CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

Published every Thursday.

London Market

STOCK MARKET BOOM CONTINUES

KEEN INVESTMENT DEMAND

London, 12th April.

THE boom in the stock market, particularly industrials, gathered considerable momentum during the past week, and a heavy demand in a market none too well supplied with stock carried many prices to new peaks. The volume of business generally has been on a vast scale with the total number of bargains marked on Monday well exceeding 25,000, the highest since the immediate post-election days over 15 months ago. Much of the business was of the genuine investment type with investors willing to take a long-term view rather than be put off by the less promising immediate outlook. There was also a fairly large element of speculative buying. While industrial equities have surged forward, fixed-interest stocks lacked support and in the gilt-edged market, there was selling by the small investor for reinvestment in equities. There was very little interest in foreign bonds, but dollar stocks advanced with Wall Street. The South African political situation overshadowed gold shares, and at times, there was a fair volume of selling, particularly on London account. The proceeds from many of these sales, it is believed, also found their way into domestic industries. However, the gold share market now appears steadier on small support, mainly from South Africa. Copper shares fluctuated somewhat, but the soaring price of tin brought persistent buying of tin shares and some sharp gains were recorded. Oil shares were quietly supported and there was buying of British Petroleum and Burmah in advance of their respective dividends due in the next few days. Tea shares were quiet and tended lower, but rubbers met with mild support.

New Delhi

MANUFACTURING COLLABORATION WITH WEST GERMAN FIRMS

MINISTER VISUALISES POSSIBILITY OF INDIAN MOTOR-CAR EXPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

COLLABORATION arrangements involving 32 West German firms were approved by the Indian Government during 1960. The following are some of the West German firms:

Name of Indian party	Name of West German party	Item of Manufacture
Delhi Garage (P) Ltd, New Delhi	Helios-Apparate Wetzel and Schlosshaver Gm.b.H., Hoidelbord	Centralised lubrication equipment
New Standard Engg. Co Ltd, Bombay	Deprag Pressuluft Maschinen Schulz K.G., Amberg-Opf.	Air compressors
Engines Valves Ltd, Madras	Alfred Teves, West Germany	A.T.E. valves
Autometers Private Ltd, New Delhi	Motor Meter, West Germany	Automotive panel instruments
Coimbatore Armature Winding Works Ltd, Coimbatore	Festo Machinen Fabrik, West Germany	F.H.P. motors
Assam Sillimanite Ltd, Calcutta	Vereinigtre Gross Almeroder Thonwerke, West Germany	Refractories
Bharat Timber Industries, Bombay	Deutsche Holzvered-lung, West Germany	Wood processing industry
Century Rayons, Bombay	A.K.V. Holland and Glaustaff, West Germany	Tyre cord
Raymon Engineering Works Ltd, Calcutta	Hoesch Export, Gm.b.H., Dortmund	Rail equipment
Rightaids (Orient) (P) Ltd, Madras	Hebborn and Co., West Germany	Ball point pens
Teksons (P) Ltd, Bombay	Autokuhler, Gm.b.H., Hofgeismar	Complete radiator, both tubular and honeycomb
Davenport and Company Pvt. Ltd, Calcutta	Halssen and Lyon, Hamburg	Buying and exporting tea to foreign countries
Automobile Industries and Agencies (India), Bombay	Lamforder Mettallwarrengesellschaft, Lamforder-H.A.M.N.	Tie rod ends
Sinac Group (India) Pvt. Ltd, New Delhi	Alfred Schuber Work zeng Und Apparatebau K.G. Kressbronn	Knitting machines

Manufacture of Gaskets

Another undertaking for the manufacture of gaskets in collaboration with Victor Manufacturing and Gasket Company of the U.S.A. is being examined here. The foreign collaborators, under the scheme, will supply the entire equipment valued at Rs. 9 lakhs as their share capital of capital participation. No royalty is involved. Asbestos sheets, steel sheets, synthetic rubber, chemicals, vegetable paper, etcetera, valued at Rs. 21 lakhs a year are raw materials for the unit, which will be located in Bombay. Already four firms have been licensed for the manufacture of gaskets. They are:

Name of the firm	Annual capacity in '00,000	Remarks
Payen-Talbros (P) Ltd, Delhi	83.5	Production commenced in 1957: collaboration with Payen of the U.K.
Auto Spares (P) Ltd, Baroda	210	Without any foreign collaboration. The party is also licensed for the manufacture of oil seals and radiators. The applicant resides in South Africa and he recently applied to the Government for permission to raise a loan from the U.K. to be paid from east African funds to finance the gaskets, oil seals, and radiator schemes sanctioned.
Excelsior Needles Industries (P) Ltd, Ludhiana	60	
J. Barman and Company, Delhi	90	

The Victor Manufacturing and Gasket Company of the U.S.A. is one of the largest gasket manufacturers in the world. It supplies gaskets to the well-known motor-car firms like Ford Motor Company, Chrysler Corporation, General Motors, etcetera. It also exports its products to many countries in the world including India.

Making Complete Clutch Assemblies

The manufacture of complete clutch assemblies in Faridabad, near Delhi, is contemplated. The lines proposed are as follows:

Phase	Lines of manufacture proposed	Monthly installed capacity on single shift
1961-62	Clutch plates comprising disc, flange, springs, facings and rivets	10,000 clutch plate assemblies
1963-64	Clutch plates as above	30,000 clutch plate assemblies along with other parts
1962-63	Clutch pressure plates and other parts	10,000 complete assembly
1963-65	Clutch pressure plates and other parts	30,000 complete assembly

Name of the product to be manufactured		Name of raw material	Quantity c.i.f. required value (annual)	Import policy for the item
Polychlordiene	970 tons	Dicyclopentadiene (imported)	339 tonnes	Rs. 474,600
		Chlorine (indigenous)	930 tonnes	
Peraceticacid	335 tons	Hydrogen peroxide (indigenous)	86.5 tonnes	
		Acetic acid-Glacial (indigenous)	288.5 tonnes	

Negotiations for collaboration are in progress with Lamellen Und Kupplungsbau Stuttgart, West Germany, and Maremont International Corporation, Chicago, U.S.A. At present, the following firms are licensed for the manufacture of clutch assemblies for capacities indicated against each:

Name of firm	Annual capacity in nos.
(1) Automobile Products of India Ltd, Bombay	15,000
(2) Turner, Hoare and Co. (P) Ltd, Bombay	36,000

Out of the two firms, the first one is in production. Licence to the other firm was recently issued.

Endrine, Chlordane and Heptachlor

The Mysore Fertiliser Company and Mysore Insecticide Company of Madras propose to set up a plant to manufacture endrine, chlordane and heptachlor. Within two to three years of the starting of the plant, they propose to produce the following from basic raw materials:

The cost of imported equipment (Rs. 1 crore) to be covered by equity capital participation and international loans to be arranged by the foreign collaborators from (i) the Development Loan Fund and /or (ii) the Export-Import Bank, Washington.

The foreign collaborators are prepared to assist in developing the exports of endrin, chlordane and heptachlor to be prepared by this unit, so as to earn the foreign exchange necessary for imported raw materials as well as payments of technical fees to them. Endrine, chlordane and heptachlor are among the important chlorinated hydrocarbons, which have strong pesticidal properties. The use of a wide range of technical materials is essential to avoid the chances of possible resistance that some of the insect pests may develop against one or the other pesticides. Endrine has proved to be very effective against some insects, where the conventional pesticides have failed to produce the desired results. The manufacture of endrin, chlordane and heptachlor has been developed by Velsicol Chemical Corporation and have been covered by patents. Velsicol Chemical Corporation will provide the requisite technical know-how and would also arrange foreign exchange necessary for the import of plant and equipment. The terms of collaboration and other connected matters are being negotiated.

Policy on Motor-vehicles

The Central Industry Minister, Mr. Manubhai Shah, in his speech before the meeting of the Association of Indian Automobile Manufacturers last week, said: "If we are to provide the benefits of mechanised transport to as wide a part of the public as possible, it should be our goal to develop the various forms of transport to suit the purchasing power of the different income groups in the country. The increasing stress that is being given to the production of mopeds, scooters and motor-cycles in greater numbers and the production of a low-cost car are steps directed towards attaining this goal. All these will really lead to the production of all transport units in the country going up. The objective could be defined as more transport at lower costs with good quality vehicles backed by proper and adequate servicing. This will rapidly develop motorisation and mechanised transport in our country of vast distances as has been through sound well co-ordinated policies in other advanced countries. You can see how the passenger bus transport has crossed all targets that we either in the Government or in the industry could ever forecast. The passenger buses whose production in 1964 was hardly 2,500 vehicles have reached about the 9,000 vehicles mark in 1960 and we expected that the production of passenger buses might cross the figure of 20,000 in 1965. The is a sure proof of the extremely fast rate of growth of transport needs." Mr. Shah added, "I need not stress the importance of exporting motor-vehicles and spares to the maximum extent. Export of each vehicle brings in an immediate gain in foreign exchange." So the motor-vehicle industry will follow the example of the sugar industry. The latter was nursed by the consumer to make this country self-supporting in white sugar. Today, when there is a glut, the Government and the industry are thinking of earning foreign exchange, without caring what price the consumer will have to go on paying. Similarly, while there are literally queues for new cars, the Minister is already talking of exports.

Equity Base of New Companies

The equity base of the new company floatations is unhealthy in so far as the promoters have used very little of their own resources, depending largely on bank finance for the purpose. This view, it is understood, was expressed by the Central Finance Minister, Mr. Morarji Desai, at a meeting of Parliament's Consultative Committee on Finance. The Government has the position in review with a view to broadbasing the equity structure of new companies in relation to bank finance, he has indicated. Mr. Desai also outlined the proposed schedule for the Income-Tax Amendment Bill, drafted in the light of the Tyagi Committee's report and the Law Commission's observations on the subject. The Government intends to introduce it during the current session of Parliament with a recommendation that it be referred to a Select Committee. The latter's report will be expected by the next session, when it might be adopted.

More Telephone and Cable Factories

The Central Transport and Communications Minister, Dr. P. Subbaroyan, has informed the Lok Sabha that the Government proposes to set up another telephone factory and a cable factory during the third plan. Another important announcement which has been welcomed particularly by members from the south, is that the schemes for the development of the ports of Mangalore and Tuticorin have been included in the third plan.

The Problem of a Sugar Surplus

Mr. S. K. Patil, Central Minister for Food and Agriculture, told members of Parliament that while the position concerning wheat, rice and pulses was satisfactory, the current "sugar surplus" presented an immediate difficulty. The stock with the factories at the end of the crushing season, it was expected, would be of the order of two million tons, and there was an urgent need for exports on a large scale. While all efforts were being made to push up exports, the price situation presented a serious difficulty. The cost of sugar produced in India was about Rs. 700 a ton, while the international price ranged between Rs. 400 and Rs. 450 a ton. Exports, therefore, had to be subsidised, and that meant hardship to the Indian consumer. The position had become even more difficult as a result of the recent Wage Board award. Patient handling of the problem was necessary.

He stated that when the Government gave incentives for the production of sugar, it was not its intention that acreage under sugarcane should increase. This had, however, happened; particularly in the case of Uttar Pradesh, about 400,000 additional acres had been brought under cane. He

emphasised that the Government's intention had been that the yield from each acre should increase, but, on an average, India's yield from each acre continued to be the lowest in the world, compared with the production in other important sugar countries.

In reply to a Member's contention that the prices of fertilisers were "too high", the Minister referred to the Fertiliser Distribution Enquiry Committee's recommendation that fertilisers should be supplied to farmers at as low a price as possible. This question, he said, was being considered. The price, it is expected, will be reduced by, say, Rs. 25 a ton.

Raw Materials for Plastics

The plastic industry in India produces raw materials and processed goods of the value of about Rs. 20 crores a year. The position of the principal raw materials used in the plastic industry and the manufacture of machinery is indicated below:

(i) Phenol-formaldehyde—The country is self-sufficient except in electrical grade material for which import is at present allowed.

(ii) Urea formaldehyde moulding powders—Although the licensed capacity is sufficient to meet the country's requirements, the actual production is not up to the capacity and about one-third of the present demand of this material is met by import of the material.

(iii) Polystyrene—The country is in short supply of this material. Two months' requirements were allowed to be imported in the last licensing period by small-scale industry.

(iv) Polyethylene—High density polyethylene is not yet manufactured in the country and its import is allowed. A licence has been issued for its domestic manufacture. The country is not fully self-sufficient in low density polyethylene, and two months' requirements were allowed to be imported in the last licensing period for small-scale industry.

(v) A beginning has been made in the manufacture of machinery like extruders, small injection moulding machines and compression presses used in the plastic industry. Moulds for the industry are also being locally fabricated. All types of moulded plastic goods are being produced in the country to meet the growing demand for consumer goods and industrial components. The capacity for plastic raw materials at the end of the second plan may be put at 20,000 tons a year (of this as much as 6,000 tons was established only at the end of the plan period and regular production is yet to commence), and production of the order of 11,000 tons a year. The target for the production of plastic raw materials by the end of the third five year plan has been fixed tentatively at 86,000 tons a year. It has been proposed to revise it to 125,000 tons. No target has been proposed for plastic processed goods.

The earnings from the export of plastic goods are steadily rising as may be seen from the statistics given below:

Year	Value of goods exported
	Rs.
1958	23.77 lakhs
1959	67.45 lakhs
1960	72.84 lakhs

The establishment of larger sized plants for the manufacture of raw materials, with a view to bringing down the cost of production, is being considered. It is expected that plastic raw materials will then be produced in the country at prices comparable with those in foreign countries. The demand for plastics in the world is steeply rising, and in spite of the several plants set up in all countries, there would be scope for exporting Indian goods. Thus, there is quite a bright future for the export trade in plastic manufactures. Economies in the production cost of plastic materials will also lead to increased home consumption.

Import of Tyres

At present it is estimated that there will be a shortfall of 120,000 tyres between domestic production and demand. This gap is being filled by arranging imports through the State Trading Corporation. Besides, the established importers were licensed to import to the extent of 75 percent of their established quotas during the licensing period October 1960-March 1961. The quantity of all the varieties of motor-vehicle tyres actually imported during the period January-November 1960 was 95,584 numbers.

U.S. P.L. 480 Funds

Representatives of the U.S. and Indian Governments signed agreements covering six projects and allocating a total sum of Rs. 46 crores out of the loan portion of U.S. P.L. 480 counterpart funds available to India. The agreements will cover the rupee costs of thermal power stations in Chandrapura (Rs. 20.5 crores) and Barauni (Rs. 1.3 crores), a hydro-electric project in Barapani (Rs. 6.4 crores), extensions to thermal power stations in Durgapur (Rs. 3.4 crores) and Kanpur (Rs. 95 lakhs), and the Trombay fertiliser plant (Rs. 13.4 crores). The entire estimated cost of all those projects is being financed by the United States. Agreements have already been signed with the U.S. Development Loan Fund for covering foreign exchange costs amounting to $87.9 million. All these U.S. D.L.F. loans are repayable in rupees. The Chandrapura plant in the Damodar Valley of north-east India will be a 250,000 kilowatt installation aimed at meeting part of an anticipated 812,000 kilowatt deficit in 1965-66 in India's most industrialised region. The Barapani project in Assam will facilitate the use of the State's important natural resources and assist in the development of that area. Assam has extensive resources of coal, limestone, bauxite, clay, oil and natural gas, plus large forests that could support pulp, paper, plywood and building material industries. The deficiency in power has delayed the development of these resources and industries, which can provide important employment and income in Assam.

The 30,000-kilowatt Barauni thermal plant in north Bihar will increase the power supply needed by a densely populated area and help further industrialisation in an area where there is already an inadequate supply of power for its sugar mills, steel rolling mills, heavy structural fabrication, railway coach factory and paper factory.

Extensions to the Durgapur station in West Bengal will meet the power need in an industrialised region, and the Kanpur extension to the only supplier of electricity in the area will assist a section where industrial uses represent about 80 percent of the total demand for power. Since India's third five year plan calls for increasing agricultural production by more than 30 percent, the Trombay fertiliser plant will be of considerable importance. The third plan contemplates tripling the output of nitrogenous fertilisers and increasing the output of phosphatic fertilisers by six or seven times.

Total U.S. assistance to India now stands at Rs. 1,808.9 crores ($3,800.4 million).

Indo-Greek Trade

Letters have been exchanged extending the validity of the Indo-Greek trade arrangement, and the lists attached to it, until the end of 1961. The trade arrangement which was first concluded in February 1953, has early been extended until December 1960.

Refractories Plant with Russian Credit

A refractories plant is among the projects to be financed with the 112.5 million roubles credit from Russia. A preliminary project study on which will largely depend the location of the plant, its size, the type of products it will make, etcetera, is now under way.

Cess Proposed on Iron Ore

A proposal for the levy of a cess on iron ore for providing welfare amenities to iron ore miners will be considered by the Industrial Committee on Mines other than Coal, at its next meeting to be held in the last week of this month.

National Development Council Meeting

A meeting of the National Development Council will be held in New Delhi on 30th and 31st May, to consider the final report on the third five year plan.

Home-grown Wool Exports

Exports of home-grown wool from India during the fourth quarter of 1960 rose by 71 percent, compared with the previous quarter, although they were 43 percent down on the fourth quarter of 1959. This brought aggregate exports for the year 1960 to 30.6 million lbs, which was 27 percent below the 42.1 million lbs exported in 1959. Shipments to the U.K. and the Common Market fell by 17 percent and 48 percent, respectively, to 11.3 million lbs and 3.9 million lbs. By contrast, exports to Russia rose by 23 percent to 7.8 million lbs but those to the United States were more than halved.

EXPORTS OF RAW WOOL FROM INDIA

(THOUSAND LBS. ACTUAL WEIGHT)

	1959	1960
Belgium	2,545	973
France	2,061	1,696
West Germany	2,113	671
Netherlands	639	410
Italy	92	114
Total Common Market	7,455	3,864
Russia	6,316	7,788
United Kingdom	13,618	11,251
United States	12,858	5,677
Other countries	1,864	1,971
Total	41,110	30,551

The output of woollen and worsted yarn in the third quarter of 1960 at 8.4 million lbs was 14 percent higher than in the previous quarter, but unchanged compared with a year earlier. This brought the total for the first nine months of the year to 21.4 million lbs, 4 percent less than in January-September 1959. The production of woollen and worsted fabrics rose by 8 percent between the two latest quarters, bringing the nine-month cumulative to 11.2 million linear yards or 1 percent more than a year earlier.

OUTPUT OF INDIAN WOOL TEXTILE INDUSTRY

	January 1959	September 1960
Woollen and worsted yarn (million lbs)	22.25	21.37
Woollen and worsted fabrics (million linear yards)	11.02	11.15

Selling Pakistani Gas to India

The Pakistani team to negotiate an agreement for the sale of natural gas to India will arrive here on 21st April. India needs gas for the fertiliser plant in Rajasthan. How far these talks will be successful in the context of the present Indo-Pakistani relations, it is difficult to say.

E.N.I. Interested in Oil Prospecting

According to official sources, there is the possibility of E.N.I. entering into an agreement for prospecting oil in Kutch, with the Italians developing petro-chemicals as *quid pro quo*. As already reported, a three-man Italian technical mission is arriving next week to carry on further negotiations for setting up the petro-chemical industry.

Burmah Oil Offer to Indian Government

Oil India in which Burmah Oil holds 66 percent of capital as against 33 percent by the Government of India has offered to increase the latter's share to 50 percent if it is granted a mining licence for 1,800 miles east of the area already held by it. The Company holds about 700 miles in which the new oilfields of Nahorkatiya, Moran and Hoogrijan are situated. Negotiations have now centred round the cost of production and a "reasonable margin" of profit. According to the existing agreement, the Company's sale price of crude will be either the landed cost similar to crude from nearest sources in Calcutta or the cost of production plus a reasonable profit, whichever is less. The Company has so far invested £25 million over the last ten years, without any return. Before venturing into a fresh exploration agreement, it would like to know not only the cost of production, but elements constituting it. Similarly, the Company would like the Government to determine what will be the reasonable profit. According to reports, the Company will be satisfied with 12 percent. Negotiations are proceeding.

Clutch Plates and Brake Linings

The following firms are licensed for the manufacture of clutch plates and brake linings:

Name of the firm	Items licensed	Licensed annual capacity
Automobile Products of India Ltd, Bombay	Complete clutch assemblies, brake linings	15,000 nos. 84 tons
Asbestos Magnesia and Friction Materials Ltd, Bombay	Brake linings	1,146 tons
Auto Supplies Co, Delhi	Brake linings and clutch facings	For a value of about Rs. 20 lakhs
Rane (Madras) Ltd, Madras	Brake linings clutch plates	180 tons 10,200 nos.
Turner Hoare and Co. (Pvt.) Ltd	Complete clutch assemblies	36,000 nos.
Hitkari Motors, Jullunder	Complete clutch assemblies	36,000 nos. (licence not yet issued)

There is yet another application to manufacture clutch plates and brake linings with capacities of 5,000 and 20 tons a month, respectively. The clutch plates are required for both original fitment and replacements for all motor-vehicles, tractors and some earthmoving machinery. The demand for motor-vehicles alone for the third plan period has been assessed by a sub-committee of the Development Council for Automobiles and Allied Industries at 100,000 a year. There is only one firm in production, namely, Automobile Products of India Limited, Bombay. Three other parties holds the licence to manufacture clutch plates and other components, of which two are for complete clutch assemblies including the plates. The terms of collaboration of the two parties who desire to manufacture clutch plates have not yet been finalised. Both of them visualise the import of plant and equipment. As far as the third party is concerned, the licence for plant and equipment has been issued and the production is to begin shortly. The foreign collaborator for the fourth unit is Relco Bremsbelagwerk, West Germany. The monthly capacity on a single-shift basis will be: clutch plates 5,000 nos., and brake linings 20 tons.

London

U.K. ECONOMIC SURVEY FORECASTS RISE IN OUTPUT AND EMPLOYMENT

TREASURY WORRIED ABOUT FRESH INFLATIONARY PRESSURES

(FROM OUR LONDON CORRESPONDENT)

TWO of the pre-Budget White Papers made their appearance last week—the annual Economic Survey and the preliminary estimates of National Income and Expenditure. Taken together, they suggest that the U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, may have to use his first Budget as a restraint rather than as a stimulant. A "significant" increase in output and employment is forecast for 1961 by the survey, which also suggests that there will be a moderate increase in personal consumption, that Government and local authorities are likely to spend more and that private investment is likely to rise sharply. The picture of resumed expansion after the stagnation of 1960 is damped down only by the prediction that business stocks—which rose abnormally fast last year—will rise much less in 1961. On balance, these trends should cause the total domestic output to increase this year, "but the size of this increase will depend also on the level of exports and the extent to which the total demand is met by imports during the year." The thesis that any improvement in prosperity must depend on expanding exports recurs frequently. The U.K. Treasury is clearly worried about signs of reviving inflation. Wages and salaries rose by 7½ percent from 1959 to 1960, and there is no sign that they have stopped doing so. This is the biggest increase since the 1955-56 rise of 9 percent, and experience suggests that it must be regarded as a warning signal. The man with property seems to have done even better than the wage-earner in 1960. Receipts from rent, dividends and interest were about 12½ percent higher than in 1959. National productivity has not kept pace with the increases, and an upward pressure on costs and prices has set in. This "has begun to reveal itself" in the rise of retail prices in December. "If increases in pay continue to outstrip the rise in national productivity, the pressure on costs and prices will be intensified and ability to export will be impaired," the survey comments.

Defending itself against the criticism that it is not doing enough to foster economic growth, the Government points to the maintenance of full employment as an important contribution, but also gives an assurance both to capital and labour that periods of recession and heavy unemployment, such as discouraged capital development in many industries before the second World War, will not be allowed to recur. "The fact that from time to time the Government is forced to act to restrain demand is not a contradiction of this general policy of encouraging economic growth ... the Government does not believe that running the economy with greater pressure of demand than at present will, in fact, increase a sustainable rate of growth ...." As for the F.B.I. criticism of the frequent "stop-and-go" changes of policy, the U.K. Government claims that these actions have in fact kept conditions more stable, but makes an important concession thus: "Nevertheless, it recognises the desirability of having a higher and steadier rate of growth, provided that this can be done without risk to the balance of payments, in order to encourage the sense of security and confidence in the future which are so important for business development."

Income and Expenditure

The second document shows that personal incomes, before tax, were nearly 7 percent higher in 1960 than in 1959. Of the increase, about one-fifth went in income tax and sur-tax and a tiny fraction in higher contributions to national insurance and health. Two-thirds of the rest were spent and one-third saved. In all, the public spent £16,640 million on goods and services, an increase of £684 million compared with personal spending in 1959. The money was spent broadly on food (2 percent more than in 1959), alcoholic drink and tobacco (6 percent), housing, fuel and light (6½ percent), durable goods (1 percent) and clothing (8½ percent). It is estimated that the money value of all goods and services produced in Britain in 1960—the "gross domestic product"—was 6 percent higher at £22,113 million, having risen only 3½ percent between 1958 and 1959. The gross national product, which includes net income from abroad as well as the gross domestic product showed a rise of 5½ percent. The gross trading profits of companies, before tax rose by 7 percent and the surpluses of the nationalised industries increased by 28 percent. Dividends and interest payments, before tax, were 17 percent higher than in 1959 a reflection of the sharp rise in profits which occurred in 1959. Last year's profits in the public and private sectors were divided among dividends and interest payments 31 percent, taxation 25 percent, and additions to reserves 44 percent. A large slice—18½ percent compared with 17½ percent—of the national income went into fixed investment in 1960. Investment spending by the private sector increased by £268 million (12½ percent) and in the public sector by £79 million (5 percent).

Final Exchequer Return

The annual Exchequer return—the Government's statement of accounts—for the financial year ended 31st March shows a surplus on ordinary revenue of £147.1 million. This compares with a surplus a year ago of £386.6 million. The original estimated surplus this year was £304 million, but supplementary estimates during the year have amounted to £156.9 million. Last year's surplus was reached after supplementaries of £102 million. Expenditure "below the line"—largely loans to State boards—exceeded repayments by £541.4 million, against £700.2 million a year ago, and the estimate of £622 million.

Revenue for the year, including self-balancing items, amounted to £6,343.6 million, against £6,015.6 million a year ago, and the estimate for this year of £6,333.8 million. Expenditure, including self-balancing items and the provision for sinking funds, was £6,196.5 million, against £5,628.9 million a year ago and this year's estimate, after allowing for supplementary estimates, of about £6,241 million. The overall deficit—reached by deducting the ordinary surplus from the "below the line" deficit—was £394.3 million, against £313.6 million a year ago and an original estimate of £318 million. The "below the line" deficit was just over £80 million less than estimated, but outgoings were £85 million less. This was largely due to net loans to the National Coal Board being only £2.8 million, against an expected £50 million, and loans to other nationalised industries £444.5 million, against the estimate of £482 million.

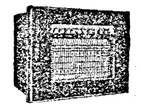
Fall in Reserves

The sterling area's reserves of gold and convertible currencies fell last month by £62 million and stood at £1,079 million on 31st March, the U.K. Treasury has announced. The fall is large but much less than was generally expected. It is certainly a great deal less than the amount of foreign currency which the Bank of England had to spend during March to stabilise the sterling rate against the massive withdrawal of foreign money. The German and Dutch currency revaluations caused widespread rumours and uncertainty about other currencies, and, as London had for the past year attracted abnormally large short-term funds, it was from London that these funds were shifted elsewhere when the pattern of exchange rates was so suddenly upset.

Just when that movement began to subside, the news of South Africa's withdrawal from the Commonwealth caused a further flight of short-term money. It is understood that the impact of these moves on the reserves has been reduced by the co-operation between the main European central banks which was agreed at the meeting of bank governors in Basle a month ago. Thanks to the arrangement between the central banks, the drop of £62 million in the reserves is nowhere near a record. Much heavier losses were incurred in many months up to 1957, and at a time when the reserves were much smaller.

Recovery in Motor-car Sales

Clear confirmation of the motor-car industry's spring recovery is contained in the March figures of hire-purchase contracts. The number of new contracts for motor-vehicle sales was 30 percent greater in March than in February and the trade in new motor-cars was almost back to the high level of March 1960. According to details issued by *Hire-purchase Information*, total contracts in March were 161,356, compared with 121,163 in February and 175,401 a year ago. The biggest improvement was in sales of new motor-cars where contracts rose from 14,737 in February to 20,212 in March, only about 100 below the March 1960 figures of 20,316. The used car business in March showed a more modest gain from 66,378 vehicles to 74,217, against a comparable 1960 figure of 82,203.



CHOOSE *ElectroniK* STRIP CHART CONTROLLERS for detailed, long-term records... and a complete selection of control forms.

CHOOSE *ElectroniK* CIRCULAR CHART CONTROLLERS for ease of scale reading... convenient daily charts: in a full range of electric and pneumatic control forms.

CHOOSE *ElectroniK* CIRCULAR SCALE CONTROLLERS where you want readability and control check at extreme distance...without need for a record.

CHOOSE THE PROTECT-O-VANE SAFETY CUT-OFF for simple dependable excess temperature protection...can be used with any temperature control to prevent furnace shut downs and loss of production.

Whatever your furnace needs for control...

There's good reason why more heat-treating furnaces everywhere are controlled by Brown instruments. First, of course, is performance...sensitive, precise control. And equally important is versatility. In this varied line of instrumentation you'll find just about everything a furnace could possibly need in the way of control.

CHOOSE PYR-O-VANE CONTROLLERS where you don't need a record but do need precise vane type snap action electric control by a millivoltmeter instrument...also available with pulse-type time proportioning action, in both vertical and horizontal models.

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) remained stationary at the earlier week's level of 127.2 during the week ended 18th March, 1961. The index was higher by 0.5 percent and 6.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The prices of salt in Cuttack (+12%); rice in Tihu (+11%) and in Kotma (+7%), onions in Calcutta (+9%), wheat in Hapur and dalda (vanaspati) (+5% each), groundnut oil (+4%), chillies (+3%), ragi, masur, tea and coffee (+2% each) and cashewnuts (+1%) rose while those of onions in Delhi (—2%), fish (—16%), salt in Tuticorin (—7%), rice in Balasore and Sadar (Cooch Behar) (—6% each) and in Balurghat(—5%), oranges (—6%), wheat in Dhanduka and eggs (—5% each), barley (—4%), potatoes (—3%), jowar and gram (—2% each) and bajra, maize, gingelly oil, mustard oil, meat and gur (—1% each) moved down, and the index for Food Articles stood at 116.7, against 116.8 for the earlier week. The index for tobacco rose by 0.8 percent to 112.6 due to an increase in the prices of raw tobacco (+1%). Higher prices of kerosene oil (+3%) and castor oil (+1%) raised the index for the Fuel, Power, Light and Lubricants group by 0.3 percent to 120.7, compared with 120.3 for the previous week. The index for Industrial Raw Materials advanced by 0.2 percent to 159.4 due to a rise in the prices of castorseed and cottonseed (+4% each), linseed (+3%), groundnuts (+2%) and copra (+1%), although the prices of lac (—3%) and raw jute, raw wool, and rapeseed (—1% each) declined. The index for Intermediate Products increased by 0.9 percent to 138.5, compared with 137.2 (revised) for the previous week, dut to the rise in the prices of rayon yarn (+4%), linseed oil (+3%) and coir yarn and zinc (+1% each). The prices of copper (—2%), however, moved down. The index for Finished Products remained unchanged at the previous week's level of 128.5. Items which showed variations during the week were: silk and rayon manufactures (+2%), general chemicals (+1%), glass (—2%), jute manufactures and oilcakes (—1% each).

WORLD LEAD SUPPLY TO BE RESTRICTED

To counter the threat to prices from heavy existing stocks, measures to restrict world supplies of lead have been agreed on by the 24 nations represented at the recent meeting in Mexico city, of the International Lead-Zinc Study Group. A statement issued after the closing season reported a decision to curtail lead supplies to a level about 2 percent below the estimated world consumption in 1961. Surplus stocks of the metal were estimated at 90,000 tons. Specific action to reduce mine and ore metal production was announced by Australia, Mexico, Peru, Sweden, the United States and the countries of the European Common Market. Canada had already made known plans to reduce output, and Yugoslavia to cut down production or exports. In addition, the United States, has agreed this year to negotiate contracts for the barter of surplus lead stocks against surplus agricultural commodities. The *communiqué* added that Russia and Poland had expressed their desire to co-operate with other members. It urged that countries other than those announcing cut-backs would take no action to nullify the effect of the curtailments.

Jute

ELECTRIC POWER SHORTAGE HITS THE JUTE MILLS

WEATHER REMAINS FAVOURABLE FOR NEW CROPS

EVERYONE connected with the industry is hoping for large jute crops in 1961-62. Conditions have so far been almost perfect in both Pakistan and India. Sowings in Pakistan are more than in previous years, but many doubt the Government's estimate of the crop. Apparently the estimate assumes a yield of about four bales an acre. The official statement points out that this is slightly below the average and thus gives the impression that the published figure is conservative. In recent years, however, the yield an acre has never been so high. Why, then, should it suddenly rise? An average of 3.7 bales an acre might be nearer the mark, and that would considerably reduce the estimate. If Government "estimates" have to be issued, they ought to be based on facts, not propaganda.

During the past week, there has been a substantial fall in the prices of both hessians and sacking. But many think that the reaction has been exaggerated by powerful bears exploiting the weakness of the bulls. The industry still cannot sell its products at a profit. For the next few months, the relationship between the cost of the raw material and of the finished product will depend on the trends in supply and demand. The main problem is to get jute goods back on a competitive basis. That can be done in only two ways—either by a reduction in manufacturing costs or by a reduction in the price of the raw material, or both. It is difficult to see how a reduction of manufacturing costs can be achieved. Any attempt to cut wages or the workers' amenities would be strongly resisted. This only leaves the hope of cheaper jute, which depends on climatic conditions.

There is one way, however, in which the workers themselves can contribute to the rehabilitation of the industry. During the past two decades, there has been a steady decline in the output a man-hour. But when the necessity arises, as was highlighted by the increase in productivity during January-February following the introduction of shorter working hours, the workers can rise to the occasion when their pocket is hit. If, by judicious propaganda, they can be induced to maintain this effort even after working hours are increased, it would promote their own interests.

The shortage of electric power culminated on Tuesday afternoon in the complete closure of eight or nine jute mills. This was only a temporary misfortune, however, and it is understood that production restarted on Wednesday. But it is possible that other areas may have to face similar treatment unless working hours are staggered. Enquiries from the Calcutta Electric Supply Corporation indicate that there is no short-term remedy for the present power crisis. It may be some months before the situation is completely back to normal, although by the end of April a big improvement may be expected.

I.J.M.A. Gunny Stock Figures

There was a marked reaction in the Calcutta market to the publication of the I.J.M.A. jute goods stock figures for March. It was generally expected that stocks would decline, but in fact they rose by 1,300 tons to 85,100 tons. There were 24,800 tons of hessians (29.2 percent), 46,400 tons of sacking (54.5 percent) and 13,900 tons of other goods (16.3 percent). The rise was 800 tons in hessians and 1,800 tons in other goods, while sacking stocks dropped by 1,300 tons. The total is the highest for eight months, and at the present rate of production, constitutes a little over a month's output. The fall in sacking stocks has been construed as a bullish factor, but is mainly due to some Government goods being taken up, as shipments during March were very poor.

New Crop Prospects

Conditions in all the areas in Pakistan continue to be favourable, although in some of the lowlands, river levels are about three feet higher than is normal for the time of year. If the rivers show a further tendency to rise, it is feared that some of the crop may have to be harvested early to save it from damage. In that event, the early arrivals will inevitably be of short and immature jute. Latest reports indicate that sowings in the midlands have been completed. Widespread rainfall in most areas has caused rivers to rise, but a few districts are still short of rain. In general, the prospects are better than for several years.

In India, weather conditions continue to be favourable for the preparation of the land and for sowing. There have been no reports of business in new crop jute. But in Pakistan, new crop offers are attracting interest at about Rs. 300 a bale for Exports Firsts for July delivery and Rs. 230 a bale for October-December delivery. Reports of actual business, however, are few as most buyers expect lower prices in the future. The current quotation in Pakistan for old crop Export Firsts is about Rs. 360 a bale.

The increasing competition for Pakistani raw jute exports is highlighted by a recent announcement by the Spanish Ministry of Commerce. Under a bilateral trade agreement, Spain is to import about 1,400 tons of jute from Thailand under licence. Although this is not a very large amount, it is expected that if the jute turns out to be satisfactory, it may lead to other contracts. Thailand does not have much surplus jute over and above her own requirements. At present, she can in no way be considered a serious competitor in world markets. But it is understood that concentrated efforts are being made to step up jute production with a view to building export markets. Siamese jute was again on offer in Calcutta last week, but buyers showed no interest as the Government of India has not yet announced any definite policy concerning the import duty. It is understood that those who took up small sample lots had to pay the duty, but were told that it would be refunded. Now, some months later, they are still waiting for the refunds. Siamese jute is reported to compare very favourably with Indian jute, and could partly relieve the current shortage if the Government takes a more realistic attitude.

THE JUTE MARKETS

Manufactured Goods: At the opening last Thursday, the market opened on a weak note as continued selling pressure from mills forced prices down. Lower advices from the fibre section helped the bears so B Twills fell by about Rs. 4. On Tuesday morning, the opening quotation for April B Twills was Rs. 172, which was Rs. 12 nigher than that for July-September. In hessians, 4/9in. 10oz. was called over at Rs. 59.25 for April shipment and Rs. 2.75 less for July-September. Over the next two days, operators hammered the market down. By Saturday, B Twills were at Rs. 169 and 11-porter hessians at Rs. 58. There was very little change over the week-end, and prices on Monday morning only showed minor variations. As the day progressed, however, rates recovered slowly due to the publication of the I.J.M.A. gunny stock figures. The decline in sacking stocks induced some covering in heavy goods. Towards the afternoon, small overseas interest strengthened the upward tendency, and by Tuesday morning, B Twills were back at Rs. 173 and hessians at Rs. 58.75. There was little change during the day, but the stronger raw jute market tended to create a steadier undertone.

Opening quotations on Wednesday morning were as follows :

	April	May	June	July-Sept.
40in. 7½oz.	43.65	43.50	42.25	42.00
40in. 8oz.	46.75	46.50	46.00	44.75
40in. 10oz.	58.50	58.25	57.75	56.00
B Twills	173.00	172.00	170.00	162.00
Heavy Cees (Plain)	174.50	173.00	171.00	162.00
A Twills	208.00	207.00	204.00	194.00
Liverpools	195.00	194.00	193.00	185.00
Cornsacks	175.00	174.00	173.00	165.00

Raw Jute: The fibre market was very quiet at the opening of the past week, with mills showing little interest. Sellers were keen for business but buyers expected lower prices, and although many of them had quotas in hand, they preferred to hold off. Only small business was reported, usually at discount prices. This was the pattern of business as Assam Bottoms rates came down from the opening level of Rs. 56 to Rs. 53 by Saturday. With the issue of quotas and an increase in the volume of business, prices began to rise after the week-end, and by Tuesday, Assam jute was back at Rs. 55. Sellers reduced their offers as more mills came into the market, and towards the close, conditions were fully steady.

Upcountry markets were very quiet throughout, with practically no business reported. Rail arrivals in Ccssipore amounted to 360 wagons, which was the same as last week, and generally considered good for the time of year.

Opening quotations on Wednesday morning were as follows :

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	150.00	56.00	Apl.-May
Northern	147.25	55.00	,,
Purnea Desal	144.75	54.00	,,
Daissee Selected	155.50	58.00	,,

THE FOREIGN JUTE MARKETS

FIBRE PRICES CONTINUE TO FALL

(FROM OUR DUNDEE CORRESPONDENT)

THE jute industry in Dundee and on the Continent is happy at the way raw jute prices are going down. The fall in the past week has been £5 to £8 a ton, depending on the grade. Some people in Dundee say that values are not coming down fast enough, but the fall is steady and that is what really matters at present. Prices must decline substantially before they can be said to be quite reasonable again. The market thinks that a reasonable level of values for raw jute is around £90 for Mill Lightnings and £5 more for Mill Firsts.

Shipment prices for April-May are now at £190 lowest for Mill Firsts, £185 for Mill Lightnings, £181 for Mill Hearts and £172 for Grade Hearts, £191 for Grade Tossa-2/3, £185 for fours

I.J.M.A. STOCK FIGURES FOR MARCH

The Indian Jute Mills Association reports the total stocks of jute goods at the end of March as follows :

Description	31st March, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	28th February, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (—) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st March, 1960 Lakh Yds. Reserves and Exchange Fluctuation Fund	N. C. Rs.	50 lacs
(N. C. Rs. 160 = I. C. Rs. 100).		

20 Branches and Sub-Offices in Nepal.

Enquiries are invited from Banks, Commercial Concerns and Tourists for information regarding Prospects, Procedure and Regulations in Nepal.

and £179 for Continental Tossa-2/3, c.i.f. U.K.-Continent. Holders of secured parcels afloat are anxious to sell and they are ready to accept a few pounds a ton less. At the same time, other firms are reluctant to accept less than the E.P.C. rates, which are £4 to £5 a ton above the lowest limits.

Meanwhile, dealers say that prices must come down a good deal if the industry is not to suffer further losses as it has already done due to the unnecessary rise in prices to over £200 a ton. The sooner they can be adjusted to something like normal levels, the better it will be for the whole trade. Many customers are either holding off as long as possible or they are replenishing their stocks with substitutes which, in many cases, mean paper. It is said that the outlook for new crop jute has never been as promising as it is this year, so there is a prospect of a bumper supply next season. Good rains have fallen in India and Pakistan, and sowings are proceeding satisfactorily. Sellers in Dundee see no point in offering new crop They are soliciting bids, but spinners' ideas are low, so no business is being done.

Calcutta goods have fallen to 88s for 40in. 10oz. hessians and 67s for 7½oz., April, 87s 6d and 66s 6d May, 87s and 66s June, with July-September mentioned at 85s and 64s, with B Twills at 255s, 254s, 251s 6d and 240s 6d for the respective months of shipment, f.o.b., Calcutta. Yarns and cloth are dull, and there has been a good deal of short-time working.

THE PAKISTANI JUTE MARKETS

FIBRE DULL

(FROM OUR EAST PAKISTAN CORRESPONDENT)

BOTH the overseas market in London and the local market in Narayanganj are dull and inactive. Little or no business has been reported over the past week, and low prices are indicated. The true market position is reflected more in Calcutta where both gunny and jute prices have come down, partly due to the speculative expectations of a large and early crop, but also due to a complete lack of overseas interest. The E.P.C. prices for raw jute have again come down, and now stand at £192 c.i.f. Continent for Export Firsts and for Dundee Tossa 4s and £120 for new crop. At these levels, no business has been reported, but it is difficult to say at which levels buyers will be interested.

Local prices have also come down considerably, Cuttings being offered at Rs. 225 with no takers, and Export Hearts quoted at Rs. 320. More business has been reported in new crop for various deliveries, ranging from Rs. 50 for Cross Bottoms for July delivery to Rs. 38, for October-November. Overseas forward business has been reported in the range of £160 for Export Firsts, but it is very difficult to find out how much business, if any, has actually been done. It seems strange that in a season when there has been a very definite short crop in both countries, the market should come down at the end of it, that is to say, at a time when it becomes most obvious that there is not sufficient jute and at a time when jute is most urgently needed by all kinds of buyers. The reason, of course, is the sentiment which has been created by reports of a large and early crop. It seems, however, that even if the crop is early, which this correspondent is not inclined to believe, overseas buyers cannot expect shipments before the end of July, whereas they can still get at reasonable prices, at about £185 c.i.f. Continent, Export Lightnings for shipment in April or even May. It is possible, therefore, that during the next few weeks, buyers will come into the market to cover their requirements for the period until they receive new crop jute. If they buy as much as 100,000 bales for shipments during April-May, this should more or less clear up current stocks with balers.

E.P.C. registrations for the last half of March are remarkably low at 26,807 bales, even considering the holiday period. It is interesting to note that India has come in again and bought 1,100 bales, it is reported, mostly of Cuttings. The biggest buyer was Czechoslovakia with 14,000 bales, followed by France which bought 2,225 bales. The U.K. bought nothing. The total registration up to the end of March amounted to 2,814,082, compared with 3,897,469 bales last season. Excluding India, it seems that overseas buyers have only bought just over 2.4 million bales, which must include some of the previous season's jute.

The crop continues to enjoy ideal growing conditions, although they vary in different parts. In some areas, there has been excessive rain whereas in other areas, the weather has been so dry that little or nothing has been done to the midland crop. The dry areas are, generally speaking, isolated districts with the exception of the area where the hard district jute grows, which seems to have suffered more than most. The present indications merely suggest a delay but no damage to the crop.

NAMES AND DATES

Mr. J. W Dixon and Mr. G. B. Sibley have been appointed directors of the British India Steam Navigation Co. Ltd as from 1st April, 1961.

Mr. Rasiklal Worah, Mr. N. L. Jalan and Mr. S. N. Bhattacharya have been elected president, vice-president and honorary secretary, respectively, of the Indian Colliery Owners Association for 1961-62.

Plantation Topics

NEW IMPORT QUOTA GRANTED FOR AFRICAN RAW NUTS

FOREIGN DEMAND FOR PROCESSED KERNELS EXPECTED TO RISE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Government of India has partially granted the cashew processors' request for an additional quota for importing raw nuts from Africa. It is reported to have released an additional 20 percent quota recently. The total release for the current year thus comes to 70 percent of last year's offtake of the cashew processing industry. The quota given so far will be sufficient to import 120,000 tons of raw nuts from Africa—the same as last year. The African crop, it is reported, is slightly better than the previous year's. But the Indian crop which is now available in the market in fairly large quantities is likely to be smaller by about 15 percent. The total availability of both Indian and African nuts is estimated by processors in Quilon at about 170,000 tons. The season in India is in full swing now. Indigenous nuts are now available at Rs. 260 a candy or at about Rs. 870 a ton while African nuts are steady at Rs. 880 a ton.

As for processed kernels, the present position is one of plentiful stocks and inactive demand. Spot kernels have declined to 52 (U.S.) cents a lb, although forward positions are dearer by three or four cents. Russia is expected to enter the market within a couple of weeks for a quantity of not less than 100,000 cases of 50 lbs each, so prices are likely to rise. Processors say that the American peak purchases are expected only after a month or so. Meanwhile, she is offering 55 or 56 cents for July-October shipments. East Germany recently imported a fairly substantial quantity while Canada, Australia and Middle East countries as well as the United Kingdom are expected to take more than what they did last year.

Enhanced Rubber Replanting Subsidy

The uncertainty over the rubber replanting subsidy is over. The Central Government, it is reported, has decided to stick to its promise to growers that the subsidy will be enhanced from Rs. 400 to Rs. 1,000 an acre. The Kerala Government and the Rubber Board are understood to have received communications to this effect from the Centre. It was in August 1960 that the Central Commerce and Industries Ministry announced that the replanting subsidy would be raised to Rs. 1,000 an acre to give an incentive to rubber growers to replace their worn-out trees with high-yielding strains. The offer had the desired effect, for thousands of rubber growers came forward with applications for replanting licences. It was at this time that the Planning Commission thought that subsidised replanting was no more necessary and advised the Central Commerce and Industries Ministry accordingly. The latter was, however, unwilling to go back on its promise. The Kerala Government, the Rubber Board and the growers were opposed to the Planning Commission's move. Efforts were being made for some time to persuade the Central Government to implement its promise concerning the replanting subsidy of Rs. 1,000 an acre. Meanwhile, the Rubber Board was not issuing replanting permits for the 1961 season due to lack of instructions from Delhi. Now the Board's officials say that they will soon be in a position to issue replanting licences as the uncertainty over the subsidy is over.

Record Pepper Exports

Brazil is gradually becoming an important pepper producer. Her present production is estimated at 5,000 tons and in another five years her output is expected to reach 15,000 tons. The country is, therefore, likely to become a serious competitor to Indian pepper in the immediate future, especially in the U.S. market. Meanwhile, India is facing keen competion from Indonesia and Sarawak. The former had a record export of pepper in 1960 when total shipments touched 19,500 tons out of an estimated crop of 27,000 or 28,000 tons. In 1960, the pepper trade witnessed an all-time record buying all over the world. There was, in fact, a boom similar to that witnessed during the Korean war.

The president of the Indian Pepper and Spice Trade Association, Mr. V.M. Patel, claimed at the annual general meeting last week that in spite of the heavy rise in prices in 1960, Indian shippers were able to fulfil their earlier low-priced contracts. But India can hardly afford to be complacent over the present state of affairs in view of the ever-increasing competition from other countries, notably from Indonesia and Brazil. Mr. Patel regretted that in spite of the fact that pepper constitutes an important foreign exchange earner for India, not even scant attention has been paid for either improving the methods of cultivation or for increasing the average yield. Brazil and Sarawak have, however, evolved improved methods of cultivation. The Government of India should, therefore, arrange for a study of the latest methods of cultivation in these countries with a view to introducing the improved methods of cultivation in India. Mr. Patel emphasised the need for effective propaganda so that foreign buyers are kept conscious of the superior quality of Indian pepper. Steps should also be taken to improve the quality of pepper exported from India. The president suggested that incentives be given to pepper exporters by granting them licences to import spices like cassia and cloves.

No Separate Forward Market for Bombay

Mr. R. Doraiswamy, chairman of the Forward Markets Commission, who also addressed the meeting, said that there is no immediate chance of Bombay getting a separate forward market for pepper. Although the Commission had recommended the opening of a second market in Bombay, the Government of India decided not to act on that recommendation after appreciating the force of arguments put forward by the Indian Pepper and Spice Trade Association and the Government of Kerala in favour of retaining Cochin's monopoly. The chairman has asked the Association, which controls the forward market in Cochin, to give adequate coverage to trade interests of Bombay so that illegal trading in pepper which is reported to be going on in Bombay can be reduced, if not eliminated. The Commission's experience has been that to the extent adequate coverage is given for the quantum of trading in a commodity in which forward trading is intended, illegal trading is reduced to that extent. Mr. Doraiswamy said that whatever opportunities the trade in Bombay thinks has been denied to it because of the absence of a second futures market, they should be made good by the working of the Association in Cochin so that Bombay traders on the board of directors of the Association will not have an occasion to raise their claim again. Referring to the Association's recommendation for fixing some limits to the daily price fluctuations, Mr. Doraiswamy said that when unhealthy speculation is avoided by the limitation on price fluctuations, a climate would be created for long-term stability in prices. He urged the Association to suggest ways and means for introducing healthy control of forward trading.

The Amended Act

The chairman explained at length the implications of the amendments made by Parliament to the Forward Contracts Regulation Act. According to amended provisions, there would be a new class of association called the "registered association". Any association dealing in forward contracts at any time must obtain a certificate of registration from the Forward Markets Commission. This will enable the latter to have a census of all associations trading in forward contracts of either regulated or free commodity. The object, the chairman said, is to see that no part of forward trading is outside the scope of the Forward Contracts Regulation Act. The Commission had hitherto been dealing with only recongnised associations. The Government—under the amended Act—has authorised it to deal with members of the association also. When directors of the association find themselves unable to tackle erring members, they can be suspended from forward trading or subjected to other disciplinary measures by the Commission. The recognised associations or the Commission have been empowered to frame by-laws of the recongnised associations rendering kerb trading in forward contracts illegal. Besides, even the publication of kerb rates is illegal. The chairman reminded the offenders of the penal provisions of the Act. They provide for a fine of Rs. 1,000 for the first offence. A compulsory imprisonment of one month is prescribed for the second offence.

Kerala Rubber Planting Scheme

The progress of the Kerala Government's rubber planting scheme has not been satisfactory. The four-tier scheme proposes to undertake the cultivation of at least 200,000 acres (100,000 acres of Government land and 100,000 acres of private land) with rubber within the next five years. A certain percentage of the Government land will be directly cultivated by the State Government. A substantial share will be distributed among landless unemployed in seven-acre plots. From the balance, small growers will be given ten-acre plots for which they will have to pay the price they tender in the auctions. Planting companies will be given a small percentage of the total, and they too will have to pay for the land. In spite of its best efforts, the Government has not been able to clear the forest lands earmarked for rubber cultivation to any appreciable extent. Progress is said to have been retarded due to the lack of competition among the people who have to undertake this work. The credit squeeze now being experienced in Kerala on account of the banking crisis is a hindrance for professional contractors to invest money on any work as they were doing previously. Besides, offers received from timber contractors for trees to be cut and removed in recent auctions were very much below the Government's expectations, so the clearing work is lagging behind the schedule. Although the State Government wanted to make available at least 25,000 acres this year for planting, present indications are that it will not be able to make available more than 8,000 acres In order to get over the difficulty of clearing the forest partially, the Government decided to auction the area set apart for planting companies with its tree growth. About 2,000 acres in plots of 300 to 500 acres were, therefore, auctioned recently, but the response was poor. So the sales were not confirmed. Due to poor response, the idea to sell ten-acre plots to small growers has been abandoned for the current planting season which begins next month.

Inherent Defects

These difficulties apart, there are many inherent defects in the scheme. This is more a political scheme rather than an economically feasible proposition. The whole scheme of distribution of land, provision of assistance to landless unemployed and supervision is vague.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

QUALITY DUSTS RISE

AT the Internal Sale, held on 12th April, the 22,500 chests of Dusts on offer met with a good general demand. Orthodox descriptions again declined by up to 15nP, although the smaller and brighter lines received better support. Legg-cut teas were up to 15nP easier except for the brighter types which enjoyed a good sale. Good and medium C.T.C. teas with a clean leaf appearance were the strongest feature of the sale and sold at considerably dearer rates. Fibrous C.T.C.s were, however, once again easier and often difficult to sell.

Quotations

	1961	1960
	Rs. a kilo	Rs. a lb
Plain Orthodox Dust	4.30 to 4.45	4.10 to 4.23
Medium Assam Dust	4.40 to 4.75	3.97 to 4.19
Legg-cut Dust	4.60 to 5.20	4.37 to 4.81
Medium Assam C.T.C. Dust	5.70 to 6.20	5.29 to 6.06
Good Assam C.T.C. Dust	6.50 to 7.10	

(Quotations are inclusive of excise duty.)

There was a good general demand for the 705 chests of Leaf on offer.

CHINESE CHARTERERS KEEP FREIGHT MARKETS ACTIVE

CHINESE charterers again kept the freight markets active. They engaged a number of vessels for carrying rice from Burma to Cuba at a steady rate of 67s. All these vessels are to load sugar for the return trip to south China at 92s. American grain shippers paid the further improved rate of $10.75 for Japan. The Baltic Exchange Chartering Committee accepted the unchanged rate of 73s 9d for foodgrains from the Gulf to the west coast of India. Other Far East business mostly concerned ore chartering. Charterers concluded fixtures from Madras and Bombay to Black Sea at 49s and 48s f.i.o. trimmed, respectively. It is reported that once more the Burmese coal contract has been given to South Africa. Two vessels have been fixed at 52s or 1s higher than the last fixture.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 4th April and 10th April, 1961)

Cowhides: Wet salted (slaughtered) 29,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 37,900 pcs. on the basis of Rs. 320 to Rs. 335, Rs. 390 to Rs. 415 and Rs. 450 to Rs. 470; Wet salted (he-killed) on the basis of Rs. 4.62 and (she-killed) on the basis of Rs. 4.37 a piece; Kissenganj 5,500 pcs. on the basis of Rs. 395 to Rs. 410; Dinajpur 2,200 pcs. on the basis of Rs. 500.

Bazaar Stocks

(10th April, 1961)

Cowhides: Wet salted 138,500 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 41,000 pcs. Assam-Dinajpur 50,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 244,500 pcs.

LINSEED FIRM

The linseed market was firm during the past week because there was an all-round rise in the prices of seeds, oil and cakes. Arrivals from the centres have declined and the prices are higher than those of Calcutta. Crushers were buyers for deliveries up to May-June, but sellers showed little interest. The oil market was firm, and local stockists were buyers for all positions in view of the possibility of power cuts. Oilcake was steady. The local demand was better. Foreign enquiries were made at slightly higher prices. The latest quotation is as follows: Ready-May delivery, Rs. 26.62 a maund.

ANNOUNCEMENT

Owing to late distribution of Prospectus to upcountry centres, at the request of the Public, the Directors are pleased to extend the closing date of the subscription list to April 15th, 1961.

The Malabar Iron & Steel Works Ltd.,
Sasthanagar, PALGHAT.
Kerala.

COMPANY AND PUBLIC NOTICES

THE SENDRA COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 11-00 A.M. on Monday, the 15th May, 1961, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 8th May, 1961 to 15th May, 1961, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 30th March, 1961.

Notes. (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 30th May, 1961, to those Shareholders so entitled whose names appear in the Company's books on the 15th May, 1961, or to their mandatees. No application for Dividend Warrants will be necessary.

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of the Company has sanctioned payment of the Final Dividend on the Preference Share Capital of the Company for the year ended 31st March, 1961, at the rate of Rs. 2.684 per share, less the statutory deduction of shareholders' taxation to be made pursuant to Section 18(3) (D) of the Indian Income Tax Act, 1922.

This dividend is being paid in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Payment will be made on or after 1st May, 1961, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

The Preference Share Transfer Books of the Company will be closed from the 25th April to the 1st May, 1961, both days inclusive.

By Order of the Board,
J. H. G. WHITFIELD,
Secretary.

2, Fairlie Place,
Calcutta-1, 7th April, 1961.

ANNOUNCEMENT

Our Foundry goes into production tomorrow, 14th April, 1961.

The Malabar Iron & Steel Works Ltd.,
Sasthanagar, PALGHAT.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary. Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ARRESTING THE FALL IN BANK DEPOSITS

FOR years, the Indian banking system sailed along merrily on the assumption that deposits would go on rising. It was thought that the Government, committed to large-scale deficit financing, would go on pumping more and more money into the economy. In turn, the growth of the organised money market and of organised business would bring a steadily increasing proportion of this new money into the banks. The task before the banks was, therefore, assumed to be relatively simple. They would give out the money in advances as far as the condition of trade and industry would permit, and as far as the selective credit control policy of the Reserve Bank would let them. Whatever could not be given out in advances, would be put away in approved investments, such as gilt-edged securities, on which the returns available were of course lower. Thus would the banks jog along in the hope of rising paper profits in an inflationary era. They would from time to time buttress those profits with such measures as inter-bank agreements to hold down deposit rates, the ostensible justification for which would be that the banks needed bigger profits for branch expansion programmes.

The outstanding event of the past year in the Indian banking world is that this rather complacent view of the future has been rudely shaken. In brief, deposits have been falling. In previous years, the growth of deposits, whether slow, fast or negative, could always be represented as a shining achievement, because the scheduled banks' deposit figures were steadily inflated by the accretion of P.L. 480 counterpart funds to the State Bank. Now, deposits are beginning to be seen in the raw, because the State Bank is gradually returning the P.L. 480 funds it has accumulated and is not getting any new ones; at the same time, the commercial deposits of the private scheduled banks have also been shrinking. The advance-deposit ratio has started to look rather ugly, so bankers have started debating how it can be improved. Widely divergent views are being expressed, two interesting samples of which are the statements made by Mr. G. D. Birla and Dr. N. N. Law at the latest annual general meetings of the United Commercial Bank and the United Bank of India, respectively. (Fuller versions of the two statements were printed in last week's *Capital.*)

Both bankers, fortunately, appear to agree that the advance-deposit ratio should be reduced primarily by increasing deposits, not by cutting down advances. This is because cutting down advances would hamper the normal functioning of trade and industry, quite apart from harming the profits of the banks themselves. But thereafter the points of agreement between the two bank chairmen become rarer. Mr. Birla thinks that the interest rate on deposits should be raised. Dr. Law thinks it should not. The latter can at least claim the virtue of consistency; until a few months ago, most Indian bankers were agreed on the need to hold down deposit rates, in which view they enjoyed the flamboyant support of the Reserve Bank. The fact that, in the space of less than half-a-year, many top-flight bankers, along with the Reserve Bank, have changed their minds, indicates the seriousness of the deterioration in the outlook for Indian banking. The distinguished support which the move to increase deposit rates is now getting does not, however, confirm that it is the logical course. The trouble is that nobody has yet proved the inadequacy of the interest rate as the sole, or even the major, reason for the fall in deposits. On the contrary, other explanations seem more valid. One is that the fall in deposits may be confined largely to certain parts of the country. In south India, for instance, some banks have been granted moratoria prior to amalgamation, and depositors have got into the habit of withdrawing their deposits in anticipation of the moratoria, rather like the *fatkawallas* anticipate bear raids in the share market. What is primarily a question of confidence cannot, therefore, be settled by tipping the depositor with ¼ percent, ½ percent or even 1 percent more interest. The ghost of Palai Central, in brief, has proved a sturdier animal than the Palai Central itself.

Another explanation is that deposits are being withdrawn from banks and diverted to the unorganised sector of the money market. The cash proves rather useful there, especially for such noble purposes as gambling in shares and commodities. It earns good returns—may be 12 percent, 15 percent or more each year—depending on how conscientious the Government is in accentuating inflation and shortages. Such capital gains also have the enviable advantage that they escape the tax-collector's net more easily than honest, regular incomes. The question which the bankers, therefore, have to ask themselves is this: can they get this money back into the banking system by offering 3½ percent interest instead of 3 percent, when it has originally gone out in the hope of earning a return of 12 percent or 15 percent? One suspects that if ¼ percent more interest were all that were needed in order to make the speculators succumb to the charms of the banks, there would not have been a single speculator left in the country today. Inflation has spawned gambling instincts on such a scale throughout the community that the banks can no longer fight back with such dull weapons as a 3½ percent deposit rate. Mr. Birla suggests that a number of other factors too have contributed to the fall in deposits. Agricultural incomes have suffered with the disappointing harvests of 1959-60 (but, then, should not deposits increase with this year's bumper crops?). The external payments deficit may have had a contractionist influence (but why so strongly during the past year only?). Deficit financing has been reduced and Government revenues have been buoyant, so deposits have gone out of the banks and into the Exchequer. Finally, Mr. Birla shyly suggests, the Reserve Bank's credit controls have diverted money into the non-banking sector; if the tendency continues, the controls will become less and less effective.

Apart from disagreeing on the question of what to do with deposit rates, the remedies suggested by Mr. Birla and Dr. Law vary considerably, at least in emphasis. On the whole, it seems that Dr. Law's recommendations deserve support. His analysis indicates that the crux of the present difficulties centres on confidence; the first need, therefore, is to introduce the deposit insurance scheme. In Mr Birla's view, apparently, the scheme this year deserves hardly even a passing mention. The bigger banks are understandably less enthusiastic about deposit insurance than the smaller ones, since the larger the deposits, the bigger the premiums that will have to be paid. But, in today's circumstances, it appears that deposit insurance is an urgent necessity. The fact is that in competing with the unorganised sector of the money market, the main advantages the banks have to offer are not higher interest rates, but greater security and ready liquidity. Both these advantages are seriously eroded if bank moratoria are allowed to continue for months while small customers starve for cash. Deposit insurance, to the extent it guarantees security and liquidity, can reinforce the confidence of such customers, and keep them within the banking system.

Mr. Birla, in contrast, appears to feel that the main problem is to bring down money rates in the unorganised sector. Everybody will wish him luck if he thinks it can be done. But it is difficult to see how it can be by the method he suggests. The method is that the Reserve Bank should lend liberally to the banks, and the banks in turn should lend liberally to their customers. "This, in the ultimate analysis, will bring in new deposits." He is right in suggesting that, to the extent borrowers cannot get money from banks, they turn to the unorganised sector and thus tend to push up interest rates there. But he does not analyse the inflationary implications of what really amounts to deficit financing *via* the banking system. And it is well worth remembering that it is inflation today which is contributing to the growing popularity of the unorganised money market. Furthermore, extensive refinancing of this sort will tend to push up the advance-deposit ratio above its already disturbing level; the psychological disadvantages of that cannot be lightly ignored.

The basic trouble with the banks is that they are not earning as much as they should if they are to build their reserves. Some are not because they are just plain inefficient; others are not because they simply cannot cope with the large-heartedness of successive bank tribunals. For this, the solution lies more with the Government and its mentor, the Reserve Bank, than with the banks themselves. At one stage last year, the Reserve Bank almost appeared to give up hope of restricting bank employee costs when it recommended the mechanisation of banking operations. Unfortunately, it forgot to mention whether it would sanction the foreign exchange expenditure necessary for mechanisation. It also forgot to mention what proportion of their working hours bank managers should spend in New Delhi hunting for import licences for the machines. The situation now is that because operating costs in the banks are high, profits and reserves are low. The banks are under-capitalised for the business they do, but it is not easy for them either to conserve resources or to attract outside capital. Dr. Law and Mr. Birla do at least agree on a minor palliative for this situation. It is that, like certain investment institutions, banks should also qualify for a tax concession on that part of their profits which is transferred to reserves. The suggestion deserves support, although rationalisation of the cost structure in the Indian banking industry will call for more drastic changes in official policy than the Government has so far cared to make.

THE GOVERNMENT LOAN PATTERN

CENTRAL Government securities have been steady recently, and the index has risen from 100.9 to 101.0 (1952-53 equals 100) during the past couple of months. This steadiness is partly due to official support and partly to the shortage of offers. But the steadiness by itself is no excuse for taking too complacent a view about the coming Central Government borrowing programme which is to be announced in a few weeks' time, considering that the credit shortage has now become very acute indeed. Whether there will be a decline in the demand for funds when the peak of the busy season is over, is doubtful. As in the 1959-60 period the coming slack season may not bring an appreciable decline in the monetary demand because a large portion of the loans and advances of banks appears to have been made on account of industrial requirements. At present a large quantity of funds are being used for financing expensive raw jute stocks and bigger accumulations of sugar at factories. In the circumstances, it is doubtful whether the banking community can extend much support to the new Government borrowing programme.

There is, nevertheless, a great deal of interesting information in the article on the pattern of ownership of Government debt as at the end of March 1959 and 1960, published in the March issue of the *Reserve Bank of India Bulletin*. It contains many points which could be profitably used in formulating the new borrowing programme. The net absorption of Central and State Government securities by the public amounted to Rs. 289.9 crores during the first plan, and rose to Rs. 468.9 crores during the second plan, although

this rise was accentuated by the inflow of P.L. 480 funds into the banking system. These funds, to the total of about Rs. 200 crores, were deposited with the State Bank of India by the end of February 1960. In May 1960, it was decided not to leave them there any longer. The State Bank was thereupon asked to transfer these funds from its own accounts to those of the Reserve Bank in monthly instalments of Rs. 12 crores each, commencing from July 1960. As a result, the State Bank has had to disinvest Government securities in order to transfer the funds to the Reserve Bank. In addition to the State Bank's disinvestment, the banking community was also forced to sell Government securities in order to obtain cash for meeting increased monetary demands. Compared with an intake of Government securities worth Rs. 153 crores by the banking community in 1959-60, there has been a substantial liquidation of securities worth Rs. 127 crores from April 1960 to February 1961. Excluding the P.L.480 funds, the net absorption of Government securities by the public worked out to Rs. 325 crores during the second plan period, or Rs. 65 crores a year. During the first plan period, the net absorption was Rs. 290 crores, or Rs. 58 crores a year. Against this niggardly progress of borrowing, the decision of the Union Finance Minister to borrow a gross amount of Rs 235 crores in the 1961-62 financial year cannot be considered modest. During this period debt repayments are estimated at Rs. 167 crores, so a net borrowing for Rs. 68 crores is aimed at. The Finance Minister will be lucky if he can collect this figure from the public under the prevailing condition of monetary stringency.

As for the pattern of ownership of Central and State Government securities—worth Rs. 2,581 crores as at the end of March 1960, excluding the funding issue of Rs. 300 crores in July 1958—the Reserve Bank and Governments together held a little over 28 percent, commercial and co-operative banks 28 percent and insurance and provident funds 20 percent. Excluding the Reserve Bank's and Governments' holdings, the public held rupee debt worth Rs. 1,851 crores. Of this, 40 percent was held by commercial and co-operative banks, 18 percent by the insurance sector and 9 percent by provident funds Of the residual holdings, trusts held more than 9 percent and individuals 3.1 percent.

Discussing the maturity pattern of rupee debt, the *Bulletin* points out that at the end of March 1960, 35 percent of the combined debts of the Central and State Governments were in the five-year maturity group while a further 30 percent were in the group five to 10 years. These two maturity groups, therefore, accounted for 65 percent of the total debt, compared with 69 percent at the end of March 1959 and 68 percent at the end of December 1957. Loans in the maturity range of 10 to 15 years accounted for 17 percent, those over 15 years for 7 percent and non-terminables for 10 percent. The corresponding percentages at the end of March 1959 were 13 percent, 7 percent and 12 percent. Some switch-over took place from medium-dated loans (five to 10 years) to medium-longs (10 to 15 years) between end-March 1959 and end-March 1960. More than 80 percent of the holdings of commercial and co-operative banks, 69 percent of those of Governments and 76 percent of those of the Reserve Bank, are due to mature within 10 years. A comparison of the position at the end of March 1960 with that at the end of March 1959, shows that there has been a shift from mediums to shorts in the case of provident funds and insurance. In the case of commercial banks there was some shift from shorts to mediums and medium-longs, but in the case of Government holdings there was a switch-over from mediums to longs.

The maturity pattern clearly shows that the choice of investors has been predominantly in favour of short and medium-dated loans. This is understandable in view of the fact that the support for securities springs mainly from institutions whose investment needs are largely governed by their liabilities. Considering that for many years to come official borrowing will be supported mainly by institutions, there is not expected to be much change in the trend. Any official borrowing programme, therefore, will have to contain a large proportion of short and medium-dated stock. At the same time, the importance of increasing the proportion of long-dated loans is being increasingly felt due to quicker maturities at a time when the Government needs more funds to finance development programmes. It seems time, therefore, that the Government made increased efforts to attract more support for long-dated loans. This can be done by encouraging individuals to subscribe for Government loans in a more energetic way. But any effort in this direction is not likely to succeed unless the interest on long-term borrowing is made more attractive.

NEW ERA IN EXCHANGE MARKETS

NOT even those who retained full confidence in sterling during the critical days after the revaluations of the German and the Dutch currencies in March would have predicted that the sterling-dollar rate, which had been below parity since the middle of February, would regain parity before the middle of April. When that event occurred it could be said that the monetary authorities had won, if not a whole campaign, at least a major battle against the speculators, and that a serious threat to the currency had been averted. The British monetary authorities can claim much credit for this achievement, but not all the credit. Positive assertions by the Chancellor of the Exchequer that sterling would not in any event be devalued would have impressed nobody if the words had not been supported by actions. In fact, the authorities used their reserves boldly for the purpose for which they are, after all, intended, to assist the currency through a period of temporary difficulty; and they reminded the world that the second-line defences, drawing rights on the International Monetary Fund and available dollar securities, were quantitatively larger than the first-line reserves.

Stabilising the pound would, however, have been much more difficult without the assistance of the foreign central banks. Their agreement, at the meeting in Basle soon after the revaluations in March, to accumulate currencies that were being offered against their own, instead of converting them, implied a major change of procedure, with various important consequences. The so-called "Basle Agreement" is not in fact a single plan of action or statement of policy but a series of individual agreements; but it represents, nonetheless, concerted action to stabilise the currencies—and official recognition that for this purpose even convertibility, though maintained in principle, must be qualified in practice. Associated with the suggestion, circulating about the same time, that "surplus" countries should lend their currencies to "deficit" countries, through the medium of the International Monetary Fund, the "Basle Agreement" can be seen as the beginning of a new phase of monetary co-operation.

The same general principle was confirmed in the discussions between President Kennedy and Prime Minister Macmillan in Washington: their countries should avoid monetary actions that would embarrass the other, or cause a more general disturbance, by initiating a movement of short-term funds. One implication of this agreement is that the British authorities have abandoned the idea of rapidly increasing their reserve, whether by a temporary inflow of funds such as occurred last year or more permanently through a surplus in the payments account. The balance of payments of Britain and the sterling area must, of course, be improved; but it is now recognised that substantial surpluses—even though much smaller than the West German surplus that caused so much trouble last year—can dangerously impede world trade.

The importance of distributing available finance, so that no country accumulates so much that others have not enough, has been emphasised frequently in recent years, but positive action to maintain liquidity has not been apparent until this year There are important examples of earlier co-operation, notably the retention by European countries of dollars that they would have exchanged for gold if they had not been persuaded to assist the United States in its efforts to stop the loss of gold from Fort Knox. The "Basle Agreement" has extended this policy of restraint to other currencies, principally sterling. It has contributed to the world's effective liquid resources by moderating the reduction in the sterling area's reserve while allowing other countries' reserves to increase as unconverted pounds accumulated.

A very important further extension of the principle of holding weak currencies would be an arrangement with the U.S authorities whereby in times of difficulty they would hold substantial quantities of sterling. Official U.S. holdings of foreign currency are insignificant; and the U.K. likewise holds by far the greater part of its reserves in gold. But there is a growing belief, in London and elsewhere, that the idea that an international currency must necessarily be supported by gold is outmoded. Already we have seen both the international, gold-supported, currencies assisted by continental European countries which have refrained from converting those currencies into gold; so insistence on the principle of gold seems somewhat artificial. Proposals that the International Monetary Fund should issue some kind of reserve-currency that would supplement, or even replace, gold have not yet been translated into action, and progress in this direction is not conspicuous. But the alternative idea, that existing currencies should be more widely accepted and used, is already being applied in practice. It seems logical that both the U.S.A and the U.K. should broaden the application of this idea by modifying their policies so that they can hold currencies that need temporary help.

However, it would be regrettable if the monetary authorities developed such enthusiasm for these new techniques that their objectives became confused. Temporary help should be recognised as such, not regarded as a permanent solution of more fundamental problems. Britain is relieved of the compulsion to apply drastic measures to improve her external account and strengthen her reserves, for other countries are easing the strain on sterling. But in time, presumably, those countries will wish to convert much of their accumulated sterling into gold. (Gold may be diminishing in importance, but the process is too slow to be relevant.) In the meantime, the basis of sterling must be gradually strengthened. Confidence in the dollar has been restored, but it is not yet proved that recent ideas that this currency was over-valued were basically wrong. The positive achievement of this year is an adjustment of two important currencies without serious disturbance of the structure of international finance. It must be recognised, however, that an earlier achievement, convertibility of all the major currencies, has been compromised. The British authorities must have remembered recently that in 1959 they considered allowing free convertibility of all non-resident capital; and they must think uneasily of the extra losses of reserves that would have resulted from such freedom.

A NEW CALCUTTA: DREAMS AND REALITIES

THE Planning Minister, Mr. G. L. Nanda's declaration in Parliament that the Centre is keenly interested in the master plan which is now being prepared for Calcutta by the Ford Foundation and other foreign experts and that "there need be no apprehension on that score", sounds reassuring, but one is compelled to ask why the assurance has not been given before. That Calcutta is the problem city of India has been known for a long time. Mr. Nehru once described it as a nightmare, yet it had apparently been thought better to leave the city to itself and to its Corporation until some foreign commentators, notably, a World Bank team, drew sharp attention to its shocking living conditions and its increasing inability, as a metropolis, to provide the necessary services for an hinterland which is rapidly becoming more industrialised. Some credit must also go to West Bengal's Chief Minister, Dr. B. C. Roy, who has been pursuing an incessant campaign for rebuilding the city on more modern lines.

The abnormal state of congestion and overcrowding and the primitive system of water supply and drainage which exists in Calcutta cannot be allowed to continue much longer without serious dangers of one kind and another. The city has the highest population density of any part in India, while housing facilities and civic amenities are shockingly inadequate. These already poor facilities have been sorely tried as the population has continued to increase, partly due to the rising birth rate and partly to the influx of migrants from villages in search of a better livelihood. It has become clear, therefore, that one of the effective ways in which to reduce this pressure is to build satellite townships, where land is provided at a reasonable price to those who can build their own houses, and cheap, rented accommodation to those who come to the city merely in search of work and have no intention of staying on permanently. The State Government has decided to acquire 56,000 square miles on either side of Diamond Harbour Road, and it is proposed to supply land and rented accommodation at as reasonable a price as possible. This will not be sufficient, and more areas will have to be developed to make some impression on the problem, but it is a good thing that a beginning is going to be made.

The chief limiting factor in all these schemes is finance. Nothing has apparently come of the move—with which, it was said, a former U.S. Ambassador was associated—to spend a large sum of the P.L. 480 counterpart rupee funds on building satellite towns and small industries around Calcutta. The Centre has provided only Rs. 10 crores during the third plan, which is a small sum compared with what the needs are going to be if a really thorough-going master plan for rebuilding the city is to be worked out. The State Government can scarcely provide more than the Rs. 1 crore or so it proposes to spend. Substantial external help is obviously needed, but it is not clear what sources exist for supplying such a prodigious amount of money. Perhaps it would be wiser to start on a more realistic or less pretentious scale. At present there is too much talk and concentration on grandiose paper schemes and too little attention paid to practical details. While Dr. Roy is thinking of instituting a Metropolitan Board, the scheme for a Rs. 1-crore water plant, to augment the city's none-too-adequate water supply, has been lost among the files at Writers' Building.

In spite of all the talk of rebuilding Calcutta in the image of a modern city and the local Government's reported plans for installing monorails to release traffic congestion, and other dream projects for improving water supply and sanitation, it might be a more useful idea to start with a town and country planning authority, with all the powers that would be required. The existing City Improvement Trust is no substitute, although in recent years there has been a welcome shift in its activities in favour of housing, from purely routine duties such as minding roads and sewers and the development of land for sale. But its resources for providing housing accommodation to low-income groups are so meagre that its activities have not been able to provide much relief to the city's harassed dwellers. The Trust, however, is doing all it can to ensure that the benefits of its housing schemes go to those for whom they are meant. Selling plots of land by auction has been stopped so that the speculators cannot benefit, they are now given on a long-term lease basis to low-income-group people after the drawing of lots. The title of ownership thus remains with the Trust and no alienation to other parties is possible.

The Trust authorities, however, seem to be unhappy about the way they have been treated in some matters by the Government and the Corporation, without whose co-operation they cannot function properly. According to the latest annual report, published under the signature of its outgoing chairman, Mr. S. K. Gupta, definite instances of unfair treatment have been mentioned which would appear to call for some sort of enquiry. Not only has the Government's appreciation of the Trust's financial difficulties been too slow, it is alleged, but due to the "stranglehold" exercised by the former's Finance Department, some valuable officers have had to leave the Trust's service. Moreover, in matters where politics play a part such as the removal of refugees and unauthorised squatters from areas required for development schemes, the Government's response has been most lukewarm. In some matters, the Trust's moves have even been cold-shouldered. The Calcutta Corporation in one case completely sat on a building plan which the Trust had submitted and the latter had somehow to find a way out of the difficulty after a good deal of time had been lost. The Trust chairman remarks ruefully: "After all, the improvement of Calcutta's communication, beauty spots, and housing conditions is not merely the headache of the Calcutta Improvement Trust, but of all the citizens and institutions, government departments not excepted."

Current News and Comment

Goodyear Offers Equities

Goodyear India Ltd is offering 400,000 ordinary shares of Rs. 10 each for public subscription at a premium of Rs. 7 a share. A special feature is that no shares have been reserved for firm allotment to any of the directors or their friends, so the entire issue will be available for the public. (Fuller details of the offer are printed on a later page.) The issued and subscribed capital of the Company at present is Rs. 1.60 crores, divided into ordinary shares of Rs. 10 each. Goodyear India is a subsidiary of the Goodyear Tire and Rubber Co. of the U.S.A., which has been given 1,600,000 fully paid-up ordinary shares of Rs. 10 each in exchange for some equipment and cash dollars. The subscription list opens next Tuesday. Applications are to be made for a minimum of 50 shares or multiples of 50 shares. Goodyear was incorporated in 1922 as a private limited Company, and was converted into a public Company on 24th March, 1961, under the present name, Goodyear India Ltd. So far, the Company has got its tyre and rubber products manufactured by other concerns in India. Now, the proceeds of the issue will be used for financing its own factory which is being set up in Ballabgarh, Punjab (21 miles from New Delhi on the Delhi-Agra Road). The factory is nearing completion and is expected to be in production in the second half of 1961. It will manufacture tyres and various other rubber products. As the demand for these is increasing, Goodyear India should have no difficulty in selling all its products, which already enjoy a good reputation.

The Company made a profit of Rs. 33.10 lakhs during the year ended December 1960 and dividends absorbed Rs. 10 lakhs. The ordinary share capital at that time was Rs. 15,000, divided into 1,500 ordinary shares of Rs. 10 each, so the dividend rate worked out to 6,666.07 percent. An agreement has been negotiated under which the Export-Import Bank of Washington has agreed to give a rupee loan of Rs. 2.25 crores to the Company for the new factory. The loan agreement imposes certain conditions relating to the payment of dividends, so the return of the loan is likely to be accelerated. It is expected that Goodyear India can meet the interest and the repayment of the loan out of its own internal resources without any difficulty. The stock market is taking a great deal of interest in the issue. It is thought that the offer of the shares at Rs. 17 each constitutes an attractive investment proposition, since Goodyear India will earn substantial profits when the Ballabgarh factory starts production.

Union Carbide Earns More

The report issued by Union Carbide India Ltd for the year ended 25th December, 1960, facilitates a more realistic assessment of the prospects for the Company's shares, which have risen to Rs. 55.75. In terms of the dividend yield, the scrip look over-valued. The latest ordinary dividend is Rs. 1.80, taxable, a share, including an interim of 75nP. The yield thus works out to 3.2 percent and is much lower than that available on comparable issues. It does not look as if the dividend will be raised substantially in the near future. The Company's expansion schemes are proceeding fast and the directors seem to be determined to finance the expansion as far as possible from internal resources, without bothering about paying bigger dividends. The Company's profit has increased from Rs. 1.36 crores in 1959 to Rs. 1.46 crores in 1960, after raising depreciation from Rs. 17.16 lakhs to Rs. 21.03 lakhs and transferring Rs. 2.30 lakhs (against same) to development rebate. The dividends absorb only Rs. 50.34 lakhs, but general reserve receives Rs. 30 lakhs (against Rs. 25 lakhs). After allocating Rs. 61.38 lakhs (against Rs. 64.61 lakhs) to taxation, the carry-forward has increased to Rs. 46.71 lakhs from Rs. 43.63 lakhs brought in. The pattern of allocations indicates that the question of rewarding shareholders more adequately deserves to be seriously considered. They cannot be expected to wait indefinitely for the fruits of expansion.

As for the expansion plans, the Company's capital expenditure was Rs. 2.20 crores in 1960, against Rs. 1.03 crores in 1959. A substantial portion of the expenditure was incurred on setting up the chemicals and plastics plant in Trombay. The project has already gone into production, and the Government of India has been asked for permission to expand the capacity of the unit. Steps have been taken to raise the capacity of the Metals and Ores Co. by spending Rs. 22 lakhs. The expansion programme is expected to be completed soon. An extensive re-equipment programme has been undertaken for improving the two battery plants and the work is likely to be completed in the near future. Considering the expansion which has taken place and that which is likely to be undertaken in the future, shareholders will wonder whether the current price does not discount the growth prospects. It does seem to, for the time being, unless Union Carbide cares to adopt a more generous dividend policy. It is worth noting that in 1960, the share capital was increased by issuing 800,000 ordinary rights shares in the proportion of two for five at a premium of Rs. 2.50 a share.

The Company's sales increased from Rs. 7.70 crores in 1959 to Rs. 8.23 crores in 1960. Export sales improved by more than 20 percent. The production of nearly all the units increased, but the Eveready Flashlight Co. in Lucknow suffered from labour troubles. The demand for Union Carbide products has risen, and this justifies the expansion programmes. The directors complain about the shortage of certain imported raw materials, but attempts are being made to increase the supply of indigenous raw materials as far as practicable. In any case, it will be necessary to import some basic raw materials for quite a long time.

Wimco Shows Satisfactory Results

The Western India Match Co. Ltd has shown satisfactory results during the year ended December 1960. It would have fared better but for the marked increase in manufacturing costs which affected its profit margin. While sales in 1960 rose by about Rs. 73 lakhs to Rs. 18.34 crores, the gross profit was Rs. 1.50 crores, against Rs. 1.48 crores in 1959. The ratio of the gross profit to sales declined from 8.37 percent to 8.17 percent. Raw materials cost Rs. 2.60 crores (against Rs. 2.36 crores) and salaries, wages and bonus increased by Rs. 6 lakhs to Rs. 1.89 crores. After providing Rs. 19.02 lakhs (against Rs. 18.06 lakhs) for depreciation and Rs. 51.15 lakhs (against Rs. 52.35 lakhs) for taxation, the net profit amounts to Rs. 67.03 lakhs, against Rs. 64.73 lakhs in 1959. From this, the directors have set aside Rs. 12.73 lakhs (against nil) for contingencies and have allocated Rs. 8.82 lakhs (against Rs. 16 lakhs) to general reserve. Development rebate reserve gets Rs. 1.86 lakhs (against Rs. 2.15 lakhs.) The dividend has been maintained at 16 percent, taxable, absorbing Rs. 44 lakhs A sum of Rs. 4.53 lakhs has been carried forward, against Rs. 4.20 lakhs brought in.

The directors state that the factories worked well during the year and sales continued to be good. The Government is still carrying on experiments to decide what should be the "standard execution" for match boxes. Up to the end of 1959, the manufacture of 50-stick boxes was permitted but it was later withdrawn and only 40's and 60's "executions" remained. In the latest Central Budget, excise duties have been amended to encourage the manufacture of 50-stick boxes and discourage that of 40's and 60's. But due to the insufficient supply of match timber, the directors say that the manufacture of 50-stick boxes will not be ideal; it will lead to a waste of wood because of the need for more boxes when the contents are reduced from 60 to 50 sticks. W.I.M.C.O.'s paper mill is reported to be working satisfactorily, but the directors point out that the prices fixed by the Government on the Tariff Commission's recommendation do not give a fair return.

The Company spent Rs. 19.57 lakhs on the additions to its fixed assets during the year, raising their total value to Rs. 4.80 crores. The depreciation provision is Rs. 2.10 crores. The paid-up capital amounts to Rs. 2.75 crores and the reserves and surplus are Rs. 1.95 crores. Out of the total capital of Rs. 2.75 crores, Rs. 2.05 crores have been raised by the capitalisation of reserves. The Com-

pany's shares, which were quoted around Rs. 250 early in the year, were marked up to Rs. 314 in March. They are currently quoted around Rs. 295, at which price they offer a tax-free yield of about 3.9 percent.

National Rayon Maintains

The shares of the National Rayon Corporation Ltd, which touched a high of Rs. 560 on 28th February, declined to Rs. 514 last week. The fall reflected the market's belief that in 1960 the Company had not fared as well as in the previous year. The preliminary figures released along with the dividend announcement show that both sales and gross profit have suffered a setback, although the decline is so small that investors need hardly worry about it because of National Rayon's huge expansion schemes. The dividend for 1960 has been maintained at 22 percent, subject to deduction of tax. Sales of yarn and waste have declined from Rs. 7.15 crores in 1959 to Rs. 6.71 crores in 1960, but those of chemicals have improved from Rs. 37 lakhs to Rs. 46 lakhs. The decline in sales is attributed mainly to lower production because of the switch-over of part of the output from coarse yarns of 100 deniers to finer yarns of 150 denies.

The gross profit for 1960 amounts to Rs. 2.59 crores, compared with Rs. 2.76 crores in 1959. While sales have fallen by about 4.65 percent, the gross profit shows a decline of about 6.28 percent. The net profit is, however, Rs. 78.96 lakhs, against Rs. 69.86 lakhs. This has been arrived at after providing Rs. 79.17 lakhs (against Rs. 94.50 lakhs) for depreciation, Rs. 4.15 lakhs (against Rs. 3.60 lakhs) for development rebate, and Rs. 86.50 lakhs (against Rs. 89 lakhs) for taxation. The transfer from deferred taxation reserve is nil (against Rs. 5 lakhs). The allocation to debenture redemption reserve has been maintained at Rs. 10 lakhs and gratuity reserve has received Rs. 3.50 lakhs (against Rs. 3 lakhs). The proposed dividends absorb Rs. 62.71 lakhs, against Rs. 61.17 lakhs, leaving Rs. 4.41 lakhs to be carried forward, against Rs. 1.66 lakhs brought in.

The National Rayon's expansion plans are progressing according to schedule. Yarn output is expected to rise considerably from June with the commissioning of 12 additional spinning frames. The 100-tons-a-day sulphuric acid plant will go into production some time in 1962. Besides, the tyre-cord plant is expected to go into production by the end of the current year. The bulk of the plant and machinery has already been received, and orders for the supply of indigenous raw materials have been executed to a large extent. The tyre-cord plant has an annual production capacity of 4 million tons. The Company has received an industrial licence for setting up a plant for manufacturing rayon-grade pulp. The plant, which will have a daily production capacity of 100 tons, will be located in Mysore State. Details of the scheme are being worked out. National Rayon has also received a licence to double the production capacity of its caustic soda plant from 20 tons to 40 tons a day. The import licences required for this purpose are awaited. Meanwhile, the Company is negotiating a loan to cover the foreign exchange component of the project.

Associated Industries (Assam) Offer

Associated Industries (Assam) Ltd, a new Company, proposes to set up, in two stages, a cotton textile mill with 25,000 spindles in Gauhati. The erection work has already started. The Company also proposes to build a chemical plant for producing 3,000 tons of superphosphate, 6,000 tons of mixed fertilisers, 1,500 tons of sulphuric acid and 300 tons of sulphur dioxide a month. The chemical factory will be located in Gauhati, and the technical collaboration for it has been arranged with Singmaster Breyer Inc. of New York. An application is being made to the Government of India for licences to import plant and equipment. The cost of the projects is estimated at Rs. 1.05 crores. The Industrial Finance Corporation will contribute a loan of Rs. 50.22 lakhs, a portion of which will be given in the form of foreign exchange. As long as the loan is not repaid, the Company cannot distribute an ordinary dividend of more than 8 percent without the previous sanction of the I.F.C.

In order to raise funds, Associated Industries is offering 250,900 ordinary shares of Rs. 10 each for public subscription at par. (Fuller details of the issue are printed on a later page.) The present issue consists of 350,000 ordinary shares of Rs. 10 each. The directors and their friends will subscribe for 29,100 shares, Rallis India Ltd will take 30,000 ordinary shares and the Assam Government will acquire 40,000 shares. Out of the public issue, 50,000 shares will be allocated preferentially to the people of Assam and the Assam Government has underwritten these shares. The rest of the public issue has been underwritten by other organisations. Rallis India Ltd is likely to distribute the fertiliser products of Associated Industries. Preference shares worth Rs. 15 lakhs are also being issued—15,000 shares of Rs. 100 each, carrying a taxable dividend of 9.3 percent. The Assam Government has agreed to subscribe for them at par. The present issued capital of the Company is Rs. 10 lakhs, divided into 100,000 ordinary shares of Rs. 10 each. The directors point out that at present there is no cotton mill in Assam, but the demand for yarn from the local cottage and small-scale industries is good. A satisfactory demand is expected for fertilisers, especially from the tea plantations. So Associated Industries hopes it will have no difficulty in selling its products at remunerative prices.

New Lines for Birla Jute

Reliable reports indicate that the Government of India has approved the schemes submitted by the Birla Jute Manufacturing Co. Ltd, Calcutta, for producing dissolved acetylene and oxygen gas in Birlapur. The project for dissolved acetylene gas has been prompted by the need to find a useful way of disposing of the smaller-sized calcium carbide at the Birlapur factory. Birla Jute can produce 30 tons of calcium carbide a day, of which 25 percent or about 7.5 tons will be in the form of smaller-sized carbide, which is difficult to sell. This quantity, around 2,000 tons or 2,300 tons a year, will be wasted unless it is used by the firm itself. The plant proposed by Birla Jute will have a production capacity of 15.12 million cubic feet a year. The plant and machinery will cost about Rs. 7 lakhs, of which Rs. 4 lakhs will have to be spent on imports. The Company is negotiating for a plant from the rupee payment area in order to save foreign exchange. The manufacture of oxygen gas is complementary to dissolved acetylene gas. Birla Jute wants to set up a plant with a production capacity of 45.36 million cubic feet a year. The plant and machinery for oxygen gas are estimated to cost about Rs. 3 lakhs, of which Rs. 2 lakhs will be needed for the import of machinery.

Expansion Prospects for Sen-Raleigh

The demand for bicycles in India has been rising faster than production. The third plan output target has been set at 2.5 million units, but producers are unlikely to reach this figure unless more adequate supplies of raw materials, especially steel, are ensured. Speaking at the annual general meeting of the Sen-Raleigh Industries of India Ltd in Calcutta on Monday, Mr. Abhijit Sen, chairman, said that in spite of the increasing use of indigenous raw materials, the Company's production during the past year could rise only slightly. This "increase was hardly of the order where it could make itself felt in the face of rising demand for our products." (A fuller version of the speech appears on another page of this week's *Capital*.) The biggest single factor which has been limiting output is the insufficient supply of suitable steel, Mr. Sen said. The indigenous plants have not been able to produce the grades required. Unless they do so at least by 1962, the bicycle manufacturing industry will not be able to plan ahead confidently. The import licensing policy for steel is decided on an annual basis, but the benefits have been lost to the industry as licences have been switched in the past two periods to two different currency areas.

Discussing the Company's expansion prospects, Mr. Sen said that the programme for the manufacture of friction parts has made satisfactory progress and these are now being produced almost to capacity. An industrial licence has been received for the substantial expansion of chain manufacture. A new item—dynamo lamps—has also been licensed. The Company has plans for stepping up bicycle output within the current plan period, but it is feared that if the present shortage of power and water in Asansol area continues, the expansion schemes cannot be easily executed. Mr. Sen complained that in spite of the part which Asansol plays in the economic life of the State, the town has been neglected by the authorities. The power supply is rationed and water is so scarce in summer that people have to buy it "by the bucket". Industries in the area, consequently, are generally unwilling to launch expansion schemes. The Company has plans to diversify its manufacturing programme within the light engineering range. The industrial licence for the manufacture of electric house service meters has been obtained. The demand prospects for this item appears to be good.

Associated Bearing: Tata-S.K.F. Venture

Associated Bearing Co. Ltd is the name of a new Company which has been formed for manufacturing a wide range of ball and roller bearings. The project has been sponsored by Aktiebolaget Svenska Kullagerfabriken, Gothenburg, Sweden, popularly known as S.K.F., the Skefko Ball Bearing Co. Ltd, Luton (England), one of its subsidiaries, and the Investment Corporation of India Ltd of Tatas. The Company will have an authorised capital of Rs. 7.5 crores, of which Rs. 3.25 crores is proposed to be issued intially. Of the issued capital, 60 percent will be subscribed by S.K.F. and/or Skefko Ball Bearing, 20 percent by the Investment Corporation of India and/or its associates or nominees, and the balance of 20 percent will be offered to the public some time in the autumn. For the present, the Company will be floated with an initial promotional capital of Rs. 10 lakhs to be subscribed under mutual arrangement by the promoters. The new Company will manufacture ball and tapered roller bearings, the latter for the first time in India, thus helping to meet the ever increasing demand from the motor-car manufacturing industry. In addition, Associated Bearing will manufacture the well-known S.K.F. pendulum weighing arms, top-roller bearing units for drafting systems on speed frames, drawing frames and ring spinning frames for the cotton textile industry. Production is expected to start towards the end of 1962. When the factory achieved full production, it will employ about 700 workmen. Indian workers will be trained in S.K.F.'s European factories. During the initial stages of operation, S.K.F. will send experts to ensure that the quality of production is maintained at a high level.

Kohinoor Mills Earns More

The working of the Kohinoor Mills Co Ltd for the year ended December 1960 shows considerable improvement over the previous year. The gross profit has increased from Rs. 17.11 lakhs to Rs. 32.19 lakhs and is the highest since 1956. The profit for 1960, however, includes Rs. 2.56 lakhs being the profit arising from the sale of old machinery. Sales of cloth, yarn and waste are up from Rs. 6.59 crores to Rs. 6.77 crores and stocks of finished goods and materials-in-process from Rs. 81.28 lakhs to Rs. 99.84 lakhs. Although Kohinoor Mills has done much better in 1960, its gross profit works out to only 4.4 percent of sales, which compares poorly with the performance of mills manufacturing similar varieties of cloth. In 1958 the ratio of gross profit to sales was disappointingly low at 2.5 percent. The directors state that the cotton year was difficult for the trade. Besides, long-staple foreign cotton was costlier than in the previous year. So the cost of cotton and fibre consumed rose by about Rs. 27.53 lakhs to Rs. 2.92 crores. Silk and other yarns cost Rs. 20.91 lakhs more at Rs. 33.26 lakhs. Salaries and wages rose by Rs. 27.34 lakhs to Rs. 2.02 crores, which includes a payment of Rs. 7.87 lakhs as the staggering compensation and bonus for previous years.

After providing Rs. 10.92 lakhs (against Rs. 7.38 lakhs) for depreciation and Rs. 4.25 lakhs (against Rs. 3.50 lakhs) for taxation, the net profit amounts to Rs. 14.84 lakhs, against Rs. 5.13 lakhs in 1959. From this the directors have allocated Rs. 7.07 lakhs (against Rs. 1.53 lakhs) to development rebate reserve. The amount left is inadequate to distribute the proposed dividend, which has been raised from Rs. 9.5 to Rs. 15 a share, both taxable. The directors have, therefore, transferred Rs. 7.16 lakhs from the reserves. A sum of Rs. 20,794 has been carried forward, against Rs. 27,909 brought in. The financial position of Kohinoor Mills is fairly strong. Against the paid-up capital of Rs. 1 crore, the reserves and surplus total Rs. 1.16 crores. Other liabilities stand at Rs. 1.79 crores, and are more than covered by assets, other than the fixed ones, amounting to Rs. 2.80 crores. Kohinoor Mills added Rs. 39.64 lakhs to its fixed assets, raising the total to Rs. 4.18 crores. But the net block stands at Rs. 1.15 crores only. At the current price of about Rs. 292, the Company's shares offer a tax-free yield of about 3.6 percent.

Brady Engineering Expanding

Investors in the Brady Engineering Co Ltd can take a reasonably optimistic view of the future. The chairman, Mr. Pallonji S. Mistry, said at the annual general meeting in Bombay last week that the Company's development plans are now taking concrete shape. Production at the works is steadily increasing and the difficulties are being overcome. Brady Engineering has achieved considerable progress in the manufacture of Morris pulley blocks and other lifting equipment—a new line for which there is a growing demand in India. The difficulty in obtaining some components, which it is not possible to manufacture within the Company's works, still continues. Mr. Mistry said that the manufacture of an automatic bread-making plant—the first of its kind to be made in India—is expected to be completed by June. The late completion is due entirely to the delay in obtaining licences for the import of certain components and in shipping the goods from the U.K. Replying to shareholders' questions, Mr. Mistry said that Brady Engineering could not undertake the manufacture of ring-frames due to the lack of equipment. The Company would like to undertake new lines of manufacture but the physical limitations of the existing site of the factory stood in the way. The potential capacity of the present plant is likely to be reached some time this year. The Rs. 80-paid shares of the Company are quoted around Rs. 92.50, at which price they offer a tax-free yield of about 3 percent.

Chase Bright Steel Prospects

Mr. Ramniwas R. Ruia, chairman of Chase Bright Steel, said at the annual general meeting in Bombay last week that the entire plant and machinery has been installed in the new factory premises in Thana and part of the unit has been commissioned with satisfactory results. The Company is receiving numerous enquiries from consuming industries. The future of the bright bar industry is good, although its progress depends on the adequate supply of black hot rolled bars of various specifications. At present, the industry depends primarily on imports for the supply of raw materials. It will take time before the iron and steel industry in India is able to supply the raw materials for the bright bar industry. The supply of free cutting steel is meagre. Mr. Ruia urged the Government to assess the demand for bright bars, supply of raw materials and the installed and productive capacity of the existing units before granting licences to new enterprises. The Government has assured the industry of raw material imports to a reasonable extent. Besides, it has asked consumers to import black bars and convert them into bright bars.

Chase Bright Steel has invested Rs. 30 lakhs in fixed assets, the chairman said, and by the time the construction of the factory is completed, total expenses will rise by about Rs. 15 lakhs over the previous estimates. This is because the Company has made some additions to the plant, machinery, land and buildings in order to facilitate further expansion. Additional finance has so far been arranged with the Company's bankers. But in order to have a sound capital structure, it may be necessary to raise additional capital, in which case shareholders have been assured of a fair return. The latter suggested that Chase Bright Steel should raise fresh capital only when it is put on a profit-earning basis. Mr. Ruia said that there are various additional lines of manufacture allied to the Company's existing manufacturing activity. The directors will go into the question of further expansion after studying the financial implications and profitability of the schemes. The Rs. 10-paid shares of the Company are quoted around Rs. 14. It touched a high of Rs. 20.24 last year.

United Wire Ropes Offer Soon

United Wire Ropes Ltd is a new Company which has been formed for manufacturing steel wire ropes—both black and galvanised. The plant, which will be located in Thana, Bombay, will have a production capacity of 3,600 tons a year. United Wire Ropes will have an authorised capital of Rs. 1 crore, made up of 75,000 equity shares of Rs. 100 each and 25,000 9½ percent, taxable, preference shares of Rs. 100 each. Of this, the Company proposes to issue 45,000 equity shares and 10,000 preference shares. The promoters, directors and their friends will acquire equity shares worth Rs. 20 lakhs. The balance, consisting of 25,000 equity shares and 10,000 preference shares, will be offered to the public some time in May. The entire issue is likely to be underwritten. The project is estimated to cost Rs. 97 lakhs, of which Rs. 55 lakhs will be raised through the capital issue. The Industrial Credit and Investment Corporation of India is reported to have agreed in principle to grant a loan of about Rs. 30 lakhs in foreign currency to meet the cost of plant and machinery to be imported from the U.K., West Germany, Belgium and France. United Wire Ropes has entered into a technical collaboration agreement with Messrs Lepage Consulting Engineers of Antwerp, Belgium. An outstanding feature of the agreement is that about 70 percent of the total payment to be made to the foreign firm as remuneration and fees over a period of seven years will be reinvested by it in United Wire Ropes' equity capital. No royalty or commission is payable to the consultants. The Company has applied for an industrial licence for manufacturing 2,100 tons a year of high-tensile steel wires used for pre-stressed concrete.

Sirsilk Profit Up: Sales Down

The working of Sirsilk Ltd for the year ended September 1960 has shown a small improvement over the previous year. The gross profit is up from Rs. 14.99 lakhs to Rs. 17.72 lakhs, although sales are slightly down from Rs. 2.32 crores in 1958-59 to Rs. 2.28 crores in 1959-60. The Company would have fared better if its production had not been affected by labour unrest which compelled the management to declare a lock-out for a month. The increased profit—in spite of a slight setback in sales—reflects the improved profit margins resulting mainly from the substantial decline in the cost of raw materials consumed from Rs. 46.44 lakhs to Rs. 27.36 lakhs. In 1958-59, raw materials represented nearly 20.26 percent of the sales, against only 12.10 percent in 1959-60. The benefit of the reduced cost of raw materials was, however, partially offset by the rise in manufacturing costs under other heads. The wage bill increased from Rs. 54.63 lakhs to Rs. 61.17 lakhs and the cost of repairs to building and machinery, etcetera, from Rs. 8.46 lakhs to Rs. 10.76 lakhs. Sirsilk paid Rs. 19.63 lakhs as excise duty, against Rs. 16.51 lakhs. Out of the gross profit of Rs. 17.72 lakhs, Rs. 14 lakhs has been provided for depreciation, leaving a profit of Rs. 3.60 lakhs. This has been used in wiping out the loss of Rs. 3.23 lakhs brought forward from the previous year.

The directors state that the working results—although satisfactory in the context of the labour situation at the factory—are not up to expectations due to the absence of any improvement in the quantity as well as the quality of production. The Company is negotiating for technical collaboration with some foreign parties of repute to carry out its expansion and modernisation programmes. This will improve the outlook, but equity shareholders will have to wait for some years for a dividend. Sirsilk is in arrears of preference dividends amounting to Rs. 72.59 lakhs, subject to adjustment under the Preference Shares (Regulation of Dividends) Act. The Company has a huge capital of Rs 3.02 crores, although it has not built any reserves. It has borrowed large sums from the Andhra Government and banks. Total borrowings outstanding as on 30th September, 1960, amounted to Rs. 2.74 crores. Against fixed assets worth Rs. 5.80 crores, total depreciation provided so far amounts to only Rs. 24 lakhs. Arrears of depreciation amount to Rs. 2.60 crores. The Rs. 10-paid ordinary shares of the Company are currently quoted around Rs. 8.75. They touched a high of Rs. 12.25 in 1960 on reports indicating the possibility of the Company's merger with a sister concern.

Ouchterlony Valley Profit Up

The Ouchterlony Valley Estates has made a profit of Rs. 7,09,692 for the year ended October 1960, against Rs. 4,11,643 in the previous year. The 1959-60 profit includes a sum of Rs. 3.7 lakhs, being the net proceeds of timber sales. The provision for taxation is Rs. 3.47 lakhs (against Rs. 1.85 lakhs). Development rebate gets Rs. 55,796 (against Rs. 14,500), and Rs. 50,000 (against nil) is transferred to general reserve. The directors have recommended a dividend of 13 percent, subject to deduction of tax, against 15 percent previously. The dividend absorbs Rs. 2.53 lakhs. A balance of Rs. 7,007 is carried forward, against Rs. 3,088 brought in. The tea crop was 1.33 million lbs, (against 1.11 million lbs in the previous year). The all-in cost was Rs. 1.85 a lb (against Rs. 2.18). The average price realised was Rs. 2.16 a lb (against Rs. 2.24). The tea crop estimate for 1960-61 is 1.4 million lbs. The coffee crop in 1959-60 was 682,737 tons (against 726,250 tons in the previous year). The all-in cost of production amounted to Rs. 3,764 a ton (against Rs. 3,585). The total points awarded amounted to Rs. 10.63 lakhs (against Rs. 11.49 lakhs). The coffee crop for 1960-61 is estimated at 790 tons.

Rayalaseema Mills Pays More

The Rayalaseema Mills Ltd of Adoni has made a profit of Rs. 10,34,983 during the year ended December 1960, against Rs. 3,73,797 in the previous year. The provision for taxation is Rs. 4.48 lakhs (against Rs. 1.52 lakhs). General reserve gets Rs. 1.25 lakhs (against nil), and dividend equalisation reserve gets Rs. 1.2 lakhs (against nil). The directors have recommended a dividend of 15 percent, subject to deduction of tax, against 10 percent for the previous year. The latest dividend absorbs Rs. 3.35 lakhs. A balance of Rs. 7,071 is carried forward, against Rs. 958 brought in.

The supply of cotton remained difficult, but the Company covered its requirements at reasonable rates. Yarn prices were quite favourable until 15th August, 1960, but were reduced thereafter in consultation with the Government. In view of the space available in the mills for further expansion and as it would also reduce the cost of production to some extent, the directors feel that further expansion is desirable by installing 28,800 spindles, making the unit one of 50,000 spindles. The Company has, therefore, asked the Government for permission to install 28,800 spindles. Another application has also been made to the Government for starting a separate unit of 16,000 spindles for spinning yarn of higher counts other than 20s and 26s. The increments recommended by the Cotton Textile Wage Board have been implemented fully. As for the other points covered by the Wage Board report, discussions are going on with the labour unions, and the directors expect that an amicable settlement will be reached.

Foreign Trade Venture of Tatas

In order to assist the development of India's foreign trade, Tatas have formed a small subsidiary Company in Switzerland called Tata A.G. The sanction of the Central Government and the Reserve Bank has been obtained. The Company has been established in Zug near Zürich and is expected shortly to undertake exports from India of various products and commodities, some of which may be processed further in Europe before being marketed.

Export Quota for Bengal Deshi

The Government of India has recently released another 60,000 bales of Bengal Deshi cotton for export on a first-come-first-served basis, subject to an individual ceiling of 2,500 bales. Out of this, 3,000 bales have been reserved for co-operative societies as usual. The announcement came not a day too soon because the trade had long been pleading for the release of a further quota in view of the substantial exportable surplus. The delay in announcing a fresh export quota caused considerable hardship to some shippers who made firm commitments abroad which they could not fulfil because of procedural formalities. Even more welcome than the export quota now sanctioned are the changes which have been introduced in the licensing procedure. Most shippers complained in the past that a few influential parties got hints about the procedure for export before it was notified, so they took full advantage of the information. The new procedure is simple and fair. It will enable all shippers to participate in the business because shipping bills are to be accepted from 15th April, and the business transacted before the date of the trade notice of 12th April will not be considered valid. The export trade is happy that the authorities have conceded their demand for a simplified procedure, although the quota falls short of their expectations.

The ceiling for the shippers' share of the export quota was reached on the very first day, that is, 15th April. This was only to be expected because of the keen overseas demand, particularly from Japan which is said to have taken up the bulk of the quota. The price paid by Japan last week was reported around 21.5d a lb, f.o.b., Bombay, for Bengal Deshi fine quality and 23d for superfine choice. In December, superfine choice fetched 27d a lb and in February Japan paid 25d for the same stuff. This means that India could have earned more foreign exchange if the export quotas were released much earlier. That there existed a large exportable surplus was never in doubt because the Bengal Deshi crop was estimated at about 375,000 bales quite early in the season while domestic requirements have seldom exceeded 150,000 bales a year. Last week's quota brings the total quantity released for export during this season to 160,000 bales. It should, therefore, be possible for the Government to permit a further export quota of about 50,000 bales. In spite of the release of export quotas from time to time, the domestic prices of Bengal Deshi as well as of other varieties have remained subdued because of the improved supply of cotton during this season. Bengal Deshi superfine, which touched a high of Rs. 1,000 early in the season, is now quoted around Rs. 840 a candy of 784 lbs. Cotton shipments since the beginning of the season up to 1st April total 113,211 bales, against 126,211 bales during the same period of the last season. Of this, Japan has taken 92,539 bales, Hongkong 8,912 bales, the Continent 8,608 bales, the U.S.A. 1,512 bales, the U.K. 1,472 bales and others 168 bales. These exports include zoda and yellow pickings.

Export Policy for Skull Scrap

The scrap export trade has criticised the Government's recent announcement banning the free export of skull scrap. The export of the latter was permitted freely since January 1960, and the export policy for the January-June period also allowed the free export of both cast iron and steel skull scrap. The recent ban has, therefore, come as a surprise to the trade. The Government has, however, said that firm commitments already made will be considered for export allotments. But for future licensing, exporters will first have to offer the scrap to domestic steel producers and only on their refusal will the shippers be issued export licences. The ban on the free export of skull scrap is aimed at encouraging the use of scrap within the coun-

try. The trade says that while the ban is unlikely to stimulate internal consumption, it will greatly hamper exports because the procedure of offering the scrap first to domestic consumers and obtaining a "no-objection" certificate from them is time-consuming. Besides, it introduces an element of uncertainty. Exports of ferrous scrap from India in 1959 and 1960 totalled 290,000 tons and 310,000 tons, respectively. Of this, skull scrap shipments accounted for about 90,000 tons each year. Shipments in January-March 1961, amounted to 87,095 tons, of which skull scrap accounted for 24,830 tons. The figures clearly indicate that skull scrap exports are nearly a third of total ferrous scrap exports. Any restriction on the former will, therefore, result in considerable loss of foreign exchange. The trade feels that the loss from reduced exports of skull scrap can be compensated by improved shipments of surplus trade scrap, such as bundle grades, provided incentives are allowed.

Fire Insurance in U.K.

Figures for the fire business transacted by insurance companies in the U.K., during the five-year period from 1955 to 1959, indicate the general experience of the U.K. market. Lloyd's figures, however, are not included in this compilation The net premium income of all companies was £214.6 million in 1955 and rose steadily to £295.8 million in 1959. The increase in premium income over the previous year was 1.2 percent in 1955, 14.6 percent in 1956, 4.3 percent in 1957, 2 percent in 1958 and 13.1 percent in 1959. The claims ratio rose from 47 percent in 1955 to 49.7 percent in 1956 and 51.6 percent in 1957 but fell to 51 percent in 1959. The expense ratio was 45.2 percent in 1955, and did not vary much until 1959. Nevertheless, the balance ratio showed considerable variation. It was 5.9 percent in 1955, 1.9 percent in 1956, 1.5 percent in 1957, 2.9 percent in 1958 and 1.7 percent in 1959. The overall surplus of 1.7 percent, compared with 2.9 percent in 1958, was the second lowest in 30 years. The annual surplus fell steadily from a maximum of 12.3 percent in 1949 to a minimum of 1.5 percent in 1957.

Considering the concessions which have had to be made because of intensified competition, the increase of 13.1 percent in net income, compared with 2 percent in 1958 and 4.3 percent in 1957, is notable, because values have increased only nominally during these periods. The increasing extent to which special perils are included in the cover in modern schedules has largely offset concessions in rating, so the increase in net income represents the growth of the business in conformity with world prosperity. In the home field, 1960 has been notable for a continuation of the disastrous claims experience which marked the previous year, when material losses, as estimated by *The Times*, reached the record total of £44 million, compared with £24 million in 1958 and the former high of £27.6 million in 1955.

Trade Unions in Asia

The employers' delegate from India to the I. L. O., Mr. N. H. Tata, addressing the Asian Advisory Committee recently, reviewed some of the outstanding problems posed by under-developed countries. These were population explosion, poor capital formation, unemployment and under-employment, and exceedingly low standards of living of the rural worker, compared with his counterpart in industry. Mr. Tata said that the solution to these problems lay in accelerated rural development, agrarian reforms, establishment of cottage and small-scale industries, and the organisation of the rural worker on trade union lines.

There was a fatal fascination in the under-developed countries for capital-intensive industries, Mr. Tata said. Such a policy did not improve employment prospects. "Atomic energy, airlines, steel plants, and oil refineries are good projects for achieving economic self-sufficiency, but rank very low in employment potential. They are capital consuming and have a tendency to dry up the limited available resources." Investment in rural development, on the other hand, has the advantage of maximising employment opportunities at the cost of the minimum possible capital. Rural development, among other things, involves accelerated development of small-scale industry, mechanised cultivation wherever possible and intensive cultivation. Mr. Tata said that all these needed intensive study and initiative on the part of the I.L.O.

Speaking on the trade union situation in Asia, Mr. Tata stressed the anti-national character of some of the trade unions in this region and the ulterior motive behind some of the movements. "This situation is in conflict with the healthy trade union movement which came to us as a legacy from the U.K.". He said that a study to find out the chronic ailments that hamper trade union movement in Asia is a compelling necessity. The I.L.O. can render great service by exposing the unhealthy intrusion of politics into trade union affairs. "Politics and the trade union movement have a close affinity. But premature contamination of a nascent trade union movement, through political bias of a non-national variety, is a dangerous feature which will permanently cripple the growth of healthy trade union movement." Mr. Tata said that as an employer, he believed in a strong and healthy trade union as a condition for proper industrial relations The principles of collective bargaining imply that the worker must have the backing of a strong and reliable trade union, and through such backing alone can he take his rightful place, in partnership with the employer, in the management of industries.

