THE STORIES WHICH CAME BACK TO ME ABOUT conditions in the hospital made me decide to see for myself how the patient was getting on. I found him in a ward packed with other beds—a bare three feet separating each one—and containing only two fans, even in April. Each bed was equipped with a filthy pallet and an uncovered pillow; there was no other bedding at all. We had provided him with sheets, pillow cases, towels, linen to lie in, and two nurses, one for days and the other for nights. Apparently the patients in that ward received no nursing attention at all worthy of the name. We had also provided food and fruit juices—it appears that while he was lying semi-conscious and unable to move his jaws to eat, the diet served consisted of hunks of dry bread left by the side of the bed without plate or covering, and some milk. There was no attempt to feed him and no straws or drinking cup were provided for a liquid diet. On one occasion, a bed pan left by the side of the bed remained unemptied for several hours. He was in bed next but one to a man who appeared to me to be in the last stages of attrition, and who was expectorating into a bowl under the bed which was uncovered when I saw it and seemed not to have been emptied for days. This patient actually died a short time after my visit without any nurse or doctor in attendance. The ward itself was incredibly dirty; the floor was unswept and the walls needed whitewashing. The beds were twisted and some of them broken; there were no screens to put round. Whatever smells were present, not one of them could be mistaken for disinfectant. I peeped into other wards and the conditions seemed no better. I would judge that things must have been much the same in the British hospital at Scutari before the arrival of Florence Nightingale or little better than in Belsen before liberation. What was perhaps the most distressing of all was the complete, if not callous, indifference of the majority of the nursing and medical staff with whom we had dealings. Repeated requests for information were met with vague assurance that the patient would "be all right", despite the fact that no apparent attempt was being made to discover the extent of his injuries. I could not help forming the opinion that nature and our efforts alone were responsible for his recovery. Apart from the X-rays, the hospital provided little more than the bed, and a filthy one at that. If this is all that a non-paying (not from choice) patient can expect in Calcutta's hospitals, I am wondering what our taxes are being paid for. I am told that these conditions are fairly general throughout most of the hospitals in the city.

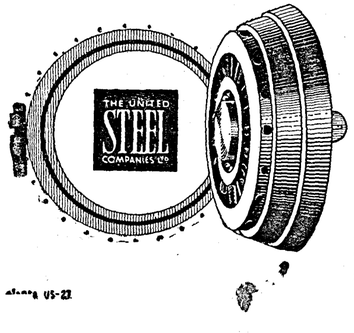
WITH QUIET PRIDE A FORMER MANAGER OF *Capital* once told me that during the war and soon after he had to use only one sales gambit for potential advertisers. He would say, "See this advertisement, five inches double column, right at the centre of the cover? I have nothing to add." He had shown the advertisement for Rolls-Royce cars, which was then being published in India only in this journal; and that was at a time when imports of these luxury cars were just about unknown and unexpectable in the foreseeable future. I suppose it was good sales talk; but it is not the non-appearance of these advertisements in this paper which hurts me now so much as the possible disappearance of the famous car itself. This is said to be one of the likely effects of Mr. Selwyn Lloyd's Budget; and if, as Rolls-Royce's chairman says, thousands of orders on the books were cancelled on the morrow of the Budget, then the future of the automobile division of Rolls-Royce would indeed be uncertain in the extreme. And that, I think, would be a great pity; and not for personal reasons, for owning a Rolls is scarcely one of my realisable ambitions. We all know the aura of snobbery that surrounds this car, in spite of corporate ownership which seems to have been the pattern in recent years; and I am not myself enamoured of the kind of snobbishness which manifests itself in the possession of expensive things. But R-R is the perfect advertisement for British craftsmanship and that respect for dignity and durability which has never been the chief feature of, say, American industry, highly advanced though it is in many respects. Apart from companies, Governments, I think, have lately been the main buyers of Rolls-Royce cars—for Governors at home and for diplomatic missions abroad. (Even Mr. Krishna Menon, whose austerity is justly famous, had to have his Rolls in London, so that people would know he was India's High Commissioner.) I have, of course, seen American diplomats emerging from Cadillacs, which appealed much to the late Mr. Lumumba; but, somehow, a diplomat stepping out of a Rolls looks more like a diplomat and less like a high-powered salesman of detergents or something. No, I will greatly miss—not my own, but other people's—Rolls-Royces. Perhaps Mr. Lloyd will relent; I hope so.

DEATH AT 60, SUCH AS CAME TO GARY COOPER LAST week, is not unduly premature—especially after the very busy life he lived on and off the screen. How many thousands of Red Indians did he finish off in those numerous Westerns that he appeared in, to thrill so many millions of young hearts? The figure may never be known; and it does not matter much. Gary Cooper combined in himself, on the screen, that mixture of toughness and tenderness, almost sentimentality, which is the essence of all Westerns. Their hero, always the same and never played better than by Gary Cooper, must shoot sharp, look without dismay on piles of Red Indian corpses and then lose his heart to plain Jane or a blonde in the village he has terrorised. He must also have a sense of honour which is to be seen not only in just vengeance on the enemy but also in his loyalty to friends. It has been said that the criminal instinct in the Briton is harmlessly dissipated by the reading of detective fiction and the *News of the World*. Westerns, I suggest, have a similarly cathartic effect on the Americans, although I have not the statistics to show that Westerns have reduced the incidence of crime in the United States. (Perhaps there would have been more crime if there were no Westerns.) And in a way Westerns represent something in the American ethos. That spirit of adventure, that fearlessness, even that sentimentality, were needed to make what America is today, for be it not forgotten that life for the early settlers who went west was not soft. Either you took a life in time—or lost your own. Nature was far from kind, and the choice of a bad area could mean death thousands of miles away from friends and civilisation. And, at the end of a hectic day, you needed whisky and fast women to comfort you. I am told that in recent years Hollywood has produced a few Westerns which are "intellectual", for egg-heads as much as for children. I am well prepared to believe it, for the formula has some of the essential ingredients of literature; and even as Graham Greene has used the thriller for serious purposes, the Western too in good hands can not only convey excitement and pleasure, but also ideas.

THE DITCHER

Bank vaults are always made of steel... because steel is so dependable!

symbol of security!



Through the years Steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability... Steel that she can hold up to the world as a symbol of her security.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 9th May, 1961, has been delivered to the Registrar of Companies, West Bengal, for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Bankers and Brokers named below.

"A Licence has been obtained from the Central Government for the establishment of a new Industrial Undertaking at Calcutta of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

Application has been made to the Calcutta Stock Exchange for permission to deal in shares now being offered and in due course for official quotations.

The Subscription List will open at the commencement of banking hours on 24th May, 1961, and will close at the close of the banking hours on 3rd June, 1961, or sooner or later, as the Directors may decide, but in no case the List will close before the close of the banking hours on Saturday, the 27th May, 1961.

DR. PAUL LOHMANN (INDIA) LIMITED

(Incorporated as a Public Company under the Companies Act, 1956)

SHARE CAPITAL

AUTHORISED :	Rs. 1,00,00,000/-	divided into 10,00,000 Equity Shares of Rs. 10/- each.
	Rs. 1,00,00,000/-	
ISSUED :	Rs. 30,00,000/-	divided into 3,00,000 Equity Shares of Rs. 10/- each.
	Rs. 30,00,000/-	

The above Issue of Rs. 30,00,000/- is made up as follows :—

3,00,000 Equity Shares of Rs. 10/- each to be issued at par and equivalent to ..	Rs.	30,00,000/-
Out of the above issue of 3,00,000 Equity Shares of Rs. 10/- each at par amounting to Rs. 30,00,000/-		
(1) 60,000 Equity Shares of Rs. 10/- each at par are reserved for issue to the Indian Promoters, Directors and their friends and associates	Rs.	6,00,000/-
(2) 40,000 Equity Shares of Rs. 10/- each at par are reserved for issue to the collaborating German Firm against supply of imported Plant and Machinery required for the Project	Rs.	4,00,000/-
The balance of 2,00,000 Equity Shares of Rs. 10/- each will be issued at par to the Public	Rs.	20,00,000/-

The amounts payable in respect of Shares comprising the present offer are as follows :—

EQUITY SHARES

With Application	Rs.	2.50 nP per Share
On Allotment	Rs.	2.50 nP. per Share
Balance (by 2 Calls of Rs. 2.50 nP. each)	Rs.	5.00 nP. per Share

The first Call shall not be made earlier than six months from the date of allotment.

No Shares shall be issued for consideration other than cash excepting the aforesaid 40,000 Equity Shares of Rs. 10/- each at par to be issued to the Collaborating German Firm against supply of imported Plant and Machinery.

UNDERWRITING

The Issue to the Public, namely Rs. 20,00,000/-, is being fully underwritten and the names of the Underwriters and the respective amounts underwritten by them are as stated below :

Name	Address	Amount Underwritten
1. Place, Siddons & Gough Private Ltd.	6, Lyons Range, Calcutta-1	Rs. 5,00,000/-
2. Triton Insurance Co. Ltd.	11-A, Lower Chitpur Rd., Calcutta-1	Rs. 5,00,000/-
3. Concord of India Insurance Company Limited	8, Clive Row, Calcutta-1	Rs. 5,00,000/-
4. Paterson & Company	22, Errabalu Chetty Street, Madras-1	Rs. 4,50,000/-
5. Harbans Singh Mehta & Co.	33, Regal Bldgs., Parliament St., New Delhi-1.	Rs. 50,000/-

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

APPLICATION AND ALLOTMENT OF SHARES

Application for Equity Shares should be made on the printed form accompanying this Prospectus, further copies of which may be obtained from the Registered Office of the Company and from the Offices of the Bankers, Underwriters and Brokers.

Applications must be made for a minimum of ONE HUNDRED SHARES or a multiple thereof and in all cases must be accompanied by a remittance of the amount payable on Application. Applications must be completed in accordance with the directions contained therein and delivered before the closing of the Subscription List to any of the Head Offices or Branch Offices of the Bankers or to the Offices of the Underwriters and Brokers or to the Registered Office of the Company. **The COMPANY'S REGISTERED OFFICE IS AT 23, CAMAC STREET, CALCUTTA-16.**

If no Allotment be made, the Application moneys will be returned in full and where the number of Shares allotted are less than the number applied for, the balance of the Application moneys will be returned to the Applicants by Cheques either through the post or otherwise, within 60 days from the date of closing of the Subscription List.

The Share Certificates will be ready for delivery within four months from the date of receipt of the money payable on Allotment.

LOAN CAPITAL

The Company has created no Mortgages, Debentures or other Loan Capital.

FINANCIAL REQUIREMENTS

The Financial Requirements of the Company are comprised of :—

INITIAL STAGE		
1. Cost of land, factory & office buildings, etc.	Rs.	4,50,000/-
2. Cost of plant & machinery, erection and other implementative expenses ..	Rs.	7,50,000/-
3. Working capital	Rs.	1,00,000/-
4. Preliminary expenses including brokerage and other share issue expenses ..	Rs.	2,00,000/-
	Rs.	15,00,000/-
SUBSEQUENT STAGE		
1. Expenses for additions to the factory, etc.	Rs.	3,00,000/-
2. Additional costs of plant & machinery, etc.	Rs.	7,50,000/-
3. Additional Working capital	Rs.	4,50,000/-
	Rs.	15,00,000/-

MINIMUM SUBSCRIPTION

The Minimum amount which, in the opinion of the Directors, must be raised by the issue of Shares in order to provide the sums required to be provided as per paragraph 5 of Schedule II of the Companies Act, 1956, upon which the Directors will proceed to allot Shares offered by this Prospectus is ONE LAKH Equity Shares of the nominal value of Rs. 10,00,000/- to be issued in cash at par being only a part amount of this issue, out of which Rs. 4,50,000/- shall be set aside for the costs of land, factory and office buildings, etc., and Rs. 3,50,000/- will be expended for the purchase and erection, etc., in part of the plant and machinery and Rs. 2,00,000/- shall be for the preliminary expenses including commission and brokerage and other expenses of this issue.

The Working capital and the balance costs of plant & machinery, etc., shall be arranged by borrowings from Banks and also from other sources, such as financial institutions or corporations and also by loans or advances from firms, companies, or individuals including Directors.

No sum is required for repayment of any money borrowed by the Company in respect of any of the foregoing matters and no other expenditure is estimated to be necessary.

AUDITORS' CONSENT

Messrs Lovelock & Lewis have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, set out above, in the form and context in which it is included.

OBJECTS

The Company was incorporated on the 12th January, 1961, with the Objects mentioned in the Memorandum of Association, a copy of which is annexed hereto and forms a part of this Prospectus; and, in particular, the Objects of the Company are :—

To manufacture Chemicals and Fine Chemicals, such as Electroplating Chemicals, Fine & Sensitized Paper Chemicals, Leather Chemicals, Paint & Varnish Chemicals, Photographic Chemicals, Printing Chemicals, Pyrotechnical Chemicals, Rubber & Plastic Chemicals, Textile Chemicals, Food and Confectionery Chemicals, Foodstuff Chemicals, Pharmaceutical and Cosmetic Chemicals, Baking Powder Chemicals and Meat Chemicals, and especially to manufacture Acetates, Albuminates, Benzoates, Borates, Carbonates, Chlorides, Citrates, Formates, Gluconates, Glycerophosphates, Hydroxides, Lactates, Nitrates, Oxalates, Peroxides, Phosphates, Phosphonates, Propionates, Pyro-phosphates, Saccharates, Silicates, Stearates, Succinates, Sulphates, Sulfophenolates, Tartrates and Trisilicates.

APPRECIATION

Some of the abovementioned Chemicals are at present not manufactured in India and are being imported. Due to import restrictions, however, they are not available in sufficient quantities and this Company will be manufacturing them in India. India's manufacturing capacities for certain other items are still not adequate to meet the growing demands of the country. Moreover, some of these items have export potentials. Large-scale manufacture of all these chemicals and export thereof will enable the Company to save as well as earn foreign exchanges for the country.

With the economic development and industrial expansion, as contemplated in the Third Five Year Plan, there is bound to be greater demands of these Chemicals in the immediate and near future.

In accordance with the manufacturing licence granted by the Government of India, this Company will, at the initial stage, be planning to produce every year about 33,60,000 lbs. of different organic and inorganic chemicals, the value whereof in retail prices shall be Rs. 1,00,00,000/- approximately.

EXPECTED PROFITS

On the above basis, the Directors are of the opinion that reasonable profits ought to be earned by the Company in the first twelve months following the installation of the machinery and equipments and from the commencement of production of Fine Chemicals; and, in the absence of any unforseeable circumstances, the Company should be in a position to pay reasonable dividends.

TECHNICAL COLLABORATORS

The Company has entered into an Agreement for participation in the Equity Shares and for supply of initial services and technical assistances with the long-standing reputed firm of Dr. Paul Lohmann, Chemische Fabrik, of Emmerthal, (Hameln-Pyrmont) West Germany. Founded in 1886, this firm is one of the well-known chemical manufacturing concerns in West Germany. Its products have a wide market and are exported to many countries of the World. Some of the chemicals mentioned are manufactured by them in West Germany, exclusively.

With a well-equipped Research Laboratory the firm has been carrying on original researches in the preparation of salts of organic and inorganic acids as intermediate chemicals required for pharmaceutical, photographic, textile, food processing, surface preparation, artificial rubber industries etc., and, in course of its various researches, it has developed many important processes and products having special technical and pharmaceutical uses. The Firm thus enjoys an unique position in the field of Fine Chemicals.

TERMS OF COLLABORATION

Subject to the Articles of Association of the Company and the provisions of Section 255(1) of the Companies Act, 1956, during such time as Dr. Paul Lohmann, Chemische Fabrik, shall be the Consultants, Technical Advisors and Collaborators of the Company, they shall have the right from time to time to nominate two persons to be the Directors of the Company and at any time to remove any such Director and appoint another person to be a Director in his place and to fill any vacancy otherwise occurring in the Office of such Director. Mr. Adolf Michelsen and Mr. Ekkehard Lohmann are the two such Directors appointed by Dr. Paul Lohmann, Chemische Fabrik, as their first two Directors on the Company's Board.

Under the agreement for collaboration, Dr. Paul Lohmann, Chemische Fabrik, will make available to the Company their 'Know-How' concerning the manufacture and production of Fine Chemicals referred to. The Firm and its visiting technicians from West Germany will give all possible assistance in the setting up of the Company's factory and will supervise the manufacture and production in India. Indian technical personnel will be trained in West German factories and laboratories of Dr. Paul Lohmann, Chemische Fabrik.

As consideration for the services for supplying designs of machines and drawings and 'Know-How' for the manufacture of Fine Chemicals and the formulas and information supplied and to be supplied and the assistances given and to be given in Germany by the Firm of Dr. Paul Lohmann, Chemische Fabrik, the Government of India, Ministry of Commerce & Industry, in their letter No. 23(4)/60-Ch. II, dated the 12th April, 1961, have allowed the following fees, which have since been agreed to by the German Firm :—

1. A technical fee for designs of the plant and machinery as well as designs and drawings for construction of the factory in India of a total sum of Rs. 2,50,000/- in three equal annual instalments.
2. In addition an annual payment of Rs. 25,000/-, subject to taxes, for a period of seven years, in return for the benefits of research of the German Firm and 'Know-How' of new processes and manufacturing details made available to the Company.

SELLING ARRANGEMENT

The Company will have the benefits of the association, as the Company's Sole Selling Agents, of Messrs Monsanto Chemicals of India Private Limited, a well-known business house of India, who have wide experiences as a marketing organisation.

The said Company have been marketing as Sole Distributors in India various fine and heavy Chemicals.

The Company is entering into necessary agreement with them, appointing them as the Sole Distributors and Sole Selling Agents of the Company.

LOCATION OF THE FACTORY

A suitable land on Jessore Road, near Calcutta, measuring approximately 60,000 sq. feet, with adequate facilities for supply of electricity and water has been selected by the Company as the site for its factory. The said site has already been visited and approved by the West German Collaborators who came down to Calcutta very recently to finalise arrangements.

TAX BENEFITS

The Company will be entitled to the special benefits under the Indian Income Tax Act with respect to development rebate. The Company will also enjoy the benefit of Section 15-C of the Indian Income Tax Act whereby the profits upto 6% on the employed Capital will be exempted from tax for the first five years of operation.

PRELIMINARY EXPENSES

The total preliminary expenses are estimated to be Rs. 60,000/- and a sum of Rs. 1,40,000/- is estimated to be the expenses of this issue including the Underwriters' and the Brokers' Commissions. This amount will be arranged by Mr. S. Sen Gupta as provided in the Agreement hereinbefore specified upto the date on which the Company is entitled to commence business when subject to audit, such expenses will be paid to him by the Company.

Save as provided above no amount or benefit has been or is intended to be paid or given to any promoter, director or officer of the Company.

BROKERAGE

Brokerage will be paid to the Underwriters, Brokers and Banks at 10 nP. per Equity Shares of Rs. 10/- each offered to the Public, on the Allotments made in respect of Applications bearing their stamps.

UNDERWRITING COMMISSION

An Underwriting Commission of 2½% will be paid to the Underwriters in respect of the Shares underwritten by them.

PROSPECTUS AND APPLICATION FORMS

COPIES OF THE PROSPECTUS ON THE TERMS OF WHICH ALONE APPLICATIONS WILL BE CONSIDERED, AND APPLICATION FORMS MAY BE OBTAINED FROM THE REGISTERED OFFICE OF THE COMPANY OR FROM THE COMPANY'S BANKERS AT THEIR HEAD OFFICES OR EXISTING BRANCH OFFICES AT CALCUTTA, AHMEDABAD, ALLAHABAD, AMRITSAR, BANGALORE, BARODA, BOMBAY, COIMBATORE, DELHI, GWALIOR, HYDERABAD, INDORE, JAIPUR, KANPUR, LUCKNOW, MADRAS, MADURAI, NAGPUR, PATNA, RAJKOT, SURAT, TRIVANDRUM, VARANASI, OR FROM THE COMPANY'S BROKERS AND UNDERWRITERS.

THE KOHINOOR MILLS COMPANY LIMITED

CHAIRMAN, MR. A. N. HAKSAR'S REVIEW

Addressing Shareholders at the Annual General Meeting of the Kohinoor Mills Co. Ltd., held in Bombay on 10th May, 1961, the Chairman, Mr. A. N. Haksar said :

Gentlemen,

I am glad to report that the year under review has definitely been an improved one for your Company. The working in all sectors of the Mill was better than last year and higher efficiency and production were achieved. Your Company increased the production of fine and super-fine fabrics to suit consumer demand. New bleached and dyed sorts in both men and women's wear were introduced and some of these have been popularised in the market. The Company progressively started 45,500 spindles by introducing a third shift in the spinning section of No. 2 Mill. This was done without additions to preparatory machinery. In your No. 3 Mill, screen printing was introduced and is running satisfactorily now.

Cotton

The Cotton Year 1960 was a most difficult one. Untimely rains in most cotton producing districts adversely affected the crop quality and quantity. Early estimates of a 48 lac bales crop had to be revised to 38 lacs resulting in an acute scarcity of desirable qualities and a sharp advance in prices. Despite liberal imports and restrictive measures taken by the Textile Commissioner in the form of quality controls and Mill Quotas, cotton prices continued to advance. By the end of December, an extremely tight supply position was evident and at January end the situation was alarming. To overcome this shortage and enable Mills to maintain their production, Government was forced to step up imports of foreign cotton, especially of short staples from America. Even so, stocks in mills were reduced to a minimum at the commencement of the new crop. Fortunately, the quality of the new crop was good and first estimates forecast 50 lac bales. To stabilise the market, however, the Textile Commissioner continued the system of Mill Quotas and Quality Control. These measures assisted by a larger crop, had the desired effect of bringing down prices and the position was much improved by the new cotton year. Your Company, like other textile units, suffered from higher prices both for Indian and imported cotton for the year under review.

Cloth

During the first half of the year, cloth movement was good and the stocks carried by the Company were reasonably low. In the second half, however, Government made it known that a reduction in cloth prices was desired. This caused uncertainty in the market and the movement of cloth became extremely sluggish. Negotiations took place between Government and the Indian Cotton Mills Federation and it was agreed to start stamping prices on cloth from 10th September 1960, on a formula based on August 1959 cloth prices. Even after this agreement was reached, Government required still further reduction in cloth prices and, therefore, uncertainty in the market continued. The final formula applicable from 1st January 1961, resulted in a still further reduction. This price reduction will obviously bring down the profit margin of all mills. It will be the endeavour of your management to make up this short-fall in profit by improving working efficiency. Until the formula was agreed, movement of cloth was nominal and, therefore, stocks at the end of the year were higher than had been expected.

In our endeavour to earn foreign exchange both for the country's and your Company's benefit, we stepped up our exports from Rs. 22.37 lacs last year to Rs. 34.97 lacs. Even though we sell in the export markets at marginal profit levels, your management consiuers it beneficial to export with a view to earning machinery licences to modernise your Mills and to obtain licences for the import of extra quantities of Cotton. In the coming year we hope to maintain and, if possible, to step up our export programme. This would, of course, depend upon market tendencies.

Yarn

We had no problems in the marketing of sewing thread and its movement was well maintained through the year. We ventured into certain new and more paying counts of yarn, and a part of this benefit was felt during 1960. Our yarn exports for 1960 were Rs. 15.51 lacs against Rs. 7.44 lacs last year.

Sales and Stocks

Our sales for both cloth and yarn continued smoothly. I have explained above the reason for an increase in stocks in December, but as the trade finally settled down in January 1961, stocks moved extremely well. I am glad to report that today our total stocks of finished products constitute only about three weeks production. This is a very satisfactory position. It will be our endeavour to maintain low stocks and reduce them further if possible. Our thanks are due to your Selling Agents who have done very well throughout this period.

Labour

By the Central Wage Board Award 1959, the basic wages of textile workers were enhanced by an average of Rs. 8/- per worker. This was the first step in a two-phased programme which was intended to give a total benefit of Rs. 10/- per worker. The additional Rs. 2/- will be levied in 1962. Whereas this was a benefit to the labour force in the textile industry, it was a tremendous drain on the profitability of Mill units This Award, however, recognised rationalisation as a part of the total scheme. This, I feel, is a step in the right direction as the Indian textile industry can only become competitive in world markets by linking up the utilisation of rationalised labour with high production machines.

Our relations with the Rashtriya Mill Mazdoor Sangh, which is the recognised Labour Union for our Mill, were most cordial, and with their help rationalisation and standardisation measures were introduced in various sectors. In all 785 posts were reduced and this without any deterioration in our labour relations. Out of this, retrenchment compensation and gratuity was paid to 547 persons and we took advantage of natural wastage to abolish the balance 238 posts. The R.M.M.S. gave us their full co-operation during this period and assured us of their complete assistance in future. In our No. 3 Mill, the four-looms-to-a-weaver system was introduced in half the Weaving Shed and to avoid unemployment and the payment of retrenchment compensation and gratuity, a second shift was started in the whole Weaving Shed in the middle of the year.

Machinery

A comprehensive programme of maintenance and rehabilitation was carried out throughout the year. New machinery of the value of Rs. 37.68 lacs was installed in your Mill and we have further orders on hand for machinery worth Rs. 46 lacs. New N.M.M. Ring Frames were received from the month of March onwards and these are being progressively erected to replace old ones. A new set of Whitin Combers was erected and are in production. The Company also installed the latest type of hot air stenter from Germany and automatic pirn winders from Holland. Most humidification systems were renovated and these have greatly improved working conditions We have still to receive a number of modern machines which will improve the quality of your mill production. The 48 automatic looms which we had been allotted some while ago are now on order, but unfortunately no further allotments have been made. I trust, however, that in due course we will receive further licences to enable us to have a full shed of this machine. Your Management is seeking all avenues to modernise in the best and quickest manner possible.

No. 3 Mill

For your No. 3 Mill which is a Silk and Art Silk Unit, we have been facing the problem of non-availability of raw material. There is a great shortage of synthetic yarn in the country and sometimes very high premiums have to be paid for yarn vitally needed to keep the Unit working. To solve this problem, your Management has decided on a policy of export for earning licences for the direct import of the required yarn. This policy will certainly bear fruit and we hope the accounts of No. 3 Mill will show a marked improvement in 1961.

Profit & Loss Account

From this you will notice that we have shown a gross profit of Rs. 32.18 lacs after adding back to the net profit Depreciation, Taxation, Managing Agents' Remuneration and Development Rebate totalling Rs. 24,41,572/-. This profit has been arrived at after payment of certain non-recurring charges which absorbed Rs. 15.91 lacs. These constituted mainly of retrenchment compensation and gratuity paid (Rs. 6.49 lacs and Rs. 4.50 lacs respectively), and the payment of staggering compensation for the year 1952 amounting to Rs. 4.92 lacs. Although these measures have reduced the profits in the year under review, there is no doubt that in the years to come these losses will be more than recouped and the Company will stand to benefit. You will appreciate that the actual working profit for this year was more than double that of the preceding one. This, I submit, is a reasonable achievement. I can only hope that this improvement will be maintained.

There were a few other additional burdens the Company had to bear over and above last year. Like all other Mills, we paid an additional average of Rs. 8/- per worker which totalled Rs. 7 lacs for the year. Dearness allowance was higher by Rs. 11.75 lacs. The bonus for 1958 was also paid which amounted to Rs. 2.96 lacs.

Note : This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASY

Wednesday, 17th May.

AGAIN there has been little change in the level of advances in the Calcutta money market during the past week. The total is, however, slightly lower and appears to be declining in line with the usual seasonal trend There has been little change in credit requirements of either the sugar mills or the cotton and woollen industries, and call for accommodation against grains and seeds storage is also about the same. The needs of the jute mills and the engineering and iron and steel industries are, however, slightly down. In the interbank market, conditions are rather easier The official call rate is unchanged at 5 percent, but business is reported down to 4¾ percent.

Conditions in the exchange market have remained extremely dull, with a poor supply of bills coming to hand. Demand for remittance has been keen. In the London money market, the pound has grown weaker and closing quotations showed losses against all major currencies.

BULLION WAS QUIET IN THE PAST WEEK. SILVER fell from the previous week's level of Rs. 235.50 to Rs. 321.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 227.50. The London and New York prices were 79¾d and 91.375 cents.

Gold was easier in sympathy with silver, and the price declined from Rs. 143.50 to 141.50. The sovereign at Rs 95.25 showed a loss of 25nP.

DURING THE WEEK ENDED 12TH MAY, GOVERNMENT of India Treasury bills for Rs. 64,10,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 16th May. The total amount offered was Rs. 2,25,00,000. Tenders at Rs. 99.315 and above were accepted in full and those at Rs. 99.310 were allotted approximately 80 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 22nd May.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 17th May to 20th May at Rs. 99.331 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 10th May to 13th May amounted to Rs. 65 lakhs.

THERE WERE RISES OF Rs. 8.88 CRORES TO Rs. 2,020.64 crores in the total note issue and of Rs. 4.88 crores to Rs. 2,007.26 crores in active notes, according to the return of the Reserve Bank of India during the week ended 12th May. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 9.97 crores to Rs. 1,671.94 crores. This was obviously done by transferring securities from the Banking Department in which investments declined by Rs. 5.80 crores to Rs. 171.78 crores. Deposits of the Government of India rose by Rs. 3.40 crores to Rs. 56.53 crores, but other Government accounts fell by Rs. 87 lakhs to Rs. 14.20 crores. Balances of commercial banks decreased by Rs. 3.52 crores to Rs. 78.28 crores. Balances held abroad improved further by Rs. 4.27 crores to Rs. 21.94 crores. Other loans and advances increased from Rs. 128.49 crores to Rs. 133.80 crores, of which advances to scheduled banks against usance bills amounted to Rs. 23.64 crores (Rs. 21.40 crores). Ways and means advances stood at Rs. 87.89 crores, against Rs. 86.30 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 5th May, shows a drop of Rs. 6.90 crores to Rs. 542.80 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 12.50 crores and Rs. 10 lakhs to Rs. 224.97 crores and Rs. 9.49 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 75 lakhs to Rs. 275.58 crores. Cash and balances are, in consequence, shown at Rs. 24.13 crores or Rs. 1.14 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 5th May, shows Demand and Time liabilities at Rs. 859.19 crores (Rs. 30.19 crores on account of borrowings from banks) and Rs. 1,097.67 crores (Rs. 14.75 crores), compared with Rs. 861.48 crores (Rs. 27.47 crores) and Rs. 1,096.84 crores (Rs. 14.12 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.05 crores and Rs. 1.96 crores to Rs. 48.74 crores and Rs. 75.85 crores. There is a drop of Rs. 15.32 crores to Rs. 547.14 crores in investments. Advances and bills discounted at Rs. 1,310.29 crores show a rise of Rs. 1.38 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.4 percent and 67.0 percent, against 6.2 percent and 66.8 percent.

TREASURY BILL MATURITIES

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Industrial Activity (Base: 1953) has now been brought up to September 1960. Compared with the preceding month, there were decreases in tea 0.58 points, jute 6.63 points, yarn 3.27 points, cloth 2.49 points, cement 10.47 points, paper 8.65 points, tyres 46.98 points, motor-cars 40.17 points, bicycles 59.09 points, electricity 7.01 points and railway ton-miles 7.97 points, while increases occurred in sugar 0.10 points, coal 0.27 points, pig iron 0.13 points and finished steel 12.60 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity declined by 4.6 points during September 1960.

Stocks and Shares

BUSINESS FALLS AS OPERATORS FEEL CREDIT PINCH

CONVERSION LOAN DECISION DOES NOT AFFECT THE SECURITIES MARKET

Wednesday Evening.

THE stock market has closed in a subdued mood this week. Business has been reduced to almost a trickle and activities are restricted. *Buying support is conspicuous* by its absence, so any small offer on an unwilling market tends to reduce prices unduly. There is, nevertheless, little sign of any selling pressure because holders are inclined to take a constructive view of the future outlook. Short-selling has been discouraged by good corporate news.

Bulls are sitting out partly due to the shartage of funds and partly because of the difficulties facing some industries. The pull of the busy season shows only limited sign of abating, so bank credit remains in short supply. Judging from current trends, it does not look as though banks will give much support to the market for quite some time. Meanwhile, the Life Insurance Corporation is taking very little interest in ordinary shares because its attention has been diverted to the *forthcoming Central Government loans.*

This apart, substantial funds have been invested in new share issues during the past few months. The pressure has also increased due to the fact that many companies have asked for further call moneys on their recently-issued shares. Because some new issues recently floated have not been fully subscribed, the underwriters concerned have been forced to hold on to a large proportion of them. They are naturally keen to find an opportunity to sell their holdings as soon as circumstances permit. As a result, the supply of floating stocks has increased. The operation of the law of supply and demand has, therefore, moved more in favour of buyers than sellers.

The working of industry has been interrupted by power cuts in many areas. As the prospect for relief in this direction is unlikely in the near future, investors are inclined to proceed cautiously. The working of the jute industry has become uncertain in view of the possibility of a block closure of mills in order to overcome the raw jute shortages. The statistical position reinforces the belief that there will be fibre shortages between now and the arrival of the new crops, so a block closure in some form or other is inevitable under present circumstances. Meanwhile, jute mills are being forced to work at a loss because the price of the fibre is much higher in relation to that of the goods. The sugar industry faces a huge accumulation of stocks due to the fact that production is expected to touch a new record of three million tons during the current season. No worthwhile measure appears to have been taken to promote domestic consumption. Whether the industry will succeed in increasing its exports further is doubtful in the light of adequate supplies of the commodity in world markets. Anyway, exports cannot be made except at substantial losses. How the industry will be compensated for the export losses, remains to be seen.

Indications are that the trend may not change much, at least for the time being, but there are good grounds for taking a constructive view about the future. Corporate working is running at a satisfactory level and the profit trend is upwards. The stock market is also taking an optimistic view about the outcome of the "Aid India Club" meeting due to be held at the end of the current month. It is thought that the donor countries may not hesitate to back the development plans of India by financial assistance. If the working of industry is not interrupted by foreign exchange shortages, the outlook is certainly promising.

In the market, the price of Indian Iron shares has fluctuated narrowly and has closed at Rs. 27.8. Short-selling is being discouraged by rumours of a further capital issue, although there is no confirmation of this. Anyway, the present price does not look unattractive in view of the proximity of the dividend due to be announced for the year ended March 1961. Interest has been subdued in engineering shares due to power shortages. Texmaco are about steady on short-covering. Dalmia Iron have met with interested buying on a good report. Guest, Keen, Williams have lost because the market is not satisfied with the final dividend which has been declared. Jessop are weak, but Indian Standard Wagons have attracted attention on hopes of a higher dividend.

Coal shares have been generally neglected because transport difficulties continue. Some collieries have been forced to cut back production due to excessive accumulations of stocks. There is, nevertheless, selective support for shares such as Bengal and New Beerbhoom on the view that the production of quality coal will be encouraged. Burrakur have been shaded on profit-taking.

Sellers have predominated in jute shares in the belief that the results during the current year are likely to be more unsatisfactory than were feared previously. Scattered interest is being taken in New Central and Birla at lower prices. Kamarhatty have been sold on paying a lower dividend and Kanknarrah are being sold on producing an unsatisfactory report.

Prices of miscellaneous shares have lost allround in the absence of interest. Dunlop Rubber are steady on hopes of a further share issue. Britannia Biscuits are favoured on expectations of a bonus share issue. Indian Copper, Indian Cables, Indian Aluminium and Rohtas are lower on balance. Hindustan Motors have been steadier on hopes of a higher dividend. The dividend has now been announced as Rs. 1.20, taxable, compared with 90nP, taxable, in the previous year. British India Corporation are weak on talk of a change in the shareholding. Isaac Holdens have called a further Rs. 5 a share and Phillips Carbon Rs. 2.50 a share. Paper shares are quiet and Orient have moved downwards on the decision to issue rights ordinary shares of Rs. 10 each at a premium of Rs. 12 a share in the proportion of three new shares for every ten held.

Cotton mill shares have become steadier at lower levels on reports of good cloth offtake. Prominent scrip are Kesoram, Dunbar, J. K. Rayon and Bharat Commerce. Sugar shares have been offered at lower prices without attracting interest.

There has been scattered interest in bank and preference shares. Bargain-hunters seek good preference shares in view of their excellent yields by market standards.

Satisfactory prices realised at the first export auction held in Calcutta this week have helped maintain interest in good Assam and Dooars gardens. The Rajgarh Tea Co. Ltd has decided to issue bonus shares in the proportion of one new share for every one held. It has also decided to offer rights ordinary shares of Rs. 10 each at par in the proportion of one new share for every one held. Attention has been mainly concentrated on Betjan, Dhelakhat, Bishnauth, Jay Shree, Baghmari, Hasimara and Hantapara.

Government securities are dull and the 3 percent Conversion Loan 1986 is being quoted at

Rs. 73.40. The decision to issue further 3½ percent National Plan Bonds to convert three maturing loans, has had virtually no effect. (Details of the new issue are discussed on a previous page.)

Bombay Market

DULL CONDITIONS FOLLOW EARLY STEADINESS

FEAR OF HIGH CARRY FORWARD CHARGES

Wednesday Noon.

DULL conditions have prevailed in the Bombay stock market during the past week and share prices have drifted downwards in idle trading. The earlier steadiness was based on the view that the Tata Iron and Steel Company might pay a higher dividend, which is likely to be announced soon. The corporate news was also good and some cotton mills have decided to issue bonus shares. The removal of special deposits in the Ahmedabad stock market was considered helpful.

Sentiment weakened towards the close on tired bull liquidation in view of end-account considerations. It was feared that the carry-forward charges at the coming settlement might be heavier due to closure of books by some companies. There was appreciable selling pressure in shares on the cash list due to the shortage of funds. Substantial amounts have been blocked in new share issues and many companies have decided to call further moneys on their shares.

Tata Steel declined to Rs. 150.50 and Indian Iron were subdued at Rs. 27.10 on selling pressure from Lyons Range. Prices of engineering shares were marked lower in the absence of support. Alcock Ashdown were sold at Rs. 320 and Premier Construction were quoted down to Rs. 182. Tata Locomotive declined to Rs. 329 and Mukand Iron were taken at Rs. 27.75. Larsen and Toubro fell to Rs. 43.25 and Mahindra and Mahindra were offered freely at Rs. 19.75. In motor shares, Hindustan Motors were steady at Rs. 20.36 on hopes of a higher dividend (since announced as Rs. 1.20 taxable against 90nP taxable in the previous year), but Premier Automobile lost at Rs. 166.

Earlier gains in cotton mill shares were not maintained at the close due to profit-taking. Investors were nevertheless inclined to take a constructive view about the future outlook in view of the prospect for increased production. Bombay Dyeing were quoted at Rs. 63.60 and Century lost at Rs. 619. Standard Mills were sold down to Rs. 1,505 on rumours that the shareholders might not be given an opportunity to subscribe to the shares of the chemical projects in the Mafatlal group. Kohinoor were steady at Rs. 309 on producing a good report. Svadeshi improved to Rs. 268 and Tata Mills to Rs. 57.50 on paying higher dividends. India United ordinaries gained at Rs. 15.56 on paying an ordinary dividend of 80nP a share, taxable. Simplex were offered at Rs. 187 and Apollo were sold down to Rs. 1.58.

Miscellaneous shares moved down in sympathy with the general pattern. In sugar shares, Belapur were quietly steady at Rs. 285 and Phalton declined to Rs. 136.25. Walchandnagar Industries were sold at Rs. 202. In cement shares, Associated Cement were transacted at a lower price of Rs. 157.50, but Digvijay were supported up to Rs. 154 by knowledgeable quarters. Mining shares were quietly steady, and business passed in Shivrajpur Syndicate at Rs. 81. Steamship Company shares were quiet in spite of the assurance of the Central Finance Minister that the industry would obtain financial assistance from the Government for expansion. Scindia Steam declined to Rs. 14.44, as did Great Eastern Shipping to Rs. 14.80. Chemical shares were quiet, and Tata Chemical were offered freely down to Rs. 18.83. Colourchem were quoted at Rs. 351.25 and Indian Dyestuff were transacted at Rs. 502.50. Bombay Burmah reacted to Rs. 605 on profit-taking and National Rayon lost at Rs. 528. Ceat Tyre declined to Rs. 182.50 on issuing rights ordinary shares at a premium. Voltas met with selling pressure and the price declined to Rs. 270. Interest was taken in Tata Oil at Rs. 74.50. Wimco were sold at Rs. 275 in the belief that the Company would not issue bonus shares at present. Synthetics and Chemicals were fractionally shaded at Rs. 173.

Bank shares were steady, but business was restricted. Central Bank came to hand at Rs. 60.50 and Bank of India were done at Rs. 123 Insurance shares were steady, and Indian Mercantile improved to Rs. 45. New India Assurance gained at Rs. 61.

Scattered interest was taken in electric company shares, and Ahmedabad were placed at Rs. 85.70. Tata Hydro were done at Rs. 104.50 and Bombay Suburban changed hands at Rs. 89.

Madras Market

PRICES STEADY BUT BUSINESS RESTRICTED

POWER SHORTAGE WORRIES OPERATORS

Tuesday Evening.

THE Madras stock market has been steady during the past week, but business has been restricted. There was selective support for both clearing and cash scrip due to good corporate news, but operators were inclined to proceed cautiously in view of the power shortage. Government securities were quiet and interest was confined to some State loans only. Public utilities were neglected, but sugar shares met with selective support. In the planting group, good tea and rubber shares were bought on crop reports, but coffee shares were sold at lower prices. In textile shares, business was restrained by fears of power cuts. Miscellaneous shares were taken discriminatingly on dividend news.

In the banking group, business was done in Indian at Rs. 165 and in Canara at Rs. 79.75. Indian Overseas came to hand at Rs. 177.25 and Punjab National were placed at Rs. 21.40. Among public utilities, Ellore were transacted at Rs. 16.55 and Negapatam at Rs. 8.65. South Madras were dealt in at Rs. 9.80 and Vellore were bought up to Rs. 13.35.

In the sugar group, Deccan were transacted at Rs. 13.85 and E.I.D. were steady at Rs. 43.80. Kirlampudi were sold down to Rs. 79 on passing over the dividend, but Mysore were steady at Rs. 59. United Breweries declined to Rs. 113 on profit-taking and Travancore were indicated at Rs. 10.24.

In planting shares, Blue Mountain were steady up to Rs. 3.10 and Cochin Malabar were wanted up to Rs. 7.73. Consolidated Coffee changed hands at Rs. 22.45 and Coorg were done at Rs. 5.70 on paying a taxable ordinary dividend of 20 percent. Business was done in Highland at Rs. 15.40 on the payment of a taxable dividend of 15 percent. Ouchterlony came to hand at Rs. 4.15 and Periakaramalai met with support up to Rs. 3.97 Peermade were steady at Rs. 23.30 on paying a taxable final ordinary dividend of 15 percent. T.R. and Tea were dealt in at Rs. 9.75 on declaring a final taxable ordinary dividend of 5 percent. Kil Kotagiri were taken at Rs. 5.05 and Mysore Coffee were transacted up to Rs. 5.45. Nilgiri were bought up to Rs. 8.53 and Parkside were in demand at Rs. 28.65. Peninsular came to hand at Rs. 21.35, but Teekoy were sold down to Rs. 6.10. United Nilgiri were steady at Rs. 24.75 and Waterfall were supported up to Rs. 3.02.

Among textile shares, Lakshmi were steady at Rs. 162, as were Madura at Rs. 36.30. Travancore Rayon reacted to Rs. 38.30 on profit-taking, but interest was taken in South India Viscose at Rs. 162 on a report that its factory might start working soon. Balasubramania were steady up to Rs. 76 on the payment of a taxable ordinary dividend of 15 percent. Business passed in Bangalore Woollen at Rs. 200 and in Buckingham at Rs. 213. Kothari lost at Rs. 13.05, as did Loyal at Rs. 40. Vijayeswari were bought up to Rs. 127 on paying a taxable ordinary dividend of 16 percent. Coimbatore Spinning were done at Rs. 54 and Hemalatha at Rs. 6.90. Mettur changed hands at Rs. 399, but Pulliccar were sold down to Rs 115.

In the miscellaneous section, Aluminium Industries were quoted at Rs. 23 and Ashok Leyland met with support up to Rs. 9.15. India Cement were steady at Rs. 6.12 and A. V. Thomas fetched Rs. 20.85 on paying a taxable ordinary dividend of 20 percent. Krishna Industrial Corporation realised Rs. 12.87 on declaring a taxable ordinary dividend of 10 percent. Spencer were steady at Rs. 24.25 on paying a taxable interim ordinary dividend of 6 percent. Standard Motors were steady at Rs. 16.75 and Seshasayee Paper were supported up to Rs. 7.12. Business was done in Textool at Rs. 181 and Tube Investment were bought up to Rs. 283. F.A.C.T. were sold down to Rs. 10.68, and General Papers declined to Rs. 10.40. Parry's Confectionery were lower at Rs. 5.10 and Premier Fertiliser were offered down to Rs. 9.50. United Eelectrical were in demand at Rs. 9.50 and W.I. Plywoods came to hand at Rs. 243.

London Market

THE STOCK MARKET BUOYANT

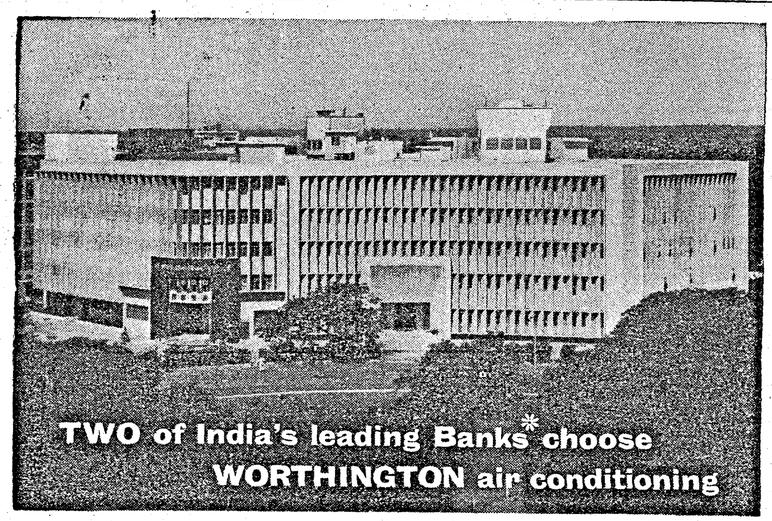
INDUSTRIALS RISE: BOOM IN PROPERTY SHARES

London, 17th May.

EXTREMELY active and generally buoyant conditions prevailed in the London Stock Market during the past week, although some irregularity developed on profit-taking. On the whole, profit-taking was, however, well absorbed by persistent heavy buying and widespread, often substantial, gains were recorded. Virtually all sections participated in the fresh advance, but industrial equities and property shares were the most active sections. A boom developed in the latter but there was a reaction from the best levels on profit-taking. The general strength of the market was based on the confident view of the business and economic outlook in the U.K. The buying of industrial equities came from all sources. In spite of the interest in equity shares, the gilt-edged market was not neglected, and prices tended higher. The firm tone of the market was not affected by the announcement of a £20 million New Zealand issue. Foreign bonds were largely neglected, while dollar stocks fluctuated narrowly under Wall Street's influence. Banking and particularly insurance shares were active while hire-purchase shares improved. Apart from steel and shipping shares, industrials were buoyant and many prices established new all-time peaks.

CORRECTION

It was wrongly stated on page 699 of the issue of *Capital* dated 4th May, 1961, that Dunbar Mills Ltd had decided to issue ordinary rights shares at par in the ratio of one new share for every five held. This should have read one new share for every three held.



...for year-round 'engineered climate'

The imposing new buildings of the United Commercial Bank and the Punjab National Bank at New Delhi are completely air conditioned (for summer cooling and winter heating) with WORTHINGTON Centrifugal Systems — 230-tons and 300-tons respectively. These Banks offer not only excellent banking facilities but the right atmosphere for their patrons and ideal working conditions for their employees.

These are yet other instances where high performance and economy in operation led logically to BLUE STAR engineered WORTHINGTON installations. Whether your requirements are large or small — you will find that BLUE STAR can serve you best in 'climate control.'

New Delhi

U.N. EXPERTS SCRUTINISE INDIAN FERTILISER PLANS

DELAYS IN PLANT CONSTRUCTION CRITICISED

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.N. experts who studied India's fertiliser requirements with reference to her food production programme have submitted a useful report as to how this country should plan for increasing the production of chemical fertilisers in India during the third quinquennium. According to their report, India's current plan calls for an expansion of nitrogenous fertiliser production from 150,000 tons in 1961 to 1 million tons in 1965-66. This means that almost 13 factories should be commissioned by 1962 From that year, India plans to start, on the average, three fertiliser factories every year until 1965. In addition, two existing factories will expand their capacity. The following table gives information concerning the commissioning of factories for production :

ESTIMATED COMPLETION DATE OF FERTILISER FACTORIES

Year of completion	No. of plants	Location of plant	Capacity in '000 tons of nitrogen a year
Already fully or partially operating	5	Sindri Alwaye Nangal (by-product ammonia plants)	243
Due to be ready			
1962	2	Rourkela Neyveli	155
1963	3	Trombay Ennore Visakhapatnam	168
1964	5	Alwaye Kothagudam Assam Tuticorin Durgapur	310
1965	3	Gorakhpur Ankleswar Mangalore	250
Total	18		1,126

Nangal: With the heavy water production somewhat of a question mark at this time, it appears that this will be a high cost ammonia production plant. This plant is now being brought on stream. A long-term project should be set up to plan a gradual change to a cheaper raw material when the electric power now used is required for other industries. The calcium ammonium nitrate production (nitrochalk) should be held at 30 percent nitrogen content instead of being diluted to 20.5 percent as planned.

Rourkela: Whatever help is needed to complete and start up this plant, should be given immediately. The plant is designed for 120,000 tons of nitrogen production a year as ammonia, but some estimates indicate that a shortage of coke-oven gas will reduce this to about 80,000 tons. If this is the case, some other raw material should be considered now and provided for in order to use the full capacity of the plant. The final product is to be calcium ammonium nitrate (nitrochalk) and, as for Nangal, a 30 percent nitrogen content product instead of 20.5 percent should be seriously considered.

Diversification of Products

Neyveli: Completion of this plant should be speeded up by any means available. The longer term planning should include evaluations for phosphatic (complex) fertilisers to supplement the single plant product, urea. This plant has a capacity for 75,000 tons of nitrogen a year as ammonia at the reasonable operating factor of 90 percent.

Trombay: This plant is being built for 350 tons a stream day of ammonia, which is equivalent to 95,000 tons of nitrogen a year. The installed spare compressors will allow future incremental expansion at minimum cost and this course should be planned now because of Trombay's excellent location in points of raw material availability and marketing.

Visakhapatnam and Kothagudam: The pending decision on the licence for Visakhapatnam should be made immediately since continued delay could seriously hamper the third plan schedule. Visakhapatnam is an excellent site for a plant in spite of the overloaded rail system in this area. This situation must be recognised, however, and plans to avoid serious transport bottlenecks should be made now. Low-cost naphtha raw material is available from the Caltex refinery and the import of both sulphur and phosphate rock is facilitated by this sea coast site. Kothagudam, however, will definitely be a higher cost operation both capital-wise and production cost-wise. It is favourably located from a marketing and transport viewpoint, but this will not altogether counterbalance the effect of the use of a poor quality and expensive raw material such as slack coal.

It is suggested that these two plants be considered together and be operated jointly, preferably by the same company. This would afford the most economic operation possible for Kothagudam and should not penalise Visakhapatnam too severely. They could complement each other in that phosphatic complex fertilisers could be produced at Visakhapatnam and high nitrogen content urea in Kothagudam, thereby affording the proper and required N-P or N-P-K ratio to be maintained throughout the combined marketing area.

Attractive Project

Durgapur: The availability of adequate coke-oven gas to support an ammonia plant of economic size, i.e., 80,000 tons of nitrogen a year, in a potentially high fertiliser acceptance and consumption area, makes this a sound and financially attractive project. It is proposed to make both urea and nitro-phosphate fertilisers, and this should be a relatively low cost operation.

Gorakhpur: Construction of the Barauni refinery is under way and operation is scheduled by 1963. There will be sufficient surplus naphtha from this refinery to supply food to more than one ammonia plant. The market potential for fertilisers is so large on the Gangetic plain that Gorakhpur should be built initially for 85,000 tons of nitrogen a year as ammonia, and arranged so as to be easily expandable. Urea is planned initially as the high nitrogen content solid fertiliser. For the longer term, it will be necessary to plan for complex fertilisers containing N-P-K. This plant should be planned to begin production in the third plan. Additional site study is recommended to make sure that proper location is established from both a short-term and long-term viewpoint.

Ankleswar: This plant in Gujarat should be planned along with the Gujarat refinery development. Naphtha supplied from Trombay could be considered initially. Site studies should be conducted jointly with the refinery investigations, adequate port facilities being one of the principal factors in location. This plant should be planned on similar lines to Gorakhpur, on a large size and expandable basis because of its economically favourable location.

Ennore: This plant is planned for ammonia production equivalent to 8,000 tons a year of nitrogen. This is a favourable plant location from a raw material, product marketing and transport point of view. A site in or near Ennore should be studied with a view to erecting a plant to manufacture fertilisers containing 85,000 tons of nitrogen a year. This could be done either as an expansion of the present small factory there, or on a fresh site. The situation seems good from both the transport and the market point of view. Either this factory or one in Tuticorin should fit well into the third plan.

Naphtha-based Plant

Tuticorin: There are plans for further development of port facilities in Tuticorin. This is a logical and economic location for a future fertiliser plant, particularly in view of the fertiliser acceptance and demand in the southern part of India. A plant based on naphtha as a raw material making 85,000 tons of nitrogen annually is justified in this area. The market should require such a plant in the third plan. The market for ammonium chloride as a fertiliser on paddy and coconut in Tuticorin area should be evaluated, and consideration given to the manufacture of ammonium chloride as one of the solid fertilisers to be made there. The complex phosphatic fertilisers and urea could also be produced to obtain the proper N-P-K balance.

Hanumangarh: The long-term development of extensive irrigation and co-operative farming in Rajasthan makes this potentially an attractive location for a fertiliser plant. It will take a considerable time to put this land into extensive production and to develop the large fertiliser consumption required to justify the planned 80,000 tons of nitrogen a year fertiliser plant. The production of the fertiliser based on coal will be high cost. It is possible to use naphtha by transporting north from Gujarat, but this entails considerable freight and additional load on the railways. It is possible that gas will become available in Rajasthan either by agreement with Pakistan or by actual discovery of gasfields. Since there is no urgency to build a plant immediately in this area, it is suggested that construction be postponed until the irrigation system is nearer operation and much more fertiliser market development work is done. During this period, if natural gas becomes available plans should be made to build quickly a low capital cost, low operating cost plant similar to that in Assam, but larger and economically expandable to take advantage of the large potential future fertiliser market in Rajasthan.

Coal as Raw Material

Itarsi: The initial studies for the plant located in Itarsi were based on the development and use of good grade coal deposits in this area. Ammonia manufactured from coal is relatively high-cost and much more capital is required for the plant facilities than for one based on naphtha. If a large fertiliser consuming area lies close, the freight handling and distribution cost savings tend to counterbalance the higher basic fertiliser cost. This is not the case for Itarsi since the fertiliser market in Madhya Pradesh is small as yet, and the demand is largely concentrated in the eastern part towards the Orissa border. Thus, not only will this be high-cost fertiliser but it will also be at a disadvantage freightwise. The small size of the projected plant at 50,000 tons of nitrogen annually is also a disadvantage. It is recommended that this plant be postponed until the fourth plan and re-examined at that time with the latest market demand and trend data. This will allow a more accurate economic evaluation and facilitate a firm decision as to location, size, products, and consideration of other raw materials such as naphtha.

Koyna Area: Growing market requirements will favour another fertiliser plant in this area. Site studies should be initiated now to determine the most favourable location. This plant should be scheduled for the fourth plan. It is felt that India faces a critical shortage of trained and experienced technical graduates in the extensive industrial expansion programme needed to meet the requirements of the third plan. This shortage will be very keenly felt in the fertiliser manufacturing plants, because the number of factories is being increased many times. It is absolutely essential to use fully the talent available in India as well as to solicit top technical help from foreign countries or foreign collaborating companies. The number of engineers and chemists normally used in the Indian fertiliser plants is excessive. This fact is recognised by some managements, and it is planned to use some of these experienced technical men as the nucleus for the tremendous task ahead for designing (where required), training, staffing, and starting up new plants. Staffing a new plant must be done on a planned and time-scheduled basis, so as to ensure adequate training of all personnel, whether supervisors, operators, or craftsmen. The surplus of labour in India has resulted in the "make work" principle used by many industries. This has been the basic reason for widespread "under-employment" with the concurrent feeling of irresponsibility affecting many of the working men. Although efficient use of manpower may not seem to be needed in India at this time, the efficient use of limited capital and the efficient use of production equipment is sorely needed now. To attain these last two objectives, it is essential to work towards increased productivity a man-hour from the working man. From the information available to the mission, the following data have been presented to illustrate the time taken in India to plan and erect fertiliser factories. For the purpose of comparison, a normal time-schedule has also been worked out. While this schedule is based on the experience of some of the western countries, it has been adjusted to suit Indian conditions.

TIME SCHEDULE FOR A FERTILISER PLANT

Phasing of the project	Approx. time taken by the Government (months)	Normal time period (months)
Preliminary analysis, project report, and initial decision to proceed with the project	5 to 7	4 to 5
Preparation of tenders, preliminary process and specification, etcetera	3 to 4	3 to 4
Contractor's project bid, review of bids and final decision to construct the factory	12 to 20	4 to 8
Ordering, construction, erection to completion and start-up	32 to 40	24 to 30
Total (months)	32 to 71	35 to 47

Two Conclusions

From the above, two conclusions emerge: first, the time taken in India to plan, erect and commission a fertiliser factory into production is about 17 to 24 months longer than is warranted. Secondly, valuable time is lost in the process of arriving at a final decision and also in the actual erection and starting of the factory. The extra time taken in the latter part, in India's present state of development, is understandable, if not excusable. With a large development programme in progress, the deliveries of construction materials, locally made machinery, etcetera, present problems of co-ordination and administration which affect the time schedule of erection of a factory. But the extra time taken in arriving at a decision once the contractor's bids are submitted is serious. This is a part of the decision-making process which should be speeded up considerably. In the case of private sector projects, a similar situation exists. Decision-making, in this case again, has become the bottleneck. The time taken to start construction of the factory from the completion of preliminary studies is about 24 months,

which is much the same as is taken in the public sector.

At this stage, India cannot afford to lose time. If two years are lost in commissioning a factory for production, it makes a great deal of difference in the implementation programme of the third plan, which is only a five-year plan. It also means the loss of valuable foreign exchange, which in the case of one factory alone would be about Rs. 8 crores—not to mention the exchange needed for the import of food.

The concensus of opinion seems to be that at this level considerable time is wasted. There is a considerable amount of see-sawing back and forth before the final decision is reached. Any efforts to reduce the time spent at this level should be encouraged. It is recommended that a time limit be set for arriving at a decision. Once the tenders are received, the total time to evaluate these and arrive at a decision should be under four months.

Standardised Plants

It is widely realised that five precisely similar plants are cheaper—and easier—to make and run than five different plants. The advantages of such standardised plants are very important for India at the present stage. These advantages include the following:

(1) the capital cost of plants will be reduced and so will the cost of spare parts, of which fewer will be required;

(2) the plants and spare parts will be more easily made, and hence will be made in India at an earlier date;

(3) the time required to build plants, train personnel, and start up plants will be reduced;

(4) standard plants facilitate good operation, good maintenance and interchange of personnel with the minimum of training; and

(5) they also facilitate and make more valuable the interchange of design, production, maintenance and other technical data.

It is obviously too late to attempt standardisation of the heterogenous fertiliser plants already operating in India or those plants in finalised phases of planning or construction. It is definitely not too late to consider standardisation of design and equipment for the new fertiliser plants now in the early planning stages and the succeeding plants. The greatest capital advantage can be obtained by standardisation of the plants requiring the largest capital investment. However, this cannot be the sole criterion since some equipment and some processes are better adapted to standardisation than others. For the future, a standardised single string ammonia plant of 300 to 350 tons a day is recommended. This means that two standard sizes would exist in India, the 175 tons a day plant until now being built (as in Trombay), and the larger ammonia unit now being recommended for future planning. The following plants recommended for completion between 1964 and 1967 offer an excellent opportunity for standardisation: Gorakhpur, Ankleswar Tuticorin or Ennore and Mangalore. These plants are being recommended for the same design capacity and for the same type of raw material (petroleum naphtha). Another plant in the Koyna area or south Maharashtra could be added to this list for completion in the fourth plan.

Application for Prospecting Licence

The Central Government has drawn the attention of applicants for the grant of prospecting licence, mining lease or their renewal to rule 11 and 24 of Mineral Concession Rules, 1960, which prescribe the time limit within which such applications are to be disposed of. These rules also prescribe that in case the State Government does not dispose of the applications within the prescribed time limit, such applications will be deemed to have been refused after its expiry. Once an application has been refused or it is deemed to have been refused due to its not being disposed of by the State Government within the prescribed time limit, it will not be permissible for the State Government in accordance with the rules to grant fresh concession or renewal against it. In all such cases it is necessary for the applicant, in order to safeguard his interest, to make a review application to the Central Government in accordance with rule 54 of Mineral Concession Rules, 1960. If an applicant, in the circumstances, does not file a review application, he has no further remedies. It will be open to another person to apply for concessions over the same area and the applicant who has not filed a review application will not be entitled to consideration.

Joint Steamer Companies Freight Rates

The Central Government has appointed a committee to enquire into the justification for the freight rates charged by the Joint Steamer Companies for the transport of goods from Calcutta to Assam and *vice versa*. The India General Navigation and Railway Company Ltd and the Rivers Steam Navigation Company Ltd (commonly known as the Joint Steamer Companies) who maintain services as common carriers on the inland waterways of north-east India increased the freight rates for the transport of all commodities other than foodgrains by the river route from Calcutta to Assam by 10 percent with effect from 15th March, 1961. Following discussions with the representatives of the Joint Steamer Companies for getting their freight rates reduced, it has been agreed that they would with immediate effect limit the enhancement of the rates to 6 percent until 30th June, 1961, and that in the meantime, the Central Government will hold an enquiry into the economic working conditions and the rate structure of the steamer Companies. The committee set up by the Government will examine the traffic handled by the Joint Steamer Companies during the last three years on the river route from Calcutta to Assam, the freight rates prevailing in 1960 and the anticipated traffic and operational results in the immediate future on the basis of the freight rates in force prior to the revision in March 1961, and recommend whether any increase in freight rates is justified and, if so, to what extent. The committee will also recommend how the increase in freight rates should be distributed among the various commodities other than foodgrains.

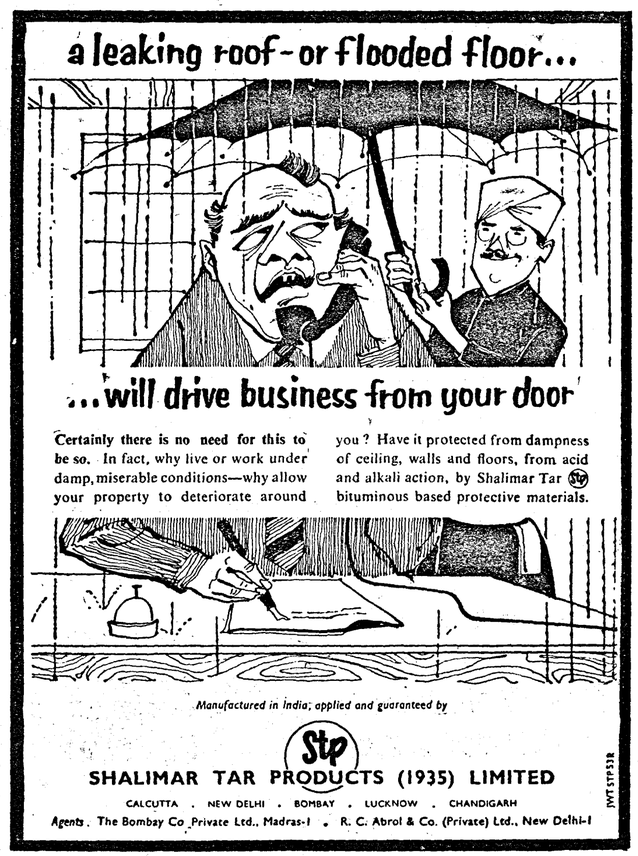
Central Seed Corporation

The Central Government has decided to set up a Central Seed Corporation as a Company registered under the Indian Companies Act, 1956. This Corporation, with a share capital of Rs. 5 crores divided into 500,000 equity shares of Rs. 100 each, will promote the production of improved seed in the country by giving financial aid, technical guidance, establishing suitable production and marketing organisations and sponsoring training programmes in collaboration with the Central and State Governments and other interests. It is understood that research in the last few years has resulted in the evolution of high-yielding hybrids of maize, and as a means of increasing food production the Government feels that it is necessary that the cultivation of these hybrids be taken up on a countrywide scale. Maize occupies about 9 million acres of cultivated land and it is estimated that the adoption of hybrid maize on a large scale would mean an additional food output of 750,000 tons every year.

