73rd YEAR OF ISSUE CALCUTTA, 5th JANUARY, 1961. Vol. CXXXXVI No. 3611

A FINAL CUT IN JUTE GOODS PRODUCTION

THE most encouraging feature of the jute industry's latest move to restrict production is the hope, expressed by the Indian Jute Mills Association, that it will be the last. All the interests concerned—the mills, the workers and the overseas buyers—are going to echo that. Since the opening of the current season, a series of restrictive steps has increased the proportion of the mills' looms sealed from 9 percent to 12 percent and reduced weekly hours worked from 48 to 45; now it is proposed to cut this figure to 42½. This decision is to be implemented as from 31st January, 1961, to bring productive capacity more nearly into line with the crop estimate for the season of 5.7 million bales. The industry claims that the choice of a further cut in working hours rather than more loom sealing has been made purely in the interests of labour; its own preference would have been for sealing an additional percentage of looms because such a method does not increase the mills' unit costs of production. But the initial reaction from the workers' unions has expressed anything but gratitude for such consideration. Labour claims, rather preposterously, that the move has little relevance to the raw jute situation, but is intended instead to sabotage the Central Wage Board's recommendations for interim wage relief which are expected to be announced at the end of this month. It has also expressed the view that such "unilateral action" comes within the purview of the Industrial Disputes Act, and that a "dispute" now exists between the mills and their employees.

Some expression of concern and disappointment on the part of the workers was only to be expected. But this kind of reaction, with its mild threats and incriminations, seems merely to be making a bad situation worse. The mills have made no secret of the fact that on their own estimates of this season's crop—and as yet these are the only ones available—a further cut in production would be necessary in the new year. They have taken the greatest care to consult the Central and West Bengal Governments and have received the reluctant consent of both bodies. They have even, on their own claim, deliberately added to their unit costs of production rather than exacerbate the unemployment problem in the industry. Why then should the unions consider it necessary to assume an attitude which could soon lead to strained relations between mill managements and their workers, and possibly a further loss in production beyond the restricted level considered necessary to counter the raw jute shortage? The plight of the jute industry during the past six months or so has been difficult enough without more exaggeration and confusion being added.

The workers' reluctance to accept a further cut in their earnings is, of course, deserving of every sympathy. But given the facts of the raw jute situation, as far as they are known, it is difficult to see a possible alternative. Some union spokesmen have declared that the industry's estimate of 5.7 million bales of raw jute is incorrect; such a view might find more support if an acceptable alternative estimate existed to back it up. The unions have also condemned any announcement of further restrictions until the Government's own crop estimate is available, it is hoped some time this month. There would be more substance in this if it were certain that the official figures will be ready before 31st January, and that more reliance can be placed on them this time than it is usually found safe to do. In the meantime, a cut in working hours requires a certain amount of reorganisation in the mills, and there is anyway the impact on the raw jute market to think about. The industry is acting on the fear that a squeeze may develop in the raw material later in the year if the sowing of the new crop is delayed for some reason. Whether this is justified or not depends almost entirely on the weather. But when the alternative is an even more severe restriction of production later in the year, or even perhaps the temporary shut-down of a portion of the industry, it is better to play safe and keep some curb on raw jute prices now. If the position eventually turns out to be better than hoped, then no doubt the mills will be only too glad to increase production to the limit that cost considerations permit.

It cannot yet be accurately assessed to what extent the past year's performance of the raw jute market, and especially its behaviour in the latter six months or so, has damaged the industry's reputation in its export markets. Admittedly speculation—now, happily, almost absent from the market—has played its part in the spectacular all-round rise in prices. But an increase over the year of Rs. 21 a maund in the price of Assam Bottoms, from Rs. 32 on 2nd January, 1960, is bound to have its effect quite independent of speculation, or, as it might be more correct to call it in this context, manipulation. This rise in raw jute has been paralleled, though not equalled, by goods: B Twills have moved up from Rs. 112.50 a 100 bags at the beginning of the year to Rs. 186 at the end, and 40in. 10oz. hessian from Rs. 42.55 to Rs. 59 a 100 yards. India has not been alone in facing increases of this kind; the Pakistani and Continental industries have been similarly affected. But such upward movements are bound to represent a considerable fall in the prestige of jute goods throughout the world, and possibly a permanent loss of markets to substitutes, especially bulk handling. It is worth a great deal of effort to bring these price levels down to something more in the region of what prospective buyers consider they ought to be. Unfortunately, the scope India enjoys for doing this on her own is strictly limited; a serious fall in raw jute prices now, for instance, might only increase the smuggling of supplies into Pakistan and benefit the mills scarcely at all. There is not much room for manoeuvre, and what can be done in the way of restrictions on the movement of Transferable Specific Delivery Contracts, margins on credit which might be used for accumulating hoards, and the buying of raw jute on quotas, has probably already been done, if not in fact overdone. Even the ultimate powers, those of requisition, have been granted to the Jute Commissioner to use when considered necessary to meet artificially created shortages. The only thing which it appears remains to be done is to pray for a better crop of raw jute next season; certainly no precipitate action on the part of labour is going to help.

As an alternative to prayer as a means of increasing raw jute production, the Union Government's policy, as outlined by Mr. S. K. Patil, Minister of Food and Agriculture, at last week's meeting of the Indian Central Jute Committee in Calcutta, would not seem to have a great deal to recommend it. What Mr. Patil had to say was admirable enough in its way. But it has all been said by Government spokesmen many times before, only to be followed by a disaster such as the present crop season constitutes. The Minister conveniently avoided explaining exactly how the Government proposes to increase the acreage devoted to jute growing, or how it intends to expand the output of mesta beyond its present level without taking land from jute. Only Mr. Patil's promise about increasing the supply of fertilisers, and the hope expressed of considerable improvement in their availability during the current year, seemed particularly hopeful. Better seed and fertiliser supplies are, of course, a considerable part of the problem. But steady prices and a reasonable return to cultivators—reasonable being based on returns comparable with paddy growing—are still probably more important, and on this point the industry's own plan for a buffer stock may prove more significant for the future. In other words, in the absence of any new and practicable methods of pursuing the goal of self-sufficiency, the best way in which the Government can help is to press the old ones more vigorously. It is an interesting thought that if all the official promises of the past few years had been implemented, the present troubles would probably never have arisen.

It is this physical shortage of raw jute which is the simple logic of the situation. Whatever steps are taken to curb manipulation in the various markets, or to interfere with the operation of the free market mechanism, that incontrovertible fact will remain, and there is regrettably little that can be done about it during the current season, except to adjust manufacturing capacity accordingly. In the meantime, all the interests involved—the workers, the mills and the Governments, both Central and State—can best confine their activities to avoiding anything which may make the situation worse, and, of course, to ensuring that it will never happen again. It may surprise the casual observer that, after all that has been heard about the jute industry's difficulties in the past few months, the workers should be confidently expecting an increase in pay in the near future. How, one might ask, are the mills going to be able to afford it? Or rather, it might be more pertinent to enquire how it is proposed to persuade the foreign buyer to pay for it.

THE COAL SHORTAGE

COAL shares in the Calcutta stock market have been rising slowly during the past few weeks. Investment interest is still highly selective, being concentrated on the equities of companies which produce the better grades of coal, and leaving the remainder largely unchanged. But even the relatively limited scale of buying is significant. It shows that the prospects for the private coal producers under the third plan are being assessed more cheerfully. The main source of optimism is the fact that the demand for coal has been rising rapidly, while output has increased much more slowly. So an acute countrywide shortage has resulted; and this shortage is gradually compelling the Government to amend its coal policies by giving more freedom for expansion to the private collieries. In his presidential address at the annual general meeting of the Coal Consumers Association of India in Calcutta a few days ago, Mr. D. C. Driver recalled how the Industrial Policy Resolutions of 1948 and 1956 have hampered efforts to increase coal production. The first of the Resolutions laid down that new undertakings in the coal industry should be reserved for the public sector. The second imposed a virtual ceiling on the output of the private sector. The rigid interpretation of the Resolutions has fortunately been relaxed somewhat recently. The Government has agreed not to impose a rigid ceiling on the production of the private collieries, but to work out an expansion programme for each colliery, especially those producing Selected A, Selected B and Grade 1 coals. Under special licences, the private producers will also be allowed to open new mines which are not immediately contiguous with the ones being worked at present.

Valuable though the change in policy is, it is not by itself enough to ensure that consumers will get nearly all the coal they want in the years to come. Mr. Driver gave a brief account of how they have suffered already. One steel company chairman has pointed out that some of the coal supplied to his company contains as much as 32 percent of ash. Another has stated that whenever the ash content of the coke supplied to his company increases by 1 percent, the cost of producing steel goes up by Rs. 3 a ton. The working of the private as well as the State steel plants has suffered because too little coal is available, and it is of inferior quality. According to Mr. Driver there is little hope that the two major private steel companies will get enough washed coal from the Bhojudih and Pathardih washeries before 1963 or 1964, since it usually takes one year for washer-

ies to achieve normal operation. Apart from the steel plants, the efficiency of the railways has declined because inferior coal has had to be used in locomotives. Factories, power houses and brick manufacturing units have cut their production due to the lack of fuel. In the south, at least two cement factories have closed down for this reason. The difficulties suggest that not only does much more coal need to be produced, but its quality too has to be improved, and better transport facilities are required to move it to the areas where it is used. Vigorous efforts are necessary to cut down the extraordinary delay in establishing the washeries at Dugda, Bhojudih and Pathardih, since the shortage of washed coal threatens to render steel manufacturing capacity idle. More foreign exchange also needs to be allocated for importing equipment for the collieries and the railways. Mr. Driver made a number of useful suggestions on all these points, although some of them may be rather controversial. Views on the ash content and the size of coke which the steel plants should be prepared to accept, for instance, may differ sharply.

One important problem, if not the most important, in increasing coal production, centres on what should be the right price for the commodity. Perhaps because he was speaking on behalf of a consumers' association, Mr. Driver did not touch on it, although he otherwise managed to make a fairly detailed speech. That is a pity; consumers should have the courage to come out and say that they are prepared to pay more for their coal if that is the one major way of ensuring that they will have enough of it in the future. In the list of handicaps which have affected the implementation of the coal programmes under the second five year plan, Mr. Driver gave first importance to the Industrial Policy Resolutions. The place really belongs to the Government's decision to keep the price of coal at an uneconomically low level. After all, even with the Industrial Policy Resolutions, the private collieries were allowed to raise their production to the level of 45 million tons annually by 1961. In fact, their output is still running below this figure. The main reasons are two. One is that it has been extremely difficult for the coal companies to find the money for expansion schemes. The second is that there would probably in any case have been little point in producing much more, seeing that the railways are unable to move the smaller amount which is already being produced. Various examples of false economy in the Government's planning are implied in Mr. Driver's speech. For instance, collieries are not given foreign exchange for buying equipment from abroad, while foreign exchange is readily sanctioned for expanding steel capacity, even though much of that capacity ultimately lies idle for want of coal. Mr. Driver could have pointed out that consumers' shyness about paying enough for their coal is a similar example of false economy. Because they pay too little for their coal, too little of it is produced; and because fuel supplies are inadequate, industries have to run below their full capacity, so unit production costs rise. The time has come when consumers should add their powerful voice to that of the producers in asking for a more economic price for coal. The sanction of foreign exchange for importing equipment is not, by itself, enough. The rupees first have to be found for buying the foreign exchange for buying the equipment.

122459

THE MISTY ROAD

CHARTS of the movement of prices on the world's principal stock exchange in 1960 show some interesting divergences, reflecting not only differences in local conditions but also confusion of thought on the economic prospect in general. New York and London were approximately in line in the first three-quarters of the year, moving downward in the first few months, then fluctuating with no decided trend; New York could not emulate London's subsequent advance, but in the last months it was New York that was rising (although cautiously), while London was declining. Montreal and Toronto fared worse than New York; but Rome, Frankfurt, Paris, Amsterdam, Zürich and Vienna, fared better than London. Melbourne and Sydney were not so unhappy as Johannesburg, but they failed to show the net gain that London likewise was unable to achieve in the sterling area. The broad picture shows generally favourable conditions in the stock markets of continental Europe, but generally subdued conditions in the markets of north America and the sterling area. But even the markets of continental Europe tended downward as the year progressed; and the collapse in Rome, after an unrealistic speculative rise, was a reminder that other markets are not as broad-based as London and New York. The market that stands out as most consistently strong is Tokyo; and Japan's economic achievement—a healthy external payments account combined with a rapid increase in production—deserves careful study. However, even in Japan business men were forecasting more doubtfully before the end of 1960.

The stock exchanges are not an infallible guide to the course of business, but they are a useful barometer of current mood, and they have often anticipated accurately, some months before it has occurred, a change in the economic trend. Their behaviour in 1960 suggests that business men cannot see the road ahead. The two-month gap between the election of a new U.S. President and his assumption of office has been on this occasion opportunely timed (if enforced hesitation can ever be opportune), for there was no decided economic trend that could be interrupted by this peculiar constitutional arrangement. The United States is no longer the unquestioned dominant force in the world of free enterprise, but when other free-enterprise countries are unsure of themselves they look to the United States for guidance. A firm lead from that quarter could now, therefore, be more than usually potent. Unfortunately, there will be a further gap of months between the declaration of the new President's policy and the demonstration (if it can be demonstrated) that he is able to fulfil it.

A year ago it was said that American business would not be allowed to fall into recession in a year of presidential elections; but the recession is a fact. That it had deeper causes than mere psychological malaise is evident in the persistence of the downward trend after the elections, although the result implied a more expansive policy. There is no suggestion that Mr. Kennedy will apply a "crash programme" to force the economy into expansion, and it may be that the recessive trend will defy his more restrained efforts until—perhaps in the second half of 1961—the economy is ready of its own accord to turn upward. Certainly, the new U.S. Government intends to stimulate business, and its plans for social development, involving an increase in public spending, will incidentally act as a stimulant; but it has yet to be proved that economic expansion and social development are compatible with the other main part of the new Administration's economic policy—strengthening the dollar. The current payments deficit, excluding movements of short-term capital, has been estimated by Mr. Edward Bernstein, the distinguished American economist, at approximately $2,500 million a year. It is not as high a figure as some other analysts have calculated recently, but it presents a formidable task.

Mr. Bernstein suggested that figure in the *Quarterly Review* of Model, Roland and Stone, members of the New York Stock Exchange, issued at a time—in the two-month interregnum—when the opinions of one of Mr. Kennedy's economic advisers were particularly helpful. Mr. Bernstein does not direct American policy, but he is certainly able to influence it, and the interest that his article in the *Quarterly Review* aroused was well deserved. Particularly significant is Mr. Bernstein's insistence on the redistribution of reserves. It is remarkable, he points out, that "three countries (Germany, Italy and Japan) with a gross national product less than one-fourth of that of the United States, could absorb a balance of payments surplus nearly equal to the U.S. deficit." Germany's export surplus in 1959, about 3.6 percent of the gross national product, was "about the same proportion of total output as the U.S. export surplus in 1947, when the world was desperately dependent on U.S. goods for relief and reconstruction, and when the United States made available over $6,500 million in economic aid".

The implication of Mr. Bernstein's reasoning is that the United States should take no action (such as restricting imports and reducing foreign aid) that would injure other countries, and that Germany rather than the United States should take positive action to correct the unbalance of payments. "In Germany", he writes, "wages are too low for its great productivity and interest-rates are too high for its enormous savings." Therefore, German wages should be raised and German interest-rates should be reduced; and expansion of demand at home should be allowed to reduce exports slightly and to increase imports considerably. But will these changes happen? We have a dangerous problem of disequilibrium and no assurance that either of the countries principally involved (indirectly, of course, it involves us all) will be able and willing to solve it. Even if the trend of trade turns upward (the National Institute of Economic and Social Research has lately made a surprisingly optimistic assessment of British exports in 1961), basic confidence cannot be restored while the stability of currencies is threatened by the disequilibrium of surpluses and deficits.

THE SHIPPING RECESSION ROLLS ON

THE world shipping industry is still sailing rough seas in the form of a depression in freight rates which has persisted for three years now. When the symptoms of a slump were evident in the freight markets during 1958, few thought it would be so prolonged, or that it would affect the shipping companies so adversely. Many optimists forecast that the slump would be essentially seasonal in character. It would now appear that the depression has been prolonged by the steady increase in tonnage, although this is now taking place at a slower rate than before. Shipowners seem reluctant to scrap tonnage, apparently in the hope that the curve of freight rates will turn upwards in the not-too-distant future. But this is probably wishful thinking. True, the freight depression should end as soon as the volume of international trade picks up, but when that will happen can only be a matter for conjecture. The rate at which world shipbuilding capacity is increasing, and the growth of the merchant fleets of individual countries, are indicated in statistical tables in the recently-published *Lloyd's Register of Shipping*. A perusal of these statistics will help the reader understand the future prospects of the shipping industry in the major maritime nations.

There is no denying that the recession has made its influence felt throughout the industry since, as *Lloyd's Register* for 1960 shows, the growth of world shipping is gradually slowing down. As it happens, the world total expanded during the 12 months ended July 1960 by only 4.8 million tons to 129.8 million tons, compared with a rise in 1959 of 6.9 million tons, in 1958 of 7.8 million tons and in 1957 of just over 5 million tons. This is no doubt a welcome development; shipowners have been realistic enough to appreciate that the increase in tonnage will eventually prove embarrassing if the freight depression continues much longer. The increase in tonnage during the year was, however, widely distributed among the principal maritime nations in a pattern similar to that of 1959. In the notes on the statistical tables, *Lloyd's Register* says that there has been a new development of "considerable importance," namely, the repatriation of ships controlled by Greek interests. The main causes of this, it is stated, are the tax concessions offered by that country, so transfers of tonnage from Liberia and Panama (which have hitherto claimed large fleets under what are called "flags of convenience") to Greece, has brought her up into the front rank of maritime nations.

Greece's gain at the cost of Liberia and Panama has brought a sharp reduction in the tonnage claimed by both these countries. Statistics show that the Panamanian fleet has fallen by 347,000 tons to 4.2 million tons during the year. The fleet of Liberia was similarly reduced by a fall of 654,000 tons to 11.3 million tons. But what is more important to the world shipping industry as a whole is the fact that oil-tanker capacity is increasing at a faster pace. A close perusal of the statistics will show that a large proportion of the overall expansion of the world fleet is due to the growth of oil-tanker tonnage. The latter has probably continued its increase as a result of the Korean and Suez booms. Even so, one cannot overlook the unmistakable evidence that the world merchant fleet is expanding in spite of a prolonged depression in the freight markets. The *Economist* realised the significance of the situation when it pointed out recently that there is now enough shipbuilding capacity to replace the entire world fleet in ten years.

As for ships launched in 1959, Japan claims first place with 1.7 million tons, Britain second with 1.4 million tons and Germany third with 1.2 million tons. The improvement in Britain's position in terms of tonnage launched should not, however, be accepted as cause for complacency. It was recently reported that the construction of 200 vessels would have to be shared between Britain's 80 shipbuilding yards if the industry's order-books do not improve in the immediate future. Besides, many of the ships on order are small, so the capacity of the shipbuilding firms to provide more employment opportunities for labour, and to earn more revenue, will be limited. It is estimated that, on the basis of present orders, the tonnage of ships under construction at the end of next year will shrink to 357,000, or in other words, less than a third of the tonnage at the end of 1959. Faced with such bleak prospects all around, many employers have had no alternative but to turn down the recent labour demands for higher wages.

The *Financial Times* rightly pointed out recently that the U.K. shipbuilding industry can improve its order-books only by quoting lower prices and by completing ships strictly according to delivery schedules. Whether the first objective will be realised, it is yet difficult to say; it depends, for instance, on such imponderable factors as the wages of labour, since the unions appear eager to press for higher wages whether or not the industry has the capacity to pay. The U.K. Chamber of Shipping has, however, made some important recommendations to improve the industry's prospects. It has urged the Government to provide more liberal aid to shipbuilding firms. Also, it has recommended the creation of a special tax-free ship replacement fund to enable British owners to meet overseas competition on equal terms. There have been repeated complaints of high taxation, and it is possible Mr. Selwyn Lloyd, purely as a good gesture, will introduce some limited tax reductions in the next Budget. This will indicate that the Government is not apathetic towards the problems of one of Britain's most important industries, which is now languishing in the face of keen overseas competition and rising costs.

Current News and Comment

Rights from Indian Oxygen

The stock market has hardly reacted to the decision of Indian Oxygen Ltd to issue ordinary rights shares, since the proposal was already known in broad outline much earlier. This is probably the reason why the shares rose substantially some weeks ago. The present ordinary share capital of the Company is Rs. 2 crores, divided into 2 million ordinary shares of Rs. 10 each. It is now proposed to issue another 600,000 ordinary rights shares at a premium of Rs. 8 a share. Of the existing capital, British Oxygen Ltd of the U.K. holds 1.4 million shares, constituting 70 percent of the total. Indian investors hold 600,000 ordinary shares, or 30 percent of the total. Under the rights issue proposal, the U.K. Company will be given 360,000 new shares. This means that British Oxygen will get three new shares for every 10 held, while the Indian shareholders will get two new shares for every five held. The U.K. Company has thus waived a portion of its rights in favour of Indian shareholders. The idea presumably is to increase the participation of Indian capital in Indian Oxygen. The money subscribed by the U.K. Company will provide the foreign exchange for financing the expansion programme which Indian Oxygen proposes to undertake soon. The entire expansion scheme may cost Rs. 3.85 crores, to which the proceeds of the new issue will contribute Rs. 1.08 crores. The balance will be derived partly from the internal resources of Indian Oxygen and partly by borrowing from banks. The decision to go in for expansion is appropriate, since the demand for such products as industrial gas, electrodes, gas-using equipment, medical equipment and nitrous oxide is expected to increase substantially during the years ahead.

However, the premium of Rs. 8 a share fixed for the rights issue is too large. At the current price of Rs. 39, the ex-rights value of the share works out to Rs. 33. If the dividend is maintained at the level of 15 percent, taxable, the yield is no more than 4.5 percent. This cannot be considered adequate by current market standards. Investors who have bought the shares around the present price have reason to be disappointed, because not only is the yield unattractive but much of the growth value of the scrip has been eroded by the heavy premium.

Usha Martin Black Issue

Usha Martin Black (Wire Ropes) Ltd, a concern which was incorporated in December 1960, proposes to build a factory in Ranchi, Bihar, for producing steel wire and steel wire ropes. The initial capacity will be 3,600 tons a year. The estimated cost is Rs. 1.03 crores and production is likely to begin at the end of 1962. The Industrial Credit and Investment Corporation of India has agreed to lend Usha Martin Black Rs. 12 lakhs in rupees and Rs. 23 lakhs in foreign exchange. Foreign collaboration has been arranged with Martin, Black and Co. (Wire Ropes) Ltd of the U.K., which has also agreed to participate in the share capital of the new Company. The foreign collaborator is well known as a producer of high-tensile steel wire and steel wire ropes.

Usha Martin Black is offering 10,000 cumulative redeemable preference shares of Rs. 100 each and 150,000 ordinary shares of Rs. 10 each for public subscription at par. The lists will open next Thursday, and fuller details of the issue are published on a later page. The issued capital at present is Rs. 22 lakhs, divided into ordinary shares of Rs. 10 each. A further 30,000 ordinary shares have been arranged for subscription by the Industrial Credit and Investment Corporation of India. The entire issue has been underwritten. The redeemable preference shares carry a dividend of 9.5 percent, free of company income tax, but subject to the usual tax deduction at source. They are redeemable at any time after a period of 10 years from the date of issue.

The prospects for the Company may be considered satisfactory in view of the fact that the products are in good demand. A major portion of the domestic requirements are at present met through imports. It is hoped that the demand will improve steadily with industrial development, and so Usha Martin Black will be able to sell its products without any difficulty. The directors expect that the working will prove remunerative when production starts. The chief raw materials for producing steel wire and steel wire ropes are high carbon steel rods. These will largely have to be imported for the next four years or so. Later, it is expected, the rods will be produced here in adequate quantities.

Travancore Electro-Chemical Shares

The paid-up capital of the Travancore Electro-Chemical Industries Ltd is Rs. 13.77 lakhs, divided into ordinary shares of Rs. 100 each. The Company is now offering another 10,000 ordinary shares of Rs. 100 each for public subscription at par. (Fuller details concerning the offer are published on a later page.) Travancore Electro-Chemical Industries was incorporated in 1945 and started manufacturing calcium carbide in 1952 on an experimental basis. At that time, the output capacity was only 1,000 tons a year, so it was not a profitable proposition. Thus, during the years of experimentation, losses were incurred. But the trials have proved profitable in the sense that sea-shells have been discovered as good raw materials for producing quicklime. These raw materials, it is proposed, will now be used for producing calcium carbide on a commercial scale. A factory is being built with a production capacity of up to 10,000 tons a year. The location of the factory has been carefully chosen and the Government of Kerala has promised electric power at reasonable rates. With cheap power and an adequate supply of sea-shells, it is expected that calcium carbide will be produced at a reasonable cost. The Government of Kerala has already invested Rs. 5 lakhs in the ordinary share capital of the Company.

Being an important basic chemical, the demand for calcium carbide is likely to increase steadily in the future. At present, the domestic production is only 4,074 tons, but it is likely to rise to 60,000 tons by 1966. So the directors think that the products of the Company will meet with a ready market. When production begins, fair profits are expected; the cost of production is estimated at Rs. 462 a ton, while the selling price may be around Rs. 865 a ton. Foreign collaboration has been arranged with Deutscher Innen und Aussenhandel Invest Export of West Germany. The collaborator has agreed to supply plant and equipment on convenient deferred payment terms.

Equity Offer from British Paints

British Paints (India) Ltd will offer 196,346 ordinary shares of Rs. 10 each for public subscription at a premium of Rs. 5 a share on 16th January. (Fuller details of the offer are published on a later page.) The issued capital of the Company at present is Rs. 28.37 lakhs, divided into 283,654 ordinary shares of Rs. 10 each. The concern is a leading producer of paint and has made considerable progress during the past few years. Sales have increased from Rs. 38.56 lakhs to Rs. 1.67 crores during the past 10 years. The present issue will help finance a further expansion in activities. It will also facilitate the participation of Indian capital in the business which British Paints is doing.

The Company's factory is situated in Howrah, West Bengal, and negotiations are going on for buying more land there. British Paints has been producing synthetic resins. This side of the manufacturing programme is likely to be extended further in order to supply synthetic resins to other paint-making concerns. Being a subsidiary of British Paints (Holdings) Ltd of England, the Indian Company enjoys the advantages of technical experience. The growth possibilities are enhanced by the fact that British Paints is likely soon to produce special types of protective coatings which are not at present manufactured in India and which are being imported in substantial quantities. This project will be started in collaboration with a reputed foreign company. It is proposed to form a new company for this purpose but British Paints will hold 51 percent of the latter's share capital.

The balance-sheet of British Paints (India) for the year ended December 1959 shows a strong financial position. The reserves will amount to more than Rs. 35.39 lakhs when the new share issue is subscribed. They will then constitute nearly 71 percent of the share capital after the issue. In view of the satisfactory state of business, the directors hope that they can easily pay an ordinary dividend of 12½ percent, taxable, on the increased capital. Considering the dividend outlook and the growth prospects, the entire offer should be taken up easily. Steps have been taken to get the scrip listed in the Calcutta stock market.

Madras Aluminium Offer

The Madras Aluminium Co. Ltd, a new concern incorporated in August 1960, proposes to build a factory in Mettur, Madras State, for manufacturing aluminium ingots and alloys. Foreign collaboration has been arranged with Montecatini of Italy, which is associated with the Neyveli project

of the Government of India and which has agreed to supply the plant and equipment on convenient deferred payment terms. The Industrial Finance Corporation of India has given a guarantee for the foreign loans which are to be taken. The cost of the project is estimated at Rs. 9.60 crores. The installed capacity of the factory will be 10,000 tons of aluminium a year, of which 7,000 tons will be ingots and 3,000 tons will be alloys. The location of the factory is suitable from the point of view of raw material supplies. It expects to obtain adequate quantities of bauxite, power, water and transport at reasonable prices. The bauxite will come from the reserves in the Sheveroy hills.

Madras Aluminium will offer 60,000 preference shares of Rs. 100 each and 126,500 ordinary shares of Rs. 100 each for public subscription at par next Monday. (Fuller details of the offer are published on a later page.) The issued capital is Rs. 6 crores, divided into 150.000 redeemable cumulative preference shares of Rs. 100 each and 450,000 ordinary shares of Rs. 100 each. The preference shares carry a dividend of 9.3 percent, free of company income tax but subject to the usual tax deduction at source. They are redeemable on 1st January, 1975. Of the total ordinary share issue, 323,500 shares have been arranged for subscription. The foreign collaborators will take up 120,000 ordinary shares. The entire issue of preference and ordinary shares has been underwritten by various bodies, including the Madras Industrial Investment Corporation and the Life Insurance Corporation.

The prospects for the aluminium industry are good, considering the steady increase in the demand for the metal. *Per capita* consumption in ıdia is estimated at only 0.12 lb, compared with) lbs in the U.S.A., 12 lbs in Canada and 10 lbs the United Kingdom. The domestic demand expected to increase to more than 75,000 tons ınually by 1966. The present production is nearly ',000 tons a year. So Madras Aluminium should ave no difficulty in selling its production. The ompany also intends to set up rolling mills with p-to-date equipment. The directors hope to earn od profits when production begins; so investent in the shares is expected to be remunerative.

'etter Year for Nepa Mills

The progress of the National Newsprint and aper Mills Ltd during the year ended March 960 has been fairly satisfactory. The Company anufactured 22,411 tons of newsprint, or 573 tons ore than in the previous year. The output consted of 19,203 tons of the bleached and 3,208 tons the unbleached variety. The net profit was Rs. 7.76 lakhs, after providing for depreciation and evelopment rebate reserve. Speaking at the annual eneral meeting of the Company in Nepanagar st week, Sir A. Ramaswami Mudaliar, chairman, id that this is the second year in succession in hich the Company has made a clear profit. (A ller version of the speech appears on another age in this week's issue of *Capital*.) As the Comany continues to improve its financial position ear by year, it may be possible to declare a divind in the near future.

The demand for newsprint has risen, and the uantity supplied to newspapers has increased uring the year to about 9,400 tons. After newsapers, priority is given to printers and publishers text-books and books of general interest. The uantity supplied to them during 1959-60 was 662 tons. The rest was distributed to Governents and dealers as duty-paid goods through the ompany's various agents and distributors. The uality of newsprint, Sir Ramaswami said, has een improved by mixing a small proportion of nported chemical and mechanical pulp. This as not only added to the strength but also imroved the appearance and colour. The Company carrying on investigations to improve the uality further. It has had difficulties in procurng chlorine due to breakdowns in suppliers' plants r transport shortages. Besides, on account of ne long distances, heavy freight charges have to e paid. Nepa is, therefore, examining a proposal have its own chlorine caustic plant to meet its equirements of chlorine and caustic soda. Plans ave also been drawn up for doubling the capaity of the newsprint plant to 200 tons a day during ne third plan. The scheme has been included n the draft third plan, Sir Ramaswami said.

luminium Corporation Cheerful

The Aluminium Corporation of India Ltd has roduced excellent results for the year ended larch 1960. The profit has increased in spite of a ise in production costs. Commenting on the results his chairman's address at the annual general eeting in Calcutta last week, Mr. Lakshmipat inghania took a fairly optimistic view. (A fuller ersion of the speech is published on a later page.) luminium Corporation has undertaken an expansion scheme for trebling its output. The project is being completed in collaboration with Aluminium-Industrie Aktien Gesellschaft of Zürich, Switzerland. Production from the new plant is expected to begin at the end of 1961. Mr. Singhania mentioned the prospect of rights ordinary shares being issued in the proportion of one new share for every two held at par. This will give the Company Rs. 31.25 lakhs out of the total of Rs. 4.5 crores it requires as the estimated cost of the project. The rest of the money will be arranged by means of borrowing and deferred payments. The demand for the metal is expected to increase steadily with the growth of industry. A production target of 82,500 tons has tentatively been fixed for aluminium under the third plan, but some say that the demand may be even higher. So the scope for raising production is large. But Mr. Singhania thought that the future of the metal depends to a great extent on its cheapness. It is, therefore, necessary that the price be kept down. At present, the excise duty imposed on the metal is substantial.

Refractories from Assam Sillimanite

Mr. S. M. Wahi reviewed the progress of the project for setting up a refractory plant in Ramgarh, Bihar, in his address from the chair at the recent annual general meeting of Assam Sillimanite Ltd in Gauhati. (The full text of the speech was printed in *Capital* on 22nd December, 1960.) He stated that the cost of the project would be Rs. 81.23 lakhs for the first stage and Rs. 47.60 lakhs for the second stage. When the first stage is completed, the output will amount to 29,000 tons of refractory bricks and shapes, mortars and mixes. Production may begin in October 1962. Meanwhile, a refractory plant is to be set up in Ramgarh with the smaller installed capacity of 6,000 tons. Steps are being taken to increase the production of the mines by 25 percent and to develop the fireclay deposits. The latter project will go into production soon. So it is hoped that the earnings of the Company will not suffer because of the delayed installation of the major project. Mr. Wahi thought that the manufacture of refractories will be remunerative as the demand has been increasing steadily. The Company's mining operations in Assam have made satisfactory progress and the Sonapahar mines are being developed.

Midnapore Zemindary Suffers

Shareholders of the Midnapore Zemindary Co. Ltd agreed to a further reduction of the Company's capital to the extent of Rs. 7.50 a share on 5th January, 1960. The sanction of the Calcutta High Court was received in September 1960, so shareholders are expected to receive this second payment soon. The directors have considered the question of further repayments of capital, but these will be possible only when progress is made in completing the outstanding tax assessments. The Company has suffered a loss of Rs. 1.07 lakhs for the year ended April 1960, so the debit balance has increased to Rs. 21,93,339 and is carried forward. The directors describe as unsatisfactory the progress made in settling claims concerning the properties acquired by the State acquisition authorities. In West Bengal, for instance, compensation rolls have still not been published, although the Company's properties were acquired more than 4½ years ago. The Bihar Government also has not published any compensation rolls yet. Objections have been made to the provisional draft compensation rolls prepared in Pakistan. The estate acquisition authorities in various areas have been extremely lazy in settling the Company's claims for arrears of rent outstanding up to the date of acquisition.

Balrampur Sugar to Expand

The Balrampur Sugar Co. Ltd proposes to increase the capacity of its plant from 1,000 tons to 1,200 tons a day. The project may take nearly three years to complete. It has already handed over its Tulsipur factory to the Tulsipur Sugar Co. Ltd under the scheme of arrangements sanctioned by the Calcutta High Court. Balrampur Sugar's profit has declined from Rs. 2.39 lakhs to Rs. 1.91 lakhs for the year ended June 1960. The taxable ordinary dvidend of 8 percent has been maintained, but the share capital has been reduced by Rs. 1 lakh to Rs. 16.31 lakhs as a result of the transfer of the Tulsipur factory. At the present price of Rs. 3 a share, the yield works out to 6.7 percent. The dividend is covered more than thrice. Taxation is allocated Rs. 10,000 (against Rs. 1.30 lakhs) and development rebate reserve Rs. 1.31 lakhs (against Rs. 42,000). The carry-forward is Rs. 48,466, compared with Rs. 45,327 brought in. The cane crush increased from 2.2 million maunds to 2.6 million maunds and the recovery improved from 9.43 percent to 9.94 percent. The Company has issued 280,000 new ordinary shares to the existing shareholders in the ratio of one new share for every share held for subscription at par. The new shares will not participate in the dividend for 1959-60.

Ahmedabad Advance Dividend Up

The Ahmedabad Advance Mills Ltd has reported encouraging results for the year ended June 1960. The profit, before providing for development rebate reserve, amounts to Rs. 17.01 lakhs, against only Rs. 1.34 lakhs in the previous year. Sales are Rs. 2.88 crores, or nearly Rs. 42 lakhs more than in 1958-59. The directors have recommended an ordinary dividend of Rs. 10 a share, against Rs. 7 a share, both subject to deduction of tax at source. The preference dividend which has been recommended is 5 percent, tax-free. This works out to Rs. 6.50 a share gross, or Rs. 4.55 net The dividend is calculated on the basis laid down in the Preference Shares (Regulation of Dividends) Act, 1960. With Rs. 2 lakhs drawn from the development rebate reserve and Rs. 65,000 transferred from general reserve No. 1, the amount available for appropriation is Rs. 19.77 lakhs. No provision has been made for taxation (as in the previous year). Development rebate reserve receives Rs. 6 lakhs, against Rs. 1 lakh. A sum of Rs. 9 lakhs is transferred to general reserve No. 2, leaving a balance of Rs. 12,482 to be carried forward, against Rs. 11,155 brought in.

Hindustan Sugar to Make Paper

The Hindustan Sugar Mills Ltd wants to manufacture writing, printing and wrapping paper and boards at its existing undertaking in Colagokarannath in Uttar Pradesh. Paper is to be made out of bagasse and the proposed plant will have a capacity of 15,000 tons a year. The entire project is estimated to cost Rs. 5 crores. The Company will provide Rs. 1 crore from its own resources and raise another Rs. 2 crores from the market by issuing fresh capital. A sum of Rs. 2 crores needed to cover the cost of imported machinery will be raised from abroad by seeking loans from foreign credit agencies. The plant and machinery will cost Rs. 3 crores, of which Rs. 1 crore will be spent on machinery of Indian manufacture. The project has been approved by the Central Government.

Great Eastern Shipping Troubles

The shipping industry in India is facing critical times not only in the overseas trade but also on the coast which was regarded as a nursery for its development. Its future appears to be bleak unless the Government's policies become more realistic. This view was expressed by Mr. A. H. Bhiwandiwalla, chairman of the Great Eastern Shipping Company, in his annual statement to shareholders. In spite of the abundance of Government cargoes, the existing small fleet of Indian overseas ships finds it difficult to get them. The Government has decided, as a matter of policy, that Ministries and autonomous corporatios like the State Trading Corporation should buy their imports on an f.o.b. basis and sell for export on a c.f. or c.i.f. basis and should allot the cargoes to Indian ships. But various Ministries and the S.T.C. light-heartedly disregard the decisions of the Government. Mr. Bhiwandiwalla, therefore, pleaded that control over the movement of all Government cargoes should be entrusted to the Shipping Co-ordination Committee in order that national ships get cargoes on a priority basis, Government shipping requirements are met with maximum efficiency and foreign exchange resources are not wasted.

Bulk shipments constitute a predominant part of Government cargoes. The tramp shipping companies can transport such cargoes. But tramp shipping cannot be built up unless there is more freedom of operation. Shipowners are still subject to vexatious rules and regulations which no maritime country should impose on tramp shipping The coastal fleet of Indian shipping companies is facing a crisis due to the short-sighted policies of the Indian railways. The prospect is dismal unless the Government takes prompt steps to implement the recommendations of the Rail-Sea Co-ordination Committee. The other chief handicaps of Indian shipping are the high cost of stores and repairs and the shortage of technical personnel. The purchase of steamers on an instalment basis raises the price of ships by as much as 25 percent or 30 percent above the normal.

Referring to the allotment of only Rs. 55 crores to shipping in the third plan, against Rs 104 crores recommended by the National Shipping Board, Mr. Bhiwandiwalla said that the lower allotment will arrest even the present rate of growth when the need is to accelerate it. The Central Minister for Shipping, Mr. Raj Bahadur, stated in the Lok

abha some time ago that the freight payments or 50 percent of the U.S. foodgrains which India s free to transport in her ships would amount to bout $51 million. This amount or part of it, which otherwise will go out of the country in the hape of freight payments, can well be used for cquiring ships to carry the foodgrains.

Speaking about the Great Eastern Shipping Company's prospects for the current accounting year, Mr. Bhiwandiwalla was rather pessimistic. The gross freight earnings in the first half of the year will amount to about Rs. 1.36 crores against Rs. 1.75 crores in the corresponding period of the previous year. Besides unsatisfactory trading conditions, a few of the Company's vessels have been laid up for longer spells. The *Jag Janani* had an accident in the river Hooghly, which made it necessary to scrap the vessel. The Company was, however, fortunate in recovering not only the scrap value of the ship but also an insurance claim of Rs. 8.50 lakhs. The chairman said that unless there is an improvement in trading and freights, he cannot take an optimistic view of the near-term prospects. The dividend to shareholders will be paid in March instead of in January because more time will be needed to settle the difference between the Company's view of the effect of Section 15C of the Income Tax Act and the official opinion on this issue. Payment of dividends has been recommended out of such past reserves as are exempt from income tax and super tax under the provisions of the Act. The tax authorities, however, hold that the dividends are taxable.

Kalinga Industries to Expand

Kalinga Industries of Calcutta, which is already producing pig iron in Barbil, Orissa, has applied to the Government for increasing the capacity of its plant from 15,000 tons to 72,000 tons. The Company has stated that, although it is situated near the coalfields, it is unable to compete in the market with pig iron produced from large integrated steel works because its scale of production is uneconomic. The Company considers that it will be able to reduce its cost of production significantly if it is allowed to increase its output to 72,000 tons a year. The Central Government has approved the scheme, subject to suitable conditions being imposed in the licences to secure the proper use of iron ore available locally and the conservation of metallurgical coals, particularly from Jharia. The additional capital required is estimated at Rs. 1 crore, of which Rs. 40 lakhs will be spent on machinery to be imported from the sterling area. The Company has made tentative arrangements to pay for the machinery, under which 10 percent of the value will be paid with the order and the balance will be paid in five equal annual instalments commencing from the fifth year of the shipment with 6-percent interest, tax-free, which will be paid annually. Payment for machinery can also be made by exporting the pig iron produced by the Company.

Malabar Iron and Steel

The Malabar Iron and Steel Works Ltd of Palghat, Kerala, has been given a licence under the Industries (Development and Regulation) Act for manufacturing 350 tons of grey iron castings and 200 tons of malleable iron castings a month on a single-shift basis. It may also later undertake the progressive manufacture of automatic bottle-filling units, automatic Driedier (paper-making) units, automatic tea-roasting machine units, capstan lathes, automatic lathes, surface grinders, universal milling machines, hacksaw machines, automatic drilling machines and special-purpose machines. The Company is expected to make a capital issue of Rs. 50 lakhs soon. Its authorised capital is Rs. 1 crore.

Vidarbha Iron and Steel

Messrs Hind Traders, Bombay, have promoted a new Company called Vidarbha Iron and Steel Co. Ltd to undertake the manufacture of pig iron. It is reliably understood that the project has been approved by the Government. The promoters of the venture have assured the Government that they will use local reserves of iron ore and limestone and coals other than the metallurgical coals of Jharia. The factory, which will be located in Chanda, Maharashtra, will have an annual capacity of 96,000 tons of pig iron. The Company has secured the collaboration of the well-known East German firm of Dia Investa Export. The latter will supply plant and machinery, supervise the construction of equipment to be made in India according to its designs, train Indian personnel in its factories in East Germany, erect the plant and supervise the working till guaranteed performance is reached. The capital equipment to be imported from East Germany is estimated to cost Rs. 5.84 crores. No foreign exchange expenditure is involved because the payment will be made in nine equal instalments by deliveries of Indian iron ore. The Company will have an authorised capital of Rs. 15 crores, of which Rs. 10 crores is likely to be issued.

Bedi Paper Mill Proposal

Bedi and Company (Private) Ltd, Bangalore, has asked the Central Government for permission to establish a new undertaking in Panipat, Punjab, for manufacturing superior writing and printing paper from begasse. The scheme is based on foreign collaboration and investment. Parsons and Whittemore of the United States will participate to the extent of about Rs. 50 lakhs in the equity capital of the Company and will supply machinery on extended credit terms. The plant will have an annual capacity of 30,000 tons of writing and printing paper. The capital equipment is estimated to cost nearly Rs. 5.25 crores, of which only Rs. 75 lakhs is to be spent on indigenous machinery. The Central Ministry of Commerce and Industry is reported to have approved the project, but the Company has still to receive the licence.

Bhopal Sugar Expands

The working results of Bhopal Sugar Industries Ltd for the year ended September 1960 show a gross profit of Rs. 17.08 lakhs, which is Rs. 2.30 lakhs more than in the previous year. It would have been higher still but for the marked increase in the closing stock from Rs. 11.92 lakhs to Rs. 33.56 lakhs. The Company crushed 72,608 tons of sugarcane, against 70,092 tons in the previous year. Its sugar output increased from 70 680 bags to 73,320 bags. The average recovery was maintained at 10.11 percent (against 10.10 percent). The average yield from the farms was, however, 30.88 tons an acre, against 32.48 tons in the previous year. The Company's application for expanding the crushing capacity from 750 tons to 1,250 tons a day has been approved by the Government. In accordance with the first phase of the expansion programme, the crushing capacity has been increased to 1,000 tons a day by the addition of machinery worth about Rs. 7 lakhs. The machinery has already been installed and will be brought into use during the current season. This is expected to result in more efficient crushing and higher recovery.

While the gross profit is up, the net profit has been shown at Rs. 11.44 lakhs, against Rs. 11.66 lakhs in 1958-59. The figure has been arrived at after providing Rs. 1.24 lakhs (against Rs. 1.18 lakhs) for managing agents' commission, Rs. 2.03 lakhs (against Rs. 1.94 lakhs) for depreciation and after adjusting an amount of Rs. 81,000, being the estimated loss on the sugar quota allotted to the factory under the Sugar Export Promotion Act. A sum of Rs. 2.37 lakhs has also been provided for the cess on sugarcane levied by the Madhya Pradesh Government under the Madhya Pradesh Sugarcane (Regulation of Supply and Purchase) Act, 1958. According to the Company, the Supreme Court has already declared the U.P. Sugarcane (Regulation of Supply and Purchase) Act, 1953, as void. So it is possible that the sum of Rs. 2.37 lakhs earmarked in the year's accounts will not be payable to the Madhya Pradesh Government. However, the implications of the Supreme Court's judgment are being studied by the Central Government.

Adding to the net profit Rs. 5,189 carried forward from the previous year and Rs. 1,416 from the unclaimed dividend account, the amount available for appropriation is Rs. 11.51 lakhs. Provision for taxation amounts to Rs. 4.50 lakhs (against Rs. 5 lakhs) and general reserve absorbs Rs. 1.50 lakhs (against Rs. 63.115). The directors have recommended a lower dividend of Rs. 2.25 a share, subject to deduction of tax, against Rs. 2.50, taxable, in the previous year. The proposed ordinary dividend absorbs Rs. 3.95 lakhs, against Rs. 4.37 lakhs. A sum of Rs. 62,500 has been appropriated for paying the proposed dividend on preference shares. The directors have recommended that a dividend of 5 percent be paid on the 5 percent tax-free preference shares, subject to deduction of tax at source, and subject to any increase that may be permissible under the Preference Shares (Regulation of Dividends) Act, 1960. After making other adjustments, a sum of Rs. 93,383 has been carried forward.

Belapur Sugar Falls Sharply

Within a fortnight of the release of the Company's annual report showing an all-time record profit of Rs. 85.60 lakhs for the year ended September 1960, the shares of the Belapur Company have dropped sharply from Rs. 410 to Rs. 329, reflecting investors' fears about the possible effects of the Maharashtra Land Ceiling Bill on the Company's prospects. Shareholders can derive little comfort from the chairman, Mr. Neville N. Wadia's statement at the annual meeting in Bombay on 29th December that the Company does not own any land of its own, for the uncertainty continues about the fate of the 11,500 acres of land under sugarcane cultivation which has been secured under lease. Of this, 7,000 acres are from the State Government and 4,500 acres from private parties. The lease from the Government has yet to run 59 years and that from private parties will expire after 25 years. The chairman was unable to say how the Bill would affect the Company because the directors have yet to study its full implications. But he assured shareholders that the management would take all steps to safeguard their interests. He also indicated that all the Deccan sugar companies might jointly take up the issue with a view to protecting their huge investments in land.

Mr. Wadia said that the Company has received the Government's permission to increase its crushing capacity from 1,000 tons to 1,200 tons a day. But in view of the proposed land legislation, the directors will have to consider the advisability of increasing the crushing capacity. During the current year, the Company has been doing well—better than in the previous year when it set an all-time record for both profits and dividends. During the first two and a half months of the current year, the factory has crushed about 70,000 tons of sugarcane. It is likely to crush about 210,000 tons, against 177,000 tons in 1959-60. The Gangapur Sugar Mills, added Mr. Wadia, in which the Company has recently invested substantial funds, will be a subsidiary of the Belapur Company when the various formalities are completed. The assets of Gangapur Sugar total Rs. 1.61 crores.

Maharashtra Sugar Shares Slump

Confidence in shares of the Deccan sugar companies has been rudely shaken by the contemplated land ceiling legislation of the Maharashtra Government. The shares suffered a disastrous fall in December. Belapur fell from Rs. 410 to Rs. 329, Walchandnagar from Rs. 290 to Rs. 255, Phaltan from Rs. 191 to Rs. 161 and Maharashtra Sugar from Rs. 262 to Rs. 210. What these shares had gained over the year was lost in a matter of few weeks. The steep decline had nothing to do with the current working of the companies which are reported to be doing quite well. It reflected investors' anxiety over the likely effects of the Land Ceiling Bill. Since the Bill has yet to be published, its exact contents are not known. But Press reports indicate that Mr. Y. B. Chavan, Chief Minister of Maharashtra, has secured the approval of the Central Government and the Planning Commission. Hitherto, the Commission had insisted on exempting, from the scope of a ceiling, efficiently-managed farms which consisted of compact blocks on which large investments had been made to effect structural improvements. Most of the Deccan sugar companies own huge farms and grow their own sugarcane. The total land is estimated at about 300,000 acres, which is said to include land taken on long lease from the Government as well as private parties.

The sugar factories have invested vast sums in the land. Efficient management of the farms and the use of advanced agricultural techniques have enabled the companies to produce sugarcane which is the best in India. The yield an acre and the quality of cane are said to compare favourably with that produced in the most advanced countries. The lands are now to be brought under ceilings which are said to vary from 24 acres to 100 acres. So the Deccan sugar companies are greatly perturbed by the proposed legislation. The break-up of the farms will adversely affect production because it is hard to believe that individual or co-operative societies can maintain the same standard of efficiency in cultivation as the big factories with their vast resources. It is difficult to assess the impact of the land ceiling legislation on the working results of the sugar companies. But until the uncertainty about the provisions of the Bill is removed, investors' confidence in the shares of Deccan sugar companies is unlikely to revive.

Manufacturing Photo Goods

The increasing demand for photographic film and paper on the one hand, and the scarcity of supplies due to foreign exchange difficulties on the other, have encouraged many entrepreneurs to prepare schemes for their manufacture in India with foreign collaboration. Surendra Overseas Private Ltd of Calcutta, Alphin Studios and Birla Gwalior have already submitted their plans to the Central Government for manufacturing photosensitive goods. The project prepared by Surendra Overseas visualises the production of one million square metres of cine film, one million

square metres of photographic film, 200,000 square metres of X-ray films and 200,000 square metres of photographic printing paper. The casting of film is included in the programme and 2.2 million square metres of film will be cast from the cellulose tri-accetate flakes expected to be produced in the country. The entire project is likely to cost about Rs. 1.77 crores. Imports of raw materials will amount to Rs. 10 lakhs a year. The plant and machinery will come from Yugoslavia and will be paid for in rupees. Foto Chemica of Zagreb (Yugoslavia) will be the foreign collaborating firm. It will provide the technical know-how and train Indian personnel. Only Rs. 1 lakh is to be paid for the know-how.

Alphin Studios proposes to manufacture sensitised aluminium sheets, plastic sheets, glass plates and photographic printing paper. The capacity proposed for photographic printing paper is around 25,000 square metres. The Company will employ a Swiss technician for obtaining the know-how for the various processes. Its capital will be Rs. 13.5 lakhs and imported equipment will cost about Rs. 5.75 lakhs. Imported raw materials will cost Rs. 3 lakhs a year. The value of the goods to be produced by the factory is estimated at Rs. 24 lakhs.

Birla Gwalior proposes to manufacture 1.4 million square metres of cine film, 500,000 square metres of X-ray and roll films and 500,000 square metres of photographic printing paper. The Company is securing the collaboration of Adox Photo Works. The terms of collaboration are said to involve the import of equipment worth Rs. 2.25 crores from free sources, the payment of 800,000 deutschemarks towards drawings, etecetera, and a royalty payment ranging from 3 percent to 1 percent depending on production. The Company, it is understood, has been advised by the Central Government to discuss the terms of collaboration again with Adox and modify them in such a way that the foreign exchange component of the project is secured through foreign equity capital participation and/or rupee payment.

Cloth Prices Cut

For the second time in four months, the textile industry has been compelled to reduce the ex-mill prices of cloth. The new set of prices became effective from 1st January. The total output has been divided into two categories—popular and others. The former varieties are to be selected by individual mills in consultation with the regional associations. Prices continue to be fixed on the basis of certain percentage increases over the rates prevailing in August 1959. The percentage increases agreed to in September 1960 were 25 for coarse, 22 for lower medium, 18 for higher medium, 11.5 for fine and 9 for superfine. The revised percentages are 17 for coarse, 14 for lower medium, 10 for higher medium, 6 for fine and 4 for superfine in relation to popular varieties. The figures for others are: coarse 20, lower medium 17, higher medium 13, fine 8 and superfine 6. The Indian Cotton Mills Federation has stated that the latest revision of prices will adversely affect the weaker units of the industry producing coarse and medium cloth. That is perhaps unavoidable if cloth is to be cheaper. But the recent cut in prices is unlikely to cheer the consumer; the entire benefit of the price reduction will not be passed on to him, for the share of the distributive trade has been increased from 15 percent to 18 percent. It is surprising that the Government should have thought it necessary to feed the distributive trade at the expense of the industry and the consumer. If the 15-percent margin was considered inadequate by the distributive trade, it was because cloth had to pass through too many hands before it reached the consumer. One wonders whether all the intermediaries are really necessary. If stocks have been accumulating with mills over the past few months, it is because of the continued uncertainty about cloth prices. Since the Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri, has been urging millowners to cut prices further, the trade could scarcely be expected to lift the goods from the mills.

Prices can be brought down only through increased production. The Government now wants the industry to increase its output by about 10 percent. On its part, it is ready to make available adequate supplies of raw cotton at reasonable prices. Mills have been asked to run three shifts wherever feasible. Efforts for increasing production will be widely welcomed, but it is doubtful whether the 10-percent increase in output now promised will materialise. Mill production is now running at an annual rate of 5,000 million yards. A 10-percent increase will mean another 500 million yards. Even in 1957—a record year for cloth production—mills produced only 5,317 million yards. Several mills have closed down since then. Enquiries in textile circles indicate that out of 191 spinning mills, 86 are at present working a third shift. Among the 292 composite mills, 193 are working a third shift on the spinning side and 77 on the weaving side. Special efforts will be necessary to put more mills on third-shift working.

CORRESPONDENCE

TAXATION OF GRATUITY

(To The Editor of "Capital")

Sir,

In India, great injustice is done to employees in commercial and industrial establishments by taxing the gratuity amount received by them, although a negligible relief is given by spreading the amount of gratuity over three years preceding the retirement, whereas retirement gratuities to employees of the Government, semi-Government and local authorities and the universities are not subjected to tax and are not taken into account for determining the rate of tax on other income. Retirement gratuity is evidently a provision for a reasonably comfortable life during the well-earned rest after retirement. If a large amount is to be paid in taxation (sometimes it may be as much as 70 percent or 75 percent of the retirement gratuity), the whole object of the provision is defeated, and it largely amounts to collection of tax by the Government. It is indeed difficult to understand how different taxation laws can apply to citizens of India working for the Government or for the private sector.

I believe that I voice the feeling of fellow employees in the commercial and industrial establishments in requesting the Finance Minister through your columns to rectify the inequity in taxation by extending the same law as that for Government employees. I had occasion to write on the inequity of taxation concerning provident funds about five years ago. The then Finance Minister did see the *injustice done* to us and generously agreed to extend the same treatment to all classes of employees. I have no doubt that our present Finance Minister will do justice so long overdue.

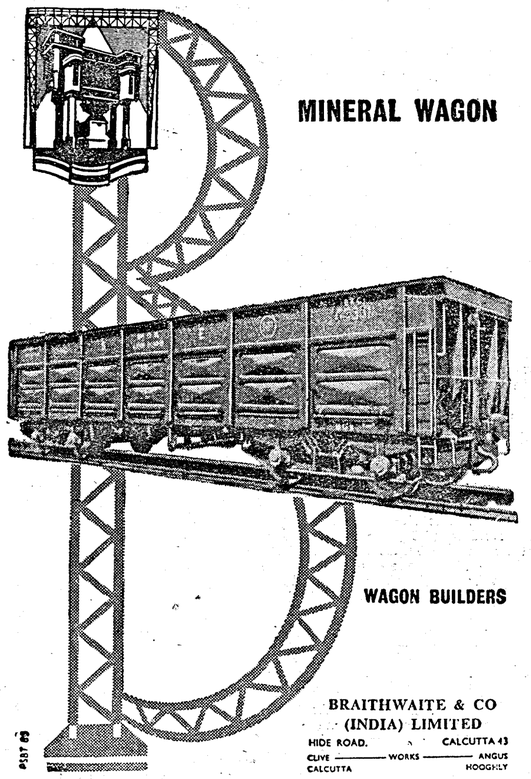
Yours etcetera,
J. C. Patel

Bombay, 21st December, 1960.

1900

The review of the last year of a century brings so many thoughts and memories before us that it is difficult to dissociate from the short span of the twelve months, which have just rolled away into unreclaimable past, the history of the entire century. It would be impossible within the limited space of a weekly article to attempt the task of a century review. Yet it is almost as impossible, or shall we say, intellectually uncongenial, to confine the review of the year 1900 to that year alone. It happens also that the circumstances of the past year do not invite much pleasurable retrospection, and although this alone would be a reason for rather than against a minute and detailed examination of that year, we think it may be more useful and interesting to spread our review briefly but comprehensively over the landscape which the rays of the setting century light up. We may, however, suitably allude to some of the most striking conditions of trade and finance during the last twelve months, as a prelude as well as an object point; first, to discover in vulgar parlance, where we are, and secondly to try to define the results of previous progression. Seldom has a year recorded so many adverse circumstances as year 1900. A famine, following upon a similar God-sent calamity three years before, caused severe distress in large districts, destroyed the livestock, and sterilised the soil. Plague defied the efforts of science to subdue it and ravaged large districts. The War in South Africa caused anxiety politically and individually and in the Stock Markets depression. The Indian Cotton Mills were assailed during the year by the abnormal co-incidence of an enormous crop in the United States and a famine crop in India. Indigo has been threatened with extinction by the competition of a powerful and enterprising company of aniline dye manufacturers in Germany. Tea has continued to suffer from over-production, and imports generaly have been checked by the poorer condition of consumers. The War in China has been the crowning misfortune of the year, bringing the Indian yarn manufacturing trade to a standstill, and intensifying the strain on the Money Markets of Europe. In Calcutta we have had to endure floods which did much damage both in the town and suburbs and throughout the 24-Pergunnahs. The rains however, have been fair, and in most districts harvests are well reported.

FROM
CAPITAL
3rd January, 1901



UNDER SECRETARY TO GOVERNMENT
10 JAN 1961
PUBLIC DEPARTMENT

A Ditcher's Diary

When the normal diversions of Calcutta's Christmas season spared me for some of the one-too-numerous attractions of its cultural life, the first visit I made was to the Children's Little Theatre. I had heard so much about it that I was determined not to miss a performance this year, and I must say my expectations were more than fulfilled. Children, I always think, are born artistes, and to see them performing with such easy grace and confidence on the stage was a joy indeed. It was certainly an example to their elders. I understand they owe their excellent training to a body of amateurs who run a school which is largely financed out of these annual shows. I should have thought that in a country where the Government is forever devising plans for developing its children's talents and personalities, the State would have given more concrete help to such movements as the Children's Little Theatre. One might also have expected a wider public support than comes from simply paying for a ticket at the door. I understand that despite their efforts, the organisers have not yet been able to raise enough funds to build a special auditorium where performances can be held more than once a year on frequently changing sites. Calcutta offers few enough facilities for children's diversion and entertainment, and I often wonder why people here are so little concerned about the fact. It would probably be useless to suggest that it should be made the responsibility of the City's Corporation to provide a building which, apart from housing the auditorium, could contain children's schools of music, drama and painting, but surely the Central or State Governments could do something about it. I am not optimistic though. I have heard of a Children's Film Society which Dr. Keskar's Ministry has helped set up for producing films for children, and that this body recently organised a children's film festival in New Delhi at which works from many countries were exhibited. I would be interested to know what the Society's own contributions were, if any, and how they compared with those from outside.

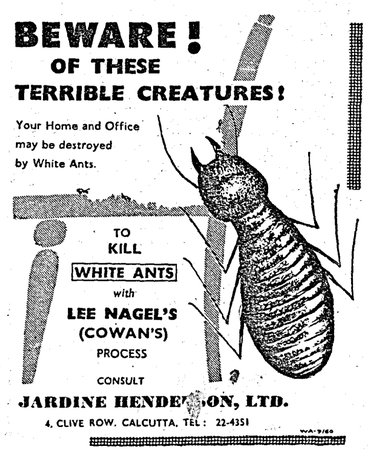
Since Mr. Khrushchev is prepared to forget the *U-2* affair, for which Mr. Kennedy said he would have apologised, it seems possible that in the New Year the East will once again meet the West. This, however, has nothing at all to do with the impending closure of Lahore's *Civil & Military Gazette*, once employer of Kipling. Nowhere in the world was 1960 a good year for the Press—except perhaps in Russia where *Pravda* published its first ever cartoon of Mr. Khrushchev and his son-in-law gave *Izvestia* a new look. The death of the *News Chronicle*, *Star*, *Empire News* and *Sunday Graphic* will scarcely be compensated by birth of the *Sunday Telegraph*. In Indonesia, the Press is very much controlled; and in Ceylon there is still talk of "nationalisation" which has already been seen in Pakistan. In recent years, I am afraid, I have not seen much of the *C. & M. Gazette*; but in the 'thirties it was a neat, well-produced daily with some readers being taken away by the Delhi *Statesman* and others by the fiercely nationalist *Tribune*. It was in those days a British paper, of course; and technically it set a standard of professional journalism which has done India—and Pakistan when it came—no harm at all. I am well aware that there are many very fine Indian journalists; I am proud to be a colleague of some of them; but a little international competition may still be a good thing. The appearance of the *New York Times* from Paris, the same edition as in New York, has, I like to think, made journalists in Britain and Europe a little more alert. In India, I am delighted to see that the award for the best produced English daily has every year gone to the Calcutta *Statesman* which, with all its deficiencies, is a spur to its contemporaries. I am happy to be able to add that every time I have been to Delhi I have heard many say that *Capital*, the only other predominantly British-owned newspaper, has a distinct rôle to play in the country's journalism and its economy. Well, one does one's best.

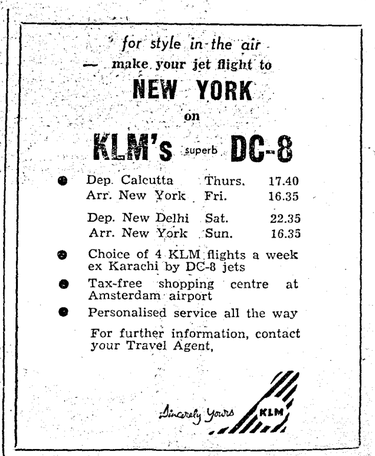
Of book imports into India valued at Rs 164 lakhs in 1959-60, United Kingdom publishers accounted for a fraction more than half (Rs. 85.3 lakhs) with the U.S.A. close behind with Rs. 69.5 lakhs. This is not surprising when one remembers the rôle which the English language plays in Indian life. It would be strange indeed if there was any mass demand for French, German, Italian or Japanese literature. And yet for a country of the size and population of India a little over Rs. 1½-crore worth of imported books is not large considering that—given the chance—Indians are by nature voracious readers. But, of course, it is not just a matter of foreign exchange; translated into rupees, the present high prices of many British and American books must look formidable indeed to the readers of limited means. But soon we are to see the first of the low-priced books in the new English Language Book Society series, published for export under the auspices of the British Government. According to a writer in the *Sunday Times*, they will be mainly scientific and technical works with a uniform cover design at prices of nine, 12 and 15 shillings or the rupee equivalent thereof. For the moment it seems that it is university text-books which are in most urgent demand, but later E.L.B.S. plans include such aids to learning English as dictionaries, grammars and text-books and a catalogue of modern English literature for distribution among overseas booksellers "whose stocks of British books", says the *Sunday Times* writer, "often tend to be unrepresentative and somewhat eccentrically selected".

The British are reputed to be a cool-headed race, given to considering their thoughts carefully before opening their mouths, and often preferring silence to saying anything at all. Especially is this supposed to be true of British business men, who, for that very reason, have sometimes been accused, not always fairly, of having no thoughts at all. It is not necessarily so of American business men. I know of instances during the past few years when influential American tycoons visiting India—true to their famed reputation for being long on enthusiasm and short on caution—have reduced U.S. diplomatic representatives here to despair by light-heartedly contradicting in public the very things they and their Government have been trying to impress on Indian opinion for the past decade. And all on the strength of a three-day stay. I would hate to see visiting British business men become so indiscreet, but something of the sort happened the other day when a very important one is reported to have delivered himself of the sweeping statement: "India is safe for British capital". Or words to that effect How, I wonder, can he possibly know? India is safe enough now, of course; but that is not what he is reported as saying. It may be safe for many years; but a prudent business man has to look well into the future, and in India, no less than in all under-developed countries, that contains more than an element of uncertainty. I am now wondering by what revelation of the crystal ball our visiting business friend could have arrived at any other conclusion. It appears the time may have come to warn visiting business men, though not, I imagine, the managements over here who may be in a position to advise them, that public utterances on such subjects are best clothed in the usual evasive platitudes, lest the words be quoted against those whose task it is to persuade the Indian Government—and who are undoubtedly working in India's best interests—that the maximum inflow of foreign capital can only be obtained in a capital-hungry world by *increasing* what considerable safety it undoubtedly already enjoys here. Put more directly, I might recommend the earthy wisdom of a notice which hung in an office I once worked in: "Please god *help me this day to keep my great big mouth shut* until I know what the hell I am talking about".

There never was much reason to expect Russian commissars to be favourably disposed towards Indian yoga, although I have heard of Soviet researches in homoeopathy or ayurveda. The writer who first thought up the dichotomy, Mr. Arthur Koestler, had also gone into the merits of yoga in some detail; and in his latest book, *The Lotus and the Robot*, he says quite plainly that he found most of the more extravagant spiritual claims made on its behalf altogether unproven. The argument has already been trotted out that what has gone on for so many centuries must be right. On that basis many must still believe that the earth is flat. If I understood Koestler aright, he found that some of the yogic exercises were not unlike similar exertions elsewhere; and physical fitness may well be the reward without proving or disproving any of the spiritual claims. That yoga cures diseases otherwise incurable is unsubstantiated, if only because research is meagre and often unscientific. If, however, western medicine is now paying increasing attention to psychosomatic diagnosis and treatment, as I have sometimes heard, may it not accept that some are cured because they *think and believe* that these exercises will cure them? The Prime Minister has placed it on record that he finds standing on his head—*sirshasana*, the exercise declared harmful by the Russians—strangely helpful in relieving physical and mental fatigue. What is one to make of that? Perhaps this is the place to underline the distinction between mental and spiritual; and physical acts do affect the mind. I do not, of course, believe in yoga bringing the dead back to life or its being able to cure cancer; but I must say I have seen in some who practise yoga a curious calm, composure and confidence; although this again proves nothing spiritual. All in all, however, I am very glad that yoga is receiving so much critical attention, for we may then know the truth about a subject shrouded in some mysticism and much charlatanism.

THE DITCHER





THIS IS AN ANNOUNCEMENT—NOT A PROSPECTUS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

The Central Government have granted a licence (a copy of which is open to public inspection at the Registered Office of the Company) for this industrial undertaking. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus, having attached to it, the documents required by Section 69 of the Companies Act, 1956, has been delivered to the Registrar of Companies, West Bengal, for registration.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

The Subscription list will open at the commencement of Banking hours on Thursday, the 12th January, 1961 and will close at the close of Banking hours on Thursday, the 19th January, 1961 or earlier at the discretion of the Board of Directors of the Company, but not earlier than close of Banking hours on Saturday, the 14th January, 1961.

USHA MARTIN BLACK (WIRE ROPES) LIMITED

(Incorporated on 1st December, 1960 under the Companies Act, 1956)

AUTHORISED CAPITAL.

1.	12,50,000 Equity shares of Rs. 10/- each	Rs.	1,25,00,000
2.	25,000 Preference shares of Rs. 100/- each	Rs.	25,00,000
		Rs.	1,50,00,000

ISSUED SHARE CAPITAL.

1.	5,100 Equity shares of Rs. 10 each upon which Rs. 5/- per share is credited as paid-up, payment having been made in cash by the subscribers to the Memorandum and Articles of Association, the balance being payable on call or calls to be made by the Company	Rs. 51,000	
2.	1,04,000 Equity shares of Rs. 10/- each have been allotted to Martin, Black & Co. Ltd., upon which Rs.5/- per share has been subscribed in cash paid into the Company's account with the United Commercial Bank Ltd., London Branch, to be utilised for the first payments on purchase of plant and machinery overseas. The balance of the subscription money is payable on call or calls to be made by the Company	Rs. 10,40,000	
3.	1,10,900 Equity shares of Rs. 10/- each have been allotted to Usha Automobile & Engineering Private Ltd., its Directors, Associates, Friends and Nominees upon which Rs. 5/- per share is credited as paid-up, payment having been received in cash, the balance being payable on call or calls to be made by the Company ...	Rs. 11,09,000	Rs. 22,00,000

The shares mentioned or referred to items 2 and 3 above were allotted on 29th December, 1960.

PRESENT ISSUE.

1.	10,000—9.5% Cumulative Redeemable Preference shares of Rs. 100/- each	Rs. 10,00,000	
2.	1,80,000 Equity shares of Rs. 10/- each	Rs. 18,00,000	Rs. 28,00,000

OUT OF THE PRESENT ISSUE.

30,000 (Thirty thousand) Equity shares of Rs. 10/- each are agreed to be subscribed by The Industrial Credit & Investment Corporation of India Ltd., Bombay, for subscription in cash as to Rs. 5/- on allotment and the balance being payable on call or calls to be made by the Company. Such Equity shares will be allotted three days after the date of closure of the subscription list for the public issue ... ... Rs. 3,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION.

1.	10,000—9.5% Cumulative Redeemable Preference shares of Rs. 100/- each	Rs. 10,00,000	
2.	1,50,000 Equity shares of Rs. 10/- each	Rs. 15,00,000	Rs. 25,00,000

No shares or debentures have been issued or agreed to be be issued as fully or partly paid otherwise than in cash and no shares have been issued at a premium nor are shares presently to be issued at a premium. No shares or debentures are under option or agreed to be put under option.

USHA MARTIN BLACK (WIRE ROPES) LIMITED—*(Cont'd.)*

The consents in writing of the Brokers and above-named Solicitors, Auditors and Bankers to act in their respective capacities have been obtained and filed with the Registrar of Companies, West Bengal, along with the Prospectus as required by Section 60 of the Companies Act, 1956 and have not been withdrawn.

PUBLIC ISSUE

APPLICATION AND SUBSCRIPTION

Application for shares by members of the public must be for a minimum of 50 shares or multiples of 50 shares in respect of the Equity shares and 5 shares or multiples of 5 shares in respect of Preference shares.

TERMS OF PAYMENT OF ABOVE SHARES

EQUITY SHARES :

On Application—	Rs. 2.50 nP.	per share
On Allotment—	Rs. 2.50 nP	per share
Balance—	Rs. 5.00 nP.	per share on call or calls to be made subsequently but not earlier than 6 months after allotment
	Rs. 10.00 nP.	per share

PREFERENCE SHARES :

On Application—	Rs. 25.00 nP.	per share
Balance—	Rs. 75.00 nP.	per share on call or calls to be made subsequently but not earlier than 6 months after allotment
	Rs. 100.00 nP.	per share

DIVIDEND AND CAPITAL

The Company in general meeting may on the recommendation of its Board of Directors declare a dividend to be paid to the members according to their right and interest in the profits of the Company and may subject to the provisions of Section 207 of the Companies Act, 1956, fix the time of payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits and no dividend shall carry interest as against the Company.

RIGHTS OF PREFERENCE SHARES

1. The Preference shares will confer upon the holders thereof the right to a fixed cumulative preferential dividend of 9.5% per annum on the capital for the time being paid up without deduction of tax at the Company's rate but subject to deduction of tax at the rate appropriate to the member prescribed and as required by Section 18(3D) of the Indian Income-tax Act, 1922, or any statutory modification or re-enactment in force at the time of payment of the dividend. The Preference shares shall also confer on the holders thereof the right on winding up to payment of capital and arrears of dividend (whether earned, declared or not) up to the commencement of the winding up in priority to the Equity shares but shall not confer any further right to participate in any profits or assets. The holders of Preference shares shall be entitled to dividend in the year of allotment proportionately to any portion of the period in respect of which the dividend is to be paid commencing from the date of allotment and ending at the close of such period. For the purpose of Section 87 (2) of the Companies Act, 1956 and Article 78 of the Articles of Association of the Company dividend shall be due on Preference shares in case a dividend is declared on the date specified in such declaration for payment of such dividend which date shall not be more than sixty days after the date of the annual general meeting which considers the accounts for the relevant period and in case a dividend is not so declared then the sixtieth day after the date of such annual general meeting shall be deemed to be the date specified for the payment of dividend on such Preference shares.

2. Subject to the provisions of the Articles of Association of the Company, the Company shall have power to issue Preference shares carrying a right to redemption out of profits or out of proceeds of a fresh issue of shares made for the purposes of such redemption or liable to be redeemed at the option of the Company and the Board may, subject to the provisions of Section 80 of the Companies Act, 1956, exercise such power in such manner as may be provided in such Articles.

Subject as aforesaid the Preference shares shall be redeemable in the manner and subject to the conditions following:—

(a) the Board may at any time after the period of 10 (ten) years from the date of issue apply the nett profits or the funds of the Company, which may be lawfully applied for the purpose, including any proceeds of a fresh issue of shares made for the purpose of the redemption, in redemption of the whole or any part of the Preference share for the time being issued and outstanding at par, together with a sum equal to the arrears of dividend (whether earned or declared or not) up to the date of redemption;

(b) the Preference shares to be redeemed on each occasion shall be determined by a drawing to be made at such time and place and in such manner as the Board may determine but in the presence of at least one of the Directors and a representative of the Auditors of the Company for the time being;

(c) forthwith after such drawing the Company shall give to the holders of the Preference shares drawn for redemption notice in writing of the Company's intention to redeem the same at a fixing a time (not less than three months ahead) and place for the redemption and surrender of the scrips of the Preference shares so to be redeemed;

(d) at the time and place so fixed each holder of such Preference shares shall be bound to surrender to the Company the certificate or certificates for his Preference shares to be redeemed and the Company shall pay to him the amount payable in respect of such redemption, and, where any such certificate comprises any Preference shares which have not been drawn for redemption, the Company shall issue to the holder thereof, a fresh certificate therefor and,

(e) any of the Preference shares issued under this Prospectus not previously redeemed under the foregoing provisions shall be redeemable on the first day of January, 1972 at par together with all arrears of dividend thereon (whether earned or declared or not) up to that date.

The Company shall, subject to the terms of any issue of Preference shares, be at liberty, without prejudice to its other rights from time to time, to create and issue further Preference shares ranking in all respects *pari passu* with the redeemable cumulative Preference shares issued under this prospectus.

EQUITY SHARES

(a) **Dividend :** Subject to the provisions of the Companies Act, 1956 or any statutory modification or re-enactment thereof and to the Articles of Association of the Company, the nett profits of the Company from time to time determined to be divided in respect of any year or other period shall be applied first in paying the preferential dividend on the capital paid up on Preference shares and the surplus shall be divisible among the holders of Equity shares in proportion to the amounts paid-up on the Equity shares held by them respectively.

(b) **Capital :** Subject to the rights of Preference shareholders the holders of Equity shares shall be entitled to be repaid the amount of capital paid or credited as paid up on such shares and all surplus assets thereafter shall belong to the holders of Equity shares in proportion to the amount paid up or credited as paid up on such Equity shares respectively at the commencement of the winding up. If the assets shall be insufficient to repay the whole of the paid up Equity share capital such assets shall be distributed so that as nearly as may be the losses shall be borne by the members holding Equity shares in proportion to the capital paid up or which ought to have been paid up on the Equity shares held by them respectively at the commencement of the winding up other than the amounts paid by them in advance of calls

MODIFICATION OF RIGHTS AND PRIVILEGES

Rights attached to Preference shares and to the Equity shares in the capital may be modified under the provisions of Section 106 of the Companies Act, 1956 or any statutory modification or re-enactment thereof as permitted by Article 58 of the Articles of Association of the Company.

CREATION OR ISSUE OF FURTHER SHARES

Subject to the provisions of the Articles of Association of the Company, the shares in the capital of the Company shall be under the control of the Board who may allot or otherwise dispose off the same to such persons on such terms and conditions, and at such times, as the Board thinks fit either at par or at a premium, and for such consideration as the Board thinks fit. Provided that where at any time (subsequent to the first allotment of shares) it is proposed to increase the subscribed capital of the Company by the issue of new shares, then, subject to any directions to the contrary which may be given by the Company in general meeting, the Board shall issue such shares in the manner set out in Section 81 (1) of the Companies Act, 1956, save that the Board may determine whether or not any offer of shares made in such manner shall include a right exercisable by any person concerned to renounce all or any of the shares offered to him in favour of any other person.

VOTING RIGHTS

Articles 78 and 88 of the Articles of Association of the Company deal with the voting rights to which the members are entitled. The voting rights of the members as fixed by the Articles accord with the provisions contained in Section 87 of the Companies Act, 1956.

Article 78 provides that on show of hands every member holding any Equity share present in person or by proxy, and, in the case of a body corporate, its representative appointed under Article 79, has one vote and on a poll the voting right of a member shall be in proportion to his share of the paid up Equity share capital of the Company.

So far as the Preference shares are concerned a member holding any Preference share has a right to vote:—

(a) on resolutions placed before the Company which directly affect the rights attached to his Preference share; and,

(b) when the holder of a Preference share has a right to vote in conformity with the provisions of Section 87 (2) (b) of the Companies Act, 1956, i.e., when cumulative dividend, or any part of it, due on such share has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the particular meeting at which such right is exercisable.

Where the holder of any Preference share has a right to vote on any resolution in accordance with the provisions of Section 87 (2), his voting right on a poll, as holder of such share, shall, subject to the provisions of Sections 89 and 92 (2) of the Companies Act, 1956 be in the same proportion as the capital paid-up in respect of the Preference share bears to the total paid-up Equity capital of the Company.

RESTRICTION ON TRANSFER OF SHARES

Subject to the provisions of Section 111 of the Companies Act, 1956, the Board, without assigning any reason for such refusal may within two months from the date on which the instrument of transfer was delivered to the Company, refuse to register any transfer of a share upon which the Company has a lien, and in the case of share not fully paid-up may refuse to register a transfer to a transferee of whom the Board does not approve.

OBJECTS OF THE COMPANY

The Company was incorporated on the 1st day of December, 1960 and obtained a certificate that it is entitled to commence business on the 21st day of December, 1960. The object of the Company is principally to carry on the manufacture and sale, distribution, dealership, import, export, etc.; of all types of steel wire ropes and to carry on business and activities, ancillary or supplemental thereto, and other objects as set out in detail in the Memorandum of Association of the Company.

HISTORY OF THE COMPANY

The formation of the Company is the result of collaboration between Martin, Black & Co. (Wire Ropes) Ltd., a member of the largest independent group in the United Kingdom specialising in the production and sale of high tensile steel wires and steel wire ropes and Usha Automobile & Engineering Private Ltd., of Calcutta, manufacturers of various engineering products and the personal interest taken by Mr. W. S. Black, a Joint Managing Director-in-charge of production of the Martin Black Group of companies and Mr. B. K. Jhawar of Usha Automobile & Engineering Private Ltd.

Steel wire ropes are a specialised product for use in coal mines, mining, shipping, engineering, ropeways, lifts, etcetera. Steel wire ropes are manufactured from high carbon steel rods and wires The major portion of India's domestic requirement of wire ropes has been imported from foreign countries with a resultant continuous drain on the country's foreign exchange. It has been apparent for some time that on the establishment of a modern well-equipped factory with the collaboration of a well-known and long established overseas manufacturer of steel wire ropes it would be possible to manufacture best quality man-riding and special engineering wire ropes and thereby assist the country's foreign exchange position. With this view and to take advantage of the increasing Indian market, the Indian promoters looked overseas for a quality manufacturer who would extend full collaboration, render all co-operation and make available to the Company the technical know-how, experience and technical assistance required. The Indian promoters were fortunate to obtain technical-cum-financial collaboration from Martin, Black & Co (Wire Ropes) Ltd., Speedwell Works, Coatbridge, Scotland, a wholly owned subsidiary of Martin-Black Ltd., a public company. Martin, Black & Co. (Wire Ropes) Ltd., was formed in 1933 by M/s. A. D. Martin and W. S. Black who became (and still are) its Joint Managing Directors.

The Martin Black Group of companies comprises:—

1. Martin-Black Ltd., a public company having its shares quoted on the London and Glasgow Stock Exchanges which owns the entire share capital of:—
2. Martin, Black & Co. (Wire Ropes) Ltd., a private company which in turn owns the entire share capital of the following private companies:—
3. Speedwell Wire Co. Ltd.,
4. Frew Brothers & Co. Ltd.,
5. Martin Black (Trawlwires) Ltd.,
6. Martin Black Wire Ropes (Canada) Ltd.

M/s. W. S. Black & J. Goodlet have been nominated Directors of the Company by Martin, Black & Co. (Wire Ropes) Ltd., and Mr. C. A. Groves has been nominated by Mr. W. S. Black as his alternate.

MANAGING DIRECTOR

Shri B. K. Jhawar, a Director, has, subject to the approval, if required, of the Central Government under Section 269 of the Companies Act, 1956, been appointed as a Managing Director of the Company for a period of five years from the sixth day of December, 1960 on such terms as regards remuneration as may be approved by the Company in general meeting and the Central Government.

MANUFACTURING LICENCE

The Government of India has issued under the Industries (Development and Regulation) Rules, 1952 (as revised) a manufacturing licence No.L/1.A(7)/N-178/60 dated 21.4.1960 for a new industrial undertaking of an installed capacity (on double shift basis) of 7,200 tons per annum of wire and wire ropes.

PLANT SITE AND POWER

The plant of an initial capacity (on double shift basis) of 3,600 tons per annum of steel wire and steel wire ropes will be located near RANCHI in the state of BIHAR. The Indian promoters, Usha Automobile & Engineering Private Ltd., have made an application to the Government of Bihar for acquisition of suitable land for the purpose of the Company's plant. No promoter or Director is personally interested in such acquisition of the land to be acquired.

Adequate Electric Power is assured by the Bihar State Electricity Board.

The broad-gauge railway serves this region and the proposed plant site is only 200/300 yards from the Tanti Silve Railway Station and is also on the Main RANCHI-PURULIA road.

PLANT AND MACHINERY

It is estimated that the plant and machinery will cost Rs. 55 lacs and of which approximately Rs. 1.60 lacs may be imported reconditioned. Some of this reconditioned machinery of an estimated value of not exceeding Rs. 1.30 lacs, payable in cash,

USHA MARTIN BLACK (WIRE ROPES) LIMITED —(Cont'd.)

may be purchased, from the foreign collaborators, Martin, Black & Co. (Wire Ropes) Ltd., Coatbridge, Scotland, U.K. The value of such reconditioned machinery which may be purchased, from the foreign collaborators, will be determined by independent Consulting Engineers.

RAW MATERIALS

High carbon steel rods required by the Company for the manufacture of wire ropes will be imported until about 1964 when it is expected adequate quantities and acceptable qualities will be produced in India.

MARKETABILITY

Production is expected to commence late in 1962 and indications show that the market is expected to absorb the entire output of the proposed plant. Furthermore the demand for wire ropes is likely to increase substantially with the progressive industrialisation of the country envisaged in the Third Five Year Plan.

PROFITABILITY

The plant and machinery to be installed will form one of the most modern and up-to-date units in the world specifically designed for the production of high tensile steel wire and steel wire ropes and the Board considers that the prospects of profitable working are good.

IMPORT LICENCES

The Government of India have been kept advised of the organisation of the Company and of the plans for proceeding with and completing the project. It is expected that the Government will issue all required licences and permits. Since Martin, Black & Co. (Wire Ropes) Ltd., is making its subscription to the capital of the Company in foreign exchange and The Industrial Credit & Investment Corporation of India Ltd., Bombay, has agreed to make a loan partially in foreign exchange, the Company's requirements of foreign exchange are assured for the purchase of plant and machinery in the U.K. and elsewhere.

TECHNICAL COLLABORATION AGREEMENT

The Company with the approval of the Government of India has entered into a Consultants and Technical Advisers' Agreement with Martin, Black & Co. (Wire Ropes) Ltd., for a period covering the design, erection and start-up of the plant and thereafter for eight years certain from the date of the royalty-cum-technical aid fee hereinafter mentioned becomes payable.

Martin, Black & Co. (Wire Ropes) Ltd., will provide the Company with various services including the following :—

1. Complete process, designing and selection of plant and machinery.
2. Train Indian Engineers, Technicians and Technical representatives in their factory in the U.K.
3. Provide technicians from the U.K. to advise, assist and give such information as may be required respecting the construction, erection, installation, start-up and operation of the plant.
4. Permit user by the Company of relative trade names, marks and letters patent registered in India.

The Company has export rights to all countries except the U.K., Canada and U.S.A.

As consideration for its services, etc. Martin, Black & Co. (Wire Ropes) Ltd., will be paid a fee of not more than 1% calculated on the capital cost of the plant and machinery acquired by the Company for this project and a royalty-cum-technical aid fee of 2½% for five years (from the date the production figure reaches 150 tons of wire ropes per month) and for the next three years 1¼% based on the nett sales of wire ropes as defined in the Agreement. On sales of high tensile steel wire sold as such the royalty-cum-technical aid fee is halved. Additionally the Company will bear the cost of the U.K. personnel sent to India, and, subject to the prior approval of the Government of India to remittances, expenses (referred to in clause 12 (b) of the Agreement) incurred by Martin, Black & Co. (Wire Ropes) Ltd., including a proportion of the expenses of investigating, experimenting, testing, developing, patenting and acquiring patents, licences or manufacturing rights in regard to any process or methods which benefit or are of value to the Company in its business.

The Government of India has approved the foregoing technical collaboration and the issue of Equity share capital to Martin, Black & Co. (Wire Ropes) Ltd., as hereinbefore stated.

DIRECTORS

The Articles of Association of the Company provide that unless otherwise determined by special resolution of the Company the number of Directors shall be not less than five or more than nine. Provision is also made in Article 90 for the appointment by the Board of an alternate for an absent Director.

Not less than two-thirds of the total number of Directors shall be persons whose period of office is liable to determination by retirement of Directors by rotation. Whilst, Martin, Black & Co. (Wire Ropes) Ltd., or any company in the Martin Black Group of companies, are Consultants and Technical Advisers to the Company, the Consultants and Technical Advisers shall have the right to nominate, appoint and remove two individuals as Director or Directors and to remove any Director so appointed and another or others to nominate and appoint in the place of any Director or Directors so removed, and every such Director so appointed as aforesaid shall be an "ex-officio Director" who shall be exempt from retirement by rotation of Directors and shall not be required to hold any share qualification. During any absence of three months or more from the State in the Union of India in which meetings of the Board of Directors of the Company are usually held of any such ex-officio Director, he shall be entitled to nominate an individual for appointment by the Board of the Company as his alternate and the Board shall appoint such nominee in preference to any other as such alternate with full right to be and act as a Director in the place of the original Director during such absence or until he shall resign, die, vacate office or be removed by the person appointing him or otherwise.

Subject as aforesaid, whilst any unit or units of the Martin Black Group of companies is or are a member or members holding in the aggregate not less than twenty-six per cent of the Equity share capital of the Company issued for the time being, one-third of the total strength of the Board but never less than two Directors (including any ex-officio Director appointed as aforesaid) shall be individuals nominated by the Martin Black Group of companies.

So long as any loan from The Industrial Credit and Investment Corporation of India Ltd., Bombay is outstanding, that institution will be entitled to appoint one Director on the Board of Directors of the Company. A Director so appointed will be exempt from retirement by rotation and will not be required to hold any share qualification. The Company has undertaken to amend its Articles of Association, if necessary, to provide for such appointment and to obtain any necessary approval of the Central Government.

The qualification of a Director shall be the holding of Equity shares in the capital of the Company of the aggregate nominal value of Rs. 1,000/- (Rupees one thousand) but an "ex-officio Director" or "Debenture Director" or "alternate Director" is not required to hold any qualification shares.

Article 95 of the Articles of Association provides for the remuneration of the Directors. Each Director shall be entitled to receive out of the funds of the Company for his services in attending meeting of the Board and Committees of the Board a fee of Rs. 150/- for each meeting of the Board and Committee of the Board attended by him. The Director shall also be entitled to receive a commission of one per cent of the nett profits of the Company in each financial year (to be computed in the manner prescribed in Section 309 of the Companies Act, 1956) in such proportions as may be determined by the Board from time to time and in default of such determination in equal proportions. All other remuneration, if any, payable by the Company to a Director in respect of his services as a Director in the whole or part-time employment of the Company shall be determined in accordance with and subject to the provisions of the Articles and of the Companies Act, 1956. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in consequence of their attending at Board or Committee meetings and otherwise in connection with the execution of their duties as Directors.

BORROWING POWERS

Article 59 provides that the Board may, from time to time, at its discretion, subject to the provision of Sections 292 and 370 of the Companies Act, 1956 raise or borrow either from the Directors or from elsewhere, and secure the payment of any sum or sums of money for the purpose of the Company.

Article 60 provides further that the Board may raise or secure the repayment of such sum or sums in such manner and upon such terms and conditions in all respects as it thinks fit, and, in particular, by the issue of bonds, perpetual or redeemable, debentures or debenture-stock, or any mortgage, or other security on the undertaking of the whole or any part of the property of the Company (both present and future) including its uncalled capital for the time being.

The Board of Directors of the Company is by resolution of the Company passed on 7th December, 1960 permitted to borrow monies from time to time for and on behalf of the Company, so that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is, reserves not set apart for any specific purpose.

INTEREST OF DIRECTORS

(a) Shri G. D. Jhawar is a member of Usha Automobile & Engineering Private Ltd., which is being reimbursed for the expenses incurred and paid or payable in attending the incorporation of the Company, and he will be interested in the remuneration which may be paid to him as a Director of the Company.

(b) Mr. W. S. Black is a Director and Joint Managing Director and member of Martin, Black & Co. (Wire Ropes) Ltd., and is therefore interested in the Consultants & Technical Advisers' Agreement with that Company and in remuneration which may be paid to him as a Director of the Company. Additionally he would be interested in any remuneration which may be paid to him as a Director of the Company.

(c) Shri B. K. Birla is a member and Director of the Company and is interested in any remuneration which may be paid to him as a Director of the Company.

(d) Shri H. P. Barat is a partner of Messrs. G. M. Pyne, one of the underwriters and brokers named in the prospectus and as such is interested in any commission and brokerage payable to that firm and in remuneration which may be paid to him as a Director of the Company.

(e) Mr. John Goodlet is a Director and Secretary of Martin, Black & Co. (Wire Ropes) Ltd., and is therefore interested in the Consultants & Technical Advisers' Agreement with that Company and the remuneration which may be paid to him as a Director of the Company. Additionally he would be interested in any agreement, that may be entered into with Martin, Black & Co. (Wire Ropes) Ltd., for the sale and purchase of reconditioned plant and machinery, as stated hereinabove.

(f) Shri B. K. Jhawar is a member of Usha Automobile & Engineering Private Ltd., which is interested as aforesaid. He will also be interested in remuneration which may be paid to him as a Director and Managing Director of the Company.

All the Directors are interested to the extent of the shares in the capital of the Company subscribed or to be subscribed for and allotted to them and to the companies and firms in which they are interested.

UNDERWRITING COMMISSION

Underwriting commission at the rate of Rs. 2.50 nP. per share in respect of 10,000 Preference shares and at the rate of 18 naye paise per share in respect of 1,50,000 Equity shares underwritten is payable to the said underwriters.

BROKERAGE

In respect of the public issue, brokerage will be paid by the Company to the Brokers mentioned in the prospectus and to members of any recognised Stock Exchange and to the Banks at the rate of Re. 1/- per share in respect of Preference shares and at the rate of 12 naye paise per share in respect of Equity shares allotted on applications bearing their respective stamps.

Brokerage on the same basis will be paid by the Company to the Underwriters in addition to the Underwriting Commission on allotments made upon applications bearing their stamps, and in such case brokerage will not be paid to any other party, subject only to the condition that if the Underwriter is called upon to subscribe to the shares, in fulfilment of his underwriting obligation, no brokerage should be paid on the shares to be subscribed by the Underwriters.

PRELIMINARY AND OTHER EXPENSES

Preliminary expenses including brokerage, underwriting commission and expenses of this issue payable by the Company, in connection with the formation of the Company and related matters are estimated at Rs. 1,60,000/- which includes expenses estimated at Rs. 7,000/- for the printing of the Memorandum and Articles of Association, fees and duty paid on the incorporation of the Company, incurred and paid or payable by, and reimbursable by the Company, to Usha Automobile & Engineering Private Ltd. Martin, Black & Co. (Wire Ropes) Ltd., and Usha Automobile & Engineering Private Ltd., have incurred and paid or will pay expenses relating to the preparation of the Memorandum and Articles of Association, the Consultants and Technical Advisers' Agreement and this prospectus and related expenses on and with reference to the formation of the Company, and subject only as aforesaid, do not seek reimbursement by the Company.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 25,00,000/-. Subscription of the amount is assured as the entire public issue has been underwritten.

The total capital required to reach a capacity (on double shift basis) of 3,600 tons per annum of wire and wire ropes is estimated to be as follows :

Description		Lacs
(a) Land, buildings, acquisition and construction of plant and facilities ...	Rs.	71.80
(b) Cost of Technical services for design and procurement ...	Rs.	.40
(c) Pre-operation expenses including salaries, wages, interest charges on loans, travelling expenses, expenses of training personnel in U.K., expenses of start-up and other miscellaneous expenses expected to be incurred by the Company from the date of its incorporation until start-up of the plant	Rs.	3.80
(d) Pre-incorporation, preliminary and miscellaneous expenses of this issue	Rs.	.80
(e) Underwriting Commission ...	Rs.	.52
(f) Brokerage	Rs.	.28
(g) Working capital ...	Rs.	25.00
	Rs.	102.60

Source of Funds			Lacs
Equity shares			Rs. 40.00
Preference shares			Rs. 10.00
Loans from The Industrial Credit & Investment Corporation of India Ltd., Bombay,			
In rupee		12.00	
In Foreign Currencies equivalent to		23.00	
			Rs. 35.00
			Rs. 85.00

USHA MARTIN BLACK (WIRE ROPES) LIMITED—(Cont'd.)

It is intended that balance of Rs. 17.60 lacs and any increase in actual cost over estimated cost, which makes provision for working capital which will not be required until late 1962 when the Company is expected to commence production, shall be raised by loans from the Company's Bankers, and, if necessary, from other sources.

FINANCIAL ARRANGEMENTS

The Industrial Credit and Investment Corporation of India Limited has agreed to lend to the Company a sum of Rs. 12 lacs and also a sum in foreign currencies equivalent to Rs. 23 lacs the latter being subject to the approval of The International Bank for Reconstruction and Development. The Rupee loan will bear interest at 6¼% per annum and the Foreign Exchange Loan will bear interest at 7¾% per annum. The Loans will be secured by a first legal mortgage of all present and future immovable and movable properties of the company, subject to the hypothecation of such of the movables in favour of the company's bankers as may be required for cash credit and overdraft facilities.

AUDITORS' REPORT

The following is a copy of the report of Company's Auditors Messrs. Price, Waterhouse, Peat & Co., Chartered Accountants.

Price, Waterhouse, Peat & Co.,
Chartered Accountants,
B4, Gillander House, Calcutta-1.
Dated 28th December, 1960.

Usha Martin Black (Wire Ropes) Limited,
2, Ramgopal Ghosh Road,
Calcutta-2.

Dear Sirs,

In accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956 we report that no accounts of Usha Martin Black (Wire Ropes) Limited have been made up in respect of any period since the incorporation of the Company.

We further report that we have examined the Cash Book and other records and documents maintained by the Company and produced to us and have satisfied ourselves that an amount of Rs. 11,00,000/- has already been received by it as subscription of Rs. 5/- per share in respect of 2,20,000 equity shares of Rs. 10/- each as per details below :—

Received from		Amount	Remarks
Subscribers to the Memorandum and Articles of Association	Rs.	25,500	
Martin, Black & Co. (Wire Ropes) Ltd. ...	Rs.	5,20,000	Deposited in the Company's account with the United Commercial Bank Ltd., London.
Usha Automobile & Engineering Private Ltd., its Directors, Associates, Friends and Nominees	Rs.	5,54,500	
	Rs.	11,00,000	

Yours faithfully,
Price, Waterhouse, Peat & Co.

INSPECTION OF DOCUMENTS

The following Agreements and Documents can be inspected at any time during the usual business hours at the Registered Office of the Company until 14 days after the opening of the subscription list :—

1. Print of the Memorandum and Articles of Association.
2. Licence No.L/1A(7)/N-178/60 dated 21.4.1960 issued by the Government of India under the Industries (Development & Regulation) Rules, 1952 (as revised) and letters reference ME.IND.23(15)/60 dated 27th October, 1960 and 17th November, 1960 approving the Consultants & Technical Advisers' Agreement with Martin, Black & Co. The remittance should be made by cheques or drafts which, if it is desired to avoid payment of bank charges, must be drawn either upon any of the above Banks to which the application forms and cheques or drafts are being sent or upon a Branch of any of the above Banks situated as aforesaid.

All cheques or drafts drawn on Banks situated at a place other than mentioned above must include a sum at the rate of 25 nP. per cent (minimum 62 nP.) of the amount remitted to cover all commission and bank charges; otherwise, the application is liable to be rejected.

Cheques or drafts should be drawn in favour of one of the Bankers to the issue "A/C. Usha Martin Black (Wire Ropes) Limited" and should bear the words "Equity Issue" in the case of applications for Equity shares and the words "Preference Issue" in the case of applications for Preference shares. For the applicant's protection, cheques or drafts should be crossed "Account Payee only". A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an Allotment Letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received, after deducting in the case of Equity shares, the amount, if any payable on allotment, will, subject to the provisions of Section 73 of the Companies Act, 1956, be refunded within two months from the closure of the subscription list. Bank commission, if any, will be payable by the applicants. No interest will be paid by the Company. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

ISSUE OF SHARE CERTIFICATES

The share certificates will be issued in exchange of Letters of Allotment within four months of allotment.

INCOME TAX LAW AND PRACTICE IN INDIA Rs. 15/-

(Thoroughly revised and enlarged 6th edition)

A useful practical guide for tax-administrator and tax-payer, lawyers and layman alike. An ideal book for students studying chartered accountancy, M. A. Commerce etc.

S. K. Mukherjee (Ex. Finance Secy. Govt. of Bengal) says : "Perhaps the most interesting feature of the book is the author's masterly selection of illustrations. These are so typical and universal in their applicability that there would be hardly an income-tax paying individual who will not find his own case faithfully reflected in one or the other of Mr. Banerjee's exhaustive array of examples."

THE MADRAS ALUMINIUM COMPANY LIMITED

(Incorporated under the Companies Act, 1956)

Authorised Capital:

2,50,000 Cumulative Preference Shares of Rs. 100 each	... ...	Rs. 2,50,00,000
7,50,000 Equity Shares of Rs. 100 each	... ...	Rs. 7,50,00,000
		Rs. 10,00,00,000

Issued Capital:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100 each	... ...	Rs. 1,50,00,000
4,50,000 Equity Shares of Rs. 100 each	... ...	Rs. 4,50,00,000
		Rs. 6,00,00,000

RIGHTS OF PREFERENCE SHAREHOLDERS

The preference shareholders will be entitled to a fixed cumulative dividend of 9.3% per annum (free of Company's Income-tax but subject to deduction of taxes at the prescribed rates), payable in priority to the ordinary Shares. This means the shareholders will get a dividend of 9.3% less a deduction of tax under Section 18-3 (D) of the Indian Income-tax Act, which at present is 30%.

In the event of winding up the preference shareholders will be entitled in priority to equity shareholders to re-payment of the capital paid-up at par, plus all accrued dividends, whether earned or declared or not declared, and also declared but not paid.

The preference shares will all be redeemed at par, on 1st January, 1975, on giving three calendar months' notice, with the option to the Company to redeem the whole or part of the preference capital outstanding at any time, at par, after 1st January, 1972, on giving six calendar months' notice. The proposed method of redemption, whether from profits or by fresh issue of capital will be decided by the Directors at the time of giving the notice, taking the then circumstances of the company into consideration.

The voting rights of the preference shareholders will be as per Section 87 of the Companies Act, 1956.

The issued capital is payable as follows:

(1) Along with application at Rs. 25 per share, whether Equity or Preference.

(2) The balance of Rs. 75 per share, whether Equity or Preference, will be called up in three calls of Rs. 25 each, with an interval of at least one month between each call, and the first of such calls will not be earlier than three months from the date of allotment of the respective shares.

PREFERENTIAL ALLOTMENTS AND RESERVATION.

(1) The signatories to the Memorandum of Association have subscribed for 1,200 equity shares. The promoters, directors, and their friends, have subscribed for a total of 48,800 equity shares of Rs. 100 each.

(2) The Government of Madras have agreed to the Madras Industrial Investment Corporation Ltd., Madras, underwriting and subscribing for 70,000 preference shares of Rs. 100 each and 80,000 equity shares of Rs. 100 each.

(3) The Life Insurance Corporation of India, Bombay, have agreed to underwrite and apply for 10,000 equity shares of Rs. 100 each and 20,000 preference shares of Rs. 100 each and these will be allotted in full.

(4) There is a specific arrangement with Messrs. Dalal & Co., Madras, for their tendering applications for 35,000 equity shares of Rs. 100 each and these will be allotted in full.

(5) As per the agreement entered into with Messrs. Montecatini of Italy, 1,20,000 equity shares of Rs. 100 each will reserved for allotment to them.

(6) In accordance with the provisions in the underwriting agreement with the Underwriters and Brokers, 28,500 equity shares of Rs. 100 each have been reserved for firm allotment in respect of applications procured and marked for "firm allotment" by them.

PRESENT ISSUE.

The balance that is now unconditionally offered for public subscription is as follows:—

60,000 Preference Shares of Rs. 100 each.

1,26,500 Equity Shares of Rs. 100 each.

THE ENTIRE ISSUE OF 60,000 PREFERENCE SHARES AND 1,26,500 EQUITY SHARES HAVE BEEN UNDERWRITTEN BY THE INDUSTRIAL FINANCE CORPORATION OF INDIA, NEW DELHI, AND BY THE VARIOUS PARTIES, AS PER DETAILS HEREIN GIVEN.

OBJECTS

The Company was incorporated on 31st August, 1960 for the several purposes set forth in the Memorandum of Association, and in particular to undertake the manufacture of aluminium ingots and alloys, from the bauxite reserves in the Sheveroy Hills. The plant capacity will be 10,000 tons, of which 7,000 tons will be ingots and 3,000 tons alloys, as per the Licence No.L/1B(1)/N-7/60, dated 6th May, 1960, granted to this Company by the Government of India.

The Company has also applied to the Government of India for a licence to erect a Rolling Mill, as an adjunct to the proposed factory, for the manufacture of A.C.S.R., and A.A.C. Cables, extrusion, rods, foils, etc., and the licence is awaited.

The rapid progress made by the aluminium industry can be gauged from the fact that world production of aluminium, which was a little over 7,00,000 tons in 1939, has increased to over 3 million tons at the present time.

The development of a large scale aluminium industry is of particular importance to our industrial economy. Aluminium is the only non-ferrous metal for the manufacture of which, on a scale commensurate with our increasing requirements, adequate natural resources are available in the country. And as indicated above, it is a non-ferrous metal with properties which permit its use as a substitute for several purposes for other non-ferrous metals like copper, lead, zinc, and tin, the indigenous production of which cannot be developed to the required extent because of the very limited resources of the necessary raw materials as far as is known at present. It is in this context that the development of aluminium industry assumes a special significance in our plans for industrial progress.

According to the draft outlines of the Third Five-Year Plan, the estimated capacity of the Aluminium Industry in 1960-61 has been placed at 17,500 tons and production at 17,000 tons, against the production of 7,300 tons in 1955-56. The 1965-66 targets are estimated at a capacity of 82,500 tons and production of 75,000 tons.

The per capita consumption of aluminium in India is very low at about 0.12 lb. compared to 19 lbs. in U.S.A., 12 lbs. in Canada and 10 lbs. in the United Kingdom. With the growing use of aluminium for Industrial purposes, the demand for aluminium is bound to far exceed production for several years to come.

RAW MATERIALS

Bauxite is the basic raw material for the production of alumina, while electric power is also as vital a necessity as bauxite. Bauxite deposits of Sheveroy Hills are considered to be very suitable for the manufacture of aluminium, because it is so soft and easily soluble in caustic soda in the process for the manufacture of alumina. The deposits in Sheveroy Hills are estimated at about 7 million tons.

In view of the advantages of nearness of bauxite, power, water, transport facilities, etc., the factory will be located at Mettur on a plot of about 400 acres, reserved for this Company by the Government of Madras. The Madras State Electricity Board have assured adequate power supply at the rate of Rs. 155 KW/y for the Alumina section and Rs. 120 KW/y for the Smelter section.

TECHNICAL COLLABORATION

The Company has been fortunate in having secured the technical collaboration with Messrs. Montecatini of Italy, who are associated with the Neyveli Project of the Government of India, and who are one of the world known names in the manufacture of aluminium products, designing, erection and successful working of aluminium plants. Under the terms of the collaboration M/s. Montecatini are to supply technical know-how, designs and specifications, procure the required machinery for the Indian Company, attend to erection, to supply required technical personnel and also train Indian technical personnel in their factory. The Government of India have approved the technical collaboration terms under which M/s. Montecatini are to be paid Rs. 45 lakhs for technical know-how, Rs. 40 lakhs for engineering fees drawings, assistance in purchase of plant and other allied services, and Rs. 35 lakhs for cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges, etc., and these payments are to be satisfied by the issue of 1,20,000 equity shares of Rs. 100 each. No further technical know-how fees are payable either for expansion of the plant capacity up to 20,000 tons or for the Rolling Section.

COST OF THE PROJECT

The cost of the project, as estimated by Messrs. Montecatini, for a plant capacity of 10,000 tons of aluminium, of which 7,000 tons will be ingots and 3,000 tons alloys, is approximately as follows:—

	Rs.	Rs.
Foreign Side:		
Plant and Machinery (to be imported)	3,40,00,000	
Technical Know-how Fees for designing, specifications, etc.	40,00,000	
For Technical Services	35,00,000	4,60,00,000
Indian Side:		
Land and Buildings	1,70,00,000	
Fabrication of machinery Customs Duty, Freight and Insurance	1,00,00,000	
	75,00,000	
Erection and implementation expenses	40,00,000	
Pre-operating expenses (plant trial expenses including raw materials)	13,00,000	
Bank guarantee commission for 3 years for deferred payment	15,00,000	
Preliminary expenses, Underwriting Commission, Brokerage and Share Issue expenditure	18,00,000	
Working Capital	50,00,000	
Contingencies	19,00,000	5,00,00,000
Total		9,60,00,000

The estimated foreign loan requirements (less Montecatini's share participation) of about 5,000 million Italian lire, equivalent to about Rs. 3.80 crores would be financed by a long-term loan under deferred payment arrangements, by "Mediobanca" of Italy, for repayment in nine years commencing from 1st January, 1965 in which direction preliminary negotiations have been completed.

The Industrial Finance Corporation of India have agreed to give guarantee for the foreign loan plus interest on the terms and conditions specified by them, one of which is mortgaging all present and future fixed assets in favour of the said Corporation for the duration of guarantee commitment.

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

All the Underwriters will be paid an underwriting commission of 2½% of the nominal value of shares underwritten by each of them.

ESTIMATE OF PROFITS

Aluminium ingots are now imported to meet the needs of the Rolling Mills in India. Secondly, rolled metal fetches good prices. The Company intends to instal up-to-date machinery and equipment and utilise the latest methods in the manufacturing processes. Based on current market conditions, the Directors anticipate that the operation of the factory will yield a satisfactory return on the capital invested.

COMMENCEMENT OF BUSINESS

After incorporation of the Company on 31st August, 1960, in order to facilitate carrying of all the arrangements and entering into early contracts for going ahead with the project, the Company obtained the certificate of Commencement of Business on 26th December, 1960 from the Registrar of Companies, Madras, after filing the Statement in lieu of Prospectus.

MANAGING AGENTS

Messrs. Salcoe & Co., a partnership firm consisting of Sri R. Venkataswamy Naidu, Sri P. R. Ramakrishnan, Sri T. S. Narayanaswamy, and Sri V. Radhakrishnan as partners, are proposed to be appointed as the Managing Agents of the Company for a period of ten years, as per the terms and conditions laid down in the draft agreement, with such modifications as may be suggested by the Central Government, and approved by the Board at their meeting held on 20th September, 1960, based on which an application has been made to the Central Government for approval of the appointment of the said Messrs. Salcoe & Co., as the Managing Agents of the Company.

The Managing Agents will be entitled to a remuneration in accordance with the prescribed graded scale of commission on the Company's annual profits to be computed and determined as provided by Sections 349, 350 and 351 of the Companies Act, 1956, subject to a minimum of Rs. 50,000 per annum in the event of absence or inadequacy of profit in any year:

DIRECTORS

The number of Directors shall neither be less than four nor more than twenty-one.

The qualification of a Director, other than the Ex-officio Directors, Italian Directors, if and when appointed by virtue of clause 135 of the Articles of Association, Corporation Director, Government Director, Debenture-holders' Director and Alternate Director shall be the holding of at least fifty Equity Shares of Rs. 100 each in the Company, of total nominal value of Rs. 5,000.

PAYMENT TO PROMOTERS

No amount of benefit has been paid or given or is intended to be given to any Promoter or Director of the Company, apart from the sitting fees for the Directors and the Managing Agency commission to the three Directors, Sri R. Venkataswamy Naidu, Sri T. S. Narayanaswami and Sri P. R. Ramakrishnan, as partners of the proposed Managing Agents, Messrs. Salcoe & Co.

UNDERWRITERS

The Industrial Finance Corporation by their Letter No. U.C.12/60—20657 dated 24th December, 1960 have agreed to underwrite 60,000 equity shares of Rs. 100 each and 60,000 Redeemable Cumulative Preference shares of Rs. 100 each, and these 60,000 equity shares and 60,000 cumulative preference shares are offered unconditionally for public subscription.

In addition to the specific underwriting arrangements with the Madras Industrial Investment Corporation Ltd., Life Insurance Corporation of India and Messrs. Dalal and Co., set out in the paragraph under "Preferential Allotments and Reservation" the Company, has entered into underwriting agreements with the following parties, who have agreed to underwrite the number of equity shares set out against each of their names. The number of shares for which they will be tendering applications for full allotment (marked for "firm allotment") has also been shown as a deduction from the number of shares underwritten, in order to give clearly the number of shares offered unconditionally for subscription by the public.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of any Bank or recognised Broker.

Brokerage on the same basis is payable to the Underwriters, in addition to the underwriting commission, as mentioned in the preceding paragraph, on allotments in respect of shares allotted on applications made or procured by them and bearing their stamps.

APPLICATION FOR SHARES

Copies of the Prospectus and application forms can be had from the Registered Office of the Company, or from the Underwriters or Brokers or from the Bankers of the Company, or from the Branches of such Bankers, at Madras, Bombay, Calcutta, Delhi, Bangalore, Coimbatore or Ahmedabad.

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS

A formal Prospectus dated the 28th December, 1960 has been delivered to the Registrar of Companies, West Bengal, for registration and copies thereof, along with Application Forms, are obtainable from the Bank and Brokers named below :

Consent of the Central Government has been obtained to this Issue, and a Licence has been obtained from the Central Government for a substantial expansion to this Industrial undertaking. It must be distinctly understood that in giving this Consent and the Licence, the Government of India do not take any responsibility for the financial soundness of any scheme or the correctness of any statement made or opinion expressed with regard to them. Consent of the Shareholders of the Company has also been obtained for this Public Issue.

The Subscription List will open at the commencement of the Banking hours on the 16th January, 1961 and will remain open until the close of Banking hours on the 18th January, 1961 or latter, at the discretion of the Directors.

Applications must be made for 100 Shares or multiples thereof and Applicants must be Residents in India.

BRITISH PAINTS (INDIA) LIMITED

(Incorporated under the Indian Companies Act VII of 1913, as Hadfields India Limited which name was changed to BRITISH PAINTS (INDIA) LIMITED on the 12th day of December, 1947).

AUTHORISED CAPITAL

10,00,000 Ordinary (or Equity) Shares of Rs. 10/- each ... ... Rs. 1,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL

2,83,654 Ordinary (or Equity) Shares of Rs. 10/- each ... ... Rs. 28,36,540

PRESENT ISSUE

2,16,346 Equity Shares of Rs. 10/- each at a premium of Rs. 5/- per share... ... ... Rs. 21,63,460

OUT OF THE ABOVE ISSUE

20,000 Equity Shares of Rs. 10/- each are reserved in the first instance for the Directors and their friends and the employees of the Company; to the extent to which these shares are not taken up by them, these will also be available for meeting the applications from the public ... ... Rs. 2,00,000

NOW AVAILABLE FOR PUBLIC SUBSCRIPTION

1,96,346 Equity Shares of Rs. 10/- each ... ... Rs. 19,63,460

Rs. 21,63,460

The whole of this Issue of 2,16,346 Equity Shares of Rs. 10/- each will be available in the manner stated above, AT A PREMIUM OF Rs. 5/- PER SHARE, on the opening of the Subscription list and the amount payable in respect of each share, including the premium of Rs. 5/- per share is PAYABLE IN FULL ON APPLICATION.

The Shares now to be issued will rank as regards dividends and in all other respects *pari passu* with the existing ordinary (or Equity) Shares of the Company save that the Shares now to be issued will not rank for any dividend that may be declared in respect of the Company's financial year ending 31st December, 1960.

All the Shares now to be issued are Equity Shares within the meaning of Section 85(2) of the Companies Act, 1956.

HISTORY AND BUSINESS

This Company was incorporated on the 17th December, 1923, in West Bengal. A controlling interest in the Company was acquired by British Paints (Holdings) Limited, Newcastle-upon-Tyne, England, in 1947, and accordingly its name was changed from "HADFIELDS (INDIA) LIMITED" to "BRITISH PAINTS (INDIA) LIMITED" on the 12th December, 1947. Since this change over there has been a rapid progress in the business of the Company; the nett sales have increased from Rs. 31,75,150 in 1947 to Rs. 166,90,983 in 1959.

PAST PROFITS, PAID-UP CAPITAL & DIVIDENDS FOR THE LAST FIVE YEARS HAVE BEEN AS FOLLOWS :—

For the year ended 31st Dec.	Nett profit before Taxation.	Nett profit after Taxation.	Paid-up Capital.	Rate of Dividend.
	Rs.	Rs.	Rs.	
1955	6,95,103	3,96,443	2,59,940	25%
1956	9,08,245	3,80,935	2,59,940	25%
1957	11,48,303	4,83,885	2,59,940	40%
1958	9,18,133	3,46,980	28,36,540	10%
1959	13,33,765	6,76,765	28,36,540	10%

OBJECTS OF THE COMPANY

The main objects of the Company are contained in the Company's Memorandum of Association, and have been set out in the "Prospectus". The principal business is manufacture and sale of Paints, Enamels, Varnishes and Synthetic Resins and allied products.

FOREIGN ASSISTANCE

The Company is a subsidiary of British Paints (Holdings) Limited of Newcastle-upon-Tyne, England, who hold a controlling interest in other subsidiary Companies in Great Britain, the U.S.A., Canada, Australia, New Zealand and Trinidad. The Company has been granted the right to use the Trade Marks owned in India by British Paints Limited of Newcastle-upon-Tyne, England, in accordance with British Paints Limited's specifications and on the basis of technical assistance granted by that Company; thus this Company enjoys the benefit of the vast technical experience and knowledge of the net-work of the subsidiary Companies of British Paints (Holdings) Ltd., England.

FUTURE PROSPECTS & DIVIDENDS

The Company's paint sales have been on the increase and it may reasonably be anticipated that the rate of increase will be maintained. With regard to Synthetic Resins, for which there is large internal demand due to restrictions imposed by the Government on the importation thereof, the Company is now in a position to manufacture, in its newly-established Resin Factory different types of Synthetic Resins for sale to consumers in reasonable quantities.