Compulsory Reinsurance in Burma

The Burmese Parliament has recently passed a Bill which provides for a compulsory reinsurance cession to the Union Insurance Board of the Burmese Government of 30 percent of all policies written in that country. The date from which such cessions will have to be made will be announced officially later, but the Union Insurance Board has already indicated that it will be from 1st October this year. The aims of the Bill are, firstly, to give an additional income to the Board; and secondly, to conserve foreign exchange. As about 80 foreign companies are operating in Burma, in addition to three native companies, the foreign exchange aspect is important. Burma has followed in the footsteps of India and Ceylon. The purpose in all cases is to keep at home as much of the premium income as possible, to check the alleged outgo of foreign exchange, and to provide an income for the reinsurance companies in the public sector. All the laws suffer from the same defect, in that they are based primarily on a quota share cession. It would have been better if the Governments had stipulated that only the surplus emanating from the underwriting of the companies should be reinsured wholly or in part with the reinsurance companies in the public or private sectors. The nationalistic tendencies do not always contribute to the countries' interests. Sound insurance and underwriting demand that the risks be spread and good reciprocity obtained. The income of the country as a whole may suffer because the direct writing companies, having less to give to reinsurance companies all over the world, will naturally receive less. Apart from the fact that they have to part with a portion of the premium income which they could easily have absorbed, their revenue accounts are likely to be further affected by the possibility that they will be obtaining less reciprocity. It remains to be seen whether, in the long run, compulsory acquisitions are really good. The public sector reinsurance companies will necessarily have to find a reinsurance market of their own later on; the overall loss of foreign exchange then might be of the same order, or even more.

HUNCH OR HORSE SENSE?

Call it what you like,
but we seem to have had it!

Today, the switch is to aluminium for electricity, a switch we pressed into the nation's service years ago, saving the country something like Rs. 6 crores in foreign exchange and continuing to save nearly Rs. 1.5 crores annually.

ALIND is geared for an annual production of: E.C. grade rod ... 10,000 tons
ACSR & All-Aluminium Conductors 13,000 tons
Covered Aluminium Conductors ... 15 million core yards
Conductor Accessories & Tools

RECONSTRUCTION OF CALCUTTA

BY far the most important announcement that emerged out of what is still humorously called the "debate" on the Bengal Budget, was that made by the Honourable Mr. Baker in reference to the opening out of the congested areas in the heart of the city, and the gradual construction of fifteen miles of new roads through districts that now form a mass of concentrated squalor and death-dealing abomination which would be hard to parallel in any other civilised metropolis in the world. We now learn on authority, what we have long been waiting to hear, that the comprehensive plan of the contemplated improvements has been prepared, and that the financial scheme for carrying them gradually into effect has been thrashed out and approved by the Government. Lord Curzon believes in taking the public into his confidence on matters of this kind, so we are not likely to have to wait much longer before everything connected with the scheme is brought into the light of day. The initial cost will be heavy, but it is to be spread over a period of eight or nine years, and one-fifth of the amount is to be borne by the Imperial Government. We are not so sure, as Mr. Baker seems to be, that the cost will ultimately prove to be a heavy burden on Calcutta, and while the conditions here do not run on all fours with those in the European cities, where costly improvements have largely recouped themselves by the sales of sites along the lines of the New Streets, still we shall be very much surprised if a considerable part of the outlay is not recovered in very much the same way. And if due care is taken not to pay too exorbitant prices for the acquisition of condemned properties, and if jobbery can be reduced to a minimum, if it cannot be altogether exterminated, the cost of improving Calcutta need not be such a very heavy burden after all. But whatever may be the cost, it will be far less costly than the heavy annual tribute which is being exacted now from trade and commerce and health and life by leaving things alone as they are. The one thing needful is that a beginning should be made, and of that we are now assured.

A Ditcher's Diary

AM I GREEN WITH ENVY THAT THE FIRST MAN TO orbit the earth and then come back alive was Comrade Gagarin and not me? I do not think so, for although I would perhaps have enjoyed the trip, I would certainly not have been able to land and immediately pay tribute to my Government and Party. I am quite sure that my first word would have been "Gosh!" or something equally human and spontaneous. I know very little about the scientific aspects of the journey into space: and even experts seem rather puzzled by some of the details released so far; but it is the mind that Major Gagarin carried on his trip that frightens me. He was never lonely, he says; nor nervous. He knew, he says, that his Party and Government would do everything possible to help him if anything went wrong. What, I ask you, could the Party have done if something had happened except, perhaps, decree a full State funeral? Some of the statements were obviously drafted by whatever is the communist equivalent of Madison Avenue—pure public relations—but my few encounters with the communist mind make me wonder whether Major Gagarin might not in fact have felt like that. The Party is a mystique with the true communist: and it is capable of all the miracles that believing men in the Middle Ages credited their gods with. It is not my intention to belittle the magnificent achievements of Russian science: and I feel almost sorry for President Kennedy. But I simply cannot see the connection between space travel and communism, except perhaps this, that only a communist State can allocate funds for fancy projects without fear of public opinion. Three years ago, when I was being taken round Moscow's proud metro stations, having already had a glimpse of the poor housing in the suburbs, I wondered what priorities the Kremlin worked on. In a capitalist State there is waste enough; and inequalities there can be cruel. But that a government which cannot yet give its people the minor luxuries that the West has been used to for decades should spend uncounted resources on space travel fills me with despair.

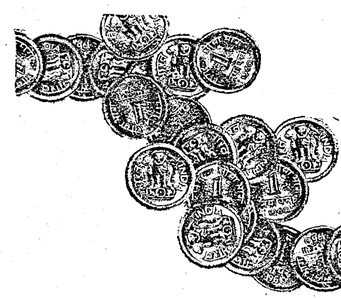
THE *Economist's* ADVICE TO BRITAIN'S CHANCELLOR of the Exchequer, Mr. Selwyn Lloyd, to frame his Budget so as to encourage the earning of income and discourage the spending of it, seems for once to have been heeded, although, of course, the provisions must have been drawn up before the advice was given. At last, a Chancellor appears to have done not only what the situation demands, but also to have found the courage for a little exercise of his own imagination as well. It seems Mr. Lloyd may be qualifying for inclusion among that select company of finance ministers who have tumbled to the fact that Budgets have economic as well as political implications, and that the use of a little intelligence can enable a country to shoulder a higher burden of taxation without suffering a disproportionate loss of incentive. For instance, I learned the other day to my surprise that Britain is not the world's most highly taxed country; West Germany is. But in Britain the impact on both the individual and the economy is felt more severely, so economic growth inevitably suffers. Perhaps Mr. Lloyd will go down in history as the man who put Britain back on the road to rapidly increasing productivity. If so, then he deserves a statue, and I suspect the first group to contribute will be the junior surtax payers. It is an interesting comment on the times when such an obviously necessary concession—which after all does not even begin to remove the injustice which has been done to this economically important group of taxpayers in the 30 years or so that the level of surtax liability has remained at £2,000—should have taken so long to materialise. The point is that rising prices, attempts to offset which only drive the higher-salary claimer deeper into the tax net, have been constantly eroding the will to work for more than a generation. A friend wrote to me the other day to say that he had read that in Britain a gross income in 1938 of £5,000 had the same purchasing power after tax as does a present income of over £50,000. He asked me whether such calculations exist for India. They do not, but I would not mind making a few guesses.

IT HAS HAPPENED TO ME SOMETIMES TO MEET people who tell me that I should take Mr. Jai Prakash Narain seriously; that, after all, he was once believed to be the answer to the question: After Nehru, who? Well, Mr. Narain does not make it easy for anyone to take him seriously: and his latest thesis leaves me gasping. It is not for me to judge the extent of his "good work" in the Bhoodan movement on which, suffice it to say, I have had conflicting reports. But if Mr. Narain's ideas on reconstruction of the Indian polity receive any kind of popular support (of which, happily, there is not the slightest possibility) I shudder to think what would happen to this country. Mr. Narain, I am told, was once a considerable intellectual, a Marxist to boot. Does he now suffer from what Koestler called "fatigue of the synapses"? If his scheme had any kind of coherence at all, I would have said he might still be working for a totalitarian society. For, surely, he knows that in communist countries the electorate is given no choice but is confronted with a single candidate? Mr. Narain will protest that his single candidate will be chosen by the voters themselves. Where then is the need for an election? This scatter-brained thesis is not meant for some eccentric experiment in some obscure Bihar village. New Delhi, at the Central level and not at the municipal, must also have what he calls Panchayati Raj. It may be possible to discuss *Hamlet* without the Prince of Denmark; I could discuss the gravedigger for hours; but anybody who tries to analyse politics without taking into account the element of power simply does not know what he is talking about. In Mr. Narain's scheme of things—to call it Utopian would be an insult to Sir Thomas More—there will be no power, no privileges—only duties. Mine is to remind Mr. Narain that he should either re-enter politics or not talk about it. Or is there some shrewd calculation behind it all, some method in his madness? In the Indian masses there is, still, great reverence for the ascetic, for the man who says he does not want power. Mr. Narain's calculations are, I hope, wholly wrong.

HAVING READ SO MUCH ABOUT IT IN THE NEWSpapers—especially when Mr. Humayun Kabir made those uncomplimentary remarks about a certain Italian artist's new technique of "painting" with a penknife—I paid a visit the other evening to the International Contemporary Art Exhibition, 1961, which is at present being held at the Academy of Fine Arts' building on Cathedral Road. It is a pity that such a good exhibition had to coincide with the hottest weather of the year, because I found it impossible to spend long enough in the gallery to do complete justice to the 200 or so exhibits. Nevertheless, I found them impressive enough. It would perhaps not be fair to compare the works of one participating country with another since not all have been able to send their best, but what struck me most was that the techniques and styles of modern art in the West have been deeply influencing, for better or worse, artists in all other parts of the world. I am a trifle old-fashioned in my tastes where art is concerned, and I am unable to appreciate so readily the aesthetic value of those bold experiments in modern art which appear to see reality only in the abstract. I often wonder whether modern art exponents are not playing a gigantic confidence trick on the general public, having assessed correctly that the popular approach to art is a compound of curiosity, snobbery and profound ignorance of the principles involved. One cannot blame them, of course; the best way of defeating the tyranny of the market is to tyrannise it yourself.

NOT THE LEAST OF "JAGGI" LALL'S QUALITIES WAS the impression he always gave of permanence and durability. That is why if anybody had told me a week ago that within a few days I would be writing about his death, I would simply have disbelieved them. This is an uncertain world, but to imagine Jaggi being struck down calls for much the same mental effort as to visualise the sudden disappearance one fine morning of I.C.I. House from its customary position on the Chowringhee skyline. I have seldom known a man who commanded more respect and genuine affection, not only from his own staff, but from what was probably a larger circle of friends and acquaintances than could be claimed by any other personality in Calcutta. Whether seated behind the huge desk in his office on the third floor, or towering over the heads at a cocktail party, or simply chattering over a quiet lunch or dinner, he was always ready with sound ideas on any conceivable subject; his faith in the future was something which I, as a professional journalist and therefore by nature somewhat cynical and pessimistic, invariably found most comforting. But that was Jaggi, always friendly, seldom preoccupied—though perhaps a little more so of late—and ever ready with a confidently optimistic opinion when asked for one. I.C.I. will miss him no more than will all those in Calcutta who had come to regard him as an institution; at 47 he was young as successes go in this city, and could reasonably have been expected to attain even greater distinction and popularity during many more years. His staff will no doubt remember him as a just and decisive employer, the general public as the man who attained the distinction of becoming the first Indian chairman of I.C.I. (India), and the business community as one of its most promising young men. But I prefer —and I suspect many others will also—to recall simply his human qualities of warmth, humour and sincerity. The sympathies of us all are due to Mrs. Lall, who to a considerable extent shares the affection and esteem in which her husband was held, and to his two children, in this tragic and untimely bereavement.

THE DITCHER



US* MAKE COLD CASH...

India today is caught up in the feverish activity of industrial advancement. Projects are planned ... dams are being built ... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines ... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary — absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

UNITED BANK OF INDIA LIMITED

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1960.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1960 and Profit & Loss Account for the year ended 31st December, 1960 together with the Auditors' Report thereon.

The Profit for the year after making provision for taxation and including the balance of Rs. 1,81,564.82 brought forward from the previous year's account amounts to	Rs.	16,44,685.45
Out of this amount the following appropriations have been made :		
To Reserve Fund under Section 17 of the Banking Companies Act ...	Rs.	2,93,000.00
Leaving an available balance of	Rs.	13,51,685.45
Out of the above the Directors recommend the payment of a Dividend to the shareholders @ 4.30 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing	Rs	11,44,000.00
To be carried forward to next year's account	Rs.	2,07,685.45

The Bank's business during the year made satisfactory progress.

During the year under report two Branches were opened in the city of Calcutta at Entally and Paikpara and one Branch was opened in the State of Behar at Barauni.

Sri J. M. Dutt, Sri N. C. Datta, Dr. S. B. Dutt and Nawab Sir K. G. M. Faroqui Kt., retire under Article 117 of the Articles of Association of the Company read with Section 256 of the Companies Act 1956 and being eligible, offer themselves for re-election.

During the year (at the invitation of the Board of Directors) Sri S. N. Ray, who recently retired as Chief Secretary, Government of West Bengal, joined the Board. Under provisions of Section 260 of the Companies Act 1956 and Article 123 of the Articles of Association of the Company, he will hold office up to the date of the Annual General Meeting and being eligible, offers himself for election.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1960 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the bank which have come to our notice, have been within the powers of the bank ;

(c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(d) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 4th March, 1961

RAY & RAY,
Chartered Accountants.

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1960.

HISTORY AND DEVELOPMENT OF BUSINESS

The Company was incorporated in India on October 10, 1922, as a private limited company under the name, The Goodyear Tyre & Rubber Co. (India) Limited and in 1947, the Company's name was changed to The Goodyear Tyre & Rubber Co. of India Limited. By virtue of the operation of Section 24 of the Companies Act, 1956, the word "Private" became part of the Company's name which from April 1, 1956 was The Goodyear Tyre & Rubber Co. of India Private Limited.

The Company was converted into a Public Company on March 24, 1961 and the name was changed to Goodyear India Limited.

The Company was formed, *inter alia*, with the object of dealing in tyres and other products and also to take over the business then carried on in Ceylon in the name of The Goodyear Tyre & Rubber Export Company.

In 1936 the Company entered into a Manufacturing Agreement with a resident manufacturer under which Goodyear tyres, tubes and allied products were produced in India to Goodyear specifications and using certain equipment supplied by Goodyear.

In 1951 the Company entered into a Manufacturing and Technical Agreement with a second resident manufacturer under which Goodyear industrial rubber products were produced in India to Goodyear specifications.

The Company also imports tyres, belting and other products from associate overseas manufacturers.

The Company is a subsidiary of The Goodyear Tire & Rubber Company of Akron, Ohio, U.S.A.

LAND, PREMISES AND PLANT

The Company is finalising the purchase of approximately seventy acres of land in the District of Gurgaon, Punjab, to erect a tyre plant. The site is ideally situated approximately 21 miles south of New Delhi on the main Delhi-Agra road. The plant is presently near completion on this site.

MANAGEMENT AND STAFF

The non-resident Directors are Executives of The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., and have long been connected with the Company.

The Managing Director and the two other full time working Directors in India have many years of service with the Company and its overseas associate Companies. Mr. R. E. O. Carey, the present Managing Director of the Company, has been associated with the Company for more than 25 years and is fully conversant with business conditions in India.

Subject to the control and direction of the Company's Board of Directors the Managing Director and the full time working Directors are responsible for the day to day administration of the Company. The Company has trained competent personnel adequate for its requirements. The senior Indian staff have been given specialized training in the U.S.A. and England at various times in the past.

The Company has its Registered Office in Calcutta with Branches at Bombay, Calcutta, Delhi, Lucknow and Madras and Depots at Ahmedabad, Bangalore, Ernakulam, Gauhati, Hyderabad and Jabalpur.

MAIN OBJECTS

The main objects of the Company, as set out in its Memorandum of Association, are as follows :—

To carry on all or any of the business of merchants, shippers, traders, commission agents, importers and exporters, and to manufacture, buy, sell and deal in property and goods of all kinds and to carry on all or any other business or business operations or operation usually carried on or performed by companies or persons carrying on the business aforesaid or any of them, or which may seem capable of being conveniently carried on in connection with any of the Company's business or operations, or to be conducive to its interests, or to enhance the value of or facilitate the realisation of or render profitable any of the Company's business, property or rights.

To carry on any other business whether manufacturing, trading, financial, mining, agricultural or pastoral, commercial or otherwise, which may be capable of being conveniently carried on in connection with the above or may be calculated to enhance directly or indirectly, the value of or render more profitable any property or business of the Company, or assist or conduce to the economical or profitable carrying on of such business.

OBJECTS OF THE ISSUE

The Company has embarked on a major programme of erecting and equipping an entirely new factory in India so as to keep pace with the general industrial development of the country and meet the increasing demand for tyres and other rubber products.

The proceeds of this issue will be used firstly to purchase machinery and equipment abroad, and secondly to provide additional working capital. The Government of India has been advised of the Company's plans and have issued such licences for which applications have been made.

FINANCIAL INFORMATION

Auditor's Report

The Directors,
The Goodyear Tyre & Rubber Co. of India Private Ltd.
209, Lower Circular Road,
Calcutta.

Allahabad Bank Buildings,
Apollo Street,
BOMBAY-1.

Dear Sirs,

We have examined the books and accounts of The Goodyear Tyre & Rubber Co. of India Private Ltd. as kept in Calcutta which have been audited by Messrs. Price Waterhouse & Co. for the five years ended 31st December, 1960 and report that the profits of the Company are as set out below. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for taxation and after making such regroupings and adjustments, subject to the notes given below, as are, in our opinion, appropriate.

THE GOODYEAR TYRE & RUBBER CO. OF INDIA PRIVATE LTD.

	Year ended 31st December, 1956 Rs.	Year ended 31st December, 1957 Rs.	Year ended 31st December, 1958 Rs.	Year ended 31st December, 1959 Rs.	Year ended 31st December, 1960 Rs.

Yours faithfully,
A. F. FERGUSON & CO.

Bombay, 20th March, 1961.

PROFITS AND PROSPECTS

There is good demand for the Company's products which is likely to increase as its manufacturing facilities are brought to bear and as the general market expands in keeping with improved standards of living and communications. It is anticipated that the future business will produce a reasonable return on the capital employed.

On December 30, 1960, an Agreement was entered into between the Company and Export-Import Bank of Washington, D.C., U.S.A. (hereinafter referred to as the "Eximbank") whereby the Eximbank agreed to establish in favour of the Company credit facilities not exceeding in the aggregate Rs. 2.25 crores with a view to making advances to the Company from time to time within the aforesaid limit to assist the Company in meeting rupee expenditure for the acquisition or construction in India of land and buildings and purchase in this country of machinery of Indian origin and to provide working capital in connection with the establishment and operation of a plant for manufacture of rubber products in India.

The loan actually drawn upon by the Company in terms of the Agreement is required to be repaid in eighteen equal half-yearly instalments commencing from February 15, 1963, and interest at the rate of six per cent per annum on the amount of the loan outstanding from time to time is expressed to be payable by the Company on February 15 and August 15, in each year.

The Agreement imposes certain conditions relating to dividends which could call for an acceleration of the repayment of the principal to be applied against the next instalment(s) of the Eximbank loan if the aggregate of dividends declared or paid from January 12, 1960, to the date of such declaration or payment exceeds 60% of the net earnings of the Company during the same period.

It is also one of the terms of the Loan Agreement that no dividend shall be declared by the Company if payment of interest on the loan outstanding at any time or any instalment thereof remains in arrears.

It is anticipated that the Company will be in a position to meet out of its internal resources its obligations under the Loan Agreement in relation to the payment of interest and instalments of the principal.

STATUTORY AND GENERAL INFORMATION

Minimum Subscription

The minimum amount which, in the opinion of the Directors, is required to be provided is Rs. 17,00,000 made up as follows :

(i) Purchase price of property	Nil

UNDERWRITING

The shares now intended to be issued have not been underwritten but the Company will pay brokerage as specified herein.

CONTRACTS

The following contracts not being contracts in the ordinary course of business, which are or may be material, have been entered into by the Company during the two years preceding the date hereof and may be inspected at the Registered Office of the Company between 10-00 a.m. and 12-00 noon and between 2-30 p.m. and 4-30 p.m. on any working day (Except Saturday) for a period of 14 days from the date of publication of this Prospectus or Until the closing of the Subscription List, whichever is earlier. Copies of such contracts have been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

(i) Agreement dated July 1, 1960, with R. E. O. Carey, Managing Director, whose monthly remuneration is Rs. 7,619.

(ii) Agreement dated January 25, 1960, with Achyut Purushotam Kanvinde and Shaukat Rai as Architects in connection with erection of buildings for the new factory project at Ballabgarh. The Architects fees are calculated as a percent of construction costs, subject to a maximum.

(iii) Agreement dated March 16, 1960, with Priestley Dugal & Co. (India) Private Limiter for fabrication and erection of structural steel of factory building at Ballabgarh. The amount the company will pay to the contractors for said works of fabricating and erection of the steel work shall be at the rate of Rs. 1,175 per long ton, subject to conditions and terms of the contract.

(iv) Agreement dated April 26, 1960, with Uttam Singh Dugal & Company Private Limited, as contractors for certain civil engineering work including the furnishing and delivering of all material and performing all the construction work as described in the specification in reference to the building to be constructed. Tendered amount for the work is at a stipulated fee subject to certain adjustments specified in the agreement.

(v) Agreement dated February 8, 1961, with Gannon Dunkerley & Company Limited for the erection of process piping and machinery in connection with the Factory at Ballabgarh. Payment for this work is based on a schedule of rates for personnel under supervisory, administrative and labour categories, as well as other fees for equipment hire.

(vi) Agreement dated December 30, 1960, with the Export-Import Bank of Washington, D.C., U.S.A., for credit facilities to the extent of Rs. 2,25,00,000.

(vii) Agreement dated December 30, 1960, with The Goodyear Tire & Rubber Company, Akron, Ohio U.S.A., regarding allotment of 16,00,000 Equity Shares at Rs. 10 each at par partly in consideration of machinery and equipment to be supplied by The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., to the Company and partly in consideration of cash.

(viii) Agreement dated December 3, 1960, with the Central Railway for the construction of a siding for serving the Company's factory premises at Ballabgarh.

(ix) Agreement (by exchange of letters dated January 20, 1960 and March 20, 1961), with Andrew Yule & Co., Ltd., appointing them to be Registrars and share transfer agents of the Company for a period of five years with effect from April 1, 1961, at a stipulated fee.

(x) Approved draft Agreement in respect of 70.97 acres of land at Ballabgarh from the Governor of the State of Punjab in favour of the Company. This agreement relates to the land acquired by the Government of Punjab under the Land Acquisition Act, 1894, at the instance of the Company, the Company having agreed to pay the compensation which may be approved by Government in respect of the land so acquired.

(xi) Purchase Order dated October 27, 1960 with W. H. Brady & Co., Ltd. to furnish fire protection system at a stipulated fee.

(xii) Agreement dated March 8, 1961, with Bhagwan Singh & Company Private Limited for the installation of electrical equipment at a stipulated fee.

In addition the Company will enter into an Agreement with the Goodyear Tire & Rubber Company, Akron, Ohio U.S.A., for technical collaboration at a stipulated fee calculated on net sales.

REDEEMABLE PREFERENCE SHARES

The Company has not issued and does not at present intend to issue any Redeemable Preference Shares.

OTHER PREVIOUS ISSUES

On December 30, 1960, an Agreement was entered into between The Goodyear Tire & Rubber Company of Akron, Ohio, U.S.A., of the one part and the Company of the other part whereby it was agreed that a total of 16,00,000 Equity Shares of Rs. 10 each in the capital of the Company would be allotted to The Goodyear Tire & Rubber Company at par and credited as fully paid up and that the consideration for such allotment should be (a) the transfer to the Company by The Goodyear Tire & Rubber Company of such items of machinery and equipment comprised in the Agreement as should have been or the documents of title to which should have been delivered to the Company on or before January 31, 1961, and (b) the payment by The Goodyear Tire & Rubber Company in cash of such sum as taken with the value of the aforesaid items of machinery and equipment should be equal to Rs. 1,60,00,000 such sum to be deposited by The Goodyear Tire & Rubber Company on January 31, 1961, in U.S dollars in an account to be opened in the name of the Company with a Bank in the U.S.A. approved by the Company.

In pursuance of the aforesaid Agreement documents of title in respect of the machinery and equipment comprised in the aforesaid Agreement to the value of Rs. 1,20,26,264 were delivered to the Company's agents in the U.S.A. before January 31, 1961, and on that date The Goodyear Tire & Rubber Company deposited with the Agency of The Chartered Bank in New York, 8,33,942.52 U.S. dollars (Rs. 39,73,736 calculated at the rate of Rs. 4.7650 to one U.S. dollar) to the credit of an account opened in the name of the Company. The Company allotted 16,00,000 Equity Shares of Rs. 10 each in the capital of the Company to The Goodyear Tire & Rubber Company at par in terms of the aforesaid Agreement, the final allotment having been completed on February 3, 1961.

Subject as aforesaid no shares or debentures have been issued or agreed to be issued within the period of two years preceding the date hereof either for cash or for consideration other than cash. No amount has been paid by the Company by way of premium on any shares within the two years preceding the date hereof.

COMMISSIONS

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

PAYMENT TO PROMOTER

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

OPTION TO SUBSCRIBE

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in or debentures of the Company.

DIRECTORS

The Articles of Association of the Company provide that :

The number of Directors unless otherwise determined by Special Resolution shall be not less than three nor more than nine.

The Board may appoint an Alternate Director to act for a Director during his absence of not less than three months from the State in which Board meetings are usually held. An Alternate Director so appointed shall *ipso facto* vacate office when the absent Director returns to the State.

The qualification of a Director, other than an Alternate Director is the holding of One Equity Share in the capital of the Company.

GOODYEAR INDIA LIMITED—*Cont'd.*

Directors shall be entitled to such remuneration as Directors as may from time to time be determined by the Company in general meeting. All other remuneration, if any, payable by the Company to each Director, whether in respect of his services as a Managing Director or a Director in the whole or part time employment of the Company shall be determined in accordance with and subject to the provisions of these Articles and of the Companies Act, 1956. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in India in consequence of their attending at Board and Committee meetings or otherwise incurred in the execution of their duties as Directors.

If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a Committee of the Board then, subject to Sections 198, 309 and 310 of the Companies Act, 1956, the Board may remunerate the Director so doing and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

The control of the Company is vested in the Board who, subject to the provisions of the Companies Act, 1956, may exercise any power or do any act or thing which under the Memorandum and Articles of Association of the Company are not required to be exercised or done by the Company in General Meeting.

Subject to the provisions of the Companies Act, 1956, the Board may appoint one or more Directors to be Managing Director or Managing Directors of the Company, either for a fixed term or without limitation as to term of office. The Board may confer on a Managing Director such of the powers vested in the Board as it may think fit, for such time, for such purpose, upon such conditions and with such restrictions as it thinks fit. A Managing Director shall receive such remuneration as may be sanctioned by the Company in general meeting and approved by the Central Government.

INTEREST OF DIRECTORS

Mr. R. E. O. Carey is the Managing Director of the Company and receives remuneration for his services as such.

Mr. R. E. Hostetler and Mr. R. T. Budd are wholetime Directors and receive remuneration accordingly.

Messrs. E. J. Thomas, R. DeYoung, H. L. Hyde and F. T. Magennis are Shareholders and Executive Directors of The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., the principal Shareholder of this Company and may be deemed to be interested to that extent.

CAPITALIZATION OF RESERVES AND PROFITS.

Nil.

INDEMNITY

The Articles of Association of the Company provide that every Director, Manager, Secretary or officer of the Company or any person (whether an officer of the Company or not) employed by the Company and any person appointed Auditor shall be indemnified out of the funds of the Company against all liability incurred by them in such capacity in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted, or in connection with any application under Section 633 of the Companies Act, 1956, in which relief is granted to him by the Court.

MANAGEMENT

The management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

BORROWING POWERS

The Company's Articles of Association provide that the Board may from time to time, subject to Sections 292 and 370 of the Companies Act, 1956, raise or borrow, from the Directors or elsewhere, and secure the payment of, any sum or sums of money for the purposes of the Company; but the Board shall not without the sanction of the Company in general meeting borrow any sum which, with monies already borrowed by the Company (apart from temporary loans from the Company's bankers in the ordinary course of business) will exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves.

VOTING RIGHTS

The Company's Articles of Association provide that every member shall have one vote either personally or by proxy for every Equity Share held by him. No member shall be entitled to exercise any voting rights either personally or by proxy at any meeting of the Company in respect of any shares on which any calls or other sums payable by him have not been paid or in regard to which the Company has exercised any right of lien. The voting rights are otherwise in conformity with the provisions of Section 87 of the Companies Act, 1956. The present share capital of the Company is not divided into different classes of shares.

RESTRICTIONS ON THE RIGHT TO TRANSFER

The Company's Articles of Association provide that subject to Section 111 of the Companies Act, 1956, the Board may without assigning any reason refuse to register any transfer of a share.

CONSENTS

Messrs. A. F. Ferguson & Co., the Auditors of the Company, have given and have not withdrawn their written consent to act as the Auditors of the Company with a copy of their report included herein in the form and context in which it is included. A copy of such consent together with a statement of adjustments made by that firm in arriving at the profits shown in the report and giving the reasons therefor has been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

The following consents have also been obtained and copies thereof have been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration:

Messrs. Orr, Dignam & Co., have given and have not withdrawn their written consent to act as the Solicitors of the Company and to the issue of this Prospectus with their name included therein as the Solicitors of the Company.

The Chartered Bank have given and have not withdrawn their written consent to act as the Bankers of the Company and to the issue of this Prospectus with their name included therein as the Bankers of the Company.

Messrs. Andrew Yule & Co., Ltd. have given and have not withdrawn their written consent to act as the Registrars of the Company and to the issue of this Prospectus with their name included therein as the Registrars of the Company.

Messrs. Place, Siddons & Gough (Private) Ltd., Calcutta have given and have not withdrawn their written consent to act as the Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Lewis & Jones Bombay, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Batlivala and Karani, Bombay, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Harbans Singh Mehta & Co., New Delhi, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs Paterson & Co., Madras, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

DOCUMENTS

A print of the Company's Memorandum and Articles of Association, copies of the material contracts referred to above, the order of the Central Government giving consent to this issue (being No. R 429-CCI/58 dated November 18, 1960), the licence of the Central Government for this industrial undertaking (being No. L/30(1)/N-9/59 dated September 21, 1959), the Report of the Auditors with copies of all Balance Sheets and Profit and Loss Accounts on which such Report is based, may be inspected at the Registered Office of the Company between 10-00 a.m. and 12-00 noon and between 2-30 p.m. and 4-30 p.m. on any working day (except Saturday) for a period of 14 days from the date of publication of this Prospectus or until the closing of the subscription list, whichever is earlier.

APPLICATION AND ALLOTMENTS

Applications for shares, which must be for 50 shares or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of The Chartered Bank in India; or to the Allahabad Bank Limited, Ahmedabad branch only

The Chartered Bank maintain branches at the following places in India:

At Calcutta ..	(a) 4, Netaji Subhas Road, Calcutta-1.
	(b) 31, Chowringhee Road, Calcutta-16.

HINDUSTAN LEVER LIMITED

MARKETING IN HINDUSTAN LEVER

The following is the text of the speech delivered by Mr. P. L. Tandon, Vice-Chairman of Hindustan Lever Limited at the Annual General Meeting of the Company held in Bombay on 18th April, 1961:

It gives me great pleasure to welcome you to this Annual General Meeting of the Company.

I shall take as read the Report and Accounts for the year 1960 which have been with you for some time. I shall talk to you today about our own Marketing, how we do it and what is our thinking behind it.

We are essentially a marketing company. What we produce we have to persuade the consumers to buy. There is no captive market for us. Successful marketing is our life-blood, and we can say with some satisfaction that our marketing is lively and effective. Marketing to us is a total operation more than mere selling. It has a wide band of activity, from product development to consumer satisfaction.

The Product

We only go to market when we have a product that is right for the market and is right in itself. This begins with a process of careful discussions among our men and women in marketing, marketing research, technical research and development. The marketing people know their consumer; marketing research makes sure that this is so; the technical research and development people have to develop the product; the advertising people assist in moulding its personality, they give it name, packaging and appeal. There will be many trials and tests with the product; probes into the market to ascertain the size and shape of the demand; till, finally, the product is ready for market testing. Let me begin with marketing research, which is the first link in our marketing chain.

Marketing Research

Marketing research tries to find out what the consumers, the men and women who constitute the market, think and want. It keeps us in touch with the consumers' minds and to study their changing likes and dislikes and habits.

Marketing research operates in a variety of fields. There is conventional research, known as quantitative research, where, with the aid of questionnaires, we find out what products of interest to us people use; how much they buy and how often; who in the family use them; what the qualities are that they look for and what is their opinion of the brands they buy. This type of research gives us excellent surface bearings, but sometimes, what people say is not always why they do it. Quite unconsciously there can be a difference between people's spoken and unspoken attitudes. This is an area where the newly developed techniques of motivation research can help to bring us closer to people's thinking.

Motivation research, instead of relying upon direct questioning, goes deeper into what motivates people's actions and beliefs, especially in areas where there is a good deal of emotional content. That is particularly so with products where the social connotation is equally as important as personal satisfaction. When it comes to finding out women's views on beauty and adornment, direct questions are unlikely to bring out the real answers. But get them together in a group and the discussion will be revealing to the trained ear of our psychologist, who will pick up nuances that are otherwise likely to be missed.

Our marketing research also operates in a variety of other fields. It conducts rural surveys to find out about habits of people in the countryside and the changes that are taking place. It operates consumer panels in towns where housewives are visited regularly for budgetary enquiries. It also conducts surveys of more general, sociological interest to study the growth that is characteristic of our society today.

All this may sound an imposition on the housewife, but it is not. She, in fact, enjoys greatly to being called upon by our market research girls and discussing domestic matters with them. These young ladies are well educated, mostly graduates, from good homes, and they are carefully trained by their senior managers, also women. They are therefore very acceptable to the housewives; in fact, their problem often is how to get away from an interview.

We firmly believe in marketing research and we use it extensively. Altogether, we interviewed over 1 lakh people in 1960. We consider it cheaper than making mistakes. We go a stage further and test-market the new product when it is ready for marketing but before we feel it can be launched on a national scale. Both marketing research and market-testing help us by bringing forth ideas for improving the products.

Test-Marketing

In test-marketing we select one or more towns or an area and try out the product under live conditions. Test markets are selected for their representativeness, either of the country or the problem. An area or town may be doing well in the sale of a type of product but not so well for our own brand. When we bring out an improved product this might be just the area to find out how far we can increase our share of the market. If we succeed here we are sure to do well elsewhere. Test-marketing can also help us to try out an advertising approach or a sales promotion scheme on a pilot scale at a small cost.

Yet another form of test-marketing is sampling, where our girls will leave samples of the product and return after a while to ask what the family thought of it in use; how does it compare with other brands they use; and would they buy it when it is available. The opinions we receive can be very helpful, particularly when they lead to a modification of the product.

During test-marketing our marketing research can also help. It may come in with enquiries before and after the launch of the product to study its impact.

At the end of all this, I should like to emphasize, we are using our judgment and the whole problem is to create men of adequate judgment. These are tools and aids which, well employed, assist their judgment and decisions. Hunches are good if they are more often right than wrong; and backed by information they are more likely to be right.

Price

While the product is being thus tested, our accounts will be busy discussing with marketing people the likely price and profit margins. Accounting is so much part of our marketing thinking, but our accounting approach here is a little different from the conventional one. We do not go in for a detailed and elaborate allocation of overhead costs in an arbitrary manner, but rely instead upon each product group taking its share of over heads in block.

There are two points about price which I should mention here. The first is price and quality. The widespread impression that India is a price market is no longer wholly true, because there are growing sections of population which demand quality. This is becoming more important as the country's economy and living standards improve. Therefore, to cut quality or packaging in a consumer product and to think only of cheapness would prove a false economy, at least in sections of the market that demand something better. Secondly, advertising and sales promotion are necessary parts of the product price to achieve good demand which, in turn, will lead to high volume of production and a consequent reduction in price. This point, I feel, deserves further attention and I will return to it.

After the product has been successfully developed and tested, both in our research and development laboratories and in the homes of potential consumers, we are now ready to launch it. The first stage is distribution, backed by a selling effort.

Distribution

Our distribution goes deep into the country. Having adequately covered the urban areas, our promotion efforts are constantly directed at taking our products into more and more small towns and villages. In 1954, our distribution covered 1,400 markets with a total population of 38 million. Today, we cover over 6,500 markets with a population of over 91 million, and beyond that is the still wider distribution that is done by the enterprising traders in small villages that we do not reach ourselves. It would be fair to say that there would be very few villages in India where Sunlight Soap does not reach. Interestingly enough, our sales increases in the smaller markets, especially in the rural areas, have been most gratifying. In the last five years the average annual growth of some of our popular products in the rural areas has been more than four times that of the all-India expansion. This is but natural in a growing economy in which there is vastly more room for improvement in the villages than in the towns. Wide distribution, too, helps to keep prices low by increasing sales volume by creating competition among retailers.

And now a few words about our distribution system in general, and how we reach the villages.

The central point of our distribution system is our chain of wholesalers throughout the country. From our five factories, goods are despatched to 60 stock depots which are the primary distribution points scattered over the country. From here they go to our wholesalers. In each one of the 6,500 markets we shall cover in 1961, we have one or more wholesalers for each group of our products.

Our wholesalers are local people who will always know local conditions better than we can. Being neighbours, their contacts with the retailers are close. As our representatives in the towns and as men of substance, their importance as our associates is good for their business and for us. They buy the goods from us outright for cash, warehouse them, distribute them with almost clock-work regularity, and extend credit to the retailers. All this saves us working capital. Belonging to the community, they form an effective and intimate link between us and the thousands of retailers who stock our products, and they do the whole operation smoothly and profitably for themselves and economically for us. They are loyal to us and rarely leave; we, in turn, treat them with respect and keep their interests always before us. Most of our vanaspati and soap wholesalers who began with us over 20 years ago are still with us. And our bad debts in the past have not amounted to even a thousandth of one per cent of turnover.

Selling

At the back of our wholesalers is our own large sales force, which today comprises 511 salesmen and supervisors. They have a set of specific and clear-cut functions. The first is, of course, selling. They visit every market at periodic intervals ranging from 4 to 8 weeks, depending upon the type of product and size of the market. Upon their visit, they discuss local conditions and problems with the wholesalers and then go out in the market to sell alongside them. This stimulates the wholesalers and their salesmen and brings us into direct contact with the retailers. At the same time, they arrange display of point-of-sale advertising material and of our products to attract the consumer's attention when he or she enters the shop. The salesmen have, besides, other functions like inspecting the quality of our goods, their packaging and contents, and withdrawing anything which in their opinion is not in a prime condition. Fortunately, our speedy turnover and distribution methods make sure that our goods are fresh in the market.

I have spoken already about our penetration into the countryside, and our spearhead here is a fleet of 45 motor vans spread over the country. These vans do a pioneering job, mainly covering small towns and nearby villages, working their way progressively deeper into the rural areas. They call at all worthwhile retail outlets; appoint wholesalers in new places where there is a sufficient volume of business to justify it; interest new retailers in stocking our products; and display advertising material and our goods. As soon as a market responds to this pioneering treatment and develops regular sales, it is put on the permanent journey plan of a regular salesman.

At the back of the rural work is another fleet of 12 cinema and 7 demonstration vans which combine the functions of propaganda and consumer sale. They give cinema shows in the villages at which large audiences happily see our advertising films coupled with an entertainment film. In addition, we show a suitable Government of India information film for broad educational purposes.

Advertising

Wide though our distribution is, by itself it cannot sell. It has to be taken to its next logical stage which is persuading the consumer to buy it. Distribution merely makes the product available; the consumer has to want it before the real sale takes place. Between distribution and consumption, therefore,

OBJECTS

The Company was formed generally for the purpose set forth in the Memorandum of Association, a copy of which is attached to the prospectus and in particular to enable the company to expand its business in the line of manufacture of automobile tyres and tubes in collaboration with the Mansfield Tire & Rubber Co., Mansfield Ohio, U.S. America.

PROSPECTS OF BUSINESS

The annual production programme at present envisaged by the Company is as follows:—

	Tyres
I. (A) Heavy Truck and Bus Tyres	2,04,000
(B) Car, Delivery Van and Motor Cycle Tyres	96,000
	3,00,000
	Tubes
II. (A) Heavy Truck & Bus Tubes	2,04,000
(B) Car, Delivery Van and Motor Cycle Tubes	96,000
	3,00,000
III. (A) Camelback and Tread Rubber	1,00,00,000 Lbs.

The total installed capacity of all automobile tyre factories in India, including those in existence and those licenced and coming into production in the next two or three years amount to only 2.5 million tyres. At 80% effective capacity, the actual production from these units may be only about two million tyres.

There are at present, over 5,00,000 motor vehicles in India and in the next five years, this figure is expected to reach a million mark with the enormous increase in the demand for automobiles consequent on the increase in the Road Transport Industry. Taking into account the number of old vehicles that may go out of the road and of the probable short-fall in the production in the 3rd Five-Year Plan, it can confidently be estimated that there will be at least 7,50,000 vehicles, by the end of the 3rd Five-Year Plan. Estimating the annual requirements of these vehicles at 1.5 tyres per car, delivery van, jeeps, etc., and 5.5 tyres per truck and 0.5 tyre per motor cycle, the minimum yearly requirements at the end of the 3rd Five-Year Plan may be of the order of 4 million tyres and tubes. Laying the cornerstone of Goodyear Tyre Factory in Delhi the Union Minister of Industries, Sri Manubhai Shah said on 12-11-1960 that demand of tyres in India will increase manifold and will reach 4.5 million by the end of the 3rd Five-Year Plan and therefore many more tyre factories will have to be erected. So there will be a substantial gap between supply and need and the Madras Rubber Factory is attempting to manufacture only 0.3 million tyres and tubes out of a total shortfall of nearly 2 millions. Though the production and installed capacity of tyres at the Madras Rubber Factory will be one of the largest among the new factories that had been licenced it is clear that there will be no difficulty of marketing this production as the gap between supply and demand is still very great.

U.S. COLLABORATION

The Company had been fortunate to secure the collaboration from one of the leading international tyre manufacturing companies of America, viz. The

HINDUSTAN LEVER LTD.

(Continued from page 617)

there is the vital area of demand, created by consumer persuasion through advertising.

There is some confused thinking about advertising. It seems to be regarded by some in India as unnecessary and by others as a case of the chicken and the egg; which comes first? Some go even further and argue that advertising is an economic waste and a luxury. We differ from this view.

We believe that by creating and expanding consumer demand, advertising promotes volume which alone can effectively bring down costs. We do not believe in cutting quality to save cost, but to look for saving through increasing sales. Advertising in a free society therefore performs a vital economic function and at a surprisingly small cost. Our own advertising costs us only two rupees and eighty naye paise for every hundred rupees of sale.

Advertising in fact is not even a cost to the consumer, for by the high volume of sales it brings, it actually means a saving to him. It also ensures a regular demand which, in turn, enables our factories to operate with minimum fluctuations. There are other savings too. For instance, the reduction in working capital that accrues from the repidity with which advertising helps to move the products from our factories, the wholesalers' godowns and the retailers' shelves. This speedy turnover of stocks helps the trade to operate on smaller margins than they would be willing to accept on slow-moving goods.

All told, advertising helps us in many ways. It introduces our products to millions of homes; it gives an assurance of quality to the consumers; and it helps reduce costs and the working capital employed.

With the household products of wide appeal that we sell, our advertising has to be spread over a large area. As it has to reach millions of homes in towns and the countryside, we have to use as many available media as possible, and it takes two forms—direct and indirect. In direct advertising, we go straight to the consumer and make a personal approach by sampling and demonstration, while, in indirect advertising, we use media like the press and cinema to carry our message.

Our advertising thus aims to reach the consumer, usually the housewife, in three ways; by meeting her and explaining to her about our product and how to use it; by reminding her through the daily newspaper and whenever she goes to the pictures; and by the last-minute appeal when she enters the shop and sees our show-cards attracting her attention to the goods displayed on the shelves.

It is important that our advertising, while trying to attract, should, at all times, be sincere and correct. We go to considerable trouble to make sure that the claims we make for our products are justified. For this purpose, all written advertising is submitted to both our legal and technical departments who scrutinise each copy to make certain that all claims are tenable. Advertising creativeness has to be given freedom but only up to the point of truth, and no further.

It is not possible to evaluate advertising expenditure as we can our capital expenditure. The effect of advertising cannot be measured as closely as the effect of spending money on new production facilities. Nonetheless, it is very important, when we are spending large sums on advertising, to develop some means of evaluation, and these we are trying to create through our operations statistics department, who are experimenting with the new techniques in measurability of advertising; through our market research who pre-test virtually every new campaign; and through sales analyses.

Staff

And now I come to the most important area in our marketing operations—that of the men and women who run it. I have made a particular reference to women because they are playing a growing part in our organisation. There are 41 women working today in marketing and marketing research, mostly in the latter, and they are trained in a variety of disciplines; one has done a doctorate in psychology, another in social sciences, and a third in nutrition chemistry; there are two who have graduated in domestic science; and of the remaining 36, 27 are graduates in arts and sciences.

We keenly appreciate that although for its vitality and success our marketing will require the use of latest methods and techniques, in the ultimate analysis we depend upon the calibre of the men and women we employ, upon their proper selection and training. Total efficiency of the operation must be a sum of the jobs well done.

For selection we look far and wide, and process the applications through a carefully designed multi-tiered procedure which aims at ruling out anything other than ability. It looks for those qualities of mind and manner which make for a good marketing type, possessing initiative and yet objectively analytical, resourceful, and with a mind that will grasp a situation quickly and meet it with energy and courage.

For promotion, we attach great importance to developing our own employees at all levels so that as many of them as possible can rise. Among our marketing managers today, 40 per cent joined the Company as salesmen and clerks; 20 per cent joined us as trainees, and 40 per cent were recruited directly from outside. While we are satisfied that our selection and promotion procedures work well, we have to be absolutely sure that we do not allow standards at any level to fall. If that happens, efficiency and morale will deteriorate and that will be injurious not to the organisation, but to the individual whose well-being and future is so intimately bound with it.

Training in the Company is a continual process. Training during probation must first make sure that the person employed is in fact cut out for the job and is capable of making a career with us; and then teach him the job. After confirmation, we are strong believers in developing the individual through devolution of responsibility and training. It takes various forms. We organise courses at our Training Centre in Bombay to which employees from all levels are brought for one-week to three-week courses. These are designed with two purposes in mind: a broader understanding of the Company's objectives and policies; and the inculcation of skills and techniques. Salesmen and supervisors have quarterly conferences with their area sales managers; branch conferences are held twice a year and bring together all levels in branch marketing; annual conferences are held at all-India management level; and special conventions are organised every year at all-India or branch levels for all staff whenever we launch an important new product.

We encourage our managers to attend and participate in outside marketing and management conferences and seminars, and we also send men regularly to the Administrative Staff College at Hyderabad. In addition, we make use of the considerable training opportunities provided by Unilever. A few have been to the U.S. and Australia, and many to Britain and Europe. Our own training facilities have developed so far that Unilever are using them for sending men from their associate companies from Africa to the Philippines.

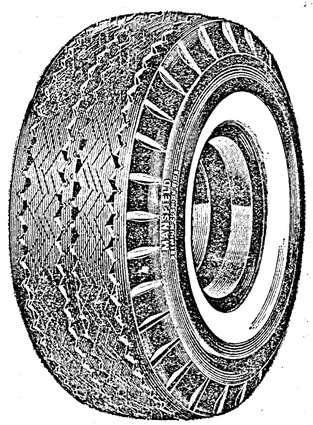
This, then, is a brief account of our marketing; the thinking and philosophy behind it; the tools and aids that are made available to the men and women who run it, and of the men and women themselves. It is an operation that has run well, but we are constantly watchful of complacency creeping in. We are always studying change and trying to adapt ourselves to the new.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

MADRAS RUBBER FACTORY LIMITED—*Cont'd.*

Mansfield Tire & Rubber Company,' on very favourable terms. They are subscribing for 1/4 of the present issue of the Equity Capital of the Indian Company. They will give the complete know-how and also station their experienced staff in India and meet their salaries for the erection and working of the tyre factory so that the quality of the tyre production in India will be equal to the international standards. They will also train all the necessary technical personnel from India and will meet all the expenditure of our staff in America when sent for training. In addition, the Mansfield Tire and Rubber Company have given permission to the Madras Rubber Factory to export to all world markets except the United States of America and Canada, tyres having 'MANSFIELD' trade mark and name. This is a very valuable and unique concession extended to this Factory.

The Mansfield Tire and Rubber Company was established in 1912 and today, it is one of the oldest and leading tyre manufacturers of America. Their



MANSFIELD Tyres and tubes will be manufactured by the Madras Rubber Factory.

main factory at Mansfield has a capacity to produce 14,000 Tyres per day which is more than double the total production of tyres in India today.

Mr. James H. Hoffman, a leading business magnate and President of the Mansfield Tire & Rubber Company, has agreed to become a Director of the Indian Company.

BRIEF HISTORY

The firm Madras Rubber Factory (MRF) was founded in the year 1946 and today, has become one of India's leading Rubber Factories and is the largest manufacturer of tyre rubber (tread rubber and camelback) in India. It had in 1959-60 a production worth about Rs. 1,00,00,000/- and the production exceeded Rs. 1¼ crores in 1960-61. The Factory has received licence for substantial expansion from the Government and in 1961-62 it is anticipated that the production will exceed Rs 2,00,00,000. Likewise the profits were over Rs. 6 lakhs in 1959-60 and has been Rs. 10 lakhs in 1960-61 and is expected to be over Rs. 15 lakhs in 1961-62.

The Madras Rubber Factory located in the heart of the Industrial area of the city, has over 11 acres of vacant land attached to the factory. It has already a team of chemists, engineers and technologists experienced in rubber manufacture. They have also a well equipped laboratory and the quality of 'MRF' Tread Rubber has established a fine reputation, not only in India but also in fourteen neighbouring countries where 'MRF' Tread Rubber is being exported. The Factory is even now unable to meet the full demand and hence, production is being stepped up every month. The Company has also a net work of branches and Sales Depots spread throughout India, and in particular in all the important centres like Bombay, Calcutta, Delhi, Bangalore, Coimbatore etc. etc.

SPECIAL ADVANTAGES

The first and foremost advantage is that the Madras Factory is already an established rubber factory with large production facilities. It is already earning substantial profits enough to declare a dividend even for the increased capital, from the very first year of working of the Company even before the commencement of production of tyres. The company has sufficient spare land for putting up the tyre factory for further expansion.

The technical collaborators, viz. the Mansfield Tire & Rubber Company have agreed to take ¼ of the present issue of Equity Capital of the Company and have offered very valuable concessions especially in the matter of technical fees to be given to them.

The earnings from the tyre factory are expected to be more than 100% of the Equity Capital of the Company.

The Directors and the Managing Agents have long experience in all aspects of the Rubber Industry and business management and are connected with a large number of rubber plantation companies and rubber factories.

ESTIMATE OF PROFITS

Even before tyre production starts, a turnover of over Rs. 2 crores and a net profit of over Rs. 15 lakhs can be expected from the existing business of the Company from the first year of the Company's working. When the tyre factory goes into full production a turnover of Rs. 10 crores is expected giving a net return of over 1½ crores of rupees. Thus the company can earn a reasonable profit even in the first year of its working and very substantial profits after attaining full production of tyres.

CAPITAL ALLOCATION

The estimated additional capital requirements of the Company are as follows:—

		Rs.
Additional Buildings	..	15,00,000/-
Machinery and installation	..	1,50,00,000/-
Preliminary expenses	..	50,000/-
Expenses for this issue	..	3,50,000/-
Working capital	..	31,00,000/-
		2,00,00,000/-

It is proposed to meet the above capital expenditure in the following way:—

Rupees One crore by issue of further Equity Capital. The balance of rupees One crore as well as any increase if any in the actual cost of plant, machinery and facilities will be raised, to the extent required, by loans from Bankers and other financial institutions and if necessary from other sources.

No Promotion Expenses—No payments are to be made to the promoters or Managing Agents for expenses incurred or for their services in the promotion of the company. The entire expense thereof has been met by the promoters.

ACQUISITION OF BUSINESS OF MADRAS RUBBER FACTORY AS A GOING CONCERN

The Company has been promoted by partners of Madras Rubber Factory. The Partners had equal shares in the partnership. Their names appear in the prospectus as signatories of the Memorandum of Association of the Company.

The entire business of the firm of Madras Rubber Factory has been acquired as a going concern by Madras Rubber Factory Private Ltd., for a consideration of Rs. 24,96,500/-.

APPLICATION FOR SHARES

Application for 50 Equity shares or multiples thereof will only be considered and must be submitted on the printed form attached to the prospectus or a printed copy thereof and delivered with the amount payable on application before the date of the closing of the subscription list to:—

(i) The Registered Office of the Company at Madras or its Bombay, or Bangalore Offices.

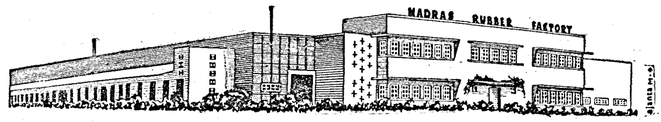
(ii) The Head Offices or any of the branches of the Bankers of the Company mentioned herein or

(iii) The office of any of the Company's brokers mentioned in the prospectus.

Remittances should include Bank charges at 15 nP percent subject to a minimum of 65 nP in cases they are by cheques or drafts on places, not covered by the Bank offices mentioned herein.

Cheques or drafts should be crossed—A/c Madras Rubber Factory Ltd.

Copies of the Application forms and Prospectus may be obtained from the Registered Office of the Company, its brokers and under-writers or Bankers mentioned in the Prospectus. Separate remittance should accompany each application.



A view of the present factory

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company at Gauhati and at its Regional Office at Calcutta. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment of this new industrial undertaking at Chandrapur near Gauhati in the State of Assam and for effecting a substantial expansion in the existing industrial undertaking, of which copies together with copies of all orders amending the same are open to public inspection at the Registered Office of the Company at Gauhati, and at the Regional Office at Calcutta. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus, having attached thereto the documents required by Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, Assam, Tripura and Manipur, Shillong, for registration.

Application will be made to the Calcutta Stock Exchange, for permission to deal in the Equity Shares of the Company and for official quotation.

The Subscription list will open at the commencement of Banking hours on Friday the 28th April, 1961 and will close at the close of Banking hours on Saturday the 6th May, 1961 or earlier at the discretion of the Board of Directors of the Company, but not before the close of Banking hours on Monday the 1st May, 1961.

ASSOCIATED INDUSTRIES (ASSAM) LTD.

(Incorporated on 7th November, 1959, under the Companies Act, 1956)

Balance	Rs. 5.00 per share on call or calls to be made not earlier than 3 months after allotment.
	Rs. 10.00 per share

Failure to pay the allotment money or any call when made will render the shares liable to forfeiture.

ASSOCIATED INDUSTRIES (ASSAM) LTD.—*Cont'd.*

DIRECTORS

Article 89 provides that the number of Directors shall not be less than three nor more than twelve.

An Agreement has been entered into with the Government of Assam under which they have the right to appoint an Ex-Officio Director, who will not be liable to retirement by rotation and shall hold office till such time Government holds shares in the Company whether Preference or Equity.

So long as any loan from the Industrial Finance Corporation to the Company is outstanding, the Industrial Finance Corporation will have the right to appoint two Directors on the Board of Directors of the Company as Ex-Officio Directors, not liable to retirement by rotation.

Unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending Meetings of the Board a fee of Rs. 100 per meeting of the Board attended by him. All other remuneration, if any, payable by the Company to each Director, whether in respect of his services as a Managing Director or a Director in the whole or part time employment of the Company shall be determined in accordance with and subject to the provisions of these Articles and of the Act.

HISTORY OF BUSINESS

Incorporation and Commencement of Business

The Company was incorporated on 7th November, 1959, under the Companies Act, 1956 and obtained the Certificate of commencement of business from the Registrar of Companies, Assam, Tripura & Manipur on 11th November, 1959.

OBJECTS OF THE ISSUE

The Company has now taken on hand business in two units, viz. (1) Textile Unit and (2) Chemical Unit

Textile Unit

It is intended to establish a cotton spinning mill of 25,000 spindles in two stages. The work on the first stage for the establishment of a mill with 12,320 spindles has already been taken up and is well under way

Chemical Unit

It is intended to set up a production unit for the manufacture of :—

(a) Super Phosphate ..	3,000 tons per month
(b) Mixed Fertilisers ..	6,000 tons per month
(c) Sulphuric Acid ..	1,500 tons per month
(d) Sulphur Dioxide ..	300 tons per month

START OF THE MILLS

The Mills will go into full production both in the Textile and the Chemical Units by the end of 1961 or beginning of 1962.

RAW MATERIALS

Cotton: Cotton is the main raw material for the Textile Unit of the Company. A large part of the supply needed for the Company will be available in the country but some cotton may have to be imported. The quantity of cotton to be imported from abroad is relatively small and no great difficulty is anticipated for obtaining licences in respect thereof.

Sulphur and Rock Phosphate: Sulphur and Rock Phosphate are the main raw materials for the Chemical Unit. Since the use of Fertilisers is indispensable for the increase of production of foodgrains the Company anticipates no great difficulty in obtaining the requisite quantity of sulphur and rock phosphate from abroad under the actual users' licence.

The factory site has an easy access by river, rail and road.

TECHNICAL ARRANGEMENT FOR THE CHEMICAL UNIT

An Agreement has been entered into between the Company and Singmaster Breyer Inc. of New York, U.S.A., which has a resident Technical Representative at New Delhi for supply to the Company of complete plant for production of sulphur dioxide (liquid), sulphuric acid, superphosphate and mixed fertilisers. The plant will be partly fabricated in India and partly imported from abroad Singmaster Breyer Inc. will be responsible for complete procurement fabrication and erection of the plant at site and bringing the plant into satisfactory commission and training of the Company's personnel. The sulphuric acid plant will be of Monsanto design. Singmaster Breyer Inc. are well known and have experience in India for erection of the plant of the type required by the Company.

PLANT & MACHINERY FOR THE TEXTILE UNIT

Contract for supply and erection of the Blow-room machinery has been placed with New Standard Engineering Co. Ltd., of Bombay who are now manufacturing Blow-room machinery in India in collaboration with Truetzschler of Western Germany.

Orders for supply and erection of Card Engines, Can Fed Inters, Ring spinning frames and other plant and machinery with the latest drafting arrangements have been placed with Textool Co. Ltd., Coimbatore.

IMPORT LICENCE

Application has been made to the Government of India for Licence for the import of the plant and machinery required for the Chemical Unit. Foreign Exchange will be met from the Dollar loan sanctioned by the Industrial Finance Corporation. Import licences for import of a small part of the plant and machinery required by the Company for the textile unit are expected to be received shortly.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs. 25,09,000 which is the total amount of the present issue offered to the public for subscription".

The Capital outlay is estimated as follows :

Land and Land Development and Roads	Rs.	3.250 lacs
Buildings	Rs.	14.600 „
Preliminary Expenses ..	Rs.	0.100 „
Expenses of Issue ..	Rs.	1.150 „
Pre-operational Expenses ..	Rs.	1.635 „
Plant and Machinery	Rs.	84.365 „
	Rs.	105.000 lacs

The above capital outlay will be met as follows :—

(1) Equity Shares already issued		Rs.	10.00 lacs
(2) Equity Shares offered to public		Rs.	25.09 „
(3) Equity Shares to be allotted to other parties ..		Rs.	9.91 „
(4) Preference Shares included in the present issue		Rs.	15.00 „
(5) Loans from Industrial Finance Corporation of India hereinafter mentioned in rupee In foreign exchange equivalent to approximately	Rs. 26,17,000 Rs. 24,05.000		
	Rs. 50,22,000	Rs.	50.22 „
(6) Deferred Performance Payment for supply and fabrication of plant for the Chemical Unit		Rs.	2.00 „
		Rs.	112.22 lacs

It is estimated that the Company will require a working capital of Rs. 40 lacs which together with any increase in the actual cost over the estimated cost of the plant and facilities will be met partly from the surplus of the resources over capital expenditure mentioned above and partly by loans from the Company's Bankers and if necessary from other sources.

FINANCIAL ARRANGEMENT WITH INDUSTRIAL FINANCE CORPORATION OF INDIA

LOAN—The Industrial Finance Corporation of India have sanctioned a loan of Rs. 26,17,000/- and a Dollar loan of $5,05,000 to the Company to be utilised towards the purchase of plant and machinery for the integrated project of textile and chemical units.

The loan is to be secured by a first mortgage of the existing and future fixed assets of the Company and will carry interest at the rate of 7% per annum on the Rupee loan and not exceeding 8% on the Dollar loan with a rebate of ½% on the Rupee loan if instalments of principal and interest are paid on due dates.

During the subsistence of the mortgage the Industrial Finance Corporation may at any time appoint not more than two persons to be Directors of the Company.

The Company will however be free to borrow from its Bankers any moneys which it may from time to time require against hypothecation of stocks, raw materials and finished goods.

During the currency of the loan the dividend on Equity Shares in any year shall not without the prior approval of the Corporation exceed 8%.

The said loan shall also be subject to other terms and conditions and subject to agreement being reached thereon, a formal agreement will be entered into between the Company and the Corporation.

Mr. G. D. Jatia, Mr. D. N Jatia and Mr. S. S. Lahiri, Directors of the Company have agreed to guarantee the loan in their personal capacity.

PROSPECTS AND MARKETABILITY.

The Third five year plan lays great stress on industrialisation and increase in agricultural productivity in the country and in particular in the less developed States. The economy of the State of Assam has been mainly dependent on agriculture and tea plantation The establishment of a Cotton Spinning Mill and an integrated chemical plant for the manufacture of Sulphur Dioxide (Liquid), Sulphuric Acid, Superphosphate and Mixed Fertilisers will certainly assist in the implementation of the recommendations of the five year plan.

There are no Cotton Mills in the State of Assam although there is a great demand for yarn from the Handloom industry spread throughout the State. At present the bulk of the yarn required by the State for consumption is supplied from other States and even the full complement of the Company's production will still be far below the demand.

The decision of the Government of India to instal Refineries in Gauhati and Barauni gave the impetus to the Company to start the present chemical unit. Arrangements have been reached between the Company and the Indian Refineries Ltd who are installing both the Refineries for the supply of our production of Sulphur Dioxide (Liquid) to them. To make full use of the Acid Plant required for the process of the Sulphur Dioxide and also the spent acid a Superphosphate and Mixed Fertilisers Plant was co-ordinated with the above chemical plant, thereby making it a complete integrated unit.

The major portion of Sulphuric Acid produced by the Company will be consumed by the Superphosphate plant and a small portion will be available for sale in the market The Company has also received a licence for the manufacture of Alum and when this is taken up it will consume major portion of the surplus Sulphuric Acid. Sulphuric Acid being a basic chemical it may be expected that with the development of other chemical industries in the State there will be no difficulty in selling the surplus acid.

To increase the production of foodgrains there is a drive for greater yield per acre by systematic and scientific use of different types of Fertilisers. With the location of an Ammonium Sulphate and Urea plant at Naharkatia, it is expected that there will be a greater demand for Superphosphate to make a balanced application of the fertilisers to the soil.

The Mixed Fertiliser Plant will supply ready-to-use fertilisers to the farmers. As already mentioned, Assam being a predominantly agricultural and tea plantation State, Fertilisers will naturally assume a great significance in the agricultural economy. It is, therefore, expected that there will be great demand for the Fertilisers and the Company's product will find a good market.

Subject to the approval of the Company in general meeting it has been arranged that Rallis India Limited who have wide experience in the field of Fertilisers will be appointed sole distributors of the Company and the Company will benefit from their experience.

PRELIMINARY AND OTHER EXPENSES

The preliminary expenses including Underwriting commission Brokerage and expenses of this issue are estimated at Rs. 1,15,000.

BROKERAGE

Brokerage will be paid to Underwriters, Brokers and Banks at 10 nP. per Equity Share of Rs. 10 each offered to the public on allotments made in respect of applications bearing their stamps.

UNDERWRITING COMMISSION

An Underwriting commission of 2½% will be paid to the underwriters.

COMMISSION

No sums have been paid within the two years preceding the date of this Prospectus or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions, for any shares in or Debentures of the Company or as discount in respect of shares issued.

PAYMENT TO PROMOTERS, ETC.

No amount or benefit has been paid or given or is intended to be paid or given to any Promoter or officer for promoting the Company except Rs. 19,142.50 paid by way of reimbursement to Jatia Industries Private Ltd., for expenses incurred by them towards preliminary expenses and for purchase of land.

MANAGING AGENTS

Article 128 provides for the appointment of Managing Agents but no Managing Agents have been appointed or proposed to be appointed at present.

MANAGING DIRECTOR & WHOLETIME DIRECTOR

Article 128 provides that subject to the provisions of the Companies Act, 1956, the Board of Directors may appoint a Managing Director or Managing Directors, Manager or Managers of the Company. There are no Manager or Managers of the Company and it is not proposed to appoint any Manager or Managers at present.

The Company proposes to appoint Mr. D. N. Jatia of 55/1, Bhupendra Basu Avenue, Calcutta, as the Managing Director and Mr. S. S. Lahiri of 1/1/2B, Hazra Road, Calcutta, as the whole-time Technical Director. The terms and conditions of appointment and the remuneration will be determined by the Company in general meeting subject to the approval of the Central Government.

PLANT SITE & POWER

The Company has with the approval of the Government of Assam purchased an extensive land, comprising nearly 1,200 acres in Chandrapur Area near Gauhati, for the factory site and staff accommodation. This site offers all essential facilities and there is good scope for further expansion. A railway line passes across the site and a railway station is in close proximity. The site being situated on the banks of a perennial river, there is no dearth of water supply and in addition there is the advantage of river transport and disposal of effluents from the Chemical plants. A road from Gauhati to the site is under construction. The Assam State Electricity Board has assured the required supply of power.

APPLICATION FOR SHARES AND ALLOTMENT

Applications for Equity Shares must be for a minimum of 50 shares or multiples of 50 shares. All applications for Equity Shares must be made on the form accompanying the Prospectus, which can be had from the Company's Bankers, Underwriters and Brokers to the issue. All application forms duly completed must be lodged together with the amount payable on application, with any of the following banks-namely :—

1. State Bank of India, Calcutta.
2. The Bank of Baroda Ltd., Calcutta.
3. The Central Bank of India Ltd., Calcutta.
4. The United Bank of India Ltd., Calcutta.

or with any of their branch offices at the following places, namely :—

Ahmedabad, Bangalore, Baroda, Bombay, Delhi, Dhubri, Gauhati, Kanpur, Karimganj, Madras, Shillong, Tinsukia.

The Share Certificates will be issued in exchange of Letters of Allotment within four months of allotment.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

CHAIRMAN, MR. A. SEN'S REVIEW

The 11th Annual General Meeting of the Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 17th April, 1961. Below are extracts from the statement of Mr. Abhijit Sen, Chairman of the Company:

Your Directors have felt that from this year the Chairman's Statement should be circulated in advance so that all members, irrespective of whether they can attend the Annual General Meeting or not, may share the information contained in the Statement.

The profit for the year after providing Rs. 20,00,730/- for depreciation amounts to Rs. 24,49,361/-. Your Directors recommend that the dividend on the Ordinary Shares be maintained at 8% as in the previous year and that the dividend on the Preference Shares be stepped up to 6.5% in order to comply with the provisions of the Preference Shares (Regulation & Dividends) Act 1960.

Past experience has shown that the capacities installed and worked to at the end of each Plan period are only stepping stones to further expansions in the succeeding Plans and so the Company's policy of retaining a major portion of the profits in the business should be taken as a necessary adjunct to an expanding economy.

Increasingly greater use of indigenous raw materials, wherever available, did allow bicycle production to record a slight increase over the previous year, but this increase was hardly of the order where it could make itself felt in the face of rising demand for our products. Marked increases in production were also recorded in some friction parts where a freer release of raw materials made operation at near capacity levels possible.

Demand in general for your Company's products continued to outstrip the increase in production but this satisfactory position may not long continue in one or two of the components we make, in which saturation point may be reached in the foreseeable future as licensing of industrial capacity for these items has been more liberal than wise. In the competition that is bound to develop, it is felt that our early entry into these lines will stand us in good stead, as our range of products have established a reputation for quality and service.

Lack of Suitable Steel

The biggest single factor limiting production still continues to be the lack of suitable steel in sufficient quantity. Can we hope that the indigenous steel processing plants would be able to rush into production and alleviate the steel shortage from 1962 onwards so that the industry could face the future with greater confidence.

The import licensing policy for steel continued to be on an annual basis but the benefits of this policy were rather lost on the industry as licences were switched in two successive periods to two different currency areas namely the Rupee Payment area (consisting of the Eastern European countries) and the United States of America (against DLF loans).

Foreign exchange problems still dog our footsteps and will continue to do so on an ever-increasing scale both for raw material and for plant requirements in the future. Government policy now appears to favour only such new schemes or major expansions where foreign investment matches the requirement of plant import and as this may very well become the pattern for the day in the Third Five Year Plan, your Company may have to consider this feature as a determining factor in undertaking some of its future expansions.

For the present industrial licences have been received for substantial expansions in chain manufacture and for manufacture of a new item—Dynamo Lamps. In the case of the chain expansion, import licences have also been received and plant is now being ordered.

Third Plan Target

Your Company naturally expects to play its due part in raising the country's bicycle production to 2.5 million in the Third Five Year Plan. Schemes for expansion are now under consideration and construction of buildings to accommodate expansions have already begun.

Plans for our future expansions are rather clouded by present shortages of power and water at Asansol. Notwithstanding the fact that our factory is situated in the heart of the Ruhr of West Bengal, and in the midst of various Multipurpose Projects, power is already on ration and no serious consideration seems to have been given to the question of supplying water to a rapidly growing industrial area—not to speak of supply to rural areas about which the Union Government is so concerned today. An Asansol/Raniganje water supply scheme has been in the offing from 1945 onwards, but, two successive Plans have passed it by and residents of Asansol town still have to buy water by the bucket in summer, and industries fear to expand for lack of water.

Considering the important part Asansol plays in the industrial and economic life of the State—it not the nation—it does appear to be the most neglected town in India as far as the planners of the country are concerned. Unless Asansol receives some attention from the planners in the Third Five Year Plan not only will it rapidly deteriorate into the second nightmare city of the State, but industries will hesitate to venture into further investment in this area.

Electric House Service Meters

Last year, I mentioned the need for your Company to consider diversification of interests within the Light Engineering range. After careful thought your Directors have now applied for and obtained Industrial sanction for manufacture of Electric House Service Meters. They are satisfied that there will be a continuing demand for such Meters in this country for some years to come, and this is a line where the experience gained by your Company can be profitably utilised.

With the growing shortage of foreign exchange there is a likelihood of imports of materials being linked with export performance. Your Company has been exploring the possibilities of obtaining a wider export market for some time. Although the export performance in bicycles has not been very good for the industry as a whole in 1960, our saddles have gone out to many new markets and we now await the reaction from the importing countries. Efforts to develop bicycle exports are continuing and it is hoped that 1961 will show better results in this direction than the past year.

I cannot conclude without a passing reference to the provisions of the present Finance Bill in as much as these concern foreign collaboration. To us it appears that an invidious distinction has been drawn between foreign Associates who have helped in developing the industries of the country in the uncertain stages of the First and Second Five Year Plans and those associates who intend to come in after April, 1961 when the country's economy has become relatively more stable. All the benefits in the way of lower taxes on inter-corporate investment and on royalty remittances have been made applicable to arrangements entered into after April 1961 whilst older arrangements remain liable to tax at the higher rates.

Before I close I would like to thank my colleagues, the staff and the workers of the Company, and our foreign associates for the work they have put in to conclude one more successful year of operation.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

UNITED ... 24 APR 1961 :: PUBLIC DEPARTMENT

THE BENGAL COAL COMPANY, LIMITED

CHAIRMAN, MR. N. STENHOUSE'S STATEMENT

The following statement has been issued to the Shareholders of the Bengal Coal Company Ltd. by Mr. N. Stenhouse, Chairman of the Company:

I have pleasure in reporting to the members of The Bengal Coal Co., Ltd. on the operations of their Company during the year ended 31st October, 1960.

The Year's Trading

The income from coal sales increased by Rs. 53 lakhs to Rs. 6,89,00,000. As a result of a general increase in output, there has been a satisfactory improvement in the trading results, the profit before taxation being Rs. 16 lakhs higher than for the previous year.

After providing Rs. 41,50,000 for taxation and transferring Rs. 21,00,000 to Reserves, the Board are recommending a final dividend of Rs. 15 per share less tax on the Ordinary Shares, making Rs. 25 per share less tax for the year and thus maintaining the same dividend as for the previous year. Calculated on the capital employed in the Company, the dividend for the year represents a gross return of under 7.5% per annum.

Costs, however, continue to rise: safety measures, stores and spare parts—in a hazardous industry such as mining, there can be no question of providing anything but the best available. In spite of the high standard of mechanisation at many of your collieries, there has been a further increase of over Rs. 20 lakhs in "Salaries and Wages" the total expenditure under this heading amounting to some Rs. 3,33,00,000 or approximately Rs. 11 per tonne of coal raised.

Production

You will observe that the words "tonnes" and "tons" are used in this Statement. The reason for this is that, although the coal industry has now gone over to the metric system of weighment, the total output of coal in the country is still officially referred to in tons and not tonnes. One tonne=0.9842 of a ton.

Raisings during the year increased by over 215,000 tonnes to a level of 3,096,500 tonnes, which constitutes a record in the long history of the Company. Mainly as a result of increased mechanisation, the Company's Poniati and Dishergarh collieries have recorded most satisfactory increases in their production. The only decline in output has been at Chanch Colliery; the installation of the sand stowing plant is, however, nearing completion, and this will result in increased raisings from the colliery.

In the context of the need for increased outout of Selected "A" grade coal, which is so urgently required for the Steel Plants, the Railways and other high priority consumers, it is interesting to note that the Company produces almost 30% of the all-India output of Selected "A" coal. In addition to our large production of this grade of coal, we have also been developing seams of other grades, conscious of the need of Selected "B" and Grade I coals by industrial consumers throughout the country. For instance, sinking to the Hatnal Seam at Sodepore 9 and 10 pits has been completed and, although raisings from this seam during the year under review amounted to less than 2,000 tonnes, I am glad to be able to report that we are currently raising over 7,000 tonnes monthly from this new development, and production will increase steadily over the coming months.

In my Statement last year I referred to the introduction of a Cess to assist deep, difficult and gassy mines. Unfortunately, we have not yet received any payment against our claims for assistance submitted some months ago, and it is now almost 2½ years since the introduction of this assistance was recommended by the Coal Prices Revision Committee. We believe, however, that payments will commence shortly, and we shall welcome this assistance. The Company operates many "deep, difficult and gassy mines", four of which are working either at a loss or making a negligible profit of under 50 nP per tonne.

The quantum of sand stowed at the Company's collieries showed a most satisfactory increase from last year's figure of 772,000 tonnes to 1,122,000 tonnes. The increased level of stowing assistance received was applicable to the whole of the year under review, and consequently the gap between the total cost of stowing and the assistance which we received from the Coal Board narrowed to Rs. 6 lakhs compared with Rs. 9 lakhs in the previous year.

Third Five-Year Plan

The Third Five-Year Plan period commenced on 1st April, 1961. The all-India coal target has been fixed at 97 million tons per annum, of which 62 million tons are planned to be raised by the private sector of the coal industry by 1965/66. This will mean increased raisings of 17 million tons per annum over the next five years by the private sector, the present annual level of production being approximately 45 million tons. In the light of this very substantial increase in the all-India production, we have submitted details to Government of plans to raise output at our existing collieries by at least one million tons per annum. This greatly increased output is, of course, largely dependent upon our receiving import licences for the necessary plant and machinery and on other factors which are at present the subject of discussion between the Industry and Government. We are also planning the sinking of new shafts, the output from which, provided no obstacles occur, should materially increase still further the total raisings of the Company by the end of the Third Plan.

Finance

These very considerable expansion plans have necessitated the Company raising initially a total sum of Rs. 1,00,00,000 by way of the issue of 20,000 Rights Ordinary Shares of Rs. 100 at a premium of Rs. 100 per share, and Rs. 60,00,000 Debentures. It is satisfactory to record that these issues were oversubscribed, and the response from our shareholders to the Rights issue and from the public to the issue of Debentures has given great encouragement to the Board and to all connected with the Company.

Power Supply

For too long, Industry, particularly in West Bengal, has been working in conditions of electric power shortage. As new generating capacity in the area has come into operation the demand from Industry has taken up all additional energy available and there is still a very large demand for power which just cannot be met. A result of this shortage has been the overloading of existing capacity with the recurrent breakdowns which must be expected from overworked plant. The output of the proposed new units to come into operation during the Third Five-Year Plan period will be more than required to meet the ever-increasing railway electrification, industrial and domestic demand, and we must anticipate that throughout the period electric power will continue to be in short supply. This is a situation which gives rise to serious concern and has inhibited and will inhibit the growth of industrial expansion so vital to the country.

Planning to provide the power required as and when demand arises is not sufficient, and what is needed is a far-seeing policy to provide ample power well before demand materialises so that potential users may themselves make their plans in confidence. During the next five years generating capacity must be planned to meet the estimated demands of 10 or 15 years hence.

The Third Five-Year Plan depends to a very large extent on the increased output of coal. Much of the extra coal production will come from increased mechanisation of existing mines and, for this alone, increased supplies of electric power will be required over the next five years. I cannot stress too strongly the necessity for meeting the power requirements of the basic coal industry.

Labour and Welfare

In my Statement last year I referred to the improved amenities which were being provided for our workers by way of new quarters, water supply, the extension of schools and Co-operative Societies, as well as medical amenities. We are at the same time increasing the recreational facilities by the provision of club rooms and sports grounds. These facilities are, I am sure, appreciated by the Company's employees, and it is satisfactory to report that labour relations during the year have been satisfactory.

Training

To obtain the increased coal production now planned for the country, a very large number of additional technical personnel of all grades will be required to work in the mines. The Company attaches great importance to its training schemes which have been in existence for many years. Not only are we providing technical courses for 106 Mining Trainees, but we also hold classes for Overmen and Sirdars in our Technical School at Sanctoria. In addition, we have under training at present at our two Central Workshops, with their attached hostels, a total of 107 Mechanical and Electrical Apprentices, about half of whom will be available for absorption by outside collieries. It may interest you to know that six of our Agents and Colliery Managers with First Class Mine Manager's Certificates originally joined us as mining apprentices and received their initial training within the organisation.

Transport

Stocks at the end of the year under review increased by almost 40,000 tonnes to a level of 94,000 tonnes, and the overall rail transport position has since deteriorated still further. The Company's collieries, however, have not suffered as badly as many others in the industry by reason of the fact that with the installation of modern screening plants, overhead bunkers, etc., we are in a position to load large numbers of wagons in the form of block rakes in accordance with the present transport policy of Government. In spite of this, however, it is necessary to restrict raisings from time to time when stocks at individual collieries reach unmanageable proportions.

In the absence of any definite assurance regarding the ability of the Railways to meet the ever increasing demands for coal transport, we have decided to increase considerably the despatches of coal by lorry to meet the demands of consumers situated within reasonable distance of our collieries. Our first large lorry weigh-bridge has been installed at Poidih Colliery to cope with despatches by road from this and four of our other collieries.

In addition to the new sidings which will be required to serve new pits, the capacity of old existing sidings has to be increased as and when additional output makes this necessary. I regret to state, however, that difficulties have been experienced in getting such work undertaken by the Railways. In particular, the alterations to Parbelia Siding have still to be completed, although application for the extension was made some four years ago. Because of this Colliery's limited available space for receiving, loading and marshalling wagons the output continues to be affected to the extent of about 20,000 tonnes per month.

Staff

A very great deal of the credit for the satisfactory results in the past year is due to the staff at all levels in our coalfields organisation. In addition to the very competent mining staff, we have well qualified teams of electrical and mechanical engineers and surveyors, and we are also fortunate to have men of high calibre in charge of the Medical, Labour, Legal, and other Departments of the Company.

Our Chief Mining Engineer, Mr. F. G. Massmann, has had a most successful first year in his appointment, and I thank him, and Mr. Ll. D. Hughes, the Deputy Chief Mining Engineer, and the other senior members of the staff, for all their hard work; they shoulder very heavy responsibility and their conscientious devotion to the interests of the Company and its 21,000 employees is an inspiration to us all.

N.B.: This does not purport to be a record of the proceedings of the Annual General Meeting.

It's Always Possible to
MAKE YOUR TRUCK TYRES
LAST LONGER!

All Users of truck and bus tyres are now aware that the Tyre Industry in India does not yet have sufficient manufacturing capacity to meet the demands of all parties.

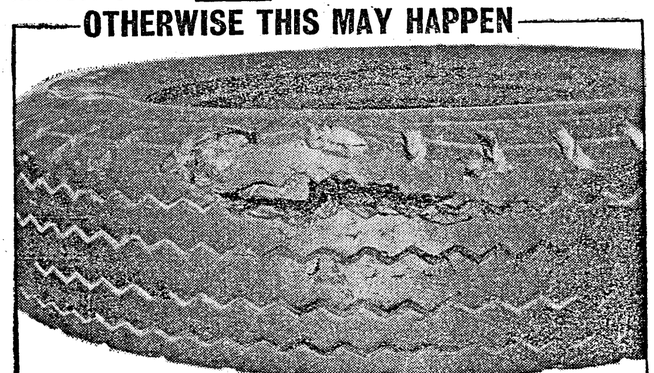
It is not a matter of distribution. More than 100 Tyre Dealer Associations and Syndicates covering a network of approximately 5000 Tyre Dealers have set up controls so that such supplies as become available are allotted at the recognized retail price to those Tyre Users whose need is both imperative and proven.

It will be some time before the new tyre factories, now in the course of construction, commence to produce tyres. The expansion programmes of the present manufacturers cannot be implemented overnight.

In the meantime, what—?

WE BELIEVE that this prolonged tyre scarcity condition can be attacked if everyone who has anything to do with trucks and buses does his utmost to see that the USEFUL LIFE of each and every tyre is extended as far as possible by CAREFUL REGULAR INSPECTION AND MAINTENANCE. Here is one way to achieve long life and maximum service.

MINOR CUTS MUST BE REPAIRED—
OTHERWISE THIS MAY HAPPEN



This tyre is now a complete loss. Water has entered through cuts in the tread which were neglected and allowed to develop as the tyre continued in service. Had this tyre been removed and repaired it would not have "died young" like this.

Money

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 19th April.

THE volume of advances has continued to expand in the Calcutta money market during the past week, but the increase appears to be chiefly in the non-seasonal category of loans to the engineering and iron and steel industries. The other sources of demand show small variations: the requirements of the sugar mills have increased slightly, but those of the cotton industry have fallen. There is little change in the offtake of the jute mills or in call for accommodation against foodgrains storage. The interbank market has continued to ease and the call rate is now down to 4½ percent. It is thought the reason for the easier conditions might be the volume of selling of stocks and securities in preparation for the Goodyear Tyre issue.

There have been very few bills of any kind in the exchange market during the past week and those that have come to hand have been chiefly on account of gunny shipments. Demand for remittance has been poor. In the London money market, the pound has been generally easier and at the close showed fractional losses against all important currencies.

BULLION WAS STEADY DURING THE PAST WEEK. Silver advanced from the previous week's level of Rs. 238.25 to Rs. 239.75, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 232.50. The London and New York prices were 80d and 91.375 cents.

Gold was firm on a strong support. The price rose from Rs. 143.50 to Rs. 144.

DURING THE WEEK ENDED 14TH APRIL, Government of India Treasury bills for Rs. 246,42,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 18th April. The total amount offered was Rs. 2,52,00,000. Tenders at Rs. 99.315 percent were accepted in full and those at Rs. 99.310 percent were allotted approximately 65 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 24th April.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 19th to 22nd April at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 12th to 15th April amounted to Rs. 10 lakhs.

THE RETURN OF THE RESERVE BANK OF INDIA during the week ended 14th April, 1961, showed declines of Rs. 1.38 crores to Rs. 2,038.53 crores in active notes and of Rs. 47 lakhs to Rs. 2,049.32 crores in the total note issue. Foreign securities of the paper currency reserve were cut by Rs. 5 crores to Rs. 118.01 crores, but rupee securities were increased by Rs. 4.91 crores to Rs. 1,692.11 crores. These securities were transferred from the Banking Department, in which foreign balances held abroad declined by Rs. 1.33 crores to Rs. 9.98 crores. Investments fell by Rs. 4.47 crores to Rs. 120.74 crores. Deposits of the Government of India rose by Rs. 14.12 crores to Rs. 68.68 crores, but other Government accounts declined by Rs. 4.32 crores to Rs. 3.99 crores. Balances of commercial banks at Rs. 73.70 crores showed a rise of Rs. 3.10 crores. Other loans and advances fell from Rs. 146.78 crores to Rs. 142.61 crores, of which advances to scheduled banks against usance bills amounted to Rs. 33.30 crores (Rs. 33.64 crores). Ways and means advances stood at Rs. 88.17 crores, against Rs. 70.69 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 7th April, 1961, shows a drop of Rs. 5.59 crores to Rs. 567.51 crores in total deposits. Investments in Government securities are down by Rs. 8.01 crores to Rs. 225.20 crores, while other authorised investments remain unchanged at Rs. 9.84 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.30 crores to Rs. 282.59 crores. Cash and balances are, in consequence, shown at Rs. 26.87 crores or Rs. 3.33 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 7th April, 1961, shows Demand and Time liabilities at Rs. 853.91 crores (Rs. 21.35 crores on account of borrowings from banks) and Rs 1,088.11 crores (Rs. 11.95 crores), compared with Rs. 834.49 crores (Rs. 14.20 crores) and Rs. 1,073.92 crores (Rs. 10.73 crores), respectively, in the previous week. Cash has increased by Rs. 2.10 crores to Rs. 47.42 crores, while balances with the Reserve Bank have decreased by Rs. 3.90 crores to Rs. 67.67 crores. There is a decline of Rs. 7.64 crores to Rs. 551.29 crores in investments. Advances and bills discounted at Rs. 1,328.81 crores show a fall of Rs. 4.96 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 68.4 percent, against 6.1 percent and 69.9 percent.

THE PROFIT OF THE UNITED BANK OF INDIA LTD HAS increased from Rs. 14.29 lakhs to Rs. 14.63 lakhs for the year ended 31st December, 1960. A dividend of 4.30 percent has been declared, subject to tax. Reserve fund is allocated Rs. 2.93 lakhs. After making other adjustments, there is a carry-forward of Rs. 2.08 lakhs, against Rs. 1.82 lakhs brought in. Deposits were Rs. 51.74 crores (against Rs. 47.68 crores). Investments amounted to Rs. 16.79 crores and loans and advances to Rs. 31.62 crores.

ESTIMATES COMMITTEE REPORT INDUCES WIDESPREAD SELLING

OPERATORS WORRIED ABOUT EFFECTS OF POWER SHORTAGE

Wednesday Evening.

THE Calcutta stock market has gone for a nose-dive during the past week. It has been hit badly by the Estimates Committee's recommendation that the Life Insurance Corporation's money should be reserved for the Government's use, and should not be invested in the private sector. The logic underlying the recommendation is far from clear, and it looks extremely doubtful whether the Government will accept it, especially since the suggestion would violate the assurances given by successive Finance Ministers after life insurance was nationalised. The stock market has nevertheless taken a gloomy view, although second thoughts have inspired a moderate recovery today.

In the market's opinion, the Estimates Committee has made one fundamental error: it has assumed that the L.I.C.'s funds belong, as of right, to the Government. In fact, of course, as the distinguished financial experts of the Committee ought to have acknowledged, the funds belong to the policyholders. This means that, when investing the money, the two most important factors to consider are ensuring security and maximising returns. If all the funds were handed over to the Government, or invested in Government securities, the returns the L.I.C. would get would be much less than they are today. Its profitability would suffer at a time when the question of improving the profitability of State-owned concerns is receiving much fond attention from Parliament. What the L.I.C. would in fact be doing is subsidising the Government by providing money cheaply.

The Estimates Committee's argument that, by buying the shares of existing companies, the L.I.C. has done nothing to promote the growth of industry, is naive. Operators hope that such ideas do not percolate to the kindergarten schools, for that is the sort of place where they are likely to be accepted. After all, if buying and selling existing shares does not promote investment, one might as well shut down the stock markets, since the scrip officially listed there have all been already subscribed. What the Estimates Committee forgets is that when the L.I.C. buys a share, it puts money into the hands of the previous shareholder. The latter may quite often use part of this money to buy shares in a new company. Thus is investment in new industries indirectly promoted even when existing shares are bought.

The Estimates Committee may or may not agree, but there is something to be said for a Government keeping its promises. One such promise, made at the time of nationalising life insurance and reaffirmed often subsequently, was that the pattern of investment for life insurance funds would not be changed. By and large, it must be said to the credit of the L.I.C. that this assurance has so far been fulfilled. A departure now would mean that official promises are not worth the paper they are written on.

Apart from the Estimates Committee's mental adventures, the stock market has had little to think about. Already last week it had gone into a bearish mood on the view that the technical position had become over-bought. The recommendation about the future disposal of L.I.C. funds thus served sharply to accentuate an incipient downtrend. The power shortage in West Bengal is causing much anxiety, especially since reports have appeared that many industrial units have had to cut their production quite drastically. The stringency of bank credit is also restraining operators.

Indian Iron have closed at Rs. 26.55 today, after touching a low of Rs. 26.12 during the past week. Other engineerings have moved in sympathy.

Coal shares are subdued, and jutes are worried about the fresh rise in fibre prices. Birla Jute, however, have resisted the decline fairly well, following reports that the Company is to go in for the production of acetylene and oxygen.

Miscellaneous industrials have followed the general trend of the market. But much interest is being taken in the share issue which Goodyear India has just announced. Bonus issue hopes have helped Indian Cable and National Insulated Cable, while Union Carbide have celebrated the publication of a satisfactory report. Electric Construction Equipment are steady on hopes of expansion. Sugar investors are worried about the sugar surplus; they have not reacted yet to the Government's assurance that it will bear the loss on sugar exports for the first year at least, as further details are awaited.

Tea shares are quiet as the price trend for the commodity at the London auctions has been discouraging.

Gilt-edged are steady, with fractional rises recorded in the short and medium-dated issues.

Bombay Market

HEAVY SELLING PRESSURE REDUCES PRICES

OPERATORS PANIC AT ESTIMATES COMMITTEE RECOMMENDATIONS

Wednesday Noon.

THERE has been a sharp decline in share prices in the Bombay stock market during the past week due to heavy selling pressure. Operators were panicked by the recommendation of the Estimates Committee of the Lok Sabha that the Government should take over the management of life insurance funds and that these funds should not be invested in stocks and shares. If the decision were to be implemented, the investment market would be deprived of a main source of funds. Considering the impracticable nature of the recommendation, the Government is unlikely to accept it.

Meanwhile, weakness developed as a result of over-bought position as was indicated by high carry-forward charges and bigger deliveries at the last settlement. The growing shortage of credit was also considered a restraining factor.

Tata Steel declined to a low of Rs. 146.75 and Indian Iron were quoted at Rs. 26.35. Prices of engineering shares also fell in sympathy with steel shares. Alcock Ashdown were quoted lower at Rs. 319 and Premier Construction were offered

freely at Rs. 190. In spite of the decision to establish a rod mill, Mukand Iron were neglected at Rs. 26.25. Tata Locomotive met with quiet buying on prospects of a rights share issue. Motor shares were quiet, and Hindustan Motor declined to Rs. 19.80. Premier Automobile were dealt in at Rs. 165.

Prices of cotton mill shares declined on a broad front. Bombay Dyeing were sold down to Rs. 65 on the observation made by the chairman of the Company to the effect that there would be no bonus share issue as long as the bonus share tax continued. Century were sold down to Rs. 573 and Svadeshi were offered at Rs. 259. Kohinoor dropped to Rs. 288 because its report was not up to market expectations. Khatau were indicated at Rs. 525 and Simplex were done at Rs. 185. Business passed in India United Ordinaries at Rs. 14.40 and Apollo found no support at Rs. 1.54.

Prices of miscellaneous shares were shaded in sympathy with the general pattern. In sugar shares, Belapur were indicated at Rs 280 and Phalton changed hands at Rs. 142.50. Walchandnagar Industries were quiet at Rs. 197 in spite of issuing rights ordinary shares. Among cement shares, Associated Cement were quietly steady at Rs. 156 on hopes of a bonus share issue, but Digvijay were sold down to Rs. 153.50. Mining shares were quiet, and Shivrajpur Syndicate declined to Rs. 87.50. Sellers predominated in steamship company shares, and Scindia Steam dropped to Rs. 14.60. Great Eastern Shipping were sold freely at Rs. 15.20. Chemical shares were quiet, and Tata Chemical touched a new bottom of Rs. 19.12. Synthetics and Chemicals were quoted lower at Rs. 155 and Indian Dyestuff fell to Rs. 485. Polychem were placed at Rs. 225. Bombay Burmah reacted to Rs. 605 on profit-taking. National Rayon were available at Rs. 505 on fears that the burden of the increased excise duty might have to be borne by the industry itself. Voltas were done at Rs. 273 and Ceat Tyre declined to Rs. 300.

Banking shares were quietly steady and fluctuations were narrow. Bank of India were transacted at Rs. 123 and Central Bank changed hands at Rs. 61.50. Insurance shares were quiet and turnover was restricted. New India Assurance were indicated at Rs. 60 and Vulcan were taken at Rs. 16.24.

There was scattered interest in electric company shares, and Ahmedabad Electric were dealt in at Rs. 84.50. Tata Hydro were done at Rs. 101.75 and Bombay Suburban were placed at Rs. 86.

Madras Market

SPECULATIVES LEAD IN GENERAL DECLINE

NEW ISSUE PROSPECTS DEPRESS

Tuesday Evening.

THE Madras stock market was quiet during the past week and prices declined on long liquidation. The pressure was particularly great in clearing shares due to lower advices from the Calcutta and Bombay stock markets. Operators were nervous because of the recommendation of the Estimates Committee concerning the investment of life insurance funds. In cash shares, buyers were few in view of many new share issues. The credit stringency also restrained activities.

Government securities were steady, and there was keen support for selected State Government loans. Public utilities were neglected, but selective support was forthcoming for banking shares. Discouraging advices from the Cochin auction sales induced easiness in tea shares. In spite of an improvement in the international price of coffee, shares were sold at lower rates. Rubber shares turned softer in sympathy with tea and coffee shares. Textile shares were quiet on predominance of sellers, but selected miscellaneous shares met with scattered interest due to good corporate news.

In the banking group, business was done in Indian Overseas at Rs. 187.50 and in Andhra at Rs. 100. Punjab National came to hand at Rs. 21.50. In public utilities, South Madras were quoted at Rs. 10 and Vellore were done at Rs. 13.50. West Coast came to hand at Rs. 14.

There were more sellers than buyers in the sugar section on fears of large stocks at factories. Deccan were dealt in at Rs. 14.10 and E.I.D. were quoted lower at Rs. 43.62. K.C.P. were transacted at Rs. 23.48 and Mysore were done at Rs. 59. United Breweries were quietly steady at Rs. 115.50 and Travancore changed hands up to Rs. 10.62.

Among planting shares, Blue Mountain were quietly steady at Rs. 3.30 on diversification prospects. The Company has decided to set up a plant to manufacture superphosphate. Business passed in Cochin Malabar at Rs. 7.75, but Consolidated Coffee were offered freely at Rs. 23.30. Emerald Valley were done at Rs. 6.50 and Ouchterlony were quoted at Rs. 4.40. Periakaramalai were steady at Rs. 4.10 and Peermade fetched Rs. 23.30 on paying a final taxable ordinary dividend of 15 percent. Be Be were quiet at Rs. 3 and Coffee Lands were sold down to Rs. 20.50. Gokul were bought up to Rs. 2.05 on paying a taxable ordinary dividend of 10 percent. Kil Kotagiri were steady at Rs. 5.25 and Lucky Valley were done at Rs. 13.87. Midland came to hand at Rs. 11.80, but Mysore Coffee were quiet at Rs. 5.55. Nilgiri were offered at Rs. 8.50 and Swinton were taken at Rs. 3.12. United Nilgiri were quoted up to Rs. 24.75 and Woodland were done at Rs. 8.

In textile shares, Lakshmi were quoted up to Rs. 168 and Madura were placed at Rs. 37.15. Travancore Rayon lost at Rs. 37.50 and South India Viscose were sold down to Rs. 160. Coimbatore Pioneer were done at Rs. 350 on the decision to issue rights B ordinary shares of Rs. 50 each to the existing shareholders in the proportion of three new shares for every share of Rs. 100 held. On every new share an amount of Rs. 16-2/3 will be paid by the Company itself by capitalising Rs. 10 lakhs out of general reserve. Bangalore Woollen were placed at Rs. 205, but Buckingham improved to Rs. 214 on producing excellent results. Jawahar were steady at Rs. 12.62 on paying a taxable ordinary dividend of 15 percent. Business passed in Rajalakshmi at Rs. 81.50 on the payment of a taxable ordinary dividend of 12 percent. Rangavilas were quoted at Rs. 48 and Venkatesa were dealt in at Rs. 197.

Among miscellaneous shares, Aluminium Industries declined to Rs. 23.35, as did Ashok Leyland to Rs. 9.20. India Cement reacted to Rs. 6 and F.A.C.T. were offered at Rs. 10.65 in spite of declaring a taxable ordinary dividend of 6 percent. Seshasayee Industries were steady up to Rs. 12.65 and Spencer were bought up to Rs. 25.25. Standard Motors were quietly steady at Rs. 16.75 and business was done in T. Stanes at Rs. 32.92. Tube Investment were placed at Rs. 285 and Jeewanlal were sold down to Rs. 8.08. Madras Aluminium came to hand at Rs. 25, but Mysore Paper were offered down to Rs. 24.50. Parry's Confectionery were steady up to Rs. 6.46 and Premier Fertiliser were done at Rs. 9.50.

London Market

STOCK MARKET RISES

BUDGET PROPOSALS WELL RECEIVED

Wednesday, 19th April.

THE Chancellor of the Exchequer's Budget proposals were well received in the stock market, and with the notable exception of South African gold shares which were unaffected by the Budget, prices advanced on a broad front in response to the proposals. Prior to the Budget, the market had reacted on profit-taking, but resumed its advance on the day in question. Business in industrials was at a very high level throughout. The industrial market was pleased with the absence of a capital gains tax in the Budget and the fact that there is to be no immediate restraint on consumer spending; while the surtax concessions were welcomed. Against these factors, the rise of 2½ percent in the profits tax was considered to be not of major importance. However, the possibility of a payroll tax and of a 10 percent increase in indirect duties being imposed some time in the future, caused some uncertainty, but did not impair the general firmness of the industrial market. The March overseas trade figures, which appeared on the morning after the Budget, were somewhat disappointing, and tended to restrain any further post-Budget rise. Gilt-edged securities went ahead on the Chancellor of the Exchequer's statement that the Government will not be looking for new money from this market in 1961-62, but gains were reduced by the disappointing trade figures. Insurance shares were a good market throughout, and recorded appreciable gains while banking shares were firm. Copper shares were subdued, but tin shares continued their advance before reacting on profit-taking. The British Petroleum results disappointed the oil share market and prices reacted after going ahead earlier in the week. Rubber shares were subdued and recorded very little change, but tea shares attracted a small demand. News that a state of emergency had been declared in Ceylon had little or no effect on the latter section.

NAMES AND DATES

The 28th annual general meeting of the Indian Sugar Mills Association, Calcutta, will be held on 4th May at 4-30 p.m. at the ball room of the Hotel Imperial, New Delhi. Mr. D. D. Puri, the president of the Association, will preside over the meeting.

FALL IN SUPPLY OF CASHEW KERNELS EXPECTED

CROP FAILURES REPORTED FROM PRODUCING CENTRES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE current year's world supply of cashew kernel, it is reported, will be less than last year's due to the smaller output of cashewnuts in India and the damage caused to the African crop. The Indian crop is 20 percent down at about 45,000 tons, according to the processors in Quilon. Crop failures are reported from central Travancore and north Malabar—two major producing centres of Kerala. Reports from the producing centres in Africa say that the Portuguese east Africa's cashew crop has been extensively damaged by cyclone. A consignment of 7,000 tons of nuts, from that area, which reached the processors in Kerala recently, showed heavy damage. Although the total availability of raw nuts from Africa may be larger, the output in terms of kernels will be down by 30 percent this year. The African crop is estimated at about 130,000 tons, against last year's 100,000 tons. The bulk of the output has already reached India, and the balance will reach here in another two or three months. Meanwhile, in anticipation of a shortage, the processors are building up stocks and are willing to pay high prices for the available supplies of raw nuts. Prices have, therefore, gone up to Rs. 920 a ton for the best quality African nuts and Rs. 870 a ton for Indian nuts. Compared with Rs. 750 a ton for the former ruling at this time last year, the prevailing rates are substantially high. At the current price, processed kernels should fetch at least 58 (U.S.) cents a lb to make precessing worth while, but the current American offer is only 52 cents.

Russia bought about 50,000 cases of 50 lbs each for prompt shipments a few days ago at 53½ cents a lb. She is expected to come again shortly for another substantial quantity. But she is hesitant to pay the rate of 55 cents which Indian exporters are demanding. Export dealers in Kerala believe that prices will ultimately move up to 58 cents in view of the anticipated shortage of kernels amounting to 200,000 or 250,000 cases. Last year the output was 1.7 million cases, but unlike in previous years there was no carryover from last year since the entire quantity available was sold. There is, however, no indication of a fall in demand. On the contrary, it is apparently rising. Under the circumstances, prices will definitely go up.

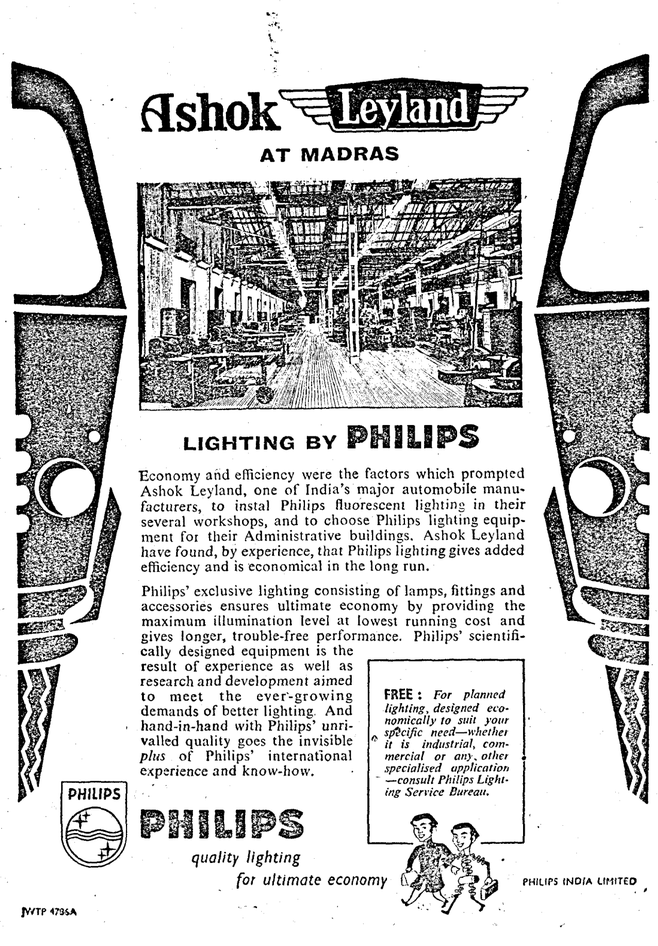
Disintegration of Coir Factories

The disintegration of the coir industry in Kerala has become more pronounced. Coir factories in Alleppey and other places, which were established and run by European pioneers, are being either closed or are changing hands. Smaller units which are coming up in the countryside offer cut-throat competition to the bigger units. These mushroom factories do not pay the minimum wages and other amenities statutorily provided for factory workers. It is reported that workers seeking employment in these factories do not insist on minimum wages, probably out of helplessness. Even workers' co-operatives do not pay the minimum wages, and the reason is that the finished products cannot be sold in the market after paying the minimum wages in spite of a 20-percent increase in prices.

The price of husks has increased disproportionately compared with the rise in the price of finished products. Unless the price of husk is linked with the price of coir yarn on a reasonable basis, the successful implementation of minimum wages will be a far cry. Any legal control of the price of husk will lead to complications, so the scheme my become unworkable. The Central Government which is the proper authority to introduce price control in husks seems to have disapproved it on various valid grounds. One cannot, however, question the good intentions of the State Government in fixing the minimum wages because the condition of workers is far from satisfactory. The average annual income of a coir worker is estimated at about Rs. 100 which is nothing more than a starvation wage. Too many people depend on the industry for their livelihood. There is a clear case for diverting a substantial portion of this number to other gainful employments.

COCHIN TEA SALES

At Dust Sale 15, 270,000 kilograms of tea were on offer. There was a good demand. Prices were irregularly 10nP easier while the residuals were the weakest feature of the sale.



Commodity Markets

TIN PRICES RISE IN LONDON METAL MARKETS

COPPER FIRM: LEAD WEAKENS

THE recent meeting of the Lead and Zinc Study Group in Mexico City diminished rather than increased interest in lead and zinc pending the *communiqué*, as dealers were unable to anticipate the decisions. In any circumstances, however, tin, as it has behaved recently, would have dominated the metal market. A general factor, affecting the other metals as well as tin, was the critical situation in Laos. The strengthening belief that the economic recession was ending in the U.S.A. and other countries which had suffered it was likewise conducive to a rise in values. The decision of the International Tin Council, at its recent meeting, to impose no restrictions on the producing countries' exports in the coming quarter was expected. Since the quotas were withdrawn last year, the price had risen considerably further, and the existing relation between supply and demand could not justify any restriction on deliveries. More interesting was the plan which emerged from the meeting for a new agreement to supersede the present one in the middle of the year. The new agreement will be based on a pool containing 12,500 tons of metal and the cash equivalent of 7,500 tons of metal. Since the specified content of actual metal was 2,500 tons more than the existing I.T.C. stock, it seemed at first sight that the buffer-stock manager would be an active buyer in the coming months; but apparently the ratio of cash to metal can at first be higher than the figures indicate.

Decontrol of Exports

The buffer stock has become much more important than the quotas which, in principle, can of course be reimposed. In the last quarter of 1960, when exports were free, Malaya disposed of some tin which accumulated in producers' hands while exports were restricted; but in the current year—with no such addition to current output available—supplies from Malaya have been reduced. As other producers have been unable to fill the gap, the decontrol of exports has had no perceptible effect on supplies, and predictions of a serious shortage (A. Strauss and Company hazards a guess that consumption will exceed available supplies by 10,000 tons this year) have raised the price to the highest level in years—even when the biggest consumer, the U.S.A., has been operating at a sub-normal rate.

Lead and Zinc Stocks Abundant

The position of lead and zinc is quite different, if only because stocks are abundant. It is complicated by the fact that the two metals are mined together but not subject to the same forces of demand. Lead is essentially the weaker: it is suffering from the use of substitutes, whereas consumption of zinc is progressing steadily.

WHOLESALE PRICE INDEX FALLS.

THE official wholesale price index (base: year ended March 1953=100) registered a fall of 0.7 percent to 126.6 during the week ended 1st April, 1961, compared with 127.5 for the previous week. The index was lower by 0.5 percent when compared with the corresponding week of the earlier month, but was higher by 6.6 percent than that of a year ago.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 1-4-61	25-3-61	2-4-60

New Delhi

SANCTIONS AGAINST BREACHES OF CODE OF DISCIPLINE IN INDUSTRY

MINISTER GIVES REASONS FOR PREVENTING EXPANSION OF PRIVATE REFINERIES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Standing Labour Committee at its sixteenth session held in October 1957, recommended that the organisations of employers and workers should take the following steps against their constituents who are found responsible for breaches of the Code of Discipline: (i) to ask the units to explain the infringement of the Code; (ii) to give notice to the unit to set right the infringement within a specified period; (iii) to warn, and in cases of more serious nature, to censure the unit concerned for its action constituting the infringement; (iv) to impose on the unit any other penalties open to the organisation; (v) to disaffiliate the unit from its membership in case of persistent violations of the Code; and (vi) to give no countenance in any manner to non-members who did not observe the Code.

The committee also recommended that grave, wilful and persistent breaches of the Code by any party should be listed and widely publicised. To strengthen the above sanctions, the Indian Labour Conference, at its seventeenth session in July 1959, recommended the following additional measures: (i) failure to observe the Code would entail de-recognition normally for a period of one year. This period may be increased or decreased by the implementation committee concerned; and (ii) a dispute may not be ordinarily referred for adjudication if there is a strike or lock-out without proper notice or in breach of the Code as determined by an implementation machinery unless such strike (or direct action) or lock-out, as the case may be, is called off.

Labour Ministers Support

The Labour Ministers at their conference in January 1960, reviewed the working of the Code and suggested the following further sanctions: (i) the employers or unions which refused to accept the Code may be denied the benefits of recognition and the Government may, unless it is compulsory under law, withhold assistance from such recalcitrant unions and employers in the settlement of disputes. This denial may also be exercised in the case of parties which having accepted the Code are found guilty by the implementation machinery of infringing it; (ii) at the time of registering a trade union under the Indian Trade Unions Act, it may be persuaded to accept the Code; and (iii) fullest use of law should be made wherever it provides prosecution of parties for breaches of the Code and labour enactments.

The above suggestions were placed before the Central Implementation and Evaluation Committee at its third meeting held in April 1960 for consideration. The Committee, while recommending that the sanctions so far laid down by the Standing Labour Committee and the Indian Labour Conference should be applied stringently by the central organisations against erring members, suggested that the question of applying additional sanctions, to make the Code more effective, may be referred to the central employers' and workers' organisations and their views placed before a tripartite conference. The views of the central employers' and workers' organisations have accordingly been obtained.

Viewpoints of Workers

The A.I.T.U.C. is opposed to the sanctions proposed under the Code as, according to it, these are being applied against the workers only. In its view, the so-called sanctions against employers are totally ineffective and are never taken—the stage has not yet reached for considering sanctions under the Code and the decisions of the Labour Ministers' Conference in this matter should be rescinded. The Hind Mazdoor Sabha feels that additional sanctions are neither necessary nor desirable for more effective implementation of the Code. It is of the view "that the Code has suffered in the past not because the sanctions against the breach of the Code were inadequate or ineffective but because in most cases, implementation machinery has been ineffective and also because the existing sanctions have not been invoked." Most of the sanctions, the Sabha feels, are likely to prove heavily weighted against workers as there are no effective sanctions against employers. It has, therefore, suggested that instead of diverting attention towards further multiplication of sanctions, it is more urgent to pay adequate attention to the positive aspects of implementation. The United Trades Union Congress also considers that time has not yet arrived to apply the sanctions stringently and the sanctions suggested by the Labour Ministers' Conference are too premature. The I.N.T.U.C. feels that before recommending any additional sanctions, strictest measures should be taken to enforce the present sanctions. It is of the view that the sanctions, as recommended by the Standing Labour Committee, are applicable to workers and there are no specific sanctions against the employers; a number of employers also escape their obligations under the Code by not becoming members of a central organisation.

Suggestions of Employers

Of the central employers' organisations, the Employers Federation of India and the All-India Manufacturers Organisation have no objection to the adoption of the three sanctions recommended by the Labour Ministers' Conference. The latter, however, considers that no additional sanctions beyond those recommended by the Labour Ministers' Conference is necessary as enough experience has not yet been gained and that even the existing sanctions have not been enforced in the case of workers' organisations. The All India Organisation of Industrial Employers is of the view that the sanctions proposed by the Labour Ministers' Conference would not help much in the implementation of the Code which can be better achieved by mutual goodwill among employers and workers rather than by increasing the number of sanctions. The whole issue will be discussed by the Standing Labour Committee here on 28th and 29th April.

Welfare of Iron Ore Mining Workers

The iron ore mining industry employs a substantial labour force. During 1959, about 41,000 persons were employed for raising 7.3 million tons of ore, compared with about 26,000 persons employed in 1952 for an output of 3.9 million tons. Fulfilment of the targets of iron ore production fixed under the plans would involve employment of additional labour on a large scale. Constant efforts have been made by the Government to effect improvement on a voluntary basis in the working and living conditions of the labour engaged in the industry. The results obtained have, however, not been encouraging. The reports of the officers of the industrial relations machinery who, during their visits to mines, persuade managements to provide at least the minimum facilities, show that in spite of their efforts, facilities such as water supply, housing, sanitation, education and recreation are either generally lacking or inadequate. A working group set up in 1956, which included representatives of employers and workers, while commenting on the unsatisfactory labour conditions in mines surveyed by them, reported that individual employers had their own limitations, that even among the larger employers instances of indifference to the problem were by no means rare and that in any case, smaller units could not achieve anything by themselves. They also stated that the problem of housing was so huge in magnitude and involved so much financial outlay that it could not be tackled successfully without Government intervention. The group, therefore, recommended that a welfare fund, financed by a special cess, on the pattern of the Coal Mines Labour Welfare Fund or the Mica Mines Labour Welfare Fund, should be set up. In the light of the position stated above, it is proposed that a similar fund should be set up for the benefit of labour in the iron ore mining industry. The annual income of the Mica Mines Labour Welfare Fund is about Rs. 26 lakhs. The number of workers in the mica mining industry is about 34,000. As the number of workers in the iron ore mining industry is about 41,000, it will not be possible to undertake welfare measures on a satisfactory scale, unless an annual income of about Rs. 30 lakhs is assured for the present. It has been worked out that this would necessitate imposition of a cess at a rate not exceeding 50nP a metric tonne of iron ore produced. The proceeds from the cess will be paid to the credit of a fund to be called the Iron Ore Labour Welfare Fund which will be used for defraying the cost of measures for the benefit of labour employed in the iron ore mining industry. The fund will be administered in consultation with tripartite advisory bodies consisting of representatives of the Central and State Governments, employers and workers. This proposal will be discussed by the Industrial Committee on Mines Other Than Coal, meeting here on 24th April.

Policy for Oil

Mr. K. D. Malaviya, Central Minister for Oil, intervening in the Lok Sabha debate on demands for grants of his Ministry, made a definite and unequivocal declaration that the Government is opposed to the expansion of refining capacity in the private sector. He declared: "It is said that the consumption of petroleum products at the end of the third plan will be something like between 12 and 14 million tons. Let me take it to be 12 million to 13 million tons. The present capacity of the private sector oil refineries is about, say, 6.3 million tons—I do not want to go into the details—and the estimated existing capacity of the public sector refinery, which is coming next year into the field, will be 2.75 million tons—about 3 million tons. If the Gujarat refinery comes—it is sure to come and I want to assure this House, within this plan period, perhaps a little later than the middle of the third plan—then that will be a two-million ton refinery. Then it comes to near about 5 million tons installed capacity under the public sector and about 6.3 million tons under the private sector. The total will be about 11.5 million tons.