The systematic adoption of improved seeds of other foodgrains, including hybrid jowar, of edible oilseeds and of green manure crops would also help materially in increasing food production. In order to ensure purity and maximum yield, it is necessary that the production of hybrid maize and other hybrids should be regulated and safeguards devised against wind pollination and other interferences. Such production can, therefore, be secured only on selected farms under efficient and well-directed management. Keeping in view these and other problems associated with the large-scale production of hybrid and other seeds, the Government has felt the necessity for setting up an autonomous organisation at the Centre with branches in different States. This organisation, it is understood, will consist of a Central Seed Corporation supported by a number of units responsible for the production of foundation seed. The Central Seed Corporation will be an autonomous organisation with a board of directors including representatives of the Government, the seed industry and other interests. It will also have executive and financial committees.

Foundation Seed Organisation

The Foundation Seed Organisation, to be set up under the control of the Central Seed Corporation, will have control over the production, movement and supply of seed to units or agencies engaged in the production of certified seeds. Four such units, each of 500 acres, it is proposed, will be set up in the third plan period, for hybrid maize seed, and one or two units for hybrid jowar seeds. They will also produce seeds of rotation crops such as wheat, groundnut and cotton as also seeds of green manure crops. The scheme also provides for certified seed agencies which, as far as possible, will be co-operatives. These will in effect be seed-growing villages with all the villagers in contiguous areas growing the same hybrid or other improved seeds and organised on a co-operative basis. Since provision will have to be made to control the quality of seeds, regulate their production and marketing and control inter-State movement, appropriate seed certification agencies and seed law enforcement agencies will be established for each State.



London

BOARD OF TRADE REPORT DISCUSSES SLOW RISE IN U.K. EXPORTS

SHARE DECLINING IN EXPANDING WORLD MARKET

(FROM OUR LONDON CORRESPONDENT)

CHAPTER and verse concerning the inadequate performance of the United Kingdom in world trade is highlighted in *Trends in United Kingdom and World Exports of Manufactures*, just published by the U.K. Board of Trade. This publication covers the figures for world exports of the first half of 1960, compared with the same period of 1959, and presents the following sombre picture. In an expanding world market, the U.K.'s share is diminishing. In its most buoyant section—western Europe—Britain is lagging. In the overseas sterling area, other industrial countries are making more headway than the U.K. The latter's exports of iron and steel, chemicals, textiles, and other manufactures are rising less rapidly than those of other countries, notably, the members of the European Economic Community. Between the two periods under examination, the value of world exports of manufactures rose by 20 percent; U.K. exports increased by 12 percent; exports from the E.E.C. by 27 percent (from West Germany alone by 22 percent); exports from the United States—where the recovery started later than in other countries—17 percent; and exports from Japan 20 percent.

The best export markets in 1960 were the E.E.C., the United Kingdom and the other European Free Trade Association countries. European markets, in fact, accounted for about three-fifths of the increase in exports of all industrial countries. Europe stimulated not only an increase in intra-European trade (including a 30-percent rise in E.E.C. exports) but also rises of between 75 percent and 120 percent in U.S. exports. Japan also benefited. Exports from other manufacturing countries in total were only 6 percent higher than the year before. Japanese exports were, however, up over 20 percent, Germany managed 10 percent and Italy 20 percent. The United Kingdom exported 3 percent more. The "slowest" market was Latin America, but here Britain did almost as well as the E.E.C. countries and better than West Germany. Exports to the overseas sterling area rose by more than 19 percent in total. U.K. exports, however, increased by only 9 percent and did no more than recover ground lost a year earlier. The U.S.A., Japan and the E.E.C. countries—other than West Germany—raised their exports by more than 30 percent.

In the commodity analysis, U.K. exports of motor-vehicle parts stand out, having risen more than the average for all manufacturing countries. Exports of non-electric machinery expanded at about the average rate. Together these groups account for about 30 percent of the world trade in manufactured goods. In other groups of engineering products and manufactures, exports from Britain did less well than those of other countries. Exports from the E.E.C. countries, excluding West Germany (and in particular France and Italy) went up substantially in every major commodity group. Exports of all the major groups of chemicals from the U.K. were higher, but in most groups the improvement was less than that achieved by the E.E.C. In cotton fabrics, the U.K. increase was much the smallest. Although Britain remains the largest exporter of woollen and worsted fabrics, other major exporting countries are increasing their exports at a faster rate. The U.K.'s progress in synthetic fabrics and artificial fibres is also much the smallest. Britain's metal sales increased less than the average. In the machinery and transport equipment group, her showing was almost up to the world average and better than that of the other two major exporting countries, but a performance below the average was recorded by electrical machinery.

Common Market Discussions

Mr. Macmillan and Mr. Maudling have made hopeful statements last week on linking Britain with the European Common Market. They referred to discussions with "Six" members at official level aimed at finding a basis for negotiation. The Prime Minister, answering questions in the House of Commons, said that he understood some progress had been made. He again re-emphasised Britain's anxiety to safeguard the interests of the Commonwealth, her farmers and her partners in the "Seven" of the European Free Trade Association. These were the pre-conditions of any closer association with the European Common Market. "Nothing would be worse than to have a long negotiation which broke down."

Mr. Maudling, in a speech at a lunch to the E.F.T.A. Consultative Committee, said that it should be possible to find a solution. "The simplest solution would be if either the Treaty of Stockholm which created E.F.T.A. could be extended to include the European countries outside or the Treaty of Rome, which created the Common Market, could be extended to include all countries outside. But this simple solution is, we know, not practicable. The 'Six' feel that to extend the Stockholm Convention in this way will endanger the progress towards unity that they are themselves endeavouring to make. We, for differing reasons, cannot accept the Treaty of Rome as it stands. Therefore, a solution must be found that lies somewhere between the two, a solution which does not jeopardise the interests of either.

"Such a solution is bound to be complicated because different countries have different problems. But there is no reason why this should make the solution impossible. Both the Treaty of Stockholm and the Treaty of Rome contain certain provisions designed to meet individual countries' special problems. It should be possible to make special provisions to meet the difficulties of individual countries as long as there is goodwill and determination to agree and as long as the objective is, in principle, a multilateral European system which will strengthen both the economic and political unity of western Europe."

Contrasts in Retailing

An increase in the hire-purchase business in March is reported by the U.K. Board of Trade, but it is put down in large measure to seasonal factors and an early Easter. March was also a very good month for retail trade generally. The index of sales, seasonally adjusted, was 115, compared with 112 in both January and February. This is the highest the index has so far reached. Helped by the good March weather, clothing and footwear sales were particularly buoyant: they were 17 percent up on March last year, having registered rises of 3 percent and 7 percent in January and February. But all the main sections of the retail trade did better business, including shops selling durable goods. The actual increase in retail sales in March, compared with a year earlier, was 7 percent whereas it was 3 percent in February and only 1 percent in January. The bulk of the increase is accounted for by a bigger volume of goods sold. Prices were 2 percent higher than a year earlier, which is a slightly bigger difference between February this year and February 1960.

The hire-purchase sales of shops, which declined by 20 percent in January-February, were only 17 percent less in March than 12 months before. This improvement in credit business relative to a year ago was general, but the outstanding performers were the household goods departments of departmental stores. Their credit business fell by only 3 percent. The debt owed direct to shops declined by £3 million to £312 million, which may be compared with the peak of £338 million last May. Finance houses extended more credit in March than in February but their business was 15 percent down, compared with March last year whereas in February it fell by only 11 percent. All classes of business, excepting farm equipment and industrial plant, showed to disadvantage. Credit for new motor-cars dropped by 8 percent (March 1960, however, was an exceptional month); for second-hand motor-cars it dropped by 18 percent, and for motor-cycles by 24 percent. Credit for commercial vehicles was 6 percent lower. The outstanding debt to finance houses, which fell away from its peak of £633 million in August to £607 million in January and February, recovered to £622 million.

Machine Tool Orders Up Again

New orders for metalworking machine tools remained at a high level in January both in home and export trade. Although less than the very high values recorded in the early months of last year, net new orders in January exceeded the monthly average rate of 1960—a year of heavy demand. Both home and export order substantially exceeded deliveries during the month. The order-book at the end of January, therefore, rose further to £84 million of home orders and £25 million of export orders.

The president of the Machine Tool Trades Association, Mr. E. W. Field, has described in the annual report various measures taken by the industry to improve its position. The census of the age of machine tools in use in the U.K. may be ready in the late autumn. The research association is now coming into operation with a Director of Research in charge. An export committee has been formed. Problems of electrical motors and control-gear for machine tools have been discussed frankly with the Electrical Manufacturers Association. The latter was told that some foreign motors give a greater power output. Relations with the electronics industry are being strengthened.

Record Year for E.C.G.D.

The U.K. Export Credits Guarantee Department did record business in 1960-61 and its favourable balance in its commercial business—loosely though inaccurately called a profit—went up from £5.2 million to £8.1 million. The Department insured commercially business worth £720.8 million, compared with £671.1 million the year before—an increase of 7.4 percent. The higher surplus is explained by three factors: premiums rose from £6.6 million to £8.2 million, sums recovered increased from £3.7 million to £3.9 million, and claims dropped from £5.1 million to £4 million. The cumulative surplus from the Department's commercial activities is now £28.6 million—the result of a series of good years. The decision to reduce premiums last month was helped by this record of solvency. The favourable balance is only meaningful in relation to the Department's potential liabilities to holders of its guarantees. These have gone up by almost £98 million to £639.7 million. Medium-term liabilities alone rose by 20 percent last year. In five years, the Department's commercial business has expanded by 82 percent.

B.O.A.C. Incurs Loss

British Overseas Airways Corporation has once more managed to reduce its total costs in 1960-61. But it has shown a loss on its total operations of about £1.7 million, which is about double the loss of the previous year. This brings its accumulated deficit to about £17 million. B.O.A.C. reports always start with a cheerful operating profit, which sinks when interest on its borrowings from the Government are paid, and sinks even farther when the losses on such associated Companies as British West Indian Airways and Hongkong Airways are deducted. The management of the Corporation has always resented having to declare its results after payment of interest, arguing that for an ordinary commercial firm a large proportion of this money would be equity capital which would be paid out of profits, not before profits. Indeed, the statement just issued referred to "interest payable to the Government (i.e., the Corporation's guaranteed dividend)." There is a similar resentment of the lossess on the associated Companies. These have jumped from £1,111,608 to about £1.8 million this year, although what particular airlines have been running at heavier losses has not been indicated.

The year was notable for the arrival in B.O.A.C. service of its 15 *Boeing 707* airliners. Passenger miles flown rose sharply from 1,835 million to about 2,500 million. Traffic revenue was up by a quarter, and the operating profit rose from £4.3 million to £4.75 million. Costs came down by about 3d a ton-mile to 2s 6d. At the same time, the larger fleet cost more to amortise and the larger amounts borrowed from the Government cost more in interest.

SUPER-CONSTELLATIONS FOR DOMESTIC ROUTES

COMMITTEE EXAMINING QUESTION

(FROM OUR NEW DELHI CORRESPONDENT)

THE question whether *Super-Constellations* which are long-range aircraft, can be used by the Indian Airlines Corporation is being examined. A sub-committee with the Director-General of Civil Aviation as chairman has been appointed to study this question. The report is awaited. The reference is to the *Super-Constellations* of the Air-India International which are likely to become surplus with the acquisition of additional *Boeings*. From May this year, the Indian Airlines Corporation has been using *Fokker-Friendship* aircraft on the routes Calcutta-Gauhati twice daily and Calcutta-Gauhati-Mohanbari once daily. A *Dakota* would operate from Gauhati to Tezpur, Jorhat, Lilabari and Mohanbari. This, the Indian Airlines Corporation feels, will relieve the congestion at present being experienced on this route. Runways at two aerodromes in Assam are being extended to take heavier aircraft. At Gauhati, a concrete runway is being extended to 6,000 feet, which will enable the airport to take aircraft like *Skymasters* and *Viscounts*. The work, it is expected, will be completed soon. The runway at Bagdogra has been extended to 6,000 feet. This will enable the operation of aircraft of the size of *Skymasters* and *Viscounts*.

Promoting Tourism

Steps taken by the Indian Airlines Corporation to stimulate tourist traffic can be put under three categories: (i) introduction of services with an aphasis on tourists, (ii) specially rebated fares to tract tourists, and (iii) other miscellaneous facilities. Among services introduced with an emphasis on tourists are flights to Panna (for Khajuraho), flights between Delhi and Kulu, *Viscount* flights to Srinagar, and flights between Madras and Madurai. From next May, *Fokker-Friendship* flights will also be available between Calcutta and Bagdogra for Darjeeling and between Calcutta and Gauhati for Shillong. The present frequencies of 18 flights a week Bombay-Delhi, ten flights a week Bombay-Calcutta and 11 flights a week Calcutta and Delhi should be increased, but that would be possible only if additional *Viscounts* are available. Two more *Viscounts* are expected soon. The Indian Airlines Corporation has drawn up specially rebated itineraries in connection with the "Visit Orient Year 1961."

Indo-Russian Aviation Pact

Indo-Russian air talks have already been concluded, giving Russia the right to fly to Indonesia. According to reports, Russia wanted to fly to Indonesia with or without agreement. On paper, India has been given the right to fly beyond Moscow, but as the booking of passengers and cargo is a State monopoly, India enjoys the illusory traffic rights of flying to, say, London.

Japan Airlines Plans Extra Service

Japan Airlines is organising booking offices in Calcutta, Delhi and Bombay. It intends to operate through India in 1962. It is planning to fly to London and Paris *via* the Polar route in July this year.

More Air France Flights via Delhi

The most significant feature of the new summer schedule of Air France is the frequency of *Boeing* jet inter-continental services through Delhi, which has been stepped up from two to three a week, in each direction. Calcutta continues to offer one service a week to east and west, as previously. With effect from 1st April, Air France thus offers each week, four *Boeing* jet inter-continental services through India, four services to Paris, four services to Teheran, four services to Tokyo, four services to Bangkok, besides services to Hongkong, Saigon, Manila, Tel Aviv, Istanbul and Rome.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : yeat ended March 1953=100) advanced by 0.4 percent to 125.7 during the week ended 29th April, 1961, compared with 125.2 for the earlier week. The index was lower by 0.2 percent when compared with the corresponding week of the previous month, but was higher by 3.6 percent than that of a year ago. The monthly average for April 1961, worked out to 125.7, against 127.5 (revised) for March 1961 and 120.4 for April 1960.

OFFICIAL INDECISION ON BLOCK CLOSURE LEAVES GUNNY MARKETS UNCERTAIN

POWER CUT AFFECTS MILL OUTPUT IN APRIL

AS far as the jute industry is concerned, there seems to be no news of any progress towards a settlement of the question of the block closure of mills. It was confidently predicted during the week by some that the question would be decided at a meeting between the deputy chairman of the I.J.M.A. and top Government officials. This proved to be wishful thinking, however, as the *communiqué* issued from New Delhi has shown. The situation, it said, was being carefully watched and if it was found that the fibre shortage was real, then the block closure of mills would be considered again at a future date. It is unfortunate that the Government has so far refused to listen to the leaders of the industry with experience and business acumen to their credit. It would appear that the former is more concerned with the effect that a block closure would have on the labour force than with the economic conditions of the industry. This policy is short-sighted, as the failure to take action now may result in even a longer closure at a later date.

The position of the jute industry is very perplexing. The uncertainty about the future is disturbing for buyers and sellers alike. A great lack of confidence is consequently pervadin the markets. More than half of this month has gone, and the trade is still in the dark as to what is likely to be the ultimate outcome of the block closure move. The publication of the mills' jute goods stock figures as at the end of April, should help to strengthen the Association's position, as these showed a rise of 5,400 tons. If stocks are adequate, there need be no fear that the overseas consumer will be left short, or that prices will rise too high, although an increase is almost inevitable should the mills close down. The outlook is gloomy. The fact that no relief can be looked for in the shape of lower and economic prices for raw jute makes it even worse. Theoretically, any restriction of production should bring about a reduction in raw material rates, but as experience has shown, this rarely happens in practice. Sellers take it as an admission that fibre is scarce, so the laws of supply and demand take effect.

While old crop jute prices show no signs of falling—nor can anyone confidently predict that new crop rates will show much discount—gunny rates are not tending to rise. Consequently, mills have no chance of trading at a profit. Can manufacturers go on paying high prices for raw jute and sell cloth and bags at comparatively low prices for any length of time? Already, reserve funds have been strained in the case of many firms. Trade has been decidedly slack during the past two months, and manufacturers have been compelled to accept prices, although these have resulted in a loss, simply to keep their works running. Competition is very keen for any business going. Buyers are fully alive to the situation, and they are making the most of it. They simply will not purchase more than sufficient to meet their immediate needs, and they have no wish to contract for supplies any distance ahead. This is clearly demonstrated by the latest figures of U.S. burlap consumption. At 59 million yards, they constitute a new low level for April, and are the lowest since July 1955. The total U.S. consumption for the current year now stands at only 275 million yards. Once again, the U.S. consumer has dipped into his stocks. April's stock figure now stands at 228 million yards, which is a drop of 9 million yards on last month. Since the beginning of the year, U.S. stocks have fallen by 29 million yards, and current stocks are the lowest since November 1958.

I.J.M.A. Production Figures

Production during April of the mills reporting to the I.J.M.A., amounted to 79,200 tons, which was 8,300 tons less than during the previous month. The total was made up of 27,500 tons of hessians (34.7 percent), 40,400 tons of sacking (51.0 percent) and 11,300 tons of other goods (14.3 percent). Working hours during the month dropped to 170, mainly due to power cuts. The fall in production can almost totally be accounted for by the drop of 17 working hours from the previous month. There was a very small change-over from sacking to hessian (1 percent), which accounts for the balance. The average production an hour remained at the fairly high level of 465.9 tons. The total production for the period July 1960 to April 1961 now amounts to 861,800 tons, made up of 313,200 tons of hessians (36.4 percent), 455,400 tons of sacking (52 percent) and 93,200 tons of other goods (10.8 percent). The average production an hour for a total of 1,936.5 hours was 445 tons.

Mills Stocks of Jute Goods

At the end of April, stocks of jute goods held by mills were 90.400 tons, consisting of 27,900 tons of hessian (30.9 percent), 48,300 tons of sacking (53.4 percent) and 14,200 tons of other goods (15.7 percent). This is 5,400 tons higher than the previous month.

While Calcutta has experienced no real downpour in recent weeks, the jute districts have recorded good rainfalls. In India, and particularly in West Bengal and Bihar, sowings have been resumed in those districts where they have not already been completed, and the condition of the standing plants is reported to be good. There seems to be no doubt that sowings in India will be fairly large. Last year, farmers had to contend with a prolonged drought at sowing time, but this year so far exceptionally favourable weather conditions have assisted them. Furthermore, the improved prices resulting from the current short crop are themselves an inducement for sowing more.

The recent cyclone in Pakistan appears to have had little effect on prices, and the extent of the damage to the jute crop, it is reported, has been grossly exaggerated. Full reports have yet to come in, but the damage appears to be confined to the lowlying areas where the new plants had attained considerable growth. It seems inconceivable, as a Pakistani daily newspaper has highlighted a news report, that the damage in certain districts was as high as 75 percent. This was generally discounted by all concerned. Although official sources in Pakistan continue to place implicit faith in their fantastically high new crop estimates, the trade in general considers that the figure should be in the region of 6 million bales, and the extent of the damage due to the cyclone not more than about 200,000 bales. Meanwhile, the Pakistan Jute Association has set the discount rate for business in new crop jute for July-August shipment at £15 a ton for long jute, and £10 a ton for cuttings. These are considered by many to make the price of new crop jute too high, particularly in view of the prospects of a bumper crop and the possibility of some early jute. There has naturally been little response from overseas to the cabled offers at the new rates. As far as India is concerned, there are no indications of new crop prices as yet, and sellers are not interested. Normally by this time, a fair amount of business is done for early delivery fibre.

THE JUTE MARKETS

Manufactured goods: Prices during the week showed a tendency to decline generally from a rather big rise at the opening. Moderate business has been put through by the trade and local shippers have been covering in for deliveries up to the end of June. Shipping has not been good so far, and this has been reflected in the general weakness of the market. The opening phase was steady as covering business forced B Twills up to Rs. 170 and 40in. 10oz. hessians to Rs. 57.25, both for May shipment. The forward section moved up in sympathy, but no business was transacted for these deliveries. The publication of the mill stock figures showing a rise of 5,400 tons caused a reaction to set in, and sacking dropped about Rs. 1.50 and hessian 25nP to 50nP. Prices continued to decline until the week-end when B Twills were quoted at Rs. 167 and 10oz. hessian at Rs. 56.75. Prices continued to fluctuate within narrow limits, and after the week-end, began to recover on the possibility of a decision being reached on the closure of mills. When this did not materialise, the sentiment again weakened helped by heavy selling pressure in the bazaar, but there was little change in quoted rates.

Opening quotations on Wednesday morning were as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 11oz.	42.50	42.50	41.25	37.35
40in. 8oz.	45.75	45.75	44.25	40.00
40in. 10oz.	56.25	56.50	56.25	49.75
B Twills	166.00	166.00	160.00	140.00
Heavy Cees (Plain)	166.00	166.00	160.00	140.00
A Twills	204.00	202.00	192.00	171.00
Liverpools	185.00	185.00	178.00	159.00
Cornsacks	169.00	169.00	163.00	143.00

Raw Jute: The fibre market throughout the week showed little change, and although mills showed more interest and took up some back quotas, raw jute prices showed only minor variations and revolved around Rs. 57.50 for Assam bottoms. Mill interest centred mainly on low assortment jute, but offers of this variety were scarce. Once again, only a very small quota was issued. Sellers' ideas continued to be steady and only small lots were put on offer. Buying indications at below the quoted rates met with little response, although towards the close the market became easier. Arrivals in Cossipore showed a slight fall last week, but at 335 wagons were still above the average for the time of year.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	152.75	57.00	May-June
Northern	150.50	56.00	"
Purnea Desal	147.25	55.00	"
Daissee Selected	158.00	59.00	"
Assam Tossa	154.00	57.50	"
Mesta:			
Assam-Northern	146.00	54.50	"
Desal	146.00	54.50	"
Daissee	144.75	54.00	"
Jungli	142.00	53.00	"
Indian Cuttings	270.00 a bale		"
Pakistani Cuttings	265.00 a bale		"

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills Association reports the total production of jute goods for April as follows:

Description	Quantity	
1. Gunny Bags		
(a) Hessian	4,254 tons	(4,322 metric tons)
	1,15.0 lakh yds.	(1,05,14 thousand metres)
	72.6 lakh nos.	
(b) Sacking	39,503 tons	(40,127 metric tons)
	9,37.2 lakh yds.	(8,56,96 thousand metres)
	4,12.8 lakh nos.	
2. Gunny Cloth		
(a) Hessian	23,215 tons	(23,588 metric tons)
	9,04.7 lakh yds.	(8,27,22 thousand metres)
(b) Sacking	923 tons	(948 metric tons)
	18.1 lakh yds.	(16,57 thousand metres)
3. Other Manufactures	11,319 tons	(11,501 metric tons)
4. Total Production (All kinds)	79,224 tons	(80,495 metric tons)

Summary

	(000,000 yds. and 000 metres) Apl. 1961	Mar. 1961	Apl. 1960	(000 tons and metric tons) Apl. 1961	Mar. 1961	Apl. 1960
Hessian	10,20 (9,32,36)	11,16 (10,20,77)	13,76 (12,58,02)	27.5 (27.9)	29.4 (29.9)	37.0 (37.6)
Sacking	8,55 (8,73,55)	10,83 (9,89,98)	10,31 (9,43,15)	40.4 (41.1)	46.2 (46.9)	44.4 (45.1)
Others				11.3 (11.5)	11.9 (12.1)	9.6 (9.7)
Grand Total				79.2 (80.5)	87.5 (88.9)	91.0 (92.4)
Hours worked				170.0	187.0	206.0

N.B.—These statistics are based on replies received and represent all members of the association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length being based on the actual (detailed) figures, are more precise.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in April was drastically lower, being 11 million yards below March this year and 13 million yards below April a year ago. Bag cut-up fell by 2 million yards, with piecegoods deliveries down 11 million yards from last year. So far this year (four months), bag cut-up has been surprisingly good in view of the high level of prices—off only 2 million yards or 0.8 percent whereas piecegoods deliveries are down 22 million yards or 25.8 percent from a year ago. U.S. burlap stocks declined further by 9 million yards last month, and are 34 million yards lower than a year ago. At 228 million yards, 132 million yards were spots and 96 million yards were afloats. Appearing on the next page are two tables which include the April figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2)

I.J.M.A. STOCK FIGURES FOR APRIL

The Indian Jute Mills Association reports the total stocks of jute goods at the end of April as follows:

Description	30th April, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st March, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	30th April, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)
	9,82	27.9	8,66	24.6	+1,16	+3.3	10,52	29.3
Hessian cloth and bag	(8,98,11)	(28.4)	(7,91,55)	(25.0)	(+1,06,56)	(+3.4)	(9,61,61)	(29.7)
	11,50	48.3	10,96	46.2	+54	+2.1	7,61	32.5
Sacking cloth and bag	(10,51,30)	(49.1)	(10,02,06)	(47.0)	(+49,74)	(+2.1)	(6,95,60)	(33.0)

THE FOREIGN JUTE MARKETS

FIBRE UNCHANGED BUT HIGHER TERMS ALSO QUOTED

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS in the Dundee jute markets is more or less nominal in the absence of pucca offers from Pakistan. The level of prices is generally unchanged, but some sellers are quoting terms which are higher than those prevailing earlier in the past week before the cyclone occurred. Meanwhile, the Dundee jute market is unable to determine the extent of the damage to the jute crop in Pakistan due to the lack of any definite news. A report says that some barges loaded with jute at the Chalna harbour have been destroyed and sunk. It will be some days before any authentic news will come through, but most jute brokers believe that the damage must only be slight.

Offers of old crop jute are being made to the Dundee market, but the prices have been ruling at from £196 for Mill Firsts, £187 for Mill Lightnings, £183 for Mill Hearts and £180 for Grade Hearts, £195 for Grade Tossa-$\frac{5}{8}$, £190 for fours and £187 for Continental or Export Tossa-$\frac{3}{8}$, all for May-June shipment, c.i.f. U.K.-Continent. There are now more sellers of new crop fibre, but the prices vary considerably. Mill Lightnings for July-August shipment range from £155 and Mill Hearts from £150. and August-September at £5 a ton less in each case, and another £5 less for September-October Dundee spinners are not, however, showing the slightest interest in these quotations, since they anticipate even bigger reductions on old crop prices. It will be unfortunate if anything happens to upset the favourable conditions which were reported to be prevailing for the next jute crop in Pakistan or in India, as the trade badly needs a bumper crop of good quality after the long spell of shortage and high prices.

Calcutta goods changed little last week. Prices were at 77s for 40in. 10oz. hessians and 65s 9d for 7$\frac{1}{2}$oz., May and June, 85s and 64s July-September and 7s 6d and 57s 9d October-December, with B Twills at 256s, 248s 6d and 221s for the respective months of shipment, all f.o.b., Calcutta.

Dundee spinners are in need of more orders to keep down short-time working. Manufacturers, too, are anxious to secure fresh orders, but buyers are still unwilling to purchase at the prevailing high prices. The latter are unchanged at 24.16d a lb for 8 lbs cops and 25.75d for 8 lbs spools, 19.81d for 40in. 10oz. hessians and 16.55d for 8oz. a yard.

THE PAKISTANI JUTE MARKETS

RAIN HELPS SOWING: EARLY CROP EXPECTED

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE whole of East Pakistan has enjoyed rain in varying degrees over the last few days. This has been specially confirmed from the north Bengal areas and from Sarisabari. So except possibly a small area, all the high lands in East Pakistan have now been sown. Generally speaking, growers do not complain about weather conditions, although in one or two areas there may have been a slight excess of rains. But since river levels are normal, it will not take long for the water to drain off, so no damage is expected. Nevertheless, there is a section of dealers in the market which talks about damage from hail in some areas as well as from pests. Market circles also report the dying of plants from excessive rains in some areas. But this correspondent is not convinced of the correctness of these reports.

The biggest speculation at present is how true is the report that the crop will be early. Already, some fully-retted second weedings are available, not for sale but for show. These are about 4 feet long and are mainly available in the Hajeeganj area. It looks as if the crop will be early, so reasonable purchases may be made towards the end of June. On the other hand, in view of the ideal growing conditions, a greater weight of crop will come in at the beginning, although the beginning may not be too early. Assuming that the overall crop will be 7 million bales and since the lowland areas have been particularly well sown and well grown—it is estimated that they will account for 50 percent of the crop—one arrives at a lowland crop figure of about 2 million bales. If one deducts from this, say, 10 percent for the reduced yield due to early flowering and a further 10 percent for what is called "Racky jute", that is to say, better jute held back by growers for sale later, one arrives at a figure of 1.6 million bales. It is reasonable to assume that by the end of August, one million bales will come into the market. It is estimated that 350,000 bales will be required during this period by the Pakistani mills. The Indian mills will need as much as 500,000 bales while overseas buyers will lift at least 200,000 bales.

It is probable, therefore, that intensive buying in the early period may well be spread over several weeks. Overseas buyers may be able to delay their purchases, but their intake of 200,000 bales will not make much difference. Having bought over the past month for forward deliveries, the Pakistani mills may not create a heavy impact on the market with their purchases. The Indian mills, who are reported to be desperate for jute, are the ones who will greatly influence the market, so it is likely that prices will rise.

Since very few balers have any stocks now, not much business is being transacted in the Narayanganj market. On the other hand, those who are willing to buy find considerable resistance, in spite of reports of dull and inactive conditions from overseas markets. E.P.C. figures amounting to 62,000 bales are lower than expected. They show that communist China did not buy after all and that Russia bought only 4,000 bales, and not 4,000 tons. The U.K bought nothing and Indian mills bought about 2,000 bales. Egypt has been the biggest buyer with 23,000 bales. France has bought 8,000 bales and Italy and Yugoslavia 4,000 bales each. Reports indicate that there was a small volume of buying during the past week, but it is difficult to arrive at an accurate figure.

BRITISH DISCOVERY FOR INCREASING JUTE FIBRE CELL LENGTH

Research at Kew Gardens, London, on jute plants treated with a plant hormone extracted from a fungus has shown that the length of the fibre cells increased, on an average, about 50 percent, and often more. The hormone is gibberellic acid, and the research work is being carried out by Miss M. Y. Stant at the Royal Botanic Gardens, Kew. Miss Stant believes that the discovery may be of major importance to producers of jute, hemp, and possibly other fibres. Interviewed in London, she said: "It is not possible yet to estimate the economic significance, as we cannot do field crop tests here The experimental plants were grown under glass and in conditions which are not exactly ideal. If similar increases in cell length can be obtained in the field, then, provided the cost of gibberellic acid comes down, it may be possible to make some economic use of this investigation" She added that it was hoped that the Tropical Products Institute would now carry out the necessary field tests. At present, the costs of gibberellic acid were prohibitive, but some degree of success had been achieved by Imperial Chemical Industries in the manufacture of a synthetic product. A full scientific account of Miss Stant's experiments is being published in the *Annals of Botany*.

Plantation Topics

PROSPECTS FOR KERALA RUBBER PLANTING SCHEME

LAND DISTRIBUTION TO BE COMPLETED SOON

(FROM OUR SOUTH INDIAN CORRESPONDENT)

LAND distribution for 1961 under the rubber planting scheme sponsored by the Kerala Government will be completed within the next two weeks, according to official sources in Trivandrum. It is expected that it will be possible to cultivate 10,000 acres during the current planting season; 4,000 acres directly by the Government in the Kodumon and Chalakudy areas and over 5,000 acres by private individuals. The Kerala Government's rubber planting scheme proposes to expand rubber cultivation into another 200,000 acres or 300,000 acres during the next six years It thinks that it will be possible to make available at least 50 percent of the area from the reserve forests and other lands presently held by the Government. The rest will be available from private parties. The planting programme has, however, many hurdles to cross, including the difficulty of getting the forest lands cleared off their tree growths in time. It is felt that rubber cultivation has to be extended to at least 400,000 acres to reach the goal of self-sufficiency. Since Kerala has all the natural facilities to grow more rubber, she will have to make the largest contribution to the increase in output. Madras and Mysore have, however, some small areas suitable for rubber cultivation. It is reported that the Madras Government has a scheme to expand the rubber areas in Kannyakumari district. It is felt that suitable areas are available in the Andamans also, which the Rubber Board has pointed out after studying the potentialities of the islands. Its report is with the Government of India and an early decision is expected.

Poor Progress in Subsidised Replanting

Subsidised replanting had a poor progress during the four years from 1956-57. According to a recent report of the Rubber Board, permits were issued for replanting 18,294 acres during the period. But actual replanting took place only on 9,555 acres. The Board distributed Rs. 17.44 lakhs as replanting subsidy during the period, it is stated. Its annual revenue from the cess on raw rubber amounts to Rs. 33 lakhs. There was an amount of Rs. 77.7 lakhs in its account in the pool fund a year ago.

South Indian Tea Output Rises

The planting districts of south India have had some useful showers after a period of drought. The rains have proved very helpful for all tree crops in general and for tea in particular. In spite of drought, south India's tea output was 5 million lbs higher at 35 million lbs during the first three months of the current year. North-east Indian tea gardens, too, had good rains since the beginning of the new year, so the season there had begun earlier than usual. It is likely, therefore, that tea estates in north-east India will make good the loss they suffered last year due to drought. At the Cochin auctions all except low mediums are fetching lower prices than last year's. Prices of low mediums are, however, being maintained at last year's level. One of the explanations for the fall in prices is the poorer quality of arrivals. The Cochin market, meanwhile, is getting very little of quality teas. The position is expected to change with the arrival of second-flush teas.

Coir Advisory Board

The Kerala Government has constituted a Coir Advisory Board with the State Minister for Industries as chairman. The board will advise the Government on the reorganisation and rehabilitation of the industry and on other such points as may be specifically referred to it from time to time. The chairman of the Coir Board is also a member of the Coir Advisory Board.

Licensing of Cashew Factories Urged

The Kerala Government has recommended to the Cashew Enquiry Committee constituted by the Central Government under the chairmanship of Mr. K. P. K. Menon that a cess be levied on cashew kernel and a system of licensing be introduced for cashew processing factories. The cess so collected can be used to provide relief to workers when cashew factories are closed. Licensing might enable the Government to exercise a better control over the factories, it is said.

CALCUTTA TEA AUCTIONS IN APRIL

QUALITY DUSTS RECEIVE GOOD SUPPORT

NO export sales were held in April. Sale No 1 took place on 15th May. In the four internal Sales held during the month, leaf offerings amounted to 2,693 chests. There was a good general demand at irregular rates, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. Total dust offerings during the month amounted to 91,585 packages. A feature of all four auctions was the strong and active demand for clean leaf C.T.C. grades which registered a considerable advance, some of the bright lines realising extremely useful prices. The more fibrous teas of this category were, however, virtually neglected and were sometimes difficult to sell. Dusts of orthodox manufacture declined steadily in value except for the small and bright lines which met with a little better support. Leggcut Dooars teas followed a similar trend, a few of the bright liquoring types realising better prices.

Quotations

	1960-61 A kilo Rs. nP.	1959-60 A kilo Rs. nP.
Sale No. 37 Clean Plain Dust	4.45	4.27
Sale No. 38	4.38	4.25
Sale No. 39	4.40	4.31
Sale No. 40	4.33	4.25

(Inclusive of zonal excise duty.)

The revised tea crop figure for the 1960 season is stated to be 240.35 million kilograms, against the original estimate of 239.06 million kilograms.

The price of special export licence remained steady at ¼nP a kilo, at which rate a number of small transactions were effected. A Press note issued by the Tea Board states that the Government of India has authorised the Tea Board to make an interim release of tea export quota for the year 1961-62 to the extent of 55 percent of the crop basis of tea estates, pending a final notification of export allotment for the year.

Arrivals (in chests) in Calcutta warehouses during the period 1st April, 1961 to 30th April, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 3,539 (1,092), by rail 2,734 (16,442), by road 8,018 (15,064), and by air 2,983 (4,088) chests. From the beginning of the season 1st April, 1960 to 30th April, 1961, arrivals have been: by steamer 2,829,259 (4,203,061), by rail 1,233,050 (1,270,863), by road 216,061 (27,227) and by air 169,202 (73,407), making a total of 4,447,572 (5,579,558) chests.

COCHIN TEA SALES

At Sale No. 19, 600,000 kilograms of tea were on offer. There was a good demand. Low mediums and mediums were irregularly 5nP to 10nP easier while good mediums were 10nP to 15nP lower. Nilgiris were irregular and easier.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

IRREGULAR TREND IN DUSTS

AT the Internal Sale, held on 17th May, there was a good general demand for the 22,841 chests of Dusts on offer. The Orthodox descriptions declined by a further 15nP and sometimes 20nP, although the smaller and brighter liquoring varieties received better support. Legg-cut teas were irregular with the brighter liquoring kinds selling well. Clean medium C.T.C. teas came to a good market and sold well, although the more ordinary kinds followed a declining tendency. Good C.T.C. teas generally sold at firm to dearer rates. The fibrous lines were, however, again easier and sold at a heavy discount.

Quotations

	1961
	Rs a kilo
Plain Orthodox Dust	4.05 to 4.40
Medium Assam Dust	4.25 to 4.80
Legg-cut Dust	4.25 to 5.10
Medium Assam C.T.C. Dust	5.90 to 6.40
Good Assam C.T.C. Dust	6.60 to 7.10

(Quotations are inclusive of excise duty.)

There was a good demand for the 414 chests of Leaf on offer.

LINSEED FIRM

The market was firm in the past week, but business was very restricted with buyers and sellers pausing. Both ready and forward prices moved upwards, but crushers did not show much interest. The oil market was steady in sympathy with other oils, but business was negligible. Stocks in the mills were limited. The oilcake market was quiet. The offtake was slow. Quotations are as follows: ready May delivery, Rs. 25.87 a maund.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 9th May and 15th May, 1961)

Cowhides: Wet salted (Slaughtered) 15,100 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

(P) Redeemable at par on 31st Dec., 1972 with option to redeem at par at any time on 6 months notice after 30th June 1958. At any time after 31st Dec. 1948 each note of Rs. 500/- may be converted into two ordinary shares of Rs. 100/- each ranking for dividend from 1st January following.

(Q) With option to redeem annually Rs 2,00,000/- at par after 31-3-58 by drawing or by purchase in the open market.

(R) May be redeemed annually at par by drawing after 10th year also the whole issue at 101% on or after 31-3-63.

(S) (Option to repay at par one month's notice). At any time after 1st October, 1968.

(T) (Option to repay at par on 6 months notice) after 1-1-67.

(U) (Option to repay on 3 months notice). At any time after 31st December 1960.

(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.

(W) After giving six months notice.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SAVINGS FOR A LARGER THIRD PLAN

THE discovery by the National Council of Applied Economic Research that the Planning Commission has been under-estimating the nation's savings, is a heartening one, provided it turns out to be correct. The Council puts the figure for the current rate of saving at 10 percent of the national income. This compares with the Commission's estimate of between 8.5 percent and 9 percent, although the latter figure takes no account of agricultural investment, a fact which the Council considers might be partly responsible for the difference in the two results. On the face of it this does not appear to be too large a discrepancy, although it is readily admitted that it might possibly make a significant and useful contribution towards closing the gap between estimated national resources and overall targets for investment. If the Council is right, then there is every reason to be thankful for an unexpected addition to the nation's development resources. But whether this justifies the conclusion that the investment targets for the third plan can now be raised with no more effort than is necessary to adjust the figures upwards, is another matter. It appears the National Savings Committee has in fact forestalled the Council's conclusions and raised the plan's savings target. A more cautious and realistic approach to the problem would have suggested that a study be undertaken of more than the plain statistical facts, if indeed that is what they are, before making any changes in the plan.

It is not easy to accept the Council's estimates as being entirely correct. Whether or not 10 percent is an accurate value for the proportion of savings to national income, the further conclusion that the marginal rate of saving is as high as 20 percent seems distinctly dubious. As the Council points out, this would bring the marginal rate in India to within about 5 percent of that prevailing in many of the world's most advanced economies, with all the advantages these possess in institutional savings and insurance schemes, including pensions and unemployment, and in a long-established tradition of personal savings. It is difficult to take the Council too seriously on this point. The same holds true for the conclusion that savings have nearly doubled between 1950 and 1957. It must be remembered that in a country where the national income increased by considerably less than double during the same period, a growth of savings of this magnitude would represent an altogether unbelievable development of the savings habit. When it is also noted that the major proportion of the increased wealth generated by the first two plans went to sections of the community whose propensity to consume is extremely high, and that, according to the Council, savings of individuals comprised 80 percent of the total of all savings, then these findings are all the more difficult to accept. They certainly appear to counter the evidence of experience. To suggest that the majority of poor people in this country not only increased their contribution to taxation, but also practically doubled their savings during a period when their real incomes rose no more than about 10 percent, is asking too much of the imagination. It is little wonder the Council has admitted the possible shortcomings in its statistical methods.

Whatever the accuracy of the Council's findings, its suggestion that they provide a good excuse for increasing the size of the third plan must be treated with extreme caution. The scope for diverting these savings to Government use is obviously limited. The Council admits that one-third of the 80 percent of total savings which it credits to individuals goes into house-building, while a further 12 percent is absorbed in agriculture. It may be neither possible nor desirable to divert too large a proportion of this kind of investment to the plan. It appears that the proportion of savings going into physical assets has declined over the years, but still comprises 65 percent of the personal savings total. Some of the increasing quantities of savings going to investment may be attracted to the Government's use, but the major proportion of it will probably go to private projects of varying sizes which might or might not be included in the plan. By the time the many and diverse calls on increased personal savings have been taken into consideration, the amount left over for the purchase of industrial shares in the private sector, for deposit with the banks, or for investment in any of the numerous Government schemes for raising resources, is bound to be severely limited. If the private sector's share of the plan were increased by a moderate amount, there is a reasonable possibility of a new target figure being met. But any move to increase the target for the public sector on the strength of the supposed improvement in savings would be anything but realistic. As things are, it is doubtful whether official borrowing targets will be met during the next five years, if only because the attractions of investment elsewhere in the economy are so much greater, and there would be simply no chance at all if the Government did not have at its ready disposal the resources of life insurance and provident funds. If it had to compete for its borrowings freely against other forms of investment, the public sector's investment targets could not be as large as in fact they are.

The Government's reluctance to increase the cost of its own borrowings is largely responsible for this state of affairs. The fact that resources are forthcoming for attractive investment propositions in the private sector has been proved many times over in the past few years. But the emphasis here is attraction—much of it, of course, being due to the quick profits which can be made when a new share issue is heavily stagged. But the response evoked by, say, the recent Goodyear offer, is proof enough that resources are forthcoming when the return on their investment is regarded as being sufficiently promising. The same is true of the recent growth of lending outside the banking system, which has added to the banks' problems during the recent busy season; it is now much more profitable to place deposits with companies or individuals in the private sector than it is to put them in the banks. Yet the Government seems unwilling to learn the lesson. Its insistence on borrowing at a comfortable 4½ percent or thereabouts is helping to depress interest rates throughout the economy and distort the normal healthy borrowing pattern, if not in fact to limit it altogether. The Government has even refused to increase the attraction of shares in State enterprises to the point where their sale to the public might be possible.

This problem of inducing savers to invest their money in productive enterprise is one which will have to be given considerably more attention in future if the Government is serious in its stated intention to limit the volume of deficit financing during the third plan period. At the moment, with profit and interest rates low and taxation high there is too little incentive to invest in either private industry—especially the more risky and less spectacular portions of it—or, through one or other of the Government's savings schemes, in the public sector. There is a distinct prejudice against the receiver of "unearned" investment income which takes the form of discriminatory taxes, low returns and an official tendency to rely for financing the plan on crippling taxation and deficit financing. It is at the roots that the problem should be tackled, otherwise the proportion of personal savings going into productive investment will continue to grow at too slow a rate to offset the inflationary effect of other, more popular, forms of financing, such as high taxes and budget deficits.

The Government's own problem of diverting a larger share of total saved resources to itself is one which may assume acute form when the second stage of this year's official borrowing programme is launched some time in the near future. At present, the only significant sources of lending available to the Government appear to be the Life Insurance Corporation, provident funds and—strictly as a last resort it is to be hoped—the Reserve Bank. It is unfortunate for those savers with money held by either the L.I.C. or by provident funds that existing law and convention prevent these institutions from investing according to strictly economic criteria, otherwise their earnings would be higher and the proportion of their lending monopolised by the Government would be considerably less. But the situation now is that apart from these two institutions, the only other sources of Government borrowing of any consequence are the small savings movement, the banks and the Reserve Bank. In the case of the small savings movement, the competition from other borrowers is already severe and seems likely to grow. The banks, for their part, are still unable to meet adequately all the calls made upon them for credit without substantial recourse to the Reserve Bank. That leaves the Reserve Bank itself as perhaps the only elastic source of official borrowing in the near future, and as everybody knows, government resort to borrowing from a central bank is highly inflationary and certainly no better than a budget deficit. For the sake of stability, care should be taken to see that the Reserve Bank's part in taking up the next Government of India loan is restricted to the underwriting function. A solution to the problem of mobilising savings calls for a complete revision of current ideas on what all sections of the industrial and commercial community, and especially the Government itself, regard as a reasonable price to pay for saved resources.

IMPROVED CORPORATE RESULTS

THE striking feature of trading on Indian stock markets during the past couple of months has been the reluctance of holders to sell shares due to the general inclination among them to take an optimistic view of the future economic outlook. The corporate sector shows an all-round improvement—sales have increased, the profit trend is upwards, assets formation is running at a satisfactory level and industry is expanding and diversifying its activities. The latest analysis of the financial statements of 123 medium and large-sized public limited companies, made by the Reserve Bank in its April *Bulletin*, helps reinforce this confidence. These companies have closed their accounts during the quarter from April to June 1960. They represent 11.1 percent and 12.7 percent of the paid-up capital and total net assets of the 1,001 public limited companies whose results were published in the September issue.

Sales of these 123 companies increased from Rs 225.8 crores in 1958 to Rs 250.5 crores in 1959, but manufacturing expenses also rose from Rs. 124.5 crores to Rs. 146.5 crores, mainly due to substantial rises in the prices of industrial raw materials. Salaries, wages and excise duties increased to a considerable extent. The rise in interest payments was due to bigger borrowings. The provision for depreciation rose by Rs. 1.2 crores to Rs. 8.71 crores, chiefly due to the acceleration of fixed-asset formation in old and new industries. Profits before tax rose from Rs.15.8 crores to Rs. 19.2 crores. The entire increase in this figure was reflected in profits after tax, because the rise in the tax provision was small at Rs. 0.3 crores. An important factor is that out of an increase of Rs. 3.1 crores in profit after tax, retained profits absorbed Rs. 2.7 crores and a sum of only Rs. 50 lakhs was distributed in the form of dividends. So retained profits, as a percentage of profits after tax, improved from 25.0 percent in 1958 to 41.7 percent in 1959. Gross profits as a percentage of sales and as a

percentage of total capital employed, therefore, rose from 9.2 and 8.4 to 9.9 and 9.3. The ratio of profits after tax to net worth moved up from 7.8 percent to 10.0 percent.

The fact that company managements preferred to plough back more resources into their businesses rather than increase dividends, indicates an optimistic view about the possibilities of future growth. As bank credit is in short supply, companies have been forced to rely as far as possible on internal resources to finance modernisation and expansion. The dependence on bank credit is likely to be discouraged further in view of New Delhi's attitude. It is thought that bank credit has been used very generously during recent years, distorting the balance between share capital and fixed assets. Companies are, therefore, likely to be asked to reduce their bank borrowings by increasing their share capital. The intention of the authorities concerned to increase the share capital of the corporate sector, may not be easy to implement in practice because the dividend distribution policy of most companies seems to be rather conservative in character. In spite of a substantial improvement in profits of the corporate sector, distributed dividends increased from Rs. 6.12 crores in 1958 to only Rs. 6.58 crores in 1959. If further capital issues are considered, it is doubtful whether there has been any increase in the percentage of dividends.

In the light of such a conservative dividend background, shareholders will have to be persuaded to buy more shares on the strength of growth prospects. Whether the latter are improved by the existence of a bonus share tax and by a system of issuing rights shares at premiums remains to be seen. Gross fixed assets of these 123 companies rose from Rs. 176.6 crores in 1958 to Rs. 189.9 crores in 1959—plant and machinery alone accounted for a rise of Rs. 10.7 crores. Inventory accumulations showed a considerable increase and amounted to Rs. 8.2 crores in 1959, compared with a decline in 1958. Industry was probably inclined to go in for a considerable accumulation of industrial raw materials due to the shortages caused either by a shortfall in domestic production or by import restrictions. The rate of increase in gross fixed assets and inventories, therefore, worked out to 8.6 percent in 1959. Total assets formation of these companies amounted to Rs. 24.8 crores in 1959. Of this, gross fixed assets were Rs. 13.3 crores, inventories Rs. 8.2 crores and other assets Rs. 3.3 crores. The gross fixed assets formation was highest at Rs. 3.3 crores in the shipping industry, followed by Rs. 2.8 crores in the engineering industry, Rs. 1.9 crores in the sugar industry, Rs. 1.8 crores in the chemicals industry and Rs. 1 crore in the cotton mill industry. External financial sources comprising fresh share capital, borrowings and trade dues and other current liabilities, contributed 51 percent of total assets formation, compared with 35 percent in 1958. The share of internal resources, therefore, declined from 65 percent in 1958 to 49 percent in 1959. Borrowings from banks were Rs. 7.8 crores and fresh capital issues contributed Rs. 4 crores.

The stock markets can be expected to attach considerable importance to these figures—although they are not very up-to-date—in assessing the future outlook, because the trend does not seem to have changed much. But those figures, which represent the average trend of all industries combined, must not by themselves constitute the sole guide in examining the outlook for the indvidual industries and companies concerned. The adverse impacts on various industries arising from special factors are not possible to asertain from these figures. The sugar industry, for instance, is at present suffering from a heavy accumulation of stocks at factories due to the record production during the current season. Sales have not increased correspondingly because there has been no appreciable rise in domestic consumption. As for export prospects, the outlook is far from encouraging. Not only are world markets flooded with supplies, but production costs of Indian sugar are far higher than the international price, so this country cannot sell the commodity to foreign markets except at a considerable loss. In the circumstances, investors in sugar companies have grounds for anxiety.

As far as the jute industry is concerned, the near-term outlook is certainly disturbing. Apart from the fact that at current prices of raw jute and gunnies, the mills are incurring losses on the production of goods, their working unitil the end of the current season has become uncertain in view of fibre shortages. It is difficult to see how the industry can surmount these difficulties without going in for a block closure of the mills, at least for a short period. This apart, production costs have been boosted by power cuts and increased remunerations paid to workers under the recommendations of the Wage Board.

In the circumstances, investors have rightly become more discriminating in buying shares. As miscellaneous industries are relatively better off and enjoy the greater benefits of a sheltered domestic market following import restrictions, they are being rated high from the investment point of view.

THE "BERNSTEIN PLAN"

THE City of London has recently had the benefit of an exposition by Mr. Edward M. Bernstein, in person, of his plan for expanding the effective liquid resources of the world's monetary system. London's financial community was not unfamiliar with the "Bernstein Plan", but was nonetheless glad to have it lucidly explained by its originator. Mr. Bernstein was formerly Director of Research at the International Monetary Fund and is now a financial consultant of international repute and a potent influence on the monetary policy of President Kennedy's Administration. His ideas must be considered respectfully, if only for these reasons; and in fact there is another good reason, that they offer at least a partial solution of a problem that has been troubling governments, bankers, and economists, for some years. The basis of the "Bernstein Plan" is not an increase in the world's monetary resources, but more liberal use of them. Its author proposes that Fund members should be authorised to treat their quotas with the Fund as part of their working reserves. (In the case of the U.K. this arrangement would add nearly £900 million to the "visible" reserve, thus nearly doubling it.) He proposes also that surpluses of some Fund members should offset deficits of others through the medium of a "Reserve Settlement Account", an institution that would be authorised to borrow through maturing interest-bearing notes (in the currency of the lender) and to lend currencies or gold.

These are not revolutionary ideas. Their principles are already embodied in the drawing rights of Fund members and the central bankers' agreement to "stockpile" currencies that are excessively offered. Their effects would be as much psychological as practical: if it were known that ample resources were available currencies would be less subject to pressure. However, not all financial opinion endorses Mr. Bernstein's belief that there is no real scarcity of liquid resources in the world's financial system; and those who argue that the aggregate of international transactions is growing faster than the means of financing them can use some of his figures to demonstrate that, even if there has been no such real scarcity in the past, it will probably develop in the future.

Mr. Bernstein reminded his audience in London that in the last 10 years the deficit balance of payments of the U.S.A. had provided more than $20,000 million (in currency or gold) to other countries. At the end of last year the dollar assets of foreign governments and central banks aggregated some $11,000 million and additionally foreign banks and business firms and individuals held some $7,000 million of short-term dollar assets. But the U.S. deficits that have provided such large liquid resources must be drastically reduced, if not entirely eliminated. Mr. Bernstein recognised this need, but he did not offer an alternative source of finance for non-American countries. Another authoritative (though unofficial) opinion, that of the U.S. Committee for Economic Development, is similar in effect. The C.E.D.'s research and policy committee, reporting on "The International Position of the Dollar", has recommended that the Administration eliminate the deficit completely, thereby greatly reducing the danger that foreign or American holders of dollars will want to convert them into other currencies or gold.

Present American thinking is concerned primarily with strengthening the dollar, just as present British thinking is concerned primarily with strengthening the pound. Because these are "reserve currencies", the two countries' monetary authorities recognise (though they have not always fulfilled it) an obligation to maintain financial discipline. The world's monetary problems are acute when the "reserve currencies" are weak—particularly acute when they are both weak simultaneously; but the process of strengthening these currencies aggravates the world's monetary problems by restricting the supply of

the currencies. This paradox Mr. Bernstein hopes can be resolved by more liberal use of the Fund, which can mobilise other currencies. Dollars and pounds account for more than half the increase in the non-Soviet world's official reserves over the last 20 years. These currencies have not adequately fulfilled requirements over this period, and they will evidently not be available on a similar scale in the future. The responsibilities of the U.S.A. and the U.K. as managers of "reserve currencies" have, moreover, imposed severe restraints on the economic policies of these countries.

Britain's financial community perceives, however, some danger in the recent moves to relieve the strain. It is well aware that the published reserves of the sterling area would appear much less favourable if the so-called "Basle Agreement" of the central bankers had not immobilised large quantities of convertible sterling. While the U.S. authorities' move to free $11,000 million-worth of gold (statutory backing for the notes and deposits of the Federal Reserve banks) was made from a position of relative strength (if it had been an act of desperation it would have weakened, not strengthened, confidence in the dollar), the recent international arrangements have concealed serious weakness in sterling's position, or, at least, made remedial action seem less urgent. Any such plan as is envisaged by Mr. Bernstein involves this risk, that it will conceal weaknesses in national financial structures behind a façade of liquidity. It cannot cure, though it can alleviate, economic ills. Mr. Bernstein can reasonably argue that curing national ills is not a function of his plan, and that it is the responsibility of the individual nations' monetary authorities (particularly the U.K.'s, because the U.K. particularly is benefiting already from the increase in international liquidity) to put their affairs in order. Perhaps in future years we shall feel that the more serious criticism of the "Bernstein Plan" is not that it makes liquid resources too plentiful but that it does not provide for an increase in liquid resources commensurate with the foreseeable increase in international financial transactions.

Current News and Comment

A New Venture in Instruments

It is authoritatively learnt that the General Industrial Society Ltd (Gondalpara jute mills) has entered into collaboration with American Gage and Machine Co. Inc., of the U.S.A. for the manufacture of various instruments. The American Company will associate through its affiliated and subsidiary companies—Size Control Co. Inc., Walsh Press and Die Co. Inc., and Simpson Electric Co. Inc. The American Company will participate in the ordinary share capital of the Indian Company. It will provide the technical knowledge and supply the capital equipment. The Indian Company will produce various types of precision gauges and instruments under Size Control Co. Complete lines of power presses will be manufactured under Walsh Press and Die Co. Simpson Electric Co. will help to produce various types of electric and electronic testing equipment for meeting the requirements of the electrical, air-conditioning and refrigeration industries. Various types of testing equipment required for motor-vehicles will be manufactured under the automotive division of the American Company. It is proposed to form a new company with a capital of Rs. 1 crore. The plant may start production in 1963. Meanwhile, the Indian Company will import the various instruments against import licences.

I. B. P. Increases the Dividend

The Indo-Burma Petroleum Co. Ltd has increased the taxable ordinary dividend from 25 percent in 1959 to 30 percent, taxable, including an interim of 10 percent, for the year ended December 1960. Out of this dividend, 5 percent has been paid from the surplus which has resulted from the purchase of the 51 percent shareholding of the Burmah Oil Co. (1954) by the Union Government of Burma from Indo-Burma Petroleum. The dividend is covered five times over and works out to a yield of 10.7 percent at the present price of Rs. 28.12 a share. The profit has increased from Rs. 63.59 lakhs to Rs. 1.01 crores, after providing Rs. 4.51 lakhs (against Rs. 4.07 lakhs) for depreciation. The improved results are partly due to higher sales at Rs. 1.77 crores (against Rs. 1.61 crores). Sales have been maintained in India and Burma, but they have increased in Pakistan. Taxation is allocated Rs. 43.26 lakhs (against Rs. 31.40 lakhs). Reserves receive Rs. 1 crore, after transferring Rs. 71.86 lakhs as a result of the surpluses which have followed a revaluation of investments. The carry-forward is Rs. 4,64,807, compared with Rs. 4,47,887 brought in.

Kanknarrah Results Disappoint

The ordinary shares of Kankanarrah Co. Ltd—a jute mill under the managing agency of Jardine Henderson Ltd—have been subdued at Rs. 76.50 on the publication of disappointing results for the year ended December 1960. Against a profit of Rs. 17.83 lakhs in 1959, there is a loss of Rs. 81,001 in 1960, after providing Rs. 6.88 lakhs (against Rs. 7.69 lakhs) for depreciation. Dividends have again been passed and the debit balance has increased to Rs. 14,78,469 which is carried forward. The adverse results are attributed to raw jute shortages. The high price of fibre in relation to that of jute goods has made it difficult for the industry to do simultaneous business at a profit. The arrangement to buy loom hours from the Reliance Jute Mills Co. Ltd has been extended to 3rd June 1961. Pre-beaming machinery has been installed to provide warp yarns for more than 300 looms. More such machinery will be installed in the near future. The new equipment is believed to have improved operational efficiency. The completion of the modernisation programme of the spinning department has been postponed in view of adverse trading conditions.

The directors state that the results for the first quarter of 1961 are more satisfactory than they were in the second half of 1960, due to the favourable prices of jute goods in relation to those of raw jute. But the trend has been reversed since then. At present trading conditions are far from satisfactory due to unremunerative prices of raw jute. Although there are prospects of bigger supplies of fibre during the current year, the beneficial results are not expected to be reflected until the end of 1961.

Bowreah Cotton Does Better

The working of the Bowreah Cotton Mills Co. Ltd has improved during the year ended December 1960, although it was interrupted by a strike. A mercerising range is being erected. A cloth singeing machine has been installed. The good effects of the modernisation of the ring frames have begun to show. The spinning preparatory section also is being modernised. After increasing depreciation from Rs. 9.66 lakhs to Rs. 11.99 lakhs, the profit has increased from Rs. 7.21 lakhs in 1959 to Rs. 16.47 lakhs in 1960. An ordinary dividend of 10 percent, taxable, has been declared after many years. It is covered six times over and offers a yield of 5 percent at a price of Rs. 201 a share. Development rebate reserve is allocated Rs. 4 lakhs (against Rs. 2.65 lakhs) and general reserve Rs. 5 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 1,13,595, against Rs. 60,410 brought in. The directors state that the arrears of depreciation could not be provided for due to inadequate profits in earlier years.

Calico Mills Pay More

The directors of the Ahmedabad Manufacturing and Calico Printing Co. Ltd have recommended a final dividend of Rs. 16 a share (Rs. 125-paid), subject to deduction of tax, and Rs. 4 from profits exempt under Section 15(c) of the Income Tax Act for the year ended March 1961, which along with the interim dividend of Rs. 14, taxable, make a total of Rs. 25 net, against Rs. 22 net in the previous year. The preliminary figures about the working results released along with the dividend announcement indicate that the Company has fared well. The gross profit for 1960-61 at Rs. 2.57 crores is about 26 percent higher than the 1959-60 figure of Rs. 2.04 crores. In spite of a higher dividend and an increase in the profit, the Company's shares which were bid up to an all-time high of Rs. 1,132 early in the past week declined later to Rs. 1,080 on heavy selling. The market was apparently disappointed as its expectations of a bonus issue had not materialised. After providing Rs. 54.43 lakhs (against Rs. 25.66 lakhs) for depreciation and Rs. 67.31 lakhs (against Rs. 59.03 lakhs) for taxation, the net profit amounts to Rs. 99.92 lakhs, against Rs. 81.41 lakhs. Appropriations include rehabilitation and development reserve Rs. 7.47 lakhs (against Rs. 2.07 lakhs), statutory development rebate reserve Rs. 22.43 lakhs (against Rs. 6.22 lakhs) and general reserve Rs. 21.44 lakhs (against nil). After providing for the proposed dividends, a sum of Rs. 16.05 lakhs has been carried forward, against Rs. 21.89 lakhs brought in.

The Company's cloth exports during the year are said to have gone up by 44 percent. An agreement has been concluded with Messrs Heberlein and Company of Switzerland for the exclusive use in India of its entire range of special processes. Calico Mills' calcium carbide plant in Bombay was commissioned in February 1961. The erection of the P.V.C. plant is nearing completion, and production is expected to start shortly. The Government has approved the Company's application to treble the production of caustic soda and chlorine in Bombay and double the production capacity of the P.V.C. plant. In view of the expansion plans, the shareholders can look forward to the future with optimism. The Company's shares, which are now quoted around Rs. 1,080, were available around Rs. 865 early in January. The highest rate recorded by the shares in 1960 was Rs. 1,105.

Ceat Tyres Fares Well

The working of Ceat Tyres of India Ltd for the year ended December 1960, shows a profit of Rs. 4.26 lakhs, against a small loss of Rs. 2,108 in 1959. After providing Rs. 12.30 lakhs (against Rs. 12,922) for depreciation, the directors have carried forward a loss of Rs. 8.04 lakhs. No provision has been made for development rebate reserve; in 1959, the directors set aside Rs. 12,525 for this purpose. The Company's first production programme as proposed in the prospectus, the directors say, has been attained, and the tyres manufactured by the Company have given satisfactory performance. It has been decided to accelerate the manufacturing programme to attain a monthly production of 1,000 metric tons of tyres and tubes. The directors expect to achieve the production target in a shorter time than the one contemplated in the prospectus provided import licences for capital equipment are granted according to schedule. With a view to financing the expansion programme, Ceat Tyres recently issued 161,000 rights shares of Rs. 100 each at a premium of Rs. 25 a share in the ratio of seven shares for every five held. A reference was made in the directors' report for 1959 about the licence of the value of Rs. 15 lakhs granted for importing tyres and tubes. The imported tyres were sold in the market in 1960, and the payment for them

will be made to Ceat Gomma out of the Company's earnings through exports of similar tyres as stipulated in the licence. Ceat Tyres will export tyres as soon as production permits. Its sales in 1960 totalled Rs. 1.37 crores and the closing stocks Rs. 43.86 lakhs. The purchase of raw materials and finished goods aggregated Rs. 1.17 crores. The fixed assets are valued at Rs. 1.46 crores and the depreciation provided against them so far amounts to Rs. 12.45 lakhs. The ordinary shares of the Company, which fluctuated between Rs. 165 and Rs. 305 in 1960, were marked up to Rs. 332.50 in March this year. They are now quoted on a ex-rights basis around Rs. 183.

Atul Products Forges Ahead

In spite of the generally subdued tendency on the Bombay Stock Exchange in recent weeks, the shares of Atul Products Ltd continued to show remarkable strength because of growth prospects. The Company fared well in 1960 in spite of the shortage of coal and supplies of raw material because of foreign exchange difficulties. Sales increased from Rs. 3.54 crores to Rs. 4.19 crores, and the gross profit rose from Rs. 1.11 crores to Rs. 1.50 crores. The preliminary figures about the Company's working were released along with the dividend announcement towards the end of March. The directors now state in their report that they are finding it increasingly difficult to keep all their plants running to full capacity and that the Company had to curtail production in the Azo and sulphur black plants in October due to the shortage of raw materials. The situation has deteriorated still further since import licences due at the end of November were not issued till the middle of February, so Atul Products had to close all the plants for periods varying from two to three months. The import quota had also been cut down by 20 percent. The sulphuric acid plant, put into commission in July 1960, and the phosphorus trichloride plant are working satisfactorily, but are not being used to their full production capacities. The intermediates plant is nearing completion, but the work is not progressing as planned on account of the cement shortage, which has also slowed down the work on the second weir on the river Par.

Projects for manufacturing intermediates are now taking definite shape under the guidance and supervision of Ciba Ltd of Switzerland. The firm is supplying the know-how for manufacturing some intermediates. Atul Products had also bought the know-how from Rohner Ltd, Prattelen, Switzerland, and the engineering work of the plants is entrusted to Humphreys and Glasgow, London. A new enterprise has been formed in partnership with Ciba Ltd, Basle and Ciba of India Private Ltd, to handle the manufacture of some urea formaldehyde plastic products and intermediates and bases for sulpha drugs. The plant designs for the projects are getting ready. The Company has secured part of the foreign exchange required for the projects by way of loan from the Industrial Credit and Investment Corporation of India and has approached other similar institutions for further accommodation.

