Yet, to many it will seem that the market is oncentrating unduly on the achievements of the ast rather than on the anxieties of the future. The most immediate of these centres on the fact that he planners want to raise nearly Rs. 1,700 crores hrough new taxes (and the surpluses of State enterprises) over the next five years. Rough guesses are now current that, as its contribution for the coming year, the Centre alone may try to raise about Rs. 50 crores. In addition, there will probably be heavier taxation in the States, if only to impress the Planning Commission that they can garner much more revenue than it thought they could. A beginning may also be made towards increasing the surpluses of State enterprises, such as the railways; there is every reason to believe that this will be done by raising charges rather than by improving operational efficiency. The stock market has for the time being chosen to ignore many of these dangers. It is banking on the planners' assurance that direct taxation will not be raised, and that the extra revenue will be sought mainly from indirect levies. Some even say that the additional taxation in the coming Budget will be very light, firstly because Government revenues are exceptionally buoyant, and secondly because the rupees do not need to be raised immediately for various projects until the foreign exchange complement has been found. This latter view may prove complacent: the indications are that substantial new taxation is likely not only for meeting the prospective rise in Government expenditure, but also as a substitute for the deficit financing which the planners have wisely promised to restrict. In that case, even if the levies were all to be indirect, it is hard to think of many which would not affect industrial costs and profits. Quite possibly, the effects would be cushioned to some extent, as has been the case in the past, by rising turnover in an expanding economy, and by the fact that most industries today enjoy a highly protected market. But it is necessary to remember that the benefits of protection are already being fairly fully exploited, and that turnover cannot expand until the industries themselves expand. Whether they will be able to do so depends to a large extent on whether enough foreign aid and investment is forthcoming.

The near-term prospects for foreign aid look bleak, however rosy they may be in the long run. About Rs. 3,200 crores is required over the next five years, out of which nearly Rs. 600 crores has already been promised in the form of wheat and rice by the United States, and another Rs. 370 crores in other forms by Britain, West Germany and the communist countries. Superficially, the figures look impressive, considering that the third plan has not yet even started, but a major danger lies in the fact that practically all the financial aid so far promised is "tied" to capital expenditure on specific projects. In the immediate future, the main problem will centre on the maintenance of imports necessary to keep the existing industries going. The "Aid-to-India" Club is due to meet next month, and it is possible that some of its members may promise "untied" aid for such imports. But until the promises are made and their size known, it would be optimistic to expect that industrial expansion in India can continue unhampered. How big those promises would need to be may be gauged from the fact that this country's foreign trade deficit exceeded Rs. 360 crores in 1960—a year when imports were supposedly "cut to the bone" and when a number of industries could work to full capacity. There is every likelihood that, as industrialisation proceeds, import requirements will rise; unless they are met, installed capacity will not be properly used, with the result that the profitability of many enterprises will suffer. Both India and her helpers abroad have yet to realise that extra foreign exchange is needed not so much for capital goods, but for the raw materials which will keep the established industries going.

After foreign aid, the next major uncertainty the stock market will have to consider is the growing stringency of bank credit, and the general move towards higher interest rates. So far, its interest in the matter has been rather parochial: investors have been worried about bank credit only when they have wanted bigger advances against shares, and speculators have been worried only when they have not been able to raise short-term funds for subscribing to new issues. But, in fact, the consequences of the whole trend go far deeper, because the stringency of bank credit is getting to the stage where it may become an important factor hampering industrial expansion. The current busy season is only half way through, and funds are extremely difficult to come by. This might have mattered less if bank deposits were increasing rapidly, thus promising a wider base for credit creation in the future. But, on present showing, there is an even chance that, however the economy may get through its current busy season difficulties, the rise in deposits will not be fast enough for the next busy season, perhaps not even for the coming slack season. The question, therefore, arises as to where industry will satisfy its credit needs, if it continues to expand as fast as it has done these past couple of years. The problem also needs to be considered as to how long the Reserve Bank can maintain its present abortion of the interest-rate structure, whereby commercial interest rates are being raised while Bank rate is being kept down to an artificially low level. If Bank rate has to be raised later in the year in the interests of the Government's borrowing programme, equity prices cannot fail to respond by falling appreciably in order that the yield differentials may be maintained.

The purpose in underlining the uncertainties here is not to suggest that the stock market should straight away take the gloomiest view possible about the Budget, and about the condition of the economy thereafter. The purpose is to indicate that whatever satisfaction the Budget may give, negative or positive, the need for caution will persist. The fact that the taxes imposed last year were less than the market had feared gave rise to a wild boom. It was in the course of that boom, and of the subsequent slump, that many investors burnt their fingers. Even if the Budget is good—and, in the present context, "good" can only mean that the new taxation will not be too stiff—there is no reason why that experience should be repeated. Nor would there be reason for unrestrained jubilation if the Finance Minister were to do the minimum necessary in the interests of rational capital growth: abolish the bonus issue tax and the discriminatory levies against foreign private investment. The state of the economy will matter most, and the Budget will be only one of the factors governing it.

STEEL GALORE IN 2000 A.D.

WILD predictions of future industrial growth are common enough among statisticians and technologists; economists know much better the value of caution. But the "estimate" which Dr. M. N. Dastur has made for India's steel production needs at the end of the century—110 million tons; he does not make clear whether he is referring to ingots or finished steel—is really in the nature of a prophecy. When he also claims, as he did in his Sir M. Visvesvaraya lecture to the Indian Institute of Engineers in Bombay last week-end, that "expansion of this order is well within our capabilities" and that the programme should be insulated from "the uncertainties of foreign credits and aid", then the observer is justified in wondering whether he need be taken seriously at all. Only when he quotes the figure of 130 kilogrammes as the *per capita* consumption which such an output would give, and points out that this would barely permit India to reach the current consumption levels of Japan and Italy, is it obvious that whether or not such a target is practicable, it is certainly desirable enough, other things being equal. It is attractive too, in the context of India's present trend towards Soviet-style planning; the main difficulty is that to achieve it would require Soviet methods of compulsion. In India, it is the economic factor which is the chief limiting one, and no amount of simple extrapolation from existing plan target figures is going to avoid that.

Without going too deeply into the statistics of a matter which anyway defies statistical prediction carried more than a few years hence, it is interesting to see what such a target would mean. If India's steel output in 1960 is taken as the second plan target of 6 million tons—which it certainly was not, because it has already disappointed predictions made only four years away, let alone 40—to reach a figure of 110 million tons by 2000 A.D. would involve production being rather more than doubled every decade. Doubling production may seem no problem when this is standing at a mere 4½ million tons, as it probably is now. But when it is understood that an output of about 50 million tons would have to be doubled between 1990 and the end of the century, then the task appears altogether a different matter. This would be equivalent to building a steel industry the size of the Soviet Union's, or twice the size of the United Kingdom's, both as they are today, in ten short years. Starting from a higher initial total, in a much wealthier country, and with all the advantages of totalitarian methods, it has taken the Soviet Union nearly 50 years to build a steel industry which India would have to add to her own capacity in ten years if she were to make a target of 110 million tons by the end of the century. The cost would be stupendous. On the basis of current capacity costs of about 3 million tons of steel for about Rs. 500 crores—inflation being counterbalanced by the economies of experience,

most unlikely—the total cost would be somewhere in the region of Rs. 17,000 crores, or about four times the size of the second five year plan in the public sector. If the foreign exchange component of this is taken as, say, 50 percent on average, that would mean steel development alone would absorb about Rs. 8,500 crores of precious foreign exchange over the 40-year period, which is more than 12 times India's annual export earnings. All these figures are very approximate; but they are as likely to be right as Dr. Dastur's suppositions, and are quite near enough to show that what he advocates is quite impracticable. As long as a 110-million-ton target figure is not taken too seriously, no harm is done; but there is always a danger these days that the impossible will be accepted through sheer usage to the exclusion of all preoccupation with the practicable. It would be a pity if a target of 110 million tons of steel by the end of the century were ever to become an item of planning lore in this country.

The fallacy of Dr. Dastur's approach is seen clearly enough in the way he skips over the problem of demand for such an output: his plans, characteristically, seem to exclude the idea of exports. They do, of course, include heavy industries—which he appears to consider the only sound basis for economic development—a full range of supporting industries, and an increase in consumer industries. In other words, his target does not preclude the installation of all the necessary industrial capacity for absorbing 110 million tons of steel right down to the consumer. Now this is clearly quite impracticable, as he himself obviously suspects when he poses the question whether India would not prefer to sacrifice consumption now in order to build investment capacity for the future, and says, quite rightly, that it is one of priorities. So it is; and these priorities are decided by the ballot box, not by statisticians' slide rules. The point is that to build a steel industry of this size, with its companion heavy industries, would involve an investment which would rule out the installation of most of the vast quantity of consumer-industry capacity which would be necessary ultimately to absorb its output. It must be remembered that planning of this kind has always, as in Soviet Russia, been designed to feed armament industries as well as those serving construction and further investment—it simply does not allow for the building up of consumer capacity as well.

In a democratic country like India, the ultimate size of steel expansion will depend on the balance between the growth of producer industries and those serving consumption. Both have a call on the nation's limited investment resources, including foreign exchange, and only the most incorrigibly optimistic would predict that these will be able to grow in the next 40 years to the point where a balanced economy can be developed so as to absorb 110 million tons of steel. The more likely situation is one where the major portion of investment resources would be concentrated on expanding steel manufacture, and steel-using capacity in heavy industry, leaving nothing for developing consumer industries or even construction activity. One point exponents of large steel industries tend to overlook is that unless the rest of the economy can be expanded proportionately with steel manufacturing capacity, this capacity is simply waste. Dr. Dastur's approach also overlooks the social cost of a steel industry of such size in an economy where development resources are strictly limited. To quote Mr. H. V. R. Iengar's argument that "if a steel plant had been put up during the first plan period, India would have not only got the plant cheaper, but also saved considerable foreign exchange spent on imported steel", gets one nowhere. This is the kind of wisdom the logical extension of which is that all development resources should be concentrated on steel production from now on. Most important of all, it overlooks the fact that the resources which were not allocated to steel at the time may have been used in other fields where the saving in cost and foreign exchange was even greater. Once again, it is a question of priorities, and it is for the planners to decide on these priorities on the evidence available to them before the event and not after it.

It is anybody's guess how much steel-producing capacity India will require by the end of the century. It may, in fact, turn out to be 110 million tons, although on present showing that is highly unlikely. The important point is that this figure should not be taken as a practical target which must be obtained no matter what the cost to the rest of the economy. The progress of economic development which Dr. Dastur obviously has in mind is a Soviet one: it has no great relevance in a democratic country such as India where investment in heavy industry and steel production will always be limited by the immediate claims on the economy for food, clothing and consumer goods. It makes little difference what view statisticians, technologists and planners take about the desirability of postponing these claims. Ultimately the decision is made by the consumer and the voter, if not through the ballot box, then through the mechanism of the market, which not even planning can entirely over-ride in the long run. It was said earlier that a 110-million-ton target might be desirable. This is only true under certain limiting circumstances, the chief one being that if the steel is not wanted for the home economy it should be cheap enough to export without subsidy. If this slight qualification is borne in mind, then little more need be said, because steel productive capacity will expand only in balance with the rest of the economy, and will only by the intervention of a miracle reach 110 million tons by the end of the century.

REALIGNING CURRENCIES

THE opinions of the National Institute of Economic and Social Research are independent of—and often in conflict with—the British Government's policy. That the February issue of its *Economic Review* (which is published every two months) suggests that sterling should be devalued is, therefore, no cause for alarm. There is no reason to suppose that devaluation has been seriously considered, officially, at any time in the recent difficult period, or that it will be seriously considered if the difficulties increase. Yet such a suggestion from an influential body of economists must be treated with respect, and it has, in fact, unsettled the ideas of some people in Britain who have hitherto excluded devaluation from their thoughts. They are not worried by a possibility that sterling will be devalued as a matter of necessity, nor by a possibility that it will be devalued as a matter of choice; for they do not believe that either possibility exists. But they wonder if the world's currencies ought to be rigidly maintained at rates fixed years ago, when conditions have changed in the meantime.

The Institute does not suggest that only sterling should be devalued. It envisages a large deficit on the U.K.'s current account in 1961, as in 1960; but the U.K. is not the only deficit country, nor even the principal one. The Institute feels that both the U.S and the Canadian dollars are over-valued. It does not, however, believe that devaluation of sterling would necessarily be accompanied, or followed, by devaluation of the U.S. dollar; and it does not seem unduly disturbed by the thought that devaluation of sterling might be a unilateral act. The particular problem that concerns the Institute—and, indeed, many economists and business men in Britain—is how to resume "growth". This is a comparatively new word in the economic language. There were long periods of "stagnation" (the not quite appropriate word now used as the antithesis of "growth") before the last war, but in that era we were not "growth-conscious". Devaluation of the currency is seen not as a necessary means of adjusting international payments but as a possibly desirable alternative to other means of adjustment that would restrict "growth", in the national economy, the world economy, or both.

One possible alternative is restraint on imports; another is restraint on exports of capital. Both, in their different ways, would restrict development and trade in the world economy. The method that the British Government prefers at present is restricting demand at home, whereby, it is hoped, imports will be reduced and exports will be promoted. Recent ministerial pronouncements have implied that steady growth is possible within the framework of such a policy, if the export drive is vigorous and successful; the implication being that restraint on demand will be relaxed when the adverse balance of payments is eliminated. This reasoning is challenged by the more "growth-conscious" economists. They argue that in many British industries the cost a unit of output is rising because productive capacity is not fully employed, and that countries where production and consumption are expanding fast—particularly Japan—are not less but more successful in export trade. A high level of production could, of course, be supported by a high level of exports, even while internal demand was restricted; but the "expansionists" argue that the comparatively low level of production prevents exports from increasing much.

In an extensive survey of British industry, the Institute has found no evidence that Britain's prices are, on the whole, higher than her competitors'. In a special article published in *The Times* at the same time as the latest *Economic Review*, Dr. T. Barna, statistical economist and Assistant Director of the Institute, shows that most of the accepted explanations of the inadequacy of Britain's exports are in some degree wrong, and that the only valid generalisation is that energetic companies can succeed where lethargic companies have failed. It might be thought that the Institute, having discovered these facts, would exclude devaluation of the currency from its proposed solutions of the payments problem; but it may feel that so much restraint on domestic trade would be needed to force the lethargic companies to export enough that the whole economy would be retarded in the process. Some observers see more evidence of basic over-valuation in the dollar than in the pound; but it seems that, whatever the evidence, President Kennedy's Administration is resolved to maintain the present value of the dollar in terms of other currencies and gold. Most observers see evidence of basic under-valuation in the deutschemark; but it seems that Chancellor Adenauer's administration is similarly resolved to maintain the present parities. It seems, then, that Governments' ideas on the value of their own currency are quite inflexible. It is surely a duty of the International Monetary Fund to consider this situation very seriously.

Various alternatives to changing relations between currencies have been proposed. The discussion is mostly concerned with the relation between the U.S. dollar and the deutschemark, and the proposals imply that, by various means, the dollar should be strengthened and the mark should be weakened. (Financial aid from Germany, or from the I.M.F., to the Unittd States is, of course, assumed to be temporary, while the dollar is being strengthened.) Since President Kennedy is obviously opposed to deflation—his policy has, on the contrary, rather inflationary implications—the most constructive long-term proposal is that the German economy should be inflated, and that in the meantime Germany should assume from the United States the main burden of financing development in the under-developed countries. Nobody suggests that the fixed parities of currencies should be frequently changed to accord with temporary changes in individual countries' economies, or that Governments should relax monetary discipline with the intention to devalue their currencies accordingly. But to make major changes in the economy of a country, or of several countries, seems a needlessly cumbersome alternative to realigning currencies. No currency has an unalterable "natural" value in terms of others. So the Institute should be commended for its honesty and courage in bringing forward the idea of realignment for rational discussion.

FOREIGN AID FOR THE PLANS

WHEN the third five year plan is inaugurated in eight weeks' time, there is likely to be considerable trepidation about the availability of foreign exchange. The cheerfulness which marked the inauguration of the second five year plan five years ago, will probably be quite conspicuous by its absence. At the time that plan started, the external reserves totalled Rs. 725 crores—more than India needed then. But the foreign aid component of the third plan has been pegged at the high figure of Rs. 3,200 crores, of which Rs. 600 crores are expected from surpluses under American Public Law 480. Against this massive requirement, India's own reserves are now at the crisis point of only Rs. 128 crores; this is considered below the bare commercial minimum. There is no doubt that the success of the third plan will depend mainly on whether or not India gets the necessary foreign aid. A rough idea of the donor countries' contributions is likely to be obtained after the meeting of the Aid India Club to be held in Washington about the middle of April.

The fourth annual report on external assistance just published by the Union Finance Ministry generates hopes as well as fears. The hope springs from the generous financial assistance given by friendly countries since the beginning of the first plan. This flow of financial assistance shows that foreign countries are quite willing to help India's economic development as far as circumstances permit. Of the foreign aid authorisations amounting to Rs. 2,727.78 crores up to the end of December 1960 (including offers of assistance totalling Rs. 977.19 crores for the third plan), Rs. 394.22 crores were made in the first plan and Rs. 2,333.56 crores in the second. The major portion of the aid, amounting to nearly Rs. 2,091.57 crores, was in the form of loans, while credits amounted to Rs. €36.21 crores. This aid was exclusive of the assistance received in the form of suppliers' credit, Rockefeller Foundation grants gift shipments from private voluntary agencies in the U.S.A., assistance under P.L. 480, aid from the Netherlands in the form of technical assistance and from Switzerland for logging equipment.

Of the big donors, the U.S.A. authorised aid of Rs. 1,480.32—Rs. 974.64 crores in loans and Rs. 505.68 crores in grants. Excluding the wheat loan of Rs. 90.31 crores and the T.C.A. programme aid of Rs. 130.03 crores made during the first plan, the amount authorised since the beginning of the second plan was Rs. 1,259.98 crores. The assistance

from the U.K. came mainly in the form of credit and amounted to Rs. 162.66 crores. The total amount of credits given by Russia up to the end of October 1960, amounted to Rs. 322.53 crores. It may be mentioned that the Russian aid consisted mainly of medium-term loans covering a period of 12 years and carrying interest at 2½ percent. In addition, Russia gave grants of Rs. 1.15 crores in the form of gifts of machinery and equipment. Apart from Rs. 28.34 crores for the third plan, West Germany has authorised aid up to Rs. 122.24 crores since the beginning of the second plan. Up-to-date the World Bank has granted loans of Rs. 315.28 crores, of which Rs. 219.44 crores have been given to the public sector and Rs. 95.84 crores to the private.

A matter of concern is the big gap between aid authorised and the amounts actually used. Out of the authorised total aid of Rs. 2,333.56 crores since the beginning of the second plan, nearly Rs. 914 crores were announced during the nine months ended December 1960. A large portion of this is specifically earmarked for the third plan. The total aid available during the first three years of the second plan was Rs. 1,617.26 crores, but only Rs. 691.49 crores were used. So the balance available at the end of March 1960, was as high as Rs. 925.77 crores. Even the P.L. 480 counterpart funds have not been used to the extent they have been available. Out of these accrued counterpart funds an amount of Rs. 150.84 crores has already been earmarked for specific projects in the public and private sectors, but only Rs. 69.49 crores have been used so far. It is extraordinary that out of an allocation of Rs. 76 crores from these funds for lending to projects in the private sector an amount totalling only Rs. 11.07 crores has been drawn, although private industries are in desperate need of financial assistance following credit shortages.

An important factor contributing to the discrepancy between the aid authorised and that used is the delay in processing and executing the various projects. Unless the foreign aid can be utilised more fully, donor countries may get the impression that India's requirements are overstated. Although the ambitious targets set for the third plan may not look big enough considering the huge social needs, it remains to be seen whether the necessary organisation can be built up for using foreign aid more speedily. The need for a first-class organisational set-up is the greater because a large portion of the future aid is expected in the form of tied loans. Although this kind of assistance is generally more expensive the donor countries are sometimes justified in insisting on it in order to make sure that the money they give is properly used. In the absence of any firm indication as to the amount of foreign aid likely to be available for the third plan, the Finance Ministry is meanwhile taking a near-term view of requirements. The foreign exchange gap during 1961-62 is estimated to be at least Rs. 300 crores. For the time being, there is nothing but uncertainty as to how it will be obtained.

Current News and Comment

A Dividend from Rallis

The ordinary shares of Rallis India Ltd have met with steady support around Rs. 132 in the Calcutta stock market during the past week. This is because the Company has announced an ordinary dividend of 4 percent for the year ended August 1960—after an interval of eight years. The dividend is covered more than five times and offers a yield of 3 percent at the present price. The prospects for the Company are brighter, considering that all arrears of preference dividends have been paid, including the preference dividends for the year under review. These have involved a total outlay of nearly Rs. 24 lakhs.

The profit has increased from Rs. 26.30 lakhs in 1958-59 to Rs. 48.11 lakhs, after providing Rs. 4.02 lakhs for depreciation. Taxation is allocated Rs. 7.11 lakhs, doubtful debts Rs. 90,000, development rebate reserve Rs. 17,000 and general reserve Rs. 5 lakhs. There is a carry-forward of Rs. 4,49,000, against Rs. 2,54,744 brought in. The excellent results are due mainly to the diverse industrial activities Rallis has undertaken during the past few years. The Company is still extending its industrial interests either by starting its own factories or through subsidiary companies.

Cast Iron Spun Pipes from I.I.S.C.O.

It is reliably understood that the Indian Iron and Steel Co. Ltd proposes to set up a new industrial undertaking in Indore or Ujjain, Madhya Pradesh, for manufacturing 60,000 tons of cast iron spun pipes a year. Informed sources believe that the Licensing Committee has recommended a licence for I.I.S.C.O., subject to certain conditions, although many applications made prior to Indian Iron's had been rejected on the ground that with all the schemes already sanctioned by the Government, there was no further scope for setting up additional capacity in this line. The preference shown to Indian Iron is based on its long experience in the manufacture of cast iron spun pipes and the installation of spun pipes plant which will enable it to implement the scheme expeditiously. It will get the licence if the terms of foreign collaboration are approved by the Government and I.I.S.C.O. agrees to export at least one-third of the total output of the new unit.

I.I.S.C.O. is one of the many firms which applied to the Government for manufacturing cast iron spun pipes. The six firms whose applications have been approved by the Government are: Kolay Iron and Steel Co., Calcutta, Mr. Rajendra K. Somani, Calcutta, Premier Spun Pipes Co., Madras, Lakhani and Co., Bombay, Bhogilal Meghraj and Co., Bombay and New Swadeshi Mills, Ahmedabad. N. C. Kolay and Sons of Calcutta and Mr. Rajendra Kumar Somani of Calcutta want to set up plants with an annual production capacity of 14,400 tons and 30,000 tons of cast iron spun pipes, respectively. Premier Spun Pipes of Madras proposes to manufacture 18,000 tons of pipes a year and its factory is to be located in Ernakulam, Kerala. Lakhani and Co., Bombay, wants to set up a plant with an annual capacity of 9,000 tons in Kalwa, Thana district (Maharashtra). The production capacity of the plant proposed by Bhogilal Meghraj and Co. of Bombay is 1,200 tons. The plant proposed by New Swadeshi Mills, Ahmedabad, will have a capacity of 36,000 tons of cast iron pipes a year.

Angelo Brothers Optimistic

The shares of Angelo Brothers have improved to Rs. 22 in the Calcutta stock market during the past week because the results for the year ended August 1960 are satisfactory. The ordinary dividend has been increased from 20 percent, taxable, to 25 percent, taxable, including a bonus of 12½ percent. At the present price, the yield works out to 11.4 percent and the dividend is covered more than twice. The profit has improved from Rs. 11.58 lakhs to Rs. 15.94 lakhs, after providing Rs. 1.03 lakhs (against Rs. 97,414) for depreciation. General reserve is allocated Rs. 50,000, bad debts reserve Rs. 10,000, pension reserve Rs. 50,000 and taxation Rs. 7.30 lakhs (against Rs. 5.40 lakhs). The carry-forward is Rs. 22,752, compared with Rs. 2,24,867 brought in. Sales increased from Rs. 1.72 crores to Rs. 2.10 crores.

The directors take an optimistic view of the prospects for the current year, and think that trading will be as satisfactory as in 1959-60. Overseas interest in shellac has increased, mainly because the market has become more stable with the fixing of minimum export prices. The Indian Lac Exporters Association has built substantial funds by collecting export levies for financing research, publicity and buffer stocks. Steps have been taken to promote research and find new uses for shellac. Plans have also been framed to encourage the cultivation of lac. The Angelo Brothers balance-sheet shows a strong financial position. The ordinary share capital of Rs. 30 lakhs, divided into shares of Rs. 10 each, is backed by reserves of more than Rs. 42.77 lakhs. Fixed assets are Rs. 10.77 lakhs and current assets exceed Rs. 56.69 lakhs.

Shree Changdeo Sugar Pays Less

The directors of the Shree Changdeo Sugar Mills Ltd have recommended a dividend of Rs. 2.50 a share, subject to deduction of tax, for the year ended September 1960, against Rs. 2.62 a share, taxable, in the previous year. What led them to propose a cut in the dividend is difficult to say because the preliminary report shows that the Company's working has been fairly satisfactory. Both production and profits have increased in 1959-60. Since the output is expected to rise by about 20 percent in 1960-61, the profit outlook cannot be discouraging. While expressing serious concern over the provisions of the Maharashtra Land Ceiling Bill, the directors state that it will not affect Changdeo Sugar substantially as the major portion of its profit is derived from the manufacture of sugar rather than from the growing of sugarcane. They fear, however, that the proposed legislation will affect the supply of sugarcane to the factory, which is already experiencing an acute shortage of raw material as co-operative sugar factories have been set up in its vicinity.

The quantity of sugarcane crushed amounted to 99,017 tons, against 93,330 tons in the previous year. The production of sugar rose from 104,000 bags to 111,000 bags. The average recovery was 11.4 percent, against 11.31 percent in 1958-59. The cane crushed from the Company's own farms amounted to 40,200 tons, against 41,216 tons in the previous year. After providing Rs. 4.79 lakhs (against Rs. 4.63 lakhs) for depreciation and development rebate, Rs. 7.35 lakhs (against Rs. 8.80 lakhs) for taxation and adjusting a sum of Rs. 1.16 lakhs being the estimated loss on the quota of 2,336 bags of sugar allotted to the factory under the Sugar Export Promotion Act, the net profit is Rs. 12.08 lakhs, against Rs. 11.63 lakhs. With Rs. 2.07 lakhs brought in and Rs. 21,825 being the refund of tax for the assessment year 1950-51, and after providing Rs. 4.75 lakhs, being short provision of tax for the assessment year 1956-57, the amount available for appropriation is Rs. 9.62 lakhs. The proposed dividend absorbs Rs. 7.50 lakhs, against Rs. 8.46 lakhs. A sum of Rs. 1.5 lakhs (against nil) has been transferred to general reserve. The carryforward is Rs. 61,719.

Delhi Cloth Mills to Expand

The shares of the Delhi Cloth and General Mills Ltd have risen from Rs. 35 to Rs. 38 since the turn of the year. The improvement is attributed to the Company's expansion plans. It proposes to undertake the manufacture of P.V.C. and rayon tyre-cord at an estimated cost of about Rs. 9 crores. The P.V.C. plant, for which an industrial licence has already been secured, is to be set up in Kotah, Rajasthan. It will be established with Japanese collaboration, and negotiations with the Japanese firm have almost been finalised. The rayon tyre-cord plant, for which a licence is expected shortly, is to be set up near Calcutta with the help of an American firm. The foreign exchange requirements are likely to be met through loans from international financial institutions.

Delhi Cloth is expected to issue rights shares for financing the new schemes.

Voltas Maintains Dividend

Although the directors of Voltas Ltd have decided barely to maintain the dividend of Rs. 13 a share, subject to deduction of tax, for the year ended August 1960, the preliminary report issued by the Company along with the dividend announcement will please shareholders. Both sales and profits have recorded an appreciable increase. Total proceeds of sales and services at Rs. 19.86 crores are Rs. 2.74 crores higher than in the previous year. After providing Rs. 60 lakhs (against Rs. 51.50 lakhs) for taxation, the net profit has increased to Rs. 61.89 lakhs from Rs. 46.31 lakhs. With Rs. 2.27 lakhs brought in and Rs. 51,550, being development rebate reserve for office appliances and vehicles written back, there is a total of Rs. 64.68 lakhs. Allocations include Rs. 15 lakhs (against Rs. 9 lakhs) for general reserve, Rs. 5.59 lakhs (against nil) for development reserve, Rs. 1.69 lakhs (against Rs. 88,768) for development rebate reserve and Rs. 5 lakhs (against Rs. 4 lakhs) for retiring gratuity. The proposed dividend absorbs Rs. 33:15 lakhs, leaving a sum of Rs. 4.24 lakhs to be carried forward. At the current price of Rs. 260, the shares offer a gross yield of 5 percent. They touched a high of Rs. 307 in July 1960, but declined to Rs. 240 in October.

More Jeeps from Mahindra

The shares of Mahindra and Mahindra Ltd have shot into the limelight during the past week. The quotation has advanced from Rs. 19.50 to Rs. 21.24 in a few days because of informed buying based on the Company's growth prospects. Like many leading engineering companies, Mahindra and Mahindra is going ahead with its expansion schemes in a big way. The Company, it is understood, has received the Government's sanction for increasing the production of jeeps from the present level of 5,500 units to 10,000 units a year. The increased production target is expected to be achieved within five years. Mahindra-Sintered Products Private Ltd, the Company's subsidiary which has been formed in partnership with Birfields to manufacture self-lubricating bearings in Pimpri, is almost ready to start production within two months. The plant of the Indian National Diesel Engineering Co. Private Ltd, an associate concern, for manufacturing vertical air-cooled diesel engines is likely to go into production by October. In view of the various expansion schemes, the outlook for Mahindra and Mahindra shares seems promising.

Head Wrightson India

To handle Head Wrightson's expanding interests in India, a new Company, Head Wrightson India Ltd, has been registered. With its administrative headquarters in Calcutta, this Company will be a wholly-owned subsidiary of Head Wrightson and Co. Ltd of Thornaby-on-Tees, England. It will act as a contracting Company for the supply, as far as possible from Indian sources, of various types of plant to the designs of the parent company. The fullest use will be made by the new Company of the rapidly growing manufacturing facilities in India for the class of work concerned, both in the public and private sectors. This is a first step in strengthening Head Wrightson's participation in India's development. As a further move, it is hoped to incorporate a rupee Company within the next three years.

Head Wrightson has maintained a close link with India for many years, and has been responsible for supplying much of the specialist equipment used today in India's basic industries. The Company is at present playing a major part in the Durgapur steelworks project, and is supplying all the iron-making plant, together with much ancillary equipment. The first blast furnace was blown-in in December 1959, and the second of the three is now complete. The chairman of Head Wrightson India Ltd will be Mr. Peter Wrightson, who is also vice-chairman of Head Wrightson and Co. Ltd. Mr. Vaughan Pendred has been appointed managing director.

Electric Construction Expanding

The shares of the Electric Construction and Equipment Co. Ltd are in demand around Rs. 12.25 as the Company is expanding. Steps have been taken to increase the production capacity for transformers in collaboration with the Tokyo Shibaura Electric Co. Ltd of Japan. It is proposed to build a separate factory near Calcutta for increasing the output of switchboards and switchgears. A technical collaboration agreement has also been finalised with the Tokyo Shibaura Electric Co. Ltd for producing motors. The progressive manufacture of lift components and parts, in collaboration with Schindler and Co. Ltd of Switzerland, is making steady progress. Further expansion is to be undertaken in this unit in the near future. In order to finance the expansion schemes, a one-for-one rights ordinary share issue has already been made at par.

Electric Construction and Equipment has increased its profit from Rs. 79,475 to Rs. 9.71 lakhs for the year ended October 1960, after transferring Rs. 99,000 (against Rs. 1.48 lakhs) to development rebate reserve and Rs. 2.48 lakhs (against Rs. 2.06 lakhs) to depreciation. The ordinary dividend has been increased from 5 percent to 10 percent, taxable. It offers a yield of 8.2 percent at the present price and is covered more than three times. Taxation is allocated Rs. 4 lakhs and general reserve Rs. 3 lakhs. There is a carry-forward of Rs. 27,282, against Rs. 22,269. Sales rose from Rs. 8.47 lakhs to Rs. 1.19 crores.

Indian Rayon Rights Issue Soon

Shareholders of the Indian Rayon Corporation will be asked at the forthcoming annual meeting to approve the proposal to increase the issued capital from Rs. 2 crores to Rs. 3.75 crores in order to finance the Company's expansion schemes. The proposed issue consists of 145,000 equity shares and 30,000 10 percent taxable redeemable preference shares, both of Rs. 100 each. The preference shareholders will be entitled to take six new preference shares for every 11 held, and ordinary shareholders will get one new equity share for every one held. The directors have decided to expand the installed capacity of the rayon yarn plant from 5 tons to 10 tons a day. They have also decided to install machinery for the pulp plant which will manufacture 15 tons of rayon-grade pulp a day from cotton linters. It is stated in the annual report for the year ended 15th February, 1960, that the Government has agreed to grant import licences for all the plant and machinery. Two import licences of the value of Rs. 37.50 lakhs and Rs. 44.85 lakhs have already been issued and the third one of Rs. 2.01 crores is expected shortly. The directors estimate that Rs. 2.84 crores will be needed to import machinery from abroad. Besides, there will be an increase in the cost of buildings and in the requirements of indigenous machinery and equipment. The total estimate, therefore, comes to Rs. 4.20 crores. Negotiations are said to be in progress for securing loans amounting to Rs. 2.45 crores from American and European financial institutions. The balance is to be raised by the issue of fresh capital. The Company's Rs. 50-paid share is quoted around Rs. 51.50.

Kelvin, Waverley Jute Pay More

In their reports for the year ended May 1960, the directors of the Kelvin Jute Co. Ltd and the Waverley Jute Mills Co. Ltd (both of which are in the McLeod group) assess the prospects with caution, since the profitability of the mills will be adversely affected by the shortage of raw jute. After transferring Rs. 4.59 lakhs (against Rs. 4.85 lakhs) to depreciation and Rs. 5.55 lakhs (against Rs. 5.35 lakhs) to taxation, the profit of Kelvin Jute has improved from Rs. 6.18 lakhs in 1958-59 to Rs. 7.90 lakhs in 1959-60. The ordinary dividend has been increased from 14 percent, taxable, to 15 percent, taxable. It is covered more than three times and offers a yield of 10.5 percent at a price of Rs. 143.50 a share. General reserve receives Rs. 1.50 lakhs (against Rs. 1 lakh) and development rebate reserve Rs. 1.46 lakhs (against Rs. 56,000). The carry-forward is Rs. 1,21,384, against Rs. 1,63,584 brought in.

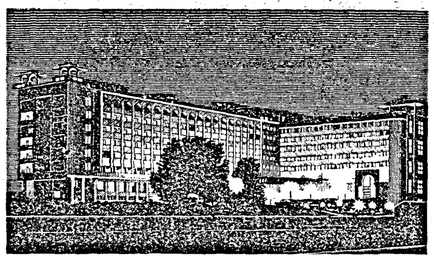
The profit of Waverley Jute has amounted to Rs. 5.02 lakhs in 1959-60, against Rs. 3.08 lakhs in 1958-59, after providing Rs. 1.05 lakhs (against Rs. 1.14 lakhs) for depreciation. The ordinary dividend has been increased from 25 percent, taxable, to 30 percent, taxable. The yield works out to 9.8 percent at the present price of Rs. 3.06 a share, and the dividend is covered more than six times. Taxation is allocated Rs. 2.50 lakhs (against Rs. 9,400). The carry-forward is Rs. 1,94,094, compared with Rs. 1,03,603 brought in. The Waverley mills have been shut since June 1957 and their loom-hours are being sold to other mills in the McLeod group.

E. R. I. C. Does More Business

During 1960, the third year of its working, the Export Risks Insurance Corporation issued 324 policies with a maximum liability of Rs. 8.14 crores, against 243 policies with a maximum liability of Rs. 7.87 crores in 1959. Forty percent of the policies issued were those for which the maximum liability was Rs. 50,000 or less. Shipments, contracts and credits insured amounted to Rs. 6.96 crores, against Rs. 5.88 crores in 1959. Insured exports were of 69 commodities to 109 countries and amounted to about 1.1 percent of the total exports in 1959 and 3.48 percent of the estimated insurable exports. In the case of 18 countries, insured exports ranged from about 5 percent to 25 percent of the total exports to those countries. The policies issued by the Corporation are treated as additional security by the banks. Thus, 94 policyholders obtained financial facilities for shipments of the value of Rs. 2.37 crores by authorising the Corporation to pay in the event of a claim to the financing bank; the value was Rs 1.95 crores in 1959. The Corporation paid claims for Rs. 3,76,394 and made provision for Rs. 1,08,680 for meeting claims which may arise out of reported protracted defaults. Sixty-four insured exporters increased their exports after insurance. The Corporation has decided to cover risks involved in packing credits given by banks to exporters to purchase and/or manufacture goods for export.

The Ashoka Hotel

AT NEW DELHI



LIGHTING BY PHILIPS

Occupying an area of 20 acres, the Ashoka Hotel—the largest project of its kind in India—stands out as another shining example of Philips specialised lighting.

The lighting is so essentially a part of the whole conception that it presents an architectural masterpiece which belies the fact that it is achieved by artificial means.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE : *For planned lighting, designed economically to suit your specific need —whether it is industrial, commercial or any other specialised application— consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

PHILIPS INDIA LIMITED

Project for Metallised Paper

A new company promoted by Mr. Arvind N. Kilachand and Mr. M. C. Chhatrapati will shortly be formed to establish a continuous process plant for the vacuum metallising of paper. This patented German process is of recent origin, and involves depositing a highly lustrous coating of metal on paper by evaporation. The raw materials required are aluminium and paper, both of which are readily available in this country. The metallised paper has several uses, such as in the production of condenser and capacitor paper for the radio, television and electrical distribution industries. The plant will be the first of its type in India. The sponsors of the project have been able to obtain the technical collaboration of the process owners and will shortly be proceeding to Germany for negotiating the purchase of machinery. It is hoped that the foreign exchange will be obtained through loans now being negotiated with the Industrial Credit and Investment Corporation of India.

Cotton Prices Decline Sharply

Cotton prices have declined sharply over the past few weeks. The hedge contract (April delivery) in Bombay, which rose from Rs. 565.50 for 3 quintals on 18th October to Rs. 614 on 22nd December, fell to Rs. 558.50 last week. The decline in spot prices has been even more pronounced; they have come down by about Rs. 25 or Rs. 35 a candy within a few days. Most varieties of cotton now virtually go abegging at Rs. 50 or Rs. 60 a candy below the ceiling rates. Until about the middle of December, mills had to ask for the Textile Commissioner's help in getting their raw material at the ceiling rates through requisitioning. Cloth offtake is encouraging, so production is being maintained at a high level. Even so, mills are inclined to keep off the market, since price expectations have changed. The growing pressure of arrivals, the upward revision of crop estimates, a larger inflow of foreign cotton and acute financial stringency—all these factors have contributed to the decline in prices. Mills are now reluctant to use their quotas of indigenous cotton. Ginning and pressing factories are reported to be fully stocked. Besides, growers' co-operative societies are said to have asked for financial assistance from New Delhi to tide over the situation created by the sharp decline in prices.

The rates held firm until about the end of December because of the record low carry-over of 980,000 bales of indigenous cotton at the end of the 1959-60 season and the rather slow arrivals which could not satisfy mills' current needs. Few observers then talked of a crop of more than 5 million bales. Some said it might not exceed 4.8 million bales. Crop ideas have recently been revised upwards, and a crop of 5.1 million or 5.2 million bales is widely forecast. Some think that it may be as large as 5.4 million bales. How far these estimates have been influenced by the changing mood of the market, it is difficult to say. But the bulls naturally feel uneasy at the prospect of a bumper crop. A crop of 5.4 million bales will help the cotton textile industry to secure adequate cotton supplies for increasing cloth production, make possible larger exports, help build a big carryover and reduce India's dependence on imports even if these come as P.L. 480 aid. So the fall in prices need not be viewed with concern. Even at the current rate of about Rs. 560, the April hedge contract is just half-way between the ceiling and floor prices of Rs. 693 and Rs. 417, respectively. The decline in prices is welcome; it will enable the industry to maintain the profit margin which was affected by the reduction in the ex-mill prices of cloth. But cotton prices may remain low only as long as the pressure of arrivals is heavy. The pressure will begin to ease after about the middle of March.

Caustic Soda Prices Revised

The Government of India has revised the ex-factory prices for different kinds of caustic soda and different packings of bleaching powder with effect from 1st February. The new prices are to remain in force for a year for caustic soda and for six months for bleaching powder. The prices of dry gas chlorine, liquid chlorine and hydrochloric acid remain unchanged But the Government has still to make up its mind concerning soda ash prices since packing costs alone have recorded a sharp rise over the past few months. The increase in caustic soda and bleaching powder prices has followed the representation made by manufacturers some months ago about the rise in production costs since the Tariff Commission last enquired into the industry's cost structure in 1958. They said that the increases in the cost of major iems like salt, power, steam and coal had neutralised the allowance for "contingencies" which the Commission then considered adequate. The increase in the manufacturing cost of caustic soda on account of salt is estimated at about Rs. 18 a ton and power accounts for an increase of Rs. 12 a ton. Steam and coal call for a rise of Rs. 4.25 and Rs. 1.75 a ton, respectively. Accordingly, the industry asked the Government to raise the price of solid caustic soda from Rs. 35 to Rs. 39.2 a cwt and that of caustic liquid from Rs. 29 to Rs. 35.7 a cwt.

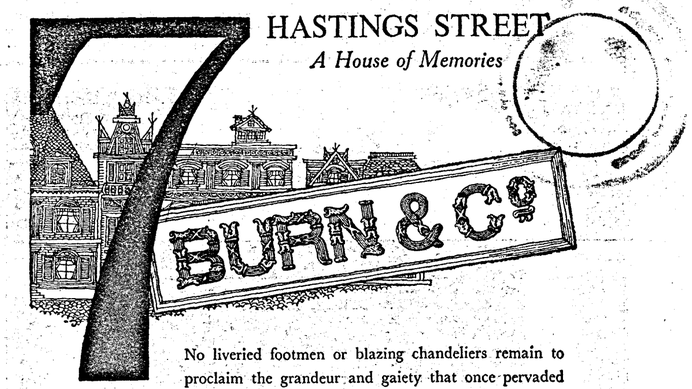
The Government has, however, fixed the new prices at Rs. 36.50 for solid caustic soda and Rs. 31.50 for liquid caustic soda. Even so, some manufacturers are fairly pleased with the Government's decision, in that it marks a welcome departure in the procedure for fixing prices. Hitherto, whenever the industry asked for an increase in prices, the matter was referred to the Tariff Commission, which took several months to complete its enquiry and submit the report. Many more months used to elapse before the Government took action on the Commission's recommendations. Besides, the price increase was seldom allowed with retrospective effect although costs continued to rise. The Government has now done well in fixing the revised prices for caustic soda and bleaching powder in consultation with the industry. As the Tariff Commission had conducted a thorough enquiry into the industry's cost structure, it was hardly necessary to refer the matter to the Commission again when the industry pleaded for a price rise because of the increase in production costs. The prices of fused caustic soda, caustic lye, caustic soda flakes, dry gas chlorine and hydrochloric acid were announced after consultation with the Tariff Commission on 27th October, 1959. Those prices were to remain in force until the end of December 1960. Pending the completion of the review, they remained in force up to 31st January. The prices of bleaching powder in various sizes of packing were announced after consultation with the Commission on 31st May, 1960.

Insurance: Ship Fires

The increasing number of fires and explosions on board ship, particularly in engine-rooms and the machinery sections, has been causing concern. The recent loss of *Indian Navigator*, belonging to the India Steamship Company, was reported to be due to an engine-room fire. The loss is a serious setback for Indian insurers, who are trying to establish a firm hull market in this country. In this connection, some interesting facts emerge from the recent address delivered by Dr. George Vedeler, managing director, at the recent annual meeting of Norske Veritas, the Norwegian classification society. Dr. Vedeler said that the statistics relating to the period 1954-58 show that 29 percent of all fires in Norwegian ships have been engine-room fires, compared with a world average of 19 percent. Fires in shipyards which are usually due to carelessness in welding or flame-cutting, represent 15 percent in the case of Norwegian vessels, against a world average of 8 percent. Considering only

HASTINGS STREET

A House of Memories



No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

MARTIN BURN LIMITED

MARTIN BURN HOUSE, 12 Mission Row, Calcutta 1

Branches: NEW DELHI BOMBAY KANPUR

MBCC-11

Norwegian vessels classified by Norske Veritas, 46 fires have occurred in the 2½ years from 1st January, 1958, to 1st July, 1960, and exactly half of those have been fires or explosions in engine-rooms.

Among engine-room incidents, crankcase explosions have probably caused most concern. During the five-year period from 1952 to 1956, there were 16 crankcase explosions in the British merchant fleet. In the five-year period from 1955 to 1959, 14 crankcase explosions were reported in vessels classified by Norske Veritas. Shipowners' inspectors should see to it, said Dr. Vedeler, that they do not get engines in which the thrust-bearings are inside the crankcase. The scavenging-air belt should preferably be separated from the crankcase by a space.

As for other causes, a number of engine-room fires have occurred because of leaky oil pipes; wrong separation of such pipes; broken oil-gauge glass windows or valves; or over-pumping of day tanks or bottom tanks, so that oil is sprayed on to hot exhaust pipes or on the commutator of an electric motor. "One cannot be too careful," added Dr. Vedeler, "when insulating highly heated pipes and their connections. It should be noted that even lubricating oil can be set on fire if it sprays on an electric motor, and that even steam pipes for modern high-pressure steam are hot enough to cause oil to catch fire." The lesson to be learnt from such short-circuit fires is that one should try to keep all piping as far from electric panels as possible, and that care should be taken to clean below and behind panels. Dust and grease should not be allowed to collect on the back of a panel.

Many engine-room fires, such as those caused by oil leakage, can be extinguished at the start if a hand extinguisher is in the vicinity. One should, therefore, provide a sufficient number of dry-powder extinguishers at all working places in the engine and boiler-rooms, and take steps to check frequently that the containers are in order and that usable replacement cartridges are available. If an oil fire can not be extinguished at the start, the personnel often have to leave the engine-room and turn on the water or carbon dioxide extinguishing installation. Fire hoses are often not particularly handy unless one can approach a fire from the side or below. That is one of the reasons why Norske Veritas requires a protected emergency staircase, such as up from the shaft tunnel.

Maharashtra Land Ceiling Bill

The main object of the Maharashtra Land Ceiling Bill is to remove disparities in the distribution of agricultural lands, and to provide land to the landless for personal cultivation. But it is unlikely that the aim will be achieved; the Chief Minister of the State has frankly admitted that no data are available concerning the land which will be made available for distribution to landless labour, so the benefit to the latter will be negligible. Speaking at the quarterly general meeting of the Maharashtra Chamber of Commerce in Bombay last week, Mr. Lalchand Hirachand, president, said that the legislation would nationalise the estates of sugar companies under the guise of providing land for the landless. The Planning Commission has recommended that the compact farms of sugar factories should be preserved. Most of the State Governments have adhered to this directive and have exempted the plantations of sugar factories, compact farms, orchards, etcetera, from land ceiling legislation. The sugar industry in Maharashtra, Mr. Hirachand said, owes its existence to the farsighted ventures of pioneers who, at great risk and after suffering heavy losses in the initial period, persisted in their determination to develop the industry. One of the special features of the industry in the State is that the yield of sugarcane an acre is three to four times the average produced elsewhere in India, and the recovery of sugar from each ton of sugarcane compares favourably with that in Uttar Pradesh and Bihar. The acquisition of sugarcane farms, the president said, will adversely affect the research work of sugar factories in finding new and better varieties of cane. It will also affect the interests of workers, who get better remuneration in the plantations of sugar factories than in ordinary farms. Mr. Hirachand, therefore, urged the State Government not to disturb the farms of sugar companies.

U.P. Electricity Schemes

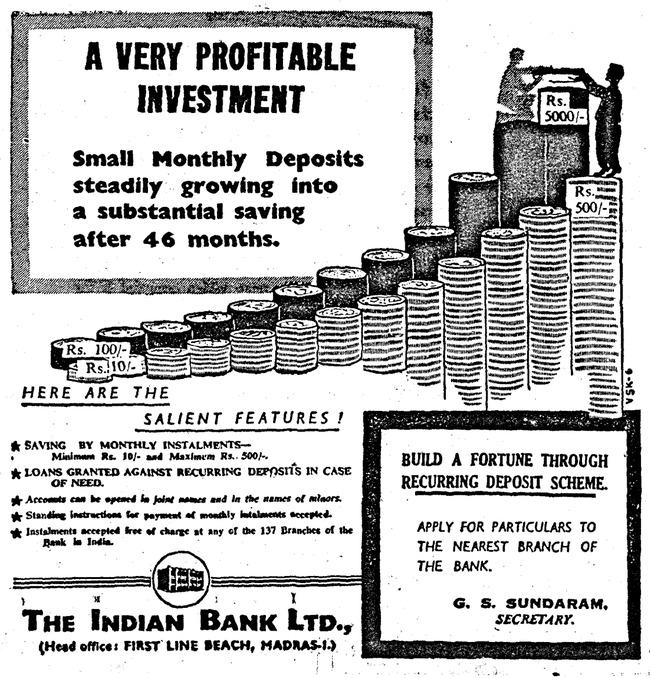
A capital works programme costing about Rs. 10 crores during the next financial year has been drawn up by the U. P. Electricity Board. The Board, it is reported, has decided to give a loan of Rs. 1.20 crores to the U.P. Electric Supply Co. Ltd, Lucknow, for the expansion of power supply. Tenders for the Matatila project have now been received. Besides the completion of major power projects, the Board has decided to undertake the electrification of the hill areas and the backward eastern districts of the State. A large number of diesel sets have been commissioned and several small diesel power-stations have been set up in western U.P. to supplement the available power. Light diesel sets of 700 kilowatts each have been ordered from Czechoslovakia and are to be installed in Ghaziabad. Civil works for the installation of the sets are complete, and they are expected to be commissioned by May 1961. Work on the Yamuna hydro-electric project (Stage I) has also commenced; when completed, it will have a firm capacity of 25,000 kilowatts and seasonal power to the extent of about 50,000 kilowatts. With the help of old plants, the Rampur power-house is being expanded to generate 2,000 kilowatts of power within three or four months, and another 2,000 kilowatts later. Obra has been selected as the site for the thermal station of 250,000 kilowatts to be set up with Russian assistance near the Singrauli coalfields. Work on the Harduaganj power-station, where two units of 30,000 kilowatts each are to be installed, is progressing. It is expected that the first unit will be commissioned by May 1962 and the second in July of the same year. Work on the construction of an alternative Sarda-Deoha feeder—taking off from the Sarda canal at a point below the Khatima power-house—has been almost completed. With its completion, some additional water will be supplied to the Khatima power-house to produce another 4,000 kilowatts of power. Although not under the control of the Board, the Rihand project is also nearing completion.

Taxes on Foreign Investment

Some interesting observations on the effects of Indian taxation on foreign investment were made by Mr. S. P. Chambers, chairman of Imperial Chemical Industries Ltd, London, at a Press conference in Calcutta last week. That taxation in India is far too high, is by now widely recognised. Mr. Chambers made a passing reference to this fact, but his main criticism seemed to centre on the point that there is effective discrimination against foreign private investment because of double or even triple taxation. This discrimination can be ended at little cost to the Exchequer, and India can in that case secure large benefits in the form of increased investment. Under the present arrangements, the return earned by the foreign investor is greatly reduced. Mr. Chambers felt that if taxation is higher in one country than in another, it does not necessarily mean that capital will not flow to the former. Other factors have to be considered in making investment decisions, such as the general environment in which the enterprise will have to operate. The environment becomes adverse if the Government's fiscal policy discriminates between different enterprises which might otherwise be making an equally useful contribution to the economy. Apart from the taxation of foreign investment, Mr. Chambers felt that personal taxation in India is too heavy. Senior personnel in Government, business and industry tend to have financial worries. As against this, he found that in Russia, personal taxation is much more realistic. Big salaries are given there to highly qualified men, and they are not taxed so heavily, with the result that they can concentrate better on the work they are supposed to do. A Russian diplomat told Mr. Chambers that his country recognises patriotism alone is not enough to make people give of their best; definite financial incentives are necessary in addition. Mr. Chambers emphasised the need to raise productivity in India, especially in the agricultural sector. Giving tax incentives to promote exports is less important than, say, increasing food yields and thereby saving on imports.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity remained unchanged at 148.0 points during June 1960. There were decreases in sugar, jute, cement, coal, pig iron, finished steel, paper, tyres, bicycles, electricity and railway ton-miles. Tea, yarn, cloth and motor-cars showed rises.



THE GILDED DECOY

THE spectacle of a former Viceroy of India standing crestfallen and, in tears, while he appeals to the patience and forbearance of a body of angry and bitterly disappointed shareholders, is a sufficiently humiliating one. It is humiliating for the man himself—for the shareholders—and for the nation. When the ex-Viceroy in question is a man like Lord Dufferin, one of the most brilliant administrators and the most conspicuously honourable men the Victorian era has produced—a man crowned with the honour and respect that accompanies age, and standing engirt, as it were, with the world-wide glories of that Empire of which he has been so good and faithful a servant—the position then becomes one not easy to pack into conventional phraseology. Othello's words "Oh, the pity of it!" involuntarily rise to our lips. But then perilous business crises are not helped by poetical quotations. The moral of the Globe Finance Corporation muddle has been dinned into the ears of the British public through the English newspapers, but what is wanted is not moralizing. Unless something more practical than the irreproachable ethics of the leader writer is evolved, the growing evil of mere greeds, of which the Globe Finance Corporation is but a symptom, will, in the long run, make havoc not only of our commercial but of our administrative morality.

FROM
CAPITAL
7th February, 1901

A Ditcher's Diary

FEW TODAY LOOK FOR ANYTHING SIGNIFICANT IN Governors' formal addresses opening State legislatures; and at least in West Bengal and Uttar Pradesh many members did not even bother to attend the ceremony. Our Governors are all non-governing; and they merely read out a piece perfunctorily composed by an incompetent secretariat and perhaps revised by a Cabinet more interested in other things. Most of our legislatures are hypersensitive about their rights and privileges and some of them haul up journalists for the flimsiest reasons. The quarter from which they receive the utmost contempt, I suggest, is the Government. Time and again Speakers have reprimanded Ministers for absence; and a student of India's parliamentary progress, which receives much glib praise, would look into the shadow that falls between question and answer and that which falls between the submission of a report and its appearance on the table of the House. Most Governments have comfortable majorities; their discomfort comes from within the Party; and they do not think it is obligatory on their part to keep the House informed. Especially with the general election barely a year away, most members are anxiously nursing their constituencies—when not chasing the Party bosses for a renewal of nomination. Miss Padmaja Naidu's address was noteworthy only for the treatment it gave Calcutta. My innate suspicion of politicians had led me to believe that the West Bengal Government had lost all interest in the city because it votes mostly non-Congress. I am still not sure that I was totally wrong, for the emphasis accorded to Calcutta may be all Dr. B. C Roy's work. He is fascinated by grandiose schemes—until he loses all interest in them. Whispers reach me that, in spite of Dr. Roy's enthusiasm, it may be some time before we see the Metropolitan Board born. The Party wants the body to be elected, which means such a powerful agency must not be allowed to remain outside Party political control. Those who have promised help, I understand, will have none of that. They want a businesslike Board doing things without political intrigue hindering them at every step. If Dr. Roy has his way, it will probably be after the general election is out of the way.

IN HIS FIRST WEEK IN OFFICE, PRESIDENT KENNEDY seemed to me to be giving a fair impression of a man enjoying himself. Now I am wondering how many people formed the same conclusion, because if what he has said in his many public utterances so far, including his State of the Union Address, is all true, then this view of mine could be a very dangerous one indeed. I was not among those who considered all was well with U.S. affairs when Mr. Eisenhower handed them over, but I did not imagine they were really as bad as the new man says they are. If he is right, then the kind of tolerant complacency which dismisses this burst of analysis as simply the enthusiasm of the new broom sizing up the job in hand, and not the vision of the prophet warning of impending disaster before it is revealed to others, is exactly what Mr. Kennedy is going to have to fight against. But if he really does see things in these urgent terms, he will need the eloquence of a Churchill to persuade the American people to do the same. I see the political columnist Mr. Walter Lippmann has much the same doubts: just how does one impress on a rich and powerful nation, in peace time, that it is not rich and powerful enough and must start making sacrifices to become so? More specifically, on the economic front, how can people be persuaded that anything as intangible as the difference between a growth rate of 2 percent and one of 4 percent can make all the difference in the long run to whether or not they, and all they stand for, are going to survive? This is a growing problem in the West, as Mr. Khrushchev has been astute enough to discover, and at the moment Britain is probably more seriously affected than the U.S.A. It is freedom's problem really, democracy's problem: why should people work and save for a more prosperous future when they have all they want already? Or at least the majority of them have, and it is their votes that put the governments into power. But some way will have to be found to combine economic growth with political freedom in the affluent society and I only hope Mr. Kennedy finds it. If he does not, then the free nations of the world will gradually surrender their influence to the authoritarian, until, of course, these become free in their turn. And that, to me, looks too like the course of history, as already established, for comfort.

THE STORY OF THE BAPTIST MISSIONARY, WILLIAM Carey, is among the most romantic of many to be found in the annals of Bengal during the old East India Company days. There must have been few to compare with him, Indian or European, for the dedicated way in which he set about tackling the various tangled social problems of his day. Carey was not a social reformer in the conventional sense of the term. He approached things with a deep religious conviction and a simple desire to help the downtrodden and the outcast—two virtues which were apparently held in much higher esteem by all races in those days than they are now. And in these cynical times, when every social evil tends to be put down to faults in the system and gratefully left at that, it is something of an object lesson to realise how much Carey endeared himself to the "natives" he did so much to help. One gets a glimpse of his activities in 18th and 19th century Bengal in the film entitled *Carey Shaheber Munshi*. I believe it is based on a novel of the same name by Mr. Pramathanath Bishi, which has won the Rabindra award for literary merit. The film gives us some insight into the contemporary English society of Bengal, its virtues and vices and its efforts to consolidate British control over the country. But the part played by Carey in bringing about a social and religious awakening here was unique. Two of his chief obsessions were with the abolition of slavery and the custom of satee by which a widow was supposed to immolate herself on her husband's funeral pyre. Through the Fort William College, where he was professor of Oriental languages, he preached incessantly against what he considered the heartlessness and religious bigotry of contemporary Indian society, and satisfied his own abiding desire to understand the people and their culture. What better proof can there be of his sincerity than the fact that although his wife became insane and his two children died, he refused to leave this country until his task was completed? By introducing Bengali typography at his press in Serampore, he also paved the way for what later became a flourishing prose literature. Although the film is not without many flaws in direction, I was at least pleased that Carey's memory should be so gratefully cherished in the Bengal he tried so hard to help.

SPUTNIKS HAVE BY AND LARGE CEASED TO FILL ordinary folk with wonder, although they are quite prepared to take the scientists' word for it that the Russians are marvellous in sending up a thing weighing 6½ tons and the Americans simply wonderful in sending up a chimpanzee and getting it back alive and well. I keep thinking of two recent cartoons in the *New Yorker*. One showed a man like Mr. Khrushchev discussing with his ample spouse whether in a nightmare he had just had his men had indeed sent a man to the moon—but the man turned out to be Mr. Kennedy. The other showed the same Mr. Khrushchev addressing his pal Mr. Molotov expansively telling the latter that his services to the Soviet Union were so great that it had been decided to choose him (Molotov) as the first man to be sent to the moon. Molotov looked far from happy at the great honour. But it must be only a matter of time before man does in fact reach the moon; and both the Americans and the Russians seem almost equally able to perform the feat any day now. Do I want to go to the moon or some other planet? I suppose I did at one time. I have since read Alfred Bester's *Hobson's Choice*, a masterpiece of science fiction; and I am not so sure now. In that story a man is given the option of going forward or backward 100 years in time. In spite of warnings that he may not like it one bit, the man makes his choice; and in the last paragraph of the story he is eager to get back to 1945. He wants to return to Hiroshima. There is perhaps some conceit inherent in the anthropomorphic view of life and the world, in thinking that man is the greatest of all living things, that this our tiny world is the most wonderful of all creations. But, come to think of it, this is the only world we know, the only one we are used to. As Mr. Bester shows, 1845 was far from perfect. In 2061 most of us will be lost. Think of the traffic; think of the language they will speak; think of television 100 years hence—assuming, of course, that man continues to live and human progress is in the directions now evident.

I MUST CONFESS A CERTAIN FONDNESS FOR champagne, pink or otherwise. The trouble with life in Calcutta at the moment—unlike the days of William Hickey, when it used to be served burnt at midnight parties—is that there is not enough champagne about, and what there is runs out far too expensive. Now I am told that an evening's champagne party is available at no greater charge than that of a theatre seat. The brand is Viennese, the hosts are the Calcutta Light Opera Group and Society, and the beneficiaries Dr. Graham's Homes, Kalimpong. By now it must be obvious that I am referring to *Pink Champagne*, which opens at the New Empire this evening. It is, I am assured, a popular version of Strauss's classic operetta *Fledermaus* and is full of wonderful melodies and gay Viennese waltzes. The atmosphere of the first act is intimate drawing-room comedy, of the second the gaiety of an old-time Czarist-era ball, and of the third, a four-in-the-morning hangover. What better sequence is there to explain the delicious progress of champagne? I wish the C.L.O.G.S. every success. Without their efforts Calcutta would nowadays never see any live light opera. They deserve our support.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS REMAIN TIGHT

Wednesday, 8th February.

THE seasonal increase in the Calcutta money market advances has persisted throughout the past week. There has been a further sharp rise in the offtake of the jute and sugar mills and the engineering and iron and steel industries. The requirements of the cotton industry show a slight rise, but those against foodgrains and seeds storage show a moderate decline. The interbank market remains exceedingly tight, with few offers at the unchanged call rate of 5½ percent.

Activity in the exchange market has continued to improve, and more tea and gunny bills have come to hand. Remittance has remained in poor demand. The pound has been somewhat weaker on the London money market and closing quotations were marked down against the U.S. dollar and most important Continental currencies.

THE PRICE OF SILVER WAS STEADY AROUND Rs. 235.26 during the past week on support from upcountry areas. The price was 80d in London and 91.375 cents in New York.

Gold was steady in sympathy with silver and closed at Rs. 143.75.

DURING THE WEEK ENDED 3RD FEBRUARY, GOVERNment of India Treasury bills for Rs. 49,64,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 7th February. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.350 and above were accepted in full, the average rate of acceptance being Rs. 2.595 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Calcutta, Madras and New Delhi up to the close of business on 13th February and in Bombay, Nagpur, Kanpur and Bangalore up to 11 a.m. on 14th February.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 8th February to 11th February at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 1st February to 4th February, amounted to Rs. 7,00,000.

RISES OF RS. 19.76 CRORES TO RS. 1,929.25 CRORES in active notes, and of Rs. 8.16 crores to Rs. 1,940.54 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 3rd February, 1961. The currency expansion was covered by increasing the rupee securities in the paper currency reserve by Rs. 10.25 crores to Rs. 1,572.28 crores. In the Banking Department, deposits of the Government of India fell by Rs. 35 lakhs to Rs. 52.70 crores, but other Government accounts rose by Rs. 58 lakhs to Rs. 22.05 crores. Balances of commercial banks at Rs. 72.13 crores showed a decline of Rs. 6.14 crores. Balances held abroad fell by Rs. 41 lakhs to Rs. 19.25 crores. Investments declined by Rs. 1.95 crores to Rs. 150.93 crores. Other loans and advances rose from Rs. 140.28 crores to Rs. 154.25 crores, of which advances to scheduled banks against usance bills amounted to Rs. 22.35 crores (Rs. 18.81 crores). Ways and means advances stood at Rs. 36.14 crores, against Rs. 36 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 27th January, 1961, shows a drop of Rs. 3.65 crores to Rs. 554.36 crores in total deposits. Investments in Government securities are up by Rs. 4.99 crores to Rs. 272.59 crores, while other authorised investments are down by Rs. 20 lakhs to Rs. 10.04 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 1.87 crores to Rs. 249.83 crores. Cash and balances are, in consequence, shown at Rs. 28.87 crores or Rs. 1.86 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 27th January, 1961, shows Demand and Time liabilities at Rs. 803.89 crores (Rs. 17.84 crores on account of borrowings from banks) and Rs. 1,094.41 crores (Rs. 9.53 crores), compared with Rs. 789.76 crores (Rs. 17.08 crores) and Rs. 1,098.23 crores (Rs. 9.38 crores), respectively, in the previous week. Cash has increased by Rs. 4.17 crores to Rs. 47.61 crores while balances with the Reserve Bank have declined by Rs. 2.53 crores to Rs. 74.54 crores. There is a rise of Rs. 3.73 crores to Rs. 610.19 crores in investments. Advances and bills discounted at Rs. 1,225.63 crores show an increase of Rs. 12.76 crores. The ratios to total liabilities of cash and balances and of advances and discounts, are, in consequence, shown at 6.4 percent and 64.6 percent, against 6.4 percent and 61.2 percent.

you have just opened A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilfer-proof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diothene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY Can Closing and Reforming and Filling Equipment

Stocks and Shares

MARKET QUIETLY STEADY AS OPERATORS HOPE FOR EASY BUDGET

STEEL RETENTION PRICE ANNOUNCEMENT STILL AWAITED

Wednesday Evening.

THE Calcutta stock market has been in a hesitant mood during the past week. Indian Iron have fluctuated narrowly during alternate spells of buying and selling, but the basic undertone has throughout been steady. It is steady mainly because operators think that the Budget will not be too harsh. No confident guesses are being made about what exactly it will contain. Mere generalisations are being issued to the effect that the Finance Minister will not impose stiff new taxes because he does not yet need all that much money. With the upsurge in economic activity, he has already been able to collect enough taxes to cut down on deficit financing; and as election year approaches, caution will be the keyword for his portfolio, however much ebullience it may inspire in other Ministries.

Operators have noted with interest the fact that no formal announcement has yet been made about the "provisional" increase in the retention price of steel, a solitary report concerning which caused great excitement earlier. Towards the beginning of last week, confident predictions were being made that the announcement would come "within a few days". The more enterprising prophets even went so far as to name the date and tell the time —the evening of Saturday, 4th February. But Saturday has come and gone, with the market still suspended in mid-air. So operators have now divided themselves into two categories. The first thinks that the original report was nonsense, and may have been inspired by speculative sources. The second thinks that the official announcement is deliberately being delayed, because the Government wants to avoid the charge that it leaks out important information to favoured correspondents far in advance of the formal publication. Readers are free to join either category; there is no admission fee.

Bears have been discouraged from selling Indian Iron since the Company's production and despatch figures for January are fairly satisfactory. Compared with December 1960, the output of pig iron and saleable steel has increased, although that of steel ingots has fallen. Despatches of saleable steel have also risen. The shares have closed at Rs. 24.35 today. Among engineerings, Guest, Keen, Williams, Jessop and Texmaco have steadied up on the view that the working of the three Companies is improving. J. K. Steel have also risen, but that is due to interested support.

Jute shares are neglected, as investors are worried about the labour unions' protests against the recent cut in the mills' working hours. It is reported that the industry is considering a proposal to fix a maximum price for raw jute voluntarily. In addition, some limited move may also be made towards requisitioning raw jute stocks in a few centres. How far these measures will enable the mills to get enough fibre at a reasonable price, remains to be seen. The I.J.M.A. jute goods stock figures for January have not done much to cheer investors.

There has been a selective demand for coal shares. The impression is that the working of some companies will improve in the near future. Burrakur, Bengal and New Beerbhoom are among the issues which have been supported.

The miscellaneous section has provided some of the most outstanding features of the week. Rallis started rising some weeks ago, and the rise has been justified by the very encouraging results just issued by the Company; all arrears of preference dividends have been paid off, and an ordinary dividend of 4 percent has been announced—the first in almost eight years. Hindustan Motors are better, as they are hoping for a D.L.F. loan from the United States. Indian Copper have improved, following talk about the electrolytic copper project. Hopes of further expansion schemes have lifted Alkali and Chemical. Imperial Tobacco are up on rumours that the Company might finally succeed in paying a higher dividend. Interested buying has lifted National Tobacco, and also National Pipes.

Tea shares are dull, as investors are readier to sell than to buy them. But the production and price statistics are being studied closely by some operators, and their conclusions are interesting. The figures show that only Assam and Cachar produced much less tea in 1960 than in 1959; they have got a better price for it, but the increase in price has probably been neutralised by the fall in production. The output of the Darjeeling gardens was slightly higher, and so was the price they got for their tea. The Dooars, Terai and other areas suffered a small decline in production, but sold their tea at appreciably higher prices. This analysis has not inspired investors to buy tea shares, perhaps because they fear that the rise in production costs will neutralise any possible increase in sales revenue.

Preference shares continue to meet with modest support, since dividends are being increased on the lines stipulated by the Preference Shares (Regulation of Dividends) Act. Some uncertainty, however, exists as to whether companies will deduct the company income tax of 20 percent in the case of taxable preference dividends.

Government securities are quiet, but prices are well maintained due to official support.

Burdwan-Cutwa Railway

The gross earnings of the Burdwan-Cutwa Railway Co. Ltd for the year ended March 1960 amount to Rs. 4.99 lakhs, against Rs. 5.60 lakhs in the previous year. A taxable dividend of Rs. 1.90 percent has been declared, against Rs. 2.19 percent taxable. This offers a yield of 5.2 percent at the price of Rs. 36.81 a share. After meeting various expenses, there is a deficit of Rs. 3.12 lakhs, which, together with the amount required for the guaranteed interest of 3¼ percent a year on the share capital of Rs. 17.80 lakhs, calls for a total subsidy of Rs. 3.74 lakhs from the Government of India. After meeting the deficit from the Government subsidy, and after crediting Rs. 2,671 being provision for taxation for previous years no longer required, the net profit amounts to Rs. 64,971. Taxation absorbs Rs. 23,035, against Rs. 37,034. A sum of Rs. 3,116 has been transferred to reserve fund. The balance-sheet shows that fixed assets amount to Rs. 18.90 lakhs and current assets are Rs. 1.31 lakhs. Reserves and surplus amount to Rs. 10,405.

have declined to Rs. 6.09 lakhs, from Rs. 6.67 lakhs in the previous year. A taxable dividend of Rs. 1.90 percent has been declared, against Rs. 2.25 percent, taxable. This offers a yield of 5.4 percent at the price of Rs. 35 a share. After meeting various expenses, there is a deficit of Rs. 2,00,785, which, together with the amount required for the guaranteed interest of 3½ percent on the share capital of Rs. 17.24 lakhs, calls for a total subsidy of Rs. 2.61 lakhs. After meeting the deficit from the Government subsidy, and after crediting Rs. 8,635 being provision for taxation for previous years no longer required, the net profit is Rs. 68,976. Taxation absorbs Rs. 27,153 (against Rs. 35,575). After making the necessary adjustments, there is a surplus of Rs. 9,067, which has been transferred to reserve fund. The balance-sheet shows that fixed assets amount to Rs. 16.97 lakhs and current assets, including book debts, are Rs. 2.74 lakhs.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for January 1961 are published below, the figures for December 1960 being given in brackets.

	(In tons)	
Production		
Pig iron	112,649 (111,516)	
Steel ingots	83,787 (86,424)

Despatches		
Saleable steel	69,157 (59,892)	

Bombay Market

BUDGET DOUBTS HALT EARLIER BUOYANCY

TEXTILE SHARES IMPROVE

Wednesday Noon.

THE Bombay stock market has been steady during the past week and a fair turnover was transacted. Towards the close, operators became cautious in view of conflicting rumours concerning the Budget. Neither buyers nor sellers were inclined to extend commitments, so fluctuations were narrow. The increase in the production of the Tata Iron and Steel Company in January has had little effect. In cotton mill shares, sentiment was helped by reports of good cloth offtake and a decline in the price of raw cotton. Selected miscellaneous shares and engineering scrip were bought on good corporate news.

Tata Steel closed at Rs. 145.75 and Indian Iron were quoted at Rs. 24.40. Operators were awaiting the confirmation of the increase in the retention price of steel with anxiety. Among engineering shares, Larsen and Toubro were bought up to Rs. 38.25 on expansion hopes and Mahindra and Mahindra changed hands at Rs. 21.72 on a report that the Government has permitted the Company to produce more jeeps. Tata Locomotive were done at Rs. 303 and Premier Construction came to hand at Rs. 191. Alcock Ashdown were placed at Rs. 257. In motor shares, Premier Automobile were neglected around Rs. 165.50 in spite of the news that the Company has been permitted to produce sheet metal components for motor-cars. Hindustan Motors enjoyed support up to Rs. 20.36 on the hope that it might obtain financial assistance from the D.L.F. for expansion.

Prices of cotton mill shares improved on balance. Bombay Dyeing changed hands at Rs. 62.10, as did Century at Rs. 492. Kohinoor were in demand up to Rs. 277 on reports of good working and Svadeshi were wanted up to Rs. 238. Standard Mills were transacted at Rs. 1,140 and Simplex were done at Rs. 168. Khatau met with support up to Rs. 457.50 and Finlay were transacted at Rs. 330. India United Ordinaries were available at Rs. 14.52 and Apollo were sold down to Rs. 1.54.

In the miscellaneous section, sugar shares were quiet because it was thought that the proposed ceiling on landholdings might affect adversely the working of sugar companies. Belapur were placed at Rs. 298 and Phalton were taken at Rs. 146. Changdeo changed hands at Rs. 29.50 on paying a lower dividend of Rs. 2.50, taxable, against Rs. 2.82, taxable. Ravelgaons declined to Rs. 104 on paying a taxable dividend of 10 percent on the increased capital, against 17 percent, taxable. Steamship company shares were quiet, and Scindia Steam declined to Rs. 14.32 on the publication of an unsatisfactory report Great Eastern Shipping were sold down to Rs. 14.68 on the decision to repay the redeemable cumulative preference shares worth Rs. 25 lakhs. Mining shares were steady, and Shivrajpur Syndicate were in demand up to Rs. 78. Cement shares showed mixed trends, and Associated Cement were bought up to Rs. 144.50, but Digvijay declined to Rs. 148.50 on pressure. National Rayon improved to Rs. 508 on talk of diversification of activities and Bombay Burmah improved to Rs. 563 on replacement buying. Chemical shares were steady, and Tata Chemical were wanted up to Rs 18.52. Indian Dyestuff were quoted at Rs. 460 and Polychem came to hand at Rs. 222.50. Voltas met with support at Rs. 262 on maintaining the ordinary dividend at 13 percent, taxable. Ceat Tyre were steady at Rs. 230, but Synthetic and Chemicals were neglected at Rs. 122 in spite of the news that the construction work of the Company is making progress.

There was increased interest in banking shares, and Central Bank improved to Rs. 56.80. Bank of India were done at Rs. 119.50 and Bank of Baroda changed hands at Rs. 94.50. Insurance shares were quietly steady, and business passed in New India at Rs. 56. Vulcan were quoted at Rs. 16.48.

Prices of electric company shares were occasionally higher, and Ahmedabad were done up to Rs. 86.30. Tata Power came to hand at Rs. 10.10 and Bombay Suburban were placed at Rs. 83.50.

Madras Market

SENTIMENT IMPROVES AS INTEREST BROADENS

SELECTED BANK SHARES IN DEMAND

Wednesday Noon.

SENTIMENT improved in the Madras stock market during the past week mainly because of broadening professional interest. Operators were inclined to take a more constructive view of the coming Budget, and it was complacently believed that there might not be any worthwhile increase in direct taxation. Turnover in Government securities was restrained, but prices, especially of short and medium-dated stocks, were maintained in the absence of selling pressure. Selected bank shares attracted attention on the payment of good dividends. Interest in public utilities broadened on good corporate news. Sugar shares met with support on reports of increased production. Tea shares were bought on firmer advices from the Cochin auction sales and coffee shares improved in sympathy. Rubber shares were fancied on reports of increased consumption of the commodity. Textile shares were favoured on hopes of increased produciton. Towards the close, operators turned cautious on a report that the Ceylon Government has restricted imports further. Miscellaneous shares were bought discriminatingly on corporate news.

In the banking group, Canara were supported up to Rs. 85 on paying a taxable dividend of 15 percent. Indian Overseas changed hands up to Rs. 187 and Pandyan were placed at Rs. 33. Among public utilities, Cochin were steady at Rs. 10.20, as were Ellore at Rs. 16.55. South Madras were in demand up to Rs. 9.85 and Vellore were taken at Rs. 12.90.

In sugar shares, United Breweries were firm at Rs. 110 and Mysore were supported up to Rs. 59.75. Cauvery were quiet at Rs. 139 on paying a taxable dividend of 6 percent, although the profit improved in spite of a strike. Deccan were done up to Rs. 14.65 and E.I.D. were taken at Rs. 49.50.

Among planting shares, Blue Mountain were quoted up to Rs. 3.95 on issuing rights shares. Cochin Malabar were in demand up to Rs. 7.60, as were Consolidated Coffee up to Rs. 23.30. Ouchterlony were placed at Rs. 4.64 and Periakaramalai were quoted at Rs. 3.63. Bababudin came to hand at Rs. 8.75 on paying a taxable dividend of 8 percent. Coonoor were indicated at Rs. 27.25 on declaring a taxable dividend of 7½ percent.

STEEL manufacture at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND | STEEL STRENGTHENS THE NATION

Kumergode were quoted up to Rs. 4.70 on paying a taxable dividend of 20 percent. Devon were done at Rs. 14.37, Highland at Rs. 14.70, Kil Kotagiri at Rs. 5.15 and Peermade at Rs. 22.30.

In textile shares, Lakshmi were firm up to Rs. 155, as were Madura up to Rs. 35. Mettur were steady at Rs. 139 and Kothari came to hand at Rs. 12.10. Business was done in Bangalore Woollen at Rs. 195.50, but Buckingham declined to Rs. 193. Travancore Rayon met with support up to Rs. 34.40, but South India Viscose declined to Rs. 146 on issuing rights ordinary shares in the proportion of two new shares for every five held at a premium of Rs. 5 a share. Pankaja were done at Rs. 59 and Vasanta at Rs. 236. Loyal were quoted at Rs. 36, as were K. Rajendra at Rs. 68.

In the miscellaneous section, T. Stanes were in demand up to Rs. 36 on declaring a taxable final ordinary dividend of 22½ percent, including a centenary bonus of 5 percent. Aluminium Industries were steady at Rs. 22.85, as were Ashok Leyland at Rs. 8.65. India Cement were easier at Rs. 6.15 on profit-taking and Enfield were sold down to Rs. 15. F.A.C.T. changed hands at Rs. 10.10 and Brunton were quoted at Rs. 5. Textool were supported up to Rs. 174.50 and Tube Investment were placed at Rs. 291. United Electricals were dealt in at Rs. 9.50 and business passed in Kirloskar Electric at Rs. 13.12. Mysore Paper reacted to Rs. 23.25 on pressure, but Parry's Confectionery were steady at Rs. 5.03. Spencer were in demand up to Rs. 22.60 and Standard Motors were bought up to Rs. 16.85.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and snares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. engineering for world industry

A new company has been formed to handle Head Wrightson's expanding interests in India. It will act as a contracting organisation for the supply as far as possible from Indian sources of the specialist heavy engineering equipment designed by Head Wrightson in England.

HEAD-WRIGHTSON INDIA LIMITED

TAKE-OVER BIDS DOMINATE MARKET INTEREST

WIDESPREAD RISE IN EQUITIES

London, 8th February.

TAKE-OVER bids continued to claim most of the attention in the stock market during the past week, but interest was not confined only to the issues concerned. Although at times there was a good deal of profit-taking, it was more than matched by new investment buying. Buyers, it appeared, were concentrating on the long-term rather than the uncertain short-term outlook, and holders were reluctant to part with good-class stock. The recent Government moves to boost exports were an encouraging factor. There was a broad advance in equities and many of the leaders were hovering at or just below their all-time peaks. The largest of the many take-over bids came from the Cotton-Clore partnership and was for the second biggest property group in the country—City of London Real Property. The most important event for gilt-edged was the announcement of the Government's big funding operation. But apart from the short-dated stocks, which gained some ground, the section was quiet. The undated stocks receded further, with War Loan 3½ percents reaching new low levels daily. Dollar issues lost the firm trend of recent months in spite of the important moves by the new U.S. Administration to bring about an economic recovery. Gold shares had little to help them, so they suffered sharp setbacks. West African gold shares came to the forefront on the surprise move by the Ghana Government to purchase the less prosperous companies and prices went smartly ahead. Coppers were uncertain. Oils moved narrowly on most days, but Shell gained some ground. There was selective buying of rubbers, but teas were idle.

The Money Market

The past week was a difficult one for the money market. Credit was in very short supply due to end-month factors and the heavy seasonal tax payments, so the rate for day-to-day loans ruled firm. To make matters worse, the authorities deliberately kept money tight by withholding a portion of their help, so that the market was forced to borrow at the penal rate of 5 percent for a week from the Bank of England on three days running. The money market at last Friday's tender made no change in its joint bid for Treasury bills, so the rate was virtually unchanged at £4 3s 4.46d percent. However, it was felt that the market did not do enough and that there should have been a hardening of the Treasury bill rate, especially in view of the decrease in the strength of sterling following President Kennedy's proposals to help the dollar. There were other factors too, such as the U.K. balance of trade and the withdrawal of some of the "hot" money which came into the U.K. during the period of high Bank rate.

Activity on Wall Street

High-grade corporates and U.S. Government obligations pushed forward on Wall Street during the past week following President Kennedy's message. Previously, the market was hesitant, with many investors inclined to await the announcement of a large refunding operation by the Treasury. This came after the close on Thursday and a favourable reception was forecast for the new 18-month 3¼ percent Note. Convertible issues responded to the higher trend in the stock market. Among foreign dollar bonds, Belgium Congo 5¼ percents slipped down to the year's low of $40. French Credit Foncier 5¼ percents were firm. Greeks were mixed, with the 6 percents higher and the 7 percent lower. A few German Nationals improved, with Italians showing little change. Among Japanese Government issues, the 6½ percents of 1964 eased.

Vegetable Oils Rise

A notable improvement took place in the demand for linseed and prices improved materially during the past week. Groundnuts met with good demand at first, but interest waned later. With the news that the drought continued in the interior of east Africa and that much depended on the March rains, the market rose sharply. The demand from Europe appeared to be the principal incentive, with Russia said to have bought at least 10,000 tons and probably wanting more. In groundnut oil also, firm conditions existed and sellers raised their limits by a furthtr £1 a ton, after which the demand became more subdued. The reportedly ample supplies of Indian castor oil on spot and near at hand kept the forward position quiet. But towards the close, interest in the spot material brought about a steadier tone.

Paris Gold Falls

Paris gold prices fell during the past week after President Kennedy's State of the Union message. The losses occurred in thin trading, as buyers withdrew and domestic holders of gold showed no inclination to sell. Prices were well below the levels of last October. French financial quarters thought that the U.S. President's pledge not to devalue the dollar could lead to difficulties.

NAMES AND DATES

The foundation-stone of the first factory of the East Anglia Plastics (India) Ltd was laid on 5th February, 1961, at the Company's Jessore Road site in Calcutta.

New Delhi

INDUSTRIAL PROGRESS UNDER THE FIRST AND SECOND PLANS

ACHIEVEMENTS AND TARGETS COMPARED

(FROM OUR NEW DELHI CORRESPONDENT)

DURING the last session of the Lok Sabha, many questions were asked about the industrial achievements under the first and second five year plans. In a typical question, the Central Minister for Commerce and Industry was called upon to make a statement showing:

(a) the production of rayon filament in 1950-51;

(b) the plan target for the first five year plan, the achievement, together with the financial allocation and the amount actually spent during the period;

(c) the target for the second plan period, the achievement made so far, together with the financial allocation under the second plan and the amount actually spent so far; and

(d) the reason, if any, for the shortfall in achieving the physical targets?

The official reply was that the production of rayon filament yarn in 1950-51 was 400,000 lbs. The target for the first five year plan was 18 million lbs a year. The target for the second plan was originally 68 million lbs. This was revised later to 100 million lbs, including man-made fibres like nylon and also rayon tyre-cord. The estimated production of rayon yarn only during 1960-61 is 47 million lbs, although total capacity to the extent of 75.6 million lbs a year has been licensed. No allocation was stipulated for the amounts to be spent during the first and second plans. The shortfall in production is due to the fact that some of the units which have been licensed have not yet gone into production.

Similar questions were asked about other industries, and the replies are summarised below.

The production of staple fibre in 1950-51 was nil. The target for the first five year plan was 2,800 bales, or 11.2 million lbs a year. The production in 1955-56 was 14 million lbs. The target for the second plan was 32 million lbs. The estimated production at the end of the second plan period is 48 million lbs.

Woollen and Worsted Yarn

The production of woollen and worsted yarn during 1950 amounted to 4.89 million lbs, as reported in the fifth Census of Indian Manufactures. Figures for the financial year 1950-51 are not available. The target of production for woollen manufactures under tht first plan was fixed at 25 million lbs. No separate target was indicated for woollen and worsted yarn. The production of woollen and worsted yarn during 1955-56 was 21.6 million lbs. No financial allocation was made for expenditure on this industry, as it is in the private sector. The production target for worsted and woollen (including shoddy) yarn for the second plan period was 37 million lbs. The production during 1959-60 amounted to 29.07 million lbs. No allocation was made for expenditure on this industry. The main reason for the shortfall in production is the inadequacy of imported raw materials caused by the difficult foreign exchange position.

Woollen Fabrics

The production of various types of woollen and worsted cloth during 1950 amounted to 4.209 million yards, as reported in the fifth Census of Indian Manufactures. Figures for the financial year 1950-51 are not available. The production target for woollen manufactures for the first plan period was 25 million lbs. No separate target was fixed for woollen cloth. The production of woollen and worsted cloth during 1955-56 was 15.04 million yards. No financial allocation was made for expenditure on this industry, as it is in the private sector. The production target for woollen and worsted cloth in the organised mill sector for the second plan period was fixed at 20 million yards. The production during 1959-60 amounted to 18.16 million yards. No allocation was made for expenditure on this industry. The main reason for the shortfall in production is the inadequacy of imported raw materials caused by the difficult foreign exchange position.

Cotton Yarn and Cloth

The production of cotton yarn in 1950-51 was 1,179 million lbs. The first plan target was 1,640 million lbs, and it was achieved. The second plan target was 1,950 million lbs, but the actual achievement is expected to be 1,750 million lbs. The reasons for the shortfall are: (1) the decline in the production of indigenous cotton; (2) in the spinning sector of the industry, the rate of installation has been below expectations; (3) short supply of iron, steel and cement for building purposes; (4) difficulties in importing machinery; and (5) late deliveries of indigenous machinery.

Cloth production in 1950-51 was 3,718 million yards. The first plan target was 4,700 million yards, but the actual achievement was 5,100 million yards. The second plan target was 5,100 million yards or 5,200 million yards, and actual achievement is estimated to be about that. The estimate is based on the actual figures of production for the period from April to August 1960, which comes to 2,106 million yards.

Cement Target Revised

The production of cement in 1950-51 was 2.69 million tons. A capacity target of 5.31 million tons was fixed for the first plan, and capacity of 4.93 million tons was actually established by the end of the period. The estimated capital outlay was Rs 17.7 crores. About Rs. 17.5 crores, it is estimated, was invested in new units and expansion schemes in the cement industry during the first plan. For the second plan, a target of 16 million tons was fixed It was later reduced to a working target of 10 million tons. The present capacity of the cement industry is 8.57 million tons (8.70 million metric tons). A total capacity of 9.37 million tons (9.52 million metric tons) is expected to be established by the end of the second plan period. The total capital outlay on the expansion of the cement industry during this period is estimated to be around Rs. 40 crores. The production of cement almost reached the target set under the first plan A capacity of 10 million tons (10.16 million metric tons) was subsequently considered for implementation during the second plan. in view of the fact that during the middle of 1958 the demand for cement showed a tendency to lag behind production.

Commercial and Tea-chest Plywood

The production of commercial plywood during 1950-51 was 8.88 million square feet. The target for the first plan was 40 million square feet. The achievement was 20.690 million square feet at the end of the first plan period. The target for the second plan was 30-50 million square feet. As for the achievement, the actual production in 1959 was 54 million square feet, and during 1960, it is expected to reach 64 million square feet. The plywood industry grew up during the second World War primarily to meet the requirements of the tea industry for plywood tea-chests. Prior to 1955-56, most of the factories were equipped with machines with which only tea-chest plywood could be manufactured. After the war, modernisation of the equipment was taken in hand by the industry. The effect of this modernisation was felt only during the second plan period, when the production of commercial plywood jumped from 20 million square feet in 1955-56 to 54 million square feet in 1959.

The production of tea-chest plywood in 1950-51 was 44.94 million square feet. The first plan target was 100 million square feet, but the achievement was 93.57 million square feet. The second plan target was 100 million square feet. As for the achievement, the production in 1959 was 93.67 million square feet and in 1960, it is expected to reach 103 million square feet. During the first plan period, there were heavy stocks of imported tea-chest panels lying with tea gardens, which could meet the demand to some extent.

Newsprint and Paper Manufacture

The production of newsprint was started in 1955 by the Nepa Mills. The target capacity for the first plan was 30,000 tons a year. This was achieved. The target capacity for the second plan was 60,000 tons a year, but the achievement will be only 30,000 tons a year. The figures concerning the financial outlay are not available. It is not yet clear whether the conventional raw materials like fir, spruce and pine will be available in sufficient quantities and at an economic price. Efforts to use bagasse for newsprint manufacture have not fructified so far, because the technical and economic feasibility have not been fully established. In order to speed up the indigenous production of newsprint, two schemes have recently been approved for the manufacture of newsprint from imported pulp. Tht sponsors of the schemes are negotiating with the foreign machinery suppliers. It is expected that by the end of the third plan, the indigenous production of newsprint can be increased substantially.

The production of paper and paper boards in 1950-51 was 114,040 tons. The production target of 210,000 tons under the first plan was achieved by the end of the plan. The production target of 350,000 tons for the second plan has already been exceeded. The financial allocations and the amounts spent during these plans are not known as the development has taken place in the private sector.

Bicycle and Motor-vehicle Tyres

About 3.48 million bicycle tyres were produced in 1950-51. The rubber manufacturing industry was not included in the first plan, so no targets were fixed for it then. The targets for capacity and production under the second plan period, and the achievements, are as follows:

	Targets (In millions)	Achievements
Capacity	20	24.73
Production	16	11 (in 1960) 14 (in 1961, estimated)

The shortfall in production is due to the late implementation of certain schemes. It is hoped that the gap will be filled in the next two years. But no scarcity of bicycle tyres is being felt. India is actually trying to export a small quantity as there is a surplus.

About 700,000 motor-vehicle tyres were produced in 1950-51. The rubber manufacturing industry was not included in the first plan, so no targets were fixed for it then. The targets and achievements during the second plan period are as follows:

	Target (In millions)	Achievement (In millions)
Capacity	2.2	2.94 (licensed)
Production	1.76	1.4 (in 1960)

It is expected that the target of actual production will be reached in 1961 on the implementation of certain schemes.

Soap Production

The production of all types of soap in the organised sector in 1951 was 83,520 tons. The target for 1955-56 was fixed at 200,000 tons. The production in 1955-56 was about 210,000 tons. The target for 1960-61 is 300,000 tons, and the estimated production is around 340,000 tons.

Nitro-cellulose Lacquers

About 32,600 gallons of nitro-cellulose lacquers (including ancillaries) were produced during 1950-51. The target for 1955-56 was 350,000 gallons of capacity and 300,000 gallons of production. The target for 1960-61 was 800,000 gallons of capacity and 500,000 gallons of production. By 1955, the capacity target for the first plan was achieved, but the production was 295,000 gallons. The capacity target for the second plan has also been achieved, but the production in 1959 was 293,000 gallons. The demand for nitro-cellulose lacquers is not increasing because synthetic stoving enamels are replacing nitro-cellulose lacquers in most industries.

Paints, Enamels and Varnishes

About 27,945 tons of paints, enamels and varnishes were produced during 1950. The plan target was 70,000 tons of capacity and 60,000 tons of production. The output was 39,034 tons during 1955 and 54,245 tons during 1959.

Synthetic Moulding Powder

Only phenolic formaldehyde moulding powder was being manufactured in the country in 1950-51. The production was 324 tons in 1959 and 404 tons in 1951. No target was fixed for the plastics industry under the first plan.

The capacity target for synthetic moulding powders under the second plan was 11,400 tons and the production target was 10,600 tons (in the private sector). The capacity target has already been exceeded, but there is a likelihood of a slight shortfall in production due to unforeseen delays in the installation of a P.V.C. and a second polyethylene plant.

Liquid Glucose

About 219 tons of liquid glucose was produced in 1950. No target was fixed for this industry under the first plan. The capacity target under the second plan is 13,000 tons. Capacity of 11,400 tons has been developed. The production in 1959 was 6,430 tons, against a target of 5,000 tons. In 1960, it is estimated to be 8,000 tons.

Glucose powder was not produced in 1950-51. No target was fixed for this industry under the first plan. The capacity target under the second plan is 7,700 tons, and the production target is 2,800 tons. Capacity of 7,200 tons has been developed and further capacity of 4,200 tons has been licensed. The production in 1959 was 2,413 tons, and in 1960, it is estimated at 2,800 tons.

Superphosphates and Sulphuric Acid

The production of superphosphates in 1950-51 was 55,089 tons (55,970 metric tons). The first plan target was 70,237 tons (71,361 metric tons). The achievement fell short due to lack of demand. The second plan target was 500,000 tons (508,000 metric tons) a year. The production in 1959-60 was 293,427 tons (298,122 metric tons). The shortfall is due to the shortage of foreign exchange and the lack of demand for the quantity stipulated.

The production of sulphuric acid during 1950-51 was 99,153 tons. The first plan capacity target was 220,791 tons, but no production target was fixed. The actual capacity installed came to 242,000 tons, and the actual production achieved was 166,200 tons. The money spent was approximately Rs. 2 crores. The second plan target was 500,000 tons of capacity and 470,000 tons of production. The capacity achieved was 475,484 tons, and the production in 1959-60 was 315,545 tons. The money spent during the second plan period was approximately Rs. 3.5 crores. The main reason for the low production of sulphuric acid during the first plan period was the poor demand for phosphatic fertilisers for which sulphuric acid is used as a raw material. The second plan target of production is more or less likely to be reached in 1961-62.

Soda Ash and Caustic Soda

The production of soda ash during 1950-51 was 44,650 tons. The first plan figures were (in tons):

	Capacity	Production
Target	90,000	80,000
Actual	90,000	80,524

The total amount spent was approximately Rs. 75 lakhs.

The second plan figures are (in tons):

	Capacity	Production
Target	253,000	230,000
Achieved	304,000	180,000 (estimated for 1961-61)

The total amount spent is estimated at Rs. 17 crores. The capacity target has been exceeded but the production is lower than the target because of (i) the delay in commissioning the expansion of the existing units; and (ii) the lower production in the new units during the trial period. But as soon as the commissioning of the installed capacity is successful, the production target will be reached.

The production of caustic soda in 1950-51 was 11,375 tons. The first plan figures were (in tons):

	Capacity	Production
Target	44,300	36,000
Actual	44,300	35,471

The second plan figures are (in tons):

	Capacity	Production
Target	150,400	135,400
Actual	165,000	120,050 (estimated for 1960-61)

The total amount spent is estimated at Rs. 15 crores. The capacity target has been achieved. But the production is low due to the delay in starting the new units and in ordering machinery.

Sulpha Drugs

The production of sulpha drugs in 1950-51 was nil. The target was 180 tons for the first plan and 450 tons for the second plan. No separate financial allocation was made for this item in the plans. The actual production in 1955 was 80 tons and the estimated production in 1960 is 133 tons. The production is based generally on imported "late" intermediates. The shortfall in 1960 is due to the restrictions imposed on imports of "late" intermediates, as they involve higher expenditure of foreign exchange than bulk imports of the finished drug. The units which have been manufacturing sulpha drugs from "late" intermediates are taking steps to change over to basic manufacture and thus save foreign exchange substantially. May and Baker is already installing equipment to produce 150 tons, and Atul Products 186 tons, of sulpha drugs a year from basic raw materials. In the public sector, a unit to produce 535 tons a year of sulpha drugs from basic raw materials, along with other synthetic drugs, is being established with Russian collaboration. The country will be more than self-sufficient in most sulpha drugs when all these plants start production by the end of 1963.

Penicillin Manufacture

No penicillin was produced in 1950-51. Regular production by Hindustan Antibiotics Ltd, Pimpri, started in the closing months of 1955-56. The relevant statistics are:

	Target of production (Unit: million mega)	Production achieved	Total amount spent (Rs. lakhs)
First plan			
1954-55	—	—	137.86
1955-56	Not fixed	0.62	59.40
Second plan			
1956-57	9	9.89	Nil
1957-58	15	21.43	15.68
1958-59	24	25.20	11.70
1959-60	30	33.15	19.57

In 1960-61, against a target of 35 million mega units, the estimated production is likely to be about 40 million mega units.

D.D.T. Projects

No D.D.T. was produced in 1950-51. The first factory in the country was set up during the first plan period and it commenced production in April 1955. A target of 700 tons of technical D.D.T. was fixed for the first plan, but due to teething difficulties the actual production was 282 tons. About Rs. 17.70 lakhs was spent on the plant. For the second plan period, a target of 1,400 tons a year of technical D.D.T. in each factory was fixed. The Delhi factory produced 1,466 tons, while the Alwaye factory yielded 1,109 tons.

Paper and Printing Machinery

The production of paper machinery in 1950-51 was nil. The industry did not figure in the first plan. During the second plan, targets of capacity and production of paper-making plants worth Rs. 4 crores and Rs. 1.3 crores, respectively, have been specified. Against this, licences under the Industries (Development and Regulation) Act, 1951, have been issued to 15 concerns for the manufacture of paper-making plants and machinery, including parts, worth Rs. 9.5 crores a year. Most of the concerns are likely to go into production by 1960-61.

The production of printing machinery in 1950-51 was negligible. The industry did not figure in the first plan. A production target of Rs. 2 crores' worth of printing machinery was fixed in the second plan. No financial allocation was made. A survey of the requirements of printing machines was made by the Government. As a result of the findings, various firms were persuaded to take up manufacture. Four schemes for the manufacture of various items of printing machinery were approved by the Government. The value and the range of items will be known when these units go into production.

Cement Machinery

The 1950-51 production figures for cement machinery are not available. The industry was not included in the first plan. A target of Rs. 2 crores for the cement machinery industry was fixed in the second plan but no financial allocation was made. At present, six firms are registered or licensed under the Industries (Development and Regulation) Act, 1951, for the manufacture of cement machinery and parts. Of these, three firms are licensed for the production of complete cement plants, with a total turnover of Rs. 4 crores a year. It is expected that with these three units going into full production by the end of 1962, much of the country's demand for cement machinery will be met. The estimated production in 1960-61 is Rs. 65 lakhs. There was a fall in demand due to the recent slump in the cement industry.

Power-driven Pumps

The production of power-driven pumps was 33,232 in 1950 and 47,989 in 1951. No specific target was fixed under the first plan. However, the production at the end of the plan was expected to be around 40,000 units. Against this, the actual production in 1956 was 46,681 units. The target for the second plan is 86,000 units. The actual production in 1959 was 85,067 units and from January to September 1960, it was 72,900 units.

Grinding Wheels

The production of grinding wheels in 1950-51 was 231 tons. The target for the first plan was 840 tons of installed capacity and 750 tons to 800 tons of production. Actually, by 1955-56, the installed capacity was 1,520 tons and the production was 800 tons. The target for the second plan is 2,110 tons of installed capacity and 1,500 tons of production. The actual achievement is 2,770 tons of installed capacity and 1,700 tons of production.

Hurricane Lanterns

The production of hurricane lanterns in 1950-51 was 3,244,000 units. The targets for both the first and second plans were 6 million units. The production achieved at the end of the first plan period was 5,385,000 units. In 1959, it was 4,560,000 units, and in 1960, it is estimated at 5,165,000 units. Due to the electrification and rural electrification programmes, the consumption of lanterns is not increasing, hence the shortfall in production.

Sewing Machines

The production of sewing machines was 30,892 in 1950 and 44,461 in 1951. The target for the first plan was 91,500, and the production in 1956 was 130,388. The target for the second plan is 300,000, and the production in 1959 was 290,681. It is expected that the target will be exceeded by the end of the second plan.

Diesel Engines

The production of diesel-engines was 4,596 in 1950 and 7,246 in 1951. The output figures in terms of horse-power are not available. No specific target was fixed for diesel-engines under the first plan. But the production at the end of the plan was estimated at 10,000. Against this, the actual output in 1956 was 12,015. The production target for the second plan was 22,000. The actual output during the first nine months of 1960 was 30,790.

Electric Motors

The production of electric motors in 1950-51 was 99,109 horse-power. The target fixed for the first plan was about 320,000 horse-power. The second plan target has been fixed at 800,000 horse-power or 1 million horse-power. The actual output in 1955 was 271,600 horse-power. The production in 1960 has been estimated at 800,000 horse-power.

Electric Transformers

The production of electric transformers in 1950-51 was 179,000 kVA. The target fixed for the first plan was 450,000 kVA, and the actual output in 1955-56 was 629,000 kVA. The second plan target has been fixed at 1.5 million kVA, and the production in 1960 is estimated at 1.2 million kVA. The shortfall in production is attributed to the decline in demand following the adjustments made in the implementation of power projects during the second plan period because of the foreign exchange shortage.

Storage Batteries

The production of storage batteries by the firms included in the list of the Development Wing in

1950-51 was 194,000. The target fixed for the first plan was 400,000, and the output in 1955-56 was 258,000. The second plan target was 600,000, and the production in 1960-61 is estimated at 450,000. Although statistics of production in the small-scale sector are not available, it is thought that there was considerable production in that sector also. Taking into account the output in the small-scale sector, it is thought that it may perhaps exceed the target fixed for the industry.

Dry Batteries

The production of dry batteries in 1950-51 was 136.5 million cells, and in 1955-56 it was 161.5 million cells. The target for 1960-61 has been fixed at 275 million cells, and the output during the year is estimated at 220 million cells. The cause of the shortfall in production is the limited availability of flashlight cases as a result of the ban imposed on their imports. Another reason is that one of the major units manufacturing dry cells was closed. The production of flashlight cases has commenced recently. With the increase in output, it is expected that the production of flashlight cells will also increase.

Electrical Cables and Wires

The production of A.C.S.R. and A.A.C. conductors by the firms included in the Development Wing's list was 1,700 tons in 1950-51. The target for these conductors at the end of the first plan, that is, 1955-56, was fixed at 5,000 tons, and the output during the year was 8,730 tons. The second plan target was 20,000 tons and the output during 1960-61 is estimated at 22,000 tons.

Electric Fans and Lamps

The production of electric fans by the firms included in the list of the Development Wing was 194,106 in 1950-51. The target fixed for the first plan was 320,000 or 350,000, and the actual output in 1955-56 was 237,336. The second plan target has been fixed at 900,000. The production in 1960-61 is estimated at 1 million. In addition, there has been considerable production in the small-scale sector, the details of which are not available.

The total output of electric lamps by the firms included in the list of the Development Wing was 14.6 million in 1950-51. The target fixed for the first plan was 30 million, and the actual production in 1955-56 was 24.23 million. The production target for the second plan has been fixed at 50 million. It is estimated that the output during the year will be 40 million. Due to foreign exchange difficulties, some of the expansion licensed is likely to materialise in 1961, so the production target of 50 million may not be fully realised in 1960-61.

Bicycles

The production of bicycles in 1950-51 was 101,136. The first plan target was 530,000. The production at the end of the plan period was 663,969. The second plan target is 1.5 million. The production in 1959 was 1,187,748. It is expected that the plan target will be achieved by the end of the second plan period.

Motor-cars

The production of motor-cars in 1950 was 14,062 and in 1951 it was 22,269. The production targets for the first and second plans and the actual production compare as follows:

Production targets		Actual production			
1955-56	1960-61	1955	1956	1960	(Jan.-Sept.)
30,000	65,000	23,084	32,138	38,044	(for nine months)

At the end of December 1955, the investment of the six motor-car manufacturers in the country in land, buildings, plant and machinery amounted to Rs. 7.4 crores. The investment likely to be made by the end of the second plan is about Rs. 43 crores. The physical targets have somewhat lagged behind in the second plan period, mainly due to foreign exchange difficulties.

Motor-cycles and Scooters

There was no production of motor-cycles and scooters in 1950-51. No targets were fixed for the first plan. Production commenced in 1955 and the achievement during that year and in 1956 is as follows:

Year	Motor-cycles	Scooters
1955	419	536
1956	1,022	4,735

The target for the second plan period was 11,000 a year. The achievement up to September 1960 was 12,233, and it is estimated that by the end of the second plan, it will rise to 24,000 a year.

Refractories

The production of refractories in 1950 was 236,500 tons, in 1951 238,209 tons, in 1956 316,640 tons, and in 1959 500,000 tons. The industry's installed capacity in 1960 was 800,520 tons, and the additional capacity covered by import licences for capital goods is 480,840 tons. The additional capacity licensed but not yet covered by import licences is 1,074,000 tons No targets were fixed under the first plan, although there was increase in production during the plan period by 36,300 tons. The second plan target was 1.25 million tons of capacity and 1 million tons for production. The increase in production over the first plan so far has been 227,200 tons. The production of the refractories is confined to the private sector.

Railway Wagons

The target for wagon procurement for the second plan period was 111,759 (in terms of four-wheelers). The actual receipt up to the end of October 1960 was 61,859 indigenous wagons and 28,489 imported ones, making a total of 90,348 wagons.

Locomotives

The physical targets of production of locomotives for the second plan period and the actual achievement were as follows:

Gauge	Plan target	Actual production up to 30th Sept.
Broad-gauge	839	741
Metre-gauge	452	408

Coal and Iron Ore

The production of coal in 1950 was 32.30 million tons; and the output in 1951 was 34.43 million tons. No specific target of coal production was fixed for the first plan. The output in 1955 was a little over 38 million tons. The target for the second plan period was 60 million tons. The production in 1959 was 47.06 million tons, while during the first nine months of 1960, it was 38 million tons. It was expected that an output of between 54 million and 55 million tons would be reached in March 1961—the last month of the second plan period.

There is an allocation of Rs. 53.34 crores for the coal production programme in the public sector. The amount actually spent up to the end of September 1960, against the above allocation, was Rs. 36.16 crores. The major part of the balance of Rs. 17.18 crores was expected to be used before the close of the financial year.

The shortfall of 5 million or 6 million tons in production will mostly be in the output from collieries of the National Coal Development Corporation. However, all arrangements will have been established by the Corporation by the end of March 1961 for an output commensurate with the target of 13.5 million tons. The targetted rate of output will be attained within the first year of the third plan.

The production of iron ore in 1950 was 3,012,786 metric tons, and in 1951 it was 3,715,821 metric tons. No target was fixed for the first plan, nor was any financial allocation made. The production of iron ore during 1952 and 1956 was as follows:

Year	(In metric tons)
1952	3,988,514
1953	3,916,733
1954	4,377,419
1955	4,752,612
1956	4,976,401

The second plan target was 12.5 million tons. No specific financial allocation was made for iron ore production in the second plan. In 1958, however, a sum of Rs. 2 crores was tentatively allocated for production of iron ore from Kiriburu mines in Orissa and Bihar for exporting it to Japan from 1964. The production during 1957 to 1959 (up to September 1960) was as follows:

Year	(In metric tons)
1957	5,166,778
1958	6,129,706
1959	7,981,819
1960	7,966,688 (up to September 1960)

So far, Rs. 75.53 lakhs has been spent on the Kiriburu project which is likely to rise to Rs. 1.91 crores by the end of 1960-61. There has practically been no shortfall in the production of iron ore. The output is being increased every year according to internal as well as external demands.

Overseas Shipping

The total gross registered tonnage of ships plying overseas in 1950-51 was 173,000. The physical target for the first plan was 283,000 g.r.t., and the achievement was 240,000 g.r.t. The physical target for the second plan was 488,000 g.r.t., and the achievement was 566,000 g.r.t.

Coastal Shipping

The total gross registered tonnage of ships plying in the coastal area and to adjacent countries in 1950-51 was 217,000. The physical target for the first plan was 317,000 g.r.t., and the achievement was 240,000 g.r.t. The physical target for the second plan was 412,000 g.r.t., and the achievement was 277,000 g.r.t.

Shipbuilding

Three ships aggregating 24,000 d.w.t. were built in 1950-51. This includes a vessel of 8,000 d.w.t. which was delivered on 3rd April, 1951. The target for the first plan was 150,000 d.w.t., and the achievement during the plan was 77,000 d.w.t. The financial allocation was Rs. 9.57 crores, and the amount actually spent was Rs. 5.88 crores. The target for the second plan was 100,000 d.w.t. or 120,000 d.w.t. The achievement during the plan was 57,753 d.w.t. The financial allocation was Rs. 9.77 crores, and the amount actually spent was Rs. 4.81 crores.

Russian Team Expected Shortly

The Russian team to finalise the projects which are to be financed from the recently announced credit of 500 million roubles is expected here shortly. The Government of India's tentative proposals include Rs. 25 crores for oil (Rs. 10 crores for oil exploration and Rs. 15 crores for the oil refinery in Gujarat), Rs. 25 crores for power plants, Rs. 15 crores for the heavy compressors and pump plant, Rs. 8 crores for the ball and roller-bearing plant and Rs. 5 crores for instrumentation.

Durgapur Steel Plant

According to the latest information, the expansion of the Durgapur steel plant to 1.6 million tons can be achieved by better use or preparation of raw materials. It is suggested for the expansion of the plant by 6000,000 tons. One blast furnace, instead of two, and one open-hearth furnace for steel-making will be required.

Yugoslav Trade Delegation

A Yugoslav trade delegation, as already reported, is arriving here on 8th February. It will stay in India for three weeks, during which it will visit Calcutta, Durgapur, Madras, Bangalore and Bombay. It will be headed by Mr. J. Drausnik of Associate Manufacturers of Power and Industrial Equipment and will include representatives of Yugoslav firms manufacturing locomotives, chemical and food products, steam turbines and diesel motors, electrical engineering goods, water turbines and machinery, etcetera, and six representatives of importers. Yogoslavia has already sold one cargo ship to the Ratna Shipping Lines. Negotiations are being carried on for the sale of another ship. The delegation will also finalise the projects on which the recently-announced Yugoslav credit of $40 million will be spent. The lists of projects being discussed include four cargo ships worth $10 million, equipment for thermal and hydro-electric stations, cement factories and food-processing equipment.

Italian Economic Mission

The 25-man Italian economic mission which arrived here includes the following: Messrs Emilio Battista, leader, vice-president of the Commission for Industry and Commerce of the Senate of the Republic; Felice di Falco, director-general in the Ministry of Foreign Trade; Mario Barone of the Ministry of Foreign Trade; Paolo Cavalli, director of Messrs Fiat, Torino; Marcello Merlo, export manager of Messrs Montecatini, Milano; Mario Buffa, manager of Messrs Finsider; and Giovanni Corbellari, vice-president of the General Confederation of Handicrafts.

Changes in Oil Companies

The oil companies, it is reported, are streamlining their Indian organisations. The Assam Oil Company has already moved its principal organisation to New Delhi. Burmah-Shell has created a new post of chief representative, who will also be stationed in Delhi. The general managers of both Burmah-Shell Refineries and the marketing company will be responsible to him.

Meetings of Import and Export Bodies

The next meeting of the Import Advisory Council will be held in New Delhi on 6th March. The Export Promotion Advisory Council will meet on the following day.

Tenure of Technical Personnel

According to New Delhi reports, Dr. Ensminger, representative of the Ford Foundation, has addressed a letter to the Prime Minister, drawing his attention to the employment of technical personnel in India. Dr. Ensminger makes two main points. Firstly, he says, technical personnel are given too short a tenure. They hardly have time to familiarise themselves with the work during their limited assignment before they are transferred to other posts. In the interests of public undertakings, such personnel should be appointed for longer periods, say, five years. The second point is that it is not the individual but the "chair" which should be called upon to take decisions. Dr. Ensminger says that the present is an age of specialisation when technicians and not administrators should be so selected as to familiarise themselves with the particular branch of the undertakings they are working for.

The Prime Minister, according to reports, is impressed with the letter and has circulated it to State Governments with favourable comments. It may be added that, in some Ministries, it has become the practice to appoint superannuated personnel on a yearly basis. This may suit the Ministries concerned, but it has a demoralising effect on the administration. According to another report, the Finance Ministry has also circulated a letter drawing the attention of other Ministries to the method of prolonged negotiations, which often result in a definite loss to the country. The Viscount deal illustrates the point. The Burmese Government was willing to sell four practically brand-new Viscounts. But India took such a long time considering the proposal that the former changed its mind and decided to operate the Viscounts itself. Thereafter, officials of the Indian Airlines Corporation visited the U.S.A. to select four Viscounts which were on sale there. But the negotiations were again so prolonged that Vickers was able to buy them. In a third set of negotiations, two Viscounts have already been bought but India has still to buy the remaining two.

A similarly long-drawn-out procedure has been adopted for the negotiations with the oil companies. Nearly six months ago, new rules were published and invitations were issued asking foreign oil company representatives to come to India for negotiations. In order to expedite matters, Mr. S. S. Khera, Secretary to the Oil Ministry, was sent abroad. Since then, representatives of various oil companies have been visiting India for negotiations, but they do not appear to have made any headway.

TEXTILE INDUSTRY MAKES RAPID PROGRESS

By Sripati Ranganadha

THE Indian cotton textile industry comprises mainly three competing sectors, namely, the handloom, the powerloom and the composite mill industry. The latter produces yarn as well as cloth out of raw cotton. Mills manufacture different categories of cloth such as superfine, fine, medium and coarse. The handloom and powerloom industries are entirely dependent on the yarn which mills produce. Originally, the yarn was produced by handloom weavers by hand spinning. This process being tedious and uneconomical, weavers have given it up. At present, both handloom and powerloom weavers produce cloth out of mill-spun yarn. The chief reason for the conflict of interests between these industries is that "fabrics which may be manufactured by the three sectors cannot always be differentiated and that the markets for the products of all the three sectors are competitive for reasons of price, except to a very small extent in the matter of expensive specialities".