"Now, we have a further potential for expansion in the public sector refineries. These expansions are marginal and these marginal expansions of public sector refinery will take the installed capacity of refineries by the end of the third plan period or early fourth plan period to something like 13 million tons or 14 million tons. These marginal imports will, I take it, be about 10 percent to 15 percent of the total consumption of the country. If we shall consume about 13 million tons of petroleum products by the end of this plan period, that will include about 10 percent to 15 percent or about 1½ million tons which have to be imported —diesel and kerosene—because one refinery must produce motor spirit and all that and a limited quantity of diesel. Therefore, if we have an installed refining capacity of 12 million or 11.5 million tons, we will consume 14 million tons and there will be no necessity of having further capacity for refining by the end of the third plan period.

"What happens in the fourth plan period is a long way off and we shall consider, we can consider, all these facts as we approach the middle of the third plan period. We are not in a hurry and I do not want my friends to be in a hurry. And nobody can hustle the Government of India to take away that installed capacity or potentiality for expansion in the public sector by just putting forward an argument, either directly or indirectly, that there is plenty of foreign exchange involved in it. We can do it cheaper and, therefore, the Government of India should hand over the expansion capacity to the existing private sector refineries. We would like to take their help; but we cannot do it. There was a time when this question could have been considered, and I have to remark that they missed the bus, which is not our fault. Two years back, some of the top American oil experts came here and they agreed with me that these refinery agreements should be revised 'in the interest of our own country and our own people.' They said, 'There is no reason why these people, if they want to exist here, if they want to take your co-operation and give you their co-operation, should not revise the agreement.' They are not agreeing to it. Why should we then agree to the expansion of the refinery capacity, so long as these agreements last? In the meantime, in the last two years, we have made our arrangements. Therefore, I say they missed the bus at that time, and I am sorry for it. Because, I want their co-operation. I still want their co-operation under some conditions, which conditions are very well known to them. That is the story of the expansion of refineries."

Loss on Sugar Exports

The sugar industry, as already reported, will incur an estimated loss of over Rs. 4 crores on account of the export of 100,000 tons (101,600 metric tons) of sugar released during the current season. The Indian Sugar Mills Association, which is the export agency, has already arranged for the export of over 81,700 metric tons of sugar, of which about 60,600 tons have been shipped to various destinations by 12th April. The exports so far arranged are: Malaya about 51,000 tons; Persian Gulf ports 20,600 tons; Ceylon 3,050 tons; Burma 6,500 tons; and Mombasa 560 tons. Export markets for the sale of the balance of sugar released, namely, 19,900 tons, are being explored. The loss incurred on exports is due to the fact that the world price of sugar is very much lower than the ex-factory price of Indian sugar, and India has to export at the international rate in order to sell her surplus. There has been a further depression of the international price this season due to the offloading of sugar from Cuba, and a good beat crop in Europe.

Mr. Kanungo to Lead Trade Delegation

The Commerce Minister, Mr. Nityanand Kanungo, will lead the trade mission to Italy, which leaves on 12th April. It will include three officials, Messrs R. V. Raman, Joint Secretary, B. C. Mukarji, managing director, Fertiliser Corporation, and N. R. Reddy, Deputy Secretary and officer-in-charge of foreign collaborations. It will also include four non-officials. Mr. Kanungo, after completing his work in Italy, will also visit Geneva, Frankfurt and London.

Cement Production Staggered

In the context of the present shortage, there has been some criticism of staggering the cement production target two years ago. Enquiries show that it was largely to enable the cement-making machinery firms to complete their projects rather than due to defective planning.

Acquisition of Yugoslav Ships

Enquiries show that Ratna Lines have already acquired one cargo boat from Yugoslavia and are negotiating for another cargo boat. Negotiations with Yugoslavia for the supply of four or five tankers are also in progress. Negotiations for the purchase of power equipment for Jamja and Pariya projects with Yugoslavia, are also on. These projects will be financed from the recent Yugoslav credit. An Indian trade delegation, it is expected, will participate in the Zagreb Industrial Fair in Yugoslavia. A Yugoslav delegation, it is expected, will visit the Industries Fair in New Delhi next winter.

U.K. Coal Expert to Advise

The deputy director-general of British National Coal Board, Mr. Elliott, is expected here shortly

to prepare a project report on three underground coal mines in Jarangdih.

Public Sector Achievements

The Lok Sabha last week discussed the demands for grants of the Central Ministry of Commerce and Industry. The Minister for Industry, Mr. Manubhai Shah, clarified certain points raised by his critics. He said: "The year 1960 has been remarkable in the growth of some of the public sector undertakings. In this year, we completed the major heavy drugs project, of which four units are being started very soon. In 1963, these four projects will start production and when they achieve full production in due course, they will be yielding life-saving drugs to the extent of Rs. 30 crores. One is in Hardwar near Rishikesh. That is for the antibiotics. It will make about 140 million mega units of penicillin and about 90 tons of streptomycin and 100 tons of tetracyclines. The second is in Sanatnagar, which is going to be one of the biggest drug projects of its kind in the whole of Asia. That is a synthetic drugs project which will be developed there at the cost of Rs. 12 crores to Rs. 15 crores. That is in Hyderabad. Sanatnagar is a suburb of Hyderabad. The third is for surgical instruments and medical appliances, which is being developed in Madras. The fourth is in the State of Kerala.

"We have practically completed preliminary preparations for all our third five year plan projects during 1960-61. The House knows about the heavy machine building plant in Ranchi and the coal-mining equipment plant in Durgapur. We have finalised the expansion project of the heavy machine-building plant to the extent of complete manufacture of plant and equipment of one steel plant of about a million tons a year, when it goes into full production. In the coalmining project in Durgapur, we are also undertaking the expansion from 30,000 tons to 45,000 tons, which will include not only the coal-mining equipment and other minerals mining equipment, but also mineral oil equipment to which the House is very much devoted. It will include the manufacture of exploration rigs, drills and various other types of drilling equipment required by the Ministry of Mines and Oil for the purpose of exploration of mineral oils. The heavy machine tools project, to which we were looking forward, has also been finalised and is being established by the Heavy Engineering Corporation.

"It is our declared policy that we should avoid industrial complexes, where they have grown, in the location of the public sector undertakings. That is why we established the machine tool project in the Punjab, the heavy electricals is going to be in one part, somewhere in the south, and the other one in the north. Out of the two instrument projects one is being finalised and the other is still being negotiated. Again, one of them will be in one State and the other in another State. During the third five year plan period, every State is going to have the establishment of a major public sector engineering undertaking."

Industrial Policy

Speaking on the Industrial Policy, he said: "In the first plan, in the public sector, the investment was Rs. 60 crores. Against that in the private sector, it was Rs. 330 crores. In the second plan, as we go along, the public sector investment expanded to an additional Rs. 720 crores; that is, 12 times more progress, more investment in the public sector, as compared with Rs. 850 crores in the second plan in the private sector. Due to the deliberate policy accepted by the party in power towards the goal of socialism, the public sector dominates the industrial activity and we have oriented the investment from Rs. 60 crores in the first plan to Rs. 720 crores in the second plan. In the third plan, as the House knows, the public sector investment is going to be about Rs. 1,550 crores—my own estimate is that it may go up by another Rs. 100 crores, as against Rs. 1,200 crores or Rs. 1,300 crores in the private sector.

"These figures are outside the power projects. As for power, the progress has been phenomenal in the public sector. In the first plan, Rs. 260 crores was the investment in the public sector on power, which is the raw material for industries, as against Rs. 42 crores in the private investment on electricity. In the second plan, Rs. 460 crores was investment on power in the public sector, as against Rs. 65 crores in the private sector. In the third plan, Rs. 1,040 crores is the investment on power in the public sector, as against Rs. 50 crores in the private sector. Therefore, the basic instruments of production and the tools of economy are remaining in the hands of the community, so that we can work as the guards and sentinels of the public good and the good of the community. This I wanted to bring out as the first point, that is the dominating role of the public sector, which is prescribed in the Industrial Policy Resolution of 1948, more elaborated in 1956, and which has been enshrined in the Indian Constitution that we shall try to subserve the interests of the community as against private interests."

Restricting Monopolies

Speaking on monopolies, the Minister said: "The production of the bulk of the consumer goods in this country that there is not a single industrial unit or industrial house—and the names are already familiar to the Hon'ble Members here—which owns more than 5 percent of the national production. There are four exceptions to this. One was the Metal Box Company of India manufacturing containers. And I am glad to inform the House that due to the Industrial (Development and Regulation) Act, the production of this Company, which at one time enjoyed almost a monopoly in containers, has today been reduced to 20 percent of the national production. We have licensed, with a deliberate view, new units outside this particular Company, to see that 80 percent of the production goes to other units.

"The next is A.C.C. in cement. Historically, the House is aware how the A.C.C. came into being. It was a combination or a merging of four or five houses. At the time of independence and particularly in 1951, they controlled 64 percent of the national production of cement. By a deliberate licensing policy of seeing that new entrepreneurs are always encouraged as against the established ones, their share has been reduced to about 39 percent. I can assure the House that during the third plan, it will be reduced to less than 25 percent. Because, it has been our definite policy, particularly after the 1956 Resolution, to see that every time a new entrepreneur comes, we give him preference in the matter of industrial licensing, whether it is for cement or for any other type of product. A.C.C. has expanded; there is nothing wrong about it. In the total gross capacity, we have expanded from 3.1 million tons to 8.9 million tons; and A.C.C. has expanded from 1.9 million tons to 3.8 million tons. This is very small. Otherwise, it would not have gone down from 64 percent to 39 percent.

"The third one was W.I.M.C.O. W.I.M.C.O. was the main producer or almost the sole producer of matches in this country. We brought in differential excise. A, B, C and D classes of units were encouraged; 19 big or medium-scale units were encouraged, with the result that the production capacity of W.I.M.C.O. has stagnated during the last five years, and production of about 16.5 million gross matches, outside the 22 million of W.I.M.C.O.'s has gone to the non-W.I.M.C.O. group. What I want to place before the House is that, from 100 percent, we have brought it down to 60 percent. The only group which is still going to be handled is industrial gases. Even here we have licensed 14 new units to see that in the next two years—industrial gas is not an important item of national economy, so we should not be overobsessed with it, but even there, we are trying to see that more new entrepreneurs come in and produce these industrial gases."

Bigness in Industry

Referring to "bigness" in industries, the Minister said: "Our policy is that we are not allowing these big industrial houses to become bigger, by letting them have more of those industries which are well established, the new entrepreneurs would be welcomed." In conclusion, he referred to profitability. He said: "The real point is that the gross profit in 1950 and in 1958 does not take into account the capital employed. In the last ten years, all these industries have had 200 or 300 percent of new investment and actually the profitability for capital employed, after deduction of tax, has gone down. The index number of profitability for all industries was 93.2 in 1958, compared with 100 in 1950. As a matter of fact, the new investment has not yet become ripe enough to have earned more profit which would be a legitimate return to the investor. Actually, as happens in every country because the period of gestation is there, there is 7 percent return on the overall total capital employed in different industries."

Aluminium Plant in Public Sector

The newly appointed Minister for Commerce and Industry, Mr. K. C. Reddy, in winding up the debate, made two specific announcements. First, he said that the Government had decided to entrust the State Trading Corporation "with greater responsibility for improving exports." Secondly, he said that the Government had decided to set up an aluminium plant in the public sector. This is what he said: "I would now like to take up an important aspect of our industrial requirement. This is what is characterised as 'maintenance requirements.' There are some items which are essential to the growth of industrial production and which are not likely to be available in sufficient quantities from within our country. Non-ferrous metals, particularly copper, zinc, lead and aliminium, have so far been available to us mainly by way of imports. Such imports are known to have cost the country in the recent past about Rs. 40 crores a year. Although there are plans for increasing the production of copper, lead and zinc in the country, such efforts are limited by the fact that we do not have in abundance the ores which are necessary for their production. The position is, however, different concerning aluminium. We have ample proved reserves of bauxite of a quality that compares favourably with what is available in other parts of the world, and it is my earnest belief that though there are many competing demands on electrical energy, we will be able to spare from our new projects sufficient power, at reasonable costs, to enable us to produce aluminium in sufficient quantities to reduce our dependence on imported non-ferrous metals. The possibilities of securing a large increase in the output of aluminium and of substituting it for imported non-ferrous metals are engaging the attention of my Ministry. In this connection I would like to say that the question of establishing an aluminium unit in our country in the public sector is also engaging the attention of my Ministry."

He added: "I would now like to say a few words about our foreign exchange requirements. The effort to reduce the foreign exchange content of what we produce has, however, its limits. In the case of fertilisers, for instance, we will have to import some basic raw materials which we do not have available in the country in sufficient quantities, and the more we produce the greater will be our import requirements. Further, the effort to reduce our dependence on imports itself generates import requirements of a high order."

D.L.F. Loan for Small Industry

The signing of a $10-million U.S. Government loan to enable Indian small industries to obtain needed equipment and machinery, has been announced by the U.S. Development Loan Fund. The loan is made to the National Small Industries Corporation Ltd, an Indian Government concern with offices in New Delhi. Approval of the loan was announced by the D.L.F. in June last. The interest will be at the rate of 5 percent a year and will be payable semi-annually on all outstanding balances. The principal amount of loan will be repayable within ten years after the first disbursement and repayment of both principal and interest will be made in rupees. The object of the loan is to assist in financing loans given by the National Small Industries Corporation Ltd to small private industries for procurement of machinery from outside. In the cases of purchases by single applicants, the procurement exceeding $50,000 will be limited to sources in the U.S.A. Among firms which have received equipment through the National Small Industries Corporation programme are those producing hardware, agricultural implements, clocks, tiles and bricks, paints and varnishes, plastics, insecticides, stationery, rope, and a variety of other products.

Foreign Payments

The broad break-down of total foreign payments on private and Government account is as follows:

	1957-58	1958-59	1959-60
		Rs. crores)	
Private account	874.2	678.7	657.8
Government account	586.7	576.4	612.1
Total:	1,460.9	1,255.1	1,269.9

This classification is in terms of the status of the licensee, not in terms of the ultimate user.

Indo-Pakistani Trade

The Government of India has decided to grant licences for the year April 1961-March 1962 for the import of 18 items from Pakistan as provided in the trade agreement between the two countries concluded on 21st March, 1960. The items are: fresh fruits; dhanicha seeds; chuna khari pearls; eggs and poultry; guar meal; books and periodicals (in Indian and Pakistani languages); gramophone records (in Indian and Pakistani languages and instrumental); films exposed (in Indian and Pakistani languages); fish dry and salted; green spices; betelnuts; drugs and medicines, including unani and ayurvedic; black cumin seeds; mother of pearl shells; betel leaves; flourspar; nylon guts and monofilament and live turtle (tortoise). Protocol No. I to the trade agreement provides for import of these items from Pakistan against payment in non-convertible Indian rupees. Licences will now be issued subject to this condition.

Fertiliser Plant in U.P.

It has been decided to establish a fertiliser factory in U.P. with an installed capacity of about 80,000 tons of fixed nitrogen a year. The end-product will be urea. The project will be in the public sector and will be executed by the Fertiliser Corporation of India Ltd.

Productivity Teams

Some 12 productivity teams will be sent under T.C.M. aid to the U.S.A. and one or two other countries in Western Europe and Asia under the 1961 programme in the following subjects: (1) paper industry, (2) machine tools industry, (3) quality control, (4) motor-vehicle ancillaries industry, (5) welding, (6) cement industry, (7) light electricals industry, (8) office management, (9) refractories industry, (10) printing industry, (11) personnel management (wage systems, recruitment, training and placement) and (12) industrial relations including arbitration of industrial disputes.

Negotiations are being finalised for sending five teams to Russia and Czechoslovakia under aid from the Governments of Russia and Czechoslovakia in the following subjects: (1) coal industry, (2) oil industry, (3) textile industry, (4) machine building industry, and (5) iron and steel industry.

Utkal Machinery Ltd

A licence under the Industries Act has been granted to Messrs Larsen and Toubro Ltd, Bombay, to set up an undertaking in Rourkela (Orissa State) in the name and style of Messrs Utkal Machinery Private Ltd, for the manufacture of the undermentioned items of machinery, in collaboration with three West German firms, with a capacity of 6,000 tons initially, increasing to 12,000 tons ultimately a year: (1) sintering and ore preparation equipment, (2) crushing and screening plant, (3) equipment for coke oven and by-products recovery plant, (4) equipment for blast furnace and steel plant, (5) equipment for chemical plant including cement making machinery, (6) equipment for fertiliser plant and synthetic gas (7) plant for the distillation of oil and oil products, tar and benzole; equipment for refinery and petro-chemicals, (8) heat exchangers and condensers, (9) gas works equipment, (10) hydraulic equipment, (11) machinery and equipment for production of pulp paper and cardboard, (12) ropeways and cablecranes, and (13) industrial furnaces.

Indian Drugs and Pharmaceuticals

A company by the name "Indian Drugs and Pharmaceuticals Limited" has been registered in New Delhi with an authorised capital of Rs. 15 crores to implement the four drug projects to be set up with the assistance of the Russian Government. The detailed project reports on all the four drug projects from the Russian experts are expected to be received shortly.

Indian Tea in U.K. Market

Messrs J. Walter Thomson and Company, London, made a survey of the market for the Indian tea in the U.K.. The following observations have been made by the firm in its report it has made to the Government: (1) the total consumption of tea a head over the past four years has barely risen during a period of considerable expansion in the domestic economy and the standard of living. Judging from the changing habits of the younger age groups, tea consumption may well fall considerably in the future; (2) India's share of the U.K. market for tea has been gradually falling; (3) the total promotional expenditure for tea in the U.K. is considerably lower than that for other competing drinks; (4) most of the promotion for tea is in the form of advertising campaigns for individual brands of tea and these do not primarily promote tea itself as a beverage; and (5) tea promotion campaign by Ceylon may establish its reputation for quality which may well begin to affect the position of Indian tea in the mind of the consumer. The firm suggested the adoption of one of the following approaches to the problem: (a) either, promotion of tea drinking as such in the U.K. in collaboration with other producing countries and distributors; (b) or, India undertaking to promote on her own the consumption of tea as such without reference to the origin of the product; (c) or, India undertaking exclusively promotion work for her tea.

Trade Balance

During 1960 India's adverse balance of trade with Italy improved to Rs. 16 crores from Rs. 21 crores in 1959; with France to Rs. 9.4 crores from Rs. 13.4 crores; with West Germany to Rs 93 crores from Rs. 100.7 crores, but worsened with Switzerland to Rs. 8.5 crores from Rs. 7 crores and with Belgium to Rs. 10.9 crores from Rs. 8.5 crores. The main features of trade movements between India and these countries between 1959 and 1960 were a decline in imports from Italy, France and West Germany and an increase in imports from Switzerland and Belgium; and an increase in exports to Italy, Switzerland, France, a marginal increase in exports to West Germany and a marginal decline in exports to Belgium.

Programme for Foundry-forge

The foundry-forge plant being set up in Hatia near Ranchi will provide that necessary castings, forgings, rough machined components and finished rolls required for the heavy machine building plant. This plant is being set up in three stages, the third stage corresponding to the needs of the second stage (80,000 tons) of the heavy machine building plant.

On 19th August, 1958, an agreement was signed with Messrs Technoexport of Czechoslovakia for the preparation of the detailed project report, for the first two stages, delivery of machinery and equipment, supervision of the erection of the machinery and consulting activity and technical services for the first stage of the plant.

On 31st March, 1961, two contracts were entered into by the Heavy Engineering Corporation, Ranchi, with Messrs Techno-export, Prague; one, for the import of spares worth Rs. 77 lakhs f.o.b., for the machinery and equipment to be delivered for the first stage of the plant, and the other, for the import of additional machinery and equipment and spares of the f.o.b. value of Rs. 7.6 crores, for increasing the output of the different plants in the foundry-forge project, to balance it fully with the first stage (45,000 tons) of the heavy machine building plant. Also on 7th february, 1961, the Heavy Engineering Corporation concluded a contract with Messrs Technoexport, Prague, for the preparation of a detailed project report for the first phase of the third stage of the foundry-forge project to match the capacity for meeting the needs for castings up to 90 tons and forgings up to 30 tons for the 80,000-tons stage of the heavy machine building plant. Arrangements for working out the details of the additional machinery and equipment for balancing this output have been taken in hand.

Economics of Food Imports

Professor Mahalanobis had in brief recommended that in order to feed the fresh additions to the population at the rate of 5 million a year, it would be necessary to provide an additional quantity of 700,000 tons of foodgrains every year requiring a very large amount of foreign exchange expenditure. The foreign exchange expenditure can be reduced considerably if a new fertiliser factory of 350,000-ton capacity is started every year; this would call for a decision four or five years ahead of the crop season. Similar expenditure for a heavy machine building factory, which could manufacture every year the plant and machinery in India for a new fertiliser factory of 350,000-ton capacity, would be however very small. Such a decision would have to be made about eight or ten years in advance of the season in which the fertiliser could be used.

London

U.K. GOVERNMENT ANNOUNCES CHEAPER AND LONGER CREDIT FOR EXPORTERS

E.C.G.D. PREMIUM RATES TO BE REDUCED

(FROM OUR LONDON CORRESPONDENT)

BRITISH exporters will be able to get cheaper and longer export credit as a result of three important changes in the Government's policy announced by Mr. Reginald Maudling, President of the U.K. Board of Trade, in the House of Commons the other day. In the first place, premium rates charged by the U.K. Export Credits Guarantee Department will be generally reduced by about 25 percent the cut to apply only to medium-term credit, and the largest reductions will be for credits to those markets where at present the highest rates are charged. Secondly, the Government has at last decided to permit export credit for more than five years from the time of delivery in the case of very large capital projects—such as power-stations, railways, ports and entire factories—and of ocean-going ships. The period will not be firmly limited but the extended credit will only be permitted for projects involving at least £2 million each. The E.C.G.D. will in these cases give 100-percent guarantee directly to a British bank or financial institution to secure loans made to creditworthy overseas purchasers. In "highly exceptional" cases, where even the new provisions are not enough to procure finance, the Government may provide a loan from the Exchequer under Section 3 of the Export Guarantees Act. This will only be done if there are "compelling reasons for regarding the project as one of outstanding economic importance to the United Kingdom."

Thirdly, a cheap and simple form of export credit guarantee is being offered to smaller firms which at present export less than £10,000 a year. They will be able to obtain cover for transactions with individual approved buyers abroad at a flat rate of premium "across the counter" at all branches of the E.C.G.D. This cover will be available either for two years or until the firm's insured export business has reached an annual turnover of £20,000. After that the normal E.C.G.D. procedure will apply. The exporter need only insure a single buyer until he has satisfied himself that E.C.G.D. cover will ease his export problems. The new policy will cover 90 percent of the exporter's risk. For any terms of payment up to six months' credit, and for any market generally accepted by the E.C.G.D., the premium will be 15s for every £100 covered. The new facilities have been carefully framed so as not to amount to an indirect export subsidy. Mr. Maudling told Press representatives later that it is the Government's intention to enable the British exporter to compete on fully equal terms with his overseas rivals, but not to encourage a credit race. He made it clear that the extension of credit insurance for large capital projects beyond five years is no violation of the Berne agreement. This applies only to "supplier credit" granted by the exporter to the purchaser abroad. The new long-term credit is essentially a "self-liquidating investment" which before the second World War would normally have been financed on the international capital markets. The new moves should bring important benefits in the medium-to-longer-term capital goods groups. In the short run, the main question for the City will be to provide the finance which the E.C.G.D. will guarantee. The principal burden will fall on the banks and insurance companies.

New Policy for State Industries

A silent revolution in the financial discipline applied by the Government to the nationalised industries is made known in a White Paper just issued. Instead of being vaguely expected to pay their way, "taking one year with another," the future financial objective will be that surpluses on revenue account over a five-year period will at least be sufficient to cover deficits. Provision will have to be made from revenue for interest and depreciation charges and for reserves. The reserves would be available as a contribution towards capital development and a safeguard against premature obsolescence. Each industry will be given a five-year target fixed in consultation between the Minister responsible and the board, and subject to annual review. Only the British Transport Commission will be exempt from the five-year plan. This is because special proposals for railway finance and administration were published four months ago. These are to become law next session.

No standard target will be set. For some industries it may be an "appropriate level" of self-financing of capital expenditure; for others a "specified rate of return" on capital employed. If an industry hits the target, in terms of satisfactory financial performance and prospects, well and good. If not, "the Government would be bound to take a closer interest." In such cases, a board will be "required to propose specific measures for righting the situation." The ultimate sanction, which the White Paper does not mention, but which has always been open to the Government, is to replace the board or certain of its members.

The White Paper states that the aim of the nationalised industries will be "to secure the necessary addition to their net revenue as far as possible by reductions in costs." But it also recognises that the industries "must have freedom to make upward price adjustments, especially where their prices are artificially low." The Government's long-term objective is clearly to make the nationalised industries self-financing. Few M.P.s will expect this to be achieved in the first five years, but a beginning has been made.

Stock Exchange Review

Last year, total ordinary dividends rose by 26 percent to £902 million, the largest total and the largest increase since the second World War. This is the feature of the Stock Exchange's 1960 review of interest and dividends on quoted securities. The Stock Exchange reports that nominal capital values rose by £773 million to £28,493 million while the aggregate market values fell by £600 million to £37,075 million. In all, £1,766 million gross was paid in interest and dividends, but the Stock Exchange estimates that not more than £700 million reached the pool of personal disposable income. The difference represents the effect of tax, duplication through companies owning shares in other companies, and the incidence of institutional investment.

Last year's rise in ordinary dividends underlines the ability of equities to outpace rising prices. Between 1947 and 1960, ordinary dividends grew by two-and-a-quarter times and capital values by one-and-a-quarter times, against the 60-percent rise in the cost of living. Out of last year's dividend increases, those from property companies and, rather surprisingly, from oil groups, were among the largest.

Life Assurance Records

Insurance companies' life funds probably exceeded £5,500 million at the end of last year, according to estimates published by the Life Offices and the Scottish and Industrial Life Offices. Net new savings through insurance in 1960 reached £490 million, against £423 million in 1959 and £366 million in 1958. Main factors behind last year's expansion were the increased pension business, higher yields on policyholders' funds and more favourable mortality experience. The rate of increase in new business, however, seems to be slowing down.

Out of last year's £490 million, which is after deducting all payments and management expenses, ordinary business overseas accounted for £41 million. A large part of this was carried out in Australia and Ceylon. No comparable estimates are available for foreign companies' share of British business. But their share of premiums is believed to be about 7 percent.

Record Savings Figures

The National Savings Committee has announced that the total net receipts from national savings during the financial year ended were £340.9 million, compared with £389 million for 1959-60 and £325 million for 1958-59. The total now invested stands at about £7,305 million. During the year, the savings bank reached another new peak with a combined turnover of more than £1,400 million. Defence bonds accounted for £107.3 million—nearly one third—of the year's savings. Savings Certificates added £56.8 million, and Premium Bonds £55.5 million net.

Hire-purchase Business Recovering

One of the factors sustaining the ordinary share market's optimism is the U.K. Treasury's forecast of a rise in the hire-purchase debt. The latest figure for the debt relates to February and although February was the first full month following the relaxing of hire-purchase controls, it is down by £6 million to £922 million. This slight drop is of small account: the important pointer is the index of new credit extended by hire-purchase finance houses. At 168 this index is only one-tenth below the index for February last year, whereas the January index dropped by one-fifth and the December index by one-third. The difference reflects the rising tide of motor-car sales, which account for most of the business of finance houses.

The fractional drop in the total debt in February occurred in the debt owned to shops (the debt owned to finance houses was unchanged at £607 million). Shop credit sales fell seasonally in February and in spite of easier terms the decline was about the same as last year's. Broken down, the figures show that only the household departments of departmental stores did significantly better business than last year.

Calcutta Markets

GOOD GENERAL DEMAND AT DUST TEA SALE

PRICE TREND MIXED

AT Sale No. 39, held on 19th April, there were 23,512 packages of Dust on offer at the Internal Sale, which met with a good general demand. Orthodox Dusts once again declined in value except for a few small and bright liquoring descriptions, which received better support. Bright legg-cut Dooars Dusts sold well, but the remainder were irregular and eased as the sale progressed. All clean medium and good C.T.C. teas met with good support and registered a considerable advance, but the fibrous types were much easier and difficult of sale.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb.
Plain Orthodox Dust	4.30 to 4.40	1.84 to 1.92
Medium Assam Dust	4.40 to 4.75	1.80 to 1.90
Legg-cut Dust	4.50 to 5.20	2.02 to 2.24
Medium Assam C.T.C. Dust	5.80 to 6.30	
Good Assam C.T.C. Dust	6.60 to 7.10	2.45 to 2.80

(Quotations are inclusive of excise duty.)

HIDES AND SKINS QUIET

The market was quiet. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 11th April and 17th April, 1961)

Cowhides: Wet salted (Ord.) 17,400 pcs. on the basis of Rs. 8.25 to Rs. 12.75 and Rs. 15.25; Wet salted (slaughtered) 18,700 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 21,600 pcs. on the basis of Rs. 280 to Rs. 300, Rs. 350 to Rs. 375 and Rs. 426 to Rs. 430; Purneah-Kissenganj 7,800 pcs. on the basis of Rs. 355 to Rs. 365 and Rs. 380 to Rs. 395; Patna-Muzafferpore 9,300 pcs. on the basis of Rs. 345 to Rs. 390; Muzafferpore-Kissenganj 3,100 pcs. on the basis of Rs. 455 to Rs. 525.

Bazaar Stocks

(17th April, 1961)

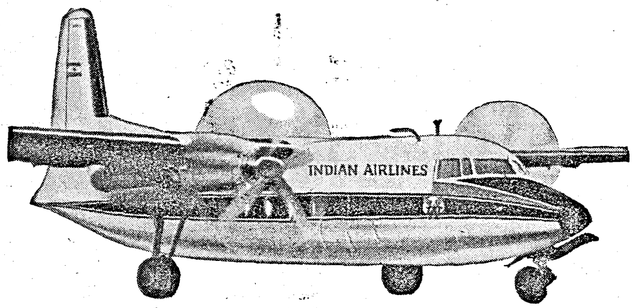
Cowhides: Wet salted 109,500 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 49,000 pcs. Assam-Dinajpur 183,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 281,100 pcs.

SHELLAC QUIET

During the week ended 18th April, the tone of the market was quiet. The range of quotations a package of 74.40 kilos (164 lbs) was as follows:

Standard Pure Buttonlac	Rs. 166 buyers; 170, 166 sellers.
Lemon No. 1 Shellac	Rs. 166 buyers; 170, 166 sellers.
Lemon No. 2 Shellac	Rs. 156, 154 sellers.
F.O. Superfine Shellac	Rs. 144, 142 sellers.
Standard One Shellac	Rs. 140, 138 sellers.
TN Pure Shellac	Rs. 120, 116 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 162 sellers.
Golden Bysacky Seedlac	Rs. 144, 140 sellers.
One B Seedlac	Rs. 134 sellers.
Two B Seedlac	Rs. 116 sellers.
Manbhum Fine Seedlac	Rs. 130, 128 sellers.
Fine Bysacky Seedlac	Rs. 118, 116 sellers.
Genuine Bysacky Seedlac	Rs. 108, 106 sellers.



The IAC FRIENDSHIP

ARRIVES

* A turbo-prop aircraft flying at over 4 miles a minute
* Powered by 2 Rolls-Royce engines of the type mounted on Viscounts
* Equipped with storm-warning radar
* Pressurised and air-conditioned
* Foam rubber seats that recline full length
* High wing configuration - shields cabin from sunlight, allows unobstructed view

THE FRIENDSHIP WILL BE INITIALLY INTRODUCED ON SOME OF IAC'S REGIONAL ROUTES ORIGINATING FROM CALCUTTA

INDIAN AIRLINES

IAC-21

Books

INDIAN TAXES: A GUIDE FOR FOREIGN INVESTORS

Taxation in India. (Published by A. S. Pandya for N. M. Tripathi Private Ltd, Princess Street, Bombay 2. Price Rs. 37.50, pages 542.)

In recent years, the Indian tax system has become more and more a rigmarole of unfathomable complexity for the layman. In what looked like an act of desperation, the Government of India some time ago issued a simplified guide covering at least the limited field of income tax. But like many others of its *genre*, it fell between two stools; the verbiage was too legalistic for the commoner and the details too inadequate for the informed. The first thing to be said in favour of this book, prepared by the Harvard Law School as part of its "international program in taxation", is that it achieves an excellent balance. Simplicity of explanation is combined with a wealth of detail in a manner few other publications of the kind have achieved. For the business man especially, the book should be extremely useful, since detailed indexing facilitates easy reference.

The work is divided into three parts. The first is rather general in nature, surveying the constitutional, economic and administrative background to the Indian tax system. The second contains a detailed analysis of the income-tax law, and reviews the statutory provisions, rules and case law. The third part discusses such ogres as the Central excise tax, the State sales taxes, the wealth tax and the expenditure tax. The readership which the sponsors of the work seem to have primarily in mind are foreign investors. From this point of view, the book fulfils a real need by providing the fiscal facts on which sound investment decisions must necessarily be based. Those facts often tend to get lost in the perennial debate between official apologists and business Cassandras on the incentives offered and disabilities imposed by the Indian tax system. At the same time, however, it must be confessed with moderate regret that the book is essentially explanatory and shy of anything very controversial. The virtue of such efforts would be well rewarded if from time to time the information offered were brought up-to-date. Fortunately, the sponsors indicate that supplements will be issued when new developments make them necessary. The promise adds greatly to the value of the work.

RURAL SURVEY

Then and Now: A Study of Socio-economic Structure and Change in Some Villages near Visva-Bharati. By Hashim Amir Ali. (Published jointly by Asia Publishing House, Bombay, and Statistical Publishing Society, Calcutta. Price Rs. 10.50, pages 124.)

This rural survey is a welcome addition to the growing literature on village studies. It is well written, a quality which is now rare in Indian economic writings. But this pleasure is tinged with disappointment for the opportunities lost by this country in recent decades, and with apprehension for the magnitude of the problems which still remain. The book studies four villages at two points of time—a quarter century apart. Under Tagore's inspiration, and with funds provided by Elmhirst, the author studied the four villages near Visva-Bharati. Twenty-five years later, he collected data for the same villages and has presented a comparison between the two pictures in this study. The village Goalpara—for which comparative economic data are presented for 1933 and 1958—seems to have changed little in these years. The three layers of caste are still as conspicuously distinct as before. Disparities in land ownership and incomes are no doubt less, but even this by itself cannot be taken too seriously. The conclusion relating to incomes that the average individual of the high-caste group of Goalpara is poorer in the inflationary year of 1958 than in the depression year of 1933 is bitter to swallow. It is not that this study brings to light what one did not know. But, to concentrate analysis on finite tracks is more easily comprehensible than all-India averages; and, in any case, such averages are affected by the prosperity in the cities and towns. If for nothing else, the three appendices containing some of the original notes on the investigations in 1933 make this a worthwhile publication. These are different from the village notes one is accustomed to handle, made by investigators not dedicated to their vocation and writing under "instructions" which may ensure coverage, but often deprive them of that vitality and insight which only freedom to chart one's course oneself can bring forth.

PROGRESS IN SHIPPING

The Calcutta Exchange Gazette and Daily Advertiser, Shipping Supplement, March 1961. Edited by V. K. Batra. (Published by B. C. R. Mfg. Co. Ltd., 5 Mission Row, Calcutta 1. Pages 75.)

The shipping supplement of the *Calcutta Exchange Gazette* contains some articles on Calcutta port, steamship agents as well as the shipment of tea, shellac and gunnies. Although the editorial coverage leaves scope for improvement, the aim of the publishers to bring out the supplement regularly is commendable.

Jute

DISPARITY BETWEEN JUTE AND GUNNY PRICES INCREASES

DRY WEATHER LIFTS FIBRE MARKET

THE rapid deterioration in the relationship between jute and jute goods prices is brought out by the following table, covering the short period since the beginning of 1961:

	B Twills (Rs. a 100 bags)	Hessians 40in. 10oz. (Rs. a 100 yds.)	Raw jute (Assam) (Rs. a md.)
2nd January	185	59	52.50
10th February	215	62	67.00
4th March	200	66.60	62.00
8th April	169	58.00	53.00
18th April	180	61.25	61 00

It will be seen that from 2nd January to 10th February—when B Twills reached their highest level—heavy goods advanced by about Rs. 300 a ton, while jute, which was also at its highest level, rose by Rs. 470 a ton. From then until the beginning of March, prices of both sacking and fibre dropped at a fairly equal pace; only hessians showed a rise of Rs. 160 a ton. But, during the past month, the difference has grown. Now, with heavy goods Rs. 50 a ton lower than they were at the beginning of the year, and 40in. 10oz. showing a gain of only Rs. 70 a ton, fibre prices are Rs. 230 a ton higher than in early January.

Difficult Position

This is a difficult position for the industry, and one in which it is almost impossible for mills to make ends meet. Overseas customers still feel that goods prices are too high, but these can hardly be reduced while the raw material remains so expensive. It seems to be fairly certain that apart from a general improvement in world trade, demand can be stimulated only by a return to a lower level of prices. This latter, however, will create more difficulties for the mills, and cause them further serious losses if there is no corresponding fall in the price of the raw material. Unfortunately, there does not appear to be any reasonable prospect that fibre prices will drop in the near future. They are at present, and for some months have been, higher than for about a decade.

Until the beginning of the past week, new crop prospects were considered to be extremely good. Indeed, mainly on the strength of the favourable weather conditions in the jute-growing areas, fibre prices dropped to the lower Rs. 50's. It was generally felt that the coming crop would be a large one, and once the immediate requirements were satisfied, nothing could prevent a fall in prices. Conditions have changed almost overnight, however, and at the first hint of a lack of rain upcountry, prices have shot up in a few days. As matters stand, weather conditions have deteriorated, which is not unusual at this time of year. But the market is so sensitive that the most trivial influence is enough to swing it either way. There is no immediate danger to the crop, and a few showers during the next two or three days will be sufficient to bring about a complete return to the quieter conditions of ten days ago. A natural fear, however, exists that the current hot and dry spell might jeopardise the hitherto favourable progress, and certain areas might have to be resown.

Pakistan Sells Fibre

It is far too premature to make any forecasts about the market's behaviour in the near future, or about the size of the new crop, but the next few weeks may prove to be the testing time. Few operators expect any distinctly downward tendency for old crop jute, and the current bullish sentiment has even been extended to new crop offers in Pakistan. It is reported from Dacca that although new crop jute was readily offered and accepted a week ago at Rs. 30 a maund for Cross Bottoms, sellers today are reluctant to close business at even Re. 1 or Rs. 2 a maund higher. In Pakistan, there has been fairly extensive business in new crop jute. Reports of deals with China and Rumania—to say nothing of the continuing interest from local mills—has brought steady conditions. Very little business has been conducted with the U.K. and other European buyers so far, as most of them have adopted a wait-and-see policy. The current rise, however, may induce an appreciable change in their outlook and bring them into the market earlier.

In India, the issue of the latest quota has failed to bring much response from the mills. The quantity issued is very small—believed to be under 400,000 maunds—because a large portion of the previous quotas has still not been taken up. Mills were inclined to hold off when prices were dropping and sellers were prepared to discount, but in many cases it appears that they have held off too long. The sellers' attitude has undergone a complete change, and very few offers can now be obtained even at the quoted rates. Any offers given are small, as it is mostly stock jute. Since imports in the agencies are negligible, there is no possibility of replenishing the stocks.

Use of Hemp

Much is heard these days about the threat from substitutes, and with the sharp rise in the price of cuttings over the past year, many mills are looking for alternative low-grade fibre. It is understood that a big backlog of cheap cuttings remains to be delivered against contracts made in the second half of last year. Many of these contracts have now been cancelled, entailing large market "difference" bills. Whether the mills will get their money against the bills without recourse to arbitration is another matter, but at the present price it is unlikely that they will cover. Cuttings are attractive only when they are cheap, and once they reach the price of the lower grades of Indian jute, the only attraction they have for the mills is that they do not come off the quota. Many mills have recently been experimenting with hemp, and while most would prefer to use cuttings, it has been found that hemp is adequate for the purpose, even though it has to be "batched" before processing. The attraction of hemp is that it is not governed by the fluctuations of the Calcutta market, and has been ruling at a steady average price of Rs. 52 a maund for some months. At present, this rate is very competitive, since cuttings are Rs. 5 or Rs. 6 a maund dearer. When the price of jute falls, however, hemp will lose its attraction unless it also becomes cheaper. It is not suggested that hemp can take the place of cuttings as the supply is very limited, but it could make considerable inroads into the cuttings market. Other mills are using low-grade mesta in place of cuttings. Unless the price of cuttings shows a considerable drop in the near future, they may find themselves priced out of the market. A large quantity of cuttings is still available in Pakistan which, because of the price factor, sellers are liable to have left on their hands.

Industry in general in Calcutta is still affected by the shortage of electric power, but zones have now been formed and working hours staggered. Although this has caused considerable hardship in some cases, and labour is protesting, the general situation appears to be better. During the past week, there have been no block closures such as those which occurred previously.

I.J.M.A. Production Figures

During March, the production of mills reporting to the I.J.M.A. amounted to 87,500 tons. Hessian output rose by 7,200 tons to 29,400 tons (33.6 percent, against 32.6 percent in February), while sacking production improved by 4,500 tons to 46,200 tons (52.8 percent, against 53.9 percent). The output of other goods also improved by 1,400 tons to 11,900 tons (13.6 percent, against 13.5 percent). The higher production was due almost entirely to the increase in working hours from 161½ to 187. Production an hour showed a slight fall, but at 467.9 tons it was still well above average. Total production for the period from July 1960 to March 1961 now amounts to 782,600 tons, made up of 285,700 tons of hessians (36.5 percent), 415,000 tons of sacking (53.3 percent) and 81,900 tons of other goods (10.2 percent). This was achieved in 1,766½ working hours, giving an average hourly tonnage of 443 tons.

THE JUTE MARKETS

Manufactured Goods: Selling by local operators brought quieter conditions in the goods markets at the opening last Thursday, and all sections showed losses of Re. 1 or Rs. 2. B Twills opened at Rs. 171.50 for April shipment, which was Rs. 11.50 above the July-September position; 40in. 10oz. hessians dropped to Rs. 57.50, this being a premium of Rs. 2.25 over the forward position. Fears that the shortage of electric power might lead to a drop in production caused prices to rise again over the holiday on Friday. By Saturday morning, all the previous losses were made up and the market ruled steady. Stronger advices from the fibre section due to the lack of rain in the jute-growing areas brought about a rapid change during the week-end. Prices advanced strongly and opened on Monday morning at Rs. 179 for April B Twills, while 40in. 10oz. rose to Rs. 60.75. Rates continued to advance in sympathy with fibre although, apart from a little local covering, there was no genuine interest. Mills showed some selling interest at the higher levels, but only small sales were reported, and overseas buyers showed no inclination to follow the rise. Towards the close, the selling pressure created an easier tendency, and reports of rain in some jute-growing districts caused the market to fall.

Opening quotations on Wednesday morning were as follows:

	April	May	June	July-Sept.
40in. 7½oz.	44.25	44.25	44.25	42.75
40in. 8oz.	47.50	47.25	47.25	45.50
40in. 10oz.	59.50	59.25	59.00	57.00
B Twills	177.00	176.00	175.00	163.00
Heavy Cees (Plain)	179.00	177.50	176.50	166.00
A Twills	200.00	203 50	205.00	197.00
Liverpools	200.00	197.00	197.00	185.00
Cornsacks	177.00	176.00	178.00	169.00

Raw Jute: There was little interest in the fibre market at the opening last Thursday and jute was freely on offer, much of it at a discount. Assam Bottoms offers were based on Rs. 55.50 a maund, but in the absence of business, could be considered nominal. Over the holiday on Friday, however, a big change took place and market indications soared over the next two days at the rate of about Rs. 2 a day. Business was reported at each rise, and although the quantities were small, it was enough to steady the market. The main reason for the bullish tendency was the lack of rain in the jute-growing areas of both India and Pakistan, and genuine fears were expressed in many places that resowing may have to take place. On Monday morning, Assam quotations had risen to Rs. 60, and this was increased by another Re. 1 on Tuesday, but there were no sellers at these rates until midday on Tuesday. After that, slightly easier conditions prevailed on reports of rain, but although some offers were put up at discount rates, most sellers appeared to be of the opinion that prices would soon revert to the maximum rates.

Wagon arrivals in Cossipore last week dropped to 185, which was about half the number in the previous week. Imports were negligible upcountry, and the tendency was steady. Towards the close, Cossipore and Calcutta rates tended to ease.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	160.75	60.00	Apl.-May
Northern	158.00	59.00	,,

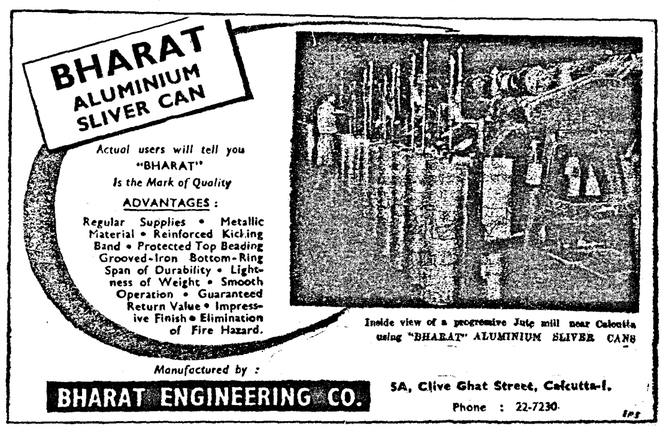
U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in March was surprisingly good, considering the uncertainties arising from unsettled market conditions. Compared with March a year ago, bag cut-up declined by 8 million yards, with piecegoods deliveries down by 3 million yards. Consumption last March was, however, above average. U.S. burlap stocks fell by 9 million yards in March, and were 39 million yards lower than a year ago. At 2.7 million yards, 136 million



yards were spots and 101 million yards were afloats. Appearing below are two tables which include the March figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry :.

I.J.M.A. PRODUCTION FIGURES FOR MARCH

The Indian Jute Mills Association reports the total production of jute goods for March as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,067 tons (4,132 metric tons)
	1,14.8 lakh yds. (1,04,97 thousand metres)
	79.5 lakh nos.
(b) Sacking	45,000 tons (45,722 metric tons)
	10,57.7 lakh yds. (9,67,16 thousand metres)
	4,76.8 lakh nos.
2. Gunny Cloth	
(a) Hessian	25,379 tons (25,786 metric tons)
	10,01.5 lakh yds. (9,15,80 thousand metres)
(b) Sacking	1,163 tons (1,182 metric tons)
	25.0 lakh yds. (22,82 thousand metres)
3. Other Manufactures	11,878 tons (12,069 metric tons)
4. Total Production	
(All kinds)	87,487 tons (88,891 metric tons)

Summary

	(00,000 yds. and 000 metres) Mar. 1961	Feb. 1961	Mar. 1960	(000 tons and metric tons) Mar. 1961	Feb. 1961	Mar. 1960
Hessian	11.16 (10.20.77)	9.67 (8,84,25)	14.13 (12,92,39)	29.4 (29.9)	25.2 (25.6)	37.9 (77.6)
Sacking	10.83 (9,89,98)	9.67 (8,84,47)	10.75 (9,82,72)	46.2 (46.9)	41.7 (42.4)	45.0 (45.8)
Others				11.9 (12.1)	10.5 (10.6)	9.1 (9.2)
				87.5 (88.9)	77.4 (78.6)	91.1 (92.6)
				Hours worked	137.0	161.5*	208.0

* This was the number of hours worked after deducting 8.5 hours lost due to the strike on 13th February, 1961.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures are more precise.

THE FOREIGN JUTE MARKETS

BRISK BUSINESS LIFTS FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has taken an upward turn, and quotations are about £2 a ton higher. So there has been a halt to the declining tendency which set in at the beginning of March. This may be the result of brisk business which was reported recently—25,000 bales sold to communist China, 10,000 to the local Pakistani mills and a few thousand bales to several European countries. Meanwhile, it is believed that any firmer tendency in the markets cannot be maintained in the face of the excellent reports concerning the new jute crop in both Pakistan and India.

Quotations have been raised from £186 to £188 for Mill Firsts, from £180 to £182 lowest for Mill Lightnings, from £176 to £178 cheapest for Mill Hearts and from £167 to £170 for Grade Hearts, with Grade Tossa-⅜ from £184 to £186, fours unchanged at £182 and Continental Tossa-⅜ from £177 to £178, April-May shipment, all c.i.f., U.K.-Continent. Tentative offers have been made for new crop jute around £155 for Mill Lightnings, but no interest has been shown by buyers. The latter have been asked to make bids, but they say that they are afraid to mention any price in case the seller accepts it.

Most members of the trade in Dundee are expecting that prices will decline substantially in future. There seems to be no reason why the value of Mill Lightnings should not return around £90 a ton—the price which the trade considers to be reasonable.

The Calcutta goods market is irregular, and quotations cover a wide range in both hessians and sackings. The lowest quotation for hessians in Dundee are 87s 9d for 40in. 10oz. and 64s 9d for 7¼oz., April 87s 3d and 64s 9d May, 84s and 64s 6d June and 83s 9d and 63s July-September, with B Twills at 263s 6d, 259s, 256s and 242s 3d for the respective months of shipment, all f.o.b., Calcutta.

Business in jute yarns and cloth is practically idle. Only small lots are being purchased for the quickest delivery, and all mills and factories are now working on short time.

THE PAKISTANI JUTE MARKETS

GOOD PROGRESS OF SOWING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE weather which is the prime factor in the market at this time of year, continues hot and dry, with occasional strong, dry and dusty wind, which promises but does not bring rain. Since this has lasted only for a week, it cannot be regarded as serious. On the other hand, if it continues, it may well undo a lot of the good which has been done to the crop by early and plentiful rains. As a result of this dry weather, sowings have ceased and although germination is helped, the plants which have already sprouted will suffer unless they get rains fairly soon.

Opinions differ about the actual amount of sowings and germination which has taken place. It is generally agreed that the crop will be approximately 22 annas, compared with 16 annas last year—that is to say, about 35 percent more in sowings. It is also generally agreed that out of these 22 annas, 6 annas has been sown in the lowlands, has germinated and is growing well ranging in height from 6 inches to 2 feet depending upon the location. The difference of opinion is mainly about midland jute. The growers and upcountry brokers maintain that in the Tipperah and Dacca areas and in those around Jessore and Khulna, midland sowings have been completed, have all germinated well and represent 10 annas of the 22-anna crop. They also maintain that in the northern and district areas as well as in the hard district areas, the dry weather has held up sowings in the midlands, and although 10 annas have been prepared, not more than half of this has actually been sown and germinated. Several of the larger balers feel that in this area, the whole of the midland crop, namely, 10 annas, has been sown and has germinated. Reports from the eastern jat area are harder to come by for the simple reason that weather conditions in this area have differed largely from locality to locality and there have been frequent but very localised rains in most places, and continued dry patches in others. Conditions, therefore, vary from place to place, but reports generally indicate that the midland sowings have not yet been completed. The smallest area which most people think has been sown, therefore, represents approximately 11 annas of the 22-anna crop. All the lowlands and all the midlands have been sown. The highland, of course, has not yet been taken up.

In spite of the shortage of jute, markets everywhere continue to fall. The reason so far has been the good weather conditions which are reflected mostly in the Calcutta goods market, which is the most sensitive of all markets. There was a rise in prices in the Calcutta goods market and, therefore, in the Narayanganj market, when it was reported that although mills' stock figures were higher, the overall sacking figures were down. There has been a reaction since then, which has not been reflected quite so much in the Narayanganj market, which is quoting slightly higher prices. The reason for this is reported business with China and Rumania, totalling some 8,000 tons, and slightly more interest shown by overseas buyers. Some of the mills have also come in to buy ready jute in pucca bales. Apart from this, however, the market in Narayanganj, although steadier, has been inactive.

COMPANY AND PUBLIC NOTICES

THE BENGAL FLOUR MILLS CO. LTD.

THE Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 25 per cent for the year ended 31st December, 1960.

BALMER LAWRIE & CO. LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
15th April, 1961.

PRESIDENCY JUTE MILLS COMPANY, LIMITED

Annual General Meeting of Members.

NOTICE is hereby given that the Register of Members and the Share Transfer Books of the Company will be closed from the 2nd May to 16th May, 1961, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

Calcutta, 18th April, 1961.

DIVIDENDS DECLARED OR PROPOSED.—Western India Match Co. Ltd.,—16 p.c., subject to tax; Bombay Dyeing And Manufacturing Co. Ltd—Rs. 2.510 per share (f), subject to tax; Bengal Flour Mills Co. Ltd—25 p.c. (f); Kohinoor Mills Co. Ltd—Rs. 10 per share (f), subject to tax; Bengal Coal Co. Ltd—Rs. 15 per share (o) (f), subject to tax.

SURPLUS IN MADRAS PORT TRUST BUDGET

THE administration report of the Madras Port Trust for 1959-60, shows that, during the year, the actual net receipts amounted to Rs. 2,28,26,846, compared with Rs. 2,27,40,000 of the revised estimates for 1959-60 and Rs. 2,19,73,407 actually realised during the previous year, resulting in an increase of Rs. 8,53,439 over the previous year. The figures exclude the sum held under "suspense" and contribution from pilotage fund. The net expenditure for the year amounted to Rs. 1,67,74,798, compared with Rs. 1,60,78,949 in the previous year. These figures exclude the amount held under "suspense" and contribution to renewals and replacement fund, general insurance fund and capital account. After excluding from the gross expenditure contribution to renewals and replacement fund (Rs. 6,79,000), contribution to general insurance fund (Rs. 1,00,000), contribution to capital (Rs. 35,00,000), interest on loans (Rs. 21,67,124), repayment of debt (Rs. 1,52,480) and debit to "suspense" (Rs. 4,81,122), the actual working expenses amounted to 63.33 percent of the receipts compared with 65.07 percent in the previous year. The decrease in percentage is chiefly due to more receipts A sum of Rs. 70,88,727 was drawn from the International Bank for Reconstruction and Development during the year in various currencies against the loan of $14 million agreed to by the Bank. Excluding the contribution of Rs. 4,00,000 to the revenue account, the result working for the year showed a surplus of Rs. 3,27,990. The actual closing balance at the end of 1959-60 was Rs. 4,85,530.

There was an appreciable increase in the volume of trade passing through the port during the year. The volume of imports and exports showed an increase of 11.4 percent over that of the previous year The tonnage figures for the year and for the previous five years are given below :

Year	Tons	Year	Tons
1954-55 ...	2,071,998	1957-58 ...	2,504,088
1955-56 ...	2,307,162	1958-59 ...	2,440,108
1956-57 ...	2,464,128	1959-60 ...	2,719,339

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

OUTLOOK FOR INDUSTRIAL EQUITIES

THE boom in equity prices which greeted the announcement of the Central Government Budget for 1961-62 two months ago seems to have fizzled out. The fact cannot be surprising, seeing that the rise was to some extent based on hopes which are not materialising at all, or materialising only slowly. The condition of the economy has not changed much in the meanwhile: the outlook for agriculture remains encouraging and industrial production is expanding. What has changed is the speculative sentiment: buoyed first by the concentration on indirect taxes in the Budget and by the cut in the bonus issue levy, operators now find that the indirect levies will not leave industry unharmed and that the expected flood of bonus issues has not yet materialised. Operators are, therefore, wondering whether the original rise was not overdone, except in the case of a limited number of companies which have actually announced that they are prepared to issue bonus shares. A downward adjustment in the nature of a technical correction has resulted; and, in the general atmosphere of bearishness, it has been accentuated by the Estimates Committee's recommendation that the Life Insurance Corporation's funds should be reserved for the Government's use rather than be invested partly in private industry. Sober reflection will almost certainly prove that the reaction to the Estimates Committee's proposal has been exaggerated; the Committee does not frame official policy, and the case for the L.I.C. continuing to invest its money in the private sector is overwhelming. Furthermore, the Finance Minister has given his assurance that no precipitate action will be taken on the recommendation. But, for the time being, the stock market has chosen to ignore these points and, except possibly in Indian Irons, has stuck to its sullen, hesitant mood.

The large number of attractive new issues in the offing might serve to restrict activity in the older shares for a considerable while yet. Investors have been liquidating what they hold already in order to mobilise their cash resources for subscribing to the new issues. The latter are coming into a market which is healthier than was the case at this time last year. Then, there was a scramble, mainly among speculators, for almost any new issue which was offered. Now, there are probably only one or two which are unofficially quoted well above the issue price, and in some cases recently, part of the share offers has been left in the hands of the underwriters. The acute shortage of bank credit is preventing the new issue market from getting out of hand. As bank deposits have been falling, and the demand for advances has been growing, less bank money is available for share transactions. The stringency of bank credit is likely to continue for a considerable while yet. It is uncertain whether the peak of the busy season has been reached, and even after it is, the demand for money is certain to remain at a high level. Last year, during the so-called slack season, bank advances fell only marginally. The pattern may be repeated this year, because the industrialisation of the economy is making the demand for credit perennial rather than seasonal. The increase in the foodgrain harvests means that bigger food stocks have to be financed. In addition, the requirements of a number of industries are exceptionally high. The jute industry, for instance, needs more money for holding its raw jute stocks, since these are extremely expensive. The accumulation of the sugar surplus at the factories means that the latter's demands have also increased. The situation might improve if a bumper jute crop brings down fibre prices in the next few months, and if sugar exports can be boosted. But, even so, the improvement is likely to be only marginal in relation to the overall level of advances.

While the stringency of bank credit remains a restraining influence for the stock market, it is arguable that its effects are more psychological than real. The extent to which bank money finances share trading is often exaggerated. Last year, for instance, the stiff credit restrictions imposed by the Reserve Bank did not succeed in checking the speculative boom, which continued until July—nearly five months after the restrictions were imposed. The fact is that a lot of speculative activity in the stock market these days is financed by money drawn from outside the banking system. This money will always be available if the possibility of making quick gains exists. To that extent, the stringency of bank credit need not depress activity unduly. But it does nevertheless have other disturbing implications. The main one is that it has reached so acute a stage that it may now begin to affect industrial production, and therefore the working results of companies. Perhaps the Reserve Bank may soon take measures to avoid the danger. But it is hard to see what quick relief can be provided, apart from the liberalisation of rediscounting facilities. Here, past experience suggests that the Reserve Bank is likely to err on the side of caution. The liberalisation has to achieve a delicate balance between two separate aims: one is to meet the credit needs of industry adequately, and the other is to avoid rediscounting on such a scale that inflationary pressures are accentuated. Traditionally, inflation has been the Reserve Bank's paramount fear, even though it knows well that bank finance plays only a very minor part in encouraging price rises.

From the stock market's point of view, the next few months may show that the credit stringency has a less significant influence than the scale of the foreign aid India can get. The foreign exchange reserves are down to the dangerously low level of Rs. 128 crores, and recent reports from New Delhi suggest that if the trend continues, a further substantial cut in imports will become necessary. In that case, it is certain that industrial expansion will suffer. Against this background, the results of the "Aid India Club" meeting in Washington this week will be of crucial importance. The aid not only has to be substantial, but has to be given quickly, if India's industrial progress is to be maintained. The reports available so far indicate that all members of the "Club", the Americans in particular, are now stalling on the question of making firm promises. Admittedly, some have made commitments already, but these do not total to anywhere near the sum required to cover the foreign exchange deficit India expects to run this year. Furthermore, most of the commitments are for specific projects; what India needs, in contrast, is money for "maintenance imports" and for servicing the debts incurred in previous years. The chances of getting adequate amounts of "untied aid" are uncertain, since U.S. worries over the dollar have not yet been eliminated, and the West Germans, who are in an immediate position to give such aid, are in no mood to do so.

Depending on the amount of external assistance India can get, the outlook for the stock market over the next few months seems fairly reassuring. Industrial production has been rising vigorously so far, and recent balance-sheets indicate that company profits are increasing. The protection afforded by the import restrictions is enabling many enterprises, especially the newer ones, to sell their products easily at a comfortable profit. The threat of inflation during the coming year is less serious than it was through most of the second plan period, because the supply of such basic requirements as foodgrains, cloth and sugar seems likely to be more plentiful. It is to be hoped that the opportunity will be taken of resisting wage increases which are already causing Indian goods to be priced out of foreign markets, although it must be admitted that the setting up of wage boards for such export industries as jute and tea may belie this hope. The tax concessions announced by the Central Finance Minister, Mr. Morarji Desai, last week offer some assurance that the Government's fiscal policies are becoming more flexible and realistic. The ingenuousness of imposing various duties, and then deliberately underestimating the revenue from them, may be doubted; but there is at least a greater readiness in the Finance Ministry now to consider the special hardships faced by individual industries, and to make adjustments accordingly. This is a happy augury for the future, especially since it looks certain that Mr. Desai is to continue in his present tenure. Finally, for what doubtful consolation it may provide, the stock market may assume that if India does not get all the foreign aid she wants, she will not need to raise the complementary rupee resources through an intensive tax effort of the sort the planners have indicated.

THE L.I.C. UNDER SCRUTINY

IT is curious, but instructive, that an important committee of the Lok Sabha, the Estimates Committee, should be saying five years after life insurance in India was nationalised that "in the case of a monopolistic and monolithic enterprise like the L.I.C., no comparative standards for measuring efficiency and performance are readily available." This is no less than a truism; that the element of competition should be absent in monopolistic undertakings is common knowledge and does not require to be laboured. It could easily have been foreseen at the time the business of the 243 privately-owned companies was taken over. Even such a confirmed socialist as Mr. Asoka Mehta, at the time the Life Insurance Corporation Bill was going through the Lok Sabha, advocated the creation of five independent corporations. Subsequently, Mr. Babubhoy Chenoy, as the spokesman of the Federation of Indian Chambers of Commerce and Industry, advocated splitting the Corporation into independent units one of which, he suggested, could be "privately owned".

His suggestion was immediately scotched by Mr. Nehru, who nevertheless agreed to consider splitting the Corporation into independent units. Thus, the idea was already in the air before the question was considered by the Estimates Committee. Now, after examining all the various issues and recommendations, the Committee is reported to have suggested a federal structure with semi-autonomous zonal units each possessing defined exclusive jurisdiction. This is not a new suggestion. The L.I.C. authorities themselves have for some time past been vesting the zones with the largest possible autonomy. India's rapidly expanding population, together with increasing industrialisation, must eventually produce a wage-earning class whose numbers will form an almost limitless reservoir for life insurance to draw on. The L.I.C., despite its official patronage, has signally failed to exploit the opportunities represented by these human resources. Its new business in 1960, in spite of all the official proddings to carry over till February-March 1961, could not exceed Rs. 500 crores, although the phased five year plan called for new business of at least Rs. 525 crores during that year.

One of the reasons for this failure is the L.I.C.'s elephantine size, which results in faulty administration, or simply the lack of any at all. Those who sponsored a monolithic structure to replace completely the 243 companies are, therefore, guilty of a lack of foresight, and are answerable to the country for the obvious shortcomings in the loose administrative structure of the Corporation. The view that every industry has an optimum size, and that after a point large-scale industry begins to yield diminishing returns, cannot easily be brushed aside as so much school book theory. If the Estimates Committee is now recommending semi-autonomous zones, it must have serious mental reservations about the capacity of the

monopolistic structure being able to respond to the country's ever-increasing requirements. Knowledgeable circles hold to the view that zonal corporations—if not entirely Statewise—competing on equal terms with one another, may perhaps provide the necessary stimulus to efficiency and may eventually accelerate the growth of life insurance in India. The suggestion for providing compulsory life insurance for Central Government employees, and perhaps eventually for employees of State undertakings as well, amounts to nothing less than the provision of a subsidy to the L.I.C. to enable it to reach a level of business which it is now, apparently, unable to attain by its own efforts.

Life insurance springs from savings and should not be converted into a tax on a particular section of the community. If life insurance in India has to husband the savings of a vast number of human beings, an enlightened and informed outlook on the part of the Government is as much a necessity as is one which is free from orthodoxy and traditionalism. It may even be useful to draw liberally on the counsel of seasoned insurance executives and directors of the company régime, unless of course the Government has good political reasons for not doing so.

The other important recommendation of the Estimates Committee concerns the investible funds of the L.I.C. The Committee has recommended that the Government should take over the Corporation's entire investible funds as an unfunded debt on which interest can be predetermined periodically in consultation with the Corporation to give an adequate return to meet liabilities. Such an arrangement, it is said, will provide an estimated Rs. 135 crores in the third plan period in addition to a sum of about Rs. 315 crores, which on the present pattern will be invested in Government and approved securities anyway. The Estimates Committee considers that the objectives of nationalisation and social advancement can be better realised if the Government takes over the investible funds rather than that the L.I.C. should continue to handle them. The Committee is reported to have quoted statistics to prove that the L.I.C. has not been able to maintain a balance in the percentages of the invested amounts if looked at from the point of view of the regions. On the other hand, more funds are reported to have been invested during 1959 in the shares of existing undertakings than in new ones.

The objectives of nationalisation can be debated endlessly. But the primary objective that was brought to the fore at the time by Mr. Deshmukh himself was the safeguarding of the interests of policyholders, which was allegedly being jeopardised by designing directors and managers of some of the companies. The investible fund belongs solely to the policyholders out of whose contribution it is formed. The ends of life insurance would be defeated if the fund were not treated as trust money and invested solely to serve the interest of policyholders. Analysing the investment pattern of the L.I.C. in the year 1960, the Estimates Committee found that the percentage of investment in shares of existing companies was 63.5, compared with only 2.4 percent in the shares of new companies. This led the Estimates Committee to form the view that the purchase of shares already on the market cannot serve the purpose of aiding the development of new industries. The purpose of L.I.C. investments is not to foster the growth of new industries but to ensure for the policyholders the best returns consistent with safety. This necessity led the Government, after the Mundhra episode, to formulate a precise investment pattern; Section 27A of the Insurance Act, 1938, with some modifications, was made applicable to the investments of the L.I.C. The Corporation is in the nature of a trustee for policyholders, and that trust is not always coextensive with financing plan programmes.

When the L.I.C. buys a share of an existing company, it puts money into the hands of the previous shareholder, thus enabling him, if he so wishes, to buy shares of a new flotation. Investment in new industries is thus not impeded but promoted, even when existing shares are bought. Were the L.I.C. to work on a set return from its investments predetermined by the Government, its existing policyholders would be earning inadequate returns, and for new insurance, the entire premium structure would require to be revised. Even on the current basis, the L.I.C. has not yet been able to determine its bonus rates; the Estimates Committee is apparently endeavouring to impede it further. It is reassuring, therefore, that the Finance Minister should have announced that the present policy governing the investible funds of the L.I.C. will stay unchanged until full consideration has been given to the Estimates Committee's suggestions. Mr. Desai would do well to study the public assurances given by previous Finance Ministers, and to dispel the notion, widely prevalent in Government circles, that the funds of the L.I.C. belong as of right to the Government. The money belongs solely to policyholders and at all times has to be regarded as such.

ECONOMIC CONTROL: NEW METHODS

STUDENTS of monetary technique who expect quick results from Britain's Budget will be disappointed. The provisions of the Finance Bill cannot become effective before July or August; the new powers that the Chancellor of the Exchequer requires will not necessarily be used immediately; and whenever they are used their effects will be gradual. They are relevant, therefore, to 1962 and after rather than to 1961; but 1961 may be the year when the more positive technique of control that Mr. Selwyn Lloyd has devised will be most needed. In another sense, however, the shift of emphasis from monetary to fiscal methods of control, which is the most important implication of Mr. Lloyd's first Budget, is opportunely timed. The international agreements on co-ordination of interest-rates, although informal, effectively preclude the use of Bank rate as an instrument of internal—or even of external—control, unless Bank rate is first reduced to a level that would seem inappropriate to Britain's domestic circumstances. Lowering the rate would not incur the displeasure of the American authorities, because it would divert short-term capital from the United Kingdom to the United States; but the British authorities are not equally free to raise the rate, because they would thereby weaken the dollar.

These considerations are relevant, but they are certainly not paramount. Mr. Lloyd would not have introduced a complicated system of fiscal controls merely because the monetary method of control was temporarily not freely operable. The principal changes in his Budget were intended to be fundamental. He had evidently been convinced that the results of orthodox methods, which had been applied in Britain in post-war conditions over nearly 10 years, were unsatisfactory, and that a new system of control must be devised. As it is no secret that the Governor of the Bank of England, Lord Cobbold, has remained staunchly loyal to orthodoxy, the Budget of 1961 has a special incidental significance: it implies that the power of the Governor of the Bank, which has been very strong during most of this century, is now weakened. What, then, is this new technique that Mr. Lloyd has introduced? It is a system of variable taxes, the rates of which are fixed independently of the annual Budget; almost more flexible than Bank rate, which is almost never changed on any other day than Thursday, when the Governor and Directors of the Bank of England hold their weekly meeting. This new system, it must be assumed, reduces the importance not only of Bank rate but also of the Budget; for if tax rates are variable between Budgets the tax rates set in the Budget are less significant.

The taxes that are variable are those that are, or may be, levied on almost all consumer goods, and additionally a payroll tax—a specified amount levied on employers for each worker employed. The taxes on consumer goods include, of course, purchase taxes, which were already, before the Chancellor's new proposals, variable between Budgets. Purchase taxes have, on occasion, been used in this flexible manner, to restrain or liberate demand for particular goods, as the circumstances have required; but they have not been used as an economic regulator in the broader sense. The payroll tax is, so far as Britain is concerned, quite new. Since his Budget speech Mr. Lloyd has intimated that if it is applied at all (the present intention is only to have the requisite powers available) it may be applied selectively to certain industries or to certain geographical areas. This tax, so used, could be a potent instrument of industrial policy, independent of policies that regulate the whole economy. There seems to be in these proposals the nucleus of a new method of control, distinct from the usual fiscal method as well as from the monetary method. Until the last war the Budget was simply a plan outlining the Government's prospective spending and the revenue required to finance that spending. After the war it assumed a more positive function, helping to regulate the total of purchasing power and the emphasis of the private sector's spending. As this was mostly an inflationary era, a normal function of the Budget was (as it is still) to provide a large surplus of ordinary revenue to cover part (this year a very large part) of the Government's capital spending. So the fiscal instrument was already well established as a supplement to the monetary instrument. But the method of annual budgeting was too clumsy. No Chancellor of the Exchequer could foresee developments in the year ahead so accurately that he could calculate what imposts or concessions would properly regulate the economy.

It seems now that the Budget will revert gradually to its former functions, providing for the Government's financial needs, and that the function of economic regulation will be transferred to the variable taxes. There are still social functions for the Budget, and the social-economic function of redistributing wealth. The most spectacular—and controversial—change this year is the relief of taxation on higher incomes, with the declared purpose of promoting individual initiative. But even such changes are not necessarily made most appropriately once a year. Perhaps the timing of Budgets, as well as the application of taxes, should become more flexible. This year the Chancellor of the Exchequer has not neglected the broad purpose of controlling purchasing power. He has proposed an ordinary surplus of £506 million, instead of £147 million last year, and an overall deficit of £69 million, instead of £394 million last year. So the Budget of 1961 is, superficially, a sternly deflationary Budget. But in fact most of the apparent strengthening of the national finances is to be achieved not by additional taxes but by the "natural buoyancy" of revenue in an inflationary period. It is not yet certain that either the big ordinary surplus or the new regulating mechanism will restrain the process of cost-inflation, which Mr. Lloyd described in his Budget speech as "our principal menace at present"—"and", he added, "it is impossible to exaggerate it."

BENGAL COAL EXPANDS

THE ordinary shares of the Bengal Coal Company have recently been steady at Rs. 354 due to the publication of excellent results for the year ended October 1960. Confidence has also been reinforced by the renewed growth prospects of the scrip. The present shortage of coal emphasises the need for the rapid expansion of the industry. With a view to meeting increased requirements, it is proposed to raise the country's overall annual output to 97 million tons by 1965-66. Of this, the private sector is being asked to produce 62 million tons, compared with the present level of about 45 million tons. In his chairman's statement (a fuller version was printed in last week's *Capital*) circulated to the shareholders of the Bengal Coal Company along with the report and accounts, Mr. N. Stenhouse mentioned that the Company has already submitted its plans for expansion to the Government. It proposes to increase production by at least one million tons a year. New shafts are being sunk, so output is expected to rise considerably by the end of 1966. Whether the expected expansion will be achieved or not chiefly depends upon the availability of equipment, stores and spare parts. In order to finance its plans, Bengal Coal has already issued 20,000 rights ordinary shares of Rs. 100 at a premium of Rs. 100 a share. Debentures worth Rs. 60 lakhs have also been sold.

At present the industry is facing many difficulties which must be removed if production is not to suffer. In West Bengal, there is now an acute shortage of electric power, and the impact of this shortage is being felt by industry. Mr. Stenhouse rightly stressed the importance of planning on a long-term basis to expand power supplies. If industry is to receive adequate power in time, it is necessary to plan expansion of electrical capacity at least several years ahead. As for transport, the situation there too is not free from anxiety. At the end of October 1960, stocks at the pitheads of the Bengal Coal Company had increased by 40,000 tons to 94,000 tons. Considering the expansion Bengal Coal is proposing to undertake, it is now necessary to extend siding facilities, but experience shows how slowly the authorities move in providing such necessities. Meanwhile, the Company has taken steps to supplement railway transport by road traffic.

The profit of Bengal Coal improved from Rs 73.12 lakhs in 1958-59 to Rs. 88.97 lakhs during the year ended October 1960, after increasing depreciation from Rs. 19.50 lakhs to Rs. 23 lakhs. The ordinary dividend has been maintained at Rs 25 a share, taxable, including an interim of Rs. 10 a share. It is covered more than three times, and offers a yield of 7.1 percent at the present price. Taxation is allocated Rs. 41.50 lakhs (against Rs. 34.37 lakhs), development rebate reserve Rs. 7.37 lakhs (against Rs. 6.42 lakhs) and general reserve Rs. 14 lakhs (against Rs. 8 lakhs). The carry-forward is Rs. 10,50,529, compared with Rs. 10,20,411 brought in.

Raisings increased from 2,880,896 tons to 3,096,576 tons and despatches from 3,062,662 tons to 3,213,541 tons. The increased output is largely due to more mechanisation. The production of the Poniati and Dishergarh collieries has increased considerably. As soon as the installation of the sand stowing equipment is completed at the Chanch colliery, its production is also expected to increase. At present Bengal Coal produces nearly 30 percent of the all-India output of selected "A" coal. The production of other grades is also being increased. The sinking of new pits at the Hatnal seam is

likely to raise monthly output from 2,000 to 7,000 tons. Although the Company is entitled to subsidies for its deep, difficult and gassy mines, due to official procrastination no financial assistance has been received so far. The sooner the subsidies are given the better it will be for all concerned. Meanwhile, the increased subsidies for sand stowing have helped reduce the costs of production. In spite of these advantages, production costs have steadily increased due to more expensive stores and spare parts and increased safety measures.

It is pointed out that the present dividend does not give a gross return of more than 7.5 percent on the total capital employed. The return is admittedly low considering the hazards of investment in an industry like coal, but the shareholders can look forward to receiving at least the same dividend as is being paid at present. The ordinary share capital has certainly been increased by the issue of 20,000 rights ordinary shares, but at the present level of profit there is an adequate dividend cover; profitability is likely to be improved further by the expansion which is being undertaken. The interest obligations of the new debentures should not make any difference in the matter of paying dividends. The ordinary share capital of Rs. 1.20 crores is supported by reserves of more than Rs. 2.37 crores.

Current News and Comment

Jessop's Brighter Future

The ordinary shares of Jessop and Co. Ltd have been steady around Rs. 22 recently on optimism about the future outlook as outlined by Sir B. P. Singh Roy in his chairman's address at the annual general meeting held in Calcutta last Thursday. (The text of the speech is printed on a later page.) Production increased from Rs. 6.48 crores in 1958-59 to Rs. 9.06 crores in 1959-60. The trend during the first few months of 1960-61 indicates that the output may rise by a further 30 percent. The order-book is in excellent shape, and there is good demand for products manufactured by the Company. But Sir Bijoy Prosad warned that the outlook will depend greatly on the supplies of matching steel and components. The present shortage of electric power has caused concern because Jessop has had to cut production in the face of power shortages. Unless adequate power facilities are ensured, the Company's working is likely to suffer a great deal. He pointed out that the rises in production, expansion and rehabilitation have pressed on funds. So far the Company has avoided raising more share capital, but he is doubtful whether the financial requirements can be satisfactorily met for long without asking the shareholders to contribute more. It is also necessary to maintain a proper balance between the share capital and investments, a portion of which is now being financed by bank borrowing. It seems reasonable, therefore, to anticipate a further capital issue in the near future.

In spite of the higher production achieved during 1959-60, working has been affected by many shortages. Steel supplies were inadequate. Transport facilities fell short of requirements and the necessary imports could not be obtained due to the foreign exchange shortage. The production of a new box wagon has begun and it is expected that this line of business will become remunerative in the near future. As for the production of electric multiple unit coaches, this has been hampered because the import licence for obtaining the special electrical and mechanical equipment has not been obtained yet. In order to fill the gap in production, the coach works has taken up the manufacture of a broad-gauge motor, parcel van and broad-gauge well wagon. The expansion of the coach works has almost been completed. Steps have been taken to extend the capacity for producing diesel road rollers. Arrangements have been finalised with Aveling-Barford of the U.K. to produce transmissions for their road rollers.

Bharat Commerce Recovers

The ordinary shares of Bharat Commerce and Industries Ltd have improved to Rs. 23.50 in the Calcutta stock market during the past month or so. The rise is remarkable considering that the shares were quoted at only Rs. 2 in 1954 when the Company had a debit balance of more than Rs. 42 lakhs. During the past few years, Bharat Commerce has made an astonishing recovery by extending activities into new lines. The spinning plant set up in Nagda is working satisfactorily. It now has 2,240 ring spindles and 8,864 doubling spindles. It is proposed to expand this capacity to 30,000 ring spindles soon. The directors are also planning to diversify activities further. A composite textile mill situated in Mysore with 302 automatic looms and 15,000 spindles, is likely to be bought. Bharat Commerce has obtained a licence for producing H.T. and L.T. porcelain insulators in Rajasthan. It is proposed to acquire another staple fibre spinning unit for which negotiations are proceeding. The directors also have other projects in mind. So the future prospect is viewed optimistically. But the directors are aware of the adverse effects caused by the rises in excise duty and wages.

The profit of Bharat Commerce has increased from Rs. 18.73 lakhs in 1959 to Rs. 22.40 lakhs for the year ended December 1960, after increasing depreciation from Rs. 9,384 to Rs. 9.68 lakhs, providing Rs. 3.02 lakhs (against Rs. 96,800) for development rebate and Rs. 1 lakh for contingencies. The usual preference dividends have been paid for 1959 and 1960. A maiden ordinary dividend has been declared at 5 percent, taxable. It is covered more than 10 times and offers a yield of 2.1 percent at the present price of the share. The carry-forward is Rs. 94,375, against a debit balance of Rs. 4.56 lakhs brought in. The arrears of depreciation relating to previous years amount to Rs. 8 lakhs.

Polychem Rights Issue

Polychem Ltd has received the consent of the Controller of Capital Issues for issuing 32,000 new equity shares of Rs. 50 each at a premium of Rs. 75 a share to the existing shareholders in the ratio of two shares for every five shares or proportionately on any of its fraction. The extraordinary general meeting of shareholders is likely to be called in June to approve the new issue. The Company is apparently issuing fresh capital at an exorbitant premium of 150 percent at the instance of the Government, for it applied last year for raising fresh equity capital by issuing one share for every one held at par. The consensus of opinion in the market is that the premium which the Company has been compelled to charge is much too high and cannot be justified on any ground. Polychem is hardly five years old. It was only in 1959 that it paid its maiden dividend of Rs. 3 a share, tax-free. The dividend was raised to Rs. 5.50 a share, taxable, in 1960. Against the Company's paid-up capital of Rs. 80 lakhs—divided equally between equity and preference shares—the reserves and surplus at the end of 31st March, 1960, totalled Rs. 21.24 lakhs. On the basis of the balance-sheet for the year ended March 1960, the book value of the Rs. 50-paid shares works out to Rs. 76.55. At the current price of Rs. 225, the shares offer a tax-free yield of only 1.8 percent. True, Polychem has done well in a brief period of five years and it has good growth prospects. So its Rs. 50-paid shares, which could be had around Rs. 66 in 1959, were bid up to a high of Rs. 320 last year. But neither the Company's encouraging performance nor the rise in its share quotation can be considered a sound reason for insisting on an exorbitant premium of 150 percent for the issue of new shares. Apart from Guest, Keen, Williams, which issued shares at a premium of 185 percent, the stock market cannot recall any other instance where a company was compelled to raise fresh capital at a premium of 150 percent.

The new capital which will bring in Rs. 40 lakhs, including a premium of Rs. 24 lakhs, is being raised to finance the Company's expansion programme. The latter includes the setting up of a styrene monomer plant in collaboration with Dow Chemie A.G. of Switzerland, a subsidiary of the Dow Chemical Co. of the U.S.A. The project for manufacturing styrene monomer is estimated to cost Rs. 3 crores. The Company has completed arrangements for securing a U.S. dollar loan equivalent to Rs. 1 crore from the Industrial Finance Corporation as well as additional finance from banks. The plant is expected to go into production by the third quarter of 1962. It will have an annual production capacity of 15 million lbs of styrene monomer which is the basic raw material for manufacturing polystyrene. The Company's plant for polystyrene, which has an annual production capacity of 12 million lbs, has to work at only 60 percent of the capacity because of the limited supply of import licences. Polychem has secured the Government's permission to expand the plant capacity to 15 million lbs. This will be done when the styrene monomer plant goes into full production.

Public Offer by Bihar Cable

Bihar Cable and Wire Industries Ltd is offering 48,092 ordinary shares of Rs. 10 each and 3,000 cumulative redeemable preference shares of Rs. 100 each for public subscription. The directors and their friends have agreed to take up 6,092 ordinary shares. The remaining 42,000 ordinary shares and 3,000 preference shares are being offered for public subscription at par. The preference shares carry a dividend of 7 percent. The subscription list will open next Monday. (The details of the issue are printed on a later page.) The entire public issue has been underwritten. Bihar Cable and Wire Industries has taken over two industrial units—Khemka Cable Works and Bihar Wire Industries. The former unit proposes to produce 24 million yards of rubber insulated cables for domestic and industrial electrification. It will also produce welding cables and various other products. The necessary plant and machinery have been obtained. The Bihar Wire Industries will produce 15,000 tons of galvanised steel wires a year. It is also proposed to manufacture 700 tons of barbed wire and wire nails a year. Production is expected to begin during the next three months. The unit for producing galvanised wire may start working at the beginning of next year.

The costs of the projects are estimated at Rs. 39.50 lakhs, to which the Bihar State Financial Corporation will contribute Rs. 5.75 lakhs in the form of a loan. The factories will be situated in Digha, near Patna, in Bihar State. The directors are hopeful about the prospects in view of the rise in electrical development. They do not anticipate any difficulty in selling the products of the Company at remunerative prices. They also expect to pay reasonable dividends in due course.

Mukand Iron to Expand

At a time when the stock market was depressed and it declined to the lowest level for many weeks, the shares of Mukand Iron showed remarkable strength and established a new high for the year. Last week's rise to Rs. 27.75 took the shares quite close to their all-time high of Rs. 28.50 recorded in 1960. But the rise was only to be expected after the chief executive, Mr. Viren J. Shah, had talked to Pressmen about Mukand Iron's excellent performance during the year ended March 1961 and

its ambitious expansion programme. It will take quite some time before the Company's accounts for 1960-61 are published, but there is little doubt that it had an exceptionally good time last year. The provisional figures indicate that sales in 1960-61 rose by about 51 percent from Rs. 4.22 crores to Rs. 6.38 crores. The production of castings increased by about 30 percent from 4,200 tons to 5,500 tons and that of rolled materials from 45,600 tons to 68,400 tons—an increase of about 50 percent. Mukand Iron's production of rolled materials is now the highest among all the re-rolling mills in India and is also higher than that of secondary producers. In other words, excluding Tata Iron and Indian Iron, Mukand Iron is the biggest producer of rods and bars. Its foundry is the first to produce—on a mass scale—roller bearing axle-boxes and centre-buffer couplers for the railways.

Encouraged by its progress, Mukand Iron has embarked on an ambitious expansion programme. It proposes to launch a Rs. 2.75-crore project for establishing a wire-rod mill in Thana for manufacturing high-tensile wire rods of 5 millimetres and upwards and other quality steels. It has already made arrangements for acquiring 148 acres of land for the purpose. The Company is expanding its steel-making capacity by installing a 20-ton electric arc furnace which, it is claimed, will be the largest of its kind in India. The new plant will have the latest devices for controlling the manufacture of refined steel. The production of steel castings, which has risen from 4,200 tons in 1959-60 to 5,500 tons in 1960-61, is expected to increase to 7,000 tons in the current year and further to 9,000 tons by 1963. The project which is estimated to cost Rs. 2.75 crores will be financed from internal resources, loans and fresh capital issue. Mukand Iron is negotiating a foreign exchange loan to cover the cost of imported plant and machinery with the Industrial Credit and Investment Corporation of India. The wire-rod plant in Thana, which will have an annual production capacity of 30,000 tons or 40,000 tons, is expected to go into production in 1963. The Company has also a proposal to set up a sand-washing plant in Kurla.

Vishnu Cotton Mill Profit Up

The working of the Vishnu Cotton Mill Ltd for the year ended December 1960 shows a slight improvement over the previous year. Sales of cloth, yarn and waste have risen from Rs. 2.12 crores to Rs. 2.17 crores, and the other income is up from Rs. 3.13 lakhs to Rs. 5.40 lakhs, mainly due to the increased income from the sale of stores. The gross profit has increased from Rs. 9.03 lakhs in 1959 to Rs. 9.74 lakhs in 1960. The gross profit as a percentage of sales, excluding other income, works out to only 4.48 percent but the figure for 1959 was even lower at 4.26 percent. The increase in the profit margin—although quite small—is significant because of the substantial increase in manufacturing expenses. The cost of raw materials represents 47 percent of sales, against 44 percent in the previous year. Besides, the wage bill has gone up from 24 percent to 28 percent. In 1960, raw materials cost Rs. 1.03 crores and the wage bill amounted to Rs. 62.06 lakhs, the corresponding figures for 1959 being Rs. 92.89 lakhs and Rs. 50.52 lakhs. After providing Rs. 5.57 lakhs (against Rs. 6.75 lakhs) for depreciation, the net profit amounts to Rs. 3.80 lakhs, against Rs. 1.78 lakhs in 1959. From this, the directors have provided a small sum of Rs. 3,500 (against Rs. 15,000) for development rebate reserve. Shareholders had gone without a dividend for three years—from 1957 to 1959. In view of the slightly better working results in 1960, the directors have recommended a gross dividend of Rs. 5.71 a share, although the Company has still sizable losses to wipe out. Depreciation is also in arrears. The proposed dividends, ordinary and preference, will absorb Rs. 2.80 lakhs, leaving a surplus of about Rs. 97,000 which is being used to reduce the losses brought forward from the previous year from Rs. 11.21 lakhs to Rs. 10.24 lakhs. The directors have provided part initial depreciation for 1952, 1953 and 1954 by transferring Rs. 3.10 lakhs from depreciation, renewal and extension reserves. They state that the Company exported cloth worth Rs. 70.33 lakhs which constituted about 30.77 percent of the mill's total production. With a view to rationalising the production pattern, considerable change has been brought about in production, the effect of which will be felt in the current year. The mill requires considerable renovation, but the programme will be taken up in stages. The capital expenditure is, therefore, likely to go up in coming years. Around the current price of Rs. 130, the shares of Vishnu Mills offer a tax-free yield of about 3 percent.

Lakshmi Cotton Profit Down

The working of the Lakhshmi Cotton Manufacturing Co. Ltd for the year ended December 1960 shows a slightly lower profit of Rs. 11.86 lakhs, against Rs. 12.76 lakhs in 1959, although sales were maintained around Rs. 2.14 crores. The directors state that though trading conditions during the year were better, the benefit was almost entirely offset by increased manufacturing costs because of the high raw cotton prices and a marked increase in the wage bill. The results would have been still worse but for the increase in the income from bleaching, mercerising and printing charges from Rs. 10.74 lakhs to Rs. 13.35 lakhs, as well as an income of Rs. 2.05 lakhs being the charges received for yarn spinning and processing, against nil in the previous year. After providing Rs. 5.71 lakhs (against Rs. 6.66 lakhs) for depreciation and Rs. 90,000 (against nil) for taxation, the net profit amounts to Rs. 5.25 lakhs, against Rs. 6.10 lakhs in 1959. A sum of Rs. 21,000 has been set aside for development rebate reserve, against Rs 9,000 in the previous year. In addition to the depreciation mentioned above, the directors have appropriated another Rs. 98,362 towards part of the initial depreciation for 1953. In 1959, a sum of Rs. 4.55 lakhs was transferred to various reserves after bringing in the excess depreciation provided in 1958 amounting to Rs. 2.97 lakhs, but no such allocation has been made to the reserve in 1960. The dividend has been maintained at 10 percent, taxable. The ordinary and preference dividends absorb Rs. 3.91 lakhs, leaving Rs. 41,000 to be carried forward, against Rs. 27,000 brought in.

The Company exported cloth worth Rs. 42.40 lakhs in 1960 which formed 19 percent of total production. The directors state that orders have been placed for bleaching plant, hot air stenter, felt calender and chainless merceriser of the value of Rs. 22.01 lakhs. The plants are expected to go into production in the last quarter of the current year. With the installation of the plants, 60 percent of the production of both Lakhshmi and Vishnu Cotton mills will be processed in the plant. The Company's mills require considerable renovation, and the programme will be taken up in stages. Lakhshmi Cotton has brought about significant changes in the pattern of production, the effect of which will be reflected in its working during the current year. The Rs. 250-paid shares of the Company are quoted around Rs. 535, at which price they offer a tax-free yield of about 3.2 percent.

Marketing in Hindustan Lever

In 1956 the sales of Hindustan Lever Ltd amounted to Rs. 27.78 crores; in 1960, they were Rs. 46.12 crores. The profit, too, has not lagged behind sales. The sustained and remarkable progress made by the Company over the past few years and the increasing popularity of its products is not accidental; it is the result of organised market research by a competent staff and lively and effective marketing. In his speech at the annual general meeting in Bombay last week, Mr. P. L. Tandon, vice-chairman, gave an account of Hindustan Lever's entire marketing structure. (A fuller version of the speech appeared in last week's *Capital*.) Marketing, Mr. Tandon said, is more than mere selling. It ranges from product development to consumer satisfaction. The product that the Company puts into the market is itself the outcome of extensive marketing and technical research. It is not satisfied with conventional research; it goes deep into what motivates people's actions and beliefs and conducts surveys in towns as well as in the countryside to find out the habits of people and the changes which are taking place in consumer preferences. In 1960, Hindustan Lever's market research staff interviewed over 100,000 people in order to test the market for its products. It is only after the product has been successfully developed and tested in both research and development laboratories and in the homes of potential consumers that it is placed on the market. The Company's distribution in 1954 covered 1,400 markets with a population of 38 million whereas in 1960 it covered as many as 6,500 markets with a population of 91 million. And beyond that is the still wider distribution which is being done by enterprising traders in small villages where the Company does not reach itself.

Over the past five years, the average annual growth of some of Hindustan Lever's popular products in the rural areas has been more than four times that of the all-India expansion, which is a clear indication of its successful sales promotion and distribution drive. The central point about its distribution system is the chain throughout the country of wholesalers who possess an intimate knowledge of local conditions. Supporting these wholesalers is the Company's large and well-trained sales force which is assisted by motor vans and a fleet of cinema and demonstration vans. But the distribution, although wide, cannot sell by itself. It merely makes the product available; the consumer has to want it before the real sale takes place. Between distribution and consumption, there is a vital area of demand created by consumer persuasion through advertising. The latter, Mr. Tandon said, promotes the sales volume which alone can effectively bring down costs and keep prices low.

Hindustan Lever has been growing from strength to strength every year. Shareholders seemed fully satisfied with its working in 1960, for they praised the management and the staff for their good work. But they pleaded that the management could have been more liberal concerning the distribution of dividend which had been increased by 20nP a share from Rs. 2.40 to Rs. 2.60, taxable. Some shareholders suggested that the Company might now issue bonus shares since its reserves and surplus are now around Rs. 4.49 crores, against its capital of Rs. 5.57 crores. Replying to these suggestions, Mr. Tandon said that Hindustan Lever's dividend policy is in no way conservative. The distribution has been increased year by year with the rise in profits, from 12½ percent net in 1956 to 26 percent gross in 1960. The Company could easily afford to pay more, Mr. Tandon said, but prudence demands a stable dividend policy. As for the bonus issue, the vice-chairman said that the directors are not thinking of any such issue because the Company needs to conserve its resources as it has many development schemes on hand. Hindustan Lever proposes to manufacture skimmed milk powder, pure ghee and casein. He assured shareholders that the production of pure ghee would not affect the Company's sales of vanaspati. Replying to another suggestion that the Unilever Ltd which held 90 percent of the share capital of the Company should be asked to release more shares to the Indian public, Mr. Tandon said that this is not possible because of the difficulties in repatriating capital on account of the foreign exchange shortage.

Rajalakshmi Mills Profit Rises

The increase in the dividend by the directors of Rajalakshmi Mills Ltd, Coimbatore, from 7.50 percent to 12 percent, both taxable, a share for the year ended December 1960 is more than justified by its excellent working results. Sales have risen by 22.6 percent to Rs. 1.29 crores while the gross profit has doubled from Rs. 10.65 lakhs in 1959 to Rs. 21.19 lakhs in 1960. The increase in the profit looks even more striking compared with the 1958 figure of only Rs. 4.22 lakhs. The increased profit margin in 1960 is attributable mainly to the marked decline in the cost of raw materials which represented 58.24 percent of the sales, against 66.42 percent in 1959. After providing Rs. 6.18 lakhs (against Rs. 5.78 lakhs) for depreciation, Rs. 2.50 lakhs (against nil) for taxation, the net profit amounts to Rs. 11.12 lakhs, against Rs. 4.37 lakhs in 1959. After writing back Rs. 43,607 being the excess provision for bonus, the directors have transferred Rs. 7.63 lakhs (against Rs. 8,000) to development rebate reserve. The dividends on ordinary and preference shares absorb Rs. 3.80 lakhs. The Company's financial position is very strong. Against the paid-up capital of Rs. 31.97 lakhs, it has reserves and surplus of Rs. 36.17 lakhs. Investments, current assets and book debts total Rs. 35.24 lakhs which are almost double the borrowings and current liabilities amounting to Rs. 17.95 lakhs. Rajalakshmi Mills made additions worth Rs. 6.80 lakhs to its fixed assets in 1960. This brings the total value of these assets at the end of the year to Rs. 99.76 lakhs. The gross block has been written down to Rs. 50.84 lakhs. The Company has a total complement of 42,000 spindles. It has recently received an allotment of an additional 8,000 spindles for spinning yarn from staple fibre. It is proposed to construct the building to accommodate the additional capacity at the site of the ginning factory in Dindigul. Orders for ring frames have already been placed. The Rs. 50-paid shares of the Company are quoted around Rs. 82, offering a tax-free yield of about 5.4 percent.

Amar-Dye Chem Expansion Plans

The Amar-Dye Chem Ltd has big expansion schemes on hand. It has already taken up the project for manufacturing T.P.M. dyes and Beta naphthols. It has now secured a licence from the Government to manufacture annually 250 tons of reactive dyes, 260 tons of pigment colours and 2,155 tons of intermediates. In order to finance the various expansion schemes, the directors have decided to raise the subscribed equity capital from Rs. 80 lakhs to Rs. 90 lakhs by issuing 10,000 new equity shares of Rs. 100 each. The new shares will be offered at par to the existing shareholders in the ratio of one share for every eight held.

The Company has reported satisfactory results for the year ended December 1960. In spite of stiff competition from imported chemicals and the reduction in prices of many items, sales have recorded a small increase from Rs. 1.72 crores in 1959 to Rs. 1.76 crores in 1960. The gross profit is up by Rs. 3.30 lakhs from Rs. 58.81 lakhs to Rs. 62.11 lakhs. Allocations include depreciation Rs. 7.86 lakhs (against Rs. 6.67 lakhs), statutory development rebate reserve Rs. 1.59 lakhs (against Rs. 1.03 lakhs), depreciation reserve nil (against Rs. 8.81 lakhs), development reserve Rs. 53,000 (against Rs. 12.32 lakhs), general reserve Rs. 14.99 lakhs (against Rs. 7.50 lakhs) and redemption reserve Rs. 5 lakhs (against nil). The directors have recommended a dividend of Rs. 12 a share, subject to tax, on the 60,000 old ordinary shares and Rs. 7.50 a share, less tax, on the 20,000 new ordinary shares. The proposed dividends, ordinary and preference, absorb Rs. 10.40 lakhs (against Rs. 8.91 lakhs), leaving Rs. 18,000 to be carried forward, against Rs. 35,000 brought in. Around the latest quotation of Rs. 390, the shares of the Company offer a tax-free yield of only 2.1 percent. In 1960, they touched a high of Rs. 572.50.

Mafatlal Group Plans Renovation

The working of the Mafatlal group of mills—Standard Mafatlal Fine and Sassoon Spinning—for the year ended December 1960, was recently reviewed in these columns on the basis of the preliminary figures. The published accounts, which are now available, provide additional information about the group's renovation programme which has made considerable progress. The Standard Mills has spent Rs. 45.03 lakhs on additions to plant and machinery during the year. A sum of Rs. 2.66 lakhs has been spent on buildings. The Dewas unit of the Surat Cotton Spinning and Weaving Mills Private Ltd, purchased by the Company for Rs. 25 lakhs, is said to be working satisfactorily. Since the end of 1960, orders were placed for the purchase of machinery and equipment of the value of Rs. 33.39 lakhs. Total additions to fixed assets in 1960 amount to Rs. 74.79 lakhs, bringing the total value of fixed assets at the end of December 1960 to Rs. 4.61 crores which has been written down to over Rs. 2.09 crores. The Company has a paid-up capital of Rs 1.22 crores. Its reserves and surplus total Rs. 2.83 crores which includes a sum of Rs. 96.82 lakhs as share premiums.

The Mafatlal Fine Spinning and Weaving Co. spent Rs. 30.13 lakhs on additions to plant and machinery during the year. Since the end of 1960, the Company has placed further orders for machinery and equipment of the value of Rs. 12.64 lakhs. A sum of Rs. 2.10 lakhs was spent during the year on extensions to buildings. The directors state that most of the machines under the Company's reorganisation and renovation programme have already been installed and are working satisfactorily. It has been granted an import licence for 72 automatic looms for replacing the ordinary looms. The entire equipment is said to be under erection. Against its paid-up capital of Rs. 87 lakhs, the Company has accumulated reserves and surplus amounting to Rs. 1.57 crores. Its gross block of Rs. 2.46 lakhs has been written down to Rs. 90.89 lakhs.

The additions to plant and machinery by the Sassoon Spinning and Weaving Co. during the year total Rs. 32.41 lakhs. The Company has placed further orders for machinery and equipment of the value of Rs. 4.28 lakhs. Against its fixed assets valued at Rs. 3.17 crores, the Company has provided depreciation amounting to Rs. 1.82 crores. It has a paid-up capital of Rs. 75.30 lakhs and the reserves and surplus amount to Rs. 1.29 crores.

Rights Issue from Cooper Engineering

The shares of the Cooper Engineering Co. Ltd, which were quoted around Rs. 153 in January, rose to Rs. 212 in the first week of April. Although the quotation has eased to about Rs. 188 in sympathy with the all-round sharp decline in equities over the past few weeks, the shares are still quoted above their 1960 high of Rs. 177.50. The continued strength in Cooper Engineering has been due to sustained influential support based on optimism about a rights issue by the Company on favourable terms to shareholders in order to finance its expansion schemes. These expectations have now materialised, for Cooper Engineering has received the sanction of the Controller of Capital Issues for issuing 45,200 new equity shares of Rs. 100 each at a premium of Rs. 125 each. The new shares are to be offered to the existing shareholders as on 15th May in the ratio of one new share for every one held. The new issue will raise the paid-up capital of the Company from Rs. 45.20 lakhs to Rs. 1.02 crores, including the premium amount of Rs. 11.30 lakhs. The additional capital is needed to finance the exapnsion of Cooper Engineering's machine tool project as well as to provide additional working capital. The Company has recently been licensed to manufacture malleable high-duty iron castings with a production capacity of 5,400 tons a year on a single-shift basis. Besides, it has received a licence to manufacture 25 vertical turret lathes and an equal number of horizontal boring machines a year on a double-shift basis. Against its existing paid-up capital of Rs. 45.20 lakhs, the Company has reserves and surplus amounting to Rs. 24.79 lakhs. It has a gross block of Rs. 96.58 lakhs which has been written down to Rs. 49.61 lakhs. On the basis of its last balance-sheet for the year ended June 1960, the book value of the Company's share works out to Rs. 157.

Bullion Trading in Bombay

The extraordinary general meeting of the Bombay Bullion Association held last week authorised the board of directors to raise a loan of Rs. 5 lakhs to meet the immediate requirements of the Association including the refund of membership fees of those who have resigned from it. That out of 225 members, hardly 24 members should have attended the meeting is an indication of their lack of interest in the affairs of the Association. The resignations of ten members have already been accepted and 13 more resignations are said to be pending before the latter. The membership fee is Rs. 10,000. The Association will, therefore, need Rs. 2.30 lakhs to pay out as refund of membership fees. The strength of the Association has been dwindling of late because of the steady decline in the volume of speculative activity in the market. Bombay, which was once the most active market in the country, is today unable to attract sufficient business to keep its members in the trade. So its membership has gradually declined from 650 to 225. The strength will be reduced further with the acceptance of 13 resignations which are now pending before the board. There was a time when the Association contributed as much as Rs. 35 lakhs in a year as stamp duty; this figure now stands below Rs. 2 lakhs. The total commission earned by members in a year is estimated at only Rs. 1.5 lakhs. The number of persons employed in the futures trade has declined from over 6,000 to around 1,000. Enquries in the trade indicate that the speculative business in silver in Bombay is hardly one-fifth of that in Jodhpur, one-third of that in Calcutta and half of that in Delhi. In gold, however, Bombay continues to be the main market in India. This is perhaps because it is being constantly fed by large supplies of smuggled gold in spite of the strict vigilance of the police and Customs authorities.

No speculative market can really thrive for long unless there is a sound basis for futures trading in the commodity it deals in. But with imports of bullion banned and the internal output of gold meagre, there is little justification for a futures market in bullion. No wonder that the market has developed anæmic conditions over a period of time. Meanwhile, official restrictions have only aggravated its difficulties. Unlike other bullion markets in India, the Bombay bullion market has long been subjected to State control; and it is the only market which has now been brought under the control of the Forward Markets Commission. The Association has long been pleading that the various official restrictions, particularly those relating to margins, have diverted speculative business from Bombay to outside centres. It has again appealed to the Commission to do something in the matter to enable the market to function smoothly with a better turnover, or else to apply the Forward Contracts Regulation Act to trading in bullion all over the country.

Escorts to Issue Rights Shares

The directors of Escorts Ltd, New Delhi, in their meeting held last week, have recommended a gross dividend of 16 percent to the shareholders. Under Section 15C the shareholders would enjoy the benefit of tax-free dividend up to about 25 percent of the distribution. The total profit of the Company for the year ended 31st December, 1960, is Rs. 24,28,546. After providing Rs. 780,000 for tax (Rs. 630,000 in 1959) and Rs. 332,761 for depreciation (Rs. 124,300 in 1959), there remains a net profit of Rs. 13,15,980, out of which the directors have recommended Rs. 304,652 as development rebate reserve and Rs. 270,000 as general reserve (Rs. 190,000 in 1959).

The Company has made satisfactory progress in setting up the factory for X-ray equipment under Westinghouse licence and expects to be in production before the end of the year. Pistons manufacture has progressed according to plan. The Company is also putting up a factory for the manufacture of motor-cycles and scooters, for which an industrial licence has been issued, and 23 acres of land has been acquired in Faridabad (near Delhi). It has negotiated the purchase of plant and machinery under long deferred terms of payment to the extent of Rs. 1 crore. All payments for these projects are to be made in rupees and no foreign exchange is involved. The Company has further decided to increase the production capacity of pistons from 300,000 to 500,000 a year. Similarly, the subsidiary Companies, namely, Goetze (India) Private Ltd and Sharpedge Private Ltd, have planned to expand their production.

Escorts Ltd has also been given industrial and import licences for the manufacture of railway shock absorbers and heating elements. To meet the capital requirements for all the new projects, the directors have decided, subject to the permission of the Controller of Capital Issues, to issue new rights shares on the basis of one for one ordinary share at a premium of Rs. 3 a share. Similarly, the directors have also decided to issue 9 percent preference shares to the extent of Rs. 8 lakhs, most of which, it is expected, will be allotted to the foreign collaborators for supplying technical "know-how" and plant and machinery.

Premier Fertilisers Expedites Project Work

Premier Fertilisers Ltd (managing agents Emcete and Sons Private Ltd, Madras) has been licensed to manufacture 16,500 tons of sulphuric acid and 40,000 tons of superphosphate a year. It expects to start production by the end of this year, and with that programme in view, work is being expedited to complete the project in time. Civil works at the newly acquired site in Cuddalore O.T., was formally inaugurated by the chairman, Mr. M. Ct. Muthiah, on 5th February. Contracts for the civil works have been finalised and actual construction work, which is being taken up is expected to be completed in six months. Intimation has been received that the shipping of foreign contents of the plant and machinery is to begin from this month and end in next August. The indigenous items also, the contracts for which were finalised in last December, will start arriving soon.

Not Enough Raw Material for Buckets

The bucket manufacturing industry, like many others depending on steel, has a large part of its production capacity lying idle. According to Mr. N. L. Chowdhury, president of the Bucket Manufacturers Association of India, the industry is able to produce only 1.5 million dozen buckets, as against an installed capacity of 2.7 million dozen buckets and an estimated demand of 2 million dozen buckets. This is largely due to the difficult supply position of thinner gauge sheets, Mr. Chowdhury said. The industry has been forced to manage with 24 gauge B.S. cuttings. Other essential raw materials like steel wire and zinc have also been in short supply. The latter has been supplied up to only 20 percent of the bucket manufacturers' assessed requirements. Referring to the criticism that bucket prices are too high, Mr. Chowdhury said that the prices of the raw materials have gone up so much between 1948 and 1960 that the bucket makers have had no alternative but to charge higher selling prices in order to cover their increased production costs. For example, a ton of B.S. cuttings which cost Rs. 195 in 1948 now costs Rs. 525, and a cwt. of zinc at Rs. 165, costs more than three times its 1948 price. As against this, 7-inch sized buckets now sell at Rs. 22 a dozen, as against Rs. 9 a dozen in 1948.

Pitfalls in Planning

Speaking at the annual conference of the All-India Manufacturers Organisation in New Delhi last week, Mr. G. V. Puranik, chairman, said that national income in India had gone up by about 33 percent in a period of nine years and is expected to rise by 42 percent by the end of 1960-61. But the per capita income—on the basis of the population trend as shown in the latest census figures—has gone up by only 12.3 percent during the past nine years. Mr. Puranik said that although the amount of annual investment in the economy has increased by 200 percent since 1950-51, there is a wide disparity in the growth rates of investment and national income. It looks as if productivity is not improving and that India is not getting full benefits from the investments already made. The chairman admitted that many new industries were being established and that industrialisation had spread to new regions. But agricultural production has lagged behind and has gone up by only 27.2 percent in nine years, although it is expected to increase by 41 percent in 1960-61. By 1959-60, the rise in foodgrains production was only 24.3 percent—a little above the rate of population growth, necessitating food imports on a large scale. Mr. Puranik said that exports are not keeping pace with the growth of the Indian economy. If the level of exports is related to national income, the country's performance in export markets will be found to be disappointing. Imports, on the other hand, have gone up by 54 percent, so the adverse balance of trade, which was practically nil in 1950-51, amounted to Rs. 300 crores in 1959-60. The available data for the first six months of 1960-61 show, Mr. Puranik said, that the adverse balance for 1960-61 will be of the order of Rs. 360 crores. The chairman said that the growing lack of balance in the growth rates between investment and national income as well as between exports and imports would have to be rectified by increasing productivity and by expanding exports. Besides,

it will be necessary to arrest the high rate of growth of population as well as the rapidly rising cost of living if the efforts to raise the standard of living of the masses are to bear fruit.

Increasing Indian Export Earnings

Addressing the latest annual general meeting of the Indian Council of Foreign Trade in Bombay last week, Mr. Murarji J. Vaidya, president, said that although industrial production in India has been steadily going up—output rose by 8.7 percent in 1959 compared with 1958, and by 11.7 percent in 1960 over the previous year—the value of exports had not risen to a point where it could equal even that of maintenance imports. Exports of new items have increased, while those of the traditional ones have fallen. According to a foreign expert now serving with the Planning Commission, export earnings should be of the order of Rs. 1,500 crores a year to meet the requirements of the third five year plan, whereas the present earnings average only Rs. 690 crores a year. In Mr. Vaidya's view, the country's inability to increase its export earnings from traditional items could be traced to "a lack of aggressive selling", and is partly due to the keen competition from other countries. Extensive and constant on-the-spot studies of the markets should, therefore, be made, and "the manufacturers or exporters should make it a point to produce and supply such type of goods that are needed in the export markets instead of trying to sell what they are making or offering for sale in the domestic market," Mr. Vaidya suggested. The Government, for its part, should give more incentives, including some fiscal ones such as are given by developed countries like the U.S.A., West Germany and the U.K. As for those incentives which are already being given, there are too many procedural difficulties for the manufactures to take full advantage of them. Mr. Vaidya suggested that part of the foreign exchange earnings of the export industries should be allowed for importing plant and machinery to replace obsolete equipment. That would increase competitive power by helping to bring down production costs and to raise the quality standards of the goods.

Cloth Output and Stocks

Mill cloth production in March is provisionally placed at 421 million yards, against 408 million yards in the previous month and 410.34 million yards in March 1960. The March figure brings the cloth output in the first quarter of the current year to 1,265.68 million yards, against 1,231 million yards in the corresponding period of last year and 1,227.62 million yards in January-March 1959. The yarn output in March is estimated at 150 million lbs, against 145 million lbs in February and 139.77 million lbs in March 1960. The January-March production of yarn at 450 million lbs compares with 422.78 million lbs in the corresponding period of last year and 428.67 million lbs in January-March 1959. Production of both cloth and yarn is thus somewhat better than in the corresponding periods of 1960 and 1959. While production has recorded a small improvement and exports have been barely maintained, there has been a marked decline in cloth stocks with mills since the turn of the year. From 411,500 bales (of 1,500 yards each) at the end of December 1960—the highest for the year—the stocks declined to 305,600 bales by the end of February, end they were further down to 259,000 bales in March. The March-end figure, which is made up of 132,000 bales of unsold cloth and 127,000 bales of "sold but not lifted", is the lowest for the past four years. Total stocks at the end of March at 388.5 million yards (259,000 bales) are less than one month's production, and unsold stocks at 198 million yards represent hardly half month's output. This appears to be a dangerously low figure for a country of India's size. There are reports that several varieties of cloth of the more popular mills are fetching premiums on stamped prices.

Kothari Textiles Expands

The working of Kothari Textiles Ltd for the year ended December 1960, shows a net profit of Rs. 9.81 lakhs, after providing Rs. 16.30 lakhs (against Rs. 8.84 lakhs) for depreciation and Rs. 1.10 lakhs (against nil) for taxation. From the profit of Rs. 9.81 lakhs, the directors have transferred a sum of Rs. 4.05 lakhs (against Rs. 7.47 lakhs) to development rebate reserve. After making these appropriations, there remains a balance of Rs. 5.76 lakhs to which was added an amount of Rs. 55,806 brought forward from the previous year, Rs. 100,000 transferred from general reserve, and Rs. 1.25 lakhs from dividend equalisation reserve. This makes a total of Rs. 8.57 lakhs which is available for distribution. The directors have recommended a dividend of 10 percent on ordinary shares, subject to deduction of tax, absorbing Rs. 6.72 lakhs. The balance of Rs. 44,107 has been carried forward.

The year's profit is arrived at after meeting additional wages amounting to about Rs. 2.5 lakhs due to the implementation of the Textile Wage Board report and about Rs. 4.5 lakhs on account of the bonus and gratuity paid during the year. The earnings would have been higher but for the fact that the price of fine counts of yarn yielded only a narrow profit margin. Sales showed a rise from the previous year's Rs. 1.41 lakhs to Rs. 1.78 lakhs. In 1960, the value of exports of Kothari Textiles was Rs. 27.45 lakhs, representing about 40 percent of its total cloth production. Due to the shortage of electric power, the third shift could not be worked at mill No. 2. The additional 12,000 spindles at the latter have been gradually brought into production, and the entire 24,192 spindles licensed for the unit have been working for two shifts from June 1960. Towards the end of the year, a set of eight high-production-whitincombers and the requisite preparatory machinery were installed at the mills. These have been put into operation during the current year. Additional cone-winding machines have been installed both in mill No. 1 and mill No. 2. The installation of up-to-date high productive combing equipment in 1960 is significant, since Kothari Textiles is the first mill in the south to install this machinery. The full benefits of its working will be reflected in the results for 1961, for the production of the Company's combed yarn for the handloom market is expected to be doubled.

With a view to maintaining and further improving the quality of products, Kothari Textiles has embarked on an extensive renovation programme. The machinery and equipment, it is said, have been ordered. The directors are considering the renovation of 13,824 ring spindles installed in 1938. After the renovation, Kothari Textiles will be one of the most up-to-date mills in south India.

Adoni Spinning Earns More

The working of Adoni Spinning and Weaving Co. Ltd for the year ended December 1960, shows that its net profit has increased from Rs. 9,026 to Rs. 10.34 lakhs, after providing Rs. 9.24 lakhs (against Rs. 99,157) for depreciation and Rs. 1.09 lakhs (against Rs. 5.44 lakhs) for development rebate reserve. With Rs. 31,634 brought forward from the previous year, the total amount available for appropriation comes to Rs. 10.65 lakhs. The directors have recommended a dividend of 8 percent on equity shares, absorbing Rs. 2.39 lakhs. The balance of Rs. 59,147 has been carried forward. During the year, all the 24,000 spindles were working three shifts. The Company has installed four doubling machines and one cone-winding machine at a cost of about Rs. 2 lakhs. Sales of yarn increased from Rs. 71.60 lakhs to Rs. 1.29 crores.

Rights from Blue Mountain

Blue Mountain Estates Ltd is issuing rights shares at the ratio of one new equity share for every three held as on 5th April, 1961. The total issue is for 1,050,000 equity shares of Rs. 2 each at Rs. 2.45 a share. The issue is being made in order to provide the finance for installing a superphosphate factory in Ennore, near Madras. The Company has obtained a licence from the Government of India for erecting the factory with a production capacity of 50,000 tons a year. It has made arrangements for acquiring the land for the factory, and has placed orders for plant and machinery. The estimated cost of the factory is Rs. 40 lakhs. It is expected that the plant will go into production by early 1962. It is proposed to finance the scheme partly by bank borrowing and partly by the issue of new shares. The directors have already arranged for a bank loan of Rs. 21 lakhs.