Ashok Leyland Earns More

Ashok Leyland Ltd, Madras, has reported satisfactory results for the year ended December 1960. Sales rose by about 30 percent from Rs. 5.78 crores to Rs. 7.55 crores. After providing Rs. 25.32 lakhs (against Rs. 17.94 lakhs) for depreciation and Rs. 11 lakhs (against Rs. 8.50 lakhs) for taxation, the profit for 1960 amounts to Rs. 37.87 lakhs (against Rs. 30.01 lakhs). The directors have set aside Rs. 10.72 lakhs (against Rs. 8.91 lakhs) for development rebate reserve. The dividend has been maintained at 8 percent subject to deduction of tax, but since it is on the increased capital of Rs. 3.03 crores, against Rs. 2.47 crores in 1959, the total distribution amounts to Rs. 24.23 lakhs, against Rs. 19.74 lakhs in the previous year. Against the paid-up capital of Rs. 2.03 crores, the Company's reserves are still small around Rs. 36.48 lakhs. The gross block of the value of Rs. 2.86 crores has been written down to about Rs. 2 crores. The secured loans and advances in December 1960, stood at Rs. 1.36 crores, against Rs. 52.18 lakhs at the end of 1959. Current assets, loans and advances total Rs. 3.94 lakhs, while current liabilities and provisions aggregate Rs. 1.87 crores. Buildings under construction are placed at Rs. 38.16 lakhs and plant and machinery in transit and to be installed at Rs. 24.11 lakhs. The Rs. 5-paid shares of the Company are currently quoted around Rs. 9.10, offering a gross yield of about 4.4 percent.

Indian Tube to Expand

Indian Tube Co. Ltd of Calcutta, it is understood, has asked for the Government's permission to expand its production capacity for the manufacture of seamless steel tubes from 30,000 tons a year to 39,600 tons a year. The expansion scheme is estimated to cost Rs. 67 lakhs, of which Rs. 54 lakhs will be required for importing equipment from the sterling area and Rs. 13 lakhs will be spent on buildings and indigenous machinery. The firm will not need any foreign exchange as Messrs Stewarts and Lloyds Ltd of the U.K., which has a 40-percent holding in the Company, will provide all the sterling required for the expansion programme. The raw materials needed are hot-rolled steel blooms, sulphuric acid and spelter. Hot-rolled steel will be indigenously obtained from the Tata Iron and Steel Company's plant. Sulphuric acid is also easily available from indigenous sources. Only spelter will need to be imported from Commonwealth countries or Europe or the U.S.A. The additional quantity of the item required for the present expansion is placed around 250 tons valued around Rs. 3.6 lakhs. The production capacity for welded and seamless steel pipes for the third plan is estimated at 900,000 tons a year, and the Government has already licensed a production capacity for 934,000 tons. Although the capacity has been fully licensed for the third plan, the Development Wing is believed to have recommended that Indian Tube Company be allowed to carry out its expansion, since it is the only firm in India manufacturing seamless steel tubes and possesses adequate experience in the production of the item. Besides, the scheme involves no expenditure of foreign exchange and the expansion asked for is also small.

Looms for Uneconomic Textile Mills

Reliable reports indicate that the Government's policy on the allotment of additional looms for uneconomic textile mills is likely to undergo an important change. The Government was hitherto allowing uneconomic units to raise their production capacity to the economic level of 300 looms by the installation of only automatic looms. While permitting the installation of automatic looms under the export incentive scheme, the mills were placed under the obligation to export the entire output from new automatic looms and also to maintain 50 percent of their past exports during any of the years 1954 to 1956. No special obligation to export the output from automatic looms in uneconomic units was envisaged. A number of allotments of additional automatic looms have been made to uneconomic units to enable them to come up to the level of 300 looms without any export obligation. But due to the foreign exchange shortage, it has become difficult to provide foreign exchange for importing all the automatic looms required by uneconomic units. This has led to delay in installing automatic looms. In view of this, it is considered unnecessary to insist on all the additional looms being automatic looms. Uneconomic units, it is understood, will henceforth be given the option to install ordinary looms which are available indigenously or automatic looms. But if the mills choose to install automatic looms, they will be placed under the obligation to export 50 percent of the output from the automatic looms allotted for a period of four years.

Chamundi Chemicals Share Offer

Chamundi Chemicals and Fertilisers Ltd is a new enterprise which has been formed to set up a fertiliser and chemical factory in Munirabad, about two miles from the Tungabhadra dam in Mysore. The plant will have a production capacity of 125 tons of superphosphate a day and 50 tons of sulphuric acid a day. The Company has an assured demand for superphosphate from sugarcane growers within a radius of 100 miles of the factory site. The current demand for superphosphate in Mysore State is estimated around 50,000 tons a year, while the production is at present placed around only 8,000 tons. The entire project is estimated to cost about Rs. 46 lakhs. Investment in land, buildings, plant and machinery is placed around Rs. 40 lakhs. Chamundi Chemicals is entering into a collaboration agreement with an international firm of repute for an automatic plant and machinery. The Industrial Credit and Investment Corporation of India is said to have agreed to offer a loan—subject to the approval of the World Bank—of the value of Rs. 6 lakhs to cover the foreign exchange cost of plant and machinery. Chamundi Chemicals will have an authorised capital of Rs. 1 crore in equity shares of Rs. 10 each. Of this, Rs. 40 lakhs is to be issued for the present. The I.C.I.C.I. is reported to have agreed to take up shares of the value of Rs. 4 lakhs. The Life Insurance Corporation will subscribe another Rs. 4 lakhs. Foreign collaborators also will take up shares worth Rs. 4 lakhs. The directors and their friends will subscribe Rs. 8 lakhs. The balance of Rs. 20 lakhs is to be offered to the public shortly. The Industrial Finance Corporation is reported to have agreed to underwrite 25 percent of the public issue. The Associated Planters (Private) Ltd of Madras is the managing agent of the Company.

Progress of Indian Organic Chemicals

In their first report for the period ended March 1961, the directors of the Indian Organic Chemicals Ltd state that the construction work of the factory is progressing satisfactorily. Orders for the main plant and machinery have been placed, and shipments are expected to be completed by the end of June. It is hoped that the erection work will be completed by the end of the current year or by January 1962. The Company has obtained a licence for importing capital goods of the value of Rs. 23.76 lakhs. The foreign exchange cost of the imports is being met by a loan of Rs. 20 lakhs from the International Bank for Reconstruction and Development through the Industrial Credit and Investment Corporation of India and from the capital contribution of Rs. 5 lakhs by Chemische Werke Huels of West Germany. The repayment of the foreign exchange loan has been guaranteed by the Bank of India. Indian Organic Chemicals was incorporated in February 1960. Out of the issued capital of Rs. 40 lakhs in equity shares of Rs. 100 each, 35,000 shares were fully subscribed by the directors and their friends while 5,000 equities were issued and allotted to Chemische Werke Huels. All the 40,000 equity shares have been called and paid-up to the extent of Rs. 50 a share. The Company earned Rs. 26,088 by way of interest and transfer fees. Deducting the amount from expenses of Rs. 29,841 including taxation provision amounting to Rs. 11,700, the balance of Rs. 3,753 has been transferred to the balance-sheet as loss. The expenses of Rs. 1.90 lakhs have been capitalised.

Barter Scrap Export Allotment

The Iron and Steel Controller has sanctioned an initial allotment of the 1961-62 barter ceiling as an interim relief to the ferrous scrap export trade pending the finalisation of individual quotas against the 1961-62 barter scrap export ceiling. The initial allotment is welcome, since it will help allay the uncertainty among the trade, but the general reaction of exporters is one of disappointment because the quantity allowed for export under the initial allotment is rather small. No indication is yet available of the 1961-62 barter ceiling, but most traders believe that it might not be better than the previous year's ceiling of 360,000 tons, although the Scrap Association has long been pleading for a ceiling of 500,000 tons for 1961-62. The initial allotment under 1961-62 barter is estimated to cover about 60,000 tons, which is considered to be inadequate. Shipments effected during the past two months in anticipation of a barter allotment are placed around 60,000 tons. The initial allotment will, therefore, get adjusted against these exports and the trade will again be left guessing about the next allotment. The barter terms stipulate that the import of finished steel will be allowed up to two-thirds of the f.o.b. value of exported scrap. The trade has been critical of the stipulation limiting imports, since it reduces the incentive to the exporter and limits the quantity of finished steel imports. Scrap shipments in April amounted to 25,415 tons, raising the total for the January-April period to 112,510 metric tons, compared with 113,738 metric tons in January-April 1960. Exports of turning and boring increased from 16,800 tons in January-April 1960 to 31,000 tons during the same period of the current year, although shipments of heavy smelting declined sharply from 18,200 tons to 6,200 tons. The rise in exports of turning and boring is attributed to larger supplies because of the improved availability of finished steel to the engineering industry. The decline in shipments of heavy smelting scrap is due to restrictions on its exports.

Mafatlal Petro-chemical Project

The chairman of the Standard Mills Co. Ltd, Mr. Arvind N. Mafatlal, told the shareholders' annual meeting in Bombay last week that the Company's project for the production of petro-chemicals has made substantial progress. The Government has approved the project in principle and he has been asked to go ahead with the formation of the new Company, to make arrangements for foreign collaboration and to raise capital. So a new Company has been formed and registered under the name of National Organic Chemical Industries Ltd with an authorised capital of Rs. 10 crores. Tentative arrangements for foreign collaboration have been made with the well-known West German firm of Farbwerke Hoechst A.G. The size of the undertaking as well as the terms of foreign collaboration have still to be finalised But the chairman hoped that all the details about the project would be finalised within four or six weeks The Company is likely to enter the market in September or October. The extent of the public issue has still to be settled, although it will depend a great deal on the amount of foreign capital participation. After deducting the amount subscribed by the foreign collaborators, 50 percent will be taken by the directors and their friends and the balance will be offered to the public. Mr. Mafatlal assured the shareholders that their interests, as far as the new project is concerned, would be fully safeguarded. But he could not say how exactly the shareholders would benefit. He added that he might be in a better position to give a clearer picture of the whole scheme at the Company's forthcoming extraordinary general meeting which would be convened to sanction the bonus issue recently approved by the Controller of Capital Issues. The chairman ruled out the possibility of the shareholders of any other Company of the Mafatlal group deriving any special benefit from the new project. In reply to a question whether the dividend would be maintained on the increased capital as a result of the bonus issue, Mr. Mafatlal said that it would depend on profits. It is not the policy of the Company to give fluctuating dividends, he added. The Company's current working is said to be satisfactory. Referring to Mafatlal (London) Ltd, the chairman said that the new Company would advise and render services concerning the new petro-chemical project as well as help the Mafatlal group of Companies in stepping up exports of their products.

Styrene Monomer for Polychem

Many industries depending on imported raw materials have been facing difficulties in maintaining production and running their plants to capacity, let alone think of further expansion, on account of inadequate raw material supplies due to the foreign exchange shortage. With the outlook for larger imports far from encouraging, industrialists have been considering various measures for ensuring larger supplies of imported raw materials without causing any further strain on India's foreign exchange resources. Proposals submitted to the Government consist of the import of raw materials against the export of goods manufactured with the help of these raw materials and/or exports of some other commodities which have not been finding a very ready market abroad. Reliable reports indicate that the Bombay firm of Kilachand Devchand has recently requested the Government to allow it to import styrene monomer for Polychem Ltd for manufacturing polystyrene against the export of kardi oil, niger oil, cottonseed oil and their cakes of the value of Rs. 20 lakhs to west European countries. Official reaction to the firm's proposal is reported to be favourable. For one thing, polystyrene is in short supply. For another, exports of oils and oilcakes suggested by the firm have not been faring well. Meanwhile, the proposal is being considered by the Barter Committee. Informed sources believe that the Government will allow the export of kardi oil and niger oil to west European countries other than the U.K. against imports of styrene monomer to the extent of 50 percent of the value of exports.

Synthetics and Chemicals to Make Tyres

Synthetics and Chemicals Ltd, Bombay, which has been licensed to manufacture 30,000 tons of synthetic rubber a year, has applied to the Government for a licence to manufacture 275,000 to 325,000 numbers each of tyres and tubes for buses, lorries and passenger-cars a year on a three-shift basis and 3,000 tons of foam rubber and other special rubber products a year. The factory is proposed to be located in Fatehganj in Uttar Pradesh, adjacent to the Company's synthetic rubber plant. The scheme will receive technical and foreign collaboration from Firestones of the U.S.A. Although the terms of foreign collaboration have not yet been finalised, no royalty payment is contemplated. The Company proposes to arrange for financing the foreign exchange requirements of the expansion programme on the same lines as it did for its synthetic rubber project. The tyre and tube project is estimated to cost about Rs. 3 crores excluding working capital. The foreign exchange required for the project is estimated around Rs. 2.5 crores. In addition, the firm will require indigenous machinery worth about Rs. 50 lakhs. The foreign exchange needed for importing raw materials is estimated around Rs. 4.5 crores a year. But there will be considerable reduction in the foreign exchange requirements when the synthetic rubber, carbon black accelerator and anti-oxident and rayon-tyre cord projects, which have already been licensed, go into production. The value of the annual output of the factory—when in full production—will be around Rs. 9.5 crores.

Taking into consideration all relevant factors including the domestic demand, export requirements and operational efficiency, the Development Wing has estimated that there is need for creating production capacity of 4 million or 4.5 million numbers each of motor-car tyres and tubes during the third plan. The existing production capacity along with the capacity licensed and under implementation for motor-car tyres is 2.94 million numbers a year and for tubes 2.99 million numbers a year, both on a three-shift basis. The Development Wing, it is understood, has recommended that Synthetics and Chemicals be granted the licence asked for.

Raising Rayon Tyre Cord Yarn Output

The Planning Commission, it is reliably understood, has tentatively proposed a production target of 20 million lbs of rayon tyre cord yarn for the third plan period. This is expected to fall short of the country's requirements at the end of the quinquennium by about 10 million lbs. The consumption of rayon tyre cord yarn is currently placed around 12 million lbs. As the production of tyres is likely to increase from 1.5 million numbers to 4.5 million numbers by 1965-66, the offtake of rayon tyre cord yarn is expected to be of the order of 30 million lbs. The production capacity licensed up to now consists of 5 million lbs a year by Century Rayon, 4 million lbs by National Rayon and 8 million lbs by Delhi Cloth and General Mills, making a total of 17 million lbs. The net availability will, however, be around 13 million lbs, since Delhi Cloth Mills has been given a licence on the understanding that a substantial portion of the output will be earmarked for export to pay for the imported capital equipment. The Company's foreign collaborators themselves are said to have undertaken to buy the product and thus pay for the cost of plant and machinery. But even on the basis of the target proposed by the Planning Commission, there will be scope for setting up further production capacity to the extent of about 7 million lbs. The balance of 10 million lbs may have to be imported, involving a foreign exchange expenditure of about Rs. 3 crores a year. If, however, the entire requirements of the tyre industry are to be met from indigenous sources as a foreign-exchange saving device, there will be scope for producing tyre cord yarn to the extent of 17 million lbs over and above what has already been licensed. This will involve considerable foreign exchange expenditure for importing capital equipment and raw materials. The Government, it is learnt, is inclined to consider favourably applications for furthher expansion or the creation of new capacity provided the applicants are able to offer suitable terms which will not involve any foreign exchange expenditure from free resources either for importing capital equipment or for raw materials and if the applicants put themselves under an obligation to export a portion of their output.

Century Rayon and National Rayon are reported to have requested the Government to allow them to expand their production capacity from 5 million lbs and 8 million lbs to 10 million lbs and 15 million lbs, respectively. Keshoram Rayon is seeking the Government's permission to set up a new plant with an annual production capacity of 8 million lbs in collaboration with Messrs A. K. U. and Glanstaff. The scheme does not involve any immediate foreign exchange expenditure for the import of capital equipment. The Company is said to be negotiating with the foreign collaborating firm for export rights to certain countries. As for raw materials, it proposes to use cotton linters instead of wood pulp. The proposed factory will be located near its rayon plant which is adjacent to the tyre factories of Dunlop and General Tyres. J. K. Rayon has also submitted an application for setting up a new unit with an annual production capacity of 8 million lbs of rayon tyre cord yarn. The Company is seeking the collaboration of a well-known foreign firm which will participate in the capital of the Company to meet the bulk of the foreign exchange requirements of the project.

Power Shortage in Engineering Factories

The president of the Engineering Association of India, Mr. K. L. Chowdhury, says in a Press release that the production of engineering industries in the Calcutta area has been affected by the power shortage. In order to ascertain the effects of power cuts on engineering firms, the Association conducted a survey of 60 factories situated in various parts of Calcutta. An analysis of the information received shows that during the period of shortage, power supply for the firms was halved in some cases. Mr. Chowdhury says that the worst affected were those which were compelled to work night shifts. Not used to night-shift operation, most of the workers could not be expected to work as efficiently as in the day shift. The result was inferior quality goods and lower productivity per worker. The president says that absenteeism due to the compulsion to work in night shifts was as high as 75 percent in some cases. He adds that a total of 5,668 workers had to be laid off for varying periods. The actual loss in production amounts to Rs. 4.64 lakhs a day. There are about 820 engineering firms which might have been affected by the power shortage. Mr. Chowdhury says: "If we take into account the daily loss being sustained by 11 firms employing 500 and more workers, covered in this survey, it comes to Rs. 2.22 lakhs a day. There are about 66 firms in West Bengal employing 500 and more workers. Thus the loss sustained by firms in this category alone will, on average, amount to about Rs. 13.32 lakhs a day". A number of factories have installed plant and machinery and have been expecting power connections, but these are not being readily sanctioned. Mr. Chowdhury says that the situation has now somewhat improved after the overhaul of the New Cossipore generator. But it has been estimated that the demand for power in Calcutta will rise to 450 mW in 1962. With 325 mW being generated by the Calcutta Electric Supply Corporation, the balance of 125 mW must be met from the Damodar Valley Corporation and the State Electricity Board, the president says.

Cutting Costs in Aluminium

The growing Indian aluminium industry is expected to take a great deal of interest in a new manufacturing process—the first major technological change in the process of producing aluminium—which is likely to be put into semi-commercial operation soon by Aluminium Ltd in Canada. If the process becomes fully successful, it should result in considerable savings. Capital costs are expected to be reduced considerably, but the process will not reduce the power requirements of the existing method, nor the dependence on bauxite. The new experimental plant will be completed early in 1962 and the production capacity will be 6,000 to 8,000 tons of aluminium a year. Operation will continue on this scale for a couple of years or so before it is decided whether or not the estimated savings can be made in capital costs in large-scale operations.

Non-diversion Agreement in Insurance

When some Bombay insurers met Mr. Morarji Desai during the passage of the Insurance Amendment Bill, 1961, the Central Finance Minister, it is reported, admonished them about alleged malpractices in the general insurance trade and warned that sterner measures would be taken by the Government if these are not stopped. What assurances the representatives gave to Mr. Desai are not clearly known, but they thereafter made a move to have a non-diversion agreement among the insurers in the country. This move, it is reported, has now been finalised. The agreement essentially means that business in the books of the companies on and from 1st July, 1961, on a "single risk" basis will not be diverted. No member who is a party to the agreement should attempt to obtain or encourage the transfer of any business from another. On the contrary, every member should actively try and see that business continues to remain in the books of the original member. If, however, an insurer is forced to entertain a diverted business, it will have to be approved by the committee which will be appointed to supervise and implement the agreement, but ordinarily, no approval for diversion will be granted. Even the approved diverted business will have to be reinsured 100 percent with the original insurer strictly subject to tariff terms. It has been suggested that by such terms, no inducement for diversion will be left. To give a psychological prop to the companies, who might be afraid of losing some business by signing the agreement, the signatories will establish a pool of business to which every member of the group will contribute in accordance with an agreed formula, and member-companies found to have sustained any loss will be compensated from the pool. Moreover, every member signing the agreement will be assured of a minimum 10 percent growth in his premium income every year.

There is an obvious flaw in the agreement. Under the terms of the Amendment Act, a certain percentage of every reinsurance will have to be ceded to the "India Guarantee" and also to India Reinsurance on the basis of the existing covenant. There cannot thus be 100 percent reinsurance for the losing insurer. Even if the Advisory Committee under the Amendment Act permits such reinsurance to the losing company, whether the terms of the Amendment Act will be faithfully implemented are doubtful, and in any case, reinsurance to the India Guarantee and the India Reinsurance must be on standing terms of cession, unless, again, exceptions are made for such reinsurances.

The idea of a non-diversion agreement has been in the Bombay market for many years. It was

sponsored several years ago by some of the established concerns. Such an agreement suits admirably the interests of long-established Indian insurers. They are obviously interested in the maintenance of their "tied" accounts and thereafter, to develop as best as they can.

India's economy, in the main, is still controlled by a group of financial houses, who, again, have their own insurance companies. The numerous floatations now coming into the market are linked up, in one way or the other, with these financial houses, resulting in insurance being channelled to the established concerns. To all intents and purposes, therefore, the agreement will help preserve the available business in the country for those insurers who have been in the field for many years and who have established a link-up with business firms in the country.

It has been suggested that a non-diversion agreement of this character will tone up administration and will, in a large measure, eliminate the vice of rebating and payment of excessive commission. It presupposes that the existing business is procured on normal terms and that business is diverted only by payment of undue financial inducements. There would not have been so much furore in the market if it were proved that the business of the existing insurers have all along been procured on normal terms. The implication that only on diversion, illegal inducements are offered is also not borne out by facts. Moreover, the agreement is likely to hurt the interests of smaller companies. These have kept up a fair measure of competition in the market. If the insured has been receiving better service, it is because of this.

Peermade Tea Profit Falls: Pays Same

The net profit of the Peermade Tea Co. Ltd for the year ended December 1960, declined to Rs. 4,88,717, from Rs. 5,83,776 in the previous year. The fall is attributed to a lower crop harvested in 1960, which was some 35,000 kilograms less than that in 1959. With the amount brought forward from the previous year, including the tax provision no longer required, the total available surplus comes to Rs. 5,45,746. Out of this, Rs. 15,212 has been transferred to development rebate reserve (against Rs. 1,725), Rs. 100,000 to general reserve (against Rs. 100,000), and Rs. 822 to capital reserve. A dividend of 6.765 percent on preference shares absorbs Rs. 10,147. A final dividend of 15 percent, subject to tax, in addition to an interim of 7½ percent on the ordinary shares has been recommended. The total dividend for the year thus amounts to 22½ percent (same as in the previous year). A sum of Rs. 37,065 is carried forward: The crop harvested amounted to 1,005,181 kilograms, which is 35,057 kilograms less than the 1959 crop. The estimate for the 1961 crop is one of 9,97,900 kilograms. The average sale price of tea was 428.93nP a kilogram in 1960, compared with 409.88nP a kilogram in the previous year.

Higher Distribution by Balarama Varma

The working of the Balarama Varma Textiles Ltd for the year ended December 1960, has resulted in a profit of Rs. 9.94,394.57 before taxation. The provision for depreciation is Rs. 3,55,496, against Rs. 2,62,353 in the previous year. Development rebate reserve gets Rs. 30,000 (Rs. 33,000). The managing agents' share of the profit comes to Rs. 63,782.15. After making the above provisions, the net profit is Rs. 5,45,116.42, compared with Rs. 1,90,324 in the previous year. Provision for taxation out of the net profit comes to Rs. 300,000 (against nil). A sum of Rs. 50,000 is transferred to general reserve, against nil. The directors have recommended a dividend of 9 percent, subject to tax, against 7½ percent in the previous year. This dividend will absorb Rs. 1,74,755.70. The balance of Rs. 13,798.63 is carried forward.

During the year, the mill worked for 306 days in multiple shifts, with an average installed capacity of 16,392 spindles. The balance of three ring frames have been received under the expansion programme. They have been installed and commissioned to work. The installed capacity at the close of the year, therefore, was 17,856 spindles. The market conditions were favourable during the first half of the year, the directors say. But after 3rd September, yarn was sold at the rates commended by the Cotton Mills Federation, which was lower than the earlier rates. There was no accummulation of stocks at any time.

Better Dividend from Gokul Rubber

The net profit of the Gokul Rubber and Tea Plantations Ltd for the year ended December 1960, amounts to Rs. 45,722.86, after providing Rs. 35,000 for taxation. With the amount of Rs. 972.69 brought in from the previous year, the total comes to Rs. 46,695.55. The directors have recommended a dividend of 10 percent, subject to tax, against 9 percent in the previous year. This dividend will absorb Rs. 45,000. The balance of Rs. 1,695.55 is carried forward. Rubber raisings during the year amounted to 1,02,215 lbs, compared with 82,830 lbs in the previous year. The increase in production is due partly to the slaughter tapping of the area to be replanted, and partly to the new area brought under tapping.

Coffee Prices and Marketing

Speaking at the annual general meeting of the Coorg Planters Association in Mercara recently, Mr. M. M. Appaiya, chairman, said that the world price of coffee is continually falling under the pressure of overproduction. India's share in the world output is under 2 percent, but since half of her coffees have to be exported, the return to the grower is largely governed by world prices. Mr. Appaiya said that there is still a premium on good coffees in the world market, and some of India's coffees can rank among the best in the world. Any future marketing policy should, therefore, aim at placing for export such coffees which can fetch a premium. Fortunately, the demand in the internal and export markets appears to be complementary. Mr. Appaiya said that the demand for good quality Arabica Plantation is stationary around 10,000 tons in the internal market while that for Robustas is rising. In the export market, the situation is the reverse, for Arabica Plantation can still be sold at economic prices while the market for Indian Robustas is poor. The potential of the internal market for the stability of the coffee industry, Mr. Appaiya said, cannot be ignored but the industry should offer maximum co-operation to enable the country to earn more foreign exchange. In accordance with this principle, the U.P.A.S.I. has proposed a reorientation of the marketing policy of the Coffee Board. A change in the latter's marketing policy is urgently needed if the large crops now being produced in India are to be efficiently marketed. The marketing of coffee, Mr. Appaiya said, should be the main concern of growers. If the Board has been criticised from time to time, it is due to the fact that it has not tried to work in conjunction with the associations of producers. "It is for this reason we clamour for representation for growers through accredited associations. This will bring strength to the Board and at the same time keep the growers alive to the problems the industry is faced with," Mr. Appaiya said.

Developing Industries in Madras

In order to encourage private enterprise, the Madras Government has compiled an imposing list of industries which can be started in the State. The list includes the manufacture of motor-car as well as bicycle parts. As for tyres, the State Government thinks that there is scope for expansion since the licensed capacity is below the current demand. It is stated that the production of glycerine may be undertaken and part of the output exported to adjacent countries. The trade view that the high excise duty will curtail the demand for radio receivers is ignored by the State Government, which points out that the domestic demand is steadily increasing. The manufacture of safety fuses, electric meters, cables and transformers is urged. The Madras Government thinks that the production of fans and lamps should be encouraged. Besides, it wants the output of acetate rayon yarn and staple fibre to be expanded, overlooking the expansion of the industry in Bombay as well as the difficulty in getting pulp. Among the other industries considered suitable for expansion are explosives, figured glass, ceramic furnaces and paints. The Government thinks that the climate for investment in Madras is better now, but it seems to be too optimistic about the supply of technical personnel.

Madras Plan for Forest Development

A greater interest in forest development because of the raw materials which can be obtained for industry from this source is one of the main features of the Madras third five year plan. The Minister in charge told the State Advisory Board recently that an outlay of Rs. 2.8 crores is contemplated. More cashew plantations along the coast and wattle plantations in the Palani Hills will supplement existing resources. The most important industrial raw material provided by the forests is bamboo. A regular supply of 50,000 tons of bamboo a year is expected from April next. A team of Japanese experts visited Madras in 1958 to advise on the suitability of using the local bamboo for manufacturing rayon grade pulp. Since expenditure on the Forest Department is just about half the annual income on the basis of the last five years' figures, the State Government is naturally anxious to make the most of the hardwood supplies. The price trend in recent years has been favourable to the Government which is a large supplier of timber, and it is believed that the Railways and other Governments would remain steady and important customers in the future. The manufacture of electric transmission poles for local requirements has been successfully undertaken, and the Madras Government has been able to try out new timber species for making railway sleepers. The locally treated sleepers have been tested on the track for performance also.

A new line of activity will be opened up with the collection of medicinal plants. The Government itself is already engaged in the manufacture of drugs by the Cinchona Department which has raised the plantations of lemongrass and geranium for the distillation of essential oils. The supply in recent years has risen, and the prices realised have been attractive. Pleas for the manufacture of hardboard and plywood in Madras State itself have been made in recent years, but at the recent meeting, only the manufacture of chipboard from the wood of the wattle trees was mentioned. A major producer of revenue in the Madras forests is sandalwood, but in recent years, the income from the monopoly has gone down due to the ravages of the spike disease. Nothing is said now about the setting up of a new distillation plant for the extraction of oils. A number of factories are already engaged in the extraction of sandalwood oil, mainly for export purposes.

Power Shortage in Madras

The power cuts in Madras have materialised. The anxiety felt about the cuts—in spite of the Kundah hydel scheme—was reflected in a memorandum submitted to the State Government by the Southern India Chamber of Commerce. The main point made in it is that in thermal areas, there should be no cut, although the supply of hydro-electric energy may be reduced in future. It has been argued that a premium is paid to help avoid a cut due to low levels in the reservoirs. The Chamber has pointed out that industries served by the Madras thermal system do not have diesel generating sets to overcome a power cut. The extensions introduced in 1958 under the second plan have led to a rise in electricity tariff, so the net income of the Madras Electricity Syetem has increased. The power shortage has emphasised the importance of the Neyveli thermal-station rather than the fertiliser or other schemes at present. The Southern India Chamber of Commerce has discussed the implications of a partial reduction in employment as well as the under-utilisation of production capacity in the engineering industries in and near Madras city. The memorandum has referred to local employers' fear of labour unrest. So it has asked for special relief to the area served by Madras Electricity System.

Andhra to Cut Power Rates

Small-scale industries in Andhra Pradesh put forward a plea for reduced power tariff, when the State Electricity Board decided that in addition to small concerns, new large-scale industries should also be given concessions, and the revenue loss should be treated as a grant made to the Industries Department. High electricity charges in Andhra have retarded industrial growth, so special concessions have to be given to industries requiring bulk loads and to those which would enlarge local employment opportunities. A committee to consider applications for concessional rates has prepared a list of industries eligible for concessions. This includes engineering and chemical industries as well as the manufacture of motor-vehicle ancillaries. The Government order issued on 12th May makes mention of the need to reduce existing charges for power by 25 to 50 percent, although not all industries will qualify for concessions. Medium industries will also benefit by the proposed revision of the electricity tariff. A full survey of power requirements in relation to the available supply was undertaken two years ago in the State, and it was ascertained that the power available from thermal stations was both insufficient and expensive. The scheme for subsidising industrial consumption will probably lead to an increase in power consumption, and the equalisation of rates with those ruling in Mysore, Madras and Maharashtra will be secured. However, the Electricity Board will be free to negotiate special rates for bulk loads in the case of new industrial enterprises. Only industries like rayon, machine tool manufacture and cigarette making will qualify for concessions under the new rate system. No existing large-scale enterprise will.

U.K. Exports to India Fall: Imports Rise

The latest statistics on Indo-British trade for the first quarter of 1961 complied from

the U.K. Trade and Navigation Accounts, show a divergent trend—U.K. exports to India were down £38.5 million in the first quarter of 1961 from £40.3 million of the same quarter last year, while imports from India went up to £42.8 million from £39.7 million. Barring a minor increase only in metal manufactures, all other items of principal British exports fell during this period. Sharp falls occurred in machinery, including electric machinery, apparatus and appliances, wool and other animal hair and tops, petroleum and petroleum products, railway and road vehicles and aircraft. A break-down of the items classified under the head machinery, however, showed sizeable increases in boilers and boiler house plant and machine tools excluding portable power tools. U.K. imports from India showed rises in some and falls in others, but there was a net rise of £3.3 million. Of all principal items, tea provided the largest single increase, from £17.5 million to £22.5 million, while the sharpest decline suffered was by animal and vegetable oils, fats, greases and derivatives. Other increases of note were in metalliferous ores and metal scraps, miscellaneous animal and vegetable crude materials, and tobacco and tobacco manufactures.

Examinations for Secretaries

A new examination structure will be adopted by the Chartered Institute of Secretaries from next year. One reason for this is a change in the status and function of the chartered secretary. Discussing the matter, the president of the Institute, Mr. Stuart M. Rix, deputy chairman of the Southern Electricity Board, said that the company secretary was not much more than a senior clerk when the Institute was founded 70 years ago. Today he held a key position in management. There would be more emphasis on administration and management. A second reason was a change in membership. The company secretary was now in a minority, although a substantial one. The Institute will train administrators in the public and private sectors. Preliminary examinations will no longer be held in Britain but will continue overseas. The intermediate will consist of one section of four subjects to be taken and passed at one sitting, instead of two parts each with three subjects. The final will be altered from two sections each of three subjects to three parts each with three subjects. This "drastic reorganisation" of the intermediate and final examinations will come into force from June 1962.

Commonwealth Trade Expands

Exports from Commonwealth countries rose sharply in 1959 and the early months of 1960, as is shown in the Commonwealth Economic Committee's memorandum on Commonwealth trade, 1959-60, just published. But the share of the Commonwealth in world exports, which rose slightly in 1959, fell back in the first half of 1960 to the same level as in 1957 and 1958. Commonwealth imports rose by 5 percent between 1958 and 1959, and even more sharply, by 14 percent, between the first halves of 1959 and 1960. The memorandum shows that there was a small fall in the share of the Commonwealth in both periods because the rise in world imports was dominated by the United States in 1959 and by western Europe in the first half of last year.

In recent years, it is pointed out, much of the expansion in exports from Commonwealth countries has been in sales to countries outside the Commonwealth. These include America, western and eastern Europe, China and Japan. There has been an increase, too, in exports to America of British motor-cars, and Australian and New Zealand meat. Japan has increased in importance as a major market for some Commonwealth raw materials, especially Australian wool. The Commonwealth still provides a market for two-fifths by value of the exports of its members. But the growth of the market has not kept pace with the expansion of Commonwealth trade as a whole. The United States constitutes the second most important market. It took one-fifth of the Commonwealth's products in recent years, with a tendency for this proportion to increase. In the last few years, the European Common Market is shown to have accounted for about 13 percent of Commonwealth exports. Continental members of the European Free Trade Association accounted for 5 percent. Britain supplied over one-fifth of the European Common Market's imports of manufactured goods from outside the "Six". This trade was at a record level last year.

Jet Aircraft for Executives

A new small jet aircraft, to carry 8 passengers luxuriously or eight passengers to airline standards, has recently been manufactured by the de Havilland Aircraft Company. The firm has decided to follow the *Trident* airliner for British European Airways with a jet aircraft for the growing demand from executives. It is an effort to follow the immensely successful *Dove* and *Heron* types into a new generation; and the Company believes that the new aircraft—designated the *D.H. 125*—may remain current for 20 years. First deliveries are planned for 1963, and an initial production batch of 30 is being laid down. The cruising speed will be 450 miles or 500 miles an hour—rather less than the 550 miles an hour claimed for the Lockheed *Jetstar*, which is already on the market. De Havilland seems to be aiming for superior production. It is installing two engines with 3,000 lbs thrust, compared with four in the *Jetstar*. It is claimed that "the *D.H. 125* will have operating costs a mile little, if any, more than the costs for the *Dove*." More than 500 *Dove* owners are being told that they can have double the speed at the same price.

As with the *Trident* and other new British jets, the engines are being mounted in the rear. They are being developed from the Bristol-Siddeley Viper 2 engine and will be called the Viper 20. The cabin is described as "large and unobstructed," and will be fully pressurised and air-conditioned. A crew of two, eight passengers, and luggage will be carried for 1,500 statute miles with normal reserves. The technical staffs working on the aircraft will be those who have already worked on the *Comet* and the *Trident* Market research has been going on for some years, and the firm believes that the use of private aircraft by industrial and commercial firms will go on growing rapidly. The investment in the project is said to be "several million pounds."

Britain and the Common Market

Four methods of solving the problem of Britain's approach to the European Common Market are discussed by Mrs. Miriam Camps, a research associate of Princeton University, in a pamphlet which forms part of Political and Economic Planning's three-year study of the problem, financed by the Ford Foundation. Mrs. Camps lists the four approaches as: a single European market; the United Kingdom joining the "Six"; the Organisation for Economic Co-operation and Development or the Atlantic Community solution; and the global or G.A.T.T. settlement. Discussing the first, Mrs. Camps says that in concentrating too much attention on the problems of aligning U.K. tariffs to those of the "Six", the other implications of a common commercial policy have been overlooked. Although a low tariff Customs union could be a possible long-term solution, it is unlikely to provide an immediate (or even probable) answer. Mrs. Camps sees as possible stumbling blocks to a negotiated British entry to the "Six" the Commonwealth commitment and agriculture. She thinks that Denmark and Norway will probably join the "Six" with Britain, thus forming a "Community of Nine," which will be more cumbersome than the "Six", but will have fewer difficulties than a Customs union of the "Thirteen".

Of the O.E.C.D. approach, Mrs. Camps suggests that the kind of partnership proposed is different from the formation of a new economic entity which is the objective of the European Economic Community. She believes that Atlantic co-operation within O.E.C.D. is important, regardless of a European settlement, and gains added importance if there is no accommodation between the "Six" and the United Kingdom. The O.E.C.D. solution is, she says, often coupled with a substantial multilateral reduction of tariffs within the framework of General Agreement on Tariffs and Trade. Any new scheme of tariff reduction depends, in large measure, on new legislation enabling the U.S. administration to take part in the scheme. On the assumption that this can be obtained, Mrs. Camps believes that most of the problems posed by the split into two trading groups can be met by substantial multilateral reductions.

Capital for Underdeveloped Countries

The Development Assistance Group which met recently in London devoted much of its time to a discussion of the Kennedy administration's proposal that leading western nations should devote 1 percent of their gross national product annually to help the underdeveloped countries. The implementation of the proposals will obviously depend very largely on the definition of aid for this purpose, for it can take a variety of forms. The following table attempts—on the basis of figures recently published by the Organisation for European Economic Co-operation—to estimate the relationship between capital flow, public and private, direct and indirect, and the gross national product of the donor countries in 1959. It must be remembered that in that year the United Kingdom began to expand aid in new forms after the completion of large drawings by sterling countries on balances accumulated in the past, and that the figure for France includes very large sums for official expenditure in north Africa. Nevertheless, the figures are interesting.

Country of origin	Total contribu-tions direct and through multila-teral and multi-national agencies, U.S. $ million	Gross national product, U.S. $ million	Capital flow as proportion of G.N.P., percent
United Kingdom	722	66,300	1.1
United States	3,032	482,000	0.6
France	1,360	69,500	2.0
Germany	805	73,300	1.1
Netherlands	223	10,700	2.0
Belgium	165	11,700	1.4

U.K. Textile Mill Profits

Profits announced by U.K. cotton textile companies in 1960 showed a sharp increase, compared with the previous year. Total net profits, after tax, of 75 companies, owning more than 250 miles, were £8.9 million, against £3.7 million in 1959, which was the lowest figure for 20 years. An analysis of trading results prepared by Frederick W. Tattersall Ltd, of Manchester, shows that the aggregate net earnings announced by 14 leading spinning and weaving combines and their subsidiaries last year amounted to £5.3 million, compared with £1.7 million in 1959. The average profit was £375.425 a group, against £121,006. The average dividend paid was 12.48 percent, against 9.73 percent, and total credit balances were about £8.6 million, against £8.7 million. Average profits announced by 24 independent mills during 1960 were £31,146 a company, compared with £13,425 for the same firms in 1959. The average dividend paid last year was 17 percent, against 14.97 percent in 1959. Average profits earned by 17 concerns combining spinning and weaving was £112,844 a company last year, against £73,562. The average dividend was 14.17 percent, against 11.39 percent. For the whole of the 41 firms, the average profit announced was £65,021 in 1960, against £38,360 for the same concerns in 1959, while the dividend last year averaged 15.83 percent, against 13.48 percent. Credit balances held by the companies total £6.5 million.

Average profits of 20 firms engaged mainly in weaving were £47.492 a firm last year, against £20,035 in 1959. Dividends averaged 9.66 percent, against 7.42 percent in the previous year, and credit balances amounted on average to £148,596 a company, against £131,092. In 1960, capital reductions were made by six spinning firms, the aggregate original capital being reduced from £3.5 million to £2.02 million; five spinner-weavers cut their capital from £10.2 million to £7.5 million; and seven weaving firms were concerned in capital reductions from £1.9 million to £538,324. Eight scrip issues were made by cotton textile companies, five of the combines particlpating in the total of £7.5 million. In the previous year, the total was £1.01 million, while in 1958 scrip issues amounted to only £242,488.

JUTE CONSUMPTION IN EUROPE

THE following figures relating to the estimated annual consumption of jute in Europe, compiled at first hands, by one of the leading jute firms in London, will not be without interest to the trade in Calcutta :—

	Bales
Scotland	1,150,000
England	37,000
Ireland	19,000
France	450,000
Belgium	115,000
Germany	647,000
Austria	250 000
Norway and Sweden ...	47,000
Russia	152,000
Holland	20,000
Spain	90,000
Italy	130,000
Total Annual European Consumption ...	3,107,000

These figures, we are assured, are based on the ascertained consumption of each separate mill in Europe, and, we believe, they cannot be far from the truth. The expansion of the jute industry, especially on the Continent, is still going on, and there is more jute being used to-day in Europe than ever before in the history of the trade. If these figures are anything like correct, then the stocks of the raw material accumulated from bye-gone seasons must have been largely reduced during the two past years. During 1898-99 Europe received 2,300,000 bales, and last season 2,050,000, while this year it will take hard work to give her 3,000,000 bales of jute and rejections, making a yearly average of 2,450 000 bales for the three past seasons. The one thing we do not know with any degree of accuracy is the amount of stock distributed throughout Europe at the present moment, but it must have been melting away with considerable rapidity since 1898, and we may safely assume that the commencement of the new season will witness stocks whittled down to a very low point indeed.

A Ditcher's Diary

IN ANY LANGUAGE—ASSAMESE, SWAHILI OR HINDI—11 people killed are 11 people dead, who will no more speak either Assamese or Bengali. The worst aspect of the latest Assam tragedy is that everything that has happened was perfectly foreseeable. The rights and wrongs of the latest firing will be known only after the enquiry is complete and, more important, after the report has been published (not every report is). But it seems to me to indicate something that the Bengali minority should have had the worst of it when the administration broke down, as in July, and when it did not break down at all, as last week. With the Nepali-speaking people of Darjeeling demanding Nepali as a State language, the Government of West Bengal may have on its hands a problem not wholly different from Mr. Chaliha's; but the fact that even Bengali was not declared as West Bengal's official language until the other day makes me think that, in spite of grave provocations, the people of this State are perhaps more level-headed in this matter than most others. It has been rightly said before that language is only a façade for a whole set of quite different struggles; and these latter are certainly at play in both Assam and Bengal. A friend pointed out to me the other day one of the hidden struggles that go on all the time. Every now and again one hears of the abolition of rickshaws from the streets of Calcutta and the concomitant idea of introducing cycle rickshaws. My friend pointed out that a decision on this would immediately disemploy thousands of people from Bihar and other States, for there is scarcely a single Bengali rickshaw-puller in Calcutta. The other result would be that cycle rickshaws would be plied by Bengalis, as I am told they are in the city's suburbs. One sees now that the apparently humanitarian objective of removing degrading rickshaw-pulling has many overtones. To return to Assam, the State Government has much to explain. And the Centre is hardly strengthening the unity of the country by letting the State Governments get away with anything.

THE MAIN REASON FOR THE RECENT QUIETNESS IN the Indian share markets seems to be the shortage of money caused by subscriptions to new issues. It is estimated that as much as Rs. 32 crores may be tied up in this way, more than half this in the Goodyear issue of a few weeks ago. This single issue was probably the most successful the markets have seen; I am told that the applications for the 400,000 ordinary shares offered totalled 83,000 and that the sum paid over was in the region of Rs. 17 crores. Or in other words, the issue was nearly 30 times over-subscribed. This may sound a lot, but it hardly compares with the almost 150 times by which the recent Penguin offer, made on the London Stock Exchange, was over-subscribed. For their 750,000 shares Penguins received 150,000 applications totalling £67 million. Big stuff you might say. But what is even bigger about it is the scandal it has unearthed, because a large proportion of the cheques representing that £67 million were in fact "duds" and had no resources to back them. It happened like this. The Penguin issue closed on the afternoon of Friday, 28th April, The cheques were not banked, but letters of acceptance were received by successful applicants in the post on Monday morning. These applicants, or those among them who had paid by dud-cheques, then rushed round to their banks, presented their allotment letters, and arranged for the funds to cover their cheques. Apparently this is not an unusual practice; it is simply that in the Penguin issue the system was carried to its highest pitch of refinement so far. It depends on two factors—one really—the fact the cheques are not cashed; the short time taken to make the allotments is of secondary importance. It could not happen in India, for the simple reason that the cheques must be lodged with a bank. But the British system—which I gather may now be due for revision—has one great advantage, it does not tie up genuine funds. Not that this recommends it for India, but the other feature, the speedy allotment, could stand copying. In this country, the average time spent over allotting shares is well over one month and may extend to three; in Britain, apparently it is a weekend, even when the transaction involved is much larger.

ON MY DESK THE OTHER DAY I FOUND A COPY OF Romesh Dutt's *The Economic History of India in the Victorian Age, 1837-1900* which, it seems, has now been republished by the Publications Division of the Ministry of Information and Broadcasting. The author, of course, was a pioneer, like Ranade, in the discussion of Indian economic problems, and caused a sensation in his time because, although a product of the I.C.S., he fearlessly criticised British rule and recommended many reforms which he considered were necessary for the prosperity of India. But I am unable to understand why the Publications Division should have taken so much trouble to republish his book under official auspices. If its aim is to highlight the progress India has achieved under a decade of planning by contrasting the picture of economic conditions during the Victorian age, it is surely displaying its own naïvety by attempting to judge one century by the standards of another. Dutt's main thesis was that British rule gave India peace but not prosperity, and that British colonialism led to exploitation and retarded economic growth. He might be right, but it is as well to remember that economic progress was essentially slower in the 19th century than it is now, and that the concept of deliberately stimulated national economic growth scarcely existed at all. One wonders what charges of exploitation would have been levelled if Britain had pushed India vigorously along the road to economic progress in an age when people here cared little for such things. Dutt complained of the frequent changes in land taxes, the steady rise in public debt and the numerous taxes which he regarded as the main causes of the impoverishment of India. One wonders what his reactions would have been had he been living today.

WE HAVE ALL HEARD SUCH CHOICE EPITHETS AS "sharks" or "greedy monsters" used freely about Calcutta's landlords, sometimes in the columns of the Press, but more often in private conversation. Landlords as a class are unpopular everywhere, but they happen to be particularly so in this city. With local house rents going up the way they have been doing in the past few years, it is only natural that tenants should feel aggrieved that their landlords appear to be able to dictate any price they fancy. But what is all too often forgotten is that if landlords are charging exorbitant rents, it is only because they are able to get them. What in fact they are doing is what we all do to some extent, especially where our own labour is concerned, that is charge what the market will bear. It is a simple question of supply and demand. The answer is obviously to increase the supply of accommodation, and high rents are a better incentive to achieve that end than the useless device of rent control. This has never worked properly anywhere, least of all in Calcutta. I have heard it suggested that the most effective way of curbing rent racketeering in Calcutta would be to freeze land values and then nationalise all private unoccupied land and use it for the construction of houses. As far as I can remember this was one of Mr. K. C. Reddy's dreams when he was Central Minister for Housing and Works, but it does not seem to have materialised. Only in New Delhi has the Administration decided to ban private sale of land for ten years except in approved cases. I do not think such a step would do much good here—speculation in land is after all an effect and not a cause of exorbitant rents. The best and most realistic solution would be to spread out the city, open up new suburbs, provide efficient and fast means of communication to the new areas, and finally encourage people to build more houses so that those who find rents in the city too high may have a better alternative elsewhere.

THE FIRST OF THE DITCHERS, THE MAN WHO STARTED this Diary in *Capital*, was a great one for quotations, Latin ones for preference. Although the ploy is easily overdone, there is much to be said for the artful aid of an apt quotation to clinch a point. I resorted to one on this page the other day; and a correspondent wrote to say, with the utmost politeness, that he did not think that "the Christian riles and the Aryan smiles" was from Kipling. The line's author, he said, was our old friend Anon. Since I had quoted from memory, it took me quite some time to trace the quotation down to its source. Fortunately, it was Kipling's—heading to chapter V of *Naulahka*. One cannot be too careful about quotations; and one is unwise to rely on fallible memory. But so many misquotations or misattributions are so dearly familiar to us that it almost hurts when some pedant comes along and says that Sherlock Holmes never said, "Elementary, my dear Watson." On such occasions one feels like saying that if Sherlock Holmes did not say it, he jolly well should have. Then there is the Duke of Wellington saying something about the Battle of Waterloo being won on the playing fields of Eton. Now we are told that the Duke said nothing of the kind. Maybe, but how many millions of us opened our brilliant school essays with that quotation? Did Lord Acton really say that all power corrupts and absolute power corrupts absolutely? I don't care; it is not a bad remark, and whoever said it said something useful. Speaking as a journalist, however, one should use quotations sparingly; and, then, one had better get them right both in punctuation and authorship. My correspondent also wants to know who wrote "There's a little yellow idol at the foot of Katmandu" which goes on to the grave of "mad Carew". Will somebody with a better book of quotations than mine please help?

AN ANDHRA EXPERIMENT IN INTENSIVE FARMING

(BY A SPECIAL CORRESPONDENT)

TO achieve the food production target of 105 million tons under the third plan, various programmes have been included. Some of these are already being implemented. An integral part of these programmes is the scheme of intensive agricultural production, otherwise known as "the package scheme", which has been introduced in one selected district in each State. The draft outline of the third plan explained the scheme as follows: "It is proposed to make an intensive effort to increase agricultural production in selected areas where on account of the availability of irrigation and assured rainfall conditions appear favourable. For this purpose to begin with, one district is being selected in each State. In this district, a concentrated effort will be made to reach all farmers through co-operatives and *panchayats* with an organised village production programme which involves all agricultural families".

In Andhra Pradesh, West Godavari district has been selected under this scheme, which, for all practical purposes, had already come into operation during the current *rabi* season. This district fulfils all the preconditions stipulated by the Planning Commission. It is within full reach of the Godavari irrigation system. Of its total geographical area of 1,931,130 acres, a net area of 991,503 acres is sown regularly every year, while another 234,768 acres are sown more than once a year. The area under cultivation thus works out to 63.5 percent of the total area. Again, more than 900,000 acres of the cultivated area are served by some irrigation source or the other, which means that more than 73 percent of it has the benefit of assured irrigation. The average rainfall in the district is 39.45 inches, the average for the delta areas being 41.84 inches and for other areas 38.85 inches. The soil is rich alluvial for the most part and very fertile, while the red ferruginous variety of soil is found in a few areas in the dry *taluks*. The main crop sown both in extent and importance is rice, and other crops are banana and sugarcane on the one side and chilli, ginger, ragi, and groundnut on the other. The Virginia strain of tobacco is grown over a considerable area, but that crop, as also ginger and groundnut, have been excluded from the scheme.

Local Units

Along with other districts in Andhra Pradesh, the *panchayati raj* scheme has been in operation in West Godavari also. The district has been parcelled out into 25 local units, 20 of which covering about 170 villages are included in 15 *panchayat samities*, two are in non-*samiti* blocks and three in pre-extension blocks. At the *samiti* level are the block development officers and a team of ten village level workers. At the district level, there is a special officer, drawn from the Agriculture Department, who is in overall charge of the scheme and functions under the direction of the District Collector and in consultation with the District Co-Ordination Committee. There are four district level specialists—a plant protection specialist, an agronomist, a soil testing specialist and a deputy registrar of co-operative societies. At the State level, a State Co-ordination Committee has been constituted with a member of the Board of Revenue as chairman, which is the top decision-making body. So far, this set-up has answered the requirements of the situation, and urgent decisions, either about policy or administration, are arrived at quickly. The stress is mainly on getting things done and on achieving results in the field, the target being to attain a 50 percent increase in the production of the selected crops by the end of a five-year period, that is, by 1965.

The State Co-ordination Committee has decided that for the *rabi* season 1960-61, 20 percent of the total cultivated area of the villages in each of the blocks selected for the scheme should be brought under it during the current year, and that the crops that should be given special attention are rice, banana, chilli and sugarcane. Rice has thus been sown in 58,000 acres and is treated according to the Japanese method in a certain proportion of the land and according to traditional methods in the remainder; chilli in 3,000 acres and bananas in 780 acres. It is proposed to phase the programme in such a way that every year, the area covered by it will be increased by 20 percent, so that the entire area in the selected blocks would come under it by 1965.

Special Allocation of Fertilisers

In accordance with the general all-India pattern, special allocations of fertilisers, improved seeds and pesticides have been made for the villages under the scheme. Likewise, arrangements have been made for the supply of credit to the cultivators. Improved seeds are being supplied from the seed farms established in the *samiti* areas. The supply of the required quantities of nitrogenous fertilisers, estimated at 27,400 tons, for the first two years of the scheme has been assured by the Government of India and for the *rabi* season. About 2,100 tons of fertilisers, stocked in 77 retail depôts of the District Marketing Federation have been or are being distributed through co-operative societies. Pesticides are also being made available through these depôts. Besides, the supplies through Government sources, arrangements have been made by the Marketing Federation for additional supply of pesticides as and when needed by the cultivators through private firms. To educate the cultivators on improved farming techniques and methods of cultivation, two demonstration farms have been laid in each of the "package scheme" villages for the *rabi* season and three will be laid during the next *khariff* season. Improved agricultural implements such as ploughs, tractors, trailers and hoes are also made available, particularly to those who have resorted to the Japanese method of paddy cultivation. As lands in some parts of the district are liable to submersion by mountain streams, measures have been taken to improve the drainage. In that connection, the scheme provides for the deepening by two feet of the village drains, the major drains thus treated covering 116 miles, medium drains 35 miles, and minor drains 85 miles, the cost being Rs. 1 crore.

The supply of credit at the psychological time when it is essentially needed by the cultivators is an aspect of the scheme which deserves mention. The total requirements of credit for the cultivators brought under the scheme have been estimated at Rs. 1,00,12,437, and the rate of advance of credit has been fixed at Rs. 150 an acre for paddy, Rs. 250 an acre for chillies and Rs. 500 an acre for bananas. The Reserve Bank has agreed to meet the increased demand for funds under this head, for which the co-operative central banks have applied to meet the requirements of the cultivators. The State Government, it is expected, will guarantee repayment of the amounts lent by the Reserve Bank to the co-operative central banks.

There are 105 village co-operative credit societies in the 170 selected villages and 70 co-operative depôts for supplying seeds and fertilisers. Three co-operative central banks, two of which are functioning in the district and one in the neighbouring district of East Godavari, have undertaken the responsibility to finance the village societies to meet the loan requirements of the participating farmers. As stated earlier, the District Co-operative Marketing Federation has undertaken the distribution of fertilisers, seeds, implements and pesticides through nine primary marketing societies in the district affiliated to it. It is claimed that since the initiation of the scheme, about 10 percent more agriculturists in the area have been brought within the co-operative organisation.

Extension Staff

Before the commencement of the *rabi* season itself, the State Government had appointed the staff of the extension officers in agriculture and co-operation, and the village level workers and other staff required under the scheme, so that the delay that would otherwise have occurred in the conduct of preliminary surveys of the villages and preparation of production plans for individual cultivators, were avoided. Preparations are afoot to prepare production plans for 70,000 more individual farmers and to spell out their requirements under different heads for the next season. It may be presumed that the schedule for the procurement and availability of the requirements for the *khariff* season and for the next four years will be maintained, and there will be no relaxation in the vigilance or the effort of the official machinery set up for it.

The success of the scheme, as an instrument for increasing food production and the productivity of the land in the district which is already quite high, appears to be assured because of the competent and zealous official machinery looking after it. A number of cultivators, whom the present writer interviewed, have expressed satisfaction at the arrangements for ensuring the supply of seeds, implements, pesticides and so on; and complaints about insufficiency of supplies, of delay in supplies or of higher prices being charged for scarce materials like fertilisers are, broadly speaking, absent. The assistance and co-operation they have received from the extension staff were also mentioned in appreciative terms. Since the vast proportion of the area in each village is either served by irrigation from the Godavari canal system or irrigation is available from filter points set up by individual cultivators at their own cost, but with the financial and technical assistance of the agricultural engineering staff, adverse seasonal conditions no longer hold the same terror as they did before.

A Source of Discontent

A criticism about the selection of West Godavari district for the intensive agricultural production programme is that one particular area is receiving the benefits of special attention and facilities, enabling an already progressive and prosperous district to become only more so, while the less progressive districts are deprived of those facilities. The complaint is not loud and articulate, but it is a potential source of discontent. It is, however, a fundamental consideration that the scheme should be implemented in a district already possessing certain special advantages, so that the experiment will be a success and its results can be adequately assessed.

An evaluation of the results achieved from season to season is an integral part of the scheme. Apart from the internal assessment that is frequently made by the extension staff itself, and at the meetings of the district and State co-ordination committees, a bench-mark survey, it is proposed, will be conducted by the Bureau of Economics and Statistics of the State Government to assess the response that this concentrated effort for raising agricultural output has evoked among the *ryots* for the better utilisation of their land, rotation of crops, improvement of livestock, use of improved agricultural impliments, fertilisers and seeds, and so on. The programme must be looked at essentially as a laboratory experiment and the selected district is the laboratory to test and assess the factors, favourable and unfavourable, for raising agricultural output by trying it in conditions which are specially favourable to achieve such a rise.

Special Significance

From this standpoint, the package scheme has special significance. An important test of its success would of course be the impact it has made on the traditional thinking and methods of work of the agriculturists. Have they accepted—and have actually adopted on their own volition and not only because there was extraneous pressure—the improved methods of cultivation and improved implements and techniques? Have they made the best possible use of the credit advances they have received and have the benefits of the liberal provision of credit to agriculturists been equitably distributed among the bigger and the smaller cultivators.? Answers to these questions must be continuously sought in the periodical assessments of the scheme.

While these are the immediate tests to assess its success, from a long-range point of view, the main test will be the extent to which the cultivators in general, apart from the many progressive ones in this district, would be and are prepared to capitalise the benefits derived by them by increasing investment in further improvements of their holdings and in increasing production. Another aspect of the problem for serious consideration is whether the mechanised processes of cultivation which are being progressively introduced and are its indispensable feature should be systematically pursued, without relation to the prospects of their being taken to by a large proportion of the cultivators within the district itself and even more so without relation to the prospect of their being adopted by the general body of cultivators in the neighbouring districts and areas. Care has also to be taken to see that the demand for nitrogenous fertilisers is kept within reasonable limits and that indegenous manures are used in increasing proportions.

The Ford Foundation is footing 50 percent of the bill for the salaries of the additional staff, for the scheme has been based on the recommendations of its team. The Foundation is also supplying one tractor and trailer with implements for each of the 20 blocks, where the scheme has been introduced. A more permanent contribution it is expected to make is to establish an agricultural workshop at a cost of Rs. 5 lakhs for manufacturing improved agricultural implements and for the servicing and repairs of the mechanised units employed.

Branch in Orissa :—Sambalpur.

Money

THE CALCUTTA MONEY MARKET

INTERBANK RATE FALLS

Tuesday, 23rd May.

THE total of advances in the Calcutta money market has declined slightly during the past week. The main reason seems to have been due to the lower requirements of the jute industry. Demand from the sugar mills showed a slight increase, but the requirements of the cotton industry and the engineering and iron and steel industries showed no appreciable change, as did the demand against grains and seeds storage. In the interbank market, conditions have become considerably easier. The official call rate has declined to 4½ percent and the trend is still downwards.

In the exchange market, there has been no appreciable improvement on the dull conditions that have prevailed over the past few weeks; once again there has been a poor supply of bills. Remittance demand has remained fairly keen. In the London money market, the pound has lost ground against all major currencies. The London cross-rate has recorded the lowest level in the recent past. The market closed on a distinctly uncertain note.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 12th May, 1961, shows a rise of Rs. 20 lakhs to Rs. 543 crores in total deposits. Investments in Government securities are up by Rs. 2.44 crores to Rs. 227.41 crores, while other authorised investments remain unchanged at Rs. 9.49 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 5.17 crores to Rs. 270.41 crores. Cash and balances are, in consequence, shown at Rs. 24.73 crores or Rs. 60 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 12th May, 1961, shows Demand and Time liabilities at Rs. 844.23 crores (Rs. 28.82 crores on account of borrowings from banks) and Rs. 1,109.68 crores (Rs. 15.39 crores), compared with Rs. 859.19 crores (Rs. 30.19 crores) and Rs. 1,097.67 crores (Rs. 14.75 crores), respectively. Cash has increased by Rs. 99 lakhs to Rs. 49.73 crores, while balances with the Reserve Bank have decreased by Rs. 3.70 crores to Rs. 72.15 crores. There is a rise of Rs. 5.51 crores to Rs. 552.65 crores in investments. Advances and bills discounted at Rs. 1,306.89 crores show a fall of Rs. 3.40 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.2 percent and 66.9 percent, against 6.4 percent and 67 percent.

TREASURY BILL MATURITIES

CONSTIPATION — AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

Stocks and Shares

STEEL SHARES LEAD IN ALL-ROUND IMPROVEMENT

ANNOUNCEMENT ON RETENTION PRICES EXPECTED SOON

Wednesday Evening.

THE Calcutta stock market has worn a more cheerful look this week due to a substantial rise in the price of steel shares. The quotation for Indian Iron ordinary shares improved to Rs. 27.68 in unofficial trading on Wednesday; the market was officially closed today due to the *hartal*. The settlement will, therefore, take place on Thursday. The cheerfulness was largely sparked off by higher advices from Dalal Street, in which near-boom conditions prevail on the hope that a generous liberalisation of the margin system may be made soon. Optimism is also based on expectations of an early announcement of the new retention prices for steel. The stock market thinks that the rise in the price will be large enough to compensate producers for increased production costs. It is also thought that the price will be adjusted in such a manner that the steel companies will be able to repay their indebtedness within a short period.

The Bombay stock market is steadily veering to the view that there will be an increase in the forthcoming dividend of the Tata Iron and Steel Company, which is due to be announced soon. Lyons Range is pitching its expectations even higher, in the sense that it is still being rumoured that the Indian Iron and Steel Company might go in for a further capital issue. But if the increase in the retention price helps to place more resources in the hands of the steel companies, there seems little justification for obtaining extra funds from shareholders by means of rights share issues in order to pay off debts.

Not only is the retention price of steel expected to be revised soon, but it is also thought that the prices of other products, such as cement and sugar, may be fixed at higher levels on the recommendations of the Tariff Commission. Even the claims of the paper and coal industries for higher prices may soon attract the attention of the authorities concerned. Profit margins of industry have been heavily squeezed by recent rises in production costs. Programmes of modernisation and expansion are difficult to finance unless industry is permitted to make reasonable profits in the form of justifiably higher prices of products.

An important factor contributing to steadiness is an improvement in the technical position following the shake-out during the past few weeks. There has been a decline in trade demands for funds during the past few days and there is also evidence of a return of funds into the banking system. This apart, funds which are now tied up in some new share issues such as Goodyear India and Madras Rubber, are likely to be returned soon. The stock market is, therefore, expecting an early reinforcement of resources for investment in shares. Meanwhile, a great deal of floating stocks appear to have been absorbed.

In the market, interest has been subdued in engineering shares because many units are suffering from shortages of raw materials and power supplies. Erratic movements have drawn attention to Texmaco shares which have declined to Rs. 19.35. The stock market is wondering whether the adverse results for the year ended March 1961 have not been more than discounted by the recent decline in the price of the scrip. There is no doubt that the profit has declined considerably in comparison with that of the previous year; net profit has fallen to Rs. 23.27 lakhs only. A sum of Rs. 2.50 lakhs has had to be transferred back from general reserve in order to pay dividends. The ordinary dividend has been halved to 10 percent, taxable. These results are due to exceptional circumstances. There have been labour troubles culminating in a strike; there have also been raw material shortages, but the working during the current year shows signs of a steady recovery. The work of the wagon workshop has been interrupted by shortages of matching materials. As the railways are in urgent need of wagon supplies, it is hoped that in future attention will be given to ensuring a smoother working of the various engineering firms concerned by supplying proper raw materials in time. The power shortage is likely to be relieved soon if the Government takes early steps to implement its promise of improving supplies. The strong point about Texmaco is that it has many sections of engineering work, so there is scope for cushioning the adverse effects of any particular department by improved working in others.

Guest, Keen, Williams have declined, but Jay Engineering enjoy knowledgeable support. The news that the Government has decided to control Jessops for a further two years has made no impression. Indian Standard Wagon have been bought on hopes of a higher dividend.

