays from the tea producing nations, and demonstrations and films for educational and social groups and clubs. The Tea Council, which was founded in 1950, is jointly owned by the Governments of India, Ceylon and Indonesia and the U.S. Tea Association. According to Mr. R. Smallwood, Chairman of the Council, more than 100 million pounds of tea are consumed in the U.S. annually and the 1958 consumption is expected to reach 108 million pounds, while 1959 would be up by 6 per cent. He added that 56 per cent. of the U.S. use is in tea bags, 41 per cent. loose tea and 3 per cent. instant tea.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures. N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

(*Concluded from page 1000*)

which costs of production are disregarded, whether the price of raw cotton grown in China is lower than the world price, whether the manufacturing cost of Chinese goods is much lower than the world level or whether it can sell at much reduced export prices on account of its unique system of a State-controlled cotton industry.

Mr. Takashi Murayama has, however, tried to give a rough idea regarding raw cotton price, manufacturing costs and profit rate. His study reveals that cotton is purchased by the State at fixed official prices. Raw cotton grown in Red China is in no way lower than international prices. It may be that the official rate of 2.617 yuan to one dollar represents an overvaluation of Chinese currency and the value of the yuan is actually much lower. If conversion is made in real value, raw cotton price in China may be cheaper. We have no knowledge as to the price actually paid by the cotton mill, for the above prices are those at which the State collects raw cotton from farmers.

No data are available to show the composition of manufacturing costs in the Chinese cotton mills. The only information available is that the average wage of clerks and workers in mills was raised in 1956 by 77.5 per cent. as compared with 1949. The labour norm in terms of the number of machines assigned is: Ring operative 1½-2 frames; weaving operative (ordinary loom) 8-10-12; weaving operative (automatic) 24-28-32. In order to promote the piece-rate system the number of machines assigned to workers is: Ring machine (26s, 21s and 23s) 600-800 spindles; ordinary loom 8; automatic loom 24. Commenting on these figures, Mr. Takashi Murayama says:

"Needless to say, the above figures do not reflect the labour productivity in the Chinese cotton industry. They merely indicate a wage schedule for the operatives. Nevertheless, these figures suggest that the productivity of cotton textile workers in China is much lower than in Japan. It seems that the cotton industry in China is making greater efforts to increase production per spindle than to reduce the number of workers. In this connection, it is to be noted that, in Red China, although the operative works eight hours, the mill is running on a three-shift operation."

In the opinion of Mr. Takashi Murayama, cotton spinning and weaving are extremely profitable enterprises in China. According to information released in 1956, the State can build a cotton mill of 100,000 spindles and 3,500 looms at an estimated construction cost of 35 million yuan. It is said that some 13 months would be required to erect such a mill and the sum invested could be redeemed in full after 12 months' operation. Thereafter, the mill could save and contribute to the State treasury 35 million yuan annually. According to a publication issued in 1958, it is stated that, when a cotton mill of 15,000 spindles is newly constructed in China, they can expect an annual output of 16,500 bales of cotton yarn (average 20s) which could be sold for 11.9 million yuan and leave a handsome profit of 5.9 million yuan (before taxation).

The Second Five-year Plan of China as adopted at the Eighth National People's Congress held in September 1956 envisages a further notable expansion of the cotton textile industry. The production targets fixed for 1962 are: cotton yarn 8-9 million bales; cloth 235-260 million bolts; raw cotton 43 million piculs (Li Fu-Chun Report). It is believed that the textile machinery industry has a programme to produce during the five-year period 12-13 million spindles, of which one million spindles are to be exported.

THE BOMBAY GAS COMPANY LIMITED

(*Concluded from page 1004*)

"Work was commenced in May 1957 upon the new 15" trunk main, almost three miles long, from the Gas Works to the Opera House. Using imported pipes with specially designed joint rings, the work was completed in about seven months, despite delays caused during the monsoon period. The main was commissioned in December 1957 and has been most beneficial in improving gas pressure in the central areas of the City.

"Gas works and district plant were maintained in good condition during the year, four beds of retorts being re-built and twelve beds let down for maintenance repairs.

"This year your Company also carried out the lighting of Netaji Subhas Road and Bombay Road No. 1 in front of the Sachivalaya. ... the Director. Shri N. K. Jalan was also present on the occasion of the final inspection. The Municipal Commissioner was much satisfied and had written to us that the 'improvement has given relief to both motorists and pedestrians' and the Company had provided 'the much needed improvement very expeditiously.' The glareless light being provided by your Company compares favourably even with fluorescent lamps. We hope all lovers of the City of Bombay find the charms of the 'Queen's Necklace' doubly enhanced by the improved lighting."

THE BELAPUR COMPANY LIMITED

(*Concluded from page 1018*)

manufacturer has to pay income-tax, corporation tax, wealth tax and dividend tax as well as a tax on capitalisation of reserves if and when such adjustment is made.

"Such heavy taxation is restraining consumption of white sugar and encouraging production of *gur* and *khandsari*, both of which involve wasteful methods of extracting sucrose from sugarcane. Even the Karve Committee, which was entrusted with the specific task of recommending measures for encouraging cottage industries, recognised this point and did not recommend placing a handicap on white sugar making, as it did in regard to other large-scale industries run by power.