New Beerbhoom Produces More

The production of the New Beerbhoom Coal Company Ltd increased considerably during the year ended October 1960. Raisings amounted to 714,376 tons against 656,767 tons in 1958-59 and despatches improved from 646,381 tons to 716,744 tons. The output of the selected "A" coal at Victoria and Victoria West collieries has increased satisfactorily. Arrangements have been made to develop the Dobrana seam at the New Kendah colliery and raisings of the Barmondia colliery are being increased. The profit has risen from Rs. 9.43 lakhs in 1958-59 to Rs. 11.98 lakhs in 1959-60, after providing Rs. 5.05 lakhs (against Rs. 3.74 lakhs) for depreciation. The ordinary dividend has been increased from 15 percent, taxable, to 16 percent, taxable. It is covered more than four times, and gives a yield of 7.3 percent at the present price of Rs. 22 a share. Taxation provision receives Rs. 5.40 lakhs (against Rs. 4.51 lakhs), development rebate reserve Rs. 1.64 lakhs (against Rs. 2.05 lakhs) and general reserve Rs. 2 lakhs (against Rs. 1.87 lakhs). The carry-forward is Rs. 79,798, compared with Rs. 81,185 brought in. Meanwhile, the ordinary share capital has been increased by issuing 142,098 rights ordinary shares of Rs. 10 each at a premium of Rs. 4 a share.

Valves from Schrader-Scovill Duncan

The Scovill Manufacturing Company of the U.S.A. has recently concluded an agreement for the manufacture of vehicle tyre-tube valves in collaboration with Duncan Brothers and Co. Ltd, Calcutta. The A. Schrader's Son Division of the Scovill Manufacturing Company is the world's oldest and largest tyre valve manufacturer. The new Company, launched under the name of Schrader-Scovill Duncan Ltd, has been formed in India with an authorised capital of Rs. 2 crores. In the beginning, Duncan Brothers and its associates in India will hold 49 percent of the shares and the rest will be held by the Scovill Manufacturing Company, which will also provide the technical know-how. Probably within about three years, the share capital will be divided fifty-fifty between the participants, and later on the new Company will invite public participation in the share capital.

At present, the vehicle tyre-tube valves used in India are imported from the Schrader factory in Birmingham, U.K. With the development of the motor-vehicle tyre industry, the cost of importing valves will be doubled by the end of the third five year plan. It is estimated that this project will then be in a position to save much foreign exchange. In addition, as Schrader's has no manufacturing operation in Asia or Africa, it is expected that tyre-tube valves manufactured in India will be exported to neighbouring countries. The plant, which will be located near Bombay, is scheduled to commence operation in January 1962. It will be the first of its kind in India.

CORRESPONDENCE

POWER COST IN U.P.

(To the Editor of "Capital")

Sir,

My attention has been drawn to the news item "Taxation in U.P." under the main heading "Current News and Comment" in your issue of 13th April, 1961, and I welcome the opportunity which this gives me of correcting what appears to be a misunderstanding. In the course of this news item, it is reported that Mr. H. L. Khanna, president of the Upper India Chamber of Commerce, Kanpur, complained of the high cost to the consumer resulting from the high cost of power projects, and he is further reported to have said, "Even in the case of the Kanpur extension project—a thermal plant—the cost comes to Rs. 1,240 a kilowatt." This figure is incorrect. Actually, the cost of the generating plant installed under the Extension Project was Rs. 767 a kilowatt, which is a little more than half of the figure reported by Mr. Khanna.

Yours etcetera,

K. C. Gupta,

General Manager,

Kanpur Electricity Supply Administration.

Kanpur, 20th April.

THE BRITISH BUDGET

HAD there been no war, the Chancellor of the Exchequer told the House of Commons, he would have had this year a surplus of fifteen millions sterling. As it is he has to put additional taxes on molasses and glucose to the extent of about £300,000; on sugar, £4,400,000; on coal, £2,100,000 and on the income-tax payers of £4,200,000; in all about £11,000,000. And in addition a War Loan of £60,000,000 is to be raised. The huge expenditure of 1901 is estimated at upwards of £187,000,000. John Bull will indulge in his constitutional grumble at this state of matters, but all the same, he will put his hand into his pocket and pay the bill. He cheerfully pays as much every year for his luxuries of wine, beer and tobacco. As showing the immense strides which Great Britain has made in taxable income since 1854, the last occasion when the income tax was at the rate of 14d., we may mention that then the tax only yielded a little over £10,000,000. This year the same rate is calculated to produce not far short of three times that sum, or nearly £30,000,000. Every penny of the tax yields over two millions sterling. As might have been expected, the export duty on coal, the quantity of which is about one-fifth part of the total output of the mines, is the impost which is raising the greater amount of opposition, but as the Chancellor has seen his way to relieve existing export contracts from paying the duty, he may be able to carry this part of his budget without further opposiion.

25th April, 1901

A Ditcher's Diary

WHILE MR. KENNEDY IS INVESTIGATING THE failure of his own little Suez escapade, it is my hope that he will give some thought to the reason why so many "uncommitted" nations were eager to chorus their horrified condemnations to Mr. Khrushchev's tune even before the U.S.A. had ceased to deny its complicity. Admittedly the U.S.A. must take a good deal of the blame on itself; it has climbed on its own high moral horse often enough in the past; even now it has the consolation of knowing that its defeat was brought about by the arms of its enemies and not by sanctimonious pressure from its allies. But the shrillness of the outcry raised, long before the picture was clear enough for a balanced judgment, was surely enough to make any country wonder why so many nations are anxious to castigate it whenever the opportunity arises, especially when it can rightly regard itself as the chief economic benefactor of most of them. Apart from this being yet another proof of the old Confucianism that when a man hates you it may be because you have done something to help him, this seems to me to be open evidence of the success the communists have achieved in convincing the world that they, and those whom they choose to support, have a monopoly of the moral right to overthrow foreign governments by force, foment revolutions and interfere in the internal affairs of other countries. It is significant that nothing like this chorus of protest was raised over China's invasion of Tibet, or the interference of Russian-armed, foreign-based guerillas in the internal affairs of Laos—an intrusion which seems to resemble in almost every detail the circumstances of the U.S. action in Cuba, but which the communists have been able to carry on without even going to the trouble of denying their part in it. There is no world outcry against President Nasser when he stirs up trouble in Jordan and has its Prime Minister assassinated, and nobody except the French condemns Tunisia for allowing a rebel army to operate from her soil. The tears shed for Imre Nagy were only a tithe of those poured out so ostentatiously over the death of Patrice Lumumba, a murder of far more doubtful official instigation. There was not even a murmur from Prime Minister Castro's present supporters when he overthrew the former Batista régime by using very much the same methods as are now being employed to unseat him. And so it goes on; the communists have established the double standard, and whom they support, so many of the "uncommitted" appear these days to accept as blameless no matter how bloody their régimes or how totalitarian. The consequences of this for Mr. Kennedy may be simply a more careful study and the eventual copying of communist public relations methods. But I suspect they will be more serious than this. For the honest man who believes in fairplay and wants to express his genuine abhorrence of aggression and interference from whichever quarter they arise, the situation also possesses serious problems. He may not wish to associate himself with the rowdy legions who demonstrate outside western embassies, or with the one-sided politicians who invariably condemn one party and exonerate the other. Yet that is what he is forced to do these days if he wants to voice his disapproval of anything the West has done. It is becoming increasingly frustrating for the impartial.

ALTHOUGH AT THE BEGINNING THE AFFAIR LOOKED ominous enough—I could almost see General de Gaulle quivering in hurt pride, like Haile Selassie a few months ago—in retrospect, the revolt in Algeria seems to have been something of a good thing. The colons and their ultras had been getting on France's nerves for quite some time; and although as many as four Generals lined up in their forlorn cause, the Army as a whole was getting fed up too. As I think I have said before, I am not lacking in sympathy for the settlers; I well realise that theirs is an excruciating dilemma. But they and their leaders must be mad to have thought that flouting Paris and its authority was going to get them anywhere. The talks at Evian have already been delayed, for which no little blame attaches to the F.L.N., but when they begin, as they must, President de Gaulle's representatives may sit there with greater confidence than might have been possible before the abortive revolt. Its apparently complete failure within a few days clearly shows that French opinion has painfully upheld the President who now accepts the inevitability of Algerian independence. Very little is known about the effective composition of the F.L.N. leadership at the moment. How powerful, for instance, is Mr. Ferhat Abbas; how decisive President Bourguiba's shrewd advice? But if there is some sanity left in the F.L.N. headquarters, Messrs Abbas and Company must know that Algeria needs France at least as much as France needs Algeria. I am entirely prepared to believe that General de Gaulle is sincere in offering to help a free Algeria develop in friendship with France. I do not expect the nationalists to admit it openly, but today's Algeria is what France has made of her. It is totally wrong to think of Algeria as a backward little colony which France only exploits; in the eradication of epidemics, for instance, France's record in Algeria is far better than Britain's in India. Both Frenchmen and Algerian Muslims have a great deal to forgive and forget; but if the moderate section of the nationalist leadership is swamped by the extremists, it will be a bad day—and not for the M.N.A. and the colons alone. It is not true that nothing in Africa can be worse than the mess of the ex-Belgian Congo.

MANY OF US MUST SOMETIMES FEEL THAT THE world is too much with us, that we have had enough of life. Fortunately, not everyone does anything more about it; and our humdrum lives continue as long as it is given to us to live. It is usually an entirely individual decision when a man or a woman decides to commit suicide; in Britain, the rigours of the law have lately been relaxed for those who fail in the attempt to cut short their lives. When suicide becomes a social phenomenon, as in some of the very prosperous Scandinavian countries, psychologists offer various explanations, only a few of which are convincing. Life has no more problems left, so people commit suicide out of boredom—so we are told. In Japan suicide has a long tradition, something to do with face and honour. I saw some figures a few months ago which established that the suicide rate in Andhra was the highest in India; and a Calcutta contemporary reports that in the Bengali middle classes the suicide rate is rising. Reason, or reasons? With inflation and unemployment, these classes have suffered more than any others; and their members are very emotional and sensitive, if not highly strung. Failure in examinations, unmarriageability, unemployment, heartbreak in a love affair—these must account for a large number of suicides. Poverty must be a major reason, which is increasing with growing numbers in West Bengal, as the recent census figures showed. The deep sense of frustration is no secret. What is one to do about it? There is much that the Centre can do but doesn't. The State Government is not all it should be; and the Corporation of Calcutta could do with a lot of improvement. There remains much that the Bengali middle class could do for itself. Dr. Radhakrishnan once said that the entire Indian nation was suffering from "a crisis of character". The Bengali middle class must ask itself whether it is not proof of such a loss of character that in recent decades it has produced little by way of positive leadership. The rising suicide rate reflects a certain defeatism which I have noticed with distress in many Bengalis. As they celebrate the Tagore centenary, they surely owe it to themselves to ponder where they have fallen from the ideals preached—and lived—by the greatest Bengali of all time.

ACCORDING TO THE New York Herald Tribune, U.N.E.S.C.O. lately sponsored a journey by Land Rover from London to Sikkim undertaken by one M. Claude Bernheim, a Frenchman in the stocking business, and a Mr. William Hubbell, free-lance photographer, and their wives. After their 26,000-mile round-tour under the aegis of the international cultural organisation, M. Bernheim was delivered of the following observations on India before a columnist of the reliable New York paper: "In India you need a loud horn or air-raid siren to get the bullocks and sacred cows off the road. Be careful when driving at dusk because the cows take on the same colour as the road. If you only have the choice of running down a woman or a cow, in India by all means choose the woman. Men in India take a dim view of your running down one of their cows . . . Don't put too much faith in Indian road maps. We drove several hundred miles and suddenly the road ended. When we enquired where the rest of the road was, since it was clearly marked on the map, the police explained that they were planning to build the road but it probably wouldn't be ready for ten years. Don't ask an Indian for directions unless you're absolutely desperate. An Indian will never tell you he doesn't know the answer to your question. He's not nasty and he doesn't want to fool you, but he has an inferiority complex and he doesn't want you to know he doesn't know the answer". Similar dubious wisdom was dispensed by this U.N.E.S.C.O. protégé about Pakistan and Iran, and he did not fail to mention that his party met (no doubt with the aid of their sponsors) Mr. Nehru, the Queen of England who was then in these parts, Tensing, the Dalai Lama and other celebrities. I can imagine various reactions among Indians to this farrago, from amused contempt to injured patriotic dignity. That will depend on personal temperament, but something on which we all might agree is to maintain our scepticism about U.N.E.S.C.O. blarney on the subject of the great works it finances in promoting accurate knowledge of foreign countries and in increasing international amity.

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS

A copy of the Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956 for Registration, has been delivered to the Registrar of Companies, Bihar, Patna.

Certificate of Commencement of business has been obtained on the 31st January, 1961.

An application is being made to the Calcutta Stock Exchange Association Ltd. for enlisting the name of this company for official quotation of the shares of the Company.

THE SUBSCRIPTION LIST WILL BE OPEN AT THE COMMENCEMENT OF THE BANKING HOURS ON THE 1ST DAY OF MAY, 1961 AND WILL CLOSE AT THE CLOSE OF THE BANKING HOURS ON THE 10TH DAY OF MAY, 1961 OR SOONER OR LATER AS THE DIRECTORS MAY DECIDE BUT NOT EARLIER THAN THE CLOSE OF BANKING HOURS ON 4TH DAY OF MAY, 1961.

BIHAR CABLE & WIRE INDUSTRIES LIMITED

(Incorporated on the 13th October, 1960 under Companies Act, 1956)

SHARE CAPITAL

AUTHORISED SHARE CAPITAL		**Rs. 25,00,000**
Divided into :—		
1,50,000 Equity Shares of Rs. 10/- each	**Rs. 15,00,000**	
10,000 Preference Shares of Rs. 100/- each	**Rs. 10,00,000**	
	Rs. 25,00,000	
ISSUED SHARE CAPITAL		**Rs. 10,00,000**
70,000 Equity Shares of Rs. 10/- each	**Rs. 7,00,000**	
3.000—7% All tax free cumulative redeemable Preference Shares of Rs. 100/- each ...	**Rs. 3.00,000**	
	Rs. 10,00,000	
SUBSCRIBED & PAID-UP CAPITAL		**Rs. 2,19,080**
(i) 18,400 Equity Shares of Rs. 10/- each fully paid up (issued to the Vendors of two industrial units purchased being the consideration money paid)	**Rs. 1,84,000**	
(ii) 3,508 Equity Shares of Rs. 10/- each (issued to promotors, Directors, their friends and relations at par, against full payment in cash)	**Rs. 35,080**	
	Rs. 2,19,080	
PRESENT ISSUE		**Rs. 7,80,920**
48,092 Equity Shares of Rs. 10/- each	**Rs. 4,80,920**	
3,000—7% All tax Free cumulative redeemable Preference Shares of Rs. 100/- each ...	**Rs. 3.00,000**	
	Rs. 7,80,920	
OUT OF THE PRESENT ISSUE		**Rs. 60,920**
6,092 Equity Shares of Rs. 10/- each have been agreed to be subscribed by Directors, their friends and relations against full payment in cash	**Rs. 60,920**	
NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION		**Rs. 7,20,000**
42,000 Equity Shares of Rs. 10/- each	**Rs. 4,20,000**	
3,000—7% All tax free cumulative redeemable (at the end of 7 years) Preference Shares of Rs. 100/- each	**Rs. 3.00,000**	
	Rs. 7,20,000	

Except the purchase price paid to the Vendors as aforesaid no shares have been allotted or will be allotted for a consideration other than cash.

TERMS OF PAYMENT OF THE ABOVE SHARES

(i) 42,000 Equity Shares will be payable as follows :

On application	**Rs. 5/- per share**
On allotment	**Rs. 5/- per share**

(ii) 3,000 Preference Shares will be payable as follows :

On application	**Rs. 50/- per share**
On allotment	**Rs. 50/- per share**

Failure to pay the allotment money will render the share liable to forfeiture.

UNDERWRITERS

The entire issue of 42,000 equity shares has been under-written by Messrs. Sadasukh Kabra & Co. of 2, India Exchange Place, Calcutta. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

APPLICATION FOR SHARES

Applications for Equity and Preference Shares should be made in the printed form accompanying the Prospectus. Applications for Equity Shares must be for a minimum of 25 shares or multiple of 25 shares and for Preference Shares must be for a minimum of 5 shares or multiple thereof. All Application forms properly completed must be lodged together with amount payable on application before the closing date of the Subscription list at the Registered office or at the Head office of the Company or at the offices of the Bankers detailed in the Application forms.

The Directors do not bind themselves to allot the full number of shares applied for and reserve the right to reject any application wholely or in part without assigning any reason thereof. Applications which are not complete or which are not accompanied by proper payment as above may not be considered.

DIRECTORS' QUALIFICATION
The qualification of Directors shall be holding of one Equity share in the capital of the company.

BIHAR CABLE & WIRE INDUSTRIES LIMITED—*Cont'd.*

OBJECTS OF THE COMPANY

The company was incorporated on 13th day of October, 1960. The main object of the company is to carry on business as manufacturers and dealers in nail-wires, wire drawing and galvanising stranded wires, barbed wires, wood screws, bolts and nuts, rivets and all other kinds of wires whether steel or otherwise and wire products and also to carry on the business as manufacturers of, dealers in, importers, exporters and contractors of all kinds of cables, apparatus, insulated materials required for electricity and telephone or are capable of being used in connection with generation, distribution, supply, accumulation and employment of electricity.

HISTORY OF THE COMPANY

The company has taken over two industrial units, viz. Khemka Cable Works and Bihar Wire Industries on and from 18-10-60 as running concerns with all their assets and liabilities, goodwill, trade marks, permits, licences, advantages etc., including rights on all immovable properties including those held under lease partly or fully constructed or acquired by the vendors including plant and machinery, office furniture, implements, raw materials created by the Vendors as on 18-10-60 in terms of the agreement dated 15-11-60, with the partners of the said two Vendors.

(1) The Unit Khemka Cable Works has a scheme to produce per annum 24 million yards of Rubber insulated cables up to 660 volts of various grades required for domestic and industrial electrification and the manufacture of 0.6 million yards of welding cables required for the installation of heavy and light steel structural constructions in both private and public sectors. The cables to be manufactured by the company will conform strictly to relative Indian Standard Specifications prescribed. The Unit has already acquired its Plant and Machinery which are likely to be delivered to the company within another about three months and has also completed the major part of construction of factory sheds and buildings.

(2) The Unit Bihar Wire Industries has two schemes—the first is to manufacture 1.500 tons of galvanised steel wires per annum and the second scheme is to manufacture 700 tons of barbed wire and wire nails per annum. This unit for making barbed wire and wire nails is likely to go into production in another about three months time since the machineries and raw materials have already been acquired and are likely to be delivered at factory site very shortly. The unit for manufacturing galvanised wire will go into production by January 1962 when all the Plant and Machinery is likely to be delivered to the company.

BUSINESS PROSPECTS

Under the present phase of industrialisation, electrification and economic development in the country, the manufacture of electrical cables has an important and major role. With the advent of the Third Five Year Plan and the progressive expansions of the existing Industries and various programmes of rural electrifications, the cable and wire industry has very bright prospects. In spite of manifold increase in the production of low tension distribution cables which has been raised by over 100% between the year 1954-58 from 62.80 million yards in 1954 to 127 million yards in 1958, the indigenous production has not been able to meet demand for these cables. The demand for these cables at the end of the Third Five Year Plan is estimated to exceed 500 million Core Yards against the country's production of 214 million in the year 1959-60 which is less than half of the target set for 1965-66. The yearly increase in demand of 20% leaves a wide gap between the demand and supply and thus assures this proposed factory a good market for its products and further increase in the production from time to time.

The demand for hard Bright Wires, Concrete Reinforcement Wires, Galvanized Wires used for stay wires, telegraphic transmission, etc., Signal Wires, etc., are largely imported as the indigenous production is not sufficient to meet the demand. In view of great industrialisation and expansion programmes undertaken in all phase of development in the country, the demand for such wires is likely to increase in the Third Five Year Plan. The company's plant for manufacturing of 1.500 tons per year will be helpful in reducing import and with the increased production of steel in the country, there is a good scope to increase the production of wires by the company. The company proposes to increase its wire drawing and galvanising capacity from 1,500 tons per year to 12.000 tons per year and for this it is already in negotiation with the Central Government for grant of Industrial Licence and the company is also in touch with foreign firms for technical collaboration.

MANUFACTURING LICENCES, RAW MATERIALS & TECHNICAL PERSONNEL

With a view to boost small industries, the Government of India have decided that industrial undertakings, which employ less than 100 persons and whose fixed assets are less than Rs. 10 lakhs in value, can proceed without applying for licence under the Industries (Development and Regulation) Act. Since the fixed assets of the company's each industrial unit will be below 10 lakhs the company does not need any manufacturing licence under the said act. The company has, however, received full support from the State Director of Industries who has recommended the setting up of the company's industrial Units in Bihar and has issued required Essentiality Certificates for the import of Plant and Machinery and raw materials.

The company has already been granted most of the import licences for import of Plant and Machinery and raw materials which have also been imported to some extent. Other plant and machinery as required for the second stage of production schedule will be imported very shortly.

Raw materials to run the barbed wire and wire nail unit has already been imported and this will be sufficient for about three months consumption Other import licences for raw materials are expected shortly. With the increased production of steel in the country, the company does not foresee any difficulty in running its wire drawing and galvanising plant.

The company has secured the services of fully qualified technicians with previous experience of working in similar units. This would enable the company to bring the units into full production within the scheduled period.

LOCATION OF FACTORY SITE & POWER

The present two industrial units of the company are located at Digha, Patna on Lease-hold land. The construction of the factory shed and office building for cable factory is nearing completion. Negotiation for the out-right purchase of other plots of land just adjacent and behind the present plot of land is under progress with the owners of the said land which is expected to materialise very shortly. From the point of view of road and rail transport, the present site is very convenient. Adequate supply of electric power has already been sanctioned by Patna Electric Supply Co. Ltd.

CAPITAL OUTLAY AND SOURCES

Capital outlay and working capital

The estimate of requirements are as follows :

1. Cost of erecting factory shed, office buildings and plant and machinery inclusive of transport, custom duty, erection at site, cost of land and preparation of site, etc	19.45 lakhs	
2. Other fixed assets	1.05	„
3. Preliminary and development expenses including expenses on this issue and brokerage payable	1.50	„
4. Working capital including accommodation from Bankers	26.50	„
5. Any other expenditure	Nil	
	39.50 lakhs	

(A portion of the above expenditure can be deferred).

This amount will be made from the sources as follows :

1. Subscription by the Directors and their friends including the Vendors share issued	2.80 lakhs	
2. Subscription of 42.000 Equity shares and 3.000 Preference shares offered for public subscription	7.20	„
3. Other Credits and advances	3.00	„
4. Loan from Bihar State Financial Corpn against mortgage of immovable assets	5.75	„
5. Bank accommodation against stocks, bills, etc.	20.75	„
	39.50 lakhs	

(To arrange Bank Accommodation of 20.75 lakhs, a margin of 4.75 lakhs have been provided. Moreover the entire banking accommodation is not required immediately since the other units will come into production later in early 1962 by which time the company would have earned from other units going into production much earlier.)

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sum required to be provided as per para (5) of Schedule II of the Companies Act, 1956, in accordance with which the Directors would proceed to allot by this Prospectus, is the subscription of shares of the nominal value of Rs. 4,50,000/- payable in cash.

PROFIT

On the basis of existing prices and after allowing costs, depreciation and other foreseeable contingencies in so far as those items can at present be estimated the directors are of the opinion that, in the absence of any unforeseen circumstance, the company should be in a position to pay reasonable dividends on the issue of Equity Shares, possibly in the very first year of the Company's working. The other similar large factories are making excellent profits and are paying good dividends.

The company will be entitled to get the advantages of the development rebate and exemption from Income Tax under Section 15(C) of the Income Tax Act and the shareholders will also be exempt from Wealth Tax on their holdings for a period of five years under Clause XX of Sub-section 1 of Section 5 of Wealth Tax Act.

The company will also be entitled to sell its products at a higher rate to Government consumers as allowed under the act for the benefit and encouragement to small scale industrial units.

UNDERWRITING COMMISSION

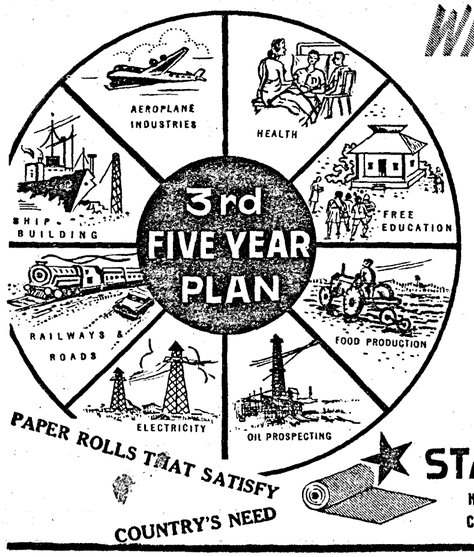
The underwriting commission @ 2½% of the nominal value of the Equity Shares now offered for public subscription is payable to the said underwriters.

BROKERAGE AND COMMISSION

The brokerage will be paid by the company to the members of any recognised Stock Exchange and to the Bankers at Rs. 1.20 nP per share in respect of Preference Shares and 12 nP per share in respect of Equity Shares allotted in respect of applications bearing their stamps. Brokerage on the same basis will be paid to the underwriters in addition to the underwriting commission on the shares allotted in respect of application bearing their stamps. Brokerage will also be paid by the company to the Managing Brokers @ 7 nP per Equity Share and at 50 nP per Preference Share on shares allotted to public.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles of Association of the Company and copies of other documents and Agreements can be inspected at the Registered Office of the company during the usual business hours until 14 days after the opening of the subscription list.



Wheel OF PROGRESS ROLLS ON...

2nd Five-Year Plan has been completed and the targets of production in most of the Sectors have been more than fulfilled. Our Government has drawn up a 3rd Five-Year Plan more ambitious than the preceding ones. The investment target is going to exceed 10,000 crores of rupees. More emphasis has to be laid on agriculture, education and industries thereby ensuring the country a brighter and prosperous future.

THE STAR PAPER MILLS are marching apace with the country's progress by increasing the volume of its output and adding M. G. Posters & Kraft Papers to its line of production.

PAPER ROLLS THAT SATISFY COUNTRY'S NEED

STAR PAPER MILLS LTD.

HEAD OFFICE CALCUTTA -1. | Mills SAHARANPUR, U.P.

JESSOP AND COMPANY LIMITED

CHAIRMAN, SIR B. P. SINGH ROY'S REVIEW

The following is the speech delivered by Sir Bijoy Prosad Singh Roy, K.C.I.E., Chairman, Board of Management, Jessop & Co. Ltd., at the Twenty-ninth Annual General Meeting of the Members held in Calcutta on 20th April, 1961:

Gentlemen,

It is with pleasure that I welcome you today at the Twenty-ninth Annual General Meeting of your Company. For want of suitable and comfortable accommodation in your Head Office, it was decided to hold the Meeting in the Room of the Bengal Chamber of Commerce. I hope this meets with your approval.

As it will appear from the Board of Management's Report, the year ended 31-10-1960 was not free from difficulties. The early part of the year was badly affected by shortages of steel. Things are no doubt better now but we have a long leeway to make things really satisfactory. Though the availability of steel has improved, we find ourselves hampered by shortage of transport facilities both in bringing materials to our Works and in removing finished products. The shortage of foreign exchange also affects us as many other concerns.

A factor which affected the working of the year under review was the prolonged delay in establishing manufacture of the new BOX wagon which replaced the old four-wheel covered goods wagon which was one of our chief lines of production. Because of the shortage of certain components, which the Railways had contracted to supply, the outturn of these wagons in the year ended 31-10-1960 was only 145, representing sales value of about Rs. 61 lakhs. At such a rate of output production was uneconomical. It should be realised that these wagons replace an older type of which we had thirty years manufacturing experience so that production ran at over 2,500 a year, or about Rs. 300 lakhs. The effect on the working of the Company is therefore obvious. The position has since improved, and is still improving, but it has a long way to go before the old level can be reached.

Electric Multiple Unit Coaches

Another factor affecting the year's working was the contract for Electric Multiple Unit coaches. This was an entirely new venture and like all new ventures, relatively unremunerative in its early stages when all the teething troubles must be overcome. With the rapid industrialisation of the country, a company like yours is expected to make its contribution to the development of our industries and in that connection the undertaking of new lines of manufacture by this company is not only desirable but essential.

We expect to complete delivery of the 18 Electric Multiple Units (3 coach) for Bombay in June, 1961. After some considerable delay we were given in June, 1960 a further order for 21 E.M. Units (3 coach) with two spare Motor coaches and 35 Special Trailers for Bombay. I regret to state that the import licence for the special electrical and mechanical equipment required has not yet been issued in spite of sustained efforts on our part. Until the import licence has been received it is not possible for us to place orders for the equipment abroad and this means that there will be a gap in production of E.M.U. coaches of approximately 7 to 9 months. Apart from the dislocation this must inevitably cause in our Works due to break in continuity of manufacture, this shortfall in E.M.U. production is even more regrettable at this time when there is a pressing demand for such coaches.

In order to fill the gap in production the Coach Works will take up the manufacture of Broad Gauge Motor and Parcels vans and Broad Gauge Well wagons. The expansion to the Coach Works which I mentioned in my address last year, is now nearing completion.

New Bogie Works

Much of the essential plant for the new Bogie Works, which has been set up to manufacture the all-welded bogie for the BOX wagons, has now arrived and is being installed. Although further plant has yet to be received, we are now transferring manufacture of the BOX bogies to this Works and this should ease the load on the Structural Works where this work is at present carried out.

The demand for our diesel road rollers continues unabated and we are making strenuous efforts to raise production beyond the target of 200 rollers per annum. With this end in view we are setting up a new Works on our own land in Dum Dum, which will specialise on the manufacture of road rollers and allied equipment. Apart from freeing capacity in the existing Structural and Mechanical Works where our road rollers are at present built, the new Works will be better equipped to meet the growing demand which will rise further with the tremendous increase in road building in the Third Five Year Plan.

We have now finalised arrangements with our collaborators, Messrs. Aveling-Barford Ltd., England, to manufacture the transmission for our road rollers and the necessary amendment to our manufacturing licence has already been obtained from the Government of India. All the special purpose plants have been ordered from abroad and when these are finally received towards the end of the year, we shall be able to take up the production of the transmission and will then have achieved almost 100% indigenous content as the engine is now made in Madras.

Recruiting Skilled Craftsmen

We are experiencing the greatest difficulty in recruiting skilled craftsmen for our Works. The shortage of skilled workmen is a factor which must retard expansion of the Engineering industry unless immediate steps are taken to train our young men along the right lines to meet the growing demand. This matter has been given the fullest consideration by your Board and it has been decided to extend the present Apprentice Training Scheme by setting up a Training School on land we have in Dum Dum.

You will have seen from the published accounts and the Board of Management's report that the Works' output during the year under review was Rs. 906 lakhs as compared to Rs. 648 lakhs during the previous year. This represents an increase of 40% which, I hope you will agree, is a remarkable achievement in the course of one year. Owing to the still uncertain supply position of matching steel and of components, particularly those which have to be imported, it is rather hazardous to make a forecast of output during the current year 1960-61, but the trend of production in the first few months indicate that the year's output will probably increase by about 30% over that of 1959-60. Our order book is excellent and the demand for our products continues to be good.

As you will have read in the daily press, there is an acute shortage of electric power prevailing at present and should the position deteriorate any further, severe cut in the supply to our Works may be imposed with most serious results. Your Board is watching the position anxiously.

Power Crisis

Since my address was printed there has been further deterioration in the supply of electric power due to the closing down of the Cossipore Generating Station. We have now been advised by the Calcutta Electric Supply Corporation that from the 17th April, 1961 they have arranged to let us have our maximum power demand between the hours of 8.30 a.m. and 5.30 p.m. but no industrial power will be made available to us outside this period. This means that those sections of your Works which operated on both day and night shifts will be restricted to working on a single shift only. This will necessitate the laying off of several hundred workmen while output will be seriously affected.

I understand that while the immediate power crisis is likely to be relieved by the 8th May, 1961 no real improvement can be expected for a further 6/8 weeks.

Need for Additional Finance

I hope that no efforts would be spared to remedy this serious situation which would affect production not only of your Company but industrial output in general in this region.

As you must have noticed, the company's financial position has improved considerably in the last two years, but the continued rise in production and the need for expansion and rehabilitation are creating ever-increasing demand for additional finance. If, in addition, any important new line is taken up, demand for capital will be still greater. Your Board has, so far, avoided raising further share capital, which understandably would place additional burden on you, but I am afraid this cannot be postponed indefinitely. We have recently had the limit of our borrowing from bank increased by Rs. 50 lakhs. Our securities may be adequate for getting some more accommodation from the bank and we may succeed in doing so but this will be too inadequate for our needs. Moreover, it is not only desirable but essential to maintain a proper balance between share capital and our borrowing.

In the Board of Management's Report the circumstances leading to the decision to buy over Jessops—Calcutta Ltd., London, and to convert it into a wholly-owned subsidiary of your company have been fully explained. The London company has become a wholly-owned subsidiary with effect from 27-3-1961. I need only mention here that the purchase of that company has been effected on very favourable and satisfactory terms.

Preference Dividend

The enactment of a law towards the close of 1960 regulating the payment of dividend on Preference shares has since set at rest the unfortunate controversy in this regard created by the Finance Act of the same year, although the solution is not wholly satisfactory from the point of view of the shareholders affected. For the financial year 1958-59 they received a gross dividend of 7.14% and a nett dividend of 5% after deduction of income tax, whereas from 1959-60 onwards these figures will be 6.50% and 4.55% respectively.

Gentlemen, I would like to make mention of the most valuable asset your company possesses. I refer to the team of Staff and Workmen built up over the years and whose loyalty and hard work have enabled your company to prosper and grow to its present size in spite of some serious difficulties it had to face in recent past due to reasons well known to you. I am sure you would wish me to express our sincere thanks to all those in the company's employ who have contributed to the excellent results shown in the accounts before you. We are now about to complete the preliminary work necessary for the introduction of the incentive system at our Works, to which I referred in my address last year. As I then explained, this requires the most careful consideration as we handle a wide range of products.

Finally, I cannot close without referring to the retirement at the end of March this year of Mr. S. S. H. Sitwell, a Member of the Board. Mr. Sitwell has been in the company's employ for over 32 years and we will greatly miss his wide experience and guidance.

N.B.: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE CALCUTTA MONEY MARKET

ADVANCES REMAIN STEADY

Wednesday, 26th April.

THERE has been little change in the quantity of advances during the past week. Of the main sources of demand, only two show substantial increases—the sugar mills and the iron and steel industries. The requirements of the cotton mills have increased slightly, but call for accommodation against grains and seeds storage is slightly down. Demand from the jute industry shows a fall. The interbank market has remained rather easier, with the call rate unchanged at 4½ percent. The position is somewhat fluid and some authorities are expecting there may be a further easing when the Good Year Tyre issue is closed towards the end of this week.

The exchange market has again been extremely quiet, with few bills of any kind coming to hand. Demand for remittance shows some slight increase. In the London money market, the pound was maintained through the earlier part of the week by the intervention of the Bank of England, but towards the close there was a markedly weaker tendency and losses were recorded against most important currencies.

BULLION WAS STEADY DURING THE PAST WEEK DUE to fresh support. Silver advanced from the previous week's level of Rs. 239.75 to Rs. 240.25, quoted today for ready delivery, and the rate for forward delivery was quoted at a discount. The London and New York prices were 80d and 91,375 cents.

Gold was higher in sympathy with silver and the price rose from Rs. 144 to Rs. 144.50 (*Mysore*). The sovereign at Rs. 96 showed a gain of 25nP.

DURING THE WEEK ENDED 21ST APRIL, GOVERNment of India Treasury bills for Rs. 124,18,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 25th April. The total amount offered was Rs. 2,20,00,000. Tenders at Rs. 99.315 percent were accepted in full and those at Rs. 99.310 percent were allotted approximately 83 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Bangalore, Calcutta, Kanpur, Madras and New Delhi up to the close of business on 1st May and in Bombay and Nagpur up to 11 a.m. on 2nd May.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 26th April to 29th April, 1961 at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 19th April to 22nd April amounted to Rs. 1 crore.

THERE WERE DECLINES OF RS. 30.88 CRORES TO Rs. 2,007.65 crores in active notes and of Rs. 19.39 crores to Rs. 2,029.93 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 21st April, 1961. The currency contraction was adjusted by reducing rupee securities in the paper currency reserve by Rs. 20.05 crores to Rs. 1,672.06 crores. This was presumably done by transferring securities to the Banking Department in which investments rose by Rs. 31.50 crores to Rs. 152.24 crores. Deposits of the Government of India fell by Rs. 4.77 crores to Rs. 63.91 crores, but other Government accounts rose by Rs. 31 lakhs to Rs. 4.30 crores. Balances of commercial banks with the Reserve Bank increased by Rs. 13.36 crores to Rs. 87.06 crores. Balances held abroad rose by Rs. 81 lakhs to Rs. 10.79 crores. Other loans and advances declined from Rs. 142.61 crores to Rs. 126.27 crores, of which advances to scheduled banks against usance bills amounted to Rs. 25.81 crores (Rs. 33.30 crores). Ways and means advances stood at Rs. 93.45 crores, against Rs. 88.17 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 14th April, 1961, shows a drop of Rs. 6.69 crores to Rs. 560.82 crores in total deposits. Investments in Government securities are up by Rs. 11.58 crores to Rs. 236.78 crores, while other authorised investments are down by Rs. 20 lakhs to Rs. 9.64 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have dropped by Rs 2.38 crores to Rs. 280.21 crores. Cash and balances are, in consequence, shown at Rs. 24.65 crores, or Rs. 2.22 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 14th April, 1961, shows Demand and Time liabilities at Rs. 848.93 crores (Rs. 20.56 crores on account of borrowings from banks) and Rs. 1,095.94 crores (Rs. 12.75 crores), compared with Rs. 853.91 crores (Rs. 21.35 crores) and Rs. 1,088.11 crores (Rs. 11.95 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 40 lakhs and Rs. 7.21 crores to Rs. 47.62 crores and Rs. 74.88 crores. There is a rise of Rs. 9.12 crores to Rs. 560.41 crores in investments. Advances and bills discounted at Rs. 1,319.96 crores show a drop of Rs. 8.85 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.3 percent and 67.9 percent, against 5.9 percent and 68.4 percent.

TREASURY BILL MATURITIES

A VILLAGE TRANSFORMED

Once an obscure village, set amidst field and forest . . . today, a mighty steel town. In a little over two years, Durgapur is making world news! Pig-iron for foundries, forging blooms and billets for re-rollers, sections for industry and sleepers for the railways are already being produced at Durgapur. More will follow as the construction of this giant steelworks nears the fourth and final stage.

SHARE MARKET IMPROVES SLIGHTLY AFTER ESTIMATES COMMITTEE SHOCK

PRICES EASIER AT CLEARING DESPITE LOWER CARRY-FORWARD CHARGES

Wednesday Evening.

THE Calcutta stock market has had a period of quiet trading this week. The shock administered by the recommendation of the Estimates Committee concerning the management and investment of the Life Insurance Corporation's funds, seems to have been absorbed. The Union Finance Minister has wisely pointed out that there will be no policy change in the investment of these funds in the near future. But although the Government is not bound by the recommendation, its long-term significance must not be ignored. It is disturbing in the sense that a section of the ruling Party still seems to be obsessed with doctrinaire ideas. The silver lining is that Mr. Morarji Desai, Union Finance Minister, is inclined to take a more pragmatic view in deciding economic policies. Considering that life insurance funds belong to the policyholders, there is no point in immobilising these funds in Government securities only. If insurance policies are to be made attractive, it is necessary to improve the profitability of the Corporation by investing its funds at least partly in the more remunerative types of investment such as industrial shares and debentures.

At the settlement on Wednesday, the prices of clearing shares were marked lower in the absence of support. The price of Indian Irons declined from Rs. 27.60 to Rs. 26.75. The fall was due more to the absence of buying than to pressure. In spite of moderate carry-forward charges, operators were inclined to cut their commitments in view of fresh uncertainties.

There is a great deal of concern about the growing power shortage in West Bengal and other industrial regions. Unless adequate power facilities are restored soon, many industries will be forced to cut production. The engineering, jute and cotton mill industries in and around the area have already been affected by the power cuts. The impact of this factor is likely to be reflected in reduced profits during the current year.

A Press report states that at the "Aid India Club" meeting now being held in Washington, the donor countries might decide to defer giving India immediate financial assistance. Whether the change in the atitude of foreign donors springs from the unrealistic oil policy which is being pursued in New Delhi, remains to be examined carefully. The good effects of the recent tax concessions, albeit small, given to foreign investments by the Union Finance Minister, appear to have been offset by the pinpricks which are being provided by other Ministries. It is unfortunate that at a time when the till is almost bare of foreign exchange, unnecessary impediments are being placed against the flow of financial assistance from abroad.

These considerations apart, attention has been diverted to the Goodyear India and Madras Rubber Factory share issues. Substantial funds have been mopped up by these. As for bank credit, there is still an acute shortage. In the circumstances, it is not expected that fresh funds will be available for supporting the existing scrip, at least for some time. But investors must not make the mistake that the background at present is more bullish than bearish. Activities of companies have expanded and the corporate profit level has steadily increased. Now that all new share issues will be stopped soon in view of the Government's borrowing programme, it is possible there may be an improvement in industrial shares before long.

The electric power shortage weakened sentiment in engineering scrip. Texmacos nose-dived on adverse corporate reports. Jessop, Guest, Keen, Williams and J. K. Steel were quoted lower.

Jute shares were traded cautiously due to the fibre shortage. Rumours are circulating to the effect that the industry might be forced to close down for a few days in the next couple of months or so in order to conserve raw jute. At current prices of fibre and gunnies, the mills are finding great difficulty in transacting simultaneous business. Birla provided a solitary exception and the scrip hardened on rumours of a bonus share issue. The Company is also likely to increase its cement production.

Business was limited in coal shares because investors were inclined to await definite news concerning the grant of foreign financial assistance for the expansion of the industry. Bengal, Burrakur, New Beerbhoom and Equitable were prominent.

There was an appreciable decline in turnover of miscellaneous shares due to greater attention being paid to new share issues. Dunlop attracted attention on bonus share prospects. Interest increased in British Paints because the present price was considered attractive. Isaac Holdens were supported on reports of good corporate working. Britannia Biscuits were firm on talk of a bonus share issue. Union Carbide reacted on profit-taking, as did Rallis. Balmer Lawrie were steady on dividend hopes. India Steamship were sold freely at lower prices due to uncertainties concerning the freight outlook. Paper shares were quiet because profitability might be hampered by unremunerative prices of the commodity.

In the cotton mill group, Dunbar and Bowreah were supported on prospects of diversification of activities. In sugar shares, investors do not want to take a definite view until the Government states its intentions as to how export losses will be compensated for.

Prices of tea shares declined on predominance of sellers, although selected Dooars gardens were bought on dividend prospects. Interest was taken in Hasimara, Hantapara aand Huldibari. Among Assam gardens, Bishnauth and Betjan were favoured.

Government securities were steady, but business was restricted in the absence of sellers. The demand for short and medium-dated loans could not be satisfied due to lack of offers. Considering that the market is being groomed for official borrowing, the trend now seems more likely to be upward in the near future.

Sendra Coal

The working of the Sendra Coal Co. Ltd for the year ended December 1960, shows that the profit has increased from Rs. 17,096 to Rs. 50,660, after providing Rs. 344 (against nil) for depreciation and Rs. 44,517 (against Rs. 16,033) for taxation. The directors have recommended a taxable dividend of 5 percent, against 3½ percent, taxable, in the previous year. This is covered more than twice and offers a yield of 5.9 percent at a price of Rs. 8.44 a share. General reserve has been allocated Rs. 15,000 (against nil). After making various adjustments, there is a carry-forward of Rs. 1,111, against Rs. 5,451 brought in. The balance-sheet shows fixed assets at Rs. 6,529, current assets, loans and advances at Rs. 2.31 lakhs, and general reserve at Rs. 4.71 lakhs. The directors say in their report that the Karanpura Mining Syndicate raised 182,754 metric tons of coal and despatched 175,702 metric tons during the year. As for amalgamation with Churulia Coal Co. Ltd, they say that the scheme was approved at the general meeting in February this year and that it is being referred to the Calcutta High Court and the Central Government for their approval.

Pandyan Insurance

The Pandyan Insurance Co. Ltd has earned a profit of Rs. 7.55 lakhs during the year ended December 1960, after providing Rs. 35,868 for depreciation of investments, Rs. 1.24 lakhs for depreciation on building and Rs. 3.96 lakhs for taxation. The directors have recommended a gross dividend of 20 percent, against 15 percent, gross, in the previous year. After making various adjustments, there is a carry-forward of Rs. 3.68 lakhs. The balance-sheet shows general reserve at Rs. 42.50 lakhs and insurance funds at Rs. 20.66 lakhs. Investments, including house property in India, amount to Rs. 91.43 lakhs. The directors state in their report that the claims paid and outstanding in the fire department amounted to Rs. 6.30 lakhs which represents 42.6 percent of the premium income. The reserve for unexpired risks remains at 50 percent of the premium income. Claims paid and outstanding in the marine department amounted to Rs. 3.98 lakhs which represents 38.6 percent of the premium income. The reserve for unexpired risks remains at 100 percent of the premium income. It is stated that the claims paid and outstanding in the miscellaneous department amounted to Rs. 2.25 lakhs which represents 57.5 percent of the premium income. The reserve for unexpired risks remains at 50 percent of the premium income.

IP6001b

of changing the policy concerning the investment of life insurance funds for the time being had a sobering effect.

The technical position appears to be healthier, as was evident from smaller deliveries and moderate carry-forward charges at the last settlement; but activities were restrained by the shortage of credit. Many new issues, especially the ones offered by the Goodyear India and Madras Rubber, were believed to have absorbed substantial funds. Investors were disturbed by reports of shortages of electric power in many industrial regions and it was feared that the working of industry might be seriously affected.

A Press report that at the recent meeting of the Aid India Club the donor countries have decided not to give aid to India immediately caused a great deal of concern. In view of the small foreign exchange reserves, India will find it extremely difficult to carry on unless some foreign aid is obtained immediately. In the absence of timely aid, maintenance imports would be difficult to maintain at the present level.

Tata Steel declined to Rs. 146.75, as did Indian Iron to Rs. 26.75 on pressure from Calcutta interests. Among engineering shares, Alcock Ashdown were wanted up to Rs. 326 on talk of a higher dividend. Tata Locomotive met with investment interest around Rs. 328. Premier Construction declined to Rs. 194 and Larsen and Toubro lost at Rs. 42.75. Motor shares were quiet, and Premier Automobile were transacted at a lower price of Rs. 171.50. Hindustan Motors were sold down to Rs. 19.76.

Cotton mill shares showed mixed trends and sentiment was generally weaker on reports of a decline in exports of cloth during March. Century, however, attracted interest at Rs. 616 on rumours of a further capital issue. Gokak were bought at Rs. 183 on a good report. Bombay Dyeing were dealt in at Rs. 65.20 and Kohinoor came to hand at Rs. 287. Standard were supported up to Rs. 1,470 and Khatau were in demand at Rs. 537.50. Simplex were sold at Rs. 190 and India United Ordinaries were quoted lower at Rs. 15.48. Business passed in Apollo around Rs. 1.58.

Miscellaneous shares turned softer in pattern with the general trend. A bigger accumulation of stocks induced pressure in sugar shares, and Belapur declined to Rs. 287. Walchandnagar Industries were offered at Rs. 202 and Phalton were available at Rs. 144. Mining shares were quietly steady, and Shivrajpur Syndicate were placed at Rs. 81.50. Discouraging advices from the freight market affected steamship company shares. Scindia Steam changed hands at Rs. 14.28 and sellers predominated in Great Eastern Shipping at Rs. 15.08. Cement shares were quietly steady, and Associated Cement were transacted at Rs. 157.50 on hopes of a bonus share issue. Digvijay were weak at Rs. 153. Bombay Burmah reacted to Rs. 600 on profit-taking and National Rayon lost at Rs. 514. Baroda Rayon were quiet at Rs. 143.50, although the Company has decided to issue rights ordinary shares in the ratio of one new share for every two held, at a premium of Rs. 5 a share. Chemical shares were quiet with sellers over. Tata Chemical declined to Rs. 19.24. Polychem were sold down to Rs. 225 on the decision to issue rights ordinary shares in the proportion of two new shares for every five held, at a premium of Rs. 75 a share. Synthetics and Chemicals were steady at Rs. 154, but Ceat Tyre lost at Rs. 300. Voltas changed hands at Rs. 274, but Tata Oil were shaded at Rs. 77.50 on profit-taking.

Routine business was transacted in banking shares and fluctuations were narrow. Bank of Baroda were done at Rs. 99 and Bank of India were taken at Rs. 122.50. In the insurance group, New India were steady at Rs. 60 on a report that the Government has no intention of nationalising general insurance at the present stage.

Interest was subdued in electric supply company shares, and Ahmedabad Electric were indicated at Rs. 83.70. Tata Hydro were done at Rs. 101.50 and Bombay Suburban were dealt in at Rs. 86.

Madras Market

PRICES FALL ON LACK OF SUPPORT

LITTLE SELLING PRESSURE IN EVIDENCE

Tuesday Evening.

THERE was an appreciable decline in turnover in the Madras stock market during the past week and share prices receded due more to the absence of support than to selling pressure. Lower advices from Bombay and Calcutta called for caution. Supplies of fresh funds into stocks and shares were interrupted by many new share issues and the growing credit stringency.

Government securities were steady and interest was taken in selected State Government loans. Public utilities were neglected and business was limited. Sugar shares were avoided in view of the large accumulation of stocks. Investors were inclined to await further details concerning the way in which the Government proposes to compensate for the losses in exports. In the planting group, the shares were offered freely due to uncertainties concerning the marketing outlook. Coffee shares were sold on fears of excessive supplies. Rubber shares were quiet in sympathy with tea and coffee. There was increased selling pressure in textile shares on reports of a decline in cloth exports. Prices of miscellaneous shares drifted downwards in the absence of fresh support.

In the banking group, Indian were transacted up to Rs. 166 and Indian Overseas were done at Rs. 177.20. Andhra were dealt in at Rs. 100 and Punjab National were quoted up to Rs. 21.50. Among public utilities, South Madras were quiet at Rs. 9.80 and Vellore were transacted up to Rs. 13.50. West Coast changed hands at Rs. 14 and Ellore were done at Rs. 16.55.

Among sugar shares, Deccan were taken up to Rs. 14.08, but E.I.D. lost at Rs. 43.50. K.C.P. were done at Rs. 23.48 and Kothari were sold down to Rs. 4.75. Mysore were steady at Rs. 59, as were United Breweries at Rs. 115.50.

In the planting group, Blue Mountain were quietly steady up to Rs. 3.15 and Cochin Malabar were transacted up to Rs. 7.72. Consolidated Coffee came to hand at Rs. 23.10 and Emerald Valley were indicated up to Rs. 6.50. Lucky Valley were taken up to Rs. 13.25 on paying a taxable ordinary dividend of 10 percent. Ouchterlony were sold down to Rs. 4.38, but Periakaramalai were steady at Rs. 4.03. Tropical changed hands at Rs. 20.75 on paying a taxable ordinary dividend of 8 percent. Kil Kotagiri met with quiet support up to Rs. 4.95 and Mysore Coffee were in demand up to Rs. 5.55. Nilgiri were dealt in at Rs. 8.50 and Nonsuch came to hand at Rs. 28.50. Business passed in Peermade at Rs. 23.30 and Parkside were quoted up to Rs. 29. Swinton were offered at Rs. 3.12 and Teekoy were sold down to Rs. 6.10.

In textile shares, Adoni were wanted up to Rs. 10.65 on paying a maiden ordinary dividend of 8 percent, taxable. Coimbatore Murugan were taken at Rs. 114 on declaring a taxable ordinary dividend of 12 percent. Lakshmi declined to Rs. 165 and Madura to Rs. 36.25. Pressure reduced Travancore Rayon to Rs. 38 and South India Viscose moved down to Rs. 159. Bangalore Woollen were steady at Rs 205.50 as were Buckingham at Rs. 216. Kothari were transacted at Rs. 13 and Mettur were bought up to Rs. 385. Loyal were quoted at Rs. 40 and Virudhunagar changed hands up to Rs. 50.

Among miscellaneous shares, business passed in Aluminium Industries at a lower price of Rs. 22.75, but Ashok Leyland were steady at Rs. 9.20. India Cement lost at Rs. 6.07 and Binny came to hand at Rs. 216. Enfield were done at Rs. 12.56, but F.A.C.T. were offered freely down to Rs. 10.60. Kirloskar Electric came to hand at Rs. 13.12 and Madras Aluminium were steady at Rs. 23. Mettur Chemical were taken at Rs. 14.12 and Parry's Confectionery were firm up to Rs. 6.50. Business was done in Premier Fertilizers at Rs. 9.50 and Spencer were steady at Rs. 24.50. Standard Motors were wanted up to Rs. 16.75 and Textool met with demand at Rs. 179. Transformer were sold at Rs. 9.90, but Tube Investment attracted support up to Rs. 284.

London Market

POST-BUDGET ACTIVITY IN STOCK MARKET

INTERNATIONAL DEVELOPMENTS INDUCE CAUTION

London, 26th April.

IT has been a very active week in the stock market, but buyer enthusiasm has been dampened in the last few days by the serious international developments. The Budget was well received and buyers were back in the market in force, and although the Cuban affair was a disturbing influence, it failed to frighten investors. However, the week-end developments in Algeria and the anti-invasion measures adopted in France brought the upward movement in prices to a halt. Gilt-edged securities eased and jobbers in equity markets lowered their quotations as a precaution against selling. Actual liquidation, however, was small and there are now signs of cheap buyers appearing once again. Company news has kept interest at a high level and the capital proposals from Midland Bank boosted bank shares generally. There have been encouraging preliminary statements from leaders like Vickers and Babcock and Wilcox. There is still no sign of a revival of confidence in gold shares and the market remains very much in the hands of the professionals. Prices have see-sawed, but are lower on balance. Tins moved irregularly with buyers restrained by the uncertain position in Laos. The statistical position of the commodity remains favourable for the producing companies and prices would probably soon respond to any cease-fire in Laos. Oils were disappointing and lost ground after the Burmah Oil results which failed to satisfy the optimists. Teas made some headway, but there was still movement in rubbers. Dollar stocks moved with Wall Street and there was a sharp marking down in American prices.

FUTURES TRADING IN COTTON CONTRACTS

The world cotton output continues to increase and there is a corresponding expansion in consumption. Over the years, moreover, the numbers of countries which produce cotton and those which consume it are steadily increasing. At the same time, the contraction compared with, say, 20 years ago in the volume of business done in the cotton futures markets might suggest that traders in, and users of, the commodity are unable or unwilling to take advantage of a mechanism intended to protect them against fluctuations in prices. In fact, futures markets can no longer provide the hedging facilities required to give cover against price movements, mainly because of the currency restrictions, export taxes, subsidies, and support prices which have been introduced by various countries and because the United States—the largest producer—"has got into the trammels of a system of Government controlled prices and supply from which she has not yet been able to escape."

The description of the United States' position is taken from an article in the latest issue of the *Empire Cotton Growing Review* in which Mr. W. B. Hutchinson discusses cotton prices and the marketing of crops in present conditions of international trade in the commodity. For the reasons already given, there is no longer a world price for cotton. Besides, there is little prospect that in the near future conditions will permit one to be established again. In consequence, Mr. Hutchinson points out, there is no longer an easily accessible indicator of current or forward market values through the published quotations of futures market prices. Instead, competitive values for cotton of any particular quality can only be ascertained by day-to-day contact with the offers made by large numbers of individual shippers and merchants, and even these values may vary according to destination. This state of affairs is expensive and unsatisfactory in many other ways for both growers and users. The article considers various means of bringing sellers and buyers together and assesses their prospects in bringing about an improvement. Direct selling to consumers has disadvantages as also has selling in the country of origin, so Mr. Hutchinson suggests a compromise solution. Where there have been established active futures markets in the past, a wide network of connections has developed as a matter of course between buyers and sellers in the world markets. In spite of the decline in futures trading, the connections have continued to operate for the purpose of trading in actual cotton, backed by a comprehensive information service. In a market like Liverpool, the proximity to one of the largest consuming centres has kept this flow of price information broad and active. Such a market provides an admirable vehicle for the marketing of, at any rate, the smaller crops.

NAMES AND DATES

Mr. A. R. Foster, managing director of I.C.I. (India) Private Ltd, has been appointed chairman and managing director of the Company.

Mr. Ahmed Ali relinquished his assignment as Deputy High Commissioner for Pakistan in Calcutta, on 25th April, 1961, and has left for Manila on transfer.

New Delhi

EXTERNAL AID PROSPECTS FOR THIRD PLAN NOW UNCERTAIN

CREDITOR COUNTRIES MAY POSTPONE DECISION DUE TO ADVERSE PUBLIC OPINION IN U.S.A.

(FROM OUR NEW DELHI CORRESPONDENT)

THE fourth meeting of the chief creditor countries and institutions interested in providing evelopmental aid to India was convened by the orld Bank in Washington on 25th April, although is rumoured a decision may be postponed due to ie impact on the U.S. Congress of India's attitude ver the Cuban incident. Previous meetings were eld in August 1958, March 1959 and September 960. Besides the World Bank, the meeting, as sual, is being attended by the representatives of ie Governments of Canada, West Germany, Japan, ie U.K. and the U.S.A. The I.M.F. and the Governents of Austria and France have sent observers. aly has declined to attend. The meeting is being eld in the Bank's office and will, it is expected, st three days. The President of the World Bank, r. Eugene R. Black, is the chairman. The leaders the other delegations are: Mr. J. F. Parkinson the Department of Finance of Canada, Dr. Hans enckel of the Ministry of Economics of West ermany, Mr. Makoto Watanabe of the Finance inistry of Japan, Sir Denis Rickett of the U.K. reasury and Mr. John M. Leddy of the U.S. reasury.

The meeting is expected to review India's oreign exchange requirements for the period of ie third five year plan, which started on 1st April, 961. It will consider the amount and nature of ie further external assistance which might be ade available to meet these requirements.

India's Commissioner-General for Economic ffairs in Washington, Mr. B. K. Nehru, paid a rief visit to New Delhi during last week to keep imself informed about the latest balance of payents position and the foreign aid requirements the third five year plan. Enquiries show that, cording to the present estimates, foreign assistnce required for the third plan is placed at (U.S.)5,500 million. It is, however, a rough estiate, and the actual assistance needed may be uch more. It is further pointed out that the stimates are exclusive of surplus commodity ssistance, such as given under P.L. 480 by the nited States. As for the balance of payments osition, India Immediately needs $(U.S.)638 milon, included in which are $(U.S.)300 million r debt repayment and $(U.S.)100 million for new rojects in the third plan. In other words, (U.S.)238 million are required to sustain India's conomy. The balance of payments gap for 1962-63 placed at $(U.S.)884 million.

Irreducible Minimum

It is emphasised that unless this irreducible inimum of $(U.S.)638 million is forthcoming, India ould not only not be able to undertake new deveopment projects, but would default in payment f her dues, which she owes—$(U.S.)127 million to ie I.M.F. and $(U.S.)43 million to West Germany, esides the obligations of private sector firms. Even is setback would be small compared with that hich the home economy might suffer. Imports ave already been cut down to dangerous evels. If the international credit consortium does ot undertake to underwrite India's balance of ayments gap, these cuts have a very slim chance f being restored.

It may be recalled that the "consortium" of the id-giving countries was formed when the Finance inistry raised the cry that the Indian economy ould collapse unless foreign assistance did not mmediately come forth. It could be argued that ie foreign exchange crisis has helped India in ndustrialising herself rapidly. But it cannot be asily defended that she should have increased er import bill by launching "prestige" projects uch as an aircraft industry and atomic powertations and vote-catching projects such as the one o manufacture "Janata" cars.

As was recently suggested in these columns, here should be an annual allocation of foreign xchange for the expansion of existing units and or starting new units: it was also suggested that uch an expansion should be correlated either to he plan or to the needs of the people. The case of rayon industry should illustrate the point. India ould have lived comfortably, say, for the next ten ears, without having any artificial silk production f her own. The establishment of this industry has also created the need for its raw materials, ost of which have to be imported. Similarly, hy foreign exchange was spent on creating units f the plastic industry, has not been explained. oth the Ministries of Finance and Industries owe great deal of explanation for pushing the country o the edge of external bankruptcy.

Total Estimated Requirements

As already reported, India's total requirements f foreign aid for the third plan are estimated at (U.S.)5,500 million, including carry-over of ,350 million from the second plan. But the latter mount cannot be used immediately, as a large art of it is "tied" credit and the rest has been armarked for specific projects.

If the members of the "Aid India Club" are not in a position to meet the immediate requirement of $(U.S.)638 million in full, India has only three alternatives open to her—stop development for a year which will help save $(U.S.)100 million, withhold repayment of debts amounting to $(U.S.)300 million during the year; and cut down imports drastically. India has already chosen the last course and a bulk cut has been made in the allocation for the Commerce and Industry Ministry for this year. If India is assured that the aid which she urgently requires will be available, this cut can be restored and the situation remedied in time. It is a matter of concern to India that while the U.S. Administration is willing to offer help on a more generous scale, the latter has been hamstrung by the lack of Congressional authority to provide aid immediately. The decision of Congress on the aid programme for under-developed countries will not be known before July. The U.K. has already indicated the amount of initial credit it could give (£30 million), and so has West Germany (400 million deutschemarks). The two other members of the Club, Japan and Canada, are not major contributors. Whatever aid India may get during the third plan, a larger proportion than hitherto, it is expected, will be "untied." West Germany is willing to provide "untied credit," the U.K. is half willing, while Japan is wholly unwilling. As for the U.S.A., the Administration is willing, but everything depends on the amount Congress is going to vote for it.

Railway Ministry Claims

The difference between publicity and propaganda is that the former has to be factual and accurate. But the Railway Ministry does not believe in maintaining that distinction. According to a Press release during the week, "the Indian Railways have created an all-time record in transporting goods by loading more than 10 million wagons during 1960-61. A significant feature of the goods traffic handled by the Railways during the period has been a marked increase in the loading of coal, which was of the order of 2,668,440 wagons, against 2,433,707 wagons in 1959-60, or 234,733 wagons more than in the previous year." A responsible officer of the Central Government, who visited coalfields last week, told this correspondent that "the facts of the situation are that wagons are not available. A colliery owner may be allotted 100 wagons a week. He, however, does not know how many he would actually get. Notional allotment is different from actual availability of wagons." Enquiries show that the present system of allotting wagons for ten days at a time has proved unsatisfactory. The Coal Controller, instead of making daily allotment of wagons every ten days, makes a ten-day allotment. This has led to uncertainty in availability.

Fillip to Khadi Development

The chairman of the *Khadi* and Village Industries Commission, Mr. V. L. Mehta, said at a Press conference recently that the Central Ministry of Commerce and Industry has directed all State Governments not to issue licences for starting new textile mills in places where the work of *khadi* development has been taken up. Is this another example of "technological maturity" about which the Prime Minister spoke at the inaugural meeting of the Federation of the Indian Chambers of Commerce and Industry?

West Bengal Opposes Legislation on Coal

The West Bengal Government has given notice to the Central Government of its intention to move the Supreme Court for having the Coal Bearing Areas (Acquisition and Development) Act, 1957, annulled as *ultra vires* of the Constitution on the ground that the Centre is not competent to enact the legislation, it is learned. The former has already filed a suit in the court of the Subordinate Judge, Asansol, against the National Coal Development Corporation, praying for permanent injunction against acquisition proceedings in the Raniganj coalfields in West Bengal. The Coal Bearing Areas (Acquisition and Development) Act provides for greater public control over the coal mining industry and its development through acquisition by the State of unworked land containing coal deposits. By the end of March 1961, the Central Government has acquired about 14,500 acres of land for coal mining under the Act and has sanctioned compensation amounting to over Rs. 33 lakhs, of which Rs. 28.73 lakhs has been paid.

Subsidy for Sugar Exports

The Government would bear the losses sustained in the export of sugar, at least for the first year, if the sugar industry agreed to implement the wage board award, declared the Food and Agriculture Minister, Mr. S. K. Patil, in the Lok Sabha last week, while replying to the debate on demands for grants for his Ministry. Hitherto, the industry has borne these losses. Ruling out any immediate possibility of lifting controls on the sugar industry, the Minister said if all controls on sugar were lifted now, prices would collapse and the whole industry would "go to the dogs." It would not be in the interest of cane-growers either, he added. Mr. Patil denied there was any crisis in the sugar industry. The difficulty about export, Mr. Patil said, was that the internal price of Rs. 700 a ton was about Rs. 300 a ton higher than the international price. He said that the subsidies asked to cover export losses should not be grudged because the sugar industry has yielded in the last ten years excise of Rs. 250 crores to the Centre and Rs. 100 crores to the States.

Investible Funds of L.I.C.

The Finance Minister, Mr. Morarji Desai, set at rest any talk of an early decision by the Government on the Estimates Committee's recommendation that all investible funds of the L.I.C. should be taken over by the Government. Mr. Desai, who was replying to the debate on the Finance Bill in the Lok Sabha, said that this was not "a simple matter which can be easily disposed of." The present policy of investment, he declared, would stand until a decision to the contrary was taken, after the matter had been considered fully.

Right of Way for Oil Pipelines

It has been decided that in order to secure right of way, legislation will be introduced to cover the requirements of future pipelines in the country. It has further been decided that in view of the likely construction of oil product pipelines from Barauni to Calcutta and Barauni to Delhi in the foreseeable future, the proposed legislation for acquiring right of way may be pursued in consultation with the States of West Bengal, Bihar, Uttar Pradesh, and the Union territory of Delhi. The Ministry of Railways has agreed, as a very special case, to the placing of Oil India's crude oil pipeline on the railway bridge over Brahmaputra.

Tax Concessions by Mr. Desai

The Finance Minister, Mr. Morarji Desai, has made a number of changes in his taxation proposals in the 1961-62 Budget. In the course of the discussions on the Finance Bill during last week, the Minister said that while speaking before the House on 17th March, he had expressed the intention to reduce the effective incidence of the increase in the excise duty on kerosene, other than inferior, by 50 percent. Steps have since been taken to prescribe suitable tests for inferior kerosene so as to facilitate assessment at the lower rate. This will also facilitate the import of more inferior kerosene. It is expected that before long, inferior kerosene will be available in adequate quantities throughout the country. As for giving relief to inferior coffee, the Minister said that it would be possible to distinguish inferior varieties of coffee from Plantation or Arabica coffee and that the evasion of revenue, if at all, would be negligible. "Accordingly, I propose to give relief by reducing the duty on Robusta and Liberia varieties of coffee to the original level of Rs. 41.35 a quintal."

Mr. Desai went on: "It has been represented to me that the concession I announced on 17th March for powerloom units having three or four looms is not adequate and that self-employed weavers working in small units with three or four looms are finding it hard to retain their position. They deserve assistance and I accordingly propose to give complete exemption to all powerloom units with three or four looms manufacturing cotton, rayon or silk fabrics, provided they work only one shift. I also propose to extend the same benefit to powerloom units manufacturing woollen fabrics if the number of looms engaged does not exceed two and the unit works only one shift a day.

Fabric from Automatic Looms

"The textile industry has been greatly concerned over the new levy on fabrics produced on automatic looms. The proposal to have a higher rate of duty for such fabrics has been primarily formulated with a view to export promotion. After taking into consideration the extent to which the export of fabrics produced on automatic looms can be stepped up under the present circumstances, I propose to withdraw this surcharge for 70 percent of the production and link up the duty on the balance with exports, so that the surcharge will be actually payable only on the quantity by which the exports made by a manufacturer during any half year fall short of 30 percent of the fabrics produced by him on automatic looms during the same period. Further to simplify the collection of duty on cotton yarn woven into fabric by composite mills, I have agreed to introduce a compounded system of levy by which the manufacturers would be enabled to pay the duty on yarn, together with the existing duty on fabrics, at the rate of 1.2nP a square metre of the fabrics produced. As already announced, for the benefit of the handloom industry, cotton yarn of counts up to 40, if issued in hanks, has been exempted from duty.

"Certain difficulties concerning the new excise duty on woollen yarn have also been brought to my notice. To remove the day-to-day difficulties that had to be faced in making *ad valorem* assessments, I propose to give compounding facilities and make provision for alternative specific rates of duty for all woollen yarn. For worsted yarn, the specific rate will be Rs. 2.10 a kilogram if the yarn is of 60s and above and Rs. 1.60 a kilogram if the yarn is below 60s. For other than worsted yarn, I propose to fix the rate at 40nP a kilogram, while the average incidence of these will be slightly lower than that on the basis of *ad valorem* rates; it will also eliminate administrative difficulties and make the control simpler for the industry.

"The House will recall that simultaneously with my Budget proposals, small manufacturers of glass

and glassware and chinaware and porcelainware employing not more than five workers were given exemption from duty. It has been represented that this concession does not go far enough to meet the needs of the genuine cottage units which, due to many factors, have sometimes to employ more than five workers. In consideration of the genuine difficulties of the cottage sector, I propose to extend the exemption to all manufacturers of glass and glassware who do not employ more than 20 workers, do not use power and use only broken or waste glass as raw material. Similar concession will also be extended to the manufacturers of chinaware and porcelainware who do not employ more than 15 workers. Similarly, in the case of small manufacturers of cosmetics and toilet preparations, I propose to increase the limit of concession already given from 50 kilograms a month to 75 kilograms a month. I hope the House will agree that these concessions are necessary and adequate to ensure protection to the small-scale and cottage sectors.

Excise Duty on Copper and Alloys

"The levy of excise duty on copper and copper alloys has created a problem for a number of small utensil manufacturers who get their metal sheets rolled by rolling units. One of their main grievances was that unlike the regular manufacturing units they have to pay full duty on untrimmed sheets, a part of which is left as scrap and is remelted. I have gone into their point of view and propose to exempt by 25 percent duty chargeable on copper and brass sheets, circles, etcetera, which are issued out from a rolling mill without trimming and cutting. The corresponding concession in case of bronze sheets and circles will be 20 percent, exemption is also being given for strips of copper and copper alloys used for making zari, stars and spangles. Further, strips and foils recovered from scraps of copper alloys and used in making anklets, trinkets, etcetera, used by the poorer people as ornaments, are also being exempted from duty.

"The House will recall the clarification about plastic and glassware that duty will be charged at one stage only. I have since given similar clarification in case of the manufacturers of dyes whereby duty will be charged only at one stage. The manufacturers of patent or proprietary medicines presented a special problem concerning the issue of free samples. In consideration of the established practice of the trade, I have agreed to allow duty-free clearance of clinical samples only which are issued for laboratories, hispitals, etcetera, up to a maximum limit of 5 percent of the total duty-paid clearance, provided the manufacturer shall observe certain necessary safeguards. Plastic moulding powders manufactured from scraps of plastics are also being exempted from duty. Clarification is being issued that refrigerators used for cold storage depôts, etcetera, for the preservation of food will not be subject to duty. I am exempting from duty air-conditioning machinery employed not for comfort, but for the preservation of food. I have also agreed to allow adjustment of countervailing duty paid at the time of import of compressors when used in refrigerators produced in the country.

Customs Duty on Textiles

"One of the proposals on the Customs side in the Finance Bill is to increase the Customs duty on 'textile manufactures not otherwise specified' from 50 percent to 100 percent. Representations have been received that nylon twine which is imported by fishermen and their co-operative societies for the manufacture of fishing nets is being assessed under this item, and has been affected by the increase in duty. This was not intended. In order to avoid hardship to the fishermen and to see that the fishing industry is not adversely affected, I have decided to maintain the duty on nylon twine imported for the manufacture of fishing nets at 50 percent *ad valorem* in those cases in which import licences are issued on the recommendation of State directors of fisheries. The change is being given immediate effect by a notification.

"As part of the Budget proposals, the rate of Customs duty on newsprint, unglazed or machine finished, imported in reels, was enhanced from Rs. 3.10 a quintal to Rs. 7.50 a quintal and that on newsprint of other sorts, imported in reels, from Rs. 3.60 a quintal to Rs. 9 a quintal. It has been represented that the newspaper industry would find it difficult to bear this additional burden. I, therefore, propose to give some relief by reducing the rate of duty on the former category of newsprint to Rs. 5 a quintal and that on the latter to Rs. 5.50 a quintal. These reduced rates of duty are considerably lower than the rates originally proposed, and it should not be difficult for the industry to absorb the small increase. Many small newspapers make use of newsprint in sheets on which the duty was raised from Rs. 4.10 a quintal to Rs. 10.30 a quintal. I propose to reduce the duty on this category of printing paper to the pre-Budget level of Rs. 4.10 a quintal. These changes are being given immediate effect by a notification.

Excise on Rayon Yarn

"Along with the increase in excise duty on rayon yarn, the Customs duty was also increased by notification within the statutory limit so as to include the countervailing duty. It was represented to us that a part of the excise duty (to the extent of the increase made in 1959) had already been absorbed in the level of Customs duty before the Budget and that this fact should be allowed for, while adding on the countervailing duty. We have accepted this plea, and suitably reduced the effective rates of Customs duty. The reduction is to the extent of 65nP a kilogram for yarn of below 75 deniers, and correspondingly less for other varieties.

"It is also considered desirable to make a few changes in some provisions of the Bill primarily to clarify the exact scope of certain items. For example, although cellophane is recognised as a trade name and also finds a mention in standard dictionaries, it still remains a proprietary name and as such to remove any doubt that may occur it is necessary to add a suitable clarification to the relevant clause. Similarly, it is necessary to explain what is meant by chinaware so as to remove all doubts about the scope of this item. Again under entry No. 84, of List I, Seventh Schedule, read with Article 268 of the Constitution, the excise duty, if any, on medicinal and toilet preparations containing alcohol, opium, Indian hemp or a narcotic drug or narcotic accrues to the States and has also to be collected by them. As such, it is necessary suitably to amend Clause 13 (g) of the Finance Bill so as to exclude these preparations from being subjected to duty under the Central Excises and Salt Act.

Direct Tax Changes

"In the field of direct taxes, my first proposal relates to a further simplification in the tax structure applicable to foreign companies. According to the provisions contained in the Finance Bill, dividends received by a foreign company from a non-subsidiary Indian company formed after 31st March, 1959, and before 1st April, 1961, are taxable at 53 percent, while dividends received from such an Indian company formed on or after 1st April, 1961, are taxable at 40 percent. It is proposed that the rate applicable to the dividends of both these categories may be fixed at 40 percent which is also the rate applicable to such dividends received by most of the Indian companies. The revenue effect of this proposal is not likely to be of any substantial order.

"One of the proposals which has given rise to some comment is the proposal to restrict the allowance of entertainment expenditure in computing the taxable income from business. A point has been made that the proposal completely disallowing such expenditure in the case of non-company assessees will cause hardship, while in the case of companies it has been suggested that the limits prescribed may be liberalised in certain directions. I have carefully considered the whole matter. While I do not see adequate justification for making any change in the limits specified for this purpose in the case of companies, I appreciate that the proposal concerning non-company assessees may lead to genuine hardship in some cases. I am, therefore, proposing to make an amendment so that in the case of non-company assessees, the *status quo* may continue."

Simplifications Adopted

Explaining the process of simplification adopted, Mr. Desai said that until now super tax payable by any company on dividends received from a subsidiary Indian company had been only 10 percent. It had now been decided as a matter of policy that the tax system should not encourage companies to acquire majority interests in other companies. So this favourable rate of super tax, it is proposed, will be withdrawn. However, in order not to affect adversely those who had already made majority investments in the light of existing tax structure, the removal of the concessional rate was being made effective only in the case of dividends received from new Indian companies formed after 1st April. The rate of super tax in the case of dividends received on portfolio investment by foreign companies, it is proposed, will be dropped to 20 percent from 33 percent. This rate will also be applicable to dividends received by Indian companies from non-subsidiary companies. The new rates will apply to dividends received from companies formed after 1st April, 1959.

Mr. Desai further said: "The Finance Bill contains a proposal to allow initial depreciation for houses built by employers for the residence of low-paid employees. I propose to extend the scope of this concession so as to apply to buildings which are constructed to meet the welfare requirements of such employees, such as hospitals, schools, canteens, libraries, etcetera. The net effect of all these concessions including those announced on 17th March, will be a revenue loss of Rs. 6.14 crores in a full year."

External Assistance Authorised and Spent

The total amount of authorised external assistance in the form of loans and grants, both in the public and private sectors, up to 31st March, 1961, was Rs. 1,857.68 crores and Rs. 652.82 crores, respectively. By the end of the second plan period, Rs. 1,030.29 crores had been used out of the authorised loan of Rs. 1,857.68 crores. The carry-forward in the third plan is Rs. 827.39 crores. The authorised loan consisted of Rs. 1,604.11 crores in foreign currency and Rs. 253.57 crores in rupees. At the end of the second plan period, out of the amount used, Rs. 936.59 crores was in foreign currency and Rs. 93.70 crores in rupees, leaving a carryover of Rs. 667.52 crores in foreign currency and Rs. 159.87 crores in rupees.

The authorised amount of grants totalled Rs. 652.82 crores up to the end of March 1961. Out of this, Rs. 234.95 crores had been spent by the end of the second plan period, leaving a carryover for the Third Plan on 1st April, 1961, of Rs. 417.87 crores. The authorised amounts of grants consist of Rs. 395.96 crores in rupees and Rs. 256.86 crores in foreign currency. Out of the amount used Rs. 5.08 crores was in rupees and Rs. 229.87 crores in foreign currency, leaving a carryover of Rs. 390.88 crores in rupees and Rs. 26.99 crores in foreign currency.

Joint Steamer Companies

The Joint Steamer Companies operating in West Bengal, proposes to construct 14 new self-propelled carriers and six harbour tugs to provide replacement for its overaged fleet at a total estimated cost of Rs. 5.66 crores. Of this, a sum of Rs. 3.66 crores will be found by it from its own resources and the balance of Rs. 2 crores will be advanced by the Government in suitable instalments as a loan. The loan will be repayable in seven annual instalments (plus outstanding interest) beginning from 12 months after the payment to it of the last instalment of the loan.

Paper Machinery Manufacture

Licences under the Industries Act have been issued to two parties for the manufacture of paper machinery in Calcutta and Ahmedabad, respectively. It is also proposed at present to issue licences to two more parties, for the manufacture of paper machinery in Saidapet (Madras) and Poona, respectively. The location of the units to which licences had earlier been given is as follows: Jamshedpur (Bihar) one unit, Dalmianagar (Bihar) one unit, Calcutta (West Bengal) three units, Rourkela (Orissa) one unit, Shahbad (Mysore) one unit, Bombay (Maharashtra) one unit and Poona (Maharashtra) one unit.

Motor-vehicle Exports

Exports of motor-vehicles, although in modest quantities, are already being made. It is expected that these exports will increase substantially during the next one or two years. This was disclosed in Parliament last week by the Industry Minister, Mr. Manubhai Shah. The soundness of the policy which allows export of motor-vehicles when there is an emormous arrear in home demand to be satisfied is not clear.

Fertiliser Plant in Andhra

The Andhra Pradesh Government has proposed that the licence granted to it for the establishment of the Kothagudam fertiliser factory with an installed capacity of 80,000 tons a year in terms of nitrogen, may be transferred to a private party which is prepared to take it over. The proposal is being considered.

Spares Supply from Russia

Fifteen contracts have been concluded with Russia for the supply of spares. The value of the contract was decided on the following basis; (i) the prices of spare parts valued at Rs. 2.1 crores included in the original contract, was at the notional average price a ton, which was agreed to be paid for the main plant and equipment; (ii) in the case of non-proprietary articles such as ball and roller bearings, competitive quotations were invited and the Russian offer was found to be the cheapest; (iii) in other cases, the prices were settled by mutual negotiations.

Activities of Orissa Mining Corporation

The Orissa Mining Corporation Ltd was incorporated on 16th May, 1956, as a joint venture of the Central Government and the Government of Orissa, for the purpose of raising, assembling and transporting iron ore and other minerals and also for organising transport facilities to and at Paradip port. The authorised capital of the Corporation is Rs. 50 lakhs. The Central Government and the Government of Orissa hold the shares in equal proportion. The paid-up capital of the Corporation is Rs. 15 lakhs.

During the year 1956 and early in 1957, the Corporation devoted attention to the problem of prospecting, proving and preparing mining plans. Actual mining was started in Tungaisuni and Maharajpur mines in June-July 1957. A third mine was started in January 1960. The production of iron ore from these mines is shown below:

1957-58	32,224 tons
1958-59	47,450 tons
1959-60	48,908 tons

The Corporation has been granted further mining leases for iron and manganese ores in the Bonai area and prospecting licences for iron, manganese ores and chromite. Prospecting operations are being organised. Chromite production is expected to begin in 1961-62. A programme of development by the Corporation during the third plan period has been drawn. The minimum programme visualises a target of 800,000 tons of iron ore, 25,000 tons of chromite and 20,000 tons of manganese ore by the end of the third plan. There are also possibilities of acquiring more leases and raising the production target. The Corporation has secured from the State Trading Corporation a contract for 50,000 tons of iron ore on f.a.s. Calcutta basis, for the disposal of its Sakradihi ore.

Cheap Watches from Russia

The Government of India is importing 500,000 cheap watches from Russia to meet the watch shortage. Watch imports into India have been banned for some years. The payment for the watches which are being imported through the State Trading Corporation will be in non-convertible Indian rupees.

As part of its export drive, the State Trading Corporation is shortly opening an office in Zürich, Switzerland. The Corporation has so far been largely trading with the communist bloc. Opening an office in Zürich will be the first step towards trading through the State Trading Corporation with the free world.

I.L.O. Objection to Panchayat Labour Practices

The State Labour Ministers are meeting here on 27th April to consider the I.L.O. allegation that India through her village *panchayat* organisations has been violating the convention against forced labour which she ratified in 1954. The *panchayat* organisations demand "voluntary" free labour for village works such as building roads, digging wells and irrigation channels.

London

CITY WELCOMES NEW U.K. BUDGET

IMPLICATIONS OF TAX REFORMS EXAMINED

(FROM OUR LONDON CORRESPONDENT)

WHATEVER doubts there may have been concerning Mr. Selwyn Lloyd's appointment to the U.K. Chancellorship of the Exchequer in succession to Lord Amory, they must have been set at rest after he presented his first Budget. Displaying his confidence, Mr. Lloyd made a new departure in British economic policy which came as a pleasant surprise to his own supporters. In the process, he did not flinch from the fact that it provided the Opposition with any amount of opportunities to snipe at him throughout the debate which is to follow. His proposals cover a bold programme of tax reforms involving a sharp reduction in the weight of taxes borne by earned incomes at the higher levels, balanced by a corresponding increase in the taxes borne directly or indirectly by industry, with the latter including the creation of a completely new set of fiscal instruments for the short-term regulation of the economy. As a whole, the Budget had one main objective—the achievement of a much more rapid and steady rate of growth of output in the U.K. economy.

Inevitably, there are many critics of individual proposals. Generally speaking, however, the City has given the Budget a good reception, believing that the U.K. Chancellor has correctly diagnosed the immediate needs of the economy. It is a restraining Budget. The surplus of ordinary revenue over ordinary expenditure the Chancellor is seeking is £506 million, against an actual surplus in the last financial year of £147 million. Within the framework of restraint, however, Mr. Lloyd has offered incentives at the managerial and executive level. He has appreciated that more means of stimulating or restricting the economy are necessary, and both the proposed payroll tax and the special surcharges and rebates he seeks to use concerning the purchase tax, Customs and Excise duties are the outcome of this thinking. Quite apart from its immediate effects, the 1961 Budget goes some way along the road to a simpler and saner system of taxation in the future, with consequent benefits to the U.K. economy as a whole. As Mr. Lloyd pointed out, "there are things wrong in our approach to our economic problems," and he indicated his readiness to look into these things and perhaps do something to put them right in future Budgets.

The actual details of the Budget have already been published, so it is unnecessary here to do other than just summarise the proposals briefly for purposes of record. The starting level of surtax has been raised from £2,000 to £4,000 with earned income allowance deductible; the profits tax has been increased from 12½ percent to 15 percent and the vehicle excise duty increased by 20 percent; a duty of 2d a gallon on heavy oils for fuel; a duty of 10 percent on programme contractors' charges for television advertisements; special powers (a) have been asked for (a) to levy a special surcharge on employers on the lines of a payroll tax as an incentive to manpower economy and investment in labour-saving equipment, and (b) to direct at any time between Budgets special surcharge or rebate applied to all main Customs and excise and revenue duties and to purchase tax, with a maximum change of 10 percent. In addition, there are a number of minor reliefs, and a warning that the expense allowance system is to be revised to provide the Revenue Department with more precise information.

March Trade Figures

The March trade figures continue to show the mildly better trend of recent months. Allowing for seasonal factors, the gap was £62 million, compared with £68 million in January, £65 million in February, and £52 million a year before. During the second half of 1960, however, the average gap was as high as £83½ million a month. Something has been gained, but the gap between exports and imports is still much greater than the average monthly rates of £44 million in 1959 and £36 million in 1958. On the adjusted basis, exports and re-exports in March came to £313 million, slightly less than in January and February, but higher than the level in most of 1960. Imports, at £375 million, were at their lowest since last June. The long-expected fall in overseas purchases is, however, slow in developing, for the March figure is only £8 million less than in February and £6 million below the December level. As the recent White Paper on economic survey showed, however, the Government is still looking for an easier import trend, as the consequence of reduced stock building.

On the unadjusted basis, the March trade gap widened to £74 million from £62 million in January and £45 million in February. But this change is not in itself alarming, for imports are always well up in March. Taking recorded values, March imports totalled £399.3 million, compared with exports and re-exports of £325.2 million.

City Aid for Exports

The first response of the City to the Government's improved export guarantee terms comes from 28 insurance companies, acting through Lazard Brothers, the City merchant bankers, to form a £11½ million pool of funds. The insurance companies, which include the Prudential, Legal and General, Royal Exchange and some Canadian firms, will finance E.C.G.D. covered projects beyond the seven years normally covered by joint-stock banks. Assuming that new export financing schemes cover, say, 12 years, and that down payments meet 20 percent of the total cost, then the insurance companies' funds will cover over £30 million of new business, with the banks financing a rather larger total. This will amply cover the £50 million or so of business which is generally expected under the new scheme.

Mechanics of the insurance companies' plan will be for the foreign buyer to issue promissory notes and Lazard Brothers will issue a letter of credit undertaking to buy the part covered by E.C.G.D. guarantees. Clearing banks will take over when the life of the debt becomes less than seven years—the banks can rediscount the last 18 months of such paper with the Bank of England —so freeing part of the insurance companies' funds for further export credit deals. Essential of the new City scheme, and of the Government's plans as a whole, is speedy decisions from the E.C.G.D. Rates charged will probably be rather above corresponding gilt-edged levels, for the new credits will be non-negotiable securities carrying a fixed coupon.

Economic Indices

Higher Health Service charges and dearer newspapers are mainly to blame for a rise in the official cost of living index to 113 at 14th March, compared with 112 in the four preceding months. From November 1959, until September 1960, the figure was 110 except for last June and July when it was 111. Last October, it went up to 111 again and rose by another point in November. Calculated to one decimal, the March index was 112.7, compared with 112.3 in February and January, 112.2 in December, 111.9 in November and 111.4 in October. There has been a rise of more than two full points since last September when the index was 110.5

Expectations that the warm March weather and early Easter holiday had sent up shopping sales are confirmed by U.K. Board of Trade figures. After seasonal adjustment, the March index of retail sales comes out at a record high level of 115, against 112 in January and February and 114 in December. This is a striking performance, for December sales had been looked on as remarkably high, even for the Christmas season. Brisker business for the clothing and shoe shops accounted for a large part of the rise, but there are some signs that durable goods sales also improved. This is significant, for until recently the January relaxations in hire-purchase had seemed to help the motor-car trade rather than the business in domestic appliances.

The Government index figure of industrial production in February, not surprisingly, again shows little change from the steady trend over the preceding year. Allowing for seasonal factors, the index was at 120 (1954 equals 100), which compares with 119 in January and an average of about 120 for the whole of 1960. The spring recovery in the motor-car industry—the most marked recent sign of accelerating output—mainly took effect in March and would not have been reflected in the February figure. The next Index figure, due a month from now, will be eagerly awaited as a measure of the economy's present growth.

Stock Exchange Dividend Move

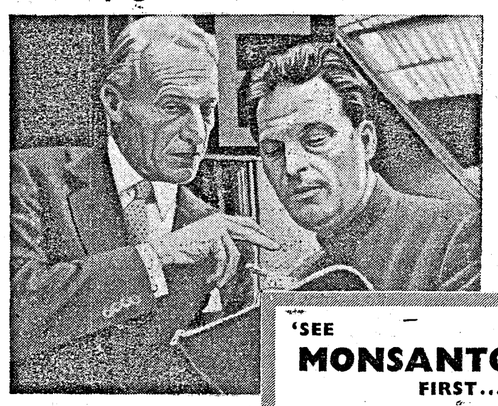
A mixed reception from the business community and from the investing public is likely to be given to the recommendation made by the Stock Exchange Council that whenever possible industrial companies should release profit and dividend statements well before the official market close at 3-30 p.m. The latest proposal clearly stems from the unfortunate position which sometimes arises when important announcements are made after the official close of the market, but not too late for unofficial dealings to develop which may result in a substantial change in quotations.

The Stock Exchange authorities have obviously felt that, in these instances, there is the risk of a false market being established, quite apart from the disadvantage at which shareholders are placed in relation to City people on the spot, who have been able to make their dispositions before shareholders have received the vital information the next morning. Nobody will, therefore, criticise the object of the present exercise. What is open to doubt is whether the proposed remedy is the right one. A more appropriate remedy might have been to recommend that important profit and dividend announcements should be released well after official market hours, say, after 6 p.m., so that unofficial dealings do not take place. Any shareholders will then start level the next morning.

Rolls-Royce and I.C.I. in New Nuclear Firm

Imperial Chemical Industries (Metals Division), Rolls-Royce and the Rio Tinto Company have jointly formed a new Company to operate in the field of civil nuclear engineering in collaboration with the atomic-power consortia.

For top grade Industrial Chemicals



'SEE MONSANTO' FIRST...

Monsanto works constantly to develop new, better chemicals – and to improve those chemicals you already use. In every industry, whether it be agriculture – automotive – aviation – ceramics – chemical processing – cosmetics – electrical – foods – insecticides – mining – oil – paint – paper – rubber – soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

BUSINESS DECLINES IN ABSENCE OF OVERSEAS INTEREST

SUBSTANTIAL DEFICIT IN FIBRE SUPPLIES

ALL sections of the market are lacking in interest, and the amount of business transacted is very small. Demand for manufactured goods, it is reported, is also small, although the report of a Government tender for 13,000 bales of B Twills brought about a temporary steadiness of the sacking markets. Some of those in touch with the markets abroad hold the view that a period of stable conditions here could stimulate interest overseas, as it is unreasonable to suppose that consumers will buy any more than their immediate requirements, or any earlier than they need to when they see quotations continually fluctuating. The unsettled conditions in the jute industry must be acting as a deterrent to taking forward views, both by the buyer and the manufacturer; it is generally considered that forward sales on mills' books are negligble due to the uncertainty of the raw jute position and the alarming discrepancy between manufacturing costs and the sale price of gunnies.

The raw jute arrival figures for the month of March did nothing to allay the position, as total arrivals were only 415,000 bales, against a consumption in that month of nearly 500,000 bales. Total arrivals so far this season, i.e., July 1960-March 1961, total 4,164,350 bales, which is about 283,000 bales less than the estimated consumption of the industry for the same period. As far as can be ascertained, this is the first time that this position has arisen so late in the season. It would be optimistic to think that arrivals for the remainder of the season would total more than another 800,000 bales, while consumption will not be less than 1,200,000 bales. That means a further shortage of 400,000 bales, making about 650,000 bales in all by the end of the season. Some think this is a conservative estimate, but it is enough to demonstrate the seriousness of the situation.

In view of this, the I.J.M.A. again reviewed the position at the committee meeting last week, and it is understood that certain suggestions for a block closure of the mills was put forward in an effort to conserve raw jute stocks. Many and varied were the reports that filtered through to the market, and they ranged from one week a month to 15 days, and even one month's complete closure. Before anything like this can take place, permission from the Government has to be sought, and it is understood that this has already been done. Many think that permission will not be given, but others think that it is inevitable, otherwise mills will not have enough jute to carry on until the new crop arrives. It is thought preferable that the industry should share the impact of a shortage of jute as a whole rather than have individual units closed down.

Mills not Taking Fibre Quota

In spite of the jute shortage, Calcutta mills have shown no eagerness to take up the quotas issued to them by the I.J.M.A. Many mills have not purchased any jute for the last two quotas, and in view of this backlog, no quotas were issued during the current week. Mills not being able to effect any sales for gunnies are reluctant to take up even small quantities, as in view of the high manufacturing costs and the relative low price of jute goods, this puts a loss on their books immediately. The price of jute has not been affected by this lack of interest however, and while gunny prices fluctuated rapidly, the fibre section ruled comparatively steady. General indications offer at about Rs. 5 a maund below maximum prices, but this is for small lots, of which there are many. For larger quantities, however, it is doubtful if these prices would continue to prevail, and premiums of Re. 1 a maund or more would have to be paid for quantity offers if any sellers could be found. Upcountry markets are very steady due to the fact that imports are practically non-existent. This seems to indicate that most of the jute is out of the hands of the cultivators. Many sellers appear to have made up their previous losses and seem to have done well enough out of what they have sold recently to enable them to adopt an attitude of some independence.

The prospects of some early supplies of new crop jute appear to be rapidly receding into the distance as the current hot dry spell continues. Conditions in India have not altogether been unfavourable, but they could have been much better. In Assam, there have been scattered showers, but no prolonged rain which is what is now required. Northern Bengal has also had its rain, but in all areas more rain is essential. It must be emphasised, however, that the crop is in no immediate danger which is what some propagandists and speculators would have others believe. In Bihar, Orissa and West Bengal there has been no rain. As far as West Bengal is concerned, this is immaterial, as sowings in this area occur much later. But in many parts of Bihar sowings are being held up through the lack of rain, and the ground is hard and parched. This may make for a late crop, which may be compensated for by the old adage of a late crop being a good crop. The main essential this year, however, is an early crop which appears to have little likelihood of materialising. In Pakistan, conditions appear to be favourable and good rain has been reported from many places. River levels appear to be higher than normal for the time of year, but so far constitute no danger. Estimates give the new crop figure as about 50 percent higher than the last season.

Some of the older members of the jute trade have pointed out that in their experience it has been found that whenever there was a period of acute shortage of jute this has invariably been followed by bumper crops. Thus they point out that conditions are ripe for the coming crop to be the highest on record. Further considerations in this matter were made in the field of jute *versus* rice. Because of a fall in the price of paddy as against a rise in that of raw jute, many contend that cultivators may contemplate a diversion from paddy to jute to compensate them for the lower paddy prices. If this becomes a reality, this factor alone should make a large contribution to the new season's outturn. Whatever may eventually happen, no one denies the fact that it is going to take the industry a very long time to get over the current impasse; some even go as far as to suggest a period of two years.

THE JUTE MARKETS

Manufactured Goods: Throughout the week, gunny prices in the Calcutta markets showed rapid fluctuations. Heavy selling pressure by mills in the early stages at the higher levels ruling towards the end of last week, caused a quick recession on Thursday morning and B Twill rates fell back to Rs. 175 for April shipment with July-September at an Rs. 11 discount. Hessians were also quiet and dropped to Rs. 59 for near deliveries and Rs. 56 for forward shipment. This trend continued on Friday when heavy goods dropped a further Rs. 2 and hessians an average of about 50nP. Towards evening, however, the market tended to become firm as rumours were circulated that mills were contemplating a further cut in production by making a block closure in the near future. As a result of this, the previous losses were recovered, and before the week-end, B Twill prices even rose to Rs. 177. Reports of a Government tender for B Twills helped to some confidence into the market, but this was short-lived, and prices began to decline due to an almost complete lack of overseas support. Mills showed little interest at the lower rates, but heavy selling pressure from a prominent market operator created quieter conditions and the market closed quiet. Opening quotations on Wednesday morning were as follows:

	April	May	June	July-Sept.
40in. 7½oz.	42.50	42.25	42.25	40.75
40in. 8oz.	45.50	45.25	45.25	43.50
40in. 10oz.	57.25	57.00	56.75	54.50
B Twills	172.50	172.50	171.00	160.00
Heavy Cees				
(Plain)	172.50	172.50	171.00	160.00
A Twills	206.50	206.50	203.50	193.00
Liverpools	192.00	192.50	191.00	182.00
Cornsacks	176.00	176.00	174.50	163.00

Raw Jute: There is practically nothing to report from the fibre markets. Mills showed very little interest, and as a result of a large percentage of previous quotas not being taken up, the I.J.M.A. did not issue any quotas during the current week. Sellers were offering freely, but for small lots, and were asking premiums for quantity offers even of a small nature. The larger sellers preferred to sit out and watch developments, and the business reported during the week was very small, but was usually negotiated at discount rates. Opening quotations for Assam jute were based on Rs. 59 a maund, but prices came down by about 50nP a day. Wagon arrivals during the week showed an improvement due to many smallholders closing their upcountry agencies and consigning the balance to Cossipore. As a result of this, 300 wagons were reported at Cossipore, but this improvement is not expected to continue. Upcountry markets continue firm with no imports. Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		
	Rs a 100 kilos	Rs. a md.	Shipment
Assam	151.25	56.50	Apl.-May
Northern	151.25	56.50	"
Purnea Desal	146.00	54.50	"

THE FOREIGN JUTE MARKETS

FIBRE PRICES SLIGHTLY FALL TOWARDS CLOSE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market ruled firm during the earlier part of the past week, and showed a slight decline towards the close. It is unfortunate that the steady decline which was noticeable in the market in recent weeks should have been arrested, since buyers in all sections of the industry have been looking forward to purchasing at more reasonable prices. For months past, the rates have been well above what consumers of jute yarns and cloth have been prepared to pay. In Dundee, their prices have really been cheapor than they should have been, because spinners have not generally bought on a large scale after fibre prices went up. Meanwhile, they are not interested in purchasing more jute, since it is understood that they have sufficient stocks in hand to meet all their requirements for the current season, or until the new crop arrives in the market around November-December. New crop quotations are £150 for Mill Lightnings and £140 for Mill Hearts for August-September shipment, c.i.f. U.K.-Continent.

Old crop fibre is offered at £191 for Mill Firsts, £185 for Mill Lightnings, £181 for Mill Hearts and £175 for Grade Hearts, with Grade Tossa-2/3 from £190, fours from £183 and Export Tossa-2/3 (Continental) at £181, c.i.f. U.K.-Continent, April-May shipment. Due to the firm trend in shipment quotations last week, sellers have sharply raised their prices for jute afloat or ex-warehouse. Formerly, they were prepared to reduce the shipment rates. The latter were raised by about £6 a ton, but the weakness now shown gives the impression that the easier tendency will be resumed in the near future.

Business in Dundee yarns and cloth remained dull last week, and short-time working is increasing.

THE PAKISTANI JUTE MARKETS

FIBRE FALLS WITH HEAVY RAINS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

EAST PAKISTAN has experienced heavy rains during the past week. After a fairly long dry period, these rains are extremely beneficial and will make for a very good and healthy crop. In one or two areas, especially around the Jessore area, there has been excessive rain, and some of the midland crop has had to be resown. In the Faridpur area, the crop is growing exceedingly well. Unless, therefore, the rain continues or the rivers stop rising, both of which are unlikely, it is now safe to say that the weather is not likely to do any further damage to the crop. Only floods in August may have some adverse effect on the crop.

The low land crop is safely established and should begin to come into the market during June, which will enable some balers to make shipments of higher marks by 15th July, provided they can buy in competition with the mills. The midland crop has been sown entirely. As much as 75 percent of it has germinated and is growing well. Before the end of this month, the whole of the highland crop will have been sown. According to recent experiments in jute growing, it would appear that the lowland, which has been sown earlier than mid-March, will flower early and reduce the yield. On the other hand, parts of the midland and the highland which were sown later should produce ideal results. This is just the opposite of what happened last year when we had a good early crop which deceived everybody and it was the later crop which was poor. In the case of tossa, the ideal fibre production is achieved when the jute is sown between the middle of April and the end of May, which will be the case this year.

The market which rose to a peak during the middle of April has begun to slide down again in all sectors, almost entirely due to the heavy rains. Because of various local conditions, the slide in the Calcutta goods market has not yet been quite so large; nevertheless, there are no overseas buyers to be found. Overseas markets, after a spurt of buying, have begun to come down quite rapidly and the same applies to the local market. In the former markets however, there is an easier tendency which is more obvious for new crop than for the old. E.P.C. registrations during the first half of April were remarkably low at 18,000 bales. The U.S.A. was the largest buyer with over 4,000 bales, followed by France with 2,700 bales and Czechoslovakia with 2,000 bales. The only other buyers of over 1,000 bales were Japan, the Philippines, the Argentine and East Africa, all what one might call output stations. The U.K. and India only bought 250 bales each. Assuming, therefore, that the sale of 40,000 bales to China and Rumania is correct and that reports of overseas purchases in the middle of April are not wrong, registrations during the second half of April should amount to nearly 100,000 bales. If such proves to be the case, there is very little jute left in the Narayanganj market. It is interesting to note that shipments up to the end of March are only 100,000 bales behind the total registration up to the end of the month. As a fair proportion of these 100,000 bales will be made up of defaults to India and Europe, it would appear that practically every baler is shipping his contracts as soon as they are sold.

COFFEE BOARD FACES PROBLEM OF STORAGE AND MARKETING

EXPORT PRICES FALL STEADILY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

WITH new crop arrivals crossing the 50,000-ton mark, the Indian Coffee Board is facing the crucial problem of storage and marketing. According to a report, receipts in the Board's pool have exceeded 53,000 tons. against 37,743 tons during the corresponding period of the previous season. To minimise the pressure on storage facilities and the chances of deterioration in the quality of coffee, the Board is expediting exports. It has sold up to the end of March 5,990 tons, out of the total export allocation of 21,500 tons. The corresponding figure for the previous season was 2 857 tons, against the total export allocation of 16 500 tons. Meanwhile, export prices are steadily declining. Plantation A grade which was selling at Rs. 400 a 50 kilos in 1953 realised only Rs. 164 a 50 kilos in the export sale held on 23rd March. 1961. This compares with the internal price of over Rs. 220 a 50 kilos. Not only is the export market showing a weaker trend as it is doing elsewhere in the world, but it is also shedding the high premium it formerly enjoyed over the domestic price level. Growers who were complaining that the minimum release price fixed by the Coffee Board was not sufficient to meet their production cost were compensated through a share in the export premium. But the formula cannot work in a situation in which such a premium has become a thing of the past. The domestic consumer who is aware of the trend in the world market may eventually demand a reduction in the price of coffee he drinks. So the problem of marketing will get more complicated in the future. A reorientation of the Coffee Board's marketing policy is, therefore, necessary more than ever before.

The International Coffee Agreement meeting, which ended recently, decided to establish a new annual export quota for the coffee year ending 30th September, 1961. While it estimated that the world coffee consumption during the year will total only 35.5 million bags, the I.C.A. has set quotas for its members totalling 37,856,320 bags. Actual shipments during the year will be adjusted downwards in the fourth quarter, following I.C.A.'s meeting on 26th June in Rio De Janeiro. The new annual estimate for the year ending 30th September provides for increases in the quotas of six countries—Costa Rica, Ecuador, Nicaragua, Portugal and British and French African territories. At the meeting, the member-countries voted to authorise the Secretary-General to study proposals either to renew the price pacts which expire on 30th September or to negotiate a new and more permanent arrangement.

CALCUTTA TEA AUCTIONS IN MARCH

QUALITY GRADES RECEIVE BETTER SUPPORT

THREE sales were held in March including the final clearing sale, and offerings amounted to 120,863 packages, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. There was a strong general demand throughout the month, but prices were irregular. All clean well-made teas were well supported at firm to dearer rates. Stalky descriptions received strong support—particularly in the last sale—from local buyers and at times were considerably dearer.

Leaf appearance of Darjeeling teas was average for the time of year but was typically of the end-of-season character. The liquors were rather ordinary and were often wild or woody. The dry leaf of both orthodox and C. T. C. teas from Assam was of the end-of-season character. There was a large weight of stalky fibrous teas on offer. Cup quality was about average but was generally found to be rather wild in character while the stalky fibrous types were flat and plain. Both leaf appearance and cup quality of Dooars and Terai teas showed a decline, and there was much more stalk and fibre in the dry leaf while cup quality was typically of the end-of-season character. Stalk and fibre of teas from Cachar and Tripura became more prominent in the dry leaf which was generally of the end-of-season character. The liquors also showed a decline in quality and were generally rather plain and woody.

The Internal Market

There was a good general demand for the 5,870 chests of leaf on offer in the five internal sales in March, and prices were irregular. A total of 113,765 chests was offered in the five dust sales. The demand was good, but prices for the orthodox types registered a steady fall in all the five auctions, although the small and bright lines met with better support. Legg-cut Dooars dusts followed a similar trend with the fibrous descriptions selling at an appreciable discount. A feature of all the five sales was the interest shown for clean C. T. C. grades, and these generally registered an advance. The fibrous teas of this category, however, declined in value. Good C. T. C. varieties sold well at irregular rates with the few selected lines realising satisfactory prices.

Sale No. 35 „ „ „	4.53	4.60
Sale No. 36 „ „ „	4.50	4.40

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 36 totalled 2,055,469 chests at an average price of Rs. 5.34, compared with 2,203,958 chests at an average price of Rs. 5.05 for the same period of the previous season. Internal sales at 23,263 chests of leaf and 739,415 chests of dust (average prices Rs. 4.32 and Rs. 5.19) go against 40,975 chests and 762,776 chests, respectively (against Rs. 3.97 and Rs. 4.70) of the corresponding period of the previous season.

The export quota market remained steady at ¼nP, at which rate some business was done. The last date for transfer of export quota was 20th March, as after that date the books of the Licensing Committee were closed in order to convert the balance of the 1960-61 export quota into Special Export Licence, which will be valid from 1st April.

Arrivals (in chests) in Calcutta Warehouses during the period 1st March, 1961 to 31st March, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 3,022 (686), by rail 615 (1,207), by road 1,071 (121), and by air 1,862 (826) chests. From the beginning of the season 1st April, 1960 to 31st March, 1961, arrivals have been: by steamer 2,825,720 (3,206,969), by rail 1,230,316 (1,254,421), by road 208,043 (12,163), and by air 166,219 (69,319), making a total of 4,430,298 (4,542,872) chests.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for March 1961:

Upper Assam: Weather seasonable; good rain has fallen; manufacture has commenced; crop prospects brighter; in Doom Dooma severe hailstorms are reported and considerable damage has resulted; in Tingri, the outturn to-date is about the same as last year; immediate prospects good.

Central Assam: Weather good and seasonable; manufacture has commenced; crop prospects generally are favourable; immediate prospects good; hailstorm is reported in Moran but little damage has resulted.

Lower Assam: Weather seasonable but dry in Mangaldai where rain is badly wanted; immediate prospects fair; drought in Borsola, otherwise prospects fair.

North Cachar: Weather favourable; good rainfall; hailstorms are reported but little damage has resulted; the crop is coming forward slower than usual; manufacture has commenced in some gardens; prospects good.

South Cachar: Weather seasonable; good rain has fallen and crop prospects are generally favourable; red spider blight prevalent; manufacture has commenced.

Eastern Dooars: Weather abnormally dry; rainfall is much below normal for the season to-date; the crop is coming forward slower than usual; immediate prospects fair but bad in Kalchini.

Central Dooars: Rain badly wanted; manufacture has commenced.

Western Dooars: Weather seasonable; immediate prospects fair; manufacture has commenced; unless rain falls shortly in Chalsa leaf prospects generally will be poor.

Darjeeling: Immediate prospects fair; weather seasonable; red spider blight prevalent in some districts.

Terai: Crop below normal; weather hot and dry; red spider moderate.

COCHIN TEA SALES

At Dust Sale 16, 224,000 kilograms of tea were on offer. There was a good demand. Coloury mediums were firm to dearer while the residuals were the weakest feature of the sale and were much easier.

At Sale No. 17, 395,000 kilograms of tea were on offer. There was a good but irregular demand. Plain and low mediums were 5nP to 15nP easier while mediums and good mediums were 10nP to 20nP lower. Nilgiris were irregular and easier.

BRITISH TEXTILE REVIEW

HONGKONG OPPOSES RENEWAL OF COTTON AGREEMENT

AS far as the nearer future is concerned, the most important news for Lancashire is the firm refusal of textile leaders of Hongkong to renew, in any form, the voluntary agreement with Britain which expires at the end of January next. Three organisations in the colony, representing some 90 percent of its weaving capacity, issued a joint declaration to this effect as a reply to a suggestion by a visitor, Mr. J. Hamm, a member of the Hongkong Committee in London, that the extension of the pact should be considered. The Lancashire industry cannot pretend to be surprised by the latest statement, for Lord Rochdale, chairman of the U.K. Cotton Board, was warned during his visit to Hongkong last November that the local industry was dissatisfied with the working of the agreement and opposed to the idea of renewing it. If textile trade is maintained at a high level throughtout this year, Hongkong will be able to claim that over most of the three-year term of the agreement, the limitation of its exports (and India's and Pakistan's) that was alleged to be almost a condition of Lancashire's survival was in fact not really necessary; and it was, in any case, accepted as a temporary measure to help Lancashire through a period of permanent change. The reorganisation of the U.K. cotton industry has proceeded as planned, and therefore, according to the industry's leaders in the colony, no further concessions from outside should be needed.

As the pacts with India and Pakistan, having become operative later, continue to the end of 1962, Lancashire has still some time in which to straighten its affairs before unrestricted competition is resumed. But not even current optimism envisages the boom continuing into the middle-1960s, and the time-table suggests that this competition will break on the U.K. market—most inopportunely. No one imagines that India and Pakistan will renew their pacts if Hongkong refuses. So Lancashire is considering what further pressure it can exert on the U.K. Government to substitute for informal restriction of Asian exports, formal restriction of U.K. imports, whether by quota or by import duty; but such a radical change of policy has already been fully considered, and the idea has been decisively rejected by the present Government.

Boom and Development

From, respectively, the Wholesale Textile Association and the U.K. Board of Trade in February came figures reflecting the boom of 1960. The year's wholesale turnover was 6¾ percent above that of 1959 and the highest since 1951; and manufacturers' sales of made-up clothing were 8 percent more than in 1959. Both statements showed that the improvement was spread over virtually all sections of the trade. Viewed in perspective, however, the boom at home is seen to have involved an appreciable increase in imports, while the cotton industry could make no broad progress in the vital task of rebuilding its export trade; by contrast, the wool industry increased its exports satisfactorily. The growth of the U.K.'s exports of textile machinery can naturally not arouse much enthusiasm in the textile industry as such. The value of the exports was about £52 million last year, and the comparable approximate figures for 1959 and 1958 were, respectively, £41 million and £40 million. Although India, previously the biggest importer of textile machinery from Britain, increased her imports from this source last year, her figure was considerably exceeded by that of Russia; the latter's figure of £6.5 million being £1.5 million more than the former's. This year a big contract, worth £5 million, has been signed in Indonesia by the Indonesian Government and Platt Brothers (Sales), for equipping three-cotton-spinning plants to be built in Java. This is a big and welcome business, but it is also a reminder that textile-producing capacity in Asia is steadily growing. Naturally, however, Indonesian textiles cannot enter Britain duty-free as the Asian Commonwealth countries textiles do.

A big plan for expansion at home—in Coleraine, Northern Ireland—is that of Chemstrand, announced last month. This Company, a subsidiary of U.S. Chemstrand, is not at present able to meet all the demand for its acrylic fibre, Acrilan, and will increase this year by 50 percent (to approximately 15 million lbs a year) its productive capacity in Coleraine. Acrilan was prominent in trade fairs in London in February-March: at the Men's and Boy's Trade Fair, the Company featured heavy knits in turbo-spun high-bulk Acrilan, and showed examples of cross-dyed effects, tone-in-tone effects, and reverse effects, in 100 percent Acrilan knitwear with a single-bath dyeing technique using Acrilan and the new Acrilan 16. At the same Fair, Chemstrand's big British rival, Courtaulds, showed Escorto-shirtings made from Courtaulds' fibres to a special wash-and-wear specification. Starting this month, a big advertising campaign is promoting Escorto fabrics, its theme being luxury feel at less than luxury price. More than 50 firms are co-operating in the manufacture of the fabrics, and nearly 200 shirt firms are using them. As many as 180 colours of Courtaulds' spun-dyed yarns are used in the weaving.

New Technique

Approximately coinciding with the report in the Wool Intelligence and Fibres Supplement of the Commonwealth Economic Committee that the world consumption of raw wool increased appreciably in the fourth quarter of last year—compared with the third—came the announcement by *Drapery and Fashion Weekly* of a revolutionary technique which could drastically reduce the demand for wool. Summerweight knitted and woven textiles can be converted immediately into fabric with the bulk and warmth required for winter wear, but with virtually no increase in weight, by lamination with plastic foam. This technique, it is stated, can be applied to an enormous range of textiles for personal and domestic use and can cause tremendous changes in the fashion trades. For instance, cheap imported cotton cloth laminated with plastic foam can be used for many more purposes than at present; winter rainwear will undergo radical changes; and so on. Some revolutions, the sceptics will recall, are quietly forgotten, but if this one justifies its claims, it will certainly break down further (as synthetic fibres have done already) the traditional classification of textiles and economise considerably the use of fibres.

WORLD COTTON CONSUMPTION WELL MAINTAINED

Production of cotton in the non-communist countries is expected to establish a new high record, at about 32.5 million bales, compared with 31.1 million bales during the last season. There is no reason to expect, however, that the increase in the crops will affect the relationship between the supply and demand unfavourably. Stocks at the beginning of the season were 1.3 million bales less than at the beginning of 1959-60, and were, in fact, the smallest for several years. The total supply, accordingly, is much the same as last season's. With serious shortfalls in production in Russia and China, net exports to the communist countries are expected to show a further increase which will more than offset the increase in the non-communist countries' total supplies. There is every indication that the total consumption in the non-communist countries will be at or near the record reached during the last season. In a survey of the outlook, the International Cotton Advisory Committee points out that while the United States' consumption is lagging behind last season's, expansion continues in most of the other large textile-producing countries.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March 1961. As compared with February, the March Index for Food shows a rise of 6 points and the indices for Clothing and Miscellaneous also indicate increases of 2 points each. The index for Fuel and Lighting remains unchanged at 287 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 4 points during March 1961.

ORTHODOX DUSTS IRREGULAR AT INTERNAL TEA SALE

PRICES FOR C.T.C. GRADES RISE

AT Sale No. 40, held on 26th April, there were 23,322 packages of Dusts on offer. The orthodox descriptions were irregular and generally easier, the smaller types receiving better support. Legg-cut Dooars followed a similar trend except for a few bright lines which sold well. All clean C.T.C. teas were a strong feature of the sale and sold at enhanced rates, some of the bright lines realising extremely useful prices. The very fibrous teas of this category were, however, neglected and towards the end of the sale were difficult to sell.