Prices of miscellaneous shares have hardened selectively on replacement buying. Indian Copper Corporation shares are in demand on renewed talk of a capitalisation of reserves. Dunlop Rubbers are buoyant on hopes of a further share issue. Hindustan Motors are steadier on excellent results achieved during the year ended March 1961; a net profit of Rs. 1.40 crores has been earned in 1960-61, against Rs. 74.29 lakhs in 1959-60. The taxable ordinary dividend has been increased from 9 percent to 12 percent. Indian Cables and Indian Aluminium have recovered. There is speculative support for Karanpura Development. Britannia Biscuits are firm on hopes of a bonus share issue. Indo-Burma Petroleum have hardened on paying a higher dividend. Rohtas and Alkali Chemicals are steady. Shaw Wallace and Balmer Lawrie are being fancied on good working reports. A good report has helped British Electric Construction. Gwalior Rayon have gained on expansion hopes. There is steady support for British Paints and Isaac Holdens. India Steamships are neglected in spite of talk of official financial assistance for expansion.

Paper shares have turned softer and Orient are not favoured in view of the issue of rights ordinary shares at high premiums. Routine business has been done in Titaghur, Sirpur and Shree Gopal.

Cotton mill shares have attracted supporrt on reports of good cloth sales. Investors think production will increase in order to meet cloth shortages. Bharat Commerce are bought on diversification prospects. Dunbar and Bowreah are steady on producing good reports. J. K. Rayon have recovered on short-covering. Kesoram and Cawnpore Textiles have gained.

In the coal section, attention is concentrated on collieries producing good grades. Bengal are fancied on expansion prospects. New Beerbhoom, Burrakur, East Indian, Equitable, Amalgamated and Central India meet with stray support.

Sellers predominate in jute shares in view of a possible block closure of mills. Meanwhile, the

mills are incurring losses in the production of gunnies when buying fibre at current high prices. Scattered business has been done in Howrah, National, New Central and Birla. Kamarhatty and Kanknarrah have been sold on producing unsatisfactory reports.

Sugar shares have declined because bigger production during the current year has resulted in a larger accumulation of stocks in the face of slow consumption. Carew, Ramnugger Cane and S.K.G. have been offered at lower prices.

There are fair enquiries for selected Assam and Dooars gardens. A bigger crop in north India during April has helped promote steadiness. It has risen to 19.1 million lbs from 16.6 million lbs from April 1960. Hopes of higher dividends and bonus share issues are also considered to have boosted sentiment. Betjan, Bishnauth, Hasimara, Hantapara and Jutlibari have been prominent.

Interest has broadened in high dividend-yielding preference shares. Banking shares are steady. In public utilities, Calcutta Electric and U.P. Electric have attracted attention.

Government securities are dull and turnover has been reduced to a trickle. Institutional investors are busy examining the prospect of the new conversion loan offer by the Government of India. The price of the conversion loan (1986) has slipped back to Rs. 73.10.

Bombay Market

PRICES IMPROVE ON RENEWED SUPPORT

LOWER CARRY-FORWARD RATES HELP SENTIMENT

Wednesday Noon.

THE Bombay stock market started a new account under near-boom conditions last Monday. Cheerfulness was promoted by lower *havala* rates showing that the authorities were no longer anxious to restrain buying activity. Lower carry-forwrad charges were also considered helpful and showed how the technical position has improved. Share prices improved on a broad front on renewed support.

Tata Steel improved to Rs. 159 on hopes of a higher dividend and Indian Iron were supported up to Rs. 27.70. Prices of engineering shares improved all round. Tata Locomotive rose smartly to Rs. 362 on talk that the coming report would show improved results. Premier Construction were wanted at Rs. 189.50. Mukand Iron rose to Rs. 28.25. Alcock Ashdown gained at Rs. 312. Motor shares were quiet, and Hindustan Motors declined to Rs. 21.32 on profit-taking. Premier Automobiles were subdued at Rs. 171.50 on reports of a fire in the factory.

Prices of selected cotton mill shares improved considerably. Morarji rose to Rs. 412 on buying by knowledgeable quarters on talk of a bonus share issue. Century gained at Rs. 682 as did Bombay Dyeing to Rs. 64.40. Kohinoor were bought up to Rs. 322 and Svadeshi were wanted at Rs. 273.50. Tata Mills improved to Rs. 60, but India United ordinaries declined to Rs. 15.40 on profit-taking. Apollo were sold down to Rs. 1.60, but Standard improved to Rs. 1533. Khatau were steady at Rs. 555 on good corporate reports.

In the miscellaneous section, sugar shares were subdued as a result of bigger stocks with the mills. Belapur were done at Rs. 285 and Phalton were transacted at Rs. 138. Steamship company shares improved on expectations of financial assistance for expansion. Scindia Steam rose to Rs. 15.52 and Great Eastern were higher at Rs. 14.04. Mining shares were steady, and Shivrajpur Syndicate were done at Rs. 81. Cement shares gained on balance, and Associated Cement were quoted higher at Rs. 162. Digvijay were placed at Rs. 156.50. Bombay Burmah were firm at Rs. 640 and National Rayon recovered to Rs. 556 on short-covering. Voltas and Tata Oil were in keen demand at Rs. 282.50 and Rs. 75.50, respectively. Chemical shares were steady, and Tata Chemical gained at Rs. 19.56. Indian Dyestuff came to hand at Rs. 530 and Dharamsi Chemical were indicated at Rs. 273.73. Synthetics and Chemicals were quoted at Rs. 172 and Gwalior Rayon rose to Rs. 50.

Banking shares were steady, and Central Bank were placed at Rs. 60.30. Bank of India were taken at Rs. 123.25. In the insurance section, there was support for New India Assurance at Rs. 61.50.

Prices of electric company shares improved all round, and Ahmedabad were taken at the higher price of Rs. 87. Tata Hydro came to hand at Rs. 105.50 and Bombay Suburban were placed at Rs. 90.50.

Madras Market

MARKET STEADY BUT BUSINESS LIMITED

INTEREST SHOWN IN GOOD SUGAR SHARES

Tuesday Evening.

THE Madras stock market has been steady during the past week, but business was done on a small scale. Interest was taken in selected sugar shares on reports of higher output. Tea and rubber shares were bought discriminatingly on hopes of higher dividends. Selected cotton mill shares were fancied on reports of good working. Miscellaneous shares improved on prospects of expansion.

In the banking group, Indian were done at Rs. 166 and Canara were taken at Rs. 79.75. Indian Overseas came to hand at Rs. 175 and Punjab National were done at Rs. 21.25. Scattered interest was taken in selected public utilities. Cochin changed hands at Rs. 10.50 and South Madras at Rs. 9.80. Business was done in Vellore at Rs. 13.35 and in West Coast at Rs. 14.

Among sugar shares, Deccan were transacted at Rs. 13.80 and support was forthcoming for E.I.D. up to Rs. 43.62. Kothari were done at Rs. 4.50 and Mysore were wanted up to Rs. 59. United Breweries reacted to Rs. 111 on profit-taking and Travancore were placed at Rs. 10.12.

In the planting group, Blue Mountain improved to Rs. 3.18 and Cochin Malabar to Rs. 7.75. Consolidated Coffee were done at Rs. 22.25, but Ouchterlony were neglected at Rs. 4.50. Periakaramalai came to hand at Rs. 3.92 and Lucky Valley were bought up to Rs. 13.25 on paying a taxable ordinary dividend of 10 percent. Nennemy changed hands up to Rs. 20.65 on declaring a taxable ordinary dividend of 15 percent. Peermade were steady at Rs. 23.30 and Parkside met with support up to Rs. 28.85. Teekoy were done at Rs. 6.10 and Twyford were in demand up to Rs. 13.50. Udayagiri were supported up to Rs. 21.25 on paying a taxable ordinary dividend of 10 percent.

In the textile group, Bangalore Woollen were steady at Rs. 200 and Buckingham were bought up to Rs. 213. Lakshmi improved to Rs. 162, as did Madura to Rs. 36.75. Travancore Rayon were steady at Rs. 39 on maintaining the taxable ordinary dividend at 20 percent. Anglo-French were in demand up to Rs. 126 and Cauvery Spinning were done at Rs. 13.25. Kothari came to hand at Rs. 12.35 and Loyal were transacted at Rs. 39.75. Mettur were steady at Rs. 402 and South India Viscose were bought up to Rs. 162. Premier were sold down to Rs. 260, but Ramakrishna attracted attention up to Rs. 224.

In the miscellaneous section, Aluminium Industries lost fractionally at Rs. 23 on profit-taking, but Ashok Leyland were supported up to Rs. 9.20. India Cement were quiet at Rs. 6.05, but Enfield were bought up to Rs. 12. F.A.C.T. were sold at Rs. 10.70 and General Papers were offered freely at Rs. 10.40. Parry's Confectionery were steady at Rs. 5.15 and Standard Motors changed hands up to Rs. 16.75. Textool were supported up to Rs. 181.50 and Tube Investment were in demand up to Rs. 283. Seshasayee Paper were quoted at Rs. 7.12 and Spencer attracted attention up to Rs. 24. United Electrical were placed at Rs. 9.50 and Bangalore Printing were done at Rs. 14.30 on declaring a taxable ordinary dividend of 5 percent.

THE WEEK'S TRANSACTIONS

London Market

WIDESPREAD LOSSES IN STOCK MARKET

ADVERSE COMPANY REPORTS

London, 24th May.

THE stock market turned downwards in front of the Whitsun holiday week-end to record fairly widespread and quite appreciable losses in many cases. Steadier conditions developed when business was resumed after the week-end, but no material recovery was staged. There was not much to help the market. The overseas trade figures made a favourable impression, but aroused no enthusiasm, while the majority of the company news was disappointing. The repeated references to shrinking profit margins by company chairmen and particularly the Imperial Chemical Industries' chairman's warning on this subject unsettled the market and brought in a fair amount of profit-taking. Although somewhat less than recently, business remained at a high level, but buyers were not so aggressive as they have been. Little of interest developed in the gilt-edged market and prices drifted lower to record small losses on the week. Most of a new £20 million New Zealand issue was left with the underwriters and the stock opened at a discount. Profit-taking in banking and insurance shares left prices lower. Industrial equities recorded widespread and often appreciable losses and most of the leading issues were lower. The South African ban on forward currency cover for Stock Exchange transactions unsettled the gold share market and prices lost ground steadily before rallying under Cape influence. Coppers were restrained by the African political situation. Tins reacted quite sharply on profit-taking in the absence of renewed eastern buying, although they picked up after the week-end. Oils fluctuated with Shell losing much of an early rise which followed news that the shares are to be split. Teas attracted little attention and generally held steady, but rubbers inclined easier in the absence of interest.

NEPAL BANK LIMITED

[Incorporated under Nepal Bank Act of 1994 (Sambat)].

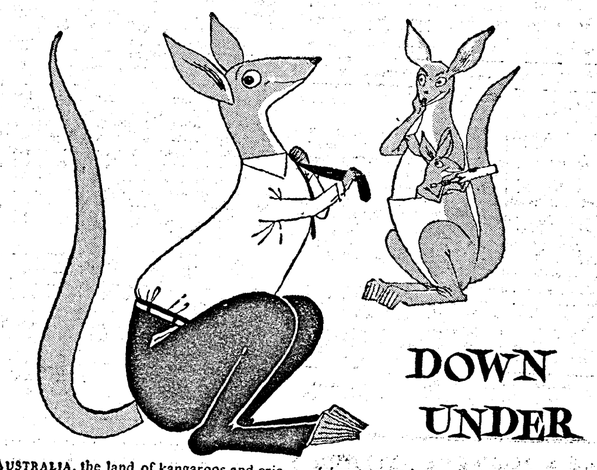
Central Office Kathmandu, Nepal.

Authorised Capital	N. C. Rs. 1 crore
Paid up Capital	N. C. Rs. 25 lacs
Reserves and Exchange Fluctuation Fund	N. C. Rs. 50 lacs

(N. C. Rs. 160 = I. C. Rs. 100).

20 Branches and Sub-Offices in Nepal.

Enquiries are invited from Banks, Commercial Concerns and Tourists for information regarding Prospects, Procedure and Regulations in Nepal.



DOWN UNDER

AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY'S textiles.

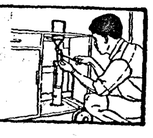
BINNY'S fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

Testing size mix to ensure strengthening of yarn

Viscosity and temperature of the size mix are tested to ensure uniform penetration, dressing and strengthening of yarn.



QUALITY FABRICS

BINNY & CO. (MADRAS) LTD.

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

BINNY - a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels
Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees etc. etc.

New Delhi

INDIA INTENSIFIES EFFORTS TO OBTAIN FOREIGN AID

OIL COMPANIES ASKED TO TAKE RUPEES IN PART PAYMENT FOR IMPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.S. Vice-President, Mr. Lyndon Johnson, paid a two-day visit to New Delhi during the past week. In a joint *communiqué* issued after a meeting with Mr. Nehru, Mr. Johnson said that "while American aid is dependent on the decisions of Congress and also on parallel efforts by the other developing countries, it is the President's hope that the American aid to the new plan will both be substantial in amount and effective in form." This supports earlier reports from Washington that, subject to the two overriding stipulations, the U.S. Administration has offered $1,000 million to finance the third plan during its first two years. Some $400 million the World Bank would make available to India during this period. What Mr. Johnson calls the "parallel efforts by the other developing countries" is placed at $1,100 million, of which $200 million was offered by the U.K. and $331 million by West Germany, the latter including $131 million for repayment of loans. In other words, the net contribution offered by West Germany was also $200 million. The U.K. and West Germany are regarded as major contributors to the "Aid India Fund" and their combined offers of $400 million are regarded as inadequate; hence the postponement of the Washington meeting to 30th May. Enquiries show that the U.K will increase its offer.

Meanwhile, India has waged a pressure campaign. India's Foreign Office took an unprecedented step last week when it sounded the envoys of the "Aid-India Club" members and other countries, who have been sending observers to the consortium meetings. (The regular members of the Club are the U.S.A., the U.K., West Germany, Canada and Japan.) The observers include France, Italy, the Netherlands, Norway, Sweden and Denmark. Austria has already announced her contribution, while the others are still "uncommitted". India's Foreign Office, it is believed, has urged on the envoys of these countries to request their Governments to make the maximum contribution to reach the ceiling of $1,100 million, thereby fulfilling one basic condition of further U.S aid to India. Side by side, the Secretary to the Economic Affairs Ministry, Mr. L. K. Jha, who has gone to Europe to attend some routine meetings, has been directed to pay personal visits, particularly to the uncommitted countries in order to persuade them to join the Aid India Club.

Private Foreign Investment

Reference was recently made to private investments in India. The Federation of Indian Chambers of Commerce and Industry in its latest fortnightly review has published the following table, showing the source-wise and country-wise investments in India since 1948:

	(As at the end of June) 1948	1953	1955	1956	1957	1958
		(In million rupees)				
U. K.	2,060	3,264	3,768	3,925	3,988	3,980
U. S. A.	112	301	398	468	572	599
West Germany	1	1	25	28	35	38
Japan	2	1	2	2	6	6
Switzerland	54	60	66	82	67	68
Pakistan	84	41	44	42	42	42
Other countries	246	253	231	232	238	252
World Bank	—	—	27	148	469	722
Total	2,558	3,921	4,560	4,928	5,417	5,706

It will be seen that British investments in India in 1958 stood at Rs. 398 crores, compared with about Rs. 60 crores from the United States. The figures of foreign business investments in India for the years 1959 and 1960 are not yet available. However, it appears that the inflow of investment has been much larger in recent years. The number of foreign collaboration agreements finalised during the year 1960 amounted to 388. The following table gives the overall picture of the collaboration agreements concluded between Indian and foreign parties:

Period	Total	U.S.A.	U.K.	West Germany	Japan	Other countries
January-March 1960	53	7	17	12	9	8
April-June 1960	159	26	58	30	13	32
July-September 1960	71	9	23	14	11	14
October-December 1960	105	20	30	17	10	28
Total	388	62	128	73	43	82

Here again, the British collaboration arrangements in India in 1960 stood at 128, compared with 62 from the United States.

Trade Negotiations with Russia

Negotiations are being held with Russia, it is learned, to add certain items in the trade plan for 1961. These items include cotton textiles, jute manufactures and steel black pipes from India and Rs. 20 lakhs a year worth of calcined petroleum coke, Rs. 65 lakhs worth of furnace oil, Rs. 31 lakhs worth of tractor and agricultural machinery and Rs. 15 lakhs worth of synthetic fishing twine from that country.

Hungary Offers Finnish Newsprint

Hungary proposes to enter the newsprint market, it is learned. The *modus operandi* is to import newsprint from Finland and export it to India in exchange, among other things, for jute manufactures, raw and tanned hides and skins, groundnuts and tapioca. The quantity of newsprint offered is worth Rs. 2.5 crores. It is a common practice with the communist group to import commodities not for their own consumption but often for disrupting the markets in the non-communist countries. In this case, Hungary may be needing for its own use certain commodities, such as jute manufactures. The principle involved is to barter goods with the goods manufactured, not in Hungary but in Finland. So far, India has been careful in making a definite stipulation in its trade agreements that goods imported would not be re-exported. How can India object to, say, Hungary exporting Indian groundnuts, if India accepts the principle of a barter deal with goods from a third country? Incidentally, it should be profitable for India if Mr. S. K. Patil, during his present visit to Russia, could arrange for the import of Cuban sugar to pay for the loss on the export of Indian sugar. He may even arrange to re-export Cuban sugar to the U.S.A.

Textile Machinery from East Germany

Negotiations are going on to import Rs. 42 lakhs worth of textile machinery and typewriters from East Germany against the export of rolled steels. It is also proposed to import 30,000 tons of special and alloy steel and 33,000 tons of steel rods, sheets, wires against the exports of manganese and chrome ore, bauxite, heavy woollen textiles, sugar, etcetera.

S.T.C. to Supply Iron Ore to Hindustan Steel

Negotiations are in progress between the State Trading Corporation and Hindustan Steel Ltd for a 20-year agreement for the supply of iron ore. The chairman of the Hindustan Steel Ltd, Mr. J. M. Srinagesh, is leaving for London and West Germany on 2nd June. In London, he will hold discussions with the Indian Steelworks Construction Company (I.S.C.O.N.), while in West Germany, he will finalise the conditions of service of 97 operational personnel, required for the Rourkela plant. Meanwhile, the project report for the expansion of the Rourkela plant has been received. For its expansion by 800,000 tons, the plant will require one blast furnace, two coke-oven batteries, two L.-D. converters, one generator in addition to the expansion of the existing capacity of blast furnaces through L.-D. converters. The total cost of expansion is placed at Rs. 90 crores, half of which (or 400 million deutschemarks) will be in foreign exchange. The foreign exchange element of expansion has already been assured by the West German Government.

Shipyard Fully Taken Over

The Government has decided fully to nationalise the Visakhapatnam Shipyard by acquiring stock holdings of Scindias. It is believed that the Scindias will be paid Rs. 80.4 lakhs for their shareholdings, the sum to be adjusted against loans advanced to this Company for the purchase of ships. Ships manufactured at the Indian shipyard are already being sold at a subsidised price, which is based on British prices. The Government, for the present, is not agreeable to reduce the price of Indian ships further.

Indo-Indonesian Trade Agreement

The Indo-Indonesian trade agreement expired on 31st March. Early negotiations for the renewal of the agreement are visualised. Negotiations are also due for the renewal of trade agreements with Italy and Spain.

Economic Delegation from Nigeria

Many independent African countries are thinking in terms of increasing their trade with India. An economic delegation from Nigeria is expected here towards the end of June.

Foreign Loan for Road Development

The Central Government's Transport Secretary, Mr. Venkateswara Ayyar, is leaving for Washington to negotiate a loan for road development from the International Development Association and from the World Bank for the development of Calcutta port, which includes crafts, dredgers, tugs, barges and other equipment. The World Bank gave a loan for the port of $20 million in 1958.

On his return journey, Mr. Ayyar will visit Britain, Norway and West Germany to explore the possibility of technical collaboration for building the second shipyard in Cochin. In case the negotiations are successful, Britain will not be able to make a separate loan for this shipyard, but would permit the use of part of its credit offered for the third plan.

Increasing Rayon Tyre Cord Output

Rayon tyre cord is an essential item used in the manufacture of motor-vehicle tyres. Until recently, cotton cord was used for this purpose. Due to the distinct advantages which rayon cord has over cotton for tenacity, resistance to heat, etcetera, the former has displaced cotton cord to a considerable extent. The current production of tyres is of the order of 1.5 million numbers and the current consumption of cord is 23.9 million lbs, as indicated below:

Cotton	...	11.3 million lbs
Rayon	...	12.0 million lbs
Nylon	...	0.6 million lbs
Total	...	23.9 million lbs

The current imports of rayon tyre cord are of the order of 12 million lbs involving a foreign exchange expenditure of about Rs. 3.6 crores annually. By 1965-66, the capacity visualised for the manufacture of tyres is from 4 million to 4.5 million numbers. The consumption of tyre cord is expected to be of the order of 70 million lbs as indicated below:

Cotton	...	33 million lbs
Rayon	...	30 million lbs
Nylon	...	10 million lbs
Total	...	73 million lbs

The Planning Commission has tentatively proposed a target of 20 million lbs for rayon tyre cord yarn for the third plan period. This is expected to fall short of the actual requirements at the end of the third plan period by about 10 million lbs. There is no indigenous production of tyre cord yarn at present and the entire requirements are met from imported yarn. The following units have been licensed for the manufacture of high tenacity rayon yarn for conversion into tyre cord:

(1) Messrs Century Rayons, Bombay 5 million lbs
(2) Messrs National Rayons, Bombay 4 million lbs
(3) Delhi Cloth and General Mills, Delhi ... ... 8 million lbs
Total ... 17 million lbs

Talks with Oil Companies

The Government of India had a meeting early this week with the representatives of the three oil distributing companies, Burmah-Shell, Standard Vacuum, and Caltex, when the Government, it is believed, pointed out the seriousness of the foreign exchange situation and requested the oil companies to accept payment in Indian rupees for part of their imports of the deficit refined products, which are at present costing more than $120 million yearly. In framing the import budget of petroleum products, the Government had earlier this year taken into account production from its own Nunmati refinery which it was thought would go on stream in September this year and a substantial import of petroleum products from Russia. It is believed that the Nunmati refinery has been delayed by several months and the Indian Oil Company is unable to distribute more than marginal quantities of Russian oil. The Government, it is believed, has warned the oil companies that it might have to resort to rationing if no relief in foreign exchange is forthcoming. It is further believed that the Government has provided $1,000 million for the import of petroleum products during the third plan, which sum is regarded as inadequate in view of the mounting consumption unless the refining capacity is increased almost forthwith. Although the reaction of the oil companies is still unknown, it is highly unlikely that they will agree to accept payment in rupees, largely because of their inability to make use of them. As far as the threat of rationing is concerned, it is regarded as an empty one in view of the forthcoming elections. The Government reduced the imports of kerosene last year, which led to an

agitation, particularly in Calcutta and Bombay, and it had to restore the cut.

Draft of New Oil Prospecting Agreement

The general manager of the Burmah Oil Company, Mr. Condon, has just left for London with the draft agreement which is expected to be signed by the end of this month.

Estimates of Saving

The estimates of saving made by the National Council of Applied Economic Research suggest that savings in all sectors of the Indian economy increased from about Rs. 600 crores in 1949-50 to Rs. 1,200 crores by 1957-58. The Council's study shows that the shares of corporations, the Government and individuals in national saving are of the order of 5 percent, 15 percent and 80 percent respectively. The individual's sector which represents non-corporate business enterprises and all other households including individuals, is the most important in the national economy for saving. This sector has in it at least two major sub-sectors, namely, entrepreneurial or business sector and non-entrepreneurial or personal sector. The Council could not at the present stage show separate estimates of savings by these two subsectors within the individuals' sector. However, its current surveys of saving in rural and urban India are expected to provide adequate data to permit the desired break-down.

The total domestic investment which was about Rs. 600 crores in 1948-49 registered an all-time record of Rs. 1,600 crores in 1957-58. The Government appears to be mostly responsible for this increased investment and accounts for about half of the total investment in the economy during 1957-58, compared with its investment of only Rs. 160 crores in the year 1948-49. Corporate investment increased from Rs. 150 crores to Rs. 250 crores during the same period. However, individuals' investment which stood at Rs. 300 crores in 1948-49 rose to Rs. 600 crores by 1957-58.

Except for three years, 1951-52, 1952-53 and 1953-54, all other years witnessed positive net foreign investment both on Government and private account in India. The average for the ten-year period of net foreign investment to the domestic investment works out to about 12 percent. But during 1957-58, it was about one-fourth of the total domestic investment which provides a significant insight into the rôle of foreign investment in India's economic development. The Government investment, on the other hand, recorded a constant rise from Rs. 160 crores in 1948-49 to nearly Rs. 800 crores in 1957-58, the tempo of investment being more prominent in the last four years of the series. A greater portion of total Government saving and investment is contributed by the public authorities, namely, Central and State Governments and the local authorities and the rest by the Government statutory corporations and Government-registered companies. Of the public authorities again, it is departmental enterprises that contributed a major share of the total investment.

The Council's estimates of marginal and average saving-income ratios for the nation—0.20 and 0.10 respectively—point to an income elasticity to save of 2. This finding suggests that national saving would be of the order required to place the Indian economy well on the path of *self-sustained* growth from 1975-76 onwards.

I.F.C. Invests in K.S.B. Pumps

The International Finance Corporation has announced a commitment to invest $(U.S.)210,000 in K.S.B. Pumps Private Ltd, of Bombay, to help finance the construction and operation of a plant in Pimpri, near Poona, for the manufacture of special-purpose pumps. The principal shareholder is Klein, Schanzlin and Becker A.G. (K.S.B.) of Frankenthal, West Germany. Other shareholders are: the Industrial and Prudential Investment Company Ltd of Bombay; the New India Development Corporation (Private) Ltd; and a private investor. K.S.B. will be responsible for the construction of the plant, and for the Indian Company's management and technical direction. Production is planned at about 800 pumps annually, and is expected to begin in 1962. The total cost of the project is estimated at $(U.S.)630,000. The I. F. C. investment of $210,000 is in unsecured dollar notes bearing 7 percent payable in dollars, and maturing between 1966 and 1971. The I.F.C. will also be entitled to receive additional interest in rupees related to profits. The I.F.C.'s commitment is subject to completion of the necessary legal formalities.

Consent to Bonus Issues

The Controller of Capital Issues has granted consent to six companies for the issue of capital of various categories. The Companies are: Arvind Mills Ltd, Ahmedabad, Raipur Manufacturing Company Ltd, Ahmedabad, Standard Mills Company Ltd, Bombay, Birla Jute Manufacturing Company Ltd, Calcutta, Delta Jute Mills Company Ltd, Calcutta and Electroflo Limited, a new company in West Bengal.

Arvind Mills Limited, Ahmedabad: Messrs Arvind Mills Ltd, Ahmedabad, has been granted consent to issue 40,000 ordinary shares of Rs. 100 each in the proportion of two bonus shares for every three shares held on capitalisation of its general reserve to a like extent. Its present paid-up capital is Rs. 86,25,000, comprising Rs. 60 lakhs in equity shares and Rs. 26.25 lakhs in preference shares. The consent order is valid for a period of 12 months from the date of issue.

Raipur Manufacturing Company Limited, Ahmedabad: Messrs Raipur Manufacturing Company Ltd of Ahmedabad doing the business of manufacturing cotton yarn and cotton cloth, has been granted consent to issue 20,000 ordinary shares of Rs. 100 each as bonus shares. The Company has a paid-up capital of Rs. 40 lakhs, consisting of equity shares of the value of Rs. 30 lakhs and preference shares of Rs. 10 lakhs. The bonus shares will be allotted in the ratio of two for every three shares held by the existing equity shareholders.

Standard Mills Company Limited, Bombay: The Standard Mills Company Ltd, Bombay, has been given consent to the issue of 43,900 equity shares of Rs. 100 each as bonus shares in the proportion of two bonus shares for every five shares held. The paid-up capital of the Company on the date of application was Rs. 121.75 lakhs. The consent is valid for 12 months.

Birla Jute Manufacturing Company Ltd, Calcutta: The Birla Jute Manufacturing Company Ltd, Calcutta, has been granted consent to the issue of capital of Rs. 22,81,500 in 228,150 shares of Rs. 10 each as fully paid-up bonus shares on the capitalisation of the Company's reserves to a like extent. The bonus shares would be issued after the Company has completed the issue of 456,300 new equity shares of Rs. 10 each at a premium of Rs. 6 a share, for which consent was obtained early in February last. The Company's paid-up capital on date of the bonus issue application was Rs. 215.94 lakhs, consisting of equity shares of the value of Rs. 91.26 lakhs and Rs. 123.64 lakhs in preference shares.

Delta Jute Mills Company Ltd, Calcutta: The Delta Jute Mills Company Ltd, Calcutta, has been granted consent to the issue of capital of Rs. 37.10 lakhs in (1) 28,000 equity shares of Rs. 100 each at par to be issued to the holders of 28,000 equity shares in Belvedere Jute Mills Company Ltd. and (ii) 9,100 preference shares of Rs. 100 each at par as fully paid to the holders of 7,000 preference shares in the Belvedere Jute Mills Company Ltd, in exchange of the assets and liabilities of the Belvedere Jute Mills Company Ltd. The consent is subject to the orders of the Courts approving the amalgamation of the Belvedere Jute Mills Company Ltd, with the Delta Jute Mills Company Ltd. The consent order is valid for 12 months.

Electroflo Ltd, West Bengal: Messrs Electroflo Ltd, a new company in West Bengal, has been given consent to the issue of capital of Rs. 50 lakhs in: (i) 400,000 equity shares of Rs. 10 each, and (ii) 10,000 cumulative non-redeemable preference shares of Rs. 100 carrying dividend at 9.2 percent. The capital is required for the Company's scheme for the manufacture of watthour meters, in collaboration with a Japanese Company who will also invest in preference capital to the extent of Rs. 8.17 lakhs. The consent is valid for a period of 12 months.

New Capital Consents

During the quarter ended 31st December, 1960, the Controller of Capital Issues has given consents to 157 applicants involving an amount of Rs 133.3 crores. A break-up between agriculture and allied activities, industrial and non-industrial groups indicates that out of the total amount consented to, 0.4 percent was for agriculture and allied activities, 94.2 percent for industrial and 5.4 percent for non-industrial groups. An analysis of the type of securities to the issue of which consents were given disclose that 80.8 percent of the issue were in ordinary shares, 3.7 in preference shares and 15.5 in debentures and loans, etcetera. From a further classification of consents given between Government and non-Government companies, it will be seen that the former class represents 14 companies involving an amount of Rs. 57.27 crores, and the latter represents 143 companies involving an amount of Rs. 76.03 crores. A break-up between public and private companies shows that consents to 120 public companies and 37 private companies involving an amount of Rs. 69.5 crores and Rs. 63.8 crores, were given during the period October-December 1960.

Working of P.L. 480 Agreement

The first annual review of the working of the P.L. 480 Agreement, under which India is purchasing 16 million tons of wheat and 1 million tons of rice from the United States over a period of four years, is due next month. The P.L. 480 Agreement provides for "sufficient flexibility" in the quantity to be imported by India each year, making it possible for the Indian Government to regulate purchases with reference to annual requirements from time to time, transport, storage accommodation available and other relevant factors. Purchase authorisations for each year are to be determined on the basis of these annual reviews.

Free Movement of Khandsari

The Government of India has removed all restrictions on inter-State movement of *khandsari*, sugar candy and *bura* sugar with immediate effect. An order amending the Sugar (Movement Control) Order 1959, has been issued. At present, there is no restriction on inter-State movement of confectionery. Restrictions on inter-State movement of factory-made sugar will continue.

Indo-Nepalese Trade Treaty

Meetings between the Indian and Nepalese trade delegates in terms of the Treaty of Trade and Transit between the two countries were held in New Delhi during last week. The treaty, which came into force on 1st November, 1960, provided for periodic consultations between the two Governments in order to resolve the difficulties which might arise in its implementation. The talks were held in order to remove some of the procedural difficulties which had come to light in the working of the arrangements for the transit of goods to Nepal through the Indian territory. One of the difficulties of the Nepalese importers was over the bonds which had to be executed under the rules for the goods in transit to Nepal. As it was represented that this led to the locking up of the capital of the Nepalese importers for a considerable time, it was agreed after discussion that the amount of the bond would be drastically scaled down. Further, as the Government of Nepal has appointed an Agent for clearing the bulk of the goods, the Indian delegation agreed that a general bond with the smallest possible amount of surety may be executed by this Agent for this purpose. To facilitate the free movement of passengers and their baggage, the Indian delegation further agreed to a considerable relaxation in the procedure at present being followed, and to permit *bona fide* baggage to pass in transit without special formalities, even if such baggage did not strictly conform to the Indian Baggage Rules. The Indian delegation also agreed to allow the transit of goods to Nepal by road in special circumstances. In various matters, such as air transit of goods, or where a part of a consignment is short-landed, it was decided further to simplify the existing procedure so as to avoid any hold-ups.

Working of the E.S.I. Scheme

The Mudaliar Committee was appointed in October 1959 to enquire into the working of the Employees' State Insurance Corporation, with particular reference to the delay in the extension of the scheme to new areas, extension of medical care to families and the delay in the construction of hospitals. The Committee, whose report is now available, has made scathing criticism of the working of the scheme. The report says: "The visits paid in Bombay and Calcutta to the various consulting rooms of the panel doctors have indeed been a most disappointing experience. In Bombay the panel practitioners have so-called consulting rooms which are in small places in the main thoroughfares and are not dissimilar to the cubicles where small shops might have been located.

INDIA STEAMSHIP CO., LTD.

"INDIA STEAMSHIP HOUSE", 21, OLD COURT HOUSE STREET, CALCUTTA-1
Managing Agents:—LIONEL EDWARDS (PRIVATE) LTD.

Several of these places were visited by me and it cannot be said that there are facilities such as would be expected for proper consultation and examination of the employees. While realising that the availablity of space in Bombay is a problem and is known to be extremely difficult, it cannot be said that many of these places where panel practitioners are supposed to look after the interests of the employees can be said even remotely to approximate to what a consulting room ought to be.

"In Bombay, there are several kinds of 'medical practitioners', who are on the panel. These are: (1) the Ayurvedic *vaids*; (2) the practitioners qualified from the Integrated School of Medicine; (3) 'Registered practitioners', an expression which is peculiar to Bombay only. This group represents all those who have been practising any form of medicine prior to the introduction of the Registered Practitioners Act of Bombay somewhere in 1947-48 and (4) the practitioners who hold the degree qualification or the licentiate qualification in modern medicine.

"Calcutta and Howrah: The position concerning panel practice here is more or less similar to what obtains in Bombay. In some ways the premises where the panel practitioners are supposed to practise are even more disquieting to view. Some of these places are not merely in slum areas but are actually slums themselves. Both in Bombay and in Calcutta, as has been already mentioned, many of the so-called consulting rooms of the panel practitioners are merely little cubicles which were probably utilised formerly for pan-shops. When it is realised that the inclusion of families will mean that for each such insured person and family, the rate to be given to the panel practitioners will be Rs. 13-8 in most States and Rs. 15-8 in Calcutta and Bombay, the Allocation Committee in fairness to the employees and their families, will have to review the whole position and lay down definite conditions under which the panel practitioners concerned may be taken on for the scheme. In my opinion, the Allocation Committee has failed to recognise its responsibilities both in Bombay and in Calcutta in the matter of dispensaries as well as for some of the hospitals which have been recognised.

"My visit to hospitals, particularly in Bombay, has not enabled me to appreciate the facilities in several of the private hospitals or nursing homes. I visited a hospital in Bombay where there were over 100 insured persons and it is not surprising that the amount of over-crowding, insanitation and the mixing up of tuberculosis patients with other patients gave a dismal picture of the facilities for hospitalisation. It may be stated in this connection that for every bed reserved and occupied by an insured person, payment of Rs. 7-8 a day is made to the establishment to cover treatment, surgical care where necessary, and diet together with the diagnostic facilities that are expected to be available in a hospital. It need not be added that there were no X-ray facilities in the institution I have referred to. It was reported later, on my second visit, that the particular hospital could not take more than 40 and the strength was reduced. It would have been unnecessary to have utilised such places as hospitals if the Corporation had launched on the scheme of building hospitals at a much earlier stage. In fact, this should have been one of the highest priorities in the implementation of the scheme.

Dispensary in Delhi

"It was noted that in a most crowded locality of Delhi, the ground floor of a particular building which was dark and dingy was being used as a dispensary, two large rooms thereof being considered for housing in-patients. The whole set-up of the dispensary gave a rather dismal picture of what the employees had to go through and when it was stated that this small part of a storied building was rented for Rs. 2,000 a month, one could not help feeling that with the amount expended during the last three or four years, it would not have been difficult to have built an insurance hospital or more than one polyclinic for the permanent use of the Corporation. I strongly advise that wherever rented buildings have been used, every effort should be made to construct immediately new hospitals and polyclinics.

"Although the panel doctors are expected to be at the consulting rooms between 7 and 10 in the morning and between 3 and 5.30 in the afternoon, or other fixed hours which are notified for each area, going round in the morning hours between 8 and 9, it was found that there was no panel doctor available in several places. In Coimbatore, out of about ten clinics visited, six clinics had not the panel doctors present between the hours of 8 and 9 a.m. The seriousness of this sort of irregular attendance will be obvious when it is realised that an insured employee has to be present at a mill or factory by a particular time, in many cases between 7.30 a.m. and 8 a.m. And if for any slight ailment, he comes to the panel doctor and finds he is not there, he will necessarily have to lose a day's attendance unless it is certified that it was necessary from the point of view of his condition to be absent.

"I am concerned with the proper care of the employees and with the medical attention they ought to receive, whether by panel doctors or by service doctors; and I must with regret say that I am not convinced that the scheme ensures prompt and proper attention by medical personnel concerned. In some cases, it is not the fault of the panel doctor or the service doctor because the conditions are such as not to enthuse him to the type of attention that one is entitled to expect from him. Whatever may be the treatment that may be afforded particularly by reserving beds in certain State hospitals, it is the feeling of the employees at several places that they are not treated very differently from those who get hospitalisation without contributing anything towards such facilities. Even in cases where it has been suggested that the treatment is different, the psychological factor which an employee has got that he and his employer have paid for what he is entitled to is hard to be satisfied. At present, the hospital facilities that are available are hardly sufficient to meet the needs of the insured people. It is unnecessary to state that if the families are also included, the hospital facilities will be deplorably inadequate."

LONDON CONFERENCE DISCUSSES MARKETING OF TEXTILES

STUDY GROUP FORMED TO CO-ORDINATE EFFORTS OF PRODUCING COUNTRIES

(FROM OUR LONDON CORRESPONDENT)

LONDON was the venue last week of a four-Power conference on the marketing of textiles which promises to have far-reaching consequences for all producing countries in the future. The immediate outcome of the London discussions was the creation of a continuing study group with the object of co-ordinating the efforts of the industrially advanced nations with those of the underdeveloped countries. Mr. George Ball, the U.S. Under-Secretary for Economic Affairs, was present at the conference. He is regarded as Mr. Kennedy's chief adviser on the general implementation of aid programmes. It seems likely that what he is able to work out in the specific field of textile production and marketing will serve as a guide to the overall problem of how the industrial nations can channel aid overseas without unfortunate repercussions at home.

The dilemma was well expressed by one of the delegates, who said: "It makes no sense at all to pump money into various industries in underdeveloped countries and then discriminate with high duties and quotas against the products of those industries when the newcomers want to start selling them in our markets." The London conference is the first of a series to be attended by Mr. Ball, who goes on to Bonn, Paris and Rome, and probably to the G.A.T.T. talks in Geneva as well. At President Kennedy's request, he is to confer with all other major textile producing countries. Of the ten largest exporters, four are in the "underdeveloped" category. Some idea of the importance of the London conference can be gauged from the fact that the chair was taken by Sir Frank Lee, the senior member of the staff of the U.K. Treasury.

Mr. Macmillan on E.E.C. Membership

The U.K. Government's intentions concerning the membership of the European Common Market is a subject which is much discussed at present. The Prime Minister indicated in the House of Commons the other day the way in which Britain could join the Common Market "Six" fully. He hoped that the Treaty of Rome could be amended. That, he said, is asking a great deal. But he added it might be that Britain could be admitted as a full member, subject to a protocol, covering certain conditions. It is still clear that top-level negotiations will not take place for some time. Mr. Macmillan emphasised that Britain could not make the sole decision. The European Common Market countries must decide whether they can agree to the necessary conditions. Answering a final question from Mr. Gaitskell, the Prime Minister said: "The ultimate thing is full membership or association with the present members of the Rome Treaty. I hope we should be able to form a partnership for Europe consistent with our duties to the Commonwealth, to agriculture and, of course, to our partners in E.F.T.A."

The subject was also discussed in the foreign affairs debate in the House when Mr. Edward Heath, the Lord Privy Seal, gave every reason why Britain should join the European Common Market, and did so with some emphasis, stopping short only at commitment. The preliminary discussions are continuing.

Trade Gap Narrowed

Britain's trade gap—measured by the excess of imports over exports—narrowed considerably last month. With exports, including re-exports, at £331.3 million, and imports costing £355.3 million, the gap was down to £24 million. This was the smallest visible gap for two years. It compares with £74.1 million in March and with £54.7 million in April last year. The figures were better than had been expected in the City. Exports—in the face of increasing competition—are holding up well and the long-expected reduction in imports appears to be getting under way. The April import bill of £355.3 million compares with £398.9 million in March.

The overseas trade picture indicates a continuation of the improving trend noticeable since the end of last year. On the export side, the figure of £318.6 million is encouraging in itself, comparing with £309.9 million in March. February, March and April together show a monthly rate of exports 1½ percent higher than that of the previous five months from September-January. Taking the first four months of the current year, exports show a 4-percent rise on the average monthly rate for the whole of last year. Even more reassuring than the export performance is the fall in the import bill. The monthly rate for the period February-April shows a 5-percent reduction, compared with September-January. In the first four months of this year, there was a fall of ¼ percent, compared with the monthly rate for 1960. The signs are thus reassuring, but the position has by no means been reached in which the risk of fresh moves to contain home demand can be ignored.

Industrial Production Remains Static

Industrial production, on the other hand, stubbornly refuses to expand. The provisional index for March, seasonally adjusted, is again unchanged at 120 and the average for the first quarter is the same as that for the fourth quarter of 1960, or indeed the same as for the first quarter of that year. With full employment nearing the breaking point in most parts of the U.K., it is becoming either mysterious or alarming that all these bustling people toiling at the bench or desk do not seem to be able to increase the nation's industrial output.

Steel Output and Prices

Steel production is still well below the record level of 504,000 tons a week reached in November last year. The weekly output in April averaged 471,600 tons, compared with 470,000 tons in March and 478,100 tons in April 1960. Announcing the figures, the U.K. Iron and Steel Board stated that stocks of steel held by merchants and users were still rising. During the first quarter of the current year, there was an increase of about 60,000 tons, although it was considerably less than the rise of 250,000 tons a quarter throughout 1960. Stocks held by motor-car manufacturers have been reduced, but the fall has been offset by increases in other industries. The Board estimates that 3.7 million tons of steel were used between January and March.

Stocks in Company Accounts

The Inland Revenue has given its decision on the recommendation of the Institute of Chartered Accountants about the proper treatment of stocks in company accounts. With reservations, it has accepted a change which means a review and probably a modification of the stock accounting methods of every business in the U.K. The recommendation was informed by the wish to find a basis for valuing stock and work-in-progress. This will ensure that the figures appearing in the annual accounts give a true and fair view of the year's trading results and a company's financial position at the balance-sheet date.

A uniform basis for every company is impracticable, but the Institute maintained that the choice would normally lie between valuing stocks at the lower cost and "net realisable value" and at the lowest of cost, net realisable value and replacement price. The formulae will permit companies, starting with the cost of their stocks, to write off where necessary the proper amounts, leaving them with a net figure which is meaningful and not misleading. The valuation of stocks is not merely an internal matter, since it materially affects a company's tax liability through the influence it has on the year's profits.

The Institute not unnaturally is pleased that the Inland Revenue has found its recommendation "largely acceptable." The reservations are three. In computing the net realisable value of stocks, the Inland Revenue does not accept in principle that general selling costs which may be incurred in future when disposing of the goods should be allowed for. In practice, it is prepared to consider special cases. Secondly, the department is not ready to accept replacement price as the basis for valuation, an alternative to actual cost or net realisable value. The reason is that replacement cost may be less than actual cost because the company has written off part of the cost in anticipation not of making a loss but of making a smaller profit than it originally thought. Here again, however, the department is flexible enough to consider special cases. The third reservation concerns the exclusion of all overheads from the value put on stocks. The Inland Revenue has recently lost a case in the House of Lords on this point and is obliged to accept the "direct cost" method of stock valuation, but only where this is normal practice or when a change of circumstances justifies a change of method. The Institute thinks the department's attitude very helpful in establishing sound stock valuing practices and removing many of the difficulties hitherto encountered in assessing tax liabilities.

A MODERN CLOCK FOR MODERN PEOPLE

A modern office or home needs a smart, attractively designed "Electric Clock". The Anglo-Swiss "Electric" Clock is just what you need. It needs no winding.

Dial 6" Overall diameter 7½" Model No. CL-19. Rs. 80/-
Dial 9" Overall diameter 11" Model No. CL-20. Rs. 100/-
Dial 12" Overall diameter 14" Model No. CL-21. Rs. 110/-
Dial 16" Overall diameter 18" Model No. CL-22. Rs. 125/-
Dial 24" Overall diameter 28" Model No. CL-23. Rs. 210/-

This clock runs smoothly and accurately on A/C mains, 220-230 volts. These clocks are available in 3 colours, Brown, Black and Cream.

Interchangeability of parts guaranteed. The beauty of the metal highly polished case is enhanced by the use of bold figures and hands. Fitted with red centre second hand. Current consumption ¼ units per month.

Jute

GUNNY PRICES REMAIN WEAK ON LACK OF OVERSEAS ENQUIRY

FIBRE QUOTATIONS EASE AS I.J.M.A. LOWERS CEILING RATES

THE easier tendency in prices of both fibre and jute goods is probably mainly responsible for the present quietness in the markets. Buyers continue their cautious policy and take up only urgent needs. The main point of issue during this past week was the lowering of the I.J.M.A.'s maximum price for raw jute to Rs. 56 a maund for Assam Bottoms. This was a cut of Rs. 6 a maund on its previous maximum price, and was not unexpected. The success of the scheme has really exceeded all optimistic expectations, and few had anticipated that within three months further reductions would be made. In spite of the success, the mills are really no better off now than they were at the beginning of the price fixing; in fact, as far as manufacturing losses are concerned, they are now in greater distress. Since the time when the price of raw jute was fixed at Rs. 62 a maund, sacking prices have fallen by Rs. 400 a ton and hessian by Rs. 500 a ton. During this time, raw jute only fell by Rs. 162 a ton. So the price of raw jute has a long way to fall before simultaneous business can be done at a profit.

In spite of the difficulties involved, the trade in general is pleased to see the jute goods prices taking on lower levels, as the higher prices were detrimental to the trade and constituted the main stumbling block to fresh overseas business. In the past ten years, jute goods have played an increasingly important rôle in the country's foreign exchange earning. During this term, it has risen from third place to first of the principal dollar earners—rubber and wool taking the first two places in 1950. This is a very creditable performance particularly as 1950 was an exceptionally good year when heavy stockpiling took place in the U.S.A. after the outbreak of the Korean war. Meanwhile, statistics compiled by the U.S.A. show a steady increase in the use of substitutes, particularly paper in the form of multiwall bags. One thing which appears clear from the reports coming through is that Indian jute manufacturers are not only up against paper and cotton, but are meeting with increasing competition from Continental mills, and Pakistan, with whom some quite big orders have been placed for shipment during the second half of the current year. An extract from an overseas letter states that fair business has been done with European mills recently and goes on to say that "so far as I know no business at all has gone to Calcutta." This continued lack of interest is responsible for the present weak state of the Calcutta markets, and as far as can be ascertained, practically no foreign business has been placed with shippers here during the week. In addition, the market is being further depressed by the activities of "bull" operators who are said to have large holdings of both hessian and heavy goods which they are now anxious to dispose of. At the lower levels, however, there was some internal business and also shipper covering, and rates improved a little from the lowest levels but later declined.

Mills Keeping Off

The fixing of lower maximum prices for raw jute does not appear to have evoked much interest from mills. Since the price was reduced to Rs. 56, practically no business has been reported, and even those concerns who usually take up each quota issue as and when allocations are made have held back during the current week. Their attitude is that prices cannot go any higher now, so they are content to wait for a fall as long as present stocks permit. May sellers who only a few weeks ago spoke contemptuously of maximum prices and predicted that they would be selling jute at Rs. 70 and over in June and July have now had a change of mind and have offered freely at the new lower maximum rates, and even below, without any success. More jute has come out on offer within recent weeks but by no stretch of imagination will this fill the gap before the new crop arrives. There is still going to be a deficit, and it looks as if mills will have to close for a period to conserve stocks. This would not be necessary if the Government took a more realistic attitude to the problem and allowed the import of Siamese jute on a liberal and duty-free basis, if only for a limited period, to see the mills through the present crisis. Some mills have actually bought samples of Siamese jute, which they find compare very favourably with Indian jute. They are convinced that the solving of the problem could lie in the use of this fibre. In spite of many assurances from the Customs and Government officials, however, that any duty paid would be refunded, these companies are still waiting for the refund of the 30 percent duty paid by them on the samples imported, and this, in one particular case, after several months.

It is inconceivable that the Government should not take advantage of this opportunity to help the country's foreign exchange earners. With duty attatched, the price of Siamese jute will be prohibitive, but if the duty were withdrawn, Siamese jute could be bought on a competitive basis and may help to bring down further the price of Indian jute. If this is done now, Siamese jute could be in the mills' godowns within a month, as many offers are for ready shipment, but any further delay will make it too late, and the disastrous effects of a block closure will have to be faced. If the Government is so concerned about the effect of a closure on labour relations, then here is the answer. The value to the industry as a whole, plus the wholesome effect of a satisfied labour force, far outweighs any small monetary gain that may be received through Customs duty on imported jute from Siam.

Raw Jute Arrivals

During April, raw jute arrivals in Calcutta and mill stations amounted to 316,600 bales, made up of 21,600 bales from Pakistan and 295,000 bales from India. This is the lowest total for April since separate records for India and Pakistan were instituted. It is 99,350 bales less than the previous month due to a fall of 99,800 bales from Indian stations. Arrivals from Pakistan showed a small rise of 450 bales on the previous month. Compared with April 1960, arrivals from Pakistan are down by 3,900 bales and those from India are down by 62,550 bales, making a total drop of 66,450 bales. Total arrivals for the period July 1960-April 1961 are now 4,481,950 bales, consisting of 393,200 bales from Pakistan, and 4,088,750 bales from India. This is about 500,000 bales short of the estimated consumption of the industry during the same period. At this stage last year, arrivals were nearly 200,000 bales more than the estimated consumption.

THE JUTE MARKETS

Manufactured Goods: Once again, overseas business was at a minimum during the current week. The market opened on a weak note with prices in all sections showing a decline. B Twills dropped to Rs. 166 for May shipment and Rs. 140 for October-December shipment, while 40in. 10oz. was called over at Rs. 56.25 and Rs. 49.75 for the near and forward positions, respectively. In the absence of any fresh interest, and in sympathy with the easier fibre markets, goods prices began to go into a decline, and over the next two days, sacking lost Rs. 2 and hessians about Re. 1. Reports of a Central Government order for B Twills caused a revival of interest over the week-end, and local covering with this in mind helped to force prices up, and on Monday morning, quotations indicated that the previous losses had been made up. The rise in sacking was around Rs. 4, but this was short-lived as once the initial orders were covered, the market fell back. The fixing of new maximum prices for raw jute which caused a weaker undertone in the fibre section spread its influence to gunnies and before the close, prices had dropped to new low levels. There was still no interest from overseas, and with Wednesday being a closed day on account of yet another *hartal*, the gunny section finished up in a weak condition. There being no quotation on Wednesday, the following were Tuesday's opening prices.

	May	June	July-Sept.	Oct.-Dec.
40in. 7½oz.	41.00	41.25	40.25	36.50
40in. 8oz.	44.25	44.25	43.00	39.00
40in. 10oz.	54.25	54.50	53.50	48.50
B Twills	164.50	165.00	160.00	140.00
Heavy Cees (Plain)	164.50	165.00	160.00	140.00
A Twills	202.00	199.00	193.00	172.00
Liverpools	184.00	184.00	181.00	160.00
Cornsacks	167.00	168.00	163.00	143.00

Raw Jute: Speculation over the outcome of the I.J.M.A. committee meeting last week caused the market to take on a quieter undertone at the opening. Rumours that new maximum prices were to be fixed made sellers put more jute on offer to try and beat the order, but mills could not be tempted, although a fair quantity was purchased at one stage in Cossipore by mill agents. The price of Assam Bottoms opened at Rs. 57 a maund, and this quotation persisted up to the week-end, although there were many indications below this level. On Monday, the I.J.M.A. announced that as from that day, a new maximum level had been instituted, and this was based on Rs. 56 for Assam Bottoms. Immediately, the fibre price fell down to this level, although this price was really possible before the announcement. A small quota was again issued to mills, but there was no rush to buy even though many offers were put up at below the maximum rate. The undertone of the market became very weak as sellers increased the quantity on offer, but mills continued to hold off, and did not even give counter bids. On Tuesday, although business was possible at below the maximum level, general quotations were as follows:

Landed at Mills

(Basis Bottoms)

	Rs. a 100 kilos	Rs. a md.	Shipment
Assam	150.50	56.00	May-June
Northern	147.25	55.00	,,
Purnea Desal	144.75	54.00	,,
Daissee Selected	155.50	58.00	,,
Assam Tossa	151.50	56.50	,,
Mesta:			
Assam-Northern	143.25	53.50	,,
Desal	143.25	53.50	,,
Daissee	142.00	53.00	,,
Jungli	139.25	52.00	,,
Indian Cuttings	250.00 a bale		,,
Pakistani Cuttings	257.00 a bale		,,

THE FOREIGN JUTE MARKETS

FIBRE PRICES EASE ON NEW CROP OFFERS

(FROM OUR DUNDEE CORRESPONDENT)

SHIPPERS were inclined to offer new crop fibre last week, so there was an easier tendency in prices. As far as old crop fibre is concerned, very few offers have been made—and these consist of only trifling lots—at prices which are more or less unchanged. Business has been nominal so far, and it appears that jute from the current crop has become exhausted.

Spinners had not yet shown any interest in lower terms quoted last week for new crop fibre at £145 for Mill Lightnings and £140 for Mill Hearts for August-September shipment, with July-August at £155 and £150, respectively, c.i.f. U.K.-Continent. Old crop offers are lowest at £187 for Lightnings and £183 for Hearts, May-June. The difference in prices between old and new crop fibre is great, but it must contract considerably before long. The rates will have to fall substantially if Dundee spinners have to resume their buying operations. They have conserved a fair quantity of jute during the past few months due to short-time working in the mills, so it is likely they will not have to purchase on a large scale until prices reach much lower levels.

Calcutta goods weakened to some extent last week. Hessians fell to 84s 3d for 40in. 10oz. and to 63s 9d for 7½oz., May and June, 83s and 62s July-September and 73s 9d and 54s October-December, with B Twills at 250s, 242s 3d and 212s for the respective positions of shipment, all f.o.b., Calcutta.

Business in jute yarns improved during the past week due to the improvement in the volume of trade in jute cloth and bags. Prices ruled firm on the basis of 24.60d a lb for 8 lbs C.H.W. cops and 25.75d for 8 lbs J.C.H. warp, on spools. The carpet industry has shown more interest lately, and this has been welcomed by spinners who cater for that trade. Sacking yarns have, however, been practically idle.

Cloth prices are at 19.81d a yard for 40in. 10oz. hessians and 16.55d for 8oz., less 3-percent discount for prompt cash.

Books

AGRICULTURAL MARKETING

Agricultural Marketing in India and Abroad. By R. S. Srivastava. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 12.50, pages 243.)

Marketing constitutes the crux of India's food and agricultural problem, so the Government has tried to effect improvements in marketing efficiency as an integral part of its policies and programmes for raising agricultural production. The first three chapters of Mr. Srivastava's book deal with the socio-economic structure of India as well as the economics of the marketing structure. They are intended to provide a suitable background and perspective for a proper understanding of the subject. In later chapters, the author discusses the efficiency of the existing system and the mechanism for the marketing of agricultural commodities. There are comments on agricultural markets, marketing channels, the state of transport and storage as well as the cost of marketing. Besides, some well-known measures for reform and reorganisation such as the standardisation of weights and measures, the scope of co-operative movement and legislation have been discussed in the last three chapters. The author has adopted a statistical and comparative approach in his book. He has made an attempt to throw into bold relief the drawbacks in agricultural marketing and has cited facts and figures to show the progress and problems in India as well as in some countries abroad.

SOCIAL INSURANCE

Social Insurance for the Indian Working Class. By M. A. Chansarkar. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 12, pages 224.)

The author, Dr. Chansarkar, has reviewed the working of the Employees State Insurance Corporation after making a brief reference to the growth of ideas on social insurance in India. But his book is mainly descriptive, although it makes a fairly detailed review of the different aspects of the scheme. Dr. Chansarkar has reviewed the employees' provident fund scheme which has been made compulsory by legislation for some industries. In a concluding chapter, he discusses the problems of integration of social insurance during the third plan and examines the recommendations of the Menon Committee's report and other suggestions which have been made from time to time. The study is neither comprehensive nor analytical. Nevertheless, it is an informative book which will be useful to all those interested in the working of social insurance in India.

PLANNING AND POLICY

Planning and Economic Policy in India. By D. R. Gadgil. (Published by the Gokhale Institute of Politics and Economics, Poona 4. Review copy received from Asia Publishing House, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 12, pages 199.)

Professor Gadgil's book contains a series of notes and memoranda written by him since the beginning of 1955, all of which are connected with planning in India and the Government's policy. There is a justification for reprinting the papers written on specific occasions over the past six years, for the problems discussed in them are still worrying the planners in India. Professor Gadgil has a lucid style, and he has packed his book with elaborate facts and figures. It is difficult to reproduce here many of his well-reasoned observations, but two of his findings are: (1) a large number of policy decisions have not been implemented due to the conflicting interests of classes or groups in power. (2) The large units in private industry and trade in India pay their highest executives salaries comparable to those paid in the richest countries of the world. Although there is scope for controversy on these issues, there is no denying that Professor Gadgil's book is a valuable addition to the literature on planning.

EUROPEAN COMMON MARKET

Common Market Fiscal Systems. By E. B. Nortcliffe (Published by Sweet and Maxwell Ltd, London. Price 21s, pages 90.)

Mr. Nortcliffe's book is compiled from a series of articles which were published in the *British Tax Review* in 1959, and they have now been brought up-to-date. The author's main object is to make available to British business men and others the tax system of the countries of the European Common Market. Mr. Nortcliffe rightly points out in the preface: "It is impossible for the United Kingdom and other countries to ignore developments in the Common Market. Patterns of fiscal policy are constantly changing everywhere, and too insular an outlook is always liable to lead to unnecessarily expensive experimentation." The unification of economic and financial policies in the European Common Market can only be possible if there is genuine co-operation and sacrifice among the participating countries. The book will prove useful to the student of taxation.

Engineering and Transport

INDO-U.S. AIR TALKS FAIL

U. S. DEMAND FOUND UNACCEPTABLE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indo-U.S. air talks have failed. This was not unexpected. As recently reported by *Flight*, "every foreign airliner is now regarded by the Americans as a bird of prey. As the Italians, Dutch and Scandinavians have discovered in the past year, it is certainly becoming more and more difficult to obtain traffic rights from the United States. In fact, it would not be an exaggeration to say that a major reversal of American policy concerning the freedom of the air has taken place." A point made by Mr. Joseph Reap, a spokesman for the U.S. State Department, was that "U.S. carriers feel that there is some discrimination because they are limited to six flights through India each week, compared with 18 available to B.O.A.C." Mr. Reap presumably did not know that as matters stand, India is allowed five flights a week to New York, while the two U.S. carriers have six frequencies a week between themselves. As far as B.O.A.C. is concerned, firstly, India has had traffic rights over the whole of the Commonwealth route, from Hongkong to London. Under the British rule, India had the traffic rights even through Cairo without a separate air agreement with Egypt, much less to talk about Colombo, Singapore, and Hongkong. Then again, India has the pooling arrangement with B.O.A.C. and gets a *pro rata* profit from the 14 frequencies a week.

Just as the U.S.A. is tightening her control over traffic rights to safeguard the interests of her own carriers, she cannot blame India if she also took all possible steps to protect the interests of her only international airline. Knowledgeable persons hold that as far as India is concerned, the U.S.A. is fighting a losing battle. If Air-India does not get the traffic rights through San Francisco, the U.S.A. does not also get another frequency.

Air France to Use More Caravelles

Now that more *Caravelles* are available, almost the whole of the European network of Air France will be operated with these aircraft, or with *Super-Constellations*. On 1st June, Air France will open a daily *Caravelle* service between Paris and Manchester, and in its Middle East network, there will be a new service to Damascus. The London-Dinard service will be operated with *Super-Constellation* aircraft this summer, and a new daily *Caravelle* service will be inaugurated between Nice and Madrid. These are the principal changes; otherwise, the summer time-tables of Air France follow a similar pattern to those of last year with increased frequencies on many routes, especially those to the south of France.

Two More K.L.M. Trunk Line Services

Chief K.L.M. developments this summer are two trunk-line services. Between Amsterdam and New York, there will be at the height of the season, 31 round-trip flights weekly, 24 by *DC-8* jet airlines and the remaining seven by *DC-7C* aircraft. Increased jet frequencies on the route Amsterdam-Montreal-Houston-Mexico city will provide seven *DC-8* round trips a week between the Netherlands and Canada from June to October. *DC-8s* will take over operation of the mid-Atlantic routes from Amsterdam to Curacao and points in Central and South America. From 1st August, the twice-weekly service between Amsterdam and Johannesburg will be flown with *DC-8* jets instead of *DC-7s*. Frequency of services to West Africa will be increased from early June and all will be operated with Lockheed *Electra* aircraft. From August, the Polar route Amsterdam-Tokyo-Biak will be operated with *DC-8s*; thus all Far East services of K.L.M. will be jet operated. The principal change in the Middle East services is the extension of the Amsterdam-Amman line to Abadan.

S.A.S. Summer Schedules

Summer schedules of S.A.S. follow much the same pattern as last year. However, one important change is the operation in conjunction with B.E.A. of daily non-stop flights between Stockholm and London. Night tourist flights between Sweden, Denmark and Norway and the U.K. will again be operated in pool with B.E.A. The seasonal Oslo-Bergen-Glasgow route will again be operated three times weekly from June to September. All services to the Middle and Far East will operate to revised time-tables and there are some minor adjustments in routings.

B.O.A.C. Through-flight to Washington

In early June, B.O.A.C. will start a through service between London and Washington. Flights will be daily, three calling at Boston and four at New York *en route* for Washington.

Air Fare Changes

Fares between Abadan or Kuwait and Europe have been increased to the level of those applicable to Teheran and Europe; it is thus possible to travel to Teheran *via* Abadan or Kuwait from European points at the normal fare. For the sake of uniformity, fares between Baghdad or Basra and Europe have also been increased to a higher level.

Plantation Topics

INCREASING TEA OUTPUT IN THIRD PLAN

DANGER OF RAISING PRODUCTION OF PLAIN GRADES

THE question of exporting a larger quantity of tea is bound up with increased production. The Government has set as a target for the tea industry a crop of 900 million lbs to be achieved within the third five year plan. It is open to question at this stage whether the target will actually be attainable within the five-year period, say Messrs A. W. Figgis and Co. Private Ltd in their annual review of the north Indian tea season, 1960-61. Certainly, much will depend on the improved availability of fertilisers at a reasonable price. At present, this commodity continues to be in short supply. But if this situation is allowed to continue, it will have severe adverse repercussions on the industry. It might well be conjectured that the fall in the 1960 crop—primarily the result of drought—might well have been less severe had the industry been able to procure the full allocation of fertilisers, against only two-thirds of its requirements. Tea seed is yet another factor which is to be considered. But above all these considerations, sufficient resources for capital expenditure of which the industry is chronically short, will be required for implementing the planned target. There is, nevertheless, a large amount of young tea which will shortly be coming into full bearing. With ever improving methods of cultivation, one can hope for a steady increase in output. Bearing in mind the anticipated increase in the north Indian crop, coupled with the almost certain increase in output from tea producers of other lands which, like India, depend on tea for favourable trade relations with other countries, it is reassuring to know that there is much scope for expansion of the market in India itself. This could, in the event of world supply outstripping demand, act as a convenient buffer for the lower priced teas. Any attempts made to restrict this trend would, in the long run, be to the industry's disadvantage. It is unfortunate, however, that with the increase in internal demand, a large section of the plainer types of north Indian tea has been virtually priced out of the export markets, the firm says.