Furthermore, negotiations with a Foreign Company for a collaboration arrangement in regard to the manufacture in India of a special type of Protective Coating which is currently not manufactured in India but is imported in large quantities, have satisfactorily progressed; should these negotiations fructify and the sanction of the Central Government be granted, then it is proposed to form a new Company in conjunction with the foreign collaborators in which this Company will hold 51% of the issued share capital.

On the basis of the past working results of the Company, and considering the growth prospects outlined above, the Directors have every reason to hope that, with the additional finance now to be made available by the present issue and with the Company's development plan and extension projects gradually materialising, and provided no unforeseen circumstances arise which have the effect of hampering or curtailing the Company's operations, the profits of the Company will be sufficient to enable it to pay a dividend rate of 12½% (taxable).

The relationship of the Paid-up Capital of the Company with its Reserves & Surplus is shown below :—

	Rs.	Rs.
The Reserves & Surplus of the Company as at 31st December, 1959 amounted to		26,56,775
ADD :		
Share Premium to be received from this Issue, on the assumption that it will be fully subscribed	10,81,730	
DEDUCT :		
Estimated cost of this Issue	2,00,000	8,81,730
TOTAL :		35,38,505

This total Reserves & Surplus will represent roughly 71% of the Increased Paid-up Capital of Rs. 50 lacs, if this Issue is fully subscribed.

MINIMUM SUBSCRIPTION

The minimum amount, which in the opinion of the Directors, is required to be provided is Rs. 20,00,000/- to be utilised for Purchase price of Property, meeting the expenses of this Issue and for additional working capital.

MANAGEMENT

The management of the Company is vested in its Board of Directors and the Company has no Managing Agents nor Secretaries or Treasurers.

DIRECTORS

The Chairman of the Board of Directors receives a fee of Rs. 600/- per annum and other Directors, excepting the Managing Director, a fee of Rs 400/- per annum for attending the Meetings of the Board. Mr. A. V. Niblet is the Managing Director and receives remuneration for his services; Mr. D. P. Dunderdale and Mr. F. C. H. Rustomjee are Partners in the firm of Messrs. Sandersons & Morgans, the Solicitors of the Company, and are to that extent interested in the fees payable to that firm. Save as above, no Director has any financial or other interest in the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

EXPENSES OF THE ISSUE

It is estimated that the expenses of the Issue which will be paid by the Company will not exceed Rs. 2,00,000/-.

UNDERWRITING

The Shares now intended to be issued have not been underwritten.

RESTRICTIONS ON THE RIGHT TO TRANSFER SHARES, ATTEND MEETINGS AND VOTE

The holders of fully paid shares are not restricted either in respect of attendance, speaking and voting at Shareholders' Meetings or in respect of the transfer thereof. It is only in respect of Shares not fully paid up or upon which the Company has a lien that there are restrictions, namely, that no member of such shares shall be entitled to be present or vote on any question either personally or otherwise or in the capacity of Attorney or proxy at any General Meeting or upon a poll to be reckoned upon in a quorum whilst any call or any money shall be due and presently payable to the Company in respect of the Share of such member.

VOTING RIGHTS

The Articles of Association provide that on show of hands every member present in person or by proxy shall have one vote and on a poll every member present in person or by proxy shall have one vote for every Ordinary (or Equity) Share held by him. There are no special rights or restrictions attaching to the present Equity Share Capital of the Company.

PAYMENT TO PROMOTERS

No amount of benefit was paid or given within the two years preceding the date of the "Prospectus" or is intended to be paid or given to a Promoter or to any Officer of the Company apart from normal remuneration and reimbursement paid to such officers.

COMMISSION

No sums have been paid within the two years preceding the date of the "Prospectus" or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions, for any shares in or Debentures of the Company or as discount in respect of shares issued.

OPTION TO SUBSCRIBE

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in or Debentures of the Company.

APPLICATIONS & ALLOTMENTS

Applications for shares will only be considered if made by residents in India and must be for a minimum of 100 shares or multiples of 100 shares (except in the case of employees of the Company where applications for 25 shares or multiples of 25 shares will be entertained), AND MUST BE MADE OUT IN ONE NAME ONLY ON THE OFFICIAL FORM AND WILL BE REFUSED IF NOT SO MADE. The Application form together with the remittance for the full amount payable on application must be sent to a Branch in India of the Chartered Bank.

The Chartered Bank maintain Offices at the following places in India :—

At Calcutta.	(a) Netaji Subhas Road, Calcutta 1.
	(b) 31, Chowringhee Road, Calcutta 16.
At Bombay.	Mahatma Gandhi Road, Bombay.
At Madras.	Netaji Subhas Chandra Bose Road, Madras 1.
At New Delhi.	Connaught Circus, New Delhi.
At Delhi.	Chandi Chowk, Delhi.
At Kanpur.	Mahatma Gandhi Road, Kanpur.
At Amritsar.	Hall Bazar, Amritsar.
At Cochin.	Vi/37, Calvetty Road, Fort, Cochin.
At Calicut.	Copra Bazar, Calicut.

Payment should be made in cash or by Bankers draft or cheque. If payment is made by cheque or draft, the cheque or draft must be drawn on a bank which is situated in the town at which the application form is submitted. All cheques and drafts drawn on banks in towns other than those mentioned above will not be accepted. Cheques or drafts should be drawn in favour of "The Chartered Bank, A/c. British Paints (India) Limited", and should, for the applicant's protection, be crossed "A/c. Payee only". A separate cheque or draft must accompany each application form. Applications carefully completed together with the cash, cheques or drafts for the full amount payable on application must be lodged before the close of the Subscription List with any of the branches of The Chartered Bank referred to above. Application forms and cash, cheques or drafts *MUST NOT* be sent to the Registered Office of BRITISH PAINTS (INDIA) LIMITED.

Allotment will be notified by the despatch of an Allotment Letter but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant within two months of the closing of the Subscription List, in which event bank's commission, if any, will be payable by the applicant.

BROKERAGE

Brokerage at the rate of 18 nP. per share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised Stock Broker.

A commission will be paid by the Company to the Managing Brokers referred to in the Prospectus at the rate of 7 nP. per Share on all Equity Shares offered and actually allotted to the public.

PROSPECTUS AND FORMS OF APPLICATION

Copies of the Prospectus on the terms of which alone applications will be considered, and Forms of Applications may be obtained from the above-named Bankers and Brokers at the places stated above.

This is only an announcement for information and not a prospectus and applications are invited on the basis of the prospectus copies whereof are available from the Company's Bankers and Brokers mentioned herein.

An application will be made to the Stock Exchange of Madras and Bombay for permission to deal in the shares now being offered and in due course for an official quotation.

THE TRAVANCORE ELECTRO-CHEMICAL INDUSTRIES LTD.

(Incorporated on 4th April, 1945 under the Travancore Companies Act IX, of 1114)

AUTHORISED CAPITAL:

1,00,000 Equity Shares of Rs. 100/- each ... ... Rs. 100,00,000

PAID-UP CAPITAL:

13,288 Equity Shares Fully Paid-up at Rs. 100/- per Share ... ... Rs. 13,28,800

1,912 Equity Shares previously forfeited but subsequently re-allotted at Rs. 100/- per Share and now partly paid at Rs. 25/- per Share ... Rs. 47,800

Rs. 13,76,600

NOTE:

By a Resolution passed on the 7th of December, 1960 the Deferred Shareholders of the Company have given their consent to the conversion of the Deferred Shares issued by the Company into Equity Shares of the Company in the ratio of five Deferred Shares to one Ordinary Share ranking *pari passu* with the existing Equity Shares.

CAPITAL NOW ISSUED FOR PUBLIC SUBSCRIPTION:

10,033 Equity Shares of Rs. 100/- each ... ... Rs. 10,03,300

AMOUNT PAYABLE IN RESPECT OF SHARES:

The amount payable in respect of Equity Shares is as follows:

Rs. 25/- per Share on application.
Rs. 25/- per Share on allotment.

and the balance in two equal instalments provided that there shall be an interval of not less than three months each between calls and between the allotment and the first call.

APPLICATION FOR SHARES

Each application must be for a minimum of 5 Shares or in multiples thereof.

Where no allotment is made, the Deposit will be returned in full and where a partial allotment is made, the unutilised balance will be adjusted against amount due on allotment.

The Share Certificates will be issued within six months of the date of allotment.

REGISTERED OFFICE

P.O. Chingavanam, Kottayam, Kerala State.

OBJECTS OF THE COMPANY

The Company was established to manufacture and deal in Calcium Carbide, Carbon and Graphite in various forms, all types of electro-chemical, electro-thermal and high temperature furnace products like Carbides, abrasives, metal alloys and refractories, and derivatives and bye-products of the above.

HISTORY OF THE COMPANY

Although the Company was registered in 1945 it started operating as late as in 1952 owing to late delivery of the electrical equipment. The Company's activities were then on a developmental or experimental stage as it had put up a pilot furnace with a capacity of Calcium Carbide upto 1000 tons per year only. The Company in its developmental stage, therefore, made small losses, particularly as the cost of production of Calcium Carbide in a small capacity furnace was high. The Company's experimental activities are of great importance in as much as it proved the advantages of using seashells for manufacturing Quick-lime—an important raw material, at very cheap rates and of prescribed purity. The Company in its development stage also proved that it could produce Calcium Carbide of high purity meeting the requirement of the British Standard Specifications, as borne out by the Certificate in this respect of the Technical Development Establishment (M.E.)—Kirkee (Ministry of Defence). The purity of the Company's products has also been confirmed by the Tariff Commission report of 1956.

PROSPECTS OF THE COMPANY

Thanks to the developmental activities of the Company in the past, it is only now that the possibility of commercial production of Calcium Carbide appears to have come.

In 1956 the Company planned to expand its Capacity to 10,000 tons per year. The Company since then have secured the necessary Industrial and Import Licences from the Central Government for raising the production capacity to 10,000 tons per year. The Tariff Commission Report of 1956 commented on the proposed expansion project of the Company thus:—"The existing plant enjoys certain marked locational facilities for procurement of raw materials and electrical energy at economic rates, and expansion at the same spot should seem to afford them a reasonable assurance of success."

ASSISTANCE FROM KERALA GOVERNMENT

The Kerela Government has given the Company co-operation and assistance in this proposed expansion of the capacity of Calcium Carbide plant to 10,000 tons per year. The Government of Kerala have also invested Rs. 5 lacs recently in the equity shares of the Company.

ELECTRIC POWER

The cost of Electric Power determines to a substantial extent the cost of production of Calcium Carbide. The Company has the advantage of having Electric Power at cheap rates and on favourable terms from the Kerala Government.

TRANSPORT FACILITIES

The Company is located favourably so as to enjoy good transport facilities by rail as well as by water for the movement of its raw materials and finished products.

SCOPE AND PROSPECTS

Calcium Carbide is a basic chemical which is used in production of many important chemicals and materials such as P.V.C., Calcium Cynamide, etc. It is also used in the manufacture of explosives, in which the Central Government may be interested. At present it is being mainly used in welding and cutting steel. But market for this product is very rapidly growing with the development of steel and chemical industry in India. The statistics published by Government agencies indicate that in the year 1959 the production of Carbide was 4074 long tons and import was 8430 long tons. In the recently published *Outline of the Third Five Year Plan*, the local production of Calcium Carbide in 1960-61 and in 1965-66 are estimated at 20,000 and 60,000 tons respectively. With growing demand, therefore, the Company's entire production of 10,000 tons per year will find a ready market within the country.

ESTIMATE OF PROFITS

The estimated cost of production of Calcium Carbide manufactured by the Company as accepted by the Tariff Commission is Rs. 462/- per ton, and the present ex-factory selling price fixed by the Tariff Commission is Rs. 865/- per ton. Even taking into account some adjustments and contingencies, there is still a good margin of profit in the manufacturing operations of the Company.

SUPPLY OF MACHINERY AND TECHNICAL KNOW-HOW

The Company has secured collaboration from Messrs. Deutscher Innen-Und Aussenhandel Invest Export, of the German Democratic Republic. The Company has entered into two agreements with the abovenamed firm, one for supply of a complete Carbide Plant of 30 tons daily capacity and the other for supply of technical personnel and of project-true supervision of erection, function tests, trial run and putting into commercial operation the plant. The total purchase price of the plant inclusive of the necessary basic and execution projects, constructional documents, etc. amounts to about Rs. 17 lacs. The machinery suppliers have further agreed to charge an interest of only 3% on the outstanding balances. The payment is to be made in Indian Currency.

BROKERAGE

Brokerage at the rate of 1% on the nominal value of each Equity Share will be paid to registered Brokers on recognised Stock Exchanges and Banks on allotment being made in respect of applications bearing the stamp of such Brokers or Banks.

Messrs. Lewis & Jones have been appointed the Managing Brokers to this Issue. They will in addition be entitled to a Brokerage of ½% on the face value of the shares subscribed by the public and a further sum of Rs. 5,000/- as incidental charges.

SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 4TH JANUARY, 1961 AND WILL CLOSE AT THE CLOSE OF THE BANKING HOURS ON 11TH JANUARY, 1961.

THE ALUMINIUM CORPORATION OF INDIA LIMITED

CHAIRMAN, MR. L. SINGHANIA'S ADDRESS

The following is the speech delivered by Mr. Lakshmipat Singhania, Chairman of The Aluminium Corporation of India Limited at the Twenty-second Annual General Meeting of the Shareholders held on Tuesday, the 27th December, 1960.

Gentlemen,

I have great pleasure in welcoming you to the Twenty-second Annual General Meeting of the Corporation. You will be no doubt gratified to observe from the audited accounts and Directors' Report which have already been circulated to you, that in spite of higher expenses the Corporation has been able to maintain the level of profits. You will notice from the Directors' Report and Accounts that adequate appropriations have been made towards depreciation and allocation towards General Reserve has also been maintained. The appropriation towards taxation has been reduced by Rs. 2 lacs and this advantage has been passed on to the shareholders. As explained in the Directors' Report the dividend on Preference Shares will be paid after deducting tax but now the Preference Shares (Regulation of Dividends) Bill, 1960, has been passed by the Legislature and as proposed immediately the full details are available whatever further dividend, if any, is due to the holders of the Preference Shares will be paid in due course.

During the year the cost of production has gone up further due to increased cost of labour, stores, spares and raw materials, etc. and also due to heavy expenses for replacement and renovation which have been incurred for the maintenance of the Corporation's plant in up-to-date working condition as the plant is in continuous operation now for more than 17 years. Besides, there have been fresh impositions by the Government in various spheres including higher railway freight and other charges. In the expanding economy of the country, I do not expect that there will be a downward tendency of these costs. Therefore, future should be viewed with cautious optimism.

Future of Aluminium Industry

As you are all aware, momentous changes are taking place in the country for the development of aluminium industry. I have pointed out before from time to time that aluminium is the only non-ferrous metal which can be produced not only to meet country's requirements but even beyond due to the availability of sufficient physical raw material, i.e. bauxite which is available in abundance in the country. However, power being still the basic raw material for production of this metal, by its anticipated rapid development as envisaged in the Third Five Year Plan, the production of aluminium metal is expected to rise to a level which was not possible to comprehend before and which is still difficult to judge, in view of the scarcity of raw materials in developing other non-ferrous metals. There are high hopes that this metal may be in a position to help the country in filling the gap of requirements of other non-ferrous metals to a great extent which are likely to be required in this expanding industrial economy. I am very glad that this fact has been realised and there is planning and thinking for higher production of the metal in the country. Although I may be repeating myself, your Corporation has played an important role by first producing this important metal from Indian bauxite in 1944 with Indian capital, Indian Management, Indian labour and on top of that Indian technical 'know-how' and personnel and without any foreign collaboration or help whatsoever in earlier stages. I feel that the services rendered by your Corporation in developing this industry in the country, would be really realised by the historians at a later date.

In my last year's statement before you, I estimated the expected consumption due to factors available then but due to accelerated industrial advancement, it seems that the earlier thinking regarding pattern of consumption in this country is changing and the consumption probably is going to be much higher than anticipated earlier. For the time being, the Planning Commission has accepted a target of 82,500 tons of metal production as included in the Third Five Year Plan. But the Hon'ble Minister for Industries, Mr. Manubhai Shah, declared in the Lok Sabha on 7th September, 1960, that the estimated requirements of the country in 1965-66 would be 150,000 tons of metal per annum. In my opinion, there should be no doubt that this consumption can be achieved in this country and as such production should follow this pattern of requirements. It is, however, possible that there may be a time lag in between the consumption and production when all the new plants come into production and such temporary phase may be disheartening for this industry but ultimately I am convinced that the consumption is going to be higher than production.

Heavy Excise Duty

At this stage I would like to draw your attention to the imposition of heavy excise duty on aluminium metal and its products announced by the Hon'ble Finance Minister in his budget proposals for 1960-61. This step is rather unfortunate as it will make this metal less competitive in comparison to other non-ferrous metals and may lead to hindrance in increasing the consumption of this metal which is being built up by the Indian producers at a very great sacrifice. The Indian producers have maintained their prices at a lower level without taking full advantage of the Tariff protection. My humble opinion is that the consumption of this metal will rise more if it is left alone to find its own market, at reasonable prices by development in future years. However, I am happy that we have an assurance from the Hon'ble Finance Minister that the position will be watched carefully and if necessary suitable steps will be taken.

During the year, the Tariff Commission has again examined the case of this industry and the recent announcement in the Lok Sabha shows that the Government of India has accepted to continue protection till 31st December, 1964. At present there is surplus capacity in several parts of the world for this metal while there is scarcity in certain parts where the industry has not developed. This is in addition to the fact that some type of protection to this metal is given in particular in every part of the world and in every country. The protection question here has to be judged and watched with great caution in future.

Rising Production

Since the production of aluminium industry is increasing in this country, it is necessary to examine very carefully the availability of other raw materials such as petroleum coke for electrodes and cryolite for electrolysis which are to be imported. Though small quantity in comparison to the cost of the metal itself these play a very important part in the production of the metal. It is necessary that our oil refineries should produce the country's requirement of petroleum coke which is needed not only for aluminium industry but many other industries also. This, in my opinion, can be done without such difficulty. The production of synthetic cryolite should also be given higher priority for investigation and production from indigenous raw materials.

LABOUR is a very important link indeed in any industrial development. There is a disquieting trend of the Trade Union movement becoming more and more political, specially in this State. At the moment, I am more concerned with the area wherein your Corporation's factory is situated. Unfortunately in this State and particularly in the area around Asansol where industrial development is rather quite rapid, there have been certain disturbances rather regularly, specially in the Collieries mainly due to political factions between Trade Unions. The maintenance of the employer-employee relation is becoming more and more difficult and efforts to create a better understanding through Code of Conduct and direct negotiations have no meaning unless and until full co-operation is shown from both sides. I want to mention another danger to employer-employee relations which has taken shape recently. I think I will do better in quoting the recent description by Sir Biren Mookerjee in his own words as follows :—

> "There has been for some time an agitation sponsored by some Trade Unions and several of the State Governments to insist on the restriction of jobs to those popularly described as "sons of the soil". If this principle is carried to its logical conclusion it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other State. The mobility of industrial labour which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country."

Such slogans popularly described as job for "sons of the soil" or "children of the State" are rather difficult to understand and in my opinion such a thing is neither in the interests of the State nor in the interests of the Nation. Dr. B C. Roy, Chief Minister, has correctly defined at a recent meeting of the Legislature that the "sons of soil" are sons of this country. This State of West Bengal at one time a pioneer in industrialisation, is now getting behind in sharing the industrial progress of the country and employment figures do not reflect a happy position as compared with the position of the employment figures of other States during the last 10 years. More industrial development means more employment in the area where the development takes place but let me be honest, jobs are not charities. These cannot be distributed. The jobs are the right of the people who can make themselves capable for them and the slogan should be that people should make themselves capable of acquiring the jobs and not accepting charity. If this attitude is not adopted, I am sorry to say that there will be more loss to the State where already a condition is created that the people are afraid of putting up new industries and also the existing offices are being transferred. There was a time when Calcutta was considered the principal financial city of the country whereas now it has been noticed that even the main financial offices are away from the city and there is a tendency of more offices being shifted. There must be some reason behind this and I must emphatically urge the people of this State to examine the position very carefully and for the sake of this State and creation of employment in the State, they should bring about conditions and atmosphere where more employment opportunities are available to the sons of the soil or children of the State. It is my appeal to all parties that this should be adopted for the interest of the State. I would like to emphasise that the first interest of every employer in any State is to see that the people available locally must be employed and all opportunities be offered to those who are living in the vicinity, otherwise there is no object of establishing an industry in that area. As far as the Corporation is concerned, the employment opportunities are open without any restriction of any kind to everyone of those who are suitable for the job.

Expansion Programme

As indicated last year as well as clarified in your Directors' Report, the Corporation has undertaken the expansion programme for trebling the production of the existing plant. After personal examination of the most modern plants in different parts of the world and in consultation with our technical collaborators, Messrs. Aluminium-Industrie-Aktien-Gesellschaft, Zurich, Switzerland, we have adopted the latest trends in the designs of our plant. We believe that when the plant starts production, it will be one of the most modern technically and will be setting up a new example in the country. The building design of the Cell House again represents the most modern thoughts at present existing in the Aluminium world and this design according to the studies made by various experts and universities, is likely to be most suitable for tropical conditions as existing in our country. I do hope that your Corporation will continue to play the important role of most economic production of the metal in this country as it has done in the past. According to present indications, we hope that the first production from this expansion would start by end of 1961.

As mentioned in the Directors' Report, we will very shortly be coming to you to raise a small amount of capital by way of equity shares to the extent of Rs. 31.25 lacs out of the requirement of about Rs. 4.5 crores for this expansion programme by offering one equity share at par to the holders of every two existing ordinary shares. The rest of the finance has already been arranged through loans and deferred payments.

The coming years will make a new history in the Corporation's existence. Government was good enough to renew the Managing Agency Agreement for the next 10 years. The Corporation has indeed grown from a very humble start under the able guidance of the Managing Agents and through co-operation and efforts of the humblest worker in the factory to the team of technicians and Directors, and I am sure, they will continue to render services in the same spirit of dedication as before. The Corporation is no doubt proud of the team of technical personnel whom it has trained.

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

CHAIRMAN, MR. A. R. MUDALIAR'S REVIEW

The following is the speech delivered by Mr. A. Ramaswami Mudaliar, Chairman of The National Newsprint & Paper Mills Limited at the Annual General Meeting of the Shareholders held on 27th December, 1960:

Gentlemen.

I have great pleasure in extending to you a cordial welcome to the Thirteenth Annual General Meeting of the Shareholders of the National Newsprint & Paper Mills Limited.

The Directors' Report, the Balance Sheet and the audited Accounts for the year ending 31st March 1960 have been in your hands for some time and with your permission I shall take them as read.

The progress for the year ending 31st March 1960 can be considered satisfactory and we have completed another year in which we have been able to show good working results. During the year 22,411 tons of newsprint was manufactured registering an increase of 573 tons over that of the previous year. The production consisted of bleached variety 19,203 tons and unbleached variety 3,208 tons. The working showed a net profit of Rs. 37,76,278.97 after providing for depreciation and development rebate reserve. The profit has been utilised to reduce the debit balance of the profit and loss account of Rs. 1,36,38,131.85 at the beginning of the year leaving a debit balance of Rs. 98,61,852.88 on 31-3-60. I have to bring to your special notice that this is the second year in succession in which the Company has made a clear profit and I will repeat what I said during my last year's speech that we have definitely turned the corner and we shall continue to improve our position year by year and hope that in the near future the financial position of the Company will be such that it may be possible to declare a dividend.

Interest-bearing Loan

As on 31st March 1959 the loans outstanding to the Madhya Pradesh and Union Governments stood at about Rs. 95 lakhs and Rs. 32.37 lakhs. During the year under review the entire interest bearing loan to the Government of Madhya Pradesh was repaid in full and Rs. 7.73 lakhs loan from the Union Government was also repaid. I am glad to say that since then due to the improvement of the ways and means position we have been able to pay the entire interest bearing loan due to the Union Government as well. We have also been able to pay the second instalment of Rs. 11 lakhs due before the end of this month towards the interest free loan payable to Madhya Pradesh Government. The balance of interest free loan to be paid to Madhya Pradesh Government is Rs. 88 lakhs. This is now the only outstanding loan still payable in 8 instalments.

Last year I referred to the additions to the Chemical Mill. Some of the equipment ordered from abroad were received and were put into commission and during the year we have been able to commission the third Digester, the Modern Refiners, the Uni-Clarifier and the Re-Chipper. The work on the Calcium Hypochlorite Plant is in progress. With the addition of some of the equipment it has been possible to increase the output and also the quality. In fact on three occasions recently we have been able to manufacture more than 100 tons a day, the target capacity of the Mill.

There has been very little improvement in the position of supply of electrical power and steam as offered by the Chandni Power Station. The Madhya Pradesh Electricity Board have a programme to expand the Power House to meet our requirements for a production of 100 tons per day through extensions to the existing installations. Two Lancashire Boilers have been installed by them recently but the additional power and steam supply is not such as to maintain a sustained production of 100 tons per day. In addition from 1-4-1960 the Madhya Pradesh Electricity Board have revised the tariffs very steeply. This will result in payment of about 25% additional charges for the supply of power and steam. This is being paid under protest. Your Directors are examining the revised tariffs.

Quality of Newsprint

The quality of our newsprint has also been improved to a certain extent. A certain degree of improvement has been achieved by mixing a small proportion of imported chemical and mechanical pulps which has added not only to the strength but also improved its appearance and colour. Further investigations are still proceeding on the lines which I mentioned in my speech last year.

We have had difficulties in procurement of chlorine supplies. At present we are getting supplies from Delhi, Bombay and Ahmedabad. There have been several occasions when the supplies failed on account of breakdown in the suppliers' plant or transport difficulties. On account of the long distances heavy freight charges have to be incurred. Your Directors, therefore, are examining a proposal to have our own chlorine caustic plant to meet our requirements of chlorine and caustic soda. This scheme is being progressed and if adopted will not only ensure steady supplies but also ensure considerable saving. We have also drawn up plans for doubling the capacity of the plant stepping up the production to 200 tons per day during the third Five Year Plan. The Scheme has been accepted and included in the draft third Five Year Plan and is being progressed.

During the ten years that I have been the Chairman of this Company, the ownership and the constitution of the shareholders has radically changed. When the Company was purely a shareholders company although a good proportion of the share were held by the Madhya Pradesh Government, there was a certain latitude granted to the Board of Directors to choose technical personnel at levels of salary which would attract the most competent and efficient staff. As you are aware we had foreign personnel who received very high salaries and even the Indian personnel were granted salaries according to existing demands for such personnel. Today the Company is a public Company not merely under the definition of the Companies Act, but also according to rules and regulations issued by the Government. The strict financial regulations in the matter of the level of salaries which could be granted are having their effect on the staffing of higher technical personnel. I would like to state as my personal opinion that public projects generally would be seriously handicapped if in appropriate cases according to the nature of the technique required of the personnel, less rigid conditions regarding maximum salaries are not established. The matter is of general importance to all public sector projects and needs serious and early consideration at the hands of the Government.

Rising Demand

The demand for newsprint has been increasing and the quantity supplied to the newspapers has been stepped up. During the year about 9,400 tons have been supplied to the newspapers. Next to the newspapers priority is given to the printers and publishers of text-books and the books of general interest. The quantity supplied to printers and publishers came to 3662.35 tons during the year 1959-60. The balance of the production was distributed to Governments and dealers as duty paid goods through our various Agents and Distributors.

The welfare of staff continued to be given attention by the Directors. This was the first year in which an Incentive Award equal to a month's pay and allowances was paid to the employees getting a basic pay of Rs. 500/- subject to a maximum of Rs. 325/-. The construction of 100 more F-type quarters and 10 C-2 type quarters have been taken in hand as the accommodation was found to be insufficient to house the employees. These are in progress. In addition a Welfare Centre, a new Maternity and Child Welfare Centre and a Recreation Hall have been constructed for the benefit of the workers in the Third and Fourth Stage residential areas. These have been completed and brought into use. A Bachelors Hostel to accommodate about 25 persons is under construction. Sports and recreational facilities continued to be attended to. The contribution to the Provident Fund has been increased from 6¼% to 8⅓% of the total emoluments, i.e. basic salary and Dearness Allowance. The workers have also shown a spirit of co-operation in stepping up the production.

I have to specifically mention on this occasion the resignation of Mr. S. R. Krishnaswamy who worked as the Works Manager of this Mill for nearly 5 years. He has contributed in no small measure to bringing up the production in this Mill to the present level with his knowledge and experience. I would like to pay a special tribute to his work during his stay in the Nepamills.

I would like to convey my thanks to all the workmen and the staff who have worked with zeal and enthusiasm in spite of difficulties and grievances. They have given their best to produce these excellent results and I hope will continue to give their hearty co-operation and improve the results even more

Finally I wish to thank all shareholders and all our Agents and Customers who have encouraged us by using our paper and without whose patronage it would not have been possible to make the progress that we have achieved during the last year.

Note: This does not purport to be the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

CALL FUNDS TIGHTER

Wednesday, 4th January.

THERE has been a considerable increase in the volume of funds outstanding in the Calcutta money market, where most of the main sources of demand have increased their offtake during the past week. These include the cotton and jute mills, the sugar, engineering, and iron and steel industries. The only important source of demand which shows a decrease is that on account of grains and seeds storage in upcountry areas. Conditions in the interbank market have become exceedingly tight, and there is little money available at the increased call rate of 5 percent.

The exchange market has been active during the past week, with both tea and gunny bills in good supply. Remittance demand has been moderate. The pound sterling opened weak on the London money market, but firmed up towards the close, with gains recorded on most important currencies.

BULLION WAS STEADY DURING THE PAST FORTNIGHT. Silver rose from Rs. 223 to Rs. 224.25, quoted today for ready delivery. The rate for forward delivery was Rs. 223.75. The London and New York silver prices were 79½d and 91.375 cents.

Reports about the seizure of substantial quantities of contraband gold raised the price of the metal from Rs. 135.50 to Rs. 136.25. The sovereign at Rs. 91.50 showed a gain of 25nP.

DURING THE WEEK ENDED 30TH DECEMBER, GOVERNment of India Treasury bills for Rs. 51,41,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 3rd January. The total amount offered was Rs. 2,40,00,000. Tenders at Rs. 99.365 were accepted in full and those at Rs. 99.360 were allotted approximately 80 percent, the average rate of acceptance being Rs. 2.556 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th January.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY Bills will be sold from 4th January to 7th January, 1961, at Rs 99.376 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 26th December to 30th December.

RISES OF RS. 10.43 CRORES TO RS. 1,868.98 CRORES in active notes, and of Rs. 9.88 crores to Rs. 1,885.19 crores in the total note issue, were the outstanding features of the return of the Reserve Bank of India for the week ended 30th December, 1960. The currency expansion was covered by increasing the rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 1,512.06 crores. This was presumably done by transferring securities from the Banking Department, in which investments declined by Rs. 20.16 crores to Rs. 185.41 crores. Deposits of the Central Government increased by Rs. 1.20 crores to Rs. 70.03 crores, but other Government accounts were Rs. 5.47 crores lower at Rs. 9.87 crores. Balances of commercial banks increased by Rs. 23.66 crores to Rs. 115.68 crores because of the usual year-end "window-dressing". Balances held abroad again rose by Rs. 3.86 crores to Rs. 27.58 crores. Other loans and advances increased from Rs. 142.14 crores to Rs. 159.91 crores, of which advances to scheduled banks against usance bills amounted to Rs. 13.80 crores (Rs. 8.36 crores). Ways and means advances stood at Rs. 41.25 crores, against Rs. 37.61 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 23rd December, 1960, shows Demand and Time liabilities at Rs. 794.36 crores (Rs. 18.08 on account of borrowings from banks) and Rs. 1,121.53 crores (Rs. 14.81 crores), compared with Rs. 790.99 crores (Rs. 19.59 crores) and Rs. 1,122.57 crores (Rs. 14.44 crores), respectively, in the previous week. Cash has declined by Rs. 71 lakhs to Rs. 43.93 crores, while balances with the Reserve Bank have increased by Rs. 8.09 crores to Rs 88.09 crores. There is a drop of Rs. 25 lakhs to Rs. 658.55 crores in investments. Advances and bills discounted at Rs. 1,156.25 crores show a rise of Rs. 11.15 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.9 percent and 60.4 percent, against 6.5 percent and 59.8 percent.

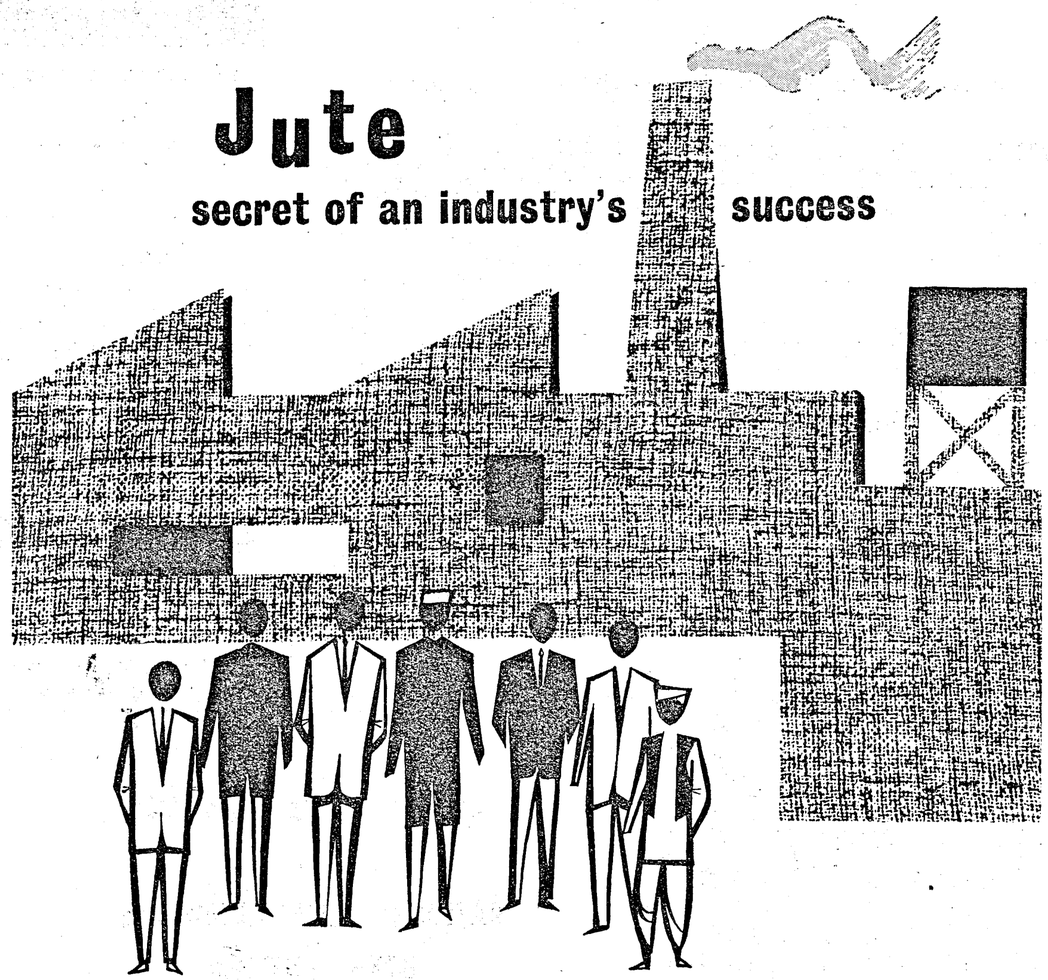
Jute

secret of an industry's success



With a membership of 70 companies, comprising 100 manufacturing units, the IJMA represents almost 95% of the total jute loomage in India.

Providing employment to millions of farmers, traders and mill-workers ... earning about Rs. 115 crores annually in foreign exchange ... contributing large sums in taxes to the State and Central Exchequers — the Indian jute industry occupies a prominent place in the nation's economy.

Guarding the interests of this nationally important industry and guiding its destiny, is the Indian Jute Mills Association. Founded in 1884, the IJMA — representing almost 95% of India's total jute loomage — protects, forwards and defends the trade of its members. The Association carries on research ... to improve the quality of jute products and to develop new uses of this already versatile material. In the field of export promotion the Association has been active for well over a decade, undertaking publicity and promotional work which has helped make jute goods India's largest dollar-earner. Its labour welfare activities have set standards throughout industry.

The Indian Jute Mills Association looks forward to serving the Indian jute industry in ever-increasing measure in the years to come.

Issued by the **Indian Jute Mills Association**

Stocks and Shares

SPECULATIVE SHARE PRICES EASE IN DULL TRADING

SELECTIVE DEMAND FOR MISCELLANEOUS INDUSTRIALS

Wednesday Evening.

THE Calcutta stock market has been through one of its dullest Christmases for years. Trading has been slow, holidays have been numerous, and prices have been drifting almost steadily downwards. The one bright set of features has been found in the miscellaneous section: a number of quality scrip there have steadied up on good company news. But the speculative issues, in particular, have softened on bull liquidation of the sort which indicates that the basic undertone of the market is one of anxiety.

Until the old year ended, the main worry was the stringency of bank credit, especially the possibility of advances being recalled as the banks dressed their balance-sheets. This worry has by no means ended yet; the money market is tight and the interbank call rate in both Calcutta and Bombay remains firm. The advance of the busy season does not promise easier conditions in the near future, especially since the Reserve Bank shows no sign of wanting to scrap the deposit impounding scheme, as it should have done a good few weeks ago.

Investors are also mobilising their resources for subscribing to a number of new issues which are to be made in the near future. On earlier pages, fuller details and analyses are given of the share offers made by four companies—British Paints (India) Ltd, Madras Aluminium, Usha Martin Black and Travancore Electro-Chemical. These are some of the notable ones of a fairly long queue, and the amount of money which will be siphoned off into the new issue market will probably be substantial. The Government's policy of "bunching together" new share issues more closely —in order to discourage rabid speculation of the sort which occurred in the first half of last year— will inevitably put a greater strain on the supply of investible resources. At the same time, the latter are not likely to be supplemented any more by speculative funds borrowed at high interest rates and then invested in new shares by gamblers hoping for quick capital gains. In other words, although the condition of the new issue market is basically healthier, the supply of funds there is less. Good companies should still get the money they want without much difficulty, but the lesser breeds may have reason for anxiety.

To some extent, the recent decline in share prices has been precautionary in nature. New Delhi has run short of Ministers, who have vanished in the direction of Gujarat to attend the meeting of the Congress Working Committee in Sardarnagar, where a resolution on planning is due to be passed. Nobody imagines that the Congress Party's economic mind nowadays is fertile for new and rational ideas so the resurrection and advertisement of outworn shibboleths about socialism is expected, which will naturally tend to subdue the investment urge. The fact that the planning resolution will be an adjunct to the election manifesto of the Congress does not make the prospects much brighter; the Party may be ready to soft-pedal on the question of joint co-operative farming in order not to scare rural voters, but in the industrial sector the purposes seem to be more and more in favour of egalitarianism and State enterprise. Although the Central Budget is still two months away, the stock market is awaiting it with some trepidation. The general fear is that the tax-gathering effort will be intensified from the very start of the third five year plan, in which case hardly any reliefs are to be expected, not even on such obviously logical points as the removal of the bonus issue tax.

At the settlement today, Indian Iron have dropped to Rs. 22.98, although the Company's production figures for December are better than those for November. Other engineerings have moved down in sympathy, Texmaco and Guest, Keen, Williams included. Indian Oxygen attracted much interest recently on hopes of a rights issue; but now that the two-for-five issue has been announced, the shares have eased because the rights shares are to be offered at a premium of Rs. 8 each.

Enquiries for coal shares remain selective, and business has thinned with the decline in the stock market generally. Investors are hoping that foreign aid may be offered in order to facilitate the industry's plans to increase its output with the help of imported machinery and equipment. The recent talks with the World Bank mission have been particularly cheering in this context, but shareholders are waiting for more positive indications about the quantity of foreign aid to be expected before any substantial buying develops.

Jute shares have attracted no interest at all, since the I.J.M.A.'s decision to reduce the working hours of the industry has highlighted the severity of the raw jute shortage. The only feature in this section have been National, which have risen on interested buying.

The better-class miscellaneous industrials have attracted fair support, but the rest are subdued in sympathy with the general trend of the market. Union Carbide have recovered partially after their sharp relapse early last month. In their case, as in the case of Associated Batteries, investors are reassured by the thought that the Companies are doing well. Rallis are expanding and diversifying their activities, so the shares have risen. Isaac Holdens have celebrated their entry into the stock market by rising smartly above the paid-up value, but some say that the support is speculative in nature, conforming to the pattern once set by Phillips Carbon Black. Interim dividends have inspired a steadier trend in Britannia Biscuits and India Paper, while the announcement of a one-for-two rights issue at par has helped Belsund Sugar. Other sugar shares have received with satisfaction the news that sugar production so far during the current season has been higher than in the corresponding period of 1959-60.

Tea shares have attracted hardly any attention, because everybody is still shedding tears about north India having produced a poor crop.

Except for interest in the Conversion Loan, turnover in the gilt-edged section has been negligible.

Two companies which offered shares to the public recently announce that their issues have been over-subscribed. They are Kothari Sugars and Chemicals, and Hindustan Wires. The former hopes to proceed with allotments by about the middle of this month. The latter says that it will give 40 shares to those who applied for 50; 60 shares to those who applied for 100; 50 percent to those who asked for 100 to 600 shares; 300 shares to those who applied for 650 to 900 shares; and approximately 35 percent to those who asked for 1,000 shares or more.

ment rebate reserve (against Rs. 4.06 lakhs), the profit of the Khardah Co. Ltd for the year ended March 1960 has increased from Rs. 10.04 lakhs to Rs. 23.92 lakhs. The Company has declared an ordinary dividend of 20 percent, subject to deduction of tax, against 20 percent, tax-free, in the previous year. This is covered more than twice and offers a yield of 10 percent at a price of Rs. 19.75 a share. Provision for tax amounts to Rs. 10.80 lakhs (against Rs. 3.92 lakhs) and general reserve receives Rs. 1 lakh (against nil). After making other adjustments, a sum of Rs. 74,405 has been carried forward, against Rs. 10,158 brought in. The balance-sheet shows that fixed assets amount to Rs. 84.56 lakhs and current assets to Rs. 1.26 crores. The Company's reserves and surplus total Rs. 24.50 lakhs.

Central Provinces Railways

After providing Rs. 2.67 lakhs (against Rs. 2.85 lakhs) for taxation, the profit of the Central Provinces Railways Co. Ltd has amounted to Rs. 3.27 lakhs for the year ended September 1960, against Rs. 3.50 lakhs in the previous year. A taxable ordinary dividend of Rs. 3.50 a share, including an interim of Rs. 1.50, has been declared. The previous year's ordinary dividend was Rs. 4.13 a share, tax-free. After making various adjustments, there remains a balance of Rs. 5,141, which is carried forward, against Rs. 6,607 brought in.

Futwah-Islampur Light Railway

The profit of the Futwah-Islampur Light Railway Co. Ltd for the year ended March 1960 has increased from Rs. 18,962 to Rs. 21,912, after providing Rs. 1.68 lakhs for depreciation (against Rs. 67,522) and Rs. 18,500 for taxation provision (against Rs. 20,800). The Company has declared an ordinary dividend of Rs. 1.90 a share, subject to deduction of tax, absorbing Rs. 21,844. This offers a yield of 5.8 percent at a price of Rs. 32.50 a share. An ordinary dividend of Rs. 1.65 a share, tax-free, was declared in the previous year. After making various adjustments, a sum of Rs. 102 has been carried forward, against Rs. 34 brought in. The balance-sheet shows that fixed assets amount to Rs. 15.86 lakhs and current assets to Rs. 2 lakhs. The Company's reserves and surplus total Rs. 8,602

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for December 1960 are published below, the figures for November 1960 being given in brackets.

Production	(In tons)	
Pig iron	1,11,516 (1,06,490)	
Steel ingots	86,424 (76,619)	
Saleable steel:		
(a) Semis	20,437 (17,144)	61,395 (59,380)
(b) Finished	40,958 (42,236)	
Despatches		
Saleable steel	59,892 (54,855)	

Tata Steel Output

Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during December 1960 was : pig iron 143,200 tons ; steel ingots 150,600 tons ; semi-finished steel for sale 40,000 tons ; and finished steel 75,800 tons.

Bombay Market

THIN TRADING FOLLOWS QUIET OPENING

NEW YEAR BEGINS ON SUBDUED NOTE

Wednesday Evening.

THE Bombay stock market opened in the New Year in a subdued mood after a long Christmas holiday. Trading during the past three days has been thin and prices of shares have drifted downwards due more to the absence of support than to selling pressure. End-account considerations also restrained activities.

Operators were not able to take a constructive view because they were worried over the deliberations which might take place at the Sardarnagar Congress session which is being held this week. Uncertain political developments in many parts of the world were interpreted bearishly. The offer of many new share issues appears to have made investors cautious. The latter are more inclined to invest money in some of these good issues instead of buying the existing scrip at the present high prices.

Tata Steel declined to Rs. 139 on pressure, as did Indian Iron to Rs. 23. The publication of higher production figures of the latter company for December has had virtually no effect. Prices of engineering shares disclosed losses all round. Alcock Ashdown were available at Rs. 234 and Premier Construction slipped back to Rs. 279. Tata Locomotive lost at Rs. 288 and Mukand Iron were sold down to Rs. 20.52. Motor shares were quiet, and Hindustan Motor were quoted lower at Rs. 19. Premier Automobile were dealt in at Rs. 160.50.

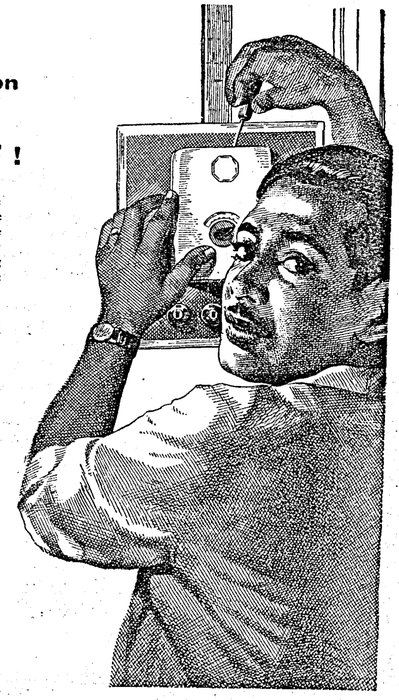
Reductions in cloth prices made investors in mill shares hesitant. Bombay Dyeing declined to Rs. 59.50, as did Century to Rs. 448.50. Kohinoor met with scattered interest up to Rs. 262, but Simplex were freely offered at Rs. 159. Svadeshi came to hand at Rs. 219 and Khatau were done at Rs. 431.25. India United Ordinaries were sold at Rs. 12.72 and buyers were difficult to locate in Apollo at the lower price of Rs. 1.30.

Miscellaneous shares lost on balance in pattern with the general trend. Among sugar shares, Belapur were offered at Rs. 327 on fears of the imposition of ceilings on landholding. Phalton declined to Rs. 159.50 and Walchandnagar Industries were available at Rs. 258. Steamship company shares were quiet, and the earlier improvement in Scindia Steam was not maintained at the close on talk of labour troubles ; the scrip were transacted down to Rs. 14.52. Great Eastern Shipping were quoted lower at Rs. 15.28. Mining shares were quietly steady, and business passed in Shivrajpur Syndicate at Rs. 71.50. Cement shares lacked interest, and Associated Cement were available at Rs. 147. Digvijay Cement were dealt in at Rs. 145. National Rayon reacted to Rs. 468 on pressure and Bombay Burmah were taken at Rs. 547. Scattered interest was taken in Tata Oil at Rs. 72.80 and in Voltas at Rs. 261.50. Chemical shares were sold at lower rates, and Tata Chemical declined to Rs. 16.64. Indian Dyestuff were dealt in at Rs. 425 and Polychem came to hand at Rs. 200. An outstanding feature in the cash section was the brisk activity in the newly-

you have just fixed on
A METAL BOX COMPONENT !

Metal Box, leaders in the packaging field, have diversified their production and now manufacture pressed metal components for the radio, automobile and electrical industries in particular. Backed by their long experience in the forming and stamping of metal sheets to various shapes—a basic process in the manufacture of containers—Metal Box are now able to supply regulator covers for fans, chasis and transformer cans for radios, hub caps for automobiles and a variety of other components made of steel, aluminium, tinplate, lead, brass and other alloys.

The production of pressed metal industrial components by Metal Box, an organization specialising in container manufacture, is evidence of the Company's adaptability and its desire to adjust itself to cater for the country's needs. In order to place the minimum strain on foreign exchange, press shop equipment already available in the country was modified to suit the production of industrial components, a ready supply of which is so essential for the rapid growth of India's industries.



METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

listed Isaac Holdens which improved to Rs. 8.75. Ceat Tyre lost at Rs. 215.

Interest was subdued in bank and insurance shares. Bank of India changed hands at Rs. 106.50 and Central Bank were done at Rs. 53. New India Assurance came to hand at Rs. 53.50.

Turnover was limited in electricity company shares. Ahmedabad were quoted at Rs. 84 and Bombay Suburban were transacted at Rs. 85.30. Tata Power were taken at Rs. 1,031.25.

Madras Market

MIXED TRENDS ACCOMPANY WIDE UNCERTAINTY

SUGAR SHARES FIND SUPPORT

Wednesday Evening.

THE Madras stock market has been quiet in the past week and the business was interspersed with holidays. It is fashionable at this time of year to speculate about the future trend. It was generally thought that the trend would be uncertain for quite a while in view of the Budget uncertainties. Support was restrained by tighter money conditions and it was feared that credit would be more difficult to obtain in the future because the busy season has begun to gather momentum.

Business in Government securities was restricted and there was little evidence of any institutional support. Due to the demands of the busy season, banks were not interested in investment. Sugar mills were selectively bought on good corporate news. Among planting shares, tea scrip were taken up with discrimination, and the gardens which sold their crop at remunerative prices met with scattered interest. Coffee shares were hesitant on fears of surpluses. Rubber shares were quietly steady due to the increased demand for the commodity. Textile shares were sold because it was thought that the profitability of mills might be hampered by the latest cuts in cloth and yarn prices. Turnover was limited in miscellaneous shares and support was discriminating.

In banks, business passed in Indian at Rs. 170 and in Indian Overseas at Rs. 179. Pandyan were transacted at Rs. 33.

Among public utilities, South Madras were done at Rs. 10.10 and West Coast at Rs. 13.10. Berhampur came to hand at Rs. 6 and Ellore at Rs. 16.55.

In sugar shares, Deccan were wanted up to Rs. 15 on paying a second interim dividend of 18¾ percent, taxable. K.C.P. were transacted at Rs. 26 on the decision to issue ordinary rights shares in the proportion of 17 new shares for every 100 shares held. Cauvery were dealt in at Rs. 146.50 and United Breweries were steady up to Rs. 114.50.

In the planting group, business passed in Blue Mountain at Rs. 4.06 and in Cochin Malabar at Rs. 6.95. Consolidated Coffee changed hands at Rs. 22.25 and Ouchterloney were quoted at Rs. 4.63. Periakaramalai were dealt in at Rs. 3.42 and Peermade were done at Rs. 22.40. Chembra were wanted up to Rs. 5.43 on declaring free bonus shares in the proportion of one new share for every two shares held. Coorg were transacted at Rs. 5.43 on the decision to sell the coffee area of the Company to a wholly-owned subsidiary. Highland were quoted up to Rs. 14.45 and Kil Kotagiri were in demand up to Rs. 5.30. Lucky Valley were dealt in at Rs. 14 and Mysore Coffee were sold down to Rs. 5.34.

In the textile group, Lakshmi came to hand at Rs. 149 and Madura were transacted up to Rs. 34.90. Tranvancore Rayon declined to Rs. 33, as did Mettur to Rs. 369. Pankaja were transacted at Rs. 69 and Bangalore Woollen were bought up to Rs. 197.25. Business was done in Buckingham up to Rs. 198 and Kothari were steady at Rs. 11.80. South India Viscose were quoted at Rs. 147 and Vijayakumar were dealt in up to Rs. 90.

Among miscellaneous shares, Aluminium Industries were transacted at Rs. 21.95, as were Ashok Leyland at Rs. 7.95. India Cement were quiet at Rs. 5.85 and Kirloskar Electric were done up to Rs. 13.10. Spencer were dealt in at Rs. 22.65. Standard Motor were in demand up to Rs. 17 and Textool were steady at Rs. 186. Tube Investment changed hands at Rs. 291 and business passed in Parry's Confectionery at Rs. 5.20.

THE TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past fortnight, the figures indicate Opening Quotations, Highest for the fortnight, Lowest for the fortnight, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. QUIET CONDITIONS IN STOCK MARKET

CAUTIOUS COMMENTS ON NEW YEAR PROSPECTS

London, 4th January.

THE past two weeks have been the quietest in the stock market for a long time, and it is necessary to go as far back as immediately before Christmas 1958 to find a period when business was at such a low ebb. There have of course been two long week-ends—Christmas and the New Year holidays—to hold business in check and at times, the volume of trading was hardly sufficient to test prices. Also acting as restraining influences have been the cautious views by commentators on the outlook for the market in 1961, and only last week came news that the Steel Company of Wales was putting 4,000 tinplate workers on short time. The situation is also an unsettling influence at the present moment. In spite of all this, the undertone has been satisfactory and there has at times been selective buying of equities. Gilt-edged securities, however, remained an uncertain market, with little to encourage buyers, while there is the possibility that they will attract even less support when it becomes possible for Trustees to put more funds into equities. Bank shares were in demand on dividend hopes and in response to a satisfactory statement from Martins, bank share prices went further ahead. One of the biggest movements in industrial equities was the erratic trend of Imperial Chemicals. There was a fairly rapid deterioration at one time as a result of an unconfirmed rumour that the Company would soon make a large capital issue, but most of the lost ground was recovered later with the appearance of buyers. There has been another big insurance merger, this time between Royal Insurance and London and Lancashire and others are expected to follow. Shipping shares enjoyed good following as the result of a favourable press comment on their prospects in view of the freight rate recovery. There has been little to attract buyers to gold shares and prices have moved narrowly. Coppers were very quiet, but tin shares were occasionally supported. There were still very few signs of life in the oil share market, although Shell Transport did respond to favourable comment at one time, but buyers were still cautious. Rubber shares were a good market with buying fairly persistent and on a sizable scale. Tea shares, however, were very quiet.

The Money Market

Very difficult conditions were experienced in the money market during the past two weeks. The money supply was dislocated by seasonal and year-end influences and was in keen demand with the market paying from 4¼ percent to up to 4½ percent for loans. The authorities provided a certain amount of help on various occasions, but the market was forced to enter the Bank of England to borrow a large amount at Bank rate terms. The market experienced difficulty right up to the end of the year. On resuming business on the turn of the year funds, which had been withdrawn or held back for balance sheet purposes, were released and business for the first day of the New Year was conducted under conditions of extreme ease with the rate for money falling to 3⅜ percent for clearing balances and down to 2½ percent for outside balances. Business in bills over the past fortnight was fair with the rate held at 4⅜ percent for March and "hots".

U.K. Steel Plans

Present plans for the British steel industry visualise an annual steel-making capacity of more than 34 million tons a year by 1965, according to figures contained in a bulletin issued this week by the British Iron and Steel Federation. This development would involve expenditure of £450 million, the bulletin says, in addition to the £900 million spent since the war. The bulletin says the British industry will produce about 24.5 million tons of steel in 1961, compared with 24.2 million tons in 1960, which is a rise of one-fifth over the 1959 production. Last year, the industry spent about £130 million on plant and development and raised production capacity to nearly 26 million tons. It expects to spend at least £150 million during 1961, to increase crude steel capacity to 27 million tons. In 1962, Britain will have over 30 million ingot tons of steel capacity, mainly due to the addition of two new strip mills to the existing three. The bulletin comments that the scale and pace of this development will exceed anything planned for this period on the continent. The bulletin says that the figure of over a million tons of direct steel exports in 1960 was an all-time peak This represented about £230 million which more than covered the cost of all raw material imports.

NAMES AND DATES

Mr. N. M. Wagle of Greaves Cotton and Co. Ltd, has been elected president of the Bombay Chamber of Commerce and Industry for the year 1961-62.

Mr. H. L. Khanna, deputy managing director of the British India Corporation Ltd, Kanpur, has been re-elected president of the Upper India Chamber of Commerce.

New Delhi

U.K. STEEL EXPERT TO STUDY POSSIBILITY OF DURGAPUR PLANT EXPANSION

GOVERNMENT RECONSIDERING POLICY ON FOREIGN COLLABORATION TERMS

(FROM OUR NEW DELHI CORRESPONDENT)

THE technical adviser to the British Iron and Steel Federation, Dr. Colclough, is due here this week to judge the feasibility of expanding the technical capacity of the Durgapur steel plant by 600,000 tons. As already reported, the British Government has offered to provide the foreign exchange component of the expansion scheme. Dr. Colclough will be here until 9th January when he will proceed to Durgapur for discussions with Hindustan Steel Ltd. Meanwhile, the latter has been busy preparing the project report for the expansion scheme. After the completion of talks with Dr. Colclough, Hindustan Steel will invite tenders from the British firms interested in the expansion project. It is understood that the Indian Steelworks Construction Company (I.S.C.O.N.) will be among the tenderers. Mr. Bury, also from the British Iron and Steel Federation, is expected to come here to discuss the long-term arrangements for the employment of British technical personnel in the operation of the Durgapur steel plant. According to present estimates, about 200 such technicians will be required on a fairly long-term basis. Similar arrangements are being made with the West German Government.

British Firm Interested in Engineering Projects

The British firm of Ashmore, Benson, Pease and Company has shown interest in providing consultant services to the Indian Government in setting up the heavy structurals and vessel plate projects. The firm produces plant and equipment for the gas, chemical, iron, edible oil, petroleum and petro-chemical industries. Among the many types of work passing through the shops are blast furnaces, ladle cars and bogies, and gasholders. Pressure vessels as well as unusual fabrications in special steels including stainless and other materials such as nickel, monel, nickel-clad and rubber lined, are regularly produced. This firm, it is learnt, has suggested the location of the two projects in one and the same place. There should be two separate plants, adjacent to each other, but under one management, it suggests. The plan is now being examined by the Government.

Management Expert to Help Hindustan Steel

A U S. management consultant, Mr. Mac Murray, is at present in India on the invitation of Hindustan Steel, to suggest improvements in the management of the Government steel plants.

Private Fertiliser Projects

Indications are not wanting that the offers of Birlas and Parry and Company for setting up two fertiliser projects in Andhra, which have been allocated to the private sector, have been given a higher priority than those of other tenderers. Birlas have plans for collaboration with Koppers of the U.S.A. to set up the plant in Visakhapatnam. Parry and Company also has a U.S. collaborator, the International Mineral and Chemical Corporation, for a project to be located in Kothagudam. Each is estimated to cost Rs. 20 crores. The Visakhapatnam plant will be based on naphtha from the Caltex oil refinery, while the Kothagudam plant will be based on gypsum as its raw material.

Attracting Foreign Capital

The question of foreign collaboration from the point of view of the share which should be allowed to the foreign collaborator is again being discussed. In order to attract external capital, the Government adopted a flexible policy which permitted a majority share for foreign collaborators in the equity capital of an undertaking. One proposal is to fix the foreign share at 40 percent, leaving the balance to be taken up by the Indian entrepreneur and Indian investors in the proportion of 40 percent and 20 percent, respectively. What effect this shift in the basic policy, if adopted, will have on the inflow of foreign capital remains to be seen.

British Investment in India

Indications are also available that the British credit, already offered for the third plan, will be largely used for machine-manufacturing projects for the cement, sugar and paper industries. It may be added that British capital has been largely invested in the private sector. The total of U.K. investments in India rose from Rs. 206.02 crores on 30th June 1948, to Rs. 389.03 crores at the end of 1958. These are mainly in petroleum, manufacturing industries and plantations. They were 80.5 percent of all foreign capital invested in India on 30th June, 1948; but by the end of 1958, the proportion fell to 69.8 percent, in spite of the increase in the absolute amount.

Transport Inadequacy for Steel Projects

The second meeting of the Iron and Steel Advisory Council, held here last week, provided an opportunity for the Government to answer its critics. The chairman of the Railway Board, Sardar Karnail Singh was even on the offensive, while the Minister for Steel, Mines and Fuel did not seem sure whether he was speaking at the beginning of the second plan or at its end. The Minister said that it was a fruitless exercise to discover where the fault lay. The railways, he said, were called on to carry much more than many thought they would in 1960. His advice to industry was to adjust itself to make the best of the situation. It had to content itself with whatever open wagons were available to transport coal. "We have to take things as they are," he said. The Steel Minister naturally said nothing about whether planning or its execution was defective. It may be added that even if industrialisation in some sectors has created more load for the railways, traffic in other sectors has been reduced. The target for cement, for example, has fallen short by 6 million tons and that for steel by 1¼ million tons. The Railway Minister, the chairman of the Railway Board and their spokesman have challenged certain statements recently made against the railways' shortcomings. It would be honest of the Government to release to the Press the report of Mr. Vishnu Sahai, who as the then Cabinet Secretary was asked by the Prime Minister to enquire into the whole muddle and make a report.

Third Plan Investment in Power

The third plan investment in power will be increased by Rs. 100 crores, from the Rs. 925 crores originally provided in the plan's draft outline.

U.S. Finance for Fertiliser Plant

The Governments of India and the United States have signed agreements in Washington under which the latter has agreed to finance the entire cost of a $58 million fertiliser plant in Trombay. Foreign exchange of $30 million will be supplied by a loan from the U.S. Development Loan Fund, while the Indian currency cost of $28 million will be met by a loan of rupees derived from the sale of U.S. agricultural commodities in India.

U.K. Credit for India

An agreement for a credit of Rs. 6.67 crores (£5 million) from the U.K. to India was signed last week by Sir Paul Gore-Booth, the British High Commissioner. India will be able to draw on this credit for a broad range of imports from the U.K. during the current year of the second five year plan. With this, the British Government's assistance for India's second plan totals a little over Rs. 107 crores. The credit is repayable in 20 years, the first instalment falling due on 30th November, 1966. The rate of interest will be the same as that currently applied by the U.K. Treasury to a loan for a comparable period out of the British Consolidated Fund on the same date, plus ¼ percent for administrative charges.

U.S. Export-Import Bank Loan for India

The U.S. Government has announced an authorisation by the U.S. Export-Import Bank of a $50-million (Rs. 24 crores) credit to the Indian Government towards the financing of the third plan. The credit is available for importing U.S. capital equipment for the public and private sectors. Allocations to the private sector from this credit will primarily benefit small and medium-sized business concerns. The repayment will be spread over ten years, beginning from 1966. This is the second credit granted to India by the U.S. Export-Import Bank. The earlier credit of $150 million was authorised in 1958 for India's second five year plan. In addition, Air-India International and three Indian firms in the private sector have been authorised loans totalling $19.6 million by the Bank. The latest U.S. Export-Import Bank loan brings the total of U.S. aid to India to $3,740 million (Rs. 1,780 crores).

Insurance Premium from Provident Fund

The facility to finance life insurance policies from the General Provident Fund has been withdrawn with effect from 17th December, 1960, except for policies which were already being financed from the Fund on that date. The facility has been withdrawn mainly with a view to stimulating savings. Moreover, it was felt that the advantages visualised by the existing arrangement were not commensurate with the amount of administrative work involved.

Bonus to Industrial Workers

The Central Government has decided to set up a commission to study the question of bonus to industrial workers in its various aspects and to make recommendations. Mr. M. R. Maher, president, Industrial Court, Bombay, will be the chairman of the proposed commission, and Mr. M. Govinda Reddy, M.P., and Dr. B. N. Ganguly, Director of the Delhi School of Economics, will be its members. The terms of reference are being worked out in consultation with the all-India organisations of employers and workers as well as State Governments. The commission, it is expected, will start functioning soon after these are finalised.

Economic Size of Textile Mills

The working group for the cotton textile industry, which went into the question of the economic size of a textile mill, has reached the following conclusions: "We are of the view that on balance of considerations, the minimum economic and workable unit of a textile mill in the present conditions should have 12,000 spindles and 300 looms. While this is the absolute minimum capacity, we would also suggest that the industry could, as far as possible, go up to the level of 18,000 spindles and 400 looms in due course with a further stage of increase to about 25,000 spindles and about 500 looms. In giving this opinion, we are guided by the fact that the industry is slowly going in for finer counts."

India and World Tea Agreement

The Indian Government is not considering any move to revive the International Tea Agreement it is stated.

Loans for Coffee Estates

The main conditions on which loans are sanctioned to registered coffee-growers are the following: eligibility for the loan is limited strictly to registered growers in the small brackets, namely (a) five to 25 acres if under Robusta coffee, or (b) five to 50 acres if under Arabica coffee. Loans are granted chiefly for intensive cultivation, and on a limited scale, for extension of the area under cultivation. An advance from the loan, not exceeding 30 percent, will be permissible towards clearing a prior encumbrance on the property to be taken for mortgage. The coffee estate to benefit by the loan will have to be mortgaged to the Board as the primary security for the advance. Additional properties may be taken as collateral security, if necessary.

Loans are sanctioned at the following rates:

(a) for intensive cultivation: Arabica Rs. 500 to Rs. 1,000 an acre; Robusta Rs. 375 to Rs. 800 an acre.

(b) for extension: Arabica Rs. 1,000 an acre; Robusta Rs. 750 an acre.

The amount granted is not paid to the loanee in a lump sum, but only in three or five annual instalments. Recovery will also be in annual instalments beginning from the sixth year in the case of loans for intensive cultivation and from the seventh year in the case of loans for extension, to be completed in five years. Interest will be charged at 6½ percent a year. Failure to pay interest on the due date will entail payment at the enhanced rate of 9 percent a year for the period during which interest remains unpaid. Only estates producing not less than 3 cwts. an acre are eligible for aid for extension.

Groundnut Oil Exports Fall

Exports of groundnut oil have declined on account of high internal prices and severe competition in foreign markets. The export of each ton of groundnut oil was linked with the export of 3½ tons of groundnut expeller cake, which carried a good margin of profit in order to compensate the exporters for the loss incurred by them in selling groundnut oil at international prices. As the gap between internal and world prices widened further during the past year, tenders were invited from all shippers to quote the minimum quantity of copra and palm oil to be imported against the export of each ton of groundnut oil with a view to providing an additional incentive. Exports of groundnut oil have been allowed against the lowest tenders with an additional link of half a ton of copra for each ton of groundnut oil. Further, it has recently been made obligatory on the part of established importers to export one ton of groundnut oil or 8 tons of tapioca flour against their imports of 1.25 cwts. of mace, 2.5 cwts. of cassia, cinnamon and cloves and 7.5 cwts. of betelnuts. Other measures for increasing exports of groundnut oil are being considered.

Polish Dredging Expert for Calcutta Port

The services of a dredging expert from Poland have been secured under the U.N. Technical Assistance Scheme for advising the Calcutta Port Commissioners on the dredging problems of the Hooghly. The expert's investigations are still in progress.

Russia to Buy More Indian Shoes

The purchase organisation in Russia has indicated that it will place orders for 300,000 pairs of shoes on the Indian State Trading Corporation, for supply during 1961. Negotiations are being conducted with the parties whose samples have been accepted by the Russians, and who are regular suppliers of shoes to that country, in the matter of price, uniformity in quality, inspection arrangements and delivery schedules.

Expansion of Praga Tools

The Praga Tools Corporation Ltd is busy expanding its works in two phases. The first phase visualises increasing the existing capacity of its foundry, providing additional plant and machinery, isolation of the precision work from machine tool manufacture and better lay-out of the factory. This phase is being implemented. The second phase of expansion visualises the manufacture of new items such as lathe chucks, drill chucks, tools and cutter-grinders with foreign technical collaboration. For this purpose, the Central Government has approved of the Praga Tools Corporation

Ltd entering into technical collaboration with the following three firms: (i) F. Pratt and Company Ltd, U.K., (ii) Kearney and Treckker-C.V.A. Ltd, U.K., and (iii) A. A. Jones and Shipmen Ltd, U.K. The expansion, as is expected, will be completed by 1964-65. With the completion of the schemes, production, it is estimated, will be of the order of Rs. 1.6 crores a year. It has also been decided to provide a sum of Rs. 1 crore only, under the Polish credit, to the Praga Tools Corporation for stepping up the production of lathes, milling machines, etcetera. The details of this expansion are being worked out.

Increasing Newsprint Capacity

At present, it is proposed to develop the capacity for manufacturing 120,000 tons to 150,000 tons of newsprint a year by the end of the third plan period. It is estimated that Rs. 15 crores will be required for the implementation of the programme which, it is proposed, will be carried out in the following way: public sector 30,000 tons; and private sector 60,000 tons. The public sector project is already located in Nepanagar (Madhya Pradesh); the cost of its expansion from 30,000 tons to 60,000 tons is placed at Rs. 4 crores. Two private plants to manufacture 60,000 tons, it is proposed, will be located in Maharashtra State.

Sheet Glass Plant Proposal

The Central Government is considering a proposal for setting up a sheet glass plant in Hyderabad. The proposal is, however, in a preliminary stage and no decisions have so far been taken.

Amended Companies Act

The Companies (Amendment) Act, having received the assent of the President on 28th December, 1960, has come into force. The Department of Company Law Administration has called upon companies and other concerned bodies to comply with the amended provisions. The Department has drawn attention to the more important changes introduced in the recent legislation. Under the nended Act, a public company can be converted to a private company in future only with the pproval of the Central Government. Again, the ct now provides that where not less than 25 per nt of the paid-up capital of a private company is ld by one or more corporate bodies, the private mpany will, subject to certain specified excepons, become a public company. Another change w effected is that if a company, at the time of uing further shares, wants to exclude the existg equity shareholders, this can be done only if a special resolution to that effect is passed at the general meeting. If the resolution is passed only by a simply majority, the shares can be offered to any outsider only with the sanction of the Central Government. The Act further lays down that in future a company will not employ simultaneously more than one of the following categories of managerial personnel, namely, secretary and treasurer, managing agent, managing director or manager.

Rules for Dividends

In future, no dividend will be paid without first providing for depreciation for that year as well as for arrears of depreciation. This provision will have no retrospective effect and may, in any particular case, be relaxed by the Government in public interest. The Act stipulates that dividend will always be paid in cash, except where bonus shares are issued. The balance-sheet and the profit-and-loss accounts will have to be placed before the shareholders in an annual general meeting within six months of the close of the financial year, instead of nine months as before. In exceptional cases, the Registrar will have the power to extend this time for a further period not exceeding three months. The books and accounts of a company will now have to be preserved in good order for a period of not less than eight years. The modifications made to the form of the balance-sheets and the requirements of disclosure in the profit-and-loss account will be applicable to the accounts for the current financial year also.

In future, the board of directors will be required to state in its report attached to the balance-sheet, material changes and commitments affecting the financial position of the company which have occurred between the date of the balance-sheet and the date of the board's report. It will be incumbent, in future, to hold an annual general meeting once every calendar year. Every branch of a company will have to be audited by its auditor or by a person who is qualified to act as an auditor, unless the branch is exempted from such audit under the rules to be framed by the Government.

Appointment of Managers

The Act stipulates that the Central Government's approval will, in future, be necessary for the appointment of a person as manager in a public company or its subsidiary for the first time, and for the reappointment of a manager of such company for the first time after the begenning of the Amendment Act if the company was in existence on 1st April, 1956; similarly, the reappointment of an existing managing director for the first time after the commencement of the Amendment Act, even on existing terms and conditions will require the Government's approval, if the company was in existence on 1st April, 1956. The approval of the Government will be necessary even in cases where the existing term of a managing director expires on 31st March, 1961, by virtue of Section 317.

No person will, in future, be allowed to be manager of more than two companies, public or private, unless specifically permitted by the Central Government. Similarly, in the cases of persons who are acting as managing directors of companies, of which one is a public company, they will have to resign their managing directorship in excess of two within one year of the commencement of the Amendment Act.

In calculating the "net profit" for payment of managerial remuneration, it will now be necessary to deduct any loss in previous financial years. In the case of public companies or their subsidiaries, where minimum managerial remuneration under Section 198(4) of the Act is being paid without the specific approval of the Central Government in the past, it will not be permissible for the companies to continue such payment without obtaining the approval of the Central Government, unless approval has been obtained under any other provision of the Act. Where the articles of association of companies provide for recurring payments of fixed amounts to directors, the companies should, with the approval of the Central Government, amend their articles of association and provide for sitting fees for each meeting of the board or any committee attended by the directors. Where a monthly amount is being paid, the present position may be continued for a period of two years, unless the term of the director expires earlier.

Salaries paid to directors who are not wholetime or managing directors will have to be either discontinued or replaced by payment on a commission basis. The total remuneration paid to a managing or whole-time director should henceforth be restricted to an amount not exceeding 5 percent of the net profits of the company, unless the approval of the Central Government is obtained to exceed this limit. Salaries which have been specifically approved as minimum remuneration will not, however, be affected.

Managing Agency Qualifications

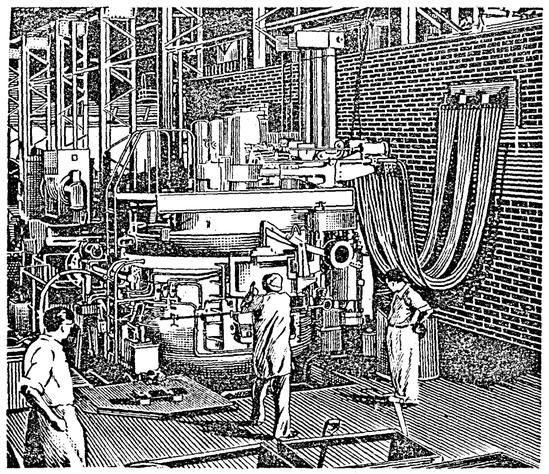
In future, a person will be deemed to be a managing agent if he holds 10 percent of the shares in a managing agency company which is public, or 5 percent of the shares in a managing agency company which is private. Those connected with managing agency companies should immediately review the position and ensure that they are not deemed to be managing agents of more than ten companies, which is prohibited.

In future, the transfer of office by a managing agent in any form whatever will require the approval of the Central Government, as also of the managed company. If the managing agent, being a corporate body, is a subsidiary of another corporate body, any change in the constitution of the holding company will require the approval of the Central Government. Otherwise, the managing agency will terminate. In future, payments made by way of remuneration to any partner of a managing agency firm or to a director of any managing agency company or to a member of a private company acting as a managing agent will be included in the remuneration of the managing agent. No contract for the rendering of any service between a company and its managing agent or an associate of the managing agent will be valid in future, unless the contract is approved by the company by a special resolution and also by the Central Government.

The definition of "same management" group as given in Section 370 has been enlarged. It will be necessary for a company to maintain a register for loans, etcera, made to companies under the same management. The provisions relating to intercompany investments have also been extensively amended. In future, subject to certain limits and exceptions. Government approval will be required for investments made outside the "same management" group as well.

Taxation and Cost of Living

As the third plan outlay target is being steadily raised, financial pundits in the Government of India are busy indicating not only the resources for the enlarged plan, but also proving that there will be neither dangerous inflation nor any appreciable rise in the cost of living following additional taxation. One such learned exercise shows that indirect taxation has not been oppressive, particularly "on the less fortunate sectors of the community". It is claimed that the effect of indirect taxation on consumer price indices over the last ten years would probably be of the order of about ¼ percent a year, although the lower and upper limits of annual incidence are 0.4 percent and 1 percent, respectively. It is pointed out that the items on which Customs duty is imposed are those consumed by the higher-income groups. In the field of excise duties, items like iron and steel, cement and motor spirit do not directly enter into the consumption budget of the poorer sections. It is true that States are getting revenue from the tax on motor spirit, sales tax on motor-vehicles and inter-State transit duties. While these can have an indirect impact on consumer price indices, their effect will be negligible."



STEEL CASTINGS

Steel Castings up to 3 tons are produced to B.S.S., I.R.S., or customer's specification in the most modern and mechanised steel foundry at the Kulti Works of the Company.

PROSPECTS FOR THE U.K. ECONOMY IN NEW YEAR

UNDER SECRETARY TO GOVERNMENT 10 JAN 1961 PUBLIC DEPARTMENT

NO FALL IN CONSUMER SPENDING POWER EXPECTED

(FROM OUR LONDON CORRESPONDENT)

BY and large, business has been good in 1960 and the chances are that they will remain good for the greater part of 1961. The consumer goods boom collapsed and was replaced by a capital goods boom which still continues. While this is no comfort for the makers of motor-cars or refrigerators, it must be remembered that Britain will now be in a serious inflationary danger if all industries are allowed to expand at will at the same time. No doubt the consumer trades, which are now slack, will take some months to clear stocks or change products, but as employment remains full and wages are rising, there should be no fall in consumer spending power in 1961.

Some of the economic problems which have created the present uneasiness will not be solved quickly. The dollar problem will almost certainly get worse before it gets better. While the situation is not as bad as the bald figures might suggest, the new U.S. Administration will have to take vigorous action to correct the deficit itself rather than the symptom of the gold outflow. Whatever actions are taken, they are bound to affect sterling and they may well affect Britain's trade. More hopeful views have lately been expressed about U.K. export prospects. If these are borne out in the coming months, the Government's policy of credit restrictions may be vindicated after all. It looks too as if imports have at last stopped rising. No doubt it will be some months before anxiety about the balance of payments can be expected to lessen, but there is at least a silver lining in sight. To sum up, the outlook for 1961 is moderately good but various uncertainties will prevent any marked upturn in the stock market for several months ahead.

Reassuring Enquiry

The latest industrial enquiry made by the National Institute of Economic and Social Research has yielded reassuring results. The recession in the motor-car and durable consumer goods industries is far outweighed in importance by the continuing boom in almost all capital goods industries. "The quantitative importance of the rise in capital goods output is at least twice as big as the fall in consumer goods output, so that on balance output and employment of the industries covered have risen," is the Institute's conclusion. This view is borne out by the official index of industrial production; the figure for October just issued as being 127, shows no change, after seasonal adjustment, from the "plateau" which has existed since March, but it is about 3½ percent higher than for October 1959.

In November, the Institute found manufacturers convinced that both the decline in consumer goods and the rise in capital goods activity would continue for some time. Motor manufacturers expect the output of cars to fall further, but look for recovery and hope that the total output for 1961 may not be much less than for 1960. For commercial vehicles, order-books are long and incoming orders still exceed deliveries. Both home and export demand for heavy engineering products, machine tools and electronic equipment is still strong. There are some soft patches. Stocks of domestic appliances and television sets are excessive. Steel manufacturers are not expected to operate at full capacity much longer because stocks are high and home demand is weakening. Not all steel products can be easily or profitably exported.

Joint Enquiry into Motor-car Industry

The engineering unions have agreed to a joint enquiry into industrial relations in the motor-car industry under an independent chairman. At a meeting with leaders of the Confederation of Shipbuilding and Engineering Unions, the U.K. Minister of Labour, Mr. J. Hare, removed their doubts that his proposal for what an official statement called "a top-level study group" was simply a euphemistic way of introducing a "bash-the-wicked-unions" campaign. The Minister even agreed to exclude the word "strike" from the statement, and it spoke instead of "industrial relations problems." The unions are, in fact, determined that the enquiry must go into the inadequacies of management in the motor-car industry, as well as the riotous behaviour of some of their own members. It is understood that Mr Jim Matthews, president of the Confederation, repeated to Mr. Hare his determination that the unions should not be made whipping-boys at an enquiry.

The Minister promised that he would convene a joint meeting under his own chairmanship early in the new year, at which employers and unions could both have their say about the terms of reference and the procedure. The union representatives said that they would recommend the next meeting of their executive in York on 12th January, to take part in joint talks. The statement says that after the first meeting, there will be an "agreed chairman." The Minister mentioned the names of Sir Alexander Fleck, the former chairman of Imperial Chemical Industries Ltd, and of Field-Marchal Sir William Slim as the kind of independent figures he would like to approach. Both these names were acceptable to the unions.

Cut in Car Output

Short-time working and reduced output programmes in the motor-car industry are clearly reflected in the heavy fall in production in November. The number of passenger cars produced was 76,009, 16 percent below October's output and 42 percent below the high level of September. Production in the first three quarters of 1960 was above that of the previous year, but it fell in October and November below the level of the corresponding months of 1959. The average weekly output in the past two months was 20,790, compared with 28,459 in 1959. Reduced production is due partly to lower demand as a result of the hire-purchase restrictions of April, which imposed a deposit of 20 percent and repayment requirement of two years—the trade is pressing for three years—and partly by contracted export markets, especially in North America.

The latest trade figures, although they show exports of 35,993 in November, compared with 24,937 in October, give no clear pointer to recovery here, as the movement of goods was distorted by the effects of the dock strike. Exports of motor-cars in the last quarter were 26 percent lower than those in the previous quarter and one-third down on the corresponding period of 1959. Demand continues to be much more buoyant for commercial vehicles and orders still exceed deliveries. The output in November, at 35,838, exceeded the October level of 34,412 and 31,222 for November 1959. Exports were also higher than in October and November 1959.

Effect on Unemployment

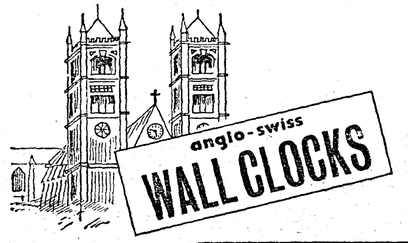
The recession in the motor-car industry continues to have its depressing effect on unemployment figures. The U.K. Ministry of Labour stated recently that 365,063 people were out of work on 12th December. This is 13,244 more than a month earlier. The paradox is that in most of the country the number of unemployed went down. But in the Midlands, the heart of the motor-car industry, 28,829 more went out of work. The Midlands unemployment rate is now above the national average: 1.9 percent, compared with 1.6 percent. The regional rate still varies, from 0.9 in London and the South East to the chronically high 7.1 in northern Ireland. The number of unfilled vacancies fell by 15,654 to 293,905. The normal seasonal fall is about 5,000.

Lower Export Prices

Britain's terms of trade, measured by the relation between import and export prices, moved slightly in November. While there was no change from the October level of 99 (1954 equals 100) in the import price index, the export price index fell by a full point to 111. In consequence, the index for the terms of trade rose by a point to 89. The fall in the export price index was due mainly to lower export prices for manufactured goods, which reflected a decline of 3 points from 122 to 119 in the index for engineering products. There was also a drop from 105 to 103 in the export price index for the textile group. Although the total price index for imports was unchanged at 99, there was a marginal rise in prices in the food, beverages and tobacco group. This was partly offset by a small downward movement in the import prices for basic materials and manufactured goods.

Cost of Living Rises

The cost of living went up by a point between 18th October and 18th November, mainly because of a seasonal increase in the price of coal, the U.K. Ministry of Labour has announced. The figure (17th January, 1956 equals 100) was 112 on 18th November or calculated to one decimal, 111.9, compared with 111.4. The figure rose by a point to 111 in October, and apart from a couple of summer months at 111 this year, had fluctuated between 108 and 110 since March 1958. After falling steadily since April, prices of basic materials used in British manufacturing industry showed a slight upward tendency in November. The U.K. Board of Trade's index (1954 equals 100) rose from 96.7 in October to 97.1 in November. This compares with 99.5 in April. This reversal of the downtrend was due mainly to a halt in the recent fall in raw wool, copper and materials used in food manufacturing. Other commodities to contribute to the higher price levels were hides and skins, cotton, flax, whale oil and jute.



CHALLENGE

LEVER MOVEMENT CLOCK

Ideal clock for offices, homes, workshops, schools etc. Used in most of the Railways, Central and State Government offices.

Lever movement will work in any position. Cases made of highly polished solid teakwood and may be spray painted to choice. Weekly winding. Chromium bezel, round shape with bold Arabic figures and hands. Dial 12", overall diameter 16" and depth 4".

MODEL No. CL-27/1
PRICE Rs. 125.00

SENTINEL

MARINE LEVER ROUND SHAPE

anglo-swiss marine lever clock is an accurate and dependable time-keeper, especially constructed to withstand extremes of climate and vibration. Suitable for ships, engine rooms, buses and other transports. Used in homes and offices too. White dial with Roman figures. Bevelled glass. Body fully chromium plated and equipped with an 8-day lever movement. Dial 8", overall diameter 10½" and depth 4".

MODEL No. CL-24
PRICE Rs. 180.00

Guaranteed for one year

NEED FOR CHANGE IN I.A.C. SERVICE SCHEDULE

ONE MORE BOEING FOR AIR-INDIA INTERNATIONAL

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indian Airlines Corporation is being advised to revise its service schedule, it is learnt here. A number of people have lodged complaints of the "highly inconvenient timings" when the aircraft for Madras takes off from Delhi. It is 6 a.m. at present. Arrangements are being made to readjust the time schedule in order to provide more convenient timings for passengers leaving Delhi for Madras. The inadequate frequency of the *Viscount* service to Calcutta has also been pointed out. It is now proposed to have two *Viscount* services for Calcutta every day. This will mean the cancellation of the mid-day service at present operating, on alternate days, to Bombay.

The Government is also hoping to acquire four more second-hand *Viscounts* for the Indian Airlines Corporation by the end of 1960. This is purely a barter deal. The aircraft are being acquired in exchange of *Skymasters*, *Vikings* and *Herons*. A.U.S. firm and an Indian business man are negotiating this deal with the Indian Government. With this deal going through, the Government hopes to introduce *Viscounts* for the night service, which, it is proposed, will operate directly, instead of rotating through Nagpur. The Government is also looking into complaints about the food served on the airline.

The Government has decided to acquire another *Boeing* for the Air-India International. The jet fleet of this airline may further be augmented, when Indo-U.S. air talks are finalised, giving traffic rights to India to operate to Honolulu and San Francisco. Air-India International has introduced a freighter service between India and the U.K. with its own equipment and crew from 14th November, 1960.

American Services of B.O.A.C.

B.O.A.C. will introduce its jet service between Los Angeles and London on 2nd March. *Boeing 707s* will operate twice a week each way on this direct service, increasing to three times weekly in the peak summer season. The flight schedule from Los Angeles to London will be 11 hours. This is the first time that B.O.A.C. will be operating to Los Angeles. The service will operate on Thursdays and Saturdays in each direction. Initially, the *Boeings* will carry 32 first-class and 97 economy-class passengers. In the peak periods, 21 first-class and 111 economy-class passengers will be carried. B.O.A.C. plans to introduce *707* jets on its through service from New York to Teheran *via* London, Geneva and Tel Aviv in early February. The twice-weekly service is now flown with *Britannias*. New *Comet IV* services now in operation include weekly London-Karachi flights, a twice-weekly service from London to the Persian Gulf for B.O.A.C's associate, Middle East Airlines, a third weekly London-Singapore flight and an increase in London-Australia weekly flights from ten to 12.

B.O.A.C. has asked the U.S. C.A.B. for authority to serve Baltimore, Washington and Philadelphia and that Boston be designated an intermediate port of call on its U.S. routes. In the bilateral agreement between Britain and the U.S.A., the three cities were named as traffic points to be served by a British carrier so that the amendment of B.O.A.C.'s air carrier permit to include them would normally be a routine matter. However, when B.O.A.C. requested the addition of west coast points, also provided for in the agreement, to its routes, Northwest objected strongly, charging that Britain had denied N.W.A. authority to call at Hongkong in violation of the bilateral agreement. In spite of the objections at that time, C.A.B. granted B.O.A.C. rights to serve the U.S. west coast.

B.O.A.C. has begun a weekly London-Karachi *Comet-IV* service and weekly service with the jet to the Persian Gulf on behalf of its associate, Middle East Airlines, this month. Ten *Comet* services a week between London and Australia are being increased to 12. Next summer, B.O.A.C. will make 34 *Comet* flights a week from London to Africa, the Middle and Far East, in one direction and to South America *via* Madrid and Lisbon in the other. Services are being increased with *Comet-IVs* recently released from the airline's north Atlantic route now operated by *707* jets.

British airlines, State-owned and independent, carried 5,536,566 passengers in the 12 months ended August 1960, compared with 4,451,298 in the previous 12 months. Passengers on domestic services totalled 2,085,352, compared with 1,627,852 in the previous year, and international passengers 3,451,214, against 2,823,446. B.E.A.'s *Viscounts* flew their ten-millionth passenger on 1st October after seven and a half years' service with the airline. The turbo-props have produced 4,500 million passenger-miles and about $364 million in revenue from B.E.A.

Thai-Indonesia Air Link

Thai International has extended its service to Indonesia on a once-a-week schedule. The new service will afford the Indonesian capital direct connection from Bangkok to Hongkong, Taipei, Tokyo, Phnom-Penh, Saigon, Rangoon and Calcutta. The service also makes convenient connections with the worldwide services of Scandinavian Airlines System.

Pan American Pacific Route

Pan American celebrated 25 years of air service across the Pacific on 22nd November. On that day in 1935, the *China Clipper*, a Martin four-engined flying boat, left San Francisco on its island-hopping trip to Manila. Eighteen hours to Honolulu—jets today make it in five—and then on to Midway, Wake Island and Guam. The aircraft arrived in Manila on 29th November, 8,210 miles and 29 hours, 48 minutes flying time from San Francisco. Jets today make the trip from San Francisco to Manila in 16 hours. Since that first flight, P.A.A. has made 60,125 Pacific crossings and today 35 Pan American aircraft leave the U.S. west coast each week for Honolulu and the Far East. The *China Clipper* made its flight at the then record speed of 130 miles an hour at altitudes of 8,000 feet. Today's jets cruise at 40,000 feet at 575 miles an hour. The *China Clipper* and other flying boats flew the Pacific until the second World War.

PROSPERITY AND DEPRESSION IN THE JUTE INDUSTRY

HISTORICAL BACKGROUND TO THE PRESENT CRISIS

WITH the current raw jute crisis uppermost in the trade's mind, it is interesting to look back on the crises of the past. It will then be realised that loom sealing and restriction of working hours have been a feature of the industry for a long time. Its growth has rarely been steady. In Dundee, it prospered considerably as a result of the Crimean war and the American civil war, but in India, its progress was slow. In 1859, there were only 192 looms in operation. By 1869, the number increased to 950. Then came the first spurt. Between 1872 and 1874 five new mills started operations, and this was followed by eight new companies in 1875. Competition became so severe that one of the old companies and four of the new ones closed down. The early 1880s were a period of prosperity when the idle mills were taken over by new companies and restarted.

The lessons of the past had not been learned, however, and the number of looms increased from 950 in 1869 to 3,858 in 1877. In 1893, extensions of existing mills were planned and the flotation of new companies mooted. The trade expressed doubts whether markets could be found for the additional goods produced, but the expansion of productive capacity still went on, and by 1884, 5,700 looms were at work. There was talk of curtailing production and efforts were made to fix minimum selling prices. Out of this crisis arose the Indian Jute Manufacturing Association, now known as the Indian Jute Mills Association, and in 1886, the first short-time agreement was negotiated. This agreement remained in force with various modifications until 1891, during which time the first of many loom sealing moves was made by closing 10 percent of the sacking looms.

Prosperity Returns

After 1892, prosperity returned, and in the second half of the 1890s, all mills were earning good profits. This prompted the building of ten new mills in four years, so the number of looms increased from 9,700 in 1895 to 15,200 in 1900. Expansion slowed down after this, but in 1904 a new spurt carried the number of looms to 31,700 by the end of 1909. The usual results followed as production outstripped consumption. In 1910, short-time working again had to be resorted to, and it remained in force until the middle of 1912. Then came the first World War with full production, and the subsequent expansion programme which advanced hand in hand with short-time agreements until the 1939-45 war. The postwar boom, followed by the Korean war boom, naturally made way for the next period of depression. What is being witnessed now is a repetition of what has happened in the past. But it is encouraging to note that modern planners have taken bolder steps than ever before to meet the crisis.

But what of Pakistan? In spite of a jute shortage which may result in the drastic curtailment of production, it is understood that under the new Pakistani five year plan, the loomage will be increased by 4,000 to 12,000. The question arises whether world prosperity will create a demand for jute goods which will enable all the machinery—existing and planned—to be fully used, or whether history will repeat itself.

Increasing Jute Yields

The subject of raw material supplies for the Indian jute industry has figured largely in the news during the past few days. The Central Minister for Food and Agriculture, Mr. S. K. Patil, inaugurating the annual general meeting of the Indian Central Jute Committee recently, assured the industry that it would get adequate supplies of fibre. He declared that India's goal was "self-sufficiency in this vital raw material for this vital industry." This appears to be a familiar slogan; so also are the methods by which it is to be implemented. An indiscriminate increase in acreage, and boosting production by improving the supply of seeds and fertilisers, is useless unless stricter control is proposed. The use of fertilisers has long been a problem, as the Minister himself admitted, the question of supply and distribution being prominent. It is generally acknowledged, however, that the biggest headache is to ensure that the fertilisers issued—at considerable expense to Central and State Governments—are used only in the manner in which they are intended to be. Too often are they misused or re-sold and no benefit is derived from them.

Capital has long been an advocate of more "green fibre a plant", instead of more plants an acre. If this question is tackled first, and tackled successfully, then bigger yields an acre will automatically follow. The recent table in the *Capital* Annual Supplement, showing the yield an acre in bales, demonstrates how little progress has been made since the war. Research workers should concentrate more on the "green fibre" aspect in improving seeds. If farmers are left merely to use fertilisers, then much of the research work will bring no benefit.

Further curbs on speculation in raw jute and gunnies were visualised by the Jute Commissioner at a Press conference in Calcutta a few days ago. He stated that the Government had already given him the authority to requisition stocks of raw jute and jute goods and to investigate all cases of speculative dealings. The most interesting point emerging from the conference, however, was a denial that the Government's final estimate of the current crop was ready. Reports were freely circulated after the Christmas holidays that the final estimate was only 5.2 million bales. This, the Jute Commissioner asserted, was "completely without foundation". He went on to say that, judging from the information available, the jute and mesta crop in 1960-61 would be about the same size as it was in 1959-60—about 5.7 million bales. As far as can be ascertained, the Government's final estimate of the crop has always been issued before the end of the year. The reasons given for the delay this time are, in the opinion of many, merely excuses. They tend to emphasise the possibility of a shortage rather than minimise it. The position has now arisen that whatever the final estimate may be, if and when it is issued, it will be treated with complete scepticism.

Fresh Cut in Working Hours

Even if the current crop turns out to be the same as the last season's, it is freely admitted in the trade that it will not be enough for the industry. This was emphasised at the end of the year, when the Indian Jute Mills Association unanimously decided that, with effect from 30th January, 1961, the working hours of mills in West Bengal with more than 220 looms should be temporarily reduced from 45 to 42½ a week. The Association hoped that this would be the last step in implementing the policy of adjusting the industry's production to the availability of raw jute.

Over the past two weeks, there has been very little change in the general situation. Markets hardened for both jute and gunnies, and new high levels were recorded, particularly in jute goods. The main reason for prices forging ahead was the rumour that the size of the current crop had been confirmed as 5.2 million bales (the report was later denied). Renewed buying by overseas and local interests helped boost jute goods prices. The announcement that working hours were to be further reduced also created a bullish tendency. The closure of the principal overseas markets for the New Year holidays kept the market quiet towards the close, and this was aided by mill selling pressure. Raw jute quotas continued to be issued to mills, and a fair amount of business was conducted in Calcutta, but it was small compared with that done in the agencies. Imports continued to be poor, which kept prices high, but towards the close, an easier tendency developed and more jute was put on offer. Ready bills of lading were much in evidence, as many buyers favoured these types of offers.

THE JUTE MARKETS

Manufactured Goods: At the opening on 22nd December, the market was quiet, with little or no interest. B Twills dropped by Rs. 2 to Rs. 178 in the ready position but 40in. 10oz. hessians remained at Rs. 55.50. Further small losses were recorded during the day, but by the Christmas week-end, prices advanced due to renewed interest from local shippers. Monday, 26th December, was a public holiday, so all the markets were closed. But, in the interim, indications continued to rise and at the opening on Tuesday, B Twills stood at Rs. 181 for ready shipment, with March shipment as a discount of Rs. 8. Hessians were also steady and 10oz. quotations moved up to Rs. 57.25. Over the next two days, prices fluctuated within narrow limits, but on 29th December, rates soared to new high levels due to renewed buying interest, and the report that mills were to reduce working hours further. Ready B Twills advanced to Rs. 183.50, and hessians rose by 75nP in sympathy. The bullish tendency prevailed right up to the end of the year, when ready B Twills were quoted at Rs. 185, and 40in. 10oz. hessians at Rs. 58.40. Interest in forward hessians gave forward shipment a small premium over the near position. This attracted the mills, and at the opening of the New Year, selling pressure from them soon changed the premium into a 50nP discount. Lack of interest from overseas due to the holidays led to a quieter undertone, and towards the close, easier conditions prevailed.

On Wednesday morning, opening quotations were as follows:

	Ready	January	Jan.-March.
40in. 7½oz.	44.75	44.10	44.00
40in. 8oz.	47.75	47.10	47.00
40in. 10oz.	58.85	58.60	58.50
B Twills	182.00	181.00	179.00
Heavy Cees (Plain)	179.50	180.00	178.50
A Twills	215.00	215.00	215.00
Liverpools	206.00	205.50	205.50
Cornsacks	183.50	184.50	182.50

Raw Jute: At the opening on 22nd December, the market was quiet at Rs. 51 for Assam, and it dropped by 50nP the next day. Due to false reports about the size of the current crop, prices advanced rapidly over the Christmas holidays. At the opening on 27th December, they were Re. 1 higher at Rs. 51.50. In spite of the rise, fair business was done, and over the next two days, rates increased by 50nP a day. Upcountry markets ruled very steady as a result of continued interest from mill agencies, and at the closure for the New Year holidays the trend was very steady. There was little interest in raw jute at the opening on Monday, 2nd January, and prices were maintained mainly in sympathy with goods. The week's quotas were issued to the mills on Monday afternoon, and over the next two days, a fair amount of business was done, mainly in ready bills of lading. This helped stabilise prices and sellers were reluctant to discount. Imports upcountry tended to be small, and this was reflected in the drop in wagon arrivals in Cossipore. From 22nd December to 4th January, total arrivals were 1,016 wagons—447 in the first week and 569 during the second. The figures were very much lower than normal, and would have been even lower but for the big increase in arrivals over the last two days. Towards the close, a quieter tendency prevailed and quotations were reduced.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md	Shipment
Assam	139.25	52.00	Jan.-Feb.
Northern	138.00	51.50	,,
Purnea Desal	135.25	50.50	,,
Daisee Selected	144.75	54.00	,,
Assam Tossa	142.00	53.00	,,
Mesta:			
Assam-Northern	132.50	49.50	,,
Desal-Daissee	132.50	49.50	,,
Jungli	128.50	48.00	,,
Pakistani Cuttings N. C.	250	a bale	

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL SLOWLY

(FROM OUR DUNDEE CORRESPONDENT)

MEMBERS of the Dundee jute industry, who were hoping that fibre prices would decline by the end of the past year, are disappointed that sellers have been able to maintain their terms to some extent. The fall from the top points reached has been slight in comparison with the sharp rise which took place earlier. The highest prices were touched on 1st November at £235 a ton for Mill Firsts, £195 for Mill Lightnings, £189 for Mill Hearts and £185 for Grade Hearts for December-January shipment, c.i.f. U.K.-Continent. Recent rates were £183, £176, £172 and £166 for the respective grades, showing declines of £23, £19, £17 and £19, respectively. For material afloat or on spot in Dundee, sellers would accept much less, as many secured lots are available, bought at much lower prices than those quoted at present. It is unfortunate that raw jute values are remaining high, as this means dear yarns and cloth, consumers of which are unwilling to pay more than they were paying last year.

Business in jute yarns has been restricted, buyers being content to satisfy their most immediate needs. Orders are for only small lots for delivery as quickly as can be given. An exception might be made in the case of linoleum hessians and the wide widths, which have brightened up considerably lately after a spell of very dull trade.

THE PAKISTANI JUTE MARKETS

FIBRE RISES AGAIN

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE holiday period brought a spate of buying from overseas, including the communist countries. The reason probably was that sellers in Pakistan, seeing that arrivals were decreasing, began to restrict their offers and increase prices. Furthermore, there is generally a certain amount of pre-Christmas buying even in the dullest seasons. Prices rose daily and, as is becoming customary, loose jute prices rose more quickly than E. P. Cs. Overseas buyers withdrew for a few days, but seeing this had no effect, came into the market again. It seemed as if the peak prices of October-November would be paid again. The steep rise in prices has not so far encouraged loose jute sellers to increase their imports. This, it is reported, is due to the fact that those who hold jute in the up-country areas, are mainly *beparis* who are so certain about the crop being short that they do not intend to release their holdings except in small quantities. This means that they will hold on to their stocks until an estimate can be made of what actual sowings have been for the new crop. This will probably be in April. The middlemen once again are adding moisture to their jute in almost as large quantities as at the worst period earlier this season.

It is likely that after the holidays, overseas buyers who have bought fairly large quantities already will withdraw again, especially since most purchases were made for ready shipment. This might bring overseas prices down, but it is not likely that Pakistani loose jute will, therefore fall. E.P.C. prices have been raised by £3, but business has been reported above these prices. Cuttings, in particular, have risen sharply. It is remarkable that overseas buyers can afford to pay such high prices for cuttings when India, which is reported to be very short of jute, considers Pakistani cuttings too expensive.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded further by 0.4 percent to 124.2 during the week ended 17th December, 1960, against 124.7 (revised) for the earlier week. The index was lower by 1.0 percent when compared with the corresponding week of the previous month, but was higher by 5.7 percent than that of a year ago. The prices of milk in Bombay (—37%), jowar in Coimbatore (—13%), rice in Cuttack (—8%), in Contai and Madras (—7% each) and in Jayanagar (—5%), ragi and cashewnuts (—4% each), bananas and cardamoms (—3% each), masur and black pepper (—2% each) and arhar, groundnut oil, mustard oil, eggs, meat and salt (—1% each) declined, while those of milk in Calcutta (+15%), rice in Ranchi (+10%) and in Jamshedpur and Imphal (+7% each), oranges (+8%), jowar in Nandyal (+7%) and in Ujjain (+6%), potatoes, onions and fish (+6% each), gingelly oil (+5%), barley and urad (+2% each) and maize (+1%) showed advances, and the index for Food Articles receded by 0.4 percent to 117.0, compared with 117.5 (revised) for the earlier week. The index for Tobacco remained unchanged at the previous week's level of 111.0. In spite of a rise in the prices of castor oil (+1%), the index for the Fuel, Power, Light and Lubricant group stood stationary at the previous week's level of 120.3. Lower prices of raw jute (—5%), lac (—2%) and raw wool, castorseed, rapeseed, copra and tanning materials (—1% each) brought down the index for Industrial Raw Materials by 0.6 percent to 147.7, compared with 148.6 (revised) for the earlier week, although the prices of raw hemp (+23%), gingellyseed (+5%) and groundnuts (+1%) showed advances. A fall in the prices of cotton yarn and coir yarn (—1% each) was almost neutralised by a rise in the prices of lead (+2%) and linseed oil, rayon yarn and zinc (+1% each), and the index for Intermediate Products worked out to 131.9, against 132.0 for the earlier week. The index for Finished Products receded by 0.5 percent to 124.3, compared with 124.9 (revised) for the earlier week due to a fall in the prices of jute manufactures (—2%) and general chemicals (—1%). The prices of oilcakes (+1%) were, however, marked up.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base 1952-53=100)

Groups and Sub-Groups	Week Ended 17-12-60	10-12-60	19-12-59

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 25, held on 2nd and 4th January, a strong general demand prevailed for the 72,767 packages on offer at the Export auction. Exportable orthodox fannings were keenly competed for at dearer rates, while clean plain B.O.P.s found ready support at about last rates. Medium Assam and plain B.P.s, however, were at times slightly easier. In non-wither teas, buyers followed quality, bright liquoring types being dearer, whereas plainer sorts were mostly easier with some withdrawals. The best C.T.C. descriptions came to a good market while the medium and poorer types were up to 20nP easier. Medium Assam B.O.P.s were a weak feature of the sale and were considerably easier. The poorer whole leaf grades were also generally lower, although the well-made ones were firm. There was a fair demand for tippy teas. There was a keen enquiry for autumnal Darjeelings, which were often substantially dearer, but the plainer kinds were at times easier.

Quotations

	1960-61 Rs. a kilo	1959-60 Rs. a lb
Clean Black Pekoe	5.30 to 5.50	2.18 to 2.24
Plain B.P.	4.50 to 4.65	2.06 to 2.14
Plain Fgs.	4.85 to 5.05	2.12 to 2.22
Medium B.P.	4.70 to 4.85	2.04 to 2.12
Medium Fgs.	4.85 to 5.05	2.45 to 2.65
Best Assam C.T.C. B.P.	5.40 to 5.80	not available
Best Assam C.T.C. Fgs.	5.70 to 6.20	not available

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good general demand for the 23,621 packages of Dust on offer at generally lower rates. Orthodox teas were irregular and registered a decline except for the few bright liquoring Assams which sold well. Legg-cut Dooars received good support and were steady. Medium C.T.C.s were usually 10nP and sometimes 15nP below last rates, although the best in this category came in for satisfactory enquiry, the smaller thick liquoring types being a strong feature.

Quotations

	1960-61 Rs. a kilo
Plain Orthodox Dust	4.85
Medium Assam Dust	5.05 to 5.25
Legg-cut Dust	5.25 to 5.35
Medium Assam C.T.C. Dust	5.45 to 5.65
Good Assam C.T.C. Dust	5.90 to 6.40

(Quotations are inclusive of excise duty.)

There was a good general demand at irregular rates for the 1,289 chests of Leaf on offer.

FREIGHT RATES RISE

THE freight markets over the holiday period have been surprisingly active and a number of grain cargoes were arranged to India just before the markets closed for Christmas. The higher rate of 68s 9d was conceded from Pacific Coast to India, an increase of 2s 6d a ton, and although considerable activity has taken place in the Mormugao ore trade, charterers are unwilling to disclose rates which are known to be considerably in advance of previous figures paid. This was reflected in the higher rate of 64s f.i.o.t. paid for iron ore from West Coast India to Poland. Australia has reported the sale of 300,000 tons of wheat to Italy and a similar quantity to China which will considerably strengthen that market. Steady activity in the time charter section has seen a preponderance of fixtures for longer periods at rates which show a reasonable profit to owners; a *Liberty* size vessel secured $(U.S.) 2.10 for 12 to 15 months' trading, and a recently purchased Victory $(U.S.) 2.50 for the same period. Any substantial rise in time charter rates would find some of the newer operators in the India-U.S.A. liner trade, who are using chartered tonnage to a great extent, in considerable difficulties. Scrap buyers in Japan have paid up to $(U.S.) 110,000 from Gulf to Japan and rates tend higher in this section. In Calcutta, stocks of grain are accumulating in dock sheds and general cargo vessels are finding difficulty in obtaining clear berths at which to work. The rapid and numerous changes of berth being made hinder cargo movement to the ships and unless strenuous efforts are made by the Food Directorate to remove the grain, the general working of the port will continue to suffer.

LINSEED FIRM

The linseed market was firm in the past week. Stocks were low and arrivals small. Local millers were anxious to buy, but very small business was transacted. The oil market was firm in sympathy with seeds and sellers were reluctant to do forward business. The local demand for oil was good. The oilcake market was steady. Export prices improved. The latest quotation is as follows: Ready, Rs. 26.37 a maund.

SOUTH INDIAN TEA OUTPUT INCREASES

EXPORTS FROM COCHIN RISE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S production of tea in 1960 declined slightly, compared with the previous year. North-east India had a severe drought early in the current season, so tea bushes were greatly damaged. This was largely responsible for the north-east Indian output declining to 513 million lbs up to the end of November compared with 548 million lbs during the corresponding period of 1959. South India, on the other hand, increased her production by 14 million lbs. During the first 11 months of the year, she produced 157.9 million lbs, against 143.9 million lbs during the same period of the previous year. India's total tea production up to the end of November 1960 at 671.5 million lbs was lagging behind that of the previous year by 20.5 million lbs. The crop figures for December are not yet available. But it does not look as if the year-end position will be much different from what it was at the close of November.

Exports Rise

Exports from south India have been running ahead of last year's till the end of November. South Indian tea exports from Cochin port during the period 1st April, 1960 to 30th November, 1960, amounted to 59.6 million lbs, against 57.3 million lbs in the same period of 1959. The decline in production was reflected on exports, as far as the north-east Indian tea output is concerned. The figures available now are for the period 1st July to 30th November, and they show that only 195.8 million lbs went to foreign countries from Calcutta port, against 221.7 million lbs in the corresponding period of 1959. Other factors responsible for lower exports from north-east India were the Assam riots which dislocated transport facilities from the growing areas and the lateness of the crop. Besides, the London dock strike held up deliveries to Britain. The London market, in fact, received only a comparatively small quantity of north-east Indian tea of the 1960-61 season on account of the above factors. But arrivals and the quantities on offer had recently reached the normal level there. There is now a greater balance between supply and demand in the tea market, although one cannot expect any appreciable rise in prices in the immediate future, according to reports from London.

Bleak Prospects for Coffee

India had a huge volume of coffee to dispose of in 1960. Her 1959-60 crop amounting to over 49,000 tons were distributed as follows by 15th November, 1960: 16,198 tons for internal consumption and 14,127 tons for export. The balance with the Coffee Board was 25,347 tons. With a carryover amounting to well over 20,000 tons and the new crop estimated at over 55,000 tons, the marketing problem has been a cause for worry to growers. Export prices have already gone below the minimum release rates fixed by the Coffee Board for the internal market. India cannot expect to get a world market for coffee at remunerative prices in view of the growing world surplus. Besides, the internal market is showing signs of inelasticity. The Coffee Board and growers are thinking about the future marketing policy India will have to adopt under the changed circumstances. Another unhappy development in 1960 was the large-scale damage to plants in the Mysore area by an unidentified disease. The yields from the affected plants are expected to show a marked decline. So a lower price on a reduced crop will slash down the growers' return.

Rubber Output and Consumption

The gap between production and consumption of rubber in India continued to widen in 1960. The country produced only 19,041 tons of natural rubber during the period January-October 1960, and manufacturers consumed 36,699 tons of natural, 5,158 tons of synthetic and 4,327 tons of reclaimed rubber. During the year, rubber growers' demand for an upward revision of the statutory price for raw rubber was turned down by the Central Government on the recommendation of the Tariff Commission. Growers are now placing their hopes on the enhanced replanting subsidy offered by the Government.

Cashewnut Exports Rise

The cashew processing industry had another bright year in 1960, for both raw nut supplies and the production of processed kernels showed improvements. Besides, exports were running ahead of last year's. The latest official figures are for the period January to August 1960. During the period, 27,570 tons of cashew kernels worth Rs. 13.9 crores were exported against 26,652 tons worth Rs. 10.6 crores during the same period in 1959. India exported 37,569 tons of cashew kernels worth Rs. 15 crores in 1959. She could earn another Rs. 40 lakhs on the export of cashew shell oil (4,989 tons). Raw nut imports from Africa amounted to 90,318 tons in 1959. Imports during the period January to August 1960 amounted to 67,311 tons, compared with 57,275 tons during the previous corresponding period.

Prospects for the new year are considered bright. New York is interested in January-June shipments at 52½ U.S. cents, against the current rate of 53 U.S. cents. Russia is expected to enter the market in January or February. The movement of African nuts is in full swing now and India has been receiving about 15,000 tons to 20,000 tons a month since November. No scarcity of raw material for the cashew processing industry is anticipated in 1961. Raw nut is now available at around Rs. 690 to 700 a ton, against Rs. 735 to 740 a ton a month ago. The formation of a syndicate of processors, primarily for the purchase and distribution of imported nuts, seems to have had a healthy effect on the raw nut market.

Record Pepper Exports

India had record pepper exports in 1960. The figures for the season ended October 1960 place total exports at over 19,000 tons. Prices were ruling high during the year. Bombay was about to get a forward market for the commodity in 1960, but the proposal had to be dropped on account of Kerala's opposition. Subsequently, the existing market in Cochin had to face a crisis from which it has almost fully recovered. Normalcy is now returning to that market. Prospects for the new year are reasonably sound with a slightly lower production in India.

Boom in Market for Coconut Products

Coconut products such as oil, copra and oilcake had a boom in the second half of 1960. This was primarily due to lower indigenous production and dislocation in the import of Ceylon copra brought about by the linking of copra imports with export of groundnut oil and oilcake. But the market is now returning to normalcy.

Higher Prices for Cardamoms

Indian cardamoms had a prosperous year in 1960. Prices realised during the year were the highest on record (Rs. 10 to Rs. 15 a lb). New crop now being marketed is placed at a substantially higher figure than that of the last season. That might be the reason for the lower price at which the commodity is now being sold. Present prices vary from Rs. 7 to Rs. 12 a lb. Other minor crops like ginger, turmeric and lemongrass oil had another nomal year.

New Export Promotion Council

An important development concerning spices was the constitution of a separate export promotion council in 1960. The Cashew and Pepper Export Promotion Council functioning for the past few years in Cochin was bifurcated and pepper was handed over to the new council which was inaugurated in Ernakulam by the Central Deputy Minister for Commerce and Industry, Mr. Satish Chandra, on 28th October, 1960.

Loans for Rubber Growers

The Kerala Government has finalised arrangements for the issue of long-term loans to owners of small rubber holdings of not less than ten acres. This credit facility will be made available to private individuals who own land suitable for rubber cultivation and also to those who possess forest land auctioned by the Government under its 200,000-acre rubber planting scheme. It is estimated that 14,000 acres of private land and 6,000 acres of reserve forest land will be brought under rubber cultivation annually for the next five years under this scheme of private ownership of small holdings. The target fixed is 100,000 acres till the end of the third five year plan. According to the scheme of assistance, loans will be issued by the Kerala Central Land Mortgage Bank on the basis of mortgages executed by land owners. The loan will be made available by the State Bank of India on the guarantee given by the State Government. At the end of each year, the amounts thus obtained by the Central Land Mortgage Bank from the State Bank of India wil be paid back by issuing special debentures, 75 percent of which will be bought by the Reserve Bank of India and the remaining 25 percent by the State Government. The loan facility to rubber cultivators is limited to Rs. 750 an acre and will be disbursed in six instalments.

COCHIN TEA SALES

At Sale No. 1, 749,000 kilograms of tea were on offer. There was a good demand at easier rates. Low mediums and mediums were 10nP to 15nP easier. Good mediums declined irregularly by 15nP while high-growns met with limited enquiry at lower rates. Whole leaf grades were barely steady.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank has provided from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CONGRESS FACES ECONOMIC REALITIES

A Party election manifesto is a notoriously ambiguous document and it is usually pointless to pay much attention to it. Unless it contains something completely revolutionary, it is generally safe to conclude that the Party which issues it intends, if elected, to carry on precisely as before. The Congress manifesto presented to last week's Bhavnagar session is no exception to this verdict. That fact is going to be regretted by some, but for others it constitutes the most interesting feature about the document, particularly where the country's economic future is concerned. Previous Congress election manifestos have all sought to offer something new in the economic field—more socialism, higher direct taxation to promote equality, State trading and so on; this time, with the possible exception of service co-operatives, there is scarcely anything that has not been mentioned before. This could be interpreted in two ways. It would seem clear enough that Congress has no new ideas to offer, and, fearing the kind of opposition which its plans for joint co-operative farming, for instance, aroused, prefers to prescribe the mixture as before. This is the sceptical view. But it would also be reasonable to suppose that Congress has learned something from the economic mistakes of the past few years and now prefers not to distract attention from the primary task of economic development by getting itself too involved in controversial policies. This might be termed the optimistic view. There is considerable truth in both these opinions, and at that stage it would seem better to leave the question of motive and turn to the facts, which are simply that, on the evidence of its manifesto, Congress does not intend, when returned, to make any revolutionary experiments such as might divide the country's economic efforts and further weaken its own political popularity. And for this fact alone, it is possible to be very thankful indeed.

The only points on which the manifesto appears at all firm are the pursuit of socialism and the continuance of planning. Not too much significance need be attached to the first point; socialism has been the aim of Congress for years, although it has not yet defined exactly what it means, if indeed it knows, and where it has tried to make its intentions clear, the results are seldom more revolutionary than policies already practised in countries which would shrink from calling themselves socialist. Fortunately, where this avowed intention conflicts with economic necessity, the latter generally prevails; where it has failed to do so in the past—the case of the coal industry—it is beginning to now. As long as this willingness to compromise between economic expediency and political ideology continues, there seems little need to worry about a mere declaration of socialist aims. About the continuation of planning, there is unlikely to be much divergence of opinion in the country. The main points on which to take issue are the apparent determination to concentrate so much of the country's effort and resources on building up the public sector—often under the somewhat threadbare excuse that private enterprise is unable to undertake the requisite projects—and the confusion which still seems to exist in Congress minds between planning, as such, and increasing the standard of living of the people One of the outstanding lessons of the second plan was, surely, that private enterprise is both able to tackle large projects, if given the incentive and opportunity, and is more efficient in implementing them; while as for living standards, the most rapid method of increasing them would probably be to abandon public sector planning altogether and to concentrate on the production of consumer goods in the private sector. Which, of course, is not to advocate that this should be done.