Quotations

	1961 Rs. n kilo	1960 Rs. n lb
Plain Orthodox Dust	4.25 to 4.40	1.90 to 2.02
Medium Assam Dust	4.35 to 4.80	
Legg-cut Dust	4.50 to 5.20	1.88 to 2.00
Medium Assam C.T.C Dust	6.00 to 6.40	2.10 to 2.28
Good Assam C.T.C. Dust	6.80 to 7.40	2.50 to 2.85

(Quotations are inclusive of excise duty.)

The 691 packages of Leaf on offer sold at irregular rates.

TONNAGE DEMAND FOR SCRAP FREIGHTS

THE main interest in the freight markets this past week was again with Japanese charterers, who continue to seek tonnage for scrap cargoes to Japan from various parts of the world, but mostly from the U.S.A. Calcutta-Japan is being offered at 61s for a 7,500 tonner with 62s for completion at Madras. Other scrap cargoes are being offered from Casablanca-Sfax range and Dakar-Lobito range to Japan. Elsewhere, fixtures have been made covering sugar from Queensland to U.K. May-June shipment at 92s 6d while Durban-U.K. for the same commodity obtained 62s 6d. The time charter market was fairly active and two *Liberty* type vessels were taken for round voyages at 14s 6d. A 10,000-ton motorship of 11¼ knots obtained 22s 3d for a round trip to West Africa, being a direct continuation of her previous charter.

LINSEED DULL

Dull conditions prevailed in the linseed market during the past week. Due to cuts in electric power, factories worked shorter hours, so the demand for seeds slackened. Prices were marked down and mills are interested in small quantities only. The oil market was steady as stocks were small. Sellers were not inclined to do much business either for ready or forward deliveries. The oilcake market was firm and local stocks diminished. Buyers could not get their full requirements. The latest quotation is follows: Ready-May delivery Rs. 25 a maund.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th April and 24th April, 1961)

Cowhides: Wet salted (Ord.) 3,000 pcs. on the basis of Rs. 8.25 to Rs. 12.62; Wet salted (Slaughtered) 23,100 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 24,400 pcs. on the basis of Rs. 280 to Rs. 300, Rs. 325 to Rs. 340 and Rs 430 to Rs. 450; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis of Rs. 4.25 a piece; Patna-Muzafferpore 9,300 pcs. on the basis of Rs. 330 to Rs. 340 and Rs. 370 to Rs. 380.

Bazaar Stocks

(24th April, 1961)

Cowhides: Wet salted 107,800 pcs.

Goatskins:—Wet salted (Daissee, Patna, Kustia, Killed) 46,000 pcs.; Assam-Dinajpur 132,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 290,500 pcs.

SHELLAC QUIET

During the week ended 25th April, the market was quiet. The range of quotations was as follows:

Standard Pure Butonlac	Rs. 166, 160 sellers.
Lemon No. 1 Shellac	Rs. 166, 160 sellers.
Lemon No. 2 Shellac	Rs. 154, 150 sellers.
F.O. Superfine Shellac	Rs. 142, 140 sellers.
Standard One Shellac	Rs 138, 136 sellers.
TN Pure Shellac	Rs. 116, 112 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 162, 160 sellers.
Golden Bysacky Seedlac	Rs. 140, 136 sellers.
One B Seedlac	Rs. 134, 130 sellers.
Two B Seedlac	Rs. 116, 112 sellers.
Manbhum Fine Seedlac	Rs. 128, 126 sellers.
Fine Bysacky Seedlac	Rs. 116, 114 sellers.
Genuine Bysacky Seedlac	Rs. 106, 102 sellers.

Shipments during April until the 18th were 9,160 packages.

COMPANY AND PUBLIC NOTICES

THE STANDARD COAL CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the members a Dividend on the Ordinary Shares @ 15% per annum for the year ended 31st December, 1960, subject to deduction of tax.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries.

Chartered Bank Buildings,
Calcutta, 21st April, 1961.

THE SOUTH KARANPURA COAL COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of The South Karanpura Coal Company Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 29th May, 1961, at 11 A.M. for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st August, 1960, and to receive the Directors' and the Auditors' reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

As a special business

5. To consider and, if thought fit, to pass with or without modification the following Resolution of which a notice has been received by the Company from a Shareholder under section 257 of the Companies Act, 1956, which will be proposed as an ordinary Resolution.

   "That Sir Walter Michelmore be and is hereby appointed a Director of the Company."

6. To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a special Resolution namely :—

   "Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company but so that the money lent shall not at any time exceed Rupees three lacs in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of Demand by Secretaries and Treasurers".

The Share Transfer Register of the Company will be closed from the 15th May to the 29th May, 1961, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

Calcutta 21st April, 1961.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The relative explanatory statements pursuant to sections 173 of the Companies Act, 1956, in respect of the Special Businesses set out above are annexed hereto.

(c) The Dividend, if declared, will be paid on or after 14th June, 1961, to those members, so entitled whose names appear in the Company's Books on the 29th May, 1961, or to their mandatees. No application for Dividend warrants is necessary.

EXPLANATORY STATEMENTS

With regard to item No. 5 it is pointed out that Sir Walter Michelmore was appointed an additional Director and the Chairman of the Board with effect from 14th October, 1960. In terms of Section 260 of the Companies Act, 1956, he now vacates his office and in view of his vast experience in the affairs of the Company your Directors recommend the adoption of the resolution in the best interest of the Company.

With regard to item No. 6, it is pointed out that the Company may require temporary financial accommodation from time to time and as the Secretaries and Treasurers are prepared to lend money to it at a rate of interest which is more favourable than the Company could have obtained from its Bankers, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Secretaries and Treasurers at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Secretaries and Treasurers constitute a service by them in terms of Section 360 of the Act and that such arrangement should be approved by the shareholders by special Resolution pursuant to the above section. Counsels opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a special Resolution confirming the arrangement.

Sir Walter Michelmore, Director and member of your Company is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Secretaries and Treasurers of your Company.

To the extent indicated above, the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolution.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED
(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock for the year ended 31st March, 1961 at the rate of £2-14-8.16/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1-13-6d. per cent. Payment will be made on 25th May, 1961 to those stockholders whose names are registered in the Company's Stock Register on 5th May, 1961.

Applications for transfers received in this office before 12 O'clock noon on Friday, the 5th May, 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board,
H. C. BOWKER,
Agent.

VICTORIA HOUSE,
Calcutta, the 20th April, 1961.

SITUATION VACANT

A large Indian public company intends to appoint an assistant to the Managing Director. The appointment carries prospects of eventual promotion to the Board in an executive capacity for a man possessing the requisite qualifications, which include preferably membership of one of the Institutes of Chartered Accountants, experience in modern methods of financial control and management accounting, knowledge of industrial legislation and ability to deal with personnel problems at different levels. There is no fixed scale of remuneration for this appointment but a good salary with commensurate allowances, depending on age and experience, will be paid to the successful applicant.

Reply, stating age and giving full particulars of experience, along with the names of two Referees, to Box No. 4800 c/o. "Capital", P.O. Box No. 14, Calcutta-1.

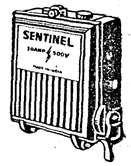
ANNOUNCEMENT



The Manufacturers of SENTINEL Switch Gear have pleasure in assuring their clientele all over India that inspite of additional imposts in Excise and Import duties, there will be no corresponding increase in the price of Sentinel Switch Fuses, Isolators and Distribution Boards.

They are further assured that this increase in cost will not have any effect on the high standard of quality maintained in Sentinel products.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE SURPLUS IN WORLD GRAIN MARKETS

THE 1961 world grain harvest promises to be substantial, but it is easy to understand why the major producers regard this prospect without enthusiasm: the stocks they have in their silos at this moment far exceed the normal volume of world cereal trade. The four leading grain exporters (the U.S.A., Canada, Australia and Argentina) are holding 61 million tons of wheat, or about enough to supply world trade for three years to come. In secondary cereals (barley, corn, oats and milo) they have on their hands 72 million tons, which is enough for world trade for the next seven to nine years. From a purely commercial point of view, the statistical position in international grain markets is disastrous and one would be entitled to speak of a global excess of cereals. However, it would require a certain amount of cynicism to limit oneself to the purely commercial calculation at a time when many Asian countries continue to suffer from widespread hunger, when China is short of grain and Russia is having grave agricultural difficulties. It is obvious that stocks are not too big, but world cereal trade too small, mainly because of the low level of *effective* demand in needy countries. Reserves of grain that sound immense when compared with annual world exports seem negligible in comparison with real needs: American and Canadian wheat stocks today are equal to only 5 percent of world consumption, or enough to feed humanity for about two weeks. Far from constituting a useless surplus, they would quickly disappear if given to the hungry millions.

Yet such calculations remain utopian as long as most of the world's grain continues to be traded for cash, even if mostly at subsidised prices. *For the grain trade there is a* global surplus and what is more, it threatens to become worse because of the appearance of cereal excesses in Europe. France has become the non-communist world's third producer of wheat and also of barley, and thus is about to join the four New World grain exporters in the overflowing-silos club. This sudden emergence of western Europe as a grain-surplus region should not surprise us, because the New World producers owe their present dominance mainly to the ravages that west European farming suffered in two world wars, and those ravages have now been fully repaired. It was during those wars that the U.S.A., Canada, Australia and Argentina vastly extended their wheat acreages in order to sell grain—at sharply increased prices, incidentally—to the Europeans. The U.S.A.'s prime position is especially recent and dates from the last war; before then the United States was a net importer of agricultural produce; and it is only since 1945 that she has become the world's biggest exporter. This situation is historically unusual, and it was to be expected that western Europe's recovery should concern agriculture too, to the discomfort of New World grain producers whose large acreages presuppose big imports by the only people who can pay their grain prices, the Europeans.

In G.A.T.T. and in the U.N.'s economic organisations, the New World grain exporters have sought to persuade the Europeans to behave as though their agriculture were still ruined, i.e., to limit their cereal acreages and buy from abroad. Only Holland has accepted this division of labour: it has cut back wheat output and made its agriculture a sort of processing-plant for grains, using them to feed cattle which it then re-exports. Britain and West Germany, although they cannot produce all the grain they need at home, were not inclined to accept a division of labour that two wars had shown to be so dangerous to their security. The Dutch proverb that says "cows are fed in the United States but milk in Holland" could never become the basis of their agricultural policies. France was even less inclined to leave grain production to the New World before seeing whether her large reserves of fertile land (France alone has half the cultivable area of the Common Market) could not equal the productivity of north American grainfields. It appears that they can, and the technological modernisation of her farming is by no means complete. Further increases in productivity are expected for some years yet, notably in the hybrid maize invented in the U.S.A.

It is this rivalry between the four of the New World and the west Europeans that is at the root of the surplus in world markets. Europe between 1953 and 1958 absorbed most of the grain exported: 76 percent of the maize, 70 percent of the barley and 48 percent of the wheat. Once Europe becomes nearly self-sufficient in cereals and actually surplus as far as concerns France (and hence as far as concerns the Common Market, once the other members give preference to French grain), then there must be an excess of cereals at the ruling world prices, which the needy countries cannot afford to pay. The fact is that when we say stocks are so and so many times the annual volume of world trade we mean, essentially, so and so many times western Europe's import needs, because most world trade in grains has been between the four New World producers and western Europe. Now, if western Europe becomes surplus in grain, world trade, even at subsidised prices, must shrink, and immense carry-forwards will accumulate on all hands.

It seems impossible for the grain producers to resolve this problem by restricting output, even if that were accepted as a moral procedure in a world where so many cannot eat their fill. The Eisenhower Administration followed the spirit of the New Deal by limiting legal acreages, paying farmers not to produce and also by reducing support-prices—and still the surpluses banked up. Legal restrictions cannot easily be enforced and anyhow they are annulled by advances in rural productivity. Reducing the farm population does not help either; it is already down to 10 percent of the national population in the U.S.A. and can scarcely be reduced further. Besides, the fewer the men on the land, the greater the application of mechanised, extensive-farming techniques which often lead to even higher output. The difficulty is not peculiarly American, but may be seen in Europe's granary, France. Grain output has doubled in 10 years, despite the fall in the numbers of the peasantry, and could easily double again in the next 10. When the Government sought to limit wheat output from 1956, it succeeded—but only at the price of producing a permanent surplus of fodder crops, to add to the permanent excess of wheat.

Paradoxical as it may be, all the countries of north America, western Europe and Australasia, whom we usually but misleadingly describe as the "industrialised regions," are doomed to go on producing more and more grain which, of course, they cannot trade among themselves as they did when Europe was laid waste by war. As the world's grain-export markets contract, these countries will have to find an outlet for their surpluses in the countries that cannot buy the food they need nor grow it themselves in sufficient quantity while they industrialise. The U.S. P.L 480 of 1954, which will bring India in the four years from April 1960 one million tons of rice and 16 million tons of wheat, all payable in rupees, shows one way in which this can be done. Yet, to succeed now that not only the U.S.A but all industrialised regions are surplus in grain, such plans will have to be put on a multilateral basis. The rich nations, who will all soon have more cereals than they know what to do with, will have to work out a common policy for using their grain to promote economic development—and not only in Asia but probably also in Russia and China too. The present confusion of normal cash sales of grain, gifts and loans is the very contrary of a joint policy, and confusion is dangerous since, it must not be forgotten, all the western agricultural surpluses are the result of deliberate farm policies, having social repercussions and budgetary costs inside each producer country.

If countries like the U.S.A, Canada and France found themselves surplus in grain just by accident, or as a consequence of nature's kindness, they might consent to tolerate a situation where one of them sells grain at subsidised prices in the same week as another gives grain away, at the cost of an even bigger subsidy, and thus depresses the ruling cash price at which the first sought to sell; where one nation declines to buy grain from its surplus neighbour in order to import it from a client at the other end of the earth in the hope of selling it industrial goods—while that client's neighbour in turn spends Rs. 3 a quintal to store grain it can neither sell nor give away. But in reality, these surpluses are not accidental; they are produced purposely, if indirectly, in order to guarantee the incomes of each nation's farmers. If each nation disposes differently of its surplus, it is upsetting the efforts of all the others to 'guarantee their farmers' incomes. Meantime, it is also missing an opportunity to put the advanced nations' food surplus to the best use from the point of view of promoting development in the less advanced areas.

A joint western policy for the disposal of grain surpluses is almost certain to come in the next few years. Despite India's obvious interest in it (and, to be parochial for an instant, the interest of the jute industry in seeing those millions of tons of grain get out of silos into bags), there is probably little we can do to hasten its elaboration. We must wait for the surpluses to grow and especially to grow in western Europe, whereupon the normal cash channels of world cereal trade will be choked, and the absurdity of competitive disposal of excesses will be admitted. The idea is already gaining ground in the west that it is only by combining food aid with generous capital assistance for industrialisation that the developing countries can be brought to the point where their living standards will, within a reasonable time, be comparable to western. When they are, the developing countries will be able to absorb more of their own industrial products, instead of menacing western industries by exporting what their own people cannot afford to buy. They will also be able to begin buying some of the surplus grain that must now be given or lent to them. And therein lies the only prospect for an enduring expansion of normal world trade in cereals, adequate to absorb present and foreseeable surpluses.

Such expansion could indeed be enduring. It is not simply that the west must pour its agricultural surpluses for a few years into Asia until Asia can feed herself. In all probability Asia will never be able to feed herself in certain agricultural products (soft wheat, barley, oats, meat, cheese and other dairy produce) as well as the temperate countries of the northern and southern hemispheres could do, for reasons both of climate and soil endowment. The idea of a world where the "industrialised nations" provide a significant part of Asia's food, not just for a temporary emergency but on a permanent business basis, must seem strange at first. We have got used to the contrary idea which dates from the last century, when the Punjab and the raw lands of the New World supplied the food and materials for industrialising Europe. But when the level of industrialisation is more nearly comparable around the world, when countries like India can consume their own manufactures and pay their way easily by exporting their specialities, the direction of international trade in agricultural produce could be very different. It will seem normal then for the Midwest farmer to sell his soft wheat in north Africa and for the French peasant to export his cheese and butter to India. Thus a rational policy for the disposal of current western agricultural surpluses might not only help both western and Asian Governments past a difficult passage, but could also prefigure the future pattern of world commerce.

REVIVAL OF U.K. MOTOR TRADE

THE motor industry is not as potent a factor in the British economy as in the American, but its influence on the economic trend, in Britain as in America, is stronger than any other industry's. Last year it was a depressant; this year it is a stimulant. Its recent vigorous recovery is regarded, officially, with mixed feelings. A substantial increase in Britons' expenditure on cars, whether produced at home or imported, would be very inopportune now, when there are ominous signs of inflation in the economy, and when foreigners' confidence in the currency, shaken by last year's payments deficit and by this year's revaluation of the deutschemark and the guilder, needs reassurance. A booming motor industry has in the past been a symbol of inflation, and the inflationary mood was conspicuously absent last year, when the industry was in recession. However, the huge debit balance of payments, revealed recently, proves that recession in the motor industry solves no basic problem.

Activity in the motor industry is admirable, of course, if it reflects a strong demand for export. The current revival of activity in the British industry is attributable to both domestic and export orders and is thus no immediate threat to the economy's stability. The threat will reappear only if the domestic trade expands enough to increase imports appreciably (whether of foreign cars or of materials for making cars), and enough to impede the industry's deliveries abroad. The export trade is at present developing well. The British industry has been notably successful this year at the international motor shows in Geneva and New York. But it cannot immediately gain full benefit from foreign orders, because a large proportion of these orders is concentrated on a single model, the new Jaguar "grand tourer"; production of this model is increasing rapidly, but it cannot satisfy the huge demand within a reasonable time. However, Jaguar's phenomenal success should not obscure the smaller but considerable achievements of other British motor companies in the export markets this year.

Nor, on the other hand, should the industry's success obscure the difficulties of continuing expansion, in a world market where supply is tending, probably, to increase a little faster than demand. The under-developed countries cannot afford large imports of cars. Nor are they content to rely entirely on imports when they are capable of building cars with imported components and, later, of making their own components too. The more sophisticated countries have mostly their own motor industry, protected by import duties, which in the European Common Market are, of course, diminishing internally, to the detriment of British exporters; and those countries with high living standards that are content to import their cars, because the mass-produced vehicles of other countries are much cheaper than the products of a small-scale industry would be, are naturally objects of particular attention by exporters.

The biggest market, the American, is the most difficult to assess. It was very favourable for the European exporters in 1959, when their shipments to the U.S.A. totalled nearly 668,000 units, of which the U.K.'s share was 31½ percent. The total for 1960 was only just over 444,000 units, and the U.K.'s share diminished slightly, to 30½ percent. The deterioration reflected not only the state of trade in the U.S.A. but also the U.S. automobile industry's belated adaption to the change in public taste to smaller cars. This year the challenge of the American "compacts" is much stronger. For years the U.S. industry persuaded itself that the demand for smaller cars was impermanent, but now a third of its production is in the "compact" class, and the proportion is still increasing. However, the "compacts" are apparently growing more elaborate, and, as they are still, though small by American standards, much larger than most imported cars, there may be a substantial permanent market for European cars in America. This year's orders, particularly for sports-type cars, with which the U.S. firms are not seriously attempting to compete, suggest that the U.K. industry may increase its share of the import trade. However, even Jaguar, whose success in the U.S. market is exceptional, is turning its attention to the Soviet bloc. It is one of a number of British motor companies that will "invade" the Soviet market by means of the British Trade Fair in Moscow next month. These companies do not imagine that the Soviet authorities will suddenly release abundant foreign exchange for such goods as motor-cars, but they envisage a big increase in the number of cars in the communist countries in the next few years, and they believe that a reasonable proportion of the expansion of those countries' external trade will be allocated, on the import side, to the more sophisticated requirements of consumers.

It is recognised, of course, that the Soviet motor industry is growing, and that its success in some export markets cannot be explained simply by uneconomic pricing. That industry has some advantages over Britain's: for instance, huge-scale production of components such as gears in a few plants that supply standardised units for various purposes—thus both motor-cars and machine-tools may be equipped with the same gears. The British industry is aware of the potential Soviet challenge; but the west European and the American challenge is more imminent. The American industry is not, apparently, thinking of a big increase in its direct exports of cars but rather of a big expansion of manufacturing capacity in other countries. That the premier U.S. "compact", American Motors' "Rambler", will soon be assembled in Malta is surely significant. Two of Britain's biggest motor Companies, Ford and Vauxhall, are now wholly owned by their American parents, Ford and General Motors, respectively. Forceful American methods are, of course, introduced into such Companies, and their all-British rivals can never relax. It should be remembered, too, that when the British industry sells cars to the U.S.A. or other markets abroad a considerable proportion of the proceeds, attributable to the American-owned companies, will eventually be remitted to the U.S.A.

SOLVING THE POWER PROBLEM

THE second World War created a growing demand in India for industrial power, and this has been increasing since 1947. Such a rapidly rising demand for electrical energy clearly showed the need for a nation-wide power development scheme to ensure future expansion being tackled on a scientific and economic basis. At the beginning of 1948, the installed capacity of power generating plant in this country was approximately 1.4 million kW or 140 mW, and up to the beginning of the first five year plan in 1951 there was an increase of approximately 100 mW. The target set for additions to the installed generating capacity during the first plan was 130 mW. The public-sector contribution was to be 110 mW, the balance of 20 mW being planned for the private sector. On what this proposal for 130 mW was based is difficult to see, but it appears that due regard was not taken of the increasing rate of demand to be expected from industry. It would seem that right from the outset the rate of growth of demand was under-estimated. The first grave error was to assume that the increase to be expected in the first five year plan would be very little greater than that experienced between 1947 and 1951, a most extraordinary piece of deduction, especially when one remembers that to build a thermal power station takes between three and four years. This means that whatever the additions made to installed capacity during the first plan, no further worthwhile additions could be expected until well into the second plan, assuming, of course, that the first plan targets were met. So, by the beginning of the second plan industrial expansion had entered a phase of rapid growth, but with the depressing possibility of power shortages looming on the horizon. In fact, the position was steadily deteriorating, as the figures of achievement reveal.

FIRST FIVE YEAR PLAN

	Target	(in mW) Achievement	Shortfall at the end of plan
Public sector	110	80	30
Private sector	20	20	—

The situation was eased by a useful contribution made by private industry in the form of a total increase of 10 mW of new power plant installed in industrial establishments, thus bringing the total additional generating capacity during the first plan to 340 mW. Looking back, it is impossible not to be amazed by the extent of the failure in certain quarters to grasp the basic problem. Briefly it was this: A decision had to be made at the outset to adopt one of the following viewpoints: Whether or not power was to be made available in sufficient quantity in advance of industrial expansion; or whether industrial expansion was to come first in order to provide the necessary finance for power development? Obviously the first alternative is the policy to adopt, provided the necessary finance is available and the economy of the country can afford to have idle capacity awaiting industrial demand which might not develop fully for two or three years after the generating plant is commissioned. It would appear that reliance was placed on a compromise which might be termed a "demand as you earn" policy. Such a scheme requires the utmost care in planning to obviate the many pitfalls; it is difficult to avoid the suspicion that by curtailing expenditure on less important projects and schemes and by using the money saved for power development in advance of industrial expansion, the whole picture today could have been made to look much better. Surely the maxim should be "first things first". For a country like India it does not seem logical to embark upon schemes which will not contribute to the main objective, schemes in fact which have only been introduced into highly industrialised countries long after the establishment of basic industries.

In the second five year plan, a target of 350 mW was planned, made up of 170 mW carry-over from the first plan, plus 180 mW newly planned. In 1956 the planned target was re-examined to facilitate the pruning made necessary by the shortage of foreign exchange. The outcome of this reappraisal was an expected shortfall. Worse was to come and it was later realised that owing to delays in placing orders, a still further shortfall was to be expected. A fresh review of the situation indicated that, of the original target of 69 mW, the best that could be hoped for was 53 mW, a shortfall of 110 mW. A serious position indeed. What of the third plan? Starting with a backlog of some 110 mW, and faced with an ever-growing demand for power, the electricity supply industry is meeting an unenviable task, although high hopes are placed on the Bokaro thermal-station extension, also on Durgapur. The commissioning of the new 75 mW station at Bokaro proved abortive and the delays experienced in getting this set into commercial operation placed a severe strain on industry in the area, which was straining to increase productive capacity. When eventually the Bokaro generating set was up on commercial load, it was learnt from various sources that there was a strong possibility of its having to be derated from 75 mW to somewhere around 60 mW. The question might be asked: On what grounds was it decided to increase capacity at Bokaro power station by the introduction of a turbo-alternator of entirely different make and country of origin from the three 50 mW sets which have given such sterling service since they were installed? It appears that the 75 mW set was of a size never before used in India. Further, it might be asked whether the manufacturers themselves had ever in fact produced a machine of this size before? Whatever the circumstances are, it was a most unfortunate experiment to conduct in the so-called interest of economy.

The depressing story has not yet ended. Not long after the Bokaro 75 mW set was finally put into commercial operation, another crisis developed. This time it was the breakdown of the 75 mW turbo-alternator unit transformer which necessitated the shutdown of the 75 mW set once again. This raises an interesting point: could it be that the original trouble on the turbo-alternator set had adversely affected the unit transformer leading to the ultimate breakdown? Durgapur was the next site to be visited by the Gremlin who seems to have taken a fancy to power stations in this area. Though not as serious as the other troubles, it added to the general power shortage situation. Finally, or at least so it is to be hoped, came the shutting down of generating capacity at the Cossipore station of the Calcutta Electric Supply Corporation due to delayed overhauls caused by the snowballing effect of breakdowns at other stations.

It is well nigh impossible to place very much reliance on the figures available, and with so many reservations attached, it is difficult to assess the forward supply position. The Government has a tendency, when quoting figures of capacity, to use those pertaining to installed capacity, which to the observer can be very misleading. The power available to consumers is that which is better described as firm capacity and which must always be less than the installed capacity. Briefly, if a power station has, say, four 50 mW—totalling 200 mW—generators, then it is reasonable to assume that the maximum firm capacity would be three times 50 mW, or 150 mW, retaining one generator as standby. The dangers of not doing so are only too well known. The immediate problem now is to take urgent and adequate steps not only to prevent a further widening of the existing gap between demand and supply, but to close that gap. To do so, two lines of action seem to be indicated. (1) Short-term action with immediate effect in order to prevent further deterioration in the position. There are various ways and means which recommend themselves. The best solution might be to import self-contained mobile gas turbine generating units which are produced by a well-known engineering firm in the U.K. These sets are available in units of 3 mW each and require no external water supply. In operation they compare favourably with diesel generators, and the installation cost is considerably less because no buildings or foundations are required. It might be argued that 3 mW is a small consideration. It is, when compared with a full power station, but when compared with the amounts which industry can contribute by way of reduced load without affecting production, a number of these mobile stations at well-chosen points could prove of immense value. This is particularly relevant to the coal industry, where mechanisation calls for more power which stations in the private sector cannot meet. This is through no fault of their own, but is due largely to inability to expand in view of the Government's policy of restricted profits and so making it impossible to attract new capital. On the other hand, the demand cannot be met from the public sector since there is none to spare. The result could be disastrous if a chain reaction really set in.

The coal industry is at present striving to increase production by mechanisation so as to supply the increasing needs of power stations and the railways, but is not able to draw enough power to do so. In the meantime, more power stations are being built, but what about coal to allow them to operate? Oil fuel is very expensive, so it seems a better way might be to purchase mobile power stations until things improve. At least these would save the coal industry, which is at the moment in grave danger, especially as the existing stations in the private sector are being flogged to death at a time when normally such plant should, in view of its age, be replaced or reconditioned. Has serious thought been given to the effects of a breakdown in one of these stations? There is still time, but it is fast running out. The long-term policy is one of good planning, coupled with a sense of urgency. To sum up, the situation should be treated as a national crisis, which it most certainly is. A study of how the power shortage was tackled in Britain during the second World War and the years immediately afterwards would provide many useful lessons. Action is needed today and every day until the problem is solved and industry is served as it has every right to be.

Current News and Comment

Dunlop Rubber Results Improve

The Dunlop Rubber Co. (India) Ltd has produced an excellent set of results for the year ended December 1960. The net profit has improved from Rs. 1.18 crores in 1959 to Rs. 1.25 crores in 1960, but the ordinary dividend has been maintained at 21.5 percent, taxable. Substantial amounts have been ploughed back into the business. General reserve is allocated Rs. 37.50 lakhs and development rebate reserve Rs. 17 lakhs. The ordinary shares of Dunlop Rubber have been steady around Rs. 50.50 on optimism concerning a further capital issue. Although the Managing Director, Mr. J. Luckham, hinted about the possibility of a further capital issue in his address to the annual general meeting of the Company in Calcutta last Thursday (the details of the speech are printed on a later page of this issue of *Capital*), the precise nature of the new share issue has not been made clear. Mr. Luckham stated that the Company is investigating the prospect of expanding the Ambattur factory. The Dunlop Rubber Co. Ltd, London, has agreed to provide the necessary foreign exchange for expansion in the form of a loan which will be converted into ordinary shares of the Dunlop Rubber Co. (India) Ltd in due course. As the Company is now negotiating the expansion project with the Government of India, it is not possible to formulate the recommendations concerning the capital reorganisation at this stage In the circumstances, the shareholders are left to consider whether the new share issue will be made in the form of rights shares or bonus shares or both.

The expansion project is justified by the fact that the demand for Dunlop Rubber products is much higher than the supply. In spite of higher production from the Ambattur and the expanded Sahaganj factories, Dunlop Rubber cannot satisfy requirements fully. The Ambattur factory has already reached full production. Mr. Luckham referred to the increased demand for bicycle tyres and rims. Dunlop Rubber has exported substantial quantities of these products to the south-east Asian markets. The expansion of the vee belt unit has helped increase the sale of rubber products. The equipment for expanding the capacity for producing conveyor belting has been installed. Referring to natural rubber, Mr. Luckham mentioned the increased imports in view of the small domestic production. The profit of Dunlop Rubber, after tax, as a percentage to sales, declined from 4.56 percent in 1959 to 4.08 percent in 1960, mainly due to the high price of imported rubber.

Against Expanding Aluminium Capacity

The observations concerning the future of the Indian aluminium industry made by Mr K. C. Mahindra in his chairman's address at the annual general meeting of the Indian Aluminium Co. Ltd, held in Calcutta last week (the speech is printed on a later page of this issue of *Capital*), are interesting. He does not think that the recent craze for expanding the industry is logical. Whether further expansion has been planned after making sure of the availability of proper raw materials and power resources, remains to be investigated carefully. This apart, Mr. Mahindra foresees the possibility of excessive supplies, if expansion takes place as is being planned. The production was previously expected to rise to 87,500 tons by the end of 1966. But talks circulate about increasing the output target to 200,000 tons at the end of the third plan. The existing output capacity at present is for 52,500 tons and the current consumption is estimated at 44,000 tons. Mr. Mahindra poses the question whether the demand can increase as rapidly as suppiy. As for exporting Indian aluminium, the prospect is far from encouraging. "We know that with our scattered deposits of ore, expensive power and comparably more expensive costs of installation, India will remain a high cost producer", he states.

Mr. Mahindra also points to the technological advance which has taken place in the industry. Aluminium Ltd of Canada is believed to be investigating a new process which, if successful, would appreciably reduce the large power requirements of the existing process. The dependence on bauxite for raw materials might be cut to a great extent. Indian entrepreneurs would be well advised to take notice of this development in time. He mentioned the difficulties the industry is facing at present. The transport shortage has interrupted coal supplies and tied up considerable capital in inventories. Substantial finance is also being blocked in paying the excise duty. If the collection of excise duty is rationalised, the industry will benefit to a great extent. Indian Aluminium produced good results in 1960. The production and the profit both increased. The latter improved from Rs. 8 million in 1959 to Rs. 12 million in 1960. The directors have recommended a higher ordinary dividend of Rs. 1.50, taxable, a share. The shareholders are entitled to enjoy the benefits of Sections 56A and 15C of the Indian Income Tax Act.

B.I.C. Turns the Corner

The British India Corporation Ltd has turned the corner, as is evident from the satisfactory results produced for the year ended December 1960. It is evident that the Company has recovered almost fully from the damage inflicted during the Mundhra period. After providing Rs. 7.40 lakhs (against Rs. 6.89 lakhs) for depreciation and Rs. 60,376 (against Rs. 47,911) for development rebate, the profit has soared from Rs. 63.09 lakhs in 1959 to Rs. 90.93 lakhs in 1960. A taxable ordinary dividend of 4 percent has been declared after an interval of three years. It is covered more than six-and-a-half times and offers a yield of 2.2 percent at the present price of Rs. 8.89 a share. Taxation is allocated Rs. 46 lakhs (against Rs. 11 lakhs) and rehabilitation reserve Rs. 20 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 3,34,066, against Rs. 74,442 brought in.

The steadiness of the scrip springs partly from the good results achieved and partly from optimism concerning the future outlook. The working of the two woollen branches has been satisfactory, but it has not been possible to attain the full benefits from these units due to restrictions on wool imports. The directors have taken steps to modernise the equipment of the two factories in order to improve operational efficiency further. As for the Cooper Allen branch, there has been an all-round improvement and a profit, although small, has been made for the first time since 1953. The working of this section is being hampered by poor supplies of quality hides.

It is proposed to merge Begg, Sutherland and Co. Private Ltd, which is a 100 percent subsidiary of the Corporation, with the Corporation itself. It is expected that Shree Madhav Mills Ltd, which is in liquidation, will be sold at a price of Rs. 55 lakhs. Out of this amount, Rs. 25 lakhs may be paid to the Elgin Mills Ltd on its loan of Rs. 20 lakhs plus interest. The British India Corporation has considerable interest in Elgin Mills.

Ramnugger Cane Pays More

There has been steady support for the ordinary shares of the Ramnugger Cane and Sugar Co. Ltd in the Calcutta stock market during the past week or so on the payment of a higher dividend of 30 percent, taxable, for 1959-60, against 21 3/7 percent for 1958-59. The improved results during the year ended August 1960, are due to a higher cane crush, which amounted to 2.5 million maunds with a recovery of 9.08 percent, compared with 1.9 million maunds with a recovery of 10.27 percent in 1958-59. The Company also enjoyed the benefits of the excise duty exemption on the surplus production. The dividend is covered more than three and a half times and works out to a yield of 10.3 percent at a price of Rs. 29.06 a share. Taxation receives Rs. 8.20 lakhs (against Rs. 1.95 lakhs) and development rebate reserve is allocated Rs. 49,689 (against Rs. 89,500). The profit has been worked out after providing Rs. 3.16 lakhs (against Rs. 3.12 lakhs) for depreciation. The carry-forward is Rs. 13,908, against Rs. 59,442 brought in. The cane crush has increased to 3.6 million maunds during the 1960-61 season and recovery has amounted to 9.62 percent.

Presidency Mills Profit Down

In their report for the year ended July 1960, the directors of the Presidency Jute Mills Co. Ltd take a cautious view of the future outlook. The fibre shortage has forced the industry to cut working hours. As a result, overhead costs of production have increased. The profit has declined from Rs. 6.64 lakhs in 1958-59 to Rs. 3.83 lakhs in 1959-60, after transferring Rs. 3.32 lakhs (against Rs. 2.57 lakhs) to depreciation and Rs. 1.16 lakhs (against Rs. 2.55 lakhs) to taxation. The ordinary dividend has been reduced from 5 percent taxable to 4 percent taxable. It is covered more than one-and-a-half times and gives a yield of 3.4 percent at a price of Rs. 5.31 a share. Development rebate reserve is allocated Rs. 1.18 lakhs (against Rs. 1.43 lakhs). The carry-forward is Rs. 23,417, compared with Rs. 68,437 brought in. The directors state that

the mills are being modernised. The new preparing machinery is believed to have contributed to operational efficiency.

Bengal Flour Results Satisfy

The Bengal Flour Mills Co. Ltd has produced satisfactory results for the year ended December 1960. In spite of bigger sales of Rs. 2.40 crores against Rs. 2.16 crores, the profit has declined from Rs. 16.33 lakhs in 1959 to Rs. 13.69 lakhs, presumably due to the fact that the products of the Company are heavily controlled. A taxable ordinary dividend of 40 percent, including an interim of 15 percent, has been declared, against 45 percent, taxable. It is covered more than two-and-a-half times and works out to a yeld of 8.7 percent at Rs. 46 a share. Taxation is allocated Rs. 6.52 lakhs (against Rs. 7.62 lakhs), development rebate reserve Rs. 18,758 (against Rs. 10,137) and general reserve Rs. 2.50 lakhs (against Rs. 3.21 lakhs). The carry-forward is Rs. 1,88,199, compared with Rs. 2,19,995 brought in. The scrip are expected to remain steady in view of the fact that the demand for the products of Bengal Flour is likely to be good for quite a long while. The balance-sheet position is impressive. An ordinary share capital of Rs. 12 lakhs, divided into ordinary shares of Rs. 10 each, is backed by reserves of more than Rs. 22.50 lakhs. Current assets are more than Rs. 40.80 lakhs.

Mahindra Sales Up: Profit Down

The working of Mahindra and Mahindra Ltd for the year ended October 1960 shows a small decline in profit in spite of substantially higher sales. The latter have risen by about 47 percent from Rs. 9.27 crores to Rs. 13.63 crores, and closing stocks are higher at Rs. 4.85 crores, against Rs. 3.57 crores. But the gross profit is down from Rs. 57.40 lakhs to Rs. 54.06 lakhs. The directors attribute the fall in the profit to the decline in steel business, the lower margin on the sale of jeep vehicles and the termination of the benefit available to the Company under Section 15C of the Indian Income Tax Act. After providing Rs. 13.06 lakhs (against Rs. 11.14 lakhs) for depreciation, Rs. 1.57 lakhs (against Rs. 2.12 lakhs) for development rebate reserve and Rs. 19.60 lakhs (against Rs. 17.52 lakhs) for taxation, the net profit amounts to Rs. 19.82 lakhs, against Rs. 26.62 lakhs. No allocation has been made to general reserve which received Rs. 5 lakhs in the previous year. A sum of Rs. 1.39 lakhs has been written back being the excess provisions in previous years. Proposed dividends, both ordinary and preference, absorb Rs. 21.29 lakhs, leaving Rs. 1.10 lakhs to be carried forward, against Rs. 1.18 lakhs brought in.

The directors state that the distribution of jeeps and allied vehicles reached a level of 6,499 units, compared with 4,694 units during the previous year—an increase of a little over 38 percent. There was an appreciable increase in the production of jeeps and allied vehicles during the year, and the number of vehicles manufactured was the largest in any year so far. The Government has approved Mahindra and Mahindra's proposals for the expansion of manufacturing capacity to 10,000 units. The expansion will involve further capital outlay on plant and equipment. The directors are considering ways and means of securing the required finance. During the four months of the current year, sales of jeeps totalled 2,363 units. Steel sales and order-bookings are said to be on par with the previous year's results. The directors add that they have reversed the decision to move the jeep manufacturing facilities to Baroda and that the Company has since secured an option of a suitable area in Greater Bombay where the construction of building and other facilities are expected to commence before the end of the current year. The directors say in their report that the negotiations with David Brown Industries of the U.K. for manufacturing tractors were terminated due to differences of opinion on the pricing policy. The formal distributorship agreement has also been cancelled. The Company is now negotiating for manufacturing another make of tractors with the tentative approval of the Government. The Company's Rs. 10 paid-up shares are currently quoted around Rs. 19.76, offering a tax-free yield of 4.5 percent.

Devidayal Cable Industries

The new cable factory of Devidayal Cable Industries Private Ltd in Pokhran Valley, near Thana (Bombay), was inaugurated by the Chief Minister of Maharashtra last week. The new factory covering an area of 60,000 square feet, will produce winding wires, cables, insulated strips, etcetera, valued around Rs. 1.5 crores a year. The production of cables alone is now expected to rise to 24 million yards a year, valued around Rs. 72 lakhs. Additional plant has been purchased for manufacturing winding wires which will increase the production of fine-gauge wires to 1,200 tons a year. The new cable factory is equipped with the most modern plant among which the continuous vulcanising plant is said to be the only American plant in India. The Company has entered into a technical agreement with a reputed U.K. firm for manufacturing nichrome wires and strips. The new plant, which is estimated to cost about Rs. 10 lakhs, will go into production by about the end of next year. By 1963, Devidayal Cable Industries hopes to set up a Rs 1.5-crore plant for manufacturing underground cables.

Tensile Steel: A New Venture

Tensile Steel Ltd is a new enterprise formed to undertake the manufacture of high-tensile steel wire for prestressed concrete construction. The plant, which will be located in Baroda, will have an annual production capacity of 10,000 tons. The Government of Gujarat has allotted 25 acres of land for the factory in Baroda. Negotiations are in progress for acquiring further adjoining land for future development. The State Government has reserved electric power for the factory's use. The Company has secured the technical and financial collaboration of three Japanese firms—C. Itoh and Co. Ltd, Kobe Steel Works Ltd and Shinko Wire Co. Ltd which is a subsidiary of Kobe Steel. The plant will be manufactured by Kobe Steel Works and the technical know-how will be provided by Shinko Wire Company. Tensile Steel will have an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each, of which Rs. 45 lakhs is to be issued for the present. The promoters, directors, their associates and friends will take up 15,500 shares and the Japanese collaborators will subscribe to 14,770 shares. The balance of 14,730 equity shares are likely to be offered for public subscription some time in May. The sanction of the Controller of Capital Issues for the issue of shares of the value of Rs. 45 lakhs has already been secured. The Industrial Finance Corporation of India is reported to have agreed to grant a loan of Rs. 20 lakhs. Besides, it has given a deferred payment guarantee for Rs. 20.09 lakhs for importing plant and machinery from Japan.

Shivrajpur Shows Better Results

The working of the Shivrajpur Syndicate Ltd for the year ended November 1960 shows a substantial improvement over the previous year's results. Sales have risen from Rs. 86.39 lakhs to Rs. 124.48 lakhs and the gross profit has sharply risen from Rs. 6.28 lakhs to Rs. 28.78 lakhs. The ratio of the gross profit to sales works out to around 23 percent, against 7.2 percent in 1958-59. Improved results in 1959-60 are attributed to the larger output and marked increase in exports of manganese ore during the year. The output of the latter rose from 70,422 tons to 76,161 tons and shipments and deliveries totalled 92,529 tons, against 60,995 tons. After providing Rs. 5.53 lakhs (against Rs. 51.15 lakhs) for depreciation, Rs. 1.30 lakhs (against Rs. 1.85 lakhs) for development rebate reserve, the net profit amounts to Rs. 13.31 lakhs, against a loss of Rs. 1.43 lakhs in the previous year. This has enabled the directors not only to raise the dividend for 1959-60 from Rs. 5 a share to Rs. 8 a share, both taxable, but also to plough back Rs. 6.23 lakhs to different reserves. In the previous year, the directors had to withdraw Rs. 6.25 lakhs from various reserves to pay the dividend of Rs. 5 a share. Shivrajpur Syndicate has been granted an export quota of 59,130 tons of manganese ore in 1961. The quantity which remained to be shipped as on 30th November, 1960, against the contracts already entered into was 58,965 tons for delivery in 1961. The directors state that the demand for manganese ore is somewhat subdued on account of the low production of steel in the U.S.A. and the development of manganese ore mines in many countries. The Government's decision not to permit, for the time being, any steel-manganese barter deal is also responsible for the poor offtake of Indian ore. The directors, however, feel that the overseas demand may pick up towards the end of the current year.

The shares of Shivrajpur Syndicate, which were quoted around Rs. 70 early in January, rose to Rs. 105—substantially above the 1960 high of Rs. 89—in the second week of March on sustained support based on ideas of a higher dividend and hopes of a bonus issue. The shares have declined to around Rs. 80 on the persistent selling pressure induced by receding prospects of a bonus issue and the rather unpromising outlook for manganese ore exports. Referring to the outlook for Shivrajpur Syndicate in his speech at the annual general meeting of Killick Industries last week, Mr. A. N. Haskar, chairman, said that Indian manganese ore continues to be uncompetitive in international markets. Many new mines have been developed in recent years in Brazil, South and West Africa, etcetera. During the same period, f.a.s. costs of Indian ore have suffered unavoidable increases due to the levy of additional imposts by way of increased royalty rates and railway freights. Mr. Haskar added that unless adequate relief was given soon concerning railway freight, he could not visualise an encouraging future for Indian manganese ore exports. He set at rest the uncertainty about the bonus issue by Shivrajpur Syndicate Replying to shareholders' questions at the annual meeting of Killick Industries, the chairman said that after careful consideration, the directors had decided against the issue of bonus shares in view of the none-too-encouraging conditions in the manganese trade. The Company's financial position is, however, sound. Against a paid-up capital of Rs. 10.46 lakhs, the reserves and surplus of Shivrajpur Syndicate total Rs. 81.10 lakhs. Its gross block of Rs. 1.07 crores has been written down to Rs. 62.53 lakhs.

Outlook for Automobile Products

Shareholders of the Automobile Products of India Ltd may not have to wait too long for their investments to bear fruit. The Company did reasonably well during the year ended July 1960, although the profit fell short of expectations due to the rise in the cost of raw materials, wages and other items. The outlook for the current year seems to be much better. Mr. M. A. Chidambaram, chairman, said at the annual general meeting in Bombay last week that without being unduly optimistic, he expected the profit for the current year to be large enough to wipe out the carried-forward loss of Rs. 9.18 lakhs and leave a handome surplus. In 1959-60, the Company produced and marketed 8,696 units of scooter, scooterettes and three-wheelers and realised Rs. 1.41 crores. Production in the current year is running at a rate of over 12,000 units, and the turnover is expected to rise to about Rs. 2.5 crores. The Government is said to have agreed to sanction Automobile Products' proposal to increase the output of the Lambretta division from 12,000 units to 18,000 units. It has indicated that once the indigenous content is over 75 percent, there will be no ceiling on production. But this will depend on the availability of foreign exchange for importing proprietary parts not manufactured in India. Due to a change in the Government's policy on motor-car manufacture, it has been agreed that the production of Meadows deisel-engines should be transferred to Premier Automobiles. The chairman said that this would augment the funds of the Company both on capital account and for working funds. The working of the clutches division has been satisfactory. The supply to T.E.L.C.O. will start soon and negotiations are being carried on with other manufacturers of passenger and commercial vehicles. The brakes division has been doing well. The Government has sanctioned an import licence for machinery to manufacture linings for heavy-duty vehicles, and it includes a jig borer worth Rs. 3 lakhs for expanding the tool room. Mr. Chidambaram said at the meeting that Mr. Ernst Wilhelm Sachs, chairman of Fichtel and Sachs of West Germany, is prepared to supply machinery required for the expansion of the Company's production up to a value of 250,000 deutschemarks as equity participation. The shareholders passed the resolution seeking to raise the authorised capital from Rs. 1 crore to Rs. 5 crores. This has been done in order to enable Automobile Products to raise additional funds when considered necessary for increasing its production. The Rs. 10 paid-up shares of the Company are currently quoted around Rs. 11.80.

Killick Industries Prospects

The Rs. 100-paid shares of Killick Industries Ltd, which touched a high of Rs. 160 in 1959, have steadily declined since then and are now quoted almost at par. The decline, in spite of continued buoyancy in the investment market, is due less to the general lack of interest in managing agency shares than to the domestic troubles which have mainly been responsible for the unsatisfactory performance of the Companies managed by Killick Industries. These domestic troubles assumed serious proportions last year. But now that the affairs have been almost set right, investors in Killick Industries can look to the future with some optimism. Speaking at the annual general meeting in Bombay last week, Mr A. N. Haksar, chairman, expressed the hope that the current year will show a modest improvement over 1960. (A fuller version of the speech appears on a later page in this week's issue of *Capital.*) The managing agency side of the business will, Mr. Haksar said, definitely show better results. But he added that he could not be so sanguine about the working of the subsidiaries—Killick Nixon and Company and Stamco Industries—although he believed that these Companies would eventually become useful members of the group. Referring to the working of the Companies under Killick's management, Mr Haksar said that Kohinoor Mills had already turned the corner and its renovation and modernisation had begun to yield results. The electricity enterprises continued to enlarge their services. The enormous expansion in demand for power for industry and homes in the Bombay suburban areas has created difficulties in procuring materials. The Surat Electricity Company—in common with other companies in the region—has been subjected to control on new connections. Besides, its deisel plant is being called upon to bear additional burden. The production of Hingir-Rampur Coal Company had to be curtailed on account of the unprecedented high level of stocks due to the wagon shortage. Referring to Shivrajpur Syndicate, Mr Haksar pointed to the difficulty in selling manganese ore abroad because of higher domestic prices. As for the steel-file factory, the chairman said that it could make considerable profit if there was no labour trouble. Mr Haksar indicated at the meeting that the Company would take steps to broaden the range of its activities by investing in industrial undertakings either directly or through subsidiary Companies. The diversification of business will, in due course, not only contribute to India's expanding economy but will directly benefit the shareholders.

Elphinstone Spinning Fares Well

The Rs. 50-paid shares of the Elphinstone Spinning and Weaving Mills Co. Ltd, which could be bought around Rs. 55 in January, rose recently to Rs. 87. Corrective profit-taking has brought down the quotation to around Rs. 83. The highest level touched by the shares in 1960 was Rs. 67 and earlier in the year they were available around Rs. 35. The recent marked strength in the shares merely reflects the Company's impressive performance during the year ended December 1960, and the prospects of a still better outlook. Although the sales in 1960 were down by Rs. 14 lakhs from Rs. 2.40 crores to Rs. 2.26 crores, the gross profit nearly doubled from Rs. 18.54 lakhs to Rs. 36.93 lakhs. From this, the directors have allocated Rs. 1.10 lakhs towards bonus for 1958. Rs. 6.30 lakhs to depreciation, Rs. 2.39 lakhs to development rebate reserve, Rs. 7 lakhs to taxation, Rs. 80,000 to development reserve, Rs. 2 lakhs to general reserve and Rs. 9.35 lakhs to replacement reserve. Except for development rebate reserve, which received Rs. 3.19 lakhs, no other allocations had been made in the previous year. Even after making these provisions, the directors have been able to raise the dividend from Rs. 7 (14 percent), taxable, to Rs. 9 (18 percent), taxable, a share in 1960. This absorbs Rs. 5.40 lakhs, against Rs. 4.20 lakhs in 1959. At the current price of Rs. 83, the shares offer a tax-free yield of about 8.3 percent.

Hindustan Glass Share Offer

Hindustan Wired Glass Manufacturing Co. Ltd, which has been formed to undertake the manufacture of wired and figured rolled glass will soon be in the market with an equity issue of Rs. 24 lakhs. The Company has an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each, of which Rs. 60 lakhs is being issued for the present. The promoters, directors and their friends are taking up shares worth Rs. 24 lakhs and the technical and financial collaborators are subscribing for 12,000 shares. The balance of the issue amounting to Rs. 24 lakhs is to be offered for public subscription. The plant which will be located in Baroda will have a production capacity of 800 tons of wired and figured glass a month. The Government of Gujarat has allotted about 60,000 square yards of land to the factory. The entire project is estimated to cost about Rs. 75 lakhs. The Company is reported to have made arrangements for financing the foreign exchange component of the project. The U.S. firm of Mississippi Glass Company which is providing technical know-how and is sharing in the equity capital of the Company is said to be the largest manufacturer of wired and figured glass in the world.

Gokak Mills Pays More

The working of the Gokak Mills Ltd for the year ended December 1960 justifies the directors' decision to raise the dividend from Rs. 6 to Rs. 14 a share, both taxable. Even the higher dividend is covered 3.8 times by the net profit while the 1959 dividend was paid out of reserves. The Company's improved performance in 1960 is attributed to higher machinery utilisation, larger sales and economy in production. Sales during the year rose by about 40.7 percent from Rs. 2.84 crores to Rs. 3.99 crores and premia received under the export incentive scheme increased from Rs. 3.02 lakhs to Rs. 3.95 lakhs. The gross profit rose from a mere Rs. 3.25 lakhs in 1959 to Rs. 44.19 lakhs in 1960 and the ratio of the gross profit to sales works out to around 11 percent. The cost of raw materials consumed increased from Rs. 1.99 crores to Rs. 2.54 crores, but it represented 63.58 percent of sales, against 70.04 percent in 1959. The wage bill also rose from Rs 48.84 lakhs to Rs. 65.62 lakhs but its share in the sales declined from 17.21 percent to 16.44 percent. After providing Rs. 15.64 lakhs (against Rs 7.95 lakhs) for depreciation, the net profit amounts to Rs. 26.08 lakhs, against a loss of Rs. 8.45 lakhs in 1959. No provision has been made for taxation. The directors have allocated Rs. 12.75 lakhs (against nil) to development rebate reserve, Rs. 4 lakhs (against nil) to general reserve and another Rs. 2.30 lakhs to various other contingencies. The proposed dividend absorbs Rs. 6.83 lakhs, against Rs. 2.93 lakhs, leaving Rs. 21,125 to be carried forward, against Rs. 1,321 brought in.

In 1959, the Company spent Rs. 14.66 lakhs on fixed assets, in 1960, it added another Rs. 36.02 lakhs, bringing the total fixed assets at the end of the year to Rs. 2.21 crores which has been written down to Rs. 1.14 crores. New machinery installed and brought into operation during the year included two high draft-speed frames, six cone winders, three cheese winders, 15 medium doublers and six heavy doublers. Besides, a number of speed and ring-frames were converted into the Casablanca system of drafting. Against the paid-up capital of Rs. 48.81 lakhs, the Company's reserves and surplus amount to Rs. 45.45 lakhs. The shares which were quoted around Rs 166 in January, rose to Rs. 205 near the end of March and have since receded to around Rs. 183, at which price they offer a tax-free yield of about 5 percent.

Kothari Textiles Profit Down

The working of Kothari Textiles during the year ended December 1960, shows a marked decline in the profit because of the enormous rise in manufacturing expenses. While sales have increased by Rs. 37 lakhs from Rs. 1.41 crores to Rs 1.75 crores, the gross profit is up by a mere Rs. 2 lakhs from Rs. 26.68 lakhs to Rs. 28.40 lakhs. The ratio of gross profit to sales works out to 15.9 percent, against 18.9 percent in 1959. The cost of cotton consumed rose from Rs. 71.07 lakhs to Rs. 92.55 lakhs; salaries, wages and bonus totalled Rs. 33.97 lakhs, against Rs. 22.39 lakhs and power and fuel cost Rs. 4.04 lakhs, against Rs. 2.74 lakhs. Interest on loans and deposite is also higher at Rs. 5.06 lakhs, against Rs. 3.36 lakhs in the previous year. After providing Rs 16.30 lakhs (against Rs. 8.83 lakhs) for depreciation and Rs. 1.10 lakhs (against nil) for taxation, the net profit amounts to Rs. 9.81 lakhs, against Rs. 15.97 lakhs. From this, the directors have allocated Rs. 4.05 lakhs (against Rs. 7.67 lakhs) to development rebate reserve. The dividends absorb Rs. 8.12 lakhs. The directors have had to transfer Rs. 1.25 lakhs from dividend equalisation reserve and Rs. 1 lakh from general reserve to pay the proposed dividends. A sum of Rs. 44,107 has been carried forward, against Rs. 55,806 brought in.

The directors state that the profit would have been higher but for the fact that the price of yarn of fine counts yielded only a narrow mergin. The Company's exports in 1960 amounted to Rs. 27.45 lakhs which represented nearly 40 percent of its total cloth production. The third shift in mill No. 2 could not be worked due to the shortage of electric power. The additional 12,000 spindles at mill No. 2 have been gradually brought into production and the entire 24,192 spindles licensed for the unit have been working in the two mills from June. Towards the end of the year, a set of eight high production whitin combers and the preparatory machinery were installed at the mills; these have been commissioned during the current year. Kothari Textiles is claimed to be the first mill in south India to install this machinery. The full benefits of the working of this machinery will be reflected in the current year's results. The production of the Company's combed yarn for the handloom market will be doubled. Kothari Textiles has also installed additional cone-winding machines at both mills of the Company in order to meet the increasing need for coned yarn of power-loom factories. During the year, an order was placed for a new blow-room line as well as 30 additional cards to improve further the quality of the yarn. The carding engines are expected to arrive by the middle of the current year and the blow-room line by the year end. An order has also been placed for additional humidification equipment. The additions made to the Company's fixed assets during the year amounted to Rs. 14.90 lakhs, bringing the total fixed assets to Rs. 1.84 crores which have been written down to Rs. 1.19 crores. Kothari Textiles has a paid-up capital of Rs. 85.20 lakhs and its reserves and surplus total Rs. 27.96 lakhs. The Rs. 10-paid shares of the Company are quoted around Rs. 13, offering a tax-free yield of 5.4 percent.

Century Mills Bonus Issue

The chairman of the Century Spinning and Manufacturing Co. Ltd, Mr. R. D. Birla, gave a pleasant news to the shareholders at the annual general meeting in Bombay last week. He said that the directors have decided to issue—subject to the consent of the Controller of Capital Issues—bonus shares in the ratio of one share for every four held. He added that the income-tax authorities had provisionally decided to exempt 33.4 percent of the Company's profits for 1960 from the tax under Section 15C of the Income Tax Act. The tax benefit will enable the shareholders to get a net final dividend of Rs. 16 a share, instead of Rs. 14 (Rs. 20 gross) originally proposed. In addition, the shareholders will get a tax refund of a rupee a share in relation to the interim dividend. Since the tax on the latter has already been paid to the Government, shareholders will have to apply for the tax refund to the income-tax authorities.

The news about the bonus issue and the tax relief did not come as a surprise, for the shares of Century Mills had continued to display remarkable strength in spite of the reactionary trend in the stock market since about the end of March. It was keen influential buying which lifted the quotation within a fortnight from Rs. 564 to a new all-time high of Rs. 638 in kerb dealings on 25th April. Corrective profit-taking brought down the rate later to around Rs. 610. The proposed bonus issue will raise the Company's equity capital from Rs. 2.03 crores to Rs. 2.54 crores. Its preference capital amounts to Rs. 1.25 crores, and its reserves and surplus total Rs. 4.12 crores. Against this, the net block of Century Mills stands at Rs. 4.90 crores. Mr. Birla said at the meeting that 60 percent of total profits for 1960 came from rayon and 40 percent from cotton textiles. Out of total sales of Rs. 12.85 crores, cotton textiles accounted for Rs. 8.75 crores, yielding a profit of Rs. 1.12 crores while rayon and waste fetched Rs. 4.11 crores giving a profit of Rs. 1.63 crores. The duty on rayon yarn in 1960 amounted to Rs. 48 lakhs and the additional burden of the new excise levy in 1961—on the basis of the current output and the understanding reached between spinners and weavers to share the new extra duty—is estimated at Rs. 32 lakhs. Arrears of depreciation at the end of 1960 amounted to Rs. 56 lakhs. The Company's tax assessments have been completed up to 1955, and there was no tax liability for the years 1956, 1957 and 1958. Century Mills has made adequate provision for taxation for 1959 and 1960. The Life Insurance Corporation is said to hold 11,169 equity shares and 23,220 preference shares of the Company.

Maiden from Adoni Spinning

The working of the Adoni Spinning and Weaving Co. Ltd for the year ended December 1960, shows an impressive improvement over the previous year's performance. This has enabled the directors to clear all arrears of dividend on preference shares from 1955 to 1960 and also to declare a maiden dividend of 8 percent, subject to tax, on ordinary shares. The sales of yarn and waste during the year amounted to Rs. 1.30 crores, against Rs. 71.94 lakhs. The gross profit has risen sharply from Rs. 6.62 lakhs to Rs. 21.97 lakhs. The ratio of gross profit to sales works out to 17 percent in 1960, against 9.2 percent in the previous year. After providing Rs. 9.24 lakhs (against Rs. 99,157) for depreciation and Rs. 1.09 lakhs (against Rs. 5.44 lakhs) for development rebate reserve, the net profit amounts to Rs. 10.34 lakhs, against only Rs. 9,026 in the previous year. With Rs. 31,634 brought in, the total available for appropriation is Rs. 10.65 lakhs. Out of this, the preference dividend absorbs Rs. 7.67 lakhs and the maiden ordinary dividend Rs. 2.39 lakhs, leaving Rs. 59,147 to be carried forward. The directors state that all the 24,000 spindles worked three shifts during the year. The Company has installed four doubling machines and one cone-winding machine at a total cost of Rs. 2 lakhs. With all the preference dividend arrears cleared, holders of equity shares can reasonably hope for a better dividend next year even if Adoni Spinning barely maintains its last year's production and profit margins because arrears of preference dividends accounted for a considerable part of the 1960 profits. The shares of the Company are quoted around Rs. 10.65, offering a tax-free yield of 7.3 percent.

Cloth Enquiry Findings

The Fact Finding Committee, appointed by the Bombay Piecegoods Merchants Mahajan to enquire into the complaint of non-availability of popular varieties of cloth and the rise in their prices, states that there has been a vast change in the pattern of cloth production in India since the price cut in January. The mills have gradually switched over to the production of qualities in which they can get more profit a loom. They have also made slight changes in popular varieties by changing few reeds and picks in order to realise higher prices. Some mills are said to have started manufacturing sanforised, mercerised poplin, superior lino and other varieties which offer better profit margins. The overall production has not, however, recorded any decline. The Committee thinks that mills

have generally delivered goods contracted by them before the new scheme was enforced. Lately, however, mills have rather been reluctant to make fresh contracts in relation to regular varieties as the production of such goods at reduced rates is not profitable to them. So they are interested in selling only such varieties as give them better profit margins under the new scheme. Some of the mills are said to be manufacturing their popular varieties but they wish to sell them only jointly with some other varieties which are not easily saleable at the stamped rates. Referring to the question of cloth prices, the Committee says that it could not find any unreasonable rise in the prices of the superior, lower medium and coarse varieties which constitute about 70 percent to 80 percent of the total output. About 70 percent to 80 percent of the goods, it is stated, are being sold in wholesale at 2 percent to 5 percent above the ex-mill prices and 12 percent to 15 percent of the goods at 8 percent to 10 percent over the stamped rates. Only a few varieties are selling at much higher prices.

The Committee has made certain suggestions for holding the price line for cloth in the future. Whether or not it was within its terms of reference to make any suggestions about holding the price line does not in any way make its suggestions less worthy of attention. It has suggested, for example, that the Mahajan should advise its members not to sell their goods at more than 5 percent net at the wholesale level and that it should advise upcountry buyers not to pay higher prices at the wholsesale level. Besides, it has suggested the appointment of a joint committee representing the Government, industry and the trade with a view to ensuring the stability of prices, regular supplies to dealers and the fixing of fair prices for new varieties and the proper distribution of cloth at manufacturing centres. It has also emphasised the need for increasing cloth production. The Committee is not in favour of price stamping as it leads to abuses.

Cloth Prices and Production

In spite of the two successive cuts in ex-mill prices in September 1960 and again in January 1961, cloth has not become cheaper to the consumer. But this is hardly surprising because prices cannot be effectively controlled when there is a lack of balance between supply and demand and more particularly when the size of the distributive trade is enormous. In his presidential address at the annual general meeting of the Indian Cotton Mills Federation, Mr. Krishnaraj M. D. Thackersey reiterated his views on the pressing need for increasing production and reducing costs to solve the problem of high cloth prices. That the increased output is the only answer to higher prices is obvious enough. But the question is how the increase in production is to be brought about. The Federation's views on the subject are well known by now. It is not satisfied with the third plan target of 9,300 million yards. It is even more dissatisfied with the allocation of production among the different sectors—mills, handlooms and powerlooms. Mr. Thackersey reiterated the Federation's earlier plea that the production targets should be finalised after taking into consideration the performance, potentiality and the contribution made by the various sectors of the industry. Its main argument that the *per capita* consumption of cloth has remained almost static around 15½ yards after 21 years and two plans raises important issues. If this trend were to persist for another five years, even the proposed cloth production targets could prove to be on the high side, the increase in population notwithstanding. But it is really surprising how the *per capita* consumption has remained almost unchanged in spite of the increase in national and *per capita* incomes. Perhaps, consumption has been restrained by high prices. The industry says that its profit margins are already about the lowest among the organised industries. This implies that prices can be kept under check only by reducing production costs. Considering the wide variations in the profit margins of various units in the industry having a comparable pattern of production, it is not easy to accept the industry's viewpoint that it has little control over production costs. But there is little doubt that the industry can reduce its manufacturing costs and improve the quality of its output if it modernises itself.

Indian Investment Centre

A Press release issued by the Indian Investment Centre states that its aim is to aid and advise Indian and foreign industrialists on joint-ventures in this country. It encourages the participation of private foreign capital in all projects to which the Central Government attaches a high priority. Entrepreneurs who wish to expand their production capacity or those who want to establish new undertakings may approach the Centre for assistance, the Press release says. The officers and experts of the Centre, it is stated, will examine all aspects—including the technical and economic aspects of the project—with a view to seeking foreign technical collaboration or financial participation. The Centre has prepared a check-list of information required for proposals for foreign technical or financial collaboration. It has requested Indian entrepreneurs to formulate their proposals in detail on the basis of its check-list, so that it may assist them in seeking foreign technical collaboration or financial participation. The Centre, the Press release says, has a complement of officers and technical experts to handle enquiries. Some enquiries have been received from both Indian and foreign entrepreneurs, and they are at present being processed. The enquiries from foreign firms relate to the investment climate in India and specific requests for collaboration, while those from Indian firms relate to specific projects for which the parties seek technical collaboration or financial participation. The Press release says that the Centre is making arrangements in principal capital-exporting countries "whereby enquiries emanating from Indian entrepreneurs and those received from foreign investors will have prompt attention." It is stated that a number of industrialists have obtained industrial licences under the Industries (Development and Regulations) Act for various projects. Their implementation will be speeded up if they secure foreign financial participation to facilitate the import of plant and equipment. The Centre requests the licenssee and other entrepreneurs to address their enquiries to: The Executive Director, Indian Investment Centre, National Insurance Building, Parliament Street, New Delhi 1.

Progress of Buckingham and Carnatic

The chairman of the Buckingham and Carnatic Co. Ltd, Mr. E. F. G. Hunter, discussed the problems of the textile industry in India and the position of the Company in particular at the annual general meeting last week. The highlights of his speech were the Company's performance in export markets, incentives for exports, the need for increasing the output of the textile industry and the benefits of rationalisation which the Textile Wage Board stressed in its recommendations. Mr. Hunter drew the attention of shareholders to the improvement in the Company's exports during the year. This creditable achievement was due to the determination of the Company's management. The chairman said that the incentives offered to exporters served as a great encouragement, but he hoped that the Government's present tendency to "water down" the incentives would be reversed.

Mr. Hunter said that the policy of extending indirect taxation by imposing further excise duties—as in the latest Central Budget—would have the effect of spreading the collection of tax over the community as a whole. In his view, this policy is to be welcomed, although the new duties have not been accompanied by any proposal for reducing direct taxation or for providing incentives. The chairman said that the excise levy and handloom cess on the cotton mill industry were heavy enough, so he felt that the fresh imposts on cotton textiles proposed in the latest Central Budget were unjustifiable. The mills, however, welcomed the Government's subsequent decision to compound the proposed duty on yarn into a duty on cloth. But the introduction of an excise levy on production from automatic looms—subject to relief on export performance—was unwarranted. Any form of penalty which does not apply equally to all mills, the chairman said, is discriminatory and the levy is no incentive to progress or modernisation. The Buckingham and Carnatic Mills has a high proportion of automatic looms and it has always done its best to earn foreign exchange by exporting. Mr. Hunter, therefore, considered the impost unfair, especially when the Government is encouraging mills to export.

Another point of considerable importance, to which the chairman referred, was the recent announcement of the Government that import entitlements under the export promotion scheme could only be used to 65 percent of their face value. The exports made by Buckingham and Carnatic Mills are all dyed and finished products which require large quantities of indigenous and imported dyes and chemicals. The mills use all their import licences for dyestuffs for their own purposes. Under the circumstances, the chairman said that representations had been made to the Government so that those mills which use all their import licences for dyestuff for their own purposes —as Buckingham and Carnatic Mills does—will not have to surrender 35 percent of their value to indigenous dyestuff manufacturers.

The improvement in the demand for cloth experienced in 1960 and maintained so far during the current year, the chairman hoped, will continue. But Mr. Hunter said that the demand alone is insufficient; and if the industry is to retain its capacity to pay higher wages (wages will again be increased in 1962 according to Wage Board recommendations), it will be necessary to increase production by implementing "rationalisation as soon as possible". The chairman, however, gave encouraging news to shareholders in this connection when he said that an agreement had been reached with the labour union on the procedure to be followed concerning rationalisation. He was optimistic about tangible results in this sphere during the current year.

Vasanta Mills Earns More

The working of the Vasants Mills Ltd for the year ended 31st December, 1960, shows a net profit of Rs. 7.48 lakhs (against Rs. 4.84 lakhs), after providing Rs. 4.77 lakhs (against Rs. 3.10 lakhs) for depreciation, Rs 3.09 lakhs (against Rs. 60,000) for development rebate reserve, and Rs. 6.20 lakhs (against Rs. 4.0 lakhs) for taxation. With Rs. 17,798 brought forward from the previous year, the total available for distribution comes to Rs. 7.66 lakhs. Out of this, the directors have transferred Rs. 2 lakhs (against Rs. 90,792) to dividend equalisation reserve. A dividend of 20 percent, subject to deduction of tax, has been declared on equity shares, against 16 percent, taxable, in the previous year. The balance of Rs. 91,696 is carried forward to next year.

The directors state that substantial additions to fixed assets have been made during the year. These represent the cost of blow-room machines to replace those installed in 1939, a set of latest combing equipment with pre-comber drawing units, carding engines, cone-winder and other auxiliary machines. These, together with the gradual conversion of the spinning frames to the modern high-draft system, are expected to improve the quality of the Company's products.

The directors say in their report that the progressive improvement in yarn and cloth prices continued over the first six months of the year. But the fixing of revised prices under a system of voluntary price control by manufacturers resulted in a fall of the profit margins in relation to those realised during the first half of the year. The control regulations limiting the consumption of Indian cotton necessitated the use of a larger quantity of imported varieties. The quota entitlement for Indian cotton for Vasanta Mills was of a sizable proportion; this factor, the directors say, must have contributed substantially to better trading results. The prospects for the Company getting a larger allotment of Indian cotton for 1961 are bright in view of the encouraging reports on the Indian crop for the current year.

General reserve in Vasanta Mills' balance-sheet stands at Rs. 18 lakhs, against the equity capital of Rs. 21 lakhs. Dividend equalisation reserve is placed at Rs. 10 lakhs. The shares at their present market rate of Rs. 238 offer an yield of 8.3 percent.

PETROLEUM IN INDIA

THERE may be room for the prosecution of this enterprise in India, as a daily contemporary observes, in the one hundred and forty-two new blocks of bearing strata demarcated by the Geological Survey in the Yenangyat division of Upper Burma, but the fact that only three of these have been applied for goes to show that, so long as the Government insist on clogging all mining enterprise with the vexatious condition at present obtaining, capitalists will seek other channels for investment, for not only is the development of the country hereby retarded, but the revenue is considerably curtailed. There are hundreds of spots where flowing wells of this mineral can be struck, near to the coast and centres of distribution scattered about eastern India and N. Burma, between the meridians of 90° and parallels of 18° to 26° the limits of our boundaries. Here the vast subterranean reservoir of petroleum of the best quality can be tapped, but the throwing open of these would not suit the Government of India so those willing and able to exploit them have to be taken themselves to such places as the Gulf of Suez, North Borneo, and anywhere outside British territory, the rulers of which countries are benefited at our expense. No doubt the presence of half a dozen Rockefellers in the House of Commons would be highly unpalatable to the Secretary of State and the obstructionists of Cannon Row they would be regarded as so many Frankensteins, but surely the authorities cannot expect to go on for ever locking up the minerals of the country: it behoves the local Chambers of Commerce to enlist the influence of the powerful London Chamber in breaking through the dog in the manger policy pursued by the Indian Government for the past forty years. Had the Burma petroleum field been in the possession of America or one of our own Colonial Governments, India would long ago have been a great source of supply for the world's fuel of the future.

A Ditcher's Diary

FOR MANY IT MUST HAVE BEEN, AS IT WAS FOR ME, a very agreeable surprise that last week the Corporation of Calcutta managed to elect just one Mayor—instead of the two claiming election last year. All surprise ends there, however, and sorrow begins. What strikes me as extraordinary is that nobody even expects any change in the Corporation's ways. Civic cynicism in Calcutta has reached a point I would not have believed possible if I had not seen it. Year after year the ridiculously restricted electorate sends up a bunch of Councillors, who then elect Aldermen and a Mayor and a Deputy Mayor; and everything goes on as before, as though the whole thing were an act of nature about which man can do little. It is time to name parties, packdrill or no packdrill. Ever since 1923 the Congress has run the Corporation of Calcutta; and all responsibility for the disgrace rests squarely on that organisation. Mr. Atulya Ghosh is not a member of the Congress Municipal Association; he is its President. And it was left to him to nominate the Congress candidate for the Mayoralty. Under the present Municipal Act, the Government of West Bengal has extensive powers over the Corporation; and to *that extent Dr. B. C. Roy must accept a share of* the guilt. The way the electoral roll is manipulated is a scandal; and nobody does anything about it. What with the power shortage, those heaps of garbage near hospitals, scavengers on strike (or at work—no difference), I am getting increasingly pessimistic about the future of this city. What is being done about the water supply? About housing and slums? About lighting streets? About the hospitals, schools, colleges? No city has more problems than Calcutta; and in spite of frequent assurances from New Delhi, no city gets less attention from authority. Sometimes I suspect that somebody has simply written us off altogether. A great deal of the fault is West Bengal's own; for a small coterie of people, Congressmen, have entrenched themselves in power; and not even Dr. Roy can rise above Party considerations and challenge them. To this must be attributed the strange delay over the creation of the Metropolitan Board, which on present showing may never be born. What is the hope for a people whose leaders think that perpetuation of their power is more sacred than anything else? Such are the gloomy thoughts evoked by the advent of a new Mayor, when normally I suppose I would have been congratulating Messrs Majumder and Pal.

DESPITE SUCH PESSIMISM ABOUT THE FUTURE OF Calcutta, I am personally not finding life quite as intolerable this week as it was last, thanks partly to four nor'westers and the absence of power cuts for five whole days. But as the next set of impossible circumstances is only just round the corner—it is always so in this fair city—I have been giving some attention to the opinion of Professor John Cohen, of Manchester University, that one of the best ways of relieving one's feelings is by swearing. I would always defer to the views of anybody speaking on this subject from Manchester; after Calcutta, I know of few places more capable of evoking despair and exasperation. And I have already learned that the frequent exercise of a little well-chosen profanity is one of the few things which makes the navigating of Calcutta's traffic possible. Professor Cohen considers swearing can prove more effective than certain of Britain's National Health remedies. Anything as efficacious as this obviously has a future in Calcutta. Why not then make the encouragement of swearing a State responsibility? It could be taught in the schools and colleges: precious little else seems to be. But perhaps the Professor's advocacy of such *a palliative has more relevance for a European* public than an Indian one. I have myself always marvelled at the patience shown by the ordinary Indian in the face of the most appalling frustrations; and didn't Kipling say something about "The christian riles and the aryan smiles, and it weareth the christian down?" All peoples have their own ways of working off their frustrations; according to Arthur Koestler, the Japanese now simply drown theirs in an ocean of tranquillisers. I think I prefer swearing, although if Mr. Morarji Desai would consent to bring down the price of Scotch whisky it might not be necessary to resort to it quite so often. The best alternative of all, of course, would be to do something about the frustrations—avoid the power cuts, regulate the traffic, clean the streets, encourage the workers to work, the politicians to be honest and the traders not to be greedy. But the trouble is that this is just not the way things are done in Calcutta, it is easier to go on swearing.

IT IS ENTIRELY ERRONEOUS TO IMAGINE THAT Rabindranath Tagore, whose birth centenary is being celebrated throughout the world, had no connection at all with what is now Netaji Subhas Road. Writing without the book, I think Carr Tagores were among the first members of the Calcutta Chamber of Commerce; and, again writing without checking my memory, Prince Dwarkanath Tagore, the poet's grandfather, was, I think, one of the first directors of the Bengal Coal Company. Nilmoni Chakravarti, who is believed to have founded the fortune of the family, was a considerable business man with extensive dealings with the East India Company; and it was Dwarkanath's complaint that Devendranath, the poet's father, had been neglecting the family business. I have heard it said that the poet himself was shrewd yet humane as a zamindar. The point I am trying to make is that an interest in worldly affairs is by no means incompatible with the most soaring artistic imagination—as the Tagores gloriously proved in their own lives. Indeed, I would go farther and say that, without a sound economic base, the most luxuriant culture is bound to grow feeble and decay. There will be no dearth of interpretations of what Tagore really thought, what his philosophy was; and I am chary of adding to the verbiage consisting chiefly of clichés and platitudes. I neither make nor listen to speeches and rarely go to meetings and functions. But if I were to address a Bengali audience on Tagore, which of course I would not have the impertinence to do, my theme would be the business career of the Tagores. The poet himself tried his hand at it, as his son has recalled in his reminiscences. Those who know how businesslike his methods were in running his university, Visva-Bharati, are not surprised that it ran at a loss, but that its losses were not greater. (No decent university makes, or is expected to make, any money.) Let us praise by all means the poet's writings and paintings; but it is his disciplined yet joyful life that has as much to teach the present generation of Indians. A profoundly practical man, the poet not only had dreams but also the capacity to make them come true. I have a notion that this aspect of Rabindranath Tagore will receive far less emphasis from the organisers of current celebrations than it deserves; and the loss is theirs.

THE PROSPECTS OF THE *panchayati raj* HAVE NEVER struck me as being particularly bright, despite the glowing and over-enthusiastic accounts of them we hear occasionally from Government Ministers and even some newspapermen. But I never quite expected them to attract the censure of the International Labour Organisation, which I see is accusing India of violating the convention against forced labour because of the way these bodies are mobilising voluntary, free labour for village development work. On the face of it, the I.L.O. seems to me to be taking altogether too legalistic a view of the matter. It is not easy to persuade India's village people to give their labour freely even when it is for projects from which they benefit. There is too much inertia, the caste system is too rigid, and perhaps individualism is too strong. Moreover, they are no doubt far more aware than the Government appears to be in the case of the business and professional classes, that the best *way of encouraging adequate effort is to match it* with adequate remuneration. So it is possible that there has not been quite the degree of co-operation with the *panchayats* that one would expect considering the wholly admirable circumstances. Yet I am unable to understand how these village organisations can be using force in the manner and on the scale which the I.L.O. appears to suggest. The Soviet Union is now a member of this august organisation, and everybody knows that besides the huge forced-labour camps which exist in that country, the whole system is one of conscription because the Russian worker is deprived of the right enjoyed elsewhere to withhold his labour. But I cannot recollect any memorable occasion when the I.L.O. has demanded an impartial investigation into communist labour practices. Russia, of course, calls her slave establishments correctional labour camps and blandly explains the absence of strikes by claiming that Russian workers have nothing to strike about. But such evasion nowadays convinces nobody, certainly not a sophisticated body like the I.L.O. If a little persuasion is required to get some community work done in India, that seems to me quite excusable when compared with some of the things practised in other countries. If the I.L.O. is going to adopt too rigid a definition of forced labour, then even wives will soon be petitioning when asked to do those extra little jobs required by their over-preoccupied and harassed husbands. And as we all know, that would never do.

Magistrate: "What made you think the prisoner was intoxicated?"

Constable: "Well, your Worship, he dropped a penny in a letterbox at the end of Westminster Bridge, looked up at Big Ben and said: 'Terrible! I've gone up two stone'."

Mr. E. OHARA, *Manager.*

AUDITORS' REPORT

We have audited the above Balance Sheet of THE BANK OF TOKYO LTD., as at 31st December, 1960 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Bombay Branch audited under Section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisos to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227 (6) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;
(d) The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns ;
(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960 and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

INDIAN ALUMINIUM COMPANY, LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S REVIEW

The following is the text of the Speech delivered by the Chairman, Mr. K. C. Mahindra, at the Twenty-third Annual General Meeting held at Calcutta on Thursday, the 27th April, 1961 :

I have pleasure in welcoming you to our 23rd Annual General Meeting.

The Directors' Report submitted to you along with the audited accounts for the year 1960 provides information on the year's operations. I am happy to report that production and sales again reached new high levels in 1960. The steady progress which your company has been making over past years is reflected in the financial accounts which are before you now for your consideration.

During 1960 your company earned a net profit of Rs. 12 million as compared to Rs. 8 million in the previous year. A large part of this increase was due to the much smaller provision for development rebate in 1960. Nevertheless, you will agree that the financial results are gratifying. This has enabled your directors to recommend the payment of a higher dividend this year at Rs. 1.50 per ordinary share. Dividend on the preference shares has been recommended in accordance with the Preference Shares (Regulation of Dividends) Act 1960, and the company's Articles of Association. The Directors have proposed a transfer of Rs. 5 million to the General Reserve and a carry forward of Rs. 4.99 million under surplus account. You will no doubt appreciate that in a capital intensive industry like aluminium, it is prudent as well as necessary to plough back a portion of our surplus so as to meet the requirements of a growing industry like ours.

For the last few years, the corporate shareholders of this company have been enjoying—in respect of the ordinary shares issued in late 1956 and those issued upon conversion of Loan Stock since 1957—the benefits of Section 56A of the Indian Income Tax Act, that is, exemption from super tax on dividends. It now gives me considerable pleasure to announce that the benefits of Section 15C of the Indian Income Tax Act, which provides for five years' tax holiday for newly established industrial undertakings for which your new smelter at Hirakud qualifies, will be available to all shareholders both ordinary and preferred. For the year 1960, the Income Tax Officer has authorised your company not to deduct tax on 12% of dividends and we propose to act accordingly. The percentage of 12% has been fixed on a provisional basis and the shareholders will have to wait until the company's tax assessment for the year 1960 is completed before the full and final estimate of this benefit is obtained and on the basis of which tax relief, if any, may be claimed by the shareholders in their own assessments.

Transport Problem

Because of our plants being located in different parts of the country, a very serious problem which we have to face is that of transport. The uncertainty of wagon availability forces the company to increase its inventories thereby tying up extra capital and also compelling the company to utilise more costly road transport.

Coal is a commodity most seriously affected and it appears there is no remedy for the immediate future. The Railways claim that they are carrying all the traffic that they are supposed to according to the Second Plan estimates. Various remedial measures are being discussed by the Government especially for the high priority industries, e.g. steel, public utilities, etc. But for industries like aluminium, which enjoy no special priority, the prospect of improvement in transport bottlenecks do not appear to be hopeful. The company is pursuing this matter with the Government in the hope that some action may be taken to solve our difficulties in this regard.

Last year I spoke to you about the new excise duty levied on aluminium products. During the year 1960 we have faithfully collected Rs. 5.5 million as excise duty from our customers and paid this amount over to the Central Government. We are, however, worried about the way in which excise officials are interpreting the duty regulations. Excise duty is normally payable on shipments to customers, but not so in the case of aluminium. The officials have ruled that duty must be paid on all shipments of ingot from our smelters to our fabricating plants. Thus, excise duty must be paid on all aluminium in the pipeline and in our fabricating plants. From our annual statements you will see that we have so far paid no less than Rupees one million on this account. The requirements of working capital for this capital intensive industry are thereby further increased, and so also is the debit for interest. In addition, duty paid on ingot which is ultimately wasted in fabricating plants as 'melt loss' is never recovered. Thus you get an amazing result : the producer of aluminium is paying excise duty on something which is non-existent and can be shipped to nobody.

Unwarranted Expenses

In our opinion the above difficulty and the unwarranted expenses arising therefrom, can be easily and sensibly eliminated by allowing us to move ingot and fabricate it 'in bond'. Such a procedure is not very uncommon, but so far it has not been possible to persuade the excise officials to see our point of view. Our losses on this score will multiply as our current expansion projects are put into commission, and it is desirable that the Central Board of Revenue take steps to remove this unfair burden at an early date.

Under the 1961-62 budget proposals the Government has extended the scope of excise duty to include aluminium pipes and tubes. Further burdens have been imposed on your industry by way of increased customs duty on imported machinery and reduction of tax concession in the form of development rebate. These proposals will have the effect of further increasing our cash requirements.

As to the company's expansion programme, satisfactory progress is being made at all locations. Barring any untoward happening, it is expected that the second extrusion press at Alupuram and the additional potline at Hirakud will be ready to go into operation before the end of the year. Expanded facilities at Belur and Muri are likely to be ready by the middle of next year. Your directors are anxious that your company continue to play its leading part in the development of aluminium industry in India and with this in view proposals for further expansion of the company's activities are under constant review.

1960 has been a good year for India and a particularly eventful one for the aluminium industry. The last 12 months have witnessed a more than ordinary increase in the tempo of economic activity. A high level of industrial output especially in steel, buoyant central revenues, a slight improvement in export earnings despite initial setbacks, are some of the significant gains recorded. The year ended on an optimistic note and the outlook for 1961 is heartening.

International Groups

Last year from this Forum I extended a hand of welcome and cooperation to two new entrants in the aluminium industry. I did not know then, nor did I anticipate, the wild scramble which has since ensued amongst the top flight producers of the world to stake a claim in the developing market in India. It does appear strange and perhaps ironic to me that international groups would take a leaf out of the Indian book of experience—a book which ruefully reveals our short horizons, our quest for the quick rupee, our inability to learn the long and tedious track to true industrialisation. There may have been justification 20 years ago for such mental attitudes, in as much as the protectorate or colonial era in India deprived the nationals of the country of learning by experience the vicissitudes of industrialisation. With the withdrawal of the British the hitherto financial and the trading classes in India plunged into the industrial vortex hurry scurry in many directions, but still with an eye for a quick rupee. They did not stop to take a long term view ; they did not stay to learn from the industrial revolution in Europe of the mid-19th century or even from the later hot-house developments in U.S.S.R. Last quinquennium has however showed a welcome change and long term investments have become fashionable. It is therefore doubly strange that in the specialist field in which your company has pioneered the way, there should emerge a movement reminiscent of the old, old colonial days and ways. Crude and half-baked schemes based on little or no field investigations or market surveys, and not even presuming to be economically viable, are presented to the public in India, endorsed by reputed concerns of international renown.

The deposits of bauxite ore on which the schemes are based have not been throughly field-tested for quality or reserves. Availability of firm and continuous power nor the ultimate costs thereof have been assured. Costs of production, in some cases based on questionable exchanges of metal for raw materials and/or equipment, have not been spelt out and are bound to be unnecessarily high. We in India should look at these proposed new schemes carefully before supporting them, and we should look at them through the factual eyes of experience and viability and not be carried away by mere enthusiasm for expansion.

Glut of Primary Metal

But why this sudden display of interest in the Indian markets ? We know that aluminium industry in the West and in North America has had a bad two years ; there is a glut of primary metal and smelters have been working on restricted production. In Europe where smelter operations do not match the requirements of the fabrication units, conditions are not so depressing, and North American groups have moved *en masse* into the European markets. India is slowly emerging as perhaps a desirable non-aligned area and may be, quick rupees can be made. It surprises me, however, that when our own planning techniques are being remodelled and reshaped in the light of experience over a decade, a throw-back emerges as a gift from the West. Alignments of resources with projections of demand become awry and we have begun to wonder if there has not been gross under-estimation of what country has in physical resources for aluminium development and what the country can consume. Our friends from the West did not perhaps reckon with the one obvious consequence of such a presentation, namely, the overall socialistic thinking of the planners. If the development of a basic commodity like aluminium is such a gold mine, Government would not like to be left out. Offer of plant and techniques from a communist country has provided the opportunity for a Minister to say that a new aluminium unit will be set up in the public sector !—a consequence which, I am sure, will be irksome to many of the new aspirants.

Rational misjudgements do occur in every large effort but where there are scarcities of resources and of technical knowledge, where the purchasing power of the market is phenomenally low and therefore will take time for the upward geometrical surge, there is critical need for prolonged and deep look into the purposes and end products of investments and of potential investors. Aluminium industry is voracious in its appetite for capital. To produce a ton of primary aluminium one needs an investment in capital equipment and facilities almost ten times what it would need to produce a ton of steel. Let us look at the picture-projections for the next 5 years.

The demand for all non-ferrous metals during the Third Plan period is expected to go up and since aluminium is the only non-ferrous metal which can be indigenously produced, in adequate quantities, considerable thought is being given to its development. The draft outline of the Plan has set the target at 87,500 tons by 1965/66. Out of this 52,500 tons is already in production or under construction while work on the balance of 35,000 tons is expected to start shortly. As against this the country is currently consuming around 44,000 tons of metal.

Production Target for Aluminium

Recently, however, there has been talk of raising the target for aluminium production to 150,000 tons, and if I am to add up the pending proposals supply target would be nearer 200,000 tons—a five times jump over current consumption within 5 years. That exports will take care of oversupply is a mirage, for India cannot hope to compete in the world market on level terms with strong international groups. We know that with our scattered deposits of ore, expensive power and comparably more expensive costs of installation, India will remain a high cost producer. Oversupply has its own quick nemesis and while I favour planning on an ambitious scale, I would nevertheless counsel prudence in weighing the adverse effects which might result from commitments which are premature for the stage of development which the industry has reached in this country. There is no surer way to discourage investment than to encourage over-optimistic growth and invite idle capacity—a fact that has been amply demonstrated even in highly developed economies. Moreover, India is currently power hungry, and its bauxite resources, though apparently considerable, are far from being proven in quantity and quality sufficient to sustain a prodigal rate of growth. This economic supply of these major raw materials is vitally important to the health of the aluminium industry, and, in my view, the country cannot afford to embark too hastily or too lavishly upon new and grandiose schemes, without the most careful thought for the prudent utilisation of these resources.

A noteworthy development, which also suggests the wisdom of temperate planning, and which is of great potential importance to the nascent industry of this country, is the announcement made by our Canadian associates, Aluminium Limited, that a basically new process—the first major technological change in the method of manufacturing aluminium—is about to be put into semi-commercial operation in Canada. The process, if fully successful, will not appreciably reduce the large power requirements of the existing process, or its dependence upon bauxite, but it does give promise of considerable savings in other elements of production cost, and particularly of substantial reduction in capital costs. The new experimental plant will be completed early in 1962, with a production capacity of six to eight thousand tons of aluminium per year. It is expected that operation on this scale for a couple of years or so will be required to determine whether the estimated savings in capital and operating costs can be realised in large scale operations.

Risks in Over-expansion

In the light of these impressive possibilities, which we are watching with interest and care, the risks inherent in over-expansion take even clearer form. However, there are many factors to be considered in the formulation of future plans, and all are receiving the constant and critical attention of your management. We do not intend to keep static, but neither will we lose touch with realities and sound business principles, and I express the hope that Government, in its planning, will continue to maintain a similar outlook.

We have lost during the year the able direction of Mr. Vance Echols, who retired from India for family reasons. His contribution to the Company's progress was dynamic and we were sorry to lose his services. Pending the appointment of a new Managing Director the Board entrusted the charge to Dr. Horwood who has been with the Company for some years, but unfortunately is also due to leave shortly. Your Board realises that quick changes in top management are not healthy, but in specialised fields where talent is very scarce it is inevitable that movement of skilled personnel must go on until we are able to develop such resources indigenously and in plenty.

Once again I am sure that shareholders would wish me to convey their thanks to the Company's able management team and to workers and staff who have served the Company well during the past year.

N.B.—This does not purport to be a record of the proceeding of the Annual General Meeting.

KILLICK INDUSTRIES LIMITED

CHAIRMAN, MR. A. N. HAKSAR'S REVIEW

Addressing shareholders at the thirteenth Annual General Meeting of the Killick Industries Ltd., held in Bombay on 28th April, 1961, the Chairman, Mr. A. N. Haksar said:

Gentlemen,

The Report and Accounts for the year are not as satisfactory as I would have liked them to be. Although I have no wish to make any excuses, I would like the shareholders to appreciate that during the year under review, we were subjected to certain strains and stresses and were forced to incur certain expenditure which I sincerely hope is not of a recurring nature. Overall, I can hope that 1961 will show a modest improvement over the current year. The Managing Agency side of the business will, I think, definitely show better results. I cannot be so sanguine regarding our subsidiaries, Killick, Nixon & Co., Ltd. and Stamco Industries Ltd., but I believe that these Companies will eventually become useful earning members of the Group though it will take some time.

The Kohinoor Mills has, one can hope, turned the corner New machinery has been installed and improvements in working are already evident. The results for 1960 are substantially better than those of 1959 and would have been better still if large amounts had not been paid out in retrenchment and other compensation.

Expansion in Power Demand

The Electricity Companies continue to enlarge their service to their respective communities. The enormous expansion in demand for power for Industry and homes in the Bombay Suburban area has created difficulties over the procurement of materials. In turn this has meant that applications for power are running ahead of services connected. The Surat Electricity Co., in common with the rest of the Licensees in South Gujarat, has been subject to control on new connections and its diesel plant is being called upon to bear an increasing burden to sustain the interests of the South Gujarat Grid. The Ahmedabad station is more than fully loaded and in fact steps are being taken by the Government to effect measures to bring about some form of rationing of power. This is most unfortunate but absolutely necessary. The silver lining in the cloud, however, is that 60 MW of new plant is scheduled to be brought into commission—30 MW by March 1962 and the balance one year thereafter.

The Shivrajpur Syndicate Ltd. increased its sales of Manganese Ore in the last year but, I am afraid, this increase was mainly due to the fact that during the year Manganese Ore exports were permitted against Barter transactions by the Government. Otherwise, Indian Manganese Ore continues to be uncompetitive, generally speaking, in the International market. It is well known that many new mines have been developed in recent years in several countries such as Brazil, South and West Africa, etc. During the same period, F.A.S. costs of Indian Ore suffered unavoidable increases due to additional imports such as increased royalty rates and Railway freights. The latter difficulty remains unresolved even today and unless adequate relief is granted soon, I cannot visualise an encouraging future for Indian Manganese Ore exports.

Shortage of Railway Wagon

The Hingir-Rampur Coal Co.'s position has shown considerable improvement although, in common with other collieries, it is faced with a serious shortage of railway wagons for the movement of coal supplies, and recently the stocks have reached an unprecedented high level with the result that production of coal has had to be curtailed.

The Steel File Factory at the Chandivli Industrial Estate has been suffering from labour problems. It is to be hoped that the Union will show a more positive spirit of co-operation to enable this Factory to improve its contribution to your Company's profits. There is no doubt in my mind that given stable conditions and trouble free working, this factory can make considerable profits.

Turning to the affairs of the Company's Subsidiaries, you will notice that the working results of Killick, Nixon & Co. Ltd., show a considerable improvement compared to the previous year. From a loss of Rs. 2 lakhs for the year 1958/59, the Company has shown a reasonable profit of Rs. 1½ lakhs for the year 1959/60. There have been some setbacks during the current year, but every effort is being made to rectify the position.

Stamco Industries continue to show a loss, but I believe that the measures now being undertaken will reverse this tendency. I am very pleased to report that consequent to the visit to the Stamco factory by two Directors of Caribonum Ltd., Leyton, U.K., which is one of the major manufacturers and suppliers of carbon paper and stationery products throughout many markets of the world, that Company has agreed to provide financial and technical assistance to develop our production and sales. While no spectacular results should be expected in the near future, I believe that this Company will eventually take its rightful place in the industry in India today.

New Subsidiary

Although our new Subsidiary, A. R. Haseler Ltd., shows a loss up to 30th September, 1960, the date of acquisition by Killick Industries Ltd., the working since that date has shown an improvement, which I hope will continue.

We expect to receive a handsome return during the current year on our investment in Snowcem India Ltd., which Company is now developing a considerable demand for its products and hopes to continue to increase its range of cement speciality products.

What of the future? In the immediate years ahead, your Company will continue to have great responsibilities as Managing Agents of large-scale industrial undertakings. I have always believed and continue to believe that the good Managing Agents serve a most useful function and I trust that Goevrnment will continue to recognise their usefulness. Nevertheless, in the circumstances obtaining today, I think you will agree that it is only prudent that your Company takes steps to broaden the range of its activities by investing in industrial undertakings either directly or through subsidiary Companies. Although at the moment the industrial potential of Killick Industries Limited and the Subsidiary Companies is not all that I could wish, I believe that this diversity of business will in due course not only contribute to the country's expanding economy but will directly benefit you all as shareholders of this Company.

THE DUNLOP RUBBER CO. (INDIA) LIMITED

MANAGING DIRECTOR, MR. JOHN LUCKHAM'S REVIEW

The Thirty-fifth Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on the 27th April, 1961. Mr. John Luckham, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts have been in your hands for some time, and with your permission I will take them as read.

The Year's Trading

Our Ambattur plant reached full production during the year and even with higher output from Sahaganj, we were still unable to meet the demand for our products. With the increasing demands of Government, vehicle manufacturers and transport operators, a difficult situation arose in the Replacement market for truck and bus tyres. In consultation with the Government of India we took a leading part in moves by the Tyre Industry to encourage the formation of Tyre Dealers' Associations to ensure equitable distribution of the sizes in short supply at list prices, and I am glad to say that the majority of these Associations have functioned efficiently and to the satisfaction of both Government and truck operators. The manner in which this task was carried out reflects great credit on both tyre dealers and consumers.

Our tyres continued to find ready acceptance with consumers and we were able to make increased supplies of our Highway truck and bus tyres, which proved extremely popular. Our car tyre remains the first choice of the discriminating motorist.

There was a further increase in bicycle production during 1960 and it became difficult to meet all the demands made on us for cycle tyres and rims. However, I am glad to say that we were able to step up our exports of cycle tyres to South East Asian markets and thus make a contribution to Government's export drive.

Sales of Industrial Rubber Products increased partly as a result of additional output from the Vee Belt expansion, mentioned in my speech last year. The equipment for an expansion of Conveyor Belting manufacture has been installed and trial production is in progress. With the increasing demand for this product during the Third Five Year Plan, we are confident of utilising this capacity in full.

Dunlopillo sales showed a further gain but despite the substantially higher output achieved through increased productivity, we were still unable to meet the demand. The requirements of the car manufacturers show an upward trend and the fulfilment of the targets of the Third Five Year Plan for vehicle production will necessitate an increase in our manufacturing capacity.

Expansion Plans

You will see from the above that there is still a big demand for many of the Company's products which cannot be met, and the Directors have in hand a further major expansion of the Company's business, particularly in respect of our factory at Ambattur. This will require a substantial amount of foreign exchange and in order to arrange this a short visit to the U.K. was recently undertaken by myself and your Finance Director. I am pleased to say that, subject to Government approval, we are able to report that Dunlop Rubber Company Limited, London, are prepared to put the necessary sterling at our disposal initially in the form of a loan to be converted to equity capital at a later date. Negotiations and discussions with Government are now in progress but the Directors are not yet in a position to put forward their recommendations regarding capital reorganisation.

Raw Materials

The consumption of natural rubber in India has been rising at a faster rate than production, and we are therefore increasingly dependent on imports. However, there are signs that long-term steps are being taken to improve production. Moreover the opening of the Government sponsored synthetic rubber factory in 1962 and the development of plans to produce locally other important raw materials such as rayon, rim strip, carbon black and certain rubber chemicals will greatly reduce the industry's import requirements, and so save foreign exchange.

Finance Bill, 1961

The recent Budget proposals did not change the rate of company taxation but they did enhance the amount of tax payable by companies through reducing the allowance in respect of Development Rebate from 25% to 20%. However, the increase in certain customs duties will have an adverse effect on costs whilst the relief in respect of excise duty on cycle rims will not benefit our Company. The introduction of a slab system for charging excise on cycle rims on the same principle as cycle tyres, would have been more equitable.

The reduction of the tax on bonus issues from 30% to 12½% is a step in the right direction but we are of the opinion that this tax should not be applied to Reserves created on account of Share Premiums.

Profit and Loss Account

The profit for the year after providing for depreciation, interest and taxation was Rs. 1,24,56,228 compared with Rs. 1,18,04,533 for 1959. As you will have seen from the Directors' Report, the profit after tax as a percentage to sales declined from 4.56% last year to 4.08%. This was almost entirely due to the high cost during 1960 of imported natural rubber, which we were not able to recover fully in our selling prices.

Excise duty is almost Rs. 1,72,00,000 higher than 1959 due to the higher volume of sales on the one hand, and the new levy of excise duty on cycle rims which was effective from 1st March, 1960, which accounted for approximately Rs. 59,00,000 of the increase. It is relevant at this stage to mention that the high excise duties leviable on our products absorb a considerable amount of working capital which earns nothing for the Company. This is a matter which is constantly under consideration by your Directors, and was represented to the Reorganisation Committee for Central Excise Duty when they visited Sahaganj recently.

The Tyre industry has borne a major burden of excise duty for many years and now the net has spread from the finished article to include certain raw materials, and has also been imposed on certain process materials inside the factories. The administrative difficulties and additional work which these latter extensions involve are considerable.

The amount of Bank Overdraft Interest this year has also substantially increased due to the higher working capital requirements arising from our increased trading activities and the increase in the rate of interest from 5½% to 6% from 1st October, 1960.

As you will have already observed, a sum of Rs. 17,00,000 has been transferred to Development Rebate Reserve and a sum of Rs. 37,50,000 is appropriated to General Reserve.

The Directors are recommending an ordinary dividend for 1960 at the rate of 21.5% subject to tax, which is the same rate as last year.

Balance Sheet

The net increase in Fixed Assets during the year was approximately Rs. 22,00,000, principally on account of Plant and Machinery. Stock Inventories increased by Rs. 84,00,000 on account of the higher level of output and sales, coupled with the increased cost of raw materials previously mentioned.

Investments have risen by approximately Rs. 2,00,000 due to increased deposits with the Madras Electricity System and the Railways.

Sundry Debtors have increased in line with the larger volume of sales, as have also the current balances with the Customs, Railways and other authorities.

On the liabilities side, the larger borrowings through bank overdrafts, usance promissory notes and acceptances have been necessary to finance the larger working capital required for the greater volume of output from both our factories.

Indianisation and Management Training

In pursuance of our policy of progressive Indianisation of the Management cadre we continue to pay special attention to training which we regard as being of vital importance. Our staff must be kept fully conversant with the latest techniques and methods of manufacture and with future technical and production developments in the Dunlop Group. We are fortunate in being able to send selected personnel to our associated factories in the United Kingdom, Germany and France, and in recent months eleven senior employees from our factories have been overseas for this purpose. It is hoped that foreign exchange restrictions will not prevent us from continuing this policy.

There are also growing facilities for normal management training within this country and in particular I would like to express our appreciation for the good work which has been done by the Administrative Staff College at Hyderabad. We are taking full advantage of the opportunities which that institution offers and several of our Managers have already completed a course there.

Employee Relations

Last year I mentioned in my review the labour unrest early in 1960 at the Sahaganj Factory. Since then I can report that labour relations there have been satisfactory. Established negotiating procedures have been followed, go-slow tactics have been discontinued, and discussions between Management and workers have been fruitful, particularly in respect of increased productivity, with greater reward to our workers. I am hopeful that our relationships with our employees in both factories will continue to be good, and that our future problems can be satisfactorily solved in the constitutional framework that exists.

We have worked towards building up a team spirit throughout our factory organisations, which will stand us in good stead in the future. Working and living conditions for our employees are regularly considered, and improvements have been made in welfare facilities and factory working conditions.

I believe there is a growing realisation that the Company's achievements are attributable to everyone concerned—shareholders, management and employees, whether in the factory or the office. All are interdependent and the success and welfare of the Company relies on the contribution each one makes.

I am sure that you will wish to join the Directors in extending their sincere thanks to all who have continued to give staunch and loyal service.

THE BRITISH INDIA CORPORATION LIMITED

CHAIRMAN, MR. H. S. CHATURVEDI'S REVIEW

Address by Mr. H. S. Chaturvedi, Chairman and Managing Director, to the Shareholders of the British India Corporation Limited, at the Forty-first Annual General Meeting of the Corporation held in Kanpur on Wednesday, 26th April, 1961:

Gentlemen,

It is my happy privilege to welcome you to the Corporation's Forty-first Annual General Meeting.

The Audited Accounts and the Directors' Report for the year ended 31st December, 1960, have been duly issued to the shareholders, and with your permission, I shall take them as read.

In my address to shareholders last year, I referred to the turn for the better in the Corporation's affairs after a period of great anxiety, and to the improved trading results for 1959. It gives me great pleasure to be able to report steady progress and further improvement in 1960. The net profit before taxation during the year amounted to Rs. 90,93,242/- as compared with Rs. 63,09,042/- in 1959 showing an increase of nearly Rs. 28 lacs. The Corporation's recovery is further reflected in the reduction of the bank overdraft by over a crore of rupees as compared with last year.

On the side of dividends, you will notice from the Directors' Report that all arrears on Preference Shares will now be cleared, and that it has at last been possible to recommend the declaration of a dividend on the Ordinary Shares. In considering the dividend policy, your Directors are of the view that in order to strengthen and sustain the Corporation's financial position in the interest of future development, it is essential to plough back into the business a reasonable part of the profits. Accordingly, a sum of approximately Rs. 31 lacs has been retained in the business out of the available trading surplus. In addition, a sum of Rs. 10.20 lacs, that being the net surplus from the sale of fixed assets, has been transferred to Capital Reserve and Rs. 1.67 lacs, that being the profit on the realisation of investments, has been transferred to Investment Reserve.

Appointment as Secretaries and Treasurers

The appointment of the Corporation as Secretaries and Treasurers for five years of the Elgin Mills Co., Ltd., Cawnpore Textiles Ltd., Cawnpore Sugar Works Ltd., Champarun Sugar Co., Ltd., Saran Engineering Co., Ltd., and Brushware Ltd., all of which were formerly under the Managing Agency of Begg, Sutherland & Co., Ltd., is a significant landmark in the history of the Corporation. Begg Sutherlands, which, since 1946, has been a wholly-owned subsidiary of the Corporation, will, I hope, soon be merged with the parent company. The appointment of the B. I. C. as Secretaries and Treasurers of the above six Companies, will ensure continuity of sound management and will, I sincerely hope, be in the best interests of those Companies.

I now propose to comment briefly on certain aspects of the working and activities of the Corporation's woollen textile, leather, cotton textile, and sugar units.

Woollen Branches

The Lalimli and Dhariwal Mills have on the whole done well in maintaining satisfactory production. These units, which were the first of their kind to be established in India have achieved a unique reputation over the years for the superior quality of their products. It has to be borne in mind, however, that the manufacture of specialized lines, for which there is a great demand, requires high grades of imported wool. In order to preserve their good reputation and to maintain production at two shift level, regular supplies of Merino and other high grade wools have to be assured. To this end the Corporation seeks the sympathetic and timely assistance of the Government in granting adequate import licences for raw materials essential for the production of specialized lines.

In my address last year I referred to the urgency of rehabilitating the plant and machinery of our Woollen Branches. Most of the Machinery is about fifty years old, and some of it dates back to 1880. A stage has been reached when productivity is bound to suffer if steps are not taken to re-habilitate the present plant, much of which is now obsolete and uneconomic. To earn foreign exchange, which is so vital to the future of the country, we must first improve our competitive power in the production of high quality goods at reasonable prices. This will to a great extent depend on our ability to modernise the existing plant.

Our technicians have prepared a blue-print of rehabilitation programmes with the aid of foreign experts, and we shall soon be approaching the Government for import licences to implement the first part of the scheme.

Leather Branches

The Corporation's Leather Branches, as you will observe from the Directors' Report, have in 1960 made a small profit for the first time since 1953. This sign of slow but sure recovery from a very serious situation is naturally gratifying to us. The incidence of excise duty on leather footwear, and the shortage of good quality hides are, however, factors which adversely affect our leather industry.

The value of exports from the Leather Branches in 1959 amounted to Rs. 44 lacs. In 1960 the value had increased to Rs. 55 lacs. I am also glad to report that recently the Cooper Allen Branch has obtained a substantial order for the supply of boots to the National Cadet Corps.

Cotton Textile Units

The Corporation's two subsidiaries, Elgin Mills Co., Ltd., and Cawnpore Textiles, Ltd., have shown very satisfactory results. Trading conditions for the cotton textile industry were, on the whole, favourable during the year under review. The satisfactory performance of the mills was, however, due mainly to the maximum utilisation of productive capacity, and concentration on new lines, which have increased the range of their products.

The export contribution of the Cotton Textile units has been outstanding, and export orders valued at approximately two crores of rupees were executed during the year.

Though cotton textile prospects are on the whole good, the recent Budget proposals in the shape of additional excise duty and other duties on dyes, chemicals, packing materials and yarn for manufacture of cloth will have the effect of increasing production costs of cotton cloth.

Sugar Units

The six Sugar Factories in the Group achieved improved working results during the season 1959/60. Due to a substantial increase in the production of sugar and decline in internal consumption resulting in the heavy accumulation of sugar stocks, the Sugar Industry is however, passing through a critical phase. The position is such that the sugar factories in the Group are finding it difficult to pay for sugarcane and also to meet the governmental dues in the form of purchase tax and excise duty. We now depend upon Government to take effective action to overcome this crisis in the Sugar Industry, which is particularly serious in U.P. and Bihar, where the Group's factories are situated.

Labour

I am glad to report that relations with workers have been, on the whole, reasonably satisfactory. Far be it for me to suggest that there have been no differences. They do arise from time to time, and we have endeavoured to approach their problems in a spirit of goodwill. The Corporation maintains three Settlements for our workmen, the running costs of which are about Rs. 3½ lacs annually. Besides housing at nominal rates, the amenities provided include free dispensaries, libraries, play-grounds, schools, and free educational facilities for workmen and their families. To maintain our good relations, your Directors have decided to make an ex-gratia payment of two annas in the rupee to all workers on their basic earnings in 1960.

General

The year 1960 may well be reckoned as a year of consolidation. We are now in a position to launch a programme of rehabilitation and modernization, without which we cannot prosper in this age of growing competition. The year 1960 was encouraging in the sense that it was a year of steady progress on all fronts. For this, credit goes to a great extent to our workmen and employees in all grades, who have by their loyal services contributed to the prosperity of the B. I C. as a whole. I thank all of them sincerely. It is in a spirit of sober confidence that we can now face the future.

In the end I must thank my worthy co-Directors who have sustained me with excellent advice and co-operation.

It is now my pleasure to move that the Directors' Report be adopted and that the Accounts for the year 1960 be passed, but before this Resolution is seconded, I shall answer to the best of my ability any questions which shareholders may like to ask on the Directors' Report and Accounts now before you.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

Money

THE CALCUTTA MONEY MARKET

EXCHANGE BILLS REMAIN SCARCE

Wednesday, 3rd May.

ONCE again there has been very little change in advances outstanding in the Calcutta money market during the past week. There is now a distinct sign that the busy season is coming to a close, and that most sources of demand, with the possible exception of sugar and the non-seasonal iron and steel and engineering industries, will soon reduce their offtake. Demand from the jute mills has shown little change, as has that on account of foodgrains storage. Cotton mills have slightly increased their offtake, but there has been a slight reduction in demand from the sugar industry. The interbank market continues to be somewhat easier and the call rate is moving between 4½ percent and 4¾ percent.

The exchange market has been particularly dull, with very few bills of any kind in evidence. Remittance demand has been fair to keen. In the London money market, the pound showed a slightly improved tendency earlier in the week, but this proved short-lived and weakness developed later. At the close there were only small variations against most currencies, but distinct losses against the U.S. and Canadian dollars and the deutschemark.

BULLION WAS QUIETLY STEADY IN CALCUTTA during the past week. Reports of seizures of contraband gold subdued sentiment. The price of gold was quoted at Rs. 144.25.

Silver was lower on profit-taking and the price declined to Rs. 238.75. The price was quoted at 80d in London and at 91.375 cents in New York.

THERE WERE DECLINES OF Rs. 75.22 CRORES TO Rs. 1,982.43 crores in active notes and of Rs. 14.05 crores to Rs. 2,014.98 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 28th April, 1961. The currency contraction was adjusted by reducing foreign securities and rupee securities of the paper currency reserve. The former was cut by Rs. 5 crores to Rs. 113.01 crores and the latter was reduced by Rs. 10.08 crores to Rs. 1,661.98 crores. These securities were obviously transferred from the Issue Department to the Banking Department in which balances held abroad declined by Rs. 47 lakhs to Rs. 10.32 crores and investments rose by Rs. 20.67 crores to Rs. 172.91 crores. Deposits of the Government of India dropped by Rs. 12.28 crores to Rs. 51.63 crores, but other Government accounts rose by Rs. 14.01 crores to Rs. 18.31 crores. Other loans and advances fell from Rs. 126.27 crores to Rs. 125.47 crores, of which advances to scheduled banks against usance bills amounted to Rs. 21.09 crores (Rs. 25.81 crores). Ways and means advances stood at Rs. 84 crores, against Rs. 93.45 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 21st April, 1961, shows a drop of Rs. 9.84 crores to Rs. 550.98 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 20.67 crores and Rs. 5 lakhs to Rs. 216.11 crores and Rs. 9.59 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 34 lakhs to Rs. 280.55 crores. Cash and balances are, in consequence, shown at Rs. 33.38 crores or Rs. 8.73 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 21st April, 1961, shows Demand and Time liabilities at Rs. 852.49 crores (Rs. 24.57 crores on account of borrowings from banks) and Rs. 1,091.79 crores (Rs. 12.40 crores), compared with Rs. 846.93 crores (Rs. 0.56 crores) and Rs. 1,095.94 crores (Rs. 12.75 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 38 lakhs and Rs. 5.40 crores to Rs. 48.20 crores and Rs. 80.28 crores. There is a drop of Rs. 22.05 crores to Rs. 538.36 crores in investments. Advances and bills discounted at Rs. 1,311.29 crores show a fall of Rs. 8.67 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.6 percent and 67.4 percent, against 6.3 percent and 67.9 percent.

TREASURY BILL MATURITIES

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant, from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 million tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

Stocks and Shares

BRIGHTER CONDITIONS FOLLOW EARLIER SHAKE-OUT

GOOD TURNOVER IN SELECTED SPECULATIVES

Wednesday Evening.

THE Calcutta stock market put on a brighter appearance this week, but business has been mainly confined to a few selected scrip. The fact that attention has been concentrated on Indian *Iron and Indian Copper shares, seems to indicate* that the improvement is due more to speculative support than investment buying. The earlier shake-out probably helped to improve the technical position to a great extent. Sentiment has been helped by a number of favourable developments. Steel shares forged ahead on reports of institutional *support.* A New Delhi Press report that the Tariff Commission will take into account the interest and repayment obligations on the steel companies' loans when fixing the retention prices, is being interpreted bullishly.

The price of Indian Iron shares closed at *Rs. 27 40 after touching a high of Rs. 27.72. The* reaction is due to disappointing production and despatch figures for April. The output of pig iron declined from 106,122 tons in March to 99,381 tons in April and that of steel ingots from 82,583 tons to 69,710 tons. In saleable steel, semis have fallen from 19,469 tons to 10,898 tons and finished from 61,321 tons to 40,246 tons. Despatches declined from 95,564 tons to 53,283 tons. The decline is presumably due to longer holidays in April.

The grant of substantial loans to India by the U. K. Government appears to have reinforced confidence concerning foreign aid. The U. K. loan will no doubt be of great help in tiding over the present foreign exchange difficulties. It is also expected that at the next meeting of the "Aid India Club," due to be held at the end of May, the consortium countries will give the necessary foreign financial assistance which India requires for the third five year plan. Although money conditions have become easier, it is doubtful whether the stock market will benefit from the flow of bank credit. In fact, substantial funds have been tied up in new share issues. The Goodyear India and the Madras Rubber Factory issues have been substantially over-subscribed. It is thought that unless these funds return to the market, the upward trend may have difficulty in acquiring further momentum. As soon as these funds are returned, the trend could easily move upwards in view of the excellent corporate working.