Satisfactory Returns

From the producer's point of view, the maintenance of a reasonable price level is essential if he is to have sufficient funds at his disposal to increase his crop materially. Certainly, the past season's returns can be considered satisfactory. There is, moreover, every indication that for the moment the internal consumption will be a major factor in supplying the required support for plain tea price levels. But what of the future with the expected increase in world crops? Surely the primary object of increasing tea production in India is to increase the export of the commodity, and on a market free from artificial hindrance to make more tea available to meet the growing internal demand. "But when the time comes, will overseas operators who now have their sights set elsewhere for their plain tea requirements be interested in a return to this market? We feel that they should be encouraged to return now." The firm says that it would apprently be unrealistic, and in fact dangerous, to make a lot more plain tea. Markets thrive on the balanced relationship between supply and demand and it would, therefore, seem only logical that apart from any considerations of foreign exchange earnings, plain tea should—as soon as possible—"be put back on the map for potential overseas buyers and in particular the world's largest consumer and that in the course of time their interest should be allowed to develop in healthy competition with the internal trade, increasing in volume *pari passu* with the anticipated increase in the north Indian crop. With a fair return now being obtained for this type of tea, the future implications of the situation may not at present seem so apparent, but the market for the competitive years ahead should be carefully considered in the light of the export situation as it exists today. The bulk of plain tea will, for the world's largest consumer, continue to be almost completely shut out if it is to remain shackled with what actually amounts to a protective tariff for the internal trade in the form of export duty, Messrs A. W. Figgis and Company say.

Removal of Export Duty

Part of the answer to the problem would seem to lie in the removal of this onerous burden. Unfortunately, the Government does not appear to be prepared to relinquish its hold on such a fruitful source of revenue. It can be argued that the removal of export duty will not immediately result in greatly increased foreign exchange earnings, but it is the firm's view that the long-term interests of the Government, trade and industry will surely suffer if the former continues to lay such a heavy burden on this commodity.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for April 1961:

Upper Assam: Weather abnormally wet; rainfall is much above normal for the season to-date; crop prospects are generally favourable; immediate prospects good; red spider blight prevalent in Doom Dooma and north Lakhimpur; severe storms without hail are reported from Nahorkatiya.

Central Assam: Weather seasonable; useful rain has fallen; crop outturn good; immediate prospects good; red spider blight prevalent in Golaghat and in Jorhat.

Lower Assam: Weather seasonable; useful rain has fallen; crop prospects are generally favourable; outturn good; immediate prospects fair.

North Cachar: Weather too hot for the time of year and rain is required; hailstorms reported from Lakhimpur, but little damage has resulted; outturn about normal; crop prospects are generally favourable; red spider blight severe in some districts.

South Cachar: Weather too hot for the time of year and rain is much wanted; immediate prospects fair; outturn about normal but in Hailakandi and Longai the outturn to-date is considerably above last year; red spider blight prevalent.

Eastern Dooars: Hot and dry weather is interfering with outturn; rainfall much below normal for the season to-date; crop prospects generally unfavourable.

Central Dooars: Weather seasonable; outturn about normal; immediate prospects fair; in Binnaguri, hailstorms are reported, but little damage has resulted so far.

Darjeeling: Outturn poor; immediate prospects bad; weather dry; red spider blight prevalent.

Terai: Crop below normal; severe drought conditions prevail; red spider blight prevalent.

COCHIN TEA SALES

At Sale No. 21, 468,000 kilograms of tea were on offer. There was a strong demand. Low mediums and mediums were sold around last rates. Good mediums and Nilgiris were irregularly easier.

WORLD COTTON YARN OUTPUT INCREASES

PIECEGOODS TRADE EXPANDS

THE cotton yarn output in 1960 in those non-communist countries for which regular figures are available—including all the major exporting countries—was about 4 percent greater than in 1959 and established a new record level, according to the U.K. Cotton Board's *Quarterly Statistical Review*. The biggest increases, compared with the previous year, were achieved by Japan and France, but all the important textile producing countries shared in the expansion with the exception of the U.K., the U.S.A., Canada and, possibly, Sweden. It is clear, however, that the global rate of cotton yarn production passed its peak some time in the course of last year. In the third quarter, the total output was only about 2 percent greater than in the corresponding period of 1959. In the fourth quarter, it was about 2 percent less than a year earlier. Production in the U.S.A. was much smaller than in the final quarter of 1959, and the U.K.'s output was also running slightly below last year's level. On the other hand, Japanese, Indian and Canadian production was greater than a year earlier and so was that of most of the continental European countries except Belgium, where activity was severely affected by strikes, and possibly Sweden.

The world trade in cotton piecegoods expanded notably in 1960 for the second year in succession. Exports from non-communist countries were about 11 percent greater than in 1959, the only important exporting countries not to share in the increase being the U.K., the U.S.A., India and Switzerland. The biggest increases in shipments, compared with 1959, were recorded by Japan, France and Spain. The expansion in world trade clearly levelled out and may even have been reversed during the year, however, since exports in the final quarter were no greater than they had been in the final quarter of 1959. Comparing the two periods, some striking contrasts are noticeable, notably a large increase in shipments from Japan and a large decrease in exports from India. The only other countries to export smaller quantities of cotton cloth in the last quarter of 1960 than a year earlier were the U.K., the U.S.A., Switzerland and possibly France.

Exports of man-made fibre piecegoods from non-communist countries in 1960 were much the same in total as in 1959 after declining for two successive years from the record 1957 level. The only countries to increase their trade in 1960 were, however, Italy and Japan. The recovery was mainly concentrated in the final quarter of 1960, when total exports from non-communist countries were about 6 percent greater than in the corresponding period of 1959. As for the year as a whole, this increase seems to have been virtually confined to Japan and Italy.

Marked Fall in U.K. Output

The rate of output of the U.K. cotton textile industry in the first two months of the current year was markedly lower than in the last autumn. There are two main reasons; the reduction in the standard working week from 45 hours to 42½ hours as from the middle of January, and widespread absenteeism because of illness. Single-yarn production in February was 7 percent below the November level. The biggest fall proportionately was in spun man-made fibre yarns, the trade in the coarse yarns for tufted carpets still being relatively depressed. The daily rate of cloth production in January—adjusted for holidays—was about 5 percent less than the level reached last October, which was the best month since the completion of scrapping under the reorganisation scheme. The rate of output of continuous filament rayon fabrics in January was actually greater than in October, but in contrast there were quite sizable decreases in the rate of output of heavy cotton canvas, tyre fabric, synthetic fibre fabrics and cotton man-made fibre mixture cloths. Meanwhile, the doubling section is still depressed. The rate of doubled yarn output (in terms of weight) in February was 8 percent less than in November and as much as 16 percent less than in May 1960.

Since October, new orders have been coming in rather slowly to the mills and order-books have been shortening. With the notable exception of the doubling section, however, order-books in general remain long and deliveries have been well maintained. Retail sales of clothing last year—corrected for price changes—were as much as 7 percent greater than in 1959, and in the final quarter of 1960 they were still as much as 5 percent up on the corresponding quarter of the previous year. The corresponding rate of increase, compared with a year earlier in January this year, was about 2 percent or 3 percent, which may indicate a slight decline, compared with the fourth quarter of 1960, on a seasonally adjusted basis. This is still a high level of retail sales, however, and represents a major source of strength for the cotton textile industry. The main weakness in the situation is the increase in stocks of cotton goods brought about by the flood of imports. Imports of cotton piecegoods reached a new record level of 195 million square yards in the final quarter of 1960, with increased quantities entering the country from Pakistan, Hongkong, Canada, the U.S.A., Yugoslavia, Formosa, Spain, Portugal and

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to April 1961. As compared with March, the April Indices for Food and Miscellaneous show rises of 3 points and 2 points, while those for Fuel and Lighting and Clothing remain unchanged at 287 points and 581 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during April 1961.

HUNCH OR HORSE SENSE?

Call it what you like, but we seem to have had it!

Today, the switch is to aluminium for electricity, a switch we pressed into the nation's service years ago, saving the country something like Rs. 6 crores in foreign exchange and continuing to save nearly Rs. 1.5 crores annually.

ALIND is geared for an annual production of: E.C. grade rod ... 10,000 tons
ACSR & All-Aluminium Conductors 13,000 tons
Covered Aluminium Conductors ... 15 million core yards
Conductor Accessories & Tools

a large number of west European countries and only India sending substantially less than in previous quarters. Imports of cotton piecegoods in January and February totalled 144 million square yards. Imports of man-made fibre piecegoods also increased further in the last quarter of 1960, the main source being the United States which sends mainly nylon fabrics.

Exports of cotton yarn, cotton piecegoods and man-made fibre piecegoods were all smaller in 1960 than in 1959. Exports of cotton piecegoods totalled 81 million square yards in the fourth quarter of the year, compared with 74 million square yards in the third quarter and 96 million square yards in the fourth quarter of 1959. British West Africa, French Africa, the Irish Republic and Indonesia were the only sizable markets to show increases, compared with a year earlier. Shipments to almost all other destinations were smaller, the decreases in exports to the Congo and Rhodesia and Nyasaland being particularly substantial. Exports of man-made fibre piecegoods were also considerably smaller in the fourth quarter than a year earlier, the decline being spread over all the main markets.

U.S. Conditions Deteriorate

Conditions in the U.S. textile industry have deteriorated sharply since the last summer and it is reckoned that there may well have to be further reductions in operating rates before orders pick up. In the fourth quarter of 1960, cotton consumption was 10 percent less than in the corresponding period of 1959, and in January of this year it was 13 percent less than in January 1960. Consumption of rayon staple and synthetic staple in the fourth quarter were, respectively, 7 percent and 12 percent less than a year earlier. The average number of hours a loom a week on cotton goods fell from 128 in January 1960, to 118 in November and the output of cotton broad-woven fabric in the third quarter of 1960 was 8 percent less than a year earlier. Production of rayon cloth was 15 percent down, but the output of synthetic fibre fabric was about 7 percent greater. Order-books for cotton cloth shortened steadily from the equivalent of 19.2 weeks' production at the end of January 1960, to 9.5 weeks' at the end of November, while over the same period mill stocks rose from the equivalent of 3.4 weeks' to 5.5 weeks' production. Because of these influences, average mill margins have been narrowing rapidly since the summer; in January they stood at 27.5 cents a lb, compared with 32.9 cents a lb as recently as August. The price of popular print cloth is reported as being 17.7 cents a yard in December, compared with 21.3 cents in June and 23.0 cents in December 1959.

Japanese Production Records

The high rate of activity enjoyed by the Japanese cotton and man-made fibre textile industries in 1960 was maintained in the final quarter, when production levels were higher than in any of the earlier quarters of the year. The cotton yarn output in the year as a whole was 16 percent up on 1959, and exceeded by 7 percent the previous post-war peak reached in 1957. The output of spun synthetic yarn easily passed the previous record level of production, being 83 percent greater than in 1959. On the other hand, production of spun-rayon yarn—although 7 percent more than in 1959—was 23 percent below the 1957 record level. Cloth production also expanded in 1960; cotton cloth by 17 percent, spun-rayon cloth by 12 percent, filament rayon cloth by 6 percent and synthetic fibre cloth by 78 percent. The strong expansion in the output of synthetic fibre cloth probably explains in part why cotton and filament rayon cloth production shows little change from the 1957 level and why spun-rayon cloth production is down. Another factor in the decline in the output of spun-rayon yarns and fabrics since 1957 is the reduced export offtake of spun-rayon fabrics.

There were big increases in Japanese exports of yarns and fabrics in the final quarter of 1960. Exports of cotton yarn amounted to 34 million lbs, compared with 18 million lbs in the third quarter and only 16 million lbs in the final quarter of 1959. Large shipments to Indonesia were the main feature. The big expansion in exports of cotton cloth—from 1,263 million square yards in 1959 to 1,425 million square yards in 1960—is probably due, at least in part, to a decline in the quantity of Chinese cloth reaching world markets. Japanese exports reached the huge total of 463 million square yards in the last quarter of 1960, against 363 million square yards a year earlier. The increase was widely spread, being particularly great in the case of British West Africa and Indonesia, but there was a substantial fall in shipments to Hongkong. The big decline in exports of rayon cloth from Japan seems to have been reversed in the course of last year.

India Faces Cloth Shortage

In India, mill production of cotton yarn and cloth in 1960 was slightly greater than in 1959, yarn production being up by about 1 percent and cloth production by about 2 percent. The increases in the fourth quarter, compared with a year earlier, were slightly greater than these. From 1st January, 1961, a revised price schedule has been enforced, reducing the prices of coarse and medium cloths by 5 percent and fine and superfine cloths by 3 percent. Some observers believe than marginal producers at the coarse end of the trade may now be forced out of business, thus further restricting cloth supply. However, in an attempt to increase production, the Cotton Mills Federation has agreed to ask all mills to work three shifts. It is estimated that this will increase the supply of cloth by 10 percent. The terms of reference for the Tariff Commission enquiry have now been announced; they include investigations into production, prices and distribution costs.

India's exports of cotton piecegoods are believed to have increased slightly in the final quarter of 1960, but the year's total was much less than that reached in 1959 in spite of the increased shipments to the U.K. The main factor was a severe decline in shipments to the Sudan accounted for by licensing arrangements. It is further reported that increases in prices made Indian textiles less attractive.

Exports from Hongkong Rise

The Hongkong Spinners Association has announced that the total number of spindles owned by member-mills was 490,688 at the end of November 1960. If the spindles of new mills about to enter production are added, the total exceeds 500,000. Nine other spinning mills are being constructed, and it is reported that there will be 700,000 spindles installed by the end of 1961. Hongkong's exports of cotton cloth in the first nine months of 1960 totalled 229 million square yards, against only 174 million square yards in the corresponding period of 1959. Slightly reduced shipments to the U.K. were more than compensated for by increased exports to many markets, especially the United States.

BRITISH TEXTILE REVIEW

CHEAP CLOTH IMPORTS

THE latest quarterly statistical review of the U.K. Cotton Board puts the U.K. cotton industry's experience last year in a worldwide perspective, and the effect is somewhat unfavourable. Output of yarn in the main producing countries outside the Russian bloc increased by 4 percent last year, but much of the rise is attributable to Japan and France, and Britain—in the good company of Canada and the United States—suffered a reduction. The main exporting countries, in the aggregate, increased their exports of cotton piecegoods by 11 percent last year, but in this matter, too, Japan and France were particularly prominent, while Britain—with the United States, India, and Switzerland—exported less than in 1959. It is too early to estimate the effects of the recent changes in Japan which seem at first sight to imply that Japanese competition will be moderated. The retention quota scheme allowed Japanese exporters to retain a percentage of the foreign currency earned by their exports, and it was for a time a strong stimulant to export; the scheme ceased to operate last September. The link system favoured exporters in the allocation of raw materials and for a time compelled them to develop their export trade in order to obtain enough cotton and wool; this scheme became ineffective at the beginning of April,when imports of cotton and wool into Japan were completely freed. But it would be foolish to pretend that these arrangements were recently the main factors in the growth of Japanese exports. The retention quota had been little more than nominal for some years before it was withdrawn, and the link system had lost much of its force as allocations of cotton and wool for domestic consumption had become more liberal.

Lancashire cannot afford to ignore any advantage that is offered. One advantage—a controversial one, admittedly—is an abundant supply of cheap cloth from abroad. A reminder by the chairman of the export section of the Cotton and Rayon Merchants Association, Mr. J. R. Bulmer, came opportunely when the possibilities of renewing the suppliers' voluntary export controls were being considered apprehensively in Lancashire. Forecasts of disaster if these cheap imports increase are still fashionable, of course; but Mr. Bulmer said in his annual report in April that more than a third of the U.K.'s exports of cotton piecegoods and about 15 percent of its exports of man-made fibre fabrics last year consisted of processed imported grey cloth. Availability, as well as price, has often favoured the imported cloth. Mr. Bulmer pointed out that some cloths woven at home had been impossible to obtain within a reasonable time, others impossible to obtain at all. "We have taken every opportunity", he said on behalf of his Association, "to emphasise at the highest level the undesirability of restricting imports of grey cloth which are required for processing in the U.K. and subsequent re-export."

A Temporary Downtrend

The volume of orders in most sectors of the textile industry has been diminishing, not alarmingly but perceptibly. Machinery activity has not been correspondingly curtailed, because orders were previously inflated, but (to use the conventional mixed metaphor) the froth has been blown off the boom. Restocking was a major factor in the boom of 1959 and 1960: last year, the reduction in Lancashire's capacity caused, perhaps, exaggerated ideas of scarcity. Not for the first time, restocking was rather overdone, and the recent curtailment of orders reflects the consequent destocking. An unsatisfactory aspect of the situation is increased difficulty in export trade; but domestic demand for both apparel and industrial textiles is well maintained—indeed, tending to increase in the industrial range. It is, therefore, unlikely that the pause in ordering is the beginning of a serious decline in trade. But it is likely that the restocking of Lancashire's products that would normally be expected after an adjustment will be delayed by the uncertainty surrounding the renewal of the export-limiting agreements with Hongkong, India, and Pakistan. However necessary the imports may be, they imply intensified competition in the home market. It should be remembered, too, that in this era of blending fibres, uncertainty cannot be confined to one sector, even a broad sector, of trade.

Meantime, the trend is uneven. The wool sector, which was the first to show symptoms of recession last year, has rather improved its position recently, fortified by the continuing strength of the clothing trade at the retail end, which is reflected in orders for delivery in the latter part of the year. Moreover, the change in the U.S. tariff on wool goods, however it may have been criticised as failing to provide a basis for fair trade, is now showing benefits to British exporters. They are thankful to be relieved of the anxiety of rushing in their goods "to beat the quota"—and often finding that the "bread and butter" lines of Italy and Japan had got in first. The flat-rate duty may not particularly favour Britain's "quality" goods, but because it does not discriminate against them it is an evident improvement on the tariff-quota system which it has replaced. In general, however, competition from Italy and Japan in the wool-textile trade is growing stronger. If recent more positive moves to bring the U.K. into the European Common Market are fulfilled, some major adjustments will be needed: in "quality" goods the British industry will benefit, particularly in the West German market; but in the cheaper range, Italian goods will make big inroads into the domestic firms' trade.

Stocking Trade Active

One sector of the business that is more prosperous than it dared to hope a year ago is the stocking trade. The boom in sales of circular-knitted seamfree stockings has not visibly affected sales of the fully-fashioned seamed variety, and the overall result is a rate of sales, in relation to the stocking-wearing population, almost as high as in the U.S.A. and Canada. One explanation of the buoyance of this market is the modernisation of distribution in retail trade generally: stockings, appropriately packed, are eminently suitable for distribution through self-service stores and supermarkets. This is one kind of British product that has great potentialities in the Russian market. The Hosiery and Knitwear Export Group remarked in its recent annual report that in its sector of the textile industry, Russia would be promoted from the 33rd place to within the top ten overseas customers, if last year's rate of progress in exports were maintained.

COMPANY AND PUBLIC NOTICES

THE DURBHANGA SUGAR COMPANY, LIMITED

NOTICE TO THE MEMBERS

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at the Maharaja's Office Building in Darbhanga, Bihar on the twentyfirst day of June, 1961 at 10-30 A.M. to consider and, if thought fit, to pass the following Resolutions which will be proposed as Special Resolutions:—

1. That the Capital of the Company be increased from Rs. 30,00,000 to Rs. 60,00,000 by the creation of 3,00,000 new equity or Ordinary shares of Rs. 10/- each.
2. That the Memorandum of Association of the Company be altered in the manner following, namely:—

   In Clause 5 the words "the capital of the Company is Rs. 30,00,000 divided into 3,00,000 shares of Rs. 10/- each" shall be deleted and there shall be substituted the following:—

   "the capital of the Company is Rs. 60,00,000 divided into 6,00,000 shares of Rs. 10/- each."
3. That the Articles of Association of the Company be altered in the manner following, namely:—

   In Article 3 the words "the share capital of the Company is Rs. 30,00,000 divided into 3,00,000 shares of Rs. 10/- each" shall be deleted and there shall be substituted the following:

   "the capital of the Company is Rs. 60,00,000 divided into 6,00,000 shares of Rs. 10/- each."

The Register of Members and the Transfer Register will be closed from the 10th June to the 21st June, 1961, both days inclusive.

Any member who is entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Directors,
THE DURBHANGA SUGAR COMPANY, LIMITED,
W. F. MALDEN,
Manager.

Lohat
District Darbhanga,
12th May, 1961.

THE CHAMPDANY JUTE CO., LTD.

THE Directors at a Board Meeting held today decided to recommend to the shareholders in General Meeting the payment of a dividend at the rate of 5% per annum or Rs. 5/- per share for the year ended 31st March, 1961.

A notice calling the Annual General Meeting for 16th June, 1961, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 18th May, 1961.

INDIAN COPPER CORPORATION LIMITED
(Incorporated in England)

The following are the returns for the quarter ended 31st March, 1961.

Calcutta.
Dated 12th May, 1961.

THE CHAMPDANY JUTE COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting (being the Seventy-first Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 16th June, 1961, at 12 noon to transact the following business:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in the place of the Director retiring.
4. To consider, and if throught fit, to pass the following Special Resolution for which special notice as required under Section 261 (2) of the Companies Act, 1956, has been received by the Company.

   As a Special Resolution

   "That Mr. N. S. Coldwell be and is hereby appointed a Director of the Company."
5. To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 5th June to 16th June, 1961, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfers are advised to effect registration of scrip in their names before 5th June, 1961.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
CALCUTTA, 23rd May, 1961.

NOTES:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

(2) The dividend, if declared, will be paid on or after the 16th June, 1961, to those shareholders so entitled, whose names appear in the Company's books on 16th June, 1961, or to their mandatees.

(3) Explanatory statement regarding Item (4)

Mr. J. H. H. Ross who was appointed a Director of the Company by Special Resolution of the shareholders passed at the Extraordinary General Meeting of the Company held on 24th January, 1961, has resigned from the Board with effect from 19th April, 1961 on his proceeding on leave outwith India. Special notice dated 15th May, 1961, of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employment of the Managing Agents.

Interest of Directors & Managing Agents.

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:—

Mr. A. I. Murison	...	10 shares.
Mr. B. Gill	...	10 shares.
Mr. R. G. Edwards	...	10 shares.
Mr. K. P. Goenka	...	100 shares.
James Finlay & Co., Ltd.	...	27,315 shares.

HERCULES INSURANCE COMPANY LIMITED
(Incorporated in India)

NOTICE is hereby given that the Twenty Sixth Annual General Meeting of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday the Sixteenth June, 1961 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1960.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 31,400 to the Directors as their fees for services rendered during the year ended 31st December, 1960.
6. To appoint a Director in the place of Mr. D. C. Kothari who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Sec. 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:—

   "Resolved that Mr. D. C. Kothari be and is hereby appointed a Director of the Company."

The Share Transfer Books will be closed from the 9th June, 1961 to the 16th June, 1961, inclusive.

By Order of the Board,
E. K. SRINIVASAN,
Managing Director.

Calcutta, 22nd May, 1961.

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 16th June, 1961.

Explanatory statement as required by Sec. 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

THE NEW SAMANBAGH TEA COMPANY, LIMITED

NOTICE is hereby given that the Fifty-eighth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Tuesday the 20th June, 1961, at 3-30 P.M., for the following purposes:—

(i) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.

(ii) To declare Dividends.

(iii) To elect a Director.

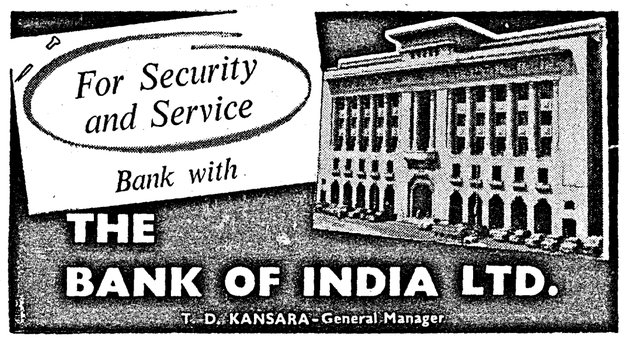
(iv) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 13th June, 1961 to 20th June, 1961, both days inclusive.

N.B.:—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 17th May, 1961.



KYANG TEA SEED COMPANY LIMITED

In supersession of the Notice of the Annual General Meeting appearing in the "CAPITAL" issue dated 18th May, 1961—NOTICE is hereby given that the thirty-third Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday the 15th June, 1961 at 3-30 P.M. for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.

(2) To elect a Director.

(3) To appoint Auditors and to fix their remuneration.

As a Special Business:—

(4) (i) To receive and consider the statement of affairs of the Company as at 31st December, 1960, prepared by the Managing Agents made up of the Balance Sheet as at that date and the Profit and Loss Account for the year to the 31st December, 1960.

(ii) To receive and consider the Report of the Auditors of the Company on the aforesaid Balance Sheet and Profit and Loss Account in accordance with the Companies Act, 1956.

(iii) To consider and if thought fit to pass with or without modification the following resolution:—

Resolved that, upon consideration of the Report of the Managing Agents on the state of affairs of the Company as on the 31st December, 1960 and the Balance Sheet made out as on that date and the Profit and Loss Account for the period commencing 1st January, 1960 and ending with that date and upon consideration of the Report of the Auditors on the said Balance Sheet and Profit and Loss Account, the Company doth hereby accept the resignation by Shaw Wallace & Co. Ltd. of the office of Managing Agents of the Company with effect from the said 31st December, 1960 and the Company doth also put on record its appreciation of the services rendered by Shaw Wallace & Co. Ltd. as Managing Agents and *It was further Resolved* that with effect from 1st January, 1961 the management of the affairs of the Company shall be vested in the Board of Directors of the Company.

(5) To consider and if thought fit to pass with or without modification, the following resolution as an ordinary Resolution.

"RESOLVED that Mr. S. M. Smith an additional director of the Company who vacates his office under Section 260 of the Companies Act, 1956, be and is hereby appointed as a Director of the Company."

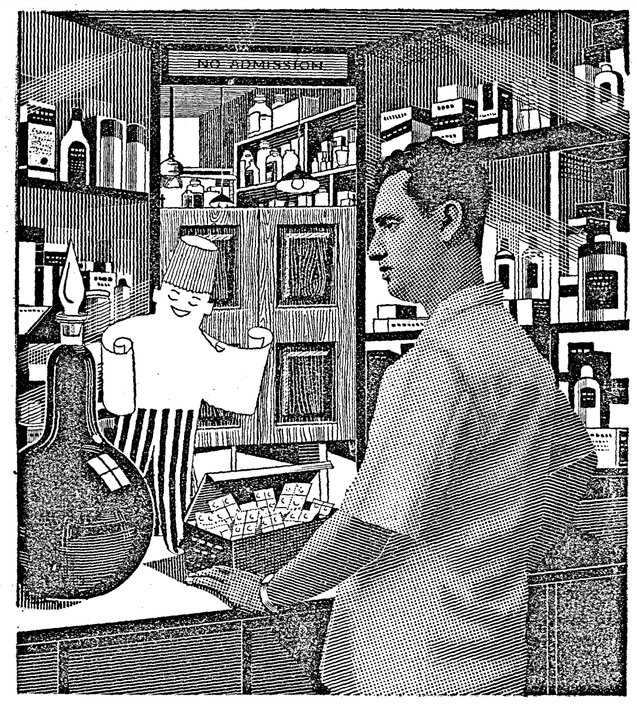
The transfer Register will be closed from 8th June, 1961 to 15th June 1961, both days inclusive.

N.B. A Member entitled to attend and Vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LIMITED,
Managing Agents.

Calcutta, Dated 12th May, 1961.

NOTE: An Explanatory Statement under Section 173 of the Companies Act 1956 has been sent to the Members of the Company by post.



MEDICINE MAN MR. AL FOIL F.G.S.P.P. ...

"... Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt ... And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries

VENESTA FOILS LIMITED KAMARHATI, 24 PARGANAS, WEST BENGAL

RAJNAGAR TEA COMPANY, LIMITED

NOTICE is hereby given that the Sixty Eighth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 3-25 P.M. on Tuesday, the 20th June, 1961, for the following purposes:

(1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.

(2) To elect a Director.

(3) To appoint Auditors for the current year and to fix their remuneration.

As a Special Business:—

(4) To consider and if thought fit to pass, with or without modification, the following resolution as an Ordinary Resolution:

"RESOLVED that Mr. Bhaba Kinkar Banerjee, a Director of the Company, who attained the age of sixty-five years on 4th July, 1960, be and is hereby appointed a Director of the Company and it is specifically declared under Section 281 of the Companies Act, 1956, that the age limit prescribed under Section 280 of the Act shall not apply to him".

The Transfer Register will be closed from the 13th June, 1961 to 20th June, 1961, both days inclusive.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy who need not be a shareholder of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 18th May, 1961.

NOTE: An Explanatory Statement under Section 173 of the Companies Act, 1956 has been sent to the Members of the Company by post.

THE BOMBAY BURMAH TRADING CORPORATION LTD.

Registered Office: 9, Wallace Street, Fort, Bombay-1.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that in pursuance of the powers granted to them by a resolution passed at the Extraordinary General Meeting held on 29th May, 1958, the Directors have extended the final date fixed for the receipt of applications for consolidation of fractional certificates into whole shares of Rs. 125/- each, from 31st May, 1961 to 31st December, 1961.

Dated at Bombay this 16th day of May, 1961.

By Order of the Board,
WALLACE & CO.,
Secretaries & Treasurers.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

REVISING THE INCOME TAX LAW

IT is certainly desirable that the Chinese puzzle which the Indian Income Tax Act has become through almost four decades of often haphazard, badly drafted annual amendments, should be changed into something more susceptible of ordinary human understanding. But whether the Income Tax Bill 1961, at persent under the scrutiny of a Select Committee of the Lok Sabha, has succeeded in combining lucidity with the precision and unambiguity of expression which so complex a piece of legislation calls for, will be apparent only after the Bill has been enacted into law and tested in the light of practical experience. In any case, the general consensus of opinion would probably be that it could scarcely make things worse than they are. The increase in the number of clauses from 67 in the present Act to 298 is, for the most part, the result of splitting up unwieldy clauses and converting into independent provisions the numerous provisos that were indiscriminately tacked on to existing sections in the course of amending them over the years. The regrouping of sections has also contributed to coherence and intelligibility. But as the Law Commission, on whose labours the Bill is largely based, itself observed, no real simplification of tax law is possible without a simplification of the tax structure.

Among the minor hardships arising from the new codification is the supersession of some bits of income tax jargon that have passed into the vocabulary of the informed layman. They, no less than income tax lawyers, will find it strange to have to acquire new and outlandish terms, for example, for the familiar Sections 23A, 15C, 56A and 183A. It is a rather paradoxical result of the attempt to make the law more easily intelligible that it will, in fact, make it more esoteric than ever. But the Bill is a good deal more than a mere simplified version of the present Act. It introduces a number of substantial amendments, some in the nature of concessions, others which introduce revolutionary changes in the basic concepts of corporate enterprise and tax liability. It is worth noting that some of the most obnoxious of these changes were inspired by the recommendations of the Direct Taxes Administration Enquiry Committee.

Among the small mercies for which the overburdened and often harassed taxpayer will be grateful is the liberalisation of the capital gains tax whereby exemption is proposed for the transfer of capital assets under gift, will or irrecoverable trust, as well as the distribution of capital assets on dissolution of a firm and by a company on its liquidation. In the last case, recipient shareholders will continue to be liable to tax on the value of the assets received on liquidation, in excess of the cost of acquisition of the shares. Another welcome change is the proposal for a uniform basis for calculating the cost, irrespective of the mode of acquisition. Assessees are to be given the choice between the actual cost of acquisition, or fair market value on 1st January, 1954, if the assets were acquired before that date. Section 23A companies are to be enabled to make further distribution of their profits in case of shortfall to make up the statutory percentage required to avoid penal supertax. It is also likely that nothing, except newspaper advertisement revenue, will be lost by discontinuance of formal public notices calling on assessees to file returns. And as a corrective to amnesia on this point, penal interest at the rate of 6 percent on the tax assessed, in cases of delayed returns, should prove effective. What is more remarkable is that the Government, on its side, is to pay interest at 4 percent on refunds not made within six months. At least two cheers should be called for this heroic effort to prod torpid bureaucracy into moving somewhat faster than a snail's pace.

The objectionable features of the Bill are, almost without exception, the result of attempts to plug loopholes and check evasion. These are laudable objects, but it is worth asking whether efforts to achieve them justify flouting such a basic principle of the corporate form of business organisation as limited liability, in determining whether company taxation is on the company as a separate juridical and fiscal entity or on its constituent shareholders. It is also worth considering, at the highest policy-making level, whether the best way to check evasion would not be to refrain from making it so highly profitable that an honest taxpayer may have to pay 120 percent of his income as tax The Bill provides that taxes that are irrecoverable from private companies should be collected from their directors and, failing that, from the shareholders having 10 percent and more of the voting power. The objection to this is not simply that it makes nonsense of the principle of limited liability, in the sense that, if passed, the liability, as far as taxation is concerned, of directors and substantial shareholders of private companies would, in fact, be unlimited. It thus strikes at the very foundation of corporate organisation. It does more than this. It seeks to identify the joint stock company with its directors and shareholders, thus doing violence to the principle which the Government itself has accepted in its tax system, that a company is a distinct and separate entity with a personality and an income-earning capacity different from its constituents.

Only on this assumption does it make sense to subject dividend income in the hands of shareholders to income tax, although the dividends are distributed out of profits which presumably have already borne tax as the income of the company. Without such an assumption, this would amount to blatant double taxation of the same income. In fact, the separate entities of the company and its shareholders have been recognised in judicial decisions as the basis of corporate taxation. Even before the changeover to the new system of corporate taxation in the Finance Act of 1959, it was only by the device of a "legal fiction" that the company income tax was deemed to have been paid on behalf of shareholders. Under the present dispensation, even that has ended and the entire 45 percent levy is a straight tax on the profits of the company, as a company. It would be incongruous to say the least, for the Government to seek to identify directors and large shareholders of private companies with their companies and hold them responsible, in their personal capacity, for the tax dues of the company. Consistency demands, as a necessary corollary of such identification, the abolition of personal tax liability on dividend incomes received by such persons from those companies. The Government cannot, in fairness, have it both ways.

The same confusion of thought, or perhaps readiness to sacrifice consistency to expediency, is apparent in the provision in the Bill covering the carry-forward of losses by companies "in which the public are not substantially interested," or section 23A companies as they are known at present. It is proposed that, in such companies, losses should not be carried forward and set off against current income unless the beneficial control of 51 percent of the voting power remains with the same persons in the year in which the income is earned as in the years in which the losses were sustained. There can be no justification for depriving a section 23A company of the facility for setting off losses simply because a change has occurred in its controlling interest. Such a change may occur fortuitously, for example, through the death of a substantial shareholder.

The ownership and control may change times without number, but it is the company and not its individual shareholders that makes the profit or incurs the loss. And it is the company, as a company, that is assessed to the corporate income tax and not the shareholders who, for the time being, happen to hold the controlling interest. The Direct Taxes Administration Enquiry Committee objected to persons acquiring controlling interest in companies which had substantial losses in earlier years, carrying on profitable business through them and reducing their tax liability by setting off the profits against the losses incurred earlier when the control was with different persons. It is hard to see why this should be considered an objectionable practice. Would it be better for society if such companies were left to wallow in their losses because efficient entrepreneurs saw no incentive to take over their management and improve their working? One can hardly blame an entrepreneur for declining to go to the rescue of such a concern when there is no fiscal advantage in doing so.

There are other provisions which, if passed into law, will involve serious hardship to taxpayers. To authorise reopening of assessments, without any time limit, when it is considered likely that an income of Rs. 50,000 in any one year has escaped assessment, means that assessments will never acquire finality and that accounts stretching back to hoary antiquity will have to be carefully preserved against such an eventuality. The clauses relating to charitable trusts appear excessively restrictive. It is provided that business income of such trusts should be exempt from tax only if the business is carried on in the course of fulfilling their primary objects, that accumulation of income in any year in excess of 25 percent thereof will be subject to tax, and that they will be disqualified for tax exemption if any relative of the founder derives assistance from them directly or indirectly. It is likely that in its anxiety to dig out evaders who have been sheltering under charitable trusts, the Government will be putting difficulties in the way of the operation of genuinely charitable institutions.

—

W. BENGAL CLAIMS A LARGER SHARE

THE information obtained from various Press reports concerning the memorandum the West Bengal Government has submitted to the third Finance Commission, suggests that the claim of this State for a bigger share in the revenues of the Government of India is being made with considerable force. Since partition, the State has had to face great financial strain mainly due to the fact that its resources are inadequate to meet the calls made on them. In addition to the common duties the Government of West Bengal performs along with other States, it has many peculiar difficulties of its own. It is burdened with a big refugee problem, it has to look after a large border area extending over many miles, and it has to manage the problem city of Calcutta in which the administrative costs of maintaining law, order and the social services have been accentuated by the growing population and by a heavier concentration of industries.

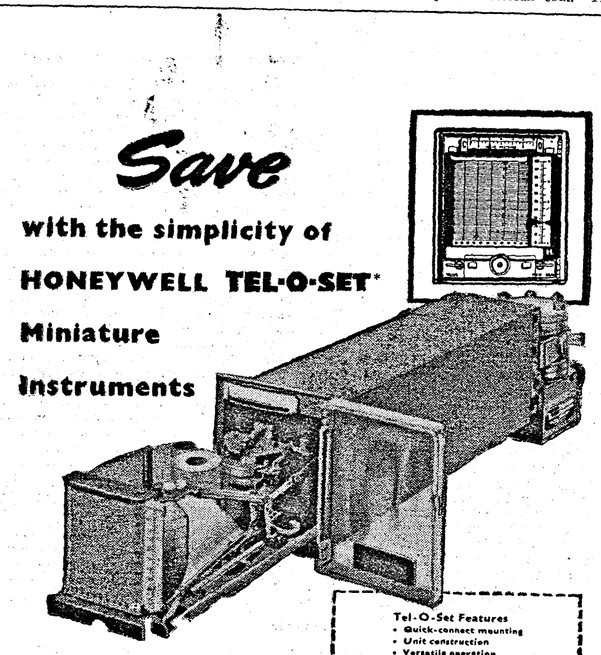
The memorandum has, therefore, done the correct thing in basing West Bengal's claims on pragmatic grounds rather than constitutional niceties. It is common knowledge that State Governments at present obtain funds from the Centre by sharing in the divisible pool of Central revenues, or in the form of grants-in-aid. As far as the former is concerned, the first Finance Commission fixed the divisible pool at 55 percent of total collections and suggested that it be shared by States to the extent of 80 percent on the basis of population and to the extent of 20 percent on the basis of collections. The second Finance Commission increased the States' shares to 60 percent and increased the allocation to 90 percent on a population basis. As a result, the share of undivided Bengal, which was 20 percent of the pool, has been reduced to nearly 10.88 percent for the trucated West Bengal. The recent changes in the system of corporate taxation are expected to cut the divisible pool further. So the Finance

Commission has now been asked to investigate this question and make appropriate recommendations in order to compensate the States for the loss of income.

Whatever justification there is from an egalitarian point of view for defending the distribution of the divisible pool on the basis of population, it is difficult to ignore the claim for a distribution on the basis of collections. It cannot be disputed that *per capita* costs of social and administrative overheads and services are much higher in densely populated States than in predominantly low density areas. It would seem, therefore, to be the responsibility of the Finance Commission to strike a balance between the two claims—one based on population and the other on collections—in order to ensure that States like West Bengal with densely populated areas, are not denied their proper share in Central revenues for maintaining their administrative responsibilities. A combination of population and collections can be appropriately used for allocating income tax, estate duty and corporation revenues to the States.

The memorandum has also pleaded for a reorientation of the system of distributing the proceeds of excise duties to the States. At present the Government of India allocates to them 25 percent of the excise revenues it collects from specific commodities. These commodities include tea, vegetable products, matches, paper, coffee, sugar, tobacco and vegetable non-essential oils. Ninety percent of the divisible pool is distributed on the basis of population and the remaining 10 percent is used for adjustments. In distributing excise revenues the basis, it is claimed, should be consumption and not population. The West Bengal Government is on strong grounds here because one of the main arguments for increasing the excise net is to restrain consumption. Considering that in future years excise is likely to be a fruitful source of increased revenues, it seems time that the basis of distribution took into account consumption as well as population.

The case of the West Bengal Government deserves consideration because it has so far done its best, as far as circumstances permit, in the matter of raising resources. In the second plan period, it was expected to obtain Rs. 14 crores in the form of additional taxation. In fact, it succeeded in raising Rs. 42 crores by means of new measures, and a further Rs. 23 crores from existing taxes by tightening up the administrative machinery. There is no doubt that few will take exception to this as long as the Government realises its taxes by conventional means, but reports indicate that State tax officers are inclined to inflate collections by means of penal measures, which may not yield dividends in the long run. One of the best criteria for judging a tax is to see whether assessees pay it willingly and honestly. It is hoped that the Finance Commission will make its recommendations in such a way that a State with the peculiar responsibilities of West Bengal will receive bigger revenues from the Government of India, to whose own resources it contributes so much. The State Government could not be more correct when it points out that there is at present little scope for further taxation on the urban population. In fact, existing taxes are already too high. This is not to say that the State Government has been as enterprising in the matter of taxing the rural sector. Not only have huge arrears of land revenues accumulated, but political considerations seem to have held back the Government from increasing the existing taxes or imposing new levies in the agricultural sector in spite of the increased prosperity it enjoys.



NEW and improved *Tel-O-Set* miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell *Tel-O-Set* indicators, recorders and controllers are today's most advanced miniature instruments.

TOWARDS FREER U.K. TRADE

BRITAIN'S evident intention to participate in the European Common Market if the minimum conditions can be satisfied—or even, some people believe, on any terms on which the present participants insist—seems to imply that the British Government and British industry are willing to suffer the rigours of freer trade. This impression is confirmed by the Government's efforts to negotiate a general reduction in import duties within the framework of the General Agreement on Tariffs and Trade in Geneva. But there are still important qualifications to the principle. The Steel Company of Wales is aware that it can obtain much more cheaply from the United States than from Wales or England some of the coal that it needs for its steelworks; so it applied for a licence to import American coal. The executives of the National Coal Board and the miners are often in mutual conflict, but their reactions to this application were identical: in effect, they accused S.C.O.W. of attempted betrayal. The miners, not content with words, threatened to stop work if American coal were admitted into Britain.

On the occasion of the British Trade Fair in Moscow, Ministers of the British and the Soviet Governments discussed ways and means of increasing trade between the two countries. The Soviet representatives pointed out that if their country was to buy more from Britain it must sell more to Britain ("We have no machines for printing pound notes". Mr. Mikoyan remarked), and they (Mr. Mikoyan particularly) emphasised their need to sell more oil. The suggestion was not favourably received by the British. Everyone knows that the Russians offer oil below the "normal" price, but Britain, with big interests in the oil trade, has an established system of import and distribution and is unwilling to import oil, at any price, from Russia. The machine-tool trade provides another example of discrimination. The British Government is not so foolish as to insist that British industry shall use only British tools; if foreign equipment is cheaper or more efficient it can generally be imported, and much of it is in fact imported from the United States and western Europe. But this freedom does not extend to the products of the Soviet bloc. Some Soviet machines installed in Britain have surprised British engineers by their technical qualities and efficiency; but the import quota is small.

It may be that most Russian machine-tools are unsuitable for British factories and that few would be imported even if the trade were free. If so, the restrictions might as well be removed. But it is possible that there are many Russian machine-tools that could reduce the costs of British industry. Why are they excluded? If exports of British machine-tools to Russia were for many years restricted for political reasons, it is surely not for political reasons that imports of Russian machine-tools to Britain are restricted; for the argument that the tools a country wants will strengthen its economy must surely apply both ways. The intention, presumably, is to limit the freedom of trade in this sector. Agriculture—one of the problems that have obstructed Britain's intended entry into the Common Market—is a different case; though not altogether different from the case of coal. Maintenance of agriculture in an industrial country is a matter of social policy—with important political implications, as the American example has often reminded us. In defence of Britain's agricultural policy, it can be said that it provides cheap food by subsidies (they bridge the gap between relatively low selling prices and the prices that the producers need to provide a satisfactory profit) and that it allows more or less free import of some foods (notably butter and eggs) that other countries are anxious to sell, even cheaply. In the main, however, it is a protective policy, and confirmed free traders in Britain persistently urge that the market should be opened wide, so that Britons could eat the cheapest food available, the cost of living could be reduced, and the inflationary balloon (which is inclined to rise again at present) could be punctured.

As far as Britain's self-interest is concerned, this is the essential argument for all cheap imports (including the controversial cotton goods from Asia), that they tend to reduce the price level. In the particular case of fuel the deflationary action operates at sensitive points in the economy and is thus particularly effective. In the case of capital equipment, freedom to import the most productive machines is at least as important as freedom to import the cheapest. There are wider principles involved. Any restraint on imports,

by embargo, quota, or tariff, is a restraint on international trade; and trade (if one may adapt a classic observation of the inter-war era) is indivisible. Britain particularly needs a healthy climate of international trade in which to expand her exports. Britain particularly could suffer from reprisals. If British miners struck to prevent American coal from entering Britain. American motor-vehicle workers—or, indeed, miners—might strike to prevent British cars from entering America.

A disturbing feature of the dispute concerning coal was the revelation—which was presented rather as a boast—that the National Coal Board had no intention of seeking cheap steel (it is, of course, a big consumer of steel) in Japan, or anywhere else. One might suppose that the chairman of the Coal Board would be cost-conscious, and that (as Britain is still a considerable exporter of coal) he would be conscious also of the virtues of buying and selling internationally. The exceptions do not invalidate the principle that Britain's trading policy is moving in a liberal direction. But they are important exceptions, and they imply that the policy of liberalisation is not whole-hearted and bold. Britain may not at present be strong enough to give full assistance to world trade, but, equally, she is not so strong that she can neglect opportunities to strengthen herself.

Current News and Comment

Prospects for Mahindras

The gross profit of Mahindra and Mahindra Ltd for the year ended October 1960, has declined from Rs. 57.40 lakhs to Rs. 54.06 lakhs, in spite of an increase of nearly 47 percent in total sales from Rs. 9.27 crores to Rs. 13.63 crores. Reasons for the fall in the profit have been succinctly given in the directors' report. The chairman, Mr. K. C. Mahindra's speech at the Company's annual meeting in Bombay last week, has provided a fuller explanation. (Mr. Mahindra's speech is printed on a later page of this issue of *Capital.*) *Wage costs have risen by 8 percent to* 10 percent a year without any increase in the workload. The chairman said that in an engineering complex like motor-vehicle production, where vendor-suppliers play a significant part, there can be no stable level for wages or production costs. This is particularly true when raw materials become scarce and there is an intense struggle for scant supplies between competing engineering groups. Inevitably, this is reflected in high material costs. There has been a 38 *percent increase* in the sales of vehicles over the past year. But throughout the year, there was Government pressure to maintain the price line in spite of increased costs of the imported components and a substantial rise in the local costs of production. From July 1960, a further reduction of Rs. 200 in the retail price of the jeep was made at the insistence of the Government. The increase in the sales volume did not prove sufficient to compensate for higher costs. The *Company has reached* a stage when it will have to bear proportionately larger costs of components produced in the factory, and every new development in *further production* of indigenous components will mean a *pro rata* rise in costs. However, a continuous realignment of manufacturnig and assembly lines has resulted in a better productivity coefficient. The other major activity of the Company is the import and distribution of steel in which profit margins have contracted. The import business in steel *might* now rapidly diminish, but the Company's organisation has been reshaped for larger internal distribution.

The chairman referred to certain disillusionments. The Company's negotiations with David Brown Industries of the U.K. for manufacturing tractors failed when they were in the final stage, but fresh talks for producing another make of tractor have been initiated with the Government's approval. The inordinate delay in acquiring land in Baroda has compelled the management to reverse its original decision to shift jeep manufacturing facilities there. It has now to consolidate its manufacturing activity in Greater Bombay. But Mr. Mahindra had also some good news for the shareholders. The Government has sanctioned the Company's application for setting up an alloy and special steel plant, which will be a major undertaking of the Company. Besides, it has been permitted to expand the production of jeep-type vehicles to 10,000 units a year. Referring to the working of the Company during the six months ended 30th April, 1961, the chairman stated that the sales of jeep vehicles and spares were ahead of the previous year's rate in as much as 3,563 vehicles were sold in this period, compared with 6,499 units in 1959-60. Steel bookings for the first half of the *current year were also* satisfactory, being about 98,000 tons, against 201,000 tons in 1959-60. He, however, added that deliveries available from the new steel works were still not firm. The Company's endeavour to undertake the export trade in steel has not yet met with any success. Answering shareholders' questions, Mr. Mahindra rejected a suggestion for a rise in the preference dividend to compensate the holders under the new system of taxation. Dealing with another *suggestion to raise* the Company's capital, he merely said that the shareholders might take him to task if dividend could not be maintained on an increased capital. The chairman revealed that the Mahindra Engineering Co. Ltd would start the production of scientific and electric instruments from July. At its current price of Rs. 20.52, the shares of Mahindra and Mahindra offer a gross yield of about 6.2 percent.

J.K. Synthetics Offer Shares

J. K. Synthetics Ltd—a Company sponsored by the J. K. group of industries—is building a factory in Kotah in Rajasthan State to manufacture synthetic yarn such as nylon and parlon. The capacity is likely to be 600 kilograms of yarn a day. Technical collaboration has been arranged with Ing. A. Maurer, S. A. Dammweg of Switzerland. The Company was originally started in the name of J. K. Investment Trust Ltd, but its name has now been changed to J. K. Synthetics Ltd. It is likely to offer ordinary shares to the public for subscription at par in the near future. The factory may begin production at the end of 1961.

Outlook for Shivrajpur

The Shivrajpur Syndicate did well in the year ended November 1960, with its sales up from Rs. 86.39 lakhs to Rs. 124.48 lakhs, and the gross profit rising from a mere Rs. 6.28 lakhs to Rs. 28.78 lakhs. The Company has taken several steps to ensure the maximum economy and efficiency in operations. The uneconomic Bamankua mine has been closed and the Pani mines will also perhaps meet with the same fate. At the same time, the major expansion project concerning the development and exploitation of the third and fourth levels at Shivrajpur is proceeding according to plan, and in about one to two years' time, this will begin to yield a bigger proportion of high grade ore, which fetches a better price and is easier to market. But the chairman, Mr. A. N. Haksar, sounded a note of warning at the Company's annual meeting in Bombay on 25th May (*a fuller version is printed* on a later page) that the results for the current year are likely to be "most disappointing". The tonnage shipped will probably be lower than in the previous year. Besides, Shivrajpur ores are today being offered at the lowest prices since 1955, and the profit margin is far from adequate. That is perhaps why the shares of the Company which rose from Rs. 70 to Rs. 105 between January and March, are down again to around Rs. 79, and they have not participated in the recent spectacular recovery on the Stock Exchange. Apart from the obscure outlook for the current year, the setback in Shivrajpur shares is in no small measure due to disappointment over the directors' decision not to issue bonus shares. Shareholders pressed their demand for bonus issue at the Company's annual meeting on the plea that the reserves were quite substantial, compared with the capital. The chairman assured them that the directors would reconsider the question at their next meeting.

In view of the various major uncertainties confronting Indian manganese ore exporters, it is very difficult to make any long-term forecast about the Company's prospects. Taking an overall view, Mr. Haksar says, it seems that world demand for manganese ore will continue to increase, but this is unlikely to reverse the downward trend in ore prices on account of increased production in many countries and the consequent severe competition. Whether the Indian industry will be able to regain its proportionate share in the world market, or at least maintain the exports at the present level, will depend largely on the Government's policy on barters. According to Mr. Haksar, the approach to the country's manganese ore export problem could be on two lines. First, the short-term objective should be to ensure that the Indian ore does not lose any more ground, for which purpose barters should be freely permitted on terms and conditions which should be well publicised, or failing this, some other form of subsidy should be made available to the exporter. This, of course, would be a temporary relief, while from the long-term point of view, the Indian exporter should be able to stand on his own feet. This means, on the one hand, that the confidence which the Indian ore enjoyed prior to the Government's intervention in 1956 has to be regained, and on the other, the prices have to be reduced to more competitive levels. The reduction of prices is beyond the control of the producer or exporter in view of the rising costs occasioned by such factors as higher royalty, freight rates, cost of machinery and spares and labour benefits.

Elphinstone Spinning Modernises

Speaking at the annual general meeting of the Elphinstone Spinning and Weaving Mills Co. Ltd in Bombay on Wednesday, Mr. N. K. Jalan, chairman, said that the profit of the Company for 1960 was almost double the amount earned in the previous year. (A fuller version of the speech appears elsewhere in this week's issue of *Capital.*) The rise in earnings has to be considered satisfactory, especially in the face of higher cost of wages, and the acute shortage of cotton and stores on the one hand, and the voluntary reductions in cloth and yarn prices, on the other. Mr. Jalan said that the beneficial effects of new machinery installed in recent years have been reflected in the Company's working results. The management, he added, is considering plans for further modernisation and renovation of mill machinery. In the spinning section, about 18,000 new spindles have so far been installed replacing the old ones. Elphinstone Spinning has a further programme for replacing the remaining old spindles and for converting the existing serviceable spindles to the latest system of high drafting. Besides, it has a scheme for converting the existing speed frames to Can feed and D-Zone drafting. Orders for additional frames have accordingly been placed with suppliers.

Mr. Jalan said that orders have also been placed for three high-speed draw frames for replacing the old ones. The Barber Colman winding and warping machines—which were ordered for replacing Elphinstone Spinning's half of existing winding and warping machines—are

expected to arrive shortly. The chairman said that with a view to modernising the entire winding and warping departments, the Company has applied for import licences for one more set of these automatic machines. One high-speed sizing machine was put into commission last year. Elphinstone Spinning has applied for import licences for two more such machines. Besides, orders have been placed for one automatic warp tying machine and 48 automatic looms for replacing the plain ones. The Company has been allotted further 48 automatic looms for replacing plain looms and another 48 as additional to the existing looms, making a total allotment of 144 new automatic looms. The processing section has also been progressively renovated, and a mercerising plant is expected to be received by the end of the current year.

The chairman said that the production of the leather cloth division was about 50 percent higher, compared with that of the previous year. Production of starch book-binding cloth, which enjoys a good demand in local markets, has been further developed during the year. Steps are being taken to equip this division with the latest types of machines. A modern embossing callender machine has already been erected in this division, Mr. Jalan said. Unfortunately, on account of the Government's restrictive policy on granting import licences for plant, machinery spares and raw materials, the Company has not been able to put into effect all the plans for the further development of this division. Besides, production was affected due to the shortage of chemicals. "With erection of more up-to-date plants, we could have stepped up our production in order to meet the increasing demand for this article from both inland and overseas markets." Referring to Moon Mills, Mr. Jalan said that Elphinstone Spinning has signed an agreement with the former for purchasing its existing block of lands, buildings and machinery, including 875 looms. It has no spinning section at present. So it is contemplated to make it a composite unit by equipping the spinning section with the most modern types of machinery at a total estimated cost of about Rs. 1 crore, the chairman said.

The Expanding Activities of B.I.C.C.

In his statement circulated to shareholders for the annual general meeting held in London last week, Sir William McFadzean, chairman, British Insulated Callender's Cables Ltd, has reported a higher net group profit of £3,652,000 for 1960, which is an increase of £121,000 over the previous year, and results from a higher volume of sales and a lower taxation charge. (A fuller version appears on another page of this week's *Capital.*) The chairman has also reported an increase in the group's net assets at £66.4 million. Discussing the year's activities, Sir William said that the two principal aims in 1960 were to obtain more economic prices for certain of the group's products, and to achieve the highest overall efficiency in cable-making activities as a whole by unifying and concentrating the group's production and selling arrangements for a number of main products. "The wisdom of this policy of increasing efficiency by concentrating group manufacture and selling effort of power cables and wiring and general cables has been proved by the substantial increase in the volume achieved. The benefits should be progressively felt during 1961," Sir William said. Among important orders secured during the year for power cables, one was from the Hydro Electric Commission of Ontario for 230,000 volt cables and another from the Australian authorities for 330,000 volt cables for a hydro-electric scheme. The group won a contract worth £2.5 million for a flexible submarine pipeline to transmit natural gas from the mainland of British Columbia to Vancouver Island. There is a growing worldwide interest in the Company's energy storage capacitors, and substantial orders from the U.S.A. have been received. It was also successful in wining a contract for 300 track miles of overhead equipment for railway electrification in India. Dealing with the group's overseas affairs, Sir William said that for many years, it has devoted a large proportion of its effort to overseas trade both in the form of direct exports from the U.K. and by way of investment in local manufactures in foreign countries. Total sales effected under these heads amounted to £45 million in 1960, compared with £38 million in 1959. The efforts are being further intensified.

Indian Wood Products Dividend Up

A rise from Rs. 43.79 lakhs to Rs. 52.50 lakhs in sales has helped the Indian Wood Products Co. Ltd to increase its profit from Rs. 10.49 lakhs in 1958-59 to Rs. 13.90 lakhs in 1959-60, after providing Rs. 1.12 lakhs (against Rs. 1.14 lakhs) for depreciation. The taxable ordinary dividend has been increased from 25 percent to 30 percent, including an interim of 10 percent. It is covered more than twice and works out to a yield of 8.9 percent at a price of Rs. 33.62 a share. General reserve receives Rs. 2 lakhs and taxation is allocated Rs. 5.76 lakhs (against Rs. 5.18 lakhs). The carry-forward is Rs. 1,29,251, compared with Rs. 1,16,286 brought in. The demand for the Company's products, such as cutch and katha, has increased, but production has had to be cut in order to conserve stocks of timber. Until recently, Indian Wood Products obtained timber by taking various leases from the U.P. Government. But these leases have now been terminated and timber requirements have to be obtained from the auctions conducted by the Government. The present system is not considered suitable for obtaining the full requirements of the Company. The strong balance-sheet of Indian Wood Products attracts attention. Reserves are more than Rs. 24.24 lakhs, against an ordinary share capital of Rs. 20.03 lakhs divided into shares of Rs 10 each. Current assets are more than Rs. 40.88 lakhs and fixed assets are Rs. 3.74 lakhs only.

Godfrey Phillips Sales Up

Godfrey Phillips India Ltd has produced satisfactory results for the year ended December 1960, due to bigger cigarettes sales at Rs. 4.14 crores (against Rs. 3.54 crores). The profit has increased from Rs. 13.56 lakhs to Rs. 20.85 lakhs, after transferring Rs. 5.41 lakhs (against Rs. 5.04 lakhs) to depreciation and Rs. 19.10 lakhs (against Rs. 12.75 lakhs) to taxation. The taxable ordinary dividend has been increased from 26 percent to 40 percent. It is covered nearly two-and-a-half times and offers a yield of 15.5 percent at the present price of Rs. 25.75 a share. There is a carry-forward of Rs. 13.38 lakhs, against Rs. 10.41 lakhs brought in. As for prospects, the directors point to the changes made in the structure of duties on tobacco and cigarettes by the last Central Budget. As a result, the prices of some grades have had to be increased, while the profit margins of others have been lowered. It is difficult to say at the present stage how the profitability of the Company will be affected by these changes. There is no doubt that some popular brands manufactured by Godfrey Phillips have met with increased sales, but competition in this line of business cannot be ignored.

Higher Dividend from Juggilal Kamlapat

Juggilal Kamlapat Cotton Spinning and Weaving Mills Co. Ltd has increased the taxable ordinary dividend from 9 percent to 12½ percent for the year ended December 1960, on the share capital which has been increased from Rs. 63 lakhs to Rs. 1.25 crores by issuing rights ordinary shares. The ordinary dividend absorbs Rs. 15.63 lakhs and works out to a yield of 6.3 percent at a price of Rs. 19.94 a share. The profit has amounted to Rs. 9.29 lakhs (against Rs. 6.97 lakhs), after transferring Rs. 72.62 lakhs (against Rs. 11 lakhs) to depreciation, and Rs. 10 lakhs to development rebate reserve. Taxation is allocated Rs. 8.30 lakhs and general reserve Rs. 15.85 lakhs. The carry-forward is Rs. 1,22,795, compared with Rs. 52,757 brought in. A sum of Rs. 31.97 lakhs has been written back from excess depreciation provided in previous years. The cotton textile unit has installed combing machines. A sanforising plant also has been set up. The directors are considering modernising the equipment further. The rayon unit has worked satisfactorily. As for expansion, it is proposed to set up a plant to produce sodium sulphate. Orders for the equipment have been placed It is also proposed to extend the capacity of the rayon plant from 5 tons to 10 tons a day. It is intended to set up a plant for producing rayon grade pulp to the extent of 10 tons a day. It has been decided to build a fertiliser plant to manufacture superphosphate of 40,000 tons a year.

Rights Issue from Dunbar Mills

Dunbar Mills Ltd has made progress in modernisation and rehabilitation. Orders have been placed to the extent of Rs. 20 lakhs for new machinery, including one complete line of blowroom, high-speed drawing frames and ring frames. A licence has been obtained to install 12,000 spindles for manufacturing waste yarn. The cloth printing section has started production. The production pattern has been diversified and the installed capacity is being used to the maximum. In order to increase the working capital, Dunbar has decided to issue a further 95,000 ordinary rights shares of Rs. 10 each at par in the proportion of one new share for every three held. After providing Rs. 9.93 lakhs (against Rs. 10.06 lakhs) for depreciation, the profit has increased from Rs. 9.37 lakhs to Rs. 32.07 lakhs for the year ended December 1960, mainly because of an increase from Rs. 1.93 crores to Rs. 2.42 crores in sales. The ordinary dividend has been doubled to 20 percent, taxable. It is covered four times over and offers a yield of 6.6 percent at the present price of Rs. 30.50 a share. Taxation provision receives Rs. 1.60 lakhs and development rebate reserve Rs. 4.10 lakhs (against Rs. 2 lakhs). Depreciation for earlier years is allocated Rs. 8 lakhs and a sum of Rs. 10 lakhs (against Rs. 1 lakh) is transferred to general reserve. There is a carry-forward of Rs. 2,16,475, against Rs. 4,01,950 brought in.

Amar Dye-Chem Expansion Programme

In their latest report for 1960, the directors of Amar Dye-Chem Ltd give fuller details about the Company's expansion programme already under way, and the further plans for which the Government's sanction has been obtained. The bon acid plant is expected to be ready by the end of this year, or early next year. The reorganisation of naphthol and fast base units has been completed, and a new plant for manufacturing naphthol A.S.G. has been commissioned. With the construction of a two-storeyed building, special plant facilities for standardising and drying will be available, and the Company will be in a position to reach comfortably the target of the full licensed capacity of 650 tons each of naphthol and fast base, provided raw material supplies are sufficient. The Company has been successful in getting a loan of Rs. 15 lakhs in foreign currency for the expansion programme. A licence for the import of capital goods for the T.P.M. plant is expected shortly. The Company has been granted a licence to manufacture 250 tons of reactive dyes and 260 tons of pigment colours. The Licensing Committee has recommended to the Government to issue a licence to the Company for manufacturing 2,155 tons of intermediates. The directors state that this scheme, when fully implemented, will not only save large foreign exchange, but make the Company fully independent of intermediate imports. The project for manufacturing intermediates will involve a capital outlay of Rs. 2.5 crores. The directors have decided to take up the manufacture of 1,000 tons a year of betanaphthol for which the Company was granted a licence in 1954, which is still valid. Negotiations for technical know-how are in progress.

The shares of Amar Dye-Chem (Rs. 100-paid) which rose from Rs. 235 to Rs. 527 in 1960 were available around Rs. 355 early in the year. They are up again to around Rs. 420. The directors have recommended a dividend of Rs. 12 a share for 1960. The dividend is entirely free of tax in view of the exemption given by the income tax authorities under Section 15(C). The Company, it is said, is eligible for exemption to the extent of Rs. 13.56 lakhs of its profit and it is out of this exempted element that the dividend has been proposed. Against its equity capital of Rs. 79.97 lakhs, the Company's reserves and surplus total Rs. 56.08 lakhs. The gross block of the Company amounting to Rs. 104.55 lakhs has been written down to Rs. 75.67 lakhs. The book value of the share works out to around Rs. 170.

Huge Fertiliser Factory for Andhra

The management of Andhra Sugar Ltd and Seshasayee Brothers Ltd are jointly promoting a new enterprise for running a huge fertiliser plant in Kothagudem, Andhra Pradesh. The project which is estimated to cost nearly Rs. 25 crores, visualises an annual production of 200,000 tons of urea, and will also include a large ammonia plant based on slack coal from Singareni Collieries. Arrangements have been made for acquiring 4,000 acres of land near Kothagudem. The State Government has assured the regular supply of water and power. The promoters state that they will not need to import any raw material from abroad. They think that their factory will produce the cheapest urea in the country and that the ideal location of the plant will enable them to distribute its products more economically than by the other fertiliser plants in other parts of India. The managing director of Andhra Sugar, Mr. Harischandra Prasad, has disclosed that originally, the Central Government had issued a licence for a fertiliser factory in favour of the State Government. The latter had also taken preliminary steps such as the selection of the site and inviting global tenders. It was only because the Centre changed its mind later on that the Andhra Sugar Company was given the licence for establishing the proposed fertiliser factory. In order to expedite the implementation of the project, the promoters of the new company—its name has still to be decided—will choose from the global tenders already received by the State Government. The technical director of Andhra Sugar and the managing director of Seshasayee Brothers are soon going abroad to negotiate a technical and financial collaboration agreement, and make arrangements for the import of plant and machinery. Foreign collaborators might be allowed to subscribe to about 35 percent of the equity capital of the new company. If everything goes well, the factory is likely to go into production by the end of 1963. The Company is expected to enter the market in August to raise Rs. 7 crores in equity shares, and another Rs. 1 crore in preference shares.

