*Consequent upon the new procedure of deduction of tax at source introduced by the Finance Act 1959, credit had been taken in the accounts for the year 1959 for anticipated tax refunds; previous year's figures are, therefore, not strictly comparable.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1960.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the *Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices* at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The Audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs S B Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and *Accounts of the Local Head Offices* has been carried out at Bombay by Messrs. S B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

The Debenture Stock now being issued was created by a Resolution of the Board of Directors of the Company passed on the twenty-third day of February, 1961 and will be constituted and secured by a Trust Deed in favour of Dalhousie Holdings Limited as Trustees for the Stockholders. Interest will be payable on 1st May and 1st November in each year in respect of the half-yearly periods ending on the previous day. The initial payment of interest will be made on 1st November, 1961 and will amount to Rs. 38 per Rs. 1,000 of stock (subject to deduction of Income Tax).

The Trust Deed will contain *inter alia* the following provisions :—

1. **Security—**

(a) *Payment of principal* and interest will be secured by a floating charge upon the whole of the Company's undertaking and assets.

(b) The Company shall be at liberty however to hypothecate pledge and create mortgages or charges over its stock of coal and coke, consumable stores and book debts outstanding monies receivable claims bills contracts engagements securities investments rights and assets ranking in priority to the said floating charge to secure sums borrowed from or obligations incurred to Banks in the ordinary course of business of the Company and for the purpose of carrying on the same but save as aforesaid and save as mentioned below the Company may not create any hypothecation, pledge, mortgage or charge over its properties ranking in priority to or *pari passu* with the floating charge. The existing hypothecation and any hypothecation supplemental thereto in favour of The State Bank of India will take priority over the floating charge to be created by the Trust Deed.

(c) The principal amount of the Stock to be issued pursuant to the Trust Deed is limited to Rs. 60,00,000 but the Company is to be at liberty from time to time to issue further stock ranking *pari passu* in point of security with (but not in priority to) the said Rs. 60,00,000 Stock carrying such rights as to interest, redemption and otherwise as the Directors may determine provided that :

(i) The amount outstanding of the Stock or any stock ranking *pari passu* therewith (including such further issues) shall not exceed 50 per cent of the value of the Company's fixed assets as certified by its Auditors and

(ii) The average of the combined profits of the Company and its subsidiaries (if any) calculated before charging depreciation, taxes on income and development rebate (or its equivalent) but after charging all expenses of working and management, including maintenance and repairs, for the three financial years for which accounts have been audited last preceding the date of any such further issue was sufficient to cover twice the amount required to pay the aggregate of one year's interest and the contribution (if any) to the Sinking Fund on the total sum outstanding in respect of the Stock and all stock ranking *pari passu* therewith, including and such further issues. A certificate by the Company's Auditors as to any of the foregoing matters shall be conclusive.

2. **Redemption—**

(a) Such part of the Stock as has not been previously redeemed or purchased will mature for repayment at par plus accrued interest on 31st October, 1975. The Stock will be redeemable as to Rs. 5,00,000 in each year from and after 1964 inclusive by the annual operation of a Sinking Fund hereinafter mentioned.

(b) The Company will constitute a Sinking Fund to which during the year ending 31st October, 1961 and during each succeeding year the Company will contribute out of its distributable profits (as defined in the draft Trust Deed) a sum of not less than Rs. 4,00,000. Any excess sum which may be set aside in any one year may be applied in reduction of the Company's obligation to contribute for any later year. The Sinking Fund will be applied annually commencing from 31st October, 1964 in the redemption of Stock selected by drawings plus accrued interest. The Fund may be utilised in the purchase of Stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a Bank till required for redemption.

(c) The Company may at any time purchase Stock in the market at any price not exceeding par or at a higher price with the consent of the Trustees (which consent is not to be unreasonably withheld) plus accrued interest but exclusive of expenses and may in lieu of or in partial satisfaction of its Sinking Fund obligations in each year surrender to the Trustees Stock so purchased by it such stock to be accepted by the Trustees at par plus accrued interest. All stock purchased or redeemed out of the Sinking Fund or tendered to the Trustees shall be cancelled.

3. **Additional Provisions—**

(a) The rights of stockholders may be modified or compromised by a Special Resolution passed at a meeting of stockholders held in accordance with the Trust Deed, a quorum for this purpose being five stockholders present in person. On a show of hands each stockholder present in person will have one vote and on a poll each stockholder present in person or by proxy (who need not be a stockholder) will have one vote for every Rs. 1,000 of stock held.

(b) A register of the Stock will be kept at the registered office of the Company. It may be closed for any periods not exceeding a total of 45 days in any year and not exceeding 30 days at any one time.

(c) Stockholders will be entitled to their stock free from equities or cross claims by the Company against the original or any intermediate holder.

(d) The Stock will be registered and transferable in amounts and multiples of Rs. 1,000.

History and Business.

The Company was formed in 1844 and has been carrying on business as colliery proprietors for the last 116 years. The Company is at present working 17 collieries, most of which are in the Raniganje field, whose raisings during the financial year ended 31st October, 1960 were over 3 million tons of coal. The coal reserves of the collieries at present being worked by the Company are estimated to be in the region of 300 million tons.

Development.

In the context of the third Five-Year Plan it is estimated that an additional 8,00,000 tons of superior grades of non-coking coal will be required from Raniganje field alone by 1965/66. The Company has plans to increase its raisings from the present level to over 4,000,000 tons per annum at the end of 1965.

Finance.

It is estimated that the capital expenditure required for the development of the Company's existing collieries to attain the increased production planned therefrom will amount to Rs. 1,56,35,000. An offer of 20,000 shares of Rs. 100 each as rights shares was made to members of the Company on 8th December, 1960 at a premium of Rs. 100 per share. The issue was fully taken up and provided the sum of Rs. 40,00,000. The present offer of Debenture Stock will provide the sum of Rs. 60,00,000 subject to payment thereout of the expenses of the issue (estimated at Rs. 3,00,000 as mentioned below) and the balance of the capital expenditure will be met from the Company's internal resources.

THE BENGAL COAL COMPANY, LIMITED —*Cont'd.*

AUDITORS' REPORT

The following is a copy of a Report which has been received from Price, Waterhouse, Peat & Company, Chartered Accountants, the Company's Auditors :—

The Directors,
THE BENGAL COAL CO., LTD.
8, Clive Row, Calcutta-1.

B-4 Gillander House,
Calcutta-1
14th February 1961.

Dear Sirs,

We have examined the books and accounts of The Bengal Coal Co., Ltd. as kept in Calcutta in which are incorporated the certified returns from the Collieries and the agents at Madras, Visakhapatnam and Chittagong for the five years ended 31st October, 1959 and for the six months ended 30th April, 1960 and report that the profits of the Company are as set out below. The accounts for the financial year ended on 31st October, 1960, in which the transactions now included in the interim accounts for the half year to 30th April, 1960, will be taken in, have not been prepared.

The profits set out below have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for taxation and after making such regroupings and adjustments, subject to the notes given below, as are, in our opinion, material and appropriate.

	Year ended 31st October, 1955 Rs.	Year ended 31st October 1956 Rs.	Year ended 31st October, 1957 Rs.	Year ended 31st October, 1958 Rs.	Year ended 31st October, 1959 Rs	Half-year ended 30th April, 1960 Rs.

Notes :

1. The above statement does not take the following into consideration :—

Initial Allowance and/or Development Rebate	5,50,108	3,42,638	5,24,432	6,38,211 (Estimated)	7,90,844 (Estimated)	4,06,288 (Estimated)
Double Allowance	11,03,555	10,43,694	9,51,484		DISCONTINUED	
	16,53,663	13,86,332	14,75,916	6,38,211	7,90,844	4,06,288
Wealth Tax	....	1,56,342	1,91,158	1,84,289	DISCONTINUED	

2. Calculated at Income Tax rates, (normal) the depreciation on the book values of the Fixed Assets (which are, in aggregate higher than the Income Tax written down values) is estimated as below :—

	18,05,300	17,51,000	18,48,300	17,92,000	19,35,000	10,00,000

3. The tax liabilities have been calculated in the light of the previous assessment orders and after making adjustments as embodied above and charging normal depreciation for Income Tax purposes
4. The Company's trading results during the year ended 31st October, 1956 were affected by a strike at the Company's collieries in West Bengal for a period of about four weeks
5. The commission payable to the Managing Agents has been calculated at the rate of 7½% of the profits. According to the new agreement effective from 15th August, 1960 the Managing Agents are entitled to commission on a sliding scale basis, at rates varying from 7½% to 4%

We also report that the assets and liabilities of The Bengal Coal Co. Ltd. as at 30th April 1960 which is the last date to which the Company's accounts were made up prior to the date of this report are as set out below. These assets and liabilities have been arrived at after making such regroupings as, in our opinion, are appropriate.

PRICE WATERHOUSE PEAT & Co.

THE BENGAL COAL COMPANY, LIMITED—*Cont'd.*

STATUTORY AND GENERAL INFORMATION.

The main objects specified in the said Deed of Settlement dated 8th June, 1844 and Supplementary Deed of Settlement dated 24th September, 1853 were described as chiefly consisting in digging, trenching, working and winning the mines, seams and veins and carrying on all other operations for the effectual working of the Company's collieries and in manufacturing and transporting to market and selling of coals and other materials raised in the said collieries and in purchasing coals when deemed expedient or necessary; in sinking coal pits or mines for minerals, erecting buildings, making tram, rail and other roads for the conveyance of coals, etc. or anything connected with the efficient working of the mines and property of the Company and in the cultivation or letting of the lands held with, or appertaining, to the said collieries and properties or any of them and expressly including the acquisition by lease or purchase of such fresh collieries, Talooks or zamindaries, lands, hereditaments and premises as might be deemed advisable for the benefit of the Company, and the sale of all or any portion of the collieries, properties, mines, plants, engines, implements, lands, Talooks, hereditaments and premises then belonging or at any time thereafter to belong or appertain to the Company or held and enjoyed therewith.

No share or loan capital is under option or agreed to be put under option.

The Company has not issued any Redeemable Preference Shares nor is there any present intention to do so. No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this prospectus as fully or partly paid up otherwise than in cash.

On 8th December, 1960 the Company offered 20,000 Ordinary Shares of Rs. 100 at a premium of Rs. 100 for subscription by existing members of the Company. No consideration for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for those shares or any other shares in or debentures of the Company has been paid within the two years preceding the date of this prospectus nor is any such consideration intended to be paid other than the underwriting commission and brokerage on the present issue of Debenture Stock referred to below.

No amount or benefit has been paid or given within the two years preceding the date of this prospectus or is intended to be paid or given to any officer of the Company save as remuneration for services as a Director or Employee of the Company.

Messrs. N. Stenhouse and A. D. Ogilvie, Directors of the Company, are Directors and Mr. R. R. Iyer and Lord Sinha of Raipur, Directors of the Company, are members of Andrew Yule & Co. Ltd., the Company's Managing Agents and as such are interested in Contract No. 1 below.

No Director of the Company is directly or indirectly interested in any property acquired by the Company within two years of the date of this prospectus or in any property proposed to be acquired by it.

On 17th March, 1950 Rs. 50,00,000 of the Company's reserves were capitalised and applied in paying up in full 50,000 Ordinary Shares of Rs. 100 each which were issued to members of the Company as Bonus Shares.

The qualification of a Director is the holding in his own name or jointly shares of the face value of Rs. 1,000.

The remuneration payable to a Director is Rs. 200 per meeting attended by him and a share of a commission of one per cent of the net profits of the Company computed in accordance with Sections 349 to 351 of the Companies Act, 1956 The Directors are entitled to be paid reasonable travelling and hotel and other expenses incurred in the execution of their duties as Directors.

The Managing Agents are entitled to appoint Directors in terms of the Companies Act, 1956 and such Directors are not liable to retirement by rotation.

The Managing Agents have been appointed to hold office until 15th August, 1970, on the following terms as to remuneration:

(a) a sum of, or in respect of any period of less than a year calculated at the rate of Rs. 50,000 per annum and

(b) such further sum, if any, as together with the said sum payable under (a) shall make up an amount equal to:—

(i) 7½ per cent on the first Rs. 50 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(ii) 5½ per cent on the next Rs. 25 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(iii) 5 per cent on the next Rs. 25 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(iv) 4 per cent on net profits over Rs. 1 crore.

The Managing Agents are a public limited Company. Their issued and subscribed capital is Rs. 1,80,00,000 consisting of 90,000 4½% Preference Shares of Rs. 100 each fully paid and 90,000 Ordinary Shares of Rs. 100 each fully paid.

The share capital of the Company is Rs. 1,40,00,000 divided into 1,20,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each. The Preference Shares confer the right to a fixed cumulative preferential dividend at the rate of 4½ per centum per annum (subject to deduction of Indian Income-tax therefrom at the rate from time to time current) and in a winding up to payment off of capital and arrears of dividend up to the commencement of the winding up in priority to the ordinary shares but no further right to participate in profits or assets.

All or any of the rights and privileges attached to each class of shares may be modified, commuted, affected, abrogated or dealt with by Agreement between the Company and any persons purporting to contract on behalf of that class provided such agreement is (a) ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of that class or (b) confirmed by a Special Resolution passed at a separate meeting of the holders of shares of that class and supported by the votes of the holders of not less than three-fourths of those shares.

On a show of hands every member present in person or by general proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share, whether Ordinary or Preference, held by him. Provided that the Preference Shares shall not confer any right to vote at any Meeting of the Company on any question affecting the disposal of the surplus profits available in any year after payment of the preferential dividend on the Preference Shares.

The directors may decline to register a transfer of shares upon which the Company has a lien or, in the case of shares not fully paid up, to a transferee of whom they do not approve.

The directors may borrow and secure the payment of money for the purposes of the Company within the limitation imposed by Section 293 of the Companies Act, 1956 in such manner and upon such terms and conditions in all respects as they think fit.

Every Director, Managing Agents, Manager or Officer of the Company or Auditor shall be indemnified by the Company against all liability incurred by him in such capacity in defending any proceedings in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Companies Act, 1956 in which relief is granted to him by the Court.

The Trust Deed will contain provisions to the following effect among other provisions for the indemnification of the Trustees.

(a) The Trustees shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof.

(b) The Trustee shall not be responsible for the money subscribed by applicants for the Stock or any part thereof or be bound to see to the application thereof.

(c) The Trustees shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed.

(d) No Trustee shall be liable for anything whatever except a breach of trust fraudulently committed by such Trustee; provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show the degree of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

CONTRACTS.

The following contracts not being contracts in the ordinary course of business which are or may be material have been entered into by the Company within two years of the date of this prospectus.

(1) Dated 26th May, 1960 between the Company and Andrew Yule & Co., Ltd. appointing Andrew Yule & Co., Ltd. to be Managing Agents of the Company to hold office until 15th August, 1970 on the terms as to remuneration stated above and with the normal powers and duties.

(2) Dated 23rd February, 1961 between the Company and Place, Siddons & Gough Private Limited relating to the underwriting of Rs. 50,00,000 Debenture Stock, for a commission of 2 per cent of the par value thereof.

(3) Dated 24th February, 1961 between the Company and the Life Insurance Corporation of India relating to the underwriting of Rs. 10,00,000 Debenture Stock for a commission of 2 per cent of the par value thereof.

Underwriting.

The entire issue is being underwritten as to Rs. 50,00,000 by Place, Siddons & Gough Private Limited and as to Rs. 10,00,000 by the Life Insurance Corporation of India for a commission of 2 per cent of the par value thereof. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

Brokerage.

Brokerage of one half of one per cent will be paid by the Company on the nominal value of allotments made in respect of applications bearing the stamp of a recognised Broker.

Expenses.

The expenses of the issue including underwriting commission and brokerage are estimated not to exceed Rs. 3,00,000 and are payable by the Company.

Consents.

The consents in writing of the Auditors, Solicitors, Brokers and Bankers to the Company to act in the capacities stated have been obtained. Price, Waterhouse, Peat & Company have given and have not, up to the date of delivery of the Prospectus for registration, withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their report set out above in the form and context in which it appears.

The foregoing written consents have been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal for registration together with copies of Contracts 1, 2 and 3 above.

Documents.

Copies of the Articles of Association of the Company, draft Trust Deed constituting the stock now being issued (subject to modification), audited accounts for the five years to 31st October, 1959, the Auditors report contained herein, the Consent Order of the Controller of Capital Issues and copies of other contracts, agreements and documents herein mentioned can be inspected between 10 a.m. and 12 noon on any business day till the expiration of 14 days from the date of publication of this Prospectus or until the subscription list closes whichever is the earlier at the Registered Office of the Company, 8, Clive Row, Calcutta.

Applications.

Applications must be for amounts of Rs. 1,000 Stock or multiples of Rs. 1,000 and must be made on the accompanying form. All application forms properly completed must be lodged, together with the full amount payable, with one of the following offices of State Bank of India:—

Calcutta Local Head Office,
No. 3, Strand Road,
Calcutta, 1.

Bombay Local Head Office,
Apollo Street Fort,
Bombay, 1.

Madras Local Head Office,
1st Line Beach,
Madras, 1.

New Delhi Local Head Office,
Parliament Street,
New Delhi 1.

Payment should be made by cheque or draft drawn on a bank in Calcutta, Bombay, Madras or Delhi in favour of "State Bank of India A/c Bengal Coal Co., Ltd. Debenture Stock" and crossed "A/c payee only". Cheques or bank drafts drawn on banks elsewhere WILL NOT BE ACCEPTED.

No receipt will be issued in respect of moneys paid but an acknowledgment will be forwarded by post in due course by Letter of Allotment or Letter of Regret and, where allotment is not made in full, by return of any surplus application money paid, in which latter event any bank commission will be payable by the applicant. Allotment Letters along with Refund Orders, if any, will be despatched within two months of the closing of the subscription list. Due intimation will be given when these Letters of Allotment should be surrendered to the Company in exchange for Debenture Stock Certificates.

Debenture Stock Certificates will be ready for despatch by registered post within four months from the date of allotment. Pending the issue of Certificates the Company will register transfers against Letters of Allotment accompanied by duly completed forms of Transfer.

Signed:—
N. Stenhouse
A. D. Ogilvie
G. C. Bangur
R. R. Iyer
Asoka K. Roy

Money

THE CALCUTTA MONEY MARKET

ALL-ROUND RISE IN ADVANCES

Wednesday, 15th March.

THERE has been a marked increase in advances outstanding in the Calcutta money market during the past week. All the main sources of demand show increases, with the possible exception of foodgrains. The requirements of the sugar mills have risen along with those of the jute industry, and demand from the cotton mills has gone up for the first time in many weeks. Conditions in the inter-bank market have been slightly easier, but the call rate remains unchanged at 5¼ percent.

The exchange market is generally inactive, with most bills being on account of gunny shipments. Tea bills remain scarce. Demand for remittance was negligible. On the London money market, the pound recovered to some extent and closed with gains against all major currencies with the exception of the D-mark, the Dutch guilder and the Belgian franc. The market is still unsettled and rumours are circulating about impending revaluations of the Swiss and French francs and the Italian lira.

SILVER WAS QUIET ON PROSPECTS OF SALES by the Government mint. The price declined from the previous week's level of Rs. 240.25 to Rs. 237.75, quoted today for ready delivery. The rate for forward delivery was Rs. 232.50. The London and New York prices were 80⅛d and 91.375 cents.

Gold was easier in sympathy with silver. The price declined from Rs. 147 to Rs. 145.75. The price of acid gold was Rs. 143.25. The sovereign decreased by 50nP to Rs. 96.25.

DURING THE WEEK ENDED 10TH MARCH, GOVERNMENT of India Treasury bills for Rs. 17,86,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 14th March. The total amount offered was Rs. 2,25,00,000. Tenders at Rs. 99.315 percent were accepted in full and those at Rs. 99.310 percent were allotted approximately 80 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th March.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 15th March to 17th March at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 9th March to 11th March.

RISES OF Rs. 32.86 CRORES TO Rs. 1,991.36 CRORES in the total note issue, and of Rs. 32.80 crores to Rs. 1,979.96 crores in active notes, were the outstanding features of the return of the Reserve Bank of India for the week ended 10th March, 1961. The currency expansion was covered by increasing rupee securities in the paper currency reserve by Rs. 35 crores to Rs. 1,627.27 crores. This was done by transferring securities from the Banking Department, in which investments decreased by Rs. 35.41 crores to Rs. 118.71 crores. Deposits of the Government of India rose by Rs. 3.98 crores to Rs. 55.42 crores, but other Government accounts fell by Rs. 8.43 crores to Rs. 6.27 crores. Balances of commercial banks at Rs. 73.87 crores showed a rise of Rs. 2.01 crores. Balances held abroad increased by Rs. 1.55 crores to Rs. 30.84 crores. Other loans and advances increased from Rs. 155.53 crores to Rs. 158.24 crores, of which advances to scheduled banks against usance bills amounted to Rs. 29.30 crores (Rs. 27.55 crores). Ways and means advances stood at Rs. 48.71 crores, against Rs. 41.62 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 3rd March, 1961, shows a rise of Rs. 1.33 crores to Rs. 554.78 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 4 lakhs and Rs. 5 lakhs to Rs. 251.09 crores and Rs. 9.75 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 2.65 crores to Rs. 267.54 crores. Cash and balances are, in consequence, shown at Rs. 24.43 crores or Rs. 4.55 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 3rd March, 1961, shows Demand and Time liabilities at Rs. 810.51 crores (Rs. 18.71 crores on account of borrowings from banks) and Rs. 1,083.80 crores (Rs. 9.77 crores), compared with Rs. 812.56 crores (Rs. 19.98 crores) and Rs. 1,086.36 crores (Rs. 10.50 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 29 lakhs and Rs. 2.99 crores to Rs. 44.91 crores and Rs. 69.92 crores, respectively. There is a drop of Rs. 3.02 crores to Rs. 581.40 crores in investments. Advances and bills discounted at Rs. 1,277.91 crores show an increase of Rs. 14.42 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, also, in consequence, shown at 6.1 percent and 67.5 percent, against 6.2 percent and 66.5 percent.

TREASURY BILL MATURITIES

FIRM TREND IN STOCK MARKET

STEEL AND METAL SHARES RISE

London, 15th March.

ACTIVITY in the stock market has continued at a high level over the past week, and although the advance in prices lost some of its momentum, the tone remained very firm. The revaluation of the West German mark and Dutch guilder was the big talking point on most days and buyers were attracted to the shares of those companies that were thought likely to benefit from the improved exports due to their more competitiveness against West Germany and Holland. One section paid particular attention was electrical equipment due to the fact that they depend largely on exports. Another important event was the marketing of the prior charge steel stocks which proved highly successful and in first-time dealings, premiums were established in most cases. Ordinary steel shares improved and numerous leading stocks moved to better levels, but at present, buyers are holding off pending the publication of the U.K. February trade figures. There have been fewer developments as the result of take-overs, although breweries were stimulated on this account. Gilt-edged securities were a dull and uncertain market with investors preferring industrials rather than fixed-interest securities. Gold shares have been very much under the influence of the Commonwealth Prime Ministers Conference and prices have fluctuated somewhat, but business was small and mainly professional. Copper shares improved and tins displayed a marked strength on the rise in the price of the metal and on favourable Press comment. Oil shares advanced with Shell Transport prominent on dividend hopes. Rubber and tea shares were quiet.

The Money Market

Rather difficult conditions were experienced in the money market during the past week. This was due some extent to events in foreign exchanges following the mark and guilder devaluations which resulted in foreign funds being withdrawn heavily from London. Heavy calling was encountered while available funds to the market were thin and resulted in very stringent conditions. However, the authorities had the situation in hand and provided large-scale assistance when required. Nevertheless, the market was still forced to borrow a small amount from the Bank of England at Bank rate terms on Tuesday, the situation being additionally affected by weekly tax transfers to the Revenue Department. The rate for day to day loans ruled firm at 4¼ percent and 4⅜ percent, but with few balances taken at lower levels. Bill business was moderate with May and hots done before the weekly Treasury bill tender at 4⅜ percent, but the tender later hardened to 4-27/64 percent. Last Friday's Treasury bill tender came out at about 11d higher at £4 9s 9.54d percent.

Mixed Trend in Vegetable Oils

Most vegetable oils and seeds encountered quiet trading conditions during the past week and price trends were mixed. Groundnut oil maintained a firm price structure on some lively Continental trading over the week-end in connection with recent buying orders from Poland. Groundnuts appeared to be a negative trading item, although the Nigerian Board turned down bids of £80¾ c.i.f. full terms for June-July shipments. Soyabean prices drifted lower in a largely neglected market, but soyabean oil rallied a little on some bidding for May deliveries of crude oil. Most linseed oil and linseed eased in price, but activity was quiet, reported business in Canadian linseed being confined to a May parcel from Montreal.

French Move to Open Commodity Futures

The Paris Chamber of Commerce is expected soon to organise a "round table" conference for the reopening of new commodity futures markets in France, well-informed trade sources said. The resumption of futures business in oilcakes, expected to start in early May, has given a fillip to French promoters of futures markets for commodities whose claims have so far been turned down by the opposition of farmers. The conference would gather together all interested quarters—consumers, traders, brokers and producers as well as representatives of the chambers of commerce. It is believed that among the items discussed would be the question of futures markets for sugar and secondary grains.

NAMES AND DATES

After several years of management by an Executive Committee, Mr. F. P. Baker has been appointed Chief Executive of Shalimar Paint taking over the management duties of that committee. Mr. Baker joined Shalimar Paint in November 1959 as Commercial Executive.

The Indian Institute of Personnel Management will hold its annual conference jointly with the National Institute of Labour Management (Bombay) in collaboration with the Indian Council of Personnel and Welfare Officers. The conference will be held at the Great Eastern Hotel, Calcutta, on 17th, 18th and 19th March.

PRECAUTIONARY PROFIT-TAKING SUBDUES THE SPECULATIVE ISSUES

SELECTED MISCELLANEOUS INDUSTRIALS STAY FIRM

Wednesday Evening.

THE Calcutta stock market has suddenly decided that discretion is the better part of valour. The cautious attitude which developed a few days ago has spread further this past week. As a result, the speculative issues have declined, although in the rest of the market plenty of tall poppies getting taller are still to be found.

One reason for the easier trend in the speculative counters is that operators have been anxious to book their profits ahead of the fortnightly settlement this afternoon. The profit-taking gathered momentum yesterday; by then, somebody had heard Mr. Krishna Menon tell Parliament that one Chinese soldier had been arrested in Sikkim, which report reached Lyons Range transformed into the rumour that the gallant *Panch Shila* comrades, the Chinese, had chewed up a further substantial portion of Ladakh. This item of intelligence, of course, was only an excuse for bringing prices down further. The real reason for anxiety was the rumour that the Stock Exchange authorities, following the Dalal Street trail, might fix "making-up" prices for certain scrip which had risen rather sharply. The substance in the rumour is hard to find, considering that it does not look as if the technical position of the market as a whole has yet been endangered.

The banking fraternity's confabulations with the authorities in New Delhi have aroused a great deal of interest. The market generally is anxious about the move to raise interest rates on deposits, thinking that it will inevitably later on be followed by a further increase in advance rates. The reasons offered for such changes have confused some, since only a few months ago banks were eager to cut their deposit rates. One of the sour morsels to emerge from the New Delhi meeting is the report that, according to the Finance Minister and the Reserve Bank Governor, bank deposits are declining mainly because people have been withdrawing their money from certain small banks since the Palai Central affair. Lyons Range hopes that confidence will be completely restored even though the increase in deposit rates is only fractional.

Another possibility which is beginning to be discussed more actively is whether and when Bank rate will be raised. The whole question is steadily gaining urgency as the time for launching the Government's borrowing programme approaches. It is thought that the present three-tiered Bank rate structure—under which the Government implicitly expects to borrow money more cheaply than anybody else—might need to be amended. The need would, of course, arise if the Government thinks that its loans will get substantial support from the public (contrary to last year's experience). The point which will have to be considered thereafter is whether banks, for one, will be able to give much support if a Bank rate increase depreciates their existing gilt-edged holdings.

Despite the efforts of Chinese soldiers and Indian bankers, the basic undertone of the stock market is still fully steady. Some very cheering reports have come through during the past week, including those from Union Carbide, Hindustan Lever and Associated Battery. The outlook for the economy as a whole is considered good, and it is hoped that happy news will emerge from the next meeting of India's foreign creditors, who will discuss how much money they want to spare for the third five year plan.

Indian Iron rose from last Wednesday's level of Rs. 26.32 to a high of Rs. 26.95, but have eased again at today's settlement to Rs. 26.55. Among other engineerings, a good report has lifted J. K. Steel, and hopes of improved working have raised Jay Engineering. Different hopes, concerning the possibility of a bonus issue, are keeping Guest, Keen, Williams firm, while Braithwaite too are in a jolly mood.

Coal shares have been quietly steady. Bengal Coal have not reacted to the announcement of a debenture issue.

The enigmatic jutes have suddenly decided to move up selectively, for reasons that are not easy to see. One reason could be that investors have decided that a thumping big jute crop will be produced in 1961-62, although nobody else seems to be sure about that yet. The U.S. burlap consumption and stock figures for February are moderately good, but the fact is that, with the present price parity between jute and gunnies, the mills cannot be making profits.

The poppies referred to earlier are mainly in the miscellaneous section. Investors in British Paints have been painting Lyons Range red. Isaac Holdens have been holding whatever they could get. A good report has charged Associated Battery, while bonus issue hopes have raised Dunlop Rubber. Angelo Brokers are firm, and Sen-Raleigh are pleased with the dividend being maintained at 8 percent, taxable. Metal Box and Hindustan Aluminium too are firm. Among papers, Sirpur are cheered by the report that they will be concentrating on producing quality paper; the Company might be diversifying its activities too.

A few Dooars and Assam shares have risen in the tea section. The rise may be due partly to hopes of satisfactory working results, and partly to a misunderstanding of the effects of the tea duty changes.

Gilt-edged securities are quiet following rumours about a Bank rate change.

Kumergode Estates

The profit of the Kumergode Estates Ltd for the year ended October 1960 has increased from Rs. 1.79 lakhs to Rs. 2.32 lakhs. The directors have maintained the dividend at 20 percent, taxable, which absorbs Rs. 80,000. This is covered more than twice and offers a yield of 8 percent at the price of Rs. 4.90 a share. Among important allocations, taxation provision has received Rs. 75,520 (against Rs. 51,100) and general reserve Rs. 75,000 (against Rs. 80,000). After making various adjustments, a sum of Rs. 14,690 has been carried forward, against Rs. 12,518 brought in. The balance-sheet shows reserves and surplus at Rs. 3.90 lakhs. The fixed assets amount to Rs. 7.97 lakhs and current assets to Rs. 1.44 lakhs. The coffee crop increased from 172,481 metric tons in 1958-59 to 193.192 metric tons in 1959-60. The production cost a metric ton declined from Rs. 2,679 to Rs. 2,190. The 1960-61 crop is estimated at 183 metric tons at a cost of Rs. 2,332 a metric ton.

Bombay Market

PRICES FALL ON POST-BUDGET REACTION

OPERATORS BECOME CAUTIOUS ON SETTLEMENT CONSIDERATIONS

Wednesday Evening

THERE was a reaction in the Bombay stock market during the past week and share prices lost fractionally due to profit-taking. The decline was expected and considered as a correction for the rise which took place immediately after the publication of the Central Budget proposals. Operators were cautious in view of the settlement today and activities seemed to be restricted by the imposition of making-up prices for some scrip.

Although there was no selling pressure, it was not expected that the market would rise much in the near future because of many uncertainties. The increase in bank deposit interest, combined with a prospect of further rises in lending rates, called for caution. There was also concern over rumours of fresh incursions into Indian territories by Chinese troops.

Tata Steel were quoted at Rs. 153.25 and Indian Iron declined to Rs. 26.40 on selling, mainly from Calcutta interests. Prices of engineering shares were steady, and Premier Construction improved to Rs. 217. Tata Locomotive were bought up to Rs. 338 and Larsen and Toubro made Rs. 44.50. Business passed in Alcock Ashdown at Rs. 308. In motor shares, interest was taken in Premier Automobiles up to Rs. 181 on talk of expansion and a rights share issue. Hindustan Motors were supported up to Rs. 21.40, mainly by Calcutta interests.

Prices of cotton mill shares improved further, but companies producing mainly yarn were bought cautiously in view of the adverse effects of the increased excise duty. Bombay Dyeing were transacted at Rs. 5.90 and Century changed hands at Rs. 540.50. Kohinoor declined to Rs. 295.50, but Standard were supported up to Rs. 1,380. Khatau were bought at Rs. 535 and Simplex were done at Rs. 178. Finlay changed hands at Rs. 355 and India United ordinaries were placed at Rs. 14.28. Apollo were dealt in at Rs. 1.46.

In miscellaneous shares, prices of cement shares improved on fresh support. Associated Cement gained at Rs. 157 and Digvijay were quoted up to Rs. 169. Mining shares were firm, and Shivrajpur Syndicate were wanted up to Rs. 88. Sugar shares were steady, and interest was taken in Belapur at Rs. 294. Phalton were taken at Rs. 150, but Walchandnagar Industries declined to Rs. 235 on reducing the ordinary dividend from Rs. 20 a share, taxable, to Rs. 15, taxable. Steamship company shares were quiet, and Scindia Steam were available at Rs. 15.60. Great Eastern Shipping were sold down to Rs. 15.88. Chemical shares were quiet on fears that the increased excise duty might be difficult to pass on to consumers in the shape of higher prices. Tata Chemical were shaded at Rs. 19.68 and Dhrangadhra declined to Rs. 130. Alembic were offered at Rs. 255 and Polychem lost at Rs. 245. Indian Dyestuff were quoted at Rs. 545. Bombay Burmah reacted to Rs. 619 on profit-taking and National Rayon declined to Rs. 536 on pressure. Wimco were firm at Rs. 293 on hopes of a bonus share issue and West Coast Paper improved to Rs. 222. Ceat Tyre gained at Rs. 295 on prospects of a rights share issue. Standard Battery rose to Rs. 210 and Tata Oil gained at Rs. 84.50. Gwalior Rayon were transacted at a higher price of Rs. 46.50.

There was scattered business in banking shares and fluctuations were narrow. Bank of India were dealt in at Rs. 122.50 and Bank of Baroda came to hand at Rs. 98. Among insurance shares, New India Assurance were quoted at Rs. 57.

Electric supply company shares were steady, but turnover was limited. Tata Power changed hands at Rs. 1,020 and Ahmedabad Electric were done at Rs. 86. Bombay Suburban were transacted up to Rs. 87.

PRICES STEADY ON NEW CAPITAL ISSUE PROSPECTS

TEA SCRIP SUPPORTED

Wednesday Evening.

THE Madras stock market was steady during the past week and prices of selected shares scored further gains on prospects of new capital issues. Among planting shares, tea scrip benefited from encouraging reports of the Cochin auction sales. Rubber shares were in demand on the hope that the Government will promote replanting and fresh planting by giving subsidies. Coffee shares were quiet because it was feared that the increase in excise duty might reduce consumption. Selected textile shares were bought in the belief that output will improve because of more raw cotton supplies. Miscellaneous shares were fancied on prospects of expansion.

There was keen support for the 4% Madras State Loan, but business in Central Government securities was limited because of stringent monetary conditions. Scattered interest was taken in public utilities, and South Madras were done at Rs. 10.06. Berhampur came to hand at Rs. 6 and Ellore were done at Rs. 16.55.

Among banking shares, Indian were quoted at Rs. 170 on paying a final dividend of 7½ percent, making 15 percent, taxable, for the year. Business passed in Indo-Commercial at Rs. 38 on a report that the moratorium would be lifted next week and the bank would be merged with the Punjab National Bank.

In sugar shares, keen support was forthcoming for E.I.D. at Rs 44 on talk of a rights share issue. Deccan were placed at Rs. 14 and Mysore were steady at Rs. 58.25 on paying an ordinary taxable dividend of 30 percent. United Breweries were firm at Rs. 115.25 and K.C.P. were indicated at Rs. 23.48.

Among planting shares, Blue Mountain were steady at Rs. 3.54 and Cochin Malabar were done at Rs. 7.87. Consolidated Coffee were sold down to Rs. 23.75. Nonsuch were bought up to Rs. 28.25 on paying an interim taxable dividend of 10 percent. Ouchterlony were offered at Rs. 4.57 on declaring a taxable dividend of 13 percent. Kil Kotagiri were steady at Rs. 5.55 and Midland were done at Rs. 12.15. Business passed in Peermade at Rs. 22.80 and Periakaramalai were bought up to Rs. 4.13. Twyford came to hand at Rs. 12.75 and United Nilgiri were placed at Rs. 24.55.

In textile shares, Travancore Rayon improved to Rs. 38.62 and Lakshmi to Rs. 159. Madura were steady at Rs. 37.85 and Trichinopoly were bought up to Rs. 11.95 on paying a taxable dividend of 13½ percent. Vasanta were in demand up to Rs. 242 on the payment of a taxable dividend of 20 percent. Bangalore Woollen were placed at Rs. 199, and Buckingham at Rs. 198. Coimbatore Spinning were placed at Rs. 57.50 and Kothari were steady at Rs. 12.75. South India Viscose were done at Rs. 174 and Rangavilas were quoted at Rs. 47.

In the miscellaneous section, Aluminium Industries were steady at Rs. 24.75 and Ashok Leyland were taken at Rs. 9.50. India Cement were quoted at Rs. 6.30 and F.A.C.T. were done at Rs. 10.92. General Papers met with support up to Rs. 11.06 and Seshasayee Paper were quoted at Rs. 4.55. Parry's Confectionery were steady at Rs. 5.35 and Spencer were done at Rs. 22. Standard Motors were dealt in up to Rs. 16.75 and Textool were quoted up to Rs. 177.50. There was support for Tube Investment up to Rs. 290 and Binny changed hands at Rs. 202.

a hundred years in India

An East Indiaman in the last century brought young Robert Stanes to Madras in 1857. His name was to become famous over a century in South India long after he began business in 1861 in Coimbatore. Few could have imagined that the independence and resolution of youth were to bear such fine fruit in the years to come.

Pioneering in Coffee and Tea in the Nilgiris, Robert Stanes started the first Coffee Curing Works in Coimbatore in 1861, the first Cotton Mill in 1888, and in 1862—as a young man of 21—laid the first foundations of Stanes High School.

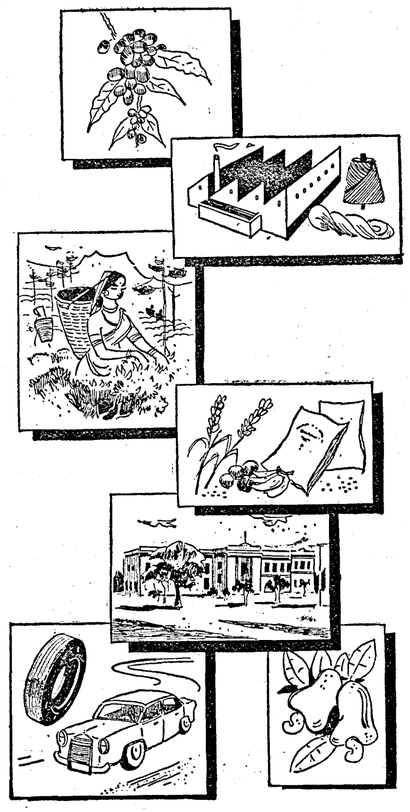
Tea and Coffee Estates and their requirements have always formed a large part of the business, besides Fertiliser Factories, Coffee Roasting and Sales through The United Coffee Supply Company Limited, and now the manufacture of Instant Coffee.

With the arrival in India of the Motor Car—Robert Stanes held the registration number C.O.1—also developed Stanes Motors (South India) Limited, with its many activities and branches throughout the South,—including "Tyresoles" and "Vaculug" for reconditioning of all sizes of Tyres—and a model bus service in Coimbatore.

Robert Stanes, knighted in 1920, was the first Chairman of the Coimbatore Municipal Council, and until his death in Coonoor in 1936, took a keen interest in the social welfare problems of all communities, and in particular in Stanes High Schools, both in Coimbatore and Coonoor.

The present Estate business includes The United Nilgiri Tea Estates Company Limited and Stanes Amalgamated Estates Limited, manufacturing 2½ million pounds of Tea per year.

Celebrating the Centenary of the start in Coimbatore in 1861 and Golden Jubilee of the Limited Company, the Stanes Group look forward with a sense of achievement to continued service to the community and to the nation.



T. Stanes & Company Limited, Coimbatore

TAXATION AND TEA EXPORTS

By George Carvelho

THE Budget proposals relating to tea have given rise to a great deal of confusion and uncertainty, concerning both the Government's intentions and the likely effect of tax changes on export earnings. Speaking on the proposal to reduce the export duty, the Central Finance Minister said: "Tea, which is one of our very good foreign exchange earners, has lately been losing ground in the international market. In order to encourage its exports, it is proposed to reduce the export duty on tea by 9nP a kilogram, that is, by about 17 percent, resulting in a loss of Rs. 2 crores." His reference to the excise duty is, apparently, equally unequivocal. He said: "With the object of restraining the consumption of tea and assisting its export, I propose to increase the excise duty on loose tea by 5nP to 8nP a kilogram. The rate on package tea is, at the same time, being reduced by 6nP a kilogram, as the present rate of duty is leading to a shift in the customary trade. These measures will yield Rs. 1.98 crores."

On the face of it, the aim of the tax changes is clear. Tea, the nation's most important export commodity, has been losing ground in the world market. This trend has to be halted and reversed, in order to earn foreign exchange for the third five year plan. The high export duty is a hindrance to expansion of exports. The Government accordingly decided that the duty had to be reduced, so that Indian tea could be sold abroad at lower prices and consumers in other countries might be induced to buy from India rather than from other producing countries. In order to increase exports, the domestic consumption has to be restrained, so that supplies may be diverted from the home market to exports. The need for this has been recognised in official statements. According to the *Draft Outline of the Third Five Year Plan:* "What is required in order to bring about a better balance in the country's external accounts is a sustained and systematic effort to increase exports.... In its immediate aspect, the problem is one of creating a larger export surplus, even at the cost of domestic consumption."

The Two Changes

The two changes in taxation of tea, that is, in export and excise duties, are perfectly consistent. The one simple fact that has disturbed this harmony and created confusion is that, unlike other excise duties, that on tea is not refunded in the case of exports. All tea produced in the country, including that portion of the crop that is exported, is subject to the export duty. So, while the lowering of the export duty has tended to make Indian tea cheaper to foreign buyers, the effect of this has been largely nullified by the increase in the excise duty. The Central Finance Minister seems to have taken away, with one hand, what he gave with the other. This will be evident from the following figures: the export duty has been reduced from 53nP a kilogram to 44nP a kilogram, a cut of 9nP a kilogram. Against this, the regional excise duties on the different tea growing districts has been increased from 4.5nP to 10nP a kilogram in Zone I (including Cachar and Terai), from 9nP to 15nP a kilogram in Zone II (Dooars, etcetera), from 18nP to 25nP a kilogram in Zone III A (Darjeeling) and from 27nP to 35nP a kilogram in Zone III B (upper Assam). The excise duty on package tea has been reduced from 46nP to 40nP a kilogram. If the entire benefit of the reduction of export duty, as well as the burden of the increase in excise duty are passed on to foreign buyers, Indian tea will be cheaper abroad only to the extent of the difference between these two. This works out to 3.5nP a kilogram in Zone I (9nP-5.5nP), 3nP in Zone II (9nP-6nP), 2nP in Zone IIIA (9nP-7nP) and the climax is reached for tea from Zone IIIB, where the net relief amounts to exactly 1nP a kilogram (9nP-8nP).

Given the prevailing world market conditions for Indian tea and the price advantage enjoyed by competing countries such as east Africa, it may be doubted whether even a reduction in price of 9nP a kilogram, the full extent of the cut in export duty, will suffice to bring about any substantial expansion of exports. The extent of the price reduction which is possible, when account is taken of both lower export duty and increased excise duty, is so minute as to be altogether negligible. The puzzling question is: what exactly was the idea of the Government in making such apparently contradictory proposals? It does not make sense to reduce the export duty in the name of promoting exports and, at the same time, proceed to check exports by raising the excise duty, which has to be borne by export as well as internal tea. One is almost tempted to think that "someone had blundered" in the Central Ministry of Finance, to the extent of forgetting to take account of the curious fact that the excise on tea is not refundable on export. But that is surely incredible, and the unworthy thought has to be forthwith rejected. The Central Finance Minister estimated that, while the lowering of export duty would involve a loss of revenue of Rs. 2 crores, the increase in excise duties would bring in an additional Rs. 1.98 crores, so that the net loss of revenue on the whole would be only Rs. 2 lakhs. It is even possible that the yield from the excise may, as has often happened, prove to be an underestimate, so, on the whole, there may be a net gain, instead of a loss to the Exchequer. This is not surprising, since the increased excise duty will apply to the entire crop of Indian tea, including exports, whereas the lower export duty will only apply to about 60 percent of the crop, which is exported.

Home Consumers and Producers

It seems that while the Government is prepared to concede the need for reducing the export duty—in order to increase exports—it is not prepared to give up any revenue for the purpose. It is equally evident that if Indian tea is to be sold abroad cheaper, someone must be willing to sacrifice. If the Government is to be excluded, there remain only two parties on whom the burden can be laid. These are home consumers and producers. From the Central Finance Minister's words, quoted earlier, one gets the impression that the Government intended the burden to be on consumers within India. The technique, apparently, is that prices to home consumers should be increased and internal offtake curtailed. The tea thus released from the home market is to be sold abroad at prices which will be lower as a result of the reduction in export duty. The snag is that even if home consumers are compelled by means of the higher excise duty to consume less tea, exports cannot be stimulated because Indian tea will be hardly at all cheaper in the foreign market, as export teas will also be subject to the higher excise. What makes the situation even more perplexing is that the region of upper Assam, which provides most of the export tea, is precisely the one where the net result of lower export duty and increased excise duty, amounts to the ridiculous figure of 1nP a kilogram.

One explanation which has been suggested is that, in spite of what the Finance Minister said in the Budget speech, the Government did not really intend that the burden of increased excise duty should be borne by consumers. It is well known that tea has a world market and that prices at which Indian teas are sold, for both export and home consumption, are governed by world market conditions. In such circumstances, the world demand—as manifested at the London auctions—calls the tune and the Calcutta and Cochin auction prices, for both export and internal sale, follow the lead set by London. So changes in cost elements, whether wages or excise duty, are powerless to affect the price. It has been noticed in the past that changes in these elements failed to produce any effect on prices. They merely affected the profits of producers. If this happens again, the whole or the greater part of the incidence of the increased excise duty will be on producers, but they will not share in the benefit of the lower export duty. That will accrue to shippers and may be partly passed on to foreign buyers through offers of larger amounts for export at slightly reduced prices. Where gardens export directly, they will of course get the benefit, to the extent of the difference between the reduced export duty and increased excise duty.

Subsidising Exports

The picture now begins to assume a definite shape. The idea seems to be that Indian export teas should become cheaper to the extent of the reduction of export duty, and that the entire or the major part of the burden of the increased excise duty should fall on home producers. The Indian tea producers are expected not only to subsidise exports by bearing the increased excise on export, in addition to that on home consumed tea; they are also expected, apparently, to subsidise packers and blenders, on whom the excise duty has been reduced. This is to be done in a rather indirect way, because the reduction of excise duty on package tea is partly offset by the increased duty on loose tea, since the tea that is blended and packed is first taxed as loose tea in the garden and again in packets. Consumers of packet tea will, on average, get their tea at the same price as before. They will be better off only in the negative sense that the price is unlikely to go up for them, while it will rise for those who consume loose tea. While this explanation seems to fit the circumstances and appears plausible, it leaves unanswered the intriguing question of why the Central Finance Minister thought it necessary to couch his Budget speech references to tea in highly ambiguous and misleading terms. The clue to the mystery is to be found in a recent statement by Mr. Satish Chandra, Central Deputy Minister for Commerce and Industry. He is reported to have said in the Lok Sabha: "India is not losing its export markets for tea. All the exportable surplus is being exported. The main question now is to increase production. Exports fell in 1960, because of the drought early last year." It follows from what the Central Deputy Minister said that the limiting factor on expansion of tea exports is not price but quantity. If more tea were made available, it could be exported without reduction of price.

If this reflects the thinking of the Government, as we much presume it does considering its source, the whole puzzle of the Budget proposals becomes easy to solve. The Government believes that the promotion of exports of Indian tea is simply a matter of making a larger quantity of tea available for export, not of lowering its price. The most obvious way to do this is to restrain home consumption, so that supplies may be diverted to the export market. The most effective way to check internal consumption is to raise the price of tea to home consumers. Hence the increased excise duty. But the excise duty being chargeable on export teas also, it was necessary to reduce the export duty, otherwise the price of export teas would have risen and the purpose of stimulating exports would have been defeated. Thus export promotion necessitates, according to the Government, not the lowering of export duty but the increase of excise duty. The cut in export duty is a mere corollary, although a necessary one, to the rise in excise duty. It does not matter to the Government that the export teas on average will be more or less in the same position, concerning price, after tax revisions, as before. In fact, that was precisely the intention of the Government. If the excise duty had been refundable on exports, as on other commodities, it would have only been necessary to raise the excise duty. The combination of the higher excise duty and lower export duty was, in the present tax system relating to tea the only way in which home consumption could be restrained and supplies diverted abroad, without increasing the price of Indian tea in the world market. This is the only explanation which seems to fit all the facts. When Mr. Morarji Desai said that the purpose of reducing the export duty was to promote exports, he evidently meant that the lower export duty was a necessary supplement to the higher excise duty and that both together would promote exports by diverting supplies from the home to the foreign market.

Further Confirmation

Further confirmation of this interpretation of the Budget proposals is provided, when account is taken of the reduction of excise duty on package tea by 6nP a kilogram. Again, the reason as given by the Central Finance Minister that "the present rate of duty is leading to a shift in the customary trade" does not appear to tell the whole story. Package tea is not exported and so, it was perhaps decided that there was no point in restricting its consumption. But since tea that goes into packets is initially subject to excise duty as loose tea in the garden, its price would have increased, were it not for the corresponding reduction in the special excise on package tea. It is true that the purpose of restricting home consumption would have been more effectively served if the excise on package tea had not been lowered. In that case, the higher price and reduced consumption of package tea would have diverted to exports some of the loose tea which now goes into packets. But since the Government desired to check the "shift in the customary trade", it was thought desirable to exempt consumers of package tea from the increased excise, so that their prices would not be disturbed in spite of the fact that package tea accounts for as much as 40 percent of domestic consumption.

The misunderstanding about the Government's intentions occurred because the search for an explanation began at the wrong end. If one starts with the reduction of export duty, the increase in excise duty appears contradictory and meaningless. But if the starting point is that the excise duty has to be increased to restrain home consumption, all the other parts of the puzzle fall into place and the whole scheme appears logical and consistent. It needs to be pointed out, however, that things may not work out according to official intentions as interpreted above. If, as is likely, the burden of increased excise duty should fall on producers and not on home consumers, the internal price of tea will not increase. In that case, there will be no reduction of home consumption, no diversion of supplies from the home market to exports and no increase in the amount of exports or foreign exchange earnings. In fact, the premise that price is of no consequence in tea exports, that any available quantity can be exported without difficulty at present prices, is wrong. Tea exports in 1960 may have declined chiefly on account of the lower output, but the fact that India has been losing ground in the world market over a prolonged period, suggests that it is price which is responsible, rather than the availability of supplies in determining export performance. According to a report by the World Trade Department of the Indian Chamber of Commerce, India's share in the world tea trade declined from 45 percent in 1946 to 43 percent in 1959, while that of Ceylon rose from 31 percent to 35 percent and that of east Africa from 5 percent to 7 percent. Discussing the reasons for the decline, the report says: "Obviously, it is due to the fact that the cost of Indian common tea is higher than that of her competitors. This higher cost is the result of several factors such as excessive taxation and the obligations imposed by the Plantation Labour Act and welfare measures."

Foreign Demand

It may suit the purposes of the Government to uphold the thesis of infinitely elastic foreign demand in relation to price, because in that case there will be no necessity to pay heed to the pleas for relieving the tea industry of the many fiscal and other burdens which are impairing its competitive strength. But facts, even if inconvenient, cannot be argued away or wished away. Once the primacy of the price factor in exports is accepted, it is not difficult to devise a scheme of tax adjustments which will stimulate exports. If the exigencies of budgeting make it impossible for the Government to sacrifice revenue for the purpose and if producers, who are already heavily burdened, cannot be taxed more without destroying the incentives to increase output to attain the target of 900 million lbs set for the third five year plan, it would appear that the only way left is to place the burden on home consumers. The most effective way to do this will be not only to reduce the export duty and increase the excise duty but also to make the excise duty on tea refundable on exports, as in the case of other excise duties.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to July 1960. Compared with the preceding month, there were decreases in jute 3.18 points, cement 6.89 points, coal 2.77 points, pig iron 10.81 points, motor-cars 5.43 points, and electricity 3.49 points, while increases occurred in sugar 2.23 points, tea 5.72 points, yarn 4.14 points, cloth 2.65 points, finished steel 19.11 points, paper 5.66 points, tyres 15.89 points, bicycles 55.00 points and railway ton-miles 6.91 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity declined by 0.3 points during July 1960.

OFFICIAL ENQUIRY ON COAL CRISIS NEARLY COMPLETED

TRANSPORT SHORTAGES LIMITING COLLIERY PRODUCTION, SAYS U.K. EXPERT

(FROM OUR NEW DELHI CORRESPONDENT)

A SECOND enquiry into the coal crisis by the Central Cabinet Secretary, Mr. Vishnu Sahay, is about to be completed. This time, Mr. Sahay is being assisted by the secretaries of nearly half a dozen Ministries. It seems that at the fag end of the second plan, the Government finds that it has no fuel plan for the country. There are, for example, two refineries working in Bombay for years, yet a rationalisation of fuel consumption is still to be attempted. The Vishnu Sahay Committee has strangely ruled out the larger use of imported furnace oil in areas where coal is in short supply. It is reported that it has favoured greater use of coastal shipping for the movement of coal, changes in the existing prices for different grades and equalisation of shipping and rail freights for coal transport. It is not yet clear why foreign experts are invited to study a particular problem and their recommendations are not implemented. An expert from the British National Coal Board was invited about six months ago by the Indian Government. The following are some extracts from his report on specific aspects of the coal problem :

"*Transport facilities:* I understand that there is a real problem in the country as a whole, as far as transport is concerned, and at the present time, the rapid expansion in industries generally is putting a very severe strain on the railways of the country. The only comment, therefore, that I feel must be made is that where a very highly mechanised unit is established, it is essential that by some means or another the coal should be moved and the machinery kept running. In the case of quarrying, there is obviously no sense at all in loading coal into a Euclid to pull it out of the quarry and dump it on the floor, perhaps 200 or 300 yards nearer the loading point. But where it still has to be picked up again, and it means that if wagons are not available, then the only thing to do is to bring loading of coal to a standstill and continue with the removal of overburden wherever this is possible. In cases where the coal dips away from the surface at a reasonable gradient and back-filling of overburden is possible, then there is clearly a very definite limit to the extent to which this can be done. As far as underground work is concerned, facilities must be available which will enable the coal to be brought out and tipped on the surface at such a rate as not to slow down the underground operations. This is an important point because in the present underground workings, there is virtually no work available for anybody or for the machines other than filling coal.

Transport Difficulties for N.C.D.C. Mines

"The lack of transport has, so far, undoubtedly been a great hindrance to the development of the new National Coal Development Corporation mines, and their present expansion is at present limited in some cases by the shortage of transport. But wherever I went I gained the impression that there was so much uncertainty about the amount of transport which would be available from day to day that it had a very bad effect on morale, and there was a feeling that each mine must be greatly over-staffed in order to ensure that wagons were quickly filled and returned as they became available.

"While recognising that transport is a real problem for the country as a whole, and that there must be a limitation of wagons that are available for each mine, could not some arrangement be devised under which a mine could be told how many wagons it would receive each day? This would mean that mine-management could develop their mines in such a way and employ the necessary number of men as to give maximum efficiency to the mine as a whole. For such a scheme to be successful it would, of course, be necessary for the mine to be told that, say, for the next six months, the basic supply of wagons guaranteed would be 'x', and that if additional wagons were available then they would, of course, be sent to the colliery also.

"*Machines:* At the present stage of development, the machines in the numerous mines were certainly not being employed for the hours that were possible, and even when they were being used they were not running to capacity. In the quarries, there were almost invariably too many machines being used for too little work ; but it is, of course, only fair to say that with many of these units the development was not really complete and the transport services appeared, at this stage, to be inadequate.

"*Maintenance:* Here, I believe, is the weakest link of all in the chain of coal production in the N.C.D.C. While it is true that little time has, as yet, been available to build and equip the workshops, the fact is that little useful work is at present being done. The problems, as I see them are as follows :

Untrained Labour

"(a) All these mines and quarries and, indeed, workshops are being established either in the jungle or on the edge of the jungle, and, therefore, the labour readily available are agricultural workers who have probably never seen any machines in their lives before. The first problem, therefore, is to train men to be capable of operating the different types of machines, bulldozers, Euclids, heading machines, etcetera. This has, to some considerable extent, been achieved, but there is obviously plenty of scope for trying to train these drivers to understand how to use a machine and not to abuse it.

"(b) As for the task of training agricultural workers to use machine tools in the overhaul and maintenance shops, here, I believe, there is no time to train these men as yet to understand precisely why they are doing a particular job and what it is for. What is urgent is that these men should be taught to operate the fine tools which are available to the limits of accuracy which the tools are capable of giving. I was told, for example, at one workshop that one could not expect to get an accuracy better than 1/64 inch and this, of course, is not nearly good enough for the modern machines which have to be maintained. The training of these young men can, I believe, only be done by having in the workshop two or three skilled craftsmen trained elsewhere who are able to instruct young men in the art of using these machines. The need for this to be done cannot be over-emphasised.

"(c) There is an urgent need for men who are capable of going to the site, either surface or underground or, indeed on the workshop floor, to undertake the necessary maintenance of equipment, and here it is obviously essential that if a man is to dismantle and rebuild a machine, he must understand how it works and what limits of accuracy are required for proper maintenance."

"*Organisation:* Each mine or group of mines where drifts and opencast are found together on a site is under the charge of a local agent or superintendent, who also has working with him a chief engineer responsible for matters both mechanical and electrical. These men, as I understand it, are not just responsible for getting the coal, but are spending most of their lives trying to build houses, roads, getting water and other supplies and so on. Visits to the various coalfields leave one with a very clear impression that there is no strong directing force on the actual production of coal near the site. I do not see how chief mining engineers, who may be at least a day's travel away from their operating units, can possibly bring to bear the influence that is needed in order to produce the coal as cheaply and as efficiently as possible and in the quantities needed. The relatively junior men on the site are far too busy chasing other matters to have time to see much of their mines or to consider their long and short-term development. I did not visit a single pit where I could be shown where the coal was coming from next week or next month or next year, and little thought appears as yet to have been given to the total extraction of the seams which are now being opened out on the pillar and stall method. Unless something is done about this, in five or ten years' time, the mines operated by the N.C.D.C. will be open to the same criticism as the old mines now to be found in the Jharia and Raniganga coalfields where part of the seam has been worked and great difficulty and expense is now being incurred in trying to recover a large proportion of what is left.

Producing More Coking Coals

"I understand that for the third plan, the first priority is to produce more good coking coals and that the N.C.D.C. visualises the possibility of getting such coals from the Jharia coalfield and possibly something from Ranigunge. I was, therefore, very pleased to have the opportunity to visit both these coalfields and to go down the mines in each of them.

"The problems are quite different from those to be found in existing N.C.D.C. fields. First of all, they are the old coalfields which have been extensively worked. Again, the seams all outcrop, and it is quite usual to find a series of upthrow faults which consequently give a whole series of outcrop workings. In the old days, when coal had to be produced at a very low price, it was quite easy to work seams from the outcrop with drifts extracting in most cases not more than 20 percent of the coal. The seams themselves are

very fiery, and it was found that as demands were made to get full extraction, the very heavy and strong sandstone roofs above the seam fractured and either let in large quantities of water at monsoon time or alternatively, let in sufficient air to get the seam on fire. These coals were not only good in quality from the point of view that ash content was relatively low, but, much more important, they were the high-grade coking coals of India and for years were used by the railways. The time has now come when maximum conservation of these seams must be practised. A visit to the Jharia coalfield shows that nearly all the main seams have been worked to the extent of, say, 20 percent over most of the area and down to depths of perhaps 600 feet or more, but below this depth it is likely that there are enormous reserves in virgin areas. Sand-stowing has now become almost standard practice at depth.

Unsuitability of Quarrying Method

"Modern earthmoving equipment does make possible the extraction of substantial tonnages by the quarrying method which was previously uneconomical to work this way, although great care has to be taken to ensure that seams do not get on fire. There are still tremendous reserves of coals to be worked, but in my view they can never be worked as cheaply as the original 20 percent extraction. There is a quite definite gas emission, much higher than in the present N.C.D.C. coal-mining areas, and, therefore, ventilation does assume a great importance in any mining operation.

"In Ranigunge, the gradients at depth are usually quite reasonable and coals are being extracted successfully by long-wall mining. Where this can be practised, problems of ventilation are very greatly reduced; here, too, it is important that ventilation shall carry a high priority in these deep mines, since there is a considerable gas emission. I believe that at any depth below about 1,200 feet, consideration should be given to the possibility of long-wall extraction in lifts accompanied, of course, by solid sand stowing.

"I am led, therefore, to the conclusion that if the N.C.D.C. is to sink new mines, either in Jharia (at, say, 1,200 feet depth) or in the Raniganga deep mines (possibly, 2,000 feet or more), they will be subject to high rates of gas emission. They will cost, I would think, from Rs. 50 to Rs. 80 a ton of annual output, and because of this high capital cost they would have to be fairly large pits, producing a big tonnage of coal; I would think an absolute minimum of 2,000 tons a day. I do not think that such a mine could be planned, the equipment ordered and the work done to the stage of full production in anything less than five to six years. For these reasons, the whole approach to such a project must be quite different from that needed for their existing mines."

Taxation and Deficit Financing

The latest taxation proposals have led to some rise in the prices of consumer goods. This has raised the old controversy of whether taxation is preferable to deficit financing. Dr. B. K. Madan of the Reserve Bank once made an interesting study of this question. Some extracts from his writing are worth reproducing: "The basic fallacy referred to here arises from the belief that the inflationary effects of high indirect taxation can be as serious as those of deficit financing; that the effects of indirect taxes are, in fact, more visible and certain while those of deficit financing are invisible and appear less certain; and in any case, there is not much of a distinction between the rise in prices occasioned under one or the other alternative; so why incur the odium and unpopularity of imposing higher indirect taxes when their effects are going to be equally bad as those of deficit financing.

"Deficit financing directly contributes to an increase in the primary money supply, namely, currency and reserves of banks with the Reserve Bank and is highly inflationary. We have to start our approach to the whole question of resources by first trying to appreciate fully why deficit financing in this sense is more inflationary than any alternative means or combination of means of financing, which in practice are indirect taxes. To take a simple illustration: if there is deficit financing to the tune of, say, Rs. 300 crores to meet part of the expenditure of Rs. 1,000 crores, with receipts from tax and borrowing at Rs. 700 crores, there will be an increase in the primary money supply, namely, currency and banks' reserves with the Reserve Bank to the same extent, but an increase in the total money supply to an even larger extent, say, Rs. 400 crores due to some secondary expansion of deposits with the expansion of credit by banks in consequence of the increase in their reserves. The effect of an increase in money supply on prices, again, follows largely as a matter of course, although the distribution of this effect on different sectors of the price structure will depend on the dispersal of the increases in incomes, and consequently, in demand for various commodities.

Money Supply and Indirect Taxes

"On the other hand, if Government expenditure of the same amount, namely, Rs. 1,000 crores is financed with an equivalent amount raised in taxes or loans, with a large component of additional indirect taxes, there will be hardly any increase in the money supply, such increase being limited to what occurs as a result of the Reserve Bank's extension of credit to meet the demands of the private sector. There will, therefore, be hardly any increase in the purchasing power with the public or in monetary incomes, the whole of the Rs. 1,000 crores spent by the Government having at the same time been withdrawn through various taxes and loan receipts. It is necessary to appreciate that there is a fundamental difference between this situation and that under which substantial deficit financing and, therefore, net addition to private purchasing power and incomes, takes place, and the effect on prices of the two situations cannot be identical. In the latter situation, with substantial indirect taxes, the price rise cannot be of anything like the order of general rise in prices under equivalent deficit financing. The reason is clear. To the extent taxes are levied on certain goods, the incomes of consumers and producers of whose goods will be reduced and their demand for other goods will be reduced so that rises in some prices will be compensated by falls in other prices. If the increase in indirect taxation is such that all luxury and semi-luxury goods are more heavily taxed than necessaries, the draft on incomes of consumers and producers will be equitably spread over the whole community. A transfer from private incomes to public revenues will thus be carried out with partial rises in some prices and adjustments in others, but also with a more or less substantial impact on producer incomes, and with a much smaller net rise in the price level than would occur if deficit financing were employed in lieu of indirect taxes.

"In a situation of continuing deficit financing and rising demand for all goods, even indirect taxes can be more easily passed on to the consumer than if deficit financing and consequent increase in public purchasing power are restricted. It is, therefore, axiomatic that deficit financing has very different implications for the price level than indirect taxes; it is definitely more inflationary and damaging to the price level with the spiral effects of a rise in costs and wages and in estimates of expenditure on various projects and shortfalls in the attainment of targets in real terms. The same level of expenditure financed by a judiciously distributed net of indirect taxes will avoid the consequences of a possible serious rise in prices which may distort the investment pattern and dislocate the whole development effort beyond a point. Excessive deficit financing implies the abandonment of planning in the financing of development since the distribution of incidence of the cost of development is not carried out through a considered and rational plan of meeting the costs, but follows the line of least resistance and inevitably invites consequences that may run counter to the plan objectives, being difficult to predict and liable to disrupt the orderly course of development."

Thermal Power-station in Cambay

The Government of India has approved the Cambay thermal power-station project, which visualises the construction of a power house, with an installed capacity of 200,000 kW in Dhurwaran near the Gulf of Cambay in Gujarat. Initially, this thermal station will have three turbo-alternator sets. Each unit will be connected to two boilers, while there will be a third standby boiler. These boilers will be designed to use coal, oil or gas It is estimated to cost Rs. 25 crores.

Jute Licensing and Control Order

The Central Government has promulgated the Jute Licensing and Control Order under the Essential Commodities Act. This provides for the licensing of dealers in raw jute and jute goods, the fixing of maximum and minimum prices, both for fibre and for goods, regulation of stocks of raw jute held by the manufacturers, and requisitioning of raw jute and jute goods. The control measures are considered necessary in the interests of the jute industry in view of the high prices prevailing for both fibre and goods. Under the Order, the Jute Commissioner is authorised to issue licences to dealers in raw jute and jute goods from year to year. In granting the licence, the stock of raw jute or jute textiles available in the locality, the business ordinarily carried on by the applicant and other relevant factors are to be taken into consideration. The Order empowers the licensing authority to suspend or cancel licences under certain circumstances. The Jute Commissioner is further authorised to fix the maximum and minimum prices at which raw jute and jute goods may be purchased or sold. The maximum quantity of raw jute, which the manufacturers of goods will buy or have in their possession, will also be prescribed by the Jute Commissioner. He can requisition stocks to ensure the equitable distribution of raw jute and jute goods. He will also have the power of entry and inspection to ensure compliance with the Control Order. Persons contravening the provisions of the Order, or failing to carry out the directions or requisitions, will be liable to punishment, as prescribed under Section 7 of the Essential Commodities Act.

More P.L. 480 Cotton from U.S.A.

The Central Finance Minister, Mr. Morarji Desai, presided over the ceremony here last week, when an agreement giving India 300,000 bales of U.S. cotton under U.S. Public Law 480 was signed. This cotton will help fill the gap created by an unusually low Indian cotton crop last year and assist in the stabilisation of cotton prices. Furthermore, there is an understanding that imports under the agreement will be over and above the usual commercial imports during the U.S. fiscal year 1962 of not less than 420,000 Indian bales. Under the agreement, India will import U.S. upland cotton with a staple length of less than 1 1/16 inches. The value of the cotton is $33.6 million. An additional sum of $1.5 million will be made available for shipping costs. Payment for the imports will be in rupees. Of the total, $14.18 million (Rs. 7 crores) will be given back to India as a grant for economic development projects. An equal amount will be made available as long-term loans at 4 percent interest. The equivalent $1.8 million (Rs. 85 lakhs) will be reserved under the Cooley Amendment for loans to private enterprise in India associated with U.S. firms, and $3.7 million (Rs. 1.75 crores) retained for U.S. use in India.

New Machine Tool Plant with East German Aid

East Germany has offered to collaborate in setting up a new machine tool factory in the public sector. A draft agreement has been drawn up, outlining the terms of collaboration. The agreement, it is proposed, will be signed in East Germany after an Indian delegation visits the Leipzig fair, where the products and working of the East German machine tool industry will be seen. The delegation will also select the class of equipment to be taken for production in the new Indian factory.

Loss on Sugar Exports

The total quantity of Indian sugar actually shipped up to 26th February this year was 57,906 metric tons. On this, the loss is estimated at Rs. 1.3 crores. Sugar has been sold to foreign countries at prices ranging from £28 5s to £37 10s c. and f. a metric ton, depending on fluctuations in international market.

Nepa Mills to Make Caustic Soda

The National Newsprint factory (Nepa) in Madhya Pradesh has been granted a licence for setting up a plant to manufacture caustic soda and chlorine at an estimated cost of Rs. 50 lakhs. The capacity of the plant will be for 4,068 tons of caustic soda a year; and 3,600 tons of chlorine a year.

Ball-bearing Plant with Russian Aid

As Russian industrial organisations are at present engaged in modernising their own ball and roller-bearing plants, their representatives have suggested the postponing of consideration of this project until such time as they are in a position to collaborate with Indian enterprise. The Central Minister of Industry, Mr. Manubhai Shah, has disclosed this in Parliament.

Cable Factory with Japanese Equipment

The licence for Traco Enterprises Private Ltd to obtain capital equipment from Japan for setting up a cable factory in Thripunithura has been approved in principle, it is stated here.

New Motor-cycle Project Licensed

Ideal Motors has been licensed under the Industries (Development and Regulation) Act, 1951, for the establishment of a new industrial undertaking in Mysore for the manufacture of "Java" motor-cycles. This firm has entered into an agreement with a Czech firm for the purpose.

Increasing Production with Domestic Materials

With a view to giving an incentive to industrial production in the country, and increasing the use of indigenous machinery and raw materials, it has been decided that manufacturing units which are allotted foreign exchange for their production at present, may increase their output beyond their licensed capacity if they can do so without the import of additional machinery and raw materials, by procuring a greater proportion of their requirements indigenously. After such units have increased their production beyond the licensed capacity, any further increase will be regularised where necessary.

New Unit to Make Paper and Pulp from Bagasse

Bedi and Company Ltd, Bangalore, has been licensed for the establishment of a new industrial undertaking in Panipat (Punjab) for the manufacture of 30,000 tons of paper and pulp a year, using bagasse as raw material. The Indian firm proposes to enter into a collaboration agreement with a U.S. firm, the terms of which have yet to be finalised by the parties and approved by the Government.

Negotiations on Double Tax Avoidance

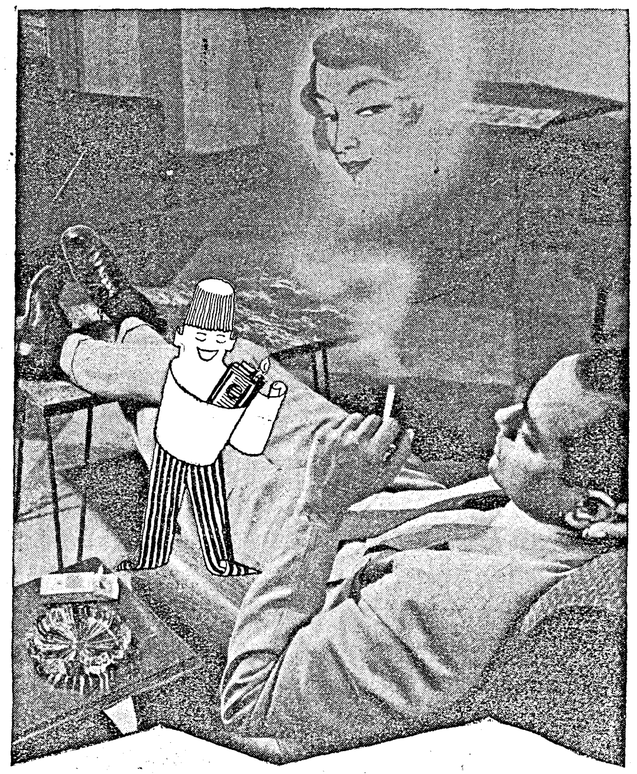
As a result of negotiations which took place here during the past few days between a three-member Finnish delegation and officials of the Central Board of Revenue, a draft agreement for avoiding double income taxation between Finland and India has been initialled at the technical level. The agreement now has to be approved by the respective Governments and ratified.

Support for Big Mechanised Farms

The Damle Committee on large-sized farms has favoured the setting up and running of big mechanised farms. Given the necessary facilities, particularly perennial irrigation, it should be possible for a farm like that in Suratgarh to get a return of 6 percent over the initial capital investment, after recovering in full the running expenditure, including invisible charges like interest on capital and depreciation on capital assets, the Committee feels. Thus the entire investment in a large mechanised farm could be recovered in a period of 16 to 20 years, making allowance for one year in every slab of four years when normal production might not be achieved due to natural calamities and other unforeseen factors peculiar to agriculture. Examining the income aspects of the Suratgarh farm, the Committee has found that in spite of natural calamities and inadequacy of irrigation supplies, the farm has been able to register profits in the years 1956-57, 1958-59 and 1959-60. Arguing that normally such encouraging results would not have been achieved in the initial stages when only a portion of the total farm area was put under cultivation, it has inferred that this might be due to the virginity of the soil contributing to better yields and "in no small measure to better cultivation under mechanised modes of farming." The Committee believes that the present level of yields could be maintained by greater application of manure and fertilisers.

Pig Iron Output and Exports

About 1,354,695 tons of pig iron were produced by the three public sector steel plants in 1960—321,868 tons at Durgapur, 658,377 tons at Bhilai and 374,450 tons at Rourkela. Of this, 83,024 tons were exported—6,120 tons to the U.S.A., 12,000 tons to the U.K., 47,661 tons to Japan and 17,243 tons to Pakistan—earning Rs. 18,335,107 in foreign exchange.



MR. AL FOIL GIVES A LIGHT

"Delightfully fresh, my Lady Nicotine ... just as I like her." "Naturally," replied Mr. Foil with a knowing smile, "these are the virtues of the lady in question. Think of the protection she enjoys. Snugly wrapped in aluminium foil from tip to toe, the flavour of her tobacco, the freshness and fragrance are sealed within. Her foil wrap, as decorative as mink, protects her from dirt too. Sufficient reasons you'll agree, sir," finished Mr. Foil, "for the lady to insist on a foil wrap, whether she comes to you as a pipe smoke or a slender cigarette!"

Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

COMMONWEALTH CONFERENCE DISCUSSING RELATIONS WITH COMMON MARKET

TARIFFS FOR GROUPS OF COMMODITIES BEING EXAMINED

(FROM OUR LONDON CORRESPONDENT)

THE Commonwealth Prime Ministers made considerable progress in their consideration of international problems. From the point of view of industry and trade, however, the discussions provided greater interest. It is believed that the British Government intends, as part of the economic talks, to give the meeting a detailed explanation of the implications of its new approach to a link-up with the European Common Market. Under the new proposals outlined by Mr. Heath, Lord Privy Seal, in Paris recently, Commonwealth countries will be able to import goods, such as motor-cars, from France and other Common Market countries on the same tariff as from Britain. But Commonwealth exports to the latter will still have free entry. Whitehall experts have been studying a number of ways of doing this. They include the use of certificates of origin, compensation tax and duty quotas. These will be discussed in further explanatory talks. The Commonwealth Governments will be told that if the new proposals are put into effect, it will be for the Commonwealth countries themselves to negotiate with the Common Market "Six" any sharing of the U.K.'s preferences. But it is emphasised that Britain's readiness to agree to such bilateral talks between the "Six" and the Commonwealth Governments will be conditional on an overall settlement being achieved.

The procedure being followed in discussion of the Heath plan at expert level is to isolate individual groups of commodities and examine them one by one to see what arrangements will be necessary for each country. Examples of commodities to be examined in this way are wheat, wine and tropical products such as cocoa, tea, coffee and hardwoods. Raw materials, it is emphasised, are in a different category and will probably be subject to a low tariff, or none at all. In view of France's opposition to the British approach, the U.K. is considering interim measures which can be taken by both sides to mitigate the short-term effects of the "Six-Seven" trade split.

Sterling Not to be Devalued

The recent announcement of the fall of £18 million in the gold reserves produced few reactions in the City. It was obvious from the pressure on sterling in the foreign exchange market that some gold was lost and the actual figure was closely in line with City estimates. The comparable outturn in January—allowing for special transactions—was a gain of £9 million, while on the same basis there was a true debit last December of £22 million. It is clear, therefore, that the February result need not be taken as too tragic. Now that confidence is being restored in the U.S. dollar, substantial covering of "short" positions built up in the latter part of last year is a natural corollary, and the main brunt of these dollar repurchases must fall on sterling. At the moment, the indications are that some further drain on the reserves must be expected in coming months, but provided that confidence in sterling remains unimpaired—and that depends largely on the trend in the underlying balance of payments—there will be no real cause for worry.

Nevertheless, the U.K. Chancellor of the Exchequer, Mr Selwyn Lloyd, found it necessary a couple of days ago to repeat his earlier statement in Parliament that the Government had no intention of devaluing sterling. "The Government," he said, "does not consider that the pound is overvalued in terms of other currencies." He explained that since the recent announcement by the West German Government of the revaluation of the deutschemark, there had been considerable speculation in the foreign exchange markets based on uncertainty about whether other Governments intended to follow suit. There were reports in certain sections of the foreign Press that sterling might be devalued. "I, therefore, think it right," said Mr. Lloyd, "to repeat my statement made in the House recently that Her Majesty's Government has no such intention."

More at Work

Unemployment fell in almost all industries and services in the four weeks ended 13th February. This is shown by the U.K. Ministry of Labour's latest analysis. The reversal of the normal fall in demand for labour brought down the number wholly or temporarily unemployed by 29,219 to 389,580. The largest single influence was the recovery in the motor-car industry. A fall of 14,200 in unemployment in the industry included 13,800 who were on short-time a month earlier. Industries which supply motor-car manufacturers, including engineering and electrical goods, also needed more labour. An unusually warm dry spell reduced unemployment in industries which fluctuate seasonally. The numbers out of work in construction fell by about 6,000 and in agriculture by about 1,000.

Motor-car Sales Rise

Motor-vehicles hire-purchase sales rose sharply in February. Total contracts were 128,163—over 25 percent more than in January and the best monthly figure since last August. It is also the first time since the credit squeeze began in April 1960, that sales for any one month have surpassed those for the same period of the previous year. Hire-purchase sales of new motor-cars rose from 9,881 in January to 14,737 in February, and used car deals from 53,785 to 66,378. New motor-car sales in February 1960, were 15,169 and used cars 61,612.

New and used commercial-vehicles contracts continue to increase: 6,606 new, against 6,178 in January and 5,695 in February last year, and for used vehicles 12,669, against 10,958 and 11,284. For the first time for many months, motor-cycle and scooter sales also shared in the expansion. New contracts in February were 7,029, against 4,785 last month and 10,994 during the same period of last year. Used sales were 15,477, compared with 11,677 and 14,466.

Hire-purchase Sales

The latest recorded movements in hire-purchase trade contain no surprises. On 20th January, the controls imposed in April were slightly relaxed, and this seems to have had a favourable influence on business during the rest of the month. Credit sales by household goods firms were less depressed in January than in December, when they had improved fractionally from the low level of the previous six months. According to the U.K. Board of Trade, sales in January 1961, were 253 percent below the figure for January 1960, whereas the December figure had been 27 percent lower and figures for earlier months 30 percent down. The amount of credit extended by hire-purchase finance houses was still a fifth lower than the corresponding figure of last year, but the December figure had been 33 percent down.

The restrictions are still holding the public back. Again in January, repayments under old hire-purchase agreements outweighed commitments under new. As a result, the total hire-purchase debt outstanding at the end of January declined by £7 million to £928 million. Of this, £607 million was owed for finance houses (down £3 million) and £321 million direct to shops (down £4 million). The U.K. Board of Trade has already issued preliminary estimates of retail trade in January. Its final figures confirm that business fell off a little from the high December level but was still good. No official indication has yet been given of retail trade in February, but there have been one or two indications that after a month similar to January, sales have recently improved slightly.

Steel Industry Capital Bill

Final figures for the capital expenditure of the iron and steel industry last year, released by the U.K. Iron and Steel Board, show that it amounted to £146 million, or nearly 50 percent more than in 1959. A further substantial increase in expenditure is expected in 1961. The rise is due largely to the work on the new wide-strip mill plants in Wales and Scotland. Of the total capital outlay this year, no less than 50 percent will be spent on mills and finishing plant, reflecting the high initial expenditure on the wide-strip mills. Modernisation is also going on at other rolling mills. Expenditure on melting shops is rising from 13 percent of the total last year to 18 percent, partly due to the installation of the new pneumatic processes at a number of new and existing plants. Capital spending on raw material treatment and blast furnaces is declining from 20 percent to 16 percent.

The Board's monthly statement shows that steel production in February was running at a weekly rate of 435,300 tons, which was 1 percent larger than a year ago, but below the high rates achieved during the last autumn. Some works experienced weaker demand for steel-sheet and there was a seasonal fall in the demand for tin-plate. Meanwhile, the fuller results of the stock census taken at the end of 1960 indicate that the sharp rise in steel stocks continued in the fourth quarter. Stocks of steel-sheet increased further but at a slower pace: stocks of plate and other products showed substantial rises. There is still no evidence of these stocks being drawn upon at the expense of current works' production.

Growth of Chartered Bank

Reflecting the further expansion of business, the group balance-sheet total of the Chartered Bank has increased by about £46 million over the past year to £363 million. Advances are up from £129.5 million to £159 million, while cash holdings have risen from £53.3 million to £65.2 million. There has been a moderate increase in the total of investments. In his annual review, Mr. V. A. Grantham, chairman, says that it is a common complaint in a number of Eastern countries that Britain shows little interest in their markets, which is in contrast to the attitude of the Germans, Japanese and others. He agrees that there is some truth in this. On the other hand, he believes that there is a harmful tendency among the developing countries of the East to hem themselves in with trade and other restrictions. To add to the difficulties caused by Government action, there is excessive competition arising from over-banking in many cities of the area. Mr. Grantham says that this is particularly true of Hongkong, where there are now more than 80 banks. The general trend for international banks to open branches in their territory and for small local banks to spring up overnight means a regrettable lowering of banking standards.

GOVERNMENT ORDER HELPS BRING DOWN JUTE AND GUNNY PRICES

FIBRE BEING OFFERED MORE FREELY NOW

DURING the past week, the Central Government promulgated an order under the Essential Commodities Act giving the Jute Commissioner wide powers to license jute dealers, confiscate stocks of jute and jute goods, and fix ceiling prices on raw jute with immediate effect. Although the move was expected, it caused an initial flurry of uncertainty. Raw jute prices continued to be quoted at the maximum rate fixed by the I.J.M.A., but after the Government's announcement, much more jute was offered at the controlled rates. Small business was conducted under contract between mills and sellers through brokers, but a far greater quantity was transacted in Cossipore by mill agents. In general, the prices paid conformed with the fixed rates, but reports of "black market" dealings caused some misgiving. It is believed that the higher prices were paid by mills who were outside the Association, and were thus under no obligation to conform to the fixed rates. Sometimes, higher prices were also paid for "specialities" with prior sanction from the I.J.M.A.

Later in the week, it was learnt that the Government did not intend to enforce a price ceiling for raw jute immediately, but wanted to give the voluntary system agreed to by the I.J.M.A. a fair trial. Action would only be taken if this system failed to keep prices within reasonable limits. The licensing system for raw jute dealers, however, is likely to be put into operation by the end of this month. The larger dealers will be licensed through the Jute Commissioner, and State Governments will be empowered to deal with the smaller operators. All dealers will have to submit periodical returns about their business to the Commissioner. As a result of recent developments, upcountry markets, which at first were slow to react to the fixing of prices, recorded a steadily downward trend. There was still no parity with Calcutta rates, but a considerable portion of the gap was closed which gave local operators an incentive to offer more freely. Many consignments of jute which previously would have been offered to mills as ready bills of lading, were allowed to go right through to their destination—usually Cossipore—as sellers found ready buyers there for all arrivals and there was always a chance of picking up a premium.

Jute Goods Seized by Customs

The news that some Rs. 50 lakhs' worth of jute goods had been seized by the Customs over the week-end was the principal talking point on Monday morning. It is alleged that the goods were being shipped without a declaration of their proper exportable value. It is understood that many consignments belonging to other parties were also off-loaded before some of the goods could be seized. In the opinion of many, the action was justified, as for some time certain parties have been underquoting genuine shippers in foreign markets for spot or afloat goods, and this could only be done by incorrect value declarations and shipments against false contracts. Similar occurrences were reported some years ago, when the commercial morality of the Calcutta markets was questioned by overseas customers. Accusations of this kind are not usually made lightly, but it should be said from the start that there has been no complaint against any of the old-established export houses. The complaints actually date back to the days when the export trade was shackled by restrictions, quotas and licences. At that time, the Government thought it necessary to allot certain percentages of quotas and licences to "newcomers" on the pretext that no restraint should be imposed on anyone wanting to enter the trade. Unfortunately, inadequate care was taken to investigate the antecedents and standing of many applicants. There is no doubt that licences often got into the wrong hands, to the detriment of old-established shippers who were deprived of quotas adequate to supply customers with whom they had built up connections over many decades.

During the intervening period, many of these "newcomers" became established shippers and earned a very high reputation. Others, however, were merely speculators with an eye on quick profits. The fact was emphasised by the number who took refuge in legal quibbles which enabled them to evade their obligations when, through bad drafting or misinterpretation by the courts, it was held that contracts for forward delivery of jute manufactures were illegal. What was intended, of course, was that "futures" contracts, which could be settled by margins, should be illegal. The effect, however, was to enable unscrupulous persons to repudiate their contracts when the market moved against them. Clearly much of the blame for such unfortunate happenings rests on the shoulders of the Government, which has provided the unscrupulous with the opportunity. The blame, however, must be shared by buyers overseas who, instead of pinning their faith on old-established houses of repute, have been tempted by the low prices quoted by people of whom they can have little knowledge. Times without number, shippers of repute have lost business because their overseas buyers have been able to buy at such substantial discounts that the deal was obviously a gamble on a fall in the market, or due to a false declaration of values. Perhaps buyers abroad have now learned their lesson the expensive way.

Pakistani Crop Prospects

It is reported from Pakistan that weather conditions during the past week have been very favourable for the new crop. Good rainfall has allowed the completion of sowings in the lowland areas and estimates indicate that the outturn may be as much as 50 percent higher than in 1960-61. Some say that the initial imports from these areas may be available by the end of May, but it is most unlikely that much fibre will find its way to India. This harvest accounts for only about 25 percent of the total Pakistani crop, so too much emphasis should not be placed on it. For a more reliable estimate, it would be advisable to wait for the reports from the more important midland areas, where sowing will not take place until about the end of this month. The target for the 1961-62 season for Pakistani jute has been set by the Government there at 7.4 million bales. It is anticipated that this will ensure an adequate supply for all customers. A minimum target for each jute-growing district has been set, and deputy commissioners have been asked to ensure that sowings do not fall below the prescribed levels. Sowings in excess of the targets will be allowed.

I.J.M.A Production Figures

The total production in February of mills reporting to the I.J.M.A. was 77,400 tons, made up of 25,200 tons of hessians (32.6 percent), 41,700 tons of sacking (53.9 percent) and 10,500 tons of other goods (13.5 percent). The total showed a drop of 8,800 tons from the previous month, which was almost accounted for by the drop in the number of working hours from 189 to 161½. The average production an hour, however, improved by 23 tons to 479 tons, which was a record. This may be partially explained by the fact that the percentage of "other goods" produced, which must have included many of the heavier constructions, improved by 3.8 percent, mainly at the expense of hessians, the percentage of which dropped by 3.3. Total production for the period from July 1960 to February 1961 now stands at 695,100 tons, produced in 1,579½ working hours, giving an average of 440 tons an hour. Hessian production was 256,300 tons, sacking 368,800 tons, and other goods 70,000 tons.

I.J.M.A. Gunny Stocks

Stocks of jute goods held by mills reporting to the I.J.M.A. amounted to 83,800 tons at the end of February, which was 900 tons less than a month earlier. Hessian stocks were down by 4,500 tons to 24,000 tons (28.6 percent). But sacking stocks improved by 1,800 tons to 47,600 tons (56.8 percent) and stocks of other goods rose by a similar amount to 12,200 tons (14.6 percent).

Raw Jute Consumption

The estimated raw jute consumption during February of mills reporting to the I.J.M.A. was 437,500 bales. This was about 45,000 bales less than in January.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening, with prices fluctuating narrowly. B Twills were called over at Rs. 203 and 40in. 10oz. hessians at Rs. 68.10 for March shipment. There were a fair number of overseas enquiries, but mills showed little interest in forward business, and were reluctant to give firm offers. Prices were nominal, and indications tended to fall heavily after the passing of the control order on jute and jute goods by the Government. In sympathy with a quieter raw jute market, prices continued to fall. By Monday morning, B Twill rates were down to Rs. 192.50, and hessian 11-porter to Rs. 67.35. Heavy goods dropped by a further Re. 1 during the day, and hessians by 85nP and there were no reports of any business. Minor fluctuations were a feature of the market on Tuesday and dull conditions prevailed.

Opening quotations on Wednesday morning were as follows:

	March	April	Apl.-June	July-Sept.
40in. 10oz.	52.00	50.00	49.85	48.75
40in. 8oz.	54.00	54.00	53.85	52.75
40in. 10oz.	67.15	66.90	66.60	65.00
B Twills	200.00	199.50	198.50	189.00
Heavy Cees (Plain)	200.00	199.50	198.50	189.00
A Twills	233.00	232.00	230.00	223.00
Liverpools	225.00	224.00	223.00	213.00
Cornsacks	200.00	202.00	202.00	193.00

the names Mackie and Lagan are Vital in the Jute Industry

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of February as follows :

Description	28th February, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st January, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	28th February, 1960 Lakh Yds. (000 Metres	000 Tons (000 Metric Tons)
Hessian cloth and bag	8.70 (7,95,24)	24.0 (24.4)	10.28 (9,40,20)	28.5 (29.0)	−1.58 (−1,44,96)	−4.5 (−4.6)	9.97 (9,11,32)	27.0 (27.4)
Sacking cloth and bag	10.96 (10,01,89)	47.6 (48.4)	10.70 (9,78,60)	45.8 (46.5)	+26 (+23,29)	+1.8 (+1.9)	7.62 (6,96,91)	31.9 (32.4)
Others		12.2 (12.3)		10.4 (10.6)		+1.8 (+1.7)		14.3 (14.5)
Grand Total		83.8		84.7		−0.9		73.2
(000 Tons/Metric Tons)		(85.1)		(86.1)		(−1.0)		(74.3)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

Raw Jute: The fibre market was quiet throughout the past week, and up to the week-end, very little business was reported due to the lack of quotas. All quotations at this stage were based on the controlled price of Rs. 62 for Assam Bottoms, but sellers made few offers. Late on Friday, the news that the Government had passed the order about the control of raw jute and jute goods caused more fibre to be placed on offer. Over the week-end, good business was done in Cossipore. With the issue of quotas, mills began to show more interest, and business was reported at the controlled rates. The Cossipore market became active, and heavy transactions were again reported. Wagon arrivals in Cossipore improved last week, and at 420 were about 120 more than in the previous week. Current arrivals were above average for the time of year, as many lots were being directed straight to Cossipore.

All quotations on Wednesday morning were based on the maximum rate fixed by the I.J.M.A., and were as follows :

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	166.00	62.00	March-Apl.
Northern	163.50	61.00	"
Purnea Desal	162.00	60.00	"
Daissee Selected	171.50	64.00	"
Assam Tossa	167.50	62.50	"
Mesta :			
Assam-Northern	159.50	59.50	"
Desal-Daissee	158.00	59.00	"
Jungli	155.50	58.00	"
Indian Cuttings	275.00 a bale		
Pakistani N. C.	306.00 a bale		

THE FOREIGN JUTE MARKETS

SPINNERS WELL BOUGHT IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices are being well maintained in Pakistan, and there are still no signs of weakness. It looks as if a higher level might yet be attained before the end of the season. In some centres, spinners may be compelled to close down temporarily because of the shortage of fibre. But as far as Dundee is concerned, there seems to be no danger of a cut in production, because spinners are all well bought. They are likely to carry on production until the new jute comes along. Reports say that new crop jute has been sold in Dundee at £172 for Grade Tossa-4 for September-October shipment and at £192 for Mill Lightnings, August-September, but these are not treated seriously. Some spinners are well bought in their requirements, so they have purchased little jute since prices rose to more than £200 for Mill Lightnings. At present, the rate for that grade is lowest at £208, with Mill Firsts at £215, Mill Hearts at £204 and Grade Hearts £198. Grade Tossa-2/3 from £212, fours £208 and Continental Tossa-2/3 £205, March-April, c.i.f. U.K.-Continent. Afloat parcels are still being offered to spinners at prices a few pounds a ton below the shipment quotations. At attractive rates, they are finding many buyers in Dundee.

Calcutta goods have continued to be irregularly quoted, but they too are being more or less maintained. For a long spell, their rates were lower than those for raw jute, and the result of this is evident in the latest reports of the Samnuggur, Titaghur and Victoria Jute Companies. They are paying an ordinary dividend of 6 percent (against 10 percent last year), and they have all made a fairly heavy loss for 1960. Samnuggur incurred a trading loss of £35,510, compared with a profit for 1959 of £264,617, while Titaghur shows a loss of £18,825 (against a profit of £181,801) and Victoria £18,821 (against a profit of £171,585). The net losses, after taxation, were £47,853, (against a profit of £129,115) for Samnuggur, £16,281 (against a profit of £151,331) for Titaghur, and £43,151 (against a profit of £106,084) for Victoria.

The latest prices were 103s for 40in. 10oz. hessians and 77s 6d for 7½oz., March, 102s 9d and 77s April, 101s 6d and 76s 9d May and 100s 3d and 76s 6d June, with B Twills at 308s 6d, 307s, 305s 6d and 304s for the respective months of shipment, all f.o.b., Calcutta.

I.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total production of jute goods for February as follows :

Description		Quantity
1. Gunny Bags		
(a) Hessian	3,356 tons	(3,410 metric tons)
	1,05,1 lakh yds.	(86,13 thousand metres)
	72.1 lakh nos.	
(b) Sacking	41,045 tons	(41,704 metric tons)
	9,52.7 lakh yds.	(8,71,16 thousand metres)
	4,36.2 lakh nos.	
2. Gunny Cloth		
(a) Hessian	21,851 tons	(22,201 metric tons)
	8,61.9 lakh yds.	(7,88,12 thousand metres)
(b) Sacking	640 tons	(650 metric tons)
	14.6 lakh yds.	(13,31 thousand metres)
3. Other Manufactures	10,476 tons	(10,644 metric tons)
4. Total Production (All kinds)	77,368 tons	(78,609 metric tons)

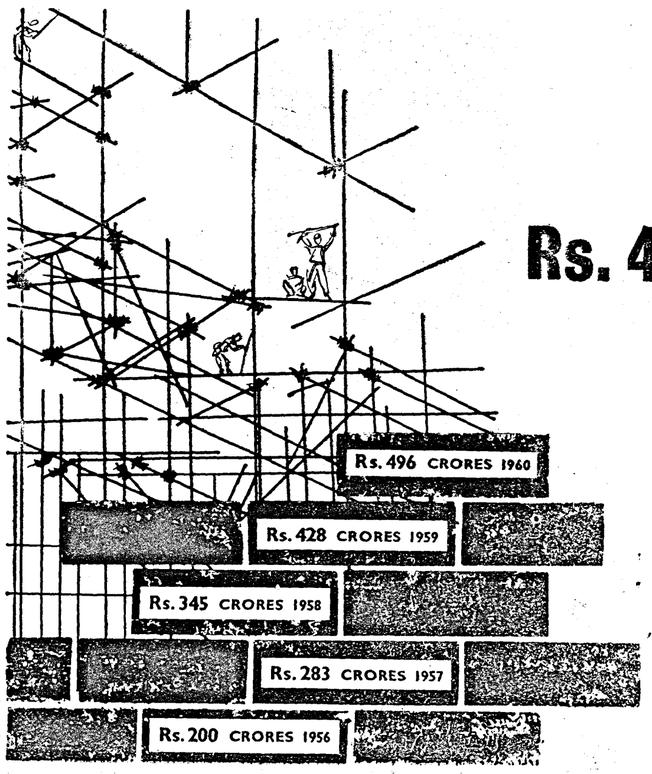
Summary

	(Million yds. and 000 metres) Feb. '61	Jan. '61	Feb. '60	(000 tons and metric tons) Feb. '61	Jan. '61	Feb. '60
Hessian	9.67 (8,84,25)	11.69 (10,69,32)	13.75 (12,57,44)	25.2 (25.6)	30.9 (31.4)	36.2 (36.8)
Sacking	9.67 (8,84,47)	11.57 (10,11,93)	10.12 (9,25,69)	41.7 (42.4)	46.9 (47.6)	41.6 (42.3)
Others				10.5 (10.6)	8.4 (8.6)	8.2 (8.3)
		Grand total		77.4 (78.6)	86.2 (87.6)	86.0 (87.4)
		Grand total		161.5*	189.0	200.5

* This was the number of hours worked after deducting 2.5 hours lost due to the strike on 13th February, 1961.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures and those of length, being based on the actual (detailed) figures, are more precise.

ASP/LIC-SP-18



Up and up soars the edifice of Life Insurance.
In the second year of its Five-Year Plan, the Life Insurance Corporation is at the half-way mark to its target of Rs. 1,000 crores in 1963, with yet another new business record of

Rs. 496,00,00,000

Year after year, the L.I.C. has improved upon past records. In 1960, it advanced by Rs. 68 crores upon its 1959 high of Rs. 428 crores.

Thus, since 1956, the L.I.C. has multiplied its new business intake nearly two and a half times. From Rs. 200 crores to close on Rs. 500 crores ...in five years.

Figures speak volumes—they point to the increasing trust and confidence placed in the L.I.C. as an institution. They speak of the growing belief by the average breadwinner that Life Insurance—and Life Insurance alone—can provide his family with the complete security he wishes for them—a security in which funds are guaranteed for a man's old age, for his son's education, his daughter's marriage, or for his family in case they should lose him.

Life Insurance Corporation of India

THE PAKISTANI JUTE MARKETS

FIBRE INACTIVE BUT STEADY

(FROM OUR EAST PAKISTAN CORRESPONDENT)

ALTHOUGH the P.J.A. quotations for both local and overseas prices have risen during the past week, it does not really reflect the market trend correctly, which has been steady though inactive. Slightly higher prices have been paid for occasional small business. Locally, arrivals have been practically negligible, and continue to be wet. In the pucca bale market, there has been more of settling undelivered contracts than actual business. Cuttings, however, have been moving slowly and upwards and the latest business has been reported at Rs. 295 a bale. It is interesting to compare this figure of Rs. 295 a bale for cuttings today with the price of Export Firsts in September at Rs. 220 a bale, and the price of cuttings last season which was at times Rs. 18 a bale. From overseas, occasional business has been reported at as high as £212 a ton for Export Firsts, but very small lots are available. Earlier, some of the balers, who were still holding stocks, were liquidating their position, but latest reports indicate that they have practically withdrawn.

The sowings of the new crop are proceeding well and it would appear that all the *char* land and low land areas have been sown. This accounts for approximately 25 percent of the total acreage under jute. The condition of the *char* land jute, it is reported, is fairly good and it has all germinated. On the other hand, more rain is required for its proper growth. One or two areas have produced unretted *char* land jute about 18 inches long. The low land jute has not yet germinated. Rain is required for this. There is no report yet of actual rainfall in any part of the country. In Calcutta, the report that Indian mills will not be able to keep more than two weeks' production, could be a bearish factor, but should help the Pakistani mills in the long run.

E.P.C. registrations during the last 15 days of February were even smaller than expected, and the total including those for India, amounted to only 41,000 bales, bringing the total registration up to the end of February to 2,755,321 bales, compared with 3,628,221 bales last season. During the current fortnight, France was the biggest buyer with 9,750 bales, followed by West Germany with 7,650 bales and Belgium and Italy, both having bought 4,000 bales. India which bought 1,500 bales has now bought a total of 388,249 bales. It will be seen from this that the business was restricted and that during March, the only business reported is odd lots with balers clearing their godowns. E.P.C. prices continue to creep up, but the market can only be described as steadily inactive. In spite of this, imports continue slowly but surely. The condition, of course, remains wet which is one thing balers have been unable to control, although their resistance has stopped any serious rise in loose jute prices.

The Pakistani Government had ordered that with effect from 1st March, 50 percent of the bonus vouchers has to be used for the expansion of the jute industry. This effectively means that they cannot be sold, thus reducing considerably the margin for the Pakistani jute mills. Since raw jute in India is cheaper than it is in Pakistan, this would make Pakistani mills uncompetitive. At the last moment, however, the Government extended the date from 1st March to 1st July, presumably to help the Pakistani mills and on the assumption that by then jute will be much cheaper to them than to their counterparts in India.

PAN AMERICAN PROPOSES BIG CUTS IN CARGO RATES FROM APRIL

Pan American Airways will cut transatlantic cargo rates by as much as 75 percent on 10th April, should the members of the International Air Transport Association fail to agree on a new rate structure before that date, Mr. Willis G. Lipscomb, Vice-President Traffic and Sales, has announced. Examples of the cuts under the airline's plan are: under 45 kilo shipments reduced from $2.81 to $1.90 or 32 percent; 100 kilos to 250 kilo shipments reduced from $2.11 to $1.14 or 46 percent; 250 kilos to 500 kilo shipments reduced from $2.11 to $1.10 or 48 percent; 1,000 kilos to 7,500 kilo shipments reduced from $1.83 to $0.95 or 48 percent; 7,500 kilos or over shipments reduced from $1.83 to $0.68 or 63 percent. "Pan American is convinced that substantial benefits to the public will result from low cargo rates by encouraging faster and cheaper exchange of goods across the Atlantic," Mr. Lipscomb said. Pan American will institute a rate system based on "Weight breaks" in place of the current outmoded and expensive commodity rate system, Mr. Lipscomb stated. A "weight break" system provides that the heavier the shipment the lower the rate a lb. A commodity system provides special rates for specific goods. If the I. A. T. A. carriers fail to agree on the new approach to transatlantic cargo made possible by volume discounts, Pan American has decided to give shippers the advantages of a rate structure which will not only be less costly but will also eliminate the complexities of the present cumbersome system, Mr. Lipscomb said. Pan American has had in Latin America cargo rates based on weights rather than on commodities for many years. On 1st January, 1960, the airline introduced Pacific cargo rates based on "weight breaks" providing reductions of up to 50 percent on general air freight shipments between the U.S.A. and the Orient.

Brown Recording-Integrating Flow Receiver

What is the cost of process flows for the various production departments of your plant? You must have accurate records of the quantities of steam, water, air, chemicals, fuel oil and other fluids supplied to each department to know where your money goes and why. Honeywell Flow Meters aid cost accounting by providing the information you need.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: *year ended March* 1953=100) declined by 0.2 percent to 126.4 during the week ended 25th February, 1961, compared with 126.6 for the previous week. The index was higher by 0.2 percent and 6.0 percent, respectively, when compared with the corresponding week of the *previous month* and that of a year ago. The monthly average for February 1961, worked out to 126.6, compared with 125.6 for January 1961 and 119.5 for February 1960. The index for Food Articles receded by 0.3 percent to 115.6, compared with 116.0 (revised) for the *previous week* due to a fall in the prices of jowar in Mohal (−20%), fish (−5%), gur (−4%), potatoes and milk (−3% each), eggs, chillies and turmeric (−2% each) and wheat, bajra, barley, gram, bananas, cashewnuts, mustard oil and black pepper (−1% each), although the prices of jowar in Nagpur (+8%) and in Gulburga (+7%), mung, onions, oranges, groundnut oil and salt (+2% each) and rice, maize, urad, gingelly oil, tea and betelnuts (+1% each) showed advances. The index for Tobacco receded by 2.6 percent to 107.9 due to the decline in prices of flue-cured tobacco. The index for the Fuel, Power, Light and Lubricants group remained stationary at the earlier week's revised level of 120. The prices of rapeseed in Kaithal (+15%), linseed (+4%), castorseed and raw hides (+2% each) and raw wool and groundnuts (+1%) showed advances, while those of rapeseed in Delhi (−10%), tanning materials (−3%) and cottonseed and lac (−2% each) moved down, and the index for Industrial Raw Materials stood at 159.7, against 159.5 (revised) for the *previous* week. Higher prices of linseed oil and tin (+2% each) and rayon yarn and lead (+1% each) raised the index for Intermediate Products by 0.4 percent to 134.9 compared with 134.3 for the earlier week. The index for Finished Products stood unchanged at the *previous* week's level of 128.4. Items which showed variations during the week were: cement (+4%), bricks and tiles (+2%) and general chemicals (−1%).

STRONG GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 34, held on 13th and 15th March, 36,173 packages were on offer at the Export Sale. The majority of the offerings comprised end of season's teas. There was a strong and general demand, although prices were very irregular. "Teas for price" and all clean, well-made orthodox teas met with strong competition at fully firm to dearer rates. The poorer plain Fannings, however, declined by up to 10nP. The few lines of bright best liquoring C.T.C. teas sold at dearer rates, while the more fibrous kinds also met with a good demand. No quotations are given this week as there were insufficient quotable teas on offer.

At the Internal Sale, there was a good general demand for the 21,994 packages of Dust teas on offer, although prices were generally easier. Orthodox teas were 10nP or 15nP lower, but the small descriptions in this category received better support. Legg-cut teas were irregularly easier and the fibrous kinds registered a drop of up to 20nP. C.T.C. Dusts were irregular, and the demand was selective with buyers following quality closely. The poorer sorts were easier, particularly the fibrous kinds which were virtually neglected. Clean mediums, however, sold readily at up to 15nP below last rates while the small powdery descriptions received better support. The best C.T.C.s on offer were in strong demand and sold at enhanced rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb.
Plain Orthodox Dust	4.55 to 4.70	1.96 to 2.00
Medium Assam Dust	4.65 to 5.00	1.90 to 1.94
Legg-cut Dust	4.85 to 5.20	2.02 to 2.14
Medium Assam C.T.C. Dust	5.40 to 6.00	
Good Assam C.T.C. Dust	6.20 to 6.60	2.40 to 2.75

(Quotations are inclusive of excise duty.)

The 1,603 chests of internal Leaf on offer sold at irregular rates.

R. V. BRIGGS & CO. PRIVATE LTD.

16, Old Court House Street, (West End Watch Co., Top Floor).

FREIGHT RATES KEEP STEADY

APART from time charter, there was a falling off in activity in the leading trading areas, but the rate remained steady, and $(U.S.) 9.65 a ton was paid for 11,500 tons wheat north Pacific to Chittagong. Fixtures from U.S. Gulf to Japan were concluded at the best rate yet paid of $(U.S.)10.55. Two vessels have been accepted at 68s 8d for rice in bags from one or two ports Burma to one or two ports Cuba, with 2s extra for two loading or discharging ports. One of the vessels has accepted a return cargo of sugar to China at 92s 6d. Cuban sugar shippers paid a higher rate of 92s 6d for a cargo to Ceylon also, the previous rate being 88s 6d. Marmugao ore charterers paid 56s for Poland and 45s for Japan and a shipment from west coast of India to Poland was agreed at 61s. The time charter section picked up in volume again at unchanged and steady rates. The Chinese were again in the market and accepted two modern motor vessels at 22s 3d for six to nine months' trading.

LINSEED FIRM

The linseed market was firm during the past week. There were shortages, since the movement of new crop was slow in the centres and local offers were small. Ready supplies were negligible. Local buyers showed interest daily for ready and forward deliveries of oil but sellers were not interested except for small lots. Most of the mills were shut down due to the shortage of seeds. The oilcake market was dull. Small local business was done. The price was higher than that in foreign countries. The latest quotation was as follows: Ready seeds, Rs. 32.25 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 7th March and 13th March, 1961)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8.62 to Rs. 12.12; Wet salted (Slaughtered) 18,400 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50; Wet salted (Ord.) 2,000 pcs. on the basis of 81nP a lb.

COMPANY AND PUBLIC NOTICES

THE BOMBAY DYEING & MANUFACTURING COMPANY LIMITED

NOTICE

THE Annual General Meeting of the Bombay Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 6th April 1961, at 4-30 P.M., to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Accounts for the year ended 31st December 1960.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election, and to consider, and if thought fit to pass, the following Resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company (and the relative Explanatory Statement for which is annexed hereto as required by Section 173 of the said Act) :—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 71 years and who retires by rotation, be and he is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in the place of Mr. N. K. Petigara who retires by rotation, and being eligible offers himself for re-appointment.
5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

6. AND for the purpose of considering, and if thought fit to pass, (with or without amendment as may be permissible), the following Resolutions as Special Resolutions and/or Ordinary Resolution as specified below :—

SPECIAL RESOLUTIONS

I. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Airfreight Private Limited, Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by one month's notice given by either side to the other, in respect of the supply or rendering of any service by Messrs. Airfreight Private Limited to the Company including the rendering of service as carriers of goods and travel agents; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Air Freight Private Limited, subject to the condition that all payments to be made to the Company by Messrs. Airfreight Private Limited shall be made within one month from the date of the sale or supply of any property or article or the supply or rendering of any service by the Company to Messrs. Airfreight Private Limited."

II. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956. (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft letter placed before the Meeting, and, for the sake of identification, initialled by the Chairman, purporting to be from Messrs. Gherzi Eastern Private Limited, Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to the Company, for the rendering of services by the former to the latter by way of planning a complete reorganization of the Spinning and Weaving Departments of the Spring Mills of the Company adopting modern processing and working methods, in consideration of which services the Company will pay a fixed fee of Rs. 1,97,800/-, and also a daily fee of Rs. 100/- per technician actually employed by Messrs. Gherzi Eastern Private Limited on the work, and conveyance and medical expenses as set out in the draft aforesaid."

III. "RESOLVED that, pursuant to Section 360 of the Companies Act, 1956 (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Gherzi Eastern Private Limited (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by three months' notice given by either side to the other, in respect of the supply or rendering of services as Textile and Engineering Consultants and Experts, by Messrs. Gherzi Eastern Private Limited to the Company; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, subject to the condition that all payments to be made to the Company by Gherzi Eastern Private Limited shall be made within one month from the date of the sale or supply of any property or article or the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, and that payments made by the Company to the said Messrs. Gherzi Eastern Private Limited for services to be rendered by them shall be such as are deemed reasonable by the Board of Directors having regard to the nature of the services asked for."

ORDINARY RESOLUTION

IV. "RESOLVED that, pursuant to Clause (d) of sub-section (1) of Section 293 of the Companies Act, 1956 (as amended), and all other enabling provisions (if any), the consent of the Company be and is hereby granted to the Board of Directors of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees ten crores."

Explanatory Statement under Section 173 annexed in respect of the above Resolutions

The drafts of the contracts and letter referred to in Special Resolutions Nos. I, II and III are open for inspection by any member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,

WORLD-WIDE ACCEPTANCE

Why is it that S.T.C. is such a universally trusted name in the World of telecommunications? Partially because the S.T.C. organisation has repeatedly proved its ability to produce integrated communication systems on a truly massive scale. Partially because S.T.C. products—from the smallest component to the most complex network—have won an enviable reputation for dependability. But primarily perhaps because nothing pleases S.T.C. more than to face the challenge of a *new* problem—and to succeed in solving it. All these resources . . . all this experience are yours to enlist, no matter what your telecommunications problem may be.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SECRETARIAT LIBRARY 27 MAR 1961 GOVERNMENT OF MADRAS

JUTE: A BAD YEAR, BUT PROSPECTS BETTER

IT was obviously no coincidence that so large a proportion of the chairman's speech at this year's annual general meeting of the Indian Jute Mills Association should have been devoted to the single topic of raw jute supply. This was merely a fair indication of the importance it has had for the industry in the past year and the part it is playing in the prospects for the future. A 100 percent increase in its raw material costs is bound to have a serious impact on any industry; when it is one which supplies a predominantly export market, it can make all the difference between life and death. What seems to have saved the Indian jute mills from greater losses of both profits and markets than they actually sustained is the fact the shortage of raw jute has been world-wide. Competitors suffered as much or even more and whatever the conclusions reached by prejudiced or badly-informed circles in this country, it was clear enough to customers abroad that the real cause of the trouble was neither the depredations of manipulators on the Calcutta markets nor the mills' greed for profit. The result was that most overseas buyers were reasonably content to put up with the situation, draw on their available stocks and postpone for a little while longer the decision to transfer to substitutes. If circumstances right themselves this year, and raw jute prices come down to more reasonable levels, the chances are that no great harm will have been done. This was the most reassuring impression to be gathered from the chairman, Mr. D. C. B. Pilkington's speech. What was clearly implicit in it, however, was that unless this season's jute crop is a normal one, the loss of foreign markets may reach disastrous proportions. It is little wonder then that the problem of raw jute should have received so much attention.

The remarkable feature of the industry's affairs during 1960 was that it contrived, thanks to high prices and not increased export volume, to step up its foreign exchange earnings to Rs. 134 crores. This was the highest for some years, and served once again to send the jute industry to the head of India's list of foreign exchange earners. The Indian Government must be tempted to reflect that it is indeed an ill wind that blows nobody any good. Production figures, too, showed an increase on the previous year, while the 34,000-ton improvement in internal consumption was a heaven-sent relief to the mills' stocks position in a year when exports fell by 6 percent. In other words, the brighter side of the picture could easily serve to obscure the fact that production had to be curtailed due to the shortage of raw jute and that few mills were able to make a profit on the year's operations. But overseas buyers can no more be expected to go on paying excessive prices for their jute goods when substitutes are readily available than the mills can be expected to operate indefinitely at a loss. As Mr. Pilkington pointed out, export earnings must eventually fall unless prices can be brought down. And if this happens, a fair number of Calcutta's mills are going to find it difficult to carry on at all.

If some part of the present predicament in the industry can be blamed on official inaction and obtuseness at the critical moment when raw jute prices began to climb, there is no accusing the Government of having been indifferent to the situation since then. The blame lies in the other direction—in trying to do too much too late. The present imposing collection of restrictions and controls has certainly made trading difficult, but whether these have helped a great deal in keeping prices in check is another matter. Probably the most that can be said for them is that they have virtually eliminated the market manipulator, at least for the time being. The Government has recently put into the Jute Commissioner's hands the power to fix maximum prices for both jute goods and raw jute, and to requisition stocks where speculative hoarding is suspected. The chief value of these powers would seem to be psychological; they exist as a threat to everybody concerned that action will follow if the bounds of legitimate trading are exceeded for the purpose of speculative gain. More specifically, at the moment they are providing a background alternative to the I.J.M.A.'s own raw jute maximum price scheme which could be tried if the voluntary principle breaks down. If they ever have to be used on their own, however, their failure is almost certain and the damage they could do to overseas confidence has been the subject of outspoken and convincing comment recently from a representative of U.S. buyers who has been visiting this country. Whatever current purpose these powers may have, it would obviously be a mistake to regard them as anything but a purely temporary expedient to be discarded as soon as conditions return to normal. Any idea that they somehow hold the key to the industry's difficulties in the long term would be a dangerous one if allowed to grow.

The only real solution to the raw jute problem is permanent self-sufficiency; this Mr. Pilkington maintained. And it is ironical that, as he pointed out, when the mills were all ready to accumulate a buffer stock of jute, "nature should have stepped in and decreed that the industry's stocks of raw material should fall to the lowest level for many years." Yet it is in this buffer stock scheme, and the steps which are being taken to increase the yield of jute from each acre sown, that the chief hope for the future lies. At last the problem of the raw material appears to have been completely grasped by all concerned, especially the industry, which in past years has rarely shown the desire to plan its raw jute supply which might have been expected of it. The special Jute Development Section, which Mr. Pilkington announced has been set up within the Association, is a welcome expedition into a more scientific handling of the raw jute situation. It now remains for this year's crop to be a bumper one for the buffer stock to operate, and, it is hoped, for the industry's worries on this score to be over once and for all. Only devices calculated to increase the supply of raw jute as a basis for stabilising the market have the slightest possibility of success in a highly competitive world.

To be optimistic about future exports in the context of present difficulties is by no means easy, but Mr. Pilkington's views were far from being despondent. Despite a fall of 50,000 tons in exports last year, he appears to consider that the industry's relations with its main consumers have been developed to the stage where a disaster on the scale of 1950 need not be expected provided present high prices do not persist too far into the new crop season. This is a commendable achievement. And it will be even more so if, as Mr. Pilkington seems to think, the loss of business to substitutes which has already taken place, can be retrieved. The main problem will be to hold the goodwill of those consumers who incur heavy capital expenditure when changing to substitutes long enough for prices to come down. When users such as these are lost to jute goods, they are usually gone for good. It is clear from what Mr. Pilkington said that this personal contact between the Indian manufacturer and his overseas customer is an extremely important one and should be encouraged to develop further in future. About the progress of the internal market, the figures speak for themselves. This should go on expanding fairly steadily, and will increasingly provide a stabilising factor in the overall demand position; if eventually jute goods manufacture in India ceases to be predominantly an export industry, then its health need seldom be in quite the precarious position it is in now.

About wages, the next most important element in the mills' costs, Mr. Pilkington's comment was reasonable enough: they should be linked with productivity. The same could be said for wages in all industries; yet incongruously enough, there has only recently been an interim award recommended for jute mill workers by the Wage Board and no doubt a further rise is in prospect when the final verdict is given. The mills appear to have accepted this increase on the fatalistic assumption that it cannot be avoided once an industry has been singled out for the attentions of a Wage Board. But it often appears that instead of studying the accounts of the Indian mills, which in this case were already nearly two years out of date, it would be better if the Board had studied the cost structure of their competitors in Pakistan. Then, the recommendations might have been different. The point is simple: either the industry is more than usually prosperous and can be expected to remain that way, therefore a wage increase is possible, or neither of these conditions holds and an increase is not possible. It does not take a Wage Board to decide which set of circumstances is true at the moment. If it is politically necessary that the mills give their workers an increase in remuneration, then it would waste less time and create less humbug if the fact were simply stated: to go through the formality of appointing a Wage Board merely confuses the issue unnecessarily.