The prices of selected coal shares have gained further ground on hopes of higher output, especially of good grades. The decision to move the commodity by coastal traffic in larger quantities, is expected to relieve transport shortages. Bengal, Burrakur, Amalgamated, New Beerbhoom and East Indian have been supported.

The power shortage has subdued sentiment in engineering shares, but Jessop have recovered on replacement buying. Britannia Engineering have benefited from a report that wagon production has started.

Sellers predominated in jute shares on fears that at current prices of fibre and jute goods, the mills cannot make any profit. The absence of foreign enquiry for gunnies is causing a great deal of concern. Birla Jute has decided to issue rights ordinary shares in the ratio of one new share for every two held, at a premium of Rs. 6 a share. It has also decided to issue bonus shares, by capitalising reserves in the proportion of one free *scrip for every four held. The scrip have never*theless slipped back due to the fact that the price had risen earlier in anticipation of these new share issues. New Central have met with scattered support on a report that the Company's chemical project has begun producing.

There has been a smart rise in Indian Copper shares on prospects of a higher dividend. As far as a further capital issue is concerned, the hope is still premature because the management, it is reliably learnt, does not favour such an issue at the present stage. Dunlop Rubber have been steady on prospects of expansion as outlined by *the chairman of the Company in his address at the* annual general meeting held in Calcutta last week. Indian Aluminium have found it difficult to go ahead on fears of excessive supplies. But the prospect for the scrip is no doubt encouraging in view of the expansion which has taken place. Indian Cables and Britannia Biscuits have been bought on hopes of bonus share issues. Hindustan Motors are steady on reports of good working, but Rohtas are sluggish, although a big parcel is believed to have changed hands. Rallis have re*covered* on replacement buying. British Paints are attracting attention at the present low price. Isaac Holdens have been fancied on good working re*ports*, but Union Carbide lack interest. British India Corporation have improved by paying an ordinary dividend after an interval of three years. Indo-Burma Petroleum are firm on paying a higher final ordinary dividend.

Paper shares are quiet due to the uncertain outlook following cuts in prices of the commodity at the beginning of 1960. Orient Paper have retreated on the decision to issue rights ordinary shares in the proportion of three new shares for every ten held at a heavy premium of Rs. 12 a share.

The support for cotton mill shares has been *maintained on reports of good cloth offtake, com*bined with excellent corporate news. Dunbar Mill has decided to issue ordinary rights shares at par in the ratio of one new share for every five held. It has also doubled the ordinary dividend to 20 percent, taxable. The Bowreah Cotton Mills Co. has proposed to subdivide its ordinary shares of Rs. 100 each into ordinary shares of Rs. 10 each. It has also paid an ordinary dividend of 10 percent, taxable, after an interval of many years.

The prices of selected Assam and Dooars gardens have become steadier at lower levels on the news that the regular export auctions for the new season's tea will begin on 15th May, which is nearly a month earlier than in the 1960-61 season. Interest is being taken in Betjan, Rajgarh, Bishnauth, Hasimara and Hantapara.

Banking shares have attracted more attention on prospects of improved working. Enquiry has broadened in selected preference shares.

Business has been negligible in Government securities. This is not surprising in view of the

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 60/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the many services the Bank provides to its clients and the general public. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-58-15

fact that the Central Government may announce its borrowing programme soon. Meanwhile, the prices of short and medium-dated loans have been steady. It looks as if the market is being groomed for the new loans. The 3 percent conversion loan, 1986, has slipped back to Rs. 73.65 on profit-taking.

Bombay Market

TRADING CLOSES ON STEADIER NOTE

L.I.C. BUYS STEEL SHARES

Wednesday Noon.

THE Bombay stock market closed the past week in a steadier mood. Share prices improved on replacement buying, but support was discriminating. Operators were encouraged by smaller deliveries and reports of L.I.C. buying of steel shares. The decision of some companies to issue bonus shares by capitalising reserves was interpreted bullishly.

Steel shares were supported on a report that the Tariff Commission would consider the interest and repayment obligations of loans of the steel companies in fixing the retention prices. The statement of the Central Finance Minister that direct taxation has been extended as far as practicable helped improve sentiment. The decline in money rates following bigger supplies of credit was considered a helpful factor. The stock market was inclined to view the prospects for foreign financial assistance optimistically. The sanction of loans to India by the U.K. Government helped promote optimism and it was thought that the donor countries would decide to give India the necessary financial assistance at the "Aid India Club" meeting due to be held at the end of this month.

Tata Steel improved to Rs. 150.50 on the view that the floating stocks had declined considerably. Apart from institutional buying, a prominent operator from Calcutta was reported to have bought a big parcel. Indian Iron were steady at Rs. 27.45, but the undertone weakened at the close due to disappointment over lower production figures for April. The prices of engineering shares fluctuated narrowly. Tata Locomotive met with support up to Rs. 329 on hopes of a rights share issue. Alcock Ashdown were bought at Rs. 325 and Premier Construction came to hand at Rs. 195. Scattered interest was taken in Mukand Iron at Rs. 28.25. Motor shares were steady, and Hindustan Motors were quoted higher at Rs. 20.12 on influential buying. Premier Automobile changed hands at Rs. 170.75.

There were mixed trends in cotton mill shares. Selected scrip were bought on reports of improved cloth offtake, although exports were rather discouraging. The decision of Swan and Century Mills to issue bonus shares improved sentiment earlier. Century nevertheless slipped back to Rs. 614 at the close on profit-taking. Swan were transacted at Rs. 600. The statement made by the chairman of the Finlay Mills that there would be no bonus share issue in the near future subdued the scrip which were quoted lower at Rs. 326. Kohinoor met with support at Rs. 299 on reports of good working. Svadeshi were wanted up to Rs. 268 on dividend prospects. Simplex were done at Rs. 188 and Khatau came to hand at Rs. 528.75. India United ordinaries were steady at Rs. 15.72, but sellers predominated in Apollo down to Rs. 1.60.

In the miscellaneous section, mining shares were firm, and Shivrajpur Syndicate improved to Rs. 81.50 on paying a higher ordinary dividend of Rs. 8 a share, taxable. Cement shares were steady, and Associated Cement were wanted up to Rs. 158.50 on hopes of a bonus share issue. Digvijay were transacted at Rs. 152. Sugar shares were quietly steady and turnover was restricted. Belapur were dealt in at Rs. 286 and Phalton were transacted at Rs. 140. Steamship company shares were quiet on uncertain freight outlook, and business passed in Scindia Steam at Rs. 14.20. Great Eastern Shipping were sold at Rs. 14.88. Bombay Burmah reacted to Rs. 605 on profit-taking and National Rayon were quoted at Rs. 518. Chemical shares were steady, and Tata Chemical were fractionally higher at Rs. 19.40. Polychem were subdued at Rs. 222.50 on the decision to issue rights shares at a heavy premium. Colourchem attracted attention at Rs. 355 on prospects at a rights share issue. Indian Dyestuff were steady at Rs. 486.25. Voltas were bought at Rs. 277 on investment account, but Ceat Tyre were quotably lower at Rs. 195. Synthetics and Chemicals declined to Rs. 152 on pressure. Wimco were firm at Rs. 274.50 on a good report and Tata Oil were bought up to Rs. 77.

Banking shares were steady and prices improved all round on hopes of higher earnings. Central Bank rose to Rs. 61.80, and Bank of Baroda to Rs. 99. Insurance shares were quietly steady, and business was done in New India Assurance at Rs. 61.50.

Prices of electric supply company shares improved on fresh suport, and Ahmedabad were done at a higher price of Rs. 86.50. Tata Power were indicated at Rs. 1,028.75 and Bombay Suburban were dealt it at Rs. 86.80.

Madras Market

CONDITIONS DULL DESPITE HIGHER ADVICES

POWER SHORTAGE DISTURBS OPERATORS

Tuesday Evening.

THE Madras stock market closed the past week in a subdued mood with business being done on only a small scale. Higher advices from Bombay and Calcutta made little impression. It was noted that substantial funds have been tied up in many new share issues, so the trend is unlikely to change until the return of these funds. The growing power shortage disturbed operators.

Government securities were steady, but business was restrained by shortage of scrip. Interest was taken in Madras and Andhra State loans. Banking shares met with support on the view that profits would increase due to bigger advances. Public utilities met with fresh interest and prices improved all round. Selected sugar shares were bought on higher production. In the planting group, tea shares showed mixed trends and companies having higher production were in demand. Selected rubber shares were steady, but coffee shares were sold at lower rates. The decision to reduce the excise duty on inferior coffee has had no effect. Cotton mill shares showed divergent trends and buying was restricted to scrip with good dividends. Business declined in miscellaneous shares and prices drifted downwards where changed.

In the banking group, Indian were placed at Rs. 161 and Indian Overseas were done at Rs. 177. Punjab National came to hand at Rs. 21.60. Among public utilities, Kumbakonam were bought up to Rs. 10.20 and Negapatam were done at Rs. 8.65. Interest was taken in South Madras at Rs. 9.80 and West Coast were supported up to Rs. 14.

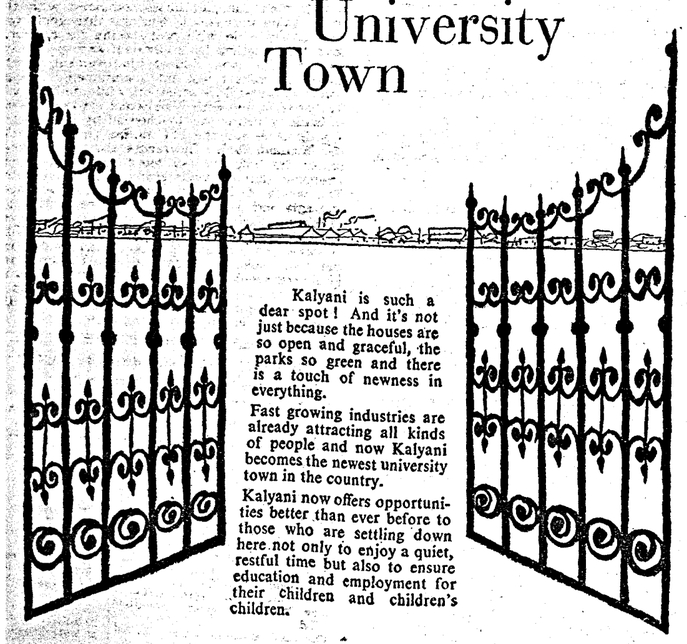
In sugar shares, E.I.D. were in demand up to Rs. 43.75 and K.C.P. were transacted at Rs. 23.62. Business was done in Mysore up to Rs. 59 and Travancore were steady at Rs. 10.60. United Breweries were bought up to Rs. 115.50, but Deccan reacted to Rs. 14.10 on profit-taking.

Among planting shares, Blue Mountain were easier at Rs. 3.07, but Cochin Malabar were steady up to Rs. 7.67. Consolidated Coffee were done at Rs. 22.70 and Ouchterlony were bought up to Rs. 4.33. Periakaramalai were steady at Rs. 3.96 and Kil Kotagiri were supported up to Rs. 4.91. Lucky Valley were supported up to Rs. 13.25 on paying a taxable ordinary dividend of 10 percent. Tropical were dealt in at Rs. 20.75 on declaring a taxable ordinary dividend of 8 percent. Chembra were quoted at Rs. 3.80 and Coffee Lands were sold down to Rs. 19. Mysore Amalgamated were offered down to Rs. 5.90 and sellers predominated in Mysore Coffee at Rs. 5.55. Nonsuch were in demand up to Rs. 28.50 and Ossoor were bought up to Rs. 3.30. Business passed in Peermade at Rs. 23.30 and Teekoy were indicated at Rs. 6.10. Travancore Rubber reacted to Rs. 10.70, but United Nilgiri were supported up to Rs. 24.75.

In the textile group, Adoni were steady at Rs. 10.70 on good working reports and business was done in Anglo-French at Rs. 138. Bangalore Woollen were steady at Rs. 200, as were Buckingham at Rs. 210. Kadri were wanted up to Rs. 124.50 on paying a taxable ordinary dividend of 15 percent. Lakshmi changed hands at Rs. 164 and Madura were transacted up to Rs. 35.90. Rangavilas were steady at Rs. 48 on declaring a taxable ordinary dividend of 6 percent, but Travancore Rayon slipped back to Rs. 37.55 on profit-taking. Vijayalakshmi met with support up to Rs. 105 on paying a taxable ordinary dividend of 12 percent. The Company has also decided to issue rights ordinary shares in the ratio of one new share for every two held at par. Business was done in Virudhunagar at Rs. 50 on the payment of a taxable ordinary dividend of 10 percent.

Among miscellaneous shares, Aluminium Industries were quoted lower at Rs. 22.80, but Ashok Leyland were supported at a lower price of Rs. 9.15 on paying a taxable ordinary dividend of 8 percent. Aspinwal were placed at Rs. 7.20 on declaring a taxable ordinary dividend of 8 percent. India Cement reacted to Rs. 6.05 on pressure and F.A.C.T. were done at Rs. 10.55. Ogale Glass were steady at Rs. 6.10 on issuing rights ordinary shares in the ratio of one new share for every four held, at par. Seshasayee Paper improved to Rs. 7.12 on renewed interest and Standard Motors came to hand at Rs. 16.70 on declaring a taxable ordinary dividend of 9 percent. Radio and Electrical Manufacturing were steady at Rs. 20 on paying an interim ordinary dividend of 9 percent, taxable. Travancore Cement attracted attention up to Rs. 8.45 on the payment of an ordinary taxable dividend of 6 percent. Tube Investment were placed at Rs. 283 and Textool were quoted at Rs. 180.

The Newest University Town



Kalyani is such a dear spot! And it's not just because the houses are so open and graceful, the parks so green and there is a touch of newness in everything.

Fast growing industries are already attracting all kinds of people and now Kalyani becomes the newest university town in the country.

Kalyani now offers opportunities better than ever before to those who are settling down here not only to enjoy a quiet, restful time but also to ensure education and employment for their children and children's children.

For particulars please contact: P.R.O., Kalyani. or Kalyani Sales Office, 188A Rashbehari Avenue, Calcutta 29.

London Market

SUBSTANTIAL RISE IN STOCK MARKET

INDUSTRIALS APPRECIABLY HIGHER

London, 3rd May.

THE stock market gave a remarkable performance during the past week. After being no more than restrained by the Algerian revolt, prices forged ahead on a broad front after the revolt collapsed and by the end of the week, it recorded widespread and substantial gains, many prices establishing new all-time peaks. The subsequent deterioration in the Laos situation had virtually no effect. After the week-end, the market became hesitant and the current crop of labour troubles was blamed for this. The more likely reason, however, was the pace of the recent advance which was clearly too hot to be maintained for very long. The reaction in prices did not go very far and losses compared with the recent gains were small. Business throughout was on a heavy scale with profit-taking for the most part well absorbed by investment and speculative buying. The post Budget improvement in the gilt-edged market was not maintained. Foreign bonds attracted little attention, while dollar stocks fluctuated in line with Wall Street. A minor boom in banking shares was touched off by the news of a scrip issue and the £24 million rights issue by the Midland Bank. Insurances also forged ahead under the influence of more good dividends. Property shares scored many substantial gains. The whole of the industrial market advanced strongly and gains on the week were often appreciable. Gold and copper shares were neglected for the most part and recorded little change. Tins, however, were in demand from both London and the east. Oils were supported with Ultramar and Shell prominent. Shell Trinidad were marked up sharply on the bid from Shell Petroleum. Rubbers were very quiet and little changed, while teas also were quiet and easier in places.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	Hours I.S.T.

British India Electric Construction Co. Ltd—45 p.c.

A BETTER OUTLOOK FOR THE U.S. ECONOMY

By Jan S. Prybyla

THE 1960-61 U.S. recession is showing signs of recovery, and forecasters are mildly optimistic. In the first quarter of this year, the gross national product declined to an annual rate of $499,500 million from the $503,500 million in the last quarter of 1960, but in the current quarter, it is expected to recover to an annual rate of between $505,000 million and $510,000 million. So far the recession has been relatively mild with an overall decline in the gross national product since the peak business cycle month of May 1960 of about 1 percent, and a fall in industrial production of 7.1 percent up to February 1961. This compares with a 14.1 percent drop in industrial production in a comparable period of the 1957-58 recession.

The belief in the approaching end of the business downswing is based on a study of the behaviour of inventory liquidation, and on the stemming of the decline in industrial production in the first quarter. Although inventory cuts continued in the first quarter of this year, there was a noticeable tapering off in the liquidation of manufacturers' stocks of materials and goods-in-process, and a shift towards the liquidation of finished goods in the hands of manufacturers and retailers. The very high stocks of unsold motor-cars (about 1 million motor-vehicles at the end of 1960) were being reduced to manageable levels in March, with a spurt in motor-car sales. This meant an improvement in the production schedules of the motor-vehicle industry and, consequently, some easing in the unemployment situation. Motor-car output in April was scheduled to exceed the relatively low March figure by about 18 percent. In spite of this, however, the motor-car market was still hesitant and the output in the first quarter was running at lows not recorded since 1952. The inventory reductions in primary metals seemed to have hit the lowest point early this year, and steel production had been picking up since January: steel output which in December 1960 was at an annual rate of 69 million tons had, by March, recovered to an annual rate of 83 million tons, and this in spite of the lag in motor-vehicle output. There has also been an improvement over the last quarter in housing starts, which are currently running at seasonally adjusted annual rates roughly comparable to last year's (about $54,500 million). The Federal Reserve index of industrial production held firm in the first quarter: it was 102.4 in January, 102.0 in February and about the same in March (1957 equals 100). The most recent data indicate that industrial activity is currently subject to opposing forces which roughly balance out; there is an upward push being exercised by steel, and some consumer durables (such as television sets and some household appliances), and a downward pull being exerted by furniture, building materials and—until March—motor-vehicles.

Industrial Activity

The question now arises as to the permanence of the stabilisation in the business downturn. Assuming a recovery in industrial activity, the problem is how long will the economy move along the bottom before moving up. Previous recessions give contradictory answers; thus in the 1954 recession, the economy dragged itself for about six months along the trough before it finally moved up, while in the 1958 recession, recovery was quick and steep except for unemployment. One indicator of the possible course of events consists in business capital spending plans. Late last year it was thought that in 1961, compared with 1960, expenditures by business on new equipment would drop by some 5 percent to 10 percent. A survey of business plans carried out in the first two months of this year tended to present a more optimistic picture with scheduled reductions not exceeding 3 percent of the 1960 expenditure on capital goods. The biggest projected cuts were to take place in investments by the producers of durable goods. These scheduled reductions were, however, offset to some extent by planned small increases in investment by the manufacturers of non-durables and by public utilities. The record since last October tends to confirm the latest predictions; confidence among business men has been maintained, a fact reflected in little deterioration in investment. In addition, President Kennedy's proposed tax incentives for business to modernise and expand its equipment, may—if enacted—stimulate investment still further.

Flow of Personal Income

Another source of strength is to be found in the flow of personal income which was fairly well sustained throughout the business recession. By February, personal income had declined by only 1 percent from the high level reached at the end of 1960, and with the exception of motor-vehicles and some slowing down of retail sales due to bad weather early in the year, retail sales have in general followed the income flow pattern. There has been no evidence of widespread loss of confidence among consumers, but some declines were registered in the purchases of such postponable items as electrical appliances and furniture. The overall decline in personal income was generated by a dip in manufacturing and construction payrolls, but the dip was to a considerable degree offset by powerful injections of purchasing power in the form of unemployment compensation payments ($31,250 million annual rate in February), special assistance to dependent children and the disabled, stepped up retirement payments, and speeded-up dividend payments on veterans' insurance. There is little doubt as to the usefulness and relative effectiveness of these "automatic stabilisers" as an anti-cyclical device. In this, as in the other U.S. post-war recessions, the massive injection of purchasing power in these forms has prevented aggregate demand from falling into dangerous levels. Another indicator of a possible early recovery was the scheduled expenditure of the defence department on research, development and procurement under the missile and other programmes which—together with past obligations—was to reach some $42,000 million in the fiscal year 1961 (this compares with about $19,000 million in fiscal 1960).

The Problem of Unemployment

Unemployment remains the hard-core of the U.S. economic problem. In March, the number of registered unemployed reached the record high figure of 5.7 million persons, or roughly 7 percent of the civilian labour force. Something less than half of this figure was accounted for by frictional and seasonal unemployment, but the remainder reflected not only the recession in business activity, but long-term structural changes in the economy. The relatively high unemployment rate and absolute figure were accompanied by one of the highest employment records in the U.S. history: in March, some 64.3 million workers were at their jobs. The unemployment problem presents the U.S. economy with a serious long-term challenge. It is partly due to the rapid spread of automation through manufacturing industry and agriculture, partly to the influx of new labour recruits, and in part to employment reductions in a number of declining industries such as coal and railways in the setting of a clearly insufficient rate of economic growth. There is no simple answer to the problem, nor will it be solved with the recovery in business activity. Recognising this, both private enterprise and the Government are taking steps in what appears to be the right direction: the stimulation of the growth rate by fiscal policy and monetary measures, the establishment of Federally-financed schemes for the creation of work opportunities in the chronically depressed areas, and the implementation of programmes for the retraining of workers. All these, of course, take time but the available evidence suggests that the problem is being tackled at its roots.

To some extent, anti-cyclical measures have to take account of the precarious balance of payments situation. Because of the attraction exercised on U.S. short-term capital by higher rates abroad, especially in Europe, it is no longer possible, as it was in the past, to ignore international interest rates. Monetary policy designed to boost investment activity at home through the lowering of interest rates is consequently limited by these international considerations. In addition, the heavy burden of foreign aid and military expenditure abroad creates a chronic deficit on the services account which must sooner or later be offset by more vigorous and cheaper commodity exports. This in turn implies the modernisation of much obsolete plant and equipment and a careful holding of the price-line.

Growth Potential

The U.S. economy has tremendous potentials for further growth and a continued improvement in the already high standard of living of the population. There is good reason to believe that the worst of the present recession is over and that long-term measures of recent years aimed at stimulating the rate of growth beyond the 2.5 percent a year will yield positive results. In face of a serious international challenge and problems of domestic adjustment, the complacency of the early 1950's is rapidly vanishing.

New Delhi

FOREIGN TRADE ACTIVITIES OF S.T.C. INCREASING

F.I.C.C.I. URGES ENQUIRY INTO DECLINE OF INDIAN MINERAL EXPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

AS indicated by the new Central Commerce Minister, Mr. K. C. Reddy, during the Budget debate recently, the State Trading Corporation is entering the export trade as a competitor of the private sector in the non-communist part of the world. This competition was so far confined to the exports of iron and other ores. What appears to be the first step is the State Trading Corporation's agreement with Sukab of Sweden for promoting trade between India and Sweden. Sukab is a private organisation with Swedish Government backing. Under the deal, business contracts will be concluded between the Indian State trading body and Sukab as well as their business associates. A Swedish bank is also linked with the arrangement.

The State Trading Corporation is shortly opening an office in Zürich, Switzerland. The working procedure for it was worked out by the K. B. Lall mission to the Common Market countries two years ago. Under the arrangement, the State Trading Corporation will export Indian goods and sell them at international prices. The loss, if any, from these transactions will be debited to an account, kept with the foreign bank or banks and will be recovered from imports of goods from that country to India. For example, among the items to be exported to Sweden under the deal with Sukab are tea, coffee, oilcakes, cotton textiles, leather manufactures, handloom fabrics, carpets, manganese ore, etcetera. The loss on the sale of these commodities in Sweden at Swedish market prices would be recovered from imports from Sweden, which include newsprint, woodpulp, ball bearings, special steel, etcetera. A similar arrangement has been made with the Italian firm of Cogis.

Higher Excise on Coal

The Central Minister for Mines and Fuel introduced a Bill in the Lok Sabha last week, seeking to raise the excise duty on coal from Re. 1 a ton to Rs. 4 a ton. The yield from this enhanced duty will pay for the additional cost of coal transport by sea as also for the operation and maintenance of the central ropeway project.

Mineral Advisory Board Meeting

A proposal to permit exporters to use up to 25 percent of their foreign exchange earnings for the import of mining machinery and components and other permissible items is on the order papers of the Mineral Advisory Board which is meeting in Bombay since 2nd May. The Board will also consider a proposal of the Federation of Indian Chambers of Commerce and Industry that a thorough assessment of the cost structure of minerals be made and steps taken to reduce costs. The Federation has pointed out that because of the increase in railway freight, port charges, rents and royalties and various labour welfare laws, the prices of Indian minerals have become uneconomic leading to a rapid decline in their exports.

The question whether the Mines and Minerals Act, 1957, or the Industrial Policy Resolution of 1956 should determine the grant of applications from private companies for the exploration of mineral-bearing areas will also come up for discussion. The private sector has complained to the Government that quite often applications made on the basis of the Act have been rejected by State Governments on the ground that they do not conform to the Industrial Policy Resolution. Another subject on the agenda is the application of royalty on ores in a uniform manner throughout the country. The F.I.C.C.I. has drawn the attention of the Government to the complications and uneconomic conditions created by the computation of royalty on an arbitrary basis by different States.

Locating Fresh Limestone Deposits

The Board is to consider the Planning Commission's suggestion to intensify efforts for locating fresh deposits of limestone of suitable quality for use in the steel plants. The proposal of the Commission to give high priority to the prospecting of iron ore deposits in Salem district of Madras State will also be considered. An item suggested by the Central Commerce and Industry Ministry relates to the development and exploration of raw asbestos and refractory grade chrome ore deposits required for the asbestos cement industry. The Ministry, in a note to the Board, has stated that investigations by a U.K. field party has indicated the availability of these raw materials in India, which, if developed, will help save foreign exchange to the tune of about Rs. 2.3 crores a year. The Board will consider the proposal of the Steel, Mines and Fuel Ministry that dolomite, limestone and marble be included in the list of "specified minerals" under the Mines and Minerals (Regulation and Development) Act in order to ensure their planned exploitation.

Some other subjects to be discussed are: railway facilities and reduction of rail freight for the movement of ores, exemption of the bauxite mining industry from some of the provisions of the Metalliferous Mines Regulations, 1961, intensification of efforts to develop copper and zinc mining and smelting industries and the constitution of an all-India service of geologists, mining engineers and metallurgists.

The Budget Session in Retrospect

Looking back on the Budget session of Parliament, which is scheduled to terminate this week-end, one is inevitably reminded of the fact that while the British system of Parliamentary Government is maintained and the usual procedure on the discussions and voting of Budget demands for grants is followed, there is no apparent attempt to keep a control over expenditure, as was the British practice. In the post-independence period, demands for grants are discussed as before and certain aspects of policy or administration are discussed, but there has been no attempt at controlling expenditure or effecting economies. Armed with figures, furnished by the obliging Ministry, the Finance Minister asserted that his Budget proposals would have no effect on the cost of living. Equally obliging economists have supplied him with the theory that price rises in a developing economy are not unhealthy.

In a small booklet written by him in 1957, Mr. Colin Clark, Director of the Agricultural Economics (Research Institute), Oxford, has said that "from June 1947, until early in 1957, in less than ten years, the cost of living index has risen by 60 percent. There has never been anything like this before in any peace-time decade in our history. High taxation combined with protectionism has been a complete, utter, howling, disastrous failure." What is happening in India? In the first place, index figures since 1947 are not easily available. Their base is no longer 1947-48, but 1952-53. Then again, the method of their computation is controversial. The question is whether any impartial attempt has been made to determine the effect of high taxation and protectionism on the cost of living. Looking back on the Budget session, it seems that no serious attempt was made to analyse the economic consequences of this policy on the cost of living. There is a school of thought, even among Congress men, which attributes the defeat of the Congress candidate in Delhi's bye-election to Mr. Desai's Budget proposals. It was time that the Planning Commission examined this very important question also.

Development of New Industries in Third Plan

The following industries in the private sector are on the *tapis*, for which foreign exchange will be needed during the third plan period:

	Total third plan outlay	Foreign exchange component
	(Rs. crores)	
Non-ferrous metals	60	30
Industrial machinery	99.28	54
Machine tools	20	11
Structural fabrication, railway wagons, etcetera	10.50	5
Tractors, earthmoving equipment, etcetera	10	6
Ball bearings	9	5
Electric motors and transformers	11	7
Cables and wires	13	8
Other electrical industries	8	5
Heavy chemicals	39	16
Miscellaneous chemicals	9	4
Drugs and pharmaceuticals	10	3
Dyestuffs	7	2.50
Rayon and staple fibres	75	45
Paper, paperboard, newsprint	89	31
Cement	50	10
Refractories	22	10
Plastics	25	10
Rubber manufactures (including synthetic rubber)	28	12.50
Industrial gases	10	6
Cotton textiles	52.50	17.50
Sugar	100	11.50
Other large-scale industries	54.90	26.26

Investment in Third Plan

It is tentatively estimated that the third plan outlay of Rs. 7,500 crores in the public sector consists of Rs. 1,200 crores of current outlay and Rs. 6,300 crores of investment expenditure. Investment in the private sector is placed at Rs. 4,100 crores. The total investment in the third plan thus comes to Rs. 10,400 crores, compared with Rs. 10,200 crores, mentioned in the Draft Outline. As a result of the work undertaken since the Draft Outline was published, and especially after the detailed discussions with the States, certain revisions in the physical targets of the third plan have been made. These include the following:

Agriculture

Commodity	Provisional estimates of total production
Foodgrains	100 million tons
Sugarcane (*gur*)	10 million tons
Oilseeds	9.7 million tons
Cotton	7 million bales
Jute	6.5 million bales

Subject to marginal changes, the targets of the main development programmes for agriculture are as given below:

(1) *Irrigation:*

	(million acres)
Major and medium irrigation	12.8
Minor irrigation	13.3
Total for irrigation	26.1

(2) *Soil conservation, land reclamation, etcetera:*

	(million acres)
Soil conservation in agricultural lands	10
Dry farming	22
Land reclamation	3.3
Reclamation of saline and alkaline lands	0.2
Flood control, drainage and anti-water-logging	5.0

(3) *Area under improved seed:*

By end of 1960-61	55
By end of 1965-66	151

(4) *Consumption of chemical fertilisers:*

	(million tons)
Nitrogenous (N)	1.01
Phosphatic (P_2O_5)	0.4

(5) *Organic and green manures:*

Urban compost	5
Rural compost	148
Green manuring	39

The target for short and medium-term credit through co-operative agencies is about Rs. 500 crores and for long-term loans (outstanding by the end of the plan) is about Rs. 140 crores.

Power: The generating capacity, it is proposed, will be increased from 5.7 million kW at the end of the second plan to about 12.6 million kW at the end of the third plan. The increase visualised in the Draft Outline was 6.0 million kW. Electricity generated is now estimated at about 45,000 million kW, compared with the earlier estimate of 42,250 million kW hours in the Draft Outline. The number of villages and towns electrified is now estimated at 43,000, compared with 34,000 in the Draft Outline.

Industry: There are no significant changes in the major industrial targets. In several directions including steel, coal, fertilisers, etcetera, detailed plans are being drawn up.

Roads: As a result of discussions with the States, the additional mileage of surfaced roads is now estimated at 25,000 miles, compared with 20,000 miles visualised in the Draft Outline.

Housing: The likely contribution by the Life Insurance Corporation towards housing is being taken into account in drawing up programmes for the third plan.

Apprenticeship Training

It is proposed to enact a comprehensive legislation on apprenticeship training in industry, repealing the existing Apprenticeship Act, the provisions of which have become outdated and totally inadequate to meet the present situation arising out of a fast-expanding industrial economy. While certain establishments like the railways and defence in the public sector and Tatas in the private sector have been administering training programmes on a systematic basis for the past many years, industry in general has not as yet organised such programmes fully. A few are training a very limited number to meet their special requirements. As observed by the Labour Investigating Committee in 1943, "there is no scheme of apprenticeship for the bulk of industrial workers in this country and the usual method of imparting training in large-scale factories is to recruit raw youth and put them on to the least skilled occupation in a factory, such as that of a doffer boy in a cotton mill. In some cases, relatives of the working people are preferred for work and are allowed to assist them on a nominal wage. Obviously, this is a most unsatisfactory procedure to follow." To remedy this state of affairs, it is proposed to enact legislation for the following purposes:

(i) to regulate the programmes of practical training in industry in such a way as to conform to the standards, syllabuses, periods of training, etcetera, prescribed by the Central Apprenticeship Council; and

(ii) to use fully the facilities available in industry for imparting practical training.

The principles suggested by the Small-scale Industries Board and approved by the National Council for Training in Vocational Trades were examined by a special committee, consisting of representatives of the three recognised all-India employers' organisations and the Ministry of Labour and Employment, under the chairmanship of the Minister of Industry, and made certain amendments to meet the point of view of the employers in general. The salient features of the proposed

legislation which have been accepted by industry in general, are as follows :

(1) The Act should be a self-contained one. The apprentice will not be governed by the different labour and factory laws. Matters relating to his health, safety, welfare, payment of stipends, compensation for injury, etcetera, will be provided for in the proposed Act itself.

(2) Provision will be made in the Act or in the rules to be framed under it for the execution and registration of apprenticeship agreements; medical examination of apprentices; minimum educational standards for admission; period of apprenticeship training; conditions under which apprenticeship could terminate; maintenance of records of progress of apprentices; payment of stipends; hours of work, etcetera.

(3) Provision will be made for setting up Central and State apprenticeship councils consisting of representatives of employers in the public and private sectors, Government officials and experts to advise the Central and State Governments, respectively, on all administrative and technical matters relating to the training of apprentices in industry. The National Council of Training in Vocational Trades will co-ordinate all programmes for training in the country, conduct trade tests and issue national certificates in craftsmanship including apprenticeship in "designated trades."

(4) Provision has been made in the Bill for extending the cumpulsory apprenticeship scheme by stages to different industries and areas according to need.

(5) Based on the available facilities in each "designated" trade in an establishment, the Central Government in consultation with the Central Apprenticeship Council will fix the maximum number of apprentices that could be taken in these trades. Where training has to be provided in the national interest to meet special shortages, the establishments where adequate facilities do not exist, will be provided with the required facilities and financial assistance by the Government for creating additional facilities.

Points of View of Employers

(6) On completion of apprenticeship in the designated trade, the apprentice will not be bound to serve the employer training him; nor will the employer be bound to offer employment to the apprentice. During the period of apprenticeship, an apprentice will be governed by the disciplinary procedure in force in the establishment. The employers have proposed that a provision be made in the Act to the effect that an apprentice will not participate in strikes and that he will not be allowed to be used for strike-breaking purposes. It is felt that such a provision is not necessary. Since, during the period of strike in an industry, there would be no arrangements for the training of apprentices, there is no point in enforcing the presence of the apprentice during the strike period. Again, the apprentices will be so small in number and their standard of skill so limited, that no employer will be able to use them effectively for strike-breaking purposes. In view of this, the provision suggested by the employers seems to be superfluous and it may not be necessary to incorporate this in the legislation. It may be mentioned that it is proposed that the Industrial Disputes Act should not be applied to apprentices under this scheme.

(7) While the Government will undertake the responsibility for providing related instruction, industry will be responsible for in-plant training.

(8) Powers will be taken for making rules under the Act, delegation to the States of such powers as are considered necessary and for imposing penalties for the proper enforcement of the Act.

U.S. Aid for Power Projects

Ambassador John Kenneth Galbraith of the U.S.A announced the approval of two U.S. Government loans, which will together finance installations of a combined capacity of more than 300,000 kilowatts of electricity a year. "These two power plants," the Ambassador stated, "represent a very substantial step forward in India's power development programme." The entire anticipated cost of the two projects located in Orissa and Madhya Pradesh will be met by U.S. Government credits. In recent months, the United States has concluded similar agreements with India for the construction of five other projects. In all, it is financing the entire cost of constructing power facilities which would produce more than 750,000 kW of electricity a year.

The two new power stations will be built in Talcher in Orissa and in Amlai in Birsinghpur district of Madhya Pradesh. The U.S. Development Loan Fund will give loans totalling $41.4 million (Rs. 19.7 crores) to meet the costs of acquiring equipment, materials and services abroad. Rupee costs of the projects such as payments to workers and purchases of materials in India will be met from loans totalling Rs. 15.1 crores from the sale proceeds of U.S. agricultural commodities supplied to India. The projected 250,000-kilowatt power-station in Talcher will be among the largest in India. A smaller thermal plant producing more than 60,000 kilowatts will be built in Amlai which is rapidly becoming a major industrial centre. Last January, the U.S. Export-Import Bank announced authorisation of a $18.5 million (Rs. 9 crores) loan to a private firm for purchasing machinery for a big paper mill to be built in Amlai.

Manufacture of Agricultural Tractors

Of the four firms licensed under the Industries Act for the manufacture of agricultural tractors, one has produced 123 tractors by the middle of February 1961. Another firm, which has been granted an import licence for components, is likely to go into production shortly. The issue of import licences for machinery and components for the third firm is at present under consideration and this firm is also expected to go into production shortly. The fourth firm has had some difficulty with its foreign collaborator, and it is now negotiating with other foreign companies for technical collaboration. Besides these, one more application under the Industries Act for the manufacture of agricultural tractors has since been received and is being considered at present. A sufficient number of tractors to meet the essential requirements of the country, it is proposed, will be imported from the U.S.A., Russia, Czechoslovakia, Poland and Rumania at normal market prices, it is disclosed here. The makes which it is proposed to import have already been used and found suitable for Indian conditions. Apart from the existing provision of a 50 percent quota for established importers, arrangements have been made for the import of spare parts along with tractors up to a certain percentage of the value of licences.

Unsold Shoes

The total number of shoes which have been manufactured for export to Russia and Poland and were lying unsold on 21st April, was 35,347 pairs.

Developing Paradip Port

Two foreign firms, namely, Dr. Ing. Giovanni Galanto and Co. of Italy and the International Development Financing Corporation of Panama have offered assistance for the development of Paradip port in Orissa. The suggestions of the first firm were not found to be technically acceptable. Also its financial terms were not considered favourable. The second one is being considered.

Iron Ore for Steel Plants

The steel plants in Rourkela and Bhilai will, even after expansion, draw their ore requirements from the captive mines in Barsua and Rajhara. The plant in Durgapur will draw, after expansion, about 2 million tons of ore from Bolani and another about 1.5 million tons from either the market mines of the Gua region or from a new mine to be developed in that region. A decision on this will depend on the results of detailed prospecting into the reserves in selected areas of the Gua region. The steel plant in Bokaro, it is planned, will be supplied from a new mine to be developed in the Sasangda area of the Bonai range. Generally, it is the intention that integrated steel works should have their captive sources of iron ore supply to ensure an even flow of ore of uniform quality. The State Government which owns the Mysore Iron and Steel Works was advised to run the steel works as a corporation or a company. It has accepted the advice. It is understood that a company will be formed shortly.

Coalmining Machinery and Parts

Several undertakings are engaged in the production of different parts of coalmining machinery such as haulages, conveyors, power driven pumps, etcetera, and certain schemes have also been approved for the manufacture of coalmining machinery and parts. Besides, the coalmining machinery plant which is being set up in the public sector in Durgapur visualises the manufacture of spare parts not only for the complete machines which the project will be manufacturing, but also for the existing machines in operation in the country. This project which is being set up in two stages will have an output capacity of 30,000 tons a year in the first stage and 45,000 tons a year in the second.

Coal Washery Costs

The cost of coal washery designed to treat 250 tons an hour of raw coal is about Rs. 1.8 crores, and the foreign exchange expenditure involved in the cost of this washery is about Rs. 1 crore. If the plant is manufactured indigenously by Indian parties, the corresponding cost of the washery and its foreign exchange element will be about Rs. 2 crores and Rs. 63.88 lakhs, respectively.

No proposal is under the Government's consideration to appoint a technical committee to go into the question of the local manufacture of coal washery plants. In order to establish its indigenous manufacture, the Government has already issued a licence to an existing engineering unit to manufacture the coal washing and preparation plant. A proposal from another party for setting up a new unit to manufacture coal washing plant is also being considered. When these units materialise, the foreign exchange expenditure for coal washeries is expected to be substantially lower than that involved in the case of those supplied by foreign firms.

Nahan Foundry Expansion

The Nahan Foundry Ltd proposes to expand its capacity from 1,800 tons of castings a year to 5,000 tons of castings a year in two stages. The first stage of expansion raising the capacity to 3,000 tons a year has been completed. The machinery required for the second stage of expansion has been installed. Under its diversification programme, the Nahan Foundry Ltd has undertaken the manufacture of electric motors of ratings from ½ h.p. to 10 h.p., metric weights, motorised monoblock pumps, centrifugal machines and horizontal cane crushers. The possibility of manufacturing improved types of agricultural implements is also being explored.

Fertiliser Pool

The fertiliser pool will continue as long as its total availability falls short of demand. The fertilisers produced in private factories will be purchased at a price which is paid for similar types of product to similarly situated public sector factories. In addition to the pool price charged by the Central Government, the States will add a margin to cover distribution charges.

Handicrafts Experts from Abroad

Four experts have come out to India to advise on various aspects of handicraft, and have already started work in different centres. Miss A. S. Hansen of Denmark is working with the All India Handicrafts Board, New Delhi, the regional design centre in Bangalore, and the Pilot Dolls and Toys Centre, Bombay. Mrs. Ruth Reeves of the U.S.A. is working with the All India Handicrafts Board, New Delhi. Mr. Wilhelm Moesch of West Germany is working with the regional design centre, in Okhla, Delhi, while the Design Development Centre, Calcutta. Mrs. Lisbet Holmes of the U.K. is working with the All India Handicrafts Board, New Delhi.

Raw Wool Exports

The following statement will show the export of raw wool to Russia and other countries and its value during 1960 and 1961 (January) :

	1960		1961 (January)	
	Quantity ('000 lbs)	Value (Rs. 000)	Quantity ('000 lbs)	Value (Rs. 000)
Russia	7,774	21,353	7	17
Other countries :				
U.K.	11,234	29,285	711	1,774
Denmark	320	1,068	9	27
West Germany	669	1,443	26	70
Netherlands	369	660	20	38
Belgium	972	2,541	37	108
France	1,733	4,127	97	241
Italy	115	348	...	...
U.S.A.	5,569	16,087	332	915
Australia	1,405	4,064	209	586
Other countries	343	752	...	...
Total	30,503	81,728	1,448	3,776

London

U.K. OVERSEAS TRADE FIGURES SHOW RISE IN EXPORTS

IMPORTS FROM STERLING AREA AND NORTH AMERICA REDUCED

(FROM OUR LONDON CORRESPONDENT)

COMPLETE figures for Britain's overseas trade in March confirm earlier favourable impressions. Compared with the last three months of 1960, exports were 4½ percent up in the first quarter of the current year, while imports were 1 percent down, allowing for seasonal factors. Last autumn's dock strike has complicated recent comparisons, but U.K. Board of Trade figures show that exports to all main areas have been rising—except to North America and Latin America—while imports from the sterling area and North America have been falling. It is clear, the U.K. Board of Trade states, that imports as a whole passed their peak in the second half of 1960 and have been falling since.

The aggregate change in imports conceals diverse movements. The most interesting is the rising inflow of machinery and other capital goods to feed the investment programmes of British industry. Imports of fuels have risen, but the other main categories—food, drink, tobacco, industrial materials, basic materials, and semi-manufactured goods—have declined. The analysis of exports is slightly more encouraging. The two striking things about the distribution of exports are the shrinking of the North American market and the rising tide of sales to western Europe, strong since the middle of last year. Exports to the United States were lower in the first quarter than the level which was thought "very low" half way through 1960. The collapse of the market for British mass-produced motor-cars is mainly responsible. To the credit of the motor-vehicle industry is the substantial increase in exports of commercial vehicles. The growth of trade with western Europe (imports from Europe climbed faster in the first quarter than exports—6 percent, against 5 percent) is another reminder of the importance of the European Common Market.

Further Drop in Unemployment

If Mr. Selwyn Lloyd sees his pay-roll tax proposal as a serious answer to the problem of labour shortage, he may be tempted to use it this summer, when unemployment is likely to reach its lowest figure for six years. Figures just issued by the U.K. Ministry of Labour show that unemployment on 10th April stood at 1.5 percent—a drop of 0.1 percent on the previous month. The trend now appears to have returned to the normal seasonal pattern, after the large decline in March. This was larger than usual because of the early spring, which stimulates building activity. Over the first quarter of 1961 as a whole, the seasonal pattern has been followed. The increase in the number of vacancies throughout the quarter has been faster than usual. Between January and February, there was an actual increase of 9,195, compared with the normal seasonal increase of 4,000 : between February and March 23,820, compared with 19,000: and between March and April 22,883, compared with 18,500. The actual unemployment figure for April was 340,300. This represented a decrease of 528 in the wholly unemployed and of 10,010 temporarily stopped since March.

Outlook for Steel

For the first time since before the second World War, the U.K. steel industry's production capacity should be sufficient to meet the probable demand for all products from the end of next year. This forecast is made by the U.K. Iron and Steel Board in its third special report on development, which covers the period ended 1965. The Board has estimated the crude steel production capacity in 1965 at 32 million tons, all from "reasonably modern and efficient plant." This estimate allows for the withdrawal of about 2.5 million tons of uneconomic capacity in the meantime. On "reasonably optimistic assumptions", the Board believes that the home and export demand in 1965 will be around 29 million tons. The excess of 3 million tons of modern capacity over demand is the "appropriate" size, the Board adds, to meet sudden increases in demand, unforeseen interruptions and other contingencies.

In most years since the second World War, the steel output has lagged behind growing demand. Last year, when the output rose to a record of 24.3 million tons, about 1.2 million tons were imported to fill the gap. On the Board's forecasts, imports in 1965 should be confined to requirements of special products, totalling about 100,000 tons. At the same time, exports should increase to 5.2 million ingot equivalent tons by 1965. In the past few years, when they have been held back by recurrent shortages at home, exports have fluctuated between 2.5 million and 4 million ingot tons. The basic change in the market situation leads the Board to believe that the industry's principal consideration will change from expanding output to increasing efficiency.

Motor-car Exports Fall

The number of motor-cars exported from Britain in the first quarter of the current year was 85,219—the lowest figure for any quarter since 1956. In the first quarter of last year, the figure was 184,912. In the year the industry has seen its U.S. market virtually evaporate and its Canadian market shrink to a quarter of what it was. In the first three months of the current year, exports of British motor-cars to the U.S.A. came to 3,078 and to Canada to 8,500: in the same quarter of 1960, the figures were 55,236 and 30,000, respectively. There is thus a large leeway to be made up, and there is little prospect of more than a moderate recovery this year. In marked contrast, exports of commercial-vehicle manufacturers have broken records. In the first quarter, when the output was up to a new peak of 119,745 (plus 4,895 buses and coaches), exports were 48,358. In the first quarter of last year, the output was 109,104 and exports 34,232.

Production of motor-cars was much higher in March than in either of the first two months of this year, but the quarter's total of 218,003 was well below any quarterly figure in 1959 or 1960. In the first quarter last year, the output was 392,664. The rising output during the rest of this year depends heavily on home demand. This is increasing (the March registrations were the highest yet), but without more exports the industry will be working well below its present capacity, not to mention its planned capacity for the future.

Testing Time for Shipbuilding

The latest shipbuilding order figures published by the Shipbuilding Conference are, to say the least, disturbing. To replace the 67 ships delivered in the first quarter, the industry received new orders for 61 ships, but the tonnage completed was 381,000, whereas the tonnage represented by the new contracts is only 131,000. The new orders have gone to small specialist shipyards whose order-books were never grossly inflated and which on that account have quoted fixed prices and definite delivery dates. The big shipyards—with the prominent exception of Harland and Wolff—are relatively well placed. The pinch is felt among the medium-sized shipyards which have been caught not only by the depression in shipping but also by the shift in tanker building to the large vessel.

The industry's order-book has shortened since the autumn of 1957 by nearly 4 million tons to 3.08 million tons at 31st March. A steady output of around 1.5 million tons a year has far exceeded an intake of new orders around 500,000 tons a year. As some ships on order are not wanted until 1965-66, the industry—at the present rate of progress—will be on its uppers in three years. The new Cunard liner will lighten one corner of the picture, but the shadow over the rest will deepen before it lifts.

Sir Oliver Franks Resigning

Sir Oliver Franks has decided to resign from the chairmanship of Lloyds Bank at the end of the current year or soon after, in order to take up an academic appointment. He will be succeeded as chairman by Mr. Harald Peake, a vice-chairman, who will give up his present chairmanship of the Steel Company of Wales. After many years of public service, Sir Oliver returns to the world of scholarship. A wide circle in the City and outside will share the feelings of the Lloyds Bank board, which records Sir Oliver's decision "with very great regret" and expresses its profound obligation for his distinguished leadership during the last seven years. Sir Oliver will remain a member of the board.

The Steel Company of Wales has agreed to release Mr. Harald Peake from its chairmanship after the annual meeting to be held in February 1962. His successor has not yet been announced. Meantime, he becomes a deputy chairman of Lloyds Bank jointly with Sir Jeremy Raisman, who (the bank stated) did not wish to be considered for any other appointment. Lord Amory has been appointed a vice-chairman.

More Visitors to Britain

Britain's attraction as a tourist country is increasing. Figures published by the Home Office show that 1,731,658 foreigners arrived in the U.K. last year, compared with 1,480,066 in 1959. The rise of more than 250,000 is considered to be the result of an increase in the number of tourists. More than 750,000 people came to Britain by way of London airport. Last year, 4,507 people arrived from Russia, compared with 2,753 in 1959. Three people from Russia were refused permission to land last year. The United States, with 471,360 people, easily topped the visitors' table. France and Germany came second, with the Netherlands a bad third. Italians formed the largest group of nationals who were refused permission to land.

Defence Bonds Conversion Offer

A conversion offer will be made to holders of 3 percent Defence Bonds purchased between 15th March, 1951, and 14th September, 1951, and maturing on 15th September, of which £5.3 million are outstanding. Holders will be invited to exchange their holdings into 5 percent Defence Bonds (conversion issue) on 15th September. Those who accept will be paid interest at 3 percent a year on 15th September, for the period from 15th March to 14th September. The bonds may, of course, be cashed. If they are, interest will cease with the payment due on 15th September. The terms of the new conversion issue bond will be the same as those of the 5-percent Defence Bonds (second issue) currently on sale, except that the interest will be payable on 1st April and 1st October. The list of acceptances of the offer will be closed on 16th June.

Burmah Oil Pays More

With a final dividend of 6¾ percent, tax-free, the Burmah Oil Company is raising its 1960 distribution to 9¾ percent, tax-free. This compares with 8¾ percent, tax-free, for 1959, and is just about in line with City expectations. In view of the long-continued world surplus of oil, it is not surprising to find Burmah's trading profit sharply lower at £4,973,000, against £6,880,000 in the previous year. But income from "other dividends and interest," which includes that from the Company's holdings in Shell and B.P., has increased by £1,894,000 to £11,782,119. This undoubtedly reflects mainly the doubled interim paid by Shell last year. The increased finals from both Shell and B.P. will figure in the current year's results.

Income from trade investments rose moderately from £2,833,000 to £2,889,000. Depreciation charges are hardly altered at £1,198,000, against £1,206,000, but total taxation absorbs less at £8,449,000, compared with £8,718,000, leaving a net profit of £9,996,000, which is £319,000 more than for 1959.

Dunlop Tyre Factory for Malaya

The Dunlop Rubber Company has confirmed that an agreement has been reached with the Government of the Federation of Malaya for establishing a tyre factory to produce a wide range of motor-car, truck, motor-cycle, and bicycle tyres. It will be built on a site already acquired in Petaling Jaya, and is expected to be completed in about 18 months. When in full operation, it will provide employment for about 600 persons. There will be a substantial Malayan financial interest in the new Company. The proposed ordinary share capital will be $ (Straits) 12 million or £1.4 million. Initially, 39 percent will be offered to the public.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base : 1939) has now been brought up to March 1961. As compared with February, the March index for preference shares shows a decline of 1.3 points, while that for Government securities remains unchanged at 97.9 points.

There were increases in banks 8.2 points, cottons 10.3 points, coals 5.6 points, jutes 13.1 points, minings and oils 0.9 points, cements 2.4 points, engineerings 19.8 points, teas 20.4 points, sugars 1.0 point and miscellaneous 7.7 points. The index for papers, however, indicated a fall of 8.6 points.

Combining all the factors, the Capital variable yield securities index advanced by 9.5 points during March 1961.

	Index of Govt. securities	Index of Preference Shares	Variable Yield Securities											
			Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement Lime etc	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others	Combined Index

HESSIAN BETTER ON SMALL U.S. DEMAND

PRECAUTIONARY MILL BUYING RAISES FIBRE RATES

AFTER a prolonged period of inactivity, there was some small interest in the raw jute market early in the week. Actually, the volume of business was not large, but the market was so delicately poised that the maximum effect was produced from the minimum of effort. The buying interest was really stimulated by the fact that the delegation to Delhi to press for a block closure of mills returned empty-handed. Those mills which had not bought for some time took up some quantities in anticipation of a rise. Nor were they disappointed, as at the first sign of business, prices began to shoot up. Naturally, there was a great deal of disappointment and some heart-burning among those who did not participate, and later in the week, some buyers paid as much as Rs. 4 to Rs. 5 a maund higher, although it was generally agreed that the top rates paid were entirely unnecessary since at the time jute was available at considerably cheaper rates. It is inconceivable why certain buyers continue to pay premiums of Re. 1 to Rs. 2 for so-called selected marks when exactly the same jute, only under another ticket, is available at much lower rates.

The controversy over the closure of Indian mills to conserve raw jute has now temporarily ceased. It is understood that the request by the industry for a block closure which was placed before top Government officials received a sympathetic hearing, but they considered it too early to consider taking definite steps in the matter. The position will be reviewed at a later date, but many believe that this is merely postponing the evil day and that mills will have to close before the new crop begins to arrive. There are others, however, including the Jute Commissioner, who consider this unnecessary, and rival factions are at work on this most controversial point.

Whatever the outcome, no one denies that the current outlook is not very bright. The gap between manufacturing and raw material costs shows no sign of narrowing, and mills cannot manufacture at a profit. Opinions are divided on the question of raw jute supply, and the method by which it is being controlled. This week only a very small quota was issued to mills, as it is understood that there is still a large arrear to be taken up against previous quotas. One thing that is worrying mills is the uneven distribution of their stocks. This is a matter of great importance and should be taken into consideration when quotas are issued. Many mills are having to use superior grades, or grades which they would not normally use, in their lower quality yarns due to the fact that they are well stocked with good quality fibre. Thus they are not in a position to buy any lower grade jute because their overall stock position precludes them from receiving an adequate quota. In other words, they are now being penalised due to a wise buying policy early in the season.

New Crop Prospects

The prospects for the new crop have brightened considerably in the last few days. Good rain in nearly all the jute growing districts has been beneficial to the crop, and in nearly all cases, reports are favourable. The recent nor'westers over West Bengal, and rain in Bihar, have relieved the position, and preparation of the ground is now possible, and sowings may soon commence in those parts of Bihar which are behind schedule. The standing crop in Assam, northern Bengal and Pakistan is reported to be very healthy. Although the rivers are generally higher than normal for the time of year, they do not, as yet, constitute any danger.

Members of the trade outside India have now resigned themselves to the fact that there is a genuine shortage of raw jute. Previously, many were prone to think that the raising of prices of raw jute was Calcutta's old idea of raising a short crop scare, but there is no getting away from the fact that the supply of raw material is barely adequate to see the industry through to the next crop. For some unaccountable reason, however, offers of jute have increased over the past week, and now fair quantities are available There is still a certain reluctance to reduce prices, and most sellers see the price going back to maximum rates, although sometimes small lots are available at a discount. One feature of the present market is that there are no large lots on offer. All indications are for 500 maunds or 1,900 maunds, as sellers prefer to release only small quantities at a time, although some of the bigger stockists are known to be holding fair quantities both in Cossipore and uncountry. This has given rise to the thought that there is more jute available than is generally believed, but this is not the case as sellers are not holding anything like the quantities of previous years. Imports into Cossipore, however, continue to be a little better than is normal at this time of year, but as pointed out previously, this is due to the closing down of many sellers' upcountry agencies and the despatch of the balances for stocking in Calcutta.

The Calcutta goods markets have fluctuated during the past week. Heavy goods passed through a price range of about Rs. 4, and at the time of writing are lower than the week's opening. Hessians, on the other hand, have shown more strength, and have moved up from earlier prices. The lack of overseas buyers has forced mills into releasing their goods to bazaar parties in greater proportions than before. This is not a good thing for the trade, as through this method overseas users are eventually held to ransom or cannot get the goods they want. One overseas buyer complaining of the high price of jute goods says it is ironical that the industry should be spending money on advertising jute products abroad, when the mills cannot even sometimes quote for many of the lines the consumers require due to the goods having been released to the open market and offered at inflated rates. This has caused the overseas buyer to turn to substitutes, which will at least protect them against the uncertainty of supplies. Part of the responsibility should lie at the consumer's door, as by staying out of the market on the pretext of high prices, he forces mills into taking this action. Cheapness of jute goods is the best form of publicity, but in a season of jute shortages, high prices are something outside the mills' control.

THE JUTE MARKETS

Manufactured Goods: The market opened on a quiet note with prices unaltered from last week's closing. Overseas buyers showed no interest, and mills were generally out of the market. On Friday, however, conditions changed and some foreign enquiries plus a stronger sentiment in raw jute saw April B Twills moving up by Rs. 2 to Rs. 174.50, and the forward shipment advancing Rs. 4 to Rs. 165. Hessians also improved and 40in. 10oz. rose 74nP to Rs. 1.50 to be quoted at Rs. 57.75 and Rs. 56, respectively, for the near and forward positions. In each case, the forward section was stronger and small enquiries for these deliveries began to close the gap between the quotations. The improvement continued on Saturday and Monday with the forward section again leading the way. During this period, B Twills recorded their highest of the week with Rs. 177 for April shipment, but the volume of genuine business conducted was small. After the opening on Monday, however, prices slumped, and by Tuesday morning, heavy goods had lost Rs. 4.50, thus wiping off the previous gains. The hessian section fared a little better and the losses there were smaller due mainly to reports of small business from the U.S.A. At this stage, April B Twills were quoted at Rs. 171.50 and 40in. 10oz. hessian at Rs. 57.50, and the undertone was weak. Prices continued to fall as favourable reports from the jute fields were received, and the market closed at lower levels.

Opening quotations on Wednesday morning were as follows:

	Ready	May	June	July-Sept.
40in. 7½oz.	42.00	42.00	42.00	40.85
40in. 8oz.	43.25	45.00	45.00	43.25
40in. 10oz.	56.25	56.25	56.00	54.50
B Twills	166.00	166.50	165.00	156.00
Heavy Cees (Plain)	167.00	167.00	165.50	156.00
A Twills	202.00	202.00	201.00	189.00
Liverpools	186.00	168.00	167.00	176.00
Cornsacks	168.00	169.50	168.50	159.00

Raw Jute: There was very little interest in the fibre section at the opening last Thursday, and interest began to develop as the day progressed. From an opening of Rs. 56 for Assam, business was done at rapidly rising prices until quotations reached Rs. 58.50. The sudden interest in buying, it was thought, was the result of the failure of I.J.M.A. delegation to Delhi on the subject of a block closure of mills. Sellers became very reserved at the higher rates, and on Friday, premium prices were paid, although it was generally agreed that the rates paid were not in keeping with the general situation. This encouraged sellers to look for even higher rates, but mills lost interest on the rise, particularly as the quota issued was extremely small. After the week-end, fibre prices declined slowly, but more jute was offered in small lots. Only small business was reported, as sellers' ideas were generally higher than those quoted. Wagon arrivals in Cossipore were again good for the time of year, and last week 310 wagons were reported.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs a md.	Shipment
Assam	152.75	57.00	May-June
Northern	150.50	56.00	,,
Purnea Desal	147.25	55.00	,,
Daissee Selected	158.00	59.00	,,
Assam Tossa	154.00	57.50	,,
Mesta:			
Assam-Northern	146.00	54.50	,,
Desal	146.00	54.50	,,
Daissee	144.75	54.00	,,
Jungli	142.00	53.00	,,
Indian Cuttings	265.00 a bale		,,
Pakistani Cuttings	270.00 a bale		,,

THE FOREIGN JUTE MARKETS

BUYERS EXPECT FALL IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE situation in the Dundee jute market is most disconcerting at present. Buyers in all sections of the trade are hesitant in making purchases. In some ways, the tendency is to look for cheaper prices, crop prospects being quite bright as far as the weather and the probable outturn are concerned, with supplies likely to be available to the industry earlier than usual. On the other hand, the scarcity of jute during this season is acute, and in most producing centres a cut in the jute goods output has had to be resorted to in order to conserve fibre supplies.

Fortunately, Dundee spinners bought freely when prices were around their lowest levels in March, April and May last year and again in July and August before the rise to prohibitive levels started and from which there has been little relief since. There has been a tendency for values for old crop to harden again in Pakistan, but so far spinners have shown no interest in new crop jute. They have not had the opportunity of doing business at what they call "reasonable" prices. The lowest that has been mentioned for new crop jute so far this season is £147 for Mill Lightnings and £142 for Mill Hearts for August-September shipment, c.i.f U.K.-Continent.

Offers for old crop jute are not numerous, and in the case of Crack Lightnings and Crack Hearts, they are higher at £212 and £198, respectively, for May-June shipment. The quantities do not exceed 100 bales. Other grades of old crop jute are quoted at from £191 for Mill Firsts, £184 for Mill Lightnings, £181 for Mill Hearts and £175 for Grade Hearts, £190 for Grade Tossa-2/3, £184 for fours and £181 for Continental Tossa-2/3, all c.i.f. U.K.-Continent, May-June. There has been a quieter market in Dundee and on the Continent. Some secured parcels of jute are being offered, and these have been of some interest to the Continent where spinners are more in need of buying than Dundee spinners.

Calcutta goods have been irregular and were rather dearer towards the close last week at 88s for 40in. 10oz. hessians and 65s 9d for 7½oz., April-May and June, with B Twills at 265s, same shipment, and 84s and 63s and 247s, respectively, July-September f.o.b. Calcutta. Business in Dundee yarns and cloth are quiet and only trifling lots are being bought.

THE PAKISTANI JUTE MARKETS

OVERSEAS BUYING LIFTS FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

IT was incorrectly stated in last week's report that all areas in East Pakistan had enjoyed rains and that the whole of the high-land crop would have been sown by the end of April. It now appears that although April showers were plentiful and beneficial, they did not reach the areas north of Pabna in north Bengal. Although sowings have been large, in this area rain has been scarce, so showers are required urgently before the middle of May. High-land sowings are not, therefore, likely to be completed until there is further rainfall. In other areas in East Pakistan, the rains have helped the growth of the plants which look very healthy.

Meanwhile, the Narayanganj market continues to be erratic. Recently, it was possible to buy loose jute well below E.P.C. prices. Even pucca bales were available in odd lots below the latter. This was profitable for those who could find overseas buyers, since overseas sales have been made at E.P.C. prices. It is reported that Egypt entered the fibre market for making some purchases while other countries made only cautious offers. As a result fibre prices firmed up last week, although cuttings were apparently neglected. They are quoted at Rs. 240 a bale ready and Rs. 235 a bale for May. Although Rumania bought some quantity as reported earlier, it is doubtful whether the Chinese really bought. Meanwhile, dealers are not certain what stocks are left in the market but it is odd to note that a small quantity of loose jute is still coming in at the Narayanganj and Chandpur markets. The quantities are such that even the biggest baler cannot buy more than 100 maunds a day.

The mills have kept out of the market, but there is no doubt that both Indian and Pakistani mills will enter the market at the beginning of the season to purchase jute for their mills. Fortunately, there are indications that the early flow of jute will be heavy, so the activities of the mills is not likely to excite the market too much.

An interesting arbitration case, which has come up recently, is worth reporting. A baler who had an overseas contract, which he did not ship at all, was placed in default by his London buyer. The former sent the case to arbitration on the grounds that, as proved by circulars issued by the Pakistan Jute Association and the Director of Jute, all the jute in Pakistan at that time was wet. The purchase of wet jute is against the law of Pakistan. In order to fulfil the contract, the baler would have had to buy wet jute, thus violating the law of Pakistan. If one has to break the law to fulfil a contract, the latter is null and void. On these grounds, it is said, the baler won the case, for the arbitrators decided that he was not in default.

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that.. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

PLAN MODELS: THE STATISTICAL LIMITATION

Studies on Consumer Behaviour. By Amalendu Ganguly and others. (Indian Statistical Series No. 6. Price Rs. 11.25, *pages* 92.)

A Demonstration Planning Model for India. By Jan Sandee. (Indian Statistical Series No. 7. Price Rs. 10.50, pages 59.)

Planning in India: Selected Explorations in Methodology. By Ragnar Frisch. (Indian Statistical Series No. 8. Price Rs. 11.25, pages 86.)

(All published jointly by Statistical Publishing Society, Calcutta, and Asia Publishing House, Ballard Estate, Bombay 1.)

The book entitled *Studies on Consumer Behaviour* includes seven studies by the research workers of the Indian Statistical Institute. Consumer expenditure has assumed great importance in the context of economic planning. But the stage has yet to be reached when the results of consumption surveys can be positively integrated into the framework of planning, not only because such surveys need to be greatly developed, but because such an integration necessitates a greater degree of control on planning than India has yet achieved. Thus, in the paper entitled "Some Results of Consumption Studies", Messrs Rudra and Roy make the following observation when discussing the ways in which excess food products can be obtained from producers and carried to non-food producing workers: "As long as the property and ownership relationships in agriculture remain as at present, the urban supply of foodgrains is bound to be made subject to factors beyond the control of planners" (Page 94). Apart from a descriptive study of consumption patterns of different classes of rural families, and a study on the applicability of "discriminant analysis" for the classification of families, most of the studies are connected with the measurement of consumer behaviour, culminating in the calculation of income elasticities for various items of consumer expenditure. In this, the mathematical equations used by some well-known foreign econometricians have been tried. But the elasticities vary a great deal from study to study, partly because the different surveys use different methods and data, and partly because the data themselves are not always quite satisfactory.

The second work by Mr. Sandee presents a model designed to show the possibility of planning models in India. It deals with long-term problems, based on an assumed economic situation in 1960 and analyses the Indian economy in 1970. It gives full account of the construction of the model, and includes an elementary introduction to "input-output" and "linear programming theory". But Mr. Sandee's book is essentially meant for the specialist. He admits that there are two weakest points in his model—the linearity assumption for all investments, and the assumed savings function. The former excludes the possibility of allocating investments over time when "it is obvious that some gains can be obtained by first investing in the least capital-intensive lines of production and using the savings and foreign exchange liberated to tackle more capital-intensive projects later". The savings function assumed is stated to be particularly unsatisfactory, since it makes no difference between types of income.

Professor Frisch of the Oslo University is well known for his econometric work. The present volume contains a few of the many memoranda on national planning he wrote while at the Indian Statistical Institute in 1955. The Institute's editors have selected the present collection. Scientific planning, Professor Frisch says, means co-ordinating everything in one simultaneous and integrated piece of analysis, and doing it on some optimum basis. It is solving the whole nexus as one simultaneous problem where everything determines everything else—much in the same way as all the unknowns in a system of equations determine each other simultaneously. One instrument for this is the planning chart, which is an expansion and generalisation of the classical inter-industry table. When the desired ends of planning have been formulated by the appropriate political organs, and the list of contemplated activities has been fixed by the technical and economic experts, a different aspect of the problem emerges, namely, how to find which particular combination of the rates of development of various activities should be chosen to realise the desired ends. For this purpose, the operational analysis has been developed to a large extent based on what is called "linear programming." Professor Frisch's few memoranda presented here develop this theme. Although meant for the specialist, works of this nature provide the lay reader with some idea of what planning really means. The statistical machinery is, however, often woefully inadequate to answer the econometricians' demands.

ACCOUNTING PRINCIPLES

Accounting for Inflation. By Lionel A. Wilk. (Published by Sweet and Maxwell Ltd, London. Price 35s, pages 184.)

The author, formerly a Research Fellow of Birmingham University, has made an interesting study of the effects of changing money values on accounting. He has put forward a method of measuring and recording the effects while, at the same time, retaining all detailed information on "orthodox" accounting. Most companies lose a substantial part of their assets in times of inflation, but it is neither measured nor recorded in orthodox accounts. Under the circumstances, the existing accounting procedures give an insufficient and misleading picture and do not present a "true and fair" view of the affairs of a company.

In trying to find a solution to the problem, the author has made an interesting study through a number of carefully worked-out examples and has made some suggestions for rectifying the defects. Besides, he has made a special study of how bonus issues, shares issued at a premium or discount, preference shares, debentures, etcetera, are affected by inflation. In a chapter dealing with taxation, Mr. Wilk has shown that the unjust effects of charging tax on profits without any allowance for losses arising out of inflation, can be removed without adding to the tax burden of those who receive the corresponding relief. One has to concede that losses due to inflation are just as real as those due to fire or theft, and by ignoring this the orthodox system of accounting fails to give "a true and fair view". The main difficulty is, however, to find out an agreed formula. It will be a major development in the building up of a coherent and logical structure of accounting principles if the limitation of accounts based on historical cost could be eliminated or reduced by adopting new principles. But many objections have been raised to the proposals, the most important being that they introduce an element of uncertainty, that they bring in hypothetical considerations, and that they give too wide a scope for personal opinion which might result in the loss of valuable information produced by the present form of accounting.

ECONOMICS OF HIRAKUD DAM

Economics of a Multi-purpose River Dam. By N. V. Sovani and N. Rath. (Published by Gokhale Institute of Politics and Economics, Poona 4. Review copy received from Asia Publishing House, Contractor Building, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 20, pages 389.)

This publication contains the report of a survey undertaken by the Gokhale Institute of Politics and Economics at the request of the Government of Orissa. The survey aimed to assess the benefits which are likely to accrue to the State from the construction of the dam and related works on the Mahanadi in Hirakud. The report gives, in the first instance, a description of the economic conditions of the Sambalpur and delta zones which are likely to be benefited from the Hirakud dam. The publication contains projections of future crop patterns and the estimates of agricultural production after irrigation; these are compared with the corresponding data for the period before irrigation. There is a discussion of the extent of flood control and the generation of hydro-electric power which may help accelerate economic development of the region. Finally, certain calculations of overall benefits and costs of the project are made, and an estimate is presented about the prospect of financial returns. The first part of the report is interesting because it presents the details of the economic situation of a relatively underdeveloped region with rather limited administrative and revenue data. The second part shows the Institute's painstaking attempts in making projections and estimates. The book contains about 150 useful tables.

SURVEY OF SMALL INDUSTRIES

Small Industry in a Big City: A Survey in Bombay. By D. T. Lakdawala and J. C. Sandesara. (Published by the University of Bombay, Fort, Bombay 1. Price Rs. 20, pages 387.)

The encouragement of small industries as a method of saving capital and for creating more employment opportunities has been accepted as an integral part of development planning in India, but little information has hitherto been available for the formation of a rational policy. The non-factory units, in particular, have remained until recently an entirely unexplored field. Based on a first-hand investigation of more than a thousand units, the survey is the first work of its kind as far as Bombay city is concerned. The data collected for the enquiry cover a wide field. Capital structure, financial position, employment and earnings and the output of units have been dealt with at some length. Besdies, the basic data have been correlated; and they throw valuable light on the productivity of small-scale enterprises. The book also contains interesting notes on some of the important small-scale industries. But one gets an impression after reading the book that the field work in some cases was done by persons who were not familiar with the technical aspects of production. For instance, while discussing the footwear industry (Page 240), it is stated that the cost of leather a lb is Rs. 1.25 to Rs. 2.25. It has not been made clear whether it is bark sole side or wax chrome leather, although in no case the price is Rs. 2.25. Again the profit margin estimated at Rs. 12 for 20 pairs is unrealistic; in Madras it is about Rs. 6 a dozen.

PEPPER MARKET REMAINS QUIET DESPITE OVERSEAS BUYING

SUPPORT FROM THE U.S.A. EXPECTED SHORTLY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Indian pepper market has been quiet for some time now. Market circles, however, say that there has been a steady flow of orders from abroad, so fairly satisfactory quantities have been exported. It is reported that at least 60 percent of the Indian crop has already been sold. Market circles, therefore, think that the remaining 40 percent of the crop will be easily disposed of. The crop is now estimated at 23,000 tons or 24,000 tons, which is slightly less than last year's. The present stocks are estimated around 10,000 tons. Of this, 4,000 tons or 5,000 tons will be required for internal consumption. The remaining 6,000 tons or so is likely to be disposed of during the next six months. But much will depend on the behaviour of the Singapore market which from now on will be the main source of supply since it will get the new Sarawak and Indonesian crop for disposal. U.S. buyers, it is said, are now in a wait-and-see mood, although stocks in America are reported to have declined. The U.S.A. may, therefore, enter the market for meeting her requirements soon. Russia has recently bought some quantity from India. With the 500 tons shipped from Cochin a few days ago, she has lifted about 3,500 tons from this country since the beginning of the current season. Her immediate requirements are believed to have been met, so the support to the market is now expected from America.

Prices Rise in Cashew Market

The cashew market in Quilon is now under the spell of speculation. The steep rise in raw nut prices to Rs. 950 a ton for the average African quality is attributed to speculation by a section of cashew factoryowners. The current rates are at least Rs 250 a ton more than the normal price for the commodity. At the present price, processed kernels should get at least 60 (U.S.) cents a lb to make processing worth while. But the foreign buyer is reluctant to pay anything more than 52 cents to 54 cents a lb.

The cashew processors in Quilon are sharply divided in their assessment of the prevailing situation. While one section says that the total production of kernels this year will be lower than last year's record output of 1.7 million cases of 50 lbs each by 200,000 or 250,000 cases, the other section feels that this assessment is grossly exaggerated. The latter thinks that the kernel output will be larger this year. In the opinion of some processors belonging to this group, the raw nut supply will be around 180,000 tons which will yield about 1.8 million cases of kernels. They do not think that the Indian crop will be appreciably below last year's as is apprehended by the other section. They expect a domestic supply of 60,000 tons, apart from the supply of about 130,000 tons from Africa. Nuts now received from that continent are largely damaged. The processors who bought a recent consignment from Portuguese East Africa found themselves in possession of useless nuts to the extent of over 30 percent. Sellers have, therefore, agreed to give a 27½-percent concession in value as a result of subsequent negotiations.

U.S. and Russian Purchases

The U.S.A. has bought about 600,000 cases of kernels from India so far. She will need another 500,000 or 550,000 cases and is presently offering 52 to 54 cents a lb. The bears among the processors are selling some quantity at this rate. Meanwhile, Russia is reported to have bought about 50,000 cases. Her interest is mostly in prompt shipments but she is said to be unwilling to pay the price shippers are demanding. There is no agreement among processors concerning the assessment of the immediate prospect for the commodity. While one section says that prices are bound to rise ultimately to the processors' advantage, the other section is nervous about the future. The latter says that the consumer will sharply react to any further increase in prices. Besides, the industry is likely to be landed in serious difficulties due to speculative manipulations.

COCHIN TEA SALES

At Dust Sale No. 17, 240,000 kilograms of tea were on offer. There was a useful demand at considerably lower rates with residuals sometimes 50nP below last rates. Others, except useful colourv mediums, declined by 20nP or 30nP.

At Sale No. 18, 505,000 kilograms of tea were on offer. There was a good general demand. Plain and low mediums were steady and sometimes dearer. Mediums and good mediums were 5nP to 10nP easier. Nilgiris were irregular and occasionally dearer with quality.

A glorious past, a striving present and a future bright with hope—this is India's destiny. As the sands run out and run out again, there is a new India emerging.

To help achieve this transformation, the A.C.C. now provides India with 35,00,000 tonnes of cement per annum and is stepping up production still further.

BRITISH TEXTILE REVIEW

NEW PROCESS IN WOOL WEAVING DEVISED

WHEN the Prime Minister of Australia, visiting Britain for the Commonwealth Prime Ministers' conference in March, opened a new laboratory for worsted-processing in Leeds, he acknowledged an endeavour which is vital both to his country and to Britain. Anxiety on the long-term future of wool is felt in Britain as well as in Australia. Mr. G. Eric Scott, retiring president of the British Wool Federation, said at the recent annual meeting in Bradford that the idea that cheap raw materials were necessarily a contributory factor in the prosperity of an industry could no longer be accepted without question. He favoured price support for wool; but as an insurance, not as a substitute for promotion of the fibre. The new laboratory is located at the headquarters of the Wool Industries Research Association. It provides the most comprehensive research facilities available for any fibre anywhere. The establishment is not concerned simply with the material aspect of research but includes also fundamental and applied science, mathematics, electronics and engineering. One of the first tasks of the new research block is to compare worsted machinery made in the U.S.A. and France with machinery made in Britain.

The W.I.R.A. has many major technical achievements to its credit. It has devised a process which can increase by a third the proportion of long fibres extracted from cleaned wool. Its full-width temple, introduced a year ago, is recognised as the first major development in wool weaving in many decades. This device, supplementing the ordinary temple's function of holding the material widthwise, holds it lengthwise during weaving, and thus so eases strain that nine-tenths of the normal breakages of warp are eliminated. When it was displayed at the opening of the new research block, it had already fully proved its value. Dr. A. B. D. Cassie, Director of Research, said that about 1,000 fullwidth temples each saved weavers at the rate of about £40 a year, and that if only 10 percent of the woollen and worsted looms in Britain were fitted with the device, their saving—about £200,000 a year on a tenth of 50,000 looms—would exceed the industry's contribution to the cost of the Research Association. Moves to increase the industry's contribution are evidently not unreasonable.

Training Labour

With higher-productivity equipment available in all main sectors of the textile industry, and some—although not conclusive—signs of slackening of trade, it is rather surprising that the industry is now particularly emphasising recruitment and training of workers. The wool industry, which started systematic training of operatives, under the aegis of the Wool and Allied Textile Employers Council, in 1953, is applying itself with more than usual energy to this task; but still not much more than 10 percent of the members of the Council have introduced these special schemes. The U.K. Cotton Board focussed its Spring Productivity Conference on recruitment, although—or is it because? —less than two years ago there seemed to be no future in an industry which was being deliberately diminished in scale. One of the speakers at the conference was Mr. P. J. Blake, chief personnel officer of Fine Spinners and Doublers, one of Lancashire's biggest groups. He emphasised an aspect of textile work which has regrettably been somewhat neglected in many mills—the visual amenities. Operatives in his group, in the first place those who are required to do shift-work, will in future work in brightly-painted mills, decorated, inside and outside, with plants. Mr. Blake advised his audience not to neglect such facilities as mirrors for the mill girls. Textiles, after all, are produced not only by machines but also by human beings—many of them female.

In the matter of equipment, however, the problem of redundancy remains. It was announced last month that the finishing sections of the Lancashire industry had declared enough machinery for scrapping to qualify for financial assistance from the U.K. Government, but the figures show that the minimum requirements have mostly been exceeded with only small margins, and the minimum requirements are considerably less than the estimated excess of capacity. Nevertheless, the excess will be substantially reduced, and if the industry can make good use of the large quantities of imported cloth it may be able—in normal trading conditions—to find adequate employment for its reduced capacity.

Temporary Recession

The signs of weakening trade have been most apparent in the rayon industry. While synthetic fibre firms, such as British Nylon Spinners, continue to expand their capacity in order to satisfy prospective demand (B.N.S. was unable to satisfy demand last year), Courtaulds (part-owner of B.N.S.) has lately put one of its big rayon plants on short-time working. The man-made fibre industry's latest figures reflect the state of demand (particularly from the carpet industry) which made it necessary to curtail operations in the rayon sector. The total output in February this year, 43.1 million lbs, was nearly 7 million lbs below the figure for February last year. Destocking, apparently, has been an important factor in the recent decline, and, by comparison with a year earlier, the recession in the motor-car industry, affecting the demand for tyres, has been a major cause of weakness. However, the underlying trend seems healthy, for the motor-car industry is recovering, while most of the apparel trade is still buoyant.

The widening of uses of synthetic fibres will in due time lift the man-made fibre figures to a higher plane, even if production of rayon, still much the most important man-made fibre, lags behind. The use of synthetics for rainwear has lately attracted attention. For instance, Qualrayn, which claims to be Britain's biggest producer of Bri-Nylon rainwear, having achieved notable success last year with its Bri-Nylon raincoat for women, is now promoting with energy and confidence a Bri-Nylon raincoat for men. Qualrayn's intention is to attract customers who might be content with one of the better plastic raincoats. Bri-Nylon is less than half the weight of plastic with more than four times its strength; it never tears in wear; it cannot perish, crack, or shrink; it is washable and drip-drying.

There are enthusiastic advocates also of 63-33 Terylene-cotton poplin for the rainwear trade. It is crease-resistant, and its wearing quality is excellent. Cotton fabrics are still the basis of most rainwear, but the range of effects is now wide and varied. The garments have, indeed, changed beyond recognition in the last decade. Rubber proofing is used only for special requirements, and the silicone, acrylic, or popyurethane, finishes which have replaced it add only insignificantly to the weight of the fabric. In the women's trade, rainwear has thus become an integral part of fashion; and this development is reflected in sales. At higher prices, women are buying three times as many raincoats as they bought in the early 1950s.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.3 percent to 125.6 during the week ended 15th April, 1961, compared with 125.8 (revised) for the earlier week. The index was lower by 1.3 percent when compared with the corresponding week of the previous month, but was higher by 4.2 percent than that of a year ago.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100).

Groups and Sub-Groups	Week Ended 15-4-61	8-4-61	16-4-60

QUALITY DUSTS SELL WELL AT INTERNAL TEA SALE

ORTHODOX GRADES RECEIVE BETTER SUPPORT

AT the Internal Sale, there were 23,551 packages of Dusts on offer. The orthodox descriptions received better support than in recent weeks, the clean Dusts and the few bright liquoring lines selling well. The bright legg-cut Dusts realised satisfactory prices, but the remainder were irregular and often easier. The clean (medium) C.T.C. grades met with less demand, and the prices were irregular and generally lower. The good C.T.C.s, however, sold at about last rates. The fibrous teas were once again neglected and proved difficult to sell.

Quotations

	1961 Rs. a kilo	1960 Rs. a lb.
Plain Orthodox Dust	4.25 to 4.45	1.98 to 2.10
Medium Assam Dust	4.40 to 4.80	1.94 to 2.08
Legg-cut Dust	4.50 to 5.20	2.14 to 2.32
Medium Assam C.T.C. Dust	5.90 to 6.30	
Good Assam C.T.C. Dust	6.80 to 7.20	2.45 to 2.80

(Quotations are inclusive of excise duty.)

There was a good demand for 385 packages of Leaf on offer, but the prices were irregular.

LINSEED DULL

The market was dull in the past week and prices showed little movement either way. The general undertone was firm, but trading was limited. Stocks of seeds were fair, but crushers were not keen to buy much due to shorter working hours because of electric power cuts. The oil market was stagnant, although prices were fairly firmly held. Business was almost at a standstill. Millers showed little interest for forward delivery. Only small quantities of ready goods changed hands. The oilcake market was firm. Good local business was done at increased prices. Stocks were limited due to shorter working hours. The latest quotations is as follows: Ready-May delivery Rs. 25.37 a maund.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 25th April and 1st May, 1961)

Cowhides: Wet salted (Ord.) 50,000 pcs. on the basis of Rs. 8.25 to Rs. 12.62 and Rs. 13.50; Wet salted (Slaughtered) 16,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50; Wet salted (Ord.) 20,000 pcs. on the basis of 87nP to 91nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 24,600 pcs. on the basis of Rs. 270 to Rs. 280, Rs. 320 to Rs. 330 and Rs. 440 to Rs. 460; Wet salted (hekilled) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Purneah-Kissenganj 4,900 pcs. on the basis of Rs. 360 to Rs. 390; Patna (Ord.) 4,400 pcs. on the basis of Rs. 230 to Rs. 245; Patna-Muzafferpore 1,000 pcs. on the basis of Rs. 450; Muzafferpore 2,200 pcs. on the basis of Rs. 425 to Rs. 475 and Rs. 500.

Bazaar Stocks

(1st May, 1961)

Cowhides: Wet salted 107,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 38,500 pcs.; Assam-Dinajpur 123,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 210,000 pcs.

SHELLAC STEADY

During the week ended 2nd May, the Market was steady. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 160, 166 sellers.
Lemon No. 1 Shellac	Rs. 160, 166 sellers.
Lemon No. 2 Shellac	Rs. 150, 156 sellers.
F.O. Superfine Shellac	Rs. 140, 146 sellers.
Standard One Shellac	Rs. 136, 142 sellers.
TN Pure Shellac	Rs. 112, 122, 124 sellers.
Golden Kusmi Seedlac (New Crop)	Rs. 160, 162 sellers.
Golden Bysacky Seedlac	Rs. 136, 140 sellers.
One B Seedlac	Rs. 130, 132 sellers.
Two B Seedlac	Rs. 112 sellers.
Manbhum Fine Seedlac	Rs. 126 sellers.
Fine Bysacky Seedlac	Rs 114, 118 sellers.
Genuine Bysacky Seedlac	Rs. 102, 108 sellers.

Shipments during April until the 26th were 11,809 packages.

COMPANY AND PUBLIC NOTICES

DALMIA IRON & STEEL LTD.

NOTICE is hereby given that the Fifth Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at Rajgangpur (Distt. Sundergarh, Orissa State) on Wednesday the 31st May, 1961 at 2 P.M. to transact the following business :—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1960.

(2) To elect a Director in place of Shri Bhagwati Prasad Khaitan who retires by rotation and is eligible for re-election.

(3) To elect a Director in place of Shri J. Dalmia who retires by rotation and is eligible for re-election.

(4) To appoint Auditors and to fix their remuneration.

(5) To approve the appointment of the sole selling Agents for the sale of Spun Cast Iron Pipes and fittings for the areas as detailed in the explanatory note.

(6) To approve the transfer of business including the sole selling Agency of the Company for the sale of Spun Cast Iron Pipes in the State of Madhya Pradesh from Kalani Bros., Indore to Kalani Bros. (Indore) Private Ltd. on the same terms and conditions.

(7) To pass the following resolution with or without modification: Resolved by way of special resolution that approval be and is hereby given to the appointment of Shri Satyanarain Agarwal, relative of a Director of the Company at a salary of Rs. 600/- per month in grade of Rs. 600-100-1500 together with other facilities and amenities in respect of Provident Fund, leave, bonus, gratuity, etc. with effect from 1.6.61.

(8) Any other business which may ordinarily be transacted at the Annual General Meeting.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For DALMIA IRON & STEEL LTD.,
G. KEJRIWAL,
Managing Director.

14th April, 1961.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956 FOR ITEMS 5 TO 7 OF THE AGENDA.

Item No. 5.

Appointment of Sole Selling Agents for any area needs approval of the shareholders under Section 294 of the Companies Act, 1956.

The following parties have been appointed as Sole Selling agents for product of Spun Iron Pipes and fittings for the areas mentioned against their names with effect from 20th August, 1960.

Name of the party.	Area
1. Messrs. Fixit & Co., 90, Mowbrays Road, Madras—18.	Mysore State.
2. Messrs. Bharat Agencies, "Ramniwas" Arkashai Road, Ramnagar, New Delhi—1.	Himachal Pradesh.
3. Messrs. Central Supply Agency, Mahatab Road, Cuttack.	Orissa State.

The broad terms are as follows:—

(a) The Agreement is initially for a period of 2 years, terminable at 6 months' notice by either side. The agreement would automatically stand extended until terminated by giving two months notice by either party to the other party.

(b) Security deposit will carry interest @ 6% per annum.

(c) A commission of 5% is payable on all sales to the public effected directly or indirectly in the area allotted and in case of supply against I.S.D. rate contract, a commission of 2% only is payable.

(d) In special cases higher or lower rate of commission may be settled in terms of Clause 5.4 of the agreement.

The appointment should have been approved by 20.2.61 i.e. within 6 months from the date of appointment but as per the Companies Amendment Act 1960 the appointment can be approved by the shareholders at the next General Meeting and as such the approval is sought at this Annual General Meeting.

The agreement may be inspected by the members at the Registered Office of the Company at Rajgangpur and at the business office of the Company at 4, Dalhousie Square, East, Calcutta during office hours between 2 P.M. and 4 P.M.

Item No. 6.

Messrs. Kalani Brothers were appointed as Sole Selling Agent for the sale of Spun Cast Iron Pipes in the State of Madhya Pradesh with effect from 9.3.59 which appointment was approved by the shareholders on 30.5.1959. On 7.1.60 the business of Kalani Brothers including the sole selling agency had been taken over by Messrs. Kalani Brothers (Indore) Private Ltd. The transfer of sole selling agency for the sale of our Spun Cast Iron Pipes and fittings in the State of Madhya Pradesh from Kalani Brothers to Kalani Brothers (Indore) Private Ltd. may be approved.

Item No. 7.

Shri Satyanarain Agarwal who is a qualified Engineer was appointed as trainee Production Engineer of Spun Iron Pipe Plant from 1.2.61 on a salary of Rs. 475/- per month. He will be completing his preliminary training shortly. It is now proposed that with effect from 1.6.61 Shri Satyanarain Agarwal be designated as Production Engineer, Spun Iron Pipe Plant and be paid salary of Rs. 600/- per month in the grade of 600-100-1500 together with benefits in respect of provident fund, leave, gratuity,etc. He would also be entitled to the benefit of Bonus Schemes introduced by the Company for its employees to achieve target production and improvement in efficiency and also to special bonus, which may be applicable to similar class and grade of employees.

Approval of the Shareholders is being sought to the appointment of Mr. Satyanarain Agarwal in compliance of the requirements of Section 314 of the Companies Act 1956 as he is a relative of Shri G. Kejriwal. Shri G. Kejriwal may be regarded as interested.

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the Twenty-fourth Ordinary General Meeting of the Shareholders of New India Investment Corporation Ltd. will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, at 4 P.M. on Thursday the 25th May, 1961, to transact the following business :—

(1) To receive and adopt the Directors' Report and audited Profit & Loss Accounts and Balance Sheet for the year ended 31.12.60.

(2) To declare dividends recommended by the Directors.

(3) (a) To appoint a Director in place of Sir Walter Michelmore who retires by rotation and being eligible offers himself for re-election.

(b) To appoint a Director in place of Mr. Keshav Prasad Goenka, who retires by rotation, but being an associate of Messrs. Ramdutt Ramkissendass, Secretaries & Treasurers of the Company, his appointment needs a special resolution u/s. 261 of the Companies Act, 1956.

In this connection to consider and if thought fit to pass the following resolution of which special notice as required by Section 190 & Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed separately as required by Section 173 of the said Act.

To be proposed as a Special Resolution:

"Resolved that Mr. Keshav Prasad Goenka, who is an associate of Messrs. Ramdutt Ramkissendass, Secretaries & Treasurers of the Company, be and is hereby re-elected a Director of the Company."

(4) To appoint Auditors and fix their remuneration.

(5) To transact any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 22nd to 25th May, 1961.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.

Calcutta,

Note :—(a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The dividends if declared will be paid on or after 10.6.61, to those shareholders whose names appear on Company's books on 25.5.61 or to their mandatees. No application for dividend warrants will be necessary.

Explanatory Statement u/s. 173.

In the special notice given to the Company of the resolution under item 3(b) of the above it has been stated that during his association with the Company, Mr. Keshav Prasad Goenka has rendered very valuable services by his guidance and advice have been of considerable benefit to the Company. As it is in the interest of the members that the Company should continue to receive the benefit of his advice as a member of the Board, and it is desirable that he be re-appointed a Director.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserve & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb. realised for crop 1958 Lbs.	1958 Rs.	1959 Lbs.	1959 Rs.	Estimate 1960 Lbs.	NAMES	Accounts closed	Mgr. Agts. Secretaries. etc.	Net Profits including taxation Rs.	Dividends per cent 1957	1958	1959	Paid-up per Share Rs.	Latest Market Quotations as available until 3-5-61 Rs.	26-4-61 Rs.	A year ago Rs.

THE FUTURE OF MANAGING AGENCY

THE economic cost to the country of some of the recent legislation designed to limit the scope of the managing agency system is already becoming apparent. Part of it is now plain enough for anybody to see who wants to; the rest will no doubt make itself equally obvious in the near future. For instance, in the promotional field: those new companies which do not have the backing of a reputable managing agency are finding it difficult and expensive to raise capital from the market or from the banking system. There is now a marked shortage of directorial talent among new companies, which can be attributed directly to the absence in so many cases of valuable managing agency support. And the export of traditional items is tending to languish. How much this can be considered a side effect of the discouragement of managing agency is difficult to say at the moment because of the impact of seasonal or cyclical factors. But it remains true that a good deal of the gradual change in emphasis at present taking place in these industries from producing for difficult export markets to exploiting easier home ones, can be traced to the weakening of the managing agency form of organisation within them. Soon other results can be expected to appear, the most probable and dangerous one being the weakness, both financial and managerial, which is likely to develop throughout the whole range of new and smaller companies in any period of contracting trade. One of the great virtues of the managing agency system is that it has stood the test of time, both good times and bad ones, and the future, planning notwithstanding, will certainly contain some of the latter.

This quality of "workability" is not the least of the many put forward in defence of managing agency as an institution by Mr. Geoffrey Tyson, C.I.E., in a newly-published pamphlet on the subject.* Mr. Tyson, who was editor of this newspaper during the interesting and crucial years from 1932 to 1952, has enjoyed unrivalled opportunities of observing the functioning of the system in some of the most exacting conditions any form of business organisation can be called on to face. Also, in his present capacity as Economic Adviser to the India, Pakistan and Burma Association, he is in an excellent position to observe the changes taking place as the system adapts itself to the circumstances of modern India. His study is based on the experience of 32 managing agency companies, some entirely British owned, some completely Indian, but most of them a mixture of the two. In 1956 these 32 managing agents managed 352 companies with a total paid-up capital of Rs. 166 crores. This may not sound large compared with the total size of the private sector in India. But these companies were among the most prosperous, productive and progressive in the country, and their importance was certainly out of all proportion to their size and number.

The study deals factually and descriptively with the historical and current development of a system of business organisation which has very little literature of its own, and whose case has so often gone by default. So many prejudices and misconceptions exist on the subject, that this little book should serve a useful purpose in educating the general public. It contains nothing which could be construed as tediously technical or incomprehensible to the layman, unlike so many previous, more academic, studies. It is, in fact, a clear and lucid exposition of an important subject on which everybody in India should be informed to at least a minimum extent. It also deals with the future, and this is where a good deal of its value lies.

To appreciate the rôle of managing agency in years to come it is necessary to understand what Mr. Tyson means when he says that the system is not an "end in itself", it is only "a means to an end". It is a form of business organisation which has grown up to fill a particular need as presented by the economic circumstances existing in India, and will go on striving to adapt itself to such needs for as long as it has a contribution to make or is not prevented from doing so by legislative action. At present it is adapting itself, to the best of its ability, to the requirements of a rapidly developing economy in which progress is taking place along planned lines and mainly in industries which have not hitherto been the main province of managing agency. Having accepted, for better or worse, the criteria of planning and the fact of private enterprise being a junior partner in future economic progress in this country, the system is settling down to its main functions of finding capital for new industries, providing them with managerial know-how, and, to an increasing extent, forming the contacts necessary to acquire the foreign exchange. All this is well within the field laid down by Government policy, and its popularity with the general public is clear enough from the response recorded whenever a new issue is made associated with the name of a well-known managing agency company. Nowadays there are unfortunately fewer of these than there ought to be, bearing in mind the need for economic expansion. Recent legislation has tended to restrict the functions of the larger agency companies to the ten managed companies permitted them, which they are thereby forced to regard as their indispensable bread and butter. Along with its attempts to curb the malpractices of some managing agencies, the Government has probably succeeded to a large extent in damping down the general spirit of enterprise as well. This is both regrettable and unnecessary. The managing agencies are struggling on as best they can, but nobody at the moment could accuse the companies as a whole of playing the part they could and would like to play in the task of developing India. A complete understanding of the subject, as outlined in this pamphlet, would help to show some of the ways in which Government policy towards managing agency has been less than wise in the past and how it could be corrected in the future to enable the system to play a more active rôle in financing and developing the newer industries which will be required under the successive five year plans. In Mr. Tyson's own words: "To abolish or emasculate the system at a moment when it is vital to maintain the impetus achieved by the first and second plans would create for industry a management crisis of the first magnitude and would permanently impair those entrepreneurial forces on which the private sector of a mixed economy must depend for its growth".

Why, one might ask, should there be any question of wanting to run such risks? The answer lies partly in two complaints which are still levelled at the managing agency system and about which Mr. Tyson has much to say. These are that it concentrates economic power in a few hands and that, partly as a consequence, it is incompatible with democracy and socialism. Without quoting the facts and figures Mr. Tyson gives to show the proportionate part of the Indian economy owned or controlled by those managing agency companies large enough to attract the charge of being concentrations of economic power, it is sufficient to point out that whatever Government policy claims to be for private industry, its efforts appear to be directed towards achieving exactly the opposite in the public sector. There can be no doubt where economic power is concentrated in India today; it is in the hands of the Government—or more specifically, individual Ministers—and no private concentrations, however large, could nowadays hope to challenge it even if there were a desire to do so. Even in the hey-day of managing agency, when Government economic activity was confined to a considerably more limited field than it is now, there was no question of any particular company becoming large enough to exert real power in the community. Today, with the forest of regulations and laws with which the managing agencies have to contend, for the Government to fear the risks of concentrating economic power in private hands is to reveal doubt in its own competence. Nor is there anything particularly undemocratic about managing agencies. They invariably adhere to the normal and approved forms of business ownership and management; indeed they are not in a position to do otherwise. They are often merely minority shareholders in the businesses they manage, and if they are not they are no more reprehensible than any other large companies which have a number of subsidiaries.

In fact, so much of the criticism aimed at the system is the result of deep prejudices or equally deep ignorance, just the things which a reading of this little book should dispel. There is no doubt that India has sought to curb the functions of the managing agency system long before she is economically in a position to do without it. The result is that the system is being forced into a straitjacket of restricted functioning which is preventing it from making its maximum contribution to the development of the economy. Common sense would seem to dictate that, subject to other aspects of the national interest, everything should be done to ensure that the best is made of what managing agency has to offer. The evidence of this pamphlet indicates how that might be done. The main thing is understanding, and that is something which Mr. Tyson offers in brief and easily-readable measure.

*Managing Agency A System of Business Organisation. By Geoffrey Tyson, C.I.E.

—

INDIAN SPICES IN THE U.S.A.

THE U.S.A. last year imported 40 million tons of pepper, mainly from India, and this was 6.7 percent more than 1959 imports. Everything indicates that the Americans have a growing appetite for spicier food, and this new trend is one that the Indian spice trade could follow with profit. Pepper remains the most popular single spice, but numerous other aromatic products are coming into favour with U.S palates: cinnamon, cloves, cumin, poppy seed and oregano. Most of these are imported, from India, East Africa and Indonesia, and in the case of oregano (a flavouring used in the Italian pizza that has become a favourite American snack) from the Mediterranean countries. However, for certain others the U.S.A. has itself become a sizeable producer, such as mustard seed, chili, red pepper and garlic. Altogether American consumption of spices last year was 200 million pounds, a record 75 million pounds higher than 1950 consumption. At this rate, consumption will have doubled within a few years, which indicates an extraordinary revolution in culinary habits, because in general nations are either spice-eaters (like Indians) or definitely anti-spices (like the British) and remain that way indefinitely.

India has to share the profits of the new American taste for pepper with Indonesia, which has just become a big exporter again after a lapse of nine years, with Borneo and Ceylon as well as since very recently, Brazil. Pepper is the only spice traded in the New York Produce Exchange, re-opened last April for the first time since the beginning of the war, and it is notable that its sales continued to grow despite the speculative boom and bust cycle suffered by the commodity in the last 18 months. The late harvesting of the 1959-60 pepper crop in India and the cornering operations of a Chinese syndicate in Singapore caused the spot price of black pepper in New York to soar from 31 cents a pound to 76 cents, before

collapsing back to 45 cents. This was an uncomfortable experience for the spice importers who are making a praiseworthy effort to popularise this valuable Indian export in dollar markets.

The obstacles they have had to overcome have been considerable. The Americans, traditionally, did not take much pepper or other spices and tended to make a patriotic cult of "plain American cooking" which was contrasted with exotic foreign dishes and was, perhaps, the last vestige of pioneering simplicity. This was fostered by doctors and dieticians, whose dictatorial power over what people may eat reaches proportions unknown outside the U.S.A.; they invariably advocated, in sickness or in health, diets of bland unspiced food. Moreover, the mass installation of home refrigerators and deep-freeze equipment made possible the greater use of fresh food and thus cut down on the consumption of spices in pickling and preserving. (It will be remembered that the original European interest in Indian spices, which brought Vasco da Gama to Malabar, was for the preservation of food, rather than its flavouring.) The result was that Indian sales of pepper and other spices were at a very low level in the 1940s.

A number of things have contributed to changing this; the enterprise of Indian spice exporters does not seem to be among them. The enforced tourism of the war and the Cold War, and the immense travel vogue of recent years, have taken millions of Americans to countries where spicier food is eaten and they have taken home a more tolerant palate. The long meat shortage obliged cooks to use the less noble cuts, in well seasoned stews. Weight-consciousness and food faddery (over 40 million Americans today are on some sort of a "diet") helped, since spices are low on sodium and on calories and they help folk stick religiously to unattractive diets free of salt and sugar. The curious craze for outdoor cooking, rather grandly named "barbecues", has promoted the use of pepper too. It is a rare suburban house in the U.S.A. that boasts no backyard grill, and open-air cooks like to prepare barbecued chicken and varieties of *kebab*, whose elaborate sauces call for a mixture of spices. Besides, finely ground pepper is likely to be blown away before it reaches a dish eaten in the open, so the trade has provided a special coarse grind which is, naturally, used in greater quantity.

The opposition of the medical profession to Indian spices was harder to conquer. Since complacent exporters are often unaware of the trouble that importers must take to secure acceptance of their goods in the difficult American market, it is worth recalling that the American Spice Trades Association persuaded a group of Boston physicians to make extended tests on the effects of spices on stomach and heart patients. The findings, suitably publicised, were favourable. Only some ulcer cases suffered "discomfort" after eating black pepper, mustard and chilli but a whole range of common spices (mace, thyme, allspices, sage, caraway seed, etcetera) were reported to be harmless. In a country where the dairy industry was hit by the cholesterol scare and cigarettes by the lung cancer panic, Indian spices won a useful victory when an article in the *American Journal of Gastroenterology* cleared them of ancient suspicions. So well are they cleared that, for an unknown reason, sales of spices have increased by 22 percent in the last 12 months to manufacturers of baby foods.

The tide having turned, the spice trade carried on the attack with customary American vigour. The cookery lessons and good-eating advice in radio and TV programmes, in women's papers and the 600 newspapers that run a recipe column have all featured liberal use of exotic spices ever since the American housewife became interested in preparing tastier dishes. The processors put out standard ranges of spices from common pepper to the rarer condiments; a typical supermarket will offer 86 different varieties of spice in attractive packs, many of which were totally unknown a few years ago. Even now, one would like to know whether they include all the aromatics one finds in north Indian curries and *pilaus*, in Bengali and Marwari sweets and in muslim cooking. The enterprise of the spices importers has opened up a receptive American market that scarcely existed a decade ago, and the Indian trade would do well to explore it carefully, while seeking to maintain some price stability in the staple of the business, common pepper. The age is past when pepper was worth its weight in gold and when spice clippers would circle the earth to carry condiments from Malabar to the Atlantic ports, but pepper and the other spices remain a valuable export whose markets, American experience has shown, are well capable of expansion.

GOVERNMENT BORROWING 1961

THE Calcutta money market has again become tighter and the call rate has increased this week to 5 percent. The temporary relaxation of the past week or so has proved short-lived, but money market circles have not been surprised at this development. The character of monetary demand has changed considerably during the past two years in the sense that a major portion of bank advances are at present industrial in character. Monetary demand, therefore, does not decline appreciably when crop movements slacken. This is why the old notion of busy and slack seasons is now of little significance. In the light of a substantial rise in industrial development during the past two years, advances seem likely to increase rather than decline. In the circumstances, money conditions may not become much easier in coming months.

The prospects for Government borrowing need to be assessed against such a background. At this time of year, market discussion always centres on the prospects of the Central Government's loans, which are generally floated as soon as the seasonal monetary demand for crop movements declines. In view of the fact that banking resources are at present fully employed and that the advances of scheduled banks are running at the high level of Rs. 1,311.29 crores, it is thought that the Central Government may not consider the present time appropriate for issuing new loans. This apart, Government securities have again turned soft and prices have generally moved down in favour of buyers. It is understood that the Life Insurance Corporation is now sitting back and no longer supporting State loans in the way it has been doing during the past few months. As a result, many State loans are having difficulty in finding a new home. As for Central Government loans, institutional support is conspicuous by its absence. Some banks which have been switching from the 3½ percent 1961 loans into longer short-dated stocks, appear to have been satisfied. Except for the prices of near-term short-dated loans, which are enjoying mainly official support, prices of Central Government securities generally have become easier. Sellers predominate in long-dated loans, but buyers are difficult to locate.

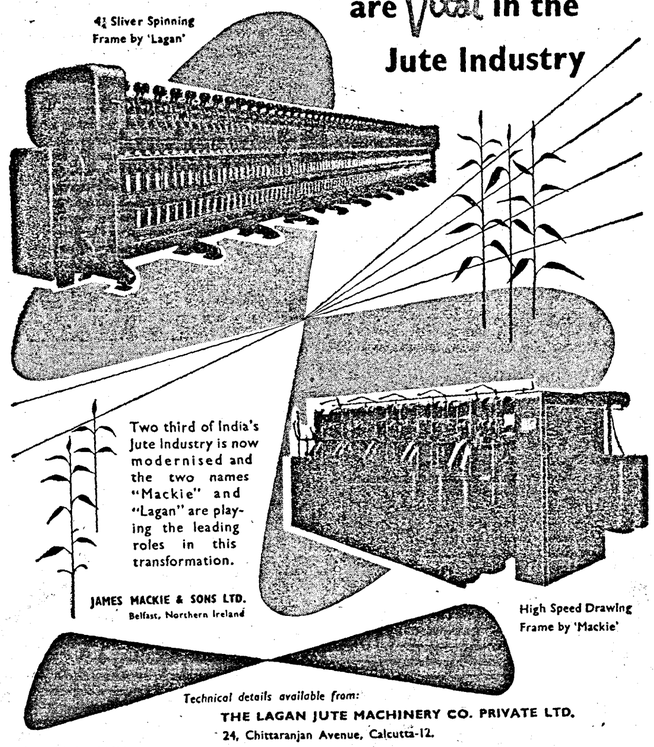
In the circumstances, conditions are scarcely propitious for floating new loans at the present time. There is as yet little indication that official measures are being taken to groom the market for new floatations. At the same time, the 3½ percent 1961 loan for Rs. 75.29 crores is due to be repaid on 1st June, 1961. Another 2½ percent 1961 loan for Rs. 57.01 crores is due for repayment on 1st August, 1961. There is little doubt that both these loans will be repaid in the form of conversion rather than cash. Whether the Government will repay one loan first and the other later is anybody's guess. Market circles, therefore, are speculating on the possibility of only one conversion loan offer for the time being; the Central Government may come to the market later for cash borrowing when money conditions are easier—this is only a hope. Guessing already has started about the terms of the new loans. As for the interest which is likely to be paid, there is little scope for speculation. The fact that an unrealistic Bank rate of 4 percent is still being stubbornly maintained, completely ignoring the more realistic market rates and the fact that higher interest rates are being charged on loans given by the Reserve Bank to the commercial banks, shows that the Government is determined to pay no more than what it pays at present on existing loans. The Government now pays 3½ percent on short-dated, 3¾ percent on medium-dated and 4 percent on long-dated loans.

As official requirements for long-term finance are large, the Government is unlikely to favour any near-term short-dated loan, but medium-dated ones are not expected to prove attractive due to the low interest which they yield. It is, therefore, possible that a short-dated loan may be offered carrying 3½ percent interest and maturing in 1967, because maturities during that year are about the lightest in comparison with other near periods. It is also possible that a further long-term loan will be offered, which may be a 20-year term one carrying interest of 4 percent. What the response will be to the new loans remains one large question mark. As far as public support is concerned, there is virtually very little hope. The Government does not seem to be interested in inducing public response because it appears to have no inclination to bring interest rates in line with market standards. Although the banks are forced to keep a portion of their funds in Government securities, during the past year or so they have unloaded nearly Rs. 70 crores of them, after taking into account the transfer of P.L. 480 funds from the State Bank to the Reserve Bank. Support from the banking community may, therefore, be restricted to the minimum due to the unattractive returns from gilt-edged stocks. The banks cannot be blamed for this attitude in view of the sharp rise in their administrative costs. Besides, the banks are obliged to borrow from the Reserve Bank at rates of interest which are much higher than the yield available on Government securities. In any case, banking resources can be fully employed in more attractive industrial and trade advances.

The Government borrowing programme will, therefore, rely greatly on support from itself, the Reserve Bank, the Life Insurance Corporation and provident funds. The banks will be largely interested in short-dated loans, but longer-dated ones may attract the Life Insurance Corporation and provident funds. As far as the support of the Government and the Reserve Bank is concerned, this is in the nature of window-dressing. To the extent the Reserve Bank can sell its holdings to the market through the tap, there is little objection. If a large portion of the new loans are held by the Reserve Bank with no prospect of eventual release to the market, this virtually amounts to deficit financing. In this perspective the official subscriptions must be watched carefully.

the names **Mackie** and **Lagan** are Vital in the **Jute Industry**

4½ Sliver Spinning Frame by 'Lagan'



Two third of India's Jute Industry is now modernised and the two names "Mackie" and "Lagan" are playing the leading roles in this transformation.

Current News and Comment

The Mysore Kirloskar Offer

Mysore Kirloskar Ltd is offering 15,000 ordinary shares of Rs. 100 each and 25,000 redeemable participating preference shares of Rs. 100 each for subscription at par. The subscription list will open on Monday week. (Fuller details of the announcement appear on a later page). The preference shares are redeemable between 1975 and 1980. They carry a dividend of 8 percent if the ordinary dividend is below 12½ percent, a dividend of 9 percent if the ordinary dividend is more than 12½ percent but less than 15 percent and a dividend of 10 percent if the ordinary dividend is more than 15 percent. The Life Insurance Corporation has underwritten the issue. The proceeds of the new share capital will be used for financing the expansion schemes of the Company.

Shaw Wallace Flour Mills

The working of the flour mills under the managing agency of Shaw Wallace and Co. Ltd has been adversely affected during 1959-60 by short supplies of wheat. These supplies have, however, improved since then and efforts are being made to use the full productive capacities of the factories. The United Flour Mills Co. produced 228,522 quintals during the year ended November 1960, against 31,775 quintals in the previous year. The profit has declined from Rs. 6.04 lakhs in 1958-59 to Rs. 3.88 lakhs in 1959-60, after transferring Rs. 33,904 (against Rs. 33,631) to depreciation. Taxation provision receives Rs. 2.31 lakhs (against Rs. 2.95 lakhs). The ordinary dividend has been cut from 52½ percent, taxable, to 35 percent, taxable, including an interim of 15 percent. It is covered more than twice and works out to a yield of 8.0 percent at a price of Rs. 43.50 a share. The carry-forward is Rs. 28,594, against Rs. 9,730 brought in.

There has been a decline from Rs. 6.96 lakhs to Rs. 3.68 lakhs in the profit of the Hooghly Flour Mills Co. and the ordinary dividend has been reduced from 27½ percent, taxable, to 15 percent, taxable, including an interim of 10 percent. It is covered more than twice and offers a yield of 7.4 percent at a price of Rs. 20.25 a share. Taxation is allocated Rs. 2.25 lakhs (against Rs. 4.09 lakhs) and development rebate reserve Rs. 18,084 (against Rs. 1,956), leaving a carry-forward of Rs. 15,064, compared with Rs. 25,346 brought in. Production was 283,548 quintals, against 285,217 quintals.

Lower Dividend from Delta Jute

Reporting the results of the Delta Jute Mills Co. Ltd for the year ended November 1960, the directors consider the current prospects uncertain. Although the new crop outlook is encouraging, its beneficial effects are not expected to be reflected in the results until the end of 1961. The production cuts following fibre shortages, it is feared, will increase overhead costs. There have also been substantial rises in labour emoluments due to the recommendation of the Wage Board. The working of the mills is being interrupted by power shortages which are likely to continue longer than previously expected. The modern spinning and preparing machinery for the sacking weft yarns has been installed and the delivery of the remaining machinery required for light yarns is expected soon. The scheme of arrangement for amalgamating Delta Jute and Belvedere Jute is making progress. It is proposed to concentrate the working of the two mills in Delta Mills for increasing operational efficiency.

The ordinary dividend of Delta Jute has been reduced from 14 percent, taxable, to 7½ percent, taxable. It is covered more than twice and gives a yield of 4.1 percent at the price of Rs. 185 a share. The profit has declined from Rs. 7.61 lakhs in 1958-59 to Rs. 4.50 lakhs in 1959-60, after reducing depreciation from Rs. 3.81 lakhs to Rs. 3.07 lakhs. Taxation is allocated Rs. 2.40 lakhs (against Rs. 40,000) and development rebate reserve Rs. 46,101 (against Rs. 1.31 lakhs). The carry-forward is Rs. 15,632, compared with Rs. 18,524 brought in. The working was obviously affected by shortages and the high prices of raw jute. Gunny sales increased from Rs. 1.37 crores to Rs. 1.56 crores and stocks of gunnies were lower at Rs. 7.94 lakhs, compared with Rs. 8.36 lakhs.

South Karanpura Coal

The working of the South Karanpura Coal Company has been affected during the year ended August 1960 by lower despatches and higher production costs. The reopening of no. 1 pit in order to work the Argada seam was completed during the period under report, and raisings started in May 1960. Difficult geological conditions increased the production costs. As the mines were declared gassy, the Mines Department prescribed systematic timbering which also increased costs. As for wagon supplies, the position is considered unsatisfactory and raisings may have to be restricted. After providing Rs. 1.34 lakhs (against 1.38 lakhs) for depreciation, the profit has declined from Rs. 2.22 lakhs in 1958-59 to Rs. 1.16 lakhs in 1959-60. The ordinary dividend has been cut from 9 percent, taxable, to 2½ percent, taxable. It is covered more than two-and-a-half times and gives a yield of 2.2 percent at the present price of Rs. 11.12 a share. Taxation is allocated Rs. 56,363 (against Rs. 1.65 lakhs), development rebate reserve Rs. 53,200 (against Rs. 8,800) and bad and doubtful debts reserve Rs. 15,000. There is a carry-forward of Rs. 20,181, against Rs. 19,788 brought in. Raisings were 192,482 tons (against 190,350 tons) and despatches 191,226 tons (against 203,054 tons).

Central Bank does Well

The Central Bank of India has produced excellent working results for the year ended December 1960. Substantial rises in working funds and advances have helped improve the net profit to an all-time high of Rs. 1.33 crores. But Sir Homi Mody, chairman, mentioned in his address at the annual general meeting of the shareholders held in Bombay last week (details of the speech are printed on a later page of this issue of *Capital*), how establishment charges have also increased. The dividend has been raised to Rs. 4.60, taxable, a share, including an interim of Rs. 2.10 a share. It is also proposed to give a further jubilee bonus of 50nP a share, subject to tax.