Project for Ball-point Pens

The Central Government, it is understood, has sanctioned a Rajkot industrialist, Mr. D. M. Joshi's project for manufacturing ball-point pens in collaboration with a well-known U.S. manufacturer. The factory which will be located in Rajkot will start with an initial capacity of 100,000 ball-point pens a month, and this capacity will be gradually stepped up to 400,000 pens a month. The project is estimated to cost Rs. 10 lakhs. The U.S. firm, which is collaborating in the venture, will provide the technical know-how and also supply the machinery valued at about Rs. 5 lakhs. The factory is expected to go into production early next year. The ball-point pen will be made entirely from indigenous raw materials. The U.S. firm, it is said, has agreed to allow its trade mark to be used in export markets. Mr. Joshi has also been permitted by the Government to produce the ink for ball-point pens in collaboration with another U.S. firm. The licence, it is reported, lays down a condition that the capacity of the ink plant be so adjusted as to meet the requirements of other new units in the field. Two separate private limited companies are likely to be formed to implement these projects.

A New Typewriter Factory

Rai and Sons of Delhi has secured a licence from the Government for setting up a factory in Chandigarh for manufacturing 10,000 "Consul" typewriters a year in collaboration with Kovo of Czechoslovakia. The factory will produce standard typewriters with English and Hindi keyboards. According to the production schedule allowed by the Government, the indigenous content of the machine, which will be 60 percent during the first 18 months, will be gradually increased to 100 percent within the next 18 months. The project is estimated to cost Rs. 30 lakhs, of which Rs. 20 lakhs will be spent on machinery to be imported from Czechoslovakia on a rupee-payment basis through the State Trading Corporation.

Progress of Hindustan Aluminium

The directors of the Hindustan Aluminium Corporation Ltd expect that the Company's smelter for manufacturing aluminium will be commissioned well ahead of schedule. The Company has acquired about 771 acres of land near the Rihand dam site from the Uttar Pradesh Government; the area has been renamed "Renukoot". The construction of the buildings and the installation of the aluminium plant have progressed satisfactorily. An agreement with the U.S. Export-Import Bank for a dollar loan of Rs. 6.5 crores and a rupee loan of Rs. 1 crore has been signed, and funds are being drawn against these credits for making payments for the aluminium plant, machinery equipment and engineering services, etcetera. Orders for the plant and machinery have been placed with U.S. manufacturers, and shipments of machinery have started arriving. The fabrication and installation of various items of plant and machinery, which are being manufactured indigenously, are in progress. The directors state that the Company has also received a licence for manufacturing aluminium conductors, redraw rods, rolled products and extrusions for a total quantity of 15,000 metric tons a year. Steps are being taken for the installation of the fabrication facilities. Hindustan Aluminium has earned a surplus of Rs. 2.11 lakhs for the year ended December 1960, after transferring Rs. 7.58 lakhs to "expenditure during construction account", but before providing for taxation. The surplus has been carried forward. The board has recommended that the stipulated tax-free rate of 6.3 percent on preference shares be changed into a gross cumulative dividend of 9 percent, free of company tax, but subject to deduction of tax as required under the law now in force. The consent of both classes of shareholders will be obtained at separate meetings. The Rs 10-paid shares of the Company are currently quoted around Rs. 12.40.

Good Results From Alembic Glass

The Alembic Glass Industries Ltd has reported encouraging results for the year ended December 1960. Sales at Rs. 1.73 crores are Rs. 28.06 lakhs higher than in 1959, and the gross profit shows a rise of Rs. 26.16 lakhs at Rs. 80.80 lakhs. The latter, as a percentage of sales, works out to 46 percent, against 37 percent in 1959. Higher profits have encouraged the directors to raise the dividend from 25 percent to 30 percent, both taxable. After providing Rs. 9.78 lakhs (against Rs. 8.31 lakhs) for depreciation and Rs. 28.30 lakhs (against Rs. 17.80 lakhs) for taxation, the net profit amounts to Rs. 37.40 lakhs, compared with Rs. 23.72 lakhs in 1959. The directors have allocated Rs. 4.50 lakhs (against Rs. 2.58 lakhs) to development rebate reserve, Rs. 22.08 lakhs (against Rs. 12 lakhs) to general reserve and Rs. 2 lakhs (against same) to gratuity reserve. A sum of Rs. 1.40 lakhs has been provided for tax liability on the bonus issue made during the year by capitalising Rs. 10.75 lakhs from reserves which raised the Company's paid-up capital to Rs. 32.90 lakhs. The increased dividend absorbs Rs. 6.65 lakhs, against Rs. 5.54 lakhs. After making all these provisions, there remains a surplus of Rs. 4.85 lakhs which has been carried forward, against Rs. 4.07 lakhs brought in. The directors state that the work on the Company's factory in Bangalore will start during the current year. Orders for plant and machinery will be placed on receiving import licences. Against the paid-up capital of Rs. 32.90 lakhs, the Company's reserves and surplus amount to Rs. 62.68 lakhs. The gross block of Rs. 1.31 crores has been written down to Rs. 80.4 lakhs.

Triveni Engineering Share Offer

The Sawhney group, which is associated with the management of many sugar mills, has floated a new Company known as Triveni Engineering Works Ltd to undertake the manufacture of sugar machinery, steam turbines and other heavy engineering goods. The Company, it is claimed, is the first in the private sector to be given a licence for manufacturing industrial process turbines. The project has been sponsored in collaboration with Booker Brothers and McConnell and Co. Ltd of the U.K. The plant will be located in Naini in Allahabad district, Uttar Pradesh. In making sugar machinery, George Fletcher and Co. Ltd and Duncan Stewart Co. Ltd—both subsidiaries of the Booker group—have agreed to sell technical know-how to the Company for £50,000 and also advance a loan of £50,000, free of interest, repayable within a period of ten years. Peter Brotherhood and Co. Ltd will provide the technical know-how for steam turbines and air compressors for £40,000, and it will also advance a loan of £40,000. The Company has received licences for importing plant and machinery of the value of Rs. 30 lakhs from the U.K. and Italy. Capital equipment worth Rs. 12 lakhs is to be imported from the U.S.A. against a D.L.F. loan already sanctioned. Nearly 50 percent of the machinery is reported to have reached the factory site. The promoters expect the plant to go into production early next year. The Company has an authorised capital of Rs. 1 crore, made up of Rs. 80 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 10 each. The issued capital will consist of Rs. 40 lakhs in equity shares and Rs. 20 lakhs in preference shares. The foreign collaborators have agreed to subscribe 50 percent of the issued capital. The promoters, directors and their friends are taking up equity shares of the value of Rs. 10.84 lakhs. The balance of the issue is likely to be offered for public subscription some time in June. The entire preference capital is said to have been underwritten by the Life Insurance Corporation.

Nil from Osmanshahi Mills

The Osmanshahi Mills Ltd seems to have come out of the wood. After several years, the working of the Company during the year ended September 1960 has resulted in a profit because of the improvement in cloth and yarn prices. Sales of cloth, yarn and waste totalled Rs. 2.07 crores, against Rs. 1.97 crores in the previous year. Closing stocks are higher at Rs. 61.15 lakhs, against Rs. 43.93 lakhs. In 1958-59, Osmanshahi Mills had suffered a loss of Rs. 9.32 lakhs; in 1959-60, it has made a gross profit of Rs. 8.08 lakhs. The results would have been still better but for the high cotton prices and the closure of the spinning and weaving departments for nine days during March 1960 on account of the coal shortage. The directors have set aside Rs. 7.09 lakhs (against nil) for depreciation on assets including arrears amounting to Rs. 3.17 lakhs. The development rebate reserve gets Rs. 18,000 (against Rs. 20,000). From the remaining balance of Rs. 30,951, the directors have transferred Rs. 30,000 to investments reserve. It is estimated that depreciation written off up to 30th September, 1960, is inadequate to the extent of Rs. 66.42 lakhs, excluding the initial depreciation amounting to Rs. 19.40 lakhs. In view of the heavy arrears of depreciation, the directors have again passed over the dividend for 1959-60. They state in their report that the current year's profit will be adversely affected by the new excise levy on yarn produced by the mills for their own consumption. The Rs. 100-paid shares of the Company fluctuated between Rs. 34 and Rs. 45 in 1959 and between Rs. 36 and Rs. 51 in 1960. The current quotation is around Rs. 63. It was in 1955-56 that the Company paid its last dividend of 3 percent.

Travancore Cements Repeats

The Travancore Cements Ltd has reported encouraging results for the year ended December 1960. Both production and sales are said to be the highest since the inception of the Company. Besides, the output was in excess of the rated capacity of the plant. The directors state that Travancore Cements' brand of white cement has been popular throughout the country because of its good quality. But due to its high selling price because of the comparatively high manufacturing costs and the high freight involved in the distribution of the product, there has been some consumer resistance. The directors, however, feel that this resistance will be temporary, for the quality of their white cement is so good that it is bound to establish a good market in future. Sales in 1960 at Rs. 70.88 lakhs were more than double the 1959 figure of Rs. 33.34 lakhs. The gross profit increased from Rs. 9.77 lakhs to Rs. 11.70 lakhs. The working results would have been much better if the Company had not been compelled to use high-priced furnace oil due to the acute coal shortage.

The directors have provided Rs. 5.90 lakhs (against Rs. 5.61 lakhs) for depreciation. No provision has been made for development rebate reserve which received Rs. 3.86 lakhs in 1959. The profit available for distribution amounts to Rs. 5.22 lakhs, against Rs. 88,787. The dividend has been maintained at 6 percent, subject to tax. But whereas in 1959, the directors had to draw Rs. 1.50 lakhs from deferred taxation reserve to supplement the profit available for distribution, the dividend for 1960 has been declared out of the year's profit. The directors have also transferred Rs. 2 lakhs to deferred taxation reserve. The shares of Travancore Cements, which touched a high of Rs. 10.40 in 1960, are currently quoted around Rs. 8.45, offering a gross yield of a little over 7 percent.

Andhra Cement Profit Up: Sales Rise

The working of the Andhra Cement Company Ltd for the year ended December 1960 shows a fair improvement over the previous year's performance. Sales have recorded an appreciable rise from Rs. 91.34 lakhs in 1959 to Rs. 1.29 crores in 1960 on account of higher production and despatches. The profit, before tax, amounts to Rs. 23.34 lakhs, against Rs. 17.91 lakhs in 1959. Depreciation amounts to Rs. 10.86 lakhs (against Rs. 8.39 lakhs). A sum of Rs. 50,000 (against nil) has been provided for gratuity. After making these provisions, the profit amounts to Rs. 11.23 lakhs (against Rs. 8.57 lakhs). This has been supplemented by writing back Rs. 90,940 from the rehabilitation fund, Rs. 60,000 from development rebate reserve created in 1958 and another Rs. 8,230 representing the excess provision for bonus made in previous years. From this the directors have provided Rs. 2.30 lakhs for taxation, Rs. 1 lakh for deferred taxation reserve, Rs. 1.20 lakhs for development rebate reserve, Rs. 79,387 for the rehabilitation fund for 1960, Rs. 24,750 for *ex-gratia* payments to labour and Rs. 4,478 for additional dividend payable on preference shares for 1959. Dividends absorb Rs. 7.34 lakhs, leaving Rs. 13,916 to be carried forward.

The directors state that although production and despatches were higher, certain restrictive factors prevented the Company from achieving the rated production capacity, so it could not avail itself of the improved market conditions. Production could not be increased any further due to the coal shortage. Recently, some coal was received by the sea-*cum*-rail route for maintaining production. The transport of coal by sea is, however, very costly. The directors add that the mechanisation schemes for handling the raw materials at the mines are nearing completion and power supply has been extended to the quarries. The mechanised units are expected to go into full operation shortly.

Digvijay Cement Profit Down

In spite of a substantial increase in production, the working of Shree Digvijay Cement Co. Ltd for 1960 shows a noticeable decline in the profit on account of the increase in manufacturing costs. The production of clinker rose from 353,000 tons in 1959 to 406,000 tons in 1960. The cement output increased from 391,000 tons to 442,000 tons. Despatches of cement also recorded a rise from 392,000 tons to 443,000 tons. But the gross profit dropped from Rs. 48.09 lakhs to Rs. 43.94 lakhs. The profit has apparently been squeezed by the rise in manufacturing costs on account of the increase in the price of coal, stores and spares and the rise in railway freight and power charges. After providing Rs. 18.08 lakhs (against Rs. 19.41 lakhs) for

depreciation and Rs. 10.25 lakhs (against Rs. 10.40 lakhs) for taxation, the net profit amounts to Rs. 13.97 lakhs, against Rs. 16.22 lakhs in 1959. The allocation to development rebate reserve has been reduced from Rs. 3 lakhs to Rs. 1.21 lakhs. The balance has been supplemented by transferring Rs. 4.07 lakhs (against Rs. 4.50 lakhs) from general reserve. The ordinary dividend has been maintained at 9 percent less tax. The directors have recommended a dividend of Rs. 6.50 a share on preference shares, against Rs. 7.14 a share in 1959. The proposed dividends on ordinary and preference shares absorb Rs. 17.30 lakhs, against Rs. 17.81 lakhs in the previous year, leaving Rs. 2,000 to be carried forward, against Rs. 49,000 brought in.

The Company has taken in hand the expansion of the present production capacity of cement from 430,000 tons to 630,000 tons. The required industrial licence has been obtained, and negotiations for an import licence are in an advanced stage. The directors have decided to install asbestos cement pipes and sheets making plant as a separate department instead of leaving it to the subsidiary Company, Laxmi Asbestos Products Ltd. The unit is expected to go into production by the first quarter of 1962. The erection of the clinker grinding plant in Bombay is nearing completion. It is expected to start production before August. The shares of the Company, which touched a high of Rs. 182 in 1960, are now quoted around Rs. 156, at which price it offers a gross yield of about 6 percent.

Alcock Sales Rise: Profit Higher

Alcock, Ashdown and Co. Ltd has reported satisfactory results for the year ended December 1960. Sales and work done have risen from Rs. 75.13 lakhs to Rs. 1.08 crores and the gross profit is up from Rs. 12.05 lakhs to Rs. 14.96 lakhs. The decline in the ratio of profit to sales from 16.03 percent 13.81 percent is due to the sharp increase in the cost of stores consumed and the enhanced wage bill. After providing Rs. 1.12 lakhs (against Rs. 1.47 lakhs) for depreciation and Rs. 3.65 lakhs (against Rs. 3.25 lakhs) for taxation, the net profit amounts to Rs. 9.13 lakhs, against Rs. 6.57 lakhs in 1959. Appropriations include development rebate reserve Rs. 23,000 (against Rs. 60,000) rehabilitation and replacement reserve Rs. 1.50 lakhs (against nil). The dividends absorb Rs. 5.68 lakhs. Although the ordinary dividend has been maintained at 17 percent, subject to tax, the net distribution amounts to Rs. 13.04 a share, against Rs. 11.90 a share in 1958-59 because of some relief under Section 15(C) of the Income Tax Act. The directors state in their report that the slump in the shipping trade has affected repairing work, so the Company has concentrated on increasing work in other shops. This policy is bearing fruit and the order-book for all the shops—including the galvanising shop—is fairly full. The board, therefore, views the prospects with a measure of confidence. The activity at the Bhavnagar works continued to be restricted to the building of barges for the Gujarat Government. Eleven barges were delivered during the year and the Company has enough orders to last till 1962. Alcock, Ashdown has taken steps to establish a fully equipped workshop for steel fabrication and general engineering in Bhavnagar. The plant and machinery have arrived at the site, and it is expected that the tower shop and the galvanising plant will start working by October 1961. The additional costs of the various shops in Bhavnagar are estimated at Rs. 27 lakhs. The Company's financial position is strong. The paid-up capital of Rs. 33.42 lakhs excluding the application money on the new shares, issued on the basis of two shares for every seven held at par, amounting to Rs. 8.85 lakhs is backed by reserves and surplus totalling Rs. 56.64 lakhs. The gross block of Rs. 84.06 lakhs has been written down to Rs. 23.04 lakhs. At the current price of Rs. 310, the shares offer a tax-free yield of about 4.4 percent.

Outlook for Investa Machine Tools

Although the sales of Investa Machine Tools and Engineering Co. Ltd increased from Rs. 37.04 lakhs in 1959 to 44.65 lakhs in 1960, its gross profit at Rs. 9.23 lakhs is a little lower than the previous year's figure of Rs. 9.47 lakhs. Having wiped out the accumulated losses in the previous year, the directors have recommended the payment of the arrears of preference dividends for 1944 and 1945 amounting in all to Rs. 80,900. From the gross profit, the directors have provided Rs. 5.53 lakhs (against Rs. 2.22 lakhs) for depreciation, Rs. 96,000 (against nil) for taxation, and Rs. 54,507 (against Rs. 18,053) for development reserve. After providing for the proposed dividend on the preference shares, there remains a surplus of Rs. 63,965 which, together with Rs. 4,605 brought in from the previous year, has been carried forward. The Company has yet to clear arrears of depreciation and also of preference dividends for 15 years. Even so, the Rs. 100-paid shares of the Company are quoted at a premium of about Rs. 25. This reflects investors' confidence in the outlook for Investa Machine Tools. It is said that its working results will show a marked improvement when its plant in Chinchwad, near Poona, goes into production, so it may not be difficult for the Company to pay a maiden dividend in 1963. The shifting of the works to Chinchwad and the expansion scheme the management has in view are estimated to cost about Rs. 60 lakhs or Rs. 70 lakhs. The turnover is expected to rise to around Rs. 80 lakhs by 1962.

Apollo Mills Turn the Corner

Shareholders of Apollo Mills Ltd, who have gone without a dividend for four years, may not have to wait much longer before their investments begin to bear fruit. The Company's working for 1960 indicates that it has now turned the corner. It has made a gross profit of Rs. 25.77 lakhs in 1960, against a loss of Rs. 9.10 lakhs in 1959. The directors have provided Rs. 5.13 lakhs for depreciation and Rs. 1.38 lakhs for development rebate reserve, including Rs. 1.33 lakhs for 1958 and 1959. After providing Rs. 1.83 lakhs as bonus for 1958 and compensation to workers for idle hours due to the power shortage in 1951-52 and taking into account the refund of tax on dividends, the directors have used the surplus to reduce the deficit brought forward from the previous year form Rs. 45.65 lakhs to Rs. 29 lakhs. In view of the large outstanding deficit and depreciation in arrears amounting to Rs. 18.70 lakhs, the directors have not recommended any dividend for 1960. They think that in all probability, the Company will be able to wipe off the entire debit balance during the current year. They are considering schemes for the modernisation of machinery in order to effect further improvement in the working of the mills. The Rs. 2-paid shares of the Company are currently quoted around Rs. 1.50.

Power Tillers from East Asiatic

The East Asiatic Company, it is reliably understood, has secured a licence from the Government for manufacturing power tillers. The factory will be located in Sanatnagar in Hyderabad. The power tillers are said to have been designed to suit tropical conditions. Besides, they can be run on kerosene. They are easy to operate and are capable of doing everything from ploughing to harvesting. The project is estimated to cost about Rs. 1 crore. The East Asiatic Company is forming a new enterprise called Landmaster Asiatic Company to undertake the project. Danish and British interests are collaborating in the venture. To start with, the new Company is likely to offer equity shares of the value of Rs. 18 lakhs for public subscription some time in July. The factory will initially produce 2,000 power tillers a year, and the output will rise to 24,000 a year when the factory goes into full production.

New India Fares Well

The directors of the New India Assurance Co. Ltd propose to maintain the dividend to the shareholders at Rs. 5.70 a share, subject to deduction of tax, for the year ended December 1960. This is made up of a dividend of Rs. 4.50 and a bonus of Rs. 1.20, and the net distribution works out to Rs. 3.99 a share. As in the previous year, the dividend of Rs. 4.50 is to be paid from the profit of the year, while the payment of bonus of Rs. 1.20 will be made from the balance of capital reserves of Rs. 42.38 lakhs built up from the compensation received for the acquisition of the Company's life business. The preliminary figures about the working results released along with the dividend announcement indicate that New India has fared well in 1960. Subject to audit, the net premium income of the Company exceeds Rs. 10.8 crores—a rise of about Rs. 2 crores over 1959. The profit, after taxation and subject to transfer to the additional and other free reserves, is said to exceed Rs. 70 lakhs. The Company's Rs. 15-paid shares have improved by about Rs. 3 over the past few weeks to Rs. 63, at which price they offer a tax-free yield of about 6.75 percent.

Alembic Chemical Earns More

The Alembic Chemical Co. Ltd has reported satisfactory results for the year ended December 1960. Its sales rose from Rs. 2.48 crores to Rs. 2.61 crores and the closing stocks from Rs. 50.49 lakhs to Rs. 80.29 lakhs. The gross profit at Rs. 46.75 lakhs is Rs. 4.96 lakhs more than in 1959. While the cost of raw materials consumed declined from Rs. 91.19 lakhs to Rs. 85.26 lakhs, operating expenses,—including wages—increased from Rs. 97.82 lakhs to Rs. 1.14 crores. Out of the increase of Rs. 16 lakhs in operating expenses, stores, spares, etcetera, account for Rs. 7 lakhs, power and fuel for Rs. 2.50 lakhs and excise duty for a little over Rs. 1 lakh. After providing Rs. 12.52 lakhs (against Rs. 9.41 lakhs) for depreciation and Rs. 10.20 lakhs (against Rs. 10.50 lakhs) for taxation, the net profit amounts to Rs. 20.91 lakhs, against Rs. 18.64 lakhs in 1959. From this, Rs. 7.16 lakhs (against Rs. 5.80 lakhs) has been transferred to development rebate reserve and dividends, absorbing Rs. 12.77 lakhs, against Rs. 11.77 lakhs in the previous year, leaving Rs. 1.17 lakhs to be carried forward, against Rs. .19 lakhs brought in. The 1960 dividend of 14 percent, taxable, is on the increased capital of Rs. 85 lakhs, compared with 16 percent, taxable, on Rs. 65 lakhs in 1959. The additional capital of Rs. 20 lakhs was issued in November 1959.

The directors state that the benefit of the expansion programme carried out in 1960 will be fully reflected in the current year's results. The programme for the current year includes further expansion of the penicillin, yeast and superphosphate plants. Orders for capital equipment will be placed after the required foreign exchange is received by the Company. Alembic Chemical has a paid-up capital of Rs. 1 crore, including Rs. 15 lakhs in preference shares. Its reserves and surplus total Rs. 59.71 lakhs. Its gross block, which has risen from Rs. 1.87 crores to Rs. 2.38 crores, has been written down to Rs. 1.60 crores. The Rs. 100-paid shares of the Company, which touched a high of Rs. 300 in 1960, are now quoted around Rs. 263, at which price they offer a gross yield of about 5.3 percent.

Thamarapally Rubber Repeats

The Thamarapally Rubber Co. Ltd has earned a net profit of Rs. 74,283.04 for the year ended 31st December 1960, after providing for taxes and depreciation, compared with a net profit of Rs. 75,909 for the previous year. With the amount of Rs. 28,430.27 brought in, the total comes to Rs. 1,02,713.31. The proposed dividend at 6.54 percent subject to tax on the preference shares will absorb Rs. 4,905. A dividend of 30 percent subject to tax is recommended on the ordinary shares (same as last year). This ordinary dividend will absorb Rs. 75,000. The balance of Rs. 22,808.31 is carried forward. The rubber crop harvested during the year amounted to 104,442 kilograms. The estimated crop for 1961 is 111,000 kilograms. The average price realised was Rs. 1.53 a lb.

The Company proposes to issue 37,500 equity shares of Rs. 10 each at par, payable in full on application to existing holders at three shares for every two held, and also to issue 850 9.3 percent taxable first mortgage debentures of Rs. 500 each payable in full on application. The proposed issue of capital and debentures is to raise funds to acquire the Budded rubber area in Calicut Estate for a consideration of Rs. 7,80,000. The share transfer books will be closed from 15th June to 20th June, 1961, both days inclusive.

TAXATION OF COMPANIES

TAXATION may be said to be of two kinds: that which is imposed by the State and which has to be paid willy nilly, and that which the tax-payer imposes on himself, e.g., subscriptions, donations, and the like. In the case of joint stock companies this latter kind of taxation is often conspicuous by its absence, the management excusing itself on the ground that it is dealing with shareholders' money. Thus a limited liability company enjoys all the blessings of the Pax Britannica with a minimum of taxation. Thus, for instance, when in Calcutta subscriptions were being raised for the widows and orphans of those who fell in the war, or later for the equipment of Lumsden's Horse, how many companies subscribed? Yet these subscriptions were being raised in connection with the defence of the Empire, in the maintenance of which these companies were vitally interested. Quite recently several Calcutta Companies have through their responsible management subscribed to the Queen Memorial Fund, and we notice that one or two ill-conditioned shareholders have taken exception thereto. They have given nothing themselves and object to the companies in which they are interested giving anything. A more contemptible proceeding it is difficult to imagine. There is a growing feeling at home that the income-tax should be graduated that is to say, that incomes derived from dividends, investments and the like should be taxed at a much higher rate than those which a man earns directly himself; and we think that there is much to be said in favour of this view. We notice that Sir M. M. Bhownaggree, M.P., on the 2nd instant proposed to ask the Chancellor of the Exchequer whether the duty on the creation of joint-stock capital could not fitly be raised from ¼th percent to 1 percent without injuriously affecting the legitimate expansion of Company enterprise. The Indian Government may not be slow to take this hint.

A Ditcher's Diary

IT IS NOT FOR DURGAPUR'S INORDINATE HEAT ALONE that I wish the A.I.C.C. had met somewhere else—some other place where they make not steel but cheese or waffle. Rarely in the history of man can so many words have said so little; and not a few of them came from the Prime Minister himself. It is none of my business to defend the Earl of Home; and I do not blame Mr. Nehru for not quite appreciating Britain's special relations with Portugal, whose sins are as dark as Mr. Nehru painted them. But it does seem a little hard that Mr. Nehru should have travelled so far to find somebody to flog, when there were so many at hand deserving worse. I have written often enough of Bengalis in terms not wholly different from those used by Mr. Nehru at Durgapur. What I found astonishing was that he had nothing comparable to say about the Assamese who, surely, brought about the whole crisis over language. Calcutta quite correctly views the one-year-*status-quo* formula with the gravest suspicion; and Mr. Nehru will not find it easy to persuade anyone that he had not the general election in mind. The total impotence of the Congress is one of the most tragic aspects of the political scene in India today. It can neither enforce its will on the Assam State Congress, which is apparently dominated by linguistic fanatics, nor discipline the Cachar District Congress Committee, which is openly defying the Congress President's directive. The reason, again, is obvious enough. The Congress wants Bengali votes in Cachar and Assamese votes in the Brahmaputra Valley; and for that no compromise is too devious. Mr. Nehru thought the Centre's intervention would have been dictatorial. Do I have to remind him that in Kerala none of these lofty considerations weighed with the Centre—because the State Government concerned was not a Congress one but communist? I have said nothing at all that Mr. Nehru and the Congress leadership do not know as well as I do; but political hypocrisy has gone so far in this country that neither the Constitution nor minorities' rights nor indeed anything else can hope to have precedence over what are conceived to be the Congress Party's interests. The pity of it all is that Mr. Nehru should be the pious theorist and defender of this dirtiest of political games.

TAGORE IS PERHAPS BEST KNOWN AS A POET; EVEN in his own country his recognition as a painter came late in life. I wonder how many of his sentimental admirers abroad know that he championed modernism in Indian painting when both critics and exponents of art in this country were nostalgically adhering to the past. I have just finished browsing through a portfolio of 12 paintings published for sale by the Tata Iron and Steel Company Limited; the proceeds are to go to the Visva-Bharati Chancellor's Tagore Jayanti Fund. I believe Tagore eventually took to painting almost accidentally, although he had pronounced leanings that way during his youth. While editing the drafts of his poems—especially those for *Puravi*, 1922-24—the poet found himself performing calligraphic exercises in the simple process of erasure and correction. And this was the prelude to the sole occupation of much of his later life. Tagore, I am told, showed no attachment to the revivalist school which was initiated by his nephew, Abanindranath, nor did he follow the narrow grooves of nationalism in art, for the revivalists confined themselves exclusively to Indian themes. I feel perhaps that he was deeply impressed by surrealism in eschewing imitation altogether and stressing originality above everything else. Like other surrealist painters, such as André Breton, his work tended to be abstract and symbolic. Yet Tagore could scarcely have known that this approach would open up great vistas of possibilities for what is now called the Calcutta school of painting. Between 1928 and 1939 he completed no less than 2,000 pictures, many of which I have seen in Uttarayan and Rabindra-Sadan at Santiniketan. But I am particularly pleased that in this Tagore year private firms should be taking such an interest in this great cultural event. The attitude is all too prevalent these days that business and culture are worlds apart. It has not always been so, and I wonder why it should be now. Both are examples of man's activity and achievement, and we would be poor individuals indeed if we indulged in the one in order to support a life which was devoid of the other.

THE SIZE AND VIGOUR OF THE CALCUTTA DINNER show no signs of diminishing—so one of my London correspondents tells me in reporting on last week's gathering of the clans at the Connaught Rooms, where some 390 Ditchers and their guests sat down to dine and to do honour to our ancient and distressful city. The principal guest of the evening was Lord Casey who, as Mr. R. G. Casey, was Governor of Bengal in the mid-1940's. His lordship, I am told, reminisced cheerfully but at some length about the state of famine and bankruptcy from which he rescued (so it seems) his erstwhile satrapy and, as he has always been an inveterate diarist, was able to document in detail his account of an unhappy chapter in the affairs of Bengal. Mr. Henry Williams presided and apart from giving his audience the customary account of men and things in Calcutta, he had a few pointed remarks to make about a commercial film of the Queen's tour of India and Pakistan which, I gather, does scant justice to the occasion, with the result that it has aroused the ire of many others besides our Pakistani friends. But speech making is not the main purpose of the Calcutta Dinner, the primary object of which is to enable old friends to meet one another and, for a brief hour or two, to remember their attachment to the city which it has been said produced gold out of silt. But that must have been a long time ago.

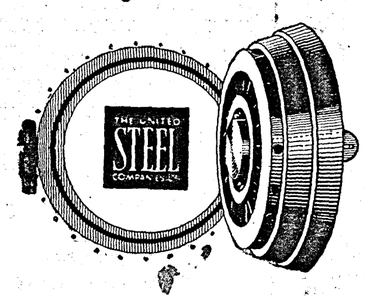
LONDON HAS PROBABLY ALREADY SEEN MORE THAN its share of demonstrations for nuclear disarmament, and it seems to me only fair that the organisers concerned have now decided to march to Moscow. It appears probable too that the marchers will not be picked up by the police as they approach the Russian border or even Red Square and the Kremlin. Will the latter mind if the marchers go to the countryside and try to address the ordinary people? Even that may be permitted. The reason is simple. If a sufficient number of people in the United Kingdom wanted Britain to renounce her H-bomb—thank heaven they don't—then the British Government, irrespective of what it thought, would have to give up all its nuclear arms—or resign. The Kremlin is confronted with no such choice; and it would not occur to it to bother about how the Russian people might feel or think on such a question. Mr. J. B. Priestley explained the other day why he had not gone to Russia to make the kind of anti-nuclear speeches he had been delivering in Britain and six or seven other countries. The reason is that he would then have been called a fellow-traveller; and thus the campaign would have suffered. I do not think that the majority of the Aldermaston marchers are fellow-travellers or anything of the sort: and Mr. Priestley would be angry if I called them eccentrics. Some, Mr. Priestley knows, are out for a bit of innocent fun; but most think they are serving a good cause. That in any nuclear war Britain is Sitting Duck Number One—Mr. Priestley's phrase—I do not doubt. That as an independent deterrent the bomb does not give Britain unlimited independence of action I would also concede. (Indeed, it is possible to argue that the bomb has greatly circumscribed the war-making capacity of both Moscow and Washington, for even limited wars are now fraught with frightful dangers.) But, looking at the East-West struggle as a political combat rather than as a moral crusade, it seems to me that the West's bargaining power rests entirely on the bomb. I trust nobody with unlimited powers of destruction: but I would rather see them in two or three different pairs of hands than in those of Mr. Khrushchev alone.

IT SEEMS A SHAME THAT ADVERSE WEATHER SHOULD have prevented Sir Edmund Hillary's mountaineering team from reaching the summit of Makalu after climbing to within a few hundred feet of it, and I am as sorry as the next man that this gallant effort to scale a difficult peak without the aid of oxygen did not succeed after so many months of hazardous climbing. But when it is remembered that the main object of the expedition—the genuinely scientific one of studying the reactions of the human body and mind to high altitudes—has been largely successful and is still going on, then there is some consolation for the failure on Makalu. Mountain climbing, or even *Yeti* hunting, may be more headline-catching, but they contribute little to the sum of mankind's scientific knowledge. The Hillary expedition is probably the first of its kind ever to have been undertaken anywhere, and during the past seven months I have been following its news closely, although little has so far come out. It has struck me that despite the activities of science fiction writers, little is known of what it is like to live for a long period at over 19,000 feet. I knew that a climber is likely to become irritable and erratic over a certain altitude—like the R.A.F. with its gremlins, he is apt to see all kinds of things which do not exist and miss altogether things which do. But I did not know that the appetite diminishes rapidly above a certain altitude and that the taste for food deteriorates to the point where even the best Scotch tastes like methylated spirit. I did not realise either that one had to be able to withstand the strain of over 150 heart beats a minute to be a successful mountaineer. All these facts are interesting enough, but no doubt there will be more interesting ones still when the expedition comes down from its Himalayan laboratory and its reports are published. The unsuccessful climbers of Makalu have been flown back to Kathmandu, but the scientists, I see, are still at their posts well above 19,000 feet. Their investigations, presumably, are incomplete. I wish them all the luck they need.

THE DITCHER

Bank vaults are always made of steel...
because steel is so dependable!

symbol of security!



Through the years Steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability... Steel that she can hold up to the world as a symbol of her security.

MAHINDRA AND MAHINDRA LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S REVIEW

Speech delivered by the Chairman, Mr. K. C. Mahindra, at the 15th Annual General Meeting of the Shareholders of Mahindra & Mahindra Limited held in Bombay on 24th May, 1961.

While my welcome to you to this, the Fifteenth Annual General Meeting of the Company, is as genuine and sincere as in previous years, shareholders will perhaps wish me to enlighten them on several counts. First is the inordinate delay in holding this Meeting. The reason is not any sluggishness in the preparation of accounts, but the Companies (Amendment) Act which came into force from the end of December 1960, posed certain problems on which the legal advisers of the Company could not provide a straight answer. One concrete recommendation is a complete revision of the Articles of Association of the Company. This has been taken in hand and I expect shareholders will be asked to approve the new set of Articles during the current year. The time limit provided in the Companies Act, 1956, for holding the Annual General Meeting was nine months from the date of closing of Company's accounts. Under the Amendment Act this has now been reduced to six months, and accordingly future Annual General Meetings of the Company must be held before the end of April every year.

Next in order of explanation should be your question about the fall in profits. Reasons have been succinctly given in the Directors' Report. I may offer here some elaboration. It is normal for a manufacturing concern employing nearly 3,000 men that standards and categories of staff employment run along prescribed lines of promotion and specific defined increments in remuneration. Under the present labour laws of the country, it is more or less incumbent to follow, for the factory workers, the practices laid down in detail by various tribunals and associations; these prominently involve an enhancing pattern of cost which ranges between 8 and 10% every year, without any increase in the workload.

In an engineering complex like the automobile production where vendor/suppliers play a significant part, there can be no stable wage level or a stable cost of production level. This is particularly true when raw materials become scarce and there is an intense struggle for scant supplies between competing engineering groups. Inevitably this is reflected in high materials cost.

Rise in Sales

There has been a 38% increase in the sales of vehicles over the past year. Throughout the year there was Government pressure to maintain the price line, despite increased costs of imported components, and a substantial increase in the local costs of production. From July 1960 a further reduction of Rs. 200/- in the retail price of the Jeep was made at the special insistance of Government authorities. The increase in the sales volume did not prove sufficient to compensate for the increased cost. The Directors, in their Report, have referred to the proportionally larger costs of components as the Company gets into the phase of producing more complicated parts. We have reached that stage, and every new development in further production of indigenous components will mean pro rata a higher production cost.

With larger number of vehicles coming out of the production line, there has been an increase in the number of staff employed but I am glad to say that a continuous realignment of manufacturing and assembly lines has resulted in a better productivity coefficient and the increase in strength is therefore not proportionate to the increase in production.

Import and Distribution of Steel

The other major activity of the Company is the import and distribution of steel. Profit margins in the Steel Division also contracted during the year. This was anticipated. The fall in surplus is partially due to a large carry-over, as there is considerable more tonnage which has remained unshipped at the close of our accounting period in contrast to last year, and this of course does not figure in the accounts. As stated in the Directors' Report, the import business in Steel might now rapidly diminish, but we hope it will be replaced by larger internal distribution. The Company's organisation has been reshaped to meet such demands.

In this connection it will not be inappropriate to mention the long delays in settlement of our steel bills by Government. The procedure is about the most cumbersome and time and money consuming known under any regulatory agency of the Government, and there is no way of speeding it up. As an illustration, I may instance the case of certain supplies made 3 years ago; the final settlement of our bills on this account is still pending. Approximately Rs. 30 lacs are involved, and, naturally, interest charges for financing such delays are a growing burden on the Company.

Profit-wise, therefore, the operations of the Company during 1959-60 have not been satisfactory, despite the utmost vigilance in expenditure and despite increased turnovers.

Expansionist Outlook

The year 1960 also provided certain disillusionment to the Company's Management. We have consistently held the view that a progressive business concern must adopt and sustain an expansionist outlook. The Dauphinoise project for a small car was one such exercise. Government in its wisdom has decided to build the small car in the public sector. It is some satisfaction, however, that according to recent press reports arrangements are likely to be concluded with Renaults of France, who were our principle collaborators, for the manufacture of the proposed small car, and the Pande Committee is reported to have recommended the Renault car for the purpose. It is also interesting to observe that collaboration terms offered by Renaults appear to be similar to those offered to your Company. This indicates to me that your Management was working on correct lines and obtained the most practicable and valuable collaboration available to entrepreneures in India. I wonder what Government has gained by this process of examination of Committee over Committee; on the contrary 18 valuable months have been lost.

Another point of disillusion was the break-down of our negotiations regarding manufacture of agricultural tractors. Considerable amount of time and effort was devoted to the working out of a detailed collaboration agreement with the British manufacturers, who had initially offered to invest nearly £480,000 in the Indian project. Towards the later end of the final negotiations, it was found that serious differences of opinion remained about the pricing policy which the British manufacturers desired to adopt. This policy was in direct contradiction of their original understandings with us, and would have involved an additional exchange burden in respect of the costs of tractors and components to be brought into India. Trust and mutual confidence was involved and we decided to terminate this association. Negotiations are at present afoot for manufacture of another make of tractor in the country. Government has been kept fully informed on the subject, and it is with their approval that fresh negotiations are being undertaken.

Another point of disillusion was the reversal of a major policy decision of the Board to shift our Jeep manufacturing facilities to Baroda. Inordinate delay in the acquisition of property in Baroda led to considerable difficulties in the matter of installation of major machine tools which had arrived in the country. We could not keep them in packing cases for long, otherwise the manufacturing programme would have suffered considerably. Besides, majority of our skilled workers showed a disinclination to move to Baroda. The Management gave considerable thought to this matter and reluctantly came to the conclusion that the original decision to shift to Baroda must be reversed. Negotiations have been concluded for the purchase of a suitable area in Greater Bombay, and it is hoped to consolidate all our manufacturing activities in this area in course of time.

Alloy Steel Project

Disappointment and disillusion are however the stock-in-trade of a realistic approach in business and it is not all gloom and darkness. We have received permission to expand production of Jeep-type vehicles to 10,000 units a year, and I am glad to be able to tell you that we have just received advice from Delhi that our application for setting up an alloy Steel project has been approved by the Licensing Committee. This is going to be a major undertaking.

There have been some doubts expressed in financial journals that your Company is essentially a trading organisation and hence the wide fluctuations in its earnings. I should like to belie this comment: the Company was started with the specific purpose of participating and helping in the constructive development of the economy of the country. Within a year or so we were able to launch the first undertaking (Machinery Manufacturers Corporation Ltd.) to engage in building textile machinery. In addition to this the Company has promoted manufacture of Jeeps and Trucks, Diesel Engines, Instruments, Synthetic Enamels and Varnishes for the electrical industry, agricultural and industrial trailers, water meters, sintered bearings, lifts etc. It has been my experience that manufacturing lines take a long time to mature and are peculiarly subject to cyclical fluctuations. Trading for this Company became therefore a sort of bread and butter line—a division to provide the cushion against adverse winds. If in the past years trading has provided the major portion of our profits, it is a measure of our success in pursuing the Company's primary purpose and providing incidentally the wherewithal for expansion.

I have referred earlier in this address to the thesis of expansion. I firmly believe that for a country like ours, we cannot afford to remain static or even sit on our oars in the name of consolidation. I do not like to think backward. When an organization stops thinking forward it becomes stagnant. There are no doubt grave problems—problems which demand urgent tackling, but if we are to survive as a potential and economically free entity, the economy of the country must "thrust its way through the stifling blanket of overpopulation and inflation". In the words of wellknown British economist, Indian people must, like the Red Queen, run fast even to stay where they are.

Economic Planning

To people critical of economic planning it will perhaps come as a great surprise that it is being more and more increasingly recognised that State planning must come first if private enterprise is to fulfil its own dynamic task: this is from Dr. Prebisch, President of the United Nations' Economic Commission for Latin America. Do we know that in the United States of America—the home of free enterprise—one in every six employed Americans is on a Government payroll? Since the beginning of this century non-Government employment has increased about 100%, while Government employment —federal, State and local—has increased about 650%. The twenty major U.S. Government guaranteed corporations possess assets over 29 billion dollars (about Rs. 14,000 crores); U.S. Government interest in these assets amounted to over 25 billion dollars.

What we should really quarrel about is that our Government doesn't seem to realise that Planning and achievement are horses of two different categories; one cannot win a thoughbreds' race by running a hackney animal. Priorities were once said by late Mr. Aneurian Bevin to be "the religion of socialism—implicitly or explicitly they have become the theology of all bureaucracies" and yet despite a host of Evaluation Reports, a very low priority is being given to performance of the various public sector undertakings. Then there is the "closed" shop practice amongst civil servants. According to a prescient but sympathetic observer— "A game of musical chairs seems to be developing in which senior bureaucrats move with disconcerting speed from post to post in the public sector" Urgent attention to the lack in performance is needed, if plans are to form a solid base for a self-sustaining economy.

Foreign Exchange Resources

For industrial growth, and as a matter of fact, for development of an agriculture-based economy as in India expansion cannot be got under way without substantial foreign exchange resources and foreign exchange, it is said, cannot be produced domestically. That may be so, but it is only by the fullness of domestic production that foreign exchange can be earned. Since 1957, and possibly earlier, there have been diverse but disparate efforts to engage the interest of people in the export business. A dozen or so export promotion councils have been set up, every year there is a round of talks with the Central Advisory Committee on exports; and associations and chambers of commerce have devoted considerable time in turning out codes of conduct and methods of behaviour for exporters. The basic requisites of exports trade are no doubt included in the list, but I do not see the emphasis on prerequisites which must be placed if our economy is to increasingly send its products to other markets. These prerequisites are extraordinarily simple: Your product must be good, quality-wise, and the buyer should want to purchase it at your price. Export promotion councils have no doubt succeeded in sending out a plethora of delegations abroad. Free trips are usually enjoyable, particularly when the reporting need not rise above the platitudinous level. I do not see any other talk except that of incentives required to export a product. It is surely an entirely wrong track to follow. Incentives are all right for removing the bottlenecks in production, but the main objective should be to produce for export something which the overseas buyer would want to buy and at your price. How can the local industry be geared up for the purpose? This should be the engaging task primarily for the producers, assisted no doubt by a guiding hand from Executive authority

Let me give two examples: one in the 30's and the other post-war, of which I have personal experience. I believe it was in 1949 or 1950 when a German engineering concern secured a substantial order for railway wagons amounting to about six million pounds sterling. The moment the acceptance of their tender was received in Germany, the Management got together, arrived at the gross margins they would be earning on this order, and decided to spend the entire gross margin in sending out delegations of 27 engineers to India. These engineers apart from their technical proficiency were superb salesmen. They were given carte blanche about quotations pertaining to prices, deliveries, etc. Various groups toured the whole of India for periods ranging from 3 weeks to 8 months. These delegations went back with new orders totalling over £11 million sterling.

A Pre-war Example

A pre-war example which comes to my mind is the Japanese drive to sell cement in India in the 'thirtees'. The markets they attacked were Burma and the Calcutta region. Wherever Indian Cement was being sold, a Japanese bag of cement was available at a lower price. If the Indian cement bag had one red or blue circle in the middle, the Japanese bag showed two read or blue circles. The competition become so severe that Indian cement manufacturers brought down their prices to the rock-bottom cost and yet the Japanese cement was still available at a price lower than theirs', despite a 30% import custom duty. On detailed investigation in Japan and an examination of the methods and processes employed by the Japanese exporter, it came as a great surprise that the ex-factory price of the Japanese cement for export was so ridiculously low that there was no hope on earth in India to meet such competition. In those days one could use the word "dumping" in an authentic manner and approach the Government to take some action. How otherwise could the Japanese afford to send substantial quantity of cement into a protected market? We learned that after a decision was made to attack a certain market, the Japanese manufacturers were got together and on the basis of their pre-export production it was agreed between them that utilisation of 60% of their installed manufacturing capacity for the home market was sufficient to give the manufacturers a reasonable return on the capital employed. The associated group then decided to ask each manufacturer to step up production to the maximum, and under Government direction production over the 60% level was to be handed over to the export associations at prime cost. I emphasise the words "prime cost" which meant the cost of raw materials and direct labour only. This gave the associations a fine start to programme the export drive. Export groups in other industries joined in and surpluses were pooled in order to help in the export drive for the new entrant, namely cement.

In these two examples there is a moral to be learnt by manufacturers, by export councils and by the Government. Maximum production, quality which the buyers like and co-operative endeavour with Government prodding and Government assistance to sell abroad are the *sine qua non* for finding a place in the overseas markets. I suggest a combination of the Japanese and the German examples cited above, but of course local prime costs—direct labour and materials—must be kept level under restraint if necessary. Businessmen should be prepared to give serious consideration to such proposals, for over the next decade it is imperative that our country's exports should advance materially year by year to the level that present imbalance in overseas trade is corrected, and a surplus is earned to pay for servicing the foreign loans and grants now being negotiated.

Turning now the current affairs of the Company I am glad to report that for the six months period ended 30th April 1961, the Company's sales of Jeep vehicles and spares are ahead of the previous year's rate—a total of 3,563 vehicles sold in 6 months as against 6,499 units in 1959-60. Steel bookings this half year are also satisfactory—being about 98,000 tons as against 201,000 tons in 1959-60. But I must also report that our endeavours to engage in the export trade in steel have not met with any success yet. Deliveries available from the new steel works are still not firm and it is not desirable to speculate on world price in this respect where overseas sales are concerned. We will continue however in efforts to develop the export business.

To the growing number of staff and workers our thanks are due for their hard work throughout and for the loyal co-operation they have given to the management in this difficult year.

CHAIRMAN, MR. A. N. HAKSAR'S REVIEW

Speech delivered by the Chairman, Mr. A. N. Haksar, at the Annual General Meeting of the Shareholders, on Thursday the 25th May, 1961.

Gentlemen,

You will recall that on a similar occasion last year I had given an indication that the Company's position would improve during 1959-60, owing to the opportunities provided for export of Manganese ore under Barter transactions. The results of the year fully bear out my expectations.

Trading Results

Deliveries and shipments during the year under review again reached the level prevailing in 1956-57 and in 1957-58, and amounted to 92,529 tons. This represents an increase of about 30,500 tons, mainly of medium grade ore, as compared to 1958-59; at the same time, the average prices realised for your High and Medium grade ores in 1959-60 were approximately the same as in the previous year. Of the total tonnage mentioned earlier, 2,400 tons represents chemical grade ore, most of which was sold to Indian manufacturers, and the balance, consisting of Medium and High Grade Metallurgical ores, was sold for export.

From these results it might appear that Indian Manganese ore has made some recovery since 1959 in the international market; I am sorry to say that, in fact, the position is quite the reverse and Indian Ore continues to lose ground to its competitors. You are aware that since 1956 the preoccupation in our country has been to provide the State Trading Corporation with as large a slice of the export cake as possible and at the same time, the Railways, and the State and Central Governments have also made further claims on the Exporter and Producer. The other producing countries, like Brazil have taken full advantage of the opportunities thus provided to them and duly snatched away from us a major portion of our traditional markets. I will not today go into this story which is too well-known to require repetition; I will try, instead, to explain how, in the circumstances, your Company was able to achieve good results in 1959-60. For this purpose, I would like to say a few words with regard to Barter transactions.

Barter Transactions and Manganese Trade

I understand that Barter transactions are not normally permitted in the case of traditional export commodities; however, by about 1959, Indian Manganese ore exports appeared to be coming to a standstill and consequently, a number of Barters involving ore exports were permitted by the Government on an *ad hoc* basis. Most of these Barter proposals were put forward and executed by Indian Importers of items such as steel, acting in conjunction with the traditional Indian Exporters and Foreign Buyers of Indian Manganese. In all such cases, the foreign suppliers of steel, etc., were able to "discount" the Indian Manganese prices: this discount in fact represented the difference between the higher price required by the Indian Exporter and the actual or market price at which ore could be sold to foreign consumers. This discount, which ranges today from 10% to 25%, could be taken as an indication of the extent to which Indian ore prices are uncompetitive. I should also mention that all such Barter Schemes have to be approved by the Government who have held that Manganese ore exports against Barters can only be made in the name of the State Trading Corporation.

Coming now to the year under review, of the total deliveries of metallurgical grade ore amounting to approximately 90,000 tons, 66,200 tons were against Contracts outstanding at the commencement of the year, and the balance of about 23,800 tons represented new sales. The latter were possible mainly due to the stimulus provided by Barter transactions, which also enabled us to maintain our price level. In fact, a major portion of the total deliveries was directly or indirectly connected with Barters.

Your Company's immediate prospects seem to be linked with Government policy regarding Barters. These Barters have helped us considerably, but one serious drawback of the policy needs, I think, to be brought to notice. As I have stated earlier, each Barter proposal is considered individually by the Government, and its policy in this regard has been changing constantly even in the short period of two years. Thus, early last year Government revised its policy and since then did not allow Barters of Manganese Ores with Phosphorous content of less than 0.18%; towards the end of the same year, however, Government decided to stop Barters involving any Manganese Ores. But, in the last few months, there have been many rumours that permission would now be given for "Special" Barters involving ore. I am informed that a number of new Barter proposals have, in fact, been submitted for importing steel, machinery, non-ferrous metals, fertilisers etc., but none of these has so far been approved.

As far as the Manganese Exporter is concerned, the situation today is that fresh sales are possible as and when such Barters are approved, which means that sale prospects are haphazard and unpredictable and it is almost impossible for an Exporter/Producer like your Company to forecast demand and plan production, which we require to do years ahead if we are to achieve maximum economy and reduce costs.

Government's Manganese Policies—Suggestions

To my mind the approach to the country's Manganese problem could be on two lines. Firstly, the short-term objective should be to ensure that Indian ore does not lose any more ground, for which purpose Barters should be freely permitted on terms and conditions which should be well publicised or, failing this, some other form of subsidy should be made available to the Exporter. This is, of course, a measure of temporary relief, while from the long-term point of view, the Indian Exporter should be able to stand on his own feet. This entails, on the one hand, regaining the confidence that Indian Ore enjoyed prior to Government's intervention in 1956, and, on the other hand, reduction of Indian Ore prices. With regard to the latter, it has been pointed out that the main factors resulting in increased costs during the last few years have been beyond the control of the Producer or Exporter; examples are increases in Royalty, Railway Freight, costs of machinery and spares, the introduction of Labour Legislation such as the Employees' Provident Fund Act, etc.

Company's Efforts

Leaving aside these matters, you may like to know that your Company has been doing its utmost to meet the challenge of this difficult situation and I would like to give an idea of some of the measures.

Last year I had informed you that your Mine at Bamankua had to be closed down as it was the least economic unit and I fear that we may soon have to face a similar situation regarding Pani Mines. At the same time, the major Expansion Project concerning the development and exploitation of the 3rd and 4th levels (350 and 500 feet, respectively, below surface level) at Shivrajpur is proceeding according to plan and this will in about one or two years begin to yield a bigger proportion of High Grade ore, as compared to the present production pattern. As High Grade ore fetches a better price and is also easier to market, this should help us to some extent to retrieve the situation.

I should also like to stress the importance which we place on the beneficiation of Low Grade ores. Mechanical as well as manual methods of screening and jigging have been practised at your Mines for several decades now and these facilities have been increased considerably in recent years. Thus in 1959-60 about 35,000 tons, or 45% of our total output, resulted from beneficiation. A large portion of this was obtained by processing material from the old "waste" dumps from which saleable ore was thus recovered economically. Such processing has also necessitated increasing use of mechanical handling and conveying equipment during recent years. These are but a few of the steps we are taking to ensure maximum economy and efficiency of operations.

Future Prospects

Taking into account what I have stated earlier regarding the various major uncertainties confronting Indian Exporters, you will appreciate that it is very difficult to make any long-term forecasts regarding your Company's prospects. Generally speaking, world demand for Manganese continues to be good and is likely to improve during the year. Imports into the U.S.A. during 1960 were slightly better, at 25 lacs short tons, than in the preceding two years. During 1960, the American steel industry suffered a recession and production dropped to about 45% of capacity towards the end of that year; this is now reported to be in excess of 60% and further improvement is expected. Consumption of Manganese Ore in Europe and Japan continues at a high level, but here powerful competition from the Soviet Union has to be reckoned with.

Taking an overall view, it seems that world demand will continue to increase, but this is unlikely to reverse the downward trend of Ore prices, on account of increased production in several other countries and severe competition. I believe there is, in the circumstances, scope for the Indian Manganese Industry, but whether we are able to regain our proportionate share of the increasing world market, or even maintain exports at the present level, will depend largely on whether Government is prepared to reorient its thinking. In any case, I think it is only fair to warn you that according to the present indications your Company's results for the current year are likely to be most disappointing. The tonnage shipped will probably be lower as compared to last year; further, Shivrajpur Ores are today being offered at prices which are lower than at any time since 1955 and the profit margin is far from adequate. This is inevitable in the prevailing circumstances.

Labour

I should now like to say a few words about the Labour situation at the Mines. Relations with the workmen continued to be cordial during the year and there were no strikes or stoppages. However, differences within the recognised Union assumed serious proportions and a stage has unfortunately been reached where it is not at all clear who are the authorised office-bearers of this Union. Under the circumstances, the demand for bonus for the year 1958/59 remained pending for about a year and it was only last month that an Agreement was reached between the Company and the representatives of the workmen whereby bonus amounting to 1/8th of the basic wages earned during the year has been paid.

Accounts

The Accounts do not, I feel, require much explanation. The profits after tax amount to Rs. 13,29,883/-which, you will agree, is a satisfactory result. Keeping the Development Programme in mind, your Board has set aside Rs. 1,42,590/- to the Mine Development and Prospecting Reserve, which is thus rounded off to a total of Rs. 30/- lacs. A sum of Rs. 3 lacs has also been transferred to the Equalisation of Dividends Reserve and in view of what I have said today about the uncertainty regarding the future I am sure you will agree that this is a wise decision. The proposed dividend and bonus at the rate of Rs 5/- and Rs. 3/- per share respectively, subject to deduction of tax, accounts for Rs. 8,37,110/-.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

THE ELPHINSTONE SPG. & WVG. MILLS CO., LTD.

CHAIRMAN, MR. N. K. JALAN'S REVIEW

Address by the Chairman, Mr. N. K. Jalan, at the Annual General Meeting of The Elphinstone Spg. & Wvg. Mills Co. Ltd., held in Bombay on the 31st May, 1961.

Gentlemen,

It gives me great pleasure to welcome you all to this Forty-second Annual General Meeting of your Company. The Directors' Report and the Audited Statement of Accounts have been with you for some time now and with your permission I shall take them as read.

The trading conditions in cloth and yarn in local markets which had taken a turn for the better some time in 1959, showed further improvement during the year under review; and although the total volume of cloth exported from India was lower during 1960 than in 1959, your Company more than maintained the export percentage of its total production of cloth.

It is gratifying to note that the profit of the Company for the year 1960 is about double as compared to that of 1959. I hope you will consider the results to be very satisfactory, especially in the face of higher costs on wages and acute shortage of cotton and stores on the one hand, and the voluntary reductions in prices of cloth and yarn effected during the year, on the other.

Stocks of cloth and yarn were higher at the close of the year compared to 1959 on account of the uncertainty created in the local markets by the reduction in prices proposed towards the end of the year. The present stock position, however, is satisfactory.

Modernisation and Renovation

The beneficial effects of the new machinery installed in the recent years have been reflected in the working results of the year under review. The management has under contemplation plans for further modernisation and renovation of the mill machinery.

In the Spinning section about 18,000 new spindles have so far been installed in replacement of the old ones. We have a further programme for the replacement of the remaining old spindles, and also for the conversion of the existing serviceable spindles to the latest system of High Drafting, and also for the conversion of existing Speed Frames to Can feed and D-Zone Drafting. Orders for additional Frames have already been placed with the suppliers accordingly. Order has also been placed for 3 High Speed Draw Frames for replacement of old ones.

The Barber Colman Winding & Warping machines which were ordered for replacement of half the number of our existing Winding and Warping machines are expected to arrive shortly. With a view to modernising the entire Winding and Warping departments, application has been made for the import licences for one more set of these automatic machines. One High Speed Sizing Machine was put into commission last year and application has been made for import licences for 2 more such machines. Orders have also been placed for one Automatic Warp Tying Machine and 48 Automatic looms in replacement of plain looms. We have been allotted further 48 Automatic looms in replacement of plain looms and another 48 as additional to the existing looms making a total allotment of 144 new Automatic looms.

The processing section has also been progressively renovated and a Mercerising plant is expected to be received by the end of the current year.

Leather Cloth Division

The working of this division remained at a satisfactory level during the year and the production was about 50 per cent higher compared to the preceding year. Production of Starch Book Binding Cloth which enjoys a good demand in the local markets has been further developed during the year. Steps are being taken to equip this division also with the latest types of machines and a modern type of Embossing Calender Machine has already been erected in this division.

Unfortunately, on account of the restrictive policy of the Government for import licences for plant, machinery spares and raw materials, we have not been able to put into effect all the plans for the further development of this division for modernisation and for manufacture of new qualities. Besides, production was affected owing to shortage of chemicals. With erection of more up-to-date plants, we could have stepped up our production in order to meet the increasing demand for this article from both inland and overseas markets. The Government's plea for being cautious in granting foreign exchange for importation of machinery is not very convincing seeing that the apparent depletion will be more than compensated by increased earning of foreign exchange through exports.

Moon Mills

As mentioned in the Directors' Report, the Company has made an Agreement with the Moon Mills Company to purchase their existing block of lands, buildings, and machinery including 875 looms. It has no spinning section at present and it is contemplated to make it a composite unit by introducing the spinning section with the most modern types of machinery at a total estimated cost of about a crore of rupees.

It is expected that the acquisition of this unit will help the Company to augment the profit-making capacity besides providing more employment.

Dividends on Preference Shares

Under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, which came into force on 28th December, 1960, the holders of Preference Shares would now normally be entitled to a dividend which would be lower than the quantum received by them for the year 1959. Your Directors have proposed to pay dividends on these shares so as to ensure that the shareholders will get the same net amount as they received for the year 1959. It is hoped that this step will be welcomed by the Preference Shareholders of the Company.

Problems of the Industry

Although your Company has fared better than in the previous year and although other mill companies have been able to show good results for the year in varying degrees, it should not mislead one to conclude that everything is now all right with this industry and that it has embarked on the road to prosperity. In fact this industry has continued to remain a problem industry and the problems have only increased at the present juncture.

Unfortunately there is a general impression in the minds of the people and the Government that the Cotton Textile Industry is making enormous profits and is, therefore, capable of bearing the burden of any amount of taxes or that any reduction in prices of its products would little affect it adversely. In fact, it is just the other way round. As mentioned

Mr. N. K. Jalan

by me last year from this very platform, the profitability of this premier industry of India has been proved to be the lowest in the industrial sector as disclosed in a study undertaken by the Reserve Bank of India. Besides, with the cloth and yarn prices now being regulated and the cost structure having become so very rigid, it is all the more likely that the profitability of the industry will in fact be lower hereafter.

Further improvement in the level of profitability is necessary to enable the industry to modernise and rehabilitate its plant and machinery from out of the profits that it can possibly plough back from its current profits after taxation and payment of reasonable dividends.

The working group set up by the N.I.D.C. has come to the conclusion that Rs. 180 crores are required towards modernisation of the Textile Industry, out of which the Industry itself has to find Rs. 80 crores, and the balance of Rs. 100 crores is to come from Government bodies by way of loan. Accordingly, unless and until the Industry is allowed to build up reserves, it will be very difficult to find money for rehabilitation. It is not proper or legitimate to say that the industry has got big reserves only by looking to the reserve funds of a few selected companies.

There has been a steady decline in the export of cotton piecegoods during the first quarter of the current year and this should be considered as a very unhealthy development especially in the context of the necessity for the country to try to earn as much foreign exchange as possible. Declining exports are due to higher costs and competition from other countries and to circumvent these disabilities, it is necessary to restore the competitive capacity of the industry through all encouragement to modernise and rehabilitate its machinery so that the mills may produce quality goods and be able to sell at competitive prices in the export markets.

On account of increased cost of production due to abnormal increase in wages, stores and others, Indian goods are facing serious competition in the world markets. The result is that India is losing ground and though in 1960 on account of higher price of cloth the value of foreign exchange earned by export of cloth was same, the quantity exported in 1960 was lower by about 15 per cent.

In dealing with the question of increase in wages, I do not for a moment say that the labour should not get adequate wage and that their standard of living is not to be improved, but with increased wage and higher emoluments all round, the labour should also be rationalised to ensure competitive value of our cloth in export market.

It is also imperative that the industry should be allowed to be modernised in order to see that India's cloth, the third most important foreign exchange earner, is not priced out of the world markets.

Price Reductions

Price reductions were effected twice by the industry at the instance of the Government during the latter half of the last year. It is wondered whether such expedients in the form of ad hoc reductions would really help the consumer. Price variations are after all the result of the changes in the demand and supply situation and it would serve no useful purpose on a long range basis to try artificial methods to check the prices.

Inflated cost is the greatest disadvantage this industry is suffering from. It is therefore necessary to ensure sufficient supply of raw materials at normal rates in order to see that the industry can produce and sell at fair prices. Some restraint in the fiscal measures by the Government would also help in creating conditions of steadiness and normalcy for the industry and trade.

Besides, to render real help to the consumer, there is every reason for the Government to come forward to reduce the high incidence of excise duty and other levies on cloth in order to help the consumer. In this context, one fails to appreciate how Government should at all have thought of increasing the rates of excise duty in the Finance Bill, 1961.

Government Policy

In view of the changing pattern of consumption of essential commodities as well as rise in the standard of living of the people of India, the requirement of long staple cotton is steadily growing. It is, therefore, most imperative that steps should be taken to produce cotton of long staple in the country, so that the import of the same from other parts of the world can be reduced to minimum. In the last 3 years the imports of long staple cotton were as follows:

YEAR	BALES (Bales of 400 lbs.)	VALUES (In crores of rupees)
1958	4,00,372	Rs. 30.6
1959	5,33.165	Rs. 34.7
1960	11,88,174	Rs. 73.00

The Government of India has allowed import of 3 lakhs bales of American Cotton for the current year which will cost the consuming mills Rs. 250/- to Rs. 300/- extra per candy which will mean a drain of about 3.75 to 4 crores of rupees. If machinery worth so much would have been allowed to be imported that would have gone a long way to modernise the industries and thereby establish the competitive value in the world market. Evidently this is a glaring instance of avoidable drain of India's precious foreign exchange. On the one hand, there is glut of stock of cotton in India on account of bumper crop, and on the other hand, American cotton is being imported. Such action on the part of the Government can hardly be reconciled.

As you are all aware, the cultivators have got this year very poor return on their crop of cotton. This naturally will have disastrous result on future crops. The Government should, therefore, take effective steps to ensure proper return to the cultivators. It is disappointing to find that until now the yield per acre and quality of cotton have not improved appreciably.

The policy pursued by he Government to give protection to the Indian Machinery Manufacturers leaves much to be desired. In this connection I regret to find that though the industry is being modernised at heavy cost, the modernisation carried out in India is out-dated to a great extent. Considerable improvements have already taken place in other parts of the world. To name some such improvements, I would point out the introduction of 10" and 12" Lift narrow width Spinning Frames without loss of any production and sliver spinning by elimination of processes, which have been adopted in other parts of the world, while on account of the protection in India we have to content ourselves with 8" Lift Spinning Frames, even on which there is loss of production on account of old conventional machinery being used today. I am rather surprised that according to our local machinery manufacturers 8" Lift Ring Frames are most suitable machinery for Indian labour, cotton and other conditions. Whenever any new advanced machines are introduced in India we are told that our Indian labour is not competent enough to adapt to these machines. I am extremely sorry that I disagree with this view-point. We have rather found Indian labour adapting themselves to the latest type of machines in the shortest period. I would earnestly request the Government to examine this point and see that either the cotton industry is allowed to import the latest machinery introduced in the world markets today or advise the Indian Machinery Manufacturers to start producing machineries of the latest type, design and modifications.