Clash of Interests

The clash of interests between the handloom industry and the relatively modern mill industry is significant. The former played a leading rôle historically in the country's economy. For ages, Indian textile manufactures have been of very good quality. The Dacca muslins of Bengal, the patalas of Baroda, the fabrics of Assam, Manipur, Orissa and south India were well known in foreign countries. The East India Company collected the samples of these fabrics from various parts of India and preserved them in the Government museum in Nagpur for the benefit of textile producers in England. All these materials were manufactured on handlooms. In short, handloom weavers have rendered a long and distinguished service to the Indian economy.

The handloom industry which was originally a cottage craft came into prominence particularly during the second World War, and its contribution, especially in times of the cloth scarcity, cannot be minimised. The cottage craft has been developed by a social structure whereby handloom weaving is pursued by a particular caste. It is the second important enterprise in India. It is primarily a village industry which provided employment for about 10 percent of the total employed population. The important cottage industries are cotton and silk textiles, raw sugar, pottery, metalwork and a variety of other basic simple consumer goods. Of late, the growth of the cotton industry has been stunted due to the internal competition from factories and foreign imported goods. Nevertheless, the Government took steps to preserve it by granting it protection.

The Textile Enquiry Committee, after going into the questions of the handloom industry in detail, came to "an irresistible conclusion". It said: "The handloom industry has to be made technically more efficient by converting the handloom either into a semi-automatic loom or into a powerloom, as power becomes available more generally in the areas where the handloom industry is widely prevalent." At present, the handloom industry may have outlived its utility, for it has been eclipsed by the modern medium-sized powerloom and mill industries.

Handloom versus Powerloom

The organisation of the handloom industry is not uniform in character. There are supposedly independent weavers who purchase yarn, produce fabrics and sell them in the market. There are certain weavers who work on a commission basis. They take yarn from a master weaver and work for him and get a fixed piece-rate wage. Sometimes they work with a particular master weaver on a long-term contract and receive wages according to the nature of the material fabricated. On such occasions, they get their wages in advance of the work they do. The next most important type of organisation is the co-operative society, which differs from place to place. For example, the Madras Handloom Weavers Co-operative Societies purchase and supply the yarn to their members, and partly market the fabrics they produce. The other type of handloom weavers' co-operative societies supply the yarn to their members and others. They seldom undertake marketing. During the second World War and particularly in times of yarn control in 1943-48, the co-operative societies which concentrated on yarn supply and marketing, made some profit which enabled them to build up reserves. The yarn supplying co-operative societies made only limited profits, so some of them incurred heavy losses during 1952-53 when yarn prices fell sharply.

Throughout the history of the handloom industry, it has lacked finance to be established on sound lines. The middlemen who have financed these primary producers have frequently exploited them. The former are the intermediaries between handloom weavers and yarn producers. They buy yarn from the mill industry and sell it to handloom weavers at exorbitant prices. The rôle of master weavers is rather significant in the economy of the handloom industry. Their rise can be traced back as early as 1880 and thereabouts. They lent great elasticity to the marketing of handloom goods. Being undeveloped, unorganised and private by nature, the institution of the master weaver has been exposed to certain abuses. The indifferent nature of master weavers brought about unemployment among weavers during a depression. The structure and organisation of the handloom industry have not, by and large, changed much today from what it was before the second World War. During the war, master weavers were eliminated temporarily in many cases and State co-operative organisations stepped into the gap created by the former. The All India Handloom Board started assisting the co-operative organisations of the States since 1953 and now the handloom weavers' co-operative societies have spread all over the country.

Progress of Powerloom Industry

The powerloom industry uses looms operated by power. Its equipment mainly consists of a weaving unit, as distinct from the composite mill industry which consists of spinning-*cum*-weaving establishments. The powerloom industry might have come into being from the initiative of a few enterprising relatively rich weavers. There are instances where a weaver owning two or three handlooms has converted more than one of them into powerlooms. They might have started the industry with weaving sections with the idea of importing yarn from abroad and later from mills within the country. The industry which has only a weaving section is commonly described as the horizontal pattern of organisation. It might have occurred to them later that the yarn imported from foreign countries would be less economical than the yarn produced at home. Naturally, this tendency might have led them to switch over to the weaving-*cum*-spinning aspect of the industry. This pattern of organisation having both spinning and weaving sections of the industry is generally known as vertical integration.

The powerloom industry may be broadly classified into small-scale and large-scale industries. The former is otherwise known as cottage powerlooms or domestic powerlooms and the latter as medium-sized powerloom industries. The cottage powerloom industries have a structure similar to the handloom industry. They have an independent commission agency and co-operative society of powerloom weavers similar to handlooms. There are even a few joint-stock companies. Apart from the weaving aspect, which is operated by power, other functions of the industry such as sizing, warping and winding are all done by the weavers' family or hired workers as in the handloom industry. Ishalkaranji, Malegaon, Bhiwandi, Surat and Cambay of Maharashtra and Burhanpur and Jubbulpore of Madhya Pradesh are the areas where the powerloom industry is concentrated. The medium-sized powerloom industry, having units between six and 20 looms, is a better organised form of the cottage powerloom industry. They often come under the provisions of the Factories Act and in some cases are subject to a statutory minimum wage. The example for the latter is the powerloom industry in Ichalkaranji.

Concessions and Reservations

The Government of India has granted to the cottage powerloom industry the same concessions and reservations of certain varieties of production as for the handloom industry. The medium-sized powerloom industries are not treated on the same footing as that of the handloom industry. However, it has extended certain reservations of producing cloth which are prohibited by the mill industry. In addition, unlike the mill industry, the powerloom industries are exempt from the excise duty on their products and are free from price and distribution control. There is a conflict of interests between the cottage handloom-*cum*-domestic powerloom industries and the medium-sized powerloom industry. The grievance of the latter is that the Government has not extended to it all the concessions granted to the handloom-*cum*-domestic powerloom industry. The medium-sized powerloom industry expects that it should be treated more generously. It has been demanding its exemption from factory legislation concerning working hours, rest periods, the statutory minimum wage, contributions to provident fund, etcetera. Apparently, the medium-sized powerloom industry is deprived of the benefits of the composite mill industry and is equally handicapped because of the privileges enjoyed by the handloom industry. Against this background, it appears that the domestic powerloom industry enjoys more privileges than any of the component industries. The domestic powerloom weaver earns a better wage because of higher productivity. At the same time, he has been exempted from many provisions of the Factories Act. So the authorities should consider the pressing issue and see that the medium-sized powerloom industry which forms about one-eighth of the handloom industry is not crushed between the handloom and the organised mill industry.

Competition from Rayon

The cotton textile industry has to face competition from another sector of the textile industry, namely, the rayon industry which was established in India after the first World War. The utility and economy of rayon as a substitute for natural fibre has been disproved. The commercial application of rayon has many uses and it has full scope to play its rôle in other spheres of the industry. According to a report, about 30 percent of the world rayon output was produced in France, Belgium, Switzerland, Sweden, Spain, Brazil, Canada, Netherlands, Norway, Turkey, Mexico, Columbia, Argentina, India and Russia. The production of rayon in India is negligible and she still imports quality wood pulp from abroad. Being an infant industry, it depends on Government aid and protection. But the conflict of interests between the cotton textile industry and the rayon industry is not pronounced in India at present.

Many synthetic conversion of fibres[1] made out of cellulose, milk, brine, crude petroleum, oxygen, nitrogen, natural gas, feathers and other raw materials have been introduced since the turn of the twentieth century. The synthetic fibres are supposedly cheaper, crease-resisting, malleable to mass production, liable to improvement and better service, "easy to carry and easy to care for" and designed to fit the "spirit of the age". Rayon is the most popular among the known fabrics in India.

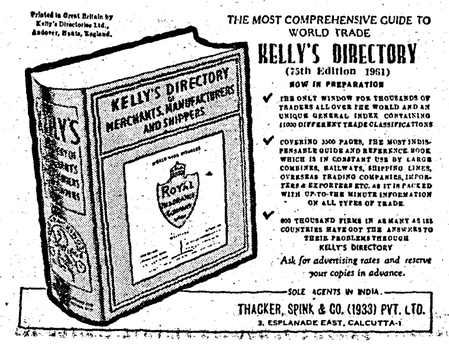
In 1920, cotton, wool and silk formed 84 percent, 15 percent and 1 percent of world textile production, respectively. Thirty years later, cotton had shrunk to 74 percent, wool to 11.6 percent and silk to .2 percent and they yielded to rayon which formed 14 percent of man's needs. It should not mislead one into believing that 14 percent of the world's needs and a negligible percentage of India's needs are a remarkable triumph for rayon. The reason for the success is not far to seek. During the depression and war years, there was a great shortage of cotton, and the import-export restrictions stimulated consumption of synthetic fibres. Yet chemical fibres scarcely seemed to satisfy the needs of consumers in India. Experience of three decades of synthetic products in India leads one to believe that the importance of cotton may not be lessened in the future.

Popularity of Synthetic Textiles

The popularity of synthetic textiles is increasing and they are slowly invading the tastes of the public. In spite of her conservativeness, India cannot stand aloof. The gradual increase of rayon powerlooms from 1,000 in 1931 to 25,000 in 1950 and 75,000 handlooms which produce rayon fabrics out of imported yarn are sufficient proof of the steady progress of the rayon industry. But taking the adverse factors into consideration, it should not be imagined that the present success of the rayon industry will be an index to its future prosperity. It is interesting to consider two important problems of the rayon industry in relation to the cotton textile industry.

1. Has the synthetic fibre industry a chance to oust and outstrip the cotton textile industry?

[1] Chemical fibres can be classified into three groups, namely, synthetic, semi-synthetic and inorganic. Synthetic fibres: Orlow, Dynal, Acrilan, X-51 and Nylon. Semi-synthetic fibres: Rayon, Acetate and Vicara. Inorganic fibres: Glass.



THE MOST COMPREHENSIVE GUIDE TO WORLD TRADE

KELLY'S DIRECTORY

(75th Edition 1961)

NOW IN PREPARATION

- THE ONLY WINDOW FOR THOUSANDS OF TRADERS ALL OVER THE WORLD AND AN UNIQUE GENERAL INDEX CONTAINING 11000 DIFFERENT TRADE CLASSIFICATIONS
- COVERING 3500 PAGES, THE MOST INDISPENSABLE GUIDE AND REFERENCE BOOK WHICH IS IN CONSTANT USE BY LARGE COMBINES, RAILWAYS, SHIPPING LINES, OVERSEAS TRADING COMPANIES, IMPORTERS & EXPORTERS ETC. AS IT IS PACKED WITH UP-TO-THE MINUTE INFORMATION ON ALL TYPES OF TRADE.
- 800 THOUSAND FIRMS IN AS MANY AS 185 COUNTRIES HAVE ONLY THE ANSWERS TO THEIR PROBLEMS THROUGH KELLY'S DIRECTORY

2. Is India ready to take synthetic fibre in preference to natural cotton in the near future?

As for the first question, it is believed that synthetic fibres can scarcely compete and thrive all by themselves at the expense of other textiles. Mr. Michael Day says that "most chemical fibres will not replace wool or cotton, but will be blended with them to provide textiles with the best qualities of each". One cannot predict about the potentialities and the future possibilities of the synthetic fibre industry. But for a long time, cotton will retain its hold in utility and importance. As for the second question, it is indeed too premature to extrapolate consumer preference for synthetic fibres, as against natural cotton. The conditions in India are changing so rapidly ever since independence that it is not possible to project one's imagination to the future. As it is, the chances of winning consumers' choice, as distinguished from the industrial one in synthetic fibres, are slender. The uses of rayon today for industrial purposes are many, since it is used in conveyer belts, telephone wire insulation, parachutes, mantles for lamps, etcetera.

The first rayon factory was established in 1947 in Travancore under the name Travancore Rayon Ltd with the co-operation of the Travancore Government. It came into operation in 1950. The second rayon factory, the National Rayon Corporation, was set up in Kalyan, Maharashtra, in 1951. The third one for the production of acetate yarn was set up in Hyderabad. The fourth unit, the Gwalior Rayon Silk Manufacturing Weaving Co. Ltd in Madhya Bharat was established in 1954. The Government wants to encourage the industry by permitting imports of such raw materials as wood pulp, rayon grade caustic soda and sulphur from the U.K., Italy, Japan, the U.S.A. and the Scandinavian countries.

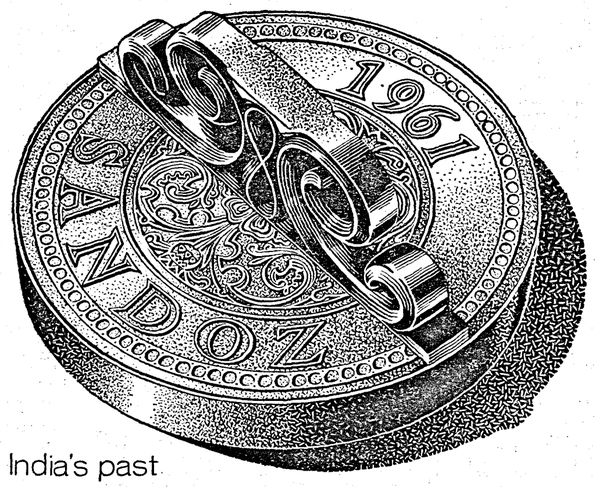
Some Handicaps

There are some handicaps which the rayon industry, or for that matter any synthetic fibre industry, faces in India today. At the outset, some of the raw materials which go into the making of the synthetic textiles are imported from other countries. Quality wood pulp, in particular, is not still available in India. Besides, as long as the variable cost is high, it is inconceivable to reduce the total cost. Secondly, the industry being an infant industry, the utility and economy of synthetic fibres are not well known in India. Promotional activity may be conceived as one of the potent methods of pushing and promoting the utility of a product to the public. Unfortunately, the rôle and scope of advertisements in India is not of much significance. Illiteracy of the people may be regarded as one of the factors for the advertisements being ineffective. At present, sales promotion can be stimulated by private companies in newspapers and magazines, movies and exhibitions. Broadcasting comes under public enterprise, so the question of sales promotion through radios does not arise. There are 330 daily newspapers in India and their total circulation is just over 2.5 million. The periodicals and magazines are nearly 4,500, but their total circulation may not exceed a few millions. The advertisements in movies as well as wall posters and exhibitions are all confined to cities and towns and their influence may not be significant. India is a land of villages and nearly 83 percent of the total population live in rural areas. So the effect of the advertisements may not be great on them.

Thirdly, the regular pattern of customs and habits may retain their hold in the choice of cotton in preference to synthetic fibres. In India, home hand-spun cloth lends more respect than a machine-made one. This is one of the reasons why weavers and their old cottage industry still have a place in India. Fourthly, the warmth or coolness of a fabric depends upon the heat conductivity of the fibre content. Spun yarn or rayon mixed with silk or wool is warm and it is not suitable for a tropical country like India for wearing purposes. Fifthly, there had been rumours that persons who use garments made out of synthetic fibres develop certain skin diseases. Although there is no scientific basis of these statements, people are sensitive to them. Lastly, rayon being "fine fabrics" requires more care than cotton for washing and laundering. The teaming millions of India are practically deprived of the irreducible minimum requirement of ordinary cotton clothing at present and the suggestions for increasing the popularity of rayon apparel do not seem appealing to the majority of the people. Even if synthetic fibres succeed in winning consumer preference with Government encouragement and aid, the process will be slow and will take a long time.

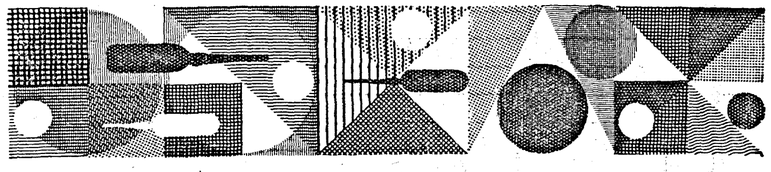
Technological Improvements

To sum up, rayon is at present the only known and sizable synthetic fibre industry in India. The competition between the rayon industry and the cotton textile mill industry is not very keen at present. But it is conceivable that due to technological improvements, there may be competition between the two industries in future. The rayon industry's progress has been significant during the past few years. For instance, the price of a yard of rayon fabric in January 1951 was 208 percent of that of a yard of grey cotton piecegoods, 159 percent of coloured cotton piecegoods and 166 percent of bleached cotton piecegoods. In January 1952, the percentages were 123, 95, and 131, respectively. Although prices of rayon fabrics are still prohibitive compared with cotton goods, there is scope for the rayon industry to cut the prices for its products. If it succeeds in doing this and evolves a process whereby it can manufacture rayon without foreign component items, then the prices of rayon fabrics will naturally come down. Even so, competition may be a more serious threat to cotton growers than manufacturers of cotton textiles, for the machinery employed by the latter can be switched over to the manufacture of rayon without much expense.



From India's past

A PLEDGE FOR INDIA'S FUTURE



'ABUNDANCE of virtue, adaptability to the disease under treatment, capacity of being used in diverse ways, and undeterioration ...' so in his wisdom Charaka defined the properties of a Drug, in his great medical treatise compiled eighteen hundred years ago. Echoed down the centuries, the words of Charaka, of Vāgbhatta and Suśruta, who together formed the Triad of the Ancients of Indian medicine, remind us that the science of healing is ageless and universal.

On the occasion of the Official Inauguration of their new factory at Kolshet, near Thana, in the distinguished presence of Dr. S. Radhakrishnan, Vice-President of India, SANDOZ pay tribute to the genius of the Ancients of Indian medicine ... have adopted, for the commemorative seal, the words of Charaka which describe so well the qualities of the Drugs modern India needs.

SANDOZ PRODUCTS PRIVATE LIMITED

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to June 1960. Compared with the preceding month, there were decreases in sugar 68.40 points, jute 3.45 points, cement 10.57 points, coal 7.07 points, pig iron 10.61 points, finished steel 7.14 points, paper 10.48 points, tyres 15.18 points, bicycles 25.00 points, electricity 1.37 points and railway ton-miles 3.11 points, while increases occurred in tea 74.56 points, yarn 3.27 points, cloth 2.56 points and motor-cars 47.16 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity remained unchanged at 148.0 points during June 1960.

FINANCIAL STRINGENCY HAMPERS MOVEMENT OF FIBRE

RAIN IMPROVES NEW CROP PROSPECTS BUT PRICES STILL FIRM

ONE of the biggest problems facing the jute trade these days is that of finance. The high price of fibre has increased credit needs, and this is likely to have a serious effect on the movement of the remaining supplies. It is not implied that plenty of jute is available. It is common knowledge that the two to three months preceding the arrival of the next crop are going to be critical for the mills, but the lack of finance—not only for the mills—may slow up arrivals even more. The first step in providing finance for the movement of the crop is the payment made by upcountry merchants for jute purchased by them with their own money or with the assistance of banks. When the merchants despatch jute to the mills or to balers in Calcutta, they draw on their buyers for the value of the fibre against shipping documents. The mills and buyers, in theory, thus pay for the documents long before they see the jute. The result is that, before the season is half over, the bulk of the crop is normally in the godowns of mills and balers, so they actually provide the finance for movement and storage.

This fact does not appear to be fully appreciated. But, if it were impressed on those who interfere with the trade, they would perhaps realise to what extent high prices interfere with the marketing and movement of the crop. To buy 5,000 maunds at present costs roughly over Rs. 3 lakhs. To finance big purchases at current prices would require crores of rupees, so mills naturally have to look to their own financial resources, and regulate their buying accordingly, irrespective of any restrictions the quota system may place on them. Of course, mills can also borrow money from the banks, but most of them are already mortgaged up to the hilt, and the tightening of regulations against advances has hit them as hard as anybody else. Furthermore, the interest on overdrafts adds to the cost of manufactured goods. Thus, if mills are slow in paying for their jute, the effect snowballs through the various stages, and blocks money which should be used for the further movement of fibre. It appears that there is ample demand for fibre, but it is possible that the operation of the quota system exaggerates it. That is why prices invariably rise when the issue of quotas becomes imminent. One may, therefore, be excused for wondering to what extent prices would ease if all restrictions were removed.

Margin Deposits

It is reported that, during the past week, several mills were summoned before the board of directors of the East India Jute and Hessian Exchange, to explain why they had not paid margin deposits against their raw jute stocks which had risen above the permissible limits. Whatever the outcome may be, the payment of these deposits, at the rate of Rs. 27 a maund, will be a further financial burden on the mills, which they can ill-afford to carry even though the deposits are refundable. Many think that the rate should be reduced considerably or abolished.

The inclement weather recently experienced in Calcutta—and which has been widespread throughout the jute-growing areas of India and Pakistan—has lent credence to the Indian and Pakistani authorities' promise that there will be a bigger and earlier jute crop during the next season. The rain has been welcomed by the farmers, and will allow early ploughing and preparation of the fields. Moreover, it has instilled a certain sense of confidence in the future by reference to the time-honoured saying about rain before the end of Magh (the first fortnight in February.) In Pakistan, the rain could not have come at a better time, and will undoubtedly lead to some early sowing. Speculators have been at work, however, and have countered any bearish sentiment which may have developed by saying that the early rains indicate that, according to the traditional seven-year cycle in Pakistan, severe flooding is due this year.

Fibre Stocks

Whatever the prospects for the next crop may be, the rain has made little difference to the current attitude of operators. They know that mills have an average of about 12 weeks' stock on hand and in transit, which will take them up to, say, the end of April or the beginning of May. From then, until the new crop arrives, mills will require about 1.2 million or 1.5 million bales, which is equal to about 6 million or 7.5 million maunds. It is very doubtful whether this amount remains from the current crop. This points to the possibility that there may have to be a further curtailment of production, however unpalatable this may be. Probably because of this, the mild reaction which occurred a few days ago, when raw jute prices showed signs of declining, has given way to bullishness during the past week, and a large portion of the loss has been made up. The highest levels of the previous week have not been reached, but many think that it is only a matter of time before new highs are recorded. Gunny prices have also risen. There is a constant, though limited, demand from overseas, which is magnified by the mills' reluctance to sell, resulting in the same enquiries emanating from many different sources. As long as overseas buyers continue to support these rates, there is little hope of a substantial fall in jute goods prices.

Jute mill workers' unions are still agitating against the reduction of mill working hours to 42½ hours a week. One prominent union has called for a one-day strike in the jute mills next Monday, and propaganda about this has already started in the mill areas. The strike is not popular with the workers, due to the possible loss of a day's wages on top of their already reduced income.

THE JUTE MARKETS

Manufactured Goods : The market was quiet at the opening last Thursday in the absence of fresh overseas enquiries. Prices suffered a further setback as B Twills lost Rs. 2.50 in the near position and Rs. 5 in forward shipment. This made ready B Twills Rs. 199, with April-June at a discount of Rs. 5. Hessians dropped by about Rs. 1.50 and 40in. 10oz. was called over at Rs. 64.85 in the near position. Mill selling pressure at this stage helped to depress the market, but towards the close, reports of fresh interest halted the downward trend. By Friday morning, the previous day's losses were almost made up, and steady conditions prevailed. By the week-end, B Twills rose to Rs. 202 and hessians to Rs. 66.25. Continuous, though small, interest and local shipper covering ensured a steady trend. With mills once more becoming reserved, conditions were ripe for a bull market. Reports of a Government order for February-March shipment excited the market towards the close, and speculation about a fall in mill production last month caused a sharp rise in prices. So Tuesday morning saw B Twills at Rs. 206 and 40in. 10oz. at Rs. 67. Prices continued to rise throughout the day and mills remained reserved, but there were plenty of buyers.

On Wednesday morning, the market was very steady, and opening quotations were as follows :

	Feb.	March	Apl.-June
40in. 7½oz.	51.25	51.00	50.50
40in. 8oz.	55.25	55.00	54.25
40in. 10oz.	68.85	67.75	67.25
B Twills	209.00	206.00	203.00
Heavy Cees (Plain)	209.00	206.00	203.00
A Twills	247.00	247.00	243.00
Liverpools	229.00	229.00	227.00
Cornsacks	215.00	212.00	208.00

Raw Jute : There was little interest in the market at the opening and Assam quotations remained unchanged at Rs. 61.50. Mills had mostly taken up the small quota issued to them previously and were not keen to buy. On Friday, a further nominal quota was issued and prices immediately began to rise, but this was mainly in sympathy with the firm gunny section. By Saturday morning, prices were up by Re. 1 a maund, and small business over the week-end took Assam quotations to Rs. 63 on Monday morning. Some business was conducted at each rise, and reports of very poor imports upcountry were a steadying influence. Towards the close, fibre jumped up in sympathy with goods, and raw jute sellers became very reserved. Wagon arrivals during the past week were reduced to 700, which was about 100 less than in the previous week.

Business was reported in Assam and Northern jute at Rs. 61 to Rs. 63, and in Daissee at Rs. 63.50 to Rs. 64. Mesta was done at Rs. 58.50 to Rs. 59.

On Wednesday morning, the market was very steady and opening quotations were as follows :

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos.	Rs. a md.	Shipment.
Assam	172.75	64.50	Feb.-March
Northern	170.25	63.50	"
Purnea Desal	167.50	62.50	"
Daissee Selected	176.75	66.00	"
Assam Tossa	175.50	65.50	"

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

LITTLE change is taking place now in the daily quotations for raw jute, and both buyers and sellers are wondering what is in store for them. Fibre prices will undoubtedly come down, but when and to what extent is the all important question, so it is simply a case of hazarding a guess on the future trend of prices. No one will have any idea about what is to happen until the sowing of the next crop, although much will depend on the weather. Sceptics, meanwhile, refuse to believe that the supply of jute has fallen to the low level as reported from some sources.

Imports from upcountry markets have been small, but this is attributed to growers holding back their stocks in the hope that they will get higher rates for their fibre later on. The Pakistani Government should realise that the high fibre prices are ruining the jute industry in that country and that the sooner it does something to increase the supply of jute at reasonable prices, the better it will be for the industry. Dealers in Dundee are losing customers, and it will be a difficult problem to entice them back again in the future. If the unfavourable conditions adversely affect the jute crop next season and high prices are maintained in consequence, the trade will be hard hit. It was the dry weather which adversely affected raw jute supplies this season. Now it is predicted that flood-

ing may be responsible for the restriction of supplies next season.

Prices were slightly lower last week at £197 for Mill Lightnings, £193 for Mill Hearts and £185 for Grade Hearts, with Grade Tossa-2/3 reduced by £1 to £197, fours to £195 and Continental Tossa-2/3 to £192, February-March shipment, c.i.f. U.K. Continent.

Continental spinners have not been buying actively, while Dundee spinners have been out of the market. Calcutta goods have weakened to some extent to 98s 6d for 40in. 10oz. and 74s 6d for 7½oz. February and March, and 97s and 73s April-June, with B Twills at 303s 3d, 302s 6d and 296s 3d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth are dull, and only small orders are being placed at unchanged rates.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES EASIER

(FROM OUR EAST PAKISTAN CORRESPONDENT)

REPORTS of rain in Calcutta and the cloudy weather over the jute-growing areas as well as buyers' resistance have made the market easier chiefly in gunnies, although the same trend is being reflected in local jute prices. It is said that the *char* lands, that is to say, the mud banks in the delta area, have already been sown and the recent rainfall has come at an ideal time for good growth. Reports indicate that the first arrival of this jute, which is generally rather short, will take place before 15th May. Assuming that this is correct and that weather conditions will continue to be favourable, the quantity of jute that will be available in these areas even with extra sowing will be small. From the north, one hears already of a shortage of seed. This is unlikely to restrict sowings, but may prevent extensive sowing in border areas which has been expected.

Although there is no doubt that there is a serious shortage of jute, the undertone is bearish for the forward position. On the other hand, it is obvious that at least for the May position and probably for June, the local mills will have to come into the market to buy. The quantity which may be purchased is around 300,000 bales.

Overseas buyers still have some purchases to make, especially since it is unlikely that they will actually receive new crop jute before early September. The most bullish factor for the May-June period is buying by India whose stocks of jute are running low.

There is some slight indication that the condition of jute is improving in some areas and that the percentage of moisture is now less. Unfortunately, the improvement is only slight. Except in one or two areas, imports of raw jute continue to be small, so prices have not receded. High prices are being paid for Tossa while white is neglected, but this has not brought its prices down.

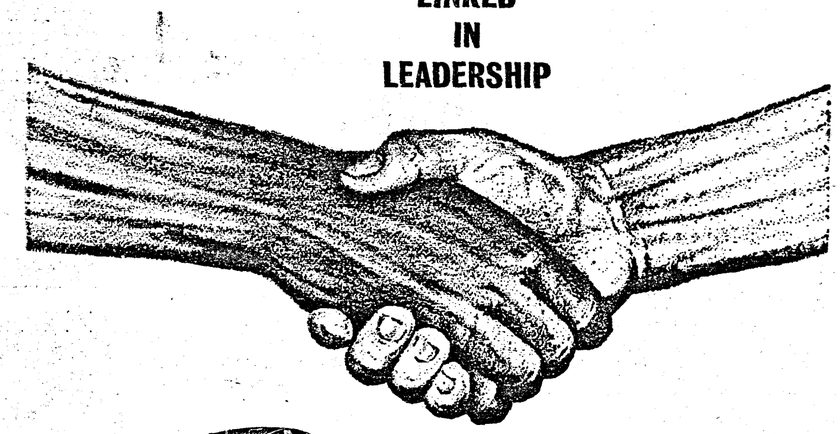
Last week there was an unusual spate of business in the local pucca bale market. This later died down except for cuttings which rose to Rs. 265 but are now quoted at Rs. 255 with few sellers. Overseas buyers have continued to nibble and one large sale of over 30,000 bales is reported to Spain. This was done by three large balers and was almost entirely ex stock. The stock position of jute balers continues to be a much-discussed issue. It would appear that most balers, as opposed to kutcha balers, have a long position. The total unsold stocks in Pakistan, it is estimated, amount to about 300,000 bales.

I.J.M.A. STOCK FIGURES FOR JANUARY

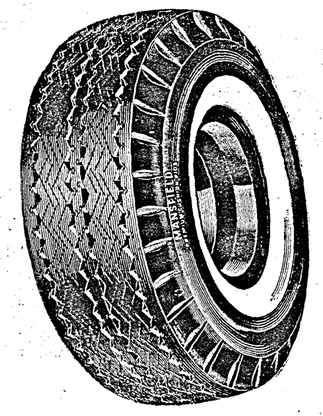
The Indian Jute Mills Association reports the total stocks of jute goods at the end of January as follows :

Description	31st January, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st December 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease (—) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st January, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)
Hessian cloth and bag	10.29 (9.40.68)	23.6 (29.0)	10.62 (9.71.09)	29.2 (29.7)	— 33 (— 30.41)	— 0.6 (— 0.7)	9.89 (9.01.70)	27.2 (27.6)
Sacking cloth and bag	10.14 (9.52.13)	46.0 (46.7)	9.58 (8.75.91)	41.2 (41.8)	+ 1.16 (+ 1.06.22)	+ 4.8 (+ 4.9)	7.57 (6.92.59)	31.9 (32.5)
Others		10.3 (10.5)		9.8 (10.0)		+ 0.5 (+ 0.5)		12.7 (12.9)
Grand Total		84.9		80.2		+ 4.7		71.8
(000 Tons/Metric Tons)		(86.2)		(81.5)		(+ 4.7)		(72.9)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.



LINKED IN LEADERSHIP



Two major firms stretch halfway across the world to collaborate in a gigantic venture, to give a boost to India's tyre and tube industry.

The Madras Rubber Factory—India's largest manufacturer of tread rubber compound—and the Mansfield Tyre and Rubber Company, Ohio—one of the oldest, and sixth largest manufacturer of tyres, in terms of units produced, in the United States—join hands to manufacture Mansfield truck and car tyres and tubes at Madras.

When in full production, the new factory will be producing over 3,00,000 tyres and tubes per annum.

A part of this production will be exported overseas.

INDIA LEADS BUYERS OF U.K. AIRCRAFT

BRISK DELIVERIES EXPECTED

THE value of the U.K. aircraft industry's exports during 1960 amounted to £142.3 million, of which £73.7 million—easily a record—was accounted for by the sale of aero-engines and £61.7 million by aircraft sales. India, with purchases of aircraft and parts worth £8,567,000, was the leading buyer, followed by the United States (£5,737,000), Argentina (£5,292,000), Canada and Switzerland. The former was fourth on the list of buyers of aero-engines, with purchases worth £5,259,000. The United States was the chief customer, buying aero-engines worth £16,687,000, followed by Canada (£10,201.000) and France. Since the war, the U.K. aircraft industry has exported £1,084,378,000 worth of products, of which £356 million was accounted for by aero-engine sales and half of which has been earned during the last three-and-a-half years. The total for 1960 was the third highest ever recorded, and compares with the 1959 record of £156 million.

Record Figures

The chief executive and director of the Society of British Aircraft Constructors, Mr. Edward Bowyer, said: "It is gratifying that the 1960 figure came so near to the 1959 record. For five consecutive years, from 1955 to 1959 inclusive, the industry has achieved new records.....While I cannot, on the evidence, forecast a spectacular rise in our export trade in 1961, it is gratifying that the value of orders in hand for overseas customers last year exceeded comfortably those held in 1959. Deliveries will, therefore, be brisk during the next 12 months, and this will be reflected in our export figures".

The value of business in hand during 1960 included some £30 million for 35 airliners ordered during the year by operators in Canada, the United States, the United Arab Republic, Greece, Austria, Ghana, Japan, Germany, and the Lebanon. Another American order is worth £3.3 million, for Avon engines for United Air Lines' 20 *Caravelles*. During December 1960, overseas sales figures amounted to £13,229,000. Indian purchases were worth about £500,000, *mainly for engines*.

PROSPECTS FOR U.K. AVIATION INDUSTRY

IMPORTANCE OF SUPERSONIC AIRCRAFT STRESSED

THE 1961 Lord Sempill Paper was recently presented by Sir Percy Hunting, lately chairman of the Hunting group of companies. His subject was "the world's future transport requirements" and his remarks on supersonic aircraft—with particular reference to the British project—merit close study. "Britain is planning to start a supersonic transport," he declared, "and this project is in line with Britain's history of being in the vanguard of progress on the prime class of vehicle, whether it be ship or aircraft."

Not to pursue the supersonic aircraft will be to break with tradition. The arguments against doing it are well known: (1) that it will tie up too much of the U.K.'s industrial capacity, and (2) big cities of the world are not big enough to justify more than a hundred or two of these vehicles. Naturally, it will be a consuming undertaking, Sir Percy said, but Britain cannot afford not to embark on it. The counter-argument is to concentrate on aircraft designed to offer exceptionally low fares, but Britain clearly must do both since world traffic will be increasingly diverted into the two distinct paths—speed without regard for economy, and economy without regard for speed—and she cannot afford not to make a challenging contribution in both spheres if she is to remain "a significant aviation influence." Since the advent of supersonic aircraft is now certain, either the U.K. must design and build them or her airlines will be compelled to buy and operate foreign-built aircraft.

BRITISH DIESEL TRACTORS TO BE BUILT IN INDIA

A manufacturing licence to produce in India the diesel tractors of Massey-Ferguson Ltd, of Coventry, England, has been issued to Tractor and Farm Equipment (Private) Ltd, Sembiam, Madras. Massey-Ferguson has a substantial minority interest in the newly-formed Company. A spokesman for the British firm recently said that initial production would be at the rate of 3,500 tractors a year on a single-shift basis. The first model to be produced will be the M.F.-35, a medium-horse-power tractor, of which there are already some 16,000 operating in India. The Indian Company is to build a modern plant near Madras. Plans provide for completely indigenous production after the first two or three years. The programme—in which agricultural implements will progressively be included—is expected to offer employment eventually to about 3,000 people.

NEW B.I.S.N. CARGO SHIP LAUNCHED

The *Bamora*, 7,370 tons deadweight, which is the fourth new cargo liner to join the British India Steam Navigation Co. Ltd's Australia-Persian Gulf service has successfully run her trials, attaining a speed of over 17½ knots. She was recently taken over from Messrs Harland and Wolff Ltd, and will shortly join the *Bankura*, *Barpeta* and *Bulimba*. The *Bamora* was launched by Mrs. R. H. A. Bond, wife of the Commodore of the British India fleet, and is to be commanded by Captain T. M. Rouse. The Chief Engineer Officer is Mr. J. C. Darroch. Only one previous vessel of the B.I. fleet has borne the name of *Bamora*, and she served the Company from 1914 to 1950, and had a gross tonnage of about 3,285.

IRON-MAKING STARTS IN SECOND BLAST FURNACE IN DURGAPUR

The Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, performed the lighting-up ceremony of No. 2 blast furnace at the Durgapur steelworks on 2nd February. The marked improvement in raw materials supply has enabled No.2 blast furnace, which has been ready for some time, to commence operations. No.1 blast furance has been in operation since December 1959, and has produced over 380,000 tons of iron to-date. Work on No.3 blast furance has very nearly been completed, and it will also be ready in a few weeks' time. Each of the three blast furnaces at the Durgapur steelworks is capable of producing 1,250 tons of iron a day.

NEARING ACHIEVEMENT

India's ambitious Durgapur Steelworks project is well on the way to completion. ISCON, the consortium of famous British engineering and electrical manufacturing companies, has been most successful and the end of the job is in sight.

Rolling mills, melting shop, blast furnaces, coke oven batteries and cooling towers have transformed the skyline. The birth of this new industry has already brought new employment to West Bengal. A steel city has been carved from paddy fields and jungle by people of two different nationalities and background, but working as a team with a single purpose. The result is a triumph for British industry and a better tomorrow for the people of India.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose further by 0.6 percent to 125.9 during the week ended 21st January, 1961, compared with 125.2 (revised) for the earlier week. The index was higher by 1.0 percent and 5.5 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced by 0.4 pecent to 116.6, compared with 116.1 (revised) for the previous week due to a rise in the prices of jowar in Hubli (+36%) and in Nagpur (+7%), salt (+24%) and milk in Calcutta (+14%), oranges (+13%) and rice in Hailakandi and in Marcara (+9% each) and in Sainthia (+8%), potatoes (+7%), bananas in Calcutta (+5%), coconut oil (+4%), maize and cashewnuts (+3% each), ragi, onions, eggs and gur (+2% each) and wheat, mung, urad, groundnut oil, fish, tea and coffee (+1% each), although the prices of milk in Bombay (−30%), jowar in Nandyal (−12%) and in Jhalawar (−10%), bananas in Bombay (−9%), rice in Kotma (−9%) and in Balasore (−8%), gingelly oil (−3%) and bajra, arhar, mustard oil and black pepper (−1% each) showed declines. The index for Tobacco increased by 0.3 percent to 109.8 as a result of a rise in the prices of raw tobacco. The Fuel, Power, Light and Lubricants group index stood unchanged at the previous week's level of 120.2. Higher prices of gingellysed (+5%), raw jute (+4%), groundnuts, linseed (+3% each) and rapeseed and lac (+1% each) raised the index for Industrial Raw Materials by 1.3 percent to 155.8 Prices of raw hides (−9%), cottonseed (−5%) and raw silk, copra and tanning materials (−1% each), however, moved down. The index for Intermediate Products advanced by 0.9 percent to 135.0, compared with 133.8 for the earlier week. Items which showed variations during the week were : linseed oil (+4%), rayon yarn and lead (+2% each), cotton yarn (+1%) and tin (−1%). Prices of jute manufactures and silk and rayon manufactures (+3% each) and soap and oilcakes (+1% each) moved up, while those of cotton mill cloth (−2%) declined and, in consequence, the index for Finished Products rose by 0.2 percent to 126.5, compared with 126.3 (revised) for the previous week.

ANNUAL NUMBERS

The Eastern Economist Annual Number, 1961. Edited by E.P.W. da Costa. (Published by the Eastern Economist Ltd, United Commercial Bank Building, Parliament Street, New Delhi. Price Rs. 10, pages 255 + XVI.)

The latest annual number of the *Eastern Economist* has chosen the theme of India and North America. Although the comparison of the richest region in the world with one of the poorest countries does not seem appropriate, the publication has discussed the possible growth rates in the two regions with the help of official reports in the United States, Canada and India. India is now at the take-off stage, which the United States reached nearly a century ago. The former, it is argued, will reach the stage of a high-consumption economy four decades hence. But the crucial question is whether this stage will be reached because of the steady growth of population which will boost consumer demand, or because of an improvement in the living standards of the people. To some, this may appear an abstruse theoretical exercise, but it is interesting since people in India are anxious to know whether the sacrifices for economic plans today will bring rewards tomorrow.

Commerce Annual Number, 1960. Edited by S. V. Rayan. (Published by Commerce (1935) Ltd, Brady House, Veer Nariman Road, Bombay. Price Rs. 10, pages 256.)

The latest annual number of *Commerce* is also its golden jubilee issue which commemorates its uninterrupted publication for the past fifty years. It contains an interesting article on the history of financial journalism which, as is well known, *Capital* pioneered in India in 1888. The annual contains a large number of articles on economic problems. But those discussing administrative reforms, distribution of national income and India's aspiration to achieve economic independence through grandiose prestige projects are more interesting. In order to provide a rich fare for its readers, the annual contains, as usual, articles on major industries as well as the principal markets.

VITAL NEWS
for every businessman

The management of the Times of India group of publications has decided to change the name of the proposed daily financial newspaper from 'The Financial Times of India' to 'The Economic Times'.

The change is designed to meet certain technical requirements, but the management is happy that the new title with its wider significance accords better with the newspaper's main field of coverage—the economic development of the country.

The newspaper which will consist of eight pages will be published on all days of the week and will be priced at 20 nP. per issue.

The Economic Times will contain information vital to every businessman, business house, investor, banker and student of economic affairs. With its comprehensive and objective coverage of economic developments in India and the world over, *The Economic Times* promises to keep its reader better informed than ever before.

"THE ECONOMIC TIMES" WILL CONTAIN:

- **Economic news and comment** of world-wide and Indian interest
- **Complete coverage of all six Indian stock exchanges** and those in London and New York
- **Spot news on planning and development** from regional economic bureaux and news about aid and collaboration from foreign correspondents
- **Extensive reports on the hundreds of commodity markets** in India; statistics, tables and graphs on economic trends
- **Periodic economic newsletters** from State capitals
- **Exclusive information from India and abroad** for the import and export trade
- **Investment guidance** by experts; critical analysis of company balance sheets
- **Articles on current topics** by well-known economists; informed leading articles

The Economic Times will be a newspaper that no businessman can afford to do without.

THE ECONOMIC TIMES

SUBSCRIPTION RATES: *Local and through authorised agents:* Yearly Rs. 73.00, Half-yearly Rs. 36.50, Quarterly Rs. 18.25

IRREGULAR TREND AT TEA EXPORT SALE

QUALITY DUSTS DEARER

AT Sale No. 29, held on 6th and 8th February, 72,339 packages on offer at the Export sale met with a strong general demand at irregular rates. Dooars B.O.P.s sold at about last rates but the better O.Fgs. were usually easier. Plain brokens and Fannings sold well. Legg-cut teas were irregular and sometimes easier. Medium Assam B.O.P.s and O.Fgs. tended easier except for the occasional brighter liquoring types. Medium B.P.s and Fannings were about firm on last rates. There was good support for the well-made whole leaf grades, but the poorer stalky kinds declined further. Poorer Darjeelings received fair support but the better grades tended easier. Tippy teas sold well. The very best autumnal C.T.C.s met with good support at firm to dearer rates but the remainder were up to 20nP lower. Mediums and secondary types were irregular, although the former were at times dearer.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.45	2.18 to 2.22
Plain B.P.	4.55 to 4.65	1.96 to 2.00
Plain Fannings	4.80 to 5.00	2.00 to 2.10
Medium B.P.	4.70 to 4.90	1.92 to 1.98
Medium Fannings	4.90 to 5.10	2.06 to 2.16
Best Assam C.T.C. B.P.	5.80 to 6.20	2.40 to 2.60
Best Assam C.T.C. Fgs.	5.80 to 6.40	2.45 to 2.65

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 22,988 chests of Dust on offer met with a good general demand. Orthodox teas were well supported at 5nP to 10nP below last rates. Legg-cut teas opened up to 15nP easier but strengthened as the sale progressed. Good C.T.C. teas met with good support with buyers following quality closely and the very best kinds sold at enhanced rates. Medium C.T.C.s, although irregular, generally came to an easier market and declined by up to 10nP except for the brighter liquoring descriptions which were firm to dearer. Darjeelings were a strong feature and sold above valuations.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.80 to 4.95	2.26 to 2.46
Medium Assam Dust	5.00 to 5.30	2.20 to 2.40
Legg-cut Dust	5.15 to 5.40	2.26 to 2.34
Medium Assam C.T.C. Dust	5.55 to 5.80	2.55 to 2.85
Good Assam C.T.C. Dust	6.00 to 6.50	

(Quotations are inclusive of excise duty.)

There was a good demand for the 894 chests of Leaf on offer. The few lines of green teas, however, were easier, the top grades receiving little support and were difficult to sell.

TIME CHARTERING ACTIVE IN FREIGHT MARKETS

CHARTERING in the freight markets has been dominated by the Far East where numerous vessels have been taken on time charter for Chinese account for an Australian round voyage. Besides time charters, several voyage charters to carry cargoes of foodgrains from Australia to north China have been reported at a steady rate of 60s. It is also said that over 60,000 tons of Canadian barley have been bought by China. The fixture of a Liberty-size vessel from Marmugao to western Italy with ore has been concluded at 45s while Marmugao to Japan paid 47s 6d f.i.o.t. Furthermore, 9,400 tons, 5 percent coal, February loading, from South Africa to Colombo paid 47s 6d f.i.o. trimmed. Charterers have accepted 80s 6d f.i.o. stowed for 9,000 tons, 10 percent sugar in bags from Cuba to Ceylon, February laydays, 750-750. Since the Indian Sugar Mills Association has started exporting sugar, it should compete with other countries, as it should not be difficult for it to obtain tonnage at a lower rate than Cuban shippers have paid. Another fixture of pig iron of 9,000 tons 5 percent from Visakhapatnam to Japan, February shipment, has been concluded at 39s 3d f.i.o.t. Although the berthing position of vessels in the port of Calcutta is quite satisfactory, arrivals of coal and iron ore from mines are very irregular and sailing schedules of ore or coal loaders are not being maintained. Due to the slow rate of clearance at the transit shed, the Madras port is still facing berthing delays of five to seven days.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 31st January and 6th February, 1961)

Cowhides: Wet salted (Ord.) 17,000 pcs. on the basis of Rs. 8.25 to Rs. 12.37; Wet salted (Slaughtered) 20,700 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 28.50.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

HEART OF EX-BRITISH INDIA WELCOMES THE QUEEN

QUEEN ELIZABETH II comes to Calcutta tomorrow after seeing a good deal of India and all of Pakistan. Not so very many years ago she would have come to Calcutta first; and to some of the places on her present itinerary she might not have cared to go at all. She is well aware of these years of change. As she moves through this teeming, chaotic and hastily built up city, she will be putting flesh on the bones of the facts she has read or heard about Calcutta. Bones, alas, are about all that ordinary visitors see. But some cities never quite lose the aura of their past. What is now called Leningrad ceased to be Russia's capital many years ago. Yet Leningrad still has a grace and a grandeur sensitive Muscovites envy. Calcutta's monuments are no match for the ones the Queen has already seen in northern India. These, of course, belong to earlier periods of Indian history. What she will see in Calcutta is a part of her family's being, for Calcutta, with all its deficiency in antiquity, was built by the British. And here to this day live and serve the largest number of her subjects in this country whose free people are according so spontaneous a welcome to a successor of their former rulers. Empires are not popular these days, even with peoples who possess them. Imperialist nations are glad to be rid of their external realms, especially so when the parting is graceful and subsequent relations grow in friendship—as is the case with India. Indo-British cooperation is explicit throughout this part of the country; and the area of working together for rapid industrialisation is expanding daily. The total desirability of this mutual assistance is no longer seriously questioned either here or in the United Kingdom. Calcutta has a reputation for radicalism; and in the struggle for freedom its rôle is proudly remembered by the Bengalis. If, in spite of this, the city receives the Queen with cordial enthusiasm, as we are sure it will, there are, we submit, good historical reasons for it.

It was in Calcutta that the three most significant planks of British rule in India were first laid—an impartial administration, English education and expanding commerce. What remains of the administration evokes the envy of observers as far apart as the Emperor of Ethiopia and Dr. Soekarno of Indonesia; India's judiciary maintains standards unthinkable in most newly independent countries. English education has many critics and the assaults on the language are distressingly frequent. Opposition to its abolition, however, is at its strongest in West Bengal, this despite the fact that its own literature is the richest in the country. For Bengalis know that a language is more than a collection of words; it represents ideas; and if Europe's commerce with Asia in the years to come is going to be chiefly in the domain of new ideas, West Bengal retains its brilliantly receptive mind. As for material commerce, Calcutta is the seat of what nobody need be ashamed to call British business. The mines and mills of Howrah, Hooghly, Titagarh, Asansol, Durgapur, Raniganj—to say nothing of the tea gardens of the Duars—are testimony to what British merchants have accomplished and continue to create.

From the point of view of the Queen's Indian visit, it is possible to argue that Calcutta has a special importance. In spite of occasional, inevitable differences between the two countries, India and Britain co-operate fruitfully for peace at the United Nations. Within the Commonwealth, whose Prime Ministers will meet again in March, Mr. Nehru's wisdom is appreciated by all his colleagues; and political consultations are held by New Delhi and London on various world problems more frequently than the public is told. It is yet true that Indo-British co-operation in the future will be more in the economic and cultural fields than in the political. This is where Calcutta comes in, as no other Indian city does. While most of us hail, and work for, the new amity discovered between India and Britain since independence, one nagging Indian writer, the no longer unknown Indian Mr. Nirad C. Chaudhuri, insists that the English people should take his word for it that "there is no greater myth than the much-talked-about Indo-British friendship since 1947." (*A Passage to England*, Macmillan, 1959.) The immediate reaction of most Indians and Britons must be to reject so sweeping and subversive a statement. But if, in the all-India context, this dangerous generalisation has any validity, which needs to be substantiated, the engagingly individualistic State of West Bengal may still be an exception. Who knows? The politically conscious Bengalis' revulsion against alien rule often assumed violent forms and proportions, to which *Capital's* attitude was always as befitted the times. Nothing said on either side need be unsaid. It may yet be true that some aspects of the British connection have left a more abiding impress on this part of the country than on almost any other, including Madras where the East India Company was established earlier.

If much of the foregoing smacks of Bengali chauvinism, the reasons are only a part of the Queen's business. The steady erosion in Calcutta's importance may have been started by her predecessors' loyal bureaucrats; the process has been continued, and faster, by the successor Government. Not all the steps taken in this direction stemmed from West Bengal's deficiencies, many though they may have been. This, again, is not a matter for the Queen to bother about. But if her visit is not purely ceremonial and is expected to produce certain results in terms of the long-term relations between her country and this, Her Majesty's Government may fairly be asked to take a special interest in the city of Calcutta. The World Health Organisation and the World Bank are doing; and the rights and duties of the head of the Commonwealth can hardly be less.

There are good reasons why Calcutta should not be presented to the Queen as an ugly shock. Something of a sad experience the city remains in many respects. For reasons already indicated, the United Kingdom is justified in taking a more active and direct interest in the future of this city. Several concrete suggestions offer themselves readily. It is not beyond Britain's resources to present Calcutta with certain municipal amenities. A steel mill is what the Government of India appreciates most; and let Durgapur be expanded by all means. But in this city, where learning is still respected for its own sake, a model university might receive greater popular acclaim. In the Middle East there are several American universities which produce teachers, administrators and other personnel badly needed by those countries. Why not an English university in Calcutta manned by English teachers? There is no reason why there cannot be a model British hospital in Calcutta. There is one in Paris, another in Addis Ababa. These institutions would not be for British nationals only; but they would serve as models; and an English university may do more for the English language in India than lengthy memorials by sections of Indians or occasional week-long seminars organised by the British Council.

Many similar ideas will readily suggest themselves if Her Majesty's Government consents to turn its mind in this direction. The statues of some former British administrators, many of them truly abominable, have been removed from street corners; and the magnificent edifice of Calcutta University's Senate House has been demolished. But there are other ways of remembering that English education once came here, chiefly at the insistence of enlightened Indians, and that here was a fusion of two unlike cultures to the permanent enrichment of the culture of India. Too little has been done by Britain to sustain the impact. British business will, we may be sure, gladly cooperate. In this Tagore Centenary year, the Bengal Chamber of Commerce and Industry proposes to participate actively. This organisation contributes to many funds concerned with the life and welfare of West Bengal and India. What is suggested now is that the Queen's visit be made an occasion to demonstrate that Calcutta occupies a special place in Britain's relations with this country and that Britain intends to do some positive things for the city her people founded. The image of the rude Englishman ordering the "natives" about happily belongs to the dead past. The very incomplete image of the Englishman growing tea or installing a machine—and making a lot of money in the process—persists; and this is largely because of the thoroughly archaic British view that all people like to be left alone and that commerce is best conducted quietly. Why should it be left to the Americans to create a liveable Calcutta, although through world organisations? Why cannot the Colombo Plan undertake it? Why cannot Britain do the job? Murshidabad was once a city more beautiful than London; Clive found it so. London has a debt to Calcutta; and it is not ungracious to say this on the gracious occasion of Her Majesty's visit.

SLOW COACH TO VACUITY

THE preliminary report issued early last week by the Transport Policy and Co-ordination Committee is a curious document. The Committee was set up in July 1959 to recommend a long-term transport policy for the country. It was asked also to define the rôle of the various means of transport over the next five or ten years against the background of the long-term policy, and to suggest ways of co-ordinating the growth of transport facilities. One-and-a-half years of presumably hard labour have passed, but a preliminary report has now been issued which raises more questions than it answers. The difficulties facing the Committee have admittedly been serious. The problem it has been asked to consider is extremely complex; data especially statistical, are lacking; and the membership of the Committee has changed almost as fast as the scenery from a mail-train window. But the preliminary report will still bring despondency to the hearts of those who have watched India's transport system get into a steadily worse mess in recent years, and who thought that the whole purpose of appointing the Committee was to highlight the need for urgent remedies. Some may recall that it was the chairman of this Committee, Mr. K. C. Neogy, who, as member of the Planning Commission, made a big fuss about the neglect of transport around the time the second five year plan was inaugurated. Now, with the third plan almost ready to be launched, it is found that this country is still without a proper transport policy. All it has is apparently a long-term Committee which believes in long-term enquiries and long-term discussions reinforced by long-term thinking about long-term problems before it spawns long-term recommendations.

The preliminary report, nevertheless, is not entirely without value. It manages to make some controversial recommendations in at least one limited field—co-ordination between the railways and the nationalised road transport undertakings in the States which largely operate passenger services. For the rest, it is a useful, if rather academic, review of the difficulties which arise in the co-ordination of railway and road transport generally—difficulties which constitute the crux of the transport co-ordination problem in India. The Committee says that, in framing a long-term policy, one of three broad choices has to be made. The first is to allow free and unrestricted competition between the different forms of transport. The second is to co-ordinate their operation and growth through Government regulation. And the third is to integrate all the road and rail services into one single unit, so that the co-ordination will

be brought about not from outside, but from within the authority responsible for joint management. The report adds that, at first sight, it might seem that only the second of these choices has any relevance in Indian conditions, at least for the immediate future; it is, in fact, the one followed by most countries which have a nationalised rail transport system. But, it declares, the first and third choices cannot be summarily dismissed; the need for transport facilities is growing so fast that the country must be prepared to accept radical changes if they are necessary in the interests of economy and efficiency. Hard as it has tried not to commit itself on any point, the Committee does seem to oppose the second choice when it says that "to rely on regulatory measures, to be devised *ad hoc* as and when any signs of unhealthy competition appear, will not, in our view, be the right answer to the questions confronting us."

It is not easy to agree with the Committee here. In a planned economy, some regulation of transport is necessary, perhaps inevitable. At the same time, nothing would be more foolish than to go in for complete regulation, through nationalising all forms of transport, which the Committee appears to treat as a possibility worth considering. It seems to feel a tinge of regret that this possibility might not have immediate relevance, since a guarantee has been given that the transport of goods by road will not be nationalised during the third plan period. In fact, the case for not nationalising road transport rests on far stronger grounds than just an official promise. Road transport has recently begun to attract a good deal of private investment; there is no reason why this investment should be shut out, considering that it is providing facilities which the country desperately needs. State Governments, which claim to be perpetually short of money, should be able to find better uses for their resources than to put private owners of lorries and buses out of business. It is debatable whether the nationalisation of road transport anywhere in India has improved the services it renders; the usual experience of users is that it has not. Finally, to think of nationalising road transport in order to build a "co-ordinated" transport system is an idle dream; the simplest information on the basis of which such co-ordination would be possible is lacking, as the Neogy Committee has by now found, if only to excuse the fruitlessness of its endeavours.

The Committee appears to be extremely hesitant about allowing co-ordination to be achieved through free and unrestricted competition between the different forms of transport. The hesitation seems to spring from the fear that, in such competition, the railways will suffer because they have to accept many uneconomic obligations in the wider interests of the country. Large portions of the preliminary report are devoted to explaining what these obligations are. At one end, it is claimed, the freight rates for certain basic commodities like coal and foodgrains are kept specially low in order to promote the growth of the economy. At the other end, various concessions are offered to students, Bharat scouts, girl guides, blind persons, and so on. In between, all sorts of hidden subsidies are given to, say, military and postal traffic. These obligations are not imposed on road transport, so, the argument runs, it will be almost impossible to equalise the conditions of competition between the roads and the railways. But to many it will seem that the dark mind of the Railway Ministry is only too evident in this reasoning. If the railways charge specially low freight rates for commodities like coal and foodgrains, there is nothing unusual about it. The rating is presumably based on the principle of "charging what the traffic will bear", which is the only sound principle to follow in framing a rational freight policy. On the other hand, if concessions are given to military and postal traffic, along with Bharat scouts and girl guides, the railways themselves are to blame. It is their business to insist either that they be allowed to charge the right fares and freights, or that they should get open and direct subsidies for any concessional traffic they are compelled to carry. There is no reason why the railways should subsidise other departments, run uneconomic services, or favour certain types of passengers from out of their own revenues. Nor is there any reason why they themselves should meanwhile go on indulging in extravagant welfare schemes for their own staff which they can ill afford. The fact that these things are done merely shows that the railways are run inefficiently and uneconomically. The deficiencies have to be removed before any complaint about unequal competition from road transport can be entertained.

The preliminary report suggests that the Neogy Committee has almost had a collapse of heart when considering the possibilities of equalising competition between the roads and the railways. As it says, "the railways have a large number of obligations which are not shared by road transport. To establish equal terms of competition between them, therefore, presents numerous problems." The short answer to this is that everything in life "presents numerous problems." The whole purpose of appointing a committee, and of suffering the thoughtless vacuity of its preliminary reports, is to find some sort of an answer to those problems. There is little hope that an answer can be found by planning for highly-centralised "co-ordination" of the sort reminiscent of infants sorting out jig-saw puzzles. As things are, the Neogy Committee has not the foggiest idea about what things were transported where, in what quantities and by which means in 1946 or 1956; it can have even less idea of what matters will be like in 1966 or 1976. The one certainty is that the demand for transport facilities will increase rapidly, probably more rapidly than the rate of economic development. The first need, therefore, is to remove all wasteful burdens as far as possible from all forms of transport, whether they be the railways, the roads, airlines or coastal shipping. Thereafter, they should be allowed to grow in relative freedom wherever an economic demand for them exists. This does not necessarily mean free and unrestricted competition. But it does mean whittling down discriminatory taxes, subsidies, burdens and controls which are distorting the entire growth of the Indian transport system today.

MORE COMPETITION IN EXPORTS

WHILE the United States and Britain discuss co-ordination in monetary matters, they cannot conceal the conflict in their trading policies. Both the dollar and the pound are strained by payments deficits, and it is sensible that both countries, and others concerned, should avoid monetary actions that would aggravate the other's problems. But both the United States and Britain are trying to reduce their deficits by exporting more goods, in a world where competition is already strong. There is, of course, no fixed total of international trade, to be shared in varying proportions among the exporting nations, but the limit is not so flexible that a major exporting nation can substantially increase its exports without reducing the trade of its competitors. In the field of export credit, this conflict of interests has recently been brought into the open. The British Government has often asserted that it will not become involved in a "credit war", but it has recently extended facilities for export credit because other countries, including the United States, have been offering more favourable terms; yet President Kennedy, referring in his Message to Congress to the plan to improve the facilities of the Export-Import Bank, stated the intention "to place our exporters on a basis of full equality with their competitors". The Berne Union agreement, which was intended to prevent a "credit war" by restricting the terms of insurance cover for export credits, has not always been strictly observed (indeed, such important countries as the United States and Japan did not commit themselves to it), and recent moves to extend credit may so weaken the Berne Union association that it disintegrates.

The British Government provides not export credit but insurance for export credit—through the Export Credits Guarantee Department. It has recently, however, approved an important change in the financing arrangements: a considerable part of the medium-term export credits granted by the banks can now be refinanced by the Bank of England, and the banks can treat the refinanced portion as a liquid asset. Exporters have complained that finance for export trade involving a few years' credit is not always readily obtainable, but henceforth the banks have no reason for reluctance to provide it. Credit becomes more important as competition in the capital trades increases, but generous credit alone will not win contracts. British firms have been criticised at home for inadequate efforts to sell their goods abroad, and they have been criticised abroad for failure to deliver their goods within the agreed time. Significantly, the president of the Federation of British Industries, Sir William McFadzean, uttered recently a strong appeal to the heads of all exporting companies, urging them to attend to this problem personally. "A reputation for late deliveries", he said, "spreads far more quickly and widely overseas than a reputation for contracts ably fulfilled to the letter." Just previously, the London Chamber of Commerce had published a report on the lasting damage caused by strikes among dock-workers, and the Chamber's chairman, Mr. Allen L. Stock, had emphasised the point by stating: "The most insidious damage is to the overseas customers' confidence in the ability of British firms to deliver on time."

Often, however, the delays in delivery are due to faults in the exporting firms. If there is no sense of urgency to export, because plenty of orders are available at home, trading at home must be made more difficult—so, at least, the Government argues. However, the latest investigation carried out (at the end of January) by the Federation of British Industries shows a weakening of orders for the home market and a slight strengthening of orders for export, also an increase in deliveries to customers abroad, in the four months since the previous investigation. At the same time as this report was published, the Governor of the Bank of England, Lord Cobbold, declared himself satisfied with the results of last year's monetary policy—which is still, essentially, in force. The shift of emphasis from domestic trade to export trade is, indeed, precisely the result that the authorities intended. But the F.B.I. is not complacent. In the weakening of demand at home it sees a danger of widespread recession; and it has discovered in the replies to its questionnaire a decided upward tendency of costs, which is due partly to under-employment of resources. Both the Chancellor of the Exchequer, Mr. Selwyn Lloyd, and the President of the Board of Trade, Mr. Reginald Maudling, have shown themselves aware of the problems of inadequate growth—or, at least, of the demands for adequate growth. But they insist that growth of the economy must be related to growth of exports. "Export and Grow" is the slogan proposed by Mr. Maudling. Mr. Lloyd says that output can increase by 3 percent a year—if exports increase by double that percentage.

The need to increase exports is most obvious in the unsatisfactory state of the U.K. balance of payments. It is clearly apparent, too, in such studies as that recently published in the *Board of Trade Journal* showing the increase (or decrease) in the exports of 11 non-communist countries which together account for a almost 90 percent of the international trade of the western world. In January-September 1960, compared with the same period of 1959, Britain, of all the 11 countries, achieved the least proportional growth in export trade. Her percentage increase was 9.3 percent, the U.S.A.'s 17.7 percent, West Germany's 18.3 percent; and Italy, at the top of the list, achieved an increase of 47.8 percent. Internally, Britain is now better prepared for an export drive; but her efforts may fail if the U.S.A., with much bigger resources, launches an attack on the world market. It is noted that the Americans plan to sell much more in Britain—while Britain is trying to economise imports. But it is in export markets that the American drive most seriously threatens sterling. If it strengthens the dollar it will almost automatically weaken the pound; whereas the stability of the world's finance requires that both the international currencies should be stable. This is a problem that the policy co-ordinating bodies must discuss frankly.

BETTER CORPORATE WORKING IN 1959

THE ebullience of the Calcutta and Bombay stock markets at this particular time of year is remarkable considering that the Budget is less than a fortnight away. Much of the confidence appears to be based on reports of good corporate working. Statistics concerning the finances of 460 public limited companies in 1959, as examined in the January issue of the *Reserve Bank of India Bulletin*, seem likely to reinforce this optimism. These companies represent 35 percent of the paid-up capital and 34 percent of the total assets of the 1,001 companies previously analysed in the *Bulletin*. Among the industrial sub-groups covered by the present study, cotton textiles account for one-third of the total assets of these 460 companies, engineering 10 percent, mineral oils 8 percent and tea plantations 7 percent.

There are a number of satisfactory features. Profits before tax increased substantially from Rs. 43.0 crores in 1958 to Rs. 61.3 crores in 1959. The profits of cotton textile mills rose from Rs. 5.6 crores to Rs. 13.3 crores. Other notable increases included Rs. 1.9 crores for tea plantations, Rs. 1.4 crores for chemicals, Rs. 0.9 crores for silk and woollens and Rs. 0.8 crores for jute. The ploughed back profits also increased from Rs. 2 crores to Rs. 12 crores. So the ratio of gross profits to sales improved from 7.7 percent to 9.5 percent and that of gross profits to total capital employed from 8.5 percent to 10.8 percent. The profitability of equity capital, as indicated by the ratio of profits after tax to net worth, improved from 5.8 percent to 10.4 percent.

Sales rose from Rs 719.9 crores in 1958 to Rs. 764 crores in 1959. On the expenditure side, manufacturing expenses increased slightly by 0.3 percent to Rs. 411.4 crores, but salaries and wages went up by 5.3 percent to Rs. 134.4 crores. There was an increase of 13.9 percent in excise duties. The latter two increases should put shareholders on their guard, because since 1959 there have been further increases in labour emoluments following many Tribunal awards. The trend in excise duties is a matter for concern because the Government is likely to rely more and more on this method for raising the major portion of its increased revenue requirements. If labour remuneration is permitted to increase in this manner without any corresponding improvement in productivity, the profitability of industry will be hampered. It is no doubt true that the Government will be forced to use excise duties as a means of raising revenue to a greater extent in the future. But the impact on production costs could be adverse if industries are not able to pass the burden of the additional duties on to the shoulders of consumers. Considering that the prices of many commodities are regulated and controlled, it is doubtful whether the full burden of the increased excise duty can be shifted in the form of higher prices.

The small increase in manufacturing expenses should give no ground for complacency, because during the past year or so there have been substantial rises in the costs of several raw materials. The high prices of raw jute and cotton, and many foreign raw materials, are expected to be reflected in increased manufacturing expenses when corporate results for the year 1960 are published. The rate of gross fixed assets formation was 6.6 percent in 1959, against 8.7 percent in 1958 and that of net assets formation was 4.9 percent, compared with 9.4 percent. So the rates of total gross capital formation worked out to 4.4 percent, against 4.5 percent, and that of total net capital formation to 2.5 percent, against 3.1 percent. The total assets formation of these 460 companies amounted to Rs. 48.6 crores in 1959. The total gross fixed assets formation was Rs. 29.6 crores. Of these, cotton textiles accounted for Rs. 11.5 crores and engineering for Rs. 3.9 crores.

An important factor is that in financing the assets formation there has been an increased emphasis on internal resources. External resources comprising fresh capital, borrowing, trade dues and other liabilities, accounted for 30.5 percent of the total finances used for assets formation in 1959, compared with 34.8 percent in 1958. Fresh issues of share capital contributed Rs. 4.1 crores. The small part played by the new share capital in total financing indicates that the corporate sector has not yet found it easy to obtain its financial requirements from the open market. In this sense the recent response to some new share issues could easily give a misleading picture. Depreciation and free reserves—two important internal sources—contributed Rs. 17.4 crores and Rs. 14.4 crores.

As for shareholders, they have little excuse for enthusiasm because the dividend outlook has been hampered by tax deductions at source and the growth prospect has been undermined by the heavy tax on the issue of bonus shares. Although dividends paid in 1959 were Rs. 24.14 crores, against Rs. 17.05 crores in 1958, there is no evidence to show that there was any increase in the rate of dividends. The dividend figure has obviously been inflated by the fact that it includes the tax deduction at source. Bearing in mind that quite a number of shareholders do not usually take the opportunity of obtaining the tax refunds from the Income-Tax Department because the refund procedure is far too complicated for any layman to tackle, the net dividend has not generally improved. The publication of company results in the recent past shows how difficult it has been even to pay the same net cash dividend as before after meeting the tax deduction at source. Apart from the tax which is deducted at source, the dividend figure by itself does not mean that shareholders got more than before because there has meanwhile been a substantial increase in share capital. So it is difficult to say whether there was improvement or not in the rate of dividends paid.

Current News and Comment

Southern Industrial Equity Offer

The Southern Industrial Corporation Ltd, which was formed in Madras State nearly six years ago, has been running a factory for various wire products, including wood screws, gate hooks and eyes, ship chains and flexible shafts. About 454 tons of wire were processed in 1959. The Company has now undertaken large expansion schemes. It has obtained an industrial licence for manufacturing flexible shafts and flexible shaft machines in collaboration with Otto Suhner Ltd of Brugg, Switzerland. Steps have been taken to expand the capacity of the wood screw section from 50,000 gross to 70,000 gross a month. Machinery has been installed for producing Dowell screws and Phillips recessed head screws and for electroplating. Considering the good demand for the products, the expansion is expected to improve earnings considerably.

In order to finance the expansion schemes, the Southern Industrial Corporation is offering 90,000 ordinary shares of Rs. 10 each for public subscription at par. (Fuller details of the offer are published on a later page.) Out of these, 16,500 shares have been marked for firm allotment. The entire issue has been underwritten. The subscription list will open next Wednesday. The new shares will not participate in the interim dividend of 10 percent which has already been declared, but they will participate in the final dividend which may be declared for the year 1960. In all other ways, the new shares will rank *pari passu* with the existing ordinary shares. The issued and paid-up capital at present is Rs. 6 lakhs, divided into ordinary shares of Rs. 10 each.

Bigger Profit for Alliance Jute

The ordinary shares of the Alliance Jute Mills have improved to Rs. 95 during the past week, because the Company has produced satisfactory results for the year ended May 1960. A taxable ordinary dividend of 6 percent has been paid after an interval of four years. It is covered more than four-and-a-half times, and offers a yield of 6.3 percent at the present price. (This ordinary dividend was paid some time ago in the form of an interim dividend.) The profit has increased from Rs. 6.56 lakhs to Rs. 8.94 lakhs. Development rebate reserve is allocated Rs. 2.65 lakhs (against Rs. 29,200), leaving a carry-forward of Rs. 1,16,925. A debit balance of Rs. 1,88,265 was brought in. The directors take a cautious view of the prospects. They think that the profitability of the mills might be adversely affected since the price of raw jute has increased more than that of jute goods. During the past year, the North mill was closed down and production was concentrated in the South mill. An import licence has been obtained for some machinery in order to improve the working of the sacking weft side of the mill. An application for a loan of Rs. 21.49 lakhs to modernise the fine side of the mill is being considered by the National Industrial Development Corporation.

Union Carbide to Expand

The shares of Union Carbide (India) Ltd, which declined to Rs. 43.44 in December, are now quoted around Rs. 50.50. The improvement is due to sustained investment enquiry because of the Company's expansion plans. It has recently applied to the Central Government for a licence for expanding the existing industrial undertaking. The production of organic chemicals is proposed to be increased to 20 million lbs a year and the output of polyethylene and processed polyethylene is to be raised from 6 million lbs and 2.5 million lbs to 20 million lbs and 5 million lbs, respectively. The expansion schemes are to be implemented in collaboration with the Union Carbide Corporation of the U.S.A. Reliable reports indicate that the Licensing Committee has recommended a licence for manufacturing 6.5 million lbs of butyl alcohol, 6 million lbs of butyl acetate, 3 million lbs of acetic acid, 3.5 million lbs each of 2-ethylhexanol and dioctylphthalate, 1.5 million lbs of ethyl acetate and 20 million lbs of polyethylene. The licence has been recommended subject to certain conditions. The terms of foreign collaboration and arrangements for meeting the foreign exchange requirements will have to be settled to the satisfaction of the Government. The capital structure of the Company will also have to be approved. It is hoped that 10 million lbs of benzene a year will be recovered as a by-product from the cracking operations. Half the production of 2-ethylhexanol is expected to be offered to other manufacturers of plasticisers. The formal sanction of the Central Government is expected soon.

Deccan Sugar Maintains Dividend

The Deccan Sugar and Abkari Co. Ltd has reported satisfactory results for the year ended May 1960. After providing Rs. 13.14 lakhs (against Rs. 13.02 lakhs) for taxation, the profit has increased from Rs. 13.57 lakhs to Rs. 16.47 lakhs. Sales total Rs. 3.61 crores (against Rs. 3.63 crores). The ordinary dividend has been maintained at 25½ percent, subject to deduction of tax, absorbing Rs. 10.26 lakhs. The preference dividend of 9.1 percent, taxable, absorbs another Rs. 63,700. Allocations include Rs. 1.25 lakhs (against Rs. 3.45 lakhs) for development rebate reserve, Rs. 2.20 lakhs for general reserve (against nil) and Rs. 1.50 lakhs (against nil) for dividend equalisation reserve. The carry-forward amounts to Rs. 1.29 lakhs, against Rs. 66,641 brought in. The Samalkot factory crushed 117,689 tons of sugarcane, producing 11,179 tons of sugar, against 95,617 tons and 9,134 tons, respectively, in the previous year. The average recovery was slightly lower at 9.5 percent because more cane was crushed during a longer season. The Pugalur factory crushed 53,389 tons of cane during the 1959 special season and produced 4,956 tons of sugar. The recovery was 9.29 percent. During the main 1959-60 season, a total of 130,554 tons of cane was crushed and the sugar produced was 13,473 tons, the average recovery being 10.32 percent. The corresponding figures for the previous season were 143,339 tons, 13,862 tons and 9.67 percent. The directors state that they did not proceed with the proposed sale of the Samalkot factory.

Godavari Sugar Earns More

The working results of the Godavari Sugar Mills for the year ended May 1960 justify the Company's decision to raise the dividend from Rs. 20 to Rs. 35 a share, both taxable. After providing Rs. 5.81 lakhs (against Rs. 5.27 lakhs) for depreciation and Rs. 25 lakhs (against Rs. 12.50 lakhs) for taxation, the profit has increased from Rs. 19.86 lakhs to Rs. 44.60 lakhs. Sales at Rs. 2.84 crores are Rs. 84 lakhs lower than in the preceding year, but the closing stock has risen from Rs 1.04 crores to Rs. 2 crores. Development rebate reserve has received Rs. 1.35 lakhs (against Rs. 1.94 lakhs) and general reserve Rs. 28 lakhs (against Rs. 13.73 lakhs). The proposed dividends, ordinary and preference, absorb Rs. 15.32 lakhs. After making some minor adjustments, there remains a sum of Rs. 2.18 lakhs to be carried forward, against Rs. 2.71 lakhs brought in. The excise duty paid by the Company totalled Rs. 94.41 lakhs, compared with Rs. 70.57 lakhs in 1958-59. The directors say that the quantity of cane crushed at both factories was higher than in the previous year. The distillery worked only intermittently, and this was due partly to the accumulation of stocks as a result of the restriction imposed on the movement of denatured spirit by the State Government, and partly to the alterations in the distillery building in Sakarwadi for erecting the acetic acid plant. The plant, for which an order was placed with a foreign firm some time

ago, has now arrived. The directors state that for the efficient management of the acetic acid plant, they have decided to form a subsidiary company, to which they will transfer the distillery building and machinery and the new acetic acid plant.

Herdillie Chemicals: A New Venture

Nowrosjee Wadia and Sons (Private) Ltd, managing agent of the Bombay Dyeing and Manufacturing Company, has asked the Central Government to licence a new industrial undertaking for the manufacture of chemicals. Herdillie Chemicals Ltd will be the name of the new Company. The plant is proposed to be located near Bombay. It is expected to produce initially 10,000 tons of phenol a year, 14,500 tons of cumene, 6,000 tons of acetone, 2,000 tons of diacetone alcohol, 3,000 tons of phthalic anhydride, 3,000 tons of phthalates, and sufficient quantities of galvanised steel drums-black to pack the products. The output is proposed to be increased gradually to 15,000 tons of phenol, 22,000 tons of cumene, 9,000 tons of acetone, 5,000 tons of diacetone alcohol, 10,000 tons of phthalic anhydride and 6,000 tons of phthalates. It is reliably understood that the Licensing Committee has recommended giving a licence for all the items, except phthalic anhydride and phthalates, provided the Central Government is satisfied about the terms of foreign collaboration and the arrangements for foreign exchange. The question of manufacturing phthalic anhydride and phthalates will be examined later in the light of the demand and the production proposed in a public sector project.

Sulphuric Acid from Indian Dyestuff

Reliable reports indicate that no new units are likely to be allowed for manufacturing sulphuric acid unless it is for the consumption of the units themselves. The Government thinks that there is no scope for further expansion in this sphere since the production capacity which has already been approved is sufficient to meet the current and anticipated demand. Aminchand Pearelal, Bombay, recently applied for a licence for setting up a new plant near Bombay with an annual production capacity of 15,000 tons. The application is reported to have been rejected by the Licensing Committee on the ground that the existing and projected capacity which has already been approved is sufficient to satisfy India's needs. Indian Dyestuff Industries Ltd, Bombay, also asked for the Government's permission to increase the production capacity of its existing undertaking from 16,500 tons to 33,000 tons of sulphuric acid. It has stated that the expansion is necessary to make the unit more economical. The Licensing Committee is reported to have recommended that the Development Wing should ascertain whether the increased output will be used by the firm for its own requirements or whether there will be a marketable surplus. Indian Dyestuff's application is unlikely to be considered favourably unless the entire output is to be consumed by the Company itself.

Enfield India Rights Issue

Enfield India Ltd is completing its phased programme of expansion, and it now proposes to undertake the manufacture of scooters and Villiers engines. The collaboration agreement with Villiers of the U.K. has been concluded, and the foreign collaborator will be allowed to participate in the capital of the Company to the extent of Rs. 3.33 lakhs. The expansion programme is expected to cost Rs. 30 lakhs. The additional equity capital required will be Rs. 23.33 lakhs. Allowing for the Rs. 3.33 lakhs of equity capital reserved for the foreign collaborators, the balance of Rs. 20 lakhs will be offered to the existing shareholders. The authorised capital is to be increased from Rs. 50 lakhs to Rs. 1 crore.

Watches from Indo-French Time

Sponsored by the Phoenix Watch Company of Bombay, the Indo-French project for manufacturing watches is making satisfactory progress. The foundation-stone of the factory building, which will be fully air-conditioned, is likely to be laid before the end of April. Plant, machinery and equipment, for which orders have already been placed by the foreign collaborators, are expected to arrive soon. The promoters hope to put the first India-made watch on the market towards the end of the current year. The factory is being installed with a production capacity—in the fifth year of the phased programme—of 310,000 complete pieces of gents' and ladies' lever and pin-lever watches on a single-shift basis. The first year's output is expected to be 90,000 pieces. Imported components, which will constitute 50 percent of the value of the unit in the first year, will be progressively reduced to 10 percent in the fifth year. The selling price of the lever and pin-lever watches will be between Rs. 50 and Rs. 100, so they will compare favourably with similar watches made abroad.

Indo-French Time Industries Private Ltd is the name of the new Company which has been formed to implement the project. Its authorised capital will be Rs. 50 lakhs and the subscribed capital Rs. 40 lakhs. The foreign collaborators—a consortium of French watch manufacturers known as S.E.D.I.M.—will take up 50 percent of the capital, which will be in foreign currency and will fully meet the cost of plant and machinery. Apart from the supply of plant, machinery and equipment, the French collaborators will provide technical know-how without any fee or royalty. The entire project is estimated to cost Rs. 40 lakhs. The promoters do not propose to make any public offer of capital.

Thirumbadi Rubber Profit Shrinks

During the year ended September 1960, the Thirumbadi Rubber Co. Ltd has made a profit of Rs. 2,23,023, against Rs. 3,03,752 in the previous year. The provision for taxation is Rs. 1,21,695, and Rs. 30,000 is transferred to general reserve. The directors have recommended a dividend of 7 percent, subject to tax, on the ordinary shares and this will absorb Rs. 64,071. A balance of Rs. 14,829 is carried forward, against Rs. 7,572 brought in. The rubber crop during the year amounted to 323,807 kilograms, against 328,991 kilograms in the previous year. The cost increased to Rs. 3.39, from Rs. 3.06 a kilogram, mainly due to the rise in labour charges, such as additional bonuses, gratuity and provident fund. The 1960-61 crop is estimated at 352,000 kilograms.

The directors are thinking of selling the Calicut estate. If the sale materialises, they expect that the financial position and the prospects of the Company will improve considerably. It is stated that the increase in staff salaries, labour wages and amenities, and taxation has affected the Company financially, so it has had to depend entirely on bank overdrafts for working capital. The percentage of tax to profits has increased from 34 percent in 1955 to about 54 percent now. The directors say that such a high rate of taxation has precluded all saving from current profits, which is essential for the redemption of debentures and the development of the estates. It is, therefore, considered advisable to sell the Calicut estate, and use the money for redeeming the debentures and for consolidating and developing the Thirumbadi and Neeleswaram estates. The shares of the Company have firmed up to Rs. 1.77 *cum*-dividend.

Nelliampathy Tea Earns More

The Nelliampathy Tea and Produce Co. Ltd has made a net profit of Rs. 3,69,306 for the year ended June 1960, against Rs. 1,77,710 in the previous year. The tax provision is Rs. 1.8 lakhs and development rebate reserve gets Rs. 800. The equity dividend is 13 percent, subject to deduction of income tax, against 10 percent in the previous year. A sum of Rs. 5,656 is carried forward, against Rs. 149 brought in. The average sale price of the Company's tea rose to Rs. 1.93 in 1959-60, from Rs. 1.80 a lb in the previous year. The total crop was 1,018,200 lbs, against 746,000 lbs. The cost of production fell to Rs. 1.20 from Rs. 1.32 a lb. The coffee crop was 748 cwts, against 729 cwts in the previous year. But there was a shortfall in the cardamom crop due to adverse weather conditions. The cardamom crop in 1960-61 is estimated at 15,000 lbs, the tea crop at 900,000 lbs, and the coffee crop at 1,100 cwts.

Associated Industries (Assam) Projects

A step towards the industrial development of Assam will shortly be taken with the setting up of a cotton spinning mill and an integrated plant for the manufacture of sulphuric acid, sulphur dioxide, superphosphate and mixed fertilisers. There is at present no cotton spinning mill or chemical and fertiliser factory in the State. Associated Industries (Assam) Ltd, a Company promoted by the Calcutta business house of Jatias, has been formed for undertaking these projects. Licences have been granted for a cotton spinning mill of 25,000 spindles, a sulphuric acid plant of 1,500 tons a month, a liquid sulphur dioxide plant of 300 tons a month, a superphosphate plant of 3,000 tons a month and a mixed fertilisers plant of 6,000 tons a month. Indian Refineries Ltd has agreed to take from the Company its entire production of liquid sulphur dioxide for the Gauhati and Barauni refineries. The handloom industry in Assam at present obtains its requirements of yarn from outside the State.

Singmaster and Breyer Inc., a well-known firm of American chemical engineers, has been appointed consultant for the integrated chemicals project. It will supply the imported portion of the superphosphate and mixed fertiliser plants. The sulphur dioxide and sulphuric acid plants of Monsanto design will be supplied by the Pan-American Consulting Company, the authorised agents for the use of Monsanto designs outside America. About 1,200 acres of land near Gauhati have been purchased and erection work is proceeding. Production in all the plants is expected to commence by the end of this year. The cost of the projects is estimated at Rs. 1.12 crores. The Assam Government has agreed to participate in the preference and equity capital of the Company. The Industrial Finance Corporation is thinking of giving a loan of Rs. 50 lakhs, part of which will be in dollars. A public issue of equity capital, it is expected, will be made shortly.

Indian Steel Rolling Rights

The Indian Steel Rolling Mills Ltd has a programme for doubling the production capacity for wires and wire products to 7,200 tons a year. A licence has been obtained from the Government. The Company proposes to raise Rs. 25 lakhs in equity capital for the expansion plan, and also to repay on maturity the debenture loan of Rs. 5 lakhs taken from the Tata Iron and Steel Co. Ltd.

Cotton Decontrol Urged

The decline in cotton prices over the past few weeks has been sharp enough to induce a technical recovery now. But the market trend is still uncertain because of the mounting pressure of arrivals and the growing accumulation of stocks. Arrivals of cotton in Bombay between 1st September, 1960, and 2nd February, 1961, are estimated at 858,640 bales, against 481,569 bales in the corresponding period of the previous season. Stocks with mills, exporters and dealers in Bombay as on 2nd February are placed at 543,909 bales, compared with 375,399 bales on the same date a year ago. Mills have not availed themselves of all their quotas. They are said to be carrying rather low stocks, so the stocks with dealers are heavy. The prevailing monetary stringency makes the holding of large stocks difficult and expensive. The East India Cotton Association, Bombay, has urged the Central Government to remove the restrictions on the distribution of Indian cotton because of improved supplies, and to allow the export of up to 100,000 bales of such varieties of Gujarat cotton as Kalagin and Wagad which, apart from being in good supply, have been slightly damaged in quality. The E.I.C.A. has also urged the Textile Commissioner to do away with compulsory surveys and ask mills to use their quotas within a specified period. It has pleaded for the abolition of the quota system if the mills fail to use their quotas in time.

The Indian Cotton Mills Federation has opposed the Association's suggestion for abolishing the quota system. But whether or not it is abolished, it is unlikely to make much difference to the market, since mills will continue to purchase according to their individual requirements and their expectations about prices. While the E.I.C.A. plea for the abolition of compulsory surveys will be widely endorsed now that prices are well below the ceiling rates, its anxiety about the decline in rates is unwarranted. In spite of the sizeable fall over the past few weeks, spot cotton prices are still nearer the ceiling than the floor levels. As for the Association's suggestion about exporting the Kalagin and Wagad varieties, the conflicting needs of building a large carryover and earning foreign exchange will have to be balanced carefully. The export of Bengal Deshi must enjoy preference over any other variety, since there already exists a substantial exportable surplus of the former. The announcement of an export quota for Bengal Deshi is, in fact, long overdue. Cotton exports from Bombay between 1st September, 1960 and 2nd February, 1961, totalled 55,891 bales, against 78,045 bales in the corresponding period of the previous season. Mill consumption of cotton during the first three months of the current season, from September to November 1960, amounted to 1,276,587 bales, against 1,294,275 bales in the corresponding period of the previous season. Of this, indigenous cotton accounted for 924,481 bales, against 1,175,365 bales. The consumption of foreign cotton increased from 118,910 bales to 352,106 bales.

Shortage of Wagons for Coal

The joint working committee of the Indian Mining Association, the Indian Mining Federation, the Indian Colliery Owners Association and the Madhya Pradesh Mining Association has just issued a statement concerning the shortage of transport facilities for coal. According to the statement, the chairman of the Railway Board told a Press conference in New Delhi last Thursday that the railways are in no way to blame for the inadequate or slow movement of coal in the country, and that if the movement of coal is unsatisfactory, it is not due to a shortage of wagons. He is further reported as saying that all demands from the Coal Controller, who determines the movement of coal, are being met, so any question concerning shortages anywhere should be answered by the Coal Controller. In fact, however, the Coal Controller had indicated a requirement of approximately 6,000 wagons daily in the West Bengal and Bihar coalfields. In October 1960, the industry and the country could only be given a guarantee by the railways to the effect that the number of wagons made available in the West Bengal and Bihar coalfields for coal loading would not be less than 5,000 wagons daily, even during the railways' busy season from December 1960 to March 1961. The railways have been unable to implement their guarantee, as the average wagon supplies in these coalfields during December 1960 and January 1961 amounted to only 4,629 and 4,730 wagons daily, respectively, which represents a shortfall of about 500,000 tons in the movement of coal.

The chairman of the Railway Board stated that during the last year of the second plan, the railways were required to move 41 million tons of coal to consumers other than the steel plants, and that against this target, the railways will in fact be moving 42 million tons. He has apparently overlooked the fact that the railways should have been moving 10 million tons for the steel plants, against which they will have moved only 7.5 million tons due to the reduced demand from those plants. Accordingly, the railways will, during the last year of the second plan, have moved a total of 49.5 million tons only, against the target of 51 million tons—a shortfall of 1.5 million tons. It is apparent, therefore, that the railways have failed to reach their second plan target for coal movement, although this target falls far short of the actual requirements of coal producers and consumers.

It is disappointing that the Railway Board should at frequent intervals maintain that it is in no way responsible for the acute shortage of coal now being felt throughout the country. At a time when enormous stocks have accumulated at collieries, including those of the N.C.D.C. and Singareni, and when numerous mills and factories are either closed or forced to reduce production due to the shortage of coal, the crisis demands more serious attention from the railways. Coal producers do not feel that everything is being done to arrange the maximum allotment of wagons and to move loaded wagons as speedily as possible. Reports have been received of loaded coal wagons being held up for weeks or months, although collieries have to load all the wagons allotted within five daylight hours.

The coal industry has suffered considerably from the inadequacy of wagons, which has occurred even though it accepted the several restrictive impositions introduced at the instance of the railways, allegedly to increase wagon offerings. Today many collieries have been forced to restrict output as vast coal stocks have accumulated. The industry has been blamed for the acute coal shortage which exists throughout the country, but it has hitherto maintained silence on the understanding that nothing can be achieved by recrimination and that the railways should be given every opportunity to improve their performance. In view of the Press statements now being issued by the Railway Board, the industry feels that it must bring the facts to the attention of the public. While fully appreciating the many difficulties with which the railways are faced, and while realising that the existing restrictions can be overcome when the remodelling of the Ondal yard and other major projects are completed, it is felt that a combined effort on the part of all can achieve considerable improvement in the movement of coal from collieries to industrial consumers throughout the country.

Oil Exports Fall Sharply

Oil and oilseed exports in January have been disappointing. Considering the present disparity in Indian and world prices, there seems little chance of any substantial improvement in the near future. Oil shipments from Bombay in January totalled 1,282 tons, of which castor oil accounted for 1,191 tons. Exports of groundnut oil were only 88 tons, while there were no shipments of linseed oil. Oil exports in January last year comprised 4,585 tons of castor oil and 1,830 tons of linseed oil. Oilseed exports in January 1961 amounted to only 994 tons, of which groundnut H.P.S. accounted for 993 tons, against 2,832 tons in January 1960. Exports of oilcakes have not, however, been unsatisfactory. Shipments of groundnut extractions in January totalled 20,970 tons, against 15,470 tons in the same month of the previous year. Linseed cake exports amounted to 2,021 tons, against 3,0[illegible] tons. Groundnut expellers did not figure in last month's shipments, whereas in January last year they totalled 11,525 tons. The export quota for 20,000 tons released on 25th January was exhausted within a few days. But it is not only the export trade which is dull; speculative activity in seeds futures is also quiet because of the strict margins imposed by the Forward Markets Commission. Besides, in order to keep prices under check, the Reserve Bank has recently modified its directive regulating bank advances against groundnut and other oilseeds, excluding cottonseeds. It has told the scheduled banks that exemptions from margins and ceiling limits accorded to exporters of groundnut and groundnut oil should be scrupulously applied with a view to avoiding their misuse. With internal forces tending to keep domestic prices above world parity, the Government will need to devise new measures for increasing exports of groundnut oil and linseed oil. The outlook for castor oil, however, is not bleak.

Engineering Production and Exports

Raw material supplies to the engineering industries have been increasing, and further improvement is in prospect during the third plan as the new steel plants are fully commissioned. But the quality of steel and pig iron is not always satisfactory. Mr. R. L. Rajgarhia, president, speaking at the annual general meeting of the Engineering Association of India last week, said that processing firms feel there is "considerable room" for improvement in quality; in particular, a good deal of machining has to be done on the steel sections. The pig iron supplied is not of the right grade. Many factories have to use off-grade pig iron as the graded qualities are in short supply. Apart from machine tools, a number of engineering products require good quality castings; the quality of the products consequently suffers. "Non-availability of graded pig iron and hard coke of suitable quality has been a very great handicap to the engineering industries," Mr. Rajgarhia said. The point does not appear to have received much attention so far, but now that "our products are being marketed in other countries also, this matter should be one of prime concern." Mr. Rajgarhia expressed the fear that "maintenance imports" for the engineering industries during the third plan may be badly cut if the balance of payments does not improve. Foreign assistance is usually tied to particular projects, and so lacks the flexibility of untied aid. "Maintenance imports" for the engineering industries cannot be financed entirely from their export earnings, and there is no immediate prospect of their earning sufficient foreign exchange by exporting their products. Mr. Rajgarhia thought that at least 15 years would be required to attain that "stature". Meanwhile, he felt that engineering firms, especially those of medium size, should organise servicing facilities on a joint basis. Individually, they cannot afford to have servicing departments, tool rooms, foundries, forges, etcetera, of their own. This is hampering their production programmes. There ought to be independent servicing units—foundries, forges, gear shops and tool rooms—which can supply quality castings, forgings, gears, jigs, fixtures and dies. The existing industries can then concentrate on the production of the specialised parts required for making industrial equipment, Mr. Rajgarhia said.

India's engineering exports have risen steadily during the past few years. The target of Rs. 8.5 crores set for 1960 has been exceeded by Rs. 1 crore, according to a claim made by Mr. A. K. Bhattacharya, chairman of the Engineering Export Promotion Council, at a Press conference in Calcutta this week. This represents a rise of 54.5 percent over 1959, in which year exports were 27 percent higher than in 1958. Shipments to all destinations have increased in 1960, the increase of 362.6 percent in the case of European countries being the most remarkable. There was a rise of nearly 60 percent in exports to North, Central and South America; those to south-east Asia, west Asia, Africa, and other areas increased by 26.1 percent, 30.5 percent, 55.5 percent and 16.6 percent, respectively. "The significant increases in exports to highly industrialised countries like the U.K., the U.S.A. and West Germany is proof that India can produce goods acceptable in quality to these countries," Mr. Bhattacharya said. The chief items for which overseas demand has risen are electric fans, sewing machines, M. S. pipes, screws, stainless steelware, tinplate containers, C. I. pipes and castings, diesel engines and electrical accessories. Electric fans, in particular, are proving popular, their exports in 1960 totalling Rs. 89 lakhs, compared with Rs. 39 lakhs in 1959. Screws have recorded a striking increase too—from Rs. 50,000 to Rs. 12 lakhs. The Council sent an export promotion delegation to the U.S.A., Canada and the Caribbean Sea islands last year. Another is being sent to eastern and western Europe this month.

Idle Capacity for Bolts and Nuts

The bolt and nut industry has a production capacity of about 97,000 tons in the organised sector. Besides, the small-scale sector has a capacity of about 25,000 tons. The development of the engineering industries, railways and other projects during the first and second plans has led to the establishment of many new units, so the industry has considerable idle capacity at present. Speaking at the annual general meeting of the Indian Bolt and Nut Manufacturers Association in Calcutta last week, Mr. K. L. Chowdhary, president, said that capacity has so far been developed only for a few diameters. The Government should, therefore, help the industry by undertaking a study of demand according to diameters, in order to accelerate the diversification of output. The industry's equipment must be made more efficient since there has been rapid technological progress in foreign countries. Improved techniques of production will reduce costs and help avoid wastage. Some State Governments, Mr. Chowdhary said, have invited entrepreneurs to set up bolt and nut manufacturing units because they do not have many manufacturers in their area. But when communication and transport facilities are well developed, it is not appropriate that only the units located in a particular State should meet its requirements. Regional considerations, the president said, should not be allowed to govern the establishment of new units. The Centre should advise State Governments not to permit the growth of further capacity which might accentuate the surplus. Manufacturers are at present short of raw materials of the proper quality. The Government should, therefore, urge suppliers to provide tested materials of the required specifications, Mr. Chowdhary said.

Marine Insurance Problems

The chairman of the Institute of London Underwriters, Mr. H. M MacDiarmid, in his address at the annual general meeting in London recently, complained that the cargo account of marine underwriters the world over is unsatisfactory. One reason is that premium income has come to be considered as more important than adequate rates. Some underwriters are still prepared to accept business without thoroughly enquiring into past experience. The past year has been a difficult one for cargo underwriters. Riots and political disturbances throughout the world have had their repercussions. The unofficial dock strikes in the U.K. have damaged her overseas trade and her transit insurance.

Mr. MacDiarmid observed that, in postwar years, foreign insurance markets have been growing in strength. Underwriters in the U.K. are finding it difficult to preserve economic rates in the face of competition from all parts of the world. The ebb and flow of competition is unavoidable, and indeed necessary for the health of any trade. But he advised U.K. underwriters not to endanger their business under the scare of competition by indiscriminately accepting treaties and other classes of reinsurance, where retentions for the ceding companies are low and overriding commissions are such that the ceding companies are relieved of all underwriting responsibility. Reinsurance is a necessary part of the business of U.K. underwriters. But by fostering the types of reinsurance he mentioned, U.K. companies are providing facilities for their business to be taken away from them and turning themselves by degrees solely into a reinsurance market.

Speaking of the world's shipping, Mr. MacDiarmid observed that it has increased by approximately 5 million tons, but a considerable amount of tonnage is still laid up. Although the laid-up percentage is smaller than it was last year, freight rates remain low and show little sign of improvement. A committee has been set up to investigate the causes of explosions in boiler rooms and machinery areas of ships. Lloyd's Register of Shipping is to be congratulated for taking this step. There have again been numerous collisions and strandings in spite of modern safety devices being used on ships. The question of unrepaired damages and unknown cost of repairs remain unsolved. One of the great difficulties which underwriters have to face arises from the fact that some shipowners seem to expect them to keep their books open for ten, 15 and sometimes 20 years to meet claims which could have been settled earlier. In no other sphere would business be tolerated on this basis. It is up to the underwriters to make a determined effort to see that this state of affairs is rectified.

U.S. Business Conditions

The new year has brought few, if any, signs of the hoped-for business pick-up, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. In both industry and trade, buying policy remains cautious, to hold down inventories and reduce them where possible. To be sure, inventory positions and prospects vary from line to line. It is generally conceded that steel inventories must be approximately at bottom. Thus,

steel operations should hold up or improve. On the other hand, motor-vehicle dealers have more than one million cars on hand. There is no precipitate rush to cut this stock down, this early in the year, but the situation restrains current production. Further cuts have been announced in passenger car assembly schedules. Between these extremes, individual industries are working out their own adjustments. During a period of general inventory reduction, goods are sold off the shelves and out of warehouses without replacement. Even though final demand is maintained at a high level, manufacturing output and employment are curtailed. Industrial production, as measured by the seasonally adjusted Federal Reserve index (1957 equals 100), dipped to 103 in December, down from 105 in November and the peak of 111 in January 1960. The slowdown in production, centred initially in basic materials, has spread to consumer goods and business capital goods. A lull continues in home building. But F. W. Dodge officials report an upsurge of contract-letting for schools, highways and other heavy construction, which will help provide an offset to declining tendencies in other lines of business.

The usual Christmas job increase in retail stores and post offices was largely offset by cutbacks of roughly 300,000 persons each in construction and manufacturing. Only part of these lay-offs could be attributed to seasonal influences and unusually bad weather in mid-December. Government statisticians figure that the number of persons out of work in December rose to 4.54 million, equivalent to 6.8 percent of the labour force on a seasonally adjusted basis. The U.S. Secretary of Labour, Mr. Arthur Goldberg, has estimated that 5.5 million were unemployed in January; if correct, this would be the highest number for any month since Pearl Harbour. Part of the January rise in unemployment resulted from lay-offs of workers hired for the Christmas season, while inventory-taking and curtailment of outdoor activities usually cause other lay-offs at this time of year. The decline in factory employment, which has been under way since March, began to be reflected in overall personal income in November and December. Retail sales have also felt the effects of payroll cuts; even though December sales were 5 percent higher than last Christmas, the increase over November was smaller than usual. In January, stormy weather again hurt retailers. New car sales, from 1st to 20th January, were off 18 percent from a year earlier, while department stores sold 3 percent less in the first three weeks than in the same weeks of 1960.

U.P. Sugarcane Ordinances

The Governor of Uttar Pradesh has promulgated the U. P. Sugarcane (Purchase Tax) Ordinance, 1961, for levying a tax on the purchase of sugarcane by factories and some *gur, rab* or *khandsari* manufacturing units. The tax will be levied in the case of a factory at the rate of 18nP a maund of sugarcane and in case of other types of manufacturing units at the rate of 4nP a maund. No unit which has not already obtained a licence under the U. P. Khandsari Sugar Manufacturers' Licensing Order shall, without obtaining a licence from the Sugar Commissioner, carry on any "process of manufacture" of *gur* or *rab*. The Commissioner may, in case of contravention of any of the provisions of the Ordinance, suspend, cancel or refuse the renewal of a licence. If any person defaults in paying the tax or contravenes any provision of the ordinance, he shall also be liable to imprisonment up to six months or to a fine not exceeding Rs. 5,000 or both, and in case of continuing contravention another fine not exceeding Rs. 1,000 for each day during which the contravention continues. The ordinance lays down that the State Government "in the public interest and with a view to encouraging or regulating production of sugar, *gur, rab* or *khandsari*, may remit in whole or in part the tax payable under the ordinance." This concession will apply to every factory for sugarcane purchased by it in any assessment year either prior to 15th November or subsequent to 31st May, and in the case of every unit situated beyond a radius of ten miles from the premises of any factory.

The President has issued the U.P. Sugarcane Cess Validation Ordinance, which validates the collection of cess on sugarcane by the U.P. Government during the past ten years totalling about Rs. 45 crores. Uttra Pradesh had been collecting the cess under three Acts, which were recently declared invalid by the Supreme Court. These were the U.P. Sugar Factories Control Act, 1938, the U.P. Sugarcane Regulation of Supply and Purchase Act, 1953 and the U.P. Sugarcane Cess Act, 1956. Under the Acts, the State Government was levying the cess under Item 52 of the State list in the Constitution ("tax on the entry of goods into a local area for sale, consumption and use therein"). In defining a local area, the State Government also included a sugar factory. The Supreme Court held that a factory was not a local area. The Presidential ordinance came into force from 3rd February—the day the State Government issued another ordinance that the cess would be collected as purchase tax under Item 54 of the State list in the Constitution.

U.P. Small Industries Corporation

The U.P. Small Industries Corporation, which was recently set up in Kanpur, has started functioning. It has rendered assistance to small units in securing Government orders and raw materials. So far, 290 units have been enlisted, and with the assistance of the Corporation, they have been able to secure orders worth Rs. 2.25 lakhs since April 1960. They are kept informed about the indents. The Corporation has plans to publish a directory of small industrial units in the State, with details of the stores which they may produce, their production capacity, etcetera. The directory will be issued to Government departments, factories and other institutions. The Corporation also proposes to issue certificates to the indenting departments concerning the competence, capacity and credit of small industrial concerns to perform a specific contract. The Corporation's capital is Rs. 12.50 lakhs, divided into 12,500 ordinary shares of Rs. 100 each.

MR. AL FOIL
OBSERVES THE FORMALITIES

Foil's the name, Al Foil, alumnus of aluminium and many titles besides. But you can call me Al. Being a tidy sort of chap and very hygiene conscious, I like to wrap up things for you in shiny aluminium foil—in fact, been so 'wrapped up' in the 'wrapping business' that I haven't had the chance of meeting you wonderful people...not for the last 57 years which is when I entered the 'foiling fray' And that puts me in a reminiscing mood. A long time...57 years at Kamarhati ...must have wrapped thousands of tons of tea for export, and now chocolates, biscuits and such toothsome confectionary. But that's only the 'sweet side' of my job...there's the bitter too, for the medicine men like to keep their pills fresh and efficacious by using 'foil protection'. Fact of the matter is that I have had to supply almost the entire requirement of foils for the confectionary, pharmaceutical, tea and cigatette industries in the country. Long and wide experience you'll agree...might even call me an expert. So whenever, in packaging, you have a 'foiling problem', remember I am here to serve you—no 'foiling problem' is difficult enough to foil Al Foil, alumnus of aluminium.

Selling Agents: Indian Aluminium Co. Ltd., Calcutta Bombay Madras and New Delhi VF-65

TRADE PROSPECTS

A FEW weeks ago *Judge*, the comic and political paper of New York, came out with a cartoon in which Brother Jonathan, with all the nations of the earth trailing behind him, was depicted as being an easy winner in the Century Stakes—in a commercial sense most assuredly lacking creation. John Bull palpably blown and exhausted, but still valiantly making a fight for it, was a bad second. Germany was third, then followed France, Russia and the other nations, while far away on the horizon could be discerned—India. Poor India! One would of course hardly be justified in treating a cartoon of this kind from a strictly statistical standpoint, and India's position as a trader in the commonwealth of nations, though admittedly capable of vast improvement, is not so hopelessly in the rear as depicted by *Judge's* cartoonist. But speaking, generally, there can hardly be much room for doubt regarding the commanding position which American trade and American finance, too, now occupies in the great business of international exchanges. Here in India, at present, we do not feel it much. But admitting this, I think, we can hardly endorse Mr. O'Conor's statement, which appears in his *Indian Trade Review* printed in 1900, that "our trade with the United States does not tend to increase." The import trade, says Mr. O'Conor, depends on kerosene oil, and the consumption of this oil does not expand because Russian oil is cheaper, being imported in bulk from a much shorter distance than the American oil packed in cans and wooden cases. The export trade also, says the Director General, manifests no tendency to increase, though he notices the increased sales of gunny cloth, raw skins and tea as a set off against diminished exports of linseed, cutch, mica, indigo and tanned skins.

A Ditcher's Diary

IN THE CONGO THEY ARE SAID TO HAVE KILLED Patrice Lumumba; in India the Government has only detained and deposed the *Maharaja of Bastar.* I will not take the parallel too far; and the Indian action is certainly more civilised and humane. But there must be some reason why the two incidents occurred to me in the stated juxtapcsition. The most obvious point in common is, of course, the respective authorities' singular hamhandedness. A communist antagonist of Mr. Lumumba would have neatly organised a shooting-while-trying-to-escape affair long ago. Messrs Kasavubu and Tshombe, and the Belgians behind them, have shown nothing but incredible ineptitude in handling their explosive captive. But the Maharaja of Bastar apparently has fewer friends than Mr. Lumumba; and it seems to me that there were some temperamental affinities between the two men. Both had a certain immaturity, impetuosity and unpredictability. Both were pitted against very powerful enemies; and I do not mind saying that I am not a great admirer of either. What evokes a little sympathy for Lumumba is that he must have been subjected to a great deal of cruelty of a kind unthinkable outside the bushes of Africa. The Maharaja's harassment was in an altogether different key, and a great deal of it he simply invited by his foolishness. That said, it must be added that the Madhya Pradesh Government seems to have been very unforgiving; and I hope I am wrong in thinking that the Centre endorsed and enhanced Dr. Katju's action in consideration of Party advantage. Most of the former princes had precious little to do during the British days; but they at least had a good time. The Congress tends to deny them even that and this may be part of the explanation for former rulers participating in politics. The irony is that even in these democratic days so many of them retain a measure of popular support. In Shaw's *Apple Cart* there was a hint at this kind of situation; and in Laos and Cambodia kings and princes lead the political Parties. Not many tears need be shed for the *Maharaja of Bastar;* but the Congress could ask itself why the Adivasis should prefer these alleged tyrants to the "dedicated, all-sacrificing, austerely virtuous patriots" of the Congress.

THE FIRST NATIONAL SUNDAY PAPER IN BRITAIN for forty years would be good news for all interested in the Press. The *Sunday Telegraph's* first effort I recently had a chance to see. Well, it looks much like the *Daily Telegraph* which, coming from me, is as much a criticism as a compliment. The *Telegraph* is certainly a good paper; it is serious in purpose and presentation. In the latter a little too serious; and many find it dull in appearance. I would not say that either of *The Times* or the *Guardian*. Both are exceedingly readable, and pleasant to look at. Nor do I care much for the "motto" of the newcomer. Why say the *Sunday Telegraph* fills the gap, or that it is the paper you can finish? (The last one, surely, is dangerously ambiguous.) The contents I find reasonably interesting—between, as the paper itself says, the "posh" and the "pop". In neutralist India it is not very safe to ridicule "the middle way"; but, in walking on streets, for instance, the method is risky. To change the metaphor, it is all too easy to fall between two stools. There is not enough "culture" and there are not enough bathing beauties. Is the *Sunday Telegraph* an improvement in the matter of news? That is certainly one of its aims; and it looks more like a newspaper than the two "posh" Sundays. But I am not sure that even here the *Observer* is not better value at a penny extra. In serials the *Sunday Times* reigns supreme—with big names too. The newcomer's serial on Eichmann looks more *Sunday Express* stuff. But it is unfair to make up one's mind on the basis of the first issue. Unfortunately, most readers will, in a few weeks. It has already got some good contributors; Peregrine Worsthorne is good; and Nicholas Blake (none other than the post, C. Day Lewis) should be good on detective fiction. Conservatives are unlikely to give up the *Sunday Times* but may make the *Sunday Telegraph* their second Sunday. Readers of the *Observer* have no reason to change their excellent favourite. The *Sunday Express* may suffer a little; not much, I imagine. But why think in these terms? The new Sunday may create a new demand and a new public. I hope it does.

AT THIS MOMENT IN TIME INDIA CANNOT COMPLAIN that she is neglected in the British Press. According to my friends in the United Kingdom, the first half of the Queen's tour in this country has been reported in almost lyrical terms, while the party of British financial journalists who visited India during December have been contributing weighty articles on the state of the Indian economy to the city columns of their newspapers throughout January. On the whole, their verdict seems to have been highly favourable to India and the result of all this has been to establish and sustain an unusual interest in Indian affairs which is most gratifying to those who, like myself, believe that the post-independence Indo-British partnership is something of real value to both countries. Apart from the newsreels, which I am told are most impressive in their coloured versions, Independent Television has, I understand, been showing a well-balanced, full-length, feature film of Calcutta which, as a city, does not always get fair treatment at the hands of visiting newspaper and other commentators. The more squalid aspects of our historic burg seem to have an irresistible fascination for the visiting journalist or cameraman, from whom you might easily gather that there are no residential dwellings in Calcutta and that its entire six million inhabitants eat, sleep and work on the pavements along with their bovine friends. The I.T.V. has apparently given a less biassed picture which has pleased the many loyal Ditchers who now live in the United Kingdom.

ROCKETS TO VENUS ARE ALL VERY IMPRESSIVE AS *international status symbols, but for a really* promising miracle of modern science my imagination has been caught by the "versatile tranquiliser". This is not whisky and soda, as one might suppose; it is a little something which, or so I read, can be administered to a whole community, say, through the public water supply, so as to make it completely receptive to regulation and suggestion. As any ex-member of the British armed forces will confirm, this is even an improvement on our old friend bromide; and the opportunities for misuse are obvious. But on the assumption that nothing science is capable of dreaming up could make Calcutta any worse than human nature has already made it, there would seem to be scope for trying out something of the sort here which might make the risk well worth taking. Think what could be done. Let us start with the roads, or rather the footpaths. That incorrigible institution the Calcutta pedestrian—whose habits always remind me of Newton's first law of motion (Any body will continue in a state of rest, or of uniform motion in a straight line, unless compelled to change that state by the action of an impressed force)—could be persuaded to walk on the pavements, look both ways before crossing the road, obey traffic policemen's signals, not bump into stationary vehicles and not spit into the wind when you are walking just behind him. The prospect is intriguing. Motorists might be dissuaded from such endearing practices as taking a sweep to the right when intending to turn left, hogging the crown of the road, overtaking on the inside, forming six lanes at traffic lights, waving from windows so as to mislead following vehicles, coming straight out of side roads, blowing horns in built-up areas, overloading, and using the centre of the road as a repair shop. Lorry drivers might be led to believe, quite simply, that it is not their father's road, and taxi drivers, that they are there to serve the public and not the public to serve them. And while we are on the public, perhaps something could be done to popularise the inside of public conveniences instead of the outside. The possibilities are obviously infinite; students would take their examinations happily instead of demanding their degrees virtually without; the Corporation would give up the spoils of office in the interests of progress; workers would do a full day's work, not take too many holidays or ask for unreasonable bonuses. But before I go any further with this dazzling prospect it is only reasonable to reflect how like one vast barracks this city would become; and what would Calcutta be without its uniqueness? Perhaps it would be better to wait. After all, India is bound sooner or later to fall victim to that versatile tranquilliser which at present has the West in its baleful grip, television.

THE MINISTER OF STATE FOR COMMONWEALTH Relations, Mr. C. J. M. Alport, who has recently been appointed Britain's High Commissioner in the Central African Federation, is no stranger to India which he has visited two or three times in his capacity as a junior minister. I think the last occasion was for the formal opening of Durgapur when he was the official representative of H.M.G. That an up and coming politician of the younger school should be selected for, and accept, the High Commissionership in the Federation is an indication of the importance which Mr. Macmillan attaches to a post whose incumbent will need to use all the diplomatic arts and an infinity of tact and patience in the next year or two. Mr. Alport, who receives a life peerage, has taken on a pretty tough assignment.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS.

A copy of the Prospectus has been filed with the Registrar of Companies, Madras. Licences have been obtained from the Government of India for effecting substantial expansion of the existing undertaking. It is to be strictly understood that in granting of these licences, the Government of India do not take any responsibility for the soundness of the undertaking, or for the correctness of any of the statements made or opinions expressed in regard to it.

The Subscription List will open at the commencement of the banking hours on the 22nd day of February 1961 and will close on Monday, 27th February, 1961, at 5 P.M. or later at the discretion of the Board of Directors.

SOUTHERN INDUSTRIAL CORPORATION LIMITED

MADRAS.

(Incorporated as a Private Limited Company on 10th May, 1955 and converted into a Public Company on 15th September, 1960)

SHARE CAPITAL		Rs.
AUTHORISED:	5,00,000 Equity Shares of Rs. 10 each	50,00,000
ISSUED, SUBSCRIBED AND PAID UP:	60,000 Equity Shares of Rs. 10 each	6,00,000
PRESENT ISSUE:	90,000 Equity Shares of Rs. 10 each	9,00,000
Out of the Present Issue:—		
(a) Reserved for firm allotment:		1,65,000
(b) Balance offered to the Public 73,500	Equity Shares of Rs. 10 each	7,35,000

The amounts payable in respect of shares of the present issue are as follows:—

With application	**Rs. 2.50 per share**
On allotment	**Rs. 2.50 per share**

The balance of Rs. 5 in two calls of Rs. 2.50 per share at intervals of not less than three months between each call, the first of such calls being not earlier than three months from the date of allotment of shares. Failure to pay the allotment money or any call when due, will render the share liable to forfeiture.