Referring to the emphasis placed on heavy industries in the draft outline of the third plan, Sir Homi was doubtful whether or not it is going to be beneficial. As the products of heavy capital industries do not absorb the purchasing power of the economy quickly, big investments in these industries generally accentuate inflation. He thinks that the target set for tax resources may prove too burdensome. He pointed to the increased pressure on banking resources. The banking community cannot be expected to meet genuine economic requirements adequately unless bigger and more liberal rediscounting facilities are available from the Reserve Bank.

Polson Sales Rise

The working of Polson Ltd for the year ended December 1960, has been satisfactory, compared with the previous year's results. Sales are up by about 12 percent from Rs. 1.23 crores to Rs. 1.38 crores and the gross profit of Rs. 16.04 lakhs is about 11.4 percent higher than the 1959 figure of Rs. 14.39 lakhs. The dividend has been maintained at Rs. 15 a share, less tax, which is adequately covered by the net profit. After providing Rs. 2.67 lakhs (against Rs. 2.34 lakhs) for depreciation and Rs. 5.75 lakhs (against Rs. 5.20 lakhs) for taxation, the net profit amounts to Rs. 6.30 lakhs, against Rs. 5.65 lakhs. With Rs. 30,136 brought in from the previous year's account and adding Rs. 8,454 being the excess provision of income tax made in the previous year, there is a total of Rs. 6.69 lakhs. From this, the directors have allocated Rs. 60,550 (against Rs. 39,200) to reserves and Rs. 28,893 (against Rs. 19,398) to development rebate. The proposed dividends, both preference and ordinary, absorb Rs. 5.12 lakhs, leaving Rs. 67,953 to be carried forward.

The directors state in their report that the sale of butter and casein was substantially higher while that of coffee declined by about Rs. 9 lakhs, mainly due to the difficulty in maintaining exports. They point out that a difference of opinion between the Government of India and the Government of the importing country concerning the manner of financing settlement of the transactions has resulted in a loss of export business amounting to Rs. 11 lakhs. This was, however, made up partially by a rise of Rs. 2 lakhs in coffee sales in the internal market. Polson has placed orders for butter churn and automatic stagger stamping press with the manufacturers in New Zealand and West Germany, respectively, for a total value of Rs. 1.55 lakhs. These are expected to be received during the current year. The Company has a paid-up capital of Rs. 46.99 lakhs and its reserves and surplus amount to Rs. 18.77 lakhs even after the capitalisation of Rs. 12.85 lakhs in the past few years. At the current price of Rs. 177, the shares of the Company offer a tax-free yield of about 6 percent.

Vijayalaksmi Mills Profit Up

The working of Vijayalakshmi Mills Ltd, Coimbatore, for the year ended December 1960, shows considerable improvement over the previous year's results. Sales have risen from Rs. 69.21 lakhs to Rs. 80.46 lakhs and the gross profit from Rs. 5.97 lakhs to Rs. 8.43 lakhs. The ratio of gross profit to sales works out to 10.4 percent, against 8.6 percent in 1959. Improved results have encouraged the directors to raise the dividend from

7½ percent, taxable, to 12 percent, taxable, a share. After providing Rs. 3.54 lakhs (against Rs. 2.40 lakhs) for depreciation, the net profit amounts to Rs. 4.57 lakhs, against Rs. 3.52 lakhs. After writing back Rs. 3,842 for taxes, the directors have set aside Rs. 83,299 towards bonus for the previous year. Other appropriations include development rebate reserve Rs. 73,098, dividend equalisation fund Rs. 80,000 and general reserve Rs. 40,391.

The directors attribute the improvement in working results in 1960 to the increased production potential and modernisation and rehabilitation effected by the Company. The installed spindlage at the end of December 1960, stood at 33,576, against 26,536 a year ago. The Company replaced 3,200 old spindles with the latest type of ring-frames. The other additions to machinery during the year include six combers, two doubler winders and two roto coners. The directors have asked for the Government's permission to install 300 automatic looms for producing cloth for export, and they appear to be hopeful of its sanction. They propose to raise Rs. 6.19 lakhs through the issue of 6,915 equity shares of Rs. 100 each to finance the rehabilitation and modernisation programme of Vijayalakshmi Mills. The shares are to be issued in the ratio of one share for every two held. The Rs. 100-paid shares of the Company are quoted around Rs. 105, offering a tax-free yield of 8 percent.

Ogale Glass to Expand

Ogale Glass Works Ltd has reported satisfactory results for the year ended December 1960. Sales have risen from Rs. 66.33 lakhs in 1959 to Rs. 72.07 lakhs in 1960. Closing stocks have increased to Rs. 3.12 lakhs from Rs. 2.65 lakhs. While sales have risen by about 8.6 percent, the gross profit has shown a rise of about 32 percent from Rs. 6.61 lakhs to Rs. 8.76 lakhs. The directors have provided Rs. 3.19 lakhs (against Rs. 2.66 lakhs) for depreciation. In addition, a sum of Rs. 1 lakh has been used to reduce the arrears of depreciation to Rs. 8.06 lakhs. No provision has been made for taxation because of the arrears of depreciation. The directors have increased the dividend from 8 percent, less tax, to 12 percent, less tax. The allocation to reserve for rehabilitation and modernisation of plant and machinery has been doubled to Rs. 2 lakhs, and a sum of Rs. 28,596 has been transferred to development rebate reserve. After providing for the proposed dividend and making other necessary adjustments, there remains Rs. 97,237 to be carried forward, against Rs. 1.16 lakhs brought in.

The directors state that with the growth of the heavy chemical industry in India, the demand for glass carboys and other large-sized glass containers is growing. Ogale Glass proposes to set up a branch factory in the Pimpri industrial area near Poona for meeting the rising demand and for producing glass bricks, tiles and other heavy pressed-ware on a bigger scale. The directors feel that the production at the new factory will be more economical than in Ogalewadi because of various locational advantages. The Company has received the licence for expansion, and the construction of buildings has commenced. In order to finance the expansion programme, it proposes to issue new shares out of the unsubscribed capital in the ratio of one share for every four held. The new shares will be offered to the public only if they are not taken up by the existing shareholders. The Rs. 5-paid shares of the Company are quoted around Rs. 6, offering a gross yield of about 8.3 percent.

Gwalior Rayon to Make Machinery

It is reliably understood that the Gwalior Rayon Silk Manufacturing (Wvg.) Co. Ltd has received the sanction from the Government for manufacturing rayon machinery. In fact, the Company has already manufactured most of the machinery needed for its expansion recently, but with the present sanction it will be making rayon machinery for the entire country. A huge workshop for this purpose will soon be set up in Nagda in Madhya Pradesh at an estimated cost of Rs. 1 crore. A senior official of Birla Brothers is going abroad to secure technical collaboration. It is reported that when the unit goes into full production, it will not only meet the full requirements of India, but also export equipment to some of the south-east Asian countries. Incidentally, the Company's rayon-grade pulp plant in Kerala—which is the first to manufacture pulp from bamboo and has an installed capacity of 150 tons a day—is expected to go into production some time in the middle of next year. The Rs. 10-paid shares of Gwalior Rayon are currently quoted around Rs. 45. Early in 1960, they were available around Rs. 24.24, but later shot up to Rs. 49. After reacting to Rs. 43 early this year, they were up again at Rs. 49 in March. Against the paid-up equity capital of Rs. 2.5 crores, shareholder's reserves total Rs. 2.60 crores and the gross block of Rs. 6.50 crores has been written down to around Rs. 2.38 crores. The book value of the shares works out to Rs. 20.41.

Elphinstone Buys Moon Mills

In their report to the shareholders for 1960, the directors of the Elphinstone Spinning and Weaving Co. Ltd state that they have made an agreement with the Moon Mills Ltd, Bombay, to purchase the entire block of land, buildings and machinery for a total price of Rs. 35 lakhs. The Moon Mills has a complement of about 900 looms. The directors are contemplating a replacement and rehabilitation scheme for the Moon Mills after they acquire it. The rehabilitation scheme, it is learnt, is estimated to cost about Rs. 75 lakhs. This is proposed to be financed partly from the Company's existing resources and partly from an additional loan from the National Industrial Development Corporation. In 1960, the Company made additions to machinery of the value of Rs. 12.74 lakhs and more machinery has been received since the end of the year. Orders have been placed for 48 Texima automatic looms and a mercerising plant. Elphinstone Mills has reported encouraging results for 1960, with the gross profit rising from Rs. 18.54 lakhs to Rs. 35.83 lakhs. The dividend has been increased from 14 percent, less tax, to 18 percent, less tax. Investors in the shares who have been amply rewarded through a higher dividend and an enormous capital appreciation from Rs. 35 in 1960 to Rs. 88, can take a reasonably optimistic view of the future.

Progress of Ultramarine and Pigments

The chairman of the Ultramarine and Pigments Ltd, Mr. N. S. Iyengar, assured the shareholders in Bombay recently that the directors are doing everything in their power to expedite the completion of the factory and start production as early as possible. The Company has purchased about 4½ acres of land in the industrial belt in Ambattur —about 12 miles from Madras city—and the Madras Electricity authorities have agreed to supply power. The technical director of the Company's German collaborators had approved of the site and various other plans. Ultramarine and Pigments has received a licence for importing machinery and equipment from Europe. Orders for all the machinery needed for the first phase of production have been placed with manufacturers in Germany and Holland in consultation with the foreign collaborators. The shipment of machinery for the Rs. 25-lakh project is expected to commence between July and August. The Company, Mr. Iyengar said, expects to receive all the machinery in India and complete erection by about the end of the current year. Orders have also been placed for the fabrication of the equipment in India. Tenders have been received for structural as well as general works and contracts will be given in a few days' time. The Rs. 50-paid shares of the Company are currently quoted around Rs. 54.

United Malleable: A New Enterprise

United Malleable Co. Private Ltd, which has been promoted by the well-known industrial house of Somanis, will soon be converted into a public Company. Its authorised capital is likely to be raised from Rs. 1.20 crores to Rs. 2.50 crores. United Malleable has received a licence for manufacturing 4,800 tons of galvanised malleable iron and pipe fittings. The factory will be located in a suburb of Bombay for which land has already been acquired. The entire project is estimated to cost about Rs. 1.50 crores, of which the foreign exchange component is valued around Rs. 88 lakhs. The Company has secured the technical and financial collaboration of a reputed foreign firm. The terms of the collaboration agreement are reported to have been approved by the Government. The foreign collaborating firm will supply the entire plant and machinery. Fifty percent of the value of the plant and equipment will be invested by the foreign firm in the Company's equity capital and the remaining half will be payable to them in instalments out of the foreign exchange earned through the export of finished products. When in full production, United Malleable is expected to earn about Rs. 32 crores by exporting the latter. Of the authorised capital of Rs. 2.50 crores, only Rs. 1.20 crores is likely to be issued for the present. The promoters, directors and their friends are expected to take up shares worth Rs. 20 lakhs. The foreign collaborators will subscribe for shares of the value of Rs. 40 lakhs. The balance of Rs. 60 lakhs is likely to be offered to the public after a few months.

Botanium to Make Chemicals

Botanium Ltd is a new Company which has been promoted by Messrs N. Wadia and Sons for manufacturing certain chemicals. The factory will be located near Bombay, and the plant will have a production capacity of 420 tons of titanium dioxide a month and 100 tons of sulphuric acid a month. The Company has secured the technical and financial collaboration of Laporte which is a reputed U.K. chemical manufacturing firm. The Company's authorised capital will be Rs. 5 crores, of which Rs. 2 crores will be issued initially. Botanium Ltd is expected to enter the market for raising capital after two or three months.

Eric Offers New Facilities

The Export Risks Insurance Corporation continues to devise new forms of cover to suit the varying needs of exporters and to provide for widely differing patterns of trade in order to stimulate the country's exports. The managing director, Mr. T. C. Kapur, announced in Bombay on 3rd May that the Corporation had decided to extend its field of activities by covering manufacturers' risks while supplying goods to shippers on credit. This will help exporters to get favourable terms of credit from manufacturers. Not all manufacturers export goods themselves. They sell their goods to shippers who undertake the export trade. Since foreign buyers quite often want goods on credit, exporters are obliged to obtain their goods from manufacturers on credit. It is said that several manufacturers have recently urged the Corporation to cover the risks involved in giving credit facilities to exporters. Mr. Kapur expressed the hope that all those who are engaged in manufacturing goods meant for export, will take advantage of the new facilities offered by the Corporation and extend liberal credit facilities to shippers. Referring to pre-shipment finance, Mr. Kapur stated that the Corporation has also decided to cover risks where such advances are given by institutions other than banks and Government organisations. Pre-shipment loans by banks and Government organisations have already been covered under packing credit insurance policies issued since the end of last year.

Reviewing the progress of the Corporation, Mr. Kapur said that during the first four months of the current year, it had issued 95 policies with a maximum liability of Rs. 2.34 crores, compared with 82 policies with a liability of Rs. 1.67 crores in the corresponding period last year. Since its inception in October 1957 to April 1961, the Corporation has issued 867 policies with a total liability of Rs. 28.19 crores. It has earned a total premium income of Rs. 6.29 lakhs, and it paid 33 claims of the value of Rs. 4.52 lakhs during this period. Shipments and contracts insured during January-April 1961 amounted to Rs 2.66 crores with a premium income of Rs. 84,183, compared with Rs. 2.55 crores with a premium of Rs. 78,500 in January-April 1960.

Oilcake Freight Rise Resented

The Karmahom Conference Lines, which had put up the freight for oilcakes shipped from India to the U.K. and Continental ports from 100s to 115s a long ton from 1st February, have announced a further increase of 17½s a ton from 1st July. This will naturally affect the competitive position of Indian oilcakes. The U.K. quotations for groundnut extractions 50 percent O. and A., July-August shipment, have remained almost unchanged around £28 17½s a ton after the freight rise announcement, while prices in the local market have declined by about Rs. 25 a ton. Since export business in oilcakes is very competitive and the shippers' margin seldom exceeds 2s to 3s a ton, exporters who have sold fairly large quantities of oilcakes for shipment after June, will be put to heavy losses. The trade says that there is no justification for the further increase in freight except that Karmahom Conference Lines enjoy a monopoly on this route and the deferred rebate system makes it difficult for exporters to charter freight even when it is easily available at cheaper rates. They find support for their view-point from the fact that neither the Pacific Lines nor the Atlantic Lines have effected any increase in their freight rates while the Karmahom Conference Lines have put it up by 17½s.

The marked rise in the price of soyabean meal to around £40 to £41 a ton because of the emergence of Chinese buying had encouraged the hope that India might succeed in selling large quantities of oilcakes this year and make up partially the loss from the decline in oil exports. But most export houses are now inclined to revise their ideas about the outlook for oilcakes with the increase of 17½s a long ton in the freight from 1st July. The trade thinks that it will now be difficult for India to compete with Africa and Latin American countries. Any setback in oilcake exports will be viewed with great concern because the performance of oils has been very disappointing this year. The view is widely shared that while it may not be possible for the Indian Government to persuade the Karmahom Conference Lines to adopt a freight policy which will help Indian exports, New Delhi can certainly insist on the abolition of the deferred rebate system so that shippers can avail themselves of the benefit of charter freight whenever possible, which they are unable to do at present. Shipments of oilseeds, oils and oilcakes from Bombay between 1st January and 24th April with the corresponding figures for the same period in 1960 are as follows: groundnut 5,982 tons (11,066 tons), sesameseed six tons (415), cottonseed 99 tons (nil), kardiseed nil (25), groundnut oil 143 tons (1,893), linseed oil 559 tons (2,098), castor oil 4,879 tons (15,918), groundnut expellers 4,431 tons (14,287), groundnut extractions 47,222 tons (46,218), linseed cake 4,737 tons (21,687), cottonseed cake 11,599 tons (1), mowrah cake 30 tons (79) and nigercake nil (2,580 tons).

Cotton Export Quota Controversy

The Government of India has released a further quantity of 50,000 bales of cotton, other than Bengal Deshi, and stapling ⅞ inch and below, for export on a first-come-first-served basis, subject to an individual ceiling of 2,000 bales. Of this, 5 percent has been reserved for co-operative societies situated in areas growing such cotton. Shipping bills will be accepted from 12th May, and business transacted before 5th May, the date of the trade notice, will not be considered valid. The latest quota brings the total quantity of cotton allowed for export so far this season to 210,000 bales. And if one were to go by the Industry Minister, Mr. Manubhai Shah's statement on cotton in the Lok Sabha, the Government might soon announce a further quota of 30,000 to 40,000 bales of short staple cotton grown mostly in Gujarat State. It is almost certain that the ceiling for the shippers' share of 47,500 bales will be reached on the very first day of the acceptance of the shipping bills—12th May, that is, because commitments made by shippers in anticipation of the quota are said to exceed the quantity permitted for export. Sustained shipper buying has lifted the prices of Kalagin and Wagad by nearly Rs. 70 to 80 a candy over the past few weeks; these varieties are now quoted almost at the ceiling rates.

The market's reaction to the quota announcement is mixed. Exporters are naturally happy because of the opportunity that the new quota offers them. In spite of the recent steep rise in prices, the profit margin on exports is reported to be appreciable. But by and large, the trade has been opposed to the export of short staple cotton. It is no secret that the Cotton Buyers Association, Bombay, which along with the East India Cotton Association had pleaded for an export quota in February, had recently advised the authorities against permitting the export of short staple cotton on the ground that estimates about the Kalagin and Wagad crops had been revised downwards and that after allowing for normal mill consumption, there would not remain a satisfactory carryover at the end of the season. It is pointed out that since yarn of 10 counts is commanding a fancy premium over ex-mill rates, the supply position of cotton is not so very comfortable. Moreover, the export of short staple cotton is considered by many as inconsistent with the import of large quantities of short staple cotton from the U.S.A. U.S. cotton is far more costly than the equivalent varieties of indigenous cotton, although the former is imported under P.L. 480 aid. The view is widely shared that in allowing the export of short staple cotton, the Government has not been guided by the consideration of foreign exchange earning; it has simply yielded to the growing pressure from Gujarat State. Its Chief Minister, Dr. Jivraj Mehta, had urged the Central Government to take effective measures, including exports to help the State tide over the crisis of accumulation of raw cotton stocks. Surprising as it might seem, the Indian Cotton Mills Federation, while opposing any further export quota for Bengal Deshi, had endorsed Dr. Jivraj Mehta's plea for an export quota of short staple cotton. While opinion about the desirability of permitting the export of short staple cotton has always been divided, the trade is generally of the view that there exists a substantial exportable surplus of Bengal Deshi and that if it is not allowed for export soon enough, its quality will deteriorate and the country will lose valuable foreign exchange.

Indian Manganese Ore Exports Decline

There has been a marked decline in manganese ore exports from India since 1957. Although there was some improvement in 1960, the overall position remains very unsatisfactory. In 1957, India exported nearly 1.7 million tons of manganese ore, which earned about Rs. 30 crores of foreign exchange. But in 1958, exports dropped sharply to 928,000 tons. The performance in 1959 was no better. Exports in 1960 are placed around 1.15 million tons, and this improvement is attributed mainly to linked deals and barter transactions. Cash sales were poor. The outlook for the current year is not considered encouraging, unless the Government revives barters suspended since some months, and adopts a more rational export policy. Since India's reserves of manganese ore are considered to be second only to those of Russia, the recent export decline is a matter of serious concern, the more so because of the pressing need for earning foreign exchange.

There are many reasons for the decline. Russia which has emerged as a big supplier of this ore, follows price policies not necessarily dictated by commercial considerations. Besides, many new mining areas have been developed in other countries, the most important of them being Brazil. These countries are more advantageously placed than India because of their nearness to the major steel producers. Increased world production has brought about a substantial fall in the prices of manganese ore in international markets, and Indian ore has been completely priced out. Against the current world price of about $28 a ton, the parity for Indian ore works out to around £35 a ton. But apart from these extraneous factors, there are other reasons as well why India has been steadily losing ground. The chairman of the Western India Minerals Association, Mr. Natwarlal S. Worah, stated at a recent Press conference in Bombay that the Government policy (or perhaps the lack of it) was much to blame for the decline in manganese ore exports. In its anxiety to boost the activities of the State Trading Corporation, official policies concerning barter transactions have lacked consistency and they have often been vague. Sometimes individual barters were allowed on an *ad hoc* basis only to be dropped later on. The Government's fluctuating policy in barter deals did not inspire confidence among exporters, nor did it encourage mineowners to risk large investments to plan production on a long-term basis which is necessary for keeping down the production cost.

Mr. Worah suggested the appointment of an independent commission consisting of geologists, mining engineers, mine-owners and exporters to assess the cost structure of mangenese ore at various stages. He also stressed the need for constituting a permanent committee of geologists, mining engineers, mine-owners and exporters to guide and advise the trade as to how the production cost could be reduced. Since these proposals would naturally take time for implementation, Mr. Worah pleaded for interim relief measures. He suggested that the Government should reduce the railway freight on the ore to the 1953 level, port charges to those prevailing before 1956 and the royalty to a uniform rate of Rs. 5 a dry long ton. He also wants the dead rent to be waived entirely until the market improves and stabilises for two years continuously. Cash incentives to mine-owners who produced ores of 30 to 42 percent grade and incentives to exporters in the form of subsidiary cash price or import licences for certain listed commodities have also been advocated. Mr. Worah added that the State Trading Corporation also could play a useful rôle in assisting the mine-owners and exporters by acting as a guide and intermediary to place the difficulties of the industry and trade before the proper authorities for their quick disposal instead of being merely commission agents as at present. The first plan export target of 1.5 million tons of manganese ore was achieved by the established exporters and the mine-owners, although no organised efforts were made, nor any incentive or guidance was given by the Government. The entry of the State Trading Corporation since about the middle of 1956 has done little to further the cause of manganese ore exports, Mr. Worah stressed.

Increasing Mineral Output

The Indian mineral industry has made considerable progress over the past few years. Between 1955 and 1960, the value of annual production has increased by about 68 percent from Rs. 94 crores to Rs. 160 crores, and export earnings from minerals have gone up by about 38 percent from Rs. 37 crores to Rs. 51 crores. The recent performance seems encouraging, but the country will need to make a much bigger effort for quicker exploitation of its vast mineral wealth. While India's resources of copper, lead, zinc, nickel and cobalt are rather poor, the reserves of iron ore, coal, manganese, mica, bauxite, chromite and monazite are considerable. Inaugurating the ninth session of the Mineral Advisory Board in Bombay on 2nd May, Mr. Y. B. Chavan, Chief Minister of Maharashtra, observed that the development of minerals within the country, their extraction, beneficiation and treatment represented a basic necessity. Talking about his own State, Mr. Chavan said that Maharashtra was young compared with many other States in the field of mineral exploitation, except for the manganese industry in Vidarbha. He looked for the day when a metallurgical industry would be set up to exploit the State's various ores. He called for a solution of the transport bottleneck and stressed the importance of a periodic review of the duties, levies, royalties, and prices.

The Central Minister for Mines, Mr. K. D. Malaviya, who presided over the Mineral Advisory Board meeting, appealed to private enterprise to co-operate fully with the Government in developing the mining industry. He assured the private sector that the Government's policy was elastic and not dogmatic. Mr. Malaviya stated that the Government was making efforts to step up the production of lead and zinc, but there would still remain a shortfall in the country's estimated need of 187,000 tons of zinc and 60,000 tons of lead by the end of the third plan. Much attention was being paid to the production of base metals. Referring to the transport bottleneck for the coal industry, the Minister stated that a rational use of the transport system had become necessary and that transport may have to be rationed. He also emphasised the need for boosting mineral exports, but here the initiative seems to rest mainly with the Government. The Mineral Advisory Board, it was reported, took some important decisions at its latest meeting in Bombay. The State Trading Corporation which has created a special fund to aid the import of mining equipment will make this benefit available to mine-owners on an instalment basis; this will be widely welcomed. The Board has decided to constitute a standing committee to keep under constant review the problems of production, transport and marketing. On the question of amalgamation of uneconomic mines the Board, it is said, was of the view that compulsion should be avoided and that the State Government should offer every possible facilities wherever lessees voluntarily agree to amalgamate their mines.

Threatening General Insurance

The question of nationalising general insurance, which is frequently raised in the Lok Sabha in spite of the Government's categorial declaration that it does not contemplate any such move, was revived again by a communist member in the course of the debate on the Finance Bill. The Finance Minister, once again, reaffirmed that the Government did not propose to take over general insurance since it was a very risky business, and the margin of profit was almost nil. If the Government nationalised this industry, said Mr. Desai, it would be taking over a very risky business, and to saddle the public revenues with the risks would not be a wise policy. But he could not resist the temptation of repeating the threat, which the Government periodically does, that if "a day comes when it becomes absolutely necessary to do so, and there is no other way to prevent abuse as it becomes a general abuse, the Government will have no hesitation" in nationalising general insurance. The threat may be vague, but such statements from high quarters have already created a feeling of uncertainty among the general insurers. The Finance Minister's statement has added to it. Abuse is too imprecise a term to go by. What the Government should be concerned to see is that there is no violation of the Insurance Act, 1938, and the rules made under it. The Government cannot eradicate any "abuse" by nationalisation, as the example of life insurance should show. Quite a number of undertakings run by the Government itself are not free from what Mr. Desai may wish to call "abuse". General insurance has been persistently charged with payment of illegal commissions and rebates. But much of it, if not the whole, is actually procuration expense. The companies are as much anxious as anybody else to reduce the procuration expense as it cuts into their profits. Buying commission in general insurance has been statutorily limited. If the insuring public demand from the companies a commission higher than what the statutory limit allows, the latter have to concede, otherwise, they will have to go out of business in a highly competitive field. Nationalisation may put a stop to this abuse, but in that case the Government will not be doing much insurance business. Remedies for the eradication of rebates and excessive commission costs are not easy to find. Even for normal insurance, the cost comes to around 25 percent including the expenses of a field officer. There cannot be any "abuse", if, statistically, costs are around this level. In business, many devices are permissible for the sake of sustenance and progress, provided the practices are above board and there is no misappropriation of funds. The general insurance industry has not been proved guilty in this latter count.

Power for Hindustan Aluminium

The Chief Minister of Uttar Pradesh, Mr. C. B. Gupta, has said that the Hindustan Aluminium Corporation is negotiating with the Central Government for importing a 50,000-ton plant instead of a 20,000-ton plant. In case the latter allowed Hindustan Aluminium to import a 50,000-ton plant, Mr. Gupta added, the Corporation would generate its own electricity, and the agreement which it has with the State Government for the supply of power from the Rihand project would be cancelled. This agreement came in for criticism again during the State Budget debate when the Chief Minister defended it on the ground that the Corporation

could have got electricity from other States at cheaper rates than were quoted in the U.P.

In the State as a whole, demands for power amounting to 250,000 kW are pending with the Government. The goal for the second five year plan was to produce 395,000 kW, but actually only about 60,000 kW could be produced, with the result that the State, at the end of the last plan, was in deficit by 334,000 kW. Under the third plan, the Orba thermal project with a capacity of 250,000 kW will be taken up with the help of Russia. This, along with other schemes, is expected to make good the State's present power deficiency. The Government has, in the meanwhile, advised the State Electricity Board to take over private companies which are only doing distribution work after receiving bulk supplies from the Government. In all likelihood, therefore, their present licences will not be renewed when they expire.

With the installation of transmission lines and construction of sub-stations, the Rihand power station will begin supplying electricity from March 1962. The Hindustan Aluminium Corporation has also been informed accordingly. According to one report, the only stipulation which the Corporation has sought while agreeing to forgo the Rihand power is an assurance that when the power supply from this source is at its peak, the surplus energy may be given to the aluminium factory to enable it to overhaul its turbines. The arrangement will be useful to both the Government and the Corporation. During the rainy season, the Government could have full power production while the Corporation would not have to keep a stand-by turbine for overhauling and repairs.

S. T. C. Harms the Chemical Trade

Speaking at the annual general meeting of the Indian Chemical Merchants Association in Calcutta recently, Mr. B. L. Kajaria, president, said that the production of various chemicals showed a substantial improvement during the past year. In spite of the increase in output, India imported chemicals worth Rs. 39.38 crores in 1960. Due to the rise in indigenous production as well as the foreign exchange shortage, chemical imports have been drastically restricted. But the Government's policy has adversely affected established importers. Mr. Kajaria said that when camphor was obtained by established importers, its price remained below Rs. 10 a lb. But, when the State Trading Corporation started importing it, the price began to rise, and it is now being sold at over Rs. 15 a lb. There is no justification for stopping the issue of licences to established importers, especially when consumers are finding it difficult to obtain their normal requirements. Similarly, mercury imported by the S.T.C. is being sold to the consumer at Rs. 1,800 a flask, against the landed cost of about Rs. 1,000 a flask. If the Government entrusts the import and distribution of this commodity to established importers, consumers could get it at a much lower price. The president said that apart from the canalisation of imports of caustic soda, heavy soda ash, etcetera, through the S.T.C., licences have been given to it in recent months for importing numerous chemicals which, till recently, were obtained through established importers. It is reported that the S.T.C. has been allowed to import in accordance with the trade agreements entered into by the Government with east European countries and that most imports are being made on the "stock and sale" basis, necessitating price and distribution controls.

Coimbatore Pioneer Pays Less

The working of the Coimbatore Pioneer Mills Ltd for the year ended December 1960, shows a gross profit of Rs. 22.03 lakhs, after deducting all expenses, bonus to employees and the interest on borrowed capital, but before charging depreciation and development rebate. Out of this amount, the directors have provided Rs. 5.36 lakhs (against Rs. 5.37 lakhs) for depreciation. Development rebate accounts for Rs. 33,409 (against Rs. 2.53 lakhs). After making the above appropriations, there is a net profit of Rs. 14.64 lakhs, against Rs. 15 lakhs. With Rs. 1.28 lakhs brought forward from the previous year, the total available surplus is Rs. 15.93 lakhs. Taxation provision is allocated Rs. 7.50 lakhs (against Rs. 8.45 lakhs), and a sum of Rs. 4 lakhs has been transferred to general reserve (against nil). The cumulative preference dividend at 8.45 percent, subject to deduction of tax, accounts for Rs. 8,450. A taxable ordinary dividend of 16 percent is recommended, against 25 percent taxable, for the previous year. This will absorb Rs. 3.20 lakhs. The balance of Rs. 14,352 is carried forward.

During the year, foreign cotton for higher counts had to be obtained by paying a premium of 20 percent of the cost of cotton under the export promotion incentive scheme to the Textile Commissioner or his nominee. The mills worked with a full complement for 307 days in three shifts at Peelamedu, spinning 40s to 100s counts. The "B" mills worked for 306 days in two shifts at Perianaickenpalayam, spinning yarn of counts 20s, 24s, 26s and 40s.

The directors say that satisfactory progress has been achieved in the Company's expansion scheme, under which an additional 10,000 spindles will be installed at "B" mills. Orders have been placed for the preparatory machines, and the delivery is expected soon. Coimbatore Pioneer hopes to work the newly-installed unit for spinning staple-fibre yarn from about the middle of the current year. The board proposes to establish a separate unit under the Company as its subsidiary for manufacturing ball and roller bearings. The scheme is expected to cost about Rs. 1.20 crores (including working capital), and it will be implemented within two or three years in three stages. The directors also desire to make a public issue for the balance of Rs. 30 lakhs of the authorised capital after securing the consent of the Controller of Capital Issues.

Anglo-Japanese Trade Agreement

The Anglo-Japanese trade agreement concluded in July last year and covering the 12 months ended 31st March this year has been extended until 30th September. Quotas for the six months have in most instances been fixed at one half the amounts arranged for the year just ended, but for some seasonal trades, such as exports of wool yarns and cloths to Japan, adjustments have been made. For Japanese exports of cotton goods to the U.K. the agreement provides two quotas, one for goods for retention and another for goods for processing and re-export.

Merchants and converters in Lancashire do not take the same view of imports as spinners and manufacturers do, and the report of the export section of the Cotton and Rayon Merchants Association, published in that organisation's *Bulletin*, refers to discussions with officials of the Board of Trade about imports of grey cloth from Japan for processing and re-export. The merchants, it appears, have again pointed out that U.K. exporters are unduly handicapped by the present restrictions, which not only limit the amout of cloth which can be imported from Japan, but also limit the markets to which this cloth can be shipped after processing. On the other hand, the *Bulletin* also reports that there have been meetings between representatives of the Merchants' Association and of the Textile Finishing Trades Association about imports from Hongkong. Concern was expressed by all parties about the situation which has arisen under the present arrangements because imports of made-up cotton goods have increased substantially at the expense of grey cotton piecegoods. Another point which must be causing concern is the position in imports of finished cloth. The yardage of these goods in 1960 was nearly double that in 1959.

CORRESPONDENCE

POWER COST IN U.P.

(To The Editor of "Capital")

Sir,

It is not with the idea of entering into any controversy, or with the intention of generating more heat than is generated by our power stations, that I would refer to the letter of Mr. K. C. Gupta in your issue of 27th April on the above subject. I desire only to bring to light the extremely unreliable nature of our statistics in India. Terminological inexactitudes (I refrain from using the more downright four-letter word) are, we have been told, of three varieties, but that is not a good reason for statistics relating to electricity so easily qualifying for inclusion in the definition. Mr. Gupta has given the cost of the generating plant installed under the Kanpur Extension Project as being Rs. 767 a kW, and for all that is known, he may well be right. On the other hand, the Fact Finding Committee appointed by the State Government under the chairmanship of Mr. B. M. Birla in 1956, with the Director of Industries as secretary, stated in page 40 of its report: "A disconcerting feature which we observe from these facts and figures is that expenditure on Government schemes is very high. On private schemes, the average expenditure comes to about Rs. 625 a kW. As against this, on Government schemes in case of hydro-electricity, the average comes to about Rs. 1,500. *Even in the case of the Kanpur Extension Scheme, which is a thermal plant, the average expenditure comes to Rs. 1,240 a kW which is almost double that of private schemes.*" It will be observed that even on a comparison of these figures with those given by the general manager of the Kanpur Electricity Supply Administration, there is a difference of Rs. 142 a kW in favour of the private scheme.

The conclusion of the Fact Finding Committee, however, was more than supported by an official hand-out to the Press issued by the U.P. Government's Information Department which said: "An extension project, the installation of a 15,000 kW generating plant, together with the necessary distribution system, has been completed at a cost of Rs. 234.25 lakhs." On this basis, the cost would work out at Rs. 1,561 a kW which is even higher than that given by the Fact Finding Committee, and repeated by the president of the Upper India Chamber of Commerce in his address. If, however, the mere layman, whose knowledge of the technicalities of electricity is limited to pushing a switch up and down and hoping for the best, desires to be further confused, he can refer to the views of the chairman of the Central Water and Power Commission who is reported to have stated that "generally speaking, the capital outlay for thermal power generation would lie between Rs 800 and Rs. 1,000 a kW. On the other hand, the capital cost of hydro-electric power stations may vary from about Rs. 1,000 a kW to Rs. 1,800 a kW". This latter, I may say, is no mean variation. There is, of course, consolation in the fact that, with the pundits providing such a mass of conflicting statistics, everybody who chooses to make quotations is right, but "when everybody's somebody, then no one's any body."

Yours etcetera,

N. Bonarji

Secretary, Upper India Chamber of Commerce

Kanpur, 4th May.

WEALTH AND POVERTY IN INDIA

Well, whilst I am a beggar I will rave
And say there is no sin like being rich;
But, being rich, my virtues then shall be
To say there is no sin like beggary.

India is a country in which the distinction between poverty and wealth is strongly marked, but not nearly so strongly accentuated by individual distinctions as in Europe and America. For, whereas in the West individual wealth is greater by far than any Asiatic ever dreamed of, poverty is much more biting and painful and difficult to contend with in the cold, rain and slush of western cities than in the soft warm climates of the East. But while the distance between the poles of poverty and wealth is greater in more rigorous climates, the mean difference is probably much less, and we believe it is safe to assume that on the average, the distinction between persons who are well-to-do and those of poor conditions is in India greater than in most European countries excluding Russia. Whether it is a healthful sign when individuals amass enormous fortunes by splitting modest enterprise into a thousand pieces and gathering the fragments one great dominating centre of employment and distribution, or when by the manipulation of stock markets, successful operators gain untold wealth by deluding the public, or by over-reaching less successful speculators, it is not my purpose to discuss. Only, one can assume that the conditions which admit of such fortunes being amassed are those in which freedom of trade is most perfectly understood, and in which individual enterprise is a national spirit. For high stakes cannot be won unless others are willing to risk them. Now it would be a gross libel to suggest that the people of India are devoid of national spirit; but we fear we cannot discover except among certain classes, such as the Marwaris, Parsis, Bhatias, Chetties and Mohamedan Merchants, any sustained spirit of enterprise. In Bengal, where the standard of intelligence is generally supposed to be highest, and in Madras where a high standard of intelligence obtains, the spirit of enterprise is distinctly weak.

A Ditcher's Diary

Well, the Americans have done it at last; and we must be grateful that the rocket with Commander Shepard aboard did not explode within seconds of its getting off the launching pad at Cape Canaveral—as so many of its predecessors have done. The American effort is puny when set against the Russian achievement; and Mr. Kennedy knows it as well as anyone else. But the patronising world outside does well to remember one or two significant points of difference. For one thing, the Americans are apparently more forthcoming with detailed information about the shot than the Russians have ever been, and the implications of this should be more widely understood. Every now and again we read of Russian wonder drugs curing such and such incurable diseases. Do these drugs appear on the world market on the morrow? Not on your life. Russian achievements in some departments of science have been too spectacular for denial; but if in some quarters a measure of scepticism persists, the Russians have only themselves to thank for it. If the military implications of Russia's tremendous efforts in space are viewed by many with concern, it is because there is such an impenetrable aura of secrecy about it all. I daresay the Americans have their secrets; and their security consciousness sometimes borders on the comical or the morbid. I do not for a moment believe that either the Russians or the Americans spend millions of roubles and dollars on space research in a spirit of scientific enquiry and nothing else. When it is possible to stay longer in space, its military possibilities will doubtless be explored to the full by both. But, on balance, I am inclined to think that in the free world there is much greater exchange of scientific information than, I suspect, there is in the communist world. Between the two worlds, exchange is just about nil. I am not blaming Major Gagarin, who probably knows very little about the actual scientific processes involved; and a meeting between him and Commander Shepard, which has been suggested, might lead to no enlightenment at all. It is the backroom boys on both sides that could meet to mutual advantage.

One can sympathise with the feelings of the women M.P.s who have been fighting the compromise amendments to the Dowry Prohibition Bill, although I cannot see how legislation, even if left unamended, is really going to be of much use. The dowry system is probably second only to untouchability as a social evil, but it would surely not be correct to say that untouchability has disappeared now the law makes its practice a penal offence. On the contrary, the occasional case which finds its way into the Press proves otherwise. There may be *harijan* Ministers in the Government or State legislatures, and a fortunate few have even reached the higher civil service. But by and large they are still what they have always been in the pattern of hindu society, and seem likely to remain so until upper-caste hindus broaden their outlook or the *harijan* himself is provided with the necessary education and training to enable him to take on less degrading jobs. In other words, the evil is not only social, it is rooted deeply in the economic system. The dowry system, in my view, is a similar case, as the reasons are even more obviously economic than social. It is usually practised by the better-off classes—that is those which are supposed to have some breadth of outlook. I have heard it from Indian friends that various considerations such as education, employment opportunities and family connections are apt to determine the demand for dowry, and that the market is a remarkably perfect one—that is in the economist's sense. In that case, where the law penalises those who demand dowry, it is just as likely to leave more daughters unmarried. If western society is free from this evil it is largely due to the freedom and incomparably better economic status which the western woman enjoys. I am not opposing legislation—at least it will stigmatise the practice and might help encourage those feelings of independent manhood in the young bridegrooms which will eventually revolt against their married future being treated as a market transaction by their elders. But it would be unrealistic not to point out the limitations of the new Act.

There is nothing new to be said about Pandit Motilal Nehru, whose centenary is also being widely celebrated together with Tagore's. But some old things need to be said again and again at this point of India's national development—by which I do not mean dams and steel mills. Quite frankly, there has been a sad and unmistakable contraction of the spirit since the days of Motilal Nehru and his contemporaries. Bigness is gone; and gone is the broadening influence of personal success preceding one's entry into politics. In his *Autobiography* the Prime Minister records what his father's first reaction was to the young leaders then emerging. Somehow he regarded them as failures; and I doubt if he changed his view in later years when he associated with them on several platforms. We have all been told in our younger days of the corrupting influence of riches. Not nearly enough has been said about the degrading effects of poverty and failure. Bitterness and frustration are usually the results; and a certain pettiness dominates the attitude to life and the world. This is the one thing nobody could ever associate with Motilal Nehru. Who has not heard of his early luxury and later sacrifice? Both in his taking and his giving he was big; and that superb self-confidence born of success at the Bar! I have been reading Motilal's letters in *A Bunch of Old Letters*; and the personality that emerges is not to be measured by the standards of our time. There was something imperious about his judgment of men and affairs; some of his remarks look to me almost prophetic (I dare not quote these, for their subjects are alive); but it cannot be said that there was no charity in him. Indeed, stories of his personal relations with the British rulers of his time show him in a tolerant light. He had no time for inefficiency and pusillanimity in politics; so some of his judgments seem unduly harsh. But he himself set an impeccable example of personal courage and political morality and reserved the right to demand similar performances from colleagues.

After what I wrote a few weeks ago about the Films Division's proposal to cut Mr. Satyajit Ray's documentary on Tagore, I was naturally anxious to see what form the film takes in its censored version and how ruthless Dr. Keskar's Ministry can be in tampering with what turned out to be an exquisite work of art. Tagore's life was a rich and varied one, and it requires the touch of genius to do even limited justice to it. Mr. Ray's documentary is not a chronology of events, which a director of lesser calibre would surely have made it. It is rather an attempt to trace the influences which moulded the poet's mind and inspired his literature. After seeing the film myself last week-end, I was left with the impression that Mr. Ray's success as an outstanding film director is to be traced to his own poetic imagination no less than to his deep insight into human feelings and his uncommon gift of selection and rejection. But I was greatly dismayed to find that Dr. Keskar's Ministry had taken advantage of the opportunity to carry on its propaganda for Hindi. What use could there be, I wondered, in writing the names of participants in the Devnagri script when the commentary was in Bengali? I have not been able to ask Mr. Ray about his experiences so far as the Films Division's assignment was concerned, but I do feel that his documentary would have been a better work of art had he done it himself without any official patronage. Bureaucracy is always inimical to art, and Mr. Ray has shown with his *Pather Panchali* (which, incidentally, was produced under the patronage of the West Bengal Government) that success is possible only when officials are willing to give the full measure of freedom to a producer or director. I was not, therefore, surprised to find Mr. Ray at his best in his *Teen Kanya* (three daughters) which is a unique trio of Tagore's short stories. Here the director shows many brilliant flashes of his genius. Some of my friends suggest that *Teen Kanya* may gain for Mr. Ray yet another well-deserved international award.

The departure from India on retirement of Mr. K. F. L. Harris, former chief accountant of Bird & Co. and Heilgers, reminds me of the debt we owe him, because for ten years he was honorary secretary to W. H. Targett & Co. Ltd, the owners of *Capital*, and was responsible for devising our present financial set-up. Mr. Harris built up an impressive record of cultural and welfare activities during his 35 years in India, which last February gained for him and his wife one of the rare and much-coveted introductions to Her Majesty the Queen. Among these must be mentioned his 25 years' association with the Calcutta School of Music as committee member, and for several years in the late 1930s as honorary secretary, and as a vice-president of the symphony concerts. He was himself an excellent pianist and singer, who took a number of leads in the Gilbert and Sullivan operas produced by the Lyric Club in the early 1930s, and sang in numerous amateur concerts and oratorios. As a member of the Executive and General Committees of the East India Charitable Trust for the past ten years, Mr. Harris was vice-chairman in 1959 and 1960 and acted as chairman during 1958 and parts of both 1959 and 1960. He was the Trust's representative on the Relief Sub-Committee and Boys Hostel Sub-Committee of the Calcutta Branch of the A.I.A.I.A. during the past four years. We wish both him and Mrs. Harris the best of luck in their retirement.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

"Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company". It must be distinctly understood that in giving the consent, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to the same.

A Licence has been granted to the Company by the Central Government for effecting substantial expansion of this industrial undertaking, a copy of which is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, in Mysore, Bangalore, for registration.

The subscription list will open at 10-30 A.M. on the 15th day of May, 1961 and will close at 3-00 P.M. on the 17th day of May, 1961, or later at the discretion of the Directors.

Applications must be made for a minimum of 8 shares or multiples thereof, each lot of 8 shares made up of 3 Equity and 5 Preference Shares.

THE MYSORE KIRLOSKAR LIMITED

Yantrapur, P.O. HARIHAR (Mysore State)

(Incorporated on the 7th day of April, 1941, under the Mysore Companies Act, and now an existing Company within the meaning of Section 3 of the Companies Act, 1956)

The Mysore Kirloskar Ltd., have decided to issue 15,000 Equity Shares of Rs. 100/- each and 25,000 Redeemable Cumulative Participating Preference Shares of Rs. 100/- each. The Preference Shares are Redeemable not before the 30th day of June, 1975 but not later than the 30th day of June, 1980.

The Preference Shares bear a firm return of 8% if the Company declares dividend below 12½% on Equity Shares. If the Company declares more than 12½% but less than 15% dividend on Equity Shares, the Preference Shares will get 9%; and if the dividend declared on Equity Shares exceeds 15% the Preference Shares will get 10%. This will be the maximum dividend payable on Preference Shares.

UNDERWRITERS TO THE ISSUE

The Life Insurance Corporation of India,

THE CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, SIR HOMI MODY'S REVIEW

Summary of the Speech delivered by the Chairman, Sir Homi Mody, at the 50th Annual General Meeting of the Shareholders of the Central Bank of India, Ltd., on Friday, the 5th May, 1961.

Sir Homi Mody, Chairman of the Central Bank of India, Ltd., speaking at the Fiftieth Annual General Meeting of the Bank struck a cheerful note when he informed the Shareholders that the net profit of the Bank amounted to Rs. 133 lacs, the highest in the Bank's history.

At the beginning of his speech, Sir Homi commented briefly on some of the notable events of the year under review.

He said that there was a general upward trend in trade and industry and notable advances were made in West Germany and Japan where production, employment and exports continued to rise resulting in substantial increases in the gold and foreign currency resources of these countries. "In Britain", continued Sir Homi, "there was an abnormal expansion of Bank credit and special measures had to be taken to deal with it, and for the first time Banks were called upon to make special deposits." "In the United States, a recession set in, the extent and duration of which are difficult to estimate. Considerable loss of gold and dollar resources took place and the balance of payments position deteriorated. The situation has since improved and the drain on the reserves has been arrested."

Rise in Industrial Production

Sir Homi said that in India during the first eleven months of the year, industrial production showed a significant increase, and despite shortage of coal, iron and steel production was up, though not to the extent of the target set. The textile industry passed through a difficult phase, owing mainly to a poor cotton crop, non-availability of raw materials at reasonable prices and a heavier wage bill. Sugar production reached a peak level of 2.42 million tons, as a result of the establishment of new factories and the expansion of the crushing capacity of existing units. Sir Homi emphasised that the most encouraging feature of recent economic growth had been the emergence of a more broad-based industrial structure and a steady diversification of the general pattern of development.

The general price level, which Sir Homi considers of vital importance, continued to soar. A relieving feature, however, was the fact that the price level of food articles had not gone out of hand and the upward trend had been arrested temporarily. "In respect of industrial raw materials", Sir Homi Mody stated, "there had been a big jump in prices and consequently the price level of manufactured articles had also moved up substantially." "The extent and seriousness of the damage," Sir Homi said, "may be gauged from the fact that between March 1956 and November 1960 there had been an increase of nearly 28% in the general price index."

Touching upon the Third Five-Year Plan, Sir Homi Mody expressed that in spite of all the assurances that public opinion would be fully consulted and given due weight the Plan had finally emerged as it was originally conceived. The total outlay on the Plan was estimated to be of the order of Rs. 11,250 crores. He, however, observed that while the size of the Plan was equal to that of the first two Plans together, its physical proportions were likely to be smaller because of the inflated prices prevailing and further pressures on the price-level which might be expected.

Limited Resources

Discussing the emphasis on rapid industrialisation indicated in the Third Plan, Sir Homi Mody stated that it was certainly open to question whether with our limited resources in materials and technical personnel, it was wise to accord such preponderance to heavy industry in our development plans. "The products of heavy capital industries," he observed "were by their very nature, incapable of absorbing all the additional purchasing power pumped into the economy, and it might legitimately be feared that such a lop-sided pattern of outlay might tend to aggravate the general inflationary pressure".

"Amongst the resources for the Third Plan," Sir Homi Mody stated, "additional taxation had been given an important place and was expected to provide as much as Rs. 1,650 crores during the five-year period and it would be obvious to all but the Planners that the country was not in a position to bear such a crushing burden and deficit financing to an extent higher than what had been estimated might have to be resorted to." Sir Homi went on to say that by far the most important and crucial source of finance for the Third Plan was foreign aid and the Plan must depend vitally on the availability of a far larger volume of foreign assistance. He was, however, doubtful whether with all the good-will in the world under the present world conditions, foreign resources of the magnitude required would be made available to us. He felt that even at the best we were mortgaging the future a little too recklessly, and it was possible that the Third Plan might have to be recast drastically.

Dealing briefly wih the main trends noticed in the monetary and banking fields, Sir Homi Mody said that the money supply with the public had increased during the year by Rs. 217 crores. The Scheduled Banks' advances had shown a steep rise of Rs. 216 crores to reach a record figure of Rs. 1,180 crores, reflecting the unmistakable impact of the growing tempo of economic activity on the banking system.

Heavy Demand for Finances

Sir Homi at this stage pointed out the difficulties that the Bank had to face whilst meeting the heavy demand for finances. While the Bank tried to do all it could to accommodate its old customers, it had to a certain extent also to cater for its new constituents. The Sugar Industry was a case in point which was meeting with considerable difficulty in securing adequate finance to take care of its substantial increase in production. Sir Homi was of the opinion that this problem could be dealt with only by a suitable revision of the policy of the Government. In the meanwhile, he suggested more liberal rediscount facilities on the part of the Reserve Bank of India to provide some relief to the Industry.

With a view to curbing undue expansion of Bank credit, Sir Homi said that the Reserve Bank, in addition to the Selective Credit Control measures, had resorted, for the first time, to the more direct devise of variable reserve ratios, whereby they impounded and immobilised, in two stages, 50% of all additional deposits secured by Scheduled Banks. In addition, ceilings were fixed on the limits up to which individual Banks could borrow from the Reserve Bank, any excess over the ceilings being subjected to penal rates of interest. Banks were also directed not only to enforce a minimum interest rate of 3% on all their advances, but also to step up their average lending rate by ½%. Sir Homi Mody warned that the fact that the general price level continued to rise in spite of these measures adopted by the Central Banking Authority should serve as a timely reminder to the Government that if they wished to maintain price stability, which was an essential pre-requisite for the success of any Plan, they should not fight shy of shedding their doctrinaire attitudes and of adopting a more realistic fiscal and economic policy.

Dealing with the Balance Sheet and Statement of Accounts, Sir Homi Mody informed the Shareholders that the Bank's working fund at Rs. 225 crores represented a substantial increase of Rs. 32 crores, or 17%, over the 1959 figures. The gross earnings and net income amounted respectively to Rs. 10.78 crores and Rs. 6.44 crores, as compared to Rs. 9 crores and Rs. 5.14 crores in the previous year. The net profit amounted to Rs. 133 lacs, which is the highest in the Bank's history.

Advances, too, had reached a high level and recorded a jump of Rs. 32.92 crores over the previous year.

Establishment Charges

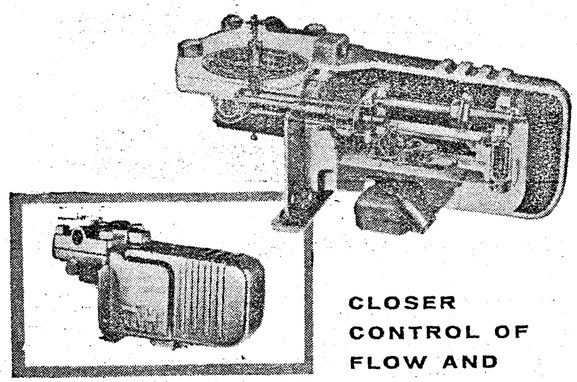
The Establishment Charges continued to move up disconcertingly year after year and over the period 1956-60 the increase has been of the order of Rs. 107 lacs, equivalent to over 41%. He said that during the year under review alone, Establishment Charges went up by Rs. 32 lacs and that in relation to the gross earnings and net income, they absorbed as high a proportion as 34% and 56.8% respectively. What was particularly a matter of concern was the fact that despite the increase in the strength of the Bank's staff, overtime allowance should have amounted to as much as Rs. 13 lacs during the year.

"In view of the higher profits that had been made", Sir Homi Mody said, "the Directors have proposed an increase over the dividend paid to Shareholders last year. The interim dividend of Rs. 2.10 per share, subject to tax, already paid for the half-year ended 30th June, together with the final dividend of Rs. 2.50 per share, subject to tax, now recommended for the second half of the year, would make a total dividend of Rs. 4.60 per share, subject to tax, equivalent to Rs 3.22 net per share. This works out to 12.88% net for the whole year. In addition, it was proposed to give the Shareholders a Jubilee Bonus of 50 nP. per share, subject to tax."

Before concluding his speech, Sir Homi Mody thanked the Vice-Chairman, Mr. C. H. Bhabha, the General Manager, Mr N. K. Karanjia, and the Deputy Managers, Mr. F. C. Cooper and Mr. V. C. Patel, and the other Officers at the Head Office and Branches and the members of the clerical and subordinate staff throughout the country. He also thanked the Local Advisory Committees at the various centres for the co-operation and guidance they had always extended to the Bank.

Finally, Sir Homi Mody expressed the hope that as the years rolled by, it would be the good fortune of the Bank to serve the interests of the industrial and business community even more efficiently than in the past. He looked forward with confidence to greater and greater efforts on the part of one and all connected with the Bank to enhance the prestige, position and prosperity of the great Institution with which all had the privilege to be associated.

Note :—This does not purport to be a report of the proceedings of the Annual General Meeting.



CLOSER CONTROL OF FLOW AND LIQUID LEVEL

...with Honeywell's Differential Converter

USE THIS mercuryless remote transmitter for practically any application requiring precise high-speed measurement of flow or liquid level.

Accurate to within 1%, it's equally fast in response up the scale or down.

Range is continually adjustable in the field.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.

Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.

Precision electronic instruments and control systems for aircraft and missiles.

THE BURMAH OIL COMPANY LIMITED

CHAIRMAN, MR. W. E. EADIE'S STATEMENT

The Annual General Meeting of the Company will be held in Glasgow on 2nd June, 1961.

The following is summarised from the Statement by the Chairman, Mr. W. E. Eadie, which has been sent to stock holders.

Accounts

On a tonnage basis trade in 1960 was 7 per cent greater than in 1959. The effects of world wide competition in the oil industry, which resulted in reduced profit margins, and increased exploration costs in the U. S. A. and Canada were the main reasons for the sharp decline in Group Profit on Trading in 1960 which amounted to £4,973,030 compared with £6,880,434 in 1959. Dividends from Trading Investment and Other Dividends and Interest were £1,950,022 greater than in 1959 and after charging taxation the net profit for the year is £9,235,798 compared with £8,899,947 in 1959, an increase of £335,851. The Board has appropriated £1,326,336 to General Reserve and recommends a final dividend for 1960 of 1/4½d. tax free, payable on 16th June, which will absorb £5,666,312.

Burma

The Group's share of the trade in Burma rose by 9 per cent over 1959. The Burmah Oil Company (1954) Ltd. continued exploration and development operations, and each of the two refineries in the country increased its throughput by over 9 per cent. The capacity of the Syriam refinery is to be increased by some 600,000 tons per annum and the oil companies in the Joint Venture have agreed to provide 49 per cent of the new capital required for this project and a related underwater pipeline. As provided for in the Joint Venture agreement the Government of Burma has increased its shareholding in The Burmah Oil Co. (1954) Ltd., and now has a 51 per cent interest. In recent negotiations, carried out in a spirit of cordiality and goodwill, the Government agreed not to exercise for 15 years its right to acquire further shares in the Joint Venture.

Pakistan

Our share of petroleum product sales increased by some 2½ per cent only. Gas sales in 1960 totalled the equivalent of 514,000 tons of fuel oil compared with 388,000 tons in 1959, the greater part of the increase arising from growing offtake through the Sui-Multan pipeline. Pipeline extensions north of Multan are under construction. While large gas reserves have been found in recent years only moderate discoveries of new oil reserves have been made. Prospecting by Pakistan Petroleum Ltd. continued throughout the year in both East and West Pakistan. The Sui Gas Purification Plant has been extended to meet increasing demands for gas in West Pakistan, while in East Pakistan gas sales from the Chhatak field to a cement factory have started and the Sylhet field will supply gas to a fertilizer factory at Fenchuganj. Work is going ahead on the construction of an oil refinery at Karachi which is due for completion in 1962.

India

Product demand in 1960 was around 7 million tons and is expected to be twice that amount in six years' time. Our share of the sales was some 7 per cent higher than in 1959. The product price formula mentioned last year has reduced the margins allowed to the oil companies; and the Government of India has established an Oil Price Enquiry Committee which has been conducting an exhaustive investigation and is expected to report shortly. Oil production operations by the Assam Oil Company Ltd. continued at Digboi; and in the Nahorkatiya, Hugrijan and Moran areas of Oil India Private Ltd. extension and development drilling has again been successful. Discussions have recently been resumed with the Government of India on exploration outside the concessions held by Oil India. The authorised share capital of Oil India is Rs. 50 crores, of which the first share issue (Rs. 12 crores) was made in February 1959, and during 1960 there was a further issue of Rs. 9 crores. The total amount required for the development of the oilfields is estimated at Rs. 28 crores, and at the end of 1960 your company had contributed Rs. 14 crores (£10.5 millions) towards its two-thirds share of this requirement. Construction work on the Oil India pipeline from the oilfields to Government refineries at Gauhati and Barauni began towards the end of 1960 with The Burmah Oil Company (Pipe Lines) Ltd. superintending the design and construction of the project. The estimated cost of the pipeline is £35 millions of which £21 millions will be incurred in rupees and the balance in foreign exchange. As mentioned last year, Her Majesty's Government has made a loan of £3 millions to the Government of India towards the foreign exchange requirements for this line and your company has agreed to provide a loan of approximately £11 millions for the balance of the foreign exchange. The rupees required will be borrowed in India by Oil India Private Ltd. The closing months of the year saw the entry into the market of a Government distributing organisation, the Indian Oil Company, which will handle products from Government refineries. Meantime that Public Sector company is distributing and selling imported Russian products. This is a disquieting sign and it remains to be seen what effect this competition will have on market conditions.

U. S. A.

The Burmah Oil Western Company, in association with Murphy Corporation and others participated in drilling in the Gulf of Mexico and arrangements are being made to obtain production from offshore wells successfully completed in different areas.

Canada

B. O. C. of Canada Ltd., in conjunction with Murphy Corporation, carried on prospecting operations in the Liard River area of Northwest Territories.

Australia

B. O C. of Australia Ltd. has been incorporated in that country to participate in joint operations with Murphy Corporation and Camelot Nominees. A marine seismic survey was begun in an area in the Gulf of Papua.

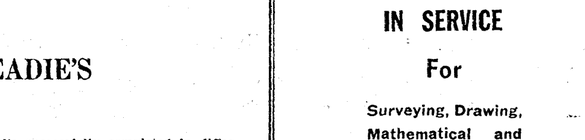
WATERTIGHT Concrete Construction



as only Impermo can make it

IMPERMO Cement Waterproofing Compound is available in powder form, convenient to use. IMPERMO is most economical: only 2% by weight need be added to cement to prevent the penetration of damp through cement mortar or concrete.

- IMPERMO renderings prevent dampness,
- Damp walls are cured by IMPERMO.
- Watertight joints can be ensured by using IMPERMO.
- IMPERMO is essential for producing water-repellent backings on which to apply coloured cement renderings.

Whatever your concrete construction, make it watertight as only IMPERMO can make it:

Tanks – Reservoirs – Basement Walls – Inspection Pits – Roofs – Cast Stone – Swimming Baths – Sewage Works – Floors – Conduits – Renderings, particularly backing coats of white or coloured cement finishes – Pools – Cellars – Garage Pits – Walls – and many others.

IMPERMO costs only Rs. 135.00 per case of 50 x 1 kilogram packets, i.e., approximately Rs. 48.00 to waterproof 100 cu. ft. of 1: 2: 4 concrete mix.

WEST GERMAN CAPACITY FOR FOREIGN AID

By B. Narpati

In the international discussion on currency problems, the opinion is frequently voiced that high balance of payments surpluses and monetary reserves are evidence of the prosperity and wealth of a country. In view, therefore, of the surpluses in the West German balance of payments and the amount of gold and foreign exchange holdings of the Federal Bank, ideas concerning the economic and financial capacity of West Germany to render foreign aid are far in excess of actual possibilities. In order to arrive at a sound assessment of its capacity, one has to bear in mind the economic development of West Germany during recent years, especially as compared with the other countries of the world. As proof of the extraordinary recovery of the West German economy, mention is usually made of the high rates of increase in industrial production, foreign trade, national product, and foreign exchange reserves. The volume of German industrial production during the period from 1950 to 1959, has increased more rapidly than that of the other major industrial countries of the West. Another picture appears, however, if one compares the increase of industrial production in the various countries between today and pre-war times. West Germany ranks only in the fifth place if the pre-war period is taken as the basis. Since about 1956, the rate of increase in West German industrial production keeps in line with the average of the other States of the European Economic Community and of all the member-States of the O.E.E.C. (with the exception of the U.K.). In close relationship with the increase in West German industrial production, foreign trade was reintegrated into the world economic system. The volume of imports increased by 240 percent and the volume of exports by 290 percent during the period from 1950 to 1959.

Large Increase in Foreign Trade

The phenomenon that the volume of foreign trade increased more rapidly than industrial production is not confined to West Germany. It holds good for a number of other industrial countries of the West, particularly the United States, the Netherlands, and Belgium. The situation is similar concerning the development of the gross national product in real terms. The increase of 88 percent between 1950 and 1959 in West Germany exceeds the rise in most of the other countries (the O.E.E.C. average being about 50 percent). The rate of increase has, however, become smaller from year to year since 1955. The real value of the increase was about 3 percent in 1958 and 5.7 percent in 1959. It thus still ranks above the European average, but the rate is one which is by no means striking for an economy such as West Germany's to achieve. West Germany by no means occupies an extraordinary position in the matter of economic capacity and standard of living. It still holds a modest place in the hierarchy of comparable industrial countries. The following *per capita* income figures (at factor costs), calculated on the basis of the gross national product at market prices, are obtained for 1959:

United States	...	$2,488
Canada	...	$1,740
United Kingdom	...	$1,126
Belgium	...	$1,156
France	...	$ 967
West Germany	...	$ 957

Personal Savings

Finally, as a further standard to judge by, German life insurance figures may be compared with those in other countries (as at the end of 1958):

		Per capita amount insured (in deutsche-marks)	Total amount as a percentage of national income
United States	...	11,800	135
Canada	...	9,810	157
Sweden	...	3,130	57
United Kingdom	...	2,520	61
Netherlands	...	1,540	51
West Germany	...	920	30
France	...	740	21

The relatively low figures for life insurance in France may be explained by the fact that other methods of saving are preferred in that country. The greater increase of the total German national product is due to a large extent to the unusual increase of the population. The taxable capacity of the West German economy has to be regarded as an essential factor in assessing the ability of that country to render substantial assistance to foreign countries. In comparison with other countries, the total share of national income going to taxation (excluding social security contributions), expressed as a percentage of the gross national product at market prices, was as follows in 1959:

West Germany	...	24.12 percent
France	...	24.08 percent
United Kingdom	...	23.4 percent
United States	...	23.1 percent
Canada	...	22.8 percent
Belgium	...	16.5 percent

Foreign Exchange Reserves

The international discussion on the development of the West German economy was focussed on the balance of payments and on the increasing foreign exchange reserves of the Bundesbank. The balance of goods and services as well as the total balance of payments have indeed shown increasing surpluses annually since 1951. The gold and foreign exchange holdings of the Bundesbank have increased between 1952 and October 1960 from about 3,000 million deutschemarks to 27,600 million deutschemarks. That development was influenced by a number of factors. There are chiefly two reasons for the fact that the surpluses of the West German balance of goods and services resulted in such a considerable increase of the gold and foreign exchange reserves of the German Bundesbank which were thus withheld from international circulation. Firstly, that phenomenon reflects West Germany's shortage of capital, which forced the exporters of goods and services as well as private credit institutions to convert the proceeds obtained in foreign exchange immediately into deutschemarks at the Central Bank in order to meet their own monetary requirements. That shortage of capital again was responsible for the high level of interest rates in West Germany which prevented these foreign exchange funds from flowing to foreign countries *via* the international money and capital market.

The foreign exchange reserves of West Germany are almost completely included in the statements of the Bundesbank. The statements of the central banks of other countries usually show only part of the total national reserves of foreign exchange. If the gold and foreign exchange reserves are to be included at all in an examination of the comparative prosperity or poverty of a country, such examination should in any case not be confined to those reserves in the banks of issue, but should take into account the entire financial status in relation to foreign countries.

A Net Debtor

West Germany is a net debtor in its capital position in relation to foreign countries, whereas the most important industrial countries of the West are net cerditors. Investments of the U.S.A. in foreign countries, for example, amounted to $64,800 million (short-term plus long-term investments) at the end of 1959, compared with liabilities amounting to $40,700 million, including short-term liabilities resulting from the U. S. position as the international monetary centre.

Public and private investments from West Germany in foreign countries probably total not more than about $1,000 million, while the assets side is quite outbalanced by liabilities in foreign currency of about $2,000 million, arising out of the London Debt Agreement alone, apart from West German indebtedness to foreign countries due to considerable foreign investments in West German industries, real estate and securities. Private direct U.S. investments in West Germany alone amounted to about $800 million at the end of 1959 (compared with but $50 million of private German direct investments in the U.S.A.). There are no other reliable data available on the amount of long-term foreign investments and liabilities of individual countries. Certain conclusions may, however, be drawn from the returns on capital shown in various balances of payments:

(Return on capital (net) in million $)

		1955	1959
United States	...	2,739	3,103
United Kingdom	...	216	193
France	...	4	8
Belgium	...	41	24
Netherlands	...	83	150
Sweden	...	17	27
Switzerland	...	118	—
West Germany	...	—145	—246

Liquidity and Capital Resources

The decisive factor for the capacity of West Germany to render assistance to foreign countries is constituted by the extent to which capital funds can be raised from private and public sources within the German national economy. Foreign exchange reserves are not capital in themselves. They merely enable capital to be transferred to foreign countries. These reserves, therefore, do not solve the problem of raising capital funds. The overall picture of the West German economy is characterised by a high liquidity and a low level of capital resources. It is, therefore, in a good position to transfer liquidity. Its ability to transfer capital is limited.

BANK OF CHINA—*Cont'd.*

AUDITORS' REPORT ON THE ACCOUNTS OF THE INDIAN BRANCHES OF BANK OF CHINA ANNEXED HERETO :

We have audited the annexed Balance Sheet of the Indian Branches of the Bank of China as at 31st December, 1960, and also the annexed Profit & Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the unaudited returns of the Bombay Branch not visited by us, with the books of accounts of the Calcutta Branch and with certified returns and particulars from the Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949 read with the provisos to Sub-section (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and the Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit ;

(b) in our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Bombay Branch of the Bank not visited by us ;

(c) the Balance Sheet and the Profit & Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns ;

(d) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis and read with the notes appearing thereon, the Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1960, and the Profit & Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

Calcutta,
The 28th April, 1961.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTER

Wednesday, 10th May.

THERE has once again been very little change in advances in the Calcutta money market, although, if anything, the total is slightly higher on the previous week. Demand from the cotton mills and the engineering and iron and steel industries showed a slight increase, as has the call for accommodation against grains and seeds storage in upcountry areas. The requirements of the jute industry and the sugar mills were largely unchanged. In the interbank market, conditions have tightened and the call rate has increased to 5 percent, with business reported at 5¼ percent.

Conditions have improved slightly in the exchange market during the past week, chiefly due to a larger supply of gunny bills. There have also been a few small tea bills in evidence. Demand for remittance has been exceptionally keen. In the London money market, the pound was firm in early dealings owing to the reduction in the West German Bank rate, but at the close only small gains were recorded against most important currencies and the usual weakness has again asserted itself.

BULLION WAS QUIET IN THE PAST WEEK. SILVER fell from the previous week's level of Rs. 238.75 to Rs. 235.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 225.50. The London and New York prices were 79⅜d and 91.375 cents.

Gold was quiet in sympathy with silver. The price declined from Rs. 144.25 to Rs. 143.50. The sovereign at Rs. 95.75 showed a gain of 25nP.

DURING THE WEEK ENDED 5TH MAY, GOVERNMENT of India Treasury bills for Rs. 46,70,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 9th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.75 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 15th May.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 10th May to 13th May at Rs. 99.331 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 3rd May to 6th May, amounted to Rs. 1,08,00,000.

A RISE OF Rs. 19.95 CRORES TO Rs. 2,002.38 CRORES in active notes was an outstanding feature of the return of the Reserve Bank during the week ended 5th May, but the total note issue declined by Rs. 3.22 crores to Rs. 2,011.76 crores. Notes held in the Banking Department consequently fell by Rs. 23.17 crores to Rs. 9.38 crores. Deposits of the Government of India rose by Rs. 1.50 crores to Rs. 53.13 crores, but other Government accounts fell by Rs. 3.24 crores to Rs. 15.07 crores. Balances of commercial banks at Rs. 81.80 crores showed a rise of Rs. 3.64 crores. Balances held abroad increased by Rs. 7.37 crores to Rs. 17.68 crores, as did investments by Rs. 4.67 crores to Rs. 177.58 crores Other loans and advances rose from Rs. 125.47 crores to Rs. 128.49 crores, of which advances to scheduled banks against usance bills were Rs. 21.4 crores (Rs. 21.09 crores). Ways and means advances stood at Rs. 86.30 crores, against Rs. 84 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 28th April, 1961, shows a drop of Rs. 1.28 crores to Rs. 549.70 crores in total deposits. Investments in Government securities are up by Rs. 21.36 crores to Rs. 237.47 crores, while other authorised investments remain unchanged at Rs. 9.59 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have dropped by Rs. 4.22 crores to Rs. 276.33 crores. Cash and balances are, in consequence, shown at Rs. 25.27 crores or Rs. 8.11 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 28th April, 1961, shows Demand and Time liabilities at Rs. 861.50 crores (Rs. 27.47 crores on account of borrowings from banks) and Rs. 1,096.84 crores (Rs. 14.12 crores), compared with Rs. 852.49 crores (Rs. 24.57 crores) and Rs. 1,091.79 cores (Rs. 12.40 crores), respectively, in the previous week Cash and balances with the Reserve Bank have declined by Rs. 51 lakhs and Rs. 6.39 lakhs to Rs. 47.69 crores and Rs. 73.89 crores. There is a rise of Rs. 24.10 crores to Rs. 562.46 crores in investments. Advances and bills discounted at Rs. 1,308.91 crores show a drop of Rs. 2.38 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 66.8 percent, against 6.6 percent and 67.4 percent.

THE INDIAN BRANCHES OF THE NEDERLANDSCHE Handel-Maatschappij have earned a profit of Rs. 4.68 lakhs during the year ended December 1960. Deposits amounted to Rs. 2.25 crores (against Rs. 1.86 crores). Investments were shown at Rs. 49.49 lakhs (against Rs 61.77 lakhs) and advances at Rs. 4.05 crores (against Rs. 3.35 crores).

THE INDIAN BRANCHES OF THE BANK OF CHINA HAVE made a profit of Rs. 2.59 lakhs during the year ended December 1960. Deposits dropped from Rs. 5.18 crores to Rs. 3.52 crores. Investments were shown at Rs. 80.20 lakhs and advances at Rs. 2.44 crores.

Stocks and Shares

PRICES SAG IN GENERAL ABSENCE OF BUYING SUPPORT

TECHNICAL POSITION NOW BELIEVED HEALTHY

Wednesday Evening.

TRADING in the Calcutta stock market has been quiet during the past week. Attention seems to have been diverted to the Rabindra Jayanti celebrations; Lyons Range was closed on Monday in order to pay homage to the memory of the great poet. At today's settlement, business was mainly of a squaring-up nature. The carry-forward charges were moderate, which indicates a healthy technical position Activities were nevertheless restrained in the absence of any fresh background news. There has been a small overall decline in share prices due more to the absence of support than to selling pressure. It appears that a substantial amount of investible funds has been tied up in recent share issues. The Goodyear India issue, for instance, is believed to have attracted more than Rs. 17 crores. Until these funds return to the market, the trend is unlikely to change much.

In view of a small decline in bank advances during the past couple of weeks, some financial circles are inclined to think that the peak of the busy season has passed. So speculation has started on the forthcoming Central Government loans. As far as the return of funds to the banking system is concerned, it is likely that the Government will soon be thinking of issuing new loans, because the success of official borrowing depends greatly on institutional support. (The prospects for new loans are discussed in a leading article elsewhere in this issue). But banking credit seems to have little relevance to the prospects for industrial investments, at least for the time being. As banking resources are likely to be fully employed in genuine trade and industrial advances in coming months, the stock market cannot expect much institutional support. But the major portion of the funds due to be returned from new issues will seek fresh investment in industrial shares.

Operators have become cautious due to a number of unfavourable developments. The power shortage has interrupted the working of industry in many parts of the country. Whether adequate power supplies can be ensured in the immediate future is doubtful, considering that proper attention is not being given to planning these supplies in advance of requirements. The jute industry faces fibre shortages and a block closure of mills may be impossible to avoid under present circumstances. As for the coal industry, wagon supplies are still far behind requirements, so some collieries have been forced to restrict output following large accumulations of stocks. The sugar industry has been embarrassed by huge stocks which are pressing heavily on its finances.

In spite of these adverse factors, which are anyway expected to be short-lived, the outlook for industrial equities is fairly promising. The working of the corporate sector is running at a satisfactory level and the profit trend is upwards. As imports are heavily restricted, industry finds little difficulty in selling all goods at satisfactory profits. In fact, shortages have developed in some commodities. Cement, for instance, is in short supply and consumers have been forced to pay more than the controlled price. In many areas the commodity has been adulterated. If the industry is to maintain its reputation intact, it is time vigorous action was taken to curb the prevailing malpractices.

The price of Indian Iron has closed at Rs. 27.56. Engineering shares lack support due to power shortages. Stray support has been forthcoming for Jessop, Britannia Engineering and Guest, Keen, Williams. Dalmia Iron have met with interested buying on the payment of a maiden ordinary dividend. Texmaco have lost further ground on pressure induced by adverse corporate rumours, but some are inclined to doubt whether the price has not now moved down to an attractive level. Indian Standard Wagons are steady on hopes of a higher dividend.

Prices of miscellaneous shares are lower all-round due more to the absence of fresh interest than to selling pressure. Indian Copper Corporation shares have fallen on the Company maintaining the ordinary taxable dividend at 27 percent. Britannia Biscuits have gained further on hopes of a bonus share issue. Indian Aluminium are not favoured on fears of excessive supplies. Rohtas are quiet, but Hindustan Motors are attracting attention on talk of a higher dividend. Indian Cables have settled down to a lower level. Profit-taking has reduced Alkali Chemicals and Union Carbide. British India Corporation have reacted on a report that a substantial shareholding has changed hands. Balmer Lawrie are steady on good working reports, but Rallis have slipped back on profit-taking. India Steamship are neglected on an uncertain freight outlook. Interest is subdued in Metal Box because investors are worried about the power shortage. British Paints and Associated Batteries are being bought at present prices.

Paper shares are quiet and Orient have lost on the decision to issue rights ordinary shares at high premiums. Routine business has been transacted in Titagurh, Sirpur and Shree Gopal.

In the coal section, business has been restricted to selected shares. Bengal are being bought on expansion prospects. Amalgamated have improved on talk of good working. Burrakur have fluctuated narrowly. Stray support has been extended to New Beerbhoom, East Indian, Central India and Equitable.

Except for Birla and New Central, prices of jute shares have declined on predominance of sellers. Investors are worried about raw jute shortages. They are inclined to watch carefully steps the industry takes to overcome the fibre shortage. Birla are steady on issuing rights ordinary shares for expansion. New Central have been bought on the news that its chemical project has started working.

Cotton mill shares appear to have settled down to lower levels on the view that the industry may be permitted to extend production in order to overcome cloth shortages. The possibility of official help for modernisation has induced steadiness. Prominent scrip are Kesoram, Dunbar, Bharat Commerce and Elgin.

There is little interest in sugar shares because it remains to be seen how the industry can manage to sell its excessive production. It is well known that exports of the commodity cannot be made except at substantial losses.

The news that regular export auctions will start in Calcutta next week has generated selective support for good Assam and Dooars gardens. Attention is concentrated on Betjan, Bishnauth, Dhelakhat, Hasimara and Hantapara. Jay Shree are bing bought by knowledgeable quarters on diversification prospects.

THE BANK OF BARODA
LIMITED
(Estd. 1908)
Head Office. Baroda

JWT-BB. 676

Interest has broadened in banking and preference shares, but business is restricted.

Government securities are quiet and institutional support is conspicuous by its absence. As speculation has started on new Central Government loans, the trend is unlikely to change much in the near future. The 3 percent conversion loan 1986 has declined to Rs. 73.50 on selling pressure.

Tata Steel Output

Messrs Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works at Jamshedpur during April was: pig iron 135,700 tons; steel ingots 136,000 tons; semi-finished steel for sale 37,000 tons and finished steel 69,000 tons.

Soorah Jute Mills

The Soorah Jute Mills Co. Ltd has produced satisfactory results for the year ended December 1960. The gross profit is Rs. 11.61 lakhs, against Rs. 12.65 lakhs in 1959. The ordinary dividend has been maintained at 25 percent, taxable. It is covered more than thrice and offers a yield of 11.1 percent at the present price of Rs. 22.62 a share. Depreciation is allocated Rs. 2.09 lakhs (against Rs. 2.64 lakhs), taxation Rs. 4.15 lakhs (against Rs. 4.41 lakhs) and general reserve Rs. 1.20 lakhs (against Rs. 1 lakh). There is a carry-forward of Rs. 21,730, compared with Rs. 63,633 brought in. Gunny sales increased from Rs. 98.96 to Rs. 1.11 crores, but stocks rose from Rs. 3.19 lakhs to Rs. 5.75 lakhs.

Tide Water Oil

The working of the Tide Water Oil Co. (India) Ltd for the year ended October 1960, shows that its profit has increased from Rs. 2.77 lakhs to Rs. 3.95 lakhs, after providing Rs. 18,312 (against Rs. 13,363) for depreciation. The Company has declared an interim of 70nP, taxable, which, together with the final dividend of Rs. 2.30, taxable, makes a total of Rs. 3 a share, against Rs. 2.20 in the previous year. This is covered twice, and offers a yield of 16 percent at a price of Rs. 18.70 a share. Taxation provision has been allocated Rs. 1.86 lakhs (against Rs. 1.31 lakhs) and development rebate reserve nil (against Rs. 3,193). The carry-forward amounts to Rs. 1.25 lakhs, against Rs. 82,687 brought in. The balance-sheet shows fixed assets at Rs. 2.74 lakhs, current assets at Rs. 41.53 lakhs and reserves and surplus at Rs. 10.64 lakhs. The directors say in their report that there has been a further increase in sales and that the results for the year are satisfactory. Andrew Yule and Co. Ltd ceased to be the managing agents of the Company on 15th August, 1960. Its appointment as Secretaries and Treasurers for a period of five years from that date has been approved by the Central Government. The directors add that at an extraordinary general meeting held on 17th August, 1960, Andrew Yule and Co. Ltd was formally appointed as Secretaries and Treasurers of the Company with effect from 15th August, 1960.

Aspinwall and Company

The profit of Aspinwall and Co. Ltd has increased from Rs. 2.04 lakhs to Rs. 4.36 lakhs during the year ended December 1960, after providing Rs. 1.13 lakhs (against Rs. 1.09 lakhs) for depreciation and Rs. 2.91 lakhs (against Rs. 1.66 lakhs) for taxation. The directors have recommended a taxable dividend of 8 percent, against 6 percent tax-free, in the previous year. This is covered two-and-a-half times and offers a yield of 11 percent at a price of Rs. 7.20 a share. Development rebate reserve has been allocated Rs. 1,155 (against Rs. 2,947) while the profit on the sale of fixed assets transferred to capital reserve amounts to Rs. 1.15 lakhs (against Rs. 40,466). After making various adjustments, there is a carry-forward of Rs. 18,821, against Rs. 766 brought in. The balance-sheet shows fixed assets at Rs. 17.24 lakhs and current assets, loans and advances at Rs. 74.10 lakhs. Investments are shown at Rs. 4.85 lakhs and reserves and surplus at Rs. 10.90 lakhs.

Bombay Market

UNDERTONE STEADY BUT BUSINESS LIMITED

OPERATORS EXPECT HIGHER TATA DIVIDEND

Wednesday Noon.

TRADING was interspersed with holidays in the Bombay stock market during the past week. The closing undertone was steady, but business was done on a limited scale. Talk of a higher dividend by the Tata Iron and Steel Company circulated and the directors are expected to announce it in a few days' time. In their bullish frame of mind operators ignored the decline in production figures for April.

Steadiness was also promoted by the fact that at the past settlement, deliveries were smaller and carry-forward charges lower. The technical position is believed to have improved a great deal. Except for Tata Steel and Century Mills, the *havala* rates were lower in all cases. Although supplies of floating stocks declined, operators were cautious. They were inclined to await the outcome of the Aid India Club meeting due to be held at the end of the current month. There is nevertheless general optimism concerning the prospect for foreign financial assistance. Reports that the working of industry has been interrupted by power shortages in many areas called for caution.

Tata Steel recovered to Rs. 152 on replacement buying and Indian Iron were supported up to Rs. 27.55. Calcutta interests were also believed to have supported the latter scrip. Prices of engineering shares were quotably lower due to the absence of fresh support. Alcock Ashdown declined to Rs. 324 and Tata Locomotive were lower at Rs. 334. Premier Construction were taken to Rs. 186 and Mukand Iron lost to Rs. 28.50. Motor shares were quietly steady, and Hindustan Motors were supported up to Rs. 20.28. Premier Automobile were transacted at Rs. 169.

Cotton mill shares showed mixed trends. Century were firm at Rs. 623 on the decision to issue bonus shares and Swan improved to Rs. 600 on issuing free scrip. Kohinoor attracted attention on talk of a higher dividend. Bombay Dyeing changed hands at Rs. 63.90 and Svadeshi were taken at Rs. 272. Khatau were steady up to Rs. 535, but Finlay declined to Rs. 313 on profit-taking. Simplex were offered at Rs. 187 and business was done in Apollo at Rs. 1.62. India United ordinaries were steadier at Rs. 15.48 on a report that the controlling interest has passed into new hands.

Miscellaneous shares were quiet and prices were fractionally shaded. In the sugar section, Belapur were quoted lower at Rs. 289 and Phalton declined to Rs. 136. Walchandnagar Industries were done at the lower price of Rs. 202. Mining shares were steady, and Shivrajpur Syndicate were in demand up to Rs. 82. Steamship company shares were quiet and sellers predominated. Scindia Steam were offered down to Rs. 14.68 and Great Eastern Shipping declined to Rs. 14.80. Fluctuations were irregular in cement shares. Associated Cement were bought up to Rs. 160 on hopes of a bonus share issue, but Digvijay declined to Rs. 154. In chemical shares, Tata Chemical lost at Rs. 19.12, but Dharmsi improved to Rs. 300 on good corporate news. Colourchem recovered to to Rs. 356.25, but Polychem were quiet at Rs. 223.75. Bombay Burmah reacted to Rs. 612 on profit-taking and National Rayon lost to Rs. 533. Ceat Tyre lost sharply at Rs. 175 on selling pressure. Voltas were wanted up to Rs. 275 on investment account and Tata Oil were steady at Rs. 74. Gwalior Rayon were done at Rs. 47 and Union Carbide were shaded at Rs. 55.25 on profit-taking.

There was an improvement in the prices of bank shares and attention was concentrated on Central Bank of India at Rs. 62. Bank of Baroda came to hand at Rs. 99.50. In the insurance section, New India Assurance improved to Rs. 61, but Vulcan declined to Rs. 15.25.

Earlier gains in electric company shares were not maintained at the close. Ahmedabad were quoted lower at Rs. 84.30 and Bombay Suburban were placed at Rs. 86.50. Tata Hydro were done at Rs. 102.

Madras Market

TURNOVER FALLS IN ABSENCE OF OUTSIDE INTEREST

CAUTION IN SUGAR SHARES

Tuesday Evening.

THE Madras stock market was subdued during the past week and turnover declined appreciably. The absence of outside interest induced an easier tendency. In Government securities support was confined to selected State loans only. Sugar shares were dealt in cautiously on reports of bigger stocks. In the planting section, coffee shares were quiet on reports of lower prices of the commodity. Interest was discriminating in tea and rubber shares and buying was largely governed by reports of crop progress. Textile shares were quiet on fears of rises in production costs. Interest declined in miscellaneous shares and routine business only was transacted. Prices were lower where changed.

In the banking group, business was done in Indian at Rs. 165 and in Indian Overseas at Rs. 177.25. Punjab National came to hand at Rs. 22.50.

Among public utilities, Cochin changed hands up to Rs. 10.20, but Ellore were sold down to Rs. 16.55. South Madras were steady at Rs. 9.80 and West Coast were done up to Rs. 14.

Among sugar shares, Deccan were quoted at Rs. 13.80 and E.I.D. were transacted at Rs. 43.60. Kothari were offered down to Rs. 4.75, but Mysore were steady at Rs. 59. There was little change in United Breweries at Rs. 115 and Travancore were bought up to Rs. 10.50.

In the planting group, Blue Mountain were quoted at Rs. 3.10 and Cochin Malabar at Rs. 7.67. Consolidated Coffee changed hands up to Rs. 22.55 and business passed in Ouchterlony at Rs. 4.14. Periakaramalai were in demand up to Rs. 4 and Balanoor were done at Rs. 16.60. Chembra were transacted at Rs. 3.83 and Gokul came to hand at Rs. 2.05. Kil Kotagiri were supported up to Rs. 5.02, but Lucky Valley were sold down to Rs. 13.25. Peermade were steady at Rs. 23.30 and Parkside were transacted at Rs. 28.47.

Among textile shares, Adoni were supported up to Rs. 10.75 and Asher were done at Rs. 204.05. Bangalore Woollen were steady at Rs. 200, as were Buckingham at Rs. 213. Jawahar were quiet at Rs. 12.62 on making a lower profit and paying an ordinary dividend of 15 percent, taxable. Madura were quoted at Rs. 35.80 and business passed in Lakshmi at Rs. 161. Travancore Rayon reacted to Rs. 38.25 on profit-taking and Rangavilas were done at Rs. 45.90. Pudukotah were sold down to Rs. 56 on passing the dividend. Ramakrishna were taken up to Rs. 224 and Vasanta were steady at Rs. 238.

Among miscellaneous shares, Aluminium Industries lost at Rs. 22.80 and Ashok Leyland were quiet at Rs. 9.15. Andhra Cement were taken at Rs. 10.50 on paying a taxable ordinary dividend of 10 percent. India Cement changed hands up to Rs. 6.05 and business was done in Kirloskar Electric at Rs. 13.12. Madras Aluminium were quoted at Rs. 23, but Mysore Paper met with support up to Rs. 23.85. Parry's Confectionery were steady at Rs. 5.03 and Seshasayee Paper improved to Rs. 7.12. Spencer were taken up to Rs. 24.25 and Standard Motors were done at Rs. 16.62. Textool were dealt in at Rs. 181 and Tube Investment were placed at Rs. 283. United Electrical were transacted at Rs. 9.50 and W.I. Plywoods came to hand at Rs. 244.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

London Market

PRICES RISE IN HEAVY TURNOVER

MIXED TREND IN INDUSTRIALS

London, 10th May.

THE London stock market was restrained by labour troubles prior to the week-end and also by end-of-account influences with the result that a good deal of irregularity developed in price movements. Substantial profit-taking was, however, generally well absorbed by fresh buying in a heavy turnover, and the undertone remained firm. With the opening of the new account—of three weeks' duration to cover the Whitsun holiday—after the week-end, prices resumed their advance but the pace was not so quick as during the last two or three weeks. The fall in the West German Bank rate encouraged hopes of a reduction in the U.K. rate, and it helped sentiment. Basically, however, the continued strength of the market reflected optimism on the business and economic outlook in the U.K. Medium and short-dated gilt-edged stocks were firm but undated and long-dated issues were neglected and slightly easier. Greek bonds moved up in the foreign market while Japanese issues hardened. Banking and insurance shares were affected by profit-taking but prices were generally well maintained. The boom in property shares continued and further substantial gains were scored in many cases. Industrial equities presented a rather mixed showing on balance but the undertone was firm and business remained at a high level. Many of the leading issues are easier but there were numerous strong features elsewhere Most groups recorded gains but cotton textiles eased on fears that the Hongkong agreement would not be renewed. Swiss selling and weakness in Johannesburg brought substantial losses in gold shares, but prices steadied when selling ceased. Diamonds and coppers fell back in sympathy, but tins continued to soar on eastern buying. Oils, rubbers and teas fluctuated within narrow limits and were not greatly changed.

DULL BUSINESS?

Counters like this with tarnished brass railings are generally deserted. But the outlook is always bright when your counter railings are clean and shining. Polish them regularly with Brasso, the metal polish that shines and beautifies brass.

SIMPLIFYING OFFICIAL PROCEDURES FOR INDUSTRIAL LICENSING

FIELDS DEMARCATED FOR FOREIGN CAPITAL INVESTMENT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has been engaged in a review of the procedures relating to the consideration of applications which need to be made by parties interested in establishing industrial units in the country. Several of these procedures have already been streamlined and simplified. It has been felt that in order to avoid delay resulting from separate and successive consideration by different authorities of various aspects of major third plan projects in the private sector, such as Industries Act licensing, capital issues, terms of foreign collaboration, import licensing for capital goods, etcetera, it would be desirable to have a unified agency to undertake co-ordinated consideration of all aspects at the same time, in consultation with the authorities concerned. A senior officer, Mr. N. R. Reddy, has accordingly been placed on special duty in the Commerce and Industry Ministry for the purpose. Some of the important third plan projects will involve foreign collaboration or foreign participation in capital. The need to give prospective foreign investors interested in important third plan schemes prompt and reliable guidance, is obvious. Such guidance will now be available from the officer on special duty and his staff, who will primarily be responsible for speedily processing important collaboration projects involving large foreign investment or technical know-how and skills of special significance.

Fields for Foreign Capital

An illustrative list of industries, in which foreign capital would ordinarily be welcome, has also been drawn up. This list takes into account the gaps in capacity which exist at present in relation to the plan targets. The list, which is only illustrative, will be subject to revision from time to time. The industries listed are: iron and steel structurals; iron and steel castings and forgings; iron and steel pipes; special steels; non-ferrous metals and alloys; boilers and steam generating plants; equipment for transmission and distribution of electricity; furnaces; marine diesel engines; industrial machinery, including major items of specialised equipment used in specific industries, and general items of machinery used in several industries such as equipment required for various unit processes, ball, roller and taper bearings; speed reduction units; machine tools; tractors, earth-moving and construction machinery; plastics; industrial and scientific instruments; fertilisers, organic chemicals, fine chemicals and intermediates; industrial explosives; industrial gases; agricultural chemicals such as insecticides; dyestuffs and drugs, including the production of basic intermediates; and newsprint and pulp. This list, as has been emphasised, is more illustrative, rather than exhaustive; collaboration schemes falling outside this list will also be considered on merits.

The fields in which foreign capital is ordinarily not needed have also been listed. This list includes banking, insurance, trading and commercial activities and plantations. Private capital, foreign or Indian, as a rule, is not being allowed in the industries listed in Schedule "A" of the Industrial Policy Resolution of 1956. In special circumstances, however, exceptions may be made where, after full consideration, this is found to be in public interest.

External Finance for Projects

Basically, the policy concerning foreign investments would be to attract private foreign capital in those fields, in which the country needs to develop in accordance with the plan targets. While the Government has been generally encouraging the investment of private foreign capital in the country, it is to be recognised that this has necessarily to be on a selective basis. If any project is approved for development in the private sector and, if imported plant and machinery are required, foreign capital investment would ordinarily be welcome as a form of financing the project. While Indian majority holding would be generally welcome, the ratio of foreign capital to Indian capital in joint-venture enterprises, the extent of foreign shareholding that is to be permitted in any case, etcetera, have necessarily to be judged on merits. This judgment is to be made after evaluating the technical skills offered and after weighing the requirements of foreign exchange for the purchase of equipment from abroad and the desire of Indian collaborators to play an effective part in the company's management.

Importance is also attached to the arrangements proposed for the training of Indian technicians and executives in all aspects of production and management. Where a phased programme of manufacture is proposed, emphasis is placed on the rapid build-up of indigenous production. Long-term assembling and formulations and production based on imported intermediate products have to be avoided. Special encouragement is given to schemes which involve expansion of exports on an economic basis with or without the assistance of the foreign collaborators' overseas marketing organisations. Foreign investors have found their collaboration arrangements of considerable economic value from the point of view of sound long-term investment. A happy corollary to the situation has been that, although existing regulations do not impose any restrictions on the repatriation of foreign capital investments in India, including accumulated profits and appreciated value of assets, subject to the payment of all taxes due, foreign investors have found it to their advantage to retain their investments in the country undisturbed and even pool back into their enterprises a substantial proportion of their remittable profits and dividends.

Internal Resources of Private Sector

It is a well-established practice for enterprises in the private sector to plough back a part of their profits into investment. On rough estimates, the contribution of this source to the financing of private sector industrial programmes in the third plan period might be of the order of Rs. 600 crores, compared with a total estimated outlay of Rs. 1,250 crores.

The Afro-Asian Organisation for Economic Co-operation will meet here from 11th December for a week. About 38 central chambers of commerce of various countries, who are members of the Organisation, will attend the meeting. Sixteen other countries, eligible for full membership and 25 territories and dependencies, who are eligible for associated membership, have also been invited to send their representatives to the conference. Trade talks among representatives of the participating countries will also be held during this period. As already reported, an international industrial exhibition is being organised and will be held here during the session of the Conference. Incidentally, it has already become impossible to book any hotel accommodation during the Conference period.

Chain Letters Schemes

The Department of Company Law Administration in the Central Ministry of Commerce and Industry, disapproves of the formation of companies with the avowed object of promoting what are called "chain letters" schemes. Generally, the schemes provide for the collection of small sums of money by the sponsoring companies concerned at every stage of the chain transaction. While such schemes are sought to be promoted ostensibly on the plea of mutual aid and saving, the Department has pointed out that there is great risk of undesirable persons exploiting the gullible public and defrauding large number of individuals of relatively small sums of money. The registration of such companies, under a statute such as the Companies Act, might tend to confer underserved respectability on them in the eyes of the public. The Department, therefore, would view with disfavour the formation of such companies and would also like to warn the general public against participation in such schemes, which may be existing at present. Instructions in this matter have been sent to all registrars of companies.

Indo-Norwegian Fisheries Project

The Indo-Norwegian fisheries project in Kerala, it is proposed, will be extended to some of the other maritime States. Extension of the project and allied issues are under discussion in New Delhi between a five-member Norwegian delegation and the Indian Government. The Norwegian delegation is led by Mr. Krogh-Hansen and includes Mr. Gleditsch, head of the Norwegian-India Foundation in Oslo. Mr. Krishan Chand, Joint Secretary, Government of India, is the leader of the Indian delegation. The project has played an important rôle in the development of fisheries. The boat-yard and the mechanical workshop have made a positive contribution in the field of boat construction and installation and maintenance of engines, and the ice factory, freezing plant and fish vans in developing the marketing of fish in many parts of Kerala. It is felt that more emphasis should be placed on the project's educational and training activities. The Norwegian-India Foundation has so far made a contribution of Rs. 2.76 crores in providing technical assistance and equipment for the development of fisheries in Kerala. Substantial contributions are likely towards the development of fisheries in the third plan period, the programmes of the project being dovetailed into the requirements of India's plan.

Value of New U.S. Aid Offer

According to reports which are still to be confirmed, the United States has offered to India $1,000 million for the first two years of the third plan. There are two stipulations attached to this offer, namely, the approval of U.S. Congress and the other members of the "Aid India Club," namely, the U.K., Canada, West Germany, and Japan, should match the contribution with an equal amount. These stipulations would appear to almost nullify the offer. Mr. Kennedy has a plan for extending long-term credit to under-developed countries, which is still under discussion by Congress, but he cannot on his own commit himself to $1 without specific Congress approval. Even the appropriation for 1961-62 aid has not yet been voted. It would be a cruel joke to tell a country that $1,000 million of aid could be made available if Congress approved and if other members of the Consortium made matching contributions. The proposal is also very unfair to the other members. The case of the U.K. should illustrate the point. Notwithstanding the huge disparity in the financial resources of the U.S.A. and the U.K., the latter's contribution to India's development in the private sector is by no means insignificant and is in any case bigger than that of the United States. Private investment from West Germany, as was recently indicated, is also on the increase.

The U.S. Ambassador, Professor J. K. Galbraith, at his first Press conference defended the system of "tied" aid because that alone could maintain the balance of payments position of the donor country in order. If this argument is to be accepted, India will be called upon to buy goods worth $1,000 million from the United States during the first two years of the third plan. If the United States has to maintain its balance of payments position in order, so have the other members of the "Aid India Club." The Indian official briefing for Mr. B. K. Nehru, however, has been that India wants credit for 50 years without interest, untied and no repayment obligations during the first ten years.

U.S. Loans for Hydro-electric Project

The U.S. Ambassador, Professor J. K. Galbraith, announced the approval of two U.S. Government loans equivalent to $57,775,000 for the Sharavathy hydro-electric project. The State of Mysore has a hydro-electric power potential of about 4 million kW, a substantial portion of which can be developed economically. Plans for meeting future power needs place a strong emphasis on the development of hydro-electric projects such as Sharavathy. A recent report pointed out that the inadequate power supply in Mysore is impeding the industrial development of the State. The demand for electric power in excess of the available firm generating capacity has required over-extension of existing generating equipment, and normal stoppages for maintenance and repair have not been possible. Disruption of any units in the generating system have forced a power cut. Thus, new customers, including small industry and irrigation, are not being serviced. The new generating capacity of the Sharavathy project will relax these stringencies. Of the amount, $21.5 million (Rs. 10.2 crores) comes from the U.S. Development Loan Fund for foreign exchange, while the rupee costs amounting to Rs. 17.2 crores ($36,225,000) will be met by a loan from the sale proceeds of U.S. agricultural commodities supplied to India. The loans will finance the entire cost of the second stage of the Sharavathy plant in Mysore State, which involves the installation of 445,000 kW of additional generating capacity. Previously, the U.S. Government had made a D.L.F. loan for $8.4 million in foreign exchange and $14.6 million in rupees (Rs. 6.97 crores) for the construction of the first stage of Sharavathy, which included construction of the dam and reservoir, a power plant with two 89,100 kW generators and 238 miles of transmission lines. This work is well under way.

Wage Board Award for Sugar Workers

The following question asked in Parliament last week and its answer should be read with some interest:

Question: "Whether it is a fact that the Tripartite Labour Conference on Sugar Industry held in Lucknow some time towards the end of March this year has suggested revision of the cost structure of sugar on the lines recommended by the Central Wage Board and for an increase in the sugar price to enable implementation of the recommendations of the Board;

"Whether the Government of Uttar Pradesh has referred this aspect of the question to the Central Government; and if so, what is the reaction of the Central Government towards a move of this nature?"

Answer: "While at the Conference held on 30th March the possibility of covering the extra cost by an increase in the price of sugar was considered, it was agreed at the Conference held on 25th April that the Wage Board recommendations should be implemented without an increase in the sugar price. On an examination of the existing prices, with reference to the costs of production, the Government of India came to the conclusion that if an assurance was given to the industry that it would not have to meet the loss on further exports this year, the industry should be able to implement the Wage Board recommendations. The Indian Sugar Mills Association has recently advised the factories to implement the Wage Board recommendations."

It should be evident that the Government is not actually subsidising the exports of sugar but is making the taxpayer pay for the enhancement of wages, following the recommendations of the Sugar Wage Board. The price of sugar is fixed according to a formula which gives to the sugar-cane growers a certain price and the sugar factory a reasonable margin of profit. The Wage Board

formula will give to the sugar factory labour a fair wage.

As already reported, the policy followed by both the Government and the sugar industry is short-sighted. The sugar industry has relied more on the Government than on the consumer. The consumer resistance to sugar has set in, which was recently discussed in these columns. It should be a matter for some concern that the Government should give price support to some cash crops, but refuse to do so in case of foodgrains. Thanks to U.S. aid, there is plenty of foodgrains to feed the people. And thanks to her again, Indian sugar may partially replace Cuban sugar in that country. Meanwhile, thanks to high sugarcane prices, more and more land is being diverted to its cultivation, creating a food problem. Looking 20 years ahead, India may have to depend on the U.S.A. for feeding her growing population and on earning dollars by the sale of sugar.

U.S. Loans to Private Sector

The following loans were given by U.S. *Government agencies to the private parties in* India during the second plan period:

Name of the Indian firm receiving the loan	Name of the U.S. Government agency giving the loan	Amount of the loan
Dollar loans:		
National Rayon Corporation Ltd	Export-Import Bank	$1,800,000 (Rs. 86 lakhs approximately)
Sundatta Food and Fibres Ltd	-do-	$60,000 (Rs. 3 lakhs approximately)
Hindustan Aluminium Corporation Ltd	-do-	$13.65 million (Rs. 6.50 crores approximately)
Ahmedabad Electricity Co. Ltd	Development Loan Fund	$3.90 million (Rs. 1.86 crores)
Premier Automobiles Ltd (formal loan agreement not yet signed)	-do-	$7.2 million (Rs. 3.43 crores)
Rupee loans:		
Otis Elevator Co.	Export-Import Bank (Cooley Loan)	Rs. 10 lakhs
Goodyear Tyre and Rubber Co.	-do-	Rs. 2.25 crores
Mysore Cements Ltd	-do-	Rs. 55 lakhs
Synthetics and Chemicals Ltd.	-do-	Rs. 3.92 crores
Hindustan Aluminium Corporation Ltd	-do-	Rs. 1 crore
Merk Sharp and Dhome of India (P) Ltd	-do-	Rs. 50 lakhs
Ex-Cell-O Corporation	-do-	Rs. 20 lakhs
Seshasayee Bros.	-do-	Rs. 2 crores
Premier Tyres Ltd, Bombay	-do-	Rs. 30 lakhs
Lederle Laboratories India (P) Ltd	-do-	Rs. 25 lakhs
Gabriel India Private Ltd	-do-	Rs. 5 lakhs
Limac Ltd	-do-	Rs. 52 lakhs
Carrier India Private Ltd	-do-	Rs. 37.5 lakhs

U.K. Coal Expert Studies N.C.D.C. Mines

An expert from the National Coal Board, U.K., *came out to India to survey the mines of the* National Coal Development Corporation, to review the different aspects of coal-raising operations in them and to advise the latter as to how it could increase production substantially in the third plan. The report, which he has submitted, covers a wide range of problems including such aspects as organisation and management, mechanisation, proper maintenance and optimum use of equipment, coal preparation and problems of safety in mines. The expert has given his views on matters where improvement is called for. These views should not be construed as "heavy criticisms". They are useful suggestions.

As for mining methods and mechanisation, his *main observation is that the present target ton*nages fixed for the new mines, both deep and open-cast, are small in relation to the capacity of the equipment installed. He has also suggested the setting up of a first-class maintenance service in order that the machines may be kept running for the maximum time. These observations are correct. But one has also to consider that the targets of output from mechanised mines have been fixed after taking into account the fact that most of the miners are drawn from agricultural workers, who have yet to acquire the requisite efficiency in dealing with such modern equipment to the best advantage. The capacity of production is also linked with consumer requirements and the transport available.

The Government is already taking steps in the light of the suggestions made by this expert. For example, intensive in-job training is being given to operators and maintenance men. A central workshop is being put up to look after important repairs and maintenance. The organisational setup of the Corporation is being revised, so that frequent supervision from top technical personnel may be available at the site of production. The facilities for coal transport are also being increased simultaneously during the third plan. It is hoped that with all these measures, the equipment will be used to its maximum capacity in due course, and the production of coal will attain the optimum level.

Yugoslav Yard to Supply Lighthouse Tender

The Government of India has placed an order for the construction of a lighthouse tender with the Tito Shipyard in Yugoslavia. The lighthouse tender of 2,500 g.r.t. will be 331 feet long, with a speed of 20 knots. It will be powered by two diesel engines, with two more as stand-by. The vessel, which will cost Rs. 1.5 crores, it is expected, will be delivered early in 1963. The design and specifications of the tender have been specially developed over a period of years in technical collaboration with the various lighthouse authorities of the world, as well as with Maierform, Geneva; Tito Shipyard, Yugoslavia; and the Union Department of Lighthouses and Lightships. It is claimed that when completed, it would be the most modern lighthouse tender of this capacity afloat.

The lighthouse tender will be used all along the cost of India, as well as the Andaman group of islands, the Laccadives and the Minicoy. It will assist in transporting machinery and equipment; attending to lighting equipment; laying of buoys; towage of ships and salvage operations whenever required. In addition, the vessel will check the accuracy of the Decca navigator chains on the east and west coast, as well as the medium frequency beacons, share-based radars, lights and sound signals. This is the first lighthouse ship built for the Union Lighthouse Department, which now has only a small make-shift vessel. India has 1,773 navigational aids all along the coast and the Andaman and Minicoy areas.

Private Sector to Acquire Oil-tankers

The Government has now allowed the private sector also to acquire tankers, it is stated here, although originally, the former had decided that the acquisition of tankers should be only in the public sector. The number of tankers that would be acquired in the public and private sectors during the third plan would depend, apart from availability of resources, on the prospects for immediate employment for them.

The National Shipping Board recommended a target of 1.42 million g.r.t. for shipping in the third plan on a total monetary outlay of Rs. 118 crores, which included the acquisition of one coastal tanker of 7,500 g.r.t. at a cost of Rs. 1.15 crores and four overseas tanker of 66,000 g.r.t. at a cost of Rs. 8.60 crores. However, the final allocation for shipping in the third plan has now been fixed at Rs. 55 crores, and correspondingly the tonnage target has also been pruned down to 1.1 million g.r.t. As far as tankers are concerned, it was estimated that within this reduced allotment, it would be possible to add only one coastal tanker of 7,500 g.r.t. at a cost of Rs. 1.15 crores and three overseas tankers of 53,000 g.r.t. at a total cost of Rs. 6.80 crores. This position is, however, now likely to change in view of the proposed acquisition of some second-hand overseas tankers by Jayanti Shipping Company from its own resources.

Mazagon Dock Marine Gear

Mazagon Dock Ltd, Bombay, has placed an order for marine gear with McKie and Baxter, a Scottish engineering firm for installation in two tugs, which are being built for Visakhapatnam port.

Self-sufficiency in Bitumen Road Binder

With the production of bitumen from both the Burmah-Shell and the Stanvac refineries, the country has become self-sufficient in its requirements of bitumen road binder. The present production of bitumen from Stanvac refinery is about 120,000 metric tons a year and this is expected to rise up to about 125,000 metric tons a year by about the end of 1961.

Kolar Goldfields under Central Control

Under the existing arrangements for the disposal of gold mined from the Kolar goldfields, there is no loss to the Mysore Government, and the question of an enquiry into the causes of the loss or the grant of any further assistance to the State Government does not, therefore, arise. The Central Government, in consultation with the State Government, has, however, arrived at the conclusion that it would be advantageous and desirable, from various other points of view, if the undertaking is transferred to Central control. The details of this transfer are now being considered.

Madras Aluminium-Montecatini Agreement

The Government of India has approved the technical and financial collaboration proposals of the Madras Aluminium Company with Messrs Montecatinis of Italy in connection with the setting up of an aluminium smelter in Mettur on the following basis: (i) allotment of free equity shares of the Indian Company to the Italian firm in consideration of technical know-how, Rs. 45 lakhs; (ii) payment in Italian lires to the foreign firm: (a) towards engineering fees, drawings, assistance in purchase of plant and other allied services not exceeding Rs. 40 lakhs, (c) the cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges, etcetera, not exceeding Rs. 35 lakhs. In addition to the above, the rupee out-of-pocket expenditure on Montecatinis personnel in India is estimated at Rs. 15 lakhs. The total sum of Rs. 75 lakhs under 2(a) and (b) above is permitted to be accounted against share certificates of the Indian Company in favour of the Italian Company as and when bills are presented to the latter for the supply of designs, for engineering fees and reimbursement of out-of-pocket expenses, etcetera.

Fertilisers with Liquid Ammonia

A U.S. firm has offered to set up fertiliser plants in India using liquid ammonia to be produced in the Persian Gulf area from the gases available there. The matter is being considered.

Top Priority for Fertiliser Plants

Highest priority has been accorded to schemes for setting up fertiliser factories during the third plan period. The following are the works which have so far been finally approved for being set up during the third plan period:

Location	Capacity in tons of nitrogen	Sector
Trombay	90,000	Public
Nahorkatiya	32,500	Public
Gorakhpur	80,000	Public
Visakhapatnam	80,000	Private
Madhya Pradesh (exact location yet to be decided)	50,000	Private
Hanumangarh	80,000	Private
Kothagudam	80,000	Private
Ennore, Madras	8,250	Private

Manufacture of Essential Drugs

Substantial capacity for the manufacture of essential drugs has been established. Foreign participation in this industry is in the form of investment in the share capital, long-term credits and technical know-how from Russia, the U.S.A., the U.K. and other countries including Switzerland and Italy. The following statement will show the capacities for various drugs established by the end of the second plan, new capacities under implementation during the third plan period, and the targets drawn up for the third plan:

Name of Item	Unit	Capacity established for essential drugs at the end of second plan period	Capacities under implementation during third plan period	Target fixed for the third plan period
Antibiotics:				
Penicillin	(M.M.U.)	55	150	120
Streptomycin and dihydro-streptomycin	(tons)	nil	145.18	150
Chloramphenicol	(tons)	10	13.6	50
Tetracyclin (including chlorotetracycline) and oxytetracycline	(tons)	5	134.5	50
Nystatin		nil	10	20
Sulpha drugs	(tons)	366	974	1,000
Anti-tubercular drugs:				
P.A.S. and salts	(tons)	100	296	400
I.N.H.	(tons)	33.1	21.3	100
Synthetic anti-malarials:				
Anti-tubercular drugs:				
Iodo-chloro and diiodo-oxyquinoline	(tons)	73.7	nil	75
Chloroquin				
Amodiaquin	(tons)	12	26.24	—
Anti-leprosy drugs:				
D.D.S. and derivatives	(tons)	18.3	nil	40
Anaesthetics:				
Procaine Hcl.	(tons)	6	50	75
Xylocaine	(kgs.)	nil	500	—

Name of Item	Unit	Capacity established for essential drugs at the end of second plan period	Capacities under implementation during third plan period	Target fixed for the third plan period
Vitamins:				
Vitamin A	(M.M.U.)	20	—	20
Vitamin B1	(tons)	nil	30	75
Vitamin B2	(tons)	nil	5	10
Vitamin B6	(kgs.)	nil	1,000	2,500
Vitamin B12	(kgs.)	4	34	25
Folic acid	(kgs.)	nil	1,015	—
Vitamin C	(tons)	60	50	—
Nicotinic acid and amide	(tons)	43	20	75
Drugs of vegetable origin:				
Emetine	(kgs.)	440	150	—
Ephedrine	(tons)	1	18	15
Glycosides of digitalis	(kgs.)	nil	100	100
Ergot alkaloids	(kgs.)	nil	50	50
Atropine sulphate	(kgs.)	nil	50	50
Scopolamine	(kgs.)	nil	10	10
Reserpine	(kgs.)	12	200	2,000
Caffeine	(tons)	8.26	53.50	100
Santonine	(tons)	2.2	nil	10
Vitamin P	(tons)	nil	1	1
Papin	(tons)	nil	10	10
Santonine	(tons)	2.2	nil	10
Strychnine and brucine	(tons)	36.0	nil	—
Quinine	(tons)	80	nil	—
Hormones:				
Synthetic hormones	(kgs.)	398	3,000	—
Analgesics and antipyretics:				
Sodium salicylite	(tons)	379	138	500
Aspirin	(tons)	196	514	800
Luminal	(tons)	nil	10	20
Phenacetin	(tons)	22	100	200
Novalgin	(tons)	nil	10	—
Pyramidon	(tons)	nil	40	—
Calcium lactate	(tons)	204	nil	—
Calcium gluconate and other calcium salts	(tons)	158	111.7	—
Ferrous gluconate	(tons)	29.7	18.5	—
Bismuth salts	(tons)	103	nil	—
Piperazine salts	(tons)	0.1	50	—
Diethyl carbamazine	(tons)	nil	30.66	—
Nikethamide	(tons)	7.1	nil	13
Oral antidiabetics	(tons)	3	39.18	10
Acetazolamide	(tons)	nil	25	—

Technological Consultancy Bureau

The National Industries Development Corporation has set up the nucleus of a technological consultancy bureau for serving the various projects under study or in the process of implementation. The following should give an idea about the nature of the work which the bureau is to perform. It is explained that the first stage in setting up a project is to get a preliminary report covering its technical and economic feasibility, general outline of the product(s) to be manufactured and the process to be adopted, the requirements of plant, machinery and services, of land and buildings, of power, water, transport and raw materials, of skilled and unskilled labour, etcetera. In the past, foreign firms were invited to send their experts to India and the Corporation bore all expenses, incidental to such a visit, as well as the cost of preparing preliminary project reports. In the case of the foundry-forge project, the schedule of requirements was drawn up by a foreign expert engaged by the Corporation, and the cost of the preparation of preliminary reports which had been commissioned from three different organisations was also met by it. In the case of certain other projects, such as those for carbon black, raw film, heavy machine building, optical glass and coal mining machinery foreign Governments deputed experts to India for a study of the requirements and the conditions under which the projects will have to be implemented, and this service was rendered free of cost. The collection of the necessary data was, however, done by Indian experts deputed to assist the team.

Preliminary Reports

A common feature of all these preliminary reports is that they are based primarily on data collected and provided by the Corporation about the country's requirements of the finished product, about the raw materials available and of local costs of construction and salaries, wages, etcetera. The foreign team bases the report entirely on such data, and it does of course contribute its background of technical knowledge of the particular industries concerned, but the extent of such knowledge that goes into a preliminary report is not of a very specialised nature, and Indian engineers can, in a very short time, be in a position to contribute such knowledge. Figures are given below of the expenditure on the preparation of preliminary project reports for different schemes: foundry forge: three reports, each costing about Rs. 87,000; newsprint from bagasse: one report costing about Rs. 16,000; synthetic rubber: one report costing about Rs. 87,000; another report costing about Rs. 21,000; pulp from bamboo: one report costing about Rs. 18,000; aluminium: one report costing about Rs. 70,000; dyestuffs and intermediates: one report costing about Rs. 50,000; carbon black: one report costing about Rs. 17,000; and pyrites mining: one report costing Rs. 25,000.