Apart from these two points of principle, the manifesto contains little more than expressions of pious intention; which perhaps shows how well Congress has learned the lessons of parliamentary democracy in the past few years. The joint co-operative farming plan, which gave the excuse for launching the Swatantra Party, has been quietly dropped, or at least not mentioned, while co-operation as a principle, and service co-operatives as a fact, are offered instead. This is the mark of wisdom; joint co-operative farming is neither a political possibility nor an economic panacea in Indian circumstances. But it is to be hoped this discretion does not deter the Party altogether from promoting land reforms. Much still depends on these reforms, and provided ceilings on holdings, which are bound to lead to fragmentation and injustices in the future, are not pressed too vigorously, the Government of the day would be well advised to carry them through to the maximum extent possible. State trading in commodities, too, although not dropped entirely, is now to be undertaken only where "found necessary". This is reassuring, because in probably no other policy has the cloven hoof of Ministerial ambition and the inevitability of failure been more apparent than in State trading. It is a pity the same official restraint cannot be extended to external trading; the country's exports would benefit if it were.

Other points are of less importance and it is difficult to see why they should have been included in the manifesto at all, except in conformity with the Congress tradition of trying to be all things to all men. The remarks about equality, for instance, are wholly contradictory; how it is to be promoted while leaving "adequate motives and inducements" for economic advance, is something only the drafters of the document can explain. So is the assertion that these inducements must not be "based on an acquisitive structure of society". It may be true, also, that such a society is "not in keeping with the temper of our people", but there is no warrant at all for adding "and the spirit of the present age". On the contrary, the present age is becoming increasingly acquisitive, as Mr. Khrushchev would no doubt willingly confirm. But this is all old stuff for Congress. It represents a kind of dusty and cobweb-choked mental attic which ought to be cleaned out and renovated so as to be a credit to the rest of the house. It is not a particularly dangerous place, however; nothing lurks in it which is likely to bite or sting. So because some Congress supporters feel more comfortable in such mental surroundings there is no great harm in leaving them as they are for the time being.

This complete lack of punch in the manifesto is at once reassuring and remarkable. It is reassuring because it means that, with certain outstanding exceptions, it may be possible, given the expected Congress victory, to go ahead with economic development largely unhampered by a surfeit of ideology. And it is remarkable because it represents a commendable degree of restraint under political circumstances which still place a regrettably high premium on expressions of revolutionary intention. In other words, it is about the best manifesto to be expected from Congress for the economic difficulties ahead, given the Party's past mistakes and current prejudices. What has caused this onslaught of comparative realism is not difficult to imagine—it is simply the need during the third plan period to avoid where possible any unnecessary conflicts and stresses in what will inevitably be an over-strained economy. This is not meant to imply that the Government will be any less austere in its treatment of various elements in the economy than it considers—sometimes wrongly—it is necessary to be. Perhaps the main factor is that planning now is practically out of the Government's hands altogether; thanks to past mismanagement, by far the larger part of it is dependent solely on the generosity of the United States and her western allies. Whatever inducement these countries will require for helping India to the utmost of their ability, the unwavering pursuit of ideology is certainly not one of them. In these circumstances, stated intentions are almost as irrelevant as stated figures; the recent addition of Rs. 150 crores or so to the third plan total is the kind of gesture which need mislead nobody. As the Finance Minister, Mr. Morarji Desai, implied in a Parliamentary statement a few weeks ago, the plan will be precisely the size India's friends want it to be, and no larger.

This is the kind of situation which, once recognised, is apt to discourage all further political initiative and persuade the Party in power to hand over economic responsibility, and the blame for incorrect decisions, to the country's benefactors. Congress has fortunately not reached this stage yet, a fact for which the Party can take every credit. But when past aspirations, however inappropriate and wrong-headed, are frustrated by circumstances outside a country's control, there is usually a tendency to political apathy and despair. It would be a pity if this were to assail the Congress Party at this stage; it is still the only one capable of giving India adequate leadership and there are probably far more opportunities in current economic circumstances than there seems to be at the moment. The one thing there is no scope for is the disruptive and antagonising pursuit of ideologies as distinct from the satisfying and encouraging expression of ideals. It is good to see from this manifesto that Congress is becoming less dogmatic in its approach to the facts of economic life.

FINANCES OF PRIVATE COMPANIES

DURING the past couple of years, private limited companies have attracted attention more because of the new statutory restrictions imposed on them than because of the important rôle they play in the corporate sector. Most of the restrictions have no doubt been introduced with a view to checking malpractices. But the point has sometimes been forgotten that private limited companies have a clear purpose to serve provided they are allowed to retain their distinct characteristics. The basic idea underlying these companies is that they function with private resources only, but are allowed to enjoy the statutory privilege of limited liability for smooth working. If they are compelled to work under the same statutory restrictions as public companies, they will be of little practical use. Thus, if private limited companies are at all considered useful, they should be permitted to function with greater freedom than public limited companies. As long as public resources are not employed, it is unnecessary to increase the restrictions on the working of private companies.

A study of the finances of private limited companies during 1958, made in the November issue of the *Reserve Bank of India Bulletin*, shows the important rôle they play in corporate activity. The coverage of the study is limited, since only 333 companies have been covered. They represent only 30 percent of the total paid-up capital of private limited companies. In addition, some industries which are important in the private limited company sector are not adequately represented in the sample. The study shows that the rate of growth of private limited companies slowed down in 1958. The expansion of gross and net fixed assets was smaller than in 1957, Gross fixed assets increased by 9.3 percent to Rs. 84.9 crores in 1958, against an increase of 11.5 percent to Rs. 77.7 crores in 1957. Net fixed assets rose by 9.1 percent to Rs 45.3 crores in 1958, against a rise of 10.1 percent to Rs. 41.6 crores in 1957. After inventories there was actually some accumulation because raw material shortages followed the imposition of stiff import restrictions. Inventories declined by 4.2 percent to Rs. 69.8 crores in 1958.

after having risen by 7.4 percent to Rs. 72.9 crores in 1957. As a result, gross capital formation was only Rs. 4.1 crores, compared with Rs. 13 crores in 1957. Total assets increased by 0.8 percent to Rs. 222.8 crores in 1958; they rose by 5.9 percent to Rs. 221.1 crores in 1957.

A rise in sales, combined with a decline in expenditure, helped to increase profits appreciably. Profits before tax increased by 20 percent to Rs. 16.9 crores, having risen by 6.2 percent to Rs. 14.1 crores in 1957. Profits after tax increased by 29.8 percent to Rs. 6.8 crores in 1958; they increased by 13.6 percent to Rs. 5.3 crores in 1957. Dividends were also higher, but they increased less than did profits. As a result, retained profits rose appreciably. Dividends rose by 21.4 percent to Rs. 5.4 crores; they had increased by 7.2 percent to Rs. 4.4 crores in 1957. Retained profits were 75.6 percent higher at Rs. 1.4 crores in 1958; they had declined by 58.2 percent to Rs. 80 lakhs in 1957. The profit and dividend figures for 1958 and 1957 are not strictly comparable, in view of the changes made in the system of corporate taxation by the Finance Act of 1959.

It is interesting to compare trends in the finances of private limited companies with those in public limited companies. The comparison is not complete, in the sense that the public limited company sector is more adequately covered by including 1,001 companies in the Reserve Bank sample, whereas only 333 companies are included in the private limited company sample. In terms of paid-up capital, the public limited company sector is covered to the extent of 77 percent of the total, whereas only 30 percent of the total is covered in the case of private limited companies. The trends in capital formation in both sectors were broadly similar. Compared with 1957, the growth in gross and net fixed assets during 1958 slowed down in both, but the deceleration was less in private than in public limited companies. Inventories rose in public limited companies but fell in the private ones. On the whole, gross capital formation in private limited companies proceeded at the rate of 2.7 percent in 1958, compared with 9.4 percent in 1957. The corresponding rates in public limited companies were 8.2 percent and 14.3 percent.

The divergence in the pattern of financing assets formation in the two sectors during 1958 was very marked. In public limited companies, external sources contributed 51.5 percent of the total, but in private limited companies, the entire assets formation was financed by internal resources. In fact, the latter companies repaid a portion of their previous borrowings from internal resources. It may be observed that of the gross capital formation of Rs. 205 crores in the corporate sector during 1958, private limited companies contributed only Rs. 14 crores, or less than 7 percent of the total. The corresponding proportions in 1957 and 1953 were about 13 percent and 14 percent. During the three-year period ended 1958, the total gross capital formation was estimated at Rs. 892 crores, of which the share of private limited companies was only Rs. 103 crores, or 12 percent of the total.

The profitability ratios of both public and private limited companies improved in 1958, although the rate of increase was bigger in the latter. The ratio of gross profits to gross sales was 7.6 percent in private limited companies, compared with 8.7 percent in public limited companies. In contrast, the ratio of profits after tax to net worth in private limited companies, which was below that for public limited companies in each of the years from 1955 to 1957, was higher at 7.8 percent in 1958, compared with 7.1 percent for public limited companies. Gross profits as a percentage of total capital employed, and dividends as a percentage of net worth, remained higher for private limited companies at 9.1 percent and 6.1 percent, compared with 8 percent and 5.1 percent for public limited companies. In 1958, the tax provision as a percentage of profits before tax was 60 percent in private limited companies, compared with 46 percent in public limited companies. The proportion of profits distributed and profits retained, therefore, was lower at 32 percent and 9 percent, against 39 percent and 15 percent for public limited companies.

Size and rate of growth are not measures of efficiency. Profits, related to assets, are significant, but they may tell us more about the state of trade than about the efficiency of companies. The Exchange Telegraph Company has instituted an analysis of British companies' profits, and its study of the accounts of more than 4,200 companies published in 1960 shows that, by comparison with the accounts published in 1959, much the biggest increase in the industrial categories was achieved by cotton-textile companies. But this unusual result reflects the strength of the textile trade rather than the reorganisation of the cotton-textile industry, which will presumably affect future results more than last year's. Anyway, the more information available the easier it is to judge the condition of British industry, and its ability to compete successfully in a more competitive world.

BRITISH INDUSTRIAL GIANTS

ONE of the difficulties in assessing economic facts is the lapse of time between the date or period of the facts and publication of the results of any thorough analysis of them. The British Government has recently published the results of a study, by the Statistics Division of the Board of Trade, of about 1,900 British companies; but the figures on which the statisticians worked are those of 1957. *Company Assets and Income in 1957* is, however, an important document; and it can be supplemented, of course, by more recent information. This official study is concerned both with absolute size and with relative growth. The Board of Trade has provided information on the 25 biggest companies, in terms of net assets at the end of 1957, and on the 25 fastest-growing companies, as measured by the proportional increase in net assets between the end of 1954 and the end of 1957. It is interesting to note that none of the companies listed as the biggest appears also on the list of the fastest-growing, but it would be wrong to deduce that big companies lacked dynamic.

The Board of Trade was not concerned with British, or partly-British, companies whose assets were mainly abroad; whereas it included in its survey the British subsidiaries of foreign companies, with assets, of course, mainly in Britain. Thus Esso Petroleum, subsidiary of Standard Oil of New Jersey, appears in the list (it is the biggest American-owned company in Britain, and the Board of Trade showed only 10 British companies bigger), whereas Shell and British Petroleum are excluded (Shell, with Royal Dutch, would rank No. 1, B.P. No. 3). Unilever, though one of the widest-spread companies in the world, is included, but not British-American Tobacco, which would be next in size to Unilever, or Peninsular & Oriental Steam Navigation, next in size to British-American Tobacco. To name all the 25 would be tedious, but it may be interesting to mention the first five, and to mention also some famous names that are much further down the list or not in it at all. The first five are Imperial Chemical Industries, Unilever, Imperial Tobacco Company, Courtaulds, Steel Company of Wales. That I.C.I. heads the list is not surprising; but it is surprising to find F. W. Woolworth—surely the most familiar company's name in Britain—at the bottom of the list of 25, and Marks & Spencer (another huge chain-store group) and British Motor Corporation (with the biggest output in the British motor industry) not in the list at all. (More recent figures show that Ford Motor Company, ranked 17 in the Board of Trade list, still has larger assets than B.M.C., although its production is smaller.) It is a little surprising, also, to find Courtaulds in the first five, for the extension of the rayon combine's interests beyond textiles (into the paint and the packaging industries and others) has mostly occurred since 1957. Courtaulds is no longer regarded simply as a textile group; the biggest textile group is J. & P. Coats, and when the merging of Coats with Patons & Baldwins is completed, the group will be comfortably among the 20 biggest companies in Britain. It is interesting to note that among the first 25 only Unilever is concerned with food, though retail distribution is represented by both Great Universal Stores and Woolworth—G.U.S. being the larger. Distillers, high in the list, is best known for whisky, but it is a big unit in the chemical industry. So is Esso. Therefore, with I.C.I. at the top, chemicals are well represented. Among the rest, steelmaking and heavy engineering (including electrical) predominate—though the list includes paper (Bowater), rubber-manufacturing (Dunlop), asbestos (Turner & Newall), and cement (Associated Portland Cement).

The list of the 25 companies that increased their assets most (proportionally) between 1954 and 1957 presents no similar picture—indeed, no clear picture at all. It is headed, rather surprisingly, by a textile company, Nottingham Manufacturing; it includes—again, unexpectedly—a company whose speciality is tea (Typhoo); intermingled with textiles, paint, groceries, glassware, sanitary products, and so on, are two important engineering groups, Associated Engineering (which makes principally components for the motor industry) and Richardsons Westgarth (which is primarily a shipbuilder), and a maker of scientific and industrial instruments, R. B. Pullin. The most interesting point is that in this list of 25 only the two engineering companies have (or had three years ago) net assets exceeding £10 million, whereas the smallest of the companies in the other list had net assets of approximately £70 million. It would be easy to deduce from these facts that the only important factor in growth was management and that very big companies were too heavy to be flexible. But the deduction would be misleading. A smaller unit is naturally more flexible in the sense that it can grow more rapidly—it is impossible to imagine a giant steel or chemical combine multiplying its assets more than sixfold in three years, as Nottingham Manufacturing did. But the statisticians of the Board of Trade discovered that the smallest companies grew less than the average and the largest companies grew more than the average. The 70 largest companies—all with assets exceeding £25 million at end-1957—expanded by an average of 41 percent over the period, whereas the average increase for all companies in the study was 26 percent.

THE WORLD BANK IN ASIA

WITH the growing inadequacy of foreign private capital in relation to the demand from developing economies, the World Bank naturally has come to be a major source of external finance, notwithstanding the usual complaints about the rate of interest being too high. The countries of Asia, in particular, are having to depend on it increasingly. The latest account of aid given by the Bank to these countries, outlined in a publication entitled *The World Bank in Asia*, places the total to-date at $1,444.8 million. The sum is substantial, and of particular significance is the fact that more than half of it has gone on such projects as transport and power, which help build the *infra-structure* of an economy. These are projects for which risk capital from abroad is not normally available, yet are the most essential prerequisites of a country's industrial development. A little more than one quarter has been given for industry, primarily for steel development, to India and Japan; and agriculture accounts for over $49 million.

India is the largest borrower among Asian countries. (The Bank report arbitrarily defines Asia as the region extending from Japan and the Philippines to the western borders of Pakistan. It consists of 13 members of the Bank, eight of whom figure as borrowers in the report.) The total of India's borrowings comes to $662 million. She is followed by Japan (borrowings $357.4 million), and then Pakistan with $241.9 million. The other five, namely, Burma, Ceylon, Malaya, the Philippines and Thailand, have borrowed, or have been given, much smaller sums which may nevertheless be substantial in relation to their own needs and resources. India's railway development appears as the largest single World Bank-financed project. In Pakistan, Burma and Thailand, railway development programmes of smaller size have been executed with aid from this source. All the four countries have taken loans for the improvement and modernisation of their port facilities. Calcutta and Madras ports in India, Karachi in Pakistan, Rangoon in Burma and Bangkok in Thailand are being developed by the respective Governments with help, and in some cases technical guidance, from the Bank. It has made power loans in seven countries, helping finance the construction of 13 major dams and hydro-electric stations, ten thermo-electric stations, thousands of miles of transmission lines and extensive distribution facilities which have helped create additional capacity of some 2.6 million kilowatts of energy. Here Japan emerges as the largest single borrower, with India following some way behind. Most of the amount lent to Pakistan has been used for laying a pipeline which conveys the Sui gas to Karachi and intermediate towns.

In the field of industry, India's two private steel units have borrowed between them a sum of $159 million, while six mills in Japan have taken a total of $144 million for their vigorous expansion programmes. Engineering companies in Japan have also been given aid for the purchase of machines and machine tools; a paper mill in Pakistan has been put up with the aid of Bank finance, and two development banks, one each in India and Pakistan, have been given loans totalling $34.2 million to help stimulate the growth of private industry. Land reclamation in India from weed infestation and jungles, the establishment of farms in remote areas in Japan, and another multi-purpose project in the same country for the expansion of farm output through irrigation and flood control, are among the agricultural projects which have been implemented with assistance from this source. The list of purposes would not be complete without mentioning the technical assistance which these countries have been given in one form or another. Bank experts have made economic surveys in Ceylon, Malaya and Thailand, and the Indian Government receives advice on various aspects of its five year plans. The report makes a special mention of the mission of the three international bankers, sponsored by Mr. Black, which visited India to assess the country's economic prospects with reference to its third five year plan.

This factual summary shows the ways in which the World Bank is helping its member countries in Asia develop their economies. But it leaves out of account the accomplishment of a very important task which, in terms of human welfare and international relations, is perhaps the most outstanding of all. That is the treaty which was signed last September in Karachi by Prime Minister Nehru of India, President Mohammed Ayub Khan of Pakistan and Mr. W. A. B. Iliff, vice-president of the World Bank, governing the use of the waters of the Indus river system. This is now known as the Indus Water Treaty 1960. All the facts of the dispute are well known, so they need not be repeated here. It, however, needs to be said that but for the patient and indefatigable negotiations which the Bank carried on through its vice-president Mr. Iliff, with parties seemingly determined not to move one inch from their respective stands, the fate of some millions of people (most of them in Pakistan) would still be hanging in the balance. They at least have to be thankful to the Bank for bringing about a settlement and for arranging some $90 million of international aid for carrying out the costly projects which would eventually allow India to use the waters of the eastern rivers, exclusively for her purposes, without any feeling of moral guilt, and Pakistan, the full use of the waters of the western rivers.

Current News and Comment

Atul Products Expanding

The shares of Atul Products Ltd, which were quoted at Rs. 429 on 4th January, were bid up to Rs. 455 the next day. The spurt followed the news that the Company's expansion plans are beginning to take concrete shape. Humphreys and Glasgow Ltd of London has already been given a contract worth £1.3 million (nearly Rs. 1.73 crores) for designing and constructing the new chemical plant in Bulsar which will be an extension to the existing works. The expansion programme for manufacturing a wide variety of intermediates, about 60 in number, used in the preparation of dyestuffs is estimated to cost about Rs. 7.5 crores. The foreign exchange cost is expected to be Rs. 4 crores or Rs. 5 crores and the cost of the machinery for the project will be around Rs. 3 crores. At present, the Company, along with other producers of dyestuffs, has to depend mainly on imports for its raw materials. With the growing foreign exchange difficulties, it is faced with the prospect of a possible cut in output. Atul's project, when completed by about the end of 1963, will not only enable it to meet its own requirements but also make available considerable quantities of intermediates for other dyestuffs producers. For some types of intermediates, however, it will probably have to depend on the proposed Government factory in Panvel. It is not known how the Company will finance its expansion project. But informed sources believe that it might not come to the market for fresh capital. It will meet part of the cost from its own resources and the unused part of the Government of India loan of Rs. 3 crores granted some time ago. In order to meet the foreign exchange requirements, it might obtain assistance from international financial institutions, including the U.S. Development Loan Fund.

Thakur Paper Mills Issue

Thakur Paper Mills Ltd is a new Company which will manufacture writing and printing paper. The factory will be located in Samastipur, north Bihar. The Company has received an industrial licence for setting up a plant with a production capacity of 3,600 tons a year. It has also received a licence for establishing a plant for manufacturing paper pulp with an annual capacity of 4,000 tons. The Company's authorised capital is Rs. 1 crore in equity shares of Rs. 10 each. Of this, only Rs. 40 lakhs is being issued at present. The promoters, directors and their friends are taking shares worth Rs. 15 lakhs, and the remaining Rs. 25 lakhs are being offered to the public. Lists for public subscription will open on 13th January. A sum of Rs. 2.50 is payable on application and Rs. 2.50 on allotment. (Fuller details concerning the issue are published on a later page.)

The projects for paper and pulp are estimated to cost Rs. 70 lakhs. The Company is raising Rs. 40 lakhs through the issue of equity capital. The Industrial Finance Corporation and the Bihar State Finance Corporation have sanctioned loans totalling Rs. 30 lakhs. The cost of imported machinery will be about Rs. 18 lakhs, comprising machinery worth Rs. 14 lakhs from Japan under a yen credit and equipment worth Rs. 4 lakhs from Europe. The machinery manufactured locally will be worth Rs. 12 lakhs. The Japanese firm of Kinsho Mataichi is providing technical know-how and lending technicians for running the plant for two years for a consideration of Rs. 2 lakhs to be paid in sterling.

The Company will use rice straw and bagasse as raw materials, as they are available in plenty in Bihar. The project, it is said, is the first in India for manufacturing paper from rice straw. A paper industry based on rice straw is well developed in Japan. The Company has asked the Government for permission to expand the production capacity of the plant by 3,000 tons a year with a view to manufacturing special varieties of paper. This will involve a capital outlay of Rs. 25 lakhs, of which Rs. 8 lakhs will be in foreign currency. The entire issue to the public has been underwritten—Rs. 20 lakhs by the Government of Bihar and Rs. 5 lakhs by the Central Bank of India. The paper plant is expected to go into production by October and the pulp plant by about the middle of 1962.

Hindusthan Sugar Makes Record Profit

In spite of the sharp decline in equities from the high levels of July 1960 and the disastrous fall in the shares of the Deccan sugar companies, the shares of the Hindusthan Sugar Mills are remarkably firm around Rs. 341.25. Even at this level, they offer a gross yield of 8.5 percent. The Company's working results for the year ended June 1960 fully justify the directors' decision to increase the dividend from 15 percent to 29 percent. The gross profit of Rs. 66.47 lakhs is Rs. 22.65 lakhs more than in the previous year. After providing Rs. 15.73 lakhs (against Rs. 17.25 lakhs) for depreciation, Rs. 20.10 lakhs (against Rs. 11.85 lakhs) for taxation and Rs. 5.16 lakhs (against Rs. 2.17 lakhs) for managing agents' remuneration, the net profit has increased to Rs. 25.48 lakhs from Rs. 12.01 lakhs in 1958-59. With Rs. 39,835 brought in and taking into account a sum of Rs. 53,314 being the refund of cess on the export quota for 1957-58, the amount available for disposal is Rs. 26.42 lakhs. General reserve gets Rs. 2 lakhs more at Rs. 6 lakhs and the provision for development rebate reserve has been raised to Rs. 2.15 lakhs from Rs. 1.05 lakhs. Dividends absorb Rs. 17.76 lakhs, leaving Rs. 52,021 to be carried forward.

The marked improvement in the Company's earnings is due to an increase in production. The factory crushed 15.8 million maunds of sugarcane, compared with 9.5 million maunds in the previous season. The recovery was 10.05 percent, against 9.84 percent. Production and recovery at the distillery were also higher at 1,165,439 gallons and 1.83 gallons a maund of molasses, against 798,917 gallons and 1.57 gallons, respectively. Sales totalled Rs. 4.34 crores, or about Rs. 3 lakhs more than in the previous year. But the stocks at the close are up by about Rs. 1.14 crores at Rs. 2.21 crores. The outlook for the current year appears to be bright. The directors state that the area under sugarcane in the reserved zone of the factory has increased further. The condition of the crop appears to be satisfactory. This will lead to a further increase in sugar production. The incentive of a 50 percent rebate in the basic excise duty on additional production has been declared for the current year also. It will apply to deliveries of sugar produced in excess of the average of the 1958-59 and 1959-60 seasons.

Hindustan Kokoku to Make Steel Wires

Hindustan Kokoku Wire Ltd is an Indo-Japanese enterprise which is setting up a factory about 12 miles from Delhi on the Mathura Road for manufacturing high-tensile galvanised steel wires, mild-steel wires and P. C. wires. The plant will have a capacity of 6,000 tons of wire a year on a single-shift basis. Production is expected to start within a few months. The factory is being constructed, and machinery has already been shipped. The Company's authorised capital is Rs. 50 lakhs, made up of 30,000 equity shares of Rs. 100 each and 20,000 6½ percent tax-free cumulative redeemable preference shares, also of Rs. 100 each. The preference capital can be redeemed after ten years at the discretion of the directors. The issued capital consists of 18,000 equity shares and 12,000 preference shares. The Gosho Company Ltd and the Kokoku Iron and Steel Wire Manufacturing Company—two Japanese firms—have taken 5,400 and 3,600 equity shares, respectively. The balance of 9,000 equity shares has been taken up privately—3,000 by Tata's Investment Corporation, 2,000 by the Investa Industrial Corporation and their friends and 4,000 by the directors, promoters and their associates. Of the preference capital of 12,000 shares, the two Japanese firms have taken up 1,000 shares and another 1,000 shares have been acquired by the New India Assurance Company. The balance of 10,000 shares has been underwritten by the Industrial Finance Corporation. The foreign firms will be paid a fee of Rs. 81,000 in sterling for technical know-how.

Pulp Plant for Indian Rayon

The Indian Rayon Corporation has received a licence from the Government to set up a plant for manufacturing rayon-grade pulp from cotton linters. The plant will be located in Veraval and will have a production capacity of 15 tons a day. The project will cost about Rs. 62.5 lakhs, including Rs. 37.5 lakhs for plant and machinery. The Corporation has also received a licence to double its capacity for rayon yarn in terms of 150 deniers to 10 tons a day. The Government is reported to have indicated that the pulp plant should get precedence over the expansion of the rayon plant. The capital outlay on the Corporation's expansion programme is estimated at Rs. 3.5 crores, of which the foreign exchange component will be around Rs. 2.85 crores. It will have to make its own arrangements for obtaining foreign exchange. The Von Kohorn International Corporation of New York—the technical collaborator in the rayon project—will take up shares worth Rs. 40 lakhs. Indian Rayon is carrying on negotiations with certain international financial institutions for assistance to meet the balance of the foreign exchange needs. In order to finance the expansion programme, it is issuing further capital amounting to Rs. 1.75 crores, comprising Rs. 1.45 crores of equity shares and Rs. 30 lakhs of preference shares. The new ordinary shares will be issued to existing shareholders in the ratio of one

share for every one held. The preference shares will also be offered to holders of ordinary shares in the ratio of one share for every five held.

Following the sanction for doubling the installed capacity for viscose yarn and setting up the pulp plant, the Government has granted licences for machinery worth Rs. 44.84 lakhs for an integrated preparatory department which will be required when the capacity is expanded. The licence for additional spinning machinery will be issued after the order for the pulp plant is placed. The order has since been placed, and it is said that machinery will start arriving from March 1962. The pulp plant and the expanded viscose yarn plant are expected to go into production late in 1962. It is stated that, apart from meeting its own requirements, the Corporation will be able to supply surplus pulp to other consumers. The Rs. 50 share of the Indian Rayon Corporation is currently quoted around Rs. 54.

Gannon Dunkerley Expands

Commenting on the improved results of Gannon Dunkerley and Co. Ltd for the year ended March 960, the directors mention the various expansion chemes which are being undertaken. Gannon Dunkerley (Orissa) Private Ltd was set up during he past year for building a small structural and nechanical engineering workshop in Cuttack. his is a wholly-owned subsidiary. Two other ubsidiaries—Gannon Electrolytics Private Ltd nd Gannon Norton Metal and Diamond Dies Pri- ate Ltd—have been formed for producing electro- ytic capacitors for the radio industry and diamond ungsten carbide and metal dies for the wire- lrawing industries. The latter factory is being stablished in collaboration with Wire Drawing Dies (Manchester) Ltd of the U.K. The foreign ollaborator has agreed to supply equipment in xchange for the shares of the new Company. oth factories may begin production in 1961. Gannon Dunkerley and Co. Ltd has also obtained licence for building a wire-drawing unit in Indore vith a capacity of 3,900 tons a year. The produc- ion will consist mainly of high-tensile steel wires.

Providing Rs. 59,606 (against Rs. 2.66 lakhs) for evelopment rebate, Rs. 2.35 lakhs (against .s. 1.26 lakhs) for depreciation and Rs. 3.50 lakhs (against Rs. 2.20 lakhs) for taxation, the profit has increased from Rs. 1.23 lakhs to Rs. 5.78 lakhs. A taxable ordinary dividend of 10 percent has been declared, absorbing Rs. 3.60 lakhs. The dividend was 6 percent, tax-free, in the previous year. Dividend reserve is allocated Rs. 83,000 and general reserve Rs. 15,000. The carry-forward is Rs. 9,821, compared with Rs. 5,434 brought in. The business of the general department has increased due to bigger sales of Indian goods, but the indent business has suffered due to import restrictions. The engineering workshop for the manufacture of liquefied petroleum cylinders has worked well.

Textool Diversifying Activities

The Textool Co. Ltd has made a net profit of Rs. 8,35,142 for the year ended April 1960, after providing Rs. 3.97 lakhs for depreciation. Development rebate reserve takes Rs. 60,000 and the tax provision is Rs. 2.6 lakhs. The dividend of 15 percent, subject to tax, absorbs Rs. 3.29 lakhs. About Rs. 4,566 is carried forward, against Rs. 931 brought in. During the year, the turnover increased by nearly Rs. 30 lakhs. Sales of textile machinery were slack at first, but a considerable number of orders was booked later, especially from the Ahmedabad and Calcutta areas. The textile section thus became busy again. The salient feature of the turnover was the increase in orders for reconditioning old textile machinery, such as the conversion of the drafting system and change of lift. As the erection of new mills is slowing down, the reconditioning of old textile mills is increasing. Although the latter is not as profitable as the manufacture of machinery, a change in the Company's pattern of production is considered necessary. With the development of agriculture and well irrigation, the demand for diesel engines (for use with pumping sets) has increased. In the circumstances, the Company is trying to increase its manufacturing facilities in order to meet the internal as well as the export demand. It has concluded an agreement for collaboration with the Nippon Signal Co. Ltd of Japan for the manufacture of all kinds of railway signalling equipment. The directors expect that the manufacturing and trading activity in this line will be good, as the requirements of the railways are large and the Japanese collaborators are already well established in this country.

Stanes Amalgamated Earns More

During the year ended June 1960, Stanes Amalgamated Estates Ltd has made a profit of Rs. 5,59,577, against Rs. 2,39,314 in the previous year. Depreciation takes Rs. 87,316 and the provision for taxation is Rs. 2.11 lakhs. An interim dividend of 5 percent, subject to deduction of tax, has been paid already. The final dividend is 12 percent, subject to deduction of tax. A sum of Rs. 10,000 is transferred to development reserve, Rs. 25,000 to general reserve, and Rs. 4,187 to development rebate reserve. A balance of Rs. 3,199 is carried forward. The tea crop from the Company's own estates reached the record figure of 770,121 lbs; in addition, 29,824 lbs was made from bought leaf. The average sale price was Rs. 1.90 a lb, against Rs. 2.02 a lb in the previous year. The coffee crop amounted to 150 tons, against an estimate of 135 tons. In view of lower export prices for coffee, the crop was valued at Rs. 2.15 a point.

Nil from Coimbatore Spinning

The Coimbatore Spinning and Weaving Co. Ltd has made a net profit of Rs. 3,19,962 for the year ended December 1959, after providing Rs. 3.65 lakhs for depreciation. The debit balance has been reduced from Rs. 15,77,632 to Rs. 12,57,670. The dividend is again nil.

Bigger Profit for Air-India

There has been a substantial improvement in the working of the Air-India International Corporation during the year ended March 1960. The profit has increased from Rs. 15.85 lakhs to Rs. 18.26 lakhs. Taking credit for Rs. 8.72 lakhs of non-operating revenue, there is a balance of Rs. 26.98 lakhs. An amount of Rs. 13.20 lakhs is written off for development expenditure, leaving Rs. 15.03 lakhs to be carried forward, against Rs. 1.25 lakhs brought in. The capacity offered increased by 6.3 percent, compared with 1958-59.

It is claimed that the Corporation now has the finest combination of aeroplane and jet engine, so the outlook is assessed with cautious optimism. But some difficulties may arise during the years ahead. To begin with, half the capacity of the Corporation's fleet is still provided by piston-engined aircraft which are no longer competitive. There is, therefore, an urgent need to replace them with modern turbine-power equipment. Secondly, the competition in world air transport services is likely to increase steadily. The international airlines, backed by their respective governments, appear to provide a total capacity on most routes which is far in excess of the demand. The addition of large fleets of high-capacity jet transport aircraft will increase the capacity. It is possible that a portion of the new capacity will be filled by the growing traffic. But considering that no airline is willing to reduce its capacity by itself, the possibility of excess capacity cannot be ruled out. Although the pressure of competition may be softened, as at present, by pooling arrangements, it looks as if the real solution lies in increasing traffic. It is, therefore, time that airlines thought seriously about reducing their expenditure and then cutting fares in order to promote traffic.

Bank Profits Up

The Reserve Bank of India index for bank shares, which declined from 201.6 to 187.8 in 1959, rose to 198.8 in 1960. The rise is far greater than in the all-India index for variable dividend securities, which has increased by only a few points from 160 to 165.7. The marked rise in bank shares reflects the improved performance of the industry. In 1960, the demand for funds remained good. During the May-October period, which is the traditional slack season, bank credit declined by less than Rs. 9 crores. Over the year, it increased from Rs. 964.48 crores to Rs. 1,156.24 crores. In 1959, credit expansion was of the order of Rs. 98.89 crores. Besides, credit was made costlier during the year, whereas deposit rates continued to be pegged on the low side. Total bank deposits, however, recorded a small decline from Rs. 1,827.09 crores to Rs. 1,823.27 crores. The busy season is getting into full swing, and the advance-deposit ratio is already standing at 62.86 percent, against 52.79 percent at the end of December 1959. The acute stringency of funds in the market has pushed the inter-bank call rate to a record high of 5½ percent.

The Devkaran Nanjee Banking Co. Ltd has reported a net profit of Rs. 23.54 lakhs, subject to audit, for the year ended December 1960. The profit has increased by Rs. 10.49 lakhs compared with the previous year. The directors have recommended a final dividend of Rs. 2.52 a share, making a total of Rs. 4.38 a share, subject to deduction of tax. This is the same as it was last year. Including Rs. 5.69 lakhs brought forward from the previous year, the amount available for appropriation comes to Rs. 29.24 lakhs. Reserve fund has been allocated Rs. 8 lakhs (against Rs. 6 lakhs) and taxation provision gets Rs. 9 lakhs (against nil). Dividends absorb Rs. 4.38 lakhs. The balance of Rs. 7,86,033 has been carried forward. Deposits show a nominal rise of Rs. 12,000 at Rs. 35.5 crores, while total working funds are up from Rs. 40.28 crores to Rs. 42 crores. The number of branches has increased from 83 to 96. Against a paid-up capital of Rs. 50 lakhs, reserve funds amount to Rs. 60 lakhs.

The Bank of Maharashtra Ltd has made a profit of Rs. 9.5 lakhs, against Rs. 7.72 lakhs in the previous year. A sum of Rs. 3.5 lakhs (against Rs. 2 lakhs) has been provided for taxation and Rs. 3.4 lakhs (against Rs. 1.6 lakhs) for general reserve. The directors have declared a dividend of 11 percent, subject to tax, inclusive of a silver jubilee bonus of 2 percent, compared with 9 percent, subject to tax, in the previous year.

Foreign Balances Fall

Between 25th November and 30th December, 1960, India's foreign balances increased by Rs. 11.76 crores to Rs. 151.73 crores. This is the largest increase for any month out of the past 14. On 25th December, 1959, the foreign balances stood at Rs. 213.14 crores. This means that the balances have suffered a decline of Rs. 61.41 crores over the year. India paid back the standby credit of $72.5 million, or nearly Rs. 34.5 crores. Even after taking this figure into account, there has been a fall of nearly Rs. 27 crores in the foreign balances during 1960. In the previous year, they recorded an increase of Rs. 24.29 crores—from Rs. 188.85 crores to Rs. 213.14 crores. October to April is generally a favourable period for foreign exchange earnings. But the performance now does not seem to have been as promising as a year ago. Between October and December 1960, the foreign balances have increased by only Rs. 12.5 crores, against a rise of about Rs. 32 crores in October-December 1959. The reserves can be expected to improve further in the coming months but it is doubtful whether they will reach the Rs. 200 crores which the Central Finance Ministry had expected by the beginning of the third plan.

Maharashtra Land Ceiling Bill

Fears that sugar companies in Maharashtra will also be brought under the purview of the proposed legislation to fix ceilings on land holdings have proved to be well founded. Even the land owned by industrial and commercial undertakings has not been exempted in the Maharashtra Agricultural Lands (Ceiling on Holdings) Bill. It thus makes an important departure from similar legislation in other States. The Maharashtra Government has not heeded the Planning Commission's advice on the exemption from ceiling of efficiently managed farms which consist of compact blocks and on which heavy investment or permanent structural improvement has been made or whose break-up is likely to lead to a fall in production. The Bill, however, makes special provision for land taken from industrial or commercial undertakings in order to ensure efficient cultivation and continued supply of raw material.

For the purpose of fixing ceilings, lands have been divided into four classes and the State has been divided into 74 local areas. The holding varies from 16 acres to 48 acres for irrigated lands, depending on the nature of irrigation, and for dry crop land the ceiling varies from 84 acres to 156 acres, depending on the local area. The ceiling is to be made applicable to families consisting of members not exceeding five. In the case of larger families, extra land is allowed at the rate of one-sixth of the ceiling for each member in excess of five, subject to a maximum of two ceiling areas. Compensation is fixed in terms of multiples of assessment and varies from 55 times to 195 times, depending on the average values of land prevailing in different districts. An order of priority is laid down for the distribution of surplus land to the landless peasant, small landholders and farming societies.

The total cultivable land in Maharashtra is around 50 million acres, divided into 430,000 holdings of varying sizes. There are quite a few landlords in Vidarbha and Marathwada owning more than 10,000 acres. About 32,000 holdings are likely to be affected by the proposed legislation. There are 13 sugar factories in the private sector and an almost equal number in the co-operative sector. Land held by the former is a little less than 100,000 acres, of which only 30,000 acres are owned by the companies and the remaining 70,000 acres has been leased by them from small cultivators, mostly during times of depression at nominal rents. The rents paid by the companies to the cultivators are reported to be between Rs. 10 an acre and Rs. 50 an acre, while the profit earned by them is estimated at around Rs. 800 an acre. Farmers in the sugar areas of Maharashtra—Ahmednagar, Satara and Sholapur—have, therefore, been asking for

the return of their land leased to the companies. The Government has apparently yielded to agitation. It would, however, be unfair to ignore the tremendous effort made by the companies in developing the land. The average yield of sugarcane in the farms of the Deccan companies is around 60 tons an acre, against the overall Indian average of 15 tons an acre. The quality of sugarcane is also much better, with recovery around 11.5 percent, compared with the all-India average of less than 10 percent. The amount of compensation payable to sugar companies is expected to be around Rs. 2,000 an acre, which will work out to Rs. 6 crores on 30,000 acres. The amount is considered inadequate by the industry. Besides, the compensation will be paid in 20-year transferable bonds carrying interest at 3 percent a year.

The special provision in the Bill enabling the Government to manage land taken from industrial and commercial undertakings as State farms or to give it to joint-farming societies for cultivation with a view to ensuring efficient cultivation and full and continued supply of raw material to the undertakings at a fair price is undoubtedly welcome. But sugar companies fear that in spite of these assurances, the proposed form of management of surplus land will adversely affect the present standards of agricultural efficiency. There is a good deal to be said for giving land to the tiller. But, however socially desirable it may be, the legislation for ceilings on land holdings must be judged by the effect it has on agricultural production. What India needs most at present is increased production, so welfare legislations can wait for some time.

M.P.s Debate General Insurance

The nationalisation of general insurance has been suggested twice during the past year by communist M.P.s—first by Mr. Bhupesh Gupta in the Rajya Sabha, and later by Mr. T. B. Vital Rao in the Lok Sabha. The latter's recent resolution covered no new ground. From the Treasury benches, Mr. B. R. Bhagat, Central Deputy Minister for Finance, stated the Government's well-known view. One of the points made by Mr. Vital Rao was that crop and cattle insurance will have to be tackled at the State level. Mr. Bhagat explained that merely by nationalising general insurance, it will not be practicable to enter a sector which has not yet been covered, particularly the rural sector where crop and cattle insurance lies. He pointed out that some State Governments have already taken up the question of crop and cattle insurance. The odd argument was put forward by the communists that because the Life Insurance Corporation has made phenomenal progress, general insurance should also be nationalised, so that the same progress can be made there. The argument is devoid of logic. In the first place, it is very doubtful whether the L.I.C. has made "phenomenal" progress. Secondly, by nationalising such a tiny sector of the economy, no useful purpose will be served. As Mr. Bhagat said, "we are not going to augment our resources by the nationalisation of general insurance."

Marine insurance, in particular, is so highly technical in nature that it would not be profitable or advisable to take it over. Mr. Bhagat quoted the *Insurance Year Book* as showing that only Rs. 40 lakhs was provided for dividends and Rs. 20 lakhs carried forward by all the general insurers in the country, who have a paid-up capital of Rs. 10 crores. The rate of dividend, therefore, comes to 4 percent. Only a few Indian companies have been declaring steady dividends. Quite a large number do not pay any dividend at all. There is, therefore, little profit in general insurance.

On the question of malpractices, which was emphasised by Mr. Vital Rao, the Central Deputy Minister for Finance stated that it is one thing to suggest regulation and quite another to suggest nationalisation. There is no guarantee that, with nationalisation, the alleged malpractices will disappear. Mr. Bhagat said that he wished to work out some sort of regulation for the reinsurance of Indian business abroad. Nationalisation, by itself, is no solution, for even after nationalisation, one has to reinsure. Channelling reinsurance through Indian reinsurers might help, he thought. Mr. Bhagat made the point that under the Insurance Act, the Government can exercise some control over general insurance. If malpractices prevail in the trade, it is not because of any oversight on the part of the Government. There is mutual distrust and competition among the companies. If they get together in a constructive spirit with a view to tackling the fundamental evils, they can count on the active co-operation of the Government. The trade is controlled by various measures under the Insurance Act. If these measures are not sufficient to make the business cleaner and sounder, and if the Government finds that the industry as a whole is not playing the game, Mr. Bhagat warned, Parliament would be asked for further powers. That warning should be taken seriously by the trade.

Exports of Rayon Fabrics

Exports of rayon fabrics suffered another sharp decline during November 1960. Shipments totalled only 881,068 yards valued at Rs. 9.27 lakhs, against 2,665,081 yards costing Rs. 22.8 lakhs in October. In September, India sold 3,528,440 yards for Rs. 32.37 lakhs to foreign markets. The fall is unusual for the time of year, as October and November are normally the months when exports rise in anticipation of Christmas buying abroad. The decline has been attributed to various factors. Firstly, since 1st October, 1960, the inspection department of the Textile Commissioner's office has been conducting pre-inspection rigidly; much of the material which was formerly allowed for export is now being rejected as sub-standard. Secondly, exports to Afghanistan have practically stopped since they do not qualify for any import licences as from 31st July, 1960. Thirdly, due to the disturbances over the language issue, the demand from Ceylon—a big buyer—has fallen considerably. Lastly, there has been a general slump in international markets.

Rubber Supply and Demand

Speaking at the annual general meeting of the Association of Rubber Manufacturers in Calcutta recently, Dr. D. Banerjee, chairman, said that the "biggest development" is going to be in the tyre section of the industry. By the end of the third plan, nine separate units will have been set up. These schemes for expansion are seen in better perspective when it is considered that Rs. 1,650 crores, or 16.5 percent of the total outlay in the third plan, has been earmarked for transport and communications. Annual motor-vehicle production will be more than doubled to 150,000 in five years, which will create a big demand for tyres, both as original equipment and for replacement purposes. Other developments in communications are equally important from the tyre manufacturers' point of view. The targets for higher coal and mineral production and more power and irrigation projects require the use of an increasing volume of these products. Among the consumer industries, the growth of footwear production holds out considerable prospects for the rubber manufacturers. These and other large-scale developments visualised in the third plan show how the manufacturers expect their requirements to rise to 150,000 tons of raw rubber a year by 1965.

Dr. Banerjee said that an adequate supply of standard quality raw material is essential for the success of the industry's plans. The indigenous supply has been a perpetual source of concern. "Despite all the talk of development of the plantations in south India and our own contributions of large sums of money for rehabilitation purposes, the total quantity of natural rubber expected from home sources is only 45,000 tons by 1965". The gap between local availability and manufacturing requirements is likely to be filled by the domestic production of synthetic rubber. The artificial product from the Bareilly plant and from other projects (including the one which is to be based on refinery gases from Assam) should suit manufacturers' requirements if it is to be useful.

Sand-washing Plants for U.P.

The manufacture of quality glass tableware, bulbs, *reshami* and nylon bangles and other brilliantly coloured glass products will receive a big fillip in India with larger supplies from U.P. of iron-free silica sand—the basic raw material for the production of glass. Seven more sand-washing plants are being set up by the State Government to cope with the heavy demand for refined silica. Five of these will be set up in the public sector in Shankargarh, Allahabad district, to increase the production capacity of the existing Government-owned sand-washing centre from 20 tons to 200 tons a day. The remaining two plants will be in the private sector. They will be located in Loghra, Allahabad district, and Bargarh, Banda district. The Shankargarh silica sand deposits alone are enough to meet over 80 percent of the requirements of India's glass industry. The supply of iron-free sand is, however, limited at present—only 4,000 tons, out of a total annual outturn of 80,000 tons—as only one sand-washing plant is operating there. At the same time, the demand for refined glass sand has been fast increasing with people becoming more quality-conscious than before.

Uttar Pradesh, which has 30 glass factories with a total installed capacity of 77,000 tons, will be the biggest beneficiary from the Shankargarh project. The State contributes 25 percent of India's total production of glassware, while its output of hollow-ware is about 50 percent. The total capital investment in the industry is estimated at Rs. 1.5 crores and the production at Rs. 7 crores a year. Shankergarh also supplies silica sand to prominent glass factories in Bombay, Bihar, West Bengal, Punjab, Andhra and Madras. The Russian-aided optical glass factory, which at one time was proposed to be located in Shankergarh, will also be supplied sand from this area. The sand-washing centre charges a nominal fee of Rs. 1.56 a ton. This means good profits for sand suppliers.

Increasing Engineering Exports

India has exported 45 percent more of engineering goods in 1960 than in 1959. According to Mr. B. S. Agarwal, chairman of the Engineering Export Promotion Council, Rs. 30 crores worth of goods could be sold by 1965 (as against an estimated Rs. 9 crores in 1960 and Rs. 6.1 crores in 1959), provided suitable incentives are given. Analysing the export figures, Mr. Agarwal said that by far the largest proportion of the increase in 1960 was in European markets. From a mere Rs. 30 lakhs in 1959, the value of exports to European countries rose to Rs. 1.15 crores in 1960. There was also an increase of Rs. 39 lakhs in exports to North and Central America. The figures show that the Indian engineering industry produces goods of "acceptable quality," Mr. Agarwal said. "We lay great store by these highly industrialised countries for the development of export trade in engineering goods for three reasons." Firstly, the markets are very large due to the higher standards of living. Secondly, a good *entrepôt* trade can be developed through them. Thirdly, Indian engineering industries can become feeder industries to big industries abroad by supplying components and parts. Mr. Agarwal felt that the economic and regional trade groupings in Europe are likely to create difficulties for Indian exports, particularly engineering goods. This country should, therefore, prepare now to meet the difficulties. Mr. Agarwal suggested two main measures. Firstly, the Government "should help develop Indian foreign trade to such a high pitch that the new developments do not have any serious repercussion on India easily, as has been done by West Germany." Secondly, the possibility of establishing free trade zones in south-east Asia, west Asia and Africa should be explored soon. He pointed out that the third plan export target of Rs. 690 crores a year (as against Rs. 645 crores in 1959-60) does not indicate any bold export promotion policy, especially when it is remembered that no foreign aid is likely to be available for financing the economy's maintenance imports.

New Look for Dalal Street

It will not be long before a multistoreyed building, stretching from Dalal Street to Mamam Street and covering an area of a little over 4,000 square yards, with a modern trading ring, springs up where now stands the old building of the Native Share and Stockbrokers Association, commonly known as the Bombay Stock Exchange. The question of constructing a new building with an up-to-date trading ring has been engaging the attention of the Stock Exchange authorities for many years. A beginning might perhaps have been made by now but for the unusually long time of four years which was taken in negotiating a deal with the Life Insurance Corporation for the purchase of an old building, covering nearly 750 square yards, located between Hamam Street and the old Stock Exchange building. The Stock Exchange is now busy preparing plans for the new building. It is said to be in touch with the U.S. firm of O'Connor and Kilham, official architects of the New York Stock Exchange. The building will be constructed in sections so that trading is not interrupted in any way.

Few people are perhaps aware that Dalal Street was once a blind alley; that the plot of land measuring 1,450 square yards, which is now occupied by the five-storeyed building of the Exchange, was used as a stable; and that the old building belonged to the Portuguese Government and the hall where the clearing house is situated was used as a ball-room. It was Sir Dinshaw Petit who donated the funds for the purchase of the building to the stock brokers when they formed an association (the deed was made in 1887) called the Native Share and Stockbrokers Association. The Stock Exchange hall has been named after him. The building of the Exchange, covering an area of about 3,500 square yards, is thus very old. But it is not merely because of its age that it needs to be pulled down and reconstructed. The efficiency of the market is being impaired by the inadequate size of the trading ring and lack of suitable office accommodation for the members of the Exchange and their staff. The L-shaped trading ring has become too small for the 350 active members (there are 503 members in all) and the 1,500 badge-holders when they get together to transact business in shares, the number of which

has been steadily increasing. Between 1955 and 1960, the number of companies whose shares are listed on the Exchange has increased from 191 to 285 and that of stocks from 277 to 524—both cleared and non-cleared securities. The list of securities can be expected to expand appreciably with the growth of industrial activity. The size of the daily official quotation list was increased from four to six pages early in 1960; now it consists of eight pages.

It is not the trading ring alone which poses a serious problem. Stock brokers need better office facilities to cope with the increase in administrative work because of the change in the nature of business. Hitherto speculative investment business contributed most to the income of the stockbroking community. But the investment habit is spreading with the growth of industrial activity. Stock brokers will, therefore, need to make energetic efforts to tap the savings of the small man who is eager to invest in stocks and shares. The construction of the new building will take time. Meanwhile, the Department of Economics and Statistics, set up by the Stock Exchange last year, is working hard to produce an up-to-date analytical directory by about the middle of 1961. It will provide people with information about the corporate sector to enable them or their professional advisers to judge the investment merits of securities.

Bonus for Sugar Mill Workers

The question of bonus for sugar factory workers has been settled in Bihar and Uttar Pradesh. The U.P. Government has ordered 69 sugar factories to pay within a period of one month about Rs. 1.05 crores to their employees as bonus for the crushing season 1959-60. Nearly 65,000 employees will benefit from the order. Five percent of the amount of bonus payable to an employee will be in the form of national savings certificates. The order follows the recommendations of a sub-committee set up by the Naini Tal Tripartite Conference in July 1960. It lays down that the bonus of an individual workman should not exceed three months' wages in that year. It also provides that any amount already paid as interim or advance bonus for the crushing season 1959-60 shall be adjustable against the bonus to be paid under the order, but a factory is not entitled to recover any excess amount already paid. Provision for exemption has been made for factories which, due to losses or meagre profits, are unable to pay the amount required by the Government's order. The order will remain in force for one year in the first instance. In Bihar, the bonus dispute between workers and sugar factories has been settled through conciliation by the Labour Commissioner of Bihar. Bonus will be payable at the rate of 75 percent for the season 1959-60 at specified slab rates on the basis of production. The claims for exemption will be decided by a committee consisting of a representative each of the Indian Sugar Mills Association and the Indian National Sugar Mills Federation, and headed by the Labour Commissioner. Its decision will be binding and final.

It will be recalled that the Sugar Wage Board, "having regard to the particular attitude of labour *à-propos* balance-sheets in the north", suggested a bonus formula which "for calculation of net profit rests on the regional cost schedule (given by the Tariff Commission in 1959) as adjusted to duration of the season and sugar recovery percentage attained by individual mills." It also specifically recommended that in the north and central regions "22 percent of the profits after tax, calculable in the manner prescribed, will be paid by the mills as bonus to their employees, provided that in case of factories having a daily (24 hours) cane crush of less than 1,000 tons as the season's average, the bonus at the rate of 20 percent of such profits will be paid."

I. F. C. Policy Restated

The chairman of the Industrial Finance Corporation, Mr. K. R. K. Menon, discussed the Corporation's activities when he recently visited Madras. He indicated that the I.F.C. has applied for a further loan of $20 million from the U.S. Development Loan Fund. Although the interest charged is as high as 8 percent a year, the facility of repayment in rupees makes D.L.F. loans attractive in spite of the fact they are "tied". Mr. Menon said that applications for loans from the I.F.C. total four times the amount available. He referred to its policy of nursing new capital issues and said that the conventional underwriting commission of 2½ percent is satisfactory. Loans sanctioned in 1960 amounted to Rs. 18 crores, and in future the total sum may be larger. Representatives of chambers of commerce pointed out that the southern region has not benefited greatly from the loans given by the Corporation, but Mr. Menon said that it deals with all requests for assistance on merit and there is no regional bias in its activities. It has actively helped the expansion of the cement and chemical industries in Madras State in recent years. The president of the Southern India Chamber of Commerce, however, said that the I.F.C. should offer more liberal assistance to industries in the private sector.

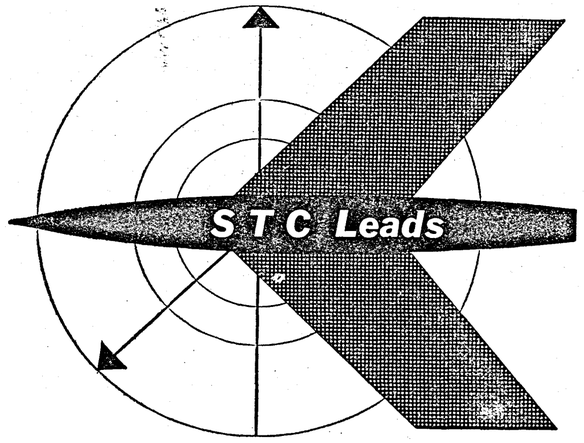
Breezy Optimism for Fans

Speaking at the annual session of the Fan Makers Association of India in New Delhi on Wednesday, Mr. Mohanlal Kathotia, chairman, said that the industry has made remarkable progress in recent years. During the first seven months of 1960, its production was 556,000 fans, compared with 409,500 fans during the corresponding period of the previous year. Mr. Kathotia said that the production target fixed for the industry in the second plan would surely be achieved. The Planning Commission has now estimated that the demand will increase to 2.5 million fans by the end of the third plan. The availability of cheap electricity, improvement in standards of living, increased industrial activity leading to the construction of new factories, staff quarters, offices, etcetera, will raise the demand further. In a hot country like India, fans are a necessity, not a luxury. Mr. Kathotia said that if the industry gets the required raw materials and facilities, it will be able to reach the production target fixed for it under the third plan. The shortage of ball bearings has adversely affected production, and the supply of certain important raw materials like electrical steel sheets, copper, nickel and chromium, has been far from satisfactory.

Mr. Kathotia said that there is great scope for increasing fan exports, since India now enjoys the distinction of producing one of the finest ceiling fans in the world. She is at present exporting to 53 countries and is competing with established brands on the basis of quality and performance. Although the Engineering Export Promotion Council is helping to increase exports, publicity abroad is still poor. "Given good publicity and agency in good hands, so that after-sales service is satisfactorily organised, we can increase our exports," Mr. Kathotia said.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity showed a drop of 2.5 points during May 1960. There were decreases in sugar, coal, pig iron, finished steel, paper and bicycles. Tea, jute, yarn, cloth, cement, tyres, motor-cars, electricity and railway ton-miles showed rises.



STC are in a unique position to supply and install complete and integrated radio-navigation and communication systems, as evidenced by the diversity of equipment available and its world-wide acceptance for civil and military aircraft and airfield installation.

STC Navigation Systems and Equipment includes—

GROUND	AIRBORNE
Precision Approach Radar SLA3	Instrument Landing Receivers
Instrument Landing Systems STAN 7-8-9	VOR
Direction Finders CADF and PVID	Radio Altimeters
Automatic Triangulation Systems	Teleprinter Receivers
TACAN Beacon Type STURN-3	TACAN

MERCHANDISE MARKS

WE understand that the stamping of goods with the familiar words "Made in Germany" has not worked altogether advantageously to the English trade, and that the home Customs, as far back as 1896, received instructions to pass any Continental goods without this designation, as it had been found disastrous to the English trade in general when the terms of the Merchandize Marks Act were strictly enforced. This being the case at home, we understand that a firm of merchants here addressed the India Office on the subject. Lord George Hamilton in replying admitted that a more lenient administration had in some particulars been adopted in British Custom Houses, and that he had written to the Government of India on the subject forwarding to them the London Customs House memorandum on the subject. The latter concluded thus: "His Lordship is confident that the Government of India do not desire their officers to administer the Merchandize Marks Act with any greater stringency than is practised at British Customs Houses. At the same time the fact that the India Customs Houses are in some cases over 1,000 miles apart, and are subject to different local authorities, makes occasional and temporary divergence of practice at the different ports less unlikely than it would be in England." We are inclined to think that more harm than good has been done by insisting on the country of origin being stamped on goods. It has been a grand advertisement for our German competitors.

FROM

CAPITAL

10th January, 1901

A Ditcher's Diary

MORE THAN ONCE I HAVE HAD TO ANSWER uninformed criticism of the way managing agencies are supposed to hold their annual general meetings where, it is alleged, the ordinary shareholders do not have a chance. But I would like to a see a managing agency get away with an annual meeting like the one the Congress held last week at Bhavnagar. The managing agency here is, of course, the Working Committee. The Companies Act lays down how long a director may continue in office. It was interesting to see the "old guard" doggedly resist the election of anyone not approved by the Establishment. What was the report on the past year's performance like? A sad and tiresome narrative of indiscipline, lack of cohesion, greed for office and what have you. Now tell me, what view would the Company Law Administration take of a report like that if produced by a managing agency? It is not unusual for companies to pass a dividend in lean years made leaner by taxation. The only dividend the Congress promised was the third plan; and if there were not many happy faces around, you know why. I daresay I will be told that the analogy is wholly irrelevant, that I see politics only through the economic keyhole. I am not sure that I am all that wrong, for politics for many now is merely dishonest business. As a political show the annual session has ceased to mean much; if this is a rash statement, I have only to ask the Congress to hold a session without the Prime Minister being present, and let us see how many attend it. A political Party is entitled to its share of annual fun. What makes these mammoth sessions objectionable is the enormous cost involved; and I do not think the country can afford it. One of the reasons why democracy has failed in so many new countries is its cost; and in India, between the elections and the Parties, the expenditure is inexcusable. Mr. Sanjeeva Reddy, the Congress President, spoke of the need for cheaper elections without indicating how the country might get them. But I do think that if the poorer countries cannot evolve cheaper political systems on this side of freedom, they will one day treat freedom as a luxury they cannot afford.

WITHIN THE NEXT FEW DAYS I AM HOPING TO FIND the time for a visit to the National Agricultural Fair in Behala. So far, my knowledge of it is confined to Press handouts and photographs, many of which, I have noted, feature prominently the U.S.S.R. pavilion, the largest and most elaborate in the exhibition. Why, I am wondering, should this be so, except, of course, for the usual propaganda reason. If the Soviet Union has anything to teach India about agriculture, I am eager to know what it is; conditions in the two countries could not be less similar nor the implements used more diverse. Besides, Soviet agricultural policy has been and still is, even in the Khrushchevian era, a resounding failure. The Russian worker is fed well enough, but his diet is probably the most monotonous and starchy of any country in Europe, and certainly of any able to claim a comparable standard of industrial development. Now, I hear, the much-trumpeted "virgin lands" policy is breaking down too; and not only the policy, the leached soil also is crumpling to dust and being carried away by the wind. I have actually seen the term "dust bowl" used to describe what is happening in Russia's Asian lands only recently brought under the plough. I shall be interested to see if the Soviet exhibition makes any mention of these failures, because I suspect that India has probably more to learn from Russia's mistakes in agriculture than from any triumphs she may have had.

PRIVATE INDUSTRY, IT SOMETIMES SEEMS TO ME, is rather shy about displaying itself. It does, I know, buy acres of space in the newspapers to advertise its products and achievements, but the number of companies which are otherwise eager to expose themselves to the public gaze is remarkably limited. I appreciate the point that managers, nowadays especially, have more urgent things to do than escort journalists or visiting dignitaries round their establishments. But in countries where the techniques of public relations are more vigorously applied, it is found that the extra trouble involved in organising such visits is well worth the returns it brings in terms of improving what one might call the "company image." I was particularly pleased to learn, therefore, that during Mr. Duncan Sandys' sojourn in Calcutta last week, special efforts were made to give him a glimpse of private industry in India, during a visit to the establishments of Shalimar Paint, Guest, Keen, Williams and Howrah Jute across the river. Too often, I feel, do distinguished official visitors from abroad confine their tours largely to public projects, and then go away with the impression that most of the economic progress made in India over the past decade has been in that sector. I do not imply that the percipient Mr. Sandys would have made such a mistake; but as Britain's Secretary of State for Commonwealth Relations, it is only appropriate that he should have been given the opportunity of a closer look into the part which British private capital is playing in India's industrial expansion. As Mr. Sandys himself pointed out at a Press conference later, the amount of U.K. private investment in India has almost doubled since 1948; and I presume it is one of his preoccupations to see that the flow is maintained at as high a level as possible. After all, *pace* Mr. Sandys, the links which bind the Commonwealth do not arise from such woolly generalities as the common search for world peace, prosperity and what-have-you. The two most important ones, to my mind, are the English language and enlightened economic self-interest. The growth of the latter will have to be assiduously nourished if the Commonwealth is to consolidate its strength and influence in the future.

APART FROM FEEDING GENERAL DE GAULLE'S inordinate vanity, it is difficult to see what else his victory in the referendum is going to accomplish. The constitution of the Fifth Republic is such as to give the President almost unlimited powers anyway, and if General de Gaulle has not so far taken the initiative to open serious negotiations with the F.L.N., it is as much because of the President's own many inhibitions as for the expected opposition from the *ultras*. I often wonder whether these latter are not used as a sort of cover for de Gaulle's own paralysis of the will. Because the extremist *colons* are so stubborn and pig-headed, the General seems almost a libertarian. We do well to remember that he is nothing of the sort, that he is a conservative if ever there was one. Being an intelligent man with considerable experience he realises that the futile Algerian war has been going on too long and must be brought to an end. To that extent he is one step ahead of the *colons*; but I have a suspicion that his heart is still unreconciled to what he calls an "Algerian Algeria". General de Gaulle's vision of French *gloire* is compounded of so many illusions that I would not be surprised to hear that he sincerely believes that, once given a free choice, the Algerians will stay in the French Community. This might well have been true six years ago. Much has changed since; and if I am not altogether wrong, nobody in the "Provisional Government" can now dare seem moderate. Very vaguely, General de Gaulle has spoken lately of assurances and guarantees for the *colons*. Where is he going to get them? The muslims will, of course, speak of fair treatment to all, but I cannot see the settlers placing much reliance on that—if only because so many of them have guilty consciences and are afraid of being treated as they once treated the muslims. Only the continued presence of the French Army might ensure that the successor government honours its promise; but no sovereign State could accept such humiliating conditions and survive long. The only hope, rather slender, is that the few rich settlers will get out; and the majority, neither wealthy nor, probably, French will make their peace with the rulers of tomorrow.

"FRINGE BENEFITS" ARE RECOGNISED AS NON-WAGE compensations to workers and others, and include such items as social security contributions, paid holidays, vacations, sick leave, private pensions and the like. As employers in India are being increasingly saddled with such responsibilities, an article on the subject in the December Letter of the First National City Bank of New York had a special interest for me. So far as the countries of the West are concerned, it would appear that within the past 25 years benefits have mounted to a point where they commonly add 20 percent or 30 percent to the wage bill. The N.C.B. Letter publishes a table which shows that whereas in the United Kingdom—which is popularly supposed to pamper its workers more than other European countries—fringe benefits are no more than 14 percent of hourly wages, they constitute 20.5 percent in the U.S.A., 44.3 percent in Germany, 51.5 percent in France and no less than 74 percent in Italy. In all cases, fringe benefits tend to be high wherever wages are low, though the U.S.A., which has the highest wage levels in the world, is the exception to the rule. Japan is the only eastern country quoted in the article, and in Japan it is said, fringe benefits are largely an outgrowth of paternalistic practices. Furthermore: "The Japanese worker is typically regarded as joining a company for life and he usually stays on the payroll in good times and bad. This in itself constitutes a fringe benefit incalculable in money terms. Wages are based on the worker's age, education, length of service, and size of family. Because of chaotic living conditions and inflation after the war, twice yearly bonuses and food and housing subsidies became firmly embedded in the wage system as a way of providing for a minimum standard of living". In the United Kingdom a fair proportion of what are regarded as fringe benefits in other countries are paid for out of general revenues. I had always thought that Britain's Liberal administrations before 1914 pioneered social insurance, but the National City Bank article tells me that Germany was first in the field with Bismarck's sickness and accident insurance scheme of 1883-84.

AUDITORS

Messrs. Thakur & Co.,
Chartered Accountants,
2, India Exchange Place, Calcutta-1.

REGISTERED OFFICE

Samastipur, Bihar.

OBJECTS

The immediate object is to set up a plant for the manufacture of writing and printing paper with a production capacity of 3,000 tons per annum.

PROSPECTS

The Company proposes to manufacture writing and printing paper from the above materials mixed with long fibre pulp like that of rags, etc. The plants up to 10/15 tons per day production capacity can be worked not only efficiently but also economically. Some special equipments are being imported for better recovery of pulp and of good quality paper. Application has been made for permission for expansion of the production capacity by 2,700 tons per annum for manufacture of special quality paper.

CAPITAL OUTLAY

The Capital required to reach the stage of production passed upon the feasibility report is estimated as follows:—

Cost of Land Building and other miscellaneous expenses ..	Rs.	19,00,000
Cost of Machinery imported or indigenous, including freight, insurance. Transport. Custom Duty, Erection and other engineering acquisition (including Brokerage, underwriting/guarantee commission preliminary expenses and other contingencies) ..	Rs.	44,00,000
WORKING Capital (excluding such further sums of money as may be required from time to time which will be financed by borrowing from Banks against hypothecations of running stock). ..	Rs.	7,00,000
	Rs.	70,00,000
This is proposed to be met by:—		
Share Capital	Rs.	40,00,000
Borrowings from the Industrial Finance Corporation of India ..	Rs.	20,00,000
Borrowings from the Bihar State Financial Corporation ..	Rs.	10,00,000
	Rs.	70,00,000

The Industrial Finance Corporation of India and Bihar State Financial Corporation have sanctioned long terms loans of Rs. 20 lakhs and Rs. 10 Lakhs respectively.

ESTIMATE OF WORKING RESULT

Estimated on the basis of present market conditions and cost of production for Paper Industry, the Directors are of opinion that the working result of the Project may yield sufficient profits for a reasonable dividend on Equity Shares, after one year of starting its productions.

MANAGING AGENTS

The Company is under the Management of Messrs. Ram Bahadur Thakur & Co., a partnership firm, whose appointment and terms have been approved by the Government of India.

SITE

It has been decided to locate the factory at Samastipur by the side of the river Burhi Gandak in the State of Bihar.

LAND AND BUILDINGS

Land measuring about 36 acres has already been acquired near the proposed site for the mill as well as staff and labour quarters.

PLANT AND MACHINERY

Orders for import of Machinery have been placed with Messrs. Kinsho Trading Co., Ltd., Tokyo, Japan, supply whereof is expected to be completed by March 1961.

COMMENCEMENT OF PRODUCTION OF THE MILL

The mill is expected to go into production by October, 1961.

WATER

The site is on the Bank of River Burhi Gandak which has a perennial flow of water.

LABOUR

North Bihar being economically underdeveloped has plenty of cheap labour. These labourers are very hard workers and it is hoped that they will be very useful for the Industry.

MEANS OF COMMUNICATION

The mill will be situated on the Barauni/Darbhanga and Lucknow/Katihar metre gauge line on the North Eastern Railway. The broad gauge line is under construction which will link SAMASTIPUR with Calcutta and South Bihar.

COMMISSION TO UNDERWRITERS AND GUARANTORS

The Company has agreed to pay to the Underwriters/Guarantors commission @ Rs. 1¼% on the total face value of the said 2,50,000 Equity Shares now offered for public subscription underwritten/guaranteed by them.

BROKERAGE

Brokerage at the rate of 20nP per Equity Share will be paid on allotment in respect of application forms bearing stamp of Bankers or members of a recognised Stock Exchange.

APPLICATION FOR SHARE

Copies of the Prospectus and application forms for Shares will be available from the Brokers, Bankers to this issue & Registered Office of the Company. Applications for Equity Shares must be made for a minimum of 25 Shares or multiple of 25 Shares on the application form accompanied by the full amount payable on applications, and to be lodged with any branches of the bankers to this issue.

Money

THE CALCUTTA MONEY MARKET

LARGE INCREASE IN ADVANCES

Wednesday, 11th January.

THERE has been a fairly substantial increase in advances this week in the Calcutta money market. Most of it is accounted for by the jute and sugar industries, although there has also been a fairly substantial improvement against grains and seeds storage. The requirements of the cotton mills and the engineering and iron and steel industries have remained more or less unchanged. The interbank market has become even tighter in the past few days and the call rate is now 5½ percent, with business being done up to 5¾ percent.

There has been a moderate activity in the exchange market during the past week, with a fair supply of tea and gunny bills. Remittance has been poor. On the London money market, quotations for the pound have moved between narrow limits, and at the close negligible variations were recorded against most important currencies.

BULLION WAS FIRM DURING THE PAST WEEK ON strong support in the face of restricted supplies. Silver rose from the previous week's level of Rs. 226.25 to Rs. 232.75, quoted today for ready delivery. The rate for forward delivery was Rs. 232.25. The London and New York prices were 79½d and 91.375 cents.

Gold moved up in sympathy with silver. The price increased from Rs. 136.25 to Rs. 139. The sovereign at Rs. 91.62 showed a gain of 12nP.

DURING THE WEEK ENDED 6TH JANUARY, GOVERNMENT of India Treasury bills for Rs. 21,48,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 10th January. The total amount offered was Rs. 2,60,00,000 Tenders at Rs. 99.360 were accepted in full and those at Rs. 99.355 allotted approximately 73 percent, the average rate of acceptance being Rs. 2.576 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 16th January.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 11th January to 14th January at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 4th January to 7th January.

Rises of Rs. 32.45 crores to Rs. 1,917.64 crores in the total note issue and of Rs. 32.27 crores to Rs. 1,901.25 crores in active notes, were outstanding features of the return of the Reserve Bank of India for the week ended 6th January, 1961. The currency expansion was covered by increasing the rupee securities of the paper currency reserve by Rs. 35 crores to Rs. 1,547.05 crores. This was obviously done by transferring securities from the Banking Department in which investments declined by Rs. 45.05 crores to Rs. 149.33 crores. Deposits of the Government of India declined by Rs. 10.32 crores to Rs. 59.71 crores, as did other Government accounts by Rs. 2.87 crores to Rs. 7 crores. Balances of commercial banks were Rs. 31.01 crores lower at Rs. 84.67 crores. Balances held abroad declined further by Rs. 4.11 crores to Rs. 19.61 crores. Other loans and advances fell from Rs. 159.91 crores to Rs. 151.46 crores, of which advances to scheduled banks against usance bills were Rs. 13.83 crores (Rs. 13.80 crores). Ways and means advances were shown at Rs. 43 crores, against Rs. 41.25 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 30th December, 1960, shows a drop of Rs. 1.99 crores to Rs. 573.28 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 21.51 crores and Rs. 1 lakh to Rs. 291.82 crores and Rs. 10.24 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 6.19 crores to Rs. 232.12 crores. Cash and balances are, in consequence, shown at Rs. 49.37 crores or Rs. 21.06 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 30th December, 1960, shows Demand and Time liabilities at Rs. 794.65 crores (Rs. 13.54 crores on account of borrowings from banks) and Rs. 1,124.56 crores (Rs. 13.77 crores), compared with Rs. 794.36 crores (Rs. 18.03 crores) and Rs. 1,121.53 crores (Rs. 14.81 crores), respectively. Cash and balances with the Reserve Bank have increased by Rs. 3.07 crores and Rs. 24.06 crores to Rs. 49.90 crores and Rs. 112.15 crores, respectively. There is a fall of Rs. 24.78 crores to Rs. 633.76 crores in investments. Advances and bills discounted at Rs. 1,180.73 crores show a rise of Rs. 24.48 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 61.5 percent, against 6.9 percent and 60.4 percent.

THE PROFIT OF THE INDIAN BANK LTD FOR THE YEAR ended December 1960 has risen to Rs. 41,03,696, from Rs. 37,45,143 in 1959. A taxable interim dividend of 5 percent and a bonus of 2½ percent were paid before. The directors now propose to pay a taxable final dividend of 5 percent and a bonus of 2½ percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of September 1960:

		Rs.
(1) At the Reserve Bank of India in India		58,96,27,000
(2) At treasuries in India ...		12,39,000
(3) In England (sterling converted at 18d the Rupee) ...		1,60,10,000
Total ...		60,68,76,000

THE MADRAS ALUMINIUM COMPANY LIMITED

(Registered Office: "Kamala Nilayam", Peelamedu, Coimbatore 4)

AUTHORISED CAPITAL:

2,50,000 Cumulative Preference Shares of Rs. 100/- each.	Rs.	2,50,00,000
7,50,000 Equity Shares of Rs. 100/- each.	Rs.	7,50,00,000
	Rs.	10,00,00,000

ISSUED CAPITAL:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100/- each.	Rs.	1,50,00,000
4,50,000 Equity Shares of Rs. 100/- each.	Rs.	4,50,00,000

The Subscription List opened at 10 A.M. on 9th January, 1961 and will close at 2 P.M. on 16th January, 1961 or earlier as soon as subscriptions approximating to the amount issued to the public have been received, but not earlier than 2 P.M. on 12th January, 1961.

With reference to the last paragraph under the heading TECHNICAL COLLABORATION (Page 11 of the Prospectus) of the announcement published on 5th January, 1961 about the approval of the Government of India of the terms of the Collaboration agreement with Messrs. Montecatini of Italy, we have to clarify that the Government of India have approved the said collaboration on the following terms:

I. (1) Allotment of 45,000 shares of Rs. 100 each in the equity share capital of the Madras Aluminium Company Ltd., Coimbatore, to M/s. Montecatini of Italy in consideration of the transfer of the collaborators' technical know-how in the field of the mining of bauxite ores and production of alumina, aluminium ingots and aluminium alloys It is noted that the collaborator would be agreeable not to charge any additional fees for the supply of technical know-how either in regard to further expansion upto 20,000 tons of aluminium smelter or in regard to manufacture of aluminium fabrications.

(2) Payment to M/s. Montecatini of Italy of a sum not exceeding Rs. 40 lakhs in Italian Lire towards engineering fees, drawings, assistance in purchase of plant and other allied services.

(3) Payment to M/s. Montecatini of Italy of a sum not exceeding Rs. 35 lakhs in Italian Lire for the cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges, etc This amount of Rs. 35 lakhs represents the payments in foreign exchange to the technical personnel of Montecatini in India. The rupee expenditure on such personnel, it is understood, is estimated at Rs. 15 lakhs.

II. It is noted that M/s. Montecatini will, apart from the equity shares to the extent of Rs. 45 lakhs issued to them for the know-how, would also invest a sum of Rs. 75 lakhs in equity capital of the company as and when this sum that is being paid to the Italian collaborator for engineering fees and personnel become due.

The reservation of 1,20,000 shares for allotment to Montecatini in page 2 of the prospectus is to meet the commitments stated above as and when they fall due.

(Sd.) R. VENKATASWAMY,
Director.

Stocks and Shares

REPLACEMENT BUYING BRINGS MODEST RECOVERY IN SPECULATIVES

OPERATORS SHORT OF BUDGET BLUFFS

Wednesday Evening.

THE Calcutta stock market has looked just a little bit more cheerful this past week. The speculative issues have pulled out of the depression they suffered a few days ago, and replacement buying has induced a generally steadier undertone. But the improvement on the whole is minor, and turnover remains restricted. Until the gentlemen whose claims, each year, suggest they have secret microphones installed in the Finance Ministry, get talking, no great upsurge in business is expected.

So far, it seems, the imaginary microphones have not really started working. This is normally the time of year when the soothsayers of the market start a trickle of Budget rumours, which later turn into a massive flood. A year ago, for instance, they excited themselves with such forecasts as that new taxes would total Rs. 60 crores in order to cover the increase in defence expenditure, the company tax would be reduced from 45 percent to about 42 percent, and the bonus issue tax would be abolished—none of which later proved correct.

It is not the misjudgments of the past, however, that are responsible for the current reluctance to make predictions. The market is frankly baffled. On the one hand, it thinks that taxes will begin to be raised straightaway if the planners want to secure Rs. 1,650 crores or so from new levies over the third plan period. On the other hand, it feels that Mr. Desai might not want to present a stiff Budget just before election year—a time when votes for the Congress matter more than rupees for the Exchequer. The problem is complicated by the fact that the planners agree there is hardly any scope for increasing direct taxation when, politically, this might have been less unpopular than the indirect taxation they recommend. Of course, lonely hopefuls are still to be found who say that the Central Government will not need to impose many new taxes, since its revenues have been exceptionally buoyant during the past nine months; and that it may even give minor concessions concerning the company tax, the bonus issue tax and the tax on foreign investments. But these voices are like those of owls in the night, plaintive rather than prophetic. The majority opinion, it seems, is that there will be no significant concessions; but most of the new levies will be indirect, and concentrated on industrial rather than consumer goods. If judiciously chosen, they may do no great harm; continuing industrial expansion may cushion the impact of heavier taxation, as has been the case during the past couple of years.

Apart from the Budget uncertainties, one reason why the stock market is quiet is that the new issue market is active. Investors have noted that a number of shares issued by newly-floated companies recently continue to command modest premiums. For the genuine investor, therefore, who does not depend on short-term funds borrowed at high interest rates, there are small capital gains to be made by subscribing to new issues selectively. The state of the new issue market is also better, since fewer companies now tend to sit on applicants' money as if it were a gift till eternity; there is an understandable eagerness to redeem the promoters' reputations by completing allotments and refunds sooner.

Finally, worries concerning the stringency of bank credit have not waned yet, nor are they likely to for many weeks to come. But moderate encouragement is derived from the fact that the Congress session in Sardarnagar has proved as colourless and insipid as any; the politicos' eagerness to climb on to election committee has fortunately left them little time to think out any reorientation of economic policy.

Indian Iron have recovered to around Rs. 23.15 from the rather low rate of Rs. 22.97 touched at last week's settlement. Fluctuations in other engineerings have been narrow, although the general undertone is better in sympathy with the market leader.

Jute shares are dull, as very little business is being done in the gunny markets. The I.J.M.A. jute goods stock figures for December have been moderately encouraging, but investors are worried that the mill workers' agitation against the proposed cut in working hours may assume more serious forms.

Coals generally show little change, although rumours continue that the World Bank may offer loans for expanding the production of the industry. New Beerbhoom are steady since the Company announced a four-for-five rights issue at a premium of Rs. 4 a share. New Manbhoom have also attracted notice among producers of better-grade coal.

In miscellaneous industrials the features have been the two relatively new entrants to the official list—Isaac Holdens and Hindustan Twyford. Both have started stock market life with fair-sized premiums. Alkali Chemical are steady since the announcement of a taxable dividend of 12 percent. Orient Paper have been active on rumours of a rights issue, while Rallis are firm on hopes of a good report. Expectations of a higher dividend are keeping up Angelo Brothers. Union Carbide have recovered due to rumours of expansion plans being sanctioned on the lines reported by our New Delhi correspondent on a later page. Similar rumours have failed to move Duncan Brothers, as fuller details from the Company are awaited. National Tobacco are firm on the view that the Company's working has improved. Assam Sillimanite have announced a rights issue in the ratio of six-for-seven at par.

Tea shares are neglected in spite of the slightly better trend at the latest auctions in Calcutta.

Gilt-edged are quiet. But there is some scattered interest in short-dated and medium-dated stocks, because the Reserve Bank is buying 1962 loans outright, instead of in the form of a switch. The idea presumably is to prepare the ground for repaying these loans.

Beharilal Ramcharan Cotton

The working of the Beharilal Ramcharan Cotton Mills Ltd, after providing for all working expenses and without making provision for depreciation, shows a profit of Rs. 1.43 lakhs for the year ended March 1960, against a loss of Rs. 6.93 lakhs in the previous year. The dividend has been passed over. Development rebate reserve is allocated Rs. 43,300. There is a carry-forward of Rs. 99,428.

Bombay Market

ACTIVITY DECLINES ON WEAKER SENTIMENT

OPERATORS SHOW PREFERENCE FOR NEW ISSUES

Wednesday Noon.

DULL conditions have prevailed in the Bombay stock market during the past week. Business was very limited and investors were inclined to sit out. The growing stringency of credit, combined with political developments in some countries, have made for caution. So prices of shares fell more in proportion to offers. This apart, attention was diverted to many new share issues which have been floated lately. It looks as if investors were willing more to invest in new shares than to buy old scrip at the present high prices.

Tata Steel were sluggish at Rs. 139, as were Indian Iron at Rs 23.16. High production figures of the steel companies for December have had virtually no effect. Engineering shares were sold at lower prices. Tata Locomotive declined to Rs. 280, as did Alcock Ashdown to Rs. 237. Business passed in Premier Construction at Rs. 275 and in Mukand Iron at Rs. 22. Motor shares were quiet in spite of higher production in the past year. Premier Automobile were lowered to Rs. 158 and Hindustan Motors declined to Rs. 18.96.

Sellers predominated in cotton mill shares and it was feared that further price cuts in cloth and yarn would reduce the profitability of mills. Bombay Dyeing were sold down to Rs. 59.88 and Century declined to Rs. 452. Scattered interest was taken in Svadeshi at Rs. 223 and Khatau were dealt in at Rs. 422.50. Simplex were done at Rs. 158.50 and Finlay were transacted at Rs. 318. India United Ordinaries were offered at Rs. 13.28 and support was lacking in Apollo around Rs. 1.32.

Prices of miscellaneous shares moved down in pattern with the general trend. The earlier losses in sugar shares due to fears concerning the Maharashtra Land Bill seeking to impose ceilings on landholding, were partly recouped towards the close on short-covering. Belapur closed at Rs. 307 and Phalton at Rs 154. Walchandnagar Industries were indicated at Rs. 230. Mining shares were quietly steady and fluctuations were narrow. Business was done in Shivrajpur Syndicate at Rs. 70. Steamship company shares were quiet, and Scindia Steam declined to Rs. 14.44 on talk of labour troubles. Great Eastern Shipping were placed at Rs. 14 68. Cement shares were quietly steady, and business passed in Associated Cement at Rs. 146.50. Digvijay were available at Rs. 144.50. Bombay Burmah reacted to Rs. 542 and National Rayon moved down to Rs. 471 on selling pressure. Chemical shares were quiet, and Tata Chemical were sold down to Rs. 16.88. Indian Dyestuff were transacted at Rs. 411.25 and Polychem were available at Rs. 213. Voltas were sold down to Rs. 249 on adverse corporate rumours. It was stated that earnings of the Company might be lower. Ceat

Tyre moved down to Rs. 210 and West Coast Paper declined to Rs. 180.

Bank shares were steady on the view that profits for 1960 would be higher. Bank of India were bought up to Rs 108.25 and Central Bank were transacted at Rs. 56.30. Insurance shares were quiet, and New India Assurance were available at Rs. 53.20.

Turnover in electricity supply shares was limited and prices showed little change. Ahmedabad Electric were placed at Rs. 84 and Bombay Suburban were dealt in at Rs. 85.30. Tata Hydro came to hand at Rs. 100.75.

Madras Market

QUIETER CONDITIONS FOLLOW BRISK START

WEAKER BOMBAY AND CALCUTTA ADVICES HELP FALL

Wednesday Noon.

THE Madras stock market was steady early in the past week and fair business was transact- Later, sentiment deteriorated and buyers bene conspicuous by their absence. So prices, were changed, fell in the absence of support. wer advices from Calcutta and Bombay contrited to weakness. Operators were worried over dget uncertainties, but there was no selling ssure on the view that increased taxation, if , would be in the form of indirect levies.

Except for scattered interest in short and dium-dated stocks, Government securities were dull. The news that the Reserve Bank has bought 1962 loans outright, helped maintain steadiness. Public utilities were neglected. Sugar shares were sold on growing concern about the export outlook. In planting shares, selected scrip were bought, but coffee shares were sold freely at lower rates without attracting support. The reduction in yarn prices from the beginning of this year induced more sellers than buyers in textile shares. Interest was subdued in miscellaneous shares, but occasional buying was noticed due to good corporate news.

Among bank shares, Indian were done at Rs. 169, as were Indian Overseas up to Rs. 177.50 Indo-Commercial were quoted up to Rs. 38.

Among public utilities, business passed in South Madras at Rs. 9.90 on the news that the Company will redeem 5½ percent taxable debentures for Rs. 2 lakhs at the beginning of April 1961. Vellore were quoted at Rs. 12.90 and Ellore at Rs. 16.55

Sellers predominated in sugar shares, and Deccan were sold down to Rs. 14.75. India were quiet at Rs. 12.70 and K.C.P. were available at Rs. 26. United Breweries were steady at Rs. 125 on a good report Travancore were done up to Rs. 10.70 and E.I.D. were quiet at Rs. 39.50.

In the planting group, business passed in Blue Mountain at Rs. 3.94 and in Cochin Malabar at Rs. 6.95. Consolidated Coffee were steady at Rs. 22.55, but Ouchterlony were offered down to Rs. 4.55. Periakaramalai were quoted at Rs. 3.38 and Rajagiri were dealt in up to Rs. 20. Chembra were bought up to Rs. 5.55 and Kil Kotagiri were wanted up to Rs. 5.30. Peermade were steady at Rs. 22.55 and Teekoy were transacted up to Rs. 6.10. Business passed in Twyford at Rs. 12 and Travancore Rubber were quoted at Rs. 10.40.

In textile shares, Madura were prominent up to Rs. 35 on prospects of a higher dividend and Lakshmi were dealt in up to Rs. 148. Travancore Rayon were quoted lower at Rs. 32.50 and South India Viscose were sold down to Rs. 147. Bangalore Woollen were steady at Rs. 195.50 and Buckingham were transacted at the same price. Kothari were quoted at Rs. 11.85 and Pankaja came to hand at Rs. 64. Rangavilas were done at Rs. 40 and Mettur were placed at Rs. 369.

In the miscellaneous section, India Cement were freely transacted at Rs. 5.83 and Aluminium Industries were dealt in up to Rs. 21.95. Ashok Leyland changed hands at Rs. 7.95 and Enfield were quoted at Rs. 15.50. F.A.C.T. were offered at Rs 9.28 and Kirloskar Electric were quoted at Rs. 13.10. Standard Motor were steady at Rs. 17 and Spencer were wanted up to Rs. 22.65. Textool were quiet at Rs. 185, but Tube Investment were in demand up to Rs. 291. Business was done in United Electricals up to Rs. 9.50 and Mysore Paper met with support up to Rs. 24.75.

opportunity for those that take it

AN important feature of the educational facilities at Jamshedpur is the leisure-time training of employees. Instruction provided, after hours, helps steelmen like J. P. Pathak to acquire wider knowledge and new skills.

Pathak, who started his career in Tata Steel as an office boy in 1929, passed his matriculation examination from the Company night school in 1944. Pathak next took up an evening course in basic mechanical drawing at the Jamshedpur Technical Institute. In 1957, he was selected for overseas training, and went to Canada, the U.S.A., West Germany and Holland, to learn techniques of operating a sinter plant. Today, Pathak is operator-in-charge of the sinter plant added under the two million ton expansion programme.

Notwithstanding initial handicaps, enterprising men like Pathak have the opportunity to better their prospects through further education and training at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

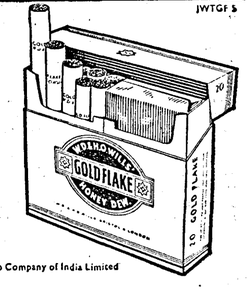
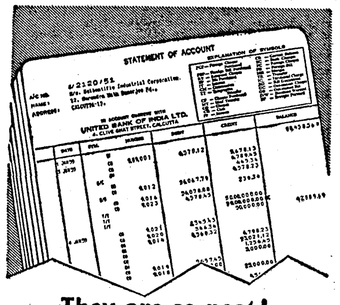
Having fun—wish you were here

Puri. Sea's warm, wonderfully refreshing. Lazy hours on superb beach, perfectly peaceful. Acquiring antiques—also smattering of temple architecture. Prolonging week-end by week. (No trouble getting Wills' Gold Flake—really fresh—wherever you go they're good.)



Issued by The Imperial Tobacco Company of India Limited



They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the **UNITED BANK** is in the van of mechanization.

MIXED TRENDS IN STOCK MARKET

INDUSTRIALS SUBDUED

London, 11th January.

THERE were some mixed trends in the stock market during the past week. Up to last Friday, prices steadily advanced in response to an increased demand in which institutional and other large investors played a considerable part. However, over the week-end, came the news that Ford Motors were to put their car workers on a three-day week and this overshadowed the whole market and dampened buyers' enthusiasm with the result that the rise was halted on Monday. Ford Motor shares were, of course, unaffected by this news in view of the fact that the American parent's bid for the shares closed on Tuesday. Other motor shares, however, eased and with the recent optimism expressed by certain car distributors having been dampened, the share market became less attractive. Another big talking point in the industrial market was the possibility of a large new rights issue being made by Imperial Chemical Industries and there were some erratic movements in the price of this Company's shares. There were the usual crop of take-over bids and Glaxo Laboratories quickly countered a bid by Fisons (Chemical Fertilizers) for Evans Medical. Interest in gilt-edged securities remained on a very limited scale, in spite of the 6-percent yield basis, and War Loan 3½ percent reached new all-time lows on several occasions. In the foreign market, Greek bonds attracted some attention at times; otherwise interest was on a very restricted scale. The steady upward movement of Wall Street in face of the U.S. economic troubles was followed by a sympathetic adjustment to dollar stocks in London. Gold shares presented a brighter appearance in the past few days and the feature has been the interest shown in uranium producers. Randfontein Estates set the pace here under the impetus of a report that the Company had sold its uranium output up to 1964, and that a capital repayment was likely. Coppers held fairly steady, while tin shares improved. More interest was displayed in oil shares and prices improved. Rubber shares were somewhat quieter after their recent advance. Tea shares were occasionally supported.

The Money Market

The money market experienced easy credit conditions for the first week of the New Year. On the turn of the year, money flowed back to the market in a substantial volume and the authorities had to act on a large scale to absorb surplus funds and bring the market back under strict control of the authorities. However, supplies of money dwindled as the week progressed, but it was not until the week-end that conditions moved into a tight phase. Money rates were easy throughout the week with the market obtaining funds down to a low of 2½ percent although the opening daily level was 4¼ percent which, however, gave way after the first hour or so of business on the easy supply position. The market this week, however, is in a tight money position in view of the heavy seasonal tax payments. Bill business over the past week has been good with end-March and early Aprils changing hands at 4⅛ percent.

Activity on Wall Street

U.S. government bonds in the intermediate and longer maturity ranges worked irregularly lower during the past week. The market's action reflected increased profit-taking following the sharp year-end rally along with concern over international affairs which caused many investors to move to the sidelines. Investment quality corporates pushed forward following a spell of softness with the scarcity of new offerings in underwriters' hands and the fact that corporate debt financing this month will be light was cited as bolstering influences. Convertibles improved in line with the recent rising trend in stock market values. German nationals were steady on a small volume and Italians were unchanged to a shade lower. French Credit Foncier showed a minor gain. Japanese Governments were mostly higher, while Chile gave up a little ground on the week.

Hongkong Gold Steady

The Hongkong gold market was steady during the past week with prices improving in slow trading. Carryover charges were 25 cents in sellers' favour. Deliveries totalled 43,000 taels and arrivals were 50,000 ounces. There were no forward contracts.

Linseed Rises in Vegetable Oils Market

Although prices of Canadian linseed were higher in the vegetable oils market, U.K. crushers were said to be more actively engaged, while the demand for Argentine seed on the Continent showed more activity. Nigerian groundnuts were well taken up internationally. Copra offers were not too plentiful and trading was restricted. Palm kernels revealed an interim good business, but final prices were reactionary. A steady business was concluded for linseed oil, but slackened towards the end of the week. Castor oil was firmer and this was especially the case with tung oil. Cotton and bean oils advanced, but America was said to be a more pressing seller of the latter at the close. Groundnut oil scored a further rapid advance and still had a firmer background at the close.

New Delhi

THE THIRD PLAN TARGETS FOR PRIVATE INDUSTRIES

GOVERNMENT SPEEDING UP CONSTRUCTION PROGRAMME FOR FOODGRAIN STORAGE

(FROM OUR NEW DELHI CORRESPONDENT)

THE following are the details of the third plan targets for some of the important industries in the private sector :

Name of industry	Unit	1960-61 Estimated capacity	Capacity targets for 1965-66
Metallurgical Industries:			
Aluminium	'000 tons	17.5	82.5
Copper (fire refined and electrolytic)	,,	7.2	18.4
Lead	,,	6	8.5
Zinc	,,	Nil	
Industrial Machines:			
(i) Cotton textile	Rs. crores	10	22
(ii) Cement	,,	1.1	4.5
(iii) Sugar	,,	10.5	11 to 12
(iv) Paper	,,	0.7	8.5
(v) Dairy	,,	0.25	2.5
(vi) Industrial bolters	,,	3.7	29
(vii) Cranes	'000 tons	2.5	60
Motor-vehicle and Ancillary Industries:			
(i) Passenger cars	'000 nos.	20	30
(ii) Commercial vehicles	,,	28	60
(iii) Jeeps and station wagons	,,	5.5	10
(iv) Motor-vehicle ancillaries including trailors	,,	0.7	2.5
(v) Motor-cycles and scooters	,,	24	48 to 60
Bicycles	million nos.	2.2	2.2
Sewing machines		288	500
Welding electrodes	million cubic feet	600	1,080
Electric fans	million nos.	2.2	2.8
House-service meters	,,	0.6	2.5
Phosphatic fertilisers (in terms of P_2O_5)	'000 tons	82	500
Heavy Chemicals:			
(i) Soda ash	'000 tons	304	530
(ii) Caustic soda	,,	150	400
(iii) Sodium hydrosulphate	,,	4	12
(iv) Calcium carbide	,,	28	67
(v) Hydrogen peroxide	,,	3	9.5
Miscellaneous Chemical Products:			
(i) Carbon black	,,	..	30
Plastics (polythelene P.V.C. polysterene and others)	,,	19.2	85.0
Soap	,,	254 (organised sector only)	354
Synthetic detergents	,,	7.2	12.5
Rubber Manufactures:			
(i) Motor-vehicle tyres	million tons	1.76	3.7
(ii) Bicycle tyres	,,	16.9	38.6
Synthetic rubber	'000 tons	..	70
Paper and paper-board	,,	363	820
Cement	million tons	10.0	15.0
Refractories	,,	0.87	2.0
Electric porcelain (H.T. and L.T. insulators)	'000 tons	..	30
Glass and glassware (including opthalmic glass in the public sector)	,,	457	615
Industrial Gases:			
(i) Oxygen	million cubic feet	1,000	2,300
(ii) Acetylene	million	156	250
Cotton:			
(i) Yarn	million lbs	2,100	2,250
(ii) Cloth (mill)	million yards	5,300	5,800
Jute	'000 tons	1,200	1,200
Rayon and Staple Fibre:			
(i) Rayon filament	million lbs	52.3	140.0
(ii) Staple fibre	,,	48.0	75.0
(iii) Chemical pulp	'000 tons	..	100.0
Woollen Manufactures:			
(i) Woollen and worsted yarn	million lbs	67	67
(ii) Woollen cloth	million yards	48	48
(iii) Wool tops	million lbs	10	31.5
Sugar	million tons	2.28	3.0
Vegetable Oils:			
(i) Solvent extraction of oilcakes	'000 tons	936 (cake)	2,000 (cake)
(ii) Cottonseed oil	,,	415 (seed)	850 (seed)
Vanaspati		424	550
Electric transformers (below 33 kV)	million kVA	2.2	4
Electric motors (22 h.p. and below)	million horse-power	1.25	3

TARGETS OF INDUSTRIES BOTH IN THE PUBLIC AND PRIVATE SECTORS

Name of industry	Unit	1960-61 Capacity Private	1960-61 Capacity Public	1960-61 Production Private	1960-61 Production Public	1965-66 Capacity Private	1965-66 Capacity Public
Nitrogenous fertilisers (in terms of nitrogen)	'000 tons	112	122	100	110	200	800
Sulphuric acid	,,	521	—	400	—	1,275 or 1,350	225 or 150
Newsprint	,,	—	30	—	28	60	60
Petroleum products	million tons	5.3 (crude oil)	—	4.6 (crude oil)	—	5.3	2.7
Coal	,,	—	—	35	18	—	—

Developing Petro-chemicals

The private sector has been permitted to help develop the petro-chemical industry in India. Three licences were granted last week, two to Duncan Brothers and one to P.J.B. Industries, to enter the field by using natural gas from the Assam oilfields. Duncan Brothers will manufacture polythene and synthetic rubber, while P.J.B. Industries will develop a carbon black unit. Phillips are the foreign collaborators of Duncan Brothers, while the Continental Carbon Company of the U.S.A. will collaborate with P.J.B. Industries.

A rough, unverified estimate of the output of gas from the Assam oilfields is 60 to 70 million cubic feet a day, of which 40 million cubic feet a day has already been earmarked for the public sector, including a fertiliser plant. The requirements of Oil India Ltd are still unknown. The left-over natural gas will be used for the projects in the private sector.

Japanese Tender for Fertiliser Plant

As for the fertiliser plant, a Japanese firm is a strong competitor to the British tenderer. It is, however, expected that a part of the British credit, already announced for the third plan, will be used in financing this project.

Storage Construction Programme

The Central Food Ministry is giving the highest priority to its storage construction programme. According to one scheme, the construction of 167 godowns and silos with a total capacity of 3 million tons will be completed before the end of the third plan. Of this, 2 million tons will be for storage in bags, and one million tons for bulk storage. Government-owned and rented godowns at present accommodate 2 million tons of foodgrains. During 1960, a record quantity of over 5 million tons of foodgrains was imported and the stocks of wheat and rice with the Central Government at present are the largest ever. With food production going up in the country and the import of large quantities of foodgrains for building up a buffer stock of 5 million tons, more and more storage capacity will be needed in the coming years. The Central Warehousing Corporation has built 30 warehouses with a capacity of about 61,000 tons. During the third plan, 55 more warehouses will be constructed by the Central Corporation, bringing the total capacity of 425,000 tons. In addition, the State corporations have set up 169 warehouses with a total capacity of about 170,000 tons.

Caustic Soda Projects

The projects of the caustic soda industry to reach the target of 400,000 tons by 1966, are being actively considered by the Government. The second plan target capacity for this industry was 150,000 tons. Additional capacity to the extent of 297,000 tons has already been licensed, leaving a gap of 103,000 tons. A number of applications for creating further additional capacity include the following: (1) the West Coast Paper Mills, to create 30 tons a day capacity for self-consumption in Dandeli, Mysore; (2) the Titaghur Paper Mills, Calcutta, to expand its existing capacity by five tons a day to 15 tons a day; (3) the Orient Paper Mills, Amlai, Madhya Pradesh, to expand its capacity from ten tons to 20 tons a day; (4) Travancore-Cochin Chemicals, Alwaye, to expand its capacity from 30 tons to 40 tons a day; (5) D.C.M. Chemical Works, to expand its capacity by 9,900 tons a year.

Union Carbide Expansion Plans

Union Carbide India Ltd, a subsidiary of Union Carbide International of the U.S.A., has plans for expanding polyethylene production from 6 million lbs to 20 million lbs a year, doubling the production of processed polyethylene to 5 million lbs and of organic chemicals to 29 million lbs a year. The chemicals and plastics plant of this Company in Trombay, it is expected, will go into production shortly with an annual capacity of 6 million lbs of polyethylene, 2.5 million lbs of processed polyethylene, 6 million lbs of chemicals and 3 million lbs of ethylene dichloride. The firm is also licensed to set up a plant to manufacture butanol, butyl acetate, ethyl acetate and acetic acid. The expansion plan visualises the use of petro-chemical raw materials and ethyl alcohol. It also includes the establishment of a naphtha cracker for the production of ethylene and propylene.

Manufacture of X-ray Equipment

Five schemes for the manufacture of X-ray equipment, with a capacity totalling Rs. 1.50 crores worth of goods a year, have so far been approved by the Government. The demand by 1966 is placed at Rs. 2 crores worth of X-ray equipment a year. The Government of West Bengal has a plan annually to manufacture equipment worth Rs. 30 lakhs in Calcutta. It has secured the collaboration of Pickers. The State Government's share in the equity capital is 51 percent.

Making Car Retarder Equipment

Saxby and Farmer (India) Ltd has formulated plans to manufacture car retarder equipment in India. The type of equipment which it proposes to manufacture in collaboration with its principal, namely, Westardair, is a recognised one suitable for application on the Indian railways. The manufacturing proposals visualise a progressive increase beginning with 56-percent indigenous content in the first stage to 98-percent indigenous content in the fourth stage, each stage lasting a year. Thus in a matter of four years, the scheme visualises the almost fully indigenous manufacture of highly specialised equipment.

Tyre-tubo Valves

Kamani Brothers Ltd of Bombay, it is learned, has reached a collaboration arrangement with Technoexport, Praha, Czechoslovakia, for the manufacture of 600,000 pieces of tyre-tube valves for motor-vehicles. The machaniery for the plant will be supplied by the foreign collaborators on a non-convertible rupee payment basis. It is proposed to set up the factory in Bangalore.

Making More Commercial Vehicles

The details of the expansion plans of Tatas and of Mahindra and Mahindra Ltd, for increasing the production of Mercedes-Benz vehicles from 12,000 to 24,000, and of Willys jeeps from 458 to 833 a year, are now available. The total additional outlay of Tatas is placed at Rs. 11.65 crores, including Rs. 7 crores in foreign exchange. The Jha Committee, it will be recalled, has placed the 1956 demand for commercial vehicles at 60,000. This target has also been accepted by the Planning Commission.

DENA BANK

OUR PROGRESS

In the prosperity of our people lies our progress. Our task is to help our countrymen to save and invest wisely. In the past year, through our increasing number of branches, we furthered our old services and sponsored new to encourage savings and to contribute to better living.

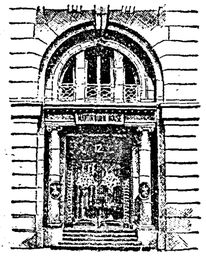
historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India. The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.



MARTIN BURN LIMITED
MARTIN BURN HOUSE, 12 Mission Row, Calcutta 1
Branches: NEW DELHI BOMBAY KANPUR
M&CC-13

The existing production of commercial vehicles is 27,000 a year. Mahindra and Mahindra already has the collaboration of the Willys Overland Export Organisation of the U.S.A. Its expansion, it is estimated, will cost Rs. 65 lakhs, including Rs. 55 lakhs in foreign exchange. The Jha Committee has placed the 1966 demand for jeeps at 10,000. The present production is 6,288.

The Government is opposed to the further expansion of the manufacturing capacity for motor-cycles. Proposals for the creation of further capacity for scooters, however, are being considered. They include one from a firm in Mysore which is working in collaboration with a Czech company. Another is from a Delhi firm, working in collaboration with a Polish firm. A third is from West Bengal and a fourth from Bihar, which is seeking U.S. collaboration. A number of schemes are being examined for the manufacture of mopeds, which seek Austrian, French, Yugoslav, West German and East German collaboration.

Industrial Committee on Coal Meeting

A meeting of the Industrial Committee on Coal will be held here on 18th February, to consider the revision of the wage structure for colliery workers. It is claimed that coal production has gone up and the industry has been given price increases, which should be reflected in wages also. The issue for consideration is whether the price increases have followed those in wages, or were given for other reasons. Then again, whether these price increases had already been reflected in the wage structure. It will be recalled that, in spite of the opposition of the then Member for Planning Commission, Mr. K. C. Neogoy, a national tribunal was set up for the coal industry, which gave its award in 1956, increasing wages by Rs. 7 to Rs. 76 a month. This award was subjected to further examination by the appellate tribunal, which gave more increases. This was followed by the Das Gupta award which, among other things, gave increases in dearness allowance in 1959. A wage board for the coal industry, however, is visualised. In a slightly different context, the current history of India could be compared with the pre-war Baldwin period in Great Britain. Mr. Baldwin's major concern then was not so much the safety of Britain as winning the elections. The major slant of the Congress policy now is towards winning the next elections. If it would improve election prospects, the so-called democratic set-up in the former Part C States of Himachal Pradesh, Tripura and Manipur would be revived, thereby undoing the work of a body called the States Reorganisation Commission. The four planks of the Congress election platform are already known. They are: (1) the third five year plan; (2) the industrial exhibition *in Delhi on the eve of the elections;* (3) the *panchayat raj* and (4) pilot projects to relieve unemployment in the rural sector for a period of two years, the Central allocation for each pilot project being Rs. 2 lakhs. The second plan itself started with unemployment of 5.3 million. On a conservative estimate, the number of new entrants to labour force during the plan period would be 10 million. The third plan starts with a larger arrear of unemployment of nearly 7.5 to 8 million. It will also have a larger number of persons entering the labour force. One method of dealing with this problem is to set up pilot projects. Another method could be to create more one-man schools, 80,000 of which were established during the second plan period.

Large Fertiliser Imports

The Government of India has decided to import Rs. 20 crores worth of fertilisers during 1961, including Rs. 8 crores worth from the non-communist countries, and the balance from the rupee payment areas or through linked deals in exchange for sugar, iron ore or oilcakes. Even this increased allotment is expected to meet about 60 percent of the demand. The supply of fertilisers under what is called the "package programme of intensive cultivation" is arranged separately, among others, by the Ford Foundation.

Further Quota for Sugar Exports

The Central Government has decided to release another quota of 50,000 tons of sugar for export, it is officially announced here.

World Bank Activities in India

The World Bank team, it is expected, will have another round of talks with the Government of India, before the director of its South Asia Division, Mr. Ruczinski, leaves for Washington. His colleague, Mr. Mason, will stay on and will be joined by seven technical experts who are expected to examine the various schemes in the third plan. The World Bank's report is likely to be ready by the time the consortium of the chief creditor nations meets in London on 22nd and 23rd March. The venue has been shifted to London due to the meeting of the Development Assistance Group, which is scheduled for 29th March. The resident representative of the World Bank in India, Mr. Harry Curran, will attend the London meeting of the consortium, and will thereafter visit Washington. Two representatives of the World Bank, Messrs Kennedy and Guinness, are due to arrive here this week for signing the Indus Water Treaty. Mr. Guinness was closely associated with the treaty negotiations.

Sir Dennis Rickett

Sir Dennis Rickett, head of the Oversea: Finance Department of the U.K. Government, i: also expected here shortly. He has been th British representative on the consortium of th chief creditor nations.

London

STERLING AREA RESERVES RISE IN DECEMBER

U.K. TRYING TO RELIEVE PRESSURE ON U.S. DOLLAR

(FROM OUR LONDON CORRESPONDENT)

IN December, the sterling area's gold reserves went up by £23 million to £1,154 million. In the whole of 1960, it gained £177 million. At the end of the year, the reserves stood at their highest point in any December since the second World War, save in December 1950. Not only was there a gain of £177 million in 1960, but Britain was able to make £196 million in special payments, mainly the clearance of past debts. But the superficially satisfactory performance of 1960 owed everything to two factors; a £131-million windfall as a result of the Ford Motor Company's purchase of the minority stock of Ford of Dagenham, and the policy of maintaining high interest rates. Foreign money has flowed into the U.K., boosting the reserves, not because of the trading record of the country and other members of the sterling area. But investors took the opportunity of earning more interest on their money in London than was possible in New York and other leading financial centres.

How vulnerable the reserves are to sudden *changes in the direction of short-term capital flows* was shown in December. Figures issued by the U.K. Treasury showed an actual rise in the reserves of £23 million, but allowing for special factors, the true movement was a fall of £22 million. The Ford money came in in December, but £67 million was paid in interest and principal off the U.S. and Canadian Government loans, £17 million of sterling was repurchased for dollars from the International Monetary Fund, and £2 million in dollars was paid to the new International Development Association. The balance of these special transactions was a gain of £45 million, but as the reserves rose by only £23 million, there was a real deterioration of £22 million. This is explained by the withdrawal of "hot" money from London.

Britain's decision to buy back £17 million of sterling from the I.M.F. in return for $47 million is a further move to help relieve external pressure on the U.S. dollar, reflected in recent gold losses. Britain will benefit, as her drawing rights in the Fund will be increased, and the proportion held in sterling in the Fund will be reduced to the normal level of 75 percent. A U.K. Treasury spokesman stated that there was no direct link between this move and the £110 or so million that Britain will receive from the United States as a result of the Ford take-over. But he added that the Ford deal had contributed to the outflow of dollars from the United States.

Busy Year for Capital Market

With one exception, last year saw more issues of new capital than in any previous year. The figure, according to the Midland Bank, was £556.7 million, compared with £480 million in 1959. The exceptional year was 1955, when capital issues reached £567 million, but they included £295 million for the nationalised industries. Of the 1960 total, £457 million (92.4 percent) was raised for use within Britain, an increase of one-fifth. Local authorities raised £7.3 million more, at £525 million. Money raised for use outside the U.K. aggregated £42 million, that is, 7.6 percent of the total. There was a sharp increase in calls made on the London capital market by foreign companies. From £244,000 in 1959, they increased last year to £3.514 million.

The Midland Bank's analysis of capital raising by industrial and other groups shows a marked increase in money raised by the coal, iron, steel and engineering industries. But of £78 million raised by companies in this group (£19 million in 1959), about two-thirds was raised by four companies. New issues by property companies, which have increased markedly since 1956, came to £38 million last year, against £23 million in 1959. New money raised by the banking, insurance, investment and finance groups totalled £119 million. This was a sharp drop from the £146.8 million in 1959 but still a much higher figure than in the previous postwar years. New capital issues by the motor-car and aircraft industries were very small; £300,000, against £18.4 million, in the year before.

New Orders for Capital Goods

Figures from the healthier side of industry, namely, producers of capital goods, continue to be satisfactory. According to the U.K. Board of Trade, new orders for the engineering and electrical industries in October kept up at the good rate of the second and third quarters. The volume of orders on hand has changed little since the end of August, because of a rise in deliveries. In October, deliveries increased radiply, as they usually do at that time of year, and were about the same as net new orders. Production in October was about 2-percent higher than in October 1959, the increase being in capital goods. During the third quarter, deliveries of engineering consumer goods, other than domestic refrigerators, seem to have stopped falling.

The value of deliveries of machine tools in October was 13-percent more than a year earlier, but export deliveries, which had been increasing at a faster rate than deliveries to the home market, were 5-percent less. Orders continued to come in at a higher rate than deliveries and in October were 45-percent more than in October 1959. Orders on hand have grown steadily and at the end of October were 83-percent more than at the end of 1959. Some new orders have been coming in from the motor-car industry.

Trend of Capital Spending

The trend of capital spending has to be watched as a basic factor in production and economic progress. Three months ago, the U.K. Board of Trade estimated that manufacturing industry would invest 25-percent more in 1960 than the £820 million of 1959. Figures now published suggest that the estimate may well be right. In the third quarter, investment by manufacturing industry in buildings, plant and vehicles reached a high level of £270 million—33 percent above the figure for the same period of 1959. Neglecting price and seasonal variations, the sum is above any recorded for a single quarter. Allowing for the usual increase of capital spending in the last quarter, the nine months' total of £714 million may be consistent with the forecast of a 25-percent increase.

This is with the qualification that previous plans are unchanged. As the National Institute for Economic and Social Research said in its latest bulletin: "Fixed investment seems fairly certain to go on rising into next year—so long as industry's confidence in the future is not shaken." The question is how far measures designed to restrain consumption will affect the capital output they are intended to make way for. The signs so far are that the credit squeeze has put back capital plans only slightly. The U.K. Board of Trade says that the vehicle and iron and steel groups account for most of the recent increase in capital spending. This was expected, and those industries are still offering a brave face to the future. If demand at home and abroad remained low, these views might alter. There is less likelihood at present of an adjustment by the steel industry—now operating at a record high level—and feeding investment demand in other industries. Recent capital raising plans suggest that its capital progremme will be maintained.

Stock-building Continues

With imports still running at a high level, it is not surprising that third quarter figures show another strong rise in manufacturers' stocks. The volume of holdings went up by £100 million, against £117 million in the second quarter and a previous high figure of £107 million in the first three months of 1957. Now seasonally adjusted figures, given by the U.K. Board of Trade, show that the "true" third-quarter increase was little different from the second. Because of lower commodity prices, the rise in the value of the stocks was nearly a third less in the second quarter than in the first. About half of the adjusted volume increase was accounted for by bigger holdings of raw materials and fuel. Three months ago, therefore, industry was still confident enough to be providing for high production, although the lower commodity prices (now further reduced) may have been another incentive. Significantly, most of the remaining rise in stocks was in finished products, chiefly by the motor-car and steel industries.

In the same period, wholesalers' stocks increased by £59 million or 7 percent of holdings. After seasonal adjustment, the addition was at more than double the rate of the second quarter and exceeded any increase since the beginning of 1957. Clearly this change reflects the accumulating stocks of durable consumer goods resulting from the reimposition of hire-purchase controls.

Pakistan Shipping Plan

A new Pakistan Company, Pakistan River Steamers, has been formed with the participation of the Pakistani Government to take over the assets in that country of India General Navigation and the Rivers Steam Navigation Companies, together with the railway flotilla (the Eastern Bengal Railway's fleet). The capital will be in rupees. Ordinary shares of Pakistan River Steamers will be held as follows: Rs. 1 crore each to India General and Rivers Steam, whose shares have a London quotation, and Rs. 50 lakhs to the Railway. Debenture stock will be held equally. Provision has been made for the introduction of a further Rs. 5 crores to be raised in Pakistan.

Burma Seeks Foreign Investors

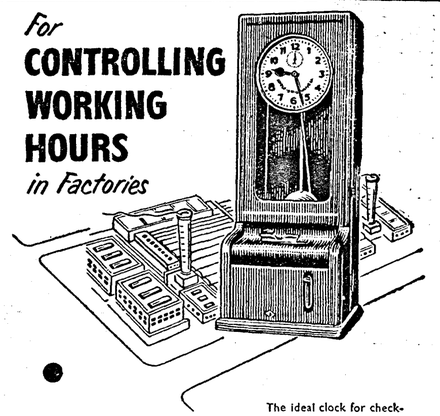
The need for fair treatment of foreign investors, which the International Chamber of Commerce consistently emphasises, is well recognised in new Burmese laws designed to attract overseas capital to that country. These fresh measures, which are in line with the shift of emphasis in Burma towards development through private enterprise, were discussed in London the other day by U Chan Tha, a member of the Burmese Parliament and former Indian civil servant, who is chairman of the Government's Investment Committee.

Under the new legislation, which allows repatriation of profits and capital, and gives tax incentives and guarantees against nationalisation, the Government welcomes schemes to save foreign exchange and promote development. The problem, will, however, be to find investors to set up new business in what is so largely an agricultural economy. U Chan Tha is to discuss this subject with Government and other experts during his present visit, and may bring a larger mission to Europe in several months' time.

Harrisons and Crosfield

Mr. J. B. Leask will act as chairman of Harrisons and Crosfield during the Eastern visit of Sir Leonard Paton. Mr. J. F. F. Gilchrist has been appointed vice-chairman from 1st January.

For CONTROLLING WORKING HOURS in Factories



ATTENDANCE RECORDER

The ideal clock for checking working hours of all staff in offices, factories, workshops, garages, banks etc. Simple to operate, self-winding, precision time recording equipment ensuring maximum accuracy. Guaranteed for 3 years.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to May 1960. Compared with the preceding month, there were decreases in sugar 175.46 points, coal 1.04 points, pig iron 15.88 points, finished steel 2.70 points, paper 9.29 points and bicycles 90.00 points, while increases occurred in tea 3.94 points, jute 0.97 points, yarn 1.52 points, cloth 0.59 points, cement 10.16 points, tyres 6.83 points, motor-cars 2.93 points, electricity 12.03 points and railway ton-miles 15.24 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity declined by 2.5 points during May 1960.