GROWTH OF NEW ISSUES

THE readier support given to new issues has been an outstanding feature of the Indian capital market during the past couple of years. The support probably reached its climax in the first half of 1960, when all sorts of companies—good, bad and indifferent—managed to raise the capital they wanted quite easily. The share issues made by some were heavily over-subscribed. As a result, market quotations, both before and after actual flotation, were well above the paid-up values. These quotations often could not be maintained over a length of time, indicating that much of the money offered was speculative in character. Both the Government and the better-class companies have in recent months taken some action to discourage speculative applicants in search of quick capital gains. As a result, the new issue market now is quieter, but healthier. It is supported by an increasing proportion of genuine investors, who are prepared to wait for the comparatively long period which new companies must take before they are in a position to pay reasonable dividends. Although it is reported that a proportion of the capital issue recently made by a large new aluminium company has been left in the hands of the underwriters, there is no sign that the new issue market as a whole is weakening. It is only becoming more discriminating; companies which offer the promise of good management and fruitful technical collaboration still have little difficulty in raising the capital they want.

An article in the latest issue of the *Reserve Bank of India Bulletin* analyses the growth of the new issue market in recent years. It is admitted that the statistics on the basis of which the analysis has been made are incomplete; even so, they are comprehensive enough to highlight the general trends, which are supported also by common experience. The main point which emerges is that the popularity of new issues has been increasing fairly steadily. The amounts involved in such issues rose from less than Rs. 5 crores in 1952 to more than Rs. 45 crores in 1956. In 1957 and 1958, there was a sharp fall to around Rs. 25 crores in each of the two years. The article implies that this was mainly because new investment was hampered by import restrictions. But it does not mention the Krishnamachari Budget of May 1957, which may have been an even more important factor. By 1959, the new issue market had recovered, and the flotations totalled Rs. 43 crores. In the first half of 1960, the amounts involved were Rs. 32

crores. Thus, over the 9½ years from January 1951 to June 1960, new issues amounting to Rs. 256 crores were floated. Of this, Rs. 171 crores, or about two-thirds, were in the last 4½ years, which broadly covered the period of the second five year plan. A number of factors have contributed to the recent recovery in the new issue market. One is that, with the growth of industry under the five year plans, the investment climate has improved, and more and more entrepreneurs are coming forward with new schemes. At first, they were worried that the import restrictions would not enable their industries to function properly. Now they realise that these very restrictions are giving them a highly protected market, which will last as long as the foreign exchange shortage continues. From the investors' point of view, an important factor is that the shares of existing companies have risen to levels higher than purely yield considerations might justify. More interest is, therefore, being taken in new issues which, on a long-term view, are available comparatively cheaply.

It is significant that, during the 9½ years ended June 1960, most of the new issues have consisted of ordinary shares (Rs. 174 crores), followed by debentures (Rs. 44 crores) and preference shares (Rs. 38 crores). The emphasis on equity capital is encouraging. It shows that people have been willing to accept the risks inherent in industry, thinking that those risks are more than compensated for by the possibility of rising dividends and capital appreciation. Debentures were fairly popular until about 1955, when a substantial number were floated by the oil refineries, but have become less popular since then. Among the industries which have raised most capital, the first is engineering, which includes iron and steel. There follow, in order of importance, mineral oils, chemicals, cotton textiles (for modernisation as well as diversification), cement, electricity and paper. Most of these industries have issued mainly ordinary shares. But cotton textile companies have relied quite heavily on debentures and paper companies on preference shares.

The Reserve Bank study points out that in recent years, the proportion of capital raised by new companies, as compared with the proportion of new capital raised by existing companies, has been increasing. In other words, it is not just the old companies expanding; more and more new ones have been entering industry. This must be counted as among the more encouraging features of the present investment scene. Since January 1956, those raising capital have continued to rely heavily on ordinary shares, and only secondarily on preference shares and debentures. Some attempt has been made to attract small savers by issuing ordinary shares in small denominations. But preference shares and debentures have usually been issued in large denominations (Rs. 100 or more), presumably because they have been meant mainly for the institutions. It is interesting to note that more and more companies are getting their issues underwritten. Among underwriters, the most important are brokers and banks, followed by the Industrial Credit and Investment Corporation of India, investment trusts, the Life Insurance Corporation, the Industrial Finance Corporation and State Governments. Although underwriting has been increasing, the limited data available suggest that the experience of the underwriters has been improving. This implies, firstly, that investors are becoming more judicious, in that they are ready to take up issues which the better-informed institutions would otherwise take up. It also implies, secondly, that underwriting tends to strengthen investors' confidence in a particular issue.

The trends in the new issue market which the Reserve Bank study brings out are encouraging. But they are encouraging only in a relative sense —that the condition of the market has been improving, apart from such temporary setbacks as were suffered in 1957 and 1958. The fact nevertheless remains that the new issue market is still not as strong as it should be if industrial expansion is to be accelerated. Much of the expansion at present is being financed by companies from their internal resources. To the extent that those resources might now be getting depleted, the reliance on new capital from outside will increase in the future. The capital will not be easy to find unless voluntary savings can be increased, which means that fiscal policies will have to be judicious and investment confidence will have to be maintained. Admittedly, many companies can build their resources by charging high prices in a protected market, and then use those resources for further expansion. But if industrial activity is to be diversified, and the concentration of economic power is to be avoided, the growth of new companies has to be facilitated. That can be done best by promoting the vigour of the new issue market, in which the rational policies of the Government and the honest practices of entrepreneurs have an equal rôle to play.

WIDER SHAREHOLDING—II

APART from encouraging the holding of shares by employees or by specified economic groups, there is the effort to bring as many people as possible, of whatever condition, into direct or indirect contact with the stock market. The indirect method has been the most spectacularly successful, in the form of investment societies and unit trusts, whose method of working is too familiar (but unfortunately, not to the Indian public) to need description. To attract more people to invest directly in the share market, various countries have resorted to such methods as split shares, shares of the smallest possible nominal value, and no-par-value shares. The last-named come in here because the discrepancy between market value and par value confuses and alarms the unsophisticated investor. For that matter, even the most seasoned investor is momentarily startled when, having told his broker to buy three X shares at Rs. 75, he gets a chit saying, "We have bought for you three Rs. 10 shares in X" and a bill for Rs. 225. The new investor would be less disturbed to be told he had bought three ten-thousandths of X, whose turnover last year was Rs. 8 lakhs.

The phenomenon of "investment clubs" is familiar in the U.S.A., but would probably not be possible in many other countries, for it supposes both the American anxiety to make money and the American gift for co-operating among neighbours for any imaginable cause. The usual thing is that a group (often about a dozen) of friends, neighbours or colleagues meet monthly in one of their houses, put up a moderate monthly sum, often $10 or $15, and choose the shares they will buy. The best head for figures works as honorary accountant. In practice, the clubs usually seek to reinvest their dividends and increase their capital. American stock-brokers praise them for their educational value but, looked at from India, it is evident that a certain amount of economic education is needed before people would even consider this form of co-operation.

Ultimately, the main agents of wider shareholding must be the existing investment community—the stockbroking profession and the share markets. It is their promotional and educational campaigns, their multiplication of branch offices, their efforts to get in direct touch with new classes and new communities—in short, their "pushing" of stock in ways not so very different from the pushing of material goods by producers —that gets shares into more and more hands. The law, naturally, restricts their activities in various ways in different countries. It is, perhaps, only in Japan that bathers on the beach see the stock-brokers' open-sided van pull up on the promenade among the ice-cream vendors and begin selling his wares. It is, no doubt, only in America that the patron of a cafe will find one of the tables taken by the stock-broker and his clerk, making their monthly circuit and doing business amid the sale of doughnuts and hamburgers.

In order to find out exactly what was being done around the world to promote popular capitalism, the department of research and statistics of the New York Stock Exchange sent out a questionnaire and has just published the results. The vice-president of the Exchange emphasises in a preface that it is very much a first approximation and requests readers to send in corrections and extra information, in order to carry the study further. A summary of the reports from various countries will help situate the Indian campaign.

Argentina: Three banks and an investment company have formed an organisation which seeks to secure wide shareholding among the public. It has provincial branch offices and 100 agents who make door-to-door calls in the cities and the smallest towns. Their main work is to instruct and interest people in buying shares in general, and not any particular stock; but they can sell shares too, and in six months of last year, they sold $6 million worth to 5,000 people.

Australia: Taking their cue from the New York Stock Exchange, the Australian exchanges are strong on "public relations". They show films on share-buying (prepared by the N.Y.S.E., these are available to any exchange and have been shown in many European cities, as well as at the American Exhibition in Moscow!) and run a sort of adult-education course of lectures for small investors.

Austria: As a relic of Nazism, the war and the Russian occupation, the Austrian Government is left holding 90 percent of the capital of the nation's industry; only 10 percent is in private hands, be they "popular" or other. Anxious to rid itself of this burden, it is using the system of popular shares to spread ownership into many private hands. The system of "mutual funds" was taken from the U.S. model in 1956 and today represents shareholding worth $9 million.

Belgium: Half a million individuals in Belgium already own shares and there is a National Share Investment Committee devoted to increasing this figure—against the doctrinaire opposition of the trade unions.

Brazil: The only notable feature—although one that could well be copied in India—is that the Sao Paolo Stock Exchange has a "technical assistance bureau" for shareholders, where anyone can go to seek information. One suspects that many of those who do go expect to be told how to make their fortune quickly, but it is precisely part of the educational effort of stock markets to moderate such ambitions before referring applicants to a reliable broker.

Canada: About 19 percent of all non-farming families in Canada own some stock, against only 12 percent in the U.S.A. Mutual funds have grown mightily since the war and last year took up one-third of all the new stock issued.

Colombia: This small country is worth mentioning only to show what may be achieved by an energetic campaign in favour of wider shareholding. Since the Bogota Stock Exchange undertook its first survey in 1947, the number of people owning stock has increased by 500 percent.

Finland: On Russia's doorstep, one person in nine out of the adult Finnish population is a shareholder of some sort or another. Workers' shares are popular, and the banks and Stock Exchange of Helsinki run public lectures and information services.

France: There were already two million shareholders in France in 1957 and the number has much increased since. By law, company accounting methods, and publicity for their results, are being revised to make them more intelligible and more easily available to the public. The Paris Bourse is to be reformed this year, to simplify its operations—which are familiar enough to initiates but bewildering to the generality.

West Germany: There are one million shareholders in the country and—not unexpectedly in a nation with Dr. Erhard as its Economics Minister —every known method of popularising investment in private industry is being used. Mutual funds are phenomenally popular, having doubled their investments in 12 months in 1959. Workers' shares and popular shares are by now widely held. Company accounting and publicity are being reformed to make the affairs of a business completely transparent to its stockholders. Undervalued assets are being written up, the incorporation of reserves into capital is encouraged, the practice of amassing secret reserves is discouraged, shareholders will have the right to vote the distribution of all profits as dividends, etcetera.

Britain: A Gallup poll shows that there are over 3.1 million shareholders in the United Kingdom, some of them being the employees of I.C.I., Rolls Royce, Hoover, Rugby Portland Cement, etcetera, who have received stock in their own company. The progressive denationalisation of steel is increasing the number of shareholders, as would a projected amendment of the Trustee Act to allow trustees to buy industrial shares. The British investment societies and unit trusts are well known.

Japan: Popular capitalism has made its most rapid advances in Japan, where it is properly regarded as a democratisation of the economy which before the war was the world's most concentrated. There are now about four million shareholders, six times the number at the end of the war. Joint stock companies themselves advertise the virtues of shareholding, energetically seconded by the Stockbrokers Association, which advertises in the daily Press, prints booklets, runs lecture courses and radio and T.V. programmes.

Italy: There are about two million Italian shareholders, and there will be many more when the Government follows the lead of West Germany by denationalising the industrial property left in State hands by the Fascist *régime*, using the method of popular shares.

Norway: The trade unions will not accept the system of workers' shares, but the Oslo Stock Exchange runs an active educational campaign among the public and encourages companies to split their stock into units within the reach of modest investors. Private "investment clubs" have had some success.

Netherlands: The Amsterdam Stock Exchange and several of the largest companies last year established an institution whose name means "foundation for the widening of the base of shareholding property". It will educate the public and provide technical information.

Sweden: The banks run lessons in investment techniques. There are private investment clubs and firms which specialise in selling the stock of a given company on time-payment terms. Half the shares owned in Sweden are in the hands of women.

Switzerland: Surprisingly, shareholding is not common in this thrifty and prosperous country. By law, shares must have a nominal value of at least 100 Swiss francs (about $25), and after years of a bull market, their real value is much higher, well beyond the reach of small savers. This antiquated attitude to shareholding, as something too dangerous or too good for the lower classes, is under keen criticism and the Federal Government has set up a commission to recommend ways of making the ownership of Swiss enterprise more popular.

Current News and Comment

Bombay Dyeing Fares Well

The working of the Bombay Dyeing and Manufacturing Co. Ltd during the year ended December 1960 has been encouraging when viewed against the background of an increase in its production costs. Sales rose from Rs. 10.34 crores to Rs. 11.07 crores and closing stocks are valued at Rs. 5.52 crores, against Rs. 3.36 crores. The gross profit has increased by Rs. 20.65 lakhs to Rs. 1.24 crores. The gross profit as a percentage of sales works out to 10.9, against 10.6 in 1959. The improvement in the profit margin—in spite of higher production costs—reflects better trading conditions at home and the benefit of the export incentive scheme. Purchases of cotton, dyes and chemicals are valued at Rs. 7.18 crores, against Rs. 5.62 crores in 1959. Salaries, wages and bonus, including a sum of Rs. 10.72 lakhs as bonus for the previous year, total Rs. 2.09 crores, against Rs. 1.07 crores. Dearness allowance is, however, down from Rs. 1.28 crores to Rs. 80.26 lakhs. After providing Rs. 63.24 lakhs (against Rs. 54.63 lakhs) for depreciation, Rs. 29.5 lakhs (against Rs. 7.2 lakhs) for development rebate reserve, Rs. 4.5 lakhs (against Rs. 13.3 lakhs) for taxation and meeting other charges, there is a profit of Rs. 20.97 lakhs (against Rs. 22.7 lakhs). To this is added Rs. 45,499, being the excess balance of the provision for wealth tax, Rs. 36,929 brought in and Rs. 14 lakhs transferred from dividend equalisation reserve, making a total of Rs. 35.79 lakhs. The interim dividend of Re. 1 a share, taxable, absorbed Rs. 10.04 lakhs. The proposed final dividend of Rs. 2.50 a share, taxable, will absorb another Rs. 25.09 lakhs, leaving a sum of Rs. 65,826 to be carried forward.

Bombay Dyeing has maintained its position as a major exporter of cotton textiles. Its exports in 1960 amounted to 11.5 percent of India's total, against 10.3 percent in 1959. It exported 59.6 million linear yards of cloth and earned Rs. 6.25 crores of foreign exchange, the corresponding figures for 1959 being 63 million yards and Rs. 5.65 crores. The directors attribute the encouraging performance to the Government's export promotion scheme. The main feature of the exports during the year was the larger proportion of finished goods and the fall in shipments of grey cloth. Against 38 percent of finished goods and 62 percent of grey cloth in 1959, the percentage for 1960 was 50 each. The directors state that the Company is doing its utmost to maintain its position in the overseas markets by diversifying production and improving the quality of its goods.

Bombay Dyeing installed new machinery worth Rs. 1.77 crores during the year. Of the 576 automatic looms ordered for replacing old power-looms at the Spring Mills, 468 looms have been installed and nearly half of these were working at the close of the year. About 182 more automatic looms have been ordered so far and their delivery is expected to start in April. With their installation, the mills will have a complement of 1,974 automatic looms. The directors state that with the machinery already installed and the import licences in hand, the Company will be able to manufacture a wider range and variety of fabrics. The new automatic looms are already producing high-grade damask table cloths, napkins, etcetera. The addition of the open width bleaching range will not only increase the production of processed goods but will also enable the mills to manufacture high-quality dyed fabrics. Bombay Dyeing hopes to enter shortly into an agreement with the Tootal Broadhurst Lee Co. Ltd of Manchester for technical know-how and for using its patented crease-resistant and minimum ironing processes. Negotiations with Heberlein and Co. of Switzerland have reached the final stages for the right to use its famous Hecows finish on processed goods. Meanwhile, the Government's sanction is awaited. The directors say that with the installation of the new machines for special finishes and the existing "sanforising" facilities, the Company will be able to introduce new manufactures which are expected to sell well in export markets. Bombay Dyeing is continuing with its plans for the renovation of various departments in the two mills.

The Company has a paid-up capital of Rs. 2.50 crores. The reserves and surplus stood at Rs. 3.56 crores on 31st December, 1960. Borrowings amounted to Rs. 4.68 crores, against Rs. 2.33 crores at the end of the previous year. Total borrowings and current liabilities are fully covered by total floating assets, which amount to Rs. 7.14 crores. The fixed assets are valued at Rs. 11.03 crores and the net block stands at Rs. 5.57 crores, with depreciation totalling Rs. 5.45 crores. Around the current price of Rs. 66.50, the Company's shares offer a tax-free yield of about 3.7 percent.

Century Mills Profit Up

The directors of the Century Spinning and Manufacturing Co. Ltd have recommended a final taxable dividend of Rs. 20 a share. With the interim dividend of Rs. 10, taxable, this makes a total of Rs. 30 a share for the year ended December 1960, against Rs. 31.50, taxable, in the previous year. The net dividend works out to Rs. 21, against Rs. 22. But the 1960 dividend is being paid on an increased capital. The Company's equity capital has been increased during the year from Rs. 1.22 crores to Rs. 2.03 crores by issuing two shares for every three held at a premium of Rs. 20. It will have to pay Rs. 61.17 lakhs as ordinary dividend, against Rs. 38.71 lakhs in 1959. The preference dividend accounts for Rs. 10.71 lakhs.

The preliminary working results released along with the dividend announcement indicate that the Company has done well. While sales have risen by about 10 percent from Rs. 11.67 crores to Rs. 12.86 crores, the gross profit of Rs. 2.86 crores is nearly 61 percent higher than the previous year's figure of Rs. 1.77 crores. Appropriations include Rs. 91.33 lakhs (against Rs. 64.71 lakhs) for depreciation, Rs. 43 lakhs (against Rs. 48.50 lakhs) for taxation, Rs. 23.62 lakhs (against Rs. 7.83 lakhs) for development rebate reserve and Rs. 7.87 lakhs (against Rs. 2.61 lakhs) for development reserve. The directors have created two new reserves—capital redemption reserve and dividend equalisation reserve—which have been allocated Rs. 15 lakhs and Rs. 10 lakhs, respectively. Adjustments for expenses relating to previous years, especially bonus, claim a sum of Rs. 12.84 lakhs (against Rs. 5.53 lakhs.) After allowing for the proposed dividends, there remains a sum of Rs. 2.31 lakhs to be carried forward, against Rs. 1.22 lakhs brought in. The gross block has increased from Rs. 9.43 crores to Rs. 10.54 crores and the net block is up from Rs. 5.67 crores to Rs. 5.91 crores.

The Company's shares which could be bought around Rs. 446 early in the year rose to Rs. 560 last week, at which price they offer a net yield of about 3.75 percent. In spite of the low yield, the shares continue to be popular with investors as well as speculators mainly because of the Company's growth prospects. It is stated that machinery and equipment for the expansion of the rayon unit from 12 tons to 18½ tons a day have begun to arrive, and the output is expected to rise to the projected capacity by the end of the current year. Besides, Century Mills has recently signed a technical collaboration agreement with Algemeine Kunstzijde Unie N.V. of Holland and Vereinigte Glanzstoff Fabriken A.G. of West Germany to set up a tyre cord plant. It is expected to go into production during the second half of 1962.

No Rights Issue from Voltas

In their report for the year ended August 1960, the directors of Voltas Ltd hinted at the various expansion schemes the Company is considering. The chairman's annual statement to shareholders also contained references to the schemes and some "joint ventures" involving a large financial outlay. This led to strong rumours about an early issue of fresh capital by the Company, which raised the price of Voltas shares from Rs. 260 to Rs. 299 since the middle of February. The uncertainty has now been ended. Mr. J. D. Choksi, chairman, said at the annual general meeting last week that the management has no intention of issuing additional capital. The new schemes, he added, will be financed by the Company's own resources and by borrowing. Referring to expansion, the chairman said that Voltas has many schemes on hand, ranging from the manufacture of electrical goods to machine tools and mining equipment. But he refused to give details, and said that it is not in the interests of the Company to disclose the plans at present.

While congratulating the management on the excellent results, shareholders pleaded for a higher dividend in view of the substantial increase in profits. The chairman replied that the 13 percent dividend could by no means be considered low. The Company has a paid-up capital of Rs. 2.55 crores and a turnover of about Rs. 20 crores, so it should build large reserves. Shareholders, Mr. Choksi said, could look forward to the future with confidence, because the Company has large growth potentialities. The additional excise and import duties on various commodities imposed in the latest Central Budget are not likely to affect the interests of Voltas, since the additional duties may easily be passed on to consumers. Referring to the scheme for establishing a manufacturing unit in India with the help of the well-known Carrier Corporation of New York, Mr. Choksi said that a new Company would be promoted to undertake the project. Carriers will hold 60 percent of its capital and another 20 percent will be acquired by Tatas-Voltas. The balance of 20 percent will be taken up by J. Stone and Co. The manufacturing programme of the unit covers a wide range of air-conditioning machinery and equipment, including compressors. Voltas will be the selling agents of the new Company.

Ceat Tyres to Raise Capital

The shares of Ceat Tyres of India Ltd have risen from Rs. 240 to Rs. 300 since the middle of February on sustained investment support based partly on reports of the Company's satisfactory working and partly on expectations of a rights issue. Ceat Tyres has reached a production capacity of 325 metric tons of tyres and tubes a month. It has received the Government's sanction to increase its production capacity to 1,000 metric tons of tyres and tubes a month. The Company has applied to the Controller of Capital Issues for permission to raise fresh capital to finance its expansion programme. It proposes to issue 161,000 equity shares of Rs. 100 each to existing shareholders in the ratio of seven shares for every five held at a premium of Rs. 25 a share. This will help raise about Rs. 2.01 crores, including the premium amount of Rs. 40.25 lakhs. The proposed issue will increase the Company's paid-up capital from Rs. 1.15 crores to Rs. 2.76 crores.

Ceat Tyres has an authorised capital of Rs. 4 crores, made up of 115,000 equity shares of Rs. 100 each and 285,000 unclassified shares of Rs. 100 each. The proposed issue of 161,000 equity shares is being made out of the unclassified shares.

Rights Issue from Baroda Rayon

The directors of the Baroda Rayon Corporation Ltd have decided to increase the equity capital from Rs. 3.50 crores to Rs. 4.90 crores by issuing 140,000 equity shares of Rs. 100 each at par. The new shares are to be offered to existing shareholders in the ratio of two new shares for every five held. Baroda Rayon has applied to the Controller of Capital Issues for the sanction. Fresh capital is being raised in order to finance an expansion programme. The Rs. 100-paid shares of the Company are quoted around Rs. 148.

Braithwaite Dividend Up

The ordinary shares of Braithwaite and Co. (India) Ltd have improved to Rs. 36.50 during the past fortnight. This is because the Company has produced satisfactory results for 1960 and its growth prospects are good. During the year ended December 1960, the profit has amounted to Rs. 20.72 lakhs, after providing Rs. 4.02 lakhs for depreciation, Rs. 17 lakhs for taxation and Rs. 72,859 for development rebate reserve. The profit is thus Rs. 3.5 lakhs bigger than in 1959, when development rebate reserve received Rs. 2.04 lakhs. The ordinary dividend has been increased to Rs. 2.50, taxable, from Rs. 2.25, taxable. In his statement circulated along with the balance-sheet and accounts, Sir John Brown, chairman, mentions that even at the present rate, the net dividend is only Rs. 1.75, after deducting the usual tax of 30 percent. Thus it is still less than the net dividend paid for 1958. (Fuller details of the chairman's statement are printed on a later page.) It looks as if the directors are not paying a bigger dividend because it is necessary to conserve resources for financing development expenditure. About Rs. 6 lakhs has been transferred to general reserve out of the profit.

The production of the structural shop at the Clive works was satisfactory, a record output being obtained. But the manufacture of railway wagons was hampered by the shortage of steel and components. If plates and other raw materials become more freely available, production is expected to improve in the near future. Heavy mineral wagons known as "box" wagons, which can carry 55 tons of coal or ore, are being made. This line of activity can be developed satisfactorily, but the progress will depend on how soon the Government gives the Company licences for importing the balancing machinery and welding equipment.

Braithwaite took over the Angus works at the beginning of 1960. It proposes to develop the latter into a first-class mechanical engineering works by modernising the equipment. Plans have been prepared for producing various types of cranes, and an application has been made to the Government of India for increasing the capacity to fabricate heavy structurals. Crane manufacture is likely to be undertaken in collaboration with two well-known British companies. Braithwaite is also negotiating with a foreign manufacturer of ancillary blast furnace equipment. The Angus works is being equipped to produce various components for railway wagons. But it will take some time before it can be developed and modernised fully. Until then, it is not expected to contribute much to the profitability of Braithwaite. Sir John thinks that substantial capital expenditure will be required for renovating the Angus works, but he foresees no difficulty in obtaining the finance. He has not, however, indicated clearly whether the resources will be obtained by issuing more shares.

Commenting on the prospects for the current year, Sir John Brown says that the order-book for the wagon shop is satisfactory. But the activity of the structural shop is expected to decline because there are neither enough orders at present, nor enough steel. He hopes that the position will improve before long. In any case, it is possible that the increased business of the wagon shop will more than compensate for the decline in the work of the structural shop, and the profitability of Braithwaite will be maintained. The outlook is good as the Company is diversifying its activities.

Traco Cable Share Offer Soon

Lists for the issue of the Traco Cable Co. Ltd will open soon. A sum of Rs. 5 a share is payable on application and the balance of Rs. 5 on allotment. The Company proposes to raise Rs. 40 lakhs in equity shares of Rs. 10 each, out of which Rs. 10 lakhs will be taken up by the Kerala Government. Shares worth Rs. 5 lakhs are being taken up by the promoters and their friends. The balance of Rs. 25 lakhs is being offered to the public. Traco Cable is establishing a factory in Punithura, Ernakulam district, for manufacturing electric wire cables in collaboration with the Japanese firm of Furukana Electric Co. Ltd, Tokyo. The licensed capacity of the plant is 36 million core yards a year of V.I.R. cables of various types and bare-copper wires to the extent of the surplus capacity of the wire-drawing plant. The factory is expected to go into production in the middle of 1962.

Standard Motor to Expand

The Standard Motor Products of India Ltd, it is understood, has obtained the Government's permission to increase its production of 10 horsepower motor-cars from the present 3,000 units to 6,000 units a year by 1963. Its application for importing capital goods to achieve the higher rate of output has been sanctioned. The Company has also received permission to manufacture one-ton lorries, making use of the Vanguard engine, gearbox and differential. The production of lorries is expected to start by about the middle of the current year, and by 1963 it is expected to reach 1,500 units a year. The expansion programme is estimated to cost about Rs. 1 crore. The management has not yet decided how to obtain the resources for financing the expansion schemes. With the active co-operation of the foreign collaborating firm, Standard Triumph International Ltd of Coventry, the Company has made considerable progress in increasing the indigenous content of its motor-cars. The Standard 10 motor-car is said to be 60 percent indigenous. The indigenous content in the Vanguard and Standard 10 engines is as high as 95 percent.

Upper Ganges Sugar Earns Less

The Upper Ganges Sugar Mills Ltd has made a profit of Rs. 7.60 lakhs for the year ended June 1960, against Rs. 11.46 lakhs in 1958-59, after transferring Rs. 9.38 lakhs (against Rs. 7.30 lakhs) to depreciation, Rs. 1.62 lakhs (against Rs. 1.95 lakhs) to development rebate and Rs. 3.50 lakhs (against Rs. 8.83 lakhs) to taxation. The ordinary dividend has been maintained at 7½ percent, taxable. It is covered more than twice and offers a yield of 10.8 percent at the price of Rs. 67 a share. There is a carry-forward of Rs. 50,655, compared with Rs. 44,480 brought in. The cane crush was 10.9 million maunds (against 6.1 million maunds), the recovery being 9.62 percent (against 9.44 percent). In the current year, a crush of 13 million maunds is expected because cane supplies are abundant. The chemical section of the factory has been shut down because of uneconomic working. The ordinary share capital of Rs. 8 lakhs is supported by reserves of more than Rs. 45.79 lakhs. Fixed assets are shown at Rs. 86.97 lakhs, investments at Rs. 8.54 lakhs and current assets at Rs. 1.62 crores.

Nizam Sugar Profit Rises

The working of the Nizam Sugar Factory Ltd for the year ended June 1960 has been satisfactory. The gross profit of Rs. 1.12 crores shows an increase of about 138 percent over the previous year's figure of Rs. 46.97 lakhs. This includes a profit of Rs. 33.60 lakhs on agricultural operations, against Rs. 6.04 lakhs in the previous year. The results would have been still better but for the major breakdown in the first plant, which led to the stoppage of crushing there for about a month. Nizam Sugar crushed 491,777 tons of sugarcane, producing 51,199 tons of sugar. The corresponding figures for 1958-59 were 443,219 tons and 43,336 tons. The recovery of sugar improved from 10 percent to 10.41 percent. In view of the impressive rise in the profit, the directors have proposed a dividend of Rs. 5.75 a share, taxable, against Rs. 5.40 a share, taxable, in the previous year. The dividends on the 4 percent and 5 percent cumulative preference shares have been raised in accordance with the Preference Shares (Regulation of Dividends) Act. The ordinary dividend is covered about two-and-a-half times by the earnings. Allocations include depreciation Rs. 7.56 lakhs (against Rs. 9.04 lakhs) and taxation Rs. 30.25 lakhs (against Rs. 17.45 lakhs). A sum of Rs. 26.35 lakhs has been transferred to general reserve and another Rs. 51,000 is earmarked for development rebate reserve. The Rs. 25-paid shares of the Company are quoted around Rs. 62, offering a tax-free yield of about 6.9 percent. The fixed assets valued at Rs. 3.20 crores have been written down to Rs. 1.27 crores. Against a paid-up capital of Rs. 1.46 crores, the Company has built up reserves and surpluses amounting to Rs. 1.13 crores. Nizam Sugar is considering plans to raise the crushing capacity from 3,500 tons a day to 4,700 tons a day. It is also thinking of acquiring a power-alcohol factory.

Jay Shree Textiles Diversifying

The ordinary shares of Jay Shree Textiles have improved to Rs. 16.50 as the Company is diversifying its activities. In addition to the usual lines of production, it has started to manufacture reinforced rubber-lined hose in collaboration with George Angus and Co. Ltd of the U.K. Jay Shree Textiles has been permitted to set up a cotton spinning mill with 15,200 spindles, the estimated cost of which is Rs. 70 lakhs. The possibility of making various other products is being explored. In order to finance the new projects, it is proposed to issue rights shares worth Rs. 24.59 lakhs in the proportion of one new share for every two held at par. Shareholders will be informed about the date of the issue in due course.

After providing Rs. 3.99 lakhs (against Rs. 13.34 lakhs) for depreciation and Rs. 1.19 lakhs (against Rs. 87,605) for development rebate reserve, the Company's profit has improved from Rs. 3.83 lakhs to Rs. 18.65 lakhs for the year ended December 1960. The ordinary dividend has been increased from 8 percent, taxable, to 10 percent, taxable. It is covered more than thrice and gives a yield of 6.1 percent at the present price. Dividend equalisation reserve is allocated Rs. 5 lakhs and taxation Rs. 8.70 lakhs (against Rs. 75,000). The carry-forward is Rs. 21,280, compared with Rs. 34,072 brought in. It may be noted that the arrears of depreciation are still Rs. 8 lakhs, but Rs. 6 lakhs has been put into renovation and renewals reserve. Sales increased to Rs. 1.28 crores from Rs. 1.03 crores.

National Pipes Pays More

The ordinary shares of the National Pipes and Tubes Co. Ltd have been steady around Rs. 25.44 since the publication of the satisfactory results for the year ended September 1960. The Company's profit has increased by Rs. 6.55 lakhs to Rs. 21.63 lakhs, mainly because sales have risen to Rs. 1.02 crores from Rs. 82.86 lakhs. The ordinary dividend has been increased from 15 percent, taxable, to 20 percent, taxable. It is covered more than thrice and offers a yield of 7.9 percent at the present price. Development rebate reserve is allocated Rs. 31,660 (against Rs. 63,800) and taxation Rs. 9.70 lakhs (against Rs. 8.32 lakhs). General reserve receives Rs. 3 lakhs (against Rs. 2 lakhs) and dividend equalisation fund Rs. 2.50 lakhs. The carry-forward is Rs. 42,879, compared with Rs. 71,183 brought in. The directors think that the demand for non-ferrous semis will increase considerably, so they are thinking of raising the production capacity further. In 1959-60, production was affected by the shortage of raw materials.

Central Bank Pays More

The profit of the Central Bank of India has improved from Rs. 99.43 lakhs in 1959 to Rs. 1.93 crores during the year ended December 1960. The interest and discount income increased from Rs. 7.43 crores to Rs. 9 crores, while deposit interest rose from Rs. 3.86 crores to Rs. 4.34 crores. An interim ordinary dividend of Rs. 2.10, taxable, absorbed Rs. 26.46 lakhs. The final dividend now declared is Rs. 2.50, taxable, a share, and it takes Rs. 31.50 lakhs. A special jubilee bonus of 2 percent, taxable, has also been declared, absorbing Rs. 6.30 lakhs. So the total dividend for the year amounts to 20 2/5 percent, taxable, against 17.2 percent, taxable. Contingency fund is allocated Rs. 8 lakhs, gratuity fund Rs. 10 lakhs and staff bonus Rs. 51 lakhs. The carry-forward is Rs. 18,61,470, compared with Rs. 18,82,560 brought in. Deposits increased by Rs. 19.26 crores to Rs. 200 crores. Investments increased by Rs. 1.68 crores to Rs. 56.60 crores and advances by Rs. 30.86 crores to Rs. 150.78 crores. Cash is Rs. 74 lakhs higher at Rs. 22.69 crores.

United Bank Pays the Same

The results of the United Bank of India for the year ended December 1960 are interesting, as the institution has now completed ten years of working. The Bank was formed in 1950 by amalgamating four banks in West Bengal. During the ten-year period, its deposits have nearly doubled from Rs. 26.90 crores to Rs. 51.74 crores, and its advances have risen from Rs. 13.45 crores to Rs. 31.62 crores. It has opened 24 new branches, mostly in places where there were no banking facilities previously. The profit has improved slightly from Rs. 14.29 lakhs in 1959 to Rs. 14.63 lakhs in 1960. The interest and discount income rose from Rs. 1.98 crores to Rs. 1.16 crores and deposit interest from Rs. 72.48 lakhs to Rs. 79.15 lakhs. The dividend has been maintained at 4.30 percent, taxable, absorbing Rs. 11.44 lakhs. At the present price of Rs. 5.12 a share, the yield works out to 8.4 percent. Reserve fund is allocated Rs. 2.93 lakhs, leaving a carry-forward of Rs. 2,07,685, compared with Rs. 1,81,564 brought in. United Bank succeeded in increasing its deposits by Rs. 4.06 crores to Rs. 51.74 crores. The rise in savings bank deposits was Rs. 1.68 crores, taking them to a total of Rs. 17.94 crores. Advances rose by Rs. 4.10 crores to Rs. 31.64 crores, giving an advance-deposit ratio of 61.1 percent. Investments, shown at or below market values, were Rs. 13.59 crores, against Rs. 14.85 crores in 1959.

Ashok Paper Share Offer Soon

Ashok Paper Mills Ltd, a new Company with an authorised capital of Rs. 3 crores, is expected to enter the market shortly with an offer at par of 115,000 equity shares of Rs. 10 each and 20,000 redeemable cumulative preference shares of Rs. 100 each. The preference shares carry a dividend of 6.25 percent, free of company's tax, but subject to deduction of tax at the prescribed rate. The present issue of equity and preference shares is actually of the value of Rs. 2.25 crores. The directors, their friends and others have taken up a portion, and the rest is to be offered to the public. The public offer has been fully underwritten or guaranteed by various institutions. The Company has finalised its project for setting up an integrated paper and pulp mill in Rameshwarnagar near Darbhanga in north Bihar. The mill will have a daily production capacity of 50 tons of writing and printing paper. The estimated cost of the project is about Rs. 6 crores. Sugarcane bagasse will be the chief raw material used with variable quantities of bamboo and sabai grass. Empacel of Paris has designed the plant and machinery, which is being fabricated by well-known manufacturers in Europe and the U.S.A. Empacel will provide technical collaboration and carry out the erection of the plant.

Dhanalakshmi Mills Earns Less

The Dhanalakshmi Mills Ltd has made a net profit of Rs. 15,73,659 for the year ended December 1960, against Rs. 21.35 lakhs in 1959. This is after providing Rs. 7.49 lakhs (against Rs. 6.12 lakhs) for depreciation. A sum of Rs. 1 lakh is transferred back from machinery replacement reserve and Rs. 1.75 lakhs from dividend equalisation reserve. The tax provision is Rs. 4.7 lakhs (against Rs. 7.8 lakhs) and development rebate reserve gets Rs. 3.29 lakhs. The directors have maintained the dividend at 17½ percent, subject to tax, and it absorbs Rs. 8.51 lakhs. The margin of profit on sales of fine counts narrowed. The shortage of electric power from Pykara meant that the automatic looms erected in the branch mill could not be worked according to plan. Extra wages became payable because of the Wage Board award and the steep increase in the cost of living index. Total sales of finished goods during 1960 amounted to Rs. 1.44 crores (against Rs. 1.51 crores in 1959). Since the dividend was announced, the shares of the Company have improved to Rs. 223. On this basis the current yield works out to 7.8 percent.

More Business for Refinance Body

The Refinance Corporation for Industry Private Ltd has taken timely measures for extending its activities. Its facilities are now offered to 43 more commercial banks, 14 State financial corporations and three State co-operative banks. It has also been decided that loans made by some financial institutions to small-scale industries will be eligible for refinancing facilities from the Corporation, provided they satisfy certain conditions. Apart from the moderate interest of 5 percent which the Corporation charges on its loans, banks have been encouraged to use its facilities to a greater extent because two restrictions which had hampered borrowing have been removed. The first restriction was that the borrowing institutions had to keep a minimum spread of 1½ percent between the rate of interest at which they borrowed from the Corporation and the rate at which they lent to industrial concerns. The second was that loans carrying interest terms less favourable to the borrower than the usual terms of local financing agencies were not eligible for the refinance facilities of the Corporation. Various financing institutions have now been given the discretion to charge the interest which appears appropriate according to their ideas, subject to review by the Corporation.

In his address from the chair at the annual general meeting of the Corporation in Bombay recently, Mr. H. V. R. Iengar pointed to the possibility of bigger demands on the Corporation's resources in the near future. As a result of economic development, industry is expected to have greater assets formation which can be financed from internal and external resources. The scope for the former is limited because most of the internal resources have been used during the past few years. In external finance, institutional support has so far been prominent. Although bank funds have been used to a substantial extent for financing the assets formation of the corporate sector during the past few years, the supply has now dried up in view of the credit shortage. Bank funds have been employed as far as circumstances permit, and it is doubtful whether banks can be of much help in extending longer-term credit to industry, unless their resources can be replenished.

After taking into account the supplies of credit from other financing institutions like the I.F.C. and I.C.I.C.I., the corporate sector has to rely on the capital issue market for its long-term requirements, but the importance of new share issues seems to have been exaggerated. The heavy subscriptions for some new shares in recent months has generated optimism. Mr. Iengar pointed out that the public response cannot be judged by the amount of subscriptions because many subscribers applied for more shares than they intended to hold for investments. There is, nevertheless, little doubt that industrial investment has become more popular. In the circumstances, it is possible that the Refinance Corporation will have to meet a substantial portion of the financial requirements of industry for fixed assets formation. To this extent, the outlook for the Corporation is encouraging.

During the year ended December 1960, there were more enquiries for the Corporation's money. So 25 applications for Rs. 4.60 crores were received, against 13 applications for Rs. 2.23 crores in 1959. The total amount of refinance sanctioned by the Corporation from its inception until the end of 1960 was Rs. 5.78 crores. It is good that the Corporation now takes only three weeks to reach decisions on an application, provided all the formalities are complied with. Considering that the coverage of the Corporation has been extended and that steps have been taken to expedite application, greater use of its facilities is likely to be made. The profit of the Corporation is Rs. 19.39 lakhs for 1960, compared with Rs. 20.02 lakhs for 1959. The dividend has been maintained at 4 percent, taxable, and it absorbs Rs. 10 lakhs. Taxation is allocated Rs. 8.73 lakhs (against Rs. 9.10 lakhs). The carry-forward is Rs. 682, compared with Rs. 9,331 brought in.

Assam Hardboards Share Offer

Assam Hardboards Ltd of Calcutta has finalised its plans for installing in Gauhati a hardboard mill with a capacity of 15,000 tons a year. It is understood that the Development Loan Fund has granted the Company a loan equivalent to Rs. 60 lakhs in dollars through the Industrial Finance Corporation. In addition, it is reported, the U.S. suppliers have asked for equity shares worth Rs. 10 lakhs and 9 percent, taxable, preference shares worth Rs. 10 lakhs. The directors and their friends will take up equity shares worth Rs. 15.5 lakhs. The remaining Rs. 24.5 lakhs of equity shares and Rs. 10 lakhs of preference shares will be available for public subscription. The fixed capital expenditure is estimated to be Rs. 1 crore and the plant is expected to go into production by the end of 1962.

Mercara Rubbers Maintains

Mercara Rubbers Ltd reports a net profit of Rs. 1,09,582 for the year ended June 1960, against Rs. 1.17 lakhs in the previous year. Depreciation gets Rs. 9,955, and Rs. 23,600 is provided for agricultural income tax and Central income tax. The 6 percent, tax-free, preference dividend and income tax thereon absorbs Rs. 22,500. The ordinary dividend is maintained at 20 percent, subject to tax, and it absorbs Rs. 65,000. A balance of Rs. 10,168 is carried forward. The total crop was 260,146 lbs (against 270,020 lbs in the previous year). The cost of production was 78.35 cents a lb (against 71.93 cents). The crop for the 1960-61 season is estimated at 260,000 lbs. The directors hope that the Government will increase the price of raw rubber suitably in view of the steep rise in wages and salaries.

Ashok Leyland Development Plans

The demand for Leyland vehicles in India exceeds Ashok Leyland Ltd's present production capacity. It is expected that the demand will continue to grow, so action has been taken to provide for a steady increase in the output at Ennore. Mr. N. Ramamurthi, supply manager of the Company, has recently visited the United Kingdom in order to ensure the supply of materials for the development and expansion of Ashok Leyland's production during the next two years. Apart from talks with Leyland Motors Ltd and Albion Motors Ltd, he visited a few ancillary suppliers like Thompson Motor Pressings Ltd, Wolverhampton, and All-Wheel Drive Ltd, Camberley. All-Wheel Drive Ltd is the manufacturer of components for the conversion of Leyland vehicles to four-wheel drive. Mr. Ramamurthi also visited West Yorkshire Foundries Ltd, an associate Company of Leyland Motors, with whose technical collaboration Ennore Foundries Private Ltd is progressing.

Chemi Plants Venture

Chemi Plants Manufacturing Co. Ltd is a new enterprise which is being formed to manufacture various types of plant and equipment for factories producing fertilisers, synthetic resins, plastics, chemicals and pharmaceuticals. It will have an authorised capital of Rs. 2 crores, consisting of 180,000 equity shares of Rs. 100 each and 20,000 7 percent tax-free redeemable cumulative preference shares of Rs. 100 each. The issued capital will comprise 90,000 equity shares and 10,000 preference shares. The Company is expected to enter the market for raising capital within a few months. The Struthers Wells Corporation of the U.S.A. is the foreign collaborating firm. The factory will be located near Bombay and its licensed capacity will be around Rs. 4 crores a year. Considering the large expansion of the chemical industry proposed under the third plan, there is ample scope for the Company's activities. The indigenous output of machinery for chemical plants is estimated at only Rs. 1 crore.

Aditya Mills in Rajasthan

A new Company known as Aditya Mills Ltd is to set up a composite cotton textile mill in Kishengarh, near Ajmer. It will have 25,000 spindles and 500 looms. The spinning mill is expected to start production in June 1962 and the weaving mill in 1964. Aditya Mills proposes to raise Rs. 60 lakhs, made up of Rs. 50 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in preference shares of Rs. 100 each. The Government of Rajasthan is said to have agreed to take up Rs. 10 lakhs worth of equity shares and Rs. 5 lakhs of preference capital. The Company is reported to have arranged a loan of Rs. 50 lakhs from the Industrial Finance Corporation.

Fertiliser Plants for U.P.

The Japanese Ministry of Trade has announced that it is considering plans to extend a $25 million loan to India for the construction of a chemical fertiliser plant in Uttar Pradesh. The Japan Consulting Institute, a co-ordinating agency for heavy machinery industries in that country, has stated that a four-man survey team will shortly visit India to finalise the details of the project. When commissioned, the plant will produce 150,000 tons of urea a year. At the end of the third plan total nitrogen requirements in the State are estimated at 250,000 tons, but it now produces only 10,000 tons at Sahu Chemicals. It will be recalled that the U.P. Heavy Industry Plan Committee built a case—based on the consuming data prepared by the Fertiliser Committee of the Government of India—for not less than three factories to make good the deficit of 240,000 tons of nitrogen. Uttar Pradesh is second in the list of States consuming nitrogenous fertilisers. Only consumption in Punjab is higher at about 64,000 tons, against 44,000 tons in U.P. Punjab has Nangal Fertilisers, Bihar has Sindri, and Neyveli is coming up in Madras, so it was U.P.'s standing grievance that it had no big factory.

Since the beginning of the use of chemical fertilisers in India, the only nitrogen fertiliser known to farmers was ammonium sulphate. But the Government has now accepted nitro-limestone (20.5 percent of nitrogen), sulphate-nitrate (26 percent to 26.5 percent of nitrogen), urea (44 percent to 45 percent of nitrogen) as suitable fertilisers. It has also recommended the use of compound fertilisers like nitro-phosphate and ammonium phosphate-nitrate. Evidently, the two most favoured categories are ammonium nitrate and urea. The former, it is said, has a certain degree of explosion and fire hazard, so Indian cultivators cannot handle it for the present. Because it contains free lime, the use of calcium ammonium nitrate is not considered safe in U.P. where the soil is neutral or alkaline, although it is to be produced in Nangal and Rourkela to cater for the dry areas of Punjab, Rajasthan and Madhya Pradesh. Trials conducted on cultivators' fields in U.P. have shown that ammonium sulphate,

ammonium sulphate-nitrate and urea compare almost identically for wheat and paddy on the same nitrogen level at doses usually given to these crops. On these considerations, the U.P. Government apparently thinks that besides the factory to be set up with Japanese aid for producing urea, there is scope for starting another factory for producing ammonium sulphate-nitrate, and for expanding the present output of Sahu Chemicals.

Fertiliser Factory in Coimbatore

Mr. G. R. Govindarajulu of Coimbatore has obtained a licence from the Government to set up a factory for manufacturing 16,500 tons of sulphuric acid, which will be used for producing 50,000 tons of superphosphate a year. The factory will be located in Vedapatti, near Coimbatore. The project is estimated to cost Rs. 66 lakhs, of which Rs. 35 lakhs will be spent on machinery and equipment. The machinery which will have to be imported is estimated to cost about Rs. 9 lakhs. The promoters are negotiating with the Industrial Credit and Investment Corporation of India for a foreign exchange loan to meet the cost of imported machinery. The factory is expected to go into production within a year of the grant of the import licence, which is still awaited. A public limited Company is being formed with an authorised capital of Rs. 1 crore to undertake the project.

New Cable Factory

P.S.N.S. Ambalavana Chettiar and Co. Ltd, manufacturers of brass, copper sheets and circles and dealers in non-ferrous metals, is setting up a factory in collaboration with Krupps of West Germany for manufacturing copper rods and weather-proof electric cables. The factory will be located in Korattur, near Madras, and will have a licensed capacity of 3,000 tons of copper rods a year and 600 tons of electric cables a year. The construction of the factory has been completed. The production of copper rods is expected to commence by the end of the current year and that of cables by the end of 1962. The project is to be implemented by Madras Cables (Private) Ltd, which may be converted into a public limited Company at a later stage. The entire cost of the project, estimated around Rs. 50 lakhs, will be met by the promoters and their friends. Krupps is supplying plant, machinery and technical know-how. The payment for the imported machinery, valued at about Rs. 35 lakhs, will be made in deutschemarks on a deferred basis. Part of the machinery has already arrived.

Oilseeds Prices Rise Sharply

Oilseeds prices have recorded impressive gains since the beginning of March. Castorseed May has risen from Rs. 170.25 (a 250 kilos) to Rs. 182.50 and cottonseed May from Rs. 92 to Rs. 100. Linseed May has improved from Rs. 35.12 (a 50 kilos) to Rs. 38.75. Oil prices, too, have recorded a proportionate rise. Over the year ended 18th February, the index for edible oils advanced by about 30 points to about 161. Groundnuts, which have continued to provide the lead in the upward trend, have risen by Rs. 50 a 250 kilos since January. Groundnut and groundnut oil are now quoted above the highest levels recorded in 1953 when the groundnut crop failed. The quotation of Rs. 57 a 50 kilos for groundnut ready, Saurashtra quality, is an all-time high. Excluding the castorseed crop, which is estimated to be some 30,000 tons lower than in the previous season, oilseeds crops, such as groundnut, linseed, rapeseed and mustardseed, are not smaller than last year. Apart from normal crops, exports this year have been far from encouraging. Only oilcake shipments have been satisfactory so far. Exports of oils have been very poor. Shipments of castor oil from Bombay in the first two months of the current year are placed at 2,342 tons, against 8,639 tons in January-February 1960. The figures for groundnut oil and linseed oil are 132 tons and 547 tons, compared with 1,893 tons and 1,846 tons, respectively, last year.

It is good that exports of groundnut oil and linseed oil have remained low, as otherwise the upward trend in prices would have gained further momentum. Even so, the situation is disturbing. That prices should have continued to rise in spite of normal crops and poor exports is a matter for serious concern because oilseeds are not only a valuable foreign exchange earner but they constitute an important source of fat in the diet of the common man. It is tempting to blame speculators for rigging up prices but the exorbitant premiums commanded by spot materials over futures prices indicate that the latter have been merely following the trend in the former. Stern warnings by the Forward Markets Commission, tighter control over trading in delivery contracts and penal margins on futures trading have proved to be of no avail. The production of oilseeds has failed to catch up with the growing demand created by the increased population and larger money incomes. So oilseeds prices can be kept under check only by raising production. The performance of growers during the second plan has been unencouraging. Production in 1960-61 is estimated at about 6.4 million tons, against the plan target of 7.6 million tons. A sustained and determined effort will, therefore, be necessary if the third plan target of 9.2 million or 9.6 million tons is to be reached. Meanwhile, the Government would do well to consider the possibility of importing large quantities of edible oils under P.L. 480 in order to keep down prices at reasonable levels.

The Engineering Outlook

Engineering shares have met with steady support in the Calcutta and Bombay stock markets during the past few weeks. The support reflects the fact that the industry has expanded rapidly in recent years, in spite of the shortage of essential raw materials like iron and steel. The expansion is expected to continue vigorously as the supply of the raw materials eases with the commissioning of the new steel plants. The optimism featuring the industry is reflected in the address delivered by Mr. P. Bhattacharji, chairman, at the annual general meeting of the Indian Engineering Association in Calcutta last Thursday. He pointed out that, since 1951, the output of engineering products has almost trebled, as against an increase of about 66 percent in industrial production generally. The overall index of industrial production (base year 1951 equals 100) has risen from 138.5 in 1958 to 165.4 in the first nine months of 1960. The index for general engineering and electrical engineering has meanwhile improved from 251.1 to 335.8, and that for chemical engineering from 206.2 to 252.5. The comparisons show that engineering companies are leading the industrialisation of the economy.

Some small, but valuable, modifications in policy have been made during the past year which should facilitate the growth of the companies. The licensing procedure for a number of industries has been relaxed. Within certain limitations, industrial licences can be issued without reference to the Licensing Committee if a unit can develop extra capacity by balancing its plant. Where foreign exchange has been allotted to a unit for a specified capacity, it can create extra capacity provided it does not use more foreign exchange than the amount sanctioned. Finally, the incentives given in the latest Central Budget to foreign private investment should help the engineering industry to secure foreign collaboration.

But, as Mr. Bhattacharji pointed out, important difficulties remain, and the biggest of these centres on the shortage of steel. The wagon manufacturing programme, for instance, has suffered badly. Four firms, which are members of the Indian Engineering Association, produced 13,000 wagons during the year ended June 1958. Their output dropped sharply to 6,500 wagons in 1958-59, and still further to 6,200 wagons a year later. Mr. Bhattacharji emphasised that a vicious circle has thus been created: the shortage of steel has reduced wagon production and the shortage of wagons has kept down the output of steel. In the circumstances, he did not think that the target of 10 million tons of steel ingots proposed for the third plan is too ambitious. Steel manufacturing capacity, in his view, should run ahead of requirements. In addition, it is necessary to plan carefully for the raw materials required for steel manufacture, especially washed coal, dolomite and limestone. Mr. Bhattacharji declared that the engineering industry needs more pig iron, and wants it to be of better quality. The export of steel scrap should be banned; power and transport facilities should be improved; and local concerns should be helped to participate in global tenders for engineering goods.

U.P. Budget Deficit

The U.P. Budget for 1961-62, recently presented to the State Legislature, has estimated receipts and expenditure at Rs. 145.63 crores and Rs. 154.13 crores, respectively, leaving a deficit of Rs. 8.50 crores. Among the measures proposed to reduce the deficit are the withdrawal of irrigation rebates, bringing diesel oil within the scope of the Motor Spirit Taxation Act, increased rate of duty on country spirit and rum and the enhancement of sales tax on certain selected commodities. The measures are expected to yield an additional revenue of Rs. 5.21 crores and reduce the deficit to Rs. 3.29 crores which is proposed to be left uncovered. The State Finance Minister, Mr. Hargobind Singh, said that the economy measures effected by the Government have already resulted in a saving of Rs. 52 lakhs a year. He added that a further saving of Rs. 32 lakhs is expected from changes in travelling allowance rules.

The total net provision for capital expenditure and disbursement of loans and advances by the State Government stands at Rs. 56.49 crores. Out of this, a sum of Rs. 43.81 crores will be required for schemes included in the third plan. On the capital account outside the plan, the expenditure will be Rs. 14.35 crores and that on loans will be Rs. 4.30 crores. The plan expenditure for 1961-62 will thus be Rs. 71.22 crores, out of which Rs. 27.41 crores will be on revenue account and Rs. 43.81 crores on capital account, inclusive of loans. The State Government proposes to borrow Rs. 8 crores from the market "depending on the circumstances at the time of actual floation." A sum of Rs. 9 crores net is expected from small savings.

In the industrial sector, the State's third plan provides for an outlay of Rs. 3.68 crores for heavy industries and Rs 16.37 crores for village and small-scale industries. Out of this, Rs. 45 lakhs has been provided in the Budget for large-scale industries and Rs. 2.1 crores for small-scale industries. On the heavy industry side, the plan programme includes expansion of Government-owned factories for the production of cement and precision instruments, the provision of developed sites for the establishment of large-scale industries in the private sector and the participation in the share capital of new co-operative sugar factories. It is also contemplated to establish a Large-scale Industries Corporation for encouraging the growth of heavy industries in the State. The installed capacity for power which stood at 370 megawatts at the end of the first plan is likely to be increased by 68 megawatts at the end of the second plan. The third plan target proposes to increase it to 1,181 megawatts. Stating that it is proposed to treat agriculture as an industry and not merely as a way of life, the State Finance Minister said that Uttar Pradesh has accepted a target of 18.3 million tons of foodgrains during the third plan. This means an additional production of 4.8 million tons over the likely production of the second plan of 13.5 million tons. A sum of Rs. 1.70 crores is being allotted to farmers for minor irrigation in the Budget year.

THE POPULATION CENSUS

THE first totals of the Indian Census are published in the last gazette. The figures of 1891 showed an increase over those of 1881 of 28.6 millions or 11.2 percent; those of 1901 only show an increase over 1891 of 6.9 millions or 2.42 percent! The following are the figures:

	1901	1891
Males	149,906,349	146,768,327
Females	144,360,352	140,548,721
Total	294,266,701	287,317,048

The following are some details:

India	1901	1891
Ajmere-Merwara	476,330	542,358
Assam	6,122,201	5,433,668
Bengal	74,713,020	71,346,961
Berar	2,752,418	2,897,040
Bombay (Presidency)	18,584,496	18,873,342
Burma (Total)	9,221,161	7,770,894
Central Provinces	9,845,318	10,784,294
Coorg	180,461	173,055
Madras	38,208,609	35,630,440
North-West Provinces and Oudh	47,696 324	46,904,791
Punjab	22,449,484	20,866,847

A Ditcher's Diary

I AM NOT EXACTLY INCONSOLABLE THAT South Africa is to leave the Commonwealth; nor am I, I should go on record with Mr. Menzies of Australia, overjoyed. The manner of the erring Dominion's departure could have been a great deal more bitter than it was; and those who wrote to *The Times* recently of the prospect of South Africa returning to the fold when it has abandoned its abhorrent policy of apartheid expressed a wish that must be shared by many, and not in Britain alone. It is not easy for the British to forget that in two world wars within living memory the South Africans were their willing and gallant allies; and the bond is not snapped without wrench. The Afrikaner perhaps never quite understood the mystique of the Commonwealth; but for the English-speaking South Africans the British connection was something very real and greatly valued. It is apparent that the Commonwealth Premiers tried hard to keep South Africa within the family—if only Dr. Verwoerd had made a responsive gesture and modified his rigid concept of how the Bantu and the whites should live together in South Africa. Dr. Verwoerd put his case with a desperate dignity when he asked his critics to consider how they would behave if they had made South Africa their home. I like to think that I would have been more liberal than Dr. Verwoerd and his friends, that I would have treated the Bantu as my potential equal if he would concede a like status to me in the future scheme of things. But, as many Asian settlers in Africa are beginning to discover with dismay, the acceptance of immediate African rule is not nearly as simple and straightforward as some woolly-thinking outsiders imagine. The ethical aspects of the question apart, who is to say that Dr. Verwoerd is wholly wrong in thinking that concessions made today under the "wind of change" will not merely hasten the end of the whites' existence in a continent they have developed? It may well be that a permanent state of domination by the white minority is unthinkable, besides being morally wrong. But we do not live in eternity or in infinite space. Our own lifetime and perhaps that of our children and the environment in which we happen to have been born—these are decisive determinants of our attitudes, tempered sometimes by certain abstract ideas. I do not find it in my heart to be only angry with Dr. Verwoerd and his white countrymen; they deserve some pity, sympathy and understanding—most of all from the African majorities that surround them.

ANOTHER DIARIST—TO WIT PAUL TANFIELD OF Britain's *Daily Mail*—is responsible for the report that Mrs. Pandit is to be succeeded in the High Commissionership in London by Mr. A. K. Sen, India's present Law Minister. For aught I know Tanfield may be right, although Mr. Sen is not one of the several names that have been previously mentioned for this key post. Tanfield says that the change-over is to take place in May and he goes on to give his readers some particulars of Mr. Sen's professional career, his education and some of those other details that columnists seem to find irresistible. But one thing is certain: whoever is eventually appointed High Commissioner in London will have a most difficult task, if only because Mrs. Pandit has been a quite outstanding success in the United Kingdom and has probably made more friends up and down the country than any other diplomat. Her term of office was extended in order that she might be available to the British and Indian Governments for the period of the Royal tour of India and it has proved a most strenuous (and successful) finale to her tenure of the High Commissionership. She is now back in London embarked on the last lap of her assignment and, inevitably, beginning a round of farewells which will last until the day of her departure. *Pace* Tanfield, I venture no opinion on who her successor will be, but whoever is chosen will not find it easy to follow one who has quite literally been an adornment of London's diplomatic corps.

IT WAS SUGGESTED TO ME THAT I SHOULD NOT AT THIS stage write on Satyajit Ray's documentary film on Tagore, which has been shown only to a few at private showings and in an uncensored version. Nor would I, normally; but a journalist fails in his duty if he foresees an impending piece of official folly and, in deference to some silly code or other, decides not to write about it. I have nothing official to go by, for I have not discussed it at all with Mr. Ray or anyone else; but I gather that somebody in Bombay or New Delhi is thinking of cutting the film down to 10 minutes from its present 50. I recognise the difficulty of fitting a film of this length into the usual schedule; and every newspaper man knows that he has to write within the limits of specified space. But this is the year of Tagore's birth centenary; and if Satyajit Ray thinks he cannot do justice to his great theme in less than 50 minutes, his view should have precedence over bureaucratic rules and regulations. I hope I heard only gossip when someone told me the other evening that the film on Tagore must be cut because that on Mahatma Gandhi was short, for this seems too otiose even for official thinking. But the friend who saw the film tells me that the whole thing is so well proportioned that to cut an inch would be to ruin the integrity of what is a work of art conceived in its totality. Since even many minor decisions have to be taken in this country by the Prime Minister, I am rather glad that Mr. Nehru found time to see the film before he left for the London conference; and I sincerely hope that on his return he will do something to preserve the film as it has been made by one of the world's greatest film directors. It is well to remember that Mr. Ray made his first film, *Pather Panchali*, under official auspices; apart from prestige, it made a lot of money for the Government of West Bengal. Until the Tagore assignment came along, he never again considered making a film for the Government; and I understand why. All governments are by definition anti-art; but those who display undue concern about the arts, such as Dr. Keskar's Ministry of Information does, are the worst enemies of all of everything independent and imaginative.

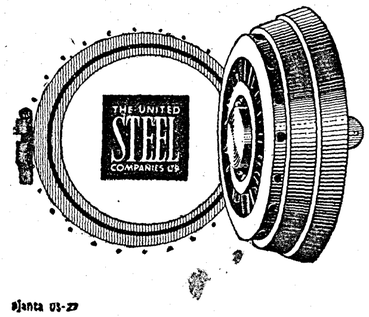
I HAVE OFTEN WONDERED ABOUT THE VALUE OF FOOTball pools as one of the United Kingdom's "invisible exports" and the recent decision of the Cyprus Government forbidding participation in the British pools by Cypriots gives me a clue. In announcing the ban, President Makarios is reported as saying that it was estimated that more than £1 million per annum is remitted from Cyprus to Britain in the form of pools bets; such money would be better employed, said the President-Prelate, in a State lottery the proceeds of which could be applied to the financing of development works. In other words, the Archbishop's decision is a straightforward exchange control edict, with no humbug about the ethics of betting or the immorality of games of chance; just a plain statement that henceforth if you want a flutter you can have it at home. Of course, if you win the prizes will not be so big, because Cypriot competitors in British pools stood a chance of winning not merely a high proportion of the total Cyprus weekly contribution, but also part of the much bigger pool made by the millions of U.K. and overseas competitors. Though these pools rely mainly on support received in the U.K. itself, overseas competitors also make quite a sizeable contribution. My information is that, among other places, they are extremely popular in West Africa, where at least one U.K. pools firm has established its own branch offices. I have been told that towards the end of the war an effort was made to popularise them in India, but there were too many practical difficulties apart from the exchange control aspect of the matter which has become increasingly important with the passage of time.

LAYMEN ARE NATURALLY CONFUSED OR IRRITATED by the specious jargon that official economists have worked out to describe the disappointing performances of the U.S. economy—those depressions that are not really depressions but just recessions, dips, downturns, declines, drops, slowdowns, slide-offs, inventory adjustments and rolling re-adjustments, and which are always on the point of bottoming out, levelling off or flattening out before leading to the awaited upswing, upsurge, upturn, pick-up or recovery. An official of the U.S. Department of Commerce lately suggested that things would be clearer if his Ministry issued its reports in the following limpid language: "The Commerce Department reports with some satisfaction that sales and income figures show an easing up of the rate at which business is easing off. This is taken as proof of the Administration's contention that there is a slow but noticeable slowing up of the slowdown. In order to clarify the cautious terminology of the experts, it should be noticed that a slowing up of the slowdown is not as good as an upturn of the downcurve but it is a good deal better than either a speed-up of the slowdown or a deepening of the downcurve. It suggests that the climate is about right for an adjustment to the re-adjustment. Unemployment figures reveal a definite decrease in the rate of increases, clearly showing a letting up of the letdown. Of course if the slowdown should speed up, the decrease in the rate of increase in unemployment would turn into an increase in the rate of decrease of unemployment. In other words the deceleration would be accelerated. But the indicators suggest rather a levelling off, referred to on Wall Street as a bumping along a rocky bottom. This will be followed by a gentle pick-up, a faster pick-up, a slowdown of the pick-up and finally a levelling off again. It is hard to tell before the slowdown is completed, whether a particular pick-up is going to be fast. But it is generally agreed that the conditions for a good pick-up are best if you are about 25, unmarried and driving a new red convertible."

THE DITCHER

Bank vaults are always made of steel... because steel is so dependable!

symbol of security!



Through the years Steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability... Steel that she can hold up to the world as a symbol of her security.

THE CENTRAL BANK OF INDIA LIMITED

SIXTY-SIXTH REPORT OF THE BOARD OF DIRECTORS

Gentlemen,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

	Rs.	nP.
The *Net Profit* for the year, including the sum of Rs. 18,82,560.07 brought forward from the previous year's account, amounts to ...	1,51,87,470	96
The following appropriations have been made :—		
An ad-interim Dividend was paid for the half-year ended 30th June, 1960 at the rate of Rs. 2.10 per share subject to tax on 12,60,000 shares	26,46,000	00
Amount transferred to Staff Gratuity Fund	10,00,000	00
Amount transferred to Contingency Fund	8,00,000	00
Amount provided for Bouns to Staff, including Special Jubilee Bonus	51,00,000	00
	95,46,000	00
The balance of Rs. 56,41,470.96 the Directors propose to recommend to the Shareholders to dispose of *as follows* :—		
To pay a final Dividend for the half-year ended 31st December, 1960 at the rate of Rs. 2.50 per share subject to tax on 12,60,000 shares (making in all 12.88⅝% net for the whole year) ...	31,50,000	00
To pay a Special Jubilee Bonus of 2½ p. a. per share, subject to tax	6,30,000	00
To carry forward to next year's account	18,61,470	96
	1,51,87,470	96

The Bank's business during the year under review showed satisfactory progress. During the year one Branch, seven Sub-Branches and four Pay Offices were opened at various centres, and one Pay Office had to be closed down as it was found to be unremunerative.

The Directors record with deep regret the death which took place on the 16th August, 1960, of their colleague, Mr. Framroze J. Guzdar. Mr. Guzdar took a very keen interest in the affairs of the Bank and his advice and guidance were greatly valued by his colleagues. The Board desire to place on record their *appreciation of the very* valuable services rendered by him to the Bank.

Three of your Directors, Mr. Cooverji H. Bhabha, Mr. Dharamsey M. Khatau, and Sir Jamsetjee Jejeebhoy Bart., retire under Article 12 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is also drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, The Depositors' Benefit Insurance Co., Ltd. Though the tax liabilities of the aforesaid Subsidiary have now been finalised, the necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company which has been applied for, has not yet been received.

H. P. MODY,
Chairman.

Bombay, 2nd March, 1961.

Statement Pursuant to Section 212 of the Companies Act, 1956.

(a) The Bank's interest in its Subsidiary, The Central Bank Executor & Trustee Company, Private Limited, as at 31st December, 1960, comprised 1998 shares of the face value of Rs. 1,000/- on each of which Rs. 500/- per share has been paid up.

(b) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1960, after a transfer of Rs. 20,000/- to General Reserve, amounted to Rs 20,197.50 which has been carried forward in the accounts of the Subsidiary.

(c) The net aggregate amount of Rs. 11,76,322.50 received as dividends from the Subsidiary Company for its previous financial years since its inception as a Subsidiary Company have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 51 branches audited by us, 17 branches audited by other auditors and the unaudited returns from 243 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 228 of the Companies Act, 1956.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank :

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report ;

(f) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960 and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

ANNUAL REPORT.

To be submitted to the Shareholders at the Fifty-fifth Annual General Meeting to be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Fort, Bombay, on *Monday, the 27th day of March, 1961, at 4 o'clock in the afternoon.*

Directors' Report for the year ended 31st December, 1960.

The Directors submit to the Shareholders the Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1960. The Auditors' Report is also annexed.

The transactions for the past year have resulted in a profit of Rs. 1,03,37,098.89. To this has been added the balance of Rs. 12,47,743.19 brought forward from the previous year, making a total sum of ... Rs. 1,15,84,842 08

An interim dividend was paid for the half-year ended 30th June, 1960, at the rate of 7.50 per cent., subject to deduction of tax at the prescribed rates, on the Paid-up Capital of Rs 3,00,00,000, which absorbed Rs. 22,50,000 00
Provision made for Income-tax and Super-tax for the year ... „ 25,00,000 00
Bonus to Staff ... ... „ 18,00,000 00

The Directors now propose :—

To pay a final dividend for the half-year ended 31st December 1960, at the rate of 12.50 per cent., subject to deduction of tax at the prescribed rates, making 20 per cent. for the year, on the Paid-up Capital of Rs 3,00,00,000, which will absorb ... ... „ 37,50,000 00
To carry forward to the *next* account ... ... „ 12,84,842 08
Total ... Rs. 1,15,84,842 08

The Company's business continued to function satisfactorily.
The Bank Rate remained stationary at 4 per cent.

Branches were opened during the year abroad at Hong Kong and in India at Bhowanipur in Calcutta, at *Mount Road* in Madras, at Ajmere Gate Extension in Delhi, at Indore and at Walkeshwar in Bombay.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. A. D. Shroff,
Mr. Ramniwas Ramnarain,
Mr. *Bhagvandas C.* Mehta,
Mr. *Krishnaraj M. D.* Thackersey.

The Shareholders are *requested* to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.* A. D. SHROFF, *Vice-Chairman.*

AMBALAL SARABHAI, N. K. PETIGARA,
RAMNIWAS RAMNARAIN, JUGMOHAN PRASAD GOENKA,
BHAGVANDAS C. MEHTA, JAISINH VITHALDAS,
K. M. D. THACKERSEY, GIRDHARILAL MEHTA,
MADANMOHAN MANGALDAS. } Directors.

H. A. CURRIMBHOY, *Chief Accountant.* T. D. KANSARA, *General Manager.*

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by *other Auditors.*

The Central Government have, by an order dated 3rd February, 1961, exempted all the Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in *respect of the* year ended 31st December, 1960.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our *examination of* those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;
(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns ;
(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Bombay, 16th February, 1961.

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st *December*, 1960 does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly-owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U. K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and *belief were necessary* for the purpose of our audit. In our opinion proper books of *account* have been kept by the Company. We have examined the above Balance-Sheet *which is in agreement with* the books of account. In our opinion such Balance-Sheet *gives the information* required by the Companies Act, 1948, in the manner so required and is *properly drawn up so as to exhibit* a true, correct and fair view of the state of the *Company's affairs* at 31st December, 1960, according to the best of our *information* and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

BRAITHWAITE AND CO. (INDIA) LIMITED

CHAIRMAN, SIR JOHN BROWN'S STATEMENT

The Thirty-first Annual General Meeting of Members of Braithwaite & Co. (India) Limited will be held in Calcutta on 13th April, 1961. Following is the statement by the chairman, Sir John Brown.

In order that shareholders may be given a more detailed account of the Company's activities and its development plans, it has been considered desirable to circulate with the Balance Sheet as at 31st December last and the Accounts for the year then ended, this statement by myself as Chairman. It is felt that this is a more satisfactory way of acquainting the general body of shareholders with the Company's position and prospects, than through the Chairman's speech at the Annual General Meeting since that Meeting is normally attended by only a handful of shareholders and it is possible, in a statement such as this, to deal with a number of matters more adequately than can be done in the formal statutory report of the Directors which is, of course, also circulated with the Accounts.

Profits

The profits for the year, after providing Rs. 4,01,566 for depreciation, Rs. 17,00,000 for taxation and transferring to Development Rebate Reserve the sum of Rs. 72,859 as required by Explanation 2 to Section 10(2)(vib) of the Indian Income-tax Act, 1922, amounted to Rs. 20,72,316. This represents an increase of some Rs. 3.5 lacs over the corresponding figure for the previous year when, however, the transfer to Development Rebate Reserve was Rs. 2.04 lacs. As forecast in the report of the Directors which accompanied the 1959 accounts, production in the Structural Shop at Clive Works was maintained at a satisfactory tempo throughout the year and, in fact, resulted in a record tonnage output. So far as railway wagons are concerned we were severely handicapped by a shortage of steel of weldable quality and by lack of supplies of components to be imported on our behalf by the Railway Board so that the tonnage output in the Wagon Shop showed a decline for the third year in succession. The other principal activity of the Company heretofore, viz. the production of pressed steel tanks, continued and towards the end of the year a record production was being obtained. As plates become more freely available from indigenous sources it is expected that the output can be still further increased in the future. The profit for the year may be considered satisfactory, having regard to the interruptions to production in the Wagon Shop and to the fact that nothing was contributed to profits from the Company's Angus Works, to which I shall make more detailed reference later in this statement. The balance sheet and the profit and loss account figures reflect the increasing scale of the Company's activities.

You will see that an increased dividend of Rs. 2.50 per share is proposed to be paid out of the year's profits as compared with Rs. 2.25 in respect of the previous year. This is equivalent to a net dividend of Re. 1.75 after deducting tax at 30% which, it will be noted, is still less than the net dividends totalling Rs. 2.25 paid immediately before the revised corporate tax structure was introduced. Payment of the increased dividend will still permit the transfer to reserves of Rs. 6 lacs and a small increase in the amount to be carried forward. There is no doubt that investment in buildings and machinery during the next few years will require a lot of money and, in these circumstances, it is necessary to retain out of profits each year a substantial sum. In this connection, I would observe that the amounts transferred to reserves and set aside as depreciation during the five years ended 31st December last totalled no less than Rs. 48.57 lacs; during the same period the Company's capital expenditure has amounted to Rs. 43.00 lacs.

Production, Development and Expansion

Clive Works: The Structural Shop was principally engaged in the fabrication of structural steelwork for the Wheel, Tyre and Axle Plant at Durgapur and for the adjacent A. V. B. Project for the manufacture of water tube boilers, cement making machinery and other heavy plant. Both of these orders embodied the new heavy rolled section beams, imported into India for the first time. Fabrication of the larger standard bridge spans required for railway development, particularly in North East India, continued throughout the year but apart from the making of the necessary jigs, fabrication of our share of the steelwork for the new Brahmaputra Bridge between Pandu and Amingaon was delayed through shortage of the necessary high quality steel. The same shortage retarded development of the use of welding as opposed to rivetting for structural fabrication generally but nevertheless the trend towards this practice was increasingly evident during the year.

In the first half of 1960 production in the Wagon Shop consisted principally of bogie underframes for railway passenger coaches. In May we turned over to the production of the new heavy mineral wagons, popularly known as BOX wagons, each of which carries 55 tons of coal or ores. These have a vital role to play in solving the problem of transporting the huge quantities of raw materials required for the country's expanding iron and steel industry. After initial difficulties to which I have already referred, production is developing satisfactorily. We have continued to produce tank wagons of various types.

As I have already stated, the tonnage output of railway wagons has been falling in recent years, but this has been compensated by the fact that the wagons which are being produced have a higher cost and sale value; apart from anything else, they are very much bigger and this has necessitated the extension of the production bays. This work will be completed this year but there is in addition a certain amount of balancing machinery and welding equipment required if an uninterrupted flow of work is to be achieved. We are endeavouring to obtain the necessary import licences.

The Fitting Shop has been re-sited and is now equipped to serve more adequately the increasing requirements of these Works. The opportunity has been taken to increase garage capacity and work is at present in hand to expand the Stores. We are badly pressed for office space and extensions to the General Office and to the Works Time Office have been sanctioned, together with an extension to the Workers' Canteen which is necessitated by the increased numbers now being employed and also by the fact that night-shift working has increased.

Angus Works: The Company took over the running of the Angus Works on the 1st February, 1960 and the terms of a 99-years' lease have recently been agreed. It is our intention to develop these Works as a first class mechanical engineering works. We have recently had a visit from our Foundry Consultants and steps will be taken to give effect to their recommendations. We have submitted or are in the process of submitting applications for licences under the Industries (Development & Regulation) Act for the manufacture of various types of cranes and we expect to receive a number of licences shortly. In addition we have applied for an increase in our licensed capacity for the fabrication of heavy structurals. We are in the process of finalising our plans for crane manufacture, which is proposed to be undertaken in collaboration with two well known United Kingdom companies. We are also in negotiation with a foreign manufacturer of ancillary blast furnace equipment, while some useful orders have recently been received for components for machinery, the manufacture of which has been undertaken by an associate company. We have in the past year been developing the manufacture at Angus of components for the railway wagons which we are manufacturing at Clive Works. This has proved of great assistance in eliminating bottlenecks which have frequently in the past restricted wagon output through failure to obtain delivery of bought-out components.

From the number of enquiries which we have received from foreign companies which are interested in undertaking manufacture of their products in India in collaboration with a company such as our's, it is clear that we shall have no difficulty in finding work; the problem rather is to devise a pattern of production which will ensure, as far as possible, that the maximum use is made of our machinery and that management effort is not dissipated over the production of relatively small numbers of too many products.

We have already paid for the stocks and work in progress which we took over from the Angus Company Ltd. and are in the process of completing orders which were outstanding at the date when we took possession. Although the machinery which we have leased is in good condition, much of it is old and it will be necessary to replace some of it with modern machines to enable us to satisfy the exacting standards demanded for the products which we shall manufacture. We shall also have to extend the buildings at these works and modernise the electrical installation as well as instal a range of additional machinery. Much of the preparatory work involved in all this is already in hand but it is not yet possible to state with any degree of exactness the estimated overall cost. It is anticipated, however, that during the coming year plans for the development of these Works will be finalised. Our financial position is a strong one and I do not anticipate undue difficulty in raising the necessary funds for expansion.

Exports

As was mentioned in the Directors' Report for 1959, an encouraging start was made during that year with the export of some of the Company's products. Progress in this field was sustained during 1960 when an increased tonnage of plates for the manufacture of pressed steel tanks was exported. We are intensifying our export effort and in recent months have dealt with an enquiry for a bridge in Thailand as well as for railway wagons in other countries. The principal difficulties which face us as exporters are concerned with supplies of raw materials and components which are products of allied industries. I feel that if the export drive in manufactures such as your Company's is to succeed, much more will have to be done to provide manufacturers with the raw materials and components which they require at prices which are not inflated by duties and levies, which must be considered as appropriate only in the case of materials for internal consumption. Like a number of other companies, endeavouring to develop new exports, it is already evident that we cannot expect to make large profits or even any profits at all on that proportion of our production which we export; but we fully accept our obligation to do what we can to [illegible] the country's export earnings and you may be sure that we shall continue to do our utmost in this direction.

Labour

The year that has passed has not been without its difficulties so far as relations with our labour force are concerned. This was almost inevitable in the circumstances in which we were working at times but, on the whole, there was a satisfactory measure of co-operation between labour and management and where production schedules were not met, it was more often due to lack of materials or components than to any fault on the part of our workers. To them I extend on your behalf our thanks for the part they have played in achieving the results which are before you.

A few weeks ago we learned of the outcome of our appeal to the Supreme Court against the award by the Labour Tribunal of five months' basic wages as bonus to our workers for 1957. Our reason for contesting this award was that on an average, in respect of the year 1957, the equivalent of some 14½ months' basic wages was paid as production bonus: in the case of our lowest rated workers the equivalent was no less than 19 months. We felt that the large sum of money involved should be taken into account in determining the overall distribution of surplus between the workers on the one part and the Company and its shareholders on the other. Unfortunately, the decision of the Supreme Court was against us. I cannot, however, help observing that if bonuses on this scale are to continue, combined with the comparatively high level of corporate taxation to which we are subject, much of the incentive to management to improve production methods and so increase the earnings on the Company's fixed assets as well as the opportunities for workers to earn more from production is thereby removed. As you all know, this question of bonus to workmen has blighted employer/employee relations in India for a good many years now and I feel it is a step in the right direction that a Bonus Commission has been set up by the Government of India to go fully into the matter. I trust that the terms of reference of the Commission and also its composition, when finally settled, will enable an objective survey of the whole position to be undertaken and in particular that the effect of bonuses on the scale which I have mentioned on the ability of industry to finance its development in the long term will be fully reviewed.

Management and Personnel

We have for some years been building up our resources of administrative and technical personnel and now have a young team of engineers whose pride it is to maintain the standards of workmanship for which this Company is well known. For their assistance in training some of our young men at their works in the United Kingdom, we are indebted to our friends, Braithwaite & Co. Engineers Ltd. The acquisition of Angus Works and their development imposes new demands on our senior staff and on your behalf I would assure Mr. J. E. Bingham, our Managing Director, and his colleagues that we are very grateful to them for their efforts in challenging circumstances.

Apart from their assistance in training personnel, Braithwaite & Co. Engineers Ltd. have continued to serve us as our Technical Consultants and we are grateful to them for their advice and assistance in various directions. It was a particular pleasure to welcome back to Calcutta recently Mr. H. W. T. Hain, a former Managing Director of our Company and now on the Board of Braithwaite & Co. Engineers Ltd. Mr. Hain's visit afforded us the opportunity for a full exchange of views on the subject of future development and was most valuable.

Prospects

We face 1961 with a satisfactory order book so far as the Wagon Shop is concerned but already it is clear that activity in the Structural Shop at Clive Works must be on a reduced scale for most of the year. We have plenty capacity but we are short of orders and the steel to fabricate them. However, this is, I hope, a temporary phase as a number of tenders in which we are concerned either directly or through our associates, The Braithwaite, Burn & Jessop Construction Co. Ltd., have recently been opened and we have good hopes that the competitive prices quoted will result in a number of useful orders. This will absorb our drawing office staff later in the year but I fear that none of these orders can be translated into output by the end of it.

Our experience during the past year has emphasised the necessity for the Company to concentrate on the fabrication of the heavy and more specialised steelwork to the highest standards. Competition from the many smaller concerns entering the structural engineering field is making it difficult for an organisation such as ours which maintains a large specialist staff and a completely integrated Design and Drawing Office to keep our costs competitive in order to obtain an adequate share of the lighter type of work. The implications of this situation are, I can assure you engaging the attention of the management.

We are building up our organisation at Angus Works and while I cannot foresee a spectacular increase in turnover this year I am hopeful that before it is out, subject to our receiving import licences for the necessary plant, we will have made substantial progress in reorganising the foundry and increasing its output as well as getting ourselves set up for the manufacture of at least some types of cranes.

While it is early in the year to make any forecast, we would expect increased activity in the Wagon Shop at least to offset the reduced tempo in the Structural Shop and, therefore, provided raw materials and wagon components are available, to maintain our profits. It will be some years yet before we can expect that Angus Works will make any material contribution to profits but we can foresee steady progress there. So far as the further future is concerned, from what I have already stated you will appreciate that the policy of the Board is to achieve a measure of diversification of its activities without, however, sacrificing the homogeneity of the business or diluting standards of management and supervision.

NATIONAL AND GRINDLAYS BANK LIMITED

CHAIRMAN, MR. J. K. MICHIE'S STATEMENT

The Annual General Meeting of National and Grindlays Bank Limited will be held in London on the 11th April, 1961.

The following is an extract from the circulated statement by the chairman, Mr. J. K. Michie, for the year ended 31st December, 1960:

The principal event in our record of 1960 is not reflected in the balance sheet—the acquisition by us of the Eastern business and branches of Lloyds Bank Ltd., and as a part of that bargain the acquisition by Lloyds Bank Ltd. of just under 25% of our capital. This mutually agreeable arrangement was ratified by you at an Extraordinary General Meeting held on 15th November, 1960. As you will see it has added 19 to our list of branches and as will emerge it means an increase of around £50 millions in the total of our next balance sheet.

Another concomitant effect was the strengthening of our Board by the addition on 1st January of Sir Jeremy Raisman and Lord Lloyd, appointments which fall to be confirmed at the Annual General Meeting. Sir Jeremy is Deputy Chairman of Lloyds Bank and both are distinguished names in the realm of Commonwealth affairs. At the same time Mr. C. Gardner, Chief Manager of Lloyds Bank Eastern Department joined our executive staff as an Assistant General Manager and Mr. R. J. S. Marsh as Assistant Manager.

Additional Strength Assured

A great deal of time and thought was given to preparation for this merger of interests and your General Manager, Mr. Gillespie, and I have just returned from tours much of which we did in concert though his was the more comprehensive and strenuous. Our visits covered the principal branches of the combined Bank in India, Pakistan and Aden. In addition Mr. Gillespie visited Ceylon.

Our journeys although covering a wider field were undertaken with the particular object of seeing that in every possible respect the merger should get off to a good start and that there should be no misunderstandings about our future policy in the minds of either our constituents or our staff. I am glad to report that our impressions were without exception favourable. Our combined staffs have from the outset shown a most admirable team spirit while our constituents appreciate that the merger means additional strength to the Bank. There is too a realisation in India and Pakistan that banking should be inherently as strong as possible and this was reflected in expressions of approval of the merger made to us by many individuals including members of the banking fraternity.

To replace Mr. Lely whose resignation took effect at the termination of the last Annual General Meeting we invited Mr. Neville Wadia, Chairman of the Bombay Dyeing & Manufacturing Co. Ltd., to join the Board which he did in June last. Mr. Wadia's family connection with the Bank goes back two generations and dates from the earliest days of our branch in Bombay and his wide knowledge of the economy generally and of the industry of India will be of great value to the Board and to our Managers in India. His appointment now falls to be confirmed by you at the Annual General Meeting and I confidently recommend him.

Growth of Advances

The total of our consolidated balance sheet at 31st December, 1960 was £181,551,921—an increase of £18,516,333 over the previous year. The growing demand for finance in the territories in which we operate, the reasons for which I refer to later, has resulted in an increase in advances of just under £19 million. Current, Deposit and other accounts are over £18 million higher, but this pressure of demand for seasonal finance has had the effect of reducing our liquidity ratio.

At £479,276 our net profit was £74,568 higher reflecting the overall more favourable conditions for banking which obtained in our territories in 1960 in comparison with the previous year—which in turn showed an improvement over 1958.

Subject to necessary reservations in respect of East and Central Africa and Burma this better climate for banking generally seems likely to continue and as a consequence of this view we have increased our second interim dividend for 1960 from 6¼% to 7% making the total distribution for the year 13¼%. Further this action would not have been taken unless we had felt justified in promising to consolidate this rate of dividend—you can therefore expect subject to no unpredictable contingency to receive 14% on the increased capital for the current year.

National and Grindlays Finance and Development Corporation. The net profit for the year was £10,152 the reduction being accounted for by the higher rates of interest paid on its borrowings from the Bank.

India

What particularly struck Mr. Gillespie and myself in our journeyings through India is the surge of industrialisation which is going on, with, it seemed, increasing momentum. The reasons behind this expansion are all excellent and legitimate and in most cases the capital in so far as cover for land, buildings and plant are concerned seems to be available. But it is the provision of "working" capital to carry stocks and outstandings which to our minds poses a real difficulty, and unless more money can be found by or for the banking system it seems to me it will be put under considerable strain within the next twelve months.

I know this aspect of the third five-year plan is appreciated by the Reserve Bank, which has already taken certain measures to increase the resources of the banks by the release of the special deposits which had been called for in March and May 1960 and by the extension of their Bill Market Scheme for the rediscounting of bills on behalf of banks, although on an escalator scale of interest. The Reserve Bank has also taken steps to strengthen and thereby to increase confidence in banking in India generally—it having unfortunately suffered a setback last autumn. These steps include the merging of some of the smaller banks with stronger units.

But somehow the hidden cash balances of India must be drawn into the banking system and through it put to work if the latest five-year plan is to be—as it must be—a success.

When it is realised that the total of bank deposits in all India at 30th June, 1960 was only Rs. 1,946 crores or £1,459,000,000—or an average sum per capita estimated at Rs. 55—it will be realised what the scope and the necessities are, and progress is painfully slow. The portents therefore are of a continuance of tight money conditions in the foreseeable future.

Naturally we are doing all we can to attract further deposits but our branch system sets limits to our potential progress.

During 1960 India's external reserves fell by Rs. 68 crores to Rs. 319 crores.

The Reserve Bank rate remained at 4% throughout the year.

Tea has had a favourable experience somewhat marred by drought in Assam though this was largely compensated by good crops in South India areas. Internal consumption continues to rise and the reduction of the export duty by 17% announced in the 1961 Budget should benefit exports by making Indian tea prices more competitive in world markets.

Jute manufacturers and shippers have had an exciting and a difficult year caused by the tremendous rise in prices in India and Pakistan in October last consequent on the then disclosed shortage of raw jute. These conditions may well react to the detriment of the trade as a whole for consumer countries will be apt to look for substitute materials rather than be at the mercy of such vagaries in cost.

Pakistan

The impetus of President Ayub's administration continues to be felt and is reflected in a general feeling of confidence individually and nationally.

The major and much the most important work now in progress is the five rivers water scheme known as the Indus Basin Projects with its tremendous potentials in extending agriculture and, by desalinisation of land, improving it. What I have already said about jute applies even more so to Pakistan where the crop is comparatively a much bigger factor in her economy. The percentage of the crop consumed internally continues to grow.

For identical reasons the need for an expansion of bank deposits is at least as urgent as in India; indeed the ratio of deposits to population is somewhat lower but that may be in some degree a consequence of the traditional Muslim objection to accepting interest.

The State Bank rate has remained at 4% and, as I have indicated, money is scarce and, relative to current bank lending rates, expensive.

External assets of the State Bank of Pakistan rose by Rs. 6 crores during the year.

General

While it is apparent from what I have written that all is by no means plain sailing it is also true to say that your Board and Management do not take a pessimistic view of our future, otherwise we should neither have increased our dividend nor have increased the number of our branches and sub-branches from 94 to the present total of 141 in a period of just over a year. We continue to believe that whatever the political future, sound banking is a necessity to economic life, and it is that which we aim to provide. Indeed I agree with those who argue that sound economics backed by a stable banking system is a necessary background to any country and any Government and should have a high priority.

What continues to puzzle me in regard to this country and I am sure causes concern in many minds, is our apparent inability to achieve a worthwhile favourable balance of trade in spite of what is to all intents and purposes full employment. It is all very well to argue that the British people prefer "the good life" to a higher level of savings but in the world of today the problem by no means ends there. We must either have more money to invest abroad, to lend to our Commonwealth friends and particularly to emerging nations, or see our influence and our trade with them steadily wane.

We incline to claim that we are a special repository of wisdom on international affairs and that others have always been glad to have our counsel but I feel that would be a more valid argument were we to prove ourselves more successful and more able to help them financially. There is much in the Russian claim that the cold war is now becoming an economic one.

Finally, our Staff—and that includes those we have recently absorbed—have given and are giving us enthusiastic and loyal service and that applies from our General Manager right down the line.

When Mr. Gillespie and I were recently on tour we took occasion to meet as many of the staff as was possible and I hope that the friendly exchanges we had—"inter alia" with our Union officials—will bear good fruit.

ACTIVE CONDITIONS IN STOCK MARKET

BIG DEMAND FOR INDUSTRIALS

London, 22nd March.

EXTREMELY active conditions have prevailed in the stock market during the past week. The main event was Dr. Verwoerd's announcement that South Africa was to leave the Commonwealth, but the impact was felt almost entirely by South African issues, particularly gold shares, although somewhat steadier conditions are now apparent. Domestic industries were buoyant and with demand finding the market short of stocks, jobbers were obliged to mark prices up almost every day in order to restrain the demand. Sentiment was helped by a number of factors and perhaps the chief stimulus was the encouraging U.K. trade figures for February which showed a further contraction in the gap between imports and exports. This gave rise to optimism concerning the outlook for company results and brought in buyers both large and small. An outstanding feature has been the unsatisfied demand for brewery shares, stimulated by take-over rumours, and there was a considerable advance in prices. There was very little interest in fixed-interest securities however, and gilt-edged steadily deteriorated. Foreign bonds were quiet and lacked any decided trend but dollar stocks were very firm following the sharp advance on Wall Street, resulting from optimism concerning the U.S. business outlook. Copper shares after tending to ease slightly developed a distinctly better tendency helped by reported American buying of Rhodesian Selection Trust. Tin shares met with a persistent demand, stimulated by the sharp rise in the price of the metal. The good results from the giant Royal Dutch Shell transport group encouraged support for oil shares and Shell Transport were several shillings higher on balance. Tea and rubber shares were quiet, but the latter encountered a selective demand following favourable investment comment.

The Money Market

The credit situation in the money market during the period was dislocated to some extent by the mid-month preparation of balance-sheets with tax payments earlier also disturbing the supply position. Consequently, there was an acute shortage of supplies during the first part of the week with the rate for day-to-day loans firm at 4½ percent and 4⅝ percent. The authorities, however, provided substantial assistance in order to prevent the market from borrowing at Bank rate terms. After surmounting two very difficult days, the position improved with the release of money held up by the banks' balancing operations, and for the remainder of the period, easy conditions were experienced with money offered down to 3 percent. There was a fair offtake of bills by the banks with June and "hots" discounted at 4-27/64 percent. The money market held its joint bid at the weekly tender at £98 17s 7d. The average rate for Treasury bills came out a shade below the previous week at £4 9s 8.57d percent.

Activity on Wall Street

Intermediate and long-dated U.S. Government obligations and investment grade corporates eased in slow dealings during the past week. Most activity centred round the intermediates which were adversely affected by the Treasury's announcement of an offering of new issues due in 1966 and 1967 in exchange for securities maturing in 1962 and 1963. The lack of interest was attributed to a tendency to await the new issues including a $70 million utility offering. Convertibles generally followed the trend of the stock market with Lockheed 3¾ percents leading the rise. Among foreigners, Australians were slightly better. Rhodesian 5¾ percents scored a good gain and Union of South Africa 5¼ percents lost ground. French Credit Fonciers were a weak spot. German 3 percents of October 1972 and Italian Republic 3 percents of 1977 hardened. Chile 3 percents improved slightly. Japanese Government bonds showed little change.

Mixed Trend in Vegetable Oils

Business volume in Canadian linseed, as far as the U.K. was concerned, was moderate at prices on a lower basis during the past week. The demand for groundnuts was quiet, although for Sudanese and Ugandas, Continental interest was useful, market sources said. Castorseed prices edged up with an improved underlying demand. Trading in linseed oil was fairly active at times in delivery positions towards the end of the year. Castor oil gained strength, induced by reports of east European, Continental and U.K. buying. Groundnut oil enquiry slackened, but there was a steady undertone. Sunflowerseed oil was fairly firm.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTER

Wednesday, 22nd March.

ADVANCES outstanding in the Calcutta money market have once again increased during the past week. Demand from the sugar mills has shown a sharp rise, as has that on account of grains and seeds storage. The cotton and jute mills have both increased their offtake slightly, but the requirements of the engineering and iron and steel industries have remained relatively unchanged. Conditions in the interbank market have tightened further and the call rate has been increased to 5⅛ percent.

The exchange market has fallen quiet during the past week, with very few bills of any kind in evidence. There has been a revival in demand for remittance. On the London money market, quotations for the pound have moved erratically, although within narrow limits. The closing rates show a varied pattern against most important currencies.

THE CALCUTTA SILVER MARKET WAS QUIET IN THE past week due to the absence of any fresh business and the price declined from the previous week's level of Rs. 237.75 to Rs. 237.25, quoted today for ready delivery, while the rate for forward delivery was quoted at Rs. 228.25. The London and New York prices were 80d. and 91.375 cents.

Gold was easier in sympathy with silver. The price declined from Rs. 145.75 to Rs. 144.75 (Mysore). The sovereign declined from Rs. 96.25 to Rs. 95.50.

DURING THE WEEK ENDED 17TH MARCH, GOVERNment of India Treasury bills for Rs. 114,44,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNment of India Treasury bills were opened on 20th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 27th March.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 21st March to 25th March at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 15th March to 17th March amounted to Rs. 5 lakhs only.

A DECLINE OF Rs. 7.99 CRORES TO Rs. 1,971.97 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 17th March, 1961, but the total note issue was Rs. 49 lakhs higher at Rs. 1,991.85 crores. Notes held in the Banking Department consequently rose by Rs. 8.49 crores to Rs. 19.89 crores. Deposits of the Government of India increased by Rs. 17.28 crores to Rs. 72.70 crores and other Government accounts by Rs. 11.85 crores to Rs. 73.87 crores. Balances of commercial banks at Rs. 71.76 crores showed a decline of Rs. 2.11 crores. Balances held abroad rose by Rs. 1.35 crores to Rs. 32.19 crores. Investments improved by Rs. 12.01 crores to Rs. 130.72 crores. Other loans and advances rose from Rs. 158.24 crores to Rs. 168.81 crores, of which advances to scheduled banks against usance bills amounted to Rs. 35.28 crores (Rs. 29.30 crores). Ways and means advances stood at Rs. 51 crores, against Rs. 48.71 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 10th March, 1961, shows a rise of Rs. 2.58 crores to Rs. 557.36 crores in total deposits. Investments in Government securities are down by Rs. 8.42 crores to Rs. 242.63 crores, while other authorised investments are up by Rs. 16 lakhs to Rs. 9.85 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 6.73 crores to Rs. 274.27 crores. Cash and balances are, in consequence, shown at Rs. 25.12 crores or Rs. 70 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 10th March, 1961, shows Demand and Time liabilities at Rs. 817.59 crores (Rs. 18.90 crores on account of borrowings from banks) and Rs. 1,084.25 crores (Rs. 9.64 crores), compared with Rs. 810.51 crores (Rs. 18.71 crores) and Rs. 1,083.80 crores (Rs. 9.77 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.16 crores and Rs. 46 lakhs to Rs. 47.07 crores and Rs. 70.38 crores, respectively. There has been a decline of Rs. 7.53 crores to Rs. 573.87 crores in investments. Advances and bills discounted at Rs. 1,292.64 crores show a rise of Rs. 14.73 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.2 percent and 68.0 percent, against 6.1 percent and 67.5 percent.

THE WORKING OF THE BANK OF INDIA LTD FOR THE year ended December 1960 shows a profit of Rs. 1.03 crores, against Rs. 82.68 lakhs. The directors have recommended a final taxable dividend of 12.50 percent which, together with an interim of 7.50 percent, amounts to 20 percent for the year. This is covered more than one-and-a-half times and offers a yield of 16.7 percent at the price of Rs. 119.25 a share. Taxation provision has received Rs. 25 lakhs and bonus to staff Rs. 18 lakhs. After making various adjustments, there is a carry-forward of Rs. 12.85 lakhs, against Rs. 12.48 lakhs brought in. The balance-sheet shows that the deposit and other accounts amount to Rs. 109.44 crores. Investments are shown at Rs. 20.37 crores and advances at Rs. 83.86 crores. The reserves amount to Rs. 3.10 crores. The directors say in their report that five branches were opened in India and one in Hongkong during the year.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 24-3-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
24-3-61	25-6-61	2,00.00	Rs. 2.750%
17-3-61	18-6-61	2,00.00	Rs. 2.750%
10-3-61	11-6-61	2,00.00	Rs. 2.750%
3-3-61	4-6-61	2,00.00	Rs. 2.750%
24-2-61	25-5-61	2,00.00	Rs. 2.650%
17-2-61	18-5-61	2,00.00	Rs. 2.590%
10-2-61	11-5-61	2,00 00	Rs. 2.585%
3-2-61	4-5-61	2 00.00	Rs. 2.585%

A COMPARISON OF WAGE BOARD REPORTS

By Mary Sur

WITH the publication of the Sugar Industry Wage Board report, there are now three wage board recommendations which afford some interesting comparisons, and underline the wide differences between industries and between industrial regions. Of the three, the Sugar Wage Board report is by far the most comprehensive, giving not only an analysis of the industry region-wise and comparison with other major industries, but also the most exhaustive study of the question of minimum and fair wages. With Dr. P. S. Lokanathan as one of the members, it is not surprising that the report should contain a treatise on this subject. The Cement Wage Board devoted several pages to it, but the Sugar Wage Board's analysis of the findings of various authorities could well serve as a model for all future wage boards. The seriousness with which the former applied itself to its task is illustrated by the fact that it held as many as 104 meetings and heard a great deal of evidence. The sugar industry cannot complain—as the cotton textile industry did—that insufficient attention was paid by the Board to regional difficulties and variations.

Naturally, discussions on wages revolve round the principle of the "need-based minimum wage" adopted by the fifteenth session of the Indian Labour Conference, and the norms recommended for working it out. The conclusions reached by the Indian Labour Conference have caused the Government some embarrassment. The Pay Commission was not able to accept them in their entirety, and the Government has been criticised for supporting the principle at tripartite proceedings while not applying it to its own employees. The Cement Wage Board, however, accepted the concept of the "need-based minimum wage" and made its calculations on the basis of the norms recommended. The Cotton Textile Wage Board, on the other hand, viewed the introduction of a need-based minimum wage as "a leap forward of a character that the industry would not be able to support." The Sugar Wage Board has endeavoured to take a middle course and "after careful review of the present economic position of the country...has arrived at the conclusion that it is not possible to give full effect to the norms laid down by the fifteenth Indian Labour Conference." Explaining its position further, it states: "The importance of the need aspect is great. In fact, in any scheme of wage fixation in modern times, this would rank as the first and within reasonable limits, the foremost of the considerations. But it cannot be the sole consideration. Ultimately, the wage level has to be considered from the point of view of its feasibility."

Norms for Need-based Minimum Wage

In reaching its final conclusions on minimum wages, therefore, the Sugar Wage Board has balanced up the various factors such as the cost of living and standard of living of the workers, the needs of industry in a developing economy, the paying capacity of the sugar industry, the desirability of not creating unemployment through the closure of weaker units, the need for capital formation and so on. The Sugar Wage Board states that the norms evolved by the Indian Labour Conference as the basis of the need-based minimum wage "constitute an attempt at concretisation of the idea of the minimum of the fair wage as conceived by the Fair Wages Committee." It goes on to point out that "although the norms decided at the Indian Labour Conference have reduced the area of controversy, yet the determination of minimum wage... is still not a matter of simple arithmetical calculation because there are large gaps still left to be filled." Indeed after studying the Board's careful analysis of these norms no other conclusion is possible. The gaps are considerable. Thus when the Board invited the various unions, employers' associations and State Governments to submit their calculations of the minimum wage according to the norms, they received estimates varying from a total of Rs. 104.46 to Rs. 154.80 among the unions; to Rs. 50.45 to Rs. 76.26 among the employers (excluding the element of house rent); and Rs. 81 to Rs. 135.97 among State Governments.

Taking two forms of recommended diet, the "balanced" and the "improved" (vegetarian) diet, tables compiled from local cost of living figures in sugar factory areas showed that the cost of the "balanced" diet varied from Rs. 70.12 to Rs. 91.27; whereas the cost of the "improved" diet varied from Rs. 44.57 to Rs. 66.86 (at 1957 prices). The difference between the costs of the two forms of diet is astonishing. Which diet should be taken as the standard, since both have the same calorific value? The cloth norm given by the Indian Labour Conference was 18 yards a head for a family of three consumer units, but statistics quoted by the Board show that the availability of cloth is at present only about 15.8 yards a head. Which should then be taken as the basis of calculation? House rent is another item which can hardly be standardised. The rent of a single room tenement according to the approved standard of the subsidised industrial housing scheme is Rs. 12.50, but the housing available to labour in the sugar industry is nowhere near this standard. The Cement Wage Board took Rs. 7.50 as a fair figure for house rent in calculating the minimum wage of cement workers. The Sugar Wage Board feels that in the conditions prevailing in the rural areas where the sugar factories are situated, the element of house rent in the minimum wage cannot be taken as more than Rs. 5.

Differing Conclusions

With so many controversial factors to consider, it is not surprising that the three wage boards should have reached such differing conclusions on the minimum wage, although all were set the same problem, namely, to work out a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages. The Cotton Textile Wage Board actually evaded the problem and merely gave a flat increase over current rates, with a difference of Rs. 2 in the amount of increase for the two categories into which it divided the industry. The Cement Wage Board calculated the total minimum pay as Rs. 94 (less Rs. 3 for amenities provided by employers) for all factories except those in Gujarat and Saurashtra where a higher minimum of Rs. 101 was recommended. The Sugar Wage Board divides the industry into four separate regions and recommends a total minimum wage for these regions of Rs. 66, Rs. 76, Rs. 81, and Rs. 87, respectively. These wide variations between industries and regions clearly make nonsense of any talk of a national wage policy, or a national minimum wage.

There are, of course, peculiarities of the sugar industry which make it very different from others. First, it is properly an agro-industry, being dependent for its raw material on locally grown cane which varies in quality and quantity according to climatic conditions and soil fertility. Secondly, it is a seasonal industry and nearly two-thirds of its workers are temporary. Thirdly, its factories are all situated in rural areas. And finally, sugar prices are fixed by the State Governments concerned. All three wage boards also differ considerably when it comes to the breakdown of the total wage into basic wage and dearness allowance, and also on the calculation of dearness allowance. The Cement Wage Board considered that out of a total cash wage of Rs. 91, the dearness allowance constituent should be Rs. 31.50, but should rise or fall Rs. 1.47 for every two points above or below the index 123 (for 1959) in the All India Consumer Price General Index. For clerical and supervisory grades, it proposed 10 percent of the basic salary plus Rs. 40 as dearness allowance. The Textile Wage Board recommended that three-quarters of the dearness allowance should be consolidated with basic pay, the remaining quarter to be linked with the nearest local cost of living index. This necessitated local negotiation on dearness allowance and was one of the causes of the break-down of discussions on implementation in the Calcutta area.

Varying Rates of Dearness Allowance

The Sugar Wage Board has taken a different approach, which makes dearness allowance merely a regional adjustment to meet the varying factors which had to be considered in the four different regions. The principle behind this seems reasonable and sound. The Board recommends a basic minimum wage scale of Rs. 60-1-65 for the whole country, adding to it a sum varying from Rs. 6 to Rs. 27 to meet the regional differences, but it stresses that basic wage and dearness allowance should be looked on as an integral whole. The amount of dearness allowance for those above the minimum will depend on the scale of pay. The Board's modified form of dearness allowance will, as in the cement industry, fluctuate with the rise or fall of the All India Consumer Price General Index, but at a different rate, namely, 55nP a point of the index for those drawing up to Rs. 100 a month, and 65nP for those drawing over Rs. 100 a month, the adjustment to be made only once a year on the average index for the 12-month period.

Thus, comparing dearness allowance in the three industries, we find it represents roughly one-third of the total pay in one case, one-quarter in the second, and an amount varying from one-tenth to more than one-third in the last case. It seems that the more the experts try to tackle the problem of dearness allowance, the more complicated they make it! But again it is the regional differences which make any standardisation impossible. For lack of local cost of living indices, both the cement and sugar industries have had to link dearness allowance to the all-India index, which, of course, makes no allowance for regional variations. This will not be very satisfactory. The Sugar Board has put in a plea for the adoption of a common price index series for relating dearness allowance rates in different regions. It is interesting to note that it found no justification for whittling down the dearness allowance of sugar workers on the assumption that prices of goods and services are cheaper in rural than in urban areas. While the assumption may have been valid in the past, it is rarely so today.

Laying Down Wage Grades

Although their terms of reference related to the wage structure of the industry, the Textile Wage Board did not lay down any grades except for clerical staff. Both the cement and sugar boards, on the other hand, have laid down grades not only for operatives, but for clerical, technical and supervisory staff up to a certain limit. Even for unskilled jobs, the trend in adjudication awards nowadays is towards incremental scales; so also in the wage board recommendations. What line will the Jute Wage Board take on this question? While the Cement Board allowed for eight steps in the lowest grade, the Sugar Board only allows five increments. If one assumed that the unskilled worker would move on into the semi-skilled group, the short span of the grade would not make much difference, but how many workers do move on? Will the unskilled remain satisfied with a grade giving only five increments?

The Sugar Board has done a good job in producing a standard nomenclature for all jobs up to a pay of Rs. 500, with job descriptions. This should help eliminate controversy in applying the new scales.

The Cotton Textile Wage Board was not asked to consider the question of bonus, but it was part of the terms of reference of both the cement and the sugar wage boards. The Cement Board preferred not to interfere with the operation of the so-called "Bombay formula", and the Sugar Wage Board also recommends the settlement of bonus claims unit-wise according to the formula in Maharashtra and the regions of the south, but in the north a satisfactory bonus system has prevailed for the last 13 years and this system is favoured in the central region also, so for these two regions the Board recommends its continuance. The formula is calculated as 22 percent of net profits (20 percent in the case of smaller factories) on the regional cost schedule given by the Tariff Commission in 1959, but adjusted to the duration of the season and sugar recovery percentage attained by individual mills, with a ceiling of three months' consolidated wages. Thus, even on the question of bonus, there is more than one standard, and one wonders how the special Commission on Bonus can do other than accept these variations.

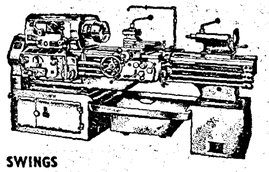
Wages and Productivity

Wage increases naturally raise questions of raising productivity to offset wage costs. The increase recommended by the Cement Board was considerable in the case of many workers in the lowest grade, and in these cases, the Board suggested a phased implementation. The Government has made the second phase conditional on a study of workloads. Productivity is a difficult concept to apply to the sugar industry because its dependence on local supplies of cane affects the quality of the product, but the Board recommended that the Government should undertake a work study in each mill with a view to introducing incentive schemes wherever possible.

Kirloskar

Machine Tools for Precision plus Production

IMPROVED MODEL 'RL' LATHES



SWINGS OVER BED DIA 375 mm to 570 mm

These versatile Lathes possess the qualities of ruggedness and outstanding performance which distinguish all Mysore Kirloskar products.

The all-geared headstock of these heavy duty, sliding, surfacing and screw cutting Lathes transmits maximum power throughout the spindle speeds. All the gears are made of specially selected alloy steel, hardened and ground to give long service.

These high speed, precision Lathes have several other special features described in an illustrated literature. Please send for it today.

Stocks and Shares

PROFIT-TAKING WELL ABSORBED, SO SELECTIVE UPSURGE BEGINS AFRESH

MISCELLANEOUS INDUSTRIALS CONTINUE TO DOMINATE ATTENTION

Wednesday Evening.

TRADING in the Calcutta stock market has been divided into two distinct phases during the past week. At first, the undertone was soft, and equity prices moved narrowly, as a good deal of profit-taking was going on. But, since yesterday, there has been a strong though selective recovery, inspired to some extent by the cheerful look of Dalal Street. The technical position of the Calcutta market as a whole looks sound. The recent profit-taking will have improved it, by showing that operators are not in favour of a wild buying spree.

Rumours persist that the Calcutta Stock Exchange might try, like Bombay's did, to curb speculation by such measures as fixing "making-up" prices for certain shares. But the rumours have been losing strength, for the very good reason that these measures are not necessary yet. In fact, the feature of the market in recent weeks has not been any inordinate strength in the speculative issues, but the selective nature of the support given to high-grade equities. Some of the latter have risen sharply, especially those pregnant with bonus issue possibilities. Nobody can say whether operators are right or wrong in thinking that the bonus shares will be issued. Each company, after all, has to make the decision with reference to its own particular circumstances, especially the fact whether it is worth while paying the bonus issue tax of 12½ percent; thereafter, it has to get the decision vetted by the Government. It is not unreasonable that operators should try to anticipate such decisions. The anticipation is particularly understandable in the case of companies which have expanded fast in recent years, accumulated large reserves, but in the process allowed their capital base to remain narrow. There is no reason why the Government should not allow them to issue bonus shares, especially when it is itself going to get a substantial cut on the deal. The whole question of bonus issue hopes has been highlighted by the decision of Jay Shree Tea and Industries Ltd to ask the Controller of Capital Issues for permission to issue bonus shares in the proportion of one-for-four. This Company thus seems to be the first in the post-Budget bonus share queue.

The economic news remains satisfactory. The parliamentary debate on the Central Budget has passed off peacefully, the best feature being the Government's assurance that it does not want to reimpose the excess profits tax. The levy has invariably proved to be nothing more than a penalty on efficiency, so the official decision to leave it quietly in its grave is welcome. As for the tax concessions worth Rs. 4.5 crores announced by the Finance Minister, there are two opinions. One section regrets that he should have succumbed to political pressure by reducing only the indirect levies which have a wide spread and therefore really affect household budgets little—in spite of what M.P.s may say. The other section feels that the concessions do not matter very much; in any case, Mr. Desai probably had them up his sleeve all the time, in order to soften the harsh reactions he may have anticipated against his Budget from certain vociferous politicians. His general underestimation of revenues gives him room for manœuvre in making such gestures.

Interest is growing in the possibility of Cabinet changes following the death of Pandit Pant. It is rumoured that Mr. Morarji Desai will be translated to the Home Ministry, which the stock market would be sorry to see happen. The successor for the Finance portfolio, it is said, might be Mr. Lal Bahadur Shastri, whose ideas on the question of exports and export industries are disturbingly unorthodox. Another possibility which is being debated is that Mr. K. D. Malaviya might be promoted to take charge of the entire Steel, Mines and Fuel Ministry, in which case the coal and steel companies might develop the same look of sisters in distress which the oil companies already have.

Indian Iron shares, however, are not too worried about this for the time being. After hovering around last Wednesday's settlement rate of Rs. 26.55, they have moved up to Rs. 27.10 today. Among other engineerings, Braithwaites have attracted attention following a satisfactory report which outlines the Company's growth prospects. Good working results are keeping up Jay Engineering and J. K. Steel, but adverse rumours about the dividend have brought down Texmaco.

Interest in jute shares has been broadening selectively. The speech made by the I.J.M.A. chairman, Mr. D. C. B. Pilkington, last week has revived some little optimism among investors. They think that the next jute crops might be good, since heavy rainfall has recently been reported from north-eastern India. Nationals continue to mourn their demotion from the forward list, but among the scrip which have attracted notice are Howrah, Birla and Northbrook.

Coals are quietly steady, anxiously awaiting further news of the World Bank aid the industry is supposed to get.

Much of the market activity has been concentrated on miscellaneous industrials, which are strong either on bonus issue hopes or because the companies are doing well. The notable features include Associated Battery, Dunlop Rubber, Indian Cable, British Paints, Angelo Brothers, Isaac Holdens and Union Carbide. Others have trailed behind.

Tea shares have cheered up a bit. This is because investors think that Jay Shree Tea's proposal to issue bonus shares might be imitated by other companies in the section. The argument has been heard that tea companies should not find it expensive to issue bonus shares, since their capital is usually small. On the other hand, it is asked whether many bonus issues can be expected from an industry whose reserves are not large and which has not been expanding particularly rapidly. Jay Shree Tea's preliminary results look encouraging, the profit, after tax, being about Rs. 25.99 lakhs in 1960 against Rs. 14.84 lakhs in 1959, so an equity dividend of Rs. 1.40 a share, taxable, has been recommended. Investors are now looking round for the shares of other companies which might produce good results. The scrip which have attracted attention include Hasimara and Betjan.

Government securities are steady. It is reported that the exchange banks have been buying short-dateds, because they doubt whether a short-dated issue will be part of the Government's borrowing programme this year. Institutional support as well as official buying is keeping up the other maturities.

Here's Another Way to
MAKE YOUR TRUCK TYRES
LAST LONGER!

At its present maximum output the Tyre Industry in India cannot manufacture sufficient truck and bus tyres to accommodate the needs of every vehicle owner.

It is not a matter of distribution. Throughout the country, authorized Tyre Dealers have taken the proper action to ensure that tyres are allocated at the published retail prices on a strict priority basis to those whose need is greatest.

Some time will still elapse before new tyre factories start production and before the expansion schemes of the present manufacturers bear fruit.

In the meantime, what-?

WE BELIEVE that this scarcity condition can be eased if every truck tyre user takes greater care of his tyres—so that they can be RETREADED for further mileage and longer life. Remove tyres from service for retreading before it is too late!

Bombay Market

SELECTED SHARES GAIN AS SENTIMENT IMPROVES

OPERATORS ATTRACTED BY GOOD CORPORATE NEWS

Wednesday Evening.

SENTIMENT improved in the Bombay stock market during the past week and prices of selected shares scored further gains. The extension of "making-up" prices to more scrip and higher *hawla* rates were ignored. Operators were largely attracted by excellent corporate news indicating expansion and growth. The Central Finance Minister's statement that there is no case for the reimposition of the excess profits tax was bullishly interpreted. The growing stringency of funds did not restrain activities in the belief that the stock market would attract enough resources in view of the good working of many industries.

Tata Steel closed higher at Rs. 155.50 and Indian Iron were supported up to Rs. 27.10. Among engineering shares, Tata Locomotive improved to Rs. 348 on prospects of a rights share issue, but Mahindra and Mahindra declined to Rs. 21.56 on the decision to maintain the dividend at Rs. 1.25, taxable. Premier Construction were bought up to Rs. 229 and Alcock Ashdown were done at Rs. 320. In motor shares, Premier Automobiles were in demand up to Rs. 183 on prospects of further expansion and Hindustan Motors were supported up to Rs. 21.40 by Calcutta interests.

There was a rally in cotton mill shares on reports of good working. Bombay Dyeing were dealt in at Rs. 66.80 on talk that the big chemical project indicated previously would be proceeded with in collaboration with a British firm. Century gained at Rs. 563 on expectations of a higher dividend. Kohinoor rose to Rs. 317 in anticipation of a good report. Khatau were done at Rs. 551.25 and Finlay came to hand at Rs. 358. Simplex were indicated at Rs. 181 and Standard rose to Rs. 1,465. India United ordinaries were transacted at Rs. 14.40 and business passed in Apollo at Rs. 1.50.