The shares now issued and allotted will not be entitled to participate in the interim dividend of 10% declared on 22-11-1960 but will be entitled to participate in the final dividend that may be declared for the year 1960, in proportion to the amounts paid up on the shares respectively, *pari passu* with the existing shares irrespective of the fact that the said new shares have not been outstanding during the year 1960. The said shares will participate *pari passu* with the existing shares in proportion to the paid up capital and in all other respect ranks *pari passu* with the existing shares.

BOARD OF DIRECTORS

1. **Shri M. A. Chidambaram** (Chairman), Businessman, Adayar House, Madras-25.

AUDITORS

Messrs. Fraser & Ross, Chartered Accountants, McLean Street, Madras 1.

BANKERS

The Union Bank of India Limited, Madras.

REGISTERED OFFICE

No. 6, Armenian Street, Madras 1.

OBJECTS

The Company was incorporated as a Private Limited Company on 10th May, 1955 for the several purposes set forth in the Memorandum of Association and was converted into a Public Limited Company on 15th September, 1960.

The main object of the Company is to manufacture and sell all varieties of wire products including wood-screws, Gate Hooks and Eyes, Ship Chains and Flexible Shafts as well as other objects set out in detail in the Memorandum of Association of the Company.

HISTORY AND BUSINESS

Since its incorporation in 1955, the Company has been working the wire products section of the factory which now produces 25 sizes of Wood Screws, 7 sizes of Gate Hooks and Eyes, 4 sizes of Shortlink Ship Chains, 4 sizes of Tinmen's Rivets and 37 sizes of various type of Machine Screws. A total of 454 tons of wire were processed in the year 1959. These "Tower Brand" products are very well received by the market and the entire production is booked in advance by dealers and agents against allotments.

PROSPECTS

The Company has obtained an Industrial Licence under the Industries (Development and Regulation) Act for the manufacture of Flexible Shafts and Flexible Shaft Machines in collaboration with Messrs. Otto Suhner Ltd. of Brugg, Switzerland. An experienced Engineer has returned from Switzerland after undergoing training. Shipments of machinery are expected to be completed by February 1961. With the spare capacity available on the ordered machines, the entire requirements of the Automobile Industry in India for Speedometer Cables can also be produced.

Machinery has been installed for the production of Dowell Screws and Phillips recessed head screws and for Electro-plating.

The expansion of the Woodscrew Industry from an installed capacity of 50,000 gross per month on single shift to 70,000 gross has been licensed under the Industries (Development Regulation) Act. Import applications for additional machinery required are pending with Government.

An application has been made to the Government of India to permit expansion of the Flexible Shaft section by installing machines required for the manufacture of various types of remote control cables such as Automobile Choke and Brake Cables. As these items are entirely imported at present it is expected that Government will consider our applicaton favourably in view of the foreign exchange saving possible.

TECHNICAL COLLABORATION

The Company has entered into an Agreement, dated 1st July, 1958 with OTTO SUHNER LIMITED, of Brugg, Switzerland.

MANAGEMENT

The Management of the Company will vest with the Board of Directors. Mr. M. A. Chidambaram is the Chairman of the Board and a wholetime Director on the following remuneration for his services to the Company in supervision and control in the affairs of the Company, namely Rs. 3,000/- per month sanctioned by Special Resolution dated 18. 7. 1960. Mr. M. A. Chidambaram has, however, consented to take only Rs. 2,500/- per month as his remuneration for his services with effect from 1-1-61.

CAPITAL REQUIREMENTS AND MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is Rs. 9,00,000 and it is intended that the proceeds of the present issue will be utilised as follows:—

	Rs.
Plant and Machinery ..	6,25,000
Buildings ..	1,75,000
Towards Working Capital ..	25,000
Expenses of the Issue ..	75,000

The Directors are satisfied that adequate additional working capital will be available by means of normal borrowings from Bankers.

UNDERWRITINGS

The Shares of the present issue amounting to Rs. 9,00,000/- are underwritten by the following underwriters:—

	Total Capital underwritten	Capital reserved for firm allotment	Balance offered unconditionally for public subscription
1. Messrs. P. R. Subramanyam, 70-A, Stock Exchange Building, Apollo Street, Bombay 1. 40,000 Shares of Rs. 10 each	4,00,000	75,000	3,25,000
2. Messrs. J. R. Motishaw & Co., 32, Apollo Street, Bombay 1. 10,000 Shares of Rs. 10 each	1,00,000	18,000	82,000
3. Messrs. A. B. Pandit & Co., 32, Apollo Street, Bombay 1. 10,000 Shares of Rs. 10 each	1,00,000	18,000	82,000
4. Messrs. Maconochie & Co., Mercantile Bank Buildings, 16, First Line Beach, Madras 1. 10,000 Shares of Rs. 10 each	1,00,000	18,000	82,000
5. Messrs. Somayajulu & Co., Andhra Insurance Buildings, 337, Thambu Chetty Street, Madras 1. 10,000 Shares of Rs. 10 each	1,00,000	18,000	82,000
6. Messrs. G. M. Pyne, 14, India Exchange Place, Calcutta. 10,000 Shares of Rs. 10 each	1,00,000	18,000	82,000
Total	9,00,000	1,65,000	7,35,000

In the opinion of the Directors the resources of the said underwriters are sufficient to discharge their underwriting obligations.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of the Equity Shares underwritten is payable to the underwriters Messrs. P. R. Subramanyam, J. R. Motishaw & Co., A. B. Pandit & Co., Maconochie & Co., Somayajulu & Co. and G. M. Pyne respectively in accordance with the terms and agreement contained in letters dated 2-2-61 from the said underwriters and the Company's acceptance of each of them dated 2-2-61.

BROKERAGE

Brokerage at the rate of 10 nP. per Equity Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a Member of a recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of application bear their respective stamps.

Messrs. P. R. Subramanyam, Bombay, are the Managing Brokers to this issue and will be in addition entitled to a brokerage of 5 nP. per Equity Share on 90,000 Equity Shares of Rs. 10 each offered for subscription i.e., the Managing Brokers' remuneration will be Rs. 4,500/-.

APPLICATION AND ALLOTMENT

Application for Equity Shares must be made on the form accompanying the prospectus, copies of which may be obtained from the Registered Office of the Company or from the offices of any of the Company's Brokers or Bankers and Underwriters named herein. It must be completed in accordance with the directions contained therein and delivered before the date of closing of the subscription list together with the remittance of the amount payable on application to:—

(i) The Company's Bankers at any of their branches noted below:—

(a) Bombay (b) Madras (c) Bangalore
(d) Coimbatore (e) Delhi (f) Calcutta
(g) Madurai.

(ii) The Managing Brokers and Underwriters named in the Prospectus.

Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be appropriated towards the amount remaining payable on the shares allotted and any balance remaining thereafter will be returned. The said refunds will be made within 2 months of the closing of the subscription list. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted, when due, will render previous payments and shares liable to forfeiture.

The Shares issued shall be subject to the Memorandum and Articles of Association of the Company.

Dated 10th February, 1961.

Money

THE CALCUTTA MONEY MARKET

SUPPLY OF BILLS IMPROVES

Wednesday, 15th February.

THE rise in advances in the Calcutta money market has continued throughout the past week. The main increases in requirements are reported from the sugar mills and on account of grains and seeds storage in upcountry areas. There has been a small rise in demand from the cotton mills. Demand from the jute mills, however, is more or less unchanged. The interbank market is slightly easier, compared with the previous week, but conditions remain fairly tight and the call rate is unchanged at 4½ percent.

The increase in the exchange market activity has been well maintained during the past week, with a greater supply of both tea and gunny bills. Remittance has remained poor. On the London money market, the pound has moved between narrow limits, and at the close changes recorded against most important currencies were negligible.

SILVER WAS STEADY DURING THE PAST WEEK AND the price advanced to Rs. 238.25 a 100 tolas, quoted today. The rate for forward delivery was Rs. 201 68 a kilogram. The London and New York prices were 80d and 91.375 cents.

Gold rose in sympathy with silver to Rs. 145 (Mysore) and Rs. 142.25 (mint gold). The sovereign fetched Rs. 95.25.

DURING THE WEEK ENDED 10TH FEBRUARY, GOVERNment of India Treasury bills for Rs. 63,47,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 14th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.350 and above were accepted in full, the average rate of acceptance being Rs. 2.590 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 20th February.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 15th February to 18th February at Rs. 99.371 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 8th February to 11th February amounted to Rs 5 lakhs.

THERE WERE RISES OF Rs. 19.56 CRORES TO Rs. 1,948.81 crores in active notes, and of Rs. 18.45 crores to Rs. 1,958 99 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 10th February, 1961. The currency expansion was adjusted by increasing the rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,592.28 crores. This was obviously done by transferring securities from the Banking Department, in which investments fell by Rs. 20.09 crores to Rs. 130.84 crores. Deposits of the Central Government rose by Rs. 7.16 crores to Rs. 59.86 crores, but other Government accounts fell by Rs. 20 lakhs to Rs. 21.85 crores. Balances of commercial banks at Rs. 72.13 crores were Rs. 1.69 crores lower. Balances held abroad rose by Rs. 5.22 crores to Rs. 24.47 crores. Other loans and advances increased from Rs. 154.25 crores to Rs. 157.03 crores, of which advances to scheduled banks against usance bills amounted to Rs. 24.26 crores (Rs. 22.35 crores). Ways and means advances stood at Rs. 39.22 crores, against Rs. 36.14 crores.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 11-2-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
17-2-61	18-5-61	2,00.00	Rs. 2 590%

STOCK MARKET LESS BUOYANT

INDUSTRIALS AND GILT-EDGED FALL

London, 15th November.

DURING the latter stages of the past week the stock market lost some of its recent buoyancy, but the volume of business continued on a good scale as a result of a considerable two-way business. For most of the current three-week account which ends on Friday, buyers have predominated, but become rather more cautious after the Federation of British Industries' survey on business trends which disclosed a falling off of new orders. This and a setback on Wall Street was the signal for profit-taking in equities, and consequently, prices eased. Buyers awaited the U.K. trade figures for January which could have determined the trend of the market fairly sharply in either direction. A marked narrowing of the trade gap is now very much a necessity in view of the prospect of the hot money which has reached here over the past month now being repatriated as the U.S.A. makes interest rates more attractive. This was to some extent responsible for the setback in gilt-edged securities where there has been foreign selling of the long and undated stocks. In the event, however, a small contraction in the trade gap now revealed by the January figures was insufficient to have much effect on the market, although prices seemed steadier at the lower levels. Take-overs again claimed a fair amount of attention in the industrial market, and at one time, produced boom-like conditions in brewery shares, although substantial gains in prices were not always held. There was very little to assist gold shares and prices steadily deteriorated. Coppers were very uncertain following developments in the Rhodesian political situation and on balance prices were lower than a week ago. Oil shares moved erratically. Tea shares made satisfactory progress and rubber shares encountered a selective demand to show useful improvements.

The Money Market

Once again the attitude and intentions of the authorities to bring about a reversal of the lower trend of bill rates was firmly brought to the notice of the money market last week. Under the influence of the seasonal shortage of normal credit supplies, the authorities were able to keep a very tight hold on the market and as in the previous week, forced them to borrow from the central bank. Money was dear throughout most of the week. The general rate was 4¼ percent with 4⅜ percent paid under pressure. The current rate for hot Treasury bills in the open market is 4-9/32 percent, compared with 4-3/32 percent prior to last Friday's tender when the average Treasury bill rate came out at £4 6s 0.56d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: Slowing of recent overseas demand and small sales sent London gilts to new lows. Industrials need further stimulus. Gold shares reacted further, still under American influences. Wall Street had technical reaction to assess market implications of Mr. Kennedy's economic message. Firmness of London industrials is accompanied by a notable expansion of business and broader interest. As this demand has absorbed profit-taking, shortage of stock no longer seems a major factor and the present levels are more soundly based. A setback now looks less likely. Markets seem prepared to live with uncertainty about the immediate economic outlook. Any correction should not be much more than technical.

Activity on Wall Street

The bond market during the past week was highlighted by further improvement in high-grade corporates with many industrial and utility lines selling at their best levels in nearly two years. The forward movement reflected the continued scarcity of new issues along with strong bidding for a couple of utility offerings. The corporate list, however, eventually hesitated and prices were shaded slightly as buyers backed away because of the sharp price increases in recent weeks. Intermediate and long-dated Government obligations were sluggish and a little lower with investors here also inclined to go slow following gains of about a point late last week. Convertibles followed the stock market into higher ground. In a mixed market for foreign dollar bonds, Polish issues were a firm spot scoring gains of one to two points. French Credit Foncier 5½ percents fell a full point at the outset, but eventually recouped more than the loss. German nationals and Italians were quiet and little changed. Japanese Governments were firm with gains of more than one point. Chile 3 percents backed.

Groundnuts Rise in Vegetable Oils Market

A moderate buying interest was taken in linseed in the past week, but an easier trend developed towards the close. Groundnuts came into the limelight with an active business at levels £3 higher on balance. The market for castorseed remained almost dormant throughout the week on lack of offers from origin. Linseed oil was slow to follow the general uplift in values and some easier intervals were experienced with prices finishing below last week's levels. Castor oil became steadier after price recessions. A good turnover was experienced in groundnut oil earlier in the week with the U.K. well represented.

U.S. Gold Reserve

The U.S.A. had a small gold gain on 3rd February. The Treasury Department announces that gold stocks on that date rose $331,049 to a total of $17,436,295,334.

Plea for Revising World Price of Gold

Dr. W. J. Busschau, chairman of Goldfields of South Africa and international gold specialist, said today that the price of gold should be increased by 100 percent over the prewar level. Dr. Busschau told a meeting of the American Luncheon Club here that it was "an idle claim" to say the U.S. dollar was stable because gold was priced at $35 an ounce. "At present, the rigid adherence to $35 an ounce is a source of instability in the international monetary system." It was not without reason that outside observers still expect to see "an agonising reappraisal". A general revaluation of gold would mean a general increase in the liquidity of world currencies. The free world's trade would be given the same freedom of movement which existed before the second World War. The refusal of the United States to change the price of gold meant that it had deliberately kept the reserves of other countries too low in terms of the dollar, he continued.

The harsh remedy of higher interest rates and balancing the American budget was not likely to be very effective in solving the United States balance of payments deficit. This was because the present Budget deficit in so far as it financed non-payable foreign aid amounted to a source of payment for American exports, Dr. Busschau said. Such a remedy was also likely to add to unemployment in the U.S.A. The United States should re-examine impartially the question of a general revaluation of gold instead of waiting until a dollar devaluation followed by other devaluations was forced on it. It should link this with an assurance from other countries that general convertibility of currencies would be restored and that revaluation would not result in a new wave of inflation.

NAMES AND DATES

Mr. F. E. H. Goddard has been elected vice-president of the Bombay Chamber of Commerce and Industry for 1961-62.

Mr. J. K. Michie, chairman, and Mr. G. T. Gillespie, general manager, National and Grindlays Bank Ltd, have visited the Bank's branches in India in connection with the recent merger with the eastern branches of Lloyds Bank Ltd.

A new pharmaceutical plant of Sandoz Products Private Ltd was inaugurated in Kolshet, near Thana, on 4th February, 1961.

NEPAL BANK LIMITED

LONDON INSURANCE LETTER

BOOM IN LIFE BUSINESS

THE preliminary figures of new life assurance transacted by U.K. offices in 1960 were at least as good as expected. The Life Offices Association, the Associated Scottish Life Offices, and the Industrial Life Offices Association, announced that their members' new ordinary and industrial life business totalled £2,687 million of sums assured, compared with £2,303 million in 1959, and that the new premium income in these combined categories totalled £172 million, compared with £124 million in 1959. The biggest increase in ordinary business was achieved, not surprisingly, by the biggest company, the Prudential: its total of £312 million represented an increase of £31 million. Some of the smaller offices reported much larger proportional increases, although English Life's increase of £13 million to £17.8 million—about two and three-quarters times the figure for 1959—was, of course, exceptional.

In industrial life assurance, proportional increases in new sums assured were, on average, less than in the ordinary category, so it may be that forecasts of a decline in the home-service system—in the era when wages have risen more or less to the level of salaries—are materialising. Last year, as previously, the Prudential transacted more than twice as much new industrial business as any other company, but it was the Pearl which showed the biggest increase—absolute as well as proportional. While the Prudential's total of £115 million represented an increase of £5 million, the Pearl's total of £52 million (the second biggest) represented an increase of £8.6 million. The overall figures imply that the growth of life assurance is secular, not geared to economic activity in general. The British economy was in a state of "high-level stagnation" last year, and the forces of inflation which were supposed to have stimulated life assurance previously were no longer operative. However, incomes tend to rise irrespective of economic activity, and their rise, of course, promotes the growth of life business.

Fire Losses

Neither the general public nor the business community is equally aware of the need for adequate insurance of property, although persistent efforts by insurance companies, calling attention to under-insurance of property and contents as a consequence of the rise in values of the former and of the increase in quantities of the latter, have somewhat improved the situation in the last few years. As far as buildings are concerned, it is necessary to distinguish between the value of the site and the value of the building itself. Much of the increase in values in recent years is, indeed, attributable to sites, but costs of building materials and labour have also persistently risen—quite as fast in recent months as previously, in spite of the change in economic conditions.

Whether properties are adequately insured or not, the cost of fire is an increasingly serious problem. Mr. W. L. Catchpole, fire manager of the Eagle Star, told the Insurance Institute of London last month that another total of about £44 million for U.K. fire damage in 1960, as in 1959, might represent a permanent change to a higher level of losses. The U.K. total may not seem unduly large by comparison with the peak estimated U.S. total of $1,108 million—about £395 million—reached last year, but, as Mr. Catchpole remarked, the U.K. totals for 1959 and 1960 were about £20 million above the 1958 figure and about 80 percent above the 1949-58 average. Only Germany, he pointed out, has experienced a comparable increase. Britain's experience in 1959 could be attributed to the exceptional period of hot dry weather; but the weather in 1960 was exceptionally cool and wet. As no single factor could account for last year's losses, it may be necessary, as Mr. Catchpole said, "to adjust our thinking to new standards".

Motor Insurance

To say that motor-car insurance was mainly unsatisfactory last year is almost a matter of routine. Over a limited range, the premium rates have already been increased, and a more general adjustment is likely this year. But there is growing awareness that the problem is not being solved by this means, and that the whole system of motor-car insurance, as operated in the U.K., should be reorganised. In the present discussion on the subject, some fundamental principles of insurance are involved. The essential defect, the critics say, is in the basis of premium rates—on the vehicle, not on the driver. The main factors taken into account in a comprehensive policy are the value of the vehicle (which is, of course, relevant), the capacity of its engine (whose relevance is questionable), the purpose for which it is used (which may or may not be important), and the conditions in which it is used (which must certainly be taken into consideration but are in most cases a secondary factor).

Motor-car insurance provides an example—fortunately, a rare example—of British insurance companies' reluctance to adapt themselves to changed circumstances. The origins of the system can be traced back more than half-a-century, to a time when the motor-car had established no standard of performance, and when drivers were a select body of enthusiasts. Now it is the driver, much more than the vehicle, who is prone to accidents or otherwise.

BROADENING ENQUIRY LIFTS COALS AND MISCELLANEOUS INDUSTRIALS

PRE-BUDGET OPTIMISM SUSTAINS SPECULATIVE ISSUES

Wednesday Evening.

THE Calcutta Corporation shut up shop yesterday to mourn the death of Mr. Lumumba, a man with whom it has had nothing whatever to do. The Calcutta stock market shut up shop today to commemorate the solar eclipse, an event it will certainly not see. But both institutions, despite a face of frowns and worries, seem to have been in a gay mood, the stock market because it thinks the Central Budget due to be presented on 28th February will be good. Although definite reactions are not easy to obtain because of today's closure, the Railway Budget announced this afternoon has been welcomed. The price of Indian Iron on the kerb has moved up to Rs. 24.77. The fact that fares and freights are not to be raised has been taken as implying that the Government's efforts to raise new resources will not be given fresh impetus right from the start of the third plan. The full implications of the Railway Budget will, however, take time to digest; meanwhile, the stock market is buoyed also by fact that corporate working remains good. Recent company reports have shown that turnover and profitability are increasing, especially in newer lines of manufacture. Plans for the expansion and diversification of activity are being launched by many enterprises. At the same time, hopes of getting foreign aid have improved with the installation of the Kennedy administration in the U.S.A. The Indian President's address at the opening of the Budget session of Parliament yesterday has brought a reminder that the condition of the economy is promising. Foodgrain production is expected to reach an all-time high this year, and industrial output in 1960 has been running at a level which is more than 10 percent above 1959's.

After a week of remarkable steadiness, induced by Budget hopes, Indian Iron closed at Rs. 24.60 yesterday. In this, they reflected the improvement in the speculative issues generally, as the following table comparing yesterday's closing prices with the previous settlement's shows :

	Yesterday's settlement Rs.	Settlement on 1st February Rs.
Indian Iron	24.60	24.52
Indian Cable	33.81	32.37
Indian Aluminium	30.25	29.87
Indian Copper	4.82	4.66
Burrakur Coal	20.19	18.50
National Jute	22.50	21.75
Howrah Jute	22.25	22.00
Shree Gopal Paper	27.56	27.25
Hindustan Motors	19.50	19.44
Orient Paper	40.10	40.00
Texmaco	22.90	22.90
Rohtas Industries	20.31	19.87
Dunlop Rubber	41.75	41.00

Engineering issues have met with selective support. Jessop have recovered on the view that the Company's business is expanding, while Guest, Keen, Williams are higher for similar reasons. The engineering industries are hoping for a substantial increase in steel production this year. They are also pleased about their achievement in exceeding the export target for engineering goods substantially during 1960.

Jutes are neglected, as investors are worried about the semi-official threat to requisition jute and jute goods stocks, and to impose stiffer controls on trading with a view to checking speculation. National, Howrah and Birla have enjoyed some support, professional or interested, but there are sellers over for almost all the remaining issues.

The recovery movement which began in coals a few days ago has continued with exceptional vigour during the past week. The more notable among the shares which have benefited are Burrakur, Bengal, Equitable, East Indian and Karanpura Collieries. The reasons for the rise are the same as before: the output of quality coal is expected to be increased rapidly, and aid may be forthcoming from the World Bank for this purpose.

As in coals, so in the miscellaneous section have many issues been strong. Indian Copper have risen on rumours of a rights issue. Indian Cable are up on reports of good working. Hopes that motor-vehicle prices might be raised have lifted Hindustan Motor. Talk of expansion plans has helped Alkali Chemical and Union Carbide. Hindustan Twyford and Isaac Holdens have met with modest support. Among sugars, Dyer Meakin Breweries have been remarkably firm because the Company's liquor business is expanding. Bank shares are steady since profits have improved and in some cases dividends have been raised. Papers are better due to replacement buying, while cotton textile issues have attracted interest on hopes that the industry's production will expand and become more profitable now that raw cotton prices are falling.

Among teas, a modest enquiry has developed for Dooars shares like Hantapara, Hasimara and Birpara. But the issues of companies operating in other areas are quiet.

Gilt-edged have been dull but very steady due to official support. It is reported that the Reserve Bank has raised its buying rates for some short-dated issues; the idea presumably is to get as many of these as possible into its oak-chest before they mature. State Government loans are notably firm; the rumour is that the P.L. 480 counterpart funds which are going to the Reserve Bank nowadays are being invested in these loans.

The allotment of shares in Usha Martin Black (Wire Ropes) Ltd has now been decided. Equity shares will be allotted on the following basis: 25 shares against applications for 50 shares, 50 shares against 100 to 150 shares, 100 shares against 200 to 450 shares, 125 shares against 500 to 550 shares, 150 shares against 600 to 750 shares, 200 shares against 800 to 950 shares, 250 shares against 1,000 to 1,200 shares, 350 shares against 1,250 to 1,500 shares, 400 shares against 1,550 to 2,000 shares, 500 shares against 2,050 to 2,500 shares and so forth. The preference shares offered having been over-subscribed, applications for 500 shares or less will be allotted in full and the balance will be allotted on a *pro rata* basis. It is expected that allotment and regret letters will be issued before 15th March, 1961.

rumours concerning the coming Central Budget. Share prices were generally maintained, mainly due to the absence of selling pressure induced by the thought that the Budget might not contain any shock for the stock market. Operators were nevertheless inclined to lighten their commitments meanwhile; so business was mainly of a squaring up nature. Selling pressure also abated in view of the moderate carry-forward charges at the settlement.

Steel shares were supported on satisfactory production figures of the Tata Iron and Steel Company and the Indian Iron and Steel Company during January. A report that the Indian Iron and Steel Company may soon set up a plant for manufacturing cast iron spun pipes helped improve sentiment. Rumours about an early increase in the retention price of steel still circulated. Cotton mill shares met with support on the hope that the move to increase production may help improve earnings. An adequate supply of raw cotton during the current season was considered a helpful factor. Recent company reports were considered encouraging in the sense that many companies had plans for further expansion.

Tata Steel were quoted at Rs. 146 and Indian Iron came to hand at Rs. 24.60. Among engineering shares, Tata Locomotive were bought up to Rs. 298.50 and Alcock Ashdown were taken at Rs. 262. Premier Construction were in demand up to Rs. 184.25 and Larsen and Toubro improved to Rs. 37.50 on expansion hopes. Mahindra and Mahindra were transacted at Rs. 21.52 on a report that the Company has been permitted to produce more jeeps. In motor shares, Hindustan Motors were supported up to Rs. 20.16 on talk that the prices of motor-cars may be increased further. Premier Automobile changed hands at Rs. 164.

Prices of cotton mill shares showed gains on balance. Bombay Dyeing improved to Rs. 62.40, as did Century to Rs. 490. Kohinoor were bought up to Rs. 281.25 and Svadeshi came to hand at Rs. 244.50. Khatau were dealt in at Rs. 451.25 and business passed in Standard at Rs. 1,118. Tata Mills were wanted up to Rs. 43 and Simplex were done at Rs. 168. India United Ordinaries were steady at Rs. 14.48, but Apollo were offered down to Rs. 1.54.

Miscellaneous shares showed mixed trends. In cement shares, Associated Cement were in demand up to Rs. 144.50, but Digvijay softened to Rs 151. Sugar shares were hesistant because there was no indication that the Government would exempt the producers from the scope of the Landholding Ceiling Bill. Belapur were quietly steady at Rs. 299 and Phalton were transacted at Rs 146. Walchandnagar Industries were available at Rs. 217.50. Mining shares were firm, and Shivrajpur Syndicate improved to Rs. 82.50 on prospects of a higher dividend. Steamship company shares were irregular. Scindia Steam recovered to Rs. 14.12 on shortcovering, but Great Eastern Shipping lost at Rs. 14.76. Bombay Burmah were quoted at Rs. 556.50 and National Rayon were steady at Rs. 501. Baroda Rayon came to hand at Rs. 123. Chemical shares were steady, and Tata Chemical were in demand up to Rs. 18. Indian Dyestuff were done at Rs. 452.50 and Polychem came to hand at Rs. 222.50. Voltas met with support up to Rs. 260 on the production of a satisfactory report. Ceat Tyre recovered to Rs. 227.50, as did Synthetic and Chemicals to Rs. 132.

Banking shares were steady on good dividends, and Central Bank came to hand at Rs. 57.30. Bank of India were dealt in at Rs. 119. Insurance shares were quiet, and business passed in New India Assurance at Rs. 55.

There was scattered support in electric company shares, and Ahmedabad were done at Rs. 86.50. Tata Power changed hands at Rs. 1,017.50 and Bombay Suburban were dealt in up to Rs. 84.

Madras Market

MORE INVESTMENT ENQUIRY AS SENTIMENT IMPROVES

OPERATORS OPTIMISTIC ABOUT BUDGET PROSPECTS

Tuesday Evening.

SENTIMENT improved in the Madras stock market during the past week on broadening investment enquiry at rising prices. Professional support was, however, given on a limited scale because operators were unwilling to extend commitments until the Budget uncertainties were over. There was modest optimism concerning the coming Central Budget, and it was thought that there might not be any increase in direct taxes. It was complacently believed that there might actually be some reliefs in direct taxes.

Selective support was forthcoming on good corporate news. Cotton mill shares were bought on prospects of increased yarn production. It was stated that the Ceylon Government has relaxed the import restrictions for inferior grades of cloth and yarn. Bank shares were supported on the payment of satisfactory dividends. Sugar shares met with scattered interest on reports of higher production. In plantings, rubber shares were fancied on the view that the domestic production of the commodity was running far behind the demand. Coffee shares improved on the belief

that attempts are likely to be made to stabilise the international price of the commodity. Miscellaneous shares were bought with discrimination on corporate news.

In Government securities, there was fresh support for State Loans. Among banks, Indian Overseas were done up to Rs. 99 and Pandyan were bought at Rs. 33. Canara came to hand at Rs. 85. In public utilities, business passed in West Coast at Rs. 13.37 and in Vellore at Rs. 13.10. Ellore were steady up to Rs. 16.55, as were South Madras up to Rs. 9.90.

In sugar shares, United Breweries were firm at Rs. 112 and Mysore were bought up to Rs. 58.25. Deccan were quoted at Rs. 13.95 and business passed in E.I.D. up to Rs. 39.75. K.C.P. were steady at Rs. 24.53 on the payment of a taxable ordinary dividend of 15 percent.

In plantings, Blue Mountain were in demand up to Rs. 3.92, as were Cochin Malabar up to Rs. 7.60. Consolidated Coffee were done up to Rs. 23.15 and Ouchterlony were transacted up to Rs. 4.62. Periakaramalai were steady at Rs. 3.60 and Kil Kotagiri were done up to Rs. 5.07. Devashola met with support up to Rs. 31 on paying an interim taxable ordinary dividend of 10 percent. Balannoor were taken at Rs. 16.40 and Midland were dealt in up to Rs. 11.65. Peermade were steady up to Rs. 22.30 and Rajendra were done at Rs. 13.02. United Nilgiri came to hand at Rs. 23.90 and Waterfall were done at Rs. 3.19.

Among textile shares, Lakshmi were steady at Rs. 154, as were Madura at Rs. 35. Travancore Rayon were firm at Rs. 33.90 on talk of expansion and South India Viscose recovered to Rs. 145. Buckingham were sold down to Rs. 192, but Bangalore Woollen were dealt in at Rs. 195.50. Loyal were steady up to Rs. 36.25, as were Kothari up to Rs. 12.25. Rajalakshmi were dealt in up to Rs. 75.25 and Venkatesa were steady at Rs. 191.

In the miscellaneous section, business passed in Aluminium Industries up to Rs. 22.85 and Ashok Leyland were in demand up to Rs. 8.70. India Cement were steady at Rs. 6.05 and Andhra Scientific were bought up to Rs. 11 on paying a taxable ordinary dividend of 6¼ percent. Indian Steel Rolling Mills were taken at Rs. 10.05 on declaring an interim ordinary taxable dividend of 5 percent. Enfield were steady at Rs. 50, as were F.A.C.T at Rs. 10.12. Parry's Confectionary were dealt in up to Rs. 5.20 and Spencer were quoted at Rs. 22.60. Standard Motors met with support up to Rs. 16.75 and Textool were in demand up to Rs. 172. Travancore Cements were sold down to Rs. 8.60, but Tube Investment were in demand up to Rs. 291.

10 YEARS OF PROGRESS

ACC DOUBLES ITS CEMENT PRODUCTION!

Careful planning and determined effort has enabled the ACC to double its cement production from 17,80,000 tonnes in 1950 to 34,84,000 tonnes in 1960.

ACC factories continue to produce larger and yet larger quantities of quality cement for India's urgent needs.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

BANKING CONTROL IN A GROWING ECONOMY

By R. M. Mitra

RECENT developments have revived discussion on the aims of banking control in India. The Reserve Bank of India Act, 1934, declared that the purpose of the central bank was to regulate bank notes "with a view to securing monetary stability", and "generally to operate the currency and credit system" to the advantage of the country. The Banking Companies Act, 1949, did not start with such a solemn pledge; the preamble only emphasised the need "to consolidate and amend the law relating to banking companies". To protect depositors' interests and maintain a sound and vigorous banking system are commonly accepted objectives of control. But how these objectives are to be achieved has not been clearly formulated. The Banking Companies Act accords legislative sanction to the vague aim. Section 22, which deals with licensing, requires a bank to be in a position to pay its "depositors in full as their claims accrue". It also says that the bank's affairs are not "to be conducted in a manner detrimental to the interests of its present or future depositors". Section 35, which authorises the Reserve Bank to inspect banking companies, calls for punitive action if the affairs of a bank "are being conducted to the detriment of the interests of its depositors".

The legislation does not clarify what factors constitute detrimental conduct or militate against a bank's ability to pay its depositors "as their claims accrue". Specific provisions have, however, been made: (i) to prohibit trading in goods; (ii) to restrict the holding of immovable property; (iii) to regulate conditions of employment; (iv) to lay down minimum requirements of paid-up capital and reserves; (v) to prohibit a charge on unpaid capital; (vi) to restrict the creation of a floating charge; (vii) to regulate the payment of dividends on shares and transfers of profits to the reserve fund; (viii) to prevent the interlocking of directorates; (ix) to require the maintenance of minimum cash and secondary reserves; (x) to restrict the holding of shares in other companies; (xi) to prohibit unsecured loans to a director or to a concern (other than a public company) in which a director is interested, and (xii) to require a banking company to hold its assets in India to the extent of not less than 75 percent of its total liabilities.

Interests of Depositors

The provisions for holding immovable property, cash and secondary reserves are meant to prevent resources from being frozen. They thus promote the capacity of a bank to pay its depositors as their claims accrue. Although the other specific provisions may also have an indirect bearing on liquidity, they seem to be intended primarily to ensure sound and prudent management and ultimate solvency. Yet the general scheme of the Act indicates that the legislators do not intend that the rule of *ejusdem generis* will operate. Compliance with these provisions is not, by itself, considered enough. Section 21 of the Act confers a general power on the Reserve Bank to "determine the policy in relation to advances to be followed by banking companies generally or by any banking company in particular." The power can be exercised if, at any time, the Reserve Bank considers it "necessary or expedient in the public interest". The concept of "public interest" is wide, it may concern the general monetary and credit conditions in the country and need not be directly connected with the position of a particular bank.

In this connection, it is worth noting that the term "national interest" was introduced in the later amendments of the Act (through Sections 35A and 45). The legislators' intention was apparently the same, so it is hard to see why two separate terms were used in the same enactment meant to serve the same purpose. Section 35A empowers the Reserve Bank to issue to banking companies generally, or to any banking company in particular, such directions as it considers fit, whether "in the national interest", or "to secure proper management", or "to prevent the affairs of any banking company being conducted in a manner detrimental to the interests of the depositors". Again, Section 36 authorises the Reserve Bank to "caution or prohibit" a banking company "against entering into any particular transaction or class of transactions", and generally to "give advice to any banking company".

Direct Reference

Unlike Section 21, the provisions of Sections 35A and 36 have direct reference to the conduct of the affairs of an individual banking company and need not relate to the general economic or monetary situation in the country. These provisions also seem to make it evident that what harms the interests of the depositors is to be determined by the Reserve Bank in its discretion. The judgment will not be limited by an application of the requirements specifically mentioned in the Act. Subsection (3) of Section 22 requires the Reserve Bank to be satisfied that a banking company "is or will be in a position to pay its present or future depositors in full as their claims accrue", before the banking company is granted a licence to carry on banking business in India. Again, Section 38(4) provides that when a banking company is to be wound up on the ground that it cannot pay its debts, it shall be deemed to be so unable if, following an actual refusal on its part to meet a lawful demand, the Reserve Bank certifies that the banking company is unable to pay its debts. The conclusion thus emerges that the specific requirements prescribed in the Act are just a formality. The material conditions which determine the effective conduct of a bank's business are to be laid down by the Reserve Bank in the course of its administrative functions.

Rationale of Control

Experience does not support the soundness of such an arrangement. It confers unlimited authority on the official executive. Yet it expects the business executive to be ultimately accountable, and the creditors and shareholders to bear losses, in the event of the concern being wound up or otherwise adversely affected because of official action. The question involved goes beyond the legal issues pertaining to the American doctrine of "police power" recognised in Article 19 of the Indian Constitution. It is also not merely a question whether it is reasonable "to make the exercise of a fundamental right dependent on the subjective satisfaction of the executive". The real question is whether an imposed policy in a developing economy, which is supposedly functioning under the competitive conditions of a free democracy, can be so devised as to ensure fulfilment of the basic condition justifying a limitation on fundamental rights.

The U.S.A., the U.K., West Germany and Japan illustrate the marked differences which characterise the composition of banking assets in different countries. In 1959, the cash reserve (comprising cash, deposits with other institutions and call loans) accounted for about 15 percent of the deposits of commercial banks in Japan, 23 percent in the U.S.A., 16 percent in the U.K., 19 percent in West Germany and 9 percent in India. Secondary reserves, comprising Government securities, represented less than 2 percent in Japan, about 27 percent in the U.S.A., 40 percent in the U.K., 7 percent in West Germany and 43 percent in India. Loans and advances formed about 82 percent in Japan, 50 percent in the U.S.A., 65 percent in West Germany and 53 percent in India. The proportional relationship of the various categories of banking assets differs widely in different countries. While long-term and medium-term mortgages and consumer credit are important in the commercial bank credit of several countries, particularly the U.S.A., such loans are discouraged by the authorities in India.

Undisturbed Control

It is clear, therefore, that there is no a priori principle available for regulating a bank's business, particularly in an economy which is changing fast. It is time, therefore, that the authorities reviewed the whole question of banking control in India. Having wisely decided not to nationalise banking, they should leave the business in the undisturbed control of shareholders, and the natural influence of depositors, subject to well-defined regulations laid down by the law. Any other course may lead to an injurious conflict between the business policy of bank management, which is necessarily flexible in a fluid economy, and the requirements of official directives, which are often conceived in a crusading, doctrinaire spirit and are subject to unpredictable changes.

The manner in which the consolidation of the banking system in India is being discussed in the Press and in official pronouncements threatens to harm the progress of banking and the interests of depositors. A feeling of uncertainty is being created and depositors are becoming bewildered. The growth of the economy calls for a progressive approach, not sensational condemnation. To enforce the U.S. system of banking control without accepting the U.S. principle of the collective absorption of losses will cause confusion rather than protect depositors.

initiative from the shop floor

The manufacture of crowbars in Tata Steel's Agrico factory in Jamshedpur involved a number of time-consuming and uneconomic manual operations. Ratan Singh, a foreman, decided to do something to improve matters. Carefully studying the problem, he designed a die which cut down work, improved the product and substantially increased turnover at reduced cost. For his brilliant work, Ratan Singh received an award of Rs. 3,000.

In the ten years up to 1960, Tata Steel employees have put forward a total of 10,165 major and minor suggestions—an average of three a day. In the latest year, 445 suggestions were received, 54 of which have merited rewards.

Thus, initiative from the shop floor is helping to improve productivity at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

SYNTHETICS THREATEN POPULARITY OF NATURAL FIBRES

SHARP RISE IN SALES FORECAST

ONE is constantly being reminded that the rapid progress of synthetics is setting limits to sales of some of India's principal exports: natural fibres (cotton, jute, wool, etcetera) and the fabrics and piecegoods woven from them. Yet the vague term "synthetics" (often confused with "man-made fibres" or even with "artificial" fibres) covers a bewildering variety of materials, each of which is known by a different name in different countries, few of which are currently imported into India and fewer still produced here. Widespread ignorance of the varieties and the properties of synthetics is, therefore, natural—but not excuseable, beause the signs are that their competition with natural fibres will become very much keener in the years immediately ahead. For example, a forecast of U.S. consumption between now and 1965 suggests that sales of synthetics will increase by 145 percent, while cotton gains only 9 percent, whereas wool will lose 13 percent and rayon 9 percent. In this matter, as elsewhere, American trends are repeated in western Europe with a delay of a few years, and indeed as European technology advances the length of that delay is being cut. So the tendency may be taken as general in the industrialised countries, *i.e.*, in most of India's export markets for fibres.

Synthetic fibres made their appearance in the U.S.A. just before the second World War, but their great advance dates from after the war and particularly in the 1950's. World production of synthetics was 3,000 tons in 1938, and it had risen to 70,000 tons in 1950. By 1959, this figure had soared to 575,000 tons, while last year's output is estimated at 809,000 tons. The 1959 figure meant that production of synthetics was still only about 5 percent of the total world output of natural fibres, in terms of weight. But comparisons in terms of weight are quite misleading because synthetics are much lighter than natural fibres, and thus give a greater volume of textiles a kilogram.

Rapid Expansion

In 1950, the U.S.A. was still producing 80 percent of the world's synthetics, but she now turns out less than half of the total because Japan (now second producer with 14 percent of the total), western Europe and the communist countries have all vastly expanded their synthetic fibre industries. Synthetics are being produced today in 27 countries, of which the principal are listed below for 1960:

NON-CELLULOSE SYNTHETICS PRODUCTION IN '000 METRIC TONS

World total	809
U.S.A.	406.7
Japan	110
United Kingdom	65.8
Common Market	114.8
West Germany	34
France	39.5
Italy	32.5
Holland	5.4
Belgium	3.4

What are the synthetics? Along with the artificial fibres, they fall into the class of man-made fibres, in contrast to natural materials which nature presents to us already in the form of fibres. The artificial fibres are made from a natural material, cellulose, which is extruded in the form of filaments; long familiar since a French nobleman, Count Chardonnet, discovered this process and the Germans perfected it, they are of two main kinds: rayon and rayon staple fibre, both flourishing Indian industries. The synthetics, in contrast, are entirely built up by chemical ingenuity out of by-products of the oil and coal industries. Nevertheless, there are materials which straddle the border between the artifical and the synthetic, such as the polynosic fibres called 354. These are better regarded as chemically improved versions of rayon and are left out of this review, as is glass fibre which, it should be noted however, is a revolutionary product with a brilliant future over a vast range.

Nylon was the first of the synthetic fibres and probably still the best known. To it have by now been added over 100 other synthetic fibres, which the chemists divide up—according to their chemical structure—into 11 groups. Of these groups, three are of outstanding importance and account for most of the synthetics produced around the world: the polyamids, the polyesters and the acrylics.

The Polyamids

The polyamids are, essentially, the nylon family. It is with them that new synthetics industries always begin, and they make up the bulk of production everywhere: 60 percent of U.S. synthetics, 50 percent of Japanese and 70 percent of British. Yet the polyamids are beginning to lose ground to the polyesters and acrylics, and they do not perhaps represent the main line of future development. The main sub-varieties are Nylon 66, usually known as nylon simply; Nylon 6 which is called Perlon in West Germany and Enkalon in Holland; and a newcomer, Nylon 11, produced in France under the name Rilsan and which has special properties that make it suitable for coloured hosiery.

In addition to these names, there are dozens of other labels and trade marks which one will find attached to nylon, such as Technyl, Nylsmart, Nylfrance, etcetera. These do not indicate different chemical properties (as Nylon 66, Nylon 6 and Nylon 11 do) but are commercial appellations. They have a great importance, however. Nylon 66 might always be the same thing chemically, but it has been found that different methods of treating it when it passes through textile mills and clothing factories can destroy some of its properties; some American nylons have been notoriously inferior because a textile manufacturer received from Dupont the same nylon as everybody else but used finishing techniques which damaged it chemically. To guard against that, some synthetics manufacturers put a brand name on their product, advertise that name widely and insist that all intermediaries in the weaving and piecegoods trade conform to their methods of treatment before they are allowed to put the advertised label on the finished article. Thus, the confusing diversity of names for nylon is not the result of a vain "product differentiation" so much as an attempt by the chemicals industry to educate the ancient textiles industry into its new scientific responsibilities.

Polyesters and Acrylics

The acrylics are the latest arrival in the field but they have progressed spectacularly and are now second only to the polyamids. In the U.S.A., they represent about one-quarter of synthetics. They are sold under the names Orlon, Acrilan, Creslan, Zefran, Verel and Dynel. Only recently produced in Europe, they are still being adjusted to European tastes, but West Germany has taken the lead with a promising acrylic called Dralon. The Belgian firm Fabelta has introduced a similar fibre called Acrybel. The acrylics show in an accentuated form a characteristic of all synthetics: the property of heat insulation. They are, therefore, being used to make pullovers and blankets.

The polyesters are also developing rapidly, and now make up 14 percent of the U.S. synthetics output. They are marketed in the U.S.A. under the names Dacron, Vycron, Teron and Kodel. In Britain, I.C.I.'s polyester Terylene has had an enormous success, claiming 27 percent of the U.K. synthetics market. This fibre is manufactured in numerous countries under British licence, and thus one has the names Tergal (France), Trevira (West Germany), Terital (Italy), Terlenka (Holland) and Tetron (Japan). The polyesters, in turn, display in a high degree a quality of all synthetics: they are eminently uncrushable. Thus, mixed with wool, they are the ideal material for suits and costumes.

Principal Uses

Exaggerated advertising claims for the early, and still imperfect, synthetics caused some disappointment in the U.S.A., while the more conservative European consumer has been slower to take to fabrics that his grandmother did not know. There is reason to think that the real boom in synthetic textiles still lies in the future. In 1958, when production was about half the current figure, Americans used 1.14 kilogram a head a year, while the British used 0.59, the French 0.47, the Germans 0.39 and the Italians 0.35. Therefore, the closing of the gap between European and American living standards—which is one of the notable features of the present day—will include rapid increase in demand for synthetics. Already the European demand is outrunning the capacity of an industry which is fast expanding.

Clothing has been the main outlet for synthetic materials and will remain so for some time. But ever since someone calculated that a motor-car uses more textiles than the average westerner puts on his back in a whole year, the quest for new industrial uses has been keen. Clothing manufacturers are using synthetics either in a pure form or mixed with natural fibres. For example, the French chlorofibre Rhovyl gives added sheen and strength to woollen jumpers. If it had not been that the trade found that mixed natural-synthetic fabrics had special advantages, the impact of synthetics on the traditional threads would have been much more severe. There is nothing permanent, however, about the present compromise. New synthetics are being developed which will entirely replace the natural fibres and if they are well received, synthetics will go ahead alone without causing even small increases in demand for wool, cotton, etcetera. The most outstanding success of synthetics has been in mercery and hosiery; nylon has completely replaced rayon in women's stockings, for instance.

In industrial uses, it is again nylon which has replaced rayon in the manufacture of motor tyres.

These are the biggest single industrial use, but the list of others is lengthening with astonishing rapidity: transmission belts, ropes, fishing nets, tarpaulins, packaging, etcetera, are all being turned out more and more in synthetics. It is notable that almost all western jute or linen mills have set up a synthetics division, to marry the old fibre with the new or to smooth their transition out of the traditional industry into the chemical age. A promising new outlet has just been tried in agriculture: the use of immense nylon sheets to protect crops from the weather—in districts where hail can entirely ruin a grape crop—the outlay is, obviously, thoroughly justified. Finally, furnishing fabrics provide an outlet of growing importance, and one where the synthetics directly impinge on jute cloth. In carpets and all types of floor covering, curtains, blinds and every variety of household fabric, synthetics have made their appearance, often mixed with the older natural fibre but increasingly on their own.

Some Advantages

These and other fields have been conquered by synthetics in spite of the fact that they are still much more expensive than natural or artificial fibres. That is because they present some advantages which make the difference in price worth paying. They are light in weight, strong, generally hard-wearing and elastic, shrink-proof and crease-proof, quick-drying, need little or no ironing, and resist moths, moisture and acids. Not all possess those qualities equally. As noted, one synthetic will bring out one or other of those properties to a marked degree: nylon is the hardest-wearing, for instance, and can thus be made into the finest fabrics.

It must be remembered that, being the product of human ingenuity, there is nothing fixed about their properties, as there was with natural fibres whose qualities were unchanged for millenia—until the chemists got to work on them, too, and produced such novelties as permanently creased wool (for trousers and pleated skirts) and uncrushable cotton. Such improvements have saved the natural fibres from real disaster in the last few years, but the scope for further improvement is limited whereas there are virtually no bounds to what can be done by "the men in white suits". At any moment, a laboratory discovery can open up to synthetics fields hitherto denied them, as when the production of extensible nylon revolutionised the hosiery industry overnight. This point must be stressed since the synthetics industries are spending a fortune weekly on research; natural fibres are living in a dangerous world.

Price Differential

They are, as mentioned, so far protected by a price differential but this too is shrinking rapidly. Once current massive investment in coal chemistry, oil refining and synthetics has been written off (but assuming that new discoveries do not involve fresh capital outlays), the widening market for synthetics will permit price cuts which could be considerable. Even now there is reason to suppose that some manufacturers of synthetics could offer much lower prices if they were ready to cease drawing rent from the prestige of a name. Whatever happens, synthetics share with artificial fibres the advantage of stable prices compared with the wide variations, from season to season, of natural fibres. Every time a bull market in the speculative natural fibre business pushes prices up, the life of that fibre is reduced by so many months—or years. The clearest threat on the price front comes from a new group of synthetics which is barely going into production: the polypropylenes, manufactured from propylene, a by-product of the cracking of crude oil.

One could conclude this brief survey on a more optimistic note by recalling the lift synthetics have given natural fibres when used in conjunction with them, or when they have stimulated chemical improvements in the treatment of natural and artificial fibres. But such comfort as one might thus derive would be more than counterbalanced by a fact which has not been touched on here: the inroads that tough, solid synthetics are making into other raw material markets besides textile fibres, and which threaten the future of wood and many metals now exported by developing countries.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced further by 0.2 percent to 126.2 during the week ended 28th January, 1961, compared with 125.9 for the previous week. The index was higher by 1.6 percent and 5.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for January 1961, worked out to 125.6, compared with 124.6 (revised) for December 1960, and 118.8 for January 1960. The prices of rice in Kakinada (−11%) and in Hailkandi (−7%), salt (−10%) and jowar in Surat (−7%) and in Gulburga (−5%), onions (−7%), potatoes (−4%), eggs (−3%), arhar and coconut oil (−2% each) and masur, urad, bananas, coffee and black pepper (−1% each) declined, while those of rice in Jagdalpur (+10%), Madras, Nagpur and Newgarh (+7% each), Kotma (+6%) and Chiplun (+5%), cashewnuts (+10%) and maize in Khageria (+9%), jowar in Hubli (+8%), and in Hospet (+5%), oranges (+2%) and mung, groundnut oil, gingelly oil, mustard oil and gur (+1% each) moved up, and the index for Food Articles stood at 116.6, compared with 116.6 for the earlier week. The index for Tobacco advanced by 0.5 percent to 110.2 due to a rise in the price of raw tobacco (+1%). The Fuel, Power, Light and Lubricants group index stood stationary at the previous week's level of 120.2, in spite of a rise in the prices of castor oil (+1%). The index for Industrial Raw Materials rose by 0.4 percent to 156.4 due to an increase in the prices of tanning materials (+8%), raw jute (+4%) and raw silk (+1%), although the prices of castorseed (−7%), gingellyseed (−4%), cottonseed (−3%) and rapeseed and copra (−2% each) declined. Lower prices of linseed oil (−3%) and cotton yarn and zinc (−2% each) brought down the index for Intermediate Products by 1.1 percent to 133.5. The prices of coir yarn and tin (+1% each), however, moved up. The index for Finished Products advanced further by 1.2 percent to 127.8, compared with 126.3 (revised) for the previous week, due to a rise in the prices of jute manufactures (+6%), although the prices of oilcakes (−1%) declined.

COMPLETE SHIP REPAIRS

FOR OVER HALF A CENTURY

The site of Garden Reach Workshops covers an area of 64 acres with half a mile of river frontage, slipway and dry-dock facilities suitable for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight.

*

SHIPBUILDING

Garden Reach Workshops have provided complete ship repair facilities at Calcutta for over fifty years. The Workshops are fully equipped to handle major and minor repairs to vessels in the River Hooghly, in the stream and in wet-docks, dry-docks and lay-up berths allotted by the Calcutta Port authorities. Stocks of components and spare parts for M.A.N. Marine Diesel Engines are maintained in Bond and complete servicing facilities are readily available.

FACILITIES

Garden Reach Workshops handle **a daily average of 25 to 35 ocean-going vessels** and during the two years ended 30th September 1959, the Workshops have conserved foreign exchange to the extent of **Rs. 48 lakhs** being the value of repairs carried out to Indian-owned deep-sea vessels; foreign exchange earned during the period by way of repairs to foreign-owned vessels amounted to **Rs. 1.44 crores.** Garden Reach Workshops are capable of handling twice this volume.

FOREIGN EXCHANGE : SAVING AND EARNING

Shallow-Draft vessels consisting mainly of Harbour Tugs, Launches, Water-Boats, Barges, Dredgers and Pontoons are wholly constructed at Garden Reach Workshops and during the past four years the value of those vessels amounted to almost **Rs. 2 crores,**—a valuable contribution to the saving of foreign exchange. Plant and experience combined with expert craftsmanship and supervision enable competitive rates to be quoted for all General Engineering Work.

Jute

PRICES DROP SHARPLY ON RUMOURS OF STIFF GOVERNMENT CONTROLS

BUT CLOSING UNDERTONE STEADIER AS DEFINITE NEWS AWAITED

THE main talking point during the past week has been the report published last Saturday that the Government proposes to assume wide powers *so as to prevent any further rise* in the prices of raw jute and gunnies. The report added that action might be taken to fix maximum prices, confiscate stocks of both raw jute and gunnies, and impose other restrictions on trading in order to check violent price fluctuations. The initial reaction was a slump in all sections of the market, so a nervous and hesitant undertone developed. *Jute goods fell by about Rs. 80* or Rs. 90 a ton, and raw jute by Rs. 54 a ton. Business virtually came to a standstill, but the tension relaxed when it was realised the report was not an official Press note.

If the report was merely aimed at bringing prices down, it has been successful, but only up to a point. Rates have again hardened at the lower levels as operators have begun to realise the difficulties which will arise in enforcing the measures. As the report is analysed, many discrepancies become apparent, not the least of which is the estimate that the jute crop during the current season will total about 5.4 million bales. This contradicts previous Government statements, and makes one wonder why, if the figure is correct, no official crop estimate has been published. The longer it is delayed, the greater will be the belief that the Government is afraid of issuing the figures because they are very low. At this stage, any final estimate the Government issues will not be believed and will only cause fresh speculation.

Gunny Stocks Rise

The publication of the I.J.M.A. jute goods stock figures for January has caused some surprise. Instead of the substantial fall predicted by the *market, there has been a rise of 4,700 tons.* Most of the increase is in sacking stocks, but it is thought that the figures include about 10,000 tons of Government orders which were not taken up in January but were put to stock. This created a false impression, so the size of the stocks is now discounted.

During the past week, the demand for jute goods has shown no signs of decreasing. Enquiry for ready and early deliveries has continued. As mills have had scarcely anything to sell, shippers with commitments for early delivery have been forced to pay the prices asked by bazaar holders. But sooner or later the bear position will be liquidated, and the market will then have to depend on fresh business from overseas. At present, there is not much business, although some consumers abroad seem to have been frightened into paying higher prices. It is said, however, that they are mainly people who were misled into believing that they could always count on the bazaar underquoting mill prices. Mills have not been able to take much advantage of the higher prices of goods for the near positions because they have already sold most of their output for these deliveries. As there are no offers of jute for forward shipment, mills are also frightened to book orders forward in case they do not get the jute to cover them.

General Outlook

When the present squeeze has been relaxed and the curtailment of production by mills has taken full effect, it will be possible to get a better idea of the general outlook for heavy goods. But it appears that the transfer of production to sacking has been carried a little too far. As a result of this, the saving in jute proposed by the reduced production has been counteracted by the increase in jute consumption brought about by the manufacture of the heavier sacking constructions. The I.J.M.A. gunny production statistics for January, for instance, show that although working hours were reduced to 189 (24 less than in December), the average hourly production increased by 31 tons to 456 tons. This is the second highest figure for the current season, and is mainly due to an increase of nearly 1 percent in the production of sacking and other goods.

The mills' total production during January 1961 amounted to 86,200 tons in 189 working hours. This was 4,500 tons less than in the previous month, which had 213 working hours. Hessian production was 30,900 tons (35.9 percent), sacking 46,900 tons (54.4 percent) and other goods 8,400 tons (9.7 percent). The total production for the period from July 1960 to January 1961 now amounts to 6,177,000 tons, made up of 231,100 tons of hessians (37.4 percent), 327,100 tons of sacking (52.9 percent) and 59,500 tons of other goods (9.7 percent). In January 1960, production amounted to 86,700 tons, made up of 36,700 tons of hessians (42.3 percent), 42,900 tons of sacking (49.5 percent) and 7,100 tons of other goods (8.2 percent). Working hours totalled 197.5 and the average production an hour was 439 tons.

After the initial excitement caused by the newspaper report about trading restrictions, when fibre prices fell by Rs. 2 a maund, the raw jute market has recovered and remained steady at the lower levels. The issue of a nominal quota to mills has not encouraged any great interest. Although sellers have put up more offers, they have been reluctant to discount. Upcountry markets are firm and imports continue to be small. Sellers in India are very much influenced by the fact that supplies in the districts appear to be exhausted, so if they sell now, they will not be able to replenish their stocks. It is understood that, on Friday, the representatives of the forward market authorities in India are meeting in Calcutta. Local operators have been speculating about the outcome of the meeting. Many fear that it may lead to the fixing of prices, and this has put an effective brake on market transactions. Since rumours have been circulating recently about the fixing of prices and the confiscation of stocks, operators are reluctant to commit themselves in case they are caught.

Token Strike by Jute Mill Workers

On Monday, workers in many jute mills in and around Calcutta observed a token strike called by various unions as a protest against the Indian Jute Mills Association's decision to curtail the weekly working hours to 42½. It is estimated that about 225,000 workers were involved, affecting about 80 mills. The strike was peaceful, and all mills resumed work on Tuesday morning.

THE JUTE MARKETS

Manufactured Goods: The market was very firm at the opening on Thursday, and prices forged ahead on the strength of further reports about a raw jute shortage. The opening quotations for B Twills jumped up to Rs. 215 for ready shipment, and 40in. 10oz. hessians were at *Rs. 68.75.* New high levels were reached during the day in both sections and boom conditions prevailed. The mood changed quickly, however, following the publication of a report that drastic measures were contemplated to bring down the prices of raw jute and gunnies. B Twills dropped by Rs. 8 and hessians by about Rs. 3 as the market became nervous. Confidence returned over the week-end, when sacking recovered by about Rs. 2. From then on, steady conditions prevailed at the lower levels, but towards the close, in the absence of fresh business, prices tended to ease.

Opening quotations on Wednesday morning were as follows:

	February	March	Apl.-June
40in. 7½oz.	49.50	46.65	49.00
40in. 8oz.	54.25	53.75	53.00
40in. 10oz.	65.85	65.65	65.10
B Twills	206.50	203.50	200.00
Heavy Cees (Plain)	205.00	203.00	200.00
A Twills	241.00	240.00	236.00
Liverpools	225.50	225.50	223.50
Cornsacks	216.00	209.50	205.00

Raw Jute: In response to steadier conditions upcountry and smaller imports in the agencies, local fibre rates advanced by about Rs. 2 on Thursday morning and Assam Bottoms were quoted at Rs. 66.50. Prices continued to rise, business was reported well above the quoted rates, and sellers became very reserved. Rumours about the possibility of a quota issue strengthened sellers' ideas, but these changed rapidly on Saturday, when the requisitioning of stocks and the fixing of maximum prices was forecast in a newspaper report. About Rs. 2 was taken off the price of jute, and all offers were withdrawn while the report was studied. After the initial nervous reaction, sellers began to offer at the lower rates, but mills showed little interest. On Tuesday, more jute was put on offer, but buyers did not appear to be in any hurry to take up the nominal quota issued to them. So prices gradually fell back to Rs. 64, and some sellers were prepared to discount at this level. Arrivals in Cossipore were slightly higher than in the previous week, a total of 725 wagons being reported.

On Wednesday morning, the market continued its downward tendency, and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	170.25	63.50	Feb.-March
Northern	167.50	62.50	"
Purnea Desal	164.75	61 50	"
Daissee Selected	174.25	65.00	"
Assam Tossa	172.75	64.50	"
Mesta:			
Assam-Northern	162.00	60.50	"
Desal-Daissee	162.00	60.50	"
Jungli	159.50	59.50	"
Pakistani Cuttings N. C.	300	a bale	

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total production of jute goods for January as follows:

Description	Quantity	
1. Gunny Bags		
(a) Hessian	3,053 tons	(3,102 metric tons)
	1,03.8 lakh yds.	(94.96 thousand metres)
	81.6 lakh nos.	
(b) Sacking	46,516 tons	(47,262 metric tons)
	10,99.3 lakh yds.	(10,05.24 thousand metres)
	4,63.2 lakh nos.	
2. Gunny Cloth		
(a) Hessian	27,838 tons	(28,285 metric tons)
	10,65.6 lakh yds.	(9,74.26 thousand metres)
(b) Sacking	349 tons	(355 metric tons)
	7.4 lakh yds.	(6,74 thousand metres)
3. Other Manufactures	8,440 tons	(8,575 metric tons)
4. Total Production (All kinds)	86,196 tons	(87,579 metric tons)

Summary

	(00,000 yds. and 000 metres) Jan. '61	Dec. '60	Jan. '60	(000 tons and metric tons) Jan. '61	Dec. '60	Jan. '60
Hessian	11.69	12.35	13.68	30.9	33.3	36.7
	(10,69.32)	(11,29.45)	(12,51.02)	(31.4)	(33.8)	(37.2)
Sacking	11.07	11.40	10.38	46.9	49.2	42.9
	(10,11,98)	(10,42.36)	(9,49,26)	(47.6)	(50.0)	(43.6)
Others				8.4	8.2	7.1
				(8.6)	(8.3)	(7.3)
Grand Total				86.2	90.7	86.7
				(87.6)	(92.1)	(88.1)
Hours worked				189.0	213.0*	197.5

*This was the number of hours scheduled to be worked and does not take into account the number of hours lost due to the general strike on 20th December.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute industry has been hoping for some time past that prices will fall back again to a normal level, but the rates are still as firm as ever and are actually dearer. Meanwhile, consumers of jute yarns and cloth are threatening to use substitutes because of high prices and the uncertainty concerning the future. But most substitutes are also dear now and are not always readily available. There really is nothing like jute; it is not only useful for packing all sorts of materials and is most suitable for various other purposes.

Unfortunately, speculators can enter the jute markets and gamble on scarcity, spreading rumours which may not have any truth in them. No one can say how much raw jute is being held back in upcountry centres in either Pakistan or India, and it is possible that there will be plenty of jute to satisfy all requirements of the industry *this year. The authorities have already said that* there will be no hindrance to increased sowings next season, and, in particular, the belief in Pakistan is that there can never be another situation like the present one. Growers will be encouraged to sow as much jute as they can, with a view to having a good carry-over to the next season.

Prices are up again to £207 for Mill Firsts, £199 for Mill Lightnings, £195 for Mill Hearts and £193 for Grade Hearts, with Grade Tossa-2/3 from £199, fours £197 and Continental Tossa-2/3 at £193, c.i.f. U.K.-Continent, February-March. These are the lowest rates quoted in Dundee, some of which are for secured parcels, offered at under the general market prices.

Prices for Calcutta goods have sharply advanced to 104s 9d for 40in. 10oz. hessians and 79s for 7½oz., February, 104s 3d and 78s 6d for March and 103s and 77s 3d April-June, with B Twills at 329s 9d, 323s 9d and 316s for the respective months of shipment, all f.o.b., Calcutta.

Values of jute yarns and cloth in the U.K. were raised by £5 a ton from 10th February. For 8 lbs cops, the rate is now up to 24.03d from 23.46d a lb and 8 lbs J.C.H. warp to 25.18d from 24.60d. Hessians are now at 19.43d a yard for 40in. 10oz and 16.25d for 8oz., from 19.05d and 15.94d, respectively.

THE PAKISTANI JUTE MARKETS

LIMITED OFFERS FROM SELLERS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE E.P.C. registrations for the second half of *January totalled 153,670 bales. The U.K.* which bought over 17,000 bales, has maintained the same buying rate as last season. India bought 15,000 bales bringing the total for the current season so far to 378,000 bales. Belgium at 12,000 bales and West Germany at 16,000 bales have bought only slightly less than last season. France

AB-3

has bought only 5,000 bales, or 100,000 bales less than last year. This confirms the report that French mills have restricted production. South Africa has bought over 10,000 bales to-date, which is more than its last year's purchases. This is accounted for to some extent by the reduced freight rates as a result of the freight war. Italy is well behind her last season's purchases and Japan, considering the expansion of her industry, is also behind her last year's purchases. Egypt, on the other hand, has bought much more than last year and has paid generally very good prices. The biggest drop in purchases comes from U.S. buyers, who have bought only 77,000 bales, compared with 281,000 bales last season. This is to some extent offset by purchases beyond requirements last season, but there is no doubt that some of the U.S. mills have cut down operations. Spain, which previously was reported as having bought 30,000 bales, has actually bought only 13,000 bales.

Although there has recently been a fair amount of enquiry from both overseas buyers and Pakistani mills, it has become more and more apparent that not only jute balers do not want to sell from their stocks, but it is also apparent from the quantity being offered that stocks are very low. So it seems that unsold stocks in the hands of the balers are not likely to exceed 100,000 bales.

Touring through the agencies, one gathers the impression that very few of the small balers, be they *kutcha* or pucca, have any stock of sizeable quantity. If, therefore, the crop is as large as 4.7 million bales, this stock must be in the hands of either the larger growers or in the hands of upcountry stockists, who are keeping the goods in stock in loose form. It is hard to believe that in this form very large stock is held. Be they large or small, these goods must come into the market when the new crop begins to come in, say, in April.

The indication, therefore, is that there is no reason for the market to come down just yet. This is confirmed by recent reports that Pakistani jute mills are buying and also that overseas markets are not only fully steady but have again become quite active. In upcountry centres, there has been no sign of weakness whatsoever, and in fact, small quantities are being offered at prices which rise almost daily. Conditions of the fibre in many agencies continued to be bad. In fact, the question of moisture has become so serious that the overseas buyers are considering seriously the inclusion of the moisture clause amendment to the present L.J.A. contract. This has been a bone of contention for many years. The biggest obstacle in inserting it is not so much the resistance of the sellers as the finding of an equitable way of determining the percentage of moisture in baled raw jute.

Considering the amount of jute available, there has been more activity than usual in the pucca bale market in Narayanganj, and business is reported in cuttings at Rs. 270 a bale with a premium for forward delivery of as much as Rs. 5 a bale. Export Firsts are quoted at Rs. 420 a bale and some sellers are even asking Rs. 430. Although overseas buyers are paying approximately the same price for Dundee Tossa 4s as for Export Lightnings, the position is not the same in Narayanganj. The tossa crop in relation to the white crop has been smaller than was expected with the result that Dundee Tossa 4s and even Dacca Tossa 6s which are not so much in demand, are being quoted at the same price or even higher than Export Firsts.

Rainy weather has continued over the past week throughout the country. This is undoubtedly very good for the crop and will not only encourage free sowings but will give the subsoil a reasonable content of moisture which will be of great help to the crop in case the monsoon is delayed. The very small *char* land jute crop should be available in May and as it takes 100 days for the jute to arrive in Narayanganj after it has been sown, reasonable arrivals of the lowland crop may be expected by the middle of June.

DIPLOMACY OF DEVELOPMENT

The Diplomacy of Economic Development. By Eugene R. Black. (Published by the Harvard *University Press. Cambridge* 38, Massachusetts. Price $3, pages 74.)

Why, it is often asked, should rich countries dedicated to the principles of private enterprise *and personal freedom, sacrifice a proportion of* their hard-earned wealth in order to develop poorer ones which may be practising an avowedly socialist creed and who, if they acknowledge the value of personal freedom at all, frequently do not regard it very highly? The answer to this question is very simple: It is self-interest. The rich countries appreciate the fact that freedom can only flourish when fundamental economic wants are satisfied and that, political systems aside, a prosperous country is a more useful trading partner than a poor one. It remains for the richer countries to decide how best to direct their assistance so as to encourage the maximum amount of economic growth among their poorer neighbours. In the process, they are bound to have to overlook many points which though important to the receiving country for political, ideological or possibly religious reasons, are known to the benefactors to be inimical to their overall aim; and out of this situation emerges a new branch of the diplomat's art—development diplomacy. There are no doubts about the qualifications of Mr. Eugene Black for expounding the theory of this new kind of diplomacy, because in the last few years he has been its most outstanding and successful exponent. In this collection of his three William L. Clayton Lectures, delivered to the Fletcher School of Law and Diplomacy, Tufts University, in 1960, Mr. Black outlines the theory and principles on which so much successful action by the World Bank since the war has been based. In a world replete with antagonisms and cold war rivalries, Mr. Black's words deserve close study. They illuminate a field of opportunity which is frequently closed to conventional diplomacy, but is one in which the struggle of the rival ideologies will eventually be decided, to say nothing of the lives and prosperity of more than one-third of the world's inhabitants.

DEBT BURDENS OF POOR NATIONS

Debt Servicing Problems of Low-income Countries, 1956-58. By Dragoslav Avramovic and Ravi Gulhati. (Published by John Hopkins Press, *Baltimore, 74 pages.)*

This is a short but expert study of the problems which arise when poor countries take big loans from foreign governments and institutions, and then have to find the wherewithal to service them. The authors are on the staff of the World Bank, and the quality of their analysis conforms to the high standards of that institution. The subject is of deep significane for underdeveloped countries like India. As primary producers, their export earnings tend to fluctuate violently, while imports have to be maintained at a high level in order to promote development and safeguard the already low standards of consumption. The study indicates how debt servicing can impose a severe strain on the balance of payments from time to time, especially since many of the loans given to such countries are short- or medium-term in nature. The concentration is on public debt; accurate data about external loans secured on private account are scanty, so these have largely been ignored. As the authors caution, a survey confined to a three-year period cannot be assumed as highlighting secular trends. Yet the point is effectively made that there is a real need to ease the difficulties of the underdeveloped countries by enabling them to borrow for longer periods and on easier terms. In this, the study reflects the growth of the new approach to international development financing. Since it provides the economic analysis on the basis of which that approach can be justified, it deserves wide attention.

WOMEN WORKERS

Women Workers of India. By Padmini Sengupta. (Published by Asia Publishing House, Bombay 1. Price Rs. 8, pages 296.)

In the earlier part of the present century, only women belonging to the lower sections of the community worked in factories. The upper-class women lived in ivory tower, surrounded by servants and retainers. Those belonging to the middle class were satisfied with their daily routine of domestic chores Today the upper and middle-class women are finding a purpose in their lives, apart from their homes. Ideals are changing, and the Constitution of India has conceded unconditional freedom to women in every sphere of life. The book is divided into two parts. Part I deals with women in factories, mines, plantations and agriculture. It consists of 16 chapters and is full of factual information about women industrial labour in India. Part II deals with women in services, trades and professions. It discusses many social and economic problems, but the place of women in the film industry is dismissed in two lines. The author is a journalist besides being a labour adviser, so the book is written in a graceful style. Mr. V. V. Giri has contributed a foreword.

RUBBER CESS RAISED TO FINANCE REPLANTING

HIGHER PRICES EXPECTED FOR FINISHED GOODS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

FROM 1st April this year, the Rubber Board will collect from rubber manufacturers a cess of 30nP on each kilogram of raw rubber they consume. A notification empowering the Rubber Board to collect the cess was recently issued by the Central Government under the Rubber (Amendment) Act of 1960. Growers will continue to get the same price for their produce at Rs. 149.50 a 100 lbs, although the cess has been doubled from the present rate of Rs. 6.25 a 100 lbs. It has been raised for financing the rubber replanting scheme. The present indications are that manufacturers of rubber products will pass on the burden of the enhanced cess to consumers of finished goods. According to available reports, rubber goods including tyres, tubes, footwear and industrial belts will cost about 2 percent more from 1st April.

It is stated that although the rubber manufacturing industry does not mind paying a higher price for its raw material, it is not happy to contribute more since the cess collected so far has remained almost fully unused. During the past five years, replantation has been of the order of hardly 20 percent of what it should have been. In addition to the cess, the Government has collected about Rs. 75 lakhs from the rubber manufacturing industry by way of the difference between the import price and indigenous price of raw rubber, so the industry feels that the authorities should have first used this amount on replantation before they contemplated an additional cess. Meanwhile, reports say that the Planning Commission is thinking in terms of dropping the entire scheme for subsidised replanting. The Central Commerce and Industries Ministry and the Government of Kerala which are more intimately connected with the replanting scheme—are, however, opposed to this move. If the Planning Commission suceeds in its endeavour and the system of giving subsidy is dropped, there will absolutely be no justification for collecting the enhanced cess.

Indigenous Production

The Chairman of the Rubber Board may shortly discuss with representatives of the industry and planters the question of returning to the industry the difference between the import price and domestic price of rubber. The current difference is Rs. 25. Imported rubber, it is said, is now cheaper. According to a current estimate, indigenous production may not be sufficient to meet even 50 percent of the industry's demand in 1960-61. While the demand is estimated at 60,000 tons, the natural rubber output in India is placed around 25,000 tons. The 1961-62 demand for all types of rubber is estimated at 75,000 tons. The enhanced requirement is attributed chiefly to the increased production capacities of tyre-manufacturing factories.

World Output Down

The world output of natural rubber was down by 58,000 tons at 1,617,500 tons during the first ten months of 1960, compared with the previous corresponding period, according to the International Rubber Study Group's latest figures. Consumption during the period amounted to 1,670,000 tons, against 1,742,000 tons. On the other hand, both production and consumption of synthetic rubber registered a rise during the period.

Progress in Malaya

According to the president of the Natural Rubber Bureau, Malaya contributed the largest share to the world natural rubber output in 1960. Production last year is estimated at 2,025,000 tons, of which Malaya's contribution amounts to 715,000 tons. She is expected to produce 1.2 million tons of natural rubber in 1970. About 42 percent of her 3.5 million acres of rubber were replanted with high-yielding strains by 1958. The replanting programme has since been accelerated. The objective is to achieve 100 percent replanting in ten or 15 years. If the programme is implemented at the present rate, the whole of Malayan rubber acreage will have high-yielding strains between 1968 and 1973.

COCHIN TEA SALES

At Dust Sale 6, 155,000 kilograms of tea were on offer. There was a strong general demand. The market opened 5nP to 10nP dearer for all types but eased as the sale progressed and closed 5nP easier.

At Sale No 7, 395,000 kilograms of tea were on demand. There was a good demand at lower rates. Plain low mediums and mediums were 10nP to 15nP easier while good mediums declined by 20nP or 30nP. Best liquorings met with a fair demand at lower rates.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES EASIER

AT Sale No. 30, held on 13th and 15th February, the 71,945 packages on offer at the Export auction met with a strong general demand. "Teas for price" were steady while plain brokens sold well at about last rates. Black Dooars brokens were the strongest feature of the sale and were firm to dearer but Fannings in this category were up to 10nP easier. Medium Assam B.O.P.s and O.Fgs. were fairly well supported, particularly the brighter liquoring kinds which were sometimes dearer. Medium B.P.s were firm on about last rates while Fannings were occasionally dearer. Well-made whole leaf grades received good support, and there was more enquiry for the ordinary kinds. Some of the poorest stalky descriptions were, however, again easier. Darjeelings met with improved demand at lower rates. C.T.C. teas with autumnal liquors received good support and were firm to dearer but the ordinary kinds were up to 15nP easier. Fibrous and secondary grades were irregular and up to 10nP lower.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	2.18 to 2.22
Plain B.P.	4.60 to 4.70	1.91 to 1.98
Plain Fannings	4.80 to 4.90	1.98 to 2.08
Medium B.P.	4.70 to 4.90	1.90 to 1.96
Medium Fannings	4.90 to 5.10	2.14 to 2.16
Best Assam C.T.C. B.P.	5.80 to 6.20	2.40 to 2.60
Best Assam C.T.C. Fgs.	5.80 to 6.30	2.45 to 2.60

(Quotations are inclusive of excise duty.)

Dust offerings at the Internal Sale consisted of 21,867 packages. These met with a fair general demand at irregularly lower rates and the market eased further towards the close. Small orthodox types met with fair support, but exportable descriptions eased by 10nP. The brighter Legg-cut kinds sold well; the remainder in this category, however, were up to 20nP easier and towards the end were often difficult of sale. The best C.T.C. Dusts met with keen competition and were disposed of at generally dearer rates. Medium C.T.C.'s were irregular, the smaller and brighter liquoring kinds being a strong feature. The poorest fibrous kinds were virtually neglected towards the close of the sale.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.75 to 4.90	
Medium Assam Dust	4.90 to 5.25	2.22 to 2.42
Legg-cut Dust	5.05 to 5.80	
Medium Assam C.T.C. Dust	5.55 to 5.80	2.26 to 2.36
Good Assam C.T.C. Dust	6.10 to 6.60	

(Quotations are inclusive of excise duty.)

The 769 chests of internal Leaf on offer sold at irregular rates.

LINSEED FIRM

Linseed was firm during the past week due to shortages of supplies from upcountry. Dealers feared crop damages. Crushers were interested daily for seeds but the turnover was small in the absence of sellers. The oil market was firm; local buyers were interested daily due to the firmness of groundnut and mustard oil. The oilcake market was quiet because overseas buyers were not showing interest except at lower prices. The local offtake was not good. The latest quotation is as follows: Ready seeds, Rs. 29.50 a maund.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 7th February and 13th February, 1961)

Cowhides: Wet salted (Ord.) 13,700 pcs. on the basis of Rs. 8.25 to Rs. 12.50; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 76,800 pcs. on the basis of Rs. 335 to Rs. 350, Rs. 385 to Rs 400 and Rs. 440 to Rs. 450; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur-Siliguri 21,200 pcs. on the basis of Rs. 290 to Rs. 350 and Rs. 410 to Rs. 430; Purneah-Kissenganj 4,000 pcs. on the basis of Rs. 385 to Rs. 410; Patna (Ord.) 16,200 pcs. on the basis of Rs. 280 to Rs. 300; Purneah 3,500 pcs. on the basis of Rs. 500.

Bazaar Stocks

(13th February, 1961)

Cowhides: Wet salted 159,300 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and Killed) 30,000 pcs.; Assam-Dinajpur 54,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 81,000 pcs.

COMPANY AND PUBLIC NOTICES

EASTERN INVESTMENTS LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 4-00 P.M., on Monday, the 13th March, 1961, for the following purposes:—

As Special Business.

To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely—

1. That the consent of the Company be and is hereby accorded to the re-appointment of Bird & Co. (Private) Ltd., as Secretaries of the Company who shall hold such office upon the terms and subject to the conditions contained in an agreement in writing, a draft of which is submitted to this meeting and which is for the purposes of identification signed by the Chairman of the meeting and the Directors be and are hereby authorised to affix the Common Seal of the Company to such agreement in writing.

As Ordinary Business.

2. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1960, and to receive the Directors' and Auditors' Reports thereon.
3. To declare the Dividends recommended by the Directors.
4. To appoint Directors in the place of retiring Directors.
5. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 6th March, 1961 to 13th March, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 25th January, 1961.

NOTES:—

(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 27th March, 1961, to those Shareholders so entitled whose names appear in the Company's books on the 13th March, 1961, or to their mandatees. No application for Dividend Warrants will be necessary.

(c) Explanatory Statement as required under Section 173 of the Companies Act has been forwarded to the Shareholders.

THE SHORTCOMINGS OF THE RAILWAYS

AT first sight, the Railway Budget for 1961-62, presented in Parliament by Mr. Jagjivan Ram on Wednesday last week, looks a colourless affair. But it may yet be the case that it is important less for what it does than for what it does not do. It was widely expected that passenger fares, or freight rates, or both, would be raised. In fact, the changes proposed are three, minor and satisfactory. The first is that the passenger fares tax will be merged with passenger fares from 1st April. This will simplify collection and accounting; the extra Rs. 12.5 crores which the railways will get thereby will be transferred to the general revenues and will subsequently be distributed to the States (who, one hopes, have agreed to the change). The second proposal is that the surcharge on small consignments will be raised from 10 percent to 20 percent, since they require special attention and are relatively expensive to handle. The third change is that the minimum distance charged for coal traffic will be 70 kilometres instead of 42 kilometres; in other words, where hitherto it has cost Rs. 4.25 to Rs. 4.98 a ton to move coal over relatively short distances, in the future the minimum charge will be Rs. 5 a ton. None of these changes is expected to increase the railways' revenues much. There may be no increase at all if the second and the third cause a substantial amount of traffic to be diverted to the roads or to other forms of transport. In fact, the main purpose seems to be to shed some of the traffic which the railways find it difficult or uneconomical to carry, so that they can concentrate better on the task of carrying bigger and more remunerative loads over longer distances. At a time when the demand for their facilities far exceeds their ability to cope with it, there need be no serious objection to the principle, although it may hurt coal-using concerns nearest to the coalfields quite badly.

The real objection to the Railway Budget is this: it offers little assurance that the financial condition of the railways is satisfactory. Just before the second plan was launched, certain adjustments were made in fares and freights. During the five years of the plan itself, there have been no less than four increases in freight rates, as a result of which they are more than 20 percent higher now than they were five years ago. Both passenger and goods traffic have increased rapidly over this period. Yet, in terms of building reserves and investing in expansion, the railways' performance has been unsatisfactory. But for the sustenance drawn in the form of loans from the general revenues, their development fund would have vanished long ago because it has been used for financing schemes which often have nothing to do with development. The depreciation reserve fund has been depleted to the point where it will soon be left with only Rs. 14.13 crores, against a capital-at-charge of well over Rs. 1,500 crores—a state of affairs which would bring shuddering thoughts of bankruptcy if it ever came about in a private company. Only in the revenue reserve fund is there a moderate balance of about Rs. 53 crores.

To some extent, it is arguable that the reserves must get depleted if the railways are to undertake rehabilitation and expansion on the scale they have done in recent years. In this sense, some of the money which has gone out of the reserves has, in effect, been capitalised. But the fact nevertheless remains that part of the reserves, and much of the extra revenue raised through higher fares and freights, has been squandered in a way no expanding concern could ever afford. It has been squandered away because the railways have not been able to keep down their current expenditure. They have launched expensive welfare schemes for their staff, without securing corresponding gains in productivity or efficiency, and have accepted many uneconomic obligations for reasons that are purely political. Galbraithians who think that the Indian railways should become more "commercial" in outlook—in the sense that they should improve their profits by raising charges—need to remember this. Only monopolistic exploitation could enable them to combine the extravagance of a welfare service with the profits of a commercial enterprise. To a large extent, exploitation is exactly what they have resorted to, at the cost of the consumer and the country. When Mr. Jagjivan Ram each year sets a new record for dreariness in his Railway Budget speeches by talking about schools, hospitals and holiday homes for railwaymen, he should bear this in mind. Many of these facilities simply could not have been created if the provision for depreciation had not been so low. Even now, the decision to raise the provision from Rs. 45 crores to Rs. 65 crores, in accordance with the recommendations of the Railway Convention Committee, is not only belated but inadequate. No Rs. 1,500-crore or Rs. 1,600-crore enterprise engaged in rapid expansion can claim to be following sound financial policies if this is all it provides. It is doing nothing less than eating into its capital. In the circumstances, the accompanying decision to raise the guaranteed dividend the Government gets from the railways from 4 percent to 4½ percent is insupportable.

The effects are seen in the railways' working, and in the progress of their expansion plans. In 1955-56, the year before the second plan was launched, the railways carried about 115 million tons of goods traffic. The target for the current year, 1960-61, was 162 million tons. In fact, the quantity carried will be only 154 million tons. Mr. Jagjivan Ram has offered a number of explanations for the shortfall. One is that the Government employees' strike in July last year lost the railways about 3 million tons of traffic. Another is that there were severe floods in various parts of the country. A third is that the composition and flow of goods traffic have changed. (But was not the Railway Ministry aware of this when it reaffirmed the 162-million-ton target last year?) The fourth explanation is that, in spite of the handicaps, goods traffic has increased to 54,000 million in terms of ton-miles, which latter is now offered as a better indicator than tonnage alone. This figure of 54,000 million ton-miles, it is claimed, is about 6 percent higher than the second plan target figure; but no explanation has been offered why the plan targets have hitherto almost always been discussed in terms of tons rather than ton-miles.

Similar evasions and disingenuousness have been noticed in previous statements about the financing of the railways' second plan also. When the plan was originally framed, the railways were asked to invest Rs. 1,125 crores over the five-year period, and then be able to carry 162 million tons of goods traffic annually by 1960-61. The Railway Ministry made a huge row, saying the job simply could not be done and more money was needed. A year or two later, it announced that because of price rises, the original Rs. 1,125-crore plan would ultimately cost Rs. 1,225 crores. Last year, without any explanation whatsoever, it declared that only Rs. 1,125 crores would be invested, but 162 million tons of goods traffic would be carried, by 1960-61. This year, again without any explanation, the Railway Minister has announced that the investment figure remains the same, but the plan target for goods traffic is being exceeded by 6 percent (in terms of ton-miles) and the target for passenger traffic is being exceeded by nearly 10 percent. Better things are expected of the gentlemen who frame the railways' plans, over-estimate the costs, and then proceed to raise a countrywide fuss about being given too little money.

Probably because its financial estimates for the second plan were exaggerated and have gone slightly haywire, the Railway Ministry seems to have been conservative in framing its estimates for the third plan period. At the moment, the tentative allocation for the next five years is Rs. 1,255 crores, including Rs. 35 crores for inventories. With this, it is hoped, the facilities for passenger traffic will be increased by 15 percent, and those for goods traffic by 72 percent (in terms of ton-miles). It is thus estimated that originating traffic will rise from 154 million tons in 1960-61 to 235 million tons in 1965-66. (In terms of ton-miles, the increase will be from 54,000 million to 93,000 million.) More than 75 percent of the increase in goods traffic will be on account of coal, steel, cement and iron ore. Certain additional projects are being considered, and if they are sanctioned by the Planning Commission, the third plan targets for the railways may be raised further. A heartening feature of the proposals is that less foreign exchange will be required—Rs. 186 crores during the third plan, against Rs. 332 crores during the second—due to the progress of indigenous manufacture. Experience nevertheless suggests that, with greater co-ordination, even more foreign exchange could be saved. Lack of co-ordination, together with lethargy, has played a major part in bringing about a shortfall in the wagon-building target during the current plan period. Mr. Jagjivan Ram has glossed over these serious deficiencies while talking in general terms about "difficulties in the import of matching steel" for wagon manufacture.

The question which now arises is whether a third plan programme of the size now outlined will enable the railways to meet the demand for their facilities more adequately in the future. The answer, almost certainly, is that it will not. They will carry more traffic, but if the economy expands as fast as it is expected to, railway facilities will remain as short of the requirements as they are today. Mr. Jagjivan Ram seems to have virtually given up all hope of adequacy when he says: "I must dispel a misconception which exists, even in some well-informed quarters, that the task set for the railways is that they must move *all* traffic freely." The misconception really exists in the Railway Minister's own mind. Nobody ever said that, with the relatively limited expansion undertaken during the second plan period, the railways should have been able to move *all* the traffic which was offered them. All that was said was that: (1) the expansion should have been faster, even if it cost more money; (2) if the railways could not handle the traffic, road and other forms of transport should be given greater freedom to handle it; and (3) the railways should at least have been able to handle all the high-priority traffic they are offered, such as that for the steel plants, which they have miserably failed to do. By penalising small consignments and short-haul coal despatches, the latest Railway

RAILWAY BUDGET AT A GLANCE

(In crores of rupees)

	Actuals 1959-60	Revised Estimate 1960-61	Budget Estimate 1961-62
Gross traffic receipts	422.33	458.00	499.02+
Ordinary working expenses	289.52	326.31	332.53
Net miscellaneous expenditure	13.16	15.91	14.88
Appropriation to depreciation reserve fund	45.00	45.00	65.00@
Payments to worked lines	0.10	0.09	0.13
Total	347.78	387.31	412.54
Net railway revenues	74.55	70.69	86.48
Dividend to general revenues	54.43	56.66	65.34*
Payment in lieu of tax on passenger fares	—	—	12.50++
Net surplus	20.12	14.03	8.64

+ Includes amount after merger of passenger fares tax with passenger fares from 1st April, 1961.

@ Increased contribution to depreciation reserve fund.

* Dividend to general revenues enhanced from 4 percent up to 1960-61 to 4.25 percent in 1961-62.

++ Contribution to general revenues from traffic receipts to be made over to the State Governments.

Budget proposals seem to imply that this dog-in-the-manger Ministry is now at last beginning to realise that other forms of transport also have a right to exist. It is to be hoped that the realisation will soon mature to the stage where the railways drop their stubborn and misguided opposition to the expansion of road transport. Only in that case will the penalties now imposed on certain classes of railway users have some iota of justification.

THE INDIAN INVESTMENT CENTRE

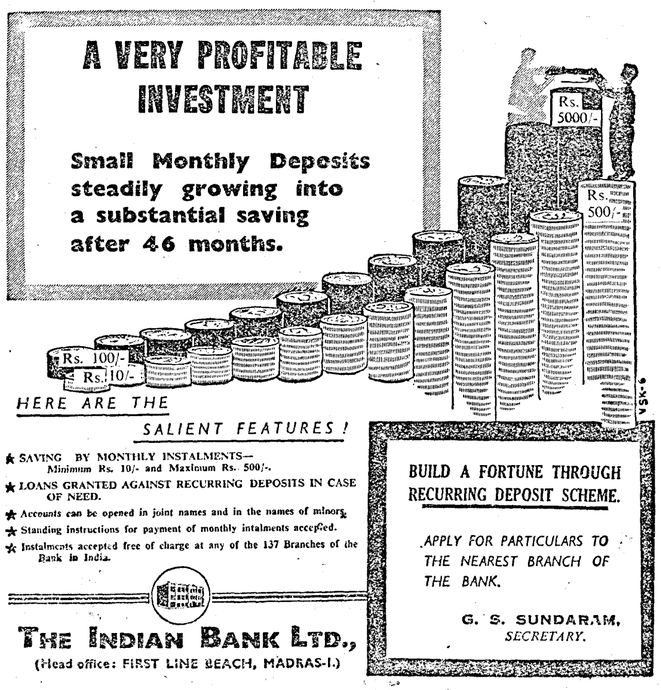
THE new Indian Investment Centre, inaugurated in New Delhi last Thursday by the Union Finance Minister, Mr. Morarji Desai, is a project with a promising future. As a liaison body providing the bridge between prospective foreign investors and potential Indian collaborators, and the necessary information about the conditions under which both will have to operate, it will serve an obviously useful purpose in encouraging the flow of private foreign capital into this country. Most significant, perhaps, is that it represents a departure from the former policy that such capital is welcome enough if it cares to come to India strictly on India's terms, but is nevertheless something not to be actively encouraged, much less sought after. This is an important shift in emphasis, and is certainly to be welcomed. It can be regarded as the first openly publicised crack in the official armour of indifference in which this subject has been shrouded since the days of Mr. Krishnamachari, and it is one into which the Centre itself will increasingly be driving the wedge of enlightenment. Indeed, whatever the success in informing potential foreign investors about possible opportunities in this country, it seems likely the Centre will find its main task to be one of educating official opinion in India concerning the general attitude of capital abroad towards the difficulties faced here, either real or imagined. For this reason it is encouraging that the Centre is not a Government institution, and that its chairman, Mr. G. L. Mehta, apart from having an unrivalled reputation abroad and especially in the United States, is also a figure noted for independent ideas and frankness in stating them.

The fact that the Centre is a non-Government institution—it is being financed chiefly through P.L. 480 counterpart funds and by the U.S. Technical Co-operation Mission, on which it will depend for a while for technical manpower—is also likely to contribute to its popularity in the country at which its activities appear chiefly to be aimed, the United States. Ultimately, it is to have offices in Europe and the Far East as well as North America. But this will take time and foreign exchange. There appear to be no plans at present for an office in London, which may be because British business already has considerable experience of India, possesses historic contacts here, and is still pouring in capital in quantities which appear to require little stimulation at the present time. The European office is to be situated in West Germany, and the Far Eastern one in Tokyo. All three sites suggest that the initial object will be to straighten out certain impressions which have grown up among capitalists abroad as to the real nature of India's socialist policies, and to inspire confidence in them about the safety of any investments made here. It will only be when those two points have been dealt with that the Centre can operate at all in bringing together Indian and foreign industrialists and smoothing the path for collaboration.

But the most important function the new Centre is likely to be called on to perform will be that of representing to the Central and State Governments in this country the views which prevail abroad on the subject of India's various policies affecting private foreign investment. Some of these will, of course, be confined to matters touching on foreign investment only; but others will extend to factors affecting private capital as a whole. There are a few items in the first category, the taxation on profits paid by a subsidiary company in India to a parent company abroad is perhaps the main example; but in the second, there are still any number of matters which must be considered if the problem of private foreign capital is to be dealt with from all angles. India is undoubtedly a more attractive investment proposition for the private capitalist than it was a few years ago yet compared with some of the more advanced countries, and many of the under-developed ones not professing socialism, it is still a very poor one indeed. Taxation is generally too high, and profits too low. The Company Law is voluminous, and its strict observance inevitably adds considerably to costs. The Government's views on labour matters are still far from favourable to private industry, although the emergence of the State as the largest employer of industrial labour is bound to bring improvement in this field. Credit is threatening to become chronically expensive, while far too much of the current prosperity in the private sector is based on inflation, and is therefore dangerously precarious.

The conditions under which any developing company has to work in India are indeed far from ideal. As for foreign-sponsored companies, the welcome relaxations of the provision that they should have a majority Indian ownership are probably not yet numerous enough. This point is one of particular importance to the U.S. private investor, and it promises to be one the Centre is likely to be raising fairly regularly in the course of its career. But the most difficult feature of all is likely to remain that indefinable element known as the "climate for investment". This has improved tremendously in the past few years, and certainly fewer complaints are heard about it now than used to be the case. The trouble is that it will take time to repair the damage done in the period between 1955 and 1959 when it often appeared that the main aim of Government spokesmen was to frighten away all private investors, foreign or otherwise.

It is fairly clear therefore, that the new Centre will have a varied job ahead of it, and it will take a number of years before it is able to function on exactly the lines intended. In the meantime, there are many ways in which the Government could make its task easier, and some of the necessary steps could be taken in Mr. Desai's Budget on 28th February. It is perhaps significant that it should be the Finance Minister who officially inaugurated the Centre, because it is ultimately he, most of all, who is going to decide whether it is to be a success or not. The very fact the Centre is to come into existence at all, however, is proof of a more enlightened attitude in New Delhi towards the problem, so perhaps the other necessary components of the complete picture will be added in due course.



GOVERNMENT BORROWING PROSPECTS

THE stock markets have become bullish during the last week or so on the view that the Central Budget, due to be presented in a few days' time, is unlikely to contain any shocks for investors. This optimism is obviously supported by the fact that the Railway Budget has proposed no significant increases in freights and fares. Some State Governments which have already presented their budgets have also refrained from proposing many new taxes. And it is scarcely to be expected the Government will be particularly keen to impose new taxes this year considering that a general election is likely in 1962. But political factors apart, it looks as though the Government may not this year require as much money as is indicated by the third plan targets—the plan will be inaugurated on 1st April, 1961—because many development projects cannot be proceeded with unless the necessary foreign exchange is arranged through financial assistance from abroad. Indications are that foreign funds will not be available in any substantial measure until the end of 1961.

A close examination of the financial position of the Central Government during the current year (1960-61) appears to promote bullish ideas. To begin with Central revenues have so far been very buoyant. The collection from excise duties encourages the hope that there will be an excess of more than Rs 40 crores over the Budget figure. The corporation tax could easily bring in more revenues than was expected because industrial production is believed to be at least 15 percent higher than in 1959-60. This factor itself may also help the collection of a bigger yield from income tax. As for small savings collections, they are no doubt disappointing in the sense that they could be much higher if the organisational set-up was appropriately improved. The receipts, however, may not be very different from those of 1959-60. The outlook for the official borrowing programme needs to be assessed cautiously. Due to reasons better known to the Government itself, little has so far been done to attract private funds into official loans. From the manner in which Bank rate has been permitted to move out of alignment with market interest rates, it looks as if the Government is not concerned whether the official loans are subscribed by quarters allied to Government departments or by the public; if the latter is to be encouraged to subscribe, it is obviously necessary to put Bank rate on a realistic level as quickly as possible.

There is, nevertheless, little reason to think that the Central Government will not be able to borrow as much money as it has done in the past year. It may be recalled that even in 1960-61, a large portion of the loans floated were subscribed by official quarters. During 1961-62, the Reserve Bank's support for the official borrowing programme is likely to be buttressed by the fact that the P.L. 480 funds are now being steadily channelled into its till. This money will certainly be shifted into Government securities. In fact, the recent support emanating from the Reserve Bank for Government securities—Central and State—is largely due to the investment of the P.L. 480 funds. Reserve Bank support apart, institutions such as provident funds, the Life Insurance Corporation and others, are expected to give greater support to the Government borrowing programme in the future. Provident funds and the Life Insurance Corporation are benefiting greatly from the steady accruals of new funds on a satisfactory basis.

As in the past year, the commercial banks are not expected to show much interest in the Government borrowing programme for 1961-62. Their resources are fully extended in meeting the usual financial requirements of the busy season. Advances of scheduled banks have just scaled a new peak of Rs. 1,255.31 crores. The ratio of advances to deposits is as high as 66.3 percent, compared with 55.6 percent a year ago. At this time in 1960, advances were only Rs. 1,049.07 crores. In order to meet the increased monetary demands, the banking community has had to raise its borrowing from the Reserve Bank from Rs. 49.33 crores to Rs. 61.40 crores over the past year, in spite of the penal rate of interest banks are forced to pay to the Reserve Bank on their debts. This apart, there have been substantial disinvestments. The investment portfolio of scheduled banks has declined by Rs. 162.30 crores to Rs. 597.13 crores during the past year. It is evident, therefore, that banks have been forced to sell securities in order to obtain more cash. The argument holds good even bearing in mind that a portion of the investments has probably been liquidated by the State Bank in order to compensate for the loss of deposits following the steady transfer of the P.L. 480 funds to the Reserve Bank.

Notwithstanding the squeeze on banking resources, there is little reason to believe that banks will not support the Government borrowing programme as much as they are expected to. Anyway, as in the past year, their support is likely to be small, and will depend greatly upon how funds flow back into the banking system when the busy season comes to an end. During the current year (1960-61) deficit financing may not be more than Rs. 115 crores or so. Considering that financing development by this measure has been restricted to a total of only Rs. 550 crores in the third plan, it is possible that the Union Finance Minister will not care to create deficit finance of more than Rs. 100 crores in 1961-62.

An important factor in assessing the taxation prospect is that the ways and means position of the Central Government is not worse than it was at this time in 1960. Its deposits with the Reserve Bank were Rs. 59.86 crores during the week ended 10th December, 1961. At the beginning of the new financial year from 1st April, 1961, the cash position of the Government of India is unlikely to be very different. In the circumstances, there is no compelling reason why the Union Finance Minister will indulge in strenuous tax exercises when formulating his Budget proposals for 1961-62. As revenues from existing taxes are expected to be much higher because of the expansion in economic development, the Finance Minister can very well take the present opportunity to produce an incentive Budget instead of a pedestrian one. Whether ideological arguments will prevent him from doing so, however, is anybody's guess.

More Business for I. C. I. C. I.

The excitement over new share issues in the second half of 1960 has abated considerably, indicating that formerly they attracted much speculative money going in search of quick gains through capital appreciation. During the past few weeks, the response to various issues has been satisfactory, although more discriminating. The manner in which good shares have been subscribed indicates that interest in industrial securities is broadening. But investors' attention has been mainly concentrated on ordinary shares rather than on fixed-interest securities. The trend suggests that investors are willing to accept business risks, provided they are satisfied about the growth prospects of the companies in which they place their money. There has been strong demand for the ordinary shares of industrial enterprises launched with foreign collaboration. In his statement to shareholders of the Industrial Credit and Investment Corporation of India Ltd, Mr. G. L. Mehta, chairman, points to the improvement in the investment climate. (A fuller version of the statement is published on a later page.) He welcomes the proposal to invite the public to contribute some of the capital in a few selected Government companies. But he warns that the success of the move will depend on the choice of the issues, on their timing and on whether the details are worked out in such a manner that a satisfactory public response is ensured.

Mr. Mehta rightly stresses the importance of improving the gearing of share capital. Many companies have deliberately kept their ordinary capital low in order to improve the profitability of the shares. In some cases, the promoters have found it convenient to keep the ordinary share capital small in order to have a controlling interest in the companies concerned. A substantial portion of the fixed assets, especially in new projects, have been financed by borrowing, because financing institutions are more willing to lend money than to underwrite or subscribe to share issues. The shortage of foreign exchange has probably been an important factor contributing to the greater indebtedness of companies. Unless foreign collaborators participate in the share capital, companies have no alternative but to obtain foreign exchange in the form of loans. Excessive borrowing, nevertheless, may disturb corporate working on a longer view. The accumulation of interest charges could become burdensome during the initial years of a new enterprise. Companies may find it difficult to service debt obligations if a business depression sets in. Mr. Mehta, therefore, says that the corporate sector should obtain more resources in the form of share capital so as to maintain a balanced capital structure.

The Industrial Credit and Investment Corporation has extended its activities considerably during the year ended December 1960. It has not only been generous in lending money and subscribing to share issues; it has also helped companies obtain funds from the market by underwriting their capital flotations. In the case of many concerns, it has guaranteed the loans they have got from various financial institutions. In 1960, the total amount of financial assistance extended by the Corporation was Rs. 13.43 crores. In view of the squeeze in bank credit, the activities are expected to increase further in the current year. Meanwhile, the Corporation has taken steps to replenish its resources. It has obtained a fresh foreign exchange loan of $20 million from the World Bank for lending to the corporate sector. It has also negotiated a loan of $5 million from the Development Loan Fund of the U.S. Government. I.C.I.C.I. has paid an ordinary taxable dividend of 5.75 percent for 1960. This leaves a net cash payment of a little more than 4 percent for shareholders, after deducting the tax at source.

Freight Slump Affects Scindia Steam

The chairman of the Scindia Steam Navigation Co. Ltd, Mr. Dharamsey M. Khatau, has urged the Government to consider the question of ensuring economic freight rates for Indian ships engaged in the coastal and international trades. In his annual speech which had been circulated in advance to shareholders, Mr. Khatau says that in view of the increase in the cost of building new tonnage and the rise in operational costs, it has become difficult to operate the services economically because freight rates are depressed. (A fuller version of the statement appears elsewhere in this week's issue of *Capital*.) Shipowners have taken steps to rationalise services. In pleading for the revision of freight rates, they ask for nothing more than what has been conceded to every other major industry. Discussing the further expansion of Indian tonnage, Mr. Khatau says that it should be implemented on a planned basis, with the two-fold object of making the maximum use of the available tonnage and of avoiding any unhealthy competition among Indian shipping lines. This can be achieved through the licensing policy by allowing shipowners to employ their vessels in new routes or routes not adequately served by Indian lines. Planning should also cover the types of vessels to be acquired, Mr. Khatau says. Reviewing the industry's performance during the past year, the chairman points out that Indian ships engaged in overseas liner services have been badly hit by the depression in shipping. The low level of tramp rates brought about by surplus tonnage and by tankers offering space for bulk dry cargoes has had its worst effect on the liner trades, where shippers expect an efficient service but at rates bearing a closer relation to tramp rates than has ever been the case before.

Referring to the recent agreement for the pooling of freight by the Karmahom Conference Lines, Mr. Khatau says that "all our colleagues in various India-Pakistan-U.K.-Continent Conferences have been wanting to evolve a pattern under which the trade would continue to enjoy all the benefits of liner services and at the same time the shipowners would eliminate wastage of steamer tonnage. From this standpoint, India Steamship, our Conference colleagues and ourselves have had several discussions and I am happy to say that we have concluded our negotiations satisfactorily. The shipping services have been reappraised in the light of modern developments and measures aimed at co-ordinating the services of the member lines taken to ensure the best use of ships employed and to provide optimum coverage for loading/discharging ports. This is really a scheme of rationalisation no different from what is normally followed in any other well-organised group of industries and is meant to give a more satisfactory and efficient service."

A Maiden from West Coast Paper

The directors of the West Coast Paper Mills have recommended a maiden dividend of Rs. 6 a share, taxable, for the year ended June 1960. The announcement was as expected, since the arrears of preference dividends were cleared in the previous year and the Company was known to be doing well. The sustained investment buying in the shares of West Coast Paper, which lifted them from Rs. 181 to Rs. 197 within a week, was based mainly on hopes of a maiden dividend and encouraging working results. The Company's preliminary report released along with the dividend announcement fully justifies the market's optimism. It has earned a gross profit of Rs. 1.12 crores during the year ended June 1960—the first year of full working for the plant in Dandeli. The production of paper amounted to 22,165 tons. During the period from 17th November, 1958, to 30th June, 1959, the output amounted to only 3,387 tons. The Company made a profit of only Rs. 4.70 lakhs in 1958-59, which was transferred to development rebate reserve. Adding the amount to the year's profit of Rs. 1.12 crores, the total available for appropriation is Rs. 1.17 crores. A sum of Rs. 88.25 lakhs has been set aside for development rebate and depreciation, leaving a balance of Rs. 28.74 lakhs. The payment of accumulated preference dividends up to 30th June, 1959, accounts for Rs. 12.20 lakhs. The preference dividend proposed for 1959-60 absorbs Rs. 6.53 lakhs and the ordinary dividend takes another Rs. 8.97 lakhs, leaving a sum of Rs. 53,426 to be carried forward.

The Company's expansion scheme is making satisfactory progress. It has received a licence for expanding the production capacity of the paper plant from 60 tons a day to 100 tons a day. It has also obtained a licence for setting up a plant for manufacturing rayon-grade pulp with a daily production capacity of 50 tons, and the directors are negotiating with the foreign technical consultants—Sandwell International of Canada. West Coast Paper proposes to seek a dollar loan from

the International Finance Corporation for purchasing machinery.

Progress of Asian Cables

The directors of the Asian Cables Corporation Ltd have stated in their report for the period from September 1959 to December 1960, that the construction of the factory buildings and the erection of machinery are making satisfactory progress, according to schedule. A substantial portion of the machinery has arrived, and most of the remaining equipment is expected by the end of March. The plant is likely to be ready for initial production by the middle of the current year. Asian Cables has received an industrial licence for manufacturing high-tension paper-insulated power cables. It has now decided to include in the programme the manufacture of super-enamelled copper wires (magnetic wires) for which it holds a licence. It is also proposed to put up an up-to-date rod rolling mill. Negotiations for technical and financial collaboration with the Phelps Dodge Copper Products International Corporation of the U.S.A. and Enfield Cables Ltd of the U.K. are said to have been concluded successfully. The foreign collaborators have agreed to invest jointly a substantial amount in the Company's equity capital and to offer technical collaboration for a period of ten years. The foreign exchange requirements for importing plant and equipment are expected to be met partly from the collaborators' investment and partly from a loan in foreign currency. The Rs. 100-paid shares of Asian Cables are now quoted around Rs. 110.

K.C.P. Earns More

The working results of K. C. P. Ltd for the year ended June 1960 show considerable improvement. After providing Rs. 15.56 lakhs for depreciation (against Rs. 13.36 lakhs), the profit has increased from Rs. 20.76 lakhs to Rs. 37.84 lakhs. To this is added Rs. 91,746 brought in, Rs. 6,833 (being the excess provision for bonus), Rs. 3.45 lakhs (being the difference in producer's price for cement in relation to previous years) and Rs. 4.75 lakhs from dividend equalisation reserve, making a total of Rs. 47.03 lakhs. The directors have provided Rs. 1.59 lakhs for capital issue expenses written off, Rs. 5.8 lakhs for bonus payable to sugarcane growers, Rs. 3 lakhs for development rebate reserve and Rs. 24.75 lakhs for taxation. Preference dividends absorb Rs. 2,12,956 and the ordinary dividends Rs. 8.80 lakhs. The carry-forward is Rs. 23,450.

The Company's sugar factory crushed 231,000 tons of sugarcane during the year, producing 22,354 tons of sugar. The recovery was 9.56 percent, against 8.88 percent in the previous season. The production of sugar during the current year is expected to be about 30,000 tons. The cement factory in Macherla produced 68,458 tons, against 53,270 tons in the previous year. The second stage of the factory is expected to be brought into commission during the latter half of the current year. The Company's workshops in Tiruvottiyur have made satisfactory progress in spite of delays in securing electric power and import licences. The heavy machine shop and the steel foundry are expected to go into production during the current year. Additional orders from co-operative sugar factories of the value of Rs. 2.50 crores have been received. The Government has allotted a factory in the private sector to the Company for supplying machinery. An order for a cement plant has also been allotted to K. C. P. Ltd.

Elgin Mills Supported

There has been fair support for the ordinary shares of the Elgin Mills Co. Ltd around Rs. 21.12 during the past week. This is partly because the results for the year ended September 1960 are satisfactory and partly because working during the current year is expected to be good since raw cotton is becoming cheaper and more abundant. The No. 2 mill taken over in 1959 has been reorganised and renovated. It is now working satisfactorily. The directors have taken steps to modernise the equipment, and the rehabilitation programme is being financed largely from internal resources. The Company's profit has improved from Rs. 40.73 lakhs in 1958-59 to Rs. 52.57 lakhs in 1959-60, after providing Rs. 5.65 lakhs (against Rs. 4.50 lakhs) for depreciation. A taxable ordinary dividend of 11.5 percent has been declared. It offers a yield of 5.4 percent at the present price and is covered more than six-and-a-half times. A dividend of 11.5 percent has also been paid now for 1958-59; this payment was postponed in the previous year, but the amount required for the dividend has been brought in from 1958-59. Development rebate reserve is allocated Rs. 1.24 lakhs (against Rs. 30,983), taxation Rs. 24.50 lakhs (against Rs. 19 lakhs) and rehabilitation reserve Rs. 18 lakhs (against Rs. 12.69 lakhs). The carry-forward is Rs. 88,973, compared with Rs. 95,889 brought in.

Sales have increased from Rs. 3.56 crores to Rs. 4 crores. The improved results are mainly due to the fact that production is concentrated on the more profitable goods. Elgin Mills' investment in Shree Madhav Mills Ltd, now in liquidation, consists of Rs. 10.08 lakhs in preference shares and Rs. 51.08 lakhs in ordinary shares. The latter Company also took a loan of Rs. 20 lakhs from Elgin Mills. It is estimated that the secured loan, plus the interest due thereon, will be recovered in full, but the recovery of the share capital is unlikely. An investment reserve of Rs. 85 lakhs has already been created in Elgin Mills' accounts by transferring funds from the capital and general reserves for meeting any loss which may arise in connection with the investments in the Bombay subsidiaries —Shree Madhav Mills Ltd and Calico Processors Ltd.

Standard Batteries Dividend Up

Standard Batteries Ltd has reported encouraging results for the year ended June 1960. Its sales, less excise duty, at Rs. 1.27 crores are about Rs. 37 lakhs higher than in the previous year. Its gross profit has increased from Rs. 16.70 lakhs to Rs. 29.53 lakhs. The directors have recommended a dividend of Rs. 15 a share taxable, against Rs 14, taxable, in the previous year. The net dividend works out to Rs. 10.50, against Rs. 9.80. After providing Rs. 4.19 lakhs (against Rs. 3.31 lakhs) for depreciation, Rs. 80,332 (against Rs. 54,086) for development rebate reserve and Rs. 2.29 lakhs (against Rs. 1.15 lakhs) for managing agents' commission, the profit amounts to Rs. 22.24 lakhs, against Rs. 11.69 lakhs. Plant modernisation and development reserve has received Rs. 2 lakhs (against nil) and dividend equalisation reserve Rs. 2 lakhs (against nil). The proposed dividend absorbs Rs. 5.62 lakhs. After making various adjustments, Rs. 15,405 has been carried forward, against Rs. 9,920 brought in. Closing stocks of finished and semi-finished materials are placed at Rs. 9.25 lakhs (against Rs. 11.80 lakhs) and the work-in-progress is valued at Rs. 7.64 lakhs (against Rs. 5.32 lakhs).

The Pg. tube manufacturing plant worked satisfactorily during the year and enabled Standard Batteries to take up additional lines. The demand for the Company's products is steadily increasing, so schemes for expanding the manufacturing facilities have been undertaken. Attempts to export Standard batteries have been encouraging. The Company hopes to develop a sizeable export market in the near future.

Maharashtra Budget Deficit

Maharashtra's first full-year Budget for 1961-62 shows a small revenue deficit of Rs. 7 lakhs, the estimates of revenue and expenditure being Rs. 110.62 crores and Rs. 110.69 crores, respectively. The revised estimates for 1960-61, which include the transactions of the undivided Bombay State for April 1960, indicate an increase in the deficit from Rs. 16 lakhs to Rs. 1.36 crores, with revenue receipts up from Rs. 100.97 crores to Rs. 108.41 crores and revenue expenditure from Rs. 101.13 crores to Rs. 109.77 crores. The revenue expenditure for 1961-62 takes credit for Rs. 1 crore from additional taxation, while the uncovered gap of Rs. 16.38 crores in the capital expenditure is to be met partly by raising open market loans and partly by withdrawals from the cash balances. The State Finance Minister, Mr. S. K. Wankhede, said that it has not been possible to include in next year's Budget any provision for new schemes or fresh items of expenditure. The size of Maharashtra's third plan has been finalised only recently, so the details of the schemes have still to be worked out.

Of the Rs. 1 crore from additional taxation, Rs. 60 lakhs are expected from the increase in the passenger tax from 10 percent to 15 percent. About 75 percent of the revenue from this tax is contributed by the State Transport Undertaking and the remaining 25 percent by private operators. A uniform sales tax of 3 percent on kerosene is expected to yield another Rs. 30 lakhs. The remaining Rs. 10 lakhs will come from the increase in sales tax on groundnuts from 1½ percent to 2 percent, the withdrawal of certain concessions to the textile industry under the recommendations of the Sales Tax Enquiry Committee and the rationalisation of discrepancies in dyes, chemicals and drugs. The levy on kerosene has evoked considerable criticism. The State Finance Minister, it is suggested, should have chosen luxury items for an enhanced sales tax levy instead of kerosene, which will hit the poorer sections of the community. But it is surprising that when the State is expected to raise Rs. 52 crores by way of additional taxation under the third plan, the Finance Minister has decided to raise only Rs. 1 crore in the first year of the plan.

The Finance Minister's Budget speech is largely devoted to a review of the State's progress. Unlike some other States, Maharashtra has used the total provision made in the two plans. The production of foodgrains has increased from 4,980,000 tons to 6,130,000 tons. Industrial production has more than doubled in many fields and co-operative societies have increased by 55 percent in the past seven years. The State has pioneered social legislation and brought education to more children. The community development programme will cover the entire State by 1963. National income has risen by nearly 20 percent over the past five years.

But the increase in industrial and agricultural production has not led to any material improvement in the standards of living of the community. In spite of the 23 percent increase in agricultural production, Maharashtra continues to be deficit in foodgrains because its population has increased. The extent of new acreage brought under irrigation and cultivation is far from impressive. The 20 percent increase in national income over the past five years does not seem to have resulted in any noticeable increase in real incomes. Unemployment has grown and the rise in national income is calculated on the assumption that wholesale prices have risen by 25 percent. But the latter do not bear much relation to the rise in retail prices, which alone determine real incomes. The Budget speech provides no positive indication of the measures the State Government proposes to take to tackle these problems effectively.