Jute

RAW JUTE PRICES RULE FIRM AS ARRIVALS DECREASE

LABOUR UNIONS OPPOSE MOVE TO CUT WORKING HOURS

THE mills' calculations continue to be upset by the unusually high level of raw jute prices, and, what is more disconcerting, by the general belief that prices are going to rise still further. It was expected that, at this time of year, when the full weight of the crop was felt, fibre would show some signs of falling, however small. But the inadequacy of imports in most areas has prevented a decrease in prices. Arrivals in upcountry stations during the past week have been very disappointing, and a sellers' market has developed. The effects are also being felt in Cossipore, where imports are not being allowed to go to stock, but are taken up immediately on arrival, with representatives bidding vigorously for each parcel. Stocks in Cossipore are now thought to be at a record low level for the time of year; they are certainly lower than they have been for many years.

The mills' present method of buying jute also tends to create steadier conditions. As their stocks are small, most buyers favour the purchase of quick shipment jute, particularly ready bills of lading or rail receipts. By this method, they hope to prevent a recurrence of the conditions they have just faced—non-delivery of goods against what are low-priced contracts, and the issue of heavy market difference bills, many of which they know are unlikely to be paid. A large number of sellers have gone out of existence due to the rapid rise in prices during the past few months and only a few have come out on the right side. As the demand for ready jute far exceeds the supply, many wonder what sort of conditions can be expected in the next few months of the season. A large part of the remaining crop will be low-grade jute. The fact has already been reflected in arrivals in Cossipore during the past week, where poorer quality fibre has predominated, although this can partly be accounted for by the lifting of booking restrictions from many jungli agencies.

High-grade jute is at a premium and only those mills making specialities or bright weave hessians can afford to pay the prices. Interest in Pakistani cuttings has decreased to negligible proportions since the price rose to Rs. 250 a bale. Many mills still hold valid licences for cuttings and it is understood that licences can now be obtained with ease for any mill requiring them, but there is now no great demand. Here, again, many contracts remain undelivered and others have been repudiated since prices rose by over 150 percent. As cuttings prices are now around Rs. 250 a bale, it is cheaper to buy low-grade mesta, which in many ways serves the same purpose.

Cut in Working Hours

The controversy over the proposed cut in jute mill working hours continues to attract attention. Discussions between the mills, trade union leaders and the Labour Commissioner failed to produce an agreement about the move to reduce working hours from 45 to 42½ a week. The workers maintain that the present hours should be maintained for at least a month after 30th January, but the proposal has been rejected by the I.J.M.A. representative. It is understood that the Labour Commissioner will submit his views to the West Bengal Government soon.

Apart from an initial reaction on Monday afternoon, when the December jute goods stock figures were announced, the gunny market has shown little change. The tendency still remains bullish, and the stock figures are considered mildly encouraging, as many thought that the high price of jute goods would cause buyers to hold off, with a consequent rise in stocks. Overseas buyers, however, although not taking up large quantities, are showing sustained interest, and regular Indian Government purchases have been partially responsible for the steady conditions. The hope is expressed in many quarters that the increase in U.S. hessian consumption during November may be maintained in December. Some think that too much emphasis is placed on the U.S. statistics. The U.S.A. being the biggest customer for hessians, and the only one from whom statistics of consumption and supplies are received, there is a tendency to omit consideration of the position in other consuming centres. This is reported to be good, and must be assessed along with the U.S. figures. It is understood that shippers have a fair quantity of hessians to cover for early shipment to various destinations.

Sacking Steady

The sacking market continues to rule steady and business proceeds on quite satisfactory lines. Although, in general, foreign enquiries are small, any business at all tends to push up prices. Australian interest in cornsacks, combined with internal purchases of B Twills, have all helped to create bullish conditions. Most of the business is concentrated in the near positions, and forward shipment has been comparatively neglected. Buyers have expressed concern over the powers vested in the Jute Commissioner for requisitioning stocks of raw jute and jute goods. That may have some bearing on the reluctance of overseas interests to buy forward.

The I.J.M.A. gunny stock figures for December 1960 show an overall reduction of 1,900 tons to 80,300 tons. Hessian stocks are down by 900 tons to 29,200 tons (36.3 percent); sacking stocks show a fall of 1,900 tons to 41,200 tons (51.3 percent); but stocks of other goods have increased by 1,000 tons to 9,900 tons (12.4 percent). Hessian stocks now are the lowest for nine months. Compared with December 1959, total stocks show an increase of 21,400 tons. Hessians are up by 7,100 tons, and sacking by 15,400 tons. But other goods show a drop of 1,100 tons.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market last Thursday, conditions were depressed, and heavy goods in particular slumped. January shipment B Twills lost about Rs. 2 to open at Rs. 180, or Rs. 4 above the April-June position, which was quoted for the first time. Hessians were not affected, and 40in. 10oz. showed little change at Rs. 58.50 for January shipment. During the day, the market firmed up on rumours of enquiries from the Argentine, and on account of interest shown by local operators. A Government tender for 2,700 bales of B Twills was also reported. All this activity forced up sacking prices by nearly Rs. 3 and hessians by 50nP. The rise was only temporary, however, and selling pressure from holders and mills at the higher rates soon caused prices to fall. By Saturday morning, the previous day's gains were completely nullified. There followed a period of inactivity, when prices moved within narrow limits, until the news of a decline in mill stocks during December was released on Monday. This caused a slightly firmer tendency, and rates again moved up. On Tuesday morning, January B Twills stood at Rs. 183, the premium over forward shipment now being Rs. 5.50. There was a small increase in hessians in sympathy and 40in. 10oz reverted to the week's opening quotation of Rs. 58.50.

On Wednesday morning, opening quotations were as follows:

	January	February	March	Apl.-June
40in. 7½oz.	45.00	44.50	44.25	43.25
40in. 8oz.	48.00	47.50	47.25	46.50
40in. 10oz.	59.50	59.25	59.00	58.50
B Twills	184.00	181.50	179.50	178.50
Heavy Cees (Plain)	182.00	181.50	179.50	178.50
A Twills	218.00	217.50	217.00	213.00
Liverpools	206.00	205.00	104.00	202.00
Cornsacks	187.00	185.00	183.00	181.50

Raw Jute: The fibre market was steady at the opening and sellers were reserved. Upcountry agencies continued to report poor arrivals, so prices there were higher than in Calcutta. The demand was still heavy, however, both upcountry and in Calcutta, and a fair amount of business was transacted. On Thursday, Assam Bottoms were quoted at Rs. 52 a maund, but they soon advanced by 50nP. After the week-end, conditions became firmer and prices advanced to Rs. 53. Over 100,000 maunds of business was reported on Monday after mills received their quotas from the I.J.M.A. This was the largest single business for a considerable period, so the market again reacted with a 50nP increase, but sellers were reserved, and many of them withdrew. More business on a smaller scale was done on Tuesday, and sellers began to indicate even higher prices. Arrivals in Cossipore last week, at 800 wagons, were good, considering the paucity of imports in upcountry agencies, but this was mainly due to the lifting of booking restrictions from many jungli agencies. Towards the close, the market became very steady, as business continued to be reported. Sellers' offers were reduced, and prices again increased.

During the past week, bills of lading from Dhubri, Assam and Northern districts were transacted at prices ranging between Rs. 52.50 and Rs. 53.50. Mesta was done at Rs. 51 for Daissee and Rs. 49.50 to Rs. 50 for jungli. Selected Daissee was reported at Rs. 54.

At the close, the market was very steady and quotations were based on the following:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	144.75	54.00	Jan.-Feb.
Northern	143.25	53.50	"
Purnea Desal	140.75	52.50	"
Daissee Selected	147.25	55.00	"
Assam Tossa	147.25	55.00	"
Mesta:			
Assam-Northern	138.00	51.50	"
Desal-Daissee	138.00	51.50	"
Jungli	135.25	50.50	"
Pakistani Cuttings

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

BUYERS in the Dundee raw jute market find it difficult to know how to act—whether to stay out of the market or pay higher rates now demanded for most manufactures. Business in fibre is being transacted at the quoted rates, ranging from £195 for Mill Firsts, obviously secured, while others are demanding £202, £190 lowest for Mill Lightnings, £188 for Mill Hearts and £186 for Grade Hearts. Grade Tossa-2/3 is offered at from £193, fours from £189 and Continental Tossa-4 from £178, January-February, c.i.f. U.K.-Continent. Dundee spinners are fairly well bought in their requirements for the season, but there must be some who have to come into the market for certain grades. A number of sales have taken place recently, but it is well known that spinners are more or less inclined to buy when firmer conditions prevail.

Just before the end of the past year, good business was done in jute yarns and cloth in Dundee. Spinners and manufacturers are now fairly comfortably placed with orders for the next two months at least. Prices were recently advanced by about £5 a ton because of the continued firmness in the Pakistani raw jute markets. Raw jute prices are much higher in proportion to the rates quoted for jute yarns and cloth, and producers are delaying in putting their terms up to give consumers the benefit of their favourably bought position. There is still some difference between the price for batch and those quoted for yarns of about £20 a ton.

Hessian yarns were raised to 23.46d a lb for 8 lbs C.H.W. cops, against 22.88d a lb formerly, and to 24.60d (against 24.03d) for 8 lbs J.C.H. warp, on spools, with 3 ply 8 lbs twist at 26.52d (against 25.95d) and rove at £150 (against £147 5s) for 48 lbs and £118 5s (against £115 10s) for 200 lbs. Cloth has come up to 19.05d a yarn for 40in. 10oz. from 18.67d, and 15.94d (against 15.64d) for 8oz.

Calcutta goods were firmer last week and 90s was quoted for 40in. 10oz. hessians and 67s 9d for

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of December as follows:

Description	31st December, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	30th November, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st December, 1959 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)
Hessian cloth and bag	10.62 (9.71.09)	29.2 (29.7)	10.95 (10.01.30)	30.1 (30.6)	−33 (−30,21)	−0.9 (−0.9)	7.85 (7.17.53)	22.1 (22.4)
Sacking cloth and bag	9.57 (8.75.39)	41.2 (41.9)	10,07 (9,20,84)	43.2 (42.9)	−50 (−45.45)	−2.0 (−2.0)	6.17 (5.64.22)	25.8 (26.3)
Others		9.9 (10.0)		8.9 (9.0)		+1.9 (+1.0)		11.0 (11.2)
Grand Total (000 Tons/Metric Tons)		80.3 (81.6)		82.2 (83.5)		−1.9 (−1.9)		58.9 (59.9)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

STEEL manufacture [redacted] at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58 (Rs. in lacs)	1958/59	1959/60
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND | STEEL STRENGTHENS THE NATION

7½oz., January, 89s 9d and 67s 3d February, 89s 6d and 67s March and 89s and 66s 6d April-June, with B Twills at 277s 6d, 275s 3d, 273s and 270s 9d, respectively, f.o.b. Calcutta.

THE PAKISTANI JUTE MARKETS

SUBSTANTIAL OVERSEAS BUYING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

IN view of the fact that practically no buying was reported for the first three weeks, the E.P.C. registration figure of 184,210 bales during December is considered high. China bought 12,600 bales and Czechoslovakia 10,865 bales. The biggest buyer was South Africa with 26,445 bales, followed by West Germany with 23,332 bales. India again came into the market and bought 20,185 bales. France took 17,065 bales, and the U.K. made the smallest purchases to date of 16,275 bales. This is probably due to the fact that working hours in Dundee have been reduced. From reports of business done, it is likely that a further 200,000 bales will have been registered during the first half of January, which should be sufficient to keep buyers satisfied for a while. In view of the present high prices, it may even encourage them to withdraw again.

Purchases of 400,000 bales within one month should be sufficient to clear any long position which may have existed in Pakistan, particularly since arrivals have been very scarce. The general view here is that it would be unwise to speculate, at least by selling short, since it is widely believed that the crop is a short one. Those balers who have had a profitable season are, it is reported, of the opinion that during the next month or so anything might happen and the wisest course is to consolidate one's profits and to trade very cautiously for the rest of the season. The speculative element is likely to continue to exercise itself. It is, however, felt that the scope for it will be limited by the financial barrier which is coming up again, after the latest spate of buying by overseas and local interests.

It is interesting to note the strength of the interior market as indicated by recent events. When world markets were completely dull and no business was being transacted, arrivals in the interior were practically nil, where normally such conditions produce a flood of imports. When prices hardened, as they did over the holidays, arrivals increased but not all at once as one might have expected, but by a gradual and cautious process so that the market was not weakened. In the past, the interior market has been completely controlled by balers. As they are in a weaker financial position now and the sellers in the origin financially much stronger, there is no doubt that the control is going more and more into the hands of the latter, whether they be growers or various types of middle men.

In the local pucca bale market, there were healthy transactions and some balers, finding it impossible to cover fast enough in the loose market, bought fair quantities of pucca bales. Cuttings were particularly excited, but more in sympathy with the rise in gunny prices in Calcutta than with overseas rates. Transactions with overseas buyers, although widely reported, are probably less than expected because it appears that after some unhappy experiences, they are restricting their purchases to a smaller circle of exporters. E.P.C. prices, after lagging behind the overseas market, rose by £9 for white jute, £11 for tossa and £6 for cuttings which include habi jabi and S.M.R.

The increased price of tossa reflects the fact that buyers, finding the white price out of line, have turned to tossa which had risen originally more slowly than white. Even after the switch in buying tossa prices are lower than these of white jute. Taking the E.P.C. prices as a guide, Dundee Tossa-4 at a rate between Export Firsts and Export Lightnings is still a good buy. In actual fact, however, most balers ask for the same price for Dundee Tossa-4s as for Export Firsts. It needs to be mentioned that the present standard of Dundee Tossa-4 is far better than that of Export Firsts. It is reported that not much of Dundee Tossa-4 is available in the market at present, and even outport Tossa 2/3s, which not so long ago were practically unsalable, are now difficult to get.

If the buying pressure on tossa continues, it is probable that the E.P.C. price for this will climb faster than for white. The most important factor in the market now is not so much whether overseas buyers continue to buy but whether the Pakistani mills will stay out.

MR. TATA OUTLINES PLANS TO INCREASE AIR-INDIA FLEET

Inaugurating the annual general conference of Air-India's Managers at Bombay House recently, Mr. J. R. D. Tata, chairman, said that Air-India was planning to acquire two more *Boeing 707* Intercontinental jets and if the scheme was approved by the Government, these would be available by March 1962. By 1962, Mr. Tata added, Air-India proposed to have a fleet of six giant jets and would be able to operate daily flights to London and New York, two flights a week to Tokyo and Nairobi each and one flight each to Moscow and Sydney. Referring to the modification programme of the *Boeings*, he said that when the first *Boeing* was flown to Seattle for modifications, the Boeing Company was impressed with Air-India's operational standards.

Engineering and Transport

PROGRESS OF THE OIL PIPELINE PROJECT

CONSTRUCTION BEGINS IN ASSAM

WITH three spreads working simultaneously in three different districts of Assam, India embarks on the construction of the largest oil pipeline system in the country. The 720-mile pipeline project will connect the upper Assam oilfields of Oil India Private Ltd, which is a joint venture between the Government of India and the Burmah Oil Company Ltd, with the two Government refineries in Nunmati (Assam) and Barauni (Bihar). The pipeline will be constructed in two stages, the first stage of 270 miles as far as Nunmati being scheduled for completion by November 1961, and the second of 450 miles to Barauni in Bihar in the second half of 1962.

As far as Nunmati, the pipeline will have a diameter of 16 inches and from Nunmati to Barauni a diameter of 14 inches. The pipeline was originally intended to convey 2.75 million tons a year of crude oil from Nahorkatiya to Nunmati and to convey 2 million tons a year from Nunmati to Barauni. It has, however, been designed so as to make possible, as and when required, an economic expansion of throughput of 4 million tons a year. The construction agency appointed by Oil India is the Burmah Oil Company (Pipelines) Ltd, and the main construction contractors are Messrs Mannesmann and Saipemm.

The 16-inch pipe for the first stage has been imported from the U.K., and was manufactured by Messrs Stewarts and Lloyds. The 14-inch pipe for the second stage is being supplied by Hindustan Steel from its Rourkela plant. World tenders have been invited for all major items, but indigenous suppliers, where their bids have been competitive, have been given preference. Besides the variable terrain through which the pipeline passes, *e.g.*, paddy fields, tea gardens, forests, hills and swamps, its most interesting feature is the large number of river crossings with which it has to contend. Throughout its length, it has to cross 78 rivers including the Brahmaputra. The Brahmaputra crossing alone will cost about Rs. 1 crore. Pumping station will be erected at intervals of approximately 90 miles along the line to maintain the flow of oil. Repeater stations will also be installed along the line to maintain radio communications throughout its length. The radio system will carry signals which will indicate to pipeline headquarters in Gauhati conditions at every pumping station and also enables operation of pumping stations by remote control. In the event of an emergency, the whole pumping system can be shut down from the central headquarters control or individual valves can be closed to isolate particular sections. Construction of pumping stations between Nahorkatiya and Nunmati is now in progress.

WORLD AIR PASSENGER TRAFFIC RISES

THE NEED TO CUT FARES

FOR the first time, 100 million people have been carried by air in a single year, the International Civil Aviation Organisation has announced. In 1960, passenger traffic increased by 10 percent to 108 million, compared with the 1959 total of 98 million, yet the number of hours flown by scheduled aircraft remained at the 1959 total of 8.9 million hours. The greater speed and carrying capacity of turbine-powered airliners is emphasised by these figures. Since the war, there has been an average annual increase of about 12 percent to 15 percent in the number of passengers carried. In 1958, this figure dropped to 1 percent and gloomy forecasts were made in certain quarters about the future of air transport. Yet in 1959, a 13-percent increase was recorded and this upward trend was maintained in 1960. The average number of passengers flown in each aircraft was 35 in 1960 (32 in 1959); the average number of miles flown a passenger was 640 (1,030 kilometres) (618 or 995 kilometres in 1959), and the average number of miles flown an hour was 221 or 356 kilometres (compared with 214 or 344 kilometres in 1959).

Sir William Hildred, director-general of the International Air Transport Association, forecast recently that the world's airlines will carry 118 million passengers in 1961. He said that some 130 more jet aircraft would be added to airlines' fleets in 1961.

Although the airline industry has been operating at an overall loss during the last ten years, an operating profit of 3.1 percent of turnover—the highest for years—was recorded in 1959. Yet a considerable number of operators are still operating at a loss—largely because of the high cost of introducing expensive turbine-powered airliners into service—and to ensure economic load-factors in these large aircraft, fares will almost certainly have to be reduced yet further. It was agreed at the International Air Transport Association's fares conference early in 1960 that certain cuts should be made provided there were no further changes for two years, by which time the airlines would be in a better position to evaluate the impact of new equipment and fare-cuts on their economy. Meanwhile, airliner deliveries continue to flow. More than 150 British aircraft have yet to be delivered out of the 700 on order or in service.

INDIA CONTINUES TO BE BIGGEST BUYER OF U.K. AIRCRAFT

Britain exported another £12 million worth of aircraft and engines during November 1960, bringing the industry's exports for the first 11 months of 1960 to £129 million, the Society of British Aircraft Constructors has announced. India was again the leading buyer during November, with aircraft purchases worth £1,297,000, followed by Brazil (£539,000), the United States (£467000), and Canada. Leading buyers of aircraft engines—which for the month accounted for a greater portion of exports than aircraft—were Canada, the United States, France, and Italy. For the 11 months, India continues to head the list of buyers, with purchases worth £8,311,000, followed by Argentina, the United States, and Switzerland. S.B.A.C. predicts that the December total will raise the annual aero-engine export figure to more than £70 million for the first time, and post-war engine sales to a figure higher than £350 million.

GERMAN FIRM SUPPLIES FINISHING LINE EQUIPMENT FOR ROURKELA PLATE MILL

Schloemann Aktiengesellschaft, Düsseldorf, manufactured and supplied the extensive finishing line equipment for the heavy plate mill at the Rourkela Steel works. The extensive, modern plant has now been put into operation. It is engineered so as to provide continuous production even if frequent changes are made in the mill schedule. In designing the plant, account was taken of the subsequent installation of a second mill stand.

AIR FRANCE BOEING AT DUM DUM

The Air France *Boeing 707* which arrived at Dum Dum airport last week is one of the 17 jet aircraft now serving the airline's long-distance air network. Three more of these are on order. The acquisition of these aircraft forms the first stage of Air France's fleet modernisation programme. The *Boeing* left Paris in an afternoon, called at Rome, Teheran and Karachi before reaching Calcutta the next morning, then left for Tokyo which it reached in less than 13 hours via Bangkok, Saigon and Hongkong.

SHORT-HAUL AIRCRAFT FOR OPERATION AT LOW COST

The *Vanguard* airliner, which has flown from London to Rome (955 miles, or 1,537 kilometres) in zero wind conditions in 2 hours 27 minutes—three minutes faster than current jet schedules—and from London to Paris (224 miles, or 360 kilometres) in 41 minutes—four minutes better than the existing jet schedule—has entered service with British European Airways. This aircraft is designed to provide short-haul air transport at the lowest possible cost. The Vickers *Vanguard* made its first flight in B.E.A. service on 17th December. On 15th February, it will enter passenger service with Trans-Canada Air Lines on short and midium length routes across Canada and to the United States.

B.E.A. *Vanguards* are due to begin regular operation on the London-Paris route on 1st March, to Madrid and Glasgow a month later, to Malta on 1st June, Belfast on 1st July and to Milan and Edinburgh on 1st August.

NUCLEAR GROUP TO BUILD SIXTH COMMERCIAL ATOMIC POWER-STATION IN U.K.

The Dungeness nuclear power-station will be Britain's sixth commercial nuclear power-station. It is due to be completed and handed over to the Central Electricity Generating Board in 1964 by the contractors, the Nuclear Power Group. The power-station will then begin supplying power to the national grid (275 kV for connection to the supergrid) just as ordinary power-stations do.

The difference between a conventional and nuclear power-station lies in the method of raising steam to drive the turbines. In conventional stations this is done by burning coal or oil. In nuclear power stations heat is created by splitting atoms of uranium, this is turn heats gas, which is then used to heat water and raise steam. Other nuclear power-stations are being built by the group in Berkeley, Gloucestershire, Bradwell, Essex, and Latina in Italy. Basically, the design of the reactors at Dungeness follows that of stations ordered earlier, but also incorporates the latest developments in reactor and heat transfer technology. The reactors will be of the gas-cooled, graphite-moderated type and use as fuel natural uranium bars clad in magnox sheaths. The station is designed for a net electrical output of 550 mW and has two identical reactor units of approximately 840 mW thermal output each, a turbine house and the usual ancillaries.

GROWERS DEMAND REVISION OF COFFEE MARKETING POLICY

SYSTEM OF FREE SALES URGED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

COFFEE growers have demanded an immediate reappraisal of the Coffee Board's present marketing policy. The system now followed, namely, the release of coffee through pool and local auctions and by allotments to co-operative societies, was introduced in 1948, immediately after the removal of price control. The output was then under 14,000 tons, so an effort could be made to stabilise prices. The conditions have changed substantially since then. World production of coffee is in excess of consumption. So a sellers' market has now turned into a buyers' one. No revision has been made in the marketing policy to compensate for the change in marketing conditions. Neither has the Government taken any action on the report of an expert committee on marketing, which was submitted about 18 months ago.

The Nilgiri-Wynaad Planters Association, which recently discussed the deepening crisis in the coffee industry, has stated that the coffee market should be made free and should be run on the same lines as the tea market. The Association has expressed concern about the fact that approximately 14,750 tons of the last season's crop remained unsold at the beginning of December, so it feels that some of this coffee might have deteriorated. In addition, a record crop of 55,000 tons is anticipated for the current season. If the Board's marketing policy is not revised, it will not be possible to sell a "substantial amount" of the new crop, according to the Association.

Extra Expenditure

Growers have to wait more than one year for final payments for the coffee which they have to deliver to the pool. Many producers have to finance the running of estates on an overdraft, thereby incurring extra expenditure. The Board also makes payments to growers mainly on overdraft, the permitted maximum of which is Rs. 5 crores. The Board charges growers for marketing their coffee, thus adding still more to their expenditure. If it fails to sell the unsold surplus from the last season as well as the current season's record crop, the unsold coffee will be lost due to deterioration, the Association says. This in turn will reduce the return to growers still further. With this year's record crop, the return is only just sufficient to balance expenditure. Many growers will harvest a smaller crop in the next season. If prices are also lower—as they certainly will be if the present policy is continued—many units will incur enormous losses and the industry will be ruined within the next two or three years, the Association adds.

It is claimed that some of the best coffee in the world produced in India will sell at remunerative prices if the expertise of the trade is utilised. As it is, with only two dealers participating in export auctions, it is being sold at less than the internal price, and very much less than the rates in the European markets. So the internal market is flooded, partly with coffee of the exportable standard. Growers apprehend that much of this will have to be sold at prices which will not cover their expenses.

Some Remedies

Mr. C. I. Machia, who was formerly the Chief Marketing Officer and Director of Propaganda of the Indian Coffee Board and who is now the chairman of the largest coffee planting company in India, has the following remedies to offer for the deteriorating situation facing the industry. If a proper return is to be ensured, only Arabica Plantation—the best coffee produced in India—should be exported even at the risk of denying it to the Indian consumer. As the Central Government desires to maximise exports, the coffee which earns more foreign exchange should be exported. A system of sales on cup tasting should be introduced, firstly, in the case of export sales, and coffee must be sold on this basis and under distinguishing marks which will ensure particular marks being available year after year. Sales for export must be made on the basis of quality and by open auction. A beginning should be made this year as the industry cannot afford to wait for another full year before any change is made in the marketing policy. The system may eventually be extended to the internal market to ensure selective buying. In the internal market, coffee should be released only through pool auctions and expedients such as local auctions and releases through co-operative societies should be abolished. Intensive propaganda for coffee, particularly for Robusta, is necessary and India Coffee Houses should be restarted, particularly in northern India, where only Robusta coffee should be sold.

In his address to the recent annual general meeting of the Coffee Lands and Industries (Mysore) Ltd, Mr. Machia said that there is little justification for imposing the same rate of export duty of Rs. 21 a cwt. on Robusta coffee as on Arabica because the export prices for the former are very low. The removal of the excise duty will make it possible to offer Robusta at a very much lower price on the internal market. This will no doubt result in a loss of Central excise duty on Robusta amounting to about Rs. 80 lakhs a year, but it will be a small sacrifice in the interest of an industry which is now facing a crisis, Mr. Machia said.

MISGIVINGS ABOUT COFFEE SURPLUS

NEED TO RAISE INTERNAL CONSUMPTION

SPEAKING at the recent meeting of the Coffee Board Mr. H. Sitarama Reddy, chairman, said that the recent misgivings about the stock position have caused deep concern in quarters not only outside the industry but also within. It is probable that the pronouncements had been made with the best of intention, but they have acted as bearish factors in marketing. They have created a feeling especially in the minds of foreign buyers that confronted with huge surplus stocks, the Coffee Board will be compelled to part with its stocks even at distress prices.

The carryover of stocks todate are in no way in excess of those in the corresponding periods

of the previous two years. The stock held up to now is about 9,200 tons, against 8,637 tons and 8,307 tons as on 1st January, 1960 and 1st January, 1959, respectively. This is notwithstanding the fact that the 1959-60 crop of 49,248 tons was bigger than the 1957-58 crop of 44,205 tons and the 1958-59 crop of 46,520 tons. The carryover is designed to be a little larger than in former years with a view to meeting the internal demands from the old crop in the early months of the year so that much of the freshly cured coffee of new crop could be made available for export during that period when there is a good demand in the foreign markets and better prices could be realised.

Scope for Raising Consumption

Mr. Reddy said that the situation is nothing like the one facing major coffee producing countries like Brazil. "Let us be clear on the point that we have presently no problem of overproduction of coffee in India. The present offtake in India is far from any saturation point. Considered from the point of view of the growth in population and the increasing purchasing power in the country as well as the taste that can be developed for coffee at home, we have a vast field yet to tap." The home market may be expanded to the extent one succeeds in making coffee available to the housewife conveniently, without adulteration and at a price matching her budget. The *per capita* coffee consumption in India is 0.18 lbs a year, compared with 0.70 lbs for tea. In spite of greater output, if the tea industry in confident of capturing for itself a greater share in the growing purchasing power of the people, Mr. Reddy could not understand why the coffee industry should at all feel diffident in winning for itself a better share than at present in the housewife's rupee. An increase in the *per capita* consumption by 0.1 a lb is enough to absorb another 15,000 tons a year, he said.

Foreign Markets

But just because India has a vast potential market at home, it does not at all follow that she can be complacent about foreign markets for her coffee. There is a select community of coffee consumers spread over in a few countries whose discriminating taste can be met by India's product. Whether she needs put in special efforts to woo them and if so how, are matters which demand careful thought. The Government should decide what pattern of export promotion it should adopt in future. The Marketing Committee at its last meeting, Mr. Reddy said, decided to allocate quotas on a destinational basis which, it is hoped, would enable the country to market quality coffee abroad with a view to building up a steady market for the future. In the export sales during the current year, due care will be taken to preserve the traditional markets like West Germany and to explore new ones.

Referring to the internal market, Mr. Reddy said that Robusta coffee presents a major problem in marketing both at home and abroad. The prices fetched in the export sales have been dwindling. The offtake in the internal market is sluggish, and prices have almost touched the "basic" levels. So it may be necessary for the Board to tackle the sales of Robusta on a special footing, the chairman said.

COCHIN TEA SALES

At Dust Sale A, 335,000 kilograms of tea were on offer. There was a strong general demand at firm to dearer rates. Residual and black leaf grades were the strongest feature of the sale.

At Sale No. 2, 914,000 kilograms of tea were on offer. There was a good demand, particularly for plain and low mediums which were steady. Mediums and good mediums were firm to dearer while quality best liquoring Nilgiris met with restricted demand at lower rates. Black leaf fannings were dearer. Whole leaf grades were fully firm.

LOWER ESTIMATES FOR KATKI AND KUSMI LAC CROP

According to the final estimates of the Katki lac crop 1960 issued by the Indian Lac Cess Committee, the crop is placed at 157,000 maunds, compared with the preliminary figure of 212,000 maunds. The estimates for 1959 and 1958 were 345,000 maunds and 265,000 maunds, respectively, and the normal yield based on the average of the ten years preceding 1959 is 277,000 maunds. According to the preliminary report on the Aghani (Knsmi) lac crop, an yield of 85,000 maunds is expected this year, compared with an yield of 129,000 maunds and 52,000 maunds for 1959 and 1958 respectively. The normal yield based on the average of the final estimates for the ten years preceding 1959 is 69,500 maunds.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD BUYING IN DUSTS

AT Sale No. 26, held on 9th and 11th January, there was a strong and general demand for the 71,290 chests on offer at the Export sale. Best C.T.C. teas met with good enquiry and were at times dearer. Medium descriptions in this category, however, were generally easier, while secondary grades were very irregular. Legg-cut teas followed the previous week's trend and those with bright liquors enjoyed a good sale. Medium Assam B.O.P.'s came in for much improved support and were about steady while the brighter types were generally dearer. Similar O.Fgs. with brighter liquors were at times much dearer. Medium brokens and fannings were about firm, although the prices for some of the cleaner and better liquoring kinds improved. Plain brokens and fannings sold at about last rates. Well twisted whole-leaf grades met with satisfactory support at about last rates, although the poorer stalky kinds were again easier. The very few tippy teas on offer were irregular. Darjeelings met with fair support, particularly those with autumnal liquors and these sold at enhanced rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.25 to 5.50	2.20 to 2.23
Plain B.P.	4.50 to 4.65	2.10 to 2.16
Plain Fannings	4.85 to 5.05	2.16 to 2.24
Medium B.P.	4.70 to 4.90	2.04 to 2.12
Medium Fannings	4.85 to 5.10	2.20 to 2.23
Best Assam C.T.C. B.P.	5.50 to 5.90	2.40 to 2.60
Best Assam C.T.C. Fannings	5.80 to 6.30	2.45 to 2.65

(Quotations are inclusive of excise duty.)

At the Internal Sale, a good general demand prevailed for the 21,808 packages of Dust on offer at generally easier rates. Except for some bright liquoring lines which evoked competition, medium C.T.C. Dusts were somewhat lower. The best in this category were irregular with buyers closely following quality. Non-withered descriptions came to an easier market and sold up to 15nP below last rates. The better liquoring small orthodox kinds were fairly well supported while the exportable types were readily taken up, although at lower rates. Darjeeling Dusts sold well.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.80	
Medium Assam Dust	4.95 to 5.20	2.32 to 2.34
Legg-cut Dust	5.15 to 5.25	2.16 to 2.28
Medium Assam C.T.C. Dust	5.45 to 5.65	2.20 to 2.26
Good Assam C.T.C. Dust	5.90 to 6.40	2.50 to 2.90

(Quotations are inclusive of excise duty.)

The 723 chests of internal leaf on offer met with a good general demand.

LINSEED FIRM

The linseed market was firm in the past week. Arrivals did not improve. With sellers reserved and buyers keen, the price advanced to Rs. 28.75 a maund. The oil market was active, but sellers were reserved. Small business passed due to limited stocks, the principal buyers being local people. The oilcake market was fairly steady because of improved demand from overseas buyers. The latest quotation is as follows: Ready, Rs. 28.75 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 3rd January and 9th January, 1961)

Cowhides: Wet salted (Ord.) 30,000 pcs. on the basis of Rs. 10 to Rs. 15; Wet salted (slaughtered) 18,900 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Kustia, Patna, Daissee) 55,300 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 330 to Rs. 350 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4.62 and (she-killed) on the basis of Rs. 4.37 a piece; Assam-Dinajpur-Siliguri-Maldah 71,600 pcs. on the basis of Rs. 280 to Rs. 300, Rs. 340 to Rs. 360 and Rs. 390; Purneah-Kissenganj 26,700 pcs. on the basis of Rs. 335 to Rs. 350 and Rs. 370 to Rs. 375; Patna-Pakur (Ord.) 3,700 pcs. on the basis of Rs. 280 to Rs. 300 and Rs. 325 to Rs. 330; Patna-Muzafferpore 43,200 pcs. on the basis of Rs. 335 to Rs. 340 and Rs. 355 to Rs. 365; Assam (heavy) 1,600 pcs. on the basis of Rs. 490.

Bazaar Stocks

(9th January, 1961)

Cowhides: Wet salted 1,23,500 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killed) 14,000 pcs.; Assam-Dinajpur 81,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,87,000 pcs.

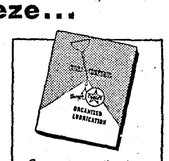
Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.
Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.
The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE THIRD PLAN: TAKE-OFF INTO UNREALITY

FEW meetings of the National Development Council can have had so bewildering an air of unreality as the one held in New Delhi last week-end. The purpose for which the meeting was called was to finalise the third five year plan. In fact, if anything at all has been achieved, it is precisely the opposite: to blast out of shape such finality and definition as the plan may have had in terms of the draft outline issued six months ago. Calculations of targets and resources have been twisted, turned and re-formed with a gay abandon reminiscent of games played with plasticine. Massive verbosity has been mobilised in support of conceptual and statistical jugglery aimed at proving that a plan costing Rs. 8,000 crores in the public sector can be completed with resources totalling only Rs. 7,500 crores. States, ministries and pressure groups have moved into array in order to get their individual outlay targets inflated. Ultimately, the upshot of the whole exercise is that a plan has been approved which the Planning Commission itself says cannot be fulfilled. In defence of the result, it is argued that the third plan has gained in "flexibility"; but that is presumably only in the sense that there are more projects now to be picked or dropped with the freedom normally exercised by chickens wandering round a grain field. The Prime Minister had opened the National Development Council meeting with a call for austerity. At the end, the nation is left wondering whether the best start might not be made by folding up the N.D.C. itself. It has proved to be a forum more of political selfishness than of economic judgment. On this basis, it has thrown an open challenge to the Planning Commission, which has quietly melted away behind a smoke-screen of words in the hoary traditions of pussilanimity. Now, two-and-a-half months before the plan is due to be launched, nobody quite knows exactly what size of a plan it is going to be.

Perhaps it is arguable that, even before, nobody knew it either. The draft outline visualised a plan involving a total outlay of Rs. 11,250 crores in the public and private sectors. The foreign exchange component of the outlay was Rs. 2,600 crores (excluding Rs. 600 crores of food aid from abroad). No foreign exchange was available from India's reserves for the plan as such, so whether particular schemes were launched or dropped depended on whether the external aid necessary for them could be found. The Government's recent investigations have indicated clearly that the total assistance will be extremely difficult to get; and even if it is obtained, most of it will be "tied" to specific projects, as almost all the aid promised so far for the third plan already is. Ignoring this basic reality, the National Development Council has gone ahead and added some more projects to those indicated in the draft outline. And, in doing so, it has had the temerity to suggest that they be included even if, quite apart from the foreign exchange, the rupees necessary for financing them cannot be found. As justification, the specious impression is now being fostered that the new projects will involve, for the most part, only rupee expenditure. They can be taken up if rupee resources are released from other projects which it was intended to launch but which could not be launched because the foreign exchange component could not be raised. Thus, claims the N.D.C., has "flexibility" been added to the third plan.

It is possible to argue that such reasoning is not without its attractions. But they exist only in the cloud-cuckoo land of the N.D.C.'s planning notions. After all, some may say, if the achievement of the whole of the third plan is uncertain, it does not matter much if the plan is somewhat bigger or smaller than the draft outline indicated. In Mr. Nehru's view, it might be advisable to make it bigger still, since that will inspire the country to greater efforts and might even encourage her friends abroad to help more liberally. At the same time, the argument continues, India herself should frame the plan in such a way that if the foreign aid does not come, the domestic effort will not be relaxed, but will merely be diverted to schemes for which foreign aid is not really necessary. In the everyday world of practical realities, however, there are serious dangers in what the National Development Council has ordained. One is that it has shown the plan to be open to mutilation for reasons which are purely political. It is true that each plan has to be flexible, and open to amendment in the light of developing circumstances. But it does not follow that the plan improves even if it is changed at the bidding of certain States, ministries or politicians who happen to be particularly vociferous. Another danger is that by inflating the plan, and then announcing that the resources to achieve it fully simply do not exist, the planners are doing no more than inviting doubt on the seriousness of their intentions. Bigger plans may, by some devious reasoning, appear to be in the interests of the Congress Party and of the several shaky State Governments which are to approach the electorate next year. But the fact is that the difference between the electoral value of a public-sector plan costing Rs. 8,000 crores, and one costing Rs. 7,250 crores, is negligible to the ordinary voter. What matters is the ultimate *achievement, and how it measures up against the* original promises. In these terms, a commitment to the impossible cannot bring worthwhile returns in the longer run.

The course of action which the National Development Council has sanctioned has two major economic disadvantages too. One is that by including many schemes which were hitherto considered relatively inessential, the Council has implicitly given the sanction for them to be started. And the second is that by being so lackadaisical about reshuffling priorities on grounds other than economic, it has served to reinforce the tendency among India's helpers abroad to "tie" the aid they give to specific projects. The experience of the past five years has shown that the Central and the State Governments have rarely been shy about launching schemes which were not included in the second plan. They may be even less shy now. In fact, the vigour with which some States insisted that their particular five year plans must not be cut at all may have been due to the desire to have a large number of schemes approved, out of which they themselves would choose which to complete and which to forget. Regional independence of this sort in planning may have its virtues, except that the States' past record in judging economic priorities has been far from reassuring. To locate a steel plant in Madras or an oil refinery in Bihar may be good for parochial vanity, but neither of them will make economic sense. It will make even less sense to draw up an impossible plan for, say, ten hydro-electric projects and 10,000 primary schools; and then say that if foreign exchange cannot be found for the former, the spare rupees will be diverted to the latter. The danger is that from the very beginning the rupees will be spent on the schools, so that if later the foreign exchange does come for the hydro-electric projects, the domestic resources to complement it will be lacking.

In sum, it seems the National Development Council has succeeded only in making the third plan amorphous rather than "flexible." Instead of presenting a clear set of priorities for schemes which are considered essential, it has issued a hotch-potch of hopes, some of which it straightaway confesses will never be fulfilled. The one crucial problem, that concerning the resources likely to be available, has simply been bypassed. Instead, the financial wizards of the Planning Commission have been bludgeoned into statistical jugglery intended to show that the resources available for the public sector, which had been estimated at the already doubtful total of Rs. 7,250 crores, will now amount to Rs. 7,500 crores. This is at a time when the target for deficit financing is being kept down in honour of the World Bank mission sitting in New Delhi; when experience with Government borrowing has been disappointing; when the expected surpluses from State enterprises show no signs of materialising; when heavier taxation promises to have a direct impact on the cost of living; and, finally, when signs of an increase in foreign aid are still awaited. The one favourable factor for resources has been the buoyancy of the Central Government's revenues, which may be reflected in the State Governments' revenues also. But that buoyancy has been due purely to the economic expansion achieved during the past year. The lack of foreign exchange could unpredictably cut short that expansion, and also the ambitions of planners now walking about cheerfully with a cornucopia of imaginary rupees.

THE SHAREHOLDING HABIT

THE Government Committee which is now investigating the distribution of income and the concentration of wealth in India is expected eventually to formulate schemes to correct any undesirable trends. The principle is unexceptional in that without a more equitable distribution of income, it may be difficult to improve the general standard of living. Among the steps which are likely to increase *per capita* income, vigorous measures could be taken to ensure that industrial shareholding becomes more widespread. This could be done in two ways. Firstly, savings could be attracted into industrial investments by improving the profitability of industries. Secondly, attention might be concentrated on distributing shareholdings among investors as widely as possible. If the shareholding in corporate industry is extended, a greater number of people will share in the growth of economic prosperity. Against this background, the decision of the Government of India to sell shares of State enterprises to the public, distributing the shareholding among *as many investors as possible, is a step in the right* direction. As for industrial shares in the private sector, the demand for investment has increased considerably in recent years. The keen support for new share issues floated during the past year or so, and the high prices of the existing good shares, show how funds are being attracted to industry in an increasing measure. But the support itself does not give any guide to judging the extent to which the investment habit has spread among the public.

An article in the December issue of the *Reserve Bank of India Bulletin* concerning share investments contains statistical data showing the spread of the investment habit. The figures have been mainly derived from the All-India Income-Tax Revenue Statistics. They relate to the years between 1955-56 and 1958-59. During these assessment years, the number of shareholders increased as well as the dividend income earned by them. In fact, the number went up from 112,471 in 1955-56 to 141,189 in 1958-59. The dividend income earned also rose, from Rs. 50.50 crores to Rs. 75 crores. The percentage increase in the number of shareholders for 1958-59, compared with 1955-56, was 25.5 and the percentage increase for the dividend income was 48.5. In assessing the extent of the growth in the investment habit, the figures relating to the number of shareholders are more relevant than those concerning the dividend income. Any rise in the latter may be due to more undertakings declaring dividends, or to the existing ones paying bigger dividends. The total number of shareholders, excluding companies and concerns assessable under the company tax laws, was 139,077 in 1958-59, compared with 110,605 in 1955-56. Individual shareholders account for nearly 89 percent of

the total and their number increased from 99,948 in 1955-56 to 125,099 in 1958-59.

The expansion was higher to the extent of 39 percent among salary earners in 1958-59, compared with 1955-56, while the rise was only 21 percent in the case of non-salary earning individuals. Expansion took place under all income brackets, but the number of individual shareholders in the income range from Rs. 25,000 to Rs. 100,000 rose by 40 percent in 1958-59 compared with 1955-56. In the income bracket up to Rs. 25,000, the number of salary earning individuals deriving income from dividends increased by 41 percent, against an increase of 19 percent in the case of non-salary earning individuals. But in the income range Rs. 25,000 to Rs. 100,000 the increase in the case of non-salary earners was higher at 48 percent, against 28 percent in the case of salary earners. The increase in the number of shareholders was more marked for salary earning individuals in the income bracket under Rs. 1 lakh. The number of salary earners who were shareholders in the income bracket under Rs. 1 lakh rose by 39 percent, from 22,848 in 1955-56 to 31,791 in 1958-59, but the increase was only 21 percent from 75,809 to 91,866 for non-salary earners.

There has no doubt been an increase in the investment habit, therefore, but the rate of growth is far too slow for a developing economy such as India's. If savings, especially of the small income earners, are to be drawn into industry in greater measure, it is time thoughts were given to improving the investment climate. An important factor hampering investment at the present time is the whimsical way in which premiums on new share issues are being imposed by the Controller of Capital Issues. Although a company is in the best position to decide whether it should issue its new shares at a premium or not, the claim for Government regulation of the premiums during a period of planned development can be conceded. But it is expected that in fixing the premiums some codified rules will be followed.

Looking at some of the recent rights share issues which have carried a premium, nobody can ever think that the Controller of Capital Issues has abided by any logic in fixing them. They are apparently governed completely by rule-of-thumb principles. Companies paying good dividends and having their shares quoted at substantial premiums in the stock markets have been permitted to issue rights shares at par, while other companies with a similar good performance have been subjected to penal premiums on their rights share issues. The subject of premiums appears to have been lightly treated so far in official quarters, although its importance in corporate matters cannot be exaggerated. It should be borne in mind that investors usually take the risk of putting money into industry with the hope of being rewarded in the form of dividends, growth, or both. As for dividends, the outlook, at least for the time being, has been made uncertain by heavier taxation. The tax deducted from dividends at source has reduced not only the net dividend income; it has also placed difficulties in the way of companies increasing their dividends. Under the circumstances, shareholders are inclined to assess the merit of shares by the growth value they possess rather than by their dividend yields. But the growth prospect has been undermined by the illogical way in which premiums are being fixed on new share issues. As long as the present heavy tax on the issue of bonus shares from capitalised reserves is imposed there is all the more reason why lighter premiums should be fixed for new share issues, if investment is not to be discouraged.

CRITICISMS OF BRITISH POLICY

EVENTS were moving quickly in Britain when the bankers made their annual pronouncements this year. The recession in the motor-car industry had reached a crisis—the two biggest producers, British Motor Corporation and Ford, had announced drastic cuts in their operations—the Government was inundated with demands to relax its policy—and the Chancellor of the Exchequer, Mr. Selwyn Lloyd, had insisted that no relaxation was permissible. More restrained, but for bankers equally interesting, was the first quarterly bulletin of the Bank of England, published according to a recommendation of the Radcliffe Committee, which reported in 1959. As these events occurred in the week or two preceding the start of the new presidency in the United States, it was difficult to discern whether domestic or international issues were predominant in the numerous meetings of British Ministers in the same period. The two elements are not, indeed, clearly distinguishable. The preliminary outline of Britain's Budget, due to be presented in April, was evidently taking shape; and it had to take into account the problems of international payments and liquidity.

Weeks before the Budget each year the estimates of the Government's expenditure in the new fiscal period are published, and in the critical period of January the Chancellor had already intimated that expenditure would be substantially increased. It was the big increase in the estimates for 1960-61, compared with 1959-60, that caused the financial restraints of 1960, which industrialists and traders and (though for rather different reasons) bankers, have criticised in recent months. It was the prospective further increase in the estimates for 1961-62 that caused the Chancellor to utter fears of a revival of inflation. The business community understands the Government's predicament, but it does not necessarily endorse the Government's policy. The more forceful critics assert that the Government and the Bank of England are persisting in a policy that has already demonstrably failed, and that the authorities are not even seeking an alternative policy that may succeed. The orthodox restrictive policy of 1930 was intended to strengthen the external payments account; yet the figures will probably reveal an abnormal deficit on current account, of the order of £150 million. Industry has increased its productive capacity, but demand has not increased correspondingly: there is already surplus capacity, and as development (already planned) continues through 1961, the surplus will become embarrassing unless demand expands considerably. This is certainly not, by orthodox standards, an inflationary situation.

The solution of the problem, as the Government sees it, is to increase exports and to substitute domestic products for imports. In other words, British industry must become more competitive both at home and abroad. But it is caught in a vicious circle. With its resources under-employed it cannot operate economically, and its unit-costs, and therefore its prices, tend to rise. The Government's policy should somehow break this vicious circle. The bankers are concerned rather with the methods of restraint than with the policy itself; though even they have suggested that it is time to consider relaxation. (The Bank of England, by contrast, said in its above-mentioned quarterly bulletin that relaxation of restraints on credit must be approached "with great caution".) The basis of the banks' complaint is that the authorities have not evolved a proper technique for controlling credit as a whole and, therefore, rely too much on controlling bank-credit. It is, indeed, anomalous that institutions such as hire-purchase finance companies should escape formal restraint when a much larger proportion of the resources is used to promote consumption. The Government could retort that the finance companies' activities were indirectly restricted by control of hire-purchase agreements. But this method of economic regulation is now substantially discredited, and even the Government, apparently, will be reluctant to use it in the future.

There is a general feeling among bankers that control of the banks' liquidity is mishandled. The authorities restrict liquidity by varying the banks' resources (both by orthodox indirect means and by direct withdrawal of resources into "special deposits") on the basis of a "liquidity ratio" of 30 percent of liquid assets to deposits. But this figure is arbitrary. In an earlier period, when banking was less sophisticated, that ratio was regarded as necessary as a precaution against untoward events, and it became a convention, which was already outdated when the authorities intimated a few years ago that it must thenceforth be regarded as obligatory. The idea of a variable "liquidity ratio", used ostensibly as a monetary device, is gaining favour in Britain. A correct monetary policy requires, of course, appropriate techniques, but not even the best possible techniques are a substitute for a correct policy. A few years ago the critics of the British Government's underlying policy were a small minority, but the experience of recent years has convinced more and more observers that a fundamental change is needed. The Radcliffe Committee was commended for its refusal to propose dramatic changes when it could not see clearly what changes were required, but its failure to solve the problem, how to promote growth within a framework of monetary stability, was very disappointing. However, that the Committee could offer no solution does not mean that no solution is possible.

It is suggested now, particularly by progressive economists, that the Government should change the order of its priorities. If it focussed its attention on growth (so the argument runs) monetary stability would follow naturally, because more goods would be available to absorb an increase in incomes that will occur anyway. The immediate effect on the balance of payments might be adverse, but the longer-term effects would be favourable, and in the meantime the reserves, and the standby credits of the International Monetary Fund, could be used for their proper purpose. If further reinforcement is needed the Government must economise its total, and particularly its military, spending.

A CEILING ON SUGAR LANDS

IN a statement published on another page of this issue of *Capital*, Mr. F. Edwards, president of the Deccan Sugar Factories Association, has called on the Government of Maharashtra to exclude from the provisions of its Land Ceiling Bill the acreage at present devoted by the industry to the growing of sugar cane. This is a wholly reasonable request. Why the Government of Maharashtra should have included these sugar lands in its new Bill in the first place is something of a mystery; the principle of applying land ceiling legislation to plantations has been rejected by the Planning Commission and abandoned by those south Indian State Governments who have at one time or another contemplated it. The reason why Maharashtra should be the exception is not clear, but what is obvious enough is that such a step is misguided, unjustified, and certainly not in the best interests of the State or the industry. Besides, the precedent created is one which could be copied in future by less responsible governments with incalculable harm to the plantation industry throughout the country.

Unlike the sugar factories in the rest of India, the Deccan mills have adopted the system of growing the major proportion of their cane supplies themselves instead of relying on a multitude of small-scale cultivators. It has worked very well indeed for them, and due to their foresight and effort in clearing thousands of acres of jungle and planting it to cane, they enjoy an assured supply of their raw material at a price which puts them among the most prosperous mills in the country. They are now the proprietors of large and compact holdings employing hundreds of workers and able to take advantage of the services of highly-qualified technical staff. They have, in other words, secured to themselves all the advantages of large-scale cultivation of their raw material, and to their workers the blessings of high wages and good amenities. Now the State Government is proposing to deprive them of these assets, under the provisions of a Bill which otherwise has many excellent features, and leave them, along with other sugar mills in the country, at the mercy of variable cane supplies at unreliable prices. The Maharashtra Government would do well to examine all the implications most carefully before taking such an unwise step.

Apart from benefiting the sugar mills by providing a stable source of cane supply, these cane farms are an example to other local growers, as well as to cultivators throughout the country, of how this crop should be reared so as to get the maximum yield from each acre. Their influence on the quality of local cane has been good; they have been able to improve seed strains, conduct experiments, and disseminate the results. They were termed by the late Rafi Ahmed Kidwai as "community projects in action". Much of the acreage now covered by these farms would have remained jungle but for the efforts of their managements; now they are models of improved agricultural practice producing three or four times the average acreage yield for the entire country. As against the average cane production for the whole of India of under 15 tons an acre, the average figure for these sugar factory farms works out to over 50 tons an acre. This is the kind of progress which ought to be the rule throughout the country, and would seem to be the goal at which the Central Government's agricultural policy is aiming. But unless something is done to alter the proposed law, these farms will soon be broken up into individual holdings, cultivated wastefully and unscientifically and become useless to the Deccan factories as an economic source of raw material.

If the State Government hopes to gain anything from this move, it would be well advised to explain what it is without delay, if only to clear itself of the charge of shortsighted persistence in its own folly. On the face of it, there seems nothing to recommend the action whatever, and by now there can be no claiming that the implications of the Bill have not been fully understoood. To implement it in the full knowledge of all it will mean, will not only be to cause deliberate damage to a valuable industry and produce little benefit of any kind, but also to set a dangerous example which future left-inclined Governments in other States might use to bring pressure on their own plantation industries. This is anything but a healthy precedent to set in the somewhat doubtful name of imposing ceilings on land holdings. The Maharashtra Government would do well to think again.

Current News and Comment

Indian Oxygen Improve

Indian Oxygen shares have been steady around Rs. 41.25 due to two factors. Firstly, their growth prospects are good. Secondly, the Company has produced fair results for the year ended September 1960. It has expanded its production facilities considerably already and proposes to expand them further. In doing so, it enjoys one advantage: it can shift plants from one place to another since it has a number of factories widely scattered over the whole country. During the past year, for instance, production has been increased in Ahmedabad and Madras by transferring one plant from Bombay to Madras and another from Madras to Ahmedabad. It is proposed to increase the capacity of the Bombay factory by importing new plant and equipment. The Burnpur factory is now well equipped to produce and compress argon, high-purity nitrogen and oxygen mixtures. The Khardah factory, near Calcutta, has been equipped for a bigger production of special electrodes.

It is estimated that the Company's expansion during the next three years or so may cost more than Rs. 3.85 crores. When it is completed, there will be a substantial increase in fixed assets. The directors have decided to finance the expansion partly by issuing ordinary rights shares. If the share capital is increased, it will be in better balance with the investment in fixed assets. It has been decided to issue 60,000 ordinary rights shares of Rs. 10 each at a premium of Rs. 8 a share. The British Oxygen Co. Ltd of the U.K. is entitled to 70 percent of the rights shares, but has agreed to take up only 60 percent in order to give Indian investors a chance to obtain more shares. The Indian shareholders are, therefore, being offered 40 percent of the rights shares—in the proportion of two new shares for every five held. The contribution of the British Company to the new share capital will help Indian Oxygen to obtain the foreign exchange necessary for the expansion project.

After providing Rs. 37.11 lakhs (against Rs. 31.69 lakhs) for depreciation, Indian Oxygen's profit has improved from Rs. 87.70 lakhs to Rs. 1.11 crores. The taxable ordinary dividend of 15 percent has been maintained. It is covered more than thrice and offers a yield of 3.7 percent at the present price. It is unfortunate that the dividend has not been increased, but this is perhaps because substantial amounts have been ploughed back into the business for financing expansion. In view of the further expansion proposed during the years ahead, shareholders are advised to "exercise a degree of patience in regard to the expectations of increased returns by way of dividends". The advice is given by the chairman, Sir J. D. K. Brown, in a statement which has been circulated along with the report and accounts. As for the outlook for the near future, it looks as if even after the share capital is increased by the rights issue, Indian Oxygen will have little difficulty in maintaining the dividend, since it is well covered by earnings. Notable allocations from the profit include Rs. 38.86 lakhs (against Rs. 34.63 lakhs) for taxation, Rs. 12 lakhs (against Rs. 9.80 lakhs) for development rebate reserve and Rs. 15,517 (against Rs. 22,695) for general reserve. The carry-forward has increased to Rs. 13,78,431, from Rs. 9,72,583 brought in.

Sales rose by Rs. 91 lakhs to Rs. 6.46 crores. Although practically all the products contributed to the improvement, the rate of increase was particularly high in the case of piped oxygen supplies to the steel works, liquid oxygen explosives used in open-cast mining operations and electrodes. The rise in electrodes sales was due mainly to the increase in production and the introduction of new ranges of special types. The increase in sales of dissolved acetylene was disappointing, partly due to delays in the completion of customers' own development programmes and partly because of increased competition and the use of alternative products. The principal raw material used in the production of dissolved acetylene is calcium carbide. With the commissioning of a plant in south India to supplement the output of another plant working in Calcutta, India has now achieved near self-sufficiency in supplies of calcium carbide, the chairman states. But the high price of the domestic carbide and its lower gas yield are having an adverse effect on the cost of production of dissolved acetylene.

Rights Raise United Breweries

The ordinary shares of United Breweries have improved to Rs. 125 in the Madras stock market this week following the Company's decision to issue 80,000 ordinary shares of Rs. 10 each to the existing shareholders in the proportion of two new shares at par for every three held. It may be observed that the total value of the Company's assets is more than Rs. 1 crore, against an ordinary share capital of Rs. 12 lakhs. The share capital was increased to Rs. 12 lakhs some time ago by issuing ordinary shares to the existing shareholders as part payment of the final dividend for the year ended March 1959. The proceeds of the present issue are to be used for financing the installation of new maltings. The malting project, when completed, will provide the Company with its full requirements of malt, which is now imported. In addition, part of the production will be sold to other consuming industries. The directors are considering measures to extend activities further and also to go in for diversification.

United Breweries has produced excellent results for the year ended March 1960. The profit has increased from Rs. 6.75 lakhs to Rs. 11.03 lakhs, after providing Rs. 2.29 lakhs (against Rs. 2.83 lakhs) for depreciation and Rs. 7 lakhs (against Rs. 9 lakhs) for taxation. The ordinary dividend has been maintained at 60 percent, taxable, including an interim of 25 percent. It is covered more than one-and-a-half times and offers a yield of 4.8 percent at the present price. Development rebate reserve is allocated Rs. 40,000 (against Rs. 99,900) and general reserve gets Rs. 15.10 lakhs (against Rs. 1.20 lakhs). The carry-forward is Rs. 1,24,443, compared with Rs. 27,831 brought in. Sales declined from Rs. 42.72 lakhs to Rs. 39.74 lakhs because production was interrupted. But the directors say that working has improved considerably during the current year, and sales and production are expected to be much higher.

Premier Automobiles Gets D.L.F. Loan

The shares of Premier Automobiles Ltd have received good support in spite of the quiet trend in the stock market. The maintenance of the dividend for the year ended June 1960 at 9 percent, taxable, caused disappointment because the Company's announcement of an increase in turnover from Rs. 17.42 crores to Rs. 20.89 crores raised hopes of a bigger dividend. The shares are supported mainly on their growth prospects. The Company is going ahead with its expansion programme and has now received a loan of $7.2 million (Rs. 3.43 crores) from the U.S. Development Loan Fund for purchasing machinery and equipment for its project to manufacture sheet-metal components of motor-vehicles, such as hood, body panels, side panels and mudguards. All the equipment will be purchased from the United States. This will include heavy power presses, tool room and die maintenance equipment and compressors, which will enable the Company to achieve a balanced output of all motor-vehicle components. Its expansion programme, to be financed with the new loan, is expected to save more than $2 million a year in foreign exchange now spent on importing sheet-metal components. When the sheet-metal plant goes into full production, the indigenous content of the motor-vehicles will increase from 60 percent to 85 percent. The output of lorries and motor-cars will increase from 12,000 to 21,000 units.

As part of the plans for increasing the local production of motor-cars, the Company intends to become self-sufficient in sheet-metal components, which are at present being imported from the Chrysler factory in the U.K. and from Fiat of Italy. Because of the changes in its model designs, Chrysler will discontinue the production of sheet-metal lorry components of the type used by Premier Automobiles. The Company is, therefore, faced with the necessity of either altering its own models for lorries at a considerable cost, or of producing sheet-metal components in its factory. The U.S. loan—one of the biggest given directly to the private sector by the D.L.F.—will enable the Company to undertake this manufacturing programme. At the price of Rs. 159, the shares of Premier Automobiles offer a gross yield of about 5.6 percent.

Mahendra Electricals Offer

Mahendra Electricals Ltd will offer 23,000 equity shares of Rs. 100 each for public subscription on 21st January. (Fuller details concerning the issue are published on a later page.) A sum of Rs. 25 a share is payable on application and Rs. 25 three months after allotment. The Company's authorised capital is Rs. 2 crores, of which Rs. 60 lakhs are to be issued in 60,000 equity shares of Rs. 100 each. The promoters, directors and their friends are taking up shares worth Rs. 18.66 lakhs. Johnson and Phillips Ltd—the well-known British firm of cable manufacturers which is collaborating in the venture—will take shares

worth Rs. 13.34 lakhs. The Industrial Credit and Investment Corporation of India has agreed to take shares worth Rs. 5 lakhs. The balance of 23,000 shares will be offered to the public. The entire issue has been underwritten by the United Commercial Bank. The Company will manufacture V.I.R. and P.V.C. insulated cables and thermoplastic wires. The factory will be situated in Kamla, near Nadiad (Gujarat State). It is stated that I.C.I.C.I. has agreed in principle, subject to the approval of the World Bank, to lend to the Company the equivalent of Rs. 17.5 lakhs in foreign exchange. The Indian organisation of Messrs Johnson and Phillips will be the selling agent.

Central India Spinning Incurs Loss

Shareholders of the Central India Spinning, Weaving and Manufacturing Company are unlikely to get much comfort from the chairman, Mr. N. H. Tata's assurance, contained in his statement issued with the directors' report for the year ended June 1960, that no efforts are being spared to improve the Company's finances. It was in 1955 that the equity holders received their last dividend of Rs. 3 a share. The preference dividend has been in arrears for four years. Against the subscribed capital of Rs. 96.87 lakhs, the loss of Rs. 8.93 lakhs in 1959-60 takes the total loss to a formidable figure of Rs. 90.10 lakhs. The loss of Rs. 8.93 lakhs has been calculated without making any provision for depreciation which, according to the note appended to the annual report, would be Rs. 29.18 lakhs. It is estimated that the Company's depreciation is inadequate to the extent of Rs. 76.33 lakhs. Contingent liability for the dividend on preference shares amounts to Rs. 13 lakhs.

The Company has incurred a loss of Rs. 8.93 lakhs during the year ended June 1960, in spite of an increase in sales of cloth from Rs. 3.11 crores to Rs. 4.11 crores. The losses suffered in 1958-59 and 1957-58 amounted to Rs. 52.69 lakhs and Rs. 42.60 lakhs, respectively. The loss in 1959-60 would have been much higher if credit had not been taken in the profit and loss account for Rs. 3.26 lakhs on account of the sale of scrap and unserviceables. Tata Industries Private Ltd has forgone its minimum commission of Rs. 50,000. It has also decided to forgo the interest of Rs. 30.000 for the year on its loan of Rs. 5 lakhs. Similarly, Tata Sons Private Ltd has forgone the interest of Rs. 1.50 lakhs for the year on its loan of Rs. 25 lakhs. The directors attribute the loss suffered by the Company mainly to unsatisfactory trading conditions during the major part of the year and to the further increase in production costs and heavy interest charges during the period of reorganisation. Although trading conditions improved moderately at the end of 1959, this was offset by increases in the cost of cotton and other consumable materials. The value of new plant and equipment installed during the year amounted to Rs. 7.05 lakhs, and the new construction works cost Rs. 4.23 lakhs. The Company's export sales were satisfactory, accounting for 15 percent of total sales, against 7 percent in the previous year.

Modernising Ahmedabad Advance Mills

In his statement to shareholders of the Ahmedabad Advance Mills issued with the directors' report for the year ended June 1960, Mr. N. H. Tata, chairman, said that the authorities and the consuming public think that extortionate profits alone are responsible for soaring cloth prices. The charge is easily disproved by the study of industrial profits made by the Reserve Bank. The gross profit of the mill industry works out to a mere 3.1 percent of gross sales, which is about the lowest among the list in the Reserve Bank's study. Gross profit as a percentage of the total capital employed comes to around 3.4 percent, against 8 percent for cement, 9.5 percent for sugar and 16.3 percent for mineral oils. These figures are for 1957, but conditions have not improved since then. Mr. Tata analysed the cost to the consumer of a yard of cloth produced by the Ahmedabad Advance Mills in 1959-60. According to him, the approximate cost to the consumer is 130.5nP a yard; of this, cotton accounts for 31nP, manufacturing costs are 53nP and provision for gratuity, bonus, depreciation, development reserve and managing agency commission account for another 7.75nP. Dividends and net surplus carried to general reserve absorb 1.50nP and 2.25nP, respectively. Realisation—the ex-mill rate—is placed at 95.50nP. Excise duty accounts for 17.75nP and distribution charges for 17.25nP. Mr. Tata said that the consumer paid 37 percent more than the ex-mill rate. Out of this, one-half is paid to the Government as excise duty and the other half is paid out as the distribution cost. Furthermore, of the ex-mill price, at least 88 percent is composed of items beyond the control of the industry. From the remaining 12 percent of ostensible profit, the Company has to provide for tax, dividends, depreciation and reserves for future rehabilitation. These figures relate to a mill which has made reasonable profits. One can well imagine the position of marginal units.

Mr. Tata warned that any attempt on the part of the Government to force a reduction in prices, directly or indirectly, without making an effort to increase production is bound to upset the stability of the industry as well as of the economy. The industry cannot raise from its own resources the huge financial outlay required for renovation and modernisation. It is caught in a vicious circle where it is unable to attract new capital because of low profitability and it is unable to improve its profitability unless it secures the funds for modernisation. The situation can be improved only by a constructive and imaginative approach from the Government. Faced with a similar situation, the U.K. Government acted boldly to salvage Lancashire from ruin by offering timely assistance to the mill industry to modernise and rationalise its operations.

Dealing with the affairs of the Ahmedabad Advance Mills, the chairman said that new plant and machinery have been put into commission, so it will help improve the working conditions and enable the Company to produce better quality cloth at lower prices. The mill holds an import licence for a Sanforiser, but it is unable to import the equipment because Messrs. Cluett and Peabody Inc. of New York, who are the licensors of the patent and trade mark, are not willing to accept the new terms and conditions laid down by the Government for the registration in India of the trade mark "Sanforised" and the payment of royalties for the use of this mark. This has been a great disappointment to the Company, since Sanforising fabrics is a matter of compelling necessity for the pattern of production now adopted and for operating the unit more profitably.

Dwarka Paper Mills

Dwarka Paper Mills Ltd is a new Company which has been formed to undertake the manufacture—for the first time in India—of glazed newsprint and mechanical printing paper. It proposes to set up an integrated pulp and paper mill in Betul district, Madhya Pradesh, involving a capital outlay of Rs. 6.5 crores. The scheme has been approved by the Madhya Pradesh Government, and an industrial licence from the Central Government is expected soon. The Company intends to produce 50 tons of glazed newsprint and 50 tons of mechanical printing paper a day. The production capacity of the ground wood plant will be 45 tons and that of the chemical plant 55 tons a day. It is proposed to use the new semi-chemical process for the manufacture of paper, which is completely new to India. Bamboo, salai wood and other soft woods which will be used as basic raw materials are available in plenty in the forest areas adjacent to the factory site. Lime and coal deposits are also easily available in the area.

The total capital requirements of the project, estimated at Rs. 6.5 crores, will be met by raising Rs. 4 crores in the form of share capital and the balance of Rs. 2.5 crores will be obtained by way of loans from the Government-sponsored investment corporations and banks. Since nearly one-third of the machinery will be obtained from indigenous sources, the foreign exchange expenditure is placed at Rs. 3 crores. The Company proposes to secure foreign participation in the capital to the extent of Rs. 1 crore in lieu of part payment for machinery, and the balance of Rs. 2 crores is to be covered through loans from international financial institutions. Negotiations are in progress for securing technical and financial collaboration from well-known firms in the United States. Of the total issued capital of Rs. 4 crores in equity shares of Rs. 10 each, the managing agents, their associates and the collaborators will take up shares worth Rs. 2.5 crores. The balance of Rs. 1.5 crores will be issued to the public when the formalities are completed.

QUALITY

This is the certification mark of the Indian Standards Institution. It is given to many consumer and industrial articles manufactured or processed according to relevant Indian standards.

The ISI mark has many advantages. To the manufacturer it means increased demand through customer satisfaction, and protection from unfair competition. To the consumer it offers an assurance of quality of goods and services purchased, and better value for the money spent. The granting of the licence to use the ISI mark is a trust placed with the manufacturer. ISI maintains a constant vigil to see that it is not misused in any way, for the interest of the consumer has to be safeguarded.

Progress of Henley Cables

In their first annual report, the directors of Henley Cables have indicated satisfactory progress in spite of the difficulties encountered, which, however, are normal for a new industrial enterprise of its kind. The construction of the factory building is progressing well. The structural work on the main factory building, which will cover an area of about 84,000 square feet, is nearing completion. The planning of the office block, canteen and other buildings has been completed. Most of the plant requirements have been finalised and approved by the Import Trade Control authorities and orders have been placed. The shipment of plant is expected to start early this year. Arrangements have been concluded for the installation to proceed as items are received at the site. The Company earned a sum of Rs. 1.03 lakhs by way of interest during the year. After providing for taxation and other expenses, a sum of Rs. 39,813 has been transferred to the balance-sheet as profit. The directors state that the profit has technically accrued because the expenditure incurred on the implementation of the project is to be capitalised. Such expenditure amounts to about Rs. 2.12 lakhs. The Company, it will be recalled, intends to manufacture certain types of rubber and thermoplastic insulated cables to the Henley quality standards and formulae. The Rs. 50-paid share of the Company is unofficially quoted at a premium of about Rs. 45.

Southern Industrial Corporation Issue

The Southern Industrial Corporation Ltd of Madras proposes to enter the market some time next month with a public issue of 93,000 equity shares of Rs. 10 each. The directors and staff of the Company have agreed to take up 3,000 shares, leaving 90,000 shares to be offered to the public. The entire issue has been underwritten. Fresh capital is being raised to finance the Company's expansion programme. It has obtained an industrial licence for manufacturing flexible shaft machines in collaboration with Messrs Otto Suhner of Switzerland. The machinery has been ordered, and is expected in February. The Company is at present manufacturing woodscrews, gate-hooks and eyes, ship chains, tinmen's rivets and machine screws. It is reported to have received a licence for increasing the production capacity of the woodscrew section from 50,000 to 70,000 a month, and the import application for additional machinery is pending with the Government. Machinery has already been installed for the production of Dowell screws and Phillips recessed head-screws and for electro-plating. An application has also been made to permit the expansion of the flexible shaft section by installing machines required for the various types of remote control cables.

Progress of Hindustan Shipyard

The chairman of Hindustan Shipyard Ltd, Mr. G. L. Mehta, addressing the annual general meeting in Bombay recently, said that there has been a "gratifying improvement" in production during 1959-60. The increase has been achieved with virtually the same expenditure on overheads as in the previous year. The delivery of ships has been satisfactory, and the year has been about the best from this point of view. Mr. Mehta said that even on the "crucial test of the number of man-hours spent in processing a ton of steel weight on hull construction, as well as the number of man-hours required in processing a unit of materials other than steel on the outfit," the performance of the yard has been good. Discussing shipowners' complaints about the price charged by the yard for its vessels being too high, Mr. Mehta said the problem is a difficult one and cannot be solved unless the present pricing policy is changed. "If the demand of the shipowners to make available ships built in the yard at the lowest world prices is to be met in future, it would be necessary to ascertain the lowest world price prevalent at any given time." The only way of dealing with this question is to accept the principle that the price payable for vessels built in the yard should bear some relationship to the actual cost incurred. "I believe that a formula based on a percentage of the cost for fixing the price would be preferable to the existing procedure, which has proved to be highly unsatisfactory." Dealing with the capital structure, Mr. Mehta said that the question of releasing the capital invested by the Scindia Steam Navigation Company in the yard is now being considered. Scindias' holdings are worth Rs. 1,04,25,000 out of a total share capital of Rs. 5,59,67,000.

United Commercial Bank

The United Commercial Bank has produced satisfactory results for the year ended December 1960. The net profit has increased from Rs. 60.42 lakhs to Rs. 67.43 lakhs. Bringing in Rs. 1,04,095, there is an available balance of Rs. 68.47 lakhs. The dividend has been increased from 11 percent, taxable, to 12 percent, taxable. It is covered more than twice and offers a yield of 7.2 percent at the present price of Rs. 83.25 a share. Reserve fund is allocated Rs. 30 lakhs (against Rs. 27 lakhs) and bonus to staff gets Rs. 13 lakhs (against Rs. 11 lakhs). The carry-forward is Rs. 1,46,870. The total reserve fund is now Rs. 2.05 crores, against a share capital of Rs. 2 crores.

Bank Profits Rise: Dividends Up

Reports of profits earned by banks in 1960 continue to be encouraging. The profit figures released by the Bank of Baroda, the Bank of India and the Indian Bank show a considerable rise over the previous year's results. While the Indian Bank, Madras, has maintained the dividend, the directors of the Bank of Baroda and the Bank of India have recommended higher dividends. After providing for taxes and including a sum of Rs. 1.03 lakhs brought forward, the net profit of the Bank of Baroda amounts to Rs. 41.69 lakhs which compares with Rs. 31.93 lakhs in 1959, including Rs. 3.04 lakhs brought forward. The interim dividend already paid for the half-year ended 30th June at the rate of 14 percent a year, subject to deduction of tax, absorbs Rs. 8.75 lakhs. The directors have now recommended a final dividend of 20 percent for the half-year ended December, making 17 percent for the whole year, compared with 14 percent in 1959. The final dividend absorbs Rs. 14.74 lakhs, leaving a balance of Rs. 18.19 lakhs to be carried forward, subject to payment of bonus to staff.

After making the usual provisions for contingencies, the Bank of India has reported a profit of Rs. 1.16 crores, including Rs. 12.48 lakhs brought in. This is about Rs. 20.68 lakhs more than in the previous year. The directors have allocated Rs. 25 lakhs for taxation, against Rs. 18 lakhs in 1959. The interim dividend of 7.5 percent absorbs Rs. 22.5 lakhs. The final dividend proposed is 12.5 percent, making 20 percent for the year, against 16 percent in the previous year. The former absorbs Rs. 37.5 lakhs, leaving a sum of Rs. 30.85 lakhs to be carried forward, subject to payment of bonus to staff.

Merging L.I.C. Subsidiaries

Three general insurance companies which are subsidiaries of the Life Insurance Corporation are to be integrated into one unit, it is understood, if the technical and legal difficulties can be overcome. The three Companies are the National Fire, the Oriental Fire and the Asiatic Government Security; the integrated unit will be known as the Oriental Fire and General Insurance Co. Ltd. This is not, of course, a merger in the sense understood in the U.K. The ownership of these Companies has vested in the L.I.C ever since the latter was born. The Companies have functioned as separate entities, but it is now proposed to integrate them in order to reduce management costs and increase their strength. This, it is assumed, will enable the integrated unit to compete more effectively with some British groups operating in India which have become stronger through the merger of the parent companies in the U.K. The latest merger is that of London and Lancashire with Royal Insurance—to form one of the biggest groups in British insurance. It has been suggested in some quarters that the emergence of the British groups does not make much difference to India. The British units operating individually here for many years were in any case larger than the biggest Indian insurers and many times larger than the average Indian company. That did not retard the growth of Indian insurers. On the contrary, according to the figures published in recent *Insurance Year Books*, there has been a steady growth in the business of Indian insurers and an equally steady decline in the business of their foreign counterparts. It has, therefore, been suggested that if the past is any guide, there is not likely to be any great difference in the growth ratio with British operators functioning in India as large groups.

Integrating the L.I.C. subsidiaries marks a new phase in India's general insurance history. The Government is patronising the subsidiaries with 75 percent of its business. This business is bound to grow rapidly in the next few years. The sums insured may prove too large even for the integrated unit and it may need to use the reinsurance facilities now available in the country with a view to reducing the outflow of foreign exchange. The group could arrange, either through the Indian Guarantee—a professional reinsurer in the public sector—or by itself, a system for spreading the business within the country so as to use the capacity of the Indian general insurance market as a whole. In turn, it is hoped that Indian general insurance companies will be influenced by the ideas prevailing in the U.K. and consider mergers themselves.

The Irish Economy

Dublin's decision to seek membership of the General Agreement on Tariffs and Trade marks a further step in Ireland's return to the world trading community, from which the ill-advised policies of Sinn Fein nationalism sought to isolate her. Eire chose to stay out of G.A.T.T., and out of both the European Common Market and the E.F.T.A., in order to continue a suicidal protectionist programme that took the shape of a virtual ban on all but essential imports, thanks to zero import quotas and prohibitive import tariffs, and of a disinclination to accept any foreign (in the event, British) investment. The results were extremely disappointing, exactly from the point of view of passionate Irish nationalism. The economy stagnated, unemployment grew, emigration continued to be the only hope of the sturdy Irish people who began leaving the country faster than the high birth rate could replace them, and meantime the country remained a commercial appanage (a "colony") of the United Kingdom. Three-quarters of Irish exports went to Britain, and half her imports were British manufactures. It is only two years since Dublin decided to break with this self-defeating form of nationalism (which resembled, incidentally, that of another poor Catholic country, Spain), firstly by opening the country up to foreign investment. In those two years, 90 factories have been built in Ireland by foreign capital and, as a result, by the middle of last year the industrial output index at last began to rise. This expansion has lately gathered pace, and from the beginning of this year unemployment began to decline. If this process continues, there is hope that emigration (statistics for which are vague because Irishmen

need no visas to go to Britain and Australia) will be reduced at least to the point where the population can be held stable. In turn, to export her manufactures Ireland needs to follow more rational trade practices, which will be ensured by her membership of G.A.T.T.

Raising Provident Fund Contributions

The committee appointed to consider the enhancement of the provident fund contribution from 6¼ percent to 8⅓ percent recently heard evidence from chambers of commerce in Madras. They pointed to the difficulties in increasing the employers' liability further. The Andhra Chamber of Commerce said that a rise in the rate of employers' contribution would increase production costs which might affect exports adversely, and that workers might be inclined to borrow more in future. Besides, the Bonus Commission might impose new burdens, and any increase in the provident fund contribution would upset the gratuity schemes of many companies. The Chamber urged, therefore, that companies which do not pay dividends, or earn less than 6 percent on capital, should be exempted from the levy. The burden on employers, it was pointed out, will increase in the future as wages are raised by the wage boards for various industries. Employers are now paying for health insurance, so any increase in the provident fund contribution will hit them more than workers. Besides, companies having many units and a large labour force will suffer. The increase in the resources of provident funds may help Governments to siphon off more funds for their loans, but employers will have to find more cash at a time when there is serious credit stringency in the market. It was suggested, therefore, that instead of having piecemeal changes, a welfare cess should be levied on employers to cover the cost of all benefits to labour.

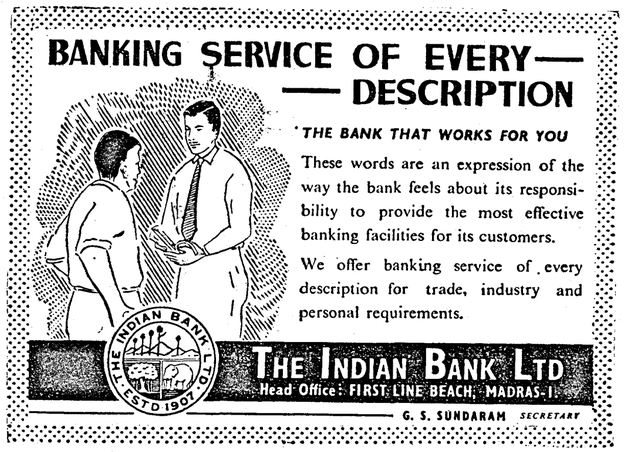
Compensation Claims against Railways

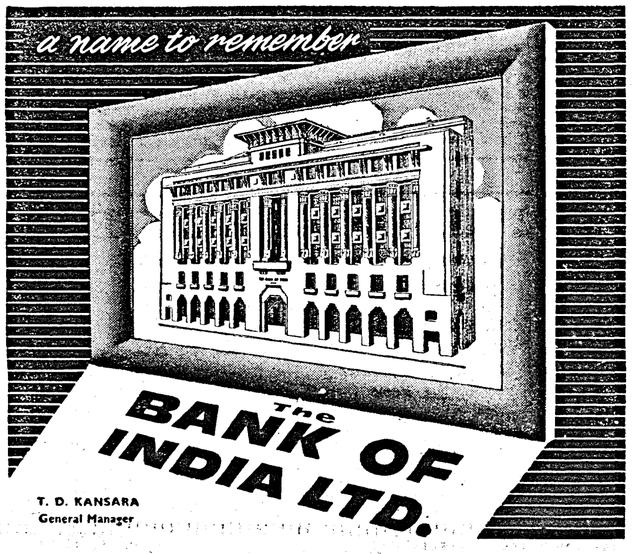
In October, the Central Deputy Minister for Railways, Mr. Shah Nawaz Khan, told the Andhra Chamber of Commerce that the recommendation of the Railway Freight Enquiry Committee on carriers' risk would soon be implemented. The need for going ahead with the reform will be obvious from a judgment of the Allahabad High Court. It allowed a writ petition by the Union of India and representing the North-Eastern Railway challenging the jurisdiction of a small causes court in Gorakhpur to entertain 46 suits in which the respondents claimed compensation for short delivery and/or non-delivery of consignments of U.S. wheat. The High Court held that the Government could not be said to carry on railway business in the sense that an ordinary individual or company would. "There is no doubt that an individual or a corporation who would generally engage in any activity for the purpose of making gain would be presumed to carry on railway business in the narrow sense of trade for gain. But the petitioner was not operating railways in the country with the primary motive of making profit. The motive of the petitioner was to render service to the people of the country. It is quite likely that the petitioner would continue to operate railway service, even though it were running at a loss. That would not be the case with an individual or a corporation. It should also be observed that the entire income derived by the petitioner from the railway service was transferred to the Indian exchequer and spent for the welfare of the people of the country. Accordingly, it could not be said that the petitioner was carrying on business at Gorakhpur within the meaning of that expression in clause (a) of Section 20 of the Civil Procedure Code."

The judgment observed that in enacting the Civil Procedure Code embodying Clause (a) of Section 20 in 1908, the legislature must be presumed to have been aware of the view of the Calcutta High Court in *Daya Narain Tewari* vs. *Secretary of State* that the expression "carries on business" could not be applied to the Government. If the legislature had intended to disagree with that view, it would have either said so or used clearer language. Section 72 of the Indian Railways Act, 1890, stipulated that the responsibility of a railway administration for loss or damage would be that of a bailee. Under the Indian Contract Act, a bailee is bound to take as much care of the goods bailed to him as possible, but otherwise he is not responsible for loss of the things bailed. Under the amendment of the Railway Act in 1949, the position was improved in the sense that there was no more any total repudiation of liability, but compensation was payable only if negligence could be proved. The judgment of the Allahabad High Court in the Gorakhpur case underlines the need for incorporating the recommendations of the Railway Freight Enquiry Committee as promised by Mr. Shah Nawaz Khan. In most other railway administrations in the world as the U.K., U.S.A., Canada and France, the liability is not that of a bailee but of an insurer or common carrier.

Industrial Progress in Andhra

Two Ministers of Andhra Pradesh, during a recent visit to Madras, spoke about the industrial progress in their State, although it is generally known that few major enterprises have been set up there during the second plan period. Projects for paper, aluminium and other mills sponsored by private enterprise in Madras have apparently created much interest. The fertiliser schemes in Visakhapatnam and Kothagudam are considered important, but the Andhra Chamber of Commerce has pointed out that the barytes available in the State can be used for establishing a paint and varnish industry. Besides, the limestone resources can be used for manufacturing calcium carbide. The Ministers spoke about the new development corporation which will advance loans to industries. Industrialists in Andhra Pradesh have asked for a subsidy in electricity charges and a link-up with the Madras grid in order to ensure an adequate supply of power. The Ministers said that outside capital would be encouraged to come to Andhra Pradesh in future. But except for the assurance that the private sector will be encouraged to develop minerals, there is no positive indication that many new industries will be set up in that sector. The State is predominantly agricultural, so factory employment there has hitherto been limited. Its reorganisation has not apparently led to any spurt in industrial activity, although it is believed that capital in Andhra Pradesh is more abundant than in Kerala or Madras.





MANAGED CURRENCY

THE Hon'ble Mr. Buckingham has directed the attention of the Bengal Chamber of Commerce to a "Notice" issued by the Treasury Office of Sibsagar, stating that "in future on receiving payment of Rs. 200 and above, half of the amount will have to be taken in gold and currency notes, and the other half in silver and copper." Government currency notes and gold, he says, are not of the slightest value to the people in Assam, as it is impossible to pay coolies in gold, and such notes as are required can be got by post from Calcutta, and he desires the Chamber to urge the Government of India to substitute rupees for the gold and notes in the Assam Treasuries. The evil complained of is the result of our absurd currency machinery which forces the Exchange Banks to import sovereigns whenever a rise in exchange indicates that the country requires additional rupees. The sovereigns are exchanged for rupees in the Paper Currency Reserve and the stock of rupees is diminished to an extent that leads to attempts to force gold and notes upon people unwilling to use them. This policy defeats its own object, because the notes and sovereigns being supplied in excess of the demand fall in price, and the distaste for sovereigns is enhanced when it is found that they can only be got rid of at a discount. In accordance with the recommendations of the Exchange Banks and Chamber of Commerce, the Government of India have begun, although late in the day, to make every effort to raise the stock of rupees in the Paper Currency Reserve from about 7 crores to 10 or 12 crores, and this is so far satisfactory; but it is not sufficient because the supply of sovereigns and rupees are not yet apportioned by automatic machinery in accordance with the actual requirements of trade.

FROM
CAPITAL
17th January, 1901

A Ditcher's Diary

FREEDOM FROM HUNGER, *Capital's* LEADING ARTICLES have always maintained, is the first goal at which any under-developed country should aim. I made a point, therefore, of finding the time last Saturday for a visit to the National Agricultural Fair on Taratola Road. Following my comments last week, my main interest was, of course, the Russian pavilion. I found it to be most imaginatively decorated; but after going over it carefully, I could see no reason for changing the opinions I expressed here about Russian agriculture. The display of implements was not, apparently, the only object of the organisers; my eye was attracted to numerous posters and leaflets publicising the communist creed. What relevance could these have, I wondered, for an agricultural exhibition, especially when everybody knows that agricultural policy has always been one of communism's most spectacular failures. But I was more amused to see on display a large array of motor-cycles and a passenger car. When I asked the latter's price, I was told that in terms of Indian currency it was Rs. 5,500. When I pointed out that this was plain humbug, and that the price in Russia was many times as much, even when the vehicle was available at all, the attendant gave me a grin a Cheshire cat might have envied and said that he had been told by his officials to quote that price to anybody who asked. I went away reflecting how tiresome the Russians are to insult everybody's intelligence by choosing just the price at which India has decided it is impossible to manufacture a baby car.

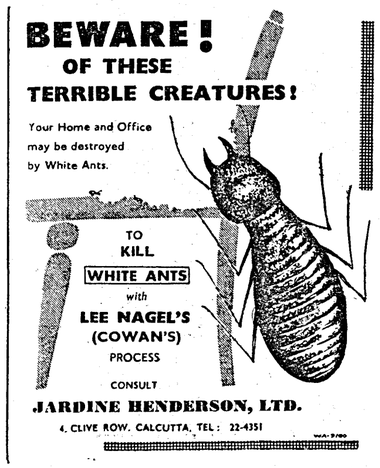
OF BACON—AS HE LOVED TO TITLE HIS ESSAYS—IT is impossible to write in terms of only 400 years ago, although that is when he was born. Described often as the father of modern science, he lived a fuller life than almost anyone I can think of, with only such exceptions as Leonardo da Vinci, Goethe and perhaps Tagore. "I have taken all knowledge to be my province," Bacon wrote to Lord Burleigh in 1592; and he certainly lived up to it as far as it was given to any man to do so. He is most widely remembered for his epigrams, of course; but there are epigrams and epigrams. Most are clever tricks with words and sounds; Bacon's are concentrated wisdom. That as a man of affairs Bacon's record is not consistently edifying seems to me less important than the fact that he was a man of affairs at all, and a successful one at that. Two dichotomies, the deplorable character of which is slowly being recognised in our time, simply did not exist in Bacon's life. Mr. Macmillan would be mad today to select a philosopher-writer-scientist as Lord Chancellor; that is what Bacon was under James I. Sir C. P. Snow recently drew attention to the "iron curtain" between science and the arts in modern times in the western world. It was not ever so; and the time may again have come to dismiss the claim of a man to be considered educated if he knows, or thinks he knows, the sonnets of Shakespeare but has no interest in, let alone knowledge of, how the human body works or what is the function of a carburettor. Francis Bacon felt profoundly the gaps in our mainly literary education; and Cambridge owes as much to him as, say, the Royal Society or the British Association. He had no time for the "departmental" mind; and although the corpus of human knowledge has grown enormously since Bacon's time, there is much to be said for a wider consciousness of the need for "comprehensive minds".

UNITED STATES AMBASSADOR MR. ELLSWORTH Bunker, and I, probably agreed wholeheartedly on two things: the folly of changing U.S. ambassadors whenever a new administration takes over in Washington, and the dangers of the "new colonialism". Our agreement on this last point is clear from his address to the Indo-American Society in Calcutta last Friday. But it seems to me it would be easier to fight the new danger if we were clear in our minds what we mean by colonialism. Mr. Bunker is reported as saying that India and the U.S.A. have both emerged from it. As an example of the old political gambit of sympathy by association, this is quite acceptable, but as a statement of fact it is simply incorrect; the British system here was imperialism, which is a different thing altogether because it excludes that essential of colonialism, the settlement. Colonialism is what exists today on a small scale in Kenya and Algeria; but among its larger-scale classical examples are, of course, the Russian penetration of central Asia and the opening up of the American West. What I feel Americans often tend to overlook when speaking on this subject is that their country owes its existence to colonialism, and that perhaps the chief difference between their own brand of colonisation of their not-so-empty West, and that practised by the Soviet Union in central Asia, is the success they enjoyed in liquidating the native inhabitants. I always feel the U.S.A. is on very shaky ground when condemning colonialism, and that it would be safer for her to concentrate on attacking imperialism, of which the communists are undoubtedly today's most arrogant and successful exponents. What has always puzzled me is that the world's largest imperialist and colonialist power, Soviet Russia, should find it so easy to attack these institutions without being laughed down as a barefaced hypocrite. And one of the reasons is the kind of muddled and emotional manner in which the words are interpreted in different minds. To Indians they mean British imperialism in Asia and western colonialism in Africa—they are simply not connected with Russian doings at all. To the Americans they mean British colonialism in north America and exclude their own 100 years or so of colonising which followed the War of Independence. To the communists they simply mean capitalism, and as we know from Chinese propaganda, that includes India. Even the British have the subject all confused; to them it means a bad conscience because everybody has told them they ought to have one and responsibilities to be discarded as quickly as possible. It is no wonder the Russians are getting away with so much when such simple words mean so many things to so many different people.

WITH GENERAL THIMAYYA'S RETIREMENT IN MAY next, the Indian Army will have snapped one of its last remaining links with pre-independence days. If wild rejoicing greets such events, I have heard none of it. Indeed, I have heard most senior officers speak of the need for preserving old traditions and standards. Some change is inevitable, perhaps desirable too. But India's armed forces are discussed so rarely—one of the less agreeable left-overs of the old days—that most people in the country haven't a clue what they do, how they live or what they want. And Mr. Krishna Menon, so irrepressibly voluble on all subjects unconnected with his portfolio, has made a fetish of secrecy. But General Thimayya's impending retirement must remind many of his offer of resignation some time ago. Mr. Nehru spoke of "temperamental differences" between the Army Chief and the Defence Minister. He must know that few believed that to be the whole truth. Many must remember also the controversy over that American biography of the General. Many questions—some, I suspect, inspired by a motive or two—were asked in Parliament; and Mr. Menon's replies were singularly unrevealing. I hope I am right in thinking that India's political and other institutions are too strong to make military dictatorship anything but a remote possibility; and even at the time of the offer of resignation nobody attributed political ambitions to General Thimayya. But the safety of democracy requires good and well-defined relations between the armed forces and the civil authorities, and not everyone in the country is satisfied that Mr. Menon's ways and manners are consistently conducive to military morale. For one thing, Mr. Menon has been preoccupied with so many other subjects that it may well be wondered whether the Defence Ministry always receives the detailed ministerial attention which it certainly needs.

IT OFTEN COMES AS A SHOCK TO BE REMINDED THAT a younger contemporary has attained mature years; one's own age seems so much the greater by comparison. I must confess that is how I felt when, on opening this year's annual number of *Commerce*, I discovered that our illustrious Bombay counterpart is celebrating its Golden Jubilee. *Capital*, of course, had already reached a vigorous majority when *Commerce* appeared on the scene. Now it has completed 50 years, and congratulations are certainly in order. An article in the Golden Jubilee number tells the story of financial journalism in this country, which *Capital* pioneered, and it is interesting to follow the way in which the field has expanded since our founder, Shirley Tremearne's day. But in substance it has not altered; the theme is still how to secure the maximum rate of economic opportunity and expansion and to protect it from the often misguided, sometimes over-enthusiastic, depredations of government. And in this it has always struck me how closely the views of ourselves and *Commerce* have coincided. We are both, I like to think, in the practical and hard-headed tradition rather than the idealistic and theoretical. Perhaps that is because for the first 25 years of its life, before it moved to Bombay, *Commerce* was published here in Calcutta, and was therefore nurtured on the same air as we breathe ourselves. I feel I must send my very best wishes to *Commerce* on this auspicious occasion, and my thanks for the pleasant things it says about *Capital*, its old competitor, in its commemorative article. I was, however, a little sorry to read that this diary is not "so very sparkling" as it was in Pat Lovett's day. But then, like *Punch*, we have always made something of a virtue of never being what we used to be.

THE DITCHER



THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS.

Consent of the Central Government has been obtained to this issue. A licence has been obtained from the Central Government for the establishment of this New Industrial Undertaking. A copy of the Prospectus together with the documents has been delivered for Registration to the Registrar of Companies, Gujarat. Application will be made to Bombay Stock Exchange for permission to deal in and for an official quotation for the shares of the Company.

The subscription list will open at 10-30 a.m. on 21st January, 1961 and will close on 28th January, 1961 or earlier as soon as subscription approximating to the amount issued hereunder to the public have been received but not earlier than 24th January, 1961.

Applications must be made for 5 shares or multiple thereof, but allotment may be of less than 5 shares.

MAHENDRA ELECTRICALS LIMITED

(Incorporated under the Company's Act, 1956)

AUTHORISED CAPITAL.

(a)	60,000 Equity shares of Rs. 100/- each	Rs. 60,00,000
(b)	25,000 Preference shares of Rs. 100/- each	Rs. 25,00,000
(c)	1,15,000 Unclassified shares of Rs. 100/- each	Rs. 1,15,00,000
		Rs. 2,00,00,000

ISSUED CAPITAL.

	60,000 Equity shares of Rs 100/- each	Rs. 60,00,000

ALREADY SUBSCRIBED :—

(a)	The Promoters, Directors and their friends have agreed to subscribe Equity shares of Rs. 100/- each inclusive of shares subscribed for by the subscribers to the Memorandum and Articles of Association of the Company of the aggregate value of	Rs. 18,66,700
(b)	The Industrial Credit and Investment Corporation of India Ltd., has agreed to subscribe for 5,000 Equity Shares of Rs. 100/- each of the aggregate value of	Rs. 5,00,000
(c)	Reserved for Johnson & Phillips Ltd., London who have agreed to subscribe 13,333 Equity Shares of Rs. 100/- each of the aggregate value of	Rs. 13,33,300
		Rs. 37,00,000

(ii) NOW OFFERED FOR PUBLIC SUBSCRIPTION.

	The balance of 23,000 Equity shares of the nominal value of Rs. 100/- each is now offered at par for public subscription in terms of the Prospectus ...	Rs. 23,00,000

TERMS OF PAYMENT OF ABOVE SHARES.

1. Rs. 25/- per share with application.
2. Rs. 25/- per share on allotment.
3. Balance. Rs 25/- per share not earlier than 3 months after the allotment.
   Rs. 25/- per share not earlier than 6 months after the allotment.

APPLICATION FOR SHARES

All application forms properly completed must be lodged together with amount payable on application before the closing date of the subscription list to the following BANKERS of the Company, viz :—

1. The United Commercial Bank Ltd., Bombay.

Mouje Kamla Mission Road, Near Nadiad, Kaira District.

OBJECTS OF THE COMPANY

The Company was incorporated on 26-11-1960 for the purposes set out in the Memorandum of Association and in particular to carry on the business as manufacturers of V.I.R. and P.V.C. insulated wires and cables.

SCOPE AND PROSPECTS

The manufacture of electric wires and cables is one of the basic essential industries of a country. The phenomenal growth of electric power has created and will create large demands for V.I.R. and P.V.C. insulated wires and cables particularly of good quality which the Company proposes to manufacture in the first stage.

TECHNICAL COLLABORATION

The Company has made arrangements for Technical Collaboration with Johnson & Phillips Ltd., London, founder member of C.M.A. and one of the foremost cable manufacturers of the U.K. They were established 80 years ago and have long experience in the manufacture of almost all kinds of electrical wires and cables and their techniques are recognised as some of the most modern in the U.K. Their wires and cables have been well known in India. Johnson & Phillips have also agreed to invest in Equity Shares a sum of £100,000/- i.e Rs. 13,333 lacs.

LOCATION OF THE FACTORY

After careful investigation, Kamla, Nadiad has been selected for setting up the factory as it offers important facilities.

IMPORT LICENCE

J. C. Patel the promoter of the Company has received Import Licence for Rs. 32.44 lacs for import of capital equipment and application will be made to the Government to amend the licence in favour of the Company.

CAPITAL OUTLAY

Estimated as under :

Cost of land and roads	Rs.	1,35,000
Cost of factory buildings, staff quarters, etc.	Rs.	14,80,000
Cost of imported plant & equipment (f.o.b.)	Rs.	30,83,000
Indigenous equipment, workshop machinery, lighting installation, c.i.f. charges, customs duty, transportation charges, sundries erection, etc.	Rs.	20,75,000
Preliminary expenses, underwriting commission inclusive of brokerage, advertising charges, etc.	Rs.	1,65,000
Working Capital	Rs.	8,12,000
	Rs.	77,50,000

FINANCIAL RESOURCES

The total fund available with the Company will be as follows :

Share-Capital already subscribed	Rs.	38,000
Share-Capital agreed to be subscribed by Directors. Promoters, their friends and associates	Rs.	18,28,700
Share-Capital agreed to be subscribed by Johnson & Phillips Ltd., London	Rs.	13,33,300
Share-Capital agreed to be subscribed by Industrial Credit and Investment Corporation of India Ltd., Bombay	Rs.	5,00,000
Share-Capital to be issued to the public	Rs.	23,00,000
Foreign exchange loan to be obtained from the Industrial Credit and Investment Corporation of India Ltd., Bombay	Rs.	17,50,000
	Rs.	77,50,000

Additional finance required for working capital about the time the factory goes into production and short-fall, if any, on public subscription will be arranged by way of long or short term loans from the Banks and other sources.

PRELIMINARY EXPENSES

The preliminary expenses are estimated at Rs. 23,500/- and Shri Jashbhai C. Patel who is meeting the expenditure will be reimbursed out of capital raised by this issue. The underwriting commission, brokerage and share issue expenses are estimated at Rs. 1,31,500/- and this will be paid out of the capital that is now being raised.

MINIMUM SUBSCRIPTION

The minimum amount which must, in the opinion of the Directors arrived at after due enquiries, be raised for matters specified in Clause 5 Part I of Schedule II of the Companies Act, is Rs. 23,00,000/-.

UNDERWRITING COMMISSION

The total public issue of Rs. 23,00,000/- has been underwritten by the United Commercial Bank Ltd., Bombay and they will be paid @ 1½% by way of underwriting commission. In the opinion of the Directors the resources of the said underwriters are sufficient to discharge the underwriting obligations.

BROKERAGE

Brokerage at the rate of 1% is payable to certified Brokers and Bankers on all allotments made in respect of applications received from them bearing their stamps.

FOREIGN EXCHANGE LOAN

The Industrial Credit and Investment Corporation of India Ltd., Bombay have agreed in principle subject to the approval of the International Bank for Reconstruction and Development to lend to the Company an amount in foreign exchange currencies equivalent to U.S. $370,000 (about Rs. 17.5 lacs) to pay for the cost of imported machinery and capital equipment for the proposed factory. The loan will bear an interest at 5½% per annum and is repayable in 14 half yearly instalments commencing from October 1963 and ending in April 1970. Besides, a commitment charge of 1% per annum on the amount of the loan undrawn from time to time and a lump sum examination fee of 1% on the amount of the loan are also payable by the Company. The loan will be secured by first legal mortgage of the company's present and future assets subject to the hypothecation of movables to secure bank borrowings for working capital.

ESTIMATE OF PROFITS

On the basis of existing price and after allowing for cost, overheads, depreciation and other foreseeable contingencies, in so far these items can be at present estimated the Directors are of the opinion that in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividends on the issued equity shares. The Company will get the benefit of Development Rebate and Exemption from Income-tax under Section 15(c) of the Income-tax Act.

MANAGING AGENTS

Subject to the approval of the Government of India the Company will be under the Management of Messrs. Jashbhai C. Patel & Co. The Company's Articles of Association provide for the appointment of Messrs. Jashbhai C. Patel & Co. as Managing Agents on the prescribed scale of commission subject to a minimum of Rs. 50,000/- per annum.

PAYMENT TO PROMOTERS

No payment is to be made to Jashbhai C. Patel the Promoter of the Company except for reimbursement of actual preliminary expenses incurred by him.

APPOINTMENT OF SELLING AGENTS

It is proposed to appoint Indian Organisation of Johnson & Phillips Ltd., London as the sole selling agents for India of the Rubber and P.V.C. insulated wire and cable products of the Company for a period of 5 years. The Indian organisation of Johnson & Phillips Ltd., London has been established in this country for the last 30 years and they enjoy good reputation for the types of products the Company will manufacture.

INSPECTION OF DOCUMENTS

Copies of porspectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during business hours.

APPLICATION FORMS

Copies of the application forms may be obtained from the Registered Office of the Company, the Company's Bankers, the Underwriters and Brokers whose names have been mentioned in the Prospectus.

Money

THE CALCUTTA MONEY MARKET

ADVANCES RISE STEEPLY

Wednesday, 18th January.

FOR the second week in succession, there has been a sharp rise in advances in the Calcutta money market and it would appear that the seasonal trend is now approaching its peak. All the main sources of demand, including the jute and sugar mills, the cotton and engineering industries, and call for accommodation against grains and seeds storage, have increased their requirements. The interbank market remains very tight, and the call rate is 5½ percent, despite the benefit which has been enjoyed due to the relaxation in the Reserve Bank's deposit impounding scheme.

The exchange market has been less active during the past week, and both gunny and tea bills have been scarcer. Remittance demand has been dull. On the London money market, the pound has ruled generally steady and what changes have taken place, compared with the previous week's level, have been purely fractional.

BULLION WAS STEADIER DURING THE PAST WEEK on fresh support. Silver rose from the previous week's level of Rs. 232.75 to Rs. 236.25, quoted today for ready delivery. The rate for forward delivery was Rs. 233.75. The London and New York prices were 79⅝d and 91.375 cents.

In spite of a rise in silver, gold was quiet and the price fell from Rs 139 to Rs. 138.50. The sovereign at Rs. 91.62 showed a decline of 12nP.

DURING THE WEEK ENDED 13TH JANUARY, Government of India Treasury bills for Rs. 236,16,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 17th January. The total amount offered was Rs 2,30,00,000. Tenders at Rs. 99.355 were allotted approximately 87 percent, the average rate of acceptance being Rs. 2.580 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Bombay, Kanpur, Nagpur, Madras and New Delhi up to the close of business on 23rd January and at Calcutta up to 11 a.m. on 24th January.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 18th January to 21st January at Rs. 99.371 percent, subject to the condition that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 11th January to 14th January.

RISES OF RS. 19.47 CRORES TO RS. 1,920.72 CRORES in active notes, and of Rs. 14.01 crores to Rs. 1,931.65 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 13th January, 1961. The currency expansion was adjusted by increasing the rupee securities of the paper currency reserve by Rs. 14.98 crores to Rs. 1,562.04 crores. This was done partly by transferring securities to the Issue Department from the Banking Department. In the latter Department, investments were Rs. 9.62 crores lower at Rs. 130.74 crores. Deposits of the Central Government declined by Rs. 8.67 crores to Rs. 51.04 crores, while other Government accounts were Rs. 11.42 crores higher at Rs. 18.42 crores. Balances of commercial banks at Rs. 78.61 crores showed a decline of Rs. 6.06 crores. Balances held abroad again fell by Rs. 14 lakhs to Rs. 19.47 crores. Other loans and advances declined from Rs. 151.46 crores to Rs. 150.79 crores, of which advances to scheduled banks against usance bills amounted to Rs. 14.59 crores (Rs. 13.83 crores). Ways and means advances stood at Rs. 45.08 crores, against Rs. 43 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 6th January, 1961, shows Demand and Time liabilities at Rs. 792.79 crores (Rs. 14.94 crores on account of borrowings from banks) and Rs 1,115.74 crores (Rs. 10.28 crores), compared with Rs. 794.65 crores (Rs. 13.54 crores) and Rs. 1,124.56 crores (Rs. 13.77 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 4.84 crores and Rs. 28.22 crores to Rs. 45.06 crores and Rs. 83.93 crores, respectively. There is a rise of Rs. 9.55 crores to Rs. 643.31 crores in investments. Advances and bills discounted at Rs. 1,199.85 crores show a rise of Rs. 19.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.8 percent and 62.9 percent, against 8.4 percent and 61.5 percent.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 6th January, 1961, shows a drop of Rs. 1.20 crores to Rs. 572.08 crores in investments. Investments in Government securities are up by Rs. 10.23 crores to Rs. 307.55 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 10.19 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 7.68 crores to Rs. 239.80 crores. Cash and balances are, in consequence, shown at Rs. 22.30 crores, or Rs. 27.07 crores less.

THE FOLLOWING IS A STATEMENT OF THE CASH BALANCES of the Central Government on the last day of October 1960 :

		Rs.
(1)	At the Reserve Bank of India in India	67,44,24,000
(2)	At treasuries in India ...	47,91,000
(3)	In England (Sterling converted at 18d the rupee) ...	1,39,81,000
	Total ...	69,31,96,000

BACKGROUND TO RISE IN LONDON PRICE OF GOLD

LARGE PRIVATE DEMAND

THE year 1960 saw London consolidate its position as the most active and best-supplied gold market in the world, says the annual circular of Mocatta and Goldsmid, bullion brokers and dealers in the City of London, now a subsidiary of Hambros Bank Ltd. The structure of the market, says the circular, was found to be proof against the exceptionally violent strains to which it was subjected. Dealing with the sudden activity in gold and the sharp increase in price during October, it concludes that all gold sold in London since 19th October has gone into hoard, since central banks are precluded by the rules of the International Monetary Fund from buying at more than $35.33. The demand for small bars has been large enough to strain the capacity of London refiners and there has been a considerable increase in the demand for sovereigns.

At the beginning of the year, sovereigns commanded a price of $8.30 a piece and in May, they could be bought for $8.05. Stimulated by Belgian demands for Queen Elizabeth sovereigns due to troubles in the Congo, the price gradually climbed back to $8.30 before it was virtually suspended by the violent fluctuations of bar gold. In November, dealings were resumed at $8.45 and by mid-December, the price had risen to $8.70. Reviewing the events of the year, Mocatta and Goldsmid observe that from the last week in June onwards, the market could smell thunder in the air. The failure of the Summit Conference, followed by troubles in the Congo, gave rise to considerable demands which, in spite of continuing Russian sales, pushed the price of gold up to $35.14. In August, some strong buying by continental central banks was piled on top of a persistent private demand from Belgium. Russian sales were easily absorbed and, with a greatly increased turnover, the dollar price of gold, at $35.16, stood higher than at any time since the market was reopened in 1954.

Central Banks Buy in London

Central banks evidently preferred to buy in London at around 250s rather than in New York at $35.08¾. In September, with the dollar price as high as $35.25¼ on 27th and 28th, it would actually have paid them to buy in New York and ship to Europe at their own expense, but they still did not do so. In the meantime, a bomb explosion in Amman and some anxiety about Laos in the Far East had further disturbed a nervous market, which was not wholly convinced by the denial during the annual meeting of the International Monetary Fund in Washington at the end of September that an increase in the price of gold was contemplated The dollar price did decline to $35.22 on 1st October to $35.20½ on 5th October, but Russian sales had ceased and the improving prospects of a victory for the Democrats in the U.S. Presidential election were held to justify a bullish view of gold.

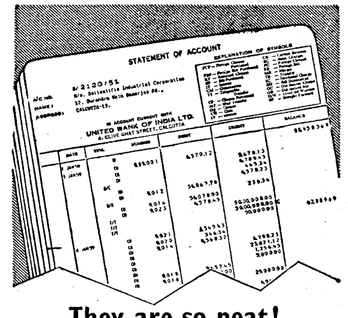
Too many people not usually interested in the price were saying that, sooner or later, it was bound to go up, says the circular. In mid-October, the market began to move more jerkily, with advances on 18th of 3 cents at the fixing and 10 cents more later in the day. Between morning and evening on 19th, there was a further rise from $35.39 to $35.60, and on 20th, the price ranged from $36.60 to more than $40. These, says the firm, were not nominal but effective prices, at which substantial business was done. Canada was prominent, no doubt partly for account of U.S. residents.

In the following week, the sterling price rose to 270s, the highest official price of the year in London, equivalent to $39. But an executive Director of the Bank of England was already then paying an unobtrusive visit to Washington and, by the end of the month, not only had the dollar price relapsed to $36, but the market had somehow recovered its poise. In November, demand began to fall away even before the result of the U.S. Presidential election was known and, in apparent contradiction to previous anticipations, it went on falling afterwards. A balance was reached somewhere between $35.60 and $35.80, and in December, the price still drifted downwards, with occasional but only moderate reactions.

Dull Year for Silver

Mocatta and Goldsmid, who have been silver brokers to the Bank of England, say the silver market has had a dull year. But although the market remains very quiet, there is a steady undertone which indicates that those who take a longer view are inclined to foresee a deficiency of silver which will make itself increasingly felt in the quotations of the London market. Demand has again exceeded the current supply of newly-mined silver, with the result that the free stocks held by the U.S. Treasury fell to a level at which they would seem to be no more than sufficient for about three years to come. Under the existing law, the U.S. Treasury might even cease to sell silver to U.S. industry without waiting for its free stocks to be exhausted.

In the last days of December, forward silver was quoted at a premium of ¼d over spot, which was the first time a premium has been established since the war. Throughout the year, it was noticeable that much more forward silver was being bought for domestic consumers, and in the second half of the year, there was forward buying which could be interpreted as a currency hedge. At slightly over 16 million ounces, the domestic turnover was a little smaller than in 1959 as a result of some slowing down of British industry in the second half of the year; but it was still substantially greater than in 1958. The demand for coinage has been sustained, chiefly by the French Mint but also by Vienna, Rome and Lisbon. The supply from recoinage in the U.K. might have amounted to some 5 million ounces if the greater part had not been retained by the Royal Mint to meet foreign orders. But in the last few months of the year, small amounts were made available to the market. Imports from the western hemisphere, at over 8 million ounces (or more than twice those of 1959), reflected this deficiency in official supplies.



They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

DECCAN SUGAR FACTORIES ASSOCIATION

PRESIDENT ATTACKS MAHARASHTRA LAND CEILING BILL

LOSS OF MILLS' CANE FARMS WILL MEAN HIGHER COSTS AND PRICES

The President of the Deccan Sugar Factories Association, Mr. F. Edwards, has the following statement to make on the Maharashtra Government's intention to include land under sugarcane in the provisions of its proposed Land Ceilings Bill:

The proposed Land Ceilings Bill of the Government of Maharashtra is a very risky and Dangerous move! No right-thinking business man or industrialist could possibly support such a retrograde step. The very basis of the success of the Sugar industry in Maharashtra is being undermined, and the benefit, experience and efficiency built up over a period of 40 years is being thrown to the winds. Maharashtra is the most successful Sugar producing area in India and this success is only due to the pioneering work and perseverance put in by the old established joint stock Companies. Their experience has proved that only by having the growth of its Sugar Cane under its own complete control can a factory produce quality Sugar at low prices. The profits made by such factories are not due to high selling prices, or profiteering, because the selling rates are fixed by the State Government! They are due solely to lower costs of growing cane and manufacturing. Looking to the yields of cane per acre and quantity of Sugar produced per acre of cane, it is completely beyond all comprehension why there should be State Government interference, when the Central Government are urging higher production, at lower costs, to enable the country to participate in world trading and earn valuable foreign exchange.

Maharashtra produces results equal to the averages in other well known Sugar producing countries of the world. Take Java, for example, and study the following figures:

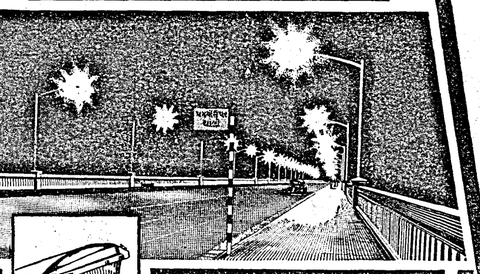
	Yield of Cane in Tons per acre	Average percentage recovery of Sugar from Cane
Java ...	56.20	11.49%
Maharashtra	53.25	11.80%
All India ...	14.70	9.84%

Political Move.

Compare Maharashtra's results with the averages throughout India, and ask yourselves the question "Why should the State Government attempt to disturb such progress in Maharashtra, when the rest of the country's Sugar industry is obviously so sick and ailing"? The answer cannot possibly be that it is in the interests of the Nation or even in the interests of the State. There are abundant facts to prove that. It is therefore astounding that the Central Government should allow such legislation to be brought forward. The only obvious answer to the question is that the move is entirely political and is an effort to attain some ideological goal at any and all costs. The intention to apply Ceilings to Sugar Cane farms is all the more astonishing when one recalls the utterances of Ministers and the Planning Commission in recent times and the steps that have been taken in other States to exclude industrial undertakings from their Land Ceiling Bills. Surely it can't be that the Governments of Andhra, Kerala, Madras, etc. are more enlightened than that of Maharashtra! In the Madras Bill provision is made for the setting up of a Sugar Cane Board with a High Court Judge as Chairman to determine whether Sugar Cane farms shall continue to be run by the factories which have been cultivating them hitherto. This is fair enough as it is expected the decisions will depend on facts and merit but the Maharashtra Government has set itself up as the sole judge as to what it should do with the Surplus lands which become vested in it. And if any difficulties should arise in administering the bill when it is enacted, the Government has taken the power to make such adjustments or take such decisions as it may consider necessary to meet the case. This is a bad feature of the bill and should be opposed rigorously. Another possibility is that some of the Sugar factories in the country may find themselves deprived of their farms while others will not and this discriminatory treatment should not be allowed by the Central Government.

The whole Bill is another example of unnecessary political interference in industry and commerce and the effect, if the bill is enacted in its present form, must inevitably be detrimental to the progress of the Sugar industry in the Deccan. It is to be hoped that the Government even at this late stage will indulge in some re-thinking and come to the right conclusion that it would be infinitely wiser to exclude well run Sugar Cane farms attached to factories, from the provisions of the bill.

NEHRU BRIDGE
AT AHMEDABAD



LIGHTING BY
PHILIPS

For India's latest and widest road bridge over the Sabarmati river at Ahmedabad, the authorities would accept nothing but the best... and, therefore, they specified lighting by Philips.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

PHILIPS **PHILIPS** *quality lighting for ultimate economy*

Stocks and Shares

MARKET SENTIMENT IMPROVES IN SYMPATHY WITH DALAL STREET TRENDS

ABOLITION OF DEPOSIT IMPOUNDING SCHEME WELCOMED

Wednesday Evening.

THE recovery movement which began in the Calcutta stock market a few days ago has continued with fresh vigour during the past week. Indian Irons touched a high of Rs. 23.60 yesterday. Although settlement considerations have brought down the price to Rs. 23.42 on profit-taking today, it still compares very well with the rate of Rs. 22.97 recorded at the last clearing a fortnight ago. Steel shares have led the rise, but other speculatives have also benefited. The Bombay market has been particularly strong; earlier fears that payment difficulties might arise there have passed, and Lyons Range has responded in sympathy.