In the establishment of new industries in India in the private as well as public sectors, this country until recently had to depend entirely on foreign firms not merely for the supply of equipment, erection of machinery and commissioning of the plant, but also for the initial design and engineering of the product. The entire job from the initial planning of the factory to its being put into operation has had to be done by foreign firms as a "package" deal or "turn-key" job. The procedure is very expensive, and adds to the foreign exchange element of the cost of a project. Undertaking the design and engineering work within the country would not only save foreign exchange, but would also enable invaluable engineering know-how and experience to be built up in the country by Indian technical personnel. It is proposed therefore to set up, under the aegies of the N.I.D.C., a full-fledged Bureau of Technological Consultants, which would undertake industrial surveys on behalf of the Government, Government undertakings or the private sector. The bureau will have a number of sections such as: (i) process and production design section; (ii) project engineering section; (iii) engineering design section; (iv) inspection section; and (v) erection supervision section.

Administrative Set-up

The organisation would be headed by a chief director assisted by five section chiefs, one for each of the five sections listed above. The expenditure is estimated to be of the order of Rs. 70,000 a month. The process and product design section will be entrusted with the selection or design of the process to be followed in a given plant or design of new products for an industry. It will also be the function of the process design group to give consideration to alternative processes which could do the job and to recommend the most appropriate process consistent with the latest developments in their application to local conditions. This section would also collaborate with the various national laboratories, to test and analyse raw materials and end-products to test out new processes, and to find alternatives to know processes where necessary to suit local requirements. After a particular process has been accepted, the preliminary studies for a particular project will be undertaken by the project engineering group which will examine both technical and economic aspects and prepare preliminary reports for approval of the project. It will be the function of the engineering design section to do the actual plant layout, detailed design and working drawings for construction.

In a large number of cases, plant and machinery is ordered, but there are no adequate safeguards for the purchaser, about the guaranteed performance and test data in relation to the equipment purchased. To rectify this, it is proposed to add an inspection section to the bureau. Services of an inspector could be made available to public or private industry to witness and certify the testing of equipment ordered in the manufacturers' works and be satisfied that the equipment comes up to the specifications and guarantees laid down. The erection supervision section will be manned by persons with sufficient experience in the field of construction and erection of equipment in industry. The services of one or more engineers and erectors from this section could be made available for supervision of erection and initial operation of the plant. They may also be assigned the task of training the factory staff to carry on with the normal operation in the factory. The cost of operating the bureau with the staff would be around Rs. 8 lakhs a year, with both the survey division and the engineering division in operation. This figure includes also travel costs. The bureau would be able to turn out each year preliminary reports on four projects as well as detailed project reports for at least two medium-sized projects (costing about Rs. 5 crores).

London

PROSPECTS OF THE U.K. JOINING EUROPEAN COMMON MARKET

NEGOTIATIONS WITH FRANCE FOR COMPROMISE SOLUTION TO BE RESUMED NEXT MONTH

(FROM OUR LONDON CORRESPONDENT)

A RECENT report in the Press that the British Cabinet had decided to join the European Common Market—although it has been officially denied—has given rise to considerable speculation. The question has undoubtedly been receiving greater attention of late, but to claim that any final decision has been reached is probably somewhat premature. But discussions between British and French officials to arrive at some compromise solution of their differing viewpoints—the main stumbling block—have lately made fairly good progress and are to be resumed next month. Britain is seeking the means whereby the interests of Commonwealth countries, of British agriculture, and of the other members of the "Seven" trade group in Europe could be safeguarded under any agreement for Britain to join the "Six." Until these means have been hammered out and agreed in detail by all concerned, there will not be any formal move by the U.K. to apply for membership. On the other hand, as Mr. Bernard Braine, Under-Secretary for Commonwealth Relations, told the conference of the Conservative Commonwealth Council the other day, if Britain's concern for Commonwealth solidarity prevented her from resolving the European trade dilemma, the consequence might be that Britain would be so weakened that she could not hold the Commonwealth together.

Mr. Braine said that the whole Commonwealth relationship is in a sense based on the notion of preference, of putting the Commonwealth in the forefront of one's thoughts and actions. This could be imperilled and might be destroyed by accepting the Treaty of Rome without qualification and reservation. "On the other hand, if we stay out our own trade is injured, not only by the new tariff discrimination of the 'Six', but far more seriously by the stronger competition of this dynamic group in our traditional markets." If Britain were squeezed out, the capacity to expand her trade and earn a surplus to provide investment capital would be seriously reduced. She might then see a greater decline in the Commonwealth trade. A compromise solution is not impossible, and the Government had never thought a solution impossible, although to get others to accept it is not easy.

Earlier, Mr. John Tilney, M.P., put forward on behalf of the Development Committee a paper proposing a Commonwealth insurance scheme with a Commonwealth guarantor institution to safeguard private investments. He said that the incidents in Abandan and other places were stalking like ghosts on the ramparts of the City of London, and asked: "How many of you are prepared to put your savings out of your income into either Asia or Africa? If we can by some insurance scheme induce private capital to go to some of the countries, rather than the taxpayers' capital, it would be of benefit both to this country and to the receiving country." Although tax reliefs on pioneer industries are an incentive for investment in certain Commonwealth countries, adequate safeguards against losses from "political risks" have to be devised in order to encourage private enterprise to invest. The political risks include inability to remit profits, depreciation of currency, loss through sequestration or nationalisation, war or revolution. All these risks are at present virtually uninsurable by the private investor.

Gold Reserves Fall

The sterling area's gold and convertible currencies reserves fell by £26 million in April to a total of £1,053 million. The drop was rather less than expected in the exchange markets, so sterling was hardly affected by the news. The April fall follows one of £62 million in March and £18 million in February. The total outflow of £106 million in three months contrasts with a gain of £227 million in the previous 12 months. It reflects further transfers from the large amounts of mobile funds which moved into London last year.

The heavy reduction in March did not reflect the true position, since large-scale speculative transfers across the exchange to the detriment of sterling were masked by the new arrangements between European central banks to stockpile currencies under pressure. It is a safe inference that the April figures have benefited in a similar way. On the other hand, West Germany's pre-payment of her remaining £67½ million postwar debt to Britain did not affect the April figures favourably. She found £22½ million of the money from the balance of a sterling account set up in 1957, while the other £45 million came from balances already held in London by the German Bundlesbank. The reserves did not benefit but sterling liabilities were reduced.

Bank Advances Rising

It is plain from the latest statements of the London clearing banks that in spite of the credit squeeze, there is no let-up in the demands of borrowers. In the five weeks ended 19th April, advances rose by another £70.5 million to a new record figure of £3,546 million. The increase was in response to a continuing demand spread over most categories of borrowers, some of it known to be of a seasonal and temporary character. A fall of £72.6 million to £1,114 million in holdings of gilt-edged is surprisingly large. Much of this reduction, however, arose from the maturity on 15th April of the £796 million of Funding 2½ percents and did not represent fresh sales from the banks' portfolios. As was expected, the ending of seasonal tax pressure is reflected in an improvement in liquidity ratios. The average moved up from 30.43 percent to 32.04 percent, which compares with 31.37 percent in April of last year.

Small Exporters Need Help

A Government committee to investigate the organisation of Britain's export drive—particularly the general services available to exporters—is suggested in the April issue of the General Electric Company's *Export Guide*. It says that the extent of services available is still not fully appreciated and facilities provided by the Government and industry should be publicised more thoroughly. Firms with fewer than 500 employees account for half of Britain's total manufacturing employment, but they provide less than a quarter of the country's exports. These smaller firms are often unable to maintain an overseas sales force, and they are hampered by lack of financial resources. If they are to play a bigger part in the export drive, they need assistance from outside.

Several ways to improve Government services are suggested. Among them are the strengthening of embassy commercial staff in areas of economic importance and an improvement in the pay and qualifications of local market officers. The work of the most important Government department for exporters, the U.K. Board of Trade, is "underpublicised" and "weak on the promotional side as distinct from market information."

Engineering Orders Rise

The flow of new orders for engineering and electrical goods, which increased in January, further rose in February. In both months, the whole of the increases was in orders from the home market. Index figures of new orders, deliveries, and production for February are published by the U.K. Board of Trade. With net new orders greatly exceeding deliveries, the volume of unfilled orders on hand increased by 3 percent. For the home market alone, the increase in the order-book was 4 percent. Taking the first two months of the year together, the volume of new orders was only slightly higher than in the same period for 1960. Expressed in index numbers, new export orders for the two months were equal to 117½ against 116½ last year, while home orders were 146½ against 144. The increase is not particularly striking.

Production in the engineering and electrical goods industries in February was 5 percent more than in February 1960, but for the first two months together, it was only 3 percent up. These modest increases are no doubt the result of combining the more rapidly expanding capital goods output with the less prosperous producers of electrical goods, railway equipment and consumer durables, which had not shown much expansion by February. Motor-cars are not included in the sample.

A better picture of the general trend in these industries can be obtained from the annual index figures. In 1958, the net inflow of new orders was 89 for exports, and 92 for the home market. In 1959, it was 104 and 108, respectively. In 1960, it had risen to 122 for exports and 125 for the home market. The rate of increase in orders, which should be reflected in deliveries and profits for some time ahead, has been regular and substantial.

Insurance Take-over Bid

The Royal Insurance Company is making an offer to buy the shares of two 100-year-old Canadian insurance firms with a worldwide premium income of £25 million, it was announced last week. The Royal is offering $153 (about £55) a share for the shares of the Western Assurance Company, and $194.39 (about £77) a share for those of the British America Assurance Company. Both Companies are in the Western-British America Group. The statement says that the directors of the Companies, who already control a majority of the shares, have accepted the offer and recommend it to the remaining shareholders. It adds that the "separate identities and positions" of its partners will be maintained by the Royal.

Hire-purchase Car Sales Drop

The number of hire-purchase contracts for motor-vehicles declined to 154,056 in April, against 161,356 in March and 173,681 in April 1960, according to *Hire-purchase Information*. Contracts for new motor-cars numbered 18,647 (against 20,212 in March) and for used cars 71,742 (against 74,217). Even for new commercial vehicles, hire-purchase sales dropped slightly to 7,701, against 8,055 in March and 6,551 in April 1960. For used commercial vehicles, the figures are 12,646, against 14,130 and 12,704. Motor-cycles and scooters also failed to maintain the recent recovery: contracts for new ones were 12,220, against 13,276 and 21,241; and for used ones 22,882, against 23,429 and 25,881. April often sees the beginning of a seasonal drop, but after the heavy slump of the winter months, the revival of sales might have been expected to continue rather longer. The results for May will be awaited with special interest.

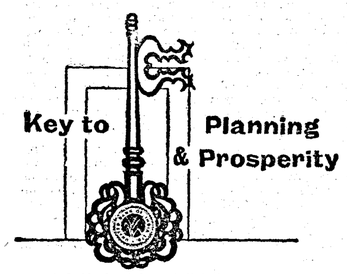
Hongkong to End Cotton Pact

The Hongkong cotton industry is not prepared to renew or extend the 1959 voluntary agreement on the limitation of its exports to the United Kingdom. Mr. P. J. Griffiths, a lawyer representing the Hongkong Spinners Association, the Federation of Hongkong Cotton Weavers and the Hongkong Weaving Mills Association, said this in London the other day. He said that the Hongkong industry felt "utter dismay when, after giving the Lancashire industry three years' breathing space, it is apparently contended by spokesmen of that industry that Hongkong should indefinitely shoulder the burden of ensuring the success of the Lancashire reorganisation scheme." The Hongkong industry feels that it is fully justified in thinking that it has done its part in co-operating with Lancashire on the latter's own terms, particularly concerning the duration of the restriction, Mr. Griffiths said.

Worries of Shipbuilders

Some strong views were expressed at a meeting last week of the Council of the Chamber of Shipping. They concerned the favourable position enjoyed by foreign owners placing building orders in Britain, compared with credit terms available to British owners. Mr. W. Errington Keville, president, declined to specify what the views were. The Council agreed to advise the Government of its feelings. The favourable position of foreign owners arises from concessions recently made by the U.K. Export Credits Guarantee Department. The latter will underwrite up to 95 percent of the total cost offered on credit. In exceptional cases, it will even make loans to foreign owners wishing to place orders in the U.K.

The Chamber of Shipping is concerned at the disparity between credit facilities available to foreign owners and to British owners placing orders. According to Mr. Keville, the industry is not necessarily critical of the facilities offered. The report of the Shipbuilding Advisory Committee, published recently, said there is evidence that credit facilities are available more freely abroad, and on better terms. British shipbuilders are losing orders because of credit facilities alone. The Government's attitude is that this criticism has largely been met by the improved Export Credit Guarantee Department's schemes. But as foreign orders account for only 20 percent as a maximum, of total British work, this does not satisfy the builders.



Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

RAW JUTE CROP CONDITIONS CONTINUE TO IMPROVE

RESUMPTION OF FUTURES TRADING POSTPONED UNTIL JUNE

THE jute trade has probably never before been so concerned about raw material supplies. The yield from this season's crops in all jute growing districts in India and Pakistan is not sufficient to meet world requirements. This fact has now been accepted by overseas consumers who, while accepting the fact, are alarmed and amazed at the high level to which prices have been raised. At the moment it appears that nothing can be done to reduce values to a more reasonable level as demand far exceeds supply. Although the resultant high prices of jute goods has caused a decline in overseas interest, consumers' search for substitutes has been temporarily thwarted by the reportedly equally high rates ruling for many other commodities.

As the biggest consumer of jute manufactures, the United States exercises a powerful influence on all sections of the jute market in India, and anything that happens in that country concerning commodity prices is promptly reflected in Calcutta. With the closure of the raw jute and jute goods futures markets here, however, speculators some time ago were not in a position to take advantage of any changing conditions, and their activity was reduced to a minimum. While many welcomed the more stable impression this left on the market and the fact that the "stunt" element in the whole thing had been lessened, most people admitted that a well-run and regulated futures market should be an asset to the industry rather than the hindrance it had become. The close watch kept by the East India Jute and Hessian Exchange did much to check undue speculation, but the Indian operator appears to be a thing apart and even the strictest control was not able to curb his activity. That is why many thought that the time chosen to reopen certain sections of the futures markets from 9th May was inopportune and would cause undue price fluctuations in an already over-sensitive market. Apparently, this opinion was also shared by higher authority and towards the end of last week, the Central Government's Forward Markets Commission (Calcutta camp office) found itself unable to agree to the resumption of the hedge market for the commencement of trading in jute goods for November 1961 delivery, and in raw jute for December 1961 delivery. This took many operators by surprise, and the advisability of it was further emphasised when reports were circulated that some unofficial transactions had already been concluded before the official opening date. The disagreement of the Commission, it was said, was due to the fact that a large section of the *genuine* operators—as opposed to the pure speculators—considered that the resumption of futures trading was premature. It is understood, however, that the Commission has compromised on 12th June for the commencement of futures trading, or any date thereafter.

Some foreign consumers of jute goods have expressed disappointment at this decision as they say that they are being hampered in planning their forward positions due to the absence of a reliable guide as to the trend of values in the months ahead. There is very little overseas interest in forward jute goods business. Consumers will naturally delay purchases as long as possible in the hope of taking advantage of lower prices. But there is a limit to the time they can wait and, if reports concerning stocks are true, it is a very near limit. In the month of March, U.S. burlap consumers dug deeply into their stocks to provide the industry with its lowest March consumption since 1953. The resultant balance was a little over three months' stock, based on the average monthly consumption. Afloat stocks were the lowest for a considerable period, nor does there seem to have been much improvement over the past month. Consequently, the current stock and consumption figures for the month of April will have some significance for the markets here.

Inadequate Fibre Stocks

Consumers of raw jute in India and overseas have followed the same example. Many mills still have fairly large quotas in hand from previous allocations, and consequently, the latest quota issued by the I.J.M.A. was again small—said to be in the region of 180,000 maunds. This is infinitesimal when compared with the industry's weekly requirements of a little over 600,000 maunds. The price drop in raw jute, as a result of the industry's own regulatory measures, has still a long way to go to close the deficit between manufacturing costs and raw material prices and current trends hold out little hope for any further substantial decline in old crop jute. On the other hand, there is a possibility of the price of jute goods rising as the prospects of a block closure of mills become more clear. All those connected with the industry, however, would rather see raw jute prices falling. For this, everything depends on the new crop. Conditions recently have been ideal for the fulfilment of the bumper crop so necessary for the salvation of the industry. Sowings in both India and Pakistan are reported to be anything from 25 percent to 50 percent higher than last season, but that often has little significance on the ultimate yield which is dependent on so many human and climatic factors. There is a long road to travel yet before confidence is restored.

Cyclone in East Pakistan

Meanwhile, the first of what will probably be many stumbling blocks to the new crop has overtaken several districts of East Pakistan. Early on Tuesday, a cyclone hit East Pakistan which was reported to be the severest for many years. Many jute growing districts are listed in the affected areas, but so far reports are scanty and it is not known if there has been any damage to the crops. It is anticipated, however, that the standing crop in many areas may have been beaten down by the high winds, but the smaller plants may have escaped damage. Calcutta markets reacted to the news and, although there was no immediate price increase, the undertone firmed up, and more sellers withdrew from the market. What may prove to be disastrous to some Pakistani crops, may yet prove to be beneficial to India, as the jute growing areas of West Bengal, which were on the periphery of the storm, received good rain. This has allowed further preparations of the land, and many feel that an early crop is a distinct possibility.

Reports from other jute growing areas in India and Pakistan continue to be favourable. Considerable rainfall has been experienced, but this has been interspersed with good sunshine in many areas which has been beneficial to the growth of the crop. Plants are healthy and range from seedlings to about 3 feet to 4 feet. River levels are higher than normal. The news that the monsoon has already set in in Colombo has caused misgivings in the jute growing areas of India and Pakistan. This is much earlier than usual, and consequently, will probably reach the jute growing areas earlier than is normal. In that case, the lowland crop will have to be cut before reaching maturity in order to safeguard against flooding. The only advantage will be to West Bengal where the early rains will promote the Daissee white and Daissee crops.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening last Thursday due to the news that hedge trading may shortly be resumed. No overseas buyers were reported and mills were not sellers. Opening quotations were based on B Twills at Rs. 165.50 for ready shipment while July-September shipment stood at a discount of Rs 9.50. In the hessian section, fractional losses were recorded and 40in. 10oz. opened at Rs. 56 in the near position and Rs. 54.75 for forward shipment. Conditions remained quiet throughout the day with sacking falling about 50nP to Re. 1 and hessians ruling unchanged. Opposition from certain quarters to the opening of the futures market prompted a steadier undertone, but this was not enough to arrest the fall and on Saturday, B Twills were quoted at Rs. 164. The possibility of a block closure of mills on account of the jute shortage and the resultant cut in production brought local operators into the market after the week-end and the holiday on Monday. Covering business by shippers and buying in anticipation of a rise forced up prices, and on Tuesday morning, the market opened steady being Rs. 3 higher in sacking, with May B Twills at Rs. 168. Hessians also improved, and 10oz. moved up to Rs. 57. The futures market did not open on 9th May as originally intended, but was postponed until 12th June.

Opening quotations on Wednesday morning were as follows:

	May	June	July-Sept.
40in. 7½oz.	42.50	42.50	41.70
40in. 8oz.	45.50	45.50	44.60
40in 10oz.	56.65	56.65	55.65
B Twills	167.50	167.00	159.50
Heavy Cees (Plain)	168.00	167.00	159.50
A Twills	204.50	202.00	192.00
Liverpools	187.00	187.00	179.00
Cornsacks	170.00	170.00	163.00

Raw Jute: Once again mills in general stayed out of the market and only small business was reported. This had the effect of making sellers reserved, and although at one stage, there was some buying indication at Re. 1 to Rs. 2 below the quoted rates, these evinced no interest, particularly when business was conducted in Cossipore at premium prices. Any indication at the market rate, which hovered around Rs. 5 below the maximum price level, i.e., about Rs. 57 for Assam—received sympathetic consideration, but once again certain mills paid premium prices which scotched any chance the market may have had of falling. Sellers adopted a reserved attitude in spite of the fact that arrivals in Cossipore continued at a high level, last week's wagon arrivals being 380, which were 70 more than during the previous week. During the week, only a small quota was issued to mills due to the fact that many had not used previous quotas and still had these in hand.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	154.00	57.50	May-June
Northern	151.25	56.50	"
Purnea Desal	148.75	55.50	"
Daissee Selected	159.50	59.50	"
Assam Tossa	155.50	58.00	"
Mesta:			
Assam Northern	147.26	55.00	"
Desal	147.25	55.00	"
Daissee	146.00	54.50	"
Juteli	143.25	53.50	"
Indian Cuttings	265.00 a bale		
Pakistani Cuttings	270.00 a bale		

THE FOREIGN JUTE MARKETS

SHIPPERS QUOTE HIGHER RATES FOR FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE outlook for the Dundee jute industry is one of uncertainty, so buyers and sellers are generally reluctant to transact business. Meanwhile, raw jute shippers have been inclined to quote higher terms, and a few pounds a ton have been added to the already high prices for all grades. The position in Pakistan is, however, quieter and values have become more reasonable again. It looks as if prices will decline in the not-too-distant future, which is what it ought to be if the industry is to prosper. Already, irreparable harm has been done to the trade through the exorbitantly high rates to which sellers raised their terms. The industry must start all over again to woo back the consumers who have switched over to substitutes. Many of those who are using other textiles—such as flax, cotton or hemp—could come back again. But where there was a change of machinery or any method of treating jute cloth or bags—involving considerable expense in some cases—the jute industry's interests would be affected.

Reports concerning new crop jute have not always been favourable, but it is still believed that there will be a bumper crop in both Pakistan and India during this season. Dealers expect that the crop will be an early one, apart from being large, in order to satisfy buyers who will be clamouring for supplies. Dundee spinners are said to be well bought, so fibre business has dwindled to insignificant proportions. It is reported, meanwhile, that jute afloat for Dundee has been diverted to the Continent where spinners are more in need of supplies. Short-time working in Dundee has reduced fibre consumption considerably.

Prices are irregular at from £197 for Mill Firsts, £187 for Mill Lightnings, £185 for Mill Hearts and £180 for Grade Hearts, with Grade Tossa-2/3 from £193, fours £189 and Continental Tossa-2/3 from £186. May-June, c.i.f. U.K.-Continent. New crop Mill Lightnings are offered at from £158 for July-August and £153 for August-September, with Mill Hearts at £5 a ton less in each case, c.i.f.

Calcutta goods fluctuated more wildly during the past week, becoming steadier lately at 85s for 40in. 10oz. and 64s for 7½oz., May and June, 83s and 62s 6d July-September and 73s and 55s 9d, October-December, with B Twills at 252s, 251s 3d, 236s 3d and 209s for the respective positions of shipment, all f.o.b., Calcutta.

RISING TREND IN COPPER PRICES

HIGHER DEMAND EXPECTED FOR TIN

BRIEFLY at the end of April, dealers in the London Metal Exchange seemed more interested in their amenities than in their functions. After 80 years, the inconspicuous building in inconspicuous Whittington Avenue, mingling with the meat and poultry trade of Leadenhall Market in the City, had been reconstructed and enlarged (but in the famous "ring" of curved benches it maintained its link with tradition), and the virtually new building was opened by the Lord Mayor. The timing was appropriate, for there were signs of change in the metal trade as prices responded to political tension and to economic advance.

Copper Output Forecasts

Copper has established a gradual upward price trend since January, in spite of a statistical position that has prompted Sir Ronald Prain, chairman of Rhodesian Selection Trust, to forecast a surplus of production capacity until 1964. Not even the astonishing estimate of the U.S. Copper Institute in April that world production of the metal increased in March by 12 percent, appreciably affected the market. It has not been satisfactorily explained how production increased by 12 percent when all major producers were supposed to have cut their production by 10 percent. It may be that the last cutbacks (principally in the U.S.A.) in January had not yet had their due effect on the figures, but the market regarded the news as evidence that producers were confident of a substantial increase in demand; indeed, Kennecott had already announced that it was reverting to a full working week in its mines.

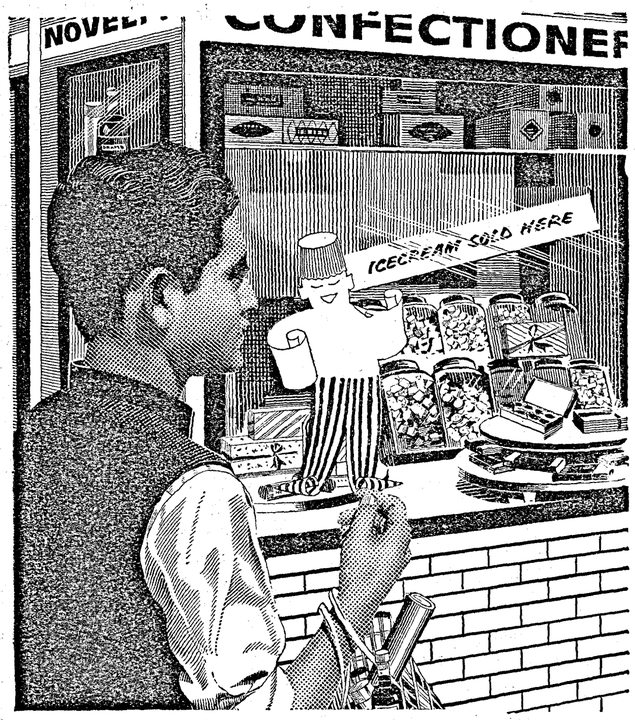
Outlook for Tin

Likewise, when the price of tin reacted suddenly after a long rise, the market saw evidence not that demand was hesitant, but that the manager of the buffer stock was anxious to restrain the rise by selling from his stock. However, the stock is not sufficient, and it was never intended, to fill a long-term gap between supply and demand, and A. Strauss and Co. has recently intimated that the deficiency this year will be "very much higher" than the figure of 10,000 tons that it had estimated previously. The position of tin differs from that of the other major metals, in that no surplus of this metal has accumulated. But the principal direct cause of the strengthening of prices is the same for all the metals: the fact, or the anticipation, of economic expansion in the U.S.A. The effect is cumulative; for when consumers are convinced that prices are moving against them, they satisfy their requirements as soon as possible and, anticipating higher values, build up their stocks.

NAMES AND DATES

Mr. R. W. Westbrook, managing director of the Metal Box Co. of India Ltd since 1958, has left for the U.K. on retirement from the Company. He is succeeded as managing director by Mr. H. K. S. Lindsay, who joined the Company in 1937.

Mr. D. S. Thaker and Mr. D. N. Kakar have been elected president and vice-president, respectively, of the Indian Coal Merchants Association for 1961-62.



MR. AL FOIL WRAPS CONFECTIONS TO PERFECTION

"Why not say it 'sweetly' Sir," said Mr. Foil helping out the worried gentleman. "Delicious chocolates and toffees to tempt sweet sixteen, soft candies to please Grand-Ma and ice-cream or biscuits to delight the kids at home... your choice in sweet presents is wide. Only be sure that they are all foil wrapped. Confectionery protected by aluminium foil looks attractive and tastes wonderful as only fresh sweetmeats do... because foil packing keeps in the tasty goodness while keeping out dirt, damp and dangerous contamination.

Long and extensive experience as Manufacturers of Aluminium Foils for packing goods in Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

LEMONGRASS OIL PRICES REMAIN STEADY ON COCHIN MARKET

BOTH INTERNAL AND FOREIGN DEMAND INCREASING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PRICES of lemongrass oil have been ruling steady above Rs. 150 a dozen bottles of 16oz. each on the Cochin market for the past few months. The latest quotation is Rs. 160 a dozen bottles of 16oz. each. This is almost double the price ruling a couple of years ago. The world demand for lemongrass oil which is used in manufacturing Vitamin A, medicines and cosmetics is rising. Some time ago, there were reports that communist China was in a position to offer similar oil at lower prices. But the apprehended competition from that source has not materialised. The competition from the synthetic oil has not apparently created any serious problem for lemongrass oil producers. So India's position in the world market is safe, according to shippers in Cochin. Guatemala—the other source of supply—offers some quantity to the world market, but she is not yet a serious competitor of India. Meanwhile, the demand for lemongrass oil is increasing in India, and almost 30 percent of her production last year is believed to have been locally consumed. Production last year amounted to about 1,300 tons, which is almost fully sold. The new season in Kerala is to begin this month. Since prices are attractive, production this year is expected to increase.

Record Pool Receipts

The Coffee Board is reported to have received well over 54,000 tons of the current season's output, which is the highest on record. The possibility of pool receipts rising to 60,000 tons cannot, therefore, be ruled out. But with the steep rise in receipts, the storing and financing of coffee will pose a serious problem. Present indications are that coffee growers will not get more than Rs. 1.75 a point for the current season's crop, against Rs. 2.50 a point a few years ago. This substantial fall in the growers' return is to be attributed to the steep decline in the world price. The latter has been falling continuously under the pressure of overproduction. India's share in the world output is under 2 percent, but since half of her coffee has to be exported, the return to the grower is largely governed by world prices. There is still a premium on good coffees in the world market, and some of the coffees produced in India can rank among the best in the world. Any future marketing policy should aim at placing for exports such coffees which can fetch a premium. Fortunately for coffee producers in India, the demands in the internal and export markets are complementary. The demand for good quality Arabica Plantation is stationary around 10,000 tons in the internal market while that for Robusta is rising. In the export market, the situation is just the reverse, since Arabica Plantation can still be sold at economic prices. The demand for Robusta is, however, poor in export markets. While the potential of the internal market for the stability of the coffee industry cannot be ignored, growers should offer the fullest co-operation to the country's efforts to earn maximum foreign exchange.

Change in Marketing Policy Urged

In accordance with this principle, the United Planters Association of Southern India has proposed a reorientation of the marketing policy of the Coffee Board. Growers think that a change in the Board's marketing system is necessary if the large crops now being produced are to be efficiently marketed. They feel that the bulk marketing of coffee has affected adversely the demand for the commodity. The distinctive qualities of some of the coffees produced in India were forgotten by the system of bulk sales. The protected market and the fair prices growers enjoyed during the past few years coupled with bulk sales have tended to dampen the pride they once took in their coffees, and the result has been that there is now an accent on quantity rather than quality. Speaking at the annual general meeting of the Coorg Planters Association, Mr. Appaiya, therefore, stressed the necessity to pay special attention to quality. He said that good prices are still available for good coffees, so it should be the growers' aim that processing on the estate should be thorough and complete. The ever-increasing production calls for more drying facilities, for the constant cry from the Board and curers is that coffee is being delivered in an underdried state. Mr. Appaiya, therefore, appealed to all members of the Association to see to it that adequate provision is made on the estates for the processing of coffees.

COCHIN TEA SALES

At Dust Sale 18, 220,000 kilograms of tea were on offer. There was a fair demand. Low mediums and mediums declined by 20nP and sometimes more. Coloury mediums and black leaf grade were fully firm while the residuals were the weakest feature of the sale.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

QUALITY DUSTS RISE

AT Sale No.42, held on 10th May, there was a good general demand for the 22,721 packages of Dusts on offer. Orthodox descriptions registered a decline of up to 15nP, although the small and bright lines received better support. Legg-cut teas were readily absorbed, the brighter lines selling above valuation while the more ordinary kinds were generally easier. Clean C.T.C.s were well supported, but sold at irregular rates with the good kinds showing an easier tendency. Fibrous descriptions met with better demand than in recent weeks but prices again declined.

Quotations

	1961	1960
	Rs. a kilo	Rs. a lb
Plain Orthodox Dust	4.20 to 4.40	
Medium Assam Dust	4.35 to 4.80	1.98 to 2.08
Legg-cut Dust	4.40 to 5.20	1.94 to 2.06
Medium Assam C.T.C. Dust	5.90 to 6.30	2.10 to 2.28
Good Assam C.T.C. Dust	6.60 to 7.00	2.40 to 2.75

(Quotations are inclusive of excise duty.)

There was a good demand for the 815 chests of Leaf on offer.

CHARTERERS PAY HIGHER FREIGHT RATES

SHIPOWNERS were successful in holding out for higher rates in the freight markets during the past fortnight and Russian and Chinese charterers accepted a number of vessels both for trip and time charter at higher figures. Fixtures of foodgrains from the north Pacific ports to Karachi paid $(U.S.) 9 with 1,000 tons discharge free. Baltic Exchange Chartering Committee fixed a motor vessel for 8,900 to 9,300 tons Min-Max rice in bags from Alexandria to Bombay at 53s 6d f.i.o. stowed. Charterers are in the market for tonnage to carry bagged fertilisers from the U.K.-Continent to Indian ports on the basis of two ports loading and two ports discharge. Fixture of a vessel for 9,500 tons bagged sugar from Cuba to Ceylon has been concluded at a higher rate of 107s f.i.o. and stowed, the last rate paid being 92s. General berthing position in Madras is improving, but due to the serious deterioration in the vicinity of the Hooghly and Fulta Points area, Hooghly river drafts for May have been reduced. The transit sheds in Calcutta are again getting congested with uncleared foodgrains and fertilisers. The Indian coastal shipowners have allocated a sufficient number of vessels to meet the movement of the extra tonnage of coal for coastal ports. The arrival of wagons from the coalfields are, it is reported, at present satisfactory.

LINSEED STEADY

The linseed market was steady with turnover limited. Millers were not very active due to shorter working hours following cuts in electric power. The oil market was fairly steady, but business was on a small scale because of limited stocks with millers. The oilcake market was steady with a further improvement in prices as demand was good and supplies were short. The latest quotation is as follows: Ready-May delivery Rs. 25.37 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 2nd May and 9th May, 1961)

Cowhides: Wet salted (Ord.) 11,000 pcs. on the basis of Rs. 11.62 to Rs. 14.25, Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 10.50 to 16.50 and Rs. 19.50 to Rs. 28.50; Wet salted (ord.) 5,000 pcs. on the basis of 60nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 49,700 pcs. on the basis of Rs. 270 to Rs. 280, Rs. 325 to Rs. 335 and Rs. 355 to Rs. 365; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Dinajpur 10,200 pcs. on the basis of Rs. 365; Purneah 2,000 pcs. on the basis of Rs. 370; Patna-Muzafferpore 4,800 pcs. on the basis of Rs. 325 to Rs. 335 and Rs. 370 to Rs. 380.

Bazaar Stocks

(9th May, 1961)

Cowhides: Wet salted 91,000 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 29,000 pcs.; Assam-Dinajpur 97,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 328,800 pcs.

COMPANY AND PUBLIC NOTICES

THE KIRLAMPUDI SUGAR MILLS LIMITED

NOTICE

NOTICE is hereby given that the Sixteenth Annual General Meeting of the above named Company will be held at the Registered Office of the Company at Pithapuram (East Godavari District) on Monday the 29th May, 1961 at 2-30 p.m. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th June, 1960.

Claims on behalf of holders of shares held on blank transfer will not be entertained.
3. Explanatory Statement as required by Section 173 of the Companies Act 1956 has been issued to all Shareholders.

JENSON AND NICHOLSON (INDIA) LIMITED
NOTICE

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Wednesday, 7th June, 1961 at 11 a.m. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1960 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.
5. **As Special Business**:—To pass, if thought fit, the undernoted resolutions:—

(i) To consider the re-appointment of Mr. Theo Millard Bishop as the Managing Director of the Company for the further period of three years with effect from the 1st June, 1961, and, in this connection, to consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as an Ordinary Resolution:—

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the re-appointment of Mr. Theo Millard Bishop as the Managing Director of the Company for the further period of three years with effect from the 1st June, 1961, on the terms and conditions contained in the draft Agreement (which was submitted to the meeting and signed by the Chairman for the purpose of identification) or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Mr. Bishop."

(ii) To consider and, if thought fit, to pass with or without modification, the following resolution as a Special Resolution:—

"That, pursuant to Section 370A of the Companies Act, 1956, the Company doth hereby extend the time of repayment of the loan of Rs. 3,49,202/- due to the Company by Jenson & Nicholson of Pakistan Ltd., beyond the period of six months from the date of commencement of the Companies (Amendment) Act, 1960, till such time as the Board of Directors of the Company consider it necessary to enforce the repayment of the said loan."

The Share Transfer Books of the Company will be closed from the 1st to 7th June, 1961, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, Fairlie Place,
Calcutta, 24th April, 1961.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the Members of the Company.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary. Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserve & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb. realised for crop 1958 Lbs.	1958 Rs.	1959 Lbs.	1959 Rs.	Estimate 1960 Lbs.	NAMES	Accounts closed	Mg. Agts., Secretaries, etc.	Net Profits including taxation Rs.	Dividends per cent 1957	1958	1959	Paid-up per Share Rs.	Latest Market Quotations as available until 10-5-61 Rs.	3-5-61 Rs.	A year ago Rs.

MISCELLANEOUS COMPANIES

O. Po. C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in accounts closed column indicate the months of the calendar year in which accounts are closed. For indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BRITAIN AND THE COMMON MARKET

THE talk that has been heard about Britain *joining the Common Market* deserves to be received with considerable scepticism, but it is important as a sign of a new trend of thought about Britain's economic future. Taken literally, it *denotes* an impossibility. It is out of the question that Britain should one day apply for membership of the six-nation group and be admitted on ratify*ing the Rome Treaty that is its constitution.* It is scarcely less absurd to claim that she would do this if only some present members would stop blackballing her application. The figure of speech that calls the Common Market a "club", with its house rules and membership fees, has been useful in drawing attention to some features of that *undertaking,* but it is worse than useless when discussing the question of recruiting new members. A club is formed with the possibility of expansion *in mind, and is thus an* "open-end" association. A multilateral trade pact, on the contrary, has to be drawn up with the existing trade between members in view; if new members are included, the whole pact has to be re-written. Since the new member in question is still, after all, one of the world's largest economies and by far its most ac*tive trader, she cannot* adhere to a trade pact without revolutionising the whole arrangement. If the club-metaphor is to be retained, one had *better envisage the case of His Holiness the Pope* applying for admission to the League of Communist Youth.

It is no one's fault in particular that the Common Market has been built in such a way as to make British membership virtually impossible. The move towards European economic unity began just after the war in a "study group for a European Customs union", in which Britain participated along with *the nations that now form* the Six and some of those that today are in the Seven. As research proceeded, it emerged that only six nations were really enthusiastic about a *Customs union* and so, before any rules were written, those six hived off to take the question further. They wrote a treaty that was based on the nature of their six economies *and on their mutual trade;* they would have been extraordinarily unpractical people if they had done anything else. If Britain had joined them from the start, *the treaty would have been very different.* Since she did not, it was inevitably founded on the assumption that the exports of Europe's biggest trader would enter only after paying the common external tariff. To suggest now that they enter duty-free, *i.e.,* that Britain join as a full member, means going back to reconstruct the whole edifice.

The pretence was maintained that the organisation was open to new members, but we have just seen *the complicated adjustments* that were needed to bring Greece in as an associate—and Greece's trickle of exports is negligible alongside the flow of *produce from, say, Denmark.* With Britain, the difficulties would be multiplied a thousandfold. This is no criticism of the architects of the Rome Treaty; it shows, on the contrary, that they did their work properly. They took account, that is, of existing trade flows between members and built their treaty on that realistic foundation; an Indian *economic plan that left it open for* Pakistan to join next week with her jute, tea and cotton industries would, obviously, be no plan at all. So when we speak of "Britain joining the Common Market" it is as well to be clear that we are referring to the possibility of the present Common Market being liquidated and a new association of similar spirit *being built with Britain* (and no doubt some of her camp-followers in the Seven) as founder-member. "Liquidated" is perhaps too strong a word, for the experience that the Six have gained would guide the search for a fresh arrangement, but that arrangement, when found, would have little resemblance to the Common Market as we know it today.

A first conclusion of importance to anyone concerned with international trade is that we are not going to wake up one day to the *fait accompli* of Britain's decision to join the Common Market. It took most of a decade to launch the Common Market and it will take at least several years to devise an alternative that includes Britain. Everyone whose interests are involved will have plenty of warning. If it is true that President Kennedy urged Mr. Macmillan in April to "join Europe", he must have had in mind, not an heroic plunge, but a gradual re-orientation of British thinking, away from the present sterile opposition to the Common Market towards a more co-operative attitude that one day could prepare an acceptable alternative.

A second conclusion that we must draw from the very fact that Britain's membership of the Common Market is discussed, is that the idea of a great free-trade area is dead and buried. That idea meant only one thing: the liquidation of the Common Market in any shape or form. The substitute proposal for a European free-trade zone was vague, probably unworkable and almost certainly damaging to American interests. None of that mattered however, for its only purpose was to nip the Common Market in the bud. To progress from that to even the most *general consideration* of Britain's admission to the Common Market means that this latter has been accepted as an abiding reality that cannot be snuffed out but has to be reckoned with. The future of world trade is to that extent clearer. No one can know, before arduous negotiations, what a Common Market with Britain would look like, but at least it is certain that it will not be a loose free-trade zone but will involve some measure of British acceptance of the principles of economic harmonisation and a uniform external tariff.

The belief that certain Continental nations are secretly opposed to finding such an arrangement with Britain is justified in this sense, that Britain is in the position of the asker, seeking something that others have no pressing need to give. By and large, the Six are content with the way their venture has turned out; it has, at all events, not run into difficulties that only Britain's admission can solve. That would have been the case if, as was forecast several years ago, the Common Market had degenerated into a West German economic hegemony and/or a French political hegemony. Britain would then have been called in to play the rôle that has been hers on the Continent for hundreds of years past, the restorer of balance, the essential counterweight. In the event and for the time being at least, the Continentals are rubbing along fairly well together in their new union and it is only sectional interests (*e.g.* north German traders) who feel that they would benefit from an extension of the union to cover Britain. The only political pressure in favour of Britain's admission comes from small countries like Holland who are realising (rather late in the day, it seems) that the little Benelux nations will be exposed to Franco-German dominance unless Britain is there to support the minor maritime powers against the Continental giants, as she has so often done in the past.

For the rest, the Continentals feel that they have set on foot a viable association without—even against—Britain, and they require to be convinced that it should be radically amended to accommodate the island power. In these circumstances, the official attitude in London that Britain should do nothing until she is cordially and unanimously invited by the Six is simply unrealistic. This attitude was taken up two years ago, and the invitation is still to come. Naturally, it will not come until the Continentals feel they need Britain more than Britain needs them. For the moment, it is the British economy that is sluggish while the Continentals are expanding; it is hard to see why they should spontaneously offer Britain admission, and a continuation of British complaints about how much she is suffering from her exclusion will not change their minds.

So far, London's approach to the Continent has shown no realisation of this inferior tactical position. There have only been broad hints that Britain would deign to accept a sufficiently warm invitation provided it did not interfere with her various overseas commercial obligations. This stand will never get Britain into the Common Market, and it was no doubt a reversal of that position that President Kennedy urged on Mr. Macmillan last month. The rumours now abroad about a British decision to join the Common Market mean no more than that the unprofitable attitude of the past three years is being surrendered. It is a long way from there to the presentation of a concrete proposition, and further still to its acceptance.

If and when a realistic counter-proposition is put forward by London, we must expect to see it received with considerable suspicion. Rightly or wrongly, Britain's policy in recent years has been interpreted as an attempt to kill the Common Market lest it damage her own commercial interests. Unless a new policy is ushered in with some striking action that demonstrates a break with the past, many are likely to imagine that the ultimate objective remains unchanged: that Britain wants to board the Continental vessel only in order to scuttle it. The sort of striking action that could disarm such suspicion would take various forms: it would include the departure from the present British Government of men too closely identified with the policies of recent years (such as Mr. Maudling and Sir David Eccles), a frank and thorough re-statement of the *Commonwealth's* commercial doctrine, and perhaps agreement to finance Britain's share of a tunnel under, or bridge over, the English Channel as a way of disavowing traditional insularity. This conciliatory approach is important because it is bound to have a favourable effect on Continental thinking, especially French, which has all along resented the special position claimed by Britain in the western world by virtue of her affinities with the U.S.A. and the extent of her overseas commitments, and which Continentals tend to regard as mere rationalisations of Britain's traditional distrust of Continental involvements.

Suspicion would not be limited to the Continent. Throughout the Commonwealth, deliberate British policy has managed to awaken fears that the Common Market is the work of the devil, or that *it is* directed against the interests of most developing nations. The consequences of this could be embarrassing the day Britain herself determined to join the association. Fears would be increased, not diminished, in places like India if British colonies were to be given the same favoured status as is now enjoyed (in theory) by the colonies of France, since it would seem that more, and more formidable, competitors were gaining an advantage for the sale of their tropical produce in western Europe.

Ultimately Britain has only one weapon to alleviate these fears and to make her partnership *more* attractive to the Continentals, and that is to stimulate the expansion of her own economy. A nation with an annual growth rate of only 1 per-cent is at a disadvantage in seeking membership (and membership on a special status) in an association where expansion rates average 5 percent. And a nation that is so near economic stagnation arouses conservative reactions among her suppliers, anxious to cling to their fixed share of the British market. Several Commonwealth countries have got so used to the stability of the British economy that they think that it is only imperial preference that guarantees their sales in that market; if they were confronted with a market where demand was increasing at the rates known on the Continent and elsewhere, they would contemplate more equably the adventure of giving up residual imperial preferences for the chance of selling more in western Europe as a whole. In other words, the *defensive* approach, that Britain must join the Common Market to escape loss, will win little support or sympathy. A more dynamic economy could take the *offensive* line by showing what she had to contribute to the task of European unity while not damaging the historical interests of her Commonwealth partners.

THE STATE OF THE MARKET

TRADING has become sluggish in the Calcutta and Bombay stock markets during the past month or so. Share prices have fluctuated within only a narrow range and activities are at the moment restricted to the minimum. Support appears almost to have dried up, at least for existing shares; nevertheless, selling pressure too is conspicuous by its absence. In an idle market, any small offer tends to depress prices unduly. An important stabilising factor, however, is that short sellers are being discouraged by excellent corporate news.

On a long-term view, the prospects for ordinary shares may be considered fairly promising. In spite of difficulties in the form of raw material and power shortages that some industries are meeting at the present time, the overall trend of corporate working is generally running at a satisfactory level. The demand for nearly all commodities has increased substantially and the gap between requirements and supplies has widened following heavy restrictions on imports. Taking advantage of the sheltered domestic market, Indian industries have extended their activities as far as circumstances permit, and many new projects are in the process of being set up. There is little difficulty in selling almost all the products at present being manufactured and the fact that prices have increased steadily does not seem to make any difference as far as sales are concerned. In a market in which commodities are generally in short supply it is not difficult to pass the burden of increased production costs to the shoulders of consumers. As a result of increased turnover, the profit trend has been generally upwards. In the light of these developments, investors are taking a constructive view of the outlook.

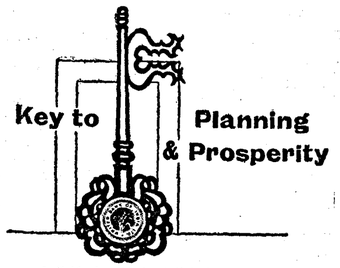
In the circumstances, greater attention has obviously been paid to growth prospects than to dividend yields in assessing the merits of shares. However, in a developing economy like India's it is perfectly reasonable to think that industry will grow steadily with economic development. Against such an optimistic background, the current sluggishness of share prices may at first sight seem rather paradoxical. The absence of support is probably due more to a lack of resources than to apathy. During the past year or so, a great deal of funds have been siphoned off into rights and new share issues. In fact, substantial amounts are at present blocked in new floatations due to excessive over-subscriptions. Unless these funds return to the market, the trend is likely to falter.

Besides this, investors are now being asked to contribute substantial funds in the form of call money on shares which have recently been subscribed. So the pressure on investible funds continues. It is, therefore, not expected that the trend can move very much in the upward direction. At the same time, there seems little possibility of a fall in share prices in view of the good corporate outlook. Holders are not expected to sell at a time when growth prospects are distinctly good. In any case, big selling is discouraged by the existence of a capital gains tax. If shares are sold now and capital gains booked on the deals, it is doubtful whether replacement can be made later at a profit. There is no doubt that response to new share issues has been very satisfactory during the past year or so, as reflected in the figures relating to new company registrations. A record number of 1,683 new companies with an authorised capital of Rs. 287 crores, were registered in India during 1960-61, compared with 1,452 in 1959-60 and 1,095 in 1958-59. Of these new companies, 153 were public and 1,530 private. The authorised capital of new public companies was Rs. 157 crores and that of private companies Rs. 130 crores. There was a record number of big public concerns whose share issues boomed on the stock exchanges. Of the 153 new public companies, 98 were registered with an authorised capital of Rs. 50 lakhs or more each, compared with 25 in 1959-60 and 16 in 1958-59. The number of big private companies was 44. There were 936 small public and private companies having a paid-up capital of less than Rs. 5 lakhs each. Although there is an apparent predominance of small companies, it is not yet certain whether the trend can be interpreted to imply a dispersal of economic power.

The increased number of company registrations seems to have caused jubilation in New Delhi in the sense that official quarters are inclined to interpret the trend as dispelling all apprehensions concerning the enforcement of the Companies Act, 1956 and its later amendment. The rise of registrations does not by itself indicate the reaction to the Companies Act one way or the other. It should be borne in mind that under present circumstances, the corporate form of organisation is about the only suitable mechanism for running a commercial enterprise. So business has to be organised through the medium of a company irrespective of whether the company law is irksome or not. Experience shows how the Companies Act has proved burdensome in many instances due to the many unnecessary formalities and restrictions which it contains. In order to make the operation of companies much smoother, it is still advisable to streamline the Companies Act in such a way what harrassment is eliminated without encouraging malpractices.

So it can be taken for granted that the registration of new companies will continue at a satisfactory level as long as economic development advances under the stimulus of an official plan. The decline in exuberance for new share issues is no subject for regret considering that formerly the eager demand for these issues was mainly speculative in character. The sobriety which prevails at the moment in the new issue market is welcomed: investors have now become more discriminating. Shares of companies under good managements and with growth possibilities, especially if also blessed with able foreign collaboration, do not find any difficulty in attracting funds. Speculation in the form of stagging operations has also declined, partly because of shortages of credit and partly due to greater discretion on the part of investors. The fact that some new share issues have not been fully subscribed and a large portion of the holding are being held by underwriters shows how discriminating the investing public has become.

A Press report from New Delhi suggests that the authorities concerned are considering reorganising the capital structure of companies. It seems that steps may be taken soon to force companies to reduce their indebtedness by issuing more share capital. The idea itself is not a new one in the sense that under-capitalisation cannot contribute to the health and vigour of the corporate sector. But, whether a further issue of share capital will prove beneficial to the existing shareholders of a company depends greatly on the terms and conditions under which rights shares are issued. New Delhi has a fetish for insisting on premiums on the issue of rights shares. Whatever little justification there is for doing this where the rights shares are issued in order to raise finance to implement schemes of expansion and modernisation, there can be no logic in issuing them at premiums when the purpose is to repay the indebtedness of the companies concerned. It is this perspective which should be borne in mind when applications for new share issues are processed in future.



Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.
Saving in the form of Bank Deposits provides resources for the National Plan.

A FLEXIBLE ASSOCIATION

THE idea that politics and business should proceed on separate levels is familiar to advocates of trade between the free-enterprise countries and the Soviet bloc. Events since South Africa resigned from the Commonwealth have established the same principle between free-enterprise countries. Both sides in the conflict at the Commonwealth Prime Ministers' Conference refused to compromise their beliefs for the sake of expediency, but as soon as the rift was formalised they sought ways and means to minimise its economic effects. This distressing event has demonstrated the loose flexibility of the Commonwealth. The system (if it can be so called), has never been formal, and the Commonwealth's relations with Eire and Burma had already shown, before South Africa's secession, that even ex-members could participate in its commercial arrangements.

South Africa might have been excluded from the system of preferential tariffs. She might have withdrawn from the sterling area. She might have rearranged the marketing of her gold, so that it would no longer be handled by the Bank of England and the London bullion market. In fact, no such consequences have followed her constitutional actions, because arrangements that benefit both parties have their own validity, distinct from politics. The problems that remain —particularly the tendency of capital to leave South Africa, a developing country that should be receiving capital—result from South Africa's racial policy rather than from her secession from the Commonwealth. Foreign capital was withdrawn, and new foreign investment ceased, last year; at the same time, despite exchange controls, some South African money was expatriated. As a result, South Africa's reserves shrank from £152 million at the beginning to £86 million at the end of 1960, although nobody imagined last year that after the following May South Africa would be outside the Commonwealth and alone.

It has been suggested in London that continental monetary centres, particularly Amsterdam, will provide the needed capital to which South Africa has no longer ready access in London. But if the main impediment to providing capital is doubt regarding the country's political future, in a state of racial turmoil, it is difficult to see how normal financing can be arranged in any centre. South Africa can provide for her essential needs by saving. But she must at the same time earn foreign exchange with which to pay for essential imports of capital goods. It is easy to see why the economic framework of South Africa's relations with the Commonwealth has been left substantially intact. To maintain her export trade (which has unquestionably been affected by official and unofficial boycotts abroad) South Africa needs all the preferential treatment that may be accorded to her goods (less than a tenth of her exports is, in fact, dependent on preferential tariffs abroad); and Britain, seeking every possible outlet for her goods, is unwilling to sacrifice any advantage abroad. Most of South Africa's trade is financed by sterling, and it is logical that most of her currency reserves should be in sterling. London's bullion market is the biggest and therefore the most convenient medium for disposing of the world's biggest output of gold. And if any foreign country wants to use London's financial facilities its business will be, as a matter of tradition and self-interest, willingly accepted.

Stern critics have objected to financial and commercial arrangements which, they say, deny the whole spirit of condemnation that pervaded the Prime Ministers' Conference. London's financial institutions, on the other hand, are glad to see fresh evidence that the sterling system functions independently of the Commonwealth. It may be significant that a new definition of the sterling area, introduced officially in February this year, does not specifically mention the Commonwealth but lists the "scheduled territories" individually (whereas previously they had been defined as comprising the Commonwealth with one exception (Canada) and some additions). It is conceivable that the British Commonwealth, adapting itselt to the profound political and social changes in the world, will gradually become unrecognisable as a political group, and that the ideas of consultation and co-operation that it represents will be embodied in an international economic system of which the main component will be the sterling area. By withdrawing from the British Commonwealth, and adhering to the sterling area, South Africa has unwittingly emphasised the distinction between them.

The sterling area comprises already a few countries (such as Libya) which are not and have never been members of the British Commonwealth. The Scandinavian countries have for many years been closely associated with it. The sterling area is a flexible association financially as the British Commonwealth is politically, and its range could be extended. Any development of the British systems—economic or political—should be adapted to the current changes in Europe. As an obstruction to the British Commonwealth's association with the European Common Market, the system of preferential tariffs remains reaffirmed, indeed, by South Africa's inclusion in it. But it is not unreasonable to assume that when the British systems are in process of change, the changes can be consciously directed towards a solution of one of the major problems of the modern world, the relation between western Europe and the less-developed countries.

Current News and Comment

Dr. Paul Lohmann Issue

Dr. Paul Lohmann (India) Ltd proposes to establish a factory at Jessore Road near Calcutta for the manufacture of chemicals and fine chemicals as for electro-plating, fine and sensitised paper, leather processing, etcetera, in collaboration with Dr. Paul Lohmann of West Germany. The foreign collaborator will be allotted 40,000 ordinary shares of Rs. 10 each in the Indian Company against supplies of plant and equipment. Dr. Paul Lohmann India is issuing 300,000 ordinary shares of Rs. 10 each, of which 60,000 shares will be subscribed by the directors and their friends. The remaining 200,000 shares have been offered for public subscription at par. The subscription list opens on 24th May, 1961. The entire public issue has been underwritten. (Details of the issue are printed on a later page of this issue of *Capital*).

As for prospects, a large portion of the chemicals proposed to be manufactured by Dr. Paul Lohmann are at present imported. So the Company should have no difficulty in selling its products. Besides this, the demand is expected to increase with industrial progress. Messrs Monsanto Chemicals of India (Private) Ltd has been appointed the Company's sole selling agents. Under the manufacturing licence granted to the Company by the Government of India, the factory can produce 3.4 million lbs of organic and inorganic chemicals valued at Rs. 1 crore in the initial stage. The cost of the project is estimated at Rs 30 lakhs. The directors hope good profits will be earned during the first 12 months of working, so there should be no difficulty in paying satisfactory dividends within a short period. The Company will be entitled to the usual tax benefits available to new companies.

Bright Prospects for Kohinoor Mills

The shares of Kohinoor Mills which were quoted around Rs. 260 early in the year touched a high of Rs. 318 in March. Subsequent technical correction took them down to Rs. 285 by about the middle of April, but last week they spurted up again to Rs. 318. The firm trend in the shares reflects the change in the basic outlook for the Company because of its rationalisation, rehabilitation and modernisation. Kohinoor Mills fared well in 1960, with the gross profit up from Rs. 17.11 lakhs to Rs. 32.19 lakhs. The improved results are due to increased production and better efficiency. The chairman, Mr. A. N. Haksar, told shareholders at the annual meeting in Bombay last week that the Company is doing better in the current year, so the long-term outlook is even more encouraging. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*.) Kohinoor Mills has increased the production of fine and superfine fabrics to suit consumer demand. Besides, it has introduced new bleached and dyed sorts which offer a better profit margin. It progressively started 45,500 spindles by introducing a third shift and commenced the spinning of some new and more paying counts of yarn. Screen printing, it is said, has also been introduced. The Company is trying to raise its cloth and yarn exports in order to obtain machinery licences for modernising the mills. Referring to the silk and art silk unit, Mr. Haksar complained about the difficulty of obtaining adequate yarn supplies. To solve this problem, he said, the management has "decided on a policy of export for earning licences for the direct import of the required yarn." He hoped that the accounts of the unit would show a substantial improvement in 1961.

Reviewing the progress of the rehabilitation and modernisation programme, Mr. Haksar said that new machinery worth Rs. 37.68 lakhs was installed in 1960 and orders for additional machinery worth Rs. 46 lakhs had been placed. In addition to the 48 automatic looms on order, he hoped to receive further licences to have a full shed of these machines. The chairman assured shareholders that the management is seeking all avenues to modernise the mills. He expressed great satisfaction over the management's relations with labour. The shareholders, however, pointed out that there was enough room for economy in the Company's buying and selling operations, which, if properly handled, could contribute a good deal to the profit. The shareholders demanded an enquiry into the contracts and urged that they be associated with it. The chairman assured them that a committee of directors would look into the matter and take suitable action. Mr. Haksar discounted market rumours that Mr. Kasturbhai Lalbhai was being invited to join the board.

Ordinary Issue from B.I.E.C.

The British India Electric Construction Co. Ltd has produced satisfactory results for the year ended December 1960. The production and sales of switch gear and electric motors have increased substantially. As there is good demand for these products, steps have now been taken to increase capacity. The Company has, therefore, issued 100,000 rights ordinary shares of Rs. 10 each at par for obtaining the necessary finance. This will treble the ordinary share capital to Rs. 15 lakhs. The ordinary dividend has been declared at 45 percent, taxable, for 1960. It is covered more than four times and works out to a yield of 14.3 percent at a price of Rs. 31.50 a share. The ordinary dividend was 25 percent, taxable, for 1959. The profit figure has been arrived at after providing Rs. 1.77 lakhs (against Rs. 1.57 lakhs) for depreciation. Taxation is allocated Rs. 5.09 lakhs (against Rs. 2.97 lakhs), development rebate reserve Rs. 29,386 (against Rs. 32,907) and general reserve Rs. 3.25 lakhs (against Rs. 1.81 lakhs). The carry-forward is Rs. 81,788, compared with Rs. 74,493 brought in.

Burmah Oil Profit Rises

In his statement to shareholders (a fuller version of which was printed in last week's *Capital*) circulated for the annual general meeting, to be held in Glasgow on 2nd June, Mr. W. E. Eadie, chairman, Burmah Oil Company, says that although trade on a tonnage basis was 7 percent greater than in 1959, there was a sharp decline in group profits to £4,973,030 in 1960 from £6,880,434 in 1959. This was due mainly to the effects of world-wide competition in the oil industry leading to reduced profit margins, and increased exploration costs in the U.S.A. and Canada. Dividends from trading investment and other dividends and interest were however £1,950,022 greater than in 1959. The net profit after taxation for the year is, therefore, £9,235,798, compared with £8,899,947 in 1959—an increase of £335,851.

Discussing the group's activities in the countries in which it has business interests, Mr. Eadie says that the demand for petroleum products in India was around 7 million tons in 1960. This demand is likely to be twice as great in six years' time. The group's share of total sales in this country during the year was 7 percent higher than in 1959. The product price formula enforced by the Government has reduced the profit margins allowed to the oil companies. The former has also set up an oil price enquiry committee, which is now conducting an exhaustive investigation. It is expected to submit its report shortly. Production operations by the Assam Oil Company continued at Digboi. In the Nahorkatiya, Hugrijan and Moran areas of Oil India Private Ltd, extension and development drilling has again been successful. Discussions have recently been resumed with the Indian Government on exploration outside the concessions held by Oil India. Referring to the entry of the Government into the oil distribution field, Mr. Eadie says that a public sector concern, the Indian Oil Company, has started its operations since the end of 1960. It will handle products from Government refineries when they are commissioned. Meantime, it is selling oil products imported from Russia. "This is a disquieting sign and it remains to be seen what effect this competition will have on market conditions," the chairman adds.

Kamarhatty Profits Fall

The working of the Kamarhatty Co. Ltd during the year ended December 1960 has been adversely affected by fibre shortages and high prices of raw jute in relation to those of goods. Discussing the current prospects in their report, just published, the directors state that the results for the first quarter of 1961 are more satisfactory than those achieved in the second half of 1960, because the prices of jute goods have been favourable in relation to those of raw jute. But the trend has changed since then and simultaneous business has again become unprofitable in view of the sharp rise in the price of fibre. The future outlook depends on the relative prices of raw jute and goods. There is, however, a certain amount of optimism concerning the new crops in India and Pakistan. Meanwhile, production costs have been increased by higher labour emoluments.

The equipment of the mills has been improved by installing a pre-beaming machine providing warp yarn for more than 300 looms. These machines have helped improve operational efficiency. Steps have been taken to import further machinery. The net profit has declined from Rs. 28.28 lakhs in 1959 to Rs. 1.22 lakhs in 1960, after providing Rs. 7.89 lakhs for depreciation; Rs. 1 lakh has been transferred from general reserve and Rs. 1 lakh from debenture redemption reserve. The ordinary dividend has been cut from 20 percent, taxable, to 5 percent, taxable, absorbing Rs. 2.16 lakhs. At the present price of Rs. 161 a share, the dividend yield is 3.1 percent. Taxation is allocated Rs. 72,000 (against Rs. 5.50 lakhs) and development rebate reserve Rs. 35,737 (against Rs. 3,683). Debenture sinking fund receives Rs. 1 lakh. The carry-forward is Rs. 39,774, against Rs. 2,65,628 brought in.

Dalmia Iron Pays a Maiden

Dalmia Iron Ltd proposes to go in for substantial expansion. The Company has obtained an industrial licence to expand the capacity for cast steel grinding media from 3,000 tons to 6,000 tons a year. The new capacity is expected to come into production in 1962. It is proposed to increase the installed capacity of steel castings from 1,500 tons to 3,500 tons a year. The spun iron pipes section will also be expanded. The capacity will be extended from 14,400 tons of pipes to 50,000 tons a year in the first stage. In this production, foreign collaboration is being

negotiated. Dalmia Iron has paid a maiden ordinary dividend of 10 percent, taxable, for the year ended September 1960, in the form of an interim dividend. It is covered more than two-and-a-half times and offers a yield of 9.8 percent at the present price of Rs. 10.16 a share.

The profit has improved from Rs. 3.51 lakhs in 1958-59 to Rs 11.77 lakhs in 1959-60, after increasing depreciation from Rs. 7.41 lakhs to Rs. 8.10 lakhs. Development rebate reserve is allocated Rs. 4.25 lakhs. The carry-forward is Rs. 4,142, against a loss of Rs. 3.48 lakhs brought in. Sales increased from Rs. 66.14 lakhs to Rs. 1.30 crores. The working has been affected by transport shortages, which have resulted in heavy accumulations of finished goods. The ordinary share capital of the Company has, meanwhile, been doubled to Rs. 80 lakhs by issuing rights ordinary shares at par in the ratio of one new share for every one held.

G.K.W. Dividend Disappoints

The ordinary shares of Guest, Keen, Williams have declined to Rs. 43 following the market's disappointment over the payment of a final dividend of 80nP, taxable, a share for the year ended Decemebr 1960. A somewhat larger distribution had been expected. The final dividend has been declared on the increased share capital, which was doubled to Rs. 4 crores a few months ago by issuing rights ordinary shares of Rs. 10 each at a premium of Rs. 18.50 a share. An interim dividend of 80nP, taxable, a share was paid on the previous capital of Rs. 2 crores. A taxable ordinary dividend of Rs. 2.40 a share was paid for 1959. The dividend is covered more than one-a-half times and gives a yield of 3.7 percent at the present price.

After increasing depreciation from Rs. 30.62 lakhs to Rs. 45.43 lakhs, the profit has declined from Rs. 1.17 crores to Rs. 87.73 lakhs, presumably due to increased operating costs. Sales improved from Rs. 9.61 crores to Rs. 9.67 crores. Taxation is allocated Rs. 18.40 lakhs (against Rs. 35.60 lakhs) and Rs. 7.66 lakhs are transferred to taxation equalisation reserve (against Rs. 1.24 lakhs). An amount of Rs. 6.04 lakhs has also been transferred from general reserve. The profit includes a dividend of Rs. 15.60 lakhs received from the subsidiary Company—Sankey Electrical Stamping Ltd. Under the terms of the last rights share issue, Guest, Keen and Nettlefolds Ltd had to subscribe for part of their rights entitlement by transferring their shareholding in Sankey Electrical Stampings to Guest, Keen, Williams, Ltd. The directors point out that the installation of the new rolling mills was completed at the end of 1960, so the beneficial effects of this section could not be reflected in the results. There were difficulties in obtaining adequate supplies of steel billets. Competition has increased, but Guest, Keen, Williams has maintained production at a satisfactory level.

Standard Coal Holds Dividend

The Standard Coal Co. Ltd has maintained the ordinary dividend at 15 percent, taxable, for the year ended December 1960. It is covered one-and-a-half times and gives a yield of 12 percent at a price of Rs. 12.50 a share. The profit is slightly higher at Rs. 2.18 lakhs (against Rs. 2.15 lakhs). Taxation receives Rs. 1.03 lakhs (against Rs. 1.01 lakhs). There is a carry-forward of Rs. 20,718, against Rs. 24,861 brought in. The directors report that the sale value of the Sowardih property has been received in full, but the sale deed is awaiting completion pending permission of the State Government for transferring the property. The investment portfolio is representative of investments which are quoted on the Calcutta stock market excepting shares costing Rs. 1.50 lakhs for which no quotations are available. The total market value of the investments amounts to Rs. 31.38 lakhs.

Standard Motor Fares Well

The working of Standard Motor Products of India Ltd for the year ended December 1960, shows a substantial improvement over the previous year's results. Sales are up by 82 percent from Rs. 2.14 crores to Rs. 3.90 crores and the gross profit at Rs. 28.52 lakhs is about 57 percent higher than the 1959 figure of Rs. 18.15 lakhs. After providing Rs. 9.50 lakhs (against Rs. 6.79 lakhs) for depreciation and Rs. 6.60 lakhs (against Rs. 3.50 lakhs) for taxation, the net profit amounts to Rs. 12.42 lakhs, against Rs. 7.86 lakhs. After writing back Rs. 1,749 being the excess provision for dividends in previous years, the directors have transferred Rs. 3.75 lakhs (against Rs. 3 lakhs) to development rebate reserve. The ordinary dividend has been maintained at 9 percent, less tax, but this being on the increased capital absorbs Rs. 4.23 lakhs, against Rs. 2.30 lakhs. The carry-forward amounts to Rs. 2,974, against Rs. 3,869 brought in.

Standard Motor's production reached a peak of 3,364 vehicles during the year. Planning is reported to have been completed for raising the output to 4,500 motor-vehicles during the current year. Production will ultimately amount to 7,500 motor-vehicles in 1963 which, of course, will depend on the receipt of the required licences. Standard Motor's application to import capital goods is pending before the Government. It is now commencing the manufacture of the new model, Standard Herald, which is expected to be in the market in June this year. The model has been well received in Europe and the United States. It is stated that the model now being introduced in India has a two-door body; and subject to the receipt of an import licence, a four-door saloon, now under test, is expected to be manufactured in India during the latter part of 1962. The directors state in their report that the price of passenger cars is controlled by the Government. But with the increase in the indigenous content, the profit margin is declining. Representation will, therefore, be made to the Government for a reasonable profit margin when the four-door Herald saloon is introduced. The Company expects to introduce the one-ton lorry in the latter part of the current year or early next year. It is said that negotiations are being carried on for introducing such additional projects as may enhance Standard Motor's earnings. Around the current price of Rs. 16.52, the Rs. 10-paid shares of the Company offer a tax-free yield of about 3.8 percent.

New Great Turns the Corner

The ordinary shareholders of the New Great Eastern Spinning and Weaving Co. Ltd, who have gone without a dividend for four years, will not perhaps have to wait too long before their investments begin to bear fruit. The Company has apparently turned the corner. Its working results for 1960 show a gross profit of Rs. 12 lakhs, against the gross loss of Rs. 16.95 lakhs in 1959. Sales are up by only 18 percent from Rs. 1.98 crores to Rs. 2.34 crores. New Great Eastern's exports in 1960 were valued at Rs. 72.39 lakhs, against Rs. 42.35 lakhs in 1959. The improved performance in 1960 is to be attributed mainly to the renovation programme. Machinery worth Rs. 15.24 lakhs has already been installed, and orders have been placed for additional machinery worth Rs. 10 lakhs. Of the gross profit of Rs. 12 lakhs, the directors have set aside Rs. 5.38 lakhs for depreciation and Rs. 2.61 lakhs for development rebate reserve; no such provisions were made in the previous year. To the remaining surplus of Rs. 4 lakhs has been added Rs. 1.15 lakhs written back from the previous year's provisions, thus making a total of Rs. 5.15 lakhs. The directors have recommended the payment of preference dividend for 1959 and 1960 amounting to Rs. 88,000, and the balance of Rs. 4.27 lakhs has been set off against the loss of Rs. 10.72 lakhs carried from the previous year and Rs. 1.82 lakhs being the loss of wages in 1951-52 due to short working. This leaves a debit balance of Rs. 8.27 lakhs at the end of December 1960. The Rs. 100-paid shares of the Company, which were quoted around Rs. 191 early in the year, have gradually improved to around Rs. 211. The price is well above the 1960 high of Rs. 195, so it indicates the revival of confidence in the Company's future as a result of the renovation and modernisation programmes.

India United on Dividend List

India United Mills Ltd has now come out of the wood. After the lapse of three years, its shares are back again on the dividend list. The directors have recommended a dividend of 80nP on ordinary shares of Rs. 10 and 13.25nP on deferred shares of Re. 1, both subject to deduction of tax, for the year ended December 1960. The preliminary figures about the working results, released along with the dividend announcement, show that the Company has fared well in 1960. The gross profit has risen nearly four-fold from Rs. 29.68 lakhs in 1959 to Rs. 1.12 crores in 1960. To this has been added Rs. 90,420 as tax refund for 1950-51. The directors have provided Rs. 11.70 lakhs for depreciation for 1960 and another Rs. 21.43 lakhs for depreciation for 1958 and 1959. A sum of Rs. 3.91 lakhs (against Rs. 1.28 lakhs) has been transferred to development rebate reserve. The directors have appropriated Rs. 13 lakhs for the payment of bonus for the years 1958 and 1959 and Rs. 8.47 lakhs for lay-off compensation to workers on account of the power shortage in 1951-52. They have also made an *ad hoc* provision of Rs. 50,000 for miscellaneous expenses of the previous year. After making the above appropriations, there remains a balance of Rs. 52.12 lakhs. From this a sum of Rs. 19.79 lakhs has been used for wiping out the loss carried from the previous year. The proposed dividends absorb Rs. 22.62 lakhs, leaving a surplus of Rs. 9.70 lakhs to be carried forward. In arriving at the gross profit and the available surplus, the refund of income tax amounting to Rs. 34.43 lakhs received for the year 1949-50 has not been taken into account but pending the disposal of the reference application made by the Department, the board has set aside the amount as contingency reserve. Similarly, the refund of income tax of Rs. 13.42 lakhs for 1950 to 1953 received recently has not also been taken into account. The Rs. 10-paid shares of India United Mills, which were quoted around Rs. 12.68 early in January, were bid up last week to around Rs. 15.96 which is well above the 1960 high of Rs. 14.68. Around the current price, the shares offer a tax-free yield of about Rs. 3.6 percent.

Indore Malwa Profit Up

In spite of the generally subdued trend in equity prices since about the end of March, the shares of the Indore Malwa United Mills Ltd have shown remarkable strength. They were quoted around Rs. 122 early in January, but were marked up last week to Rs. 147—the highest level for many years. The sustained support for Indore Malwa shares is based on the view that the Company has turned the corner. The increase in the dividend from Rs. 7 to Rs. 8.50 a share, both taxable, is more than justified by Indore Malwa's working results for 1960. Sales have increased from Rs. 2.87 crores to Rs. 3.20 crores and the gross profit has sharply risen from only Rs. 9,583 to Rs. 27.68 lakhs. Depreciation provision amounts to Rs. 10.36 (against nil). Development rebate reserve gets Rs. 39,000 (against Rs. 41,000). The proposed dividend absorbs Rs. 4.24 lakhs, against Rs. 3.49 lakhs in 1959 which had been paid by drawing Rs. 3.23 lakhs from general reserve. The balance remaining after making the above allocations has been used for wiping out the debit balance of Rs. 12.53 lakhs carried from the previous year. The directors state that no provision for taxation has been made this year in view of the accumulated and unabsorbed depreciation available to the Company. Accrued depreciation for 1958 and 1959 has been provided this year. The mills are being equipped with the latest machinery. During the year, Indore Malwa installed new machinery worth Rs. 2.97 lakhs. Out of the machinery worth Rs. 8.61 lakhs ordered earlier, some was received and installed last year. Further orders of about Rs. 26 lakhs have been placed during the current year. The directors say that new equipment will replace the old spinning ring-frames. Up-to-date machinery will also be installed in other departments. Power supply from the Chambal hydel project will enable the Company to scrap the out-dated steam engines

Hindustan Electric Incurs Loss

The Rs. 100-paid shares of Hindustan Electric Co. Ltd, which touched a high of Rs. 135 last year, are now quoted at a discount of Rs. 3. This reflects mainly the shareholders' disappointment over the working results for the year ended April 1960. The year was indeed an extremely difficult one for the Company. Its Howrah works were closed from December 1959 due to labour trouble and work was resumed only in October 1960. The cable works had to be closed for some months due to the shortage of raw materials. The production of transformers, motor and switch fuse-gears was affected by the power shortage. Hindustan Electric suffered a loss of Rs. 4.08 lakhs, after providing Rs. 3.58 lakhs for depreciation and Rs. 12,432 for development rebate reserve. In 1958-59, it made a profit of Rs. 7.60 lakhs, after providing Rs. 69,959 for development rebate reserve and Rs. 4.39 lakhs for depreciation. The directors have decided to skip the dividends for both preference and ordinary shares. The Company paid a tax-free dividend of 7 percent in 1958-59. A sum of Rs. 3 lakhs has been transferred from general reserve. After taking into account Rs. 57,385 brought in from the previous year, there remains a debit balance of Rs. 57,385, which is being carried forward.

While Hindustan Electric has fared badly in 1959-60, the directors state that it has been doing well in 1960-61. Although production at the Howrah works, which was resumed from October, continues to be unsatisfactory, its impact on the results of the entire Company is said to have been substantially reduced. Reorganisation, rationalisation and consolidation are being carried on, and the directors assure shareholders that thay are bent on showing better results. Hindustan Electric has undertaken a wide range of manufactures. It has completed the fabrication and installation of the rolling mill in Faridabad with an annual production capacity of 3,600 tons of aluminium rods on a single-shift basis. The Company has obtained a licence for establishing a new industrial undertaking near Rihand for manufacturing A.C.S.R. and all aluminium conductors with a tentative installed capacity of 5,000 tons a year. It has also secured permission to set up a new undertaking in Baroda for manufacturing transformers of all types up to 5,000 kVA with an annual production capacity of 72,000 kVA on a single shift basis and starters and control gears up to 500 horse-power with an annual production capacity of 10,000 units on a single shift basis. The Company has received the consent of the Controller of Capital Issues for issuing 20,000 equity shares of Rs. 100 each at par in order to finance the expansion programme.

Killicks to Diversify

Reliable reports indicate that Killick Industries Ltd has decided to set up a chain of small units for manufacturing a wide range of goods such as typewriter ribbons, cement concrete vibrators and prestressed equipment at its Chandivali industrial estate in Bombay. The Government has approved the technical and financial collaboration agreement between the well-known U.K. firm of Caribonum Ltd—manufacturers and suppliers of carbon paper and stationery products —and Stamco which is a subsidiary of Killick Industries. It is considered likely that Stamco Industries Ltd will be converted into Carbonum-Killick, with the U.K. firm taking up about 45 percent of the issued capital of the new Company. Killicks are negotiating collaboration agreements with foreign firms of repute to undertake other lines of manufacture. An engineering unit has been set up in Chandivali in technical collaboration with a British firm for producing contractors' equipment and concrete vibrators of all types. The Company is considering the expansion of its existing unit manufacturing cement plaint under the international trade name of Snowcem. In view of the diversification of the manufacturing activities, Killick Industries Ltd is also expanding its marketing subsidiary, Killick Nixon. The Company's marketing personnel will be trained abroad in order to improve the efficiency of its marketing organisation. The diversification of activities should help improve the outlook for the Company's shares which are still available around par.

Bonus Issue from Dharamsi Chemical

The Dharamsi Morarji Chemical Co. Ltd has mixed news for its shareholders. The directors have recommended to pass over the dividend for 1960, but they propose to issue bonus shares—subject to the sanction of the Government—in the ratio of four shares for every ten held by capitalising Rs. 9.09 lakhs out of the Company's general reserve. The application to the Government concerning this will be made after the shareholders approve the resolution at the annual meeting on 21st June. The Company paid a taxable dividend of 10 percent in 1959. The dividend for 1960 has been skipped, in spite of the marked improvement in the working results over the previous year. The gross profit amounts to Rs. 35.09 lakhs (against Rs. 29.60 lakhs.) After providing Rs. 6.27 lakhs (against Rs. 3.71 lakhs) for depreciation, Rs. 79,000 (against Rs. 4.93 lakhs) for development rebate reserve and Rs. 12 lakhs (against Rs. 8 lakhs) for taxation, the net profit amounts to Rs. 16.63 lakhs, against Rs. 12.96 lakhs in 1959. A sum of Rs. 16 lakhs has been transferred to general reserve. Dharamsi Morarji was entitled to relief under Section 15 (C) of the Income Tax Act for the financial year 1959. The Rs. 50-paid shares of the Company, which rose from Rs. 273 to Rs. 305 on hopes of bonus and rights issues, have eased to around Rs. 285 because of the disappointment caused by the passing over of the dividend.

Indian Rubber Share Offer

The Indian Rubber Regenerating Co. Ltd is a new enterprise which has been promoted by Kamani Brothers of Bombay to undertake the manufacture of reclaimed rubber. It will have an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each, of which Rs. 35 lakhs is being issued at present. The promoters, directors and their friends will take up shares of the value of Rs. 17.85 lakhs and the balance of Rs. 17.15 lakhs will be offered for public subscription some time in June. The project is estimated to cost about Rs. 52 lakhs, of which Rs. 35 lakhs will be provided by the equity issue and the balance will be met by a foreign exchange loan from the Industrial Credit and Investment Corporation of India which will cover the cost of the imported plant and machinery. The factory will be located in Thana —an industrial suburb of Bombay. The plant, which is claimed to be the first of its kind in the country, is expected to go into production next year. Starting with an initial production capacity of 2,400 tons a year on a single shift basis, the plant will reach its full capacity of 4,800 tons on a three-shift basis in the third year. Since production will be done by the steam pressure process, fluctuations in the prices of chemicals and other ingredients required for processing will not affect the products, since no such chemicals and other ingredients are required in bulk. When in full production, the Company expects to save about Rs. 30 lakhs worth of foreign exchange a year, for at present the entire requirements of India for reclaimed rubber are being met through imports. The imports amounted to 3,837 tons in 1957, 4,051 tons in 1958, 4,800 tons in 1959 and 5,600 tons in 1960. The demand for reclaimed rubber is steadily increasing.

Hedge Contract for Cotton

In his presidential address at the annual general meeting of the East India Cotton Association in Bombay, Mr. Madanmohan R. Ruia stressed the need to have a uniform procedure for collecting sales tax. He pleaded for a rational export policy and assured members that the Board would take every possible care to evolve a realistic hedge contract. In view of the varying procedures for levying sales tax in different States, cotton arrivals in the Bombay market have been seriously affected. So the spot market in Bombay which used to have a stock of about a million bales now carries only half the stock even in the busy season. It is only desirable, Mr. Ruia said, that the commodities which go under inter-State trade should have a uniform procedure for collecting sales tax. Mr. Ruia's criticism of the Government's export policy should be widely endorsed, for seldom has the cotton trade felt so irritated over the export policy as in this season. The trade is disgusted not only because of the half-hearted manner in which export quotas have been announced during this season but also because the haphazard changes in the export procedure have caused considerable avoidable hardship to the shippers here and buyers abroad. Fortunately, the procedure has recently been simplified to the general satisfaction of the export trade. Mr. Ruia's suggestion that the export policy as well as the procedure for export should be settled and made known in the beginning of the season, leaving only the quantity to be announced later, merits careful consideration But his other suggestion that the maximum possible export quota should be announced early in October is not without serious risks because crop estimates have often been upset in the past after October. Bengal Deshi cotton apart, the exportable surplus of other varieties cannot be determined until a clear picture emerges of the total crop.

Answering the criticism that the prevailing hedge contract is unrealistic since it is completely divorced from spot cotton, Mr. Ruia pointed out that last year the trade was almost faced with the threat of going without a hedge contract. In view of the record low carryover and uncertain crop prospect, it was decided to have a contract which might work within certain prescribed limits. A realistic hedge contract is possible only when there is an adequate carryover, production and supply are fully assured and prices are allowed to reflect demand and supply. "A proper realistic hedge contract of the days gone by", said Mr. Ruia, "has to await normal conditions." But this raises the fundamental question whether or not it is necessary to have a futures market if it is not possible to frame a contract which can provide adequate hedging facilities for the grower, the trader and the spinner. Fortunately, the outlook for the hedge contract for the 1961-62 season seems good. The current season's crop of about 5.2 million bales and continued large imports will leave a comfortable carryover of nearly 2 million bales at the end of the season. Everything, of course, depends on the 1961-62 crop which, in turn, depends on the unpredictable weather.

Policy for Re-rolling Mills

The Government of India, it is understood, has recently taken important policy decisions concerning new re-rolling mills. In doing so, it has taken into account the demand for sections which can be rolled in re-rolling mills, the possibilities of producing additional billets and the need for regional development. The Government desires that the re-rollers should be encouraged and pressed to use the major part of their capacity to roll special sections which integrated steel works cannot produce easily—the demand for this is estimated around 1 million tons including wire rods—and that the re-rolling industry should as far as possible be enabled to work two shifts. Inconvenient as it is for integrated steel works to produce billets, it has been planned that 1 million tons of these products will be supplied from these plants. Another about 200,000 tons are expected to be available from electric furnaces.

Although the existing capacity of the re-rolling industry is claimed to be about 1.3 million tons on a two shift basis, actual consumption of billets in 1960-61, when supplies were easy, has shown that it should be possible to license between 100,000 and 150,000 tons of further capacity. The Government wants the new units to be located in unserved areas. Judging by availability, in different areas, of products which can be manufactured by the re-rolling industry and bearing in mind the need to eliminate movement, as far as possible, of re-rolling mill products over a distance of about 100 miles, the Government wishes only one new unit to be set up in each of the following States: Andhra, Assam, Bihar, Maharashtra (Vidharba area), Gujarat, Kerala, Madras, Mysore (Karnatak region) and Orissa. Further, in view of the limited availability of billets and the need to spread the industry on a regional basis, the Government would like to restrict the capacity of new units to 15,000 tons on a two-shift basis. Over 50 applications for setting up re-rolling units are said to be pending with the Government.

Cable Venture by Kotharis

The firm of Kothari and Sons, Madras, proposes to establish a cable factory near Madras city. It has been granted a licence for the manufacture of 3,000 tons of A.C.S.R. and 18 million core yards of P.V.C. and other wires. The Company will be under the name and style of Kothari Cables and Electricals Ltd. In keeping with the modern trends in advanced countries, there will be the adoption of more and more polyethylene, P.V.C. and neoprene for insulation in the place of natural rubber. The present production in the country of A.C.S.R. and aluminium conductors is about 22,000 tons a year and of P.V.C. and V.I.R. cables, about 300 million core yards; as against this, the third five year plan target is 45,000 tons of A.C.S.R. and aluminium conductors a year and 900 million yards a year of P.V.C., V.I.R. and other cables. The major part of Kothari Cables' production will be aluminium conductors steel re-inforced, all-aluminium and aluminium cables with synthetic insulation.

It is expected that the production of A.C.S.R. and all-aluminium conductors will start by early 1962. The plant and equipment are designed for cables based on both copper and aluminium. The foreign collaborators will make the service of an experienced expert available in the initial stages. Arrangements are also likely to be made for training Indian technicians abroad. The total capital of the Company, according to present indications, will be Rs. 65 lakhs consisting of Rs. 40 lakhs of ordinary shares and Rs. 25 lakhs in the form of loans. Out of this, Rs. 40 lakhs will be invested in fixed capital and the balance will be working capital. Arrangements for the supply of know-how and plant and machinery, it is said, have been completed. The foreign collaborators will participate substantially in the share capital of the Company.

Ranga Vilas Pays More

The working of Sri Ranga Vilas Ginning, Spinning and Weaving Mills Ltd for the year ended 31st December, 1960, has produced a net profit of Rs. 2,84,178.83, after providing Rs. 2,62,511 for depreciation (Rs. 1,14,945 in the previous year). With Rs. 13,375.64 brought in, the total available surplus is Rs. 2,97,554.47. Out of this, the provision for taxation comes to Rs. 41,904 (against nil). The provision for mortgage loan redemption amounts to Rs. 75,000. A sum of Rs. 83,852.96 is transferred to general reserve. A dividend at 6 percent subject to tax, is recommended on the equity shares, which absorbs Rs. 90,150. It was 5 percent in the previous year. The remaining sum of Rs. 6,647.51 is carried forward.

During the year, the mills worked for 306 days in double shift with an average of 31,573 spindles, spinning cotton yarn from 2s to 40s and 60s to 80s. Considering the age of the machinery and the prevailing trading conditions, the directors consider that the profit of the Company is satisfactory. During the financial year under report, the weaving machinery was dismantled and sold, the proceeds of which were used for the renovation of the machinery. The Industrial Finance Corporation has sanctioned a loan of Rs. 20 lakhs for the renovation scheme, out of which a sum of Rs. 10 lakhs has been received so far against the machinery ordered and received. The management has arranged for the purchase of machinery on deferred payment terms to a value of about Rs. 5,50,000. Out of this, machinery worth Rs. 3,50,000 has been received. The building for housing the blow room machinery is under construction and is expected to be completed by the end of this month. The machinery received

under the renovation scheme will have been erected by that time.

Travancore Rubber Earns Less: Pays More

The working of the Travancore Rubber Ltd for the year ended December 1960, has resulted in a net profit of Rs. 1,38,731.63, compared with Rs. 1,48,949 for the previous year. With the amount of Rs. 2,248.18 brought in, the total surplus comes to Rs. 1,40,979.81. Out of this, the provision for taxation is Rs. 58,500 (against Rs. 68,000). A dividend of 13 percent is recommended, subject to tax, compared with 10 percent in the previous year, which will absorb Rs. 78,000. The balance of Rs. 4,479.81 is carried forward to next year.

Third Plan: Prices and Production

Speaking at the annual general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. Russi Mody, president, said that both in scope and size, the draft third plan evokes one's admiration, although one feels sceptical about its successful implementation. In spite of two five year plans and the benefits accruing from them, there is little mass enthusiasm, since the Government has done little to infuse a sense of urgency into the people for economic development. The president said that the second big obstacle to the implementation of the plans is the administrative inefficiency and bureaucratic mentality in the whole machinery of the Government. Although the Prime Minister exhorts the people to adopt a way of thinking befitting the modern age, he does not apparently realise that the administrative machinery of the Government has not had a major change for at least a century. So the country is confronted with "the strange spectacle of a dynamic and self-sustaining economy being sought to be created with a machinery belonging to the bullock-cart age." A disquieting feature of India's planned effort, Mr. Mody said, is the inability of the Government and planners to learn from past mistakes. In spite of repeated assurances that all shades of public opinion will be consulted, there is every indication that the third plan will finally emerge in the same form as was originally brought out by the Planning Commission for discussion. The president said that all the millions of words that have been said on the plan—most of them approving the concept and size but pointing out the practical difficulties —have been brushed aside.

Although the economy has progressed in some directions, the main problems of checking the inflationary trend in prices and increasing food production still remain. Although the level of industrial production has increased by about 12 percent—the highest in recent years—the rise in prices still continues. The index of wholesale prices, for example, rose by over 6.5 percent in 1960, compared with 1959. The rise is partly due to the fact that the production of goods was not sufficient to counteract the inflationary spiral and partly because the production of foodgrains and agricultural raw materials was lower in 1959-60 than in the previous year. Mr. Mody said that the poor performance of the agricultural sector was responsible for the decline in the *per capita* income by 0.7 percent in 1959-60, compared with the previous year. Referring to the criticism that certain large groups in industry have become larger in recent years, Mr. Mody said that only the bigger industrial groups have the experience and resources to put up large industries. The crucial problem for India at present is to increase production all round, since without an increase in output and wealth, the socialistic pattern of society will only mean the sharing of poverty. The experience of England has shown that socialism is propitious when the economy is in a high state of development. If the majority of the people in India, say, after 25 years, wish to introduce socialism, "I for one would not quarrel with them", Mr. Mody said.

A New Conversion Issue

The decision of the Government of India to issue further 3½ percent National Plan Bonds (1967) at Rs. 98.90 for conversion of three maturing loans has not come as a surprise to the market. The maturing loans are the 3½ percent (1961) due for repayment on 1st June, the 2½ percent (1961) on 1st August and the 3 percent Hyderabad loan (1951-61) on 1st August. The decision to convert the latter two loans now appears to have been made in order to save trouble. The outstanding amount of the three maturing loans is about Rs. 139 crores. As for the success of the conversion offer, there is no cause for concern because the Reserve Bank holds a major portion of these loans. The re-issue of the 1967 loan offers a current yield of 3.54 percent and a redemption yield of 3.69 percent at an issue price of Rs. 98.90. The yield is no doubt unattractive by market standards, but a small attraction has been offered by issuing the loan at a discount of 10nP on the present market price. Anyway, banks which hold the maturing loans are expected to go in for the conversion offer because they prefer to invest in short-dated loans.

Market circles speculate on a further loan offer by the Government of India later when money conditions become easier. It may be recalled that in the Central Budget for 1961-62 credit has been taken for gross borrowing of Rs. 235 crores. It is, therefore, possible that a cash loan offer of about Rs. 96 crores may be made in coming months. Meanwhile, the move for a conversion loan is at present timely because there is now an acute shortage of funds As for the next loan offer, when it is made the response is likely to be confined mainly to the Reserve Bank, the Life Insurance Corporation and provident funds. If banks are to borrow from the Reserve Bank by paying interest which is much higher than the yield available from Government securities, they cannot be expected to become big buyers of Government loans.

Definition of Employer

The Allahabad High Court has held recently that the word "employer" in the U.P. Shops and Commercial Establishments Act is intended to include also a commercial establishment or shop where no person is employed as such. The case arose out of a revision petition filed by a shop-owner of Sultanpur who was sentenced by the lower courts to a fine of Rs. 25 for keeping his shop open on a Sunday, which was declared a "close day" by the District Magistrate. In 1958, a similar question came up before the High Court. The Division Bench then held (*Abid Ali* v *State, 1958*, A.L.J.R. 333) that the expression "employer" in the U.P. Act contemplates an owner of a shop who has engaged an employee to help him in running his business. Subsequently, however, in another case (*State* v *Chandra Prakash, 1958*, A.L.J.R., 448), the High Court said that the word "employer" was intended to include a commercial establishment or shop where no person was employed. In the present case, their lordships concurred with the opinion expressed in the *State* v *Chandra Prakash* case and said that it was in accordance with Section 2(6) of the Act.

Section 2(6) defines an employer as follows: "A person having charge of, or owning a business of, a shop or commercial establishment, and includes the manager, agent or any other person acting in the general management or control of such shop or commercial establishment." Section 4 of the Act lays down that nothing in the Act shall apply to members of the family of any employer. In the opinion of their lordships, the legislature had deliberately enlarged the meaning of the word to include a person having charge of owning the business of a shop. It has not confined the meaning to someone employing someone else to assist him in running the business. The provision about closure of a shop or business will, therefore, apply to owner-run businesses or shops also.

It was urged on behalf of the petitioner that an exemption was granted to members of the family of an employer by providing that the Act shall not apply to them. No offence will, therefore, be committed if a member of a family transacted the business of a shop on a "close day." Their lordships disagreed with this contention. Section 10 made it obligatory on an employer to close his shop on a "close day", and if he kept it open through members of his family, he would be guilty of breach of the law.

Retaining Allowance and Wages

Mr. Justice Dhawan of Allahabad High Court held recently that the retaining allowance paid to a workman in a sugar mill during the off-season is wages and not unemployment benefit or bounty. He was delivering judgment on a writ petition of Diwan Sugar Mills against the award of the industrial tribunal, Allahabad, that the Company's workmen were entitled to retaining allowance for the off-seasons of 1952 and 1953 at the rate of 50 percent of their normal wages. Most of the mills in the State had agreed to pay the allowance in response to the Government's appeal, but the petitioner and a few others refused to pay, so the matter was referred to the tribunal for adjudication Rejecting the Company's contention that the tribunal had no right to interfere with the sanctity of contract. Mr. Justice Dhawan said: "The fundamental law of the land today is not the Contract Act but the Constitution of 1950 and the philosophy of the Constitution must prevail over the sanctity of contract in the interests of social justice and industrial peace, if necessary". He pointed to the preamble declaring "economic justice" as one of the objects of establishing a democratic State. Article 38 directs the State to promote the economic welfare of the people. Article 39 lays down that the policy of the State shall be to secure for the citizen the right to adequate means of livelihood. Article 43 expressly requires the State to secure to all workers "a living wage and conditions of work ensuring a decent standard of life." These principles, Mr. Justice Dhawan said, were intended as instruments of instructions which "every legislature enacting laws must obey and which, I would add, every High Court interpreting the laws must bear in mind." In view of the fundamental directives, "the principle of sanctity of contract no longer enjoys the status of a V.I.P. among laws which govern relations between employers and employees."

Mr. Justice Dhawan rejected the Company's contention that a retaining allowance for the off-season is not wages but unemployment benefit or bounty which the employer was not bound to pay. He said: "In my view, a retaining allowance for the off-season paid by the employer to his workmen in consideration of their returning to work at the commencement of the next season is analogous to wages. Employees serving institutions like universities and the High Court, which have long vacations, must be paid wages for the months they do not work. In my view the vital tests are two: (1) does the employer-employee relationship subsist during the employees' enforced idleness and (2) is the retaining allowance paid for some legal or valuable consideration? If either of these conditions is fulfilled, the allowance is in the nature of wages. If it is never paid to an employee who does not report for duty at the close of the off-season but only to those who return for work, it follows that the employer pays the allowance only in considerations of the employee considering himself bound to return to work. In the present case, the fact that the retaining allowance is paid only after the employee has returned to work is the conclusive proof that it is not paid as unemployment benefit or bounty but for consideration as defined in Section 2(d) of the Contract Act, and the workman receives it as an employee."

Industrial Growth in U.P.

An increase in industrial production in Uttar Pradesh from Rs. 212.30 crores in 1959 to Rs. 293.52 crores in 1960 has been reported by the Directorate of Industries in its annual review. The percentage of rise over the previous year was 38.26, and the increase in industrial employment was 21.34. One hundred and thirty-three licences, involving a total investment of about Rs. 85 crores, were issued under the Industries (Development and Regulation) Act, against 64 licences in 1959. But the overall picture of industrial buoyancy was somewhat dimmed by the reported liquidation of about 188 companies with an authorised capital of about Rs. 6 crores in 1960-61. During the same period, 47 new companies with an authorised capital of about Rs. 7.5 crores were registered, but this figure includes Rs. 5 crores for the U.P. Heavy Industries Corporation incorporated by the State Government on 29th March. Against 1,427 companies operating in the private and public sectors with an authorised capital of Rs. 137.14 crores on 31st March, 1959, the total number of companies at work by the same date this year was only 1,082 with an authorised capital of Rs. 120.98 crores, so over a two-year period there has been a decline in both the number of companies and their capital. The fall in the number of companies in the public sector has been from 343 in 1958-59 to 313 in 1959-60 and to 277 in 1960-61. The decrease in authorised capital has been from Rs. 91.23 crores in 1958-59 to Rs. 82.91 crores in 1959-60 and to Rs. 77.57 crores in 1960-61. Although the number of companies in the private sector declined from 861 in 1959-60 to 805 in 1960-61, the capital registered a small increase from Rs. 37.62 crores to Rs. 43.41 crores. This was, nevertheless, lower than the 1958-59 figure of Rs. 45.90 crores. Of the 188 companies which were liquidated or struck off in 1960-61, the public sector accounted for 57 and the private sector for 131. The State's industrial plan proposes to undertake a total investment of Rs. 331 crores over the next quinquennium—Rs. 205 crores in the public sector and Rs. 126 crores in the private. If and when invested as paid capital, the amount will be treble the present authorised capital distributed over 1,082 companies. But having regard to the slow rate of capital formation in Uttar Pradesh and the heavy mortality rate of companies, optimism must—for the time being—be considerably subdued.

U.P. Enforces Sugar Wages Award

The U.P. Government has ordered sugar factories in the State to implement immediately the recommendations of the Central Sugar Wage Board, with retrospective effect from 1st November, 1960. Implementation of this order will mean an immediate minimum increase of Rs. 18 in the monthly wages of nearly 80,000 workers of the 70 sugar factories in the State. Other important recommendations of the Wage Board enforced by the State Government's order, are the introduction of gratuity and dearness allowance schemes for the first time in the sugar industry in the State and graded pay scales for different categories of employees. The factories have to start making payments of the regular increased wages as well as arrears, from the first pay day of May. The arrears from November 1960 are to be cleared off in two successive monthly instalments. Doctors, teachers and other categories of workers employed in dispensaries and schools run by the factories will also benefit by the order.

The Government's order follows an undertaking given by the representatives of the industry to the Chief Minister, Mr. C. B. Gupta, to implement the Wage Board's recommendations without imposing further conditions. The president of the Indian Sugar Mills Association, Mr D. D. Puri, has also issued an appeal to all constituent members to implement the wages award. It may be recalled that the I.S.M.A. had earlier expressed the inability of the industry to implement the award unless the Government helped it to clear the accumulated stocks. It had also demanded, among other things, an increase in the sale price of marketable sugar. The Government has offered to bear the loss involved in the export of 500,000 tons of sugar, amounting to Rs. 15 crores. Sugar factories have also been allowed to defer, up to a maximum of three months, the payment of 25 percent of the total excise duty payable on each consignment of crystal sugar when it is cleared from the factory. The Bihar Government has granted remission of cess to factories at the rate of 12nP a maund on cane purchased from a distance of over 30 miles from 27th April to 7th May.

Trends in World Shipbuilding

The latest Lloyd's Register returns on shipbuilding covering the first quarter of 1961, indicates a mixed trend. Some of the major shipbuilding countries like the U.K., West Germany, France, Italy, the Netherlands and the U.S.A. show big declines in the tonnage under construction in their yards, while others including Japan, Sweden, Norway and Poland register large increases. The U.K.'s figure, in particular, is sharply down, compared with the previous quarter, by 83,541 tons to 1,610,647 tons. This is the lowest U.K. figure since December 1945. The highest U.K. post-war figure was 2,345,408 tons at the end of 1957. The tonnage being built by West Germany was 60,679 tons lower at 837,026 tons—the lowest since September 1957. Sweden which increased its tonnage by 21,115 tons to 830,056 tons was closely challenging West Germany for the second position. Taking the figures for the world as a whole, however, there was an overall rise of 58,779 tons in the tonnage under construction during the first quarter of this year, compared with the last three months of 1960. Japan has regained the lead abroad which she had held for two years until last quarter, Norway shows a record in shipbuilding, and Poland and Yugoslavia have attained a highest ever level.

The total tonnage under construction in the world for countries other than the country of build, amounted to 3,332,541 tons, of which 16.9 percent was being built in Sweden, 15.6 percent in West Germany, 14.9 percent in Japan, 10.6 percent in the U.K., 10 percent in the Netherlands and 7.8 percent in France. The countries making the largest additions to their existing fleets were the U.K. (1,713,558 tons), Norway (1,247,828 tons), Italy (547,746 tons), Japan (529,359 tons), the U.S.A. (523,495 tons), Liberia (513,352 tons) and France (433,222 tons). Oil tankers being constructed in the world amounted to 3,547,403 gross tons, which showed a fall of 378,071 tons. and represented 40.7 percent of the world total. The largest number of oil tankers being built was for the U.K.

Lucky Valley Maintains

During the year ended 31st December, 1960, Lucky Valley (Nilgiri Hills) Tea Estates Ltd has earned a net profit of Rs. 1.01 lakhs against Rs. 90,510 in the previous year. The Company has been able to obtain a record crop of 351,427 lbs of made tea, against an estimate of 245,000 lbs. The crop for the previous year was 260,177 lbs. With Rs. 35,812 brought forward from the previous year, the total available for appropriation is Rs 1.37 lakhs. From this, the directors have transferred Rs. 20,000 (against nil) to dividend equalisation reserve. A sum of Rs. 30,000 (against Rs. 34,353) has been transferred to general reserve. A dividend of 10 percent, subject to deduction of tax, has been recommended, which is the same as in the previous year. This will absorb Rs. 50,000. The balance of Rs. 37,130 is carried forward to next year. The estate cost of production was Rs. 1.33 a lb, against the estimated cost of Rs. 1.56 a lb. The average sale price of tea for the season was Rs. 2.34 a lb, compared with Rs. 2.70 in the previous year. The estimated crop for 1961 is 265,000 lbs at a cost of 157.88nP a lb.

22 MAY 1961 PLANTING DEPARTMENT

Coimbatore Murugan Profit Up

The Coimbatore Murugan Mills Ltd has earned a net profit of Rs. 5.17 lakhs for the year ended December 1960, after providing Rs. 2.06 lakhs (against Rs. 53,883) for depreciation. The net profit of Rs. 5.17 lakhs is higher than the previous year's Rs. 1.49 lakhs. Out of this, the bonus for the previous year accounted for Rs. 19,869. The directors have provided Rs. 2.79 lakhs towards the arrears of depreciation for previous years. A higher ordinary dividend of 12 percent, subject to deduction of tax, has been recommended, against 7½ percent, taxable, in the previous year. The dividend will absorb Rs. 2.10 lakhs. No amount is carried forward to next year out of the profit. The directors state that the higher profit for the year was mainly due to improved market conditions and to the high profit margin in the medium counts of yarn on which the Company is concentrating its production.

Nil From Kirlampudi Sugar

The working of the Kirlampudi Sugar Co Ltd for the year ended June 1960, shows encouraging results, although no dividend has been declared on ordinary and preference shares. The fact that the Company has now been able to wipe out all the previous year's losses is of considerable importance to equity shareholders. The gross profit of Kirlampudi Sugar amounts to Rs. 11.51 lakhs, before providing for depreciation. Depreciation provision amounts to Rs. 4.13 lakhs (against Rs. 4.35 lakhs.) The net profit amounts to Rs. 7.38 lakhs, compared with the previous year's Rs. 3.19 lakhs. Out of this, development rebate reserve accounts for Rs. 37,034 (against Rs. 25,932). A sum of Rs. 6.15 lakhs is adjusted against the debit balance in the accounts. This leaves Rs. 40,774, which is carried forward to next year. The Company's financial position has apparently improved since the old losses were wiped off. Furthermore, there is an available surplus of Rs. 5.59 lakhs to the credit of the debenture sinking fund of 1949-70. The Company has by now redeemed debentures of the value of Rs. 22 lakhs, leaving a balance of only Rs. 12 lakhs. Out of this outstanding debenture liability, it holds debentures of the face value of Rs. 9.5 lakhs. So the debenture liability to outside holders is only of the face value of Rs. 2.5 lakhs.

About the prospect for the current year, the directors state that the outlook appears to be good, but no prediction is possible, since the sugar industry is facing a serious crisis due to heavy accumulation of stocks. This can only be removed by exporting sizable quantities as well as by increasing the internal consumption. The directors consider it desirable to increase the authorised capital of the Company to Rs. 60 lakhs. This matter will be placed before the shareholders at a separate meeting, it is stated.

Rubi Rubber Profit Down

During the year ended June 1960, Ruby Rubber Works Ltd has reported a profit of Rs. 92,894, compared with Rs. 1.54 lakhs for the previous year. Out of this, taxation provision amounts to Rs. 42,320 (against Rs. 77,000.) The dividend on preference shares at 9.283 percent, taxable, for the first half-year and at 10 percent, taxable, for the second half-year, amounts to Rs. 23,729. Preliminary expenses and brokerage on shares written off amount to Rs. 25,000. Development reserve accounts for Rs. 825. The balance of Rs. 5,869 is carried forward to next year. The directors state that although sales increased considerably, the expenses increased by a higher percentage, particularly because of higher prices for chemicals, rubber and other raw materials. Besides, larger amounts had to be paid as wages and bonus to factory workers due to a conciliation agreement. Severe competition had to be faced in the field of bicycle tyres and tubes, and larger sales could be effected only at higher costs. Furthermore, the Company's new sales depôts were in their initial stages and did not, therefore, make any appreciable contribution to the overall profits during the year. But the improvement of the market for bicycle tyres and tubes as well as the realisation of higher target for tread rubber production is bound to push up the Company's profit for the current year, the directors add.

Signs of U.S. Recovery

The business news of recent weeks confirms the feeling that the declining phase of the recession ended with the first quarter. Although the squeeze on profit margins persisted, signs of a turn in the tide appeared from many sides. Orders and shipments, production and trade, employment and income have all picked up, says the latest monthly letter of the First National City Bank. It would be premature, however, to assume that recession problems are all behind and that a rapid climb lies ahead. Unseasonable weather has played havoc with sales projections in many lines, which makes evaluation of performance difficult. Inventory adjustment, by most reports, is far from complete. Uncertainties created by the conflicts in Laos and Cuba cloud the outlook.

Apart from the usual indicators, increases over recession lows have also been registered by such varied measures as steel production, construction expenditures, and money supply. Such figures as are available suggest that the upturn gained breadth during April. For example, the daily rate of motor-vehicle production, which was still declining in March, turned up markedly. As in the three previous recessions since the second World War, personal income and total employment held up well. Both had virtually regained their peaks by March 1961. To be sure, the stability of total employment conceals substantial shifts; a rise in white-collar jobs offset a drop in factory jobs, and other manual work. Similarly, the stability of personal income resulted from the netting out of declines in wages and salaries against increased unemployment insurance, social security benefits, and other transfer payments. In fact, half the 8 percent recovery in personal income during March was a statistical quirk, reflecting the accelerated payment of $150 million of veterans' life insurance dividends. This will be absent from the April totals, but by then the temporary extension of unemployment benefits will begin to be felt.

A signal of business revival has been provided for some weeks now by a rise in new orders placed with durable goods manufacturers. The decline in orders for durables was reversed in February by a spurt of defence ordering. Defence contracts receded in March and the further increase in durable goods orders was the result of stepped-up buying of basic and fabricated metals by private industry. In both months, new orders exceeded shipments, giving a boost to backlogs of unfilled orders, which, if past experience is any guide, foreshadows an increase in production. Steel was about the first big industry to feel the impact of cautious buying policies among its customers and again among the first to enjoy a pickup in buying as users reached the practical limits of inventory curtailment.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity decreased by 4.6 points during September 1960. There were declines in tea, jute, yarn, cloth, cement, paper, tyres, motor-cars, bicycles, electricity and railway ton-miles. Sugar, coal, pig iron and finished steel increased.

ARTIFICIAL INDIGO

THE report of the Badische Anilin and Soda Fabrik Ludwigshafen, on Rhine, for 1900, a translation of which appears in our usual columns, if not altogether pleasant reading, will, at all events not be without interest to all the planters and others connected with the production of Indigo in India. This German Company is a large and prosperous concern, employing nearly 7,000 workmen in their various manufacture and notwithstanding the reduction of their profits on other goods, owing to the dullness of the cotton and woollen textile industries during 1900, their profits outstripped those of the previous year owing to their increased production and sales of Artificial Indigo. For the further extension of this profitable branch of their trade, they are spending another £150,000 this year. The following sentences in the report are doubtless meant for Indian consumption, and should possibly be taken *cum grano salis*, but they indicate the nature of the fierce competition with which indigo planters will have to contend in the near future. The report says: "As regards plant indigo, we are prepared and determined to meet this competition in all its possible variations in value. Much strange matter has been published in India as to proposed improvements in the cultivation and preparation of natural Indigo, but the illusion of the planters and indigo dealers are destined, we feel certain, to be dispelled before facts which, although they are not known to them, will make themselves the more felt, the larger our production of artificial indigo increases. The advantages of our Indigo in dyeing may now be considered as universally acknowledged by all consumers."

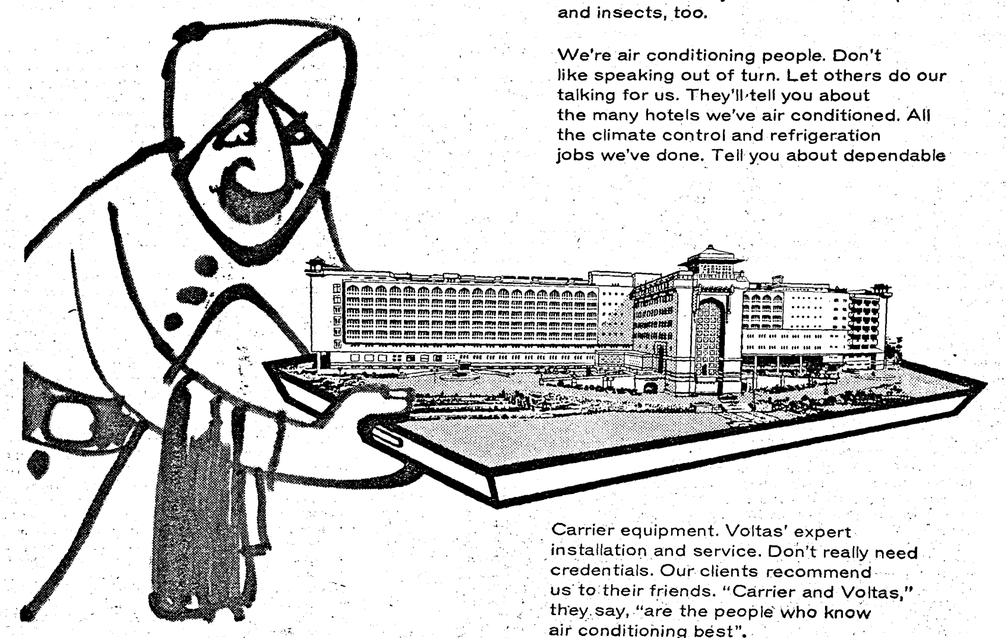
Carrier serve you faithfully at the Ashoka Hotel, New Delhi

We're at your service 24 hours of the day. Constantly. Quietly. Reliably. Our main concern: your comfort. At the Ashoka we keep you cool in summer, warm in winter. Protect you from dust, damp and insects, too.

We're air conditioning people. Don't like speaking out of turn. Let others do our talking for us. They'll tell you about the many hotels we've air conditioned. All the climate control and refrigeration jobs we've done. Tell you about dependable



Carrier equipment. Voltas' expert installation and service. Don't really need credentials. Our clients recommend us to their friends. "Carrier and Voltas," they say, "are the people who know air conditioning best".

Some other hotels and restaurants air conditioned by us:

A. Firpo Ltd., Calcutta
Gaylord, Bombay
Great Eastern Hotel Ltd., Calcutta
Hotel Ambassador, New Delhi
Hotel Imperial, New Delhi
Hotel Janpath, New Delhi
La Bella, Bombay
Maidens Hotel, New Delhi
Taj Mahal Hotel, Bombay.

A Ditcher's Diary

LAST WEEK'S ABORTIVE STRIKE OF CALCUTTA HOSPITAL menials seemed to me to be merely symbolic of the demoralisation, lack of discipline and relative absence of pride in service and efficiency which appear to exist among a large number of medical workers in this city. I say this because I have just had some first-hand experience of what conditions are. On Tuesday, 18th April, an office peon employed by *Capital* was knocked down by a motor-car and taken, unconscious, to the S.S. Karnani Memorial Hospital (the old P.G.) by the driver of the car and a policeman. He was examined and found to be suffering from, in addition to considerable bruising, an injury of the head, which was stitched, and a suspected fracture of the arm, which was put into a plaster; there was no attempt to X-ray either the arm or the head to find out the extent of the damage before he was sent away and told to report the next morning. We supplied the plaster for the arm and the one injection of A.T.S. and four of penicillin which were recommended. When he returned the next morning, still barely conscious and carried in bodily by friends, the verdict was a suspected fractured skull and broken arm. It was added that he ought to be admitted, but no beds were available, and that he ought to be X-rayed, but the apparatus had broken down. I might say at this point that there was no question of the admittance fee or any other legitimate charge not being available on the nail. He was brought back to the office in a semi-conscious condition, unable to walk, speak or eat; one eye was completely closed and there was a large, untreated abrasion on one cheek. Telephone calls to three other large city hospitals all brought the same refusals of admission. Finally, personal contacts were resorted to and a bed was procured at the Nilratan Sircar hospital. This was on the Wednesday afternoon. After a cursory examination he was apparently left without further treatment except for a single injection and the ministration of bromide to lessen the pain. A letter to the hospital Superintendent on the Friday asking why there had been no attempt to X-ray the head injury brought the answer by telephone that nowadays it was medical practice to leave a patient suffering from a head injury a few days of rest before X-raying, but that anyway it would be done on the Saturday morning. But when Saturday morning arrived, the X-ray apparatus had broken down—an odd coincidence of excuses. Finally both head and arm were X-rayed on the Monday, six days after the accident, and the results were conveyed to us, after repeated requests, orally on the Thursday, nine days after the accident and the following day in writing. Fortunately, there was no fracture of the skull, only, apparently, of one metacarpal bone in the right hand. Ten days after admission he was discharged and told to attend the outpatients' department after 48 hours to have his hand re-plastered. He went, but was not attended to; he was merely ordered to come back in another two days' time. In despair we sent him to a private doctor who re-plastered the hand, but found, when it was X-rayed again, that there were in fact two metacarpals broken.