Mysore Kirloskar to Raise Capital

Mysore Kirloskar has recently adopted a resolution in Harihar concerning the capitalisation of reserves for issuing bonus shares in the proportion of one share for every four held. It is reliably understood that the Company will soon enter the market to raise new capital amounting to Rs. 40 lakhs, which will increase the subscribed capital to Rs. 90 lakhs. The proposed issue consists of 15,000 equity shares and 25,000 redeemable cumulative participating preference shares, both of Rs. 100 each. The Government's sanction, it is said, has already been obtained The preference shares will be entitled to a dividend of 8 percent, taxable, if the ordinary dividend is 12½ percent or less, taxable. The preference dividend will be 9 percent, taxable if the Company pays an ordinary dividend of between 12½ percent and 15 percent. The dividend on the preference shares will be 10 percent if the ordinary dividend exceeds 15 percent.

Mysore Kirloskar is issuing the shares at par. Applicants for equity shares will have to apply for preference shares also. The Company will offer shares for subscription in lots of eight, consisting of three ordinary shares and five preference shares, and multiples thereof. The issue of ordinary shares is apparently being linked with preference shares with a view to facilitating the raising of preference capital, which has become difficult, particularly since the change in the fiscal policy relating to preference dividends. The amending legislation has not materially improved the situation. Considering that the ordinary shares of the Company are at present quoted around Rs. 180 and the reputation it enjoys, the proposed issue is expected to go through smoothly. Fresh capital is being raised to finance the Company's expansion schemes. It is now engaged in the manufacture of a wide range of lathes, drilling machines and power presses. Besides, it has obtained a licence to double the production of its existing manufactures. It has entered into a technical collaboration agreement with Alfred-Herbert Ltd of the U.K. for manufacturing Capstan and turret lathes.

Fit-Tight Nuts Share Offer

Fit-Tight Nuts and Bolts Ltd proposes to enter the capital market next month to raise resources for financing its expansion programme. It was registered in 1957 with Rs. 5 lakhs as a private Company, but has now been converted into a public limited Company with an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each. The issued capital will be Rs. 30 lakhs, of which Rs. 5 lakhs has already been subscribed. The new issue is for Rs. 25 lakhs in the form of 25,000 equity shares. Of this, 7,800 shares have been reserved for the promoters, directors and their friends, and another 2,500 shares are to be taken up by the Industrial Credit and Investment Corporation of India. The remaining 14,700 shares are to be offered for public subscription.

The Company started producing high-tensile precision cold formed nuts in July 1959. Its present production capacity is about 10 million pieces a year on a single-shift basis. It is now proposed to expand the manufacturing range and start the production of high-tensile bolts and socket head-screws. The annual production capacity of the plant a shift, after expansion, will be 21 million pieces of nuts and 21 million pieces of bolts and/or socket head-screws. The expansion programme, which is expected to be completed by June 1962, is estimated to cost Rs. 49.75 lakhs. The financial requirements are proposed to be met by the issue of new capital worth Rs. 25 lakhs and by a foreign exchange loan of Rs. 24.75 lakhs from the I.C.I.C.I. The Company's factory is situated in Andheri, a suburb of Bombay.

Air Conditioning and Refrigeration

Air Conditioning and Refrigeration Private Ltd is the name of a new Company which is being formed in Bombay to undertake the manufacture of a whole range of air-conditioning equipment, including compressors from 1 horse-power to 120 horse-power. It is a joint venture of Carriers Corporation of the U.S.A., Voltas and J. Stone and Company, India, Ltd. It will have a paid-up capital of Rs. 50 lakhs, of which 60 percent, which will cover the entire foreign exchange requirements of the project, is likely to be contributed by the U.S. firm. The remaining 40 percent of the capital will be shared by the other participants. The factory will be located near Thana, an industrial suburb of Bombay. The plant and machinery will be supplied by the U.S. firm. The Company is expected to start production by the end of next year.

Calcutta Paper Machinery Factory

Three Scottish firms have formed a Rs. 10 lakhs consortium to establish a factory to produce paper-making machinery in Calcutta. Mr. John Kidd, managing director of Bertrams Ltd of Edinburgh, is visiting India shortly to settle arrangements on behalf of the consortium with the Indian Government. The three firms are Bertrams Ltd, Ernest Scott and Co. (a subsidiary of Henry Balfour Ltd, Leven, Fife) and James Bertram and Son Ltd, Edinburgh. Negotiations with the Indian Government are already "well advanced". Work on the conversion of a former jute mill in Calcutta into the consortium's plant is nearly complete, and paper-making machinery is expected to be produced there within the next few months. Mr. Kidd has stated that "our three firms have joined forces to start up in India because that is the satisfactory way of doing business there. Machinery and technical men have already been sent out. When the factory is in full production, it will employ 500 local workers. Initially, a staff of Scottish technicians will be used to train them."

Indian Exports to U.K. Rise

The latest statistics compiled from the U.K. Trade and Navigation Accounts show that the value of Indo-British trade fell appreciably to £299 million last year from £313 million in 1959. Britain's imports from India increased by nearly £7 million to £149 million, but her exports to this country fell by about £21 million to £150.2 million. Indian tea shipments to the U.K. were below the 1959 level. Exports of leather, leather manufactures, dressed furs, oilseed cake and meal (excluding husk meal), wool and other animal hair and tops were also lower. But these declines were more than offset by increases in Indian exports of all other principal items. Proportionately, the biggest rises were in animal and vegetable oils, fats, greases and derivatives (from nearly £2 million to over £4 million) and in cotton yarns and woven fabrics (from £10.65 million to £14.5 million). Most principal items of India's imports from the U.K. fell, including machinery, chemicals, railway rolling stock, road vehicles and aircraft. Consequently, in spite of the increases in the three principal U.K. exports to India—petroleum and petroleum products, iron and steel and non-ferrous metals—there was a net fall of about £21 million in the total. In machinery, which is the most important U.K. export to India, declines occurred in all items except two—internal combustion engines and textile machinery.

West Bengal Budget: No New Taxes

The West Bengal Government does not intend to impose any new taxes during the next fiscal year. This is the outstanding feature of the Budget for 1961-62 presented to the State legislature on Monday by the Chief Minister, Dr. B. C. Roy, who holds the Finance portfolio. The Government does, however, propose to raise some additional revenue by plugging a loophole in the Bengal Finance (Sales Tax) Act through legislation which is to be introduced later. The Budget estimates for 1961-62 show one of the biggest deficits in recent years, Rs. 8.91 crores—Rs. 3.2 crores on revenue account and Rs. 5.71 crores outside revenue account. Dr. Roy has left the deficit uncovered. But there is a provision for a market loan of Rs. 7 crores to finance development schemes included in the third plan. In addition, the State Electricity Board is expected to raise a loan of Rs. 1.5 crores for its own schemes. It seems one reason why the deficit has not been covered is that the West Bengal Government's revenues have been buoyant. The Budget estimates for 1960-61 showed revenue receipts as likely to total Rs. 88.17 crores; the revised estimates now show them as Rs. 102.2 crores. But revenue expenditure too has risen appreciably; the Budget estimate was about Rs. 89.2 crores, and the revised estimate is nearly Rs. 97.7 crores. Compared with these figures, the 1961-62 Budget expects that revenue receipts will be Rs. 95.48 crores and revenue expenditure will be Rs. 98.68 crores.

In his Budget speech, Dr. Roy made out a strong case explaining why West Bengal should receive more assistance for its development plans. The sources from which the States can raise revenue are limited. In West Bengal, a special problem is that as the State industrialises, the fiscal benefits of industrialisation go mainly to the Centre. Yet, when the question of distributing the divisible revenues arises, the distribution is made on the basis of population, as a result of which States like West Bengal suffer. In addition, not enough has been done to help the State in dealing with the after-effects of war, famine and partition, and with the special problems of Calcutta. Dr. Roy recounted his arguments at the National Development Council meeting recently that West Bengal should be allowed to undertake a bigger third five year plan than the Planning Commission had visualised for it. He pointed out that the State is prepared to raise additional resources for the bigger plan; but he did not explain why, in that case, no effort has been made to boost revenues in the latest Budget. A fuller explanation is also necessary as to why the financial results of the West Bengal Government's commercial enterprises have been so deplorable.

Vanaspati Output Rises

The production of *vanaspati* in 1960 is estimated at 336,600 metric tons, against 320,583 metric tons in 1959. This represents an increase of 5 percent, against 7 percent in 1959. In its annual report for 1960, the Vanaspati Manufacturers Association attributes the decline in the rate of increase mainly to the fall in oilseeds production in 1959-60, which led to a steep rise in the prices of edible oils. The vagaries of the monsoon and expectations of a liberal export policy for raw groundnut oil tended to aggravate the situation. Consequently, the price of groundnut oil in Bombay exceeded the level of Rs. 2,200 a ton—a record high since 1953. The failure of price stabilisation agreements in different zones resulted in keen competition within the industry and increased the financial risks of wider price fluctuations. All this had an adverse effect on production and on the stocks held by the trade.

The supply of raw materials continues to be a source of anxiety. Oilseeds production has failed to keep pace with the growing demand for vegetable oils in India. Manufacturers are finding it difficult to obtain sesame oil, which they are statutorily required to use, even after paying exorbitant prices. The Association says that it is unfortunate that State Governments, which are in charge of plans for increasing oilseeds production, have not so far appreciated the urgency of the problem. Even if the third plan target of 9.3 million tons a year is achieved, there will remain a deficit in India's vegetable oil requirements. The Association, therefore, urges the implementation of the integrated oilseeds development schemes proposed by the Indian Central Oilseeds Committee for achieving the plan target. Exports of *vanaspati* in 1960 amounted to 6,500 tons, showing a marked increase over the 1959 figure of 2,792 tons, although they fell far short of the target of 10,000 tons. The shortfall is attributed to the late announcement of the export incentive scheme and the delay in negotiating business abroad.

But the biggest worry of the industry at present is the growing pressure on the Government of India to colour *vanaspati*. In spite of the verdict of scientists that no visible colour should be added, and that a colour which can meet all the needs stipulated by the Ghee Adulteration Committee for its suitability for *vanaspati* is not available, the Government has appointed a committee of scientists to review the suggested colours and examine their suitability. The Association says that the policy of colouring *vanaspati* is irrational and undesirable. The colourisation will deprive the consuming public of a cheap source of nutritious dietary fat as well as bring ruin to the industry. Manufacturers deplore the adulteration of *ghee* but they point out that the problem of food adulteration, of which *ghee* adulteration is only one aspect, can be tackled effectively only through a rigorous enforcement of the Prevention of Food Adulteration Act and Rules.

Bengal Deshi Cotton Export Quota

The Government of India has announced the release of a further export quota of 50,000 bales of Bengal Deshi cotton. The quota will remain valid for shipment up to the end of August. Out of the total, 2,500 bales are earmarked for distribution among the co-operative societies situated in areas growing Bengal Deshi cotton. Another 19,000 bales are reserved for exporters who had participated in the previous quota of 50,000 bales released in December. The balance of 28,500 bales has been reserved for newcomers, being licensed on a first-come-first-served basis. The individual ceiling under this category has been fixed at 1,500 bales. Shippers who exported cotton under the December export quota will get their new quota on the basis of 40 percent of the cotton actually delivered by them to mills. They are allowed to participate in the 28,500-bale quota under the first-come-first-served category only to the extent to which their new allocation, together with the quantity actually shipped by them against the previous quota, falls short of 1,500 bales.

The trade's reaction to the export quota has been mixed. In the first place, the size has fallen short of its expectations. It was generally thought that in view of the upward revision of crop estimates to around 5.3 million bales and the recent sharp decline in prices, the Government would allow 75,000 bales or 100,000 bales for export. But the trade is happy that the "link system," binding a shipper to deliver to mills for local consumption a quantity equal to what he proposes to export—evolved at the time of the previous export quota—has been done away with. A section of the trade is, however, agitated over the procedure for the allocation of quotas, since many shippers who gave a reasonably good account of themselves in December will now be unnecessarily penalised. A few of them will not be able to participate at all in the quota under the first-come-first-served category and others will get a much smaller share than the newcomers who are allowed a ceiling of 1,500 bales. But many criticise the Government's policy of reserving a quota for shippers who had exported cotton under the previous quota. They say that the entire quota should have been placed under the first-come-first-served category. It appears that the 19,000-bale quota has been earmarked for exporters under the December quota in order to enable them to make good the losses they might have incurred because of the linking of exports with the supply of cotton to mills at ceiling prices, when Bengal Deshi had been fetching a fancy premium in the market. The ceiling for the 28,500-bale quota was reached within two days of the release, which was, however, expected. Japan was said to have lifted the bulk of the quantity; the price she paid for Bengal fine was mentioned around 21d a lb. The latest quota raises the total quantity allowed for export during this season to 100,000 bales. An improved cotton supply as well as the need for earning foreign exchange hold out the prospect of a further export quota in 1960-61.

Tax Structure Criticised

Speaking at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. Russi Mody, president, said that at certain levels of income, the Indian tax structure is confiscatory in nature; it takes away not only the entire income of the assessee but sometimes substantially more. The capital erosion has retarded economic development. Under the existing personal income tax structure, Mr. Mody said, no one can become rich working on a salary. The tax burden should be such as will enable an executive or a manager to retain as large a part of his income as possible below a certain fair salary level. Unless the Central Finance Minister grants relief, the worst sufferers will be Government undertakings, which will find it increasingly difficult to attract the managerial talent of the best calibre at the existing level of salaries in the Government. Mr. Mody said that as far as personal taxation goes, "the lemon has been squeezed dry." The increase in the revenue from corporation tax is due to India's industrial growth. But if any attempt is made to increase the tax, industrial progress will be arrested. As for indirect taxes, the revenue from Union excise duties has increased four-fold since 1951-52, although there has been a decline in the revenue from export duties. It may be possible for the economy to bear some additional excise duties, but Mr. Mody cautioned the Government about their inflationary effects. The Planning Commission has indicated that Rs. 1,650 crores will have to be raised from additional taxation during the third plan. The bulk of the internal resources required for the plan,

Mr. Mody said, can be obtained from public undertakings in which large sums have been invested. It is, therefore, necessary to ensure that the latter give fair returns. The president said that, according to an assessment made in 1959-60, among 52 enterprises with Government capital of Rs. 471 crores, only six declared dividends amounting to Rs. 1.38 crores. This represents a return of 3.7 percent on the capital of the undertakings concerned and only 0.3 percent on the total capital invested in the 52 Government undertakings. In contrast, the average yield is 4 percent or 5 percent on gilt-edged securities and 5 percent or 6 percent on the market value of equity shares.

Swiss Industries Fair

The 45th Swiss Industries Fair is being held in Basle from 15th to 25th April. This year, more than 2,000 exhibitors are taking part. The exhibition itself covers an area of well over one million square feet. On show at the Fair will be a comprehensive display of consumer and capital goods. Heavy machinery used in the welding industry, for the construction of goods and the manufacture of boilers, forms one of the main groups at the exhibition. For the first time, mechanical handling equipment for factories, such as continuous conveyors, cranes and fork trucks will form part of a special trade group display. Other important export groups represented at the Fair will be the electrical industry, machinery for the foodstuffs industry, office machinery, industrial accessories, foundry products, workshop equipment, ventilation and air-conditioning plant, aluminium and non-ferrous metals, medicinal and dental equipment, as well as optical goods, photographic and cinema equipment, textiles and clothing on the consumer side.

Plastic goods, so far represented mainly in connection with the electrical industry, will be given increased importance at this year's Fair. The exhibition space for plastic materials has been tripled to allow fuller participation by the industry. The 31st Swiss Watch Fair will also take place within the framework of the Industries Fair, and in addition to this there is a separate jewellery pavilion in which leading Swiss jewellers will display their latest products. Full information, identity cards and a copy of the catalogue can be supplied by the official Swiss representatives in foreign countries (Swiss embassies, legations, consulates, chambers of commerce, agencies of the Swiss Office for the Development of Trade and the Swiss National Tourist Office).

Handloom Industry in Madras

While celebrating the handloom week in Madras, the State Government has recalled the industry's progress since a weavers' co-operative society was started in 1935. The 985 primary societies have provided a share capital of Rs. 5.86 lakhs while the Government has contributed Rs. 3 lakhs. Yarn sales, it is estimated, totalled over Rs. 1.26 crores in 1959-60, and cloth sales exceeded Rs. 1.5 crores. The society incurred a loss in only one year. Its reserve fund has increased to Rs. 6.48 lakhs, while its other reserves exceed Rs. 17.53 lakhs. The apex society deals in dyes and chemicals needed by weavers. It has four dyeing factories as well as a processing centre in Erode, which cost Rs. 8 lakhs. It runs a spinning mill with 16,000 spindles in Tirunelveli. It now has over 250 shops to sell handloom goods and has set up 12 shops in Calcutta, four in Bombay and six in Bangalore for marketing handloom cloth. Besides, a separate society sells cloth abroad as an adjunct to the State Trading Corporation to increase exports of handloom goods. It is claimed that Madras leads all States in the production and sale of handloom cloth and that the reorganisation of States has not affected the progress of the industry. The apex co-operative society has encouraged the use of modern appliances for making better goods of uniform quality. Besides, indigenous designs have been improved. A rebate is offered to consumers so as to increase sales of handloom cloth.

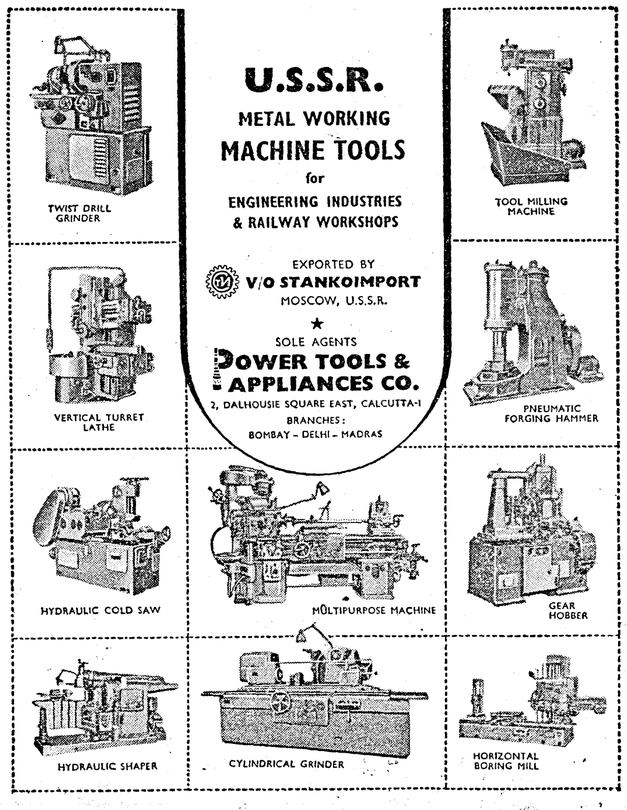
Madras Corporation Revenue Rises

The report of the Madras Corporation for 1959-60 shows that its revenue rose to Rs. 3.53 crores, while its expenditure totalled Rs. 3.49 crores. Compared with the previous year, there was some extra outlay on drainage, education and water supply. But, in spite of this, the Corporation's Budget does not seem to have been strained since the year ended with a surplus on revenue account. The regular annual outlay on slum clearance has led to a demand for Government assistance through loans and subsidies. The Corporation has been criticised for the limited grant of Rs. 5 lakhs for road repairs. The wear and tear on roads, it is said, has forced the State Government to offer Rs. 30 lakhs. But in view of the total outstanding debt of over Rs. 5.63 crores, the Corporation has pressed for additional assistance from the Government. The report states that the receipts from entertainment tax totalled over Rs 36.54 lakhs, while the share in the stamp duty exceeded Rs. 22.90 lakhs. The income from building licences has increased. Besides, the value of the Corporation's assets is rising because of the rapid increase in the price of land and property.

Textile Rationalisation in Europe

The high level of efficiency of the textile and textile machinery industries of Europe has been studied by Mr. Pratap Singh, an Indian industrialist, who recently visited the U.K. and several Continental countries. He has brought out his findings in the form of a report. Under the pressure of keen competition and labour shortages, he says, these countries have thoroughly rationalised their textile industries. For example, an old mill in Germany, which is now modernised and rationalised, employs a much smaller labour force than an average Indian mill. Enormous sums are being spent on research for the production of better equipment which will greatly strengthen the competitive efficiency of the industries. Mr. Singh takes the U.K. as an outstanding example. Tremendous developments have taken place in that country in the last five years. In fact, the machinery supplied only in 1952 or thereabouts is now considered almost out-of-date. Some of the major developments are in such items as electronically-operated blow-rooms with automatic controls, draw frames, high-speed combers, high-speed winding, warping, sizing, drawing-in and reaching machines, and high-speed automatic looms.

Explaining the processes of rationalisation in the European industries, Mr. Singh says that these consist mainly in richer mixings, faster machines, better factory layouts and mechanised material handling. India may not be able to follow the European example in full, since she cannot possibly scrap the old machinery she has or even make any material changes in the layout. But she can, "by proper time and motion studies, examine the possibilities of some reduction in labour." It is also possible to mechanise material handling by the use of trolleys and conveyors. Maintenance standards have to be improved to get more out of the machines. Production can be standardised to maintain a high level of efficiency "by repetitive production and to improve quality through quality control methods." Since the number of supervisory staff engaged in an Indian mill is much larger than in Europe, it should not be difficult to ensure better supervision of the labour force, better maintenance of machines, cleanliness and proper conditioning inside the mill.



THE INDIAN TEA INDUSTRY

"MR. Speaker," said an Hubernian M.P. on a memorable occasion, "in the course of a life long experience, I have invariably noticed that single misfortunes never come alone, but that the greatest calamities are always either preceded or immediately followed by disasters of even larger proportions." This remark unfortunately seems to hold good of the Indian Tea Industry, which having already received in the Currency Legislation of the Government of India in 1893, and the increased duty imposed by Parliament in 1900, two very severe blows, is now threatened with further disaster in the proposed legislation of the Government of India and the rumoured further enhancement of duty with the coming budget. We print in another column the proceedings of an influential meeting of those interested in Tea, held at the Bengal Chamber of Commerce last Friday, and would invite the serious attention of the Government of India to the remarks of the various speakers and with a knowledge of what they were talking about. It is no light matter to cry havoc on an industry like this. The ruin of the tea industry will spell disaster to the coolies whom the Government of Assam desire to take under their paternal care. We would advise the Government not to take the Chief Commissioner of Assam too seriously, the earthquake of 1897 has much to answer for, and they will find that in Assam cotton manufactures are a very poor substitute for tea. We understand that the London Tea Association have wired to the Tea Association here that no extra duty on tea is anticipated, but urging the Association to support them in agitating for a reduction in the present duty. It is curious that Mincing Lane should have been so differently informed in this matter.

A Ditcher's Diary

CALCUTTA, THE CITY OF NIGHTMARES AND PROCESsions, according to some people, gave Her Majesty the Queen and her Consort a reception they had rarely seen before. The people of Calcutta are sometimes a little too intolerant of criticism from others, who often exaggerate. But the peaceful manner in which so many thousands watched the pageantry, I suggest, is also characteristic of Calcutta. This needs to be emphasised, for Calcutta has two hearts, two minds, two faces, almost two souls. Here the people can be, too often are, unruly, defiant and totally lacking in discipline. It must be admitted that external, physical, provocations to this aspect of the city's personality have been many in recent years. But to occasions of another kind, such as the Royal visit, this city can rise as no other comparable metropolis can. Many, some of them visiting foreign correspondents, have asked me, in half-disbelief, how Calcutta, of all places, which is supposed to be so anti-British, should have responded to the Queen's visit as it did. A lot of people, I dare say, turned up only for the *tamasha*. Many wanted to see a young and beautiful Queen. The elderly perhaps thought of Viceregal shows of days gone by. To this I will add another reason, in my view the most powerful. This city's connection with the British has always been rather different; and, as last week's editorial tried to point out, the cultural impact of the coming of the British was nowhere more creative than in Calcutta. Gloomy Indian friends tell me that this culture, like the Hooghly, began to silt up long ago; and soon there will be nothing left of it, although they all consider that to be an unmitigated pity. The course of cultures is rarely predictable; and Bengali culture by itself is rich enough. In Professor Rostow's terms, it reached the "take-off" stage long ago; or a Tagore would hardly have been possible. But, to continue with the economic metaphor, it is a highly-developed economy that imports the most; it can afford to, it needs few protective walls. This, I suggest, is true of Bengali culture too; and against this background, the concrete suggestions offered by this newspaper in last week's editorial deserve to be taken up seriously.

LEWIS CARROLL MADE HUMPTY DUMPTY SAY: "Words mean precisely what I want them to mean, nothing more and nothing less". Which quotation I may have got wrong, although I think the sense is correct enough. And so, unfortunately, was Humpty Dumpty. These days especially a word sometimes takes on an emotional meaning which in no time completely effaces the real one; the only thing to do then is to drop it from current usage as quickly as possible. Indeed, the rapidity with which some words can fall from respectability and degenerate into terms of abuse is such as to arouse the sympathy of all those who, like me, love words and consider they deserve better treatment. I suppose it all has something to do with the fact that most human beings think in words and mistake their feelings for their thoughts. Take those two terms of popular abuse, colonialism and imperialism, for instance. As I have mentioned here before, thanks to the efforts of clever propagandists, half mankind nowadays reacts to them in a perfectly predictable way, just like Pavlov's dogs, and forgets altogether to question the motives and behaviour of those using them. Much the same is happening to the word speculator, which Mr. Kanungo is reported to have used with such abandon at a conference in Calcutta last Saturday, and if it is not too late I should like to say something in favour of this useful member of the English language. If speculators are anti-social, then we are all guilty, because each one of us is a speculator in his way. If I buy my fish from the market at 5.30 a.m. (unlikely, but let us use the example for the sake of argument) because by experience I find it cheaper then well what I am doing is speculating on a rise in price later in the day. It matters little whether I want the fish to eat myself or to sell back again later—although here, of course, is where the emotional definition of speculation comes in—the effect is the same: my demand helps increase prices in the morning and the absence of it helps keep them down later in the day, which is what makes for a more stable price and a less unreliable supply. I know that such operations can give rise to abuses and that is why speculation has such a bad name. But would it not be better to use a different word for the kind of operator who seeks to rig markets, form corners and so on? A friend suggested one to me the other day. It was "manipulator", which seems a much more admirable candidate for emotional castigation than the unfortunate speculator.

THE UNION COMMERCE MINISTER, MR. KANUNGO, is not the only one who dislikes speculators, the U.S. Treasury does too, especially when their activities affect the dollar, and this is one reason why, despite the fact that last October saw the highest free market gold prices for a generation, gold was a long way down the list of 1930 currency hedges. I see from the January issue of *Pick's World Currency Report* that last year's best hedge was tapestries, 15th and 16th century Spanish, Flemish and French ones. They increased in price over the year by 100 percent. Next to them came French rugs of the 17th and 18th centuries, which rose in much the same proportion in French markets. Manuscripts of the 12th and 14th centuries came third with a 75 percent increase on last year's prices. Modern originals did well too; a volume illustrated by Toulouse-Lautrec, which sold for about $6 half a century ago, was available last year at a mere $8,000. French 18th century furniture, signed by a master, which rose by about 150 percent in 1959, slowed down to 40 percent last year. Paintings were not such a good hedge as they have been since the war, although the American Abstract School were in fair demand and did 50 percent better. What did not do well at all were, of course, Government securities and bonds of all kinds. Which seems to suggest that in this modern world of contradictions dead artists are held in much higher esteem than live politicians; and that is not really a bad scale of values. This worldwide thirst for art and antiques might have a relevance for India which, I see, is taking firmer steps to ensure that none of her prodigious stocks leave the country. Why, I wonder? When Europe has been in trouble, she has helped raise the wind by selling her works of art to the United States, or at least abroad. Why cannot India do the same? It is never pleasant to part with treasured possessions, but it is a well honoured device for tiding over an emergency, and if others have had to do it, what has India to worry about provided the foreign exchange is good? As a slogan, what about "Kangra paintings for steel plants" or "temple carvings for railway wagons". Those who throw up their hands in horror can console themselves with the knowledge that art is universal, and historically speaking they are really only a loan anyway; it is amazing how many of those European treasures are finding their way home again these days.

THE LANCASTER HOUSE CONFERENCE ON NORTHern Rhodesia seems fast to be getting nowhere; and the pressures on Mr. Macmillan and Mr. Macleod must have been terrible. But when it comes to taking difficult decisions which are unpleasant to one party or another, few governments can claim to have a faultless record. The emergence of India's sixteenth State, Nagaland, evokes in me many thoughts, some of which I dare not express. It has already been argued that this decision, if taken three years earlier, might have avoided much of the trials of the intervening years. Sections of the Nagas are, obviously, still not satisfied with what Delhi has conceded; and the "moderates" know it. But at least they can tell their people they have got something. It is never easy, sometimes impossible, to decide just when to make concessions and to what extent. Would it have been better if the British had ended their rule in India in, say, 1905 rather than in 1947? Could the unity of India have been preserved if she had been given, meaning if the Congress had been given, all power in 1921? These ifs of history constitute debating points for schoolboys, I realise, but there is no evidence that historians know any better. The Belgians are now being widely accused of giving freedom to the Congo too soon. Dr. Hastings Banda has no doubt at all that freedom came to the Congo too late, and hence all this trouble. Who is right, or are both wrong? How great is the risk involved in giving Northern Rhodesia an immediate African majority? What is the price India has paid for not granting Nagaland sooner? I do not know that there are definitive answers to any of these questions. With what little data politicians are required to take decisions affecting the lives and deaths of millions! Even if Nagaland is not the complete answer to some of the people's prayers in the area concerned, it is perhaps a step in the right direction. The Nagas have much to gain from a close association with India; but they deserve to be understood and respected better not only by Mr. Nehru, who likes tribals, but also by minor officials from the plains.

A MAN WENT TO A PSYCHIATRIST AND EXPLAINED that he was suffering from executive's strain. "And what is your job?" asked the psychiatrist. "Well", said the man, "I work in an orange factory. I stand at the bottom of a long chute and as the oranges come down I put the large ones in a box on my right-hand side and the small ones in a box on my left." "But that does not seem to be particularly strenuous", replied the psychiatrist. "What really is the trouble?" "Trouble?" said the man, "Why can't you see doctor: all day long it's decision, decision, decision."

THE DITCHER

US* MAKE COLD CASH...

India today is caught up in the feverish activity of industrial advancement. Projects are planned ... dams are being built ... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines ... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary — absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

THE SCINDIA STEAM NAVIGATION COMPANY, LIMITED

CHAIRMAN, MR. DHARAMSEY M. KHATAU'S REVIEW

Address of Mr. Dharamsey M. Khatau, Chairman, The Scindia Steam Navigation Co., Ltd., delivered at the 41st Annual General Meeting of the Shareholders of the Company, on the 22nd February, 1961:

In his address to the Shareholders of The Scindia Steam Navigation Co., Ltd., at the 41st Annual General Meeting, Mr. Dharamsey M. Khatau, Chairman of the Company, referred to the performance of the Company during the year ended 30th June, 1960 that while the cargo carried was higher by over two lakh tons and the freight earnings were higher by *over Rs. 1.75 crores, as compared to the previous year,* there was a fall in the net earnings due to the low level of freight rates and increased expenditure directly attributable to the increased calls made at different ports, charter hire and direct expenses by way of stevedoring, marine and canal dues. Excluding the provision for special depreciation amounting *to Rs. 101 lakhs and not taking into account the sur*plus on sale of assets of Rs. 6.74 lakhs, the working of the Company showed a profit of Rs. 74.53 lakhs which, under the depressed conditions in the shipping industry the world over, could not be regarded as unsatisfactory.

The Dividend proposed is 60 nP. per share, subject to deduction of tax, to be paid out of the General Reserve.

Low Freight Rates

The low level of freight rates in the overseas trades, the Chairman remarked, was due to severe impact of general depression in shipping, continued low level of tramp rates and the increased competition by tramp and liner vessels which called at Indian ports *en route* while engaged in international trades not directly connected with India. There was also the competition offered by tonnage bringing foodgrains and fertilizers to Indian ports which could offer to carry cargoes on the way back without regard to economic rates of freight. Mr. Khatau, confirming the recent arrangements between different Liner Companies engaged in the India/U.K.-Continent trades, referred to the discussions between the Scindia Company, India Steamships and the other Conference colleagues and observed that the shipping services have been reappraised in the light of modern developments and measures aimed at co-ordinating the services of the Member Lines taken to ensure the best utilisation of ships employed and to provide optimum coverage for loading/discharging ports. This he added was a scheme of rationalisation no different from what is normally followed in any other well-organised group of industries and was meant to give a more satisfactory and efficient service.

Referring to the criticism levelled against the efforts made by under-developed countries in the matter of expanding their national shipping, by the General Council of British Shipping recently, Mr. Khatau said it was unfair to foist the responsibility for the present day difficulties experienced by shipping the world over on countries like India. Mr. Khatau stated that the difficulties presently experienced by shipping in the international field had been brought about by over-acquisition and over-building of tonnage year by year by traditional maritime nations who should have had a better appraisal of the situation and should have taken precautions to adjust their tonnage from year to year to the world trade requirements. He instanced an increase in tonnage by some of the countries as under :—

Tonnage as at 1st July each year :

(in millions of G.R.T.)

	1948	1955	1958	1959	1960
World Total of which	**80.3**	**100.6**	**118.0**	**124.9**	**129.8**
U.K. & Northern Ireland	18.0	19.3	20.3	20.8	21.1
U.S.A.	26.9	23.9	23.1	22.8	22.3
Countries of Europe other than Scandinavia & U.K.	8.1	14.7	18.5	19.6	20.1
Scandinavian countries	7.3	11.7	14.7	16.3	17.2
Greece	1.3	1.2	1.6	2.1	4.5
Liberia	—	3.9	10.1	11.9	11.3
Panama	2.7	3.9	4.4	4.6	4.2
Japan	1.0	3.7	5.5	6.3	6.9

In commenting on the future trend, Mr. Khatau referred to the decrease in the world laid-up tonnage from 8.7 million G.R.T. in October 1959 to 3.3 million G.R.T. in January 1961, but observed that the rates of freight had however not registered any increase to justify an inference that the imbalance between world tonnage and world trade had been sufficiently adjusted.

Coastal Shipping

Dealing with the coastal and adjacent trades Mr. Khatau referred to the diversion of salt and coal cargoes by rail, delays to coastal shipping both at *loading and discharging ports owing to slow despatch* consequent upon the inefficiency of unloading operations and lack of wagons. These factors coupled with restricted loading due to unsatisfactory drafts in the Hooghly River meant a considerable wastage of shipping tonnage employed on the coast. These problems, he said, had been placed before the National *Shipping Board and also before the Neogy Committee.* He urged the need for a proper co-ordination of all modes of transport and an early solution of the difficulties which the coastal shipping had to face.

Referring to the tonnage programme, Mr. Khatau said, *that efforts had been made to improve the efficiency and competitiveness of the Company's services* by adding new and recently built vessels to the fleet.

War Risk Insurance Scheme

Mr. Khatau stressed the urgent need for establishment of War Risk Insurance Scheme by the Government of India by which it would be possible to save foreign exchange presently spent abroad. He pleaded for an early adoption of the proposals before the government. Mr. Khatau referred to the increasing cost of building new tonnage and rise in the cost of operations and pleaded for a suitable policy in the matter of economic rates of freight for shipping either employed in the coastal or international trades. He said, in making this plea the ship-owners asked for nothing more than what was conceded to every shore industry of importance. Mr. Khatau further emphasised the need to bring about the expansion of Indian tonnage on a planned basis so as to ensure maximum utilisation of the available tonnage and to *avoid wasteful and unhealthy competition between* Indian Lines and with this end in view, he pleaded that further licensing of vessels should be only for routes either new or not adequately covered by Indian Lines presently. In referring to the operations of the subsidiary companies Mr. Khatau stated that B.S.N. (1953) Pr. Ltd., which operated on the Konkan coast had made a further loss of Rs. 6.95 lakhs, which brought the cumulative loss to Rs. 28.63 lakhs. He hoped that the Government of India will arrive at an early decision on the report recently submitted by the Konkan Shipping Services Committee. The Scindia Workshop Pr. Ltd., showed a small net profit of Rs. 1,672. Mr. Khatau referred to the acquisition of one of the Ship Repair Firms in Bombay by the Government and urged that there should be no change in the usual practice of the Government Shipping Corporations to invite tenders from all the workshops for ship repair work and to entrust to the lowest tenderer *as hitherto, thus ensuring that* the Corporations enjoyed the benefit of economic repair costs. Operation of the Jalanath Insurance Ltd., he observed, had brought an increase in insurance premium by about Rs. 1.88 lakhs and added that effective from 1st January 1961 the Company had been able to enter into reciprocal treaty arrangements in the U.K.-Continent and Far Eastern Countries which would benefit the Company further.

In conclusion Mr. Khatau thanked Dr. Subbaroyan, the Minister for Transport, Mr. Raj Bahadurji, Minister of State for Shipping, the Secretary to the Ministry of the Transport, and the Director General of Shipping and his Officers for their efforts in furthering the cause of Indian Shipping. He further thanked all the Company's patrons, shippers and consignees at home and abroad and looked forward to their increased support to the Company's services.

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED

CHAIRMAN, MR. G. L. MEHTA'S STATEMENT

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163, Backbay Reclamation, Bombay 1, on Thursday, March 23, 1961, at 4 p.m. The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1960:

I have great pleasure in welcoming the Shareholders to the new premises of the Corporation, to which the Corporation's registered office was transferred in May 1960, and in placing before them the Sixth Annual Report of the Board of Directors of the Corporation for the year ended December 31, 1960.

In many ways, 1960 marked an important stage in the planned development of India. After the foreign exchange difficulties in 1957 and 1958, the country was able to consolidate its position in this sphere, thanks partly to the aid of friendly countries. Industrial production increased by about 15 per cent over the level reached in 1959—the result of completion of earlier efforts. Available reports indicate a favourable situation as regards agricultural production. Credit which appeared plentiful at the beginning of 1960, however, became subsequently scarce. Inflationary pressures in the economy have been largely contained. The situation has improved sufficiently to embolden Government to plan on a larger scale for the Third Plan period, an effort underpinned by the successful negotiation of a large and long-term agreement for the import of food grains and other agricultural commodities from the U.S.A.

Trends in Industrial Finance

Of more immediate interest to this Corporation were developments in the field of industrial finance. The upsurge in investment to whose beginning I had referred in the last year's statement, assumed much larger proportions during 1960. This upsurge was reflected in the capital market both in the number of new issues floated on the market and in the heavy over-subscription of these issues of capital and the premiums quoted on new shares. A gratifying aspect of this trend was the widening of interest in industrial shares, as evidenced by the large number of applications made for the issues. I would also refer to the fact that the interest apparently was confined to variable dividend securities rather than to fixed interest bearing securities. Considerations of growth appear to have outweighed considerations of yield.

This phenomenon has, however, to be interpreted with some qualifications. It is likely that a part of the demand for the new issues was based on short-term considerations of quick capital appreciation, as frequently happens in a rising market. Moreover, with investors failing to secure *required shares in one* issue, it was often the same applicant and nervous the same money chasing successive issues. Besides, as over-subscription became a common phenomenon, people may have tended to apply even with borrowed funds, for larger amounts than their investment requirements, in order to ensure at least a part allocation on their application.

But even after allowing for stagging of new issues, double-counting of many applications and inflation of demand, it is possible to infer that there was a substantial increase in genuine investment demand for *industrial securities. The upsurge has proved to be* transient as the results of more recent issues indicate; nevertheless, the shift in investment habit, once acquired, is likely to have an enduring impact, although the intensity of its manifestation is bound to vary with market psychology and the general climate.

There are one or two aspects of this phenomenon which are of importance from the view-point of sound industrial development. There seems to be a strong demand for equity participation in industrial enterprises, more so where there is foreign collaboration. In this connection, I should like to welcome the recommendation of the Committee appointed by Government to invite, as an experiment, minority public participation in a few selected public sector companies. The success of this experiment, however, will depend upon the choice of issues, their timing and the care bestowed on details as well as adequate preparation for ensuring satisfactory public response. Unduly high expectations about public subscription to such issues should not be entertained in the initial stages; the benefits of this policy will be realised over a period of years.

In the private sector also, it is necessary that the present opportunity be used to improve the gearing of share capital. There are various factors which appear to favour an increasing resort to debt-financing in private industry. A smaller equity base considerably improves the profitability of a company. Very often, the amount of equity capital fixed is based not on the requirements of the project but on the financial resources of the entrepreneur, with the result that where an entrepreneur takes up a very large project and tries to retain controlling interest, he keeps the equity low and seeks to obtain the balance of the cost of the project by means of borrowing. Most finance institutions also cater to supplying loan capital rather than providing assistance in the form of underwriting of or subscribing to share capital. Finally, foreign exchange, because of its shortage, is available mostly by way of loan capital (except to the extent financial participation is forthcoming from foreign collaborators) instead of being purchased with rupees raised on the capital market, as was previously the case.

I cannot help feeling, however, that excessive reliance on loan obligations in the capital structure, particularly of new companies has its risks which entrepreneurs are, in their optimism, prone to overlook. Such borrowings lead to an accumulation of interest charges in the early non-productive (construction) years of a new enterprise, which can be avoided by raising equity. Moreover, while in prosperous times it may be apparently easy to service debt obligations, when the winds of competition blow, such enterprises would be hard put to meet their growing commitments. Further, the existence of debt obligations may reduce the capacity of a company to borrow in difficult times when borrowing alone may be possible and becomes unavoidable.

It would, therefore, be prudent for private industry to raise the required resources by way of share capital when circumstances permit. Times like the present should be used to strengthen the capital structure rather than to seek capital appreciation by keeping equity low. Financial institutions should have the necessary flexibility for providing assistance in this direction.

I am aware of the fact that there are different views on this subject. Undoubtedly, the capital structure appropriate for a company depends upon several factors such as the nature of its business, the magnitude of its requirements, the stability of its operations over a period of time, and the climate of the capital market. What I have tried to indicate are some of the considerations relevant to sound finance which should not be overlooked when we desire not merely rapid but also healthy industrial development.

Widening of the Financial Market

The investment market is being broadened by the expansion of the functions of finance institutions. Many commercial banks have started giving medium-term loans; the existence of the Refinance Corporation should further strengthen this development. Commercial banks have also entered the underwriting field. As regards finance for small industries, the benefit of the guarantee scheme operated by the Reserve Bank of India, available to commercial banks, has been extended to State Finance Corporations.

The widening of the financial market is also indicated by the growing practice of giving guarantees. Guarantees are now being given by one set of financial institutions to another as, for example, by commercial banks on behalf of Indian borrowers to foreign financing agencies like the Export-Import Bank and the Development Loan Fund as well as to Indian financing agencies; or by finance institutions on behalf of Indian purchasers to foreign suppliers of machinery as by the Industrial Finance Corporation for deferred payments.

ICICI's contribution to these developments has to be judged in relation to its resources; it is, therefore, more qualitative than quantitative. ICICI has always kept in view a broader objective, namely, to help foster the growth of a capital market in India. To this end, it has consistently tried to keep in touch with other finance institutions, to exchange information on matters of common interest and to take up joint underwriting and other financing operations. We have done joint financing also in respect of foreign exchange loans thereby augmenting the foreign exchange resources available to the country. We have done so in cases where we could have met all the requirements ourselves and although it was not necessary to invite other institutions to participate. We consider such operations to be also in the interest of ICICI in so far as they help to reduce risk by spreading it.

Operations of I.C.I.C.I.

ICICI's own operations during 1960 reflect some of the trends noted earlier. ICICI benefited from the upsurge in investment activity in the country, as shown by the total volume of assistance, Rs. 13.43 crores, sanctioned by it. A large proportion of this assistance was in the form of foreign exchange loans since, with the acute scarcity of foreign exchange, ICICI became an important source of foreign exchange for industry. At the same time, as a result of its policy of limiting its stake in any one unit (which, in view of foreign exchange shortage, often took the form of foreign exchange loans) and because of the buoyancy of the share market (which reduced the need for underwriting and encouraged other finance institutions to take up such business as became available), ICICI's own rupee operations, although higher than during 1959, tended to grow less rapidly. With indications of hardening money conditions and a slackening of demand for shares, ICICI's rupee operations during 1961 may well rise further.

The amount of gross assistance sanctioned by ICICI during 1960, as already mentioned, was Rs. 13.43 crores to 44 companies, consisting of rupee assistance of Rs. 5.81 crores and foreign exchange assistance of Rs. 7.62 crores. Of this, an amount of Rs. 11.21 crores was sanctioned to 39 companies for new projects. A finance institution is a catalyst in the sense that it helps bring into being investment much larger than the amount of its own assistance. For example, the total amount of investment in the new projects of the 39 companies assisted by ICICI in 1960 would be Rs. 55.22 crores (of which Rs. 43.69 crores would be for fixed assets)—almost five times the figure of ICICI assistance. The foreign exchange component of the fixed investment of Rs. 43.69 crores was Rs. 17.84 crores, of which ICICI provided about 40 per cent; the balance of the foreign exchange requirements was met from Government releases of foreign exchange to the companies concerned, participation by foreign collaborators and deferred payment terms given by suppliers. The turnover of these projects when completed is estimated to amount to about Rs. 39 crores.

The companies financed this total fixed investment of Rs. 43.69 crores by raising ordinary share capital of Rs. 18.75 crores preference share capital of Rs. 2.15 crores and long-term loans of Rs. 21.22 crores; working capital requirements of Rs. 11.53 crores were more than fully covered by bank credit and internal cash accruals of Rs. 13.10 crores. I would like to add that the larger reliance on long-term loans in these cases was partly due to the fact that a substantial part of the requirements was in foreign exchange which, except in the case of cash licences or foreign participation, can be obtained only by way of loans; besides, old companies can more safely go in for preference shares or loan commitments than new companies.

New Loans

With the increasing tempo of ICICI's operations, it was found necessary to augment our resources, particularly of foreign exchange. The Second Loan from the World Bank was fully committed during 1959, much earlier than originally anticipated. I am glad to report that during the last year ICICI obtained a further foreign exchange loan of U.S. $20 million from the World Bank. This is the third and the largest foreign exchange loan obtained by ICICI; the first two being of U.S. $10 million each. We are grateful to the World Bank for its increasing confidence in this Corporation. I would take this opportunity to thank the distinguished President and the staff of the World Bank for their understanding and co-operation. We are also obliged to the Government of India for its helpful attitude, and particularly for its guarantee to the World Bank in regard to the Third Loan.

ICICI has also successfully negotiated during the year a loan of $5 million from the Development Loan Fund of the United States Government. Some formalities remain to be completed in regard to this loan and it is hoped the agreement would be signed at an early date. I take this opportunity to thank the officials of the Development Loan Fund for this loan and for the interest they have evinced in the activities of this Corporation.

Working Results

Reflecting the rising tempo of operations, the Corporation's profits before tax increased from Rs. 59 lacs in 1959 to Rs. 62.60 lacs in 1960. After providing for tax (Rs. 26.94 lacs), the balance carried to revenue appropriation account is Rs. 35.67 lacs in 1960 against Rs. 23.23 lacs in 1959. As required by Clause 103 of the Corporation's Articles of Association, we have set aside Rs. 9 lacs out of this to the General Reserve; we have also transferred the entire amount of realised profit on investments, being a sum of Rs. 24.87 lacs (net), to Capital Reserve.

The directors recommend a dividend at the rate of 5.75 per cent. After deduction of tax at source, this leaves in the hands of shareholders an amount slightly above 4 per cent. Thus we have been able to restore to the shareholders the cut in dividend necessitated by the change in the system of company taxation. We have represented to the Government that the present tax system bears heavily on finance institutions of which there are about twenty at present which do not benefit from the various tax incentives like development rebate and tax holiday made available to manufacturing concerns. It would therefore be equitable to extend to these institutions tax concessions as has been done in some countries. In view of the need to encourage the saving and investment habit in the country and in recognition of the catalytic impact of finance institutions on industrial development, I trust the Government will see its way to extending these reliefs to finance institutions.

General

I should finally like to refer to two matters of general interest to investors, in which ICICI played an important role. A legislative measure of considerable importance to the investor—the Preference Shares (Regulation of Dividends) Act 1960—was enacted during the year under review. While the Bill was under discussion, your Corporation, as a matter of public service, jointly with other institutions, made representations to the Finance Minister as also to the Select Committee. The Government has seen its way to grant some relief to shareholders as a result of these efforts.

I had referred last year to the proposal to form an Investment Centre. I am glad to report that the Indian Investment Centre has now been set up in New Delhi. ICICI has played a prominent part in its establishment. The Government has chosen five Members of the Governing Body of the Centre from among the Directors of ICICI; I have the honour to be the first Chairman of this body. I have every hope that, as a result of the Centre's activities, the flow of foreign investment to India will increase.

The staff have carried out their duties loyally and efficiently. I take this opportunity to thank them for their valuable services.

U.K. ACCEPTS I.M.F. OBLIGATIONS OF STERLING CONVERTIBILITY

THE U.K. on 15th February accepted the full obligations of convertibility for sterling as set forth in Article 8 of the articles of agreement of the International Monetary Fund, it was announced by the Chancellor of the Exchequer, Mr. Selwyn Lloyd, in the House of Commons. In a written answer, Mr. Lloyd said: "The United Kingdom is today (15th February) notifying the International Monetary Fund that it accepts the provisions of Article 8 of the agreement as from today."

As far as the U.K. is concerned, the move is formal recognition of the stage which had already been reached, it is pointed out in London. When the I.M.F. was set up, temporary provisions (Article 14) were made for the transitional period following the war: this was to enable member-countries to defer, for the time being, taking on in full the permanent obligations embodied in Article 8 of the I.M.F. agreement. Broadly speaking, under these permanent obligations, member-countries are required not to impose exchange restrictions on current payments without the approval of the Fund. They are also required not to engage in discriminatory exchange arrangements without the Fund's approval and, with certain provisos, are required to maintain convertibility of their currencies. They may, however, apply controls to capital movements, provided these do not restrict current payments.

Restrictions Steadily Lifted

The U.K. has been steadily removing restrictions for some time. There are now no exchange restrictions on payments for current transactions, and the purpose of the only remaining exchange controls in relation to current transactions is to ensure that unauthorised capital transfers are not carried out under the guise of current payments. A few quantitative restrictions are still retained on imports, for other than balance-of-payments reasons. The British Government intends to make further progress in removing these as soon as possible, although there are some special problems which it will take some time to resolve. These restrictions are not affected by the present move.

Nine other members-countries of the I.M.F. in addition to the U.K.—namely, Belgium, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Peru, and Sweden—are also accepting the obligations of convertibility set forth in Article 8 of the Fund agreement. (Hitherto, these obligations had been accepted only by the U.S.A., Canada and some Latin American countries.)

In a statement in Washington on 15th February announcing the move, the I.M.F. draws attention to its important implications for the Fund's general activities. A larger number of currencies will now be available for use in Fund transactions, and there will now be greater scope for promoting international monetary co-operation in a changing world.

MR. AL FOIL MINDS HIS MANNERS

"Full-flavoured soft and delicious," enthused Mr. Foil biting deeply into an excellent cheese. "But d'you know, my charming hostess, what *keeps* this cheese in such superb 'taste'...'tis that very attractive foil packaging...aluminium foil, clean crackling and functional—that helps to keep the *original goodness within and the dirt without.* So here's a tip for your table... buy any brand of cheese or butter that's to your taste but be sure it's foil wrapped—for only foil wrapped products keep their taste to the table.

Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

VENESTA FOILS LTD. KAMARHATI, 24 PARGANAS, WEST BENGAL

THE CALCUTTA MONEY MARKET

CALL RATE REMAINS UNCHANGED

Wednesday, 22nd February.

THE level of advances in the Calcutta money market has continued to rise during the past week, but the rate of increase has slowed down. There has been a fall in the credit requirements of the jute industry, but demand both from the sugar mills and on account of grains and seeds storage shows an increase. Demand from other sources remains more or less unchanged. Conditions are slightly easier in the interbank market, but the call rate is unchanged at 5½ percent. This was the rate ruling last week, when it was incorrectly quoted here as 4½ percent. This error is regretted.

There has been a sharp fall in activity in the exchange market; the poor supply of bills which has come to hand consisted mainly of gunny documents. Remittance has remained poor. Due to a general strengthening of the U.S. dollar, the pound sterling has been marked down on the London money market. At the close, losses were also recorded against most important Continental currencies.

SILVER WAS STEADY IN THE PAST WEEK. THE price advanced from Rs. 238 to Rs. 239.25 a 100 tolas quoted to-day for ready, while the rate for forward delivery was quoted at Rs. 201.50 a kilogram. The London and New York prices were 80⅛ and 91.375 cents.

Gold was quiet on bigger offers and the price fell from Rs. 145 to Rs. 143.50 (Mysore). The sovereign realised Rs. 95.25.

DURING THE WEEK ENDED 17TH FEBRUARY, Government of India Treasury bills for Rs. 10,50,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 21st February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.335 percent and above were accepted in full, the average rate of acceptance being Rs. 2.650 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 27th February.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 22nd February to 25th February at Rs. 99.356 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 15th February to 18th February amounted to Rs. 5 lakhs.

THERE WAS A DECLINE OF RS. 8.15 CRORES TO Rs. 1,940.66 crores in active notes in the return of the Reserve Bank of India for the week ended 17th February, 1961, but the total note issue was Rs. 37 lakhs higher at Rs. 1,959.36 crores. Notes held in the Banking Department consequently rose by Rs. 8.53 crores to Rs. 18.70 crores. Deposits of the Government of India increased by Rs. 12.91 crores to Rs. 72.77 crores, while other Government accounts fell by Rs. 55 lakhs to Rs. 21.30 crores. Balances of commercial banks at Rs. 71.39 crores showed a rise of Rs. 95 lakhs. Balances held abroad improved by Rs. 5.08 crores to Rs. 29.55 crores. Investments were Rs. 12.12 crores higher at Rs. 142.86 crores. Other loans and advances declined from Rs 157.03 crores to Rs. 150.70 crores, of which advances to scheduled banks against usance bills totalled Rs. 26.90 crores (Rs. 24.26 crores). Ways and means advances stood at Rs. 37.71 crores, against Rs. 39.22 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 10th February, 1961, shows a rise of Rs. 2 crores to Rs. 560.41 crores in total deposits. Investments in Government securities are down by Rs. 8.10 crores to Rs. 260.91 crores, while other authorised investments remain unchanged at Rs. 9.79 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 9.21 crores to Rs. 262.24 crores. Cash and balances are, in consequence, shown at Rs. 23.24 crores or Rs. 1.42 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 10th February, 1961, shows Demand and Time liabilities at Rs. 794.39 crores (Rs. 15.57 crores on account of borrowings from banks) and Rs. 1,098.49 crores (Rs. 10.29 crores), compared with Rs. 801.04 crores (Rs. 16.56 crores) and Rs. 1,095.02 crores (Rs. 9.74 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 94 lakhs and Rs. 4.28 crores to Rs. 44.83 crores and Rs. 69.77 crores. There is a drop of Rs. 8.89 crores to Rs. 597.13 crores in investments. Advances and bills discounted at Rs. 1,255.31 crores show an increase of Rs. 16.49 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.1 percent and 66.3 percent, against 6.3 percent and 65.3 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of November 1960:-

	Rs.
(1) At the Reserve Bank of India in India	90,02,07,000
(2) At treasuries in India ...	37,54,000
(3) In England (sterling converted at 18d the rupee) ...	1,25,03,000
Total ...	91,64,64,000

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to January 1961.

As compared with December, the January index for preference shares showed a rise of 0.3 points, while that for Government securities indicated a decline of 0.1 point.

There were increases in banks 4.4 *points*, cottons 2.5 points, coals 2.0 points, minings and oils 2.7 points, engineerings 5.7 points and teas 10.1 points, while decreases occurred in cements 2.2 points, papers 7.2 points, sugars 13.0 points and miscellaneous 4.1 points. The index for jutes remained unchanged at 111.9 points.

Combining all the factors, the *Capital* variable yield securities index advanced by 2.8 points during January 1961.

Stocks and Shares

BUDGET HOPES KEEP MARKET FIRM DESPITE RESTRICTED ACTIVITY

MISCELLANEOUS INDUSTRIALS ATTRACT: BRITISH PAINTS ALLOTMENTS ANNOUNCED

Wednesday Evening.

FACES as long as the pillars of the Calcutta Stock Exchange normally line *Lyons Range* at this time of year. But this past week, broad smiles *have illumined* the physiognomies of investors and speculators there. The omens for the Central Government's Budget, due to be presented next *Tuesday evening, are considered* good. West Bengal has proposed no new taxes, nor has Bihar. Maharashtra is raising only Rs. 1 crore more; and the *Railway Budget has brought no substantial increases* in fares and freights. What, therefore, was once feared as an approaching orgy of revenue-raising has begun *almost as dully as a Calcutta* cocktail party. So hopes are high that the tax-*gatherers will* depart, *sans* thirst or hunger, leaving basketfuls of satisfaction behind.

It cannot, however, be said that Lyons Range operators have been out on a buying spree for equities. Business *has been limited, but, because* of the pre-Budget optimism, sellers are few. So *even modest* buying has tended to raise share prices somewhat *immoderately. Holders of blue* chips, in particular, are sitting tight on what they *have. Recent* reports indicate that the better-class companies are doing well, particularly some in the miscellaneous section; so investors have struck hard bargains *for such morsels* of shares as they might have cared to offer. The speculatives have merely reflected the general optimism, without business anywhere *being necessarily large.*

The general view seems to be that the Central Finance Minister will raise only about Rs. 25 *crores or Rs. 30 crores by* way of new taxes. All the taxes will be indirect, and there may even be some minor adjustments in direct taxation, particularly *where this latter discriminates* unjustly against *certain* classes of enterprise. The approaching summer has also brought forth a few swallows twittering *the prophecy that the* bonus issue tax might be reduced. Beyond that, Budget *guesses* are rare. Rayon and potable liquor have been mentioned as possible *victims of indirect* levies, but without quite managing to fray nerves *anywhere*

The rise in Indian Iron to Rs. 25.02 *reflects* partly the cheerfulness of the market and partly the fact that the Company hopes to set up a cast iron spun pipe plant. Among *other engineerings*, investment buying has lifted Jessop, Indian *Oxygen and* Guest, Keen, Williams in response to ideas that the Companies are doing well, while speculators have been attending to Texmaco.

In the jute section, Birla, Howrah and New Central have come in for *selective* support. But the other shares are depressed by the thought that maximum prices might be fixed for jute and jute goods. Such a step, it is assumed, will only disorganise trading and lead to the growth of black *markets. In the end, the industry* will suffer, without consumers being able to get their gunny requirements promptly and at reasonable prices.

Coal shares have been very firm. An American team's report, recommending that depletion allowances be granted to the industry, has *attracted interest*; but nobody really believes that the allowances will be given straightaway. The more important reason for the cheerfulness is the hope *that the industry will* be encouraged to expand its production rapidly; and that foreign aid *will* be forthcoming for the expansion plans. The railways' proposal *to raise freight rates for short*-haul coal traffic has not caused much concern. On *the contrary*, Bengal, New Beerbhoom, Equitable and Amalgamated have risen, *while Burrakur are* celebrating the announcement of an ordinary dividend of 8 percent, taxable.

A notable *feature is the rise in cotton textile* shares, including Kesoram, Dunbar and Elgin (this last due to a good report). Raw cotton prices have fallen since the new crop *prospects look* promising and substantial quantities of the fibre are *coming from the United States.* The profitability of the industry is expected to improve with rising production and lower raw material costs.

Many stars, little and big, have twinkled in the miscellaneous section. Union Carbide *have risen* sharply on reports that some of the Company's *expansion plans* have been sanctioned. It is hoped that the Company will in future find it possible to give definite information on such subjects equally *promptly to all* shareholders. Indian Copper are up on rumours about a rights issue. Kallis are celebrating the excellent results issued by the Company *recently, while Indian Cable have* risen on the view that the technical position of the *shares has* improved. An ordinary dividend of *Rs. 2.75 taxable, has lifted Martin Burn. Expan*sion prospects have pushed up Metal Box and *Alkali* Chemical. Isaac Hodden and Hindustan Twyford are displaying youthful *vigour. National* Insulated Cable are up *on* interested support. *Papers are dull but steady*, and sugars are quiet.

Enquiries have been *broadening in the tea sec*tion, but mainly for Dooars shares. The notable features have included Hantapara, Birpara, New *Dooars, Hasimara and Nagaisuree.*

Gilt-edged securities have been very quiet, and the 3% Conversion Loan has met with selling pressure. But *official* support has held up short-dated and medium-dated securities, while institutional buying has helped State Government loans.

The subscription list for the recent ordinary share issue of British Paints (India) Ltd was kept open for three days, and it is understood that the issue has been over-subscribed eight times. The basis of allotment has been decided as follows: 15 shares to each applicant for 100 shares, 25 to each for 200 shares, 35 to each for 300 shares, 45 to each for 400 shares, 55 to each for 500 shares, 65 to each for 600 shares, 75 to each for 700 to 900 shares, 80 to each for 1,000 shares, 90 to each for 1,100 to 1,900 shares, 95 to each for 2,000 shares, 101 to each for 2,100 to 5,000 shares and 201 shares to each applicant for 10,000 shares. The allotment letters and refund orders will, it is understood, be ready for posting on 28th February.

Bombay Market

PRICES IMPROVE ON BROAD FRONT

ABSENCE OF ADVERSE BUDGET RUMOURS HELPS SENTIMENT

Wednesday Noon.

CHEERFUL conditions have prevailed in the Bombay stock market during the past week, and share prices have improved on a broad front

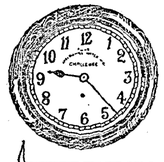
CHALLENGE

LEVER MOVEMENT CLOCK



Ideal clock for offices, homes, workshops, schools etc. Used in most of the Railways, Central and State Government offices.

Lever movement will work in any position. Cases made of highly polished solid teak-wood and may be spray painted to choice. Weekly winding. Chromium bezel, round shape with bold Arabic figures and hands. Dial 12", overall diameter 16" and depth 4".

MODEL No. CL-27/1
PRICE Rs. 125.00

SENTINEL

MARINE LEVER ROUND SHAPE

anglo-swiss marine lever clock is an accurate and dependable time-keeper, especially constructed to withstand extremes of climate and vibration. Suitable for ships, engine rooms, buses and other transports. Used in homes and offices too. White dial with Roman figures. Bevelled glass. Body fully chromium plated and equipped with an 8-day lever movement. Dial 8", overall diameter 10½" and depth 4".

MODEL No. CL-24
PRICE Rs. 180.00

Guaranteed for one year
MADE IN INDIA

anglo-swiss watch co.
6 & 7, DALHOUSIE SQUARE EAST, CALCUTTA-1

AWI-13

due to a renewed spate of buying. Operators were inclined to take a more constructive view of the coming Central Budget, and sentiment was helped by the absence of any adverse rumours about it.

Investors, however, were cautious and bought shares discriminatingly. Companies having expansion schemes and growth prospects were generally favoured. The expectation of an early increase in the retention price of steel induced renewed support in steel shares. The prospect for improved supplies of cotton during the current year has helped broaden enquiry in cotton mill shares. Selected miscellaneous scrip were bought on good corporate news.

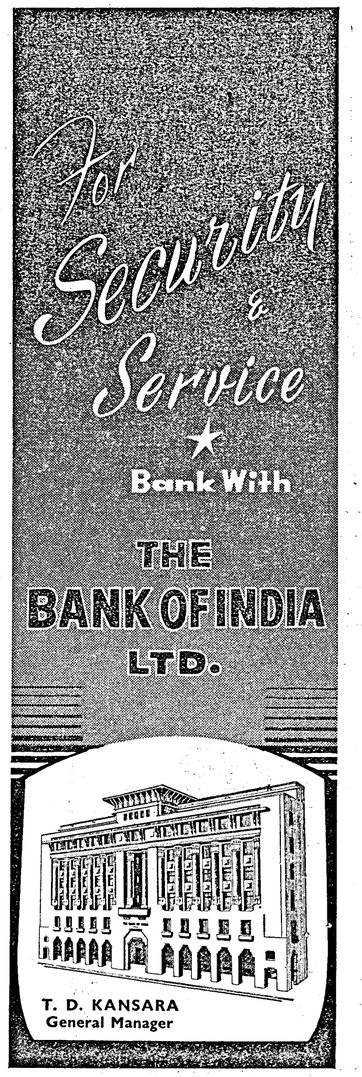
Tata Steel closed higher at Rs. 149.25 and Indian Iron were steady at Rs. 25.10 on support from Lyons Range. In the engineering section, Alcock Ashdown improved to Rs. 280, as did Premier Construction to Rs. 193. Tata Locomotive were wanted up to Rs. 309.50 and business passed in Larson and Toubro at Rs. 39. Motor shares were firm, and Hindustan Motors gained at Rs. 20.84 on firmer advices from Calcutta. Premier Automobiles were transacted at Rs. 168.75 on hopes of expansion.

In cotton mill shares, Bombay Dyeing rose to Rs. 63.70 and Century came to hand at Rs. 501. Standard Mills shot up to Rs. 1,208 on corporate rumours and Kohinoor were in demand up to Rs. 285. Tata Mills were steady at Rs. 44.75, as were Khatau at Rs. 470. Simplex were done at Rs. 173 and Finlay were transacted at Rs. 330.50. India United Ordinaries were quoted at Rs. 14.60 and Apollo changed hands at Rs. 1.58.

Prices of miscellaneous shares moved up in line with the general trend. In the sugar section, Belapur recovered to Rs. 272, as did Walchandnagar Industries to Rs. 215. Phalton were dealt in at Rs. 135. Among cement shares, Associated Cement were wanted up to Rs. 147.50 on diversification of activities and Digvijay were quoted at Rs. 153. In mining shares, Shivrajpur Syndicate were firm and the price increased to Rs. 88.50. Steamship company shares were neglected, and Scindia Steam were sold at Rs. 15. Great Eastern Shipping lost at Rs. 14.24. Bombay Burmah recovered to Rs. 566 and National Rayon were firm at Rs. 515 on short-covering induced by the hope that there might not be any further increase in the excise duty on rayon. Baroda Rayon were in demand up to Rs. 132. Among chemical shares, Tata Chemical changed hands at Rs. 18.44 and Colourchem improved to Rs. 355. Indian Dyestuff were done at Rs. 465 and Ceat Tyre improved to Rs. 235. Synthetic and Chemicals shot up to Rs. 145 on replacement buying. Voltas were in demand up to Rs. 272 on reports of good working.

Bank shares were steady and prices were quotably higher. Central Bank improved to Rs. 56.30 and Bank of India to Rs. 119.50. Insurance shares were steady, and New India Assurance were dealt in at Rs. 52.52.

Selective buying took place in electric company shares, and Tata Power came to hand at Rs. 1,020. Ahmedabad Electric were transacted at Rs. 87.30 and Bombay Suburban were quoted up to Rs. 89.80.



Madras Market

PRICES IMPROVE ON BUDGET HOPES

TEA SHARES FIND SUPPORT

Wednesday Evening.

THERE has been an appreciable improvement in the Madras stock market during the past week. Selected shares were bought at rising prices because sellers were rather reserved. Holders were disinclined to sell because favourable prophecies were being made about the Central Budget due to be presented in a few days' time. Turnover increased more on investment account than on professional buying. In sugar shares, optimism emanated from reports of increased production. The textile interests were hoping to benefit from improved working because of the prospect of abundant cotton supplies during the current year. Meanwhile, the cloth offtake has been upward. In the planting group, tea scrip were supported on the view that production was higher in 1960 and the quality of tea has improved following careful plucking. Rubber shares were steady because the domestic production was much short of the demand. Coffee scrip were bought on reports of higher output. In the miscellaneous section, shares were generally bought on reports of expansion and diversification of activities.

In Government securities, prices of State loans have improved due to institutional buying. The prices of medium and short-dated stocks of the Central Government were steady in the absence of pressure. There was little interest in public utilities and routine business was transacted. West Coast were done at Rs. 13.50 and Vellore at Rs. 13.10. South Madras were dealt in at Rs. 9.90 and business passed in Berhampur at Rs. 6.

In the sugar group, United Breweries were firm at Rs. 112 and Travancore were wanted up to Rs. 10.75. Deccan changed hands at Rs. 14.25, as did E.I.D. up to Rs. 40.60. K.C.P. were transacted at Rs. 25.53 and Mysore came to hand at Rs. 58.25.

Among planting shares, Blue Mountain changed hands at Rs. 3.86 and Cochin Malabar were in demand up to Rs. 7.86. Consolidated Coffee were quoted at Rs. 23.62 and Ouchterlony were done at Rs. 4.62. Periakaramalai were dealt in at Rs. 3.69 and United Nilgiri were bought up to Rs. 24 on paying an interim taxable ordinary dividend of 10 percent. Coonoor were transacted at Rs. 28 on declaring a final taxable ordinary dividend of 7½ percent. Cowcoody were in demand up to Rs. 4.90 and Kil Kotagiri were steady at Rs. 5.15. Coffee Lands changed hands at Rs. 21 and Nilgiri came to hand at Rs. 7.60. Highland were done at Rs. 14.65 and Midland were taken at Rs. 12. Peermade were steady at Rs. 22.30 and Teekoy were quoted at Rs. 6.10. Travancore Rubber were supported up to Rs. 9.87 and Waterfall were done at Rs. 3.19.

In the textile group, Travancore Rayon were firm at Rs. 35.50, as were South India Viscose at Rs. 149. Bangalore Woollen were bought up to Rs. 196.50 and Buckingham up to Rs. 193. Business passed in Dhanalakshmi at Rs. 216 on paying a taxable ordinary dividend of 17½ percent. Kothari were steady at Rs. 12.50 and Lakshmi were done up to Rs. 154. Madura were firm at Rs. 36.25 and Radhakrishna were in demand up to Rs. 29.37. Trichinopoly changed hands at Rs. 11.95 and Coimbatore Spinning were done at Rs. 53.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.50 on the payment of the interim dividends. Ashok Leyland improved to Rs. 8.90, as did India Cement to Rs. 6.15. General Papers were supported up to Rs. 11.06 and F.A.C.T. were done at Rs. 10.30. Enfield were steady at Rs. 15 and Parry's Confectionery were wanted up to Rs. 5.20. Interest was shown in Spencer at Rs. 22.70 and Standard Motors were transacted at Rs. 16.75. Textool were steady at Rs. 173 and Tube Investment were supported up to Rs. 291. Binny were taken at Rs. 210 and W.I. Plywoods met with interest up to Rs. 240. Mysore Paper were bought up to Rs. 23.25, but Mysore Tobacco were sold down to Rs. 11.85.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. ACTIVITY IN STOCK MARKET IMPROVES

INDUSTRIALS RISE

London, 22nd February.

ENCOURAGED by the further, though very small, improvement in the U.K. trade figures for January, and by a revival of optimism concerning the long-term business outlook which has been stimulated by the return to a five-day week in the motor-car industry, buyers took a distinctly keener interest in the stock market over the past week. Good company news and the unabated flow of take-overs also held the attention of investors and fairly substantial headway was made in industrial share prices. The battle for control of Odhams Press remains undecided, but an increased bid from the *Daily Mirror* group pushed the price of Odhams shares still higher. Motor shares improved following the news from Fords, Vauxhalls and Standards of full-time working and there was a sympathetic rise in steel shares. There has been a good deal more interest in the gilt-edged market than for some time, which followed investment comment on the attractive yields obtainable but a flurry in undated stocks was short-lived and prices reacted. Interest in gold shares remained on a very restricted scale, and prices steadily deteriorated. Copper shares came under the influence of the Rhodesian problem and prices in this section also eased. Tin shares, on the other hand, made quite a substantial headway in response to buying mainly on eastern account. Oil shares were quiet and rather uncertain. Rubber and teas shares encountered a certain amount of support and some useful gains were recorded.

The Money Market

With the pressure of seasonal heavy tax payments easing off and causing less dislocation to the credit situation, the pattern of the money market is now emerging to one of stringent conditions. During the early part of the past week, the position was very easy due to large disbursements of Government dividend and departmental monies and there was a sharp expansion in the supply of funds available to the market, making it necessary for the authorities to absorb small surpluses. The rate for day-to-day money after being firm at 4¼ percent and 4⅜ percent on the first two days of the week became easier with the market obtaining balances in the afternoon at as low as 3 percent and under, with the basic minimum rate of 3⅜ percent being reached around midday. A fair business was transacted in end-April, early May and "hot" bills at 4⅜ percent, but after the Treasury bill tender on Friday, May and "hot" bills were dealt in at 4⅛ percent.

Activity in Wall Street

High-grade corporate issues resumed their forward movement during the past week following some initial hesitancy. U.S. Government obligations also moved ahead. This was attributed to the successful outcome of the recent huge refunding operation by the Treasury with a good demand noted for the new 3¼ percent notes due in August 1962. Convertibles improved. In the foreign section, dollar bonds of African countries experienced some unsettlement as a result of developments in the Congo. Rhodesia 5⅜ percents were off a full point. Australians were mostly higher by fractions and Japanese Governments were mixed. Greeks were firm and Polish issues easy. A few of the German nationals were lower by more than one with French Credit Fonciers 5½ percents and Chile 3 percents showing little change on the week.

Lower Prices for Linseed

More activity has been displayed in Canadian linseed as a result of lower prices. Some of the business was for the earlier shipments from Vancouver, but quite the major proportion was for the opening of navigation clearances from Saint Lawrence lakes. Set against these purchases were collateral sales of oil for deliveries well ahead at discounted prices.

NAMES AND DATES

The following have been elected to the Committee of the Bengal Chamber of Commerce and Industry for 1961-62. President, Mr. N. Stenhouse of Andrew Yule and Co. Ltd; vice-president, Mr. H. Mackay Tallack of Macneill and Barry Ltd; members, Sir John Brown of Jardine Henderson Ltd, Mr. J. M. Lall of Imperial Chemical Industries (India) Private Ltd, Mr. J. Luckham of Dunlop Rubber Co. of India Ltd, Sir Walter Michelmore of Bird and Co. (Private) Ltd, Mr. A. I. Murison of James Finlay and Co. Ltd, Mr. P.E.G.W. Parish of Gillanders Arbuthnot and Co. Ltd, Mr. S. M. Smith of Shaw Wallace and Co Ltd, Mr. I. G. Thomson of the Chartered Bank and Mr. H. M. L. Williams of Guest, Keen, Williams Ltd.

The annual general meeting of members of the Indian Jute Mills Association will be held at the Royal Exchange on Friday, 17th March, 1961, at 11 a.m.

Mr. G. P. J. De Clermont, chairman of De Clermont and Donner Ltd, London, and its subsidiary, the South Indian Export Company Ltd, Madras, is touring India. The main purpose of his visit is to discuss with the Central Government the possibilities of increasing exports of hides and skins from India.

New Delhi

U.S. EXPERTS REPORT ON INDIAN COAL EXPANSION PLANS

NEED FOR MORE WASHERIES TO SUPPORT STEEL DEVELOPMENT PROGRAMME

(FROM OUR NEW DELHI CORRESPONDENT)

A TEAM consisting of four U.S. coal experts (three coal mining executives and one technical executive assistant) came to India last year to examine the considerable data made available by the Indian Government, the National Coal Development Corporation, the Technical Co-operation Mission and others. The experts inspected collieries and coal workings; and held various conferences and discussions with the interests concerned on matters relating to this country's coal production plans for the next five or six years. The team consisted of Mr. R. E. Salvati, president, Island Creek Coal Company, Mr. H. E. Jones, Jr., president, Amherst Coal Company, Mr. E. R. Phelps, president, Pittsburg and Midway Coal Mining Company, and Mr. B. C. Saunders, assistant to Mr. Salvati. The observations and recommendations of the team are summarised as follows:

There are adequate proven reserves to support the growth and development programme for India's coal industry during the third plan period (April 1961-March 1966). The aggressive exploratory programme should be continued and, if possible, expanded in order to provide verification of present planning and additional proven reserves for future use.

Transport shortages are adversely affecting the production of present-day mines. Unless corrected promptly, they will seriously impair the attainment of the third five year plan growth objectives. Serious consideration should be given to the necessity for additional and larger wagons, locomotive power, etcetera, and an adequate supply of wagons for colliery operations. This single item could in itself increase the output from the present-day operation by as much as 20 percent, and at the same time, reduce considerably the current cost of putting coal in storage at the mines and then loading from storage to wagons—a costly operation at best.

Much of the present-day mining equipment is from time to time made idle by the need for spare parts. This situation will become more critical as more wagons are put into service, and the mines are called on to produce to full capacity. Efforts should be made to simplify the procedure for procuring parts, increase inventories, and expedite deliveries from stores to points of need.

While great strides have been made in training manpower and obtaining trained personnel for mining operations, the coal industry, both in the public and private sectors, faces a shortage of trained personnel, skilled in the maintenance and repair of mining equipment. A gigantic effort should be made to alleviate this situation and it is believed that this can best be accomplished by the use of training programmes on a specialised rather than a general, overall basis.

Coal Washeries

India "is to be congratulated" on planning for the use of coal washeries. It is believed that in spite of the excellence of planning to-date, additional washeries will be needed over those already contemplated. In order to justify the use of washeries, their cost should be offset through increased prices paid by consumers. The improved quality of the washed products at points of consumption will more than repay the consumer for the increase in cost a ton. To attain a higher level of production, the various Government organisations having control over the coal industry should be brought under one organisation.

Of fundamental importance to the third five year plan coal target is the output of the private sector mines. They must be given every incentive to carry out their part of the programme:

(1) A reappraisal should be made of the coal reserves to allow private sector mines a greater share of the undeveloped coal reserves.

(2) The private sector should be allowed sufficient financial incentive to develop new mines. One such incentive would be a depletion allowance to permit the private producer to charge off his reserves and accumulate a sum of money for the acquisition of new assets.

(3) The simplification of the import licensing procedure so that the private sector mines can obtain spare machine parts more promptly is of fundamental importance.

(4) Some credit assistance will be needed by the private sector mines. This should be made available on the same terms as are offered to the National Coal Development Corporation mines.

Of equal importance to the deep and strip operations in both the private and public sectors of the industry is the matter of labour relations. Safety pays dividends in both production and employee morale. There is ample opportunity for substantial gains through expanded safety programmes, the use of protective clothing such as hard-toed shoes, hard hats, etcetera, the safeguarding of equipment and the use of electric cap lamps in underground mining. Also, it is believed that production can benefit from improved industrial relations that would ensue if the workers in the major coal-producing belts had available to them their necessities at reasonable prices. Today's facilities are meagre. This one suggestion could do much towards relieving absenteeism, which appears unnecessarily high.

N.C.D.C. Mines

The strip mines of the National Coal Development Corporation are excellently equipped and the management is to be congratulated on the degree to which standardisation has been accomplished through the selection of equipment. India's deep mines, unlike her strip mines, lack the advantages which result from the standardisation of equipment within a given operation. It is important that this matter be carefully reviewed before any additional equipment is purchased for the projected or existing N.C.D.C. deep mines. It is not suggested that all mines need to have the same equipment, but there are numerous advantages in having all equipment in a given mine produced by the same manufacturer. The management of the Corporation should be complimented on its underground electrical system. As rapidly improved transport is provided for moving coal to points of consumption, it should continue its programme of mechanisation. This applies equally to both the private and public mines.

The present plans of the Corporation call for the reopening of the old Jarangdih mine. This mine, operated in the Kargali seam which was very gassy, had bad roof conditions, and was interspersed with numerous faults. The seam consists of high-quality metallurgical coal for which there is a great demand. Adjacent to the old Jarangdih mine is another working in the Jarangdih seam. Below this seam is reported to be a deposit of the Kargali seam.

A new mine at the location of the present Jarangdih mine in the Kargali with a 12-foot seam would seem much better than reopening the old mine with the faults, gas, and bad roof. This location has the further advantage of offering ample room for a washery and a good supply of sand from the nearby river. The present management of the mine is perfectly capable of handling the problems arising out of the development of a new high-capacity mine in this body of metallurgical coal. Additional diamond drilling should be done to verify this recommendation.

Plan for Mechanised Mine

The National Coal Development Corporation plans to open a large, mechanised mine, called the Bisrampur mine, which will be operated with loading machines and shuttle wagons dumping directly into mine wagons which will be pulled to the surface by locomotives. This mine appears to be very well planned, and it is highly recommended that the project be pushed to rapid completion so that construction can be started in time for the tonnage to be available during the third five year plan.

The Sudamdih mine will be in the Jharia coalfield and it is tentatively forecast that it will produce 1.5 million tons of metallurgical coal through a shaft 2,000 feet deep. This project is one of the major problems facing the Corporation in the third five year plan, and the team is doubtful whether the N.C.D.C. has the technical know-how to embark on a project of this magnitude. The sinking of the shafts alone will be a tremendous problem. Similar mines have already been developed in the private sector. In the opinion of the team, incentives should be offered to private operators through better profits, financial assistance, etcetera, to develop this particular mine either individually or jointly.

The Korba mine is under planning and subsequent construction with Russian help. It appears to the team that the Russian plans for this mine are "very highly developed". However, if the information given the team concerning the cost is correct (reported to be Rs. 50 crores), it is of the opinion that this cost for a mine of 2.5-million-ton capacity is too high. It is believed that such a mine should be opened for not more than Rs. 10 crores, and it is suggested that the cost of this installation be subjected to review.

The problems confronting India's coal industry, if it is to attain the production targets set for the third five year plan, are numerous and challenging. Errors will be costly in time, money and overall economic growth. Even with the best of planning, engineering, and technical advice available, the attainment of 37½ million tons to 40 million tons of additional coal production during the 1961-66 period will be a most difficult task. Having done so, India will have solved only her coal supply problem for the present, but will continue to face a supply problem for the future. India's continued dependence on coal for her economic growth and improvement makes it all the more important—in fact, compelling—that all growth and expansion planned for her coal industry during the next five years be of the very best possible, and that to the extent possible, within the limits of financial and physical availability, the U.S.A. provide every possible aid.

Beneficiating Coals

As the reserves of metallurgical coal are limited, two measures of conservation have been adopted: (i) to wash all metallurgical coals so as to lower the ash content and thereby enrich the coals; and (ii) to use a blend of weakly coking or semi-coking coals—of Bokaro, Burrakur and Korba—with the fully coking coals of Jharia. The new steel plants in Rourkela, Bhilai and Durgapur are all designed to use a blend of coals. The existing steel plants in Jamshedpur and Burnpur, which have been using largely Jharia coals, also propose to use a relatively small proportion of semi-coking coals of Bokaro and Burrakur. The requirements of washed coals for the three new steel plants in the public sector and the expanded steel plants in the private sector—for the production of about 6 million tons of steel in terms of ingots and about 700,000 tons of more pig iron for sale—are estimated at 8.2 million tons a year:

	(In million tons)
Rourkela	1.6
Bhilai	1.8
Durgapur	0.8
Jamshedpur	2.4
Burnpur	1.6
Total ...	8.2

There are at present three washeries—one in west Bokaro, one in Jamadoba and the third in Lodna—which supply the steel works in Jamshedpur and Burnpur. With certain improvements, these would supply about 1.75 million tons of washed coal. The new 500-ton-an-hour washery, which has been set up in Kargali, will supply about 1 million tons of washed coal to Rourkela and 500,000 tons to Bhilai. In the contract for the steel plant in Durgapur is included a washery to supply 800,000 tons of washed coal to that steel plant. For the balance—about 4 million tons—three washeries, it is projected, will be put up—one in Dugda, another in Bhojudih and a third in Patherdih, all in the Jharia coalfield. Generally, it is the intention that the Dugda washery would supply washed Jharia coals to Bhilai and Rourkela, that in Bhojudih to the Tata steel works and the one in Patherdih to the Indian Iron steel works.

The plant for the Dugda washery is being supplied by the U.S. firm of McNally-Pittsburg. It will have roughly an input capacity of 2.4 million tons of coal and supply 1.8 million tons of washed product, the balance being middlings and rejects. The middlings will be used in a thermal power-station, which is being put up nearby in Chandrapura with a loan from the United States. The washery, it is expected, will be ready for operation early this year. The Bhojudih washery is being constructed with the assistance of Powell-Duffryn Coppee Ltd of the U.K. Some 1.2 million tons of coal will be washed to supply 900,000 tons to the steel works. The balance will be in the form of middlings and rejects. Preparatory work is in progress and it is expected that the washery will be fully in operation by the middle of 1962. The Patherdih washery will have a coal input of 1.8 million tons to give a washed product of 1.3 million tons and is expected to be constructed in time to be in operation by the second quarter of 1963. Tenders have been received from 12 different overseas suppliers. These are being examined by Hindustan Steel Ltd which is also responsible for the construction and management of the Dugda and Bhojudih washeries.

In a sense, the washeries which will wash coals of Jharia are all central washeries, in that they wash coals from different collieries. In selecting collieries, the prime consideration is the suitability of coals for washing. Yet another consideration is the output of the colliery, which has got to be a minimum of at least 2,500 tons a year. Judging by these criteria, there will hardly be any colliery with an output of over 2,500 tons a year which will be left out of the scheme of washing beyond 1963.

High Ash Content

Indian coals are particularly difficult to wash as the ash in the coals occurs throughout the body. Coals generally of other steel-making countries have ash in layers. Depending not only on the content of ash but also on the particular manner in which it is ingrained in the coal, washeries have to be designed. The processes to be employed will vary; so will the size of the washing units. As washeries are designed to wash specific coals, it is necessary, before deciding the location, size and specifications of a washery, to know which particular coals are to be washed in that washery. Thereafter, the characteristics of the coals have to be studied in a series of experiments to be able to draw up the specifications. It is, therefore, a little too early to foresee exactly how many more washeries will be required to wash coals for the expanded steel industry of the third five year plan. Planning, which is proceeding to settle the sources of supply of additional coals to each of the steel works as they will be at the end of the third five year plan, indicates that there will be need

at least for four more washeries. One of these may be in Katara to wash coals of the Bokaro seam, which are being mined at this place. There will have to be two washeries to wash Jharia coals. These are likely to be both in Dugda or one in Dugda and another in Bhojudih. The coal washery in the Durgapur steel works will have to be expanded suitably. There may also have to be a washery in the new steel works in Bokaro.

Tentative Schemes for World Bank Aid

The World Bank mission has indicated that the Bank is tentatively considering the following projects for assistance during the third plan period: (i) development of Calcutta port; (ii) power development in the D.V.C. and Bombay areas; (iii) production of coal in the private sector; (iv) development of the railways; and (v) additional funds for the Industrial Credit and Investment Corporation of India. No final decision has, however, yet been taken by the Bank concerning any of these projects.

U.K. and U.S. Investments in India

U.K. and U.S. investments in India as at the end of 1948 and 1958, together with the percentage increases, are shown below:

(Rs. crores)

	End of June 1948	End of 1958	Percentage increase in 1958 compared with 1948
U.K.	206.02	398.03	93.2
U.S.A.	11.17	59.85	435.8

U.S. investments in India, as at the end of 1958, were as follows:

Industry	(Rs. lakhs) Amount
Petroleum	41,18
Manufacturing	14,88
Trading	2,52
Utilities and transport	5
Mining	9
Financial	10
Plantations	6
Miscellaneous	67
Total	59,85

Deferred Payment Contracts

Deferred payment contracts are generally in terms of gross liabilities, the interest element in most cases being included in the total cost of the goods to be imported. It is, therefore, not possible to compute the amount of interest charges separately, especially since the rate varies from case to case and also depends on a number of imponderable factors like the dates of shipment and actual arrival of goods in India. However, on the basis of sanctions given, the gross payments, including interest charges on account of imports under deferred payment terms as on 1st October, 1960, for which information is available, have been estimated as follows:

Year	(Rs. crores)
October 1960-March 1961	13.64
1961-62	24.96
1962-63	29.76
1963-64	22.15
1964-65	16.70
1965-66	11.42

L.I.C. Business

The total amount of business (zone-wise) completed by the Life Insurance Corporation of India during 1960 is given below:

	(Rs. crores)
Northern zone	62.40
Central zone	57.27
Eastern zone	86.86
Southern zone	107.41
Western zone	97.48
Total	411.42
Foreign business	7.96

Reserve Bank Scheme on Unit Trusts

The Reserve Bank of India has sent a note to the Government dealing with the question of establishing investment and unit trusts in India. The note is being examined.

Indian Investment Centre

The Indian Investment Centre was formally inaugurated here last week. It is managed by a governing body of which Mr. G. L. Mehta, former Indian Ambassador to the U.S.A., is the chairman. Other members are: Dr. Sir A. Ramaswami Mudaliar, Mr. Kasturbhai Lalbhai, Mr. George David Woods, Mr. William George Pullen, Mr. P. C. Bhattacharyya, Mr. K. R. K. Menon, Mr. S. Ranganathan, Dr. B. K. Madan and Mr. G. L. Bansal. Mr. R. S. Bhatt, who was until recently a member of the Tariff Commission, is the executive director of the Centre.

The main objects of the Investment Centre are to advise and assist Indian industrialists, including those engaged in medium and small-scale industries, on matters necessary to attract foreign private capital and to advise and assist foreign business men on matters concerning investment in India. For this purpose, it will maintain services for supplying information to Indian entrepreneurs and prospective foreign investors on industrial capacity, production, trade, markets, labour conditions, resources and power supply, as well as on economic and financial policies and laws and regulations relating to foreign investment in India. The Investment Centre will assist Indian industrialists in collecting basic data for a specific investment project and in building it up to a "prospectus" stage so as to meet the investment requirements of foreign investors. It will contact foreign entrepreneurs on their behalf and confer with them as a follow-up to the submission of project reports.

The Centre will assist foreign entrepreneurs in various forms. It will answer enquiries from them on investment conditions in India generally and supply detailed information on particular investment projects. After foreign firms have shown interest in individual schemes, the Centre may arrange contact between individual foreign firms, Indian parties and the Government. The Investment Centre will render assistance whereby specific schemes may materialise and become established as early as possible.

The Centre has set up its own organisation consisting of qualified and trained personnel. In addition, it will have the benefit of the services of foreign advisers and technicians, whose services are made available on contract by the U.S. Technical Co-operation Mission. It also proposes to make arrangements in important foreign capital exporting centres so that enquiries emanating from Indian entrepreneurs and those received from foreign investors may be dealt with as quickly as possible.

Resolutions for F.I.C.C.I. Annual Meeting

A two-day meeting of the committee of the Federation of Indian Chambers of Commerce and Industry has decided that resolutions for its annual session, to be held here from 25th March, be drafted on the following subjects: (1) third plan, (2) export promotion, (3) streamlining of administrative machinery, (4) transport capacity and movement bottlenecks, and (5) coal production and movement. The committee has also finalised a communication to be addressed to the Government on price regulation and return on capital. The Federation has already taken up with the Commerce and Industry Ministry the point that the recommendations of the price fixing authorities do not always take note of the needs of the industry to provide for a fair return to the investor and for rehabilitation and expansion of plant and equipment after meeting the growing operational expenses.

Raw Wool Imports Fall

India's seaborne imports of raw wool fell markedly in the third quarter of 1960 to 302,000 lbs, due mainly to a very sharp decline in the purchases from Australia and New Zealand. This brought the total for the first nine months of 1960 to 3.1 million lbs, or 23 percent up on the corresponding months of 1959, receipts from Australia rising by 21 percent to 2.1 million lbs. Imports of wool tops rose by 8 percent between the two latest quarters to 4.2 million lbs, bringing the total for the nine months to 11.6 million lbs, or 7 percent less than in January-September 1959. Imports from the U.K. were 6 percent down at 7 million lbs, while those from Australia fell in the same proportion to 3½ million lbs. Yarn imports during the third quarter came to only 21,000 lbs, while the nine months' total amounted to 160,000 lbs, compared with 429,000 lbs a year ago. Imports of wool fabrics during the same nine months were 55 percent higher at 152,000 linear yards.

Wheat Utilisation Mission Report

The report of the Wheat Utilisation Mission which was released by the U.S. Government last month has made a number of recommendations on India. It states that in view of the rapidly increasing population in India and the current level of agricultural production, the Mission is of the opinion that under average climatic conditions, a minimum deficit in cereals and pulses in the range of 4 million tons to 5 million tons annually over the next two years, will have to be supplied through imports if the present level of consumption is to be maintained. Thereafter, for a period of at least three years, similar quantities will be required if an improvement in the diet is to be realised, and as the demand for food increases with progressive industrialisation and urbanisation. To a very large extent, these deficits can be met through the provision of wheat. The Mission is also of the opinion that the foreign exchange resources available to India cannot be concentrated on food requirements without serious impairment to the development plan as a whole and to the realisation of ultimate production targets in agriculture.

It is recommended, therefore, that within the framework of the rules governing concessional wheat sales adopted by the Wheat Utilisation Committee, the member-countries give serious consideration to:

(a) the provision of adequate supplies of wheat to India on concessional terms to meet consumption requirements sufficient to maintain current nutritional levels during the next two years, and

(b) an undertaking to provide the necessary supplies of wheat on concessional terms to realise some gradual improvement in nutritional levels during the remaining years of the third five year plan.

The concessional supply of wheat may be vital to India's welfare, but wheat alone is not enough. In order to make optimum use of the wheat supplies received, India will require substantial assistance in terms of foreign exchange for essential goods and services. Only if such assistance is available will she be able to implement her programme for economic development, improve the purchasing power of her people, and use effectively large quantities of wheat for the objectives which the "food for peace" programme has in view.

It is suggested that the member-governments of the Wheat Utilisation Committee (if considered desirable, in conjunction with other nations friendly to India and with appropriate international agencies) may wish to give special attention to the Mission's conclusion that, over and above any aid wheat provided, the success of India's development programme requires capital imports under an aid of significantly greater magnitude than represented by concessional wheat imports.

Possibilities of Self-sufficiency

The Mission considers that there exists in India the potential to become self-sufficient in food, but recognising the magnitude of the food problem, in relation to an expanding economy and a rapidly increasing population, there is a need for immediate and large-scale expansion in indigenous food production. It is recommended, therefore, that the provision of wheat on concessional terms be accompanied by a suitable understanding that such supplies will not be permitted to impede or cause a relaxation in programmes for agricultural development and expanded production.

The transport difficulties, market imperfections and climatic variability from year to year which prevail in India, make it highly desirable that reserves of foodgrains be expanded. The Indian Government has suggested that such reserves should be of the order of 5 million tons. This would be only 5 percent of the anticipated consumption requirement at the end of the third plan. The objective is not unreasonably large in a food economy which is at near-subsistence levels.

It is recommended that consideration be given by member-countries of the Wheat Utilisation Committee to the establishment of a wheat reserve in India, on concessional terms, subject to the provision of satisfactory facilities for the handling and long-term storage of such wheat; and that shipments of wheat for reserve stocks be phased in relation to the availability of such facilities over and above storage requirements for the day-to-day Government operations in foodgrains.

The Mission has noted the improvements made in port facilities in India under the second plan and the further programmes to provide additional facilities in keeping with the needs of an expanding economy. It recommends that early action be taken to provide more adequate grain-handling facilities at the major ports, including the construction of silos to facilitate receipt, cleaning, fumigation and bagging of imported wheat prior to long-term storage in godowns and also to provide some storage in bulk for reserve stocks.

The Mission is of the opinion that there exists in India a considerable potential for the increased consumption of wheat. Conditions are currently such, however, that large-scale market development projects along traditional lines may not be too productive. As incomes rise, there will be a greater possibility for market development activities, particularly in urban centres. If efforts to popularise wheat products are made part of a general nutritional education, emphasising the best use of a range of available food, they are likely to be more readily accepted by the people. There is need for expanded technical training facilities for food production, industrial plants for the processing of wheat and wheat products, and increased availability of milling and baking machinery.

It is recommended that (a) in market development programmes, emphasis be given to food demonstration and other educational techniques which will include the promotion of a wide variety of wheat foods already accepted by sections of the Indian public; (b) encouragement should be given to pilot school lunch projects, so as to provide information on the potential for expanded use of wheat in programmes of this type on a large scale when economic conditions permit; and (c) in the event that wheat is supplied on concessional terms to build up reserve stocks, the Government of India should be encouraged to make every effort to supply mills with such types of wheat as will permit the production of a uniform standard quality of wheat products.

The maintenance of nutritional levels in India is a critical problem, and improvement even to the modest extent proposed for the third five year plan will require special effort. The Mission recommends that the quality considerations involved in nutritional improvement should be given particular attention.

Using Rupee Proceeds of Sale

The Mission was concerned with the problem of exploring the uses to which the rupee proceeds of the sale of concessional wheat should be put. It was recognised that relating the use of these rupees to the total supply of rupees, to the maintenance of internal financial stability and to the planning process for economic development is of the greatest importance.

In India today, as a result of intensive efforts to increase capital formation, there is continuous inflationary pressure upon the prices of most available supplies, caused by the impact of deficit financing upon a population still living at the subsistance borderline. Even though the foreign exchange cost of economic development is greatly reduced by aid-financed imports on a large scale, the rupee costs of the development programme generate heavy pressures on the prices of available consumer goods. While India's financial control techniques are modern and sophisticated, some inflationary pressures cannot readily be offset by additional taxation or other counter-inflationary techniques if India is to maintain her traditionally democratic society and continue her rate of investment.

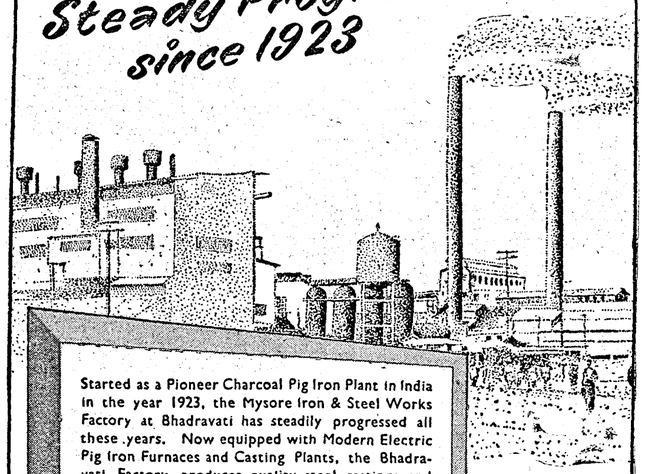
Wheat supplied on concessional terms is sold by the Indian Government, thereby providing an excellent offset to the inflationary pressures of development financing through its ability to absorb excess purchasing power. At the same time, donor countries are understandably anxious to be able to show that "specific projects" are being financed from wheat sales funds, thereby demonstrating that the donor is "directly" rather than "indirectly" assisting specific development projects.

Obviously, spending the proceeds of the sale of concessional wheat partially or wholly nullifies the beneficial counter-inflationary effect of the original sale, unless there is a corresponding reduction in rupee expenditure derived from deficit financing. On the other hand, the protracted failure to agree to spend sales proceeds blocks the donor's wish for direct participation in defraying the rupee costs of desirable economic development projects, while at the same time subjecting the recipient Government to all sorts of pressures from special interests anxious to have the "available" rupee funds spent on their behalf. Trying to implement a donor's desire to assist specific projects presents a complicated problem in timing and co-operation which, if not understood and resolved, can be a constant source of difficulty to both donor and recipient.

In recipient countries having an effective overall plan for economic development, the problem can be solved if the donor agrees to finance projects from within the economic development plan. The problem is much more difficult to solve where donors wish to suggest new projects for the consideration of recipients. In such a case, many difficult adjustments necessarily delay the reaching of mutual agreement, on this latter basis.

One useful solution to these difficulties might well be for both donor and recipient to begin planning for the use of rupee sales funds as early as possible, based on estimates of the amounts which will be derived from sale rather than on the basis of sales proceeds actually accrued. Thus, in the case of India, donor governments may well wish to consider the desirability of having mutually agreed rupee expenditure proposals ready sufficiently in advance so that they can be included as a matter of routine in the annual readjustments of the five year plans, which are characteristic of the present Indian procedure.

Steady Progress since 1923



Started as a Pioneer Charcoal Pig Iron Plant in India in the year 1923, the Mysore Iron & Steel Works Factory at Bhadravati has steadily progressed all these years. Now equipped with Modern Electric Pig Iron Furnaces and Casting Plants, the Bhadravati Factory produces quality steel castings and other products.

Range of Products:

Cast Iron Mortar Mills, Charcoal Pig Iron, Cast Iron vertical and Spun pipes to B.S.S., Mild Steel Sections-Rounds, Flats, Squares and Angles, Grey Iron and Chilled Iron Castings, Cast Iron Railway Sleepers, Steel Castings, Railway and General Baling Hoops for Cotton and Jute, Ferro Alloys, Special Steels etc.

Books

SOCIALIST PLANNING

Essays on Economic Planning. Oskar Lange. (Published jointly by Asia Publishing House, Bombay and Statistical Publishing Society, Calcutta. Price Rs. 10, pages 72).

This book by Professor Oskar Lange, one of the leading socialist economists of Poland, contains three analytical essays on the problems of planning in an underdeveloped economy. They were written by him in 1955 and 1956 when he was staying with the Indian Statistical Institute in Calcutta. As far as the analysis of the problems of economic planning goes, Professor Lange probes them deeply and makes a searching scrutiny of the issues involved with a special reference to the conditions obtaining in India. But as a votary of socialist planning, he sees only its good points overlooking the many imponderables and difficulties which face an underdeveloped economy like India which has undertaken planning on a national scale. Much of his beliefs are biased and one searches the whole book to find that it contains no analysis of the defects of socialist planning. Nor does it contain any discussion of the tendency towards decentralised planning as is evident now in communist countries. Professor Lange apparently believes that the growth of State capitalism is no solution for India; it is more necessary to lay the foundations of a strong nationalised sector which, he says, will provide the economic surplus needed for further development. But the record of profitability of State enterprises in India being what it is, many will regard Professor Lange's suggestion as crying for the moon. India already has too much of what Professor Galbraith calls "post-office socialism", and any extension of the nationalised sector seems likely to add to the problem rather than diminish it. Besides, socialist planning of the type that Professor Lange visualises for India would usher in conditions akin to a war economy. If the planners here are prepared to welcome a society to be ruled by an omnipotent and omniscient Big Brother of the George Orwellian type, one need bother no more. But the point is they do not. Much of Professor Lange's opinions on foreign capital are doctrinaire. It is good that the Government and people of this country do not yet subscribe to the views of an extremist socialist planner like Professor Lange.

INDUSTRIAL FINANCE

Industrial Finance in India. By P. C. Jain. (Published by Suneja Book Centre, 24-90 Connaught Circus, New Delhi. Price Rs. 8, pages 300.)

Based on the doctoral thesis of the author, this book attempts to give a complete picture concerning the problems, organisation and the rôle of various financial agencies meant to provide aid to industries. Besides, it contains a comprehensive discussion on the financial needs of industries. The subject is topical since the third plan is to be launched shortly. Dr. Jain discusses both principles and problems as well as the organisation of various financial agencies. But his book is mainly factual, although it compares the position in India with that obtaining in foreign countries. Besides the usual discussions on sources of finance, capital markets, stock exchanges, etcetera, separate chapters have been included to study the special problems of small industries. The book also discusses the rôle of commercial banks, institutional investors, the Reserve Bank and the Government in providing industrial finance. A chapter has been devoted to international credit agencies. But when discussing the place of foreign private capital, Dr. Jain should have referred to royalties and the rules relating to them.

GROWTH OF TRADE UNIONS

Indian Trade Unions—A Survey. By V. B. Karnik. (Published by Labour Education Service, 127 Mahatma Gandhi Road, Bombay. Price Rs. 15, pages 276.)

Mr. Karnik's book tells the story of the growth of the trade union movement in India. It begins with the rise of trade unions in 1918-19 and covers the momentous period of the past 40 years. It ends with the strike of Central Government employees which took place last year. The writer who has been intimately connected with the trade union movement has given his personal touch in this monograph. It is an interesting account of a living and growing movement and refers to men and groups which worked for the movement, of their conflicts and achievements and analyses the purposes which guided their activities. The author has lucidly dealt with the relation of the trade union movement with the national movement and concludes with a discussion of the problems and prospects facing the former. Writing about the parleys held to avoid the Central strike, he says: "Operating under that mounting pressure of rank and file opinion, they (leaders) had very little freedom of action".

The book has an index. In the note about the particulars of trade union leaders, the names of those known in the Bombay area are mainly given, and Mahatma Gandhi is listed as M. K. Gandhi.

KERALA TRADE DIRECTORY

Kerala Guide and Trade Directory. (Published by Joseph Thomsons and Company, Ernakulam. Price Rs. 6, pages 319.)

The book gives concise and authentic information about the land and people of Kerala, its history, culture, politics, industries, plantations, trades, etcetera. The trade section contains classified lists of industries. The directory is arranged in an alphabetical order, and contains over 4,000 addresses. The book satisfies a long-felt want, but the publishers should introduce Calcutta firms to Kerala business men by publishing details about the former in the next issue of the directory.

LABOUR LEGISLATION

Indian Factories and Labour Reports. Edited by L. S. Shastri and M. L. Kharbanda. (Published by the Law Publishing House, 39 Sheo Charan Lal Road, Allahabad. Annual subscription Rs. 25.)

Indian Factories and Labour Reports is a fortnightly journal which discusses the judgments of the Supreme Court, High Courts, awards of industrial tribunals, etcetera. The 1st January, 1961, issue contains summaries of detailed reports of cases heard by the Supreme Court and by the Bombay, Kerala and Madras High Courts. The journal should be useful for lawyers and for companies interested in labour legislation.

BANKING ALMANAC

The Banking Almanac 1960-61. (Compiled and published by Indian Business Publications, G. P. O. Box 548, New Delhi. Price Rs. 25, plus postage and packing Rs 3.50.)

The latest edition of the *Banking Almanac* is more comprehensive than its predecessors. Apart from general information on the banking industry, the publication contains balance-sheets of many Indian and international banks. Bankers and business men will regard it as a useful handbook on commercial banks in India and abroad.

SURVEY OF STEEL DEMAND

The *Appraisal of Steel Demand*, the review of which appeared in *Capital* of 15th December, 1960, is compiled by the National Council of Applied Economic Research. It was published by the Council of Scientific and Industrial Research, New Delhi. The price of the publication is Rs. 10, and it contains 138 pages.

MARKETS DISCUSS POSSIBILITY OF PRICE CONTROLS FOR JUTE AND GUNNIES

FIBRE ARRIVALS REMAIN SMALL IN JANUARY

THE past week has been a period of restricted activity in the Calcutta jute and jute goods markets. Many business houses were virtually closed last Friday and Saturday because of the Royal visit to the city. At other times, traders were reluctant to do business until the results of the Forward Markets Commission meeting were known; it was feared that some sort of restrictive controls may be imposed. The outcome of the East India Jute and Hessian Exchange Committee meeting was also eagerly awaited, since it was understood that the question of reopening futures trading would be discussed. It appears that the matter has been referred to a sub-committee, and many think that futures trading may shortly be permitted, subject to maximum and minimum prices.

The question of controls is one which always inspires considerable argument, but recently the agitation for fixing prices by law has died down. The industry and others have had bitter experience in recent years, particularly in 1950 and 1951, of attempts to control prices, so no one desires a return to those disastrous times. The only true remedy—but a long-term one—is to maintain the quality and the quantity of raw jute available in India. The aspect of quality is as important as that of quantity, so it may be opportune at this stage—on the threshold of another sowing season—to emphasise the point. The folly of indiscriminately increasing production in order to attain self-sufficiency in raw jute has been obvious. It is to be hoped that the lesson has been learned. The best way of dealing with the problem is to ensure that State agricultural organisations and other bodies specially set up to promote the cultivation of jute, concentrate their efforts in areas which are capable of producing high-quality fibre. Every assistance should be given by the Government to stimulate the production of high-yielding crops of good quality in those areas. It is vitally important for the industry in this country that the production of *quality* jute should be expanded, and that the yield obtained should be sufficient to provide the cultivator with an adequate return for his labour. Self-sufficiency will follow automatically once the yield is improved.

Controls Opposed

Interesting views on the question of price control were expressed in Calcutta on Tuesday by Mr. W. D. McLean, chairman of the Burlap Business Relations Committee of the U.S. Textile Bag Manufacturers Association. He spoke strongly against any controls on the jute trade, and expressed the opinion that to impose such restrictions is the surest way of turning U.S. consumers against burlap. He pointed to the serious inroads substitutes have made in the burlap market. Although consumers appreciate the reasons for the current high prices, unless there is a reduction, the switch to substitutes will continue. Once burlap is replaced as a packaging material, it is extremely difficult to regain lost ground.

Few in the Calcutta trade visualise lower prices in the near future, and the latest rumours have only tended to create bullish conditions. It was strongly rumoured over the week-end that the I.J.M.A. was considering a further reduction in production by sealing more looms. Some think that such a move may ultimately become inevitable, although few feel that it will be attempted on as large a scale as the market *pundits* predict. One view is that the shortage of raw jute will become very real in the coming months, and this is again emphasised by the fibre arrival figures which have just been published. In spite of arrivals being much higher than most people anticipated, they represent a new low for the month of January. The gap between consumption and arrivals has still not been made up, and the deficit now stands at 278,000 bales. At this stage of the 1959-60 season, arrivals exceeded consumption by about 76,000 bales. It is difficult to see how the present deficit is going to be made up, if it ever is. Over the next few months the gap is more likely to widen than to narrow, as arrivals drop off towards the end of the season.

Very little business has been reported in the fibre market during the past week, and the issue of a further small quota for 300,000 maunds has caused no great excitement. Sellers' offers continue to be small, and it is doubtful if this amount will be available even if all the offers are put together. Prices have ruled almost unchanged throughout the week, as the upcountry markets are steady due to the small imports. The Pakistani market is also firm, with prices showing a rising tendency, particularly for the higher grades. Jute goods prices have shown minor fluctuations compared with previous weeks. Overseas buyers have taken little interest and business has been small.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during January 1961 amounted to 593,700 bales, made up of 37,700 bales from Pakistan and 556,000 bales from India. The total was 41,300 bales less than in the previous month, due to a fall of 3,600 bales in arrivals from Pakistan and 37,700 bales in arrivals from India. Compared with January 1960, imports are down by 35,000 bales. Total arrivals for the current season, from July 1960 to January 1961, are now 3,298,400 bales, made up of 305,150 bales from Pakistan and 2,993,250 bales from India. During the corresponding period of the 1959-60 season, total arrivals were 3,776,000 bales, made up of 248,000 bales from Pakistan and 3,528,000 bales from India.

The East India Exchange

It has always been understood that one of the functions of an association is to advise and provide protection to its members. A correspondent writes that over three months ago, a point relating to the East India Jute and Hessian Exchange's bye-laws for trading in T.S.D. contracts in jute and jute goods was referred to it for interpretation, as the phraseology led to a great deal of confusion. After several verbal reminders, an answer has just been received to the effect that the Exchange is unable to give any interpretation or advice on its trading bye-laws, and for that purpose a reference may be made to the member's legal advisers! Such is progress.

THE JUTE MARKETS

Manufactured Goods: The market opened on a steady note last Thursday, with heavy goods showing a rise of about Re. 1. Hessians were unchanged and 40in. 10oz. remained at Rs. 66.75 for February shipment. At this stage, B Twills were quoted at Rs. 207.50 for the same shipment, with April-June at a discount of about Rs. 5. The rise was mainly due to covering by local operators and no fresh overseas business was reported. This phase continued over the next two days, but little mill business was transacted as many offices were closed on account of the Royal visit. After the week-end, B Twills advanced to Rs. 210, but in the absence of any genuine enquiries a quieter tone developed. Operators awaited the outcome of the meetings the representatives of the Forward Markets Commission were having with various sections of the industry. This brought a reaction, when B Twill February rates fell back to Rs. 208 and 40in. 10oz. to Rs. 67.50.

At the close, the market was slightly steadier and opening quotations on Wednesday morning were as follows:

40in. 7oz.	51.25	50.75	50.25
40in. 8oz.	55.25	54.75	54.25
40in. 10oz.	68.50	67.65	67.00
B Twills	208.50	206.50	203.00
Heavy Cees (Plain)	206.00	205.50	203.00
A Twills	243.00	243.00	241.00
Liverpools	227.00	228.00	227.00
Cornsacks	214.00	213.00	208.00

Raw Jute: The market was fairly steady last Thursday, mainly due to the steadiness of upcountry rates. Assam quotations advanced to Rs. 64 a maund, but there was little or no interest as the mills did not have a quota. Sellers were reserved and prices were eventually raised to Rs. 64.50, where they remained for the rest of the period, in spite of the fluctuations in the goods market. Imports in most of the main upcountry

agencies continued to be poor, and prices were above the parity of local quotations. For this reason, sellers were inclined to reduce their offers, and were reluctant to discount. On Monday, a further quota of 300,000 maunds was issued to the mills, but evoked very little interest. Wagon arrivals in Cossipore were less than in the previous week, a total of 690 being reported. Mill agents were active, and most of the imports found ready buyers.

On Wednesday morning, the market was unchanged, and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	172.75	64.50	Feb.-March

THE FOREIGN JUTE MARKETS

FIBRE PRICES REMAIN FIRM

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS is quiet in the Dundee market, since dealers appear to be awaiting further developments. Meanwhile, fibre and goods prices in the East continue firm because of the fear that there may be a scarcity of raw jute during this season. Reports of good rains having fallen in the jute-growing areas have, however, made Dundee dealers optimistic that the Governments of both India and Pakistan will be able to implement their promises to do their best to influence jute growers to commence sowings as early as possible and to increase acreage to yield larger crops for the next season. Pakistan will try to raise a crop of 7.4 million bales, while it is said that the present crop will not exceed 5 million bales, and the possibility is that it may be only 4.5 million bales. In spite of reports of a shortage of jute in both India and Pakistan during this season, enquiries among Dundee spinners have elicited the news that no complaints have been received of non-delivery of contracts entered into this season, for which they have bought considerable quantities.

Raw jute ruled firm during the past week. Mill Firsts were quoted at from £207, Mill Lightnings £202, Mill Hearts £198 and Grade Hearts at £192, for February-March shipment, c.i.f. U.K.-Continent. These were the lowest quotations, and there were some sellers asking a few pounds a ton more. Grade Tossa-2/3 was from £204, fours £200 and Continental Tossa-2/3 from £193, same shipment. But the business is more or less quiet now.