Prices of miscellaneous shares moved up in sympathy with the general pattern. In sugar shares, Belapur hardened to Rs. 306, as did Walchandnagar Industries to Rs. 246.25. Kesars increased to Rs. 250 on increasing the ordinary dividend to 9 percent, taxable, from 6 percent, taxable. Among cement shares, Associated Cement were higher at Rs. 158 and Digvijay gained at Rs. 166. Mining shares were quiet, and Shivrajpur Syndicate declined to Rs. 90 on a report that there would be delay in the issue of bonus shares. Steamship company shares were quietly steady, and Scindia Steam were placed at Rs. 16.08. Great Eastern Shipping changed hands at Rs. 16.20. Rayon shares were firm in spite of the fact that the Government might press companies to bear the burden of the increased excise duty. National Rayon jumped to Rs. 553.50 and Baroda Rayon were in demand up to Rs. 158 on the decision to issue ordinary rights shares in the proportion of two new shares for every five held, at par. Chemical shares were steady, and Tata Chemical improved to Rs. 20.80. Polychem gained at Rs. 265. Synthetic and Chemicals rose to Rs. 158 on a report that the Company has applied for licences to produce tyres and tubes. Indian Dyestuff were quoted higher at Rs. 577.50 and Colour-Chem realised Rs. 382.50. Ceat Tyre were wanted up to Rs. 300 on the decision to issue rights ordinary shares in the proportion of seven new shares for every five held, at a premium of Rs. 25 a share. Wimco lost at Rs. 311 on profit-taking and Hindustan Lever declined to Rs. 51.50 in spite of paying a higher dividend of Rs. 2.60, against Rs. 2.40 taxable. Voltas were supported up to Rs. 299 and Premier Tyre were in demand up to Rs. 112.50.

Banking shares were steady, and business passed in Central Bank at Rs. 58.30. Bank of India were taken at Rs. 123. In insurance shares, New India Assurance were indicated at Rs. 58.50.

Turnover declined in electric supply company shares, and Tata Hydro were done at Rs. 101.50. Bombay Suburban came to hand at Rs. 86 and Ahmedabad were dealt in at Rs. 86.80.

Madras Market

TEA AND COFFEE SHARES LEAD GENERAL ADVANCE

STATE LOANS RULE STEADY

Wednesday Evening.

THERE was a substantial improvement in the Madras stock market during the past week and buying increased on both professional and investment accounts. In Government securities, State loans were firm in the absence of sellers. Scattered interest was taken in public utilities. Tea shares attracted attention on good news from the Cochin auctions and coffee shares improved in sympathy with tea. Prospects of increased planting induced support for rubber shares. Sugar shares were fancied on hopes of higher production. In the miscellaneous section, interest broadened in cement and chemical shares in the light of good company reports.

In the banking group, Indian were done at Rs. 170 and Indian Overseas were transacted at Rs. 189. In public utilities, South Madras were quoted up to Rs. 10 and West Coast were done at Rs. 13.87.

In sugar shares, Deccan were firm at Rs. 14.70 on paying an interim taxable dividend of 7½ percent. E.I.D. were in demand up to Rs. 45.50 on prospects of a rights share issue. United Breweries were firm at Rs. 115.25 and business passed in Mysore up to Rs. 58.25. K.C.P. were steady at Rs. 23.45, as were India at Rs. 12.25.

In planting shares, Blue Mountain were steady at Rs. 3.65 and Cochin Malabar were dealt in at Rs. 8.03. Coffee Lands came to hand at Rs. 24.50 and Periakaramalai were firm at Rs. 4.10 on declaring an interim taxable dividend of 7½ percent. Kil Kotagiri were bought up to Rs. 5.50 on paying a final taxable dividend of 17 percent, making 25 percent for the year. Kumergode improved to Rs. 4.90 on declaring a taxable ordinary dividend of 23 percent; the coffee crop increased substantially. Nonsuch were done at Rs. 28.35 on the payment of an interim taxable dividend of 10 percent. Chembra were steady at Rs. 3.80 and Devon were done up to Rs. 14.37. Mysore Coffee were bought up to Rs. 5.50 and Nilgiri were in demand up to Rs. 8.30. Peermade were steady at Rs. 22.80 and United Nilgiri came to hand at Rs. 24.55.

In the textile group, Lakshmi were firm at Rs. 181 on hopes of a bonus share issue. It was also hoped that the Company might pay a higher dividend in order to celebrate its golden jubilee year. Madura were placed at Rs. 40 and Travancore Rayon improved to Rs. 40.40. South India Viscose were quoted higher at Rs. 174 on support from Bombay interests. Trichinopoly hardened to Rs 12.25 on paying a taxable dividend of 13½ percent, against 12 percent, taxable, in the previous year. Vasanta were firm at Rs. 255 on declaring a taxable ordinary dividend of 20 percent, but Coimbatore Pioneer declined to Rs 335 on decreasing the dividend from 25 percent, taxable, to 16 percent, taxable. Radhakrishna were steady at Rs. 224 and Kothari were placed at Rs. 13. Bangalore Woollen improved to Rs. 205 and Buckingham were also quoted at the same price.

In the miscellaneous section, demand was forthcoming for Aluminium Industries up to Rs. 24.80 and Ashok Leyland increased to Rs. 9.75. Indian Steel Rolling were supported up to Rs. 10.75 on the decision to issue ordinary rights shares in the proportion of one new share for each held, at par. McDowell improved to Rs. 31.25 on paying an interim taxable dividend of 15 percent. F.A.C.T. were done at Rs. 11.35 and Enfield were quoted up to Rs. 15. Kirloskar Electric were dealt in at Rs. 12.49 and Spencer were placed at Rs. 22. Business passed in Standard Motors at Rs. 16.70 and Textool were bought up to Rs. 178. Tube Investment were steady at Rs. 290 and Mysore Lamp were quoted at Rs. 25.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

Publicity Society—Rs. 21/00—21/00—21/00—21/00—(15/00).
Rohtas Industries ("B" Pref.)—Rs. 55/00—55/00—55/00—55/00—(60/00).
Rallis India—Rs. 149/00—149/00—149/00—149/00—(95/50).

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant, from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 millon tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

WASHINGTON MEETING OF CHIEF CREDITORS EXPECTED NEXT MONTH

EXTENSIVE COLLABORATION ARRANGEMENTS OF U.K. FIRMS IN INDIAN VENTURES

(FROM OUR NEW DELHI CORRESPONDENT)

THE chief creditor countries, it is now expected, will meet in Washington by about 25th April to discuss the amount of aid which each of them will give for India's third five year plan. In addition to the old members—the U.S.A., the U.K., West Germany, Canada and Japan—the Netherlands, Italy and Switzerland have expressed their willingness to join "the club," while France is planning to send an observer. Compared with the U.S., or even the communist bloc aid, the credit so far offered by the U.K. Government appears to be small, but Britain's main contribution towards India's development continues to be through the private sector, which is likely to escape public notice. The following details of British collaboration in Indian ventures, already approved by the Government, show how substantial is British assistance for India's industrial growth.

Indian firm	British collaborator	Project
Metallurgical industry:		
I. S. and G. Yamunanagar, Punjab	John Thompson Ltd	Boilers.
Kilburn and Co. (P) Ltd, Calcutta	Hall Harding Ltd	Copying machines.
Industrial Air Control India (P) Ltd, Bombay	Lightfoot Refrigeration Co. Ltd	Riefrigeration equipment.
Commercial office and household equipment:		
Hindustan Twyfords, Calcutta	Twyfords Ltd	Sanitary ware and household ceramics.
The Britannia Engg Co. Ltd Calcutta	Dawson, Payne and Elliott Ltd	Letterpress printing machines.
Punj Sons Ltd, Connaught Circus, New Delhi	A. E. I. (Gala) Ltd, London, S.W.1.	Manufacture of domestic refrigerators.
Agricultural machinery:		
Mahindra and Mahindra (P) Ltd. Bombay	David Brown Industries Ltd	Tractors.
Farm Equipment Company, Kanpur	Trackparts, Hatfield	Crawler tractor spares.
Plastics:		
Allied Resins and Chemicals (P) Ltd, Calcutta	Leicester Lovell and Co. Ltd	Urea formaldehyde synthetic resins, etcetera.
East Anglia Plastics India (P) Ltd, Calcutta	East Anglia Plastics Ltd	Cellulose acetate moulding powders.
Hyderabad Laminated Products Ltd, Secunderabad	Bakelite Ltd, London	Plastic products (laminated phenolic).
Mechanical handling equipment:		
Brady Engineering Co. Ltd, Bombay	H. Morris Ltd	Elevating trucks.
New Standard Engg. Co. (P) Ltd, Bombay	Road Machines (Drayton) Ltd	Single and double bucket swing weigh batchers.
Sterling India Co. (P) Ltd, Calcutta	T. T. Works Ltd	Conveyors.
Vaughan Burn Crane Co. (P) Ltd. Calcutta	Vaughan Crane Co. Ltd, U.K.	Manufacture of cranes.
Industrial plant, machinery and accessories:		
Spence Ltd, Bombay	H. E. C. Compressors and Engineers Ltd	Air compressors.
Benger Laboratories Ltd. Calcutta	Fisons Ltd	Pharmaceutical plant.
Patel Engineering Co. Ltd, Bombay	James Bertram and Sons Ltd, Scotland	Paper-making plant.
Fuel Injections Ltd, Bombay	Bryce Berger Ltd	Fuel nozzles, delivery valves, etcetera.
India Firebricks and Insulation Co. Ltd, Bombay	Thomas Marshall and Co. (Loxley) Ltd, Sheffield	Refractories.
Bell's Asbestos and Engg. (India) Pvt. Ltd, Calcutta	Negretti and Zambra Ltd, Regent Street, London, W.1	Progressive manufacture of pyrometers, potentiometers, vacuum recorders, etcetera.
Port Engineering Works Ltd, Calcutta	Watson Laidlow and Co., Glasgow	Centrifugals.
Machine tools and accessories:		
Precra Tools Corporation, Ltd, Hyderabad	Kearney and Trecker C.V.A. Ltd of Sussex	Drill chucks.
	A. A. Jones and Shipman Ltd, Leicester	Precision grinding machines.
Fuels:		
Indian Cathodic Protection Co. (P) Ltd, Bombay	Cathodic Corrosion Control Ltd, London	Coating and wrapping inspection, and cathodic protection of pipeline in Barauni.
Electrical equipment:		
Omega Insulated Cable Co. India Ltd, Madras	Mersey Cableworks Ltd	Cables.
Saxby and Farmer India (P) Ltd, Calcutta	Westinghouse Brake Signal Co. Ltd	Signalling equipment
Gandhi Electric Industries (P) Ltd, Bombay	Lancashire Dynamo Crypte Co. Ltd	Electric welding equipment.
Kaycee and Co. (P) Ltd, Nicol Road, Bombay	Rotaflex (G.B.) Ltd, London	Accessories for electrical trade and lampshades.
Radio and telecommunications:		
Agreement with the Government of India	Marconi's Wireless Telegraph Co. Ltd	Radio and radar equipment in the aeronautical, broadcasting, communications, radar and television fields.
Transport:		
J. N. Marshall and Co. Ltd, Bombay	Simmonds Accessories Ltd	Self-looking nuts for use in aircraft, train etcetera.
New Standard Engg. Co. (P) Ltd, Bombay	Beckett Laycock and Watkinson Ltd	Window equipment used in motor-vehicle, shipbuilding, and railway trains.
Enfield (India) Ltd, Royal Enfield Buildings, Madras	Villiers Engg. Co. Ltd	Motos-cycle engines, scooters and mopeds.
Bramec Suri (P) Ltd. Delhi	Hall and Nielsen Ltd, Bury, U.K.	Clutch and brake lining.
Associated Engg. Work Ltd Delhi	Magnatex Ltd	Windscreen wipers (blades and arms).
Rane (Madras) Ltd, Madras	Small and Parkes Ltd, Manchester	Clutch discs.
Allied Motors (P) Ltd, New Delhi	Super Oil Seal and Gaskets Ltd, Birmingham	Synthetic rubber oil seals.
T. V. Sundaram Iyengar and Sons Pvt. Ltd, Veli Street, Madurai	Joseph Lucas Ltd, West Birmingham	Electrical equipment for motor-vehicles.
Simpson and Co. Ltd, Mount Road, Madras	Ambrose Shardlow and Co. Ltd, U.K.	Motor-vehicle industrial marine and aircraft forgings and stampings including crankshafts.
T. I. Miller Lamps Ltd, Madras	H. Miller & Co. Ltd, Birmingham	Lamps for auto-cycles, scooters, motor-cycles and trucks and bicycle dynamo lamps.
Rane (Madras) Ltd, Madras	Small and Parkes Ltd, Manchester, U.K.	Clutch discs.
Canara Workshops Ltd, Mangalore	Mond Nickel Co. Ltd (S.G. iron process)	Hubs, brake drums and cylinder liners.
Drugs and pharmaceuticals:		
Smith and Nephew India (P) Ltd, Bombay	Smith and Nephew Associated Companies Ltd	Pharmaceuticals.
Food and oils:		
Ovaltine of India (P) Ltd, New Delhi	A. Wander and Co. Ltd	Ovaltine.
Northern India Tanneries Ltd, Kapurthala	P. Leiner and Sons Ltd, London	Gelatine and glue.
Chemicals:		
Tata Chemical Works Ltd, Bombay	British Glues and Chemicals Ltd	Protein isolate.
East India Distilleries and Sugar Factories Ltd, Ennore, Madras	Simon-Carves Ltd, U.K.	Fertilisers.
Adarsh Chemicals and Fertilisers Ltd, Surat	Chemical Construction (G.B.) Ltd, London	Sulphuric acid and superphosphate.

Towards the end of his reply to the Budget debate in the Lok Sabha, the Finance Minister, Mr. Morarji Desai, announced certain modifications in the Budget proposals in the form of concessions. He said: "I have considered the difficulties of the different classes of people pointed out in the debates in the two Houses and have also met a large number of deputations who had any difficulties to explain. After taking all these into account, I propose to reduce the effective incidence of the increase in the excise on kerosene by 50 percent. Steps are also being taken to see that all kerosene which falls in the category of inferior kerosene is quickly released from bond, so that it can be made available in different parts of the country. As there is no increase in the duty on this type of kerosene produced by the Assam Oil Company, it also falls in this category and has been moving freely. Steps are also being taken to increase the import of inferior kerosene, so that it may be available in adequate quantities throughout the country. Import of inferior kerosene in the place of superior kerosene will reduce the expenditure on foreign exchange. Kerosene which is nowadays classed as inferior has not a very high carbon content and in actual use it will not make any marked difference. I am also taking steps to reduce by 50 percent the incidence of compounded levy on units of three or four powerlooms which will be paying the excise on cotton cloth for the first time. Similarly, steps are being taken to introduce tax on the slab basis for small units of powerlooms so as to avoid a sharp increase in the burden of duty at the stage of transition.

"There have been several suggestions to exempt *yarns of counts 1 to 10 so as to benefit coarse cloth* as well as cotton carpets woven on handloom which I propose to accept. I have also considered the case of woollen carpets. A very large part of such carpets is exported and steps will be taken to see that they get full drawback of the duty on wool. On the other hand, it is not possible to give complete exemption to wool purchased by the manufacturers of such carpets in order to avoid diversion of such wool for the manufacture of cloth.

"In order to ensure that when a small family works on its own without any use of power or assistance of hired labour it is not put to hardship, steps have been taken to exempt their production from duty and this policy will be continued. Similarly, in order to reduce administrative inconvenience for small manufacturers, I am considering what steps can be taken to recover excise duty from them on the basis of their own accounts open to periodical inspection instead of by posting excise officers at their place of manufacture. In this connection, it will, however, be necessary to ensure that proper and correct accounts are regularly kept and there is no evasion. I have also considered the case of producers of inferior coffee which has no export market. If suitable measures can be devised to distinguish such coffee and to avoid evasion, I will be prepared to consider partial exemption of such coffee from the present increase of duty.

"In the course of my discussions with the trade, I have clarified that in the case of plastics and glass and glassware, the duty will be at one stage only, that is, at the stage of powder, granule or flake *in the case of plastics* and at the first stage such as sheet and tubes in the case of glass. Other items made out of duty paid plastic powder or glass sheet or glass tube will not be liable to duty. It is, however, necessary to retain other categories in the tax schedule so as to ensure that imported goods falling in those categories bear the *countervailing duty.*

"There have been a number of complaints of increase in the prices of betelnuts as a result of the increase in the import duty on them. As I have stated earlier, the increase in import duty in this case is meant to mop up the large profits which existed. Unless the importers take steps immediately to bring down the prices, the Government will have to consider whether the issue of import licences should not be restricted only to those who can take effective steps to keep down the prices of their goods." The value of all the concessions announced by the Finance Minister taken together is likely to be of the order of Rs. 4.5 crores. This takes into account concessions in the countervailing Customs duties in the case of kerosene."

Repayment of Rourkela Credit

The amounts of credit due for repayment for the Rourkela project to West Germany are as follows: 1960-61 147.55 million deutschemarks; 1961-62 256.46 million deutschemarks; and between 1962-65 255.99 million deutschemarks. As part of its assistance for India's development programme, the West German Government has agreed to the deferment of a portion of the loan falling due for repayment during the years 1960-61 and 1961-62. Out of a sum of 147.55 million deutschemarks payable in 1960-61, a sum of 49.19 million deutschemarks is being repaid on the due dates and the period for the repayment of the balance of 98.36 million deutschemarks has been extended initially for four years. According to the understanding with the West German Government, the repayment of one-half of this amount will be further extended by another four years and the other half by eight years. An understanding has also been reached that out of the 256.46 million deutschemarks repayable in 1961-62, only 10 percent, i.e., 25.6 million deutschemarks will be repaid on the due dates, and repayment of the balance extended

initially for a period of four years with an option for a further extension of half the balance by another four years, and the other half by eight years. As for the postponement of the 98.36 million deutschemarks for which an agreement has already been signed, an additional amount of 22.62 million deutschemarks representing interest at 5½ percent for the period 1st February, 1961 to 30th January, 1965, is payable. Details of the terms and conditions of the other postponements are yet to be negotiated.

Foreign Exchange Expenditure in Private Sector

The total of foreign exchange expenditure approved for private sector industries during the second five year plan, up to February 1961, is Rs. 587 crores. During 1960-61, up to the month of February, the amount approved is Rs. 146 crores.

Briquetting and Carbonisation Plant

Negotiations have been completed and the Indian Government has accepted the tender of a consortium of firms comprising *Maschinenfabrick* Buckau R. Wolf, A.G., West Germany, Lurge Gessellschaft Fuer Waermetechnik, M.B.H., Frankfurt, West Germany, Siemens Schukert Werke, A.G., West Germany, and Protos Engineering Company (P) Ltd, Bombay and the State Electricity Commission of Victoria, Australia, for the supply and erection of a briquetting and carbonisation plant. The scheme, it is now estimated, will cost Rs. 20 crores and sanction has been issued on this basis. The contract is expected to be signed shortly.

Manufacture of Industrial Machinery

During 1960, 110 licences under the Industries (Development and Regulation) Act were granted for the manufacture in the private sector of various kinds of industrial machinery and equipment, which are expected to include spare parts of heavy machinery as far as possible. The corresponding number of licences granted in 1959 was 69. In the public sector, the following undertakings have either been established or are proposed to be established shortly for the same purpose: (1) the Heavy Engineering Corporation, Ranchi, for setting up the heavy machine building, the coal mining machinery, foundry forge and heavy machine tools projects. These are in the process of construction at present; (2) the Heavy Electricals Ltd, Bhopal (started production of some items recently); (3) Hindustan Machine Tools Ltd, Bangalore (in production); (4) Praga Tools Corporation, Hyderabad (in production) and (5) Nahan Foundry, Nahan (in production).

Zinc Smelter Licensed

A licence under the Industries (Development and Regulation) Act has been granted to a firm to set up a 15,000-ton zinc smelter near Udaipur (Rajasthan) based on the Zawar deposits. According to the terms of the licence, the unit is to be established by the middle of 1962. The present known workable deposits of zinc in the country are confined to the Zawar area in Rajasthan. Indications are available that the smelter in Zawar could be later expanded to about 40,000 to 45,000 tons a year if sufficient quantities of ores are proved there. It is also proposed to issue an industrial licence to a private party for the manufacture of 12,000 tons of zinc a year based on imported concentrates. The scheme is expected to lead to a substantial saving of foreign exchange. The party is still working out the exact details of the scheme.

New Cement Factories

A scheme for the setting up of a cement factory in Drug, Madhya Pradesh, by Associated Cement Companies Ltd, Bombay, for the manufacture of 165,000 tons of portland cement and 85,000 tons of slag cement a year has been finalised. The factory, it is expected, will be completed in 1963. Assam Cements Ltd, which holds an industrial licence for the establishment of a cement factory in Cherrapunji in Assam, has recently entered into an arrangement with a firm in Yugoslavia for the supply and erection of a complete cement plant valued at Rs. 62.98 lakhs, with a capacity of 250 tons a day. The firm is being granted an import licence on this basis.

Leasing of Bamboo Areas

The umbrella handle *mahal* in southern forest sub-division of Tripura has been leased out to Mr. Peari Mohan Bhakta Choudhury of Agartala on a monopoly-*cum*-royalty basis for one year from 1st January, 1961, on the following terms: (i) the lessee will pay Rs. 1,600 as monopoly fee over and above the usual royalty; (ii) he will extract bamboo chips for umbrella handles from within the area under southern forest sub-division on payment of the usual royalty; and (iii) in the matter of umbrella handle exports, the lessee will follow Customs rules.

Legal Backing for Wage Boards

The Central Labour Minister, Mr. G. L. Nanda, has said that it is proposed to introduce legislation soon to give effect to the recommendations of wage boards. A draft bill has already been prepared and the Commerce and Industry Ministry is being consulted. Mr. Nanda, who was addressing the Informal Consultative Committee of Parliament for Labour, said that while the Government was anxious to avoid recourse to compulsion, there were several considerations which required that statutory force be given to the recommendations of wage boards. First, even if one unit in an industry failed to implement the recommendations, it created problems for the future. Secondly, there had to be a time limit for implementation, for it was not realised that the longer the delay in implementing the recommendations, the greater is the accumulation of arrears which had to be paid to the workers, Mr. Nanda said. The proposed measure would not be in the nature of a "general legislation", but a "piecemeal measure" concerning each wage board, Mr. Nanda explained. He disclosed that out of the 445 textile mills in the country, 427 were covered by the recommendations of the Wage Board, and of these, 375 had so far implemented the recommendations fully or partially. Out of the 32 cement factories in the country, 11 had so far fully implemented the recommendations and six partially. Mr. Nanda also said that the Indian Jute Mills Association had asked all its constituents to implement the interim recommendations of the Jute Wage Board. Some members complained that the jute mills in U.P. and Andhra had not so far implemented the recommendations. The Labour Minister said that the matter had been taken up with the State Governments concerned and their replies were awaited. The Labour Minister announced that wage boards for coffee and rubber would be set up soon.

Bonus Commission Terms of Reference

In anticipation of the demand by the employers that public sector undertakings should also be brought within the purview of the proposed Bonus Commission, the Labour Ministry is sounding other Ministries as to what categories of undertakings may be "covered". Under the present dispensation, the public sector does not distribute a share of its profits as bonus to its workers, but many undertakings have in operation a scheme of incentive or production bonus as a reward for higher productivity. While official thinking continues to be opposed to the payment of bonus by public sector undertakings from their profits on the ground that these profits go to help finance the plan—about Rs. 450 crores, it is expected, will be contributed by them for the third plan—a view has been expressed that there need not be wholesale exclusion of public sector undertakings from the purview of the proposed Commission. Barring those State enterprises which are not run as a commercial proposition and where the competitive element does not enter, a scrutiny of the remaining industries by the Commission, it is felt, may be well worth it. In spite of the probing by the Labour Minister of the minds of other Ministries, a positive announcement by the Government on this matter is unlikely until its representatives meet the representatives of employers and workers towards the end of April to finalise the terms of reference of the Commission. In all probability, it will be left to the Bonus Commission whether or not to take up the case of the public sector, unless, of course, the terms of reference specifically forbid examination of their case.

Derecognised Government Employees Unions

The invalidation by the Bombay High Court of Section 4 (B) of the Government Servants' Conduct Rules has put the Central Government in a quandary. The Section prohibits membership of a Government servant of a derecognised union. Following the general strike of July 1960, the Central Government derecognised 129 out of 405 unions of Government employees. But the unions affected have a larger membership, about 55 percent of the total. The Government's discomfiture arises from the fact that the derecognition of unions, instead of the deterrent punishment it was meant to be, has been rendered an ineffective penalty by the Bombay High Court's judgment, for now a Government employee can continue to be a member of a derecognised union with impunity. The implications of the judgment are being studied and a reference of the case to the Supreme Court is not ruled out.

Institute for Industrial Designs

It has been decided to establish an institute for industrial designs in Ahmedabad with the object of training students as industrial designers for the private and public sectors of industry as well as handicrafts. It will also provide advanced training opportunities for architectural designers, who are expected primarily to function as independent practising architects. Besides, it will provide service to those industries and agencies interested in introducing new design methods in their production, building and sales schemes. In due course, it is proposed to have a research wing in the institute, closely connected with the training and servicing programmes. About 50 students are expected to be trained in the institute every year. It will consist of one chief administrator, seven full-time instructors and ten part-time instructors. The institute, it is expected, will earn some revenue as fees from the trainees, charges for services rendered to industries and sales of prototypes. The annual recurring expenditure of the scheme has been estimated approximately at Rs. 2.50 lakhs. The expenditure on machinery and equipment required for the centre as well as the services of some foreign experts, it is expected, will be met by the Ford Foundation. The institute is likely to start working during the next financial year.

Refractory Bricks and Blocks Plant

In the Yorkshire factory of William Johnson and Sons (Leeds) Ltd, a complete plant for the manufacture of refractory bricks and blocks is nearing completion for New Bharat Refractories Ltd of Calcutta. The plant, worth about £60,000, will eventually stand on a site quite close to the Durgapur steel works. The equipment includes crushers and screeners, and two mechanical presses for forming the bricks. It will occupy an area of about 3,300 square feet. This is the second contract fulfilled recently by William Johnsons for the Calcutta Company. At the end of last year, they supplied similar equipment to the Bharat Mining Corporation, an allied concern of New Bharat Refractories.

Railway Orders for Rails

The Ministry of Railways has placed orders with State trading organisations in Czechoslovakia, Poland, Yugoslavia and with firms in Belgium, Japan and the U.K. for the supply of 45,539 tons of rails at an estimated cost of Rs. 2,978,441 for the doubling of the existing railway line that is in progress on the Nagpur-Drug section of the South-Eastern Railway.

New Pig Iron-making Unit

One new unit in the private sector in Maharashtra to produce 96,000 tons of pig iron has been licensed, while the existing unit in Barabil in Orissa has been permitted to expand its capacity from 15,000 tons to 100,000 tons a year.

Iron Ore Exports

Contracts have been signed to export 1.4 million tons of iron ore during 1961, while negotiations for the export of 2.75 million tons are in progress. The following are the details:

Country	Quantity sold for delivery during 1961 (in tons)
Rumania	*200,000*
Czechoslovakia	900,000
Yugoslavia	135,000
West Germany	100,015

Country	Quantity for delivery in 1961 for which negotiations are in progress (in tons)
Hungary	*100,000*
Italy	100,000
Poland	100,000
East Germany	*100,000*
Austria	50,000
Japan	2 million
Egypt	300,000

Going Abroad for Meetings

Some 515 applications were approved during 1960 for attending meetings and conferences abroad. No reports are called for or received by the Reserve Bank about the extent to which each individual to whom foreign exchange has been released for attending a conference abroad actually draws on the sanction.

Reinsurance Expert

The services of Mr. Cook, a reinsurance expert, have been requisitioned under the U.N. Technical Assistance Organisation Programme. His duties are to advise in setting up a reinsurance company in India—its organisational, legal and commercial aspects.

Technical Consultants for Hindustan Steel

Hindustan Steel Ltd has approved the appointment of the Canadian firm of Atlas as technical consultants for the alloy steel plant, to be located in Durgapur at a mutually agreed fee of Rs. 1.5 crores. M. N. Dastur and Company has already been appointed as consultants for the project at an agreed fee of nearly Re. 1 crore. The alloy steel plant is a Rs. 35-crore project. The Durgapur steel works is a Rs. 100-crore project for which the consultants, the International Construction Company, have been paid Rs. 2.5 crores. As for the Bokaro steel plant, a preliminary report submitted by M. N. Dastur and Company on the establishment of an integrated steel works, has generally been accepted by Hindustan Steel Ltd. The firm is likely to be appointed as consulting engineers for this project also.

Calcutta Tramway Strike

Although it is old history, the following remarks on the Calcutta Tramways strike in Augus-September 1958 should provide interesting reading: "The report on the strike in Calcutta Tramways Ltd was discussed at the last meeting of the Central Implementation and Evaluation Committee. While the management accepted the findings of the enquiry officer, the A.I.T.U.C. representative raised objections and tried to justify the strike. In this, he was supported by the U.T.U.C. representative. The decision on the recommendations of the report was, therefore, postponed, pending consideration of the basic question as to what strikes constitute a breach of the Code. The main ground on which the Calcutta Tramways strike, which lasted from 12th August, 1958 to 22nd September, 1958, was sought to be justified is that the State Government did not refer all the demands of the workers to adjudication and that by referring only four out of 14 demands, the State Government provided sufficient justification for the workers to go on strike. This contention is not tenable under the Industrial Disputes Act. It has been held by courts in several cases that it is not obligatory on the part of the Government to refer all the demands of workers to adjudication. The following few rulings will make it clear that the action of the workers, in resorting to a strike on the ground that some of the demands were not referred to adjudication, is unjustified.

"As soon as a reference was made to the tribunal, the workers were precluded from striking and the management was likewise precluded from effecting a lock-out. In our view, it would be a negation of the scheme of the Act, namely,

the maintenance of peace and orderly working in a concern, if the workmen were to have liberty in such circumstances to strike for such demands as had been refused a reference. It seems to us clear that the prohibition against a strike in a concern as to which a reference has been made is absolute, and is not qualified by any circumstance like the employees having other grievances which have not been referred to adjudication. There is no obligation on the Government under the provisions of Section 10 (of the Industrial Disputes Act), while making a reference to a court or a tribunal, to make a reference of the whole of the dispute and/or of the whole demand made. On the contrary, the matter is left at large."

The above decisions show that the West Bengal Government was not bound to refer all demands to adjudication, and the strike on the ground that all the demands were not referred to the Tribunal was thus illegal. As the following observations of the Supreme Court confirm, an illegal strike is unjustified in all circumstances.

"It is a little difficult to understand how a strike in a public utility service which is clearly illegal, could at the same time be characterised as 'perfectly justified.' The law has made a distinction between a strike which is illegal and one which is not, but it has not made any distinction between an illegal strike which may be said to be justifiable and one which is not justifiable. This distinction is not warranted by the Act, and is wholly misconceived, specially in the case of employees in a public utility service."

So much for the legal aspect of the case. Coming now to the moral responsibilities for the strike, an illegal strike always constitutes a violation of the Code of Discipline. So does an unjustified strike. And the Calcutta Tramways strike was both illegal and unjustified. The violation that this strike constituted was all the more grave because the workers disregarded the offers of help from the Central Deputy Labour Minister and the State Labour Minister to secure a settlement of the remaining demands, although some of them were outside the purview of the Act and some had been rejected by tribunals earlier. Not using all avenues of settlement, including the implementation machinery, before resorting to the strike, made the infringement of the Code more serious.

The unions insisted throughout that the management should concede their demands without raising fares. This was an unjustified stand. This is obvious from the decision of the Special Tribunal which held that the resources of the Company were not adequate for maintaining its assets and meeting the additional liability imposed by its award. Although the High Court directed that the Tribunal must hold that the proposal to increase the fares by one naya paisa must be given effect to, the Tribunal left the matter to be decided by the advisory committee of the Company. The fares were raised by one naya paisa on 2nd November, 1959. What the workers got was after a prolonged strike and as a result of the award of the Special Tribunal the Company had offered much earlier, but this offer was not accepted by the unions as the Company proposed an increase of the fare by one naya paisa. Eventually, the Company increased the fare. The strike served no purpose.

Besides the main strike from 12th August, 1958, the workers had earlier resorted to three lightning strikes on 3rd May, 14th May and 24th June, 1958. The strikes on 3rd May and 24th June were over the discharge of a worker for overstaying on leave, while that on 14th May was a token one in support of their demands. All these strikes were sudden and without any justification; they were thus against the Code. Even industrial tribunals and the Labour Appellate Tribunal have held that a strike should be used only as a last resort when all other avenues of settlement of disputes have proved futile; a strike launched without exhausting all means of redress is unjustified. If the workers felt aggrieved over the discharge of a worker, they should have, instead of resorting to a strike, taken the matter to the State Conciliation Machinery. As the Madras High Court has held in the case of *Sridharan Motor Service, Attur vs. Industrial Tribunal, Madras and others:* "Provocation might mitigate or it might extenuate, but it practically never justifies contravention of law. Even assuming that the action of the employer which provoked the workmen to go on strike was illegal, that would not justify the workers in contravening the law themselves, namely, in going on strike in a public utility service without giving any notice under Section 22 of the Industrial Deputes Act. One wrong never justifies another wrong. If the contention that provocation justifies a breach of law or that an unlawful act committed by one party justifies the opposite party in contravening the law is accepted, dangerous conditions will follow.

"Even if it is contended that the strikes were spontaneous and that the workers resorted to them without any directive from the union, the responsibility for the violation of the Code would lie with the union(s) as, after all, it is the workers who constitute the union. It would thus be seen that all strikes which are illegal, unjust and are resorted to without notice and without exhausting all the avenues for the settlement of disputes, namely, mutual negotiations, conciliation, voluntary arbitration, Implementation Machinery and adjudication are violations of the Code. The three lightning strikes and the main strike which began on 12th August, 1958, by the workers of Calcutta Tramways were thus against the Code."

U.K. GOVERNMENT CREATES NEW MINISTRY OF OVERSEAS AID

WHITE PAPER ON TECHNICAL ASSISTANCE EXPECTED SHORTLY

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Government has announced the creation of a new Ministry for overseas aid. It will be under a Minister who will probably have the rank of a Minister of State A White Paper with details of all the various forms of technical assistance and advice now available to overseas countries from Britain is expected shortly. The decision comes as no surprise. It was foreshadowed three *months ago by Mr. Macleod, Colonial* Secretary. He told the House of Commons that the U.K. Government was studying the possibility of creating a joint department under a Minister who would be responsible to the Colonial Secretary, Commonwealth Relations Secretary and Foreign Secretary. The intention is to bring under a single direction many of the forms of technical and advisory assistance which Britain can provide to overseas countries, whatever their status.

The Ministry will thus serve independent countries of the Commonwealth and foreign countries, as well as dependent territories administered by the Colonial Office. It will not necessarily mean any large increase in the total cost of overseas aid. But by concentrating under one head all the effort which has hitherto been dispersed over several departments, it should help draw attention to what Britain is doing for "underdeveloped" territories in general. The new Ministry is not intended as Britain's answer to President Kennedy's proposed "peace corps" of young men and women willing to work without pay in the underdeveloped countries. In the Government's view, this kind of mission is best left to voluntary bodies, with financial assistance from the Exchequer.

South Africa and the Commonwealth

South Africa's decision to leave the Commonwealth came as a shock to the City, and the day after the announcement was made, millions of pounds were sliced off South African shares in the Stock Exchange. Gold shares were worst affected, although it should be pointed out that the cutting of prices was largely precautionary and in actual fact there was very little selling. Indeed, towards the close of the day, prices showed a slight upward trend. Among the many problems raised by the decision will be the trustee status of the South African Government's loans. Even if South Africa had remained in the Commonwealth but became a republic, any new borrowing in London would not have had trustee status. The whole question of the trustee status of South Africa's existing loans will now have to be thrashed out. Meanwhile, the outstanding loans in London are not large.

The trade and economic consequences of the withdrawal will take some little time to develop and will be lessened to some extent by the decision to continue membership of the sterling area, for it ensures that no controls need be placed on the flow of capital. In terms of trade, South Africa is not likely to suffer drastically, for less than a tenth of her exports are dependent on imperial preferences. Both these factors, of course, are independent of Commonwealth membership. The Irish precedent (Ireland, although not a member of the Commonwealth, enjoys imperial preferences) may well be invoked to ease the problems.

Trade Outlook Improves

The anxiously-awaited foreign trade figures for February confirm the modest improvement in the position of British overseas trade which has been noted in the past three months. Exports at £297.1 million were less than in January—a longer month—but imports at £353.3 million were sharply down. As re-exports at £11.2 million were only a little less than in January, the monthly trade gap narrowed considerably. The real trend can be seen more clearly in the seasonally adjusted figures, which show that exports in December, January, and February were 5½ percent more than in the three months from September to November—a rise largely due to the London dock strike in the early autumn. Exports in the most recent three months were, however, also 4½ percent above the average for 1960. This is moderately reassuring, but hardly sufficient to eliminate the current deficit in Britain's balance of payments.

The import side looks a good deal more hopeful. Imports were abnormally large last year, the monthly average being £379.9 million, compared with £331.9 million in 1959. Moreover, imports rose to a peak as recently as January. In February, they fell to a seasonally adjusted figure of £383 million and in the three months from December to February were 1 percent less than in September-November. The U.K. Board of Trade has stated that without the London dock strike, the fall in imports would have been more marked. After seasonal adjustments, the monthly average gap—which had risen rapidly during 1960 from £56 million in the first quarter to £70 million in the second quarter and £89 million in July-November—has since steadily narrowed to £73 million in December, £68 million in January, and £65 million in February.

Importance of Commonwealth Trade

The Commonwealth Industries Association has claimed in the March issue of its monthly bulletin that, although Britain's imports from the Commonwealth increased by £113 million during 1960, and exports by £82 million, Britain's position, compared with other industrial countries, is not very encouraging. For example, Australian imports from the main industrial countries (which includes Britain, European Economic Community countries, the United States and Japan), increased by 35 percent in the nine months ended September 1960, compared with the first nine months of the previous year. The percentage increase by Britain was, however, only 18 percent, compared with 33 percent from the E.E.C. countries, 62 percent from the United States, and 67 percent from Japan. "A similar situation is evident in another 12 Commonwealth countries and foreign countries, with the exception of India and Japan, where we have held our own," it is stated.

According to the bulletin, "the importance of Commonwealth trade seems to have declined to the official eye." Reference is made to the U.K. Board of Trade Journal as not showing trade statistics divided into Commonwealth countries and foreign countries but giving details of the sterling area and the non-sterling area. But "a little vision will indicate that it will not be a great many years before the markets within the Commonwealth are of vastly more importance to the United Kingdom than those outside it."

All attention, it is claimed, has been centred on Europe over the past few years, and "it is true that European trade has been brisk and increasing." But trade with Europe has two "somewhat dangerous features." First, the goods made in Europe are of the same type as those made in Britain, and, secondly, west European trade has never been profitable for Britain. The bulletin forecasts that when a recession occurs in Europe (which "must happen sooner or later"), it will stop buying British goods, but try hard to sell in the British market. "If Britain were inside the Common Market, the Commonwealth from the trading point of view would, as a Commonwealth, be written off altogether. If, on the other hand, Britain would concentrate on giving the industrialisation within the Commonwealth every encouragement by means of official priority and at the same time maintains its priority in the purchase of Commonwealth primary products, there is a future for us and all the Commonwealth that will never be found in Europe."

Absenteeism Surveyed

About one million people a day in Britain fail to go to work. Absentees thus represent about 5 percent of the total labour force each day. The British Institute of Management started to look into this problem in 1953. Now it has published a report of its findings. It says: "Absence appears to be a serious cost to industry and the large part of the cost represents a complete waste of resources." The B.I.M. made a detailed study of the cost of absenteeism in 11 firms. In five, the cost worked out to 5s or more each week for every employee. In ten of the cases, the cost was more than 3s an employee a week. An all-round wage increase of 5s a week will be regarded seriously by most employers, the B.I.M. has pointed out. It suggests that to reduce this cost firms should take a look at their training policies and consider building up a reserve labour force. Flexibility of the labour force seems to be the best way of reducing the cost.

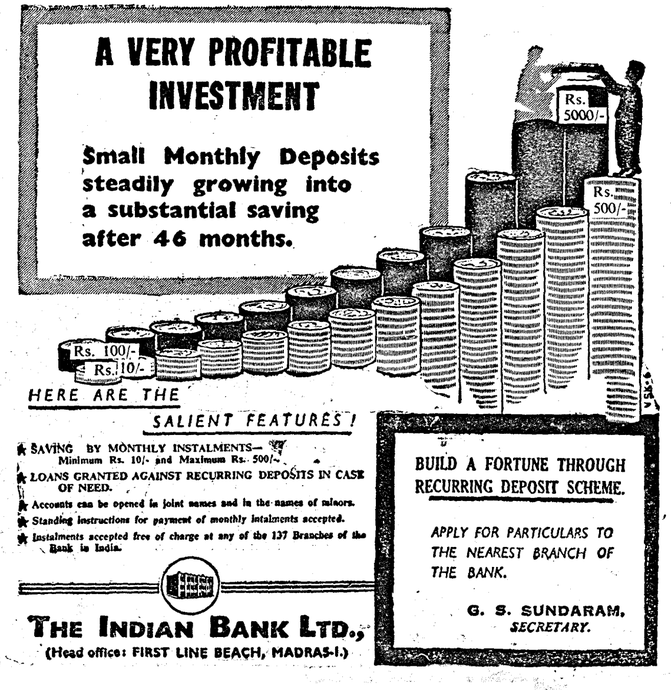
Women tend to be absent more frequently than men; absenteeism climbs in the winter and falls in the summer; the long journey to work may be a factor contributing to a higher rate of absenteeism in London than in the Midlands; these are among the more obvious conclusions of the survey. Sickness, industrial accidents, and occupational diseases account for about three-quarters of total absence. The "other reasons" (staying in bed, racing in Kempton Park, painting the parlour, etcetera) are not broken down in the survey. There is an interesting correlation, however, between absenteeism and the length of the working week. A five-and-a-half-day week leads to more absence than a five-day week. The report concludes from this: "A high absence rate may sometimes reflect a different set of priorities, as between pay and leisure than the one enforced by existing agreements. Abolishing Saturday work, for example, may drastically reduce absence without reducing (perhaps even increasing) output."

Brevities

Craven Brothers (Manchester), machine tool makers, have been awarded orders from India valued at over £600,000, bringing the total of contracts for new work received so far this year to well over £1 million. The greater part of the new orders are exports.

Britain's exports to her six partners in the European Free Trade Association rose in value by 10.1 percent in 1960, compared with the 1959 figures. Her imports from the same countries rose by 18.6 percent.

The Middle East Association, recently set up to promote trade between Britain and the Middle East, has appointed Sir Neville Gass as chairman, Mr. R. M. Wynne-Edwards as vice-chairman, and Sir Ferguson Crawford as director-general. About 50 companies have so far joined, and it is hoped that membership will include others with interests in the area. The address is River Plate House, Finsbury Circus, London E.C.2.



Jute

RAW JUTE ARRIVALS REMAIN POOR IN UPCOUNTRY CENTRES

BUT WIDESPREAD RAIN IMPROVES NEW CROP PROSPECTS

RAW jute arrivals in the upcountry centres remain meagre, and prices are high. Usually at this stage of the season, most mills do not want to buy much. But at present the demand is heavy, and in some cases there is a rush similar to that seen in the busier times of a normal season. In view of the tightness of supplies upcountry and the short crop, mills cannot decide what to do. The dullness of the jute goods market is making it extremely difficult for them to sell either hessians or heavy goods at a profit. Since a maximum price was imposed for raw jute, goods prices have fallen considerably. The stage has now been reached when rates would have to advance by at least Rs. 100 a ton (in sacking) for mills to show any profit based on the controlled price of jute.

The trend will become clearer only when the prospects for the new crops can be assessed more reliably. But that will not be possible until the season is considerably further advanced. Meanwhile, new crop reports from Pakistan continue to be favourable. Fairly extensive rain has not only benefited the sowings which have been nearly completed in the lowland areas, but has allowed sowings to commence in many of the midland districts. This is about 10 to 14 days earlier than many had expected. The overall prospects seem to be good, and more rain appears to be on the way. Widespread rain in Assam has also given rise to hopes that the preparation and sowing of the new crop may begin sooner.

U.S. Burlap Consumption

In spite of the high price of hessians, U.S. burlap consumption during February remained fairly large. At 73 million yards, it was almost the same as in the previous month, but 2 million yards less than during February 1960. The total for January and February 1961, however, is the same as for the corresponding months of last year, which is encouraging, as the figures are the highest recorded for the two months for over ten years. It is, however, obvious that the U.S.A. has had to dig deeply into her stocks. During February 1961, they have dropped by 11 million yards to 246 million yards, which, apart from October 1960, is the lowest figure since December 1958. The stocks represent 3.4 months' consumption at the present rate. Although this is not very much lower than the recent average, it does not represent a very healthy position.

One of the interesting results of the reduction in Indian mills' working hours—as mentioned by the I.J.M.A. chairman in his speech at the annual general meeting last week—is the increase in worker efficiency to combat the loss in pay due to the shorter working week. As a result of this, the fall in raw jute consumption which was hoped for has not been fully realised. It was pointed out here last week that the average production an hour during February reached a new high of 479.25 tons, which was 23 tons more than in the previous month, and at least 15 tons higher than the next comparable figure. This was accomplished during a part of the Ramzan period when worker efficiency is usually at its lowest. It makes one wonder what figures could be achieved if labour really worked to its full capacity. This is no new experience. It has been noted on previous occasions that each time working hours are reduced—which normally means a lower wage packet for the worker—the efficiency of labour increases.

The Quota System

The raw jute quota system operated by the I.J.M.A. appears to be working well, except in the case of mills who normally buy specialities at premium rates, or who want to purchase anything other than the normal assortment of Middles and Bottoms. Purchases other than the normal assortments have first to be referred to the I.J.M.A. for sanction. It is understood that, in most cases, the sanction has been given, but the long delay from the date of application to the time permission comes is causing complications and sometimes serious hardship to both mills and sellers. The reason appears to be that the committee dealing with this subject meets only once a week, normally on a Friday, and all references are held up until then. It often happens that circumstances have changed considerably if, say, the offer is given to the mill on Monday, and sanction is not obtained until about a week later. In many cases, the seller has changed his mind by then, and the buyer is deprived of taking up what may have been an attractive offer. On a market such as exists today, a seller cannot be expected to keep offers open for long periods, and the delay often damages the good relationship between buyer and seller.

It might simplify matters if a smaller body is formed to deal with the applications, instead of it being a matter for the committee. Alternatively, wider powers could be given to the secretary or the person to whom applications have to be submitted, and only complicated or unusual requests may be referred to the committee itself. It is understood that the person to whom the original applications are sent is well versed in the various needs of mills and could be relied upon to do the job. The need for controlling these purchases is not questioned, but the method of control should perhaps be revised.

Champdany Mill to Close

Yet another of Calcutta's old-established mills has become victim to the current high costs of production and modernisation. The management of the Champdany jute mill, in Hooghly district, under the managing agency of James Finlay and Co. Ltd, announces that it has become uneconomic to run the mill as a separate unit, so it is to close down from 1st May. The work and workers of Champdany will be transferred to the Wellington mill, which is under the same ownership and about six miles away on the same bank of the river. Wellington is one of the oldest mills on the river, but is now fully modernised.

THE JUTE MARKETS

Manufactured Goods: Prices were steady at the opening last Thursday due to reports of a marked decline in U.S. burlap stocks and a favourable consumption figure for February. B Twills moved up by Rs. 2 to Rs. 202 and hessians by about 50nP to Rs. 67.50 for 40in. 10oz., both for March shipment. This trend continued on Friday, with some covering business in the local markets. By the week-end, however, prices fell on reports of widespread rain in many jute-growing areas of India and Pakistan. On Saturday morning, B Twills had dropped to Rs. 198 and they fell another Rs. 2 on Monday. Hessians also reacted, as 10oz. fell to Rs. 67 and later to Rs. 66. On Tuesday, heavy goods continued to fall and touched Rs. 194 before they recovered on renewed buying interest. Mills were not keen to sell, and preferred to wait for higher rates.

Opening quotations on Wednesday morning were as follows:

	March	April	Apl.-June	July-Sept.
40in. 7½oz.	49.60	49.50	49.35	48.35
40in. 8oz.	53.75	53.50	53.25	52.00
40in. 10oz.	66.50	66.25	66.00	64.50
B Twills	195.50	195.00	194.00	184.00
Heavy Cees (Plain)	195.50	195.00	194.00	184.00
A Twills	228.00	227.50	226.50	216.00
Liverpools	219.50	219.50	218.00	208.00
Cornsacks	195.50	197.00	197.00	188.00

Raw Jute: There was very little to report from the fibre market as far as contract jute was concerned. Small business was done daily, but many transactions were held up by the delay in dealing with applications for specialities. Arrivals in the upcountry agencies were negligible, and any business reported there invariably came from stock. No forward transactions were being done by mills, and interest centred on ready bills of lading or shipment within 10 or 15 days. Many sellers were consigning jute direct to Cossipore, and taking delivery there as mill agents continued to be active. Other sellers took the liberty of consigning jute to particular mills, without their permission, in the hope that when the mills came out as buyers they would give preference to the jute already consigned to them. The market trend was quiet and prices generally conformed to the controlled level of Rs. 62 for Assam Bottoms. With the widespread rain in Assam, Northern, Bihar and jungli areas, conditions were very favourable for sowing. Some sellers indicated their willingness to sell below the controlled level, provided closing indications were received. None of the larger sellers was prepared to entertain lower bids, but some indications of new crop jute were given for August shipment on the basis of about Rs. 50 a maund. Wagon arrivals in Cossipore last week amounted to 330, which was nearly 100 less than in the previous week, but still very good for the time of year.

The market was unchanged on Wednesday morning, and all quotations were based on the maximum rates fixed by the I.J.M.A.

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	166.00	62.00	March-Apl.
Northern	163.50	61.00	,,

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL SLIGHTLY

(FROM OUR DUNDEE CORRESPONDENT)

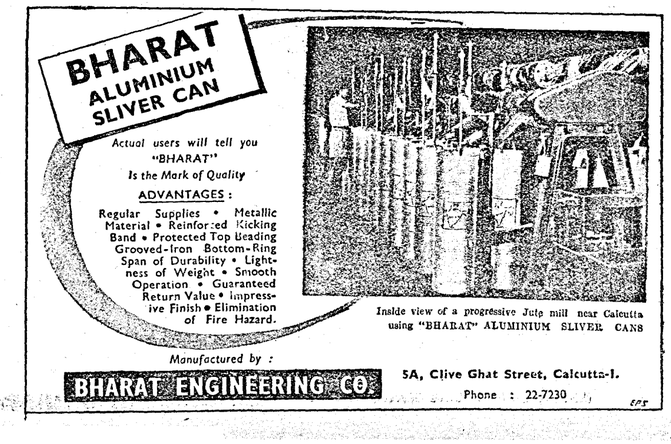
JUTE manufacturers in Dundee are still trying to solve the problem of the future course of fibre prices. They showed slight weakness during the past week, as the rates generally declined by £1 to £2 a ton. But the fall is insignificant compared with the manner in which values rose previously. Sometimes the rise was as much as £30 a ton in the course of one week. So the traders in Dundee will welcome a return to a lower level of prices, although they do not want a heavy drop all at once, for it might be dangerous for some people holding large stocks. Nevertheless, manufacturers and traders want to see a decline in prices, but according to some knowledgeable people (mainly those who have been working in Calcutta for some years and who have returned to work here), this will take a long time.

Mill Firsts are now quoted at £214 a ton, Mill Lightnings £207, Mill Hearts £203 and Grade Hearts £198, Grade Tossa-2/3 £209, fours £203 and Continental Tossa-2/3 £201, March-April, c.i.f. U.K.-Continent. Spinners in Dundee are just ignoring the shipment offers made from day to day at much the same rates, but they are showing some interest in offers being made for jute afloat at a few pounds a ton less than the shipment rates. These are secured lots and probably show a substantial profit.

Spinners are expected to be interested in new crop fibre at a reasonable price. Both sellers and buyers are somewhat diffident about quoting prices for jute for shipment as far ahead as August-September onwards, and buyers are afraid to mention a price in case it might be accepted. Meanwhile, up to £175 has been done for Mill Lightnings for August-September shipment, c.i.f.

Calcutta goods ruled irregular last week, although there was not much change in the level from day to day. Hessians are now quoted at 102s 3d for 40in. 10oz. and 76s 9d for 7½oz., March, 102s 3d and 76s 6d April, 102s and 76s May and 101s 9d and 75s 9d June, the forward positions being all dearer due to the reluctance of mills to offer to sell ahead.

Jute yarns and cloth are all firm, but business is confined mostly to small quantities for early delivery.



U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in February was about the same as in January, but was 2 million yards or 3 percent lower than February a year ago. Compared with February 1960, bag cut-up was up by about 2 million yards while piecegoods deliveries declined by about 4 million yards. (Piecegoods deliveries a year ago, were, however, abnormally low.) U.S. burlap stocks declined by about 11 million yards from the end of January and were 5 million yards lower than a year ago. At 246 million yards, 127 million yards were spots and 119 million yards were afloats. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE PAKISTANI JUTE MARKETS

GOOD NEW CROP REPORTS LEAD TO SLIGHT PRICE FALLS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THERE has been a very slow increase in arrivals, although these are restricted to the baling centres in Narayanganj, Chandpur and Daulatpur. It is customary before Id for stockists to turn their jute into liquid cash in order to be able to purchase the presents and clothing. The arrivals have been at the rate of approximately 40,000 bales a month, but it is likely that this rate will fall off after the festival is over. Overseas markets have shown a slight decline due to the fact that spot sellers appear to be liquidating, probably in view of the good crop reports. Those few balers, who are holding stocks in East Pakistan, have come into the overseas market to sell, and this has had an easing effect. It is unlikely, however, that even a drop of £5 a ton will encourage overseas buyers to increase their rate of purchasing. Most of them have not only suffered serious losses, but find the raw material price so uneconomical that it would require a drop of at least £20 a ton to make the purchases worth their while.

Furthermore, reports from Pakistani and Indian jute mills indicate that even though finished goods are now cheaper compared with raw jute, there is very little demand from consumers. It is difficult to ascertain whether this lack of demand is due to buyers turning to substitutes. The answer is probably that some have gone over to substitutes and others are simply liquidating stocks or turning to second-hand bags until such time as they can purchase the packaging material locally or from India or Pakistan at more reasonable rates.

Reports on sowings continue to be good and although indications are that the area sown will be approximately 50 percent more than last year, estimates of the crop vary considerably from as low as 6.2 million bales to as high as 10 million bales. It seems rather early to estimate the crop at present, when the mid-land areas are not even wholly sown and the high-land areas have not been prepared. Whatever the size of the crop, there is no doubt that India will not be able to obtain jute suitable for her mills from Pakistan in any appreciable quantity before the middle of July, and at such a time, the prices are not likely to be much cheaper than they are today.

In all probability, it will turn out to be more economical to buy during the next month whatever low quality jute is available from the current crop. Any mill which does this will at least be able to purchase the earliest of Pakistan's crop, which will be weedings, and these can be used if mixed with the lower grades, provided the proportion is not too large. The Pakistani jute mills, although not over-stocked, are not in the market at present except for odd lots of cuttings and occasionally, S.M.R. and habijabi. If they can carry these forward to the first few days of the new crop, they will be able to use the first arrivals of new crop fibre. This will put them at an advantage over the Indian mills.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 126.7 during the week ended 4th March, 1961, compared with 126.6 (revised) for the earlier week. The index was higher by 0.2 percent and 6.5 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced by 0.5 percent to 116.5, compared with 115.9 (revised) for the earlier week due to a rise in the prices of oranges (+26%), wheat in Dhanduka and jowar in Rohtak (+8% each), milk (+6%), rice in Balurghat (+5%), bananas and gingelly oil (+2% each) and fish and coffee (+1% each), although the prices of jowar in Nagpur (−14%), rice in Nagpur (−8%), in Tihu (−6%) and in Ranchi (—5%), turmeric (—5%), potatoes (—4%), chillies (−3%), eggs (−2%) and bajra, barley, musur, cashewnuts, mustard oil, coconut oil, tea and cardamoms (−1% each) declined. Higher prices of manufactured tobacco (+6%) and raw tobacco (+1%) raised the tobacco index by 2.1 percent to 110.2 during the week. The index for the Fuel, Power, Light and Lubricants group rose by 0.3 percent to 120.3, against 120 for the previous week as a result of an increase in the prices of kerosene oil (+4%). The index for Industrial Raw Materials receded by 0.4 percent to 159.0 due to a fall in the prices of castorseed, rapeseed and copra (+3% each) and raw jute and lac (−1% each). The prices of raw wool, gingellyseed and tanning materials (+1% each), however, moved up. The index for Intermediate Products rose by 0.9 percent to 136.1 due to a rise in the prices of brass (+5%), rayon yarn and copper (+3% each), coir yarn (+2%) and linseed oil (+1%). The prices of jute manufactures (−4%) and oilcakes (−2%) moved down, while those of silk and rayon manufactures (+2%) and cotton cloth (mills) and general chemicals (+1% each) moved up, and the index for Finished Products declined by 0.5 percent to 127.8, compared with 128.4 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

INDIAN COLLIERY ORDERS EQUIPMENT FROM U.K. FIRM

A £200,000 order for underground mining haulage equipment has been won against world competition by a British engineering firm, John Tinsley Ltd of Darlington, County Durham. It is the second order to be placed with the Company by the Singareni Collieries, near Hyderabad. Deliveries will begin in July and are expected to be completed by November. The firm, which specialises in mining equipment, carried out a smaller contract for the Indian colliery last year.

Plantation Topics

MINIMUM RELEASE PRICES FOR COFFEE RAISED

FALL IN WORLD OUTPUT FORECAST

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Indian consumer will have to pay more for his coffee due to the recent increase in excise duty from Rs. 41.35 to Rs. 55 a 100 kilograms. The Coffee Board has raised the minimum release prices of coffee sold from the pool as well as the retail price of coffee seed sold from depôts to the public due to the increase in the levy. Retail prices have been raised as follows with effect from 1st March, 1961: Plantation A from Rs. 2.37 to Rs. 2.45, Arabica Cherry Flats from Rs. 2.05 to Rs. 2.12 and Robusta Cherry Flats from Rs. 1.77 to Rs. 1.84 a ¼ kilo. The duty on coffee, planters say, has been raised at a time when the industry is looking for a larger market in India for its produce. Although production has shown a phenomenal increase during the past few years, consumption in the home market has not shown a corresponding rise. Consequently, the exportable surplus has been mounting and that too at a time when the world market is overburdened with a heavy surplus. India's exportable surplus in 1961, it is said, will exceed 30,000 tons, including the carryover from last year. The I.C.A. is getting anxious about the future of the International Coffee Agreement in view of the mounting stocks in producing countries. In a recent note, it has pointed out that the stability of coffee prices depends on effective control of production and propaganda to increase consumption.

A 20-percent reduction in the world coffee crop has been forecast by the Foreign Agricultural Service. Its latest estimate places the 1960-61 world output at 65.2 million bags and the exportable surplus at 51.9 million bags. India will, however, have a larger crop. Her 1960-61 crop is estimated at 55,000 tons, against 49,000 tons in the previous season.

Excise and Export Duties on Tea

The 17-percent concession in tea export duty announced by the Central Finance Minister, Mr. Morarji Desai, in his recent Budget speech will be almost offset by the increase in excise duty. So the impression that the tea industry has been granted a substantial tax concession by the revision of the duty is wrong. What the Central Finance Minister has done is to reduce the export duty from 53nP to 44nP a kilogram uniformly. At the same time, he has enhanced the excise duty on loose tea by 5nP to 8nP a kilogram. Discussing the effects of the revision, Mr. H. C. Kothari, President of the United Planters Association of Southern India, said recently that the benefit to the industry will be negligible. Under the existing system, all loose teas—whether they are exported or sold internally—have to pay the excise duty; there is no drawback of excise duty on exports. So teas which are exported will get a reduction of 9nP by way of export duty, but they will have to pay an additional excise duty between 1.5nP and 7nP according to the zones in which they are produced. As for high-grown Nilgiri teas, which are produced in Zone III A, the net benefit will be only 2nP a kilogram or less than 1 percent compared with the previous duty and not 17 percent as announced by the Central Finance Minister. Relief in the case of Zone I and Zone II will amount to only 5.7 percent and 6.6 percent, respectively.

Levy on Package Tea

According to Mr. Kothari, the concession to package tea is also insignificant. The excise duty on package tea has been reduced from 45nP to 40nP a kilogram. The president said that the package tea released from estates also pay the appropriate duty for loose tea on the zonal basis. The total duty paid by package teas in Zone I was 50.5nP, those in Zone II 55nP and those in Zone III A 64nP. The corresponding figures now are 50nP, 55nP and 65nP, respectively. Thus while package teas in Zone I get a relief of 0.5nP, no relief has been granted for package teas in Zone II, and those in Zone III A actually pay 1nP more. As far as the sales of package teas are concerned, the reduction in excise duty is hardly worth mentioning, the U.P.A.S.I. president said. Mr. Kothari, therefore, feels that the aims of the Central Finance Minister, namely, to encourage exports and to restrain internal consumption, are most unlikely to be achieved by the present scheme of revision.

Decline in Exports

India's tea exports fell by 42.4 million lbs to 430 million lbs last year, against 472.5 million lbs in 1959, so she lost about Rs. 5.5 crores in foreign exchange. Total earnings from tea exports in 1960 amounted to Rs. 121 crores. The fall in exports was largely due to the smaller north-east Indian output which was affected by a severe drought. Production in that area fell by 34 million lbs, compared with that in 1959. Although there has been a rise in the offtake of India's new customers, traditional buyers such as Britain and the U.S.A., imported less tea from this country in 1960.

CALCUTTA TEA AUCTIONS IN FEBRUARY

PRICES FOR MEDIUM GRADES RISE

FOUR sales were held in February, and offerings amounted to 228,054 packages. There was a strong general demand throughout the month, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. The best C.T.C.s on offer with improved autumnal liquors were strongly competed for and advanced in price; medium C.T.C.s prices, however, declined while fibrous secondary types inclined easier in each of the first three sales, but in the final sale, with strong competition, prices improved. Medium Assam B.O.P.s and O.F.s with improved quality were fully firm to dearer but the more ordinary types were easier. All clean black B.P.s and fannings ruled about steady but those with stalk and fibre inclined easier. Legg-cut teas came in for fair support but were an irregular feature. Stylish whole leaf grades continued to attract buyers at satisfactory prices but the stalky types were easier, although more support was forthcoming than in the previous month. Darjeelings came in for fair support; the higher grades inclined easier with declining quality but the lower grades generally showed a rise in price. There were only few tippy teas on offer but they were well supported, particularly the really tippy lines.

The Internal Market

The 4,065 chests of leaf on offer in the four sales met with a good demand. The few green teas realised satisfactory prices in the first auction. They were, however, considerably easier and difficult to sell in the second. There was a good general demand for the 18,036 chests of dust on offer in the four Sales held during the month. Prices were irregular, and the market slightly weakened in the closing sales. The bright liquoring C.T.C. dusts were, however, well supported throughout the month, particularly the best grades which were generally taken up at enhanced rates. The more fibrous descriptions declined in price, and were considerably easier in the last two auctions. Orthodox exportable types opened firm, with the small and bright liquoring Assams being a strong feature. Thereafter, there was a general decline in price, and towards the close of the last auction the exportable descriptions were sometimes difficult to sell. Legg-cut Dooars dusts were irregular but followed the general trend. The few bright fines, however, realised better prices.

Sale No 30 " " "	4.83	4.40
Sale No. 31 " " "	4.80	4.56

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 32, totalled 1,929,944 chests at an average price of Rs. 5.38, compared with 2,022,690 chests at an average price of Rs. 5.11 for the same period of the previous season. Internal sales at 18,385 chests of leaf and 648,798 chests of dust (average prices Rs. 4.35 and Rs. 5.23) go against 30,953 chests and 669,101 chests, respectively (against Rs. 4.12 and Rs. 4.70) of the corresponding period of the previous season.

There was little activity on the Export quota market, particularly after the final release of 5 percent of quota on the best crop basis early in the month. The price remained steady at the sellers' quotation of 4nP a kilo, at which rate there were only a few buyers.

Arrivals (in chests) in Calcutta warehouses during the period 1st February to 28th February, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 65,814 (26,046), by rail 5,913 (5,215), by road 1,353 (938) and by air 7,779 (3,351) chests. From the beginning of the season 1st April, 1960 to 28th February, 1961, arrivals have been: by steamer 2,823,696 (3,206,283), by rail 1,128,936 (1,253,214), by road 206,813 (12,042) and by air 164,795 (68,493), making a total of 4,324,240 (4,540,032) chests.

COCHIN TEA SALES

At Sale No. 12, 431,000 kilograms of tea were on offer. There was a good demand at lower rates. Plain and low mediums were 10nP to 20nP lower while mediums and good mediums were 10nP easier. Nilgiris were neglected. Black leafs were firm.

The Birthday Gift

Mother stitched a pair of trousers for his birthday and sent them to the laundry so that they would look fresh, crisp, new. But they shrunk—she had forgotten to look for the label 'Sanforized'!

If only she'd taken a little more care in the selection of the fabric, these trousers would have retained their immaculate fit even after many, many washings.

Make certain you get the full measure of value of the material you buy—

Look for

·SANFORIZED·

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Engineering and Transport

STEADY GROWTH EXPECTED IN DOMESTIC AIR PASSENGER TRAFFIC

I.A.C. PLANS FOR FLEET IMPROVEMENT

(FROM OUR NEW DELHI CORRESPONDENT)

NATIONALISATION often creates complex problems which take years to solve. This is particularly true of the internal air services, which have all been merged into the Indian Airlines Corporation since they were taken over by the Government. There were two problems in particular, which the new State undertaking had to face. At the time of nationalisation, the Indian public had not become air-minded, so the traffic receipts were generally poor. The second one was more serious. The Indian Airlines Corporation *had to operate with a variety of aircraft: Skymasters, Vikings* and *Dakotas*, none of which was pressurised. It entered into a deal by buying eight *Herons* for "feeder service." But the advent of the *Viscount* has changed the scene. It has stepped up traffic, which is placed at 245 million passenger miles in 1960-61, on trunk routes alone; this is likely to go up to 290 million passenger miles in 1962-63 and 675 million passenger miles in 1965-66. The third five year plan estimates are, however, based on certain assumptions, including the introduction of jet aircraft by the middle of the plan and replacement of *Dakotas* by a more acceptable aircraft, such as the *Fokker-Friendship*.

Speed of Caravelle

A route analysis of the French jet aircraft, *Caravelle-Vir* was recently made. The *Caravelle Vir* is powered by two Avon Mark 533R engines. It will take two hours and 28 minutes to fly from Calcutta to Bombay, one hour and 49 minutes from Bombay to Delhi, one hour and 58 minutes from *Delhi to Calcutta, two hours and 11 minutes from* Calcutta to Madras and one hour and 37 minutes from Madras to Bombay. It is suggested that with the introduction of jet aircraft on trunk routes, the *Viscounts* will be slightly downgraded and will be used on regional routes. Foreign exchange will be the main hurdle in acquiring the *Caravelle*. At least, six aricraft will be required to meet India's requirements, the cost of which is placed at Rs. 9 crores, and Rs. 3 crores will be needed for spares. It is for the French to find a middle way, which may be a barter deal on the model of the Indo-Dutch deal for *Fokker-Friendship*. It could also be a long-term loan to be paid from the earnings of *Caravelles*.

Another route analysis shows that *Viscounts* become uneconomical if flown beyond 900 miles non-stop. Ideal mileage on trunk routes is 750 and on regional routes 360. A deal is being put through to acquire two second-hand *Viscounts from the American airline*, T.E.C.A. International. Twelve *Vikings* and seven *Herons* are being given in part payment. There will also be an element of foreign exchange payment in the deal. Two more *Viscounts* on a similar basis are expected to be purchased. Five *Fokker-Friendships*, the first of which was delivered on 21st March, will be in service by the middle of this year. It is proposed to buy five more *Fokker-Friendships*. It is proposed to replace *Dakotas* by *Fokker-Friendships* on various points connecting Calcutta, such as Calcutta-Gauhati, Calcutta-Dacca, Calcutta-Chittagong.

Air-India to Call at Prague

With effect from 3rd May, Air-India International will call at Prague once a week on its *707* jet service from India to New York *via* London and increase total flights on the route to five a week. With Presidential approval, the U.S. C.A.B. has amended Air-India's foreign air-carrier permit to add Saudi Arabia as an intermediate point between Bahrein and Syria on the airline's *India-New York route*.

Pakistani Airline to Start New York Service

Pakistan International Airlines will extend its jet service from London to New York on 5th May, operating one *707* flight weekly from Karachi. Pakistan International Airlines plans to increase its jet service to London from three to four flights a week and will charter a second *707* from Pan American. London flights will be extended to New York and a service to Tokyo will be opened in May. The present agreement for chartering jets from Pan American will expire at the end of June 1963, and *P.I.A. will probably decide this* year what new aircraft, if any, are needed, or whether the airline will continue to charter or purchase *Boeing* jets from Pan American. Aircraft which are being considered in addition to the *707-320* are the *DC-8* and *VC-10*.

B.O.A.C. Proposes Air Freight Cuts

Air freight charges on B.O.A.C.'s services to and from the U.S.A. will be cut by up to 76 per*cent from 10th April*. The cuts follow the ending of the present international agreement on north Atlantic air cargo rates. The cuts range from 53 percent on consignments of 100 kilos (220 lbs) to 76 percent on consignments of 1,000 kilos (2,200 lbs) or over. Reductions on loads between these limits vary from 68 percent to 73 percent. New low rates for selected commodities are also being considered, to help exporters of specialised items. The new rates are subject to the Government's approval.

B.E.A. and K.L.M. plan combined once-an-hour *Viscount* service this summer between London and Amsterdam.

B.O.A.C. will begin a daily through *707* jet air service from London to Washington in June, if the U.S. Government approves. Four roundtrips a week beginning on 2nd June will be increased to daily flights on 9th June, calling *en route* at New York or Boston. B.O.A.C. will open a new route to South America from London on 11th April serving Lima *via* New York and Nassau twice weekly with Boeing *707-420*. British jets and turboprops in service and on order world-wide now total 709. Recent orders include three *VC-10s* for Ghana Airways, two *Comets* for United Arab Airlines, and two *Heralds* for Maritime Central and Nordair of Canada. B.E.A. is *showing interest in the Argosy* and American is discussing the *Trident* with de Havilland.

Export-Import Bank Loan for Alitalia

The U.S. Export-Import Bank has authorised a $8.5 million loan to Alitalia for the purchase of two *DC-8s* to be delivered in April and May of this year. Alitalia has received four of the ten *Douglas* jets it has on order. Since 1950, the Export-Import Bank has provided $30 million in *credits to Italy for the purchase of* 15 U.S.-built airliners. Four of these were *DC-8s*.

J.A.L. Plans New Route to Europe

J.A.L. plans to begin service on a southern route to Europe towards the end of 1961 or early 1962 with *Convair 880-22M* jets. Flights will be routed *via* Hongkong, Bangkok, Calcutta, Karachi, Cairo (or Beirut), Rome to London and will be operated twice weekly with two *Convair* jets. The Japanese Government has already concluded air agreements with Britain and India for this service and is likely to hold negotiations with Pakistan, Lebanon, Italy, the United Arab Republic or Kuwait. Negotiations are likely with the U.S.A for extension of two Tokyo-Seattle flights a week to New York, with Korea for three *DC-7C* flights weekly between Tokyo and Seoul, and with Indonesia for the extension of three Tokyo-Hongkong-Bangkok flights to Djakarta. *Aviation Daily* reports that with effect from 1st April, J.A.L. *will participate in the jet service on* the southern route now operated by Air France, under a pool arrangement, similar to the agreement now in force between the two airlines for operation of the polar route between Paris and Tokyo. On the polar service, Air *France 707s* also carry J.A.L. insignia and use Japanese stewardesses. J.A.L. will begin operating its own aircraft on the polar routes on 1st June, but the airlines will continue to pool revenues.

More Kerosene Consumption in U.S.A. Forecast

Kerosene demand in the U.S.A. will rise by 8 *percent in 1961, bringing the daily consumption to* 390,000 barrels, the publishers McGraw-Hill, have predicted in an economic forecast for the current year. The report says that the increase reflects the switch from *gasoline*-burning, piston-engine commercial aircraft to kerosene-powered jetliners Faced with the threat of over-capacity with their big jets, airlines will make a determined effort in *1961* to tap new markets and divert travellers from road vehicle services. The domestic airliners expect to increase revenue from passenger miles flown by 6 percent. The total for 1960 was 30,000 million, a 15.5-percent increase over 1959.

This Age of Sillimanite

WITHOUT REFRACTORIES

the WATER we drink cannot be purified by lime and chlorine, both produced with the aid of Refractories. FOOD is obtained with the aid of potash, phosphates and nitrogenous fertilizers, none of which can be produced in adequate quantities without Refractories. CLOTHING cannot be produced in sufficient quantities if Refractories are not available for the power plant. Power plants using Refractories provide your home with heat for COOKING, LIGHT for comfort, and power for essential domestic appliances. It would be impossible to construct FURNACES to extract metal from ORES or to operate Rail Road LOCOMOTIVES. There will not be high octane AVIATION spirit nor LUBRICANTS as suitable furnaces cannot be constructed. STEEL plates cannot be produced for building SHIPS.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

IRREGULAR TREND IN DUSTS

AT the Internal Sale, held on 22nd March, the 22,648 chests of Dusts on offer met with a good general demand. Orthodox descriptions were 10nP and sometimes 15nP easier except for the smaller bright liquoring kinds which met with better support. Legg-cut teas were also easier, although the small varieties sold fairly well. Medium C.T.C.s came to a strong market and sold well above last rates except for the poorest fibrous descriptions which were virtually neglected. Good C.T.C. teas were the strongest feature of the sale and sold at considerably enhanced rates.

Quotations

	1961 Rs. a kilo
Plain Orthodox Dust	4.45 to 4.60
Medium Assam Dust	4.55 to 4.90
Legg-cut Dust	4.70 to 5.20
Medium Assam C.T.C. Dust	5.60 to 6.20
Good Assam C.T.C. Dust	6.40 to 7.00

Quotations are inclusive of excise duty.

There was a good demand for the 405 chests of Leaf on offer.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were higher than in the previous week.

Bazaar Sales

(Between 14th March and 20th March, 1961)

Cowhides: Wet salted (Ord.) 7,500 pcs. on the basis of Rs. 8.50 to Rs. 12.25; Wet salted (Slaughtered) 12,400 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50, Wet salted (Ord.) 4,000 pcs. on the basis of 81 nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 29,100 pcs. on the basis of Rs. 340 to Rs. 350, Rs. 380 to Rs. 390 and Rs. 450 to Rs. 470; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinajpur-Maldah 14,200 pcs. on the basis of Rs. 360, Rs. 400 and Rs. 440; Purneah-Kissenganj 9,400 pcs. on the basis of Rs. 375 to Rs. 405 and Rs. 410 to Rs. 420; Patna-Pakur (Ord.) 7,100 pcs. on the basis of Rs. 275 and Rs. 380; Kissenganj 5,500 pcs. on the basis of Rs. 550 to Rs. 560.

Bazaar Stocks

(20th March, 1961)

Cowhides: Wet salted 162,500 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 76,700 pcs.; Assam-Dinajpur 35,000 pcs.; Patna-Pakur-Purneah - Kissenganj - Muzafferpore 157,000 pcs.

SHELLAC QUIET

During the week ended 21st March, the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 178, 176 buyers; 180, sellers.
Lemon No. 1 Shellac	Rs. 182, 176 buyers; 186 to 180 sellers.
Lemon No. 2 Shellac	Rs. 170, 166 buyers; 172, 168 sellers.
F. O. Superfine Shellac	Rs. 158, 152 buyers; 160, 156 sellers.

Genuine Bysacky Seedlac	Rs. 112 buyers; 114 sellers.

Shipments during March until the 17th were 21,441 packages.

U. S. STEEL PRODUCTION

The U.S. steel industry will raise production to at least 60 percent of capacity during the second quarter of 1961 and possibly more, it is forecast by Jones and Laughlin Steel Corporation vice-president, Mr. John Timberlake. Although production rates are no longer issued by the industry, some trade quarters estimate the current rate at around 55 percent of capacity. Mr. Timberlake reported in a Press interview that his Company was receiving a substantial order improvement from almost all sources except the motor-vehicle industry, and he believed that "people are going to buy more cars in the spring". He forecast that steel production for the whole of this year would approximate last year's total of about 99.2 million ingot tons.

Books

ROAD TO FULL EMPLOYMENT

Employment and Capital Formation in Underdeveloped Economies. By V. V Bhatt. (Published by Orient Longmans Private Ltd, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 10, pages 127).

Post-Keynesian literature has given an impetus to the discussion of full employment in underdeveloped economies. There have been a number of good books on the subject written by some well-known economists, although their analysis and prescriptions for attaining full employment have varied according to their belief in the efficacy of Keynesian tools. Dr. Bhatt does not follow the beaten track in analysing what he calls "structural involuntary unemployment" in underdeveloped economies and indicates—on the basis of an analysis of capital co-efficients of industries—whether it is possible to achieve full employment in an economy like that of India. The basic problem facing the latter is the slow rate of capital accumulation. A recent *U.N. Economic Survey of Asia and the Far East* pointed out that at the existing level of techniques, there is redundant agricultural labour in India since the marginal product of labour is less than its minimum subsistence requirements. But by undertaking a comparative study of the capital intensity of industries in developed and underdeveloped economies, Dr. Bhatt has apparently been unable to discuss it in a broader perspective because of the lack of data and the fragmentary nature of the information. Nor has he discussed adequately the policy implications of his analysis with special reference to Indian conditions. His modification of the Keynesian employment analysis appears to be convincing, although it requires a more elaborate treatment with the help of such important Keynesian tools as multiplier and acceleration principles. Another point on which the present reviewer disagrees with Dr. Bhatt is his refutation of Professor Rosenstein-Rodan's analysis of comparative cost in establishing capital or labour-intensive industries. The author thinks that there is nothing sacrosanct in it, although it would appear that the principle does come into play in the long run in all agricultural economies. After all, there can hardly be any point in establishing grandiose prestige projects when expediency demands that agriculture should be rapidly developed in India. But in spite of the controversy about his methodology and conclusions, Dr. Bhatt's book is thought-provoking and shows his deep insight into the problems.

ANNUAL NUMBERS

The Economic Weekly—Twelfth Annual Number. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers Private Ltd. 65 Apollo Street, Fort, Bombay 1. Price Rs. 3, pages 304.)

The latest annual number of the *Economic Weekly* provides a varied fare for its readers. A number of well-known economists have written on India's economic growth and the related problems. But the articles which appear to be most interesting are those discussing the utility of national income estimates, urbanisation in India and the defects of post-graduate teaching of economics. Analysing the problems of the latter, a well-known Indian economist says that it is doubtful whether there are more than 44 economists competent to teach at the post-graduate level in the 44 or so Indian universities. Apart from containing articles on theoretical subjects, the annual contains, as usual, some political reviews.

Indian Finance Annual and Year-book. 1960. Edited by C. Swaminatha Rangaswami, Jr. (Published by Indian Financial Journals Private Ltd, 116 Lower Circular Road, Calcutta. Price Rs. 10, pages 132.)

The latest annual number of *Indian Finance* contains some comprehensive articles on the third plan. The leading article discusses the resources prospect. It reaches the conclusion that although it may not be difficult for India to pay for her development imports because of the improved prospects for foreign aid, there is still considerable uncertainty as to how maintenance imports will be financed. The need for increasing export earnings will, therefore, be greater during the third plan. The annual contains two well-written articles on the Reserve Bank's monetary policy and rural credit. Besides, it reviews the problems and prospects of some of India's major industries.

ADVERTISING AND MARKETING

Admars Annual Number, 1961. (Edited and published by V. Achuthan, 6-174 Mahalakshmi Building, Sir Bhalchandra Road, Bombay 14. Price Rs. 2.50, pages 74 + XXIV).

In spite of the increasing tempo of industrial development and competition among manufacturers in various spheres, it is unfortunate that there is still a need to advertise "advertising". But as the expanding industries in India try to capture a larger share of the market, the scope for, and importance of, advertising will increase. The annual number of *Admars*—a journal devoted to advertising and marketing—discusses public relations and advertising, the marketing of consumer goods as well as the much broader theme of the Press and the advertiser.

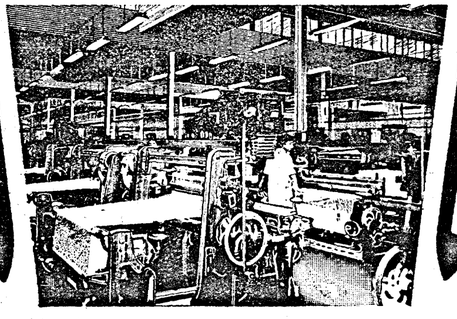
THE SWATANTRA BHARAT MILLS AT DELHI



LIGHTING BY PHILIPS

The Swatantra Bharat Mills, one of the well-known D.C.M. Group of Textile Mills, have used Philips lighting. The Management of this mill has been so impressed with the performance of Philips lighting that they have, as before, relied exclusively on Philips to refit the entire unit, covering the large area of over 3½ lakh square feet and maintaining the high efficiency of nearly 5,000 workers.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application — consult Philips Lighting Service Bureau.*

PHILIPS **PHILIPS** *quality lighting for ultimate economy*

PHILIPS INDIA LIMITED

COMPANY AND PUBLIC NOTICES

INDIAN ALUMINIUM COMPANY, LIMITED
31, Chowringhee Road,
Calcutta.

NOTICE is hereby given that the Twenty-third Annual General Meeting of Indian Aluminium Company, Limited will be held at the registered office, 31 Chowringhee Road, Calcutta 16, on Thursday, April 27th 1961, at 11 a.m. for the following purposes:

1. To receive and adopt the Balance Sheet as at December 31st 1960, and the Profit and Loss Account for the year ended December 31st 1960, together with the reports of the Auditors and Directors.
2. To declare dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit to pass with or without modification the following resolutions:

   (i) as special resolution:

   "That it is hereby approved that the register and index of members, the register and index of debenture-holders and copies of all annual returns prepared under Sections 159 and 160 of the Companies Act, 1956 as amended, together with the copies of certificates and documents required to be annexed thereto under Sections 160 and 161 of the said Act may, at the option of the Directors, be kept at the office of Andrew Yule & Company Limited, 8 Clive Row, Calcutta, instead of at the registered office of the Company".

   (ii) as ordinary resolution:

   "That the powers given to the Directors to borrow moneys on behalf of the Company by resolution No.5 passed at an Extraordinary General Meeting of the Company held on November 12th 1956 be limited to the sum of Rs. 15 crores".

   (iii) as ordinary resolutions:

   "That each Director, other than a Director in the employ of the Company, do receive as remuneration for his services under Article 104 of the Company's Articles of Association Rs. 400 for each meeting of the Board of Directors he may attend or which his Alternate Director, not being in the employ of the Company, may attend in his place or stead.

   That the aforesaid resolution will have retroactive effect from January 1st 1961".

The share transfer register of the Company will be closed from April 6th to April 27th 1961, both days inclusive.

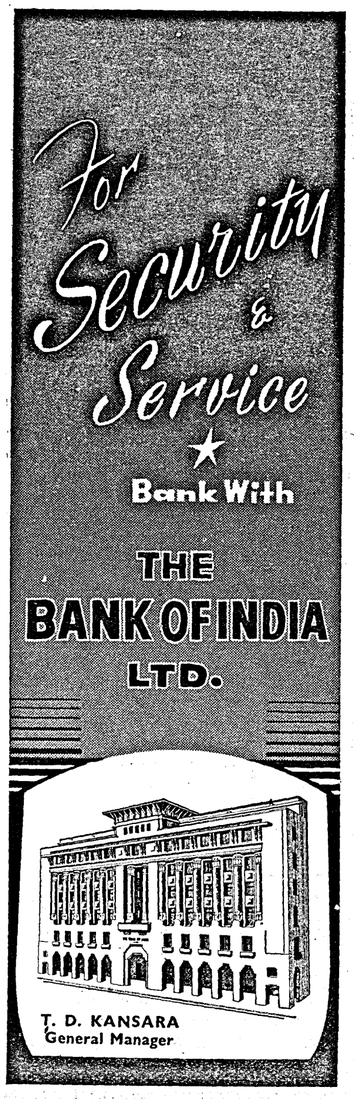
Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th 1961, or to their mandataries. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company who is entitled to attend and vote at the Meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,
T. D. SINHA,
Secretary.

March 6th 1961.

The Explanatory Statement relating to Item No. 5 above in terms of Section 173 (2) of the Companies Act 1956 has been forwarded to the members of the Company along with the Notice.



BRAITHWAITE & CO. (INDIA) LIMITED

NOTICE is hereby given that the Thirty-first Annual General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday the thirteenth day of April, 1961, at 11-45 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
2. To declare a Dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

   "That Article 95 of the Articles of Association be deleted and the following Article substituted in its place:—

   "95. Unless otherwise determined by the Company in General Meeting, each Director, other than the Managing Director, shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 350/- per meeting of the Board attended by him subject to a maximum of Rs. 3,000/- for each Director per annum and the Chairman shall similarly be entitled to receive Rs. 550/- per meeting of the Board attended by him subject to a maximum of Rs. 4,800 per annum."

The Transfer Books of the Company will be closed from the 30th March to the 13th April, 1961, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such Dividend as may be declared will be made on or after the 21st April, 1961 to those members whose names are on the Company's Register on the 13th April, 1961.

By Order of the Board,
Y. S. TAYAL,
Secretary.

Calcutta,
3rd March, 1961.

An Explanatory Statement pursuant to the provisions of Section 173 of the Companies Act, 1956, is annexed to the Notice convening the meeting.

THE DURBHANGA SUGAR COMPANY, LIMITED

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL: REALISM BORN OF A CRISIS

UNDER SECRETARY TO GOVT. 3 APR 1961 PUBLIC DEPARTMENT

THE outlook for the coal industry has shown a distinct, if moderate, improvement during the past few months. The improvement, paradoxically, is the progeny of a crisis—the worst the country has faced in relation to its fuel supplies for at least a decade and one, moreover, whose approach could be, in fact was, confidently predicted years ago. The elements of the crisis are mainly two. One is that far too little coal is being produced for the rapidly growing needs of transport and industry. The other is that even the little that is being produced is not being moved to the places where it is urgently required. Neither of these difficulties is new; the spokesmen of trade and industry have for years been shouting themselves hoarse complaining about the shortage of coal. In New Delhi, however, a calm insouciance has prevailed, apparently on the assumption that any coal which cannot be brought up from the ground below can always be brought down from the heavens above. The outstanding development of the past year has been the discovery that providing India with enough fuel is a human, not a divine, function. Detailed plans have to be framed and the producers have to be encouraged if an acute shortage is to be avoided. As the inadequacy of coal has grown in intensity during the past year, the stage has been reached where it is not affecting private industry alone, but also the exhibition-pieces of "socialist" planning—the Bhilai, Durgapur and Rourkela steel plants, and the Sindri fertiliser factory. The drastic harm done to the latter is primarily responsible for the change in the Government's attitudes and policies.

The change may not be readily evident from the speech which Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, made at the annual general meeting of the Indian Mining Association in Calcutta last Friday. The speech maintained a well-known tradition as an essay in complacency, excusable only on the grounds that the Steel, Mines and Fuel Ministry does not wish to resume the running dog-fight it has recently been having with the railways on the question of who is responsible for the coal shortage. Nobody reading it would imagine that India's coal production programme for the second five year plan has been a massive failure. On the contrary, Sardar Swaran Singh felt himself at liberty to say that, "in terms of the annual rate of production, our target of coal production has been exceeded". The assertion is based on the chance that in January 1961, the total output was 5.14 million tons, which gives an annual rate of about 62 million tons, against the second plan target of 60 million tons. What Sardar Swaran Singh forgot to mention was that January is usually a good production month, by no means typical of the whole year. The 60-million-ton target was meant to be achieved during the 12 months from April 1960 to March 1961; it is certain that the actual achievement over this period will fall far short of the figure. Furthermore, since pithead stocks have risen to dangerously high levels, many collieries in both the public and the private sectors are faced with the threat of having to cut production in the near future. The Steel, Mines and Fuel Ministry ought to give up the habit of making claims based tenuously on the statistical jugglery of a single month's somewhat exceptional figures. It would be more honest to admit plainly that the second plan coal targets have not been achieved.

In his address from the chair at the I.M.A. meeting, Mr. R. H. Wright explained in some detail the reasons for the failure. The price of coal, especially the high-grade varieties which are mined under difficult conditions, has been fixed at far too low a level. As a result, the industry has been able neither to conserve money for expansion, nor to raise it from the open market. For ideological reasons, the Industrial Policy Resolution has been interpreted in such a way as to restrict the expansion of the private collieries. The shortage of transport facilities has hampered efforts to raise production. The supply of power, and of essential necessities such as explosives, has often been inadequate. But, according to Mr. Wright, "undoubtedly the most important reason for the shortfall in production has been the acute foreign exchange position which has denied to the industry sufficient licences for the import of spare parts, quite apart from the new plant and machinery so urgently required." If the outlook for the industry has improved, it is because a more serious effort is now being made to deal with at least some of these problems. The private collieries need a special foreign exchange allocation of about Rs. 28 crores for importing plant, machinery and spare parts over the next five years in order to achieve their third plan target. Substantial assistance is expected from the World Bank, and it may be supplemented by other foreign credits. Sardar Swaran Singh was thus able to say, in discussing the industry's foreign exchange requirements, that "I do not anticipate any serious difficulty in this regard." Apart from the hopes concerning foreign aid, another encouraging development is that the Industrial Policy Resolution is being reinterpreted more pragmatically, in the sense that the private collieries are to be allowed to expand into certain proximate areas. Mr. Wright urged that the licences required to reopen collieries and to work the proximate virgin areas be issued promptly. The plea has to be answered urgently, if the Government really wants detailed planning to begin as soon as possible.

It is unfortunate that the Steel, Mines and Fuel Ministry remains adamant in its refusal to consider the industry's case for an increase in the price of coal. This is a problem which Mr. Wright described as being "at the very root of the present coal crisis". But it is hoped the official attitude will soften as the production of the N.C.D.C collieries increases, and as a growing proportion of it consists of high-grade coals secured from deeper mines. The N.C.D.C. collieries have hitherto operated at shallow depths, and contributed only 2 percent of the total output of Selected grade coals. As they go deeper in search of the good quality coals, and find working conditions becoming more difficult, the unremunerative character of the present price structure may begin to be appreciated by the Government itself. There is reason to hope, therefore, that the official policy on this subject will be revised. Meanwhile, the least that can be expected is that the Government should accelerate the payment of the subsidy which it agreed more than one-and-a-half years ago to give to collieries working deep, gassy and difficult seams. Mr. Wright pointed out that more than Rs. 1 crore has already been collected as cess from consumers for the purpose of paying this subsidy, but not a single naya paisa has yet reached the collieries. Pleas for greater speed in framing plans and implementing decisions, which the Minister addressed to the I.M.A. audience, would perhaps be better addressed to the bureaucrats in his own Ministry.

It is encouraging to hear that some concrete efforts are at last being made to improve the transport facilities for coal. The idea seems to be to move an extra one million tons *via* Calcutta port in coastal ships to southern and western India. Consumers far away from the West Bengal-Bihar fields will be asked to take more of their coal from the central Indian mines. Larger quantities of the commodity will be moved by lorries, and the practice of seven-day loading at the collieries is to be encouraged. It seems, however, that all these measures will prove, at best, to be only temporary palliatives. The overall shortage of transport facilities will remain unless the railways can offer many more wagons than they are doing today. Mr. Wright said that it is necessary, as soon as possible, to allot at least 6,000 wagons a day to the West Bengal-Bihar collieries, as against the present allotment of only 4,700 wagons daily. The railways have so far offered a long list of excuses to explain why they are carrying much less coal than they promised to; it is time they took energetic measures to eliminate the shortfall in wagon supplies. The transport crisis has arisen primarily because of their dog-in-the-manger refusal to let coal be moved by coastal ships and lorries, even though they knew they could not move it themselves. They are becoming less adamant now, but the consequences of their attitude will not be easy to overcome: it is doubtful, for instance, whether road transport capacity, as well as the handling facilities at Calcutta port, will permit any large-scale diversion of coal traffic for some time. Nevertheless, the effort needs to be made urgently, if only as an initial gesture to indicate that the transport problems of the coal industry will receive more conscientious attention during the third plan.

A QUART FROM A PINT POT

BOTH the retiring President, Mr. A. M. M. Murugappa Chettiar, at this year's annual general meeting of the Federation of Indian Chambers of Commerce and Industry, and the mover of the resolution on the third plan, Mr. B. M. Birla, called for higher investment in industry Mr. Chettiar was categorical; he recommended 40 percent as the portion of the plan which ought to be devoted to industry, compared with 28 percent as provided for at present. But neither speaker explained how this could be done without either increasing the size of the plan—a move which would certainly go against Mr. Birla's warning about increasing inflation—or reducing the allocation of resources to other items, including agriculture. The President admitted the importance of agriculture in the scheme of economic development. But as the acknowledgment gave the impression of being somewhat reluctant, and as it would scarcely appear possible ne should be advocating cuts in allocations to power, railways and road transport, the conclusion seems inescapable that he is quite aware that what he recommends would entail reducing the investment in agriculture. It is difficult to accept that such a suggestion is intended to be taken seriously. After the experience of the second plan, and the extent to which this country is already dependent on United States P.L. 480 aid for holding down food prices, it is difficult to see how any responsible observer could go on record as advocating a cut in plan allocations for agriculture. Not only is cheap food essential to continued rapid industrial expansion—a point which many enthusiasts of more investment in industry often forget—but it is indispensable to political stability as well. A sound agriculture cannot be divorced from industrial expansion in India unless adequate sources of food are available from abroad and the foreign exchange can be earned to pay for them. If Mr. Chettiar is anxious to have his words taken to mean something other than that industry should be favoured under the plan at the expense of agriculture, then he should have taken care to explain more fully what he meant. As it is, one can only conclude that no less a figure than the President of the F.I.C.C.I. has joined the ranks of those who would further aggravate India's economic difficulties by refusing, even at this late stage, to put first things first.

Where Mr. Chettiar was on stronger ground was in advocating that a higher proportion of plan expenditure on industry should be allocated to the private sector. There can be no doubt at this juncture that the present distorted and precarious state of the Indian economy—chronically inflationary and wholly dependent, not only for development, but for actual subsistence, on aid from abroad—is due almost entirely to the Government's determination to go on diverting resources from private hands regardless of the economic costs involved and to use them in projects which, when they do not actually qualify as "conspicuous in-

vestment", are limited in their provision of employment and dangerously long-term in their contribution to national output. So far as it could be regarded as having any relevance at all to the matter at issue, Mr. Nehru's speech was obviously directed at justifying the Government's policy on this main point. But to represent socialism as being up to date, which it certainly is not, and to castigate those whose doubts are sincere about the wisdom of destroying freedom and perpetuating poverty in order to pursue an ideology most of the world left behind a generation ago, and which is fast losing its more rigid aspects even in the economy of its chief protagonist, is no answer to the economic points involved. These are quite simply that the private sector is being starved of resources and the general public deprived of essential consumer goods so that spectacular projects of doubtful economic merit can be implemented to the glory of the Government as a whole, or even that of individual Ministers. If the spirit of genuine economic criticism were more alive in India, and less slavishly obsequious abroad—where after all a good deal of the money is coming from—Government spokesmen might not find it quite so easy to disguise the poverty of their economic policies by presenting them almost as religious dogmas. The point the Government would apparently like everybody to forget is that the controversy of private versus public sector is fundamental to India's future, political and economic. It is not unpatriotic to draw attention to this fact, it is simple common sense.

To transfer a large part of the public sector's plan allocation to private industry would be one way of meeting the objection to the F.I.C.C.I. policy, as apparently expounded by Mr. Chettiar, that it seeks to get a quart out of a pint pot. The public sector is fed internally by taxation and public borrowing, the former involving an economic cost ludicrously out of proportion to the resources raised and the latter being possible only by creating inflation and by diverting funds from the private sector. To change this emphasis to one of borrowing by the private sector direct from the general public would yield an economic benefit which would startle the planners. Even the raising of resources from abroad would be easier; the Government is by no means the only agency able to raise the wind from foreign countries, and by breaking down the resistance abroad to lending for the building of socialism rather than the strengthening of democracy and the rapid expansion of India's living standards, a greater reliance on the private sector would probably eventually yield more resources. Most important, it would relieve the present situation where the major portion of the investment made in this country—that in the public sector—can only be financed, whether or not the outer form is crippling taxation or low-cost borrowing, by printing the necessary money. It is scarcely realised that no country in peacetime can bear without inflation the kind of burdens the Indian Government is so determinedly imposing regardless of whether or not they are necessary. And inflation is an evil which Mr. Birla did well to draw attention to, despite the fact that at the moment high-cost, uncompetitive private industry is the chief beneficiary from it.

L.I.C.: GOOD YEAR BUT TARGET MISSED

ACCORDING to a Press announcement, the Life Insurance Corporation completed new business amounting to Rs. 495.99 crores in 1960, against Rs. 429.17 crores in 1959—the increase being 15.4 percent. The 1960 total includes Rs. 484.47 crores of new business completed in India, Rs. 9.70 crores in foreign countries and Rs. 1.82 crores of "Janata" policies. Annuities are not included in the computation. Under the Corporation's five year plan, the new business should have reached Rs. 525 crores last year. There is thus a shortfall of about Rs. 30 crores from the target figure. Even the total of Rs. 495.99 crores was reached by methods which might in some ways be considered dubious. The Corporation carried forward the closings until the end of February 1961. Since it departed from the normal practice of closing its books on 31st December, 1960, and had to carry forward until the end of February 1961, it is thought that a large part of the new policies consists of what is called "forced business". There is likely to be a high proportion of lapses in this "forced business", in which case the figure of Rs. 495.99 crores would be anything but real.

Nevertheless, the achievements of the Corporation are creditable in the sense that its business has reached a new high in 1960. The rise in national income has undoubtedly helped; the Corporation would deserve strong criticism if it could not mobilise more savings from the community in these circumstances. Yet, there seems to be one potential market which it has not explored properly, and that is the one composed primarily of the artisan class. Small artisans, traders, tool-makers, skilled and semi-skilled labour, and agriculturists often now have incomes bigger than those of the middle class engaged in white-collar jobs. If this potential market had been tapped more energetically, the Corporation might have completed its target of Rs. 525 crores. It might at least not have had to carry forward closings until the end of February 1961 in order to reach the figure of Rs. 495.99 crores now claimed. The practice of carrying forward closings is unhealthy, and once commenced, is hard to drop. It was an unsavoury feature of the company régime, and one hoped the Corporation would not fall victim to it, especially since it holds a monopoly of life insurance business in India.

Among the various regions, the southern zone has led by completing Rs. 122.85 crores of new business. The second in the list is the eastern zone, with Rs. 111.74 crores. Abroad, the Corporation has been able to maintain its progress and record a slight increase, although the political situation in certain territories has led to instability and a flight of capital. This, together with the migration of Asians from some of these areas, has prevented the Corporation from showing an appreciable increase in its foreign business. But a recent survey indicates that the situation is now stabilising. During 1960, the Corporation decided to withdraw joint life policies, and certain restrictions were imposed on the insurance of female lives. This type of business had amounted to Rs. 32.70 crores in 1958 and Rs. 47.53 crores in 1959, but the experience was not favourable. The restrictions have tended to reduce business during the past year; so also have natural calamities like floods in different parts of the country, and the riots in Assam, which led to the stoppage of work for a period of months. Even so, the Corporation has managed to increase its total business by about Rs 67 crores, which compares favourably with the increase of Rs. 62 crores recorded in 1959. Two more divisional offices have been opened in Kanpur and Meerut. The number of branch offices, sub-offices and development centres in the country is now 460. Steps have been taken to intensify publicity measures and do more rural promotional work.

The increase in business means that it is necessary to strengthen the organisation. In order to provide trained staff, administrative training courses have been introduced at the divisional level. An Administrative Training College has been established in Nagpur for supervisory officers, such as superintendents and assistant branch managers, and for development officers, such as branch managers and assistant branch managers (development). Mr. P. A. Gopalkrishnan, chairman of the Life Insurance Corporation, is reported to be of the view that 1960 has been a crucial year for the progress of life insurance in India. The Corporation, according to him, has consolidated its position and is well placed to extend its facilities. One major aim is to do more business in the rural areas. The proportion of rural insurance to the total business has already risen from 37 percent in 1957 to 46 percent in 1960. But the Corporation has to change its administration and outlook if the rural market is to be exploited more intensively. The traditional plans of the Corporation are not always suited to this class of people. During the past five years, hardly any new plans have been announced to attract rural savings. The Corporation might do well to devote thought to this subject and prepare schemes for mobilising rural savings properly.

WHAT TO DO FOR EXPORT PROMOTION

THE background to India's foreign exchange crisis, and the consequent need to maximise exports, is well known. What is not so well known is the half-hearted part which the Government itself is playing in the country's export drive. The Federation of Indian Chambers of Commerce and Industry has, therefore, done well to review the whole range of problems in a recent note, in which it also puts forward suggestions to remedy the various deficiencies now noticed in implementing the present promotional measures. Starting with an assessment of the balance of payments position, the note points out that in spite of drastic import cuts, the trade deficit in 1960 amounted to Rs. 364.7 crores, which was the second highest on record. (The highest, Rs. 449.4 crores, was in 1957). The foreign trade receipts and expenditure over the second plan period have been summarised as follows:

	Imports (Value in Rs. crores)	Exports (Value in Rs. crores)	Balance of Trade (In Rs. crores)
1956	821.5	619.2	– 202.3
1957	1,068.2	618.8	– 449.4
1958	864.2	570.3	– 293.4
1959	887.4	622.7	– 264.7
1960	1,000.4	635.7	– 364.7

The position might get worse during the next plan, as it is likely that the size of India's import bill will each year be higher than even the 1960 figure. Apart from the growing needs of development and maintenance, there will also be due the annual principal and interest repayments of foreign loans which have already been incurred. "Obligations are mounting, which cannot be skipped by merely import-saving devices." It is, therefore, time to take more positive steps for maximising exports rather than to fall back on the negative device of cutting imports as the shock of a big trade deficit is felt. The difficulties of exporting more have, however, not been minimised. On the other hand, the outlook for export expansion is unfavourable, the F.I.C.C.I. memorandum says. Recessionary conditions in some of the developed countries which import India's goods and the balance of payments difficulties of the United States have created serious problems for a very large number of primary exporters. The formation of regional trade groupings has also introduced complications. India cannot wait for more favourable times; nor will marginal adjustments here and there make any real impression on the situation. The need is, therefore, to do some rethinking about the matter, from the short as well as long-term points of view, "for creating the requisite climate for a real export promotion effort," it stresses.

Discussing the measures which are essential for sustaining the export drive efficiently and well, the F.I.C.C.I. places them in the following five main categories: (1) sustained increase in agricultural, industrial and mineral production, (2) maintenance of prices at competitive levels; (3) formulation of appropriate incentive schemes; (4) organised effort by the Government, industry and trade and (5) assistance to specific commodities. In spite of her increasing industrial production, India is still largely a primary exporter and more than two-thirds of her foreign exchange earnings come from exports based on agricultural products. For example, two of India's main exporting industries, jute and cotton textiles, depend on agriculture for their raw materials. Shortfalls in the output of raw cotton and jute during the past season have had a seriously adverse effect on the output and exports of these industries.

Industrial production as a whole has been increasing, but there has been no proportionate rise in the exports of manufactures because costs have been rising, reducing competitive efficiency. Buying too much machinery on deferred payment terms has also contributed to higher costs. The F.I.C.C.I. note urges that the Government's monetary and credit control policies be suitably adjusted to meet the needs of the exporter. Transport facilities are still inadequate and wage boards appear to overlook an industry's capacity to pay when making their recommendations. This is what has happened at least in the case of the cotton textile industry, it says. The Government's fiscal policies have not been entirely helpful. The 1961-62 Budget, for example, proposes to increase excise duties on a wide range of commodities, some of which are industrial raw materials. Import duties on machinery and components have also been raised. These will only serve to push up industrial costs.

In the circumstances, a thorough re-examination of the export promotion measures including the export and import regulations and procedures, is necessary, and the F.I.C.C.I. urges this be done immediately. Measures both short-term and long-term need to be devised which should be based less on an emotional appeal to the exporter's patriotism, and more on scientific thinking. Meanwhile, the F.I.C.C.I. suggests some steps to boost exports, the first of which is that the administrative procedures should be streamlined so that the exporters can avail themselves of the facilities which are now being offered. Credit facilities need also to be liberalised. A certain amount of relief from income tax should be given, as is being allowed in Japan and other countries. Other suggestions of the Federation include a more generous provision for the exporters to retain part of their foreign currency earnings to finance their raw material and equipment imports, which should be reinforced by a liberal licensing policy for importing these essentials more adequately.

Current News and Comment

Growth in Alkali Chemical

The ordinary shares of the Alkali and Chemical Corporation of India Ltd have improved to Rs. 38.62 during the past fortnight as the Company's growth prospects are excellent. In his address from the chair at the annual general meeting in Calcutta last week, Mr. J. M. Lall said that the expansion schemes would cost nearly Rs. 6 crores during the next three years or so. (The full text of the speech is printed on a later page.) The plant for producing rubber chemicals is being built at a cost of Rs. 2 crores. The capacity of the polythene plant is to be increased more than two-and-a-half times. The present capacity is 3,500 tons a year, but an output of 1,000 tons was achieved in 1959-60 with higher operational efficiency. The expansion is considered necessary in view of the increased demand for the product. The output of high-quality paints has improved, as domestic and export demand has increased. The management has, therefore, asked the Government for permission to increase the capacity of this unit. It is expected that the application will be sanctioned. Plans have been framed to increase the production of chlorine, caustic soda and hydrochloric acid. It is good to hear that the Government has permitted a higher price for caustic soda, in order to compensate for the increase in production costs. In raising its production capacity, Alkali Chemical enjoys the advantage that it can obtain the necessary foreign exchange from its U. K. associate, Imperial Chemical Industries Ltd.

Commenting on the prospects for the current year, Mr. Lall stated that production and sales have been satisfactory so far. But the taxes proposed in the latest Central Budget are likely to have an adverse effect. Apart from the reduction in development rebate and the heavier duties on machinery imports, the increases in the excise duties may force the Company to pay as much as Rs. 70 lakhs annually, against Rs. 12 lakhs at present. Whether the burden can be passed on to consumers in the form of higher prices is doubtful, as competition is keen. During the year ended September 1960, the Company's results have been satisfactory, as sales and production have increased. The ordinary dividend has been raised from 9½ percent, taxable, to 12 percent, taxable. This is the third year in succession that the dividend has been increased. About Rs. 48 lakhs has been put into reserves. The need for ploughing back resources into the business is underlined by the big expansion schemes. The larger allocations to reserves have also been made in order to compensate for the transfers which were previously made out of reserves. It is clear that Alkali Chemical proposes to have a progressive but consistent dividend policy.

Jessop Recovering

The ordinary shares of Jessop and Co. Ltd have recovered to Rs. 22.56 partly because the ordinary dividend has been maintained at 8.58 percent, taxable, and partly because of the growth prospects. The dividend is being maintained on the doubled ordinery share capital of Rs. 2.04 crores. (Some months ago, ordinary rights shares were issued in the proportion of one-for-one at a premium of Rs. 2 a share.) The ordinary dividend absorbs Rs. 17.50 lakhs and is covered more than three-and-a-half times. It offers a yield of 3.8 percent at the present price. The profit has improved from Rs. 25.88 lakhs in 1958-59 to Rs. 31.52 lakhs during the year ended October 1960, after providing Rs. 29.17 lakhs (against Rs. 22.68 lakhs) for taxation, Rs. 5.78 lakhs (against Rs. 3.61 lakhs) for development rebate reserve and Rs. 19.28 lakhs (against Rs. 13.05 lakhs) for depreciation. General reserve receives Rs.18.50 lakhs (against Rs. 17 lakhs). The carry-forward is Rs. 57,411, compared with Rs. 64,000 brought in. It looks as if a portion of the rights share money has been used for reducing bank overdrafts.

Sales increased to Rs. 9.08 crores in 1959-60 from Rs. 6.59 crores in 1958-59. The Company's turnover has improved by 138 percent during the past four years. Agency sales are almost negligible and the concentration is on manufacturing activities. The coach works have contributed much to the improved results. The first part of the E.M.U. coach contracts has been completed. The production of metre-gauge bogie passenger coaches has increased. The wagon works have produced satisfactory results after renovation. The next stage of rebuilding has begun since the end of 1960. The bogie works have produced good results and bigger "box" wagons are being manufactured. The output of the structural works has been affected by the shortage of raw materials, but supplies of the latter have increased since the end of 1960. The mechanical works have been operating satisfactorily since they were re-equipped. Further re-equipment is proceeding. It is proposed to increase the production of cranes and diesel rollers. During the current year, the Company's working is expected to improve as bigger supplies of raw materials become available. Meanwhile, the directors are thinking of expanding the production capacity further. The existing foundry is fully occupied, so it is proposed to erect a new one. The Company is also thinking of making new products.

An important development is that, so far, the S.B. Industrial Development Co. (U.K.) Ltd along with S.B.-Calcutta Ltd has looked after the interests of Jessop in the U.K. But this arrangement has now been terminated and the U.K. business will be handled by Jessop itself. S.B.-Calcutta Ltd will be bought by Jessop soon and the name of this concern has been changed to Jessops-Calcutta Ltd, which will be a fully-owned subsidiary.

Ashok Paper Share Offer

The Ashok Paper Mills Ltd proposes to build a plant in Rameshwara Nagar, north Bihar, for producing 15,000 tons of paper a year, along with the necessary pulp. The site is suitable, as supplies of raw materials such as bamboo, sabai grass and sugarcane bagasse are abundant. The Company has already arranged to obtain about 18,000 tons of bagasse a year from the Darbhanga Sugar Co. Ltd at a reasonable price. From the point of view of power, water and transport facilities, the location is considered suitable. Ashok Paper has arranged for technical collaboration from Empacel of France, which has also agreed to supply the equipment on convenient deferred payment terms. The foreign collaborator will subscribe for 300,000 ordinary shares of Rs. 10 each in Ashok Paper. The cost of the project is estimated at Rs. 5.95 crores. The Industrial Finance Corporation is expected to give a loan of Rs. 1 crore. Production is expected to begin in 1963 and the land for the mill site has been obtained.

Ashok Paper will issue 1,150,000 ordinary shares of Rs. 10 each and 20,000 redeemable preference shares of Rs. 100 each (carrying a dividend of 6½ percent, free of company tax) for public subscription at par on 3rd April. (Fuller details concerning the issue are published on a later page.) The issued capital is Rs. 2.25 crores. The directors and their friends have already subscribed for 514,000 ordinary shares of Rs. 10 each and subscriptions for a further 86,000 ordinary shares of Rs. 10 each have been promised. The entire public issue has been underwritten by various institutions, including the Bihar Government. The paper industry has made satisfactory progress during the past few years, but the domestic production is still far short of requirements. So the prospects for Ashok Paper are good. When production begins, the directors hope to pay reasonable dividends before long. The preference shares are redeemable at the option of the Company.

Hindustan Lever Expands

The shares of Hindustan Lever, which could be bought at Rs. 26 in 1959, are now quoted around Rs. 51. Since the Company continues to expand and diversify its activities, investors view the future with optimism. The gross dividend has been increased by 20nP from Rs. 2.40 to Rs. 2.60 a share, and shareholders will find the directors' report for 1960 encouraging. The turnover rose by about 13 percent (from Rs. 41.80 crores in 1959 to Rs. 46.12 crores in 1960) and the trading profit from Rs. 4.17 crores to Rs. 4.57 crores. In spite of the increase in raw material prices and severe competition in many of the products, the trading profit as a percentage of turnover has been well maintained around 10 percent. The cost of raw materials consumed increased by about 13 percent from Rs. 26.59 crores to Rs. 30.05 crores; the rise is almost the same as the increase in turnover. The sale of soap products and detergents rose from 75,072 metric tons valued at Rs. 17.83 crores to 83,027 metric tons worth Rs. 19.95 crores; the rise was faster than in the previous two years. In *vanaspati*, Hindustan Lever had to face severe competition and higher raw material prices throughout the year. Although the turnover rose to Rs. 22.35 crores from Rs. 20.45 crores in 1959, sales were slightly less at 82,286 metric tons, against 82,432 metric tons. The Company made further progress in the sale of its toilet preparations, although at a lower rate than in 1959. The continuing rise in the demand for glycerine reduced the quantity available for export. The latter declined further from 1,749 tons valued at Rs. 40 lakhs to 834 tons worth Rs. 21 lakhs. Exports of oilcakes, oils and hardened groundnut oil, however, showed a significant rise from Rs. 2.5 lakhs to Rs. 17 lakhs. *Vanaspati* shipments were maintained around the

previous year's figure of 1,721 tons, but they fetched Rs. 6 lakhs less at Rs. 35 lakhs.

The directors state that Hindustan Lever has obtained a licence for manufacturing skimmed milk powder, ghee and casein. The factory is to be set up in Etah in Uttar Pradesh. The Company has recently started a pilot project to investigate the possibilities of manufacturing animal-feeding stuffs. The pilot project at the Ghaziabad factory for dehydrated peas did not make progress as expected during the year due to the failure of the crop in experimental farms. But valuable experience has been gained concerning all aspects of the project, so it will be pursued during 1961 in order to bring it to the planned semi-large scale.

The profit of Hindustan Lever, before taxation, amounts to Rs. 4.57 crores. Taxation accounts for Rs. 2.08 crores, which is about the same as in the previous year. The dividend, subject to deduction of tax, absorbs Rs. 1.45 crores, against Rs. 1.34 crores in 1959. This leaves a balance of Rs. 1.05 crores, to which is added Rs. 2.10 crores brought forward from the previous year. Allocations include Rs. 2 crores for development rebate reserve and Rs. 90 lakhs for general reserve, leaving Rs. 24.39 lakhs to be carried forward. Against a paid-up capital of Rs. 5.57 crores, reserves and surplus total Rs. 4.49 crores. Hindustan Lever made an addition of Rs. 49 lakhs to its fixed assets, raising the gross value to Rs. 6.19 crores, which has been written down to Rs. 3.86 crores. Current assets, valued at Rs. 12.60 crores, exceed current liabilities by about Rs. 6.20 crores.

Rights and Bonus from Modern Mills

The working of the Modern Mills Ltd for the year ended October 1960 is encouraging. The results justify the directors' decision to raise the dividend from Rs. 5 to Rs. 6 a share, both subject to deduction of tax. The gross profit of Rs. 25.60 lakhs is about Rs. 9.41 lakhs higher than in the previous year. Sales are up from Rs. 1.67 crores to Rs. 1.92 crores. The percentage of gross profit to sales shows a substantial increase from around 10 to 13.3. After providing Rs. 4.62 lakhs (against Rs. 4.36 lakhs) for depreciation, Rs. 1.47 lakhs (against Rs. 65,806) for development rebate and Rs. 8.25 lakhs (against Rs. 36,000) for taxation, the net profit amounts to Rs. 9.13 lakhs, against Rs. 9.61 lakhs in the previous year. A sum of Rs. 3 lakhs (against nil) has been transferred to general reserve. The proposed dividends absorb Rs. 5.57 lakhs (against Rs. 4.65 lakhs). After making some adjustments, a sum of Rs. 32,765 has been carried forward, against Rs. 28,992 brought in.

The directors state that Modern Mills has received a licence to install 144 automatic looms. The modernisation and expansion scheme is intended to ensure better operational efficiency and achieve more economic working. The Company's application for acquiring more spindles in order to feed the automatic looms and balance the production at No. 2 mill is being considered by the Textile Commissioner. The permission is likely to be granted as soon as effective steps are taken by the Company to install the automatic looms. The directors have announced a fresh issue of Rs. 46.47 lakhs of equity capital, for which the sanction of the Controller of Capital Issues has been obtained. The shares are to be offered at par in the proportion of one new share for every one held. Besides, the directors propose to issue bonus shares, subject to the sanction of the Controller of Capital Issues, in the ratio of one share for every two held. The bonus issue is to be made out of the share premium account and general reserve. As the rights and bonus issues will exceed the authorised capital of Rs. 1 crore, the directors propose to increase the latter from Rs. 1 crore to Rs. 5 crores to make possible any further issue which may become necessary when negotiations for the rayon project are completed. The Company's shares (Rs. 50 paid) are quoted around Rs. 94, offering a tax-free yield of about 4.4 percent.

Walchandnagar Industries Expands

The working of Walchandnagar Industries Ltd for the year ended September 1960 shows a gross profit of Rs. 31.74 lakhs, which is about Rs. 1 lakh less than in the previous year. The decline in profit is due to the fall in sugar production because of a smaller crush. After providing Rs. 17.90 lakhs (against Rs. 13.25 lakhs) for depreciation, Rs. 10.21 lakhs (against Rs. 8.20 lakhs) for development rebate and Rs. 45,000 (against Rs. 8.50 lakhs) for taxation, the net profit amounts to Rs. 19.92 lakhs (against Rs. 19.01 lakhs). The directors have recommended a dividend of Rs. 10 a share, taxable, on the preference shares and Rs. 15 a share, taxable, on the ordinary shares. After providing for the dividends and making other adjustments, there remains a sum of Rs. 1.61 lakhs to be carried forward, against Rs. 1.77 lakhs brought in.

The directors state that the land taken on lease by the Company is 7,902 acres, while that owned by it is about 8,506 acres. If sugar factories are not exempted from the provisions of the Maharashtra Land Ceiling Act, it will adversely affect the Company. Besides, wages are likely to rise due to the Central Wage Board award. The quantity of sugarcane crushed during the season amounted to 186,000 tons producing 218,000 bags of sugar, against 205,000 tons of sugarcane and 218,000 bags of sugar in 1958-59. The output of rectified spirits rose from 358,584 gallons to 502,323 gallons. The sugar machinery manufacturing division supplied machinery worth Rs. 1.05 crores, against Rs. 56.39 lakhs in the previous year. The oil mill produced 2,457 tons of oil and 673 tons of refined oil, the respective figures for the previous year being 2,631 tons and 341 tons. The production of hydrogenated oil declined to 1,232 tons from 1,734 tons.

Walchandnagar Industries has undertaken the manufacture of industrial mouldings in its plastics factory. It is reported to have received orders for complete sugar machinery worth about Rs. 2.52 crores for three co-operative sugar factories. It has also received a licence for manufacturing hammer tips. The directors have stated that an application has been made to the Controller of Capital Issues for issuing 50,000 equity shares of Rs. 100 each. The new shares will be offered to existing shareholders in the proportion of one for every five held. The Company has a paid-up capital of Rs. 1.51 crores. Its reserves and surpluses total Rs. 1.36 crores. The gross block of Rs. 4.27 crores has been written down to Rs. 2.81 crores. The Company's shares (Rs. 100 paid) are quoted around Rs. 245, offering a tax-free yield of about 4.2 percent.