"In the budget for 1958-59, the Government of India mercifully spared white sugar from any further taxation, but it was only on 14th December 1957, that is, 2½ months before the presentation of the budget, that it had enhanced the tax burden by As. 3 per maund of sugar while imposing a special excise (at the rate of Rs. 3.31 per cwt.) in lieu of sales taxes levied by State Governments.

"The effect of heavy taxation on the sugar industry is clearly reflected in the financial results of your Company. From Rs. 18.23 lakhs in 1953-54, excise duty and sugarcane cess paid by the Company has gone up to Rs. 69.13 lakhs in 1957-58. The latter amount, it may be interesting to note, is equal to nearly a third of the Company's sale proceeds.

Sugar Exports

"An outstanding development of the year was the Government's decision that the industry should export 50,000 tons of sugar. It is outstanding not because of the quantity involved —in 1956-57 India had exported 150,000 tons—but because of the sacrifice involved to the country in terms of rupee resources. If, in the previous season, India exported at a profit three times the

MARKET GOSSIP

(Concluded from page 991)

decline in 1957-58, from 8.8 million bags (in 1956-57) to 8.4 million bags. Estimates for 1958-59, however, indicate an increase to 9.7 million bags for the whole of Africa.

As a result of the increase in production, the exportable surplus had risen by 25 per cent. during 1957-58, that is, from 34.4 million bags to 43.2 million bags. Naturally, Brazil accounted for the bulk of this increase. In 1958-59, the exportable quantity is estimated to go up further to 50 million bags, which would be nearly 50 per cent. more than in 1956-57. Despite the [illegible] of world consumption is estimated at 35 million bags, [illegible] does not show any sign of increase.

Thus, coffee producers are again confronted with a huge exportable surplus and the problem has so far evaded solution. There has been a substantial fall in prices during the last one year but they have not yet found their bottom. In London, for instance, Coffee Uganda Robusta—grade 10 unwashed January shipment—was quoted last week-end at 189s. per cwt., as against 221s. a month before. The two separate agreements, one by the Latin American producers and the other by the African growers, together cover 90 per cent. of the world production. Brazil, the largest producer in the world, is holding back 40 per cent. of its output under the agreement. These agreements have no doubt prevented an utter collapse of prices though they have not restored confidence, because of the growing surplus.

There are only two remedies to correct the imbalance. The one is to cut production drastically and the other to raise consumption substantially. The second one will be more welcome than the first, but it is not an easy one. The cuts in retail prices of coffee during the last one year or so have not brought about any significant increase in consumption, as coffee prices, despite the cuts are considered to be very high from the consumers' point of view. The evolution of soluble coffee is no doubt a promising development, but the sales of coffee in this form are not expected to continue to rise at the same rate as they did a few years ago when it was introduced.

Continued expansion of production and holding back of surplus from the market cannot go on for ever, when the prices maintain their downward trend. The sharp decline in prices will normally bring about a cut in production, but there is also a tendency for growers to raise their output in order to maintain their earnings. The policy of the Latin American countries has not done anything to reduce production. On the contrary, their policy of keeping up prices has only helped African producers to gain a foothold in the traditional markets of Latin American producers. It must also be noted that nearly 80 per cent. of the total African coffee is of the Robusta variety, a type which has been in growing demand, because of its suitability for the making of instant coffee. It is much cheaper than South American coffee. It not only constitutes a good part of the world supplies to West European markets but has even entered the U.S.

Against this background of world coffee situation, the outlook for Indian coffee is getting dimmer, particularly in view of the rising output in this country too. Despite the untimely and unhealthy weather during November and December, the earlier estimate of the current season's crop at 44,810 tons is expected to be fully realised. The crop represents an increase of 3,200 tons over that for 1956-57 and of nearly 10,800 tons over the 1955-56 crop. The picking of the 1958-59 crop has commenced in several estates. Planters expect yet another bumper crop of well over 50,000 tons, the highest on record.

Export sales out of the 1957-58 crop up to 4th December aggregated 14,126 tons (made up of 9,563 tons of Plantation, 3,910 tons of Arabica Cherry and 1,413 tons of Robusta). Tenders for another 481 tons have been invited this week. The sales made so far compare well with 12,978 tons sold during 1957 and exceed the export allotment by 1,470 tons. The upward trend in internal offtake continues, but its pace is slow as compared with that of production. The total releases up to the end of November amounted to 24,902 tons. This quantity is ahead of last year's offtake in the corresponding period by 800 tons. The total releases during the whole of 1957 amounted to 26,230 tons. Unless the internal consumption is pushed up substantially, India will be faced with the problem of a substantial surplus next year and the chances are that it may have to export this surplus at considerably lower prices.

I.F.C. TO INVEST IN BRAZIL

The International Financial Corporation has decided to invest $1.2 million in a private Brazilian cement manufacturing company. The investment will be in U.S. dollar notes bearing interest at the rate of 7 per cent. per annum, maturing in instalments over 10 years and will be redeemable at any time without premium. The I.F.C. will also receive *Partes Beneficiarias*, a type of security in use in Brazil, which, in this case, gives the holder the right to receive a portion of the annual net profits of the Company *plus* an option to redeem the *Partes Beneficiarias* into cash or to convert them into common stock. The I.F.C. commitment is subject to completion of the necessary legal formalities.

The I.F.C. investment is to finance the construction of a new cement plant, with an annual capacity of about 200,000 metric tons. It is expected to commence by the end

Supplement to "COMMERCE" dated 24th January 1959.