THE PAKISTANI JUTE MARKETS

FIBRE QUIET BUT RATES HIGH

(FROM OUR EAST PAKISTAN CORRESPONDENT)

DURING the past week, the Narayanganj market has been quite inactive. The Queen's visit was partly responsible, but the main reason is that the amount of pucca bales available for internal sale is so small that no trading is going on except for ready goods. Very few balers are prepared either to buy or sell forward locally. The prices are still quoted high, mainly for Cuttings, which is quoted at Rs. 275 a bale. On the other hand, overseas markets continue to resist high prices after a short period of buying. More jute is now being offered overseas at slightly reduced prices, but it is probably due to dealers liquidating their positions. A reasonable quantity of spot goods is still available, estimates of which vary from 10,000 to 25,000 bales. Although overseas mills will probably try to calculate their requirements as accurately as possible so as not to carry into the new season any of the expensive old crop jute, they will still have to buy a fair amount before they start receiving new crop material.

Exports so far are remarkably small, namely, 1,941,632 bales up to the end of January excluding India. Since over 2.2 million bales have been registered up to the end of the month, one must assume that approximately 300,000 bales are in the process of being shipped during February. Upcountry imports continue to be meagre. Even large balers with as much as 20 agencies have had small imports. This either means that there is no jute left or that the growers and upcountry stockists are holding back for even higher prices. Since it is hard to believe that the crop is already exhausted and since it is highly improbable that there is more than 150,000 bales in the hands of balers, it can be only assumed that fairly large quantities are being held upcountry. This is largely due to the improved financial position of the growers, which is likely to influence the trend of fibre prices next season.

NEW FAN AERO-ENGINE UNDER DEVELOPMENT IN U.K.

LESS NOISE, GREATER THRUST AND ECONOMY CLAIMED

WHEN a well-known aero-engine manufacturing company which provides 50 percent of the powerplants used by the Royal Air Force and 2,300 engines fitted to nearly 1,000 civil aircraft operated by more than 80 airlines announces a new engine, a good deal of interest is aroused: The Bristol Siddeley BS 75 was the earliest offspring of the union in 1958 between Armstrong Siddeley Motors and Bristol Aero-Engines, both Companies possessing more than 40 years of aero-engine manufacturing experience, and is the first high by-pass ratio fan engine in the world to be designed as such from the start. Fan engines with high by-pass ratios have been produced in the United States by modifying existing turbojets, while in Britain new engines with low and medium by-pass ratios have been built and used very successfully. But the BS 75 and the lift-thrust BS. 53 are the first entirely new designs which exploit the by-pass principle to the limits set by current knowledge.

It is interesting to recall that Frank Whittle (late Sir Frank) patented the by-pass principle some 20 years ago and the first engine of this type was built by Metro-Vick in the late 40s.

The BS. 75 is the result of an investigation which began late in 1956 into the type and size of engine which would be required for the next generation of medium and short-haul airliners. The basic design—a ducted fan with high by-pass ratio of 1.75:1 and a thrust of 7,000 lbs to 8,000 lbs (3,175 kilogrammes to 3,630 kilogrammes)—was finalished in September 1959. Bench testing, say Bristol Siddeley, will begin in January 1962, and flight testing 12 months later. Basic type-testing will take place at the end of 1963, followed by full certification in early 1964. This is ahead of the schedules planned for the first two aircraft in which the BS. 75 is to be installed—the Avro 771 and British Aircraft Corporation *107*. The new engine is closely related to the Olympus Sapphire, Proteus and Orpheus—all successful, proven powerplants—so teething troubles are expected to be few in number.

Advantages

The by-pass or ducted fan engine combines many of the advantages of the turboprop or turbojet—quietness, economy and take-off performance are among the important advantages. This is because the propeller acts on a large mass of air and projects it backwards at a relatively slow speed. But airscrew limitations restrict operating speed to about 550 miles an hour. The narrow, high velocity efflux of the turbojet is a more efficient means of propulsion at high speed, but is inefficient and uneconomical at low speed. Moreover, the noise of the jet cannot be greatly reduced without prohibitive loss of efficiency.

The ducted fan or by-pass engine is, in effect, a jet to which a fan or oversized compressor has been fitted. The fan acts not only as a compressor for the air entering the combustion chamber, but as an airscrew which forces a considerable mass of air through the fan duct, by-passing the combustion chamber, to the rear of the engine. The ducted air travels more slowly than the jet efflux and remains a lot cooler, thus giving greater propulsive efficiency at low speeds and creating less noise. The ratio of ducted air to combustion air is important because it determines the characteristics of the engine. This is the "by-pass ratio" which, in the case of the BS. 75, is 1.75:1.

More Take-off Thrust

Some manufacturers believe that best results can be obtained from a medium by-pass ratio, say, .9:1 or 1:1, but the manufacturers are convinced that higher ratios are the answer. It is claimed that, compared with a turbojet of comparable size, the BS. 75 will give 25 percent more take-off thrust, a 50 percent decrease in noise level and a 15 percent improvement in specific fuel combustion. Fan and compressor design on the BS 75 owes a lot to experience obtained with Olympus and Orpheus engines, while the combustion chamber is derived from that used on Sapphires, many thousands of which have been built in Britain and in the United States under licence. The turbines are almost identical in size to those of the Proteus, a version of which has achieved an overhaul life of 2,400 hours. There is, therefore, nothing experimental in the engineering sense about the BS. 75 and an overhaul life of 2,000 hours within its first 250,000 flight hours is confidently expected.

GIANT DREDGER FOR THE HOOGHLY LAUNCHED AT SCOTTISH SHIPYARD

The 4,700-ton suction hopper-dredger *Churni*, built by the Scottish firm of Simons-Lobnitz Ltd, for the Commissioners of the Port of Calcutta, was launched in Glasgow on 16th February. The *Churni* is sister ship to the *Bhagirathi*, launched in 1957 from the same shipyard. The *Churni* will trail a suction pipe on the Hooghly, and can fill the silt into her own hopper or container (which can carry 3,000 tons). She will operate away from port for anything up to three weeks at a time, and has a complement of over 100. Three hundred and fifty feet long and 62ft across, the *Churni* is a giant among dredgers. She has a high white superstructure and a blue hull, and was launched with a considerable amount of equipment in position. Propulsion is by steam machinery installed by the builders, with a rating of 4,350 horse power. Simons-Lobnitz is a combination of two neighbouring firms—William Simons and Co Ltd., founded in 1847, and Lobnitz and Co. Ltd, shipbuilders and engineers for over a century.

BRISK AIRLINER SALES BY U.K. INDUSTRY

During the first month of 1961, seven British airliners worth about £10 million with spares were ordered by overseas operators. This brings to 709 the number of British jet and turboprop airliners in service or on order in the world. Of the 118 British transports ordered during 1960, 36 were for overseas operators, a monthly sales average of three. So 1961 has started well with seven ordered in January. The aircraft concerned were three Vickers *VC-10s*, for Ghana Airways, two de Havilland *Comets* for United Arab Airlines and two Handley Page *Heralds* for Maritime Central Airways and its associate, Nordair, of Canada.

At a recent dinner, Lord Douglas, Chairman of British European Airways, said that delivery of three *Heralds* purchased by the Government "has been held up by the Ministry of Aviation." He added: "The sooner we get them the better." In June 1959, the then Minister of Supply said that negotiations were to be opened with Handley Page with a view to buying three *Heralds*, and with Avro for three *748s*. He added that the commercial prospects of these aircraft would be improved by "an early demonstration of their efficiency in regular operation on normal services in the United Kingdom." The contract between the Ministry of Aviation and Handley Page is still awaiting signature. B.E.A. is also showing interest in the Armstrong Whitworth *Argosy* freighter, and American Airlines, one of the biggest U.S. domestic operators, is having discussions with de Havilland about the possible purchase of *Tridents*.

Proposed Purchase by B.U.A.

Closer to home, the independent operator, British United Airways, intends to buy a fleet of new jet airliners. B.U.A., formed in July 1960, by the amalgamation of the Airwork Group and Hunting Clan, is second in size only to the State Corporations and, backed by powerful shipping interests, is ready to expand after a period of internal reorganisation and integration. Under the 1960 Civil Aviation (Licensing) Act, B.U.A. has applied to the Air Transport Licensing Board to operate a number of new scheduled services using a minimum of four Vickers *VC-10s* and five de Havilland *Tridents*. The outcome of this application is awaited with more than usual interest.

BOEING ANNOUNCES DETAILS OF LATEST JETLINER

The Boeing Airplane Company, Seattle, Washington, U.S.A., has made public the details of its newest jetliner, the *Turbofan 320-B*. The company also announced the purchase of five of the new aircraft by Pan American World Airways. Powered by Pratt Whitney JT3D-3 engines with water injection, the new aircraft has a take-off thrust of 18,000 lbs, and will carry a payload of 40,000 lbs. 5,400 miles, representing a 15 percent improvement over the old model *320*. Now the world's longest range jetliner, the *320-B* will use full-span leading edge flaps and more efficient trailing edge flaps. It will have a maximum taxi weight of 317,000 lbs, and allowable payload of 56,000 lbs. Otherwise, its dimensions are identical with those of the *320*.

ARRANGEMENTS TO FUEL BOEINGS ON NON-STOP ROUND THE WORLD FLIGHTS

In five years' time, enough fuel will go into B.O.A.C. jetliners every year to keep a *Boeing-707* flying round the world non-stop for 24 years—or well over 100 million miles. This is the outcome of a new fuel contract recently awarded by B.O.A.C. to the Shell International Petroleum Company. The contract, which will run for three years with an option on a further two, is expected to mean that by the fifth year, the company would be supplying nearly 350 million gallons of fuel a year to the airline and its associated companies—enough to fill the tanks of about 17,500 *Boeing-707s*, or nearly 40,000 *Comet 4s*. The contract will meet about 97 percent of B.O.A.C.'s fuel needs and will mean supplying fuel to about 130 airfields in over 50 countries.

Akbarallys DEPARTMENT STORE IN BOMBAY

LIGHTING BY PHILIPS

In a city of bright, modern shops Akbarallys department store in Bombay stands out as a favourite rendezvous of smart shoppers.

And naturally, the lighting at Akbarallys is by Philips.

A scientific combination of Philips fluorescent and incandescent lamps with Philips' exclusive fittings produces lighting that helps to display the merchandise in the most attractive manner possible.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application —consult Philips Lighting Service Bureau.*

CALCUTTA TEA AUCTIONS IN JANUARY

DEMAND IMPROVES FOR QUALITY GRADES

FOUR sales were held in January, and offerings totalled 291,162 packages. The demand was strong and general throughout the month and most teas were readily absorbed say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. The best C.T.C. teas with improved quality came in for strong competition and were disposed of at dearer rates; medium C.T.C., however, declined in each of the four sales, while fibrous secondary types were very irregular and prices were easier. In the opening sale, medium Assam B.O.P.s were a weak feature, but thereafter they came in for much better support, especially those with improved quality which inclined dearer. Similar O.F's with improved quality were well supported at dearer rates. Medium brokens and fannings were about steady, but the brighter liquoring types sold at slightly enhanced prices. Plain brokens were firm, while fannings although irregular, tended dearer. The brighter liquoring legg-cut teas sold well but the plainer liquoring types were a little easier. Stylish whole leaf grades came in for good competition, but the stalky types were easier and sometimes difficult to sell. Bright liquoring autumnal Darjeelings were strongly competed for, and some very useful prices were realised. But the lower grades and more ordinary liquoring types inclined easier. Few tippy teas were on offer and they were well supported, particularly the really tippy lines.

Leaf appearance of Darjeeling teas continued to maintain a satisfactory standard, but the lower grades were inclined to be lacking in "make," while some stalk was in evidence at the latter part of the month. Cup quality showed a marked improvement, and there was a very fair selection of attractive flavoury teas on offer, although a few became a little wild in character at the end of the month. Leaf appearance of orthodox Assam teas showed little change but rather more stalk and fibre were present in the lower grades. Cup quality showed some improvement and a few teas were found to possess some cold weather character. The first line C.T.C. grades showed little change, but a much greater weight of secondary lines containing fibre were on offer. Some quite attractive autumnal teas were seen, but secondary grades were found to be rather soft. Leaf appearance and cup quality of Dooars and Terai teas were about average for the time of year. There was, however, more stalk and fibre present in the dry leaf. More fibre was evident in the lower grades of teas from Cachar and Tripura, but otherwise leaf appearance and cup quality were average for the time of year. A few estates, however, continued to make satisfactory teas.

The Internal Market

The total leaf offerings amounted to 2,522 packages. There was a good general demand at irregular rates. The few lines of green tea on offer were well supported. In the three dust sales, held during the month, a total of 66,899 packages was offered. A good general demand was evident throughout, although in the first and second sales prices were generally lower. In the last auction, however, the market noticeably strengthened. Orthodox descriptions were irregular and easier except for the small bright liquoring teas which sold well. Legg-cut Dooars dusts received good support in the first sale while in the second they declined in price. In the last auction, however, they came in for keen competition and were readily absorbed at firm to dearer rates. In the two earlier sales, medium C.T.C.s generally registered a decline but in the final auction they met with useful support at firm rates, the smaller and brighter lines being a strong feature. The best C.T.C. dusts were irregular with quality.

Export sales up to and including Sale No. 28 totalled 1,640,197 chests at an average price of Rs. 5.46, compared with 1,739,631 chests at an average price of Rs. 5.20 for the same period of the previous season. Internal sales at 13,497 chests of leaf and 553,890 chests of dust (average prices Rs. 4.40 and Rs 5.25) go against 24,454 chests and 577,427 chests, respectively (against Rs. 4.12 and Rs. 4.63) of the corresponding period of the previous season.

Arrivals (in chests) in Calcutta warehouses during the period 24th December, 1960 to 23rd January, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 367,240 (306,277), by rail 137,891 (72,181) and by air 5,936 (5,014) chests. From the beginning of the season 1st April, 1960 to 23rd January, 1961, arrivals have been: by steamer 2,603,668 (3,160,422), by rail 951,682 (1,605,389) and by air 59,354 (63,951), making a total of 3,708,271 (4,289,540) chests.

NATURAL RUBBER PRICES FALL IN SINGAPORE

CONSUMPTION OF SYNTHETIC PRODUCT INCREASING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

NATURAL rubber price has again fallen back to just over Re. 1 a lb on the Singapore market. It is doubtful whether prices can be retained even at this level in view of the heavy surplus now hanging over the market. Those growers who hold the view that natural rubber's future depends largely on its capacity to compete with synthetic, are not surprised over the present fall in the former's values. Higher prices of natural rubber during the past two years has helped increase the consumption of synthetic rubber, the prices of which were cheaper. It will be interesting to look into the recent trend in rubber consumption of some major buyers. The *per capita* consumption of rubber in the U.S.A. has increased from 19.2 lbs in 1957 to 20.6 lbs in 1959. Synthetic rubber has gained more from this increase in consumption. Its share in the total rubber offtake of the U.S.A. has increased from 63.2 percent to 69 percent during this period. In Canada, synthetic offtake has risen from 53.8 percent to 60 percent, in Australia from 31.1 percent to 37 percent and in Britain from 24 percent to 37 percent. West Germany's offtake of synthetic rubber during this period has increased from 25.7 percent to 39.4 percent and Japan's from 23.8 percent to 36 percent. In India, synthetic offtake has increased from 8.7 percent in 1957 to 12 percent in 1959. In all these countries, rubber consumption as a whole increased over the three-year period.

Revenue from Increased Cess

The enhanced cess on raw rubber which will be collected from the manufacturers from next April is expected to yield an annual revenue of Rs. 77 lakhs to the Rubber Board. This will be sufficient to meet the Board's commitments on research, replanting subsidy, etcetera. As a matter of fact, a heavy sum is remaining unused with the Central Government, partly collected from 1955 by way of cess and partly being the difference between the imported and indigenous prices of raw rubber. Finance will not be a hindrance hereafter for acceleraed efforts to make the country self-sufficient. India is now deficit to the extent of 50 percent of her requirements. An all-out drive both in new planting and replanting is considered essential for achieving self-sufficiency. Growers are expected to respond fully to the recent offer of the Central Government and the Rubber Board to raise the replanting subsidy from Rs. 400 to Rs. 1,000 an acre.

A field in which the Rubber Board is not showing satisfactory progress is research, which is essential for taking the country towards the goal of self-sufficiency. The Board's research station in Kottayam has not yet started to function normally, although the work on it was started long ago. The Board has not yet been able to find out a suitable successor to the former Rubber Production Commissioner, Mr. Kaimal, who passed away a few months ago. It was he who was in charge of the Board's research section. The difficuity, it is stated, is that qualified hands are not available for the salary the Board is prepared to pay. The growers argue that the Board must be prepared to pay more for a suitable hand.

Dearer Indian Tea

Like the Irish tea delegation, the tea delegation from Iran also has expressed the view that the Indian tea is more costly. It is pointed out that Ceylon tea is cheaper. Although Iran, Egypt and some other countries take more Indian tea due to their unfavourable balance of trade with Ceylon, it is still necessary to put India's trade with those countries on a firm footing by supplying teas at competitive prices. The difficulty for doing this is the high cost of production in India, it is said. Like Russia, Iran also produces a certain percentage of her tea requirements. The tea imported from India and Ceylon is used for blending with that produced locally. Imports by these countries will increase only if their consumption rises faster than their indigenous production. Iran is collecting an import duty of Re. 1 a lb on all teas coming from abroad.

COCHIN TEA SALE

At Dust Sale 7, 172,000 kilograms of tea were on offer. There was a strong demand. Coloury mediums were 10nP to 15nP easier while others declined by 20nP.

HONEYWELL TEL-O-SET*

Miniature

Instruments

Tel-O-Set Features
- Quick-connect mounting
- Unit construction
- Versatile operation
- Wide range of reset rates
- Low air consumption
- High precision
- Exceptional compactness
- Chart re-roll

NEW and improved *Tel-O-Set* miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell *Tel-O-Set* indicators, recorders and controllers are today's most advanced miniature instruments.

BRITISH TEXTILE REVIEW

CONSOLIDATION SCHEME CRITICISED

THE quarterly statistical review published by the U.K. Cotton Board at the end of 1960 covered the third quarter of the year. It takes a broad view of developments, relating the British industry to the world industry, and it referred to the hesitation in both North America and Britain —although not generally in continental Europe and certainly not in Japan—in the later months of 1960. However, the check to production in Britain seemed to be the result of the shortage of labour rather than of the lack of demand. Before the year-end, makers of clothing had become more positively critical of the consolidation scheme. They were undoubtedly impressed by the U.K. Cotton Board's calculation that in little more than a year, from mid-1959, the output an operative employed in spinning and in weaving had increased by 10 percent and 7 percent, respectively, but the fact remained that not enough material was coming forward and prices had risen considerably—in some cases by about 25 percent over a year. Spinners and weavers pointed out that the comparison of prices with those of mid-1959 was unrealistic, as the price-fixing agreements had then recently been compulsorily abandoned and the market had not regained stability. However, it is obvious that in 1960 the market was in sellers' favour, and there is little doubt that prices—particularly of high-quality cloths—have risen more than this factor, and a moderate rise in costs, can explain.

It would have been better if the industry had retained more of its capacity and had operated on a higher level of turnover in 1960, but at least it is gratifying that the demand was such that this criticism could be made. When the trade was active at the end of 1959, most people in the trade predicted that it would subside after the first few months of 1960. They thought the high rate of ordering was simply a result of the unexpected response to the consolidation scheme; that customers anticipated scarcity towards the end of March (the last date for scrapping plant within the scheme) and would not subsequently renew their orders on a similar scale. In the event, a high rate of final demand has maintained the pressure all along the "pipeline", and the industry is as confident early in 1961 as it was a year ago.

This buoyancy is the more remarkable as the statistics of imports and exports suggest a much less healthy condition. Exports represented about a quarter of domestic production amounting to roughly 1,300 million yards of cotton cloth last year, but imports were not very much less than half the figure of production. Much of the imported cloth is for processing and re-export (so that much less than a quarter of Lancashire's own output is exported), but imports of finished cloth and of made-up goods—and also, incidentally, of yarn—have increased significantly. The distressing factor in the position is the stagnation of exports, in a period when world trade in textiles has been generally favourable. Some potential export business has certainly been lost because prices have risen and delivery periods have lengthened—another natural result of the over-contraction of the industry.

Structure of the Wool Industry

No one questions that consolidation of the cotton industry was needed: the question is whether it would have been sufficient to reorganise it into bigger groups and to eliminate obsolete equipment. There has been no suggestion of planned reorganisation of the wool industry, which has no comparable problem of excess capacity, and whose export trade is sufficient evidence of its comparative efficiency. But of course, not all firms in the industry are equally efficient, and some observers feel that more reorganisation than is being undertaken will be beneficial. Many of the wool industry's units are comparatively small. A complaint against small firms generally is that they lack either the resources or the enterprise to make a strong effort in export trade. The smaller wool firms are exceptional in that they play their full part in an export performance that no other major British industry can surpass. Even so, in modern conditions of trade, the advantages of size cannot be wholly ignored. It is evidently easier for big groups to merge together than for smaller firms to combine to form big groups, but organisational changes of the one kind or the other will gradually change the industry's structure.

The outstanding event of last year was the plan to merge Patons and Baldwins with J. and P. Coats. The biggest pure textile group in the world will be a hybrid, combining cotton and wool; and both its elements will have interests in synthetic fibres, which the new organisation will develop. This bold move has stimulated discussion on the trend of development in the whole textile industry, with suggestions that the distinction between the cotton and wool and man-made fibre industries, already blurred, will eventually disappear.

Progress in Dyeing

The wool industry has had its share of technical progress, but its developments have not always been noticed as widely as the other textile industries'. The importance of a new dyeing process for woven woollen cloth, evolved last year (by a very young company) and announced at the year-end, has been appreciated immediately. The Company is Colourcraft (Cala), of Calashields, Scotland, and it claims that its process represents the first major advance in the colour-design technique for woven woollen cloth for half a century or more. The principle of this device is multi-colouring of individual yarns; so that instead of seven or eight colours in a pattern when each yarn is a single colour, 30 or 40 colours can be incorporated in a fabric. Approximately similar results are sometimes achieved in printed fabrics, but in that case the pattern is repeated. In the Colourcraft system, the pattern is never repeated, and the cloth can, therefore, be cut and tailored as though it were plain, with no problem of matching checks or stripes or correlating colours. As many as six colours can be incorporated in a thread of yarn, and there seems to be almost unlimited scope for variety.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January 1961. As compared with December, the January Index for Food shows a drop of 3 points, while those for Fuel and Lighting, Miscellaneous and Clothing remain unchanged at 287, 303 and 579 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during January 1961.

you have just opened

A METAL BOX OPEN TOP CAN!

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents *after* they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

PLEASE
MAKE YOUR TRUCK TYRES LAST LONGER!

The present maximum output of the Tyre Industry in India is not enough to ensure sufficient truck and bus tyres for the country's needs.

It is not a matter of distribution. Adequate steps have been taken by Tyre Dealers to arrange that such supplies as are available are strictly allocated at our recommended retail prices to those who need them most.

New tyre factories are in the course of construction, and existing units have expansion programs, but it will be some time before supply catches up with demand.

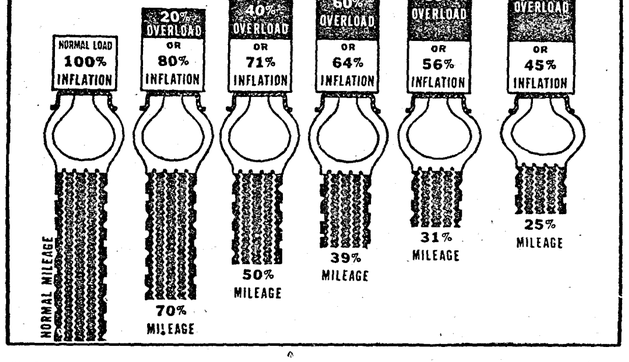
In the meantime, what-?

We believe that this scarcity—which is a source of continuous anxiety to all of us—can be eased to some degree by every truck tyre user taking all possible steps to get the MAXIMUM SERVICE from the tyres he already has. There are many ways that MILEAGE—and, therefore, LIFE of the tyres can be INCREASED. Here is ONE WAY.

MAINTAIN CORRECT INFLATION PRESSURES AND DON'T OVERLOAD YOUR TYRES

LOOK AT THIS CHART

It shows you how overloading and/or under-inflation destroy mileage—kill tyres—and make the tyre scarcity even more acute.



WATCH OUT FOR MORE TYRE SAVING INFORMATION FROM

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 31, held on 20th and 22nd February, there was a strong general demand for the 72,000 packages on offer at the Export auction. "Teas for price" and plain Fannings were in strong demand, although sometimes irregularly easier while plain brokens were about firm on last rates. Black Dooars fannings were generally dearer, while similar B.O.P.s met with good support. Medium B.O.P.s received fair support, but the more expensive kinds were generally up to 30nP easier: the remainder were generally firm and the brighter liquoring kinds were occasionally dearer. Medium fannings were at times considerably dearer, but brokens in this category were slightly lower. Stylish whole leaf grades sold well, but the poorer kinds were irregular. The few tippy teas on offer came in for good demand. Darjeelings were easier. Autumnal C.T.C.s were a strong feature and generally dearer, but the plainer kinds were 15nP to 30nP lower. Fibrous secondary C.T.C. grades were up to 15nP easier. Legg-cut Dooars teas were irregular and sometimes up to 15nP lower.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Broken Pekoe	5.20 to 5.50	2.16 to 2.20
Plain Broken Pekoe	4.60 to 4.70	1.90 to 1.96
Plain Fannings	4.70 to 4.50	1.96 to 2.06
Medium Broken Pekoe	4.70 to 4.90	1.90 to 1.96
Medium Fannings	4.90 to 5.10	2.04 to 2.16
Best Assam C.T.C. B.P.	5.80 to 6.20	2.45 to 2.60
Best Assam C.T.C. Fngs.	5.90 to 6.50	2.45 to 2.60

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings amounting to 21,978 chests met with a good general demand. Orthodox descriptions came to an easier market, particularly towards the close, and were sometimes difficult to sell. Legg-cut teas were irregular with the bright types selling well. Clean medium C.T.C.s were generally dearer, although irregular but the fibrous kinds in this category again declined in value. Good C.T.C. teas were a strong feature and were dearer with the best grades selling at considerably enhanced rates.

Quotations

	1961 Rs. a kilo
Plain Orthodox Dust	4.70 to 4.90
Medium Assam Dust	4.80 to 5.20
Legg-cut Dust	5.05 to 5.40
Medium Assam C.T.C. Dust	5.60 to 5.90
Good Assam C.T.C. Dust	6.20 to 6.60

(Quotations are inclusive of excise duty.)

There was a good general demand for the 1,857 chests of Leaf on offer.

NORTH ATLANTIC RATES IN FREIGHT MARKETS RISE

DUE to a fall in enquiries from China, the Far East market was quieter than of late, but other trades including the river plate have been busy over the past fortnight. Owners now appear to be holding out for higher rates which it seems almost certain they will obtain. They were successful in the north Atlantic market; 4s 3d extra was paid for a single fixture from the Gulf to Glasgow. Fixtures of foodgrains were reported from U.S.N.H.-Karachi 9,500 tons 10 percent wheat $(U.S.)9.45, 1,000 discharge free, U.S. Gulf-West Coast India 9,800 tons 5 percent rice 100s 1,000 tons load gross-750 tons discharge free. Burmese rice shippers concluded six fixtures March loading for Colombo paying 42s 6d f.i.o and stowed. A vessel has been taken for 9,500 tons 5 percent rice Rangoon-Cuba at the rate of 70s f.i.o. and stowed followed by Cuba-south China sugar 91s 6d f.i.o.s. and free taxes. Indian ore charterers paid 59s f.i.o. for 10,000 tons manganese ore Visakhapatnam-Ghent. The S.T.C has accepted a vessel for loading 7,500 tons 5 percent iron ore from Krishnapatam-Constantza at the rate of 60s f.i.o. and trimmed with 600 tons load and 1,000 tons discharge. As loading at this port depends entirely on the availability of lighters, it will be worth watching the rate of loading actually performed. Calcutta coal shippers have concluded three fixtures to the Far East. Unconfirmed rates are Calcutta-Singapore 44s f.i.o. and trimming, Calcutta-Penang 40s 3d f.i.o. and trimmed and Calcutta-Japan 48s f.i.o. and trimmed. At Madras port, shore labour has adopted go-slow tactics, which is increasing congestion.

LINSEED FIRM

The linseed market was firm during the past week. Arrivals were negligible and sellers reserved for ready and forward deliveries. Buyers were generally keen, but business was on a small scale at higher prices. The oil market was steady. Local buyers showed interest, but business was restricted because stocks were low. The oilcake market was fairly steady. Some business was reported for export at lower prices. The latest quotation is as follows: Ready seeds, Rs. 30.25 a maund.

UNDER CENSORSHIP
27 FEB 1961
PUBLIC DEPARTMENT

COMPANY AND PUBLIC NOTICES

RAZA BULAND SUGAR CO. LTD., RAMPUR, U.P.

NOTICE

IS hereby given that the 26th Annual General Meeting of the Shareholders of the Company will be held at Govan Building, Rampur, U.P., on Wednesday, the 22nd March, 1961, at 10 A.M. to transact the following business:—

1. To receive and consider the report of the Board of Directors and Auditors and the Audited Statements of Accounts of the Company for the financial year ended 31st October, 1960.
2. To declare dividend.
3. To appoint a Director in place of Shri R. P. Nevatia, who retires by rotation at the meeting, and is eligible for re-appointment.
4. To appoint a Director in place of Raizada Jagmohan Lal, who retires by rotation at the meeting, and is eligible for re-appointment.
5. To appoint Auditors for the financial year 1960-61 of the Company and to fix their remuneration. Messrs V. Sankar Aiyar & Co., Chartered Accountants, the retiring Auditors, are eligible for re-appointment.
6. To consider any other business that can be transacted at the Annual General Meeting with the permission of the Chair.

SPECIAL BUSINESS.

A. To consider and, if thought fit, to pass the following Resolutions as Ordinary Resolutions:—

7. "RESOLVED that the re-appointment of Beopar Sahayak Private Ltd. for a period of five years with effect from 1st April, 1961 as the Company's Sole Selling Agents for the sale of sugar manufactured by the Company, except the sugar sold for export, on a commission of ¾% on the sugar sold against Govt. allotments and 1% on the free sales of sugar calculated on the net ex-factory sale proceeds, subject to the provision that it can be terminated earlier by three months notice on either side be and is hereby approved."

"RESOLVED that the consent of the Company be and is hereby given to the Board of Directors of the Company borrowing moneys from time to time, whenever required, for the business of the Company provided that the borrowings so made (apart from the temporary loans obtained from the Company's bankers in the ordinary course of business) shall not at any time exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, by more than Rs. 3 crores."

B. To consider and, if thought fit, to pass the following Resolutions as Special Resolutions:—

9. "RESOLVED by way of Special Resolution that existing Article 136(a) of the Articles of Association of the Company be and is hereby deleted and substituted by the following:—

135(a)(i). The seal on Share Certificates shall be affixed in presence of such persons as are authorised from time to time to sign the share certificates in accordance with the provisions of the Companies (Issue of Share Certificates) Rules, in force from time to time.

(ii) On instruments other than Share Certificates the seal shall not be affixed except in presence of a Director or any other person or persons authorised in that behalf by the Board, who shall sign every instrument to which the seal shall be affixed."

"RESOLVED by way of Special Resolution that approval be and is hereby given to the arrangement with Govan Bros. (Rampur) Private Ltd., Managing Agents of the Company, and The Shevaroy Bauxite Products Co. Private Ltd., an Associate of the Managing Agents, allowing them the use of the services of Shri Bhim Sen, an Officer of the Company, for part of his time for their work on payment to the Company of Rs. 100/- and Rs. 150/- per month respectively, with effect from 1st May, 1956, and on an increased payment of Rs. 200/- and Rs. 250/- per month respectively, with effect from 1st January, 1961. Provided further that Govan Bros. (Rampur) Private Ltd., and The Shevaroy Bauxite Products Co. Private Ltd., shall make payments to the Company for each month before the close of the following month."

"RESOLVED by way of Special Resolution that approval be and is hereby given to continuance of Shri Laxmi Narain Modi, a relative of a Director of the Company and an Associate of the Managing Agents, as the Chief Executive Officer of the Company with effect from 25th December, 1960, on the revised salary of Rs. 2,500/- per month, consolidated in the scale of Rs. 2,500-100-3,500 plus free furnished residential accommodation (including electricity and water) free conveyance and medical facilities including special treatment for him and his family, payment of premium for personal accident insurance upto an insured amount of Rs. 1,50,000/-, payment of clubs/associations subscriptions and bills together with such other facilities and amenities as may be or are given by the Company to other officers in respect of Provident Fund, leave, bonus, gratuity, etc."

Explanatory statement of the Special Business in terms of Section 173(2) of the Companies Act, 1956, has been forwarded to the members with the notice.

The Share Transfer Books of the Company will remain closed from 1st March, 1961 to 24th March, 1961.

A member entitled to attend and vote at the meeting is entitled to appoint one or more proxies to attend and vote instead of himself, who need not necessarily be a member. Such proxies should reach the Company at least 48 hours before the meeting.

By Order of the Board,
For RAZA BULAND SUGAR CO. LTD.,
S. K. KAUL,
Secretary.

New Delhi,
Dated: 27th January, 1961.

NOTE:

(1) Shareholders are requested to notify change of address, if any, failing which the Dividend Warrants will be posted to their addresses as registered with the Company.

(2) Persons holding shares on blank transfer should submit such shares for transfer complete in every respect before the closure of transfer books in order to be entitled to the dividend on such shares.

(3) Shareholders whose income is not liable to Income Tax and therefore want no tax to be deducted from their dividend amount should arrange an Exemption Certificate to be sent to the Company by 6th March, 1961 by the Income Tax Officer of their respective Circle. In the absence of such certificates Income Tax will be deducted at the rates applicable under the current Income-tax Law.

THE BURRAKUR COAL COMPANY LIMITED

AT a meeting of the Board of Directors held on Wednesday the 15th February, 1961, the following dividends were recommended to be paid subject to deduction of tax under Section 18(3D) of the Indian Income Tax Act.

1. Final Dividends for the year ended 30th June, 1960.

On 1st Pref. Shares at 5.60 per cent [being dividend at the stipulated rate of 7% per annum, increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, making a total of 9.10% per annum less Interim Dividend at 3.50% already paid].

On 2nd Pref. Shares at 2.928 per cent [being dividend at the stipulated rate of 6% per annum, increased by 11% thereof and after deducting therefrom Income Tax at the Company's rate of 20% in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. at 5.328% per annum less Interim Dividend at 2.40% already paid].

On Ordinary Shares at 8 per cent.

2. Additional Dividend in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 for the year ended 30th June, 1959.

On 1st Preference Shares at 2.10 per cent [being dividend at the stipulated rate of 7% per annum, increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, making a total of 9.10% per annum less 7% already paid].

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MISCELLANEOUS COMPANIES

O., Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively P. next to the name of the company indicates that the company also has Preference Shares. Figures in accounts closed column indicate the months of the calendar year in which accounts are closed. For indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ECONOMIC COST OF WEST BENGAL

THERE are unmistakable signs of a growing general awareness of the problems of West Bengal, and in particular Calcutta. The Central Government has recently moderated its hitherto impenetrable indifference, thanks largely to the efforts of Dr. Roy and perhaps, less creditably, to the threat presented by the growing communist grip on local affairs. The obvious needs of the Calcutta port have at last, it would appear, brought a firm decision on the Farakka Barrage project. International organisations have begun to take an interest, and there have been reports that the United States Government, or the World Bank, or both, might be prepared to invest in a sweeping programme of improvements, especially for water supply and sewage. A couple of weeks ago, a meeting of Calcutta business men was called by the Indian Chamber of Commerce to discuss the city's problems. Local newspapers—and not only that tireless campaigner in the cause of a better Calcutta, the *Statesman*—have increasingly been drawing their readers' attention to local eyesores. Even *Capital*, although our interests are chiefly economic, in a leading article on the occasion of the Queen's visit two weeks ago, made certain suggestions as to what the British Government and the British business community might do towards improving Calcutta, which after all is the heart of the problem. Now the retiring President of the Bengal Chamber, Mr. H. M. L. Williams, has added his voice to the chorus in a speech at this year's annual general meeting which is relatively unique among those of recent years in devoting a fair proportion of its length to this very topic.

Naturally enough, Mr. Williams' interest is chiefly economic. This approach is only one of many, the social and human ones being the more usual. But it serves as a timely reminder that congestion, bad planning, inefficient administration, uncontrolled growth, inadequate transport, all have a cost in terms of money as well as individual and community inconvenience and suffering. One of the consolations of looking at things from this economic point of view is that the bill for improvements is seen more easily as an investment in higher productivity and output, not simply as unrequited welfare expenditure. It takes no great stretch of the imagination to appreciate that faster transport, more adequate communications, and a healthy well-housed population, are assets which will eventually pay for themselves in strictly economic percentages. And by healthy is meant that state of mind and body which comes from enjoying clean water, good drains, a plentiful supply of fresh food and pure milk, more spacious housing, the exercise and relaxation which can be obtained from open spaces, the cleaner air which results from abating smoke and fume nuisances, and so on. These are all things desirable in themselves. But as Mr. Williams points out, they have their impact on the economic costs and development of this whole area, the prospective Ruhr of India.

The most pressing economic need would seem to be to relieve congestion in and around Calcutta and to free the gathering stranglehold on lines of transport and communications. From this step alone much subsequent good would flow. It would mean not only opening up roads and constructing new electric railways or monorails, but clearing Calcutta's slums and settling their residents in new towns either satellite to the main city or possessing an economic life of their own. This would be a big task. But if it is not started soon, the cost of delay will considerably outweigh the expense of getting to work. There is simply no point in building steel plants, industrial projects and other expensive items, in order to increase national wealth and living standards, if their beneficial effect is to be steadily reduced by the economic cost of West Bengal. Eventually, the potential of the area will disappear completely under the weight of external diseconomies, then the very real human problems of the area—poverty, demoralisation, educated unemployment—will never be solved. What is clearly wanted is action now, before the difficulties become completely insuperable. Wider spread calls for better transport. Outside Calcutta this means express roadways and faster local railways. Inside the city it means the abolition of slow-moving vehicles, improved road regulation and an underground railway system. (Calcutta must now be the largest city in the world which does not possess one of these.) Throughout the area it will eventually mean a network of local airline services and an increase of business flying, both involving the planned siting of airfield and possibly helidromes. Thinking along these lines should start now.

It is not sufficiently realised at the moment how much time and energy, all measurable in economic terms, is wasted by traffic congestion and inadequacy in Calcutta. In the centre of the city the road system is saturated. Outside, it requires extension and expansion while the space is still not built on. Soon, the only kind of progress possible will not be horizontal but vertical, either up or down. It is doubtful whether the tramway system is capable of further development in the city area; already its slowness and inflexibility is causing serious traffic jams at rush-hour periods and making the task of traffic regulation a perpetual nightmare. There is simply not room for any more buses; the number and condition of those already on the road is such that the toll in human life and inconvenience is something no city in Europe or north America would dare tolerate. Private cars are bound to increase in number, and with them the parking problem. Recent improvements have helped postpone an approaching crisis, but these will soon be swamped too. Only careful thought and planning now seems likely to prevent Calcutta from becoming the first city in the world to ban the private motorist from its centre, with all that will mean in wasted time and personal and business inconvenience. The key to the problem is increasingly seen to be the provision of an underground railway network for the city, linked with local surface feeder services outside. Without it, the whole thing will become completely insoluble within the space of the next few years. It is rarely appreciated when planning spectacular projects such as steel plants that transport is the basis of the modern economy. It may not seem much of a vote catcher now, but if it is neglected on the scale it has been in the past few years it is likely to turn out a big vote loser in the end.

The question arises, how are these improvements to be paid for at this critical period in India's development? This will be easier to answer if it is accepted from the outset that they are not luxuries: they are economic necessities. Anything which does not come strictly within that category can be rejected for the time being. Which will leave intact at least the main concept of, water and sewage supply, relieving the choking congestion in and around Calcutta and opening up the main lines of communication by road, rail and air, to say nothing of the rivers. Money for the water and sewage schemes can be expected from international sources. The problem of paying for satellite and new townships is simple enough; they will pay for themselves through the appreciation of land values. Railways and airlines, too, take care of their own financing problems. River facilities can be offset against harbour dues and other tolls. That leaves the roads. Modern road financing is not only India's problem. In city centres it has to be supported from local taxes and borrowing, which are usually amply compensated by the increased amenities of the area. Outside cities, and especially on the much-needed trunk routes, there is no reason why tolls should not be imposed. The saving to all kinds of road users from the convenience offered by fast motorways is such that a toll is seldom begrudged; and unlike railway fares, it is fairly easy to collect. On the whole then, such a scheme for improvement would be relatively easy to finance, provided the necessary initial capital and foreign exchange can be made available from loan sources. It should not be too difficult to interest international, and even to some extent domestic, investors in the idea provided the necessary assurances could be given. At which point the key to the whole situation comes into focus, politics. There is not room here to go into the much-discussed idea of appointing a Metropolitan Board for water supply and sewage to supersede the various contending political interests which are at present stifling the development of Calcutta and its surrounding districts. It is so obviously the indispensable prelude to getting anything done at all that nothing more need be said about it, except to restate the fact that without something of the kind, foreign interest is unlikely to be forthcoming on the scale required. Those who are reluctant to forgo the short-term political advantages which the present system yields would do well to reflect that there might be even more in the long-term ones of radical reform and reorganisation.

This is the time, now that popular interest is becoming thoroughly roused, to draw up a practical scheme of improvement and press for decisions. It should then be regarded as being every bit as much an economic project as a steel plant or a shipyard. Progress in the area has long since overtaken its amenities, and unless these are brought into line, and supplemented by carefully devised facilities for meeting the expansion to be expected during at least the next 50 years, the brake imposed on further progress will far outweigh the cost of improvement. Looked at in this light, the question becomes not what can be afforded, but how long the country can go on affording things as they are now.

—

COMPULSION IN REINSURANCE

THE Government, it is reported, wants to reduce India's foreign exchange expenditure on reinsurance. It also wants to promote the growth of *Indian reinsurance companies*. So Mr. Morarji Desai, Central Finance Minister, has introduced the Insurance Amendment Bill, 1961, in the current session of the Lok Sabha. The idea is to add to the Insurance Act, 1938, a provision whereby every insurer will have to reinsure with Indian reinsurers up to 30 percent of the sum assured under each policy or renewal thereof with effect from 1st April, 1961. The reinsurers will be those carrying on reinsurance business exclusively and approved as such by the Central Government. Within this limit of 30 percent, different percentages may be fixed for different classes of insurance. Power has also been conferred on the Central Government to fix the percentage for the allocation of business among the approved Indian reinsurers. But this power can be exercised only after consulting the advisory committee which is to be constituted under the provisions of the Bill, and which will consist of five persons having specialised knowledge and experience of insurance. The statement of objects and reasons describes the basis of the Bill. It says that, at present, insurance companies operating in India depend on companies outside India for a very large part of their reinsurance requirements. More often than not, the statement goes on to say, they enter into disadvantageous arrangements. Reinsurance with companies outside India results in loss of foreign exchange. The Bill is thus intended to counter these trends, which are considered undesirable by the Government of India.

The official interpretation of the trends, however, is nothing less than a facile generalisation. Indian insurers these days have excellent oppor-

tunities to negotiate competitive reinsurance arrangements. The favourable claims ratio in the fire account—the main branch of general insurance business in India—enables the companies to drive hard bargains with professional reinsurers in India and outside. The need for reinsurance in marine and motor accounts, in the way it was traditionally conceived, has dwindled considerably. "Excess of loss" cover is to be found these days in marine and motor insurance. Underwriters in India and outside can testify that this has curbed considerably the outflow of premiums by way of reinsurance in these two sectors. Brokers from the Continent, the U.K. and other countries, including those operating in India, not to speak of professional reinsurers in India and outside, compete strongly to get business from Indian insurers. It is not correct, therefore, to say that, as a rule, Indian insurers reinsure on disadvantageous terms. The terms of reinsurance depend on many factors. The nature of the business, the claims ratio over a number of years, and the profit ratio are some of the important ones. Every reinsurance account is carefully weighed and an exchange is not negotiated unless there is mutual gain. The observations in the statement of objects and reasons are unwarranted in the light of the Indian insurers' bargaining capacity.

The problem of loss of foreign exchange, however, is highly complex. Statistical data are insufficient and often inaccurate. The Controller of Insurance, it is reported, has been maintaining for years what are commonly called "gain" and "drain" figures. A revenue account concerning the "gain" and "drain" of foreign exchange by way of reinsurance effected outside India and reinsurance accepted in India from overseas, together with the direct business transacted by Indian insurers outside, has never been accurately drawn. A correct compilation would have to be based on a mass of statistics taken from the insurers themselves. It is doubtful whether these can ever be compiled with the accuracy the issue deserves. In any case, while drawing up the revenue account and the profit-and-loss account for foreign exchange, the premium outgo is not very material. The correct determinant is the income or outgo by way of ultimate profits resulting from various exchanges.

In spite of the practical difficulties, the Indian Insurance Companies Association, Bombay, has in recent weeks made an elaborate compilation for the period from 1953 to 1958. According to this analysis, the profit drain during this period was only 2.3 percent of the gross direct premium income of Indian insurers, amounting in the aggregate to a little over Rs. 127 crores. Likewise, the profit drain for non-Indian insurers was 6.6 percent on gross direct premiums written in India of a little more than Rs. 56 crores. This compilation has been made with many reservations, and depends primarily on the figures published in the *Insurance Year-Books*. In any case, the percentages are likely to undergo large modifications because Indian insurers are doing steadily increasing business outside the borders of India and greater reciprocity is being earned in exchange for Indian reinsurances. British companies in recent months, by mergers and alliances, have acquired large absorptive capacity. Their Indian retentions are likely to be higher than they were in previous years. These changes are bound to reduce the outgo of foreign exchange, and obviate the need for a Bill of this character. The loss of foreign exchange is not large if it is compared with the losses on various other counts, including numerous questionable Government expenses. In any event, an unfavourable balance, if it existed, could have been largely cured by certain voluntary arrangements. Foreign interests in this country are aware of the need for India to improve her balance of payments. If it is suggested to them, whether officially or unofficially, that they should reinsure in this country as much as they safely can, there is little doubt that they would co-operate readily. They could possibly collaborate with their Indian counterparts in framing a scheme of exchange which would enable India to retain more of the reinsurance premiums.

Even if it is argued that the loss of foreign exchange cannot be stopped except through legislation of this character, the Bill should have been concerned with the appropriate disposal of the surplus and not with 30 percent of each and every policy. Most of the business done by the companies consists of small insurances, which the companies retain wholly. These premiums do not figure in reinsurances, much less in reinsurances overseas. It seems odd, therefore, that the Government should propose diverting by law up to 30 percent of the premium on each and every policy. That can have serious effects on the revenue accounts of the companies. It is thus difficult to see how the alleged loss of foreign exchange can be stopped. From this point of view, the Bill is misconceived and should be amended so that the quota share reinsurance can be replaced by what in insurance circles is known as surplus reinsurance. Quota share cession is acquisitive in character and is to be resented. It is likely to damage the Government's reputation abroad.

It is true that insurance companies, by a voluntary arrangement, cede business to the India Reinsurance Co. Ltd on a quota share basis. This arrangement was negotiated by the member-companies with India Reinsurance after some reluctance, so as to provide the professional reinsurers in the private sector with a good base. Shareholding member-companies hoped to participate in the dividends arising from the trading of India Reinsurance and that constituted an incentive. The shortcomings of compulsory cession, however, are well known. Although India Reinsurance has obtained by general agreement a consent share from the companies, it has the disadvantage of trading with liabilities which it does not have the opportunity of examining and weighing in a manner a professional reinsurer would do if it had the choice. In consequence, it has difficulty in producing balanced results. A professional reinsurer, before entering into an exchange, would carefully assess the account, and the direct writing ceding companies would likewise be able to bargain only when their accounts have shown an excellent profit ratio over a number of years. It is, therefore, not in the interests of a professional reinsurer to accept compulsory cessions. Its account may become unprofitable over the years since it cannot exercise its judgment in making the choice. The ceding companies, on the other hand, must have the freedom to bargain to their best advantage, depending on the profitability of their accounts. If they have to cede compulsorily to a reinsurer a large percentage of their premiums, there is every likelihood that they may lose the competitive advantage, which will have an unfavourable effect on their net revenue accounts. The ceding companies may also be tempted to relax underwriting standards when they know that a large percentage of the business will be absorbed by a reinsurer. Thus, compulsory cession is wholesome neither for the professional reinsurer nor for the direct writing companies. The interests of both are served best if they have freedom of choice.

It is not clear whether compulsory acquisition has been suggested in order to help the India Guarantee—a professional reinsurer in the public sector. That institution has long been clamouring for arrangements on a compulsory basis similar to those which the companies have with India Reinsurance. In any event, if the provisions of the new Bill are designed even remotely to serve the interests of India Guarantee, the legislation loses much of its value and its professed purposes are nothing more than a façade. The growth of professional reinsurers cannot be fostered on this basis. They can survive only if by their trading activities they promote the interests of the ceding companies. They should thus be concerned with absorbing the surplus of Indian and non-Indian direct writing companies. A subsidy by way of compulsory cessions will do more harm than good in promoting the growth of an integrated Indian insurance market. The Bill also suffers from the defect that the terms of exchange have not been incorporated. It is not clear whether the companies will have the freedom to bargain with the approved Indian reinsurers while ceding up to 30 percent of the business. In any event, their bargaining capacity will be greatly reduced when the law makes the cession inevitable. Unless the terms of the cession are clearly known, it will be difficult to determine how much the companies are losing through the exchange.

DECIMAL SYSTEM FOR STERLING

MONETARY traditionalists in Britain were put on the defensive when India and lesser countries in the sterling area adopted the decimal system; their position has been further weakened by the change to a decimal currency in South Africa, and the similar moves contemplated in Australia and New Zealand would make it almost untenable. The change in South Africa in mid-February was the occasion for a new and vigorous discussion of the whole idea in Britain, and this discussion continues. It differs significantly from similar discussions in the past, in that the advocates of decimalisation are now much more confident. They never doubted the merits of the system; now they are confident that, sooner or later, it must be adopted. And the indications suggest that the adoption of a decimal currency in Britain will be enacted sooner than anyone imagined even a few weeks ago.

The likely programme is discussion of the decimal plan at the Commonwealth Prime Ministers' meeting in March. a formal announcement of the change later in the year, probably in the Queen's Speech, a period of preparation, culminating in either a two-tier or a three-tier decimal coinage—radically changing, but perhaps not completely replacing, pounds, shillings, and pence—within a few years. Why should the British Government act so (comparatively) quickly when the idea has been inconclusively discussed (as Lord Dundee, Minister without Portfolio, remarked in the House of Lords last November) since 1799? The answer may be found in a recent report by Political and Economic Planning, an influential fact-finding body, and in another by the Council of the Institute of Chartered Accountants in England and Wales. PEP concluded that the currency would inevitably be changed to a decimal system within 50 years—"whether we choose to change by an act of corporate will or are content to be pushed"; and the accountants forecast that if no change were effected in the meantime, sterling would be the only non-decimal currency of any importance by 1965. These and other investigators have emphasised, moreover, that the change becomes more costly and more difficult the longer it is delayed.

If the principle is accepted there remains the problem of denominations. The Association of British Chambers of Commerce and the British Association for the Advancement of Science, whose joint report on decimalisation was published last May, inclined towards a 10-shilling unit, but they had to admit that the business organisations which they consulted were still thinking in terms of the 20-shilling pound. The Institute of Chartered Accountants definitely, and PEP more tentatively, favour the 10-shilling unit, and even official thinking—though not, it seems, in the Treasury itself—seems to be inclining slightly towards that basic denomination. That South Africa has abandoned the pound and substituted the rand, worth 10 shillings, and that the decimalisation committees of Australia and New Zealand have recommended a similar unit for their countries, are strong arguments in favour of a currency based on 10-shilling, but tradition and sentiment are opposed to it. The present sterling system is based on multiples of four (four × three pence = a shilling, four × five shillings = a pound), but as the pound is also a multiple of 10 (10 × two shillings) conversion to a system based on 10 is simple enough if tradition and sentiment are put aside. The only difficulty is in replacing a denomination worth a twelfth of a shilling by a denomination worth a tenth of a shilling. In South Africa a 2½-cent piece is available to represent three pence, and it is only in smaller amounts that exact conversion is impossible. Some traders took advantage of the difficulty (or at least were suspected of doing so), and the feeling in many areas immediately after the change was resentful. But temporary difficulties of this kind can surely not be allowed to influence the choice of denominations that will serve for many centuries.

The obvious objection to the pound as a decimal unit, that the value of a hundredth part of it would be equivalent to nearly 2½ pence, can be overcome by subdividing the sub-unit into tenths; but it seems a needlessly complex arrangement. That a hundredth of a unit is too large for the lowest denomination may be thought to imply that the unit itself is too large, and that the present system is unnecessarily complicated not only because it is based on awkward multiples but also because it needs three denominations. The Treasury's objection to a 10-shilling unit is, apparently, that the currency would seem to be, in some sense, devalued if the value of the unit were halved. One may reasonably hope that the currency is respected enough to withstand any such absurd reaction. There is no evidence that the dollar is respected less than sterling because it is worth not much more than a third of a pound; nor is there any reason to suppose that it would gain prestige if it became worth more than two-thirds of the British unit. Currencies of smaller denomination would be more conveniently quoted in terms of the British unit if its value were halved. Just as the old French franc was too "light" so the present British pound is too "heavy".

Such details are important, but they are subordinate to the principle. If Britain adopts a decimal currency within the next few years she will not only facilitate, permanently, her internal business and her external trade but also demonstrate that she is intolerant of inefficiency. Every industrialist knows that modernising a factory may be inconvenient and costly, but he does not, therefore, avoid the responsibility by arguing that the methods and machines employed there have served well enough in the past. Changing a currency—even though the change is from a complex to a simple system—is inconvenient and costly, and the traditionalists argue that it is not really essential. But Britain can no longer afford to indulge any inefficiency; and in this matter time is against her. As the number of accounting machines, cash registers, coin-operated machines, and other such equipment, increases, so the difficulties of conversion grow worse.

Current News and Comment

Burrakur Coal Pays the Same

The Burrakur Coal Co. Ltd has produced satisfactory results for the year ended June 1960. The profit has risen from Rs. 34.16 lakhs to Rs. 36.97 lakhs, after providing Rs. 12.19 lakhs (against Rs. 11 lakhs) for depreciation, Rs. 2.05 lakhs (against Rs. 2.20 lakhs) for building and repairs and Rs. 20.05 lakhs (against Rs. 15.52 lakhs) for machinery repairs. The ordinary dividend has been maintained at 13 percent, taxable, including an interim of 5 percent. It is covered more than thrice and gives a yield of 6.5 percent at the present price of Rs. 19.94 a share. Taxation is allocated Rs. 17.17 lakhs (against Rs. 15.24 lakhs), development rebate reserve Rs. 2.28 lakhs (against Rs. 3.50 lakhs), general reserve Rs. 1 lakh (against Rs. 1.50 lakhs) and bad and doubtful debts reserve Rs. 1.50 lakhs. There is a carry-forward of Rs. 1,49,292, against Rs. 1,10,738 brought in.

Raisings and despatches have improved. The former have increased from 1,170,123 tons to 1,285,954 tons and the latter from 1,171,427 tons to 1,265,155 tons. The amount of sand transported over the Loyabad ropeway system has also increased. The sand-stowing subsidy has been raised. Since the Government has agreed to give subsidies to deep and gassy collieries, it is expected that Burrakur Coal will benefit. The fixed assets have been written down by Rs. 40.69 lakhs by debiting the revaluation of fixed assets reserve, in order to correct the over-valuation which was made by writing up the value in 1948.

I.C.I.C.I. Makes Satisfactory Progress

The Industrial Credit and Investment Corporation of India reports improved results for the year ended December 1960, which was only to be expected in view of the upsurge in investment activity. After providing Rs. 26.93 lakhs (against Rs. 22.43 lakhs) for taxation, the Corporation's profit has risen from Rs. 28.22 lakhs to Rs. 35.66 lakhs. The dividend, which has been increased from 5 percent to 5.75 percent, both taxable, absorbs Rs. 28.75 lakhs and general reserve has been allocated Rs. 9 lakhs (against Rs. 4 lakhs). After making minor adjustments, a balance of Rs. 77,237 is carried forward, against Rs. 99,763 brought in. If one goes merely by the record of profits and dividends, I.C.I.C.I.'s performance might not seem exceptionally encouraging. That is why the Rs. 100-paid shares of the Corporation are still quoted around Rs. 75. But the progress of a financial institution like the I.C.I.C.I. should be judged by the extent to which it is able to fulfil the broader objective of fostering the growth of a capital market in the country. Considering its resources, I.C.I.C.I.'s contribution in this sphere seems satisfactory. The total of operations sanctioned during the first six years of its life, from 1955 to 1960, was Rs. 31.41 crores to 95 companies. The figures exclude amounts totalling Rs. 7.31 crores sanctioned in 36 cases, which were subsequently withdrawn, reduced or not proceeded with by the applicant companies.

In 1960, the Corporation received 64 applications for financial assistance. The industries covered by such applications included electric power, electrical and mechanical engineering, aluminium and steel fabrication, chemicals, fertilisers, nylon, glass, paper, sugar, wood and wood substitutes. The directors approved assistance during the year, both in rupees and in foreign currencies, to 44 companies for a total of Rs. 13.43 crores. Rupee assistance in the form of loans, underwriting and direct subscriptions to ordinary and preference shares amounted to Rs. 5.81 crores for 34 companies, and foreign currency loans equivalent to Rs. 7.62 crores were given to 27 companies. Among these companies, 17 were sanctioned assistance in both rupees and foreign currencies. The amount disbursed, including disbursements in various foreign currencies, totalled Rs. 3.11 crores. The Corporation obtained a third line of credit from the World Bank for $20 million, bringing the total of World Bank loans to $40 million. From this total, $26.53 million was sanctioned in the form of loans by the end of 1960. The Development Loan Fund has approved a loan of $5 million and the agreement is expected to be signed shortly.

Mr. G. L. Mehta, chairman of I.C.I.C.I., has stated that in order to ensure the equitable distribution of the limited foreign exchange resources at its disposal, the Corporation has not given any single unit or any group loans in foreign currency exceeding about Rs. 1 crore. The D.L.F. loan will be used for granting assistance to smaller industrial units, with individual loans restricted to around $100,000. Apart from the World Bank and the Development Loan Fund, I.C.I.C.I. is working is collaboration with the International Finance Corporation. It is also exploring the possibilities of securing the collaboration of the Reconstruction Loan Corporation (Kreditanstalt für Wiederaufbau) of West Germany, which has special significance in view of India's adverse balance of trade with that country. Mr. Mehta has expressed the view that there will be no dearth of foreign exchange for sound industrial concerns.

Rallis Recovering Smartly

The ordinary shares of Rallis India Ltd have improved from Rs. 130 to Rs. 141 during the past month following reports of a steady recovery in the Company's business. The accounts for the year ended August 1960, just published, confirm the impression that the Company is set for a period of further prosperity. The industrial activities of its subsidiaries, and the improvement in its own trading activities, have helped increase the profit from Rs. 26.30 lakhs in 1958-59 to Rs. 48.11 lakhs in 1959-60, after transferring Rs. 4.02 lakhs (against Rs. 3.25 lakhs) to depreciation. An ordinary dividend of 4 percent, taxable, has been paid after an interval of eight years. It is covered more than five times and offers a yield of 2.9 percent at the present price. All arrears of preference dividends, along with the preference dividend for 1959-60, have been paid. The arrears of preference dividends amounted to Rs. 19.98 lakhs. Taxation absorbs Rs. 7.11 lakhs (against Rs. 4.43 lakhs) and Rs. 5 lakhs is transferred to general reserve. The carry-forward is Rs. 4,49,497, compared with Rs. 2,54,744 brought in.

The subsidiary companies have made considerable progress in their industrial activities. Ralliwolf started production in October 1959 and further programmes for expansion are being considered. The production of Rallifan has been restricted by the shortage of space and equipment, but the new factory in Mulund has been completed and production has started there. The difficulties of Ralli-Hoyland have been surmounted by rebuilding a portion of the plant. Production from the reorganised unit is likely to begin soon, but this unit has incurred a trading loss in 1959-60. The Teddington Chemical Factory has produced satisfactory results, and so also has Boehringer-Knoll. In view of the difficulties of the cotton mill industry, the working of Hemlata Textile is considered fairly satisfactory. Steps have been taken to begin the work of Ralli Chemicals (Private) Ltd. The construction of the factory and the installation of the equipment have begun. Rallis India has agreed to contribute Rs. 44.50 lakhs for the project by subscribing to the ordinary share capital of Ralli Chemicals or by arranging the necessary finance.

S.K.G. Sugar Maintains Dividend

The working results of Shree Krishna Gyanoday Sugar Ltd for the year ended July 1960 show a small decline in the profit over the previous year in spite of larger sales. After transferring Rs. 4.29 lakhs (against Rs. 4.54 lakhs) to depreciation and Rs. 7.70 lakhs (against Rs. 8.60 lakhs) to taxation, the profit has declined from Rs. 18.49 lakhs to Rs. 16.79 lakhs. Sales at Rs. 3.68 crores are about Rs. 68 lakhs higher than in the previous year, and the closing stock has increased by Rs. 44,902 to Rs. 1.05 crores. The receipts from Central excise under the incentive scheme amount to Rs. 4.43 lakhs. The dividend has been maintained at 15 percent, taxable. After providing for the proposed dividend and allocating Rs. 2 lakhs (same) to general reserve, a sum of Rs. 34,778 has been carried forward, against Rs. 41,428 brought in.

The directors have stated that drought and adverse weather conditions affected the recovery percentage in Bihar factories. It fell from 10.01 percent to 9.64 percent for the Hathwa factory, which crushed 4,358,000 maunds of cane (against 3,818,000 maunds). The recovery percentage fell from 10.04 to 9.48 for the Lauriya factory, which crushed 4,691,000 maunds of cane (against 4,263,000 maunds). The recovery in the Gurara factory was higher by 2.9 percent at 10.44 percent, but it crushed only 610,000 maunds of cane. The production of alcohol declined by 188,000 gallons to 680,000 gallons due to the shortage of raw material and the inferior quality of coal. The sugar export quota was raised from 12,500 tons in 1958-59 to 50,000 tons in 1959-60, and the export loss amounted to Rs. 3.35 lakhs (against Rs. 57,803). The Government has approved a scheme for the further expansion and modernisation of the Hathwa and Lauriya factories. Their daily crushing capacity will be increased from 2,670 tons to 3,350 tons. At the current quotation of about Rs. 14, the shares of Shree Krishna Gyanoday Sugar offer a yield of 10.7 percent.

Raza Buland Sugar Earns More

The Raza Buland Sugar Co. Ltd, Rampur, has reported encouraging results for the year ended October 1960. Its gross profit of Rs. 33.69 lakhs is about Rs. 23.36 lakhs more than in the previous year. The directors have recommended an ordinary dividend of 12½ percent, taxable, on the increased capital. The dividend in the previous year

was 12 percent. A sum of Rs. 2.75 lakhs (against Rs. 2.80 lakhs) has been allocated to depreciation and Rs. 27,000 to development rebate (against Rs. 43,000). Taxation provision receives Rs. 18.92 lakhs (against Rs. 3.50 lakhs). General reserve and dividend equalisation reserve get Rs. 5.78 lakhs and Rs. 1.12 lakhs, respectively, against nil in both cases. The proposed dividend absorbs Rs. 8.13 lakhs, leaving a carry-forward of Rs. 65,217. The directors have stated that the marked increase in the profit is mainly due to larger quantities of cane being crushed by the Raza and Buland factories, and partly due to the incentive rebate of 50 per-cent of the basic excise duty earned by both on their excess production. Raza crushed 5,574,000 maunds of cane (against 3,103,000 maunds) and produced 540,000 maunds of sugar (against 297,000 maunds). Buland crushed 5,778,000 maunds of cane (against 3,989,000 maunds) and produced 556,000 maunds of sugar (against 302,000 maunds).

Bababudin Coffee Pays Less

The working of the Bababudin Coffee and Produce Co. Ltd has resulted in a net loss of Rs. 47,778 for the year ended June 1960, after providing for depreciation. The directors have transferred back Rs. 45,000 from general reserve and Rs. 47,000 from dividend equalisation reserve. A 6 percent dividend is being paid on the preference shares, subject to deduction of income tax, and it absorbs Rs. 18,000. A taxable dividend of 8 percent is recommended on the ordinary shares, against 12½ percent in the previous year. A balance of Rs. 2,438 is carried forward, against Rs. 8,216 brought in. The directors say that if an increase in the preference dividend is necessary under the Preference Shares (Regulation of Dividends) Act, an additional sum will be paid to the preference shareholders. But the increase may be negligible as the Company's income is almost wholly agricultural. Poor blossom showers and unsatisfactory weather conditions reduced the coffee crop to 2,253 cwts, from 3,301 cwts in the previous year. So the cost of production was Rs. 137.39, against Rs. 119.42 a cwt. Although the original estimate for the new 1960-61 season was 3,000 cwts. the latest reports from the estate indicate that the crop will be about 4,000 cwts.

Bigger Profit for Coonoor Tea

The Coonoor Tea Estates Co. Ltd has made a net profit of Rs. 1,47,124 for the year ended September 1960, after providing for taxation and depreciation. The previous year's profit was Rs. 1,14,067. Dividend equalisation reserve gets Rs. 15,000 (against nil) and development rebate reserve gets Rs. 20,975 (against nil). The dividend on the 6 percent preference shares, subject to deduction of tax, absorbs Rs. 9,000. An interim dividend of 10 percent, subject to tax, was paid on the ordinary shares on 1st October, 1960, and it absorbed Rs. 56,642. The directors have now announced a final ordinary dividend of 7½ percent, subject to tax, making a total of 17½ percent for the year, against 20 percent, taxable, for the previous year. But the dividend is being paid on the capital as increased by the issue of additional ordinary shares at par during 1958-59. A balance of Rs. 32,888 is carried forward, against Rs. 29,120 brought in.

The Company secured a record crop of 404,655 lbs (against 352,549 lbs). The cost of production was Rs. 1.55 (against the estimate of Rs. 1.49 a lb). The net average selling price was 261.28nP (against 277.61nP a lb). The crop for 1960-61 is estimated at 360,000 lbs of made tea, at a cost of 154.60nP a lb.

Andhra Scientific Earns More

The Andhra Scientific Co. Ltd has made a net profit of Rs. 5,10,744 for the year ended June 1960, after providing Rs. 88,763 (against Rs. 62,184) for depreciation. The previous year's profit was Rs. 2,85,413. The provision for taxation is Rs 2.05 lakhs (against Rs. 1.35 lakhs). A sum of Rs. 30,500 (against nil) is transferred to dividend equalisation reserve and Rs. 61,000 (against Rs. 30,000) to development rebate reserve. The arrears of the 5 percent tax-free cumulative preferential dividend on 20,000 equity shares for the period from 1st July, 1948, to 30th June, 1959, including the tax on the dividend, absorb Rs. 1.43 lakhs. The proposed 5 percent tax-free cumulative preferential dividend for 1959-60 on 20,000 equity shares, including the tax on the dividend, absorbs Rs. 13,000. The directors have recommended a dividend of 6½ percent, subject to tax, on 80,000 equity shares. This will absorb Rs. 52,000. About Rs. 16,768 is carried forward, against Rs. 10,624 brought in.

Satisfactory progress has been maintained during the past year. The demand for the instruments manufactured by the Company remains good, and it is said that there is a huge backlog of orders. Sales have increased by Rs. 3.90 lakhs compared with the previous year. New machinery and equipment has been added, and the directors feel that there is vast scope for expansion. The estimated annual consumption of instruments under the third five year plan is Rs. 13 crores, while the present production in India is only Rs. 4 crores. An expansion scheme is being considered. The Company proposes to raise its production to Rs. 60 lakhs in the first stage and to Rs. 1.2 crores in the second stage, for which an application has already been submitted to the Government of India.

Trianthrene Dyes Project

Trianthrene Dyes, Drugs and Organics Ltd is a new Company which has been formed to manufacture vat dyes and solubilised vats. It has been sponsored by Mr. T. R. Sathe and will have an authorised capital of Rs. 1 crore, of which only Rs. 10 lakhs is proposed to be issued in the first instance. Trianthrene Dyes is expected to enter the capital market in April. The factory will be located near Bombay and the plant will have an annual production capacity of 200 tons. The range of manufactures will cover the entire spectrum of shades required by the textile industry. It is stated that no foreign collaboration is needed for the project and that the main raw materials will be imported against rupee payments until such time as they are available in India. The plant is expected to go into production within a few months.

NOTICE

FROM THE REGISTRAR OF COMPANIES, WEST BENGAL

The Registrar of Companies, West Bengal, writes: "I would like to take advantage of your paper for publishing this letter in your journal so that some of the difficulties experienced by companies and this office in the administration of the Companies Act may be avoided.

"1. In all correspondence with this office, companies should invariably give the number given in the certificate of incorporation of the company. In the case of very old companies or where fresh serial numbers are given every year in the certificate, they may quote the number which is given in our letters to the respective companies.

"2. Companies are advised to remit their fees by way of cheque in the case of local companies and by way of draft or pay orders in the case of mofussil companies or by Treasury challan. Payment by cash should be avoided. They should be drawn in favour of the Registrar of Companies, West Bengal. Section 611 of the Companies Act has been amended and now the Registrar is given the discretion to receive the documents after the due dates provided a certain penal fee is paid. In view of this provision, it may not be possible for the Registrar to accept the documents after due dates unless the penal fee is paid to him. Companies are, therefore, advised to stick to the time limit prescribed by the Act in filing the documents.

"3. The Government of India has recently issued Press notes and certain circulars to various chambers of commerce, etcetera, indicating the main changes in the Act and the action to be taken by companies. It is understood that the copies of the Companies (Amendment) Act, 1960, are available with the Manager of Publications, Government of India, and companies are, therefore, advised to get the copies and get themselves acquainted with the provisions thereof.

"4. The Regional Director, Company Law Administration, Eastern Region, Calcutta, his Solicitor and the Registrar will be pleased to clarify the provisions of the Amendment Act, if approached."

Bombay Wire Ropes

A new Company known as Bombay Wire Ropes Ltd has been incorporated in Bombay to manufacture steel wire ropes. It has obtained an industrial licence, and the sponsors are negotiating with some well-known British firms for technical and financial collaboration. The project is estimated to cost Rs. 70 lakhs. The factory will be located in Thana, an industrial suburb of Bombay. It will make mining, marine, excavator, shipping and engineering ropes. The plant will have an initial installed capacity of 3,000 tons of wire ropes a year. The Company's authorised capital will be Rs. 2 crores.

Graham Firth to Make Steel Strips

Graham Firth Steel Products (India) Private Ltd is a new Company which is being set up with a capital of Rs. 50 lakhs for manufacturing cold-rolled-steel strips. The latter are used in a large number of ancillary medium and small industries producing a variety of goods. The Company takes its name from Graham Firth Steel Products Ltd of the U.K., which has sponsored the project in association with Messrs Pranlal Patel, N. H. Nanavati and Dashrath Sinh. The factory will be located in Greater Bombay and will have an initial production capacity of 3,600 tons of finished strips a year on a single-shift basis. The Jamshedpur and Rourkela steel plants will supply the main raw material. The U.K. firm will take a third of the Company's capital, in lieu of which it will provide technical know-how as well as complete plant, machinery and tools. The Indian Company has been given the right to use the British firm's trade mark "Firsteel." Besides, it has been allowed the right to export its goods and no payment of royalty is involved. The plant is likely to go into production by the end of October. Initially, it is proposed to manufacture strips of up to 9 inches. In the second stage, strips of up to 10 inches will be produced. The Company also has plans to manufacture section rollings for the motor-car industry as well as lacquered strips for the hardware and light metal industries. The project is likely to save about Rs. 60 lakhs of foreign exchange a year.

Outlook for Textile Shares

Cotton textile shares have shown a fair improvement in the Calcutta and Bombay stock markets, the index for the equities having risen from 145 to 150.8 (1952-53 equals 100) over the past year. The rise reflects the belief that the industry has done better in 1960 than in 1959, and that its growth prospects are good. During the past year, the production of cloth and yarn has increased considerably, and so has the demand. As a result, cloth stocks lying with mills have declined. This is encouraging, since the heavy accumulation of stocks in 1958 and 1959 caused great financial embarrassment. At the same time, the difficulties the industry has had to face cannot be ignored. As the demand for cloth and yarn has improved, shortages have developed. Taking advantage of the situation, the trade has increased retail prices, although the mills have benefited little. The industry has hesitated to increase production, since the slump of 1957-58 has been fresh in its memory. There has, meanwhile, also been an appreciable rise in its production costs. Labour charges have increased as the recommendations of the Wage Board have been implemented. The price of raw cotton too has risen with the failure of the domestic cotton crop in 1959-60. In the circumstances, the industry cannot be blamed if it has had to increase selling prices in order to cover the rise in production costs.

Being worried about the increase in cloth and yarn prices, the Government has forced the industry to reduce its selling prices. The cuts were made in two stages in 1960. At present, the question of fixing fair prices for cloth and yarn is being investigated by the Tariff Commission. It is hoped that the Commission will fully allow for the increase in production costs. In spite of the difficulties, however, the industry is believed to have done better in 1960 than in 1959 due to the rise in production and the improvement in operational efficiency. The output of cloth has increased from 4,925.4 million yards in 1959 to 5,018 million yards in 1960, while that of yarn has declined only slightly from 1,722.5 million lbs to 1,715.8 million lbs. In view of the improved performance, investors hope that the dividends for 1960 will be better than those for 1959. If working remains at the present satisfactory level, the companies may be able to reward their shareholders adequately. It is expected that cotton supplies will become abundant in the near future. The domestic crop in 1960-61 is likely to be bigger. The Government has liberalised imports, and steps are being taken to secure bigger supplies of U. S. cotton under P.L. 480. The Government is keen to ensure that the production of cloth and yarn does not suffer due to a shortage of raw cotton.

The growth prospects for the industry are being assessed optimistically. The *per capita* consumption of cloth in India is very low, being about 16 yards. It is expected to increase to 20 yards in the near future. So a production target of 9,300 million yards has been fixed for the third plan. But the mill sector has been allocated a target of only 5,800 million yards, leaving 3,500 million yards for the decentralised sector, consisting of handlooms and powerlooms. The target for the decentralised sector is far too high, considering its past performance. It will not be surprising therefore, if the mill sector is asked to produce more at a later stage. Meanwhile, investors need to note the many difficulties the industry is facing at present. Its competitive power has been undermined by the increase in production costs. This is evident from the fact that exports have fallen from 810 million yards in 1959 to 700 million yards in 1960. Vigorous measures are thus necessary for improving efficiency. The industry should be given more freedom to modernise its equipment and rationalise

production. For this, bigger financial facilities have to be arranged. During the past few years, the industry has had to depend heavily on its internal resources. So it now has to be permitted to earn reasonable profits under a more realistic price structure. It is hoped that, in recommending fair prices for cloth and yarn, the Tariff Commission will bear in mind the need to provide funds for expansion, modernisation and rehabilitation.

Third Plan Cloth Targets

The shares of handlooms and powerlooms in the total output of cloth in the decentralised sector has become a subject of serious controversy. The Indian Cotton Mills Federation has challenged the accuracy of the figures compiled by the Textile Commissioner's office which provide the basis for the allocation of certain production targets among handlooms, powerlooms and mills during the third plan. In a brochure entitled *Third Plan Targets For Handlooms, Powerlooms and Mills*, the Federation analyses the contribution to supplies and to plan resources made by various sectors of the cotton textile industry as well as their potentialities. While it may not be possible to agree with all the conclusions, the study is thought-provoking. The production of cloth by handlooms and powerlooms in 1959 totalled 800 million yards and 1,365 million yards, respectively, while the figures included in the Textile Commissioner's Statistical Bulletin are 1,907 million yards for handlooms and 351 million yards for powerlooms. The Federation has explained at length how it has compiled its figures, and one wonders whether the Textile Commissioner's Office will challenge them. The Statistical Bulletin has discontinued giving separate producing figures for handlooms and powerlooms since September, so it seems that the authorities are not sure about the reliability of their own statistics. There is no basis for their assumption that the ratio of handloom production to powerloom production has remained unchanged at 5.43 to 1 since 1952.

Referring to the relative performance of the various sectors in the textile industry during the second plan period, the Federation states that while the total cloth output of mills in 1960 at 5,044 million yards was 44 million yards more than the target figure, the production of handlooms at 800 million yards lagged behind the target of 2,125 million yards and the powerlooms exceeded their target of 405 million yards by as much as 960 million yards. The powerlooms have, therefore, "usurped" a major portion of the target of the handloom sector which was not allowed to produce even 50 percent of what was allotted to it. The former have been able to do this because of the "wide and undeserved" advantages they enjoy. The Federation describes the powerlooms as parasites on the economy "gaining at the cost of the handloom sector, the mill sector and the public Exchequer." The small powerloom factories do not give proper wages or taxes as the mill sector does, nor do they provide large-scale employment like the handloom sector.

The cloth production targets in the third plan have been fixed at 5,800 million yards for cotton mlls, 2,800 million yards for handlooms and 500 million or 600 million yards for powerlooms. Considering the performance of the various sectors in the second plan, the distribution of the production targets in the third plan raises serious problems. The crucial question is that measures are to be taken to cut down the production of powerlooms from 1,365 million yards to 500 million or 600 million yards, and how is the increase in handloom production from 800 million yards to 2,800 million yards to be brought about. Apart from the need for devising measures to ensure that the decentralised sectors reach the targets assigned to them, the matter, the Federation says, has to be considered from the point of view of resources for the third plan on which it has a vital bearing. If all the 1,365 million yards now produced by powerlooms are to be manufactured by mills, the Government will have secured a revenue of Rs. 20 crores a year or Rs. 100 crores over the quinquennium. The excise duty paid by the powerlooms is said to be negligible.

The Federation resents the indulgence which is being shown to the powerloom sector. But the problem of handlooms, it says, has to be considered from humanitarian and socio-economic angles. The revenue which the Government could have secured if cloth were produced in the tax-bearing sector, instead of on handlooms, is of secondary importance. This is difficult to understand. The Federation knows that in spite of all the facilities and concessions which handlooms have enjoyed for many years, their progress has been poor. Besides, there is little reason to believe that they will do much better in the future. But powerlooms have become a serious rival not only to handlooms but also to mills. This is apparently worrying the mill industry. Whatever the Federation may say, there can be little doubt that the powerlooms have an increasingly important rôle to play. It will be recalled that the Kanungo Committee considered the ultimate replacement of handlooms by powerlooms as "intscapable." All that is needed is proper organisation of the powerloom sector. The question of allocating production targets to the various sectors should be considered from a broader perspective. Consumer interests and the requirements of development planning have to be balanced. The Federation warns against repeating the pattern of the second plan, when the powerloom industry was allowed to deprive the handlooms of their share in the production of the decentralised sector, resulting in a serious loss of revenue. Referring to the cotton mill industry, the Federation says that it will be satisfied with any production target which may be assigned to it. All it wants is an assurance that if shortages arise through the failure of other sectors or through the defective assignment of targets, the mill industry will not be made a scapegoat for all the ills and subjected to all types of restrictions on prices, distribution, etcetera. This seems fair enough.

Paper Prices and Production

At the recent annual meeting of the Federation of Paper Traders Association, the president said that the crisis in the industry during 1960 was due to prices being revised on the recommendation of the Tariff Commission. The profit margins of mills have been affected, although the output has increased from a monthly average of 24,502 tons in 1959 to 28,505 tons in 1960. The increase in production reflects the rise in demand, although some varieties still have to be imported. A token import quota, the president said, affords no relief to traders. It is necessary to improve the existing distribution arrangements for handling a larger volume of production. Besides, quality should be improved and production costs reduced. Mr. Nityanand Kanungo, Central Minister for Commerce, said that the substantial increase in production has helped avert a shortage. The flow of new capital for investment in the paper industry indicates that manufacturers are eager to get over the shortage due to import cuts. The indigenous manufacture of paper machinery will help the industry to expand. In a message to the conference, Mr. Manubhai Shah, Central Minister for Industries, stated that many licences have been given for importing machinery to start new paper mills since the third plan production target was raised to 900,000 tons. The Minister thought that it would take about five years for the indigenous supply to catch up with the growing demand for paper and paper products.

THE CENTRAL BUDGET

The Calcutta stock market's reactions to the Central Government's Budget are discussed on page 323. A detailed analysis of the Budget proposals will appear in a leading article in next week's issue.

Progress of Electrical Industries

The value of electrical goods produced in India increased from Rs. 68 crores in 1958 to Rs. 73 crores in 1959. The targets fixed for the industry under the second plan are likely to be achieved, although the production of electric motors and transformers has been adversely affected by the decline in demand caused by cuts in power projects. Speaking at the annual general meeting of the Indian Electrical Manufacturers Association in Calcutta last Saturday, Mr. N. W. Gurjar, president said that there is considerable idle capacity in the transformer industry. State Governments are the major buyers of transformers, but they have started the practice of negotiating prices even after the opening of tenders. Besides, they often urge manufacturers to accept unremunerative prices for their products. The difficulties have been aggravated since the Government heavy electrical factory in Bhopal started supplying transformers to the market. The factory was designed, Mr. Gurjar said, to manufacture transformers above 3,000 kVA 11 kV, but it is now producing goods even below that range. The Government assured the Association that the State factory would be engaged mainly in manufacturing heavy electrical equipment and that private producers need not fear any competition from it. But the factory is now manufacturing items which are being produced in the private sector; furthermore, State Governments, which are the major purchasers of transformers and switchgears, have been advised to place their orders with the Bhopal enterprise at prices which will be settled later.

Discussing the shortage of raw materials, Mr. Gurjar said that the electrical industries still have to depend on imports for raw materials like transformer grade electrical steel sheets, insulating materials and ball bearings. Ball bearings are now being manufactured in India, but their supply is unsatisfactory, so the consuming industries have to supplement it with imports. It is, therefore, necessary to grant import licences freely until the indigenous manufacturers are able to increase their production. Besides, the Government should readily grant import licences for electrical steel sheets and insulating materials. Mr. Gurjar said that it is difficult to get graded pig iron and coke. The supply of raw materials is likely to fall short of requirements in the future when additional production capacities are created in various electrical goods industries.

Fertiliser Production in Madras

In his Budget speech, the Finance Minister of Madras referred to the increased demand for fertilisers in the State. It is estimated that 400,000 tons of superphosphate will be needed for the irrigated areas. The urea plant in Neyveli, it is said, is likely to provide 350,000 tons of ammonium sulphate from 150,000 tons of urea. The Finance Minister stressed the need for establishing many more fertiliser factories in the State. He welcomed the project of Parry to manufacture ammonium phosphate. Kotharis are reported to have decided to establish a large fertiliser plant in Tuticorin. The production of phosphate manures in Madras, meanwhile, is estimated at 110,000 tons. The Finance Minister said that licences have been issued for three new factories in Madras, Cuddalore and Coimbatore for the production of 140,000 tons of superphosphate. Production will then rise to 250,000 tons, but since the output will be insufficient to meet the current demand, another factory will be set up in Tanjore to produce 60,000 tons of superphosphate. The Finance Minister said that the Dhrangadhra Chemical Works in Arumuganeri proposes to raise its production capacity for caustic soda from 30,000 tons to 60,000 tons. The Mettur Chemical and Industrial Corporation is already producing potassium chlorate in addition to caustic soda, bleaching powder and chlorine.

Promoting Tea Exports

Tea exports during the current season, said Mr. K. Ghosh, chairman, at the annual general meeteing of the Calcutta Tea Merchants Association last week, have been running below the level of the previous year. Shipments from north India up to the end of January 1961 were 5.32 million kilograms less than in the same period of 1959-60. Higher prices might compensate for the decline in quantity, but the trend nevertheless is disturbing. Exports to the U.K., the Sudan, the U.S.A., Ireland, Turkey, Canada, West Germany and the Netherlands have fallen. Sales to Australia, New Zealand and Egypt have also declined. Only the continued support from Russia for quality Assam and Darjeeling teas has helped increase exports of these grades. As the largest source of foreign exchange earnings, it is necessary to increase tea exports, but part of the effort should be directed at increasing domestic consumption. "Internal demand, particularly for plain teas, is the salvation of the industry as a whole," since the domestic market can act as a "buffer at a time of crisis." Under the third five year plan, India proposes to increase her tea output to about 900 million lbs, but all forecasts concerning world production point to the need for caution. At any rate, the prospect of an increase in the world output of tea should be a strong argument for promoting consumption at home. Discussing India's effort to increase sales of her tea overseas, Mr. Ghosh said that the propaganda campaign needs to be supported by appropriate fiscal and other measures. An essential step is to reduce substantially or even to abolish altogether the export duty on Indian teas. Some rival producers, including East Africa and Indonesia, do not levy export duty. Moreover, the "various and differential duties" levied by the Central and State Governments on tea handicap export promotion. The sales tax imposed by the States is particularly vexatious. According to a Press report, Mr. Satish Chandra, Central Deputy Minister for Commerce and Industry, has said in Coonoor that the Government is considering "a single all-embracing tax on tea." If this is correct, a major grievance of the industry will be removed. Such a tax will be simpler to administer, cheaper and more efficient. It will also earn the Government more revenue.

Ferrous Scrap Exports

Exports of ferrous scrap from India in January 1961 totalled 29,559 metric tons, against 22,644 long tons in the previous month and 23,090 long tons in January 1960. Of the total of 29,559 tons of scrap (heavy melting 1,349 tons, turning and boring 8,144 tons, budles 10,660 tons, skulls 9,386 tons and others 20 metric tons), 22,959 tons, or roughly 75

percent, were shipped from Calcutta while Bombay accounted for only 6,440 tons. Enquiries from the trade indicate that it will be risky to form an idea of export prospects for the year on the basis of January figures, which are very encouraging. Shipments during the month were entirely against the 1960 barters, the fulfilment of which in rare cases may extend up to the end of March. Shippers say that the prospects for the current year should be based on export possibilities, which are discouraging in view of the low foreign prices and the uneconomic ocean freight, and the barter ceiling for 1961 which has yet to be announced. The easier supply of steel has resulted in the larger availability of scrap. Exporters believe that unless a scrap barter ceiling of 500,000 tons, against 360,000 tons in 1960, is fixed for the current year, the use of surplus scrap will fall below 40 percent this year. Shipments in February have been poor, and business is unlikely to revive unless the barter ceiling for 1961 is announced soon.

Coal Dumps

Reactions to the Central Railway Ministry's proposal to establish coal dumps in consuming centres appear to have been mixed. To some extent, the ultimate decision will rest with State Governments, but a number of questions will have to be answered before they can make up their minds. U.P.'s Chief Minister, Mr. C. B. Gupta, has told the State legislature that he is convening a conference of general managers of railways, the Coal Controller and other representatives of the Government of India to discuss the many problems which are likely to arise in case the scheme for coal dumps materialises. In the first place, there are some doubts about the existing facilities for the bulk handling of coal at loading and unloading centres. Experience shows that, even at receiving centres, block rakes have not been handled satisfactorily, so restrictions have had to be imposed. Assuming that the railways can fulfil their part of the bargain, the subsequent storage, and the distribution of coal by road, will present serious difficulties. It is said that arrangements for the latter will raise the cost of coal to the consumer by anything up to 50 percent.

Linked with the coal dump scheme of the railways is another proposal from the Coal Controller to relieve his office of the burden of clerical work by issuing all sanctions in future in favour of district magistrates. Since it cannot be expected that the already harassed district magistrates can handle the distribution personally, it follows that the actual work will devolve on a host of petty officials, with all the attendant risks. The shortage of coal in Uttar Pradesh has become so great that the Government has directed all State undertakings in Kanpur and those mills which have surplus stocks of coal beyond 15 days, to divert their extra stocks to units which are running short of coal and are faced with closure. Since soft coke for domestic purposes has been assigned a low priority, the State Government has instructed the Forest Department to arrange for the supply of domestic fuel to Kanpur, Agra, Varanasi, Allahabad, Lucknow and other cities. While the wheels of industry must be kept going, it is equally important that the cooking pot too be kept boiling in millions of homes.

More Co-operative Sugar Mills

One more co-operative sugar factory has been opened in Madras. Three mills have already been set up, and five more are going to be set up in the next five years. Each new mill will place an order for local machinery worth Rs. 90 lakhs, which sum will come as a loan from the Industrial Finance Corporation under a Government guarantee. As in Bombay, the new mills in Madras will be managed by Government officials. A co-operative sugar mill gets half its capital from the State Government, and further help from sugarcane growers. The price of cane has been raised to the advantage of growers, who are now backed by co-operatives, which give advances for manure and make sure of regular cane supplies. The optimum cane area for a new factory is said to be 4,000 acres. The normal crushing season will be 150 days in a year for a mill handling 1,000 tons of cane a day. Although only 500 workers will be needed for each factory, it is believed that a new sugar mill set up in the rural areas will provide appreciable employment. The competition for cane will, however, increase. Co-operative sugar mills will deduct part of the price paid so as to enable the growers to buy shares every year. The mill will thus ultimately belong wholly to shareholders who will be buying up the Government's holdings gradually. The first co-operative sugar mill set up in Amaravathi in Coimbatore is now making glucose. New irrigation sources have turned an area growing dry crops like cotton into a cane-growing tract.

Sweden Proposes Barter Deal

The Swedish trade delegation which visited Madras recently said that it is proposed to conclude a barter agreement under which Sweden will import Indian goods worth Rs. 3 crores. The State Trading Corporation has been informed that India can ship tea, coffee, deoiled cake, jute manufactures, leather goods, textiles and manganese ore, against matching exports by Sweden of wood pulp, electrical machinery, special steels and ball bearings. The Swedish counterpart of the S. T. C. handles all barter deals. It also helps foreign exporters for a nominal commission. The demand for mica in Sweden is growing, and the chances of exporting more are bright. Sweden often imports oilcake in lots of 500 tons.

Indo-Italian Collaboration

Italian business interests in India now include chemicals and drugs as well as teleprinters. In the south, several industries, including rayon and aluminium, already have Italian collaboration. At a party recently in Madras, Sgr. Battista, who is leading an Italian economic mission to this country, said that India's adverse trade balance has made Italy realise that she must help with adequate credit facilities. It is not possible for Italy to give long-term credits, but a new formula for supplies on deferred payment terms is contemplated. He did not say anything about the prospects of Italian assistance for the Oil and Natural Gas Commission. Sgr. Battista explained that the European Common Market set up under the Rome Treaty does not imply a closed economy for the Six. "Trade relations between India and Italy are similar to the relations between Italy and the countries grouped in the Common Market." The economic unity achieved in western Europe will actually increase the aid-giving capacity of the member-countries.

Conference of Cinema Workers

Much may be demonstrably wrong with the Indian cinema industry, but it is doubtful whether anything could justify its nationalisation, as was urged by an All-India conference of cinema workers held in Varanasi recently. The conference demanded the setting up of a wage board to standardise wages on a national scale. Purporting to speak on behalf of all employees in the distribution and exhibition trade, it also demanded an immediate increase of 25 percent in their wages. Another resolution urged the Government to issue free insurance to all such employees for a sum of Rs. 5,000, the premium to be paid by the Government out of the entertainment tax. The conference asked for festival holidays for cinema employees, as in other industries. No reliable estimate of the number of people employed in distribution and exhibition is available, but the Varanasi conference claimed a membership of 5,000.

While the film studios already seem to be covered by the Factories Act, other categories of workers do not have any special legislation to protect them. The Film Enquiry Committee, in a brief reference to such employees, said that the vast majority of the non-technical staff consists of part-time workers. "People engaged in other occupations, mainly clerical workers, appear to be seeking and finding employment as part-time attendants at the box office or in the auditorium. The result of this practice has been that the box office is manned only for a short time before each show is due to commence and suitable facilities for advance booking cannot be provided. Moreover, it would appear to be getting round the intention of the State when it prescribes the maximum number of hours for which a person can undertake employment under another. There is another factor in the matter of such employment which requires consideration. It has been the plea of certain exhibitors that since the box office attendant, for instance, is working only for a short time before the commencement of each show, there should be no objection if his total employment is spread over a larger period than that prescribed in the local Act."

Two U.S. Banks to Merge

Mr. James S. Rockefeller, chairman of the First National City Bank of New York, and Mr. Ralph T. Tyner, Jr., chairman of the board of the National Bank of Westchester, White Plains, have announced plans to combine the two Banks, subject to the approval of shareholders and of the Comptroller of the Currency. The terms of the agreement call for the exchange of one share of the First National City Bank for every two shares of the National Bank of Westchester. The National Bank of Westchester will become the Westchester Division of the First National City Bank. First National City shareholders will be asked to approve the necessary increase in the outstanding stock of that Bank. The shares of the National Bank of Westchester to be exchanged will include the 4 percent stock dividend payable in March 1961.

Leipzig Spring Fair

At a Press conference in Calcutta on Tuesday, Mr. Otto Voelker, Deputy Trade Representative of East Germany, said that the Leipzig Spring Fair would be held from 5th March to 14th March, 1961, on a site covering about 3,250,000 square feet. It will accommodate 16 multi-storeyed fair buildings, 22 fair halls and 25 pavilions. Apart from East German exporters, 200 foreign trade corporations from other socialist States and about 3,000 foreign trade companies and other firms from the western countries will participate in the fair. East Germany will display industrial machinery and equipment as well as consumer goods. Among the other countries which will participate in the fair are Britain, France, the U.S.A., Cuba, the United Arab Republic, Iraq, the Sudan, Canada, Czechoslovakia and India. The Government of India has booked over 10,000 square feet of floor space and about 187 Indian manufacturers and exporters will participate in the Indian pavilion.

COLD STORAGE

THE process of preservation by cold storage of articles of food, both for local consumption and especially for export to foreign countries, is possibly capable of development in India. Already a scheme is on foot at Bombay to furnish the London market with fresh mangoes, and should this prove successful it may be found practicable to extend the trade to other fruits and products, which, common, plentiful and cheap in this country, are or would be esteemed as delicacies in Europe and elsewhere. In Chicago the cold storage business has grown to very large dimensions in milk, butter, and cheese, besides fruit, meat, fish, poultry and eggs. The trade in eggs alone is enormous; in one month (September last) 600,000 cases, each containing 30 dozen, were taken into cold storage in the stock yards. Hens' eggs preserved sell at from 4d to 6d a dozen. America, it is believed, is at present the only country engaged in the egg canning industry, the whites and yolks of cracked and broken eggs being separately preserved in air-tight tins. Even damaged and clouded eggs are preserved in like manner, for use in tanning leather and glossing finely preserved skins. To the ice works in India, which only find employment for their machinery during the hot-weather months, those which are favourably situated as regards supplies, might find it worth the experiment to extend their business in the manner indicated, as the loss of earnings in a certain number of months in the year materially reduces the profit producing capacity of a factory.

A Ditcher's Diary

LORD ATTLEE IS NOW ON A LECTURE TOUR OF THIS country; and Lord Morrison was here recently. Lord Home, the Foreign Secretary, was not here, we may be sure, only for the shoot in Nepal. One good result of the Queen's visit is already evident: in Britain today there is greater awareness of this country and its problems than ever before. But the Labour politicians belong to another category; in India they have always taken great interest, although this was often sentimental and not always informed. I was glad to see the other day a letter to a contemporary in which was suggested a suitable memorial for Lord Attlee in this country. I think he deserves it, for although Indian independence was just about inevitable by the time it came he made the process smoother than a Tory Government might have done. But where his Indian audiences have much to learn from him, I suggest, is in the art of opposition. I agree with Mr. Raymond Aron that the first need of most newly independent countries is the creation of a political society in which there is a viable political majority. It is not an exaggeration to say that a political society exists in India, and that the art of government has been learned, more or less, by a sufficient number of people. The stresses and strains in the Indian political scene today stem from a relative deficiency in the art of opposition; and I wish I could say that the Congress has set an example worth emulating by others. In essence the art of opposition in a democracy consists of (a) patience, and (b) persuasion. Lord Attlee spent many years in opposition before his Party came to power in 1945; and he has known days in opposition again after wielding power. In a sense those years have to be more active than the ones spent in power; and it is a pity that the Congress in India simply cannot bear the thought of being out of office. I wish Lord Attlee would take an opportunity of telling his hosts how (a) he treated the opposition when he was in power, and (b) how his Party and he were treated when in opposition.

HAPPILY THE LOK SABHA DOES NOT HAVE TO RESORT to all-night sittings to get controversial legislation passed; indeed as modern legislative practice goes, it works very reasonable hours. Filibustering and sitting until the dawn comes up are alien to its traditions and I hope they may remain so, for I cannot believe that marathon speechifying, or listening to it until sleep supervenes, improves the quality of legislation. I am prompted to these reflections by the goings-on in Britain's House of Commons where the Opposition has recently forced a series of all-night sittings to emphasise its objections to the increased national health service charges. The all-night sitting was, I believe, a favourite tactic of the Irish Nationalist Members of Parliament in the now far-off days prior to the first world war to draw attention to their grievances. More recently the Labour Opposition has revived the idea, and the House of Commons has been sitting at all sorts of unearthly hours. But if the effect on legislation is bad, what about the effect on Members? Certainly for those in late middle-age (as many are) the strain must be considerable. For politics is quite unlike other professions, the burdens of which tend to get lighter after a man passes a certain age. In industry, as men enter their fifties they feel entitled to take things a bit easier and to shorten their working days. But in politics, at the same age, the struggle is often only just entering its fiercest phase.

THE BRITISH GOVERNMENT'S OBJECTION TO making the ten shilling unit the basis for its proposed decimal coinage—that it would give the impression the pound had been devalued—is a remarkable comment on the grip which the idea of fixed currency parities has on nations these days. Personally, I have always felt the pound was too large for convenience, and a 100th part of it, valued at nearly 2½ pence, would obviously have to be subdivided if a decimal system were adopted. A new pound, equivalent to the present 10 shillings, would be handier for everybody. And would this look like devaluation? I think not; no more than the introduction of the "heavy franc" looked like an appreciation of the old French franc. Internally, I dare say that a smaller unit slips through the fingers faster and therefore helps to reduce the prestige and respect for money which does seem to accrue to a larger one. But I cannot see what possible difference it can make on the international level. The British Government's fears need not, however, be dismissed as merely stupid. It is simply facing the truth that these days an almost neurotic anxiety attaches internationally to maintaining existing parities. It ought not to, but it does, and it has to be accepted that some countries are quite prepared to stop the growth of their internal economies altogether rather than devalue, even when their currency is completely out of line with reality. Is that not what in fact the British Government itself has been doing for the past 18 months or so? Then we have just had the example of the new American administration adopting measures to protect the declining dollar which are certainly hurting the United States' allies, and may restrict world trade as well. Indeed, the situation does not now differ greatly from that which existed under the old gold standard. Why should governments feel this way? I strongly suspect the main reason is simply national prestige; which is just the wrong way of looking at anything in economics. I believe there is still much to be said for the institution of free exchange rates. Both external and internal management would benefit by them, and such countries as Britain would be able to undertake a perfectly simple currency reform without being suspected of trying to pull a fast one.

THE RABINDRA EXHIBITION IN ENTALLY, WHICH depicts Tagore's life and activities in clay models, is by no means a sensational job of work, although I must congratulate the West Bengal Pradesh Congress Committee on its originality. Also, it is one of the first practical attempts at celebrating the poet's centenary, about which so far remarkably little has been done in the State of his birth. But I suppose Tagore belongs exclusively neither to Bengal nor India, but, like all great poets, to the world. A friend tells me that the English rendering of *Gitanjali*, which earned him a Nobel Prize in 1913, is better than his original work in Bengali; this I can well appreciate because I find from his English works that he had an excellent command over the language. I can name hardly any figure whose talent was as varied as Tagore's. In poetry, he secured a place for lyricism which he may well have imbibed from English literature, although I am told that in Bengal lyricism owes its origin to such Vaishnaba poets as Chandidas and Vidyapati. A master writer of prose, Tagore wrote a number of excellent dramas which are comparable with Shakespeare's in their audience appeal and imagination. Each one of his short stories is a literary gem, and his paintings and songs reveal a versatility which recalls the genius of Leonardo da Vinci. But the main reason I have for respecting Tagore is because he lifted himself out of the narrow grooves of parochial politics and partisan approaches; he said in one of his remarkable poems that India should be the pilgrimage of the East and the West and of many races and religions. He established Visva-Bharati in Santiniketan on the same high principles, although I doubt whether his successors have taken the same trouble to follow such philosophy. I often wonder whether a more appropriate memorial to Tagore would not be the establishment of an international foundation for awarding prizes to the world's outstanding litterateurs, poets and artists, somewhat on the lines of the Nobel Prize.

•

IN GRAHAM GREENE'S *The Quiet American* AND *Our Man in Havana* the novelist managed to convey something of the corrupt political atmosphere in Indo-China and Cuba, although neither was a political novel in the sense Malraux or Koestler understood it. From this point of view Greene's latest, *A Burnt-Out Case*, is disappointing, for he does not discuss politics at all. But the writing is as taut as ever; and as I read this fine novel I could not help feeling what a fine movie it would make in the hands of Sir Carol Reed. It is a cheap thing to say about a serious writer like Graham Greene that he wrote his book keeping the eventual script in view; but I must confess that the thought occurred to me more than once. In *The Heart of Matter* Scobie committed suicide, which got Greene into trouble with his Church; and in the Hollywood version an accidental death had to be contrived to satisfy the Johnston code. In *A Burnt-Out Case* Querry is murdered for a crime he had not committed; so no trouble this time, although it will be interesting to see how Hollywood punishes Ryckers for his killing Querry. The characterisation is as usual superb; but I seemed to sense now and again a structural defect in the novel. There is not, I felt, sufficient validation of Querry's contracting out of mankind as it were; and if there is a moral in his finding peace in a leproserie, it must be a pretty trite one. But there are many mordant observations on love and marriage, on professional leprophiles. My favourite is the doctor, who says he hates leprosy and is working only to exterminate the disease. How would leprophiles then save their souls without lepers' feet to wash with their hair? I think the problem is overstated, for do-gooders will always find something to keep themselves engaged. This brings us back to Mr. Greene's *The Quiet American*, which I am inclined to consider a better work in many ways. But then he has never been less than readable; and in *A Burnt-Out Case* he is a lot more than just that.

RECORD ACTIVITY IN STOCK MARKET

GREAT DEMAND FOR INDUSTRIALS

London, 1st March.

BUSINESS in the stock market during the past week has been on a fairly considerable scale. On Monday, the market had its busiest day for over a year with the number of bargains officially recorded exceeding 21,000. Interest was almost entirely confined to industrials, and although gilt-edged were supported at one time, interest dwindled when sterling came under pressure which gave rise to some apprehension concerning the U.K. gold reserve position, and there is now disposition to await the February figures which will be made known on Thursday next. In the industrial market, demand appeared to favour some of the less well-known issues offering promising prospects. Buyers did not always find stock in good supply, however, and this prompted jobbers to lift prices sometimes more sharply than they would normally. There were a number of disappointing company statements. The biggest shock came from Jaguar cars which returned sharply lower profits much against general expectations. The shares fell heavily after the announcement but brighter news from the motor-car industry generally helped them to recover some of the lost ground. An important favourable influence on sentiment was the good employment figures showing more vacancies and fewer unemployed. There was also good news from the engineering and electrical equipment industries of increasing output. The result from the giant Unilever group confirmed the pessimistic views that had prompted selling prior to the announcement, but there was little further movement in the shares afterwards. The brighest item of company news came from Peninsular and Oriental Company which showed a marked rise in profits and this helped the entire shipping share market although a little profit-taking later pared the gains. Gold shares continued to lack stimulus and prices receded on most days. Copper shares also eased, but tin shares made substantial headway following the rise in the price of the metal. Oil shares fluctuated somewhat and were generally irregular. Rubber and tea shares met with a good demand and prices moved to better levels.

The Money Market

Credit conditions tended to be easier in the money market during the past week, but there was not a great deal of expansion in the amount available. Government disbursements rendered useful benefit to the market, but the volume of credit still needed to be boosted by operations from the authorities who gave sufficient assistance to keep the market out of the Central Bank, and borrowing at Bank rate terms. The rate for day-to-day non-regular money which at the beginning of the week was affected by the weekly tax payments ruled firm at 4¼ percent and 4⅜ percent, eased to around 4¼ percent with late afternoon balances obtained at cheaper levels down to the basic minimum of 3⅜ percent. There was a fair business in bills with May and "hots" sold at 4 11/32 percent to the clearing banks and at 4⅛ percent to outside banks.

Stock Market Prospects

Investors Chronicle market newsletter writes: The recovery in London gilts gained momentum and their index encouragingly broke through the downward trend line dating from October 1959. Industrials resumed uptrend with Wall Street. Gold shares were overshadowed politically but little selling. Political factors also dominate base metals. Oils were better on New York advices. Wall Street may rise to test the mid-1960 resistances. The rally in gilts owed little to switching from equities which remained remarkably firm. The external trade figures are ambiguous. The approach of the Budget which can hardly make concessions might cause caution.

Activity on Wall Street

Long-dated U.S. Government obligations held the trading spotlight in the week ended 23rd February with prices marked up. Many were selling at their best on announcement by the Federal Reserve System of a new policy of purchasing Treasury issues with maturities of more than five years. Investment quality corporates also improved with prices at their highest for some time, with the Federal Reserve announcement a factor. Convertibles generally scored gains. In a slow moving market for foreign dollar bonds, Republic of Cuba 4½ percents moved up 1½ points. Japanese Governments were mixed. French Credit Foncier 5½ percents were firm, moving up over a point to within 1½ points of the 1960-61 high. Greek 6 percents were off a point, with Italians and German nationals showing little change. Chile 3 percents held steady.

Advice on Investment

Despite adverse business news and a disturbing international situation, the outlook suggests that over the intermediate term of several years, equities may be more satisfactory holdings than liquid funds or fixed-income securities, a well-known Wall Street firm stated. Therefore, it added, "investment of liquid reserves in selected equities over the next several months is advised." The firm noted that on seasonal grounds "one can expect a year-end rise, a late winter, decline usually in March and a summer rise into the autumn. We would expect 1961 to conform to this pattern". The vigorous rise many stocks have experienced since last October may have discounted favourable near-term prospects and, therefore, bring on some reaction in the weeks ahead. "But whether one occurs or not," it added, "we suggest gradual investment of liquid reserves over the next three months."

U.K. Industrial Production

The seasonally adjusted index of U.K. industrial production in December does not suggest any marked change in the level of industrial production in the last quarter of 1960. According to the Central Statistical Office, in 1960 the index was 7 percent above 1959. The increase in the last quarter of 1960, compared with a year earlier, was 2 percent. The seasonally adjusted figure for December 1960 (based on 1954 as 100) is 120, against 119 in November and 118 in December 1959. The figures for December in both years were affected by the Christmas holidays.

* Effect of Budget proposals.

THE TAX PROPOSALS AND ADJUSTMENTS

THE following is a summary of some of the important tax proposals and adjustments announced by the Finance Minister in the latest Central Budget:

Customs

Betelnuts: Duty raised by 80nP a kilogram.

Unmanufactured tobacco: Duty raised by about 50 percent.

Iron & steel manufactures: Existing *ad valorem* duty raised to 50 percent.

Textile manufactures: Existing *ad valorem* duty raised to 100 percent.

Machinery and components: Statutory *ad valorem* duty raised by 5 percent except items on which there is a commitment under GATT: concessional rate of *ad valorem* duty now applicable to certain types of machinery exempted to be raised by 5 percent.

Spirits, wines and malt: Duty to be increased to Rs. 44 a litre of the strength of London proof or 170 percent *ad valorem* whichever is higher.

Electrical and other instruments, apparatus and appliances: Existing *ad valorem* duty raised by 10 percent.

Railway materials: Existing *ad valorem* duty raised by 5 percent.

Newsprint: Existing duty raised to about 10 percent *ad valorem*.

Tea: Export duty reduced by 9nP a kilogram, that is about 17 percent.

Central Excise

Tea: Duty on loose tea raised by 3nP a kilogram. The rate on package tea reduced by 6nP a kilogram.

Coffee: Duty increased by about 33 percent.

Tobacco: Changes made to discourage lower rated tobacco being used as a substitute for tobacco bearing a higher rate.

Superior kerosene: Duty raised by about 46 percent raising incidence of duty to Rs. 95.55 a kilo litre. This with existing additional duty of Rs. 4.45 will mean a total duty of Rs. 100 a kilo litre.

Diesel: Duty increased on oil not otherwise specified.

Rayon: Duty on yarn and staple fibre raised by about two-thirds.

Vegetable products: Duty raised by Rs. 2.80 a quintal.

Paints and varnishes: Duty raised by about 25 percent.

Paper and paper-boards: Duty raised by 36 to 59 percent. No increase on printing and writing paper.

Cotton fabrics: Basic duty on medium "A" grey fabrics raised by 25 percent. Levy on processed cloth is also being increased by small amounts.

Matches: Changes made in pattern of duty. Ceiling rate raised from 57nP a 1,000 sticks to 65nP. Rates on standard boxes of 50 will be kept almost at present level.

Cycle rims: Smaller units producing cycle rims will be granted certain concessions.

Chemicals: Small specific duty will be levied on soda ash, caustic soda and glycerine. Duty of 15 percent *ad valorem* on coal-tar dyes, 10 percent on patent or proprietory medicines not containing alcohol and 25 percent on certain cosmetic and toilet preparations. Levy of 20 percent *ad valorem* on cellophane and on plastic powders and other semi-finished plastic material.

Cotton and woollen yarn: Small specific duty to be levied, part of the duty is expected to be absorbed in cost of manufacture. Hosiery and certain other fabrics will also be brought within the duty.

Glass, glassware, china, porcelainware crockery: Ad valorem duty raised from 5 to 15 percent. Lower rate for laboratory glassware.

Copper and zinc: Duty of Rs. 300 a metric ton on sheets and circles and 10 percent *ad valorem* on pipes and tubes. Aluminium pipes and tubes will be brought in line.

Wireless receiving sets, air-conditioning machinery and refrigerators: 20 percent duty on air-conditioning machinery and refrigerators, ceiling rate of 20 percent *ad valorem* for wireless receiving sets valued more than Rs. 300 each and concessional rates for cheaper sets.

Millmade silk fabrics: Additional excise duty in lieu of sales tax levied by States.

Direct Taxes

Special surcharge of 5 percent on earned income above Rs. 1 lakh increased to 10 percent of basic tax.

Tax on new bonus issues is reduced from 30 to 12½ percent.

Supertax on dividends paid on intercorporate investment, Indian or foreign and whether on majority or minority basis, fixed at 20 percent. New rate will apply to companies formed after 1st April, 1961.

Tax on royalties received from Indian enterprises by foreign companies approved by the Central Government after 31st March, 1961, reduced to 50 percent.

Entertainment expenses of companies would be admissible within specified limits as expenditure for tax purposes.

Rate of development rebate reduced from 25 to 20 percent for machinery or plant installed after 31st March, 1961.

Tax exemption for foreign technicians will now be available for uniform period of 36 months.

Benefit of five years of tax holiday is to be extended to newly started hotels on certain conditions.

Deduction of Rs. 600 a year will be provided from annual value of new residential units completed after 31st March, 1961. Concession will be available for three years only from the date of completion.

THE CALCUTTA MONEY MARKET

BAD WEEK FOR EXCHANGE BILLS

Wednesday, 1st March.

ONCE again the increase in the level of advances outstanding in the Calcutta money market has slowed down during the past week. The total demand was higher, but not a great deal above that of the previous week. The requirements of the jute mills were down and those of the engineering and iron and steel industries slightly less. Demand from the sugar mills and call for accommodation against foodgrains storage showed a slight increase. The needs of the cotton textile industry were about the same. In the interbank market, conditions have eased slightly, but the call rate is unchanged at 5¼ percent.

The exchange market continued dull, with very few bills of any kind coming to hand. Those that did, however were chiefly on account of gunny shipments. Remittance demand continued to be poor. The main feature of the London money market was the extreme firmness of the U.S. dollar against the pound sterling. At the close, quotations for the pound were lower both in terms of the U.S. dollar and most Continental currencies.

BULLION WAS STEADY DURING THE PAST WEEK, BUT trading was limited. Silver rose from Rs. 239 25 to Rs. 239 75 a 100 tolas and the rate for forward delivery was Rs. 201.50 a kilogram. The London and New York prices were 80½d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 143.50 to Rs. 143.75 (Mysore). The sovereign fetched Rs. 95.25.

DURING THE WEEK ENDED 24TH FEBRUARY Government of India Treasury bills for Rs. 20,72,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 28th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 6th March.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 1st March to 4th March at Rs. 99.331 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 22nd February to 25th February, amounted to Rs. 1,02,00,000.

THERE WAS A DECLINE OF Rs. 15.33 CRORES TO Rs. 1,925.33 crores in active notes, according to the return of the Reserve Bank of India for the week ended 24th February, 1961. The total note issue was fractionally higher by Rs. 94 lakhs to Rs. 1,960.30 crores. Notes held in the Banking Department consequently rose by Rs. 16.27 crores to Rs. 34.97 crores. In the Banking Department, deposits of the Government of India fell by Rs. 11.73 crores to Rs. 61.04 crores, and other Government accounts by Rs. 2.91 crores to Rs. 18.39 crores. Balances of commercial banks at Rs. 76.98 crores showed a rise of Rs. 5.59 crores. Investments rose by Rs. 74 lakhs to Rs. 143.60 crores. Balances held abroad again increased by Rs. 1.94 crores to Rs. 31.49 crores. Other loans and advances declined from Rs. 150.70 crores to Rs. 147.64 crores, of which advances to scheduled banks against usance bills amounted to Rs. 26.15 crores (Rs. 26.90 crores). Ways and means advances stood at Rs. 37.77 crores, against Rs. 37.71 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 17th February, 1961, shows Demand and Time liabilities at Rs. 805 crores (Rs. 18.02 crores on account of borrowings from banks) and Rs. 1,088.65 crores (Rs. 10.12 crores), compared with Rs. 794.39 crores (Rs. 15.57 crores) and Rs. 1,098.49 crores (Rs. 10.29 crores), respectively, in the previous week. Cash has risen by Rs. 1.20 crores to Rs. 46.03 crores, while balances with the Reserve Bank have diminished by Rs. 2.24 crores to Rs. 67.53 crores. There is a drop of Rs. 11.56 crores to Rs. 585.57 crores in investments. Advances and bills discounted at Rs. 1,260.17 crores show an increase of Rs. 4.86 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6 percent and 65.5 percent, against 6.1 percent and 66.3 percent.