Steel and Allied Products Offer

Steel and Allied Products Ltd was formed as a private Company in 1951 and converted into a public one in 1954. It produces wood screws, screws, wire nails, hacksaws and other allied products. The Company has made steady progress. During the year ended June 1960, the profit was Rs. 8.89 lakhs, after taxation, and an ordinary dividend of 40 percent, taxable, was paid. In 1955-56, there was a loss of Rs. 43,456. It is now proposed to expand the production capacity in collaboration with Sandvikens Jernverks Aktiebolag of Sweden. The cost of the expansion scheme is likely to be Rs. 29 lakhs. The Industrial Finance Corporation may contribute Rs. 10 lakhs in the form of a loan. Steel and Allied Products Ltd will offer 9,550 ordinary shares of Rs. 10 each for public subscription at par on 8th April. (Fuller details concerning the offer are published on a later page.) The present issued capital is Rs. 5.45 lakhs, divided into ordinary shares of Rs. 100 each. When the expansion scheme is completed, the turnover may be more than Rs. 40 lakhs a year and the directors expect to pay satisfactory dividends. There is a good demand for wood-working saws and the domestic production is inadequate.

Gwalior Sugar Profit Up

The Gwalior Sugar Co Ltd has earned a profit of Rs. 4.51 lakhs during the year ended June 1960, after providing Rs. 3.96 lakhs (against 3.50 lakhs) for taxation and Rs. 1.77 lakhs (against Rs. 1.98 lakhs) for depreciation. The profit was Rs. 3.89 lakhs in 1958-59. The ordinary dividend has been increased from 10 percent, taxable, to 12½ percent, taxable. The preference share redemption reserve is allocated Rs. 1 lakh (against Rs. 50,000) and general reserve Rs. 75,000. The carry-forward is Rs. 12,594, compared with Rs. 30,235 brought in. The cane crush was 3.1 million maunds (against 2.1 million maunds) in 1958-59 and the recovery improved from 9.48 percent to 9.85 percent. The crushing capacity has been raised to 900 tons a day, and it is proposed to increase it further to 1,100 tons a day. The directors are thinking of asking the Government for permission to expand the capacity later to 1,250 tons a day. The outlook for 1960-61 is considered good in view of the bigger crush, although a strike interrupted working temporarily some time ago.

New Foundry of Microtec

Microtec Castings Private Ltd of Madras is setting up a big foundry at St. Thomas Mount with West German collaboration. The foundry has been licensed to produce annually 1,000 tons of special iron, malleable iron and steel castings which are being imported at present. The project is estimated to cost Rs. 35 lakhs. Machinery worth Rs. 15 lakhs will have to be imported from West Germany. For this, payment will be made in deutschemarks on a deferred basis. H. F. Cordes and Co. is the West German firm which is collaborating in the venture.

Shreeniwas Cotton Pays More

The shares of the Shreeniwas Cotton Mills Ltd have risen from Rs. 225 to Rs. 271 since the turn of the year on sustained investment support based on ideas of a higher dividend. The hopes have now materialised. The directors have recommended a taxable dividend of Rs. 18 a share, against Rs. 15 a share, taxable, in 1959. The net dividend works out to Rs. 12.60, against Rs. 10.50. The increase in the dividend is fully justified by the Company's encouraging performance during the year ended December 1960. Sales are up from Rs. 4.16 crores to Rs. 4.47 crores. The gross profit amounts to Rs. 69.67 lakhs, which is about Rs. 30.69 lakhs higher than in the previous year. Taxation accounts for Rs. 18.50 lakhs (against Rs. 8 lakhs) and depreciation Rs. 14.14 lakhs (against Rs. 10.51 lakhs). A sum of Rs. 5 lakhs (against Rs. 8 lakhs) has been transferred to development rebate reserve, Rs. 7 lakhs (against nil) to general reserve and Rs. 1.38 lakhs to capital reserve (against nil). The marked rise in profits is attributed partly to the renovation and modernisation of the mills and partly to the change-over in production to finer varieties. All the goods manufactured by Shreeniwas Cotton are processed in the mills. During the year, it installed machinery worth Rs. 20 lakhs. It proposes to install more machinery worth Rs. 45 lakhs during the current year. Eight American combers have been erected. Three sizing machines, ten winding machines, shearing and cropping machines and a sanforising machine will be added during the current year. The directors say that the huge madernisation programme carried out during the past few years and the additional facilities available for producing the diversified range of fancy fabrics will progressively benefit the Company and will be reflected in its future results. Shreeniwas Cotton had to pay Rs. 6.5 lakhs more in 1960 due to the implementation of the Textile Wage Board award. Shree Madhusudan Mills—one of its subsidiaries—has also shown better results. It has wiped off the loss and has provided about Rs. 16.5 lakhs for depreciation for the first time. Shree Gopal Industries Ltd, another subsidiary, is expected to start functioning by June this year.

Kerala Laxmi Mills Share Offer

The subscription list for the Rs. 14-lakh issue, made up of 12,500 equity shares and 1,500 preference shares—both of Rs. 100 each—by the Kerala Laxmi Mills Ltd will open soon. The entire issue has been underwritten by the Bank of Madura. Kerala Laxmi Mills has an authorised capital of Rs. 50 lakhs, consisting of Rs. 30 lakhs in equity shares and Rs. 20 lakhs in 8 percent, taxable, cumulative redeemable preference shares. The issued capital is Rs. 35 lakhs, made up of 26,000 equity shares and 9,000 preference shares. Of this, the directors and their friends have subscribed for 11,000 ordinary shares. The Kerala Government has agreed to take up 2,500 ordinary shares and 5,000 preference shares. Twelve thousand and five hundred ordinary shares and 1,500 preference shares will be offered to the public.

Kerala Laxmi Mills has obtained a licence to establish a spinning mill with 24,000 spindles The factory will be located near Trichur. The machinery has been ordered and the construction of the factory building has commenced. The promoters expect that the mill will go into production before the end of the current year. The entire project is estimated to cost about Rs. 70 lakhs, of which Rs. 35 lakhs will be provided by the capital issue. The balance will be met by a fresh capital issue and/or a loan from the Industrial Finance Corporation. Working capital requirements are estimated around Rs. 15 lakhs.

Micro Steel Tube Corporation

A new enterprise known as the Micro Steel Tube Corporation has been formed for manufacturing spun pipes of varying lengths for sewage, drainage and water supply. The factory will be located in St. Thomas Mount, near Madras, and will produce 18,000 tons of pipes a year on a three-shift basis. Production is likely to start before the end of next year. The project is estimated to cost about Rs. 50 lakhs. Akere Syckebrucket A.B. of Sweden is likely to collaborate in the venture, but the terms of collaboration have not yet been finalised. Of the estimated cost of Rs. 50 lakhs, Rs. 30 lakhs will be spent on machinery and equipment and Rs. 10 lakhs on buildings. Micro Steel will have an authorised capital of Rs. 50 lakhs in equity shares of Rs. 100 each. It has not yet been announced when the Company will enter the market for raising capital.

Vaikundam Rubber Pays More

The Vaikundam Rubber Co. Ltd has earned a net profit of Rs. 5.68 lakhs during the year ended December 1960, against Rs. 4.41 lakhs in the previous year. To this is added Rs. 58,210, being excess provision for taxation in previous years no longer required. The provision for Central and agricultural income tax is Rs. 2.3 lakhs (against Rs. 2.21 lakhs). The interim dividend of 15 percent, taxable, paid in October 1960 absorbed Rs. 1.32 lakhs. The final dividend of 15 percent, subject to tax, now recommended will absorb the same amount. General reserve gets Rs. 79,000 (against nil) and rehabilitation reserve Rs. 52,400 (against nil). A balance of Rs. 903 is carried forward, against Rs. 585 brought in. The total dividend of 30 percent, taxable, compares with 25 percent, taxable, for the previous year. The crop was 581,200 lbs (against 494,400 lbs). The average yield an acre was 758 lbs (against 644 lbs). The cost of production was 55.66nP a lb (against 60.72 nP). The estimates for 1961 provide for a crop of 550,000 lbs at a cost of 66.56nP a lb.

Anaparai Estates Profit Down

Anaparai Estates Ltd has earned a net profit of Rs. 3.68 lakhs for the year ended June 1960, against Rs. 5.83 lakhs in the previous year. Depreciation gets Rs. 43,828 (against Rs. 64,753). Reserve for agricultural income tax and Central income tax gets Rs. 1.40 lakhs (against Rs. 2.16 lakhs). The directors have recommended a dividend of 20 percent, subject to deduction of tax, against 25 percent previously. This dividend will absorb Rs. 2.42 lakhs. The balance of Rs. 34,372 is carried forward, against Rs. 27,812 brought in. The coffee crop was 9,177 cwts (against 10,519 cwts). The average cost of production was Rs. 86.48 a cwt (against Rs. 74.70). The coffee crop in 1960-61 is estimated at 537 tons.

Induction Furnaces from New Standard

Reliable reports indicate that the New Standard Engineering Co. Ltd, Bombay, has entered into a collaboration agreement with Forni Ellettrici A. Tagliaferri of Italy, for manufacturing low-frequency induction and coreless furnaces, mixers and receivers. The furnaces are suitable for melting and superheating steel, cast iron and non-ferrous metals. The first furnace is expected to be ready in 1962. New Standard Engineering will perhaps be the first in India to manufacture low frequency induction furnaces. It is also considering the manufacture of glass lining of pressure vessels for chemical industries with the technical collaboration of Nikex of Hungary.

Policy for Barter Deals

The Government of India, it is reliably understood, has recently taken some policy decisions concerning barter proposals. The Barter Committee is unlikely to entertain proposals where exports or imports are for a small value, that is, less than Rs. 10 lakhs. Commodities which are traditionally exported to particular countries or areas will not be considered for export under barter. The United Kingdom will normally be excluded from the scope of such deals. Items which will be permitted for import should have known international prices. Machinery will be kept out of barter proposals as far as possible. As for old cases, the Government thinks that a barter application once approved should be valid for only six months. If a party is unable to implement the barter decision within a period of six months for some special reasons, the period may be extended, but not by more than six months. If a deal is not implemented fully within the specified period, it will be deemed as cancelled. The need for a stricter code of discipline has arisen because there have been many instances of applicants not pushing through the deals long after they have been sanctioned by the Government.

Wide Strip Mill in Rourkela

The wide strip mill, which is one of the most important sections of the Rourkela steel plant, was formally inaugurated by Mr. Nehru on Tuesday. The inauguration of this mill means that all the hot rolling facilities have been installed. The major construction work for the one-million-ton steel plant has thus been completed. Speaking at the inauguration ceremony, Mr. Nehru thanked the West German Government and the engineers for their help in building the plant. Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, expressed the hope that the expansion of the Rourkela works would proceed smoothly. Dr. H. Von Scherpenberg, West German Secretary of State for Foreign Affairs, declared that the Rourkela plant "is to be enlarged further under the third plan, and my Government has made proposals to help the Indian Government in obtaining sufficient credit facilities necessary for the realisation of the expansion plan. Besides our participation in financing the third plan, the Federal Government will carry on with its technical assistance." It is inviting 20 members of the technical staff in Rourkela to spend 18 months in West Germany for further specialised training.

New Plastic Paper Unit

The Bombay Housing Corporation, it is understood, has secured a licence from the Government, subject to certain conditions, for establishing a new industrial undertaking in Wadala, Bombay, for manufacturing 3 million square feet of plastic paper laminates a year. The terms and conditions of foreign collaboration will have to be approved by the Government. The latter has stipulated that the Corporation should meet the cost of machinery through equity participation or private credits or rupee sources. Besides, it should undertake to obtain raw materials under the export promotion scheme.

Bank Deposits and Advances

Speaking at the annual general meeting of the Indian Banks Association in Bombay last week, Mr. C. H. Bhabha, chairman, said that banks in India have made steady efforts to gather additional resources and divert them into productive channels. Nevertheless, the deposits of scheduled banks fell towards the close of 1960. This was largely due to the new policy formulated for P.L.480 funds, which had hitherto been kept exclusively with the State Bank. They are now placed in a new account with the Reserve Bank. Past accumulations of these funds, Mr. Bhabha said, are also being gradually transferred from the State Bank to the Reserve Bank in monthly instalments of Rs. 12 crores since July 1960. Total deposits of scheduled banks, therefore, fell from Rs. 1,828 crores on 25th December, 1959, to Rs. 1,760 crores on 30th December, 1960—a fall of Rs. 68 crores. Besides, the trend which was in operation for the past two years of time deposits increasing faster than demand deposits was reversed. While demand deposits declined by Rs. 30 crores, time deposits fell by Rs. 38 crores between 25th December, 1959, and 30th December, 1960, the former declining from Rs. 717 crores to Rs. 687 crores and the latter from Rs. 1,111 crores to Rs. 1,073 crores.

As against the trend in deposits, advances made by scheduled banks increased from Rs. 812 crores on 25th December, 1959, to Rs. 1,008 crores on 30th December, 1960—an increase of Rs. 196 crores. Mr. Bhabha said that the rise in the demand for credit has been due to an increase in the tempo of economic growth, but it has imposed great strain on the resources of the banking system and the ratio of advances to deposits has exceeded normal requirements. He, therefore, urged the authorities to bear this in mind before thinking in terms of regulatory measures for conducting banking business in India. Another trend during the past year was that the value of bills discounted did not maintain the healthy growth noticeable during the last few years. The measures for the rediscounting of bills and advances against securities, the chairman said, have been yielding handsome profits to the Reserve Bank, which has been making advances at the graded rates of 4 percent, 5 percent and 6 percent to banks. The authorities should consider the long-term impact of these measures, for apart from the reduction in Government securities held by scheduled banks from Rs. 760 crores at the beginning of last year to Rs. 650 crores at the end of it, many small investors as well as supporters of gilt-edged securities have been reluctant to go in for them unless compelled to do so.

Tax Concessions for Cloth and Yarn

The cotton mill industry, which was greatly perturbed about the new and additional excise levies on cloth and yarn proposed in the Central Budget, is happy with the various concessions allowed by the Finance Minister in response to the industry's protests. Yarns of one to ten counts have been exempted from the new levy in order to facilitate the production of coarse cloth as well as cotton carpets woven on handlooms. This announcement was made on 17th March. Now, the Government has agreed that the duty on yarn produced and consumed in the same mill for manufacturing cloth should be compounded into a levy on cloth at the uniform rate of 1.2nP a square metre for all categories. Exported cloth will be exempt from the duty. The Government has also decided to exempt the first 70 percent of the output of automatic looms from the extra surcharge of 25 percent which will be levied on the remaining 30 percent. But a drawback will be allowed on the duty so paid to the extent of exports of cloth made from automatic looms.

The additional burden apart, the Indian Cotton Mills Federation criticised the excise levy on yarn consumed within the mill on the ground that it amounted to double taxation since there already existed a duty on cloth. It pointed out that the excise duty on yarn of composite mills was likely to give rise to serious administrative difficulties. The surcharge on automatic looms was attacked on the ground that it would hinder the modernisation of mills. The Central Finance Minister has done well in conceding the industry's viewpoint, although the concessions now allowed do not meet the full demands. On its part, the Federation has decided that out of the compounded levy of 1.2nP a square metre, 0.2nP will be borne by the mills and 1nP will be passed on to consumers by amalgamating it with the excise duty stamped on cloth. The revised duties which will now be stamped on cloth will be at the rate of 47.7nP for grey superfine, 34.6nP for grey fine, 16.7nP for grey higher medium, 13.7nP for grey lower medium and 11.3nP for grey coarse. Besides, the Federation has decided that the mills should bear the increased production costs due to the levy on coal tar dyes, caustic soda and soda ash. The surcharge on cloth produced on automatic looms is not to be passed on to the consumer. While the industry is reasonably satisfied with the tax concessions, it would like to see an early end to the procedural problems.

Price-linking Formula for Sugar

Representatives of the sugar industry in U.P. have pleaded that a rehabilitation allowance for machinery replacement must first be allowed before the deferred price is determined, if there is to be any price-linking between sugar and sugarcane. In their evidence before the Tariff Commission which visited Lucknow last week, they said that there was no justification for such linking as long as the sugar price is controlled and fixed on the basis of a minimum price for cane. Cane-growers' representatives opposed the grant of a rehabilitation allowance to mills at the growers' cost. The main issue being considered is how the cane-growers could be allowed a deferred payment in addition to the statutory minimum price out of the extra receipts, if any, made by a factory during any season. Following an agitation in 1952-53 by the cane-growers for an increase in cane price, the late Mr. Rafi Ahmed Kidwai suggested that the growers accept a share in the excess profits of the industry. A price-linking formula has, in fact, been statutorily enforced by the Central Government from the 1958-59 season, but the Joint Sugar Cane Board of U.P. and Bihar find it to be somewhat complicated. A price-linking advisory committee has also been set up by the two States. A tripartite conference was held and a formula was evolved, but the millowners did not accept it. The millowners had from the very beginning been demanding a rehabilitation allowance, and their claim has been strengthened after the Supreme Court's judgment allowing rehabilitation grant to a cement factory.

Jute Goods Exports

According to the provisional figures compiled by the Department of Commercial Intelligence and Statistics, shipments of jute goods in 1960 fell to 853,500 tons, compared with 860,200 tons in 1959 and 793,500 tons in 1958. It is feared that the final figures might show a bigger drop, although in terms of value, earnings might be substantially higher. (The value, according to one estimate, will exceed Rs. 130 crores, in which case jute goods will have again become the country's best foreign exchange earner.) Speaking at the annual general meeting of the Calcutta Jute Fabrics Shippers Association last week, the president, Mr. N. L. Kanoria said that because of high prices, Indian jute goods now stand in danger of losing their overseas markets to alternative packaging materials. The major decline in the case of hessian exports (which fell by 2,372 tons during the year) occurred in the U.S. and Argentine markets. Buyers there "have kept out of the market as far as possible and adopted a 'wait and see' policy." The Argentine took only 36,162 tons, compared with 51,470 tons in 1959, and the U.S.A. bought 194,588 tons, compared with its 1959 purchase of 205,172 tons. The fall in sacking exports (by 20,441 tons), however, was mainly due to the famine in China, and to some extent because of smaller shipments to Burma and some west Asian countries. There were increases in sales to Russia, the U.A.R., Cuba and some west European countries. A redeeming feature is that shipments to Australia,

India's biggest market for sacking, were well maintained, and burlap consumption in the U.S.A. continued at the usual rate, although imports were less. West Asian and African countries now offer a great potential for increasing jute goods exports, "and once the political climate in these areas is more settled, and planned economy has been introduced to improve the living standards of the masses, the demand for jute goods should rise considerably." The world demand for jute manufacture should also improve with the development of its economy.

A satisfactory feature of the jute goods trade is that home consumption has been showing a steady rise in recent years. "We can look forward with confidence to a continuation of this trend in the years that lie ahead," Mr. Kanoria said. The Indian offtake amounted to 286,200 tons in 1960, compared with 234,000 tons in 1959. The prospect is good, but the potentialities cannot be realised unless constant efforts are made to increase raw jute supplies. The difficult year through which the Indian jute industry is now passing is entirely due to the fibre shortage during two successive seasons. Mr. Kanoria stressed that the long-term solution to the industry's raw material problem lies not in official controls or in fixing prices at artificial levels, but in improving the quality of fibre and raising yields from the existing acreage. If jute is in short supply, prices cannot be stopped from rising. "The first thing to be done—and the I.J.M.A. has done it—is to arrange a fair distribution of the available raw material so as to achieve a balance between the consumption and estimated supply," Mr. Kanoria said.

Hemp Exports Fall

The crucial problem facing the hemp trade is the rapid decline in exports. Since a negligible part of the output is consumed in India, the prosperity of the trade depends largely on external demand. Speaking at the annual general meeting of the Indian Hemp Association in Calcutta last week, Mr. G. S. Poddar, president, said that exports of sann hemp were 11,800 tons in 1959-60, against 14,900 tons in 1957-58 and 26,100 tons in 1956-57. The United Kingdom is the largest buyer and accounts for about 52 percent of total Indian exports. But her imports in 1959-60 amounted to only 30 percent of her past imports. The chairman of the London Hemp Association has stated in his report for 1959-60 that unless Indian hemp prices are reduced to meet the competition from substitutes, a steady decline in the demand for the commodity will be inevitable. The high prices, Mr. Poddar said, are due to the heavy expenses incurred by the trade in fulfilling formalities connected with Agmark labelling, the levy of sales tax, the rise in freight rates, port charges, etcetera. These factors have reduced the competitive capacity of Indian hemp in world markets, while Russian flax and Chinese wastes are being increasingly used because they are cheaper.

Shifts in Economic Policy

In his address at the annual general meeting of the Bombay Chamber of Commerce and Industry in Bombay last week, Mr. C. H. Campbell, president, said that the Government's approach to economic development is becoming more pragmatic, as indicated by its latest decisions on coal and fertilisers. It would be more reassuring if the lessons of the doctrinaire industrial policy had been fully learnt, but judging from the Oil Ministry's activities in the matter of petroleum refining, this does not seem to be the case. "The Ministry seems to be blinded still with doctrinaire preferences with regard to the means to be selected for refining oil in India, although foreign companies have been invited to discuss prospecting for oil," Mr. Campbell said. The existing refining capacity in India is 6 million tons a year. The demand may rise to nearly 14 million tons in 1966, in which case a gap of 8 million tons will have to be filled. One of the existing refineries, Mr. Campbell said, has already offered to expand its capacity to approximately 4 million tons within 18 months and complete a lubricating oil manufacturing complex of between 60,000 tons and 100,000 tons annual capacity within a year afterwards. All this would be done without any foreign exchange being spent. Moreover, it holds the promise of a net saving in foreign exchange of Rs. 6 crores a year with effect from 1963, if early sanction is given. But no such sanction has been forthcoming yet. The president praised the efforts of the Central Ministry for Commerce and Industry to stimulate industrial production. But he pointed out that the liberal manner in which additional industrial capacity is being licensed involves the danger that if sufficient foreign exchange cannot be found, a good deal of the productive capacity will remain unused. Mr. Campbell regretted the fact that the development rebate has been reduced from 25 percent to 20 percent. "This rebate is one of the best selling points as far as foreign investment is concerned. It is a pity that we are advertising it now at a depreciated value." The Bombay Chamber of Commerce and Industry, which is celebrating its 125th anniversary this year, has produced a special brochure on investment prospects in India. It is a factual publication meant specially for the foreign investor.

Raw Materials for Ropes

The Indian rope manufacturing industry at present has a combined installed capacity for about 19,800 tons of manila, sisal and aloe ropes and cordages. It is capable of producing 10,000 tons more with home-grown materials, but a large part of this capacity has remained idle due to the acute raw material shortage. Speaking at the annual general meeting of the Indian Rope Manufacturers Association in Calcutta recently, Mr. H. D. Wahi, chairman, said that the industry has to depend on imports for most of the hard fibre it needs. But the Government has halved the import quota because of the foreign exchange shortage. Even the reduced quota is now difficult to obtain as other manufacturing countries are buying more of the hard fibres. For example, consumption in Japan, North America, the U.K. and Europe has increased to 90.8 percent of the total world production. The balance of 9.2 percent available to other countries, including India, is, therefore, very meagre; as small buyers, they have always been at a disadvantage. Mr. Wahi pointed out that the amount which is likely to be saved by the drastic cut in raw material imports of the rope industry is only Rs. 20 lakhs, which is insignificant in comparison with the country's total import bill. Most of the foreign exchange spent on such imports can be recovered through larger exports of Indian ropes. The Central Minister for Industry made a welcome statement at the last meeting of the Import Advisory Council that a portion of the foreign aid in future might be earmarked for maximising production from existing capacity. Mr. Wahi hoped that the rope industry would not be left out of the scheme. Urging the Government to take over the responsibility for promoting indigenous fibre cultivation, Mr. Wahi said that the total requirements of sisal and aloe fibres amount to about 10,000 tons a year, but hardly 4,000 tons are available locally. The supply of indigenous aloe fibre is not only inadequate, but also irregular as it is not grown on a commercial scale. Mr. Wahi suggested that no more indigenous units should be licensed until the full raw material supplies are ensured. He was surprised that the Rajasthan Government has already licensed a new unit.

Screw Output and Exports

Speaking at the annual general meeting of the Screw Manufacturers Association in New Delhi recently, Mr. S. K. Mazumdar, president, said that about 51 units are at present engaged in manufacturing wood screws. Out of these, 20 units are registered with the Development Wing and about 31 units are working in the small-scale sector. The production capacity of the 20 units under the Development Wing, Mr. Mazumdar said, was 7 million gross in 1960 on a single-shift basis. Together with the capacity of about 5 million gross in the small-scale sector, the industry is at present producing about 12 million gross a year, as against the Tariff Commission's estimate of demand at 11 million gross for 1960. There are 11 major units engaged in manufacturing machine screws in India. Some of the units have diversified their production by taking up the manufacture of precision machinery, screws and fasteners. But the expansion programme of the producers has been hampered by the raw material shortage. Neither the Iron and Steel Control nor the Development Wing are able to expedite the supply of steel wire, because the present capacity of Indian Steel and Wire Products Ltd is fully booked. Besides, manufacturers in Punjab, who are willing to expand production, are unable to do so due to the shortage of electricity. Dealing with the export of wood screws, Mr. Mazumdar said that a "screw export pool" has been formed by the Association with a view to exporting 25 percent of the industry's total output. The value of screws exported in 1960 increased to Rs. 12.35 lakhs from Rs. 49,665 in 1959.

Wheat Allocations for Flour Mills

Speaking at the annual general meeting of the Calcutta Flour Mills Association in Calcutta recently, Mr. G. E. Howitt, chairman, said that flour mills in West Bengal had another busy year in 1960 since the quantity of wheat milled was larger than in 1959. The increase in production was achieved in spite of the continuance of controls over both selling prices and extraction percentages of various wheat products, as well as inadequate allocations of wheat. The Association made repeated representations to the Government for increasing the allotments, because the shortage of wheat compelled the industry in the State to work at only 66 percent of its capacity. The West Bengal Government set up a wheat committee in February 1960 to assess the capacity of flour mills in Calcutta. As a result of the committee's recommendations, it decided to increase wheat allocations from 800 tons to 900 tons a day. But the increase was not sufficient to enable mills to work at full capacity. Besides, their working was hampered by irregular allocations and supplies. The chairman said that the wheat supplied to mills last year was abnormally "heavy in refraction", dusty and had a high moisture conttnt, although the quality improved when wheat imported from the United States under P.L. 480 came later in the year. Even so, mills have had to face difficulties in blending because of the disproportionate allocation of red and white wheat. The Association, Mr. Howitt said, asked the Government to supply 75 percent red wheat and 25 percent white wheat. Although the Government had earlier agreed to this arrangement, few mills have actually received wheat in this proportion. Mills were sometimes given red wheat and then supplied only white wheat, resulting in a complete reversal of blends which affected the colour of *atta* and strength of flour. Mr. Howitt, therefore urged the Government to adhere to the proportion of 75 percent red wheat and 25 percent white wheat with a view to removing the blending difficulties of flour mills in the State.

Unplanned Expansion in Refractories

In his address from the chair at the annual general meeting of the Indian Refractory Makers Association in Calcutta recently, Mr. A. Banerjee said that the Government continues to issue licences liberally for new units as well as for capacity expansion, so there is danger of a surplus developing in the firebricks market. This is also obvious from the demand for refractories as estimated in the draft proposals for the third five year plan, compared with "the installed capacity and additional licensed and sponsored capacity as at June 1960 given in the same document." The situation will get worse if the steel industry changes over to the proposed all-basic practice, Mr. Banerjee said. The refractory industry as a whole does not have an adequate market for its firebricks, which are its "bread and butter". If the position is to deteriorate, it is hard to see how the industry can economically expand to the extent required, particularly for special refractories, during the next five years. The estimates of the Development Wing about certain refractories are on the high side and require further study, as a large amount of foreign exchange will be required for setting up additional plants. Another suggestion made by Mr. Banerjee, which would not only ensure fuller use of capacity but save foreign exchange, is that the Government should place its orders on the domestic industry for the refractories required for its numerous public sector projects sufficiently in advance, so that the producers can plan their output for timely delivery of the materials.

THE LONDON GOLD RESERVE

WE were glad to see the Hon'ble Sir Allan Arthur take exception in the Budget debate to the appropriation of the profit on the coinage of rupees during the year 1900. The currency and resources of the Government of India were arbitrarily expanded to the extent of Rs. 2,59,50,000. The disturbance to the State accounts is unimportant, as the money was lent to Native States for famine purposes, and will be placed in the London Gold Reserve, when received back; but the reconversion of the money from rupees into gold will practically go to swell the amount which the Government of India has to remit to London; and in a year when the balance of indebtedness is less favourable to India than usual, there might be some difficulty in selling the full amount of Council Bills. This is the argument used by Sir Allan Arthur in condemning the practice; and the Financial Member of Council concurred in this view; but there is another objection, viz., that for a prolonged period the Indian currency will be arbitrarily enlarged, and this redundancy will tend to cease a fall in exchange just at the time when the surplus rupees have to be reconverted into gold. In placing these extra 2½ crores in circulation the Government of India made a mistake similar to what would be made by the Paper Currency Department, if, on receiving 5½ crores of rupees from the public, it issued a corresponding amount of notes to the public, and then made over as a present an additional 2½ crores notes to Government for State expenditure. Action of this kind would be illegal, and it is to be hoped that ere long the appropriation of profits on the coinage of rupees will be equally illegal.

A Ditcher's Diary

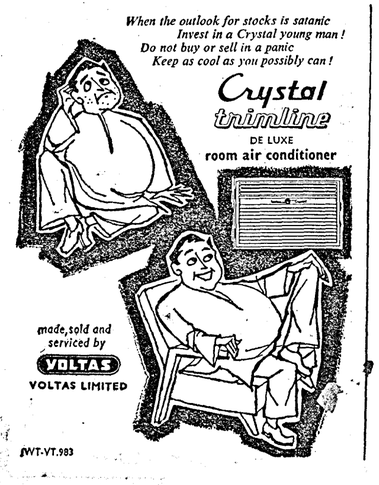
IN CALCUTTA THEY HAVE DECIDED NOT TO SHOOT THE pianists after all—they had done their worst and will do so again. That most of the old gang is back in the Corporation will doubtless be paraded now by the Councillors as the ultimate proof that all the criticism against them in public and the Press was false and malicious. (Some of the bunch did in fact try once to censure the Press for having exposed various scandals.) "Look, now," they will say, "how the citizens of Calcutta—dirtiest city, my foot!—have shown their confidence in us, for we are back after due democratic elections." I hope the more discreet among the Councillors will not emphasise democracy too much, for let it be remembered that of Calcutta's three-odd million citizens just about 200,000 have votes, and only about half of these ever care to exercise their right. It is by design that the franchise is so ridiculously limited; and then the various manipulations are no secret. The Municipal Act has been amended time and again; and now let me make a concrete suggestion. Abolish the electoral department of Calcutta Corporation; for if the adult-franchise roll for elections to Parliament and the Assembly is good enough for India's democracy, it should be so for Calcutta's democracy too. The fact is that there is no democracy in Calcutta's municipal administration; and all that talk about civic democracy is so much poppycock. The Congress must be pleased with itself; and I have heard of incidental gains in terms of the coming general election and funds for it. But the Congress does well to remember that when there is democracy in voting in Calcutta, as in the elections for Parliament and the Assembly, the Party makes a very poor showing indeed. In the latest election there was not much to choose between the Congress and the U.C.C., true; but that seems to me an excellent reason for calling the whole expensive farce off. Judging by the Calcutta Press, Dr. Roy seems to be dithering about the Calcutta Metropolitan Board, at least until the elections are out of the way. Here, surely, is the one occasion when Dr. Roy should rise above party politics and force the Board Bill through. Why not a referendum on it, so that the people of Calcutta have a chance to tell all the political Parties just where they get off? If there is no provision for a referendum in the Indian Constitution, I say: provide it.

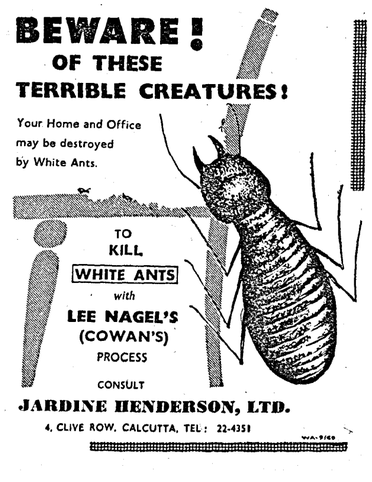
MOST STAMP-COLLECTORS WOULD DENY THAT THEY are making an investment in the hope of large capital gains one distant day, yet everyone knows that there is a good deal of speculation in rare stamps. It appears, however, that the chances are very slim of an amateur picking up cheaply a stamp that will later turn out to be valuable. I have just seen an expert quoted very firmly to the effect that "practically none of the stamps issued in the past 20 years have appreciated in value. In fact, if you take a collection of modern stamps to a dealer, the chances are that he will buy them only at a discount from face value. They can always be used for mailing letters of course, but it is less trouble to patronise the Post Office when one is buying stamps for that purpose". The only stamps that have soared in value, and in which a speculative investment might be justified, are those that are already known to be extremely rare and which therefore fetch a large sum which may well become larger as other collectors donate their albums to museums. In other words (I don't know how many philatelists' pipe-dreams I am shattering here), there is no possibility of making money in stamps unless you start out with an investment of several thousand rupees in one issue. Stamps costing that sort of money are mainly the early rarities and the famous misprints. Misprints are still happening of course and there is one chance in millions that you might be the first to notice an error; if not, it will already have soared to high prices the moment it is known. At the end of the war the British Government banned the export of stamps, as a way of preventing the flight of capital, but that was because certain refugees had cornered most of the rare old European stamps as the most convenient portable investment: Rs. 25 lakhs worth of real rarities can fit into an envelope. These scarce gems are now moving back across the Atlantic as European collectors once again have the cash to buy them from their U.S. owners. It is these stamps that are involved in the astronomical sales frequently reported in the Press; but they have always been known to be very valuable. There is a chance for modest profit in the new craze for speciality stamps. Some people collect flower stamps, bridge stamps, aeroplane stamps or those portraying famous musicians, and they might pay a fancy price to complete a collection. Needless to say, the experts have moved in here, and there is a magazine published in Canada devoted solely to the market in stamps portraying sportsmen!

I AM SURE I AM RIGHT IN THINKING THAT THE published list of voices in All India Radio's library of tapes is incomplete. Besides Mahatma Gandhi, Sardar Patel, Sarojini Naidu, and Mr. Nehru, Dr. Keskar himself must account for considerable footage; and no doubt the Films Division has likewise immortalised its great Minister. I write in these terms because I find this gentleman's self-pride a shade offensive. Nobody need deny that All India Radio's engineers have achieved great quantitative expansion in India's broadcasting system: there are more stations, more powerful transmitters. The latest report even boasts of a longer list of artistes, for producing whom A.I.R. has perhaps devised a machine. But it is Dr. Keskar's moral righteousness that informs all his attitudes; and the alacrity with which he promised early legislation on "obscene" posters is characteristic. The demand came from some M.P.s, admittedly; but the point to note is that the innate illiberalism of the Minister responded to it so enthusiastically, while he cavalierly dismissed demands for an autonomous corporation. The idea of introducing commercial broadcasting in India also finds little official favour. I am quite familiar with some of the vulgarities perpetrated in the United States and elsewhere by commercial television and broadcasting. But All India Radio's monopoly has become an intolerable tyranny; and if commercial broadcasting constitutes the only way of breaking the monopoly, I think the country should consider it. The listening public is entitled to a more varied programme than it gets from A.I.R., which designs its fare within the narrow ultra-moral frame laid down by Dr. Keskar. In music the Minister's ideas are too rigid, with the result that Radio Ceylon attracts so many listeners. Of A.I.R.'s language policy even Mr. Nehru has often been a critic. As for spoken words, not a breath of controversy or independent thinking is allowed; and dullness and mediocrity dominate most "talks". Then, look at it from the point of view of broadcasters. Once a talker, however talented, has dared to disobey some secret edict, he is quietly "black-listed"; and there is no alternative market for his talent. And talent cannot grow in any case if professionalism is not permitted; and who in India will make broadcasting even his leisure-time, secondary profession when all he can hope to make is about Rs. 100 a month? A.I.R. must be freed from its official chains if it is ever going to occupy a place of importance in the citizens' life.

IT IS A FAD AMONG ECONOMISTS THESE DAYS TO equate investment and growth in an arbitrary and rigid ratio as if the two terms were just about synonymous. Like so many current economic over-simplifications, the idea may have originated from Lord Keynes's doctrine that public investment can revive an economy suffering from cyclical recession—although we know from Lord Keynes himself that as far back as the ancient Egyptians the principle that investment, not necessarily productive, can generate economic growth, was well enough known. Now I see that rebel among economists, Mr. Colin Clark, is challenging the whole idea, and his refutation, contained in a pamphlet entitled *Growthmanship*, published by Barrie and Rockliff for the British Institute of Economic Affairs, is to me a most convincing one. Thanks partly to Professor Rostow, under-developed countries such as India are now obsessed with the idea that "self-sustaining" growth—or should it be "self-continuing"?—is the alpha and omega of economic policy. But Mr. Clark argues that such an obsession can lead to undesirable price increases followed by inflation and balance of payments difficulties which damage the economy and the social system and defeat the object of the growth policy. I am afraid the planners in this country still prefer to ignore this hard truth; they insist on clinging almost neurotically to the belief that capital should be accumulated *at almost any cost*, even where it necessitates what Mr. Clark calls "misdirected investment". Mr. Clark is most convincing when he sets out to prove that an increase in investment may not necessarily lead to the desired result. The rate of growth in Russia was quite fast during the immediate post-war period, but it declined after 1953 despite an increase in the rate of investment. Furthermore, Mr. Clark contends, the average capital-output ratio in developed countries such as Britain, West Germany and the United States has also fallen despite the fact that investment has been rising. This, he maintains, is largely due to the extension of nationalised industry, which is always the worst offender in any economy when it comes to encouraging misdirected investment. While I accept wholeheartedly the hard core of Mr. Clark's analysis, I am disappointed that he should have ignored the individual problems of the economies he deals with—their stages of development, for example, the availability of natural resources and the obvious limitations on their growth. But I suppose this was deliberate; certainly such omissions are a familiar enough feature of analyses of this kind. A good name for them, to take a lead from Mr. Clark, might be economistmanship.

THE DITCHER





THE INDIAN BANK LIMITED, MADRAS.

(ESTD. 1907)

Registered Office: "Indian Bank Buildings", 17, North Beach Road, Madras-1.

(To be placed before the Shareholders at the ensuing Fifty-Fourth Annual General Meeting, to be held on 7th April 1961 at the Registered Office of the Bank, 'The Indian Bank Buildings', 17, North Beach Road, Madras-1.

DIRECTORS' REPORT

ONE HUNDRED AND SEVENTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1960. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 40,32,080-89 and together with the sum of Rs. 80,143-18 carried from the previous year's account, makes a total of Rs. 41,12,224-07.

3. Out of this sum, the Directors have made the following interim appropriations :—

	Rs.	nP
An ad-interim dividend at the rate of 5% and a Bonus of 21% (subject to deduction of tax at the prescribed rates) was paid which absorbed	6,22,500	00
To transfer to Sinking Fund	2,00,000	00
The Directors now recommend that the following further appropriations may be made :		
To pay a final dividend of 5% and a Bonus of 21% (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15%	6,22,500	00
To provision for taxes	23,00,000	00
To transfer to Sinking Fund	2,00,000	00
To transfer to Bank's buildings account	30,988	00
To carry forward	1,36,236	07
	41,12,224	07

4. The Bank rate remained unchanged at 4%

5 Offices of the Bank were opened during the year at Muthialpet (Madras) Neyveli, Vishakapatnam and Willingdon Island.

6. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Sec. 256 of the Companies Act, 1956 four Directors, Messrs. R. Sundram Iyer, T. S. Kachapikesa Mudaliyar, Kumararajah M A M Muthiah Chettiar of Chettinad and R. K. Venkatachalam retire this year by rotation and they, being eligible, offer themselves for re-election.

7. Sri K. Arunachala Mudaliar resigned his seat on the Board on 2nd December, 1960. In his place Sri C. Ramasubban was co-opted as a Director on 20th January, 1961.

AUDITORS' REPORT

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December, 1960 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in Malaya, and Singapore. The accounts of the Branches in Malaya and Singapore were audited by auditors qualified under the laws of those countries and appointed by the Board of Directors before the Companies (Amendment) Act 1960 came into force. The Bank has applied for necessary exemption to the Central Government. We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit :

(b) Such information and explanations have been found to be satisfactory ;

(c) The returns received from the Malayan and Singapore branches have been found adequate for the purpose of our audit :

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank ;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required, subject to the note appended to the Balance Sheet.

(f) In our opinion, (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1960.

(ii) the Profit and Loss Account gives a true and fair view of the Profit and Loss for the year ended on that date and shows a true balance of profit for the period covered by the audit ; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and returns.

OBJECTS

The main object of the Company is to manufacture and deal in all kinds of pulp, paper, paperboards and paper products, and the particular immediate object is to construct and erect near Darbhanga (State of Bihar) a factory for the purpose of manufacture and production of 15,000 tons per annum of Writing & Printing Papers and necessary Pulp therefor.

SITE

The Pulp and Paper Mills will be located at (RAMESHWARA NAGAR) about five miles to the south of Darbhanga township in North Bihar.

Land measuring about 320 acres is under acquisition proceedings as per Declaration and Memorandum of Agreement published in the Bihar Gazette Extraordinary dated September 10, 1960, and will be delivered to the Company soon.

RAW MATERIALS

The main fibrous raw materials to be used are sugarcane bagasse and bamboo. Some quantities of Sabai grass will also be used.

The large number of sugar mills in the vicinity of the site of the proposed Mills can supply adequately the present and future requirements of bagasse for the Mills. The Company has entered into an agreement with The Durbhanga Sugar Co. Ltd., Lohat situate within 25 miles from the Mills, for supply of at least 18,000 tons per annum of bagasse.

PROSPECTS

There is a great demand for paper in the country at present. The demand is likely to increase in future. Considering the capacity of the existing concerns in India the prospects for paper industry are quite bright.

START OF THE MILLS

The Mill is expected to go into production in 1963.

PROFITS

The potentiality of the Paper Industry in India for earning profits is appreciably high. Having the advantage of up-to-date plant and machinery and *modern methods and processes of manufacture*, the Company should have substantial savings in the costs of production. The Directors are, therefore, of the opinion that on the basis of the existing prices and market conditions, and in the absence of any unforeseen circumstances, the Company should be in a position to make sufficient profits so as to pay reasonable dividends to the Shareholders after meeting all costs and overheads.

INDIAN MINING ASSOCIATION

COAL—ITS DEVELOPMENT AND PROBLEMS

The following is the speech by Mr. R. H. Wright, Chairman of The Indian Mining Association at the Annual General Meeting of the Association held in Calcutta on 24th March, 1961 at the Bengal Chamber of Commerce and Industry.

Gentlemen.

It is indeed a great pleasure to welcome you to this the 69th Annual General Meeting of the Indian Mining Association. We are particularly pleased to have with us today the Hon'ble Minister for Steel, Mines and Fuel and the fact that he has been able to come down from the Capital for this meeting is a great source of encouragement to us all. Sardar Swaran Singh has been at the helm of the affairs of our Industry for a number of years, and in fact during the period when our major expansion has taken place, and we are grateful for the fair and considerate treatment which we have always received from him. It is also most gratifying to see so many other distinguished visitors, including representatives of the Railways, the Coal Board, the Mines Department, the Coal Mines Welfare Organisation and other bodies whose work is of such importance to our Industry. In particular, we are delighted that our Coal Controller and Chairman of the Coal Board, Mr Zaman, has been able to attend this meeting Now-a-days he has to spend a great deal of his time away from Calcutta placating the many State Governments and important consumers, who feel that only he can be responsible for their present coal troubles, and we are quite certain that throughout these many meetings and negotiations he maintains always the sense of humour without which he could not hope to maintain his level-headed approach to each and every problem. The assistance and advice which we have received from Mr. Zaman have not always been palatable, but as an Industry we are extremely and most sincerely grateful to him for all the constructive and untiring efforts which he has directed towards solving our problems.

It is the usual practice at these Annual General Meetings for your Chairman to review the main events of the past twelve months, but on this occasion I propose to preface this review with a brief summary of the progress which we have made over the past five years. The period of the Second Five-Year Plan comes to an end in a matter of a few days and it is important that we should learn all that we can from both the failures and achievements, in order that such experience may be applied to our progress during the coming Third Plan. I suppose that it is only natural that on the occasion of each speech from this Chair there should be a feeling that the Indian Coal Industry has never before held such an important position in the affairs of the country as a whole, but such a feeling must be literally true today when numerous industrial units throughout the country are lacking their basic fuel—coal. I am sure that each lump of coal being raised today, whether it be from our high grade Dishergarh and Selected Jharia seams or however lowly, would blush, if it could, in realising the importance attached to its raising, movement and consumption.

Second Five-Year Plan

All-India coal production during 1955 amounted to 38.25 million tons, of which the private sector produced 33.8 million tons. We, the private sector, were expected to produce 45 million tons by the end of the Plan, and our actual output during 1960 amounted to less than 43½ million tons. There was thus a shortfall in our actual production of about 1½ million tons out of the total shortfall of over 3 million tons, and we must face the fact that the targets have not been achieved whatever may have been the cogent reasons and however impossible it may have been to transport all the coal raised had the targets been reached. We all know the basic reasons for this shortfall—and, as I have said before, the experience gained in the Second Plan must be applied to ensure that the tremendous targets of the Third Plan are fulfilled. It is good to know that Sardar Swaran Singh shares our desire to pursue with vigour this question of planning in great detail for our future requirements. A great deal has been achieved and let us take credit for the fact that during the course of the past five years we have been able to raise the annual level of coal production by over 13½ million tons, or by 35%. Having said that there has been a shortfall during 1960, I must point out that the actual coal output of the private sector during the 12 months ended 28th February, 1961, has amounted to 441 million tons—a mere half million tons below its target.

We have suffered by reason of severe restrictions on our development plans, labour policy has not always been helpful, individual necessities such as explosives have been in short supply on occasions, but undoubtedly the most important reason for the shortfall in production has been the acute foreign exchange position which has denied to the industry sufficient licences for the import of spare parts, quite apart from the new plant and machinery so urgently required. Any visitor to the coalfields today will see numerous coal cutters, haulages and other vital items of equipment lying idle owing to lack of some essential spares. Such machinery represents a considerable quantum of unremunerative investment by the collieries concerned. I must state emphatically at this stage, however, that the industry as a whole believes that the foreign exchange which has been made available has been utilised by the Coal Controller's office and by our Import Controller to the best possible advantage. But it has just not been sufficient.

Foreign Exchange

It was, therefore, most gratifying when the Industry was advised towards the end of last year that the International Bank for Reconstruction and Development, more generally known as the World Bank, had indicated the possibility of granting assistance by way of foreign exchange to enable the private sector of our Industry to import requirements for its Third Five-Year Plan expansion. Detailed discussions have since taken place with Members of the World Bank Team who have been with us for a number of weeks, and we were all tremendously impressed with the vigorous and detailed examination which they undertook both at the collieries and here in Calcutta. The Team has now returned to Washington and we eagerly look forward to hearing the details of the assistance which the World Bank will be rendering us. A special foreign exchange allocation of about Rs. 28 crores would ensure that all our requirements of imported plant and machinery and spare parts could be met during the next five years, to enable us to achieve our agreed target of an additional 17 million tons per annum by 1965-66.

I would stress the fact that even though our coal exports have had to be reduced very considerably to the present level, such exports are still earning sterling to the extent of approximately Rs. 5 crores yearly. This means that even at the present low level of coal exports we should earn Rs. 25 crores in foreign exchange over the next five years.

Third Five-Year Plan

The Third Plan coal production target has been fixed at 97 million tons per annum, and the private sector will have to increase its level of output from the present figure of 45 million tons to 62 million tons per annum, whilst the public sector will produce the balance 35 million tons. Our Minister has stated that these targets will not be made too rigid, but that Government are keen that every unit participating in the increased production should maintain its individual phased target. This Association welcomes this increased attention to detailed planning, since we know that a number of new projects on which we are now embarking will continue to expand well into the Fourth Plan. This detailed planning should, therefore, be extended further, and we should by now be assessing the coal requirements in 1970, with necessary attention being given to the new projects required by that time.

It is understood that in the case of much of the increased coal to be obtained by N.C.D.C., contracts for the new projects will be given to various foreign organisations who will be responsible for opening out the new mines on behalf of N.C.D.C. It is not for us to question official policy on this matter, but I would like to point out that we already have in this country technical "know-how" of the very highest calibre which has had experience of the most difficult mining operations in India over the past years. I am quite sure that Government will not overlook the possibility of utilising such indigenous technical experience in their new projects.

Any failure in our Third Plan coal production targets will automatically result in shortfalls in the progressive expansion of the industrial might of the country, and the coal industry must, therefore, have its full requirements of transport, imported plant and machinery and explosives, all of which have been referred to elsewhere. There is one other most important aspect which is being considered at the highest level—power. A number of collieries who have recently applied for increased supplies of energy to meet their expansion plans have been told that the necessary power just will not be available, since the additional generating capacity being installed in the industrial area is already earmarked for other requirements. One need hardly add that this obstacle must be removed as quickly as possible.

N.C.D.C.

We are, indeed, glad to have with us today senior representatives of the National Coal Development Corporation, and I would like to offer them our sincere congratulations on their remarkable achievements over the past twelve months. Such achievements have been due in a great measure to the dynamic outlook of their Managing Director and Deputy-General Manager, Messrs. R. C. Dutt and J. G. Kumaramangalam, and it has been a pleasure to note that their approach to many of the problems of the industry is identical to ours. N.C.D.C. produced during the last calendar year of the Plan almost 6 million tons, thus doubling the output existing at the commencement of the Plan, and this is a great achievement even if we do not dwell on the recent rather misleading use of the expression "production at the rate of....."

The opening out by N.C.D.C. of new mines in virgin areas, and the rapid rise in production from such areas, is indeed a creditable performance which has today placed N.C.D.C. as the largest single producer of coal in the country. Whilst there is no doubt that N.C.D.C. will now go from strength to

ASHOK PAPER MILLS LIMITED—*Cont'd.*

IMPORT LICENCES OBTAINED; FOREIGN EXCHANGE ARRANGED

The Company has been granted by the Government of India Licence for import of machinery valued at Rs. 255 lakhs C.I.F. from France and Rs. 50 lakhs C.I.F. from the U.S.A. respectively.

PLANT AND MACHINERY

Messrs ETUDES ET MATERIELS POUR L'INDUSTRIE DU PAPIER ET DE LA CELLULOSE (EMPACEL) Paris France, reputable French Consultants and Engineers have signed an agreement dated September 23, 1959 with the Company for supply of major portion of plant and machinery and for the design and layout of the entire plant.

Messrs EMPACEL have undertaken to guarantee the output of the whole integrated pulp and paper plant using a variable combination of bagasse, bamboo and sabai grass, with a 24 hours production capacity of 50 long tons of good commercial grade Writing and Printing Papers.

TECHNICAL COLLABORATION; ERECTION: PLANT MANAGEMENT

The Company has entered into a separate agreement dated September 23, 1959 with Messrs. EMPACEL for the erection and installation of the whole plant.

Messrs. EMPACEL have also undertaken to depute trained and qualified Engineers for the purposes of erection of the Mills, planning and supervising the entire erection work who will remain at the Mills till the fulfilment of the guarantees for the erection, performance and production.

FOREIGN INVESTMENTS; DEFERRED PAYMENTS

Messrs. COGEMIC have agreed to invest Rs. 30,00,000/- (Rupees thirty lakhs) in the Share Capital of the Company by subscribing 3,00,000 Equity Shares of Rs 10/- each. These Equity Shares will be allotted to them against payments by them to Messrs. EMPACEL of an equivalent amount against the delivery of the plant and machinery to be supplied to the Company by Messrs. EMPACEL.

The Company has obtained reasonable terms of payment from Messrs EMPACEL for the plant and machinery of £17,25,000/- (pound sterling seventeen lakhs and twenty-five thousand) equivalent to approximately Rs. 2,30,00,000/-. The sum of £15,00,000/- (pound sterling fifteen lakhs) equivalent to approximately Rs. 2,00,00,000/- is payable in ten equal six-monthly instalments the first of which being payable nine months after the date of consignment of the last shipment of the plant and machinery. The balance of £2,25,000/- (pound sterling two lakhs and twenty-five thousand) equivalent to rupees thirty lakhs will be paid to Messrs. EMPACEL by Messrs. COGEMIC in French Francs in France.

Permission has been granted by the Exchange Control Department Reserve Bank of India for the above foreign investment. The said two agreements of the Company with M/s. EMPACEL and the said one agreement with Messrs. COGEMIC have been approved by the Governments of India and France.

GUARANTEE OF DEFERRED PAYMENT AND LOAN OF RS. ONE CRORE BY THE I.F.C.

The Industrial Finance Corporation of India has agreed to guarantee on behalf of the Company to M/s EMPACEL the payments of the instalments of the aforesaid deferred payments and of the interest thereon aggregating to £17,70,000/- (pound sterling seventeen lakhs seventy thousand) but not exceeding Rs. 2,36,00,000/- (Rupees two crores thirty-six lakhs).

The Company has received also the I.F.C.'s sanction for a loan of Rs. 1 crore and the necessary documents therefor are expected to be executed in due course. The rate of interest is 7% per annum with rebate facility of ½% in case of due and punctual repayments of the respective instalments by the Company.

CAPITAL OUTLAY

The Capital outlay is estimated as follows:—

		Rs.
1.	Land, Buildings etc.	75,00,000
2.	Plant, Machinery and equipments & spares including freight customs dues insurance, import duty, erection expenses, etc.	4,52,75,000
3.	Other fixed assets	5,00,000
4.	Preliminary & Issue expenses including brokerage and underwriting commission	8,00,000
5.	Provision for contingencies	4,25,000
6.	Working capital	50,00,000
		5,95,00,000

UNDERWRITING COMMISSION

Underwriting and/or guaranteeing commission at the rate of 2½% of the face value of the shares underwritten or guaranteed is payable to the Underwriters and Guarantor.

BROKERAGE

A brokerage at the rate of 10 nP. per Equity Share and Re. 1/- per Preference Share will be paid on allotments in respect of application forms bearing the stamp of a Bank or a member of recognised Stock Exchange

APPLICATIONS AND SUBSCRIPTION FOR SHARES

Application for Equity Shares must be made for a minimum of fifty shares or a multiple of fifty shares and application for Preference Shares must be made for a minimum of five shares or a multiple of five shares.

Application for shares must be made on the application Form enclosed with the Prospectus or on a printed copy thereof and must be delivered, accompanied by the full amount payable on application, to any of the Bankers to the Company at their Offices set out on the back of the Application Form during banking hours on any working day before the close of the subscription list. The application money must be paid separately for each application by cheque or bank draft. Money Orders and postal orders shall not be accepted. Cheques drawn on Banks at places other than those mentioned in the Application Form must include a sum (minimum 75 nP.) at the rate of 25 nP. per cent of the amount remitted to cover Bank commission and charges.

Copies of the Prospectus and Application Form can be had from the offices of the Brokers as mentioned herein and of the Bankers at Calcutta Bombay, Madras, Delhi, Ahmedabad Allahabad, Bangalore, Nagpur Lucknow, Patna and Muzaffarpur.

N.B. The Company is happy to announce that the land for the Mill Site has been acquired by the Government of Bihar and delivered to the Company.

strength, it must be remembered that they have had hitherto the advantage of exploiting deposits at shallow depths, and that during the coming 5 years the Corporation will be required to tackle more difficult and deep deposits.

The Second Five-Year Plan commenced with the adoption by Parliament in April, 1956, of the Industrial Policy Resolution, which by virtue of restrictive interpretations has undoubtedly retarded coal development in the private sector without ensuring that the deep deposits of high grade coal would be worked by the public sector. I am sure that our friends in the N.C.D.C. will agree with the basic statement that there is plenty of room for us both: they have taken vast coal areas for their own workings; let them now leave to the private sector the areas which have been held by Companies in reserve and which, having been fully prospected, are now ready to be worked. It was unfortunate that earlier appeals from this chair for a more realistic and pragmatic approach went unheeded until the coal crisis was upon the country, but we have been reassured to a considerable extent by the statements on this subject made by our Hon'ble Minister since October, 1960. We are to be allowed to expand into certain proximate areas. Whilst this has been accepted, we would like to see the prompt implementation of these assurances by the issue of the licences required both to re-open collieries and to work the proximate virgin areas.

Coal Prices

Although the question of coal prices has been described as the 'hobby-horse' of the Coal Industry, I make no excuse for stating once again that the very root of the present coal crisis is the fact that we have for years had to operate on an uneconomic price structure so far as our high grade coals, mined under difficult conditions, are concerned. There is no denying the fact that many units are today making adequate profits from open-cast quarries and shallow seams, but our friends in the Public Sector would confirm my statement that the present price structure does not cover the cost of working difficult seams.

Although the public sector's share of All-India coal production has now increased to almost 17%, they are producing less than 2% of the selected grade coals mined: the balance 98% is being produced by the private sector. In the years to come the N.C.D.C. will realise the very high cost involved in working the difficult seams, and it behoves us all to press for some real incentive which will encourage all collieries to mine high grade coal. It has been assessed that the cost of Grade I coal beneficiated by washing to 15% ash is well over Rs. 10 per ton in excess of the present controlled price for the highest grade of coal, Selected "A". It is obviously in the national interests that every encouragement possible should be given to mine Selected Grade coals wherever available, and, even with a substantial incentive, the cost to the consumer would be very much less than the cost of coal washed to the equivalent grade.

Difficult Mining

A year ago from this chair I welcomed the introduction of the scheme for the grant of subsidies to collieries working the deep, gassy and difficult seams, normally yielding high grade coal. Even though the subsidy will meet only a small fraction of the extra cost of working such difficult seams, the scheme has been welcomed by the Industry as a sign of the sincere desire of Government to encourage such mining. Our appreciation must end here, however, since the delay in implementing the scheme must be quoted as an unfortunate example of the treatment which we have been accustomed to receive. The recommendation to subsidise difficult workings was made by the Coal Prices Revision Committee as long ago as December, 1958; although it was accepted by Government in August, 1959, the arrangement for the distribution of the subsidy was not finalised until October, 1960, and collieries eligible for assistance submitted their claims many months ago. The finalised scheme envisages the reference of each and every application to New Delhi, where the Ministry is already overburdened, whereas the implementation of this agreed policy could so easily be undertaken by the Coal Board in Calcutta. Today, 27 months after the scheme was proposed by the Coal Prices Revision Committee, not a single colliery has received one naya paisa from the cess, already collected from consumers to the extent of well over Rs. 1 crore.

I would appeal most sincerely to those in the Capital who are responsible for our destiny: please let us have a rather more dynamic approach to our problems, rather less delay in attending to each and every matter, and a greater desire to seek the Industry's advice, in confidence, before policy decisions are made. Whilst on this point, it gives one pleasure to express our appreciation of the efficient co-operation which we have received from the Coal Board.

Coal Quality

The mention of high grade coal brings me to the vexatious question of the quality at present available for supply throughout the country. We have all seen and heard recently of the apparent deterioration in the quality of coal supplies, particularly to the Railways and the Steel Plants. To the uninitiated it might appear from all these reports that the coal industry is deliberately reducing the quality of these supplies, for reasons unspecified, and I must, therefore, say just a few words on this subject. With the present stress on utilising to the full the available reserves of high grade coal, selective mining is discouraged and sandstowing is encouraged to the full: both admirable measures from the national point of view. Large quantities of floor and roof coal which could previously be left are now having to be raised, and it is virtually impossible to ensure that sand is completely eliminated from the raisings at stowing collieries. Let us face the fact, therefore, that the overall quality of coal available, has deteriorated because the more easily available of the quality seams have been worked out. The Railways were hitherto accustomed to using a very considerable proportion of the high grade coking coals which have now been diverted to the Steel Plants, and they are having to consume the lower grades. The Steel Plants were hitherto taking only the natural make of slack from the many coking coal collieries but they are now obliged, to meet their greatly increased demands, to take crushed lump coal, where the ash content is certainly higher than the slack from the same seam. There is only one solution—washeries. I need not dwell on this point since we all know that many of our transport problems would now be solved if we had many more washeries, both for metallurgical coal and for the requirements of the Railways.

Today the overburdened rail transport capacity of the country is carrying each year many millions of tons of impurities which could have been removed by washing. As a very general statement it can be said that one wagonload of 15% ash coal is worth to a consumer two wagonloads of 30% ash coal: this statement is supported by facts and figures submitted some years ago by the late Mr. A. Farquhar, who is so rightly known as the father of Coal Washing in India. I am not for one moment suggesting that all the wagons available should today be allotted to the collieries producing higher grades of coal in order to ensure the maximum utilisation of available transport, since this would be a very shortsighted policy when we realise that from a long-term point of view encouragement must be given to the producers of low grade coals, whose output will continue to be just as important from the national point of view.

To summarise this question of the quality of coal, therefore, I would ask our customers, the many consumers of coal throughout the country, to appreciate our problems and to accept our assurance that we try to give them the very best coal which can be supplied from the seams provided by nature.

Rail Transport

Throughout the history of the Indian Coal Industry there has been too frequent a pattern of insufficient transport to move the coal available. One leading unit of the Industry has still in its possession a telegram, dated 18th June, 1857, from its harassed representative at Ranigange reading "You say, send coal. I say, send more wagons." What was true 104 years ago is true today, as is borne out by the fact that coal stocks lying at pitheads are very much larger than they were at the beginning of the Second Plan and amount to over 3½ million tons, quite apart from the enormous stocks at the collieries of N.C.D.C. of which you have recently read so much. Owing to their pithead stocks having reached unmanageable proportions, many collieries have in recent weeks restricted their raisings by as much as 30%.

Nobody can deny the fact that there has been a general shortage of wagons, or of movement capacity, or of both. The Railways have been unable to achieve even the reduced target for the movement of 51 million tons of coal per annum by the end of the Second Plan. Let us not forget, however, the very real difficulties which they have had in obtaining rolling stock, increased line capacity, etc., and despite this they have increased the average daily coal loadings in West Bengal and Bihar coalfields from a level of 3,262 wagons daily in 1955 to 4,335 wagons daily in 1960. This is an achievement of which any organisation can be justifiably proud. And yet, rail transport is just not sufficient. The time has now come when the level of coal production and supply should be settled by the joint co-operative efforts of the Industry, our Ministry and the Railways, meeting together at high level.

By far the major portion of the coal production in the country falls within the areas of the Eastern Railway and the South Eastern Railway. We meet the senior representatives of these two Railways at very regular intervals—they sometimes complain, in jest perhaps, that such frequent meetings reduce the time available for solving operational problems—and I would like to say how much we in the Industry appreciate the very considerable measure of co-operation which we have received from the two General Managers, the Chief Operating Superintendents and others. We have developed an atmosphere in which both sides can place their problems quite frankly and freely. Our sincere thanks are due to them and I can assure the Railways of the continued full co-operation of the Coal Industry in achieving the goal of sufficient rail transport to carry the coal available. We must have as soon as possible at least 6,000 wagons allotted each day for coal loading in West Bengal and Bihar, as against the present level of only 4,700 wagons.

During the course of the next few days we will have an opportunity of meeting the World Bank team who have recently arrived in this country to examine the future needs and requirements of the Indian Railways. It is earnestly hoped that they will be able to make certain specific recommendations whereby increased movement can be obtained from existing resources. An impartial examination from Railwaymen of the very greatest experience could well pinpoint certain restrictions and obstacles which can be removed without difficulty. At the same time, it is earnestly hoped that the good offices and financial assistance of the World Bank will be available in implementing the vast expansion of the Railway net-work of the country, without which the targets for greatly increased industrial expansion are completely meaningless.

Alternative Means of Transport

On the basis that rail transport will for some years lag behind the requirements for coal movement, Government have recently been giving considerable thought to ways and means of increasing the transport of coal by other means. Detailed examination is being made of projects for the movement of coal from large individual points of production to individual consumers by means of piping, mono-rail construction and other devices which are entirely new to us. At the same time, every effort will be made to double the quantity of coal moved via Calcutta Docks by steamer to the Southern and Western States. Here, the limiting factor will be the capacity of the Calcutta Coal Docks, and it is quite evident that steps will have to be taken immediately to ensure the maximum utilisation of the capacity of the existing seven loading berths where the rate of loading has deteriorated very considerably over recent years.

The most substantial increases can be obtained by the greater use of road transport, although it is impossible to assess with any real accuracy the number of additional trucks which can be made available for this purpose in the immediate future. This Association has been pressing for a number of years for an immediate programme of repairs to the connecting roads in the coalfield areas, and the present crisis dictates that every priority must be given to this work. Far more important still is the need for immediate attention to the main artery—the Grand Trunk Road—between the coalfields and Calcutta, since the Railways will not be able to maintain even the present level of transport to industrial units in the Calcutta area if they have to transport an additional one million tons per annum to Calcutta Docks for coastal shipment. An immediate improvement in this vital link can be obtained, I am sure, if the Police authorities institute forthwith a system of detailed patrols, whose task it will be to ensure that individual lorry drivers cease to regard the highway as their own private property, on which they can risk not only their own necks but those of other users of the road; strict enforcement of traffic regulations can remove numerous obstructions and ensure the free movement of greater quantities of coal and other materials along the road. This is, however, only a short-term solution, and we must have without further delay the construction of the Durgapur Expressway which must then be continued to Asansol. This construction, if put on a priority basis, could be completed within 18 months, providing considerable employment and without any reliance on foreign exchange, and such an Expressway could permit of the additional movement of about 2 million tons per annum between the coalfields area and Calcutta.

Labour Relations

Labour relations during the past year have generally been satisfactory although we have experienced sporadic outbreaks of violence at collieries. The Code of Discipline certainly appears to have had a stabilising effect and it is now up to employers and employees to realise their responsibilities towards ensuring the settlement of each and every dispute by reasoned negotiation rather than by adopting extreme measures. The Labour Unions have demanded a complete revision of the wage structure of the Coal Mining Industry. This matter is due to be discussed within the next few days and when this is being done it is hoped that all concerned will bear in mind the many facilities which are available to our mine workers. Our modern hospitals, free dispensary services, T.B. Clinics, Rehabilitation Centres, Holiday Homes, Multi-purpose Institutes, Adult Education Centres and Holiday Tours, etc., are all excellent institutions, of a standard far higher than enjoyed by the workers in any other comparable industry. Both employers and labour owe a debt of gratitude to our most active Coal Mines Welfare Organisation directed by Brigadier Bag Singh. All these facilities together with the extension as quickly as possible of the provision of housing, supply of satisfactory water and other benefits can ensure the contented labour force which is so necessary for our future.

As regards the Gorakhpur Labour Organisation, it is gratifying to note that at a recent meeting held in New Delhi under the Chairmanship of the Minister of Labour and Employment, a co-operative and constructive approach has been taken to this problem. It is hoped that the implementation of the agreed proposals subsequently accepted will result in an end of the antagonism which our Trade Unions have had to the employment of the highly productive Gorakhpur Labour.

The series of meetings with the Chief Inspector of Mines, to which I referred in my address last year, have continued and have been accepted as most beneficial to both sides. Our sincere thanks are due to the Chief Inspector for the full co-operation which we have received and these continued meetings illustrate so clearly the fact that safety in our mines must be a joint enterprise covering the Mines Department, the workers colliery owners and our technical Managers.

Other Minerals

Turning now to minerals other than coal, the expansion of production in these minerals has more or less paralleled the increase in coal production, as a consequence of the broadening demand arising out of the progressive implementation of the Second Five-Year Plan projects. Iron ore, limestone, dolomite and bauxite have all registered substantial increases and mines producing these minerals are being geared to fulfil the calls that will be made on them in accordance with the targets set up for the Third Plan. The supplies of the raw materials needed for the refractory industry, for which a substantially increased target has been set for the next Five-Year Plan, have also recorded a significant expansion during the year under review.

Unfortunately, so far as exports are concerned, progress has been disappointing since competitive sources of supply together with reduced demand overseas have resulted in a reduction in the exports of manganese ore and kyanite. In the case of manganese ore, this has also been partly due to shortage of rail transport which has made it impossible for shippers to make available to buyers their needs to suit requirements.

General

Gentlemen, the years that lie ahead of us hold out a great opportunity for the Coal Industry. The tremendous target of at least 97 million tons to be raised annually by 1965-66 poses a splendid challenge for us. The private sector of the Industry is ready to face this challenge as an equal partner with the public sector, and let us resist any temptation from any quarter to consider the joint progress as more than friendly competition. To all the many other bodies, both official and otherwise, so closely connected with our affairs, one would suggest that constructive discussions can achieve far more than destructive criticism. I know you will all join me when I say that with the co-ordinated and concentrated effort of all concerned we will be able to face with confidence the challenge of this great opportunity.

Note: This does not purport to be a record of the proceedings of the above Annual General Meeting.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS. APPLICATION FOR SHARES ARE INVITED ON THE BASIS OF PROSPECTUS.

Licences have been obtained from the Central Government for effecting substantial expansion to this existing industrial undertaking at Calcutta for manufacture of different types of Wood Working Saws, Slitting Saws, Slotting Cutters, Tool Bits and Hacksaw Frames, of which copies are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting the licences the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus with all the relevant documents has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Subscription list will open at the commencement of banking hours on Saturday, the 8th April, 1961 and will remain open upto the close of banking hours on Saturday, the 22nd April, 1961. The Directors at their discretion may close the subscription list earlier but not before the close of banking hours on Monday the 17th April, 1961.

STEEL & ALLIED PRODUCTS LIMITED

(Incorporated on 14th May 1951 under the Indian Companies Act, 1913)

AUTHORISED SHARE CAPITAL.

Divided into:			
(1) 80,000 Equity Shares of Rs. 100/- each ...	Rs.	80,00,000	00
(2) 20,000 9% Redeemable Cumulative Preference shares of Rs. 100/- each	Rs.	20,00,000	00
	Rs.	1,00,00,000	00

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL

5,450 Equity Shares of Rs. 100/- each fully called and paid up	Rs.	5,45,000	00
PRESENT ISSUE:			
9,550 Equity Shares of Rs. 100/- each	Rs.	9,55,000	00

Out of the Present Issue:

(1) The existing shareholders or their nominees will be offered 2,180 Equity Shares of Rs. 100/- each at par as 'Right Shares' (This offer will remain open upto 22-4-61 after which the shares not subscribed will be allotted by the Directors in such manner as they may think fit)	Rs.	2,18,000	00
Now Offered at par for Public Subscription			
(2) 7,370 Equity Shares of Rs. 100/- each ..	Rs.	7,37,000	00
	Rs.	9,55,000	00

APPLICATIONS, SUBSCRIPTION AND TERMS OF PAYMENT

Application must be for a minimum of 5 shares or multiples of 5, payable as follows:

On application	Rs.	50	00 per share
On Allotment	Rs.	50	00 per share
	Rs.	100	00 per share

The Shares now being issued will be entitled to participate in dividend in respect of the year commencing from 1st July, 1961.

OBJECTS OF THE COMPANY

The Company was incorporated on 14th May, 1951 with the objects mentioned in the Memorandum of Association of the Company and in particular to manufacture and/or fabricate Wood Screws, Screws, Wire Nails or other allied and/or associated products including ferrous and non-ferrous articles of any size, description or specification and to prepare for the market, sell, export or otherwise deal with the same for any purpose for which the same may be used.

HISTORY OF THE COMPANY

Steel & Allied Products Ltd., was incorporated in Calcutta on 14-5-51 as a Private Company and started with a Pilot Plant, the manufacture of Wood Screws towards the end of 1952. Successful operation of the Pilot Plant led to its triplication in 1956 after the Company had been converted into a public Company in 1954.

The Company commenced the manufacture of Hacksaws towards the end of 1957 with Plant & Machinery purchased from Sandvikens Jernverks Aktiebolag together with their technical assistance. Towards the middle of 1960, Tool Bits was added to the manufacturing programme of the Company.

The achievements of the Company are reflected in the profits that it had earned and distributed among its shareholders—as will be apparent from the Auditors' report—inspite of restricted production, during the initial stage.

IMPORT LICENCE

The Government of India has already issued Import licences for the import of requisite Plant and Machinery for manufacture of different types of Wood Working Saws, Slitting Saws, and Slotting Cutters and other machineries for the expansion of our existing capacities from Sweden, West Germany, Switzerland and Italy. Only a few of the Licences for import of machineries for these expansion projects are awaited.

PLANT & MACHINERY AND TECHNICAL COLLABORATION

The complete Wood Working Saw Plant will be acquired from MESSRS. SANDVIKENS JERNVERKS AKTIEBOLAG, the world famous Swedish manufacturers, under a deferred payment agreement, which includes, *inter alia*, provisions for technical assistance, supervision of erection of the Plant, putting the plant into operation and training of Indian personnel for which a sum of SW. KR. 3,82,000/- is payable.

OTHER PLANT AND MACHINERIES

Additional machineries required for the manufacture of Wood Working Saws are being secured from other Swedish manufacturers as also from other sources according to the advice of Sandvikens Plant and Machineries for the manufacture of Slitting Saws, Slotting Cutters, Metal Cutting Band Saws and Hacksaw Frames, including the expansion of our present installations for Hacksaws and Tool Bits are being secured by direct negotiations with the manufacturers and/or importers.

BUSINESS PROSPECTS VIS-A-VIS MARKET POSSIBILITIES

The Directors have carefully weighed the prospects of the additional capital outlay envisaged for this expansion project. On a conservative estimate of sales it is estimated that the gross turnover after one year of completion of this project alone would be Rs. 40 lacs per annum approximately. It is expected that there will be no difficulty in disposing of the entire production as the demand for Wood Working Saws in the country, is estimated to be well over 2 crores of rupees more so as a result of the rise in the tempo of industrialisation. Furthermore, the high quality of products the Company expects to turn out as a result of technical collaboration with Sandvikens of international repute, can be exported to the neighbouring countries.

At present import of some items of Wood Working Saws is restricted to 12½% while other items are restricted to 50 to 60 per cent. By the time the Company is scheduled to go into full production it is expected that there will be total ban in the importation of all the different items of Wood Working Saws.

Thus in the result it can be expected that a reasonable dividend would be available to the shareholders participating in this issue.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

Minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs. 9,55,000/-, being the whole of the share capital now offered for subscription.

The capital outlay required for this project will be as follows:

	Rs.	Rs.
Building, Water Supply, Sanitation, electric installation and other fittings		5,50,000
Cost of plant, machinery and equipments, including technical assistance fee and installation expenses		
To be imported	6,30,000	
To be locally procured	6,35,000	12,65,000
Other fixed Assets including cost of Furniture, Motor Car, etc.		6[illegible],000
Expenses of the issue		[illegible],000
Working Capital		10[illegible],000
		29,00,000

SOURCES OF FINANCE

Out of the Present issue	9,55,000
Loan from Industrial Finance Corporation of India	10,00,000
Deferred Payment	2,55,000
Loan from Bank	6,90,000
(An application has already been made to the Industrial Finance Corporation of India for sanction of the above loan)	29,00,000

EXPENSES OF ISSUE AND BROKERAGE

Brokerage will be paid to Brokers @ Re. 1/- per share on allotments made in respect of applications bearing their stamps. The total brokerage so payable is estimated at Rs. 7,000/-

Total expenses of the issue are estimated at Rs. 25,000/- and will be paid by the Company.

INSPECTION

A printed copy of the Memorandum and Articles of Association of the company, Licences issued by the Central Government for Substantial expansion of the existing Factory, Import Licences in respect of Plant, Machinery, etc. copies of material contracts listed herein, the report of Auditors, consent of the Central Government to the appointment of the Managing Director, and copies of the Balance Sheets and Profit & Loss Accounts of the Company for the last five years can be inspected at any time on working days during usual office hours at the Registered Office of the company from the date of publication of the prospectus until the date of closing of the subscription list.

INTEREST OF DIRECTORS

(1) Shri S. K. Mazumdar, the Managing Director of the Company is interested in (a) the remuneration payable to him as the Managing Director of the Company and (b) the interest payable to him in respect of an unsecured advance of Rs. 19,000/- made by him to the Company. (2) His Highness Maharaja Sir Pratap Chandra Bhanja Deo, the Chairman of the Company is interested in (a) the interest payable to him in respect of an unsecured advance of Rs. 7,08,088/- made by him to the Company, (b) the rent payable to him in respect of the factory land leased to the Company, of which he is the owner and (c) the 1% commission on the net profits of the Company payable to him subject to the approval of the Central Government and the Industrial Finance Corporation of India. (3) No other Director of the Company is interested in the Company in any other manner except being a Director and/or Shareholder of the Company.

MATERIAL CONTRACT

The following contracts not being in the ordinary course of business, which are material, have been entered into by the Company:

(1) An agreement with Messrs. Sandvikens Jernverks Aktiebolag, Sweden for sale and supply of complete Wood Working Saw Plant, providing technical assistance, supervision and guidance to assembly for installation of plant, running in of the plant, providing drawing for factory layout, training Indian Labour and technicians in India and/or Sweden and providing payment for the same on deferred basis, in terms of the memorandum of agreement entered into on 6.10.58.
(2) Agreements with Maharaja Sir Pratap Chandra Bhanja Deo for lease of additional Factory land at 2/1, Hossain Shah Road, Calcutta dated 12th January and 19th July, 1960.
(3) Agreement with Messrs. Union Bank of India Ltd., for guaranteeing deferred payment to Sandvikens Jernverks Aktiebolag, Sweden dated 6th May, 1960.
(4) Agreement with Shri S. K. Mazumdar dated 20th January, 1961 appointing him as the Managing Director of the Company for a term of five years from 1.7.59, at a remuneration of 5% of the net profit of the Company, subject to a minimum of Rs. 30,000/- per annum and with all powers for conducting the busniess of the Company subject to the supervision and control of the Board.

APPLICATION FOR SHARES AND ALLOTMENT

Application for shares must be for a minimum of 5 shares or a multiple of 5 shares and must be made in the form accompanying the prospectus, which can be had from the Company's Bankers or Brokers or from the Company itself.

The Application forms duly completed must be lodged together with the sum of Rs. 50/- per share applied for, with the Union Bank of India Ltd., at any of its offices at Calcutta, Bombay, Delhi, Madras, Kanpur, Ahmedabad, Nagpur, Bangalore, Cochin, Hyderabad and Gauhati or with the company at its registered office at 17, Brabourne Road, Calcutta-1.

The remittance should be made by cheque or draft payable on any Calcutta Bank and in case of outstation cheques Bank-collection commission shall be added at the rate of 25 nP, per cent. All cheques or drafts shall be crossed and made payable to "Steel & Allied Products Ltd. New Issue Account".

Allotment will be notified by despatch of an allotment letter but Directors reserve the right of accepting or rejecting any application in whole or in part without assigning any reasons whatsoever. Should any application be rejected in whole or in part, the whole or the balance of application money shall be refunded but Bank Commission payable, if any, shall be paid by the applicant.

Share certificates will be issued in exchange of letters of allotment within six months of the date of allotment.

Dated, the 24th March, 1961.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

RECORD PRODUCTION AND PROFITS

MR. J. M. LALL ON THE ROLE OF RETAINED PROFITS—THE CONFIDENCE OF THE PRIVATE INVESTOR ABROAD

Speech delivered by the Chairman, Mr. J. M. Lall at the 24th Annual General Meeting at Calcutta on Wednesday, 22nd March, 1961.

Gentlemen,

The Audited Accounts and Directors' Report have been in your hands for sometime, and with your permission, I shall take them as read.

The results shown by these accounts need no emphasis from me; the figures speak for themselves as evidence of the most successful year in the Company's history so far. How have these highly satisfactory results been achieved?

Production

In the year under review we had the benefit of a full year's production of polythene granules for the first time. The Polythene Plant, you will remember, has an installed capacity of 3,500 tons but, largely as a result of a methodical, scientific study of the working of the Plant, we were able to achieve an output of 4,000 tons. A notable increase was also achieved in the output of Paints and here again scientific study of the processes and increased efficiency in production planning were largely responsible. Even more paint could have been produced had it been possible to import a larger quantity of raw materials. We must expect this scarcity of imported materials to continue and we are, therefore, constantly seeking and evaluating raw materials produced in this country.

While the major increases in production have come from the two Plants I have mentioned, all other Plants also contributed.

Sales

Sales which, as you know, are made through our Selling Agents, Imperial Chemical Industries (India) Private Limited kept pace with this increased production and the final figures achieved were Rs. 5.4 crores as against Rs. 3.4 crores in the previous year. Throughout the year demand for all our products was in excess of our ability to supply and a ready market exists for any increases in output which we are able to achieve this year. An important part in the development of demand for our products, and particularly such materials as polythene and high quality paints, is played by the Technical Service organisation of our Selling Agents which provides a comprehensive service to all our customers and helps them to use our products economically and with good and sound technical results.

Appropriations

Let me turn now to the proposals your Directors have made as to the use to which the available surplus of approximately Rs. 88.5 lacs is to be put. They have recommended allocations of Rs. 48 lacs to Reserves and Rs. 39.2 lacs to dividends.

Some of you may well ask why the Board have not recommended distribution of a larger part of the profits in dividends. The Board considered this matter very thoroughly and in their deliberations were guided by the following factors:—

(a) Last year we withdrew from the Dividend Equalisation Account Rs. 13.8 lacs, the entire amount standing to the credit of that Account. In addition, a sum of Rs. 10 lacs was withdrawn from General Reserves to make up the amount required for dividend on Ordinary Share Capital. The Board are of the opinion that these withdrawals should now be made good and the Reserves brought up to levels commensurate with the Company's activities.

(b) The Company's indebtedness to Banks stood at Rs. 1.24 crores at the end of the year.

(c) We have on hand a large programme of expansion which will require about Rs. 6 crores during the next 3 years or so.

(d) A progressive but consistent dividend policy is essential for the strength of the Company and prestige of its stock in the market.

Your Directors believe that self generation of resources is as important for the growth of a company as it is for the economy of a country. In achieving a state of "take-off" as the modern economist puts it, retained profits have a very important role to play. Nevertheless, your Board are fully conscious of their duty to the Shareholders and hope that you will not regard a dividend of 12%, before tax, as inadequate.

The provisions in the recent Budget if accepted by Parliament will materially affect your Company in the current year and in the future. Apart from the reduction from 25% to 20% in development rebate and increases in duty on the import of plant and machinery, substantial new excise duties have been imposed on polythene and caustic soda, and the duty on paints has been increased. For the year to September 1960 your Company paid excise duty amounting to approximately Rs. 12 lacs. For the current year which will only have 7 months of the new and enhanced duties, the excise bill will be Rs. 45 lacs and for a full year's operations the total excise duty may amount to as much as Rs. 70 lacs. As you will appreciate no Company can absorb such a large debit and the bulk of this must perforce be passed to consumers. We must realise, however, that competition in these products is growing and to increase prices to recover such a large amount from consumers is not likely to be easy.

I would like, at this stage, to refer briefly to the delay which occurred in the payment of the half yearly Preference Dividend which normally occurs in April and October of each year. The withdrawal of Section 18(3E) of the Indian Income Tax Act, 1960 raised certain difficulties in connection with the payment of Preference Dividends and there arose also considerable uncertainty as to Government's intentions regarding the treatment of tax-free Preference Dividends. In these circumstances, your Board thought it prudent to defer payment until the position was clear beyond doubt, but this clarification took a long time to achieve and amending legislation was not passed until the end of 1960. A full year's dividend has now been paid in conformity with this legislation but my colleagues and I would like to express to Preference Shareholders our regret at the considerable inconvenience which was caused to them.

All our shareholders will I think be glad to hear that we have now been able to arrange with our Bankers that all future dividends can be paid at par at any of their branches.

Prospects

So much for the past. What of the future? Production and sales in the current year have been satisfactory so far and in line with the increased targets which we have set ourselves. Methodical studies of the working of each of our Plants and improvements in preventive maintenance are enabling us to increase production still further. In our caustic soda business Government has taken note of our difficulties arising from the substantial rise in the price of salt and has acted promptly to authorise us and other caustic makers to charge a higher price.

I referred in my speech last year to our plan for making various chemicals for the rubber industry at Rishra at a cost of Rs. 2 crores. Work is proceeding steadily on this project.

I have already referred to increases in output of polythene granules achieved by the application of Work Study techniques without any additional capital investment. Demand for polythene in India has grown so quickly that it has become urgently necessary to extend our capacity. Government has now agreed that we may expand our capacity by more than 2½ times and this expansion is being pushed forward as matter of the highest priority. As with the first Plant our technical consultants are Imperial Chemical Industries Limited, London, and I would like to record our gratitude for the prompt and effective help which they have given and are giving us, in order to bring this extra capacity into production within the shortest possible time.

I have also referred to the substantial increases which we have been able to achieve in the output of our high quality paints Despite this, demand within India is increasing so rapidly as a result of the country's general industrialisation, that it is urgently necessary to put in a substantial increase in capacity. This extra capacity will enable us to meet internal demand and, what is equally important, help us to expand the valuable export business in paints which we have been able to develop over the last year or so. Our proposals to increase our paints capacity are at present under discussion with the Government and we have every hope that the outcome will be successful

In addition to these projects we are also actively investigating plans to increase our production of chlorine, caustic soda and hydrochloric acid.

These plans for new projects or substantial expansion of existing projects are made possible largely because of the readiness of our associates in the U.K. Imperial Chemical Industries Limited, to provide sterling finance for the import of plant and machinery.

Shortage of foreign exchange is one of India's major problems. I know that the Government of India are doing everything possible to find a solution to this problem and are meeting with a fair measure of success in arranging Government to Government or World Bank loans. I would like to suggest, however, that the Private Sector of the economy also is playing a very important role in this endeavour. Willingness of foreign private investors to come into a country without any political pressures is indicative of the strength and stability of the economy of the country. Admittedly, the aggregate of such foreign private investment in any one of the years of the second plan is small in comparison with governmental aids but I maintain that the real effect of this foreign private investment in these years is seen not in the quantum but in the climate it has created. Governmental thinking overseas must be influenced to quite an extent by the independent expression of confidence by the foreign private investor.

Staff and Workers

May I turn now to the most valuable asset which your Company possesses, although you will not find it in the Balance Sheet: I refer of course to our staff and workers, without whose loyal support and conscientious work, machines, no matter how efficient or well designed, can achieve nothing.

Throughout the year we have laboured to build up a team spirit and a sense of common purpose among all sections of our employees. On the whole these efforts have been successful and the relationship between Management and Workers has been reasonably good. Differences there have been and still are but they are all, in my view, capable of a right and just solution if they are approached by both sides in a spirit of goodwill and with a genuine desire to find agreement. That such solutions should be found and found quickly is of importance not only to the employees themselves, to the Company and to its shareholders but, above these three, to the country as a whole.

During the year we were able to complete improved amenities for our workers by building more quarters for them, and arranging for subsidised accommodation in the West Bengal Government's Housing Project at Baidyabati.

Training is, of course, of vital importance to your Company and indeed to the country as a whole at this time of rapid development. To help meet the need for trained fitters and the like we have established a Craft Apprentice Training School the aim of which is to provide your Company with a steady supply of skilled craftsmen. We have also undertaken to train such men on behalf of the Government of India as a contribution to the country's needs. Our policy of appointing Indian staff to responsible management positions has been assiduously pursued and I am happy to be able to report to you that with the exception of the Technical Director at Rishra the entire management of that complex chemical manufacturing site is in the hands of Indian staff and they are discharging their responsibilities most efficiently.

We had the privilege, a few weeks ago, to welcome to Rishra Mr. S P. Chambers who is now the Chairman of Imperial Chemical Industries Limited, London. You will, I know, be pleased to hear that he was greatly impressed by all he saw at your Factory and paid particular tribute to the high morale and enthusiasm which he found there.

These then were the achievements of your Company in the year ended September 1960. The years ahead hold out a great challenge to all who are concerned with the development of a vigorous and prosperous chemical industry in this country. They will bring their problems and their difficulties but they will also, I am sure, bring great achievements. In the building of this chemical industry your Company has an important part to play. We face that future with sober confidence.

Note: This does not purport to be a record of the proceedings.

Authorised Capital — Rs. 1,00,00,000 divided into — 10,00,000 shares of Rs. 10/- each

Issued Capital — Rs. 40,00,000 divided into — 4,00,000 shares of Rs. 10/- each

This Company has been formed for starting a series of industrial units in the State of Kerala in pursuance of the Government's declared policy of industrialisation and in the first instance, the Company is putting up a combined unit (Group of Industries) comprising of the most essential industrial units which cater to the needs and form the basis, fundamental nuclei of many industrial undertaking particularly Small Scale Industries that are or may come into existence in Kerala sooner or later. This first group of industries when commissioned will manufacture:—

(a) Industrial Basic Raw Materials (Steel Section and Castings)
(b) Industrial Machinery/Machine Tools (Specialised)
(c) Industrial Components, Gears and Drives
(d) Industrial Auxiliaries including hardware and implements

Necessary consent has been obtained from the Controller of Capital Issues for the issue.

Of the shares now offered for subscription and Directors and their friends have agreed to take 2,04,000 shares amounting to Rs. 20,40,000.

The balance of 1,96,000 Equity shares of Rs. 10/- each are now offered for Public subscription in terms of the Prospectus, payable:—

On application ... ... Rs. 5/- per share
On allotment ... ... Rs. 5/- per share

Failure to pay the allotment money will render the share liable to forfeiture.

Application for shares should be made on the printed form accompanying Prospectus; further copies may be obtained from the Registered Office of the Company and from the Bankers and the Brokers. Applications must be completed in accordance with the direction contained therein and delivered before the closing of the subscription list to the Registered Office of the Company. The application money must be paid in Cash or Bank Draft. Money Orders will not be accepted. Outstation Cheques must include Bank charges at 0.25 nP. per % (minimum 0.62 nP.). Where no allotment is made, deposit amount will be returned by cheque on the Company's Bankers at Palghat and where a partial allotment is made, the unutilised balance after adjusting the allotment money will be returned by cheque on the Company's Bankers at Palghat within 2 months. Bank commission, if any, will be payable by the applicant. No interest whatsoever will accrue or be paid by the Company on application money or other sums. The shares when issued will be governed by the Regulation, viz: Memorandum and Articles of Association of the Company.

The instruction contained in the application form should be followed carefully.

The Directors do not bind themselves to allot the full number of shares applied for and reserve the right to reject any application wholly or in part without assigning any reason therefor. Applications which are not complete or which are not accompanied by proper payment including Bank charges may not be considered.

The Shares Certificates will be issued within four months from the date of allotment.

The Company has no debentures or debenturestock outstanding.

REGISTERED OFFICE

Sultanpet—Palghat—Kerala.

Consent: The consent of Auditors, Bankers, Legal Adviser and Brokers to act in their respective capacities have been filed with the Registrar of Companies, Kerala, along with Prospectus required under Section 60 of the Companies Act, 1956.

The Company was incorporated on 28.11.60 with the objects mentioned in the Memorandum of Association.

Objects: *Inter alia* the main objects are—

1. To undertake and to manufacture, roll and reroll steel—sections, cast iron steel and non-ferrous castings, machine tools, machine parts, instruments, jigs, attachments, industrial fasteners, house building accessories, industrial and agricultural implements, wire products, domestic and industrial chains, wire nails, pins, malleable iron castings and parts, conveyors, material-handling equipments, instruments, tools, textile accessories, industrial components, engineering requisites, fabricated parts, vessels, railway requisites, cylinders, structural work and coaches.
2. To undertake and execute contracts, orders and sub-contracts for any or all of these from any person, body or association and to erect these or any of these.
3. To carry on the business of Mechanical Engineers, Electrical Engineers, Aeronautical Engineers, Automation Engineers, Civil Engineers Navigation Engineers, Automobile Engineers, Machinists, Fitters, Founders, Smiths, Wire Drawers, Tube Makers Metallurgists, Galvanizers, Annealers, Enamelers, Painters, Electroplaters, Packers, Makers, Ship-builders and manufacture, Export and Import and deal in all kinds of plants, Conveyors Plants, Mechanical Handling Equipments, Machinery Appliances, Machine Tools, Apparatus, Accessories, Machine Parts, Electroplated goods and things necessary or convenient for carrying on any of the above business or usually dealt in by persons in the like business.

The Company will in due course apply for a Certificate to commence business as required by Companies Act.

Development Licences: The Government of India have granted a development licence No. L/IA/3/82/MEI/60, dated 30.12.60. Licence for setting up a Rolling Mill is under consideration.

Business Prospects: Market: There is no organised Factory in Palghat, Kerala to make the machine tools, as visualised in these schemes and appliances to meet local needs. Most of the items envisaged to be manufactured will be consumed within the State though it is reasonably hoped that 5% to 10% of the production will be sold outside Kerala (in the adjoining districts of Madras and Mysore).

The Scheme will only meet a fractional % of the States consumption in the beginning and the demand for the products is not seasonal but is perpetual.

Materials: Steel, Pig Iron and Coke are available in plenty as a result of the new projects. Import of raw material will amount approximately to Rs. 2.5 lakhs a year.

Service: Water is available from our own wells while power will be generated by the Company's own Generators in adequate quantity.

Man-Power: Kerala Labour force is quite intelligent and is easily adaptable. Men and Women being hard workers, given fair training, Palghat workers can take up any type of intelligent work and exert maximum efforts. No trouble is apprehended in recruitment, training, placement or collective bargaining.

Method: The Promoter possesses a veritable acumen and the "Know-how" besides facilities and influence in the market. The Promoter and his associates are quite capable of assuring technical perfection of all machine tools and parts.

Collaboration: Polytechna, the Czechoslovakian State Agency for Technical collaboration has given its consent to collaborate with this Company in the manufacture of many of the machine tools. The details of this agreement when reached will be announced in the press.

Machinery: Many of the machinery required for the project can be purchased in India. Some of the machines can be designed by the Promoter to save valuable foreign exchange. Some machines can be had against non-transferable rupee payment as well.

The foundation stone of the project was laid by His Excellency Shri V. V. Giri, Governor of Kerala, on 3rd December, 1960 and the function was presided over by the Hon. Industries Minister of Kerala.

Turnover: The conservative estimate of the anticipated annual sale when fully commissioned is as follows:—

Iron and Steel Sections	...	Rs. 45 lakhs a year
Machinery & fabricated items		Rs. 35 lakhs a year
Other items including Agency Sale ...	...	Rs. 12 lakhs a year
Total	...	Rs. 92 lakhs a year

Profit & Dividend: Indication as the market being lucrative, the Directors are of the opinion that in the absence of any unforeseen circumstances the Company should be in a position of paying

THE BANK OF INDIA LIMITED

CHAIRMAN, SIR COWASJEE JEHANGIR'S REVIEW

Extracts from the Speech of the Chairman, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., at the Fifty-fifth Annual General Meeting of the Shareholders of the Bank of India Limited, at Bombay on Monday, 27th March, 1961.

Ladies and Gentlemen,

I have great pleasure in welcoming you to this our Fifty-fifth Annual General Meeting.

In 1960, as in other years, the Reserve Bank of India have been vigilant in their efforts towards the proper development of banking in the country. We very much appreciate the consideration which the Reserve Bank of India have extended to banks. It is no small task to endeavour to watch and guide the large number of banking units—big and small—throughout the country. I would express the gratitude of my colleagues on the Board and myself for prompt information, advice and guidance given to our Bank from time to time by the Reserve Bank of India.

Taxation

I am personally of opinion that the recent Budget is framed on a fair basis. I am sure the Finance Minister expects to be criticised whatever he does by one school of thought or the other. A pertinent question has been asked as to how the Finance Minister was to raise funds for the Government if he did not do so by indirect taxation. My answer is that the Government should reduce their capital expenditure on rash projects which have no prospects of yielding good value for money spent. It is believed by many that this is due to the increase of corruption in the last few years and lack of efficiency and competent technical personnel in Government service. At the root of all the trouble is the policy of the Planning Commission who have allowed their imagination to run wild without calculating the disastrous financial consequences of their rash projects. Really good and efficient planning will enable the Government to spend less and to borrow less money from all parts of the world and thus reduce the demand for maintaining the high levels of taxation already imposed and for levying other taxes on all classes of the people.

The Government were spending crores of rupees and claiming that they had raised the annual income of the common man. I do not vouch for the accuracy of this claim but if this is well-founded it forms a very reasonable argument for indirect taxation. The Finance Minister must not forget that India is the heaviest taxed country in the world and that a certain class of people are made to pay almost the whole of their hard-earned income in taxation leaving little or nothing to live upon. Most of them are at present living on their capital. Highly placed officers both in public and private enterprises are made to pay a large portion of their hard-earned salaries in taxation leaving little for the maintenance of themselves, their families and their dependents. The only class of people that appears to be comparatively well off under present conditions is factory labour.

The main necessities of life are food, housing and clothes. Food and housing are the responsibility of the Government. Clothing is supplied by the private sector and, although the textile industry supplies cloth to the public at a cheaper price than supplied by many countries of the world to their people, the Government insist upon lowering the prices because it only affects the private sector but they do very little effectively to reduce the price of food or housing.

All-India Inter-bank Agreement

In my last two annual speeches I have mentioned the All-India Inter-bank agreement for maximum rates of interest on deposits which the larger commercial banks, about 40 in number, other than the State Bank of India, entered into from October, 1958. Changes in the maximum rates of interest were made during the year from the 22nd August, 1960, and from the 1st October, 1960. I would like to see the State Bank of India, as the largest commercial bank in the country, also joining in the agreement. I understand that the Indian Banks' Association have been making endeavours in that direction. In this connection, I have to inform you that our General Manager, Mr. T. D. Kansara, has recently been elected Vice-Chairman of the Indian Banks' Association.

The Bank in 1960

The Bank's profit of over Rs. 103 lakhs for the year 1960 is about Rs 20¼ lakhs more than the 1959 profit of about Rs. 82¾ lakhs. These figures of profit for the two years cannot be exactly compared. Part of the difference between them is because the bulk of 1960 tax at an appreciably lower rate than in 1959 has been deducted at source from the Bank's investment income.

Before arriving at the profit figure we have, as usual made appropriate prudent provisions. Sound banking calls for the setting aside of provisions relative to our commitments. Our business is appreciably growing. Our liabilities are increasing. Prudence dictates that, in such circumstances, adequate provisions should be made at all stages.

A final dividend of 12½ per cent., subject to deduction of tax at the prescribed rates, is proposed. This will absorb Rs. 37½ lakhs. An interim dividend of 7½ per cent. subject to deduction of tax was paid in August last. The amount of that interim dividend was Rs. 22½ lakhs. The total dividend for the year is 20 per cent. or Rs. 60 lakhs, subject to deduction of tax. This compares with 16 per cent., subject to deduction of tax, for 1959 and with 16 per cent., free of income-tax, for 1958. I think shareholders will be pleased at the dividend we are recommending.

The increase in the dividend proposed for 1960 goes to off-set only to some extent the reduction in the net payment caused by the changes made by the Finance Act of 1959.

Audit

The Companies (Amendment) Act, 1960, materially amended the Companies Act, 1956. Section 228 of the main act, as amended, makes audit of all branches of the Bank obligatory. The Central Government have power to exempt branches from being audited as required by the amended Section 228. For 1960, we applied to the Central Government for such exemption and it was granted. For 1961, we do not intend to seek any exemption. My colleagues on the Board and I are, on this point, at one with the legislature. We have a high regard for the safety provided by frequent audit.

Branches

The Bank has a programme of considerable branch expansion.

Staff Relations

During 1960, staff relations in the Bank have been on a reasonably tranquil basis, but difficulties have not been absent.

General Manager

It is with great regret that I refer to the death during the year of Mr. T. R. Lalwani, General Manager of the Bank. He served the Bank for nearly 43 years, the last three years as General Manager. He enjoyed the confidence of the Board to a marked degree.

In Mr. Lalwani's place, the Board have appointed Mr. T. D. Kansara as General Manager.

Local Committees and Staff

I would express our appreciation of the aid given to us by our Local Committees at branches.

I express our thanks to our General Manager, Mr. T. D. Kansara, for his able management of our affairs and for his unremitting application to the Bank's business. Our thanks are tendered to the staff who have assisted in the Bank's working during the year.

NOTE:—This does not purport to be a report of the proceedings of the Annual General Meeting.

THE MALABAR IRON & STEEL WORKS LTD.—*Cont'd.*

fairly dividends on the issued equity shares, right from the first year itself.

Preliminary Expenses: The preliminary expenses which are payable by the Company are estimated to be Rs. 70,000 including Brokers' commission and the other expenses of the issue.

Minimum Subscription: The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sum required to be provided as per paragraph 5 of Schedule II to allot shares offered by the prospectus is the subscription of the nominal value of Rs. 25,00,000 payable in cash.

The total amount of Issue will be utilised as follows :—

Land & Building	...	Rs. 15.00 lakhs
Plant & Machinery	...	Rs. 15.50 ,,
Preliminary expenses	...	Rs. 0.70 ,,
Working capital	...	Rs. 8.80 ,,
Total	...	Rs. 40.00 lakhs

Qualification of Directors: Under the Articles of the Company the qualification of the Director is the holding of 500 equity shares solely or jointly with another or others of the nominal value of Rs. 5,000/- (Rupees Five Thousand only).

Meeting Fees: Articles of the Company provides that the remuneration of every Director of the Company shall be Rs. 100/- for every meeting of the Board which he attends in addition to the actual travelling expenses, if any, if he is not a resident of the place where the meeting is held.

Brokerage: In respect of the shares now offered to the public the Company will pay brokerage at the rate of 20nP. to Banks, recognised Brokers and Agents on an allotment made in respect of applications bearing the stamps of such Banks, Brokers, etc.

The Directors have appointed Shri Nurani Sesha Parameswaran Iyer, as Managing Director for a period of 5 years and fixed his remuneration by way of salary and allowances Rs. 2,000/- (Rupees Two Thousand only) per month plus all out of pocket expenses under the draft agreement and as provided in the Articles of Association.

Directors' Interest: Shri Nurani Sesha Parameswaran Iyer is interested as Director and shareholder of the Company and Shri Iyer is the Promoter. Shri Iyer is further interested as Managing Director of the Company, a place of profit as per agreement between himself and the Company a copy of which is available for inspection at the Registered Office of the Company.

All Directors are interested in the usual remuneration to be paid by way of fees for meetings attended, and will be paid their travelling expenses etc., if any.

Contracts: The following contracts, not being contracts in the ordinary course of the business will be entered into by the Company with the parties mentioned.

The draft agreement between Shri Nurani Sesha Parameswaran Iyer, Promoter of the Company and the Company.

AUDITORS' REPORT

The Auditors have given and not withdrawn the consent for inclusion of reports under item 24 of Part II of the Schedule 2 of the Act.

The original report is open for inspection at the Registered Office of the Company.

Inspection of Contracts and other Documents:

(a) A print of the Memorandum and Articles of Association of the Company.

(b) A letter from the Controller of the Capital Issues, Government of India in connection with the present issues.

(c) The Draft Agreements between Shri N. S. P. Iyer and the Company.

(d) A Licence granted to the Company under the Industries Development and Regulation Act, 1952 and Rules made thereunder.

(e) Report of the Auditors.

MADURA MILLS COMPANY LIMITED

(REGISTERED OFFICE: NEW JAIL ROAD, MADURAI)

CHAIRMAN REVIEWS PROGRESS

Speech of the Chairman, Dr. Rajah Sir M. A. Muthiah Chettiar, at the Annual General Meeting of the Shareholders of Madura Mills Co. Ltd., held at Pandyan Building, Madurai, on 27th March, 1961.

Gentlemen.

The Report of the Directors and the Audited Accounts of the Company for the year ended 31st December, 1960 having been circulated in the prescribed manner, I propose with your permission to take them as read.

As had been forecast the raw material supply position throughout the country during most of 1960 was acute. The total growth for the 1959/60 cotton season which ended on 31st August 1960, was 38.35 lac bales, against a consumption requirement of 51.05 lac bales. Prices were at an all time high, and it was very difficult indeed to obtain cotton of the proper quality or at the right price. I am glad to be able to say that despite these constant difficulties we were, with the timely help of supplies of American short staple cotton, able to maintain both production and quality.

Much of the credit for concluding a settlement on the many problems which arose from implementing the recommendations of the Textile Wage Board must be given to the patient and untiring efforts of the Minister for Labour in Madras. Nevertheless the additional payments amounting in all to nearly Rs. 22 lacs some of which were retrospective to 1st January materially increased our operating costs. Although there was also a clause in the settlement regarding rationalisation, I am sorry to have to report to you that so far little or no progress has been made in discussions with Labour on this aspect.

Excellent Demand

Demand for our products was excellent throughout the year. I am particularly pleased to be able to tell you that we have improved upon last year's performance in the export market, and in fact earned over Rs. 2 crores of valuable foreign exchange. In India prices in the markets began to rise alarmingly in the middle of the year, and we made efforts to introduce a measure of stability. Part of the rise of course was fully justified resulting as it did from the increases in raw material and labour costs to which I have already referred. Our efforts did not meet with the success we had hoped, and in due course Government decided that it was necessary to take a hand. The result was an agreement on price ceilings for all mills. While this took no account of the monthly increase in Dearness Allowance, nor of the premium usually available to quality products such as ours, the latter disadvantage was to some extent compensated by a continued steady in excess of our production. As you will be aware, as a final result of negotiations over price fixation with Government, the industry agreed to a reference to the Tariff Commission with a view to arriving at yarn and cloth prices fair to producer and consumer alike.

Towards the end of the year the Supreme Court considered and gave its decision on our appeal against the award of Bonus payable on the profits of 1957. The measure of success can be gauged by the transfer of Rs. 12,07,192 to General Reserve out of the provision made in 1958 and now no longer required. I am happy to be able to tell you that a Bonus Agreement has been signed with twentyone of the twentythree unions, covering the three years to 1962, and that agreement was also reached on the Bonus for 1959 of one month's average earned basic wages. Let us all hope that this long term agreement will call a halt to the disputes which have been so frequent, and enable management and labour to work in greater harmony.

Rehabilitation and Modernisation

Reference has been made in the Directors' Report to the rather slow progress of our rehabilitation and modernisation programme. Let me assure you that no efforts are being spared to increase the pace of carrying this out, delays which occur are beyond our control. Nevertheless I am sure you will agree with me that the figures are still impressive—a total of nearly Rs. 4 crores, of which over half should be on site by the end of this year. Some of the machinery which is imported is already on the water, and is routed both to Tuticorin and to Calcutta Ports, the latter being for our Tyre Cord factory at Serampore Further plans are under consideration by your Directors, in extension of the massive scheme already on hand.

On the accounts themselves, I would like briefly to draw your attention to the gratifying reduction in bank borrowing particularly when read with the satisfactory increase in current assets. The heavy drain which the General Reserve suffered in 1958 has now been completely neutralised, but you will readily appreciate from the size of the figures for modernisation etc. the continued need to conserve resources so as to provide the necessary funds to meet these commitments. The assistance of a loan of Rs. 75 lacs from the National Industrial Development Corporation which we had hoped to finalise during 1960, has I am sorry to tell you not yet been received, in spite of the best efforts of both the N.I.D.C. and ourselves. I would however hasten to assure you that the delay is procedural only, and will undoubtedly be overcome shortly. I would also ask you to notice the adjustment in the Managing Agents' commission, which arises mainly because of the change in the depreciation allowance under the Finance Act 1960 granting a full year's depreciation to plant installed for more than 180 days. The provision for taxation includes a sum of Rs. 1,18,500 due on the profits to 31st December 1959, this has arisen because the tax loss carried forward from 1958 accounts has now been reduced by the Supreme Court's award on bonus for 1957, thereby leaving a small taxable profit in the 1959 accounts.

Excise Duty on Yarn

Looking to the future, I believe there is every reason to be hopeful. The recent budget which imposed excise duty on yarn, except for hank yarn below 40s count, will increase the cost to the purchaser particularly of our Industrial products, and the Excise department's supervision while being necessary to conform to the new law has unavoidably made the administration more complex and difficult.

Before concluding I must express the Board's appreciation of the efforts of the staff and other employees which contributed so very greatly to these satisfactory results. With their continued efforts behind us I feel sure that we can look forward to the future with sober confidence.

THOUGHTS ON THE THIRD PLAN

By T. Balogh

The third five year plan is due to replace its predecessor on 1st April, 1961, that is, in just a few days' time. It is a socialist plan, in that it follows closely the Soviet-style method of concentrating the major portion of available resources on building up investment in the public sector. This investment, in turn, is designed to generate further investment, and so on to the point where the process becomes self-generating. Private industry concentrated as it is chiefly on consumer-good production, and agriculture, are both, although better favoured than under the second plan, relegated to secondary and supporting rôles. The whole structure is massively dependent on foreign aid. In this article, Dr. Thomas Balogh of Oxford, a socialist economist of international repute, presents his views about the plan, its possibilities and its shortcomings. His approach is essentially socialistic and represents only one of the many available. It must not be taken as reflecting in any way the views of "Capital".

THE third five year plan, just as its predecessor, has come under sharp attack. It is said that it is unrealistically large, that the targets are too ambitious, that the means chosen are too totalitarian, and that the impact on the energy and enterprise of the growing industrial élite in India will be one of discouragement and disaster. I completely dissent from such views. If anything, the third five year plan is too small, if anything planning has not been total enough, if anything the means chosen have not been sufficiently ruthless to achieve what is a political minimum.

What are the immediate requirements politically?

1. The size of the plan. In conceiving the second five year plan and until recently the view was prevalent in India that the population increase did not amount even to 2 percent *per annum*, a figure considerably below the rate of increase in countries which are at a similar stage of development to India. I have always been sceptical about this assumption. The interaction between twentieth century medicine and medieval social conditions in villages usually gives a much higher rate of increase. This seems to have been the case in India. We have no firm figures yet, but the last census seemed to suggest that the rate is nearer to 2½ percent than to 2 percent. If that is so we must reckon with an increase in population which is fast surpassing 10 million *per annum*. This means that if the present social inequality—which is most marked between people who have some regular job and those who have only intermittent employment, or employment which is distinctly inferior (*e.g.*, retail trading and other types of "self-employment")—is not to increase, 4 to 5 million jobs will have to be created annually. Thus the size of the plan and the contemplated rate of growth is essentially the foundation of any remote possibility of arriving at some kind of equality and social justice in India. But the rate of growth of output has not increased by much more than the 2½ percent increase in population. In as much as some privileged classes have very considerably increased their standard of life, this must indicate that the standard of life of those least able to look after themselves has further deteriorated if that was at all possible. Some such development is actually confirmed by the Rural Labour Survey.

A Better Society

Thus, as I shall argue presently, the question of establishing a better society in India, which will still be far removed from any socialist ideal, is directly bound up with the size of the plan. Unless national investment can be increased towards 20 percent of the national income within a measurable time, say by 1970, and unless the increase in the national real output can be accelerated to, say, at least 8 percent *per annum* compound, I feel that democracy in India will not survive. *Those who are agitating for a small plan on the plea that they wish to preserve liberty in India* meaning especially economic rather than personal liberty (for they have not been very exercised about the status of the poor peasant, especially those who are in the scheduled castes and tribes), *in fact do an extreme disservice to their own professed cause.* Through a fortuitous turn of events the Chinese economic challenge has not materialised as quickly as one had every right to fear a few years ago. But the shock of misfortune has been taken by the Chinese communists with the aggressive ruthlessness to which they have accustomed us. It is not improbable that, having overcome the natural catastrophes, their momentum will once more accelerate and the challenge will be posed in an acute form in India.

The third five year plan from this point of view represents the minimum which is politically safe in the long run. It demands an effort on the part of India which would set it on the road to cumulative improvement, and which should, by 1970, secure, if not economic independence (in view of the magnitude of the problem, a cessation of all foreign aid would by no means be justified at so early a date) at least independence from the vagaries in the policy of foreign powers.

The immediate target, the increase of national investment from 11 percent to 14 percent, is by itself a relatively minor task, but in considering it we must remember that the initial target for domestically financed investment during the second plan period did not materialise. The savings rate, which already at the end of the first plan was running at 6 to 7 percent, ought to have increased to 11 percent, *i.e.*, by almost 50 percent. In actual fact it has hardly increased at all; the increase in investment was financed by foreign aid and by drawing on reserves. It is this failure of the Indian economic system to take the strain of accelerating investment which is the first desperately serious aspect of the position. Unless the Government succeeds in increasing the domestic contribution to national investment during the third plan period (and the contemplated increase is no more than what was contemplated for the second) the outlook for a cumulative improvement in India's position is sombre indeed.

2. The efficiency of investment. In assessing the chances of success, the most important single consideration is whether capital investment will be as effective as it is planned to be. With an increase only from 11 percent to 14 percent in investment, the third plan hopes to accelerate growth from the actually experienced 3 percent towards 5 percent. It should be realised that even the fulfilment of that target would not give rise to more than 2½ percent in *per capita* national income *per annum*. Even at that rate poverty will not be much mitigated for decades to come. It should be noted that a similar increase in the effectiveness of capital investment was prescribed for the second plan and failed to materialise. In judging the details of the plan, therefore, the most careful scrutiny has to be applied whether scarce investment power will be applied in the most effective manner so as to bring about the contemplated acceleration of growth. It is perhaps in this direction that I would have certain misgivings about policies actually pursued or proposed. I shall in the following briefly touch on various aspects of the third five year plan and point out what appear to me to be the most important policy conclusions.

3. Agriculture. Much the most important problem facing India at the moment is the continued stagnation of agriculture in a large part of the country. While encouraging advances have been made in Punjab Rajasthan, in a number of the most important and most closely settled provinces stagnation continues. The large-scale investment schemes initiated by the Government, of which perhaps the Bhakra Nangal project is the most spectacular and also the least satisfactory, do not seem to have resulted in the full increase in production which could have been expected. The reason for this has been the failure to instruct the peasants in modern production methods, the failure to connect the fields to the large-scale canals, and the failure to utilise water economically.

No doubt the very failure of these large-scale investment programmes (and not in agriculture) which has depressed the effectiveness of capital investment, represents an opportunity for achieving a more than proportional increase in the near future. *The investment is there, and the output* may be expected to materialise. It should be noted, however, that in many countries an acceleration of investment projects without due attention to the organisational capabilities of the system has resulted in a cumulative agglomeration of big projects which are yielding little or nothing. It should not be taken for granted that because during the second plan full progress was not achieved, expansion under the third plan will automatically soar.

Social Framework of Agriculture

The success of the medium to rich peasant in increasing production, and taking to the use of artificial fertilisers and diversify his crop, which was responsible for the advance in certain States in India, is a sign that with the help of an adequate framework, the Indian cultivator is quite as capable of responding to economic stimuli as any other cultivator or producer. It is the archaic social framework of agriculture which has to a large extent prevented success in other areas. The Government will thus have to make up its mind whether to back an *embourgeoisement* of the richer peasant or go full out for the establishment of modern co-operatives capable of introducing modern techniques and organising scattered holdings. A possible compromise might succeed. What is not possible in the present vacillation between the two policies. From this point of view three essential preconditions follow.

First, the uncertainty about land tenure will have to be ended. On the whole the lack of the success of the land tenure reform to rejuvenate the social framework of the village is deplorable. But however deplorable it is, the state of suspense in which landowners in very large parts of the country are kept about further instalments of land reform is completely incompatible with an effort to get those landowners who are able to do so to improve their land and techniques, both of which would require investment. It is essential to force a clarification of this issue centrally, because the lack of solution will endanger the plan for the whole of the Indian Union.

The second essential condition is the provision of stable prices. It has been argued that stability in prices might mean great divergence in income as bad harvests succeed good ones. The problem in India is not one of equalising incomes between bad and good years: it is to promote a steadily rising trend of production. A setback in prices might suggest to the peasant that relentless concentration on increasing production is not worth while. As the Ford Foundation study has shown, the danger in India is not one of glut but one of grave and possibly catastrophic deficiency. I do not accept either the assumption of the Ford Foundation or their suggestion that the solution of the agricultural problem demands a switch of investment from industry to agriculture. But I welcome their report as calling attention to the basic problem of India. While techniques and needs of increasing production will necessitate other measures, perhaps flexibility in the relative prices, such measures will not be successful until the general problem of price instability in agriculture has been eliminated. In all countries in which this has been done the increase in physical productivity has been spectacular. There is no reason to doubt that it will have even more favourable results in India where there is so much room for improvement through relatively simple changes.

The stabilisation of prices presupposes the establishment of storage capacity and the operation of a buffer pool scheme. Once this has been established the continuity and security provided will prevent the malpractice by which merchants and moneylenders buy the harvest of the impoverished peasants at knock-down prices. The floor price will be valid for one or more seasons and will give the peasant security that he is not exploited. The building up of storage capacity is an operation which demands more labour than other productive resources. It could, therefore, be successfully accomplished as a part of the rural public works programme, to which I shall make some allusion below.

Agricultural Credit

Once the buffer pool is in operation, the third problem of agriculture can also be tackled. This is the provision of supervised credits, on the one hand to independent peasant owners, and on the other to co-operatives. So long as the peasant depends on moneylenders it would be futile to assume that much agricultural improvement can be undertaken by him. The rates of interest are far too high to permit using such capital for productive investment. Even when the peasant is forced by social circumstances to borrow, *e.g.*, by the unfortunate marriage ceremony system, he will have great difficulty in ever getting out of debt. Modernisation of agriculture cannot be expected to succeed.

These three measures should contribute to the promotion of some agricultural expansion. Much progress should however not be expected from them because of the basic shortcomings of the agricultural tenure system in India. This, together with certain religious and traditional prejudices, creates an enormous under-employed or unemployed class which battens on the lower classes in the village hierarchy. The land reform movement was not successful in eliminating these drawbacks of primitive agriculture. A possible relief has been suggested by Professor Kalecki through taxation, which would force non-working landowners to sell and thus would hasten the possibility of integrating the village. Another possibility would be to link rural public works with reorganisation of the productive system. If the peasant does not immediately benefit from a reorganisation he is hardly likely to adopt it, as he is suspicious of any innovation. Nor will he take easily to co-operation. To overcome this difficulty and provide immediate and substantial incentives, rural public works ought to be organised through co-operatives and some payment given to those who participate.

U.S. Aid

The fear of inflation which has prevented the undertaking of such operations could be overcome by using the generous offer of President Kennedy to increase food aid. An overwhelming proportion of the increase in income in the rural sector would be used to purchase food and clothing. Such foodstuffs and cotton are available in America and there is excess capacity in the cotton mills in India which could work it out. Thus a reconstitution of the rural public works programme should take high priority in the Government's plan together with a request for increased aid from America.

Provided the organisation of the co-operatives is energetically taken in hand, and extension services planned, no single measure would improve India's chances more. These linked rural public works schemes would be the answer and probably a triumphant answer to the Chinese communes.