The Cotton Mill Industry has been continually impressing on the Government the necessity of pursuing a very liberal expansion programme in its favour but unfortunately, the request is not being conceded to. Ultimately, we may find one day that the supply of cloth will fall short of demand.

The Tariff Commission has fixed a gross return of only 12% out of which the Company has to meet bonus, income tax and dividends. This return is too small particularly in the context of recent Government loans carrying high percentage of interest. Accordingly, the percentage of the return deserves upward revision.

The industry has given several proposals for stepping up the production by several means such as, staggering of holidays, working of the mills 24 hours instead of 22½ hours by arranging relay system, etc. I would, therefore, earnestly request the Labour Union to agree to these proposals, in as much as staggering of holidays and 24 hours working have been adopted practically in all other industries.

In conclusion, I have to sincerely thank my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended by them during the year.

Thank you.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

IMPROVED SUPPLY OF GUNNY BILLS

Wednesday, 31st May.

THE total of advances outstanding in the Calcutta money market has continued to decline during the past week in line with the seasonal trend. The largest falls have been recorded in the requirements of the jute mills and the engineering and iron and steel industries. Demand from the sugar mills and the cotton textile industry has remained more or less unchanged, as has call for accommodation against grains and seeds storage. In the interbank market, conditions are generally easier. The official call rate has been fluctuating fairly rapidly around the unchanged level of 4½ percent.

There has been an improved supply of export bills in the exchange market during the past week. These have been chiefly on account of gunny shipments; tea bills have remained scarce. Remittance demand has been exceptionally high. In the London money market, the pound has shown some slight improvement and the undertone is steadier after the low level reached by the quotation on 29th May. The closing quotation was, however, marked down against the twin dollars and all important Continental currencies with the exception of the Swedish kroner and Belgian franc.

BULLION WAS QUIET IN THE PAST WEEK DUE TO THE lack of interest. Silver fell from the previous week's level of Rs. 213.25 to Rs. 231.00, quoted today for ready delivery, and the rate for forward was quoted at Rs. 229. The London and New York prices were 79⅞d and 91.375 cents.

Gold was quiet in sympathy with silver. The price was Rs. 141.50. The sovereign was quoted at Rs. 95.25.

DURING THE WEEK ENDED 26TH MAY, GOVERNMENT of India Treasury bills for Rs. 23,11,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 30th May. The total amount offered was Rs. 2 crores only. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 5th June.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 31st May to 3rd June at Rs. 99.331 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 24th May to 27th May amounted to Rs. 33 lakhs only.

THERE WERE DECLINES OF Rs. 22.26 CRORES TO Rs. 1,963.24 crores in active notes and of Rs. 9.38 crores to Rs. 1,991.56 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 26th May, 1961. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 1,641.94 crores. Deposits of the Central Government rose by Rs. 74 lakhs to Rs. 68.75 crores and other Government accounts by Rs. 5.13 crores to Rs. 20.35 crores, but balances of commercial banks fell by Rs. 59 lakhs to Rs. 76.43 crores. Balances held abroad improved further by Rs. 25 lakhs to Rs. 23.11 crores. Investments at Rs. 213.42 crores showed a rise of Rs. 10 crores. Other loans and advances declined from Rs. 121.92 crores to Rs. 116.81 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.65 crores (Rs. 16.27 crores). Ways and means advances stood at Rs. 80.72 crores, against Rs. 81.04 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 19th May, 1961, shows a drop of Rs. 13.40 crores to Rs. 529.60 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 10.18 crores and Rs. 15 lakhs to Rs. 217.23 crores and Rs. 9.34 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have dropped by Rs. 3.59 crores to Rs. 266.82 crores. Cash and balances are, in consequence, shown at Rs. 24.33 crores or Rs. 40 lakhs less.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 2-6-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
2-6-61	3-9-61	2,00,00	Rs. 2.750%
25-5-61	26-8-61	2,00,00	Rs. 2.750%
19-5-61	20-8-61	2,00,00	Rs. 2.750%
12-5-61	13-8-61	2,00,00	Rs. 2.750%
5-5-61	6-8-61	2,00,00	Rs. 2.750%
28-4-61	29-7-61	2,00,00	Rs. 2.750%
21-4-61	22-7-61	2,00,00	Rs. 2.750%
13-4-61	14-7-61	2,00,00	Rs. 2.750%
7-4-61	8-7-61	2,00,00	Rs. 2.750%

BICC

SIR WILLIAM McFADZEAN'S STATEMENT

The 16th Annual General Meeting of British Insulated Callender's Cables Limited was held on 26th May, at Brettenham House, Lancaster Place, London, W.C.2.

The following are extracts from the circulated statement of the Chairman, Sir William McFadzean, C.A., Companion I.E.E.:—

GROUP ACCOUNTS

Sales of the Group at £143,000,000 increased by £15,000,000 or some 12% as compared with 1959, mainly as a result of higher output. Including income from Trade Investments, the profit for the year at £6,245,000 shows a decrease of £137,000 but with a lower taxation charge the Net Profit improved by £121,000 to £3,652,000.

Exceptional Items produced a further £988,000 to bring the Total Net Profit of the Group up to £4,640,486 of which £4,314,890 is attributable to BICC Stockholders. This compares with £3,946,746 for the previous year.

Net Group Assets have increased to £66,400,000.

THE CABLEMAKING INDUSTRY AT HOME

Our two principal aims in 1960 were to obtain more economic prices for certain of our products, and to achieve the highest overall efficiency in our cablemaking activities as a whole by unifying and concentrating our production and selling arrangements for a number of our main products.

The wisdom of this policy of increasing efficiency by concentrating Group manufacture and selling effort of power cables and wiring and general cables has been proved by the substantial increase in volume achieved.

As I said in my Statement to Stockholders a year ago, our policy as the largest cablemaking group was to endeavour to give a lead to the industry by raising prices to some extent, so as to prevent the industry drifting to the disastrous position to which pursuit of any short-term advantage under conditions of unfettered competition would lead it. We are convinced this policy is in the national as well as our own interests and we have continued to follow it during the year under review.

The benefits should be progressively felt during 1961.

GROUP ACTIVITIES

Power Cables. Among important overseas orders for power cables were that from the Hydro Electric Commission of Ontario for 230,000 volt cables and from the Australian Authorities for 330,000 volt cables for the Snowy Mountain Hydro Electric scheme in New South Wales.

Telecommunications. Our Telephone Cables Division at Prescot, in addition to its large business with the Post Office, has continued to play its full part in the British Transport Commission's electrification and modernization programme by engineering, manufacturing and installing considerable quantities of telephone cables on various routes.

Submarine Power Cables and Pipelines. The most interesting event during the year was the award of a contract worth £2,500,000 for a flexible submarine pipeline to transmit natural gas from the mainland of British Columbia to Vancouver Island. When completed this pipe, which will be made by British Insulated Callender's (Submarine Cables) Ltd and installed by our Construction Company, will constitute the world's longest flexible submarine gas pipeline. We believe no other manufacturer in the world can offer a comparable product.

Metals. In 1960 our Wire Mill Division at Prescot achieved a record output of 107,000 tons of metals.

Total orders received by Thomas Bolton & Sons showed a substantial increase over 1959 and output of British Copper Refiners was 9% above 1959. The Telcon Metals Group of Companies has achieved substantial increases over the whole field of its activities.

Although we use many metals, including a steadily increasing quantity of aluminium, copper is still our chief raw material, and the Group last year purchased some 230,000 tons.

Capacitors. There is growing worldwide interest in our energy storage capacitors, and I am pleased to report the receipt of substantial orders from the U.S.A.

The turnover of the Telegraph Condenser Company exceeded that of 1959 which was itself a record year. This Company is now actively pursuing the opportunities presented by the agreement concluded during 1960, for interchange of technique and know-how with the Sprague Electric Company of U.S.A., an agreement which I am confident will prove of great advantage to both parties.

Construction. 1960 witnessed a further increase in the activities of our Construction Company.

On the railway electrification side, the Company continued to be actively engaged. Two schemes were completed under the British Railways modernization plans, namely the Manchester/Crewe and the Liverpool Street/Enfield / Chingford / Hertford (East) / Bishop's Stortford lines, both of which are in successful commercial operation.

The Company was also successful in obtaining a contract for 300 track miles of overhead equipment for railway electrification in India.

The Company continues to supply a large number of radio and television masts and towers, and business in Callender-Hamilton bridges is expanding, particularly overseas where a noteworthy installation was a 636 feet bridge crossing the Jhelum River in Pakistan for work on the Mangla Dam.

In New Zealand a half-mile crossing of the Haast River was made, and bridges were also supplied to Tanganyika, Kenya and Kurdistan.

OVERSEAS AFFAIRS

For many years we have devoted a large proportion of our effort to overseas trade both in the form of direct exports from this country and by way of investment in local manufacture overseas. Total sales effected under these heads amounted to £45,000,000 in 1960 compared with £38,000,000 in 1959 but we are further intensifying our efforts and are determined to improve still further on our achievements.

Despite fierce and growing competition and the further development of local manufacture in many parts of the World, our exports from the United Kingdom factories have been well maintained.

Our overseas factories have continued to make progress in line with the growing local demands. Business conditions in some countries, particularly Canada, were not easy but, overall, these investments have made a further contribution to our results for 1960 and I am confident will be of increasing benefit to the Group in the years ahead.

RESEARCH

The past year has been of special significance for our Research Organization. It has seen the completion of a fine additional laboratory at Wood Lane which increases the effective working space by 50,000 square feet. I am proud to tell Stockholders that we are to have the honour of a visit by H.R.H. Prince Philip, Duke of Edinburgh, in May to open this laboratory.

THE OUTLOOK

I believe the steps we have taken to expand and improve the efficiency of our Group manufacturing and selling arrangements will enable us fully to retain our share of the business available, and I have good hope that by the price leadership we have endeavoured to give in the cable industry at home, we shall be able to secure a reasonable return on all our principal products.

Although the future of world trade can never be free from political uncertainty, there are, I believe, encouraging signs of a trend towards freer and increasing trade between the nations. Allied to this trend is the growing demand in all countries for a higher standard of life, and one of the fundamental requirements in meeting such demand is the transmission and distribution of electricity for power and communication purposes. This is our business—a business owned by 35,000 Stockholders and operated by a team of some 41,000 men and women.

Results to date for 1961 are encouraging and, provided there is no major dislocation in trade generally, I look forward to the BICC Group having a successful year.

14th April, 1961.

OIL CONSUMPTION OF JAPAN INCREASING

By V. S. Swaminathan

NO other country has attained a rate of growth since the second World War as that by Japan. Between 1951 and 1959, its manufacturing output virtually trebled and its gross national product jumped 119 percent. Its prices rose by a mere 2 percent over this period, a singular achievement in the context of such phenomenal progress. At an annual average of 10.3 percent, Japan's gross national product showed a higher rate of increase than in any other country including West Germany and Russia During the financial year ended March 1960, its gross national product rose 16 percent and manufacturing output 29 percent. But for the period ended last March, the increase, it is expected, will be less. Even so, the upward trend in economic growth is unmistakable and it is likely to continue for years to come.

This economic boom has stimulated a demand for all forms of energy, and meant a big rise in oil consumption. According to the latest forecast by the Japanese Economic Deliberative Council, a total capital investment of 6,300,000 million yen (the equivalent of $175,000 million) will be required to ensure that the country's raipdly growing energy requirements are met during the period up to 1970. Of this sum, 960,000 million yen are for oil and natural gas (130,000 million yen for crude petroleum and natural gas production and 830,000 million yen for the other sectors of the industry). The indicated investment a ton of new annual capacity is some 15,000 yen (say, £15). This is inclusive of replacement of existing facilities.

Consumption Forecasts

The earlier forecasts of the Economic Planning Agency, E.P.A., for 1970 (in terms of coal equivalent) were coal 71.4 million tons, oil 107.9 million tons, natural gas 1.6 million tons and hydro-electric power 52.5 million tons, making a total of 238.5 million tons (See Table 1). The new figures by the Japanese Economic Deliberative Council concerning oil, at approximately 89 million metric tons of actual oil, are higher by some 20 million tons of actual oil than the E.P.A. forecasts. At this higher rate, petroleum would account for an estimated 50 percent of the total of the country's energy supply by 1970. If the forecast is realised, Japan's total imports in 1970 will be around 1,700,000 barrels a day of actual oil, or four-fold the 1959 figure of 441,000 barrels a day. This forecast is based on the reasonable assumption of an average annual rise in gross national product by 7.2 percent to 26,000,000 million yen, and an increase in population from 93 million in 1959 to 102 million in 1970.

Japan's estimated inland consumption of petroleum products during the four years, 1956 to 1959, is given in Table 2. Demand, it is expected, will go up by an annual average of 13 percent with accent on black oils, especially fuel oil. Sales of fuel oil have been helped by low import prices and freights, and the inability of the domestic coal industry to lower its costs. Kerosene continues to be used increasingly for cooking and heating in place of charcoal, the traditional fuel. A substantial rise in demand for liquid gas is visualised, and the volume of feedstock needed year by year by the waxing petro-chemical industry will mount up. Consumption of gasoline and gas diesel oil has been growing steadily with the growth in the vehicle population. By granting loans for modernisation, the Japanese Government is encouraging the coal industry and power supply undertakings to slow down the pace of conversion to petroleum. In addition, it imposed in April 1960 an import duty of up to 7 percent on crude oil and 10 percent on heavy fuel oil, against the previous 2 percent and 6½ pecent, respectively. Even so, the pronounced trend towards wider adoption of oil fuels continues, and the highly competitive Japanese petroleum industry is striving, not without success, to satisfy the country's liquid fuel needs. Foreign investment has contributed handsomely to the building up of oil refining and marketing in recent years, through partnership companies most of them equally owned by foreign and Japanese oil interests. Japanese industrialists have a tradition of acquiring know-how through technical assistance agreements on a royalty basis with foreign firms, and they have continued to do this on a big scale in the post-war years.

Small Domestic Production

Japan's domestic crude oil production is negligible in relation to consumption. It rose from 367,000 metric tons in 1958 to an estimated 500,000 tons last year. Inland oil exploration and production is encouraged through the State-owned Oil Resources Development Company. Drilling the third successful offshore well early in the second half of 1960 near Tsuchizaki, this Company found oil at a depth of approximately 2,000 feet. When in regular production, these three wells are expected to yield some 650 barrels a day. The fourth well is being drilled to a depth of 6,000 feet. The country's modest gas reserves were increased when Teikoku Oil tested a gas strike at 35 million cubic feet daily. The first turbo drilling ever used in Japan went into operation last January. Three sets of 6¾in. model T12 M3 drills have been purchased from Russia by Teikoku Oil for development drilling in Katamachi field on oil and gas wells in the 3,900-6,500 feet range. Each drill costs nearly $7,000 including attachments. The present five-year plan for domestic oil development ended on 31st March, and a new plan is being formulated for which the necessary Government financial support will be forthcoming.

Japan's oil imports already take 10 percent of the country's foreign exchange expenditure. The new basis for foreign exchange allocations for crude and fuel oil imports was announced by the Ministry of International Trade and Industry in mid-1960. It is still based 50 percent on the value of exchange allocated in the previous three years, but the weighting of quantity actually imported has been reduced to 25 percent. The remaining 25 percent will in future be based on the value of the products obtained from imported crude oil. Foreign exchange allocations for oil imports in the period April-September 1960 was $192 million ($157 million for crude oil), 15 percent more than on the previous six months and an increase of 37 percent on the corresponding period the year before. This higher allocation, together with lower prices, it is expected, will make possible crude oil imports in the April-September 1960 period, 50 percent larger than a year previously. For the October-March (1960-61) period, the foreign exchange allocation has been stepped up to $240 million to cope with higher import needs.

Foreign Crude Supplies

Japan is taking several steps to reduce the strain on her foreign exchange reserves. Two Japanese groups, the Arabian Oil Company and the semi-Government Japan Petroleum Exploration Company, are developing foreign crude oil supplies. The former has now completed nine wells, all with yields of some 6,000 barrels a day, and is drilling the tenth well at the Khafji field off the Neutral Zone in the Persian Gulf. Production is to start before the middle of 1961. Arabian Oil's sales of crude petroleum to Japanese refineries will certainly be welcome by the authorities since on balance. its operations will earn, or economise, foreign exchange for Japan. The Japan Petroleum Exploration Company has concluded a deal for at least 12,000 barrels a day of oil for ten years from fields in north Sumatra controlled by the Indonesian Government. Finally, under the Russian-Japanese trade agreement of 1960, Japan would import six to eight million tons of Russian crude oil over the next six years, bartering in return tankers and large diameter pipes.

The operable capacity of refineries in Japan at the beginning of this year of 726,720 barrels a stream day, or, say, 37 million metric tons a year, is well above the current rate of domestic demand of approximately 25 million tons a year. Since consumption, it is estimated, will go up very rapidly, there has been a rush to get pre-emptive authorisation for new processing plants. Some 18 million tons of new capacity is to be built by the end of 1962, and a further 5 million tons or so by 1964. Beyond these firm projects there are plans pending for nine plants scheduled for completion between 1965 and 1970. The largest new refinery now visualised is a 10-million-ton plant to be erected in Nishinomiya by Nippon Oil Company in 1970. Most of the larger refineries will have petro-chemical facilities attached to them. Several Japanese industrial companies have oil refining interests, notably, the leading vertical combines of Mitsui Mitsubishi and Sumitomo, as well as Esso, Mobil, Caltex Shell and Tidewater.

Marketing Arrangement

Most marketing is done by affiliates of the western Companies: Stanvac with 55 percent interest in Toa Nenryo Kogyo; Caltex with 50 percent interest in Nippon Oil; Shell with 50 percent interest in Showa Oil, and Tidewater with 49 percent interest in Mitsubishi. But three big independents—Idemitsu, Maruzen and Daikyo—handle nearly 30 percent of total sales and are growing both in volume and share of the markets. In less than a decade, Japan has made a successful bid to join the ranks of the world's leading producers of petro-chemicals. Her activity in this fast-growing field falls into two divisions—that based on natural gas and that on petroleum fractions and refinery gases. The first division had its start in 1952, and was well advanced before the second came into existence five years later. The industry using natural gas produces methanol, ammonia, ammonium sulphate, urea and several compound fertilisers. In April 1957, the Shimotsu refinery of Maruzen Oil Company started producing solvents like secondary butanol and methyl ethyl ketone from refinery gases. This was the first step in a five-year petro-chemical development programme which resulted in an investment of $228 million by 13 companies in 14 plants. Japan's sales of petro-chemicals have risen sharply from $4.2 million in 1957 to an estimated $220 million in 1960. Early last year, some two dozen companies, nearly half of them newcomers, applied for permission to build new petro-chemical facilities, or to enlarge existing units. Plans already under way indicate that plant investment in a second five-year programme may well exceed $300 million. The country's annual output of polyethylene plastic is to go up from 70,000 to 140,000 metric tons. Plans for setting up its first polypropylene plants

visualise an initial capacity of 55,000 tons a year. The overall capacities of styrene monomer and polystyrene facilities are to be stepped up from 15,000 and 25,000 tons to 40,000 and 60,000 tons, respectively. Other products whose manufacture, or expansion, is planned include alkyl benzene detergents, tetra ethyl lead, acetylene, ethyl and butyl alcohols, synthetic special-purpose and general-purpose rubbers, ethylene derivatives, aromatics, acids and solvents of various kinds.

Producers of petro-chemicals in Japan enjoy tax exemptions in various forms as well as special facilities for quick depreciation and the acquisition of funds and long-term loans from the Development Bank. Most of the major industrial groups in this sector are linked in one way or another with American and European interests, and the Government continues to allow foreign concerns to participate financially and to accord active technical co-operation in the building up of the country's petro-chemical industry. Its growth means increased savings in foreign exchange outlay on imports of highly priced chemical products. Already in 1960, such savings were computed equivalent to some $100 million. Exports of petro-chemicals promise to earn foreign exchange for the country.

Construction of Giant Tankers

Japan's progress as a builder of giant tankers is remarkable. This is due to modernisation of shipyards, low costs, quick deliveries and excellent workmanship, backed by State subsidies to ship-building steel. The tonnage of tankers launched rose sharply, with one setback, to a peak of approximately 1,400,000 gross tons in 1957. Apart from the former naval dockyard in Kure, now owned by the U.S. Ludwig interests, there are in all 14 shipyards capable of constructing super-tankers. The biggest tanker so far completed in a Japanese-owned yard, that of Sasebo Company, is the 88,900 tonner *Oriental Giant* in December 1959. The most outstanding performance of the Japanese yards was the delivery of *Universe Apollo* of 104,500 tons only seven months after laying the keel. The biggest tanker at present afloat, *Universe Daphne* of 107,400 tons d.w., was built at the Kure shipyard. Last year, Idemitsu ordered from Japanese yards two tankers, each of 130,000 tons d.w., the employment of which is reckoned to reduce the cost of transporting oil from the Persian Gulf to Japan by some 30 percent, compared with vessels of 45,000 tons. The first is scheduled for completion in October 1962 and the second, a year later. Each of these mammoth tankers will cost around £5,300,000.

Because of recent recession in shipping and shipbuilding, buyers have become much more price-conscious. For this reason, Japan's prices were drastically reduced in 1959. The *Universe Daphne* was priced at approximately £6 million (say, £55 a ton) and the *Naess Sovereign* of 87,500 tons d.w. at £49 a ton. Early in 1960 prices as low as £47 a ton were quoted. The level of prices ruling in western Europe ranges from £55 to £65 a ton. Moreover, it is customary for foreign purchasers to pay only 30 percent of prices up to the time of delivery and to spread the balance over a period of six to seven years. Interest on ship-building credits varies from 5 percent to 5.5 percent. For domestic buyers. the Government has a scheme whereby the owners may borrow 40 percent of the cost in the case of tankers. Last December, Russia bought six tankers, aggregating 219,840 tons from Japan. This deal is part and parcel of the Government's efforts to expand exports and, in particular, to support its profitable and strategic shipbuilding industry. The Russian ship purchasing mission has expressed its desire of ordering still more super-tankers from Japan if this can be covered by deliveries of Russian crude oil on long-term arrangements.

More Oil Products Consumed

At present, the only Japanese-built liquid gas carrier in service is a 1,000 ton coastal vessel of pressurised type employed on short runs between local petro-chemical and synthetic rubber plants. But Japan has plans for building ocean-going carriers of refrigerated type in anticipation of a rapid rise in large-scale imports of liquefied petroleum gas for the home market. A refrigerated L.P.G. tanker of 15,000 tons gas carrying capacity was ordered early in 1960 by the Bridgestone Tyre Company of Tokyo which had entered into a ten-year agreement with the British Petroleum Company for an annual import of 140,000 tons of l.p.g. from Kuwait. It is due for delivery by the end of 1961. Also Tokyo Kako Kensetsu, a Japanese chemical construction Company, has been awarded a contract worth £1 million by National Iranian Oil Company for the erection of an l.p.g. plant near Abadan and for the export of its production. For this, special tankers will be required which will add appreciably to the value of the contract. In short, oil products will be called on to play an increasingly important part in Japan's energy picture. She has taken several concrete steps to meet this growing demand. They include encouraging domestic search for and production of oil and gas; developing foreign production as from the Persian Gulf; purchasing foreign crude oil under long-term contracts or barter arrangements, fostering a thriving home refining and petro-chemical industry and building mammoth tankers and l.p.g. carriers both to conserve and earn foreign exchange. To achieve her ends, she has not hesitated to enlist the financial and technical collaboration of industrially advanced western countries.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to April 1961. As compared with March, the April index for preference shares shows a decline of 0.9 points, while that for Government securities indicates a rise of 0.1 point.

There were decreases in coals 4.6 points, jutes 5.1 points, cements 2.0 points, engineerings 11.1 points, teas 4.7 points and papers 20.6 points, while increases occurred in banks 0.5 points, cottons 4.2 points, minings and oils 9.9 points, sugars 16.4 points and miscellaneous 7.8 points.

Combining all the factors, the *Capital* variable yield securities index declined by 0.8 points during April 1961.

Stocks and Shares

PRICES HESITATE AS MARKET TURNS CAUTIOUS

NO SELLING PRESSURE BUT OPERATORS RELUCTANT TO EXTEND COMMITMENTS

Wednesday Evening.

THE stock market closed in a sober mood this evening. During the past couple of days, turnover has declined and fluctuations have been narrow. It looks as if operators are now taking breath after last week's substantial improvement. Sentiment continues bullish, as is evident from the absence of selling pressure. There is, nevertheless, little inclination at present to extend commitments until some of the prevailing uncertainties are cleared up.

To begin with, Dalal Street has turned cautious because it is thought that the Government might not permit any relaxation of the present margins. The investigations of the Bombay Stock Exchange Sub-committee into the margin system, combined with declines in making-up prices and margins at the turn of the past settlement, helped to promote optimism about the possibility of relaxing the system. But judging by present indications there seems to be little ground for this optimism because the system exists to restrain speculation. As it is the intention of all concerned not to permit excessive speculation, the claim for removing the margin system altogether would seem not to be justified. At the same time, it should be borne in mind that the system must be operated in such a manner that no hardship is caused. All efforts should be made to ensure smoother working of the stock markets.

There is a general inclination to take an optimistic view about the prospect of India obtaining foreign financial assistance. Although some donor countries such as West Germany do not seem to be inclined to write blank cheques for aid to India, it is thought that there might be no difficulty in obtaining what is needed to help this country carry on with her economic development, at least for the next couple of years. Anyway, details are likely to be known soon when the Aid-India-Club meeting concludes its deliberations in a few days' time. Lyons Range is taking a cheerful view about the monetary situation due to the fact that money supplies have now become more plentiful in this part of the country. Whether the trend will be short-lived is likely to be indicated clearly only when the size of the demand due to the half-yearly closing of bank accounts is known. Considering that funds tied up in the Goodyear India issue are expected to be returned next week, there is reason for taking a constructive view of the near-term outlook.

It is reliably learnt that the Goodyear issue consisting of 400,000 ordinary shares has been subscribed 25 times over. So total subscriptions are believed to be nearly Rs. 17.3 crores. Of the total applications, 84.57 percent are in the 50 to 100 shares group, representing 43.24 percent of the total number of shares applied for. The directors have decided to allot 44.41 percent of the total to the applicants in this group, so allotment will have to be made by ballot, each successful allottee receiving only five shares. Applicants for 150 to 400 shares will receive 10 shares, those for 1,000 shares, 40 shares, those for 1,500 shares, 55 shares each, and so on. The highest allotment will be made at a rate of 800 shares to applicants for 20,000 shares.

The management seems to take credit for the fact that the allottees will be as many as 49,231, but the shareholding could be more widespread had the management decided to give shares to all small applicants instead of holding a ballot. If the investment habit is to be promoted, the less the disappointment among this class of applicants the better.

After touching a new high of Rs. 28.16, the price of Indian Iron shares closed at Rs. 28.09. Interest has declined in engineering shares due to fears about power shortages. Texmaco have gained on short-covering. Sellers predominate in Guest, Keen, Williams, Jessop and Braithwaite. Calcutta Steel are supported by knowledgeable quarters on a good report. Britannia Engineering have lost on talk of a further capital issue.

The coal section has produced some bright features on expectations of foreign financial assistance for expansion. Prospects of expansion have also helped improve Bengal and New Beerbhoom. Western Bengal are being bought by informed quarters. Burrakur have fluctuated narrowly. Scattered interest has been taken in Equitable, East Indian and Amalgamated.

Prices of selected miscellaneous shares have improved on replacement buying. Indian Copper are steady on hopes of a bonus share issue, but Dunlop have reacted on profit-taking. Indian Aluminium are being supported on talk of expansion. Hindustan Motors have improved due to good results achieved in 1960-61. Rohtas have recovered, as have Indian Cables, on short-covering. Renewed interest has been taken in Alkali Chemicals and Britannia Biscuits. British Paints are being fancied on hopes of a good report. British India Corporation have reacted on pressure. Balmer Lawrie are steady on paying good dividends. Paper shares are quiet and fluctuations narrow. Routine business has been done in Orient, Titaghur, Shree Gopal and Sirpur.

Sellers predominate in jute shares on the fear that mills at present make losses on current production due to high prices of raw jute in relation to those of goods. Scattered interest is being taken in National, New Central and Birla.

Prospects of high production have generated support for cotton mill shares. Prominent scrip are Bharat Commerce, Kesoram and Cawnpore Textiles. J. K. Rayon have become steadier on a good report.

Interest is subdued in sugar shares on the fear that factories may find difficulty in disposing of their production, which is a record this year.

Prices of selected tea shares have hardened in the absence of sellers. Interest has been taken in Bishnauth, Betjan, Jutlibari, Tezpore and Baghmari in the Assam group. Among Dooars garden, Hasimara have improved. Support has been forthcoming for Huldibari and Hantapara.

Routine business has been done in banking shares. Good preference shares have been bought, but sellers are not easy to locate.

Government securities are dull and prices of long-dated loans have declined. The conversion

CALCUTTA

The State Bank of India, through its many branches, is ready to offer help and advice to small industrialists in need of a loan. Please call on the Agent of the branch in your town for full particulars.

STATE BANK OF INDIA
INDIA'S LEADING BANK

SISTA'S-58-33

offer by the Government of India opened last Monday. The stock market thinks that the issue will succeed because a large portion of the stocks which can be converted are held by the Reserve Bank, the State Bank and the Life Insurance Corporation. Meanwhile, the price of the 3 per-cent Conversion Loan 1986 has declined to Rs. 73.05 on pressure.

Oodlabari Tea

The profit of the Oodlabari Co. Ltd has increased from Rs. 76,865 to Rs. 1.19 lakhs for the year ended 31st December, 1960. The taxable dividend has been raised from 10 percent to 12½ percent. After making necessary adjustments, there is a carry-forward of Rs. 17,633, against Rs. 7,268 brought in. The crop amounted to 291,297 kilograms (against 273,846 kilograms). The average price realised was Rs. 4.14 a kilogram, against Rs. 3.85 a kilogram. Estimates for the current year provide for a crop of 290,200 kilograms at an outlay of Rs. 10.22 lakhs.

Hansqua Tea

The Hansqua Tea Co. Ltd has made a profit of Rs. 2.67 lakhs for the year ended December 1960, against Rs. 2.54 lakhs in the previous year. A dividend of 20 percent, subject to tax, has been declared, against 17½ percent, taxable. Taxation absorbs Rs. 1.23 lakhs (against Rs. 1.20 lakhs) and revenue reserve receives Rs. 40,000 (against nil). Investment reserve gets Rs. 10,000 (against Rs. 10,000) and development rebate reserve is allocated Rs. 2,000 (against Rs. 5,000). After making other adjustments and bringing in Rs. 18,957, there is a carry-forward of Rs. 22,242. The crop fell from 72,714 kilograms to 261,270 kilograms, but the average sale price rose from Rs. 4.59 to Rs. 4.79 a kilogram. Estimates for 1961 provide for a crop of Rs. 254,010 kilograms at a cost of Rs. 9.76 lakhs.

Bombay Market

GOOD SUPPORT FOR SELECTED SCRIP

DOUBTS ABOUT MARGIN SYSTEM
CURB SENTIMENT

Wednesday Noon.

THE Bombay stock market produced mixed trends during the past week. Excepting support for a few selected scrip, operators were not inclined to extend commitments due to uncertainties concerning the margin system. The settlement due to be held next Friday has also called for caution. Operators fear that there might be no relaxation in the margin system because the Government does not favour any such move at the present stage.

This apart, money conditions were very tight in Dalal Street and the stock market felt the shortage of funds. In these circumstances, any selling pressure, however small, tended to reduce prices rather unduly. The undertone was nevertheless steady and operators took a constructive view of the future outlook.

Tata Steel were steady at Rs. 158 on expectations of an increase in the forthcoming dividend. Indian Iron were supported up to Rs. 27.95 on talk of a further capital issue. Engineering shares turned softer on profit-taking. Tata Locomotive declined to Rs. 359.50, as did Premier Construction to Rs. 191. Alcock Ashdown were sold at Rs. 303 and Larsen and Toubro lost at Rs. 43.75. Interest was subdued in Mahindra and Mahindra which declined to Rs. 20.60. In motor shares, Hindustan Motors were steady on support from interested parties and the scrip improved to Rs. 22.20 on talk of expansion. Premier Automobiles were quiet at Rs. 172 on the news of a fire in the factory.

Except for Century which improved to Rs. 673 on a bonus share issue, cotton mill shares were generally lower due to profit-taking. Bombay Dyeing met with scattered interest up to Rs. 66.30, but Svadeshi were sold down to Rs. 271. Khatau attracted attention up to Rs. 560 on good working reports and Morarji were bought up to Rs. 407 on hopes of a bonus share issue. Simplex were offered at Rs. 190 and Apollo were neglected at Rs. 1.54. United Ordinaries reacted to Rs. 15.32 on profit-taking. Standard lost at Rs. 1,545 and Kohinoor were in demand up to Rs. 321.

Prices of miscellaneous shares moved in line with the general pattern. In sugar shares, Belapur were quietly steady at Rs. 287, but Phalton declined to Rs. 138. Walchandnagar Industries were offered down to Rs. 172.50. In cement shares, Associated Cement were steady at Rs. 160.50 on talk of a bonus share issue and Digvijay improved to Rs. 155 on replacement buying. Mining shares were steady, and business was done in Shivrajpur Syndicate at Rs. 79.50. Steamship company shares improved on balance due to replacement buying. Scindia Steam were done at Rs. 14.68 and Great Eastern Shipping at Rs. 15. Chemical shares were quiet, and Tata Chemical declined to Rs. 19.24. Indian Dyestuff were available at Rs. 551.25, but Dhrangadhra Chemical were supported up to Rs. 132. Polychem were transacted at Rs. 237.50 and Colour-Chem were placed at Rs. 363.75. Rayon shares were steady, and National Rayon were bought up to Rs. 554. Baroda Rayon were supported at Rs. 127.50 and Gwalior Rayon improved to Rs. 51.80 on expansion plans. Bombay Burmah reacted to Rs. 642 on profit-taking. Voltas were steady at Rs. 287 and Tata Oil were in demand up to Rs. 77.80. Ceat Tyre improved fractionally to Rs. 192.50, but Synthetics and Chemicals showed little change at Rs. 171. Wimco were sold down to Rs. 258 in the belief that there would be no bonus share issue, at least for the time being.

Banking shares were steady, but business was restricted. Bank of India were placed at Rs. 123.25 and Central Bank were done at Rs. 59.50. Insurance shares were firm, and New India Assurance were transacted at Rs. 64 on maintaining the dividend.

There was scattered support for electric company shares, and Ahmedabad were indicated at Rs. 86.50. Tata Power came to hand at Rs. 1,050 and Bombay Suburban were done at Rs. 90.50.

Madras Market

MARKET STEADY BUT SUPPORT REMAINS SELECTIVE

GOVERNMENT SECURITIES QUIET

Tuesday Evening.

THE Madras stock market has been steady during the past week, but support was mainly selective in character. Higher advices from Bombay and Calcutta were considered helpful factors. The trend is not expected to change much in the near future because a large portion of funds is now blocked in new share issues. The Madras Rubber Factory's new issue of 500,000 ordinary shares has been subscribed 11 times over and allotments are expected to be made next week.

Government securities were quiet because the conversion loan offer of the Government of India opened last Monday. Interest was nevertheless taken in some selected State loans. Sugar shares were not fancied due to excessive accumulations of stocks at factories. In the planting group, scattered interest was taken in selected tea and rubber shares, but coffee shares were sold freely due to reports of declines in the price of the commodity. Cotton mill shares met with interest on optimism concerning the future outlook. It is believed that production would improve further in order to meet the cloth shortage. Movements were mixed in the miscellaneous section. Chemical and paper shares were quiet, but interest was taken in some assorted industries due to good corporate working.

In the banking group, business was done in Indian at Rs. 166 and in Indian Overseas at Rs. 175. Punjab National came to hand at Rs. 21.45 and Canara Banking were transacted up to Rs. 74.75. Among public utilities, stray support was extended to South Madras up to Rs. 9.80. Vellore were placed at Rs. 13.35 and Cochin were dealt in at Rs. 10.50.

Among sugar shares, E.I.D. were steady at Rs. 44, but Deccan declined to Rs. 14.10. India were placed at Rs. 12.90 on paying a taxable ordinary dividend of 14 percent. United Breweries showed little change at Rs. 110 and Mysore were steady up to Rs. 59.

In the planting section, Blue Mountain were steady at Rs. 3.20; the Company has extended the time for applying for the new shares. Cochin Malabar were sold down to Rs. 7.93 and Consolidated Coffee were offered freely at Rs. 21.50. Ouchterlony were quiet at Rs. 3.65 and Periakaramalai were available at Rs. 3.80. Cowcoody came to hand at Rs. 5.20 on declaring an interim taxable ordinary dividend of 10 percent. Devashola were in demand up to Rs. 30.62 on paying a final taxable ordinary dividend of 10 percent. Business passed in Lingapur at Rs. 5.40 on payment of an interim taxable ordinary dividend of 10 percent. Kil Kotagiri were quietly steady at Rs. 4.92 and Manar were placed at Rs. 2.70 on paying a taxable ordinary dividend of 5 percent. Nilambur were dealt in up to Rs. 16.25 on declaring a taxable ordinary dividend of 15 percent. Peermade were steady at Rs. 23.30 and Rajagiri came to hand at Rs. 18.60 on paying an interim taxable ordinary dividend of 10 percent. United Nilgiri were done at Rs. 24.75 and Waterfall were taken at Rs. 3.03.

Among textile shares, Bangalore Woollen improved to Rs. 201, as did Buckingham to Rs. 213. Cambodia came to hand at Rs. 10.40 on paying a taxable ordinary dividend of 9 percent. Cannanore were done at Rs. 160 on paying a taxable final ordinary dividend of 11 percent. Kothari were steady at Rs. 12.25 and business was done in Lakshmi at Rs. 166. Madura were fancied up to Rs. 36.90 and Coimbatore Kamala were bought up to Rs. 102 on declaring a taxable ordinary dividend of 10 percent. Travancore Rayon were quiet at Rs. 38.55 on profit-taking, but the Company has produced a satisfactory report. Radhakrishna were steady at Rs. 31.50 on declaring a taxable ordinary dividend of 12 percent. Venkatesa came to hand at Rs. 197 on paying a taxable ordinary dividend of 30 percent. Pulliccar were sold down to Rs. 115 on passing the dividend. Ramakrishna were in demand up to Rs. 224 on declaring a taxable ordinary dividend of 23 percent.

In the miscellaneous section, Aluminium Industries improved to Rs. 23.25, as did Ashok Leyland to Rs. 9.28. India Cement gained at Rs. 6.12 and Forest Industries were quoted at Rs. 3. F.A.C.T. were quiet at Rs. 10.40 and business was done in Enfield at Rs. 12.50. Jeewanlal were quiet at Rs. 8.08 on paying a final taxable ordinary dividend of 1 percent. Radio and Electricals were sold down to Rs. 3.60 on passing the dividend. Spencer were steady at Rs. 23.87 and Standard Motors were dealt in up to Rs. 16.75. Textool were steady at Rs. 181.50 and Tube Investment were supported up to Rs. 283. United Electrical were done at Rs. 9.50, but Mysore Paper declined to Rs. 22 on profi-taking.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

STOCK MARKET CONDITIONS UNSETTLED

GOLD SHARES RISE ON RAND DEVALUATION RUMOURS

London, 31st May.

UNSETTLED conditions prevailed in the stock market during the past week, and prices in most sections lost ground, but a brighter tendency developed with the start of a new account on Monday. Business throughout was on a smaller scale than in recent weeks, and a generally more cautious view was being taken of the market generally. On balance, prices were mainly easier, although an outstanding exception was provided by gold shares which forged ahead to show some sharp gains on the week. This reflected a continuous advance at Johannesburg where buying was stimulated by rumours of a devaluation of the South African rand. The earlier dullness in market generally reflected increased profit-taking and a contraction in demand. The more cautious approach by buyers was due to a number of adverse factors. These included the persistent weakness of sterling in foreign exchanges, the possibility of an economic regulator being brought into operation and almost daily statements by company chairmen of falling profit margins. The uncertain performance of Wall Street was a further restraining influence.

Gilt-edged securities lost ground steadily following persistent selling in a market lacking support and prices in some cases reached new all-time lows. Greek and Japanese bonds attracted small support in the foreign market. Banking and insurance shares moved irregularly. Properties fell back following a warning on profit margins by the chairman of Hammersons, but staged a strong recovery later. Equities benefited from selective buying and quite a few good features appeared, but generally prices are a little lower on profit-taking. Coppers recorded little change, while tins moved erratically. Oils were subdued and the tendency was easier. Rubbers were on the dull side in the absence of interest, but teas were fairly well maintained.

BOOKS RECEIVED

Dieselisation and Diesel Oil Taxation. (Issued by the National Council of Applied Economic Research and published by Messrs Deepchand Kishenlall, Bangalore. Price Rs. 3, pages 51.)

COMPANY FLOATATIONS IN SOUTH INDIA

DURING the quarter ended 31st March, 1961, 119 companies with an authorised capital of Rs. 653.32 lakhs have been registered in the southern region, comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. Of these 14 are public companies with an authorised capital of Rs. 297 lakhs, 104 are private companies with an authorised capital of Rs. 366.32 lakhs and one is a guarantee company without share capital. The table below gives the Statewise and industrywise classification of companies registered under the Act during the period. Transport companies continue to form the bulk of the newly registered companies as usual in Madras State, accounting for 34 companies. The total investment by way of increase in paid-up capital of the companies was of the order of Rs. 110.09 lakhs. Two giant companies, namely, Dakshin Bharat Alkali Corporation Ltd for the retail dealing in chemicals, etcetera, and Jaya Credits Private Ltd for the business of finances, etcetera, have been floated in Madras State with an authorised capital of Rs. 10 lakhs each. Two giant companies by name Andhra Pradesh Mining Corporation Ltd for searching iron ores and to acquire mineral produce, etcetera, and Andhra Pradesh Small Scale Industrial Development Corporation Ltd to assist, finance and promote the interests of small-scale industries have been floated in the State of Andhra Pradesh, Hyderabad, with an authorised capital of Rs. 50 lakhs each, and both the above two concerns are Government companies. One giant company by name Darragh Smail and Company (India) Limited to acquire and take over as a going concern the property, assets, business and goodwill in India of Messrs Darragh Smail and Company Ltd, and to carry on the business of merchants, contractors, etcetera, has been floated in the State of Kerala with an authorised capital of Rs. 50 lakhs. During the quarter under report, 33 companies were struck off the register of companies as defunct, the paid-up capital involved being Rs. 3.31 lakhs and 19 companies went into liquidation, the paid-up capital involved being Rs. 11.01 lakhs. During this quarter, under report, one foreign company, Hindustan Bible Institute, ceased to have place of business in Madras State.

One hundred and one prosecutions were launched during the period under report in the region against certain companies and their officers mostly for not holding the annual general meeting and for non-filing annual returns and balance-sheets as required by law. Some 163 cases were disposed of resulting in conviction of the accused in 147 cases, in the acquittal in eight cases, withdrawal in one case, stopping of proceedings under Section 249 Cr. P.C. in four cases and dismissal in three cases. The total amount of fines imposed amounted to Rs. 21,302.50.

Plantation Topics

RAIN HAMPERS PLUCKING AND TAPPING IN KERALA

TAX BURDEN ON PLANTATIONS CRITICISED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

MONSOON has started in Kerala, but its severity is now a matter of concern for producers of such plantation crops as rubber and tea. Meanwhile, tapping and plucking operations are being hampered. But coming as it does after a period of severe drought, it is beneficial to most crops in spite of the temporary dislocation. Due to inclement weather, the processing of rice from paddy and copra from coconuts has become difficult, so their arrivals in the market have declined considerably. The prices of rice and coconut oil have, therefore, risen in the Kerala markets. But compared with the rise in the price of rice, the rate of increase in coconut oil prices is milder because of the lull in demand from north Indian markets.

In the last few Cochin auctions, there was a definite fall in tea prices. Trade circles attribute this to a deterioration in quality. The advice of Mr. R. W. Thorpe, chairman of the Nilgiri-Wynaad Planters Association that producers must see to it that teas produced for the export markets are clean and well made is, therefore, timely. Addressing the annual general meeting, he said that in order to keep the good name of south Indian teas in the export markets—especially in the United Kingdom—adequate attention should be paid to quality when tea is manufactured. "It is of utmost importance that the export markets abroad are carefully fostered and developed. Steps taken towards that end would be the best insurance not only against economic instability of the industry but also against the impairment of financial resources for the nation's plans through any reduction in foreign exchange." The recent reduction in export duty, he added, has not provided any real encouragement to exporters for the enhancement of the excise duty has offset the concession. Although the Nilgiri-Wynaad district falls within Zone 1 and pays the lowest rate of excise duty, the relief amounts to only 5.7 percent.

Excise Duty on Coffee

The coffee industry has been in difficulties for some time now, and it was a great shock to producers that the Central Government appeared to be oblivious of the crisis and chose to enhance the excise duty by 33⅓ percent. The recent revision in the rates of excise duty on Robusta bringing it to the old level—although a sympathetic gesture to be appreciated—does not mitigate the rigour of the general enhancement of the duty at a time when the industry is faced with a serious crisis in marketing, the chairman said. Meanwhile, world prices have slumped, so the Indian coffee has to earn foreign exchange at a great sacrifice. The internal marketing procedures will have to be drastically reorganised if the industry is to be saved from stagnation. Mr. Thorpe said that the United Planters Association of Southern India made some proposals including the earmarking of a minimum export quota, radical changes in coffee export procedures including open auctions, auctioning of some small lots of individual coffees under their estate names, the introduction of cup testing, the abolition of the multi-channel system in the internal market, the replacement of sales tax by a Central excise duty, etcetera, to the Coffee Board for solving the marketing problem now facing the industry.

U.P.A.S.I. Survey on Medical Aid

There was one medical unit to every 1,157 of the labour population in south Indian plantations at the end of 1958, according to a survey conducted by the United Planters Association of Southern India. This compares with the national figure of one for every 40,000 of the population. Including mobile dispensaries, the three major cities—Bombay, Calcutta and Delhi—together had only one medical unit for every 35,000 of the population. At the end of 1958, the plantations covered by the U.P.A.S.I. survey, had one doctor to every 1,831, one compounder to every 752, one nurse to every 1,102 and one midwife to every 1,355 of the working population. This compares with the national average of one doctor to every 5,714, one midwife to every 12,045 and one nurse to every 14,260 of the population. The survey shows that the medical establishments were larger and better and more numerous on larger plantations. Out of the 31 group hospitals covered by the survey, 30 were on estates of 1,000 acres and more. Out of the 61 estate hospitals, 55 were on plantations of 1,000 acres and more. Adult females accounted for 30 percent of the labour covered by the survey. About 18 percent of the adult female labour claimed maternity benefits each year. The average cost of medical aid in south Indian plantations in 1949 was Rs. 11.94 a head of the working population. It was Rs. 26.12 a head in 1958. The national average is Rs. 1.48 a head.

COCHIN TEA SALES

At Sale No. 22, 472,000 kilograms of tea were on offer. There was a strong general demand. Plain and low mediums were fully firm while mediums and good mediums were 5nP to 10nP easier. Nilgiris were irregular but generally easier.

New Delhi

MINERAL DEVELOPMENT PROGRAMME IN THE THIRD FIVE YEAR PLAN

GOVERNMENT OUTLINES SCHEME FOR INSURANCE OF BANK DEPOSITS

(FROM OUR NEW DELHI CORRESPONDENT)

SOME indications of the schemes for minerals development in the third five year plan are now available. The outlay on mineral development over the period is placed at Rs. 498 crores; Rs. 438 crores for the public sector with Rs. 200 crores as its foreign exchange component; and Rs. 60 crores for the private sector with Rs. 28 crores in foreign exchange. The 1966 target for coal is placed at 97 million tons, of which 37 million tons will be the additional production under the plan, which will be raised in the following manner: public sector—20 million tons; 3 million tons from the Singareni fields and 17 million tons by the National Coal Development Corporation. Grade-wise, production will be as follows: non-coking coal 10.83 million tons; coking coal 4.82 million tons; blended coal 1.48 million tons. These make a total of 17.13 million tons. The private sector has been allocated 16.83 million tons.

Outlay on Oil Exploration

The outlay on oil exploration is placed at Rs. 115 crores, compared with Rs. 26 crores in the second plan. Additional allocations will be made from time to time as the production stage is reached and oil is ready for being transported. It is said in the third plan that in the field of exploration, the Government will seek foreign collaboration on mutually advantageous terms.

Dissolving Pulp from Hard Woods

South India Viscose Ltd, it is expected, will set up a plant in Coimbatore for the manufacture of 21,000 tons a year of dissolving pulp from hard woods, such as eucalyptus and wattle. This Company is already licensed to set up a plant for the manufacture of viscose rayon yarn and staple fibre in Mettupalayam. The import of dissolving pulp is allowed to actual users, the annual purchases of which are of the order of 50,000 tons. This demand, it is expected, will be increased to 88,000 tons when the capacity for rayon, so far licensed, materialises. The requirements of viscose yarn, staple fibre, cellulose film, cellulose acetate and cuprammonium, all of which require dissolving pulp, is placed at 360 million lbs by 1966. The total requirement of rayon-grade pulp will be about 198,000 tons. After considering other uses for the dissolving pulp, the total requirement is placed at 204,000 tons. The total capacity, so far licensed, is for 277,800 tons, including 17,400 tons for self-consumption in integrated units. The regional distribution of the capacity is as follows:

Assam	114,000 tons a year
Mysore	91,800 ,,
Kerala	48,600 ,,
Gujarat	10,800 ,,
Maharashtra	7,200 ,,
Uttar Pradesh	3,600 ,,
Andhra Pradesh	1,800 ,,
Total	277,800 tons a year

It will be thus seen that the total capacity, so far licensed, is for 277,800 tons. There is no production as yet. It is well known that in the manufacture of rayon-grade pulp, only about 60 percent of the output is suitable for the manufacture of rayon yarn; the balance is used for paper making. The south Indian undertaking is collaborating with S. Viscose of Milan, Italy, which is one of the two principal manufacturers in the world.

Deposit Insurance Scheme

The Central Finance Ministry has announced the Government's decision to introduce a scheme for the insurance of deposits in commercial banks to the extent of "not less than Rs. 1,000." Deposits with the State Bank of India and its subsidiaries will not be covered under the scheme, but they will be required to contribute to the funds of an autonomous corporation, to be set up to implement the scheme. The rate of premium will be fixed by the Corporation in consultation with the Central Government. A Bill to give effect to this proposal will be introduced in Parliament at its August session. A Finance Ministry Press note said: "The Government of India has had under consideration, for some time, various measures to strengthen the position of commercial banks in the country to safeguard the interests of the depositors. For this purpose, legislation was undertaken last year to permit the declaration of moratorium in the case of the weaker banks and to facilitate their reconstruction or amalgamation with other units. In pursuance of these powers, the position of the more vulnerable banks is being reviewed and some of them have already been amalgamated with bigger commercial banks. It has been suggested from time to time that, in addition, a scheme for the insurance of bank deposits should be introduced to avoid or minimise the hardship caused to the depositors through failure, reconstruction or amalgamation of the relatively weaker banks. The Government of India has, after careful consideration of the various aspects of the question in consultation with the Reserve Bank of India and the leaders of the banking community, decided to initiate immediate action for the implementation of such a scheme. It is proposed that, for this purpose, a separate autonomous corporation should be set up with the Governor of the Reserve Bank as its chairman, who will be assisted by a small board consisting of one of the deputy governors of the Reserve Bank of India, a representative of the Central Government, and at least one non-official. The corporation will have an authorised capital of Rs. 5 crores which will be allotted entirely to the Reserve Bank. The deposits in all commercial banks functioning on the date of the introduction of the scheme, other than the State Bank of India and its subsidiaries, will be insured under the scheme. It is considered that in view of the special position of the State Bank of India and its subsidiaries, it is not necessary that the deposits of these banks should be covered by the scheme; these State-associated banks will, nevertheless, be required to contribute to the funds of the corporation. The limit of amount of individual deposits insured and the rate of premium will be fixed by the corporation with the approval of the Central Government and may be varied from time to time in the light of experience gained. It is expected that, to begin with, individual deposits to the extent of not less than Rs. 1,000 will be guaranteed under the scheme. The actual figure will be determined by the corporation after it has been formed. A bill to give effect to these proposals is under preparation and it is intended that it should be introduced in Parliament during the next session."

Ten Years of Planning

"Ten Years of Planning" is the caption of a chapter in the *Third Five Year Plan*. The chapter makes an official appraisement of the two plans. It says: "The first five year plan took over several projects which had been worked out earlier and integrated them into a well-knit scheme of economic and social development embracing every part of the country. Through its emphasis on agriculture, irrigation, power and transport, the plan succeeded in creating the base for more rapid economic and industrial advance in the future. In stressing the place of social change and institutional reforms in the economic development of the country, the plan initiated some of the basic policies which were further developed during the second plan.

"While the first plan placed great emphasis on the stepping up of agricultural production, rehabilitation of transport and communications and a fuller utilisation of the existing capacity in industry, one of its main aims was to establish the basic social and economic policies for economic development in accordance with the Directive Principles of State Policy laid down in the Constitution. The reform of an antiquated land system which was inhibiting agricultural production, setting up a nationwide agricultural extension service as part of a comprehensive community development programme, revitalisation of the co-operative movement, expansion of irrigation and power facilities on a large scale, strengthening and improving the administrative structure of the country, and establishing a number of specialised institutions for providing credit to agriculture and industry, for developing small-scale industries and for giving special assistance to backward sections of the population were some of the notable features of the first plan. The plan focussed the nation's attention on the vital need for planned effort for achieving rapid economic growth as well as social justice. It offered to the people not only the objectives for which to work, but also the means with which to realise them through mutual self-help and co-operation and the mobilisation of local resources.

"While the second plan carried the basic policies initiated under the first plan a step further and aimed at a larger increase in investment, production and employment, its main contribution was to direct the economy towards the next important stage which followed logically from the policy of planned development which the country had already accepted. It placed special emphasis on the development of basic and heavy industries for, with the advantages in natural resources which India already possessed, this was an essential element in the strategy for speeding up the development of the national economy over the next 15 or 20 years. The plan also defined more clearly the key rôle that the public sector was to play in the economic development of the country. Along with the emphasis that it put on accelerating the rate of growth of the national economy and creating conditions for more rapid development in future, the second plan placed before the nation the goal of the socialist pattern of society. It also set the objectives of increasing employment opportunities and reducing disparities in income and wealth and bringing about the more even distribution of economic power.

Increasing Investment

"As a result of economic planning, there was a substantial increase in the rate of investment, especially in directions calculated to accelerate the economic development of the country. The total investment, public and private, in the economy increased from over Rs. 500 crores a year at the beginning of the first plan to Rs. 850 crores at its end and reached an annual level of about Rs. 1,600 crores at the end of the second plan. Corresponding figures for investment by public authorities are Rs. 200 crores, Rs. 450 crores and over Rs. 800 crores. The total investment during the two plans was Rs 10,100 crores; about Rs. 5,210 crores in the public sector and Rs. 4,900 crores in the private sector. Details for the two plans are given below:

OUTLAY AND INVESTMENT IN FIRST AND SECOND PLANS

(Rs. crores)

	First plan 1951-56	Second plan 1956-61	Total 1951-61
Public sector outlay	1,960	4,600	6,560
Public sector investment	1,560	3,650	5,210
Private sector investment	1,800	3,100	4,900
Total investment	3,360	6,750	10,110

"The distribution of outlay in the public sector as between different heads of development is shown in the following table:

DISTRIBUTION OF OUTLAY

	Provision	Percentage	Expenditure	Percentage	Provision	Percentage	Expenditure	Percentage
Agriculture and community development	346	17	291	15	568	12	529	11
Irrigation	434	21	310	16	498	10	450	10
Power	127	6	260	13	415	9	416	9
Village and small industries	50	2	43	2	200	4	176	4
Industries and minerals	146	7	74	4	690	14	900	20
Transport and communications	498	24	523	27	1,385	29	1,367	28
Social services and miscellaneous	468	23	459	23	1,044	22	829	18
Total	2,069	100	1,960	100	4,800	100	4,600	100

"This distribution reflected the changes in emphasis in the two plans. In the first plan, relatively greater stress was placed on programmes designed to build up the agricultural potential of the country. Consequently, programmes for agriculture and irrigation comprised 38 percent of the plan provision. In the second plan, greater emphasis had necessarily to be given to industrial development and the relative share of industries and mining increased from 7 percent to 14 percent. Transport and communications were given high priority in both the plans. Social services comprised 23 percent of the first plan and 22 percent of the second plan provision. The variations between provisions and expenditures during the two plan periods reflected partly lags in implementation and partly adjustments in the light of actual requirements. The reappraisal of the second plan in 1958 was due to the sharp decline in foreign exchange reserves during the first two years of the plan, the fact that external assistance was not yet available on the scale needed, the unfavourable agricultural seasons during 1957-58, and the fall in the prices of primary products abroad.

"The financing of the public sector outlay in the two plans originally proposed and as it actually emerged was as follows:

FINANCIAL RESOURCES IN THE PUBLIC SECTOR

(Rs. crores)

	First plan	
	Originally proposed	Actual
Outlay on the plan	2,069	1,960
Budgetary resources	1,258	1,352
External assistance	521	188
Deficit financing	290	420

	Tax effort Second plan	
	Originally proposed	As visualised now
Outlay on the plan	4,800	4,600
Budgetary resources	2,800	2,562
External assistance	800	1,090
Deficit financing	1,200	948

"During the second plan in particular, there was a substantial step-up in the tax effort. A number of new direct and indirect taxes were introduced. The gap in resources was made up partly through deficit financing and partly through external assistance. During the earlier years of the second plan, budgetary deficits were rather high. An attempt was, however, made in the later years to reduce them. Actual deficit financing during the second plan was roughly of the order of Rs. 950 crores, compared with the original provision of Rs. 1,200 crores."

"The balance of payments did not present a problem during the first plan period. The actual

deficit amounted to Rs. 318 crores over the plan period. It was met to the extent of Rs. 196 crores by external assistance and Rs. 122 crores by withdrawal from the country's foreign exchange reserves. The second plan which put greater stress on industrialisation naturally required heavier expenditure of foreign exchange. The second plan *Report* estimated the aggregate deficit in the balance of payments over the five-year period at about Rs. 1,100 crores and asumed that about Rs. 800 crores out of this would be met by external assistance. It ran, however, into unexpected balance of payments difficulties from the very second year. Foreign exchange reserve had to be drawn down by Rs. 610 crores in the second plan period. In addition, external assistance of the order of Rs. 872 crores was used in the public as well as private sectors, besides commodity imports of Rs. 540 crores under the P.L. 480 assistance. Stringent restrictions were imposed on less essential imports. Efforts were made to increase exports, but the total export earnings for the five-year period turned out to be somewhat lower than the plan anticipations."

"The record of growth over the last ten years has not been uniform. There have been significant ups and downs—occasionally due to natural causes or international developments, and sometimes due to deficiencies in implementation. During the first plan, due largely to the progress recorded by agricultural production, the national income increased by 18 percent, compared with a target of 12 percent. During the second plan, on the other hand, the increase in national income was 20 percent, compared with a target of 25 percent, partly due to foreign exchange difficulties experienced in the earlier years of the plan and partly to adverse weather conditions.

"The past decade has witnessed striking developments in industry—in terms of the rate as well as the pattern. Some idea of the trend may be obtained from the following indices of industrial production:

INDEX OF INDUSTRIAL PRODUCTION

	1950-51	1955-56	1960-61
General index	100	139	194
Cotton textiles	100	128	133
Iron and steel	100	122	238
Machinery	100	192	503
Chemicals	100	179	288

"The index of industrial production thus recorded a cumulative rate of expansion of about 7 percent a year. The actual increase was, in fact, more pronounced than indicated by the above figures because a number of new industries which have generally shown more marked progress, are at present not included in the index. Even more significant than the quantum of industrial development has been the direction in which the expansion has taken place, especially under the second plan. During the first plan, what has been proposed initially for large industry was chiefly to encourage the already existing factories to use their capacity to the full. Industrial production, even with this mild stimulation, rose by 39 percent during the quinquennium.

"With the successful completion of the first plan, it was possible to take up in a large way the development of new industries, especially the capital and producer goods industries, which constitute the very basis for any programme for accelerated industrial growth. Judging by the progress so far achieved by the metallurgical, mechanical and electrical engineering and chemical industries in augmenting industrial potential and taking cognisance of the heavy machine-building projects recently initiated, it can be now stated that some of the basic conditions required for an accelerated growth towards the goal of a self-reliant economy were successfully established during the last decade.

Rôle of Public Sector

"A key rôle was assigned to the public sector in the development of basic industries in particular. The total public sector outlay on industries and minerals amounted to Rs. 974 crores over the decade, out of which investment in the second plan period alone amounted to as much as Rs. 900 crores or 60 percent of the total investment in organised industry, public and private, during the quinquennium. But even more important was the nature of the public sector industries most of which were of a heavy type. This development has not only helped to strengthen the public sector, so essential from the standpoint of a basic objective discussed earlier, but also helped to create conditions conducive for a rapid growth of medium and light industries in the private sector.

"A major step forward was taken with the establishment of three new steel plants in the public sector and the expansion of the two units in the private sector. The production stage of the new projects has now been reached and the capacity for finished steel has increased from 1 million tons in 1950-51 to 4.5 million tons in 1960-61 and of pig iron from 350,000 tons to 900,000 tons. The availability of other essential industrial materials like aluminium, cement, heavy chemicals, such as sulphuric acid, soda ash and caustic soda and dyestuffs, of fuels, such as coal and petroleum and of power has also increased substantially since 1950-51. New skills and experience have been acquired by a rapidly increasing number at all levels from the industrial manager right down to the factory worker.

"Another significant development has been the rapid growth of machine-building industries. India is now producing progressively increasing quantities of machine tools and machinery for use in agriculture, for needs of the transport industry and for such industries as chemical and pharmaceutical, textiles, jute, cement, tea, sugar, flour and oil mills, paper, mining, etcetera. Most of the machinery and equipment needed by the railways, except diesel and electric locomotive, are now available from indigenous sources. A large variety of electrical equipment and scientific instruments are also now being produced in the country. The production of graded machine tools has increased from Rs. 34 lakhs in 1950-51 to Rs. 550 lakhs in 1960-61. Steps have been recently taken for the establishment of a heavy machine-building plant and the foundry-forge plant in Ranchi and the coalmining machinery plant in Durgapur. The aggregate value of all kinds of industrial machinery and capital goods increased by about 11-fold during the last decade. A beginning has also been made with the production of heavy electrical equipment. The heavy electrical project in Bhopal has entered the stage of initial production. When all stages are completed, Rs. 25 crores worth of equipment will be produced. The progress made by chemical industries, particularly pharmaceuticals, heavy chemicals and fertilisers has also been significant and capacity for a wide range of primary organic chemicals has been stepped up.

Modernisation of Industries

"The programme for the modernisation and re-equipment of important national industries, such as jute, cotton textiles and sugar has been progressing. In the case of the jute industry, it is at an advanced stage on the spinning side. The bulk of the machinery required for the modernisation of the jute industry in the preparatory and spinning departments has been manufactured within the country. Another achievement during the period under review was the progress made in increasing the indigenous content of industrial products manufactured in the country. Yet another indicator of the country's industrial development is the production of a growing number of new industrial items, i.e., industrial boilers, milling machines and other types of machine tools, tractors, industrial explosives, sulpha and anti-biotic drugs, D.D.T., newsprint, motor-cycles and scooters, calcium carbide, dyestuffs, staple fibres, etcetera.

"While the output of mineral oil within the country is as yet small, valuable oil resources have been found in Nahorkatiya area in Assam and indications obtained of a sizeable oilfield in Cambay-Ankleshwar areas in Gujarat. Prospecting operations are in progress in other areas as well. In view of the importance of establishing indigenous sources of oil, an Oil and Natural Gas Commission was set up for undertaking on an intensified scale, geological surveys, geophysical investigations and exploratory drilling for oil. The Government has also decided to invite foreign oil explorers to join the quest for oil on mutually acceptable terms. Construction of two refineries in Nunamati and Barauni was taken up in the public sector and the Indian Oil Company, a Government agency for the distribution of oil products, was formed in 1959.

"Provision of adequate power is one of the basic requirements for the development of both large and small-scale industries. A number of hydro-electric and thermal power projects were put up during this period and the total public sector investment in power amounted to Rs. 647 crores. The four multi-purpose projects, Damodar Valley, Bhakra-Nangal, Tungabhadra and Hirakud, which were begun before the first plan, were incorporated into the integrated programme of river development. Among the hydro-electric projects started during the last decade, mention may be made of Chambal, Rihand, Koyna and Nagarjunasagar. A large programme for thermal power generation was also undertaken. The installed capacity for hydro-electric power increased from 560,000 kW to 1.93 million kW and of thermal power from 1.74 million kW to 3.77 million kW during the last decade. The total installed capacity thus went up from 2.3 million kW in 1950-51 to 5.7 million kW in 1960-61. The generation increased from 6,575 million kilowatt-hours to 19,850 million kilowatt-hours—out of which as much as 62 percent was required for industrial purposes. Impressive as this increase was, it represented nevertheless a substantial shortfall from the target of 6.9 million kW, mainly due to foreign exchange difficulties that arose during the early years of the second plan and also delays in the execution of some of the major projects. Special attention was paid to extending electricity to rural areas as this was considered to be an important measure for developing and modernising the rural economy. The total number of small towns and villages electrified went up from 3,687 in 1950-51 to 23,000 in 1960-61."