LIMITS OF REMUNERATION FOR COMPANY MANAGERS

By B. S. Kothari

THE recent changes introduced in the Companies Act are governed not only by legal expediency but also by the socio-economic objectives which it is sought to achieve through legislation in this country. The provision in the Companies Act, dealing with managerial remuneration, attempts to set up standards of fair remuneration by specifying the amount, mode and manner of remuneration payable to each category of managerial personnel such as managing agents, directors, secretaries and treasurers or managers. It has been recognised that the cost of running a business is not the concern of shareholders alone and that social ideas concerning fair remuneration should also be taken into account. The Government has, therefore, taken powers to sanction the appointment and remuneration of management staff. The sections dealing with their appointment and their remuneration are spread out over different parts of the Act and need to be considered together to understand and appreciate their significance and implications.

It has been sought to control the overall cost of management by Section 198, and all forms of management have been brought within its scope. According to this Section, the total remuneration payable by a company to its directors, managing agents, secretaries and treasurers, or manager, for any financial year, will not exceed 11 percent of the net profits of the company for that financial year computed in the manner laid down in Sections 349, 350 and 351. The legislature has made a distinction between the remuneration payable for services rendered in managing the company and services rendered for other purposes. The remuneration paid to a director, managing director, managing agent or partner or director of a managing agency firm or company, for services by him in his capacity as a technical expert or receiver or trustee, will not be taken into account in calculating the overall limit of remuneration under Section 198. Moreover, the emoluments of the secretary of a company will not be counted in calculating the managerial expense limit of 11 percent as the secretary is not vested with any powers of management. The reimbursement of expenses to the managing agent under Section 354 and the payment of any commission or other remuneration for sales of goods or purchases of goods and services according and subject to the conditions specified in Sections 356, 357, 358 and 359, will not be taken into account in computing the total. Similarly, the money value of the contracts for the sale or purchase of goods and materials or supply of services entered into by the company with the managing agent or his associate under Section 360 of the Act, have been excluded from the operation of Section 198, as such payments are obviously for purposes other than managerial.

Minimum Remuneration

The remuneration of all management personnel has been linked with the profits of the company, to establish a firm correlation of the managerial class with the fortunes of the company. It is possible that there may be no profit in any financial year or the profits may be very low. The management functionaries devote their time and energy to the affairs of the company and they should be remunerated out of the funds of the company in such contingencies. It has, therefore, been provided for in sub-section (3) of Section 198 that where in any financial year a company has not made any profit or its profits are inadequate, the company may, subject to the approval of the Central Government, pay to its directors (including any managing or wholetime director), managing agent, secretaries and treasurers or manager, or if there are two or more of them holding office in the company, to all of them together, by way of minimum remuneration, a sum not exceeding Rs. 50,000 a year.

Prior to the amendment of Section 198, it was open to the board of directors of a company to sanction such minimum remuneration to its managing agents, secretaries and treasurers, directors or manager without the approval of the Central Government. It has been now made necessary for the companies to seek the approval of the Central Government to pay this minimum remuneration if the permission has not been taken under any other Section. Parliament has thus put a check even on the disbursement of the minimum remuneration by making it subject to the sanction of the Central Government. The managing director, wholetime director or manager have been permitted to draw monthly amounts by way of remuneration. It may happen that the companies, which are making monthly payments to their managing director, wholetime director or manager, may find that the minimum remuneration of Rs. 50,000 is not sufficient for the efficient conduct of their business. In such cases, the companies may apply to the Central Government to sanction an increase in the minimum remuneration.

Fees of Directors

Section 309 deals with the remuneration payable to directors. Directors are not entitled as of right to any remuneration, which is to be determined either by the articles of the company, or by a resolution, or if the articles so require, by a special resolution, passed by the company in general meeting. There are decided cases to the effect that directors cannot claim any remuneration on the implied assumption of serving the company. If there is no specific provision in the articles, the directors are not entitled even to be reimbursed travelling and other expenses for attending and returning from the board meeting or general meeting of a company. An ordinary director may receive remuneration by way of a fee for each meeting of the board or of a committee attended by him. Prior to the amendment of sub-section (2) of Section 309, a director was entitled to receive remuneration either by way of a fee for each meeting of the board attended by him or by way of a monthly payment, or partly by the one way and partly by the other. The Amendment Act has prohibited any monthly payments to directors in lieu of the sitting fees payable to them for attending board meetings. It has, however, been provided that where immediately before the beginning of the Amendment Act, fees for meetings of the board or any of its committees, attended by a director, are paid on a monthly basis, such fees may continue to be paid on that basis for a period of two years or for the remainder of the term of office of such director, whichever is less. The companies will, thereafter, have to amend their articles and provide for the sitting fees for each meeting of the board or committee attended by the directors. Private companies have, however, been exempted from the operation of Section 309.

The company may, by special resolution, pay to an ordinary director or where there is more than one such director, to all of them together a commission not exceeding 3 percent of the net profits of the company. If the company has a managing or wholetime director, a managing agent or secretaries and treasurer or a manager, the aggregate amount of commission disbursed to the ordinary directors will not exceed 1 percent of the net profit. Such commission will, however, be payable only to directors who are not paid a monthly salary. The commission, when paid, comes out of the net profits on which the remuneration of managing agents or secretaries and treasurers is based, and, therefore, such commission paid to directors will be treated as part of the working expenses of the company. The special resolution authorising the payment by way of commission mentioned above, will not remain in force for a period of more than five years. The company may, by passing a resolution in general meeting and with the approval of the Central Government, authorise the payment of a commission to its directors at a rate exceeding 1 percent, or as the case may be, 3 percent of its net profits.

Limits of Payment

The amount, mode and manner of remuneration, payable to a managing or a wholetime director, has been laid down in sub-section (3) of Section 309. The company may pay to its managing or wholetime director either by way of a monthly payment or at a specified percentage of the net profit of the company or partly by one way and partly by the other. The remuneration so paid will, however, not exceed 5 percent of the net profit for any one such director, and if there is more than one such director, 10 percent for all of them together, without the approval of the Central Government. The managing director, or wholetime director or a director, who is in receipt of any commission from the company, will not be entitled to receive any commission or other remuneration from any subsidiary of such company. If there is overdrawing by any director in anticipation of the profit, he will be bound to refund the same to the company and until such sum is refunded, hold it in trust for the company. Even if the company wants to waive the recovery of the said amount, it cannot do so without the approval of the Central Government.

Section 309, however, deals with and controls remuneration payable to a director in his capacity as a director and in no other capacity. It was held by the Bombay High Court in Ramaben A. Thanawala *vs.* Jyoti [illegible] that the remuneration received by a director in any other capacity will not be taken into account in deciding, whether the amount paid to him, exceeds the limit prescribed by Section 309. If a director is appointed receiver in a debenture holders' action or as their trustee, he may receive remuneration in his capacity as a director as well as a receiver or trustee. It has been decided by courts that the remuneration paid to directors is the payment for their services and where a company has provided the qualification shares of directors appointed to represent its interests on the board of another company, it has no claim to the fees paid by that company to such directors. It is thus clear that the limit of remuneration referred to in Section 309, is with reference to the work done by the director, as a director, for the company and not work done by him in any other capacity. If Parliament had intended that the remuneration referred to in Section 309 should include not only the remuneration paid to the director as a director, but also remuneration paid to him in any capacity whatsoever, appropriate language could have been used for that purpose in Section 309 as it has been done in Section 348 in the case of managing agents.

Remuneration of Managing Agent

The amount of remuneration payable to the managing agent is governed by Section 348. A public company or its subsidiary will not pay to its managing agent for any financial year by way of remuneration, whether for his services as managing agent or in any other capacity, any sum in excess of 10 percent of the net profit of the company for that financial year. The words "in any other capacity" appearing in the section, are very comprehensive and remuneration paid to a managing agent in his capacity as a technical adviser, trustee or receiver will be taken into consideration for the purpose of computing the ceiling of 10 percent. If the managing agent is a company or firm, then any remuneration paid to a director of a compay and a member of a private company or partner of a firm will be counted for the purpose of arriving at the limit. Section 348, however, does not prohibit payments to managing agents under the provision of Section 352, 354 and 356 to 360.

Perquisites

There was no specific provision in the principal Companies Act that the perquisites paid to managerial personnel in one form or the other, would be counted in calculating the limit of managerial remuneration. It was construed by the companies that the term "remuneration" covered only the cash payments made to the personnel and did not include the expenses incurred by the company in giving free quarters, free passage, free motor-car, or like benefits in kind. The perquisites definitely meant additional cost to the companies and an equivalent money value to the recipients. The Amendment Act has, therefore, made it clear that any expenditure incurred by the company in providing any rent-free accommodation, or any other benefit or amenity, or insurance, pension, annuity or gratuity will be taken into account in evaluating the remuneration for the purpose of Sections 198, 309, 310, 311, 348, 352, 381 and 387. Even the expenditure incurred by the company to effect any insurance on the life of or to provide any annuity or gratuity to the spouse or child of any managing agent, secretaries and treasurers, directors or manager will be included in the maximum limit of that category and the overall managerial remuneration.

No Simultaneous Appointment

The amended Companies Act has by inserting Section 197A prohibited the simultaneous appointment of more than one of the categories of managerial personnel, namely, managing director, managing agent, secretaries and treasurers and manager, which has also indirectly the effect of lowering the overall managerial remuneration of 11 percent, because the maximum remuneration that can be paid to a managing agent is 10 percent, the maximum payable to secretaries and treasurers 7½ percent and the maximum payable to a manager or managing director is 5 percent. Apparently, when the company cannot employ more than one category of such management personnel, the total outgo by way of managerial remuneration will be less than the statutory limit of 11 percent.

The Government has got powers to check and control the managerial remuneration even within the statutory limits fixed by Parliament. If the Central Government considers, taking into account the nature of business, the size of the company, its past performance as for profit or loss, that the remuneration proposed to be paid to the managing agent, secretaries and treasurers, managing director, wholetime director or manager is excessive, it may direct the company to reduce it in the interests of the shareholders. The Government has in the case of managing agents and secretaries and treasurers sanctioned the remuneration on a sliding scale. It has meant a scaling down of the remuneration payable to the managing agents and secretaries and treasurers as the amount declines with the increase in the slab of net profits. The prohibition of the simultaneous appointment of more than one category of managerial personnel, the inclusion of perquisites in evaluating the managerial remuneration, the restriction on monthly salaries to directors in lieu of sitting fees for board meetings, extension of the scope of Section 348, have all directly or indirectly restricted the total outgo on account of managerial remuneration in the case of public companies and their subsidiaries.

Stocks and Shares

MARKET WELCOMES THE BUDGET, ESPECIALLY THE CUT IN BONUS ISSUE TAX

INTEREST CONCENTRATED ON SHARES OF EXPANDING COMPANIES

Wesnesday Evening.

THE stock market has been buoyant throughout the past week. It expected that the Central Budget would be good; and since yesterday evening has decided that it is—although perhaps not as good as it might have been. The qualification is made because operators felt that Mr. Morarji Desai would raise anything between Rs. 30 crores and Rs. 50 crores through new taxes. In fact, he proposes to raise nearly Rs. 61 crores, in order to cover fully the revenue deficit of Rs. 60.60 crores he had estimated for 1961-62.

The best thing about the Budget, investors feel, is that the bonus issue tax has been reduced from 30 percent to 12½ percent. Few fiscal monstrosities have done more to distort the capital structure of companies, so the reduction of the tax has received the welcome it genuinely deserves. The levy has earned the Government very little revenue. In the case of companies, it has prevented them from bringing the issued capital in line with the actual capital employed—and thus provided a heaven-sent opportunity for speculators, cornerers and take-over bidders. The only mystery is why, considering the deficiencies of the tax to which Mr. Desai himself has now pointed, it was not reduced earlier, or completely abolished now. Perhaps the Finance Minister feels that if he maintains the bonus issue tax at a lower rate for another couple of years, some of the pent-up pressure of potential bonus issues will be worked off—and the Government can thus get some revenue. There is no doubt that many companies—especially those which have expanded fast and have financed their expansion largely from internal resources—will now have a greater incentive to issue bonus shares. Whether they will actually do so depends partly on their individual condition and partly on the whim and fancy of the Capital Issues Control. This particular office should now be invited to declare in plain terms what principles it will follow while sanctioning or rejecting bonus issue proposals. It is alleged that, in the case of rights issues, some definite principles have been formulated; why should they not be published too?

The bonus issue tax apart, the next thing which has impressed the market most is the Budget's emphasis on indirect taxes. The planners had already indicated eight months ago that this would be the emphasis for the next five years. But some people thought that, for the coming year at least, indirect taxes would be kept down because they would affect the cost of living when the general elections were approaching. Mr. Desai is complimented on his political courage in telling the country bluntly that it cannot run away from indirect taxes if it wants the third five year plan to be of the size proposed. The range of levies is so wide that protests will be legion. But in choosing them, the Finance Minister seems to have concentrated his attention on: (1) industries which are supposed to be making big profits; (2) diverting goods from internal consumption to export markets; (3) things bought by the relatively rich; and (4) a modest contribution from the poor, led by the betelnut levy. The point which now remains to be seen is whether categories (1) and (2) will not have spread-effects throughout the economy, boosting production costs as well as the cost of living.

Returning to direct taxes, the stock market is so overjoyed about the bonus issue tax reduction that it has almost ignored the slightly bearish implication of certain other proposals. One of these is the cut in the development rebate from 25 percent to 20 percent for plant and machinery installed after 1st April, 1961. The reasons for this cut are hard to appreciate; the actual and psychological benefits of a liberal development rebate for foreign as well as domestic investors have been worth far more than the extra revenue Mr. Desai may now secure. Some market *pundits*, however, are inclined to welcome the cut in the development rebate; they feel that part of the money which has been siphoned off and locked up in the development rebate reserve will now be available as free cash for the companies, and could be used for distributing bigger dividends. But this argument seems only partially valid, for the money which will not now go into the development rebate reserve will be taxed, and little more than half of it may be actually left in the company's hands.

The implications of the other substantial proposal in the sphere of corporate taxation are not yet clear, since the details of the Finance Bill are awaited. This proposal is to collect supertax at a uniform rate of 20 percent on dividends paid on intercorporate investments, whether these investments are Indian or foreign, or majority or minority holdings. (The new rate will apply to companies formed after 1st April, 1961.) But one preliminary guess is that the move is intended to meet recent criticisms that the Indian tax system unjustifiably discriminates against certain types of intercorporate investments, particularly those coming from abroad in the form of minority holdings. The tax concessions offered for housing provided to low-income employees may benefit tea gardens and coal mines which are compelled to undertake such housing projects. In the sphere of personal taxation, it is hard to appreciate the reasons for raising the tax liability on earned incomes above Rs 1 lakh. One interpretation is that, before election year, Mr. Desai had to make a further attempt to soak the rich. Another is that he wishes to narrow the distinction between earned and unearned income in the higher brackets.

Three features have stood out in the general pattern of market activity during the past week. The first is the bullishness of sentiment in Lyons Range as a whole. The second is the sharp rise in the shares of some well-known companies which, it is hoped, will make bonus issues in the near future. And the third is the comparative quietness of shares representing the commodities *which have been subjected to indirect levies.* After closing at Rs. 25.02 last Wednesday, Indian Iron have been jogging upwards with only occasional hesitancy. They reached a peak of Rs. 25.95 during yesterday's Budget session just after the cut in the bonus issue tax was announced. Subsequent profit-taking brought them down to Rs. 25.55, but replacement buying has lifted them back to Rs. 25.92 at today's settlement. Other engineerings have moved up in sympathy with Indian Iron or on bonus issue hopes, but there is an undercurrent of worry about how the new levies on iron and steel manufactures will affect

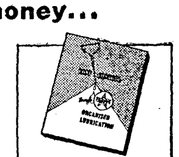
Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CALTEX PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay • New Delhi • Calcutta • Madras

the companies. Prominent features have been Jay Engineering, Guest, Keen, Williams, Indian Standard Wagon and Texmaco.

No one has bothered much about jute shares, since there is nothing in the Budget to excite them. On the contrary, investors are worried about the condition of the industry, as highlighted once again by an I.J.M.A. Press note. The difficulties of the mills are evident from the fact that it is proposed to fix a voluntary ceiling on the price of the raw jute they buy and that they will hencefortb be persuaded to unload manufactured goods more freely.

The coal industry has not got the depletion allowance, but many investors did not really expect that it would, so they are not too disappointed.

Miscellaneous industrials are sparkling with life in the hope that the companies concerned will consider issuing bonus shares. Prominent features have been Indian Copper, Indian Cable, Alkali Chemical (aided by an excellent report), Metal Box and Dunlop Rubber. Professional interest has lifted Hindustan Motors, Indian Aluminium and Rohtas. In comparison, paper and cotton textile shares have been somewhat sluggish because of the new levies on the commodities.

The improvement in tea shares has been maintained following the reduction in the export duty.

Gilt-edged securities are quiet, because institutional investors are studying the implications of the new borrowing programme.

Bombay Market

PRICES RISE ON BUDGET INTERPRETATIONS

SHARES OF COMPANIES WITH LARGE RESERVES BOUGHT

Wednesday Noon.

THE Bombay stock market greeted the Central Budget proposals by marking prices higher all round. There was brisk trading during the past couple of days and share prices rocketed on a fresh buying spree. Attention was concentrated on companies having large reserves because it was thought that the issue of bonus shares by capitalising reserves would be more frequent in view of the cut in the tax on these issues. Although the reduction in development rebate was regretted, it was decided that its effect was likely to be marginal in character. Companies having foreign collaboration were fancied because the Budget proposals have given encouragement to foreign investment.

As for the new indirect levies, it was generally thought that a greater portion of the tax burdens would be passed on to consumers.

Tata Steel soared to Rs. 152.25, as did Indian Iron to Rs. 25.70. Among engineering shares, Tata Locomotive moved higher to Rs. 328 and Alcock Ashdown were enquired for at Rs. 289. Premier Construction came to hand at Rs. 208 and Larsen and Toubro were quoted higher at Rs 40.75. Motor shares were firm, and Hindustan Motors rose to Rs. 21.88 on strong support from Calcutta interests. Premier Automobile were dealt in at Rs. 171.

Cotton mill shares were steady, but the improvement was restrained by the levy of a heavier excise duty on medium cloth. Operators were not sure as to how much of the tax burden could be shifted in the form of higher prices. Bombay Dyeing improved to Rs. 66.60 and Century were bought up to Rs. 524. Kohinoor were transacted at Rs. 290, as were Simplex at Rs. 180. Svadeshi were taken at Rs. 260 and Khatau met with interest at Rs. 525. Finlay were quoted at Rs. 336 and Standard came to hand at Rs. 1.350. Business passed in India United Ordinaries at Rs. 14.64 and Apollo were bought up to Rs. 1.54.

Prices of miscellaneous shares moved up in line with the general pattern. Among sugar shares, Be'apur were steadier at Rs. 285, as were Phalton at Rs. 145. Walchandnagar Industries were dealt in at Rs. 225. Mining shares were firm, and Shivrajpur Syndicate were in demand up to Rs. 98. Steamship company shares were quietly steady, and Scindia Steam were quotably higher at Rs. 14.96. Great Eastern Shipping were taken at Rs. 14.84. Cement shares were firm, and Associated Cement improved to Rs. 154.50. Digvijay were quoted at Rs. 157. Chemical shares were steady, and Tata Chemical were supported up to Rs. 18.68. Indian Dyestuff were taken at Rs. 472.50 and Polychem improved to Rs 247.50. The levy of a higher excise duty on rayon has had little effect, and National Rayon improved to Rs. 535. Baroda Ravon were in demand up to Rs. 143. Voltas met with support at Rs. 280 and Tata Oil were dealt in at Rs. 79. Ceat Tyre were quoted higher at Rs. 242.50 and Synthetic and Chemicals improved further to Rs. 157.

Banking shares were steady and prices were quotably higher. Bank of India were done at Rs. 119.50 and Central Bank were transacted at Rs. 57. Insurance shares improved on balance, and New India Assurance were quoted higher at Rs. 54.30. Vulcan were taken at Rs. 16.48.

There was scattered interest in electric company shares at higher prices. Tata Hydro were dealt in at Rs. 103 and Bombay Suburban changed hands at Rs. 87. Ahmedabad Electric were placed at Rs. 88.50.

Madras Market

BUYING SPREE FOLLOWS BUDGET

REDUCTION IN BONUS ISSUE TAX WELCOMED

Wednesday Evening.

THE Central Budget proposals sparked off a fresh buying spree in the Madras stock market on Tuesday. Prices of shares increased on a broad front due to professional and investment buying. The reduction in the tax on bonus share issues was welcomed. Although the imposition of heavy excise duties on medium cloth, rayon and paper was regretted on the thought that it might not be possible to pass the entire burden of the new taxes in the form of increased prices, there was no selling pressure. Holders were inclined to think that the profitability of companies would improve steadily following expansion.

Government securities were quiet on the view that the borrowing programme of the Central Government in the current year is likely to be higher than was expected previously. Public utilities were quiet and routine business was transacted. Sugar shares were fancied, because there was no proposal for fresh taxes. Tea shares met with increased support because of the cut in the export duty. The reduction in the excise duty on package tea, combined with the increase in the excise duty on loose tea, is likely to promote domestic consumption. Coffee shares were hesitant because the new excise duty may prove burdensome. Rubber shares were steady on prospects of expansion. Selected cotton mill shares were supported and miscellaneous industries met with discriminatory buying.

In the banking group, Indian Overseas were steady up to Rs. 188.50 and Pandyan were bought at Rs. 33 on paying a taxable dividend of 10 percent. Among public utilities, business passed in Vellore at Rs. 13.10 and West Coast came to hand at Rs. 13.62.

Among sugar shares, E.I.D. were firm at Rs. 40.75 on paying a taxable ordinary dividend of 14-2/7 percent. Mysore were bought up to Rs. 58.25 on declaring a taxable ordinary dividend of 30 percent. Deccan came to hand at Rs. 14.30 and Travancore were placed at Rs. 10.75. United Breweries were firm at Rs. 112.

In the planting group, business passed in Blue Mountain at Rs. 3.88 and Cochin Malabar were placed at Rs. 7.60. Consolidated Coffee were quiet at Rs. 24.60 and Ouchterlony were sold down to Rs. 4.50 on paying a lower taxable ordinary dividend of 13 percent, against 15 percent. Periakaramalai were firm up to Rs. 22.80 and Kil Kotagiri were in demand up to Rs. 5.70 on paying a final taxable ordinary dividend of 17 percent. Anaparai were bought up to Rs. 4.70 on declaring a taxable dividend of 20 percent and Mercara were supported up to Rs. 8.80 on the payment of a taxable ordinary dividend of 20 percent. United Nilgiri were steady at Rs. 24.12 on declaring an interim taxable ordinary dividend of 10 percent. Vaikudam were quoted up to Rs. 31.25 on declaring a final taxable ordinary dividend of 15 percent.

In the textile group, Lakshmi were firm at Rs. 155, as were Madura at Rs. 36.50. South India Viscose were supported up to Rs. 164 and Travancore Rayon improved to Rs. 35.50. Dhanalakshmi were bought up to Rs. 216 on maintaining a taxable ordinary dividend of 17½ percent. Business passed in Bangalore Woollen at Rs. 196.50 and in Buckingham at Rs. 193. Coimbatore Cotton were steady at Rs. 172.50 and Kothari were supported up to Rs. 12.35. Mettur were in demand up to Rs. 367 and Loyal changed hands at Rs. 36.25. Coimbatore Spinning were quoted at Rs. 55 and Anglo-French were transacted at Rs. 127.

Among miscellaneous shares, Aluminium Industries were steady at Rs. 23.40 and Ashok Leyland were dealt in at Rs. 9.20. India Cement came to hand at Rs. 6.08 and Parry's Confectionery were firm at Rs. 5.50 on declaring an interim taxable ordinary dividend of 10 percent. Seshasayee Paper improved to Rs 4.55, as did Spencer to Rs. 22.70. Interest was taken in Textool at Rs. 173 and Tube Investment were wanted up to Rs. 292. Enfield were done at Rs. 15 and F.A.C.T. were transacted at Rs. 10.30. Mysore Paper were in demand up to Rs. 23.40 and Standard Motors were quoted at Rs. 16.75.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

ANNOUNCEMENT

THE STATE BANK OF INDIA

have pleasure to announce that,

in pursuance of their objective to promote savings and encourage rural deposits through the large number of branches opened in fulfilment of their Statutory obligation for Branch Expansion,

THE INTEREST RATES

PROGRESS OF THE DURGAPUR STEEL WORKS

FOURTH ROLLING MILL UNIT COMMISSIONED

THE 24-inch medium section mill, the fourth unit of the rolling mill plant at Durgapur steel works, was commissioned last week well ahead of its scheduled date. This mill will roll a range of structural products consisting of certain sizes of joists, channels, angles, rails and fish plates. It is fed by two bloom re-heat furnaces taking its stock from the blooming mills. The mill has been designed by a member-company of I.S.C.O.N.

B.O.A.C. CUTS CARGO RATES ON U.S. SERVICE

All freight charges on B.O.A.C.'s services to and from the U.S.A. will be cut by up to 76 percent from 10th April. The cuts follow the ending of the present international agreement on north Atlantic air cargo rates. The cuts range from 63 percent on consignments of 100 kilos (220 lbs) to 76 percent on consignments of 1,000 kilos (2,200 lbs) or over. Reductions on loads between these limits vary from 68 to 73 percent. New low rates for selected commodities are also under consideration, to help exporters of specialised items. The new rates are subject to Governmental approval.

QUICK CALCULATION OF AIR FARES WITH AID OF ELECTRONIC DEVICE

An "electronic brain" has just finished one of the biggest jobs ever undertaken in the travel industry—working out two million different air fare calculations for 16 separate airlines. The sums were needed to compile a 1,400-page fares "*encyclopaedia*" for B.O.A.C. and its 15 partner and associate airlines. After months of preparation, punched cards bearing all the information were fed into B.O.A.C.'s I.B.M. computer at London Airport—and within hours it had worked out the details of 100,000 possible air fares and route details. A total of 30 tons of paper have gone into the printing of 7,500 copies of the fares manual—the first of this size ever produced by a group of airlines.

JET AIRCRAFT HELP INCREASE AIR FRANCE BUSINESS

In spite of the suspension of the services for some weeks, Air France *Boeings*, since their introduction on 31st January, have flown 968 million passengers-kilometres. During this period, 156,000 passengers have been transported by these jets. Similarly, Air France *Caravelles* have carried one million passengers since their introduction on 6th May, 1959. Taking altogether, Air France transported during the year 1960, approximately 3,200,000 passengers, a figure which is so far a record with the Company. The average load worked out to 66 percent. As for freight, 57 million kilograms were carried during this period which equals 94,000,000 tons-kilometre.

LUFTHANSA ORDERS SHORT TO MEDIUM RANGE BOEING JETLINERS

Lufthansa, the German airline, has announced the purchase of 12 *Boeing 727s*, the newest short to medium range jetliners. Six of the 12 aircraft will be delivered to Lufthansa in the summer of 1964, and the balance in 1965. Seating 90 passengers, Lufthansa will operate its *727s* on the European and Near East routes. This is the first overseas order for the new jetliner. Previous customers are Eastern and United Air Lines, of the U.S.A., each with an order of 40 *727s*. According to Lufthansa, the *727's* Pratt-Whitney JT8D engines permit speeds of 900 kilometres an hour. The airline currently operates five *Boeing 707 Intercontinentals* and has ordered eight *Boeing 7208* jetliners.

New Delhi

OFFICIAL APPROVAL GIVEN FOR THREE PRIVATE FERTILISER UNITS

FOREIGN CREDITS ASSURED FOR DURGAPUR AND ROURKELA STEEL PLANT EXPANSION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Government has approved three fertiliser plant projects in the private sector, located in Andhra, Rajasthan and Madhya Pradesh. The Andhra plant will be in Visakhapatnam and will depend for its raw material on naphtha purchased from the Caltex refinery. It will be an 80,000-ton-a-year project (in terms of nitrogen), and has been sponsored by Parry and Company of Madras. The foreign collaborators are the International Mineral Corporation and California Chemicals of the U.S.A., both of whom will together contribute 47 percent of the equity capital in the form of technical know-how and capital equipment. Part of the foreign exchange required may have to be secured through a loan from the U. S. Development Loan Fund. A second unit in Kothagudam in Andhra, with an installed capacity of 80,000 tons a year (in terms of nitrogen) is also planned. The unit in Madhya Pradesh, to be located in either Katni or Itarsi, has also been approved. It will have an annual installed capacity of 50,000 tons (in terms of nitrogen), and is being sponsored by Khandelwal Brothers of New Delhi. The third unit, with a capacity of 80,000 tons a year, is to be located in Hanumangarh, Rajasthan. It is being sponsored by an industrialist, Mr. B. L. Jalan. The sanction in this case is subject to approval by the Government of the foreign collaborators, and their terms and conditions. The Madhya Pradesh project will be based on lignite, and the Rajasthan unit probably on gas from Pakistan.

The Development Council for Heavy Chemicals (Acids and Fertilisers) says that since a total period of a minimum of four years is required from the planning to the production stage, the Council feels that no time should be lost in specifying the target and for undertaking measures for planning to achieve the following capacity year-wise :

1960	250,000 tons nitrogen
1961	350,000 tons nitrogen
1962	400,000 tons nitrogen
1963	400,000 tons nitrogen
1964	400,000 tons nitrogen
1965	700,000 tons nitrogen
1965	1,200,000 tons nitrogen

The Council has estimated the requirements of capital investment as well as the likely foreign exchange expenditure in each year for the above programme, assuming the capital investment rate at Rs. 3,000 a ton of nitrogen capacity a year, including a foreign exchange component of Rs. 1,400. During the gestation period of five years between the planning and production stages in a fertiliser unit, the percentage of investment to be incurred in each year is likely to be 10, 10, 30, 40 and 10, respectively. On the above basis, the capital investment and foreign exchange requirements during each year to implement the phased programme indicated above will be :

	Capacity to be achieved (tons a year of nitrogen)	Capital investment (Rs. million)	Foreign exchange (Rs. million)
1960	250,000	90	42
1961	350,000	90	42
1962	400,000	420	188
1963	400,000	510	230
1964	400,000	540	242
1965	700,000	600	270
1966	1,200,000	150	68
Total (Rs. million)		2,400	1,072

The Council took note of the existing superphosphate capacity which stands at 300,000 tons a year. The additional capacity likely to come up by 1961, by implementing the schemes for new units and by substantial expansion, is 370,000 tons of superphosphate a year. Thus the total capacity at the end of the second plan period is likely to be 670,000 tons of superphosphate, equivalent to 110,000 tons of P_2O_5. Considering the current shortage of fertilisers, the Council is of the view that it is desirable to issue licences immediately for raising the total installed capacity of superphosphate to one million tons.

The Council drew up a schedule of the capacities which should be established in the next few years for meeting the rising demand for phosphatic fertilisers. These figures, and the respective requirements of foreign exchange for achieving the capacities, are as follows :

Year	P_2O_5 (tons a year)	Foreign exchange required (Rs. million)	
1961-62	200,000	10.0	For capital goods only
1962-63	250,000	20.0	
1963-64	300,000	21.8	
1964-65	400,000	23.6	
1965-66	500,000	22.7	
		Total	98.1

For calculating the foreign exchange requirements, the following assumptions have been made : (a) the gestation period for a superphosphate unit is taken as two years ; (b) the investment for 50 tons a day sulphuric acid and 100 tons a day superphosphate units are of the order of Rs. 20 lakhs and Rs. 20 lakhs, respectively, including foreign exchange components of Rs. 7 lakhs and Rs. 3 lakhs, respectively.

The Council recommended that factories which wish to do their own designing and fabrication for sulphuric acid and superphosphate plants, should be allowed to import capital goods of the following value and the foreign exchange should be released on a cash basis : (a) for 50 tons a day sulphuric acid plant, Rs. 7 lakhs ; (b) for 100 tons a day superphosphate plant, Rs. 3 lakhs.

Indo-U.S. Cotton Deal

India's cotton deal with the U.S.A. under P.L. 480 is about to be finalised. Under this deal, India will import 300,000 bales of U.S. cotton at an estimated cost of $3.5 million. The U.S. Government does not favour deals for the export of cotton to India for more than 12 months at a time.

Organisation of Economic Commissioner-General

India's Commissioner-General for Economic Affairs in the U.S.A., Mr. B. K. Nehru, according to lobby reports, has written to the Government of India urging that his own organisation be wound up, as it will have fulfilled its objectives after the forthcoming London meeting of the creditors' consortium. The Government, it is expected, will accept his advice and liquidate the organisation, perhaps by August this year. Meanwhile, Italy, the Netherlands and Austria have agreed to join the consortium. France may send an observer.

According to a Tokyo message, the Japanese Ministry of International Trade has proposed a loan of $200 million for financing India's third plan.

Fresh Credit for Steel Expansion

The Secretary to the Central Ministry of Steel, Mr. S. Bhoothalingam, has made his report on his recent visit to West Germany, Austria and London. The visit could be regarded as entirely successful, his report says. In addition to securing credit for the expansion of the Rourkela steel plant by 800,000 tons at an estimated cost of Rs. 100 crores, half of which will be in foreign exchange, tentative agreements have been reached in West Germany, under which the West German Government will meet the cost of the German personnel to be employed at the Rourkela works, the amount being Rs. 80 lakhs to Rs. 90 lakhs. West Germany, it will be recalled, has already advanced to India 600 million deutschemarks to finance the foreign exchange component of the Rourkela steel project. Part of this credit remains unused. It has now been agreed to use the left-over on building a fertiliser plant and a pipe plant and for importing spare parts.

Austria has increased her credit from $14 million to $25 million, $10 million of which will be used on the expansion of the L.D. plant in Rourkela. The balance will be used for financing other projects for which negotiations will soon be started. Power plant and railway equipment are included in the list. An agreement has already been reached for the expansion of the Durgapur steel plant by 600,000 tons.

Expansion of Durgapur

Following the visit of Mr. T. P. Colclough, the Central Ministry of Iron and Steel has approved a plan for the expansion of the Durgapur steel plant, work on which can now proceed. The plan differs substantially from the earlier proposals, which visualised two coke oven batteries, two blast furnaces, three open-hearth furnaces, a new finishing mill (skelp or light structural), an additional wheel and axle plant and additional plants for coal-washing, power, oxygen, etcetera. In the former proposal, the increased production was to be provided by a substantial increase in the number of production units.

The Indian authorities agreed that it would be preferable to adopt the principle that the expansion of production should be achieved by raising the standard of efficiency and productivity of the units already provided. Only a small number of new units need to be added and these should be installed mainly on sites already provided and within easy reach of the services established in the layout for the one-million-ton plant. An expansion of this type was an essential factor in the preparation of the original design of the works.

The vital feature of the plant being put up is the installation of facilities for the full preparation of the ore and coal supplies before use in the productive units. It is recognised that with the pressure arising from the growing demand for both iron ore and limestone for the new blast furnaces and coal for the coke ovens, the quality of these materials is deteriorating and becoming more variable. This inevitably must lead to a lower standard of operating efficiency and production.

It is accepted that further coal washeries must be installed either in Durgapur or at the mines. Facilities for crushing and wet screening and possibly washing the iron ore must be installed at the ore mines. The provision of these items of plant are separate and distinct from the programme of development in Durgapur. It is essential that a new sinter plant be installed at the steel works, on a site already provided, for the agglomeration of ore, with appropriate connections to the existing blast furnace supply lines.

The plan now adopted provides for the installation in Durgapur of the above-mentioned sinter plant ; one battery of coke ovens (subject to further investigation which may indicate that 1½ batteries should be provided) ; one additional blast furnace connected to the existing services ; one 200-ton open-hearth furnace on foundations which already exist ; four additional soaking pits, also on foundations which already exist ; and a new skelp mill. It also provides for the use of steam and oxygen in the blast furnace air mains and of oxygen in the open-hearth furnaces to improve the operating technique.

Based on the preliminary data available, it is estimated that the revised programmes will involve a small reduction in capital costs, both in rupee and foreign exchange expenditure.

While on this subject, it may be added that the Central Government can no longer ignore the demand for the industrialisation of the south. An iron plant in Neyveli is now almost a certainty during the third plan period. As already reported, a technical committee is at work to examine the project based on lignite and iron ore from Salem or Mysore.

Indian Branches of Foreign Design Companies

Four foreign designing companies, three British and one Italian, have set up Indian subsidiaries in this country to meet the urgent demand for designs and drawings for Indian industrial units, and also to train Indian engineers in this special type of work. The companies are Davy Ashmore, Head Wrightson, Simon Carves and Montecatini. A team from Davy Ashmore is also here negotiating an agreement for designing the heavy structurals plant as well as the heavy plate and vessel works. The heads of agreement, it is believed, have already been agreed upon. It will be on the model of the Bhopal agreement with Associated Electrical Industries, a sort of ten-year technical collaboration agreement under which one firm will be allowed to invite tenders.

Warning against Atomic Power-stations

The first vice-chairman of the Council of Ministers of Russia, Mr. A. N. Kosygin, has advised India to be cautious about her programme for building nuclear power-stations. In his talks with the Planning Commission, the Russian Deputy Premier, it is reported, has stated that his country is having second thoughts on the economics of nuclear power and that no new power-station is being planned in Russia. It is believed he also added that but for the fact that the third nuclear power project in Russia had already been launched, the Russian Government would perhaps have abandoned it. Mr. Kosygin did not agree with a questioner who pointed out that Indian conditions are different because many industrial areas are far away from the coal belt. He replied that in Russia coal has to be hauled over much longer distances than in India.

Indian Economic Mission to Italy

Following the visit of an Italian trade mission to India, an Indian economic mission, headed by the Union Minister of Commerce, Mr. N. Kanungo, will visit Italy in April. It will be in time for the Milan Fair.

New York World Fair

India has decided to participate in the New York World Fair of 1964-65.

Indian Currency Expansion

The following statement (in crores of rupees) shows the value of notes in circulation and the paper currency backing:

1939	225.20	107.50	6.98
1948	1,188.20	768.86	256.38
1951	1,141.09	583.15	197.94
1956	1,466.07	447.30	82.61
1958	1,589.42	164.68	24.77
1960	1,868.98	128.01	23.72

Copper Reserve Estimates

Estimates of copper reserves have so far been made only for Khetri in Jhunjhunu district and for the Dariba area in Alwar district. A prospective reserve of 28.5 million tons of copper ore with an average grade of 0.8 percent copper in Khetri, and a reserve of 5 million tons with an average grade of 2.5 percent copper have been estimated in Dariba. It is premature to say at this stage what the ultimate capacity of the refinery in Khetri will be. It is proposed to secure a detailed project report from competent consultants, and the capacity will ultimately depend on various factors which are under study.

P.L. 480 Agreements

The Government of India has so far signed five agreements under the P.L. 480 (Title I) programme for the import, against rupee payments, of surplus agricultural commodities from

the U.S.A., covering a total of $2,302,203 million (Rs. 1,096.28 crores) as shown below:

Agreement	Commodities	Allocation (in million dollars)	Whether imports completed
(1) First P.L. 480 agreement signed on 29th August, 1956, as subsequently amended	Wheat, rice, cotton, tobacco and dairy products	354,556	Imports completed
(2) Supplementary agreement signed on 23rd June, 1958	Wheat, yellow corn and serghum	55,277	Imports completed
(3) Second P.L. 480 agreement signed on 26th September, 1958	Wheat and yellow corn	259,800	Imports completed
(4) Third P.L. 480 agreement signed on 13th November, 1959, as subsequently amended	Wheat, rice, cotton, tobacco and corn	297,870	Imports completed
(5) Fourth P.L. 480 agreement signed on 4th May, 1960, as subsequently amended	Wheat, rice, milo, corn, cotton, tobacco and soya-bean oil	1,334,700	Imports are in progress. Wheat and rice are to be imported over a four-year period
	Total or	$2,302,203 million Rs. 1,096.28 crores	

Out of the rupee accruals, a sum of Rs. 510.10 crores will be available as loan and a sum of Rs. 368.27 crores as grant to the Indian Government to finance development projects, consistent with the objectives of India's five year plans. The amount drawn until 31st January, 1961, for agreed projects, was Rs. 67.22 crores as loan and Rs. 1.87 crores as grants.

The following statement (in lakhs of rupees) will show how the funds made available to India are being used:

Name of country	Project	Amount	
U.S.A.	Rihand valley development	15,83	(loan)
	Refinance Corporation of India	26,20	(loan)
	River valley projects	36,13	(loan)
		5,94	(grant)
	Industrial Finance Corporation	10,00	(loan)
	I.C.I.C.I.	10,00	(loan)
	Malaria eradication programme	8,00	(grant)
	Indian Institute of Technology, Kanpur	45	(grant)
	U.P. Agricultural University	1,00	(grant)
	All India Institute of Medical Sciences Hospital	2,90	(grant)
	Indian Investment Centre	22	(grant)
	Total	150,84	
Colombo Plan Canada	Mayurakshi Project	714	
	Umtru Project	100	
	Canada-India Reactor	140	
	Total	954	
Australia	Tungabhadra Project	395	
	Grain storage godowns, Calcutta	40	
	Total	435	
Ford Foundation	Intensive agricultural package programme:		
	(a) to finance half the cost of additional staff	200	
	(b) to finance cost of training the staff	48	
	(c) to finance expenditure on workshops, demonstration, research and evaluation activities in the seven districts	82	
	Total	330	

Requirements of Sulphur

The current annual requirements of sulphur for various industries are of the following order:

(1) Fertiliser industry	
(a) Ammonium sulphate (acid process) and phosphate	30,000
(b) Superphosphate	60,000
(2) Steel pickling, etcetera	10,000
(3) Petroleum refining	2,500
(4) Industrial explosives	500
(5) Aluminium sulphate and other inorganic heavy chemicals	20,000
(6) Rayon and staple fibre	20,000
(7) Carbon disulphide manufacture	5,000
(8) Sugar industry	12,000
(9) Miscellaneous industries (paper, rubber, sulphur dioxide and fireworks)	8,000
(10) Sulphuric acid industry (for industries not specified above)	32,000
Total	2200,000

There is no indigenous production of sulphur. The entire requirements are met by imports.

Egyptian Rice against Indian Commodities

An agreement was signed here between the U.A.R. and India for the import of 50,000 tons of Egyptian rice, against the export of jute, tea and engineering goods like sewing machines, diesel engines, motor pumps, dry batteries and also pharmaceuticals.

Increasing Output of Industries

With a view to giving an incentive to industrial production in the country, it has been decided recently that manufacturing units may increase their production even beyond their licensed capacity, if they can do so without importing additional machinery and raw materials.

Foreign Collaboration Agreements

The total number of foreign collaboration agreements approved by the Central Ministry of Commerce and Industry during 1958-1960 are as follows:

1958	64
1959	154
1960	381

Watch Factory

Replying to a question in the Lok Sabha, the Central Minister for Industries, Mr. Manubhai Shah, said that the watch factory would be set up by Hindustan Machine Tools Ltd, the construction of buildings would begin shortly and it is expected the factory would be commissioned by the end of 1961. The cost of the project was estimated at Rs. 2.5 crores. Its capacity would be 240,000 watches a year on a single shift or 360,000 on multiple shifts. The price of the watches could be worked out after production begins.

Cost Accounting in State Concerns

The system of cost accounting has been introduced in the following undertakings: (1) Hindustan Steel Ltd; (2) the National Coal Development Corporation Ltd; (3) the Orissa Mining Corporation Ltd; and (4) the Neyveli Lignite Corporation Ltd. The system will be introduced in the others by the time they go into production or begin large-scale activities.

Wage Board Recommendations for Sugar Industry

The Government of India has announced its acceptance of the recommendations of the Central Wage Board for the Sugar Industry, subject to the following:

(a) *Workload studies:* The Government has taken note of the Board's recommendations that workload studies be undertaken in the sugar industry and that such studies should be preceded by reasonably specific programmes of implementation drawn up in consultation with the organisations of the interests concerned. The Government proposes to consider the matter further in consultation with the parties.

(b) *Bonus:* The Government commends the bonus formula for the north and central regions recommended by the Wage Board. If, however, the parties concerned in any of the States included in these regions agree to adopt any other formula for determination of bonus payable for a particular period, they may be allowed to do so.

The Board recommended, among other things, that although the total minimum wages would necessarily vary from region to region, the basic minimum wages should be Rs. 60-1-65 and the rest should be treated as dearness allowance for each region. For the purpose of wage fixing, it divided the country into four regions—north, central, Maharashtra and south. It also said that its recommendations should take effect from 1st November, 1960.

Advisory Committee on Agricultural Labour

There is a proposal to set up a central advisory committee on agricultural labour in the Planning Commission. The committee's main functions would be: (i) to deliberate upon and guide policies to be pursued at the Centre and in the States for the amelioration of the economic condition of agricultural labour; (ii) to co-ordinate the activities undertaken by different agencies concerned in the economic and social welfare of landless labour; (iii) to indicate priorities and programmes for Central assistance; and (iv) to review periodically the progress of the schemes on the subject. The composition and other details of the committee are under consideration.

Standing Labour Committee Meeting

The extent to which tripartite decisions should be binding on the parties concerned, is among the subjects to be discussed by the Standing Labour Committee, which will hold its next session in New Delhi towards the end of April. The Committee will also consider the question of extending the scheme of joint management councils and will review the functioning of works committees in industrial establishments. Other subjects to be discussed are: (a) sanctions under the Code of Discipline; (b) amendment of the Indian Trades Union Act, 1926, to provide for resolution of disputes among rival office-bearers of a union; (c) abolition of rickshaw-pulling; and (d) indebtedness of colliery workers.

Training in Fish Processing

The Central Agriculture Ministry, it is believed, will soon provide training facilities in fish processing. A three-man team of Japanese experts, led by Mr. Tochinai, is now here discussing with the Indian Government the details of the project. While the Japanese Government would provide the required machinery equipment and technical know-how, the Government of India would make available the necessary land, buildings and meet local expenses. India's present fish production, both from the sea and inland waters, has gone up from 6,000 tons at the beginning of the first plan to nearly 1.4 million tons this year. The target for the third plan in placed at 1.8 million tons. The Kerala Government's proposals for the development of fishing harbours in Vizhinjom, Beypore and Baliapatam have been included in the third five year plan. The financial provision made for the purpose is Rs. 1.34 crores. The Vizhinjom scheme involves the construction of breakwaters, landing facilities and shore establishments. Details of the Beypore and Baliapatam projects have not yet been worked out.

Motor-vehicle Production

The production figures for motor-vehicles for the years 1958 to 1960 and the installed capacity, compare as follows:

Cars	8,113	11,993	19,096	20,200
Lorries	15,325	20,342	27,518	28,000
Jeeps	3,550	4,568	5,591	5,500
Motor-cycles	2,653	3,239	3,998	5,000
Scooters	4,391	3,940	12,880	
Auto-rickshaws	483	947	496	Not possible to assess

Farakka Barrage Project

The Farakka project in West Bengal visualises the construction of a barrage across the Ganga at Farakka, a feeder canal 26 miles long with its outfall into the river Bhagirathi, and a barrage at Jangipur below the outfall of the feeder canal.

The headwater supply is approximately 40,000 cusecs, which can be brought from the Ganga into the Bhagirathi-Hooghly with the help of the Farakka barrage. It will take about eight years to complete the project. The project report has been ready since April 1959 and detailed designs preceding construction have been under way. The left afflux bund of the Farakka barrage project has been already completed. Further construction on major components of the project is proceeding.

Alkalis and Allied Industries

The Development Council for Alkalis and Allied Industries has suggested the following targets for implementation by the end of the third plan:

	Demand (in tons) Firm	Target of capacity (in tons a year) Probable	Firm	Desirable
Soda ash	450,000	500,000	530,000	600,000
Caustic soda	340,000	380,000	400,000	450,000
Calcium carbide	60,000	75,000	67,000	88,000
Potassium chlorate	18,000	10,000	9,500	12,000
Hydrogen peroxide	6,000	10,000	9,500	12,000
Sodium hydrosulphite	10,000	12,000	12,000	14,000

Bicycles, Sewing Machines and Instruments

The Development Council (Bicycles, Sewing Machines and Instruments) has recommended the following targets of production for 1965-66 for the three industries falling under its purview:

Industry	Target for 1965-66
Bicycle industry	2.5 million nos.
Sewing machine industry	6 lakh nos.
Instrument industry	Rs. 20 crores worth of instruments

Since the instrument industry is not sufficiently developed, the members of the Instruments Panel visited various factories and institutions which are engaged in the manufacture of scientific instruments in order to make a survey of the facilities available in the country for undertaking the manufacture of various types of instruments. After a study of the statistics of production of some of the important instruments, the following targets for 1959, 1960 and 1961 were fixed:

	1959	1960	1961
Microscopes	5,000 nos.	6,000 nos.	7,000 nos.
Drawing instruments (geometry boxes)	25,000 gross	25,000 gross	25,000 gross
Other instrument boxes valued at	6 lakhs	7 lakhs	8 lakhs
Surveying instruments			
Levels	5,000 nos.	6,000 nos.	7,000 nos.
Theodolites	400 nos.	500 nos.	600 nos.
Pressure gauges	30,000 nos.	60,000 nos.	80,000 nos.

As for the manufacture of sewing machines for which a target of 600,000 has been fixed for 1965-66, the Council noted that there is only one large unit at present which is licensed for the manufacture of 100,000 on single shift or 300,000 on multiple shifts. All other units (medium and small scale) together might be able to produce 200,000 sewing machines by the end of the third plan. There would thus be a gap of 100,000 sewing machines which had to be filled up. Moreover, the Council indicated that at present heavy industrial sewing machines of all types were not produced in the country in substantial quantities. In this context, the Council has recommended that the additional capacity which will be created should include all types of industrial sewing machines in addition to domestic models. The Council has also recommended that steps should be taken to create a couple of large units for the manufacture of sewing machines with a capacity of 50,000 a year each.

The question of supply of dies, tools and gauges, etcetera, required by the industries were discussed by the Council and it was observed that most of the manufacturing units had no facilities for the design and manufacture of tools and dies, etcetera. Normally, the manufacturers in other countries obtain their tools and dies from the large number of private firms who are specialised in this trade and many have their own design offices, tool rooms and die workshops. It was, therefore, recommended that several well-equipped tool rooms and die workshops with attached design offices could be established in the country in the private sector and such workshops should be able to design, develop and manufacture all kinds of tools, dies, gauges, etcetera, for meeting varied requirements of the bicycles, sewing machine and instrument industries, and possibly other engineering industries, both in the large and small-scale sectors. It was further recommended by the Council that if the private sector did not show sufficient initiative and interest, such workshops should be establishhed in the public sector.

Paper, Pulp and Allied Industries

The following targets for the third plan for paper, pulp and allied industries have been suggested by the respective development councils:

(1) Paper and paper board:		
Installed capacity	900,000	tons a year
Production	700,000	tons a year
(2) Newsprint	150,000	tons a year
(3) Pulp:		
Paper grade (capacity)	100,000	tons a year
Rayon grade	110,000	tons a year
(4) Strawboards	120,000	tons a year

The position of the industry as on 1st February, 1960, is summarised as follows:

		Capacity tons a year
(1) Paper units in production on 1st February, 1960	(22)	324,000
(2) Paper units coming into production shortly	(7)	33,840
(3) (a) Paper units (large) licensed new units	(7)	141,900
(b) Paper units (large) licensed for substantial expansion	(6)	109,500
(4) (a) Paper units (small) new units covered by import licences	(12)	31,000
(b) Paper units (small) approved	(17)	41,220
(c) Paper units (small) substantial expansion	(2)	7,020
Total		688,380

Production Statistics

Industry	Production (1959)	Imports (1959)
Paper	294,027 tons	17,800 tons
Newsprint	21,160 tons	74,528 tons
Board	51,032 tons	—

Drugs, Dyes and Intermediates

The Development Council for Drugs, Dyes and Intermediates has suggested the following targets for the third plan period:

		(000 lbs)
(1)	Acid dyes and direct dyes ...	6,600
(2)	Basic dyes ...	2,000
(3)	Naphthols ...	2,800
(4)	Fast colour bases	2,900
(5)	Vat dyes ...	2,700
(6)	Sulphur black ...	5,000
(7)	Other sulphur dyes	500
(8)	Organic pigments	2.6 million lbs (or 1.18 million kilograms)

Voluntary Price-fixing for Woollens

The Federation of Woollen Manufacturers in India and the All India Woollen Mills Association Ltd have jointly decided voluntarily to regulate prices of all kinds of worsted, weaving and shoddy yarns, knitting wools and fabrics. These two organisations represent an overwhelming majority of the woollen mills in India. Weaving yarn prices are fixed on the basis of Rs. 11.75 a lb ex-mill for 2/48s m.m. 64s quality. This will provide a reduction of 15 to 20 percent on prevailing rates, it is claimed. Additionally, the spinners undertake to supply yarn to weaving units on an equitable basis. The usual qualities and shades of shoddy yarn will be sold ex-mill at Rs. 2.87 a lb. This, too, is considerably lower than the prevailing market prices. The handloom section is the principal consumer of shoddy yarns. Mills' retail prices for knitting wools and wool fabrics will be displayed in retail shops so that customers may buy wool materials at these rates. A reasonable margin for wholesalers and retailers will be fixed. The manufacturers intend to keep these rates in force up to 31st December 1961, if the supplies of raw materials are maintained at the present level.

Valuable Protection for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

Commodity Markets

BRITISH TEXTILE REVIEW

GROWING INTEREST IN FASHION TRADE

IN the fashion trade, Paris still takes the limelight, but London is asserting its claims to attention with more than usual vigour. Leaders in the trade in London are optimistic; and their optimism is based on a rising trend of exports. Members of the Fashion House Group of London, for instance, have increased the value of their exports by 15 percent or 20 percent in the last two years. The business is widely spread. Both the U.S.A. and Canada have shown encouraging interest in London's fashions since the goods were more actively publicised; buyers have come from the sterling Commonwealth, particularly Australia; business with Europe—both the Economic Community and the Free Trade Association—has grown; and the displays which will be presented in Moscow this year, in connection with the British Trade Fair, will appeal to a market that is not unfamiliar with British fashion goods.

Not all the fashions seen in London are of British origin. In export trade, however, the emphasis is on characteristically British styles. The trade believes that they are what overseas buyers expect from Britain. If, for instance, American-style dresses are required, they can be more appropriately imported from there. It is recognised, however, that British goods will not sell themselves: they must be sold. Selling, it is argued, must begin at home. When Lady Lewisham, a lady of society and public affairs, uttered last year some scathing criticisms of the girls who sell apparel in U.K. shops, *Drapery and Fashion Weekly* undertook a laborious search for Britain's three best shopgirls, and when Lady Lewisham awarded them their prize-money (she modified her criticisms for the occasion), she pointed out that if Britain's approach to the customer was wrong at home, it would be wrong abroad too.

Trend of Exports

The cotton industry, in general, is not so hopeful of the trend of exports. The value of exports of cotton yarns and woven goods was virtually maintained last year—just under £63 million in 1960, a little over that figure in 1959; but at higher prices, the maintained value conceals an appreciable reduction in quantity. On the other hand, the quantity of imports increased substantially. Attention is focussed on, although by no means confined to, grey cloth, of which imports amounted to 596.4 million square yards in 1960, compared with 460.8 million square yards in 1959. Even in 1959, imports of grey cloth were much in excess of exports of cotton piecegoods of all kinds, and the margin was much wider in 1960, when exports declined from 347.4 million square yards to 327.2 million square yards.

Exports of cotton yarn showed up better. After a decline of about 4 million lbs in 1959, they were reduced comparatively moderately last year from 22.9 million lbs to 21.1 million lbs. But in this section, too, the industry is worried about imports, and it has recently applied to the U.K. Board of Trade for an increase in the import duty on doubled yarns, 7½ percent on yarns of foreign origin being considered insufficient, while, of course, yarns from Commonwealth countries are admitted duty-free—in considerable quantities. The U.K. Cotton Board, in its latest quarterly statistical review, commented on the contrast between the doubling section, "where some short-time is being worked", and the industry in general, its "production being held back only by a shortage of labour".

Record Output of Man-made Fibres

The announcement by the British Man-made Fibres Federation of the biggest ever output of man-made fibres in 1960 caused no surprise. The total was 592 million lbs, an increase of 78 million lbs—about 15 percent—compared with the total for 1959. Of the 1960 total, staple fibre accounted for 323 million lbs, filament yarn for 267 million lbs, both being the highest figures on record. The first year in which the output of staple fibre exceeded that of filament yarn was 1954; in recent years, the proportions have been fairly steady.

So much attention is directed to the newer fibres that it is easy to forget that by far the largest element in the U.K.'s production of man-made fibres is still viscose rayon. Although the output of acetate rayon, nylon, Terylene and acrylic fibres increased considerably last year, about three-quarters of the total production was viscose rayon. Yet about the time when the figures were announced, Courtaulds—the principal producer of rayon—was the subject of an adverse report on trading. It was possibly inspired by known facts on competition abroad, where the group has, of course, vast interests. That imports of Japanese yarn into Canada were causing concern had been known for some time, and the Company's interim statement last November mentioned the unremunerative character of North American business at that time.

Wool Consumption Falls

Hopes that the U.K. wool industry will use as much wool in 1960 as in 1959 had to be abandoned months ago. The figures issued by the Wool Industry Bureau of Statistics in February showed, in fact, a considerable reduction, from 517.8 million lbs to 489.5 million lbs. It must be mentioned, however, that consumption in 1959 was uncommonly high, not far below the postwar peak of 528.1 million lbs attained in the exceptional conditions of 1951. Indeed, excluding 1959, one has to look back to 1953 for a higher figure than last year's. The main factor in last year's decline was a decrease of more than 8 percent in production of tops. As the latter were overproduced in 1959 and the burden weighed on the industry in 1960, the figures are, in a sense, distorted. Bigger weights of tops were drawn and more worsted yarns were delivered in 1960 than in 1959. Deliveries of worsted fabrics increased, although those of woollen fabrics diminished.

In recent weeks, the tone of the top trade has been much more optimistic and in general it has been felt that running down stocks has been overdone. Although the trade is still somewhat erratic, there have been times when spinners, both at home and abroad, have put in substantial orders for tops, and some topmakers have realised that they have not been making enough. Similarly, stocks of raw wool were allowed last year to decline to levels which are now regarded as too low for safety, and, as other countries, too, it seems, will have to do some restocking, it is believed that the trend of the raw material is now firmly—although not steeply—upward. As far as sales are concerned, the industry is preparing a plan which should satisfy critics of inadequate promotion at home. Mr. George Birkenshaw, vice-chairman of the Wool Textile Delegation, stated last month that a market-research study of consumption would provide information which could serve as a basis for an "expertly-directed and aggressive scheme" to promote sales. The slackening of demand for durable consumer goods offer an opportunity which the clothing industry can advantageously exploit, he said.

METAL PRICES RECOVER IN LONDON MARKET

ZINC AND COPPER RISE: MORE INTEREST IN TIN

THE British Metal Corporation's *Review of Non-ferrous Metals in 1960* contained an interesting analysis of the forces which might influence the trend of prices in 1961. According to the precedent of the 1950s, the decline in prices in the second half of last year should continue far into this year; but the precedent may be false, for the present U.S. recession is mistimed, having begun about a year earlier than the previous pattern would have indicated; so a correspondingly early U.S. economic recovery can turn metal prices on an upward course. In fact, prices on the London Metal Exchange were on the whole considerably higher in February than in January. Zinc attracted particular attention because there was no obvious explanation of its rise. The expectation that the Lead and Zinc Study Group would agree in March to reduce production of the metal was certainly an influence. Of more practical significance was the cessation of U.S. offering of zinc in London, where it had been arriving in considerable quantities a few weeks previously; and when major U.S. producers announced that they were curtailing production, the threat of the U.S. surplus seemed to recede further.

Incipient Recovery

Another influence affecting copper and lead as well as zinc was the incipient recovery in the U.K. motor-car industry. But in the case of copper, as of zinc, it was prospective supply rather than demand which strengthened the price. The troubles in the Congo and in Northern Rhodesia were aggravated rather than relieved, and consumers of copper were less inclined to defer their purchases, imagining that the troubles might affect deliveries more in 1961 than in 1960. Under the circumstances, the market was not unduly perturbed by fresh evidence from the U.S. Copper Institute that production, in spite of cut-backs, was still in excess of consumption.

More Buying in Tin

The Congo situation had a similar effect on tin. Consumption of this metal is still at a high rate in Europe and seems to be recovering in the U.S.A., and rumours of a considerable reduction in supplies of ore from the Congo persuaded consumers to buy. The strength of the Singapore market was not, however, fully reflected in London.

Russian Offering of Lead

Less European (particularly Spanish) lead came into the market, but late in February when the price had recovered from its recent low level, offers apparently originating from Russian sources caused a sharp relapse. Soviet zinc is familiar in London, but appreciable offers of lead from that country are rare. The market is wondering if they represent the beginning of a new phase.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during January 1961, was 528,000 tons, against 498,000 tons during the corresponding period of the last season. This brings the total output for the 1960-61 season up to 31st January, 1961, to 1,294,000 tons, against 1,140,000 tons produced by the same date of the last season. The offtake from factories during January 1961, was 164,000 tons, against 170,000 tons during the same month of the last season. Total despatches including those for exports up to 31st January, 1961, were 478,000 tons, against 472,000 tons by the same date of the last season. Total closing stocks with factories on 31st January, 1961, were 1,357,000 tons, against 810,000 tons on the same date of the last season.

Jute

INDUSTRY PROPOSES VOLUNTARY PRICE CEILING FOR RAW JUTE PURCHASES

LIMITS TO BE IMPOSED ON UNSOLD GUNNY STOCKS HELD BY MILLS

THE possibility of some sort of controls being imposed in the form of maximum prices for raw jute and jute goods, has been the main talking point in the markets during the past week. A few days ago, a delegation from the industry had preliminary discussions with the Central Commerce and Industry Ministry in New Delhi. But at that time no conclusions were reached. It is understood, however, that the delegation was left in no doubt that unless action to curb the high prices of raw jute and jute goods was taken by the industry itself, the Government would have to do something. Until then, the matter had come up for discussion on several occasions but it seemed that the measures suggested did not receive the unanimous support of the members. It was realised that major decisions of policy of this nature would have to be examined with the utmost care, and the task of enforcing any scheme, once approved, would present serious difficulties. Meanwhile, overseas buyers showed very little interest in the Calcutta markets, and the uncertainty only tended to speed their decision to turn to substitutes. The lack of any concrete information in the early part of the week created conditions ripe for rumour, and hardly a day passed without various contradictory reports. These ranged from a further curtailment of production, to a gentlemen's agreement not to buy jute for 15 days.

Maximum Price for Fibre

Then, late on Tuesday, the I.J.M.A. issued a Press note on the subject. It confirmed the rumour which had gained most ground during the week—that the Association had undertaken to introduce a scheme for a maximum price for raw jute based on Rs. 62 a maund for Assam Bottoms, with other grades and qualities in proportion. The decision was taken during the discussions between the Central Government and the I.J.M.A. delegation in Delhi. It is understood that the Government will shortly issue regulations under the Essential Commodities Act, which will empower it to fix statutory maximum prices for raw jute and jute goods. It is also proposed to introduce a scheme for licensing raw jute dealers. The I.J.M.A. scheme provides for the compulsory registration of all contracts for raw jute with the I.J.M.A. It will be reinforced by the requisitioning of raw jute stocks by the Jute Commissioner from sellers, and, if necessary, from mills. To supplement the supply of raw jute to mills, the Government has agreed to license freely imports of jute from Pakistan for delivery in July and August to take advantage of the earlier jute crop in that country. As for jute goods, no maximum price has been fixed, but a scheme to limit the amount of unsold ready goods held by mills will be introduced. The Jute Commissioner will be empowered to requisition goods in excess of this limit if mills do not abide by the voluntary agreement.

It is too early yet to gauge the trade's reaction to the decisions. The member-mills of the I.J.M.A. will enter into a gentlemen's agreement not to buy jute above Rs. 62 a maund basis Bottoms for Assam jute. But what method can be adopted to ensure that the agreement is carried out is difficult to foresee, in spite of the registration of contracts with the Association. The position of non-member mills will also have to be taken into consideration, as open buying by them may jeopardise the whole scheme. Opinions appear to be divided on the best way to get the trade out of its present difficulties, but maximum prices do not have many supporters. The main complaint from the mills' point of view is that the maximum price soon tends to become the minimum price, and any scheme of this nature lends itself to malpractices in spite of all the controls. The registration of all raw jute contracts with the I.J.M.A. will only create extra work as all contracts are already registered with the East India Jute and Hessian Exchange. Registration may not prevent the declaration of false transactions within the prescribed limits by those who are prepared to circumvent the price controls. In other words, many in the trade visualise the growth of a black market in raw jute in a very short time, or an increase in the smuggling of Indian jute to Pakistan, where higher prices are available.

Poor Arrivals

Upcountry reactions are unlikely to be swift. For some time, the paucity of imports has made mofussil prices higher than those ruling in Calcutta, and it is improbable that any great change will follow now. This was demonstrated during the past week when gunny rates showed a violent downward reaction, B Twills at one stage dropping by as much as Rs. 50 a ton. During this time, fibre rates remained unchanged, and upcountry rates retained a premium over Calcutta quotations. One of the main reasons was the constant search by mills for quick shipment jute. Most contracts concluded these days call for ready shipment, or ready bills of lading, which puts a continuous strain on both upcountry and local markets.

The time chosen for the announcement of maximum prices for raw jute was opportune, although many think that some indication of the progress of the discussions should have been given earlier to help relieve the uncertainty under which the market was operating. It is believed that it will be Friday before any jute allocations can be made to mills, by which time the gentlemen's agreement may be in force. Perhaps this is intended to give the market time to settle down. Some think that the fixing of ceiling prices may bring out hidden stocks of jute, but it is doubtful if any large quantities are under cover. If a reasonable quantity can be obtained at Rs. 62 or less, then the price of gunnies will undoubtedly fall, but the immediate reaction of most jute sellers was a complete withdrawal from the market. Some weak holders may be frightened into unloading some of their stocks, but the larger sellers are not likely to be stampeded into any such action. It is also open to doubt whether any large quantities of Pakistani new crop jute will be available at an early date. According to all reports, the shortage of jute across the border is as acute as, if not more acute than, in India. When their new crop jute becomes available, Pakistani sellers are not likely to release jute to India if the demand from their own side of the border is heavy—at higher prices than are available in India.

THE JUTE MARKETS

Manufactured Goods: The market tended to be quiet at the opening last Thursday due to the continued rumours about the fixing of maximum prices for raw jute. Small losses were recorded in both sacking and hessians, so B Twills opened at Rs. 208 and 40in. 10oz. at Rs. 69.25. Over the next few days, the lack of foreign business and a general tendency to postpone operations until the outcome of the talks in New Delhi was known, caused a sharp setback in prices. Both sacking and hessians lost Rs. 1.25 or Rs. 1.50, but some local covering against February due date shipment enabled the losses to be made up before the week-end. Rumours and counter-rumours about the fixing of prices caused a slump over the week-end. On Monday morning, B Twills were Rs. 5 lower at Rs. 203, and hessians were down by Rs. 1.50 for 40in. 10oz. to be quoted at Rs. 68.25. Further losses were recorded on Tuesday and the undertone was weak.

On Wednesday, opening quotations were as follows:

	Ready	March	Apl.-June
40in. 7½oz.	50.00	50.00	49.50
40in. 8oz.	54.00	54.00	53.50
40in. 10oz.	66.25	66.75	66.00
B Twills	201.00	201.00	197.50
Heavy Cees (Plain)	198.00	200.00	197.50
A Twills	231.00	232.50	231.50
Liverpools	220.00	222.00	221.00
Cornsacks	206.00	207.00	202.00

Raw Jute: In contrast to gunnies, the fibre market opened on a firm note and Assam rates advanced by 50nP to Rs. 65 a maund. Various

ONLY

B·O·A·C

OFFERS CARGO SHIPPERS

TWICE WEEKLY ALL-FREIGHT SERVICES

CALCUTTA-EUROPE

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

rumours and the continued small imports up-country, kept prices steady, so a further 50nP was added to indications. Uncertainty about the outcome of the New Delhi talks between the I.J.M.A. delegation and the Government worried sellers, and in sympathy with the weaker goods market, prices began to fall after the week-end. By Tuesday morning, rates were back to Rs. 64.50. Very little business was reported as no quota had been issued. The announcement late on Tuesday about fixing maximum prices for raw jute caused initial nervousness, and some weak sellers were prompted into offering at the rate of Rs. 62. In general, however, sellers withdrew from the market, but on Wednesday morning continued to offer on the basis of Rs. 63.50 to Rs. 64. There was a big drop in wagon arrivals in Cossipore last week and a total of 550 were reported, which was about 140 less than in the previous week.

THE FOREIGN JUTE MARKETS

FIBRE PRICES HARDEN

(FROM OUR DUNDEE CORRESPONDENT)

EACH week raw jute prices in Dundee have hardened, and this has reacted on other sections of the industry. Buyers of jute yarns and cloth are virtually out of the market while spinners and manufacturers are perturbed over the lack of orders. The only solution to the problem is to resort to short-time working. Even so, if there is no improvement, some mill and factories will have to close down temporarily. The outlook at the moment is bleak indeed and, to make matters worse, fibre prices continue to rise.

So far, there has been no increase in the fixed rates for yarns and cloth in the U.K., but a change could come any day now. The average price for jute held by spinners is steadily going up with each fresh purchase, and some sales are always being negotiated each day, although not always for shipment jute. A good number of secured parcels are being offered to spinners in Dundee—jute bought at much cheaper rates—which is afloat or ex-warehouse now. These are available to buyers at some pounds a ton under the usual quotations for shipment. Dundee spinners have only a small proportion of their season's requirements to purchase now, and this will be less if the cut in working hours is extended. A report says that Belgium has bought 25 percent less jute this season than the last, West Germany 29 percent less and France 38 percent less. Short time and the cut in production is quite general throughout the industry in Europe and it is certainly increasing in the U.K.

Mill Firsts are now quoted at from £214 a ton, Mill Lightnings £206, Mill Hearts £202 and Grade Hearts £197, with Grade Tossa-⅜ from £210, fours £205 and Continental Tossa-⅜ £202, all March-April, c.i.f. U.K.-Continent.

The Calcutta goods market continues firm. Prices for hessians are firm at 106s for 40in 10oz. and 78s 6d for 7½oz., February, 104s and 77s 9d March and 102s 6d and 77s April-June, with B Twills at 317s 6d, 316s and 311s 6d for the respective positions of shipment, all f.o.b. Calcutta. In spite of the quiet trend in Dundee yarns, cloth prices remain firm and unchanged.

THE PAKISTANI JUTE MARKETS

FIBRE STOCKS RUNNING LOW

(FROM OUR EAST PAKISTAN CORRESPONDENT)

IT becomes daily more apparent that there is going to be a serious supply gap in fibre between the current season and the next for the Indian jute mills and for many manufacturers in Europe. It is obvious that whatever jute is available now for sale to overseas mills, is not likely to keep them going until October, when they can expect the first arrivals of the new crop jute, unless they drastically reduce their consumption by closing down for as much as 10 days a month from March onwards. The Indian mills are in almost a similar position, but they can expect to begin receiving Pakistani jute from July. If India is forced to cut production as a result, the impact on the market may not be adverse. Goods stocks are now higher than they were last year, and there is very little interest at present prices. In fact, it would seem that the price of goods has reached a point where consumer resistance has emerged. The recent large business to Russia by Indian mills had little or no effect on the market.

It would appear that the fibre prices have reached a similar point. Arrivals in East Pakistan continue to be negligible. The mills have come out as fairly keen buyers and even the E.P.C. figures of 115,000 bales are high for this time of year and for such a small crop. In spite of all these rather bullish factors, prices have not moved up very much except for Habijabi and S.M.R. which are in keen demand by the mills. One or two over-confident small sellers have, it is reported, offered to sell jute in the Narayanganj market at Rs. 84 a maund, which is some Rs. 8 a maund above the market rate. But no business has been done at this level.

Reports from upcountry indicate that apart from the little jute which is being held in the hands of small stockists in remote corners, who use their own living quarters as a storage godown, most growers have disposed of their stocks. Estimates for the available jute which, of course, cannot be very accurate, are for approximately 100,000 bales with the balers, and 400,000 bales with the stockists. At least, 200,000 bales of this will go to the mills, leaving 300,000 bales for overseas buyers including India.

During the first 15 days of February, Japan was the biggest purchaser with 21,000 bales, followed by Poland and the U.K. with 10,000 bales each. Spain bought 9,700 bales and India continues to buy regularly. During the past fortnight, she bought 8,500 bales. It is interesting to note that purchases by the U.K. are at present larger than at the same time last year. The same applies to South Africa, Egypt and Poland as well as Burma, Czechoslovakia, Yugoslavia and Morocco.

Upcountry, reports indicate that most of the char land jute has already been sown and that preparation is practically finished in lowland areas.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in January was only slightly above the level of December, and was 2 million yards or 3 percent higher than January 1960. Compared with January a year ago, bag cut-up increased by about 4 million yards while piecegoods deliveries declined by about 700,000 yards. U.S. burlap stocks continued at the same level as at the end of December and were about 6 million yards higher than a year ago. At 257 million yards, 132 million yards were spots and 125 million yards were afloats. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

We Share Your Disappointment too!

The overwhelming demand for Philips Quality Lamps is pleasing to us, but what a pity we can't meet it. And how disappointing it is for our dealers who, with sad faces, do their best!

All of us know that the lamp industry is more self-sufficient than many others. Yet there is a small but vital content in lamp manufacture which has to be imported. That is where foreign exchange restrictions creep in. So the supply becomes difficult.

Certain positive steps are being taken in the Third Five-Year Plan to ease the position. Until supplies become plentiful again we request you to bear with us.

Meanwhile, while wishing you happy lighting, here is a list of our retail prices to help you the next time you want to buy Philips Quality Lamps:

		Retail price per piece
25W. Vacuum clear	...	Rs. 1.25
40W. Gasfilled clear	...	Rs. 1.44
60W. Gasfilled clear	...	Rs. 1.56
100W. Gasfilled clear	...	Rs. 2.00
150W. Gasfilled clear	...	Rs. 3.50
200W. Gasfilled clear	...	Rs. 5.12
60W. Argenta (inside white)	...	Rs. 1.75
100W. Argenta	...	Rs. 2.25
150W. Argenta	...	Rs. 3.94
4 ft. 40-Watt Fluorescent	...	Rs. 9.69

These prices are inclusive of excise duty but exclude sales tax and local taxes

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 32, held on 27th February and 1st March, the 70,651 chests on offer at the Export auction met with a strong general demand. "Teas for price" sold well. Dooars B.O.P.'s and all clean black B.P.'s and P.Fgs. were well supported at about last rates, but the more ordinary descriptions sometimes showed a decline of up to 10nP. Medium Assam with bright liquors received good support, but the plainer kinds were often easier. The best C.T.C. teas with bright liquors again received good support and were sometimes dearer, but the more ordinary liquoring sorts were occasionally 20nP easier. Secondary grades were the strongest feature of the sale and were well competed for, prices often showing considerable advances. Legg-cut teas came in for good support and were sometimes dearer. Leaf grades met with good demand, the better types sold well and more support was forthcoming for the poorer stalky descriptions. The few Darjeelings on offer generally sold at easier rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	2.16 to 2.20
Plain B.P.	4.60 to 4.70	1.86 to 1.92
Plain Fannings	4.70 to 4.90	1.98 to 2.04
Medium B.P.	4.70 to 4.90	1.88 to 1.92
Medium Fannings	4.80 to 5.10	1.98 to 2.03
Best Assam C.T.C. BP	5.80 to 6.20	2.45 to 2.65
Best Assam C.T.C. Fgs.	5.90 to 6.40	2.45 to 2.65

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 22,980 packages of Dust on offer met with a good general demand. Orthodox teas sold readily at up to 10nP below last rates. Legg-cut Dusts were irregular and generally easier. Once again the strongest feature of the sale were the bright liquoring C.T.C. teas. Poorer-Medium sorts were up to 15nP easier. The best C.T.C. Dusts were irregular, but the bright lines met with keen competition and were dearer. The few lines of flavoury Darjeelings enjoyed a good sale.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb.
Plain Orthodox Dust	4.65 to 4.90	
Medium Assam Dust	4.75 to 5.15	2.14 to 2.24
Legg-cut Dust	5.00 to 5.40	2.08 to 2.18
Medium Assam C.T.C. Dust	5.50 to 5.90	2.20 to 2.30
Good Assam C.T.C. Dust	6.20 to 6.60	2.45 to 2.75

(Quotations are inclusive of excise duty.)

The 1,028 chests of Leaf on offer met with a good general demand.

HIDES AND SKINS STEADY

The market was steady. Stocks of skins were higher but those of hides were less than in the previous week.

Bazaar Sales

(Between 21st February and 27th February, 1961)

Cowhides: Wet salted (Ord.) 22,000 pcs. on the basis of Rs. 8.25 to Rs. 12.25; Wet salted (Slaughtered) 22,900 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19 to Rs. 28. Wet salted (Ord.) 8,000 pcs. on the basis of 81nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 52,300 pcs. on the basis of Rs. 340 to Rs. 350, Rs. 410 to Rs. 425 and Rs. 460 to Rs. 470; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur 61,100 pcs. on the basis of Rs. 350 to Rs. 380 and Rs. 410 to Rs. 425; Purneah-Kissenganj 7,400 pcs. on the basis of Rs. 385 to Rs. 395 and Rs. 410 to Rs. 415; Patna-Bhagalpur-Pakur 11,700 pcs. on the basis of Rs. 280 to Rs. 300 and Rs. 340 to Rs. 390; Patna-Muzafferpore 18,500 pcs. on the basis of Rs. 365 to Rs. 375 and Rs. 390 to Rs. 395; Kissenganj 1,100 pcs. on the basis of Rs. 530.

Bazaar Stocks

(27th February, 1961)

Cowhides: Wet salted 137,000 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 75,000 pcs.; Assam-Dinajpur 21,000 pcs.; Muzafferpore-Purnneah-Kissenganj-Patna-Pakur 118,500 pcs.

LINSEED FIRM

The linseed market was firm during the past week. There were shortages of supplies. The price of oil rose as a result of short supplies and the increased local demand following high prices of other vegetable oils. Sellers were reserved. The oilcake market was sluggish. Small business was done at slightly lower rates. The latest quotation is as follows: Ready seeds, Rs. 30.50 a maund.

MARTIN BURN LIMITED

NOTICE

THE Annual General Meeting (being the Fifteenth Ordinary General Meeting) of the shareholders of Martin Burn Limited will be held on Monday, 27th March, 1961, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1960, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS.

(A) To consider the re-appointment of Mr. Saradindu Gupta as a Managing Director of the company for a further period of four years with effect from the 1st May, 1961 and in this connection to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:—

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the re-appointment of Mr. Saradindu Gupta as a Managing Director of the company with effect from the 1st May, 1961, on the terms and conditions contained in an Agreement dated the 29th December, 1960 and made between the company of the one part and Mr. Saradindu Gupta of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Mr. Gupta."

(B) To consider the appointment of Sir Narayan Raghavan Pillai as a Managing Director of the company for a period of four years with effect from the 1st March, 1961 and in this connection to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the appointment of Sir Narayan Raghavan Pillai as a Managing Director of the company with effect from the 1st March, 1961 on the terms and conditions contained in an Agreement dated the 17th day of February, 1961 and made between the company of the one part and Sir Narayan Raghavan Pillai of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Sir Narayan Raghavan Pillai."

The Ordinary Share Register and Transfer Books of the Company will be closed from 13th to 27th March, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
27th February, 1961.

NOTE—The Dividend, if sanctioned, will be paid on or after 17th April, 1961, to those shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 27th March, 1961, or to their mandatees. No application for dividend warrants will be necessary.

An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the members of the Company.

BIRDS INVESTMENTS LIMITED

NOTICE is hereby given that the Twenty-fourth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Tuesday, the Twentyeighth day of March, 1961, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To elect a Director in place of Mr. S. B. Bose, who retires by rotation and being 72 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281 (2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is appended below as required under Section 173 of the said Act.

   To be proposed as an Ordinary Resolution:—

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
4. To elect a Director in place of Mr. D. L. V. Rowe who retires by rotation at this Meeting.
5. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 14th March, 1961 to 28th March, 1961, both days inclusive.

By Order of the Board,
LOVELOCK & LEWES,
Secretaries.

Registered Office:
4, Lyons Range,
Calcutta,
27th February, 1961.

NOTE:—(1) Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.

(2) Explanatory Statement under Section 173 of the Companies Act, 1956, in respect of item No. 3 of the above Notice has been forwarded to the members of the Company.

UNION CARBIDE INDIA LIMITED

NOTICE

NOTICE is hereby given that the Board of Directors of Union Carbide India Limited, at their meeting held on Monday, the 27th February, 1961, recommended to the shareholders for their approval, at their 26th Annual General Meeting of the Company to be held on 15th May, 1961, the payment of a Final Dividend of Rs. 1.05 Naye Paise per share subject to the deduction of taxes in respect of the Company for the year ended 25th December, 1960.

By Order of the Board,
G. BOWLAND,
Secretary.

Registered Office:
1 & 3, Brabourne Road,
Calcutta-1.
27th February, 1961.

BENGAL POTTERIES LIMITED

NOTICE

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the Bengal Potteries Limited will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta-15, on Wednesday, the 22nd March, 1961, at 11-00 A.M. to transact the following items of business :—

To consider and if thought fit to pass the following Resolutions which shall be proposed as Special Resolutions :—

1. "Resolved that this meeting consents under Section 314 of the Companies Act, 1956, to the reappointment of Messrs. Allied Distributors & Co., a Co-partnership firm of which Bharat Ram Charat Ram Private Ltd., Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Ltd., Hindusthan Selling Agencies Private Ltd., and K. L. Poddar & Sons Private Ltd. are partners, as the Sole Selling Agents of the Company for a period of five years commencing from the 1st day of April, 1961 and on the terms and conditions mentioned in the draft Agreement expressed to be made between the Company of the one part and the said Messrs. Allied Distributors & Co. of the other part subscribed by the Chairman of the Board of Directors of the Company at its meeting held on the 23rd day of February 1961, and also subscribed by the Chairman of this meeting and otherwise holding an office of profit as such selling agents of the Company."
2. "Resolved that consent be and is hereby given for continuance of Messrs. Allied Distributors & Co., a Co-partnership firm of which Bharat Ram Charat Ram Private Ltd., Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Ltd., Hindusthan Selling Agencies Private Ltd. and K. L. Poddar & Sons Private Ltd. as partners, in the office of profit inspite of the fact that any partner of the firm may be deemed to have become a relative of any Director of the Company by virtue of the Companies (Amendment) Act, 1960."

Explanatory Statement Under Section 173 (2)

Re: Resolution No. 1 :— Allied Distributors & Co., is a Co-partnership firm and it appeared that Shri S. K. Agarwal and Shri R. K. Agarwal are sons of Lala Bishen Swarup, a Director of the Company and are sons of a brother of the mother of Lala Shri Dhar, a Director of the Company.

As such they are the relatives of Lala Bishen Swarup and Lala Shri Dhar within the meaning of Companies Act of 1956.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

Accordingly, previous consent of the Company accorded by a special resolution is required under Section 314 of the Companies Act, 1956, for reappointment of the said Messrs. Allied Distributors & Co., as the Sole Selling Agents of the Company.

Re: Resolution No. 2 :— The Companies (Amendment) Act 1960, which came into force from 29. 12. 1960, has enlarged the definition of relatives in some respects with the result that Shri S. K. Agarwal and Shri R. K. Agarwal, partners in Allied Distributors & Co., are now deemed to be relatives of Lala Shri Dhar, which was not the case previously. The Company is advised that this does not affect the appointment of the firm under Section 314 of the Companies Act, 1956, but for abundant precaution, Shareholders' consent is being sought by the Resolution.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

The draft Agreement referred to in the above Resolutions can be inspected by any member at the Registered Office of the Company, 45, Tangra Road, Calcutta, on any working day of the Company, during the hours of 2 p. m. to 4 p. m.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, Tangra Road,
Calcutta.

HINDUSTHAN WOOLLEN MILLS, LIMITED

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta on Wednesday the 22nd March, 1961 at 2-00 P.M. as special business to consider and if thought fit to pass with or without modification the following resolutions as SPECIAL RESOLUTIONS:

(a) "RESOLVED that subject to the approval of the Central Government in that behalf, the name of the Company be changed to 'UNIVERSAL CABLES LIMITED'."

(b) "RESOLVED that subject to the confirmation of the High Court at Calcutta and subject to the terms of such confirmation, the provisions contained in the Memorandum of Association of the Company be altered in the manner following :—

(i) That the existing sub-clauses No. (3D), (1), (2), (3), (3A), (3B) and (3C) in clause 3 of the Memorandum of Association be renumbered as sub-clauses No. (2), (3), (3A), (3B), (3C), (3D) and (3E) respectively thereof, and

(ii) that the following new sub-clause be inserted as sub-clauses No. (1) (a) & (b) in the said clause 3 of the Memorandum of Association—

'(1)(a) To carry on the business of manufacturers of and dealers in wires cables, and lines of all kinds including A.C.S.R. and all aluminium and copper conductors, electricians and electrical engineers, contractors and manufacturers of and dealers in tramway, electric and other apparatus, mechanical and chemical engineers and in all apparatus and things required for or capable of being used in connection with the generation, accumulation, distribution, supply and employment of electricity or other energy for lighting, heating, sound and power or any of them, compressed air, gas, steam, oil or any of them or otherwise.

(b) To carry on the business of manufacturers of bitumen, india-rubber, gutta-percha, or any other waterproofing or insulating materials and to manufacture and sell all articles to which any such material can be supplied.'"

(c) "RESOLVED that the Share Capital of the Company be increased to Rs. 5,00,00,000 (Rupees Five crores) by the creation of 20 lac new Ordinary Shares of Rs. 10/- each and 1 lac new Preference Shares of Rs. 100/- each with powers to the Directors to issue the said Ordinary and Preference shares with such rights, privileges or conditions attached thereto as they may decide and that the conditions contained in the Company's Memorandum of Association be altered accordingly."

(d) "RESOLVED that the Regulations contained in the document submitted to the meeting and for the purpose of identification subscribed by the Chairman thereof be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

By Order of the Board,
R. K. CHHAOCHHARIA,
Secretary.

They are so neat!

These mechanised Statement of Accounts ! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A BIG NEW TAX BURDEN FOR 1961-62

THE general verdict on the Indian Budget for 1961-62 has so far been remarkably favourable. The Finance Minister must be gratified at the lack of serious protest with which his proposals to relieve the public of no less than Rs. 60-odd crores have been received. Even the Budget forecasters appear to be satisfied; for once their predictions have not been hopelessly wide of the mark. All this is an impressive tribute to the country's willingness to shoulder almost any tax burden in the name of development provided some care is taken to ensure that it is fairly distributed, it appears designed without too close attention to ideological considerations, and it makes at least a gesture towards improving incentives. Somehow, despite its many contradictions and lost opportunities, Mr. Desai's Budget has succeeded in creating this impression, partly, no doubt, because past experience tells us it could have been much worse. It is the relief felt on this score which seems to account for much of the apparent enthusiasm for the Budget as a whole, and for the comparative absence of carping comments on its many blemishes. The country considers it has got off lightly, there is general satisfaction at the buoyant state of the economy and few appear to feel they have been hit unfairly. Mr. Desai would appear to have achieved the *virtually impossible.*

The most striking feature of the Budget from the economic point of view is the fact that the *entire revenue deficit* has been covered. This is distinctly anti-inflationary, is most welcome, and will help offset the upward surge in prices which *is almost bound to result from the increased* Customs and excise duties. It is obviously in line with the intention to rely less on deficit financing during the third five year plan, and the discriminating cuts in consumption forced on the community by the large volume of indirect taxes must be regarded as in the nature of an alternative to the *indiscriminate* forced saving of deficit financing. The question then arises whether or not this shift in policy will defeat its object. Mr. Desai *has certainly put the heaviest indirect tax burden* on these sections of the community which he considers most able to bear it. But in India, where professional, technical and managerial talent is *scarce*, the bargaining power of the wealthier groups is probably *stronger* than in more industrially advanced countries. And when it is *remembered that* because of the weight of indirect taxes, the extra income required to compensate those in the higher earning groups for losses due to increased prices is extremely high, the *resultant effect* could well be a seriously inflationary boost to personal incomes and, therefore, to costs. This feature may well turn out to be the *biggest disappointment* of the whole Budget. Coupled with the increase that is bound to take place in the overall cost of living, which the bargaining power of organised labour will inevitably *seek to offset, it may well be proved* eventually that raising revenue by this method is every bit as inflationary as deficit financing.

The next most interesting aspect of the Budget is its almost complete reliance on indirect taxation. This is inevitable as long as it continues to be *accepted* that the major share of the country's development must be financed out of taxes. Nevertheless, Mr. Desai is to be congratulated, especially so close to a general election, on having the courage to resist the usual pressure from the many members of his own Party who always appear to believe that tax systems exist exclusively to serve *doctrinaire* ends. The examples of ideology which have crept in are fortunately few, although none the less disappointing for being that. The new impositions are expected to raise just over Rs. 60 crores in a full year and about Rs. 300 crores in five years. Bearing in mind that the third plan involves the eventual raising of an extra Rs. 1,000 crores or so in fresh taxation, this year's effort should account for almost one-third of the amount required. This is probably the right amount to aim at in the first year of the third plan; later, of course, the efforts will have to be proportionately higher owing to the fewer number of plan years during which they will be effective.

Among the new impositions, *one or two stand* out as having remarkably little justification. The increased duty on newsprint, for instance, could have been avoided; the Government seems determined to put up the costs of newspaper publication, whether by accident or design is difficult to say. The by now annual impositions on imported liquor can probably be dismissed altogether as having an explanation other than fiscal; their main effect will be not so much on the price of the product as on the volume of smuggling, which is now increasing immoderately. Higher duties on diesel oil, machinery and components, and on *iron and steel* manufactures, are bound to put up industrial costs, while the increased levies on tobacco, superior kerosene, rayon, and cotton fabrics, will directly affect the cost of living and, among other things, add to the country's export difficulties. But most questionable of all among the many indirect tax changes are undoubtedly those involving tea. *The first impression created* by the reduction in export duty was that the loss to the revenue of Rs. 2 crores would be the industry's gain, thus helping to improve its competitive position in world markets; the "loose" tea *on which increased excise duties were announced* was taken to mean tea marketed other than in packages. Now it *is being taken* that what Mr. Desai really meant by loose tea was all tea leaving the gardens. On this interpretation, the *increased excises*, less the reduced excises on packaged tea, total some Rs. 1.98 crores, thus cancelling out almost completely the reduction in export duty. Further, the early impression that quality teas would be the main ones to benefit, *also now appears to have been false*; it is the gardens growing the quality teas which will have to pay the highest slabs of the new excises. The net benefit to the industry, therefore, is *negligible*. Indeed, the effect on home consumption of the higher prices for tea which will now follow may retard the process by which the industry is able to strengthen its export position by producing in bulk for the home market. It is not yet quite clear what the Finance Minister's true intentions are in this matter; an *early* clarification would be most appreciated.

The changes in direct taxes present something of an odd mixture. Whereas some are distinctly designed to encourage incentives, especially for foreign investors in this country, others appear equally intended to damage them, and without any obvious reason for wanting to. Why, for *instance, should it have* been decided to cut one of the few existing tax incentives which really attract new investment, the development rebate? True, Mr. Desai seems never to have taken to this concession; he has deliberately reduced its effectiveness before. But why he should choose to cut it down from 25 percent to 20 percent without any *compensating or offsetting* provision, will remain one of the inexplicable mysteries of this Budget. The doubling of the special surcharge on earned income over Rs. 1 lakh has an obvious explanation—it is unadulterated doctrinaire socialism. For its justification one has to look beyond such reasons as economic logic into the realm of the politically expedient. *The most welcome* direct tax adjustment is, of course, the reduction of the levy on bonus share issues from 30 percent to 12½ *percent*. There has never been any real justification for this tax, and Mr. Desai would have done well to have abolished it altogether, especially in its application to bonus issues declared from share premium account. Perhaps it has been decided that at 12½ percent the disincentive is merely nominal and that more revenue will be raised because more *bonus shares* will be issued. If so, then this must be the first instance on record where the Finance Ministry has acknowledged the validity of the theory of diminishing returns.

By removing the discrimination against foreign minority investors in Indian companies, Mr. Desai has both reduced a disincentive and corrected a *contradiction* between Government policy and tax reality. The main features of this move are discussed in detail in an article which appears on a later page of this issue of *Capital;* the chief comments to be *made here are that it does not go far* enough and now discriminates against those foreign investors whose only guilt is that they *were early on the scene to help with India's de*velopment. There is obviously no justification whatever for having three different systems of *taxation for exactly* the same class of investor, and the new provisions should be applied to all right away. The exemption of foreign technicians from paying income taxes for a further two years, *provided their taxes are paid by the companies* employing them, is one of those logical provisions which can hardly be objected to. It should now *be possible to retain for India a supply of* technical talent which is all the more valuable because of its accumulated experience of local conditions. This concession—along with that by which hotels may avail themselves of the five-year tax holiday granted to other newly-established industries, and with the reduction to 50 percent of the tax payable *on royalties from an Indian to a foreign* company—is only simple common sense.

The general lack of serious objections the Budget has raised—except possibly *in Parliament* where political postures have to be struck—must not be allowed to mislead us into concluding that *it is a good one, as distinct from simply the best* that can be expected under the circumstances. In fact, it contains a remarkable number of contra*dictions* and at least the usual total of missed opportunities. While certainly doing something to encourage foreign investors to take minority holdings in Indian enterprise, and to give Indian *industry the benefit of their inventions,* the new provisions do little to increase the overall incentive for foreign investment. In the shape of the *increased tax on the higher earned incomes,* which is bound to affect chiefly foreign nationals in the senior managerial posts, it has done a good deal in the other direction. Similarly with the new *excise duties on such items as air conditioners,* refrigerators and liquor. Few foreign companies are content to put their capital into Indian industry *without having at least a few of* their own nationals to keep an eye on it; these new duties will ensure that this necessity will be an even more expensive one than it is now. There is, in fact, a general all-round lack of personal incentives in this Budget, and although this is a feature which observers of the Indian political scene have come confidently to expect, it is economically regrettable for all that.

The other great weakness of the Budget is that it does so little to encourage personal saving and investment. India seems now to be irrevocably wedded to the thesis that resources which might *otherwise be saved* for private development should be removed from the public's pocket at staggering expense and incalculable economic cost to be devoted to public development. This fits in with socialist planning notions, impresses the less discerning well-wishers abroad, and satisfies the current masochistic desire for national self-sacrifice. *The only trouble is, it has scarcely any eco*nomic justification whatever. A Budget designed more to encourage work and enterprise, thrift and *low prices would have* been precisely what the country's real economic interests dictate. But this is crying for the moon. To use that convenient expression of *Professor Galbraith's,* the "conventional *wisdom" just does not permit* it.

OPTIMISM IN NEW DELHI

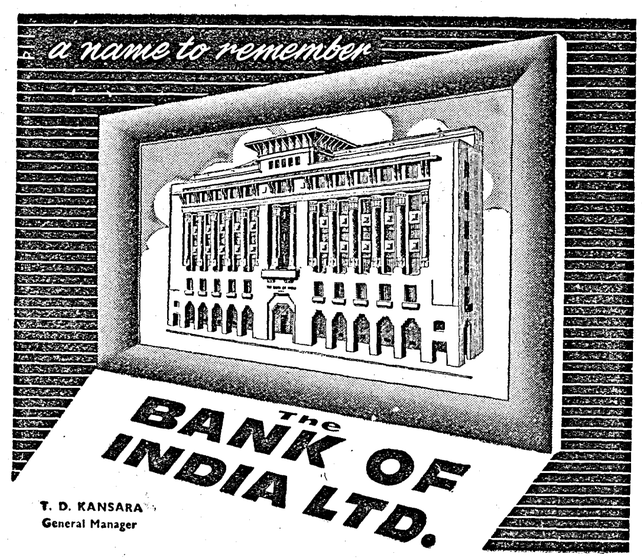
THE *Economic Survey* for 1960-61, issued along with the Central Budget last week, takes a moderately optimistic view of the prospects for the economy. The basic conclusion seems to be that the momentum of economic advance will be maintained, if not increased, during the coming financial year. This is a view which the stock markets, in their current ebullience, appear to be supporting too, although with fewer reservations than the official forecasters are inclined to make. One of the major reasons for the optimism is that agriculture is expected to recover well from the setback it suffered in 1959-60. The production of foodgrains, it is expected, will rise to an all-time high of 76 million tons during the current year, aided by the good rice crops. More cotton and sugarcane will be harvested. But the outlook for jute and oilseeds is "not equally encouraging," which remark perhaps deserves a consolation prize for understatement. It is expected that the rise in agricultural production will be supplemented by the vigorous growth of industry. During the first ten months of 1960, industrial output was running at a level about 11.7 percent higher than in the corresponding period of 1959. As a result, the index of industrial production (base year 1951 equals 100) rose to 167.5 from 151.9. The *Economic Survey*, therefore, expresses the hope that "a high rate of growth of industrial output, comparable to the current year's will be maintained in the coming year." The hope seems justified, considering that the large investments made in recent years in public and private sector projects are now rapidly maturing. The industries which the official forecasters expect will increase their output include iron, steel, cement, coal, textiles, paper, sugar, electricity and chemicals. It is thought that with bigger iron and steel supplies, the production of engineering goods and industrial machinery will also increase, although much will depend on the "supplies of imported raw materials and components."

Nevertheless, serious difficulties remain, and the two which the *Economic Survey* appears to highlight most prominently relate to prices and foreign exchange. It is certain that the pressure of demand, for both consumption and investment, will increase. India's population is growing at the rate of about 2 percent a year; public investment in 1951-62 is expected to be 6 percent or 7 percent higher than in the current year; and private investment too is likely to increase. These factors might well offset the increase in supplies, and tend to push up prices. The remedy prescribed by the official forecasters, therefore, is to restrain consumption and speculative stock-building with fiscal and monetary weapons. The fiscal weapons have presumably already been outlined in the Budget proposals presented last week, especially those pertaining to the heavier indirect taxation of consumer goods. But the *Economic Survey* does not say what new monetary weapons the Government might have in mind apart from those already in force, which have proved rather unsuccessful. It is merely stated that the creation of fresh purchasing power has to be restricted, either through fiscal operations (*i.e.*, with heavier taxes and less deficit financing) or through the banking system (which presumably means credit controls).

In theory, all this sounds very well. But recent experience suggests that indirect taxes, whatever they do to purchasing power, will push up prices; and credit controls by no means work quite as well as the Reserve Bank thinks they do. Much of the "fresh purchasing power" arising nowadays is in the unorganised sector of the monetary system, which has hardly yet felt the effects of taxes and monetary controls. Unless the tax base is widened, and unless more money is drawn into the banking system, the policies recommended in the *Economic Survey* will be subject to serious limitations. In the immediate future, perhaps the most the Government can do is to hold down food prices, by using the bumper crops and the large imports of wheat from the United States. Over the prices of industrial raw materials and manufactured goods, it will have very little influence, whether it resorts to fiscal or to monetary controls. In the case of manufactured goods, the chances are that prices will go on increasing in spite of the increase in production —because import restrictions protect domestic industry, tax and labour charges are rising, and credit is becoming costlier. The experience with the cloth excise duties after September 1956 shows that indirect taxes do not necessarily absorb purchasing power always; they sometimes also knock marginal units in an industry dead and thus lead to a prolonged decline in production.

On the question of foreign exchange, the *Economic Survey* covers much familiar ground. It virtually says that import restrictions cannot be tightened much further, except in occasional cases where the output of domestic substitutes is increasing. Nor can imports be liberalised. There is, therefore, an urgent need to increase exports in order to earn more foreign exchange, which latter is described somewhat lyrically as "a developmental resource *par excellence*." (Later on, however, it is stated that "the determining factor in success is the scale and intensity of the domestic effort towards increased production and savings".) In discussing how exports can be increased, the *Economic Survey* has very little to offer apart from a series of well-worn generalities. It declares that the need to boost exports is "paramount"; export promotion has "to be viewed as a central plank in public policy"; and so on—all of which are familiar but meaningless sounds. Coming down to more specific terms, it prescribes "an appropriate emphasis in investment allocations", "a strengthening of the institutional machinery for export promotion", and a restraint in domestic consumption through heavier taxes. The small point about reducing production costs, which one might have thought was central to the whole problem of export promotion, has not apparently struck the official policy-makers as worth much attention. Perhaps that is why they feel that "there are, in the short run, rather rigid limits to the expansion which can be achieved in respect of traditional exports like tea, jute goods and cotton textiles." Nobody denies that India ought to try and diversify the range of goods she sells abroad. But the wails of despair which are constantly heard about the potentialities of the traditional exports are justified only to the extent that the Government refuses to amend its fiscal and labour policies.

The authors of the *Economic Survey* are understandably disturbed over the fact that the country is not saving enough. As they put it, "the step-up in savings has been below expectations; the data available do not yet show any marked upward trend." The ratio of investment to national income has gone up from about 8 percent at the end of the first plan to around 11 percent for the closing years of the second plan, but much of this investment has been financed by external aid. The proportion of tax receipts to national income at current prices has risen only moderately, from about 8 percent in 1955-56 to about 9 percent in 1960-61—despite the sharp increases in taxation in recent years. The official policy-makers are justified in saying that "this illustrates how difficult it is, in a country with a preponderance of low incomes, to draw a growing proportion of national income into the public Exchequer." But they could well have added that they made their task even more difficult by not widening the tax base enough earlier. The stage has now been reached where the scope for further direct taxation is admitted to be negligible. The spread of indirect levies, especially on popular consumer goods, might have served the Exchequer better if it had begun much earlier. The growth in savings has been disappointing precisely because the Government has pocketed the money which would otherwise have been saved by the private sector. That is an important point to remember in framing the fiscal policies of the future.



SIGNPOSTS FOR THE SHIPBUILDERS

ACCORDING to the latest Lloyd's statistics, the tonnage of merchant ships launched in the world during 1960 dropped by 389,260 tons to 8,356,444 tons. On the face of it, this would seem to show that the world shipbuilding industry is still not out of trouble, but that assumption is fortunately not now supported by developments in the industry and the freight markets during the early part of this year. The *Financial Times* of London reported a few weeks ago that laid-up dry cargo shipping tonnage in the world had dropped from 5 percent in 1959 to 2 percent during the past year, and that all but 15 of the 226 ships laid up were built during or before the war. The paper further added that according to the estimate of some shipowners, barely one-third of the laid-up fleet can be brought back into service economically, thus offering little threat to any substantial improvement in demand for tramp shipping. It went on to point out that owners believe an expansion in shipping demand is beginning to develop in the grain trades, quite apart from the unexpected and urgent enquiry from China for tonnage to carry famine-relief grain from Australia and Canada.

It would be rather premature to say whether these developments presage a better outlook for shipbuilding during the current year. It is said that the world shipping tonnage is already excessive, and the fewer orders on the yards during 1960 could well be due to corrective measures taken by owners to bring their tonnage into more reasonable balance with the current and prospective state of total demand. In any case, they have to take a cautious view of the future, as competition from air transport is increasing and flag discrimination is fast becoming the order of the day. There has been, of course, an increase in freight rates in recent months: the U.K. Chamber of shipping statistics show that the single voyage tramp freight index rose to 76.7 points in December (1952=100), which was the highest level reached since February 1960. The average of the index for 1960 at 74.2 compares favourably with 71.9 for 1959; yet this may not encourage shipowners to embark on any feverish expansion programme. On the other hand, the probabilities are that their orders on shipbuilders are likely to be on a restricted scale, which will mean that competition for winning contracts will be keener. The costly schemes which the U.K. shipbuilders have launched for the modernisation of their yards is to be explained in this context. The U.K. has still a long way to go to regain its leading international position in shipbuilding, but it has managed to work its yards for the past few years at a steady level

output capacity. It was able, therefore, to maintain second position among the shipbuilding countries in the world in 1960. The tonnage launched during the year was 1,331,491, and the number of merchant ships 253. This shows a decline of 41,104 tons, compared with the 1959 figure, but the fall was proportionately much less than that in West Germany or Sweden, which countries were third and fourth in order of tonnage launched. Considerable declines were also recorded for the U.S.A., Norway and Italy, while smaller decreases were noted for the Netherlands, Belgium and Finland. Japan, which maintained her lead over all others for the fifth successive year, more or less maintained her output: the increase of only 079 tons to 1,731,656 tons was marginal. Against the general trend, however, France, Spain and Poland increased their output to individual records, while Canada's total was at its highest level since 945.

It can be seen from the figures in the Lloyd's annual summary concerning the tonnage launched for export, that the U.K. was one of the two principal shipbuilding countries, which had an excess of "imports". Countries having an "excess of exports" were Japan, West Germany, Sweden, France, the Netherlands, Poland, Italy, Denmark, Belgium, Yugoslavia, the U.S.A., and Finland, while Great Britain and Norway had an "excess of imports" amounting to 319,086 tons and 688,840 tons, respectively. Consequently, among the countries "for which the largest amounts of new tonnage have been launched", Great Britain and Ireland head the list. This presumably means that the U.K. is replacing with newer and bigger ships the older items in its merchant fleet fast enough to face the more competitive times ahead. The U.K. shipping industry has been representing to the Government that a measure of protection be accorded to it in view of the flag discrimination practised in other countries. The Government has so far shown no signs of obliging. On the other hand, it maintains that it is within the powers of the industry itself to put things right.

Current News and Comment

Alkali Chemical Profit Shoots Up

The ordinary shares of the Alkali and Chemical Corporation of India have been firm around Rs. 37.25 since the excellent results for the year ended September 1960 were published. After providing Rs. 33.12 lakhs (against Rs. 19.91 lakhs) for depreciation, the profit has increased from Rs. 37.78 lakhs in 1958-59 to Rs. 1.29 crores in 1959-60. The ordinary dividend has been increased from 9½ percent, taxable, to 12 percent, taxable. It is covered more than thrice and offers a yield of 3.2 percent at the present price. Taxation is allocated Rs. 25 lakhs, development rebate reserve Rs. 30 lakhs (against Rs. 35 lakhs), general reserve Rs. 28 lakhs and dividend equalisation reserve Rs. 20 lakhs. About Rs. 10 lakhs has been written back from development rebate reserve, being in excess of the statutory requirements. Sales increased from Rs. 3.44 crores to Rs. 5.40 crores. The polythene plant has worked very well. Extensions to the paint manufacturing plant have been undertaken. The chlorine and caustic soda plant has worked at full capacity, but the profit margin of this unit has been affected by the ceiling prices fixed by the Government. The development work for setting up the rubber chemical plant has made satisfactory progress. The directors are considering proposals for extending the capacity of almost every unit in order to meet the increased demand. It is proposed to treble the capacity of the polythene plant and an application has been made to the Government for this purpose. The cost of the expansion projects is estimated at Rs. 3 crores. Exports of the Company's products have increased.

Indian Aluminium Strong

There has been strong support for the ordinary shares of the Indian Aluminium Co. Ltd during the past few weeks. The preliminary results for the year ended December 1960, just published, are likely to reinforce the confidence of investors. Apart from the steady rise in dividends during the past three years, the growth possibilities have been enhanced by the fact that production is expected to rise by a further 10,000 tons from the present level of about 16,000 tons. The ordinary dividend has been increased from 12 percent, taxable, in 1959 to 15 percent, taxable, in 1960. For 1958, the dividend was 7 percent, tax-free. The latest dividend, therefore, offers a yield of 4.5 percent at the present price of Rs. 33.12 a share. In 1960, the profit has improved sharply from Rs. 80 lakhs to Rs. 1.2 crores, after providing Rs. 55 lakhs (against Rs. 52 lakhs) for depreciation and depletion, Rs. 99 lakhs (against Rs. 55 lakhs) for taxation and Rs. 3 lakhs (against Rs. 62 lakhs) for development rebate.

The production of aluminium ingots at the Company's smelters in Alupuram and Hirakud increased over the levels achieved in 1959. The output of rolled products in Belur improved in tonnage because of better product-mix and consistent operational efficiency. The extrusion production in Alupuram and the output from the aluminium powder and paste plant in Bombay also improved slightly over the previous year. Sales of the Company's own products rose from Rs. 7 crores in 1959 to Rs. 8 crores in 1960. Sales of agency products increased from Rs. 2.7 crores to Rs. 3.2 crores. The directors of the Company have recommended that a dividend of 5.55 percent (less income tax payable by the Company) be paid on the preference share capital for the year 1960. This incorporates the enhancement stipulated by the Preference Shares (Regulation of Dividends) Act, 1960.

State Bank Profit Improves

The latest report issued by the central board of directors of the State Bank of India, covering the year 1960, is of special interest. Apart from expanding its usual banking activities as other commercial banks have also done, the State Bank is trying to promote the banking habit by opening many more branches and by diversifying the supply of credit. The State Bank has fulfilled its statutory obligation by opening the 400th new branch (in Kairana, U.P.) within five years from 1st July, 1955. During 1960, 70 new branches were opened, against 97 in 1959. A sub-committee of the central board of directors is now working out a new programme for branch expansion. In the field of rural credit, the Bank has done useful service. It has extended a generous supply of funds to co-operative institutions and organised credit transfers at cheap rates. The credit limits sanctioned by the Bank to co-operative banks amounted to Rs. 15.2 crores at the end of September 1960. Co-operative sugar factories as well as industrial co-operatives have been financed. The Bank's scheme for providing credit to small-scale industries has made further progress. The number of industrial units assisted, and the limits sanctioned during 1960, rose by 63.8 percent and 69.2 percent, respectively. It is hoped that efforts to extend banking facilities in the rural areas, and to promote credit supplies to small industries, will be pursued with greater vigour. Since it enjoys the backing of the Government and has bigger resources at its command, the State Bank is in an advantageous position to extend such services.

There has been a substantial increase in the normal banking activities of the State Bank. Its advances rose by Rs. 53.7 crores to Rs. 211.9 crores during the 1959-60 busy season, compared with an expansion of Rs. 41.5 crores during the previous busy season. The increase in other scheduled banks' advances during the 1959-60 busy season was smaller (Rs. 134.6 crores) than in the 1958-59 busy season (Rs. 140.2 crores). The rise in the State Bank's advances constituted 28.5 percent of the busy season credit expansion of all scheduled banks. During the 1960 slack season, the Bank's advances declined by Rs. 90 lakhs only, against Rs. 41.8 crores in the 1959 slack season. The smaller credit contraction is obviously due to the fact that industrial advances have formed a steadily increasing proportion of total advances. At the end of December 1960, the Bank's advances were Rs. 226.5 crores, against Rs. 156.5 crores a year earlier. Between October 1959 and October 1960, advances to industry increased from Rs. 103.8 crores to Rs. 140.5 crores, their proportion to total advances rising from 65.8 percent to 67.2 percent. Deposits amounted to Rs. 557.4 crores in December 1960, compared with Rs. 563.4 crores a year earlier. The non-accrual of the counterpart funds under P.L. 480 from May 1960, and the transfer of these funds to the Reserve Bank at the rate of Rs. 12 crores a month from July 1960, are the main reasons for the decline in deposits. Due to this factor, and to the increase in credit demand, the investment portfolio was reduced to Rs. 286.5 crores in December 1960, showing a decline of Rs. 98.5 crores over the year.

If the demand for credit is maintained at the present high level, it is possible that the support which the State Bank gives to the Government's borrowing programme will be less in the future. The Bank has had fewer occasions to borrow from the Reserve Bank during 1960, but it remains to be seen whether it can do without much help from the central institution now that its advance portfolio seems to be well extended. The rise in deposits may not be adequate to cope with the increase in credit demand. The foreign exchange department of the State Bank has made considerable headway. Its rupee traveller's cheques are meeting with increased support. Satisfactory progress has been made in providing medium-term industrial credit. Apart from the loans given to limited companies for acquiring fixed assets for expansion and modernisation, the Bank has furnished many guarantees concerning advances made by foreign banks to Indian business men for importing plant and equipment. It has used the facilities offered by the Refinance Corporation for industrial advances. In order to promote the growth of road transport, the Bank has been active in extending hire-purchase finance for buying commercial vehicles.

The State Bank's profit has increased from Rs. 1.87 crores in 1959 to Rs. 2.18 crores in 1960. The dividend has been increased from Rs. 20 to Rs. 22.75 a share, taxable, including an interim of Rs. 10 a share. This absorbs Rs. 1.28 crores. Reserve fund is allocated Rs. 25 lakhs (against Rs. 20 lakhs), pension fund Rs. 7.29 lakhs (against Rs. 6.96 lakhs), bonus to staff Rs. 42 lakhs (against Rs. 40 lakhs), staff welfare fund Rs. 5 lakhs (against Rs. 2.50 lakhs) and staff co-operative housing fund Rs. 10 lakhs (against Rs. 5 lakhs). The carry-forward is Rs. 56,20,677, against Rs. 55,87,498 brought in.

Martin Burn Earns More

The profit of Martin Burn Ltd has increased slightly from Rs. 84.49 lakhs in 1958-59 to Rs. 84.87 lakhs for the year ended September 1960, after providing Rs. 2.35 lakhs (against Rs. 1.81 lakhs) for depreciation. The ordinary dividend has been maintained at Rs. 2.75 a share, subject to tax. It is covered more than twice and offers a yield of 9.7 percent at Rs. 28.44 a share. Taxation is allocated Rs. 35.50 lakhs (against Rs. 35 lakhs) and general reserve Rs. 5 lakhs (same). The carry-forward is Rs. 2,60,369, compared with Rs. 2,54,284 brought in. The preference dividend has been increased as

prescribed by the Preference Shares (Regulation of Dividends) Act, 1960.

The appreciable rise in the managing agency commission has been offset by a decline in the profits of the trading departments. Martin Burn has now been reappointed as managing agent for ten public companies and one private company, apart from being secretaries and treasurers for seven companies. There is likely to be a decline in the remuneration applicable to these new appointments, unless the fall can be offset by improved earnings in the managed companies. The managed companies in the engineering group offer scope for improvement, since they are growing. In spite of better working, the profitability of the electric companies has suffered because of the Electricity (Supply) Act, 1948. There has been an improvement in the working of the light railway companies.

Apart from the remuneration received from the managed companies, Martin Burn derives a considerable income from the merchandising and processing of various products, from contracts for the construction of buildings, medium and light structures and electrical installations, and from the manufacture of some electrical engineering products. Steps have been taken to handle more indigenous products in view of the restrictions on imports. Martin Burn is also investigating the prospects for manufacturing some engineering products in collaboration with foreign companies. It has participated in the Vaughan Burn Crane Co. Private Ltd for the manufacture of cranes, pulley blocks, etcetera, in collaboration with the Vaughan Crane Co. Ltd of England and Burn and Co. Ltd. During 1959-60, holders of 32,000 convertible notes in Martin Burn have exercised their option to convert their holdings into ordinary shares with effect from 1st October, 1960.