4. The public sector. An increase in the rate of investment financed out of domestic savings presupposes either an increase in taxation or an increase in domestic saving or an increase in the contribution of the public sector enterprises to the finance of their own expansion schemes. Given the critical size of the Indian problem probably all three would have to contribute.

(a) *Taxation.* It has been suggested that Indian taxation is already beyond the capacity of bearing it. This on the whole is not borne out by one's

superficial impression of the way of life of the upper classes, including the managerial. The total contribution of taxation to the national effort is barely 10 percent. Even given the low level of income in India, this is surprisingly small. The contribution of direct taxes at 3 percent is definitely insufficient.

One of the important tasks before the Indian Government is obviously to try to prevent the emergence of large profits. This legitimate aim has been pursued in extremely doubtful ways. While there has been a rather sharp control of the price of certain essential goods, *e.g.*, coal and electricity, which prevented these industries from contributing their share to the national investment programme, no measures were taken to prevent the emergence of vast capital profits through land speculation arising in localities where a publicly financed development programme was under way. Surprisingly enough, this was the case even in places like Chandigarh where the whole of the development basically was due to the Government. Given the extreme inequality in wealth this obviously resulted in speculative gains which do not perform any useful task at all. In my view the compulsory purchase of land before any development is put into execution is an essential condition to increase the effectiveness of investment. There ought to be also a licensing control over building using scarce materials. (The Government ought to ration itself. In the approval of monumental buildings the argument that it may stimulate tourism is not on the whole a valid one, nor are sumptuous buildings necessary in order to have a good university.)

Tax Alternative

I do not believe that in Indian circumstances very elaborate tax measures are really feasible. I would, therefore, rather try taxes on the consumption of non-essentials. One way of combining the principle of progression with such taxation is to exempt a certain fixed amount of the purchase price of a commodity and increase the rate of tax; thus lower qualities would not bear much of any taxation. Here again, however, the problems of collection might prove overwhelming. An alternative and simple way of taxing individuals might be to follow the French example of making income tax dependent or mainly dependent on apparent consumption, which is taken as an indication of income. The possession of servants, cars, the size and location of the habitation, would be expressed in terms of approximate income on which tax becomes payable. Certain kinds of expenditure, say on servants or on handicraft products, might be exempt as they might represent employment for people otherwise not easily employed. The returns would be published and would be subject to amendment. It will be difficult for the income-tax payer to make an incomplete return on things which his neighbours will know so well.

(b) *Prices.* Much the most important alteration, which I think has become unavoidable, is the reform of the pricing system in the public sector. Mainly as a result of the traditions which grew up under the defunct British administration, the principle that public investment need not show returns comparable to those in the private sector, seems to have been accepted in India. This was perfectly justified in that nightwatchman State régime when this was the only way in which the private sector could be stimulated. Thus the income of the community might be increased and the unfavourable consequences resulting from the distortion of the price system more than offset. This would especially be true in such under-developed areas as India, which suffered especially in the colonial era from a perversion of their real comparative cost structure, to the detriment of industry and in favour of primary production for export.

Pricing Policy

In a planned economy such haphazard subsidisation of private industry can hardly be defended. The problem at present is one of controlling rather than stimulating private enterprise. Indiscriminate subsidisation of private industry, or the consumer of certain specific services, by charging low prices, is totally incompatible with the very purpose of planning.

If the policy now pursued should continue when the public sector expands, and if it were to apply to steel, machine tools and other vital industries, severe misallocation of resources could not be avoided. Already now there is such misallocation, mainly because of the system of charging for transport on the railways which is inappropriate to present day requirements. It is essential that the public sector should finance a large part of its own expansion. Unless this is done, success in increasing the rate of investment in accordance with the outline of the plan will prove impossible. The only alternative would be a severe increase in taxation far beyond that contemplated in the previous section, which itself goes beyond the present plans and intentions of the Government.

(c) *Size of public sector.* Contrary to the impression often given by certain critics of the Indian Government, the public sector in India is still much smaller than that in England or in America, not to speak of France or Italy where it occupies a really sizable part of total commodity production. Its expansion is absolutely essential if national energies are to be mobilised. In the situation in which India finds itself private enterprise cannot be expected, under the stimulus of the free play of the price mechanism, to produce balanced growth. It did not produce it in India or anywhere else in the world. It would not do so now.

This does not mean, however, that there is any justification for a repressive control of the private sector when the public sector cannot provide essential supplies. If, for instance, the public sector is not to build the fourth steel plant (and I am much in favour of its doing so) it would be essential to stimulate the private sector to do it. The same thing in coal or in heavy electrical machinery, *etcetera*.

Public Sector Projects

Nor is it permissible to advocate the expansion of the pulic sector merely because it is the public sector. The advocacy of the so-called popular car is a spectacular example of such a fallacy. It could not be produced for the price at which it is now stated it could be produced; it would diminish savings, it would add to the feeling of inequality rather than reduce it, and it could not contribute either to investment capacity or to a further acceleration in the rate of increase in national income. The fact that it was proposed to do it in the public sector is, if anything, an argument against it because it would be less easy to tax it or to prevent the use of State credit for the purchase of its products. It is essential that in planning public sector projects the closest possible consideration should be given to the alternatives which might be undertaken if the particular scheme proposed were not accepted. This does not seem to have been done with sufficient thoroughness in the past, as is evidenced by the brilliant analysis of Professor Raj of the Bhakhra Nangal project. Specially close attention must be paid to the relative needs and contribution of those alternatives to the foreign exchange sector.

5. Exports. This brings me to the problem of exports. Even under very optimistic assumptions the strain on the Indian balance of payments will very considerably increase. Maintenance exports are bound to expand and the service of public external debt will be sizable. Development imports will, even under very optimistic hypotheses, increase considerably until steel and machine production gets going in India. Already draconic restrictions have to be exercised on imports, and the contribution of those imports to possible increases in Indian national income are a multiple of their foreign exchange cost at present rupee values. For example, the import of fertilisers might give a return in increased crops of over twice its own value.

An Undervalued Rupee

It is obvious, therefore, that the present rate of the rupee undervalues marginal imports, and therefore exports, for India. The much canvassed idea that India should devalue under these conditions seems extremely silly, for the general repercussions on internal balance and thus, soon afterwards, on external solvency, would not be favourable. This does not mean, however, that in planning imports and exports steps need not be taken to stimulate marginal exports and to do everything to keep imports from rising. In actual fact, the present system by which the rate of interest on the organised capital market is kept at a much lower level than general returns in the private sector at a fraction only of the rates of interest ruling in the subsistence agricultural sector, means that the import of complicated machinery, giving insufficient employment a unit of cost, is encouraged. It also means that in planning exports comparative costs are not readily and accurately taken into account. Instead of stimulating at all costs the production and export of oilseeds, more attention is being paid to relatively less favourably situated produce, *e.g.*, sugar.

6. Private sector. It is also obvious that if India is to balance her foreign payments she will need to increase her manufactures of exports. This means that the encouragement of industries which cannot be expected to be competitive within measurable time seems extremely questionable.

There has been a tendency in controlling the private sector to discourage the rise of large-scale industry, partly to avoid concentration of economic power, and partly in order to spread industry over a large number of States for political reasons. In consequence, in a great number of industries production was begun on a scale which will, even at insufficient rates of pay, prevent them from being competitive in the international markets, and also retard the increase in Indian national income. Given the grave problem confronting India of increasing her standard of living and increasing her domestic investment capacity, this policy seems suicidal. It is certainly suicidal if the balance of payments is to be brought into some semblance of equilibrium, even if foreign aid is to continue at an increasing rate. In deciding on private investment projects the sole consideration must be social efficiency, *i.e.*, efficiency with due regard to the existence of unemployment and shortage of foreign exchange.

7. The social aim of policy. I now come to my conclusions. So long as the growth of the Indian population is greater than the capacity of the country to provide employment, the number of the miserably poor is bound to increase. The only way in which this grave problem can be dealt with is through an increase in investment capacity. Short-cut measures, however well meant and well meaning, by which income or employment is redistributed at the cost of reducing the rate of growth, will objectively not decrease but increase misery. It will increase the small number of the less unprivileged but will leave the mass of completely unprivileged still growing. Unless this basic truth is realised in evolving policy, progressive schemes will redound to the disfavour of the miserable instead of helping them. Thus both in devising controls over the private sector, and in planning the development of the public sector, attention must be concentrated on the fastest possible increase in output. The time for redistributive measures which impair the growth of the economy is not yet. Employment opportunities should be equalised by suitable redistribution of and increase in rural public works schemes, closely concerted with reorganising agricultural production. In my opinion the criticism of the Indian third plan is not that it is too big. If anything it is too small. The criticism is much more that in launching the plan all parts of the Government have not yet fully realised the immensity of the task and the necessity of concentrating ruthlessly on increasing national output and investment capacity which alone will in due course be able to solve the problem of poverty, inequality and ignorance.

A CHALLENGE ACCEPTED

From G. H. Gates-Reed, M.I.A.M.A.

A report from the Advertising Conference held this week in New Delhi

New Delhi, 28th March.

THE Prime Minister, Mr. Nehru, promptly picked up the gauntlet over commerical radio, when it was thrown into the arena of Vigyan Bhavan, rather rashly one felt, by Mr. Chinubhai Kilachand, chairman of the Indian Society of Advertisers, in his inaugural speech on 27th March. He did not agree at all with the appeal or values of commercial radio, even as a means to develop exports, the overall theme of the conference. In fact, Mr. Nehru does not like commercial radio! As he later indicated that the development of television facilities in India was being played down deliberately, as the Government did not wish to waste money on it—or have the public do so—that could be used to better purpose as savings, it would seem that the chances for commercial radio, Government blessed, in India, in the near future, must be slight indeed. A detailed memorandum on the subject had been put up to the Government by the Indian Society of Advertisers some time back.

As could have been anticipated, Mr. Nehru had little good to say about advertising. He acknowledged its existence, in fact he resented its persuasiveness and power, accepted its inevitability no matter what he might say, and then proceeded to suggest how it could better serve the community by helping and not hindering by distraction the evolution of the "integrated" individual. He wanted more savings rather than greater consumer demands. (Note: Advertising has proved a most successful seller of savings in the U.K.) However, he did recognise advertising's ability to help the export drive whilst not commenting on the chairman's recommendation that a Central export institute be set up to co-ordinate activities of the various export promotion councils and individual exporters, in market research and sales promotion particularly, an aspect laboured by later speakers.

Attendance was remarkably high—Mr. Nehru suggested it might have been even greater had the inauguration been left to a famous film actress rather than to himself. The organisation and presentation of the conference was outstanding. Mr. Charles Schlaepfer, president of the International Union of Advertisers' Associations, Brussels, had flown in from Berne to bring tidings of admiration and goodwill from many nations. He was also one of the speakers on the second day when Mr. Morarji Desai, Minister for Finance, was the chief guest. Mr. Desai's attitude was sympathetic, if avuncular. Admitting the need for increased exports, he granted also the need for advertising. He felt it was his job to hold a watching brief on the activities of all parties in this respect, but emphasised that although the Government was deeply interested in export developments, the onus to develop the markets rested with industry. As handmaidens of industry, the advertising practitioners at the conference—which he welcomed—had a real part to play and he hoped the conference would assist all in stimulating interest and finding new methods of building up export demand.

The delegates in session will be addressed by Mr. D. S. Joshi, I.C.S., Sir Donald MacDougall of the Nuffield Institute, Mr. Lal Bahadur Shastri and Dr. Gordon Barnewell, T.C.M. expert on marketing, as well as by Mr. P. L. Tandon, vice-chairman, Hindustan Lever Ltd, and Mr. R. K. Sircar of the Dunlop Rubber Co., both of whom recently returned from a study tour of the U.K., West Germany and the U.S.A. The full programme of speeches, talks and social events will be rounded off in a summing up by Mr. P. L. Tandon.

Money

THE CALCUTTA MONEY MARKET

HEAVY DEMAND FOR REMITTANCE

Wednesday, 29th March.

THE steady increase in outstanding advances has continued throughout the past week. The main reason appears to have been the sharp rise in demand from the sugar industry. The requirements of the cotton mills and against grains and seeds storage are also higher. Demand from the jute mills and the engineering and iron and steel industries was slightly down on the week. Conditions in the interbank market are now extremely tight and there are reported to be few, if any, funds available at the increased call rate of 5¾ percent.

The exchange market has continued dull, with few bills of any kind in evidence. Those that have come to hand have been chiefly on account of gunny shipments. There has been a sharp revival in demand for remittance on account of certain large recurring payments becoming due at this time of year. On the London money market, sterling has again been under pressure, which the British monetary authorities have sought to relieve. Due to their persistent buying of the pound, closing rates showed small gains against most important currencies, with the exception of the Norwegian krone.

BULLION WAS QUIET ON RUMOURS OF BIGGER arrivals of contraband metals. Silver declined from the previous week's level of Rs. 237.25 to Rs. 236.75, quoted today, for ready delivery. The London and New York prices were 80d and 91.375 cents.

Gold fell from Rs. 144.75 to Rs. 144. The sovereign at Rs. 95.75 showed a loss of 50nP.

DURING THE WEEK ENDED 24TH MARCH GOVERNment of India Treasury bills for Rs. 52,30,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNment of India Treasury bills were opened on 28th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 3rd April.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 29th March to 1st April at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 21st March to 25th March amounted to Rs. 70 lakhs.

THERE WAS A DECLINE OF RS. 2.27 CRORES TO Rs. 1,968.70 crores in active notes, according to the return of the Reserve Bank of India for the week ended 24th March, 1961, but the total note issue was Rs. 94 lakhs higher at Rs. 1,992.79 crores. Notes held in the Banking Department consequently rose by Rs. 4.29 crores to Rs. 24.09 crores. Deposits of the Government of India declined by Rs. 19.43 crores to Rs. 53.37 crores, while other Government accounts increased by Rs. 15.51 crores to Rs. 33.63 crores. Balances of commercial banks at Rs. 74.47 crores showed a rise of Rs. 2.71 crores. Balances held abroad declined by Rs. 6.65 crores to Rs. 25.54 crores. Investments improved by Rs. 29.62 crores to Rs. 160.34 crores. Other loans and advances rose from Rs. 168.81 crores to Rs. 173.17 crores, of which banks against usance bills crores (Rs. 35.28 crores). Ways and means advances stood at Rs. 42.18 crores against Rs. 51 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 17th March, 1961, shows a drop of Rs. 14.53 crores to Rs. 542.83 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 13.23 crores and Rs. 1 lakh to Rs. 229.40 crores and Rs. 9.84 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 2.84 crores to Rs. 277.11 crores. Cash and balances are, in consequence, shown at Rs. 24.37 crores or Rs. 75 lakhs less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 17th March, 1961, shows Demand and Time liabilities at Rs. 810.92 crores (Rs. 16.17 crores on account of borrowings from banks) and Rs. 1,066.52 crores (Rs. 9.80 crores), compared with Rs. 817.59 crores (Rs. 18.90 crores) and Rs. 1,084.25 crores (Rs. 9.64 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.66 crores and Rs. 3.58 crores to Rs. 44.39 crores and Rs. 66.80 crores, respectively. There has been a drop of Rs. 14.98 crores to Rs. 558.89 crores in investments. Advances and bills discounted at Rs. 1,307.17 crores show an increase of Rs. 14.53 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.9 percent and 69.6 percent, against 6.2 percent and 68 percent.

THE INDIAN BANK LTD, MADRAS, HAS MADE A profit of Rs. 40.32 lakhs for the year ended December 1960, compared with Rs. 36.84 lakhs in the previous year. Bringing in Rs. 80,143, there is Rs. 41.12 lakhs available for distribution. A final taxable dividend of 7½ percent, including a bonus of 2½ percent, has been declared, making 15 percent, taxable, for the year. Sinking fund is allocated Rs. 4 lakhs and taxation Rs. 23 lakhs, leaving a carry-forward of Rs. 1.36 lakhs. Deposits stood at Rs. 39.48 crores, investments at Rs. 14.45 crores and advances at Rs. 27.27 crores.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 30-3-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
30-3-61	1-7-61	2,00,00	Rs. 2.750%
24-3-61	25-6-61	2,00,00	Rs. 2.750%
17-3-61	18-6-61	2,00,00	Rs. 2.750%
10-3-61	11-6-61	2,00,00	Rs. 2.750%
3-3-61	4-6-61	2,00,00	Rs. 2.750%
24-2-61	25-5-61	2,00,00	Rs. 2.650%
17-2-61	18-5-61	2,00,00	Rs. 2.590%
10-2-61	11-5-61	2,00 00	Rs. 2.585%
3-2-61	4-5-61	2,00.00	Rs 2.585%
27-1-61	28-4-61	2,00.00	Rs 2.580%
20-1-61	21-4-61	2,00.00	Rs 2.580%
13-1-61	14-4-61	2,00,00	Rs 2.576%
6-1-61	7-4-61	2,00,00	Rs. 2.556%

(Monthly Maturities 000's omitted)

April 1961	8,00.00
May 1961	8,00.00
June 1961	8,00.00
July 1961	2,00.00
Total	26,00.00

CLEARING HOUSE RETURNS

Week ended	Calcutta	Bombay
	Rs. (thousands)	
24-3-61	1,05,67,32	1,05,42,10
17-3-61	1,02,78.00	96,5[illegible]

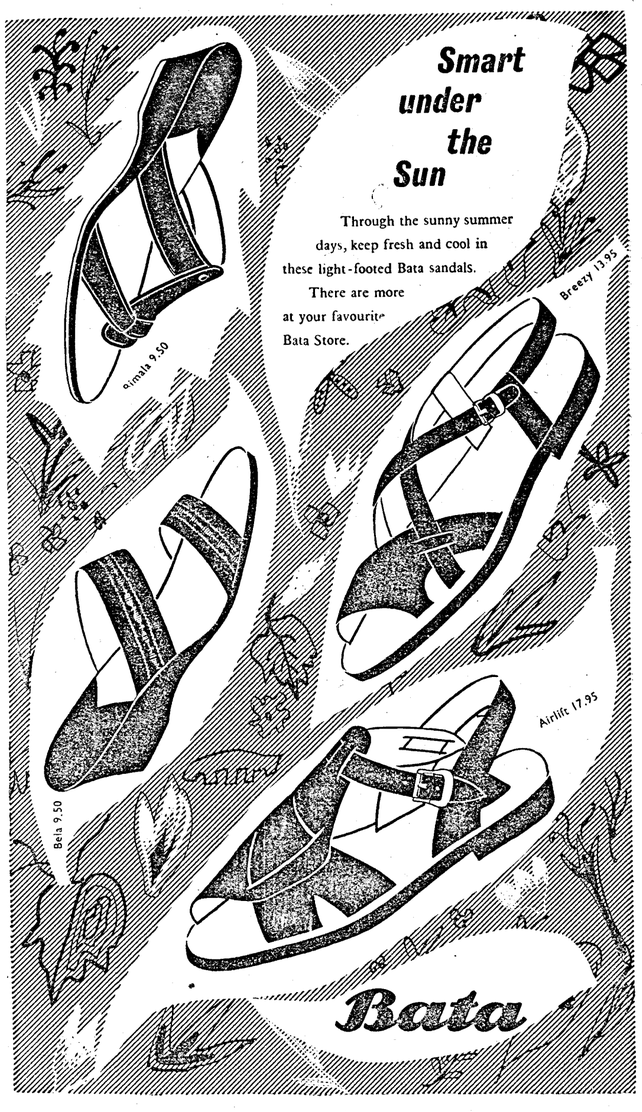
3-3-61	85,57,95	78,38,86

WORLD OFFTAKE OF SILVER RISES

NEW USES BEING DEVELOPED

SILVER prices were steady and the demand was strong in world markets throughout 1960, according to the latest annual review compiled by Messrs Handy and Harman of New York. Increasing economic activity abroad was in contrast to some slackening in the United States. The world consumption of the metal for industrial uses increased



by about 5 percent, compared with the previous year. The total consumption of silver by industrial users in the United States amounted to 100 million ounces in 1960 or about 3 percent below the revised figure for 1959. Consumption in sterling holloware and flatware held up well, and photographic uses increased. On the other hand, the demand for silver in the metal joining, electrical and electronic fields was down, due largely to the effect on the metal business of reduced production in consumer durable goods including air-conditioning, refrigeration and electrical appliances. However, the number of uses for silver—*for military as well as civilian purposes—continues* to grow.

There was no price change whatsoever in the New York silver market during 1960. The availability of Treasury silver to domestic users at a delivered cost of 91⅜ cents a troy ounce established the maximum price to consumers. On this basis, Handy and Harman's published price, which is the price paid by it for silver in unrefined materials, was issued at 91⅜ cents, the usual ¼ cent below the price for refined bar silver offered for nearby delivery at New York.

U.S. Imports and Exports

Imports of silver into the United States in 1960 amounted to about 60.3 million ounces. Excluding the returns against lend-lease of 4.6 million ounces, the balance of 55.7 million ounces was about 13 percent below the comparable figure for 1959. Imports from Canada of 21.4 million ounces were about equal to the previous year, and arrivals from Peru increased slightly to 12.2 million ounces. *Imports from Mexico*, however, at 10.3 million ounces were sharply down from 1959. Total imports from all western hemisphere countries amounted to about 50.6 million ounces—15 percent below the previous year. Receipts from countries outside the western hemisphere, excluding lend-lease, amounted to 5.1 million ounces, which was slightly higher than in the previous year. Total exports from the United States in 1960 amounted to about 26.7 *million ounces* which was nearly three times the 1959 volume.

U.K. Demand Falls

The consumption of silver outside the United States maintained a high level and in some countries increased sharply during 1960. Throughout most of the year, as already noted, the pressure of world demand resulted in higher prices abroad. Quotations in the London market for prompt delivery ranged from a high of 80½d a troy ounce at the beginning of the year to a low of 79d on 18th March. These rates were equivalent to 93.67 cents and 92.37 cents, respectively. The closing quotation for the year of 79 3/8d was equivalent to 92.73 cents an ounce. During the year, there was increasing business on a forward basis in London, and by December forward silver was quoted at a 1/8d premium over spot for the first time in many years, indicating a growing hedging interest. The industrial consumption in Britain amounted to 16.5 million ounces during 1960, about 1 million ounces less than in 1959, the drop being attributed to a decline in demand during the second half of the year. The consumption of silver in West Germany for industrial uses amounted to about 40.2 million ounces, a 20 percent increase over 1959. Total imports increased accordingly and are estimated at 40.2 million ounces.

Stocks and Shares

EASIER TREND REVERSED AT THE SETTLEMENT IN SPITE OF CREDIT SHORTAGE FEARS

INVESTORS MOBILISING RESOURCES FOR NEW ISSUES

Wednesday Evening.

THE Calcutta stock market has been in a subdued mood during the past week, although at the settlement yesterday the speculatives recovered rather suddenly. (Today is a holiday because of Mahabir Jayanti.) The softer trend earlier was due to a variety of factors. the most important of which was probably the technical reaction marked by widespread selling in Bombay. The undertone nevertheless was quite steady; operators merely decided that it was time to book their profits, since another vigorous upsurge did not appear to be in sight.

It is also likely that investors have been mobilising their resources for a number of new share issues which are expected to be announced in the near future. Two have already been announced—by the Ashok Paper Mills and by Steel and Allied Products, the details concerning which appear on earlier pages of this issue of *Capital*. Rumours are going round that two other attractive ones are due to be announced very shortly—one by Goodyear and the other by Agfa. The foreign collaboration promised for these projects is proving an important bull factor for investors.

There has been little reaction to the speeches *at the meeting of the Federation* of Indian Chambers of Commerce and Industry in New Delhi. The sermon read by the Prime Minister there is considered colourless. The Federation's plea for raising the share of the private sector under the third plan has also caused no great excitement. This is partly because it is thought that moving paper targets up or down by Rs. 100 crores or so does not matter very much; and partly because it is reported that the private sector's *share had already been raised, well* before the Federation thought of recommending that it should be.

The shortage of bank credit is exercising a pervasive restraining influence on the market. But many feel that the influence is psychological rather than real. The view has been expressed, for instance, that the restrictions on bank credit do not reduce the flow of funds to the stock market. To the extent they do, the loss is made up by people withdrawing their deposits from the banks, and putting them in the financing of *budla* transactions, where a return of 12 percent to 15 percent can often be earned. The withdrawn deposits are, of course, supplemented by funds from the unorganised sector of the money market.

In the circumstances, the stock market is watching with dismay the confused efforts of the authorities to bring more money into the banking system by raising the interest rates on deposits. This will no doubt be followed by an increase in the interest rates on advances, but the purpose of the whole exercise is not very clear. It is wondered, for instance, wheher banks can get more money by raising deposit rates from 3 percent to, say, 3½ percent, when the money originally *went out in search of interest rates varying from* 12 percent to 15 percent. The unorganised sector where interest rates of the latter magnitude are earned does not, it is true, offer the same security as the banks do, and that is why the banks could get this money as deposits in former years. But now their advantage has been eroded, since some banks, in south India especially, have been granted prolonged moratoria. The wide gap in attractiveness which once separated the banks from the *kabuliwallas* of the share-fiddling fraternity has thus been narrowed to some extent—from the depositors' point of view. The question is, therefore, being asked if marginal increases in the banks' deposit rates can alone remedy this situation.

Indian Iron fluctuated narrowly, but mostly in a downward direction, during the earlier part of *the past week. But they recovered smartly at* the clearing yesterday, when they rose to Rs. 26.75, against Rs. 27.05 a week earlier and Rs. 26.55 at the previous settlement. Jessop have improved because the Company's results for the year ended October 1960 are satisfactory, and the taxable ordinary dividend of 8.58 percent has been maintained on the capital as doubled by a rights issue. Texmaco spirits are flagging due to rumours in informed quarters that the Company's working results will be poor and the dividend will have to be cut.

Coals are steady, buoyed by Sardar Swaran Singh's speech at the Indian Mining Association meeting, where he said that he did not expect the industry would have any serious difficulty in getting the foreign exchange it needs for expansion.

Jute shares have been cheered by the discovery that raw jute prices are falling. It is reported that the weather has been excellent in East Pakistan and in Assam, so bumper crops will be sown. Some operators say that if the favourable conditions continue for the next three months, fibre prices will slump and the industry's raw material difficulties will be over. Others, however, feel that the recent fall in values is due largely to precautionary liquidation by weak holders; the critical months of possible shortage, from May to July, are yet to come.

Among miscellaneous industrials, Indian Aluminium *have woken up to the fact that the Company* has produced an excellent report. But Dunlop Rubber are still sleepily enjoying sweet dreams of a capital issue. In the case of Jaipur Udyog, the dream has turned into reality with a one-for-four rights issue announced at par. Elsewhere, National Insulated Cable are hoping for a bonus issue, and Electric Construction Equipment for rights shares. Carew have risen sharply on reports *that the Company is going to transfer its* Pakistani factory to a new company in that country; *the factory has been transformed into* a white elephant by the Pakistani exchange control regulations. Seshasayee Paper have joined the Calcutta list, and celebrated the event by rising nearer the paid-up value. Cotton textile shares have been strong, because (1) some modifications have been made in the new textile excise duties; (2) raw cotton is becoming more plentiful; and (3) some companies are thinking of diversifying their activities.

Bonus issue hopes are inflating a number of Assam and Dooars tea shares, with Joonktollee Tea's one-for-one bonus issue proposal serving as the pump.

Government securities are dull, since no large quantities are on offer. There has been a fair demand for short-dateds, and for some State Government loans; all this is keeping the undertone of the section steady.

Kil Kotagiri Estates

The working of the Kil Kotagiri Tea and Coffee Estates Co. Ltd for the year ended October 1960 shows that its profit has increased from Rs. 8.29 lakhs to Rs. 11.76 lakhs, after providing Rs. 96,844 (against Rs. 67,495) for depreciation. The directors have recommended a final taxable dividend of 17 percent which, together with an interim of 8 percent, amounts to 25 percent, taxable, for the year, against 35 percent, taxable, for the previous year. This is covered more than two-and-a-half times and offers a yield of 9 percent at a price of Rs. 5.47 a share. Among important allocations, taxation provision has received Rs. 6.31 lakhs (against Rs. 3.75 lakhs), development rebate reserve Rs. 4,569 (against Rs. 13,638), capital reserve Rs. 71,510 (against nil) and general reserve Rs. 1 lakh (against same). After making various adjustments, a sum of Rs. 15,600 has been carried forward, against Rs. 28,103 brought in. The balance-sheet shows reserves and surplus at Rs. 12.28 lakhs. The fixed assets amount to Rs. 27.45 lakhs and current assets to Rs. 7.10 lakhs. The tea crop increased from 890,357 lbs in 1958-59 to 1,044,395 lbs in 1959-60. The production cost a pound declined from Rs. 1.61 *to Rs. 1.49. The coffee crop increased from* 46.917 metric tons to 165.001 metric tons and the production cost fell from Rs. 8,487 to Rs. 2,487 a metric ton. The 1960-61 tea crop is estimated at 453,600 kilograms at a cost of Rs. 3.52 a kilogram and the coffee crop at 47 tons at a cost of Rs. 7,914 a ton.

Calcutta Credit Corporation

After providing Rs. 2.04 lakhs (against Rs. 3.40 lakhs) for taxation, the profit of the Calcutta Credit Corporation Ltd for the year ended June 1960 has declined from Rs. 3.59 lakhs to Rs. 2.26 lakhs. The directors have recommended a dividend of 20 percent, taxable, against 35 percent, taxable, in the previous year. This is covered more than twice and offers a yield of 9.4 percent at a price of Rs. 21.25 a share. Development rebate reserve has been allocated Rs. 3,229 (against Rs. 5,120). After making various adjustments, a sum of Rs. 15,336 has been carried forward, against Rs. 1.92 lakhs brought in. The balance-sheet shows reserves and surplus at Rs. 13.40 lakhs. The fixed assets amount to Rs. 19.38 lakhs and current assets to Rs. 45.76 lakhs.

Bombay Market

PRICES FALL BUT SENTIMENT HOLDS

OPERATORS OPTIMISTIC ON FUTURE PROSPECTS

Wednesday Evening.

THE Bombay stock market has closed the past week in a sober mood. There was a modest decline in share prices on profit-taking but sentiment became steadier at lower levels. Although

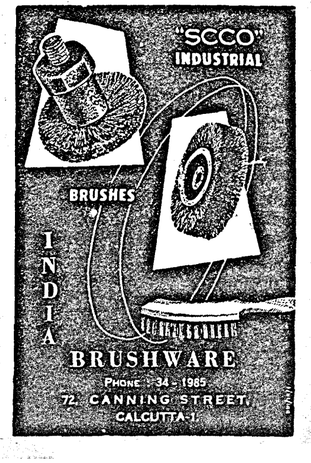
Shri JADU NATH ROY
Chairman.

V. G. PAI,
General Manager.



those bulls who had bought earlier were inclined to take profits, there was little evidence of selling pressure. In spite of the decline, operators took a bullish view about the future outlook. The decision of the Government of India to compound the duty on cotton yarn produced and consumed by textile mills into a levy on cloth, and to exempt the first 75 percent of the cloth production on automatic looms from the extra surcharge of 25 percent, helped promote steadiness. Corporate news was good in the sense that some companies were contemplating issuing further share capital in order to finance expansion. It was generally believed that the prospect of obtaining financial assistance from abroad for the third plan has considerably improved.

Tata Steel closed lower at Rs. 153.25 and Indian Iron were quoted at Rs. 26.80. Among engineering shares, Premier Construction were sold at Rs. 206 and Alcock Ashdown came to hand at Rs. 320. Larsen and Toubro were transacted at Rs. 44.50 and Mukand Iron realised Rs. 26.25. Tata Locomotive were bought up to Rs. 344 on investment account. Motor shares were steady, and Hindustan Motors improved to Rs. 21.52 on buying from Calcutta interests. Premier Automobile gained at Rs. 178.

In cotton mill shares, Century were supported up to Rs. 577 on talk of a further capital issue. It was also thought that the Company would soon produce a satisfactory report. Bombay Dyeing were transacted at Rs. 66.90 and Kohinoor were bought up to Rs. 312 on dividend hopes. Central India declined to Rs. 113 on profit-taking and Simplex were done at Rs. 195. Talk of a higher dividend lifted Standard to Rs. 1,455 and Svadeshi were steady at Rs. 259. Business passed in India United Ordinaries at Rs. 14.84 and Apollo were dealt in at Rs. 1.48.

In the miscellaneous section, sugar shares were steady, and Walchandnagar Industries improved to Rs. 241.25 on the decision to issue rights shares. Belapur were steady at Rs. 301. Cement shares were quietly steady, and business passed in Associated Cement at Rs. 155.50. Digvijay were taken at Rs. 157. Mining shares were firm, and Shivrajpur Syndicate found buyers up to Rs. 91. Hopes of an improvement in freight induced scattered interest in steamship company shares, and Scindia Steam were dealt in at Rs. 15.80. Great Eastern Shipping were quoted at Rs. 16. Bombay Burma reacted to Rs. 616, as did National Rayon to Rs. 543 on profit-taking. Chemical shares were quietly steady, and Tata Chemical were wanted up to Rs. 20.08. Indian Dyestuff were quoted at Rs. 522.50 and Polychem were transacted at Rs. 256.25. Voltas were steady at Rs. 292 and Tata Oil were bought up to Rs. 83. Ceat Tyre improved to Rs. 305 and Synthetic and Chemicals rose to Rs. 163. The latter has called the balance of the share money which remains unpaid.

Bank shares were steady, and Bank of India were transacted at Rs. 121. Central Bank were taken at Rs. 62. Insurance shares showed two-sided movements. New India Assurance were firm at Rs. 60.50, but British India General declined to Rs. 12.24 on pressure.

Turnover was limited in electricity company shares and Tata Hydro were dealt in at Rs. 101.50. Ahmedabad Electric were in demand up to Rs. 85.50 and Bombay Suburban were taken at Rs. 86.

malai were bought up to Rs. 4.06. Ouchterlony were quiet at Rs. 4.52 and Coffee Lands were done at Rs. 20.85. Kil Kotagiri were in demand up to Rs. 5.47 and Lucky Valley were dealt in at Rs. 14. Nilgiri were available at Rs. 8.30 and business passed in Nonsuch at Rs. 28.62. Anaparai were steady at Rs. 4.70 and Balmadies were quoted up to Rs. 2.50.

In textiles, Lakshmi met with support up to Rs. 174 and Travancore Rayon were taken at Rs. 39.37. Madura changed hands at Rs. 39.80 and Adoni were dealt in up to Rs. 10.20. Bangalore Woollen were quoted at Rs. 205 and Buckingham improved fractionally to Rs. 205.50. Kothari were done at Rs. 12.95 and South India Viscose were supported up to Rs. 171. Ramakrishna were available at Rs. 224 and Tirupati changed hands at Rs. 11.25.

Among miscellaneous shares, support was forthcoming for Aluminium Industries up to Rs. 24.35 and Ashok Leyland were steady at Rs. 9.60. Business was done in India Cement at Rs. 6.17 and F.A.C.T. were quoted at Rs. 11.15. Enfield were transacted at Rs. 14.87 and Spencer were in demand up to Rs. 23.62 on talk of a bonus share issue. Seshasayee Paper recovered to Rs. 4.75 and the Company has called a further sum of Rs. 2.50 a share. Parry's Confectionery were taken at Rs. 5.85 and T. Stanes were firm at Rs. 32.92. Textool changed hands at Rs. 178 and Tube Investment were bought up to Rs. 292. W. I. Plywoods were in demand up to Rs. 248, especially from Bombay interests. Binny were steady at Rs. 202 and Brunton were transacted up to Rs. 5.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. Madras Market

EARLIER STEADINESS NOT MAINTAINED

BUT MARKET HEALTHIER FOR SHAKE-OUT

Wednesday Evening.

THE earlier steadiness was not maintained in the Madras stock market during the past week; share prices declined at the close due to selling in both clearing and cash scrip. It was generally thought, however, that the market had become healthier because of the shake-out. In Government securities, there was good demand for short-dated Central Government securities and State loans, but business was limited because of lack of offers. Selective buying took place in sugar shares on hopes of increased production. In planting, tea shares were bought discriminatingly due to good reports from the Cochin auction sales. Interest was subdued in coffee shares on fears of excessive supplies. Selected rubber shares were fancied on prospects of expansion. Textile shares were quietly steady and shares of miscellaneous companies having expansion schemes and large reserves were favoured.

In the banking group, business was done in Andhra at Rs. 100 and in Indian Overseas at Rs. 190. Punjab National changed hands up to Rs. 21.50. Among public utilities, scattered interest was taken in West Coast at Rs. 13.87 and in South Madras at Rs. 10.06.

In sugar shares, United Breweries were maintained at Rs. 115.50 and Mysore were steady up to Rs. 59. Deccan were transacted up to Rs. 14.45 and E.I.D. were in demand up to Rs. 44.20 on talk of a further share issue. Business passed in India at Rs. 12.10 and in K.C.P. at Rs. 23.48.

In planting shares, Blue Mountain were quoted at Rs. 3.57 and Cochin Malabar at Rs. 7.97. Consolidated Coffee reacted to Rs. 24, but Periakara-

London Market

LAOS DEVELOPMENTS INDUCE CAUTIOUS TRADING

BUT FRESH RISE CONSIDERED LIKELY

London, 29th March.

SENTIMENT in the stock market came very much under the influence of international politics during the past week, the position in Laos causing buyers to adopt a more cautious approach and induced those who have accumulated useful profits since the three-week account started, to cash in. Nevertheless, business has been on a considerable scale on most days and given a satisfactory settlement of the Laos affair, there is every indication that the upward trend in prices would be resumed. Indeed there are already signs of this developing. Although there is some apprehension concerning the balance of payments figures and the gold reserve position this month when they are made known during the next few days, there has been plenty of encouraging news from industry and individual companies. The motor-car industry is steadily recovering from its slump and the machine tool and heavy engineering trades are receiving increased business even if profit margins have contracted. The biggest item of company news in the past week was the final results of Imperial Chemical Industries which were very much in line with the directors' forecast. Brewery shares encountered a good deal of profit-taking, but stock was usually well absorbed. The newspaper market has been in the limelight with rumours of a take-over pushing up the shares of Associated Newspaper and Daily Mail trust, the controlling company. However, interest subsequently dwindled and there has since been some reaction in prices. Gilt-edged securities were sensitive to small sales and prices eased, although there has been some resistance during the past few days. Gold shares lacked interest and responded to the slightest selling with the result that prices have eased. Coppers, however, experienced rather brighter conditions with a good demand at times coming from most leading centres. A feature was the marked strength of selection trust as a result of U.S. buying. Tin shares went ahead at one time, but buyers became cautious reflecting nervousness concerning Laos. Oil shares lost their buoyant tone which followed the Royal Dutch-Shell Transport results. In spite of the situation in Laos, rubbers and teas held steady.

TRADE PROMOTION

...is our business

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

Enquiries may be made through your own bankers or direct to

Plantation Topics

SLOW PROGRESS IN RUBBER REPLANTING

IMMEDIATE ISSUE OF LICENCES URGED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

RUBBER replanting in south India is now in a stalemate. The Rubber Board, it is reported, is not issuing replanting licences due to the lack of instructions from New Delhi. Replanting has been progressing slowly with the aid of a small subsidy given by the Central Government through the Rubber Board. It was in August 1960 that the Government of India approved a proposal to raise the replanting subsidy from Rs. 400 to Rs. 1,000 an acre to create more enthusiasm among rubber growers for replacing their low-yielding trees with high-yielding strains. This was done with a view to achieving self-sufficiency in this strategic raw material. The enhancement of the subsidy attracted thousands to the replanting scheme, and there was a rush for replanting licences. The Planning Commission, however, thought that the system of subsidised replanting was not necessary and advised the Central Commerce and Industries Ministry—which was directly concerned with the rubber planting industry—to drop the subsidy. The Ministry which stands committed on the enhanced subsidy is unwilling to abandon the subsidised replanting scheme, according to available reports. Meanwhile, the controversy between the Ministry and the Planning Commission appears to continue. The Government of Kerala and rubber growers are totally opposed to the Planning Commission's recommendation. The Rubber Board, meanwhile, is not issuing replanting permits for the 1961 season due to the lack of definite instructions from the Central Government. Growers point out that unless the Government of India orders the immediate issue of replanting licences, they will unnecessarily lose a year.

Production and Consumption

India's natural rubber output is only a little over 50 percent of the country's requirements. By 1970, the gap is expected to widen to 57,000 tons and by 1975 to 108,000 tons. Therefore, if the country is to achieve self-sufficiency in the commodity, intensive efforts are necessary for both planting and replanting. It is estimated that 350,000 acres of land have to be brought under rubber during the third plan period to reach the goal of self-sufficiency. So the Kerala Government is sponsoring a scheme to plant over 200,000 acres during the third plan. The Madras Government is also preparing a scheme to bring a few thousand acres in the Kannyakumari district under rubber cultivation. The Central Government is likely to offer financial assistance for these schemes.

Cashew Kernel Exports Rise

The cashew processing industry on the west coast of India earned about Rs. 19 crores in foreign exchange last year. About 39,000 tons of cashew kernels valued at more than Rs. 18 crores and 6,000 tons of cashew shell liquid worth Rs. 52 lakhs were exported from India in 1960. The corresponding figures for 1959 were: cashew kernel 37,600 tons valued at about Rs. 15 crores and cashew shell liquid 5,000 tons worth Rs. 40 lakhs. The United States continued to be the largest buyer of cashew kernel while Russia, Britain, Australia, Canada and Japan bought more than what they did in 1959. But exports to West Germany and Switzerland declined during the year. Britain replaced America as the largest buyer of cashew shell liquid. Australia and West Germany took larger quantities of the oil in 1960.

Raw Material Shortage

The cashew processing industry which is one of India's major dollar earners is now facing a serious raw material shortage. Inadequate release of import quotas by the Central Government has created a serious shortage of raw cashewnuts imported from Africa. As it is, the industry has to meet more than 60 percent of its raw material requirements from Africa. Processors say that if the free flow of African nuts is obstructed, the cashew processing industry in Kerala will have to starve. They point out that unless a large quota is released immediately, cashew factories will have to curtail their processing activities. Several thousand workers might, therefore, lose their jobs. There was a brief discussion on this issue in the Kerala Legislature recently. The member who raised it in the Assembly said that apart from unemployment, India will be losing valuable foreign exchange. As imports were more liberal in the past, cashew processors were getting almost the entire quantity of nuts produced in Africa. But last year, they got only about 100,000 tons of raw nuts from that country. Besides, import licences issued this year form only 50 percent of last year's offtake. The member, therefore, warned the Central Government that if the free flow of raw nuts was obstructed, processing factories would be established in Africa. So India will lose the monopoly she is enjoying now. The Kerala Industries Minister said in reply that the State Government is aware of the difficulties of the idustry. He added that he would persuade the Central Government to ensure adequate supply of raw material to the industry.

Voluntary Quality Control

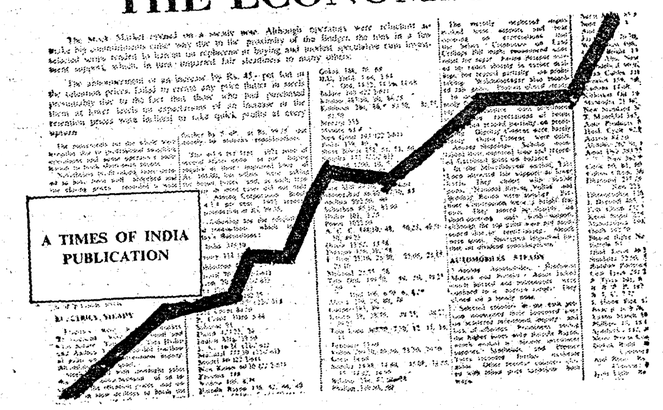
The Cashew Export Promotion Council is trying to introduce voluntary quality control for both imported raw nuts and finished products exported from India with a view to avoiding complaints about quality. It is carrying on correspondence with the Central Government on this matter.

Controversy over Sales Tax

A controversy over the sales tax is creating dislocation in Kerala markets. The law as it is today provides scope for double taxation. It empowers the sales tax officials to assess closing stocks on 31st March. Commodities such as pepper are expected to pay sales tax only at one point. But according to the provisions in the law, irrespective of the fact whether these commodities were taxed once towards the year-end or not, they are liable to be taxed at the last point of the deal. This means that pepper, which is subject to a 5-percent single-point sales tax may in some cases have to pay the tax twice or a total tax of 10 percent. The trade challenged this up to the High Court, but it did not get a verdict in its favour. As a result of the representations from the trade, the Government is, however, exploring the possibilities of avoiding double taxation. It has assured the trade that in assessing sales tax due care will be taken to avoid double taxation. Meanwhile, a high-level committee is examining the tax in the State, since it has been asked to prepare a comprehensive sales tax Bill. The Government hopes that when the legislation is enacted, the defects now existing in the sales tax law will be removed. In that case, the chances of tax exasion will also be minimised. The trade is, however, actively continuing its compaign against the levy on year-end stocks held by individual dealers. Those who are panic stricken have been liquidating their stocks even at distress prices with a view to avoiding double taxation.

NOW
For your day-to-day business a new, authoritative financial daily—

THE ECONOMIC TIMES



A TIMES OF INDIA PUBLICATION

EVERY day of the week, **The Economic Times** will keep you informed with the latest happenings in every corner of your business world...guide your daily business-thinking with the vital first-hand news and balanced views that shape our economic times!

The Economic Times is a fully-fledged financial *daily*...with an alert staff of highly-trained experts to watch every move in all the major markets *of the world*...give you news *promptly*...interpret with the precision that rules the business world!

The Economic Times is first with economic news—of business and commerce, of trade and financial enterprise *everywhere!* It returns to you a high yield on a small investment.

F. I. C. C. I. DEMANDS GREATER REWARDS FOR MANAGERIAL AND ENTREPRENEURIAL ABILITY

IMPROVED FACILITIES FOR PRODUCTION AND MOVEMENT OF RAW MATERIALS FOR STEEL INDUSTRY

(FROM OUR NEW DELHI CORRESPONDENT)

THE thirty-fourth session of the Federation of Indian Chambers of Commerce and Industry was inaugurated here last week by the Prime Minister. While deprecating the practice of raising slogans, Mr. Nehru repeated some of his own on socialism, the welfare State and technological maturity. The Prime Minister dislikes both classical economic theories and Marxism, because the thinking associated with these is rooted in times 100 years behind. But his Government manages to combine the *charkha* cult with the most modern textile technology, while declaring that it is striving towards a stage of technical maturity in Indian society. The ban on cow killing is another incongruous example. It has ruined India's tanning industry. This should be evident from a statement of the Deputy Minister for Commerce last week, in which he said: "The actual production of tanned hides in the country has been considerably below the installed capacity. It is estimated that only about 60 percent of the capacity for tanning raw hides is being utilised at present. Although no increase in the installed capacity for tanning hides and skins is visualised at present, the following steps are being taken to assist the indigenous industry to increase its production: (1) the export of raw hides which are in short supply has been totally banned; (2) the import policy fo rraw hides and skins has been liberalised."

Growing Slums

The Prime Minister repeatedly referred to enormous private wealth existing side by side with public squalor, and rightly said that he would prefer the removal of a slum to the erection of an imposing multi-storied building. Yet more slums have been added in Delhi since 1947, without removing any of the previous ones. Side by side, palatial buildings have been erected by the protagonists of the welfare State in the capital of India.

Third Plan Resources

The Federation adopted six resolutions. As for the third plan, it urged that "the distribution and outlay of resources needs careful reconsideration. Any avoidable wastage or imbalance in the pattern of production and the misuse and malallocation of resources which they involve, will affect not only the rate of consumption but also the rate of savings and, therefore, the overall rate of economic growth. It is of necessity to ensure that the outlay on industries, power and transport sectors is maximised to the fullest extent practicable. Only then the foundation for self-sustaining growth can be laid. And it is also the surest way of restraining inflationary pressures. Inflation which is usually measured by the rise in prices occurs because the total demand on the nation's resources is in excess of the available supplies. The effective way of meeting the situation is by improving the supply position.

"Agricultural production requires to be stepped up, and policies in this behalf must be evolved on a pragmatic basis and implemented with vigour. Industrial production can be accelerated quicker if climate is created for the purpose, and industry and trade are given comparative freedom to go ahead with their business. There are many idle factors in India, both human as well as material, that could be activised. The growth of technical, managerial and entrepreneurial skill is of basic importance in this regard. The Federation is convinced that having regard to the unexploited resources in the country, which are estimated to be large, they should be brought into productive use speedily. And this will be possible through domestic effort supplemented by foreign collaboration provided the forces of development are assisted to play their rightful part. In this connection, the Federation would strongly recommend that the tax policy of the Government should view management and entrepreneurial ability as a key economic resource that requires to be released and fostered through incentives so as to make possible and successful widespread capital investment for productive activity.

Stagnating Exports

"The Federation notes with concern that in spite of the measures initiated by the authorities to stimulate exports, the value of exports has remained stagnant during the past few years at an annual average of less than Rs. 615 crores. In the opinion of the Federation, piecemeal attempts for the solution of the problem and measures in the nature of patchwork will not produce the desired results, and there is a pressing need for a complete reorientation of the approach to the problem both on the part of the Government on the one hand, and the trade and industry on the other. It cannot be overemphasised that having regard to the country's repayment obligations, the increased foreign exchange contents of the third five year plan and the fact that the scope for any significant pruning of the country's import bill is very limited, there is imperative need for an all-out effort to intensify our export promotion drive. Those in industry and trade have a special responsibility in this behalf, and they should endeavour to promote exports by creating confidence in the minds of foreign buyers through export performance and by following acceptable procedures, such as pre-inspection, arbitration and the like."

Administrative Machinery

Another resolution demanded streamlining of administrative machinery, adding that there is a vital need for improving administrative efficiency and integrity. "There is equal need to simplify, co-ordinate and rationalise the system of submission of reports and information by industry and trade to the authorities. The Federation would like to invite the particular attention of the Government to:

"(a) that there is too much centralisation of effective power at the higher level and there is need for much decentralisation to take quick decisions;

"(b) that there is a lack of proper co-ordination between various departments of Governments which often causes bottlenecks in production and distribution;

"(c) that the existing administrative procedures relating to the setting up and expansion of industries need re-examination so as to eliminate avoidable delays and duplication, particularly for industries set up as joint ventures with foreign collaboration.

"The Federation is of the view that top priority needs to be given to the streamlining of administrative machinery in the third plan with an emphasis on reducing needless restrictions on enterprise, as otherwise the expansion of the economy will be slowed down and at the same time the growing administrative machinery will unduly add to the cost of the execution of the plan".

Transport Shortages

Referring to transport, the Federation has expressed the opinion that the development of roadways is equally essential "in the context of the country's growing transport needs. It is common knowledge that the railways, inasmuch as they do not reach all the corners of the country, cannot handle the entire traffic, more so when they are not able to move, speedily and smoothly, even the traffic offered. Therefore, if a part of the traffic has been diverted to road transport, the road transport can hardly be blamed for that. Consequently, the suggestion that nationalisation of the entire road transport system would have to be attempted in suitable stages does not meet the situation and, if implemented, will aggravate the problem, and deny the user of transport the facility to choose the mode of transport best suited to his requirements. The Federation believes that a freer road transport policy will result in road transport effectively supplementing rail transport, thus augmenting transport availability for both passenger and goods traffic. The development of roads is an essential prerequisite for the growth of road transport. This important aspect has not received its due importance, and the Federation cannot help feeling that the authorities have not utilised, as they should have done, the heavy imposts collected from road transport for the development of roads.

"The Federation would also urge that greater attention be paid to the opening of river routes throughout the country and establishing regular river transport services in such sections where they could operate immediately. In this connection, it views with grave concern the reports that some of inland waterways and ports are gradually getting silted up. If timely steps are not taken for dredging these, they will cease to be useful."

The Coal Policy

Coal is another subject on which a resolution was adopted. "The Federation regretfully feels that the shortfall in the coal production target during the second plan has been occasioned through failure to utilise effectively the available production potential. In spite of the many handicaps faced by the private sector of the coal industry, which among others include restrictions in expansion into new areas involving the working of easy deposits at relatively shallow depths, being compelled to accept an uneconomic price structure, and, to work under adverse mining conditions, its current rate of production is well in excess of its second plan target of 45 million tons. In this background, the possibility of achieving the third plan target of 97 million tons must be viewed realistically having regard to the production of coal of the requisite quality. While the Federation welcomes the recent announcements relating to a more realistic interpretation of the Industrial Policy Resolution, which does not preclude the expansion of the privately owned collieries whether independently or in conjunction with the State, actual implementation has been vitiated by serious shortcomings and avoidable delays and restrictions." Lastly, the Federation adopted a resolution on land ceilings, urging that agriculture should be operated as an industry. The policy of land ceilings, it claimed, went against increasing productivity.

Executing Big Industrial Projects

The Central Government has decided to appoint an officer on special duty in the Ministry of Commerce and Industry, in order to speed up the processing of big industrial projects, particularly those involving foreign collaboration. Side by side, a handbook is being prepared detailing the list of industries eligible for foreign private investment. The handbook will clarify the Government's policy and lay down detailed working rules which any official could apply without unnecessary reference to his superiors. Lack of decision is one major obstacle to rapid development and it is hoped that the handbook now being produced will expedite decisions. It is stated that a lot of time is now wasted in such references to high officials like secretaries, not to mention unnecessary inter-Ministerial references. There are also several instances where schemes, after partial processing, have had to be dropped because of non-fulfilment of certain basic requirements. The list will clarify the eligibility of the various industries in the light of the priorities fixed for plan programmes and the availability of foreign exchange for their execution. It is explained that the Government's policy is to create a wider base of equity capital. Loan capital should not be more than equity capital, it is pointed out.

Necessities for Goa

The present ban on the export of necessities to Goa, Daman and Diu, imposed nearly six years ago, is being relaxed early in April. This would enable Goans to obtain from India their essential requirements and sell to India some of their basic produce. Goa generally imported vegetables, rice and cloth from India and exported to India coconut, arecanut, salt and mangoes.

Speedier Movement of Coal

The Department of Mines and Fuel, in consultation with other Ministries concerned, is devising ways to effect an increased movement of coal to consumers. Some of these measures are: (1) increasing production in the central India coalfields so that consumers in western India, for example, those in Maharastra and Gujarat, may get supplies mostly from this region and the long haul by rail from Bengal-Bihar may be avoided; (2) moving an additional one million tons of coal a year by the rail-cum-sea route from Bengal-Bihar fields to the coastal States in the south and in western India; (3) diverting short-distance traffic of coal to road; (4) introducing seven-day loading in all collieries; (5) creating coal dumps at suitable consuming centres; and (6) increasing movement capacity in the above Moghulsarai direction from the present 1,900 wagons a day to 2,100 wagons a day from July 1961 onwards.

A readjustment of rail and sea coal freight is being examined here. Meanwhile, the shippers have been persuaded to accept Rs. 35 a ton for Gujarat and Saurashtra ports, the same freight charged by them for Bombay.

More Machine Tools

An agreement was last week signed here between the Praga Tools Corporation and the C.E.K.O.P., an organisation of Polish machine tool makers, for collaboration in the setting up of a new factory in Hyderabad for the manufacture of light and medium varieties of machine tools.

The Central Government has decided to set up a machine tool factory in Punjab in the public sector. The factory, which will be on the lines of the Hindustan Machine Tools in Bangalore, will have a production capacity of 1,000 machine tools annually. The Punjab factory will be one of the two such projects entrusted by the Central Government to Hindustan Machine Tools, Bangalore. The capital cost of the new factory is estimated at Rs. 5 to 6 crores, and the annual output will be of the order of Rs. 4 crores. An official delegation which visited East Germany early this month, has already signed an agreement with Limex for technical collaboration for this project. The project will include universal milling machines, production millers, dye sinking milling machines, gear cutting machines like shapers, hobbers and grinders and special performance machines.

Personnel for Scientific Instruments Industry

An agreement was last week signed here between the Swiss Foundation for Technical Assistance, Zürich, and the Council of Scientific and Industrial Research for the establishment and operation of an Indo-Swiss centre for training precision mechanics in the fields of instrumentation. The centre will be a co-operative effort and is being established as a part of the Central Scientific Instruments Organisation which has, as one of its aims, the organisation of advanced training of technicians and specialised personnel for the Indian scientific instruments industry. The Swiss Foundation is an organisation of the private Swiss industry and has over 200 enterprises as its members. Under the agreement, the Foundation will provide free of cost to the Council of Scientific and Industrial Research equipment worth 1.5 million Swiss francs and the services of six to eight Swiss

technical experts for a period of five to eight years. The total cost of this assistance will be over 6 million Swiss francs. The C.S.I.R. will be responsible for providing the buildings, the Indian staff and the necessary supplementary equipment, besides meeting the recurring expenditure for the Centre, and the local cost of the experts.

Raw Materials for Steel Industry

The principal raw materials for the steel industry are iron ore, coal and limestone. While the consumption of these raw materials would depend on their composition and to some extent on the processes adopted, the average annual consumption in a million-ton steel plant in India is about 4 million tons to 4½ million tons of all these three raw materials put together. The additional requirements of Bhilai, in the third five year plan, will be met by the development of the existing mine and, if necessary, of adjacent areas and ore will be carried over the same rail route as at present. Supplies to Rourkela will be met by enhanced production from the Barsua area and will be transported over the present rail route. For Durgapur it may be necessary to open a new mine in the Gua region and lay necessary sidings connecting the mine to the existing railway system in that region. This is included in the third five year plan.

"Supplies of coal to the steel plant in Jamshedpur is planned from three washeries about 100 to 120 miles from the steel plant, one in the Bokaro coalfields and two in the Jharia coalfields. Transport from the washeries to the steel plant will be by rail over the existing system. For Burnpur, supplies will be obtained from two washeries in the Jharia coalfield and from certain other collieries in the Barakar region at distances of between 35 miles and 70 miles from the steel plant. These will also move over the existing railway system. The Company managing the steel plant in Burnpur proposes to develop a new colliery in the Jharia field to meet part of its requirements of high grade coals. The preliminary plan for the development of this colliery visualises transport by an aerial ropeway. The steel plants in Bhilai and Rourkela will be supplied by washeries in the Bokaro and Jharia coalfields. At present coals move over the existing railway system. The steel plant in Bhadravati obtains its coal and coke from the Bengal and Bihar coalfields over the existing railway system. During the third plan when certain new railway works which are under construction between Rourkela and Chandrapura are completed, coals for Rourkela and Bhilai will be more conveniently and speedily conveyed over this new route. The haulage to Rourkela will be about 190 miles to 215 miles and that to Bhilai about 465 miles to 490 miles. Additional supplies of coals are also visualised from the Raniganj, Karanpura and Jhilimili coalfields. While supplies from Raniganj and Karanpura would not require any new works, transport of coal from Jhilimili will be over a new railway line which is nearing completion. Detailed planning of additional production of coal for the steel industry which is going on at present may require the construction of a few sidings to connect new collieries to the main railway system. Limestone for the steel plant in Jamshedpur is obtained from the Birmitrapur region, about 120 miles away. This source also supplies limestone to meet the bulk of the requirements of the Burnpur, Durgapur and Rourkela steel plants—distances being about 210 miles, 230 miles and 15 miles, respectively. The balance of the requirements of these steel plants is met from quarries in the Satna-Maihar area of Madhya Pradesh.

The steel plant in Bhilai gets its limestone from a new quarry developed in Nandini about 15 miles away. The steel plant in Bhadravati gets its limestone from quarries about 25 miles away. While limestone to Jamshedpur, Burnpur, Durgapur and Rourkela is transported over the existing system of the South-Eastern and Central Railways, a new siding has been constructed to bring limestone from Nandini to Bhilai. Transport of limestone to the steel plant in Bhadravati is over a tramway owned by the steel works.

Reliance on Railways

Thus for the transport of the principal raw materials, the steel plants rely almost entirely on the general railway system. New lines have been constructed for the transport of iron ore from Barsua to Rourkela and from Rajhara to Bhilai and limestone from Nandini to Bhilai. The general railway system has been augmented as necessary by the building of sidings and marshalling yards to cope with the increase in traffic including traffic to and from the steel plants. The new railway link between Bondamunda (Rourkela) and Chandrapura is a part of the development of the railway system to serve the many industries growing up in this region. Iron ore for the new steel plant in Bokaro is planned to be obtained from the Sasangda area, which is a continuation of the main iron ore range of Gua. The ore will be transported over the new line built to carry ore from Barsua and Kiriburu to Rourkela and beyond and would travel about 200 miles to Bokaro. A blend of coals from Karanpura, Bokaro and Jharia will be used in the new plant in Bokaro. While coal from Karanpura will move over the existing railway system, transport of coal from Bokaro and Jharia may be either by rail or by aerial ropeways. The alternative means of transport are being examined as a part of the detailed planning of the supplies of coals from different collieries.

It is proposed to obtain limestone from the Shahabad area. Preliminary investigations are going on as to the suitability of the limestone. While transport from the existing rail head to Bokaro will be by rail, the question of the means of transport of limestone from the quarry to the rail head will be examined once the location of the quarry is settled. Because of the quantities involved and the need to have an unfailing and constant flow of raw materials to the steel plants, transport by rail is generally considered the most reliable and economic. Occasionally, there may be certain attractive features about other forms of transport which may tilt the balance in favour of these, particularly in the transport of limited quantities over short distances. Thus, for instance, in the plan for the development of a new colliery for supply of some of the requirements of coal for the steel plant in Burnpur, transport by an aerial ropeway is considered more convenient than transport by rail. But, by and large, the steel industry will have to rely on the railways for movement of its principal raw materials.

Rolling Mill in Madras

The proposed State steel rolling mill will be in the Madras State. Its capacity will be 20,000 tons a year. A provision of Rs 1 crore has been made for this scheme in the Madras third five year plan.

Imports from West Germany

Imports from West Germany will cost 5.04 percent more in terms of rupees, it is officially stated in Parliament. The same is true of repayments of capital and interest. There may, however, be some changes in West Germany's export prices. It is, therefore, not possible to estimate the aggregate extra costs, nor the cost separately to the Government and the public at large. The beneficial effect on India's exports is likely to be relatively small.

New Currency for Kuwait

The Government of Kuwait has announced its intention to introduce a new local currency, to be known as the dinar, and the appointed date for the issue of this currency has been notified by that Government as 1st April, 1961. Consequent on this decision, it will be necessary to arrange for the withdrawal of special Indian rupee notes and coins now in circulation in Kuwait and the representatives of the Governments of Kuwait and India have accordingly been discussing the arrangements to be made in this connection. The two delegations have reached complete agreement. The arrangements which have been agreed on contemplate that an initial payment to Kuwait will be made soon after the Indian notes and coins now in circulation in Kuwait have been redeemed and that the balance of India's liability will be discharged in annual instalments over a period of ten years extending up to 1971. The decisions reached as a result of the present agreement between Kuwait and India do not affect the circulation of special Indian notes or Indian coins in the other territories of the Gulf, where the existing arrangements will continue to be in force.

New Proposal to Make Scooters

A proposal from a firm in Ludhiana has been accepted on an experimental basis for the manufacture of 50 c.c. to 78 c.c. scooters in collaboration with a Japanese firm. The proposal visualises the import of component parts to the extent of Rs. 150 a scooter. The vehicle, it is expected, will give 180 miles a gallon of petrol.

A Car for Farmers

The Ministry of Defence has not yet finalised its proposals for the manufacture of a "farmer's car" in ordnance factories or elsewhere, it is disclosed here. The manufacturers, Komatsu Manufacturing Company of Japan, are studying Indian conditions to determine what changes, if any, will be needed to the car to make it suitable for use by the Indian farmer. The result of the study is awaited. A substantial order will also be needed to make the manufacture an economic proposition. The Ministry of Industry is planning to manufacture a "Janata" car in the public sector.

Power Projects in U.P.

The following 12 power projects in Uttar Pradesh are being considered for inclusion in the third five year plan:

Continuing schemes: (1) Rihand dam project (250 mW); (2) Kanpur Electric Supply Administration extension project (15 mW); (3) Yamuna hydel stages I and II (320 mW); (4) Matatila hydro-electric project (30 mW); (5) Harduaganj Extension State I 60 mW; (6) Ganga grid transmission state IV; (7) Ram Ganga hydel project (127.5 mW); (8) diesel station in Ghaziabad (4 mW).

New schemes: (1) Singrauli thermal power station (250 mW); (2) Harduaganj extension stage II (30 mW); (3) Obra Hydel (48 mW); and (4) small hydel schemes.

Fertilisers for Tea Gardens

The requirements of various kinds of fertilisers for the tea gardens during 1960-61 and the allocations made are as follows:

Kind of fertiliser	(Figures in tonnes) Requirement	Allotment
Sulphate of ammonia	104,428	82,721
Urea	6,770	4,750
Ammonium sulphate nitrate	16,565	24,097
Calcium ammonium nitrate	3,685	1,000

In terms of nitrogen, the requirement has been met to the extent of about 86 percent. During 1961-62, it is proposed to meet the "realistic" requirement in terms of nitrogen in full.

NAMES AND DATES

Mr. Rama Row Macherla and Mr. Jaychand D. Lohade have been elected president and senior vice-president, respectively, of the Federation of Andhra Pradesh Chambers of Commerce and Industry.

Of the new Committee of the Indian Mining Association elected for 1961, Mr. P. Prashad is chairman and Mr A. A. G. Weir, vice-chairman. The members are Messrs. C. M. A. Bathurst, S. K. Birla, K. K. Dosaj, N. B. Ghosh, I. K. Karnani, R. H. Mody, E. Sherarton, J. K. Stoddart and R. H. Wright.

Mr. K. N. Mookerjee has been elected president of the Bengal National Chamber of Commerce and Industry, Calcutta.

ANNOUNCEMENT

THE STATE BANK OF INDIA

announced
an INCREASE as from the
1st March 1961
in their

INTEREST RATES

on

Savings Bank Accounts from 1½% to 2½% p.a.
Savings Bank Deposits from 2½% to 2¾% p.a.

They now have pleasure to announce
the following

FURTHER INCREASES
as from 1st April, 1961.

in their

FIXED DEPOSIT RATES

for six months from 2¾% to 3½% p.a.
for twelve months from 3% to 3½% p.a.

The STATE BANK also accept Call Deposits and other SHORT TERM DEPOSITS at competitive rates, which may be ascertained on application.

The State Bank's 903 offices in the country are at the nation's service.

London

WHITE PAPER ON TECHNICAL ASSISTANCE SURVEYS AID FROM U.K.

IMPORTANCE OF MUTUAL CO-OPERATION STRESSED

(FROM OUR LONDON CORRESPONDENT)

A SURVEY of technical assistance provided overseas by Britain during the past decade has been published as a White Paper which is a companion document to the one on economic aid published a year ago. The account of technical aid is prefaced by the statement that in 1960, Government assistance will have been about £150 million, of which £125 million will have been given bilaterally and the rest multilaterally. "This means," the White Paper says, "that Government aid has almost doubled in the last three years. In addition, annual U.K. private investment in underdeveloped countries is about £100 million."

The U.K. Government expects that requests for technical aid will expand rather than decline in the immediate future. The balance between the various forms of aid may change as more dependent territories—to which the bulk of U.K. technical assistance has hitherto been directed—achieve independence. "The emphasis in the future will thus tend to be, as it is now in the independent Commonwealth, on mutual co-operation in which both sides give and receive assistance at the same time, although the United Kingdom will no doubt remain principally a donor." The document describes the British contribution in the field to be covered by the new Department of Technical Co-operation, which will concentrate activities and provide more effective machinery. It will provide aid amounting to about £30 million a year. The creation of the department was recently confirmed in the House of Commons by Mr. Macmillan, the Prime Minister.

Record Bank Advances

Between November 1960 and February 1961, bank advances—in the face of the continuing credit squeeze—rose by £147 million to a new record of £3,717.5 million. Taking the clearing banks alone, there was an increase of £98 million, or 3 percent. Advances of non-clearers appear to have increased by about 11 percent. This at least suggests that these institutions have derived some advantage from being outside the sterner disciplines in the clearing bank field.

The pattern of lending shown in the latest quarterly analysis, issued by the British Bankers Association, has one or two striking features. Loans to the engineering industry, for example, have risen sharply by nearly £56 million to £496.2 million, which compares with only £318.3 million in February 1960. Advances to textiles, other than cotton and wool, are up from £65 million to £73.7 million and bank accommodation to the food, drink and tobacco industries has jumped by £21.7 million to £212.8 million. Bank lending to hire-purchase finance companies, which has levelled off over the past 12 months, shows a small fall in the past quarter from £136.5 million to £132.9 million. As usual, borrowers in the "personal and professional" category are the largest single group. Advances under this head rose between last November and February of this year by just under £9 million to £691.3 million—a record. This increase is largely seasonal, however, and does not imply any relaxation of the squeeze.

Capital Expenditure Rises

A heavy, and encouraging, rate of capital expenditure in manufacturing industry continued into the fourth quarter of last year. According to the U.K. Board of Trade's provisional figures, it increased by 20 percent, compared with the figure for the fourth quarter of 1959, to £291 million. Expenditure on building was up by 21 percent and on plant and machinery by 16 percent. Most of the fourth quarter's rise is attributable to the investment programmes of the iron and steel, textile, and motor-car industries. For the whole of 1960, capital expenditure in manufacturing industry is estimated at £1,029 million, an increase of 18 percent; new building work increased by 27 percent and investment in plant and machinery by 13 percent. Measured at constant (that is 1954) prices, capital expenditure in the fourth quarter was 17 percent higher than in the corresponding quarter of 1959. In the third quarter, the rise was 28 percent, and if allowances are made for seasonal factors, the volume of investment declined by about 4 percent between the third and fourth quarters of 1960.

Capital expenditure in non-manufacturing and service industries rose by 6 percent in the fourth quarter and by 12 percent in the year. All capital spending—in manufacturing and non-manufacturing industries—was 15 percent higher in 1960 than in 1959, measured both at prevailing prices and at constant prices. Capital expenditure figures for separate industrial groups are not yet available for the whole of 1960. It appears, however, that 70 percent of the increase in capital investment last year was accounted for by the iron and steel, textile and clothing, and motor-car industries.

The latest capital expenditure figures are the first in a new form. Hitherto information was collected on an establishment (usually a factory) basis, whereas now it relates to a company or group of companies. The new method ensures that the figures are comprehensive. The change originates from the 1959 Census of Production, for which the basic statistical unit was the whole of a business. The older figures have been revised to accord with the latest statistics. The broad effect in the figures for manufacturing industry is to raise them all by about 6 percent.

Industrial Stocks at Peak Level

Stocks held by British manufacturers and distributors rose to an all-time peak at the end of 1960, according to new figures just released by the U.K. Board of Trade. Excluding price changes, stocks rose by £170 million or 2½ percent in the fourth quarter after allowing for seasonal factors. This is the largest quarterly rise ever recorded and brings the total increase during 1960 to £556 million, or 9 percent. The increase in the volume is abnormally large—nearly six times as large as in each of the two previous years and more than twice the rise during 1957. The figures go some way towards explaining the deficit in the balance of payments for 1960. The fourth-quarter growth of stocks was primarily in the engineering (including motor-vehicles) and chemicals group of industries. Stocks of textiles and clothing declined.

A significant change occurred during the year in the composition of stocks. By the fourth quarter (after seasonal adjustment), about 43 percent of the increase in the volume was in finished goods and more than 40 percent in work-in-progress. Stocks of materials and fuel increased much less in the fourth quarter than in any previous quater of 1960. This confirms the impression gained from other recent statistics that the pressure to import began to decline in the autumn and that a substantial reduction in imports may be seen in 1961.

Industrial Output Steady

Industrial production went up by less than 1 percent in January, according to U.K. Treasury figures just issued. The Index of Industrial Production was 120 in January (1954 equals 100), compared with 119 in December 1960. The January figure is exactly the same as it was a year ago. Production normally recovers in January after the Christmas holidays. The adjusted index, which eliminates such seasonal factors, was 119 for January 1961, compared with 120 in December 1960. The point to be noted, however, is that the overall level of industrial production has shown no significant change over the past 12 months. A movement of 2 points in the index is usually too small to be reliable.

Development of Scotland

In spite of what has been done in taking industry to Scotland and broadening the base of the Scottish economy, it is still far from capable of spontaneously generating its own economic progress. It is evident from the latest survey of economic conditions in Scotland published by the Clydesdale and North of Scotland Bank, that the country has fallen further behind in economic terms. Industrial output went up by 5 percent last year when the Scottish economy completed its recovery from the recession of 1958. Compared with 1957, the rise in Scottish output in 1960 was 4 percent. In the United Kingdom as a whole, industrial production was 6 percent higher last year than in 1959 and 11 percent more than in 1957. The Scottish engineering industries have benefited from the upsurge in capital investments, but the shipbuilding industry is causing concern. Unemployment in Scotland has stubbornly remained higher than in any area of England and Wales.

The short-term prospects for Scottish industry at the beginning of this year were "not altogether favourable." The rate of increase in output appears to have slowed down and the flow of new orders has slackened. Most of the heavier industries, on which the Scottish economy depends to a marked extent, were relatively well placed. According to the survey, recent developments have underlined the need for a substantial and sustained increase in Scottish exports. This will call for the entry into overseas business of more Scottish manufacturers. Above all, Scotland needs a broader economic base. Much is promised: a higher initial output from Colvilles' strip mill, the B.M.C. plant in Bathgate, and the Rootes group's plant in Linwood have all raised Scotland's hopes. Nevertheless, much remains to be done if the Scottish economy is not to lag behind the rest of the United Kingdom.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose by 0.3 percent to 127.2 during the week ended 11th March, 1961, compared with 126.8 (revised) for the earlier week. The index stood almost at the same level as that prevailing in the corresponding week of the earlier month but was higher by 7.2 percent than that of a year ago. The index for Food Articles advanced by 0.2 percent to 116.8, compared with 116.6 (revised) for the previous week due to a rise in the prices of potatoes in Delhi (+14%), rice in Nagpur (+8%), in Nizamabad and Tihu (+6% each) and in Kakinada and Sadar (Cooch Behar) (+5% each), fish (+8%), meat (+6%), oranges, cashewnuts and groundnut oil (+3% each), barley, urad and chillies (+2% each) and wheat, jowar, bajra, ragi and gingelly oil (+1% each), although the prices of rice in Contai (−8%), in Matihat, Jagdalpur (−6% each) and in Marcara (−5%), potatoes in Mettupallayam (−7%), onions (−3%), eggs, gur, and salt (−2% each) and coconut oil and tea (−1% each) declined. The index for Tobacco increased by 1.4 percent to 111.7 as a result of a rise in the prices of raw tobacco (+2%). The index for the Fuel, Power, Light and Lubricants group remained stationary at the earlier week's level of 120.3, in spite of a rise in the prices of castor oil (+1%). The prices of raw hemp (+6%), groundnuts and raw hides (+3% each) and raw cotton, raw wool, raw silk, castorseed, tanning materials and cottonseed (+1% each) moved up while those of raw jute (−2%), and gingellyseed, rapeseed and lac (−1% each) declined, and the index for Industrial Raw Materials stood at 159.1, compared with 158.9 (revised) for the previous week. Higher prices of linseed oil (+6%), rayon yarn (+2%), coir yarn and zinc (+1% each) raised the index for Intermediate Products by 1.2 percent to 137.7 during the week. The index for Finished Products advanced by 0.5 percent to 123.5, against 127.9 (revised) for the previous week. Items which showed variations during the week were : jute manufactures and glass (+2% each), oilcakes (+1%) and bicycles (−1%).

SUBSTANTIALLY LOWER AIR CARGO RATES FORECAST

A fairly substantial reduction in air cargo fares in the near future was predicted by Mr. Ralph Cohen, Public Relations Officer, International Air Transport Association, in an informal discussion with Press representatives and Indian Airlines Corporation personnel in Calcutta recently. Some airlines had already announced this and others were likely to follow he said. The reason was that in jet airliners cargo space was "a bye-product," moreover, a large number of piston-engined aircraft were being converted to freighters. It was possible that within a year, air cargo capacity would be doubled. The real importance of carrying cargo by air lay in the revolution of distribution methods which it was bringing about. Mr. Cohen quoted the example of a manufacturer of electronics equipment in the U.S.A. who had done away with regional warehouses because he could now send supplies by air against orders from all his dealers in the United States within a three-day cycle : orders were received by Telex, processed by I.B.M. machines and despatched by air. This helped release an enormous amount of working capital that would otherwise be tied up in inventories.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to February 1961. As compared with January, the February Indices for Food and Miscellaneous show rises of 4 points and 1 point, while those for Fuel and Lighting and Clothing remain unchanged at 287 and 579 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during February 1961.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUSTS IRREGULARLY EASIER

AT Sale No. 36, held on 27th and 29th March, 14,331 chests were offered at the Export auction for the clearing up sale of 1960-61. There was a strong and general demand, all descriptions selling at generally dearer rates. No quotations are given as there were insufficient quotable teas on offer.

At the Internal Sale, Dust offerings totalled 22,994 packages. There was a good general demand at irregularly easier rates. Orthodox descriptions sold readily at up to 15nP below last rates while legg-cut Dooars Dusts met with fair support, although the small and bright lines sold well. Medium C.T.C. teas were irregular, the better liquoring kinds selling at about last rates, although the smaller and brighter types were generally dearer. The poorer sorts were up to 20nP easier, particularly the fibrous kinds. The few best C.T.C's sold well at about last rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.40 to 4.55	1.84 to 1.90
Medium Assam Dust	4.50 to 4.80	1.80 to 1.90
Legg-cut Dust	4.80 to 5.10	1.98 to 2.14
Medium Assam C.T.C. Dust	5.55 to 6.20	
Good Assam C.T.C. Dust	6.40 to 7.00	2.40 to 2.75

(Quotations are inclusive of excise duty.)

The 483 chests of leaf on offer met with good demand and prices were irregular.

FREIGHT MARKETS IMPROVE

THE fixture of scrap and foodgrains to Japan kept the American market active. During the middle of March, a *Liberty* size cargo of scrap paid $ (U.S.) 110,000 only, but with a steady improvement in the rate *Maria G Kulukundis* was fixed at $ (U.S.) 120,000. It seems quite likely that this improvement will continue, and may be one of the reasons why Indian scrap shippers have obtained more orders for Japan as the Conference freight rate from Indian ports to Japan is comparatively cheaper. In the Far East, Australian grain shippers managed to reduce the rate from 60s to 54s for fixtures to China. Marmugao ore to Japan paid the slightly improved rate of 48s a ton. Indian ore shippers paid 52s for Bombay to Yugoslavia. There are about 10,000 tons to 15,000 tons pig iron for shipment from Calcutta and Visakhapatnam to Japan during March-April, but local shippers indicate a freight of 41s f.i.o. and trimmed, when in the London market, charterers are quoting 48s f.i.o. and trimmed, with 700 load and 1,000 discharge for similar cargo. It is understood that the Government of India has decided to move an extra million tons of coal by sea from Calcutta to Indian coastal ports. This will require berthing additional colliers every month, for which Indian shipping lines may have to charter outside tonnage. At present, in the port of Calcutta, there is no problem for berthing except in the coal docks where vessels have to await a loading berth for a maximum of two days and this is due to a shortfall in the arrival of wagons from the coalfields. The congestion in Madras continues and delay in berthing varies between seven and 13 days. At Krishnapatam anchorage, the *Platani* has loaded 467 tons of iron ore in 30 days, due to only one lighter being available, but the number has now been increased to four.

LINSEED EASIER

The increased movement of new crop in up-country areas and the appearance of new crop seeds with more wagons arriving caused a sharp decline in ready goods and the price has fallen by about Rs. 5 a maund. Forward prices declined by only Re. 1 a maund. Sellers were not inclined to offer at lower prices. Mills were keen buyers for April-May, but sellers were reserved. The ready oil market was quiet in sympathy with seeds and mustard oil. The oilcake market was quiet. Foreign buyers were not interested. The latest quotation is as follows: Ready seeds, Rs. 27.25 a maund.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks of skins were higher but those of hides were less than in the previous week.

Bazaar Sales

(Between 21st March and 27th March, 1961)

Cowhides: Wet salted (Ord.) 4,500 pcs. on the basis of Rs 8.25 to Rs. 12.25 ; Wet salted (Slaughtered) 23,100 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50 ; Wet salted (Ord.) 6,600 pcs. on the basis of 81nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 58,400 pcs. on the basis of Rs. 320 to Rs. 340, Rs. 420 to Rs. 440 and Rs. 450 to Rs. 460; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 ; Assam-Dinajpur-Jalpaiguri 60,100 pcs. on the basis of Rs. 275 to Rs. 375, Rs. 410 to Rs. 425 ; Purneah 20,300 pcs. on the basis of Rs. 390 to Rs. 400 ; Patna (Ord.) 3,000 pcs. on the basis of Rs. 315 ; Patna-Muzafferpore 14,000 pcs. on the basis of Rs. 390.

Jute

RAPID DECLINE IN JUTE AND GUNNY PRICES

WIDESPREAD RAINFALL IMPROVES NEW CROP PROSPECTS

FEW people expected such a rapid decline in raw jute and manufactured goods prices as has taken place during the past few days. The fall in goods prices has outpaced jute to the extent of about Rs. 40 a ton in hessians and Rs. 60 a ton in sacking. When one adds this to the Rs. 100-a-ton gap between the price of goods based on the controlled price of Rs. 62 for raw jute that was pointed out last week, it makes one wonder why mills have been so keen to dispose of their stocks. For some time, they were reluctant to offer, and only small transactions were reported. Now nearly all of them are sellers for almost any delivery, but the difference is that no buyers can be found. Many people are convinced that gunny prices at present have little relation to the raw material, and are governed mainly by the law of supply and demand. Unless a closer relationship is maintained between raw jute values and the prices of goods, producers will be unable to carry on their business, and the industry will fall back into the depression from which it has so recently emerged. Nobody—except the speculator holding stocks—is sorry to see the prices of jute goods falling. It is generally agreed that they have been too high, so the recession may induce overseas buyers to take more interest in the market. But if the present trend continues, the industry may have to consider fixing a minimum price for jute goods.

Uncertainty Prevails

Certainly the glorious unpredictability of the Calcutta markets has been amply demonstrated during the past week. There are so many factors which could affect the trade either way, and it seems as if buyers and sellers are awaiting the outcome of events, unable to make up their minds how to act. The success of the I.J.M.A. voluntary maximum price scheme has exceeded most people's expectations, and sellers are now agreeing to give jute at almost any price. For instance, on Tuesday, the morning quotations for Assam fibre were based on Rs. 58 a maund, but in the afternoon, business was done in bills of lading at Rs. 54. Time was when bills of lading commanded a premium, but that now seems to be a thing of the past.

As the end of the 1960-61 season and the beginning of a new sowing period approaches, it becomes more and more obvious that something drastic will have to be done about jute crop forecasts and estimates. So far, no final estimate has been issued, although admittedly no useful purpose would be served in issuing it at this late stage. The industry knows there is going to be a shortage and each individual has his own ideas about how great it will be. In the near future, however, the Government will be contemplating the issue of a preliminary sowing forecast. If this is really a forecast in the true sense of the term, it would be possible to excuse a fairly large error. But it is not a forecast when it is issued after the sowing is completed. The preliminary forecast, for instance, should be issued in early May or June if it is really to be a forecast. Yet normally one has to wait until the new season has commenced and sowing has been completed before the figures arrive.

Excellent Opportunity

The Government has an excellent opportunity now of redeeming its reputation. Forecasts can be forgotten as they are always notoriously inaccurate. Since they have such an effect on the market, usually to the detriment of the industry, the statisticians should concentrate instead on estimates after the sowing period. When errors have occurred in the past, the usual excuse has been to attribute them to discrepancies in the carry-over from the previous crop. In this case, however, such an excuse is not available, for it is certain that nothing of the 1960-61 crop will be left over. There is, therefore, only one crop to deal with—the 1961-62 one. It is believed by those who know the mofussil fairly well that much of the error is not so much in the acreage as in the estimate of the outturn an acre, and it is not unlikely that that is where fresh data are required. It is to be hoped that in the coming season, more accurate estimates will lead to more stable markets.

New Crop Prospects

As is usual at this time of year, new crop prospects are discussed daily in the Calcutta markets. In other years, reports have often indicated a lack of rain, but the grower has never yet failed to make up for any time lost in such circumstances. This year, however, widespread rain has been reported from nearly all the jute-growing districts in Pakistan and India. Nowhere can anyone be found who does not predict a bumper crop. In Pakistan, the general opinion seems to be that the new crop will be well in excess of the 7.4 million bales forecast by the Government. It is satisfactory to note that the market reaction has been pronounced following these reports. No doubt, there will be lots of ups and downs before the crop proves adequate to meet the industry's demand.

The attitude of sellers has undergone a distinct change. Offers to mills have increased considerably, and in many cases, buyers have only to name a price for it to be met. Similar conditions prevail in the gunny market, where many small holders are flooding the market with goods. Heavy selling pressure, particularly for forward shipment, has brought a sharp fall in sacking. At one stage, July-September B Twills slumped by Rs. 13 in a single day. Against this, there is a distinct lack of genuine buyers, which is reflected in the poor shipping reports for the current period. Ample freight space is available, and the boating companies can provide an unlimited number of barges, which is an unusual feature at this stage of the month. Towards the close, conditions have tended to become a little steadier, but the general undertone continues to be weak.

THE JUTE MARKETS

Manufactured Goods: The market displayed no strength at the opening of the past week. In the absence of overseas interest, prices in both sections were marked down considerably. March B Twills were quoted at Rs. 192.50, with July-September shipment at a discount of Rs. 12.50 In hessians, 40in. 10oz. opened at Rs. 65.50, with forward shipment at a discount of Rs. 2. Over the next two days, prices continued to fall, partly due to the lack of buyers and partly in sympathy with the easier conditions in the fibre section. By Saturday, March B Twills were down to Rs. 189.50 and 11-porter hessians to Rs. 64.75. Further losses were reported over the week-end. Heavy selling pressure from mills, and panic selling on behalf of weak holders, caused a general slump on Monday, so B Twills lost Rs. 8 in the near position and Rs. 13 for forward shipment. In hessians, the trend was the same, and ready 40in. 10oz. lost Rs. 1.85, while forward shipment dropped by Rs. 3.50. The losses brought ready B Twills to Rs. 179.50, and the discount for forward shipment widened to Rs. 17.50. Similarly, the gap between near and forward shipment in hessians was extended to Rs. 4, with ready shipment at Rs. 62.50. Towards the close, due to business having been done in hessians, and the withdrawal from the market of weak holders, 10oz. rates moved back to Rs. 62 from the Rs. 60 level.

Opening quotations on Wednesday morning were as follows :

	Ready	April	Apl.-June	July-Sept.
40in. 7½oz.	46.25	45.00	45.50	44.00
40in. 8oz.	49.30	49.50	48.75	47.25
40in. 10oz.	62.50	61.50	61.00	58.75
B Twills	176.00	176.00	175.00	162.00
Heavy Cees (Plain)	178.00	177.00	176.00	162.00
A Twills	210.00	210.00	208.00	196.00
Liverpools	198.00	198.00	197.00	185.00
Cornsacks	176.00	178.00	178.00	165.00

Raw Jute: Favourable weather conditions in the jute-growing areas, with plenty of rain, supported predictions of a bumper crop in the coming season. Sellers' ideas began to change, and although the initial quotations were based on the maximum price of Rs. 62, some indicated a willingness to cut rates. Eventually, jute began to be offered at below Rs. 62. So prices began to drop, slowly at first, but as the week progressed, the discount became larger By the week-end, rates were down to Rs. 60, and by Tuesday morning they were quoted at Rs. 58. Small buying was reported by mills against quotas issued before the week-end, and sellers were keen for business. At one stage, ready bills of lading changed hands for as little as Rs. 54, but these were isolated cases. Imports in the upcountry markets remained negligible, and sellers were mainly despatching from stock. Arrivals in Cossipore also showed a fall from the previous week, but at 280 were well up to the average for the time of year. Prices continued to fall towards the close in spite of the slightly steadier tendency in the goods market, and the undertone remained weak.

Opening quotations on Wednesday morning were as follows :

Landed at Mills (Basis Bottoms)

	Rs. a 100 kilos	Rs. a md.	Shipment
Assam	152.75	57.00	March-Apl.
Northern	150.50	56.00	,,
Purnea Desal	147.25	55.00	,,
Daissee Selected	158.00	59.00	March-Apl.
Assam Tossa	154.00	57.50	,,
Mesta:			
Assam-Northern	146.00	54.50	,,
Desal	146.00	54.50	,,
Daissee	144.75	54.00	,,
Jungli	142.00	53.00	,,
Indian Cuttings	265.00 a bale		,,
Pakistani N.C.'s	265.00 a bale		,,

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute sellers in Dundee are reducing their terms almost daily, although the E.P.C. rates are not coming down substantially. Some of the offers are of secured parcels and the holders are apparently thinking that it is about time they made some profits. But with the prospects for the next jute crop looking bright, it seems that fibre prices will decline substantially.

Raw jute prices are now much too high. They suit agents, brokers and merchants since their commission has been doubled, but much harm is being done to the trade as consumers are turning to substitutes. The fear at the moment in Dundee is that much labour may be lost to other industries. The flax trade has lately been booming. Meanwhile, urgent appeals have been made in the Press for spinners and weavers while building and other trades have absorbed much surplus labour. If short-time working increases in the future—and it has been spreading rapidly in the jute trade—there is likely to be a labour shortage when conditions improve once again.

Raw jute is offered at from £207 for Mill Firsts, £203 for Mill Lightnings, £198 for Mill Hearts and £194 for Grade Hearts. Grade Tossa-¾ is being offered at £207 and fours at £200, April-May shipment, c.i.f. U.K. Spinners are ignoring the offers being made at present, because they are already well bought.

Calcutta goods have weakened to 99s 3d for 40in. 10oz. hessians and 74s 6d for 7½oz., March, 99s and 74s 4d for April, 98s 6d and 73s 9d May and 98s and 73s 3d June, with B Twills at 292s, 291s 6d, 289s 6d and 288s 6d for the respective months of shipment, all f.o.b., Calcutta.

Little business is being done in jute yarns and cloth, but spinners and manufacturers are in need of fresh orders. It appears that buyers will remain aloof from the market till prices come down, as they undoubtedly will in due course. Prices would have been much lower if spinners could use jute at the current prices.

THE PAKISTANI JUTE MARKETS

FIBRE FALLS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE Muslim festival of Id and the attendant holidays spread over a long week-end of four days. This probably is the reason for the sharp decline in arrivals. The tornados also did considerable damage throughout the countryside. But accompanying them were widespread rains, ideal for the growing crop and for further sowings. In one or two areas, there has been excessive rain to the extent that the fields are being ploughed up again and resown. The rains have apparently also fallen in the Indian jute growing areas, resulting in a weaker tendency in the Calcutta market.

The overseas market, as previously reported, was already weak and one of the larger holders of raw jute had come out as a seller of fairly considerable quantities. This has resulted in a considerably weaker market, Export Firsts being quoted at £202 and Export Lightnings at £197. Buyers, eager to force the market down, are showing no interest even at these reduced prices. Locally, the market has also come down by as much as Rs. 20 a bale, and, in fact, there are so few buyers that the f.o.b. Narayanganj parities are lower than overseas quotations. It is felt, however, that some of the Pakistani mills still have a fair amount of buying to do. The present decline in the local market does not alter the fact that the raw jute crop this season is not sufficient to meet even the reduced world demand. It is quite probable that after the Easter holidays, market sentiment will remain weak as it is at present due to the excellent crop reports, but actual business will be done at higher prices. E.P.C. registrations for the first 15 days of March total 31,954 bales, making the total registrations to-date only 2,787,275 bales. West Germany was the biggest buyer with 4,725 bales, followed by the U.K. 4,550 bales, Italy 4,133 bales and Japan 4,000 bales. Belgium bought 2,845 bales and the U.S.A. 2,120 bales. Morocco was an unusually large buyer with 2,220 bales, and France only bought 1,242 bales. It is interesting to note that India made no purchases whatsoever.

COMPANY AND PUBLIC NOTICES

BENGAL POTTERIES LIMITED

NOTICE

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the Bengal Potteries Limited will be held at the Registered Office of the Company at 45, Tangra Road, Calcutta-15, on Monday, the 17th April, 1961 at 3-30 P.M. to transact the following items of Business :—

1. To consider and if thought fit to pass the following Resolutions which shall be proposed as Ordinary Resolutions :—

A. "Resolved that consent be and is hereby given to the Board of Directors of the Company, borrowing up to a total amount of Rs. one crore (excluding temporary loans from time to time obtained by the Company from its Bankers in ordinary course of business), in excess of the aggregate of the paid-up Capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose, as the Board may from time to time deem necessary for the purpose of the Company."

B. "Resolved that this meeting approves of the reappointment by the Board of Directors of the Company of Messrs. Allied Distributors & Co., as the sole selling agents of the company for a period of five years commencing from the 1st April, 1961, at the remuneration and upon the terms and conditions contained in the agreement dated 22nd March, 1961, made between the company of the one part and the said Messrs. Allied Distributors & Co. of the other part laid before the meeting and subscribed by the Chairman of the meeting for the purpose of identification."

2. To consider and if thought fit to pass the following Resolution which shall be proposed as a Special Resolution :—

Resolved that the Articles of Association of the Company be altered in manner following :—

A. Subject to approval by the Central Government, the following Article shall be inserted after Article 96 B :—

"96 C". So long as any money remains due by the Company to the Industrial Credit and Investment Corporation of India Limited, the Industrial Credit and Investment Corporation of India Limited, shall have and may exercise the following rights and powers :—"To appoint from time to time any person or persons to be a Director or Directors of the Company but so that not more than two persons shall at any time hold Office by virtue of appointment made under this Article. Any person or persons so appointed shall not be subject to retirement by rotation but may at any time be removed from office by Industrial Credit and Investment Corporation of India Limited, who may from the time of such removal or in case of death or resignation of the person appointed, appoint any other or others in his or their place. Any such appointment or removal shall be by a writing signed by the Industrial Credit and Investment Corporation of India Limited, and served on the Company."

B. Sub-clause (17) of Article 131 of the Articles of Association of the Company shall be deleted and the following new sub-clause shall be substituted therefor :—

Article 131 (17). "Subject to the provisions of the Companies Act, 1956, to delegate all or any of the powers hereby conferred upon them to the Managing Agents of the Company as they may from time to time see fit."

Explanatory Statements under Section 173 (2) of the Companies Act, 1956.

Item No. 1A of the Agenda :

The Company has entered into a Collaboration Agreement with Messrs. Rosenthal Isolatoren GMBH of West Germany, for the manufacture of Porcelain Insulators.

For the purpose of giving effect to the said Agreement, the Company will have to undertake substantial expansion of the Insulator Section of its factory by installing new machinery which will require capital expenditure (including foreign exchange facilities) which is estimated at Rupees Forty-Eight lacs and fifty thousand.

Negotiations are proceeding with the Industrial Credit and Investment Corporation of India Limited of Bombay for a loan of 242.000 dollars equivalent to Rupees Eleven lacs and fifty-five thousand, and Rs. 25 lacs in Indian Currency.

A Resolution was passed by the Company in General Meeting on the 23rd June 1959, consenting to the Directors borrowing moneys in excess of the limit placed by Section 293 (1) (d) of the Companies Act, 1956. This Resolution did not specify the total amount up to which moneys might be so borrowed by the Directors as was not necessary under the Companies Act then in force. By Section 99 of the Companies (Amendment) Act of 1960, Explanation No. 1 was inserted to sub-section (1) of Section 293 of the Companies Act, 1956 which inter-alia provides that every resolution shall specify the total amount up to which moneys may be borrowed by the Board of Directors.

Industrial Credit and Investment Corporation of India Limited in view of the abovementioned amendment requires that another Resolution should be passed complying with the provisions of Explanation No. 1 to Section 293 (1), of the Companies Act, 1956.

It may be mentioned that the proposed loan from Industrial Credit and Investment Corporation of India Limited together with the amounts already borrowed will exceed the aggregate paid-up Capital of the Company and its free reserves.

None of the Directors or the Managing Agents has any concern or interest in the abovementioned resolution, except as a Director or Managing Agents of the Company.

Item No. 1B of the Agenda :

Messrs. Allied Distributors & Co. is a co-partnership firm of which Bharat Ram Charat Ram Private Limited, Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Limited, Hindusthan Selling Agencies Private Limited and K. L. Poddar & Sons Private Limited are partners.

The said Messrs. Allied Distributors & Co. was appointed sole selling agents of the company for a period of 5 years commencing from 1st April, 1956, and the period of such appointment is to expire on the 31st of March, 1961.

At an extraordinary general meeting of the company held on the 22nd March, 1961, at 11 A.M. the company accorded its consents by a special resolution under section 314 of the Companies Act 1956, to the reappointment of the said Messrs. Allied Distributors & Co., as the sole selling agents of the company for a period of five years commencing from the 1st April, 1961, at the remuneration and on the terms and conditions mentioned in the draft agreement expressed to be made between the company of the one part and the said Allied Distributors & Co. of the other part subscribed by the Chairman of the Board of Directors of the company at its meeting held on the 23rd February, 1961 and also subscribed by the Chairman of the extraordinary general meeting held on the 22nd March, 1961.

The said Messrs. Allied Distributors & Co. have also made a declaration under the provisions of Section 314 (2) of the Companies Act 1956.

The Board of Directors at its meeting held on the 22nd March, 1961, at 11-45 A.M. after the said special resolution was duly passed, reappointed the said Allied Distributors & Co. as sole selling agents of the Company for a period of five years commencing from the 1st April, 1961 at the remuneration and upon the terms and conditions mentioned in the said draft agreement placed before the extraordinary general meeting on the 22nd March, 1961, subject nevertheless to the condition that such reappointment of Messrs. Allied Distributors & Co. as such sole selling agents shall cease to be valid if it is not approved by the company in the first general meeting held after the date of such reappointment. The said draft agreement was thereafter duly completed and executed.

The resolution therefore is for the purpose of obtaining the approval of the company in general meeting under the provisions of section 294 (2) of the Companies Act.

Allied Distributors & Co. is a co-partnership firm and it appeared that Shri S. K. Agarwal and Shri R. K. Agarwal are sons of Lala Bishen Swarup, a Director of the Company and are sons of a brother of the mother of Lala Shri Dhar, a Director of the Company. As such they are the relatives of Lala Bishen Swarup and Lala Shri Dhar within the meaning of Companies Act of 1956.

Lala Shri Dhar a Director of the Company, is a Director and Shareholder of Bharat Ram Charat Ram Private Ltd., also a partner of Messrs. Allied Distributors & Co., Shri S. K. Agarwal and Shri R. K. Agarwal, partners of Messrs. Allied Distributors & Co. are also Directors in private companies (not concerned in this arrangement) in which either Shri Bishen Swarup or Lala Shri Dhar, two of the Directors of the Company, are Directors.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

Item No. 2 (A) of the Agenda :

For reasons as explained in the Explanatory Statement relating to Item No. 1A of the Agenda, the Industrial Credit and Investment Corporation of India Limited requires the Company to amend Articles of Association of the Company to provide for the appointment of nominee of the Industrial Credit and Investment Corporation of India Limited, on the Company's Board, who shall not be required to hold qualification shares prescribed by Article 97, nor shall he be liable to retire by rotation. Under the provisions of the Companies Act, 1956, the proposed amendment of the Article by inserting the new clause 96C will require the approval of the Central Government.

Item No. 2 (B) of the Agenda :

Under Sub-clause (17) of Article 131 of the Articles of Association of the Company, the Directors have power inter-alia to delegate all or any of the [illegible] any Manager, Managing Director or Managing Directors, but not Managing Agents. The Company at present has no Manager, Managing Director or Managing Directors but only Managing Agents. Further under the provisions of Section 197A of the Companies Act, 1955 as inserted by Section 55 of the Companies (Amendment) Act, 1960, no Company shall after the commencement of the Companies (Amendment) Act, 1960, appoint or employ at the same time or after the expiry of six months from such commencement continue the appointment or employment at the same time of more than one of the following categories of Managerial personnel, namely: (a) Managing Director, (b) Managing Agent; (c) Secretaries and Treasurers and (d) Manager.

None of the Directors or the Managing Agents has any concern or interest in the abovementioned resolution, except as a Director or Managing Agents of the Company.

The agreement dated 22nd March, 1961, referred to in the Resolution No. 1B can be inspected by any member at the registered office of the Company, 45, Tangra Road, Calcutta, on any working day of the Company, during the hours of 2 P.M. to 4 P.M.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, Tangra Road,
Calcutta,
Dated, 22nd March, 1961.

JESSOP AND COMPANY LIMITED

NOTICE is hereby given that the Twenty-ninth Annual General Meeting of the Members of Jessop & Co., Ltd. will be held in the Committee Room No. 2 of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, on Thursday, the 20th April, 1961 at 11-00 a.m. for the transaction of the following business :—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors for the year ended 31st October, 1960.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 8th April to 20th April, 1961, both days inclusive.

By Order of the Board,
K. S. BASU,
Secretary.

63, Netaji Subhas Road,
Calcutta, 9th March, 1961.

Note :—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

INSTITUTE OF ECONOMIC GROWTH UNIVERSITY ENCLAVE DELHI-6

APPLICATIONS are invited for the following posts in the Institute :—

(a) One Fellow: Grade: 800-50-1,250
(b) Four Research Associates: Grade: 500-25-800
(c) Two Research Analysts: Grade: 275-500
(d) Four Research Assistants: Grade: 200-10-400
(e) Two Computors: Grade: 120-10-200
(f) Two Stenographers: Grade: 160-10-330

All posts carry the usual dearness and other allowances permissible under rules in the Institute.

Qualifications:

(a) A good master's degree in Economics with at least five years' research experience in the field of Urban Economics, experience of organising field surveys and interest in urban demography.

(b) A good master's degree in Economics or Statistics and at least three years' research experience in Industrial Economics or Urban Demography or applied economic statistics.

(c) & (d) : A good master's degree in Economics and Statistics and experience of analysing statistical data.

(e) A good bachelor's degree and experience of computational work and statistical processing.

V. K. R. V. RAO,

THE SOORAH JUTE MILLS CO., LTD. CALCUTTA

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Wednesday, the 10th May, 1961 at 2-30 P.M. for the following purposes :

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st December, 1960.

(2) To declare Dividends on Preference and Ordinary shares.

(3) To elect directors in place of Mr. H. J. Silverston and Shri G. D. Kothari who retire by rotation but being eligible offer themselves for re-election.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business to consider and if thought fit to pass with or without modification the following resolutions :

(a) As Ordinary Resolution—

"RESOLVED that Shri Bhagirath Murarka, a Director, who retires under Article 111 of the Company's Articles of Association be and is hereby re-appointed a Director of the Company."

(b) As Special Resolution—

"RESOLVED that the Articles of Association of the Company be altered in the manner following, that is to say with effect from 1st January, 1961 the existing Article No. 114 be deleted and the following new Article be substituted therefor—

'114. Each Director shall receive out of the funds of the Company by way of remuneration for his services a fee of Rs. 100/- for each meeting of the Board attended by him.

In addition, the Directors shall receive a commission of 1% of the net profits of the Company in any financial year computed under the provisions of the Companies Act, 1956, such commission to be divided among the Directors equally or as they may determine.

The Directors shall also be remunerated for any extra service done by them outside their duties as defined in these Articles and shall be paid any travelling, hotel or other expenses properly incurred by them in attending and returning from meetings of the Board of Directors or any Committee thereof or general meetings of the Company or in connection with the business of the Company.'"

(c) As Special Resolution—

"RESOLVED that the Company do hereby approve of the contract with Messrs. Hindusthan Investment Corpn. Ltd., the Managing Agents of the Company, for supply of money by the said Managing Agents to the Company by way of short-term credits with or without security, made or to be made over a period of five years with effect from the 1st January, 1960 bearing interest at the rate mutually agreed upon from time to time. Provided, however, that any interest received by Messrs. Hindusthan Investment Corpn. Ltd., from the Company on or in respect of money lent pursuant to this resolution shall not be deemed to be remuneration paid by the Company to them as Managing Agents of the Company within the meaning of Section 198 & 348 of the Companies Act, 1956, and that Messrs. Hindusthan Investment Corpn. Ltd. shall not be accountable therefor under the provisions of Section 363 of the Act."

(d) As Ordinary Resolution—

"RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general fund other funds not directly relating to the business of the Company or the welfare of its employees, such amounts up to a total of Rs. 5 lacs in any financial year as may be considered proper by the Board notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater."

The Register of Members and Share Transfer Books of the Company will remain closed from the 24th April, 1961 to the 10th May, 1961, both days inclusive.

By Order of the Board,
HINDUSTHAN INVESTMENT CORPN. LTD.,
R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

Calcutta,
Dated, the 24th March, 1961.

N.B. (i) The Directors have recommended the following dividends free of income-tax payable by the Company but subject to deduction of tax under 18 (3D) of the I.T. Act—

On Preference Shares @ 10% per annum ; and

On Ordinary Shares @ Rs. 2.50nP. per share.

If dividends on shares as recommended by the Directors are approved at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 10th May, 1961, or to their order or to their bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 25th May, 1961.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS HAS BEEN FORWARDED TO THE MEMBERS OF THE COMPANY.

MARTIN BURN LIMITED

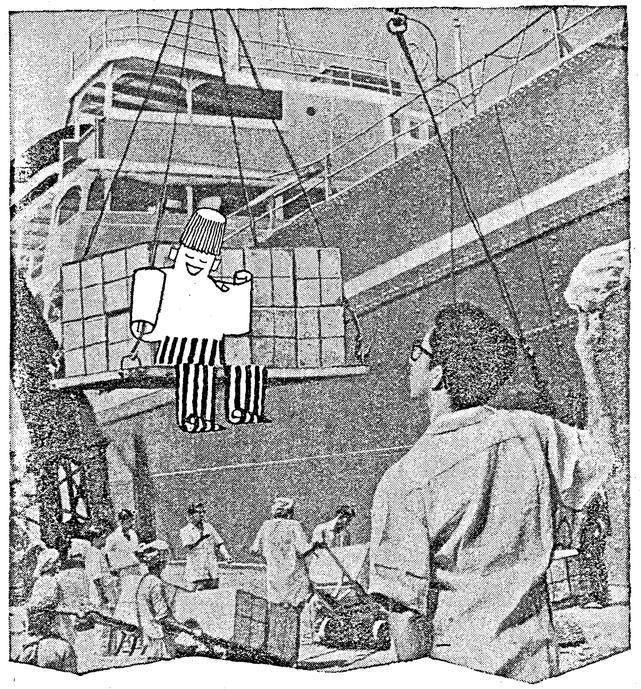
NOTICE is hereby given that the Board of Directors has declared an additional dividend on the Preference shares in the Company in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 in respect of the year ended 30th September, 1960, and also sanctioned payment of dividend on the same for the half-year ending 31st March, 1961.

The dividends will be paid on or after the 20th April, 1961 to those shareholders whose names appear on the Register of Preference Shareholders on the 18th April, 1961.

The Register of Members and Share Transfer Books for Preference Shares will be closed from the 10th April, 1961 to the 18th April, 1961, both days inclusive.

By Order of the Board,
A. G. GIDLEY,
Secretary.

12, Mission Row,
Calcutta 1,
1st April, 1961.



MR. AL FOIL GOES OVERSEAS

"Westward Ho !" shouted Mr. Foil, importantly perched upon a tea chest, "I go as a Protector of Tea (Aluminium lining for tea chests and packages) and come back with foreign exchange. Busy voyage ahead, though," Mr. Foil continued shouting, "What with having to keep out the damp devil and keep in the tea flavour. But I am not worried. Have long experience in the matter of lining tea chests with aluminium foils which stand up to all sorts of ill usage like rough crossings and wet weather (the Bay of Biscay and the Channel y'know) . . . In fact, aluminium foil packaging keeps the tea full flavoursome and factory fresh right up to the tea lover's table . . . to England, America or any place in the world . . . I, Al Foil, alumnus of aluminium, guarantee satisfaction".

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

VFC-11

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE is hereby given that the 35th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57-B Free School Street, Calcutta, on Thursday the 27th day of April 1961, at 10-30 a.m. for the following purposes:

1. To consider the Profit and Loss Account for the year ended 31st December, 1960, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as an ordinary resolution and the remainder as special resolutions:

5. **(As an ordinary resolution):** "That Mr. Sachindra Chaudhuri be and is hereby appointed a Director of the Company."
6. **(As a special resolution):** "That subject to the approval of the Central Government under Section 269 of the Companies Act, 1956, Mr. Michael Laurence Bexon, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Sales) of the Company upon the terms and conditions presently governing his employment, as evidenced in a letter dated 1st March, 1961 issued by the Company and addressed to him, and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him".
7. **(As a special resolution):** "That consent be and is hereby accorded to Mr. Prakash Narain Haksar, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Purchasing) with remuneration in that capacity as approved by the Company in General Meeting on 29th April, 1957".
8. **(As a special resolution):** "That consent be and is hereby accorded to Mr. James Alexander Moore, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Finance) with remuneration in that capacity as approved by the Company in General Meeting on 23rd April, 1959".
9. **(As a special resolution):** "That consent be and is hereby accorded to Mr. Kenneth Claud Ferguson, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Works) with remuneration in that capacity as approved by the Company in General Meeting on 23rd April, 1959".

By Order of the Board,
P. B. SEN GUPTA,
Director & Secretary.

Dunlop House,
57B, Free School Street,
Calcutta.
30th March, 1961.

NOTE: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference shares of the Company will be closed from 17th April, 1961 to 8th May, 1961, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 17th April, 1961.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is annexed to the Notice issued to the members of the Company.

ECONOMIC PRIORITIES FOR THE THIRD PLAN

THE formal inauguration of the third five year plan is an opportune occasion for examining the aims and methods of economic planning in India over the past decade. That the achievements over this period have been impressive, few will deny. Since 1950, national income (at constant prices) has increased by about 40 percent, industrial production by nearly 70 percent, and agricultural production by about 35 percent. Yet, as one looks back over the panorama of the years, the progress seems modest when compared with the original ambitions of the planners. It seems even more modest in relation to the huge needs of a poverty-stricken economy whose population, as the latest census indicates, is growing far faster than most people a decade ago might have imagined. If one lesson stands out from the recent experience, it is that if there was ever a time for indulging in the luxury of ideological experiments, it is no longer now; a single-minded emphasis on the economic imperatives is necessary in developmental planning if India is to build a progressive, democratic society. A noteworthy analysis of the achievements of the past, and the promise of the future, has just appeared in the form of a book entitled *India on the Eve of the Third Five Year Plan* by Sir Theodore Gregory. Sir Theodore was Economic Adviser to the Government of India from 1938 to 1946, and his work has been sponsored by, although it does not necessarily reflect the views of, the Associated Chambers of Commerce of India. In its own way, it is nevertheless a competent summary of business opinion on the purposes and methods of Indian planning.

Sir Theodore starts by pointing to the ambitious and deterministic quality of the planning. Major assumptions are made, and long-term projections formulated, which from time to time prove to be far out of touch with reality. Such exercises no doubt have some theoretical value, in that they give the authorities a vision of what to strive for in the future. But the danger is that they raise hopes which cannot be fulfilled, and introduce a rigidity into the course of economic development the consequences of which are expensive. There is a tendency to consider the plans as sacrosanct; it is forgotten that the economy is not a machine operating according to pre-determined criteria, and can never be made to work like one. The range of economic activity is so vast that detailed regulation and co-ordination is simply not possible. As a result, when difficulties arise because some parts of the plan fail or because co-ordination is lacking, the approach of the planners remains inflexible. In framing the plans, political priorities are often allowed to outweigh economic ones. There is no evidence that, in order to accelerate progress, certain industries have to be reserved for the public sector, yet this is what the Industrial Policy Resolutions have done. Nor is there any proof that development is promoted best under a socialist pattern of society, yet this is what the Government and Congress Party have committed themselves to (without, however, having defined what their version of socialism implies). In response to political pressures, uneconomic methods of production are encouraged or industries are set up in the wrong places. Thus are the concepts of progress and unity undermined in an economy already suffering from provincial, communal and linguistic jealousies.

In one of the more noteworthy sections of the book, Sir Theodore Gregory analyses the political influences in modern Indian planning. He declares that, "since 1950, the political element in the Planning Commission has been strengthened, whilst at the same time its membership has expanded." The trouble with the five year plans is "not that there is too little discussion or inadequate documentation, but possibly too much. But all this does not alter the fact that the *actual* plan of any particular time-period is a compromise plan, in the sense that not only has it to be approved by bodies such as the National Development Council and the Cabinet, which are political by definition, but that it has to pass the hurdle of approval by the Planning Commission itself (as distinct from the staff), on which the political element is strongly represented." The result is that political conflicts determine such questions as the order of priorities, the location of enterprises, price stability and State trading; ministries and departments inflate their individual programmes for the purpose of personal empire-building; and a good deal of "kite-flying" goes on about what could be achieved in fields like steel and oil if only more money were allocated. In the process of horse-trading, the strictly economic priorities tend to be forgotten. The justice of the criticisms will be readily evident from the experience of the second five year plan, in the framing of which ideological considerations have been dominant. To some limited extent, such considerations have lost importance under the pressure of economic necessity, but their influence is still clearly noticeable in many aspects of the third five year plan.

Sir Theodore Gregory's discussion of the third plan is rather brief. But that is perhaps understandable since most of his investigations in India were conducted at a time when the Draft Outline had not been officially published. The most important point which seems to emerge is a certain doubt as to whether the resources the planners visualise can be raised over the next five years. No categorical assertion is made; Sir Theodore merely states that even allowing for the fact that, compared with the second plan, the increases in outlay are smaller in real terms, "the financial task involved is a considerable one." The happiest feature of the third plan probably is that it proposes much less deficit financing. A less happy feature is the heavy reliance on taxation and the surpluses of public enterprises for raising rupee resources. Another significant feature is that not much extra money is expected in the form of loans and small savings from the public. Sir Theodore's assessment of the tax prospects is somewhat confusing, especially where he implies that the target for additional taxation is Rs. 650 crores (in fact, it appears to be much nearer Rs. 1,650 crores). But he is nevertheless right in pointing out that fiscal ambitions and the pricing policies of State enterprises cannot be considered in isolation; they might well have serious repercussions on the rest of the economy. Furthermore, there is a genuine danger that if resources cannot be raised by other means, the reliance on deficit financing might be much greater than the planners have promised. In that case, India will have little scope for checking inflation, especially since her foreign exchange reserves are too small to permit the liberalisation of imports.

Crucial to the implementation of the third plan is the question of foreign aid, and it is here that Sir Theodore makes one of his most important recommendations. As he puts it, "in connection with the whole problem of priorities, the desirability of giving India as free a hand as possible in the disposal of the foreign aid granted her cannot be overstressed." The difficulties facing the countries giving the aid are recognised. The United States has its dollar troubles, the competing demands of Africa are increasing, the burden of armaments is heavy, and western tax-payers naturally claim that they should first get relief. Finally, it is understandable that the countries giving the aid should want to know what will be done with it, and whether the aid cannot be used for placing orders with their own suppliers. But, as Sir Theodore points out, restrictions of the latter sort "may add to imbalances within the Indian economy", and imbalance "must be prevented to the greatest extent possible." If foreign aid is inadequate, or does not come in time, the third plan cannot be implemented as a coherent whole. On India's part, this calls for a high degree of flexibility in determining the ultimate size of the plan; and on the part of India's helpers, it calls for a high degree of flexibility in letting her use such aid as they are able to give.

LINKING IMPORTS TO EXPORTS

THE import policy for the April-September period contains no surprises. A further tightening was only to be expected. The Rs. 3 crores involved will certainly be felt, coming on top of the cumulative restrictions of the past few years; but if, as intended, it is taken up in financing additional import requirements for certain favoured industries, then the all-round *status quo* should be maintained. Also unchanged are the three main aims of current import policy. Where there are differences in emphasis, these seem unlikely to affect the overall picture. Perhaps only the continued determination to sidetrack the functions of the established importers calls for categorical disapproval. This feature of the policy is undoubtedly depriving the country of a considerable body of expert knowledge and involving industries and the economy in general in expensive waste. What it saves in terms of depriving the middleman of undeserved profits, it loses in the form of imposing a rigid and expensive system of import procurement on individual firms. In other words, the profits are all too often simply transferred from the pockets of middlemen to those who are successful in securing licences, or those in a position to dispense them. The net result is almost certainly a loss to the country.

One of the advantages of this system as far as the Government is concerned is shown in the new policy of linking import quotas to export performance. Superficially, this idea would appear to have many attractions. In practice it will probably prove to be something of a negative inducement, if effective at all. As a proof that the Government is beginning to take the export problem seriously, it is to be welcomed. But as a gesture towards solving a problem whose real causes lie in another direction entirely, it cannot be accepted as being of much importance. At best it will help an established exporter to maintain production, or persuade a new one to venture into a fresh field of activity so as to show willingness. At the worst it may lead to manufacturers undertaking exports at a loss so as to keep their plants operating. This may in fact be what the Government is aiming at; but if so, it is making a mistake. To export at a loss, unless as a purely temporary device to enter a particular market, is equivalent to a selective devaluation of the rupee. In the jargon of international trade, it amounts to dumping, and invites retaliation. In no circumstances can it be regarded as a satisfactory answer to India's export problems. Even as an inducement to a manufacturer who would otherwise continue to exploit an easy home market, it has its limitations because the larger the scale on which such a manufacturer can operate, the lower will fall his unit costs of production and the higher will rise his chances of eventually exporting a proportion of his output at a profit. And it is exporting at a profit which should be India's goal, otherwise the gain in foreign exchange will always involve the country in a disproportionate loss of internal production, will be bought too dearly, will generate inflation, will invite action from competitors and will always be a halfhearted venture on the part of the particular firm concerned. Clearly, the artificial forcing of exports is not something which should be undertaken lightly.

The most significant feature of this linking of imports to exports is that the Government is at last seriously entering the field of export incentives. This somewhat negative move may be followed later by more positive ones. If this

happens, then the Government will not run short of advice about what to do. It is axiomatic that the first requisite is to keep down the internal price level; this point needs emphasis because it scarcely seems to have been accepted in New Delhi that the two things—internal costs and export prices—are intimately connected. This must be so otherwise there is no logical explanation of such recent contradictions as an increase in the wages of jute mill workers when the mills are incurring heavy losses on their export business. Even in the newer exporting industries, where the political aspects of wage policy are not yet so vexing, costs must be kept down otherwise markets cannot be expanded. It is no coincidence that the countries whose exports are at present growing most rapidly are, like the Soviet bloc countries, able to keep a firm hold on their internal cost structure, or are those, like West Germany, who have succeeded in keeping internal prices stable by more liberal means. One way or another, cost and wage levels must be kept under control when a country is seeking a rapid expansion in exports. At the moment, the rupee is undoubtedly over-valued at its present parity, and this is a severe handicap to exporters who are attempting to establish their markets.