Modest encouragement has been derived from the fact that, at long last, the Reserve Bank has seen its way to abolishing the scheme for impounding bank deposits. But the market realises that, for itself, the significance of the move is psychological rather than practical. It is estimated that, as a result of the abolition, the banks' resources will be replenished by about Rs. 18 crores. The rise in scheduled banks' advances in a single week—the one ended 6th January, 1961—was over Rs. 19 crores. The inference is clear, that conditions in the money market are going to remain extremely tight, and not much of the new resources will be available for investment in stocks and shares.

Nevertheless, Lyons Range is gratified that the Reserve Bank is not wholly oblivious of the need to liberalise the supply of bank credit. Vague hopes are being expressed that further measures may be taken in due course, although what they will be, nobody can say. Suggestions have been aired that the facilities for rediscounting usance bills should be liberalised and made cheaper. Some say that the whole move towards what is in effect a three-tiered Bank rate structure, which was inaugurated last October, should be suspended. But others feel that this is unlikely to be done; the central banking authorities may ask when is the dear money policy to be enforced, if not during the busy season?

The meeting of the National Development Council in New Delhi has been followed with keen interest in the stock market. But, at the end, only perplexity remains about what exactly it is that the Council has done. The impression is that the members of the Council themselves probably do not know either. The decision to raise the outlay target for the public sector under the third plan could be interpreted bearishly, in so far as it might imply heavier taxation. But Lyons Range has not interpreted it in this way. It feels that the size of the plan has been increased only on paper, and only to calm the frayed tempers of various State Chief Ministers who were angry that their plans had been cut. The latest changes in the targets for outlay and resources may not, in this context, matter much. The ultimate size and shape of the plan will be determined by the amount of foreign aid India can get. There is, however, an undercurrent of anxiety that the States might ordain a stiff increase in taxation shortly, just to show the Planning Commission that they are serious about getting their bigger plans sanctioned. Meanwhile, as for Central taxation, moderate optimism continues. The general view is that the coming Budget cannot fail to bring new levies, but they will not be harsh.

To give some idea of the improvement which has taken place, the following table compares prices at the last settlemcnt with those prevailing at the clearing today:

	18th January, 1961 Rs.	4th January, 1961 Rs.
Indian Iron	23.42	22.97
Burrakur Coal	18.75	18.62
Howrah Jute	21.12	20.12
National Jute	21.00	22.62
Indian Copper	4.62	4.45
Textile Machinery	22.75	22.40
Dunlop Rubber	41.00	41.12
Hindustan Motors	18.81	18.37
Indian Aluminium	30.00	29.81
Indian Cable	31.94	31.31
Rohtas Industries	20.06	20.37
Orient Paper	39.95	39.80
Shree Gopal Paper	27.56	27.87

Engineerings as a whole are steadier in sympathy with Indian Iron, but the notable feature among them have been Jay Engineering, which have risen on the publication of good working results.

Coals have been quietly steady. Investors are cheered by the more definite indications now forthcoming that the World Bank is considering proposals to help the industry. It is expected that the better-grade collieries will be the chief beneficiaries if the proposals materialise, since their production needs to be increased most in order to overcome the shortage of good quality coal. The increase in production brought about with the help of World Bank money, it is thought, will enable many producers to soften the impact of rising costs. In the longer run, the burden of servicing foreign loans might even persuade the Government to adopt a more liberal pricing policy for the industry.

Jute shares are stagnating, because fibre has led the rise in the jute and gunny markets. The latter are experiencing a spectacular boom, but that is due to the increase in raw material costs rather than to any rise in demand. On the contrary, the U.S. burlap consumption and stock figures for December have been discouraging. They show that the demand for burlap has declined in India's most important market because prices are too high.

Miscellaneous industrials have moved up in sympathy with the general trend of the market. Interested support has lifted National Pipe and National Insulated Cable, while Angelo Brothers are firm on expectations of a bigger dividend. Mild disappointment has been expressed over the Indian Oxygen dividend; the shares are steady although some investors think that the distribution should have been bigger in order partially to recompense for the heavy premium which is being charged on the rights issue.

Tea shares are quiet. The latest figures confirm that the north Indian gardens produced only 527.03

million lbs of tea last year, against 561.23 million lbs in 1959.

There has been little interest in gilt-edged, apart from the small official enquiry for loans which are due to mature in the near future.

Punjab Minerals

The working results of the Punjab Minerals Co. Ltd, after providing Rs. 41 for depreciation (against Rs. 44), show a loss of Rs. 4,741 for the year ended 30th September, 1960, against a loss of Rs. 4,533 in the previous year. The dividend has again been passed over. After making the necessary adjustments, a debit balance of Rs. 1.40 lakhs has been carried forward. The balance-sheet shows that fixed assets amount to Rs. 1.57 lakhs.

Bombay Market

CHEERFUL MOOD IMPROVES PRICES AND TURNOVER

STEEL SHARES LEAD THE RALLY

Wednesday Evening.

AFTER earlier slow trading, the Bombay stock market closed the past week in a cheerful mood. Turnover increased on a broad front at rising prices. The technical position is believed to have improved a great deal and the payments difficulties which arose on account of a defaulting member have now been overcome. The deliberations of the National Development Council were interpreted bullishly in the sense that no concrete proposals for further taxation have been formulated.

Steel shares were prominent on replacement buying in view of the prospect for increased production. Tata Steel soared to Rs. 142.75 and Indian Iron were quoted higher up to Rs. 23.52. Engineering shares gained in sympathy with steel shares, and Premier Construction came to hand at Rs. 282. Tata Locomotive improved to Rs. 293.5, as did Alcock Ashdown to Rs. 262. In motor shares, Premier Automobile were wanted up to Rs. 164 on reports that the Company has obtained finance from the Development Loan Fund. Hindustan Motors were dealt in at Rs. 19.52.

There was a rally in cotton mill shares on favourable corporate rumours. The Cotton Textile Consultative Board has recommended an increase in production through third-shift working. The Textile Commissioner has taken steps to increase the supplies of raw cotton to mills. Bombay Dyeing recovered to Rs. 60.40, as did Century to Rs. 466. Kohinoor improved to Rs. 272 on knowledgeable buying and Svadeshi were in demand up to Rs. 234 on good working reports. Simplex were transacted at Rs. 166 and India United Ordinaries were dealt in at Rs. 14.12. Apollo were bought up to Rs. 1.46, but Central India reacted to Rs. 97.50 on showing a loss for 1959-60.

Prices of miscellaneous shares moved higher in pattern with the general trend. Among cement shares, Associated Cement improved to Rs. 150.50 and Digvijay changed hands at Rs. 150. Sugar shares were traded cautiously because of fears concerning the Maharashtra Land Ceiling Bill. Belapur were available at Rs. 312 and Phalton declined to Rs. 155.50 on paying a smaller dividend of Rs. 12, taxable, for 1959-60, against Rs. 13.50, taxable, in the previous year. Steamship company shares were steadier, and Scindia Steam gained to Rs. 14.80 on short-covering induced by rumours that the labour troubles were over. The outlook for freight was also assessed more optimistically on talk that negotiations were proceeding between Indian companies and other conference lines on the India-U.K.-Continent trade for pooling freight earnings. Great Eastern Shipping were quoted at Rs. 14.88. Mining shares were quietly steady, and Shivrajpur Syndicate were indicated at Rs. 72. National Rayon rose smartly to Rs. 486 on rumours of a further capital issue. Bombay Burmah recovered to Rs. 554. Chemical shares were steady, and Tata Chemical were in demand up to Rs. 17.44. Indian Dyestuff were quoted at Rs. 445. Synthetics and Chemicals which were newly listed were bought up to Rs. 108. Ceat Tyre were done at Rs. 215 and Polychem came to hand at Rs. 223. Orissa Cement declined to Rs. 13.80 and Sirpur Paper to Rs. 16.40 on forced selling of these shares belonging to a defaulting member.

Enquiry broadened in bank shares on improved outlook. Central Bank rose to Rs. 56.50 on rumours of higher dividends and a bonus share issue, but no confirmation about them was available. Bank of India were dealt in at Rs. 114. Insurance shares were quiet, and New India Assurance were available at Rs. 53.80. Vulcan came to hand at Rs. 16.80.

Electric supply company shares were steady, and business passed in Ahmedabad. Electric at Rs. 84. Tata Hydro were transacted at Rs. 100.50 and Bombay Suburban were placed at Rs. 83.50.

Madras Market

TRADING IMPROVES AFTER CHEERLESS START

HOPES OF INCREASED TEXTILE PRODUCTION

Wednesday Evening.

THE Madras stock market showed mixed trends during the past week. Trading was subdued earlier and buyers were conspicuous by their absence due to various uncertainties. Towards the close, sentiment improved on higher advices from the Calcutta and Bombay stock markets. Steadiness was promoted by the removal of the Reserve Bank's deposit impounding scheme. Hopes of an increased production target for the cotton mill industry also encouraged operators.

Business in Government securities was limited and interest was mainly concentrated on short and medium-dated stocks. Public utilities were bought cautiously. Sugar shares were hesitant on fears of excessive supplies. In planting, tea shares lacked interest due to increased competition in foreign markets. Coffee shares were not fancied in view of the possibility of excessive supplies. Rubber shares were selectively bought on increased demand for the commodity.

In banks, business passed in Indian at Rs. 169 and in Indian Overseas at Rs. 177. In public utilities, Cochin came to hand at Rs. 10.20 and South Madras were transacted up to Rs. 9.90. Vellore were dealt in at Rs. 12.90 and West Coast were transacted up to Rs. 13.10.

In sugar shares, Deccan were placed at Rs. 14.80 and E.I.D. were taken up to Rs. 39. The issue of rights shares helped United Breweries to improve up to Rs. 125 and Travancore were transacted at Rs. 10.40; K.C.P. were bought up to Rs. 26 and

BOEING 707 Jet INTERCONTINENTAL

Lufthansa, German Airlines have pleasure in announcing the introduction of their big Jets to the Far-Eastern route and extention of this route to Hong Kong and Tokyo from *24th January*.

Mysore were placed at Rs. 60.50. Cauvery were done up to Rs. 138 on paying a taxable dividend of 6 percent.

In plantings, Blue Mountain were transacted at Rs. 3.88 and Cochin Malabar were done up to Rs. 6.95. Consolidated Coffee were dealt in at Rs. 21.20 and Ouchterlony were quoted at Rs. 4.50. Periakaramalai changed hands at Rs. 3.35 and Chembra were bought up to Rs. 5.48. Devon were in demand up to Rs. 14.37 and Kalasa were done at Rs. 4.55. Midland were transacted at Rs. 11.40 and Mysore Coffee met with interest up to Rs. 5.34. Nilgiri were done at Rs. 7.90 and Nonsuch at Rs. 26.25. Peermade met with support up to Rs. 12.50 and Rajagiri were placed at Rs. 19.05.

In textile shares, Lakshmi were indicated at Rs. 148 and Madura at Rs. 37. Travancore Rayon were bought up to Rs. 32.70 and South India Viscose changed hands at Rs. 146. Bangalore Woollen were sold down to Rs. 195, as were Buckingham to Rs. 196.50. Kothari were quoted at Rs. 11.85 and K. Rajendra were dealt in up to Rs. 68. Radhakrishna were offered at Rs. 29.12 and Ramakrishna were bought up to Rs. 224.

Miscellaneous shares were bought selectively, and Aluminium Industries came to hand at Rs. 21.95. India Cement gained at Rs. 5.93 and Enfield were quoted at Rs. 15.50; F.A.C.T. were in demand up to Rs. 9.28 and Ashok Leyland were steady at Rs. 7.95. Kirloskar Electric were placed at Rs. 13.10 and K.I.C. were done up to Rs. 12.87. Spencer were transacted at Rs. 22.50, on paying a taxable final dividend of 12 percent. Mettur Chemical were bought up to Rs. 12.40 on declaring a taxable interim dividend of 6¼ percent. Textool were steady at Rs. 173 and Tube Investment were in demand up to Rs. 291. General Papers were dealt in up to Rs. 11.12 and Aspinwall were quoted at Rs. 6.95.

STOCK MARKET RECOVERS AFTER EARLY DECLINE

U.S. DEMAND DEVELOPS FOR GOLD SHARES

London, 18th January.

IN spite of an almost continuous stream of adverse news, the stock market gave a satisfactory performance during the past week. At first, prices eased, but a recovery was staged later and the falls were fully recovered. The best feature was provided by gold shares. They first advanced under the lead of uranium producers, and then made further substantial headway following the order forbidding U.S. residents to hold gold overseas. This was interpreted in some quarters as a sign of the weakness of the dollar, and substantial buying of gold shares was reported from the U.S.A. As U.S. citizens were banned from holding gold, they were apparently turning to gold shares. Industrials were disturbed early in the week by the further production cuts announced by Ford Motors, and by the Chancellor of the Exchequer's warning on inflation. There was also news of short-time working in certain sections of the steel industry. Prices consequently tended to drift downwards, but staged a sharp recovery following the Chancellor of the Exchequer's comments before T.U.C. leaders about hire-purchase restrictions. After a slight pause, industrials again went ahead in response to selective buying encouraged by the December trade figures, which were a little better than expected, and by an optimistic statement accompanying the rights issue of Imperial Chemical Industries. Reinvestment of the Ford Motor money was also a helpful influence. On balance, industrials were higher, but the gains were usually small. There was very little interest in gilt-edged, but prices held steady after the recent falls. In the foreign market, Greek bonds were favoured, while dollar stocks were higher in response to Wall Street. Coppers were quiet and easier, but tin shares improved following a selective demand. Oil shares showed further gains, partly reflecting the reinvestment of Ford Motor money. Rubbers were quiet and tended to ease on profit-taking after the recent advance. Tea shares were subdued but occasionally in demand.

The Money Market

Apart from a disturbance at the beginning due to heavy seasonal tax transfers to the Revenue Department, conditions in the money market during the past week were comfortable. This was partly because a large volume of bill maturities helped reinforce the credit base, and partly because the discount houses had only a moderate number of bills to take up. Money was in abundant supply and the authorities, after having given a large amount of help on Tuesday (the main tax day), had to do a large amount of mopping up on Friday in order to absorb the surplus funds. After paying firm rates, the market was able to obtain its requirements cheaply, the daily rate during the easy spell ranging from a high of 4½ percent down to 3 percent and sometimes as low as 2½ percent. Good business was done in March and April bills.

U.S. Gold Loss

The U.S. gold loss of $55 million during the week ended last Wednesday is relatively small but still serious. Nearly all the gold may have gone to private investors and hoarders. A financial commentator has calculated that the London market drain on the U.S. gold stock is at present about $40 million a week. In addition, private demand is taking $15 million of new gold a week, which the world's central banks took previously and which they can now replace only in New York. Since October, the London price of gold has been higher than what the central banks are willing to pay. At present, it is above the ceiling of $35.70, which is the highest that any central bank—except Switzerland's—is entitled to offer under the I.M.F. rules. In both forms, the private drain alone may now be at a faster rate than the $2,275 million of gold that the United States lost in 1958—its worst year. Central banks are capable of taking still more, although they did not do last week. Running at about seven times its normal pre-October rate, the private demand for gold may be partly due to pre-inauguration nerves, but a much lower rate would still be serious. A similar bout of nerves before Mr. Kennedy's election was followed by a reaction, but this never brought the London price below $35.40, and gave way to the present extraordinary revival of demand. Much may depend on Mr. Kennedy's words and policies at and after his inauguration next Friday.

Paris Gold Recovers

Sharp declines on selling by hoarders, reflecting the Algerian referendum results, developed early in the past week on the Paris gold market. Later, however, a recovery took place under the influence of a rise in international prices. This rise continued until the last session, when some profit-taking and selling from overseas developed.

New Delhi

N.D.C. DECIDES TO INCREASE SIZE OF THIRD PLAN

LACK OF RESOURCES IGNORED: MR. NEHRU PLEADS FOR AUSTERITY

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Development Council held a two-day session here last week-end. The Prime Minister was in the chair. In his opening speech, he supported plans to expand steel production by setting up a fourth steel plant in Bokaro. He was also confident that the foreign oil companies would help India in oil exploration on the Oil Ministry's terms.

The Prime Minister made a passionate plea for austerity. He declared: "I do not wish to put great burdens on the people in the shape of austerity. But one thing should be definitely frowned upon, that is, flouting wealth, flouting expenditure, extravagance whether in one's private life or in weddings; also, as a consequence of this, in increasing wants. Again, I am not against increasing wants if the country can afford them, but when we are saving, we should not adopt policies which give new habits, new wants, which we can do without today, so that instead of saving, money goes into increasing consumption of unnecessary articles."

Fewer Ceremonies

The Prime Minister's exhortations were, as usual, wise and timely. It is presumed that, in pursuance of this policy, Ministers will be discouraged from getting functions organised in their honour. Why should there be ceremonies, for example, while opening railway lines and bridges? It may be news to some that a separate section of the Works Department has been set up to organise non-stop receptions for foreign dignitaries. Money is lavishly spent on so-called cultural activities. At the same time, excuses are offered for the continuance of newly-created slums in the capital of India. The Prime Minister correctly disapproved of creating new wants. The Planning Commission and, in particular, the Ministries of Railways could take the cue by checking the dieselisation of rail transport. The Department of Atomic Energy could take a similar warning from its chief.

For austerity, the ruling Party will have to give a lead. The people have no incentive to save if their money is spent on sending out dancing troupes, building theatres and museums, and holding receptions on every excuse. It may be news to some that in the capital of India, the Ramlila shows patronised by the President and the Prime Minister cost on average Rs. 6 lakhs a year. The expenditure used to be counted only in thousands before top official patronage started.

Spectacular Plan

The session of the National Development Council conformed with expectations. As the third five year plan has become the Congress Party's election manifesto, the anxiety of every State's Chief Minister to have a really spectacular plan is understandable. The original conception of planning was to allocate priorities within the framework of the availability of resources. But now the financial *pundits* can be relied upon to produce a thesis to support any directive. Originally, they had placed a ceiling of Rs. 7,250 crores on the availability of resources to finance the third plan. They have, since then, revised their figures and placed the ceiling at Rs. 7,500 crores, leaving the private sector's share unchanged at Rs. 4,000 crores. "Flexibility" being the principal guiding principle, a mere Rs. 250 crores this side or that presumably does not make much difference. The plan, after all, will be adjusted on an annual basis and many of the projects depend on the availability of foreign exchange. There may be, and already is, a "hard core" of the third plan if resources do not come up to expectations. The case of the Bokaro steel plant illustrates the point. The Prime Minister, contradicting a Patna report, said that "we have decided on this plant very definitely. Bokaro is one of our basic plants. It is a plant which naturally we will start with a million tons, but it has a capacity to expand to developing three, four, five and even up to ten million tons possibly. So we have to build it in terms of its being able to expand almost indefinitely in the future."

As far as steel production is concerned, there is no indication yet about the finance for the expansion of the Rourkela factory. As already reported, there is no offer for financing the Bokaro plant. The Government is banking on "cold war" rivalries for money to build this plant. But the present cocksure attitude may prove rather "flexible," in which case the Bokaro plant may be carried over to the fourth plan if no resources are available to finance it during the third plan.

States Resent Cuts

Against this background, it is not surprising that the Chief Ministers of various States resented the cutting down of their plans. As indicated in these columns, the Chief Minister of West Bengal, Dr. B. C. Roy, protested vigorously against the Planning Commission for the way it had treated his State. He could not understand why the Commission should have fixed the size of West Bengal's plan at Rs. 250 crores when he had offered to raise Rs. 350 crores. He perhaps forgot that the Commission, which includes the Central Finance Minister, faces two difficulties. Firstly, the World Bank mission is in Delhi, carefully watching how the Government is formulating its resources budget. Secondly, the Planning Commission's experience of promises to raise additional resources, and their implementation, to finance the first two plans has not been very encouraging.

In the draft outline, the estimate of resources for the third plan was Rs. 7,250 crores—Rs. 6,050 crores at the Centre and Rs. 1,200 crores in the States. For the Centre, certain estimates were worked out last May. The Budget estimates for 1960-61 were taken into account at that stage. The actual revenue receipts during the first six months of the fiscal year are now available. They show a considerable improvement over those for the corresponding period of 1959-60. It is, however, not possible yet to make a firm estimate of the likely aggregate receipts over the entire fiscal year. On the expenditure side, it is virtually impossible at this stage to say how the revised estimates for the current year—or, indeed, the actuals—will turn out.

New Estimate of Resources

The draft outline placed the States resources at Rs. 1,416 crores, including Rs. 610 crores of additional taxation. These estimates need two adjustments, one concerning the interest liability on fresh loans from the Centre in the third plan period (Rs. 46 crores); and the second relating to borrowing from the public (Rs 24 crores). In other words, the estimates of resources have to be adjusted downwards by Rs. 70 crores. The following table compares the estimates: (i) as worked out for the draft outline; (ii) as on the basis of the discussions; and (iii) as taken now.

ESTIMATES OF STATES RESOURCES FOR THE THIRD PLAN

(Rs. crores)

	(i) As in the draft outline	(ii) As on the basis of discussions	(iii) As worked out now	Difference between (iii) and (i)	Difference between (iii) and (ii)
1. Balance from current revenues at 1960-61 rates of taxation	−35	34	−12	+23	−46
2. Surpluses of other public enterprises	140	149	149	+ 9	—
3. Loans from the public (net)	330	374	350	+20	−24
4. Small savings (net)	360	377	377	+17	—
5. Provident fund (net)	60	79	79	+19	—
6. Balance of miscellaneous capital receipts over non-plan disbursements	−205	−233	−233	−28	—
7. Withdrawals from cash or reserves	—	26	26	+26	—
8. *Total of 1 to 7*	650	806	736	+86	−70
9. Additional Taxation	550	610	610	+60	—
Total	1,200	1,416	1,346	+146	−70

It may be stressed that the target of Rs. 1,350 crores over the plan period involves a considerable stretching of resources. The following factors need to be mentioned in this context:

(i) Only seven States have made provision for an increase in the pay and emoluments of Government employees. Several other States may in fact have to find some resources for this purpose.

(ii) Both the loans and small savings targets are high in relation to the collections in the second plan. The figures for public loans given in the table above represent net collections, and the gross borrowing will have to be larger by Rs. 90 crores.

(iii) In the second plan period, the States were able to raise about Rs. 240 crores through additional taxation. The target for the third plan, namely, Rs. 610 crores, is more than 2½ times the second plan achievement. Detailed work has yet to be done on the lines along which this order of taxation is to be realised.

The table below presents the latest appraisal of the combined resources of the Centre and the States year by year.

RESOURCES FOR THE THIRD PLAN: CENTRE AND STATES TAKEN TOGETHER

(Rs. crores)

Items	1961-62	1962-63	1963-64	1964-65	1965-66	Total for five years
1. Balance from current revenues at 1960-61 rates of taxation	34	35	66	104	145	384
2. Railways' contribution	21	23	20	17	27	108
3. Surpluses of other public enterprises	34	52	77	121	165	449
4. Loans from the public (net)	152	138	239	170	151	850
5. Small savings (net)	103	110	117	123	132	585
6. Provident funds (net)	46	47	50	52	54	249
7. Steel equalisation fund (net)	30	31	32	33	34	160
8. Balance of miscellaneous capital receipts over non-plan disbursements	25	38	44	51	50	208
9. *Total of 1 to 8*	445	474	645	671	758	2,993
10. Deficit financing	—	—	—	—	—	550
11. Additional taxation	—	—	—	—	—	1,710
12. External assistance	—	—	—	—	—	2,200
Total	—	—	—	—	—	7,453

This means that the estimate of aggregate resources is around Rs. 7,400 crores or Rs. 7,500 crores. It could, as best, be taken at Rs. 7,500 crores. It is essential to stress that this estimate is, if anything, on the high side for the following reasons:

(i) There is a certain limitation in all estimates which are based on the assumption that production increases steadily at a certain rate from year to year, and that these increases reflect themselves more or less proportionately in the estimates of receipts.

(ii) The estimate of the surplus from revenues provides for a total defence outlay of Rs. 1,700 crores. Recent indications suggest that this figure might have to be revised upwards.

(iii) The estimate of the surpluses of public enterprises and of the steel equalisation fund is almost certain to suffer a reduction. The Planning Commission is consulting the Ministries in this connection.

(iv) The estimate of loans of Rs. 850 crores is rather high. The net absorption of loans by the public this year has been *minus* Rs. 4 crores so far. The estimate of Rs. 850 crores contains, in other words, a certain element of deficit financing through contribution to or support of these loans by the Reserve Bank.

(v) The additional taxation target of Rs. 1,710 crores is on the high side. It will call for very special and sustained efforts throughout the plan period both at the Centre and in the States.

(vi) The plan postulates external assistance of a substantial order, and there is no cushion available by way of foreign exchange reserves to draw upon.

(vii) Prices have risen by 25 percent over the second plan period. Any further significant rise in prices, especially in the prices of essential commodities, would be undesirable and has to be guarded against. Deficit financing has, therefore, to be kept down to the minimum and care has to be taken not to exceed the limits set by the growth in the real national product.

Challenge from the States

In spite of these considerations, the National Development Council could not resist the challenge from the State Chief Ministers. It had to give in. In a Press communiqué, the Planning Commission says: "The National Development Council envisaged that the total outlay relating to the physical programmes to be included in the third plan might be of the order of Rs. 8,000 crores. This would include a total outlay of Rs. 3,847 crores for the plans of States, Central assistance for which was estimated at Rs. 2,431 crores. The Council further noted that the estimate of resources for the public sector, which was placed at Rs. 7,250 crores in the draft outline, had since been revised to Rs. 7,500 crores. While the actual resources available would depend necessarily upon the progress made in realising the targets of the third plan, especially in agriculture, savings and taxation, and on other factors such as foreign exchange, the actual expenditure had necessarily to be limited to the resources now in sight. Thus, as against proposals for the Centre and the States which might together entail a total outlay of the order of Rs. 8,000 crores, at present the financial limit should be placed at Rs. 7,500 crores, of which Rs. 3,725 crores would be available for the plans of the States. The position would be kept under review, and every effort would be made to mobilise the nation's resources to the greatest extent possible and to provide for the implementation of the various programmes of the Centre and the States through annual plans."

Increases in Outlay

The discussions with the States proceeded on the basis that, of the total outlay of Rs. 7,250 crores in the public sector, the outlay in the States would

be Rs. 3,525 crores and in the Union territories Rs. 175 crores. For financing the plans of States, Rs. 1,200 crores were to be found by them and Rs. 2,325 crores were to be provided by way of Central assistance. In the course of the discussions, the States agreed to raise Rs. 216 crores more, and the Central assistance proposed was also increased by Rs. 106 crores, the total increase in outlay being Rs. 322 crores. For the Union territories, the outlays agreed on amounted to Rs. 171 crores. Taking States and Union territories together, the following table compares outlays under different heads proposed before and after the recent discussions:

TOTAL OUTLAYS: STATES, INCLUDING UNION TERRITORIES

(Rs crores)

	Before discussions	After discussions	Difference
Agriculture and community development	900	947	+ 47
Major and medium irrigaton	645	651	+ 6
Power	800	938	+138
Village and small industries	130	136	+ 6
Industries and minerals	50	76	+ 26
Transport and communications	225	271	+ 46
Social services	950	918	− 32
Miscellaneous	—	81	+ 81
Total	3,700	4,018	+318

An assesment of the requirements at the Centre which has been recently made shows that the provisions at the Centre will fall short under several heads. The position is summarised below:

(i) Industries and minerals: When the draft outline was prepared, the cost estimates available showed that projects in categories A, B and C called for a total investment of Rs. 1,535 crores during the third plan. Recently, revised cost estimates have been furnished for some projects. For projects in categories A, B and C, the investment needed now comes to Rs. 1,657 crores, an addition to the original estimates of Rs. 122 crores, which represents an excess of Rs. 207 crores above the provision of Rs. 1,450 crores.

(ii) Transport and communications: For transport and communications, certain additional allocations are required at the Centre. These include provisions for a diesel locomotive factory, a railway line for Haldia port, and extension of the Deva-Panvel line, inter-State roads of economic importance, additional provision for ports and harbours (including the barrage at Farraka) and for telecommunications facilities required for the railway electrification programme, amounting in all to about Rs. 100 crores.

(iii) Power: For power development, the main addition to the outlay is in the State sector. At the Centre, additional provision might have to be made in case it is decided to install a nuclear power plant with a capacity of 150 M.W. for the Delhi-Punjab region. To meet the shortage of power anticipated in this area, there is need for additional capacity of this order. If undertaken, the nuclear power plant would be in substitution of an additional thermal plant for which provision has not so far been made in the plan.

(iv) Irrigation: There is need for raising the allotment for research, investigations, etcetera, from Rs. 5 crores to about Rs. 8 crores.

(v) Agriculture and community development: The outlays proposed by the Ministries of Food and Agriculture and Community Development and Co-operation come to about Rs. 194 crores. The provision earlier indicated was Rs. 125 crores.

Project Priorities

Since uncertainty about the availability of foreign exchange is inevitable, it has been agreed to classify projects under this head as follows:

(A) Projects under execution and carried over from the second plan.

(B) New projects for which external credits are already assured, wholy or in part.

(C) New projects which, having reached an advanced stage of preparation, are included in the plan, but for which foreign credits have not yet been arranged.

(D) Projects on which preparatory work should continue and for which external credits have not yet been arranged, decisions on these being taken in due course.

(E) Projects of a contingent nature which depend on certain other developments.

Industrial Schemes

The outlays required at the Centre for industry and minerals are indicated below :

Scheme	Provision in the draft outline (Rs. crores)	Outlay required as now revised (Rs. crores)	Difference excess (+) reduction (−) (Rs. crores)
(A) *Projects carried over from the second plan*			
Completion of the three steel plants	45.0	45.0	—
Rourkela fertiliser factory	12.0	12.0	—
Heavy machinery plant, foundry-forge shop, mining machinery plant	80.0	80.0	—
Heavy electrical project, Bhopal	16.0	16.0	—
Drug projects	30.0	30.0	—
Organic intermediate plant	11.0	11.0	—
Expansion of Hindustan Antibiotics	0.5	0.5	—
Trombay fertiliser project	22.0	25.0	+ 3.0
Nahorkatiya fertiliser project	12.0	12.0	—
Andhra fertiliser project	20.0	20.0	—
Total of (A)	248.5	251.5	+ 3.0
(B) *New projects for which external credits are already assured, wholly or in part:*			
Expansion of heavy machinery plant	14.0	14.0	—
Expansion of mining machinery plant	15.0	15.0	—
Expansion of foundry-forge shop	10.0	10.0	—
Second and third heavy electrical projects	69.0	69.0	—
Heavy machine tool factory	8.0	11.0	+ 3.0
Precision instruments factory	8.0	8.0	—
Ophthalmic glass project	1.5	1.5	—
Raw film project	8.0	8.0	—
Watch factory	2.0	2.0	—
Expansion of Bhilai steel project	130.0	138.0	+ 8.0
Expansion of Durgapur steel project	35.0	56.0	+ 21.0
Expansion of Rourkela steel project	80.0	90.0	+ 10.0
Expansion of Mysore Iron and Steel Works	—	5.0	+ 5.0
Total of (B)	380.0	427.5	+ 47.9
(C) *New projects included in the plan for which foreign credits have not yet been arranged:*			
Bokaro steel project	200.0	235.0	+ 35.0
Alloy and tool steel plant (inclusion of manufacture of grain-oriented electrical steel sheets)	35.0	50.0	+ 15.0
Heavy structural works	6.0	6.0	—
Heavy plate and vessel shops			
Expansion of Hindustan Machine Tools, Bangalore	3.0	3.0	—
Expansion of heavy electrical project, Bhopal	19.0	19.0	—
New fertiliser factories	75.0	75.0	—
Expansion of Hindustan Shipyard at Visakhapatnam (expansion and subsidy)	10.0	10.0	—
Hindustan Shipyard (dry dock)	2.0	2.0	—
Expansion of Nefa, Praga Tools	—	5.0	+ 5.0
Second shipyard, Cochin	10.0	10.0	—
Security paper mill	4.0	5.5	+ 1.5
Expansion of Hindustan Cables	0.5	3.5	+ 3.0
Salt development	Nil	2.0	+ 2.0
Townships	30.0	50.0	+ 20.0
N.I.D.C.	10.0	20.0	+ 10.0
Loans to institutional financing corporations	20.0	20.0	—
Loan assistance to plantation industries			
National Productivity Council	10.0	10.0	—
Metric system and Indian Standards Institution			
Expansion and modernisation of alkaloid factory	—	0.4	+ 0.4
Total of (C)	434.5	526.4	91.9

Expansion of Indian Bureau of Mines	5.00	5.00	—
Amjore pyrites	5.00	5.00	—
Kolar gold mining undertakings		2.10	+ 2.10
Huthi gold mines		0.50	+ 0.50
	41.00	44.10	+ 3.10
Grand Total	416 30	451.80	+ 35.50

(D) *Projects on which preparatory work should continue with a view to decisions in due course:*

	Total cost (Rs. crores)
Products pipeline	37.0
Lubricating oil plant	12.0
Coal washeries for non-coking coal	12.0
Low temperature carbonisat. plants	22.0
Neyveli lignite high-temperature carbonisation plant and connected facilities for pig iron production	25.0
Total	108.0

(E) *Projects of a contingent nature:*

	Total cost (Rs. crores)
New refinery for fresh oil findings	15.0
Crude pipelines	4.00
Indo-Stanvac project	Not available
Oil India	8.0
Piping of Nahorkatiya natural gas	Not available
Expansion of Kiriburu iron ore project	6.0
Total	33.0

World Bank Mission

The World Bank mission, consisting of Messrs Ruczinski and Mason, is having its final round of talks here before Mr. Ruczinski leaves for Washington later this month. Mr. Mason will stay on and will be joined by six experts, Messrs. D'Epenou and Bergan on road transport, Mr. Marshall on power, Mr. Van Helden on transport and ports, Mr. Groenveld on irrigation, and Mr. Williams on economic affairs. Two new features of these talks are reported. Firstly, the Government of India has told the mission that aid alone is not adequate for India's development; it should be supplemented by trade. It is mainly through exports that India can hope to repay loans and meet the growing import bill to sustain her economy. It is recognised that the unsatisfied home market hinders the export drive. It is, however, felt that the western countries do not encourage imports from India.

The second point relates to the financing of projects by loans. These loans are at present given project-wise, which creates a number of difficulties. It tends to concentrate wealth in the hands of a few families, which, apart from other considerations, creates dissatisfaction in the weaker section of the private sector. It also leads to unbalanced development. The Government, it is learned, has urged the World Bank mission to use its good offices for industry-wise instead of project-wise allocation of loans, leaving it to the Government of India to select the parties in the private sector with most favourable terms.

Meeting of Creditor Countries

The next meeting of the consortium of western countries helping India will be held in London on 23rd March. The participating countries will be the U.S.A., the U.K., West Germany, Canada and Japan. France and Italy may come in. According to newspaper reports, the World Bank may give a lead by announcing credits of $150 million. The Government of India, according to these reports, has asked the World Bank to give aid for the development of Calcutta, Haldia and Bombay ports, for power development in the D.V.C. and Koyna areas, and for the development of the coal industry in the private sector.

Third Finance Commission

The chairman, Mr. A. K. Chanda, and members of the third Finance Commission agree that there is some overlapping in the functions of the Finance Commission and the Planning Commission in allocating grants to the States, and that there is need for co-ordination. Talking to journalists here, they said that the Finance Commission, which was set up under the Constitution, laid down the principles for the distribution of divisible taxes and other revenues and grants, whereas the Planning Commission, which was a creation of the Government, performed its functions after considering the available resources and the needs of the States. Furthermore, the former dealt only with the distribution of revenues, whereas the latter also made allocations relating to capital expenditure.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

London

OUTLOOK FOR NEXT U.K. BUDGET

CUT IN STANDARD RATE OF INCOME TAX URGED

(FROM OUR LONDON CORRESPONDENT)

JUDGING from the tenor of a recent speech by Mr. Selwyn Lloyd, Chancellor of the Exchequer, at a Liverpool luncheon attended by 500 members of the Merseyside Chambers of Commerce, his first Budget is going to be "tough." He reinforced the U.K. Prime Minister's New Year warning that "self-discipline and self-restraint" must be observed on the economic front. If inflation sets in again, Britain will price herself out of export markets, people on small fixed incomes will suffer great hardship, and wage increases will lose their value. All this has been said before, but with the Budget only three months away, every word uttered by the U.K. Chancellor takes on a special significance. In a survey of the state of the British economy, Mr. Lloyd said that there are good and bad features in the present situation. It is wholly false to describe it as one of stagnation. "No one in the world owes us a living." But in exports, if Britain does not earn a living by hard work, "it's goodbye to dreams of expansion and social progress." Dealing with the increase in imports, Mr. Lloyd said that it would be wrong for the Government to think in terms of higher tariffs or quantitative restrictions. These would be of no help to the U.K.'s export trade. Mr. Lloyd does not believe in a complicated system of physical controls but prefers monetary measures—restrictions on credit and fiscal measures through the Budget which hold back consumption.

In the last Budget, Mr. Lloyd said, his predecessor did things to restrict consumption and during the past six months as the U.K. Chancellor, he himself had done quite a lot to restrict credit. On the whole, these measures have fulfilled their purposes and reduced the pressure of demand at home. "I will relax these measures as and when I can in the interests of the economy as a whole," he promised. He defined Britain's principal needs for 1961, as: (1) determination to modernise industrial practices; (2) the will to work—the Government here has a part to play in considering whether the tax burden is rightly distributed; (3) the will to export; (4) the will to forgo some current consumption in the interests of investment; and (5) realisation that there is a limit to what can be provided from the public purse.

Finally, said Mr. Lloyd, a clear view is necessary of where Britain wants to go as a nation. At home, people do not want a society in which the State is the universal provider, with precise equality enforced for everyone, whatever their talents or however hard they work. Abroad Britain no longer rules, but she has something more difficult to do—to influence and lead or guide. If she is to do this only, the very best is good enough in production and salesmanship, in professional and business standards, and in the services and diplomacy.

In the face of this speech, the "suggestions" which are now pouring to the Chancellor of the Exchequer concerning what his next Budget should contain take on the appearance of wishful thinking. Submissions have recently been made by the Institute of Taxation, the Income Tax Payers Society, the National Union of Manufacturers and the Association of British Chambers of Commerce. Most of them, as might be expected, favour cuts in the standard rate of income tax, modification of the surtax, and the abolition of Schedule A, in that order of priority, with other reliefs over a wide field.

Shrinking Hire-purchase Debt

The U.K. Board of Trade has reported that debts owing on hire-purchase and other credit instalments continued to decline in November by £3 million. The fall was in the debt owed to finance houses, which deal mainly with motor-cars and other vehicles. The instalments outstanding to household goods shops remained unchanged during November. Since August, when the total debt first began to decline as a belated result of the restrictions imposed at the end of April, the average fall has been about £5 million a month. This contrasts with a monthly average rise of £25 million in the period free from restrictions from November 1958 to April 1960.

The value of sales on credit by household goods shops during November remained at about 30-percent below that of a year earlier. Sales of furniture and furnishings were down 25 percent on the year, a somewhat smaller fall than sales by the group including hardware, radio and electrical goods, bicycle and perambulator shops, where the decrease was about 33 percent. Finance houses reported that new credit extended in November 1960 was 23 percent less than in the same month of the previous year. The corresponding decreases in October and September were 26 percent and 22 percent, respectively. Credit for new and used motor-cars, motor-cycles, caravans, and household goods was well down, but the figures for commercial vehicles, farm equipment, industrial and building plants were higher than a year ago. The total debt outstanding at the end of November on hire-purchase and other instalment credit was £942 million—still £120 million higher than a year earlier, in spite of the recent shrinkage.

Good Year for Banks

Six of the seven leading English banks did very good business in 1960, in spite of the growing pressure from the Government during the year to check bank overdrafts (Westminster has yet to show its hand). Rises in published profits range from nearly 18 percent by the Midland to 34½ percent by Lloyds. Barclays pressed Lloyds close with almost 32 percent, National Provincial and District gained more than 25 percent and Martins 22 percent. All six have distributed more in dividends. Three had forecast more and only one, National Provincial, failed to exceed its forecast. Both results and dividends have—with one exception—delighted the Stock Exchange.

Last year was the second full year of commercial freedom for the banks. The shackles of directives were removed in July 1958, and the banks proceeded to lend on a vast scale, contributing in large measure to the boom and the sense of national well-being of the election year. Their ventures into hire purchase have so far been a financial success and most of the latest results owe some of their gloss to income from hire-purchase subsidiaries and associates.

Unemployment Figures

The recession in the motor-car industry continues to dominate the unemployment figures. Those issued recently by the U.K. Ministry of Labour show that 17,600 men and women in the motor-vehicle industry were put out of work during the four weeks ended 12th December. The industry then had 34,000 unemployed workers. This is more than 9 percent of the total of 365,051 unemployed in all industries and services. The next highest increases were in furniture, 1,600 more unemployed, and construction, 1,500 more. But shipbuilding showed a fall of 3,700, and fewer were out of work in distribution, catering and transport. The distributive trades also had 4,200 fewer unfilled vacancies, compared with a month before. Postal services showed a sharp increase of nearly 1,000 vacancies.

Pay Rise for Shipyard Workers

Immediate rises for 250,000 shipyard workers were recently agreed at a meeting between the Shipbuilding Employers Federation and the Confederation of Shipbuilding and Engineering Unions in London. They amount to 8s 6d for skilled men, 8s for semi-skilled and 7s 6d for unskilled. The annual cost to the industry will be about £5 million. The unions' claim for higher wages had twice previously been rejected by employers on the grounds of the industry's unfavourable financial position. But at the latest talks, they agreed on increases similar to those given to 3 million engineering workers last month.

As a condition, employers insisted that the Confederation should meet them to discuss "steps to be taken to improve the competitive power of the industry." They obviously had in mind a joint examination and possible elimination of restrictive practices and rigid demarcation, which they say seriously reduce the efficiency of the industry, and hamper the improvement of labour mobility. The unions, on the other hand, obviously did not attach much importance to the employers' condition. It has twice been imposed in the past without producing any results, and it is difficult not to regard it as little more than a face-saving formula.

Aid to Export

A flood of requests has been received by the U.K. Board of Trade from small firms for increased assistance in stepping up their exports. This followed Mr. Macmillan's appeal last year to Britain's "merchant adventurers" to sell more abroad. A Board of Trade spokesman said that many of the requests were for monetary assistance or tax concessions from firms which said they could not bear the full burden of expense in export. Latest figures show that small firms—representing about a third of the total industrial output—are not showing any great increase in export activities. Many of these firms say that it is more difficult and dangerous for smaller firms to export than the larger ones.

A typical request to the U.K. Board of Trade is from Enalon Plastics Ltd, of Kent, which points to the expense of sending representatives abroad. It suggests that the Government should provide reduced fares and special hotel arrangements. Mr. L. F. Moore, managing director, is anxious for his firm to explore other potential export markets. He said: "We have been asked to increase our exports. Surely the Government can afford a little financial assistance to get us out there." The Board of Trade spokesman said that concessions of this sort would be extremely difficult to administer fairly. It would also be difficult when it came to providing financial assistance, to discriminate between "large" and "small" firms. But there is a growing feeling among smaller industrial concerns that something more than just advice and help is needed from the Government. Otherwise, it will be hard for them to play their full part in the export drive.

New Economic Adviser

The U.K. Treasury has just announced that Sir Robert Hall, Economic Adviser to the U.K. Government, is retiring in April, on reaching the age of 60. He will be succeeded by Professor A. K. Cairncross, who occupies the chair of Applied Economics at Glasgow University. The appointment, one of the most important in the Civil Service, has been made by Mr Selwyn Lloyd, Chancellor of the Exchequer, with the Prime Minister's approval. Professor Cairncross will take it up in June. The timing of Sir Robert's retirement indicates that his advice, which helps influence economic and financial policy, will continue to be available to Mr. Selwyn Lloyd in drafting his first Budget. Successive Chancellors have relied heavily on the guidance of this self-effacing "backroom boy".

Professor Cairncross will be 50 next month. His reputation as an economist extends far beyond his native Scotland. He was director of programmes at the U.K. Ministry of Aircraft Production in the second World War, and economic adviser to the Board of Trade, 1946-49, and to the Organisation for European Economic Co-operation, 1949-50. In the past ten years, he was entrusted with many special tasks by the Government. He was given a year's leave from Glasgow University in 1955 to become the first director of the Economic Development Institute, opened by the World Bank in Washington to train senior government officials of underdeveloped countries. One of the subjects in which Professor Cairncross has specialised is the distribution of industry in Britain. He is noted as a quick worker.

Public Spending

The recession in the motor-car industry was given a statistical form when official figures of expenditure on cars and motor-cycles in the third quarter of last year were published recently. According to the Central Statistical Office, £131 million were spent between June and September, compared with £177 million in the previous quarter—a fall of £46 million. Although Government figures on motoring expenditure are subject to a considerable margin of error, the difference is sufficiently great to make it clear that spending fell considerably during the autumn. There is, of course, every probability that an even greater drop will be recorded for the final quarter of the past year.

Waterlow Deal with De La Rue

Thomas De La Rue, the world's biggest banknote printers, has bought the banknote and stamp printing business of Waterlow and Sons, a subsidiary of Purnell and Sons of Midsomer Norton, Somerset. The price is not being disclosed. Included in the sale is Waterlow's business in travellers' cheques and bonds printed by the direct plate process. But most of the equipment will be sold by De La Rue under special arrangements only to authorised customers, such as overseas governments printing their own notes.

Record Year for Life Assurance

Life assurance in its several forms has gained in popularity. Since the end of the year, the offices have been disgorging statistics of business, usually record business, done during 1960. These have been added together and they show a remarkable rate of growth. The combined efforts of the ordinary life and "home-service" branches of the industry have resulted in a rise of a fifth in the total new premium income to £172 million. The rate of increase in 1959 was 12 percent. Last year's advance on this front was almost certainly the best in any year.

Out of the total, ordinary life assurance premiums accounted for £142.2 million and "home-service" or industrial assurance for £25.9 million. Compared with the previous year, these figures represent gains of 24 percent and 4 percent. Quite obviously—and for understandable reasons—life assurance the middle-class way (monthly, quarterly or annual premiums by bankers' order) is expanding much more rapidly than business conducted at the front door. New sums assured in both branches amounted to £2,687 million in 1960 (£2,303 million in 1959) and new annuities to £124 million (£112 million) a year.

New Bank Bulletin

A commentary on recent events is the most significant feature in the Bank of England's first quarterly bulletin issued recently. It provides more detail than the occasional speeches by the Bank Governor, in which he has latterly been willing to think aloud on policy decisions. The commentary now issued covers in detail the period April-September 1960, but runs over into October to take in developments in that month which culminated in the ½ percent cut in Bank rate.

Assessing the situation immediately preceding the Bank rate reduction, the bulletin says that the prospective rise in domestic demand then seemed less dangerous than it had in June. "Longer-term problems remained serious but the short-term situation was changing." Apart from the commentary, the bulletin contains a wealth of statistical information. Perhaps in future issues, the Bank may see fit to indulge in some forward-looking comment, at least on general lines.

Jute

BOOM CONDITIONS PREVAIL IN JUTE AND GUNNY MARKETS

UPCOUNTRY REPORTS INDICATE SHARP FALL IN FIBRE ARRIVALS

THROUGHOUT the past week, boom conditions have been reported in the Calcutta raw jute and jute goods markets. The boom, however, owes nothing to international trade, which is normally the yardstick by which these things are measured. There has been some demand, as the business with Australia, the U.S.A. and the Continent shows; but the rise in international demand has a long way to go before it reaches the dimensions necessary to warrant a boom. It is on international trade that the jute industry largely depends for its prosperity, and a note of warning may not be out of place here. The consumption of jute goods in the U.S.A. last year has fallen short of the previous year's figure by 40 million yards. It should also be remembered that burlap consumption in the United States usually falls from March to June; so it should occasion no surprise or alarm if there is a sharp drop in U.S. consumption over the next few months in spite of the stimulus expected from fresh economic activity following the change of President. Where, then, are the conditions for a boom? It is as well to keep the foregoing in mind, for, as so often happens, local factors carry greater weight, leaving the true facts in obscurity.

Upcountry Stocks

The current situation really stems from raw jute. Mofussil reports indicate that stocks there are small and that fresh arrivals are negligible. It is generally thought that most of the jute is now out of the hands of the cultivators and is in the hands of the sellers and large landowners. The sellers, in particular, have suffered heavy losses since the beginning of the season, and in the present situation they see an opportunity of recouping their losses. Mill stocks of raw jute are not good, although they are much better than they were a few months ago, thanks to the quota system introduced by the I.J.M.A. It is estimated that mills now have a minimum of three months' jute on hand, and so their immediate requirements are satisfied, but they still have to buy jute. Sellers, however, are not releasing stocks, and according to reports, are determined to push prices up to a level that will compensate them for the loss of Rs. 15 or Rs. 20 a maund they sustained earlier in the season. Having sold jute at about Rs. 35 and delivered at Rs. 50, they now want to hold on to the jute they bought at Rs. 50 to deliver it at Rs. 65 or thereabouts.

Extensions and Options

The point arises, however, whether the sellers will be as lenient with the mills as the mills were with them. The mills lost heavily on the deal when prices shot up between purchase and delivery times. Every consideration was given to the sellers by way of extensions and options, and, in many cases, market difference bills were settled at rates which bore no relation to the then market prices. Help was given to the sellers to enable them to deliver jute with the minimum loss, even to the extent of giving high-priced contracts to help them average out. After all this, are mills going to be held to ransom for their supplies now that fortunes have changed? The jute they are liable to get at the current rates will be of much lower quality than the early new crop deliveries. Large quantities of jungli jute are now becoming available, and future offers will inevitably contain a large percentage of this type of fibre. Nobody expects that jute will be in short supply, however, if working hours continue to be restricted to 42½ a week. Neither will there be uneven distribution if the present restricted buying is adhered to under the quota system.

During the past week, raw jute rates have improved by Rs. 135 a ton, while hessians have advanced by Rs. 160 a ton and sacking by Rs. 85 a ton in the near positions. The forward position in sacking shows a relatively higher gain of Rs. 110 a ton, but forward hessians are much the same as those in the near position. In spite of the amount of business conducted, mills are not keen sellers, and a large proportion has been done through the bazaar. In many cases, overseas buyers have been scared off by the prices quoted against cabled offers and the percentage of business done, as against the volume of enquiries received, is reported to be very small.

Raw Jute Arrivals

Although the raw jute arrival figures for December are generally considered to be good, there is still a substantial shortfall to be made up, so the market continues to rule steady. Total arrivals amounted to 634,000 bales—40,300 bales from Pakistan and 593,700 bales from India. This was 19,200 bales less than in the previous month, arrivals from Pakistan being down by 8,700 bales and those from India by 10,500 bales. Compared with December 1959, total arrivals show a fall of 192,800 bales—23,500 bales from Pakistan and 169,300 bales from India. Total arrivals for the period from July to December 1960 now amount to 2,699,600 bales, made up of 262,350 bales from Pakistan and 2,437,250 bales from India. Compared with the corresponding period of the previous season, arrivals from Pakistan are up by 99,400 bales, but those from India are down by 543,400 bales, making a total shortfall of 444,000 bales.

From July to December 1960, the estimated raw jute consumption of mills reporting to the I.J.M.A. amounted to 3,056,000 bales, so arrivals during the same period fell short by over 350,000 bales. At the present rate, it will be another three months before the arrival figures equal the estimated consumption.

THE JUTE MARKETS

Manufactured Goods: The opening session of the goods market was dominated by reports of hessian business with the U.S.A. This, coupled with stronger advices from the raw jute section, succeeded in forcing gunny prices up. On Thursday morning, B Twills rose by Re. 1 or Rs. 1.50 to rule at Rs. 185 for January and Rs. 179 for April-June shipment; 40in. 10oz. hessians jumped by 60nP or 75nP to Rs. 60.10 for near delivery and Rs. 59.25 for April-June. Hessians continued to lead the way at this stage, and on Friday, there was a general increase of Re. 1 in both sections. By Saturday morning ready B Twills were quoted at Rs. 186.50, with the forward section now at a discount of only Rs. 4.50, while 40in. 10oz. hessians were at Rs. 61.50 for the near and forward positions, respectively. The situation changed rapidly over the week-end, mainly due to the steady jute market, and sacking jumped up by Rs. 2.50 and hessians by Re. 1. Excited conditions prevailed and it was almost impossible to keep track of prices, which forged ahead in both sections, eventually spurred on by reports of fresh overseas business and the publication of the favourable U.S. burlap stock and consumption figures. On Tuesday morning, January B Twills stood at Rs. 192.50, while forward shipment, with a spurt of Rs. 7 during the previous day, drew up to within Rs. 3 of the ready price. Hessians also took a big jump of Rs. 1.75 and 10oz. was quoted at Rs. 64. Further advances were recorded during the day as raw jute prices continued to rise on buying pressure, but at this stage overseas interest was negligible.

On Wednesday morning, quotations were as under:

	January	February	March	Apl.-June
40in. 7½oz.	48.00	48.00	48.00	47.50
40in. 8oz.	51.25	51.25	51.25	50.50
40in. 10oz.	64.10	64.00	64.00	63.50
B Twills	195.00	195.00	194.50	191.00
Heavy Cees (Plain)	196.00	196.50	196.50	191.00
A Twills	234.00	234.00	233.00	228.00
Liverpools	218.00	218.50	219.00	216.00
Cornsacks	200.00	200.00	199.00	195.00

Raw Jute: The raw jute market ruled very steady throughout the week and fair business was recorded. Most of this was before the week-end, and it succeeded in pushing up prices from an opening of Rs. 54.50 for Assam Bottoms on Thursday morning, to Rs. 56 on Saturday. Imports at the upcountry agencies were very small, and sellers became reserved over the week-end. In spite of this, a fair amount of business was concluded which caused a further Re. 1 rise. Good business in the jute goods market over this period promoted the bullish outlook, but after the week-end, raw jute led the goods market. Prices fluctuated rapidly and erratically after the week-end, and sellers withdrew almost completely from the market. By Tuesday morning, indications had advanced to Rs. 58.50, and business was again reported at full market rates or even higher. In contrast to upcountry trends, arrivals by rail in the Cossipore markets were well maintained, and during the week, a total of 770 wagons arrived. Most of these were from jungli agencies, but all arrivals continued to find ready buyers.

Business was reported in Assam and Northern ready bills of lading at Rs. 55 to Rs. 59. Tossa from the same agencies was reported at Rs. 56.50 to Rs. 58.50. Desal mesta passed at Rs. 52.50 to Rs. 53.50, while buyers paid Rs. 51.50 to Rs. 52.50 basis Bottoms. Desal white and jungli white passed at Rs. 54.50 and Rs. 53.50, respectively.

At the close, the market was firm, and opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	156.75	58.50	Jan.-Feb.
Northern	155.50	58.00	,,
Purnea Desal	152.75	57.00	,,
Daissee Selected	160.75	60.00	,,
Assam Tossa	158.00	59.00	,,
Mesta:			
Assam-Northern	151.25	56.50	Jan.-Feb.
Desal-Daissee	150.00	56.00	,,
Jungli	147.25	55.00	,,
Pakistani Cuttings N. C.	270	a bale	,,

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in December continued at the same level as during November, but was 8 million yards or 10 percent lower than December a year ago. (Compared with December 1959, bag cut-up declined by about 3 million yards while piecegoods deliveries fell by about 5 million yards.) The total estimated consumption last year was 40 million yards lower than during 1959. Meanwhile the continuing abnormally high level of prices is creating strong buyers' resistance, already reflected in last year's lower overall use of burlap. Substitutes are increasingly coming into use—a development which is likely to gain momentum, since in the case of bag usage, some time element is involved for packing changeovers. U.S. burlap in stock and afloat at the end of December increased by 2 million yards. At 257 million yards, 120 million yards were spots and 137 million yards were afloats. Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)

	1960	1959
Jan.	58	64

THE FOREIGN JUTE MARKETS

FIBRE PRICES MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices in Dundee are still more or less maintained, and so far there has not been much of a decline from the top points reached in November. Hopes were revived for a fall in prices in the first half of December when values declined to £182 for Mill Firsts, £173 for Mill Lightnings, £169 for Mill Hearts and £166 for Grade Hearts, with Grade Tossa-2/3 down to £170 and fours to £166, c.i.f. U.K.-Continent. The lowest for Mill Firsts (secured) is now £197, Mill Lightnings £191, Mill Hearts £185 and Grade Hearts £180, Grade Tossa-2/3 £190, January-February, c.i.f. There are occasional offers of jute afloat or ex-quay at lower prices.

Dundee spinners are not buying much now. Just before the end of the past year, they were buying some quantity because of a rise in the yarn business. Since prices for yarns were raised by about £5 a ton from 5th January, they have shown little interest in further purchases. A good business was done just before the rise, and a number of spinners who were working only three days a week have now increased to full-time working of five days.

The latest news from India and Pakistan has made the markets there very strong for both raw jute and goods, and prices are advancing. Some shippers who were offering quite freely earlier have now withdrawn their offers, but there are others who are willing to sell fibre at the unchanged rates. Values of Calcutta goods have, however, risen by as much as 2s for hessians and 3s to 4s for sackings. Quotations are 92s for 40in. 10oz. hessians and 69s 6d for 7½oz., January, 91s 9d and 69s February, 91s 6d and 69s March and 90s 6d

Free catalogue on request.

and 68s April-June, with B Twills at 282s 6d, 279s 6d, 276s 3d and 273s 3d for the respective positions of shipment, all f.o.b. Calcutta.

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of jute goods for December as follows :

Description		Quantity
1. Gunny Bags		
(a) Hessian	4,506 tons	(4,578 metric tons)
	1,56.1 lakh yds.	(1,42,70 thousand metres)
	1,27.4 lakh nos.	
(b) Sacking	48,329 tons	(49.105 metric tons)
	11,19.9 lakh yds.	(10,24,03 thousand metres)
	5,03.3 lakh nos.	
2. Gunny Cloth		
(a) Hessian	28,761 tons	(29,223 metric tons)
	10,79.1 lakh yds.	(9,86,75 thousand metres)
(b) Sacking	889 tons	(903 metric tons)
	20.1 lakh yds.	(18,33 thousand metres)
3. Other Manufactures		
	8,195 tons	(8,326 metric tons)
4. Total Production		
(All kinds)	90,680 tons	(92,135 metric tons)

Summary

	(000 yds. and 000 metres) Dec. '60	Nov. '60	Dec. '59	(000 tons and metric tons) Dec. '60	Nov. '60	Dec. '59
Hessian	12,35 (11,29,45)	11,83 (10,81,81)	14.38 (13,14,78)	33.3 (33.8)	22.0 (32.5)	38.8 (39.4)
Sacking	11,40 (10,42,36)	10,89 (9,95,46)	11,41 (10,43,29)	49.2 (50.0)	47.2 (48.0)	47.9 (48.6)
Others				8.2 (8.3)	6.7 (6.8)	6.9 (7.1)
	Grand Total			90.7 (92.1)	85.9 (87.3)	93.6 (95.1)
	Hours worked			213.0*	208.0	217.5

* This was the number of hours scheduled to be worked and does not take into account the hours lost due to the general strike on 20th December.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures and those of length, being based on the actual (detailed) figures, are more precise.

THE PAKISTANI JUTE MARKETS

FALL IN OVERSEAS BUYING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

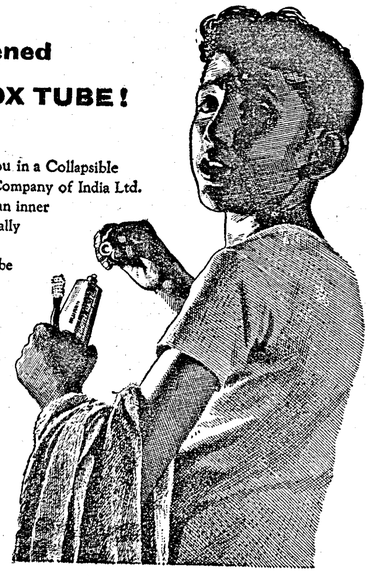
SENTIMENT is playing a more important rôle than usual in the Pakistani jute market this season. There have been declines in prices when logically they should have gone up, and rates have risen when normally the market should have been quiet. The general trend, meanwhile, appears to be following a fairly regular pattern. Experience has shown that when buyers, having made their urgent purchases for ready shipment, withdraw, the overseas market comes down fairly quickly. The local pucca bale market reacts downwards equally quickly, but the loose jute market remains fairly strong for some time after the overseas recession. When prices upcountry eventually come down, imports into the agencies decline. Buyers having held off as long as possible and brought overseas and E.P.C. prices down, come into the market later and raise prices simultaneously in all centres. But as soon as they have purchased their urgent requirements, the cycle starts again.

During the past week, the overseas market quietened with more sellers and buyers resisting any rise in prices, since they had fulfilled their urgent requirements. The pucca bale market, except for cuttings, has been practically inactive but the loose market continued steady. Recently, there has been some interest in the overseas markets, but this is not likely to last.

If the pattern of rise followed by a fall is to continue, it is not likely to do so quite regularly after March-April when reports of weather affecting the crop, time of sowing, etcetera, begin to influence market sentiment. Already there are reports that *char* land jute will be sown, if not late in January at least in February. It is generally agreed, however, that the warehouse stocks available on the Continent during the period June-July will command a premium price, since however early the crop may come into the market and whatever may be the outturn, there will no doubt be a rather difficult hiatus between the last arrivals of the current crop and the first arrivals of the new crop. Reports also indicate that every effort will be made to encourage growers to sow widely in order to produce a large crop. It is hard to say whether these efforts will be successful, since it is impossible to predict on the weather. Sceptics have warned that floods in Pakistan come in seven-year cycles and that she will have floods during the coming season.

There are conflicting reports about jute goods stocks with the Pakistani mills, but the general view seems to be that both Pakistani as well as Indian mills are not very well sold for the January-March position. In spite of this, gunny prices have recently risen more than the loose jute rates, making the position of mills a fairly happy one when they can find buyers.

you have just opened
A METAL BOX TUBE!



Your favourite toothpaste comes to you in a Collapsible Tube, a speciality of The Metal Box Company of India Ltd. Wherever necessary, this tube is given an inner coating of a specially devised, chemically inert lacquer that keeps the toothpaste from reacting with the metal of the tube itself. The tube collapses with reducing contents, thereby protecting the toothpaste from oxidation and dehydration. The Metal Box Collapsible Tube is therefore a functional as well as a convenient package. It is scientifically designed to ensure that the toothpaste remains fresh for months.

Backed by their knowledge and experience drawn from India and abroad, Metal Box are manufacturing a wide range of scientifically designed packages for the consumer goods you use.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diothene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY Can Closing and Reforming and Bottle Sealing Equipment

OIL AND GAS FROM THE SAHARA

(BY A SPECIAL CORRESPONDENT)

NO other oil and gas producing region has ever been developed with the same speed as the Algerian Sahara. It has become an important producer only four years after the commercial deposits were found. This achievement is all the more remarkable when operating conditions were exceptionally arduous—the oilfields are surrounded by huge shifting sand dunes, cliffs and highly corrosive salt lakes and are accessible only by aircraft or specially-built lorries. The first of the Saharan oilfields to be brought into commercial production was Hassi Messaoud, discovered in July 1956. It is also by far the most important oilfield in terms of proven reserves. From the outset, its development was treated as a matter of the utmost urgency. Following on the initial discovery, several additional wells were drilled in 1957. These proved the importance of the field, and small-scale commercial production was speedily established.

The first oil from Hassi Messaoud reached the Mediterranean at Philippeville on the north Algerian coast before the end of 1957. It was moved there by a temporary pipeline combined with rail transport and was shipped to France. Work was soon put in hand for the laying of a major trunk pipeline to Bongie on the coast some 100 miles east of Algiers. This pipeline was commissioned towards the end of 1959. It is of 22 to 24-inch diameter and 400 miles long. Its initial capacity was 5 million tons a year, but the addition of further pumping stations was planned with a view to raising capacity to a target of approximately 14 million tons a year by mid-1961. Similar high speed characterised the development of the Edjele oilfield near the Libyan border and the Hassi R'mel natural gasfield.

Exploration of North African Desert

Three reasons account for the delay in exploring the north African desert for oil: (a) lack of surface structures and oil indications (b) remoteness and terrain difficulties and (c) political uncertainties. Oil laws of the Algerian Sahara (and Libya) were drawn up with a view to encouraging exploration and development by relinquishing obligations and a 50-50 sharing of profits. The Saharan desert, covering some 800,000 square miles, is comparable in size with that of Saudi Arabia, but the concession terms are different. Algerian concessions are limited in size to 50,000 to 60,000 square miles, with 50 percent relinquishment after five years and a reduction to one quarter after five years later. The first Saharan permits were granted in 1953, so the first relinquishments followed in 1958 and the discarded areas were taken up by competitors. In mid-1960 these numbered 23 companies including six foreign, holding 75 permits and covering nearly 250,000 square miles.

Search for oil in the southern territories of Algeria had three phases. Between 1948 and 1952, the French Government, French private companies and to a minor extent, British concerns, obtained permits to explore the area. The period 1952-56 was one of intensive search. Nearly £30 million were spent during 1953-55. The discovery of petroleum in paying quantities marked the third phase. The first oil discovery in Edjele was in January 1956. It gave 500 barrels a day of 37° oil at 1,500 feet in Carboniferous and Devonian at 2,500 feet under a faulted surface dome. It was closely followed by the Hassi Messaoud well in July 1956 with 12,000 barrels a day of 45° oil from Cambrian sandstones at a depth of 11,000 feet. The big Hassi R'mel gasfield was found in the same year in Triassic sands at a depth of 8,000 feet. The next oil strike was in 1959 in El Gassi, again in Cambrian, and the latest is in Ohanet, 100 miles north of Edjele.

Giant Oilfield

Hassi Messaoud is one of the world's giant oilfields with recoverable reserves estimated at around 2,000 million barrels from 50 wells. Its first throughput at 10,000 barrels a day in the new $100 million 24-inch pipeline reached the Bongie terminal in November 1959, only three years after the discovery, which is a fine achievement. It is expected to be pumping double that quantity soon and the full capacity of the pipeline will be reached next July. This field is nearly 30 miles long and 20 miles wide, a gentle dome with a north north-east south south-west trend, and its reservoir consists of very ancient Cambrian sandstones 300 feet thick, overlain unconformably by Triassic sandstones and gypsum. Underneath come 1,000 feet of barren quartzites resting on basement granite. Porosities are fairly uniform, but permeabilities vary. The origin of Hassi Messaoud oil is a puzzle. It is stored in Cambrian sandstones now which are non-marine, continental and unfossiliferous. It could have migrated from fossiliferous Silurian and Devonian shales overlying farther into the basin. The alternative theory is that the reservoir sands were charged with oil from overlapping Triassic shale in Hassi Messaoud and with gas in Hassi R'mel. In Edjele and Zarzaitaine fields, the Carboniferous and Devonian oil could have originated in those formations which are marine and fossiliferous.

Export from the Edjele-Zarzaitaine fields began last October at 15,000 barrels a day when the 24-inch pipeline to a terminal in El Skirra near Gabes was completed. Plans are under way for piping Hassi R'mel gas to coastal and even under the Mediterranean to Sicily and Spain. Of the four original permitholders in the Algerian Sahara, three C.F.P.(A), S.N., R.E.P.A.L. and C.R.E.P.S. have found commercial oil production and only C.P.A. has been unlucky in that it found only gas. More permits have been taken over the eastern dunes in recent months. Altogether in mid-1960, there were 45 rigs (25 development and 20 exploratory) and 25 seismic crews were active. Total expenditure is now running at an annual rate of about $300 million, one-third for exploration and two-thirds for development. A total of 360 wells was drilled to the end of 1959 of which 200 were deep ones. Of the total, 220 were producers and 140 dry holes.

Large Gas Reserves

An outstandingly important new source of gas is the French Saharan Hasso R'mel where very large reserves have been discovered. Hassi R'mel, rated one of the world's largest, has recoverable reserves estimated at between 26 and 35 trillion cubic feet of gas. A 500-kilometre line is being constructed to link this field with the coast of Arzew near Oran. Through branch lines, it will serve the small local markets of approximately 50 million cubic feet a day. But its main international significance is that it seems likely to be the first source of natural gas for commercial shipments by methane tanker. A liquefaction plant for this purpose is being built in Arzew. Also, the possibilities of three different routes for submarine pipelines to western Europe are being investigated. Another prospective use of natural gas in Algeria itself is now possible, following the recent conclusion of an agreement for the erection of a steelworks in Bone.

Owned by S.N., R.E.P.A.L. and C.F.P.(A) and discovered by the former Company, the Hassi R'mel field has now been fairly accurately delimited. Its reserves in place are put at 2,000 milliard (1 milliard=1,000 million) cubic metres of wet gas containing nearly 315 million tons of natural gasoline, and its recoverable reserves at 750 to 1,000 milliard cubic metres of gas and 90 to 100 million tons of gasoline. On all accounts, this must be reckoned a formidable addition to the energy resources of the French community. A large export business will be required to render the entire project commercially viable. The President of S.N., R.E.P.A.L. is optimistic about the potentialities of the European market, and in particular, of the possibility of selling one milliard cubic metres of gas a year to Britain. The French are going fast with the gas project, since Saharan gas will be playing an important rôle in Europe's supplies before many years pass.

A small refinery is being constructed by S.N., R.E.P.A.L. and C.R.A.N. It is to be commissioned next June. To encourage local economic development, the products are to be sold cheaply, free of tax—the prices to be fixed 0.27 new francs a litre for gasoline and 0.24 new francs for kerosene and gas oil. The ex-pump price of gasoline in Paris is 0.98 new francs a litre.

The geographical advantages of north African oilfields to European markets are obvious from a map. Hassi Messaoud is some 400 miles from the Mediterranean terminal at Bongie, compared with Kirkmuk's 550 miles and Abqaiq's 1,000 miles. Bongie is barely 400 miles from Marseilles, compared with 1,600 miles from the Levant terminals and 4,800 miles from those at the head of the Persian Gulf. The Skirra terminal will be about the same distance, 450 miles from its Edjele oilfields and 750 miles from Marseilles. The French are claiming a crude oil transport advantage of 50 cents a barrel. To set against this, the exploration charges in the Sahara are 15 cents a barrel more than the average for Middle East oilfields.

Problem of Markets

In view of the close interest of the French Government in Algerian oil, special provision is being made to find an opening for it in French markets where it is regarded as indigenous oil and vigorous attempts are being made to interest buyers elsewhere. There are, however, certain technical problems which have given rise to some difficulty. The Saharan crude oil is exceptionally light in quality. Whereas Middle East crudes, like those of Kuwait, yield 50 percent of fuel oil on distillation, Hassi Messaoud petroleum gives only 20 percent of this fraction, with a proportionately higher quota of light oils. In the west European pattern of oil consumption, the requirements of gasoline are relatively low, coupled with a high demand for fuel oil and other heavy products. If the Algerian crude oil is to form a major part of the French supplies, some adjustment of the refining plant is imperative. Incidentally, the Saharan oil is admirably suited to the needs of the U.S. market, where the emphasis is on gasoline. Unfortunately, there are at present restrictions on imports into the U.S.A. with a view to protecting domestic production, and the Algerian oil must compete with that from the Middle East and Venezuela for a restricted market.

In short, the north African (Saharan and Libyan) discoveries have come at a time when the world's proved oil reserves are greater than ever before, relatively to production as well as absolutely. Even so, the next two years' exports from Algeria can probably be absorbed in France, but when Libya starts production, north African capacity might total 50 million tons a year by 1965. It will also have to compete with the Middle East and Russian supplies for the European market. But in five years' time, western Europe's total oil demand will continue to rise by 50 million tons or 80 million tons to 200 million tons or 240 million tons, and the consumer's choice will naturally be for the lowest cost fuel.

CALCUTTA TEA AUCTIONS IN DECEMBER

STEADIER TREND IN PRICES

THREE sales were held in December, and the offerings totalled 220,575 packages. No sale was held in the last week of the month on account of the Christmas holidays, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. There was a good demand, and most of the teas on offer were readily absorbed. Plain brokens and fannings grades were steady, with the latter showing a dearer tendency in the last sale of the month. Medium orthodox brokens and fannings were about steady, but B.O.P.s and O.F.s in this category were irregularly easier. The market for C. T. C. Assams eased further, but in general these teas received good support at the lower rates. Selected lines of the better sorts realised satisfactory prices. Non-wither teas of legg-cut manufacture were a little easier in the first sale, but thereafter showed little change and sold readily. Whole leaf grades, although a little irregular, were well supported and showed no quotable change. There was a fair enquiry for Darjeelings at irregular and generally lower rates, although a few invoices with improved quality and flavour were keenly competed for and realised useful prices. Tippy teas were not in plentiful supply, but there was only a fair demand for them at irregular rates; the few really tippy grades, however, sold well.

Leaf appearance of Darjeeling teas generally was satisfactory, although some of the lower grades tended to become a little rough. Cup quality showed some improvement, and in the last two sales a few invoices with quite attractive flavour were catalogued. There was little change to note in the appearance or cup quality of orthodox Assam teas. A few quite bright liquoring teas were on offer, but in some cases stalk and fibre became more noticeable in the lower grades. In the case of C. T. C. Assams, however, the leaf tended to become browner and more fibrous, particularly the secondary grades. Both leaf appearance and cup quality of Dooars and Terai teas were satisfactory, with little change to note. A few teas showed signs of seasonal improvement, but some of legg-cut manufacture became a little more fibrous. Little change was noticed in cup quality of teas from Cachar and Tripura, but appearance tended to deteriorate, the leaf of the lower grades in particular becoming dullish and more stalky. A few of the better estates, however, continued to produce clean black leaf teas with sweet bright liquors.

(Inclusive of zonal excise duty.)

There were 1,918 packages of internal leaf on offer in the three sales held in December. The demand in all auctions was good, although prices were irregular. Green teas came to a strong market and sold well. Dust offerings amounted to 72,030 packages in the three sales held during the month. The market opened easier with prices generally below the level of the previous month. As the month progressed, however, a better demand was seen, and in the last auction prices were generally firm and sometimes dearer. Orthodox descriptions opened easier but in the subsquent auctions they met with better support. In the closing sale, they quoted firm and were occasionally dearer. Legg-cut Dooars dusts followed a similar trend. Medium C. T. C.s were easier in the first two sales except for the bright liquoring sorts which were better supported. In the last sale, however, they were keenly competed for and were fully firm and often dearer. In the first auction, the best C. T. C. dusts declined by 20nP, but in the following sales they met with useful enquiry at enhanced rates, particularly the smaller sized grades which were a strong feature.

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 24 totalled 1,336,163 chests at an average price of Rs. 5.58, compared with 1,418,105 chests at an average price of Rs. 5.25 for the same period of the previous season. Internal sales at 9,914 chests of leaf and 453,692 chests of dust (average prices Rs. 4.41 and Rs. 5.29) go against 17,525 chests and 458,177, respectively (against Rs. 4.08 and Rs. 4.52) of the corresponding period of the previous season.

The estimated north-Indian crop up to the end of November 1960, was 232.95 million kilograms (513.56 million lbs), compared with 248.62 million kilograms (548.11 million lbs) up to the same date in 1959. The average figure at this date for the three years 1957-59 was 243.09 million kilograms (535.93 million lbs).

The export quota market remained steady, and little business was transacted. Sellers quoted 4nP, at which rate business was done. Buyers were rather scarce.

Arrivals (in chests) in Calcutta warehouses during the period 24th November, 1960 to 23rd December, 1960, with the corresponding figures of the previous year in parentheses were: by steamer 450,020 (377,698), by rail 162,736 (136,480) and by air 6,926 (6,144) chests. From the beginning of the season 1st April, 1960 to 23rd December, 1960, arrivals have been: by steamer 2,295,828 (2,854,145), by rail 814,091 (933,208) and by air 53,418 (58,937), making a total of 3,163,337 (3,846,290) chests.

IMPLEMENTING KERALA RUBBER CULTIVATION SCHEME

DELAY IN CLEARING FORESTS HAMPERS PROGRESS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

OFFICIAL circles in Trivandrum do not think that the Kerala Government will be able to make available more than 10,000 acres for rubber cultivation both in the private and public sectors during the coming planting season under the State's ambitious 200,000-acre rubber planting scheme included in its third five year plan. The acreage falls short of the original target. The shortfall, it is said, will be primarily due to the delay in getting forest lands cleared of their growths. The State Government has to get this job done by professional contractors who are not active now due to inadequate competition among them. The rates tendered by contractors on areas demarcated for rubber cultivation are falling short of the amount expected by the State Government, so the Forest Department's officials are being compelled to resort to re-auction in several cases involving considerable delay. It is understood from an official source that the Government now proposes to sell through auction forest lands demarcated for planting companies with their tree growths with a view to avoiding delay. The new proposal is reported to be more suitable under the present circumstances.

The Government's present expectation is that it will be able to make ready 4,000 acres for cultivation by landless poor and middle-class people during the current year. So the acreage will be too small to satisfy the expectation of prospective cultivators in these categories. Another 4,000 acres might be made available for cultivation in the public sector. The lands now being made ready for direct cultivation by the State Government are in the Kodumon and Chalakudy areas. The Government is optimistic of getting the 4,000 acres planted during the coming season because the required quantity of planting material is ready in its nurseries.

Third Plan Target

The Kerala Government was able to create a good impression about its rubber planting scheme in New Delhi, so it got about Rs. 7 crores to finance the scheme under the third plan. The target is to plant 200,000 acres in the next quinquennium. The current estimate is that the Government will be able to make available 100,000 acres from its forest reserve and other lands and another 100,000 acres will be made available to private parties who will receive financial and other forms of assistance from the State Government. This scheme has two advantages to offer: first, it will go a long way to make the country self-sufficient in rubber. Secondly, it will solve Kerala's unemployment problem to some extent.

Higher Replanting Subsidy

Meanwhile, it is feared that this big scheme sponsored by the Kerala Government has led the Planning Commission to think that the replanting subsidy given to rubber planters is no more necessary. Reports from New Delhi say that the Commission is not favourably disposed towards the Central Commerce and Industry Ministry's recent proposal to enhance the replanting subsidy to Rs. 1,000 an acre to make it sufficiently attractive to planters who have been reluctant to replace their worn-out rubber trees with high-yielding strains, when they were given a replanting subsidy ranging up to Rs. 400 an acre. Planters, especially small growers, in Kerala who have got the hint of the turn of events in New Delhi have started protesting. They have moved the State Government against the Commission's reported move to get the subsidy dropped. It is understood that the State Government has already taken up the matter with the Central Government and the Planning Commission. The latter's move, growers say, is objectionable for two reasons. First, a good share of the existing area is in need of replanting, and the best way to get this done is through offering an attractive replanting subsidy. That is how other rubber growing countries like Ceylon and Malaya are getting this job done. Secondly, the Central Government and the Rubber Board are committed to an enhanced replanting subsidy of Rs. 1,000 an acre. It will be unfair to let them down, growers say. Besides, planters have been nursing high hopes ever since the announcement about a higher replanting subsidy came from New Delhi and the Rubber Board.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for December 1960:

Upper Assam: Cold weather has set in and the season has closed; weather dry; there has been a deficit in rainfall.

Central Assam: Weather too hot for the time of year; rain badly wanted; crop below normal.

Lower Assam: Outturn normal to poor; weather seasonable; the season has closed.

North Cachar: Outturn poor; cold weather has set in and the season has closed; in Lakhipur, outturn to-date is considerably below last year.

South Cachar: Outturn poor; the cold weather has set in and the season is closed.

Eastern Dooars: Outturn poor; that to-date is considerably below last year in Kalchini; the season has closed.

Central Dooars: Weather seasonable, and the season has closed.

Western Dooars: Outturn normal to good; the cold weather has set in, and the season has closed.

Darjeeling: Weather dry.

Terai: The season has closed; weather seasonable; some helopeltis and blister blight prevail.

COCHIN TEA SALES

At Dust Sale B, 310,000 kilograms of tea were on offer. There was a strong and active market, and prices were 5nP to 10nP dearer. Black leaf types were very strong.

At Sale No. 3, 435,000 kilograms of tea were on offer. The market was steady for plain and low medium brokens while similar fannings were dearer. Improved quality mediums and good mediums were dearer. Best liquoring high-grown brokens met with restricted demand but similar fannings were stronger and dearer. Black leaf fannings met with keen enquiry.

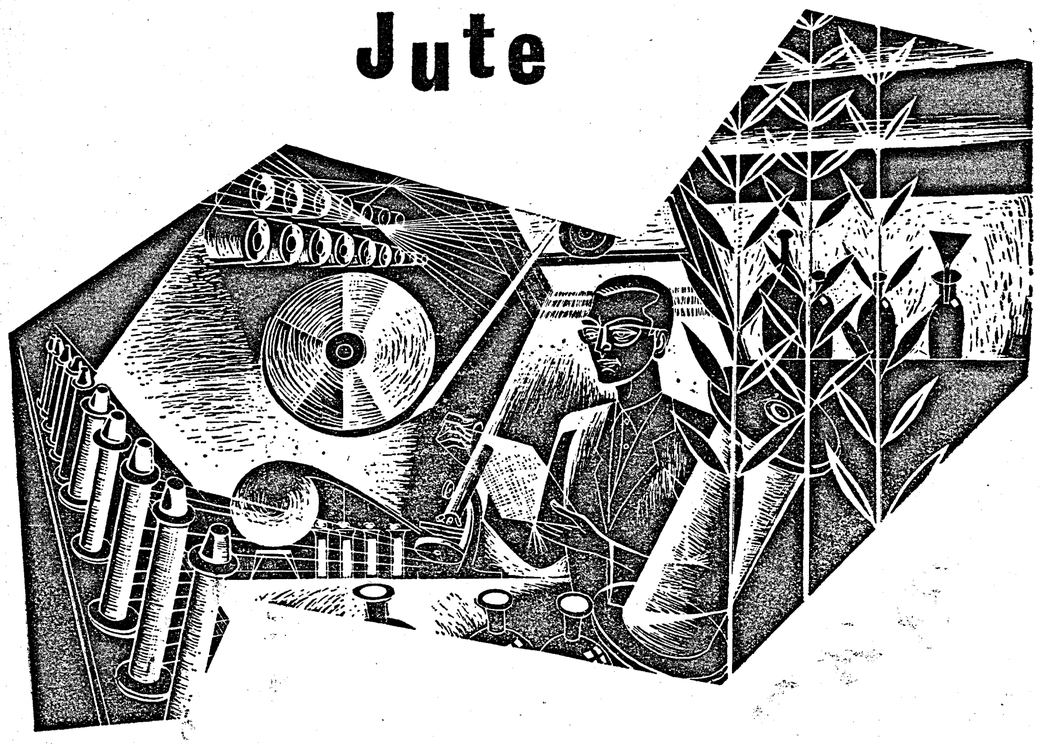
Jute



— an industry on the march

Long regarded as the cheapest heavy-duty packaging material, jute is today claiming attention as a fabric with greater possibilities and wider applications.

Laminated with paper or plastic, jute fabrics provide moisture-proof containers for fine or high-grade products. Treated with chemicals, they offer protection against rot, mildew, corrosion and attack by rodents and insects. Scientific experiments have resulted in the production of a hessian membrane for water-proof roofing... hessian in combination with asphalt is finding increasing favour as a material for canal-lining and a moisture barrier.

These and other discoveries which have dramatically widened the scope of jute usage, stem from the fundamental and applied research carried out at the Indian Jute Mills Association's Research Institute in Calcutta. Side by side, the Institute of Jute Technology—financed by the IJMA—provides facilities for training young men for important supervisory positions in jute mills.

Founded in 1884, the Indian Jute Mills Association seeks to serve India's vital jute industry in ever-increasing measure.

WORLD TEXTILE PRODUCTION MAINTAINED

EXPORTS OF PIECEGOODS REMAIN SATISFACTORY

IT looks as if the expansion in the total world output of cotton textiles has come to a halt for the time being. That is the view expressed in the latest *Quarterly Statistical Review* issued by the U.K. Cotton Board in December. In the third quarter of 1960, it says, the output of cotton yarn in those non-communist countries, for which regular figures are available, was about 1 percent greater than in the corresponding period of 1959. This compares with an increase in the first half of the year of 7 percent over the figures for the same period of the previous year when, admittedly, cotton textile activity was at a depressed level in most countries. Cotton yarn production in the third quarter was considerably smaller than a year earlier in the United States, where textile activity has definitely turned downwards. The yarn output was also less than a year earlier in Canada and the United Kingdom, the explanation in the latter case being the shortage of labour rather than a fall in orders. Almost all the other main cotton manufacturing countries continued to record higher levels of production in the third quarter of the year, one of the biggest increases being achieved by Japan.

World trade in cotton piecegoods continued at a high level in the third quarter of 1960. Exports from non-communist countries were probably the same as in the preceding quarter and were about 8 percent greater than in the corresponding period of the previous year. This compares with a 19-percent increase in the first six months of 1960. Compared with a year earlier, exports from Japan, Hongkong, Pakistan and almost all the European countries showed increases in the third quarter. In contrast, shipments from the U.K., the U.S.A. and, in particular, India were smaller.

Exports of man-made fibre piecegoods from non-communist countries in the first half of 1960 were about 4 percent less than in the same period of 1959, continuing a downward trend which had persisted since 1957. However, there was a measure of recovery in the third quarter, when exports were about the same as a year earlier. The volume of Japanese exports exceeded the figure for the corresponding quarter of the previous year for the first time for over two years. Exports from all other main exporting countries except Italy were less than in the third quarter of 1959.

U.K. Output Rises

The daily rate of output, adjusted for holidays, of the U.K. cotton industry has been improving since the summer. The rate of yarn production in November was the best for any month in 1960 except for May, but was still about 4-percent less than the level achieved in October 1959, which was the post-recession peak. The output of pure cotton yarns is now much the same as it was in May, but there has been a slight decline in the production of waste yarns and a more substantial decline in the output of spun man-made fibre yarns, particularly in the very coarse counts for the tufted carpet and similar trades. The latest figures for weaving relate to October when the rate of output was the best for any month since January, although still about 5-percent less than in October 1959. The general picture is of the level of production being held back only by the shortage of labour. An exception is the doubling section, where some short-time is being worked. Here the heavy imports of doubled yarn are a major depressing factor. In the first four weeks of November, doubled yarn production (in terms of weight) was running about 9 percent below the May level.

There has been an encouraging improvement in output a head since the reorganisation scheme took effect. The best pre-reorganisation period to take for purposes of comparison is June 1959. Since then output a head in spinning has gone up by over 10 percent—an increase which can be accounted for only to a minor extent by the slight coarsening in the average count spun. In the case of weaving, valid comparisons can be drawn only for the Lancashire area. There output a head has increased by nearly 7 percent since June 1959.

There was a flurry of buying at the beginning of October, prompted in part by the claim for shorter hours put forward by the unions. Since then, the rate of ordering has been much slower, although, in general, mills' order-books remain very long and deliveries have been well maintained. Retail sales of clothing remained excellent throughout the summer and autumn, a possible favourable influence being the diversion of money from goods affected by hire-purchase restrictions. In the first ten months of the year, sales of clothing were about 8-percent greater than in the corresponding period of 1959 after allowing for price changes. However, preliminary reports of retail sales in November are less favourable, and if the economy as a whole moves into a recession—accompanied probably by an easing of hire-purchase restrictions—retail sales cannot be relied on to remain a buoyant sector in the textile situation. The difficulties of the motor-car industry have already led to some reduction in the offtake of textiles used in it, and there has almost certainly been a considerable rebuilding of stocks of many types of cloth in the pipeline. On the other hand, any reduction in the standard working week will certainly reduce the level of production, at least temporarily.

Imports from Non-Commonwealth Countries

There was little change in the total volume of imports of cotton piecegoods in the third quarter of 1960, but Portugal, the U.S.A. and Canada became more prominent as supplying countries. There seems to be some misunderstanding overseas concerning imports of cotton cloth from non-Commonwealth countries. Of all the cotton piecegoods imported from countries other than India, Pakistan and Hongkong in the first nine months of the year, roughly one-third consisted of finished cloth, in which the Commonwealth countries have not been much interested until very recently, and another third consisted of grey cloth imported for processing and re-exports—a trade which is open to Commonwealth countries without restriction. The remaining third consisted of grey cloth intended for consumption in the U.K., and of this almost half came from Spain. About three-quarters of all grey cloth imported for home consumption in the first nine months of 1960 came from India, Pakistan and Hongkong. Apparently, there is an element of subsidy or dumping or both in the case of imports from Spain, and in the limited case of corduroy, the U.K. Board of Trade has given notice that it is considering an application for the imposition, under the Customs Duties (Dumping and Subsidies) Act, 1957, of an anti-dumping or countervailing duty on imports from Spain. Imports of cotton yarn, mainly from Spain and India, and of man-made fibre piecegoods, mainly from the U.S.A., Germany and Italy, also continued at a very high level in the third quarter.

Exports of cotton piecegoods totalled only 74 million square yards in the third quarter, compared with 85 million square yards in the second quarter and 88 million square yards in the third quarter of 1959. The only considerable increases, compared with a year earlier, were in shipments to British West Africa and the Irish Republic. In contrast, there were marked decreases in exports to Rhodesia and Nyasaland, Australia, the Congo, French Africa, Burma and the U.S.A. Exports of both cotton yarn and man-made fibre piecegoods in the third quarter were also less than in the preceding quarter and the corresponding quarter of the previous year.

Recession Hits the U.S.A.

The cotton and allied textile industries in the U.S.A.—in common with other sectors of the economy—are now experiencing a recession. Mill consumption of raw cotton in the third quarter of 1960 was 8-percent less than in the same period of 1959, and the decline continued in October. Consumption of rayon and synthetic staple in the third quarter was also less than a year earlier, by 12 percent and 11 percent, respectively. The latest weaving production figures relate to the second quarter when the output of cotton cloth was about 11-percent less. Production of synthetic fibre cloth, on the other hand, was about 17-percent greater than in the second quarter of 1959. The subsequent decline in weaving activity is reflected in the cut in average hours a loom a week from 126 in June to 120 in September. Inventories of cotton goods have been increasing steadily since the beginning of the year and unfilled orders shrinking. Profit rates shrank again in the second quarter and mill margins narrowed in September, although they still remain ample by historical standards. It appears that mills deliberately and quickly curtailed production at an early stage of the downturn in an attempt to forestall some of the large stock accumulations and price cutting characteristic of previous recessions in textile activity.

Concern is still being expressed about the high level of cotton cloth imports. These totalled 135 million square yards in the second quarter, compared with 122 million square yards in the previous quarter and only 45 million square yards in the corresponding period of 1959. There seems to have been a moderate decline in imports of cotton piecegoods in the third quarter, however. Japan remained the principal supplier in the second quarter, followed very closely by Hongkong. Imports from Spain, Egypt and Portugal continued their rapid expansion, but there was some reduction in arrivals from India and Pakistan.

Exports of cotton cloth fell last year from 128 million square yards in the first quarter to 106 million square yards in the second and again to about 93 million square yards in the third. Exports in the third quarter of 1959 totalled 108 million square yards. The considerable reductions in trade with Cuba and Canada, compared with a year earlier, were partially made good by an expansion in shipments to Australia, the U.K. and the West Indies among other markets.

Japanese Mills Busy

The cotton and allied textile industries in Japan continued to be busy during the third quarter of 1960 when yarn production was only very slightly less than the high level attained during the preceding quarter. Spun rayon yarn production was 1-percent less than a year earlier, but the spun synthetic yarn output was almost double that achieved in the corresponding period of 1959, and the output of cotton yarn was 16 percent greater. In the weaving section, production of cotton, spun rayon, filament rayon and synthetic fibre cloth in the third quarter was, respectively, 18, 8, 5 and 79 percent greater than a year earlier. A continuation of the present level of production control until next March is expected, although stocks are mounting.

In April 1961, raw cotton imports are to be completely liberalised. This will remove the ultimate sanction by which the Government has hitherto been able to enforce production controls on cotton textiles. To replace it, the Textile Industry Equipment Temporary Adjustment Law, under which about 15 percent of registered cotton spindles have been "mothballed" and 55,000 cotton and spun rayon looms scrapped, has been amended. The amended law contains provisions for continuing the "mothballing" of spindles and also for controlling production in the short-term by the "sealing" of additional machinery. These measures will be enforced on the whole of any section of the textile industry if two-thirds of the units in that section are in favour.

Exports of cotton piecegoods expanded sharply to reach a total of 360 million square yards in the third quarter, compared with 299 million square yards and 314 million square yards in the previous quarter and the third quarter of 1959, respectively. Increases compared with the corresponding period of 1959 occurred in shipments to British West and East Africa, Singapore, Australia, Burma, the U.K. and Germany, while shipments to Hongkong, Siam, Iraq and Indonesia showed decreases. Exports of rayon piecegoods in the third quarter increased to 254 million square yards, compared with 235 million square yards in the previous quarter and 247 million square yards in the third quarter of 1959. This is the first such increase compared with a year earlier for over two years.

Restrictions on Indian Trade

Estimates of cotton yarn and cloth production in India in September suggest that it was the best month so far in 1960. Total yarn production for the first nine months of the year, however, was only very slightly greater than in the corresponding period of 1959. Mill-made cloth production over the same period was up by 2 percent. The controversy surrounding the price of cotton textiles, arising out of allegations of exploitation of the consumer by the industry and the Government's desire to hold the cost of living steady, has led the industry to attempt voluntarily to fix profit margins and prices. One result of these measures has been a marked increase in mill stocks of cloth from 283,000 bales in June to 384,500 bales in October, since some traders have been reluctant to take price-stamped cloth in large quantities. A further restraining factor on trading conditions is the reported decision of the Government to refer to the Tariff Commission the whole question of the control of textile prices. Since the determination of "fair prices" is a complex matter, hearings will probably be long and may well disturb market sentiment, thus reducing offtake.

Exports of cotton cloth in the third quarter are expected to be about 165 million square yards, compared with 173 million square yards in the previous quarter and 225 million square yards in the third quarter of 1959. Indian cloth is now facing keen competition in the Sudan because of the entry of certain Japanese cloth into that market, while shipments to the U.S.A. have declined, allegedly because of a sharp increase in shipping freight rates. A brighter feature in the export field is the further ban by the Malayan authorities on the import of certain Chinese cloths.

West European Mills Cautious

The prevailing mood of the cotton industries of continental western Europe appears to be one of caution. This is possibly because of past experience of cyclical fluctuations in textile activity coupled with the downturn in the U.S. cotton industry, which in the past has often heralded recessionary conditions in the textile industries of Europe. For the moment, however, offtake both at home and abroad appears to be quite well maintained. Order-books, although shortening, remain reasonably well filled. In France, however, price margins are described as narrow. Belgium reported very heavy October sales, while in Holland both production and sales remained at high levels. The cotton yarn output in the third quarter in continental western Europe as a whole was probably around 12-percent greater than a year earlier; this is much the same increase as that achieved in the second quarter. All the main producing countries are believed to have raised their rate of output over the last 12 months.

Total exports of cotton piecegoods from continental west European countries in the third quarter were about 27-percent greater than in the corresponding period of the previous year; this follows a 45-percent increase in the first six months of the year. All the main exporting countries with the exception of Switzerland reported increased exports in the third quarter compared with a year earlier, the expansion in shipments from Spain and Portugal—largely to the U.K. and the U.S.A.—being particularly great. West European exports of man-made fibre piecegoods in the third quarter were about 4-percent smaller than in the same period of the previous year, following a 2-percent increase in the first half of the year. Only Italy exported a significantly greater quantity in the third quarter than a year earlier, while shipments from Germany, Belgium, the Netherlands and, probably, France were smaller than a year before.

VANGUARD PRODUCTION CONTINUES

CANADIAN AIRLINE PLANS FARE REDUCTION

VICKERS has announced that the present *Vanguard* production programme will extend into 1962 and that the Company is trying to get further orders for the big turboprop airliner. This statement followed an inaccurate report in a newspaper that production was to be discontinued. In fact, now is just the time when more orders may be forthcoming. The airliner entered service recently with B.E.A., and next month it will start carrying passengers on Trans-Canada Air Lines' routes. During the Christmas holiday, B.E.A.'s first *Vanguard* carried about 1,000 passengers when making "holiday help" flights. In fact, about 100 passengers were carried on each "lift", a load factor of around 70 percent.

B.E.A. has announced the dates on which regular *Vanguard* services will begin : Paris, 1st March; Glasgow, 1st April; Warsaw, 4th April; Madrid, 1st May; Palermo, 1st June; Naples, 2nd June; Rome and Malta, 3rd June ; and Edinburgh and Milan, 1st August.

Forty *Vanguards* were ordered before the first aircraft made its maiden flight, and three more were ordered last year. Once a new airliner has entered service and proved itself in airline operation, orders start to flow. This was true of the *Viscount* and there is no reason to believe it will not be true of the *Vanguard*.

The *Vanguard* can carry up to 139 passengers over short and medium length stages at block speeds equivalent to those achieved by jet airliners at a seat-mile cost, on certain routes, of less than one U.S. cent a seat-mile. This means that fares can be reduced substantially on many routes. Mr. Gordon McGregor, president of Trans-Canada Air Lines, said recently: "The lower unit operating costs anticipated from the *Vanguard* were a basic factor in the calculating of the new fare structure. T.C.A.'s highly satisfactory experience with the *Viscount* gives promise that its larger turboprop stablemate, the *Vanguard*, will have an equally favourable impact upon air transport economics. At present, about 40 percent of T.C.A.'s North American seat capacity is being provided by propeller-turbine aircraft. When T.C.A.'s 23 *Vanguards* are in service, this figure will rise to about 70 percent."

NEW LOCKHEED LIGHT AIRCRAFT PROTOTYPE DEVELOPED

The newest prototype of the Lockheed *LASA-60* light utility aircraft, which is to be built in Mexico, arrived in San Luis Potosi in Mexico from Texas. The six-passenger aircraft is the latest prototype of the series. It is powered by a 260 horse-power Continental turbosupercharged engine. The first prototype powered by an unsupercharged engine was certificated by the F.A.A. last April. Work is progressing rapidly to build Mexico's latest privately produced aircraft. First production parts are already taking shape and the first Mexican-built *LASA-60* will come off the assembly line in February. The project is a partnership plan between Lockheed International and a group of Mexican industrialists headed by General Abelardo Rodriguez and Mr. Juan Azcarate. The new aircraft has also been licensed for production in Argentina and Italy.

NEW AUTOMATIC ALUMINIUM CABLE SHEATHING PRESS

The fully-automatic aluminium cable sheathing press developed by Schloemann Aktiengesellschaft, Düsseldorf, has proved its utility at numerous cable manufacturing plants. During the past few months, Schloemann has received orders for four of these machines from Japanese cable producers. This brings up to 21 the total number of aluminium cable sheathing presses either supplied or in the course of construction. Cables of any desired length can be sheathed on these presses. Through the automatic die adjuster, the thickness of the cable sheath is maintained constantly even when there are intervals in the extrusion process, either for loading a fresh supply of billets or in the event of troubles. Cable cores served with temperature-sensitive insulating material—such as Polyethylene or Styroflex—can be sheathed in unlimited lengths, which is made possible by a dependable heat-protective arrangement for insulated cores.

U.S. AIR FORCE BUYS LOCKHEED AIRCRAFT

Modernisation of the U.S.A.F. Military Air Transport Service with faster, longer range, more versatile aircraft began this month when a letter contract for 16 *C-130E Hercules* propjets was awarded to the Georgia Division of Lockheed by the Air Force's Air Material Command. The order for the new troop and cargo carrying aircraft is expected to total 50 aircraft over a two-year period with a total estimated cost of $170 million. M.A.T.S. provides strategic airlift for worldwide U.S. defence forces including the Strategic Air Command, Tactical Air Command and strike forces of the Army and Navy.

Books

ENTREPRENEURS IN MADRAS

Industrial Entrepreneurship in Madras State. By J. J. Berna. (Published by Asia Publishing House, Bombay. Price Rs. 18, pages 238.)

Dr. Berna's study was sponsored by the International Industrial Development Centre of the Stanford Research Institute. It discusses a group of entrepreneurs in Madras State, chosen by the author as a case-study of an under-developed region in India. The primary purpose is to investigate the background of the entrepreneurs, the ways in which they have developed their industries and the problems they have had to face in establishing and building them up. The book also evaluates their performance as industrial entrepreneurs. Dr. Berna says that Madras is one of the most suitable States for investigation, since it is just at the take-off stage. A more rapid tempo of development will become possible if entrepreneurs come forward to establish many more new industries in future.

The book is divided into seven chapters. Chapter I discusses some basic concepts and the theoretical framework which have guided the author's approach to the subject. Chapter II presents a picture of the economic environment in which the entrepreneurs are carrying on their activities. Chapter III introduces the entrepreneurs and discusses their background. Chapter IV analyses the problems they face in developing the enterprises they have established. The growth of firms and technology have been dealt with in Chapter V, while Chapter VI deals with the entrepreneurs' mobility in adapting to changing circumstances. The last chapter summarises the conclusions reached in the course of the study and includes some recommendations for developing small and medium-scale industries.

NATIONAL INCOME

Papers on National Income and Allied Topics. Volume I. Edited by V. K. R. V. Rao, S. R. Sen, M. V. Divatia and Uma Dutta. (Published by Asia Publishing House. Price Rs. 25, pages 297.)

This book is the first of a series which the Indian Conference on Research in National Income proposes to bring out. It consists of the papers presented at two meetings of workers in the national income field in India. The first meeting was preliminary to the formation of the National Income Research Conference, and the other was the first formal session organised by that Conference. The topics in this volume concern the conceptual and methodological aspects of national income estimates, national accounts and related aggregates, estimates of long-term growth, and estimates of savings, investment and capital stock. Although the papers are of a somewhat tentative nature, they are useful in that they highlight the need for a more comprehensive study of national income in India. This volume is likely to promote interest among research workers in the field.

COMPANY LAW

Salient Features of Company Law. By R. K. Dalal. (Published by N. M. Tripathi Private Ltd, Bombay. Price Rs. 7, pages 289.)

The book explains the important features of company law in a simple way. Students appearing for various commercial examinations will find it useful, especially since the important provisions of the Companies Act have been illustrated with case laws. The book will also be useful for business men, for it indicates in broad outline the duties of company managers and directors.

MARKET SURVEY

Thompson Consumer Index of Markets. (Compiled and published by J. Walter Thompson Co. Private Ltd, Sir Pherozeshah Mehta Road, Bombay 1. Pages 68.)

The increase in consumer demand following a rise in the national income has resulted in the overall expansion of economic activity. Many consumer goods industries are, therefore, faced with the problem of making a correct assessment of the sales potentialities of their output. The consumer index of markets compiled by J. Walter Thompson and Company for India's 504 cities and towns with population of over 20,000, will help manufacturers to assess correctly the market potentialities for their products.

STOCK EXCHANGE GUIDE

The Madras Stock Exchange Official Year Book, 1959-60. (Compiled and published by the Madras Stock Exchange Ltd, 322-23 Linghi Chetty Street, Madras 1. Price Rs. 10, pages 1,108.)

The eighth edition of this year-book has been revised and brought up-to-date. It contains the latest balance-sheets of companies and incorporates details of those listed on the Bombay and Calcutta stock markets. Besides, it includes particulars of companies which raised capital in the market during the past two years. With its comprehensive coverage, the year-book will prove useful as usual.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 27, held on 16th and 18th January, there was a strong general demand at irregular rates for the 73,831 packages on offer at the Export sale. Medium Assam B.O.P.s met with fair support but were generally easier except for the bright liquoring kinds which were fully firm. Similar O.Fgs. with bright liquors were again a strong feature and sold at dearer rates. Medium brokens were about firm while Fannings with a clean leaf appearance and brighter liquors were dearer, the remainder being about steady. Plain brokens and Fannings, although irregular, were 5nP and occasionally 10nP easier, while Legg-cut teas were generally 10nP or 15 nP lower. Well-made whole leaf grades were about steady but the poorer stalky kinds showed a further decline. A few of the very best C.T.C. teas came in for good support at firm to dearer rates but the remainder and medium C.T.C.s were up to 20nP lower while the secondary grades were a very irregular feature. Darjeelings with autumnal liquors were well supported, while the few tippy teas on offer sold well.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.45	2.22 to 2.26
Plain B. P.	4.50 to 4.65	2.06 to 2.10
Plain Fannings	4.80 to 5.00	2.10 to 2.16
Medium B.P.	4.70 to 4.85	2.06 to 2.08
Medium Fannings	4.90 to 5.15	2.16 to 2.26
Best Assam C.T.C B P.	5.50 to 5.90	2.40 to 2.60
Best Assam C.T.C Fannings	5.80 to 6.30	2.40 to 2.60

(Quotations are inclusive of excise duty.)

At the Internal Sale, the offerings comprising 21,470 packages of Dusts met with a good general demand which strengthened as the sale progressed. Medium C.T.C. Dusts were well supported, the smaller and brighter liquoring kinds being firm to dearer. There was an active enquiry for good C.T.C. sorts which were upto 10nP dearer while the best in this category were irregularly lower. Orthodox descriptions sold readily ; the smaller and brighter liquoring varieties were generally dearer. Non-wither teas were also keenly supported. Darjeelings were a strong feature and mostly sold at dearer rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb.
Plain Orthodox Dust	4.80 to 4.95	2.16 to 2.26
Medium Assam Dust	5.00 to 5.30	2.10 to 2.20
Legg-cut Dust	5.15 to 5.36	2.18 to 2.26
Medium Assam C.T.C. Dust	5.50 to 5.70	2.50 to 2.80
Good Assam C.T.C. Dust	5.90 to 6.40	

(Quotations are inclusive of excise duty.)

A good demand prevailed for the 510 chests of Leaf on offer.

GRAIN RATES IN FREIGHT MARKETS RISE

THE first fixtures against the purchase by China of 300,000 tons of wheat from Australia have been done at 60s with the immediate result of increasing grain rates Australia-Italy by 2s 6d and to the U.K. by 7s 6d a ton. Other vessels have been taken on time charter by the Chinese with deliveries in the Indian Ocean area. There is a report of the conclusion of the sale of 1 million tons of coal from Newcastle N.S.W. to Japan which should further stimulate business in the area. Continued activity was evident in the time charter section and Chinese charterers again predominated. American markets during the period have been fairly quiet, but any demand on a reasonably large scale will meet with considerable resistance from owners. Japanese ore importers are showing some anxiety, and a contract of 100,000 tons is available from Mormugao, the higher rate of 43s being indicated.

A visit to Madras port recently revealed considerable progress in modernisation and expansion and the mechanical ore loading plant, when experience has been gained in operation, should produce very satisfactory loading rates.

General cargo movement is still at a low ebb with no sign of improvement in the near future. Most berths are overtonnaged, but this does not appear to prevent new operators setting up in competition—the latest effort being in the India-U.S.A. trade.

LINSEED FIRM

Firmer conditions prevailed in the linseed market during the past week and seeds and oil prices advanced further in sympathy with sharp rises in other oilseeds, notably groundnut and mustard. With supplies short, sellers showed little interest, while there were livelier enquiries from millers. The oil market was firm. Stocks were limited and small lots changed hands at higher prices. The oilcake market was steady due to good local demand and small stocks available in the mills. The latest quotation is as follows: Ready, Rs. 30.50 a maund.

COMPANY AND PUBLIC NOTICES

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3¼ per cent net (tax applicable at 7s.9d. in the £) for the year ending 31st March, 1961. Payment will be made on 15th February, 1961, to those stockholders whose names are registered in the Company's Stock Register on 31st January, 1961.

Applications for transfers received in this Office before 12 O'Clock noon on Tuesday, the 31st January, 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board
D. H. P. HENDERSON
Agent.

Victoria House,
Calcutta, 12th January, 1961.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	Hours I.S.T.
Champdany Jute Co., Ld.	24-1-61	11-45 a.m.
Punjab Minerals Co., Ld.	10-2-61	11-00 a.m.

DIVIDENDS DECLARED OR PROPOSED.—Punjab Minerals Co. Ltd—Nil ; Associated Cement Companies Ltd—Rs 12 per share, subject to tax ; United Breweries Ltd—Rs. 3.50 (f), per share, subject to tax; Indian Oxygen Ltd—15 p.c. (o), subject to tax ; Calcutta Electric Supply Corporation Ltd—£3¼ percent (Int.) (o), less tax.

HIDES AND SKINS FIRM

The market in skins ruled firm. Stocks of hides were higher but those of skins were less than in the previous week.

Bazaar Sales

(Between 10th January and 16th January, 1961)

Cowhides : Wet salted (Ord.) 14,000 pcs. on the basis of Rs. 9.25 to Rs. 10.25 ; Wet salted (Slaughtered) 18,000 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19.50 to Rs. 28.50.

Goatskins : Wet salted (Patna, Daissee, Kustia) 41,800 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 380 to Rs 400 and Rs. 430 to Rs. 440 ; Wet salted (hekilled) on the basis of Rs. 4.75 and (she killed) on the basis of Rs. 4.50 a piece ; Assam-Dinajpur-Bankura 39,300 pcs on the basis of Rs. 270 to Rs. 300 and Rs. 340 to Rs. 370 ; Purneah-Kissenganj 2,700 pcs. on the basis of Rs. 370 to Rs. 380 ; Patna-Pakur (Ord.) 14,250 pcs. on the basis of Rs. 270 to Rs. 300 and Rs. 340 to Rs. 350 ; Patna-Muzafferpore 57,400 pcs. on the basis of Rs. 340 to Rs. 350 and Rs. 365 to Rs. 375 ; Patna-Purneah 4,200 pcs. on the basis of Rs. 400 to Rs. 440 and Rs. 475.

Bazaar Stocks

(16th January, 1961)

Cowhides : Wet salted 152,500 pcs.

Goatskins : Wet salted (Daissee, Kustia, Killed) 15,000 pcs. ; Assam-Dinajpur 88,000 pcs. ; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 133,000 pcs.

SHELLAC STEADY

During the week ended 17th January, the market was steady. The range of quotations was as follows :

Standard Pure Buttonlac	Rs. 92, 90, 92 buyers ; 95, 94, 96, 95 sellers.
Lemon No. 1 Shellac	Rs. 95 buyers, 95, 96 done and buyers, 96 buyers ; 97, 98 sellers.
Lemon No. 2 Shellac	Rs. 89 buyers, 91 done, 90, 91 buyers ; 91, 92 sellers.
F.O. Superfine Shellac	Rs. 84 done, 85 buyers ; 86, 87 sellers.
Standard One Shellac	Rs. 81, 82 buyers ; 82 to 84 sellers.
TN Pure Shellac	Rs. 73 to 75 buyers ; 76 to 78 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 103, 104 buyers ; 106, 108 sellers.
No. 1 Kusmi Seedlac	Rs. 86 sellers, 88 value, 85 sellers.
No. 2 Kusmi Seedlac	Rs. 72 sellers, 75 value, 74 sellers.
Golden Bysacky Seedlac	Rs. 78 buyers ; 80 done, 80 buyers ; 80, 83, 82 sellers.
One B Seedlac	Rs. 76, 75, 78, 77 buyers ; 77, 76, 80, 79 sellers.
Two B Seedlac	Rs. 68, 67 buyers ; 68 done and buyers, 69 buyers ; 69, 68, 70 sellers.
Manbhum Fine Seedlac	Rs. 73, 76, 75 buyers ; 75 to 78 sellers.
Fine Bysacky Seedlac	Rs. 66 done and buyers ; 66, 70, 69 buyers ; 68, 69, 72 sellers.
Genuine Bysacky Seedlac	Rs. 58 done and buyers ; 57 to 60 buyers ; 60, 62 sellers.

Shipments during January until the 13th were 16,980 packages.

THE ECONOMIC CONSEQUENCES OF MR. KENNEDY

IT seems generally agreed that the most difficult task facing the new U.S. President will be to fulfil all the various hopes placed in him. Certainly not since the inauguration of Franklin D. Roosevelt—who, significantly, became President almost exactly the same number of years after a world war as Mr. Kennedy—has so much obviously required to be done in U.S. affairs, both domestic and foreign. Perhaps the main difference in the problems facing the two is that Mr. Kennedy's solutions are likely to have an even greater impact on the rest of the world than did Mr. Roosevelt's. That is why the new man's performance is going to be watched even more closely outside the U.S.A. than inside—where anyway the criteria of success are likely to be far less exacting in the long run. Indeed, it is the external impact of the measures he chooses which history will eventually judge him on. To the prosperous United States a million unemployed more or less need have little importance; to the outside world, and especially the under-developed portion of it, the maintenance by the U.S.A. of aid programmes and wise trading and payments policies can quite possibly mean the difference between life and death.

The effect of Mr. Kennedy's promised policies on the dollar was a lively issue in last November's election. Now the various predictions will be put to the test. The new President is dedicated to inflationary measures both at home and abroad while at the same time maintaining the present parity of the currency—a dilemma for which he has only himself to blame. He has one sure way of resolving it—to increase U.S. productivity to the point where both burdens are bearable. Whether in fact he can do this is doubted by many; economic management in democracies these days is too much in the hands of inflationary elements, namely organised trade unions. In any case, he is unlikely to achieve anything in time to relieve the current pressure on the dollar without having to adopt other, possibly temporary, measures as well. And it is these measures in which the rest of the world is primarily interested, because the temptation will be to take many of them at its expense. This is what will present Mr. Kennedy with his trickiest problems—how to carry out his responsibilities at home without neglecting them abroad. Up to now he has shown himself to be fully aware of both sets. But to understand problems is not the same as to solve them, and Mr. Kennedy has little time in which to gain experience in the latter process. Fortunately, he has at least three qualities in his favour which promise well for his success—youth, energy and enthusiasm. He is going to need all of them.

The index of his success will, of course, be the strength of the dollar. Pledged to economic regeneration at home, the new President is faced with falling U.S. gold reserves, a balance-of-payments deficit exceeding $1,000 million a year, and a speculative drain which measures taken by the U.S.A. itself—as distinct from those taken by its allies in the form of discount rate reductions—have so far failed to halt. *It is significant that* the last act of the retiring Mr. Eisenhower was to extend the prohibition on U.S. citizens holding gold in their own country, to their holding it abroad. This move would seem to be only logical; but to the international speculator it suggests declining faith in the dollar, which is now all but inconvertible on short-term capital account. No doubt President Kennedy will supplement this measure by further cuts in unnecessary military expenditure abroad, especially in Europe where N.A.T.O. members will be urged to contribute more to their own defence, fresh appeals to the U.S.A.'s allies to increase their foreign aid, an export drive and, eventually, when the present pressure on the currency has eased, legislation to remove the 25 percent gold backing for the dollar. There are, in fact, many ways in which the U.S.A. can improve its balance-of-payments position without devaluation, especially when it is remembered that, on current account, this is at present running an annual *surplus* of more than $3,000 million.

But not all the measures, or even many of them, will be possible without affecting the outside world generally and individual countries in particular. The contraction of U.S. military spending abroad might change radically the balance of power in Europe; it could, for instance, give an opportunity for a future resurgent Germany. The move to persuade surplus countries to accept more foreign aid obligations is likely to bring an altogether different complexion to aid programmes generally—which might not be altogether a bad thing. And the obvious need to tie U.S. assistance to purchases chiefly from dollar markets is clearly going to reduce the future effectiveness of what aid the United States will continue to be in a position to give.

Even the short-term measures to protect the dollar are proving not to be without their effect *on the outside world*. Britain, for instance, has been forced as a gesture of goodwill to reduce her discount rate at a time when sterling is under little less pressure than the dollar. American persistence that countries should hold more dollars, instead of demanding gold, could induce excessive caution in other monetary authorities when the world badly needs more confidence and initiative in trading and payment matters. The U.S. Treasury's disapproval of free gold markets abroad could help to contract the volume of world liquidity. The reluctance to prohibit private capital movements while asking other countries to make sacrifices for the dollar is placing some of those countries in the unacceptable position of, in effect, financing private U.S. take-over bids in their own economies—the Ford purchase of its U.K. subsidiary came remarkably near to this. Indeed, the present position is full of difficulties and dangers which would certainly diminish if the dollar gains in strength, but which will get steadily worse if it does not.

One of the points with which Mr. Kennedy is undoubtedly familiar is that his actions are capable of having a serious effect on his allies and on the world generally; within his power he can be relied upon to mitigate whatever damage they may threaten to do. But perhaps the most important question of his tenure of office is whether and how soon he will be prepared to recognise that the dollar is at present clearly over-valued in terms of gold, whether he will be prepared to introduce that idea to the American people, and what alternatives he proposes to dollar devaluation if that should become necessary. The over-valued dollar is, of course, the problem of world liquidity; that of the incorrect alignment of, say, the deutschemark, with the dollar, is connected, but of far less real importance. Whatever hope there might be of Mr. Kennedy respecting the world's other economic difficulties, there appears to be none at all that he will do anything about this one. The United States monetary authorities are still resolutely against an increase in the price of gold—on the doctrinaire ground that the U.S.S.R. would be the largest beneficiary—but apparently remain unable to suggest an alternative method of increasing the world's liquidity resources. The abolition of the 25 percent gold backing for the dollar, if it ever materialises, would certainly help. So would Britain's suggestions for restricting drawing rights with the I.M.F. to currencies of surplus countries instead of simply dollars and sterling, and for turning the Fund into an international central bank. But unless Mr. Kennedy can persuade such countries as West Germany, France, Italy and Japan—those which appear to have benefited most from the U.S. dollar drain—to disgorge some of their newly acquired gold hoards for the sake of increasing international trade, he is not going to have much success with the measures at present proposed. Even then, it is still true that the expansion of the free world's gold output has not kept pace with the growth in the value of its trade. Sooner or later this difficulty will have to be faced, and the greatest reluctance to doing so is, at the moment, located in the United States itself. It will prove a great test of Mr. Kennedy's statesmanship how far he can lead his countrymen towards the sacrifices of prejudice which dealing with this situation may involve for them.