West Coast Paper to Diversify

In their annual report for the year ended June 1960, the directors of West Coast Paper state that an industrial licence has been obtained for manufacturing 9,000 tons of caustic soda and 7,200 tons of chlorine a year. The Company has also received a licence for manufacturing 27,000 tons of rayon-grade pulp a year. Negotiations are going on with the Canadian technical consultants, whose representative visited the Dandeli factory for an on-the-spot study. A final decision on the scheme will be taken after the report is received from the consultants. A preliminary attempt has been made to get the loans required for importing the capital equipment for the scheme. Negotiations, it is said, are being carried on with the Central Government for securing its approval for the arrangement.

The preliminary figures concerning West Coast Paper's working results were released along with the dividend announcement. Sales during the year totalled Rs. 3.58 crores (against Rs. 51.05 lakhs). The production of paper amounted to about 22,000 tons, against the rated capacity of 18,000 tons. The Company paid Rs. 55.53 lakhs as excise duty. Its gross profit was Rs. 1.17 crores. A sum of Rs. 45 lakhs has been transferred to development rebate reserve and Rs. 43.26 lakhs to depreciation. After providing for the proposed dividends and making other adjustments, a sum of Rs. 53,348 has been carried forward. The Rs. 100-paid shares of the Company are quoted around Rs. 210.

Sirpur Paper Earns More

The working of the Sirpur Paper Mills Ltd during the year ended June 1960 has been satisfactory. The gross profit of Rs. 75.18 lakhs is Rs. 18.05 lakhs higher than in the previous year. The results would have been still better but for the continuance of labour troubles and the reduction in paper and board prices from 1st January, 1960. The production of Sirpur Paper exceeded 30,000 tons, against 17,600 tons in 1958-59. The directors state that the output suffered in both quantity and quality because of labour troubles. There has, however, been an improvement in the labour situation recently. Net sales during the year increased from Rs. 2.88 crores to Rs. 4.33 crores, and closing stocks from Rs. 6.56 lakhs to Rs. 15.75 lakhs. Raw materials consumed cost Rs. 91.41 lakhs, against Rs. 49.17 lakhs. The consumption of stores, materials and chemicals showed an increase of Rs. 49.89 lakhs at Rs. 1.17 crores. Salaries and bonus accounted for Rs. 61.75 lakhs, against Rs. 45.28 lakhs. The increases in various items of costs are due to increased production. After providing Rs. 46.81 lakhs (against Rs. 30 lakhs) for depreciation and Rs. 6 lakhs (against Rs. 23 lakhs) for development rebate, the net profit has increased to Rs. 19.28 lakhs from Rs. 83,846. The ordinary dividend has been maintained at 65nP a share, subject to tax. The directors have recommended payment on the 6 percent, tax-free, preference shares, at the enhanced rate of 7.8 percent, subject to deduction of tax. The proposed dividends absorb Rs. 19.66 lakhs, leaving Rs. 34,592 to be carried forward, against Rs. 72,313 brought in. In the previous year, the directors had to withdraw Rs. 18 lakhs from general reserve for paying dividends. Sirpur Paper has obtained a licence to install a plant for manufacturing special varieties of light-weight papers up to a rated production capacity of 250 tons a month. The Company's total arrears of normal depreciation, including shift allowance, are estimated at Rs. 66.40 lakhs. It installed new machinery worth Rs. 1.10 crores during the year. At the current price of Rs. 16.50, the shares offer a gross yield of about 4 percent.

Good Results from Deccan Sugar

The Deccan Sugar and Abkhari Co. Ltd has produced good results for the year ended May 1960. The profit has increased from Rs. 26.15 lakhs to Rs. 29.08 lakhs. The ordinary dividend has been maintained at 25 3/4 percent, taxable. It is covered more than one-and-a-half times and offers a yield of 9.1 percent at the present price of Rs. 14.10 a share. The preference dividend has been increased, as prescribed by the Preference Shares (Regulation of Dividends) Act. Taxation is allocated Rs. 13.15 lakhs (against Rs. 13.03 lakhs), development rebate reserve Rs. 1.25 lakks (against Rs. 3.45 lakhs), general reserve Rs. 2.20 lakhs and dividend equalisation reserve Rs. 1.50 lakhs. The carry-forward is Rs. 1,29,253.

Reviewing the Company's performance in his address from the chair at the annual general meeting in Madras, Mr. C. R. Srinivasan, took a cautious view of the prospects. (Fuller details of his speech are printed on a later page.) It is believed that the ex-factory prices of sugar recommended by the Tariff Commission have been accepted by the Government. But when they are enforced, the profitability of sugar companies is likely to suffer. The Tariff Commission has calculated the prices on the basis of a return of 12 percent on the capital employed. But this return includes payments for bonus and gratuity, interest on borrowed capital, dividends on preference shares, managing agents' commission, income tax and dividends. So the actual return to the industry will be substantially lower than it appears at first sight. The ex-factory prices fixed by the Tariff Commission do not provide for any rehabilitation allowance. Considering the increased cost of equipment, it is essential that the industry be allowed to plough back adequate resources in order to finance modernisation and rehabilitation. Much uncertainty prevails about the formula the Tariff Commission has been asked to work out for linking the price of sugar with that of cane. It is hoped that in fixing the cane price, attention will be given to ensuring that the mills can sell their sugar at a reasonable price.

Commenting on the outlook, Mr. Srinivasan pointed to the possibility of excessive supplies following the expansion in production capacity. If output increases, it is possible that sugar factories will have to sell the commodity more cheaply, although through increased efficiency they might still be able to make reasonable profits.

During 1959-60, the Samalkot factory produced 11,179 tons of sugar (against 9,134 tons in 1958-59). The recovery was 9.50 percent, showing a decline of 0.05 percent because of the larger quantity of cane crushed during the longer season. The production of the Pugalur factory was 13,473 tons of sugar (against 13,862 tons) and the recovery improved from 9.67 percent to 10.32 percent. Production in the 1960-61 season is expected to be higher. Meanwhile, steps have been taken to extend the capacity of the Pugalur factory from 1,000 tons to 1,250 tons of cane a day. The expansion scheme may cost between Rs. 25 lakhs and Rs. 30 lakhs. Its production is expected to begin from the 1962-63 season. Mr. Srinivasan hoped that by raising output it will be possible to improve the operational efficiency.

Kesar Sugar Pays More

The shares of the Kesar Sugar Works Ltd have risen from Rs. 175 to Rs. 220 over the past few weeks due to sustained investment enquiry based on ideas of a higher dividend and improved working results for the year ended July 1960. The dividend and preliminary figures fully justify the market's optimism. The directors have raised the taxable dividend to Rs. 9 a share, from Rs. 6 in the previous year. The net dividend works out to Rs. 6.30, against Rs. 4.20. After allowing Rs. 70.54 lakhs (against Rs. 51.96 lakhs) for excise duty and Rs. 11.02 lakhs for sugarcane cess, the gross profit has increased to Rs. 23.75 lakhs from Rs. 11.23 lakhs in 1958-59. Providing Rs. 3.16 lakhs (against Rs. 2.45 lakhs) for depreciation, Rs. 2.10 lakhs (against Rs. 40,000) for development rebate and Rs. 7.90 lakhs (against Rs. 4.50 lakhs) for taxation, there is a balance of Rs. 10.59 lakhs. From this, the directors have provided Rs. 60,000 for tax for previous years and to the balance is added Rs. 9,576 brought in, making a total of Rs. 10.09 lakhs. The ordinary dividend absorbs Rs. 4.05 lakhs and the preference dividend takes Rs 91,575. A sum of Rs. 9,075 has been provided for additional dividend on preference shares for 1958-59. General reserve receives Rs. 4 lakhs, leaving Rs. 1.04 lakhs to be carried forward.

Progress of Indian Rayon

The chairman of the Indian Rayon Corporation, Mr. Morarji J. Vaidya, said at the shareholders' annual meeting recently that the Company is making satisfactory progress. Production will start in the middle of 1962. Shipments of machinery have begun arriving and the erection of the plant is likely to be taken up within the next three months. Indian Rayon has already established the mechanical workshop machinery in Veraval and the steel fabrication work has commenced. Orders for equipment like high-tension sub-station switch gear, pumps, cables and water treatment plant, which are to be obtained from indigenous sources, have been finalised. The chairman said that the factory would be designed for a daily production capacity of 10 tons of rayon yarn, 25 tons of sulphuric acid and 10 tons of sodium sulphate, instead of the 5 tons of rayon yarn a day originally proposed, in order to ensure greater economy in capital costs and better efficiency and profitability. Indian Rayon also has a scheme for manufacturing 15 tons of rayon-grade pulp a day. The Government has issued licences on condition that the foreign exchange component is to be procured through either foreign investments or foreign loans. The entire expansion scheme is estimated to cost Rs. 4.2 crores. Mr. Vaidya said that the Chase International Investment Corporation has agreed to give Indian Rayon a loan of $1.25 million, and negotiations with the U.S. Export-Import Bank for another loan would be concluded soon. The directors expect to raise Rs. 2.45 crores through foreign loans. The balance of Rs. 1.75 crores for the expansion programme is to be raised by the issue of fresh capital. The shareholders passed the resolution seeking approval for raising the Company's issued capital from Rs. 2 crores (made up of 145,000 equity shares of Rs. 100 each and 55,000 cumulative redeemable preference shares of Rs. 100 each) to Rs. 3.75 crores (divided into 290,000 equity shares and 85,000 preference shares). The dividend on the preference shares has been changed from 7 percent, tax-free, to 10 percent, taxable. The Company's Rs. 62.50-paid shares are quoted around Rs. 68.

Milk Powder from Hindustan Lever

Hindustan Lever Ltd proposes to set up a plant for manufacturing skimmed milk powder in Uttar Pradesh. The plant will have a production capacity of 215 tons a month. The project, it is estimated, will cost about Rs. 1 crore. The Company has obtained an industrial licence. It is expected that the plant will go into production before the end of next year.

Nestler Boilers Project

Nestler Boilers (Private) Ltd, Bombay, has secured an industrial licence for manufacturing "Powermaster" boilers and "Vorislow" fuel-burning equipment in India. Orr and Sendower Inc. of the United States is the foreign collaborating firm. The Government has approved the terms of collaboration. The U.S. firm, it is said, will supply the technical know-how. Arrangements have been made for the foreign exchange needed for importing plant and machinery. The factory will be located near Bombay. The project is expected to help build complete automatic packaged boilers, reaching a target of 1,200 pieces a year when the plant is in full production. The Company is likely to enter the market to raise capital within the next few months.

Bombay Paints Share Offer Soon

Bombay Paints and Allied Products Ltd will soon be in the market to raise fresh capital needed to carry out its expansion and rationalisation programme. Of the issued capital of Rs. 12 lakhs in equity shares of Rs. 10 each, the directors and their friends have agreed to take shares worth Rs. 4.50 lakhs. The balance of 75,000 shares is to be offered for public subscription. The Company has made an agreement with Hempel's Marine Paints of Denmark for manufacturing marine paints. Incorporated in 1949 as a private limited Company, Bombay Paints and Allied Products was converted into a public limited company in 1950.

Bigger Profit for Madura Mills

The Madura Mills Co. Ltd has made a net profit of Rs. 78,92,199 for the year ended December 1960, against Rs. 40.51 lakhs in the previous year. Depreciation takes Rs. 25.72 lakhs (against Rs. 19.94 lakhs). The provision for taxation is Rs. 71.72 lakhs, and development rebate reserve gets Rs. 6.38 lakhs. The directors have recommended an ordinary dividend of 15 percent, taxable, against 12½ percent for the previous year. The dividend absorbs Rs. 26.25 lakhs. A sum of Rs. 40 lakhs is transferred to general reserve, and Rs. 7.5 lakhs to National Industrial Development Corporation loan redemption reserve. About Rs. 7.21 lakhs is carried forward, against Rs. 2.05 brought in. The general reserve now stands at over Rs. 1.78 crores.

The directors say that the serious shortage of indigenous cotton in the closing months of the year created difficulties, but production has continued without interruption. The stock position has now improved and the outlook is somewhat better. Throughout the year, yarn prices have been reasonably good. The demand in India, and even from the Company's established export markets, has been excellent. Although prices are somewhat lower now, the mills expect to operate at a reasonable profit. The recommendations of the Central Wage Board for the Cotton Textile Industry have been implemented without the rationalisation of work-loads intended to complement them. Investigations on this aspect are making slow progress. The modernisation programme of the Company continues, although delivery dates from suppliers have been lengthening. The commencement of production in Serampore has been delayed and is now planned for April this year. No drawings have yet been made against the National Industrial Development Corporation facility of Rs. 75 lakhs. Firm orders for capital commitments placed and outstanding, as on 31st December, 1960, amounted to Rs. 134 lakhs, while further orders still being considered are worth approximately Rs. 152 lakhs. The National Industrial Development Corporation's facility will be used in 1961. The directors state that the policy of conserving resources has to be followed by the Company for a number of years to come.

I.F.C. to Invest in K.S.B. Pumps

The International Finance Corporation announced on Monday a commitment to invest $210,000 in K.S.B. Pumps Private Ltd of Bombay, to help finance the construction and operation of a plant in Pimpri, near Poona, for the manufacture of special-purpose pumps. The principal shareholder is Klein, Schanzlin and Becker A.G. (K.S.B.) of Frankenthal, West Germany. This firm was formed in 1871 and is today a leading manufacturer of a wide range of pumps, compressors and valves. Other shareholders are the Industrial and Prudential Investment Co. Ltd of Bombay; the New India Development Corporation (Private) Ltd; and a private investor. K.S.B. will be responsible for the construction of the plant, and for the Indian Company's management and technical direction. Production is planned at about 800 pumps annually, and is expected to begin in 1962. Total cost of the project is estimated at $630,000 in U.S. dollars and dollar equivalent. The I.F.C. investment of $210,000 is in unsecured dollar notes bearing 7 percent interest, payable in dollars, and maturing between 1966 and 1971. I.F.C. will also be entitled to receive additional interest in rupees related to profits. Its commitment is subject to the completion of the necessary legal formalities.

I.F.C. to Amend Charter

Mr. Robert L. Garner, president of the International Finance Corporation, has announced that a resolution to amend the Corporation's charter to permit it to make investments in capital stock is being submitted to the I.F.C. board of governors for action. Under its charter at present, I.F.C. is prohibited from investing in capital stock or shares. The Corporation came into existence in July 1956, with the hope that this prohibition against investing in capital stock would not unduly restrict its operations. The experience of 4½ years has now convinced the directors and management that the restriction is in practice a serious handicap both to the growth of I.F.C.'s operations and the mobilisation of private capital for foreign investment. Mr. Garner emphasises that "the ability to do equity financing, where appropriate, would provide wide flexibility of financing so as to meet the varying needs of private enterprise in the developing countries and to attract private investors to participate with I.F.C. It would substantially assist I.F.C. in increasing the scale of its operations, and thus increase its contribution to economic development." The proposed action to amend the charter does not involve further capital subscriptions by member-countries.

Given the power to invest in capital stock, I.F.C. would be in a position to: (1) strengthen by its own investment the capital structure of enterprises; (2) encourage private investors to join in with it in taking either preferred or common stock; (3) share in the risks and profits of an enterprise in traditional form; (4) negotiate investment terms on simpler and more acceptable lines; (5) make more effective use of options and convertible securities; (6) and co-operate with local institutions in the development of capital markets by underwriting issues of convertible securities and share capital for public subscription. I.F.C. would not go into the business of selling shares to the public; that would be done by private bankers and brokers. I.F.C. would be in a position to assure that the required funds would be forthcoming as needed, pending the time when public investors could subscribe to such shares. It feels strongly that it should not exercise control over, nor participate in management of, private business. It has not participated in management or even named a director on the board of any enterprise in which it has invested. It would not ordinarily wish to vote stock held by it. I.F.C.'s purposes would be served if it could invest in stock which it would be prohibited from voting except in cases of jeopardy or other special circumstances. It is emphasised that the sole purpose in requesting this right is to enable I.F.C. more adequately to meet the needs of worthwhile private business in forms more acceptable to business men and investors.

Madras Cements Ready to Start

The report of Madras Cements Ltd for the year ended September 1960 says that the erection of plant and machinery for the first stage of the project has been completed and trial runs are now going on. It is expected that the plant will be able to start regular production shortly. The directors are going ahead with the expansion programme by putting up an additional plant with a capacity of 350 tons a day, so as to reach the licensed capacity of 600 tons a day. The import licences for the second stage of the scheme have been granted, and orders have been placed for equipment on a rupee-payment basis. The new plant is likely to be commissioned by the end of 1962. To finance the second stage of the project, the Company has issued a further Rs. 70 lakhs of capital, and the Industrial Finance Corporation has sanctioned an additional loan of Rs. 50 lakhs.

Excise Levy on Textiles Criticised

The cotton textile industry is worried about the additional excise duties on cloth and the new levies on yarn proposed in the latest Central Budget. The excise duty on higher medium cloth has been raised by 25 percent. Besides, excise surcharges for the processing of all varieties of cloth have been increased by 66⅔ percent. The excise levy on cloth produced on automatic looms has been raised by 25 percent. A new excise duty of 10nP a kilo for counts below 35s and 15nP on counts of 35s and over has been imposed on yarn meant for use in mills for the production of cloth and also on yarn manufactured for sale, except for yarns of 11s to 40s if issued in hanks. Duties have been imposed on chemicals and dyes which are used in mills. The Central Finance Minister has estimated the yield from the new levies on yarn at Rs. 5.2 crores. He expects another Rs. 4.72 crores from the excise duties on cloth, making a total of Rs. 9.92 crores. But according to textile circles, the yield will be much higher—anything between Rs. 11.5 crores and Rs. 16 crores. The Indian Cotton Mills Federation thinks that all the new imposts will raise the price of cloth by 3 percent or 4 percent. It is surprised that Mr. Morarji Desai should have thought it advisable to impose fresh burdens on the industry when the Central Government has expressed concern about the rising trend in cloth prices. The excise duty on cloth can easily be passed on to the consumer in a sellers' market but the duty on yarn will become an element of production cost. So the Federation has criticised the new levy on yarn consumed within the mills for manufacturing cloth, particularly when a duty on cloth already exists. Composite mills produce about 760 million kilos of yarn, of which they consume about 520 million kilos. The additional burden apart, the Federation says that the excise levy on yarn is likely to give rise to many administrative difficulties, so it will hinder the day-to-day working of mills. The excise levy on cloth made on automatic looms has also evoked strong criticism, for it will hinder the modernisation of the industry. Besides, the duty is said to be far in excess of the saving effected through the use of automatic looms. Since most of the automatic looms licensed over the past few years have been established mainly for producing cloth for export, the Government might think that the excise duty will not place any undue burden on the industry. But the Federation points out that if the same type of cloth manufactured in the same mill on automatic looms and on plain looms is to bear duties at different rates, it will lead to difficulties in marketing. It has, therefore, urged the Central Finance Minister to withdraw the duty on yarn produced and consumed by mills themselves for manufacturing cloth, and to remove the additional duty of 25 percent for cloth made on automatic looms.

Change in Reinsurance Bill

The Government has given notice in the Lok Sabha that it proposes to alter certain provisions of the Insurance Amendment Bill, 1961. This Bill, as explained in a leading article last week, is meant to promote the growth of the Indian reinsurance market by compelling insurance companies to reinsure a certain proportion of their business in this country. The alteration now proposed seeks, in the case of fire insurance only, to replace the quota share cession by reinsurance of the surplus normally ceded. There is, however, a stipulation that the amount of premiums so ceded will not be less than the agreed percentage, within the limit of 30 percent, which would have applied if the original quota share cession had been in existence. It may seem that the change is being made by the Government in order to meet criticisms that the quota share cession, by which reinsurers will share the retainable premium of the companies, hardly fits in with the declared objective of arresting the outflow of foreign exchange. The critics said that the outgo arises, if at all, only from the disposal of the surplus, which may thus be canalised to local approved reinsurers within the limits prescribed by the Bill and in accordance with the absorbing capacity of the reinsurers. The Government has not, however, conceded similar methods of cession in marine, miscellaneous and motor insurance.

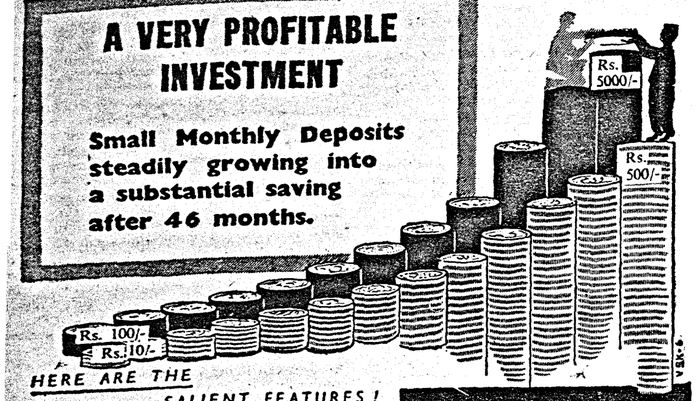
It appears that the Bill is intended mainly to ensure for India Guarantee the same terms as India Reinsurance enjoys. In fact, during the many discussions which Indian insurers have recently had with the Central Finance Ministry, there has been no attempt to conceal this intention. (India Guarantee is the reinsurance Company in the public sector.) It is permissible, under the terms of the promoters' agreement, for companies to cede fire insurance on a surplus basis to India Reinsurance—as long as the premiums so ceded equal 10 percent of the direct premiums of the companies. In other sectors, the quota share system operates without exception. It is now abundantly clear from the many indications received from the Government that it proposes to appropriate 20 percent—and to distribute that 20 percent equally between India Reinsurance and India Guarantee. Of this 20 percent, the share India Reinsurance now obtains will be statutorily recognised. The balance will be used to provide India Guarantee with what is called a "base" in official circles. The amendment thus merely seeks to confer in favour of India Guarantee the same options as India Reinsurance now has with the companies in relation to fire insurance. The question of "base" has been debated often. But no impression has been made on the Government by the argument that India Guarantee—by virtue of a monopoly of the reinsurances emanating from subsidiary general insurance companies, who again have a monopoly of 75 percent of the direct business emanating from Government and semi-Government sources—already has more than the "base" it requires. That "base" compares very favourably with the so-called base conferred on India Reinsurance by member-companies. Nor has the other argument carried any weight—that in exchange for the "base", member-companies hope to share in profits of India Reinsurance, which India Guarantee is unable to concede. The Bill and the proposed amendment are thus designed to buttress India Guarantee, and the ostensible objectives are just a camouflage.

Cotton Production Targets

The Indian Central Cotton Committee has proposed to the Planning Commission a production target of 7.2 million bales of cotton for the third plan. Presiding over the recent meeting of the Committee, Mr. V. Shanker, vice-president of the Indian Council of Agricultural Research, said that with greater co-ordination it should be possible not only to achieve the target but to produce more. Considering the likely increase in the demand for cloth, the consequent rise in the industry's requirements of raw cotton and the need for building an export surplus, the target of 7.2 million bales seems to be the bare minimum if India is not to depend on large imports. But it is not easy to share Mr. Shanker's optimism about achieving the target, for past experience has been far from encouraging. Little comfort can be derived from

A VERY PROFITABLE INVESTMENT

Small Monthly Deposits steadily growing into a substantial saving after 46 months.



HERE ARE THE SALIENT FEATURES!

- SAVING BY MONTHLY INSTALMENTS— Minimum Rs. 10/- and Maximum Rs. 500/-.
- LOANS GRANTED AGAINST RECURRING DEPOSITS IN CASE OF NEED.
- Accounts can be opened in joint names and in the names of minors.
- Standing instructions for payment of monthly instalments accepted.
- Instalments accepted free of charge at any of the 137 Branches of the Bank in India.

EEIC-45

the fact that the 1960-61 cotton crop, estimated at around 5.2 million or 5.3 million bales, is very close to the second plan revised target of 5.4 million bales. It is not the output which has recorded any impressive improvement; only the target has been revised downwards from 6.5 million bales to 5.4 million bales. The 1960-61 crop looks good only when it is compared with the previous season's 3.8 million bales. There has not been any noticeable progress in cotton production in recent years, because even in 1954-55 India produced a crop of 5.3 million bales.

The scope for bringing a larger acreage under cotton is limited by the more pressing need to raise food production. The increase in cotton output thus has to be brought about mainly through intensive cultivation. The success of intensive efforts will depend largely on irrigation facilities and the increased supply of fertilisers. The use of farm manure, improved agricultural practices, better implements and seeds can make a valuable contribution. Roughly 25 percent of the increased output, Mr. Shanker said, will be achieved by the use of fertilisers.

Idle Capacity in Foundries

The total number of iron and steel foundries now working in India is estimated at about 2,000, their installed capacity being 1.4 million tons. Many of them are lying partially idle, because they lack either orders or raw materials. The development of big casting projects in the public sector might increase the idle capacity further, so foundries in the private sector are worried. Speaking at the annual general meeting of the Indian Foundry Association in Calcutta last week, Mr. P. N. Ghosh, president, said that although there is no shortage of pig iron at present, the supply of foundry-grade pig iron has fallen short of the demand. Unless the steel plants in the public sector start producing more graded pig iron, the raw material difficulties of the foundry industry cannot be overcome. The former have prepared a set of rules which they rigidly follow in their sales policy. They do not accept an indent if the full value of the pig iron ordered is not paid for in advance. This condition has to be fulfilled for each indent, whatever be the number at a given time. Mr. Ghosh said that since indents are placed according to the release orders issued by the Iron and Steel Controller, a firm is often compelled to place several concurrent indents on a steel plant when the release orders are issued by the Control authorities in quick succession. Under the circumstances, the indenting firm has to arrange for the payment of the full value of the total quantity of pig iron of all the indents taken together, without any reference to the time of delivery, which may be spread over a year. Besides, iron and steel foundries are facing a shortage of hard coke. The Central Government should take immediate steps to set up more coke ovens with a view to increasing the output.

A PUBLIC SCANDAL

OUR readers will recollect this scandalous case in which a District Magistrate and Superintendent of Police conspired together to imprison an innocent man. We were told at the time that these officials had been punished, but this is what we read in a recent judgment of Mr. Pennell :—"Mr. Corbett was nominally punished with the stoppage of his promotion for one year. No sooner were the Government orders issued than he was transferred from the undesirable station of Backergunge to Ranchi, which is well known as a sanitarium and he has remained there ever since. Further, the last civil list shows that he has been put back over the heads of all the Police officers of this year, with the exception of Mr. Justice Steven's son, who was confirmed before him. An expression of the 'Lieutenant-Governor's severe displeasure' was conveyed to Mr. Bradley, whose conduct in the opinion of the Governor-General in Council 'amounted to a little short of persecution and was a flagrant abuse of the authority with which as a police officer he was entrusted.' Between the 1st and the 2nd of these verbal castigations Mr. Bradley was appointed to officiate as District Superintendent of Police of Muzufferpore, the prize District of Bengal, in succession to a very senior officer, who is Mr. Bourdillon's brother-in-law: and there Mr. Bradley has remained up to date. A good many of us would rather like this sort of punishment. Mr. Bourdillon has been first appointed to officiate and has since been confirmed as Chief Secretary to the Bengal Government. Messrs. Twidell and Zaker Hosain were granted leave on full pay, and were allowed to join it to the Puja vacation, an extraordinary concession not admissible to Judges even of the High Court. Mr. Twidell and Moulvi Zaker Hosain are still administering injustice at Chupra, with powers to try men summarily and inflict three months' rigorous imprisonment without any appeal. Babu Jaganath Sahay, the pleader who championed Narsingh Singh, has had to remove his practice elsewhere."

If these statements are true, they are a grave public scandal.

A Ditcher's Diary

FEW POLITICIANS ARE REMEMBERED FAR BEYOND THEIR death; but the debt of gratitude which India owes Pandit Pant will never fail to be acknowledged, at length and with deep sincerity, in the annals of her post-independence history. A senior colleague once said of Mr. Nehru that the Prime Minister is like a banyan tree under whose shade nothing grows. He could perhaps have mentioned Pandit Pant as an outstanding exception, in the sense that here was a man who in seven brief years rose from the somewhat parochial glory of the U.P. Chief Ministership to command, from the Central Home Ministry, a position of countrywide respect and influence paralleled only once before by Sardar Patel. The qualities which won Pandit Pant that position are by now well known: a tremendous fortitude and courage which marked even his last, dying days, and a sharpness of intellect which few of his colleagues, in Congress or Government, ever quite managed to equal. Above all, he showed selfless determination in the pursuit of any cause he espoused, even though such single-mindedness was always tempered with the emotional softness of a benign and kindly heart. Brave men have been known to falter before the ill-health which dogged Pandit Pant in his later years; but, uncaring of the personal hazard, he maintained a relentless tempo of hard work right until, a fortnight ago, the cruel hand of fate struck him for what was really the last time. It was hard work and an exceptional mind which made Pandit Pant not just an astute politician, but a brilliant administrator and a distinguished parliamentarian commanding a mastery of detail whatever the subject he happened to be dealing with. The sorrow the country has just expressed is only a preliminary token of respect; the sorrow that will linger will be the real monument to his greatness as a man.

MR. MACMILLAN NEVER MADE QUITE CLEAR JUST why he decided a Commonwealth Prime Ministers' conference was essential on Monday last; and I am in considerable doubt that we will know any better at the end of the talks. It is plain enough that South Africa and the Congo will feature prominently in the discussions; and this has been the clearer since the official spokesmen's maladroit efforts to have us believe that disarmament is the main thing on the agenda. I consider it unnecessary for me to proclaim anew that I am a great believer in the Commonwealth; but I am getting increasingly more impatient with its mounting hypocrisies. Perhaps there is something to be said for South Africa's readmission as a republic, for it cannot be shown that severance of the connection will in any way improve the lot of the Africans and Asians in that country. But those who protest so vehemently that the Commonwealth must retain South Africa so that apartheid may in due course be less brutal, are under an obligation to show that London has so far exercised some humanising influence on the men in power in South Africa. This, I submit, cannot be shown. Again, at the risk of being impolite, the time has come to give some thought to the size of the Commonwealth membership; for we have seen where one country one vote has taken us in the United Nations. I do not need to be reminded that there is no voting in the Commonwealth club; but let us not pretend that numbers do not mean anything at all. While on the subject, and in a generally nasty mood, I should like to discourage the use of the word "club" too often. The image it evokes fits in perfectly with Mr. Macmillan's lachrymose manner and somnolent look, but the Commonwealth is not going to live very long on that basis. There is need to make it a businesslike body, even at the cost of some unpleasantness—or it will be only a joke to nations who are earnest about international relations. Even inter-Commonwealth relations do not improve on unrelieved indifference to all the issues that really matter.

ART EXHIBITIONS ARE MORE NUMEROUS IN Calcutta these days than even the most ardent enthusiast can profitably cope with; but they are nevertheless a great source of temptation. I have myself managed to find time to visit a few recently, including those admirable paintings of the Himalayas by Maharaja Sir Tashi Namgyal of Sikkim at the Academy of Fine Arts' building, as well as those exhibited by members of the British Women's Club elsewhere. Of the women painters, I can only say that I found their work much better than I expected, having heard that almost all of them are housewives no doubt with heavy responsibilities at home. Some of the paintings were quite remarkably good, and perhaps if such shows are held frequently we can expect to see even better work in future. But there is a point I feel I must mention here, and that is that one important side of this city's cultural life is nowadays being neglected: I refer to the theatre, particularly the English theatre. Amateurish efforts to promote and popularise it have, of course, been made from time to time, but usually without much success. The fault is not all the promoters': sufficient popular encouragement and support is all too often lacking. So, when an invitation arrived for me from the "Amateurs", a group of young people who have started with the serious ideal of promoting "dramatic appreciation and consciousness" in Calcutta, to one of their initial efforts, I went not with the approach of a critic, but as a well-wisher. The amusing two-act play which I saw was on the whole well done. It was called *Bashful Bill*, was written by one John J. Melluish, and was as enjoyable for me as it obviously was for the rest of the audience. I understand this group intends to tackle the more ambitious venture of staging some Shakespearian plays next April. Shakespeare is admittedly very difficult for amateurs, but it seemed to me this group might just have the talent and enterprise for such an undertaking. I wish them the luck they deserve.

AS THOUGH THERE WERE NOT ENOUGH LANGUAGES around us already, a colleague now on one of his rare visits to the Indian capital claims to have discovered another. He writes: "With apologies to George Orwell, I propose to call it Newdelhispeak. It is occasionally reminiscent of English, oldspeak and newspeak, although people here usually 'dispose files of' and 'avail of leave' while laughing at such Bengali aberrations as 'jam-packed' or 'pin-drop silence'. Apart from these minor points of grammar, what distinguishes Newdelhispeak is its bold experiments in the meaning of words. Every Minister is 'a great man', especially if he is in failing health; every deputy Minister is 'a very able man' until he has been dropped from the Government for reasons totally unconnected with competence. Mr. is now rarely used; Sri is the O.K. handle. For the 'great men', however, ji is indicated at the end of the name; Panditji or Nandaji, for instance, although I have not yet heard Morarjiji. For this last named great man, Morarjibhai is the correct form, indicating some reverence and some familiarity—both of which may be conspicuously absent in the addressor's mind. To open conversations in Newdelhispeak, such notices as 'hanji' or 'kahiye sahb' cannot burn patriotism; and to speak another Indian language is downright treason. Cabinet gossip is a dozen a *naya paisa*; and a special correspondent (or was he a special representative?) told me how he knew that the Vice-President once threatened to resign. The two great men share a dhobi; and the latter asked the journalist whether he could suggest some alternative accommodation. You see, the dhobi lived in Dr. Radhakrishnan's house in New Delhi. But no language is a mere collection of words; it represents an outlook of life, almost a world view. Some recently failed to discover the African personality. I suggest I have found the New Delhi personality. Going back to Newdelhispeak, is there going to be a demand for a Newdelhispeak suba? That's probably going too far; but as I watch Delhi's ways and means, I have an uneasy feeling that Newdelhispeak already has a separate suba—so total is its isolation from the rest of the country and its people."

IT IS OFTEN SAID THAT IF YOU ARE AN EMINENT European business man of this city all you have to do to get a mention in Ditcher's Diary is to retire, whereas if you are an Indian business man it is usually necessary to die. And such is generally the case, because so often nowadays the gap between retiring from India and retiring from life altogether is so long for a European business man, perhaps containing another career altogether, that by the time he dies there are few people left in Calcutta who remember him at all vividly. But it is not so with Sir Edward Benthall, who, although he left here 14 years ago, was a frequent cold weather visitor, had already become something of a legend in the business life of this city, and was a figure of such distinction on the war-time all-India scene as to guarantee permanently his place in this country's political and economic history. He was also one of the warmest and kindest personalities that ever lived, added to which he was once chairman of this newspaper. I am not going to enumerate the many achievements and accomplishments of this remarkable man; the obituary columns of the daily newspapers are the proper place for that sort of thing. What I propose to do is simply to quote the last few lines that were written about him in this Diary on 4th July, 1946, when he left for England on retirement, one of the last non-official members of the Viceroy's Executive Council. ".....he was quite one of the most popular men in Delhi. Bland, smiling and immense, sheer patience and courtesy carried him through many a stormy incident in the Legislative Assembly.... His house in Queen Victoria Road was famous for its hospitality. His assumption of responsibility for an important branch of wartime administration has added to the general stock of Indian goodwill which British business in this country enjoys. To that extent we are all in his debt." What finer obituary could any man have than that?

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S REPORT

Extract from the Statement by the Chairman, Mr. Vincent Alpe Grantham, on the Report and Accounts for the year ended 31st December, 1960:

The record figure of £270,390,101 set up in last year's balance sheet total has soon been outstripped, for the accounts now placed before you reflect the further expansion of the Bank's business by an increase of £45,813,097, producing a new record total of £316,203,198. We have also been able to maintain a high degree of liquidity as evidenced by a slight increase of 1.47 per cent. in the ratio of cash to our demand and time liabilities, which now stands at 19.55 per cent.

The fall of £2,200,280 in Current and Other Accounts is small in relation to the increase of £48,723,430 in our Fixed Deposits. Bills Payable are higher by £569,466 but there has been a reduction in our Acceptances of £2,872,556.

Our assets are all higher, with increases of £12,795,970, £5 609,575, £1,035,300 and £27,848,337 in our Cash in Hand at Call and at Bankers, Government and Other Securities, Bills of Exchange and Advances to Customers and Other Accounts respectively.

The Consolidated Balance Sheet total of £362,759,636 shows an increase of £45,737,927 over that of last year.

Consolidated Profit and Loss Account

Stockholders will have noticed that we have adopted the practice of the leading banks in the City of London by making all allocations to Premises Account, Pensions and other Staff Funds, before arriving at our published profits and last year's figure has been adjusted accordingly.

In the current year our profit of £761,916 is arrived at after deducting £155,000 (1959—£145,000) on account of Pension Fund and Widows' and Orphans' Fund and £250,000 (1959—£250,000) on account of Bank Premises so that in comparison with 1959 the profit shown has been increased by £142,220.

Next year our published profit should be compared with the published figure for 1960, viz., £761,916. In September last we paid an interim dividend of 8 per cent. less income tax absorbing £245,000 and it is now proposed that out of the balance available a final dividend of 7½ per cent. less income tax, on a capital which has been increased during the year to £5,500,000 be now paid at a net cost of £252,656.

We have transferred £250,000 to Reserve Funds, bringing the total of those Funds up to £5,750,000, and there remains to be carried forward a balance of profit of £506,254, an increase of £14,260 over that for last year.

India

India is now on the threshold of the third five-year plan, which starts in April. It is no exaggeration to say that the critical phase has been reached in the enormous task of raising within the constitutional framework of parliamentary democracy the living standards of a population now estimated to number approximately four-hundred-and-thirty millions. It is generally agreed that the first and second five-year plans have successfully laid the foundations necessary for further economic advance, and the various criticisms so often voiced of this or that aspect of Indian planning policy must not be allowed to obscure the magnitude of what has already been achieved. Perhaps industrial development has been allowed to outrun the supply of power and the provision of transport and is, therefore, partially nullified and no doubt undue emphasis has so far been placed on the development of heavy industry rather than increasing agricultural output, but agriculture is to receive a more prominent place in the new plan. The target for food grains has been raised by twenty-five million tons and a further twenty million acres is to be brought under irrigation. Soil conservation and an increased use of fertilisers are important planning features and, provided the practical work required to implement the plan is carried out, it is hoped that there will be a sufficient production of food grains for the country within the next five years. The central government will have to obtain the co-operation of the individual states in its plans as agriculture is a state subject under the constitution. The success of the third five-year plan, not only in agriculture but in all aspects covering industrial development, transport, power and communications, can only be relative to India's ability to raise the necessary foreign exchange for the point has now been reached where future development is dependent upon external credits and aid funds. The comfortable cushion of foreign exchange reserves available at the beginning of the second plan has been spent and the sterling balances are now only adequate for current needs. So far, official visits abroad have resulted in pledges covering approximately one-quarter of the external cost of the projects in the plan, but no doubt considerably larger grants will be forthcoming as it seems clear that the governments of the West will have to help India for many years to come. Encouraging too is the noticeable increase in enthusiasm, particularly from America, for investment of private capital although Britain, privately and as a country, continues to make valuable contributions to India's development. Private investment from the United Kingdom, which in 1958 was estimated to be about £300 millions, is probably much higher now, whilst since that date official loans amount to £110 millions.

India can itself contribute to the success of its ambitious plan by increasing exports but can save little on imports which are now no more than sufficient to keep industry going. In time the manufacturing industries developed under previous plans can be expected to make a useful contribution to export earnings providing costs can be kept down, but for some time to come reliance for help in this direction will have to be placed on the traditional exports, tea and jute. With the country's future development so dependent upon exchange earnings it is all the more surprising that there should be increased interference by officialdom in commercial trading, particularly as experienced government servants are so badly needed in the ordinary administrative duties for which their training suits them. Their handling of commercial undertakings which can only suffer from lack of commercial training and knowledge, must prove costly to the country at a time when it can least afford it and the tendency to increase their activities is a further manifestation of the see-saw between public management and private enterprise. The private sector, which still accounts for ninety per cent. of the total output of the economy, is, in the third five-year plan, once again to play a smaller part and only forty-two per cent. of the total investment is allotted to it.

The only other source of foreign exchange lies in India's hidden gold, but the authorities must by now despair of getting this into official hands and their endeavours seem more directed to the prevention of further hoarding by making savings more popular and curtailing the money supply. This is no doubt one of the factors enabling the Reserve Bank to go contrary to the government's desire for cheap money; the other is an endeavour to contain inflation due to speculation, and to achieve this the Reserve Bank called on banks for special statutory deposits and has put considerable limitations on the amounts that banks may borrow from the central authority at bank rate against government securities or under the bill market scheme. By bringing into effect a system of selective credit control the Reserve Bank seems to have succeeded in introducing a dearer money policy without, on paper, increasing the cost of government borrowing. This position may not continue unless banks keep a reasonable interest differential between borrowing and lending, for if unrealistic rates continue to be quoted for bank deposits investors will be inclined to switch from government securities. The quotation of unduly high deposit rates by indigenous banks nullifies the aim of the Reserve Bank, shown in its fixing of minimum lending rates, to enable those banks to make reasonable profits in order to build up their reserves. This concern of the Reserve Bank over the economic state of the indigenous banks, particularly the relation of capital and reserves both published and undisclosed, can be well understood after the banking failures in India in the current year and so can the Reserve Bank's desire that the smaller banks merge into stronger units.

NOTES :—

(1) There are contingent liabilities on Bills re-discounted, £6,522,492 (1959, £11,631,510) (of which £3,748,042 has run off at 27th February 1961) and commitments in respect of Confirmed Credits, Forward Exchange Contracts and Guarantees.

(2) Contracts for outstanding capital expenditure on premises amount to approximately £260,000 (1959, £173,000).

(3) Assets and Liabilities in foreign currencies have been converted into sterling at approximately the rates of exchange ruling on 31st December, 1960.

(4) Under Part III of the Eighth Schedule to the Companies Act, 1948, the Bank is exempted from showing the aggregate amount of its reserves and the movements therein.

REPORT OF THE AUDITORS

TO THE STOCKHOLDERS OF THE CHARTERED BANK

We have obtained all the information and explanations which we considered necessary for our audit. In our opinion proper books of account have been kept by the Bank and proper returns adequate for the purposes of our audit have been received from the branches which have not been visited by us. The annexed balance sheet of The Chartered Bank is in agreement with the books and returns.

We have also examined the annexed group accounts, comprising the consolidated accounts of the Bank and its wholly-owned subsidiaries and the accounts of its other subsidiary, Allahabad Bank Limited, with the audited accounts of those companies, certain of which have not been audited by us. Subject thereto in our opinion the said balance sheet and group accounts give, in the prescribed manner, the information required of banking companies by the Companies Act, 1948, and on the basis indicated in Note (4) on the balance sheets give a true and fair view of the state of affairs as at 31st December, 1960 and of the profit, ascertained as indicated in the profit and loss accounts, for the year ended on that date of the Bank and its subsidiaries, so far as concerns stockholders of The Chartered Bank.

THE DECCAN SUGAR AND ABKHARI COMPANY LIMITED

EXTRACTS FROM MR. C. R. SRINIVASAN'S REVIEW

SIXTY-FOURTH ANNUAL GENERAL MEETING

Presiding over the Sixty-fourth Annual General Meeting of The Deccan Sugar and Abkhari Company Limited, held on 27th February 1961, Mr. C. R. Srinivasan, Chairman said that although the net profit after taxation for the financial year ended 31st May 1960 was about Rs. 3 lakhs more than that of the previous year the Directors had decided to maintain the dividend on the Ordinary Share Capital at the same level as last year.

Extracts from Mr. C. R. Srinivasan's Review are quoted below:

"The net profit after taxation was about Rs. 3 lakhs more but the Board considered it expedient to take further sums to General Reserve and to place a sizeable sum to Dividend Equalisation Reserve. In this connection I would draw your attention to Note 12 of the Notes on the Accounts headed 'Contingent Liability''. Unless and until we see the final shape in which the Price Linking Formula emerges from the Tariff Commission's enquiry, the sugar industry cannot tell with exactitude what price it will have to pay for cane delivered from the 1958/59 season onwards. As we have stated in this note, a reasonable provision for this factor has been made in the Accounts, but the possibility of a further Contingent Liability exists and in all prudence we must maintain a margin out of which, if it arises, it can be met. Another major factor which must be borne in mind is that during the current year owing to the All-India increase in production, sugar stocks at our Factories are likely to build up, and we must husband our cash resources to help carry this additional load.

Preference Dividend

The enactment of the Preference Shares (Regulation of Dividends) Act, 1960 behoves us to declare Dividends totalling 9.1% on the Preference Share Capital of the Company. Unfortunately this was enacted too late to enable us to pay the Final Dividend of 2.1% subject to deduction of Tax for the year ended 31st May 1960 together with the Interim Dividend for the current year. We have now made arrangements to pay it tomorrow.

Pugalur Factory Expansion

In my speech at the last Annual General Meeting I told you that we had applied to the Government of India for permission to expand the capacity of Pugalur factory from 1,000 tons to 1,250 tons cane per day. I am glad to say that permission has been received and orders placed for almost all the necessary equipment. The scheme is expected to cost between Rs. 25 and Rs. 30 lakhs and if the required plant and machinery is delivered in time the new capacity will be effective from the 1962/63 season. Against the background of rising sugar stocks, a doubt may be raised in the minds of some of our shareholders as to the wisdom of going ahead with this expansion. I believe that the law of supply and demand must operate, and the fact that we have more sugar than this country requires will mean that prices will come down, and it is only those factories who can manufacture cheaply who will be able to continue to make a profit. It is estimated that the expanded factory will produce sugar at approximately Rs. 17/- per ton more cheaply than is currently possible. On a production of some 28,000 tons per annum this Rs. 17/- assumes considerable significance. Incidentally, in the last two years we have been able to link the Special and Main Seasons, thus eliminating the idle period between the two. In the current combined season it is hoped to produce 22,400 tons of sugar against 18,429 tons in the previous combined season.

Tariff Commission's Report

I will now deal with the general problems of the sugar industry as they present themselves to us in the South. The most important events in the interval of time since I addressed you last were, first, the publication in April 1960 of the Tariff Commission's Report on the Cost Structure of Sugar and, second, the reference in October 1960 by the Government of India to the Tariff Commission of the egregious Price Linking Formula for sharing with the cane grower the price realised for sugar.

The outcome of the report on the cost structure of sugar is that the country has been divided into four sugar regions, the Southern region comprising the States of Andhra Pradesh, Madras, Mysore and Kerala, with recommendations as to the basis on which fair ex-factory prices are to be fixed for each region. While we have no serious quarrel with the structure of the ex-factory price suggested for the Southern region, subject to certain obvious lacunae being redressed, the main draw-backs of the recommendations are that (a) the Commission considers that a fair return to the industry is 12% on employed capital within which to meet commitments under bonus and gratuity, interest on borrowed capital, dividend on preference shares, managing agents commission and income tax and "finally leave a residue to a large majority of the units in all the regions to declare reasonable dividends" and (b) no rehabilitation allowance has been granted in the cost structure, in spite of the fact that the Supreme Court has freely conceded this necessity for it in industry when machinery prices have increased 5 to 6 times in the short space of a decade.

The recommendations of the Commission have been accepted by Government, but I can only hope that before fixing any ex-factory price in the South, where as yet there is only self-imposed control to sell at the same price as the average landed cost of North Indian sugar, Government will give due consideration to the representations made on the utter inadequacy of the "fair" return and the need for a rehabilitation allowance.

Price Linking Formula

This brings me to the question of the freight advantage accruing to the Southern factories by reason of the Southern region being still on the whole somewhat deficit in sugar. It is obvious that this advantage can last only so long as the need for importing North Indian sugar continues and our selling price is influenced by the landed cost of North Indian sugar. We in the South have for long voluntarily parted with the lion's share of the freight advantage to the growers in the shape of the SISMA formula or a negotiated settlement, keeping for ourselves only a little over one third of the net ex-factory price realised for sugar. The Price Linking Formula in the form in which it was placed on the Statute Book would upset this fine balance and reduce the factory's share to the point where profits would dwindle and the sugar industry would cease to attract the middle class investor who is still the backbone of the private sector. Perhaps a timely realisation of the ill-effects of the formula prompted the Government to refer it to the Tariff Commission. It is to be hoped that a solution will emerge from the findings of the Commission that will do justice to the industry, the cane grower and the worker in the factory. Proper representations have been made on behalf of the industry.

Sugar Production

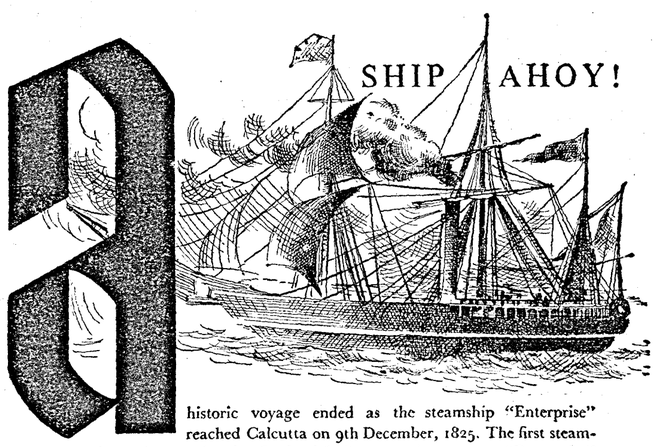
The overall sugar situation in the country is that there is a large surplus, part of which must be exported albeit at a huge loss, if internal prices are to be maintained at economic levels. All-India production in the current season is likely to reach an all time record of 27 lakh tons, the South contributing as a whole thirty percent more than the production in the last season. We in the South are fast attaining not only self-sufficiency but, owing to the unrestricted expansion that seems to be on the anvil, reaching a state of affairs in which disposal of the substantial surplus after making due allowance for increased per capita consumption will present a problem that cannot be solved by exports which involve heavy loss all round, namely to the industry, the Exchequer and the grower. It behoves Government not to lose sight of the implications of over-expansion and its attendant evils, despite the exhortations of our planners and the pressure of the new vested interests.

Planners should realise that the bulk of next year's sugar crop is already in the ground. This sugarcane must be milled and any intention Government may have of curbing the expansion of sugarcane production can only show any effect on the production of the 1962/63 season.

Our relations with labour during the year under review have been satisfactory and I wish to record my appreciation and that of my fellow-Directors of the loyal work put in by them and the staff."

The Report & Accounts for the year ended 31st May, 1960 were adopted, the retiring Directors, Mr. M. J. Edwards, Mr. G. N. Noel-Tod & Mr. P. Hadfield were re-elected and the retiring Auditors, Messrs. Lovelock & Lewes were re-appointed on the same remuneration as for the previous year.

N.B.:—This does not purport to be a report of the Proceedings of the Annual General Meeting.



historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

TAXING INTER-CORPORATE DIVIDENDS

By K. C. Khanna

THE proposals relating to the taxation of dividends on inter-corporate investment, as contained in the latest Budget of the Central Government will, if accepted, apply to investment in companies formed on or after 1st April, 1961. Thus, the proposed changes will not affect investments already made under different assumptions, and for existing companies, the *status quo* is maintained. Under the existing law, different rates of tax apply to dividends depending on whether the dividend paying company is a subsidiary or a non-subsidiary, and the dividend receiving company is an Indian company or a foreign one. The proposals now made visualise a uniform rate of tax, irrespective of the status of the dividend paying and/or receiving company; the only exceptions are where the dividend paying company is one to which the provisions of Section 56A apply and those with incomes of less than Rs. 25,000. For ready reference, the position is summarised below:

Nature of dividend income	Total tax payable by an Indian company (percent)	Total tax payable by a foreign company (percent)
(1) Dividends from any Section 56A Indian company	20	20
(2) Dividends from a subsidiary Indian company formed and registered before 1st April, 1961 ...	30	30
(3) Dividends from a non-subsidiary Indian company formed and registered before 1st April, 1961 ...	45	63
(4) Dividends from a non-subsidiary Indian company formed and registered on or after 1st April, 1959, but before 1st April, 1961	40	53
(5) Dividends from an Indian company whether subsidiary or non-subsidiary, formed on or after 1st April, 1961 ...	40	40

Explanation of Finance Minister

It will be noted from the above that for investment made in companies which will be formed on or after 1st April, 1961, the rate of tax applicable on dividends will be 40 percent. Explaining this proposal, the Finance Minister stated as follows in the course of his Budget speech: "Under the law as it stands, there is a concessional rate of supertax on dividends received by a parent company from its subsidiary, while inter-corporate investment on a minority basis is taxed at a higher rate. I feel that we should not, through our tax laws, encourage the formation of subsidiaries. Consistently with our broad social objectives, our tax laws should help to enlarge rather than restrict the scope for public participation in all joint-stock companies. I have one more consideration in mind. Because of the more favourable treatment given to income derived from subsidiaries, foreign investors in Indian companies are tempted to ask for a majority holding. The tax on a minority shareholding by a foreign company is substantially higher than on an Indian company with a minority investment. The investment of foreign capital can make a major contribution to our programmes of industrial development. We do not, rightly, give any tax concessions to the foreign investor as such. At the same time, we should not impose a higher tax on inter-corporate investment from outside which comes in with the Government's approval than on similar Indian investment. Having regard to all these considerations, I propose that the rate of supertax on dividends paid on inter-corporate investment, whether Indian or foreign, and whether on a majority basis or a minority basis, should be fixed at 20 percent. In order that this change does not affect investments already made under different assumptions, the new rate of taxation will apply to investment in companies formed after 1st April, 1961".

While the reduction in the rate of tax on minority investment in companies and the attempt at simplification and uniformity are to be welcomed, it is regretted that the uniform rate of 40 percent proposed by the Finance Minister is still too high. It is now well appreciated that inter-corporate investment is playing a more and more important part in the industrial and economic development of all countries, particularly the underdeveloped ones. As remarked by the National Council of Applied Economic Research, in its latest study *Taxation and Private Investment*, with the decline of the managing agency system in India, the need of business houses to employ the holding company device has increased. Moreover, inter-corporate investment by the parent company in a subsidiary and also in the case of minority shareholdings serves as useful mechanism for the transfer of surplus funds to those who need them. Similarly, foreign investment will invariably come in the form of a two-tier structure consisting of a foreign company investing in an Indian company. It is, therefore, imperative that the rates of tax on dividends on inter-corporate investment should be so regulated that they not only do not act as deterrents, but also appear to be attractive.

Highest in World

Unfortunately, the general impression that a lowering of the rate of tax on minority investment is a concession granted to attract foreign capital will be found to be erroneous, when it is remembered that the aggregate burden of tax on the dividend paying and dividend receiving companies, in spite of the reduction, amounts to 67 percent, and is among the highest in the world.

Given below are specimen figures showing the net return to the shareholding company after the taxes on profits and dividends have been paid under the existing rates as applicable to companies formed before 1st April, 1959, and the proposed rates which will apply to companies formed after 1st April, 1961.

It will be seen from the table below that at present, the shareholding company can receive as much as 38.50 percent of the profits made by an Indian company after payment of taxes. When the proposed rates of tax come into force, the maximum return to a shareholding company will be 33 percent only. In other words, the total burden of tax will be fixed at 67 percent on all forms of companies, with the exception of a few to which the provisions of Section 56A apply. This compares most unfavourably with the rates in force in other countries and is too heavy a tax burden to promote inter-corporate investment.

Foreign Practices

The Finance Minister's apprehensions about the formation of subsidiaries are not appreciated, particularly if the parent company is a public company. It is obvious that any expansion or development of the interests of the parent company will inevitably lead to a wider participation in its ventures by the public. In most other countries, dividends received by the parent company from its subsidiary are generally given favourable treatment, even though the requisite percentage of shareholding to become a parent is much less than that in India. As a matter of fact, the entire taxation of inter-corporate investment is on a modest scale. For instance, in the U.K., a resident company pays income tax at 38.75 percent and profits tax at 12.50 percent and is permitted to deduct income tax at 38.75 percent from dividends paid. No further income tax or profits tax is payable by a company receiving such dividends.

In the U.S.A., a domestic corporation receiving dividends from another domestic corporation subject to income tax is taxable thereon, but it is allowed a deduction equivalent to 85 percent of the dividends received. Tax is not deducted from dividends paid. In France, the parent company can deduct from its taxable income 75 percent of the dividends received from its subsidiary. For this purpose, the parent company must have been a registered holder since the formation of the subsidiary or, for at least two years, of not less than 20 percent of the capital of the subsidiary.

West Germany imposes a corporation tax of 51 percent on retained profits and 15 percent on distributed profits. Dividends received by one company from another are included in profits for corporation tax purposes, but if the recipient company owns at least 25 percent of the paying company's share capital, the dividends received are exempt from further liability. Where, however, dividends received in this way have been taxed at the reduced rate of 15 percent, they are subject in the hands of the recipient company to a "special corporation tax" of 36 percent, representing the difference between the general corporation tax of 51 percent and the distributed rate of 15 percent. In Holland too, dividends received from companies in which at least 25 percent of the share capital is held are excluded. In other cases, dividend tax is payable at 15 percent on distributions. In other countries, that is, Canada, Hongkong, New Zealand, dividends received by a resident corporation are excluded from taxable income if they are from another resident company which is subject to income tax on its profits. No tax is payable either by deduction or by assessment on dividends received by one company from another company in South Africa and tax is payable only on company profits.

Unrealistic Tax

Judged in the context of the above, the proposed increase in the rates of tax chargeable on dividends received by a parent company from its subsidiary would appear to be anything but realistic. It also shows clearly how much the Indian system of taxation on inter-corporate investment is at variance with those of other developed and underdeveloped countries. To impose a total tax burden of 67 percent on the profits of a company and its dividends is, to say the least, inequitable, oppressive and harsh. Unfortunately, company taxation, as with most other forms of taxation, cannot be kept out of the political field and the Finance Minister, too, would appear to justify the raising of the rate on dividends from a subsidiary company purely on grounds of "our broad social objectives". The total tax burden in other countires varies from about 50 percent to 60 percent and it is, therefore, to be strongly urged that a uniform rate of 30 percent on dividends from inter-corporate investment should be prescribed instead of the proposed 40 percent. Further, the said rate of 30 percent should be made applicable to all companies irrespective of their date of formation or registration. Even from practical considerations, to add to the numerous existing classifications of companies under the Income Tax Act, a further classification based on the date of formation, will make confusion worse confounded, rendering the deduction of tax at source from dividends a most complex job.

	Existing rates applicable to companies formed before 1st April,1959		Proposed rate applicable to companies formed on or after 1st April, 1961
(a) Indian subsidiary company with Indian foreign holding company:			
Taxable profits—	100.00		100.00
Income and supertax thereon at 45 percent	45.00		45.00
Net divisible profits—	55.00		55.00
Income and supertax thereon at 30 percent	16.00	at 40 percent	22.00
Net to shareholders	38.50		33.00
(b) Non-subsidiary Indian company with Indian shareholding companies:			
Taxable profits—	100.00		100.00
Income and supertax thereon at 45 percent	45.00		45.00
Net divisible profits—	55.00		55.00
Income and supertax thereon at 45 percent	24.75	at 40 percent	22.00
Net to shareholders	30.25		33.00
(c) Non-subsidiary Indian company with foreign shareholding companies:			
Taxable profits—	100.00		100.00
Net divisible profits—	45.00		45.00
Income and supertax thereon at 45 percent	55.00		55.00
Income and supertax thereon at 63 percent	34.65	at 40 percent	22.00
Net to shareholders	20.35		33.00

(The case of a few companies formed on or after 1st April, 1959 and before 1st April, 1961 has been omitted).

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN CALL FUNDS

Wednesday, 8th March

THERE has been little change in the total level of advances outstanding in the Calcutta money market during the past week. Requirements of the cotton and jute mills were relatively unchanged and there has even been a fall in demand from the iron and steel and engineering industries. Only the needs of the sugar mills and call for accommodation against grains and seeds storage have shown any increase, but these have not been large. In the interbank market, conditions are unchanged on the week and the call rate remains at 5¼ percent.

There has been rather more activity in the exchange market due chiefly to an improvement in the supply of gunny bills. Tea bills have remained scarce. Remittance demand continues to be poor. There has been considerable confusion in the London money market during the past few days due to the revaluation of the West German D-mark and the Dutch guilder. Partly as a result of these disturbances, the pound at the close recorded losses against almost all important currencies.

BULLION WAS STEADY DURING THE PAST WEEK DUE to a shortage of supplies. Silver advanced from Rs. 239.75 to Rs 240.25, quoted today for ready delivery. The rate for forward delivery was Rs. 202.50 a kilogram. The London and New York prices were 79⅛d and 91.375 cents.

Gold improved from Rs. 143.75 (Mysore) to Rs. 147. The sovereign at Rs. 96.75 showed a gain of 50nP.

A RISE OF Rs. 21.83 CRORES TO Rs. 1,947.16 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 3rd March, 1961. The total note issue was Rs. 1.80 crores lower at Rs. 1,958.50 crores. Notes held in the Banking Department consequently fell by Rs. 23.63 crores to Rs. 11.34 crores. Deposits of the Government of India declined by Rs. 9.60 crores to Rs. 51.44 crores, as did other Government accounts by Rs. 3.69 crores to Rs. 14.70 crores. Balances held abroad declined by Rs. 2.20 crores to Rs. 29.29 crores. Investments at Rs. 154.12 crores showed an increase of Rs. 10.52 crores. Other loans and advances rose from Rs. 147.64 crores to Rs. 155.53 crores, of which advances to scheduled banks against usance bills amounted to Rs. 27.55 crores (Rs. 26.15 crores). Ways and means advances stood at Rs. 41.62 crores, against Rs. 37.77 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 24th February, 1961, shows a rise of Rs. 2.97 crores to Rs. 553.45 crores in total deposits. Investments in Government securities are up by Rs. 28 lakhs to Rs. 251.09 crores, while other authorised investments remain unchanged at Rs. 9.75 crores. Advances, including loans, cash credits, overdrafts and bills discounted, have increased by Rs. 1.80 crores to Rs. 264.89 crores. Cash and balances are, in consequence, shown at Rs. 28.98 crores or Rs. 4.67 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 24th February, 1961, shows Demand and Time liabilities at Rs. 812.56 crores (Rs. 19.98 crores on account of borrowings from banks) and Rs. 1,086.36 crores (Rs. 10.49 crores), compared with Rs. 805 crores (Rs. 18.02 crores) and Rs. 1,088.65 crores (Rs. 10.12 crores), respectively, in the previous week. Cash has declined by Rs. 83 lakhs to Rs. 45.20 crores, while balances with the Reserve Bank have risen by Rs. 5.38 crores to Rs. 72.91 crores. There is a drop of Rs. 1.15 crores to Rs. 584.42 crores in investments. Advances and bills discounted at Rs. 1,263.47 crores show an increase of Rs. 3.30 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.2 percent and 66.5 percent, against 6.0 percent and 66.5 percent.

THE DIRECTORS OF THE CHARTERED BANK HAVE recommended a final dividend of 7½ percent, actual, less income tax for 1960. Allocations to premises account, pensions and other staff funds amounting to £405,000 have been made before arriving at the profit of £761,916. This compares with the previous year's profit of £619,696, after allocations of £395,000. In the consolidated accounts of the Bank and its wholly-owned subsidiaries, £250,000 has been transferred to reserve funds, leaving £506,254 to be carried forward.

THE DIRECTORS OF THE NATIONAL AND GRINDLAYS Bank Ltd have declared a second interim dividend for 1960 of 7 percent, less income tax at 7s 9d in the pound, payable on 5th April, 1961.

THE WORKING OF THE DEVKARAN NANJEE BANKING Co. Ltd for the year ended December 1960 shows a profit of Rs. 29.24 lakhs (against Rs. 16.07 lakhs), after adding Rs. 5.69 lakhs brought forward from the previous year. The directors have recommended a final taxable dividend of Rs. 2.52 a share which, together with the interim dividend of Rs. 1.86, amounts to 8.76 percent for the year. The reserve fund has received Rs. 8 lakhs (against Rs. 6 lakhs) and taxation provision Rs. 9 lakhs (against nil). A sum of Rs. 7.86 lakhs has been carried forward. The balance-sheet shows that the deposit and other accounts amount to Rs. 35.81 crores. Investments are shown at Rs. 12.31 crores and advances at Rs. 24.34 crores. The directors state that 13 branches were opened during the year, bringing the total to 96 at the end of 1960.

HEAVY BUYING IN STOCK MARKET

INDUSTRIALS RISE ON MARK REVALUATION NEWS

London, 8th March.

HECTIC conditions were experienced in the stock market during the past week, and on Monday, the number of bargains officially recorded at 22,821 was greater than at any time since January 1960, when the market was still enjoying the post-election boom. Buyers were in the majority on most days and this was particularly noticeable on Monday following the big news that the West German Government had revalued its currency, a move that was quickly followed by Holland and gave rise to other Continental countries taking similar action, although denials from the various countries were *quickly forthcoming*. One of the uncertainties in the stock markets has been the export outlook, but with West German goods now less competitive both in West Germany and other parts of the world, the prospect for U.K. exports has brightened somewhat. This attracted buyers to industrials and is expected to continue. Among the stocks particularly favoured were those of the big exporting companies such as electrical equipments, engineerings and motor-cars and substantial gains have been recorded. Gilt-edged securities however were an uncertain market and moved erratically. The fall in sterling in the foreign market after the week-end currency moves tended to unsettle the section. In the foreign market, Greek bonds were occasionally supported, but German bonds showed no alteration, being unaffected by the revaluation of the mark. Interest in gold shares remained on a limited scale and the business transacted was very much of a professional character. South African politics were still a deterrent. Occasional small support mainly from Johannesburg helped prices at times, but the move usually failed to develop. Political uncertainties also checked business in copper shares, but tins made good headway under the influence of satisfactory company news. Oil shares fluctuated somewhat, but were higher on balance. Rubber shares encountered a selective demand and tea shares tended higher, although the Indian decision to reduce the export duty had little influence.

The Money Market

With the main tax gathering season drawing to a close, the pressure which it exerts on money supplies slackened and conditions throughout the past week in the money market were less difficult. However, there was no easing of the rate which ruled firm at 4⅛ percent and 4¼ percent. Demand for bills was only moderate with May and "hots" sold to the clearing banks at 4⅛ percent and to other banks at 4-5/16 percent. These bills, however, are now currently quoted at 4⅛ percent, following a further increase in the Treasury bill rate of just over 10d to £4 8s 10.41d percent at Friday's tender. The higher bill rate reflected the weakness of sterling and the fall in the gold and foreign exchange reserves announced last Thursday.

Activity on Wall Street

U.S. Government and top quality corporate obligations during the past week tended to drift into lower ground early in the period as traders hesitated following the recent rise which carried many issues to their highest levels in about two years. The forward movement and heavy dealings in the security market was also cited for the indifference in bonds by the investing public. The Treasury and corporate list eventually developed renewed firmness as a result of quickened interest by investors with the Government bonds aided by stepped-up purchases of intermediates by the Federal Reserve system. Convertibles took their cue from the action in the stock market with a number of issues moving into new highs. In a mixed market for foreign dollar bonds, Belgian Congo 5¾ percents were a firm spot moving up a half dozen points while Rhodesia 5¾ percents fell nearly 3 percent to come within striking distance of their 1960-61 low. French Credit Foncier 5½ percents dipped over one point early, but eventually recouped part of the loss. Among the German nationals the 3 percents of 1963 and 5½ percents of 1969 added over one on single sale with Italians showing little change. Chile 3 percents backed and filled to finish with a minor fractional gain.

Mixed Market in Vegetable Oils

Quite a useful business was completed in linseed in the past week from the principal origins both here and on the Continent and the close was steadier. After a good start, enquiry for groundnuts fell away. Linseed oil has had a fairly active week and at the close, prices showed little change from those of a week ago. Castor oil lacked buying incentive. The U.K. was the main support for groundnut oil, which brought further higher levels.

W. German Official Rate of Payment for Gold

The official price of $(U.S.) 35 a troy ounce will be paid in West Germany for 0.222168 grammes instead of 0.222588 grammes as before the revaluation of the deutschemark, a West German news agency has reported.

Italy Not to Revalue Currency

Rumours that Italy was considering revaluing the lire are unfounded, an authoritative source in Rome said on Monday. There were no plans for such a move, the source added.

Stocks and Shares

PROFIT-TAKING FOLLOWS THE POST-BUDGET BUYING SPREE

OPERATORS TURN CAUTIOUS AS BOMBAY ACTS TO STOP THE BOOM

Wednesday Evening.

THE hearty enthusiasm with which the stock market greeted the Central Budget has waned a little during the past week. But the undertone is still very healthy, and if the best prices have not been maintained, it is only because some folk are keen to book their profits. They are cautious, not pessimistic.

The implications of the Budget are analysed in detail in the leading article of this issue. Second thoughts have given the market no reason to revise its opinion that the Budget is a good one. The suspicion is nevertheless growing that some of the concessions the Finance Minister has offered are no concessions at all (*e.g.*, in the case of tea). Furthermore, he has perhaps deliberately underestimated the revenue from many of the excise and Customs duties. But the market is not too worried about this for the time being. It is convinced that, as long as shortages persist, much of the indirect taxes will be passed on to consumers. The news from the New Market seems to support this supposition.

The reason for the new-found caution is that the ides of March 1960 are still fresh in the market's memory. The reckless boom which followed last year's Budget inspired the stock exchange authorities and the Reserve Bank to impose stiff restrictions on trading. The market would, therefore, like a boom now, but would not like it to be reckless. And the authorities' vigilance is evident from the fact that special "making-up" prices have been fixed for some shares in Bombay. Fearing that further measures might be taken, the weaker hearts have been cashing their profits and sitting out. The justification for further measures, however, simply does not exist at the moment, although it could arise with a renewal of the boom.

A minor reason for the profit-taking is that last week many operators bought shares merrily, trying to anticipate a flood of bonus issues. The revised opinion now is that (1) the bonus issues are by no means certain, since some companies may not feel it worth while paying the 12½ percent tax; (2) if the issues come, they will not come in a flood; and (3) the Government apparently intends to restrict their number, since Mr. Morarji Desai has said that the Capital Issues Control will keep a strict watch over them. Nevertheless, it does seem that quite a few bonus issues will be made; Mr. Desai has clearly stated that the reduction of the tax has been made "from the revenue point of view and from the point of view of widening the equity base of companies."

The general feeling of well-being is supported by the fact that some companies have issued good reports during the past week. The most outstanding results are those of the Alkali and Chemical Corporation and the Indian Aluminium Company. Both have done the right thing with their bumper profits—that is, they have paid bigger dividends. And both are expanding further. (The results of these and other companies are reviewed in our "Current News and Comment" section.)

After closing at Rs. 25.92 at last Wednesday's settlement, Indian Iron moved up vigorously to a high of Rs. 26.80, but have eased to Rs. 26.32 on profit-taking today. A good report has lifted J.K. Steel, and bonus issue hopes are pushing up Guest, Keen, Williams. Other engineering issues are buoyed by the growth prospects; the official *Economic Survey* informs them that with bigger iron and steel supplies, their production is likely to increase—to the extent that it is not restricted by the shortage of imported components and raw materials.

The jute section has been dull, and only partly because operators have had better things to find elsewhere. The gradual decline in fibre prices over the past few days would have been satisfying to investors, but for the fact that hessian and sacking prices have also eased. That is why National and Howrah are hovering around their old levels, moving only in sympathy with the other speculatives. This is normally a time of year when Clive Row is buzzing with forecasts about the size of the new jute crops. So far, however, it has found very little to say on the subject, although if the next month or two bring glad tidings, interest in jute shares may revive.

Coal shares have met with occasional profit-taking, but the general undertone there is quite steady. Some interest has been aroused by reports that the Central Government is trying to jerk itself out of slumber over the monumental transport mess. Further assurance is, however, awaited that it is wagons, not tongues alone, that are moving.

The undertone in miscellaneous industrials has been firm, although the best prices have not always been maintained. Apart from the activity in Alkali and Chemical and Indian Aluminium following the good working results, many other shares have attracted interest. Indian Cable and National Insulated Cable have risen on bonus issue hopes. Talk of foreign loans for the Company has lifted Hindustan Motors. Isaac Holden and Hindustan Twyford have moved strongly ahead. Proposals for building a milk powder plant have raised Hindustan Lever.

Tea shares benefited from some attention early in the week, but the opinion is now gaining ground that the net effect of the changes in the export and excise duties will be very little. The tax burden may actually increase unless much more of the commodity can be exported or sold in packages.

Gilt-edged are quiet due to the stringency in the money market. But some short-dated securities have improved since the official buying prices were raised.

Phosphate Company

The results of the Phosphate Co. Ltd. for the year ended June 1960 show a profit of Rs. 7.90 lakhs (against Rs. 6.66 lakhs), after providing Rs. 1.13 lakhs (against Rs. 1.09 lakhs) for depreciation, Rs. 49,428 (against Rs. 42,110) for development rebate and Rs. 6.90 lakhs (against Rs 8.30 lakhs) for taxation. The directors have recommended a dividend of Rs. 35 a share, taxable. Among important allocations, bad and doubtful debts reserve receives Rs. 50,000 (against nil) and general reserve Rs. 2 lakhs (same). The carry-forward amounts to Rs. 2.05 lakhs, against Rs. 1.02 lakhs brought in. The directors say in their report that a licence has been received from the Central Government for the installation of an additional sulphuric acid plant. This will help increase the

THE JAVA BENGAL LINE'S OFFICE AT CALCUTTA

LIGHTING BY PHILIPS

When one enters the recently renovated offices of the Java Bengal Line in Calcutta's premier business area. there is an almost breathless hush of amazement at the unusual elegance which presents itself. The reason is, at once, obvious. The evenly spread out and gentle lighting lends an atmosphere of dignity and efficiency.

And naturally, the lighting is by Philips.

The diffuse and even high level lighting, free from shadows and glare, has been achieved through recessed fluorescent lamp fittings. These Philips' exclusive fittings produce lighting that totally eliminates eye-strain and increases staff efficiency.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the evergrowing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

production from 8,250 tons to 24,750 tons a year. The plant is likely to be commissioned by the end of 1961 and will make the Company self-sufficient in sulphuric acid. The scheme for the renovation and modernisation of the superphosphate plant has already been taken in hand. It is expected that the output will increase when the scheme is completed.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for February 1961 are published below, the figures for January being given in brackets.

Production	(In tons)
Pig iron	96,791 (112,649)
Steel ingots	72,839 (83,787)
Saleable Steel:	
(A) Semis	20,483 (14,912) } 70,966 (71,540)
(B) Finished	50,483 (56,628) }
Despatches	
Saleable steel	74,111 (69,157)

Tata Steel Output

Tata Industries Private Ltd, managing agent for the Tata Iron and Steel Co. Ltd, reports that the total approximate production of iron and steel at the steel works in Jamshedpur during February 1961 was: pig iron 125,900 tons; steel ingots 126,500 tons; semi-finished steel for sale 24,900 tons, and finished steel 69,300 tons.

Bombay Market

PROFIT-TAKING REDUCES SHARE PRICES

BUDGET INTERPRETED BULLISHLY

Wednesday Evening.

THE Bombay stock market has closed the past week in a steady mood, although share prices were fractionally shaded towards the close. It looks as if many of the bulls who had bought in anticipation of a favourable Central Budget, were inclined to take their profits. In spite of a cut in the development rebate and the imposition of many new excise duties, the Budget proposals were generally interpreted bullishly. It is believed that in view of the good performance of the corporate sector the future outlook is fairly good. Companies having large reserves were fancied on the prospect that the reduction, from 30 percent to 12½ percent, in the bonus share tax, might encourage these issues. In view of the fact that foreign investments have been given some incentives, companies having foreign collaboration also attracted attention.

The imposition of moderate carryforward charges at the past settlement indicated a healthier technical position, but caution was called for because make-up prices were being fixed for some clearing shares to restrain speculation.

Tata Steel closed at Rs. 152.50, and Indian Iron at Rs. 26.30. The decline was partly due to lower production figures of both the Companies for February, which was a short working month. Engineering shares were firm, and Tata Locomotive were bought up to Rs. 331. Alcock Ashdown were in demand at Rs. 287 and Premier Construction came to hand at Rs. 207. Motor shares were steady, and Premier Automobile met with support up to Rs. 177 on prospects of expansion. Hindustan Motors were supported at Rs. 21.76, mainly from Calcutta interests.

The increase in the excise duty on cloth and yarn did not have much effect on mill shares, and Century improved to Rs. 533 on replacement buying. Bombay Dyeing were transacted at Rs. 65, and Kohinoor at Rs. 291. Standard fluctuated widely, closing at Rs. 1,318. Simplex came to hand at Rs. 179 and Khatau were in demand up to Rs. 515. Svadeshi were wanted up to Rs. 247 and India United Ordinaries were done at Rs. 14.16. Business passed in Apollo at Rs. 1.50.

The prices of miscellaneous shares moved up generally in line with the overall pattern. Among sugar shares, Belapur were dealt in at Rs. 288 and Phalton were placed at Rs. 146. Among cement shares, Associated Cement were firm at Rs. 154.50, but Digvijay declined to Rs. 164 on profit-taking. Mining shares were firm, and Shivrajpur Syndicate were wanted up to Rs. 100 on hopes of a higher dividend. Chemical shares were steady, and business passed in Tata Chemical at Rs. 18.52. Indian Dyestuff met with support at Rs. 470 and Polychem were taken at Rs. 242.50. Steamship company shares were quiet, and routine business was transacted in Scindia Steam at Rs. 15.12. Great Eastern Shipping were quoted at Rs. 14.94. National Rayon improved to Rs. 536 and Baroda Rayon were in demand up to Rs. 143. Voltas met with investment support at the higher price of Rs. 284 and Wimco were bought at Rs. 292 on prospects of a bonus share issue. Interest was taken in Synthetic and Chemicals at Rs. 155 and Tata Oil were done at Rs. 81.

Banking shares were steady and prices were quotably higher. Bank of India were placed at Rs. 119.25, as were Central Bank at Rs. 57.50. Among insurance shares, New India Assurance improved fractionally to Rs. 55.50 and Indian Mercantile were done at Rs. 43.25.

There was scattered interest in electric company shares, and Tata Hydro improved to Rs. 101.50. Ahmedabad were placed at Rs. 6.50 and Bombay Suburban were dealt in at Rs. 87.

Madras Market

TURNOVER FALLS BUT SENTIMENT MAINTAINED

IMPORT ASSURANCES WELL RECEIVED

Wednesday Evening.

THERE was a decline in turnover in the Madras stock market during the past week, but sentiment was fully maintained. It appears that the gains in share prices since the publication of the Central Budget proposals were being consolidated. There was an undercurrent of optimism concerning the future outlook of the corporate sector. Although the prospect for further taxation was admitted, it was thought that the increase would be taken in its stride if the corporate sector was permitted to work with greater freedom. The decision of the Import Advisory Council to ensure the flow of maintenance imports at a satisfactory level was having good effects.

Government securities were quiet due to stringent monetary conditions. Except for scattered enquiries in short-dated stocks, there were more sellers than buyers in other dated stocks, including State loans. There was little interest in public utilities, and routine business was done in West Coast at Rs. 13.87 and in Cochin at Rs. 10.20.

In the banking group, Indian came to hand at Rs. 170 and Indian Overseas were dealt in at Rs. 189. Andhra were done at Rs. 100.

Sugar shares were steady, and Deccan were placed at Rs. 14.10. E.I.D. were quiet at Rs. 41 on paying a final ordinary taxable dividend of 14-2/7 percent, making a total of 21-3/7 percent for the year, against 28-4/7 percent in the previous year. United Breweries were steady at Rs. 112 and Mysore came to hand at Rs. 58.25. Cauvery were done at Rs. 135.50 and K.C.P. were transacted at Rs. 24.53.

In the planting group, selected tea shares were prominent on encouraging advices from the Cochin auction sales. Blue Mountain met with support up to Rs. 3.92 on the decision to issue rights shares in the proportion of one new share for every three held at a premium of 45nP a share. Cochin Malabar were in demand up to Rs. 7.93 and Consolidated Coffee were dealt in at Rs. 24.12. Business passed in Anaparai at Rs. 4.70 on the payment of a taxable dividend of 20 percent. Kil Kotagiri were quiet at Rs. 5.75 on declaring a final dividend of 17 percent, making 25 percent for the year, against 35 percent in the previous year. Mercara were placed at Rs. 8.80 on paying a taxable ordinary dividend of 20 percent. Ouchterlony were indicated at Rs. 4.63 and Periakaramalai were in demand up to Rs. 4.80 on declaring an interim taxable dividend of 7½ percent. Mysore Coffee were transacted at Rs. 5.45, as were Nilgiri at Rs. 7.70. Peermade were steady at Rs. 22.80 and Parkside met with support up to Rs. 28.37. Teekoy were done at Rs. 6.10 and Thirumbadi came to hand at Rs. 1.87.

Textile shares were steady on reports of improved cloth and yarn offtake. The prices of selected scrip improved on balance. Lakshmi were done at Rs. 157 and Madura were supported up to Rs. 37.50. Travancore Rayon improved to Rs. 37.20, as did South India Viscose to Rs. 149 xr. Bangalore Woollen were quoted at Rs. 196.50 and Buckingham at Rs. 197. Coimbatore Cotton came to hand at Rs. 172.50 and business was done in Kothari up to Rs. 12.50. Loyal were quoted at Rs. 39 and Mettur were steady at Rs. 367. Ramakrishna were indicated at Rs. 224 and Venkatesa were dealt in at Rs. 193.

Interest in selected miscellaneous shares was sustained, and Aluminium Industries were bought up to Rs. 24.50. Ashok Leyland changed hands at Rs. 9.37 and India Cement were in demand up to Rs. 6.23. F.A.C.T. were transacted at Rs. 10.78, as were Enfield at Rs. 15. Kirloskar Electric were steady at Rs. 13.12 and Mysore Paper were quoted at Rs. 23.75. Parry's Confectionery were in demand up to Rs. 5.20 on paying an interim taxable dividend of 10 percent. Seshasayee Paper improved to Rs. 4.60 and Spencer changed hands at Rs. 21.86. Business was done in Standard Motors at Rs. 16.75 and Textool were in demand up to Rs. 175. Tube Investment were quoted at Rs. 294 and United Electricals were done at Rs. 9.50.

STEEL PRODUCTION SOARS BY 173% AT MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58 (Rs. in lacs)	1958/59	1959/60
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

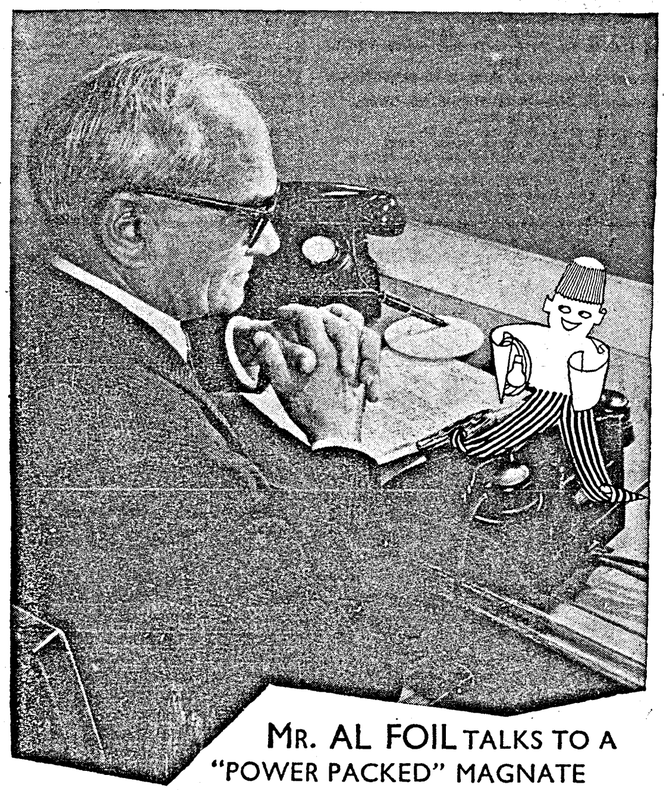
Calcutta Safe Deposit—Rs. 7/81—7/81—7/81—7/81—(7/87).



MR. AL FOIL TALKS TO A "POWER PACKED" MAGNATE

'Profit', thundered the Magnate insulating himself against sales talk, "Profit's what I am interested in."

"And profit, sir", replied the unabashed Mr. Foil, "profit's what foil insulation ensures in the heavy electrical equipment industry. In transformers, cables or condensers, wherever you need effective insulation, and/or superior dielectric properties aluminium foil is the lightweight answer for a big job. We do a really first class job of 'wrapping up' electrical energy, allowing no leakage come rain or shine. Fact is, aluminium foil foils damp damage for long periods . . . and no helping hand required . . . and that's profit for you . . . low initial outlay, low maintenance and no leakage."

Don't be isolated by your insulation problem. No foiling problem is difficult enough to foil Al Foil.

VENESTA FOILS LTD.

KAMARHATI, 24 PARGANAS, WEST BENGAL

Selling Agents: Indian Aluminium Co. Ltd., Calcutta Bombay Madras and New Delhi

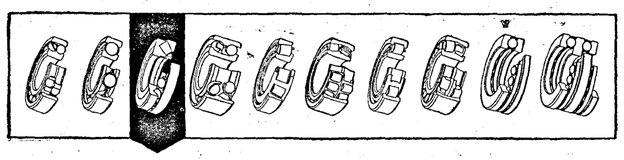
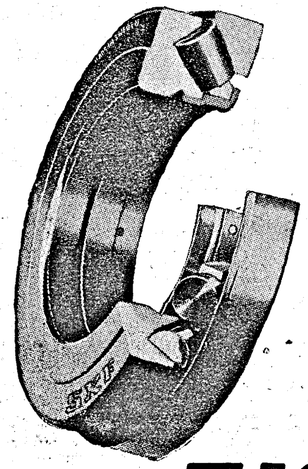
SKF *offer the widest selection of bearings*





Illustrated here is the **SKF** SPHERICAL ROLLER THRUST BEARING which has one row of obliquely disposed rollers guided by a high flange on the shaft washer and running on a sphered track on the housing washer. It combines very high carrying capacity with complete self-alignment. The surface of the roller end next to the guiding flange is so formed that the rollers are always separated from the flange by an oil film when under load. The bearing can therefore be used at relatively high speeds, even if the load is very heavy. Unlike other thrust bearings, it can also carry radial loads.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.4 percent to 126.6 during the week ended 18th February, 1961, compared with 127.1 for the earlier week. The index was higher by 0.6 percent and 6.1 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The prices of potatoes in Kanpur (−44%) and in Farrukhabad (−11%), oranges in Nagpur (−37%), ragi in Bangalore and tea (−5% each), gur (−4%), milk (−3%), urad, onions and meat (−2% each), and barley, masur, gingelly oil, chillies and coconut oil (−1% each) showed declines while those of oranges in Shillong (+19%), potatoes in Mandi (+17%), in Shillong (+11%) and in Mottupalayam (+7%), ragi in Ghoti (+17%), rice in Nagpur and fish (+9% each), cashewnuts (+5%), maize and black pepper (+3% each), gram (+2%) and wheat, jowar, arhar, mung, groundnut oil, mustard oil and eggs (+1% each) were marked up, and the index for Food Articles fell by 0.5 percent to 115.9. The index for Tobacco advanced by 0.5 percent to 110.8 due to a rise in the prices of raw tobacco (+1%). The Fuel, Power, Light and Lubricants group index worked out to 120.2, against 120.1 for the previous week. The price of castor oil showed a rise of 1 percent. Lower prices of bamboos (−21%), linseed in Kanpur (−6%), raw jute and gingellyseed (−3% each), rapeseed (−2%), and raw wool, tanning materials and lac (−1% each) brought down the index for Industrial Raw Materials by 0.6 percent to 159.4, compared with 160.3 (revised) for the earlier week, although the prices of cottonseed (+5%), groundnut (+3%) and raw hemp (+2%) rose. The index for Intermediate Products rose by 0.4 percent to 134.3 due to an increase in the price of tin (+5%), lead (3%), linseed oil and coir yarn (+2% each) and rayon yarn and zinc (+1%). The prices of cotton yarn (−1%), however, moved down. The index for Finished Products declined by 0.5 percent to 128.4, compared with 129.0 for the previous week. Items which showed variations during the week were: jute manufactures (−2%), oilcakes (−1%), silk and rayon manufactures (+3%) and bricks and tiles (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 18-2-61	11-2-61	20-2-60
I. Food Articles:	115.9	116.5	118.3
(a) Cereals	99.9	99.4	104.2
(b) Pulses	92.7	92.2(R)	94.6
(c) Fruits and vegetables	103.7	103.7	116.5
(d) Milk and ghee	109.8	111.4	109.1
(e) Edible oils	160.8	159.6(R)	137.6
(f) Fish, eggs and meat	122.7	120.7(R)	109.1
(g) Sugar and gur	177.8	120.6(R)	145.8
(h) Others	166.7	170.7	167.8
II. Liquor and Tobacco:	112.2	111.6	95.8
(a) Tobacco	110.8	110.3	94.0
III. Fuel, Power, Light and Lubricants:	120.2	120.1	117.3
IV. Industrial Raw Materials:	159.4	160.3(R)	131.7
(a) Fibres	179.5	182.9(R)	123.3
(b) Oilseeds	158.0	156.5(R)	140.9

U.K. IMPORTS OF INDIAN SILK TREBLED IN THREE YEARS

With silk regaining its place as the most glamorous fashion fabric in Britain, India's exports to the U.K. market have more than trebled over the past three years. For the first 11 months of 1960, exports to Britain totalled 38,771 square yards of silk fabric, compared with 22,589 square yards for the whole of 1959 and 13,193 square yards in 1958. Britain's output of silk fabrics last year is estimated at 4.6 million square yards, compared with 3.2 million square yards a year earlier. An official of the Silk Centre in London said that the silk trade in Britain is booming with increased demand not only for women's dresses but also for men's ties and shirts as well. "The revival in England is quite startling", he said. "People are moving away from man-made fabrics because they realise that silk, with its intrinsic value, has a special something. This is particularly apparent among younger people." The demand is expected to rise even higher this year.

New Delhi

TECHNOLOGICAL CONSULTANCY BUREAU FOR PUBLIC SECTOR PROJECTS

N.I.D.C. SCHEME FOR FINANCIAL AID TO JUTE AND COTTON TEXTILE MILLS WORKS WELL

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Industrial Development Corporation has set up a Technological Consultancy Bureau for serving the various projects which are being either scrutinised or implemented. The functions of the Bureau include the preparation of preliminary studies, investigation and selection of sites, preparation of detailed project reports and the designing of structures. Its work will be confined for the present only to public sector projects.

The implementation of the bio gas-fertiliser project, for which India has entered into an agreement with the Foreign Trade Company for Chemical Products of Hungary, has been entrusted to the National Industrial Development Corporation. Action is being taken to install two pilot plants, one in the Indian Agricultural Research Institute, New Delhi, and the other in the National Sugar Institute, Kanpur. The Technological Consultancy Bureau will take up the execution of the constructional works after the designs and technical documents from the Hungarians have been received.

The schemes of the National Industrial Development Corporation for financial assistance to the jute and cotton textile industries for their modernisation and rehabilitation, are progressing satisfactorily. A sum of Rs. 6.07 crores has been advanced to the Corporation for granting loans to the two industries up to 30th November, 1960. The scheme for assisting the jute and cotton textile industries in the acquisition of machinery on a hire-purchase basis for speeding up limited projects of modernisation and rehabilitation, has also been making good progress. Another scheme for providing loans to the jute and cotton textile industries on a short-term basis against guarantees and collateral security for the installation of improved machinery, has recently been introduced. As for the scheme to extend financial assistance to the machine tool industry, assistance to the extent of Rs. 35 lakhs has been sanctioned.

Aid for Beas Project

The Beas project consists of a set of schemes for harnessing the irrigation and power potential of the river. The project comprises two main units. The first is the Beas-Sutlej link for the diversion of water from the Beas into the Sutlej to avail of the 1,000 feet fall *en route*, for the generation of electric power and extension of irrigation in the arid tracts lying in the south and south-west of Punjab. The unit is still being examined and a detailed project report has yet to be prepared. It is estimated to cost Rs. 80 crores and will take about eight to nine years for completion, excepting the installation of the power unit which will be phased according to the development of load demand in the region. The second unit is represented by the Beas dam at Pong. It is proposed to construct a storage dam on the river at an estimated cost of Rs. 92.65 crores. The site of the dam is near the village Pong, about 24 miles from Mukerian. The reservoir will have a live storage capacity of 5.5 m.a.f. The project will ensure the extension of perennial irrigation to about 5 million acres of land in the Punjab and Rajasthan areas. A power plant with an installed capacity of 240 mW will also be constructed.

The reservoir will extend to 23 miles upstream of the dam site and will submerge about 58,000 acres of land, out of which 28,000 acres are cultivable. A number of villages will also get submerged. A portion of the Pathankot-Jogindernagar metre-gauge railway line will be submerged. It will have to be realigned above the maximum reservoir level. A fair weather unmetalled road from Talwara to Dera-Gopipur on the left bank of the river will also be submerged in two reaches for a length of about 11 miles. On the right bank, the road from Nurpur to Dera Gopipur *via* Jawali and Ranial will be submerged in a number of reaches. About 9,400 families, or approximately 70,000 persons, are likely to get displaced.

The proposed design consists of an earth and rock fill dam 325 feet high above the river bed on the right side, in conjunction with a concrete semi-hollow deck slab buttress type dam 250 feet high on the left side. The central 463-feet length of the concrete dam will serve as an overflow spillway controlled by eight radial gates. The spillway is designed to pass a maximum flood of 650,000 cusecs. It will take about eight years to complete the construction works. A project report for this unit was prepared by the Punjab Government, but it is being revised in the light of the latest technological advice and hydrological studies.

Pending the finalisation of the project reports on both the units, a provision of Rs. 49 lakhs in the revised estimates for 1960-61 and Rs. 3.5 crores in the Budget estimates for 1961-62, has been made. For the execution of the Beas dam project (Pong), the U.S. Government has promised a loan of $53 million and the World Bank a loan of $23 million.

Fourth Institute of Technology

The Indian Institute of Technology, Kanpur, is the fourth in the chain of higher technology institutes established by the Central Government to foster the development of higher technological education. The Institute is an autonomous body registered under the Societies Registration Act, 1860, and is fully financed by the Central Government. It is being set up with the assistance of U.S. Technical Co-operation Mission, which has agreed to provide experts, equipment and training facilities. One expert has already arrived in Kanpur, and others will be joining shortly. Equipment for the Institute will start coming from the U.S.A. in the next few months.

The Institute is to construct its own buildings in Kalyanpur, at a distance of about 8 kilometres from Kanpur, on a plot of land measuring about 422 hectares acquired for the purpose by the U.P. Government. The work for the construction of buildings, it is expected, will be taken in hand shortly. The entire project is estimated to cost Rs. 9 crores, out of which a sum of Rs. 6 crores is to be spent on the construction of buildings and Rs. 3 crores on equipment and other charges. The above figures include Rs. 45 lakhs to be provided by the U.S. Technical Co-operation Mission out of the grants under P.L. 480. The Institute at present is intended to provide instruction in five-year degree courses in chemical engineering, civil engineering, electrical engineering, mechanical engineering, metallurgical engineering and textile engineering.

It is proposed later on to provide instruction in other technological subjects, and also to provide facilities for post-graduate work. The Institute admitted the first batch of 100 students in 1960 and the second batch of 100 students will be admitted in 1961. When fully developed, the Institute will provide instruction for 1,600 undergraduate and 400 postgraduate students. By the end of 1960-61, it expects to spend a sum of Rs. 20.50 lakhs. A provision of Rs. 55.14 lakhs has been made in the Budget estimates for 1961-62.

Expansion of Mysore Steel Works

The Indian Government has approved the following expansion programmes of the Mysore Iron and Steel Works at a total cost of Rs. 7 crores: (1) an L.-D. plant and an electric furnace; (2) a billet and light structural mill; and (3) expansion of foundry, yard, electricity, etcetera, consisting of various items to meet the service demands on account of expanded production. The programme will raise the production of saleable steel to 85,000 tons a year. The expansion scheme was included in the second five year plan, but could not be undertaken earlier. Orders have been placed for the import of plant and machinery required for the first two items. The scheme for the expansion of foundry, etcetera, is also being undertaken simultaneously.

The Mysore Government has asked for financial assistance for the expansion, and the Central Government has agreed in principle. The assistance will take the form partly of equity and partly of loan after the Mysore Iron and Steel Corporation is actually formed. A provision of Rs. 25 lakhs has been made in the Budget estimates for 1961-62, for the purchase of shares in the proposed Corporation. Besides, a provision of Rs. 1 crore has been made in the Budget estimates for 1961-62 for a loan to the Corporation.

Telephone Output to Rise

During the third plan, the production of Indian Telephone Industries Ltd, Bangalore, is expected to go up to 180,000 telephones, 136,000 exchange lines and transmission equipment valued at Rs. 2.6 crores a year, compared with the corresponding figures at the end of the second plan of about 120,000 telephones, 88,000 exchange lines and transmission equipment valued at Rs. 75 lakhs. The third plan schemes of the Company also visualise the setting up of an additional unit for the manufacture of telephones, exchange lines and transmission equipment, as the existing factory will have already reached its full capacity. The Company has been paying attention to problems of research and development and the substitution of imported materials by suitable indigenous products. It has been designing and manufacturing a large number of items of equipment required for the railway electrification project, thus saving foreign exchange. The Company has also been able to bring down the cost of production gradually.

Mechanising Sailing Vessels

It has not so far been possible for the sailing vessels industry to play any useful rôle in the transport system of the country because its dependence on sails as the sole motivation power results in unprofitable voyages. For this reason, the Sailing Vessels Committee emphasised that if the industry was to survive, the owners should be encouraged to mechanise their vessels. A sum of Rs. 25 lakhs, out of a provision of Rs. 40 lakhs for the sailing vessels industry in the second plan, was earmarked for granting loans to owners for the mechanisation of their vessels. However, no financial assistance has been given so far, as it is considered necessary to bring the industry under legislative control. Suitable provision has been made in the Merchant Shipping Act, 1958, and rules under the Act are being framed. The procedure to be followed in granting loans is also being finalised. A provision of Rs. 1 lakh has been made in the revised estimates for 1960-61, and Rs. 3 lakhs in the Budget estimates for 1961-62 for the grant of loans to the owners of sailing vessels for mechanisation. In the third plan, a sum of Rs. 15 lakhs, out of the provision of Rs. 1 crore for the sailing vessels industry, has been set apart for this scheme.

The Sailing Vessels Committee recommended that the Government should examine the necessity for granting special assistance for the construction of new sailing vessels. It has been decided that as a first step, the Government should undertake a scheme to assist prospective builders by granting them loans. A sum of Rs. 15 lakhs, out of a provision of Rs. 40 lakhs for sailing vessels, was accordingly earmarked for this purpose in the second plan. However, no financial assistance could be given. The Government has now appointed a naval architect for preparing improved designs and plans for the construction of new sailing vessels. In the third plan, a provision of Rs. 85 lakhs, out of the total provision of Rs. 1 crore for the sailing vessels industry, has been earmarked for this scheme. A provision of Rs. 5 lakhs has been made in Budget estimates for 1961-62 for granting loans to the industry.

Inland Waterways

Inland waterways are the lifeline of Assam. About 55 to 60 percent of the traffic for Assam and Calcutta is carried by this means of transport. The joint steamer companies carry from 70 percent to 80 percent of the traffic, the balance being handled by other private operators. The joint steamer companies have drawn up a programme for the replacement of old crafts, costing Rs. 5.66 crores. To supplement their finances, they have asked for loan assistance of Rs. 2 crores from the Government. A provision of Rs. 2 crores has been made in the third plan and Rs. 58.34 lakhs in the Budget estimates for 1961-62.

Dredger and Survey Launch Pool

With a view to arranging for outer harbour dredging of certain important minor ports and also to carry out surveys prior to and after dredging, a dredger-*cum*-survey launch pool has been created at an estimated cost of Rs. 2.19 crores. A provision of Rs. 5 crores was made in the second plan for the development of minor ports. Out of this provision, a sum of Rs. 1 crore was earmarked for the dredger-*cum*-survey launch pool. Orders for six survey launches and two dredgers are being placed during the current year. A provision of Rs. 30 lakhs has been made in the revised estimates for 1960-61, and Rs. 1.10 crores in the Budget estimates for 1961-62.

Fuel Elements for Nuclear Power Station

The first stage in the fabrication of the atomic fuel element is the production of uranium metal from concentrates. The latter are processed at the uranium metal plant in Trombay Island for the extraction of uranium metal of atomic purity. The metal is subsequently machined and fabricated in the fuel fabrication facility to required specifications. In order to be able to produce the requisite quantity of the fuel elements for the first atomic power station, the capacity of the existing uranium metal plant and the fuel fabrication focility plant in Trombay will have to be increased four-fold. The expansion scheme is included in the third five year plan and is estimated to cost Rs. 2.5 crores. Detailed plans for the expansion of the plants are being prepared. The provision made in the Budget estimates for 1961-62 is to meet the preliminary expenses.

The by-product recovery plant (project phoenix) is being set up for treating irradiated fuel elements and extraction of valuable by-products from them. The project is estimated to cost about Rs. 2.56 crores, comprising Rs. 1.27 crores on account of equipment and Rs. 1.29 crores on account of civil engineering works, erection charges, etcetera. The work on the construction of the building to house the plant is in progress. Orders for a substantial part of the equipment have been placed. The plant is scheduled for completion during 1962-63.

The Jaduguda Mines in Bihar are the principal source of uranium ore in India. It is proposed to develop the mines fully so as to enable the production of sufficient quantities of uranium ore from which the necessary uranium metal for the atomic energy development programme will be produced. The provision made in the Budget estimates for 1961-62 is for the preliminary work. The scheme is estimated to cost Rs. 4.5 crores and is included in the plan. It s proposed to set up a uranium ore mill with an ultimate capacity of 1,000 tons a day for treating the ore mined at the Jaduguda mines. The mill is expected to cost about Rs. 4.5 crores, and will take three years to be completed. The provision of Rs. 2 lakhs made in the Budget estimates for 1961-62 is to cover the preliminary expenses.

Hitch with Consultants

There appears to be some last-minute hitch in the Indian Government's agreement with Davy Ashmore for technical consultancy in setting up the heavy vessel plate and heavy structurals plants. Enquiries show that the fees demanded by the Company are considered high by New Delhi. The

view is taken that the foreign collaborators should not attempt to make all their profits from one project, but should widen the base of their operations by charging fees which are not only reasonable but competitive. The second difficulty appears to be about credit. The British credit, from which the projects are to be financed, is so phased that funds may not be available for these two projects. Meanwhile, a decision has been reached to invite tenders from British firms for setting up a fertiliser plant in Assam, the raw material being gas from the oil refinery. Part of the British credit will be used to finance the project.

West German Aid for Third Plan

West Germany will continue to participate in the meetings sponsored from time to time by the World Bank on the subject of external assistance to India. This was announced in a joint Indo-West German Press release, following the visit to India of Dr. Hans Wilhelmi and his discussions with India's Finance Minister, Mr. Morarji Desai. The Press release said: "In the light of the material furnished by the Indian delegation, the Government of West Germany will examine sympathetically assistance for India's third five year plan. Pending these discussions, Dr. Wilhelmi indicated his Government's readiness to make available on a long-term basis a sum of 400 million deutschemarks (equivalent to approximately Rs 45.5 crores) towards India's requirements during the first year of the third plan. Of this amount, 100 million deutschemarks will be 'untied' so as to strengthen India's foreign exchange reserves and will be made available early in the financial year 1961-62.

"To enable India to start immediately with the placing of urgently required orders, West Germany had agreed already last year to guarantee credits for export transactions and had indicated the possibility of a subsequent consolidation of these credits on a long-term basis. The amounts so consolidated would be considered part of the German contribution towards India's third five year plan. The Federal Government has already recognised the importance to the Indian economy of the Rourkela steel plant and its expansion. It has noted that this expansion would require foreign equipment and services totalling 450 million deutschemarks in value and that orders for the entire expansion will have to be placed early. The Federal Government has, therefore, promised to help India to obtain appropriate credit facilities in the Federal Republic. In these circumstances, the Indian Government may now proceed to place orders. It was recognised that in view of the continuing nature of India's developmental programmes, credits to India need to be long-term. The period of all the credits referred to above will be the subject of further discussion and negotiation. The Federal Government will also continue its technical assistance in co-operation with the Indian Government. Mr. Morarji Desai expressed his appreciation of these initial measures of assistance for the third plan, which are evidence of West Germany's continuing interest in India's economic development."

New Chemical Project with German Help

Details are now available of the new chemical works to be built near Bombay in collaboration with the West German firm of Bayers. The plant, which it is proposed to construct within three to four years, will produce 40 different organic intermediates for the processing industries (dyestuffs, synthetic resins for surface coatings, rubber auxiliaries, and pharmaceuticals), using Indian raw materials such as toluene, benzene, and naphthalene. A vital link will thus be established between the coking plants of the large Indian steel projects of Rourkela, Durgapur and Bhilai, and the rest of the chemical industry in India. These organic intermediates have hitherto had to be imported to a great extent, so that the country will save foreign currency totalling roughly 25 million deutschemarks annually. In this agreement, with Farbenfabriken Bayer Centrall handling the negotiations, three West German chemical enterprises have undertaken to design the plant, furnish all data, and assist Indians in construction work. The individual construction stages are: selection of the site and the working out of the necessary data which will be the basis for the Indians to develop the site, erect buildings, construct the factory roads, and provide for auxiliary installations. These auxiliary installations include a power plant, repair shops, production facilities for inorganic auxiliary chemicals, traffic and administration facilities, storage facilities for raw materials, and finished products, fresh water and power supplies, and sewage removal facilities. In addition, housing facilities for the personnel must be provided.

The equipment to be fabricated in India or furnished from West Germany will be determined on the basis of the plan. After the arrival of the German and Indian machinery on the factory site, West German specialists will be available to help Indian engineers and workers to install the equipment and start it. Indian specialists, meanwhile who will have been trained by the German firms, will then take over production operations, with German technicians temporarily carrying out advisory functions. The know-how made available by the Germans covers the most advanced processes now being used by the three firms. Both sides have also agreed to give each other access to any process improvements made within ten years, for free use.

The engineering department of B.A.S.F. and Friedrich Uhde will assist the Indian partners in calling tenders for the supply of German machinery. The number of machinery suppliers from West Germany alone is estimated at 300. The total cost of the venture will exceed Rs 120 crores. The German chemical enterprises will be refunded the costs for engineering and services by transferring to them shares of a value totalling the amount they are due, these shares being issued by a private limited company to be established by the Indian Government. The three chemical firms undertake not to sell within the first ten years.

Modernisation of Woollen Industry

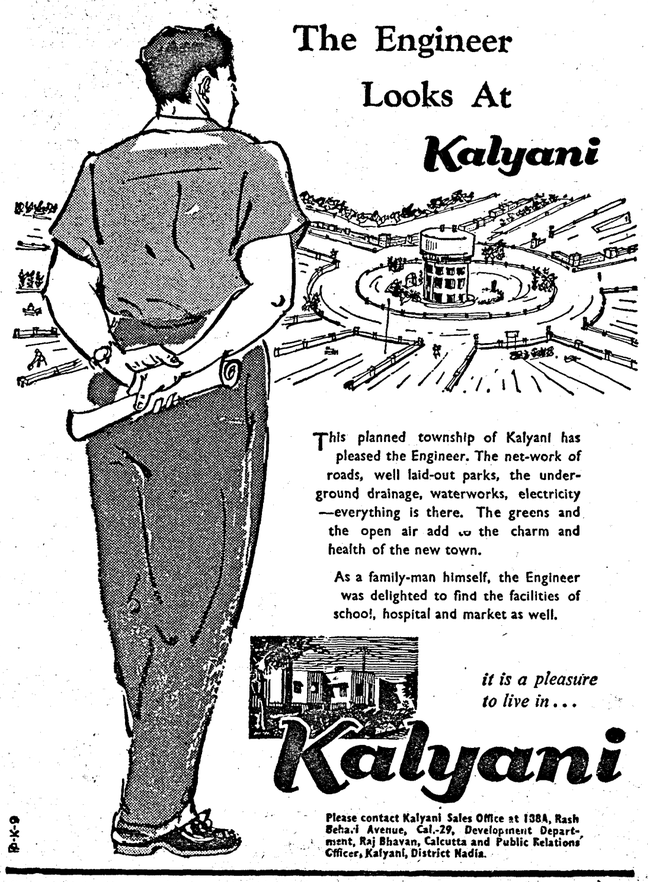
The Central Government's decisions on the report of the working group, set up by the National Industrial Development Corporation, to draw up a programme for the rehabilitation and modernisation of the woollen industry have been published. Some of the major recommendations made by the working group have been broadly agreed to. In a unanimous report, the group has emphasised the urgent need for rehabilitation and modernisation of the woollen industry within five to six years. It has assessed the total requirements for the entire rehabilitation progamme at Rs 11.25 crores, consisting of Rs 10.25 crores for plant and machinery and Rs 1 crore for land and buildings. The foreign exchange component has been assessed at Rs 9.25 crores for the import of plant and machinery. The working group is of the view that the industry by itself will be able to meet about 75 percent of the total requirements of the rehabilitation programme. The balance, which would work out to Rs 2.81 crores, would have to come from Government lending institutions.

As for the working group's recommendation that the National Industrial Development Corporation should extend loan assistance facilities to the woollen industry for meeting rehabilitation requirements, the Government, after careful consideration, has decided that for the present the N.I.D.C. would not be in a position to render such assistance to the woollen industry, particularly in view of the heavy demand from the cotton textile and jute industries for funds. The Government has accepted in principle the working group's recommendation that essential expenditure on spare parts should be adequately provided for. After ascertaining the position about the spare parts manufactured indigenously, priority will be given in future for the import of necessary spare parts.

The recommendation about fabricating certain finishing and preparatory machinery at home in the third plan period, has also been accepted in principle by the Government. A committee has recently been appointed to assess the demand of machinery for different textile industries, including the woollen industry, in relation to the indigenous capacity and to suggest suitable steps to bridge the gap between demand and supply. The possibility of manufacturing woollen finishing and preparatory machinery would be fully explored by this committee. The Government is examining a recommendation of the group that the present export incentive scheme might be modified to provide an increase in the import entitlement for machinery from 10 percent to 20 percent in the value of exports. The recommendation that foreign exchange earned by the export of old machinery should be used for the import of permissible types of new machinery has been accepted. The Government will consider on a priority basis the question of releasing foreign exchange for the import of plant and machinery not covered by the export incentive schemes and rupee payment purchases. The Government is examining another recommendation of the working group that the excise duty on the industry should be reviewed with a view to consolidating its position.

Russian Experts at Bhilai

At present, there are 376 Russian experts employed at Bhilai by Hindustan Steel Ltd. Of these, 140 experts are on the operation side and the remaining 236 are on the construction side. As construction work tapers off, the services of the Russian experts engaged there will not be required. The services of the experts on the operation side will be required for varying periods up to 31st December, 1961. According to the terms of the principal agreement dated 2nd February, 1935, the Russian organisation will post at its own expense, a sufficient number of experts for a period of up to three years after the works go into full operation for rendering technical supervision and consultant services. It has been agreed that 50 Russian specialists and 10 interpreters should be invited to Bhilai for this purpose. The number of these experts will be revised from time to time by mutual agreement. The cost of their deputation will be borne by the Russians. Hindustan Steel Ltd has to provide them with accommodation and transport facilities. Besides, Hindustan Steel proposes to invite a top-level expert from Russia to advice on the efficient management and organisation of production at the Bhilai steel works, and in particular, to suggest the outlines of a system of periodic departmental returns and reports within the works for management, information and control purposes. The cost of deputation of this expert will be borne by Hindustan Steel. The terms and conditions of employment are still being negotiated.



Aid Needed for Coal Mining

Assistance is being sought for certain difficult aspects of open-cast and underground mining, erection and maintenance of central workshops and washeries. The countries approached for this are the U.S.A., the U.K., France, West Germany and Poland. Certain offers have been received from the first four, and these are being considered. A technical team from Poland is at present in the country to investigate deep-shaft mining of coking coal in the Jharia field. It will be some time yet before final decisions are taken as to the scope and mode of assistance to be availed of from each of these countries. In addition, an open-cast mine, two underground mines and a workshop in the Korba coalfield, and two washeries, one in Kathara and the other in Karanpura, are to be established with the credits offered by Russia. The following projects are likely to receive the highest priority: (i) underground mining of thick and steeply inclined seams in Kathara, Karanpura and Jarangdih; (ii) open-cast mining of coking coal near Ramgarh; and (iii) deep-shaft mining of coking coal in Jharia.

State-wise Distribution of Cement Works

The State-wise distribution and location of the eight new cement factories and 17 schemes for effecting substantial expansion to existing cement works, which have been licensed so far under the Industries (Development and Regulation) Act, 1951, and which are going to be established in 1961-62 and 1962-63, are as follows:

New cement factories:

State	Location	Private sector
Andhra Pradesh	Vizianagaram	do.
Assam	Cherrapunji	do.
Gujarat	Veraval	do.
Jammu and Kashmir	Kumoh	do.
Maharashtra	Rajpur	do.
Madhya Pradesh	Drug	do.
Mysore	Ammasandra	do.
Madras	Thiruvattiyur	do.

Schemes for effecting substantial expansion to existing cement factories:

Andhra Pradesh	Macherla	Private sector
Andhra Pradesh	Mancherial	do.
Andhra Pradesh	Panyam	do.
Bihar	Chaibasa	do.
Bihar	Khalari	do.
Gujarat	Sikka	do.
Gujarat	Dwarka	do.
Gujarat	Ranavav	do.
Madras	Ramanathapuram	do.
Madras	Madukkarai	do.
Madhya Pradesh	Kymore	do.
Madhya Pradesh	Kymore	do.
Madhya Pradesh	Banmore	do.
Madhya Pradesh	Satna	do.
Mysore	Ammasandra	do.
Mysore	Bagalkot	do.
Uttar Pradesh	Churk	Public sector

The additional capacity would work out to about 3.41 million metric tons over and above the existing capacity of about 9.13 million metric tons. Cement machinery has now begun to be manufactured in the country and new schemes are being increasingly provided with indigenous machinery and plant.

More Machine Tool Factories Proposed

The setting up of two more medium type machine tool factories in the public sector during the third plan is being considered. Hindustan Machine Tools has been entrusted with the task of drawing up projects for the setting up of these factories. The estimates of cost, selection of sites, etcetera, are being examined by Hindustan Machine Tools. East Germany has offered to collaborate in setting up a machine tool factory. A draft agreement has been drawn up, setting out the terms of collaboration. The agreement, it is proposed, will be signed in East Germany after an Indian delegation visits the Leipzig fair, where the products and the working of East German machine tool industry will be seen by the delegation. The delegation will also select the class of equipment to be taken up for production in the new Indian factory with East German collaboration. Noakhali Machine Tools (Private) Ltd., Calcutta, which has already been licensed to manufacture machine tools, has put up a proposal to enter into technical collaboration with Messrs Veb Wema of East Germany represented by Limex, for the manufacture of lathes. The proposal is being examined.