The central problem of exports apart, there are a number of other steps that could be taken to encourage exporters in India to be more venturesome. The best of these involve the free use by the exporter of a fixed proportion of the foreign exchange earned. The Government may at present be moving towards this idea, but the current export promotion scheme is still some distance from it. To let an exporter sell a proportion of the foreign exchange he earns for what it will fetch in India, would serve as an even greater inducement, especially if the purchaser were then allowed to import what he liked. The point is that the present system of import restrictions is apt to hamper any scheme for export incentives simply because it is too comprehensive. This feature arises partly from the fact that of necessity it has to be severe, but also partly from the Government's purely arbitrary judgement on what ought or ought not to be regarded as indispensable to a country's standard of living. The free import of consumer goods against a proportion of increased export earnings, whether in the hands of the concern originally earning them or not, might prove the best incentive of all. This has been tried in other countries with quite remarkable success. It amounts to little more than allowing consumer good imports at extremely high prices, or in other words revaluing the rupee against such imports—but involving only a limited number of rupees which would not have been earned in the first place but for the incentives.

The continued restriction on imports generally, although perfectly easy to justify under present circumstances, is bound to accentuate internal inflation and the rise of domestic prices. And this in its turn will have an impact on export earnings. The country has got itself into the kind of tangle from which it is not easy to break free, given the need for import restrictions at all. There is clearly a limit to which restrictive import policies can be pushed in a country where the Government does not exercise full control over the whole range of internal prices and costs. The recent reports, usually unconfirmed, that individual manufacturing concerns have had to close temporarily due to a shortage of imported raw material, are an indication that the present policy has already passed this limit. The Government has only partly acknowledged the need to give maintenance imports first priority under all circumstances. This category of imports is going to grow and foreign exchange will have to be found for it if much of the industrial investment of recent years is not to be wastefully used. The new policy does not give much confidence that in fact this will, or even can, be done.

THE BRITISH BUDGET

THE delay of a week or two in presenting Britain's Budget this year on 17th April—is explained by the pressure of other business, not by any particular difficulties in the financial position. But the financial position is certainly not easy, and the Chancellor of the Exchequer, Mr. Selwyn Lloyd, has not much room for manoeuvre. It is permissible to shift the burden of taxation slightly from one section of the community to another, but not appreciably to reduce the burden while spending—particularly on defence and social services—remains high. Britons have for years been resigned to the idea that they are the most-taxed people in the world. Opportunely, at the end of March, the National Institute of Economic and Social Research published in its *Economic Review* a study of comparative taxation, covering 20 countries. Its figures showed, surprisingly, that Britain's position in the tax-scale (in terms of total taxation as a proportion of the gross national product) was not first but eighth. The unenviable first position is occupied by West Germany, followed by Austria, Finland, Norway, France, Sweden, Luxemburg, then Britain, with the Netherlands and Italy (rated equal) only slightly below. Taxation takes 34 percent of the gross national product in West Germany, 29 percent in Britain, 26 percent in the United States. It is mainly that one-thousandth of the population earning more than £10,000 a year that is more taxed in Britain than its counterpart in any other country.

It is, of course, desirable to reduce taxation in Britain, regardless of other countries, but 1961 is not an opportune year for such concessions. Even the National Institute, whose thinking inclines towards expansion, was unable to recommend anything better than a "neutral" Budget, devised so that it would neither expand nor restrict domestic spending. The second *Quarterly Bulletin* of the Bank of England was published at the same time as this *Economic Review* of the N.I.E.S.R. It showed distinct signs of official caution, in a situation where demand appears to be expanding and large quantities of short-term money are invested or deposited in Britain and liable to be withdrawn if the economy shows symptoms of inflation. The banking system has recently come through the most difficult period of the year with no direct official assistance, because, as the *Bulletin* explained, it was necessary to maintain a firm control on credit. This period includes the maximum inflow of revenue to the Exchequer, which always exerts pressure on the monetary system. It was apparent months ago that the banks could not strengthen their liquid positions enough to prepare fully for this pressure, and that the authorities' attitude would indicate the trend of monetary policy. As expected, the banks increased their lending to a bigger total than had ever previously been reached; but the Bank of England did not supplement their liquid resources by releasing the "special deposits" which it had exacted during the restrictive period. The authorities assisted the banks by facilitating sales of some of their investments (whereby they could transfer some of their assets from the non-liquid to the liquid category); but, even so, the banks' liquidity ratios pressed hard against the obligatory minimum of 30 percent—indeed, one bank transgressed as low as 29½ percent.

The implication of the authorities' behaviour in this difficult pre-Budget period is that they are willing to make some temporary concessions but are convinced that the structure of firm credit-control must be maintained. The Bank of England has explained, in the afore-mentioned *Bulletin*, that its policy is influenced mainly by the condition of the labour market, by the trends of wages and other costs and prices, and, on the international plane, by the prospective balance of payments. It does not regard the present trends complacently. It must be assumed, therefore, that the London Bank rate will be maintained at a relatively high level. One body of opinion in the City expects a reduction in the rate from 5 percent to 4½ percent, not because the economy needs a stimulant but because, in the words of one financial expert, Mr. Paul Bareau, writing in the London *Daily Mail*, 5 percent is "a bad figure from which to manoeuvre". Later in the year, when the seasonal trend is against sterling, it may be desirable to raise Bank rate; but a rise from 5 percent to, say, 6 percent would put the rate up to a level appropriate to a crisis, whereas, we must assume, no crisis will be developing. But the National Institute did not mention in its latest *Review* the possibility of reducing Bank rate. Instead it remarked: "If foreign funds continue to flow out on a big scale it might be more effective to raise short-term interest rates, which operate directly on the international flow of funds and which do little to restrict domestic expansion."

It appears to some observers that the Bank of England has mishandled Bank rate, by raising it in the first half of last year and thereby promoting a flow of short-term funds whose presence has since been embarrassing, and by failing to reduce it at various times when an opportunity occurred. Ten years ago, a few months before the so-called "new monetary policy" was introduced, the London Bank rate was at 2 percent. It is easy to understand that in modern conditions it had to be raised permanently above that level, but a persistent upward trend—reflecting rises that are later only partly counteracted by falls—is disturbing. "Lombard" has pointed out in his column in the London *Financial Times* that the cost (in terms of interest or the equivalent of the overseas sterling balances in Britain) has risen from a few tens of millions of pounds annually ten years ago to approximately £150 million annually in recent years, and that the reserves would have been many hundreds of millions of pounds larger than they are if the average level of Bank rate in the last decade had been appreciably lower. Neither Bank rate nor direct control of credit is the main instrument or method of regulating the modern economy. The Chancellor of the Exchequer relies mainly on his annual Budget, whereby he can control, with some degree of accuracy, the proportions, as well as the totals, of consumption and investment. Unfortunately, there is no technique for stimulating export trade in general, and not all the experts endorse the idea that restraint at home promotes export trade. But this year an expansionist Budget would be (as the N.I.E.S.R. remarked) too risky.

IMPROVING COMPANIES' CAPITAL STRUCTURES

A REPORT from New Delhi states that the Capital Issues Advisory Committee has decided to encourage an improved balance between ordinary share capital and the indebtedness by broadening companies' equity capital base. The need for such a move has become more urgent in view of the fact that many companies have recently been financing a large portion of their fixed capital requirements by borrowing from banks. To some extent this has helped to squeeze banking resources. It is now thought that if companies were able to fund their indebtedness by raising money in the form of ordinary share capital, the present monetary stringency might be relieved.

On the face of it, the argument looks attractive enough, but in actual practice the mere fact of increasing ordinary share capital as a means of reducing the proportion of companies' indebtedness might create more problems than it would solve. To begin with, a clear distinction must be made between working capital and fixed capital requirements. The former is generally financed by banks, and rightly so. As for long-term capital requirements, there is as yet little evidence to show that these have been financed by banks to any great extent. At the same time, it is not denied that the capital structure of many companies is now out of line with their fixed investments. There are a number of factors which have contributed to the trend. The Government's monetary and fiscal policies during the past few years have not helped companies obtain resources from the open market by selling shares. They have been forced to finance their long-term requirements by borrowing from banks or other financing institutions such as the Industrial Finance Corporation and the Industrial Credit and Investment Corporation.

So far, many companies have refrained from issuing further shares by capitalising their reserves due to the exorbitant tax on bonus issues. Some companies having big reserves are now proposing to issue bonus shares by capitalising their reserves because the bonus share tax has been reduced. There is, however, no logic in having a bonus share tax even at the present rate because capitalised reserves have already paid their full share of the company tax. The policy of fixing arbitrary premium on rights share issues has also discouraged companies from increasing their share capital. There are no doubt instances in which the share capital has been deliberately kept low by the managements concerned in order to ensure the profitability of the equity share capital. There are also companies in which the share capital has been made small so as to maintain controlling interest.

In the circumstances, there are good reasons for helping companies bring about a greater balance between their share capital, investments and indebtedness. In doing so, attention must be given to ensuring that the corporate capital structure is appropriately geared instead of overstressing the importance of the ordinary share capital. In order to have a well-geared capital structure, it is necessary to distribute the long-term capital requirements of a company proportionately between ordinary, preference and debenture capital. Unless gearing is made discriminatingly, the capital structure may not be balanced in the strict sense of the term. Judging from performance, it looks as if most companies have tried to balance their capital structure as far as circumstances permit. Out of an amount of Rs. 255 crores raised by industries during 1951-1960, the ordinary share capital was 68 percent, debentures 17.3 percent and preference capital 14.87 percent.

The present time would seem to be fairly appropriate for effecting a balance in the capital structure of the corporate sector. The investment climate has taken a turn for the better during the past year or so. Many new share issues have been floated and the response is on the whole fairly satisfactory. When permission is given for new share issues, the Controller of Capital Issues should see that the capital structure of each company is properly geared. In order to achieve this, it is necessary that each company be asked to issue equity, preference and debenture capital in proportion to its requirements. No company should be permitted to keep down the size of its equity capital in order to serve the personal interests of the management.

Apart from new share issues, there is greater need for encouraging the existing companies to increase their share capital either by issuing rights shares or by making free scrip issues. In these the Controller of Caital Issues shoulders great responsibilities. In the case of rights shares, there has so far been no coherent policy. On many rights share issues, prohibitive premiums have been imposed. Whatever justification there may be for imposing premiums on rights share issues under present circumstances, it cannot be disputed that companies remain the best judges of whether or not their rights shares should be issued at premiums. As long as the Government thinks that companies cannot be permitted to issue these shares freely, the Controller of Capital Issues owes an explanation to justify the terms and conditions under which any rights shares are permitted. If these shares are issued according to a completely haphazard policy as at present, confidence is likely to be impaired. As for bonus share issues, the decision of the Capital Issues Advisory Committee can probably be taken as a pointer. Considering that the Union Finance Minister reduced the bonus share tax in order to earn more revenue, it is reasonable to think that the Controller of Capital Issues will in future be more generous in permitting free scrip issues.

Current News and Comment

East India Distilleries Expanding

The ordinary shares of the East India Distilleries and Sugar Factories Ltd have been steady around Rs. 42.54 in the Madras stock market. This is due partly to the satisfactory results achieved during the year ended September 1960 and partly to the excellent growth prospects. Steady progress has been made in 1959-60, although the profit was held down by the heavy interest paid on the loans obtained to finance the new fertiliser factory. The financial position of the Company has improved steadily during the past few years. The capital and reserves have risen to £3.28 million and total assets to £7.4 million. Bonus shares have been issued by capitalising reserves, and the dividends have been satisfactory.

Commenting on expansion programmes in his chairman's address at the annual general meeting in Madras last Thursday, Mr. C. R. Srinivasan pointed to the increase in the Company's industrial activities. (A full text of the speech is printed on a later page.) East India Distilleries owns a large and efficient sugar factory in Madras, producing 30,000 tons of white sugar a year. Mr. Srinivasan thought that Indian sugar supplies are likely to be excessive to the extent of nearly 500,000 tons a year. It is, therefore, necessary to export as much of the surplus as possible. But sugar can be exported only at a loss because the international price is much lower than the domestic production costs. He felt, therefore, that some kind of control would have to be maintained on sugar as long as it is necessary to export part of the domestic production. But the control should be modified in such a way that consumption is encouraged within the country. The Company's pottery and chemical works are operating satisfactorily. It is proposed to expand the pottery works at an estimated cost of about Rs. 22 lakhs. It is hoped that technical collaboration will be arranged with a well-known British firm for the production of sanitaryware.

Big expansion has taken place in the field of fertilisers. An ammonium phosphate factory is being established in Ennore, Madras State, with a capacity of 50,000 tons a year. Production is expected to begin from the middle of 1962, as a result of which the profitability of East India Distilleries will rise considerably. The directors are thinking of doubling the capacity of the unit in due course. When this and other expansion schemes are launched, there is a possibility that the finance will be obtained by issuing rights ordinary shares. The Company, along with two American collaborators, has obtained a licence from the Government of India to erect a factory in Visakhapatnam, Andhra State, to produce more than 300,000 tons of fertiliser a year. The project will be started by forming a new company, in which East India Distilleries will have a substantial shareholding. That company will be managed by directors, but East India Distilleries will distribute its products. The public will be given an opportunity of participating in the share capital of the new company. The acid and superphosphate plant of Andhra Fertilisers Ltd—a subsidiary of East India Distilleries—started production at the end of 1960. The capacity of the plant is 50,000 tons of superphosphate a year.

Mafatlal Group Shows Better Results

The shares of the Mafatlal group of textile mills, which were rising since the turn of the year, recorded spectacular gains last week. Between 27th March and 1st April, New Shorrock spurted from Rs. 1,750 to Rs. 2,400 and Standard Mills from Rs. 1,392 to Rs. 1,680. Early in January, the shares could be bought around Rs. 1,400 and Rs. 960, respectively. The rise in Mafatlal Fine and Sassoon Spinning, which are on the cash list of the Bombay Stock Exchange, has also been impressive. Mafatlal Fine which were quoted at Rs. 870 on 27th March were bid up to Rs. 1,120 on 1st April. Sassoon Spinning improved from Rs. 55.50 to Rs. 60. The rise in the shares followed higher dividend announcements by all the Companies—the increase is, however, nominal for Standard and Mafatlal Mills—and the issue of bonus shares by New Shorrock and Standard Mills which had been talked about for long. The working of all the mills shows considerable improvement, compared with the previous year.

The New Shorrock Spinning and Manufacturing Co. has increased the dividend from Rs. 55 to Rs. 60 a share, both taxable, for the year ended December 1960. The dividend for 1960 is on the increased capital because of the amalgamation of the Shorrock Spinning and Manufacturing Co. with the New Shorrock Spinning and Manufacturing Co. from 1st January, 1960. Apart from a higher dividend on the increased capital, the directors have decided to issue—subject to the sanction of the Controller of Capital Issues—bonus shares in the ratio of two shares for every five held. The issue of bonus shares will necessitate the capitalisation of Rs. 28.11 lakhs from the reserves. The working of New Shorrock for 1960 shows a gross profit of Rs. 1.48 crores—the combined results of the two amalgamated mills—against Rs. 98 lakhs of New Shorrock and Rs. 30 lakhs of Shorrock Mills in 1959. Sales totalled Rs. 5.53 crores. The gross profit works out to 27 percent of turnover. After providing Rs. 18.51 lakhs for depreciation and Rs. 47.40 lakhs for taxation, the net profit amounts to Rs. 71.46 lakhs. The directors have allocated Rs. 10.67 lakhs to development rebate reserve, Rs. 15 lakhs to general reserve and Rs. 10 lakhs to dividend equalisation reserve. Dividends absorb Rs. 33.73 lakhs. After making various adjustments, a sum of Rs. 2.25 lakhs has been carried forward, against Rs. 1.63 lakhs brought in.

The expectations of investors of a bonus issue by Standard Mills have at long last materialised. The directors have decided to issue bonus shares in the ratio of two shares for every five held by capitalising Rs. 43.90 lakhs out of the share premium account. The bonus issue is subject to the sanction of the Controller of Capital Issues. The gross dividend has been increased from Rs. 29 to Rs. 30 a share but with the difference that while the distribution for 1960 is a straight dividend, the sum of Rs. 29 paid in 1959 included a cash bonus of Rs. 4. The gross profit for 1960 at Rs. 1.43 crores shows a rise of about Rs. 41 lakhs over the 1959 figure of Rs. 1.02 crores. Depreciation amounts to Rs. 23.09 lakhs (against Rs. 21.02 lakhs) and taxation Rs. 44.30 lakhs (against Rs. 29 lakhs). The net profit amounts to Rs. 60.92 lakhs (against Rs. 43.87 lakhs). Appropriations include development rebate Rs. 11.36 lakhs (against Rs. 10.52 lakhs), general reserve Rs. 6 lakhs (against nil) and dividend equalisation reserve Rs. 10 lakhs (against nil). Dividends absorb Rs. 33.60 lakhs, against Rs. 32.50 lakhs in 1959, leaving Rs. 1.37 lakhs to be carried forward, against Rs. 91,000 brought in.

The dividend on Mafatlal Fine has been increased from Rs. 29 to Rs. 30, both gross. As in the case of Standard Mills, the distribution for 1959 included a cash bonus of Rs. 4 a share while the 1960 dividend does not contain any bonus. The Company has made a gross profit of Rs. 69.47 lakhs which is Rs. 6.70 lakhs more than in 1959. After providing Rs. 11.77 lakhs (against Rs. 8.58 lakhs) for depreciation and Rs. 20.05 lakhs (against Rs. 19.65 lakhs) for taxation, the net profit amounts to Rs. 31.65 lakhs, against Rs. 29.42 lakhs in the previous year. Allocations include Rs. 7.54 lakhs (against Rs. 3.41 lakhs) for development rebate reserve, Rs. 2 lakhs (against Rs. 4 lakhs) for general reserve, Rs. 3 lakhs (against same) for dividend equalisation reserve and Rs. 22,291 (against nil) for investment fluctuation reserve. Dividends absorb Rs. 19.09 lakhs (against Rs. 18.68 lakhs), leaving Rs. 5,916 to be carried forward, against Rs. 6,549 brought in.

The directors of Sassoon Spinning have recommended a dividend of Rs. 1.70 a share, subject to tax, for 1960, against Rs. 2.50 a share, taxable, in 1959. But the dividend for 1960 is on the increased capital of Rs. 75.40 lakhs while the distribution for 1959 was on Rs. 37.70 lakhs. The dividend has, therefore, really been increased by 90nP a share, gross. The gross profit of the Company has increased from Rs. 33.57 lakhs to Rs. 49.70 lakhs. Depreciation amounts to Rs. 18.40 lakhs (against Rs. 15.22 lakhs) and taxation Rs. 10.55 lakhs (against Rs. 51.14 lakhs). The net profit amounts to Rs. 17.74 lakhs (against Rs. 10.40 lakhs). The directors have appropriated Rs. 7.66 lakhs (against Rs. 7.27 lakhs) for development rebate reserve. General reserve gets Rs. 3 lakhs (against Rs. 5.25 lakhs) and dividends absorb Rs. 12.82 lakhs (against Rs. 9.42 lakhs), leaving Rs. 24,984 to be carried forward, against Rs. 215 brought in.

Finlay Group Mills Profits Down

The working of the James Finlay group of textile mills—Finlay, Swan and Gold Mohur—has been unsatisfactory. Although dividends have been maintained, profits have declined. The Finlay Mills shows a gross profit of Rs. 42.58 lakhs for 1960, against Rs. 50.10 lakhs in 1959. Swan's gross profit is down from Rs. 52.90 lakhs to Rs. 51.48 lakhs. The profit of Gold Mohur, which shows a rise of Rs. 4.50 lakhs at Rs. 41.38 lakhs, is in reality down by Rs. 4.41 lakhs because the figure for 1960 has been inflated by Rs. 8.91 lakhs due to a change in the method of valuation of the stock-in-trade. The amount added to the gross profit of Finlay and Swan as a result of the change is Rs. 4 lakhs and Rs. 6.55 lakhs, respectively. The directors attribute the poor working results to the reduction in the ex-mill prices of cloth under the voluntary price control scheme which had the effect of retarding sales and deliveries during the latter part of the year. The mills had also to pay a substantial premium for cotton purchases under the export incentive scheme.

The net sales of Finlay Mills amounted to Rs. 2.75 crores, against Rs. 2.45 crores in 1959. But the gross trading margin declined from 13.56 percent to 10.15 percent as a result of the rise in manufacturing costs. This explains the marked fall in the

gross profit. After providing Rs. 9 lakhs (against Rs. 8.17 lakhs) for depreciation and Rs. 12.76 lakhs (against Rs. 14.57 lakhs) for taxation, the net profit amounts to Rs. 17.82 lakhs, against Rs. 12.14 lakhs in the previous year. The directors have created a stock valuation reserve with the entire surplus of Rs. 4 lakhs earned out of the revaluation of stocks. After allocating Rs. 94,000 (against Rs. 2.56 lakhs) to development rebate reserve, the directors have transferred Rs. 11.93 lakhs to general reserve no. 1, representing the taxed profit, and have drawn Rs. 11.50 lakhs from the same reserve to pay the proposed dividend. Finlay Mills has ordered 23 twist-ring frames for delivery early in 1963 to implement its rehabilitation programme.

The sales of Swan Mills declined from Rs. 2.36 crores to Rs. 2.17 crores. The gross profit fell from Rs. 52.90 lakhs to Rs. 51.48 lakhs. After providing Rs. 12.52 lakhs (against Rs. 7.5 lakhs) for depreciation and Rs. 13.35 lakhs (against Rs. 14.75 lakhs) for taxation, the net profit has declined by Rs. 4.46 lakhs to Rs. 21.71 lakhs. Allocation to development rebate reserve has been reduced from Rs. 6.07 lakhs to Rs. 3.48 lakhs. Out of the Rs. 6.55 lakhs added to the profit by the revaluation of stock, the directors have set aside only Rs. 5 lakhs to stock valuation reserve. A taxable dividend of Rs. 36 a share is maintained and will be paid by transferring Rs. 12.96 lakhs from general reserve no. 1. The directors state that the extension to the cord department was completed early in the year and was in full production from 1st June, 1960. An order has been placed for 20 twist-ring frames which will be delivered early in 1963. Swan Mills has purchased 17,539 square yards of land, adjoining the mills together with the buildings.

The gross profit of Gold Mohur Mills for 1960 amounted to Rs. 41.38 lakhs, which included Rs. 8.91 lakhs arising from stock revaluation, against Rs. 36.88 lakhs in 1959. Sales rose from Rs. 2.26 crores to Rs. 2.42 crores. The directors have provided Rs. 3.77 lakhs (against Rs. 3.65 lakhs) for depreciation and Rs. 14.70 lakhs (against Rs. 13.33 lakhs) for taxation. The net profit amounts to Rs. 19.28 lakhs which is nearly Rs. 2.66 lakhs more than in 1959. A sum of Rs. 1,700 (against Rs. 20,900) has been transferred to development rebate reserve and Rs. 6 lakhs has been allocated to stock valuation reserve. The directors have transferred Rs. 12.82 lakhs to general reserve no. 1, representing taxed profits. The proposed dividend of Rs. 21.50 a share, taxable, absorbing Rs. 10.75 lakhs, will be paid by withdrawing the whole amount from general reserve no. 1. The directors state that the Company has placed an order for 36 twist-ring frames which will be delivered by the end of 1961.

Good Results from Kasturbhai Textiles

The shares of the Kasturbhai Lalbhai group of textile mills rose sharply during the past week. Between 27th March and 29th March, Arvind Mills spurted from Rs. 1,290 to Rs. 1,630, Raipur from Rs. 710 to Rs. 900, Nutan from Rs. 480 to Rs. 615, Asoka from Rs. 665 to Rs. 755, New Cotton from Rs. 497.50 to Rs. 630 and Saraspur from Rs. 402 to Rs. 495. The rise followed the announcement of higher dividends and the issue of rights and bonus shares. Arvind Mills' gross dividend has been raised from Rs. 40 to Rs. 45, Raipur's from Rs. 35 to Rs. 40, Nutan's from Rs. 25 to Rs. 30, Asoka's from Rs. 25 to Rs. 30, New Cotton's from Rs. 25 to Rs. 30 and Saraspur's from Rs. 20 to Rs. 30. Apart from the increase in dividends, the directors have recommended the issue of bonus shares in the ratio of two shares for every three held for both Arvind and Raipur Mills, which, of course, is subject to the sanction of the Controller of Capital Issues. As for the other mills, the directors have recommended the issue of rights shares at par in the ratio of one for one for New Cotton, one for two for Asoka and Saraspur, and two for three for Nutan Mills. No official sanction is needed for the rights issues since the amount involved is restricted to Rs. 10 lakhs in each case.

Higher dividends are justified by the Companies' encouraging performance in 1960. Sales of Arvind Mills increased from Rs. 3.42 crores in 1959 to Rs. 3.74 crores in 1960. Its gross profit rose from Rs. 92.66 lakhs to Rs. 1.09 crores. Depreciation takes Rs. 18.36 lakhs, development rebate Rs. 4 lakhs and taxation Rs. 38 lakhs, including Rs. 2.89 lakhs which was in arrears. The ordinary dividend absorbs Rs. 27 lakhs. Apart from capitalising Rs. 40 lakhs through the proposed bonus issue, the directors have decided to redeem 5,250 4-½ percent redeemable cumulative preference shares. The gross profit of Raipur has risen from Rs. 30.17 lakhs to Rs. 39.30 lakhs. A sum of Rs. 6.86 lakhs has been provided for depreciation and Rs. 75,000 for development rebate. Taxation accounts for Rs. 1.30 lakhs and dividends absorb Rs. 12.45 lakhs, of which the preference dividend amounts to only Rs. 45,000.

The results of the Nutan Mills are particularly encouraging. Sales have increased by Rs. 13 lakhs from Rs. 1.47 crores to Rs. 1.60 crores, but the gross profit has risen from Rs. 7.75 lakhs to Rs. 22.67 lakhs. Allocations include depreciation Rs. 5.99 lakhs, development rebate Rs. 4.5 lakhs, taxation Rs. 6 lakhs, general reserve Rs. 1.07 lakhs, dividend equalisation reserve Rs. 3,769 and contingency reserve Rs. 2,413. After providing for the proposed dividends, there remains Rs. 32,277 which has been carried forward. The gross profit of Asoka Mills has recorded an impressive rise from Rs. 8.82 lakhs in 1959 to Rs. 31.43 lakhs in 1960. The directors have provided Rs. 11.69 lakhs for depreciation, Rs. 11 lakhs for development rebate and Rs. 2 lakhs for taxation. The Ahmedabad New Cotton Mills has earned a gross profit of Rs. 22.49 lakhs, against Rs. 7.78 lakhs in 1959. Allocations include depreciation Rs. 8.28 lakhs, development and rehabilitation reserve Rs. 3.50 lakhs and taxation Rs. 4.25 lakhs. Saraspur's gross profit is reported at Rs. 30.5 lakhs; out of this, the directors have allocated Rs. 9.3 lakhs for depreciation, Rs. 3.5 lakhs for development rebate, Rs. 5.7 lakhs for taxation and Rs. 5.16 lakhs for reserves.

Dunlop Rubber Pays the Same

The Dunlop Rubber Co. Ltd has produced satisfactory results for the year ended December 1960. Sales increased by Rs. 4.59 crores to Rs. 30.47 crores. Increasing depreciation from Rs. 50.99 lakhs to Rs. 58.71 lakhs and taxation from Rs. 74.76 lakhs to Rs. 81.37 lakhs, the profit has risen from Rs 1.18 crores to Rs. 1.25 crores. The ordinary dividend has been maintained at 21.50 percent, taxable. It is covered more than thrice and offers a yield of 4.3 percent at the price of Rs. 50 a share. Important allocations include Rs. 17 lakhs (against same) for development rebate reserve and Rs. 37.50 lakhs (against Rs. 30 lakhs) for general reserve. The carry-forward is Rs. 25,12,555, compared with Rs. 24,03,447 brought in.

Atul Products Profit Up

The directors of Atul Products Ltd have maintained the dividend for 1960 at Rs. 12, subject to deduction of tax. Although it has just been maintained, the total distribution to shareholders amounts to Rs. 26.94 lakhs, against Rs. 24 lakhs in 1959, because of last year's increase in capital. The shares, which rose from Rs. 539 on 27th March to Rs. 580 on 29th March, declined quickly to Rs. 550 following the dividend announcement, for the market had apparently expected a higher dividend. But more significant than the setback in the price is the remarkable strength which the shares have displayed all along in spite of frequent reports of the closure of some departments of Atul Products due to inadequate raw material supplies. Apparently, growth prospects rather than the dividend have been the main force behind the support for the shares. The Company has ambitious plans for manufacturing a wide range of intermediates in collaboration with Humphrey and Glasgow and the Swiss firms of Ciba and Rohner. The plans are estimated to cost about Rs. 6 crores.

The preliminary figures on Atul Products' working released along with the dividend announcement show that it has fared well in 1960. Sales have increased from Rs. 3.54 crores to Rs. 4.19 crores. The gross profit has risen by Rs. 39.45 lakhs to about Rs. 1.50 crores. The former, as a percentage of sales, works out to 35.8, against 31.2. Taxation claims Rs. 49 lakhs (against Rs 45 lakhs). A sum of Rs 19.94 lakhs (against Rs. 19.72 lakhs) has been provided for depreciation. The net profit amounts to Rs. 69.96 lakhs, compared with Rs. 33.16 lakhs in 1959. Allocations include development rebate Rs. 4.50 lakhs (against Rs. 3 lakhs), depreciation reserve Rs. 14 lakhs (against Rs. 9.50 lakhs) —this is in addition to the depreciation mentioned above—and general reserve Rs. 20 lakhs (against nil). The proposed dividend absorbs Rs. 26.94 lakhs, leaving Rs. 4.15 lakhs to be carried forward, against Rs. 73,000 brought in.

West Coast Paper to Expand

Judging from the West Coast Paper Mills Ltd's performance during the year ended June 1960—the first year of normal working—investors have reason to look forward to the future with optimism. Apart from the good financial results, the different varieties of paper manufactured by the Company have achieved great popularity in a short period. Encouraged by the working results, West Coast Paper has been considering schemes for further expansion. Its paper production is to be increased from 18,000 tons to 45,000 tons a year. It has received a licence for manufacturing 27,000 tons of rayon grade pulp and paper a year and another licence for setting up a plant with a rated annual production capacity of 9,000 tons of caustic soda and 7,200 tons of chlorine. The entire integrated expansion programme will involve a foreign exchange expenditure of about Rs. 6 crores. In his annual statement to shareholders, Mr. G. L. Bangur, chairman, says that the Government of India has indicated its willingness to allow the Company to negotiate a direct loan from the U.S. Development Loan Fund and the Export-Import Bank for a major part of the resources. This clears the way for securing foreign exchange. West Coast Paper is almost ready with its expansion schemes but it will implement them only after examining the report of Sandwell International Ltd on the feasibility of the various projects. The report is expected by about the end of April.

The paper industry is worried about the adequacy of raw material supplies to keep it working to capacity. To cope with possible shortages of bamboo, the Company is planning to diversify the production programme by making use of other raw materials and even bagasse, if necessary. The chairman says that the equipment required is being planned to facilitate the use of different raw materials. Referring to some of the fresh levies in the 1961-62 Central Budget, Mr. Bangur says that the increase in the price of chemicals and other needs will adversely affect the industry's production costs. He criticises the increased levy on cheap varieties of packing and wrapping paper, the duty on which works out to 32 percent or 35 percent of the price of the paper. The Company fared well last year and its working in the current year is fairly encouraging, but it has still to provide depreciation amounting to Rs. 29 lakhs and development rebate of about Rs. 55 lakhs. Answering shareholders' questions, the chairman stated that the issue of fresh equity capital would be considered after West Coast Paper took a final decision on the expansion schemes He added that it would have to return Rs. 12 lakhs annually to the Industrial Finance Corporation from 15th July, 1962.

Malabar Iron Share Offer

The Malabar Iron and Steel Works Ltd is a new Company which has recently been formed for starting a series of industrial units in Kerala State. It proposes to begin with the production of basic industrial raw materials, industrial machinery, machine tools, industrial components, gears, drives and industrial auxiliaries, including hardware and implements. The Company offered 196,000 ordinary shares of Rs. 10 each for public subscription at par last Wednesday. The issued capital is Rs. 40 lakhs, divided into 400,000 ordinary shares of Rs. 10 each. The directors and their friends have agreed to subscribe for 204,000 ordinary shares. (Details of the issue were published in last week's *Capital.*)

Malabar Iron and Steel hopes to sell its products largely in Kerala State; there is no organised factory producing such goods there at present. Details of technical collaboration with Poly Techna of Czechoslovakia are likely to be published in due course. The cost of the entire project is estimated at Rs. 40 lakhs. When production begins, the annual turnover may be nearly Rs. 92 lakhs. The directors expect to make reasonable profits and pay dividends within a short period.

Century Mills to Expand

Although the stock market was subdued last week due to heavy corrective profit-taking, the shares of the Century Spinning and Manufacturing Co. Ltd were bid up to an all-time high of Rs. 588. The working results of the Company for 1960, released along with the dividend announcement, were recently reviewed in these columns. Now the directors' report gives fuller details about the expansion plans which have been the main force behind the rise in the price of the shares. The Company has obtained a licence to install 336 automatic looms under the export promotion scheme, in addition to 192 looms to replace the old ones. It proposes to establish a modern mill with 528 automatic looms at a suitable place outside Bombay city Steps are being taken to acquire land for the purpose. Orders have been placed with Japanese manufacturers for plant and machinery for the expansion of the rayon plant capacity to 18-½ tons a day. Shipments of machinery, it is stated, have started arriving. The plant will reach full production by the end of the current year. The total cost of the project is estimated around Rs. 3 crores.

Century Mills has signed a technical collaboration and know-how agreement jointly with Algemeine Kunstsijde Unie N.V. of Holland and Vereinigte Glanzstoff-Fabriken A.G. of Germany to set up a super two tyre yarn and cord plant. The plant will be situated in Kalyan at the same site as the rayon plant. The project's engineering work will be undertaken by Ing. A. Maurer S.A. of Switzerland. The tyre cord plant, estimated to cost Rs. 4 crores, will employ the latest techniques and equipment and is expected to go into production during the second half of 1962. The directors point out that the Company is eligible for tax exemption under Section 15C of the Income Tax Act, so they have applied for it. Shareholders will get the benefit of proportionate exemption of tax on the dividends. The Company's financial position is strong. Against a paid-up capital of Rs. 3.29 crores, made up of Rs. 2.04 crores in equity shares and Rs. 1.25 crores in preference shares, the reserves and surplus amount to Rs. 4.12 crores. In 1960, Century Mills added Rs. 8.19 lakhs to the gross block of the cotton mill unit and Rs. 1.08 crores to the block account of the rayon unit, raising them to Rs. 3.18 crores and Rs. 7.36 crores, respectively. The gross blocks have been depreciated to Rs. 85.71 lakhs and Rs. 5.05 crores, respectively. The combined net block at Rs. 5.91 crores gives a turnover of Rs. 13.37 crores. The net earning on an ordinary share works out to around Rs. 64.5 on the basis of the results for 1960, while the gross dividend is Rs. 30 a share.

Binani Metal Share Offer

The Binani Metal Works Ltd is an engineering unit specialising in the production of non-ferrous alloys. It has made steady progress during the past few years, sales having improved from Rs. 50.73 lakhs in 1954 to Rs. 1.44 crores in 1960. The paid-up capital is Rs. 18.50 lakhs, divided into ordinary shares of Rs. 10 each. The Company is now offering 215,000 ordinary shares of Rs. 10 each for subscription at par. Out of this, 19,000 shares will be taken by the directors and their friends. The remaining 196,000 shares will be offered for public subscription next Monday. (Fuller details of the offer are published on a later page.) The proceeds of the issue will be used for expanding the traditional business and for diversifying activities. It is proposed to set up a plant for producing dies and moulds with foreign collaboration. A cast iron foundry will also be established in due course.

The estimated cost of the expansion programme is Rs. 33.50 lakhs. As the demand for the products is good, the prospects are considered promising. The directors expect to pay a taxable ordinary dividend of at least 10 percent for the year ended December 1961 and the new shares will participate in this distribution. The reserves of the Company amount to Rs. 2.84 lakhs and are expected to rise further when the report for the year ended December 1960 is published. Fixed assets are Rs 6.62 lakhs, but they have been adequately depreciated. The entire issue has been underwritten by the Bank of Baroda.

Gujarat Steel Tubes Offer

The Gujarat Steel Tubes Ltd, a new enterprise, will be in the market by about the middle of April to raise capital for its Rs. 1-crore project for manufacturing galvanised steel pipes of the diameter of ⅛ inch to 4 inches. The plant will be located in Sabarmati, near Ahmedabad, and will have a production capacity of 24,000 tons of pipes a year on a two-shift basis. The promoters expect that the factory will start production by about the middle of next year. The total capital cost of the plant, machinery, buildings, etcetera, is estimated at Rs. 1 crore and another Rs. 25 lakhs will be needed for working capital. Gujarat Steel Tubes has obtained a loan of Rs. 45 lakhs from the Industrial Credit and Investment Corporation of India, which will cover the entire cost of imported plant and machinery. The tube mill will be supplied by the West German firm of Mannesmann-Meer which will erect and commission the plant and train the Company's staff. Steel strips—the raw material for the pipes—will be obtained from the Rourkela steel works. The authorised capital of Gujarat Steel Tubes is Rs. 3 crores in equities of Rs. 100 each. The issued capital is Rs. 1 crore, of which the promoters, directors and their friends have taken up Rs. 51 lakhs. The balance of Rs. 49 lakhs will be offered for public subscription.

Lynx Machinery Share Offer

Lynx Machinery Ltd, which has acquired the partnership firm of Lynx Machinery Co., with all its manufacturing activity along with import licences and other facilities, proposes to enter the market on 18th April for raising Rs. 60 lakhs of equity capital. The old firm has been engaged since June 1957 in manufacturing concrete vibrators, concrete mixers, roller-pan mixers and other equipment used in the building and construction trades. It wanted to expand the range of production and undertake the manufacture of other items like engines, cranes of all types, grinders and tools in view of their increasing demand and the need for indigenous production. So the new joint-stock Company has been formed. The old firm holds licences for manufacturing engines, overhead travelling cranes, electric hoist cranes, concrete vibrators and mixers, roller-pan mixers, asphalt mixers and tar boilers. Its application for a licence for manufacturing flexible shaft machines and allied engineering tools is being considered by the Government. Lynx Machinery has entered into technical collaboration agreements with seven world-renowned machinery manufacturers—R. A. Lister and Co., E. P. Allam and Co., Flexible Drive and Tool Co. of the U.K., Demag-Zug, Schiess Defries and Ofu-Ofenbau of West Germany and Poly Techna of Czechoslovakia. Most of the collaboration agreements provide for export rights.

Lynx Machinery has an authorised capital of Rs. 2.50 crores, made up of Rs. 2 crores in equity shares of Rs. 10 each and Rs. 50 lakhs in preference shares. The issued capital will be Rs. 60 lakhs in equity shares, of which Rs. 30 lakhs is being taken up by the promoters, directors and their friends and Rs. 30 lakhs is being offered at par for public subscription. The issued capital of Rs. 60 lakhs will be used for purchasing the partnership firm of Lynx Machinery Co. as a going concern and for importing plant and machinery for the proposed expansion. The Company has acquired all the fixed assets, including plant, machinery, equipment, buildings and factories, for Rs. 14 lakhs from the partnership firm. The expansion programme is estimated to cost about Rs. 84 lakhs. The foreign exchange component is valued at Rs. 30 lakhs. The Government of India, it is reported, has sanctioned the entire foreign exchange required by the Company. Lynx Machinery is expected to go into full production in about 18 months.

Progress of Madura Mills

The Madura Mills Co. Ltd has produced satisfactory results for the year ended December 1960, in spite of many difficulties. There was an acute shortage of raw cotton, which was only partly relieved by imports from the U.S.A. The demand for the Company's products has been excellent and the export performance has been good. Madura Mills has earned nearly Rs. 2 crores worth of foreign exchange in 1960. Pointing to the good results in his address from the chair at the annual general meeting last week, Dr. Rajah Sir M. A. Muthiah Chettiar took a fairly optimistic view of the future. (The full text of the speech was printed in last week's *Capital.)* The rehabilitation and modernisation programmes are progressing. Some machinery has been imported for the tyre cord factory in Serampore, near Calcutta. Further expansion schemes are being considered. A loan of Rs. 75 lakhs is likely to be obtained from the National Industrial Development Corporation soon. The chairman, nevertheless, mentioned that production costs are likely to rise, mainly due to higher labour emoluments. It is hoped that the Tariff Commission, which is investigating the cost structure of the industry, will recommend fair prices for cloth and yarn in the near future.

Budge-Budge Jute Pays Less

The working of the Budge-Budge Jute Mills Co. Ltd during the year ended October 1960 has been affected by the fact that prices of raw jute were high in relation to those of jute goods. The profit has declined from Rs. 12.97 lakhs to Rs. 12.01 lakhs, although depreciation has been increased from Rs. 2.30 lakhs to Rs. 3.54 lakhs. The ordinary dividend has been cut from 15 percent, taxable, to 10 percent, taxable. It is covered more than three-and-a-half times and gives a yield of 6.6 percent at the price of Rs. 151 a share. Taxation is allocated Rs. 3.55 lakhs (against Rs. 2.65 lakhs) and development rebate reserve Rs. 4.41 lakhs (against Rs. 48,845). The carry-forward is Rs. 34,192, compared with Rs. 62,431 brought in. The installation of the modern drawing and spinning machinery has not been completed yet, because of delayed deliveries. New machinery worth Rs 25.42 lakhs has been installed and it is working satisfactorily. The directors have placed orders for further machinery in order to continue the modernisation of the heavy weft yarn section of the mills. The directors say that the prospects are uncertain. Unit production costs are likely to increase in view of the cuts in output. Costs have also risen because increased remuneration is being paid to workers on the recommendation of the Wage Board for the Jute Industry.

Pandyan Bank Profit Up

The Pandyan Bank Ltd has made a profit of Rs. 7,50,005 for the year ended December 1960, against Rs. 7,14,840 for the previous year. The provision for taxation is Rs. 3.40 lakhs (against Rs. 3.20 lakhs). General reserve gets Rs 2.50 lakhs (against Rs. 1.50 lakhs). The ordinary dividend is 10 percent, subject to deduction of tax, against 14-2/7 percent previously. A balance of Rs. 38,844 is carried forward, against Rs. 28,839 brought in. The directors say that, in common with many other banks in south India, the Pandyan Bank also experienced a fall in deposits during the latter part of 1960. But now steady progress is visualised for the future. The total deposits of the Bank at the end of 1960 were Rs. 4.39 crores (against Rs. 5.63 crores a year earlier). Advances totalled Rs. 3.07 crores (against Rs. 3.45 crores).

Bank of India Pays More

The net profit of the Bank of India Ltd has increased by nearly Rs. 20.50 lakhs to Rs. 1.03 crores during the year ended December 1960, compared with 1959. But a portion of the improvement is due to less tax being deducted from the Bank's investment income. The ordinary dividend has been increased to 20 percent, taxable, including a final of 12½ percent, from 16 percent, taxable, for 1959. Addressing the annual general meeting in Bombay last week (extracts from the speech were printed in last week's *Capital),* Sir Cowasjee Jehangir mentioned the regulation of interest rates on deposits under the inter-bank agreement. He hoped that the State Bank of India would join the agreement in due course. He thought that the Government could reduce its capital expenditure by pruning some unremunerative projects.

Anil Starch Pays More

The directors of the Anil Starch Products Ltd have recommended a dividend of Rs. 20 and a bonus of Rs. 10, making a total of Rs. 30 a share, subject to deduction of tax for the year ended December 1960. The distribution in the previous year amounted to Rs 28 a share, taxable, comprising a dividend of Rs. 20 and a bonus of Rs. 8. Sales at Rs. 2.68 crores are Rs. 37.48 lakhs higher than in 1959 and the gross profit has increased from Rs. 33.58 lakhs to Rs. 44.40 lakhs. The ratio of gross profit to sales works out to 16.5 percent, against 14.6 percent in 1959. After providing Rs. 8.87 lakhs (against Rs. 9 lakhs) for depreciation and Rs. 13.54 lakhs (against Rs. 10.15 lakhs) for taxation, the net profit amounts to Rs. 18.44 lakhs (against Rs. 11.96 lakhs). A sum of Rs. 1.17 lakhs (against Rs. 2.76 lakhs) has been provided for development rebate reserve and Rs. 8 lakhs (against nil) has been taken to general reserve. The dividend and bonus absorb Rs. 9 lakhs (against Rs. 8.37 lakhs), leaving Rs. 42,000 to be carried forward, against Rs. 47,000 brought in. The Company's shares are quoted around Rs. 740, offering a tax-free yield of about 3.8 percent.

Chemicoat to Make Metallised Paper

Chemicoat Ltd is the name of a new enterprise which has recently been registered in Gujarat to undertake the manufacture of metallised paper. The factory, which will be located in Baroda, will have a continuous process plant for the vacuum metallising of paper. The process is said to be of recent origin. It involves depositing a highly lustrous metal coating on paper by evaporation. Metallised paper is used as a substitute for aluminium foils in packing tea, cigarettes and biscuits, as well as in confectionery and label manufacturing. The proposed plant, which is perhaps the first of its kind in India, will coat paper with aluminium. Aluminium foils are at present only being laminated on paper. The plant will have an annual production capacity of 1,600 tons of aluminium-coated paper on a three-shift basis. It will be completely automatic, so it will need hardly a dozen workers to operate it.

The entire project is estimated to cost about Rs. 24 lakhs. Another Rs 8 lakhs will be needed for working capital, plant and machinery, incldluing erection, will cost about Rs. 18 lakhs. The foreign exchange component is estimated at Rs. 13 lakhs. The Industrial Credit and Investment Corporation of India is reported to have agreed to grant a loan of $275,000, which will meet the entire cost of the imported machinery. Metal Coating Establishment of Holland will supply the plant and machinery and provide the technical know-how, although it will not participate in Chemicoat's capital The promoters expect the cost of production of metallised paper to be about one-third of the price at which aluminium-laminated paper is being sold in the market The Company's authorised capital will be Rs. 50 lakhs in equity shares of Rs. 100 each, of which Rs. 20 lakhs is to be issued in the first instance. Of this, 10,000 shares are being taken up by the promoters, directors and their friends. The balance of Rs. 10 lakhs will be offered to the public. The Company is likely to enter the market for capital towards the end of April or early in May.

Expansion of Praga Tools

The working of the Praga Tools Corporation Ltd during the nine months ended March 1960 has not been as encouraging as was expected. The average production a month has not been equal

to the previous year's due to unsettled labour conditions in the factory. Speaking at the annual general meeting in Hyderabad last week, Mr. S. Ranganathan, chairman, said that Praga Tools has signed technical collaboration agreements with three British firms. (A fuller version of the speech appears elsewhere in this week's issue of *Capital.)* The Company has signed one agreement with Kearney and Trecker C.V.A. Ltd, of Hove, Sussex, for manufacturing drill chucks in India. The second has been signed with F. Pratt and Co. Ltd of Halifax for manufacturing lathe chucks, pneumatic chucks, magnetic chucks and pneumatic vices. The manufacture of these items, Mr. Ranganathan said, will prove useful to the steel processing industry, since without these appliances the machine tools by themselves will not be of great use. The third agreement has been signed with A. A. Jones and Shipman of Leicester for manufacturing cutter and tool grinders in India. "This is a new item to be taken up by the machine tool industry in India, and your Company would be the first in the field," Mr. Ranganathan said. The Polish Government has offered a credit of Rs. 14.3 crores to the Government of India. Out of this, the latter has earmarked Rs. 1 crore for Praga Tools to enable it to equip a complete machine tool plant. At present, only 20 percent of its production consists of machine tools; the Government wants the machine tool output to increase from Rs. 12 lakhs a year to Rs. 1.20 crores a year. The chairman said that for this huge expansion, the Polish Government would supply a major portion of the plant on credit. Negotiations have been going on with C.E.K.O.P., a Polish enterprise which undertakes the design and the supply of complete plants. Praga Tools has recently signed an agreement with C.E.K.O.P. for supplying the project report at a cost of Rs. 2.5 lakhs. The report is expected by about September. Meanwhile, negotiations are going on to book firm capacity in Poland for the supply of some general-purpose machine tools required for Praga Tools' machine tool plant.

Confectioners Want Cheaper Sugar

The confectionery industry has made rapid progress during the past few years. The second plan production target of 10,000 tons was exceeded in 1957. Production of the organised units has increased to about 13,000 tons during the past year, while the small-scale units have produced about 3,000 tons. Speaking at the annual general meeting of the Indian Confectionery Manufacturers Association in New Delhi last week, Mr. P. Mohanlal, president, said that the increase in production has been possible due to the improvement in sugar supplies as well as the growing demand for quality confectionery in India. If the trend continues, it will not be difficult for the industry to achieve the third plan target of 25,000 tons suggested by the Association early in the plan period. But the annual installed capacity of the 44 units registered with the Development Wing of the Central Ministry of Commerce and Industry is estimated at over 51,000 tons. Mr. Mohanlal said that the increased production last year was achieved by using only about 25 percent of the installed capacity, so the remaining 75 percent of the capacity is lying idle. The use of the idle capacity, the president said, is possible if there is a substantial increase in the demand for quality confectionery. India is a poor country whose people can hardly afford to purchase quality confectionery at the prevailing high prices. Any substantial increase in the demand can, therefore, be created only by a drastic reduction in the price of confectionery. Mr. Mohanlal said that one of the basic raw materials of the industry, accounting on average for about 45 percent of total production costs, is sugar, the price of which is Rs. 40 a maund in India, against about Rs. 15 in world markets. In some countries such as Australia, sugar is supplied to the preserved fruit industry at a subsidised rate. A similar policy should be followed in India in relation to sugar supplies for the confectionery industry. This will enable it to reduce production costs and expand the demand for its products. If the Government does not find it possible to supply sugar at a subsidised rate, it should at least exempt sugar used in confectionery manufacture from all internal taxes. The principle underlying the proposal has been accepted by the Government for ar number of excisable commodities, such as power alcohol, cotton fabrics and tea waste when these are used for industrial purposes.

Progress in Chemicals

The Indian chemical industry has made rapid progress in recent years. In 1960, its output recorded an increase of 29 percent, against a rise of 13 percent in the general index of industrial production. The total value of chemical products is estimated at Rs. 435 crores, against Rs. 340 crores in 1959. There are now about 97 large-scale manufacturing units and some 2,100 small-scale ones making drugs, fertilisers and other chemical products like caustic soda, soda ash and sulphuric acid. India has become virtually self-sufficient in many items. Although there are occasional complaints about quality, Indian drugs, by and large, are not inferior to the imported stuff. The expansion of the plastics industry has also been impressive.

Inaugurating the annual general meeting of the Indian Chemical Manufacturers Association in Bombay last week, Mr. Manubhai Shah, Central Minister for Industry, complimented manufacturers for their creditable performance but added that the production of by-product chemicals has not yet received sufficient attention. The coal and non-ferrous-based chemical industries have not been properly developed in India. The Minister said that he has pleaded with State Governments for establishing more and more coke-oven batteries and small ore-smelters. He urged industrialists to develop cost and research consciousness in order to accelerate the pace of progress. He also advised manufacturers to start co-operative research laboratories to avail themselves of the financial and technical assistance promised by the Government.

The outgoing president, Dr. K. A. N. Rao, welcomed the appointment of the Kane committee which will probe the development prospects of the petro-chemicals industry. Dr. Rao suggested that entrepreneurs should be informed of the composition of the natural oil and gas found in oilfields to enable them to plan ahead. He referred to the procedural difficulties faced by the industry. Application for a licence, approval of foreign collaboration and the sanction for capital goods imports have to be taken up at three different stages causing avoidable delay. Dr. Rao, therefore, stressed the need for reforms in the licensing procedure. The Central Industry Minister assured manufacturers that the Government is aware of the industry's problems and is trying its best to minimise procedural delays. He appealed to the industry to co-operate with the Government by giving technical assistance and other guidance to new as well as established entrepreneurs in tackling procedural problems. The incoming president, Mr. J. H. Doshi, suggested that a licence should be freely granted to an industry if it could arrange for the repayment of foreign exchange loans through exports.

Staple Fibre and Cotton Spinning

It is reliably understood that the Government will allow staple fibre spinning units to divert their production capacity to cotton spinning. Staple fibre spinning units, which have recently been established with up-to-date machines, have been finding it difficult to use their capacity effectively because of the acute shortage of raw material. Manufacturers of staple fibre yarn, therefore, asked the Textile Commissioner to let them divert their production capacity to the spinning of cotton so that they might use their capacity to the maximum. The Textile Commissioner suggested to the Central Commerce Ministry that he be empowered to permit staple fibre spinning units to divert their capacity to cotton spinning to the extent deemed necessary. The diversion to cotton spinning, it is said, is unlikely to affect the production of staple fibre yarn, which can be well maintained either by improved working or by working an additional shift, wherever possible. The diversion to cotton spinning will help eliminate complaints about the yarn shortage for the decentralised sector consisting of powerlooms and handlooms. Informed sources believe that the Government will soon authorise the Textile Commissioner to issue permits for the diversion of staple fibre spinning capacity to cotton spinning.

Paper Traders Complain

In his address from the chair at the annual general meeting of the Paper Traders Association in Bombay last week, Mr. B. M. Choksi said that although the domestic production of paper has increased, special varieties still have to be imported. As the country is short of foreign exchange, only 15,000 tons or so of these are allowed to be brought in, mostly through such channels as the State Trading Corporation and under barter deals, with the result that the established trade gets barely one-third of this quantity as its share. This has caused considerable hardship. Mr. Choksi alleged that imports through the State Trading Corporation are leading to many malpractices. Its officers do not have enough experience of the trade, so "more prices have been paid and wrong qualities have been imported." Similar things are happening under the barter system of imports also. Mr. Choksi had no complaints against the principle of allowing quotas to actual users, but they should be carefully screened before licences are given. He said that licences are being issued for bigger quantities than their actual requirements, and in some cases, "to non-manufacturing concerns or for the manufacture of inessential items like crackers, etcetera." Under the Government's protectionist policy, Mr. Choksi said, a heavy import duty of 75 percent ad valorem has been levied on imports of boards, while some of the varieties are yet to be produced in the country. Ivory board, for example, is not being manufactured by any concern in India, yet its imports have been cut to an insignificant quantity. This has apparently been done in the hope of encouraging domestic production, but after checking with those whose names and addresses have been officially supplied to the trade as indigenous manufacturers, it has been found that they do not produce ivory boards at all. Mr. Choksi, therefore, suggested that a more thorough scrutiny of the indigenous manufacturing programmes should be undertaken before formulating the import policy. He also suggested that established trade channels should be allowed to import newsprint along with the S.T.C. and actual users. This could check some of the malpractices in the trade.

CORRESPONDENCE

ADVERTISING AND MARKET SURVEYS

(To The Editor of "Capital")

Sir,

The important rôle of market research in stimulating exports was emphasised by several speakers at the conference organised by the Indian Society of Advertisers recently in New Delhi. Most manufacturers of consumer goods in this country pay very little attention to market studies and surveys before introducing their products. The unfortunate result is that their goods never find favour with the vast multitude of consumers. Experience elsewhere in the world shows that market studies always pay handsome dividends. For instance, three top executives of a well-known department store in Japan recently inaugurated their first overseas branch in the U.S.A. Before launching the scheme, elaborate market surveys were undertaken, and the products advertised. The studies indicated that there was an exceptional consumer acceptance for imported merchandise of all kinds in the Los Angeles metropolitan area, as compared with other areas. The same studies further proved that imports of general cargo from Japan, through the progressive Port of Los Angeles, consistently topped those of all other nations. The scheme was then launched and its success is now taken for granted. If the manufacturers of exportable goods in our country undertake similar market surveys under expert guidance, the goods produced can easily find a place even in highly competitive foreign markets.

Yours etcetera,

T. S. Jayaram

Madras, 1st April.

THE BUDGET STATEMENT

For many years past it has been the custom of the Government of India to give advance copies to the press the day before the Budget Statement is made known at the Council Chamber in Government House. This is invariably done on the undertaking that no information from the advance copies will be published before 12 o'clock of the day on which the Budget Statement is made. This year *The Indian Daily News* published a synopsis of the Statement some time before 10 o'clock instead of after 12 o'clock, in accordance with the arrangement. The Government of India have fully accepted the assurance that this premature publication was accidental. But the occurrence has led them to reconsider the practice, and to determine that in future no advance copies of the Statement will be given to any newspapers before the hour at which it is read in the Legislative Council. We think it is rather hard upon other newspapers that have not accidentally published the information prematurely, that they should be punished for the default of another. But at the same time the practice of issuing information to certain parties, which is not available to the public is not a desirable one, and therefore we think, that the Government is well advised in what they have done But while, on the subject, we would ask why this annual farce of a Budget Statement being presented in Council? Why could it not be sent to all the members and to the press simultaneously? Why should the members of the Council be dragged to Government House to listen to the monotonous reading of a Budget Statement or to simply have it handed to them? Some four years ago, when reviewing the Budget debate, we observed that it was really painfully ridiculous to find sensible men sitting for hours reading laboured compositions to each other. We are still of the same opinion.

FROM

CAPITAL

4th April, 1901

A Ditcher's Diary

The World Peace Council, which recently held a far from peaceful session in New Delhi, must ruefully have decided that the pursuit of peace can sometimes be a warlike operation. At his Press conference, Professor Bernal seemed almost besieged: and the Austrian Press Officer's method of rescuing him was, to say the least, inept and clumsy in the extreme. (At a gathering of poets and prose writers, organised by the same Council, participants are said to have exchanged blows.) The fact is that everyone now knows the World Peace Council for the communist, Soviet, front organisation it is. I am sure the Council wants peace—the peace, for instance, that would be ensured if India conceded all Chinese claims to Indian territory, Britain abandoned the hydrogen bomb and walked out of N.A.T.O., and America agreed to let East Germany take over Berlin and the Soviet Union establish its sphere of influence in Latin America. There would doubtless be more demands, but later. I am not a believer in suppression of meetings, even if the communists take advantage of them; so I see Mr. Nehru's point in letting the Council hold its session in India. Nor do I believe that a resolution there condemning Chinese aggression would have made the slightest difference to man or beast. What I cannot understand is that otherwise highly intelligent men, such as Professor Bernal, should not see that by associating themselves with the Council and similar organisations they are not advancing the cause of communism at all. As the whole Stalin era's record is there to show, they are only helping the intensely national and expansive policies of two powerful nation-States called the U.S.S.R. and the People's Republic of China. This is the big error the communists share with the late Mr. Dulles; they mistake Asia and Africa's anti-colonialism and nationalism for communism. The Russians can be very stupid sometimes in their assessment of political situations abroad; but Professor Bernal would have been spared his Indian disappointment if he had taken the trouble to study the political institutions India is trying to build I profoundly suspect such assertions as that this or that country will never go communist: but the Chinese and the Russians will have to be much subtler to sell communism to India; and peace conferences deceive nobody.

The marked unwillingness of Americans, official or otherwise, to learn the language of the country to which they are posted is a familiar cause of resentment in Latin America, Asia and Europe. It is this that President Kennedy is seeking to correct by introducing into his diplomatic service a regulation instituted in the old I.C.S. very many years ago: financial rewards for representatives who master the tongue of the area where they are sent to work. But other reforms may still be needed before Americans try their tongues at foreign languages, to judge from a plaintive letter that appeared recently in a New York paper. A very senior engineer from Florida reported that he was sent by his Government to work in France, so he made the effort to learn French. This saved a lot of time and trouble because he could deal directly with French engineers whereas his colleagues had to call in interpreters and rely on their necessarily shaky translation of technical terminology. A civil service inspector came in from Washington and told the engineer that his position was irregular, because he was doing two jobs: that of an engineer and that of an interpreter. Moreover, the rule-book said that where a government employee was doing a high-grade job part-time, and a low-grade job part-time, he must be paid the salary of the low-grade job. In this case, that meant that the engineer-linguist would drop in pay from the level of an engineer to that of an interpreter. Demonstration was useless; the rules were the rules. The engineer from Florida could retain his salary only by expunging from his service record all reference to a knowledge of French and by calling in an interpreter when he was doing business with a Frenchman. Parkinson's Law would thus be confirmed, and the proof administered that civil services can be as silly on one side of the world as on the other.

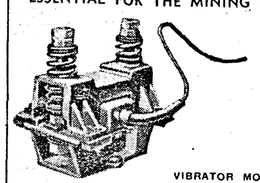
The law of diminishing returns operates in a wider area of human affairs than we generally realise. I thought of this as I read Mr. R. H. S. Crossman's piece in the latest *New Statesman*: The Faceless Bureaucrat. Mr. Crossman, who saw some of the Nazi gas chambers soon after liberation, writes: "I had found at Dachau that the most horrifying thing was not the state of the prisoners but my own reaction to it. How rapidly I got acclimatised, and how soon my fear of getting typhus from the living skeletons who tried to kiss me outweighed my sympathy for them." I think many of us can vividly recall similar instances of the dehumanising effect of prolonged living with horror. I well remember how as a young boy I got used to death and destruction as the Nazis bombed the city I grew up in. Sudden death seemed the natural order of things. Now happily away from those dreadful days, I do not think I could stomach a tithe of that horror. It is this psychological mistake which, Mr. Crossman argues and I agree, Israel is going to make by staging the Eichmann trial on Old Testament proportions. As prosecution witnesses pile evidence upon evidence of Eichmann's part in executing the "Final Solution"—the systematic extermination of six million Jews—the non-Jewish world will initially be horrified, then disgusted, but soon atrophied. Mr. Crossman relates why it was decided not to show the Germans the films that had been taken of Auschwitz and Buchenwald; they would not have filled the Germans with contrition over just what they had done to their fellow human beings: they might conceivably have given some of them a new taste for brutality and fresh ideas on refinements in the art of cold cruelty. It would, I suppose, be possible to document or reconstruct the Great Calcutta Killing of 1946 or the Punjab massacres a year later. Would any good come of their detailed presentation in India and Pakistan to combat what has been called the rising tide of communalism? I doubt it. Further feeding of the spirit of vengeance might be the only result. The Jews of the world need and deserve sympathy—just what a savage trial of Eichmann will not evoke.

In one sense, the coming closure of *Bradshaw*, Britain's famous railway guide and timetable, marks the close of an epoch—the end, perhaps, of a century of railway supremacy. Even for internal (as distinct from trans-continental) travel, the railways are giving place to the motor-car and the aeroplane. In its 122 years of existence *Bradshaw* had become the prototype of many other railway guides in many other countries and for a very long time it was an indispensable adjunct to British Railway travel. The first number in 1839 consisted of eight pages of "reading" matter and five of maps, and sold for sixpence. Recent numbers contain more than a thousand pages and the price has advanced to twelve shillings and sixpence a copy. This is an indication not only of rising costs, but of the enormous growth and complexity of British Railways' network of services. The original Bradshaw was a Manchester Quaker and an engraver by trade, and I suppose there must have been a period when the publication was a real money-spinner. The decision to cease publication in May has been made because it is no longer an economic proposition and no one who knows anything about printing costs in the United Kingdom will be disposed to dispute this—even though much of *Bradshaw* must inevitably consist of "standing matter". The casualties among British publications have recently been pretty heavy. *Bradshaw*, I suspect, really belonged to an age when it was not possible to pick up the 'phone and ask "Inquiries" for the times of the fast trains to Puddleton.

The new chairman of British Railways, Dr. Richard Beeching, may be getting £24,000 a year, but by the time he has paid his taxes he will be taking home only about £1,000 a year more than his predecessor, Sir Brian Robertson, whose salary he will be exceeding by two-and-a-half times. Why the fuss then? The answer is much the same as could be given to the question why should the Indian Government expect its public undertakings to be run by men paid perhaps one-third of what they would be able to earn in the private sector—simple, unadulterated envy. High-tax countries such as Britain and India have brought this state of affairs on themselves. When they enter public service, men like Dr. Beeching have to be paid what they would earn elsewhere—in this case as technical director of Britain's largest public company, I.C.I.—and such salaries are usually very high indeed, not because they represent much more in the pocket, but because they confer the only asset which is left when the tax man has taken his cut—prestige. The same is even more true in the United States. There, a senior business man will demand a salary which represents a loss to his company out of all proportion to the gain to himself. The reason is simply that he likes to be able to boast he is worth it. When India inevitably finds herself in this dilemma of having to pay what appear to be outrageous salaries for good men to run her public undertakings, I hope she will solve it in the same way as has been done with British Railways. There is a limit to the talents and usefulness of retired generals and admirals, and this is when the situation needs the expert ministrations of an experienced business or technical man. Nobody who has travelled by British Railways recently will deny that there are plenty of opportunities for Dr. Beeching to earn his salary. My guess is that he will prove to be cheap at the price, especially when that is really only £1,000 more than has been paid to B. R.'s chairman all along. Will it create a precedent? I hope it will. There seems no reason why a man should not be paid the rate for the job simply because he is the head of a nationalised industry. And if left-wing politicians do not like it, they can console themselves with the thought that those chiefly to blame are themselves, because they are the main advocates of high personal taxation.

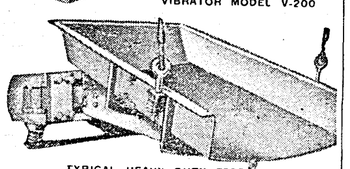
THE DITCHER

ESSENTIAL FOR THE MINING INDUSTRY



SYNTRON ELECTRIC VIBRATORY EQUIPMENT

VIBRATOR MODEL V-200



TYPICAL HEAVY DUTY FEEDER

Syntrons provide a cure for choked bins and hoppers, and speed up sluggish-flowing materials. Vibration is effected by electro-magnet with variable intensity of stroke to suit the material

Notes on the Accounts: Confirmed Credits, Guarantees and Endorsements outstanding amount in the case of the Bank to HK$571,529,167 and in the case of the Group to HK$1,173,317,154. In addition there are commitments in respect of outstanding Forward Exchange Contracts. Foreign Currency Balances are converted into *Hong Kong Dollars* at the rates *ruling* at 31st December, 1960. The Sterling equivalents of the figures shown in the Accounts are converted at the rate of HK$1=1/3d. The Hong Kong Currency Notes in Circulation are secured as to the Authorised Note Issues by the deposit with the Crown Agents of investments having a market value in the case of the Bank of HK$31,439,100 and in the case of the Group of HK$36,212,100 and as to the Excess Note Issue by the deposit of funds in respect of which the Hong Kong Government Certificates of Indebtedness are held. Current, Deposit and Other Accounts amounting to HK$47,947,714 in the case of the Bank and to HK$89,909,780 in the case of the Group are secured by the deposit of assets of the Bank and of the Group respectively. Directors Fees, London Committee Fees, Chief Manager's Remuneration and Special Administration Expenses of the Bank amounted to HK$1,105,984. Contracts for outstanding Capital Expenditure amounted in the case of the Bank to HK$3,622,465 and in the case of the Group to HK$10,764,761. There are contingent liabilities for uncalled capital in respect of certain of the Investments and Subsidiary Companies of the Bank amounting to HK$4,150,000. The British Bank of the Middle East became a Subsidiary Company during the year and the Accounts of that Bank and its Subsidiary Company are not included in the comparative figures in the Group Accounts. At 31st December, 1960 the Bank held 99.67% of the Issued Share Capital of The British Bank of the Middle East and for the purposes of the Group Accounts that Bank has been dealt with as a wholly owned subsidiary. The Reserves and Undistributed Profits of the Subsidiary Companies applicable to the period since acquisition have been included with the Inner Reserves in the Group Accounts.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1949

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of the Hongkong and Shanghai Banking Corporation with the books and accounts of the Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949 read with the provisions of Section 211 (1), (2) and (3) and 227 (5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956 but are in conformity with forms A and B of the third schedule of the Banking Companies Act 1949.

We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit

(b) In our opinion proper books of account as required by law have been kept by Calcutta Branch so far as appears from our examination of those books and proper returns adequate for our audit have been received from Bombay which was not visited by us.

(c) The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956, in the manner required for Banking Companies, and on such basis and subject to the same remarks, give respectively a true and fair view of the state of the affairs of the Indian Branches as at 31st December 1960 and their results for the year ended on that date.

PRICE, WATERHOUSE, PEAT & CO.
Chartered Accountants.

Calcutta, 21st March, 1961.

THE PRAGA TOOLS CORPORATION LIMITED

CHAIRMAN, MR. S. RANGANATHAN'S REVIEW

Speech of Mr. S. Ranganathan, I.C.S., Secretary, Ministry of Commerce and Industry, Government of India and Chairman of the Board of Directors at the Sixteenth Annual General Meeting of the Shareholders held on 27th March, 1961, at Hyderabad.

Gentlemen,

Since we met last on September 19, 1960, another year, really 9 months of the Company's working is now ready for review. This period ended on 31st March 1960. Under the amended Company law the Annual General Meeting of the Shareholders of the Company should be held within a period of 6 months from the close of the accounting period. Our office will have to be strengthened to meet this new situation and this is being done. As a Government Company our accounts have also to be audited by the Auditor General and this again requires to be done within this short period. We are suggesting to the Auditor General as well as to the Company's Statutory Auditors that they should consider undertaking concurrent audit in order to save time.

The audited statement of accounts together with the Directors' Report thereon have been with you for some time. This year, as suggested by the Government of India, we have also sent you a simplified Balance Sheet and Profit and Loss Account, so that those who are very busy and cannot find the time to go through the complete balance sheet could gain a clear picture of the Company from the simplified data we have given. With your permission I shall take the accounts and the report as read.

Technical Collaboration Agreements

When I addressed you on the occasion of the last Annual General Meeting held on September 19, 1960, I referred briefly to the details of the expansion scheme which your Company was planning. We are glad to report that technical collaboration agreements have been signed with three British firms. The first is with Messrs. Kearney & Trecker—C. V. A. Ltd., of Hove, Sussex, for the manufacture of their well-known range of drill chucks in India. The second is with Messrs. F. Pratt & Co., Ltd., Halifax, for the manufacture in India of their range of lathe chucks, pneumatic chucks, magnetic chucks and pneumatic vices. This is a range which should prove very useful to the steel processing industry, as without these appliances the machine tools by themselves would not be adequately useful. The third agreement is with Messrs. A. A. Jones & Shipman of Leicester, for the manufacture of their Cutter and Tool Grinders in India by your Company. This is a new item to be taken up by the machine tool industry in India and your Company would be the first in the field.

As you may have read in the press, the Polish Government have offered a credit to the Indian Government of Rs. 14.3 crores and out of this the Government of India has earmarked one crore for your Company for the purpose of equipping a complete machine tool plant. You would have seen from statistics given that only 20% of our production relates to machine tools; it is the Government of India's intention that our Company should increase the output of machine tools from its present level of about Rs. 12 lacs per annum to Rs. 120 lacs per annum. For this huge expansion, the Polish Government would be supplying a major portion of the plant on credit.

Project Report

As a first step in this collaboration with the Poles, they have been asked to prepare a complete Project Report for a machine tool plant, capable of turning out a certain quantum of machine tools per annum. Negotiations have been going on with CEKOP, an organisation in Poland which undertakes the design and supply of complete plants, and I am glad to report that on 24th March 1961 i.e. last Friday, our General Manager signed on behalf of our Company an agreement with CEKOP for the supply of this Project Report at a cost of Rs. 2.5 lacs. We expect the Project Report to be in our hands by about September next, but in the meanwhile discussions are going on between the respective technicians to enable your Company to book firm capacity in Poland against their 1962 production for the supply of certain general purpose machine tools required for the machine tool plant.

The Working Results for the 9 months period ending March 31, 1960 have not been as encouraging as we had expected. The average production per month does not measure up to last year's performance. As indicated in the Directors' Report this is largely due to the unsettled labour conditions that prevailed in the factory. I had mentioned on the last occasion, the rioting which took place inside the factory on 27th November 1959 and again in May 1960. In May 1960, some officers of the Company were actually assaulted. I would have preferred not to bring back to memory these unpleasant occurrences. I do so however, as I feel that the labour has not yet quite settled down and there is still talk of strikes, etc. I shall be the last person to say that labour should not ask for, in an appropriate manner, or be given what is their legitimate due, having regard to all relevant factors. But to create a state of uncertainty in regard to continued and increasing production or about peaceful conditions being available to work in, is not the best way of setting about this business. I do hope that labour will pay heed to this advice and recognise that in this Board of a Government Company, there is really no interest which would wish to deny them their fair share, out of their own production. Having said this, I shall not go into the details of the demands that have been pressed for from time to time, some times, in open flouting of previously mutually accepted settlements, the methods adopted to capture power by rival Unions, etc. I shall mention only that your Board has appointed a Sub-Committee to go into certain demands now made. This Sub-Committee has met several times and is now currently discussing this subject with the Union. I hope the Board will soon have proposals that will be acceptable to labour, that will be within the Company's means and finally that the proposals will ensure a fairly long period of settled conditions which could be utilised to maximise production and take in hand the large expansion schemes with confidence.

After making the necessary adjustments for depreciation, development rebate, etc., the Balance Sheet shows a surplus of Rs. 3,72,667/-. Your Directors have proposed that this surplus should be carried forward and I feel sure you would find this proposal acceptable.

Revaluation of Finished Goods

The Comptroller and Auditor General in his comments has again invited our attention to the necessity to revise the method of evaluating the stock of finished goods. This has not been possible in the year under review but the revised method is being adopted in the accounts of 1960-61 and consequent on this a certain amount of write-off is expected. In the circumstances your Board of Directors feel that it would be a prudent step not to distribute the very small surplus the present Balance Sheet discloses; it would be more appropriate to get the revaluation of finished goods done on the proper basis in 1960-61 before considering any distribution of dividends. Although, the financial position is thus only of a marginal balance having been reached, I feel optimistic about the trends and given the whole hearted support by labour, the Company should be able to register a leap forward in the next year or two.

Before I conclude, I wish to thank my colleagues on the Board for their active co-operation and guidance in all our deliberations. I also wish to express my appreciation to the officers and staff of the Corporation particularly those loyal workers who strove to restore a sense of responsibility in the organisation during a difficult period.

N.B. The above does not purport to be the report of the proceedings of the 16th Annual General Meeting of the Company held on March 27, 1961.

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS.

Applications are invited on the basis of the Prospectus, copies of which are available from the Registered Office of the Company, the Company's Bankers to this issue, and the Brokers mentioned herein.

A copy of the Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration, together with the requisite documents attached thereto as required by Section 60 of the Companies Act 1956.

The Consent of the Central Government has been obtained to this issue. It must be distinctly understood that in giving this Consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to it.

An application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation for the Equity Shares of the Company.

The Subscription List will open at the commencement of Banking Hours on the 10th day of April, 1961, and will remain open until the close of the Banking Hours on the 15th day of April, 1961, or earlier as may be decided by the Directors, but not earlier than 13th April, 1961.

APPLICATIONS MUST BE MADE FOR 25 SHARES OR MULTIPLE THEREOF.

THE BINANI METAL WORKS LIMITED

(Incorporated under the Indian Companies Act, 1913 on the 25th day of February 1941 as a "Private" Company and converted into a "Public" Company on the 16th day of March 1961).

AUTHORISED CAPITAL:

5,00,000 Equity Shares of Rs. 10/- each ... ... Rs. 50,00,000

ISSUED, SUBSCRIBED AND PAID UP CAPITAL:

(a) As on 31-12-60 65,000 Equity Shares of Rs. 10/- each Rs. 6,50,000

(b) Further taken up by the Directors and their friends
1,20,000 Equity Shares of Rs. 10/- each Rs. 12,00,000 Rs. 18,50,000

PRESENT ISSUE:

2,15,000 Equity Shares of Rs. 10/- each ... ... Rs. 21,50,000

OUT OF THE PRESENT ISSUE:

(a) 19,000 Equity Shares of Rs. 10/- each at par have been agreed to be taken by the Directors and their friends ... ... Rs. 1,90,000

(b) AVAILABLE FOR PUBLIC SUBSCRIPTION—
1,96,000 Equity Shares of Rs. 10/- each at par ... ... Rs. 19,60,000

Rs. 21,50,000

RESERVES & SURPLUS:

The Reserves and Surplus of the Company as on 31st December 1959 were Rs. 2,83,970/- against Issued & Paid up Capital of Rs. 6,50,000/-

UNDERWRITING:

The whole issue of 1,96,000 Equity Shares offered to the public has been underwritten.

TERMS OF PAYMENT:

PAYABLE IN FULL ON APPLICATION:

APPLICATIONS FOR SHARES:

Each application must be for a minimum of 25 shares or multiple thereof. All applications must be made on the printed forms. All application forms properly completed must be lodged together with FULL AMOUNT PAYABLE BEFORE the closing date of the Subscription List to the Bankers of this issue or with any of their following Main Branch Offices:—

AHMEDABAD, AJMER, ALLAHABAD, AMRITSAR, BANGALORE BARODA, BHAVNAGAR, BOMBAY, CALCUTTA, COIMBATORE, COCHIN, DELHI, HYDERABAD, INDORE, JAIPUR, JULLUNDUR, KANPUR, LUCKNOW, MADRAS, MADURAI, MIRZAPUR, NEW DELHI, NADIAD, NAGPUR, NAVSARI, PATNA, POONA CAMP, POONA CITY, RAJKOT, SURAT.

The Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant within a period of three months from the date of the closing of the Subscription List.

The Share Certificates will be issued in exchange for the Letter of Allotment within six months from the date of the allotment.

OBJECTS, BRIEF HISTORY & FUTURE PROSPECTS OF THE COMPANY

The Company was established for the purpose set out in the Memorandum of Association and it is at present a leading Metallurgical Engineering unit in India specialising in the manufacture of non-ferrous alloys, non-ferrous castings—both rough and machined. The progressive record of the Company's activities is reflected from the Company's sales and services figures quoted below for the last three years:—

1958	..	..	Rs. 68,34,884/-
1959	..	..	Rs. 98,61,137/-
1960	..	..	Rs. 1,44,12,438/-*

(* provisional)

With the increase in the industrialisation of the country and emphasis being placed on the indigenous production of engineering components and plants, the demand for the product of the Company is rapidly increasing It is estimated that as against the total current estimated consumption of 4 major non-ferrous metals, viz: copper, zinc, lead and aluminium of 65,000, 60,000 25,000 and 45,000 tons respectively, the consumption by the end of the Third Five-years Plan would be in the neighbourhood of 1,70,000, 1,35,000,

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

INCORPORATED IN ENGLAND
THE LIABILITY OF MEMBERS IS LIMITED

CHAIRMAN, MR. C. R. SRINIVASAN'S REVIEW

Presiding over the Sixty-third Annual General Meeting of the Shareholders of The East India Distilleries and Sugar Factories Limited held at Madras on Thursday, the 30th March, 1961, Mr. C. R. Srinivasan, Chairman, said:

Gentlemen,

It is with much pleasure that I welcome you to this the Sixty-third Annual General Meeting of the Shareholders of this Company. The Accounts for the year ended 30th September 1960, together with the Directors' Report thereon, have been in your hands for the statutory period, and with your permission I will take them as read. You will have observed that during the year under review there have been no spectacular advances, but steady progress has been maintained on all fronts. Equally, during the year in which we now are, 1960/61, and in 1961/62 I do not foresee more than steady and sustained progress. In effect it may well be reckoned as a period of consolidation if it is borne in mind that we shall be paying interest on the loans raised to finance our Ammonium Phosphate factory at Ennore and it will only be in the latter part of 1961/62 that we may expect to start receiving compensating revenue coming in from this project.

I think it would be appropriate if I take this opportunity of reviewing the progress your Company has made since the war, and more particularly since 1956. Over this period, the Company's growth has certainly been considerable. In 1948, the year in which the management and control were transferred to India, our capital and reserves totalled £706,736 and our total assets were £1.6 million. At the end of the financial year 1955/56, during which the purchase of the Ordinary Shares of Parry & Company Ltd. took place, the consolidated capital and reserves of the Group rose to £1.8 million and the total assets to £5.2 million. On the 30th of September last these figures were £3.28 million and £7.4 million respectively. During the same period the Group excess of current assets over current liabilities has risen from £304,000 in 1948 to £1.56 million on the 30th of September 1960.

Bonus Issues

These figures tell their own story of expansion and needless to say that shareholders' interests have benefited accordingly. Bonus issues have been made and the dividend has been maintained at a satisfactory level. Progressively the emphasis on the Group's expansion has been on the industrial sector and, more and more, the pattern of our business is changing. As a result of this policy, we have been forced with great regret to dispense with some of our agency representations in order to concentrate more of our finance and management resources on the administrative problems which are tied to the Group's industrial progress.

Today we own a large and efficient sugar factory at Nellikuppam, crushing over 2,000 tons of cane per crop day and producing, over a season, more than 30,000 tons of white sugar. I am proud to say that the factory is as efficient as any other in India, and continues to show us a satisfactory return on our capital employed there. It is perhaps desirable to draw your attention to the problems which face the sugar industry in this country and South India in particular. The Government of India in its present phase of expanding economy is naturally most concerned about the exchange earning potentials of every industry. The potentials of this industry have not been overlooked, especially after our experiences in 1956 and 1957 under fortuitous conditions. Today, we have an excess of production over consumption of the order of 500,000 tons per annum. Many of you, I expect, will be familiar with the economics of exporting this surplus to foreign countries willing to pay only current world prices; in other words, to pay prices that will yield about Rs. 400/- per ton ex-factory. I hope the representatives of the industry currently negotiating for the sale on favoured terms to the United States of America will be able to report some success. Whatever the measure of success, let it be remembered that it involves a large measure of sacrifice also—sacrifice to Government revenues, to factory profit and to consumer prices.

Price and Distribution Control

Despite the surplus of sugar available, we have the anomaly that control over price and distribution continues. To the extent that this control restricts sales, this continuation is bad, but one must, in fairness, recognize that the complete removal of control will increase the problems of arranging export of the surplus stocks and might well lead to forced sales at low prices by the financially weak units.

Government's task is to retain control without allowing it to restrict offtake in any way. Furthermore, for the exports even under adverse conditions to be maintained to the extent of 5,00,000 tons per annum, some control of production will have to be exercised. It may not generally be realised that the cane for the 1961/62 season is already in the ground. The earliest that action taken this year can be effective will be in the 1962/63 season and delay beyond the end of this calendar year would mean one more year's delay with heavily increasing stocks. That the internal offtake may well catch up during the course of the Third Five Year Plan is not beyond the bounds of reason, but until it does, the industry will have this difficulty to face.

Sugar producers in the South have benefited from the fact that their total production has been less than the demand and the price has been generally fixed by the cost of the sugar procured from North India; in other words, there has been a freight advantage which must inevitably disappear when the production in the south equals consumption. In common with other factories in South India, this Company has shared the freight advantage with the cane growers so that it is only a relatively small part of the reduction in price that I anticipate will fall on this Company. The balance, I am afraid, will fall on the cane growers in terms of a reduced bonus on the cane price.

Finally, the whole question of sugar price is at present before the Tariff Commission. A report was published in April 1960 which divided the country into four regions, the Southern region comprising the States of Andhra Pradesh, Madras, Mysore and Kerala. The Tariff Commission states that a fair return for the industry is 12% on employed capital within which to meet commitments under bonus and gratuity, interest on borrowed capital, dividend on Preference Shares, Managing Agents' commission and income-tax and, to quote the Commission's words, "finally leave a residue to a large majority of the units in all the regions to declare reasonable dividends". Obviously there is no margin with which Directors of sugar companies can rehabilitate their plant at costs which will absorb depreciation allowances four or five times over. It is precisely this point, namely the refusal of the Tariff Commission to take this in, that urged manufacturers to prevail on Government to make a second reference. I can only hope that the Tariff Commission will see facts as they are. Meantime, dependent on the price fixed, we have a contingent liability on the cane crushed since November 1958 under the Price Linking Formula announced earlier and still hanging in mid-air. For this, provision has been made in the accounts, but there is no means of knowing if this provision is adequate, for we do not know the extent of the ultimate liability, should it eventuate.

Pottery and Chemical Works

Our Pottery & Chemical Works at Ranipet which represent the other part of our old established industrial business continues to expand and, in pottery particularly, expansion has been considerable over the last few years. Development has been particularly significant in the case of sanitaryware for which, against the background of India's constantly improving standard of living, there is a growing—and I believe—stable market. We are now in the process of arranging for the installation of yet a third kiln in our Pottery Works involving an outlay of about Rs. 22 lakhs and I hope shortly to be able to announce to you also the conclusion of an agreement for technical co-operation with a British manufacturer of sanitaryware, whose name enjoys world-wide repute.

But our largest expansion in recent years has undoubtedly been in the field of fertilisers. Up to date, the bulk of our trade has been the preparation and selling of conventional mixtures suited to particular soils and crops, and of straight superphosphate, and while I believe our business in these lines will continue, we have, in order to keep abreast of the times and maintain our leading position, to ensure the availability of compound fertilisers which, in the more advanced countries, have virtually replaced the ordinary mixtures.

As I told you last year, with these thoughts in mind, we ordered a complete Ammonium Phosphate Factory from Messrs. Simon-Carves of Stockport, England, and this is now under construction at Ennore, about 8 miles north of Madras. The situation is excellent, work is progressing according to plan, and I have every reason to believe that, subject to no unforeseen obstacles cropping up, the factory will be in production by the middle of 1962. In its first stage it will produce about 50 000 tons of fertilisers. By modern standards this is a relatively small output but it would be as well to compare it with our present annual turnover in fertilisers of all description, including Superphosphate from our subsidiary, Andhra Fertilisers Private Ltd., which is in the neighbourhood of 160,000 tons per year. From this you will see that the Ennore Factory will make quite a substantial contribution to our turnover but there is no doubt that it would be in the best interests of the Company if the size of this plant, and its output, could be doubled. With this object in mind, the plant has been laid out in such a way that the additional equipment required to double the capacity can be installed with the minimum inconvenience and your Directors have already started to consider ways and means by which this expansion may be undertaken.

Fertiliser Factory in Visakhapatnam

Additionally, we have just been advised, along with two very well-known American collaborators, of the issue of a licence from the Government of India to erect a fertiliser factory at Visakhapatnam in the State of Andhra Pradesh, to produce more than 300,000 tons of fertiliser per year. In this case, a substantial part of the capital is being found by our American

(Continued to page 530)

THE BINANI METAL WORKS LIMITED—*Cont'd.*

65,000 and 1,00,000 tons respectively. Being a premier unit in its line, the Company looks forward to participate in the substantial increase in business which is likely to materialise in the coming years.

Quite apart from the existing lines of manufacture, the Company has undertaken other Projects after obtaining necessary Industrial Licences from the Government of India to manufacture Resin Cored Solder, Pressure Die Casting, Zinc & Aluminium Base alloys, Tilting Pit and Rotary Furnaces, Iron Castings, Dies for Plastic Injection machines, Milling Machines, etc.

As has been outlined above, the activities of the Company in its traditional lines of business are steadily on increase. There is also very large uncovered internal demand for the new items of production proposed to be undertaken by the Company. With the Company's development plans and expansion projects gradually materialising, the prospects of growth in the earning capacity of the Company are very encouraging.

DIVIDEND

Barring any unforeseen circumstances the Directors hope to pay a minimum dividend of 19% on the increased Capital of the Company for the year ending 31st December 1961. The benefit of this dividend will also be available in full even to the subscribers to the present issue.

FACTORY

The Company's plant is situated at 44 & 103/24/1 (Upper) Foreshore Road, Sibpur, Howrah, West Bengal, on lease-holds lands acquired from the Port Commissioners, Calcutta, and the area of the land at present occupied is approximately 206 cottahs, which includes a big plot of land measuring 123 cottahs very recently acquired to carry out the expansion programme.

MANAGING DIRECTOR

At present Shri Ghanshyamdas Binani is the Managing Director of the Company and application to the Central Government has been made by the Company for the approval of his appointment as Managing Director for a period of 5 (five) years. He is associated with the Company since 1949 and is the Managing Director thereof for the last four years.

DIRECTORS' INTEREST

The Directors will be interested in the remuneration payable to them as fees for the Meetings attended, travelling expenses if any, for the purpose and a commission of 1% to be shared equally amongst all the Directors (excluding the Managing Director). The Managing Director of the Company will in addition to the fees for the meetings attended and travelling expenses if any, for the purpose be interested in the remuneration payable to him as Managing Director.

The Directors and the Managing Director will further be interested to the extent of the Shares subscribed for by and to be allotted to them in the Company.

UNDERWRITING COMMISSION

The underwriters will be paid an underwriting commission @ 2½% of the nominal value of the shares underwritten by them.

BROKERAGE

Brokerage @ 1% will be paid on all allotments made in respect of application bearing the stamp of a Bank or Brokers who are members of the recognised Stock Exchanges. Brokerage on the same basis is payable to Underwriters in addition to the Underwriting Commission, on allotments in respect of applications made or procured by them and bearing their respective stamps.

CAPITAL OUTLAY & WORKING CAPITAL

The requirements of the Company are as under:

	Rs.
(i) Working Capital ..	7,00,000/-
(ii) Estimated cost of Building & structures on the plot of land taken on lease recently for installation of Machinery and shifting of Machine Shop ..	5,00,000/-
(iii) Purchase of Raw Materials to feed the new plants and machinery ..	10,50,000/-
(iv) For paying the value of imported new plants and Machinery ..	11,00,000/-
(v) For repayment of Loans ..	10,00,000/-
	43,50,000/-

The minimum cash amount required immediately in the opinion of the Directors is Rs. 33,50,000/-. Out of which the Directors and their friends have already taken shares worth Rs. 12,00,000/- and this amount has been utilised to repay the loan and to meet the other requirements of the Company. Thus, the balance amount of Rs. 21,50,000/- is raised by this issue.

INSPECTION OF DOCUMENTS

Copies of Prospectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during business hours.

APPLICATION FORMS

Copies of the Prospectus and Application Forms may be obtained from the Registered Office of the Company, Brokers, Bankers to this issue and Underwriters.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

CONSENT OF THE CENTRAL GOVERNMENT has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A LICENCE has been obtained from the Central Government for the establishment of this new Industrial Undertaking at Merar and Hesla Villages of Dist. Hazaribagh, Bihar State, of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A COPY OF THE PROSPECTUS together with the copies of the documents specified therein as required under Section 60(2) of the Companies Act 1956, has been filed with the Registrar of Companies, Maharashtra State, for registration.

APPLICATION WILL BE MADE to the Bombay Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

THE SUBSCRIPTION LIST will open at the Commencement of Banking hours on 18th April 1961 and will close at the close of Banking hours on 28th April 1961 or earlier at the discretion of the Directors but not before the mid-day of 21st April 1961.

INDIA FIREBRICKS & INSULATION CO., LTD.

(Incorporated under the Companies Act, 1956)

AUTHORISED CAPITAL:

7,50,000 Equity Shares of Rs. 10/- per share	Rs. 75,00,000
25,000—7½% (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) Cumulative, Redeemable Preference Shares of Rs 100/- per share, with option to subscription to and conversion into Equity Shares	Rs. 25,00,000
	Rs. 1,00,00,000

ISSUED CAPITAL:

7,50,000 Equity Shares of Rs. 10/- per share	Rs. 75,00,000

	Rs. 1,00,00,000

The entire public issue, viz., 4,75,000 Equity Shares of the aggregate value of Rs. 47,50,000 and 15,000 Preference Shares of the aggregate value of Rs. 15,00,000/- now offered to the public has been underwritten.

The Company has agreed to the firm allotment of 1,00,000 Equity Shares of Rs. 10/- each of the nominal value of Rs. 10,00,000/- to the "Life Insurance Corporation of India", Bombay, against underwriting arrangements with them.

TERMS OF PAYMENT OF ABOVE SHARES

EQUITY SHARES:

On application	Rs. 2.50 per share
On allotment	Rs. 2.50 per share

The balance of Rs. 5/- in such calls as may be determined by the Directors, provided that no call shall exceed Rs. 2.50 and that there shall be an interval of at least one month between any two calls.

PREFERENCE SHARES:

On application	Rs. 25.00 per share
On allotment	Rs. 25.00 per share

The balance of Rs. 50/- in such calls as may be determined by the Directors, provided that no call shall exceed Rs. 25/- and that there shall be an interval of at least one month between any two calls.

The share certificates will be issued within nine months from the date of allotment.

DIRECTORS

1. **Shri Kantilal Nahalchand (Chairman),** Businessman, "Kantilal House", 14, New Queen's Road, Bombay 4.
2. **Shri Mahavirprasad Ramkumar Morarka,** (Governing Director), Millowner and Banker, 24-B, Carmichael Road, Bombay 26.
3. **Mr. Arthur Marshall** (Ex-Officio Director), Managing Director of Thomas Marshall & Co. (Loxley) Ltd., England., Netherfield Bradfield, Near Sheffield, England.

INDIA FIREBRICKS & INSULATION CO., LTD.

(Continued from page 529)

Registrar of Companies, Bombay, along with a copy of the Prospectus as required under Section 60(3)(b) of the Companies Act, 1956. The same have not been withdrawn.

OBJECTS OF THE COMPANY

The Company was incorporated on the 21st April 1960 at Bombay generally for the purposes of carrying on all or any of the objects or purposes mentioned in its Memorandum of Association. The particular immediate object is to carry on business in refractories and with that end in view to construct and erect near Ranchi Road Railway Station, District of Hazaribagh in the State of Bihar in India a plant or factory for the purpose of manufacture and production of firebricks, insulating bricks, high alumina bricks and shapes.

PROSPECTS FOR THE REFRACTORY INDUSTRY

With the rapid progress of industrialisation coupled with the development of the Iron and Steel Industry under the 2nd and 3rd Plan periods, the refractory industry has received considerable impetus. All industrial operations involving application of high temperature are very much dependent on refractory materials. Besides Iron and Steel, a wide range of industries like Ferro-Manganese, Cement, Glass, Potteries, Ceramics, Soda Ash, etc., need refractory materials. Refractories consist of various types such as Fireclay, Silica, Basic, High Alumina, Insulating Materials, Fire-Cement and Mortar and Dead-Burnt Magnesite. All these fall in the range of the Company's scope of activities.

India is believed to possess considerable deposits of Fireclay, Bauxite, Magnesite, Silica and Felspar, Dolomite which are the principal raw materials required for the manufacture of refractories. India's requirements of refractories are so large that the existing indigenous manufacturing capacity is unable to cope with them. As a result, large amounts of foreign exchange are being expended on imports. The Government of Bihar have already granted a certificate of approval to the company for mining leases on 3rd January, 1961.

When production of all these varieties of refractories goes up to the required capacity i.e. about 1.2 million tons dependence on the import of these materials would have been largely eliminated.

FOREIGN COLLABORATION AND PLANT AND MACHINERY

Shri Badri Narain, one of the Directors of the Company, opened up negotiations with Messrs. KERAMISCHE INDUSTRIE—BEDARFS—KOM.—GES. PAUL GATZKE, BERLIN, Charlottenburg 1. OTTO—Allee, 22-24 (West Germany), a reputed firm of manufacturers of Refractory Plants and equipments and an agreement has been reached by which, besides erecting the complete plant in 18 months and provision of technical assistance during erection and for three years from the date of lighting-up, the West German firm would train Indian Technical Staff in their factory and also give a guarantee for plant performance and against faulty erection.

Simultaneously with these preceding negotiations in respect of the purchase and imports of plant from Messrs. KERABEDARF, West Germany, Shri Badri Narain negotiated with Messrs. Thomas Marshall & Co., (Loxley) Ltd., Loxley, Near Sheffield, England, for the benefit of their Technical 'Know-how' and collaboration. This negotiation resulted in an agreement which provides that, besides the normal assistance in surveying and analysing raw materials, scrutiny of drawings of plant, machinery and buildings—the collaborators would assist in commissioning the plant in the production of different kinds of refractories including insulating refractories and Carbon bricks and training Indian personnel in plant operations and plant management. It is note-worthy to mention here that this Company has been authorised and permitted under the terms of the agreement to use all trade marks, trade literature and also the use of the name of 'MARSHALLS' in all their products. The Company by this Agreement has been appointed the sole selling agent for the products manufactured by the Technical Collaborators in England and sold to India and the Company has appointed the Technical Collaborators its sole selling agents so far as the exports overseas are concerned.

The approval of the Government of India has been obtained for this Technical Collaboration agreement.

PROFITS

On the basis of the existing prices the Directors are of the opinion that in the absence of any unforeseen circumstances, the estimated profits, after providing for dividends on Preference Shares and allocation to reserve, are such that the Company should be in a position to pay reasonable dividends on the issued Equity Shares, once satisfactory manufacture of the products has been established.

INDUSTRIES LICENCE

Industrial Licence No. L/34(2)/7/60 L.IND dated the 8th July 1960 under the Industrial (Development & Regulation) Rules 1952 (as revised) has been issued by the Central Government for the establishment of the industrial undertaking.

PLANT SITE & POWER

The plant will be located in the Merar and Hesla Villages near Ranchi Road Railway Station where a railway siding to serve the proposed factory would be constructed in due course. It is intended to acquire under the aegis of the Government of Bihar 350 or more acres of land for the purpose of the Company. Out of this, the Government of Bihar have already acquired for the Company blocks of land admeasuring approximately 106.20 acres. Adequate electric power will be available from the Bihar State Electricity Board and the Damodar Valley Corporation. The site is on the bank of the River Damodar thus ensuring ample supply of water at the proposed factory.

CONTRACTS & AGREEMENTS

Agreement dated the 25th March, 1961, with Shri Mahavirprasad R. Morarka, appointing him as the Governing Director of the Company, subject to the approval of the Central Government. This position does not carry any remuneration.

Agreement dated the 25th March, 1961, with Shri Badri Narain, appointing him as the Managing Director of the Company, subject to the approval of the Central Government. This position carries a remuneration by way of commission at the rate of 2½% of the net annual profits of the Company, subject to a minimum of Rs. 3,000/- per month as salary effective from the 1st September 1960. Applications for approval under Section 269 of the Companies Act for the above appointments have already been made.

TECHNICAL COLLABORATION AGREEMENT DATED 12-10-1960.

MACHINERY & FACTORY

The Company has already obtained Import Licence No. 098395 dated 9-8-1960 for Rs. 54 lacs. The Plant and Machinery are expected to start reaching the Factory Site by or about October 1961 and the Plant is expected to go into production by the end of 1962.

MINIMUM SUBSCRIPTION & CAPITAL OUTLAY

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 62,50,000.

(a)	Land, buildings and cost of engineering acquisition and construction of plant and machinery and other facilities such as railway siding, water supply etc.	Rs. 2,01,19,900
(b)	Cost of "know-how" and Technical Collaboration services (by issue of Equity and Preference shares)	Rs. 12,50,000
(c)	Expenses of the issue, i.e. preliminary expenses	Rs. 5,00,000
(d)	Working capital	Rs. 49,27,000
(e)	Pre-operating expenses	Rs. 13,53,500
		Rs. 2,81,50,400

The capital structure of the Company as envisaged in the prospectus is as follows:

Equity Shares	Rs. 75,00,000
Preference Shares	Rs. 25,00,000
	Rs. 1,00,00,000

Applications made for the following loans from The Industrial Credit and Investment Corporation of India Limited, Bombay, in foreign currencies and the Industrial Finance Corporation of India, New Delhi, in rupees, have been approved and are as follows:

(a)	The loan in foreign currencies equivalent to from I.C.I.C.I. Ltd.	Rs. 54,00,000
(b)	The rupee loan from I.F.C.	Rs. 85,00,000
		Rs. 1,39,00,000

It is intended that the balance of Rs. 50,50,400 and any increase there may be in the actual cost over the estimated cost of plant and machinery will be raised as required, by loans from Company's Bankers and if necessary, from other sources, including the directors and their friends.

PREFERENCE SHARES

Preference Shares will confer upon the holders thereof, besides the right to a fixed cumulative preferential dividend to accrue from the date of allotment at the rate of 7½% per annum (free of Company's tax but subject to tax deducted at source at prescribed rate from time to time) from out of the profits of the Company, the right to subscribe to Equity shares of equal value at par within a period of four years from 30th September, 1962. Preference shareholders who have not exercised the option mentioned hereinabove before 30th September 1966 shall be eligible to get their Preference Shares converted into Equity shares at the time of redemption and such of the Preference shareholders who have exercised their option by the 30th September, 1966, but not in full shall be eligible to exercise their option to get their Preference Shares converted into Equity Shares to the extent of their not having exercised their option.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of 15,000 Preference Shares and at the rate of 2½% of the nominal value of 4,75,000 Equity Shares underwritten, is payable to the said underwriters.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a bank or a recognised broker.

Brokerage on the same basis is payable to the Underwriters in addition to the underwriting commission on all allotments in respect of applications made or procured by them and bearing their respective stamps.

APPLICATION FOR SHARES

Application for Equity shares must be for a minimum of 50 shares or multiples thereof.

Application for Preference shares must be for a minimum of 5 shares or multiples thereof.

All Application forms properly completed must be lodged together with amount payable on application before the closing date of the subscription list to the following Banks, viz.,

1. State Bank of India 2. The Bank of India Ltd., 3. The Bank of Baroda Ltd., 4. United Bank of India Ltd. and 5. Devkaran Nanjee Banking Co. Ltd. at any of their main Branch Offices at the following places:

AHMEDABAD, BOMBAY, CALCUTTA, DELHI, KANPUR, MADRAS, NAGPUR, PATNA and RANCHI

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

(Continued from page 528)

friends, International Minerals & Chemical Corporation of Skokie, Illinois, and California Chemical Co. of San Francisco so that our own contribution, although considerable to us, will be small relative to the total capital required. A new Company will be promoted in India for the purpose and the public will be invited to participate in the issue in ample measure. Our association in the new Company will be clear cut and we bring to the consortium a ready-made fertiliser sales organisation which, suitably expanded, will be available to market the new factory's output. Negotiations with our American friends—to whom I would like to pay this tribute, that they have been most co-operative and understanding—have also been based on our having adequate representation on the Board of the new Company. The new Company will be Director managed. This new enterprise marks a great step forward, and I am sure Shareholders will share the satisfaction of the Board that we have, in these various ways, been able to consolidate our leading position, in the private sector, in the manufacture and sale of fertilisers.

All these items of expansion have required, or will require, further finance and as you know a successful 'Rights' issue of Ordinary Shares was made last September and is reflected in the Balance Sheet now before you. In addition we have arranged the following loans which are being drawn upon as required:—

The Commonwealth Development Finance Co., Ltd.	£600,000 =	Rs. 80,00,000/-
The State Bank of India	=	Rs. 180,00,000/-
Simon-Carves Limited ...	£275,157 =	Rs. 36,68,760/-

These four items of finance were required specifically for our own new fertiliser factory at Ennore and we are confident that the contribution of equity capital which we have to make to the new Visakhapatnam Fertiliser Factory to which I have referred to above, will be provided from our own resources.

Acid and Superphosphate Plant

To complete the picture of our fertiliser activities, I would mention that the acid and superphosphate plant of our subsidiary, Andhra Fertilisers Private Ltd., at Tadepalle in Andhra State, came into production in November 1960. This plant is designed to produce 50,000 tons of superphosphate per year, for which there is a ready sale in Andhra. While we have experienced the usual teething troubles, the plant can stand comparison, for design and efficiency, with any other similar plant in India. I have been surprised recently to note that remarks have been made in some quarters to the effect that Andhra is being neglected by industrial companies whose Head Offices may be in other States and, in particular, we appear to be regarded almost as if we were foreigners! I very much deprecate these examples of parochialism. I would remind our good friends in Andhra that this Company and its subsidiary, Parry & Company Ltd., were established with a Head Office in Madras long before Andhra and Madras became separate States. We have always regarded Andhra, Madras, Kerala and Mysore as the main areas of our operation and the fact that Parry & Co. Ltd has for many years managed a sugar factory at Samalkot, the fact that we have now established a superphosphate factory at Tadepalle, and finally the fact that we are partners in the enterprise to set up a very much larger fertiliser plant at Visakhapatnam should, apart from the existence for very many years of branch offices in the main cities in Andhra, convince any reasonable person that we are very far from failing to play our part in the industrial development of Andhra.

It is customary for me to include in this speech some remarks regarding the budget. I am happy to note the Budget has generally been well received and while necessarily austere, has on the whole distributed the burden of additional taxation in even measure. The real test is its reaction on the price level and a lapse of time is necessary to be reassured on this point. Meanwhile I welcome the adjustments made in taxation of inter-Company dividends and the reduction of the tax on royalties payable to foreigners, which will surely encourage the inflow of outside capital which is sorely needed if we are to achieve the targets of the Third Five Year Plan. The tax concession to short term technical personnel is also welcome. I further welcome the reduction of the rate of tax on Bonus Shares and express the hope that next year it may be possible for the Finance Minister to take one further step forward and abolish the tax altogether.

The industrial pace in India today is faster than anything we have previously experienced. We shall, however, always strive to keep in step and, if possible, one step ahead. It follows, therefore—and here I am looking well into the future—that as soon as we have achieved some measure of consolidation after our two recent fertiliser developments, we shall almost certainly have to consider further programmes of expansion which will again require additional capital and one of which I have already mentioned, namely the doubling of the capacity of the Ennore Factory and when that time comes I am confident that the goodwill and co-operation of Shareholders will be forthcoming in ample measure.

I conclude these remarks by expressing the sincerest appreciation of the Board of Directors of the excellent work put in during the year under review by all members of the staff and labour, and I personally wish to add to this my thanks to my Co-Directors who have sustained me with excellent advice and co-operation.

The Directors' Report and the Accounts for the year ended 30th September 1960 were adopted and a Final Dividend on the increased Ordinary Share Capital of the Company at the rate of 14-2/7% subject to deduction of Indian Tax was declared for the year ended 30th September 1960 payable on 30th March 1961.

Messrs. C. R. Srinivasan, T. S. Krishna and A. M. M. Murugappa Chettiar were re-elected to the Board and the Auditors, Messrs. Lovelock & Lewes were reappointed.

N.B. :—This does not purport to be a report of the proceedings of the General Meeting.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS REMAIN TIGHT

Wednesday, 5th April.

THE increase in the level of advances outstanding in the Calcutta money market has moderated slightly during the past week. Demand from the sugar mills remains high; there has been an increase in the requirements of the engineering and iron and steel industries and the jute industry. Call for advances both from the cotton and woollen mills and against grains and seeds storage is down. The interbank market remains extremely tight and few funds are available at the unchanged call rate of 5¾ percent.

In the exchange market, there has been an improved supply of gunny bills, but very few tea bills have come to hand. Once again demand for remittance has been strong. On the London money market, sterling has displayed a weak tendency throughout most of the past week but improved slightly towards the close. Closing quotations show only small variations from the previous week's levels.

BULLION WAS QUIET IN THE ABSENCE OF INTEREST. Silver declined from the previous week's level of Rs. 236.75 to Rs. 236, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 233.75. The London and New York prices were 80d and 91.375 cents.

Gold was quiet in sympathy with silver. The price fell from Rs. 144 to Rs. 143.25 (Mysore). The sovereign at Rs. 95.25 showed a loss of 50nP.

DURING THE WEEK ENDED 31ST MARCH, Government of India Treasury bills for Rs. 95,51,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 4th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th April.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 5th April to 8th April at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 29th March to 1st April.

THERE WAS A RISE OF RS. 16.04 CRORES TO Rs. 1,984.74 crores in active notes, according to the return of the Reserve Bank of India for the week ended 31st March, 1961. The total note issue was Rs. 20 lakhs lower at Rs. 1,992.59 crores. Rupee securities of the paper currency reserve were increased by Rs. 4.98 crores to Rs. 1,632.20 crores in order to compensate for the fall of Rs. 5 crores to Rs. 123.01 crores in the foreign exchange holding of the paper currency reserve. Even after transferring the latter securities to the Banking Department, its holding of foreign balances declined by Rs. 12.30 crores to Rs. 13.24 crores. Deposits of the Government of India rose by Rs. 23.09 crores to Rs. 76.46 crores because of tax collections, but other Government accounts declined by Rs. 4.64 crores to Rs. 28.99 crores. Balances of commercial banks at Rs. 70.85 crores showed a decline of Rs. 3.62 crores. Investments increased by Rs. 20.61 crores to Rs. 180.95 crores. Other loans and advances rose from Rs. 173.17 crores to Rs. 185.50 crores, of which advances to scheduled banks against usance bills amounted to Rs. 45.39 crores (Rs. 37.14 crores). Ways and means advances stood at Rs. 39.02 crores, against Rs. 42.18 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 24th March, 1961, shows a rise of Rs. 18.07 crores to Rs. 560.90 crores in total deposits. Investments in Government securities are up by Rs. 2.03 crores to Rs. 231.43 crores, while other investments remain unchanged at Rs. 9.84 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 3.10 crores to Rs. 280.21 crores. Cash and balances are, in consequence, shown at Rs. 28.51 crores or Rs. 4.14 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 24th March, 1961, shows Demand and Time liabilities at Rs. 828.04 crores (Rs. 15.64 crores on account of borrowings from banks) and Rs. 1,062.90 crores (Rs. 9.68 crores), compared with Rs 810.92 crores (Rs. 16.17 crores) and Rs. 1,066.52 crores (Rs. 9.80 crores), respectively, in the previous week. Cash has decreased by Rs. 37 lakhs to Rs. 44.02 crores, while balances with the Reserve Bank have increased by Rs. 5.50 crores to Rs. 72.30 crores. There is a rise of Rs. 73 lakhs to Rs. 559.62 crores in investments. Advances and bills discounted at Rs. 1,318.05 crores show an increase of Rs. 10.35 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 69.7 percent, against 5.9 percent and 69.6 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of December 1960:

		Rs.
(1)	At the Reserve Bank of India in India	74,80,11,000
(2)	At treasuries in India ...	10,66,000
(3)	In England (sterling converted at 18d the rupee) ...	
	Total ...	75,94,61,000

Stocks and Shares

EQUITY PRICES RISE ON BONUS ISSUE HOPES

INDIAN IRON STRONG AS PRODUCTION FIGURES ENCOURAGING

Wednesday Evening.

THE Calcutta stock market has been in a very cheerful mood during the past week, rather more cheerful than either Bombay or Madras. Operators' attention has been concentrated on three main sectors—the speculatives, miscellaneous industrials and tea shares. In all three cases, bonus issue hopes have contributed liberally to the boomlet.

Indian Iron have been particularly strong. At first, the kite-fliers were active, spreading rumours that a bonus issue from the Company was inevitable. Now they have been reminded that the Government might not sanction such an issue until the heavy debts incurred in connection with the expansion schemes are paid off. It is true that capitalising reserves will not lose the Company any money. But the fact is that to capitalise reserves would be pointless unless the ordinary dividend can be maintained at the last rate of 15 percent, taxable. To make a bonus issue and maintain the dividend would mean paying more money to shareholders. However justified it might seem to operators, it is doubtful whether the Government would countenance that until most of the loans the Company has taken are repaid.

While hopes of a bonus issue from Indian Iron might well be discounted for the time being, another item of news has been very encouraging. It is that the Company has produced and despatched much more steel during its accounting year ended March 1961 than it did in 1959-60. The figures are summarised in the table below (in tons):

	1960-61	1959-60
Production		
Pig iron	1,160,576	1 053 612
Steel ingots	914,159	827.072
Saleable steel	718.684	652,113
Despatches	712,181	667,648

The statistics indicate two things. One is that, judging from the ratio of actual production to the installed capacity after expansion, Indian Iron has had fewer "teething troubles" than the other steel producers in the country. This is a tribute to its management; the harm done by the shortage and inferior quality of coal appears to have been minimised. The second, and more important, point is that the profits of the Company should improve substantially, since the rise in production and despatches will be supplemented by a bigger retention price. Under the Companies Amendment Act, Indian Iron is expected to issue its annual report by September; it is hoped that the Government will not again fall asleep on the question of finalising the retention price like it did last year.

A major reason for the cheerfulness on Lyons Range is that the Government at last seems to be realising that the capital structure of various companies has been going wonky, partly because of the bonus issue tax and partly because of the heavy reliance on loans for financing expansion. Influential people have made speeches recently, and inspired reports have been emanating from Government departments, that the equity-debt ratio needs to be improved by increasing the equity. The stock market has understood this as meaning that the Government will sanction rights and bonus issues more readily in the future. Official ideas on the subject, however, still seem slightly ambivalent; the view has been expressed, for instance, that too many such issues cannot be sanctioned quickly because that might lead to a speculative boom in the stock markets. The fact has to be faced, however, that the gross distortion of companies' capital structure which is seen today is the cumulative result of four years of official stupidity, as expressed *via* the bonus issue tax. What has been made into a malignant disease can be cured only by a drastic remedy—in other words, rights and bonus issue applications will have to be sanctioned liberally if the equity-debt ratio is to become healthier.

After closing at Rs. 26.75 on Tuesday last week, Indian Iron rose to a high of Rs. 27.82. before finishing off around Rs. 27.68 today. Among other engineerings, Braithwaite and Burn are firm on reports that the Companies' turnover is expanding. Informed quarters have been selling Texmaco following rumours that the Company might be obliged to issue a duck's egg as dividend.

Jute shares are steady in response to reports that the new jute crops in India and Pakistan will be big. In East Bengal, sowings have been completed in the lowlands and midlands, and preparations are now beginning in the highlands. Such progress holds the promise of an early crop, but it is doubtful whether much of it will reach India soon since the Pakistani mills themselves are reported to be running short of fibre. In India, preparations for the new crop have been facilitated by the recent widespread rains. The share which has reacted most prominently is Birla Jute, and that is because it is helped by reports that the Company is diversifying its activities.

Coal shares are steady but featureless.

The centre of attraction in the miscellaneous industrials group have been Indian Copper and Dunlop Rubber. Bonus issue announcements from both are believed to be imminent, although the latter has produced a regrettably uninformative report. In the case of Indian Copper, it is said that the new electrolytic copper plant will be in action next year; much money is being invested in it, and the investment will have to be capitalised since it has been financed largely from reserves. (So, at least, the argument runs.) As for Dunlop Rubber, brokers' bets are on a one-for-two bonus issue. Definite news about the forthcoming issue by Goodyear India Ltd is awaited. The issue, it is reported, will be very attractive, especially if the Company's factory near Delhi is nearing completion. Isaac Holdens are celebrating the news in their maiden report that the Company has started production. Interested support has lifted Hindustan Motors and expansion hopes have raised Electric Construction Equipment. Indian Cable and Indian Aluminium are strong, the former on bonus issue rumours.

Among papers, Shree Gopal are down on reports that there has been a fire at the factory. The boom in cotton textile shares is inspired partly by the improved working conditions for the industry, and partly by the flood of capital issues proposed by certain Bombay textile mills. Calcutta's notable features have been Kesoram, Cawnpore, Dunbar, Bharat Commerce and J. K. Rayon. Sugars are quiet as the industry is worried about what it can do with the sugar it has produced; it seems the Americans after all are not going to buy much of it at a fancy price.

Tea shares are strong, partly on bonus issue hopes and partly because more companies are expected to issue their reports for 1960 in the near future. The scrip which have attracted particular attention are Hasimara, Huldibari and Tyroon.

The gilt-edged market is firm, attention being concentrated on short-dateds and State loans. It

Bombay Market

OPERATORS PAUSE ON FEARS OF FRESH RESTRICTIONS

GOOD BONUS ISSUE NEWS HELPS SENTIMENT

Wednesday Evening.

THERE has been a pause in the Bombay stock market during the past week; business was restrained by the fact that carry-forward charges were higher and bigger making-up prices were fixed. Operators turned cautious because they feared that excessive speculation would be held down by official measures. There were nevertheless some smart features on the anouncement of bonus share issues. Standard Mills have decided to issue bonus shares by capitalising reserves in the proportion of two new shares for every five held. Companies having large reserves were being fancied on prospects of free scrip issues. For the time being there was an inclination to await further developments concerning the credit situation. It was considered that unless effective steps are taken to provide more credit for banks from the Reserve Bank, trade and industry might find difficulty in obtaining their legitimate financial requirements.

The import policy for April-September 1961, was well received in view of the fact that actual users are being given more licences to import raw materials for industrial purposes.

Tata Steel were sluggish around Rs. 152.50, but Indian Iron improved to Rs. 27.45 on strong support from Lyons Range. Prices of engineering shares fluctuated narrowly. Alcock Ashdown were dealt in at Rs. 324 and Premier Construction came to hand at Rs. 201. Tata Locomotive met with quiet buying around Rs. 338. In motor shares, Hindustan Motors met with support up to Rs. 21.40 from Calcutta interests. Premier Automobile were placed at Rs. 179.

Selected cotton mill shares improved on balance on hopes of bonus share issues. Standard Mills gained at Rs. 1,510 on the decision to issue free scrip and Bombay Dyeing were wanted up to Rs. 68 on the prospect of a bonus share issue. Century rose to Rs. 588 on hopes of expansion. Svadeshi were higher at Rs. 268 on rumours of a bigger dividend. Shree Niwas showed little change in spite of paying an increased dividend. Simplex were transacted at Rs. 192 and Kohinoor were in demand up to Rs. 311. India United Ordinaries were done at Rs. 15.12 and business passed in Apollo at Rs. 1.72.

In the miscellaneous section, sugar shares were steady, and Belapur were indicated at Rs. 301. Phalton were bought up to Rs. 148.50 and Maharashtra Sugar were steady at Rs. 205 on maintaining the dividend. Mining shares were firm, and Shivrajpur Syndicate were supported up to Rs. 92. Steamship company shares were quiet, and Scindia Steam were sold down to Rs. 15.52. Great Eastern Shipping were freely offered at Rs. 15.84. Cement shares were steady, and business was done in Associated Cement at Rs. 155. Digvijay were placed at Rs. 156. Bombay Burmah improved to Rs. 627 on hopes of a bonus share issue. National Rayon were firm at Rs. 541 on talk of a rights share issue. Chemical shares were steady, and Tata Chemical were bought up to Rs. 20.36 on investment account. Indian Dyestuff realised Rs. 517.50 and Polychem were dealt in at Rs. 252.50. Ceat Tyre improved to Rs. 302.50 and Voltas were in demand up to Rs. 291.

Turnover was limited in banking shares and fluctuations were narrow. Bank of India changed hands at Rs. 121.50 and Central Bank were transacted up to Rs. 61.50. Insurance shares were quietly steady, and business passed in New India Assurance at Rs. 60.50.

Interest was taken in selected electricity company shares, and Ahmedabad were done up to Rs. 84.20. Tata Hydro were supported at Rs. 101.50 and Bombay Suburban were taken at Rs. 85.00.

Madras Market

TURNOVER IN SPECULATIVES DECLINES

GOVERNMENT LOANS IN DEMAND

Wednesday Noon.