It is odd that, since the days of Lord Keynes, so little constructive thinking should have been done on this problem of increasing the world's liquidity, and subsequently its trade, as distinct from simply solving the maldistribution of liquidity resources which resulted from the war. What is rapidly becoming more obviously necessary, and will certainly arrive at the critical stage during Mr. Kennedy's Presidency, is an overall increase in world liquidity together with a realignment of certain currencies with the dollar. These are in part complementary, and as mentioned above, the first is more important, at least in the short-term, than the second. But both will eventually have to be faced and no single person will be more concerned in their solution than the new President of the United States. When so much has been promised the American people in the election campaign about reviving their country's prestige and rehabilitating the importance of its currency, it is going to require statesmanship of a high order to introduce them to the fact that the post-war period is now over, that national economic circumstances have changed beyond recognition, that the U.S. economy has at last become what Lord Keynes always said it would, inflexible and high cost, and that any prejudices that stand in the way of the world increasing its ability to trade and prosper are probably the real dangers to the United States' prestige and popularity in the world today.

FOOD AND FERTILISERS

MUCH fuss has been made in recent months over the fact that food prices in India are falling. During the last session of Parliament, the farm lobby rose occasionally to demand the tentative formulation of price support schemes. More recently, reports from various centres have suggested that a number of State Governments are getting worried about what will happen if the general elections next year are preceded by a slump in agricultural prices this year: the Congress Party's heavy reliance on the rural vote is well known. The evidence, however, indicates that all talk of a slump so far is eye-wash. The official index of wholesale prices for food (base year 1952-53 equals 100), which stood at 116.8 a year ago, is 116.2 now. About the highest it has touched meanwhile is 124.6, in July 1960; and that was a time when, in the course of the Central Government employees' strike, New Delhi was being angrily denounced for letting food prices rise so high. The indices of wholesale prices for individual commodities show that, since the July peak, rice and *gur* alone are appreciably cheaper. The wheat index has fallen only slightly, and changes elsewhere have been minor. The cassandras need to be told firmly that cheaper rice and cheaper *gur* do not constitute an agricultural slump. Food prices in general are hardly lower than they were a year ago—a time when they were already too high. The decline in *gur* prices deserves to be positively welcomed; it will promote an increase in sugar production, which is by far the more economical way to use sugarcane. The decline in rice prices could well be allowed to go further; it is the staple diet of some of the poorest sections of the population. It is true that the indices disguise local variations, which in some places have been quite sharp. But wherever the prices of certain agricultural commodities have declined sharply, it is due more to the

clogging of the transport and marketing organisations than to anything else.

The real danger of any fall in agricultural prices which may have taken place lies not in that it threatens disaster to the farms, but in that it is making the Government more and more complacent about increasing food production. The Central Food and Agriculture Minister, Mr. S. K. Patil, has with characteristic ebullience been promising the country that it will be virtually self-sufficient in food in five years' time. It is also reported that the third five year plan, as revised, makes a bigger provision for agriculture. But such assurances and adjustments on paper apart, it seems that the drive for agricultural self-sufficiency has been losing momentum since the earliest months of Mr. Patil's tenure at the Central Food Agriculture Ministry. Latest evidence of this comes in reports from New Delhi that many schemes for increasing fertiliser production, which are a major component of the agricultural programme, have been hanging fire. Bureaucratic delays, mismanagement and plain bad planning threaten to ensure that the third plan targets for fertilisers will not be achieved. Already, thousands of tons of fertilisers which could have been produced have not been produced. It is said that newly-built capacity of 10,000 tons at the Alwaye factory has been lying idle for three months because not enough power is available. What is worse, the capacity of the Sindri unit has been increased by 60 percent, but the actual output is running below even the original level. This is partly because of the shortage of coal: but experts say that full production cannot be achieved until the older plant is thoroughly overhauled, which speakes poorly of the way it has been maintained. The net result of these and other failures is that fertiliser production in the country is running far below the target of 375,000 tons a year (in terms of nitrogen) set under the second plan.

The shortfall cannot be remedied by importing more fertilisers, since foreign exchange too is scarce. Straightforward imports are being arranged along with barter deals, but it is extremely doubtful whether supplies will keep pace with the rising demand. The situation might have been better if the fertiliser projects for Nangal, Rourkela and Neyveli had not been so far behind schedule, and if something had been done to accelerate the construction of the Trombay factory, preliminary investigations concerning which have already taken two years. These delays, and the acute shortage of fertilisers which has resulted, have apparently taught the Government nothing. It is reported that most of the new projects are still awaiting final sanction. Even the negotiations for the factory which the West Bengal Government had hoped to set up in Durgapur with Japanese collaboration are believed to have fallen through. It is not that detailed proposals for fertiliser manufacture are lacking; on the contrary, private entrepreneurs can be complimented on the speed with which they have put forward various schemes and are willing to put forward still more. The trouble, it is believed, is that the Government just cannot decide which group should be allowed to build the private plant proposed for Visakhapatnam; the impression is that this is likely to be a particularly profitable venture, so unless its fate is decided, the possible sponsors will wait before they present alternative schemes. A number of other projects are similarly awaiting official sanction, and it is unfortunate that this latter is being so greatly delayed.

Much of the complacency about sanctioning fertiliser projects quickly, it seems, arises from the fact that the prospects for foodgrain production during the current year are quite promising. The Government has been claiming that the total output in 1960-61 will approach the second plan's original target of 75 million tons, and may even exceed it. Rice production is expected to be an all-time record, and wheat production "very satisfactory." But there is still no obvious reason in all this for nationwide rejoicing of the sort that is invariably followed by deep slumber. It will be remembered that a year ago, too, claims were being made that India's foodgrain production in 1959-60 had exceeded the previous all-time record of 73.5 million tons. Only some months later was it discovered that, on the contrary, there had been a small decline. The theme was then taken up that the smallness of the decline, in spite of widespread drought and floods, indicated how intrinsically vigorous Indian agriculture had become; in other words, that it had been increasingly immunised against the vagaries of the weather. The theme is still being advertised vigorously in New Delhi, but its speciousness need not be doubted. China has just discovered how rapidly bad weather can switch an adequacy of food into a nationwide famine; and Indian agriculture is no healthier than Chinese. One partial insurance against climatic adversities lies in measures to keep the soil rich and yields high. For this, the increasing use of fertilisers is essential. It does not matter whether the delay in implementing schemes for raising fertiliser output is the fault of the Commerce and Industry Ministry or of the Food and Agriculture Ministry. What matters is that the delay should be cut short by quick decisions aimed at ensuring that the targets for nitrogenous and phosphatic fertilisers are realised well before the end of the third plan. It is reported that some decisions may be announced in the very near future; they have been too long in coming, and it is essential that the delays should not be repeated in the case of other schemes which also are awaiting the Government's sanction.

U.K. PAYMENTS PROBLEMS

THE British Government, mindful of its own problems and of the broader problem of international payments, is trying to make the International Monetary Fund more useful. "We must try to disabuse people of the idea that a drawing from the Fund is a last resort, only undertaken at a time of grave crisis," said the Chancellor of the Exchequer, Mr. Selwyn Lloyd, at the banquet of the Overseas Bankers' Club in London. He was preparing psychologically for a drawing on the Fund that would help the sterling area through a difficult, but not a critical, year. Some of the anxious attention that was previously directed towards the dollar has recently been transferred to sterling, and both the main international currencies are now under scrutiny. Financial observers have wondered which Government, the American or the British, will be the first to try to strengthen its currency, in the new situation, by drawing from the Fund! This is not a dignified spectacle, and its implications are potentially serious. "Since the U.S.A. and the U.K. are both experiencing considerable deficit on current and capital accounts," said Mr. Lloyd, "...the world payments situation will need careful handling.

No such situation was envisaged when the I.M.F. was established, and the habits formed in the operation of the Fund are not appropriate to such a situation. When the dollar was a strong currency all countries with a weak currency wanted dollars, and while the dollar has been in trouble they have continued to take from the Fund more dollars than all other currencies together. The only other currency that has been drawn from the Fund in any significant quantity is sterling, which is likewise in a difficult position. This behaviour is irrational, yet not difficult to understand. It is natural that countries needing financial support select the main international currencies. "In our view," said Mr. Lloyd, "drawings ought as far as possible to be concentrated on the currencies of the surplus countries. I hope that, with goodwill, any reluctance to draw these currencies more widely from the Fund can be overcome." The Chancellor was thinking of course, of the additional pressure on sterling that might result from an increase in the quantity of the currency circulating internationally; but he was considering also the inefficiency of an international monetary system that neglected strong currencies simply because they were not conventionally used much in international transactions.

To correct this deficiency, more is needed than a change of mood in the deficit countries: a thorough reassessment of the I.M.F. quotas is equally essential. The present quotas make available to the Fund's members more sterling than German and Italian and Japanese currencies together; yet the currencies of those three surplus countries—and proportionally of other surplus countries—could be very helpful in the present situation, where effective liquid resources are inadequate. It might be supposed that in this situation the resources of the I.M.F. would be strained by demands for temporary assistance. In fact, of the Fund's resources of $14,000 million the facilities granted (standby credits as well as actual loans) take only some $500 million a year. The Fund's managers are not unreasonably difficult to satisfy when a member applies for aid; it is because members are reluctant to apply for aid that the facilities are not fully used.

The Fund is not, in fact, regarded as a means of facilitating payments. It is regarded as a lender of last resort, to be approached only in an emergency. That the total of its lending is comparatively small may be evidence that the world's financial problems are not critical; but financial policy must surely attempt something positive, not merely avoid crisis. The British Treasury's new ideas on the use of the I.M.F. envisage applications to the Fund before any critical situation has arisen. It may be an exaggeration to say that its resources should be used for purposes of ordinary trade—they are not, after all, unlimited; but they should, according to the modern British idea, be available to facilitate ordinary transactions as soon as a country's liquid position becomes so tight that ordinary transactions may have to be restricted. Members should apply for assistance through a period of temporary difficulty as soon as it is apparent that the difficulty will not resolve itself immediately.

It may, of course, be open to question whether the difficulty is normal and temporary or a result of wrong policies and, therefore, (unless the policies are adjusted) permanent. One factor that inhibits members' use of the Fund's facilities is an understandable reluctance to submit their policies to scrutiny. Equally understandable is the reluctance of the Fund's managers to grant assistance unconditionally. Yet it is evidently necessary, if the Fund is to be properly used as an organ of finance, that it shall minimise its interference in its members' affairs. If members are encouraged to use the facilities more freely they will avoid at least the worst excesses of restrictionism. "We must work together", said Mr. Lloyd, "to get through this period without imposing the kind of corrective short-term action which would be harmful to all of us in the long run." For Britain, restrictions on imports (whether directly or by restricting demand for goods) are probably the only alternative to assistance from the I M F. this year, for the foreign short-term funds that have already been used partly to repay debt will not remain indefinitely. It is sensible to explain in advance that drawing from the Fund is an act of policy, not of desperation.

PROS AND CONS OF SMALL COMPANIES

THE idea that big companies should be discouraged from becoming bigger in order to prevent the concentration of economic power is steadily growing among official circles in New Delhi. But however attractive it may look at first sight on ideological grounds, the implementation of such a policy in practice, without any consideration for the economic implications, could do a great deal of harm to the Indian economy. There are many industries such as iron and steel and shipping in which there is no choice as to whether they will be managed by big companies or small ones. In view of the large capital outlay these industries require, they cannot be run except through the medium of big companies. This apart, the advantages of large-scale units have been proved by long experience in many industries. At the same time, it is not denied that there are many industries in which small companies can be profitably employed. It is, therefore, necessary when deciding whether an industry should be managed by a big company or a small one, the approach is made on pragmatic lines.

The finances of 663 small public limited companies in 1958, constituting 13.8 percent of the paid-up capital of this entire sector, as examined by the Reserve Bank in its December *Bulletin*, show how they have increased in number and size in industries which are more suitable for small undertakings on purely economic grounds. They are largely concentrated in cotton, engineering and trading enterprises. The overall performance of the small companies in these industries is more impressive than that of big companies, after comparing the finances of 1,001 medium and large companies examined earlier in a *Reserve Bank of India Bulletin*. The rate of growth in fixed capital formation of the small companies was less in 1958 than that of the big ones, but it was markedly higher as far as engineering and trading enterprises were concerned. It is noteworthy that among small companies, only 32 percent of the gross fixed assets formation was for buying and installing plant and equipment, compared with 75 percent for medium and large companies. This is partly due to the fact that there is no participation of small companies in the iron and steel and shipping industries which disclose a substantial amount of capital formation. In 1958, the rate of inventory accumulation in the case of small companies was higher at 5.2 percent, against 0.5 percent shown by medium and large companies.

The rate of profitability was lower for small companies in comparison with big ones. Gross profits, as a percentage of gross sales, were 6.1 percent, and gross profits as a percentage of total capital employed were 6.8 percent for small companies, compared with 8.7 percent and 8.0 percent for large companies in 1958. Comparing the performance of the small companies in 1958 with that in 1957, there was a distinct improvement. Profits before tax and profits retained in the business were higher in 1958 than in 1957. Total capital formation, comprising gross fixed assets and inventories, also increased. Dividends were higher. The rate of ordinary dividend rose from 4.8 percent in 1957 to 5.9 percent in 1958. Dividends as a percentage of net worth were 4.6 percent.

On performance, the smaller companies deserve as much credit as the larger ones. At the same time, it should be remembered that because of their limited size small companies usually suffer many disadvantages in comparison with the large ones. To begin with, the series of rules and regulations a public company has to abide by under the present Companies Act, is a formidable burden as far as small companies are concerned. Not only are substantial expenses incurred in complying with the often unnecessary formalities of the law, but small companies also have to devote more attention to maintaining books and records than to doing their business. Secondly, they usually find it difficult to obtain funds from the market by issuing shares and debentures. Being relatively unknown, they are not in a position to attract funds in competition with big companies. Unless the underwriting of capital issues by well-known finance houses is organised more vigorously, small companies are not likely to find it easy to get their share issues subscribed by the public.

There was a total gross assets formation of Rs. 2.88 crores in the small company sector during 1958. The financing of these assets is interesting in that the external sources, including the new capital from the market, borrowing and other current liabilities, constituted 48 percent of the total finance; internal sources worked out to 52 percent of the total. Borrowing and depreciation constituted nearly 66.3 percent of the total resources. Borrowing was largely obtained from the banks. It may be mentioned that borrowing from various State Financial Corporations was only Rs. 4 lakhs in 1958. Quite apart from the fact that bigger bank borrowing was probably due to more inventory accumulation, there is no doubt that these industries even now prefer bank borrowing to anything else. Considering that various Financial Corporations have been set up with a view to assisting small industries with credit facilities, it is not irrelevant to stress the importance of recasting the procedures and formalities of these institutions in order to widen their popularity as lenders. Meanwhile, the reliance of the small companies on bank financing cannot be ignored and the trend may not change much in the near future. It is, therefore, necessary to take steps to replenish bank resources in such a manner that these industries may not suffer from a shortage of funds. Banks can no doubt draw on the resources of the Refinance Corporation for maintaining their credit supplies to industry. Even then, under the present circumstances of credit shortage it is appropriate that greater liberalisation be introduced into the methods by which the funds of the Refinance Corporation are channelled into industrial investments through the medium of the banks.

Current News and Comment

Madras Cements Share Offer

Madras Cements Ltd is increasing its share capital from Rs. 50 lakhs to Rs. 1.20 crores by issuing 50,000 equity shares of Rs. 100 each and 20,000 redeemable cumulative preference shares of Rs. 100 each. The dividend on the preference shares is 9.3 percent, free of company tax but subject to tax deduction at source. The existing shareholders have taken up 5,289 equity shares and 2,941 preference shares, all worth Rs. 8.23 lakhs. The Madras Industrial Finance Corporation is to be allotted 27,500 equity shares and 7,500 preference shares, which are worth Rs. 35 lakhs. The Life Insurance Corporation is taking preference shares of the value of Rs. 2.5 lakhs. The remaining 17,211 equity shares and 7,059 preference shares are now being offered to the public. (Fuller details concerning the offer appear on a later page.) Lists will open on 27th January, and the entire issue has been underwritten.

The object of the issue is to finance the second stage of the Company's expansion programme, which will increase its production capacity from 200 tons or 250 tons a day to 550 tons or 600 tons a day. Madras Cements was incorporated in 1957 for setting up a cement factory with a capacity of 600 tons a day. It was proposed to implement the scheme in two stages. The first stage has been completed, and the cement produced by the Company will be placed on the market soon. Skoda of Czechoslovakia is to supply the machinery on rupee payment terms, and the import licence has been granted. Land has been acquired, and water and power facilities are said to be easily available. The capital requirements for the second stage of the expansion programme are estimated at Rs. 1.20 crores. The present issue is for Rs. 70 lakhs. For the balance, the Company has arranged a loan from the Industrial Finance Corporation. A further sum of Rs. 20 lakhs will be needed as working capital. It is proposed to raise this through earnings from the first stage and through bank borrowings.

A.C.C. Expands and Diversifies

The expansion programme of the Associated Cement Companies has been making satisfactory progress, but the record of profits and dividends remains unencouraging. There has been a small rise in profits in 1959-60. But the earning capacity has not improved in spite of substantially higher production and increased capital employed. This is because costs have been rising and the retention prices are too low. It is, therefore, natural that Mr. Dharamsey M. Khatau, chairman, should have devoted the major part of his speech at the shareholders' annual meeting in Bombay last Friday to the Government's policy on cement prices. (A fuller version of the speech is published on a later page.) He charged the Government with deliberately ignoring the difficulties and needs of the industry. "The recent policies of the Government affecting this major industry are fraught with grave consequences to its future and to the early satisfaction of the country's urgent need for cement." Mr. Khatau says that it is impossible to hold the price line with planned inflation on the one hand, and with so many variable factors tending to raise costs on the other. Under the circumstances, a rise in the price of cement is an unavoidable necessity if the increase in production is not to be arrested. Against this background, A.C.C. proposes to tell the Tariff Commission that the "fair return" on the capital employed in the cement industry should be conceived as a "fair net distributable return" after meeting all costs. In particular, it feels that there is no justification for excluding from the overall cost of cement either such items of direct cost as the full charge for packing—whether in new or used bags—and the commission payable to stockists, or such large and specific items of overhead costs as bonus and gratuity to employees, the remuneration payable to managing agents, the statutory development rebate reserve and company taxation. Mr. Khatau said that to admit, on the one hand, that the industry is entitled to a fair return on capital employed, but to insist, at the same time, that from this return the industry should meet the cost of these items, is a contradiction in terms.

In spite of the uneconomic price of cement and the various difficulties concerning transport and coal supply, A.C.C. is going ahead with its expansion and rehabilitation programme. It has decided to proceed with the construction of a new cement works in Durg, Madhya Pradesh, having an initial production capacity of 165,000 tons a year, with scope for doubling it in course of time. Slag cement will also be manufactured there. A new white cement plant with a capacity of 25,000 tons a year is to be installed in Kymore. The Company has decided to establish a well-equipped engineering works in Shahabad in Gulbarga district, Mysore, for manufacturing machinery required for the cement, paper and pulp, chemical and other industries. The project is expected to be completed by about the middle of 1962. Work on the construction of the heavy engineering plant in Durgapur in collaboration with Vickers and Babcock and Wilcox is proceeding according to schedule. Production is expected to begin by the end of this year. A.C.C. has expressed its inability to expand its output in Pakistan due to foreign exchange difficulties. Negotiations are, it is said, proceeding satisfactorily to transfer the factories there to certain foreign interests on mutually agreeable terms.

Referring to the Company's prospects, Mr. Khatau said that the cement industry has perhaps seen its worst. Since both demand and production are rising, it is expected to do well in future. Of course, a good deal depends on how costs are kept under check. The chairman referred to the Government's recent decision compelling the industry to use second-hand bags for packing cement at such a low price (conceived as an average price for packing in new and used bags) that it makes the whole scheme impracticable and grossly expropriatory. While the Government has calculated the average price of the bags at Rs. 15 a 100, the prevailing price is around Rs. 40. According to the estimates for the current quarter, the loss to the Company on this account will be about Rs. 8 lakhs a month. Altogether it needs about 2 million bags a month.

Premier Automobiles Profit Up

The working results of Premier Automobiles Ltd for the year ended June 1960 are satisfactory. Sales increased from Rs. 17.42 crores to Rs. 20.94 crores and the gross profit of Rs. 1.54 crores is Rs. 54.10 lakhs more than in the previous year. The gross profit, as a percentage of sales, works out to 7.3, against 5.7 in the preceding year. The profit would have been higher still but for the increase in costs. Salaries, wages, gratuity, provident fund, insurance schemes and staff and labour welfare have cost the Company Rs. 1.89 crores, compared with Rs. 1.40 crores in 1958-59. After providing Rs. 10.96 lakhs (against Rs. 7.66 lakhs) for managing agent's remuneration, Rs. 44.23 lakhs (against Rs. 28.54 lakhs) for depreciation, Rs. 22.50 lakhs (against Rs. 13 lakhs) for development rebate reserve and Rs. 34 lakhs (against Rs. 27.33 lakhs) for taxation, the net profit has increased to Rs. 42.19 lakhs from Rs. 23.25 lakhs in the previous year. With Rs. 2.64 lakhs brought in and Rs. 23.18 lakhs, being the excess provisions relating to previous years, added, the total available for disposal is Rs. 68.01 lakhs. General reserve has been allocated Rs. 15.27 lakhs (against nil) and dividend equalisation reserve Rs. 5 lakhs (against nil). A sum of Rs. 13.53 lakhs has been provided for expenses relating to previous years. The dividend absorbs Rs. 40.97 lakhs (against Rs. 19.89 lakhs), leaving Rs. 3.24 lakhs to be carried forward. In spite of a substantial increase in profit, the directors have barely maintained the dividend at 9 percent, subject to tax, because of the increase in the capital of the Company from Rs. 2.27 crores to Rs. 4.73 crores. The increased capital will participate in the 1959-60 dividend for only a few months. But the Company will need an additional Rs. 17.5 lakhs to maintain the dividend at 9 percent in 1960-61. This should present no difficulty because of the rising output and better profitability. Production in the first half of the current year is placed at 6,357 motor-vehicles, against 5,220 motor-vehicles in the corresponding period of the previous year. The directors hope to maintain the increase in output throughout the current year.

The gross block has increased from Rs. 4.77 crores to Rs. 5.94 crores. Depreciation totals Rs. 2.64 crores, leaving a net block of Rs. 3.2 crores. Current assets are valued at Rs. 8.26 crores while current liabilities and provisions stand at Rs. 3.16 crores. The reserves are, however, still small at Rs. 1.21 crores, compared with the subscribed capital of Rs. 4.73 crores. Loans from banks total Rs. 3.83 crores. Shareholders of Premier Auto-

mobiles can look forward to a fairly bright future. The Company has recently secured a loan of $7.2 million from the D.L.F. carrying an interest of 5-3/4 percent to be repaid in rupees over a period of 15 years. The loan will enable it to purchase machinery and equipment for manufacturing sheet-metal components. It has an ambitious expansion programme involving a capital outlay of Rs. 25 crores to Rs. 30 crores, 75 percent of which will be the foreign exchange component. The expansion scheme, for which an application has already been made to the Central Government, proposes the manufacture of 15,000 motor-cars a year on the basis of single-shift working and an equal number of lorries. The present production capacity is 4,000 motor-cars and 3,000 lorries a year on a single-shift basis. The Company is now working two shifts.

Premier Automobiles hopes to complete the expansion programme in three years. When that is done, it will be able to reduce the price of Fiat cars by about Rs. 1,000. In view of the expansion of the motor-car industry proposed in the third plan, the directors appear to be optimistic about their scheme being approved by the Government. Meanwhile, the management has not taken any decision on how to raise finance for the expansion programme. The question will be considered only after the Government's sanction has been obtained. The directors propose to seek the approval of shareholders at the forthcoming meeting for increasing the Company's authorised capital from Rs. 10 crores to Rs. 25 crores, of which Rs. 15 crores will be in the form of equity capital and Rs. 10 crores will be unspecified. The shares of Premier Automobiles rose from Rs. 160.75 to Rs. 168 after the market came to know of the Company's working results for 1959-60 and its expansion plans.

State Bank Dividend Up

The State Bank of India has increased the dividend for the year ended December 1960 from Rs. 20 to Rs. 22.75, both taxable, a share. The net profit amounts to Rs. 2.18 crores, against Rs. 1.87 crores in 1959. With Rs. 55.87 lakhs brought in, the amount available for appropriation is Rs. 2.73 crores. The dividends absorb Rs. 1.28 crores (against Rs. 1.13 crores) and the reserve fund gets Rs. 25 lakhs (against Rs. 20 lakhs). The other allocations are: pension fund Rs. 7.20 lakhs (against Rs. 6.96 lakhs), bonus to staff Rs. 42 lakhs (against Rs. 40 lakhs); staff welfare fund Rs. 5 lakhs (against Rs. 2.5 lakhs); and staff co-operative housing fund Rs. 10 lakhs (against Rs. 5 lakhs). The carry-forward is Rs. 56.20 lakhs.

Central Bank Pays More

The Central Bank of India has reported satisfactory results for the year ended December 1960. After providing for taxation, the net profit has increased by about Rs. 33.6 lakhs to Rs. 1.33 crores. The increase in the profit has enabled the bank to celebrate its golden jubilee which falls this year by declaring a higher dividend and a special bonus for both shareholders and staff. The final dividend of Rs. 2.50 (gross), which has now been recommended, raises the total dividend for 1960 to Rs. 4.60 a share, taxable, against Rs. 4.30, taxable, in 1959. The total net dividend works out to 12.88 percent, against 12.04 percent in the previous year. But this year, the directors have also recommended a special jubilee bonus of 2 percent, which works out to an additional 35nP net a share. The dividends absorbs Rs. 64.26 lakhs (against Rs. 54.18 lakhs). Bonus to staff, including jubilee bonus, amounts to Rs. 51 lakhs (against Rs. 33.75 lakhs). A sum of Rs. 8 lakhs (against nil) has been transferred to contingency reserve while staff gratuity fund gets Rs. 10 lakhs—the same as in 1959. After making these appropriations, a sum of Rs. 18.61 lakhs is carried forward, against Rs. 18.82 lakhs brought in. The preliminary figures show that deposits increased from Rs. 180 crores to Rs. 198 crores and investments from Rs. 54.91 crores to Rs. 56.60 crores. The bank opened 12 new branches during the year, bringing the total to 318, both in India and abroad.

Indian Overseas Bank Earns More

The Indian Overseas Bank, Madras, has earned a profit of Rs. 44.66 lakhs for the year ended December 1960, which is nearly Rs. 11 lakhs more than in the previous year. But the directors have decided to maintain the dividend at 14 percent, taxable. With Rs. 1.26 lakhs brought in, the amount available for appropriation comes to Rs. 45.92 lakhs. Taxation provision gets Rs. 18.51 lakhs (against Rs. 12.50 lakhs). The allocation to the reserve fund has been increased from Rs. 7.50 lakhs to Rs. 9.50 lakhs and the provision for bonus to staff amounts to Rs. 5.50 lakhs (against Rs. 5 lakhs). Dividend absorbs Rs. 10 lakhs, leaving Rs. 1.92 lakhs to be carried forward.

Hindustan Oxygen Gas Issue Soon

The Hindustan Oxygen Gas Co. Ltd has been formed to undertake the manufacture of industrial oxygen and dissolved acetylene. Its factory will be located in Ahmedabad. The plant will have a production capacity of 72,000 cubic metres of industrial oxygen and 18,000 cubic metres of acetylene a month. The industrial licence has been obtained from the Government of India. The Company will have an authorised capital of Rs. 1 crore, of which only Rs. 25 lakhs is to be issued at present. The issued capital consists of 20,800 equity shares and 4,200 8.125 percent, taxable, cumulative redeemable preference shares, both of Rs. 100 each. The sanction of the Controller of Capital Issues has been obtained, and the Company will soon be in the market for raising capital. The promoters expect it to start production by March 1962.

Process Pilot Plant for Dumex

Dumex Private Ltd. Bombay, proposes to set up a process pilot plant in Chandigarh, Punjab, for manufacturing chlorpropamide, tetrahydro zolone, nialamide, benzthiazide and oxyphenicyclimine. The annual output will be around 1,500 kilograms of chlorpropamide, 550 kilograms of benzthiazide, 300 kilograms of nialamide, 35 kilograms of oxyphenicyclimine and 10 kilograms of tetrahydro zolone. The plant is proposed to be set up in collaboration with the Pfizer Corporation of Panama, which is a subsidiary of Chas. Pfizer and Company of New York. The Licensing Committee, it is understood, has recommended the grant of a licence on condition that no special facility will be given for the supply of raw materials and that the foreign exchange requirements will be approved by the Government.

Gas Cylinders: A New Venture

Gas Cylinders (India) Ltd is a new Company which is being started in Calcutta for the manufacture of gas cylinders with foreign collaboration. For the present, it is proposed to build a plant with a capacity of approximately 60,000 pieces a year, but an increase in the capacity may be decided on later. The Company hopes to go into production by the end of 1961. Its authorised capital will be Rs. 1 crore.

Associated Hotels Does Badly

Associated Hotels of India Ltd proposes to transfer its Pakistani assets to a new company it will set up in that country. The new company will acquire the assets at fair market value, and pay for them by allotting its fully-paid ordinary shares to Associated Hotels. This move has become necessary because the Pakistani Government wants Associated Hotels to improve the existing hotels in Pakistan. The programme is likely to involve considerable expenditure and Associated Hotels is negotiating with the Pakistani Government.

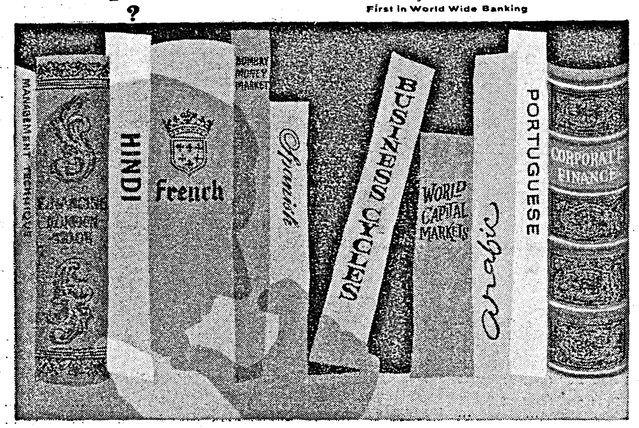
In spite of an increase from Rs. 71.65 lakhs to Rs. 75.19 lakhs in the turnover, the trading profit of Associated Hotels has declined from Rs. 12.54 lakhs to Rs. 8.27 lakhs for the year ended March 1960, mainly due to higher wages and bonuses. The ordinary dividend has been passed over. Taxation is allocated Rs. 4.30 lakhs (against Rs. 7.20 lakhs), but no provision has been made for depreciation because the directors think that the fixed assets are now adequately depreciated. About Rs. 3.80 lakhs has been transferred from the accumulated profits of previous years, in addition to the Rs. 1.50 lakhs already allotted during the year under review to the debenture sinking fund. After making other adjustments, there is a balance of Rs. 1,55,433, which is carried forward.

Sheveroy Estates Pays More

Sheveroy Estates Ltd has made a profit of Rs. 2,14,976 for the year ended June 1960, after providing for depreciation. The provision for taxation is Rs. 70,000, and Rs. 24,000 is transferred

How many languages should your banker speak ?

The FIRST NATIONAL CITY BANK of New York
First in World Wide Banking



You'll enjoy a unique plus when you bring your CITIBANKER in on your financing deliberations. Naturally, your CITIBANKER is fluent in the language of your business. But also, because his everyday job has world-wide dimensions, he talks to international businessmen around the world, in THEIR OWN TONGUES about Commerce and Finance. When you plan to explore new markets or more imaginative financing, get the benefit of the broader perspective that First National City's world-wide organisation provides. Call your CITIBANKER in Bombay or Calcutta.

to dividend equalisation reserve. The directors have recommended a dividend of 9 percent, taxable, against 6¼ percent, taxable, in the previous year. A sum of Rs. 907 is carried forward, against Rs. 1,431 brought in. The coffee crop during the year amounted to 201,804 kilograms and the cost was Rs. 112.02 a cwt. The coffee crop for 1960-61 is estimated at 4,500 cwts.

Bigger Profit for Neelamalai Tea

Neelamalai Tea and Coffee Estates Ltd has made a profit of Rs. 6,44,742 for the year ended June 1960, against Rs. 3,22,208 in the previous year. Taxation reserve gets Rs. 2.85 lakhs, and the 5 percent dividend on the preference shares, subject to deduction of income tax, absorbs Rs. 90,000. The ordinary dividend of 7½ percent, taxable, has been maintained and it absorbs Rs. 2.7 lakhs. The directors say that the preference dividend will be increased, if necessary, in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960. The tea harvest during the year was 1,430,199 lbs (against 1,146,960 lbs). The cost of production was Rs. 1.75 a lb (against Rs. 1.91). The average price realised was Rs. 2.54 a lb (against Rs. 2.55). The coffee crop amounted to 1,668 cwts (against 1,782 cwts). The cost of production was Rs. 223.29 a cwt (against Rs. 220.84). Regular shipments of the Company's teas were sent to London and the U.S.A. The tea crop for 1960-61 is estimated at 1,375,000 lbs, and the coffee crop at 3,000 cwts.

Manufacturing Nuts and Bolts

The Government of India, it is reliably understood, is now willing to encourage schemes for manufacturing on a large scale, high-tensile nuts and bolts which are required for motor-cars, tractors and ancillary industries and which are at present being imported in bulk or as motor-car components and other ancillary equipment. Hitherto, the bolts, nuts and rivets industry was allowed to develop mainly in the small-scale sector. But it is now felt that there is great scope for manufacturing special type of high-tensile nuts and bolts. The Licensing Committee is reported to have approved the application of Fit Tight Nuts and Bolts (Private) Ltd, Bombay, for a licence to establish a new undertaking in Andheri, a suburb of Bombay, for the manufacture of 1,692 tons of bolts, nuts and screws a year. The Committee is said to have recommended that the Development Wing should examine how further capacity for the manufacture of such special types of bolts, nuts and rivets can be set up in India.

Cloth Output and Stocks

The cloth output of the mills in December 1960 is provisionally estimated at 447 million yards which is 22 million yards more than in the previous month and 13 million yards higher than in December 1959. Last month's figure is the highest since July 1957, and it raises the total for 1960 to 5,044 million yards, compared with 4,925 million yards in 1959 and 4,927 million yards in 1958. In 1957, however, the mill industry achieved a record production of 5,317 million yards. The December figure for yarn, at 159 million lbs, is an all-time record, and it brings the total for yarn output in 1960 to 1,737 million lbs, against 1,723 million lbs in 1959 and 1,685 million lbs in 1958. The 1957 figure was, however, higher at 1,780 million lbs. The improvement in cloth and yarn output in 1960 seems quite creditable, considering the difficulties the mill industry has had to face. Earlier in the year, the problem was mainly to secure an adequate supply of indigenous cotton at reasonable prices, since the partial failure of the 1959-60 cotton crop had pushed prices substantially above the ceiling rates. The shortfall had to be made good through larger imports. During the latter half of the year, the industry had to maintain output at a high level in spite of the Government's insistence on a sizable reduction in cloth prices. Since the rise in prices can be checked only through increased production, the industry has been asked to raise its output by about 10 percent. As large imports continue and a much bigger crop is expected, the industry is assured of ample cotton supplies at below the ceiling rates, so mills can now make arrangements for increasing their output.

Spindle activity in 1960 was about 8 percent higher than in 1959. On the basis of the average for the first ten months in 1960, the number of spindles amounted to 11.7 million in the first shift, 11.6 million in the second and 6 million in the third. The corresponding figures for 1959 were 11.3 million, 10.9 million and 4.9 million. Similarly, the number of looms amounted to 17.9 million in the first shift, 17.3 million in the second and 4.2 million in the third. The corresponding figures for 1959 were 17.6 million, 16.8 million and 3.1 million. The loom activity was, therefore, about 3 percent higher than in 1959. With production moving up, exports on the rather low side and domestic offtake restricted by the uncertainty about prices until recently, cloth stocks with mills have continued to rise. The end-December figure of 411,500 bales (of 1,500 yards each) is the highest for nearly a year and a half. It was made up of 206,100 bales of unsold cloth and 205,400 bales of cloth sold but not delivered. The increase of 30,400 bales in December is due largely to the marked improvement in production during the month. Stocks of yarn at the end of December 1960 totalled 52,700 bales (of 400 lbs each). This is 7,400 bales higher than at the end of November. Stocks of both cloth and yarn are expected to decline now that offtake has increased appreciably with the end of the uncertainty about prices. The improved conditions in the cotton piecegoods market have brought about a marked recovery in textile shares over the past three weeks.

Tea Shares Ease

There has been an appreciable decline in the prices of tea shares in the stock market. Their index has fallen from 168.6 to 152.9 (1952-53 equals 100) over the past year. At present, sellers predominate and buyers are difficult to find, so trading has been reduced to a trickle. Investors are taking a cautious view of the profit outlook for 1960 and of the future trend, although average sale prices for the north Indian crop have been higher in the current season than in 1959-60. So far, the average price a lb of Assam tea has been Rs. 5.81 (against Rs. 5.58), of Cachar tea Rs. 4.66 (against Rs. 4.41), of Darjeeling tea Rs. 6.89 (against Rs. 6.88), of Dooars tea Rs. 4.90 (against Rs. 4.63), and of Terai tea Rs. 4.86 (against Rs. 4.61). But the benefits of the increase in prices, it is believed, have been more than neutralised by the decrease in the crop. North Indian production has declined from 561.23 million lbs in 1959 to 527.03 million lbs in 1960. The decline in production is due to the drought in April and May 1960. The drought has done considerable damage to tea bushes. So gardens have had to use money for getting their bushes back in proper condition. To this extent, the liquidity of the companies has suffered. The dividend prospects may be affected, because they are governed largely by the amount of cash a company has.

Meanwhile, current trends do not encourage the hope that the prices of north Indian tea will improve much before the end of the season. All teas will, of course, be disposed of earlier this season than in 1959-60 because the crop is smaller. But it looks as if foreign customers will not be in hurry to buy Indian tea by paying higher prices. The shortfall in the north Indian production has been offset to a great extent by the bigger crops in other producing areas. As a result, the world output is only 10 million lbs lower than in 1959, and supplies are more or less in balance with demand. Russia may no longer figure as a large buyer from now, considering that at this time in 1959 she virtually ceased to take interest in Indian tea. The United Arab Republic, which is a substantial customer, will buy only if the price suits her. She has recently concluded a bilateral trade agreement with Ceylon, so it is possible that she will divert her purchases to the Colombo market.

Nevertheless, north India has on the whole done fairly well with exports, and the rest of the crop should be sold at reasonable prices. Exports so far this season have totalled 259.24 million lbs, compared with 284.22 million lbs in the corresponding period of 1959-60. They are satisfactory in view of the smaller crop. As for domestic consumption, its importance is being exaggerated in assessing the earnings of gardens. Although internal demand has increased, it should be remembered that it is very responsive to the price factor. If the price is kept down to a reasonable level, domestic sales will be promoted. Since production has increased steadily in south India, it is expected that there will be enough tea for the internal market.

Projects for Paper-maker Felts

Four firms are reported to have asked the Government of India for a licence for manufacturing paper-maker felts. The Commonwealth Spinning and Knitting Mills of Ludhiana, Punjab, proposes to set up a plant with an annual production capacity of 144,000 lbs of paper-maker felts in technical collaboration with a Japanese firm. Another firm from Ludhiana, Oswal Cotton Spinning and Weaving Mills, has asked for permission to set up a factory with an annual production capacity of 600,000 lbs in collaboration with the Ichikawa Woollen Textile Co. Ltd of Japan. Jay Shree Textiles Ltd wants to establish in Rishra, Hooghly district, a plant for manufacturing 180,000 yards a year of all types of felts made of wool, cotton and synthetic fibres, dryer felts, filteration felts, suction felts, etcetera. The name of the foreign collaborator is Fez Co. Ltd of Vienna. Rajasthan Wool Industry, Bombay, has asked for permission to establish a new factory in Kotah for manufacturing 500,000 square feet of paper-maker felts a year. The first three firms applied to the Government for a licence on an earlier occasion also, but their applications were rejected. Dhruva Woollen Mills is the only firm which has so far been given a licence for manufacturing paper-maker felts. Annual imports of this material are worth Rs. 30 lakhs to Rs. 40 lakhs. The Development Wing thinks that one more unit should be licensed for manufacturing paper-maker felts. The main consideration that is likely to weigh with the Government in recommending a licence is the standing of the foreign collaborator, because the manufacture of paper-maker felts is a highly specialised job. The Licensing Committee, which considered the applications at its recent meeting, was unable to recommend any due to lack of information about the foreign collaborators. The applicants, it is said, have been asked to put up their applications again with detailed information about the foreign firms which will be collaborating in their ventures.

Motor-car and Ancillary Industries

The Indian motor-car and ancillary industries have made significant progress over the past few years. In spite of the fact that there has been no increase in foreign exchange allocations, production of the former in 1960 recorded an increase of 46 percent over that of 1959 and it was 65 percent more than in 1956. Motor-car firms can no longer be called mere assembly shops since there has been a marked increase in the indigenous content of the vehicles. It is claimed that the "Dodge" (three ton 105" W.B.), with 80 percent of indigenous components, leads the field. Mercedez-Benz has 70.8 percent indigenous content, the Ambassador 76.4 percent, jeeps 73.6 percent, Leyland Comet 65.7 percent, Fiat 1100 64 percent and the Standard 10 50.7 percent. Inaugurating the annual general meeting of the All-India Automobile and Ancillary Industries Association in Bombay last Saturday, the Central Minister for Industry, Mr. Manubhai Shah, complimented manufacturers for their creditable performance, but he wanted the indigenous content to be increased to 100 percent in the next two or three years. The performance of the ancillary industry has been equally promising. There were nearly 45 units in India in 1958 and the value of their output was estimated at Rs. 5 crores. Since then, 45 new units have been licensed. Production in 1959 and 1960 was placed at Rs. 7.5 crores and Rs. 9 crores, respectively, without taking into account the output of units manufacturing batteries, tyres, tubes and ball bearings. The production of ancillary items in the small-scale sector was valued at Rs. 4 crores or Rs. 5 crores. Mr. Shah emphasised the need for increasing the output to at least Rs. 20 crores a year in the next two years. The ancillary industry has played a dual rôle in assisting manufacturers to put more motor-vehicles on the road and in meeting the demand for servicing and maintenance of the growing fleet of vehicles. The Central Industries Minister stressed the need for well-established ancillary divisions in all the big motor-car manufacturing companies. He discussed the importance of research and explained the scheme of the Council of Scientific and Industrial Research for establishing co-operative research institutes, supported by the industries themselves with limited financial grants from the Central Government.

Auditing Company Branch Accounts

The Department of Company Law Administration has formulated rules under which companies may obtain exemption from the provision in the Companies (Amendmment) Act for the audit of branch accounts. The Amendment Act, which has now come into force, requires the accounts of every branch office of a company to be audited either by the auditor or by a qualified person appointed by the company, unless a branch office is exempted from this requirement. The branch accounts of a company for a financial year which has ended or may end after the coming into force of the Amendment Act have, thus, to be audited as required under the new provisions, unless exemption from such branch audit has been obtained.

The Companies (Branch Audit Exemption) Rules, which have now been published, provide that where a company carrying on any manufacturing, processing or trading activity has a branch office, the average quantum of activity of which during the relevant financial year does not exceed Rs. 2 lakhs or 2 percent of the total turnover of the company (including all its branch and other offices), whichever is higher, the branch office will be exempt from the provisions of Section 228 relating to branch audit. The expression "average quantum of activity" has been suitably defined in this connection. In all other cases, it will be necessary for the company to make an application to the Central Government for exemption, stating the

grounds on which it seeks exemption. Where the exemption is granted, the Central Government may lay down, in its order, the period and the conditions subject to which the exemption will be granted. All such applications should be in the form prescribed under the rules and should be accompanied by the necessary documents. If any application is made for exemption from branch audit on the ground that the company has arranged for the audit of its branch accounts by a person otherwise qualified for appointment as a branch auditor, even though such a person is an employee of the company, it will be necessary for the company, in case exemption is granted, to comply with certain conditions. The company should give such a person access at all times to the books of accounts maintained at the branch office and furnish such information or explanations as he may require. Such a person should, every year, make out a report on the accounts of the branch office examined by him and forward it to the company's auditor. The management of the company should attach to the balance-sheet a certificate to the effect that no material change has taken place in the arrangement for internal audit of branch accounts.

It is hoped that the provisions will encourage the larger companies to build within their organisations sound systems of internal audit. In the case of a company engaged in any activity other than that of manufacturing, processing or trading, the rules provide that exemption from branch audit may be applied for on the ground that it has made satisfactory arrangements for scrutiny and check, at regular intervals, of the accounts of the branch office by a responsible and competent person.

Steel Output and Imports

Speaking at the annual general meeting of the Steel Importers Association of India in Calcutta on Friday, Mr. P. L. Master, president, said that the shortage of raw materials has affected the programmes of the major steel producers in the private sector. But the planners are still thinking in terms of producing 10 million tons of steel annually at the end of the third plan period. Before any target is finally fixed, Mr. Master said, it is necessary to review the causes of the shortfall in production in the existing units as well as the possibility of improving raw material supplies and transport facilities. The Government has drastically reduced steel imports due to the lack of foreign exchange, so consumers have had to suffer considerable hardship because of the shortage of such items as sheets 16-G and thinner, wire, tinplate, alloy tool and special steels, spring steel, electrical steel sheets, bright drawn bars and box strapping. Mr. Master said that of the D.L.F. loan of $75 million recently granted to India, $25 million will be spent on steel and $50 million on railway materials. But the restriction that purchases will have to be made from the United States only will mean an increase in cost, varying from 10 percent to 30 percent compared with world market prices. The finished articles will accordingly have to be priced substantially higher, and this will have its impact on the export prices of manufactured goods. Mr. Master, therefore, urged the Government to persuade the United States to allow India to purchase her requirements against D.L.F. loans from world markets. He welcomed the Government's decision to allow controlled stockholders of imported steel to handle indigenous steel. But a few large importers who are not actually controlled stockholders of imported steel have been left out. Mr. Master urged the Government to consider their cases on merits.

Churk Refractories Project

A pilot refractory project, which is later to be expanded to a full-fledged factory at a cost of Rs. 85 lakhs, was recently inaugurated in Churk in Mirzapur district. It is expected to meet the entire demand for firebricks in U.P. The pilot plant, which is a subsidiary of the Government-owned Churk cement factory, has a production capacity of only 1,500 tons a year, but the bigger factory will produce 30,000 tons a year. About 50 percent of the output of the pilot plant will be required in the cement factory itself. The remaining surplus is to be used in the tunnel kilns of the bigger factory. Since there is an acute shortage of firebricks in India, the Planning Commission has decided to increase the existing annual production of 700,000 tons to 2.2 million tons by the end of the third plan. Uttar Pradesh has had no refractory unit so far, although it has the largest number of glass and sugar factories, which require refractories. A Heavy Industries Committee set up by the U.P. Government recently reported that the glass industry of the State alone will need about 10,000 tons of refractories a year. After referring to the import of 150,000 tons during the 1956-59 period for the construction of steel plants, involving a foreign exchange expenditure of Rs. 4.5 crores, it made out a strong case for locating one or more refractory plants in U.P.

The main raw materials required for manufacturing refractories are fireclay, plastic clay, quartzite and sillimanite. The clay deposits discovered in the Bansi region of Mirzapur district have been analysed in the Glass Technology Laboratories and have been found suitable. Huge deposits of quartzite are available near the clay deposits in the Rihand dam area. Sillimanite deposits are rare, but they have been discovered in Wydham, Madhya Pradesh—just on the border of Uttar Pradesh and very near the clay deposits. It is proposed to keep the quality of firebricks produced by the pilot plant at a high level, compared with similar products in the market. The grog, which constitutes about 40 percent of the aggregate in the mixtures, will be available almost free of cost from the kilns of the cement factory. It is, therefore, anticipated that manufacturing costs will compare favourably with those of similar quality firebricks, so a fair return on capital will be ensured from the beginning.

Minimum Wages in U.P. Tea Gardens

The U.P. Government has fixed minimum wages for adult employees of tea plantations in the Almora and Garhwal districts. The rates are Re. 1 a day or Rs. 26 a month for plantations in the Berinag and Chowkorie areas of Almora district and 66nP a day or Rs. 17.16 a month for plantations in other areas of Almora and Garhwal. The month will consist of 26 working days, and the rates include basic wages, dear food allowance and the cash value of concessions concerning supplies of essential commodities. The order follows the U.P. Minimum Wages Advisory Board's recommendations of March 1958. An enquiry by the latter showed that 46 percent of the plantation workers in these districts—barring those of Berinag and Chowkorie areas—got less than Rs. 10 a month, and in some cases wages were as low as one and a half annas a day. The market rate of wages for unskilled workers varied from 75nP to Rs. 2 a day in these areas. When the survey was carried out, about 400 labourers were employed by ten tea estates in the Almora and Garhwal districts. Early this year, the State Government enacted legislation to regulate wages in these plantations as well as in the woollen carpet industry, since they could not be covered by the Central Act which fixed 31st December, 1959, as the date for enforcing minimum wages in the scheduled occupations. The Minimum Wages Act covers agriculture and 12 other non-agricultural sectors in the State. Besides wages, it regulates working hours, weekly rest, festival holidays and overtime. Contraventions are punishable with imprisonment or fine. The State Government is considering the recommendations of a committee for the revision of minimum wages fixed earlier for various industries.

Tax on Royalties

The Southern India Chamber of Commerce told Mr. V. V. Chari of the Central Board of Revenue when he recently visited Madras that royalties paid to foreign collaborators should be exempt from income tax. It also pointed out that not all foreign experts employed in India for limited periods are exempt from the tax. Mr. Chari said that the Central Government is willing to help employers as far as possible. But the revenue authorities are unable to do anything concerning religious donations, as distinct from charitable ones. In reply to questions about the taxation of gratuities, Mr Chari said that the exemption from tax of gratuities given to Government servants is not discriminatory, since private employees get bonuses and other benefits which Government employees do not. He did not deny that there is sometimes delay in issuing assessment orders but added that conditions now are improving.

Progress in Madras Surveyed

In his recent address to the State Legislature, the Governor of Madras surveyed the progress achieved in the State. He said that the Centre has included the programme for improving Tuticorin port in the third plan. The representations of the chambers of commerce in Madura and elsewhere compelled the Tamilnad M.P.s to press for the development of Tuticorin as a deep-water port. The eventual closure of Dhanushkodi due to erosion and the stoppage of the ferry service to Talamannar Pier in Ceylon may lead to greater use of the port in future. The Governor referred to the State Government's view that Madras should have a dozen sugar mills to produce 200,000 tons of sugar a year. As for power supply, the aim is to raise generating capacity to 1,441 megawatts at the end of the third plan so that all villages might be provided with electric power.

MUNICIPAL SERVICES

WE have always expressed the opinion that the mere passing of an Act and the changing of the Municipal Commissioners would not work much improvement in the town of Calcutta. What was really wanted was a thorough change of the executive from top to bottom. *The Englishman* on Saturday last had a long article entitled "Nero Fiddling" upon what it considers the shortcomings of the new Corporation, and remarks that "it is as unwilling or as unable as the old to grapple with the problems of sanitation, conservancy and overcrowding." We quite agree with this remark, but it is not so much the fault of the Commissioners as of the system. Unfortunately, there are one or two Commissioners who seem unable to keep their mouths shut and who waste the time of the Corporation in the most trivial manner possible, and we quite agree with our contemporary's remarks on this point. Our contemporary seems much exercised that the Municipality does not take an active and great interest in the Central Railway scheme. But inasmuch as a Committee appointed by the Government is now dealing with that question, the Commissioners would display a want of good taste if they passed a resolution expressing any view whatever upon the project. When the Committee have issued their report then will be time for the Corporation to either support or oppose it. But it seems to us that any endeavour now to force the Committee's hand would be very much out of place. We should like to see an attempt made to grapple with the sanitation and conservancy, but so far we must confess to a feeling of great disappointment. Sir John Woodburn has now been with us a considerable time, and it will not be long before we shall be looking forward to his successor. We would urge him to use the time at his disposal in passing some measures for the improvement of Calcuta. It is, of course, easy to abuse the Corporation, for they have neither souls to be saved nor bodies to be kicked.

A Ditcher's Diary

IT IS NOT A WEEK YET SINCE HER MAJESTY QUEEN Elizabeth II arrived in the Republic of India; but it does not seem to me too early to pronounce the visit a total success. Nobody had ever thought it would be otherwise, given India's long tradition of hospitality and the Queen's young and beautiful presence. Yet the extent of the spontaneous warmth extended to Her Majesty and Prince Philip must still have surprised the guests as well as the hosts; and I believe she meant every word of it when she spoke of the "wonderful story" she would have to tell her children. Week after week I fulminate on this page at this or that deficiency in life in India; and good and patriotic Indians often join me in it. But on an occasion like the Queen's visit I am agreeably reminded that India does remain a "wonderful story", warts and all, which some undiscerning critics regret the Queen may not see. The Taj, Jaipur, Durgapur, New Delhi, Calcutta, Bombay, Madras—yes, I have been told and told again that these are not India. But then, what is? I suggest that these are India; and in three busy weeks the Queen will have seen more of them than some of us may in thirty years. The sneer, sometimes hurled at my own profession, that you do not know a country and its people in three weeks, is often simply stupid. An unobservant idiot will not know a country in fifty years; and some of the most perceptive analyses of lands and peoples have been written by travellers in haste. (Let someone try to improve on de Tocqueville on America, or Brogan in our time.) The forests of Sawai Madhopur will tell the Queen as much about India as the Taj or the drive from Dum Dum; and let no one tell me that the Taj is not India just because it belongs to the past, or Bhakra Nangal is not either because it belongs to the future. India is all these things put together; and one of the gravest errors one can make is to think that only the folk music of Rajasthan or the wail of the refugees from East Pakistan are the "true India". The Queen will have a taste of the rich variety of life here, to which her own subjects' contribution is manifest. The British period in India, it has been said, belongs to history. Living history, I would add—as may the Queen at the conclusion of her historic visit to a country history has never ignored nor ever will.

WHY, I WONDER, DID A DEPARTING EISENHOWER make such a virtue of having kept the United States out of war during his eight years in office? Was it simply a consolation for obvious failures in the field of foreign affairs generally? Or was it a genuine personal feeling that, despite the pre-war European experience of determined aggressors, peace is a good thing in itself no matter what price has to be paid for it? President Eisenhower always seemed willing to pay such a price, or at least to interpret the will of his people as being prepared to, even if Mr. Dulles was not. And it seems to me that is the chief reason why the Eisenhower era will go down in history as the one during which the free world's position deteriorated with almost breathtaking rapidity. Now, the United States and her allies are in a much worse position than they would have been if Mr. Eisenhower had not made a domestic election issue out of suing for peace in Korea, or if the communists had not been allowed an easy military victory in Indo-China. The communist world is stronger and more confident than it has ever been; and how reminiscent it all is of the triumph of aggression and encroachment which led to the desperate so-far-and-no-further that sparked off the second world war. The trouble is, I suppose, that democracies are doomed to fight big wars because they are unwilling to fight small ones; totalitarian aggressors know that all they have to do is to hold on long enough with their limited military actions and the democracies will get tired of the fight and start to ask for peace. By his action in bringing the Korean war to a precipitate end for domestic reasons, Mr. Eisenhower may only have been doing what his electorate wanted, but he was certainly ignoring the fact that when dealing with aggression, a small war, even if dangerous and protracted, can often save a large one. I think perhaps Mr. Kennedy's biggest task for the future is going to be to dispel this taint of Chamberlainism which the Presidency of the United States has accumulated during the Eisenhower incumbency. I only hope it is not too late for him and that the communists are not already convinced that every limited military action they care to launch will eventually go in their favour. If they are, then Mr. Kennedy will be lucky not to go down to history as the President of world war number three. I wish him luck.

IT IS SELDOM I WASTE MY TIME PONDERING THE comments on economic affairs made by judges in the sanctity of their court rooms; they are all too often the expression of personal bias tinged by malfunction of the liver. But those reported as coming from Mr. Justice Mitter in the Calcutta High Court last week I feel deserve the attention of us all. The Judge was in the unenviable position of having to apply the rigours of the law to a starving and unemployed father found guilty of murdering his six-year-old son on a Calcutta pavement because the boy persisted in asking for food. In his resentment, Mr. Justice Mitter relieved himself of a good deal of censure on the Government for boasting about its gigantic projects, five year plans and all round development, when such examples of poverty are still so numerous. I think it is a pity he limited himself to this simple *cri de coeur* and did not give us the benefit of his wisdom on such interesting questions as: To what extent are the motives behind planning in underdeveloped countries restricted to the alleviation of poverty and not in fact dictated by considerations of national prestige. Party political advantage, Ministerial empire building, and so on? But perhaps this is not the function of a judge so much as that of the politician, economist or even journalist; and it has always been a marvel to me how uncritical such elements are about the purpose of planning as distinct from its detail. No doubt the planners will have a ready answer to cases like that of Ram Das, the unfortunate father, which include such brave *cliches* as "building for a prosperous future" and "eliminating poverty altogether in 50 years". What of the meantime, one may ask? Well, it is always necessary to sacrifice one generation in order to build a better world for those coming after. Personally I doubt it. It is all a question of priorities; and I cannot see that the Ram Dases of this world are going to accept the logic of such arguments. It seemed a little illogical, too, that on a matter of "human consideration" Ram Das's sentence should have been reduced from transportation for life to one year's imprisonment; this might have satisfied the consciences of all concerned, but just where is the humanity in releasing a man if he is to go back to misery and starvation on the streets of Calcutta?

IN MR. KHRUSHCHEV'S LATEST PRONOUNCEMENT on a world he refuses to leave in peace—the report published on Tuesday last week—I discern a whiff of the home-brewed vodka he says he is so determined to wipe out. In crudity the 44-page paper would be hard to beat; but it must be said that the man has for once made plain just what he means by "co-existence". Here are his words: "A form of intense struggle—economic, political and ideological—between the proletariat and the aggressive forces of imperialism on the world scene". The "sacred conflicts" that he is determined to support are easily identified. There is no conflict in Hungary or Poland; if there is, it is not sacred. But, of course, there is Algeria, there is Laos, there is the Congo and there is Cuba. In none of these trouble-spots is the western record entirely clean; the Americans are sometimes, and rightly, every bit as assertive. But for the Kremlin to accuse any country of imperialism is surely the last word in cynicism. I respect India's neutralism—as a policy, it is perhaps the best in India's interests. But there is less to be said for it if the attitude fails to recognise evil when it manifests itself glaringly and leads to a sort of intellectual non-commitment under the mistaken belief that anything else would be partisan. To be non-partisan on moral issues is contrary to the Indian tradition in which moral awareness has always been sharp and distinct. It is too early for the West to rejoice that the Russians and the Czechs are out of the Congo; but the Kremlin is stupid not to reassess the impact of Mr. Khrushchev during the last session of the U.N. General Assembly. It was clear that the new nations were not impressed by his ill-mannered antics; and I should be surprised if the nationalist leaders of the world's not many remaining colonies of the West take Mr. Khrushchev seriously on his promised support for sacred conflicts. Much may yet go wrong in the negotiations between the French and the F.L.N.; but the first reactions of Mr. Ferhat Abbas suggest to me that even he is chary of drawing on Russia's help. China's offer of assistance probably scares him outright.

AN OLD AMERICAN PARSON WHO WAS STAYING WITH his brother was much attached to the latter's twin sons, aged five, and took a great interest in their education. He was delighted to hear that, thanks to Poppa's instructions, they had both learned to count. The elder (by half-an-hour or so) showed what he could do by saying, slowly and deliberately, "One, two, three, four, five, six, seven, eight, nine, ten." This exercise being completed, the old parson was further informed that the younger twin could not only count up to ten, but could do it in reverse. On being asked to do his stuff the child said: "Ten, nine, eight, seven, six, five, four, three, two, one. Hell and Damnation!" "Really!" ejaculated the horrified padre. "That is terrible! Where on earth did you learn that awful expression?" "Well," replied the twin, "can I help it if Poppa works at Cape Canavaral?"

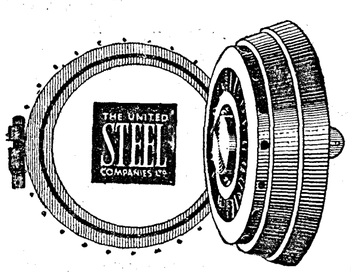
Bank vaults are always made of steel... — because steel is so dependable!
symbol of security!


Through the years Steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability... Steel that she can hold up to the world as a symbol of her security.

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS.

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration together with the documents specified in the Prospectus, as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to the public for inspection at the Registered Office of the Company at Rajapalaiyam. It must be distinctly understood that, in giving the consent, the Central Government, do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to the public for inspection at the Registered Office of the Company. It must be distinctly understood that in granting the licence, the Government of India do not take any responsibility for financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The existing Equity and Preference shares of the Company are officially listed on the Madras Stock Exchange Limited, Madras. Application will be made in due course to the Madras Stock Exchange Limited for permission to deal in the Equity and Preference shares now offered.

The Subscription list will open at 10 A.M. on Friday, the 27th January, 1961 and will close at 10 A.M. on Saturday, the 4th February, 1961 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 10 A.M. on Wednesday, the 1st February, 1961.

MADRAS CEMENTS LIMITED

(Incorporated under the Companies Act, 1956)

SHARE CAPITAL

AUTHORISED CAPITAL:

1,50,000	Equity shares of Rs. 100/- each	Rs. 1,50,00,000
40,000	Redeemable Cumulative Preference shares of Rs.100/- each carrying a dividend of 9.3% free of Company's tax but subject to deduction of tax at source at prescribed rates	Rs. 40,00,000
10,000	Cumulative Preference shares of Rs. 100/- each carrying a dividend of 6½% net after deduction of income tax at the prescribed rates	Rs. 10,00,000
	Total	Rs. 2,00,00,000

ISSUED AND SUBSCRIBED CAPITAL:

40,000	Equity Shares of Rs. 100/- each	Rs. 40,00,000
10,000	6½ per cent tax-free Cumulative Preference Shares of Rs. 100/-each	Rs. 10,00,000
	Total	Rs. 50,00,000

PRESENT ISSUE:

50,000	Equity Shares of Rs. 100/- each	Rs. 50,00,000
20,000	9.3 per cent Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 20,00,000
	Total	Rs. 70,00,000

RIGHTS OF PREFERENCE SHARES

The holders of Preference shares shall be entitled to be paid out of profits which the Board of Directors shall determine to distribute by way of dividends, a fixed cumulative preferential dividend at the rate which after deduction of such amount of tax as may be prescribed from time to time under Section 18 (3D) of the Indian Income-tax Act, 1922, would entitle the holder of such share to a net dividend of 6½% per annum on the capital paid up for the time being on such shares in respect of 10,000—6½% Tax-free Cumulative Preference shares of Rs. 100/- each and at the rate of 9.3% per annum free of Company's tax but subject to deduction of tax at the prescribed rate as required under Section 18(3D) of the Indian Income-tax Act, 1922, on the capital paid up for the time being on such shares in respect of 40,000 Redeemable Cumulative Preference Shares of Rs. 100/- each from the date of allotment and to a right on winding up to be paid all arrears of preferential dividends, whether earned or declared or not, down to the commencement of the winding up and also to be repaid the amount of capital paid up or credited as paid up on the Preference Shares held by them respectively in priority to any payment in respect of Equity Shares but shall not be entitled to any other rights in the profits or assets of the Company; subject as aforesaid and to the rights of the holders of any other shares entitled by the terms of the issue to preferential repayment over the Equity Shares in the event of winding up of the Company the holders of Equity Shares shall be entitled to be repaid the amount of capital paid up or credited as paid up on such shares and all surplus assets thereafter shall belong to Equity Shares in proportion to the amount paid up or credited as paid up on such Equity Shares respectively at the commencement of the winding up. The holders of Preference shares that have already been issued and that may hereafter be issued shall, unless restricted by the terms of the issue of such shares, rank *pari passu* in the matter of payment of dividends and return of capital.

Any further issue of Redeemable Preference Shares over and above the present issue of 20,000 Redeemable Cumulative Preference Shares of Rs. 100/- each ranking in all respects *pari passu* with the existing 10,000—6½% tax-free Cumulative Preference Shares of Rs. 100/- each and 20,000 Redeemable Cumulative Preference Shares of Rs. 100/- each now being issued under the Prospectus will be made only with the consent of holders of not less than three-fourths of the Preference Shares.

TERMS FOR REDEMPTION OF PREFERENCE SHARES

The shares will be redeemed at par after 10 years and before 15 years from the date of issue of shares. The Company may, at their option start redeeming the Preference Shares at par, after six years from the date of issue of such shares. The Redeemable Cumulative Preference Shares, if any, subscribed for and held by the Industrial Finance Corporation of India, New Delhi, shall be redeemed in the first instance without the draw of lots.

The Preference shares may be redeemed all at a time or in instalments. The Preference shares to be redeemed on each occasion shall be determined by the drawing of lots.

RIGHTS OF THE EQUITY SHARES

The new Equity shares for all purposes shall rank *pari passu* with the existing Equity shares of the Company.

ALLOTMENTS TO SHAREHOLDERS AND FINANCIAL INSTITUTIONS

Pursuant to Section 81 of the Companies Act, 1956, and as per resolution passed by the Company in General Meeting on 1-10-1960 authorising the offer of the present issue to the holders of both Equity and Preference shares of the Company, all the shares under the present issue were offered in the first instance to the existing shareholders of both Equity and Preference shares of the Company whose names appeared on the Register of Members of the Company as on 3rd December 1960, on the basis of one Equity share of Rs. 100/- each for every Equity or Preference share of Rs. 100/- each held by them and two Redeemable Cumulative Preference shares of Rs. 100/- each for every Five Equity or Preference shares or a combination of both held by them.

The shareholders of the Company have subscribed for 5,289 Equity shares and 2,941 Redeemable Cumulative Preference shares having a total nominal value of Rs. 8,23,000/- leaving a balance of 44,711 Equity shares of Rs. 100/- each and 17,059 Redeemable Cumulative Preference shares of Rs. 100/- each having a value of Rs. 61,77,000/-.

Out of the above, the Madras Industrial Investment Corporation Ltd., have subscribed for 27,500 Equity shares of Rs. 100/- each and 7,500 Redeemable Cumulative Preference shares of Rs. 100/- each and they have been allotted these shares in full

The Life Insurance Corporation of India have also underwritten and subscribed for 2,500 Redeemable Cumulative Preference shares of Rs. 100/- each and these shares have been allotted in full.

THE ENTIRE ISSUE OF RS. 70 LAKHS IS UNDERWRITTEN

The following underwriting arrangements have been made with the institutions mentioned below in respect of the quantities and classes of shares mentioned against each.

Name of the Underwriter.	Redeemable Cumulative Preference shares.	Equity shares	Total Value. Rs.
Madras Industrial Investment Corporation Ltd.	7,500	27,500	35,00,000
Industrial Finance Corporation of India, New Delhi	10,000		10,00,000
Life Insurance Corporation of India, Bombay	2,500	7,500	10,00,000
Indian Overseas Bank Limited, Madras		7,500	7,50,000
Brokers:			
Jointly			
(1) M/s. Chitra & Co., Madras			
(2) „ Maconochie & Co. „			
(3) „ Somayajulu & Co. „		7,500	7,50,000
(4) „ Paterson & Co. „			
(5) „ P. R. Subramanyam, Bombay			
Total	20,000	50,000	70,00,000

In the opinion of the Directors, the resources of the said underwriters are sufficient to discharge their underwriting obligations.

OFFER TO THE PUBLIC

The balance of the issued capital, namely Rs. 24,27,000/- consisting of 17,211 Equity shares of Rs. 100/- each and 7,059 Redeemable Cumulative Preference shares of Rs. 100/- each is offered at par for public subscription in terms of the Prospectus and is payable as follows:—

On application	Rs. 50/- per share
On allotment	Nil

The balance of Rs. 50/- per share will be called up at the discretion of the Directors not earlier than six months from the date of allotment.

No shares are issued for consideration other than cash.

The Life Insurance Corporation of India have also agreed to send us an open application for Equity shares to the value of Rs. 7,50,000/- which will rank for allotment on a par with other applications received from the public.

CONSENT

The consent in writing of the abovenamed Bankers, Brokers and Auditors of the Company to act in the respective capacities have been obtained and have been filed with the Registrar of Companies, Madras, and have not been withdrawn.

HISTORY OF THE PROJECT

The Company was incorporated on the 3rd July, 1957, for the several purposes set forth in the Memorandum of Association and in particular to undertake the manufacture of Portland Cement and other allied products. A factory has been established for this purpose at Tulukkapatti, Ramanathapuram District. An industrial licence has been obtained from the Central Government for erecting a factory with a capacity of 600 tons of Portland Cement per day, to be executed in two stages.

Large reserves of suitable limestone are available from quarries within a few miles from the factory. Suitable clay and gypsum are also available in and around the area. Extensive lands for the factory and residential buildings, both for existing and expansion scheme, have been acquired by the Company. Plenty of water is available from Arjuna River nearby. Necessary pipe lines have already been laid from the river bed to the factory site. The supply will be sufficient both for the first and the second stage of the project. The State Electricity Board have sanctioned necessary electric power to meet the requirement of the first stage of the factory and they have already made the power available. They have also assured the sanction in time of the required electric power for the second stage. The factory is located on the Madras-Cape Comorin National Highway and is well served by rail and road transport facilities. Besides, it is very near to the Tuticorin Port.

The Certificate of Commencement of Business was obtained on 31st July, 1957. The licensed capacity of 600 tons per day is to be executed in two stages, namely, the first stage having a capacity of 200/250 tons per day and the second stage having an installed capacity of 350/400 tons per day, making the total of 600 tons per day.

In accordance with the above phased programme, to finance the outlay of the First Stage, a capital issue of Rs. 50 lakhs was made. The original issue of Rs. 50 lakhs was in the form of Rs. 10 lakhs of Preference and Rs. 40 lakhs of Equity shares both of the denomination of Rs. 100/-. The entire Preference capital of Rs 10 lakhs and Rs. 30 lakhs of Equity shares out of Rs. 40 lakhs were placed before the investing public without resort to the publication of a Prospectus, using the personal influence of the Chief Promoter, Shri P. A. C. Ramasamy Raja, the well known Mill Magnate of Rajapalaiyam and the Managing Agents of Rajapalaiyam Mills Ltd., Rajapalaiyam, The Ramaraju Surgical Cotton Mills Ltd., and Jayaram Mills Ltd., Rajapalaiyam. The balance of Rs. 10 lakhs of Equity shares was taken up by the Madras Government to signify their confidence in the project. Further, a long term loan of Rs. 40 lakhs was obtained from Industrial Finance Corporation of India, New Delhi, to secure the balance of requirements.

The Company has now completed the first stage of the construction of the 200/250-ton factory. The plant and machinery were supplied by the internationally well known firm of Messrs. Skodas of Czechoslovakia and they were erected under the supervision of their experts. The Directors are glad to state that the first stage of the project is about to be commissioned and the cement produced by the factory will be placed on the market shortly.

EXPANSION SCHEME

The Company is now issuing additional capital to find the required finance for the second stage of the project. The supply and erection of plant and machinery for the second stage are also in the hands of Skoda, who have made all arrangements for delivery by the end of 1961 and erection of the machinery according to our present schedule.

The Import Licence for the plant and machinery for the expansion scheme has already been granted by the Government of India under Rupee payment terms and it is in accordance with the terms of this licence that we have placed firm orders with Messrs. Skodas.

PLANT AND MACHINERY

The Company has entered into an agreement on 9-12-1959 with Messrs. Skoda (India) Private Ltd., Bombay, Agents of Messrs. Technoexport of Czechoslovakia for supply of the extension plant of 350/400 tons day capacity. The entire plant and machinery including electrical drives are to be supplied by the renowned manufacturers in Czechoslovakia, Messrs. Skodas. These manufacturers of cement-making and other machinery enjoy a world wide reputation, particularly in the Cement and Sugar lines. They have undertaken the erection and the successful commissioning of the extension plant. The plant and machinery supplied by the above mentioned firm, Skodas, is for the wet process.

CAPITAL REQUIREMENTS

The total cost of the second stage of the project is estimated as under:—

Plant and machinery	Rs.	76.25 lakhs
Civil Constructions	Rs.	27.00 „
Other Assets	Rs.	9.25 „
Contingencies	Rs.	3.50 „
Expenses for issue of shares	Rs.	4.00 „
	Total Rs.	120.00 „

The requirements of working capital for the Second Stage will be about Rs 20 lakhs.

SOURCE OF FUNDS

The total sum will be provided as under:—

By the present issue of share capital	Rs.	70 lakhs
Additional long-term loan from the Industrial Finance Corporation of India New Delhi (already sanctioned)	Rs.	50 „
	Total Rs.	120 lakhs

The requirements of working capital, namely, Rs 20 lakhs for the Second stage will be met out of the earnings of the First stage and borrowings from banks.

PROSPECTS

It is well known that the Cement industry in India has not only seen phenomenal growth in the last twelve years but is looking forward to a period of increasing consumption of cement in the next decade. Apart from a quadrupling of capacity in a little over a decade, the industry has been allotted a target of 14 million tons during the Third Plan period. The capacity of the industry at the end of 1960 was estimated at about 9 million tons. Thus, it is safe to expect that the target will be more than achieved during the Third Plan period, though it is expected that, by this time, consumption of cement by the house building industry will, apart from the needs of the large projects of the Third Plan, have very considerably increased. Actually, it is expected that, by the first year of the Third Plan, cement consumption will receive a new stimulus with the availability of larger quantities of steel, with the completion and coming into operation of the three steel units in the public sector. The Company's expansion scheme is, therefore, timely.

PROFITS

The Directors are of opinion that in the absence of any unforeseen circumstances, the Company will earn *sufficient profits* as to enable the declaration of a reasonable dividend within one year from the date *the second plant goes into production.*

FINANCIAL INFORMATION

The Auditors' Report dated 10-1-1961 in accordance with the provisions of the Companies Act, 1956, has been appended to the Prospectus. The Auditors have given and have not withdrawn their written consent to the inclusion of their reports in the form and context in which it appears.

EXPENSES OF THE ISSUE

The expenses of the issue, including underwriting commission and brokerage are estimated not to exceed Rs. 4 lakhs and are payable by the Company.

UNDERWRITING COMMISSION

Underwriting Commission at the rate of 2½% on the nominal value of both Equity and Preference shares underwritten will be paid to the underwriters.

BROKERAGE

Brokerage at the rate of 1% will be paid to the Bankers of the Company and recognised Brokers on all allotments made in respect of applications for Preference and Equity shares bearing the stamp of such Banks or Brokers. Brokerage on the same basis is payable to underwriters in addition to the underwriting commission on allotments in respect of applications made or procured by them and bearing their respective stamps. However, no brokerage is payable on shares subscribed by the existing shareholders under Section 81 of the Companies Act, 1956 or by the Directors or by the Managing Agents or their associates and by the Madras Industrial Investment Corporation Limited.

DIRECTORS

The Articles of Association of the Company provide that the number of Directors shall not be less than three and until otherwise determined by the General Meeting, not more than fifteen, including Ex-Officio Directors. The maximum number of Directors not liable for retirement by rotation shall not exceed one third of the total strength of the Board. The qualification of every Director, other than the first Directors, Ex-Officio Directors, and alternate Directors, Madras State Government Director, and Industrial Finance Corporation of India Director shall be his holding shares in the capital of the Company of the face value of Rs. 5,000/- and it shall be his duty to comply with the provisions of Section 270 and 271 of the Act.

Every Director is entitled to receive a sitting fee of Rs. 100/- for every meeting of the Directors or of any Committee of the Directors attended by him and all reasonable travelling, hotel and other expenses incurred within India for attending and returning from meetings of the Board or a Committee thereof or in connection with the business of the Company.

BORROWING POWERS

The Directors may at their discretion raise or borrow or secure the payment of any sum or sums of money for the purposes of the Company provided that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) shall not at any time, except with the consent of the Company in General Meeting, exceed the aggregate of the paid-up capital of the Company and its free reserves.

INTEREST OF DIRECTORS

M/s. P. A. C. Ramasamy Raja and P. R. Ramasubramania Raja, Directors of the Company, are the partners of Messrs. P. A. C. Ramasamy Raja & Co., *the Managing Agents of the Company* and each of them is interested in the remuneration payable to the *Managing Agents in the following proportion.*

1. Shri P. A. C. Ramasamy Raja .. 51%
2. Shri P. R. Ramasubramania Raja .. 49%

Each of the Directors is interested to the extent of shares subscribed allotted or to be allotted to him in the Company and in the sitting fee receivable by him for attending the meeting of the Board of Directors.

MANAGING AGENTS

M/s. P. A. C. Ramasamy Raja & Co., have been appointed with the approval of the Central Government accorded in their letter No. 41(914)-CMN/57, dated 4th October, 1957, as the Managing Agents of the Company for a period of 15 years from 30-1-1958 on a remuneration of 10% of the annual net profits of the Company. For this purpose, the net profits are to be computed in accordance with Section 349 and 350 of the Companies Act 1956. In the event of inadequacy or absence of profits, the Managing Agents will be paid, as minimum remuneration for every such financial year of the Company, such sum payable in such manner, as the Central Government may hereinafter fix in this behalf.

In the event of any compensation becoming due and payable to the Managing Agents for loss of office, such compensation shall be determined in accordance with Section 366 of the Companies Act, 1956.

The partners of the Managing Agents are well known industrialists and they are associated with several successful enterprises.

Subject to the provisions of the Companies Act, 1956, and to the supervision and control of the Board of Directors, the Managing Agents shall have the Management of the whole affairs of the Company. The Managing Agents have a right of appointing not more than two Directors where the total number of Directors of the Company exceeds five and one Director, where the total number does not exceed five. Such appointees will be known as Ex-Officio Directors.

VARIATION OF RIGHTS

The rights attached to any class of shares may be varied by complying with provisions of Sections 106 and 107 of the Companies Act, 1956.

INSPECTION

Copies of Memorandum and Articles of Association of the Company, Audited Balance Sheet and Profit and Loss Account for the last three financial years and the Auditors Report referred to hereinabove, the original consent order of the Controller of Capital Issues, Licence issued by the Government of India for establishment of new industrial undertaking and copies of other contracts, agreements and documents mentioned in the Prospectus can be inspected at any time during the usual office hours of the Company at the Registered Office of the Company for a period of 14 days from the date of publication of the PROSPECTUS or until the Subscription List closes whichever is earlier.

APPLICATION AND ALLOTMENT

Applications for Equity and Preference shares must be for a minimum of 5 shares.

All applications must be made on the forms accompanying the Prospectus which can be had from the Registered Office of the Company, the Company's Underwriters, Brokers and Bankers. In respect of Bankers arrangements have been made with the following offices for receiving applications and remittances.

State Bank of India, Rajapalaiyam, Madras and Bombay; Indian Bank Ltd., Madras, all their Branches in Madras State, Bombay, Calcutta and New Delhi; Indian Overseas Bank Ltd., Madras, all their Branches in Madras State Bombay, Calcutta and New Delhi; Central Bank of India Ltd., Rajapalaiyam, Madras and Bombay and Rajapalaiyam Commercial Bank Private Ltd., Rajapalaiyam.

The form of application accompanied by the necessary remittance of Rs. 50/- per Equity or Preference *share applied for, should be delivered to the* Registered Office of the Company, Company's Underwriters, *Brokers and Bankers mentioned in the Prospectus* on or before the date of closing of the subscription list.

Cheques or drafts drawn on banks at places other than those mentioned above must include bank charges at 1/8% with a minimum of 75 nP. Cheques or drafts should be made payable to 'Madras Cements Limited' and should be crossed. A separate cheque or draft should accompany each application.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

CHAIRMAN, MR. DHARAMSEY M. KHATAU'S REVIEW

Speaking at the 24th Annual General Meeting of the Associated Cement Companies Limited held in Bombay on Friday, 20th January, 1961, the Chairman, Mr. Dharamsey M. Khatau said:

"After the steady and continuous deterioration in profits over the preceding four years, there has at last occurred some slight improvement in gross profits and net profits. Encouraged by this, and by the prospect, or at least the hope, that the Tariff Commission now examining our current and future costs will recommend a fair price and that the benefits accruing hereafter from the increase in installed capacity will not be wholly neutralised by further increases in costs, your Directors have decided to recommend a Dividend at Rs. 12 per share (subject to deduction of tax). This has been done in an endeavour to reach what we consider to be the minimum rate of dividend to which the shareholders are entitled. Your Directors realise that this is by no means yet a fair return on shareholders' capital, having regard particularly to the fact that the shareholders have also contributed a very substantial amount of further capital by way of Premium on Shares paid in cash. But it is not possible to go any further in that direction just at present, because even the modest dividend now recommended as well as the rate at which it is proposed to pay bonus to our employees this year, have necessitated the heavy withdrawal of Rs. 84.50 lakhs from General Reserve.

Production and Costs

"Despite the slight improvement in profits the results of last year's working have been disappointing. In keeping with the Second Plan, the installed capacity of your Company's factories in India rose from 34.42 lakh tons to 37.30 lakh tons, but despatches improved only from 31.47 lakh tons last year to 33.68 lakh tons. This was not due to any lack of demand for cement. On the contrary, the demand improved strongly since the beginning of 1960. But the shortage of railway wagons, especially since the end of May 1960, prevented us from taking full advantage of the improved demand. Moreover, your Company along with many other industrial concerns was adversely affected by the acute shortage of transport for coal, with the result that a number of our Works were obliged to curtail production for want of coal supplies towards the end of the year under review. The transport situation continues to be grave, though the authorities concerned are doing all they can to ensure for our cement plants at least their minimum requirements of coal and adequate supply of wagons for despatching cement. We are also endeavouring to increase despatches by road transport.

"Apart from these, the increase in gross earnings has been largely offset by further increases in the cost of various materials, enhanced railway freight, a further rise in the cost of coal and power, higher incidence of labour costs, etc. The incidence of depreciation was also higher on account of the high capital cost of expansion and rehabilitation projects.

"The implementation of the recommendations of the Cement Wage Board would have increased the labour costs still further but for the Government's acceptance of the Wage Board's finding that the cement industry was incapable of bearing this additional burden, and that consequently there was need to neutralise it by an appropriate increase in the retention price. Unfortunately, in the process of computing this higher labour cost per ton of cement, the installed 'rated' capacity has been taken as the base instead of the actual production which was considerably lower.

"The major increases in costs which have been responsible for the progressive reduction of profits have been due to factors entirely beyond the control of the Company. They have in fact been the direct consequence of Government's own fiscal, monetary, labour and welfare policies in an attempt, on the one hand, to implement the Second Five-Year Plan which many of us regarded as extravagant and, on the other, to move nearer to the goal of a socialistic pattern of society which, at this juncture, most of us consider impracticable."

Tariff Commission

"In view of continually rising costs," the Chairman continued, "your Company was constrained to approach the Government repeatedly since 1959 for some enhancement of the retention price. It was pointed out that the continued decline in the earning capacity of the Company, despite the substantially higher production and increased capital employed, which is amply borne out by our published accounts since 1956, was the direct outcome of increasing costs and the uneconomic retention price. The Government was well aware that your Company has always co-operated in the plants and policies of Government by readily assuming responsibility for its share in the expansion of the country's cement output, and by carrying out expansions and technical improvements with a view to keeping down production costs. Your Company has also participated in establishing a major Heavy Engineering project in the country in collaboration with two leading British Concerns, involving very considerable investment of resources in men and money. In view of all this, one cannot but deprecate the irresponsible attitude of Government in deliberately ignoring the difficulties and needs of this basic controlled industry, and in refusing to re-fix the retention price at a level which would yield a reasonable margin of profit, and also leave something over for ploughing back into the business. Even more reprehensible was the Government's failure to implement the last Tariff Commission's recommendations concerning the retrospective operation of the enhanced retention price fixed in 1958 and the need to alter that price from time to time with every change in the cost of coal.

"In these circumstances, the decision of the Government to refer the whole question once again to the Tariff Commission for a fresh investigation is welcome, though the decision was taken after nearly two years of inaction. In effect, this means that the Cement Industry will have to continue to suffer, without any redress, not only the entire rise in costs which has already occurred since January 1958, but also the further rise which will undoubtedly occur until a new retention price becomes operative.

"Meanwhile, almost exactly a month ago, even before the Tariff Commission could make a start with its formidable task, came an extraordinary edict from Government. They decided, by a stroke of the pen, to compel the industry to use secondhand bags for packing cement; and this at a price so low, conceived as an average price for packing in New Bags and Used Bags, that it makes the whole scheme both impossible of performance and grossly expropriatory.

"I have often wondered,—lately with some anxiety, —what could be the reasons for singling out the Cement Industry for such unsympathetic, if not indeed harsh, treatment. Can it be that, even after all these years, there is as yet no understanding in Government circles of the real needs, or the elementary "economics" of this major, basic, capital-intensive industry? Do they not want a Cement Industry that is buoyant and can grow with freedom and vigour to a point when shortage of cement will be a thing of the past? Or is it, quite simply, that State Trading in cement, though initially highly lucrative, has lately become such an unprofitable adventure, that a desperate attempt is now being made to minimise the liability by passing back the losses in State Trading to the producers? I suspect that this last point is nearest the mark; but whatever may be the true answer, I feel bound to say, with all the emphasis at my command and with a full sense of responsibility, that the recent policies of Government affecting this major industry are fraught with grave consequences to its future and to the early satisfaction of the country's urgent need for cement. I must also add that 'holding the price line' is impossible, with planned inflation on the one hand, and with so many variable factors (of Government's own making) tending towards rising costs, on the other. In such circumstances a rise in the price of cement is an unavoidable necessity if a further increase in cement production is not to be throttled.

"It is with this background that we propose to urge before the Tariff Commission that the 'fair return' on the capital employed in the Cement Industry should be conceived as a 'fair net distributable return' after meeting all items of cost. In particular we shall urge that there can be no justification—legal or equitable—for excluding from the over-all 'cost' of cement either such items of direct cost as the full charge for packing, whether in New or Used Bags, and the commission payable to stockists, or such large and specific items of overhead costs as Bonus and accruing Gratuity to employees, the remuneration payable to Managing Agents, the statutory Development Rebate Reserve and Company Taxation. To admit, on the one hand, that the industry is entitled to a fair return on capital employed, but to insist, at the same time, that from this return itself the industry should in effect meet the cost of the items to which I have just referred is a contradiction in terms. It certainly results in our being left with a net distributable return which can hardly be described as fair."

Expansion and Rehabilitation

The Chairman reported that the Company's various expansion and rehabilitation projects have made satisfactory progress. Giving details, Mr. Khatau mentioned the extensions to the Shahabad Works which raised its capacity from 4.00 lakh tons to 5.65 lakh tons per annum; the modernisation and extension of the Kymore Works as a result of which the capacity of the factory has been raised from 3.60 to 5.73 lakh tons per annum; the installation of the flotation plant for the beneficiation of low-grade limestone and the slag-cement plant at Chaibasa; and the slag-granulation plant at Jamshedpur. The Chairman expressed his fears that it may not be possible to commission the recently completed second dry-process kiln at Mancherial immediately due to the inability of the Andhra Government to supply the full requirements of additional power.

New Cement Works at Durg

Mr. Khatau also announced that the Company had decided to start immediately on the building of a Cement Works at Durg in Madhya Pradesh which was held in abeyance due to the glut in the cement market and the shortage of foreign exchange etc. The Government of India has now agreed to give high priority to this project so far as foreign exchange is concerned. This new Cement Works will have an initial capacity of 1.65 lakh tons of cement per annum, and in due course, will produce slag-cement using blast-furnace slag from the Bhilai Steel Plant.

Firebricks and White Cement

The capacity of the refractories factory at Katni was being raised from 17,640 tons to 30,000 tons per annum in view of the adequate demand for this product. The Company also marketed nearly 8,000 metric tonnes of Silvicrete white cement produced at the old Porbandar Works. Since demand continued to be fairly steady despite competition from imported and local white cement, and was likely to increase in the coming years, the Company has planned to install a new 25,000 ton capacity white cement plant at Kymore.

Collieries

Mr. Khatau also said that the Company's Nowrozabad and Kotma Collieries met a good portion of coal requirements at some of the cement works and the modern coal-washing plant at Nowrozabad to improve the quality of the coal produced there, is supplying enriched washed coal to the Kymore Cement Works replacing the more expensive Bengal coal to a large extent.

Machinery Manufacture

Continuing, the Chairman stated that in line with the Government policy of encouraging the setting up of a hevy-machinery industry in India, the Company has decided to establish a well-equipped engineering works at Shahabad for the manufacture of machinery required for cement, paper and pulp, chemical industries, etc. Meanwhile, the Company continues to manufacture cement machinery for its own requirements at the existing Central Workshops at Shahabad.

ACC-Vickers-Babcock Ltd.

The work on the construction of the Heavy Engineering Works at Durgapur in collaboration with Messrs. Vickers Ltd. and Messrs. Babcock & Wilcox Ltd. is proceeding according to schedule. The new Company is expected to go into production by the end of 1961. ACC-Vickers-Babcock Ltd. have up to now issued 3,00,000 shares of Rs. 100 each and the ACC's share, which is 49.8% of the shares so issued, amounts to Rs. 1,49,40,000/-.

Pakistan

The Chairman reported that the Company's factories in Pakistan continued to function satisfactorily. Remittance to India of profits earned in Pakistan continued to be banned but the Company was allowed to remit to India the due proportion of the management and administrative charges incurred at the Head Office. The demand for cement in Pakistan was steadily growing and naturally, the Government of Pakistan were eager to meet this growing demand by increased production within the country. "They therefore approached us to expand the capacity of our two plants in Pakistan; but we expressed our inability to do this for want of the substantial foreign exchange resources required for the purpose."

The Chairman continued: "As the need for expanding the cement production in Pakistan was undoubted, we have been in negotiation with certain foreign interests—at first British, and now American—to transfer our factories to them on terms mutually agreeable and subject, before completion, to the approval of the Government of Pakistan and the Government of India. The pre-requisites of any such transaction must be that we get a price which is fair, having due regard to all the circumstances, and that the entire sale proceeds together with our cash balances should be received by us in Indian Rupees or in convertible foreign exchange. From the point of view of the Government of Pakistan, such an arrangement would be of great value because it would ensure considerable expansion of production capacity without any burden on the foreign exchange resources of the country either for the acquisition of our factories, or for their further expansion. To the Government of India also the transaction should be welcome as it would enable the release of our resources in Pakistan for investment in further expansion in India. Negotiations are proceeding satisfactorily and before they are finalised the shareholders will be approached for their approval."

INDIAN OXYGEN LIMITED

CHAIRMAN, SIR J. D. K. BROWN'S STATEMENT

INDUSTRIAL GASES AND ELECTRODES PLAY INCREASINGLY IMPORTANT PART IN THE INDUSTRIALISATION OF THE COUNTRY

PROPOSED RIGHTS ISSUE TO FINANCE LARGE EXPANSION PROGRAMME

The following is a statement by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited, issued to the shareholders, together with the Directors' Report and Accounts for the year ended 30th September, 1960 and the Notice of the Company's 26th Annual General Meeting which is to be held on 14th February, 1961.

The Directors' Report and Accounts for the year ended 30th September last are being circulated with this statement. In keeping with the trend in these matters, your directors have felt that the statement which is normally made by the Chairman at the Annual General Meeting, which is attended by only a very small proportion of the shareholders, should be circulated in advance to all members and that this opportunity might be taken to deal at some greater length than previously with the company's trading experience in the year under review. Its financial position and its development plans with particular reference to its position in the expanding economy of India.

Profits, Taxation and Dividend

The profit for the year, after providing Rs. 37,10,806 for depreciation and Rs. 38,85,900 for taxation, amounted to Rs. 62,98,449. This compares with a net profit for the previous year of Rs. 53,07,450 which was arrived at after charging depreciation of Rs. 31,69,459 and taxation of Rs. 34,62,755. As stated in the report of the directors, the profit may be considered satisfactory. Ours is, however, a capital-intensive industry and past experience has demonstrated the necessity continuously to plough back profits to provide for plant replacements at increased cost and for expansion which, as an industry serving other industries, we must always be prepared to carry out in anticipation of demand. I shall refer later in this statement to the expansion which we visualise over the next few years and to the arrangements which are contemplated to finance it. Suffice it to say at this juncture that, for so long as can be foreseen, there will always be the necessity to plough back substantial sums of money each year and it is in these circumstances that your directors have felt it appropriate, notwithstanding the increase in profits, to recommend the same rate of dividend as was paid in respect of the previous year.

Sales

From the accounts for the year you will observe that the value of sales exceeded that in the previous year by over Rs. 91 lacs, representing an overall increase of just over 16 per cent. While practically all products contributed towards this rise, the rate of increase was particularly high in the cases of piped oxygen supplies to the steel works, liquid oxygen explosives used in open-cast mining operations and electrodes. The increase in electrode sales was primarily due to the higher level of production at the factory and the introduction of new ranges of special types during the year. The rate of increase in sales of dissolved acetylene was disappointing and while partly due to delays in the completion of customers' own development programmes, was also accounted for by increased competition and the use of alternative products. The principal raw material used in the production of dissolved acetylene is calcium carbide and towards the close of the year, with the commissioning of a plant in South India to supplement the output of another plant which has been functioning for some time in Calcutta, the country is now approaching self-sufficiency in this item. While this development is particularly welcomed by us as ensuring supplies of one of our main raw materials without our having to concern ourselves with the problem of foreign exchange, I have to observe that the high price of indigenously produced carbide and its lower gas yield are already having an adverse impact on the cost of production of dissolved acetylene.

Development and Expansion

Industrial gases and electrodes, which are your company's main products, play an increasingly important part in the industrialisation of the country, and this was appropriately recognised during the year when the Planning Commission called a meeting of the major producers and consumers to discuss the requirements of these products in the Third Five-Year Plan period. The outcome has been the inclusion of our industry's overall requirements in the draft outline of the Plan published a few months ago.

While the Planning Commission has indicated the country's overall requirements of our major products during the next few years and while this is extremely useful as a basis for planning our own production facilities, these requirements have to be broken down to assess the needs of each region. This is particularly important in the case of industrial oxygen and dissolved acetylene, where extremely high distribution costs limit the frontiers of the market. The whole country, therefore, has to be divided into several regions to be served by carefully sited producing and supply points. Again, each production point has to be of a capacity geared to the needs of the region it serves, and as the state and pace of development varies from region to region, it is obvious that the capacity and size of the various plant units will also vary. In catering for additional oxygen requirements, therefore, we have to consider the alternatives on the one hand of multiplication of plants of similar capacity, and on the other of stepping up the size of each unit as a region progresses industrially, so that benefit may be derived from the economies of larger scale production. Your company is in a particularly favourable position to fulfil this requirement of regional development, and this is accomplished by transferring oxygen producing plants from one region to another, and installing plants of higher capacity and greater efficiency in regions which, by reason of economic advancement, require such plants. This incidentally results in a significant saving of foreign exchange as the import of one additional plant may, through a number of consequential transfers, help to increase available capacity in more than one region. Thus, during the past year we have succeeded in stepping up oxygen production at Ahmedabad and Madras by transferring plants from Bombay to Madras and from Madras to Ahmedabad. This leaves the oxygen plant capacity at Bombay to be augmented, and we are hopeful that the necessary licence under the Industries (Development & Regulation) Act will be forthcoming in the near future, to enable us to import a plant with adequate capacity against foreign exchange procured by the company.

Oxygen requirements in the Calcutta and Jamshedpur region have been growing apace and an additional 400 M³ oxygen plant was installed in each of the Calcutta and Jamshedpur factories during the year.

Another significant development took place at Burnpur, where we installed argon purification and high purity nitrogen production facilities, which were successfully commissioned during the year with the help of technical assistance received from The British Oxygen Company Limited. In our Burnpur factory we are now equipped to produce and compress argon, high purity nitrogen and argon/nitrogen and argon/oxygen mixtures. The production of these gases for the first time in India will lead to substantial savings in foreign exchange which had hitherto been expended on importing them and the cylinders which contained them. Argon, high purity nitrogen and their mixtures will provide electric lamp manufacturers with an indigenous source of supply, while argon will help in welding and fabricating stainless steel and aluminium and aluminium alloys, which are to be produced in the country in growing quantities in the years to come, and will also fulfil the large requirements of the Government Alloy Steel Plant to be set up at Durgapur.

The present oxygen producing plant in Bombay also produces liquid nitrogen which is essential for the operation of India's atomic reactors. The additional oxygen plant we hope to install there will further augment our supply of this gas, the demand for which is increasing and will continue to increase as India progresses in the field of atomic power generation.

Through the pioneering efforts of your company liquid oxygen is being more and more used with loxite cartridges as an effective and economical explosive in open-cast mining for coal, iron ore, limestone and manganese. In developing the use of this explosive, we have been closely associated with the National Coal Development Corporation, the Tata Iron & Steel Co. Ltd., and the Indian Iron & Steel Co. Ltd. The loxite cartridge manufacturing plant which was established at Burnpur in May, 1958 is producing the additional cartridges required to match developing sales.

The draft outline of the Third Five-Year Plan envisages rapidly increasing requirements of electrodes and our new factory at Khardah, Calcutta, is being equipped to meet the greater demands. The level of production at this factory improved during the year and new types of special electrodes were developed and introduced into the market. Our equipment factory at Calcutta, which two years ago undertook a phased programme of indigenous manufacture of gas-user equipment, is now on 100% local manufacture of the components required. Here again plans are afoot to raise the level of production in the near future.

At Bangalore construction of a new oxygen and dissolved acetylene factory is progressing on schedule and operations should commence within the current financial year. When complete, this will afford increased production of dissolved acetylene in that growing industrial area.

At Gauhati, we have installed an oxygen plant within the premises of Indian Refineries Ltd., and I think we can claim that we have contributed in no small measure to the progress of erection at the

refinery by coming forward with timely supplies of oxygen.

Nitrous oxide, which is an anaesthetic widely used by the medical profession in India and which is also exported, is now produced in our Calcutta factory. A licence for setting up a second producing plant for nitrous oxide at Bombay has recently been obtained and when this plant is in operation, it is hoped to increase substantially both sales generally and in particular exports to the Near and Far East.

With regard to welding rods, miscellaneous gas-user and medical equipment and electric welding plant, it has been our policy to encourage their manufacture through feeder industries, thus reducing our reliance on imports. I am glad to say that in very many cases these feeder industries have been nursed and encouraged to undertake manufacture of these items, not only through the orders we place with them, but with the technical help we render them by drawing on our collaboration arrangements with The British Oxygen Company Limited.

It is obvious that with the increasing pace of industrialisation in the country and in particular having regard to the greatly increased quantities of steel which will become available for fabrication and machine building during the next Five-Year Plan period, the consumption of your company's products must continue to rise. What may not, however, be so widely appreciated is that based on the experience of the industrially developed countries, the rate of expansion of the industrial gases industry is likely to exceed the rate of expansion in the output of steel. Even today, in the United States of America, the consumption of oxygen per ton of steel produced is still increasing and this is a factor which I believe will have to be borne in mind in considering the scale of development required in India if shortages and deficiencies are not going to handicap the steel-using industries in the highly competitive years which lie ahead of us.

Competition

Government's policy towards competition, especially with regard to industrial oxygen, has been indicated by the Planning Commission as follows :—

> "……it was agreed that while recent entrants into this field and newcomers might be given some weightage in the interest of preventing over-concentration of growth, there could be no question of freezing the capacity of leading producers at current levels and that taking all relevant factors into consideration, an appropriate share of the expansion should be allowed to them also."

We accept this position which is in line with the declared economic and social objectives of planning in this country. I feel, however, that I should make one comment in this connection and it stems from what I have stated before, namely that by the very nature of its business, oxygen production facilities have to be sited at multiple points each serving a certain optimum area. If, therefore, the country is to reap the benefits of increased production each one of these production points should be allowed to grow to be able to achieve the economies of scale which in this industry are very considerable; indeed, spectacular. A careful eye should, therefore, be kept on this aspect of the problem so that wasteful competition is not allowed to lead merely to unnecessarily high prices to the detriment of our customers and therefore of the nation as a whole through failure to achieve economic cost levels.

Finance

The considerable expansion in our production facilities which has already taken place as well as the further expansion which is now visualised, necessarily involves financial commitments which cannot be completely met from cash retentions in the business. Apart from the quantum of the finance required, the necessity at this stage to import plants gives rise to a demand for foreign exchange, and this is being met in various ways. The biggest single item in the past year has been for oxygen and dissolved acetylene cylinders and for this purpose accommodation was arranged through the United States Export-Import Bank. As a counterpart of this arrangement, the rupee equivalent of the U.S. Dollar cost which could not be met from internal resources was secured by way of additional facilities from our Bankers in Calcutta.

Our capital expenditure in the three years ending 30th September, 1963 is presently estimated at a figure of Rs. 3,85,00,000. Your directors have carefully considered the methods of financing this large expansion programme and in view of the steadily increasing investment in fixed assets have come to the conclusion that the Ordinary Share capital should now be increased. By virtue of The British Oxygen Company Limited's holding in our equity capital this will also yield foreign exchange in our hands through the parent company's subscription towards the new Ordinary Shares to be allotted to them. The consent of the Controller of Capital Issues has, therefore, been sought and obtained, and it is now proposed to make a rights issue of 6,00,000 Ordinary Shares of Rs. 10/- each at a premium of Rs. 8/- per share. You will notice that various matters arising out of this issue of share capital are proposed to be dealt with at the meeting to which this statement is to be submitted and full information is contained in the explanatory statement attached to the notice convening the meeting. I would particularly point out that although on the basis of its current holding of Ordinary Shares, The British Oxygen Company Limited, is entitled to 70% of the rights issue, they have agreed that they should take up only 60% thereof, thus enabling 40% to be offered to members other than The British Oxygen Company Limited, being very largely members of the Indian public.

Management and Personnel

In an expanding organisation such as ours which by the nature of its production is necessarily widely dispersed throughout the country, the need to provide for the development of senior executives is a continually increasing one. We have taken advantage of the facilities afforded to us by The British Oxygen Company Limited, to send a number of our officers to the United Kingdom for specialised training while nominees of the company have also attended the Administrative Staff College at Hyderabad as well as other specialised courses in sales and administration which have been available in India. We were particularly proud that our Secretary, Mr. A. K. Basak, was selected by the National Productivity Council to lead a Productivity Study Team on stores and inventory control to Japan, the United States of America and West Germany, while we are also pleased that one of our officers has been chosen for inclusion in a Productivity Team on welding which is to go abroad in 1961. The burden on our senior executives is a heavy one and I assure you that we have been well served by them. Our particular gratitude is due to our Managing Director, Mr. A. K. Sen, who has been untiring in his devotion to the company's interests. To him and to the other senior executives as well as to the staffs and work-people at our installations throughout the country I offer on your behalf our grateful thanks.

Technical Collaboration

It would be inappropriate to close this statement without a special mention of the help and assistance which we continue to receive from our parent company, The British Oxygen Company Limited. With the increasing tempo of development in India the contact between the personnel of the two companies has continued to grow at all levels and we were particularly pleased to welcome just a few weeks ago Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited, who in a crowded programme visited Jamshedpur, Calcutta, Delhi and Bombay. On your behalf I extend to The British Oxygen Company Limited and to its Chairman our appreciation of their valued assistance and of the very real interest which I can assure you they continue to take in our progress.

Prospects

The Company is now embarked on a further expansion programme, the scale of which is substantial even on the basis of its already widespread activities. We are, however, building on a sound foundation and from what I have already stated, shareholders will apreciate that I have no doubts regarding the future demand for our products. Expansion of the steel-using industries constitutes a basic feature of the Third Five-Year Plan just as increased steel production was the central theme of the Second Plan. In these circumstances it is clear that our industry must forge ahead. At the same time I must point out that we have already shouldered substantial liabilities in the shape of foreign exchange loans and the likelihood is that the demands of Indian industry will compel us to consider before long a further stage of expansion, involving fresh financing problems. Having regard to all these considerations it may, I fear, be necessary for shareholders to be prepared to exercise a degree of patience in regard to the expectation of increased returns by way of dividend; but from what I have stated it is only reasonable that you should be able to look forward to a steady growth in the value of your investment in an industry which is vital to the continuing growth of the Indian economy. I have no doubt that, given a steady supply of the necessary raw materials, all industries in this country will bend themselves to the task of achieving what is expected of them under the Third Five-Year Plan and in serving them Indian Oxygen will play its full part.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river . . . threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.

Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

The Tata Iron and Steel Company Limited

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS REMAIN TIGHT

Wednesday, 25th January.

THE steep rise in advances outstanding in the Calcutta money market has continued throughout the past week. All the main sources of demand, including the jute and sugar mills, the engineering and iron and steel industries, and call for accommodation against grains and seeds storage, show large increases in requirements. The only exception to the current trend appears to be the cotton industry, which has reduced its offtake slightly. In the interbank market, conditions remain extremely tight, and there are borrowers over at the unchanged call rate of 5½ percent.

There has been more activity in the exchange market during the past week, with an improvement in the supply of both tea and gunny bills. Remittance demand has remained poor. On the London money market, the pound has ruled generally firm, with only narrow fluctuations recorded; at the close, changes were negligible.

THERE WAS A SHARP RISE IN THE PRICE OF GOLD during the past week. Bulls bought heavily on hopes of an increase in the international price. The local quotation was Rs. 143.50.

Silver rose to Rs. 238 in sympathy with gold. The price was quoted at 79¾d in London and at 91.375 cents in New York.

DURING THE WEEK ENDED 20TH JANUARY, Government of India Treasury bills for Rs. 1,37,48,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 24th January. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.355 were accepted in full, the average rate of acceptance being Rs. 2.580 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th January.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 25th January to 28th January at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 18th January to 21st January, amounted to Rs. 1,14,00,000.

THERE WAS A DECLINE OF RS. 5.85 CRORES TO Rs. 1,914.87 crores in active notes, according to the return of the Reserve Bank of India for the week ended 20th January, 1961, but the total note issue was only Rs. 33 lakhs higher at Rs. 1,931.98 crores. Notes held in the Banking Department consequently rose by Rs. 6.18 crores to Rs. 17.11 crores. Deposits of the Government of India fell by Rs. 93 lakhs to Rs. 50.11 crores, while other Government accounts rose by Rs. 13.51 crores to Rs. 18.42 crores. Balances of commercial banks at Rs. 76.71 crores showed a decline of Rs. 1.90 crores. Balances held abroad declined further by Rs. 5 lakhs to Rs. 19.42 crores. Investments at Rs. 152.45 crores showed an increase of Rs. 21.71 crores. Other loans and advances declined from Rs. 150.79 crores to Rs. 138.46 crores, of which advances to scheduled banks against usance bills amounted to Rs. 17.16 crores (Rs. 14.59 crores). Ways and means advances stood at Rs. 40.59 crores, against Rs. 45.08 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 13th January, 1961, shows a drop of Rs. 6.21 crores to Rs. 565.87 crores in total deposits. Investments in Government securities are down by Rs. 15.05 crores to Rs. 287 crores, while other authorised investments remain unchanged at Rs. 10.19 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 8 crores to Rs. 247.80 crores. Cash and balances are, in consequence, shown at Rs. 209.84 crores or Rs. 13.19 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 13th January, 1961, shows Demand and Time liabilities at Rs. 787.73 crores (Rs. 14.90 crores on account of borrowings from banks) and Rs. 1,104.88 crores (Rs. 9.72 crores), compared with Rs. 792.79 crores (Rs. 14.94 crores) and Rs. 1,115.74 crores (Rs. 10.27 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.03 crores and Rs. 5.98 crores to Rs. 43.03 crores and Rs. 77.95 crores, respectively. There is a drop of Rs. 18.30 crores to Rs. 625.01 crores in investments. Advances and bills discounted at Rs. 1,208.92 crores show an increase of Rs. 9.0[illegible] crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.4 percent and 64.2 percent, against 6.8 percent and 62.9 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 27-1-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
27-1-61	28-4-61	2,00,00	Rs. 2.580%
20-1-61	21-4-61	2,00,00	Rs. 2.580%

STEEL PRODUCTION SOARS BY 173% AT MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND STEEL STRENGTHENS THE NATION

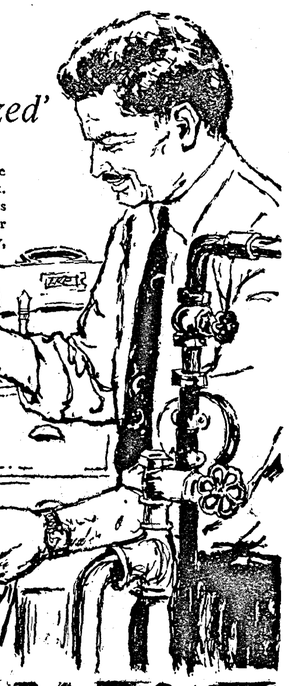
This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!



Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at *random several samples* from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. *This is the first stage of* ensuring quality. All fabric must meet the Company's strict anti-shrinkage *specifications before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for

·SANFORIZED· REGD TO MK

on the label and your clothes will never shrink out of fit!

'Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Stocks and Shares

STEEL RETENTION PRICE KITE-FLYING DRAGS INDIAN IRON UP

BUT INVESTOR INTEREST CONFINED TO NEW ISSUES

Wednesday Evening.

THE *prima donna* of the Calcutta stock market, Indian Iron, has been dancing joyously this past week. But the evidence suggests that the musical inspiration for the performance has been largely imaginary. The shares have risen from Rs. 23.42 last Wednesday to a high of Rs. 24.75, before shading a little on profit-taking to Rs. 24.65 today. The sole reason for the rise is a newspaper report, published last Thursday, which claimed that the Government had decided on a "provisional" increase of Rs. 25 a ton in the retention price of steel for a two-year beginning from April 1960. The authenticity of the report is strongly doubted, but the newspaper concerned has not yet published a denial. So Lyons Range has been making merry, to the considerable bewilderment of Dalal Street.

There are three main reasons why the truth of the report is doubted. One is that neither of the two big private steel companies appears to have been officially notified about any retention price increase. The second is that the two-year period for which the increase is supposed to have been ordained is somewhat unusual. And the third reason is that *the purpose of a "provisional" increase in the retention* price just now cannot be seen; the official habit usually is to announce such increases long after (in fact, far too long after) the close of the companies' accounting years.

In addition, there are two other very good reasons why the stock market should not celebrate steel retention price increases too joyously, even if they are made. One is that such increases are usually meant to cover only the rises in production costs; their contribution to the companies' *profitability is, therefore, very little. And the* second reason is that any increase in the retention price at this stage would be meaningless, unless *it took into account the rise in unit costs resulting* from the transport and raw material shortages which are hampering production. Perhaps the Government or the newspaper concerned may in due course deny the story. The absence of a denial is keeping Lyons Range artificially buoyant.

Indian Iron apart, there has been very little activity in the stock market. This is partly because there have been quite a few holidays, and partly because there have been no fresh incentives. Attention has, in fact, been diverted largely to the new issue market, where subscriptions for the British Paints share offer are reported to be particularly heavy. In addition, conditions in the money market remain extremely tight; the abolition of the deposit impounding scheme has done almost nothing to ease the overall situation. Operators remain unimaginative in sponsoring Budget rumours; they are merely sitting back in the calm hope that direct taxation will not be increased.

Some say that the past week's rise in Indian Iron has been too sharp, and therefore cannot be sustained as next Wednesday's settlement approaches. But others feel that it is primarily a corrective reaction to the widespread short-selling *earlier, which had taken speculative issues as a* whole to such a low level that the satisfactory condition of the economy was being ignored. The bulls argue that industrial production is well maintained in spite of the recent import cuts, and foodgrain production promises to reach a new all-time record. If the coming Budget is good, or as good as can be expected under the circumstances, the market should recover; on this view, the past week's trend has been merely anticipatory in nature.

Taken individually, the various sections of the market have been colourless. Engineerings are a shade better, but that is purely in sympathy with the improvement in Indian Iron. Coals are quietly steady; *it is felt that they are unlikely to improve* much further now, unless the World Bank formally announces the aid the industry is expecting, or unless more information comes about which collieries' expansion schemes have been sanctioned.

Among miscellaneous industrials, the main feature have been Orient Paper; they are celebrating the news that the U.S. Export-Import Bank is giving the Company a loan of about Rs. 9 crores for the Amlai project. The activity in National Insulated Cable and National Pipe is due largely *to interested support.*

Jute shares, rarely active nowadays, have been depressed further by the report that the Wage Board for the Jute Industry has recommended an interim increase in wages. Doubts about the size of the current crop are growing, since the official crop estimate which should have been issued about a month ago seems to have got inextricably stuck in some bureaucratic pigeon-hole. The raw jute bulls are saying that it is being held back deliberately, because it will show that the jute crop this season has been very small. The rise in fibre prices, inspired partly by the absence of the official crop estimate, is supported by one other factor. This is the smallness of raw jute arrivals, especially in the upcountry markets. Operators are saying that the crop must be short if the arrivals are so small and if their quality is so poor. All this is adding to the despondency of the unlucky souls who happen to be holding jute shares. These latter have also remembered that the industry will be cutting its production next Monday, by reducing working hours. The only consolation is that the "protest week" *which the labour unions had* threatened (while opposing the production cut) is being commemorated by keeping the protests for *the most part spiritual.*

Tea shares see no reason to go up or down. The niceties of the auction trends—in the sense that *common teas are steady, mediums down,* and quality ones up—are no doubt fascinating for the tasters. But they are not easily translatable into stock market terminology, so investors are lying quiet. Perhaps the season will soon start when shrewd (or silly) guesses *will be made about which* companies have done well and which not. At present, the widespread assumption seems to be that *most north Indian companies produced less tea last* year than in 1959. The suspicion, however, is now slowly arising among ordinary investors that a number of companies may have managed to maintain their output fairly well.

Gilt-edged are quiet, the limited activity centring *mostly on the Conversion Loan.*

Kothari Sugars and Chemicals announces that those who applied for 100 shares will get all they asked for. Those who applied for more, up to 500 shares, will get 50 percent, subject to a minimum of 100 shares and rounded off to the nearest 50. Applicants for *over 500 shares will get 40 percent* of what they wanted, subject to a minimum of 250 shares and rounded off to the nearest 50.

Bombay Burmah Trading

The Bombay Burmah Trading Corporation Ltd states that the tea crop during the seven months ended December 1960 amounted to 3,947,456 lbs, compared with 3,569,054 lbs during the same period in 1959. Weather conditions have not been particularly favourable recently, so the increase in yield is unlikely to be maintained for the rest of the financial year. The coffee harvest has started, but *it is too early to give any accurate forecast of the* crop.

Bombay Market

FRESH SUPPORT BRINGS HIGHER PRICES

OPERATORS HOPEFUL ON BUDGET PROSPECTS

Wednesday Noon.

THERE has been a substantial improvement in the Bombay stock market during the past week. Turnover increased to a great extent and share prices rose on a broad front due to fresh buying support, combined with short-covering The technical position was believed to be much healthier, and operators were inclined to take a mildly bullish view about the Central Budget to be published in just over four weeks' time. It was *thought that there might not be any significant* increase in direct taxation.

This apart, sentiment was helped by encouraging corporate news. There was an improvement in cloth offtake and indications are that the cotton mill industry will be encouraged to produce more. Towards the close, prices slipped back on profit-taking, but the prices of steel shares edged forward on hopes of an early increase in the retention price of steel. Some time ago, a New Delhi report stated that the Government had decided on an interim increase in the retention price of steel, but there has so far been no confirmation about it. Trade interests do not appear to put much reliance on the news.

Tata Steel improved to Rs. 147 and Indian Iron were quoted at Rs. 24.48. Engineering shares showed appreciable gains on balance. Tata Locomotive improved to Rs. 289 on talk that the Company might be permitted soon to increase the output of trucks to 24,000 a year. Premier Construction were dealt in at Rs. 192 and Alcock Ashdown were taken higher to Rs. 261. Hume Pipe were transacted at Rs. 160.50. Motor shares were steadier, and Premier Automobile gained at Rs. 166.50 on a report that the Company has been granted a loan from the D.L.F. for expansion.

Prices of cotton mill shares improved on prospects of an increase in cloth output. Bombay

Other Offices : 15 Shyamacharan De Street (1st Floor), Calcutta. (Phone 34-3941), & BANKURA.