Zinc Smelter Project Approved

The scheme of the Metal Corporation of India for the installation of a zinc smelter with an annual capacity of 15,000 tons has been approved and the terms of foreign collaboration with Kreb and Pennoria of France have since been settled. The industrial licence under the Industries (Development and Regulation) Act, 1951, has already been granted. The firm, it is expected, will complete the scheme by 1962.

New Company for Earthmoving Equipment

A new Company known as Limac Ltd, Madras, has been formed for implementing a scheme for the manufacture of earthmoving equipment such as crawler type heavy tractors, shovels, etcetera. The location of the factory will be in Madras and the capacity for crawler tractors will be fixed after the firm goes into production.

Diesel Traction for Goods Trains

It is proposed to have diesel traction for goods trains on about 3,800 miles of busy sections during the third plan period for the movement of coal, raw materials for the steel plants and other through freight traffic. The quantity of diesel oil consumed during 1959-60 and the assessed requirements for 1960-61 and 1961-62 are as follows:

1959-60	51,208 long tons
1960-61	75,000 long tons
1961-62	101,000 long tons.

Commercial Road Transport

Commercial road transport throughout the world has been rapidly changing over from petrol to diesel-driven vehicles during the past few years. In India also, the production of petrol-driven vehicles has practically stopped and the four vehicle manufacturers are concentrating on the production of diesel vehicles only. Conversion of the old petrol vehicles to diesel vehicles is also taking place. It is expected that by the end of the third five year plan, most of the commercial vehicles operating in the country will be diesel-driven.

Government rejects Ship Acquisition Plan

Most of the offers from various parties for the acquisition of ships by India for the transport of foodgrains from the United States under the Indo-U.S. food deal, have been examined and found unacceptable to the Indian Government. Some are still being considered.

Application for Aluminium Smelter

An Application has been received from a firm of the grant of a licence under the Industries (Development and Regulation) Act, 1951, for setting up a 20,000-ton aluminium smelter in Madhya Pradesh (in Annapur or near Korba) with the collaboration of a Swiss firm. The proposal is being considered.

Fertiliser Plant in Durgapur

Negotiations are in progress between the West Bengal Government and a consortium of American firms for the erection and operation of a fertiliser plant in Durgapur. No agreement has so far been signed.

Indian Tea Exports

Tea exports fluctuate from year to year. The quantity exported during 1960 was lower than in previous years. There is, however, no firm trend to show that the exports are declining, it is thought The fall in 1960 was mainly due to the shortfall in the production on account of drought conditions in north-east India during the early months of the 1960 season. Progressively greater quantities of nitrogenous fertilisers are being supplied to tea estates.

New Lead and Zinc Smelter

It is proposed to issue industrial licences to a firm for a zinc smelter and a lead smelter. As the country is very deficient in the production of these metals, and has to rely practically on imports, the Governments would like to encourage a few smelters based on imported concentrates. Simultaneously, it is making efforts to establish such smelters on a large-size basis in the public sector also. The estimated cost of the two smelters to be established by the party are not yet known as it is working out the details for the Government's consideration.

Road Roller Output

The production of road rollers, etcetera, in India in 1960 was as follows:

Name of item	Production in 1960
Road rollers	383 nos.
Air compressors	1,715 nos.
Pumps	1,000,000 nos.
Concrete mixers	964
Concrete vibrators	513
Bitumen mixers	55
Bitumen boilers	18
Cement batching plant	8
Stone crushers	160

Canadian Metal Imports under Colombo Plan

The Government of Canada makes available some quantities of aluminium, copper and nickel under its Colombo Plan aid programme. Broadly, the arrangement is that consumers in India place orders on firms in India who are normally acting as agents of the Canadian manufacturers and suppliers of these metals. For 1960-61, a sum of $ (Canadian) 11.7 million has been offered to India under the programme for importing these metals as detailed below:

Aluminium	$5.5 million (11,176	metric tons, approx.)
Copper	$5.5 million (4,674	metric tons approx.)
Nickel	$0.7 million (183	metric tons approx.)
Total	$11.7 million	

Plans for Calcutta

Problems relating to the city of Calcutta have been considered by the West Bengal and Central Governments. Some studies have already been undertaken by the State Government and by the World Health Organisation. With a view to assisting in the preparation of a master plan for Calcutta, the Ford Foundation has been requested to arrange for a team of experts. No approach for funds has so far been made to the World Bank, or to any other agency. However, in the third five year plan, a provision of Rs. 10 crores is being made by the Centre, and it is understood that a similar provision is likely to be made in its plan by the West Bengal Government.

National Drugs and Pharmaceuticals

A corporation called National Drugs and Pharmaceuticals Ltd, is being formed it is learned.

Diesel Locomotives from U.S.A.

The Government of India has accepted the tender of General Motors of the U.S.A. for the supply of 40 broad-gauge diesel locomotives. Orders for the import of 60 metre-gauge diesel locomotives have been placed in the U.S.A. The purchases are being financed from a D.L.F. loan.

Railway Experts

The second World Bank railway mission is arriving here on 12th March. It will include six Canadians, three each from Canadian Pacific and Canadian National, to review the third plan railway problems, including a reappraisal of management, organisation, operation and accounting. The World Bank teams on coal, roads and ports have already finished their work and returned to Washington, and are now writing their reports.

As far as the consortium meeting is concerned, the World Bank proposes to circulate two papers—one dealing with the economic situation since the Hoffman mission reported, and the other on various projects included in the third plan which need external financing, how they should be financed and how much of aid is required. Both papers will be ready shortly and circulated among members of the consortium.

Decasualisation Scheme for Colliery Workers

The Central Ministry of Labour has drawn up a decasualisation scheme for the colliery workers, aimed at avoiding the wastage of manpower, increasing the efficiency of workers and eliminating malpractices and favouritism in the recruitment. The scheme also seeks to ensure speedy re-employment of experienced surplus labour in collieries, before new hands are engaged, and to reduce the period of waiting before the worker gets the jobs. Details of the scheme will be considered by the Industrial Committee on Coalmining, which is expected to meet in New Delhi shortly.

SIGNIFICANCE OF THE FALL IN STERLING AREA RESERVES

F.B.I. URGES CHANCELLOR TO CUT PERSONAL INCOME TAX

(FROM OUR LONDON CORRESPONDENT)

THE sterling area's gold and convertible currencies reserves recorded a fall of £18 million in February—the first loss for just over a year. This was more or less expected in view of recent developments. The pound sterling came under some pressure on the London exchange market during the past couple of weeks. It is understood that the U.K. Treasury had to offer support to maintain the rate. Sterling had been declining ever since President Kennedy took office and promised that the dollar would not be devalued. Although interest rates are still a good deal higher here than in New York, and funds deposited here simply for the sake of a better return are remaining here, a good deal of money came from the United States last year as a result of panic fears for the dollar. Some of this has now been withdrawn. The extent to which the gold reserves have had to be drawn upon in support of sterling is not evident in the monthly return, but market estimates place the drain at about £30 million.

Rise in Overseas Holdings

In these conditions, the latest quarterly figures of overseas sterling holdings revealing the changes between September and December last year take on a slightly academic look, but the rise over 1960 is still remarkable. They show that total overseas holdings, which had risen by £72 million between June and September, increased by another £89 million to £4,436 million by December. Within this overall increase, there were some notable changes. Perhaps the most striking was the jump of £170 million to £303 million in the sterling holdings of the dollar area countries, a clear reflection of the heavy transfers out of dollars into sterling caused partly by interest-rate differentials, but mainly reflecting fears for the dollar itself.

Another sharp increase was in the sterling holdings of the O.E.E.C. countries, which were up by £67 million to £699 million, a new record. On the other hand, the "rest of the sterling area" countries reduced their sterling holdings in the last quarter of the past year by £97 million to £2,480 million. At £4,436 million, total overseas holdings of sterling are shown to have risen by £224 million last year. A drop of £32 million in the first quarter was followed by an increase of £256 million in the succeeding nine months.

Advice to the U.K. Chancellor

A reduction of income tax and surtax are the only Budget recommendations submitted to the U.K. Chancellor this year by the Federation of British Industries. The submission, reprinted as a pamphlet, begins by setting out two objectives of economic policy for the coming year: (1) to contain inflation, and (2) to "achieve a surge forward in exports which above all requires us to remain competitive." The F.B.I. admits that the defence against inflation may preclude large-scale tax reliefs; but if any reliefs are given, they should be designed to strengthen the competitive power of the economy and not simply to encourage the expansion of consumption. The export drive will not succeed unless the Government "takes a new attitude for rewards for effort and enterprise"; for this purpose, a reduction of income tax and surtax is suggested as an overriding requirement. The F.B.I. memorandum describes income tax at 7s 9d in the pound as the greatest disincentive of all, and hopes that the U.K. Chancellor will reduce the standard rate. In any case, the F.B.I. thinks that immediate and considerable relief of surtax is required. Income tax and surtax should be regarded as parts of a single graduated tax on personal income, the two parts being combined and administered as a single system.

The T.U.C. has also weighed in with its advice, which, in essence, says: "Take a calculated risk with the balance-of-payments situation, and go out for expansion at home." The T.U.C. believes that the risk in not doing this—the drift once more into recession—is the greater. It argues that the Budget should be directed towards two main objectives: "More investment to secure higher production and greater productivity," and "more exports." Both immediate and the long-term needs of the economy call for a Budget which will encourage the tendency to expansion which has shown itself. On the other hand, it was impossible to ignore the dangers inherent in the balance-of-payments situation, caused basically by Britain's failure to export enough to pay for imports, the smallness of her reserves, and the instability of the short-term funds attracted by high interest rates. Such a policy could swell the U.K.'s import bill and lessen some manufacturers' incentive to seek markets overseas. It would, in short, involve taking a calculated risk on the external situation. Under the circumstances, the T.U.C. does not consider it necessary to administer any major stimulus to the private sector. Investment should be stepped up in the public sector. The T.U.C. points out that transport, power, communications play an important part in raising industrial output. Its statement calls for increased old-age pensions, a capital-gains tax, and selective cuts in indirect taxation on basic household goods. If the choice has to be made between increasing social service charges and the rising direct taxation, then the Government, it says, should increase the latter.

Rising Demand for Labour

Unexpected pressure is developing on the labour market again, contrary to its normal seasonal behaviour. Figures published by the U.K. Ministry of Labour show that unemployment is decreasing while the number of unfilled vacancies is growing at more than twice the usual seasonal rate. Unemployment fell slightly between mid-January and 13th February. At the middle of February, 389,531 persons in the United Kingdom were registered as unemployed, of which 47,900 were only temporarily stopped from work. As a percentage of the total labour force, this represents 1.7 percent, compared with 1.9 percent at mid-January and 2 percent in February last year. Normally, unemployment increases slightly between January and February.

The number of unfilled vacancies notified to employment exchanges on 8th February was 290,237, that is, 9,134 more than in January. The normal increase between January and February is about 4,000. In the latter part of last year, the register of vacancies showed a downward trend, three times as steep as usual in the early winter. This trend levelled out to just below average between December and January.

Board of Trade and Overseas Fairs

There will be a warm welcome from industry to the U.K. Board of Trade's latest statement of its attitude towards British exports participating in overseas trade fairs. Its activities are to be expanded. It thinks it probable that the best medium for export promotion "in the more sophisticated countries" will continue to be the specialised fair confined to the products of a single industry or range of industries, and in many cases open only to trade buyers. Its statement follows the announcement in Parliament recently that it is proposed to increase next year's vote provision for trade fairs and trade weeks by £200,000 to a total of £530,000.

For some years the Board, working with trade associations and similar bodies, has been developing a "joint-venture" procedure in specialised fairs. It pays the cost of the space and of erecting a simple shell-stand scheme. The remaining costs are divided between the participating firms, each of which has to man its own section of the stand but is free to decide what goods it exhibits. Where there is no suitable local specialised fair, the Board will be prepared to consider giving assistance on similar lines to a representative organisation in an industry which is prepared to undertake the organisation of an all-British specialised fair. The Board is not in favour of the organisation of fairs on a "national pavilion" basis but says: "It has to be recognised that this is a pattern which appeals to a number of fair organisers and governments, especially in countries which are still developing industrially."

Where the Board is satisfied that British exhibitors will find themselves at a real disadvantage unless a British section or British pavilion is organised by some central body, it will be prepared to undertake the responsibility for doing this. It will make block bookings of space, provide overall decoration and a shell-stand scheme, and sublet to individual firms at a price below the full cost. A special place in the programme will be filled by all-British general fairs which depend "on a massive volume of support from industry." The Board does not intend to change the present pattern in this field. There will be an expansion of its activities in support of British weeks and similar events, such as paying for the dubbing of documentary films for television and tapes for radio and the loan from London of display material.

Brevities

Sir William G. N. Walker, chairman of Jute Industries, has been appointed a director of Clydesdale and North of Scotland Bank.

East India Distilleries and Sugar Factories has reported a net profit for the year ended September of £393,108 (against £402,129) after tax of £381,428 (against £352,386) and crediting profit adjustments from previous years, £5,688 (against £22,516). Dividends totalling 21-3/7 percent, against 28-4/7 percent, including a special additional dividend of 7-1/7 percent, have already been announced.

The U.K. Board of Trade made no sales from its natural rubber stocks during February. These now stand at 28,405 tons.

GRADUAL DECLINE IN FIBRE PRICES REVERSED AT THE CLOSE

FIRM TREND UPCOUNTRY KEEPS CALCUTTA SELLERS BULLISH

THE Calcutta jute and jute goods markets have now had a week to digest the implications of the voluntary price ceiling for raw jute. The initial reaction was slow and, as anticipated, it was not until after the Holi holiday that fibre prices settled down to the controlled rates. Even then, the number of sellers prepared to sell at the lower levels was very small, and this no doubt induced rumours that a mill group was offering large quantities of jute at the ceiling price. It was known that this particular group held large stocks, so it came as no great surprise to the market when the rumours proved correct and intermill business was confirmed, although not on the scale indicated. Since then, small business has been recorded, but the contracts are more in the nature of token deals, and in some cases are due to the nervousness of weak holders who have been induced to release stocks. Towards the close, most sellers are again inclined to be reserved, and very little jute is actually on offer, although many are prepared to lend a sympathetic ear to genuine closing indications.

The steadiness of the upcountry markets makes the position seem paradoxical. Prices in the mofussil are declining much more slowly than those in Calcutta, and all mofussil markets are well above Calcutta parity. The fact that mill purchases so far are much less than normal may have some influence on sellers' attitude in the future, as they always like to have business in hand to keep their presses occupied. On the other hand, the fact that the Pakistani markets are stronger than ever may lead to an increase in the flow of Indian jute across the border, where sellers can get prices up to Rs. 15 a maund higher than in India. At one time, it seemed as if mills would hold off and wait until there was a more attractive margin between the price of raw jute and that of manufactured goods. But, with the lower quotations of the past day or two, mill interest has increased. This may be due to the belief among a large number of buyers that it is only a matter of time before prices rise again, as all factors point to a squeeze in supplies within the next month or two.

Uncertain Position

It is said about the jute industry that the opportunity to make a fortune—or lose one—occurs at least twice a year. But anyone who could tell what is to happen in the near future would be very lucky indeed to strike the right road. The position is so uncertain that one cannot say what the state of the market will be even tomorrow. Almost daily during the past week, the Calcutta market has been opening easier and closing firmer, or vice versa, and yet prices have not deviated far from the level of recent weeks. In the goods market, the slight recession during the early part of the week brought everybody out as buyers, but there were very few sellers. Local shippers were very active, particularly in covering for South America, and there was continued interest in goods for almost all destinations. The search for forward shipment goods goes on, as mills, with their raw jute supplies in the future uncertain, are reluctant to enter into too many forward commitments without being covered in jute. This is emphasised by the hardening of forward shipment sacking rates during the past week. July-September indications appeared for the first time, and they opened at a discount of Rs. 13 on the March price. This was narrowed to about Rs. 10 before the week was out. Similarly, the discount for April-June shipment has narrowed from Rs. 4 to about Rs. 2.

Sowing Time

It might be expected that when sowing time comes round again, and efforts for increasing raw jute production are intensified—reports about which will no doubt be given full publicity—prices will move down. Much of the scepticism which now prevails about the success of the voluntary price ceiling for raw jute may disappear by then. It may even be that the final Government estimate of the current crop, if it is ever issued, will make the statistical position clearer. In the event of a bumper crop in the coming season, the I.J.M.A.'s tentative proposal to create a buffer stock may become feasible. Unconfirmed reports have been current that the Association has been considering a proposal to set up a pool or central buying agency for raw jute. The object is, no doubt, to check the rise in prices. It is interesting to recall that similar proposals were made as long ago as before the first World War, when the mills were faced with a financial crisis. At that time, the proposals found sufficient support for the members of the Association to procure an expert from the U.S.A. to draw up a scheme. After some months of study, a scheme was evolved, but in the meantime circumstances had radically changed and it was pigeon-holed.

The suggestion that mills should obtain their supplies of raw jute from a central pool, which would do all the buying on their account, has much to reccomend it and sounds simple enough. Competitive buying would be eliminated and that, it may be contended, would put the mills in a much better bargaining position. There are, however, many complications and to make the scheme effective, there would have to be serious sacrifices on the part of mills, and considerable modification of their present methods. In the past few years, they have gone in more for the direct purchase of jute in the growing districts. In some cases, they have developed their own organisations. Whether these have been to the mills' advantage or not is debatable, but it is a common complaint in the mofussil that where mills' buying agencies are operating, it is difficult for others to compete because of the high prices they pay. From the mills' point of view, they would lose their freedom to choose. It is claimed that they know their suppliers, and in turn their regular suppliers from long experience know their needs. There is a fear that if supplies are obtained from a common pool, there would be a tendency to reduce everything to the lowest common denominator. In the case of mills which manufacture only standard goods, that would not be serious, but for those who go in for specialities it has its drawbacks.

Special Goods

Sellers have their own contacts and in many cases bale specially for particular buyers. Would a central buying organisation permit their being able to tender their special goods with the certainty that their offers would reach the buyers who might be interested in them? This was one of major failures of the Jute Board in recent years. Then there is the question of purchases from the local bazaars and the purchase of jute and mesta "over the jetty", which is not inconsiderable and has been a growing business in the past few years. How would that be integrated into the common pool? The whole proposition bristles with difficulties, more than have been involved in previous agreements about maximum prices and restraint on buying, all of which in the past have met with only limited success. As we go to Press, reports are current that dealings have already been conducted in raw jute with some mills above the ceiling price. With sellers remaining reserved, guided by the high prices ruling in the mofussil, such transactions are liable to increase as the scarcity of jute continues.

THE JUTE MARKETS

Manufactured Goods: Market interest was negligible at the opening last Thursday following the voluntary maximum price scheme for raw jute, so conditions eased considerably. B Twills lost Re. 1 and were quoted at Rs. 200 for ready shipment, while hessians eased to Rs. 66.60 for the same delivery. On Saturday, heavy goods lost a further Rs. 1.50, and the lack of overseas interest saw hessian rates decline by 60nP. Over the week-end, however, enquiries began to appear and heavy covering by local shippers who were interested in all constructions for all shipments saw prices rise on Monday and Tuesday, so the previous losses were made up. There were practically no sellers, and prices took on a further rising tendency.

At the close, the market was very steady and quotations on Wednesday morning were as follows:

	March	April	Apl.-June	July-Sept.
40in. 7½oz.	50.65	50.75	50.40	49.50
40in. 8oz.	55.00	54.75	54.40	53.50
40in. 10oz.	68.25	67.75	67.25	66.00
B Twills	203.50	202.50	201.00	191.00
Heavy Cees (Plain)	201.50	202.00	201.00	191.00
A Twills	232.00	232.00	232.00	226.00
Liverpools	223.50	223.50	223.50	216.00
Cornsacks	203.50	205.00	205.00	195.00

Raw Jute: There was little interest in the raw jute market as buyers waited for rates to drop to the I.J.M.A. maximum and sellers waited for further developments. Nominal quotations were issued on the basis of Rs. 62 for Assam Bottoms, but there were no sellers at these rates. Eventually, small business was recorded, but the steadiness of the upcountry markets prevented any large reduction in price. After the week-end, offers increased but again only small business was done. Then, sellers became reserved in sympathy with the improved goods market. Towards the close, business was reported above the maximum prices, and sellers began to look for higher rates. There was a big drop in wagon arrivals last week, only 300 arriving at the Cossipore sidings. Imports into upcountry agencies were also very small, and indications practically without exception were above the parity of Calcutta prices. The nominal opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs. a md.	Shipment
Assam	166.00	62.00	March-Apl.
Northern	163.50	61.00	"
Purnea Desal	162.00	60.00	"
Daissee Selected	171.50	64.00	"
Assam Tossa	167.50	62.50	"
Mesta:			
Assam-Northern	159.50	59.50	"
Desal Daissee	158.00	59.00	"
Jungli	155.50	58.00	"
Indian Cuttings	275	a bale	
Pakistani Cuttings N. C.	315	a bale	

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

THE trend of raw jute prices is still uncertain, and shippers are making few offers from Pakistan. But whether this is due to the lack of jute or to the continued apathy of spinners, it is difficult to say. A few members of the industry still believe that jute is not as scarce as it is made out to be. The proposal for fixing ceiling prices for fibre in India and making hoarders disgorge their stocks is welcomed in Dundee. If the traders in Pakistan do the same, they will be surprised at the quantity of jute which is likely to be offered for sale.

Generally speaking, the jute industry is becoming reconciled to the fact that there is a real fibre shortage this season, so they are not unwilling to bow to the inevitable and accept any expedient measures which might be announced to alleviate fibre scarcity. At present, some business is being done in yarns and cloth—usually for prompt delivery—but short-time and general curtailment of production is gradually increasing throughout the mills in Dundee and also in the Continent. Meanwhile, it is fervently hoped that conditions will return to normalcy in the near future.

Raw jute prices are more or less nominally unchanged at £218 for Mill Firsts, £208 for Mill Lightnings, £204 for Mill Hearts and £200 for Grade Hearts, with Grade Tossa-2/3 from £211, fours £208 and Continental Tossa-2/3 from £205, March-April, c.i.f. U.K.-Continent. Dundee spinners are fairly comfortably bought in their raw jute supplies for this season, and only small business is being done, mostly in afloat parcels, but these are not now so freely offered. The sellers are not inclined to reduce their terms, as they were formerly.

The Calcutta goods market transacted nominal business at 101s for 40in. 10oz. hessians and 76s for 7½oz., March, and 100s 3d and 75s 6d April-June, with B Twills at 304s and 300s 9d for the respective positions of shipment, all f.o.b., Calcutta. Prices for jute yarns and cloth were raised by £5 a ton, so 8 lbs cops are now at 24.60d and 8 lbs spools at 25.75d a lb and 40in. 10oz. hessians 19.81d and 40in. 8oz. 16.55d a yard.

KERALA CASHEW PROCESSORS FACE RAW NUT SHORTAGE

GOVERNMENT URGED TO RELEASE BIGGER IMPORT QUOTA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

CASHEW kernel processors in Kerala are now facing a shortage of raw nuts because of the inadequate release of import quotas. The licences issued so far by the Central Government form only 50 percent of manufacturers' offtake last year. Processors have, therefore, asked for the immediate release of another 25 percent of import quota. The request was made a few weeks ago, but no decision has yet been taken by the Government, according to processors in Quilon. Last year, the Government issued licences for importing 90,000 tons of raw cashewnuts from Africa. The African crop available this year, it is estimated, is 130,000 tons. Meanwhile, reports say that the African crop was damaged to the extent of 25 percent to 30 percent due to cyclone, etcetera. The price of African nuts has increased to Rs. 800 a ton, representing a rise of Rs. 25 a ton, compared with the rate a month ago. New crop local nuts have started flowing into processing centres and the first harvest has already been absorbed by processors. The second harvest will be available from the middle of this month; it is expected to be larger than the first one. Processing interests in Quilon say that the south Travancore area is having a smaller crop while the crop in north Kerala is normal to better. There is almost a scramble for the Indian nuts, so they are commanding a premium over African nuts. Even at primary markets, the former are commanding a price of Rs. 875 a ton, against Rs. 800 a ton for the latter. Processed kernels are now selling at 56 (U.S.) cents a lb. Russia has just bought 500 tons at the current prices. She is reported to be negotiating for another 2,000 tons. The American offer is slightly lower since she is quoting only 54 cents or 55 cents a lb.

Declining Foreign Demand for Pepper

Russia has taken about 1,000 tons of pepper from Cochin recently. She and her allies are reported to have bought over 2,000 tons for their immediate requirements. Barring this, the foreign demand has been virtually absent for some time now. Meanwhile, the lack of buying by American dealers is worrying the Indian pepper trade, for the U.S.A. used to be a brisk buyer at this time of year. Strangely enough, she is now sitting on the fence and is watching the trend in the markets of origin. The disposal of the 1960-61 Indian crop amounting to an estimated 25,000 tons has, therefore, made little headway so far.

Competition from Singapore is believed to be responsible for the apathy of U.S. buyers. Some Singapore business houses have been liquidating their stocks recently to finance the losses they were incurring on their rubber stocks. Besides, the Sarawak Government is said to be encouraging the liquidation of stocks in view of the proximity of the new season which starts in May. The loan and storage facilities offered by the Government encouraged the building up of stocks to about 2,000 tons, forming well over 20 percent of the island's total production. A stock of this size is considered unmanageable by some quarters which support the stock liquidation drive in Sarawak.

Artificial Conditions

Market circles in Cochin doubt whether the little strength which Indian pepper gained from the recent orders from communist countries will be maintained. Unless substantial orders come from other countries too—especially from the United States—the market is likely to weaken. It is stated that the prices are still affected by the artificial conditions created in 1959 by the syndicate of Chinese dealers in Singapore which rigged up prices by cornering stocks. The price of pepper is still above its 1959 level, and many exporters expect a further fall in prices before buyers' interest is revived. The current Indian price is Rs. 375 a quintal, compared with Rs. 250 a quintal at this time last year. The forward positions are dearer.

Ginger Stocks Growing

The markets in Kerala are now reporting plentiful arrivals of dry ginger, although the harvest period is now on the verge of ending. Some quantity is being exported to Persian Gulf countries, but the demand from Bombay is far from satisfactory, so stocks are accumulating. The latest quotation from Cochin for new crop ginger is Rs. 110 a quintal. The current season's Indian crop is estimated by the trade at about 12,000 tons. This forms about 50 percent of the world output. Other major producers are Jamaica, Sierra Leone and China. The Indian ginger is considered poorer in quality. So its exports are threatened by better quality ginger offered by other countries. Efforts are now being made in India to improve quality. Ginger exports earn for the nation a few lakhs of rupees every year. Exports form only about 50 percent of the country's total production.

Higher Prices for Tea and Coffee

The Central Finance Minister's taxation proposals will make tea, coffee and betelnuts costlier to the consumer. Tea is expected to be costlier by 2nP or 3nP a lb while coffee prices are likely to go up by 6nP or 8nP a lb. The prices of betelnut have gone up by about Rs. 5 or Rs. 10 a 20 kilos after the announcement of the new proposal raising the existing duty by 80nP a kilogram.

Tax Concession for Planters

The Kerala Finance Minister, Mr. R. Shankar, has offered a small tax concession to planters while presenting his Budget for 1961-62 to the State Legislature. The highest rate of super tax on agricultural income will be reduced by a few naye paise to encourage the expansion of the plantation industry. At present, planting companies are subject to an agricultural income tax of 25nP in the rupee besides a super tax at progressive rates; the rate of super tax on incomes above Rs. 10 lakhs is 31nP in the rupee and on income above Rs. 20 lakhs 37nP in the rupee. The rates of tax on agricultural income in the higher slabs in Kerala are the highest in India. The high rate of tax, it is said, has retarded the expansion of the Kerala plantation industry, which even the State Finance Minister admitted. He said in his Budget speech that in the larger interest of economic growth of the State, it is proposed to fix the highest rate of super tax in the case of companies at 31nP in the rupee which will be applicable to incomes above Rs. 10 lakhs. Similarly, the highest rate of super tax payable by individuals, Hindu undivided families, etcetera, will be fixed at 34nP in the rupee, against the present rate of 41nP a rupee. But even after the reductions, the taxes on agricultural income in Kerala will remain the highest in India. The loss of revenue due to the above measure may not exceed Rs. 6 lakhs a year, according to the estimate of the State Finance Minister.

Three New Levies

Mr. Shankar has proposed three new levies to cover partially the Rs. 6.76-crore deficit in his Budget. He has proposed an additional land tax of Rs. 2 an acre, subject to the condition that the total land tax—including the new tax—shall not exceed one-fifth of the gross produce from the land. The effective acreage, brought within the levy of the plantation tax introduced last year, will be deducted from the assessment for the new levy. To give relief to small land holders, holdings below two acres will be exempt from the additional tax. The Finance Minister's excuse is that the large outlay of expenditure on agricultural development in the first two plans has substantially improved the yield from the land and "it is only in the fitness of things that a small portion of the additional benefit is made available to the State for further investments into its economy". His second new tax is a levy on buildings, other than factory buildings, public buildings and buildings for religious, educational and charitable institutions, to yield Rs. 20 lakhs a year. Buildings having a floor area of less than 1,000 square feet will, however, be exempt from the tax. The rate of tax varies from 10nP to 40nP a square feet, the maximum being applicable to buildings having a floor area of over 8,000 square feet. The tax will be applicable for buildings completed on or after 2nd March, 1961, and will be levied only once on a building. The third tax is a sales tax on foodgrains at 1 percent, single-point. Foodgrains were hitherto enjoying exemption from sales tax in Kerala. Rice distributed from fair-price shops will be exempted from the levy to provide relief to the poorer sections of the people. The Finance Minister's other proposals to raise revenue are the following: the enhancement of the sales tax on foreign liquor from 25 percent to 40 percent (anticipated revenue Rs. 3 lakhs a year) and increase in State Transport fares from 3.44nP to 4nP a mile (additional income Rs. 40 lakhs).

Developing Cash Crops

Dealing with cash crops, Mr. Shankar said that their cultivation and export should be given equal importance. Kerala has almost a monopoly of certain cash crops like coconut, pepper, cardamom, ginger, lemongrass oil, rubber and tapioca. India is not self-sufficient in coconut and rubber, so considerable foreign exchange is now being spent for importing these commodities. The only State in India which can prevent this drain by increased production of these commodities is Kerala. If the yield from the State's coconut gardens can be increased by 30 percent, India will become self-sufficient in the commodity. Rubber cultivation will have to be extended by another 300,000 acres or 400,000 acres in order to meet the increasing demand for it in India. Mr. Shankar said that determined efforts would have to be made to reach the third plan targets.

In view of the importance of cash crops to Kerala, a comprehensive scheme has been included in its third plan for the development of their cultivation. The next year's estimates included provision for research and development of cash crops. The research programme on cash crops is a new one which the State Government has decided to undertake, realising the need to increase their production. During 1961-62, it is proposed to plant rubber in a large area and a sum of Rs. 10.70 lakhs has been included for granting loans to educated unemployed to help them cultivate rubber. This will also afford some relief to the problem of unemployment in the State. Besides, it is proposed to raise 3,700 acres of teak plantations, 3,000 acres of soft-wood plantations and 3,000 acres of Eucalyptus plantations next year. There is also a scheme for raising plantations of sandal wood, wattle and bamboo. Substantial amounts have been provided for implementing these schemes.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

LOWER PRICE TREND IN DUSTS

AT Sale No 33, held on 6th and 8th March, there were 70,359 packages on offer at the Export auction, and these met with a strong general demand at irregular rates. The majority of the offerings comprised end-of-season teas. "Teas for price" and plain B.P.'s were firm and sometimes dearer but plain Fannings were easier by 10nP. Dooars B.O.P.'s were fully firm to dearer but O.Fgs. in this category occasionally declined in price. Medium Assams with bright liquors sold well, particularly B.O.P.'s and O.Fgs. Stylish whole leaf grades met with good support, while the remainder were rather irregular. The few lines of tippy teas on offer were a strong feature. The very few Darjeeling teas met with fair support. Legg-cut teas were irregular and occasionally easier. The best C.T.C. descriptions with bright liquors were again a strong feature and sometimes appreciated in price, but the plainer and more ordinary kinds registered a further decline. Secondary C.T.C. grades continued to receive good support, and although irregular generally sold at about last rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	2.12 to 2.16
Plain B.P.	4.60 to 4.70	1.80 to 1.83
Plain Fannings	4.60 to 4.80	1.84 to 1.96
Medium B.P.	4.70 to 4.90	1.80 to 1.84
Medium Fannings	4.80 to 5.10	1.90 to 2.00
Best Assam C.T.C. BP	5.90 to 6.30	2.45 to 2.65
Best Assam C.T.C Fngs.	5.90 to 6.40	2.45 to 2.65

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 23,149 chests of Dust on offer met with a good general demand at lower rates. Orthodox descriptions declined by 10nP and sometimes 20nP except for the smaller types which found better support. Legg-cut teas were up to 20nP easier and towards the close of the sale there were some withdrawals. Clean medium C.T.C.'s sold at irregular rates, but the fibrous kinds registered a further drop and were rather difficult of sale. Good C.T.C.'s were also irregular with buyers following quality closely and a few lines realised much dearer prices.

Quotations

	1961 Rs. a kilo	1959 Rs. a lb.
Plain Orthodox Dust	4.60 to 4.80	2.02 to 2.10
Medium Assam Dust	4.70 to 5.10	1.26 to 2.04
Legg-cut Dust	4.90 to 5.20	2.06 to 2.13
Medium Assam C.T.C. Dust	5.50 to 5.90	
Good Assam C.T.C. Dust	6.20 to 6.60	2.40 to 2.75

(Quotations are inclusive of excise duty.)

There was a good general demand for the 2,351 chests of Leaf on offer, which sold at generally dearer rates.

TIME CHARTERING IN FREIGHT MARKETS QUIET

THE best features during the past week were the fixtures of grain from U.S. Gulf to Japan which paid improved rates of $10.25, and shipowners are hopeful of obtaining up to $11 for end-March and April loading. Chartering activities for foodgrains from the Pacific coast remained inactive. Sugar trading from Cuba was more active. Russian charterers taking the major part of the cargoes. Another fixture of sugar from Cuba to Ceylon was reported at 32s 6d f.i.o. stowed. According to some unconfirmed reports, the first grain shipments from British Columbia to China is believed to have been fixed at 59s 6d. Cement in bags 10,000 tons 5 percent from Alexandria to Colombo and Rangoon has been fixed at 41s 6d f.i.o. stowed. Indian ore shippers accepted 58s f.i.o. with 1,000 load-1,500 discharge for 9,000 tons 10 percent manganese ore Visakhapatnam-Ghent. West coast India to Poland paid 61s f.i.o. trimmed. Eight thousand tons 5 percent bauxite ore from Port Okha to Rotterdam was fixed at 54s f.i.o. and trimmed. Time charter was slower, probably due to the absence of the Chinese charterers. Trips to Australia from the U.K. or the Continent were reported at 22s 6d. At the Haldia anchorage, about 32,000 tons of foodgrains have been lightened up to the middle of February. Due to the unfavourable weather, no further vessel will be accepted there until late this year. At the Paradip anchorage, a Japanese chartered vessel loaded about 7,500 tons of iron ore in 13 days but since 1st March, due to strong south-west wind, the vessel remained idle for five days and then was diverted to Visakhapatnam to complete her engagement quantity. As reported in this column a few weeks ago, a vessel arrived in Krishnapatam on 21st February, 1961, and up to 3rd March only 25 tons of iron ore was loaded. At present, only one lighter of 25 tons capacity is available there.

COMPANY AND PUBLIC NOTICES

THE ORISSA MINERALS DEVELOPMENT COMPANY LTD.

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office of the Company Chartered Bank Buildings, Calcutta, at 11-30 A.M. on Thursday, the 30th March, 1961 for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th June, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 15th March, 1961 to 30th March, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 24th February, 1961

NOTE: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 12th April, 1961, to those shareholders whose names appear in the Company's books on the 30th March, 1961 or to their mandatees. No application for Dividend Warrants will be necessary.

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place, Calcutta-1.

NOTICE

NOTICE is hereby given that the Eighteenth Annual General Meeting of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 5th April, 1961, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1960 and Profit & Loss Account for the year ended 31st December, 1960;
2. To declare a dividend;
3. To appoint four Directors in place of Mr. I. P. Goenka, Mr. Y. N. Mafatlal, Mr. R. L. Nopany and Mr. M. L. Tapuriah who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint Auditors for Bank and its branches for the current year and to fix their remuneration;
5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:

"That the Articles of Association of the Company be altered in manner following:

(a) The first paragraph of Article 87 of the existing Articles shall be deleted and the following paragraph inserted in its place:

Each Director shall be paid out of the funds of the Company by way of remuneration for his services a sum not exceeding Rs. 100/- for each Meeting of the Board or any Committee of the Board attended by him.

(b) At the end of the second paragraph of Article 87 the following sentence shall be added:

The Directors shall further be entitled to be reimbursed and/or paid all expenses that may be incurred or paid by them in connection with any business of the Company."

NOTE:—1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 20th March, 1961 to Wednesday, the 5th April, 1961, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 6th April, 1961, to those Members whose names appear on the Company's Register on the 5th April, 1961.

(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

The item of Special Business to be transacted at the Annual General Meeting to be held on the 5th April, 1961 is to consider and pass a Special Resolution seeking to alter Article 87 of the Articles of Association of the Company.

By a special resolution passed on the 9th April, 1958 the remuneration of a Director was changed from a fee not exceeding Rs. 100 for each Meeting of the Directors or any Committee of the Directors attended by him to a fixed remuneration of Rs. 500 per month. By virtue of Section 309(2) of the Companies Act as amended by the Companies (Amendment) Act, 1960, monthly payments to Directors are prohibited. The proposed alteration is to bring the Article in conformity with the provisions of the Companies Act by reinstating the method of remuneration in force prior to the 9th April, 1958.

The second paragraph of Article 87 as it stands at present refers only to expenses incurred in connection with Meetings. It is proper that other expenses, *e.g.* charges for trunk telephone calls and cost of cables, which may be incurred by the Directors in connection with the business of the Company should be defrayed by the Company. The proposed addition at the end of the second paragraph is intended to enable this to be done.

All the Directors are interested in the proposed amendments to the extent that they relate to the payment of Directors' fees and expenses.

By virtue of Section 35(B) (1) (a) of the Banking Companies Act, 1949, the present amendments regarding the remuneration payable to the Directors require the approval of the Reserve Bank of India, which will be sought after the company gives its consent to the Special Resolution.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
1st March, 1961.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Directors have decided to declare a second Interim Dividend on 24th March 1961 (additional to the Interim Dividend of 2½%, subject to tax, declared on 5th August 1960) in respect of the Company's financial year ending 31st March 1961, of 2½%, subject to tax, payable on or after 12th April 1961 to registered shareholders whose names appear in the Register on 24th March, 1961 or to their mandatees.

Transfers received at the Company's Registered Office before close of business on 21st March, 1961 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
B. GRANGER PEARSON,
Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
7th March, 1961.

N.B. Shareholders should inform the Registrar of *any changes in their registered addresses.*

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

THE Directors of this Company have declared:—

(1) On the ordinary shares a dividend of 3% making, with the interim dividend, 6% for the year ended 31st December, 1960; and

(2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1960.

These dividends will be paid on 28th March, 1961, less Income Tax at 7/9 per £. and the Transfer Books will be closed from 14th March to 28th March, 1961, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1960.

Preliminary figures for the year ended 31st December 1960 show Trading Loss £35,510 (profit £264,617), Income from Investments £20,281 (£23,126), Depreciation written off £10,000 (£40,000), Net Loss after Taxation £47,853 (Profit £129,115), net interim dividends already paid £13,781, net dividends now declared £13,781 and estimated carry forward £23,428 (£98,843).

J. G. WALTON,
Secretary.

Dundee, 7th March, 1961.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that a separate meeting of the holders of Ordinary Shares in the capital of the Company will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday the thirtieth day of March 1961 at 11-30 o'clock in the forenoon to consider and, if thought fit, to pass the following resolution as a special resolution, pursuant to Article 65 of the Articles of Association of the Company and Section 106 of the Companies Act, 1956, viz:—

"That this separate general meeting of the holders of Ordinary Shares of Jardine Henderson, Limited, hereby confirms an Agreement dated the thirtieth day of March 1961, made between Jardine Henderson, Limited of the first part, Mr. Girdharilal Mehta on behalf of the holders of Preference Shares in the capital of the Company of the second part and Mr. Chhedi Lal Gupta on behalf of the holders of the Ordinary Shares in the capital of the Company of the third part (which Agreement has been produced to this meeting and for the purpose of identification initialled by the Chairman thereof) and sanctions and approves of the rights attached to the Preference Shares in the capital of the Company being modified and varied in accordance with the said Agreement."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row,
Calcutta-1.
24th February, 1961.

NOTICE is hereby given that the Board of Directors have sanctioned payment of an additional dividend of 2.10% to Preference Shareholders of the Company in pursuance of the Preference Shares (Regulation of Dividends) Act, 1960 in respect of the year ended 31st March, 1960.

The dividend will be paid on 27th March, 1961 to those Shareholders (or their mandataries) whose names appear in the Company's books on 25th March, 1961.

The Preference Share Transfer Books of the Company will be closed from 17th March to 25th March, 1961, both days inclusive.

By Order of the Board,
ANGLO-INDIA JUTE MILLS CO. LD.,
DUNCAN BROTHERS & CO. LD.,
Managing Agents.

31, Netaji Subhas Road,
Calcutta, 3rd March, 1961.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that a general meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1 on Thursday the thirtieth day of March 1961, at 11 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following Resolutions:

1 **(As a Special Resolution).** "That subject to the sanction by special resolutions passed at separate meetings of the holders of the issued Preference Shares of the Company and of the holders of the issued Ordinary Shares of the *Company respectively being obtained* within three months from the date of passing of this resolution, Article 4 of the Articles of Association of the Company be deleted and the following Article 4 be substituted in place thereof:—

"The Capital of the Company is Rs. 3,50,00,000 divided into 3,00,000 Ordinary Shares of Rs. 100 each and 50,000 Preference Shares of Rs. 100 each, and the said Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 5 per cent per annum without deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under Section 18 (3D) of the Indian Income-tax Act, 1922, or any statutory modification thereof, on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of dividend, whether declared or not up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any further right to participate in profits or assets, nor confer any voting rights."

2 **(As an Ordinary Resolution).** "That for the purpose of giving effect to the modification of rights in the manner specified in the foregoing special resolution an Agreement be entered into between the Company of the first part, Mr. Girdharilal Mehta representing the holders of Preference Shares of the Company of the second part and Mr. Chhedi Lal Gupta representing the holders of Ordinary Shares of the Company of the third part in terms of the draft placed before and approved by this meeting and for purposes of identification signed by the Chairman thereof and that the Board is hereby authorised to affix the Common Seal of the Company to the Agreement and that such Agreement be executed on behalf of the Company in the manner provided in the Articles of Association of the Company."

3 **(As an Ordinary Resolution).** "That the Board is hereby authorised to take the necessary steps to obtain sanction to the Agreement and to the modification of rights envisaged therein at separate meetings already convened of the holders of the issued Preference Shares and the holders of the issued Ordinary Shares of the Company respectively to pass the necessary special resolutions thereat."

4 **As an Ordinary Resolution** of which special notice as required by section 281 of the Companies Act, 1956, has been received by the Company, viz:—

"That pursuant to the provisions of section 281 of the Companies Act, 1956, the Hon. Sushil Kumar Sinha who has attained the age of sixty-five years in June 1960 and who in accordance with the provisions of section 280 of the said Act (prior to its amendment) vacated his office as a Director of the Company on 22nd December 1960, be and is hereby appointed a Director of the Company and it is hereby specifically declared that the age limit for directors prescribed by section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600 for each Meeting of the Board attended subject to a maximum in the aggregate of Rs. 6,000 per annum."

5 **(As Special Resolutions)—**

LINSEED STEADY

The linseed market was steady during the past week in sympathy with mustard and groundnut. Trading was slow with crushers consuming all available ready supplies. Arrivals were on a small scale. Upcountry markets were steady and sellers reserved. The oil section of the market was firm. Stocks with millers were small. Local buyers showed interest for ready and forward deliveries. The oilcake market was quiet and local demand poor. The latest quotation is as follows: Ready seeds, Rs. 30.50 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 28th February and 6th March, 1961)

Cowhides: Wet salted (Slaughtered) 24,500 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 72,300 pcs. on the basis of Rs. 340 to Rs. 350, Rs. 380 to Rs. 430 and Rs. 460 to Rs. 470; Wet salted (he-killed) on the basis of Rs. 5.00 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur-Murshidabad 47,600 pcs. on the basis of Rs. 350 to Rs. 400 and Rs. 425; Purneah-Kissenganj 9,700 pcs. on the basis of Rs. 390 to Rs. 400 and Rs. 415; Patna (Ord.) 2,000 pcs. on the basis of Rs. 275; Patna-Muzafferpore 14,500 pcs. on the basis of Rs. 370 to Rs. 375 and Rs. 395 to Rs. 405; Purneah 5,700 pcs. on the basis of Rs. 525.

EXPANDING TEA PRODUCTION AND EXPORTS

TWO broad criticisms can be made of the changes in indirect taxes proposed by the Central Finance Minister, Mr. Morarji Desai, in his Budget for 1961-62. One is that many of the tax rates are stiffer than he says they are. In the case of more and more commodities, it is gradually becoming clearer that the ultimate revenue will turn out to be much larger than what Mr. Desai has estimated. The second criticism is that, in a number of cases, the increase in the indirect levies is far too steep. The younger producers, or those facing exceptional difficulties, may be hit so hard that they may have to shut up shop. Within certain limits, both criticisms apply to the changes in the export and excise duties on tea. According to the Finance Minister, by reducing the export duty from 53nP a kilogram to 44nP a kilogram, the Government will lose Rs. 2 crores of revenue. Against this, it will get back Rs. 1.98 crores through the increase in the excise duties on all teas, combined with the reduction in the excise duty on package tea. The net decline in revenue, on the official calculation, should thus be Rs. 2 lakhs.

Other calculations, however, suggest that the revenue, instead of declining, will actually increase. Furthermore, whoever else may be better off, the industry will almost certainly suffer. This latter is the main point which emerges from the speech delivered by Mr. N. S. Coldwell, chairman, at the annual general meeting of the Indian Tea Association in Calcutta last Friday. As Mr. Coldwell claimed, the excise duties are paid not by the consumer, but by the garden. They are part of the cost of production, "just like the labourers' wages or the cost of coal". The heavier excise duties will undoubtedly make things more difficult for the producer, but "will have no effect upon the wholesale buyer or upon the general public in this country"—against whom they are mainly intended. The increase in the excise duty on Cachar tea is particularly illogical after a year when production in that area has fallen by 25 percent. Investors who have been buying tea shares since the cut in the export duty was announced might well have second thoughts after Mr. Coldwell's remarks. How much of the excise duty increase can be passed on to consumers during the coming year, is uncertain. A lot depends on whether tea production declines to the point where a sellers' market develops. On present indications, however, it seems that the foreign consumer will be somewhat better off with the export duty reduction, but the domestic producer will almost definitely be worse off. He will be worse off not only because he will have to bear virtually the whole of the increase in excise duty, but also because he will have to find more funds to pay the duty at a time when such funds are extremely difficult and expensive to obtain. (A fuller analysis of the tea duty changes is made in a special article on a later page.)

The increases in the excise duties are hard to justify considering that the Government wants the industry to increase its production rapidly in the coming years. The draft outline of the third five year plan recommended an output target of 850 million lbs for 1966. But, as Mr. Coldwell mentioned, "there has even been talk of a target of 900 million lbs", against an actual production of 694 million lbs in 1960. Since a tea bush planted in the plains takes five years to reach full bearing, this increase of 150 million lbs is really expected of the bushes already in the ground. It is, therefore, worth examining whether circumstances are conducive to such an increase. Apart from the fiscal disincentives, the tea industry is not allocated enough fertilisers which are essential for raising production. Scientists have shown that if fertilisers are not used in a single year, up to 30 percent of the normal annual production may be lost before the damage can be made good. Yet, in 1960, when the north Indian gardens asked for 71,000 tons of ammonium sulphate, they got only 50,000 tons. Supplies of electrical power are inadequate, especially in Darjeeling, where many estates have to run their emergency plants as a matter of routine. There is an acute shortage of transport facilities, and this has apparently grown worse in Assam since the large claims of the army and the oil refineries began to receive higher priority.

For years, the Government has been unable to make up its mind about whether or not the consumption of tea within India should be encouraged. At times, it has decided that it should; at other times, that it should not. The latest fiscal changes seem to imply that once again the official policy is veering round to the latter view. In this, it is unduly influenced by the fact that the drought of April-May 1960 sharply reduced the north Indian tea crop, and if more had been produced, probably more would have been exported. The main conclusion which seems to have been drawn is that it is necessary to depress domestic consumption, so that the surplus available for export may be bigger. In a longer-term perspective, however, such a policy may prove extremely short-sighted. A large and growing internal market is essential for the health of the industry. By encouraging bigger production, it can help keep down unit production costs, and thus enable Indian tea to compete more effectively abroad. It is also one way of providing some sort of an assurance that the industry will be able to sell a substantial proportion of its output. The need to earn more foreign exchange is recognised, as also is the fact that exporting bigger quantities of tea is one way of doing so. But the fact has to be faced that no industry can for long go on exporting its products at prices rendered unremunerative by surplus production; it must ultimately shrink in size. One of India's major advantages in international competition is that she has a fair-sized domestic market for tea, which to some extent cushions her against the adversities of trade abroad. That advantage can be consolidated if the growth of the domestic market accompanies the growth of production, and if the industry's costs are kept down.

It is certain that competition in world tea markets will increase in the years to come. Mr. Coldwell quoted a recent F.A.O. report as estimating that, if present production and consumption trends continue, there is likely to be an accumulated surplus of about 100 million lbs of tea by 1966. The Chinese threat to flood the world markets with tea offered at cut prices has not yet materialised, but it represents an important potential danger. In Ceylon, production and exports are rising, quality has not deteriorated, and the old advantages of easier transport remain. Indonesian output is still barely half the pre-war level; it may or may not recover. But the most serious threat of all probably comes from the African territories which produce common tea. Mr. Coldwell pointed out that producers there pay very little tax; they have been able to avoid the mistakes of the pioneers; and they can import fertilisers, tea chests and other requirements without restriction. On the other hand, it is also true that the political unrest now spreading in Africa might affect tea production there considerably in years to come. Clearly, however, India cannot rely on the adversities of her competitors if she seriously means to grow and export more tea. She has to see to it that her own industry works in an atmosphere of peace, and is able to yield a profit which constitutes a genuine incentive for producers.

In former years, some protection against sudden changes in world production and demand was afforded by the International Tea Agreement, which expired more than five years ago. Efforts to renew it have continued ever since, but they have borne little fruit so far. This is apparently because the newer producers are not prepared to restrict their output. Also, some of the older ones, being short of foreign exchange, are keen to raise their exports and, therefore, their production. Mr. Coldwell nevertheless declared himself in favour of renewing the Agreement as a precaution against over-production, and the events of the future might well prove him right. What is certain is that the Indian industry cannot afford to produce large quantities of tea, at high cost, and then, squeezed in the domestic market, find itself forced to compete abroad at uneconomic prices. The ambitious tea production targets for the third plan depend on the growth of internal consumption as well as exports; both these, in turn, depend on whether India can produce her tea cheaply enough.

WIDER SHAREHOLDING—I

THE ownership of shares in joint-stock companies in India has been very substantially extended in the past three years. Willingness to invest savings in the stock market, formerly restricted to a very small class, is now shown by a somewhat larger class. Although larger, it no doubt remains a minority section of the mass of savers, but the trend is important, as is the fact that smaller individual sums of cash are nowadays being invested; more people are realising that one does not have to be a tycoon to own one or two shares. The offer of shares to the public (in some cases, of a majority of their shares) by companies of international repute, has encouraged the entry into the market of a new class of investors, sometimes of modest means; heavy over-subscription of certain of these offers suggests that the process could go much further yet. No accurate survey of the spread of share ownership among the population has been undertaken here. The trends it would reveal might be interesting at a time when it is being alleged that Indian industry is becoming more concentrated, and that a small section is taking more than its share of increments in the national product. Careful study would show that private enterprise can become more "popular"—that is, be owned by more people—while it concentrates its structure in answer to economic and technological exigencies.

However, more urgent than calculating to what extent Indian enterprise has already become more popular is the effort to see that the trend continues and gathers pace. This is being done, notably by the Calcutta Stock Exchange, which has a programme for educating the public and promoting share ownership. In 1959, it formed a special sub-committee for public relations and for development of the market, and last summer it launched a campaign, with the aid of informative booklets in English, Bengali and Hindi, to teach savers how and why they might buy shares. In adopting the slogan "Become a shareholder in the enterprise India!" and in defining itself as "the market of the nation", the Calcutta Stock Exchange is following a course already entered upon by the professional investment community in most parts of the non-communist world, with the goal of making a reality of the notion of "popular capitalism".

Naturally, anyone familiar with the mechanism of investment and of company management realises that "popular capitalism" will always remain an ideal. "The people" will never really own capitalist enterprise, and to the extent they do own large shares in it, the day-to-day management of its affairs will, and must, escape them. But "the people" can, thanks to the stock markets, aspire to a much greater measure of ownership and control of capitalism than they could ever

hope to gain over "their own" nationalised industries. If a "people's capitalism" remains an ideal, it is not a pure myth like the "people's democracies" of the communist States. To say that the American people own General Motors will always be a more reasonable statement than to say the Russian people own "their" steel mills.

A study published in February by the New York Stock Exchange surveys progress towards popular capitalism, in the sense of widespread share ownership, in 22 countries, including India. Before using its findings to place Indian efforts in a world perspective, it is useful to recall the forms that popular capitalism may take. It is proposed to leave aside profit-sharing and various schemes for workers' co-operation in management, because these do not involve any change in the ownership of capital and could thus be implemented in totally non-capitalist economies. The ownership of capital can be spread in three ways: by the issue of workers' shares to the employees of an enterprise; by the sale, as far as possible to specified sections of the population, of special types of stock called "popular shares"; and finally by encouraging and facilitating the purchase of ordinary types of shares among as many people as possible, regardless of whether they are workers, etcetera.

The first-named are surely the oldest conception of popular capitalism, for the idea dates from the 1848 revolution in France, when the revolutionary republicans imagined that capitalism could be wound up by distributing all the shares of a firm among its workers. During the first World War, in the same country, a law offered tax concessions to firms that instituted worker shares in addition to "capital shares", but since the former carried no voting rights, they were just a way of disguising shared profits as dividends without affecting the ownership of capital. In modern times, worker shares such as are issued by many of the world's best-known firms—like I.C.I. —are exactly of the same nature as all the other shares in the company's capital. It is just that they are acquired by employees only, and they are acquired either free or on specially favourable terms as to price or credit. Their issue is a complicated operation and, if a large number of workers are involved, must be accompanied by an increase in capital by incorporation of reserves.

Being particularly advantageous, or even free, they are issued as a bonus, usually in relation to each worker's salary and seniority in the firm. Many firms in Britain and the U.S.A. offer shares to managerial staff and key men, either at reduced prices or on long-term payment, as a bonus for diligence or to supplement pension schemes. The Conservative Party's plan for "co-partnership" would entail extending this practice much more widely. I.C.I.'s 1959 issue of free bonus shares to staff was the most massive operation of this sort, and its effects are being closely followed by employers and unions alike. Montecatini's offer of free and cut-price stock to its Italian workers falls in the same class, and so in reality did the public sale of the Ford family's shares on the New York market, because the unions demanded and received an assurance of prior treatment in this enormously successful issue.

Workers' shares raise a number of problems. Employers want to know whether their psychological effect over the long run will be as great as cash bonuses, profit-sharing, etcetera, which are simpler to effect. All the shareholders want to know whether, by placing shares in the hands of a large number of "weak holders" (since workers can less often afford to lock up their stock indefinitely), one has not created the danger of mass marginal sales that could depress prices at awkward moments. If, in order to meet that danger, the company places restrictions on the right to resell, the psychological effect of the operation is damaged by the feeling that worker-shareholders are only second-class capitalists. The British Council of the Aims of Industry has ingeniously suggested the constitution of "shop companies", financed by the firm itself, with resources to buy back workers' stock at market prices, and indeed to sell them the stock in the first place; the worker thus gets market rates, but his employer is his designated stockbroker. For the moment, tax complications have prevented giving this idea a trial.

Popular shares have become famous because most of the stock of Volkswagen, Preussag and other well-known West German and Austrian enterprises has lately taken this form, and further operations of the same sort are planned. They are aimed specifically at the most modest class of savers and thus lead to wider ownership than workers' shares, although workers in the firm may be given special facilities to acquire them. Their purpose is expressly political: to denationalise undertakings left in the State's hands by a previous régime without letting them pass back into the control of cartels or financial powers. The time is not yet, but one can well conceive that the Indian Government could one day choose this method of interesting the public in its national undertakings—while incidentally gathering together much capital for use in new undertakings. In fact, India will already benefit from the issue of popular shares in West Germany, because the Federal Government and the Land of Lower Saxony (the owners of Volkswagen) are putting their profits to a fund for assisting developing nations. Obviously, the same could be done if it were the Indian Government that were scattering the ownership of, say, a steel mill in a few years' time.

To ensure that popular shares reach only small investors, it is necessary to go into minute detail. There is a maximum number of shares any one person can buy (five in general, but ten for employees of that firm); the price at which he buys may be reduced in view of his income or family situation; no shareholder gets more than one vote, no matter mow many shares he owns (this makes cornering uninteresting); and no one can hold more than 2 percent of the capital. Since the seller retains 20 percent of the stock, he keeps a dominant minority holding. In Austria, further refinements are being experimented with: a chocolate factory, for instance, is selling 44 percent of its stock to the general public as popular shares, 26 percent to its employees as workers' shares, and 30 percent to retailers of its chocolates. It remains to be seen how effective these various guarantees against cornering by powerful interests prove. It is evident already that banks could persuade many small holders to deposit their scrip and delegate their voting power—which would take one right back to the most common form of industrial concentration in Germany: the domination of enterprises by a few industrial banks.

A type of popular shareholding which fits neither into the category of workers' shares nor people's shares has been suggested in France by the Gaullist exponents of popular capitalism. They urge that firms willing to practise profit-sharing should give the shared profits, not direct to their workers, but to a national fund which would take the form of an open-end investment trust. It would invest the money in the shares of all the companies concerned (and perhaps of others too) and then issue investment certificates to all the workers in those companies, pro rata to the cash they would otherwise have received. This would avoid the inconvenience of profit-sharing restricted to one enterprise. The workers would get, not one year's profits, but a permanent stake in the capital, and then not only of their own firm but of all the best companies. They would have a concern to see that their own firm made profits, for then they would get more investment certificates, but if it did not, their "capitalist" income would not suffer so much since their stake would be in a wide range of companies.

(To be concluded)

AFTER THE REVALUATIONS

THE British authorities were not content with a neutral policy after the revaluation of the German and Dutch currencies. First they bought sterling in sufficient quantities to stop the decline in its quotations; then the Chancellor of the Exchequer denied categorically that the Government had any idea of devaluation; then the Bank of England sold U.S. dollars in excess of the demand for them and thus raised sterling's quotations. This policy was not ineffective: speculators against sterling became nervous, and the currency was, at least temporarily, stabilised. Thus the first wave of uncertainty initiated by the revaluations spent its force a few days after these unexpected changes were announced; but, of course, the underlying problem remained. It is significant that as soon as the principle of altering exchange-rates was accepted as practical finance, the pound, not the dollar, was suspect. The contrary idea that relative values, established at some arbitrary point of time, in the circumstances of that time, are the true values of currencies, at any time and in any circumstances, is illogical, and even conservative opinion had accepted the proposition that currencies should be "realigned". Years previously sterling had been weakened by rumours that "realigment" was imminent, and the manner of the mark's revaluation, when sterling was again weak, aggravated a problem that revaluation of the mark was supposed to solve.

First thoughts on the revaluations were not all confirmed by subsequent consideration. It was generally agreed that the revaluation of the mark by less than 5 percent was inadequate, but the belief that a further adjustment would soon be authorised gave way to the belief that the German authorities had accepted an inadequate rise as a compromise between a proper "realignment" and no adjustment at all, and that the compromise would remain in force for a considerable time. The fact remains that the principle of changing the relative values of currencies has been recognised as valid. The existing parities of the dollar and the pound are, therefore, no longer regarded as sacrosanct. But it was the pound, not the dollar, that suffered from the discussion of further "realignment"; for the dollar was already regaining strength when its value in terms of the mark and the guilder was reduced, whereas the revaluation of those currencies was not enough to convince the doubters that the pound was realistically valued after the change.

The reaction of the London Stock Exchange was emotional rather than rational. The value of two important European currencies had been raised; therefore, British exporters would sell more in both the domestic and the foreign markets of the countries concerned. So small investors and speculators reasoned; and, accordingly, prices of exporting companies' shares, particularly, were marked up. Significantly, big institutional investors remained aloof. After mature thought it seemed more doubtful that Britain's exports would expand much as a result of the revaluations. Dr. Ludwig Erhard had pointed out that inflation would have raised the prices of German goods abroad if revaluation of the currency had not done so, and as revaluation of the currency is essentially deflationary—in that it improves the terms of trade—the net effect of the change will probably be slight, even if exporters in the countries with revalued currencies do not deliberately reduce their prices.

The effects of revaluation on international payments are likewise problematical. The beneficial effects of devaluation—notably of sterling in 1949 and of the French franc in 1957—have not in the past accorded with expectations. Conversely, raising the value of a currency does not necessarily prevent the country concerned from strengthening its current account—witness the experience of New Zealand after 1948. The revaluations of the mark and the guilder will have served a useful purpose even if they do not materially change the pattern of international payments; for they will have forced us to recognise the benefits of a highly-valued currency. It may be, for instance, that some German and Dutch machinery is so productive, so economical in operation, that its price, in terms of foreign currencies, can be raised by 5 percent or so without affecting the demand for it; then not only every unit of the machinery sold but total earnings from the sales of it abroad will reflect the revaluation of the currency.

Britain is in an awkward position where she must consider not only her current account and the current accounts of the other sterling countries, but also the movement of short-term funds. The first reaction to the revaluations was alarming: these funds seemed to flow in larger quantities than previously—and they flowed out of London. But there was some evidence later that even inadequate revaluation had reduced the speculative attractions of the mark and correspondingly fortified the dollar, and that relative interest-rates would in future be the main determinants of the movement of funds. Even so, Britain may be compelled to maintain an average level of interest-rates that is higher than her internal circumstances require. The position of sterling would, of course, have been stronger if the British authorities had strengthened the nation's current account, at a relatively low rate of interest, rather than taken temporary advantage of short-term funds, at a relatively high rate of interest. Even if the currencies were properly aligned, an excess of short-term funds would be dangerous. The revaluations have evidently solved no fundamental problems, and they have disappointed official and financial opinion in London because they were small and individual when bold and comprehensive action was required Because they have moderated the strains that were weakening the whole financial structure, they have weakened the resolve to adjust that structure permanently. They have, however, proved that relative values of currencies (unlike, apparently, the relative value of gold) can be adjusted when necessary.

THE INCREASE IN DEPOSIT RATES

BANKING shares have turned hesitant following the decision to increase bank deposit interest rates. Investors are, however, more confused than worried, because only a few months ago bankers cut their rates under the impression deposits would not suffer. The Indian Banks Association is believed to have circulated all member banks informing them of the proposed increases in deposit rates. The new ones are: For money at three days' notice or more, 3 percent; for term deposits of three to 30 days, 3 percent; of 31 to 60 days, 3½ percent; of 61 to 90 days, 3½ percent; of 91 days to 12 months, 3½ percent; of 12 to 24 months, 4 percent; of 24 to 48 months, 4½ percent; of 48 to 60 months, 4½ percent and of 60 months and over, 5 percent. The revised ceiling on savings bank account interest will be 3 percent.

There is no doubt that banking resources have been employed to the maximum extent possible under present circumstances. Unless the resources of the banking community are replenished without delay, a substantial portion of the credit requirements will be extremely difficult to satisfy. Bankers have made the present move in a frantic bid to obtain more funds. Whether the deposit trend will respond, of course, is another matter. Usually during the busy season, the public has few spare funds to bank, and it might be some time before the impact of higher deposit rates makes itself felt.

The deliberations at the bankers' meeting held in New Delhi during the week-end did give serious attention to finding out the real cause of declining deposits. But to link the deposit fall entirely to low interest rates is not corroborated by the evidence. During the past six months deposits of scheduled banks have declined by Rs. 91.72 crores to Rs. 1,898.92 crores, but the State Bank has had to transfer Rs. 12¼ crores out of P.L. 480 funds to the Reserve Bank every month. The net loss of deposits of all scheduled banks, therefore, amounts to Rs. 19.72 crores. In the corresponding period of 1959-60, deposits increased by Rs. 53.45 crores to Rs. 1,887.72 crores, but then deposits of the State Bank were boosted by the accrual of P.L. 480 funds. In view of the demands of the busy season it is not correct to attribute the cause of the decline to lower interest rates only. It would probably have occurred in any case, judging from the stringent monetary conditions.

A closer examination of the trend indicates an important development. Deposits of the State Bank have increased during the past six months, if the loss of P.L. 480 funds is considered. Between September 1960 and February 1961, deposits of the State Bank declined only by Rs. 51.45 crores, but Rs. 72 crores were lost out of P.L. 480 funds. So there has really been a rise in public deposits. As for other scheduled banks, deposits declined by Rs. 40.27 crores to Rs. 1,340.51 crores. It remains to be seen whether there has been a shift of funds from the commercial banks to the State Bank. Judgement would be easier if the regional pattern of deposits were available. It is suspected that there has been a structural change in deposits as far as South India is concerned. In this region commercial banks are believed to have lost deposits following the Palai Central Bank episode. Confidence has also been weakened by placing a number of banks on moratoria. Whether a moratorium is declared for amalgamating or reconstructing any bank, it is damaging to confidence. It is therefore relevant to ask whether the decline in deposits is due to loss of confidence.

Investors in bank shares can hardly be blamed for taking the view that the profitability of banks has been hampered by the raising of deposit interest. Deposits are not expected to improve much—at least for some time—because nobody is interested in keeping money in a bank as long as funds can be utilised in business. The danger of the rise in deposit interest is that banks will be forced to increase their lending rates soon in order to compensate for the loss of profits. Some financial circles are inclined to believe that it is time bankers thought about whether they could increase their share capital in order to bring a greater balance between it and deposit liabilities. If the share capital is increased, not only will the capital structure of banks be more evenly balanced, but more resources will also flow into the banking system.

Current News and Comment

Associated Battery Attract

There is keen support for the ordinary shares of Associated Battery Makers (Eastern) Ltd around Rs. 39.31 because of the dividend yield and the growth prospects. The Company's results for the year ended August 1960 are satisfactory. Sales have fallen by about 9 percent to Rs. 2.06 crores in comparison with 1958-59, but this is partly due to technical factors. There has been a change in the pattern of production and a number of components are being manufactured in order to replace the imported goods. After increasing depreciation from Rs. 5.38 lakhs to Rs. 7.79 lakhs, the profit is Rs. 52.07 lakhs, against Rs. 60.55 lakhs in 1958-59. A final ordinary dividend of 10 percent, taxable, has been declared, making 25 percent for the year. It is covered more than two-and-a-half times and offers a yield of 6.4 percent at the present price. Taxation is allocated Rs. 23.77 lakhs (against Rs. 27.49 lakhs) and reserves get Rs. 5.70 lakhs. The carry-forward is Rs. 8,73,110, compared with Rs. 4,37,537 brought in.

In January 1960, Associated Battery was converted into a public limited Company and the ordinary capital was increased by issuing 630,000 new shares of Rs. 10 each at a premium of Rs. 5 a share. Out of this, 480,000 shares were subscribed by the Indian public. Associated Battery has a strong balance-sheet. The ordinary capital of Rs. 1.18 crores is supported by reserves of more than Rs. 60.85 lakhs and by a share premium reserve of Rs. 28.63 lakhs. Fixed assets are Rs. 44.78 lakhs, investments Rs. 20.40 lakhs and current assets Rs. 1.60 crores. Cash stands at Rs. 25.60 lakhs. In view of the strong reserve position, the stock market expects that the Company may issue bonus shares in the near future.

Orissa Minerals Maintains

The Orissa Minerals Development Co. Ltd has produced satisfactory results for the year ended June 1960. Raisings of iron ore increased from 587,803 tons to 702,291 tons, and despatches from 566,122 tons to 692,063 tons. The demand for iron ore increased due to the requirements of the new steel plants and the existing ones following expansion. But full advantage of the increase in demand could not be taken because of transport shortages. The production of manganese ore showed little change at 61,285 tons, but despatches declined from 56,990 tons in 1958-59 to 50,066 tons in 1959-60. The output of dioxide ore decreased from 1,404 tons to 640 tons because the deposit yielding dioxide ores has been almost exhausted.

After providing Rs. 3.59 lakhs (against Rs. 2.92 lakhs) for depreciation, the Company's profit has amounted to Rs. 25.77 lakhs, against Rs. 26.16 lakhs. The ordinary dividend has been maintained at 36 percent, taxable, including an interim of 15 percent. It is covered more than thrice and offers a yield of 8.2 percent at the present price of Rs. 44 a share. General reserve is allocated Rs. 4 lakhs (against Rs. 2 lakhs), building reserve Rs. 40,000 (against Rs. 1 lakh), statutory development reserve Rs. 2.08 lakhs (against Rs. 60,800) and mechanisation reserve Rs. 3 lakhs (against Rs. 4 lakhs). The carry-forward is Rs. 1,10,697, compared with Rs. 88,304 brought in.

It is stated that there is keen competition in the manganese ore export market, and the position has deteriorated further due to the shortage of transport. Bolani Ores (Private) Ltd has made satisfactory progress and despatches of iron ore to the Durgapur steel project started from April 1960. Orissa Minerals has an ordinary share capital of Rs. 20 lakhs, divided into 200,000 shares of Rs. 10 each, which is backed by reserves of more than Rs. 59.67 lakhs. Fixed assets are Rs. 40.65 lakhs, investments Rs. 43.57 lakhs and current assets Rs. 54.34 lakhs.

Hindustan Lever Pays More

The shares of Hindustan Lever Ltd have risen from Rs. 44 to Rs. 52.50 over the past few weeks on sustained investment support based on prospects of a higher dividend. Investors' confidence which has pushed the price well beyond the 1960 high of Rs. 49.50 has not proved misplaced. The Company has fared well during the year ended December 1960. After providing Rs. 2.08 crores for taxation, it has earned a net profit of Rs. 2.50 crores, which is Rs. 42 lakhs higher than in the previous year. Since working results have shown a marked improvement, the directors have recommended a dividend of Rs. 2.60 a share, taxable, against Rs. 2.40 a share, taxable, in 1959. The net dividend works out to Rs. 1.82, against Rs. 1.68. The fuller report about Hindustan Lever's working is awaited with interest.

Progress of State Bank

There has been a noticeable decline in the rate of growth of bank deposits over the past few months due to the setback in public confidence following the failure of the Palai Central Bank and the low interest rates on deposits. In view of the steady increase in the demand for credit, banks are worried about the trend in deposits. In his speech at the State Bank's recent annual general meeting, the chairman, Mr. P. C. Bhattacharyya, stressed the need for increasing deposits in order to meet the growing demand for credit. He said that the banking system would have to use new techniques for mobilising resources. Banks have hitherto depended more on urban areas and industrial and commercial centres for collecting deposits; but now they will have to explore the possibilities of securing more deposits from rural and semi-urban areas. The State Bank has already made considerable efforts in this direction. Up to the end of 1960, it opened as many as 429 branches, mostly in rural and semi-urban areas. Total deposits at the branches increased from Rs. 29.32 crores in 1959 to Rs. 37.03 crores in 1960. The average deposits a new branch rose from Rs. 8.17 lakhs to Rs. 8.63 lakhs. The chairman said that there is considerable scope for increasing deposits in rural and semi-urban areas. The State Bank's future expansion programme will, however, be drawn up after the Branch Expansion Sub-Committee, which has been asked to review the working of the new branches, submits its report. The report is expected to be ready within a month or so.

Higher interest rates, some think, may help increase the volume of deposits. As an experimental measure, the State Bank has increased from 1st March its interest rate on savings bank accounts. The maximum rates of interest payable by banks on various classes of deposits under the inter-bank agreement are also being increased from 15th March. Asked whether the State Bank would raise deposit rates along with other banks, Mr. Bhattacharyya said that the former was not a party to the inter-bank agreement. But if the increase in rates under the agreement affected its position, the board of directors will have to think about it.

Public confidence is another factor which influences the growth of deposits. The deposit insurance scheme, it is thought, might help restore confidence. Earlier reports said that the scheme might be abandoned because of opposition from the bigger banks. Mr. Bhattacharyya, however, said that the scheme is "very much alive". The State Bank has not been officially consulted in the matter but the authorities have had informal discussions with the chairman and he has given his opinion in his personal capacity. Mr. Bhattacharyya did not disclose what was his opinion on the matter. Referring to the amalgamation of weaker banks, he said that the Bank is not considering any proposal for amalgamation except that

of the Travancore Forward Bank with the Bank's subsidiary, the State Bank of Travancore.

Reviewing the Bank's operations, the chairman said that in marked contrast to its position in 1959, it had recorded good progress in its traditional business in 1960. As a result, its net profit, after usual provisions, showed an increase from Rs. 1.87 crores to Rs. 2.18 crores. This has enabled it not only to strengthen its reserve and other funds but also to declare a dividend of Rs. 22.75 a share. It has thus restored the net dividend which was previously available to shareholders. The improvement in the profit is attributed to the increase in advances and the rise in the Bank's lending rates after 1st October, 1960. Total deposits declined in 1960 by Rs. 6 crores. Mr. Bhattacharyya attributed this to the fact that no deposits of P.L. 480 funds accrued to the Bank after 12th March, 1960, and a sum of Rs. 72 crores out of the amounts previously received was transferred to the Reserve Bank during the year. If the P.L. 480 deposits are kept out of account, the average deposits increased by Rs. 27.9 crores in 1960, compared with an increase of Rs. 122 crores in total deposits of other scheduled banks. At the end of February 1961, the State Bank held Rs. 201 crores of P.L. 480 funds.

Bengal Coal Offers Debentures

The Bengal Coal Co. Ltd proposes to increase its raisings of coal from 3 million tons to 4 million tons a year. It is expected that the target will be reached without difficulty, as the Company's coal reserves are estimated at more than 300 million tons. The expansion project is likely to cost Rs. 1.56 crores. A sum of Rs. 40 lakhs has already been raised by issuing 20,000 rights shares of Rs. 100 each at a premium of Rs. 100 a share. The Company is now offering Rs. 60 lakhs of 6½ percent debenture stock for subscription at par. (Fuller details of the issue are printed on a later page.) The rest of the money is to be found from the Company's internal resources. The subscription list for the debentures will open on 22nd March. Applications are being invited in amounts and multiples of Rs. 1,000. The interest on the stock is taxable. The redemption dates for the debentures range from 1934 to 1975. Out of the present offer, applications have been received for Rs. 30 lakhs, including an offer of Rs. 5 lakhs from the Life Insurance Corporation. These applications will be allotted in full.

The debentures are a first-class investment, since they are fully secured by the large assets of Bengal Coal. The annual interest on the stock is adequately covered by the net earnings of the Company. Bengal Coal made a net profit of Rs. 69.49 lakhs for the year ended October 1959. The net profit was Rs. 48.09 lakhs for the half-year ended April 1960. It is expected to improve as expansion proceeds. Debentures worth Rs. 5 lakhs will be redeemed at par each year, from and after 1964, by means of a sinking fund which will be constituted from the year ended October 1961. During the current year and in succeeding years, the Company will contribute at least Rs. 4 lakhs to the sinking fund out of its distributable profits. An application is being made to the Calcutta Stock Exchange for permission to deal in the debenture stock. The issued share capital of Bengal Coal is Rs. 1.40 crores, divided into 20,000 4½ percent cumulative preference shares of Rs. 100 each and 120,000 ordinary shares of Rs. 100 each. A taxable ordinary dividend of Rs. 25 a share was paid for the year ended October 1959, and a taxable interim ordinary dividend of Rs. 10 a share has been paid for the year ended October 1960.

Mahindra Maintains Dividend

The directors of Mahindra and Mahindra have maintained the dividend at Rs. 1.25 a share, subject to tax, for the year ended October 1960. They have also recommended a dividend of Rs. 7.80, taxable, on the 6 percent tax-free preference shares and Rs. 8.45, taxable, on the 6.5 percent preference shares. The preliminary figures on the Company's working show a net profit of Rs. 22.40 lakhs (against Rs. 26.62 lakhs), after providing Rs. 13.06 lakhs (against Rs. 11.15 lakhs) for depreciation, Rs. 1.58 lakhs (against Rs. 2.12 lakhs) for development rebate reserve and Rs. 19.60 lakhs (against Rs. 17.52 lakhs) for taxation. The Rs. 10 paid-up shares of Mahindra and Mahindra are quoted around Rs. 22.24, offering a tax-free yield of about 4.1 percent. They are popular among investors because of the Company's growth potentialities.

Premier Automobiles to Expand

In spite of the encouraging performance of Premier Automobiles during the year ended June 1960 and the prospects for still better results in the current year, the shares had long been subdued on account of substantial investment selling. The name of the Industrial Credit and Investment Corporation of India, which is known to hold about 34,000 shares in the Company, was freely mentioned in this connection. But the shares came into the limelight after the chairman, Mr. Lalchand Hirachand, said at the annual meeting last week that Premier Automobiles expects to receive the Government's sanction for its expansion scheme within a month or so. The scheme proposes stepping up the output by increasing the present production capacity for lorries from 3,000 to 15,000 a year on a single-shift basis and that of motor-cars from 4,000 to 15,000 a year. This will involve a capital expenditure of Rs. 25 crores or more. Part of the expense will be met through loans granted by the U.S. Development Loan Fund or other organisations. The chairman said that the Company's capital might also have to be increased. An application has been submitted to the Government to allow the Company to produce 100 motor-cars a day in two shifts. This will enable it to meet market requirements as well as bring down substantially the price of its motor-cars. Following the broadening of the motor-car manufacturing policy of the Government, the Company will have the right to make the Meadows engine which is at present manufactured by Automobile Products of India. Besides, the Company will be permitted to make another engine of its own choice. Referring to the current year's working, the chairman said that during the seven months ended January 1961, the Company produced 3,886 motor-cars and 3,690 lorries and sold spare parts of the value of Rs. 92.09 lakhs, against 3,050 motor-cars and 3,210 lorries and spare parts worth Rs. 84.83 lakhs in the corresponding period of the previous year. Premier Automobiles is now making all the important components including differential gears, planatory gears, carriers, half-shafts, cases, brake drums and pinions of axles. The heat-treatment equipment and the generators, which were installed last year, are now in full operation. The equipment—besides improving the quality of production—has contributed to minimising wastage.

Ambica Mills Pays More

The directors of Shri Ambica Mills Ltd, Ahmedabad, have decided to increase the dividend from Rs. 45 to Rs. 50 a share, subject to deduction of tax, for the year ended December 1960. The net dividend works out to Rs. 35, against Rs. 31.50 in 1959. The increase in the dividend is justified by the Company's performance. Sales and other receipts rose from Rs. 5.32 crores to Rs. 5.50 crores. The gross profit of Rs. 1.42 crores is Rs. 20 lakhs higher than in the previous year. After providing Rs. 10.85 lakhs (against Rs. 10.70 lakhs) for managing agency commission, Rs. 14.67 lakhs (against Rs. 14.19 lakhs) for depreciation, and Rs. 56 lakhs (against Rs. 48.50 lakhs) for taxation, the net profit shows an increase to Rs. 57.96 lakhs, (against Rs. 45.26 lakhs in the previous year). From this, Rs. 15 lakhs (against Rs. 3.74 lakhs) has been allocated to general reserve. Development rebate gets Rs. 2.50 lakhs (against Rs. 2.60 lakhs). The appropriation to the investment reserve has been reduced from Rs. 10 lakhs to Rs. 5 lakhs, while gratuity reserve gets Rs. 3 lakhs (against Rs. 2 lakhs). The proposed dividend absorbs Rs. 31.88 lakhs (against Rs. 28.69 lakhs) and the preference dividend Rs. 80,024. After making all the allocations, there remains Rs. 2.86 lakhs to be carried forward, against Rs. 59,271 brought in. Around the current price of Rs. 1.290, the shares of Shri Ambica Mills offer a tax-free yield of about 2.7 percent.

Shri Ambica Mills has accepted the offer of Bombay Steel Tubes Ltd for subscribing to the entire fresh capital issue of Rs. 70 lakhs. Sponsored by the former, Bombay Steel Tubes is expected to produce 25,000 tons of galvanised steel pipes a year when it gets into full production after a year or so. The factory will be located in Vatva, near Ahmedabad. The Industrial Credit and Investment Corporation of India is understood to have sanctioned a foreign exchange loan of Rs. 45 lakhs to the Company for importing plant and machinery. Bombay Steel Tubes was incorporated in 1959 with an authorised capital of Rs. 1 crore, of which Rs. 10 lakhs was issued. The present issue, which has been taken up by Ambica Mills, raises the issued capital to Rs. 80 lakhs.

Andhra Sugar Profit Down

The working of the Andhra Sugar Ltd during the year ended September was adversely affected by the inadequate supply of sugarcane, and the extra Rs. 4 a ton which it had to pay for the raw material. Cane crushed during the season was 108,524 tons (against 132,234 tons) and sugar manufactured was 111,620 bags (against 129,203 bags). The recovery was better at 10.29 percent (against 9.77 percent). With production down, sales fell from Rs. 1.54 crores to Rs. 1.18 crores. The gross profit of Rs. 18.39 lakhs was Rs. 5.78 lakhs less than in the previous year. A sum of Rs. 5.50 lakhs (against Rs. 8.10 lakhs) has been provided for taxation. Depreciation is allocated Rs. 4.97 lakhs (against Rs. 5.14 lakhs). The dividend of 20 percent, taxable, absorbs Rs. 6 lakhs. Development rebate reserve is allocated Rs. 1.50 lakhs. After making minor adjustments, the balance of Rs. 25,153 has been carried forward, against Rs. 22,959 brought in. The Company expects to crush more than 150,000 tons of sugarcane during the current season due to the fall in the price of jaggery.

The directors state that Andhra Sugar's superphosphate plant went into production in September 1960 and the sulphuric acid plant in February 1961. The industrial alcohol plant is expected to go into production before September. The acetic acid and acetic anhydride plant buildings are being constructed. The caustic soda plant is likely to go into production early in 1962. The diversification of the Company's activities is expected to improve the outlook in coming years. At the current price of Rs. 28, the shares offer a tax-free yield of about 5.2 percent. Against the paid-up capital of Rs. 30 lakhs, Andhra Sugar has reserves and surplus amounting to Rs. 28.80 lakhs.

Union Carbide Earns More

For the year ended 25th December, 1960, the earnings of Union Carbide (India) Ltd have improved to Rs. 1.45 crores from Rs. 1.36 crores in 1958-59, after providing Rs. 2.30 lakhs (against same) for development rebate. The ordinary dividend has been maintained at Rs. 1.80 a share, taxable, including an interim of 75nP a share, but the share capital has meanwhile been increased. The dividend is covered more than twice and offers a yield of 3.2 percent at the price of Rs. 56.37 a share. General reserve is allocated Rs. 30 lakhs and taxation takes Rs. 61.38 lakhs (against Rs. 64.61 lakhs). The carry-forward is Rs. 46,70,851. Sales increased from Rs. 7.70 crores in 1958-59 to Rs. 8.23 crores in 1959-60 due to the increased demand for the Company's products. In 1959-60, the capital expenditure for the construction of new plant and equipment and for renovation amounted to Rs. 2.20 crores (against Rs. 1.03 crores in 1958-59). A substantial portion of the expenditure has been incurred on the construction of the chemical and plastic plant in Trombay, Maharashtra State.

Union Carbide Polyethylene Plant

The polyethylene and chemical plant of Union Carbide (India) Ltd, which the Central Minister for Industry, Mr. Manubhai Shah, opened last week-end in Bombay, has been built at a cost of Rs. 4.5 crores. This is the second such plant in India; the first has been set up by the Alkali and Chemical Corporation in Rishra, near Calcutta. The Union Carbide factory is located in Trombay Island, in which are also situated the two oil refineries belonging to Burmah-Shell and Standard-Vacuum, India's first atomic reactor and a thermal power-station. A few other important industries are to be set up there shortly. The Union Carbide plant, it is claimed, is the most modern of its kind, built in collaboration with the foreign associate, the Union Carbide Corporation of the U.S.A., which holds a majority interest in the Indian concern, and which is itself a leading American plastic and chemical manufacturer. The capacity of the Trombay factory is rated at 15 million lbs of polyethylene resins and compounds, and substantial quantities of organic chemicals, including acetic acid, butyl alcohol, butyl acetate and ethyl acetate, a year. The annual value of the products is calculated at Rs. 2.5 crores. The initial capacity, as the Union Carbide chairman, Mr. J. R. Galloway, declared at the inauguration ceremony, will be increased several times within the next few years, at an estimated cost of Rs. 10 crores. The Central Government's sanction has already been obtained, and work will begin as soon as arrangements for finance are completed. The Company, it is reported, will not have much difficulty in marketing the products even after the capacity has been raised. Thanks to the remarkably rapid growth of the plastics industry which uses polyethylene as its raw material, the demand for this product has increased by at least 30 times since 1952, when India imported only 100 tons a year. So in addition to the Union Carbide factory and that belonging to the Alkali and Chemical Corporation, two more factories have been licensed, one each in Assam and south India. The raw material for polyethylene manufacture is industrial alcohol produced out of sugar bagasse which is available in plenty in India. The Union Carbide plant will draw its raw material of about 3 million gallons of alcohol a year from the Chitali distillery of the Maharashtra Government, located about 200 miles away from the factory.

Polyethylene has a wide range of applications. Besides many domestic appliances, useful products such as film and coated laminates, pipe and extruded sections, wires and cables are made out of it. It is also used by the transport and defence services. Union Carbide India Ltd is the former National Carbon Company, which was well-known in this country as the flashlight battery producing

firm with factories in Calcutta and Madras. Two other branches of the latter's activity are a manganese ore crushing and grinding mill and a zinc rolling mill, which provide support to the main line of manufacture. The polyethylene venture now marks a wholesome diversification of the organisation's activities. An important feature of the Trombay plant is the service laboratory, which will give all technical help to small-scale plastic processors who have little technological resources of their own. Apart from providing advice, it will also help train technical personnel.

S. K. G. Sugar Earns Less

Shree Krishna Gyanoday Sugar Ltd has earned a profit of Rs. 9.06 lakhs for the year ended July 1960, after transferring Rs. 4.29 lakhs to depreciation and Rs. 7.70 lakhs to taxation. The profit was Rs. 9.83 lakhs in 1958-59, after providing Rs. 4.54 lakhs for depreciation and Rs. 8.60 lakhs for taxation. The ordinary dividend has been maintained at 15 percent, taxable. It is covered more than two-and-a-half times and offers a yield of 10.6 percent at the price of Rs. 14.12 a share. General reserve receives Rs. 2 lakhs (same). There is a carry-forward of Rs. 34,778, against Rs. 41,428 brought in.

The cane crush increased substantially, but the profitability suffered due to lower recovery from the inferior cane supplies. The Hathwa factory crushed 4.3 million maunds of cane (against 3.8 million maunds) but the recovery declined from 10.01 percent to 9.64 percent. The Lauriya factory had a cane crush of 4.7 million maunds (against 4.3 million maunds) and the recovery declined from 10.04 percent to 9.48 percent. The cane crush at the Gururu factory increased from 470,000 maunds to 610,000 maunds, and the recovery from 10.15 percent to 10.44 percent. The production of the distillery was slightly lower. The Hathwa factory has been renovated. It is proposed to increase its crushing capacity from 1,500 tons to 1,750 tons, and that of the Lauriya factory from 1,170 tons to 1,600 tons.

Mysore Sugar Profit Up

The Mysore Sugar Co., Bangalore, has reported encouraging results for the year ended June 1960. In spite of a slight fall in production, the gross profit of Rs. 42.33 lakhs is about Rs. 12.53 lakhs higher than in the previous year—a rise of about 33 percent. After providing Rs. 6.92 lakhs (against Rs. 7.29 lakhs) for depreciation, Rs. 36,326 (against Rs. 1.27 lakhs) for development rebate reserve, Rs. 13.5 lakhs (against Rs. 8 lakhs) for taxation and Rs. 5 lakhs (against same) for plant and machinery rehabilitation reserve, the net profit shows an increase to Rs. 8.24 lakhs from Rs. 6.55 lakhs. Adding Rs. 45,172 brought in, the amount available for appropriations is Rs. 8.69 lakhs. From this, Rs. 1 lakh has been earmarked for contribution towards arrears of employees' gratuity fund. The proposed dividend of 30 percent, taxable, absorbs Rs. 6.54 lakhs, leaving Rs. 1.15 lakhs to be carried forward. Mysore Sugar's Mandya factory crushed 316,100 tons of sugarcane (against 354,742 tons), producing 31,550 tons of sugar (against 35,771 tons). The output of alcohol and distillery products increased to 695,527 gallons in terms of absolute alcohol. The directors state that the Company has obtained a licence for establishing a plant in Mandya to manufacture 3,300 gallons of cellulose acetate a year. The problems of technical collaboration and foreign exchange are being considered. The project is proposed to be implemented by a new undertaking and will involve a large capital outlay. Mysore Sugar will manufacture acetic acid from alcohol and supply it to the new Company. Against the subscribed capital of Rs. 21.79 lakhs, accumulated reserves are Rs. 1.04 crores. Fixed assets costing Rs. 1.63 crores have been written down to Rs. 55.87 lakhs. Around the current price of Rs. 58, the shares of Mysore Sugar offer a tax-free yield of 3.75 percent.

J. K. Steel Steady

The ordinary shares of J. K. Steel Ltd have been steady around Rs. 26.19 following the publication of the satisfactory results for the year ended June 1960. Sales increased from Rs. 94.95 lakhs to Rs. 1.24 crores. As a result, the profit has risen from Rs. 11.76 lakhs to Rs. 21.27 lakhs, after transferring Rs. 6.02 lakhs (against Rs. 5.12 lakhs) to depreciation. The ordinary dividend has been increased from 12.50 percent to 20 percent, taxable. It is covered more than five times and offers a yield of 7.6 percent at the present price. Taxation is allocated Rs. 7.30 lakhs (against Rs. 2.02 lakhs) and general reserve Rs. 14.30 lakhs (against Rs. 2 lakhs). There is a carry-forward of Rs. 91,460, compared with Rs. 75,109 brought in. A sum of Rs. 5.58 lakhs has been written back, being excess depreciation provided in previous years. The expansion programme is making progress and J. K. Steel has obtained licences for producing mild steel wires. The capacity of the wire rope plant is likely to be double. The directors say that working has improved due to bigger supplies of raw materials.

Southern Cables Share Offer

The Southern Cables Corporation Ltd, which is setting up a factory near Madras for manufacturing wire and paper-insulated cables in collaboration with a West German firm, is likely to enter the market for raising capital next month or early in May. It has an authorised capital of Rs. 2 crores, of which Rs. 1.20 crores—made up of Rs. 20 lakhs in 9 percent preference shares of Rs. 100 each and Rs. 1 crore in equity shares of Rs. 10 each —will be issued for the present. The West German firm of Hackhethalh Draht Undkabel Works is collaborating in the venture and is taking up equity shares worth Rs. 10 lakhs. The directors and their friends are likely to take up another Rs. 15 lakhs worth of equity shares. The balance is to be offered to the public. The Madras Industrial Investment Corporation is reported to have agreed to underwrite preference and equity shares worth Rs. 25 lakhs. The machinery which will be imported from West Germany is estimated to cost Rs. 95 lakhs. The International Finance Corporation has agreed to give a foreign exchange loan of Rs. 65 lakhs. The licensed capacity of the plant will be 36 million yards of wires and cables and 240 miles of paper-insulated lead cover underground cables. The Company has been promoted by K. R. Kothandaraman and Co. Private Ltd, which has been the agent of Hackhethalh for a long time.

Superphosphate from Ralli Chemicals

The foundation-stone of the superphosphate factory of Ralli Chemicals was laid recently in Magarwara in Unnao district, Uttar Pradesh, by the State's Governor, Dr. B. Ramakrishna Rao. In his welcome speech, Mr. M. Paspathi, chairman and managing director of the Company, said: "It is no accident that we have chosen Uttar Pradesh for this venture. Some hundred years ago, Rallis started trading in cotton, grains and oilseeds in Kanpur. For many years, unending files of carts laden with the produce which Rallis bought converged on Kanpur in clouds of dust, returning empty and contented in the drowsy sunset.... In the background, then as now, stands the tall stack of our bone mill, where what has come from the earth is made fit to return to it." The experience of cultivators has shown that the combination of nitrogen and phosphate in the proportion of two to one does more to increase yields than higher applicatins of nitrogen by itself. Mr. Paspathi added: "The State's Department of Agriculture is promoting the use of phosphates, and we hope to play an increasing rôle not only as producers but also through our parent Company, Rallis India Ltd, by assuming the responsibility for the distribution of superphosphate and fertiliser mixtures."

According to the Planning Commission, a production target of only 120,000 tons of P_2O_5 in the form of single superphosphate has been fixed for the third plan period. The total estimated requirement at the end of the plan period is, however, placed at 500,000 tons. So the remaining quantity of about 380,000 tons is proposed to be met by triple superphosphate or bone meal. As the percentage of P_2O_5 in single superphosphate is about 16, the total requirement for providing 120,000 tons of P_2O_5 will be 750,000 tons. The U.P. Government has stated that there is scope for producing 130,000 tons of single superphosphate in the State. Although five applications for licences were forwarded to the Central Government, only one licence has so far been given, to Rallis India, for an installed capacity of 60,000 tons a year. The State Government has recommended that licences may also be given to the D.C.M. Chemical Works which proposes to put up its factory in Allahabad, and to J. K. Spinning and Weaving Mills Ltd which proposes to install its plant in Kanpur. The application of Ratna Sugar Mills which proposes to have its factory in Shahganj has also been recommended by the State Government.

Carew Pays Nil

The fact that no ordinary dividend has been paid for the year ended June 1960, has had little effect on the price of the ordinary shares of Carew and Co. Ltd. They are now quoted at Rs. 11.25. Investors are optimistic about the outlook for the Company, although so far its dividend-paying capacity has been reduced by the fact that even when its Pakistani branches make a profit, it is very difficult to transfer the profit to India. The directors now state that the Pakistani Government wants the Pakistani branches to be transferred to a new company. They are, therefore, considering whether this is possible. During 1959-60, the Pakistani branches have incurred a loss, but the Indian factories have made a profit. At the Rosa sugar factory in India, the total amount of cane crushed was 2.34 million maunds, with a recovery of 9.66 percent. The crush in the current year is expected to be much higher. The two distilleries in India have done well. Some foreign countries are taking interest in Carew's gin, and bigger shipments are, therefore, expected. The Darsana sugar factory in Pakistan crushed 4.56 million maunds of cane. It has incurred a loss because cane supplies and recovery were poor. The Company might be given compensation in the form of higher selling prices by the Pakistani Government for the loss incurred. Working during the current year is likely to improve in view of the better cane supplies. The distillery in Pakistan has done fairly well.

After providing Rs. 3.50 lakhs (against Rs. 3.61 lakhs) for depreciation, Carew's profit has amounted to Rs. 9.63 lakhs in 1959-60, compared with Rs. 16.32 lakhs in 1958-59. Taxation is allocated Rs. 4.82 lakhs (against Rs. 11.28 lakhs), debenture redemption reserve Rs. 1 lakh (against Rs. 3 lakhs), general reserve Rs. 1 lakh (against Rs. 3.10 lakhs) and development rebate reserve Rs. 20,000 (against Rs. 58,000). There is a carry-forward of Rs. 2,75,591, compared with Rs. 14,180 brought in. The directors say that they have paid no dividends in order to conserve the finance required for the current season. But they hope to pay interim dividends, if circumstances permit, as soon as the present crushing season comes to a close.

T. Stanes Profit Up

T. Stanes and Co. has reported satisfactory progress during the year ended September 1960—its golden jubilee year. Sales have increased by about Rs. 12.85 lakhs to Rs. 80.88 lakhs and the gross profit is up from Rs. 7.91 lakhs to Rs. 10.37 lakhs. After providing Rs. 64,814 (against Rs. 55,726) for depreciation, the net profit has risen to Rs. 8.25 lakhs from 6.52 lakhs in the previous year. With Rs. 41,732 brought in and Rs. 4,259 being the provision for bad debts no longer required, the amount available for disposal is Rs. 8.71 lakhs. Appropriations include Rs 3.25 lakhs (against Rs. 2.35 lakhs) for taxation, Rs. 1 lakh (against Rs. 87,000) for development and stock reserve, Rs. 8,161 (against nil) for development rebate reserve and Rs. 12,000 for centenary presents to staff and labour. The ordinary dividend of 27½ percent, taxable, absorbs Rs 3.18 lakhs and another Rs. 57,815 is accounted for by the 5 percent centenary bonus dividend. The preference dividend takes Rs. 9,324. After making minor adjustments, there is a balance of Rs. 40,519 to be carried forward. The directors have stated that further improvements have been made in the Company's Tudiyalur fertiliser factory. The modernisation programme in the coffee-cutting works has been completed.

Urmi Cheese and Chemicals

Urmi Cheese and Chemicals Ltd is the name of a new Company which is to manufacture cheese, butter, baby food and dairy chemicals. The project is estimated to cost about Rs. 1 crore. The Danish firm called de Danske Mejeriers Maskinfabrik, Kolding and Broderne Gram. Vojens, which is well known for the manufacture of dairy plant and machinery, is collaborating in the venture. It will supply plant, machinery and technical know-how. The factory is expected to go into production before the end of the current year. To begin with, it will produce 27 tons of cheese, 14 tons of butter and 2,000 litres of ice-cream a month. The installed capacity of the plant will be about fives times the initial production. The Company is likely to have an authorised capital of Rs. 50 lakhs in equity shares of Rs. 10 each. Of this, 250,000 equity shares are likely to be offered to the public some time next month.

Praga Tools Makes a Profit

The Praga Tools Corporation of Hyderabad has reported encouraging results for the nine months ended 31st March, 1960. It has carned a net profit of Rs. 3.45 lakhs after wiping out a debit balance of Rs. 5.07 lakhs. The results would have been still better but for the labour trouble which affected the output, and caused sales realisations to decline by Rs. 10 lakhs. A sum of Rs. 3.89 lakhs has been provided for depreciation while development rebate accounts for Rs. 80,000. Pending the revaluation of finished stocks at cost or the market price, the surplus of Rs. 3.73 lakhs has been carried forward. Praga Tools has plans to set up a new factory with facilities for developing ancillary industries. It has concluded agreements with three British firms—Kearney and Trecker, Pratt and Company and A. Jones and Shipmen—

for manufacturing drill chucks, tool and cutter grinders. The Government is reported to have agreed in principle to the Company's use of Polish credit amounting to Rs. 1 crore for purchasing plant and machinery in order to increase production.

Projects with Hungarian Collaboration

The foreign exchange shortage has encouraged many Indian entrepreneurs to seek collaboration from countries with which India has rupee-payment arrangements. Reliable reports indicate that some Indian firms have recently asked for Hungarian collaboration in manufacturing chemical machinery, spring washers, cranes and crabs, pharmaceuticals and fluorescent light tubes. In all these cases, Hungary will supply the machinery, for which the Indian partners will pay in non-convertible rupees over a period of three years or more. Hungary, it is understood, has laid down a condition that the products of the new factories are not to be exported beyond neighbouring countries like Pakistan, Burma and Ceylon.

The New Standard Engineering Co., Bombay, is likely to form an enterprise for manufacturing chemical machinery in collaboration with Messrs Nikex of Budapest. The project is estimated to cost about Rs. 40 lakhs, of which Rs. 28 lakhs will be spent on the machinery supplied by the Hungarian organisation. The plant is expected to go into production by the end of the current year. It will have an annual production capacity of 400 to 800 vessels of capacities ranging from 100 to 1,250 litres, glass enamellined acid-alkali-resistant mixers, condensers, receivers, evaporating pans and distillation plants. Messrs Radia and Sons is collaborating with Messrs Complex of Budapest for manufacturing spring washers. The plant will produce 360,000 washers a year at less than half the present cost, and production is expected to start soon. Messrs. R. S. Jhaver is setting up a plant in Madras for manufacturing 1.2 million fluorescent light tubes a year. The machinery, which is to be imported from Hungary, is estimated to cost Rs. 12 lakhs. Garlick and Co. is expanding its existing unit for manufacturing cranes and crabs. Most of the machinery will be produced locally, although a few components will have to be imported from Hungary. The factory will produce annually 1,000 pieces of hoist blocks with travelling crabs in five sizes of 500 to 5,000 kilos capacity. The plant is expected to start production by the end of the current year. The Hungarian Government has approved the scheme of Biological Products Ltd for manufacturing basic pharmaceuticals like pepsine, peptone and pancreatic fluid. The factory is to be located in Hyderabad.

Projects for Tyres and Tubes

Reliable reports indicate that many companies have applied to the Central Government for permission to manufacture motor-car tyres and tubes by either setting up new industrial undertakings or by expanding their existing production capacities. Universal Tyres Ltd of Calcutta has submitted a proposal for manufacturing 504,000 tyres and an equal number of tubes a year in collaboration with Messrs Semperit of Austria. Surendra (Overseas) Private Ltd is another Calcutta firm which wants to set up a new undertaking for manufacturing 180,000 tyres and 240,000 tubes. The factory is proposed to be located in Visakhapatnam. Mr. P. J. Zacharia of Kottayam has asked for a licence for manufacturing tyres and tubes, 300,000 each, and also 2 million lbs of camel-back. The U.S. Rubber Company Ltd of the United States will be collaborating in the venture. Synthetics and Chemicals Ltd, Bombay, wants licence for manufacturing 275,000 or 325,000 tyres and tubes a year on a three-shift basis and 3,000 tons of foam rubber and special rubber products—also on a three-shift basis—in collaboration with Firestone. Premier Tyres, Bombay, wants to expand its existing capacity for manufacturing tyres and tubes from 240,000 to 600,000 a year. The Dayton Rubber Company is the foreign collaborator. While these firms have already submitted their proposals, Dunlops, Goodyear Tyres of Ballabhgarh, and General Tyres of Calcutta, are also understood to be preparing schemes for expanding their existing licensed capacities. According to informed sources, the Government has asked all the firms to submit fresh applications after a few months, giving full particulars about the financing arrangements and also the terms of foreign collaboration. It is also anxious to know the extent to which manufacturers can undertake to effect exports.

Manufacturing Copper Wire Rods

Three Bombay firms, it is understood, have submitted schemes to the Government for setting up plants in Maharashtra State for manufacturing copper wire rods. The Asian Cable Corporation wants to set up a plant with an annual production capacity of 14,400 tons. Shashi Bros. Private Ltd proposes to install a plant with a production capacity of 9,000 tons. Wandleside of Bombay has asked for the Government's permission to manufacture 4,000 tons of copper wire rods a year. All the applications have been rejected by the Government on the ground that the minimum economic size of a good copper rod mill is 15,000 tons or 18,000 tons a year on a single-shift basis. The individual requirement of each of the firms is therefore too small to justify the installation of separate rod mills. The Government is, however, considering the question of making suitable arrangements for setting up a good modern rod mill in the Bombay area for meeting the requirements of cable manufacturers in the region. Reports say that the firms whose applications have been rejected will be asked to join hands to set up the mill.

Manufacture of Rider Fork Trucks

Godrej and Boyce Manufacturing Co. (Private) Ltd of Bombay and Carter Pooler and Co. (Private) Ltd of Calcutta have concluded agreements with the Clark Equipment Co. of America for manufacturing freight-handling trucks of various kinds. Godrej and Boyce will manufacture Clark electric-powered Rider Fork Trucks and will distribute them throughout India. Carter Pooler will manufacture the Clark "power worker" line of hand trucks and Clark gasoline-powered Fork trucks with capacities ranging from 2,000 lbs to 4,000 lbs.

Industrial Activity

Corrected for seasonal fluctuations, *Capital*'s Index of Industrial Activity decreased by 0.3 points to 147.1 points during July 1960. There were declines in jute, cement, coal, pig iron, motor-cars and electricity. Sugar, tea, yarn, cloth, finished steel, paper, tyres, bicycles and railway ton-miles increased.

MEDICAL REGISTRATION

DR. Hurro Nath Roy, L.M.S., writes: "When we have to do with an art whose end is the saving of human life, any neglect to make ourselves masters of the same becomes a crime"—Hahn.

In these days of fraud practised by quack practitioners under the cloak of bogus American M.D. degrees, medical registration seems to be the only safeguard and the only protection of society. This is a subject in which every physician should be interested, both as a physician and as a citizen. As a citizen, because the laws governing the right to practice medicine are essential for the protection of society; as a physician because without the protection of proper laws, men of attainments in this branch of science are put upon a level with fraudulent charlatans. When restrictive legislation has been attempted in this country immediately the cry of monopoly was raised, and so effectively, that for many years legislation was delayed. The matter of medical legislation is, therefore, a delicate one from a professional standpoint. Dr. Myers, in his address before the "Mississipi Valley Medical Association", remarked that "there is a feeling in the community and on the part of legislators that in some way the medical profession wishes to put a fence round the practice of medicine, in order that those who are in the inside may fatten." It is persistently charged that we want to create a medical oligarchy, to which only a few shall be eligible, and that we desire to limit the number of medical men, so that we alone may occupy the chosen field. These charges emanate chiefly from those whose interests are identical with the diploma mills and the various forms of quackery. The profession urges medical legislation not from selfish and interested motives, but in the interest of public health. Those who pose as practitioners of the healing art should be in effect what they claim—masters of medical science. It is the duty of Government to ascertain the qualifications of medical men who pose as medical practitioners in the city and in the mofussil. So far as we are personally concerned, we attach little or no value to medical registration, because it is not necessary for our protection, but we are anxious for the protection of the public.

fair chance for young talent

Some 48,000 children are at school in Jamshedpur, where Tata Steel runs 34 schools—17 of them on two shifts—and assists 122 other schools with recurring or capital grants. Instruction up to matriculation is given in four languages to meet the needs of the cosmopolitan industrial community.

Employees' children are taught free or pay a concessional fee depending on the parents' income. Here, we see Shri Etwari of Monghyr, an operative in the steel works, and his son, Kameshwar Prasad. Kameshwar passed matriculation in the first division in 1959, qualifying for a university stipend and for a Tata Steel Jubilee scholarship of Rs. 75 per month which will see him through college without any strain on his father's modest resources.

Jubilee scholarships apart, Tata Steel provides assistance in several ways to enable deserving children to take up higher studies. Young talent is thus encouraged and nurtured at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

A Ditcher's Diary

NEWSPAPER READERS CAN HARDLY COMPLAIN THAT they have not been given a wide choice on exactly how the Commonwealth Prime Ministers' conference at Lancaster House has been proceeding. In the last few days it has gone on like a house on fire, like a house divided, like a Spanish inquisition with Dr. Verwoerd in the dock; it has, and has not, faced an impending showdown—according to the newspaper you read. Opinion in this country must be strongly in favour of a near-breakdown adroitly averted at the last moment. Only that way does the public get a run for its money; and in this particular instance that may well be the best outcome to hope for. Dr. Verwoerd is in a minority of one in believing that apartheid is a good thing; and no harm is done by his colleagues telling him so in the clearest of terms. Considering that Messrs Nehru and Nkrumah, and some other Premiers, have to think of their peoples back home in stating their attitudes to South Africa, a certain amount of playing to the gallery was inevitable. Ghana's reported threat to resign from the Commonwealth if South Africa is not turned out seems to me a little exaggerated. Dr. Nkrumah needs the Commonwealth at least as much as the Commonwealth needs him; but Dr. Verwoerd has to think of his electors too. And if he goes back to South Africa with a black eye, which some in London may be inclined to imprint on his face, the whites in his country may be even more inflamed. Indeed, it may be politically advantageous for him to take a consistently tough line in London. "No compromise with evil", I read in a report. I have nothing but contempt for Dr. Verwoerd's apartheid; but I am wondering whether, in relation to other countries, compromise with evil is not precisely the policy generally followed by some of the more excited participants at the London conference. India no longer thinks that China is an angel; but she believes that China should be a member of the United Nations. I suggest a similar approach to the question of South Africa's readmission as a republic. I said last week that I did not know what good, or harm, is done by keeping South Africa in the Commonwealth; and I am no wiser this week. But it should be possible for the Prime Ministers gathered in London to calculate the balance of pros and cons empirically, rather than emotionally, and then come to a conclusion. This process is helped neither by evasions nor by loud denunciations.

I CAN SAY WITHOUT THE SLIGHTEST HESITATION THAT the provisional census figures for West Bengal are incorrect: I was not counted. It is scarcely surprising to me, therefore, that as compared with an increase of 33 percent for the State as a whole, Calcutta's population is shown as having risen by only 8.4 percent. It does seem rather odd though, even when one remembers that statistics are often the handmaid of politics. Why, for instance, should the population of Greater Calcutta be excluded from the total, which seems to cover only the areas falling within the jurisdiction of Calcutta Corporation? A figure of 2.9 million, if not indeed a gross under-estimate, scarcely gives a correct impression of the congestion and squalor of a city which still proudly claims to be the second city of the Commonwealth. Goodness knows how the enumerators of Bombay have managed to estimate their population increase as over 38 percent. This figure, compared with Calcutta's 8.4 percent, has obviously arisen from the fact that in Bombay's case both the suburbs and city proper have been included. Calcutta, the *Spectator* said recently, is the greatest challenge to modern India; it would be unfortunate for this country if its problems were to be distorted or shelved. The Central Government's apathy apart, there would seem to be a calculated campaign to underrate Calcutta and the difficulties it faces, just as over the past 50 years or so there has certainly been a move to deprive the city of its financial importance in favour of Bombay. Perhaps Calcutta has asked for it by its bad behaviour. If so, then the census verdict that a greater balance now exists in the sex ratio of its population is good news, because this was always one of the main causes of trouble. As for the percentage of literacy, many of my Bengali friends are flattered that it is as high as 58.5 percent in Calcutta. But here again I know of serious omissions: a European friend of mine who gave his first language as English and his second as French complains that he was promptly marked down as illiterate. Mr. Dom Moraes, who recently commented so eulogistically on British I.T.V. about the intellectual curiosity and talents of Bengalis, could surely not have meant his remarks to cover census enumerators.

SINCE NOBODY KNOWS WHO WILL BE INDIA'S Home Minister on Mr. Nehru's return, speculation is naturally great; and I have seen a longish list of probables. With the names game soon exhausted, some theoretical discussion is in progress about who is the more powerful—the Finance Minister or the Home Minister. In his *India Wins Freedom*, Maulana Abul Kalam Azad had much to say on the subject, much of it controversial. He held the view that the late Sardar Patel made a grave mistake by refusing to surrender the Home portfolio to the League nominee, the late Mr. Liaquat Ali Khan, who got Finance instead and made it just about impossible for the Interim Government to function. So the Maulana argued, Finance was all important. But it is easy to see that giving Home to the Muslim League might have had equally disastrous consequences. The question has to be discussed in the context of 1946. In 1961, I suggest, the dispute is largely academic; and, as the leader of his Party, Mr. Nehru may well decide it on considerations of the Party with the coming elections exercising more than usual influence. Mr. Morarji Desai was in charge of Home in his home State; but having tasted Finance at the Centre he may be reluctant to pass it up, although this might give him an additional opportunity of introducing total prohibition throughout the country. With the elections coming, Finance and Commerce and Industry have their rewards too—and not necessarily corrupt ones. It is good to be friendly with business houses in these times, good for the Party I mean. What seems to me certain is that the Congress Parliamentary Party will no more permit Mr. Nehru to select for any of these key portfolios a man who is not a veteran Congressman; and this rules out such young and able men as Mr. A. K Sen. As for the relative importance of Home *vis-à-vis* Finance, I suggest power depends on the personality of the holder. Either Ministry can be reduced to impotence if left with a man whose influence in the Congress Parliamentary Party is limited. When a bureaucracy ran this country, Finance was the traditional arbitrator as between Ministries, while Home wielded much power through its control of the civil service. Today politicians decide everything; and it is your rating as a politician that will determine whether you are more powerful as Finance Minister or as Home Minister.

A FORMER EDITOR OF *Capital* WRITES: THIS newspaper had a special place in Sir Edward Benthall's affections, because it was he who brought together the group who acquired it from the Tremearne family in 1932. Sir Edward (who for some inexplicable reasons was always known as "Tom") was a man of catholic tastes and in those years an exceedingly wide range of activities; he was specially interested in anything which touched the fortunes of the British business community, although this did not in the least detract from his numerous Indian friendships and his many purely Indian interests. At a time when it was regarded as prudent for Britons to give nationalist politics a wide berth, Tom Benthall was probably on closer personal terms with leaders of the Congress Party than any other leader of the British business community. At this time his political objectives were frequently misrepresented by the "diehards" of Clive Street; but his liberalism was based on a firm faith in India and a refusal to be stampeded into stupid actions or ineffective postures. Under the 1919 and 1935 enactments there was "European" representation in the legislatures then created, and more than any other person, Sir Edward Benthall was responsible for putting that representation on an organised and regular basis. This was but one of many public services he rendered over the years. Apart from business, his interests were enormously varied; he was a patron of Indian art and a devotee of its countryside, as he was as of the countryside of Devon; he got a rugger blue at Cambridge and was picked for England in 1914; he was a tennis player of no mean calibre and a keen supporter of the game in India. But he will be remembered above all as a man of great personal goodness whose help and friendship assisted many people at moments of difficulty. For the last two or three years he had been in failing health but it was not in his nature to complain and to the end he continued to take a lively interest in India.

Obiter Dicta. "SO FAR, THE MOST SUCCESSFUL of the comparatively new members of the Commonwealth has been India. It had several advantages which most other nations do not possess: but one of them ought to be specially mentioned. The Indian National Congress was a large and well organised Party even in 1947. It was not just an assembly of politicians hoping for jobs. It had its roots deep in the villages. Its strength has carried India through since 1947. It may break up within the next decade; but there is a reasonable chance that it will have put democratic government on a firm footing for all time." Sir Ivor Jennings in the General Overseas Service of the B.B.C.

THE DITCHER

Reap a rich dividend...

...a dividend of employee goodwill. Invest in a Tushar water cooler, and give your staff the amenity they will appreciate most—cool, drinking water!

Water from a Tushar is always on tap, always cool, refreshing and hygienic.