THE Madras stock market has been steady during the past week, but business declined in clearing shares because operators were inclined to await further developments. In Government securities, there was keen interest in short and medium-dated stocks of the Central Government, but sellers were difficult to locate. The prices of State loans improved on balance. Banking shares were steady on the publication of some good reports. Sugar shares were dealt in cautiously in view of excessive supplies. In the planting group, selected tea shares attracted attention, but coffee shares were sold at lower rates because the outlook was considered uncertain. Rubber shares were bought discriminatingly and attention was generally concentrated on companies having bigger replanting schemes. Cotton mill shares were favoured on prospects of higher output following adequate supplies of raw cotton. Miscellaneous shares were bought selectively on expansion prospects.

Among banks, Andhra were bought at Rs. 100 on paying a final taxable dividend of 4½ percent. Punjab National were steady at Rs. 21.50 and Indian Overseas were done at Rs. 189. In public utilities, Vellore were dealt in at Rs. 13.35 and Cochin were taken at Rs. 10.20. South Madras were steady at Rs. 10.06.

In the sugar group, E.I.D. were steady at Rs. 42.54 on expansion prospects. Deccan changed hands at Rs. 14.45 and Mysore were done at Rs. 59. United Breweries were firm at Rs. 115.50 and Travancore were placed at Rs. 10.75.

Among planting shares, business passed in Blue Mountain up to Rs. 3.55, but Ouchterlony were sold down to Rs. 4.37 on paying a lower taxable dividend of 13 percent. Cochin Malabar were placed at Rs. 8 and Consolidated Coffee changed hands up to Rs. 23.75. Emerald Valley were taken at Rs. 6.50 on the decision to issue ordinary rights shares in the ratio of one new share for every two held at par. Lucky Valley changed hands up to Rs. 13.87 on paying a taxable ordinary dividend of 10 percent. Periakaramalai were steady at Rs. 4.08 and Kil Kotagiri were bought up to Rs. 5.40. Mysore Coffee were offered at Rs. 5.55 and Coffee Lands were sold at Rs. 20.85. Teekoy were in demand up to Rs. 6.10 and Travancore Rubber were steady at Rs. 10.70.

In the textile group, Adoni improved to Rs. 10.70 on paying a maiden ordinary taxable dividend of 8 percent. Bangalore Woollen reacted to Rs. 205 and Buckingham to Rs. 206.50. Both the Companies have paid final taxable ordinary dividends of 6 percent, making 10 percent taxable for the year. Radhakrishna improved to Rs. 31.25 on hopes of a higher dividend. Vijayalakshmi were done at Rs. 96 on the decision to issue rights ordinary shares in the proportion of one new share for every two held, at par. The Company has also declared a taxable ordinary dividend of 12 percent. Kannapiran were steady at Rs. 10 on paying a taxable ordinary dividend of 15 percent. Kothari were supported up to Rs. 12.87 on declaring a taxable ordinary dividend of 10 percent. Business passed in Lakshmi at Rs. 180 on paying a golden jubilee ordinary dividend of 10 percent. Madura were steady at Rs. 39.60 and Travancore Rayon were firm at Rs. 40. South India Viscose were done at Rs. 166.

In the miscellaneous section, Enfield were firm at Rs. 14.87 on the decision to issue rights ordinary shares in the proportion of four new shares for every five held at par. Aluminium Industries were bought up to Rs. 24.70 and Aspinwal were taken at Rs. 7.37 on paying a taxable ordinary dividend of 8 percent. Ashok Leyland were steady at Rs. 9.73 and India Cement were done at Rs. 6.10. Ogale Glass were quoted up to Rs. 5.30 on declaring a taxable ordinary dividend of 10 percent. Standard Motors were in demand up to Rs. 16.65 and Spencer were supported up to Rs. 23.75. Textool were dealt in at Rs. 178 and Tube Investment were indicated at Rs. 292. Business passed in United Electrical up to Rs. 9.50 and Mysore Paper were firm at Rs. 26.75.

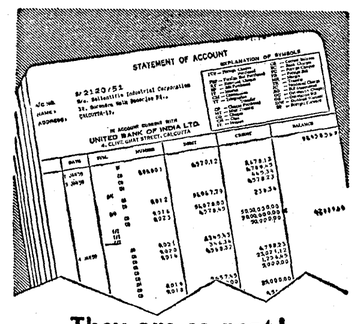
London Market

STOCK MARKET ACTIVE DESPITE APPROACHING BUDGET

INDUSTRIALS ATTRACT BUYING INTEREST

London, 5th April.

APART from international politics which have taken a turn for the better recently, the main factor influencing sentiment in the stock market last week was the forthcoming U.K. Budget and this is likely to remain a major factor for the next fortnight. There are, of course, the March reserve figures to contend with and in view of the recent drain on funds, they can hardly make good reading, but the market took the 1960 balance of payments figures in its stride and investors appeared content to take the long-term view rather than the immediate outlook. The turnover in business kept brokers actively engaged and there has been a fair amount of buying. Industrials were still the major attraction and some of the buying was thought to be in advance of the Trustee Act becoming law soon which is likely to bring a good deal of switching from fixed-interest stock. Nevertheless, gilt-edged securities gave a good account of themselves during the past week and it was interesting to note that one or two leading insurance companies have increased their stake in the market where interest yields are bigger. Equities were very active and a feature was the constant large-scale demand for "call" options from people looking for higher prices in three months' time. There were many favourable company statements. Brewery shares encountered profit-taking at one time, but fresh buying was stimulated by the announcement of a big merger between Ind Coope, Tetley Walker and Ansell Brewery. The feature of motor-car shares was the marked firmness of Jaguar issues on reports that the Company has booked large orders for its new car at the New York motor show. A good deal of interest was displayed in newspaper and newsprint shares following the statement that discussions were taking place with Price Brothers (the Canadian newsprint group) with a view to this Company acquring the capital of Anglo-Newfoundland Development in which associated newspapers has a 51 percent interest. Gold shares have remained under the influence of South African politics which caused buyers to hold off. Coppers moved irregularly and were slightly lower on balance. Tin shares, on the other hand, shook off Laos uncertainties and earlier falls were more than regained. Oil shares went ahead in response to investment buying and rubbers and teas held steady.



They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

A SYMBOL OF SERVICE

United Bank of India Ltd.

HEAD OFFICE: 4 CLIVE GHAT STREET, CALCUTTA-1

New Delhi

FURTHER IMPORT CUTS ANNOUNCED FOR CURRENT HALF-YEAR PERIOD

MORE ITEMS ALLOWED TO ACTUAL USERS AND EXPORTERS

(FROM OUR NEW DELHI CORRESPONDENT)

ANNOUNCING the import policy for the current half-year—April-September 1961—period, a Press note says : "Taking into account the progress made by the indigenous industries, the stock position, the availability of goods from rupee sources and under loan programmes, quotas have been reduced or banned for items like bright m.s. and free cutting quality (high sulphur and/or landloy) bars, rounds, etcetera, iron and steel pipe fittings, bifurcated rivets, boot and shoe grindery, files and rasps, graphite crucibles, fractional horse-power motors, pneumatic plants, electric insulations, cable accessories, electric motor starters, transformers, metal clad or otherwise switches, wood working band saws, leather belting, high-tension insulators, certain items of chemicals such as hydrosulphite of soda, cation active finishing agents, carboxy methyl cellulose and its salts, sodium bicarbonate, nickel salts, barium chloride etcetera, coal-tar dyes, card clothing and card accessories, powdered milk, milk food for infants and fairnaceous patent foods, cutch, gambier, gum arabic, dammer including unrefined batu, certain items of drugs and medicines such as oxytetracycline, acid salicylic excluding preparations thereof, prednisone and prednisolone excluding its preparations, packing and wrapping paper, cotton fabrics, garage tools, miscellaneous hardware, certain items of motor-vehicle parts such as cylinder liners, fitter-cleaner assembly, piston rings, radiator assembly and thin walled bearings, time-pieces, artists' brushes, water meters, lenses including bifocal blanks. Quotas for raw films, photographic sensitised materials and electric carbons have been slightly reduced.

"The list of items for which actual users will be granted licences has been expanded. Items like German silver, nickel silver scrap, industrial sewing machines and electro-medical apparatus have been added to this list. The licensing of paper items has been decentralised. The list of items the import of which is allowed under the export promotion scheme has also been expanded.

Relief where Necessary

"The need to give relief wherever urgently necessary has also been kept in view. The licences for the import of newsprint will be issued with a cut of 10 percent on the entitlement instead of 20 percent as in the last period. The provision for licencing of "emergency spare parts", that is, spare parts required on an immediate basis to overcome an emergency breakdown of any production machinery has been increased from Rs. 750 to Rs. 2,500 in an individual case.

"The basic period for a number of items has been extended. The more important items for which the basic period has been extended are tools and cutters, milling cutters, industrial exhaust fans and blowers, component parts of textile machinery, parts of domestic refrigerators, parts of musical instruments, artists' brushes, rubber contraceptives, giant motor, motor cycle, bicycle tyres and tubes and flaps, tractor, and off-the-road tyres, tubes and flaps, hearing-aids and their parts, pressure gauges, etcetera.

"An important feature of the new policy is that the formal distinction between the dollar and soft currency area for the purpose of licensing has been removed and licences will be issued as valid for 'general area' covering all countries, except that certain licences issued under capital goods and h.e.p. schemes and export promotion schemes may be restricted to specific country or countries. Licences will not, however, be valid for import from South Africa and South West Africa."

The following figures relating to India's foreign trade should be read with interest :

STATEMENT SHOWING IMPORTS AND EXPORTS AND BALANCE OF TRADE BY CALENDAR YEARS

(Value in crores of Rs.)

Year	Imports	Exports including re-exports	Balance of trade
1958	878	562	(–) 316
1959	940	621	(–) 319
1960	1011	635	(–) 376

STATEMENT SHOWING THE MONTHLY POSITION OF STERLING BALANCES DURING 1958 TO 1961 (UP TO 17TH MARCH, 1961)

(Value in crores of Rs.)

Months	1958	1959	1960	1961
January	284.71	192.81	207.81	147.67

(3) Cotton piece-goods	64,41	45,47	60,52	57,70
(4) Manganese ore	30,84	15,15	12,34	13,33

Using U.K. Credit

Negotiations are in progress between New Delhi and London for the use of the British credit of £30 million towards the third plan which was announced recently. Expansion of the heavy electrical plant in Bhopal, a fertiliser project in Nahorkatiya in Assam, the security paper mill project with Portal as technical consultants, the plate and vessels and heavy structural project, some power schemes and expansion of the Hindustan Cables are the important items which are being discussed. Credit will also be available for capital equipment for the private sector such as equipment for the Leyland buses. The possibility of some textile machinery and a ropeway in Jharia coalfields is not ruled out. The credit is for use over a three-year period. The British Government will prefer to have evenly spread drawings, say, £10 million every year. India visualises its peak drawings in the second or the third year. The British shipping interests have shown interest in building the second shipyard in India. The possibility of British consultants preparing a project report is not ruled out.

Legislation on Strike by Government Employees

Although eight months have passed since the pronouncement was made in Parliament that strike by Central Government employees would be statutorily banned, the Government does not seem to be in any great hurry to introduce the legislation. The draft bill is ready, but considering the various stages it has yet to pass through before finalisation, there is little likelihood of enactment of the measure during the current session of Parliament. At best, it may be introduced towards the fag-end of the session. The delay in bringing forward the legislation seems to have arisen from the Government's decision to "consult" the employees about the provisions of the draft Bill before finalisation. The Cabinet had entrusted this task to two Ministers—the late Mr. G. B. Pant and Mr. Nanda. But a factor which was not conducive to speeding up the process of consultation was the Government's decision to deal with representatives of only those unions which had not been derecognised following the last July strike. This meant screening of the union representatives and drawing up an acceptable list by the Ministries concerned. The death of Mr. Pant in the meantime has been the cause of further delay. As things stand, Mr. Nanda, either singly or with the new Home Minister (for the Bill is to be sponsored by the Home Ministry), is expected to begin his round of talks with the union leaders after the middle of April. This is not likely to give the Government much time to finalise the Bill and introduce it in Parliament before the Budget session ends in the first week of May. If the Bill is not introduced during the current session, it is doubtful whether the Government, with the general elections only a few months away, will take the risk of introducing it in the next session.

Industrial Relations in Iron and Steel

Behind the Labour Minister, Mr. G. L. Nanda's announcement in New Delhi last week that the Centre was "pursuing" with the States concerned the transference of the responsibility for industrial relations in the iron and steel industry to the Central sphere lies a prolonged tussle between the India Government and the States of Bihar and West Bengal. Mr. Nanda made the announcement at a meeting of the Informal Labour Consultative Committee of Parliament on 29th March. Control of labour-management relations in iron and steel plants—a responsibility of the States under the Industrial Disputes Act, 1947—has been a source of immense power and influence, which the States are naturally unwilling to part with. Accordingly, in the latest communication of the Centre to the States on the subject, the emphasis has shifted from "gentle persuasion" to firmness with reason. Apart from reiterating that in the context of planning, the iron and steel industry is vital to the development of the economy, the Centre has impressed on the States that a stage has come when there has to be some uniformity of policy and approach concerning industrial relations in this vital sector of industry, which the Centre alone can ensure. The case of the Centre has been reinforced by the almost unanimous stand taken by the other two parties involved in the issue—employers and workers—that regulation of industrial relations in the iron and steel industry should be transferred from the State sphere to the Central sphere. A decision, therefore, cannot be delayed too long. Meanwhile, the wage board on the iron and steel industry will have a technical wing to appraise the workload a man. This has become the integral part of wage negotiations in the steel industry in the U.S.A.

Modernising Cotton Mills

A working group for the cotton textile industry was set up in August 1959 by the National Industrial Development Corporation. It has submitted a unanimous report in which it has particularly emphasised the fact that in India, the problem of modernisation has assumed its present huge dimensions largely because of the old and outmoded machinery installed in the majority of the mills and the comparative neglect of these machinery during the war years and thereafter. The Government is broadly in agreement with the recommendations of the working group. It accepts the group's view that mere replacement of old, worn-out, uneconomic or obsolete machines would not constitute complete modernisation. Apart from these processes, modernisation covers the introduction of modern techniques and methods and the adoption of the latest devices and management skill by which productivity and quality of production could be improved, unit costs reduced

and the strain on the operatives relieved to the largest possible extent.

The Government also agrees that modernisation is a multi-phased problem which should be conditioned by the availability of finance, the degree of labour displacement and the need to ensure a minimum standard of efficiency in all units. At the same time, failure to effect timely modernisation will leave the industry including labour in a position of great disadvantage. The Government, therefore, accepts the recommendation that the immediate objective should be the achievement of a minimum level of modernisation. Certain units have already reached or even exceeded this minimum level. Such units may effect further modernisation provided they have the necessary financial resources and are in a position to accomplish modernisation consistent with the principles laid down at the fifteenth Labour Conference.

Rationalisation

The working group has estimated the cost of a modest scheme of modernisation and rehabilitation to be about Rs. 180 crores, of which not less than Rs. 80 crores will be raised by the industry itself from out of its own resources. The industry will seek to obtain the balance from financing institutions like the National Industrial Development Corporation, etcetera. The Government appreciates and accepts the vital need for modernisation and rehabilitation of this important industry. It has noted this recommendation and proposes constantly to review the position during the current plan period so as to expedite the pace of modernisation, rehabilitation and diversification of the cotton textile industry.

The working group has drawn attention to the inevitability of a certain amount of rationalisation in the process of modernisation. As the problems of rationalisation are bound to differ from mill to mill, the working group has recommended the setting up of a suitable machinery which could analyse and help resolve the problems of each individual mill. The Government accepts the need for such a timely analysis and a suitable machinery is being set up for this purpose. Another important recommendation of the working group concerns the revival of closed mills under the Government's auspices or any other suitable agencies. The group has recommended that simultaneously with the continual running of such units by authorised controllers of State Governments or the Central Government or any other suitable agencies, there should be a process of compulsory liquidation so that the assets and liabilities of the old unit are available to the labour and other creditors, management and the shareholders. The Government accepts this recommendation in principle. The problem, however, is one which bristles with practical difficulties and will need comprehensive examination.

Scrapping Obsolete Units

The working group has pointed out that where rehabilitation of a unit is not worth while, it should be compulsorily scrapped and that the provisions of the Industries (Development and Regulation) Act may be suitably amended so as to ensure that in cases where the mills' plant and machinery are irretrievable, compulsory scrapping may be enforced and such scrapped machinery should not be permitted to be used elsewhere. The Government is in agreement with the working group on this recommendation.

The Government accepts the proposal that five new units with a capacity of 25,000 spindles and 500 looms each and equipped with up-to-date types of machinery including processing equipment should be allowed to be set up for the production of faultless quality cloth on automatic looms subject to the condition that the entire or a large part of the output should be compulsorily exported.

Indo-Pakistani Trade

The Indo-Pakistani trade agreement was reviewed during last week by the Government of India and a Pakistani trade delegation. It was agreed that steps would be taken to facilitate further movement of trade. The ceilings for the current year are likely to be as follows:

Group A—fresh fruits, fruit plants and seeds	Rs. 40 lakhs
Group B—raw cotton from Pakistan, bidi leaves, cement, stone boulders and railway materials, etcetera, from India	Rs. 1.50 lakhs
Group C—livestock including horses from Pakistan	Rs. 5 lakhs
Group D—jute cuttings from Pakistan, steel materials and coal from India	Rs. 1,00 lakhs
Group E—miscellaneous commodities	Rs. 1,15 lakhs
Total:	Rs. 4,10 lakhs

Alloy and Tool Steels Manufacture

There is a variety of tool and alloy steels. For purposes of planning additional capacity, estimates of the requirements have been made only of alloy steel sections with a minimum of chromium, nickel, molybdenum and other alloying elements which require specialised plant. Capacity already existing or licensed, for such steels, is about 10,000 tons. It is estimated that the requirements would be about 200,000 tons a year by the end of the third plan. As it takes some time for the production to come up to capacity, it is proposed to license capacity necessary to produce initially 200,000 tons a year. The Government alloy steels plant will contribute about 50,000 tons. The ordnance factories will make available another about 35,000 tons. A number of applications have been received from which a choice has to be made to secure additional capacity necessary to produce the balance of about 100,000 tons. A decision is expected to be taken shortly.

For the manufacture of alloy steel castings and such alloy steels as do not need specialised rolling equipment, there is capacity already to the extent of about 50,000 tons. A further capacity of about 50,000 tons has been licensed. The question of licensing an additional about 100,000 tons is being considered.

Dugda and Bhojudih Washeries

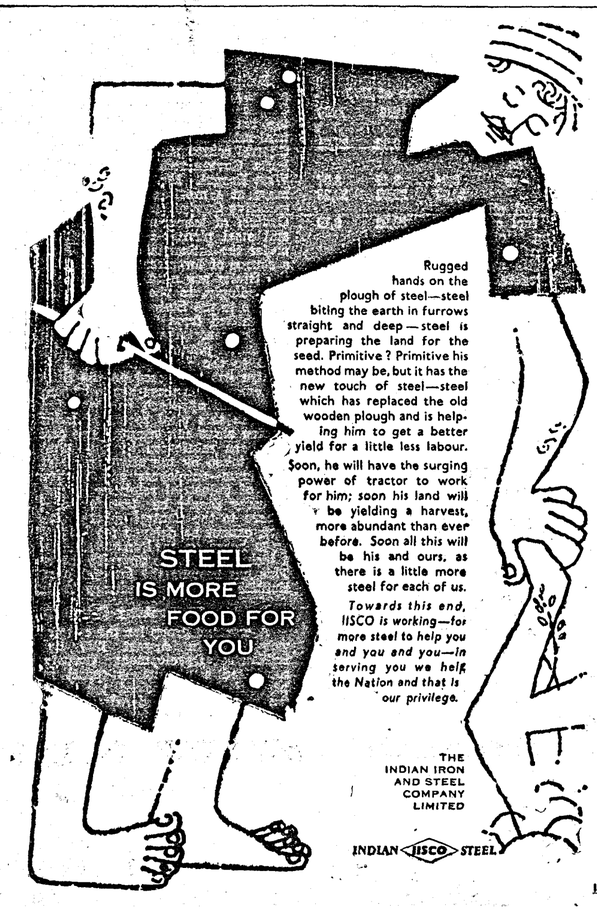
The Dugda and Bhojudih coal washeries, now under construction, are to be expanded. The extent of expansion and the nature of additional facilities will be known only when the plan for additional production of coals from the different collieries has been finalised and the washability characteristics of these coals determined.

Capacity for All Basic Bricks

The total quantity for which licences have been issued up till now for the production of all basic bricks, including magnesite bricks, required by the iron and steel industry is 255,400 tons a year. It is open to the manufacturers to adjust the type of basic bricks according to demand.

Praga Tools Expansion Scheme

Under its expansion programme, the Praga Tools Corporation proposes to set up a new factory with facilities also for developing ancillary industries to feed the main machine tool factory with components. To build the new factory premises, land near Moulali railway station is being acquired. The total cost of the expansion programme is estimated at Rs. 1.23 crores. With the approval of the Government, the Praga Tools Corporation Ltd has entered into technical collaboration with three U.K. firms for undertaking the manufacture of new items like lathe chucks, drill chucks, tool and cutter grinders, etcetera. A portion of the machinery required has been ordered. An agreement has also been entered into for technical collaboration with Poland in the new factory by



using credit to the extent of Rs. 1 crore available under the Indo-Polish economic agreement signed in May last year.

Solvent Extraction Plants

The schemes for the manufacture of the continuous type of solvent extraction plants have been approved by the Government. The following are the parties: (1) Messrs Walchandnagar Industries Ltd, Construction House, Ballard Estate, Bombay, (2) Messrs Larsen and Toubro Limited, L. C. House, Dougall Road, Ballard Estate, Bombay, (3) Messrs Vasant Industrial and Engineering Works, 470-71, Worli Road, Bombay, (4) Messrs Associated Cement Company Ltd, Cement House, 121, Queens' Road, Bombay, (5) Messrs Oil Corporation of India Private Ltd, Bansamandi, Kanpur, U.P. State, (6) Messrs Schantung Agencies, 26-A Ezra Mansions, 10 Government Place East, Calcutta, (7) Messrs Scindia Workshop (Private) Ltd, Dockyard Road, Mazagaon, Bombay. The first five firms have gone into production; the remaining two firms are likely to go into production by the end of 1961.

Standard Motors Wants to Raise Output

Standard Motor Products of India Ltd, Madras, has applied for a licence under the Industries (Development and Regulation) Act for increasing its existing installed capacity for the manufacture of Standard 10/Standard Herald cars to 6,000 vehicles a year and also for undertaking the manufacture of Standard (one-ton) lorries up to 1,500 vehicles a year, it is disclosed here.

Manufacture of Agricultural Tractors

The following are the details of the schemes licensed under the Industries (Development and Regulation) Act for the manufacture of agricultural tractors:

Name of the firm	Details of licence
(1) Goodearth Company, New Delhi	Licensed for the manufacture of 2,000 tractors a year of "Eicher" tractors in 12-18 D.B.H.P. and 20-30 D.B.H.P. ranges; location: Punjab.
(2) Mahindra and Mahindra Ltd, Bombay	Licensed for the manufacture of 3,500 a year of David Brown tractors in 12-18 D.B.H.P., 20-30 D.B.H.P. and 35 and above D.B.H.P. ranges; location: Maharashtra. The firm has reported that its collaboration talks with the U.K. Company has fallen through and it is negotiating with other foreign companies for technical collaboration.
(3) Amalgamations (Private) Ltd, Madras	Licensed for the manufacture of 3,500 a year of Ferguson tractors in 20-30 D.B.H.P. and 35 and above D.B.H.P. ranges, location: Madras.
(4) Tractors and Bulldozers (Private) Ltd, Bombay	Licensed for the manufacture of 1,000 a year of Zetor tractors in 35 and above D.B.H.P. range; location: Gujarat.

Besides these, more applications under the Industries (Development and Regulation) Act for the manufacture of agricultural tractors are at present being considered.

Aid for Roads and Bridges

A World Bank team recently visited certain States, including Bihar, with a view to examining the possibility of the International Development Association, which is an affiliate of the World Bank, giving some loan assistance for certain selected road and bridge works in the country. It will, however, be some time before the views of the team are known here.

Cement for Tea Industry

Allocation of cement to the tea industry is made each quarter on the basis of demands received from the industry. The allocations for 1960 and 1961 are shown below:

Period		Allotments (In metric tons)
1960:	January-March	7,554
	April-June	5,676
	July-September	8,226
	October-December	8,100
1961:	January-March	9,000
	April-June	9,000

The total demand for cement has been in excess of supply since October 1960.

Yugoslav Ships on Credit

A credit of Rs. 4.7 crores has been offered by Yugoslavia for building ships for India. Some Indian shipping companies have started negotiations for placing orders on Yugoslav shipyards on a rupee payment basis.

Sugar Consumption Falls

Sugar production during January 1961, was 528,000 tons, compared with 498,000 tons during the corresponding period last season. This brings the total production for the season 1960-61 up to the end of January to 1,294,000 tons, compared with 1,140,000 tons produced last season by this date, thereby registering an increase of 154,000 tons. The offtake of sugar from the factories during January 1961, was 164,000 tons, compared with 170,000 tons during the corresponding period of last year. The total despatches, including despatches for exports, up to the end of January this year were 478,000 tons, compared with 472,000 tons by the same date of last season. This year's figure, however, includes 28,000 tons despatched for exports. The offtake for internal consumption was, therefore, only 450,000 tons, or 22,000 tons less than the corresponding figure last year. The total closing stocks of sugar with factories on 31st January, 1961, was 1,357,000 tons, compared with 810,000 tons on the same date of the last season.

That consumer's resistance has been effective should be evident from the fact that sugar offtake went down from 2,066,000 tons in 1958-59 to 2,024,000 tons in 1960-61. Against an offtake of 629,000 tons by the end of February last season, the offtake this season for internal consumption is estimated to be only 610,000 tons. At this rate, the total consumption for the current season will not be more than 1,840,000 tons, compared with 2,024,000 tons of last year. Even with the most liberal expectation of a higher rate of consumption in the remaining eight months, the total consumption is not expected to be higher than 2,050,000 tons. Against this, production by the end of February this year is expected to be about 1,790,000 tons, compared with the corresponding figure of 1,613,000 tons last year. The present estimates are that the total production this season will be around 2.75 million tons. With a carryover of 550,000 tons at the beginning of this season, the stocks at the end of the season will reach the unmanageable figure of 1.3 million tons.

It should be a matter for some concern that the sugar industry has never nursed the consumer, just as the consumer nursed it to grow to its present position. It has been trying to beat down its own competitor, namely, *khandsari* and held out an alluring prospect of earning foreign exchange. As already reported, small exports of sugar have resulted in a loss of over Rs. 1 crore. The loss on exports will have to be made up by increased domestic prices. This might further reduce internal consumption, and give a bigger "exportable surplus".

By-products from Steel Plants

The by-products produced at present by the three steel plants in the public sector are crude tar, ammonium sulphate, naphthalene, benzene, sulphuric acid, benzol, and crude anthracene. The amount spent for setting up facilities for the production of these by-products is as follows:

	(In crores of Rs.)
Rourkela	7.6
Bhilai	5.1
Durgapur	5.5

It is expected that by-products worth approximately Rs. 4.3 crores will be sold annually, when full production in the by-products units of the three steel plants is achieved.

Exports to Goa

The Prime Minister made the following statement in the Lok Sabha on releasing export restrictions to Goa during the week: "The Government has indicated, in answer to a question in the Lok Sabha a few weeks ago, that it had been decided to permit limited trade with Goa with effect from April 1961. Broadly speaking, only such items as are required by the people of Goa, particularly the poorer classes, would be permitted to be exported from India. Included in the list of permissible items of export are: textiles (*khadi*, handloom and certain varieties of mill-made textiles), books, drugs and medicines, equipment for educational institutions, tea and leather goods. The Government has also decided to permit the import into India from Goa of betelnuts. The trade in most items will be against payment in sterling. Books, *khadi* and handloom textiles, however, would be permitted for export to Goa against payment in Indian rupees. All trade will be channelised *via* the Majali route of entry into Goa. The resumption of limited trade with the Portuguese possessions is part of the Government's policy of liberalisation. As is known, movement to and from Goa has been liberalised and the baggage rules simplified. The Government has also announced the opening of two additional routes, *via* Anmode and Lakkarkot, to Goa, but so far the Portuguese authorities have not extended corresponding facilities on the Goa side of the border. If, in this matter of trade, too, the Portuguese authorities decline to extend facilities to the Goans, the responsibility is surely their own."

Control Board for Farakka Barrage

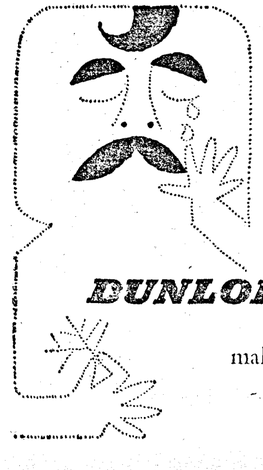
The Central Government has decided to set up a high-powered control board on the pattern of the Chambal Board for the expeditious execution of the Farakka barrage scheme. It will consist of a representative each of the West Bengal Government and the Union Ministries of Transport and Communications, Railways, Irrigation and Power and Finance.

Hungarian Credit Offer

The First Deputy Prime Minister of the Hungarian Republic, Mr. Antal Apro, told newsmen here last week that Hungary is willing to offer India credit facilities up to Rs. 8 crores for bilateral trade. The amount could be repaid in Indian products spread over eight to nine years and will be offered at 2½ percent interest, he said. Outlining the basic principles of economic co-operation between the two countries, Mr. Apro said two Hungarian-built hydro-electric power-stations will shortly be commissioned in Kashmir. Referring to the large demand for steel pipes in India, he offered Hungarian collaboration in setting up a plant for steel pipe manufacture. The survey and exploration of Indian bauxite resources could benefit by Hungarian technical co-operation, he said. Other fields in which Hungarian collaboration would be available, he said, are manufacture of flour mill machinery, aluminium and pharmaceutical products.

Population Increase in India

The provisional population of India (excluding the populations of Manipur, North East Frontier Agency, Nagaland and Sikkim in pockets of which the census or the collection of totals is still continuing) on 1st March, 1961, was 436,424,429. There were 224,957,948 males and 211,466,481 females. Including the probable population of the territories mentioned above, the population of the whole of India might be placed at the round figure of 438 million. In 1951, the population of equivalent territory (no census having been taken in Jammu and Kashmir in 1951, the population for the State in 1951 has been estimated for working purposes as the arithmetic mean between 1941 and 1961) stood at 359,216,935. There were 182,871,428 males and 173,079,631 females in 1951, excluding Jammu and Kashmir. The increase in the last ten years for the population so far compiled has been 21.49 percent, 21.97 for males and 21.20 for females. The States of Andhra Pradesh, Bihar, Jammu and Kashmir, Madras, Mysore, Orissa and Uttar Pradesh have registered an increase below the average of 21.49 while Assam, Gujarat, Kerala, Madhya Pradesh, Maharashtra, Punjab, Rajasthan and West Bengal have registered increases above the average, Assam showing the highest decennial increase of 34.30 and West Bengal the next highest of 32.94. Geographically, States on the north east and on the north west have shown high increases. For the purpose of drafting the third plan, an expert committee of the Planning Commission had forecast in March 1959 a population of 430.8 million for 1st March, 1961. The crude density of persons a square mile for the country as a whole works out to 384 in 1961, compared with 316 in 1951.



THE DIRGE OF THE DISAPPOINTED GARDENER
"With care the seeds of flowers did I sow
And with my own hands laboured them to grow
And this was all the harvest that I reaped
A quarter of an inch of ugly weed."
(With Apologies to OMAR KHAYYAM)
And a message:
DUNLOP WATER HOSE
can change all this,
make sprinkling a pleasure,
gardening a bliss.

London

MORE AID FOR UNDERDEVELOPED COUNTRIES RECOMMENDED

GRANTING OF LONG-TERM SOFT LOANS URGED

(FROM OUR LONDON CORRESPONDENT)

REPRESENTATIVES of ten of the world's richer nations—Britain, the U.S.A., Belgium, Canada, France, West Germany, Italy, Japan, the Netherlands and Portugal—met in a conference for three days last week in London on the subject of capital assistance to underdeveloped countries. The subject is a complex one, and it is all the more creditable, therefore, that some limited progress was made. It was agreed that there should be an increase in the amount of economic aid, although *it remains to be discussed which of all the many* forms which aid can take are to be included in the total. The conference was sponsored by the Development Assistance Group, and the discussions were dominated by the suggestions put forward by Mr. George Bell, representing the Kennedy administration in the United States. President Kennedy's idea is that the countries concerned should contribute about 1 percent of their gross national product annually to help the underdeveloped countries, which would represent a sum of about £2,600 million a year for the ten countries mentioned above.

Much preparatory work still remains to be dealt with, but it appears to have been agreed that the best help will be in the form of long-term "soft" loans rather than short-term export credits. It was also decided that the ten nations and the Common Market Commission should jointly study "the principles on which governments might most equitably determine their respective contributions to the common aid effort, having regard to the circumstances in each country, including its economic capacity and all relevant factors." This involves a fairer sharing of the burden and also the need for a working formula by which the aid given by one country—which may take various forms—can be compared with that given by another. The member-nations of the group, which is to become the Development Assistance Committee of the new Organisation for Economic Co-operation and Development, also agreed to appoint a permanent American chairman.

Balance of Payments Shock

In its current transactions with the rest of the world, Britain was "in the red" last year to the extent of £344 million. For 1959, there was a payments surplus of £51 million. A payments deficit of £79 million in the first six months of 1960 was followed by a much heavier deficit of £265 million for July to December. These figures, disclosed in the Balance of Payments White Paper just issued by the U.K. Treasury, are even more unfavourable than had been feared. The main contributory factor to last year's current payments deficit was a sharp rise in Britain's import bill. The cost of import rose by about £500 million to £4,077 million. With exports increasing by only £202 million to £3,711 million, the trade gap for the year widened from £69 million to £366 million.

At the same time, Britain's surplus on "invisible" transactions, such as banking, insurance and shipping, fell in 1960 from £120 million to £22 million. This was mainly because Government spending abroad increased and larger payments of interest had to be made on overseas sterling holdings. In the face of the heavy current payments deficit, Britain increased her gold reserves last year by £177 million, apart from making substantial investments in overseas countries—chiefly through the influx of "hot" money to London.

The U.K. Board of Trade has now had time to analyse the full foreign trade figures for February. While precise comparisons are still bedevilled by the autumn dock strike, this general verdict is given: "It is clear that the underlying trend of exports since mid-1960 has been upwards and that the rise in imports, which continued through most of 1960, had come to an end by the final quarter; the latest figures suggest a downward movement." It seems that exports to the United States have not yet recovered from the setback of a year ago, but shipments to Canada have made up most of the ground lost. Exports to western Europe (especially the Common Market) "now seem to be rising strongly again after a period of hesitancy earlier in 1960." Among sterling area countries, exports to Australia were well maintained and those to New Zealand have continued to grow strongly.

In terms of commodities, the rise in exports has been mainly in engineering products and chemicals. The largest increase has lately been in non-electric machinery, electric machinery and appliances, commercial vehicles and scientific instruments. Exports of motor-cars show no sign of recovery yet. The analysis of imports in the last three months is also reassuring. There was a fall in imports of "food, beverages, and tobacco" after the sudden rise in the autumn, which seems to have been exceptional. Imports of industrial materials continued to increase somewhat, imports of oil products increased substantially but those of finished manufactures comparatively little. The U.K. Board of Trade comments that imports of industrial materials reached a peak in the third quarter of 1960 and have since been falling, *especially in steel and other metals.* Imports of finished manufacturers stopped rising after the second quarter of 1960. There was a steep fall in arrivals of motor-cars and other consumer durables, while imports of capital goods and of clothing continued to rise. All this makes the trade outlook for 1961 look a good deal healthier than seemed likely at the beginning of the year—especially if the Government's view that the "world trade recession be almost at an end" turns out to be correct.

	Britain's share of the market for manufactures in 1954 (a) Percentage of market	Decline in Britain's share 1954 to 1960 Percentage of market	Decline in Britain's share 1958 to 1960 Percentage of market	Average margin of preference on all imports from Britain in 1948 Percentage	Ratio of Britain's investment (d), 1958-59 average, to her exports of manufactures in 1959
Federation of Rhodesia ...	87.2	—17.0	— 6.7	10-11	1 : 7

(a) Britain's share in the exports of the nine main exporters.
(b) 1965. (c) 1955-60.
(d) Direct British investment abroad, excluding oil and insurance.

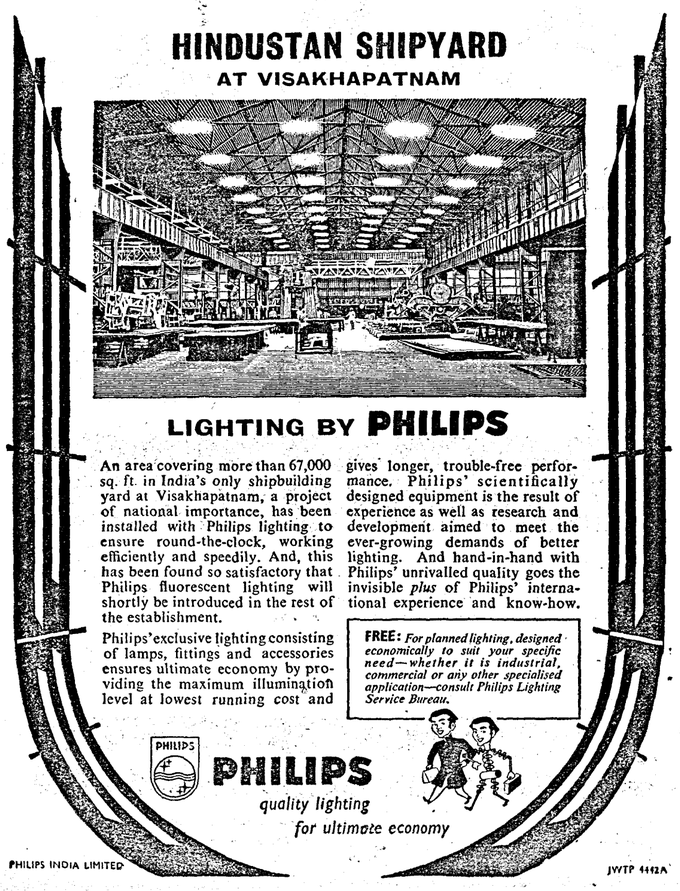
U.K. Share of Commonwealth Markets

The table above taken from the National Institute's *Economic Review*, shows the decline which has taken place since 1954 in the explanation of the trend, and that the development of competition and the weakening of personal and commercial as well as official ties have also played a part. Consumers and importers in the purchasing countries have become more aware of the array of goods offered by competing countries, and firms from those countries have vigorously attacked the sterling area markets.

The Institute thinks it in some ways surprising that Britain has kept a high proportion of commonwealth markets for so long. In spite of the recent fall, the U.K.'s share in these markets is still much larger than in all the important non-sterling markets. The discrepancy implies that Britain may in time have to yield further ground in the Commonwealth countries. But the Institute considers that this process should now continue at a slower pace than in the past few years when relaxations in Commonwealth import controls opened the way for a once-for-all rapid expansion of sales by other suppliers. It is also notable that sterling area markets as a whole have been growing more slowly than others (no doubt chiefly because of low commodity incomes). The Institute thinks that the pace of growth may continue to be slow.

Import Prices Fall

Britain's terms of trade, measured by the relation between import and export prices, moved slightly in her favour in February. Although the export price index was unchanged from the January level of 112 (1954 equal 100), the import price index fell by 1 point to 91. The fall in the index of import prices was due almost entirely to United Kingdom's share of the Commonwealth market. The Institute says that the reduction in discrimination in Britain's favour is only a partial drop of nearly 3 percent in the index for food, beverages and tobacco. At 112, the index of export prices showed no change.



Jute

MARKET UNDERTONE EASIER AS PROGRESS OF NEW CROPS REMAINS ENCOURAGING

FIBRE ARRIVAL FIGURES FOR MARCH KEENLY AWAITED

FAVOURABLE crop reports from Pakistan, and the good weather conditions in the jute-growing areas in India, have brought a certain amount of confidence to the markets. But activity has been restricted both in India and overseas due to the Easter holidays, and many prices are purely nominal. Overseas buyers of raw jute all seem confident that fibre prices in the coming season will fall substantially. Certainly they have done all they can to force down rates by staying out of the market, but many believe that manufacturers abroad must be very nearly at the end of their stocks. As a result, mills, particularly in Dundee, are on short-time and the industry is losing skilled workers to other enterprises. The fall in jute prices recently is welcome, but if mills in Europe buy within the next month or so, many believe that rates will increase. Another rise would surely make the position more difficult, and the increasing competition from substitutes cannot be ignored. The handling of grain crops in bulk, the use of containers made of paper and other fibres, and the efforts of various countries to use domestic products wherever possible, all tend to restrict the consumption of raw jute.

The admittedly excessive production capacity of the existing machinery not only in India, but also on the Continent and in Dundee, if all of it is used, is a constant threat to the welfare of the industry, even without the added fear of competition from substitutes In most countries, at the moment, the jute industry is working below capacity. One of the main disadvantages of jute in world trade is that its price fluctuates widely. These fluctuations are, of course, reflected in the prices of manufactured goods, although not always to the same extent. The resulting uncertainty has been an important factor in influencing consumers to turn to substitutes. Reports from consumers are unanimous in emphasising the growth of competition from paper in particular, and they say that this has given American bag manufacturers a "hedge" against squeezes in Calcutta. The consumer has reached the stage where he is fed up with the problem presented by the short crop scare and the uncertainty about the price of his packaging material. This is no new development, and the threat arises from time to time, but now the danger signal is seen in the lack of overseas enquiries during the past month and the poor shipment figures.

Shortage of Power

Recently, the Indian mills have had another headache—the electric power cuts. The breakdown of generators supplying power through the Calcutta Electric Supply Corporation has necessitated "borrowing" power from the D.V.C. system, which in turn "borrowed" from Bokaro. The latter are now having troubles of their own and have had to reduce the amounts provided. As a result, manufacturing concerns have had to cope with frequent power cuts, which have seriously upset mills running two or three shifts. Some groups which have steam-driven equipment have considered using it more intensively, but they have been restrained by the fact that the supply of coal to run the boilers is very small, and in some cases is enough for only a few days. It is understood that there are not enough wagons to carry coal to the mills. No doubt, some mills may welcome the saving of jute inposed by the power cuts, but labour has caused trouble in a number of areas.

Raw Jute Arrivals

Much has been made of the fact that the Indian mills have received considerably less jute so far than they did during the corresponding period of the 1959-60 season, and that consumption is still running ahead of arrivals. The arrival figures for March will be studied very closely, but there is little likelihood of the gap being closed. In recent weeks, however, the supply has become easier, and much more jute has been offered to mills. This is thought to be a result of the good crop prospects, and many stockists are prepared to discount rates if there is a firm indication from the buyer. Buying in the upcountry markets has virtually ceased, as no fresh jute is coming in and the remainder of the crop is now completely in the hands of market operators. In spite of the encouraging reports from Pakistan about the possibility of an early crop, it is doubtful if India will derive much benefit from it. The Pakistani mills are as short of fibre as the Indian ones and overseas buyers will want their share of any early jute which may be available. Only after these demands have been satisfied can India expect her requirements to be met. The feeling is that much of the early jute will go to replenish stocks at various points along the world's supply pipeline. This demand might well prevent any large fall in the price of jute. Although the trade in general expects lower prices in the near future, the fall may only be temporary.

There has been no rush to take up the quotas issued to mills after the Easter holidays. The issue was reported to be larger than in the two preceding periods Small business has been reported, but most mills appear to be adopting a wait-and-see attitude in the hope that prices will come down further. Mill agents, however, continue to be active but on a much smaller scale than recently. Sellers have increased their offers of ready bills of lading for this reason, but often mill indications have been too low to be accepted.

THE JUTE MARKETS

Manufactured Goods: Because of the Easter holidays, the past week was quiet and inactive. Little business was done in either manufactured goods or raw jute. The market, after recording fresh low levels a week ago, improved slightly, and at the opening last Thursday reacted upwards strongly due to the general feeling that prices had gone down far enough. The lower prices induced some speculative buying, but there was very little foreign interest, except for some shipper covering for end-of-the-month obligations. Thursday's opening B Twills quotations advanced to Rs. 180 in the near position and Rs. 166 for July-September shipment. Hessians were more or less unchanged and 40in. 10oz. remained at Rs. 62.25 for ready and Rs. 59.25 for forward shipment. The advance was short-lived as over the holiday period the market suffered a setback, and heavy goods prices dropped by Rs. 2 and hessians by 50nP. The release of goods by weak holders also induced a quieter undertone, but on Tuesday, rumours of a foreign tender for sacking saw prices making a small recovery. Once again, this was only a temporary phase, and before the close, the market became very quiet in sympathy with the lower advices from the raw jute section.

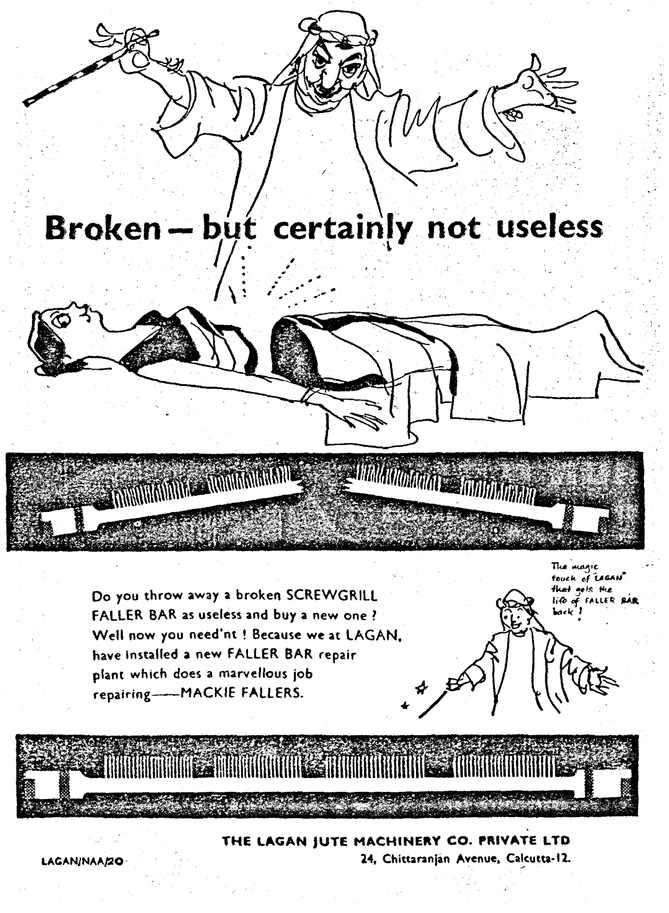
Opening quotations on Wednesday morning were as follows:

	Ready	April	Apl.-June	July-Sept.
40in. 7½oz.	45.20	45.20	44.90	43.15
40in. 8oz.	48.50	48.35	48.00	46.15
40in. 10oz.	60.25	60.25	59.75	57.50
B Twills	176.00	176.00	175.00	162.00
Heavy Cees (Plain)	178.00	177.00	175.50	162.00
A Twills	210.00	210.00	209.00	197.00
Liverpools	199.00	199.00	198.00	186.00
Cornsacks	176.50	178.00	178.00	165.00

Raw Jute: There was very little activity in fibre at the opening last Thursday, as mills held off in anticipation of the issue of a fresh quota. In spite of this, however, fibre rates advanced by Re. 1 for Assam Bottoms to be quoted at Rs. 58 a maund, which was Rs. 4 below the maximum rate. The rise was mainly in sympathy with the goods market. Business was always possible below the quoted rates, and with the reduction of mill activity in Cossipore and other agencies, more jute was put on the open market. After the holidays, quieter conditions prevailed and with the issue of quotas to mills, small business was conducted at a discount. Towards the close, the market became very weak in response to the favourable crop reports from Pakistan and the ideal weather conditions in the Indian jute-growing regions. Wagon arrivals in Cossipore last week were good, and at 360 were well above average for the time of year.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	152.75	57.00	Apl.-May
Northern	150.50	56.00	"
Purnea Desal	147.25	55.00	"
Daissee Selected	158.00	59.00	"
Assam Tossa	154.00	57.50	"
Mesta:			
Assam-Northern	146.00	54.50	"
Desal	146.00	54.50	"
Daissee	144.75	54.00	"
Jungli	142.00	53.00	"
Indian Cuttings	270.00 a bale		"
Pakistani N. C.'s	265.00 a bale		"



THE FOREIGN JUTE MARKETS

EASIER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE continued easier trend in raw jute prices is welcome. It looks as if fibre prices will come down to more reasonable levels in the not-too-distant future. It is heartening to see that the prospects for the next crop are promising. Meanwhile, it has been reported that sowings in the low lands have been completed and that they have been started in the midlands. But until normal trading conditions return, there is likely to be a prolonged spell of hand-to-mouth buying in all jute commodities. Manufacturers in Dundee are thinking how they can deal with the periodical interference with the jute industry. Many people connected with the trade have tried to solve the problem, but the most satisfactory solution in the opinion of many is to grow big crops in both Pakistan and India and carry buffer stocks to use them under such circumstances as have occurred during this season.

Raw jute prices have fallen by about £20 a ton, but this is not enough to satisfy buyers who want to see Mill Lightnings returning to about £100 a ton before they can purchase again. Much will depend on the quantity of jute left from the current crop. If there is a sufficient quantity to enable production to continue on the existing level, one need not fear any undue rise again before the new crop becomes available. If the prospects continue to remain as favourable as they are now, fibre supplies should be offered to spinners earlier than usual. Meanwhile, an increase of about 50 percent in the next season's crop is estimated in some quarters.

Mill Firsts has declined to £198 a ton, Mill Lightnings to £190, Mill Hearts to £185 and Grades Hearts to £180, with Grade Tossa-2/3 lowest at £194, fours £189 and Continental Tossa-2/3 from £185, c.i.f. U.K.-Continent, April-May shipment. Dundee spinners are virtually out of the market and brokers are having a lean time. As far as the new crop is concerned, sellers are asking for bids, which spinners are not inclined to make.

Calcutta goods have declined to 93s 6d for 40in. 10oz. and 70s for 7½oz., April, 93s and 69s 6d May and 92s 6d and 69s June, with B Twills at 271s 3d, 268s 3d and 265s 3d for the respective months of shipment, all f.o.b., Calcutta. Jute yarns and cloth are practically idle. Short time is increasing in the Dundee jute industry.

THE PAKISTANI JUTE MARKETS

FIBRE FALLS RAPIDLY AS BUYERS SIT OUT

(FROM OUR EAST PAKISTAN CORRESPONDENT)

OVERSEAS buyers continue to sit out. Not so long ago, Export Firsts were very much in demand at £212, but it is at present difficult to find buyers at £192 for them. The present bearish feeling overseas is such that a further drop in prices is likely to encourage the buyers to wait for still lower prices. Locally, the decline in rates is even more apparent. Cuttings were at one time eagerly sought after at Rs. 295 a bale but now it is very difficult to get rid of them at Rs. 220 a bale. It is not so long ago that Export Hearts were hard to find at Rs. 390 a bale, and today, although the market is approximately Rs. 345 a bale for pucca bales f.o.b. Narayanganj, there has been a distress sale made at Rs. 300 a bale. In the loose jute market, bone dry jute is coming in, a sure sign of weakness. The quantity remains exceedingly low, but the price at below Rs 60 a maund is very low, compared with last month's rate at over Rs. 80 a maund. The present parity of Export Lightnings is approximately £175 c.i.f. Continent, which is well below anything being quoted even by the most panicky overseas sellers.

The position, therefore, is that panic conditions prevail in the local market and, also to a lesser extent, overseas. The local weakness is partly due to a big drop in prices in the Calcutta gunny market. This was brought about by the fact that buyers find it uneconomical to buy at existing rates and at the same time, the jute growing areas have had more than sufficient rains. These rains have been widespread.

Sowings are progressing well under good growing conditions. The *char* land jute which has been completely sown is growing quite well. River levels, however, are rather high and this jute may well have to be harvested early. This would mean rather short, immature jute of the weeding type equivalent to normal second weeding of low land jute. The plants at present vary in length from 1 feet to 2 feet. All lowland jute sowings have been completed, and practically everywhere the jute has germinated and is over 6 inches in height. All the midland crop has been sown and most of it has germinated well. Except for the preparation of the land, nothing has yet been done for the highland crop. More recent indications are that although the crop will be large, it is not likely to exceed 7.5 million bales, and is more likely to be in the region of 7 million bales. Reports about jute being available in May are being discounted and it is not likely that exports whether to India or to overseas will start before July.

Several purely speculative sales for the forward position varying from July to December have been reported. Those overseas are mainly in the region of £160 to £170 for Export Lightnings. Sales are also reported to the mills of Cross Bottoms for October-December at Rs. 36 which appears at present to be remarkably low. It is at least a healthy sign that opinions for the size of the crop and for the market vary considerably for the coming season.

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

QUALITY DUSTS RISE

AT Sale No. 37, held on 5th April, there was a good general demand for the 22,251 chests of Dust on offer. The orthodox descriptions once again declined by 10nP, although the brighter and smaller lines received better support. Legg-cuts sold above last rates, the teas with improved quality receiving better demand. Medium C.T.C.s were keenly competed for, especially the powdery types but prices were irregular while the fibrous descriptions were easier and at times difficult to sell. Good C.T.C.s were a strong feature and sold at improved rates.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb
Plain Orthodox Dust	4.25 to 4.55	1.88 to 1.94
Medium Assam Dust	4.45 to 4.75	1.82 to 1.94
Legg-cut Dust	4.70 to 5.20	1.98 to 2.20
Medium Assam C.T.C. Dust	5.55 to 6.20	2.40 to 2.75
Good Assam C.T.C. Dust	6.40 to 7.00	

(Quotations are inclusive of excise duty.)

There was a good demand for the 508 chests of Leaf on offer.

LINSEED QUIET

The linseed market was quiet during the past week. Ready prices declined further by more than Re. 1 a maund. There were increased demands for forward deliveries, but sellers were reserved. There was some activity in the oil market for forward deliveries with the decline in prices. But sellers were cautious and were not inclined to do much business at lower prices. The oilcake market was dull. Export prices were still unworkable. Local business was transacted for ready goods. The latest quotation is as follows: Reads seeds, Rs. 26.25 a maund.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Stocks

(Between 28th March and 3rd April, 1961)

Cowhides: Wet Salted (slaughtered) 2,300 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 66,800 pcs. on the basis of Rs. 280 to Rs. 310, Rs. 380 to Rs. 410 and Rs. 450 to Rs. 470; West Salted (he-killed) on the basis of Rs. 4.62 and (she-killed) on the basis of Rs. 4.37 a piece; Assam-Rajshahi 12,000 pcs. on the basis of Rs. 350 to Rs. 360 and Rs. 435; Purneah 5,700 pcs. on the basis of Rs. 290 to Rs. 400; Patna (ord.) 6,700 pcs. on the basis of Rs. 270 to Rs. 300; Patna-Muzafferpore 17,400 pcs. on the basis of Rs. 360 to Rs. 392.50.

Bazaar Sales

(3rd April, 1961)

Cowhides: Wet Salted 111,000 pcs.

Goatskins: Wet Salted (Daissee, Patna, Kustia, Killed) 27,000 pcs.; Assam-Dinajpur 40,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 203,500 pcs.

SHELLAC DULL

During the week ended 4th April, the market was dull. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 174 buyers; 176, 170 sellers.
Lemon No. 1 Shellac	Rs. 174 buyers; 176, 172 sellers.
Lemon No. 2 Shellac	Rs. 164 buyers; 166, 158 sellers.
F.O. Superfine Shellac	Rs. 148 buyers; 152, 146 sellers.
Standard One Shellac	Rs. 146 buyers; 150, 142 sellers.
TN Pure Shellac	Rs. 130 buyers; 136, 122 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 164, 162 sellers.
Golden Bysacky Seedlac	Rs. 148, 146 sellers.
One B Seedlac	Rs. 136, 134 sellers.
Two B Seedlac	Rs. 118, 116 sellers.
Manbhum Fine Seedlac	Rs. 132 buyers; 136, 132 sellers.
Fine Bysacky Seedlac	Rs. 118 buyers; 122, 120 sellers.
Genuine Bysacky Seedlac	Rs. 112 buyers; 114, 110 sellers.

Shipments during March were 39,495 packages.

Books

CENTRAL BANKING

Central Banking in South and East Asia. Edited by Gethyn Davies. (Published by Hongkong University Press, Hongkong. Review copy received from the Oxford University Press, Mercantile Buildings, Calcutta. Price 27s 6d or $ (HK) 18.50, pages 194.)

Mr. Gethyn Davies has brought together 11 essays—all written by experts—on central banking in Asian countries. The introduction written by the editor poses the basic issues in clear and lucid terms. All the countries except Japan are underdeveloped, but they show wide variations in their economic features and stages of development, with corresponding diversities in the central banking techniques. The approach is essentially factual and objective, dealing with current problems and policies. Particular attention has been given to the rôle of the central bank in relation to fiscal policy, the balance of payments problem and the growth of banking facilities. Development with stability is the crucial issue facing the underdeveloped economies today. Central banks are finding it a difficult problem to solve, since the unorganised nature of the money market limits the scope for traditional methods. Besides, the conflicting forces at work in a developing economy call for new weapons and a great flexibility of approach. Central banking policy has ranged from the use of mainly traditional weapons as in Japan and India to the frequent issue of new currency and the use of multiple exchange rates as in Indonesia. The "pilgrim notes" of Pakistan are also a novel experiment in exchange control. But in most Asian countries, monetary policy has so far been a much weaker force than fiscal policy, and the two have often been at variance. Fiscal policy and exchange control have also been difficult to reconcile.

A slightly greater uniformity in the arrangement of problems in the different essays would have made comparisons easier. In particular, a brief description of the main features of the economy and money markets—as has been given in some of the essays—would have been helpful. A few of the essays have been rather long, and not all of them possess the same vividness and realism, as for example, the essay on central banking in the Philippines. One feels the need for a concluding chapter, bringing together the main strands of experience. A selected bibliography would also have been of great use. On the whole, however, Mr. Davies's collection is extremely informative and stimulating. It will be considered a valuable supplement to the existing literature on the theory of central banking in underdeveloped countries.

PROGRESS IN INSURANCE

Insurance in India. By A. N. Agarwala. (Published by the Allahabad Law Journal Press, 5 Prayag Street, Allahabad. Price Rs. 27.50, pages 628.)

Dr. Agarwala's voluminous book is the first comprehensive objective study of life insurance and social security in India. It gives a historical background with a scientific method of research for the purpose of analysing the underlying forces and for making suggestions for suitable policies in the future. The study is broadly divided into two parts, namely, life insurance and social insurance in India. The first part contains details with elaborate statistics mainly collected from Government and other publications on the basis of which the author has drawn some conclusions. He seems to contend that it was not the large-sized companies but the medium-sized ones which were best managed. So he argues that it would be more economical to have medium-sized companies only. From this and other studies, Dr. Agarwala concludes that the nationalisation of life insurance business was neither necessary nor justified on technical grounds. He doubts if such an extensive and unwieldly organisation as the Life Insurance Corporation of India can be really efficient.

It is rather unfortunate that the book appeared after the nationalisation of life insurance had become a *fait accompli*, so much of the analytical study and the statistics in Dr. Agarwala's book are of only historical interest. Furthermore, the study lacks sufficient data on the working of the L.I.C. The author's observations on it are, therefore, inconclusive. The working of the Corporation during the period 1958-60, that is, after the study was completed, would belie some of his observations. Dr. Agarwala suffers from the obvious disadvantage of not being actively associated with the industry itself. But his academic background has enabled him to take a broad-based view of the various problems and impart a freshness and impartiality in the study which would have been difficult for a person in the industry. His study of social insurance is comprehensive.

FINANCING THIRD PLAN

Resource Prospects of the Third Five Year Plan. By I. S. Gulati. (Published by Orient Longmans Private Ltd, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 10, pages 152.)

Dr. Gulati has packed much material and some interesting discussion within a slim volume. To search for resources for the development of the public sector in the third plan is ambitious; it involves forecasts which have a slender basis, often no more than the trends (if one can use that word), in the last few years. The author estimates budgetary savings at the existing tax rates at Rs. 480 crores and the gross profits of public enterprises at Rs. 900 crores, on various assumptions, as for example, past trends, the likely plugging of existing loopholes and the increases expected from the rise in national income postulated in the plan. The other resources for the plan are domestic capital receipts, deficit financing, direct and indirect taxation. The former are estimated at Rs. 1,685 crores, including open market loans from non-bank investors (Rs. 930 crores) and small savings (Rs. 625 crores) provided the latter retains its appeal. Dr. Gulati's treatment of deficit financing is ingenious and refreshing. On the basis of past records and certain rates of growth of the economy, including monetisation, deficit financing is estimated at Rs. 1,320 crores. For agricultural taxes, the author suggests progressive land revenue rates and the abolition of agricultural income tax. The former suggestion may be defeated by the ceiling provisions of land reform policies, and the latter by opposition from States with sizable revenues from such taxes. Altogether, Rs. 400 crores of additional revenue is estimated from progressive land revenue rates, surcharge on commercial crops, etcetera.

Dr. Gulati concedes that there is little scope to enhance non-agricultural income taxes, except raising more revenue from incomes up to Rs. 20,000 which bear less tax in India than elsewhere. Together with a few other minor suggestions, direct taxes on non-agricultural incomes are estimated to yield another Rs. 220 crores. It is suggested that large sums be raised from various excise duties: Rs. 250 crores from diesel and kerosene oils, Rs. 550 crores from the tax on railway freights and fares, Rs. 335 crores from the excise duty on tobacco, Rs. 125 crores from salt, etcetera, adding up to Rs. 400 crores All these leave a gap of Rs. 1,195 crores for the public sector plan. Dr. Gulati estimates the gap for the public sector at a mere Rs. 150 crores, on many ifs and buts. The total gap is Rs. 1,345 crores—a measure of external assistance needed for the plan. But the exercise is stimulating, although the imponderables are too many. It is debatable if it will be politically feasible to raise the resources. Dr. Gulati could also have indicated the framework of accounting procedure into which the resource study is fitted. So one wonders where the large payments of interest and instalments on foreign borrowings are to come from.

PLANNED ECONOMY

A Decade of Planned Economy. By S. Kesava Iyengar. (Published by the Indian Academy of Economics, Mysore 2. Price Rs. 15, pages 347.)

Since the advent of planning in India, a large number of books have been written on the subject, but most of them are either handbooks, replete with official details, or text-books with an academic approach. This book, which consists of 12 sections, is a collection of studies on several aspects of the Indian economy. Dealing with planning, Professor Iyengar says that there is still considerable unused productive capacity in India. He considers it a paradox that the Government should encourage the production of cheap motor-cars and impose a heavy excise duty on new ones. As for food production, the paradox is one of co-existence of record production and record high prices (Page 126). If the population increases by 7.5 million a year, additional foodgrains required are 105,000 tons a year. If that amount is imported, the cost to the nation will be about Rs. 135 crores a year. India has been importing from America over Rs. 100 crores worth of foodgrains a year at exorbitant prices. No wonder, food prices are not higher!

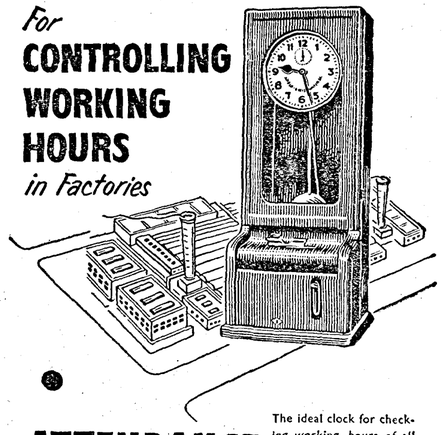
On the question of land reforms, Professor Iyengar is critical, but many will agree with him that in planning agricultural reorganisation, greater priority should be accorded in raising output. Land ceiling and the redistribution of surplus lands, he says, are purely doctrinaire demands, so the game is not worth the candle (Page 135). The author is reluctant to gulp the amateurish handouts of "experts" of the Reserve Bank. He says that the structure of money rates in India is ineffective. The discount rate should, therefore, be raised. The Government's long-term loan rates should be enhanced to 6 percent not only to net in larger internal savings but also to attract foreign capital and to reach the ambitious target for savings proposed in the third plan. Professor Iyengar says that "in the State-dominated Indian economy, people are forced to sacrifice current consumption and liberty to meet targets of capital formation imposed by the Planning Commission." The book contains a mine of facts and figures not easily accessible. It will stimulate independent thinking on the subject.

FARMING PRACTICES

Agricultural Economic Theory and the Indian Economy. By J. R. Bellerby and N. A. Majumdar. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 7.50, pages 158.)

The book begins with the analysis of the economic theories applicable to peasant and commercial farming. To illustrate the theme, the authors have taken up the Indian economy. A distinction has been made between the "engineering plan" and the "peripheral plan." The object of the former, it is stated, is to increase agricultural incomes through improved instruments as well as better organisation and techniques. Part I of the book is devoted to a discussion of these aspects. The "peripheral plan" in Part II deals with the fundamental social aims of the national development schemes. In the chapter entitled "means and ends," the authors have made a curious attempt to find a place for *yoga* and Bhagawat Gita in the plan. They have felt the need for an expert body to advise through what forms of economic and spare-time activity the Indian people may find the complete fulfilment and self-realisation. No comments are apparently needed.

For CONTROLLING WORKING HOURS in Factories



ATTENDANCE RECORDER

The ideal clock for checking working hours of all staff in offices, factories, workshops, garages, banks etc. Simple to operate, self-winding, precision time recording equipment ensuring maximum accuracy. Guaranteed for 3 years.

INDIAN ECONOMIC GROWTH: A SCIENTIFIC VIEW

MOST of the academic commentaries on Indian economic development begin by accepting completely the desirability, or even the inevitability, of planning, and then proceed to concentrate discussion on such detailed matters as priorities, the rôle of government, and the raising of resources. The book *India on the Eve of the Third Five Year Plan*, by Sir Theodore Gregory, which was reviewed in last week's leading article of *Capital*, followed such an approach. Nowadays, it is both fashionable and convenient among Indian planners to dub this kind of criticism as "constructive", and therefore acceptable, as distinct from the "destructive" variety, which usually rejects the theory of planned development altogether and advocates complete reliance on market forces; the latter is easy to castigate as being *laissez faire* and so by definition old-fashioned and unsuited to modern India. The fact that such polarisation is politically convenient and saves further mental effort helps explain why there is so little demand for a truly alternative approach to economic development which is neither of these extremes. But there is such an alternative, as the world is beginning to realise, and it deserves the careful attention of all those in India who have the country's rapid economic growth at heart, and are not necessarily prepared to accept the conventional, ideologically-inspired and politically interested notions on how to achieve it. Such individuals will find much to interest them in *Indian Economic Policy and Development*, by Professor P. T. Bauer, of the London School of Economics.*

Professor Bauer's approach is economic and up-to-date. That is why, in his own words, it "differs greatly from some of the most widely held opinions both in India and the West". It outlines the basic essentials for economic growth as the conditioning of the human population towards progress, the concentration of government initiative and energy largely on clearing away the physical obstacles and psychological prejudices which impede economic growth in all underdeveloped countries, and the general realisation that the economic problem is one of choice based on strict alternative-cost criteria. Unlike so many pseudo "scientific" approaches to development, Professor Bauer's approach is truly scientific—the science for a change being economics and not statistics, mathematics or astrological physics. His analysis starts where any sound theory of growth should begin, with the human factor in development, its customs, prejudices and attitudes, which are all basic to economic progress, goes on to reject any rigid ratio between the input of investment and the output of national income, classifies investment in industry as only one among many alternative investment choices, pin-points the various anomalies and contradictions of current planning and describes the social and economic evils which are arising from them. His main omission would seem to be that he does not offer any tangible alternative in a field where tangibility undoubtedly has great political and psychological importance. But alternatives are indicated, even if they are not developed into a detailed programme, and those who would condemn all such criticism as "destructive" would do well to ponder Professor Bauer's point that "an essay can be constructive even if it is mainly critical, provided that the criticism is valid." And the disturbing part about his criticism is that so much of it is valid.

That fact is not, however, likely to recommend the book to the planners in New Delhi. Professor Bauer shows himself to be aware of this when he probes some of the real motives behind planning and development. It is these motives which tend to make all analyses of this kind, based as they are on strictly logical and scientific criteria, somewhat irrelevant to circumstances in India today. It is obvious to any impartial observer that the main motives behind Indian planning are firstly, national power and prestige; second, Party political and Ministerial advantage; and a long way third, the purely humanitarian desire to relieve the poverty, though not necessarily to build the wealth, of the poorer members of the community. These motives, which Professor Bauer appears to have grasped, are probably fairly general throughout all under-developed countries; the point to note about them is that they do not include a single one which might be classed as economic. Even the third mentioned springs chiefly from the sense of guilt which all politicians these days feel towards their under-fed constituents. There is nothing particularly reprehensible in the fact that these should be the main motives behind planning; the impact of the truth need not be on conscience, although it certainly has significance for the realities of the economic situation. In India at the moment, these realities are uncomfortable and precarious and can all be regarded as the price which is being paid for neglecting economics.

It is no bad thing to realise that this price can be an exceedingly high one. Briefly, it may be summed up as a slower rate of economic progress. In India, this is already taking place; impressive official statistics of national income increase simply obscure the fact that growth could have been much faster if strictly economic criteria had been borne in mind. As things are, and as Professor Bauer indicates, the position now is one where excessive preoccupation with heavy industry, regardless of the economic and social cost involved, is feeding chronic inflation, breeding countless controls and regulations, expanding disincentive taxation, stifling enterprise, producing dangerous shortages, hampering organised industry, and confirming the country's human material in its semi-literate lethargy. What progress has been achieved is not benefiting the common man to any significant extent and is being bought at a disproportionately high price. Advance would be more rapid, Professor Bauer maintains, if the Government were to confine its activities to the tasks which it alone can effectively perform; the raising of the general level of education, the changing of social customs which stand in the way of progress, the reduction of inflexibilities and the removal of obstructions to growth. Such duties, if done properly, would absorb any government's entire energies. Instead, the pursuit of Soviet-style planning is restricting growth, neglecting the people's needs, and destroying freedom. The political risks which are thereby being run, claims Professor Bauer, are such that western economic aid should not be given to India to perpetuate her folly. It is neither in India's interests, nor in those of the donors.

This is a point of view which has many supporters abroad who would not hesitate to call themselves friends of India. The reason their views carry so little weight is similar to the reason why the critics of India's present socialist planning are so easily silenced here. It is all a question of motives, and while Professor Bauer seems to have understood the ones which justify India's present planning, he has not gone into those which explain western economic aid. These are quite simple; first, fear of communism (although to finance rigid socialism as an antidote is surely the height of folly); second, sound commercial self-interest; and third, the sense of guilt which the rich usually have towards the poor. In contrast to the motives behind Indian planning, there is at least one here which might be identified as economic. Unfortunately, it is largely incidental to the motive which chiefly inspires the main aid donor, the United States. And since the inauguration of President Kennedy, there seems even less chance of sound economic criteria predominating over the emotional in the foreseeable future. The Indian economy appears doomed to be the victim of confused motives and policies based on any principles except economic ones.

The difficulty of moulding policy in India on the lines suggested by Professor Bauer, however, are mainly psychological. Planning is by now almost a sacred institution; its very existence provides the country with a consolation and a sense of security. That it has also become a happy hunting ground for self-seeking politicians need not obscure the fact that to dismantle the present structure of socialistic nation building in favour of promoting rapid growth on economic lines would cause considerable mental conflict and evoke widespread feelings of insecurity among the electorate. Mr. Nehru gives the clue when he speaks of the steel plants as being "temples of industry". It is a fact that what India is building are temples, and only incidentally economic assets. What is more, it is typically Indian to raise development to the status of a religion instead of a rational science. And despite Professor Bauer's cold logic, there is no evidence to indicate that economic progress could be achieved in this country by any other method. Having said this—that India is finding her own interpretation of the truth that progress is rooted in the mind of man—it is important to study the soundly economic approach of Professor Bauer so as to understand the cost which is being paid, the opportunities that are being missed, and the risk that is being run. It might also be wise to reflect that the ordinary Indian has been content for thousands of years to worship his gods in their temples with his stomach empty and his back unclothed, but that in this world of rapid change and enticing alternatives, he may not be prepared to do so much longer.

PAPER PLANS

PAPER has long been among the most promising of India's growth industries. Since the second plan started, it has increased its output by almost 90 percent—from 187,000 tons in 1955-56 to 350,000 tons in 1960-61—which means that the production target under the plan has been achieved. The target for installed capacity has unfortunately not been achieved although enough licences have been issued; the actual capacity is still 310,000 tons a year, or 40,000 tons less than the planners visualised. Under the third plan, the target for installed capacity is 900,000 tons, and that for actual production is 700,000 tons. But, in fact, if all the schemes already licensed materialise, the installed capacity will rise to 1.145,000 tons. It is possible that some of the schemes may not be completed, but even so the expansion of the industry as a whole will be rapid. The question, therefore, arises whether the pricing system imposed by the Government will facilitate the expansion. The burden of Mr. P. J. Egan's address from the chair at the annual general meeting of the Indian Paper Makers Association in Calcutta on Tuesday was that it will not. (The address is printed in full on a later page of this week's *Capital*.) Mr. Egan implied that most of the expansion has hitherto been financed by companies out of their own resources. The new prices do not leave the companies with enough money; nor do they help the raising of outside capital which the new units at least will certainly require.

In fact, the purpose of the cut in paper prices ordained by the Government since 1st January. 1960, has never been very clear. The move has not benefited consumers much. They still often have to pay more than the official prices since the supply of the commodity is inadequate. The price cut has thus served only to siphon money out of the pockets of the industry into those of the trade. If the industry had been allowed to earn more, it

would have found it easier to finance the expansion which is the only long-term solution for the problem of shortages and high prices. Mr. Egan gave a number of good reasons why the present prices are becoming steadily less realistic. He pointed out that four-fifths of the increase in production during the second plan has resulted from the expansion of existing units. During the third plan, four-fifths of the increase will come from new units, in whose case the capital outlay is much larger and the cost of servicing capital and depreciation is consequently greater. Much of the fresh capacity will be created in the form of medium or small units. Although these might be economic if labour and raw materials are cheap and if markets can be found nearby, their manufacturing costs will be considerably higher than in the case of the larger units. The industry as a whole now has to spend much more on essential materials such as coal. The coal it gets is no longer as good as it used to be. Furthermore, with the shortage of wagons, much of it has to be moved by road, which is more expensive. The transport shortage has also affected the supply of the main raw material, bamboo. Large quantities of it have been accumulating at the railheads, while stocks at the mills have been falling "at an alarming rate." Since the Tariff Commission conducted its enquiry on paper prices, the cost of most of the materials used by the industry has increased substantially. The Government is aware of the fact, but seems reluctant to let mills charge more for their paper. Yet, it is not only necessary to compensate them for the increases in production costs; in addition, as Mr. Egan put it, "the expansion of the industry is bound to be retarded unless the price structure is revised to include adequate provision for return on employed capital."

As the output of paper increases, the problem of ensuring adequate supplies of the basic raw materials such as bamboo and sabai grass will become more urgent. State Governments have been in the unfortunate habit of granting mostly short-term forest leases to the mills, in an attempt to secure more revenue. But the effect of such leases is to encourage the uneconomic exploitation of forest resources. If longer leases were given, there would be a direct incentive for the mills to conserve the resources and to undertake replanting on a large scale. Mr. Egan recommended that the leases should be for at least 20 years; it will then be reasonable for the mills to spend the large amounts required for growing cellulosic raw materials. The need to encourage bamboo planting is the greater now since it is going to be used for the manufacture of rayon grade pulp. The raw material supplies for the paper industry will be supplemented by the growing use of sugarcane bagasse in many of the new factories. The bagasse has hitherto been used as fuel by the sugar mills; they will have to be provided with an alternative if they are to release adequate quantities of bagasse for paper manufacture.

MORE MONEY FOR U.K. EQUITIES

A PERSISTENTLY favourable influence on the industrial sections of the London Stock Exchange this year has been the imminence of a big increase in demand resulting from new legislation. The change in the law recognises, belatedly, the change in the status of ordinary shares, and allows trustees more freedom to invest in ordinary shares the funds at their disposal. On 22nd March, in anticipation of the enactment of the Trustee Investments Bill, the *Investors' Chronicle* held in London a conference on investment, which nearly 400 professional investment advisers attended. In the opening speech, Lord Robbins, a professor of economics who (like the late Lord Keynes) is also a chairman of big companies, said the existing legislation regulating trusts was based on the old idea that the value of money was stable; whereas now "if you are lending to the Government at 5 percent *per annum* and prices are rising at a similar rate, you are in fact lending to the Government at a zero rate of interest".

Lord Robbins suggested that social historians of the future would regard the shift of enlightened opinion towards ordinary shares as one of the most important developments of this post-war era. It has certainly transformed the capital markets, which are still in the process of adapting themselves to the demand for ordinary shares—and to the loss of interest in fixed-income stocks. Small investors have followed—or, sometimes, moved in advance of—the big institutions. Both are now employing the same medium: the principle of the unit trust, familiar to small investors, has been adopted by the municipalities in Britain. At the same time as the experts were discussing investment at the *Investors' Chronicle* conference, it was revealed that the municipalities were likewise anticipating the new freedom proposed in the Trustee Investments Bill by forming the Local Authorities' Mutual Investment Trust. A few authorities were already empowered to invest in ordinary shares, but for most the experience is new. The local authorities of England and Wales have approximately £500 million invested at present, and they are accumulating new funds (mostly for pensions) at a rate of £30 million or £40 million a year. Their intervention can appreciably affect the stock market.

The intervention of small investors is more controversial. The chairman of the London Stock Exchange has warned them against the hazards of investment in ordinary shares. On the other hand, some members of the Association of Unit Trust Managers are trying to initiate door-to-door selling of trusts' sub-units: if insurance can be sold by ringing the door-bell, they argue, so can investments. Even those members of the Association who oppose the idea are concerned less with the principle, whether people with modest savings should be induced to invest them in ordinary shares, than with the expense of that method of selling. Unit trusts have, unquestionably, brought the advantages of ordinary shares within the range of small savers, enabling capital sums that would be scarcely sufficient to invest in one company through the market's normal procedure to be spread over many companies. But in so far as the funds are invested in ordinary shares (the prior-charge element is normally small) the question of principle remains: should small savings be invested "at risk"?

Discussion of this question has often involved politics. The president of the New York Stock Exchange proposed to the annual National Foreign Trade Convention in New York last November that share-ownership should be expanded as an antidote to communism. As befitted the occasion, he was discussing the matter internationally, but the same argument is frequently advanced on the national plane. In a study of the spread of investment (published in its first Quarterly Survey this year) the Australia and New Zealand Bank remarked that the New York Stock Exchange had been much more active than the London Stock Exchange in encouraging the small investor. The bank recognised that there were "dangers in the evolution" of small investment—as in any other progressive development. "Even the desirable objectives of genuine investment and stable security markets could fail to eventuate if new investors are uninformed or liable to give way to pessimism"; and after a long period of rising prices of shares investors expect the rise to continue indefinitely, and they are unprepared for, and possibly disillusioned by, a reversal. However, the bank pointed out that, apart from the advantages to the individual, the community as a whole could expect to benefit from the wider spread of share-ownership. One of its benefits is "the greater equality of incomes that would be expected to develop gradually as many citizens of moderate means supplement their incomes by investment. As an objective of political policy—long recognised as desirable in democratic countries—such economic equality is presumably of social and moral value."

The question whether small savings should be put "at risk" is still open, but the growth of interest in ordinary shares is an established fact. An important development of this interest is its extension to foreign shares. A number of foreign shares, mostly American, have been quoted in London for many years, but extensive interest in European shares is recent—a consequence of the formation of the Common Market and of the growth of confidence in it. Next October the heads of the European bourses will meet the chairman of the London Stock Exchange in London, and the freer exchange of securities will be one of the subjects discussed. But the practical results of this meeting may disappoint the optimists, for many European companies, even very big ones, do not publish enough financial information to satisfy the London Stock Exchange. British investors—not only the small ones—are inclined to invest in the Common Market through the medium of the European unit trusts whose portfolios are spread over its territory.

THE POWER SHORTAGE IN CALCUTTA

THE serious shortage of power which has arisen in West Bengal, and particularly in Calcutta, was not unforeseen, although it was not expected to overtake the city as early as 1961. Several factors have contributed to the shortage. One of them dates as far back as 1951-52, when the Calcutta Electric Supply Corporation's plan for erecting another thermal station with an initial capacity of 120MW at Matiabruz was turned down by the authorities in favour of providing a bulk supply of energy from the then infant Damodar Valley Corporation. The rapid industrial development of eastern India, spurred on by the five year plans, has led to a growth in demand far in excess of the normal annual increase of 7 percent or 8 percent. In 1951, the D.V.C. estimates of demand led the authorities to believe that the spare capacity which they thought would exist four or five years later should be used by the C.E.S.C. When, however, the two systems were in fact interconnected, the D.V.C. was then and has ever since been unable to meet its commitments to Calcutta, in spite of the three years' notice tendered under the terms of the agreement between the two utilities. Since the interconnection, the D.V.C. has made every effort to increase its generating capacity so as to catch up with the unexpected increase in demand throughout West Bengal and Bihar. But a shortage of finance and procedural delays have hindered its plans, with the result that the power shortfall has tended always to grow in spite of the commissioning of new plant during the past six years.

The present crisis is the result of an endeavour to keep in operation plant which has for a long time been due for overhaul. The three initial units in Bokaro, for instance, have completed 50,000 hours in continuous operation when they were each due to receive attention after 20,000 hours. Overhauls were delayed because it was hoped that the new plant installed would be commissioned on schedule. But serious troubles arose, hence there was and still is no spare capacity to cover not only the D.V.C. overhauls but those of the C.E.S.C. as well. In Calcutta, the delay in overhauls has this year taken its toll. First the major unit at the C.E.S.C. New Cossipore station, a 50,000 kilowatt generating set, failed on 9th February. Then, on 1st April, a further unit of 30,000 kilowatts ceased to generate. Finally, on Tuesday morning, the turbo-alternator No. 1 had to be shut down; this has resulted in the total closure of the New Cossipore station. If the two units in Durgapur of 75,000 kilowatts capacity had been in full operation, as they were expected to be in the spring of 1960, then with the help of 20,000 kilowatts from the Durgapur coke oven plant and the new fourth set of 75,000 kilowatts in Bokaro, the Calcutta shortfall could largely have been met. In actual fact, however, the troubles experienced with the Durgapur units have restricted their capacity sometimes to half their rated output, and the damage to the transformer installed for the fourth set in Bokaro has postponed for several months the possibility of increasing the output of that station. The final blow has been the temporary loss of the 20,000 kilowatts exported by the coke oven plant in Durgapur.

There is every reason to hope that the new D.V.C. plant will shortly be in full commission. When that takes place, the existing units at Bokaro will have to receive attention. The hydro units in Panchet Hill and Maithon, which are at present generating, cannot do so after this month until the monsoon because of the lack of water at this season in the dams. The crisis thus cannot be expected to be of short duration. To alleviate the situation, industry in Calcutta is being asked to assist by altering working hours so as to minimise the demand during peak hours. This has already aroused opposition from workers, but if production is not to suffer seriously, there is no alternative.

Chemicals and Fibres: I.C.I. Venture

Chemicals and Fibres of India Ltd, a new I.C.I. Company, has been registered in Bombay a few days ago with an authorised capital of Rs. 10 crores. It will be a public Company in which the Indian public will be invited to participate in due course. The Company has been formed to take care of the I.C.I. manufacturing projects intended for the west coast of India. Negotiations are in progress for the acquisition of a large site near Bombay. It is expected that the new Company will manufacture a wide variety of chemicals and raw materials which have had to be imported hitherto, as well as new materials which have not been available in India in adequate quantities so far. The enterprise will save a large amount of foreign exchange. Its chairman will be Mr. J. M. Lall, chairman of I.C.I. (India) Private Ltd. Its board of directors will include two well-known Indian industrialists, Mr. Neville Wadia, chairman of Bombay Dyeing and other companies, and Sir Raghavan Pillai, managing director of Martin Burn. Full development of the site will be phased over a number of years.

Goodyear India Shares Soon

Goodyear, which was incorporated in India in 1922, announces that its new tyre factory situated on a 70-acre site in Ballabgarh, Punjab (21 miles from New Delhi on the Delhi-Agra road) is nearing completion. It is expected to be in production in the second half of this year. To assist in financing, the Company increased its authorised capital by Rs. 2 crores. It was subsequently converted from a private into a public Company, and on 28th March, 1961, its name was changed to Goodyear India Ltd. Goodyear India now intends to offer 400,000 equity shares of Rs. 10 each to the public at a premium of Rs. 7 a share. The prospectus for the issue will be published this month. A special feature of the issue is that no reservation of shares or firm allotments have been made for any of the directors or friends, so the entire issue of 400,000 equity shares will be made available to the public.

Isaac Holdens Gets Going

The ordinary shares of Isaac Holdens (India) Ltd have enjoyed good support around Rs. 12.50 since the publication of the Company's first report covering the period from 7th November, 1959, to 31st December, 1960. It is stated that 18 noble combs with the necessary preparing machinery have been installed and the erection of 12 new cards has started. The production on the six combs of the merino unit started in January 1961 and the standard of work is satisfactory. The initial response from trade and industry is encouraging. Production is increasing steadily with the progress in installing the machinery. It is hoped that the 18 noble combs will start producing in a couple of months. The rate of production is expected to be 5 million lbs of wooltops a year. Further orders worth Rs. 14.70 lakhs have been given and the import licence for 10 rectilinear combs, with the necessary preparing equipment, has been received. Production in this unit is likely to begin in the autumn. An application is being made to the Government of India for licences to bring machinery in order to achieve the rated capacity of 10 million lbs of wooltops a year. Isaac Holdens has also received a licence for building a dye plant and this section may start production in the autumn. During the period covered by the report, there was a loss of Rs. 6.40 lakhs because the Company had to incur the initial expenses of building the plant, but no revenue was earned.

Buckingham and Carnatic Maintains

Although the directors of the Buckingham and Carnatic Co. Ltd have decided barely to maintain the dividend at 10 percent, free of tax, its working for 1960 has shown marked improvement compared with the previous year. Realisations from sales of cloth, yarn and waste at Rs. 11.28 crores—an all-time high—are up by Rs. 71 lakhs. The Company's other income has increased from Rs. 17.81 lakhs to Rs. 31.24 lakhs. This is due to the fact that it received Rs. 15.07 lakhs from the Government under the export incentive scheme. Buckingham and Carnatic's exports at Rs. 1.97 crores showed a rise of about 10 percent over the 1959 figure. The gross profit has recorded an impressive rise from Rs. 1.16 crores in 1959 to Rs. 1.51 crores in 1960. The performance would have been still better but for the rise in manufacturing expenses. The cost of raw materials consumed increased from Rs 3.60 crores to Rs. 4.03 crores because of the high prices which had to be paid for Indian cotton and the premiums paid for foreign cotton Salaries and wages showed a rise of about Rs. 19 lakhs at Rs. 2.37 crores due mainly to the implementation of the Textile Wage Board award.

After providing Rs. 41.87 lakhs (against Rs. 38.41 lakhs) for depreciation and Rs. 39.25 lakhs (against Rs. 25.75 lakhs) for taxation, the net profit amounts to Rs. 58.28 lakhs, against Rs. 43.65 lakhs in 1959. Allocations include general reserve Rs. 17.85 lakhs (against Rs. 1.80 lakhs), debenture redemption fund Rs. 5 lakhs (against same) and development rebate Rs. 8 lakhs (against Rs. 9.58 lakhs). A sum of Rs. 9.65 lakhs (against Rs. 8.33 lakhs) has been set aside for taxation in relation to ordinary dividends. Preference dividends absorb Rs. 2.08 lakhs and ordinary dividends Rs. 17.85 lakhs, leaving Rs. 2.17 lakhs to be carried forward, against Rs. 2.31 lakhs brought in

The directors state that the Company's production programme was governed largely by cotton supplies due to the shortage of the commodity. The output would have been greater but for some unjustified stoppages by labour. The agreement with Binny and Co. Ltd extending its appointment as the managing agent expired on 31st December, 1960. In its place managing directors were appointed to take over the Company's management from 1st January, 1961. Around the current market price of Rs. 205, the Company's shares offer a tax-free yield of about 5 percent.

Bangalore Woollen Profit Down

The working of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd for 1960 shows a marked decline in profit in spite of larger sales. This is attributed to a temporary setback in production and the all-round increase in manufacturing costs. The rise in manufacturing expenses under raw materials, power and fuels, stores and machinery, and salaries and wages amounts to Rs. 46.40 lakhs. Sales of cloth, yarn and waste realised Rs. 5.73 crores, against Rs. 5.52 crores in 1959, but the gross profit fell from Rs. 77.65 lakhs to Rs 64.51 lakhs. The gross profit, as a percentage of sales, works out to 11.25, against 14.06. After providing Rs. 15.80 lakhs (against Rs. 14.78 lakhs) for depreciation and Rs. 19.80 lakhs (against Rs. 26.50 lakhs) for taxation, the net profit amounts to Rs. 23.50 lakhs, against Rs. 29.83 lakhs. Appropriations include development rebate reserve Rs. 3.37 lakhs (against Rs. 1.75 lakhs) and general reserve Rs. 2.50 lakhs (against Rs. 2 lakhs). Preference dividends absorb Rs. 46,800 and ordinary dividends Rs. 17.36 lakhs, leaving Rs. 2.49 lakhs to be carried forward, against Rs. 2.69 lakhs brought in. Bangalore Woollen has a paid-up capital of Rs. 1.28 crores and its reserves and surplus total Rs. 1.67 crores. The gross value of its fixed assets amounts to Rs. 3.98 crores, which has been written down to Rs. 77.20 lakhs. Around the current quotation of Rs. 205, the Company's shares offer a tax-free yield of about 5 percent, the gross dividend being Rs. 14.28 a share.

The directors state in their report that there was a temporary setback in all departments during the year due to the loss of workers with long service. They left the Company under the gratuity scheme which was introduced in 1959. The results were disappointing in the first half of the year, but there has been a marked improvement since then. A further cut in the licences for importing wool necessitated reducing production in the fine section of the woollen mills. The Company has been forced to take a decision on the closure of the wool mill in Hebbal; this will take place at the end of May 1961. The production in the silk section was affected by the shortage of both indigenous and foreign silk yarn. The directors, however, say that the demand for Bangalore Woollen's cotton and woollen cloth continues to be good.

India Firebricks Share Offer

The list for public subscription to the issue of India Firebricks and Insulation Co. Ltd, Bombay, will open on 18th April. (Fuller details of the offer were published in last week's issue of *Capital.*) The issued capital consists of 750,000 equity shares of Rs. 10 each and 25,000 7½ percent taxable cumulative redeemable preference shares of Rs. 100 each. The promoters, directors and their friends will take up 250,000 equity shares. The technical collaborators—Thomas Marshall and Co. (Luxley)—will be allotted 25,000 equity shares and 10,000 preference shares for consideration other than cash. The public issue of 475,000 equity shares and 15,000 preference shares has been underwritten. India Firebricks has agreed to the firm allotment of 100,000 equity shares to the Life Insurance Corporation against underwriting arrangements made with it.

The Company proposes to manufacture all kinds of refractories. Its plant will be located near Ranchi, and will have a production capacity of 72,000 tons of refractories a year. The estimated requirements in India by the end of the third plan are around 1,450,000 tons, as against the present production capacity of the industry of about 800,000 tons. Messrs Keramische Industrie-Bedarfs Kom. Ges Poul Gatzke of West Germany will supply the plant and machinery and provide the technical know-how. The project is estimated to cost Rs. 2.81 crores. This will be raised by a capital issue of Rs. 1 crore, a loan of Rs. 54 lakhs in foreign currency from the Industrial Credit and Investment Corporation of India and a rupee loan of Rs. 85 lakhs from the Industrial Finance Corporation. The balance will be raised by borrowing from banks and other sources.

later converted into a public one in 1960. Formerly, its main business was selling pipes, cement and sanitaryware. The sales section has now been discontinued and the activities are restricted to manufacturing. The Company proposes to build a lamp factory in Madras State with an initial production capacity of 9,000 incandescent lamps during each shift of eight hours. A licence has been granted for producing 5 million collapsible tubes a year. Technical collaboration for the tube project has been arranged with Anderson and Brunn's Fabriker of Copenhagen. Tube Suppliers also produces fire-clay refractories. A licence has been obtained for manufacturing 3,000 tons of these a year. It has plans to make other products also.

The Company's subscribed capital consists of 32,000 ordinary shares of Rs. 10 each. It is now offering 80,500 ordinary shares of Rs. 10 each for subscription at par. Out of this, shares worth Rs. 2.05 lakhs have been reserved for firm allotment and the remaining ordinary shares worth Rs. 6 lakhs are being offered to the public for subscription. (The details of the issue are printed on a later page.) The subscription list opens next Monday. The entire issue has been underwritten. The directors think that the Company will earn good profits in view of the satisfactory demand for its products.

McLeod Jute Results

Presenting the reports of the Empire Jute Co. Ltd, the Nellimarla Jute Mills Co. Ltd and the Chitavalsah Jute Mills Co. Ltd for the year ended July 1960, the directors say that the prospects are uncertain. The shortage of raw jute, combined with the credit restrictions on advances to mills against stocks of raw materials and finished goods, is likely to affect production. In the case of Nellimarla and Chitavalsah, the fibre shortage has been accentuated by the fact that these mills are situated in the south and generally buy their raw jute locally. As the southern crop is usually a late one, the mills have to build large stocks of fibre, but their finances have been reduced by credit restrictions. The working of Chitavalsah has been affected by labour troubles, although the modernisation of the spinning section has been completed. There was labour trouble in Empire and Nellimarla also. But the labour situation in the three mills has now improved.

The net profit of Empire has risen from Rs. 3.37 lakhs to Rs. 4.16 lakhs, after providing Rs. 4.82 lakhs (against Rs. 4.17 lakhs) for depreciation and Rs. 3.90 lakhs (against Rs. 2.75 lakhs) for taxation. The ordinary dividend has been maintained at 12½ percent, taxable. It is covered more than thrice and gives a yield of 6.3 percent at the present price of Rs. 19.94 a share. Development rebate reserve is allocated Rs. 1.42 lakhs, leaving a carry-forward of Rs. 70,285, compared with Rs. 93,729 brought in.

Nellimarla has reduced the ordinary dividend from 14 percent, taxable, to 3 percent, taxable. The profit has declined from Rs. 7.11 lakhs to Rs. 2 lakhs, after transferring Rs. 5.27 lakhs (against Rs. 3.52 lakhs) to depreciation. The dividend is covered more than twice and offers a yield of 2.7 percent at a price of Rs. 10.94 a share. Development rebate reserve receives Rs. 1.64 lakhs (against Rs. 4.12 lakhs). The carry-forward is Rs. 43,020, against Rs. 1,38,623 brought in.

There is a decline of Rs. 9.55 lakhs to Rs. 1.96 lakhs in the profit of Chitavalsah. The ordinary dividend has been cut to 5 percent, taxable, from 15 percent, taxable, and absorbs Rs. 1.51 lakhs. It offers a yield of 3.9 percent at a price of Rs. 12.94 a share. Development rebate reserve is allocated Rs. 2.11 lakhs (against Rs. 3.56 lakhs). The carry-forward is Rs. 39,326, compared with Rs. 2,33,594 brought in.

Cawnpore Textiles Earns More

The ordinary shares of Cawnpore Textiles Ltd have improved to Rs. 8.94 because the Company's performance during the year ended December 1960 has been good. The profit has increased from Rs. 8.72 lakhs to Rs. 12.02 lakhs, after providing Rs. 3.05 lakhs (against Rs. 3.21 lakhs) for depreciation, Rs. 98,800 for development rebate reserve and Rs 6.70 lakhs for taxation. An ordinary dividend of 36nP a share, taxable, has been declared, against nil in the previous year. A debit balance of Rs. 3,29,080 was brought in. After transferring Rs. 6 lakhs to general reserve, a balance of Rs. 56,518 is carried forward. In spite of the shortage of raw cotton, the production of Cawnpore Textiles increased substantially and exports rose by more than 50 percent. The directors are optimistic about the outlook in view of the modernisation which has already taken place. As further schemes for rehabilitation have been undertaken, they think that the installed capacity can be used to the maximum extent. Production has been concentrated on the remunerative lines. It is, therefore, hoped that the improved working will more than offset the increased burden placed on the Company by the rise in excise duty under the latest Central Budget.

New India Industries Earns Less

The working of New India Industries Ltd during the year ended December 1960 shows a smaller profit in spite of larger sales. The turnover increased from Rs. 1.01 crores to Rs. 1.14 crores, while the gross profit declined from Rs. 25.78 lakhs in 1959 to Rs. 21.94 lakhs in 1960. The setback in profit is attributed mainly to the uneconomic working of the camera factory due to a smaller output. The Company also had to incur higher expenditure on wages and salaries since it had to implement the Textile Wage Board's award. Besides, raw materials and stores cost more during the year. The production of the camera factory was interrupted more than once on account of the delayed issue of import licences as well as delayed supplies of raw materials by indigenous manufacturers. After allowing Rs. 3.56 lakhs (against Rs. 3.64 lakhs) for depreciation and Rs. 3.50 lakhs (against Rs. 9.20 lakhs) for taxation, the net profit amounts to Rs. 8.07 lakhs, compared with Rs. 10.72 lakhs in 1959. The allocation for development rebate reserve has been reduced from Rs. 79,331 to Rs. 33,084, but that for general reserve has been increased to Rs. 2 lakhs from Rs. 1 lakh. The dividend has been maintained at Rs. 25 a share, less tax, absorbing Rs. 6.9 lakhs. The balance of Rs 1.18 lakhs has been carried forward, against Rs 1.37 lakhs brought in. The directors state in their report that the production of cameras has improved appreciably during the past three of four months. The output is now around 2,000 units a month, against a monthly average of 646 units in 1960. The Company has submitted a scheme to the Government for manufacturing Agfa Isolette models. It has received an industrial licence for manufacturing photographic printing paper in collaboration with Agfa A. G. Leverkusen of West Germany. The licence for importing plant and machinery, it is stated, has also been received. The construction work for the factory has started in Mulund, Bombay. Orders for plant and machinery have been placed, and the directors hope that the factory's erection will be completed by March 1962. At the current price of about Rs 420, the shares of New India Industries offer a tax-free yield of about 4.2 percent.

Madras Rubber Share Offer

The subscription list for the Rs. 50-lakh equity issue of the Madras Rubber Factory Ltd will open on 24th April. A sum of Rs. 2.50 a share is payable on application and Rs. 2.50 on allotment. The Company's authorised capital is Rs. 4 crores, consisting of 1 million 6½ percent tax-free cumulative preference shares of Rs. 10 each and 3 million equities of Rs. 10 each. The issued and subscribed capital is Rs. 25 lakhs in equity shares. It is now proposed to issue an additional Rs. 1 crore through the issue of equity shares of Rs. 10 each. Out of this, 250,000 shares have been reserved for the Company's foreign collaborator—the Mansfield Tire and Rubber Co., Ohio—to be issued against payment for machinery to be purchased in the United States. Furthermore, the promoters, directors, managing agents and their friends have agreed to take up Rs. 25 lakhs worth of equity shares. The balance of Rs. 50 lakhs is being offered to the public. The entire public issue has been underwritten.

Madras Rubber intends to manufacture 300,000 heavy truck, bus and motor-cycle tyres. 300,000 tubes and 10 million lbs of camelback and tread rubber. The production and installed capacity of the factory will be one of the largest among the new factories. The directors do not anticipate any difficulty in marketing in view of the wide gap between supply and demand. The Company already has a rubber factory, which is making enough profits to declare a dividend on the increased capital. The Company has sufficient spare land for putting up the tyre factory and for further expansion. The production of tyres is expected to start within 18 months. When the factory goes into full production, Madras Rubber expects the turnover to exceed Rs. 10 crores, giving a net return of about Rs. 1.25 crores. The additional capital expenditure involved in the tyre project is Rs. 2 crores, of which Rs. 1 crore will be provided by the proposed capital issue and the balance will be met by borrowings from banks and other financial institutions.

Premier Construction Pays Less

The shares of the Premier Construction Co. Ltd, which touched a high of Rs. 234.50 by about the middle of March, were sold down to Rs. 198 last week. The setback is more than a mere technical correction of the preceding rise. It reflects the market's disappointment over the cut in the dividend from Rs. 18 to Rs. 13.50 a share, both taxable, and the equally discouraging results for the year ended December 1960. The gross profit of Rs. 18.59 lakhs is Rs. 8.12 lakhs lower than in 1959. The fall is due mainly to the reduced income from dividends and agency commission. The dividend income from subsidiaries has declined from Rs. 23.32 lakhs in 1959 to Rs. 17.42 lakhs in 1960 and the agency commission from Rs. 2.43 lakhs to Rs. 1.88 lakhs. After providing Rs 36,200 (against Rs. 31,500) for depreciation and Rs. 1.79 lakhs (against Rs. 4.96 lakhs) for taxation, the net profit amounts to Rs. 16.38 lakhs, against Rs. 21.10 lakhs in 1959. From this, the directors have allocated Rs. 1.67 lakhs (against Rs. 2.11 lakhs) for general reserve. Dividends on the ordinary, promoters' and preference shares absorb Rs. 15.94 lakhs, against Rs. 19.61 lakhs in the previous year, leaving Rs. 12,839 to be carried forward, against Rs. 1.36 lakhs brought in.

The directors state that the promoters' shares have been converted into ordinary shares and bonus shares have been issued to existing shareholders. The income-tax assessment has been completed up to the financial year 1958. But Premier Construction has gone in appeal against the assessment for 1957 and 1958. It proposes to alter the terms of the preference shares. As the three classes of the latter are subject to deduction of company income tax, the net dividends on them—even after the increase under the Preference Shares (Regulation of Dividends) Act is given effect to—will be less than what is contemplated under the articles of association. The directors propose to alter the terms with a view to making the dividends free of company income tax. Premier Construction is now virtually an investment Company. Of the total assets of Rs. 2.92 crores, investments account for Rs. 2.32 crores—quoted investments being Rs 1.85 crores and unquoted investments Rs. 47 lakhs. The market value of quoted investments is Rs. 2.54 crores.

Lynx Machinery Share Offer

Lynx Machinery Ltd was incorporated as a public Company in November 1960, and it has taken over the business of the partnership called Lynx Machinery Corporation which produced concrete vibrators, concrete mixers and other equipment used in the building and construction trades. The partnership concern sold goods worth Rs. 6.23 lakhs for the period from 1st June to 9th November, 1960, and earned a profit of Rs. 2.42 lakhs. The profit figure claimed is high for the kind of business Lynx Machinery does, but this is not of much relevance considering that the Company proposes to increase the share capital considerably. It is issuing 299,000 ordinary shares of Rs. 10 each for public subscription at par. The issued capital consists of 600,000 ordinary shares, of which 141,504 shares are already subscribed and fully paid. A further lot of ordinary shares worth Rs. 15.95 lakhs will be taken up by the directors and their friends. (The details of the offer are printed on a later page.) The subscription list will open next Monday. The proceeds of the issue are meant to be used for extending the existing lines of business and for manufacturing engines, cranes, furnace equipment and various other products. The existing factory is situated near Calcutta and another factory is proposed to be built. A number of agreements have been negotiated for foreign collaboration. The estimated cost of the project is Rs. 84 lakhs. Lynx Machinery will pay for the assets of the Lynx Machinery Corporation partnership. The directors think that they can reward shareholders with dividends in due course, and there is likely to be a satisfactory demand for the products Lynx Machinery manufactures.

Killick Industries Profit Down

With the dividend reduced from Rs 9 to Rs. 8 a share, less tax, it was taken for granted that Killick Industries Ltd, would show a decline in profit for the year ended November 1960. The gross profit for 1959-60 at Rs. 17.75 lakhs is down by Rs. 1.13 lakhs from the previous year's Rs 18.88 lakhs. The income from commission and office allowance from managed companies declined from Rs. 14.70 lakhs to Rs. 14.11 lakhs while that from trade investments was slightly better at Rs. 14.27 lakhs, against Rs. 13.86 lakhs. The income on account of John Baker and Sons increased from Rs. 31.33 lakhs to Rs. 35.42 lakhs, but the increase was largely offset by the rise in expenses from Rs. 29.05 lakhs to Rs. 32.54 lakhs. After providing Rs. 60,903 (against Rs. 1.14 lakhs) for depreciation, Rs. 668 (against Rs. 3,083) for development rebate reserve and Rs. 8.50 lakhs (against Rs. 8.90 lakhs) for taxation, the net profit amounts to Rs. 8.64 lakhs, against Rs. 8.81 lakhs in the previous year.

The directors have had to transfer Rs. 1.40 lakhs (against Rs. 1.60 lakhs) from dividend equalisation reserve to distribute a dividend of Rs. 8 a share which asborbs Rs. 10 lakhs (against Rs. 10.38 lakhs).

While the working for 1959-60 has been rather poor, the outlook for the Company seems encouraging because expansion, modernisation and rationalisation programmes are the highlights of the directors' report. It is stated that negotiations for the formation of a new Company for manufacturing Dexion slotted angles have reached an advanced stage. Steps have been taken to modernise the equipment of the factory for steel files in order to improve production and quality. Killick Industries has acquired all the shares of A. R. Hoseler—a Company dealing in aircraft spares. It has also taken 140 shares of A.C.C.-Vickers-Babcock. Referring to the working of Shivrajpur Syndicate Ltd which has yet to release its working results for the year ended November 1960, the directors state that the Company's sales will substantially exceed the previous year's figure, mainly due to barter deals. Against a paid-up capital of Rs. 1.25 crores, Killick Industries has reserves and surplus amounting to Rs. 31.94 lakhs. The investments at cost amount to Rs. 1.69 crores, of which quoted investments total Rs. 1.42 crores but their market value is placed at Rs. 1.21 crores. The gross block is valued at Rs 47.67 lakhs and depreciation amounts to Rs. 16.86 lakhs. Around the current quotation of about Rs. 107, the Company's shares offer a tax-free yield of over 5 percent.

Industrial Cables Share Offer

The list for public subscription to the issue of Industrial Cables (India) Ltd will open soon. The Company's authorised capital is Rs. 1 crore, made up of 90,000 equity shares of Rs. 100 each and 10,000 preference shares of Rs. 100 each. The present issue consists of 30,000 equity shares and 10,000 preference shares. Of this, the promoters, directors and their friends have taken up 15,300 equity shares. The balance of the equity and preference capital is being offered to the public. The entire issue has been underwritten by the Punjab Government, the New Bank of India and the D.L.F. Housing and Construction (Private) Ltd.

The Company is setting up a plant in Rajpura, near Patiala, with a production capacity of about 800,000 core-yards of cable a year on a single-shift basis. The production range will comprise cables from 1.10 kV for sections including and up to 0.5 square inch. This is said to be the first cable factory in Punjab. Production is likely to start by the end of the current year. Orders for machinery and plant have already been placed with some U.K. firms. The project is estimated to cost Rs. 70 lakhs, and the Industrial Finance Corporation has agreed to offer a loan of Rs. 15 lakhs.

Baroda Electric Meters

A new Company known as Baroda Electric Meters Ltd has been incorporated in Gujarat. It has obtained a licence to manufacture annually 60,000 single-phase household electric meters and 24,000 poly-phase industrial meters. The factory will be located either in Anand or in Baroda. The project is estimated to cost about Rs. 45 lakhs, including the foreign exchange expenditure which has been sanctioned by the Government. The Company's authorised capital is Rs. 1 crore, consisting of 75,000 equity shares of Rs. 100 each and 25,000 unclassified shares of Rs. 100 each. The issued capital will be Rs. 40 lakhs, of which the promoters, directors and their friends are likely to take up Rs. 15 lakhs or Rs. 20 lakhs. The balance is likely to be offered to the public before the end of May. The promoters are negotiating with a leading German firm for technical collaboration. The plant is expected to go into production by the end of 1962.

Nil from Cawnpore Sugar

The Cawnpore Sugar Works Ltd has produced satisfactory results for the year ended October 1960. The profit has increased from Rs. 6.78 lakhs in 1958-59 to Rs. 13.37 lakhs in 1959-60, after transferring Rs. 6.70 lakhs (against Rs. 6.30 lakhs) to depreciation and Rs. 7,500 to agricultural taxation. Development rebate reserve is allocated Rs. 1.60 lakhs (against Rs. 1.03 lakhs). The dividends have again been passed over, but the debit balance has been reduced to Rs. 4.18 lakhs, which is carried forward. The improved results are due to the bigger cane crush in the four factories. The recovery is lower because of the poor quality of the cane. The Marhowrah factory crushed 2.16 million maunds with a recovery of 10.13 percent, the Gauri factory 2.74 million maunds with a recovery of 10.37 percent, the Padrauna factory 4.02 million maunds with a recovery of 9.11 percent, and the Kathkuiyan factory 3.01 million maunds with a recovery of 9.40 percent. In the 1960-61 season, the results are likely to be much better as cane supplies have been bigger. The Padrauna and Kathkuiyan factories have been renovated to a great extent, and they are expected to work more efficiently. The Marhowrah distillery has been expanded and further expansion is being considered. The directors hope to wipe out the existing debit balance during the 1960-61 season.

Sen-Raleigh to Expand

The ordinary shares of Sen-Raleigh Industries of India Ltd have improved to Rs. 26.25 on expansion prospects. The Government of India has allowed the Company to manufacture house service meters and bicycle dynamo lamps, and to raise the production of chains. Shareholders will be informed in due course about how the money will be obtained for these projects. Sen-Raleigh Industries has improved its production and sales during the year ended September 1960. Sales at Rs. 3.58 crores are 22 percent higher than in 1958-59. Production would have been even higher if adequate supplies of raw materials were available. The imposition of the excise duty on bicycle components has increased production costs. After providing Rs. 20 lakhs (against Rs. 9.54 lakhs) for depreciation, the profit has improved from Rs. 23.73 lakhs in 1958-59 to Rs. 24.49 lakhs in 1959-60. The ordinary dividend has been maintained at 8 percent, taxable. It is covered more than four times and gives a yield of 3 percent at the present price. General reserve is allocated Rs. 3 lakhs (against same), repayment of loan reserve Rs. 2.75 lakhs (against same) and development rebate reserve Rs. 1.18 lakhs (against Rs. 9.88 lakhs). Taxation equalisation reserve receives Rs. 10 lakhs. The carry-forward is Rs. 1,17,247, compared with Rs. 1,60,686 brought in.

New P. V. C. Plant of Sahu Brothers

Sahu Brothers—the managing agents of the Dhrangadhra Chemical Works—will soon be forming a new Company for manufacturing poly vinyl chlorine (P.V.C.) and chlorine liquification. The factory will be located in Sahupuram—the site of the Dhrangadhra Chemical Works. It is proposed that the plant should have a total annual production capacity of 15,000 tons of P.V.C. A licence for this purpose is expected soon. The project is estimated to cost about Rs. 5 crores. Meanwhile, talks for foreign collaboration with French and Japanese firms are in progress. The machinery is proposed to be purchased on long-term deferred payment terms. The project will be financed largely by equity capital, and the foreign collaborators are expected to participate in the capiital of the Company. The project will be closely associated with Dhrangadhra Chemical Works which will supply chlorine, the main raw material, from its caustic soda plant. The shareholders of Dhrangadhra Chemical Works are likely to be given preference for participating in the equity capital of the new Company. The promoters hope to export a sizable part of the P.V.C. output. Locally, it will be consumed by manufacturers of electrical installations, P.V.C. sheets, leather goods and P.V.C. pipes and tubes.

It is learnt that Dhrangadhra Chemical Works has obtained industrial and import licences for expanding its existing production capacity of rayon-grade caustic soda from 30,000 tons to 50,000 tons a year. Full production is likely to be achieved by September 1962 when the production of chlorine will be increased from 75 tons to 125 tons a day. Sahu Brothers' new P.V.C. plant is expected to use about 100 tons of chlorine a day.

Role of Established Importers

Speaking at the annual general meeting of the Calcutta Import Trade Association in Calcutta last week, Mr J. H. Forman, chairman, said that the shortage of foreign exchange has made it necessary to ensure that nothing of what is available is misused. The Association has for a long time advocated that preference be given to the established importer, as against the actual user, when allocating foreign exchange for imports to a particular industry. Mr Forman said that the efforts of the Association have met with little success so far. The Government has created an impression among import traders that it does not altogether trust them. "This is most unfortunate as in our case it is an impression completely unwarranted. Undoubtedly, there have been cases of profiteering in the past, but I am certain that the accusation cannot be levelled at the members of the Association." Consumer bodies, the chairman said, have become increasingly conscious of the services which can be rendered by established importers. The delegate of the Indian Colliery Owners Association at the December meeting of the Port Import Advisory Committee said that the mining industry would be better served if established importers were permitted to obtain the bulk of the spares required by the industry and were made responsible for the distribution of available supplies. Meanwhile, the Government has accepted some of the recommendations of the Customs Reorganisation Committee, although it has rejected the plea for revising the present method of assessment of "real value". Mr. Forman said that the existing method is unjust and discriminatory and leaves too much authority to the Customs officer on the spot. Cases of obvious abuse should be dealt with severely, but to penalise established importers merely because the Government prefers actual users is unjust, since it does not take into consideration the services the former have rendered to the trade for many years.

Tea Production and Prices

The tea industry is a major foreign-exchange earner and employs the largest number of workers, so its expansion can provide more employment opportunities for India's increasing population. The Working Group appointed by the Planning Commission suggested that a production target of 900 million lbs and an export target of 600 million lbs be fixed for the third plan. Speaking at the annual general meeting of the Indian Tea Planters Association in Jalpaiguri last week, Mr. Inamul Hossain, chairman, said that the Government should see to it that Indian tea is able to compete with tea from other countries in quality and price. The industry should have sufficient elasticity to adjust its pattern of costs to the changing demand in the markets. Unfortunately, production costs have risen due to the implementation of labour welfare measures, increasing costs of coal, iron, steel, tea chests and fertilisers, and the levy of numerous duties and taxes by the Central and State Governments. The industry, Mr. Hossain said, needs capital for its development and expansion. Previously, it could plough back profits to meet its future capital requirements, but the demands on profits nowadays are so many that it is difficult to build reserves after paying a modest dividend. Mr. Hossain said that a tea bush is a wasting asset and its normal economic life is generally estimated at an average of 60 years, so replanting or "infilling" is essential for maintaining the productivity of the estates. The Plantation Enquiry Commission pointed out that 30 percent of the tea acreage had been planted before 1900, and that many tea estates were unable to undertake systematic replanting because of the sharp rise in costs. There is also a need for research to improve the quality of common tea since it will face increasing competition in foreign markets. At the opening ceremony of the Dooars Tea Research Institute in Malbazar last week, Mr. B. C. Ghose, member of the executive committee of the Association, said that the institute would enable scientists to study the problems of common tea grown in Dooars and Terai estates.

Industrial Process Control Equipment

The Bombay firm of Toshniwal Brothers has secured an industrial licence for setting up a plant for manufacturing industrial process control and test equipment. The factory, which will be located in Ajmer, Rajasthan, will produce equipment worth Rs. 60 lakhs a year. The proposed plant, it is claimed, will be the first of its kind for large-scale production, with possibilities of further expansion. The project is estimated to cost about Rs. 65 lakhs, of which the foreign exchange component is valued at Rs. 22 lakhs. Hartmann-Braun of Frankfurt, West Germany, will collaborate in the venture. Details about the terms are being finalised. The Company, it is said, will be allowed to export its products to neighbouring countries like Ceylon, Burma, Pakistan and Nepal.

Coal Crisis in U.P.

The high-level conference of railway managers convened by the U.P. Chief Minister, Mr C. B. Gupta, to devise ways and means of easing the coal shortage in the State has ended in failure. The representatives of the Coal Controller, who were present at the conference, could neither give any *ad hoc* allotment to tide over the present coal crisis nor promise any immediate increase in the State's daily quota of 50 wagons for brick-burning coal. The State Government pointed out that unless supplies are available soon, the brick-kilns will not be able to manufacture anything before the rainy season. Mr. A. K. Sarkar, the Deputy Coal Controller, however, said that the diversion of coal from higher priority items would not be possible. The crux of the situation is that there is more coal but not enough transport capacity.

The Railway Board's Director of Traffic, Mr. J. Singh, said that the railways promised to lift 51 million tons and actually moved 49.5 million tons, leaving a gap of only 1.5 million tons. The U.P. Chief Minister, Mr. Gupta, frankly expressed disappointment that the conference should have ended in mutual recrimination.

The Deputy Coal Controller, Mr. Sarkar, explained the Government's scheme for coal dumps and for switching over coal supply on the broad-gauge to mammoth trains with new types of wagons. Coal would be booked to Government nominees like district magistrates to prevent blackmarketing. He gave one instance of how, against a booking of 720 wagons to U.P. for brick-burning coal, the State Government had knowledge of only 220 wagons, and did not know anything about the distribution of over 500 wagons. Mr. T. L. Mahindra, Director of the U.P. Government's cement factory in Churk, said that to receive "box" trains, the factory's sidings and loading equipment would have to be changed at a cost of Rs. 20 lakhs. Similarly, other industries will have to incur enormous expenses in remodelling their sidings, which will upset their cost structure. Mr. Singh stated that by November the railways would be able to bring coal in "box" trains and that the State Government should try to set up as many dumps as possible to avail itself of the facility.

Taxation in U.P.

In his presidential address at the latest annual general meeting of the Upper India Chamber of Commerce in Kanpur recently, Mr. H. L. Khanna discussed three taxes which particularly affect trade and industry in the State. They are the sales tax, the cane cess, and the octroi and transit dues levied by municipalities. The State's sales tax system is a composite one, under which there is a single-point tax on some commodities and a multiple-point levy on others. Mr. Khanna suggested that the multiple-point tax should be abolished, and also that the tax on raw materials should be reduced in the case of existing industries and abolished for a specific period for new ventures. As for the cane cess which is levied in the State at Rs. 3 a maund, the highest rate in India if Mysore is excluded, Mr. Khanna said that more than ten years ago, the Tariff Commission had pointed out that the levy of a tax on raw material was, as a normal rule, wrong in principle, and was particularly objectionable when imposed on the raw material of an industry like sugar with which the consumer throughout the country was intimately concerned. Some years ago, the disadvantage on this account alone for a mill in U.P. was Rs. 6 a maund as against a mill situated in the former Bombay State where the cess was lower. The U.P. rate needed to be lowered and the proceeds should be spent on the purpose for which the cess was originally imposed, namely, research, higher yields and the development of better cane, he suggested. Referring to the commission payable to co-operative societies—a levy which obtains only in U.P. and Bihar—Mr. Khanna said that the cess and the commission might be consolidated into one levy at a reasonable level. As for the octroi and terminal taxes, Mr. Khanna demanded that octroi should be levied on the basis of weight and not *ad valorem*. Secondly, a model schedule should be drawn up by the Government and made applicable to all local authorities. Thirdly, as far as possible a switch-over should be made from octroi to a terminal tax, and no transit dues should be levied. Municipalities have been very lavish in the number of items which they include in their octroi schedules, he said.