Dyeing were quoted higher at Rs. 60.40, as were Century at Rs. 471. Svadeshi gained at Rs. 237 on good corporate news and Simplex were transacted at Rs. 168. Kohinoor were taken at Rs. 276 and Khatau came to hand at Rs. 441.25. India United Ordinaries were indicated at Rs. 14.04 and Apollo turned buyers up to Rs. 1.44.

In the miscellaneous section, sugar shares were quiet on fears about the Maharashtra Land Ceiling Bill. Belapur declined to Rs. 305, as did Phalton to Rs. 154. Walchandnagar Industries were offered down to Rs. 226.25. Cement shares were steady on reports of an increased demand for the commodity. Associated Cement gained at Rs. 150.50 and Digvijay changed hands at Rs. 150. Steamship company shares were steady, and Great Eastern Shipping were taken at Rs. 15. Scindia Steam were hesitant around Rs. 14.44 on revival of rumours concerning labour troubles. Mining shares were steady, and Shivrajpur Syndicate were dealt in at Rs. 70.50. Chemical shares were in demand, and Tata Chemical improved to Rs. 17.48. Indian Dyestuff met with support up to Rs. 430 and Polychem were transacted at Rs. 217.50. After an earlier rise, National Rayon reacted to Rs. 488 on profit-taking at the close. Bombay Burmah found support up to Rs. 553 on reports of an increase in the tea crop. Ceat Tyre were quoted at Rs. 230.50 and Synthetics and Chemicals shot up to Rs. 133.50.

The publication of some good reports induced support in banking shares, and Central Bank rose to Rs. 55.50. Bank of India changed hands up to Rs. 115. Insurance shares were quiet, and New India Assurance were done at Rs. 54.50.

There was scattered interest in electric company shares, and Ahmedabad Electric were placed at Rs. 85. Tata Hydro found buyers up to Rs. 100.50 and Bombay Suburban were done at Rs. 84.

Madras Market

IMPROVEMENT FOLLOWS EARLY DULLNESS

HIGHER CLOTH OUTPUT PROSPECTS HELP SENTIMENT

Wednesday Noon.

SENTIMENT in the Madras stock market improved at the close of the week after an earlier dull spell. Operators were encouraged by firmer advices from the Calcutta and Bombay stock markets. The prospect for an increase in cloth production induced fresh support. It was generally believed that the coming Central Budget might not contain any shock for the stock markets, because direct taxation has now been stretched to the limit.

Government securities were quietly steady, but business was extremely limited in the absence of institutional support because of tighter money conditions. In the planting group, tea shares were hesitant on fears of labour troubles in Kerala. Coffee shares were traded cautiously, because the results of the meeting of the Coffee Board, to be held in the first week of February, are being awaited with interest. Rubber shares were easier due to a fall in the international price. Replacement buying helped improve prices of miscellaneous shares on good corporate news.

In the banking group, interest broadened on the publication of excellent results by some banks. Indian Overseas improved to Rs. 183, as did Indian to Rs. 169. Business passed in Andhra at Rs. 100. Interest in public utilities was subdued and routine business was transacted in South Madras at Rs. 9.80 and in Vellore at Rs. 12.90. West Coast were transacted up to Rs. 13.10 and Cochin were done at Rs. 10.20.

Sugar shares were quiet on fears of excessive supplies. Deccan came to hand at Rs. 14.80 and E.I.D. were dealt in up to Rs. 39.75. Mysore were quiet at Rs. 59.75 and Travancore were available at Rs. 10.55. United Breweries were, however, firm and improved to Rs. 85.48 xr xd.

In planting shares, Cochin Malabar came to hand at Rs. 7.30 on paying a taxable interim dividend of 9 percent and business passed in Blue Mountain at Rs 3.93. Coffee Land were transacted up to Rs. 18.30 and Consolidated Coffee were in demand up to Rs. 22.20. Ouchterlony were quoted at Rs. 4.55, as were Periakaramalai up to Rs. 3.50. Thirumbadi were supported up to Rs. 1.48 on paying a taxable dividend of 7 percent. Balmadies were dealt in up to Rs. 2.36 and Lucky Valley were in demand up to Rs. 13.75. Kil Kotagiri changed hands at Rs. 5.27 and Mysore Coffee were sold down to Rs. 5.40. Nilgiri were steady at Rs. 7.90 and Peermade were in demand up to Rs. 22.50. Swinton were offered at Rs. 3.12 and Teekoy were sold down to Rs. 6.10. United Nilgiri were supported up to Rs. 23.25, as were Woodland up to Rs. 7.65.

In textile shares, Travancore Rayon recovered to Rs. 33.10, as did Madura to Rs. 35.75. Business passed in Bangalore Woollen at Rs. 196 and in Buckingham at Rs. 197. Coimbatore Cotton were quoted at Rs. 158.50 and Kothari were sold at Rs. 11.85. Lakshmi were quoted up to Rs. 151 and Loyal were transacted at Rs. 37.25. Mettur were steady at Rs. 369 and Rajalakshmi were done up to Rs. 73. South India Viscose gained at Rs. 151 and Tirupati were transacted at Rs. 10.50.

In the miscellaneous group, Spencer were firm at Rs. 22.50 on declaring a taxable final ordinary dividend of 12 percent, making 18 percent, taxable, for the year. Travancore Chemical Manufacturing were in demand at Rs. 15.50 on paying a taxable interim dividend of 7½ percent. The Company has decided to issue 20,000 ordinary shares of Rs. 10 each to the existing shareholders in the proportion of two new shares for every 13 held, at par. Indian Steel Rolling were steady up to Rs. 10.05 on the decision to issue 250,000 ordinary rights shares. The finance will be used for increasing the output of wires and wire products. Textool reacted to Rs. 173, as did Tube Investment to Rs. 291; W. I. Plywoods were firm up to Rs. 239 on fresh interest. Aluminium Industries were done up to Rs. 22.10 and India Cement changed hands at Rs. 5.94. Ashok Leyland were steady at Rs. 8.65 and Mettur Chemical were wanted up to Rs. 12.85 on the payment of a taxable interim dividend of 6¼ percent. Business passed in Parry's Confectionery at Rs. 4.95 and F.A.C.T. were done up to Rs. 9.30. Enfield were indicated at Rs. 15.50 and Forest Industries were sold down to Rs. 2.95. Madras Cement were offered at Rs. 100 on the decision to issue new shares for public subscription, at par.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

INDUSTRIALS IMPROVE ON SELECTIVE BUYING

BIG NEW ISSUES EXPECTED

London, 25th January.

THERE was very little to encourage buyers to open new commitments in the stock market over the past week. But in spite of a number of adverse influences, including news of short-time working in industry and some rather woeful forecasts about the economic outlook by market commentators, investors persisted in their refusal to dispose of good shares. The demand for industrials showed no signs of abating and with stock in short supply, small support was sufficient to push prices higher. The demand was rather selective, and was restricted by the prospect of some large new issues. One was the £34 million Imperial Chemical Industries rights issue and there were others in the offing. Operators said that next month would see the marketing of the steel industry's prior charge issues, which would make a big call on funds. Nevertheless, industrials continued to improve. The vast Ford Motor pay-out money reached recent holders, and although a good deal had already been reinvested, the market was considered likely to benefit from this source for some time. Gilt-edged held very steady, but the cut in the West German Bank rate and a sharp fall in the U.K. Treasury bill rate failed to assist the market. These events did revive talk of a possible reduction in the U.K. Bank rate. Dollar stocks followed the trend of Wall Street, which was mainly higher, although there was no marked response to the inaugural speech by the new U.S. President. Nevertheless, London followed with keen interest the policy of the U.S. Administration. Gold shares were disappointing. Although they went ahead immediately after the U.S. ban on overseas holdings of the metal by American citizens, prices steadily drifted back later. Coppers moved within narrow limits, but tin shares made satisfactory progress. Oils moved erratically in rather quiet conditions. Although the price of rubber fell below 2 shillings a lb, the shares held up quite well as very little selling developed.

The Money Market

Credit conditions in the money market were slightly less comfortable than in the previous week, but generally supplies were just about adequate. The rate for day-to-day loans ruled at about 4¼ percent, with late balances sometimes obtained at rates down to 3¾ percent. There was a fair turnover in bills, with April and "hots" done at 4⅞ percent and 4¾ percent, the latter rate being that ruling after the weekly tender, when there was a decline of approximately 2s 6d percent in the Treasury bill rate to £4 3s 8.22d percent. The sharp fall in the Treasury bill rate, together with the reduction in the West German Bank rate, gave rise to thoughts of a further cut in the U.K. Bank rate.

Mixed Trends in Hongkong Gold

The Hongkong gold market showed an easier trend initially following overseas advices, but subsequently it became steadier. Carryover charges were 100 cents in sellers' favour. Deliveries totalled 41,000 taels and arrivals amounted to 42,000 ounces. There were no forward contracts.

Declining Trend in Vegetable Oils

Rapid price advances were in operation for linseed during the week supported by a good Continental demand. Eventually a sharp reaction took place for Canadian with United Kingdom crushers only moderately interested. Castorseed was also firm but came under some reselling pressure eventually. Groundnuts encountered a good general enquiry but most of this had disappeared by the close of the week. Linseed oil values advanced appreciably in sympathy with Continental markets but closed well below the best with sellers more in evidence. Groundnut oil maintained a very firm market with resale offers more prominent at the close. Price movements in castor oil were limited and business rather on the slack side.

NAMES AND DATES

Mr. James E. Potts, managing director of National Carbon Company (India) Ltd from 1948 to 1955, has been appointed a vice-president of Union Carbide International Company of the U.S.A.

Sir Ronald Prain, president of the Rhodesian Selection Trust Group of Companies, is arriving in Calcutta on 1st February, 1961.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

New Delhi

MORE FOREIGN EXCHANGE NEEDED FOR IMPORTING FERTILISERS

PROGRESS OF SCHEMES FOR EXPANDING DOMESTIC PRODUCTION

(FROM OUR NEW DELHI CORRESPONDENT)

ACCORDING to current estimates, 1 million tons of ammonium sulphate (equivalent to 200,000 tons of nitrogen) will have to be imported during the first year of the third plan. In addition, the internal production is expected to amount to 850,000 tons in terms of ammonium sulphate. The total availability will thus be a little more than 1.85 million tons. This figure, however, falls short of the 2 million tons (or 410,000 tons in terms of nitrogen) needed in the initial year of the new plan. Thus, an additional allocation of foreign exchange appears to be necessary, since an availability of 2 million tons (in terms of ammonium sulphate) is the basis on which the production targets for the first year have been worked out.

It is generally expected that foodgrain production in the closing year of the second plan will appreciably exceed the original target of 75 million tons. It is well known that the output of rice this year bids fair to be an all-time record. Also, the present rabi season has produced a standing wheat crop which is very satisfactory. That this production has been achieved in spite of drought and floods in several parts of the country lends support to the view that a potential is being created to make up for losses due to natural calamities.

Existing Units

The installed capacity of the existing units producing nitrogenous fertilisers is as follows in terms of fixed nitrogen :

	(In tons)
(1) Sindri fertiliser factory (after expansion just completed)	117,000
(2) Mysore Chemicals and Fertilisers	1,300
(3) Fertilisers and Chemicals, Travancore, Ltd	30,000
(4) Five by-product ammonium sulphate units at coke ovens, including those of steel plants	10,000
(5) By-product ammonium chloride unit at Varanasi soda ash factory	10,000
	168,300

Three more fertiliser projects—in Nangal, Neyveli and Rourkela—were taken up during the second plan period, with a capacity of 80,000 tons, 70,000 tons and 80,000 tons of fixed nitrogen, respectively. They are being implemented. The Nangal factory was expected to start production by the end of 1960. The Neyveli and Rourkela fertiliser factories, which are being set up as integral parts of Neyveli lignite project and the Rourkela steel plant, are expected to start production by the end of 1962. The Trombay project was sanctioned about a year ago for the production of 90,000 tons of fixed nitrogen, and negotiations are in progress concerning the foreign exchange expenditure. Preliminary work has begun in the meantime.

Overall Target

It was decided that an overall target of 1 million tons (in terms of nitrogen) could be assumed broadly for nitrogenous fertilisers under the third plan. Out of this, about 200,000 tons (in terms of nitrogen) was earmarked for development by the private sector. Against this target, the total capacity already installed or being installed is as follows :

Name of unit	Actual capacity (in tons of nitrogen)
(1) F.A.C.T.	30,000
(2) Sindri	117,000
(3) Nangal	80,000
(4) Rourkela	80,000
(5) Neyveli	70,000
(6) Parry and Co., Madras	8,250
(7) Mysore	1,300
(8) Trombay	90,000
(9) Steel plants (by-product)	26,000
(10) Ammonium chloride (by-product)	10,000
Total	512,550

The Government set up a technical committee, with the Senior Industrial Adviser (Chemicals) of the Commerce and Industry Ministry as chairman, to investigate suitable sites in the country where additional fertiliser factories could be set up during the third plan period. The committee has so far submitted reports on sites in Andhra, Assam, Rajasthan and Madhya Pradesh. Other States where major fertiliser units do not exist are now to be taken up for similar investigations. It is tentatively proposed to consider the installation of additional units broadly on the following basis :

Location	Actual capacity (in tons of nitrogen)
(1) Andhra, Kothagudam	80,000
(2) Assam, Nahorkatiya region	32,500
(3) Rajasthan, Hanumangarh	50,000 (or 80,000)
(4) Madhya Pradesh, Katni or Itarsi	50,000
(5) Uttar Pradesh	80,000
(6) Mysore	50,000
(7) West Bengal, Durgapur	58,000
Total	400,000

Suitable Sites

Visakhapatnam in Andhra is another suitable site. Possibilities exist for setting up fertiliser factories in Barauni, Bihar, and in Koyna, Maharashtra, along with a similar unit in Jammu and Kashmir. There is also a proposal for increasing the capacity of Fertilisers and Chemicals, Travancore, Ltd by 30,000 tons of nitrogen during the third plan period. The fertiliser factory in Kothagudam Andhra, is proposed to be established by the State Government. Preliminary work has started, and tenders have been called for. The factory in Nahorkatiya, Assam, is to be established in the public sector by the Central Government. The execution of the project has been entrusted to Hindustan Chemicals and Fertilisers Ltd, Nangal. The speedy implementation of these projects depends on the availability of foreign exchange resources, which are yet to be found. The West Bengal Government proposes to establish its factory in Durgapur and has been negotiating with a Japanese firm for technical and financial collaboration.

Proposals from Private Sector

Three parties have submitted applications for a licence to set up a fertiliser factory in Hanumangarh, Rajasthan. They are Mr. Dharamsey M. Khatau, Mr. S. P. Jain and Mr. B. L. Jalan. All three proposals are fundamentally based on the recommendations made in the report of the Kane committee. They visualise the production of ammonium sulphate as the main product, using lignite and gypsum. Mr. Khatau has placed his capital requirements at Rs. 26 crores, including Rs. 13.85 crores in foreign exchange. Mr. S. P. Jain has made a similar estimate. Mr. B. L. Jalan has two schemes. One is based on natural gas from Pakistan, and it places the capital requirements at $47,026,000 to $48,825,000. The other is based on lignite, and it places the capital requirements at $52,330,000 to $54,124,000. The figures in dollars have been worked out by his technical consultant, Vitro International.

It has been suggested that, instead of coal or lignite, it would be economical to use the natural gas which may be available in Jaisalmer in Rajasthan for ammonia synthesis capacity. Tapping of natural gas on a commercial basis around Jaisalmer may take some time. For the interim period, it has been suggested that it would be worth while considering the possibility of using natural gas from the Mari fields on the border of Pakistan. Stanvac is willing to negotiate with the Government of Pakistan for the supply of gas from these fields. The quantity of natural gas required has not been stated.

Madhya Pradesh Factory

Khandelwal Brothers Private Ltd of New Delhi, and Krishna Distributors of Indore, have submitted applications for a licence to set up a fertiliser factory in Madhya Pradesh. The production pattern proposed by both parties conforms to that recommended by the Kane committee, which is as follows :

(i) Total capacity in terms of nitrogen	55,000 tons
(ii) Ammonia	66,800 tons a year, of which 6,000 tons would be sold as such for industrial purposes
(iii) Urea	101,300 tons

The Kane committee has also recommended the production of methanol in the Madhya Pradesh project. This is not included in the scheme from Khandelwal Brothers. The scheme from Krishna Distributors includes methanol production. Khandelwal Brothers has placed its capital requirements at Rs. 17.5 crores, including Rs. 8.5 crores in foreign exchange. Krishna Distributors will require Rs. 2 crores more, including Rs. 7.5 crores in foreign exchange. Hydro-carbon Research Inc. of New York is the foreign collaborator of Khandelwal Brothers. It is expected that a decision on three fertiliser factories in the private sector—in Visakhapatnam, Andhra, in Hanumangarh, Rajasthan, and in Itarsi or Katni, Madhya Pradesh—will be known by the end of this week.

Expansion of Printing Capacity

The draft outline of the third five year plan had left out the following four items of expenditure : (1) the building programme of the Ministry of Works; (2) the expansion of printing capacity; (3) statistics and research; and (4) plan publicity. The revised estimates, increasing the outlay for the Centre by Rs. 817 crores, have included Rs. 53 crores for "other schemes", which cover these four items. A provision of Rs. 6 crores is being made for the expansion of printing capacity, covering the following projects :

(1) Establishment of Government of India Presses in Coimbatore, Madras State, and in Koratti, Kerala.

(2) Resiting of the Government of India Press in Calcutta, and the construction of staff quarters in Santragachi.

(3) Construction of quarters for the staff of the Government of India Forms Press in Aligarh.

(4) Setting up of a new Government of India Press in New Delhi (Najafgarh industrial area).

(5) Addition of a photo-litho and photography wing to the Government of India Press in Calcutta, after it has been resited in Santragachi.

Building Programme of Works Ministry

A proposal is being discussed here to allocate Rs. 35 crores for the building programme of the Ministry of Works, including the spill-over from the second plan. In the first two plans, the construction of residential and non-residential accommodation was confined to Delhi, Bombay and Calcutta. In Delhi, the Ministry sanctioned the construction of 27,639 houses, 17,906 of which have been completed, 5,527 are in progress and 4,206 have not yet been taken in hand. The offices built are the Ayakar Bhavan, Krishi Bhavan, Udyog Bhavan, the Supreme Court building, Yojna Bhavan, and the building on the site of "N" and "K" Blocks, which are now occupied by the Ministry of Railways and the Air Force Headquarters, respectively. In Calcutta, sanction was accorded for the construction of 748 residences, of which 420 have been completed and 328 have yet to be taken in hand. A hostel building has been built. An office building near Chowringhee Square is under construction. In Bombay, sanction was accorded for the construction of 534 residences, of which 162 have been completed, 236 are in progress and 136 have yet to be taken in hand. An office building has been built on Queen's Road.

Scope to be Extended

During the third plan, the scope of the programme is to be extended, in addition, to Madras, Bangalore, Hyderabad and Nagpur. In Delhi, it is tentatively proposed to sanction the construction of 11,610 houses. Adding to this figure the number of houses in progress (most of which are likely to be available in the third plan) and the number of houses which, although sanctioned during the second plan, will actually be built in the third, the Ministry of Works will be putting up during the third plan period about 21,343 houses of various types in Delhi. To provide about 1.2 million square feet of office accommodation, it is proposed to construct buildings : (i) on the site of 1, Rajendra Prasad Road; (ii) 2, Maulana Azad Road; (iii) in a 1,200-acre area; (iv) on the site of "E" and "F" Blocks (wartime hutments); and (v) at the Indraprastha Estate. The other proposals are: (a) to develop the Timarpur area in the vicinity of Birla Temple, and the Minto Road area; (b) to

SOUTHERN BANK LTD.

build a shops-*cum*-auditorium-office building on Janpath; (c) to add two storeys, providing office and residential accommodation, to some of the blocks of the New Central Market; (d) to construct hostels for single men and women employees on Lodi Road and Curzon Road, respectively; (e) to build a hostel-*cum*-club building for M.P.s on Old Mill Road; and (f) to set up a Janata Hotel in the Minto Road area.

In Bombay, the 236 houses in progress and 136 houses, the construction of which has not been taken in hand, will be available during the third plan period. It is proposed to take up the construction of another 954 houses of various types. This will bring the total number of residences which are likely to become available to 1,326. An office building to provide about 100,000 square feet of accommodation will be put up in Marine Lines. Another building will be in Wadala.

In Calcutta, the 328 houses which, although sanctioned for construction, have not yet been built, will be completed during the third plan. In addition, it is proposed to build 452 houses. Thus, the additional number of residences which may become available during this period will be 780. The houses are proposed to be built in Belvedere, Narkeldanga and Alipore. To meet the shortage of about 200 square feet of office accommodation, a building is to be constructed at a site in Nizam's Kothi.

In Madras, there will be an office building to provide 100,000 square feet of office accommodation on Haddows Road. Proposals for the construction of residential accommodation are being formulated by the C.P.W.D.

Company Law Advisory Committee

The Government of India has reconstituted the technical advisory committee in the Department of Company Law Administration. The committee was set up towards the end of 1958 under the chairmanship of Mr. D. L. Mazumdar, Secretary, Department of Company Law Administration. It advises the Government on all major policy issues relating to the legal and accounting aspects of the administration of the Companies Act. The scope of the committee's work is similar to that of the technical advisory committee associated with the Companies and Insurance Department of the Board of Trade in the United Kingdom. The reconstituted committee will function for a two-year period. Besides Mr. D. L. Mazumdar, who will continue to be chairman, the members will be Messrs N. R. Mody, S. P. Chopra, G. Basu, J. D. K. Brown, C. C. Shah, C. C. Choksi, J. M. Lall and P. L. Tandon.

Simultaneously, the Government has also reconstituted the research programme committee attached to the Company Law Administration Department. The committee's function is to advise the Department on the most fruitful lines along which statistics and other data on companies, now available, can be processed and analysed to serve as a basis for formulation of policy. During the last two years, this committee has sponsored several research publications on different aspects of company management and finance. Apart from the Secretary of the Department of Company Law Administration, who will act as chairman, the members of this committee will be some leading chartered accountants, economists and the Director of Statistical Research, Reserve Bank of India.

Coal for Thermal Power Stations

The Government of India has appointed a committee to examine in detail the use of raw coal and middlings from the existing washeries and those proposed under the third plan. The committee will assess the adequacy of production against the requirements of raw coal and middlings for the power generation programme during the third plan period. It will check whether such middlings will be consumed in thermal power stations at or near the coal washeries. The committee will also draw up a time-schedule for the establishment of new coal washeries. It is estimated that about 20 million tons of inferior and low-grade coal will be required for power production by 1965. During the third plan period, 17 thermal power station schemes will be continued from the second plan. In addition, 26 new schemes are proposed for inclusion. It is essential that the thermal power stations functioning at present, and those to be installed, should be assured of a regular supply of sub-grade and low-grade coals.

Rural Manpower Programmes

One of the major planks in the Congress Party's election platform, it will be recalled, is the pilot project for works programmes to use rural manpower during two years ended March 1962. About 32 pilot projects have been approved. They cover almost all States and the Union territories of Himachal Pradesh and Tripura. The scheme of pilot projects provides for certain supplementary works programmes to be undertaken in addition to the agricultural, irrigation, road development and other programmes included under the State plans and the community development programmes. As a rough measure, a provision of Rs. 2 lakhs has been suggested for each project for the period ended March 1962. The works programmes which have been drawn up include irrigation, afforestation, soil conservation and other schemes. The idea is that wages should be paid at local village rates according to the appropriate seasons, and that the planning of the various works will be undertaken in a co-ordinated manner.

The object of the series of pilot projects now initiated is to gain experience in organising works programmes which will make a marked impact on the problem of unemployment and under-employment, especially during the slack agricultural seasons. On the basis of the first year's experience, it is hoped to extend the programme to many other areas in which there is widespread under-employment. It is, therefore, of the utmost importance that the present programme should be considered not merely as providing additional financial resources, but as embodying a new approach to the working of the entire development programme in districts and blocks. The essence of the pilot project consists, not in the provision of a supplementary works programme, which will by itself provide only a limited amount of additional employment, but in the decision to use fully the manpower resources of the selected areas, and to reorientate the working of the entire development programme so as to achieve this central aim. This implies that for the employment benefits of the development programmes of an area to be maximised, (a) labour co-operatives, voluntary organisations and local leadership should be enabled to play a vital rôle; and (b) not only the supplementary works programmes but all the works to be undertaken in the area should be organised on similar lines.

Fundamentally, through the intensive use of the available manpower and determination to find work for every willing hand, the pilot projects are designed to increase the potential for development, especially in agriculture, on the basis of a widespread and well-organised community effort in selected areas and carefully worked out plans on the part of various Government agencies. The works proposed include minor irrigation, drainage, communications, drinking water wells, sanitary drains, contour-bunding, restoration of minor irrigation sources, approach roads, sinking of wells, earthen embankments; manufacture of building materials, development of *panchayat* lands, afforestation and soil conservation.

Better Farm Implements

The draft outline of the third plan placed considerable stress on programmes relating to the use of better ploughs and improved agricultural implements. Different aspects of this programme have been studied and the proposals were examined by a large number of technical and other experts at a conference in Kharagpur in October 1960. The programme includes the following principal items:

(1) Establishment in each State of a centre for testing, designing, technical guidance and manufacture of agricultural implements.

(2) Adequate provision of iron and steel.

(3) Selection of the principal implements to be popularised.

(4) Training facilities for village level workers, mechanics, artisans, etcetera.

(5) Credit for the supply of implements.

(6) Extension arrangements at the district and block levels.

(7) Strengthening of agricultural engineering personnel in the States.

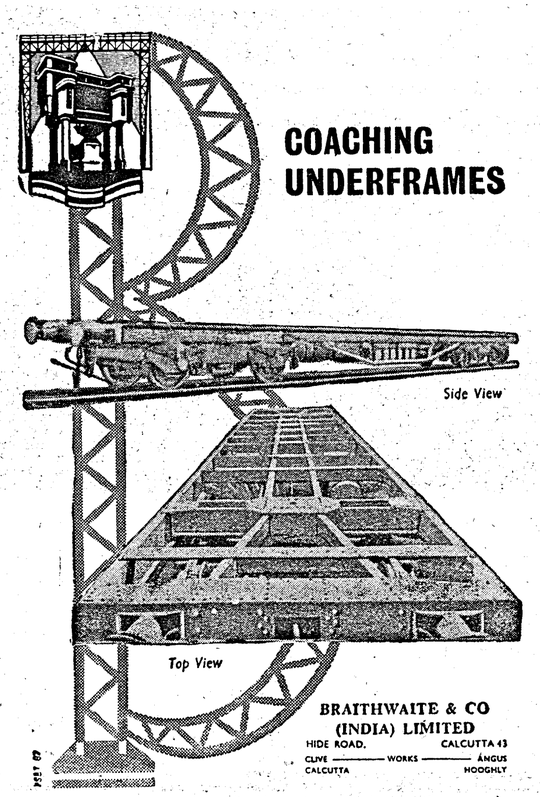
For item (2) above, it should be pointed out that during the second plan, there has existed a large gap between the allotment of iron and steel for agricultural implements and the actual supply. The quantity allotted has increased from about 92,000 tons in 1957-58 to 115,000 tons in 1958-59 and 320,000 tons in 1959-60. However, judging from the available statistics, the actual supplies have not improved and amounted during these years to 66,511 tons, 55,429 tons and 46,036 tons, respectively. It is suggested that, in the course of the next three months, the schemes to be implemented by the States should be worked out fully, so that they can launch without delay an effective programme on a large scale for popularising agricultural implements.

Italian Economic Mission

A 22-member economic mission sponsored by the Italian Government will arrive in New Delhi on 1st February to explore the possibilities of expanding trade between India and Italy. During its 24-day stay in the country, it will hold talks with the Government of India and representatives of trade and industry. It will make arrangements for exporting Italian machines and machine tools to India and importing industrial raw materials from this country on a larger scale.

Oil India Contract for U.K. Firm

Oil India Private Ltd has awarded Whessoe Ltd of Darlington, England, the contract for the supply and erection in upper Assam of the plant required to condition crude oil before it is pumped through the 720-mile-long pipeline from the Nahorkatiya oilfields to the new refineries in Nunmati and Barauni. The contract, which was open to international tender, is valued at about £900,000.



London

T.U.C. CRITICISES OFFICIAL ECONOMIC POLICY

BRITAIN DETERMINED TO INCREASE EXPORTS, SAYS U.K. CHANCELLOR

(FROM OUR LONDON CORRESPONDENT)

HOPES of tax reductions in the next U.K. Budget were hardly encouraged by the remarks last week of the two Ministers most closely concerned with economic affairs—the Chancellor of the Exchequer and the President of the Board of Trade. Mr. Selwyn Lloyd and Mr. Maudling had a frank two-hour discussion with the economic committee of the General Council of the Trades Union Congress. Labour leaders contended that the unions had done as much as they could *in labour relations and productivity. It is not* wages which are pricing British exports out of overseas markets, they said. It was claimed that employers are chiefly to blame for the unsatisfactory performance in the export markets, so the Government should prod firms into being more cost-conscious. Government policy was also criticised, particularly in relation to the motor-car recession. It was suggested that in imposing and removing restrictions, the U.K. Government had been guilty of bad timing and bad strategy. Apparently, the Chancellor of the Exchequer was non-committal in his reply, going no further than *to remark that he was "giving serious consider*ation to the position," and those who read into this a hint that the U.K. Chancellor was thinking of easing the credit squeeze were obviously influenced by wishful thinking.

Later, Mr. Selwyn Lloyd addressed the annual banquet of the Overseas Bankers Club in London and said that the country should not allow itself to be panicked into short-sighted measures to restrict trade and payments. During 1960, industrial production of the free world ceased to expand and until a recovery takes place, Britain will be faced *with a relatively slacker period in world trade* during which the payments situation will need careful handling. "We must, therefore, work together to get through this period without imposing the kind of corrective short-term action which would be harmful to all of us in the long run." Britain is determined to expand her exports and maintain a healthy balance of payments position. She will not hesitate to be ready to make sacrifices at home to keep inflation under control. Suggesting how other countries could help, Mr. Lloyd said: "In some instances, expansion at home may be called for; in others an increase in capital exports, allowing the surpluses to be put to more productive use. There are other surplus countries in a position to take a larger share in appeasing the growing world hunger for development funds."

Meantime, Mr. Maudling went up to Liverpool, where he spoke to the Merseyside and district branch of the National Union of Manufacturers. It is undeniable, he said, that high rates of taxation, particularly on those responsible for the direction and management of business, discourage additional effort and risk-taking. But he does not think it will be right to make special tax concessions on profits made from the export trade. Apart from the difficulties of devising a suitable scheme, it will mean breaking international agreements. It is for industry as much as for the Government to improve both planning and production. The most unstable element in Britain's economic growth, he pointed out, is the rate of stock accumulation. Much can be gained if better planning by industry and the Government help to even out the peaks and troughs.

December Trade Figures

Britain's trade gap—measured by the excess of imports over exports—slightly widened last month than in November. It amounted to £67.7 million, compared with £65.5 million. In December, exports totalled £302.7 million, compared with £342.3 million in November. The import bill fell from £419.6 million to £382.5 million, which is encouraging. Taking last year as a whole, with imports costing £4,559 million and exports fetching only £3,678 million, the trade gap was £881 million, against £537 million in 1959.

The figures for December are better than was expected. Adjusted for seasonal factors, exports are a little higher than in any month since February except the "freak" month of November, when goods held up by the strike at the ports were shipped abroad. For the fourth quarter, exports were 2-percent higher than in the third quarter—a great deal better than the talk of "declining" U.K. exports may have suggested. Imports in December were still at the high level of the past six months. In the fourth quarter, they were 2½-percent higher than in the third. For 1960 as a whole, exports were 6-percent greater than in 1959, but imports were up by 14 percent. However, there is a general expectation that imports will soon start to fall. They were swollen by an unexpectedly large build-up of stocks which seems likely to be approaching its end. A spokesman of the U.K. Board of Trade recently confirmed that there was no distortion from strike factors in the December figures. He added the usual warning that there is no room for complacency. The seasonally adjusted figures show a trade gap for December of £67.7 million, which is a good deal smaller than the monthly average since mid-year.

Factory Building Plans

Industrial building schemes approved by the U.K. Board of Trade during 1960 were 40-percent greater than the year before in numbers, and nearly 70-percent greater in the total area of building planned. With the estimates for the fourth quarter now issued, the total area of factory *building for which industrial development* certificates were issued during 1960 turns out to be 98.2 million square feet—much the largest of any year since the war. The corresponding figure for 1959 was 58.5 million square feet.

The greatest increase in applications occurred in the first half of 1960 and particularly in the first quarter. This suggests that the large extension plans of the motor-car industry, which were then being negotiated with the U.K. Government, *form a considerable part of the 1960 total.* But even in the third quarter, approvals were still 60-percent higher in area than in the third quarter of 1959 and the 17.8 million square feet approved in the fourth quarter of 1960 were still 18½-percent up on the final quarter of the previous year. It may be that the peak has already been passed, but in any case the exceptionally large schemes of industrial building approved last year should provide work for the building industry at full stretch for a considerable time to come.

Export Credit Record

During 1960, the Export Credits Guarantee Department insured a record total of £695 million of export business. This represents an 8.8-percent increase over the previous year's £638 million. New business in large capital goods insured during the year amounted to £103 million, against £87 million in 1959. Large capital contracts were insured during the last three months of 1960 for Russia, *Argentine, Japan and the Sudan.* The Department had 5,232 short-term policies outstanding at 31st December, with a face value of £718 million. This *compares with 4,852 policies with a value of £644* million at the end of 1959.

The favourable balance of commercial business undertaken by the Department was increased in 1959-60 from £15,468,881 to £20,478,232. This sum is the Department's reserve against the risks it has underwritten, amounting to £550 million at 31st March last year. Claims paid by the Department in 1959-60 fell to £5,084,809 from £6,973,963 the year before. Of the former figure, it is estimated that about two-thirds will be recovered. The amount recovered last year was £3,690,016, compared with £3,469,283 in 1958-59.

The Department, in addition to guarantees of credit extended in normal commercial business, gave guarantees for £47 million "in the national interest" (against £55 million). E.C.G.D. was also the channel for economic assistance to foreign countries amounting to £57,223,787, against £30,735,750.

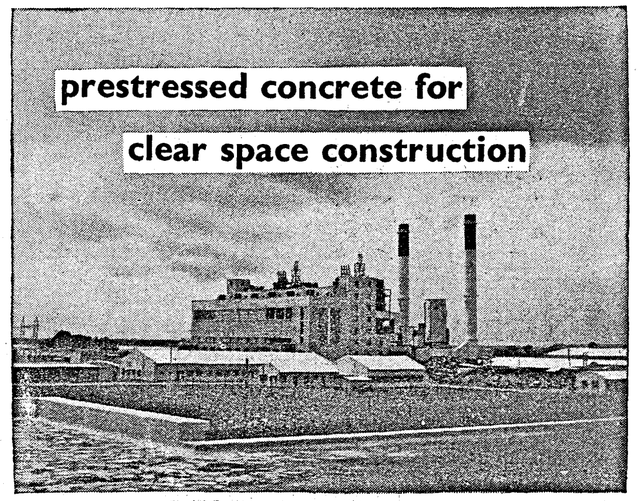
December Retail Sales

After the signs of flagging apparent in the November figures, provisional estimates issued by the U.K. Board of Trade of retail sales in December indicate a sharp recovery. Seasonally adjusted, the index of the value of total sales last month is put at 114 (1957 equals 100), which compared with 109 in November. Taking November and December together, the index works out to 112—the same as in October.

Estimates for individual sectors are not yet available, but the indications are that in most branches of retail trade the increases over a year earlier were larger in December than in November. Trade by food shops seems to have been especially buoyant, and in the clothing and footwear groups sales appear to have recovered a little from the small increase on a year earlier shown for November. There are also some signs that durable goods shops may not have shown quite so large a decrease in December as in preceding months.

Tramp Shipping Freights

Improvement in tramp shipping freights in December is put into perspective by the average figures for the whole of 1960, now published by the U.K. Chamber of Shipping. In December, the voyage index number rose to 76.7 (1952 equals 100) from the 74.7 reported for November. This brings the average for the year to 74.2 against 71.9 for 1959. Although this is a further small gain on the low average index level of 67.1 for 1958, the improvement is bound to be considered marginal.



Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base : 1939) has now been brought up to December 1960. As compared with November, the December index for preference shares showed a rise of 0.1 point, while that for Government securities remained unchanged at 97.7 points.

There were decreases in banks 4.5 points, cottons 9.1 points, jutes 1.6 points, minings and oils 2.4 points, cements 0.4 points, engineerings 5.4 points, teas 2.1 points, papers 55.7 points, sugars 5.4 points and miscellaneous 1.6 points. The index for coals remained unchanged at 231.6 points.

Correlating all the factors, the *Capital* variable yield securities index declined by 6.4 points during December 1960.

	Index of Govt. Securities	Index of Preference shares	Variable-Yield Securities. Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement Lime etc	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others	Combined Index.

Jute

JUTE AND GUNNY MARKETS FIRM BUT HOLIDAYS RESTRICT BUSINESS

FIBRE ARRIVALS REMAIN POOR

BULLISHNESS has again been in evidence in Calcutta during the past week, and attempts have been made to raise raw jute prices. Nowadays, sellers become reserved on the slightest provocation. They are quick to exploit any circumstance which gives them the opportunity to raise rates, such as the small arrivals which have been reported in the upcountry markets recently. The trade, however, is becoming accustomed to these efforts to stampede buyers into purchasing on a large scale. With the added deterrent of a lack of quota in many cases, the impulse to buy has been resisted. In spite of all the talk about the lack of jute, buyers find no shortage of offers when they show any interest, particularly after the issue of weekly quotas. High-grade jute, however, is at a premium, and the small lots on offer emphasise the present influx of inferior quality.

Keen Competition

Competition is so keen in world markets these days that expenses have to be cut down to the minimum. Jute cloth, which has been termed "the world's wrapping paper," is sometimes a substantial item of expense, so buyers are not anxious to pay more for it. The practice now is to use a lighter weight and narrower cloth. Time was when some mills and factories specialised in producing the better qualities of yarns and cloth only, and they had no difficulty in selling their output. In the past few years, however, firms engaged in this class of trade have gradually found it necessary to produce the commoner qualities in order to compete with their rivals. They are less anxious to secure the finer qualities of raw jute, so the scarcity of good fibre, which has been stressed much this season, is not all that keenly felt.

Many of the older members of the trade recount stories about the huge quantities of cloth ordered by users in the old days, when manufacturers would have orders on their books for delivery anything up to 12 months ahead. An order for 10 million yards was a common feature. Nowadays, an order for 1 million yards causes some excitement, and is usually so keenly competed for that there is little or no profit for the man who takes it. With the high price of jute goods, buyers have got into the habit of purchasing only small lots, and manufacturers are seldom sold for more than a few months ahead. In present conditions, this suits the manufacturers, as with the uncertainties about the supply of raw material, and the difficulty in doing simultaneous business in raw jute and jute goods at a profit, it is better not to go long in goods.

New Mills

The frequency with which reports are circulated about proposals for setting up new mills in Pakistan makes one wonder what the views of the promoters are about the world demand for jute goods. When one considers the potential increase in production that is possible by using the idle machinery in Calcutta and abroad, not to mention the possibility of increasing working hours, the only conclusion is that those who are bold enough to build new mills are counting on Calcutta continuing to look with tolerant eyes on their enterprise. It must be patent to all who are familiar with the facts that the Indian industry will not keep its machinery idle any longer than is necessary, considering the demand for jute goods and the availability of raw jute.

A study of the available figures is interesting in this context. It is not possible to get the stock and consumption statistics for all the countries which consume jute goods. But as the United States is by far the biggest consumer at least of hessian, the statistics for that country may be taken as a fair indication. Comparing the position in 1959 with that in 1960, one gets the following results :

Hessian Consumption

January to December, 1959	897 million yards
January to December, 1960	857 million yards
Decrease	40 million yards

Hessian Production

January to December, 1959	458,000 tons
January to December, 1960	422,200 tons
Decrease	35,800 tons

To offset this, however, sacking production in 1960 increased by 37,000 tons, and along with an increase of 14,400 tons in the production of other goods, the overall output in 1960 showed a rise of 15,600 tons. The figures for other consuming countries may not, of course, show similar results when they are available, but those above give a fair indication of the trend in 1960. The question is whether the rise in total production, against an apparent decrease in the consumption of jute goods, justifies the erection of new mills when such a great potential for increasing production is already available.

THE JUTE MARKETS

Manufactured Goods: Due to local holidays and festivals, the past week had only four working days. The market opened on a quiet note due to the lack of interest, and also in sympathy with the lower advices from the raw jute section. Shortly after opening, however, rates became firmer on the news that U.S. burlap prices had risen. Until recently, U.S. consumers had been curtailing buying as they resisted the high prices prevailing. But stocks having become depleted, fresh supplies were now being taken. This, coupled with reports of purchases of B Twills by the Central Government for February-March delivery, lifted prices. From an opening of Rs. 191 for ready shipment, B Twills soon moved up to Rs. 192. But there was little change in 40in. 10oz., which remained at Rs. 62, except in the forward section, which moved up slightly to Rs. 61.50. There was very little activity, however, and with the market officially closed on Saturday and Monday, values were unchanged. Except for a slightly easier tendency in hessians, conditions showed no change at the opening on Tuesday in the absence of fresh enquiries. Prices soon improved, however, as B Twills rose to Rs. 192.50 and 11-porter hessians to Rs. 62.50, mainly on covering business by local operators. Overseas enquiries increased and sales to Cuba were reported, but mills showed very little interest in selling. The usual rapid fluctuations followed, and steady conditions prevailed towards the close on reports of heavy goods business with overseas buyers.

Opening quotations on Wednesday morning were as follows :

	January	February	March	Apl.-June
40in. 7loz.	48.75	48.75	48.75	48.25
40in. 8oz.	52.00	52.00	52.00	51.50
40in. 10oz.	64.85	65.00	65.00	64.50
B Twills	197.00	198.00	198.00	194.00
Heavy Cees (Plain)	198.50	200.00	199.00	191.00
A Twills	235.00	235.00	235.00	232.00
Liverpools	218.00	220.00	220.00	217.00
Cornsacks	201.00	202.00	202.00	193.00

Raw Jute: In the absence of any interest from mills, who were still without a quota, prices in the Calcutta jute market tended to ease at the opening last Thursday. Assam rates dropped by Re. 1 to Rs. 57.50 for January-February. With the drop in prices, more offers were put on the market, but they failed to evoke any interest. Imports upcountry continued to be small, and this was also the case in the local markets. There was no change in quoted rates up to the holidays, and no business was reported. All rates were increased by 50nP on Tuesday morning, but most sellers had higher ideas. Quotas were issued to mills during the day, and in spite of the fact that none had been issued for a fortnight, it was reported that the quantity was only small—about 400,000 maunds. Small business was reported and prices hardened, but this was due mainly to a further fall in imports in the upcountry agencies. Most sellers still held bullish ideas, and at the close, showed strong resistance to any attempt to discount prices. Arrivals in Cossipore last week amounted to 600 wagons, or 170 less than the previous week.

The business reported during the week was negligible.

Opening quotations on Wednesday morning were as follows :

	Landed at Mills (Basis Bottoms) Rs. a 10 kilos.	Rs. a md.	Shipment.
Assam	158.00	59.00	Jan.-Feb.
Northern	156.75	58.50	,,
Purnea Desal	154.00	57.50	,,
Daissee Selected	162.00	60.50	,,
Assam Tossa	160.75	60.00	,,
Mesta :			
Assam-Northern	150.00	56.00	,,
Desal-Daissee	150.00	53.00	,,
Jungli	146.00	54.50	,,
Pakistani Cuttings N. C.	270 a bale		

THE FOREIGN JUTE MARKETS

FIBRE PRICES IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices in Dundee have been irregular, so the outlook for the market appears to be uncertain. On some days, dealers are happy to see an easier tendency in prices, but on other days, the firmness of the market destroys the hopes which have been raised for the reduction wanted by all—producers of jute goods as well as consumers. Fibre offers are not freely made from Pakistan, and this supports the view that there

Industrial Purchasing in West Germany
By Bernhard Steinberg,
Head of Purchase Dept.
Krupps.

"With the progress of industrial development Indian manufacturers will be spending more money on the purchase of various goods and services. So there is a growing keenness in industrial houses to maintain efficient purchasing organisations. The "Eastern Purchasing Journal" which is a pioneering endeavour on this specialised subject, should be popular among Government and commercial purchase departments"—CAPITAL.

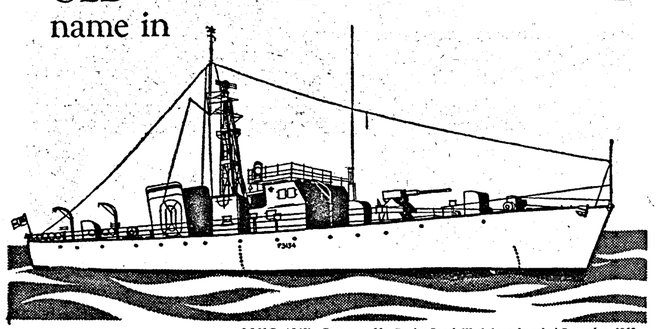
NEW honour for an OLD name in **Shipbuilding**



** I.N.S. AJAY—Constructed by Garden Reach Workshops, launched September, 1960*

Well-known for shipbuilding and complete ship repairs for several decades, Garden Reach Workshops won new laurels when INS Ajay, a Seaward Defence Boat, was launched in September, 1960. This boat is a vessel of high manouverability and has a displacement of 150 tons; it is powered by twin turbo-charged diesel engines and has a speed of 17 knots. Despite its diminutive size the Seaward Defence Boat packs a powerful punch in its surface armament and anti-submarine equipment.

Thus, to Garden Reach Workshops, went the honour of building the first defence vessel in India since Independence. Complete facilities exist at Garden Reach Workshops for the construction of a variety of vessels such as Naval Craft, Harbour Tugs, Launches, Water Boats, Barges, Dredgers and Pontoons.

The Workshops are fully equipped to handle major and minor repairs to vessels in the River Hooghly, in the stream and wet docks, dry docks and lay-up berths allotted by Calcutta Port authorities.

is likely to be a scarcity before the next crop is available. With the exception of an occasional drop of £1 or £2, quotations vary little from day to day. Mill Firsts are quoted at £200 a ton after being up to £202 a ton, Mill Lightnings remain unaltered at £194, Mill Hearts at £190 and Grade Hearts from £184, while Grade Tossa-2/3 is offered at the reduced rate of £195, fours at £191. Continental Tossa-2½ from £189 and fours £195, all January-February shipment, c.i.f. U.K.-Continent. Meanwhile, spinners in Dundee are not buying much, since they cannot afford to pay high prices for fibre.

Spinners, it is reported, are still selling their jute yarns at prices well below the batch rates for their jute. In the first half of January, they bought 41,900 bales, which brings their total purchases from 1st July last to 531,873 bales, compared with 547,569 bales for the same six and a half months of the last season. The authorities responsible for fixing the rates for jute yarns in the U.K. are basing them on the prices of jute held by spinners and are apparently ignoring the shipment rates quoted from day to day. The latter will need to fall by about £25 a ton before any change is made on the yarn and cloth prices ruling in the U.K.

Calcutta goods have continued to fluctuate, touching the highest level for many months before falling back to 93s 6d for 40in. 10oz. and 71s for 7½oz., January and February, 93s 3d and 70s 6d March and 92s 3d and 69s 3d April-June, with B Twills at 289s 9d, 289s 6d, 289s and 284s for the respective months of shipment, all f.o.b., Calcutta.

Business in jute yarns and cloth last week was quiet, but steady, at firm and unchanged rates.

THE PAKISTANI JUTE MARKETS

FIBRE QUIETLY STEADY

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE raw jute market has remained fairly steady but practically inactive during the past week. More apparent than for some time is the feature which typifies this season and which some balers refer to as a market without any feel for it. This sentiment probably refers to the fact that one gauges the undertone of the market by gossip and reports, sometimes true and sometimes false. It is only natural that the most effective gauge of the market, as far as Pakistan is concerned, should be the activities of balers. During this season, the pucca bale business has been negligible, and it is this which has contributed largely to the absence of the usual pattern in the market.

E.P.C. registrations during the first fortnight of December have been surprisingly low at 153,609 bales. Once again, the U.K. has been the biggest buyer with 42,000 bales while Germany and Belgium bought over 20,000 bales and France 13,000 bales. India continues with a small purchase of 5,000 bales. She is apparently nibbling at the cuttings market in order not to excite it. Total registrations to date amount to 2,444,113 bales, against 3,283,769 bales in the same period of 1959-60. Exports up to the end of November 1960 totalled 1,540,477 bales, against 1,788,001 bales during the previous year. More recent figures are not available. Since shipments are about 250,000 bales lower whereas registrations are about 850,000 bales down, it is safe to say that contracts have been shipped much quicker during this season than the last.

It also means, however, that most of the stock lying with balers or in transit or at the agencies is unsold. It is difficult to estimate the actual figures, but the general consensus of opinion seems to be that stocks are not higher than 400,000 bales. The stock position is more or less static because, on average, sales and arrivals from upcountry centres are about the same, with the latter showing a tendency to decline. Although E.P.C. prices rose by £3 during the past week, there was little change in the overseas market. The upcountry markets have, however, been firm due to small arrivals and strong resistance from sellers. Most balers agree that the cause of small arrivals is the good financial position of growers, who are releasing their jute slowly. There is, however, a section which insists that the real reason is that the market is now scraping the bottom of the barrel and that there is very little jute to sell. If this opinion is correct, the crop will be even smaller than the conservative estimate of 4.8 million bales. Meanwhile, there is a high percentage of moisture, with no indication that the condition of the jute will improve.

With the withdrawal of most overseas buyers and continued buying in agencies by kutcha balers, who normally sell only to mills, it has become obvious that the Pakistani mills have quietly made purchases from small balers, who sold short encouraged by the drop in prices before Christmas. Although the raw jute market remained steady but inactive last week, cutting prices rose as high as Rs. 250 a bale, which is considerably higher than the overseas parity. In sympathy with Calcutta gunny prices, they have eased somewhat but there are very few sellers. Pakistan expects a large consumption of cuttings next season both in the domestic market as well as in the U.K. This is because of the use of a new machine in the jute mills, which allows the mills to put a large percentage of cuttings in their batch. It is reported that the machine allows an increase of 20 percent in cuttings consumption.

Engineering and Transport

TECHNOLOGICAL REVOLUTION IN AIRCRAFT INDUSTRY

LOCKHEED CHAIRMAN REVIEWS PROGRESS

DISCUSSING the technological revolution in the aircraft industry, Mr. Robert E. Gross, chairman of Lockheed, said that more than half of the Company's $1,300-million business in 1960 came from the programmes developed in the past five years. "The 1956-60 period produced startling effects upon our industry," the chairman said. "I feel sure the coming half-decade will not only continue but will accelerate the trend towards change for all aerospace companies." Mr. Gross cited the following highlights of Lockheed's rapid transition since 1955:

1. More than 22 percent of the Company's 1960 sales come from Agena satellite vehicles—first ordered in 1956—and from space research. In 1955, it had no such programme and few existed in the United States.

2. Thirty percent of 1960 sales came from Polaris ballistic missiles, conceived also in 1956. Missile sales in 1955, largely low-altitude air-breathing test vehicles, were less than 4 percent of the total business.

3. The dollar volume for military and civil aircraft exceeded $500 million in 1960. The proportion of aircraft to total sales declined from 94 percent in 1955 to 43 percent in 1960. Yet the reduction in the dollar volume of aircraft sales was only 12 percent—from $637 million to $560 million—since total sales of the Company almost doubled during the five-year period.

4. The proportion of research and development personnel needed to build the present fleet of missiles and aircraft has vastly increased in comparison with that required for less sophisticated items five years ago. In the five years, employment in Lockheed's scientific laboratories and engineering departments has more than doubled—from 8,250 at the end of 1955 to 18,000 in 1960. At the same time, workers in manufacturing and related activities have declined by 24 percent—from 42,600 to 32,400. Total employment, including administrative employees, has risen from 57,500 to 59,500.

New Fields

Lockheed, Mr. Gross said, has been diversifying to add new fields to its traditional aircraft and missile-space programmes. These new areas include relatively small but important penetrations of electronics, undersea research, shipbuilding, heavy construction, architectural products and others. "These are small activities now, but one should not discount their possibilities. Surely I am not the one to say that in another five to ten years Lockheed will not be just as important in industrial products or industrial automation as we are today in space." Referring to the continued emphasis upon products developed in the past half-decade, Mr. Gross said that the first launchings of the U.S. Navy's extended range A-2 and A-3 models of the Polaris will take place in 1961. Supporting engineering, scientific and production effort will go forward to achieve the target dates.

In 1961, Agena satellites bearing the Lockheed trademark will outnumber all satellites placed in orbit by various U.S. agencies and Russia combined in 1960. The launching of Agenas in combination with Atlas or Thor boosters will be undertaken by the U.S. Air Force and the National Aeronautics and Space Administration. New uses for the basic Agena were expected in the U.S. Army's project "Advent" involving communications relay via the satellite and in a new Air Force space project being directed by R.C.A. for inspection of unidentified satellites.

Anti-submarine Aircraft

The first of a new type anti-submarine aircraft of the U.S. Navy, the Lockheed *P3V-1*, will fly early this year. Its production rate will be accelerated throughout 1961. Mr. Gross said that the new aircraft is expected to be a mainstay in the United States' defence against marauding submarines because it covered a larger area than any predecessor and featured the ability to fly high and fast or low and slow. New models of the *F-104 Starfighter*, including the G version fitted with the latest electronic equipment for all-weather multimission capability and the J version for defensive operations, will move into full-scale licensed production during the year in Germany, Holland, Belgium, Japan and Canada. Negotiations are proceeding for production of *Super Starfighters* in Italy. Production runs by America and its allies, Mr. Gross said, could swell the *F-104s* total to 2,000 aircraft or more. Production will move rapidly during the year on a brand-new extended range version of the *Hercules* transport. The first of the long-range *Hercules* will be virtually completed in 1961, with early delivery.

BIG RISE IN EMPLOYMENT IN U.K. AIRCRAFT INDUSTRY

During October, the number of people employed in aircraft manufacturing and repairing in the United Kingdom rose by 2,100—the largest monthly increase for more than four years—to 285,600. This compares with 283,500 in September and 281,700 in August. The figure for October 1959 was 278,600. A peak postwar employment level of 265,000 was reached in January 1957, a total which was computed on a different basis to the 1960 figures. From then until August 1959, the industry's labour force decreased to 235,200 (or 279,400 by the new system of reckoning). Apart from fluctuations of a few hundred, the monthly figure remained constant until July 1960, since when there has been an increase of 5,400. The October 1960 figure of 285,600 is equivalent roughly to 241,500 by the old system of computing. This means that since January 1957 there has been a reduction of some 23,500, or 9 percent. According to the president of the Aerospace Industries Association, there was a drop of 25 percent in the level of employment in the American aircraft industry between the peak month in 1957 and March 1960.

In May 1958, the then U.K. Minister of Supply, Mr. Aubrey Jones, said that he foresaw a contraction in the size of the British aircraft industry over the next five years amounting to some 100,000 people "from the present level of about 250,000". In fact, between May 1958 and October 1960, there was a drop of about 10,500. The president of the Society of British Aircraft Constructors, in an interview published in *Flight* recently, said that he "would not expect any substantial change" in the level of employment "over, say, the next two years. Now that the industry has reorganised itself, we are certainly in a much better state to maintain our position, although as a capital goods industry very largely dependent on exports, we are inevitably sensitive to the conditions governing world trade."

PAN AMERICAN ANNOUNCES WORLDWIDE MARKETING ADVISORY SERVICE

The first international marketing advisory service established by an airline has been provided to cargo shippers by Pan American Airways at more than 100 trading centres abroad, Mr. Willis G. Lipscomb, vice-president, Traffic and Sales, has announced. The airline has placed the service at the disposal of its active and potential cargo customers. The service is available without charge to individuals and companies in all countries served by Pan American Airways. It provides on a global basis the latest business advice, ranging from overseas marketing situations to current tariffs and currency rates. "All persons and companies whose businesses involve the transport of goods between the United States and other countries, now or in the future, are invited to take advantage of the worldwide source of marketing information," Mr. Lipscomb said.

MODIFICATION PROGRAMME FOR ELECTRAS APPROVED

The U.S. Federal Aviation Agency Administrator, Mr. E. R. Quesada, announced recently that the F.A.A. had approved the Lockheed Aircraft Corporation's modification programme for the Lockheed *Electra* turboprop aircraft. Lockheed is presently modifying *Electras*. As each aircraft is modified, the speed restrictions which were imposed immediately after the *Electra* crash in Cannelton, Indiana, on 17th March, 1960, will be removed. Under the F.A.A. action, modified *Electras* may be flown at the operating speed for which they were originally designed—373 miles an hour—instead of the present speed restriction of 259 miles an hour. The F.A.A. action is the result of one of the most extensive investigations ever to take place in the aviation industry. The extensive re-evaluation, proven by an intensive and thorough flight test programme, F.A.A. has found, fully justifies the removal of speed restrictions on modified *Electras*. The strength of the latter, when operated at all speeds up to the originally designed maximum, will be well above the requirements of the F.A.A. for structural integrity.

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

MORE PIPES
to meet the nation's needs

IISCO

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

LEAD AND ZINC PRICES FALL SHARPLY

COPPER FIRM: SLIGHT DECLINE IN QUICKSILVER

THE London metal market's attention has turned recently to lead and zinc. Falls in their prices in individual sessions have sometimes been unusually severe, and the cumulative results of the declines are price levels considerably below those of mid-1959, before the controls initiated by the International Lead and Zinc Study Group had taken effect. It is now obvious that the U.S. market is not insulated from the world market as effectively as was supposed. The former cannot absorb enough zinc to keep smelters adequately employed, and some of them maintain their activity by smelting imported ore for re-export, avoiding the import duties which would be payable if the metal were to be retained. In an unreceptive world market, the resulting exports have been large enough to depress the price, although a considerable proportion of exports find their way to Japan, where consumption increased substantially in 1960. In Europe, by contrast, the demand for zinc and lead is inclining downwards. Particularly, the recession in the motor-car industry has affected the demand for die-castings and, therefore, for zinc, and the demand for batteries and, therefore, for lead. Shipments of lead from Spain are another depressing factor: they cannot be readily absorbed when supplies are already in excess of consumption.

Labour Troubles in Chilean Mines

The copper market continued to trade at firm prices through most of December 1960. It was influenced by renewed labour troubles in Chile: but the price reacted when settlement of the dispute at El Teniente mine seemed possible without a strike. Earlier in the month, special selling by producers had been reported, contrasting significantly with the special buying whereby producers had supported the price a few months previously.

Quicksilver Supplies from Russia

Among the minor metals, quicksilver has claimed unusual attention. For the first time, apparently, in 40 years, Russian quicksilver has arrived in London recently; and the first contract for Russian deliveries, of which the consignment was the first result, is believed to be the beginning of a regular supply from that source. The London price of the metal was not, however, appreciably affected by this development: having been mostly a little above £70 a flask for months previously, it fell only a little below that level; for the merchants concerned will probably dispose of additional supplies under contract with consumers rather than offer them on the market.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.6 percent to 125.0 during the week ended 7th January, 1961, compared with 124.3 (revised) for the earlier week. The index was higher by 0.2 percent and 5.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Higher prices of rice in Jeypore (+12%), in Ranchi (−8%), in Balurghat (+7%), in Varanasi (+6%) and in Dumka (+5%), eggs in Bombay (+10%) and in Calcutta (+5%), fish in Calcutta and oranges (+9% each), black pepper and turmeric (+5% each), milk and betel-nuts (+4% each), groundnut oil (+3%), wheat, maize, bananas and gingelly oil (+2% each) and arhar, mung, urad, cashewnuts and ghee (+1% each) raised the index for Food Articles by 1.0 percent to 116.2, compared with 115.1 (revised) for the earlier week. The prices of jowar in Hospet (−14%) and in Jhalawar (−6%), fish (pomfret) in Bombay (−10%), rice in Imphal and Madras (−7% each) and in Chiplun (−5%), ragi (−7%), potatoes (−6%) and eggs in Madras (−5%), onions and chillies (−4% each), salt (−2%) and mustard oil and gur (−1% each), however, moved down.

The index for Tobacco receded by 0.7 percent to 109.5 due to a fall in the prices of raw tobacco (−1%). The Fuel, Power, Light and Lubricants group index stood at 120.3, against 120.4 for the previous week. The prices of castor oil (−1%) declined during the week. The prices of gingellyseed (+4%), castorseed (+2%) and raw jute, groundnuts and cottonseed (+1% each) moved up, while those of tanning materials (+8%) and raw skins (−7%) declined, and the index for Industrial Raw Materials advanced by 0.3 percent to 152.5, compared with 152.0 for the previous week. The index for Intermediate Products rose by 0.3 percent to 133.4 due to an increase in the prices of linseed oil, brass and copper (+2% each) and coir yarn, zinc and tin (+1% each), although the prices of cotton yarn and lead (−1% each) declined. The index for Finished Products advanced by 0.2 percent to 126.0 as a result of a rise in the prices of jute manufactures, oilcakes, leather shoes and glass (+1% each).

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to December 1960. As compared with November, the December Indices for Food, and Fuel and Lighting show drops of 9 points and 2 points, respectively, while those for Miscellaneous and Clothing remain unchanged at 303 and 579 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during December 1960.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during December 1960, was 478,000 tons, against 427,000 tons during the corresponding period of the last season. This brings the total output for the season 1960-61 up to 31st December to 766,000 tons, against 642,000 tons by the same date of the last season. The offtake from factories during December 1960, was 163,000 tons, against 171,000 tons during the corresponding period of the last season. Total despatches up to 31st December, 1960, were 314,000 tons, against 302,000 tons by the same date of the last season. Total closing stocks with factories on 31st December, 1960, were 994,000 tons, against 482,000 tons on the same date of the last season.

DULL BUSINESS?

Counters like this with tarnished brass railings are generally deserted. But the outlook is always bright when your counter railings are clean and shining. Polish them regularly with Brasso, the metal polish that shines and beautifies brass.

MEASURES TO RAISE RUBBER YIELDS IN MALAYA

SUBSTANTIAL PROGRESS IN REPLANTING

SPEAKING at a recent meeting in Ohio, the Ambassador of the Federation of Malaya to the United States, Mr. Dato' Nik A. Kamil said that the Federation of Malaya is the largest producer of natural rubber in the world. The United States, in spite of its substantial interest in synthetic rubber, still remains the single largest consumer of natural rubber in the world. Mr. Kamil said that rubber directly or indirectly provides the main livelihood for at least one-quarter of the Federation's total population of some 7 million. Sixty percent of its export income is derived from the shipment of rubber. Besides, about 25 percent of the Government's total revenue is made up of Customs and income tax from rubber. A great deal of the research work on increasing tree yields by genetic selection, the application of fertilisers and the improvement of tapping and processing methods is done by the large individual estates with private capital. The Federation through an export tax on rubber is presently spending the equivalent of $(U.S.)4 million a year on research and development.

Research Work

Through the genetic research work done by the Federation's own institutes and other producing countries, trees have been developed that yield from three to four times the output of the old unselected material. "We are rather proud in the Federation of the progress which has been made in the postwar years in replanting our low yielding rubber with high yielding material. Although this effort was hampered considerably during the first ten years following the second World War because of communist guerilla activities, nevertheless we managed to accomplish a substantial amount of replanting during that difficult period." Since then, however, the Federation has been replanting at the rate of 150,000 acres a year, half of which is in smallholders' rubber. At the end of 1959, 56 percent of its large estate acreage and 24 percent of smallholders' acreage had been replanted with high-yielding material, or a grand total of 42 percent for the entire rubber area consisting of 3.5 million acres. The ultimate objective of the Federation is to reach 100-percent replanting. If it can continue its present rate, it should be able to achieve that objective in another ten or 15 years. "It may be of interest to note that no other natural rubber producing country has replanted even a fifth of the acreage that we have done in the Federation", Mr. Kamil said.

Problem of Smallholders

The larger estates have taken care of their own replanting programmes. A great many of the large estates have, in fact, been completely replanted and in certain instances are even replacing the selected material planted in the 1930's which gave about 900 lbs an acre a year, with new high yielding material which will now produce 1,500 lbs. The smallholder, however, who has an average of only four to five acres is in a different situation. To replant two acres out of his total of five acres means that he has no income from the two acres until his new trees come into production, which is about six years. Under the Government's replanting programme, however, the individual smallholder is provided with the equivalent of $(U.S.)200 an acre to recover his replanting costs. This is derived from the Smallholders' Replanting Fund which, in turn, is financed by a rubber export tax. Each smallholder is provided with either selected seedlings or proven budwood with which to replant, and at regular intervals instructors from the Rubber Research Institute guide him in the proper husbandry to be followed on the replanted plot. It is still difficult in many instances to convince a smallholder that his six years' loss of income will be compensated for later on by the expected long-term greater yields.

Improving Quality

The success of the smallholders' replanting programme is obvious from the fact that during the first year of the programme, 1953, only 23,000 acres were replanted, whereas for the past three years, an average of 75,000 acres a year have been replanted. In addition to the extensive effort on tree yield improvement, the Rubber Research Institute in Kuala Lumpur and the Natural Rubber Producers Research Association in Welwyn, England, work not only in the field of fundamental research but also in improving the quality and usefulness of natural rubber for industrial consumption. "The Federation's future is so involved in rubber that we are taking every practical means known to us within our ability to pay to protect that future by constantly striving to lower costs and improve our product", Mr. Kamil said.

COCHIN TEA SALE

At Sale No. 4, 400,000 kilograms of tea were on offer. The market was irregular. Plain and low mediums opened barely steady but firmed towards the close. Mediums and good mediums were strong to dearer. Quality high-grown brokens met with restricted demand at lower prices while similar fannings were firm.

Calcutta Markets

HIDES AND SKINS FIRM

THE market in skins continued firm. Stocks of skins were higher but those of hides were less than in the previous week.

Bazaar Sales

(Between 17th January and 23rd January, 1961)

Cowhides: Wet salted (Ord.) 7,500 pcs. on the basis of Rs. 8.25 to Rs. 12.25; Wet salted (Slaughtered) 19,600 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 32,200 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 330 to Rs. 400 and Rs. 430 to Rs. 440; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Rampurhat-Dinajpur-Murshidabad-Maldah 27,200 pcs. on the basis of Rs. 280 to Rs. 330 and Rs. 400 to Rs. 425; Purneah-Kissenganj 30,200 pcs. on the basis of Rs. 360 to Rs. 370 and Rs. 380 to Rs. 385; Patna-Pakur (Ord.) 9,200 pcs. on the basis of Rs. 275 to Rs. 300 and Rs. 330 to Rs. 350; Patna-Muzafferpore 43,000 pcs. on the basis of Rs. 345 to Rs. 355 and Rs. 370 to Rs. 380; Pakur-Thakurganj 2,100 pcs. on the basis of Rs. 480 to Rs. 495 and Rs. 540.

Bazaar Stocks

(23rd January, 1961)

Cowhides: Wet salted 126,200 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 39,000 pcs.; Assam-Dinajpur 74,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 159,600 pcs.

LINSEED FIRM

Firm conditions prevailed in the linseed market during the past week, but there was a slight reaction towards the close. Crushers showed keen interest, and the daily turnover was small. The oil market showed little change and the undertone was steady in sympathy with other oil markets. The oilcake market was steady due to small stocks. The overseas market was quieter. The latest quotation is as follows: Ready, Rs. 30 a maund.

SHELLAC QUIET

During the week ended 24th January, the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 92 buyers; 95 sellers.
Lemon No. 1 Shellac	Rs. 94, 95 buyers; 97, 96, 98 sellers.
Lemon No. 2 Shellac	Rs. 90, 88, 90 buyers; 92, 90, 92 sellers.
F.O. Superfine Shellac	Rs. 85, 84 buyers; 87, 86 sellers.
Standard One Shellac	Rs. 82, 81, 82 buyers; 84, 83, 84 sellers.
TN Pure Shellac	Rs. 75, 72 buyers; 78, 75 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 108, 104 sellers.
Golden Bysacky Seedlac	Rs. 78, 80, 78 buyers; 82 sellers.
One B Seedlac	Rs. 77, 76, 75 buyers; 78, 77, 76 sellers.
Two B Seedlac	Rs. 67 done and buyers, 66 buyers; 69, 68, 67 sellers.
Manbhum Fine Seedlac	Rs. 75 to 72 buyers; 77 to 74 sellers.
Fine Bysacky Seedlac	Rs. 67, 68, 67 buyers; 68, 70, 69 sellers.
Genuine Bysacky Seedlac	Rs. 60, 59 buyers; 62 sellers.

Shipments during January until the 19th were 22,826 packages.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

—

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount issued in 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 25-1-61 Rs.	Market Quotations A year ago Rs.

FIRST PLAN YEAR BUDGET CHOICES

THE open season for Budget rumours has already reached its height, but so far this time there has been a complete absence of the spine-chilling type of report about prospective new taxes which has been so common in previous years. Most of the responsible views expressed up to now have been uniformly optimistic, contending on the one hand that large new resources will not be needed in the first year of the third plan, and on the other, somewhat cynically, that heavy increases in taxation are unlikely within just over a year of a general election. Neither of these opinions is, probably, wholly wrong; governments do not usually raise resources unless they are going to need them, and it is often remarkable how requirements contract when an election is in the offing. But it would be a mistake to dismiss altogether the prospects of new taxes solely on these two scores. Some fresh ones will probably be unavoidable; the question is how many and of what kind?

The Finance Minister is faced with having to raise about Rs. 1,000 crores of extra resources from Central taxation during the five years of the third-plan period, or roughly Rs. 200 crores a year. The requirements of the plan will not, however, fall uniformly over the five-year period; there is bound to be a peak, which will probably occur somewhere around the second or third year when the bulk of the projects have been started. If the second plan is any guide to experience, requirements in the first year of the third plan are likely to be comparatively light, especially when the supply of foreign exchange is uncertain. A figure of, say, Rs. 75 crores, compared with the Rs. 200 crores of average annual requirements, would not seem to be an unreasonable estimate for what the Finance Minister may have in view for the coming year. A fair proportion of this, however, will probably be made up from the surplus expected on this year's estimates. How large this is going to be will not be known until Mr. Desai presents his Budget on 28th February; but revenues appear to have been fairly buoyant throughout the current financial year and there is no reason to expect that the surplus will not be at least as large as last year's. Taking all points into consideration, therefore, a total of round about Rs. 50 crores of new taxation would not seem to be altogether too unreasonable a guess at Mr. Desai's requirements. This compares with the last Budget's Rs. 23.50 crores of fresh taxes, and still represents a fairly substantial effort; it will certainly require a whole range of new impositions with varying effect on the economy. It is not a large figure compared with what is going to be required in future years if the plan is to be fulfilled, but it is large enough to cause an appreciable impact on prices and incentive.

It is also large enough to attract the usual warnings given annually in these leader columns of *Capital* about the need for exaggerated care in choosing from the various new tax possibilities. And large as it may be, it still leaves room for the correction of the many inequities in the existing tax system. Whatever this year's revenue needs may be, Mr. Desai should consider, if only in the interest of goodwill, the abolition of such unjustifiable levies as the bonus share tax and the tax on gratuity payments made to employees other than civil servants. This last is purely a matter of not discriminating in favour of one section of the community simply because it happens to be in government employ; whether it is settled by abolishing the tax on all gratuities or by extending it to those not already covered, is largely immaterial, although any relaxation of personal taxation in any form is always a welcome contribution to incentive. But the removal of the bonus tax is a long-overdue measure. It had no justification in the first place and has always been against the considered advice of responsible independent opinion; why the Government persists with it is something which has to be explained in terms other than of either logic or necessity, because its yield is negligible. Especially objectionable is the inclusion in the tax of bonus issues from share premium accounts; these funds are rightly shareholders' property and should not attract tax at all. When the Government itself is also these days dictating what premiums must be charged on new issues, the anomalies of this unjust tax are clearer than ever. There are a number of inequities which Mr. Desai could eliminate with little loss of revenue and considerable gain in goodwill, but the three taxes mentioned above certainly qualify for priority attention.

Other problems the Finance Minister could profitably apply himself to are the restrictive effects of the present provisions covering the grant of Development Rebate, and the disincentive caused to foreign private investment in this country by the discriminatory tax on the profits remitted by a foreign subsidiary company operating in India to its parent company abroad. The cramping rules which at present govern Development Rebate are by now an established grievance and have been criticised by numerous business men since they were introduced; the fact that nothing has so far been done to remedy the situation is a significant comment on the lack of regard which, despite the ostensible purpose behind so much of its legislation of the past few years, the Government still shows for the interests of shareholders as a body. No similar complaint can be made against the tax on foreign profits; the Government is entitled in equity to make up for the tax loss it would otherwise sustain under the general provisions governing company profits by virtue of the transfers to shareholders abroad. But the discriminatory provisions, as they stand, are often a heavy burden for a foreign subsidiary to bear, and the general effect on foreign investment in this country is undoubtedly a disincentive. A token forfeiture of revenue on this account might pay handsome dividends in the form of increased foreign investments. These are only a few of the many adjustments which the Finance Minister could make in any Budget which unlike its dreary predecessors of the past few years, is designed with an eye to eliminating injustices rather than to multiplying them and to increasing incentives to work and invest rather than to diminishing them.

It has also been the custom in these columns in previous years to emphasise the need for studying the overall economic effect of budgeting in this country, and not just concentrating attention on revenue raising. Each year, of course, the arguments have gone largely unheeded. The fact is that ideas on Budgetary policy in India have become completely fossilised. This is partly due to the inflexibilities imposed by planning, but it is also due to the lack of imagination, and the bookkeeping- mentality, which prevails at the Finance Ministry. Due to these deficiencies, the opportunity is lost each year of shaping the annual Budget so as to encourage the growth of economic activity rather than, as at present, to stifle it. It is possible that the much-advertised "flexibility" which has been written into the third plan will allow for a different approach this year. The signs are not reassuring. It is also possible that the steady increase in the cost of living, and of producing for export, which is being caused by the unavoidable growth of indirect taxes, will encourage a regard for maintaining incentives to produce, and so keeping costs down, which the previous concentration on direct taxes, with their yield in ideological satisfaction, has never done. But once again, there is no encouragement to be gained from current indications. All the signs point to a continuation of the present policy of piling on taxes to yield a predetermined figure, while ignoring almost completely the loss to the economy caused by the resulting disincentive. There seems little hope that the Government's attention can be drawn to the fact that, with the third plan not yet under way, and the availability of foreign exchange so far uncertain, the current year is probably the most suitable it has ever had for the making of Budgetary experiments in the direction of greater incentive. With its revenue needs largely undefined, it is in an admirable position at the moment for making concessions and adjustments designed ultimately to increase overall production, incomes and employment, and so to swell tax revenues in future. But so far the Finance Ministry has proved itself impervious to any ideas not concerned solely with the meeting of target revenue figures irrespective of the dampening effects on the economy.

Whether or not he considers himself able this year to begin the long-overdue task of reshaping the Indian Budget on economic lines, Mr. Desai would make a useful contribution to the real needs of the times by announcing along with his new tax proposals the appointment of a committee to review the present progress of taxation legislation in this country and its long-term effects on the economy. This committee should be staffed by competent economists without Party affiliations and directed to report fearlessly on the Indian Budget as an instrument of economic control instead of simply an exercise in bookkeeping. Among its findings the Government might discover a clue as to why the present system of monetary and credit controls is working so badly.

THE SUGAR EXPORT ADVENTURE

LATEST statistics indicate that the substantial rise in Indian sugar production continues. During November and December 1960—the first two months of the current season—the mills' output totalled 766,000 tons, against 642,000 tons in the corresponding period of 1959-60. The production during the last season was already an all-time record, at 2.42 million tons. If present trends continue, therefore, a new high will be established. The achievements and prospects have inspired curiously mixed reactions in the industry. On the one hand, there is satisfaction that higher production means fuller use of installed capacity, and therefore bigger profits. On the other, there is nervousness over the fact that if sugar really does become plentiful, its price will decline and profits may not increase quite so much. In assessing these hopes and fears, it is worth bearing in mind the factors responsible for the increase in production during 1959-60. On the raw material side, the most important was that, due to good weather, the cane harvest was much bigger. Since the minimum price which the mills had to pay for their cane was raised, they got more of the raw material, and less went for *gur* and *khandsari* manufacture. Similarly, on the manufacturing side, the most important reason was that the Government gave fiscal concessions for any sugar produced in excess of the output during the 1958-59 season. A secondary reason was that the installed capacity of the industry expanded. Nearly all these factors are in operation during the current season too. The output of cane is expected to rise further. The minimum price which the mills have to pay for their cane remains high. The fiscal concessions continue to apply. And the installed capacity of the industry is expanding.

In this generally rosy picture, four major qualifications need to be entered. Many in the trade are trying to give the impression that the Indian sugar industry is a massively enterprising enterprise, now firmly set on the road to expansion which will enable it to titillate steadily more teeth with steadily more sweets in years to come. But the first qualification is that, to a large extent, the recent increase in sugar production is due to sheer good luck with the weather in the cane-growing areas; that luck cannot be assumed as

eternal. The second qualification is that the production costs of the industry are steadily rising. The third is that, partly because of the rise in production costs and partly for other reasons, the price of sugar to the consumer has not decreased much; transport shortages and the exploits of an opportunist trade have kept the commodity much dearer than the increase in supplies would have warranted. The fourth qualification is that, with Maharashtra wanting to make its Land Ceiling Bill applicable to sugar plantations also, production is threatened in an area where some of the most efficient and progressive mills in the country operate.

The current tendency of many in the trade and industry is to assume that the so-called "surplus" of sugar is permanent. Past history and present facts support no such assumption. Production happens to have increased in 1959-60, and will probably do so again in 1960-61, aided by the weather. Consumption is stagnating; according to some estimates, it even fell a little last year. So the stocks of sugar held by the factories have increased. The stocks would not have increased if the market price of sugar had come down appreciably—as it should have done with the rise in production. Because the decline in prices has been so small, the so-called "surplus" has developed. On this analogy, any commodity in India could be made "surplus" overnight. Mr. S. K. Patil could treble the price of food, let millions of people starve, and then proudly announce that this country's food problem had been "solved" with the resultant "surplus" of wheat and rice. Thereafter, Sardar Swaran Singh could do the same with steel; he could raise its selling price five-fold (or, simpler, bomb the steel-using concerns out of existence) and then issue a grand declamation on India's new-found mastery in creating surpluses out of shortages. It is surprising that many in the sugar trade have not realised how fallacious all the talk of a "surplus" is. The normal reaction to a surplus would be to work for lower prices; but an editorial in *Indian Sugar*, apparently reflecting the industry's opinion, asserts that "far from visualising any reduction in prices, the continued increase in costs underlines the need of upward revision of the fair price of sugar."

The mills argue that if the ex-factory price of sugar is raised, the market price will not increase, since the latter is governed purely by supply and demand. This is doubtful, considering that the market price has fallen very little so far in spite of all the talk about a sugar surplus. The fact is that, in the sugar trade, bigger profit margins are considered more important than bigger turnover, so prices tend to be rather inelastic. In any event, a rise in the ex-factory price would not bring down the market price. That being so, domestic consumption would stagnate, and the question would then arise about what should be done with the growing surplus. Some mills, abetted by the Government, feel that it ought to be exported. But, on Mr. S. K. Patil's own testimony two months ago, sugar costs almost twice as much in India—*after* deducting excise duty, etcetera—as in the world market. According to the Central Food and Agriculture Minister, the cost of Indian sugar is Rs. 800 a ton after deducting the fiscal levies, whereas the international price is Rs. 450 a ton. India has nevertheless been trying to export the commodity, and her mills have been assured that they can mulct the domestic consumer in order to make up for the loss incurred in subsidising exports. Perhaps it is time the Finance Ministry took a closer look into what is happening, and explained why India is quietly going the way of certain Latin American countries by applying, in effect, a different exchange rate for a particular commodity.

It is claimed that the first export quota of 50,000 tons has been sold. The quantity is small, and although the export effort promises to be a failure without the subsidy, one hope remains. It is that the United States will take from India—at artificially high prices—the sugar she used to take from Cuba. It is reported that the Government is trying to negotiate a long-term arrangement under which 500,000 tons could be sold to the Americans each year in this way. Whether, considering the violent fluctuations in sugar production from time to time, India will always be able to spare the 500,000 tons, does not seem to matter. What the Government appears to have decided is that it will connive at keeping market prices high at home, so that a forced surplus can be created. For political reasons, the arrangement might suit the Americans. But, in commercial terms, it will make as little sense as their late lamented deal with Cuba. Being political, it is suggested, the propagandist ornamentation attaching to such an Indo-U.S. arrangement would be important. In that case, some feel, the Americans should not pay India an artificially high price in the usual, straightforward way. They should pay the normal, world market price, and then make up the difference by awarding suitably-sized gold medals to Indian sugar exporters at monthly ceremonies held at the American Ambassador's residence. Thus would U.S. generosity and appreciation become better known, along with the already famous enterprise of the Indian sugar trade.

The fact is that India is not yet fit to be a sugar exporter. It would be equally sensible for her, with the aid of subsidies, to try and crash into the American television or motor-car market. Promoting exports does not mean that a nation should export everything it can lay its hands on. It means exporting those things which it is, or can become, especially fitted to produce. Sugar is not that yet for India, nor, by the look of things, will it be for many years to come. So, for the time being, the question is worth asking why Indians should not eat all the sugar they are producing, by being able to get it at a substantially lower price. In course of time—as cane yields improve, and as the inefficient units of the industry are modernised and rehabilitated—the opportunity may arise to think logically and seriously about promoting sugar exports again.

SHADOW OVER LONDON GOLD MARKET

AFTER the inauguration of President Kennedy, the attention of the London bullion market was diverted from gold to silver. There were strong reasons for the interest in silver. It was perceived that demands for it, for industrial and monetary purposes, were considerably in excess of supplies, and that available reserves, in the U.S. Treasury and the Bank of England, could not fill the gap indefinitely. But this was not a new discovery (though, apparently, many users of silver have only recently realised the unavoidable implication of the position—a rise in the price of silver), and the shift of attention to silver implied that gold was, for a time at least, not particularly interesting. The Administration of ex-President Eisenhower cannot claim credit for the change of mood in the gold market. It was not the decree illegalising Americans' holding gold abroad that restrained the demand for gold. A more potent factor was the belief that President Kennedy, following the recommendations of a group of experts who had investigated the weakness of the dollar, would rigidly adhere to the existing official price of gold—$35 an ounce.

However, the new President's policy on the price of gold must be judged in relation to his economic policy in general. The pressure on the U.S. gold reserve can be relaxed by such expedients as releasing the gold required to cover 25 percent of the notes and deposits of the Federal Reserve system, but ultimately the price of the metal must break free if the deficit in the U.S. payments account persists. That deficit is, of course, the real cause of the weakness of the dollar, of which the recent conversion of dollars into gold is only a symptom. The loss of nearly $1,700 million of gold from the U.S. Treasury's reserve last year is equivalent to approximately a tenth of the reserve as it stands at present, and it is a much larger proportion of the free reserve remaining after deduction of some $12,000 million immobilised by the obsolete law specifying the minimum cover for notes and deposits. The British authorities would be well content if current sterling liabilities were substantially covered by their gold and currency reserve, but it is recognised that if Americans themselves lose faith in their currency and many of them try to convert dollars into gold or other currencies, the U.S. reserve will be overwhelmed.

Buying of gold by Americans who were worried by the U.S. payments deficit was the primary cause of the spectacular rise in the price of gold in the London market last October—buying by other nationals was mainly a reflection of the Americans' distrust of their own currency. The U.S. Treasury was naturally reluctant to supply gold to American and other speculators against the dollar, but the alternative to inaction was a divergence between the official price and the market price of gold so wide that the official price—the nominal gold value of the dollar—could no longer be respected. The normal resources available to the Bank of England were quite insufficient to maintain a normal price in the gold market. Only the U.S. Treasury could supply enough gold to keep the price down. But any gold provided by the Treasury for that purpose would further weaken the reserve, when the sight of a declining reserve was already weakening confidence in the dollar. Thus the choice before the American authorities was inaction that would discredit the dollar by allowing a high premium on gold in the free markets and action that would weaken confidence in the dollar by weakening the reserve. The authorities decided to enable the Bank of England to hold the price of gold near the official level, by ensuring that dollars accruing to the Bank from price-steadying arbitrage operations would be convertible into gold; but they adopted this policy reluctantly, and only because the alternative seemed worse.

The Bank of England—implementing, doubtless, the wishes of the U.S. Treasury—did not reduce the market price of gold to the point where central banks could buy gold in the market. The International Monetary Fund precludes buying of gold by a central bank at more than 1 percent above the gold parity of the currency. The central banks of I.M.F. members can convert currency into gold through official channels, but it is assumed that they will be more reluctant thus to exhibit their lack of confidence in the dollar than to buy gold unobtrusively in the market. However, the effect of this arrangement was to put all the resources of the market—supplemented by the resources of the U.S. Treasury—at the disposal of private hoarders and speculators—including Americans; and liberal use of the facilities convinced the U.S. Treasury that a more restrictive policy was needed. Illegalising Americans' buying and holding gold abroad was a logical act, but it has obviously not solved any fundamental problem. Some dealers in London are sceptical of the ability of the American authorities to enforce the decree (which should become fully effective on 1st June); for the authorities have no appropriate system of exchange control. After a brief period of hesitation when the ban was announced, demand for gold in the London market was soon as strong as before, emanating from many countries. Since Americans' foreign holdings of gold are estimated at, roughly, $1,000 million and they should all be sold within the next few months, the strength of the market does not imply confidence in the efficacy of the decree.

The U.S. Treasury itself, apparently, is not convinced that the decree solves any problem. A strong body of opinion in the Treasury would like to do more than restrict the use of the London gold market: it would like to suppress the market itself. The London market is the world's principal gold market, and the critics believe that if that market were closed private operations in gold would be effectively curtailed. London's answer is that—as previously—more gold would be traded in Zürich (where there is no system equivalent to the regulating mechanism of the Bank of England) if the London market were closed, and that if, by agreement, the Zürich market were closed other, less regulated, markets would develop. The Americans' argument that monetary gold should be used only for official purposes, not for private hoarding, cannot be lightly dismissed. But that argument is not strictly relevant to the problem of the dollar, for holders of that currency who lose faith in it will convert it into other currencies if access to gold is denied to them.

BANKING EXPERIENCE IN 1960

THE preliminary results of a number of leading Indian banks for the year ended December 1960, give the impression that the banking community has had a good year. Profits have improved substantially and many of the banks represented have declared higher dividends. Considering that there has been no appreciable decline in the prices of Government securities during the past year, banks are unlikely to have suffered any serious depreciation on their investments. On the face of the preliminary allocations made, it does not look as though adequate reserves have been ploughed back in the business. But whether or not secret reserves have been replenished further, is difficult to say until full balance-sheets are published in due course. The good performance has naturally attracted scattered interest in banking shares and their prices have improved during the past couple of weeks or so. The index for them has improved from 194.9 to 199.1 (1952-53 equals 100) over the past year. But the rise is not in proportion to the improved results because the outlook is obscured by a number of imponderables.

The uncertainties apart, the profits of the past year have been largely due to a number of fortuitous circumstances. Contrary to the usual trend, banking resources were fully employed during the past slack season partly because of the growing industrialisation of the economy and partly due to substantial import surpluses. Resources were no doubt more than fully employed during the busy period also. An important factor was that during the major portion of the past year, banks had enough resources of their own because there was a sharp rise in deposits during the earlier part of 1960. In addition, the beneficial effects of cuts in deposit interest and of increases in advance rates have been fully reflected in the results. Whether these special advantages of the past year will continue, is too early to say at the present stage. The downward drift in deposits during the past few months is a matter for concern. Deposits of scheduled banks have declined from Rs. 1,934.48 crores to Rs. 1,887.99 crores over the past three months or so. Although this may be partly due to a standstill position in the supplies of money to the public, it is worth investigating whether the fall has not been caused by the reduction in deposit rates. Considering that other competing financial institutions have offered more attractive interest, the possibility of a shift of deposits away from the banking system cannot be lightly ignored. It is also possible that the banking community was not vigorous in attracting deposits when the deposit impounding scheme was enforced. In any case, a substantial increase in deposits is not foreshadowed, at least in the near future, because the creation of deficit finance may be restrained by foreign exchange shortages.

A disturbing feature is that banking resources have been greatly squeezed and banks are being seriously strained in meeting monetary requirements. The worry is the greater because monetary demands are expected to increase a great deal more in coming weeks. Since the beginning of the current busy season, advances of scheduled banks have gone up by Rs. 96.03 crores to a new peak of Rs. 1,205.64 crores. During the rest of the busy season, it is expected that the demand may rise by at least a further Rs. 180 crores. This demand the banks cannot possibly meet from their own resources. Their deposits may not increase much in the near-turn. There is little scope for obtaining cash by selling Government securities; such a move is not likely to meet with official blessings because the maintenance of stable prices among gilt-edged stocks appears to be a kingpin of Government policy.

It is possible that partial relief may be obtained by banks having greater recourse to the funds of the Refinance Corporation. But the scope for such facilities is restricted by unnecessary formalities. The sooner the procedures for channelling the funds of the Refinance Corporation into the hands of banks are streamlined, the better it will be for the economy. These resources are not expected to be enough to meet the full requirements of the busy season. Under the circumstances, therefore, it is essential that serious thought be given to reinforcing banking resources. This could perhaps be done if lending by the Reserve Bank were liberalised. So long as credit is extended against genuine economic needs, the Reserve Bank should have no hesitation in promoting increased advances. If banks are to borrow more from the Reserve Bank two things need to be done. The first is that the penal interest which banks are now forced to pay on their borrowing from the Reserve Bank when the indebtedness exceeds a specific quota, should be reduced, otherwise banks will not find it a worthwhile business proposition to borrow. Recent trends indicate why banks are shy in borrowing from the Reserve Bank. When the deposit impounding scheme was dismantled a few weeks ago and deposits to the extent of nearly Rs. 18 crores were released, they were largely used for repaying the banks' indebtedness to the Reserve Bank. Secondly, it is time steps were taken to liberalise the Reserve Bank's lending to the banks against usance bills. If banks borrow from the Reserve Bank by rediscounting genuine trade bills, they should not be forced to pay interest at the present high rate.

Investors are getting worried over the possibility that the profits of the past year, however fortuitous they may be in character, might encourage a spate of fresh demands for increased emoluments from workers. If administrative charges of banks are increased on the pretext of the high profits, the banking community will certainly be heading into new difficulties.

Current News and Comment

Scindia Steam Cuts Dividend

The drastic cut in Scindia Steam's dividend from Rs. 1.30 to a mere 60nP a share, both taxable, confirms that the Company has fared badly during the year ended June 1960. Its working results are disappointing. Even the reduced dividend costing Rs. 33.79 lakhs has been paid entirely out of general reserve. In the previous year, the Company withdrew Rs. 20 lakhs from the dividend equalisation fund to distribute Rs. 73.21 lakhs as dividends. Although its earnings from freight and passage money at Rs. 18.77 crores were nearly Rs. 1.91 crores higher than in 1958-59, its gross profit declined from Rs. 3.48 crores to Rs. 2.67 crores. The cargo carried increased from 2,453,000 tons to 2,676,000 tons, and the income from freight rose from Rs. 16.58 crores to Rs. 18.35 crores. The rise is attributed to the employment of more tonnage, but against this there has been a rise in expenditure under some heads, particularly under charter hire, stevedoring charges, marine dues and claims.

The directors say that shipowners have had another difficult year. Freight rates remain at uneconomic levels The principal maritime nations of the world, even after the recession set in, built tonnage far in excess of the requirements of world trade. They are continuing to build new ships and this has aggravated the situation still further. To bring about an improvement in the freight business, it is stated, the total volume of world trade must increase or more ships must be scrapped. The directors say that it is reasonable to expect that some adjustment will take place before long.

The Company's working results have been affected by the uneconomic freight rates on the coastal and adjacent trades. Delays to ships—particularly to those employed in coal voyages—at the loading and discharging ports and the poor despatches have considerably increased the losses in coastal operations. These problems are receiving the serious consideration of shipowners handling the coastal trade. After providing Rs. 2.84 crores (against Rs. 2.44 crores) for depreciation (including Rs. 1.01 crores to special depreciation reserve, against Rs. 81 lakhs), Rs. 2.30 lakhs (against Rs. 3 lakhs) for directors' remuneration, nil (against Rs. 10 lakhs) for debenture sinking fund and nil (against Rs. 40 lakhs) for taxation, there remains a debit balance of Rs. 19.73 lakhs, against a profit of Rs. 51.12 lakhs in the previous year. With the credit balance of Rs. 3.59 lakhs brought in, the debit balance is reduced to Rs. 16.14 lakhs, which has been written off from general reserve. The directors say that excluding the items of special depreciation, being the provision for statutory development rebate reserve, and the surplus of Rs. 6.74 lakhs on sale of assets, the working during the year has resulted in a profit of Rs. 74.52 lakhs. This, they say, cannot be regarded as unsatisfactory under the present depressed conditions. The second ship on order with the Lubeck shipyard was delivered in July 1960. The first ship under the yen loan agreement, the order for which was placed with Mitsubishi Heavy Industries Reorganised Ltd. Kobe, was delivered in June 1960. The contract for building another ship was finalised with the same shipyard under the yen loan arrangement. It is expected to be delivered in February 1961. An order for one 17-knot ship of the Japanese type has been placed with Hindustan Shipyard. Two old war-built vessels have been sold. The steadier trend in Scindia Steam shares—in spite of the drastic dividend cut—seems to be based on the idea that the recent arrangements for pooling and distributing the freight earnings by the Karmahom Conference Lines will help improve the Company's working results in the future.

Sendra, Churulia Coal Merger

The Sendra Coal Co. Ltd and the Churulia Coal Co. Ltd—both of which belong to the Bird-Heilgers group—propose to amalgamate. The idea is that shareholders of Churulia Coal will get one ordinary share of Rs. 10 each in Sendra Coal for every three ordinary shares of Rs. 4 each they hold in Churulia Coal. The 4,800 ordinary shares of Churulia Coal which are held by Sendra Coal will be excluded from the proposed exchange, because it would mean that Sendra Coal would have to accept its own shares in return, and that would involve a reduction in the capital of Sendra Coal. This step is neither desirable nor necessary, so it has been decided to exclude the 4,800 shares from the proposed exchange. In order to give shares to Churulia Coal shareholders, it is proposed to raise the share capital of Sendra Coal from Rs. 8 lakhs to Rs. 15 lakhs by creating 70,000 new ordinary shares of Rs. 10 each, ranking *pari passu* with the existing ordinary shares of Rs. 10 each for dividends and in all other ways. The scheme will be finalised after obtaining the sanction of the Calcutta High Court and the Government of India. The directors expect that the amalgamation will be beneficial. Both Companies are investment institutions at present, and they hold between themselves more than half the partnership called the Karanpura Mining Syndicate When the amalgamation is effected, the resources of Sendra Coal will increase and its profitability is also expected to improve. The basis of exchange for the shares of the two Companies has been worked out fairly. The break-up values, the present prices and the dividend records have been considered carefully.

Spencer Pays the Same

Spencer and Co. Ltd has maintained its taxable ordinary dividend at 18 percent, including an interim of 6 percent, for the year ended June 1960. At the present price of Rs. 22.60 a share, the yield works out to 8 percent and the dividend is covered more than two-and-a-half times. Transferring Rs. 3.56 lakhs (against Rs. 2.64 lakhs) to depreciation and Rs. 8.50 lakhs (against Rs. 9.10 lakhs) to taxation, the profit is Rs. 11.59 lakhs, compared with Rs. 11.39 lakhs in the previous year. Development rebate reserve is allocated Rs. 71,000 (against Rs. 17,000). The carry-forward is Rs. 7,55,863, compared with Rs. 8,51,274 brought in. Sales increased from Rs. 3.71 crores to Rs. 3.79 crores.

Since the close of the year under review, Spencer has subscribed for 50,000 shares of Rs. 10 each of Kelvinator of India Ltd; Rs. 5 a share has been paid so far, leaving an uncalled liability of Rs. 5 a share. As for the other investments of Spencer, the dividends on the Electronics shares have been received and included in the accounts. But the dividends on the shares in Parke, Davis (India) Private Ltd have not been included. Parke, Davis (India) paid a dividend of 22 percent, so Spencer has received Rs. 1.54 lakhs. The premises of Spencer and Co. in Kanpur, which were formerly used for producing carbon dioxide, are now used for running a modern canning factory. Although the initial results of the new project are not satisfactory, the directors think that they will improve substantially in the near future.

Structural Engineering Profit Down

The results of the Structural Engineering Works Ltd for the year ended June 1960 show a fall in the gross profit from Rs. 21.29 lakhs to Rs. 17.34 lakhs. After providing Rs. 1.17 lakhs (against Rs. 1.70 lakhs) for managing agents' remuneration, Rs. 5.37 lakhs (against Rs. 4.39 lakhs) for depreciation, Rs. 1.05 lakhs (against Rs. 2.45 lakhs) for development rebate reserve and Rs. 4 lakhs (against Rs. 6 lakhs) for taxation, the net profit has dropped to Rs. 5.75 lakhs, from Rs. 6.76 lakhs in the previous year. Realisations from sales and work done amounted to Rs. 94.45 lakhs (against Rs. 1.02 crores). The directors have recommended a dividend of Rs. 12 a share, subject to deduction of tax. A proportionate dividend has been recommended for new shares. The Company paid a dividend of Rs. 17, taxable, in 1958-59. It has asked the income tax authorities to ascertain how much of its income is exempt under

Section 15(C) of the Income Tax Act concerning the factory in Calcutta. A sum of Rs. 40,000 (against Rs. 50,000) has been allocated to contingency reserve. The proposed dividends absorb Rs. 5.37 lakhs (against Rs. 4.76 lakhs), leaving a sum of Rs. 12,134 to be carried forward, against Rs. 14,390 brought in.

Referring to the fall in the profit, the directors say that keen competition in the structural steel fabricating industry compelled the Company to accept work at much more competitive rates than before. The tempo of work in general too became somewhat slower. The company has, however, sufficient orders in hand, and it has secured the duct line contract valued at over Rs. 1 crore from the Bombay Municipal Corporation. The work of fabrication at the Calcutta establishment is proceeding satisfactorily. Negotiations are in progress with the Central Government for securing a licence to fabricate light and heavy structural work, in addition to pipes. Structural Engineering has started the fabrication of pipes in Calcutta. The management has finalised a scheme for manufacturing boilers in consultation with a well-known foreign firm. Collaboration agreements with some foreign firms have been concluded for manufacturing prestressed concrete pipes, high pressure penstocks, etcetera. The Company has been given a licence for importing galvanising baths, which will enable it to execute big jobs for the fabrication of transmission towers. It proposed to issue further capital for financing its expansion schemes.

Rights from Ballarpur Paper

The shares of the Ballarpur Paper and Straw Board Mills Ltd have improved to Rs. 72.25 since the Company has decided to issue ordinary rights shares in the proportion of three new shares for every two held at par. The money will be used for expanding the production capacity from 35 tons to 120 tons a day. Equipment will be imported from Germany and France. The cost of the project is estimated at Rs. 6.5 crores and the Maharashtra Government has taken steps to supply the necessary power. Production from the expanded unit is likely to begin in 1963. The foreign equipment has been bought on deferred payment terms. The Company's present capital is Rs. 75.5 lakhs, of which the ordinary share capital amounts to Rs. 57.5 lakhs, divided into shares of Rs. 25 each. Reserves are more than Rs. 40 lakhs and the last ordinary dividend was 14.8 percent, taxable.

Universal Cables from Birlas

Birlas are ready with their Rs. 2-crore project for manufacturing paper-insulated lead-covered cables (known in the trade as P.I.L.C. cables) in collaboration with British Insulated Callender's Cables. Sponsored by the Hindustan Woollen Mills Ltd. the project will be operated by a new Company called Universal Cables Ltd, which will be a subsidiary of the sponsoring firm. To finance the project, Hindustan Woollen will issue fresh capital amounting to Rs. 70 lakhs, raising the issued capital to Rs. 1.05 crores. The issue will first be offered to existing shareholders and the balance, if any, will then be offered to the public. The foreign exchange cost, estimated at Rs. 80 lakhs, is proposed to be met by loans from the Industrial Credit and Investment Corporation of India and the Commonwealth Development Finance Company. The remaining Rs 50 lakhs will be met from the existing resources and borrowings. The agreement for technical collaboration with the U.K. firm, which has been approved by the Central Government, proposes paying a royalty of £5,000 a year in the first two years and £10,000 a year in the following six years. The prospects for Universal Cables are considered fair; against the third plan target of 4,000 miles of P.I.L.C. cables a year, production in 1960 was only about 500 miles. The location of the Company's factory has yet to be decided. The machinery and plant which are being obtained from the U.K. are due to be shipped in about six months' time after the import licence is received. The factory might start production by the end of next year.

Traco Cable Share Offer

The Traco Cable Co Ltd is a new venture which will manufacture V.I.R. insulated cables of all types and hard-drawn copper wires. Its authorised capital is Rs. 1 crore, consisting of 750,000 equity shares of Rs. 10 each and 250,000 6 percent, tax-free, cumulative preference shares, also of Rs. 10 each. The issued capital will be Rs. 40 lakhs in equity shares. The Kerala Government has agreed to subscribe for shares worth Rs. 10 lakhs. The managing agents, directors and their friends will take up shares worth Rs. 5 lakhs. The remaining Rs. 25 lakhs will be offered to the public in March. The Company's factory will be situated near Cochin. It is proposed to manufacture 36 million core yards of V.I.R. cables of various types a year and bare copper wire up to the surplus capacity of the wire-drawing plant. The project is estimated to cost Rs. 40 lakhs. The Furukawa Electric Co. of Japan will be the technical and scientific adviser. Traco Enterprises Private Ltd is the managing agent.

India Firebricks and Insulation Issue

The India Firebricks and Insulation Co. Ltd has been formed to set up a plant near Ranchi, Bihar, for manufacturing refractories. Thomas Marshall and Company (Loxley) of the U.K. will be the technical collaborators and consultants. The plant will have an annual production capacity of 72,000 refractories. India Firebricks will have an authorised and issued capital of Rs 1 crore, consisting of 750,000 equity shares of Rs. 10 each and 25,000 7½ percent (free of company tax, but subject to tax deduction at source) redeemable cumulative preference shares of Rs. 10 each. The promoters, directors and their friends will take up equity shares worth Rs. 25 lakhs. The Life Insurance Corporation is being allotted 100,000 equity shares. Thomas Marshall and Co. is to be allotted 25,000 equity shares and 10,000 preference shares for consideration other than cash for its services as technical advisers The balance of the issue, consisting of 375,000 equity shares and 15,000 preference shares, will be offered to the public. The entire issue has been underwritten. The Company proposes to enter the capital market in the near future. The financial requirements of the project, which is estimated to cost Rs. 2.81 crores, will be met by raising Rs. 1 crore from the issue of shares, Rs 54 lakhs as loan in foreign currencies from the Industrial Credit and Investment Corporation of India and a rupee loan of Rs. 85 lakhs from the Industrial Finance Corporation. The balance is to be met by borrowing from the Company's bankers. A licence has been secured for importing plant and machinery worth Rs. 50 lakhs. An order has already been placed with a West German firm, and the machinery is expected to arrive by September. The factory is likely to start production by about the middle of next year.

Hindustan Gums: A New Venture

Hindustan Gums and Chemicals Ltd. an Indo-U.S. venture, is the name of a new Company which has been formed to undertake the manufacture of guar-based gums and other chemicals. These have a considerable foreign demand, apart from the sizable domestic offtake by the paper and textile industries. The factory will be located in Bhiwani, Punjab. The initial installed capacity will be about 800 tons of gums and chemicals a year. Hindustan Gums will have a paid-up capital of Rs. 30 lakhs, of which Rs. 15 lakhs will be contributed by Stein Hall and Company Inc. of New York, which will meet the cost of imported plant. The latter will also provide technical know-how and engineering facilities The entire project is estimated to cost about Rs. 35 lakhs.

India Forge Issue Soon

India Forge and Drop Stampings Ltd is setting up a forge shop in Ambattur, a suburb of Madras, with the technical collaboration of Messrs B and S. Massey, Manchester. The plant will have an initial production capacity of 3,000 tons of steel forgings and drop stampings a year, on a single-shift basis. The Company will have an authorised capital of Rs. 1 crore, consisting of 750,000 equity shares of Rs 10 each and 25,000 6½ percent, tax-free, cumulative preference shares of Rs. 100 each. Its issued capital will be Rs. 50 lakhs, consisting of 350,000 equity shares and 15,000 preference shares. The preference capital is being taken up by the

Over 888 Offices and Enlarged Service

Perhaps you would like to know how rapidly the State Bank of India is expanding. On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, the Bank had only 243 branches. By August 1959, it had 555 fullfledged branches in urban and semi-urban areas. The rate of growth is now about 100 branches a year. The Bank has also 238 sub-offices.

With a net-work of over 888 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

BANK WITH

STATE BANK OF INDIA

INDIA'S LEADING BANK

SISTA'S-SB-22 A

Madras Industrial Investment Corporation. The promoters, directors and their friends will be taking up equity shares worth Rs. 15 lakhs, and the balance of Rs. 20 lakhs is to be offered to the public some time before the end of March. The Industrial Credit and Investment Corporation of India is said to have agreed in principle to give a foreign exchange loan of Rs. 28 lakhs to pay for the imported machinery and capital equipment, subject to the consent of the World Bank. Land for the factory has already been acquired.

High-grade Paper from Afsons Industrial

The well-known paper concern of Abdullabhai Fidaalli and Company, Bombay, is setting up a plant in Khopoli, an industrial suburb of Bombay, for manufacturing high-grade writing and printing paper required for special purposes. The private firm of Afsons Industrial Corporation is being converted into a public company with an authorised capital of Rs. 1 crore to undertake the new project. It has secured an industrial licence to establish a pulp and paper plant with an annual production capacity of 2,400 tons. Besides, it has acquired land in Khopoli where transport facilities, water and electricity are readily available. It has already acquired a "Fourdiner" paper plant which has been transported to the site. The plant is expected to go into production by the end of the current year. It will initially use waste paper, and hosiery and textile cuttings, as raw materials. Large supplies of these are available in the Bombay region. The Company is entering into a technical assistance agreement with G. Williams Co. Private Ltd. It is claimed that when the pulp plant goes into operation under the expansion programme, the Company will perhaps be the first to have an entirely self-sufficient plant with its pulp unit in the small and the medium-sized industry. The large-scale units in India do not manufacture enough of high-grade writing and printing papers. The Company, it is learnt, will initially have an issued capital of Rs. 25 lakhs. An application has been made to the Controller of Capital Issues.

Rayon Exports and Pulp Imports

Exports of rayon fabrics from India in 1960 rose to 345,000 yards from 173,000 yards in 1959. In spite of the 100 percent increase in volume, export earnings were down from Rs. 3.73 crores to Rs. 3.53 crores. This gives an average price of about Re. 1 a yard, against about Rs. 2 a yard in 1959. Prices were apparently inflated out of all proportion in the previous year with a view to securing large supplies of rayon yarn under the export incentive scheme. The past year began well, with exports in January 1960 valued at Rs. 31.78 lakhs. After a slight decline in February, exports picked up substantially in April, when shipments recorded a high of Rs. 51.11 lakhs. The trend kept fairly steady until about the end of September, but exports declined sharply in November and December to Rs. 9.27 lakhs and Rs. 12.33 lakhs, respectively, mainly because of the higher standards set for exportable goods. In November, the products of about 40 mills were said to have been rejected during pre-shipment inspection. This shows the need for improving the standard of the fabrics which are offered for export.

The objective of quality control, manufacturers say, is laudable. But these measures should be evolved only after taking into consideration the type of machinery and equipment employed in the industry and the quality of yarn available. The human factor in the inspection of goods is also important because there have been occasions when the rejected goods have been passed for shipment on being reoffered. Apart from quality, another factor which has created instability in the rayon export trade is that prices are changed too frequently, according to the premium quoted for yarn in the Bombay market. By taking rayon goods worth Rs. 86.87 lakhs, Afghanistan was India's best customer in 1960, followed by Ceylon, Singapore, Iran and the Sudan (with their respective shares at Rs. 41.84 lakhs, Rs. 35.03 lakhs, Rs. 27.69 lakhs and Rs. 26.97 lakhs). Aden imported rayon goods worth Rs. 23.20 lakhs, Burma Rs. 21.88 lakhs, Malaya Rs. 13.63 lakhs and Mauritius Rs. 10.91 lakhs.

Faced with the prospect of a fall in production following the 10 percent cut in the import quota for rayon pulp, the industry has suggested to the Government that the exporting weaving units be asked to use some percentage of their entitlement for the import of rayon pulp which could be sold to spinners. The value of rayon pulp is about 25 percent of that of rayon yarn, so more yarn will be available for a fixed amount of foreign exchange. This will help feed the new units as well as provide for the expansion of existing units. Reliable reports indicate that the Government is inclined to accept the suggestion. The export promotion council is being asked to consider the basis on which pulp may be offered to spinners, as well as how weavers may procure yarn from the latter. It is likely that new units wishing to undertake the manufacture of rayon yarn will be asked to give export guarantees.

Groundnut Export Quotas

The Government of India has recently announced export quotas for groundnut expellers and groundnut H.P.S. The quantity in each case is 20,000 tons. The shipment period is up to the end of June for expellers, while the H.P.S. quota is valid up to the end of the current year. Hitherto, only established shippers were allowed to export these items, but this time exports will be allowed to all if they produce firm sale contracts in the form of cabled offers and cabled acceptances on a first-come-first-served basis. In order to ensure the execution of contracts, shippers have been asked to furnish bank guarantees equal to 10 percent of the f.o.b. value for H.P.S. groundnut and 5 percent of the f.o.b. value for groundnut expellers. An individual ceiling of 500 tons has been fixed for groundnut cake.

The market's reaction to the export quota announcement has been mixed. It criticises the Government's policy because of its likely repercussions on groundnut prices, which are already too high. In view of the precarious balance between demand and supply, even marginal exports are likely to have a pronounced effect on prices. For example, the price of Saurashtra bold quality rose by about Rs. 1.50 a 50 kilos to about Rs. 50.50 within a day of the quota announcement. Groundnut oil ready rose from Rs. 20.10 to Rs. 20.45 a 10 kilos. The rise in prices has brought futures trading to a virtual standstill. The February contract reached the ceiling rate of Rs. 220 a 250 kilos a fortnight ago, and the May contract too is now quoted very near the ceiling. So it is evident that export quotas go ill with the Government's anxiety to keep prices under check. But in view of the difficult foreign exchange position, exports need to be stimulated even at the cost of domestic consumption and higher internal prices, official circles say.

The export trade is naturally pleased with the quotas; but not so the established shippers. The policy of first-come-first-served, it is argued, will place overseas buyers in a better bargaining position. Their immediate reaction to the export quota announcement has been a reduction in their quotations. The U.K. quotation for Indian groundnut expellers, 54 percent, has declined from £33 10s to about £31 10s a ton, February shipment. Domestic prices, on the other hand, have risen by about Rs. 15 a ton. Considering the current high price of soyabean meal, Indian exporters could realise much higher prices only if they could afford to wait for some time. This is not possible under the first-come-first-served policy. The Government is aware of this handicap, but it is anxious to push exports anyhow. On the basis of the current prices for groundnut H.P.S. in the U.K., Indian H.P.S. is said to be about £1 or £2 a ton out of parity. But the trend of overseas demand—particularly from Japan and Hongkong—is said to be fairly encouraging. Few shippers seem to have any doubt that export quotas for both expellers and H.P.S. will be exhausted within a few weeks. The export business in groundnut expellers has been at a standstill for a long time due to the lack of quotas. As for groundnut H.P.S., the quota released in December was used within a fortnight.

Statutory Reinsurance Corporation

The report that the Indian Government is thinking of creating a statutory reinsurance corporation, to which 25 percent of all the general insurance business in the country will have to be compulsorily ceded, has created a stir. There are already two professional reinsurers. One is the India Reinsurance Corporation, a body having general insurance companies as its member-shareholders. The promoters' agreement for the Corporation stipulates that an agreed percentage of business will be ceded to the I. R. C. compulsorily. The cessions vary from 10 percent to 5 percent. The second, Indian Guarantee, is a reinsurance corporation in the public sector. It is fully owned by the Life Insurance Corporation, although during the company régime it was a subsidiary of the Oriental Fire and General Insurance Co. Ltd.

Indian Guarantee has been trying for some months to get compulsory cessions from general insurance companies like the I. R. C. does. In this, it has had the support and backing of Government officials. Indian Guarantee has not, however, been able to make much headway. The reason is obvious. Being member-shareholders, the companies have a stake in the future of the I. R. C., as they share in the profits and dividends. They have no such stake in the Indian Guarantee. They are quite willing to exchange business with it, provided the terms and conditions are mutually satisfactory. But the Indian Guarantee considers the preferential weightage in favour of the I. R. C. a handicap for its own growth. Against this background, the report that a statutory corporation might be set up has created confusion. If the intention of the Government had been to promote the interests of the Indian Guarantee with 25 percent compulsory cessions, it might have been partly understandable. But if the idea is to create a new statutory corporation, it will harm both the Indian Guarantee and the I. R. C.

A compulsory cession of 25 percent or more would be nothing new. The Pakistan Insurance Corporation, which is a statutory body, takes 30 percent. Similar corporations function in many other countries. The idea is to conserve within the country as much of the reinsurance premiums as is consistent with safety. The fact that the Pakistan Insurance Corporation takes 30 percent does not, however, mean that it retains the whole sum. The P. I. C. has its own reinsurance and retrocession arrangements. Likewise, the body proposed in India will have to have its own reinsurance and retrocession treaties. It is, however, wrong in principle to take compulsorily by law a certain share of the general insurance business of the companies functioning in the private sector. Reinsurance is a sensitive business, based on careful calculation. No exchange is arranged unless it is satisfactory for both sides. Compulsory cession will undermine initiative and affect the revenue account of the companies.

Manufacturing Precision Instruments

A site near Izatnagar, a growing satellite town near Bareilly, has been provisionally selected by the U.P. Government for a factory to manufacture precision instruments. The project is being sponsored by the Government of India, which has decided to establish it with Russian collaboration. Electrical, electronic and mechanical instruments will be manufactured in the factory. It is estimated that when all the stages of the scheme are completed, the factory will have a turnover of about Rs. 20 crores. The Working Group on Electrical Engineering, set up by the Heavy Industries Committee of the U.P. Government, said that although it is not easy to obtain figures on imports of electronic goods, the item "electrical goods and apparatus other than machinery" shown in the Statistical Abstract may contain up to 50 percent of electronic equipment. The value of imports for this item is about Rs. 1.15 crores from the dollar area, Rs. 10.22 crores from the sterling area and a little over Rs. 4 crores from other areas. If the value of radio valves and other components amounting to Rs. 2 crores is added, the total expenditure on such items comes to Rs. 10 crores a year. This figure may not be far wrong considering that the Planning Commission expected Bharat Electronics Ltd to produce up to Rs. 4.4 crores worth of equipment a year, mostly for the Central Defence Ministry and some other Government departments.

Bharat Electronics Ltd has no plant to manufacture transistors, so it is likely that the Izatnagar factory will undertake their manufacture. The fact that India still lags behind in the manufacture of thermionic valves is a strong argument in favour of the manufacture of transistors. The present negligible imports of the latter are not a reliable guide for future consumption, but it is expected that their use will increase greatly with the development of rural receivers. Emphasising the rôle of electronic instruments, the Heavy Industries Committee said: "Besides serving the long-range interests of planning, an electronic industry will immediately serve the needs of the country for equipment which is required in our rapidly growing universities and colleges, research institutes and Government departments such as All India Radio, Posts and Telegraphs department, civil aviation, etcetera. It is particularly important to note that scientific research which forms the basis on which our methods of production are introduced in industry, and the basis on which production from land is ultimately enhanced, is now increasingly using electronic techniques of investigation."

River Transport on the Ganga

A survey party is examining the course and the depth of the Ganga between Allahabad and Benares with a view to starting a heavy boat service between Patna and Allahabad. This has revived the old question of developing transport facilities on India's navigable rivers. The muddle in transporting coal from the coalfields in West Bengal and Bihar to Uttar Pradesh and Punjab appears to be the immediate reason for the survey activity on the Ganga. From 1834 onwards, regular monthly services were operated by the East India Company to transport goods between Calcutta and its trading stations on the Ganga, Jamuna and Gogra. Steamers regularly called at Agra, Allahabad and Ajodhya in U.P.—towns about 1,200

miles away by river from Calcutta. In 1844, the Indian General Steam Navigation Company established a passenger and goods service between Calcutta, Patna and Allahabad. But river transport suffered a decline when, in Bihar and U.P., railways were built along both sides of the Ganga. Ton for ton, railway transport was costlier than water transport, but the speed of the railways was a counter-attraction. Another reason for the decay of river transport was the expansion of irrigation facilities which diverted water from the Ganga. The deterioration of channels brought about unfavourable conditions for operating regular steamship services. If navigation on the Ganga is to be revived, the river will require dredging at several places. Only during the rainy season is no dredging needed.

U.P. Bill on Sugarcane Tax

The U.P. Government has decided to impose a tax on the purchase of cane by sugar mills in the State. The decision to introduce the purchase tax has been necessitated by the invalidation of the U.P. Cane Cess Act by the Supreme Court. A Bill is to be introduced in the forthcoming sesion of the U.P. Legislature, and the taxing clause will have retrospective effect. The Supreme Court invalidated the Cess Act on the ground that it was beyond the scope of the State Legislature, and only the Central Government was entitled to levy the cess. The invalidation of the Act, it was estimated, would cause a loss of Rs. 5 crores a year to State revenues. The U.P. Government earlier suggested to the Centre to take some steps to validate the original Act. But it was finally decided that the State Government should enforce a purchase tax and then get it approved by the Government of India.

Less Ships Being Built

Lloyd's Register of Shipping, reviewing the quarter ended December 1960, reflects the fact that the four-year-old shipping slump has not yet ended. Steamships and motorships under construction in Britain at the end of the fourth quarter of last year totalled 258 ships of 1.7 million gross tons—a decline of about 59,655 tons compared with the previous quarter, and the lowest figure since June 1946. The highest postwar figure, Lloyd's Register says, was 2.3 million tons at the end of 1957. It adds that the output is usually measured by tonnage launched from the shipyards, and a high figure in the fourth quarter of 1960 brought the total for the year to about 1.3 million tons, which is only slightly below the previous year's level. The high figure enabled Britain to maintain second place—after Japan—among the shipbuilding countries. But the output this year is likely to be much lower, judging from the figures for the construction of tonnage on which work has already commenced. Lloyd's Register shows that during the past year, only 939,000 tons were commenced, against 1.1 million tons in 1959, 1.3 million tons in 1958 and 1.6 million tons in 1957. There was a similar decline in shipbuilding activity in other countries: steamships and motorships under construction at the end of the fourth quarter totalled 1,140 ships of 6,972,894 gross tons—a fall of 84,679 tons compared with the previous quarter. Germany, Sweden, France, Norway and Yugoslavia showed a rise in output, while Japan, Italy, Netherlands, Spain, the U.S.A., Poland, Belgium, Canada, Finland and Australia showed a fall. Referring to the world shipbuilding industry, Lloyd's Register says that 1,393 steamships and motorships of 8.7 million gross tons are now under construction, of which 19.5 percent are being built in Britain and Northern Ireland. The total is 144,334 tons less than in the previous quarter.

Industrial Exhibition in Madras

The Southern India Chamber of Commerce has commemorated its golden jubilee by arranging an exhibition in Madras. It displays the products of various local enterprises, ranging from cars to confectionery. The growth of electric consumption in the State has been a subject of much publicity, and it is attributed to the rise in the production of motors and appliances. Machine tools are displayed at the exhibition, and the small tools on view include fire-fighting equipment. It is claimed that some of the Madras equipment is now being used in Malaya. Besides, Perkins engines made by Simpsons are being increasingly used in road-rollers and lorries in the State. Apart from industrial equipment, consumer goods are also displayed. The Chamber has organised the exhibition mainly to show that, in the postwar period, many industries in Madras have grown rapidly.

Health Insurance in Madras

The employees' health insurance scheme, it is reported, is to be extended to Cauvery Nagar, Trichinopoly and Ranipet in Madras. It is proposed to open dispensaries to treat all sick insured workmen. The scheme is already in force in the cotton mill areas of the State. At present, about 196,000 workers are eligible for benefits under the health insurance scheme and it applies to 883 factories in Madras. Unimportant centres are served by mobile dispensaries. It is claimed that due to the vigilance of State insurance authorities, there has been a prompt discovery of occupational diseases and quicker treatment of tubercular patients. Workers in the plantation industry, however, enjoyed medical benefits before the employees' State insurance scheme was initiated in 1948, since planters provided doctors and medicines to sick patients on their estates. An official report has recently stated that big estates keep a lien on beds in Government hospitals and that plantations get Government approval for their health schemes, which provide for 14 days' sickness allowance at two-thirds wages. In 1958-59, many privately-owned estates as well as public companies got their medical benefit schemes approved by the State Government. The latter's Inspectors of Plantations have been kept busy by the rules in force, since estates now have to get even the water supply certified by a health officer.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- *Industrial Associations* and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

MEMORIAL TO QUEEN VICTORIA

WE are glad to learn that steps are being taken to prepare a requisition to the Sheriff to convene a public meeting at an early date to afford the citizens of Calcutta a public opportunity of expressing their sorrow at the death of Her late Majesty Queen Victoria, Empress of India, and of conveying a message of condolence to His Most Gracious Majesty King Edward VII, Emperor of India, and the members of the Royal Family; together with an expression of loyalty and allegiance to His Majesty on his accession to the Throne. We hope that the opportunity will be taken to determine the most appropriate form of memorial that should be raised in Calcutta to perpetuate the memory of our late Beloved Sovereign. We regard this as a fitting occasion to obtain for Calcutta a lasting memorial to recall to the mind of future generations the great and glorious reign of Queen Victoria. It should be one to which all sections of the community can unreservedly subscribe, and in which they can have a personal interest. No limit should be placed upon the amount of subscriptions to ensure for the metropolis the possession of a suitable work of art; yet no one need feel backward in contributing according to his means, and, we would hope, that in addition to the substantial sums that the Chiefs of India, the landed proprietors of Bengal, and the merchants of Calcutta will no doubt subscribe, arrangements will be made to gather the smaller subscriptions of those who cannot afford more, and who desire to contribute towards this national memorial. Whatever is done, however, should be done quickly.

A Ditcher's Diary

THOSE ACQUAINTED WITH VINTAGE SCIENCE FICTION will not find it strange that of late I have taken to it for my sadly limited leisure reading. On the lines of Mr. Nehru's "positive neutrality", I have coined for science fiction the term "positive escapism"; and the possibilities are infinite. In the *Sunday Statesman* Mr. Lindsay Emmerson has been having great fun with his Fatso and Ernie going back to centuries past and "fixing", or rather "unfixing", things that are history. Sorties into the future can be as fascinating; and you do not have to know all that much fact. In this Tagore centenary year I have been trying to learn one or two things about the Calcutta of 1861 in which Tagore was born. My tentative findings resemble my vision of the Calcutta of 2061; and this, I must add, I discovered before the World Bank team came out with its horrorscope (here is a new word for you coined by my typewriter) of Calcutta. Long before 2061 the Tallah tank had disappeared; and the Hooghly had just about dried up. Most Central Government offices had, of course, been transferred to other places where there is more room for proliferation; and the jute industry was remembered only in terms of indigo. Had the third plan been completed by 2061? Well, yes—after some "pruning". What about the new income-tax offices, under construction—no, under active construction—for years on Bentinck Street? Towards the end of the twentieth century they were completed, after taxes had been raised many times; but the building soon fell down; and the citizens of Calcutta in 2061 remember it only vaguely in the way the French remember their Bastille. The Companies Act had buried the managing agencies long ago; and public corporations had multiplied and rusticated. Parking problems had improved tremendously; those few people who could still afford cars to come to what used to be Clive Street left them in Tollygunge and walked the rest.

SPEAKING AS A JOURNALIST, THE MAIN OBJECTION I can see to the present moves to concentrate newspaper and magazine ownership in the U.K. is that employment opportunities are thereby limited. Jobs may not actually decline in number; if the financial strength of the papers concerned is improved, they could in fact increase. But when the number of owners is small, so are the chances of finding a new boss to work for, and in a profession where controversy and independent views are the very breath of life, this is important How, for instance, can I tell Mr. Thomson what he can do with his editorial policy if the only other newspapers I can move to are owned by him as well? I know Mr. Thomson, as distinct from Lord Beaverbrook, does not interfere in his papers' editorial affairs, but there is nothing to stop him when he wants to, and the temptation must sometimes be strong. In the old days, the vitality and independence of the journalistic profession was upheld just because a man who got under the skin of one proprietor could usually slip across the street to his rival and be taken on, often at an enhanced salary, to expound the same set of opinions he had just been sacked for. If this kind of freedom is lost—and its existence has always been one of the great consolations among newspaper men for the relatively low pay and insecurity of their profession—then the quality of British journalism is bound to suffer. The sparkle of controversy will be lost and dull platitude will replace independent judgment. The prospect is bleak indeed. But I see that another bid, this time from an "independent" source, has been made for Odhams, so there is a chance after all of keeping this desirable piece of estate out of either the Thomson or the Mirror and Pictorial empires. I hope it succeeds; it has the backing of the *New Daily*, I understand, which may lack the dazzle of the larger popular papers, but is at least free of combines and trade union influence. The Press in the U.K. is becoming the victim of consolidation and rationalisation at a truly alarming pace, and it would be a blessing if the trend could be stopped. A free Press has an indispensable part to play in a democracy and it should be preserved from the depredations of both the Mr. Thomsons of this world and the Mrs. Bandaranaikes.

RECENT CONVOCATION ADDRESSES IN CALCUTTA AND elsewhere have not been notably original; but I cannot blame the speakers *qua* speakers and some, like Mr. G. L. Mehta, who gave this year's address, have shown both originality and a commendable and rare literacy. Where most cannot escape blame is that they have helped shape the system of education which they now flog with such glee. Two things, *I* suggest, went wrong. One, the population has been growing at an alarming rate; and this could not help being reflected in the universities and colleges; the effect on the quality of education was bound to be disastrous. There must be fewer students per teacher; and this will not be possible until there are fewer babies in maternity homes and nurseries. The second thing that went wrong was that—partly, but not wholly, because of the inflation in numbers—most teachers lost their integrity and became uninterested in teaching. Until a few brief years ago one of the most striking aspects of most Indians' conversation was the respect, and personal regard, in which they held their teachers at school and college. I hear much less of this now. More frequent is the Gibbonesque stance that they owe nothing to their *alma mater*. It is no secret that universities are mere waiting-rooms where students languish before securing some precarious employment; and nobody dares keep them out of universities for the terrible law-and-order problem they will create. I did not entirely agree with Mr. Neil McInnes when he argued in the last annual supplement to *Capital* that primary education in India was a total waste of time and resources; I think there are strong economic arguments in favour of mass education. But I can see the circumstances which have led Mr. McInnes, and not him alone, to the point of desperation.

MUCH OF INDIAN AND AMERICAN ECONOMIC literature, to my mind, has one failing in common; the unending resort to high-sounding technical jargon to explain propositions which, reduced to basic English, would invariably gain in both accuracy and clarity. I appreciate that the use of technicalities in economics is often essential for summarising concepts and definitions which should have been explained adequately in earlier reading. But it is nevertheless irritating to have to cope with long essays loaded with such statements as "the income-elasticity of demand for necessities tends to approach unity in low-income countries"; a perfectly satisfactory way of saying the same thing would be that in poor countries, most of the extra income people earn is spent on essentials like food and clothing, rather than on comparatively inessential goods like refrigerators and motor-cars. The point struck me recently while reading an excellent book on *Industrial Development* by Murray D. Bryce, published by McGraw-Hill. This Canadian economist's work is not only a model of simplicity and clarity in development literature, it is also a highly practical and down-to-earth guide for industrialists appraising projects in under-developed countries. Mr. Bryce starts with the important point that entrepreneurs often fail to get the resources they want, not because the money as such is lacking, but because they prepare their investment proposals in a slipshod manner; and this is the more significant coming, as it does, from an economist who has worked with the World Bank for some years. The book explains in considerable detail how project reports and investment proposals should be presented—and how they are likely to be judged by the international financial institutions which are nowadays becoming increasingly important suppliers of development capital. I do not imagine that entrepreneurs everywhere will be able to follow the advice given to the last detail; the author's assumptions concerning the market research possible in under-developed countries, for instance, seem somewhat exaggerated. But the book, taken as a whole, is perhaps the best exposition I have yet seen of the factors which private industry in countries like India should take note of when launching industrial projects and inviting people to contribute to them.

STEALING AN OCEAN LINER, WITH ITS SEVERAL hundred passengers and crew, to advertise a forthcoming political attraction, is the kind of publicity gimmick which must have taken even Hollywood's breath away. It could surely only happen in central or south America, where it is reassuring to find that colourful characters can still survive in this increasingly mundane world and remain defiantly capable of monumentally outrageous deeds. The one depressing feature of the whole thing was that, such being the preoccupation of mankind these days, so many people hastened to take political sides instead of just sitting back and enjoying the spectacle for what it was worth. Sometimes I wonder if the complete loss of man's sense of humour and proportions is not the price we are paying for our current obsession with politics. It was in the fitness of things that it took so long for the U.S. Navy to find the *Santa Maria* (even the name seems to be straight out of Rafael Sabatini) but it did leave me wondering how much longer they would have taken if she had been a submarine. I was under the impression that modern U.S. detection devices are so sensitive they can warn of the approach of a missile a few seconds after it has left its launching pad in the middle of Siberia. But apparently they cannot find a 20,000-ton liner sailing within a few hundred miles of their own coast line. I am beginning to see what the advocates of atomic submarines are talking about.

THE CALCUTTA MONEY MARKET

FURTHER SHARP RISE IN ADVANCES

Wednesday, 1st February.

THERE has been a further sharp rise in the advances outstanding in the Calcutta money market. All the main sources of demand have *increased their requirements* during the past week. Conditions in the interbank market remain extremely tight, and it is reported that there are few offers at the unchanged call rate of 5½ percent.

The improvement which took place during the previous week in the exchange market has continued during the past few days. An increased supply of both tea and gunny bills has been noted. Remittance demand has remained poor. On the London money market, the pound was slightly easier towards the close, when quotations mostly showed fractional losses against the more important world currencies. A few stray gains were, however, recorded.

AFTER BEING STEADY EARLIER IN THE PAST WEEK, bullion prices reacted at the close on profit-taking. Silver was quoted at Rs. 235.32. The price was 79-5/8d in London and 91.375 cents in New York.

Gold realised Rs. 143.25, but there was no sign of any pressure.

DURING THE WEEK ENDED 27TH JANUARY, GOVERNment of India Treasury bills for Rs. 61,18,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 31st January. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.350 and above were accepted in full, the average rate of acceptance being Rs. 2.585 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 6th February.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 1st February to 4th February at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 25th January to 28th January, amounted to Rs. 5,00,000.

A FALL OF Rs. 5.38 CRORES TO Rs. 1,909.49 CRORES in active notes was shown by the return of the Reserve Bank of India for the week ended 27th January, 1961, but the total note issue rose fractionally by Rs. 40 lakhs to Rs. 1,932.38 crores. Notes held in the Banking Department consequently rose by Rs. 5.78 crores to Rs. 22.89 crores. Deposits of the Central Government increased by Rs. 2.94 crores to Rs. 53.05 crores, while other Government accounts fell by Rs. 10.46 crores to Rs. 31.93 crores. Balances of commercial banks at Rs. 78.27 crores showed a gain of Rs. 1.56 crores. Balances held abroad improved by Rs. 24 lakhs to Rs. 19.66 crores. Investments at Rs. 252.89 crores showed a rise of Rs. 44 lakhs. Other loans and advances rose from Rs. 138.46 crores to Rs. 140.28 crores, of which advances to scheduled banks against usance bills amounted to Rs. 18.81 crores (Rs. 17.16 crores). Ways and means advances stood at Rs. 36 crores, against Rs. 40.59 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 20th January, 1961, shows a drop of Rs. 15.86 crores to Rs. 550.01 crores in total deposits. Investments in Government securities are down by Rs. 19.40 crores to Rs. 267.60 crores, while other authorised investments are up by Rs. 6 lakhs to Rs. 10.24 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 16 lakhs to Rs. 247.96 crores. Cash and balances are, in consequence, shown at Rs. 30.73 crores or Rs. 9.75 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 20th January, 1961, shows Demand and Time liabilities at Rs. 789.76 crores (Rs. 17.08 crores on account of borrowings from banks) and Rs. 1,098.23 crores (Rs. 9.38 crores), compared with Rs. 787.73 crores (Rs. 14.90 crores) and Rs. 1,104.88 crores (Rs. 9.72 crores), respectively, in the previous week. Cash has increased by Rs. 41 lakhs to Rs. 43.44 crores, while balances with the Reserve Bank have declined by Rs. 83 lakhs to Rs. 77.12 crores. There is a drop of Rs. 18.55 crores to Rs. 606.46 crores in investments. Advances and bills discounted at Rs. 1,212.87 crores show a rise of Rs. 3.95 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.4 percent and 64.2 percent, against 6.4 percent and 64.2 percent.

THE PROFIT OF THE PUNJAB NATIONAL BANK LTD for the year 1960 amounts to Rs. 1.21 crores (including Rs. 3.19 lakhs brought in), against Rs. 88.69 lakhs (including Rs. 4.49 lakhs brought in) during the previous year. A taxable interim dividend of Re. 1 a share was paid before. The directors have recommended a taxable final dividend of Re. 1 a share, making 20 percent for the year. Taxation absorbs Rs. 53 lakhs, reserve fund Rs. 11 lakhs and bonus to staff Rs. 27 lakhs. A balance of Rs. 4.18 lakhs is carried forward.

THE DIRECTORS OF THE HONGKONG AND SHANGHAI Banking Corporation have announced that the group profits, which include the Mercantile Bank and the British Bank of the Middle East, for the year 1960, amount to $(H) 42,190,060 (£2,636,879). A final dividend of £2 10s a share has been declared, and the reserve increased to £15 million. It is proposed to recommend to an extraordinary general meeting that the existing shares of $(H) 125 be subdivided into five shares of $(H) 25 each.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 3-2-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
3-2-61	4-5-61	2,00,00	Rs. 2.585%

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

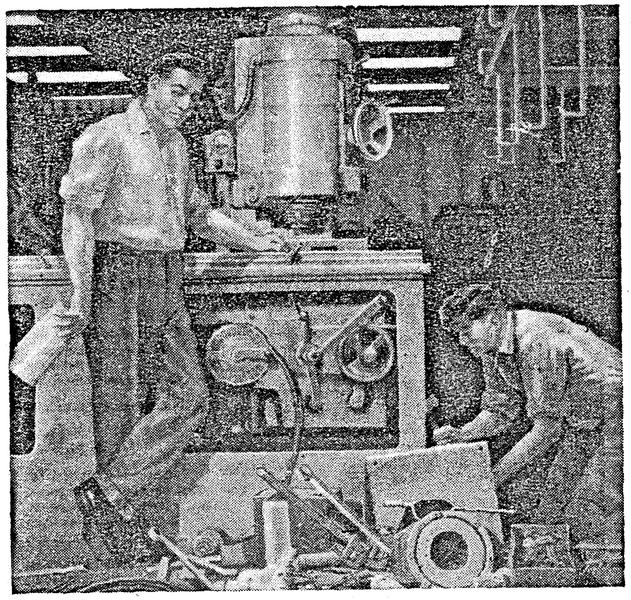
Amongst the Banks in India the UNITED BANK is in the van of mechanization.

A SYMBOL OF SERVICE

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

UP-30-59



His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen —a Caltex Lubrication Survey could have spotted the trouble—solved the problem.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CALTEX PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

Stocks and Shares

RETENTION PRICE SPECULATION KEEPS INDIAN IRON ACTIVE

MORE INTEREST IN PREFERENCE AND BANK SHARES

Wednesday Evening.

THE feature of the Calcutta stock market during the past week has been the concentration of activity on one main share—Indian Iron. Business in other scrip has been negligible, with prices slowly edging up or down in fractions. Indian Iron have been active because operators are sharply divided in their assessments of two points: (1) has or has not the retention price of steel been increased "provisionally" by Rs. 25 a ton, as reported by one newspaper a fortnight ago; and (2) if it has, does the increase mean anything in terms of improving the profits of the steel companies?

The answers to both questions should, in the opinion of many, have proved fairly simple. Only last week were outlined here the reasons for believing that the retention price of steel has not been increased, and even if it has been, it cannot raise the steel companies' profits appreciably. But doubts persist in the market, because the bulls say that if the original report was incorrect, either the Government or the newspaper concerned would have denied it. Neither has done so. On the contrary, the story is that the newspaper has re-checked the report, and has found no reason to withdraw it. In the circumstances, it is hard to see why the Government itself should be so reluctant to confirm or deny. It has spent a lot of its time confirming and denying other stories of no particular importance; here is one to which a great deal of investment interest attaches. If steel retention prices have been raised, surely the information is important enough not to be vouchsafed to only one newspaper reporter. If they have not been raised, the kite-flying ought to be stopped. In any case, one important point needs to be borne in mind. The steel companies' unit production costs have risen, since transport and raw material shortages are compelling them to work below capacity. Unless the rise in the retention price covers the increase in costs on this account also, the profitability of the companies will suffer.

At today's settlement, Indian Iron eased to Rs. 24.52 on profit-taking, after having touched a high of Rs. 24.84 since the last settlement. The market is by no means bearish in sentiment; it is just that prices rose too fast over the past fortnight. The undertone seems to be optimistic—at least on the point that no direct taxes will be imposed in the forthcoming Budget. Indirect taxes there will be, everybody says—without specifying of what kinds and on what commodities. Some investors are scanning reports about which industries are making the biggest profits; the suspicion is that they will be soaked through taxes on their products or on their raw materials. Others say that the Finance Ministry conforms to no such simple formulae. It is only a sphinx of the inscrutable East who can retain the bonus issue tax while abolishing the excess dividends tax; who can discriminate in fiscal terms against foreign investment while inviting it into the country; and who can reform company taxation, collect more revenue, but then say that the purpose was never to collect the extra revenue at all. It also has a reputation for deliberately confusing the prophets before important decisions are announced; the reputation is serving it well this year in an atmosphere of political rivalry where, otherwise, Budget guesses would very soon be equated with Budget leakages (if proved correct, of course).

Engineering issues have been featureless this past week. So have coals. But bank shares have moved up shyly, since most banking companies have made bigger profits in 1960 than in 1959 and some have paid higher dividends. Investors are happy that banks managed to keep down their deposit rates while they raised their advance rates; the recent stagnation in the volume of bank deposits, however, indicates that depositors may not be quite so happy.

Jute shares are selectively maintained. The industry is very sad about its raw material difficulties, but the Bird-Heilgers group of companies have declared satisfactory dividends. Budge Budge too has paid a dividend. Birla, Howrah and National have risen on interested support.

Among miscellaneous industrials, Associated Battery have paid a final ordinary dividend of 10 percent, taxable. But their third cousins, the electric supply shares, are quiet, because the president of the Federation of Electricity Undertakings has said that electricity companies are not being allowed to earn a fair return these days. Hindustan Motors have risen on hopes that the Company's production will increase; perhaps the talk about other companies' expansion plans has reminded operators that this one also exists. Interested buying is stepping up National Pipes. Ballarpur Paper, an hitherto obscure share, has switched the torchlight to itself by announcing a three-for-two rights issue at par.

As for tea shares, the less said the better, and there is not very much to say either.

An interesting feature is that preference shares are awakening from their long slumber. Many companies have announced extra dividends in terms of the Preference Shares (Regulation of Dividends) Act. This has cheered investors. Still, the small point is being raised as to what will happen to those companies which had already, on the Finance Minister's advice, paid bigger dividends than they are supposed to under the Act. Will they now invite preference shareholders to return a little bit of the money?

Conditions in the money market being tight, gilt-edged are quiet. There are reports that some banks would be glad to mortgage part of their securities to the Reserve Bank, in order to get a little more cash in the till. But the Reserve Bank must already be pretty flush with Government paper; does it, then, expect the banks to sell the securities in the open market?

Bankura-Damoodar Railway

The gross earnings of the Bankura-Damoodar River Railway Co. Ltd have amounted to Rs. 8.05 lakhs for the year ended March 1960, against Rs. 9.12 lakhs in the previous year. A taxable dividend of 1.90 percent has been declared, against 2 percent taxable. After meeting various expenses, there is a deficit of Rs. 6.04 lakhs, which, together with the amount required for the guaranteed interest of 3½ percent on the share capital of Rs. 34 lakhs, calls for a total subsidy of Rs. 7.23 lakhs. After meeting the deficit from the Government subsidy, and after crediting Rs. 12,092 being provision for taxation for previous years no longer required, the net profit is Rs. 1.31 lakhs. Taxation absorbs Rs. 53,550, against Rs. 72,785.

Katakhal-Lala Bazar Railway

The gross earnings of the Katakhal-Lala Bazar Railway Co. Ltd has totalled Rs. 2.13 lakhs for the year ended March 1960, compared with Rs. 1.82 lakhs in the previous year. A dividend of Rs. 3.35 a share, subject to tax, has been declared, against Rs. 4 a share, taxable. After making various adjustments and reserving Rs. 29,048 for taxation, there is a surplus of Rs. 30,005.

Bombay Market

MARKET QUIETER DESPITE RISE IN STEELS

OPERATORS CAUTIOUS ON BUDGET DOUBTS

Wednesday Noon.

THE pause in the Bombay stock market at the close of the past week is understandable, considering that operators were taking time for reflection and consolidation after earlier sharp rises in share prices. Turnover was fairly heavy, but there was a general inclination to keep commitments light. Shortages of credit restrained enthusiasm and Budget uncertainties have already begun to cast their shadows.

Steel shares were boosted on rumours of an early increase in the retention price of steel. Cotton mill shares were supported on reports of improved offtake and it was complacently believed that the Government might encourage more production in the mill sector. Miscellaneous shares were bought discriminatingly on good corporate news. Companies having expansion projects were generally fancied.

Tata Steel closed at Rs. 146.75 and Indian Iron were steady at Rs. 24.64. Engineering shares were quotably higher on increased support. Premier Construction were quoted at Rs. 196 ex-rights and Tata Locomotive were bought up to Rs. 296.50. Business passed in Alcock Ashdown at Rs. 258 and Larsen and Toubro improved to Rs. 37.25. Motor shares were steady, and Premier Automobiles were wanted up to Rs. 168.25 on reports of expansion in production. Hindustan Motors were steady at Rs. 20.20 on support from Calcutta interests.

Cotton mill shares disclosed gains all round. Bombay Dyeing improved to Rs. 61.80, as did Century to Rs. 484. Svadeshi were quoted higher at Rs. 239 and Standard were bought up to Rs. 1,120. Khatau were in demand at Rs. 465 and Tata Mills were transacted at Rs. 42. Kohinoor came to hand at Rs. 278 and India United Ordinaries were done at Rs. 14.60. Apollo were sold down to Rs. 1.54.

Prices of miscellaneous shares fluctuated in pattern with the general trend. Sugar prices increased fractionally on replacement buying. Rela-

AB. 2

pur were transacted at Rs. 306.50 and Walchandnagar Industries changed hands at Rs. 230. Phalton were done at Rs. 151. Mining shares were steady, and business passed in Shivrajpur Syndicate at Rs. 71.50. There was more support for cement shares on prospects of an increased demand for the commodity. Associated Cement were higher at Rs. 151.50 and Digvijay Cement were dealt in at Rs. 149.50. Steamship company shares were quietly steady, and Scindia Steam were done at Rs. 14.36. Great Eastern Shipping were quoted up to Rs. 14.84. Chemical shares met with scattered support, and Tata Chemical improved to Rs. 17.86. Polychem were dealt in at Rs. 220 and Indian Dyestuff were taken at Rs. 440. Voltas improved to Rs 263.50 on replacement buying induced by talk of a higher dividend. National Rayon reacted to Rs. 499 at the close and Bombay Burmah were quoted at Rs. 563.50. Ceat Tyre improved to Rs. 237.50, but Synthetic and Chemicals declined to Rs. 120 on profit-taking. Gwalior Rayon were steady at Rs. 44 and Wimco were wanted up to Rs. 258.

The declaration of higher dividends by some leading banks attracted interest in banking shares at increased prices. Central Bank changed hands at Rs. 56.30 and Bank of India were dealt in at Rs. 117. Insurance shares were quiet, and New India Assurance were available at Rs. 55.50. Vulcan were offered down to Rs. 16.40.

Electric company shares were easier, and sellers predominated. Tata Power declined to Rs 1,018.75, as did Ahmedabad Electric to Rs. 85.50. Bombay Suburban were done at Rs. 84.

Madras Market

TURNOVER IMPROVES IN CLEARING SHARES

SELECTED TEA SCRIP IN DEMAND

Wednesday Noon.

THERE was an appreciable improvement in turnover in the Madras stock market during the past week. Business increased considerably in clearing shares, because operators were inclined to take a mildly optimistic view about the coming Central Budget. Sentiment was helped by the view that the Government would release enough raw cotton for increasing the production of yarn and cloth. Encouraging auction advices helped improve the prices of selected tea shares. Coffee and rubber shares also moved up in sympathy with tea scrip. Miscellaneous shares were selectively bought on reports of expansion and good dividends.

Government securities were quiet in the absence of institutional support. There was evidence of increased support for preference shares because many companies have decided to pay increased dividends under the Preference Dividends Regulation Act.

In the banking group, interest was taken in Canara up to Rs 85 on maintaining the dividend at 15 percent, taxable. Indian Overseas were dealt in up to Rs. 187 and Pandyan came to hand at Rs. 33.

Turnover increased in public utilities, and attention was concentrated on Cochin at Rs. 10.20 and on South Madras at Rs. 9.85. West Coast were indicated at Rs. 13.25 and Vellore up to Rs. 12.90.

Prospects of increased production induced support for sugar shares. United Breweries were transacted at Rs. 95, as were Travancore up to Rs. 10.62. Mysore were placed at Rs. 59.75 and K.C.P. were dealt in at Rs. 27. Deccan came to hand at Rs. 14.80 and Cauvery were done up to Rs. 138.50.

Among planting shares, Blue Mountain were wanted up to Rs. 3.88 because the Company has now obtained permission to issue 1,050,000 shares at Rs. 2.45 a share. Cochin Malabar were transacted up to Rs. 7.60 on paying a taxable interim dividend of 9 percent. Business passed in Consolidated Coffee at Rs. 23.50 and Neelamalai were dealt in at Rs. 4.65 on paying a taxable dividend of 7½ percent. Thirumbadi came to hand at Rs. 1.45 on declaring a taxable dividend of 7 percent. Ouchterlony were placed at Rs. 4.68 and Periakaramalai were in demand up to Rs. 3.56. Kil Kotagiri were steady at Rs. 5.15, as were Lucky Valley at Rs. 13.87. Midland were transacted up to Rs. 11.20 and Mysore Coffee were done at Rs. 5.40. United Nilgiri were placed at Rs. 23.75, as were Waterfall at Rs. 3.35.

In textile shares, Madura were prominent up to Rs. 33.40 on paying a higher taxable dividend of 15 percent, but Loyal were sold down to Rs. 37.50 on passing the dividend. Lakshmi were steady at Rs. 154 and Travancore Rayon were transacted up to Rs. 33.40. South India Viscose were placed at Rs. 150 and Rangavilas were done up to Rs. 40. Bangalore Woollen were quoted at Rs 195.50 and Buckingham were taken at Rs. 195. Kothari were done at Rs. 12 and Mettur were steady at Rs. 369.

In the miscellaneous section, Aluminium Industries were firm up to Rs. 22.60, as were Ashok Leyland at Rs. 8.70. Business passed in India Cement at Rs. 5.89 and Travancore Chemical Manufacturers were bought up to Rs. 15.50 on issuing rights ordinary shares. Panyam Cement were sold down to Rs. 86 on passing the dividend. F.A.C.T. were placed at Rs. 9.75 and Binny were in demand up to Rs. 250. General Papers were wanted up to Rs. 11.06 and Kirloskar Electric were indicated at Rs. 13.12. Parry's Confectionery were steady at Rs. 4.95 and Spencer were firm up to Rs. 22.60 on maintaining the ordinary dividend at 18 percent, taxable. Tube Investment were in demand up to Rs. 291, but United Electricals were offered down to Rs. 9.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

CLEARED SECURITIES

Burrakur-Rs. 18/69—18/78—18/50—18/50—(18/37).
Howrah—Rs. 22/25—22/25—21/94—22/00—(24/00).
National—Rs. 22/25—22/25—21/75—21/75—(31/00).

Ltd—Rs. 1.90 per share, subject to tax; Associated Battery Makers (Eastern) Ltd—10 percent (f), subject to tax; Eastern Investments Ltd—14 p.c. (o), subject to tax; Burdwan-Cutwa Railway Co. Ltd—Rs. 1.90 per share, subject to deduction of tax; Kinnison Jute Mills Co. Ltd—Rs. 5 per share (o) (Int.), subject to tax; Union Jute Co. Ltd—Rs. 5 per share (o) (Int.), subject to tax; Northbrook Jute Co. Ltd—75 nP per share (o) (Int.), subject to tax; Lawrence Jute Co. Ltd—Rs. 7 per share (o) (Int.), subject to tax; Dalhousie Jute Co. Ltd—Re 1 per share (o) (Int.), subject to tax; Auckland Jute Co. Ltd—Rs. 7 per share (o) (Int.), subject to tax; Budge Budge Jute Mills Co. Ltd—Rs. 10 per share (o) (f), subject to tax; Tide Water Oil Co. (India) Ltd—Rs. 2.30 per share (o) (f), subject to tax.

BIHAR AND ORISSA BUY MORE COMET BUSES

More orders for India-built buses are now being received from Bihar and Orissa who are augmenting their fleets of Ashok Leyland Comets. Among recent contracts placed by the Bihar State Road Transport Corporation is an order for 25 Ashok Leyland Comet ECPO.2/1R, 203in. wheelbase passenger chassis to serve the growing transport needs of Bihar. The Bihar State Road Transport Corporation is already operating a fleet of 60 India-built Comet passenger chassis. From Orissa, a repeat order has been received from the Orissa State Transport for 5 ECPO.2/1R bus chassis. A beginning has been made in Orissa to nationalise the passenger road transport system and to build up a sizable fleet. The first order from Orissa was for seven Ashok Leyland Comet buses. They were delivered recently.

PEPPER PRICES FALL DUE TO LACK OF FOREIGN DEMAND

RIVAL PRODUCERS CUT RATES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE absence of foreign demand is now keenly felt in the Indian pepper market. The United States—India's principal buyer—has kept away from the market for some time now because of the availability of pepper from Indonesia and Singapore at lower prices. It is reported that India's rivals have reduced prices by one or one-and-a-half cents a lb. Communist countries have occasionally been placing small orders; but for them, the foreign demand would have been still lower. Meanwhile, prices have declined steeply from the season's peak of Rs. 430 a quintal to Rs. 377 a quintal on the Cochin market. Although it is argued that unless Indian prices are reduced to the world parity, the foreign demand will not rise, stockists in India appear to be reluctant to cut prices substantially. They think that Singapore and Indonesian supplies will soon dry up, so foreign buyers will have to turn to India ultimately to cover their requirements. The proximity of the season in Sarawak is something the Indian shippers will have to take into account when assessing the competitive capacity of Singapore. Bears, however, think that prices will fall further if foreign buyers continue to keep away from the market. Prices are also likely to fall because of the reduced holding capacity of growers and dealers in Kerala which is now experiencing a severe credit squeeze following the failure of the Palai Bank and the granting of moratorium to six other commercial banks. Alleppey and Cochin—the main terminal markets in Kerala—have reported plentiful arrivals of new crop pepper.

Seasonal Demand

The internal demand is reported to be fair at the moment, although the present tempo of the seasonal demand may taper off soon. One has to take into account the comparatively poor offtake by the internal market last year. According to trade circles, the internal market did not absorb more than 5,000 tons in 1960, against 8,000 tons or 9,000 tons in the previous two years. One of the factors responsible for the decline was the keen foreign demand. Exports are believed to have reached the all-time peak of about 20,000 tons in 1960. Last season's crop amounted to 25,000 tons. The carryover to the new season is placed at the nominal figure of about 1,000 tons. The new crop now being marketed will be slightly less than the previous crop, according to some trade sources in Cochin.

Better Prospects for Cashewnuts

Processing interests in Quilon say that the current year holds out better prospects for cashewnuts. Their optimism is based on the following factors: first, the world market for edible nuts is basically strong with prices of almond improving. Cashewnut prices closely follow the trend in almond rates. Secondly, the supply of cashewnuts is likely to be tighter this year. Reports say that African supplies of raw nut will be lower this year because of cyclone and other such natural calamities. A fall of 10,000 tons or 15,000 tons is expected in the African crop now reaching India. It is difficult to make a forecast on the size of the Indian crop. It will, however, be late by two to three weeks this year. Besides, it is doubtful whether it will be large enough to cover the deficit in the African crop.

The cashew processors' syndicate formed some time ago for the collection and distribution of raw nuts on an equitable basis is working satisfactorily in spite of its inherent weaknesses. It has been able to check the unhealthy spiral in raw nut prices, according to some factoryowners in Quilon. The improvement in raw nut prices from Rs. 775 a ton to Rs. 825 a ton (for the best quality of African nuts) since the beginning of the new season is only reasonable, they say. The demand for processed kernels, on the other hand, is expected to maintain steady improvement. Exports last year touched a new peak at 1.7 million cases of 50 lbs each, showing a rise of 200,000 cases over 1959. The U.S.A.—India's largest buyer—took as much as 1.2 million cases, against her previous year's offtake of 1.1 million cases. The Russian offtake was 250,000 cases, which was higher than that in 1959. Both Russia and the United States are expected to take more this year. The former is likely to enter the market in February for her immediate requirements. The Continent, especially East and West Germany, is developing into an important market for cashew kernel. Besides, Indian cashewnuts are getting fresh markets in west and east Asian countries. So the overall position is considered good by exporters.

COCHIN TEA SALES

At Dust Sale 4, 139,000 kilograms of tea were on offer. There was a strong demand, and the market was 10nP to 20nP dearer.

At Sale No. 5, 516,000 kilograms of tea were on offer. There was a good general demand, and the market was fully firm to dearer. Buyers showed more interest in improved quality high-growns.

LONDON INSURANCE LETTER

THE BIGGEST MERGER

THE merging of British insurance companies (unlike that of British industrial companies) has hitherto concerned mainly the smaller units. One of the mergers, of Commercial Union Assurance and North British and Mercantile Insurance, formed a group with total assets exceeding £300 million, but the others have been considerably smaller. It seems, however, that the scale of these operations is now expanding: the offer by Royal Insurance of an exchange of shares with London and Lancashire Insurance involves total assets exceeding £400 million. There are various significant aspects of this move. Royal, on its own, is the biggest composite insurance company based on Britain, as measured by premiums on fire, accident and marine accounts; yet it has realised the need to broaden its operations. London and Lancashire is considerably smaller, its premiums written for 1959 being £35 million, against Royal's £137 million, but it is quite big enough to strengthen the combined undertaking. Neither Company, individually, can maintain a large operating unit in each of the many territories where it does business; and this problem is aggravated by concentration of activities in the U.S.A. According to the latest figures, more than 60 percent of Royal's premium income is derived from the U.S.A.; the proportion for the two Companies together is 55 percent which Royal may regard as safer. (If a company can be said to have memory, both Royal and London and Lancashire must have vivid memories of the San Francisco earthquake, which tested the smaller, and somewhat younger, Company specially severely.)

Another difference between the proposed new group and its main component is the group's larger interest in marine insurance. Even so, on the latest figures, marine business accounts for only 7 percent of the combined total premiums of £172 million. The biggest element is accident business, accounting for 53 percent; the remaining 40 percent being attributable to fire business. In view of the state of accident insurance in the U.S.A., with premium rates keenly competitive and claims high, it is not surprising that both Companies feel the need of financial strength in that country. Another motive for such mergers is, of course, economy in administration. But the directors' statement accompanying the Royal's offer emphasised that the purpose of the proposed arrangement was expansive, not restrictive. "The directors believe that the resources of the two groups can be developed more effectively and fruitfully in association than separately, and are satisfied, therefore, that opportunities and scope will be increased and broadened."

Claims Highest Ever

It seems that 1960 will go on record as a year when international claims on the London insurance market were higher than ever before. Natural calamities were a considerable factor in this experience, but they cannot be blamed particularly. Nor can American claims, although they have again been considerable. There were various adverse developments in the U.K. market in 1960.

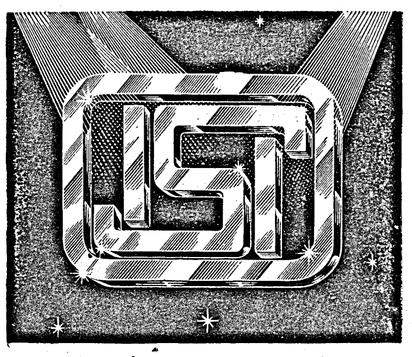
On a world scale, there was no improvement in marine experience, aviation losses were even worse than previously, and accidents on roads continued at a distressingly high rate. As more people and more goods are moved around, the problem of transport grows, and insurers' premium income does not always correspond. On average, about a third of the world's mercantile marine is involved in some kind of mishap each year, in spite of all the efforts of science to devise foolproof navigational aids. When big airliners crash—in spite of efforts to promote safety—the damage is proportionally much more. (The worst disaster, the collision over New York in December, was not as bad financially as at first seemed likely, because both the aircraft involved were substantially self-insured, but even a moderate proportion of total claims amounting to millions of pounds will be considerable.)

At home, the insurance companies are doing all that seems possible to promote fire precautions and to prevent accidents. The British Insurance Association sponsored a dramatic film to convince motorists of the folly of risky driving, and the British Broadcasting Corporation changed its published television programme to accommodate this excellent propaganda before the New Year's Eve celebrations. Premium rates have recently been raised for commercial-vehicle and motor-cycle insurance, in relation to which underwriting experience has been particularly unfavourable. Recent experience in the aviation market, it is thought, makes a rise in premiums for aviation insurance inevitable.

Estimates of Losses

Last year's unprecedented flooding at home revealed—and it was a surprising revelation to insurers—that even in a peaceful climate such as Britain's, individual damage by flood could be as costly as that caused by a serious fire. In the space of a day or two early in December, several factories in South Wales suffered flood damage estimated at not much less—in one case considerably more—than £500,000. But insurers are not the only sufferers from last year's calamities: many industrial companies have realised, too late, that flood insurance is not an unnecessary luxury. Even where companies have made adequate provision for damage by flood, they have not always provided for consequential loss of profits. Provisional estimates suggest that claims for flood damage in the U.K. in 1960 will amount to £6 million or 7 million. The figure is, of course, much less than the cost of fires, but it is considerable, and much more than normal. Fire claims may be about £5 million less than the figure of £44 million for 1959—the highest on record; even so, the figure for the U.K. alone will be very high by comparison with figures around £25 million that were normal for many years before 1959. The figures refer to direct losses: consequential losses add about 40 percent to the total of claims.

In spite of some improvement in Canadian experience, fire business in North America has yielded unsatisfactory results, as in the U.S.A. more damage was caused by fire in 1960 than ever before. Earthquakes, particularly in North Africa and Chile, and hurricanes, particularly the ambient "Donna", have added substantially to the toll of losses; and even a single film, *Cleopatra*, could involve a (disputed) claim as large as $5½ million. It may be mentioned, for the sake of comparison, that the figure for *Cleopatra* is roughly a third of the estimate of the exceptional damage by flood in the U.K. last year.



This is the Mark of QUALITY!

The ISI certification mark guarantees quality of products, ensures consumer satisfaction and increases sales appeal.

It is given to consumer and industrial articles manufactured to relevant Indian standards. ISI, the national standards body of India, keeps a constant vigil to safeguard the integrity of the mark.

TAKE-OVER BIDS DOMINATE MARKET INTEREST

GOLD SHARES EASE AFTER U.S. PRESIDENTIAL SPEECH

London, 1st February.

THE stock market during the past week was dominated by take-over proposals involving a number of prominent industrial groups as well as major newspaper interests. Industrial shares in general moved uneasily and finished a little lower on balance. President Kennedy's "State of the Union" message came late in the period and its only noticeable effect was on gold shares. Prices there were marked down to a modest extent on the President's pledge to maintain the value of the dollar and hold the U.S. gold price at $35 an ounce. Short and medium-dated gilt-edged securities attracted small investment demand and moved to slightly better levels, but the long and undated stocks lacked interest and tended easier. War Loan 3½ percents reached a new all-time low. Foreign bonds advanced, with a revival of interest in East European issues on hopes of an improvement in the international situation. Greek bonds encountered a certain amount of speculative buying. Dollar stocks advanced in response to Wall Street's enthusiastic reception to President Kennedy's message. Oil shares recorded some sharp gains under U.S. influence. Tea shares remained subdued throughout.

The Money Market

The credit situation in the money market during the early stages of the past week was disturbed by the heavy seasonal tax payments and by the rapid circulation through the market of the U.S. payment for the shares of U.K. Ford Motor. At first, there was an acute shortage of funds and it was necessary to borrow a fair amount at Bank rate terms. The rate for day-to-day loans during the very tight period ruled firm at 4½ percent and 4⅝ percent. But, towards the end, conditions improved and the market was able to fulfil its obligations on better terms, with the rate easing to 4⅛ percent. Later, afternoon balances were obtained at even 3 percent. There was a fair demand for bills, with April and "hots" sold to the clearing banks at 4⅛ percent and to outside banks at 4⅛ percent prior to last Friday's tender. Later, the same bills were sold at the general rate of 4⅛ percent.

Activity on Wall Street

High-grade corporate issues held the spotlight in bond dealings on Wall Street during the past week. They extended their recent rise, with any utility and industrial scrip selling at their best levels for more than a year. The forward movement reflected an active demand from institutional and other investors for the limited supplies available. The number of new issues in the market was relatively small. Activity in U.S. Government obligations centred on the short end of the list, where prices moved higher. Intermediate and long-term issues backed and filled narrowly in quiet dealings, with traders on the sidelines pending some clarification of the fiscal policies of the new U.S. Administration. In the foreign division, the recently depressed Belgium Congo 5¼ percents scored a four-point gain, with Republic of Cuba 4½ percents higher by over two points. Greeks were firm, with the 7 percents adding a couple of points. French Credit Fonciers were shaded fractionally, but German Nationals and Italians were little changed. Australians were mixed and Union of South Africa mostly higher by fractions. Rhodesia 5¾ percents fell a full point.

Vegetable Oils Quiet

The demand for oilseeds in general was again on the quiet side, but there were signs of an improvement in the enquiry for linseed. The demand for castorseed was poor, but offers from the origin were by no means liberal and prices were steady. Supplies of spot linseed oil in the U.K. were tight and prices made further advances. Groundnut oil showed little change. Enquiries for Indian castor oil remained almost in abeyance and the only business reported was for occasional amounts on spot and for early delivery, mostly at easier rates.

NAMES AND DATES

Mr. J. E. Trainer, executive vice-president and a director of the Firestone Tire and Rubber Company of the U.S.A., arrived in Bombay on 31st January, 1961.

Mr. S. P. Chambers, chairman of Imperial Chemical Industries Ltd, has arrived in Calcutta on the first stage of a tour of offices and factories of the I.C.I. subsidiaries in India.

AIR-INDIA INAUGURATES BOMBAY-TOKYO BOEING FLIGHT

A *Boeing* 707 "intercontinental jet" of Air-India International left Bombay on 25th January, 1961, on its first inaugural flight to Tokyo. It will bring Tokyo within 14 hours of Bombay and will operate every week *via* Calcutta, Bangkok and Hongkong. On board the inaugural flight were Government officials, Members of Parliament and other guests. Air-India's first *Super Constellation* service to Far East was inaugurated in July 1954, linking Bombay and Calcutta with Bangkok and Hongkong. The ...yo in May 1955.

New Delhi

EUROPEAN INTERESTS SEEK LONG-TERM ARRANGEMENTS FOR BUYING IRON ORE

AID MAY BE OFFERED FOR DEVELOPING MANGALORE PORT

(FROM OUR NEW DELHI CORRESPONDENT)

WEST Germans, Italians and Yugoslavs have shown interest in negotiating long-term agreements for importing iron ore from India. Jointly, they may agree to help in developing the port of Mangalore, the transport facilities linking the new sea-going port with iron ore deposit areas on the west coast, and in the mining of the iron ore itself. As already reported, an Italian trade mission is coming here very shortly. It will be followed by a similar trade mission from Yugoslavia. The steel industry in all three countries is anxious to make long-term arrangements for importing iron ore.

India, too, is anxious to develop new sources of iron ore so as to step up her exports. Deposits of iron ore are located in Tumkur and Chitaldurg districts of Mysore State. These deposits are estimated at 276 million tons, the grade of ore being equal to, or in some cases even superior to, the ores from the Bellary-Hospet region. The deposits of low-grade ore from Babubudan area are estimated at 546 million tons, the grade being suitable for blast furnaces Even without drawing on the Bellary-Hospet ore deposits by means of a rail connection between Kottur and Harihar, it will be possible for the port of Mangalore to be fed by the deposits in the Tumkur, Chitaldurg and Babubudan areas.

Railway Construction

The State Trading Corporation expects that, with the construction of a link between Mangalore and Hassan, traffic in iron ore from these areas of the order of 2 million tons can be developed in Mangalore. Once the Mangalore-Hassan rail link is established, high-grade ore can be loaded in Chitaldurg, Haliyuru, Amritpura, Chickajajur, Hosdurg Road, Tiptur, Banavar, Banasundra and Arsigere on the existing lines between Chitaldurg and Tumkur. Low-grade ore from the Babubudan area can be loaded in Kadur and Tarekere on the existing line between Kadur and Bhadravati. It will, of course, be necessary to build short stretches of the line from the loading points to the principal mining centres. The distance between Mangalore and Chitaldurg, the farthest loading point for high-grade ore, will be only 230 miles *via* Hassan, the rail freight for this being Rs. 14.69 a ton. The distance from Kermmangundi, the principal point for low-grade ore, to Mangalore *via* Hassan will be about 200 miles, the rail freight being Rs. 13.35 a ton.

The length of the proposed metre-gauge section between Hassan and Mangalore is 122.6 miles, the cost of which is estimated at Rs. 10.24 crores. In addition, the cost of improving the capacity of the existing lines and providing rolling stock, etcetera, for handling 2 million tons of ore is estimated at roughly Rs. 7 crores or Rs. 8 crores. The traffic forecast on the Mangalore-Hassan line is as follows:

First year	215,000 tons
Sixth year	287,000 tons
Eleventh year	430,000 tons

This estimate has been made assuming that the present conditions at Mangalore port will continue. The traffic estimate also does not take into consideration the possible iron ore traffic. The distance of the Bhadravati-Malpe line will be 109 miles. This is estimated to cost Rs. 10 crores, if the line is a metre-gauge one. In calculating the cost, the Southern Railway has assumed the same gradient for both the Mangalore-Hassan and the Malpe-Bhadravati lines, *viz.*, a rising gradient of 1 in 100 from Hassan to Mangalore and 1 in 50 in the return direction. The Southern Railway feels that the traffic prospects on the Malpe-Bhadravati line are poor, since after leaving Bhadravati, there is no place of commercial or industrial importance until Malpe is reached. The Railway, therefore, favours the Mangalore-Hassan railway line.

All-weather Port

For the export of iron ore, an all-weather seagoing port is needed on the west coast. In ordinary circumstances, Marmugao would have provided an ideal port. Under the existing conditions, there has been a search for alternatives. The 1948 West Coast Major Port Development Committee preferred Malpe to Mangalore on the ground that "the islands off-short of Malpe form the nucleus of a sheltered harbour, and therefore most of the protection in deep water has already been provided by nature." Since then, opinion has been swinging in favour of Mangalore. It may be added that the former Mysore State Government, as early as 1915, invited Sir Francis Spring, late chairman of the Madras Port Trust, to study the feasibility of developing Bhatkal, a small roadstead some 300 miles south of Bombay and 360 miles north of Cochin, into an all-weather port. At that time, Mangalore was not a part of Mysore State. The scheme, as visualised by the former Mysore State Government, was to construct a deep-sea port in Bhatkal and extend the Shimoga branch of the old Mysore State Railway to Bhatkal. Sir Francis Spring made the first report on the harbour scheme.

The former Mysore State Government, in 1919, then invited Mr. A. G. Lyster of Messrs Sir James Wolf, Barry and Company to study the harbour scheme for Bhatkal. Mr. Lyster produced a scheme for separating the Bay of Bhatkal from the open sea by groynes, and developing an inner creek, known as the Sharabi river, as a fully-protected harbour. The scheme was then estimated to cost Rs. 1.44 crores. It was expected to enable the proposed port, when developed, to deal annually with 230,000 tons of cargo. Mr. Lyster also described another feasible scheme, different in detail but not in essentials, which would allow for expansion better but would be a good deal more costly. He felt that the first instalment of works for the former scheme should be initiated, which would cost about Rs. 1 crore, leaving room for future expansion up to the total figure of Rs. 1.44 crores.

Rail Haulage

The Ports (Technical) Committee, which was appointed by the Government of India in 1946 to investigate port development in India, was asked to consider the Bhatkal project. It felt that the construction of a harbour in Bhatkal, along with a railway line connecting Talguppa and Bhatkal 49 miles in length, would greatly reduce the rail haulage from the coast to the industrial hinterland of Mysore and would materially assist in the development of Mysore.

The Intermediate Ports Development Committee, which reported last year, in preferring Mangalore to Malpe said: "In spite of the advantages in initial capital cost in the construction of a port and railway link in Malpe, the Committee prefers Mangalore as the site of the future all-weather deep-sea port to serve the industrial hinterland of Mysore for the following reasons:

"(a) The initial advantage in the capital cost for the construction of a port in Malpe will be more than offset by the need for the construction of a new township in Malpe. Mangalore is already a well-developed port town, with facilities such as banking, electricity, water supply, workshop and lighterage. It also has high traditions in seamanship, commerce and stevedoring.

"(b) Mangalore already has a broad-gauge link and is more centrally situated on the coastline between Mormugao and Cochin than Malpe. The road connections serving Mangalore at present are more numerous and better developed than those to Malpe.

"(c) In Mangalore, there is already an existing intermediate port with a trade of about 435,000 tons a year.

"(d) From the point of view of the time required to construct a harbour, this would be much quicker in the case of Mangalore than in Malpe, where in the absence of a railway and a working port, there would be the problem of importing the necessary building materials, such as cement and steel, and the requisite machinery for the construction of a harbour. Everything in Malpe will have to be started from scratch. In Mangalore, on the other hand, there is a well-developed intermediate port with tugs, dredgers, a marine workshop, adequate lighterage, and a broad-gauge railway link. These will contribute materially to the speedy construction of a harbour in Mangalore.

"(e) The Mangalore-Hassan line has, according to the Southern Railway, better traffic prospects than the Malpe-Bhadravati line recommended by the West Coast Major Ports Development Committee."

Fertiliser Expansion Plans

The Kane Committee, for the purpose of the production of fertilisers during the third plan period, has divided India into four zones. The estimates for Zone I, which includes Punjab, north Rajasthan, Uttar Pradesh, Jammu and Kashmir, Delhi and Himachal Pradesh, are as follows:

		(In tons a year)
Total demand		278,800
Production planned		90,000
		1,88,800
Production to be planned:		
Ammonium sulphate	96,000	
Ammonium sulphate-nitrate	92,800	188,800

Zone II consists of Andhra Pradesh (Telengana area), Bombay, Madhya Pradesh, Mysore (Karnatak areas in former Hyderabad and Bombay

States) and south Rajasthan. The estimates for this zone are as follows:

		(In tons a year)
Total demand		246,000
Production planned		Nil
		246,000
Production to be planned:		
Urea	90,000	
Ammonium sulphate-nitrate	82,000	
Complex fertilisers	74,000	246,000

The estimates for Zone III, which includes Orissa, Bihar, West Bengal, Assam, Manipur and Tripura, are as follows:

		(In tons a year)
Total demand		230,100
Production planned		213,000
		17,100
Production to be planned:		
Ammonium sulphate	15,000	
Urea	35,000	50,000
		+ 32,900

(The surplus of 32,900 tons to be adjusted in Zone IV)

For Zone IV, which consists of Andhra Pradesh (excluding the Telangana area), Madras, Kerala, Mysore (excluding the Karnatak area of the former Hyderabad and Bombay States), the estimates are:

		(In tons a year)
Total demand		256,400
Production planned		92,000
		154,400
Production to be planned:		
Ammonium chloride	40,000	
Di-ammonium phosphate	62,000	102,000
		— 52,400
To be made available from Zone III		+ 32,900
Ammonium sulphate from steel plants (to be explored)		29,500

Foreign Exchange for Industries

The statement below, and the one at the top of columns 2 and 3 on this page, show the estimated amounts of the foreign exchange commitments which have been made during 1960-61, and which will be made during 1961-62, for industrial projects in the public and private sectors:

Projects	Total third plan cost	Third plan foreign exchange cost	Orders to be placed in 1960-61	Orders to be placed in 1961-62	Source of aid available already, if any	Country of orders
Public Sector						
1. Bhilai steel (expansion)	138.0	56.0	6.0	30.0	Russia	Russia
2. Durgapur steel (expansion)	56.0	27.0	—	15.0		U.K.
3. Rourkela steel (expansion)	90.0	50.0	5.0	20.0		W. Germany
4. Alloy and tool steel plant	35.0	20.0	10.0	10.0		W. Germany/U.K.
5. Two heavy electrical plants	69.0	45.0	—	45.0	Russia Czechoslovakia	Russia Czechoslovakia
6. Heavy machine tool plants	8.0	5.5	—	6.5		Czechoslovakia
7. Precision instruments plant	8.0	5.4	—	6.3	Russia	Russia
8. Raw film project	8.0	2.3	2.3	—		France

Loan for Orient Paper Mills

The U.S. Government has announced the authorisation of a loan of $18.5 million (Rs. 9 crores) to the Orient Paper Mills Ltd of Calcutta. The loan, channelled through the U.S. Export-Import Bank, will be used for the purchase of pulp and paper making machinery for a big mill to be built in Amlai, Madhya Pradesh. Using bamboo as raw material, the mill will produce over 50,000 tons of paper annually. India's need for paper has greatly increased in recent years. The Beloit Iron Works of Beloit, Wisconsin, will manufacture or procure the machinery and equipment for the mill. The Eastern Engineering Company of Atlanta, Georgia, will provide technical and engineering services for the overall project. The loan is repayable over a period of ten years, with the first payment due in 1964. The credit of $18.5 million to the Orient Paper Mills brings the total of loans given to India by the U.S. Export-Import Bank, a U.S. Government agency, to $238 million (Rs. 113 crores).

The dollar credits extended by the U.S. Export-Import Bank are as follows:

Name	Amount $	Date authorised
1. Sundatta Cotton-Seed Utilisation Limited	60,000	March 1957
2. National Rayon Corporation	1.8 million	October 1957
3. First line of credit to Government of India (Of this, import licences have been issued to the private sector for $92 million; the balance of $58 million has been allocated for purchases by public-sector projects. Orders for both sectors which have actually been placed so far amount to $95 million)	150 million	February 1958
4. Hindustan Aluminium Ltd (a joint venture of Messrs. Birla Brothers and the Kaiser organisation of the U.S.A.)	13.6 million	January 1960
5. Air-India International (to meet the partial cost of a Boeing 707 jet airliner)	4.1 million	September 1960
6. Second line of credit to Government of India	50 million	December 1960
7. Orient Paper Mills	18.5 million	January 1961
Total	238.06 million	

Canadian Aid to India

Details are now available of Canadian aid to India under the Colombo Plan for 1960-61. About $11.7 million will be available for importing non-ferrous metals, $600,000 for the India-Canada reactor, $3.5 million for the Kundah power project, and $7 million for importing wheat. The total of Canadian aid offered during the year is placed at $25 million. Negotiations are going on about using the remaining portion of the aid.

Facilities for Technical Education

A survey of the present and future needs of technical education in India has recently been made by the Central Ministry of Scientific Research. The survey makes two important observations. One is that "numbers are not everything. What about the quality which is correlated to teacher, equipment and buildings?" The second is that "the training of a technologist is not just a course. It is a complex process that extends over a number of years. Part of the process takes place in an institution and part in industry or in the professional field."

There are at present 97 institutions for first degree or equivalent courses, and 193 institutions for diploma courses. Except for the higher technological institutes in Kharagpur, Bombay and Madras, the Indian Institute of Science, Bangalore, and the Madras Institute of Technology, which are in a class by themselves, all first degree institutions are affiliated to universities and conduct courses as prescribed by the universities. The higher technological institutes and the Indian Institute of Science, Bangalore, award their own degrees. The latter until recently awarded only diplomas and associateships which had been recognised by the Central Government and other authorities, but since 1958, the Institute has been empowered to award conventional degrees. The Madras Institute of Technology awards diplomas for courses in aeronautical engineering, instrument technology, motor-velicle engineering and radio engineering which are of first degree standard. The diplomas are recognised by the Central Government and other authorities.

Three Basic Fields

Most of the institutions cater only for the three basic fields—civil engineering, mechanical engineering and electrical engineering. Other fields, such as mining engineering, chemical engineering, metallurgy and textile technology, are covered mainly by certain institutions which have been set up specially for the purpose. Historically, "engineering" and "technology" were used to represent different fields. That distinction was reflected in the scope of work of the technical institutions. Engineering colleges were set up mainly for civil, mechanical and electrical engineering; and separate institutions for the so-called technologies. The distinction was purely scholastic, but the pattern set by history for technical institutions continued for a long time. The separate existence of engineering and applied sciences has not done either any good. Nevertheless, it is being increasingly realised that the progress of technological education and research depends in large measure on the integration of fundamental and applied sciences with engineering studies in the institutions. It is also accepted on all hands that the establishment of separate institutions for individual fields is not only uneconomical but restricts their development. The move now is to have composite institutions as far as possible, or to diversify and develop the activities of existing institutions. The new institutes of technology which offer facilities for a wide range of subjects are cases in point.

Except for the higher technological institutes, practically all technical institutions had until recently a maximum admission capacity of about 120 students a year. Some had even less. An important step taken by the Central Government to develop facilities within the country for advanced technological training is to establish four higher technological institutes, one in each region—east, west, south and north. The Indian Institute of Technology, Kharagpur, was the first higher technological institute to be established. It started functioning in 1951. Equipped with all the faculties viz., liberal arts, fundamental sciences and the various technologies, which are necessary for the realisation of the highest ideals of technological education, the institute provides facilities for the education and training of over 1,500 students in the undergraduate courses and 500 students for postgraduate courses and research work. The subjects offered cover a wide range, some of which (as, for instance, naval architecture and marine engineering, fuel and combustion engineering, production technology, geophysics, advanced electrical communication engineering, foundry engineering and concrete technology) are designed to meet the special requirements of industrial and other development projects for high-grade technologists. The Institute has been incorporated by an Act of Parliament as an "institution of national importance."

Newer Institutes

The other three higher technological institutes are being established in Bombay, Madras and Kanpur. The Bombay Institute started functioning in 1958 and the Madras one in 1959, when admissions were made to the first degree courses. The Kanpur Institute has also started work. All these institutes are being planned on the same comprehensive scale as the Kharagpur Institute, and, when completed, will take the technological education of the country several steps further. Each will be a fully residential institution designed to promote corporate life among students and teachers, and will provide facilities for about 1,500 students in the undergraduate courses and 500 students for postgraduate courses and research. The Bombay Institute is being assisted by Russia and the Madras Institute by West Germany. The assistance given by these countries comprises scientific and technical equipment, the services of expert professors for a period of five years and facilities for training Indian teachers at universities and institutions in Russia and West Germany. The Kanpur Institute expects to receive assistance from the U.S.A.

The first attempt ever made to assess the requirements of technical personnel over a given period, and plan for the necessary training facilities, was by the Scientific Manpower Committee in 1947-48, soon after independence. At that time, however, no five year plans had been formulated. Nevertheless, the Committee visualised a certain level of economic development to be reached by the country over a ten-year period, from 1947 to 1957. It estimated the requirements of technical personnel for industry, agriculture, transport and communications, defence and other fields. Qualitatively, it also classified the personnel required into different categories of engineers, scientists, technicians, etcetera, and indicated the level of their training in terms of postgraduate and specialist qualifications, degress and diplomas. On the supply side, it carried out a comprehensive survey of the state of scientific and technical education in the country, the available training capacity of the institutions, the shortages existing in the instructional facilities and the scope for the development of the institutions.

Estimate of Requirements

The Committee estimated that the requirements of technical personnel over the ten-year period 1947-57, would be of the order of 30,000 persons possessing postgraduate qualifications and first degrees in various fields of technology (including engineering) and 33,000 persons possessing diplomas. In order to meet this demand, and also to improve the quality of technical education, the Committee recommended a number of schemes which included the development of existing institutions and the establishment of new ones. A scheme was also formulated for the institution of research scholarships for training research workers in science and technology, and for practical training stipends to enable fresh graduates and diploma-holders to undergo a stated period of practical training in industry. Some of the schemes were accepted by the Central Government and were implemented. They were the forerunners of the more vigorous efforts made in subsequent years, particularly during the second plan period, to develop technical education.

Curiously enough, doubts were raised in certain quarters about the estimates of manpower requirements prepared by the Scientific Manpower Committee. The critics said the estimates were rather on the high side and the country did not need as many as 30,000 graduate engineers and 33,000 diploma-holders over a period of ten years. According to them, the economic development of the country was not likely to proceed on such a comprehensive scale as visualised by the Committee, nor as speedily. Subsequent events, however, proved that the fears were unfounded.

In 1955, at the end of the first five year plan, technical institutions in the country produced 4,020 graduates and 4,500 diploma-holders. The number of institutions increased to 65 for degree courses and to 114 for diploma courses. Their admission capacity also increased to 5,890 students for degree courses and to 10,480 for diploma courses. When the second five year plan was formulated, a target of nine additional institutions for degree courses and 21 additional polytechnics for diploma courses was proposed in the plan. That would have increased the admission capacity to 7,390 students for degree courses and 13,080 students for diploma courses. This was the order of development visualised by the Scientific Manpower Committee.

Engineering Personnel Committee

The Planning Commission, therefore, appointed in 1955 an Engineering Personnel Committee to make an estimate of the requirements for manpower for the second five year plan, and to suggest measures to meet the shortage, if any. In its report submitted in May 1956, the Committee estimated that for the various development projects included in the second plan, about 26,500 graduates and 50,500 diploma-holders in engineering would be required by 1960-61. The supply from institutions during that period would not meet the demand in full, and the shortage in 1960-61 would be of the order of 1,800 graduates and 8,000 diploma-holders. According to the programme of expansion of technical education then contemplated, the admission capacity of the institutions would reach only 7,390 students for degree courses and 13,080 students for diploma courses by the end of the plan period. The Committee emphasised that unless efforts were made towards a much larger expansion of technical education than was contemplated at the time, and the gap between the demand and supply of technical manpower was bridged, the economic development of the country would suffer. The Committee recommended that the targets of technical education should be increased by 2,790 seats for degree courses and 8,220 seats for diploma courses by the end of the plan period. For that, a number of new engineering colleges and polytechnics should be established in the country.

The targets of technical education have had to be revised thrice in the course of the current plan period. The original targets correspond to an annual admission of 7,390 students for degree courses and 13,080 students for diploma courses in 1961. The revised targets are 13,500 students for degree courses and 27,000 students for diploma courses. It is stated that the achievements are pretty near these new targets. In 1960, the admission capacity reached 13,500 students for degree courses and 25,290 students for diploma courses. When all the new schemes are implemented, Indian institutions will produce about 10,500 graduates and 18,000 diploma holders a year during the third plan period, which is more than double the 1959 output of 4,500 graduates and 7,250 diploma holders. The important thing is that with this advance preparation, no serious shortage of technical personnel is expected for the successful execution of the third five year plan. In fact, the supply will keep in step with the demand.

Rôle of Private Enterprise

An important feature of technical education in India is the large rôle played by private enterprise. Of the 275 institutions in the country at present for first degree and diploma courses, 158 have been established by the Central and State Governments, 29 by universities and 88 by private agencies. In quantitative terms, the institutions established by private agencies account for nearly 35 percent of the total number of seats. This is a very substantial part. A definite policy is also followed by the Central Government to encourage and assist private agencies. Where a private institution, by itself or in association with the State Government, raises enough funds to meet 50 percent of the non-recurring (buildings and equipment) and 50 percent of the recurring expenditure for a technical institution, the Central Government provides the balance of the amounts required as grants-in-aid. The Central Government also gives interest-free loans for the construction of hostels. As a result of this policy, nine engineering colleges and 25 polytechnics have been established by private agencies during the second plan period, against nine colleges and 45 polytechnics established by State Governments and the universities. Private enterprise, therefore, constitutes a very important element of the technical education in India and supplements in large measure the efforts of the State. In order to ensure that the private institutions are run on the right lines and maintain proper standards, governing bodies which include representatives of the Central and State Governments, and the All-India Council of Technical Education, have been set up for the administration and management of the affairs and finances of the institutions.

U.K. Firm to Help Praga Tools

Under an agreement signed between the Praga Tools Corporation of Hyderabad and A. A. Jones and Shipmen Ltd of Leicester, England, Praga is to manufacture in India one of the Jones and Shipmen range of precision grinding machines. To assist the initial production and pass on the know-how, two senior engineers from Jones and Shipmen have left the U.K. to spend about a month in the Praga works. They are Mr. R. W. Mason, a production engineer, and Mr. A. Jackson, chief international technical representative of the Leicester concern.

The machine to be manufactured in India is a cutter and tool grinder—a versatile model which has been installed in factories in most parts of the world. A compactly designed machine having universal operating pcsitions, it has a rising and falling swivelling wheelhead which enables all types of milling cutters to be ground in a short time. The accuracy and efficiency to which these are ground ensures that the machine tools on which they are used give maximum performance. Numerous attachments are available to cover a wide range of cutter and tool-grinding operations. The licence agreement allows Praga to manufacture the machine for sale in India and other territories. British models of the machine have been sold in India for a number of years.

Prospects for Wool

In spite of unfavourable rates offered by most foreign buyers, the price of raw wool in the Indian markets remained steady last year. This was due to the sustained buying interest shown by the indigenous industry and the marked increase in Russian purchases. The position of Indian wool in foreign markets, however, has not been good. A steady rise in carpet exports through Government efforts in the past few years has led to a greater use of indigenous wool by the industry. Although figures of sales within the country are not available, the rising standard of living indicates that people are spending more on home furnishings, including carpets, than ever before. The handloom industry is also using more wool now. The introduction of a subsidy for weavers and a rebate for buyers has helped increase sales of handmade woollens. The capacity of the wool growers to hold their stocks is another factor which has helped maintain the price level. They have been selling most of their stocks in outlying markets to the cottage weavers. As a result, exports until September 1960 were 20 percent less than a year earlier.

Indian wool in the Liverpool market has not fared very well. Although the year opened with brisk demand, the imposition of hire-purchase restrictions followed by the increase in the U.K. Bank rate to 6 percent disturbed the optimistic tone of the market. Buying for the most part of the year was, therefore, confined to maintaining stocks at minimum levels.

A noticeable feature was the high price of Indian wool throughout the year, compared with wool from Pakistan. As a result, the U.K. mills concentrated only on the best quality Indian wool and bought the bulk of their needs from Pakistan. Indian wools have also had to meet considerable competition from other sources, including China, Spain, Portugal, Syria, Morocco and North Africa generally, all of whose wools were more attractively priced and often of excellent shade and quality. The new year has now opened with a note of greater optimism. Although the new business from foreign markets is generally quiet for the moment, this is not unusual because at this time the yellow wool season is approaching its close while white wool arrivals are awaited. With wool prices at the previous year's level and with the rate of carpet wool consumption increasing in several countries, there is a general feeling of confidence that better conditions are on the way and the wool industry is poised for a forward move during 1961.

G.E.C. CHAIRMAN URGES BRITAIN TO INCREASE EXPORTS

LONGER REPAYMENT PERIOD FOR HIRE-PURCHASE ANNOUNCED

(FROM OUR LONDON CORRESPONDENT)

THE new chairman of the General Electric Company, Mr. Arnold Lindley, went to the heart of the export problem when he spoke about the fifth year of publication of the G.E.C. *Export Guide*. "We must create a home climate in which export thrives," was his main point. Exhortation had done its job. The "crisis element" will have to be taken out of the export problem so that thinking on exports will become a natural business habit. But that will not happen without profound changes in Britain's whole economic and fiscal set-up. The latest *Export Guide* suggests that the outlook for the first quarter of 1961 is "good" in 19 countries, "improving" in three, "deteriorating" in ten, and "unchanged" in two. But since October, the outlook for U.K. exports has improved only in one or two minor markets, but has deteriorated in Australia, Canada, India, Kenya and South Africa—all important Commonwealth markets.

In a study of engineering exports, the G.E.C. says that the outlook will depend increasingly on the scale and quality of research and investment. Scarce scientific resources need to be put to the best possible use. Only a very high rate of investment can provide the capacity to maintain supplies to the home market and at the same time meet rising export orders without bottlenecks and delays. But future investment, the *Export Guide* argues, will depend not only on what industry can do for itself but also on the economic policies of the Government. "A consistent objective of long-term growth will be much more helpful than frequent bursts of speed, as frequently cut short by later recessions."

Setback in Motor-car Industry

The full extent of the setback in Britain's motor-car industry is shown by U.K. Board of Trade production figures for December. Only 76,783 motor-cars came off the assembly lines, compared with 134,881 in December 1959. Export figures, included in these totals, also substantially declined. They were down to 29,224 cars, compared with 49,555 in December 1959. But, in spite of the sharp recession in the closing months of 1960, peak production in spring and summer helped the industry to set an all-time production record over the whole year with a total output of 1,352,728 motor-cars. This was against 1,189,943 in 1959. Much of this increased output was sold in Britain. Exports over the year increased by fewer than 1,000 from 568,971 to 569,916 motor-cars, although this was also a record figure.

Production figures for January are unlikely to show much improvement and may even be worse. The slight relaxation in the credit squeeze recently, giving a longer repayment period for hire-purchase customers, came too late to have much effect on production in January. The Ford Motor Company said: "The relaxation of the credit squeeze was helpful. But the effects have not reached the factories yet. It is likely to be helpful initially to the used car market. This should have a beneficial effect on manufacturers eventually, since nowadays 80 percent or 90 percent of new motor-cars are sold against trade-ins." The British Motor Corporation's headquarters in Birmingham said: "Experience shows that these alterations are slow to take effect. It is still early days."

The output of commercial vehicles has not been affected by the recession. Production of vans, lorries and buses reached a record of 457,972 in 1960, compared with 370,484 in 1959. The average weekly output of commercial vehicles in December was running at a record rate for the month. Overseas shipments for the year were also a record, with 146,134 vehicles worth more than £104 million being exported. The total value of all the motor-car industry's exports for 1960 was a record of nearly £618 million, the Society of Motor Manufacturers said. This total includes sales of tractors, parts and accessories, engines, and garage equipment.

Industrial Relations

The U.K. Minister of Labour, Mr. Hare, finished sounding out unions and employers on his proposal for a joint enquiry into industrial relations in the motor-car industry. The first meeting of the two sides will be held under his chairmanship on 20th February. An independent chairman, to be agreed by both sides, is likely to be announced later.

After the Minister had met the representatives of employers, a statement said that his proposals were welcomed. There was a helpful exchange of views on the scope and form of the joint talks. A similar meeting between leaders of the Confederation of Shipbuilding and Engineering Unions and the Minister took place last month. The object was not to blacken the former, it was said, but to examine the whole field of labour relations in industry.

Ford Takeover Complete

A Bank of England draft for £119,595,645 12s—believed to be the biggest yet in Britain—changed hands in the old boardroom at the National Provincial Bank in London the other evening. The draft was handed over by Lord Hampden, a director of Lazard Brothers and Company, Ltd, acting for the Ford Motor Company of the United States, to the chief general manager of the bank, Mr. Frank Keighley. It represents the amount paid by Fords of Detroit for the acquisition of the ordinary stock of Ford of Britain.

The ceremony represented the complete takeover of the British Ford Company by Ford of the United States. There were 17,726,804 ordinary stock units which the American Company wanted to purchase. For each £1 unit, they are paying 145s 6d. Lazard Brothers appointed the National Provincial to deal with the formalities of the operation. More than 90 percent of British shareholders accepted the offer, which became unconditional on 11th January. More than 19,000 cheques are to be posted to shareholders. Before launching their £129 million bid for Ford of Dagenham, U.S. Ford of Detroit already held 52.6 percent of the 39-million ordinary £1 shares.

China as a Market for Britain

The President of the U.K. Board of Trade, Mr. Maudling, said recently that he believed communist China would become an important export market for Britain. He was answering a questioner at an exports convention in Wolverhampton. The questioner, Mr. S. G. Sloan, general manager of the motors division of Rubery Owen, has himself visited Peking six times trying to sell British goods. He said that a group of Midland business men had succeeded in pushing up the volume of exports to China from £11 million in 1954 to £60 million at present. He asked what the Government was going to do to raise the China trade and give the British business man a chance to exploit it. The idea that the Chinese cannot pay is quite wrong, he said. Anyone who has done business with them know that there is never any trouble about getting payment. Mr. Maudling said that he is certain there are more opportunities for Chinese products in the U.K. market. "As they sell more, so they will buy more, because their exports will be determined by the amount of foreign exchange they can earn." It is difficult for the Government's exports services to operate in the same way in China as in other countries, but the U.K. Board of Trade keeps in touch with Chinese representatives in Britain. China, Mr. Maudling said, will eventually become an important export market.

On trade generally, Mr. Maudling said that soon really important progress would be made towards reducing the tariff barriers of the industrial countries. "This will certainly be our objective." It will mean competition at home, but it will be stimulating competition, and in exchange Britain will see widening opportunities abroad. The home market will become less and less protected. The present drive throughout the world is towards lower tariff and trade barriers. Free entry of Commonwealth goods to Britain may cause considerable difficulty and embarrassment in individual industries, for example, in textiles. But these difficulties apply to one sector of the economy. A needed change in the attitude of the whole country to exporting is taking place, Mr. Maudling said. "We have been offered many slogans about exports. Some have carried a grim message such as 'Export or die' and 'Sell or sink'. I should like to offer my own suggestion, which is 'Export and grow.'" He appealed especially to small businesses to export. It is not easy "but it is not as difficult as people think."

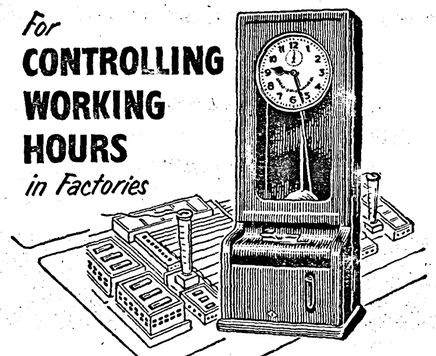
Export Delivery Dates

Managers of more than 50,000 British companies concerned with exports recently received a letter appealing to them not to break delivery promises. Only a few large firms were not sent copies. This step was taken, the President of the Federation of British Industries, Sir William McFadzean, said, because of "a growing number of reports" of failure to supply exports on time. The letter was sent out by the F.B.I., the National Union of Manufacturers and the Association of British Chambers of Commerce to all members.

Sir William, speaking in Wolverhampton, gave several reasons for deferred deliveries, such as strikes and transport and docks delays. But industry carries a heavy responsibility for the lack of liaison between production and sales staff, and for yielding to pressure to promise impossible delivery periods. It is a problem which industry itself must tackle. "Companies which fall down on the job do harm not only to themselves but also to all other British exporters."

Bank Holiday Adjustments

Proposals for changing the dates of the August and Whitsuntide Bank Holidays and for staggering school and industrial holidays are discussed in a report of departmental officials just received by U.K. Ministers. The committee making the report was set up by the British Board of Trade. The size of the report and the necessity of consultations with trade unions, educational authorities, hotel and holiday organisations, suggest that swift action by the Government is not likely. Legislation will be needed to change Bank Holidays. The U.K. Ministry of Labour is known to be in favour. The National Joint Advisory Council, on which employers and employees are represented, approved the idea in 1949, but the Labour Government did not implement it.



For CONTROLLING WORKING HOURS in Factories

ATTENDANCE RECORDER

The ideal clock for checking working hours of all staff in offices, factories, workshops, garages, banks etc. Simple to operate, self-winding, precision time recording equipment ensuring maximum accuracy. Guaranteed for 3 years.

Jute

MILD REACTION FOLLOWS SHARP RISE IN JUTE AND GUNNY PRICES

UPCOUNTRY REPORTS INDICATE FIBRE ARRIVALS REMAIN SMALL

THE Calcutta markets have continued their upward trend during the past week and new high levels have been recorded in both raw jute and gunnies. Although much of the strength has come from the raw jute section, jute goods have really led the way with the squeeze for ready goods which developed towards the end of January. It is interesting now to take stock of the position and see how the change has come about. For some time, fibre has dominated proceedings, and the phrase "higher advices from the raw jute section" has been mentioned often in giving reasons for the advance in jute goods rates. Overseas buyers have been holding off for several weeks in the hope that goods prices would fall. Meantime, stocks in many centres have fallen to a dangerously low level, until the stage has been reached when they have had to be replenished. Thus, in spite of this being considered the start of the off-season, more enquiries have come to the market than for some time. Buyers have reached the position where they cannot remain out of the market, and they are forced to concede price increases or take the consequences.

It is the general belief that the present high prices are not good for the industry. But as long as consumers are prepared to buy, some say no harm is being done. How long will buyers be prepared to pay high prices? At the present moment, they have no option as they need the goods, but it is thought that unless prices drop considerably, their purchases will last only until they can find substitutes at a lower rate. Prices have now risen to a level not touched since the 1951 boom, and it seems probable that there will be a reaction. This was obvious towards the close, when heavy goods prices fell by about Rs. 7 on Tuesday. There is always a tendency, especially in this country where markets are so much dominated by a few large operators, for price movements to be pushed too far in either direction. It seems probable that in this case it has been carried too far, although considering the question of supply and demand, the rise could be justified earlier.

Working Hours Reduced

In accordance with the decision of the Indian Jute Mills Association, jute mills in West Bengal started operating on a 42½-hour basis from Monday midnight, instead of the 45 hours a week which had been in force since December. The reduction has been made in an attempt to conserve raw jute stocks, and theoretically should cut production by a little under 1,000 tons a week. It is doubtful, however, if this will work out in fact, as it is reported that, over the past few weeks, mills have transferred many looms from hessian to sacking to book the higher profits recently available on the latter. Thus, the saving in jute which should be made as a result of the smaller number of working hours will be partially offset by the larger quantities of jute required to produce the heavier sacking fabrics. Similarly, the production tonnage will not suffer to the same extent due to the increase in sacking output.

For the second time in recent weeks, mills have not been allotted a weekly quota to buy jute. This step has been taken in an attempt to reduce activity in the hope that prices will fall. Many question the advisability of the move, as each time it has been attempted previously, prices have advanced, and by the time fresh quotas are eventually issued, mills have had to pay perhaps Rs. 4 or Rs. 5 more than if the quotas had been issued earlier. This time, the move has worked, and prices are lower. But will they be lower by the time the next quota is issued? Many feel that the present reaction is temporary, and raw jute will continue to be short. The reluctance of the Government to issue the final official crop estimate has caused more harm than good; it is construed as an admission that the crop is very small. This in itself is a bullish factor, and may perhaps be the primary reason for the retention of the quota system. The fact is, however, that when any form of rationing takes place, it leads eventually to higher prices.

Small Arrivals

Reports from the upcountry markets continue to indicate that imports are very small, and are mainly of low-quality jute. It is known, however, that stockists have varying quantities of jute on hand, which they will continue to hold as long as prices continue to rise. Even if all these stocks were released, it is unlikely that the jute shortage would be relieved, as whatever happens, the position will become very acute before the arrival of the next crop. The current high prices are putting a great strain on the mills' financial resources. The recent tightening of advances by banks has caused many difficulties. In previous seasons, the bulk of the jute crop was marketed by the end of December, and mills were holding a large part of their consumption in their godowns. As mills paid for most of their jute on presentation of bills of lading or railway receipts, that meant that they had provided the finance for moving and storing a very large portion of the crop. At present, the mills hold only an average of about six or eight weeks' consumption in their godowns, and the equivalent of about another two weeks' consumption in transit. But at the current rates, some of them are finding difficulty in financing their purchases, and bills are being held up. This, in turn, puts a strain on the seller, who has to pay heavy interest to brokers and banks through whom he has presented the documents and obtained an advance.

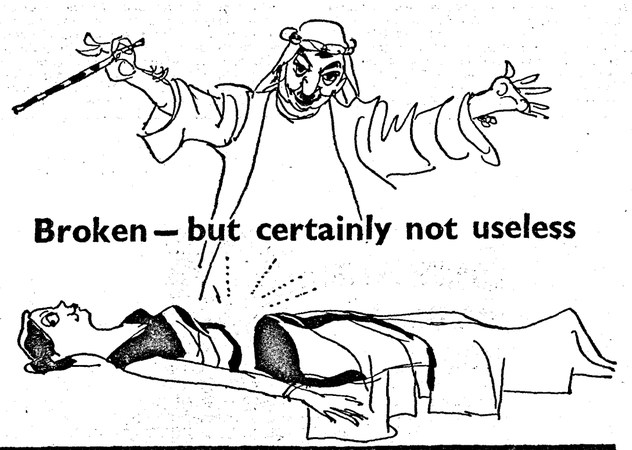
The marketing of jute goods has also undergone a change. Normally, mills do not sell manufactured goods without having the raw material in hand. Previously, with the large stocks of raw material they carried, they were in a safe position to sell manufactures for several months ahead. Now they cannot do that because the stocks they hold are so much smaller. It is true that mills have recently sold for deliveries as far ahead as April-June. But that does not mean that they hold enough raw jute to carry on till then. It simply means that part of their production for the earlier months is unsold, and that part of their godown stocks has been appropriated against these sales.

Siamese Jute

Much has been said and written recently about Siamese jute, and a fair amount of business has been done by various countries. The demand for this fibre is on the increase, so much so that prices recently have advanced rapidly. So far, only small sample lots have been imported into India, and buyers' comments on the quality appear to be favourable. The big snag, however, is the 35 percent import duty imposed on this fibre, which makes the current price prohibitive. Although there is a move afoot to get the duty abolished, buyers at the present moment have to pay the duty, and must submit applications for a refund, if any. According to reliable sources in London, it is understood that as far back as September last year applications were made to the Government of India for import permits for Siamese jute, when there was every chance of buying the fibre at very low rates. The authorities refused to grant such permits at the time, but now, when the price of Siamese jute has advanced to such an extent as to make it unattractive, there is every likelihood of permits being granted.

THE JUTE MARKETS

Manufactured Goods: There was a considerable amount of overseas interest in the Calcutta market during the past week as buyers rushed in to replenish their depleted stocks. Both sacking and hessian business was reported, but the squeeze was in sacking. At the opening on Friday, after the holiday, B Twills advanced by Rs. 4.50 to Rs. 201.50, but such was the demand for green and plain heavy Cees that this fabric shot up by Rs. 9 to Rs. 207.50. Hessians were not slow to follow and 40in. 10oz. moved up by Rs. 1.80 to Rs. 66.65. Most of the activity was confined to the near sections, but the small business for forward shipment kept that position lively too. On Saturday, rates advanced again—by Rs. 3 in sacking and 60nP in hessians. Prices rose by similar amounts on Monday morning. But so great had been the buying pressure that there was bound to be a reaction, and this began to be felt with the opening of the new week. With the pressure off also from local shippers, who had done a fair amount of covering for January due date, opening quotations on Tuesday morning dropped heavily. B Twills lost Rs. 5.50 and were quoted at Rs. 203, dropping by



Broken — but certainly not useless

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you need'nt! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job repairing——MACKIE FALLERS.

THE LAGAN JUTE MACHINERY CO. PRIVATE LTD

24, Chittaranjan Avenue, Calcutta-12.

LAGAN/NAA/20

a further Rs. 2 during the course of the day; 11-porter hessians declined by Rs. 2.25 and ready shipment was quoted at Rs. 65.75. There was very little interest at this stage. The tendency was *hesitant but generally in a downward direction.*

Opening quotations on Wednesday morning were as follows:

	Ready	Feb.	March	Apl.-June
40in. 7½oz.	49.50	49.50	49.50	49.00
40in. 8oz.	53.00	53.00	53.00	52.50
40in. 10oz.	66.00	66.25	66.25	65.75
B Twills	241.50	202.50	202.50	199.00
Heavy Cees (Plain)	204.00	205.00	205.00	199.00
A Twills	241.00	214.00	244.00	240.00
Liverpools	224.00	235.50	235.50	222.00
Cornsacks	205.00	207.00	207.00	203.00

Raw Jute: A very small quota was issued on 24th January, *and most of it was taken up soon.* The market was very steady, however, in sympathy with the improved conditions in the goods market. Opening quotations on Friday *morning were up* by Rs. 3 *a maund, which made Assam* jute Rs. 62. The price was raised by a further Re. 1 a maund on Saturday, but business was conducted above that level, late on Saturday and on Sunday. As a result, prices *on Monday morning increased to* Rs. 65. This proved to be the highest rate, and thereafter there was a quick reaction. Assam rates dropped to Rs. 63.50 on Tuesday, but in the afternoon, business was reported at Re. 1 or Rs 1.50 lower. Sellers were reluctant at first to discount, but eventually weak holders became keen for business and small offers became plentiful. Arrivals in Cossipore *amounted to 810 wagons,* which was considered good as the yards were closed on Tuesday.

Business was reported in Assam at Rs. 61 to Rs. 64. Northern was reported at Rs. 61 to Rs. 61.50. Daissee mesta passed at Rs. 59 and jungli mesta at Rs. 57 and Rs. 58 a maund. Cuttings fetched Rs. 275 to Rs. 280.

At the close, the market was quiet, and opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos.	Rs. a md.	Shipment.
Assam	164.75	61.50	Feb.-March
Northern	163.50	61.00	,,
Purnea Desal	160.75	60.00	,,

THE FOREIGN JUTE MARKETS

FIBRE PRICES STILL FIRM

(FROM OUR DUNDEE CORRESPONDENT)

IT is remarkable how raw jute prices are being kept up in the Dundee market. It looks as if the higher rates cannot all be attributable to the possibility of a scarcity of raw jute before the end of the season. *Continental spinners* were buying fairly freely during the past week and were paying the full prices quoted, such as £196 to £198 for Mill Lightnings, £190 to £192 for Mill Hearts and £184 to £186 for Grade Hearts, with Grade Tossa-2/3 *from* £195, *fours* £191 and Continental Tossa-2/3 from £190 and fours at £185 to £186, January-February, c.i.f. U.K.-Continent.

The most important question now is whether there will be enough jute to meet the needs of the trade before the next crop is available. There must, of course, be a considerable quantity of raw jute in the hands of spinners, since there always is as far as Dundee spinners are concerned. They always suffer from the anxiety that jute will become scarce or the crop will be late, so on most occasions they buy when fibre is reasonably cheap. They normally have to buy much in advance, and they must now carry big stocks of fibre. Market circles believe that this is the case at present. Some spinners say that they have enough jute to keep them going till a month or two after the close of the season.

The Calcutta goods market was very strong lately. Most members of the trade say that raw jute is gaining its strength from the firm trend of the Calcutta goods prices. Hessians rose last week to 100s 3d for 40in. 10oz. and 75s 6d for 7½oz., January, 100s 6d and 75s 6d February and March and 99s 6d and 74s 9d April-June, with B Twills at 306s 6d, 308s 3d, and 303s 6d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth are in quiet but steady demand, and prices rule firm all round. Although prices for the manufactures are due for a rise, the authorities are keeping them down in order to increase business.

Sir William G. N. Walker, chairman of Jute Industries Ltd, Dundee, has issued a very comprehensive report on the industry with the accounts of the firm for the year ended 30th September, 1960.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.2 percent to 125.3 during the week ended 14th January, 1961, compared with 125.0 for the previous week. The index was higher by 0.8 percent and 4.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. A rise in the prices of milk in Bombay (+36%), potatoes in Methupalayam (+15%), rice in Kotma (+12%), betelnuts in Mangalore (+6%), maize in Bhilwara, gram in Patna and oranges (+5% each), mustard oil (+4%), ragi, mung, masur, onions, cashewnuts and fish (+3% each) and bajra, urad, coconut oil and turmeric (+1% each) was neutralised due to a decline in prices of betelnuts in Calcutta (−15%), potatoes in Farrukhabad (−12%), milk in Ludhiana (−11%), rice in Jagdalpur (−9%), in Jaypore (−7%) and in Chiplun (−5%), black pepper in Calcutta (−5%), eggs (−4%), jowar, gur, tea, chillies (−2% each) and arhar, bananas, cardamoms and salt (−1% each), and the index for *Food Articles stood* unchanged at the earlier week's level of 116.2. The index for Tobacco also remained stationary at the previous week's level of 109.5. The Fuel, Power, Light and Lubricants group index worked out to 120.2, against 120.3 for the earlier week. Higher prices of tanning materials, konam bark (+6%), gingellyseed (+5%), raw jute (+3%), lac (+2%), raw wool and rapeseed (+1% each) raised *the index for Industrial* Raw Materials by 0.9 percent to 153.8. The prices of tanning materials, galnuts (−9%), linseed and cottonseed (−2% each), raw silk and groundnuts (−1% each), however, moved down. The index for *Intermediate Products* advanced by 0.3 percent to 133.8 due to a rise in the prices of rayon yarn (+2%) and linseed oil, coir yarn and tin (+1% each), *although the price of lead* (−2%) declined. The index for Finished Products rose by 0.4 percent to 126.5 as a result of a rise in the prices of jute manufactures (+2%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 14-1-61	7-1-61	16-1-60

CALCUTTA STATE TRANSPORT TO ACQUIRE MORE LEYLAND BUSES

Following closely the recent delivery of 125 Leyland Titan, Tiger and Royal Tiger Cub chassis, another order for 20 Leyland Tiger single-deck bus chassis has been placed by the Calcutta State Transport Corporation. The 20 Tigers ordered are the 210in. wheelbase PS.2 model equipped with Leyland 600 vertical diesel-engines, fully-floating type offset underslung worm drive rear axles, heavy-duty synchromesh gearboxes, and air brakes. West Bengal's Leyland fleet of over 500 vehicles includes Titans, Royal Tigers and Tigers. The recently introduced Royal Tiger Cub model has also been purchased by the Calcutta State Transport Corporation. All the above models are powered by the vertical or horizontal version of the Leyland .600 diesel-engine. The lighter India-built Comet buses are also in operation in West Bengal as they are elsewhere in India.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 28, held on 30th January and 1st February, the 73,274 chests on offer at the Export auction met with a good general demand at irregular rates. Black Dooars B.O.P.s were a strong feature of the sale and were often dearer, but similar Fannings were irregular. Plain brokens sold at about last rates while Fannings—particularly the better types—inclined dearer. Leggcut teas were irregular. With the exception of the occasional brighter liquoring types which inclined dearer, medium Assam B.O.P.s and O.Fgs. were 10nP to 20nP easier. Medium B.P.s were steady while Fannings in this category were irregular, *although some of the better types* were at times dearer. The best autumnal C.T.C.s were well supported at dearer rates but the remainder were 10nP to 20nP lower. Medium and secondary grades were very irregular but generally up to 10nP lower. Stylish whole leaf grades sold well but the poorer stalky kinds were easier and sometimes difficult to sell. Tippy teas were fairly well supported and while there was little change for the best Darjeelings, the remainder inclined easier.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.45	2.18 to 2.22
Plain B.P.	4.50 to 4.65	1.93 to 2.02
Plain Fannings	4.80 to 5.00	2.00 to 2.08
Medium B.P.	4.70 to 4.90	1.92 to 2.00
Medium Fannings	4.90 to 5.15	2.06 to 2.16
Best Assam C.T.C. B.P.	5.70 to 6.10	2.40 to 2.60
Best Assam C.T.C. Fgs.	5.30 to 6.30	2.45 to 2.65

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 21,253 packages of Dusts on offer met with a good general demand which strengthened as the sale progressed. Orthodox Dusts were firm and the small bright liquoring kinds were a strong feature. Legg-cut Dooars Dusts *followed a similar trend.* Bright liquoring medium C.T.C.s were generally dearer while the remainder in this category were disposed of at about last rates. Best C.T.C. Dusts were irregular.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.85 to 5.00	2.20 to 2.32
Medium Assam Dust	5.05 to 5.15	2.14 to 2.22
Legg-cut Dust	5.15 to 5.40	2.24 to 2.30
Medium Assam C.T.C. Dust	5.60 to 5.80	2.35 to 2.85
Good Assam C.T.C. Dust	6.00 to 6.40	

(Quotations are inclusive of excise duty.)

The 515 packages of Leaf on offer met with a *good demand,* the few green teas realising excellent prices.

LINSEED EASIER

There was a slight reaction in linseed during the past week, and the price declined following some offers from upcountry for the new crop, April-May delivery, at reduced prices. The turnover was fair. The oil market was quiet as buyers were hesitant to *do any business at high prices.* The oilcake market was full. Foreign buyers showed little interest except at lower prices. The latest quotation is as follows: Ready, Rs. 29.50 a maund.

SKINS FIRM, HIDES STEADY

The market in skins ruled firm, while that of hides was steady. Stocks of skins were less but those of hides were higher than in the previous week.

Bazaar Sales

(Between 24th January and 30th January, 1961)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 8.87 to Rs. 12.25; Wet salted (Slaughtered) 23,900 pcs. on the basis of Rs. 10 to Rs. 16 *and Rs. 19* to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 56,100 pcs. on the basis of Rs. 340 to Rs. 350, Rs. 380 to Rs. 400 and Rs. 430 to Rs. 440; Wet salted (hekilled) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinajpur-Siliguri-Bankura 55,000 pcs. on the basis of Rs. 270 to Rs. 300, Rs. 325 to Rs 360 and Rs. 400 to Rs 425; Purneah-Kissenganj 13,500 pcs. on the basis of Rs. 370 to Rs. 380 and Rs. 390 to Rs. 400; Patna-Pakur (Ord.) 21,900 pcs. on the basis of Rs. 260 to Rs. 280 and Rs. 300 to Rs. 330; Patna-Muzaffer-pore 3,000 pcs. on the basis of Rs. 350 to Rs. 360 and Rs. 370 to Rs. 385; Maldah-Dinajpur 6,500 pcs on the basis of Rs. 480 to Rs. 500.

Bazaar Stocks

(30th January, 1961)

Cowhides: Wet salted 151,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 48,500 pcs.; Assam-Dinajpur 45,500 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissenganj 131,500 pcs.

INEQUITIES OF INDIAN INCOME TAX

By S. Kesava Iyengar

IT is reported that the third plan outlay may be increased by another Rs. 300 crores, the main cause being the keen desire of many States to have *bigger plans that can be managed within* an outlay limit of Rs. 11,250 crores. These proposals may be tentative, but both in the Centre and the States, more and more of taxation is taken as *inevitable,* and income tax is looked upon as the proverbial milch cow. Can the people of this country bear heavier income tax burdens is a question which deserves very careful examination, particularly in *the light of the experience in the U.S.A. and the* U.K. Some details given below show that while in those countries, the incidence of the tax is moderated with a view to making it the least *irksome* and vexatious, income tax in India resembles a *steam-roller with little consideration* for peculiarities and pressures. Another point to be borne in mind is that in view of the incomparably low *per capita* income in India, the optimal point is at a much lower level than in the U.S.A. or the U.K., proportionately speaking that is. In this country, the range of variations is very wide: for example, the per capita income of agricultural labourers in 1956-57 was 34 *percent of the general per capita* figure.

The tax revenue in the United States is about 30 percent of the national income. It is more than 30 percent in the U.K., but slightly over 10 percent in India (Central and State taxes amounting to Rs. 1,230.83 crores according to the 1960-61 Budget, with a national income of Rs. 11,750 crores in 1959-60). But the tax burden in India is already *much heavier than in the other two countries.* The *per capita* income in the U.S.A. is $1,864, in the U.K. it is $778. In India, it is only $64! As in the U.S.A., State taxes like excise and property tax have low elasticity in India, but expenditure by the States is increasing fast due to rapidly expanding responsibilities. This has led in both countries *to more and more of Central grants,* and in turn to heavier federal taxation. Of the total revenue, income tax receipts are 75 percent in the United States, 50 percent in the U.K. and 29.1 percent in India. Personal income tax receipts in this country are estimated at Rs. 105 crores and corporation taxes at Rs. 135 crores (1960-61 Budget). On the other hand, personal income tax accounts for about two-thirds in the U.S.A., corporation taxes making up the rest.

Actual and Taxable Incomes

The difference between the actual and taxable incomes is quite generous in the U.K. and the U.S.A., while in India the margin is nominal. The average rate of income tax on large companies is 52 percent in the U.S.A. Personal income tax rates are higher, the maximum being 91 percent on taxable *incomes of $200,000 and over (the rate* is 85.6 percent in the U.K. and 83.16 percent in India), going down to 20 percent on taxable incomes of less than $2,000. In 1958, 40 percent of personal income tax came from the slab of $5,000-10,000, which includes both wage earners and salary earners. Unearned incomes are taxed at the same rates as earned incomes, dividends being subject to lower *rates on account of prior taxes* on the profits of corporations (including undistributed profits). Capital gains are subject to income tax, but at preferential rates: 10 percent below $5,000, and 25 percent above $32,000. Capital losses are deducted up to $1,000 a year, and may be carried forward for five years.

The exemption slab comprises $600 a member of the family; $1,200 is allowed if the earner is more than 65 years of age or blind; this concession applies to his wife also. Ten percent is allowed as *business expenses, or even higher* if accounts are submitted. According to the 1948 law, man and wife can show separate incomes, thus going down to lower slabs. Apart from any personal business expenses, the taxpayer can deduct non-insured losses from theft, fire or hurricane, interest payments on mortgages or personal loans, taxes paid to State and local governments, and even his *alimony costs. Any medical expenses* that exceed 3 percent of annual income are deductible, and all such expenses in the case of the elderly. Finally, the taxpayer can subtract from his income all contributions to charitable, scientific, educational or other non-profit-making organisations, up to 20 percent of his income in any one year (or 30 percent if he has given to churches and hospitals). Even Sunday charities and the presentation of works of art to museums are deductible. The result of all these allowances and deductions is to reduce the taxable income to slightly less than one-half of the total personal incomes, collectively speaking.

Taking these concessions into account, a married man with four children can earn up to $4,000 a year without paying the federal income tax. Looking at all types of taxation—Federal, State and Local—studies suggest that the tax burden for each class of income below $15,000 a year is remarkably close to 20 percent: for the 5 percent of families with incomes above $15,000, the proportion rises to an average of 34 percent. Thus, rates are high but the burden is comparatively light on account of the numerous exemptions, allowances and reliefs. For incomes above $10,000, the revenue is small because the number of assessees is small, and evasion is *common* through manipulation. For instance in 1957, personal incomes of over $1 million each paid only 54 percent. The following table shows how federal taxation of personal incomes is highly progressive, (the States relying much more on property taxes and excise duties):

U.S. TAX BY LEVEL OF INCOME

Family income ($)	Average tax burden ($) Federal	State and local
Total		
1,454	412	229	183
3,751	986	595	391
5,934	1,535	972	563
8,160	2,097	1,407	690
10,250	2,454	1,656	798
13,868	3,332	2,382	950
32,284	11,576	9,615	1,961

Income Tax in U.K.

The standard rate of personal income tax in the U.K. is 7s 9d in the £. The exemption slab includes £180 (£140 for single persons and £240 for married couples). Incomes up to £4,005 are allowed exemptions up to two-ninths, while one-ninth is allowed for incomes between £4,005 and £9,945, subject to a maximum of £11,550. For persons over 65 years of age, an allowance of *two-ninths is allowed* even in the upper slab. The minimum allowance for the aged is £275 a single person and £440 for a married couple. In addition, the earned income of a wife is exempted from income tax up to £140. Children are allowed £100 each up to 11 years of age and £125 in the age group 11-16, and £150 for each son or daughter being educated, above the age of 16. £60 is allowed for each relative or dependent, as also the housekeeper if any. Progressive income tax rates apply in the following manner:

up to £	60 taxable	1s 9d
next £	150 taxable	4s 3d
next £	150 taxable	6s 3d
on excess	...	7s 9d standard rate

Effective rates of personal income tax including sur-tax are shown in the following table:

U.K. INCOME TAX AND SURTAX ON SPECIMEN INCOMES (1959-60)

Income	Income (all earned income) Income tax (and surtax, if any)	Effective rate	Income (all investment income) (a) Income tax (and surtax, if any)	Effective rate
£	£ s d	s d	£ s d	s d
180	—	—	—	—
250(b)	4 15 3	4½	4 15 3	4½
500	49 5 6	1 11½	84 0 0	3 4½
1,000	191 12 9	3 10	277 15 0	5 6½
1,500	342 6 8	4 7	471 10 0	6 3½
2,500	693 14 5	5 6½	909 0 0	7 3½

25,000	18,439 12 6	14 9	19,040 5 0	15 3
50,000	40,627 2 6	16 3	41,227 15 0	16 6
1,00,000	85,002 2 6	17 0	85,602 15 0	17 1½

(a) Age relief: Where the taxpayer is over 65 and his total income does not exceed £800, age relief is given. *This reduces the tax payable to that chargeable on* the earned income scale. Where the total income exceeds £800, marginal relief is given so that the full tax on the investment income scale is not payable until the marginal relief runs out.

(b) Age exemption: Where the taxpayer is over 65 and his total income does not exceed £275, no tax is payable. Where the total income slightly exceeds £275, marginal relief is given so that the full tax is not payable until the marginal relief runs out.

Distinction between earned and unearned income is maintained throughout. The general exemption slab is lower than in India, but the difference between actual income and taxable income is wider as in the U.S.A., and unlike India. Categories of relief are many more than in the U.S.A., including several marginal reliefs. All *contributions* by employees towards super-annuation funds are exempted, as also two-fifths of insurance premiums subject to certain conditions. Income tax and surtax combined, all incomes in excess of £15,000 a year are charged progressive rates up to 17s 1½d in the £.

The Indian Schedule

Rates are high and allowances nominal in the levy of income tax in India. The exemption slab comprises an annual income of Rs. 3,000, but the distinction between single, married and income receivers with children is quite small. It is only at the Rs. 8,400-step that distinction begins to be made between earned and unearned incomes for determining the rate of the levy. For Rs. 24,000 a year and upwards, the distinction disappears as among single persons, married persons, those with one child each, and those with two children or more. The relief does not go beyond two children even for incomes of less than Rs. 24,000 a year. This is in strong contrast to the allowances in the U.S.A. and the U.K. for the number of members of the family, relatives, dependents, housekeeper, aged (65 and over) and the blind. Nor is there any provision in India concerning medical expenses. Further, the taxpayer cannot get any relief on account of theft, fire and hurricane (they cannot be construed as capital losses). This "pound of flesh" demand has inevitably resulted in notorious evasions, for the detection of which there is neither sufficient administrative machinery nor technical personnel. The latest instance is of black money in the film industry.

The following table contains levies on specimen income ranges. As mentioned earlier, the topmost slab carries 83.16 percent (Rs. 30 lakhs and over), going down to 58.8 percent in the case of incomes of Rs. 1 lakh and over, 16.1 percent on incomes of Rs. 24,000 and over and 6.55 percent on Rs. 12,000 and more.

TAX PAYABLE ON INCOME OR INCOMES

(Tax at 1958-59 rates on total incomes)

Income	Married persons		Married with one child		Married with more than one child		Unmarried	
	Wholly earned	Wholly unearned	Wholly earned	Wholly unearned	Wholly earned	Wholly unearned	Wholly earned	Wholly unearned

5,00,000	3,59,471	3,94,824	3,59,471	3,94,824	3,59,471	3,94,824	3,59,471	3,59,471
10,00,000	7,44,471	8,14,824	7,44,471	8,14,824	7,44,471	8,14,824	7,44,471	8,14,824
30,00,000	22,84,471	24,94,824	22,84,471	24,94,824	22,84,471	24,94,824	22,84,471	24,94,824

The omission of agricultural incomes at a time when farm prices have not risen but shot up, is inconsistent *with the harsh treatment* accorded to non-agricultural incomes: some States do levy an agricultural income tax, but at nominal rates, and there is a good deal of scope on this ground for escaping the Central income tax.

On business incomes, the Indian tariff is slightly more considerate. Twenty-five percent of the value of new plant and machinery is deductible for the first year from profits for income tax assessments, and a tax holiday is provided for five years to new concerns in case the dividend rate does not exceed 6 percent. Constructions completed (whether personal or business) are also exempt from the income tax levy for the first two years. The salaries of foreign technicians are also exempt for one year.

In the United States, income tax is levied on capital gains, but at preferential rates. In India, such gains are taxed at uniform rates. It is curious that the Government of India classifies workers getting Rs. 6,000 or less a year as eligible for Employees' State Insurance and provident fund, while the levy of income tax begins at a much lower level at Rs. 3,600 a year. This is rather strange side by side with the loud protestations of social justice, compared with the maximum possible exemptions up to about Rs. 20,000 in the U.S.A. It is because the U.S. Government duly appreciates its responsibility for maintaining a decent minimum of national standard of life, whereas the Indian Government appears to believe in the eternal suffering capacity of the masses.

COMPANY AND PUBLIC NOTICES

THE BALLARPUR PAPER & STRAW BOARD MILLS LTD.

NOTICE

NOTICE is hereby given that an Extra-Ordinary General Meeting of the members of the Company will be held at the Registered Office of the Company at Ballarpur, Dist. Chanda, Maharashtra, on the 22nd February, 1961 at 11 A.M. to consider and if thought fit, to pass the following Resolutions with or without modifications:

AS SPECIAL RESOLUTIONS:

1. **RESOLVED:**

(i). "That the Authorised Capital of the Company be increased from Rs. 2 Crores to Rs. 2½ by creation of 2,00,000 additional Equity Shares of Rs. 25/- each."

(ii). "That in clause V of the Memorandum of Association and in Article 8 of the Articles of Association, the figures 'Rs. 2,00,00,000/-' and '5,60,000' shall be deleted and figures 'Rs. 2,50,00,000/-' and '7,60,000' substituted therefor, respectively."

AS ORDINARY RESOLUTIONS:

2. **RESOLVED:**

(i). "That it is desirable to raise further Capital and accordingly, it is decided that 3,43,242 Equity Shares of Rs. 25/- each, in the Authorised Capital of the Company, be issued and offered by the Directors at par, in the first instance, for subscription, to the Existing Equity Shareholders of the Company, whose names appear on the Register of the Company as on 22nd February, 1961, in proportion to three Equity Shares out of this New Issue for every two existing Equity Shares held by them on that date, with full powers to make such provisions for issue of fractional certificate or otherwise as the Directors think expedient for cases of fraction."

(ii). "That this New Issue of Equity Shares which the existing Equity Shareholders are entitled to take up, shall be offered in accordance herewith to each Equity Shareholders whose names appear on the Share Register of the Company on 22nd February, 1961, by a notice specifying the number of the New Equity Shares to which he is entitled, and limiting the time within which the offer, if not accepted, shall be deemed to be declined, and containing such terms as to payment or otherwise, as the Directors may determine."

(iii). "That the balance, if any, of the Equity Shares not taken in response to such offer, be allotted by the Directors to the applicants for additional shares on an equitable basis with reference to the equity shares already held by them provided that the Shareholders who renounce their rights in whole or part, shall not be entitled to apply for additional shares. Any balance still left unallotted, may be disposed of at the ruling price by the Directors of the Company."

(iv). "That this new issue of Equity Shares shall rank *pari passu* in all respects with the existing Equity Shares except that they shall not participate in any dividend that may be declared in respect of any period prior to the Company's financial year ended 30th June, 1961 and shall be entitled to dividend from the date of allotment on the capital for the time being paid up on such shares."

3. To pass the following with or without modification as an Ordinary Resolution under Section 294 of the Companies Act, 1956:

RESOLVED:

"That in compliance with Section 294 of the Companies Act, 1956, the Company doth hereby approve and consent to the appointments of the persons, firms and/or companies detailed in the Appendixes 'A' and 'B' attached and who are at present working as Sole Distributors of the Company for different areas, for sale of paper and stationery products of the Company on terms and conditions on which they are working and that the Directors be and they are hereby authorised to enter into and complete agreements with all or any one or more of them at their absolute discretion, for such periods (not exceeding five years from 1-4-61) as the Directors may deem proper and at their discretion to cancel any one or more of such appointments, and/or from time to time to vary the terms and conditions of such appointments."

By Order of the Board,
KARAM CHAND THAPAR & BROS. PRIVATE LTD.
Managing Agents.

Calcutta,
Dated the 24th January, 1961.

NOTE: i). The Share Transfer Books of the Company will remain closed from 15th February '61 to 22nd February, 1961 both days inclusive.

ii). A member entitled to attend and vote at the meeting, is entitled to appoint a proxy who need not be a *member to attend and vote instead* of himself.

iii). Explanatory Note in respect of the above resolutions and the list of Distributors referred to in the resolution in item No. 3, have been sent to the Shareholders along with the Notice. The following are open for inspection of the members at the Registered Office of the Company during business hours:

a). The sanction of the Controller of Capital Issues for this further issue of capital;

b). The list of the Distributors together with their respective areas and the general terms and conditions of the Distributorship.

ANGELO BROS. LIMITED.

NOTICE is hereby given that the Fifty-fourth Annual General Meeting of Shareholders of Angelo Bros., Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Friday the 24th February 1961, at 3-30 P.M. to transact the following business:—

1. To receive and adopt the Directors' report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st August, 1960.
2. To consider and declare a dividend in respect of the year ended 31st August, 1960.
3. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS.

4. To appoint a Director in place of Mr. C. N. Rodewald who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution:—

"That Mr. C. N. Rodewald, a Director and Manager of Turner, Morrison & Co. Private Ltd., the Managing Agents of the Company, and as such Director and Manager an associate, officer and employee thereof, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation". (Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co. Private Ltd. are the Managing Agents of the Company and Mr. C. N. Rodewald, a Director and Manager of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261(1)(f) of the Act, (2) the Managing Agents are a private company and as such Managing Agents hold an office or place of profit under the Company and Mr. C. N. Rodewald is an officer and employee of the Managing Agents as aforesaid in terms of Section (261)(1)(c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. C. N. Rodewald is an officer and employee thereof in terms of Section 261(1)(d) of the Act).

Note:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

(2) An explanatory note as required under Section 173 of the Companies Act, 1956, has been sent to each Shareholder entitled to notice of the meeting.

(3) The Share Transfer Register of the Company will be closed from 9th February, 1961 to 24th February 1961 both days inclusive.

Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
TURNER, MORRISON & CO., PRIVATE LIMITED,
A. H. HUME,
Director,
Managing Agents.

Calcutta, 24th January, 1961.

Managing Agents.

Calcutta, 30th January, 1961.

ASSOCIATED BATTERY MAKERS (EASTERN) LIMITED

NOTICE TO SHAREHOLDERS

THE accounts of the Company for the year ended the 31st August 1960 exhibit a net profit, allowing for depreciation, of Rs. 52 lakhs. After providing for taxation and reserves, bringing in the balance from the last account and deducting the amount of the interim dividend declared before the public conversion of the Company in January 1960, the amount available is Rs. 20 lakhs.

The Board of Directors has resolved to recommend to the shareholders at the forthcoming Annual General Meeting that a final dividend be declared at the rate of ten per cent subject to tax.

By Order of the Board,
H. M. COX,
Secretary.

Calcutta,
27th January, 1961.

DUNCAN BROTHERS & CO., LD.

NOTICE is hereby given that Mr. Melville Spencer Christie and Mr. Dilip Kumar Sen have been granted power to sign "per procurationem" on behalf of the Company with effect from 1st January 1961.

K. P. GOENKA,
Director.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRE-BUDGET OPTIMISM IN THE STOCK MARKET

WITH the Central Government's Budget for 1961-62 barely three weeks away, the stock market appears to be in remarkably good shape. This is normally a time of year when equity prices fluctuate sharply, as bulls and bears engage in vigorous argument about what the Finance Minister will do. In most years recently, the tendency has been for the bears to win; the prospect of heavier expenditure on development and defence has invariably highlighted the danger of new taxes being imposed. This year, however, not only is the argument subdued, but the bears have not been winning, mainly because the market's attention is centred on hopes of industrial expansion rather than on fears of fiscal deficits. Looking back, it finds that substantial progress has been made during the second plan, and in some sectors of industry, the advance has been quite spectacular.

fter the foreign exchange storms of 1957 and 1958, ie economy as a whole has made a fair recovery a position of relative stability. The production foodgrains has risen to an all-time record of ver 75 million tons; and is being supplemented y large-scale imports from the United States. The utput of other agricultural commodities too is kely to recover from the setback suffered in 1960. ndustrial activity continues to expand vigorously, s the various schemes launched in the earlier ears of the second plan approach maturity. Prices, lthough high, have been fairly stable, because of he increase in production and the cutback in eficit financing. It is true that the foreign exhange reserves remain at a dangerously low level, nd that exports are languishing while imports emain large. But the general assumption is that his does not matter much as long as external aid ontinues to come on a big scale. The prospects f getting such aid are assessed optimistically—erhaps more optimistically by the stock market han by the Government itself.