In a reference to the chronic power shortage in U.P. and the various State schemes to generate more electricity, Mr. Khanna complained of the high cost to the consumer resulting from the high cost of the projects. As against Rs. 625 a kilowatt in private schemes, the cost of hydro-electric schemes of the Government works out to Rs. 1,500 a kilowatt. Even in the case of the Kanpur extension project—a thermal plant—the cost comes to Rs. 1,240 a kilowatt. He deplored that the development of joint-stock organisation in U.P. has not kept pace with its capital resources. At the end of 1955, there were over 1,746 companies in the State with a total paid-up capital of only Rs. 36.94 crores.

Rise in U.P. Population

The population of Uttar Pradesh increased by 10.4 million during the last ten years, registering an increase of 16.5 percent over the 1951 figures, according to provisional census figures. The present population of the State has been estimated at 73.6 million, against 63.2 million in 1951. There has been a remarkable rise in the population of the K.A.V.A.L. towns of the State, the figures for which, compared with 1951, are as follows: Kanpur 947,793 (against 705,383), Agra 509.108 (against 377,665), Varanasi 573,558 (against 355,777), Allahabad 423,272 (against 332,295) and Lucknow 662,196 (against 496,861). Varanasi recorded the largest rate of rise, making it the third largest town in the State. There are more males than females in all these towns. In Lucknow, there are 370,115 males and 292,081 females. In Kanpur, there are 545,184 males and 402,604 females. Varanasi has 311,274 males, against 262,284 females and Agra has 278,966 males, against 230,142 females. The overall figures indicate that the ratio of men and women remained unchanged in Uttar Pradesh since 1951. There are 90.7 women to every 100 men in the State. The percentage of literacy which was 10.4 in 1951 has risen to 17.5.

Developing Road Transport

The chairman of the Motor Vehicle and Allied Industries Association, Mr. T. S. Santhanam, recently said that roads should be improved since traffic is growing. The Madras Government has spent about Rs. 2.15 crores on road improvement in the past five years, but the increase in the number of motor-vehicles indicates that this is not enough. In suburban areas, where industrial growth is rapid, the development of roads is neglected. Since the railways cannot cope with the increase in traffic, road transport facilities should be expanded as recommended by the Masani Committee. The Centre and the States obtain Rs. 140 crores from taxes on road transport, but they have done little to help the industry develop on sound lines. Discussing the Neogy Committee's views on competition between the roads and the railways, Mr. Santhanam said that the haulage cost a ton-mile is 5.28nP on the broad-gauge and 9.18nP on the metre-gauge, whereas road transport costs from 12nP to 47nP a ton-mile. Heavy taxation, he said, is responsible for the higher cost of road transport. But the expansion of railway facilities is expensive. Besides, road transport serves distributors more effectively. Urging a review of the transport policy under the third plan, Mr. Santhanam said that the railways alone cannot meet the need for more facilities.

U. S. Business Conditions

Business observers who have been looking for the recession to bottom out around this time have found much in recent news to encourage them, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. The arrival of spring weather brought customers to department stores and motor-vehicle dealers, and ordering by business and Government has also picked up. Business investment plans reported in March indicate that the decline in plant and equipment expenditure may be halted and even reversed during the second half of this year. Industrial production and personal income nearly held their own in February, while housing starts rose for a second month. Employment increased slightly, although unemployment held around 6.8 percent of the labour force. Some of the improvement in the last few weeks may be a natural reaction after the unusually bad weather early this year, but the revival in buying interest points to something more basic. A key item among the encouraging reports was the increase in new orders received by durable goods manufacturers during February. The gap between shipments and new orders virtually disappeared. Part of the rise in orders was due to stepped-up defence contracts with aircraft and instrument firms, but demand for steel and other basic materials also picked up a little. This encourages the hope that the stringent inventory controls of the past year have done their work, that stocks of purchased materials have been cut to a practical working minimum, and that the way has been cleared for any gain in consumption to set off buying all along the line. These are all signs of a probable "bottoming out". Solid statistical confirmation must await later figures but the prospect is encouraging. It is still far from clear, of course, whether the economy will turn up promptly as in 1958, or will bump along the bottom for several months as in 1954. It is even less apparent whether the recovery will be vigorous and sustained, or mild and incomplete.

Industrial activity in February held at nearly the same level as in January, and preliminary reports indicate little further change in March. The Federal Reserve index of industrial production (seasonally adjusted 1957 equals 100) stood at 102 in February, compared with 102.4 in January. Output of steel, television sets and some appliances increased, but offsetting declines were registered in motor-vehicles, furniture, and building materials. Motor-vehicle output was still being cut back in March, but an upsurge in sales, trimming dealers' stocks below one million cars, has led to an increase of 18 percent in the daily production rate scheduled for April. It would appear that the weather had much to do with the sales setback in early 1961, and industry officials now talk hopefully of a good spring season.

Steel mills, among the earliest to feel the impact of inventory cutbacks, have also led the rest of the economy on the upswing. New orders exceeded shipments in both December and January (the latest months published) and order backlogs reportedly have been strengthened further in February and March despite lagging demand from the motor-vehicle industry. Steel output, at a rate of 69 million tons a year in December, ran in March at the equivalent of 83 million tons. If industrial activity touched bottom in February or March, the recession will indeed have been one of the mildest on record. Overall, the dip in gross national product may have been only about 1 percent. Industrial production decreased by 7.1 percent through February from the business cycle peak reached last May—about as long a decline as in previous post-war recessions, but not so deep. The contraction through February was smaller than the 10.2 percent decline in 1953-54.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 9.8 points during August 1960. There were rises in sugar, tea, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, tyres, motor-cars, bicycles, electricity and railway ton-miles.

CORRESPONDENCE

SALARIES IN THE PUBLIC SECTOR

(To the Editor of "Capital.")

Sir,

Reading that portion of the Ditcher's remarks dealing with Dr. Richard Beecham's salary of £24,000 a year in *Capital* of 6th April, a possible solution presented itself to me. Could not employees of the Government and nationalised industries be given terms of employment on a net basis, so that their nominal salaries would be very much smaller but they would not have to pay any tax on them? The full tax would be deducted at source and paid to the Revenue Department, if necessary for accounting purposes, or alternatively both Government expenditure and revenue would be reduced by equal amounts but in different departments. This system would have the advantage of appearing to run such Government departments or nationalised industries very economically, and would not publicise the huge salaries paid at the top levels. If the employee concerned should have any private income, his salary would of course have to be grossed up for the purpose of ascertaining his total income and computing the tax due on his private income.

Yours etcetera,
I. C. Mackenzie

Calcutta, 7th April.

TEA SEASON, 1901

THE abnormal drought now obtaining over most of the tea districts looks as if nature was going to solve the question of reduction of crop, which seemed to defy human ingenuity to find a way out of, that did not bristle with difficulties; indeed, whatever scheme was propounded, it was immediately combated as impossible; and a nostrum for the disease seemed as far off as ever until this drought set in, and now many of the districts will probably find, before the drought is over, that 5 to 10 percent of plant is dead; and it is a much more severe remedy than any of the proposed nostrums, for it means cultivating an area all giving 5 to 10 percent less yield, and which must continue for ever and ever, for no matter how vacancies are filled in, they never yield the same as original plant. Indeed, it is a question whether putting out new area to the same extent does not pay better, as from this the tea is much stronger and the yield greater and earlier per acre—possibly double. We cannot say that we agree with Sir Patrick Playfair in his utterance that a fine dry cold weather was followed by a good "vintage", in fact, we have always been led to believe the opposite. The human subject, when it has undergone a period of training, calculated to give it the opportunity of exerting its best effort, cannot long undergo the system without deleterious effects to its constitution. In the same way exactly is the tea bush affected, and season 1901 will not, we are afraid, be noted as a good vintage year, but it is possible, as in 1898, that it may be followed up by an extraordinarily favourable cold weather, and the vintage of 1902, like that of 1899, be of extra good quality and strength; but let us hope, if such be the case the lesson of 1900 will not be repeated, and leaf of any kind plucked, foisted on the market.

CAPITAL
11th April, 1901

A Ditcher's Diary

Some Congressmen's idea of placing a constitutional ban on what are called communal Parties is so manifestly fatuous that I am inclined to look for some shrewd political motive behind it. One that suggests itself is that the Congress is anxious to postpone the next general election, for it is obvious that any tinkering with the present electoral procedure will lead to protracted litigation, if not worse. Others besides Congressmen are disturbed over Jabalpur and its sinister implications; and the Jan Sangh's recent victory in a Delhi by-election has to be read with reported stirrings in the Muslim League here and there. I am told that some of the tensions are more provincial than communal. But it is rather late in the day for the Congress to proclaim that it will have no alliance with any communal Party; and it is sheer sophistry on the part of Mr. Sanjeeva Reddy to say that in Kerala his Party did not have an alliance with the Muslim League. (Even more ingenious was Mr. Nehru's pleading that the Muslim League of Kerala was not the Muslim League, not really.) The plain fact is that communal preferences are still strong in most parts of the country; and all Parties occasionally confront constituencies with candidates chosen on grounds other than the strictly secular. The Congress does it; the P.S.P. does it; and the communists do it. Maulana Azad's death led Mr. Nehru to look for a muslim in the Cabinet; and in Punjab, Sikhs have to be placated for reasons that are plainly communal. In the communist ministry in Kerala, too, there was a nice balance between ezhavas, muslims and the rest. The disease thus recognised, where to look for a remedy? The Congress has suggested the worst way out, for any constitutional amendment or legislative enactment restricting the freedom of all Parties to contest elections is sure to be abused—to the abridgement of other essential democratic liberties. The thing for the Congress to do is to live up to its precepts, which means that the Congress itself must be transparently non-communal. The Party is; its members often are not, and these members are locally so powerful that the Party can ill afford to do without them, especially when an election is only a few months away. I wish I could be sure that there will be an improvement after the elections.

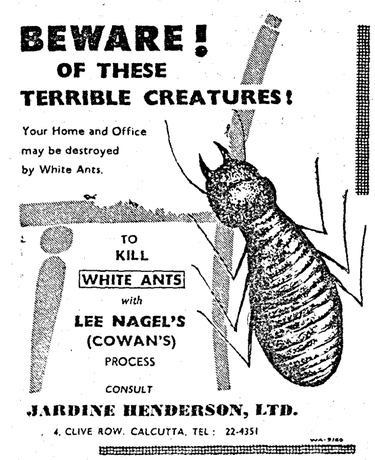
If the new United States Ambassador to India, Professor Kenneth Galbraith, fails to hand over along with his credentials a blank cheque for aid for the third plan, it seems that quite a few people in New Delhi are going to be profoundly disappointed. So many much-needed adjustments to the plan have been postponed, and so many personally-sponsored prestige projects retained when they ought to have been abandoned in the country's wider economic interests, that unless the United States is now prepared to pay up first, and Mr. Galbraith to ask his questions afterwards, the planners may be faced with what Mr. Dulles once called an "agonising reappraisal". From what we have learned about President Kennedy so far, however, it seems unlikely they will need to go to the trouble. The new President appears to be intent on making the same mistake as his predecessors—judging friendship as a commodity which can be bought—and is going all out in a bid for U.S. popularity among the uncommitted countries in which mere money is no object. In the case of Africa, it seems that the interest of America's allies might soon be no object either. But respect for allies has not been a particularly prominent U.S. characteristic in recent years, hence the undoubted advantages which accrue in this world from being "neutralist" rather than being willing to stand up and be counted. What makes the pay-off even more likely is the fact that Professor Galbraith—as far as one can judge from his public utterances—is approaching the Indian problem in the spirit of a later-day economic Kipling—with a set of romantic and impracticable ideas. I have been assured on authority which I respect that Mr. Galbraith is in fact a great realist and a man devoid of ideologies. From his books I had personally gained a similar impression. But if he is to take time to assess the Indian situation realistically, he may be too late in recommending the aid which nobody is going to deny is not imperatively urgent. Anyway, the Professor is in politics now, not in his lecture room; which means that purely economic considerations will have to take second place to questions of national interest and political expediency. Even so, it would probably be a mistake for New Delhi to be too confident. For a man who may be inclined to ignore the interests of his allies, President Kennedy is still seeking to shift a larger proportion of foreign aid to their shoulders. That means that Europe and Japan will in future have a much larger say in combined aid programmes than in the past, and I cannot see such economic realists as the West Germans, for instance, being prepared to shell out too much of their treasure to buy popularity for President Kennedy or to vindicate the academic theories of Professor Galbraith.

Few hearts will have been broken by the news that the Indian communists gathered in Lumumbanagar were as divided as the leaders of the Congo itself. (*Poor Lumumba!*) To the uninitiated, much of the disputation seems academic. What difference does it make whether the Congress is described as a progressive bourgeois Party or a Party of irredeemable reaction? The fact the communists have to face up to is that the Congress is in power and the communists are not. Does the C.P.I.'s election strategy depend on this theoretical formulation? I doubt it, for while the C.P.I. will doubtless seek alliances with various leftist Parties in places where they are by themselves not strong enough, it can hardly hope to make a deal with the Congress. Elimination of three-cornered contests must be the communists' chief aim; but I cannot see them achieving it in the present political configuration of the country. Although they may secure some local gains here and there by talking some leftists into another Popular Front, in the long run, strictly on tactical grounds, I am inclined to agree with the fundamentalists—the orthodox Stalinists. Apparent isolation may be the immediate result; and there may be fewer communists in the legislatures. But the communists have enjoyed (if that is the word) partial power in Kerala and should know from experience that communism will never come that way. I am in fact prepared to believe that some corruption crept into the Party when it was running the Kerala Government. And parliamentarianism does something to a Party's revolutionary zeal. Far better to remain in opposition and retain the rebellious fervour of the boys, while watching international developments. Mr. Suslov's presence is important for, like Al Capone, the Kremlin "don't want no trouble"— at this point. But a moving point it is; and if I were a Party tactician I would wait. Waiting too is demoralising for a large Party, but less so, I suggest, than wielding power at the State or municipal level. With the Congress weakening daily, the communists may well be wise not to weaken their rigid principles. But then, however long the debate in Lumumbanagar, the final decisions will be taken in Moscow. Not even in Peking—yet.

The order from the Chinese Government's politburo that scholars must exalt comrade Mao as the hero of world communism and the supreme exponent of Marxist-Leninism, emanates, I believe, from a desire to rehabilitate the Mao personality cult which has become slightly discredited recently. But if Mao is not careful, *he may find* his minions will do for him after his death what Mr. Khrushchev and his supporters did for the Stalin cult at the 20th Party Congress in Moscow. One can obtain some interesting glimpses of what communism stands for in China and India from two books I have just finished reading. These were sent to me by the Oxford Book and Stationery Company of Calcutta; one is entitled *A Decade of Mao's China*, and is a collection of essays by some leading authorities on Far Eastern affairs; the other is *Communism in India* by Messrs Gene D. Overstreet and Marshall Windmiller and is a truly encyclopaedic work. I should like to compliment the Perennial Press of Bombay, the publishers of these two books, for making available such painstaking and original researches into the political aspirations of the Communist Parties of China and India. It seems that the shortage of food and consumer goods, the continued low standards of living, the failure of the communes and now the widespread famine conditions—exaggerated claims of official statistics notwithstanding—have so disillusioned the people of China that there has recently been serious rioting in the communes. Mao's overture in the form of the "hundred flowers" proposal, it is argued in one of the essays, was merely a clever device designed to weed out the counter-revolutionaries and deviationists who refused to respond like robots to the Party dictates churned out from radios and street loudspeakers. When that too failed, the militants contrived to divert the people's attention by launching an ambitious scheme of territorial expansion in much the same style as that adopted by other hard-pressed totalitarian rulers in the past. The Communist Party of India has been unable to reconcile its dual rôle of national political Party and Sino-Russian Trojan Horse and is now quite rightly attracting public ridicule for its equivocations. After watching the antics at Lumumbanagar I can agree with Messrs Overstreet and Windmiller that the Party is still undecided whether or not it should take an active rôle in Parliamentary Opposition, and if so, to what extent it should allow itself to be dictated to by Moscow and Peking. Personally I would be well content to see it go on wasting its energies in trying to make up its mind.

At the rate things are going, the war of the sexes will never be won. There's too much fraternising with the enemy.

THE DITCHER



THE UNITED COMMERCIAL BANK LIMITED

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Eighteenth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1960.

The net profit for the year, after providing for taxes and for all known and antipicated charges, and including Rs. 1,04,096.00 brought forward from the previous account, amounts to Rs. 68,46,870 98

The Directors have transferred Rs. 30,00,000 to the Reserve Fund and provided Rs. 13,00,000 for bonus to staff. They now recommend the payment of a dividend at Rs. 6 per share, subject to deduction of tax, which will absorb Rs. 24,00,000, leaving an unappropriated balance of Rs. 1,46,870.98 to be carried forward.

The Reserve Fund of the Bank now exceeds the paid-up capital and stands at Rs. 2,05,00,000.

The working of the Bank during the year was satisfactory and profit showed an improvement over the previous year's figure.

Stringent conditions prevailed in the money market almost throughout the year.

During the year branches of the Bank were opened at Bhopal, Durgapur, Kota, Maligaon (Gauhati), Mandvi (Bombay), Nagapattinam, Pipri and Ranchi.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. I. P. Goenka, Mr. Y. N. Mafatlal, Mr. R. L. Nopany and Mr. M. L. Tapuriah, who offer themselves for re-appointment

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

On behalf of the Board,

G. D. BIRLA
Chairman.

Calcutta,
1st March, 1961.

BALANCE SHEET AS AT 31st DECEMBER, 1960.

REPORT OF THE AUDITORS
TO THE MEMBERS OF THE UNITED COMMERCIAL BANK LIMITED

We have audited the attached Balance-sheet of The United Commercial Bank, Limited as at 31st December, 1960, and the annexed Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

We report that :

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance-sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date

THE UNITED COMMERCIAL BANK LTD.

CHAIRMAN, MR. G. D. BIRLA'S STATEMENT

Statement of Mr. G. D. Birla, Chairman, circulated to the Members at the Eighteenth Annual General Meeting held on Wednesday, the 5th April, 1961.

Gentlemen,

You will notice from the Directors' Report and the Accounts of the Bank for the past year now before you that while the profits have maintained their upward trend and show a satisfactory expansion, our deposits were somewhat down after the rapid increases of the past years.

Deposits

The deposits at the end of 1960 at Rs. 88.94 crores showed a decline of Rs. 7.74 crores against a rise of Rs. 18.40 crores in 1959. The fall is attributable to withdrawals of funds for business purposes, the sustained demand for bank credit and continued stringency of money practically throughout the year. The deposits of the Bank, however, have started going up since the date of the Balance Sheet.

Cash and Securities

Cash on hand and with banks and money at call and short notice were Rs. 9.57 crores and represented 10.8 per cent of the deposit liability. In 1958 and 1959 we made substantial purchases of Government Securities with a view profitably to invest funds which would otherwise have remained idle, but during the year under review we reversed the process in order to make funds available for advances to our customers. As a result of the realisation of part of our investments, our portfolio of Government Securities, Shares and Debentures declined from Rs. 40.79 crores to Rs. 33.88 crores. There was a further vigorous demand for funds towards the close of the year which was met by resort to loans from the Reserve Bank of India against Government Securities and Bills.

Advances and Bills

Our advances rose over the year from Rs. 36.57 crores to Rs. 42.47 crores while our bills discounted and purchased showed a small reduction from Rs. 19.68 crores to Rs. 18.91 crores.

The Bank has been providing credit facilities to various types of Small Scale Industries. The number of industrial units to which credit facilities have been made available is over 650 of which individuals and partnership firms number nearly 550 and joint stock companies make up the remainder. The total of limits sanctioned is of the order of Rs. 4 crores and the actual availments exceed Rs. 2.50 crores.

Liquidity

Our quick assets, viz. cash and free Government Securities amounting to Rs. 35.00 crores formed 39.4 per cent of our total deposits. The total of our liquid assets consisting of cash on hand and with banks, money at call and short notice, unencumbered Government Securities and Bills amounted to Rs. 53.91 crores and represented 60.6 per cent of our deposit liability as compared to 67 per cent twelve months ago.

Profit and Loss Account

The year's working has resulted in a further rise in profits. This is due in a large measure to the higher average total of our advances and bills throughout the year, the operation for a full year of the reduction in interest rates on deposits which took effect from 1st September, 1959 and the increase in the lending rate brought into effect under direction from the Reserve Bank of India in October last. The improvement of profits attributable to these influences was partially offset by the lock-up of funds in special deposits with the Reserve Bank of India which could otherwise have been used to liquidate the higher-interest-bearing loans from the Central Banking Institution.

The small rise in charges for interest on deposits and borrowings is due to the higher average level of borrowings from the Reserve Bank of India over the greater part of the year while working expenses like salaries and other operating costs have continued to rise.

The increased profits have enabled the Board to transfer Rs. 30 lacs to the Reserve Fund and thereby raise it to Rs. 2.05 crores, which is Rs. 5 lacs more than the paid-up capital of the Bank, and at the same time it has been possible to increase the rate of dividend to shareholders from 11 per cent to 12 per cent per annum, subject to tax. The amount allocated for bonus to staff has also risen from Rs. 11 lacs to Rs. 13 lacs.

Reserve Fund

The year 1960 will be remembered as a landmark in the Bank's history, as at the close of this year, the Bank's Reserve Fund exceeded its paid-up capital. This Reserve Fund is built up entirely out of the profits within 18 years of Bank's existence —that too in spite of heavy taxation. It is always the policy of the Directors to strengthen the Reserves of the Bank to safeguard the interests of the depositors. I am thankful to the shareholders for their restraint in being content with modest dividends in the early years of the Bank's career to enable the Bank to build up the Reserves in order to strengthen its financial position. This is not to say that the shareholders have been starved of reasonable dividends because with growing prosperity, the Bank has paid progressively higher dividends.

Industrial Growth

During the year under review industrial production grew at an accelerated rate. In the first ten months of 1960 industrial production showed a rise of 11.5 per cent as compared with 8.7 per cent in 1959 and 1.7 per cent in 1958. The basis of calculation of these index figures themselves requires to be re-cast inasmuch as it is felt that the weightage given to some of the older industries is not justified in the present circumstances and that the many new industries which have come into existence have not been assigned the importance that is rightly due to them. A provisional re-calculation by foreign experts of the index on a more rational basis would appear to indicate that the increase in production in the first ten months was not 11.5 per cent but 15 per cent.

Money Supply

Money supply with the public at the end of 1960 was Rs. 2630 crores made up of Rs. 1885 crores of currency with the public and Rs. 745 crores of deposit money, i.e. demand deposits of the public with all the commercial banks. The increase in currency was Rs. 144 crores while the increase in deposit money was only of the order of Rs. 70 crores. Analysing the expansion of money supply in terms of bank credit, there was a sharp rise of Rs. 236 crores in the public's net indebtedness to banks which contrasts with a sizeable decline of Rs. 107 crores in 1959. The rise in bank credit to Government was only Rs. 43 crores in 1960 as compared with Rs. 246 crores in 1959. The gold and foreign exchange reserves, inclusive of the balances of Government of India abroad, declined in 1960 from Rs. 387 54 crores to Rs. 319.05 crores. The contractionist effect of the reduction in bank credit to Government and the decline in foreign balances has been severe and is reflected in the reduced liquidity of the banking system.

Money Market

The monetary climate in 1960 was far from comfortable and for the best part of the year the banking system had to operate under various restraints. Credit conditions were stringent, unrelieved by even occasional ease, and there was no sign of any downward tendency in advances during the second half of the year which, by tradition and past experience, is considered as the slack season. Bank credit rose rapidly, as usual, during the first four months of the year and thereafter the volume of credit continued, without contraction, at the peak figure of the year right up to the middle of December when the new season's demand made itself felt and advances, once again, resumed their upward trend. The increase in bank credit during January—April 1960 amounted to Rs. 165.89 crores while during the same period the deposit resources of the bank failed to grow to a corresponding extent but rose only by Rs. 102.56 crores. Whereas in 1959 bank credit shrank by Rs. 97.5 crores in the slack season there was no such contraction in the slack season of 1960; the return of funds from agricultural and other seasonal advances was obscured by the intervening increase in industrial advances. The exhortation addressed to banks by the Reserve Bank of India in April 1960 to bring about a reduction of Rs. 110 crores in advances by the following October proved impossible of fulfilment by most banks. Borrowings from the Reserve Bank of India and the State Bank of India reached the peak figure of Rs. 96.26 crores in March 1960 against Rs. 76.65 crores in March 1959. But, whereas in 1959 the banks were practically out of debt with the Central Banking Institution by June, the experience of 1960 was quite otherwise. During the slack season of 1960 the average borrowings of the scheduled banks from the Reserve Bank of India and the State Bank of India were Rs. 46.90 crores against Rs. 10 crores in 1959.

Credit Curbs

Early in March 1960, the Reserve Bank of India, presumably somewhat anxious about the size of the expansion in advances during 1959-60 busy season, came to the conclusion that there was excess liquidity with the banking system. Consequently, banks were required to maintain with the Reserve Bank of India special deposits amounting to 25% of new deposit resources accruing with them after the specified date. Two months later, in May, the additional deposit requirements were raised to 50 per cent of new accruals. The selective credit controls of the Reserve Bank by directive ensured that banking finance was not available, or was available only up to specified limits, against particular commodities. At the same time the Reserve Bank of India made it clear that the object of the new measures was by no means to deny bank finance for legitimate productive enterprises. Since industrial production, in fact, grew stridently during the year, the expansion in the advances of the banking system can be seen to have been fully justified. But, with the accrual of deposits slowing down or ceasing altogether to take place, the fact that advances were sustained at a high level imposed a considerable strain on banks under conditions of restricted liquidity.

By September 1960 it was clear that the banks would be quite unable to bring about a contraction of advances of the order of Rs 110 crores as desired by the Reserve Bank of India. Indeed, bank credit, which had gone up to Rs 1130.38 crores on the last Friday of April, rose still higher to Rs. 1135.82 crores on the last Friday of September. In this knowledge and with the 1960-61 busy season not far off, the Reserve Bank introduced a fresh set of monetary measures. Banks were directed, with a view, no doubt, to inducing some voluntary restraint on would-be borrowers, that they should raise the average rate charged for their advances by half per cent and prescribed a minimum of 5 per cent for advances. Secondly, on the analogy of regulation Q of the Federal Reserve Board's rules to which I have in earlier years made reference, the Reserve Bank of India set a ceiling on the rates of interest that banks could pay on very short deposits for periods of less than 21 days or repayable at 21 days' notice or less. Thirdly, the Reserve Bank of India also fixed quotas up to a maximum of which alone banks would be permitted to borrow at the bank rate of 4 per cent. Thereafter, in two slabs, the rate of interest payable on borrowings from the Reserve Bank of India was raised to 5 per cent and 6 per cent. This, in effect, set up a three-tier bank rate. Hence, with the level of commercial banks' borrowings from the Reserve Bank of India relatively high for the season, the new regulations induced a fresh wave of disinvestment in Government Securities accentuating the weakness in the gilt-edged market already brought about by the mass of State Loans pressed for sale on an unwilling market. The investment of scheduled banks in Government Securities declined from Rs. 787.52 crores in December 1959 to Rs. 744.86 crores in May in the first phase of disinvestment followed by a further decline to Rs. 633.47 crores in the second phase following the credit curbs. The running down of investments to a low level in relation to deposits would by itself act as a brake on the willingness of banks to sustain the continued up-swing of advances except to the extent that the bill market scheme affords relief.

Since the turn of the year, in view of the pressure upon the resources of the banking system, the Reserve Bank has defrozen the special deposits which had been maintained. However, all that this meant was that, in the relevant week, banks were enabled to reduce their indebtedness to the Reserve Bank of India.

Trend of Deposits

The fact of the matter is that the deposits of commercial banks are not rising as fast as they should to meet the growing needs of an expanding economy. In fact, of late, they are tending to become stagnant. In this situation the banks are stretching themselves to their utmost to meet legitimate demands, seasonal and otherwise, of industry and commerce and in so doing are allowing liquidity steadily to go down. Between 31st March, 1955 and 31st March, 1959 currency in circulation increased by Rs. 424.10 crores while demand and time liabilities of scheduled banks rose by Rs. 692.41 crores without making allowance for the distortion introduced by the impact of P. L. 480 funds which up to May, 1960 flowed into the State Bank of India and which thereafter has not only ceased to flow in but past accretions of which are being diverted to Reserve Bank of India in agreed instalments. Through this fast growth of deposits, the ratio of deposits to notes in circulation went up to 100 per cent. In fact, in June 1959, for the first time in Indian Banking history, the total deposits of scheduled banks at Rs. 1737 crores exceeded the currency in circulation of Rs. 1714 crores. The trend, however, has now been reversed and the pace of increase in deposits is slower than that of note-circulation.

There have been normal deflationary factors at work. Firstly, agricultural production in 1959-60 was down owing to climatic conditions. The production of foodgrains was about 5% less than in the previous year while the out-turn of cash crops like cotton, raw jute and oilseeds declined substantially. This set-back in the income of the agricultural sector has its inevitable repercussion on deposits.

Secondly, the adverse movement in our balance of payment position gives room for thought; the growth of our exports, in spite of programmes of export promotion, is disappointing while imports continue to rise. The contractionist influence of a balance of trade deficit is felt, not through a drop in active notes in circulation, but through a decline in bank deposits and a chain of changes in Government deposits and Reserve Bank's holding of Government Securities in the Issue or Banking departments. It seems probable that such an influence was indeed felt during 1960, and that this was the second reason why bank deposits failed to grow at a rate corresponding to the expansion in advances.

In the third place, Central Government revenues have proved buoyant. The revised estimates for 1960-61 disclose a considerable increase in Government's revenue, union excise duties being expected to fetch Rs. 15 crores more and taxes on income going up by Rs. 22 crores. Such perceptibly heavier tax collections, it is not to be doubted, will prove to be an additional drain on deposits.

In the fourth place, the very buoyancy of Central Government revenues enabled a reduction in the quantum of deficit financing. Thus, while Government expenditure itself should normally be expected to provide a fillip to bank deposits, the manner of financing of the disbursements was such as to greatly reduce the impact of the governmental payments on the rise in Deposits.

Lastly, it may be permissible to suggest that the various measures of credit control instituted by the Reserve Bank of India may well have had the effect of diverting financial resources from the organised money market into the unorganised non-banking sector of finance. There are reasons to believe that up to a year ago the non-banking sector was losing ground and the organised institutions gaining in strength and influence but it would appear that this trend has now been reversed with detriment to the deposits of the banking system. Neither the Government nor the Reserve Bank of India would welcome such a diversion of resources to the non-banking sector, for to the extent that the non-banking sector gains in strength the credit measures of the Government or the Reserve Bank of India will prove even less effective than they have been in recent years.

Mobilisation of Resources

Everyone realises the vital need to provide not only working capital to industry but also its reasonable medium-term requirements of credit but the resources of the banking system are inadequate and resort to central bank credit, which can never be a substitute for bank deposits, is discouraged through penal rates of interest and anti-inflationary credit curbs. Demand for bank credits is running at a high level and has outstripped money supply. Lending rates of banks may, therefore, well rise rather than be held at present levels. Banks are being asked not to restrict lending for productive purposes but,

clearly, there is a limit, dictated by considerations of liquidity and prudence, to their ability to go on expanding advances in the absence of a sustained rise in deposits.

So, if Industry is to develop to the full extent and stature visualised in the Third Five-Year Plan, it will be necessary to take steps to mobilise resources and channel them into the banking system. A solid basis for growth of deposits over a period is increased agricultural, industrial and mineral production. But, apart from this long-term objective, the existing resources should be mobilised. From the response to the new capital issues made in 1960 and on a sample analysis of the applications made, it would appear that a new class of investors is taking interest in new floatations, and this would point to the existence of a considerable amount of untapped resources in the country. This should be gathered and not allowed to go into the non-banking sector or be diverted in the form of direct deposits with industrial concerns or non-banking financial institutions.

One way of attracting money into the banking system is to bring down money rates in the non-banking section. Through liberal credits to banks by the Central Bank under the bill market scheme and a liberal lending policy by commercial banks, money rates in the unofficial markets could be brought down, and thereby the diversion of funds into the unorganised market could be stopped and the flow of funds thereto reversed. At the same time interest rates on fixed deposits with the banks should be raised to wean away funds from the unorganised sector and attract fresh funds from the public.

Inner Reserves

In the recent budget of the Central Government, the Finance Minister has made a valuable concession in favour of public financial institutions providing long-term finance whereby they are enabled to claim a reduction in respect of transfers to a special reserve account of sums not exceeding 10% of the total income of each year till the amount carried to the Reserve Fund becomes equal to the Paid-up Capital of the institution. I strongly urge an extension of this concession to commercial banks so that they may be enabled to strengthen their inner reserves. This will have the effect of making banking institutions impregnable.

Favourable conditions such as elimination of double taxation of dividends should be created for the establishment of Unit Trusts as a medium of saving so that small savings could be attracted into the capital market and a broader basis of ownership created for industry and finance.

The Third Plan

The Third Plan has got a tremendous task before it. The total investment is expected to be about Rs. 10,000 crores, out of which Rs. 4,000 crores is assigned to the private sector.

In order that the private sector may be able to accomplish this assignment it is essential that there should be availability of adequate finance for the purpose of new investment. The rate of interest is important but not as much as the quantum of available finance. I would, therefore, suggest that we take all necessary fiscal and monetary measures to hold the price-line, bearing in mind always that anything that constitutes an obstacle to production is not going to help us in fighting inflation. The pivot of the whole question, thus is increased production. This requires investment and adequate finance. Scarcity of finance ultimately must lead to restricted production and consequently to higher prices.

It would be prudent to keep all these important points before us because sometimes, in our zeal, we adopt a remedy which defeats its own object.

I would, therefore, state that while the credit restriction policy in the beginning was wise, latterly it was overdone. And the time has now come when we should review the whole position.

Sufficient finance could not be supplied by banks to industry unless it has got adequate deposits. I have a feeling that the inflow of money into the banks' coffers will be encouraged only by the liberal outflow of it—a well-regulated outflow for productive purposes.

The question, therefore, is which step—lending with a view to attract deposits or waiting for deposits before lending—is to be taken first. In the present circumstances the only way is for the Reserve Bank to liberalise the policy of accommodating the commercial banks in respect of bills and allow them to lend freely for industrial purposes. This, in the ultimate analysis, will bring in new deposits. Assistance by the Reserve Bank under the Bill Market Scheme, *inter alia*, will enable the banks to meet the growing demand of funds for industrial development. This may put up the advance-deposit ratio of the banks but would keep their liquidity intact.

Secondly, if the rate of interest on deposits is raised reasonably, this will help the banks in getting more money.

Thirdly it is necessary to open more branches. And in this respect a planned policy by commercial banks in consultation with the Reserve Bank for at least two years ahead would be very wise.

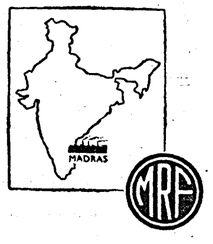
Fourthly, it is essential to tap the agricultural resources which can only be done by opening small branches in rural areas. There are difficulties about it. These difficulties have to be tackled.

The Plan, in order to become a success, has to be supported by all sections of the economy, that is rural, urban, commercial, financial and so forth. The banks have to play an important part in making the Plan a success and the means suggested above, if adopted, would go a long way to create a more balanced and healthy situation.

Note: This does not purport to be a record of the proceedings at the Annual General Meeting.

A NEW GIANT

TYRE FACTORY



A gigantic new venture in Indo-American collaboration sets the stage for a major development in India's tyre and tube industry.

The Madras Rubber Factory—India's largest manufacturer of tread rubber compound—and the Mansfield Tyre and Rubber Company, Ohio —one of the oldest, and sixth largest manufacturer of tyres, in terms of units produced, in the United States—have joined hands to manufacture Mansfield truck and car tyres and tubes at Madras.

When in full production, the new factory will be producing over 3,00,000 tyres and tubes per annum. A part of this production will be exported overseas.

MADRAS RUBBER FACTORY LTD.

Dhun Buildings, 175/1 Mount Road, Madras 2.

Branches: Ahmedabad, Bangalore, Bombay, Calcutta, Calicut, Coimbatore, Delhi, Jullundur, Kanpur, Kottayam, Mangalore, Nagpur, Trichur and Vijayawada.

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS COPIES WHEREOF ARE AVAILABLE FROM THE COMPANY'S REGISTERED OFFICE AND THE MANAGING BROKERS, BROKERS, MENTIONED HEREIN.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them. The Central Government have granted licences (copies of which are open to public inspection at the Registered Office of the Company) for the industrial undertakings as set out in the Prospectus. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of the undertakings or for the correctness of any of the statements made or opinions expressed in regard to it. A copy of the Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, specified herein, has been delivered for registration to the Registrar of Companies, Bombay.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 18TH APRIL 1961 AND WILL CLOSE AT THE DISCRETION OF THE DIRECTORS BUT NOT EARLIER THAN THE CLOSING OF BANKING HOURS ON 20TH APRIL, 1961.

OBJECTS OF THE COMPANY

The Company was incorporated on 10th November 1960 generally with the aims objects and purposes set forth in its Memorandum of Association and in particular to manufacture engines, cranes furnace equipments, road and building machinery such as concrete mixers, concrete vibrators, roller pan mixers and asphalt mixers, flexible shaft machines, engineering tools, etc.

BUSINESS AND PROSPECTS

The Company has taken over the business of the partnership firm Lynx Machinery Company as from 10th November, 1960. The firm was established on 1st June, 1957 and since then has been engaged in manufacture of concrete vibrators, concrete mixers, roller pan mixers and other equipment used in the building and construction trade. The firm has been regularly earning profits. The Company has secured the necessary industrial licences under the Industries (Development & Regulations) Act, for the following products:

1. **Engines.**
2. **Concrete Vibrators.**
3. **Overhead Travelling Cranes and Electric Hoist Cranes.**
4. **Concrete Mixers.**
5. **Roller Pan Mixers.**
6. **Asphalt Mixers.**
7. **Tar Boilers.**

There is today an increasing demand for building, road making and construction equipment, oil engines, cranes of various kinds grinders and tools which are still being largely imported. The rapid industrialisation in India under the Second and Third Five Year Plans envisages a large expansion of manufacturing capacities in all these items. Indigenous production of these items will not only help save foreign exchange to an appreciable extent but may also earn foreign exchange, by way of exports to our neighbouring countries.

LISTER ENGINES: The Company has been granted a licence to manufacture 6000 Lister B & D type Engines per annum in technical collaboration with the world renowned manufacturers of oil engines, MESSRS. R. A LISTER & CO LTD., ENGLAND. These Engines are still being imported in India and have numerous applications in the Industrial and Agricultural field. The marketing will be undertaken by MESSRS. VOLTAS LIMITED, BOMBAY and MESSRS. BALMER LAWRIE & CO. LTD., CALCUTTA.

ALLAM VIBRATORS: India has been regularly importing in considerable quantities Concrete Vibrators of the world famous manufacturers MESSRS. E. P. ALLAM & CO. LTD., ENGLAND. The Company has been granted licence to manufacture 1200 Vibrators per annum. The Company will manufacture a wide range of Allam Vibrators which will help to a great extent the construction programme envisaged in the Third Five Year Plan.

CRANES:—(a) DEMAG ELECTRIC HOIST CRANES: MESSRS. DEMAG-ZUG G.m.b.H OF WEST GERMANY, the world-renowned manufacturers of Cranes have agreed in principle to grant a licence agreement to the Company for the manufacture of Electric Hoist Cranes in Eastern India. In view of the rapid industrial development outlined in the Third Five Year Plan, the demand for these Cranes already large, will further increase.

(b) SCHIESS-DEFRIES CRANES:— Besides Electric Hoist Cranes the Company will also manufacture various other types of Cranes including Overhead Travelling Cranes, Goliath Cranes in technical collaboration with MESSRS. SCHIESS-DEFRIES, WEST GERMANY belonging to the well-known industrial group of M/s. Schiess. The cranes will be sold under the Trade Mark of Schiess-Defries/Lynx, and the licensed capacity will be fixed after one year of the company going into production.

LYNX CONCRETE MIXERS:—The Company is regularly manufacturing various sizes of Concrete Mixers and already a large number of these machines are in use throughout the country. The Concrete Mixers manufactured by the Company enjoy a high reputation and are marketted by the well-known firm, MESSRS. HEATLEY & GRESHAM LIMITED. The annual licensed production capacity is 600 numbers.

LYNX ROLLER PAN MIXERS:—The Company has been manufacturing two types of Roller Pan Mixers and the licensed annual production capacity is 228 numbers. These are also being sold by MESSRS. HEATLEY & GRESHAM LTD.

LYNX ASPHALT MIXERS AND TAR BOILERS: The licensed capacity of Asphalt Mixers and Tar Boilers is 144 numbers each per annum. The Company will shortly undertake the manufacture of these machines because of the extensive road making programme envisaged in the Third Five Year Plan.

OFU-LYNX RE-HEATING FURNACE PARTS:— An Agreement has been reached between the Company and OFU-LYNX PRIVATE LTD. for manufacture of OFU-LYNX furnace parts. Since Messrs. Ofu-Lynx are currently negotiating for large number of orders for furnaces it is expected that Company's production in furnace parts will be considerable. "OFU" Furnace being very well-known the scope for this business in India is considerable.

BAXTUL FLEXIBLE SHAFT MACHINES:—Subject to the approval of the Government whereupon it will become effective a technical collaboration agreement has been signed with well-known British Firm, THE FLEXIBLE DRIVE & TOOL CO. LTD., ENGLAND whereby Flexible Shaft Machines like grinders, ship scaling machines, tube scaling machines and other engineering tools will be manufactured and sold under the Trade Name BAXTUL/LYNX. The Company's application for Industrial Licence and collaboration agreement are under the consideration of the Government. This scheme when approved by the Government will be a very profitable addition to the Company's manufacturing programme.

SKODA DIESEL ENGINES:—The Company is negotiating for the manufacture of certain types of well-known SKODA Stationery and Marine Diesel Engines in collaboration with the renowned European concern of SKODA, CZECHOSLOVAKIA. The Company in due course will apply for the necessary Government sanction for the implementation of this scheme. In view of the large popularity enjoyed by SKODA engines the benefits of this technical collaboration when the scheme is implemented will be considerable. Under this collaboration the Company proposes to manufacture higher horse-power Marine and stationery Engines.

In all these collaborations the Company will have the benefit of their full technical assistance and in most cases the Company will send Indian Engineers for training abroad.

LAND, PREMISES AND PLANT AND MACHINERY:—The existing factory premises of the Company are situated in the industrial area of Calcutta and comprises more than 13 Bighas approximately with structures covering an area of approximately 40,000 sq. feet. Adequate power and water supply is available. The Commissioners for the Port of Calcutta have indicated their willingness to give a long term lease in respect of the plot of land of about 40 Bighas located in Kidderpore, on their standard terms and conditions. The Company proposes to erect a new factory for the manufacture of new products that is to say, Engines, Cranes, etc. on this plot of land. The Company has obtained necessary approval of the Ministry of Commerce & Industry for import of Plant and Machinery for a value of Rs. 30 lakhs for the various schemes sanctioned by the Government. As mentioned above, the Company is already manufacturing in its existing factory Concrete Mixers, Concrete Vibrators and other road building machinery.

PAYMENT TO PROMOTERS—PRELIMINARY EXPENSES

1. Shri K. K. Jajodia, Shri R. K. Jajodia and Shri M. K. Jajodia are partners of the Firm whose fixed assets have been acquired by the Company and who will receive the purchase price of Rs. 14,00,000/- for the same and a sum of Rs. 7,66,374.49 in respect of the current assets and liabilities which have been taken over by the Company at prices based on the Auditors' report as from 10th November, 1960.

2. The Promoters will be reimbursed of all the expenses incurred by them on behalf of the Company which are estimated at Rs. 50,000/-.

MANAGING DIRECTOR

The Board of Directors have, subject to the approval of the Central Government being obtained, entered into an Agreement dated the 23rd March, 1961 with Shri K. K. Jajodia for the appointment of the said Shri K. K. Jajodia as Managing Director of the Company.

The Agreement between the Company and Shri K. K. Jajodia provides inter alia that Shri K. K. Jajodia be paid by way of remuneration an annual commission of 5 per cent on the net profits of the Company as computed in the manner laid down in Section 198(1) of the Act with the usual perquisites and that in the event of the Company having no profits, or its profits being inadequate, in any financial year, he is to be paid a minimum remuneration of Rs. 30,000/- per annum with the usual perquisites provided nevertheless the said Shri K. K. Jajodia shall be entitled to draw a sum of Rs. 2,500/- per month towards his remuneration as Managing Director.

ESTIMATED PROFITABILITY

Since the Company has a running business, with the implementation of the expansion programme both in the present and new lines of manufacture, the Company is confident that within a short period the profits will be sufficient to provide an attractive return to the shareholders.

COMMENCEMENT OF BUSINESS

The Company has already obtained a Certificate dated 21st March, 1961 for commencement of business from the Registrar of Companies, Bombay.

MINIMUM SUBSCRIPTION AND CAPITAL OUTLAY

The minimum amount which in the opinion of the Directors must be raised by this Issue and upon which the Directors can proceed to allot shares to the public as offered by this Issue has been determined at 1,49,000 Equity Shares (of the nominal value of Rs. 14,90,000) being only a part of this Issue out of which Rs. 12.90 lakhs will be utilised towards part payment of the purchase price of the land buildings, plant and machinery, motor vehicles etc., and Rs. 2 lakhs will be for preliminary expenses, brokerage and expenses of this Issue.

Any amount by which the allotment to the public out of the present issue falls short of the amount to be raised from the public will be as required met by borrowings from Banks or from other sources in the usual course of business. Likewise, it is intended that the balance of Rs. 24,00,000 required to meet the total capital outlay as detailed below together with any increase there may be in the actual cost over the estimated cost of the plant and facilities will be raised by loans from the Company's Bankers or from other like sources against the fixed and other assets of the Company in the ordinary course of business. For this purpose the Company has already approached the Punjab National Bank Ltd. of Calcutta which has indicated willingness in principle to make available a substantial loan subject to the usual formalities being satisfied.

CAPITAL OUTLAY

The financial requirements of the Company will be made up as under:

	Rs. 84,00,000/-
1. Purchase price of land, plant machinery and equipment including cost of erection of machinery, construction of factory building, power house, etc.	Rs. 72,00,000/-
2. Preliminary expenses including brokerage and expenses of this Issue	Rs. 2,00,000/-
3. Working Capital	Rs. 10,00,000/-
	Rs. 84,00,000/-

SOURCES OF FINANCE

The above amount will be provided as under:—

(a) Subscribed Capital	Rs. 14,15,040/-
(b) Present Issue	Rs. 45,84,960/-
(c) Borrowings from Banks and other sources as and when required in the usual course of business	Rs. 24,00,000/-
	Rs. 84,00,000/-

EXPENSES OF THE ISSUE

The Expenses of the Issue other than brokerage are estimated at Rs. 75,250/- and will be payable by the Company.

BROKERAGE

Brokerage will be paid to Registered Brokers on the recognised Stock Exchange in India and Banks at 0.18nP. per share in allotment made in respect of applications bearing their stamps. Messrs. Lewis & Jones, Bombay, are the Managing Brokers to the Issue and will be in addition entitled to a commission of 0.07nP. per Share subscribed by the Public.

The total amount of brokerage payable by the Company will be Rs. 74,750/-.

The following is a condensation of the Auditors' report by the auditors, Messrs. Singhi & Co. relating to the figures of sales and profits as published in the Prospectus.

	Sales less Commission & Discount Rs.		Profit Before Provision for Taxation Rs.	
Year ended 31st May, 1958	2,79,165	93	10,044	82
Year ended 31st May, 1959	6,59,787	95	54,175	82
Year ended 31st May, 1960	18,54,009	38	1,61,380	44
Period from 1st June, 1960 to 9th November, 1960	6,23,473	11	2,42,212	88

ALLOTMENT AND SHARE CERTIFICATE

Where an application is rejected, or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant within two months from the date of closing of the subscription list in which case bank commission, if any, will be payable by the applicant.

Share Certificate will be issued in exchange for letters of Allotment within 4 months from the date of allotment.

LYNX MACHINERY LIMITED—*Cont'd.*

THE PUNJAB NATIONAL BANK LIMITED

Registered Office: PARLIAMENT STREET, NEW DELHI.

DIRECTORS' 114th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1960.

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

The transactions for the year under report have resulted in a profit of Rs. 1,21,23,141.75 (including Rs. 3,18,830.32 brought forward from the previous year's account) after contributing Rs. 12,81,429.00 to the Employees Gratuity Fund Trust. The following amounts have been appropriated for the under-mentioned purposes :—

		Rs.	nP.
1.	Transferred to Provision for Taxation	53,00,000	00
2.	Transferred to Reserve Fund	11,00,000	00
3.	Transferred to Bonus to Staff Account	27,00,000	00
4.	Transferred to Charity Account	1,00,000	00
5.	Ad.interim Dividend at Re. 1.00 per share paid	12,50,000	00
	Total ...	1,04,50,000	00

The Directors recommend that the balance of Rs. 16,73,141.75 be disposed of as follows :—

		Rs.	nP.
(a)	Final Dividend at Re. 1.00 per share making the total at 20 per cent. per annum (Gross)	12,50,000	00
(b)	Carry forward to the next year's account	4,23,141	75

The Directors consider that the working of the Bank has been satisfactory.

During the year 16 new offices were opened at various centres and one office was closed.

The Reserve Bank of India in exercise of the powers conferred by Section 45(4) of the Banking Companies Act, 1949 prepared a scheme for the reconstruction and amalgamation of the Indo-Commercial Bank Ltd., with our Bank which was sanctioned by the Central Government under Section 45(7) of the said Act. Branches of the Indo-Commercial Bank Ltd., have been functioning as our branches under the above scheme with effect from 25th March, 1961.

The Directors retiring by rotation at this meeting are Shri Ramnath Goenka, Pandit J. N. Bhan and Shri Shital Prasad Jain, who being eligible, offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the General Board of Directors,
R. N. GOENKA,
Chairman

March 27, 1961.

AUDITORS' REPORT

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Limited, as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us. Under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1951 the Central Government by an Order dated 4th February, 1961 has exempted all the branch offices of the Bank from the provisions of sub-sections (1) and (3) of Section 228 of the Companies Act, 1956 in respect of the year ended 31st December, 1960.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

OBJECTS

The Company was incorporated as a Private Limited Company on 1st August, 1955, for the several purposes set forth in the Memorandum of Association and was converted into a Public Limited Company by a Resolution passed at an Extraordinary General Meeting of the Shareholders held on 14th October, 1960 and obtained a Certificate of change of name on 25th November, 1960. Therefore the Company has no necessity to obtain any Certificate of Commencement of business.

The main object of the Company is to sell and deal in Iron and Steel Pipes, Tubes and fittings materials and to manufacture import, export and deal in all kinds of electrical bulbs, mercury bulbs, etc., and collapsible and rigid extruded tubes and sections in aluminium ferrous and non-ferrous metals and alloys and to carry on the manufacture and sale of bricks and refractories.

HISTORY

The Company was incorporated on 1st August 1955, and was mainly engaged in the distribution of Pipes, Cement and Sanitary Ware The sales section for these lines were discontinued in order to concentrate the Company's efforts on the various manufacturing projects that it has undertaken.

PROSPECTS

Lamp Factory

The proposed lamp factory is situated at Red Hills, Polal Villave in a plot of three acres of land. The factory is on the Northern Trunk Road from Madras to Calcutta and therefore has very easy access by road. Availability of water and electric power make this location ideally suited for this Industry.

The factory is designed for a production of 9,000 incandescent lamps per shift of 8 hours, the lamps being of the General Lighting Service category. The imported plant and machinery, which is all automatic, has already been acquired at a cost of Rs. 4 lakhs. Even though imported some time ago the machinery has been found to be in excellent condition on inspection. Some additional equipment will have to be purchased at a cost of approximately of Rs. 1 lakh to complete the installation.

The building is nearing completion and the erection of machinery will follow shortly. The building land and water supply facilities are expected to cost Rs. 2 lakhs.

Some of the raw materials such as filaments for this Industry are to be imported. Applications have been submitted to the Government of India for the issue of the necessary Import Licence and no difficulty is anticipated in obtaining the same.

The total production for Incandescent Lamps in India is far from sufficient to meet the increasing demand. It is expected that within a short period, expansion of capacity would have to be considered. Sufficient land for such expansion is available at the site selected as also facilities for more water and power.

We are in correspondence with a leading Japanese electrical firm for technical collaboration for the manufacture of Flourescent lamps and this project is being actively pursued.

We have also engaged the services of a very experienced and competent consulting Engineer, Mr. S. V. Devarajan, who is a specialist in this field, to erect and commission our factory. Mr. Devarajan was responsible for the erection of the factory of the Mysore Lamps Works Ltd., Bangalore and the Radio Lamps Works Ltd., at Karachi and at Shikohabad. Mr. Devarajan has been managing the two latter factories for several years and is considered one of the most experienced consultants in this field.

COLLAPSIBLE TUBES

A licence has been granted in the sum of Rs. 4,03,084, for the import of machinery required for the manufacture of 50,00,000 Collapsible Tubes per annum on single shift basis. Negotiations have been concluded with M/s. Anderson and Bruun's Fabriker A/S. Copenhagen (1) for the supply of machinery (2) for technical assistance and (3) for facilities to train engineers in Copenhagen at no extra charges. Anderson & Bruun's Fabriker A/S have got a world wide reputation both in the direct manufacture of collapsible tubes and in the machinery used for the manufacture of Collapsible tubes.

Demand for collapsible tube packaging exceeds installed capacity in India even if only the current applications for this type of packaging are taken into account. A large variety of other products such as sauces, condiments, and indigenous medicines can be successfully packaged in collapsible tubes when sufficient supplies of these tubes are made available. Manufacturers of cosmetics require large quantities can be absorbed by any one of them. The factory will be located in Red Hills and will be built according to the suggestion of M/s Anderson & Bruun's Fabriker A/S of Copenhagen and will be of the most modern design.

VADAPAZHANI REFRACTORY WORKS

The Company manufacture fireclay refractories. The Third Plan requirements of fireclay refractories are estimated over one million tons against the present installed capacity of 5,30,200 tons. An industrial licence under the Industries (Development & Regulation) Act for manufacture of 3,000 tons fireclay refractories per annum has been obtained. It is also intended to produce fire cement, fireclay, mortar, insulating bricks and acid proof bricks. New Lines of ceramic manufacture like stoneware pipes and white glazed sanitary ware products as well as expansion of present lines can be taken up in due course.

PROGRESS OF WORK

The factory building has been constructed and the plant and machinery erected. The main kiln are

TUBE SUPPLIERS LIMITED, MADRAS—*Cont'd.*

expected to be ready by the end of April, 1961 when the factory can go into full scale production. Electricity has been connected and installed machines have been working since January, 1961, manufacturing firebricks for construction of the main kiln.

CAPITAL COST AND WORKING EXPENSES

Capital Expenditure so far incurred is as under:

Land, Building and Kilns	Rs. 1,00,000
Plant and Machinery	50,000
	Rs. 1,50,000
Estimated requirements of working funds and cost of main kiln	50,000

VADAPAZHANI BRICK WORKS

There is a Brick Kiln of 24 Chambers situated in the same compound and turning out an annual production of over 25 lakhs building bricks. Plans are in hand to increase production to meet the increasing demand.

MANAGEMENT

The Management of the Company will vest with the Board of Directors, Sri V R. Rajaratnam and Sri G. Viswanathan are Managing Directors of the Company. No remuneration is being paid to Sri V R. Rajaratnam with effect from 1.1.61. Sri G. Viswanathan is being paid a salary of Rs. 1,000/- per month plus a conveyance allowance of Rs. 250/- per month and an entertainment allowance of Rs. 250/- per month with effect from 1.1.61. His appointment is subject to the sanction of the Government of India and the Company in General Meeting.

CAPITAL REQUIREMENT AND MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is Rs 8,05,000/- and it is intended that the proceeds of the present issue will be utilised as follows:

	Rs.
Plant and Machinery	5,75,000
Buildings	1,50,000
Towards Working Capital	30,000
Expenses of the issue	50,000

The Directors are satisfied that adequate additional working capital will be available by means of normal borrowings from Bankers.

BORROWING POWERS

Article 127 of the Articles of Association of the Company provides that the Board may from time to time, at their discretion, subject to the provisions of Sections 292 and 293 of the Act, raise or borrow any sum or sums of money for the purposes of the Company provided that the Board shall not, without the sanction of the Company in General Meeting, so borrow any sum of money which will make the amount borrowed by the Company (inclusive of temporary loans obtained from the Company's Bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid up capital of the Company and its free reserves that is to say, reserves not set aside for any specific purpose.

Article 127 (2) of the Articles of Association of the Company provides that the Directors may raise or secure the repayment of such sum or sums in such manner and upon such terms and conditions in all respect as they think fit and in particular, by the issue of bonds, perpetual or redeemable debentures or debenture-stock or by any mortgage or other security on the undertaking or the whole or any part of the property of the Company (both present and future) including its uncalled capital for the time being. The Company has no debenture. State Bank of India have sanctioned a Cash Credit Pledge limit of Rs. 4 lakhs on 14th April, 1960 to be renewed every 6 months against pledge of Bulb manufacturing Machinery and on personal guarantee of Mr. M. A. Chidambaram, Chairman and G. Viswanathan, Managing Director of the Company and the loan has been renewed for the second time from 14th October, 1960. Interest is charged at the rate of 1 per cent over the State Bank of India advance rate with a minimum of 5½ per cent per annum. As on date the amount due to State Bank of India stands at Rs. 3,99,141/-.

EXPENSES OF THE ISSUE

The expenses of the present issue including underwriting commission brokerage and Managing Brokers' remuneration are estimated to amount to Rs. 50,000/- and will be payable by the Company.

UNDERWRITERS

The Shares of the present issue amounting to Rs. 8,05,000/- are underwritten by the following underwriters.

5. M/s. Maconochie & Co., 16, First Line Beach, Madras-1.	1,00,000	25,000	75,000
6. M/s. Somayajulu & Co., Andhra Insurance Buildings, 337, Thambuchetty Street, Madras-1.	1,00,000	25,000	75,000
7. M/s. M. R Dhawan & Co., 4/8, Asafali Road, New Delhi-1.	1,00,000	25,000	75,000
Total	8,05,000	2,05,000	6,00,000

In the opinion of the Directors the resources of the said underwriters are sufficient to discharge their underwriting obligations.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½ per cent of the nominal value of the EQUITY Shares underwriters is payable to the underwriters Messrs. P. R. Subramanyam, J. R. Motishaw & Co., A. B. Pandit & Co., G. M. Pyne, Maconochie & Co., Somayajulu & Co., M. R. Dhawan & Co., respectively in accordance with the terms and agreement contained in their letters, from the said underwriters and the Company's acceptance of each of them.

The aforesaid letters from the underwriters setting out the agreement with them provide that in consideration of their agreement to underwrite, the said underwriters shall be entitled to such firm allotment. The names and other particulars of the said persons entitled to such preferential allotment is set out above. The period for which the option is exercisable is the period when the subscription list is open.

BROKERAGE

Brokerage at the rate of 10 nP. per Equity Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a Member of a recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of applications bear their respective stamps.

Messrs. P. R. Subramanyam are the Managing Brokers to this issue and will be in addition entitled to a Brokerage of 5 nP. per Equity Share on 8,05,000 equity shares of Rs. 10 each offered for subscription, i.e., the Managing Broker's remuneration will be Rs. 4,025.

VENDORS OF PROPERTIES AND INTEREST OF DIRECTORS

The Company purchased on 26.11.59 from The South India Corporation (Agencies) Private Ltd., lands in area about 18.17 acres and the Brick kiln, stores and tools, etc., thereon known as "VADAPAZHANI BRICK WORKS" situated in the village of Virugambakkam village, Saidapet Taluk for a total consideration of Rs. 80,000/-.

Mr. M. A. Chidambaram the Chairman and Director and Mr. V. R. Rajaratnam a Managing Director of this Company are interested in the said sale transaction as follows:—

Mr. M. A. Chidambaram and Mr. V. R. Rajaratnam are Directors and Shareholders of South India Corporation (Agencies) Private Ltd., No. 6, Armenian Street, Madras-1. The Vendors and as such interested in the aforesaid sale transaction.

Mr. G. Viswanathan is interested in the remuneration payable to him as Managing Director of the Company which appointment is subject to the approval of the Company in General Meeting and the Government.

The Directors are interested in the remuneration paid by way of sitting fees for meetings attended besides reasonable travelling expenses.

APPLICATION AND ALLOTMENT

Application for Equity Shares must be made on the form accompanying the prospectus, further copies of which may be obtained from the Registered Office of the Company or from the office of any of the Company's Brokers or Bankers and Underwriters named herein. It must be completed in accordance with the directions contained therein and delivered before the date of closing of the subscription list together with the remittance of the amount payable on application to:—

1. The Company's Bankers at any of their Branches noted below:—
   (a) Bombay. (b) Madras, (c) Bangalore, (d) Coimbatore. (e) Delhi, (f) Calcutta, (g) Madurai and (h) Tiruchirapalli.

Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be appropriated towards the amount remaining payable on the shares allotted and any balance remaining thereafter will be returned. The said refunds will be made within 2 months of the closing of the subscription list. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due, will render previous payments and shares liable to forfeiture.

The Shares issued shall be subject to the Memorandum and Articles of Association of the Company.

ISSUE OF CERTIFICATE

The Share Certificates will be issued within three months of the date of allotment.

Dated: 8th April, 1961.

UNITED BANK OF INDIA LTD.

CHAIRMAN, DR. N. N. LAW'S REVIEW

Abstracts from the Speech addressed by Dr. N. N. Law, Chairman of the Board of Directors, United Bank of India Ltd, Calcutta, to the shareholders of the Bank at its Annual General Meeting held on 10th April, 1961.

Gentlemen,

It is my happy privilege to welcome you to this meeting. Last year your Bank has completed the first ten years of its united existence. It is heartening to note that during this period our basic progress has been satisfactory. We have been able to cross the aggregate peak deposits of the pre-merger period. We have closed 55 over-lapping branches and opened 24 new branches, a number of which are in previously unbanked areas.

Coming now to our operations during the last year, the balance sheet has been in your hands for some time and you would not have failed to notice that despite the tendency of deceleration which marked the growth of bank deposits last year, we have been able to achieve an increase of Rs. 4.06 crores in our deposits, a rise of 8.5% over 1959. Our advances portfolio has also registered an increase of 14.7% over that of 1959.

Monetary Policy

The past year has been a significant one for Indian Banking. On the one hand, it witnessed efforts on the part of the monetary authority in playing its role actively in an attempt to control the effects of various adjustments that were taking place in the economy. On the other, there were certain developments in the country inhibiting banking progress. In the monetary field, by and large, the Reserve Bank showed its alertness and did all that was within its powers to keep the situation under control.

In a situation where there is a narrow profit margin and a low capital structure of banks, (to which I shall be referring again later in this statement), the directive of the Reserve Bank in prescribing minimum lending rates and limiting the rate of interest on short-term deposits was most appropriate and timely. I have not yet been able to reconcile myself to the appropriateness of the removal thereafter of the ceiling on short term deposit interest rates, particularly at a time when introduction of a Deposit Insurance Scheme will call for a rigid control in this regard.

Deposit Insurance

In order to strengthen public confidence in banking, which was adversely affected during the past year, the Reserve Bank by sponsoring a scheme of Deposit Insurance is removing an important lacuna in the Indian money market mechanism. We now learn with a sense of satisfaction that the Government has, at last, made up its mind to give effect to the scheme. The Governor of the Reserve Bank is to be congratulated for having taken this right step for better development and growth of Indian banking. It is hoped that an appropriate scheme, suiting the needs of the situation, will be given effect to without further loss of time.

You would no doubt recall that as early as 1954, your Managing Director gave shape to his earlier suggestion, first made in 1948, that a scheme for Deposit Insurance be evolved and that over the past few years I have been advocating the establishment of an agency for Deposit Insurance as well as for rehabilitation of sub-standard units. The importance of Deposit Insurance lies not only in covering depositors' loss in case of bank failure, but more in its ability, as a tranquiliser, to bring about a general climate of confidence. However, this is not the end in itself. It is only a means to achieve the objectives of a healthy expansion and development of the banking system for sustaining the growth of the economy. Any scheme for Deposit Insurance, therefore, to be successful, will have to be designed with a view to taking care of the liabilities side of the banking balance sheet, the Reserve Bank taking care of the assets side.

The most important thing, in the present context, is to provide a better margin of safety for the depositors. This can only be done by having an adequate capital structure for the Deposit Insurance agency itself as well as generating operating conditions conducive to gradual growth of the capital structure of the individual banks, and also by ensuring that an amount of liquidity is maintained in the commercial banking system.

Capital Structure

Increased capital funds can be achieved in two ways, by augmentation of reserves from profits and by issue of fresh capital. I may point out, as the indices of variable dividend securities clearly show, that bank shares are not thought to have growth prospects. In such circumstances it becomes ruinously expensive—and uneconomic too—for banks to secure capital on the only terms on which such issues can be successful. In other words, the strength secured from an addition to capital is dissipated by the higher quantum of distribution required thereon. It would follow that whether for augmentation of reserves or for issue of fresh capital on equitable terms, the profit margins of bank operations must be enhanced.

Again, the liquidity position which the banks are required to maintain has an important influence on the profit levels which can be reached. Thus, capital funds, liquidity and profitability of a banking institution are mutually the cause and effect of one another.

Liquidity

Under compulsion of circumstances liquidity is drifting downward. It is true that the liquidity position of banks in any country, at any point of time, would be a reflection of the state of activity of its national economy, extent of banking habits and coverage and pressure of legitimate demand for credit; the liquidity of banks, in the conventional sense, will reflect the degree of development and integration of the overall economic fabric of the country. In a developing economy like ours with a limited banking habit, banking liquidity will naturally tend to be lower and the pattern comparatively rigid. More so, when massive planned efforts are being made to increase the tempo of economic activities. It is also true that in these days of advanced central banking, immediate liquidity problem no longer has the significance it had in the past. Yet the basic need for liquidity in banking business cannot be ignored or its importance minimised.

Admittedly, economic expansion calls for greater credit requirements for industry and trade. But that should not eventually lead to bank finance replacing, even partly, the functions of owner capital. In so far as high taxation and low saving rate force this distortion, the phenomenon calls for immediate attention; this is important for the basic need for institutional growth. It seems that the low capital structure in the industry is being sought to be supplemented, to a noticeable extent, with bank funds. In so far as this tendency is responsible for the present expansion of bank advances, pushing up the advances-deposit ratio further, it could be said to be unrealistic and even disturbing; unless of course this is considered to be only a transitory phase.

Profitability

Another reason, may be the most important one, for the liquidity being placed low is the need for increased profits. The profit margins of the banks are already very narrow. With a number of major banks the profit, after deduction of taxes and bonus to the staff, for 1960, as ratio to deposits, ranges between 0.17% and 0.30%. To match the mounting operating costs, therefore, banks tend to seek better earnings through larger advances. Any increase in the quantum of profit has, thus, been the result of 'double shift' in advances. This can neither be regarded as normal nor be looked upon with complacence. That even such profit has evidently failed to allow for ploughing back and make up for the decline in the investment values, is all the more a matter for concern. There is an urgent need for a study of the structure of operating costs and operating earnings with a view to achieving a better differential.

It is surprising to note that while the advances-deposit ratio has been continuing to take an upward turn, the banks have thought it fit further to raise the rates of interest on short and other term deposits. We have been expressing our views against raising of interest rates and we still believe that the recent upward revision has been an extremely undesirable step.

Interest Rates

Over the years it has been our confirmed conviction that by and large the growth of deposits does not depend so much on the rate of interest as on the confidence which the banking system inspires, availability of banking facilities and the quality of services rendered to the community. While most of the people still live at or below the subsistence level, it would seem incorrect to assume that a feasible rise in interest rates will stimulate savings as the base for bank deposits by curtailment of consumption, particularly when the value of the Rupee is declining. The step, on the other hand, will further add to the increasing expenses of the banks. If the increased expenditure were, instead, spent on opening branches in unbanked areas and improving the quality and diversifying the range of services, the banking habit would have been further stimulated resulting in mobilisation of fresh deposits; that would have been a useful investment in the future.

The influence of rising deposit rates on the relationship between short-term and long-term rates of interest needs more consideration than it has received so far. Any increase in the short-term rates of interest in the organised sector of the money market will, sooner or later, lead to an increase in the long-term rates of interest. The short-term rates in this sense are the rates offered on bank deposits and the long-term rates are those offered on public bonds. The higher rates of interest paid on bank deposits may tend to push the bond rate upward in regard to the future borrowings of the Government. This will cumulatively add to the burden of servicing charges, which will, for obvious reasons, have to be met by progressive increase in taxation. Any disturbance on this account is likely to reflect itself by further complicating the difficult funding problem. In order, therefore, to prevent the servicing cost of the public debt from rising sharply, the interest rates prevailing elsewhere in the economy, particularly on bank deposits, will need to be kept under close control. The policy of varying the minimum lending rates of the banks, already initiated by the Reserve Bank, can effectively take care of the adjustments in the economy.

Peg the Rates

In this connection, I would also point to the danger of uncertainty about the future course of interest rates. It is our considered view that in the interest of present investment and also in order to bring about a healthy growth of future investment, proper steps should be taken to remove any fears of capital depreciation. To quote Keynes, "the Monetary Policy which strikes public opinion as being experimental in character or easily liable to change, may fail in its objective"

I therefore suggest that the desirability of following the U.S. method of imposing a reasonable limit on interest rates on medium term and long term public debt should be seriously considered. It may not be necessary, however, to adopt the American method of legislative provision; a stipulation as to the maximum rate of interest to be offered incorporated in the National Plans, may, perhaps, serve the purpose equally effectively.

Tax Concession Necessary

Returning to the question of profitability, I think that by increasing the rates of interest on deposits, the banks have again postponed the opportunity of raising their low profitability. It is high time that banks took a more realistic view of the situation, kept interest rates under control and tried other methods of improving their resources and profitability. While undoubtedly banks will have to make their own efforts in this regard, it is also our view that the banking system should receive apposite assistance from the concerned authorities. Tax concessions on that part of profits, which is utilised to build up reserves and thus to strengthen the capital structure, should, for example, be seriously considered by the Government.

Conclusion

Indian banking needs a major reorganisation and the urgency of a close study of the whole matter cannot be over-emphasised. In this connection, I am glad to mention that, your Managing Director, Sri B. K. Dutt, has given a timely lead. He was invited by Calcutta University to deliver a series of lectures as Prof. Benoy Kumar Sarker Memorial Lecturer for 1960. He selected "Monetary Discipline and Indian Banking" as the subject of his lectures. In these lectures, which are now available in book form, he has analysed in detail the prevailing situation in the Indian banking system and has put forward a number of ideas for its progressive development.

(NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.)

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN, MR. P. J. EGAN'S ADDRESS

Speech of the Chairman, Mr. P. J. Egan, at the Annual General Meeting of the Association held in the rooms of the Bengal Chamber of Commerce and Industry, Calcutta at 11 a.m. on Tuesday, 11th April, 1961.

Gentlemen,

It gives me great pleasure to welcome you to this Annual General Meeting of the Indian Paper Makers Association.

As this meeting is being held just after the completion of the second Five Year Plan and on the commencement of the third Plan, it is fitting that, before I proceed to review the events of the last year, I should first deal with the performance of the Paper Industry in the second Five Year Plan and with the targets which have been set for it under the third Plan.

The second Five Year Plan envisaged a target capacity by the end of 1960/61 of 450,000 tons of paper and board a year and an annual production of 350,000 tons. Although licences issued have far exceed the capacity target, the actual installed capacity achieved to date amounts to 410,000 tons—a shortfall of 40,000 tons. On the other hand, production for the calendar year 1960 was 345,000 tons or only 5,000 tons short of the production target, and I have no doubt that, when figures for 1960/61 are available, they will show that the production target of 350,000 tons has been fully achieved. Production for 1955/56, the last year of the first Five Year Plan was 187,000 tons. Therefore, within the space of five years the Industry has increased its output by nearly 90%.

Survey of Capital Outlay

An important feature of this achievement on the part of the Industry was the predominant part played by existing units, which between them accounted for approximately four-fifths of the increased production in the second Plan. Another feature is the extent to which expansion of existing mills' production was financed out of their own resources. A survey made by this Association last year of the capital outlay of five of its member mills in the preceding five years disclosed that, of the total block additions of these companies amounting to over 9 crores of rupees for the five years, only 39% was financed by new issues, borrowings and deferred payments; the balance 61%, or more than 5½ crores of rupees, was made available from mills' own resources. The Tariff Commission has paid a tribute to the Industry for having ploughed back its resources purposefully; these figures show how the very great increase in production of paper and boards during the second Five Year Plan was in no small measure due to the Industry's restraint in the declaration of dividends and to its policy of ploughing back its resources for the modernization and expansion of its plant.

The third Plan sets the Industry targets of 900,000 tons and 700,000 tons for capacity and production respectively, or exactly double the targets in the second Plan. The rate of industrial development, the growth of literacy and increased provision of free and compulsory education makes it possible that these targets may require upwards revision; in fact licences have already been granted or approved to increase capacity to 1,145,000 tons. There is thus an adequate margin to provide for unanticipated increases in demand, and also for failure of some of the licensed schemes to materialise.

The breakdown of the capacity licensed or approved to date is as follows:—

Present capacity ...	...	410,000 tons
Expansion of existing units	...	142,000 ,,
18 new large units ...		369,000 ,,
83 new small units ...	...	224,000 ,,
Giving a total of ...	...	1,145,000 tons

I referred earlier to the fact that four-fifths of the increased production in the Second Plan resulted from the expansion of existing units. However, it will be seen from the foregoing figures that the position is almost exactly reversed for the Third Plan, in that new units are required to provide four-fifths of the expansion envisaged.

Uneconomic Prices

A point which this at once raises is that capital outlay per ton of capacity is much greater for the setting up of entirely new units than for the expansion of existing units. Consequently the cost of servicing capital and depreciation per ton of production is higher in the case of new units. In its Memorandum to Government on the Tariff Commission's Report, this Association pointed out that the prices recommended by the Tariff Commission would be uneconomic for such units. More recently the Directors' Report of a new unit has referred to the difficult situation which has been created for the Paper Industry in general, and new units in particular, by the price structure which came into effect on 1st January, 1960, in consequence of which this particular new unit was unable to charge its full depreciation provision in the Accounts.

Another feature of the third Five Year Plan is the development of capacity through the medium of small scale paper units, which are expected to produce 30% of the total increase in installed capacity. Given a combination of cheap labour, cheap local raw materials, and proximity to markets these small units may be an economic proposition. Their manufacturing costs will, however, always be considerably higher than the costs of the larger units. This point was confirmed by the Tariff Commission when, in testing the adequacy of the current price structure on the individual units costed by it, it was found that in the case of those units with a comparatively small volume of output the net realisation available to such units would be comparatively lower.

In view of the vital part which new and small scale units are being called upon to play in the third Plan, and, having regard to the fact that present prices are largely based on the costs of the bigger, older established, and therefore the more efficient low cost units, of the Industry an immediate revision of prices to make them more representative of the Industry as a whole is surely necessary.

Eventful Year

1960 was an eventful year for the Paper Industry. Although production for the year at 345,000 tons showed a rise of 50,000 tons over 1959, the Industry was faced with an increasing number of problems as the year progressed.

During the early part of the year the supply position of almost all varieties of paper, but more especially the common varieties of printings and writings, was so acute that Government took the unusual step of convening a meeting with the representatives of Industry, trade and consuming interests in May, 1960 with a view to bringing about an improvement. However before the year was over, scarcity conditions, at least for the common varieties, had virtually disappeared due to the increased production to which I have just referred.

In July, 1960, the Paper Industry was downgraded from selected grades to Grade 1 for its requirements of coal. Apart from the increase in consumption of coal, this has produced for some mills grave difficulties in maintaining the required pressure of steam, as their boilers were equipped for use with coal having a higher calorific value than Grade 1.

Throughout the year the supply position of railway wagons deteriorated seriously and I regret that since the close of the year the position has become steadily worse, to the extent that some mills have had to resort to road movement of coal which, of course, has had a serious effect on their costs—a contingency which was certainly not provided for by the Tariff Commission in the price structure recommended by it.

Transport Shortage

Serious though the effect of shortage of rail transport may be on the Industry's supplies of coal, it is even more serious in relation to supplies of raw materials. As a result of representations made by the Bengal Chamber of Commerce and Industry, the Railways held a conference in December last with Mills in the Bengal/Bihar area at which it was decided to make regular allocations of block rakes for bamboo movement, and to recall condemned wagons into service for short distance traffic. Unfortunately, due to priority requirements for movement of coal, the Railways have been unable to make regular allocations of block rakes, with the result that, while thousands of tons of bamboos are accumulating at the railheads, stocks at the Mills are reducing at an alarming rate.

Supplies of China Clay and Lime have also been affected from time to time by wagon shortage and here again Mills have had to make use of road transport for their requirements.

During the year stocks of finished paper have built up in Mills' godowns due to the shortage of wagons and mills have been obliged to move their finished goods by road far beyond the point where it was economic to do so. Shipment of paper to Madras, in the absence of wagons was also necessary during the year.

Any step which will help to alleviate the present acute transport position is very welcome and it is gratifying to note therefore that Government has decided to move coal to Southern and Western India by sea from Calcutta. I sincerely trust that this will have the effect of releasing more wagons to lower priority industries including the Paper Industry. I have already mentioned that this Industry is required to double its production during the Third Plan; if even at the present level of production, the Industry is being handicapped by lack of rail transport I cannot see how it will be able to fulfil its obligations under the third Plan, unless a vast improvement is made in wagon availability.

Power Shortage

Another problem which is causing some mills concern is the serious shortage of electrical power in West Bengal. If the shortage persists it will undoubtedly impede the much needed expansion of the Paper Industry apart from slowing down the present rate of production.

Last year my predecessor indicated that this Association in its Memorandum to Government had requested Government to rant an increase in the price structure which had been recommended by the Tariff Commission and which came into effect on 1st January, 1960. At the conference held in May, 1960, to which I have made previous reference, the Union Minister for Commerce and Industries accepted that a case had been made out in the Industry's favour on certain points which deserved looking into, but considered that there should be a reasonable lapse of time before prices were reviewed. A review of the price structure is now long overdue.

Since the Tariff Commission's investigations Mills' production costs have steadily increased and Government itself is directly responsible for part of Mills' increased costs. I refer in particular to the 5% Railway freight surcharge which came into effect from 1st April, 1960, to increases in railway freight as a result of alterations in the minimum weight conditions for transport of bamboos and other raw materials from November, 1960 and to the new excise duty on Caustic Soda and Soda Ash levied from 1st March of this year.

Raw Material Prices

The prices of all raw materials, including rags and paper cuttings have increased considerably. The price of coal has gone up and due to wagon shortage Mills are now incurring additional expenditure on road transport for coal. In addition, coal bills have shown an all round increase due to the downgrading of coal for the Paper Industry.

The basic prices of China Clay, Rosin and almost all chemicals used by the Industry have increased and, as most of these items are generally supplied in gunny bags, packing charges for these items have recently soared due to the inordinate increase in the price of gunnies which, of course, has had its effect on Mills' own packing costs Moreover, labour costs have increased as a result of Tribunal Awards.

The 5% contingency allowance provided by the Tariff Commission in the price structure recommended by them has long since been absorbed. On the consideration of costs alone therefore an increase in paper prices is now well overdue.

At a meeting held last month between representatives of the Industry and Government in connection with the supply of paper under the 1961/62 Rate Contract, the Industry's representatives asked for a price increase to offset the increase in Mills' production costs. Although Government is still of the opinion that it is premature to revise paper prices, they have agreed to reconsider the matter as soon as they receive from the Industry details of increases in Mills' costs which have taken place since the Tariff Commission's investigations.

Adequate Return

I trust that when Government are re-examining paper prices they will not confine themselves to the question of cost increases alone, but will also take into consideration the necessity for an adequate return to the Industry on employed capital. The return of 12% provided by the Tariff Commission which is intended to cover a wide variety of payments including labour bonus and managerial remuneration both of which are items of cost, taxation, transfer to reserves, interest on working capital, debenture and loan interest, as well as dividends is wholly insufficient. The expansion of the Industry is bound to be retarded unless the price structure is revised to include adequate provision or return on employed capital.

I have pointed out that almost the whole of the expansion required for fulfilment of the second Plan was contributed by existing units and that, in contrast, reliance is being placed in the third Plan on new units, both big and small, for most of the required expansion. I have also dealt with the difficult position of new units, both big and small, under the present price structure. It is essential that nothing stands in the way of the Paper Industry doubling its production to meet the expected demand for paper at the end of the third Plan. I strongly recommend therefore that, when Government are reconsidering paper prices in the next few months, they take this opportunity to make adequate provision, not only for increased costs, but also for a fair return on capital employed.

Rehabilitation Allowance

The absence of any allowance for rehabilitation in the price structure was commented upon by the Association in its Memorandum and by my predecessor last year. The Tariff Commission has not followed any uniform policy in the granting of a rehabilitation allowance. This allowance was granted for the cement and steel industries, but not in the case of sugar and paper. I understand, however, that Government has referred back to the Tariff Commission the question of a rehabilitation allowance for the Sugar Industry. The cost of replacement plant for the Paper Industry is increasing at no less a rate than for any other industry, and consequently the necessity for Mills to build up resources to make up the disparity between their depreciation provisions and replacement costs is just as much in the Paper Industry as in any other. I trust therefore a suitable rehabilitation allowance will not be long delayed to the Paper Industry.

Scarcity of raw materials is another problem which is facing the Industry today. Reading the speeches of my predecessors I find that without exception the necessity for granting long term leases of bamboo and grass forests to paper mills was invariably stressed by them. I hope that State Governments now are awakening to the realisation that the policy of granting annual contracts, although possibly a source of immediately increased revenue, has been the cause of the gradual wasting away of forest resources, and that the only means of conserving these resources is by giving long leases to Paper Mills. Some mills have been granted leases of a duration of 3 to 12 years but these medium term leases are not in the best interests of either States or the Paper Industry. To ensure scientific exploitation and development of the forests it is essential that leases of at least 20 years are given to Paper Mills to enable them to undertake widespread plantation of bamboos, grass and other fast growing cellulosic raw materials for use in the manufacture of paper. Such development work obviously involves a considerable outlay spread over a period of years and would only be warranted if the lessee has had the assurance of a security of tenure very much longer than 3 to 12 years. The necessity for widespread planting of bamboos has become all the more now that it is proposed to make use of bamboo for the manufacture of rayon grade pulp. I understand that already schemes for the manufacture of 280,000 tons of rayon grade pulp have been approved by Government. If these schemes materialise the amount of raw materials available for the Paper Industry will be further curtailed. To ensure that the requirements of existing paper mills are not jeopardized it is very essential that the resources of bamboo, grass and other raw materials in the country are carefully surveyed before many more new licences for the manufacture of either paper or rayon grade pulp are granted.

Use of Bagasse

Because of the shortage of bamboo, bagasse is becoming extremely important as a raw material for the manufacture of paper. Before bagasse can be made available to the Paper Industry, however, an alternative fuel must be provided to the Sugar Industry and having regard to the present shortage of wagons Sugar Mills will be naturally reluctant to part with their bagasse until they have the assurance of a regular supply of an alternative fuel. In order to expedite the expansion of the Paper Industry, therefore, I trust this assurance will not be long delayed.

While on the subject of raw materials I must refer to Government's policy not to allow Foreign Exchange for import of wood pulp except for the manufacture of Speciality papers. This policy, commendable though it is in the interests of saving Foreign Exchange, means that some units will not be in a position to make full use of their paper making machinery until such time as indigenous pulp becomes available. In view of the increasing demand for paper it is very essential that all units work to the full capacity of their installed plant. I trust therefore that Government's policy will be relaxed in the case of those Mills whose pulping capacity at present falls short of their paper making capacity.

The urgent necessity for building up a substantial export market for paper has been engaging the close attention of the Industry and during the year a Sub-Committee for Paper Export Promotion was formed under the auspices of the Development Council for Paper, Pulp and Allied Industries.

Manufacture of Paper Machinery

There has been considerable progress during the year in India's paper machinery manufacturing industry. Manufacturers of small scale plants are already in course of completing the fabrication of the first units of 3-5 tons capacity and manufacturers of large scale plants expect to be in a position to fabricate and supply several plants of 50 tons capacity by 1962.

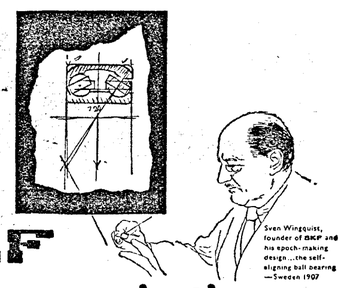
I would like to place on record the gratitude of the Industry for the assistance and advice rendered by the Development Officer (Paper) and his Assistant without which the Industry might not have been able to fulfil the production target set for it in the second Plan.

The thanks of the Industry are also due to the Cellulose and Paper Branch of the Forest Research Institute, Dehra Dun for rendering a much needed service to the Industry.

In conclusion, I would like to express on behalf of my committee and myself our very great appreciation of the work put in by both Mr. Dick, who acted as Secretary of the Association throughout 1960, and Mr. Paris, who has recently taken over from him on his departure on leave.

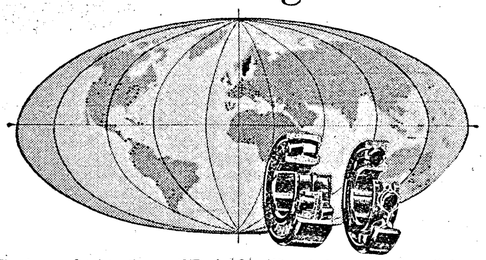
N.B.—This does not purport to be a report of the proceeding of the General Meeting.

from this little sketch



grew the SKF world-wide organization

Sven Wingquist, founder of SKF and his epoch-making design ...the self-aligning ball bearing —Sweden 1907



The place was Sweden—the year 1907, when Sven Wingquist invented the first self-aligning ball bearing, which revolutionized the bearing industry.
Manufacturers liked the new type of bearing and demand for it became world-wide.
With the passing of time SKF has grown with the industry it serves.
Today you will find SKF at work on all types of machinery in every industry, filling the intricate precision requirements of the jet aircraft, to the tough needs of huge construction units. Wherever a bearing is required, SKF will meet the requirement—with the finest bearing in the world.

THE PROBLEM OF TOO MANY LABOUR UNIONS

By Mary Sur

IT is common to hear industrialists put down all their difficulties about labour to rival unions, and even the Central Labour Minister has said that the multiplicity of unions is the bane of Indian industry today. But merely to deplore the fact will not get one very far, so it is time industry considered more constructive lines of approach. A democracy ensures the right of freedom of expression and freedom of combination. Political differences are not only countenanced, but given an official place in the Opposition in a system of parliamentary democracy. Politics have always played an important part in the trade union history of India, and the Government has itself given implicit approval to the principle of trade unions with different political outlooks by recognising more than one central federation for purposes of representation on all tripartite bodies. Legislation allows any seven persons to register themselves as a trade union, and the Supreme Court not long ago, interpreting the Industrial Disputes Act, declared that even a minority union could give notice to terminate an award or settlement.

Multiplicity of unions is, therefore, a natural feature of the Indian labour scene and likely to remain so unless there is a fundamental change in Government policy. Discussion on the rights and wrongs of multiple unions will not help management to sort out the tangle with which it is frequently faced today. And just to put the problem in its proper perspective, it has to be realised that it is not a problem peculiar to India.

Political Leanings

At a recent conference in Calcutta organised by the Indian Institute of Personnel Management, Mr. Arthur Silkin of the U.K. High Commission, speaking with intimate knowledge of industrial relations in France, showed that the French position was strikingly similar to that in India. Until 1947, the socialist and communist trade unions in France were combined in the C.G.T., but then the socialists, fearing communist domination of the confederation, broke away, leaving the C.G.T. to the communists. This could be compared with the I.N.T.U.C. break-away from the A.I.T.U.C. except that the French socialist unions are less strong than the I.N.T.U.C. A third factor in the French situation is the Christian Trade Union Confederation, which might be compared with the Hind Majdoor Sabha, although, the difference is that the former's basis is religious and not political, and it is a stronger body than the Indian organisation. There is also a fourth French body of independent trade unions, very similar to the U.T.U.C., which brings together various groups; and finally, there are a number of unaffiliated unions.

Belgium also has a trade union movement divided between socialist and catholic unions. Even in Britain, it would not be true to say that there is no problem of rival unions, in spite of the strength of the British Trade Union Congress. In 1954 the dock strike was called by an organisation opposed to the T.G.W.U. In British Railways, there is a rival union to the N.U.R. Multiplicity of unions, which are not necessarily rivals, but whose membership spheres sometimes overlap, is an inevitable outcome of the historical growth of British trade unions on a craft basis. In the shipbuilding industry, for instance, it may be necessary to negotiate with as many as 20 different unions, covering all the varied crafts connected with the industry. In the U.S.A., the merger of the C.I.O. and A.F.L. brought together the two large national federations, but this does not preclude rival unions springing up within an industrial establishment. The difficulty of negotiation where there is more than one union is, therefore, not a problem for India only, nor is it necessarily a problem of the present transitional period only. Factors in the situation may change, but the problem will remain. It is necessary to consider what solutions have been offered and to what extent they have been tried out and found effective.

The U.S. Solution

The solution adopted in the U.S.A. is recognition of and negotiation of contracts with the most representative union as provided for in the National Labour Relations Act. Where necessary, a ballot is conducted within the industrial unit under conditions laid down by the National Labour Relations Board, and new elections can only be held after at least one year, or on termination of the contract. The Indian Government has rejected this solution, although its adoption was at one time contemplated in the Industrial Relations Bill drafted in 1950, but subsequently allowed to lapse. The arguments against this solution are mainly two: that it may exclude altogether a substantial minority of workers who belong to another union for community or political reasons; and that the possibility of a ballot every year or so may keep industrial relations in a state of constant tension.

The Indian Government favours recognition by employers of the union with the largest membership in the establishment, but this must be identified by other means than the ballot of the workers. To many this seems not only illogical but undemocratic. If the country can choose its political representatives through the ballot system, they argue, why should not industrial workers designate the union to represent them in the same way? But, while workers choose their representatives on works committees by ballot in the manner prescribed by rules under the Industrial Disputes Act, the Government evidently fears that a ballot applied to choice between rival unions for recognition would arouse too much agitation and bring disorder rather than peace in industry.

It is well known that few trade unions have a real majority membership in the units they claim to represent. Therefore, the criteria for recognition of unions put forward by the Indian Labour Conference in 1958, and now forming part of the Code of Discipline, recommends that employers should recognise a trade union with a membership of at least 15 percent of the workers in a unit, or 25 percent of workers in the industry in the area, if it is the largest union claiming recognition. To check figures of membership, the Government has introduced a system of "verification" of the trade union claims, which seems to be both clumsy and not too reliable.

Recognition of a single major union is a solution which naturally appeals to those schooled in the principle of the democratic majority, but they forget that the largest union may not have anything like a majority behind it. Moreover, the difficulty of establishing clearly which of several unions has the largest support is further complicated by the fact that membership of unions tends to fluctuate, and is liable to sudden changes of allegiance. Also, where political rivalry is acute, intimidation occurs rather frequently and the unfortunate worker may be found to be contributing to two unions at once for the sake of peace. In these circumstances, a company by strictly adhering to recognition only of the union which it once appeared was the largest of all may today find itself in trouble. There are many situations where it may prove unwise to do so.

Unions for Separate Groups

Craft unions are the exception in India, but it does frequently happen that separate unions come into being for certain groups. A strong minority community in a company may wish to have a separate union. Often workers in distinct sections, although not widely separated from the main workshop, may still feel sufficiently apart in their interests to prefer a separate union of their own. Sometimes one category of workers may feel that their interests do not coincide with those of the main body of employees. The division between clerical and manual staff is an obvious example. Sales and distributive staff have different problems from production workers. In such cases, separate unions may well be recognised, even though this increases the work of negotiation and occasionally creates problems of overlapping claims to membership. Recognition of separate unions for such groups overcomes the argument that a substantial minority is being neglected.

Overlapping Bodies

The crux of the problem, however, is presented by rival unions with different political affiliations claiming general representations of the employees. That it is possible to persuade several major unions with differing political outlook to sit down in common negotiation of their economic claims has been proved by the outstanding case of Aluminium Industries of Kundra. In this Company, there were six rival unions with different political views, but a mediator sponsored by the Kerala Government was able to bring them all into joint negotiation, and eventually, an agreement was signed for four years with the six unions recognised as "the sole collective bargaining agents for the workmen". The agreement even named a single individual as the arbitrator in case of any dispute arising out of the contract. This agreement has worked well and the arbitrator has settled a number of points of difference. Now discussions are being held with a view to making a new contract when the existing one lapses.

It is something of an achievement to bring a number of unions to sit together to negotiate. In many cases, unfortunately, rival unions object in principle to sitting together and will not recognise that they have a common economic purpose because their political allegiances are stronger than their economic outlook. In France, for instance, communist and catholic unions refuse to sit together round a table. In the nationalised Renault works employing 40,000 workers, the management was not deterred by the communist union's refusal to join the negotiations, but signed an agreement with the christian and socialist unions, although neither of them was as strong as the communist union. Nine months later, the agreement was still working well and the communist union changed its mind and asked to be included in the contract.

Negotiation with several or with minority unions is certainly not the ideal, but it may in practice prove to be better than to sit back in despair and do nothing while warring unions bring about a rapid deterioration of morale in the works. If it is possible to draw a reasonable dividing line between the membership of the different unions, this should be done, and then negotiations can be conducted separately. The workers themselves may welcome such a division as long as they know that it will not prejudice their negotiating rights. Sometimes there will remain a small area where membership overlaps. This need not present an insuperable obstacle. The firm of Atlantis East Ltd in such a situation in Calcutta was able to negotiate separate agreements with several unions, with identical clauses relating to those categories of workers where union membership overlapped.

Equilibrium with More Unions

Where it is not possible to draw any dividing line, management can in certain cases recognise more than one union and achieve some equilibrium in industrial relations. It is possible to agree to discuss individual grievances with the union representing the particular employee concerned, and on wider issues, to invite the unions to sit together to negotiate. They may not all agree to do so, although their willingness may be influenced by the degree of understanding with which management has handled individual cases. Perhaps too much emphasis is laid on the formal act of recognition. It is possible to meet union leaders and discuss the individual cases which they wish to raise without giving formal recognition to the union. It is being done both at industry and factory level. Since, in any case, a registered union, whether recognised or not, may raise an industrial dispute and have it referred to adjudication, the actual question of recognition is not so important as many would make out. Management may have to meet the union leaders in conciliation proceedings even if they refuse to do so on their own. Formal recognition has, of course, a prestige value, and may encourage a more responsible attitude from the union side.

The I.N.T.U.C. argues that on questions of recognition it is the quality of a union which matters more than the "quantity" of its membership, and that the employer should only be expected to recognise a union that can "deliver the goods". This may be considered a specious argument in the mouth of a trade union leader, but from the point of view of peace in industry, it is conceivably better to meet and reach agreement with a union whose demands are within reason than to refuse to meet any of the representatives of the employees.

The suggestions for handling the problem of rival unions are admittedly pragmatic, but the possibility of their application to a given situation needs to be considered. It is surely better to make an honest attempt at a solution than to stick rigidly to principles which make any solution impossible. There are many companies which have declared that they will not give recognition to communist unions. Others, noticeably in the engineering industry in West Bengal, have not only given such recognition but made agreements which have been faithfully carried out. It is not a question over which one can dogmatise at the present juncture. An A.I.T.U.C. union may supplant an I.N.T.U.C. union or *vice versa*, but neither may remain long in power. Meantime, the problems of industrial relations remain, and are not solved by management holding aloof.

A Knotty Problem

It has often been held against employers that they find rival unions a convenient excuse for not recognising any body. This might have been the case at one time, but it can hardly be so now. Rival unions within any industrial unit are disastrous to morale and consequently to production. Management must deal with the situation as it arises, and the local circumstances in any two companies are rarely alike. It may well be that the only possible solution is to deal with more than one union where their membership is substantial. If would, therefore, be helpful if the criteria for recognition of unions were revised to meet this eventuality and to provide for recognition of one or more unions each having a membership of at least 15 percent of the employees. At present, the fifth clause of the criteria reads: "Where there are several unions in an industry, the one with the largest membership should be recognised." This is the ideal, but not necessarily the practical solution. The proper application of the Code of Discipline depends on the recognition of unions. It may not pay to be too dogmatic, and one must experiment with practical solutions of what is admittedly a very knotty problem.

Money

THE CALCUTTA MONEY MARKET

SLIGHT EASING IN INTERBANK FUNDS

Wednesday, 12th April.

THE somewhat slower rate of increase in advances has continued in the Calcutta money market during the past week. Of the main sources of demand, those showing substantial increases in offtake are the sugar and engineering and iron and steel industries. There has also been a slight improvement in call for accommodation against grains and seeds storage. The cotton and jute industries have reduced their requirements to a slightly lower level. There has been a moderate break in the tightness of the interbank market and the call rate has been marked down fractionally to 5½ percent. At this level there is reported to be little demand for funds. The reason for the improvement appears to be the influx of funds from the south Indian and Bombay markets.

The supply of bills has been restricted in the exchange market during the past week, but some improvement was apparent towards the close. What bills have been in evidence have been chiefly on account of gunny shipments. Demand for remittance has been fair, but by no means as buoyant as during the previous week. In the London money market, the pound has been generally firm and closing quotations showed fractional gains against most major currencies.

BULLION WAS STEADY ON SUPPORT ARISING FROM the approach of the Bengali New Year. Silver advanced from the previous week's level of Rs. 236 to Rs. 238.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 230.25. The London and New York prices were 80d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 143.25 to Rs. 143.75. The sovereign at Rs. 95.25 showed a gain of 25nP.

DURING THE WEEK ENDED 7TH APRIL, GOVERNMENT of India Treasury bills for Rs. 2,11,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY GOVERNment of India Treasury bills were opened on 11th April. The total amount offered was Rs. 2,65,00,000. Tenders at Rs. 99.315 percent were accepted in full and those at Rs. 99.310 percent were allotted approximately 61 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Bangalore, Calcutta, Kanpur, Madras and New Delhi up to the close of business on 17th April, and in Bombay and Nagpur up to 11 a.m. on 18th April.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 12th April to 15th April at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 5th April to 8th April amounted to Rs. 1,60,00,000.

RISES OF RS. 57.20 CRORES TO RS. 2,049.79 CRORES in the total note issue and of Rs. 55.17 crores to Rs. 2,039.91 crores in active notes were outstanding features of the return of the Reserve Bank of India for the week ended 7th April, 1961. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 55 crores to Rs 1,687.20 crores. This was obviously done by transferring securities from the Banking Department in which investments fell by Rs. 55.74 crores to Rs. 125.21 crores. Deposits of the Government of India declined by Rs. 91.90 crores to Rs 54.56 crores, as did other Government accounts by Rs. 10.67 crores to Rs. 8.31 crores. Balances of commercial banks at Rs. 70.60 crores showed a drop of Rs. 25 lakhs. Balances held abroad again declined by Rs. 1.93 crores to Rs. 11.31 crores. Other loans and advances fell from Rs. 185.50 crores to Rs 146 78 crores, of which advances to scheduled banks against usance bills amounted to Rs. 33.64 crores (Rs. 45.39 crores). Ways and means advances stood at Rs. 70.68 crores, against Rs. 39.02 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 31st March, 1961, shows a rise of Rs. 12.30 crores to Rs. 573.20 crores in total deposits. Investments in Government securities are up by Rs. 1.78 crores to Rs. 233.21 crores, while other investments remain unchanged at Rs. 9.84 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.08 crores to Rs. 281 29 crores Cash and balances are, in consequence, shown at Rs. 23.54 crores, or Rs 4.97 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 31st March, 1961 shows Demand and Time liabilities at Rs. 834.49 crores (Rs. 14 20 crores on account of borrowings from banks) and Rs. 1,073.92 crores (Rs. 10.73 crores), compared with Rs. 828.04 crores (Rs 15.64 crores) and Rs. 1,062.90 crores (Rs. 9.68 crores), respectively, in the previous week. Cash has increased by Rs. 1.30 crores to Rs. 45.32 crores, while balances with the Reserve Bank have decreased by Rs. 1.54 crores to Rs. 70.76 crores. There is a drop of Rs. 69 lakhs to Rs. 558.93 crores in investments. Advances and bills discounted at Rs. 1,333.77 crores show an increase of Rs. 15.72 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 69.9 percent, against 6.2 percent and 69.7 percent.

THE PROFIT OF THE UNITED COMMERCIAL BANK Ltd has risen from Rs. 60.42 lakhs to Rs. 67.43 lakhs for the year ended 31st December, 1960. A dividend of Rs. 6 a share has been declared, subject to deduction of tax. Reserve fund is allocated Rs. 30 lakhs and staff bonus Rs. 13 lakhs. After making other adjustments, there is a carryforward of Rs. 1.47 lakhs, against Rs. 1.04 lakhs brought in. Deposits were Rs. 88.94 crores (against Rs. 96.68 crores). Investments amounted to Rs. 33.88 crores and loans and advances to Rs. 61.39 crores.

THE PROFIT OF THE PUNJAB NATIONAL BANK HAS increased from Rs. 84.20 lakhs to Rs. 1.18 crores for the year ended December 1960. An interim of Re. 1 a share, taxable, was paid. A final dividend of Re. 1 a share, taxable, has been declared, making 20 percent for the year. Taxation absorbs Rs. 53 lakhs, reserve fund Rs. 11 lakhs and staff bonus Rs. 27 lakhs. The carryforward is Rs. 4.23 lakhs, against Rs. 3.19 lakhs brought in. Deposits amounted to Rs. 139.48 crores (against Rs. 141.16 crores). Investments were Rs. 45.80 crores and loans and advances Rs. 93.53 crores.

THE HABIB BANK LTD HAS MADE A PROFIT OF Rs. 74.23 lakhs for the year ended December 1960. Deposits amounted to Rs. 77.24 crores. Investments stood at Rs. 42.58 crores and advances at Rs. 31.04 crores.

LAST YEAR THE TURNOVER IN THE LONDON GOLD market increased by about 30 percent and for the first time since the market was reopened after the second World War, the orderly pattern of prices was disrupted. The speculative activity during the autumn, touched off by a belief that the United States would be compelled to raise the price of gold, naturally figures prominently in the *Annual Bullion Review* published by Samuel Montagu, the bankers and bullion merchants. In their opinion, reports of the autumn events were in many ways "exaggerated and inaccurate." They estimate, for instance, that purchases of gold in the last quarter of 1960 in Europe and Canada by U.S. interests did not exceed $100 million, which is much less than most estimates. The review is critical of the tardiness of the U.S. authorities in recognising the importance of free gold markets. It is suggested that an official declaration of willingness to intervene in the bullion markets in September or early October would probably have cost the United States' reserves less than its Treasury's average weekly loss of gold to the market in subsequent weeks. The firm is still not convinced that there is a good case for changing the dollar price of gold. There are also hints against the suggestion that the use of gold should be strictly controlled and confined to monetary purposes. During the past ten years, hoarders, investors, the arts and industries have absorbed about half the world's supplies of new gold. The London silver market was also livelier in 1960 when there was a marked increase in forward operations. The steadily rising industrial use of silver and the revival of silver coinage have boosted consumption even more above current production, and stocks seem to be dwindling. The shortage of silver is expected to keep prices firm in the London market, but no runaway rise is thought likely this year. In the longer run, higher prices "would seem inevitable." The only source of non-production silver which holds any promise of expansion is communist China, whose silver sales were a feature of the London markets and elsewhere in 1959 and 1960.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 13-4-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
13-4-61	14-7-61	2,00,00	Rs. 2.750%
7-4-61	8-7-61	2,00,00	Rs. 2.750%

Stocks and Shares

TECHNICAL REACTION FOLLOWS THE BOOMLET

INVESTORS WAITING FOR GOODYEAR AND OTHER NEW ISSUES

Wednesday Evening.

THE boomlet which developed in the Calcutta stock market a few days ago has fizzled out during the past week. Bombay decided that the technical position had become over-bought, so it started selling the speculative issues freely. Prices in Calcutta, after initial reluctance, followed downwards, but since yesterday there has been a minor recovery.

It is hard to pinpoint the reasons for the fall in equity values. Some say that a lot of money is being held in reserve for subscribing to the attractive new issues which will be coming up shortly. The one which is awaited most eagerly is due from Goodyear India Ltd by the end of this month; the Company has confirmed that its factory near Delhi is nearing completion and will go into production before long. The stringency of bank credit is worrying the stock market now that the busy season seems to be approaching its peak. Recent speeches by various bankers offer little hope that the stringency will be reduced much even when the slack season sets in. Finally, it appears that operators are having second thoughts on the bonus issue prospects which inspired the recent boomlet.

Nevertheless, the technical position of the market has probably improved with the latest shake-out. It is reported that the Life Insurance Corporation has bought a fair amount of ordinary shares in Tata Steel. Rumour has it that the Calcutta Stock Exchange is thinking of adding three more scrip to the forward list, the three being J. K. Rayon, Central India Coal and Jaipur Udyog.

Indian Iron dropped to Rs. 26.72 at one stage, but have recovered to Rs. 26.85 at the settlement today. Among engineerings, the concentration is on companies whose business is believed to be expanding particularly fast, such as Indian Standard Wagon, Braithwaite and Burn, Texmaco lie depressed on informed selling.

The trend in jute shares has been hesitant, because the gunny markets have been fluctuating indecisively. The I.J.M.A. jute goods stock figures for March have proved satisfactory in so far as there has been only a minor increase in stocks. But the foreign demand for hessian and sacking at the moment is reported to be poor, and investors are worried that the power shortage in the Calcutta area will seriously affect the working of the mills. The prospects for the new jute crops, however, remain good.

Coal shares are dull, except for Bengal Coal, which are firm because the Company's recent debenture issue has been over-subscribed. The official announcement says that, of the Rs. 60 lakhs worth of debentures which Bengal Coal has issued, Rs. 30 lakhs were subscribed through firm applications. The remaining Rs. 30 lakhs have been subscribed more than twice. Except in the case of applications for Rs. 1,000, which will be allotted in full, allotments will be made *pro rata* to the amount applied for, subject to such adjustments as are necessary to make allotments in units of Rs. 1,000 in terms of the prospectus. Allotment letters and refund orders will be issued by 15th April.

Miscellaneous industrials have moved down in line with the general trend of the market, but are closing above the week's lows. The better-class shares, like Indian Aluminium, Indian Copper, Indian Cable and Dunlop Rubber, have resisted the decline well. But Hindustan Motor are quiet following reports that plans for manufacturing baby cars in the public sector are being finalised. India Steamship are worried about the outlook for freight rates. Papers are disturbed by the speech made by the chairman of the Indian Paper Makers Association, wherein a gloomy view was taken of the industry's profitability. Cotton textile shares have been steady on expansion hopes and because raw cotton is becoming more plentiful, but sugars are worried that large stocks of the commodity are accumulating at the mills.

There has been a slight reaction in tea shares because it is reported that plenty of common tea is available in the London market. If this remains the case, the new marketing season in north India might not make as strong a start as the trade had expected.

Institutional buying is keeping up Government securities, especially short and medium-dated loans. But the scrip on offer are few.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during March was: pig iron 141,600 tons; steel ingots 142,300 tons; semi-finished steel for sale 33,200 tons and finished steel 81,700 tons.

Bombay Market

MODEST RALLY FOLLOWS EARLY PRICE DECLINE

OPERATORS TAKE CAUTIOUS VIEW

Wednesday Noon

THE Bombay stock market closed the past week in a sober mood. Share prices declined on a broad front earlier due to long liquidation induced by fears of high carry-forward charges and increased make-up prices. Towards the close, there was a modest rally on the view that the technical position had improved after the shake-out. Sentiment was also helped by a report that there was some institutional support for Tata Ordinary shares. Operators were nevertheless cautious in view of the fact that the credit shortage was being accentuated. Many new issues have been floated and considerable funds are being siphoned off.

Tata Steel closed at Rs. 150.50 and higher production figures for the Company in March have had steadying effects. Indian Iron were quiet at Rs. 27.15 because Lyons Range was reported to be in a bearish mood. Among engineering shares, Tata Locomotive were a firm feature and improved to Rs. 341 on investment buying. Premier Construction were shaded at Rs. 191, as were Alcock Ashdown at Rs. 318. Larsen and Toubro lost at Rs. 41.50. Motor shares were quiet, and Premier Automobile were lowered to Rs. 172.75. Hindustan Motor declined to Rs. 20.32.

Sentiment in cotton mill shares was maintained on good corporate news. The decision of some

companies to issue bonus shares induced support, but highest levels were not maintained at the close because of profit-taking. Century were quoted at Rs. 579, but Bombay Dyeing were subdued at Rs. 65.30 due to the fact that the Company has no idea of issuing bonus shares for the time being. Svadeshi were bought at Rs. 265 and Tata Mills at Rs. 52.50 on expectations of bigger dividends. Kohinoor came to hand at Rs. 300 and Simplex were done at Rs. 187. Standard were steady at Rs. 1,485 and Khatau were transacted at Rs. 522.50. India United ordinaries were offered at Rs. 14.72 and business passed in Apollo at Rs. 1.60.

Prices of miscellaneous shares moved down in sympathy with the general trend. In sugar shares, Belapur declined to Rs. 286 and Phalton were quoted lower at Rs. 144. Walchandnagar Industries changed hands at Rs. 199.50. Cement shares were steady, and Associated Cement found buyers up to Rs. 160.50 on prospects of a bonus share issue. Digvijay were done at Rs. 154.50. Mining shares were steady, and Shivrajpur Syndicate were dealt in at Rs. 91. Steamship company shares were quiet, and Scindia Steam were available at Rs. 14.68. Great Eastern Shipping were sold down to Rs. 15.56. Rayon shares were quiet because it was feared that the burden of the increased excise duty might have to be borne by the industry. National Rayon reacted to Rs. 523 and Baroda Rayon were shaded at Rs. 144. Bombay Burmah improved to Rs. 619 on hopes of a bonus share issue. Chemical shares were quiet, and Tata Chemical were sold down to Rs. 19.52. Polychem declined to Rs. 240 and Indian Dyestuff were available at Rs. 505. Ceat Tyre were quoted lower at Rs. 287.50 but Voltas were steady at Rs. 277 on investment account. Synthetics and Chemicals declined to Rs. 150.

Banking shares were steady, but business was restricted. Central Bank were dealt in at Rs. 61.30 and Bank of India were done at Rs. 122. Insurance shares were steady, and business passed in new India Assurance at Rs. 59.

Scattered business was done in electricity company shares, and Ahmedabad Electric were placed at Rs. 81.80. Bombay Suburban were quoted at Rs. 85. Tata Hydro came to hand at Rs. 101.50.

Madras Market

SENTIMENT STEADY BUT TURNOVER FALLS

BONUS PROSPECTS HELP BULLS

Tuesday Evening.

THERE was an appreciable decline in turnover in the Madras stock market during the past week. Although sentiment was steady, operators were restrained by easier advices from the Calcutta and Bombay stock markets. Prospects for new and bonus share issues by some companies promoted bullishness. Textile shares were favoured on the view that production of the mill sector would be encouraged in order to meet cloth shortages. Government securities were steady and institutional support was forthcoming for the State loans. Sugar shares were quiet because many factories were believed to have been embarrassed by heavy accumulation of stocks of the commodity. Tea shares were quiet on the news of declines in prices of plain grades at the London auctions. Coffee shares were offered freely on fears of excessive supplies. Rubber shares were bought selectively. The publication of good dividends, combined with rights share issues by some companies, helped improve sentiment in miscellaneous shares.

In the banking group, Indian Overseas were bought at Rs. 189 and Indian at Rs. 171. Among public utilities, routine business was transacted. Cochin came to hand at Rs. 10.20 and South Madras at Rs. 10. Business was done in Vellore at Rs. 13.50 and in West Coast at Rs. 14.

In sugar shares, Deccan were sold down to Rs. 14.30 and India declined to Rs. 12.60. Mysore were offered at Rs. 59, but United Breweries were steady at Rs. 115.50. E.I.D. were steady and met with support up to Rs. 44.05 on expansion prospects.

In the planting group, Blue Mountain were taken at Rs. 3.55 and Cochin Malabar were dealt in at Rs. 7.92. Business passed in Consolidated Coffee up to Rs. 23.60 and Ouchterlony were indicated at Rs. 4.38. Peermade were steady at Rs. 23.30 on paying a final taxable ordinary dividend of 15 percent. Periakaramalai were done at Rs. 4.10 on declaring an interim taxable ordinary dividend of 7½ percent. Ossoor were bought up to Rs. 3.30 on paying an interim taxable ordinary dividend of 5 percent and Savamalai were in demand up to Rs. 3.55 on declaring a taxable ordinary dividend of 14 percent. Wartyhully changed hands at Rs. 3.30 on paying an interim taxable ordinary dividend of 5 percent. Business was done in Balmadies at Rs. 2.48 and Chembra were transacted at Rs. 3.90. Kil Kotagiri were steady up to Rs. 5.32 and Midland were wanted up to Rs. 11.80. Mysore Coffee were quiet at Rs. 5.55 and Nilgiri were offered down to Rs. 8.45.

In the textile group, Lakshmi were steady at Rs. 174, as were Madura at Rs. 38.18. Travancore Rayon improved to Rs. 38.50, but South India Viscose lost at Rs. 166. Vijayalakshmi turned buyers up to Rs. 105 on issuing ordinary rights shares in the ratio of one share for every two held, at par. Balarama Varma were steady at Rs. 94 on declaring a taxable ordinary dividend of 9 percent. Rajalakshmi were in demand up to Rs. 83 on paying a taxable ordinary dividend of 12 percent. Kothari were in demand up to Rs. 12.85. Bangalore Woollen were quoted at Rs. 204, but Buckingham improved to Rs. 209 on producing a very good report. Mettur were steady at Rs. 380, as were Premier at Rs. 260.

In the miscellaneous section, Aluminium Industries were supported up to Rs. 23.87 and Ashok Leyland were in demand up to Rs. 9.47. India Cement were quietly steady at Rs. 6.05 and Parry's Confectionery were firm at Rs. 6.23 on issuing ordinary rights shares in the ratio of one share for every two held, at a premium of Re. 1 a share. Travancore Ogale found buyers up to Rs. 7.20 on paying a taxable ordinary dividend of 6 percent. Enfield were steady at Rs. 14.87, but F.A.C.T. were sold down to Rs. 11.10. Mettur Chemical were steady at Rs. 14.25 and Mysore Paper improved to Rs. 25.50. Standard Motors were done at Rs. 16.75, but Spencer reacted to Rs. 25.25 on profit-taking. Business was done in Textool at Rs. 179 and Tube Investment were supported up to Rs. 290. United Electrical were transacted at Rs. 9.50 and business passed in Kirloskar Electric at Rs. 12.90.

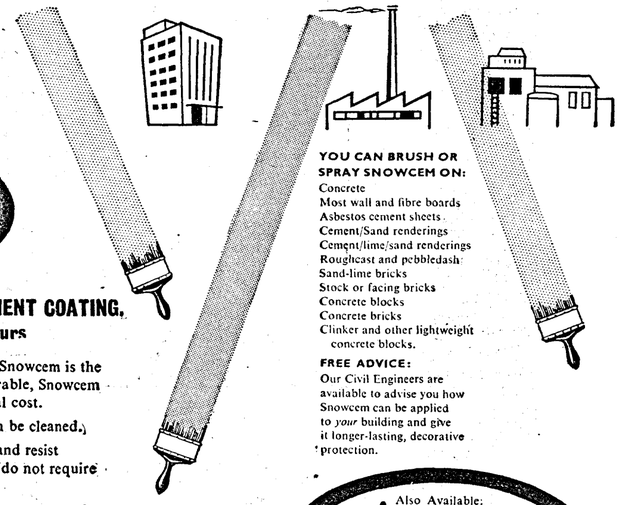
Protect your Office and Industrial Buildings with

Snowcem

SUPERIOR, LOW-COST, WATERPROOF CEMENT COATING.
Available in a wide range of colours



To protect your mill, factory or office building, Snowcem is the ideal coating material. Longer-lasting, more durable, Snowcem creates brighter decoration at a more economical cost.

Snowcem does not rub, flake or peel off and can be cleaned.

Snowcem coated surfaces are hard, waterproof and resist penetration of damp. Subsequent applications do not require any special preparation of surface.

Silvicrete White Cement is the base of Snowcem

YOU CAN BRUSH OR SPRAY SNOWCEM ON:
Concrete
Most wall and fibre boards
Asbestos cement sheets
Cement/Sand renderings
Cement/lime/sand renderings
Roughcast and pebbledash
Sand-lime bricks
Stock or facing bricks
Concrete blocks
Concrete bricks
Clinker and other lightweight concrete blocks.

FREE ADVICE:
Our Civil Engineers are available to advise you how Snowcem can be applied to *your* building and give it longer-lasting, decorative protection.

Also Available:
Impermo
CEMENT WATERPROOFING COMPOUND
Impermo is well-known as a most economical and superior water-repellent material in powder form for adding to cement to overcome the penetration of damp through cement, mortar or concrete.

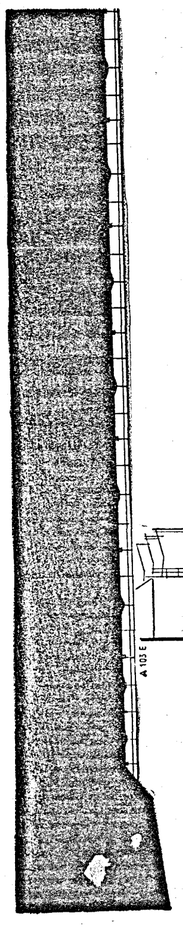
SIEMENS



165,000 h.p. for Rourkela

The new Rourkela power station has a total capacity of 165,000 h.p., of which 105,000 h.p. are available as electric energy for the rolling mills and auxiliary drives while 60,000 h.p. can be used for the turbo blowers of the blast furnaces. The whole plant was planned and carried out by Siemens-Schuckertwerke AG, Germany.