Russia against Third Heavy Electrical Plant

In two project reports which were recently submitted to the Government of India, Russia has advised India against setting up a third manufacture of heavy pumps and compressors. Enquiries show that the administrative opinion was opposed to the inclusion of these projects in the third plan. It was felt that the Russian credit should be used for more important and urgent projects. As a *via media*, the projects were included in the list for which the Russian credit could be available, mainly with the object of getting project reports, among other things in order to ascertain from an independent source the advisability or otherwise of undertaking these projects. The Russian view concerning the third plant to manufacture heavy electrical equipment is that the installed capacity of the expanded Bhopal plant and that of the new plant to be set up during the third plan period would be adequate to meet India's demand in 1966. As far as the second project, namely, the heavy pumps and compressors plant is concerned, the Russian view is that it would be uneconomic. This should not be taken to mean that the Russians have reduced their original offer of credit. Meanwhile, according to newspaper reports, the Central Minister of Industries is planning to visit Moscow in order to persuade the Russians to reconsider their decision. In other words, the Russians are being requested to declare that their project reports were wrong, that there would be adequate demand for heavy electrical equipment to require a third plant and that the heavy pumps and compressors plant would be "economic".

This raises the fundamental issue of the utility of these project reports. Several project reports, for example, were made on the refinery project for Nahorkatiya oil. They were all thrown on the dust heap and the Government ultimately decided to have two refineries, one in Assam and the other in Bihar. The L. K. Jha report relating to the manufacture of a low-cost car gave the broadest indication of its unsuitability under the existing conditions. The small car project is not included in the third plan. Undeterred by all these considerations, the Minister, as distinct from the Ministry of Commerce and Industry as a whole, has set his mind to launch the project. And whatever the Pande Committee report may say, the car when placed on the market would not cost less than Rs. 8,000 each. It would be more economical if a Minister gave a directive to a committee to produce a project report which would fit into the framework of his own whim.

Russians to Collaborate in Private Lorry Project

While on this subject, it may be disclosed that just as the Americans, thanks to the cold war ideology, are beginning to enter the public sector, and thereby making a fundamental change in their own declared policy, the Russians are also about to enter the private sector in India. A proposal is being discussed under which the Russian Government will enter into collaboration with a private undertaking to manufacture lorries in Andhra Pradesh. As far as the Americans are concerned, the Export-Import Bank has made a policy decision under which it is prepared to finance oil exploration, refining and marketing, etcetera, in the public sector. India is taking advantage of this new policy and the Oil and Natural Gas Commission will shortly apply for a credit of about $2 million for oil exploration.

Fresh Capital Issues

The Controller of Capital Issues has granted consent to the Tennur Bank Ltd, Tiruchirapalli, and the Rayon Pulp Manufacturing Company Ltd, Bombay, for the issue of capital of different categories. The following are the details: with a paid-up capital of Rs. 1,00,000 divided into equity shares of Rs. 50 each, the Tennur Bank Ltd is carrying on banking business. With a view to improving the liquidity of the bank, it was granted consent to issue 400 ordinary shares of Rs. 50 each for cash at par in the ratio of one new share for every five held. The consent is valid for 12 months. Rayon Pulp Manufacturing Company Ltd, Bombay, has been granted consent to issue capital of Rs. 50 lakhs for cash at par divided into Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in redeemable cumulative preference shares of Rs. 10 each. Of this, shares of the value of Rs. 15 lakhs would be subscribed privately and the balance by the public. The proceeds of the issue will be used for the manufacture of bleached rayon-grade pulp.

U.S. Consultancy Service for Copper Project

An agreement for consultancy services for the Khetri copper project was signed here between the National Mineral Development Corporation Ltd and Messrs Western Knapp Engineering Company of the U.S.A. Under the agreement, the project report is to be submitted by the consultants not later than the end of this year. Messrs Western Knapp Engineering Company is a division of the Western Machinery Company, San Francisco, California. The Khetri copper project is included in the third five year plan. A production of 10,000 tons of electrolytic copper annually is visualised.

PROSPECTS IMPROVE FOR THE U.K. JOINING EUROPEAN COMMON MARKET

CONFERENCE OF COMMONWEALTH FINANCE OFFICIALS DISCUSSES VARIOUS ISSUES

(FROM OUR LONDON CORRESPONDENT)

WHETHER Britain will or will not join the European Common Market is still a matter for speculation, although there are several indications that the opposition to such a move is less apparent now than it was some time ago. Indeed, the conviction seems to be growing that a decision on Britain's membership is impending, and this possibility adds special significance to the meeting now proceeding in London of senior financial officers from the Commonwealth countries as a preliminary to the annual conference of Finance Ministers, which is expected to take place in September. This meeting in the autumn will probably be the deciding factor in negotiating and laying down the terms of entry for Britain which will prove acceptable to her Commonwealth partners. Meantime, however, it is the task of the senior civil servants—some four dozen of them are assembled in London and have been meeting under the chairmanship of Sir Denis Rickett of the U.K. Treasury in the absence through illness of Sir Frank Lee—to set out the limits for the bargaining process to come. For instance, what is the maximum scaling down of the present level of Commonwealth preferences which can be accepted, for example, by Canada, New Zealand and Australia? Also, what are the possible variations for the formula if Britain is to try to draft some *quid pro quo* which will compensate Commonwealth producers for the losses they might sustain on their sales in the United Kingdom? It is this process of charting a path through the economic maze which is being done by experts before the 12 Commonwealth Cabinets can take what is really a political decision. In effect, Britain—as the prospective traveller—is being asked to define her destination, the possible routes to be followed, and the speed of travel required. The other Commonwealth countries will then work out the cost of the ticket.

In point of fact, the impact of British membership of the "Six" on the individual economies of the Commonwealth countries has already been discussed at some length. The ground has been covered so effectively in the past few months that there is not likely to be any great disagreement, and in any event it is considered likely that there will be informal contact at the Prime Minister's level by letter before the final decision is taken. Therefore, while the European Common Market is the principal topic for discussion, there will be time also for the study of other subjects. These will include a review of balance-of-payments problems and the co-ordination of assistance for underdeveloped countries with the rationalisation of their low-cost manufactures. The effect of South Africa's withdrawal from the Commonwealth will also be considered. Her place has now been taken by the newest member of the Commonwealth, Sierra Leone. The most important outcome of the technical discussions which have been going on for the past three days will undoubtedly be some kind of profit and loss account showing the effect of Britain's entry into the European Common Market.

Expanding Trade

Although the value of imports into Britain declined in the first quarter, the drop was due to lower prices, not a lower volume. The volume index compiled by the U.K. Board of Trade rose to 143.4 (1954 equals 100) which is about 2 percent higher than the index of 140.7 for the fourth quarter of 1960. Exports, too, have risen in volume. The first quarter index is 127.9—a rise of 2.5 percent from the fourth quarter's 124.6. The increase is greater still if allowance is made for seasonal factors.

The export picture is not quite as attractive if a comparison is made between the first quarter of this year and the same quarter of last year. The increase over the 12 months is only about 1 percent, since the rise in exports of manufactured goods and basic materials was almost offset by falls in shipments in the food, drink, and tobacco groups and in mineral fuels and lubricants. The index of manufacturing exports conceals some divergent performances. Exports of electrical and non-electrical machinery were 15 percent greater in volume this year than the last while exports of motor-vehicles and aircraft declined by 17 percent. Textiles and metal manufacturers were also lower, but chemicals accounted for almost the whole of a 12-percent improvement in the group labelled "other manufacturers."

The volume of imports, compared with a year earlier, rose by over 5 percent. Manufactured goods—including large quantities of materials and goods for further processing—accounted for almost half the increase, with basic materials and fuels together accounting for much of the rest. The appetite for imported manufactured and semi-manufactured goods was a outstanding feature of trade throughout last year and the major single cause of the sharp deterioration in the balance of trade and payments. This has led to the demand—in diverse quarters—for an imposition of some import controls.

The payments consequences of a rising volume of imports were mitigated in the first quarter by a drop in their price. The import price index for the first quarter at 97 was two points lower than in the fourth. The main falls were in the prices of food, drink and tobacco. At the same time, the price of exports went up (mainly engineering products and textiles), with the result that the terms of trade moved in the United Kingdom's favour.

Large Rise in Engineering Orders

There was a large increase in both home and export orders for the British engineering industries in March, the U.K. Board of Trade has reported. Net new orders in March were 17 percent higher than in March 1960: in the first quarter, they were 6 percent more than the very large volume of a year earlier. In the home market, apart from some big orders placed in March for a new power-station, the demand for plant and machinery has grown strongly in the first three months of 1961. Aggregate order-books at the end of March were about 15 percent higher in value than a year earlier: for export orders alone, the backlog was 11 percent up. This was in spite of further considerable increases in both home and export deliveries. In the fourth quarter of last year, deliveries had caught up with new incoming orders but in each month of this year new orders have been much larger than deliveries. For many types of engineering products, delivery delays are now once again so long that British manufacturers are placing orders abroad wherever they can get quicker delivery—particularly in the United States, and in some cases in Czechoslovakia.

Total production of engineering and electrical goods has been rising gently but in the first quarter of this year, it was only 4 percent more than in the first quarter of 1960. Yet exports in the first quarter were up 15 percent. These statistics probably cover too wide a range of industries to be very informative in the short run. In particular, they cover both capital and consumer goods, and while the former have met with a steadily expanding demand the latter had a bad time last year. The U.K. Board of Trade now states that there is some evidence of the production of engineering consumer goods recovering at last. In the early months of 1961, factory deliveries of domestic electrical appliances began to increase. In this field, sales have been reviving for several months, but such large stocks were built up last year that production was held back until the warehouses were thinned out a little. It may be that this period is now ending.

Banks and Export Credit

There is a limit to the amount of export finance the banks can provide, Mr. Anthony Tuke, chairman of Barclays Bank, said the other day. The banks had stretched their principles in providing export credit up to five years, which was a long time to tie up customers' money which was held either on demand or on seven days' notice. For the first time since the second World War, the banks were in general "very fully lent," and fresh advances could only be made for any purpose to the extent that other advances are repaid. Mr. Tuke thought that the life insurance companies and pension funds as traditional long-term lenders might be persuaded, in the national interest, to put up a substantial sum of "many millions" as a pool of medium-term export credit. "If they like to do this through a new organisation to which they can provide money on 20 or 25-year loans, well and good," Mr. Tuke concluded. The problem is certainly, as he admits, far from being solved.

Europe as a Market for British Goods

European markets are more profitable than most British firms have so far supposed, according to a report entitled *Trading Opportunities in Europe*, published by the Export Council for Europe. The report is based on the experiences of a series of "fact-finding missions" which visited nine European countries earlier this year. It states that there is a valuable fund of goodwill towards Britain in Europe; but that British industry does not fully appreciate the extent to which postwar economic development has increased present and potential purchasing power in Europe, and a "constructive, intensive effort to meet specific demands" is now needed.

A general conclusion is that the British export record to Europe is fair, in spite of shortcomings confirmed by E.C.E. mission reports of broken delivery promises, "stop and go" attitude to markets frequently dismissed as marginal when the home demand is booming, "and our national assumption that British weights and measures, language, and currency terms are universally acceptable." One surprising statement in the report is that traditional British quality is sometimes too high! In some classes of goods and for some markets, Britain can lower the standard, and as a result the price. The quality of British machine tools, for example, is considered to be often unnecessarily high for the Swiss market, where a cheaper article will sell better. Swedish buyers have also found some British designs of machine tools more powerful and "conservative" than necessary. One suggestion made is that much more business could be done in consumer goods if British manufacturers adopted the deep-stock system, particularly in Switzerland, where agents want fresh supplies quickly. It is thought that British exports of oils could be trebled in Italy, and that Britain should be able to improve on present exports of coal to Portugal.

Cost of Living Slightly Up

The cost of living rose slightly in April, although the U.K. Ministry of Labour's official index of retail prices remained unchanged. The index stood at 113 on 18th April (January 1956 equals 100), the same figure as on 14th March. Calculated to one decimal, however, the April index was 113.3 compared with 112.7 in March. According to the Ministry, main changes during the month were increases in local rates and in the average prices of several food items.

Finlay Group Tea Results

Four tea Companies in the James Finlay group are paying higher dividends for the year ended 30th November. Anglo-American Direct Tea's pre-tax profit rose from £314,057 to £397,300, and the dividend total is lifted from a tax-free 12½ percent to 15 percent. Kanan Devan Hills earned a pre-tax profit of £781,545, against £208,998, the distribution increasing from a tax-free 10 percent to 15 percent. Although Amalgamated Tea Estates' profit fell from £348,146 to £245,713, the dividend is raised from a tax-free 8½ percent to 10 percent. Consolidated Tea and Lands also earned less—£865,676, against £1,444,663—but the dividend is 27½ percent, tax-free, against 22½ percent.

The board of Bengal United Tea, which has a holding of over 25 percent in the Company, is rejecting the improved bid of 30s for each £1 ordinary share and 20s for each £1 preference, made by Phillips Investments. It says that the offer does not place an adequate value on the estates, but having regard to immediate prospects, it does not feel it can advise shareholders against accepting the offer. Last year's crop was affected by drought, and although the final figures have not yet been received from India, they are doubtful of being able to recommend a dividend for 1960 other than on the preference shares.

THE RIGHT PRICE FOR COPPER

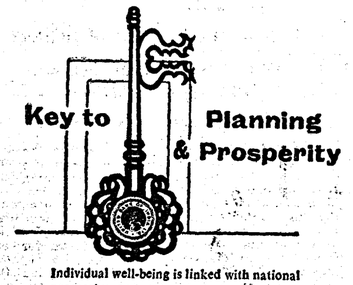
TIN FALLS FROM PEAK

EMINENT opinion in the copper business considers £240 a ton to be "the right price" for this metal. Late in May, the price touched £250, but it could not hold that level. The El Teniente mine in Chile was in trouble again, and the markets in London and New York were reminded how easily supplies from a major source could be interrupted by labour disputes. The price of copper had previously been very firm, for the market had surprisingly—but, as was later proved, wisely—ignored the evidence in the Copper Institute's statistics for March that production was still expanding and the expansion was adding to stocks. The figures for April showed that production was, in fact, responding to the declared cutbacks and stocks were beginning to diminish.

Consumption of copper in the U.K. is not very impressive (the recovery of the motor-car industry was recently checked), and demand in the U.S.A. has not yet reacted very vigorously to that country's economic advance. More important in recent weeks has been the demand of Japanese consumers, whose requirements are increasing and who have evidently formed the opinion that the metal's price has turned decidedly upwards and it is, therefore, wise to increase stocks. London's opinion on the price trend is still rather cautious, because the cutbacks in production can be—and to some extent have been—rescinded.

Lead and Zinc Hesitant

Lead and zinc have not aroused so much interest, and the advance in their prices is more hesitant. Zinc approached the end of the month in a firm condition, but lead, which had previously recovered proportionally more than zinc since the beginning of the year, fell back quite considerably. In neither case is consumption, in either the U.S.A. or Europe, expanding enough to make much impression on the price, and the Japanese demand is not a particularly prominent factor in the position. The price of tin is no longer governed simply by the "commercial" statistical position of the metal and by current supply and demand. The trade stocks of the U.S. Government have now been brought clearly into the picture, and dealers believe that releases from the much bigger strategic stockpile will soon be used to relieve the scarcity of tin. They do not, however, expect any disorderly selling from that quarter. More probably, the price will be stabilised by consultation between the International Tin Council and the U.S. Government. But the London price, having almost reached £880 a ton, has recently reacted somewhat, and it is unlikely that this year's hectic advance can be resumed.



Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 125.7 during the week ended 13th May, 1961, compared with 125.4 (revised) for the earlier week. The index was lower by 0.2 percent when compared with the corresponding week of the previous month, but was higher by 1.7 percent than that of a year ago.

FAIR DEMAND AT TEA EXPORT SALE

DUST PRICES FALL

AT Sale No. 2, held on 29th and 31st May, there was a fair demand for the 27,140 chests on offer at the Export sale. Darjeeling teas comprised about half the sale, but quality generally showed a decline and whole leaf grades were often difficult to sell but plainer brokens and Fannings met with a good demand, although prices showed a decline. The few invoices with flavour were well supported. There was a good demand for orthodox descriptions from the other districts, but prices were irregular and generally easier with the exception of a few useful liquoring, well-made invoices which sold at dearer rates. The Fannings grades were, however, a weak feature of the sale. Legg-cut Dooars were firm except for the poorest sorts which were easier. Assam C.T.C.'s met with good competition and prices were generally firm to dearer, particularly for the brokens. Whole leaf grades were easier except for the most stylish kinds.

Quotations

	1961 Rs. a kilo
Clean Plain Pekoe	5.10
Plain B.P.	4.70 to 4.75
Plain Fannings	4.55 to 4.60

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was only a fair demand for the 23,007 chests of Dust on offer, and prices declined considerably. Orthodox description were generally up to 30nP easier, although there was a better demand for the few bright liquoring teas. Legg-cut teas also declined but were readily absorbed at about 20nP below last rates. Both medium and good C.T.C.s were irregularly easier by up to 60nP.

Quotations

	1961 Rs. a kilo
Plain Orthodox Dust	3.85 to 4.20
Medium Assam Dust	4.05 to 4.60
Legg-Cut Dust	4.20 to 5.00
Medium Assam C.T.C. Dust	5.40 to 5.90
Good Assam C.T.C. Dust	6.20 to 7.00 (Nominal)

(Quotations are inclusive of excise duty.)

There was a good demand for the 67 chests of Leaf on offer.

FREIGHT RATES RISE

NOT since the Suez crisis have freight rates in many trades risen to their present high levels. In the Far East especially, Chinese charterers are in the market for forward chartering of tonnage at higher rates to transport Canadian and Australian grain. Russian charterers are also paying higher rates to cover their requirements from the Black Sea to Cuba and return trades by time chartering vessels. The Japanese are continuing to accept tonnage on lump-sum freight to move grain, scrap and coal from the U.S.A. Fixtures for scrap from the U.S.A. to Japan have been reported at $(U.S.) 145,000 which is about $(U.S.) 40,000 above the level of a year ago. Fixtures of fertiliser in bags on account of the Indian Government have been concluded at 75s f.i.o. and stowed, and shipowners are expecting higher rates for future cargo. Some 8,800 tons 5 percent coal South Africa to Rangoon paid 55s f.i.o. and trimmed. At Calcutta at present both coal and ore loaders are obtaining berths without delay as wagon movements are satisfactory.

HIDES AND SKINS QUIETLY STEADY

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 23rd May and 29th May, 1961)

Cowhides: Wet salted (Ord.) 6,600 pcs. on the basis of Rs. 8.25 to Rs. 12.25; Wet salted (Slaughtered) 10,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 62,000 pcs. on the basis of Rs. 255 to Rs. 270, Rs. 340 to Rs. 360 and Rs. 370 to Rs. 390; Wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam-Dinajpur 18,100 pcs. on the basis of Rs. 270 to Rs. 290 and Rs. 320; Kissenganj 25,000 pcs. on the basis of Rs. 335 to Rs. 355; Muzafferpore 6,000 pcs. on the basis of Rs. 360 to Rs. 370.

Bazaar Stocks

(29th May, 1961)

Cowhides: Wet salted 98,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 39,000 pcs.; Assam-Dinajpur 71,500 pcs. Muzafferpore-Patna-Pakur - Purneah - Kissenganj 347,500 pcs.

Jute

MARKED DECLINE IN FIBRE AND GUNNY PRICES

MIXED RECEPTION IN MARKETS TO FUTURES REOPENING ANNOUNCEMENT

THE announcement that the hedge market is to be reopened with effect from 15th June has been received with mixed feelings in Calcutta trade circles As and from that date, business will be permissible in hessian cloth and sacking bag standard contracts for November 1961 delivery, and in standard raw jute contracts, for December 1961. This has been done with the concurrence of the Forward Markets Commission, but is subject to certain amendments to the Hedge Contracts Trading Bye-Laws. It was only early in May that the authorities decided that the time was opportune for the reopening of the futures markets, and many are still of the same opinion. But as the general market situation has deteriorated rapidly during the month, it is to be wondered whether the time is opportune now. Certainly it will tend to put a stop to all the unofficial forward trading dealings which have been on the increase recently, and overseas parties will welcome it in some cases as complaints have been received that customers are not in a position to plan ahead without some sort of guide to future prices. Trading in *fatka* was banned in October 1960 when prices were at abnormally high levels, for which gambling got the blame. Now that the market is in the doldrums, will futures trading improve conditions?

It is a very complex situation. Experience in the past has shown that speculation is mostly condemned when markets are falling and heavy losses have been, or are about to be, sustained. When prices are rising, and most people are happy, one hears less of its evils. On a rising market, the speculator tends to be regarded as a person of exceptional intelligence—on a falling one, he becomes a gambler and a social pariah. When things are going well, everybody condemns Government interference in industry—when trade is depressed, it becomes the Government's duty to give it a tonic and to lift traders out of their difficulties. Violent alterations of sentiment and emphasis do the jute industry little good. They bring it into disrepute both at home and abroad, and overseas customers, who provide it with the overwhelmingly larger part of its business, find it particularly difficult to understand the seeming inability to curb speculative influences.

Pakistan Underquotes

Nobody can blame speculation for the current slump in the Calcutta goods markets. The main reason is the almost total lack of overseas interest. This does not mean that foreign buyers have been inactive; on the contrary, a fair amount of business has been negotiated, although very few of India's offers have been taken up. On every point, they have been underquoted by Pakistan. In the heavy goods section, business was reported up to Rs. 10 a 100 bags below Indian rates and in hessian about Rs. 3 a 100 yards below. Pakistan is in a position to do this because of her better jute position. She will undoubtedly receive supplies of cheaper new crop jute much earlier than India, and will be in this position for some time to come. There has been a tendency in the market to take rather an alarmist view of this and prices have slumped considerably. Many mills are not prepared to sell, however, on current prices, as the loss on simultaneous business is so heavy—about Rs. 250 a ton on an average—that they prefer to wait until they can purchase jute at lower rates. Many think they will not have to wait long as the current trend in raw jute is very weak. Because of the extremely good new crop prospects, and the possibility of mills conserving raw jute stocks by a block closure, fibre prices have fallen rapidly, and now, about a week after the new maximum levels were fixed, rates are at a discount of Rs. 5 and over.

The question of a block closure for mills is still uppermost in the mind of the industry, but as yet no official confirmation is available. If a closure does take place, then gunny prices should rise due to the production cut, but goods prices have fallen so rapidly recently that one could almost say that any rise has already been discounted, unless there is a further fall in fibre prices to help reduce the unbalanced ratio between the prices of the goods and the raw material. Then, and only then, will India again be in a position to compete favourably with her rivals. Sooner or later, there must be a resumption of buying by consumer countries, but with the recent increase of stocks, the industry has enough to supply present requirements, although a shortage would be inevitable in the event of a closure of the mills. Western countries of the northern hemisphere must soon prepare themeselves for this year's harvest, and although this is as yet some way off, the recent fall in the price of bags and sacks may halt the trend towards substitutes. To what extent prices have to fall to compete favourably again has never been really established, but the immediate prospect looks brighter than only a short period ago. If this trend can be maintained, then the southern harvest may follow suit.

It is a long time since new crop prospects have been so good. The last cyclone in East Pakistan did less damage than most people anticipated, and it is not expected that any damage will result from the latest cyclone to hit the coastal districts of East Pakistan. Weather conditions both in India and East Pakistan have been ideal with alternate rain and sunshine. The only district in India where prospects are poor is the Murshidabad area, and here more rain is required. In West Bengal, the crop is very far advanced. The first-class Daissee districts of Sheoraphuli, Midnapore and Tarakeshwar report that sowings are about 50 percent completed, and ground preparation is nearly finished for the balance. Estimated outturn for this area is expected to be 50 percent higher than this year. Other Daissee and mesta areas indicate that prospects are good with an increased outturn. Favourable reports also emanate from the Assam and northern areas where weeding operations are almost complete. Here also, it is anticipated that the crop will be much larger than the current one.

THE JUTE MARKETS

Manufactured Goods: The goods markets were particularly quiet during this past week, and with the exception of one day, prices declined steadily, reaching new low levels. Overseas buyers stayed completely out of the Calcutta markets, although business was concluded in standard goods in Pakistan. Opening quotations were based on Rs. 164 for ready B Twills and Rs. 139 for October-December shipment, while 40in. 10oz. hessians stood at Rs. 53.75 and Rs. 48.50 for the near and forward positions, respectively. Prices fluctuated narrowly, and with Friday being a holiday, there was little interest. Rumours of overseas enquiries caused rates to show a temporary spurt, and B Twills advanced to Rs. 165.50 and hessians to Rs. 54.50 on Saturday morning. The rise was short-lived however, and by Monday, these gains were negatived by mill selling pressure. Rates dropped rapidly throughout the day on reports of business lost to Pakistan, who appeared to be underquoting Calcutta indications on all counts. As a result of this, sacking prices dropped by nearly Rs. 5 and hessian by about Rs. 2. They hovered round this level throughout Tuesday with no appreciable change, but the undertone of the market was weak and operators nervous.

Opening quotations on Wednesday morning were as follows:

	Ready	June	July	July-Sept.	Oct.-Dec.
40in. 7½oz.	39.75	39.50	39.50	39.25	35.25
40in. 8oz.	42.75	42.50	42.50	42.00	37.75
40in. 10oz.	51.75	52.00	52.25	52.00	47.00
B Twills	159.00	159.50	157.50	155.00	137.00
Heavy Cees (Plain)	159.50	160.00	157.50	155.00	137.00
A Twills	200.00	195.00	191.00	188.00	169.00
Liverpools	179.00	179.50	178.00	176.00	157.00
Cornsacks	161.50	162.50	161.00	159.00	140.00

Raw Jute: The fibre markets were very weak throughout as nervous holders began to release stocks. Favourable crop reports and buyers' reluctance to buy jute with the possibility of a block closure of mills in the offing forced down prices after the opening. The general feeling among mills was that prices would fall, and only small business was reported. Opening quotations on Thursday morning were based on Rs. 55 for Assam Bottoms, i.e., Re. 1 below the new maximum rate. Nervous holders began offering at lower rates, and eventually, this snowballed to such an extent that prices were discounted by Re. 1 on Monday and Rs. 2 on Tuesday. This brought out the largest offers of jute for some time, and several amounts of 10,000 maunds and over were put up as sellers saw the price declining rapidly. Mills showed little interest and held off buying except in small quantities. Sellers again offered at a discount, but mills could not be tempted.

On Wednesday morning, the market was very weak. Although quotations were discounted by another Rs. 2 a maund, there were only a few sellers at the lower rate. Opening prices were based on the following:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	134.00	50.00	May-June
Northern	131.25	49.00	,,
Purnea Desal	128.75	48.00	,,
Daissee Selected	139.25	52.00	,,
Assam Tossa	135.25	50.50	,,
Mesta:			
Assam-Northern	127.25	47.50	,,
Desal	127.25	47.50	,,
Daissee	126.00	47.00	,,
Jungli	123.25	46.00	,,
Indian Cuttings	140.00 a bale		,,
Pakistani Cuttings	240.00 a bale		,,

THE FOREIGN JUTE MARKETS

NEW CROP FIBRE BEING OFFERED FREELY

(FROM OUR DUNDEE CORRESPONDENT)

THE outlook for the raw jute trade in Dundee is getting more uncertain as time goes on. Sellers are charging any prices they like, so quotations are many and varied. Business in old crop fibre is now more or less nominal, for Dundee spinners have no interest in it, apart from the fact that it is far too dear and most of them can afford to wait until the new crop comes into the market. Mill Firsts are quoted around £197, Mill Lightnings £192, Mill Hearts £187 and Grade Hearts £182, with Grade Tossa-2/3 at £194, fours £190 and Continental Tossa-2/3 £187, May-June shipment, c.i.f. U.K.-Continent.

New crop fibre is much more freely offered now, and it is difficult to determine the lowest and the highest rates. A fair average list for June-July shipment is £170 a ton for Mill Lightnings and £165 for Mill Hearts, c.i.f. U.K.-Continent, for July-August £155 and £150, respectively, for August-September £145 and £140 and for September-October £140 and £135. So far, little business has been reported in new crop fibre, since spinners are expecting a big reduction in prices.

The working results of the Samnuggur, Titaghur and Victoria Jute Companies were issued last week. Mr. F. H. Kidd, chairman, says that 1960 has been one of the most difficult years for the jute industry in India. Although working results in the earlier part of the year were quite satisfactory, a steady rise in raw jute prices rapidly altered the situation. While fibre prices rose by about 100 percent during the year, those for manufactured goods rose by about 50 percent only, with obvious adverse effects on trading. No trade can carry on under such unsatisfactory circumstances and spinners—the men who buy the raw material—cannot carry the trade on their back much longer. The spinners who were unable to buy jute at about the lowest prices of the season, must now be having a hard time indeed.

The Calcutta goods market was irregular last week, with 40in. 10oz. hessians around 81s and 7½oz. 61s 3d for June shipment, with B Twills at 240s, f.o.b. Calcutta.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the fortysecond Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Monday the 26th June, 1961, for the following purposes :

1. To receive and adopt the Audited Accounts for the year ended 31st March 1961 and the Directors' and Auditors' Reports thereon.
2. To declare dividends (including additional dividend on preference shares).
3. To appoint Directors in place of the Hon'ble Sushil K. Sinha and Mr. T. C. Hornby who retire by rotation.

In this connection notice is hereby given that a special notice has been received of the following resolution :

"That the Hon'ble Sushil K. Sinha who has attained the age of 65 years be and is hereby re-appointed a Director of the Company and that it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

Special Business

To consider and if thought fit to pass the following resolutions as Special Resolutions.

5. Special Resolution No. 1.

That pursuant to the provisions of Section 314 of the Companies Act, 1956, the consent of the Company be and the same is hereby accorded to Mr. A. Adhikari, who is a relative of Sir Biren Mookerjee, a Director of the Company, holding and continuing to hold an office or place of profit under the Company, namely, as an Assistant of the Company on the terms and conditions specified in the copy of the Agreement submitted to this meeting and signed by the Chairman for the purpose of identification.

6. Special Resolution No. 2.

That subject to the approval of the Central Government pursuant to Section 360 of the Companies Act, 1956 the Company do hereby approve of the contract embodied in the Agreement referred to in Special Resolution No. 1 entered into between the Company of the one part and Mr. A. Adhikari, an associate of Martin Burn Limited, the Managing Agents of the Company, within the meaning of the Companies Act, 1956, of the other part the material terms of which are :

(a) Mr. Adhikari, who is the Works Manager in the Company's Santa Works, shall continue to be such Works Manager for a period of five years with effect from the 1st December 1960 ; during this period he shall enjoy the same privileges, amenities and perquisites and be subject to the same liabilities and obligations as are applicable to other Assistants of the Company in the same grade of employment and with the same status.

(b) Mr. Adhikari's basic salary will be on the scale Rs. 2,500-2,600-2,700-2,800-3,000, during the first and successive years of service, plus dearness allowance at the rate allowable under the Company's rules from time to time, free unfurnished accommodation, medical expenses and, at the discretion of the Company, an annual bonus.

He will be entitled to two months leave on full pay and will be paid return air-conditioned railway fares for himself and his wife after completing the second and fourth years of his contract of service.

7. Special Resolution No. 3.

That pursuant to Section 309(4) and (7) of the Companies Act, 1956 and subject to Article 114 of the Articles of Association of the Company, each of the Directors be and he is hereby authorised to continue to receive every year a share in a commission of 1% of the net annual profits of the company for a further period of five years up to and including the financial year ending on 31st March, 1966.

The Registers of Members and the Transfer Books of the Company for both Ordinary and Preference Shares will be closed from the 17th June, 1961 to the 26th June, 1961, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

Calcutta, 31st May, 1961.

NOTE : The Dividends if sanctioned, will be paid on or after 26th June, 1961, to those shareholders so entitled whose names appear in the Company's Registers of Members on that date, or to their mandatees.

An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the members of the Company.

By Order of the Board,
P. PRASHAD,
Chairman.

Registered Office :
Chartered Bank Buildings,
Calcutta, 29th May, 1961.

LINSEED FIRM

The market was firm in the past week in sympathy with other oilseeds. Prices continued to rise and sellers were reserved. Crushers showed keen interest and small quantities changed hands daily with buyers over. The oil market was firm in sympathy with seeds. Stocks in the hands of sellers were small. Local buyers showed interest daily, but mills are reluctant to do business for forward except at higher prices, due to shortages of the seeds. There was little activity in the oil-cake market. Local prices were out of parity with foreign markets. Small local business was done. The latest quotation is as follows: Ready-May delivery Rs. 26.75 a maund.

TRITON INSURANCE COMPANY LIMITED

NOTICE TO MEMBERS

THE Board of Directors of the Triton Insurance Company Limited hereby give notice that the ANNUAL GENERAL MEETING OF MEMBERS will be held at the Company's Registered Office, 4, Clive Row, Calcutta, on Thursday, the 29th day of June 1961, at 3-30 p.m. to receive and consider the Audited Accounts for the year ended 31st December, 1960, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon, to declare a Dividend, to appoint Directors, to appoint Auditors and to fix their remuneration, and, as special business, to consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution :—

"That Article 112 of the Company's Articles of Association be deleted and the following Article substituted therefor.

112 Unless otherwise determined by the Company in General Meeting each Director shall be entitled to receive out of the funds of the Company remuneration by way of a fee of Rs. 250/- for each meeting of the Board attended by him subject to a maximum in the aggregate of Rs. 1,200 each per annum. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sums as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his fees as above specified".

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer Books of the Company will be closed from 15th June to 29th June, 1961, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row.
Calcutta, 27th May, 1961.

Note :—Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all Members.

ANALYSIS OF THE "TAKE-OFF" THEORY

MOST books on specialised subjects are judged and criticised by experts in that field long before the general public hears of them; and in fact the public will probably not hear about them at all unless a majority of expert critics decide that they are especially important, whereupon their fame spreads centrifugally from specialists to lay readers. Yet it is the fortune of some books to go straight to the public's heart, despite their origin in a difficult subject, before qualified critics (who normally review books in quarterly periodicals, and often several issues late at that) can get their hands on them. In such cases, the "scientific" reputation of a really unexamined theory may be established before the scientists have pronounced judgment, its doctrines become familiar to newspaper readers, and its terminology pass into the language—all regardless of the true worth of the theory. By the time competent critics appear on the scene to exercise their normal function, they are cast in the rôle of carping and perhaps envious academics quibbling about the details of a master's work. Something very like this has been the fate of an essay by Professor Walt Whitman Rostow called *The Stages of Economic Growth*, which includes the celebrated theory of the "take-off", familiar to and virtually unquestioned by much educated opinion in this country for almost two years.

Rostow was, till lately, an eminent professor of economics and is now a senior adviser to President Kennedy. Neither of these titles should discourage criticism since half the false doctrines of economics have been put forward by eminent professors, and the other half by official advisers. His theory of the five stages of economic development, publicised first by *The Economist* and then by many more popular journals, won instant recognition from everyone except the only people competent to judge, the economic historians. Its popularity was assured by many colourful turns of phrase, and by none more than the famous "take-off into self-sustained growth". This aeronautical metaphor struck many economists as smacking of advertising copy, but, as Professor Cairncross remarks drily, it "suggests at once an effortlessness and finality congenial to modern thought". Since India, where Rostow secured a ready audience, is supposed to be on the verge of this event in her economic history, there has arisen a popular Rostovian literature that depicts us all sitting tensely in our seats, safety belts fastened, waiting to see the airstrip of development difficulties fade away as we soar into the free air of buoyant progress.

Unhappily, if we are waiting for what Rostow described, we are liable to wait a long while. For it is extremely doubtful if the "take-off" exists. Economic historians, going over Rostow's ground not in any debunking mood but just in the normal course of verification of scientific assertions, have not been able to find the evidence for it—or for that matter, for any of the five stages of economic growth. At the best, and supposing that Rostow is substantially correct in his economic history, what could happen is this. Indian economic development could pursue its painful and checkered course, and eventually no doubt gather momentum; and then one day 50 or 100 years hence an historian looking back over the statistics might say: "The crucial moment, after which things began to get markedly better, was around the year such and such". This statement might or might not be true and in any case would be devilishly hard to prove—but what is sure is that Indians living in the year such and such would have noticed nothing. That is to say, even if the take-off occurs (which is dubious), it is something that can only be known after the event; and it definitely cannot be forecast in advance.

Before going further with Rostow's ideas, it is as well to emphasise that no one dreams of denying the obvious. In the economic history of advanced nations we see how things got better and better, and the better they got the easier it was for them to get better still. This getting better involved all sorts of progress: the expansion of agriculture, a faster accumulation of capital, institutional reforms and the spread of technological knowledge. We might, for convenience, divide the process up into "stages", but unless we could show that all these various sorts of progress went through identical stages concurrently, this manner of speaking would not mean very much. Finally, we know that economic growth is spasmodic: there seem to be moments of rapid advance that crown patient years of accumulated toil. All of this is beyond doubt, and was known before Rostow was heard of. His doctrine is much more specific. It asserts, briefly, that there are precise stages in economic growth and that in each stage every element of progress is going through some fixed phase—agriculture is at such and such a point, capital formation is so and so, etcetera. And of these stages, one is crucial: the period of take-off.

The whole notion of neat "stages" in history is open to multiple objections and Rostow's five-fold division has been badly mauled by the critics. However, we shall concentrate on the middle stage of take-off, because it is supposed to be the most dramatic and because it is the one that this country is held to be approaching. Rostow describes it as "a decisive break-through", during which "compound interest gets built into the society's structure", and he calculates on the basis of nine alleged cases of take-off that it lasts about 20 years. For take-off to occur, there are various "pre-conditions", *i.e.*, things that must have happened in a prior stage of "transition". These are a rise in agricultural production and in investment sufficient to outstrip population growth, and the accumulation of a certain quantum of social overhead capital. Given these things, there are then three "conditions" for take-off: (i) "a rise in the rate of productive investment from, say, 5 percent or less to over 10 percent of national income"; (ii) the emergence of leading sectors in manufacturing, or "pilot" industries, whose rapid growth leads the rest of the economy; and (iii) "the existence or quick emergence of a political, social and institutional framework which...gives growth an on-going character".

The separation of "pre-conditions" from "conditions" has not survived the first onslaught of criticism. There is nothing to suggest that agriculture has ever completely done its job *before* the spurt in industrial growth that Rostow calls take-off, nor that social overhead capital has to attain some minimum figure *in advance* of that event. On the contrary, at whatever stage they may be when industrial expansion quickens, they must continue into the period of industrialisation, when they constitute a large proportion of total growth. Moreover, the last of Rostow's three "conditions", the progressive social and political reform, is impossible to distinguish from various social and institutional "pre-conditions" which he mentions as occurring in the stage of "transition"; in fact, he refers to it on successive pages as a pre-condition and a condition. In any event, the only way to recognise a suitable socio-political reform (suitable for take-off) is its "capacity to mobilise capital from domestic sources", which just takes us back to his first "condition", the rise in productive investment. The point of these apparently minor criticisms is that they quite destroy the spectacular clarity of the age of take-off, which is now not a neatly outlined stage but merges into the long prior period of transition and into the subsequent 60-year period of maturing industrialisation.

So there remain only two definite criteria of take-off, the jump in investment and the appearance of pilot industries. On the former, the balance of expert opinion today is this: "It is abundantly clear that the periods during which he supposes economies to have taken off did *not* witness a decisive break in savings or investments ratios, that in some countries at least the evidence tells against any antecedent rise, and that the normal experience has been a gradual increase in the ratio of savings and domestic investment to income as development proceeded. There is nothing in the historical record to justify the quite exceptional emphasis laid on a sharp increase in this ratio, however measured, at the outset of rapid growth".* Economic historians have been unable to find the sudden jump in output curves that the take-off describes; or where they find them, they find several, none of which is decisive or irreversible. Those that exist seem to be due to the fruition of efforts that took place before the critical period, which is therefore not critical at all. Taking the British case, where the miraculous take-off is supposed to have occurred in the 20 years 1782-1802, a leading authority fails to find anything especially

significant in that period and concludes: "I know of no evidence that growth was more self-sustaining in 1802 than it had been in 1782".

The theory of "leading sectors" has fared just as badly. The cotton textile industry, which is claimed to have played this rôle in Britain's case, represented only 2 percent or 3 percent of English national income in the take-off period and was thus able to exert only a limited influence—much less than the motor-car industry does today, for example. Sudden progress may occur without any one industry leaping ahead and dragging the others along with it; a large group of industries may advance together over a broad front. There is nothing to show that the pilot function, supposing it is vital, must be exerted only by a manufacturing industry: it can be railways, or agriculture or retail distribution. Of course breakthroughs happen from time to time (but not only in take-off), but they are less important than quiet and multifarious improvements in techniques over the entire industrial field.

What is left of the take-off? Little but the familiar ideas of cumulative economic growth that sometimes seems to gather pace and even shows sudden spurts. To call these occasional irregularities in the curve "take-off" is to imply that there must be one of them and only one, after which the economy never looks back. It hides the known facts that an economy can lapse back into the preparatory phase, that it can take off more than once, and that it can go on beating its wings for ages as though it were about to take off without ever doing so. It is perhaps because laymen and politicians know these facts perfectly well and are afraid of seeing them confirmed in India that they have embraced Rostow's reassuring fatalism so enthusiastically. One could not show that this temporary infatuation with an erroneous doctrine has so far done any harm, and indeed it may have done good by stimulating optimism about the near future in a country where hope is sometimes the scarcest of commodities. But addiction to error, however comforting, is never profitable in the long run.

INDIAN INSURANCE RESULTS

A STUDY of the working results of the general insurance companies in India for 1959, from the *Indian Insurance Year-Book 1960* published recently, shows that there has been no marked variation in the pattern of trading results of the Indian as well as foreign companies. During the period 1954-1959, the claims experience of non-Indian insurers, as usual, was better than their Indian counterparts in all classes of business. The former paid a higher percentage as commission for all categories of business during that period, excepting only fire insurance in 1958. Their expenses of management including taxes and miscellaneous outgo also accounted for a higher percentage of the gross premium written direct in India than those of Indian insurers during that period. Only miscellaneous insurance was an exception in 1957 where the ratio was lower for the foreign companies.

The review also shows the superior underwriting ability of the foreign insurers. It also shows that in spite of the higher percentage of commission paid and a higher management expenses ratio, a lower claims ratio enabled them to achieve better working results than their Indian counterparts. For example, in the fire section, the non-Indian insurers had a balance of 23.7 percent in 1959, compared with one of 15.2 percent of the Indian insurers. In marine and miscellaneous sections also, the foreign insurers had balances of 10.2 percent and 8.9 percent, while the Indian-owned sector showed a debit balance of 5.7 percent and 1.1 percent, respectively. This difference in working results should help the Indian insurers to check whether all is well with their method of doing the business, which over the past several years has not shown much improvement. The claims ratio of these latter in fire insurance business during 1959 has, however, shown an appreciable fall, compared with 1958. But their claims ratio during 1959 in the marine insurance section was higher than that of 1958. There has, however, been no appreciable change in the claims experience of both Indian and non-Indian insurers in miscellaneous insurance, the percentages of 1959 and 1958 being more or less the same.

The gross premium income written direct in India during 1959 amounted to a little over Rs. 33 crores, compared with Rs. 30 crores in 1958. Thus on a rough computation, the gross premium income has gone up by about 10 percent. The rise by about Rs. 3 crores in the course of one year is on the whole remarkable, and is an index of India's increasing industrial activity. It is also a measure of the growth in India's business and trading. Likewise, the net premium income in India has registered a rise by about 10 percent, from a little over Rs. 20 crores in 1958, to about Rs. 22½ crores in 1959. While this is the position concerning business written direct in India, the gross premium written direct by Indian insurers in India as well as outside rose from over Rs. 26 crores in 1958 to a little over Rs. 30 crores in 1959. Likewise, their net premium income rose from about Rs. 25 crores in 1958 to over Rs. 28 crores in 1959. Thus the ratio of the net premium income of Indian insurers to gross premium written direct has been showing a steady rise. The share of Indian insurers in the gross premium income written direct in this country has steadily increased over the period 1954-59. Their share in the net premium income has also increased as steadily.

The ratio of the net premium income to gross premium written direct has been going up for Indian insurers. The ratio concerning premium written direct in India has moved up from 61.0 percent in 1957 to 65.9 percent in 1959. The ratio on premium written direct outside India has increased from 164.8 percent in 1955 to 189.3 percent in 1959. For non-Indian insurers, the ratio has been more or less steady varying from 72.9 percent in 1954 to 73.2 percent in 1959. An interesting feature is the proportion of the class of business to the total gross premium written direct in India. The proportion of fire insurance in the total gross premium income written direct in India by Indian insurers has fallen from 47 percent in 1954 to 38 percent in 1959, while the proportion concerning the miscellaneous insurance business has increased from 31 percent in 1954 to 40 percent in 1959. The proportion of marine insurance has remained more or less steady at 22 percent. This trend is the result of a faster increase in the gross premium written direct in India in miscellaneous insurance business, compared with the increase in fire insurance.

It is by no means clear that the rise in miscellaneous business is good for the industry. India's planned programmes call for the production of a progressively larger number of lorries and buses. The claims ratio in this class of business is not what can be desired, and is largely reflected by the steep rise in the rates recently enforced on public carrier vehicles. All the same, the necessity of having a larger gross premium income written direct in India imposed by the regulations in force, has led the insurers to relax their underwriting standards and to go in for a class of business which would have been otherwise declined. Apart from this, the insurers are now having to explore such uncharted fields as erection insurance, performance bond, the contractors' all-risks insurance, the guarantee bond, etcetera—all new to the insurers in this country, and not without unwelcome features. The debit balance in the final computing of figures in the miscellaneous sector arises from this unsound nature of the business. Similarly, in the gross premium income written direct outside India by Indian insurers, the proportion of fire insurance business has decreased from 38 percent in 1954 to 28 percent in 1959, and that of marine insurance has fallen from 31 percent in 1954 to 25 percent in 1959, while the proportion of miscellaneous insurance has risen from 32 percent in 1954 to 47 percent in 1959. This trend is disturbing, and if it continues, the working results of Indian insurers in future years may well be unhappy.

As for the non-Indian insurers, 49 percent of the total gross premium written direct in India by them during 1959 came from fire insurance business, 24 percent from marine insurance and 27 percent from miscellaneous insurance. The composition during 1954 was 48 percent for fire, 27 percent for marine and 25 percent for miscellaneous insurance. The wisdom of maintaining a steady fire account cannot be over-stressed and one of the reasons for which the non-Indian insurers are showing steady results is the fact that they maintain a steady fire account and do not undertake miscellaneous insurance on a large scale.

The wisdom of linking the expense ratio to the gross premium written direct in India has been variously debated, but no alternative formula has been suggested with which to measure expenses. The Controller of insurance has been relaxing the relevant rules, following the recent rise in expenses in all directions. For each of the years, 1958 and 1959, the extent of relaxation for fire, miscellaneous and marine insurance was fixed at 15 percent of the fall in the gross premium income written direct in India during the year concerned, compared with 105 percent of such premium income in the preceding year subject to a minimum of 1 percent and a maximum of 4 percent of the gross premium written direct in India during the year concerned.

According to the review of the Controller, during 1959, a larger number of groups of non-Indian insurers contravened Section 40C of the Act in 1959 than in 1958, while the number of groups of Indian insurers who contravened the provisions of that Section during the year was lower than in 1958. Nearly three quarters of the insurers who contravened Section 40C of the Act during 1958 were warned in terms of the Act. Out of the total number of 129 insurer-groups who transacted business during 1959, only 50 groups complied with the provisions of Section 40C from 1954 to 1959, while as many as 25 groups of insurers contravened the provisions of Section 40C of the Act four times or more. Of these 25 groups, as many as 21 were administered warnings once or more for the period 1954 to 1958.

Considering all classes of general insurance business taken together, the group who spent less than the basic limits in terms of rule 17E, wrote the same proportion of the total gross premium written direct in India in 1959 as in the previous year. The percentage of the gross premium income on which the expenses were actually incurred exceeded the basic limits for the groups spending more, increasing from 3.5 percent in 1957 to 4 percent in 1958, but decreasing to 3.8 percent in 1959. The aggregate experience of all groups over the period 1957 to 1959 shows that from a marginal saving in 1957, the actual expenses have exceeded the basic limits in 1958 and 1959.

It is indeed ironical that the enforcement of the statutory rule should cause adverse total experience and that the actual expenses should be exceeding the basic limits. Most of the insurers have been showing good profits, paying dividends regularly, and have a sizeable premium income. In spite of this position, if they are still "warned" by the Controller and black-listed, it is the rule rather than the companies that is to blame. The strange position is known to the Government, but so far no positive steps have been taken suitably to amend the rules and to put the general insurance trading on a footing where it will be no longer necessary to have more gross premium written direct in India, and to relax underwriting standards resulting in a fall in profits. Since its nationalisation, life insurance does not figure in the annual review. It is improper that life insurance, which represents the savings of millions, should be kept entirely out of the scrutinising gaze of the insuring public. Public interest demands full publicity of the facts. If the next issue of the *Insurance Year-Book* rectifies the omission, it will have increased its usefulness.

NEW SEASON TEA PROSPECTS

THERE has been selective support for tea shares in the Calcutta stock market during the past month or so. Bishnauth have risen to Rs. 25.87, Basmatia to Rs. 33 and Hasimara to Rs. 27.50. Interest is generally concentrated on good Assam and Dooars gardens because not only have these produced better results in 1960 than in 1959 but they are also expected to maintain their progress during the current season provided the weather is obliging. In the light of an optimistic assessment of the current outlook, some estates have recently issued bonus shares by capitalising reserves. Some tea companies, such as Hasimara and Jay Shree, have been fancied on prospects of diversification of activities. A substantial rise in the north Indian crop from 16.6 million lbs in April 1960 to 19.1 million lbs in April 1961 appears to have reinforced confidence. It is believed that output has also risen during May. In judging the size of the increase it should be borne in mind that production has been heavily affected during the past year by drought.

The rise in the crop is particularly welcome because the second flushes—which constitute the best qualities—are plucked in north India at this time of year This factor has probably helped to distract attention from the slow trading which took place in the first two new crop export auctions held in Calcutta during May. The third auction will be held next Monday. The idea of holding auctions every fortnight instead of every week as in the past seasons, is mainly due to the smaller arrivals from the gardens. Not only have export auctions started earlier this season, but supplies from Cachar have been interrupted by the language agitation in that territory. As soon as bigger quantities arrive, regular weekly auctions will no doubt be resumed. The reason why the auction results have not so far been as encouraging as expected is that Turkey and Russia—who are usually keen buyers at this time of year—have not been very enterprising. It looks as if they may want to buy slowly in view of the possibility of a bigger crop.

In the circumstances, it is not unreasonable to take a fairly optimistic view of the outlook, at least for the coming weeks when offers will consist largely of second flushes. During the past two years supplies of good teas have not been adequate, so demand is expected to be satisfactory. But it is doubtful whether a steadier trend will be maintained as and when the weight of bigger supplies of more rain teas is felt. It is reliably learnt that the monsoon has almost started in Assam. Although production may not necessarily be affected by heavier rainfall, quality will deteriorate. On a longer view, it looks as if there will be bigger supplies in world markets this year than in 1960. Not only is the north Indian crop ahead but other areas have already so far this year produced more than during the corresponding period of 1960. Pakistan, for instance, produced 4 million lbs in April 1961, against 1.6 million lbs in April 1960. If world supplies turn out to be as big as expected, Indian tea is likely to meet with rough weather in export markets. Being burdened with heavy taxes, Indian teas have become uncompetitive in comparison with those of other countries. In view of the possibility of excessive world supplies the move of the Planning Commission to increase the output target to a figure of 900 million lbs a year during the third plan, has produced mixed reactions. Indian production amounted to 694.2 million lbs in 1960 and 714 million lbs in 1959. In the absence of full details, it is not possible to say whether the increased output will be obtained by replanting, more intensive cultivation or bringing more acreage under planting. It is going to be odd if India now decides to go in for more acreage. This would accentuate overproduction throughout the world. The statistical position appears to indicate the need for regulating production in order to maintain prices at reasonable levels. Experience has proved how useful the International Tea Agreement has been in regulating output. As the Agreement may have to be reinstated again in order to bring greater stability to the trade, any move to increase acreage in India at present is considered inappropriate.

It is logical, therefore, to suggest that the increased production should be obtained by replanting, more intensive cultivation and improved mechanical manufacture. In their illuminating annual report just published, which is supplemented by comprehensive statistics concerning production, sales and exports, Messrs J. Thomas and Co. Private Ltd point out how India has fallen behind other countries in production and exports. During the past decade production has increased by nearly 40 percent in Ceylon, Africa and other tea producing countries, while India has increased her output by only 20 percent. World shipments during this period have increased by 30 percent, but the proportionate increase is less than 8 percent in the case of India. They think that in view of the rising internal consumption an increase in output is urgently called for in order to produce adequate quantities for export and prevent prices from rising unduly.

But the big difficulty is that rehabilitation, modernisation and mechanisation involve a great deal of expenditure which the industry cannot finance out of its own resources. Except for a very few gardens, there has been considerable financial strain following the implementation of the many statutory obligations of the Plantation Act and the various other welfare measures. In order to help the industry put its house in order two things are necessary. Firstly, investment in the industry will have to be made reasonably attractive by reducing taxation burdens. An important factor which has priced the Indian commodity out of world markets is that taxation is not only very high, but is also extremely cumbersome. Secondly, measures must be taken to provide the industry with adequate financial facilities. It is no use drawing up ambitious blueprints and putting them in cold storage, as has happened before. It is time the difficulties of the industry were recognised more realistically. Unless remedial steps are taken now, "the future of the Indian tea industry in general and of exports in particular is clearly in the balance, and the danger of a further decline in Indian shipments to overseas markets cannot be over-emphasised". Commenting on prospects, Messrs J. Thomas & Co. state that they consider the long-term outlook uncertain, but in the present season conditions are expected to be reasonably favourable.

Current News and Comment

Tendering for Shares

A striking feature of the Indian capital market is that speculation in new shares has become more discriminating and selective during the past year. In 1960, some new issues attracted hectic response and subscribers paid little attention to whether or not is was worth risking money either from the dividend or growth points of view. As a result, many new shares were sold at considerable premiums, but have now lost their glamour. A disturbing feature of buying and selling new shares at exhorbitant premiums is that the capital gains arising from price changes do not benefit either the companies concerned or investors. Most of the gains go to swell the pockets of speculators.

Under the circumstances, the authorities concerned have been thinking hard how to restrain speculation. Many *ad hoc* measures have been considered, such as putting high premiums on the selling prices, restricting allocations to interested parties and closely examining the method of distribution among subscribers. But these measures are in the nature of palliatives rather than remedies. The fact that speculation has abated in new share issues during recent months is not due to these precautionary measures as such, but it is because investors have become instinctively cautious after so many of them have burnt their fingers. Against this background, the method of selling industrial shares by means of public tenders—which seems likely to be used more frequently in the U.K. in future—is of considerable interest. This method is that the offer for sale invites tenders and the minimum price of sale is stated. The issuing authorities concerned decide how many applicants they want to choose for allotting shares in view of the number of applications, prices and the extent of distribution desired.

The system provides safeguards for those who tender at high prices because the allotment prices of all successful tenderers are the same and equal to the minimum price of any accepted tender. Under the tender system, the issue price is governed by the actual demand, so companies concerned get the full advantage of the high prices investors are prepared to pay. Investors are also assured of paying as much for shares as justified on grounds of merit. An outstanding feature of the system is that the price will tend to be nearer the minimum accepted tender value when market dealings in shares start. In that eventuality, disappointed subscribers stand a chance of picking up shares at reasonable prices. Anyway, the scope for speculation is removed to a large extent. Under this system, steps may have to be taken to ensure a wider distribution of the shareholding.

J.K. Synthetics' Prospectus

The J. K. Investment Trust Ltd, formerly an investment company, has changed its name to J. K. Synthetics Ltd in order to reflect the industrial activities undertaken by the Company. It now proposes to offer 523,750 ordinary shares of Rs. 10 each for public subscription at par. The lists will open next Monday. (Full details of the issue are printed on a later page of this week's *Capital*.) The present paid-up capital is Rs. 72.63 lakhs divided into ordinary shares of Rs. 10 each. The entire new issue has been underwritten. A factory is being built at Kotah in Rajasthan for producing synthetic yarn such as nylon and perlon. Technical collaboration has been arranged with Ing. A. Maurer, S. A. Dammweg of Switzerland. The new project is expected to cost Rs. 1.79 crores, to which the Rajasthan Government will contribute Rs. 30 lakhs in the form of a loan. Production is expected to begin in 1961. As the commodities J. K. Synthetics will produce are now imported, the directors take an optimistic view about the outlook. They do not think that shareholders will have to wait long for receiving dividends.

Champdany Jute Results

The working of the Champdany Jute Co. Ltd for the year ended March 1961 has been affected, along with that of other jute mills, by the fibre shortage and the high prices of raw jute in relation to those of goods. But steps have been taken to improve operational efficiency. With a view to improving it further, the directors have decided to concentrate production in the Wellington mill by shutting down Champdany mill. The move is expected to result in considerable economies, which may not be fully reflected in the current year's results. The installation of machinery for the production of wide carpet backing is going ahead and output may start soon. The future outlook depends on whether a reasonable balance can be achieved between prices of raw jute and those of goods in the near future when abundant fibre supplies become available from the new crop.

After increasing depreciation from Rs. 7.05 lakhs to Rs. 9.18 lakhs, the profit has declined from Rs. 9.88 lakhs in 1958-59 to Rs. 2.65 lakhs in 1959-60. The taxable ordinary dividend has been halved to 5 percent to absorb Rs. 2.96 lakhs. At the present price of Rs. 108 a share, the yield works out to 4.6 percent. An amount of Rs. 85,000 has been transferred from contingency reserve. Development rebate reserve receives Rs. 1.31 lakhs (against Rs. 3.74 lakhs). The carry-forward in Rs. 1,37,286, compared, with Rs. 1,68,730 brought in.

Production Hampered at I.S.W.

The Indian Standard Wagon Co. has maintained the ordinary taxable dividend at 28.5 percent for the year ended March 1961. It is covered nearly four times and works out to a yield of 6.6 percent at the present price of Rs. 108 a share. But production has been hampered by shortages of matched steel supplies. The directors point out that at times the factory is flooded with adequate steel supplies, but they cannot be put to use for a lack of matching steel. This anomalous situation could be rectified if the Government rationalised its control over steel.

The profit is Rs. 44.17 lakhs against Rs. 44.16 lakhs, after increasing depreciation from Rs. 4.66 lakhs to Rs. 7.39 lakhs. Out of the profit, taxation absorbs Rs. 24.50 lakhs (against Rs. 22.88 lakhs) and statutory development rebate reserve Rs. 23,252 (against Rs. 2.41 lakhs). General development reserve is allocated Rs. 33,990 (against Rs. 2.68 lakhs), plant replacement reserve Rs. 5 lakhs (same) and general reserve Rs. 1 lakh (same). There is a carry-forward of Rs. 53,466, against Rs. 48,708 brought in. Substantial reserves have been ploughed back into the business in order to ensure the progress towards the complete modernisation of the factory.

Calcutta Steel Profit Increases

The Calcutta Steel Co. Ltd has produced satisfactory results for the year ended March 1961 and the price of the ordinary shares has improved to 17.81. The profit has increased from Rs. 3.53 lakhs in 1959-60 to Rs. 25.60 lakhs in 1960-61, after increasing depreciation from Rs. 95,632 to Rs. 9.68 lakhs and taxation provision from Rs. 3.07 lakhs to Rs. 20.80 lakhs. Sales improved from Rs. 68.06 lakhs to Rs. 4.19 crores; production was promoted by bigger supplies of raw materials. The production of wire rods could not be started due to the late delivery of machinery, but is expected to begin soon. The Company has declared a maiden ordinary dividend of 15 percent, taxable. It is covered more than three times and offers a yield of 8.4 percent at the present price. General reserve is allocated Rs. 10 lakhs and the carry-forward is Rs. 1,63,056, against Rs. 3,53,035 brought in.

Philips India Plans Expansion

The ordinary shares of Philips India Ltd have become sluggish around Rs. 31.87 due to the maintenance of the ordinary dividend at 12 percent, taxable, for the year ended December 1960. But investors are studying carefully the growth possibilities as indicated in the latest report just published. In 1960, Philips India acquired the land, buildings and other assets of a lamp factory in Bombay which was previously owned by the Osler Electric Lamp Manufacturing Co. Ltd—now in liquidation.—The factory has been lying idle since 1958, so a team of experts has been engaged by Philips to put it in working order. The licensed capacity of this factory is 5 million general lighting service lamps. Production is expected to start this year and it should help relieve the present shortage. In addition to electric lamps, the production of burners for gas discharge lamps, photo flash bulbs and glow-switches for fluorescent lamp starters is also planned to take place in this factory.

Philips India is planning a further expansion of the manufacture of radio components at its Loni factory in order to cater for the demands of other radio manufacturers, in addition to fulfilling its own requirements for the production of radio sets. Once the plan is fully realised, the Loni factory will become one of the main sources of supply of components for the electronic industry. But the domestic production of these components may adversely affect the costs of radio receivers at the beginning, because components manufactured locally do not compare favourably in prices with imported ones produced in substantially bigger quantities under more mechanical methods of production. Meanwhile, the factories in Calcutta and

Loni have maintained operational efficiency at a satisfactory level.

There has been an increase in sales from Rs. 4.91 crores in 1959 to Rs. 5.55 crores in 1960. It is thought that these will continue to improve with the acquisition of the new lamp factory and the utilisation of various manufacturing plants. The profit has increased from Rs. 58.82 lakhs to Rs. 62.96 lakhs, after providing Rs. 19.04 lakhs (against Rs. 11.17 lakhs) for depreciation. The ordinary dividend absorbs Rs. 26.40 lakhs and is covered twice over. It gives a yield of 3.8 percent at the present price of Rs. 31.87 a share. Taxation is allocated Rs. 33.50 lakhs (against Rs. 28.06 lakhs) and development rebate reserve Rs. 2.90 lakhs (against Rs. 3.25 lakhs). The carry-forward is Rs. 63,622, compared with Rs. 47,214 brought in.

Raymond Woollen Does Well

The Raymond Woollen Mills Ltd has reported satisfactory results for the year ended December 1960, with both turnover and profit showing considerable improvement over the previous year's figures. Sales increased from Rs. 2.62 crores to Rs. 3.05 crores and closing stocks declined from Rs. 77.46 lakhs to Rs. 70.32 lakhs. The gross profit at Rs. 50.94 lakhs is Rs. 8.74 lakhs more than in 1959. The ratio of gross profit to sales works out to 16.6 percent, compared with 16.1 percent in the previous year. After providing Rs. 9.32 lakhs (against Rs. 6.80 lakhs) for depreciation and Rs. 17 lakhs (against Rs. 13.50 lakhs) for taxation, the net profit amounts to Rs. 20.71 lakhs, against Rs. 18.68 lakhs in 1959. From this, the directors have provided Rs. 2.24 lakhs (against Rs. 2.20 lakhs) for arrears of normal depreciation, Rs. 3 lakhs (against Rs. 2.50 lakhs) for general reserve, Rs. 1.25 lakhs (against Rs. 2.40 lakhs) for development rebate reserve and Rs. 3 lakhs (against Rs. 60,000) for investment depreciation. The dividend on ordinary shares has been increased from 11.5 percent, taxable, to 12 percent, taxable. This absorbs Rs. 9 lakhs, against Rs. 8.62 lakhs. The preference dividend accounts for Rs. 1.67 lakhs, against Rs. 1.78 lakhs. A sum of Rs. 1.11 lakhs has been carried forward, against Rs. 57,000 brought in.

The directors state that export sales have been maintained, and the Company is exporting its products even to west European countries such as Sweden and Denmark. The import quotas for wool tops were reduced but Raymond Woollen was able to increase its production by obtaining higher entitlements under the export promotion scheme. In view of the increased demand for woollen yarn and fabrics, the directors have, subject to the shareholders' sanction, entered into an agreement for taking on lease a factory known as Baijnath Bankey Beharilal Woollen Mills in Kanpur. The lease will be effective when the Company obtains a licence for importing raw materials. The factory has an installed production capacity of 2,4000 spindles and 62 looms, and the lease rent has been fixed at 25nP a rupee of the factory's net profit with a minimum of Rs. 12,000 a year. The engineers' files division worked satisfactorily during the year in spite of the dislocation caused in the implementation of the Company's expansion scheme. The programme to raise the capacity from 24,000 dozen files to 48,000 dozes files a year is nearing completion. It is expected that the factory will attain rated production capacity by the middle of 1962. The Company has a paid-up capital of Rs. 1 crore and its reserves and surplus total Rs. 28.07 lakhs. Its fixed assets valued at Rs. 1.87 crores have been written down to Rs. 93.77 lakhs. The Rs. 100-paid shares of the Company, which quoted around Rs. 102 early in the year, were recently bid up to Rs. 138 on hopes of a higher dividend. The quotation has declined to Rs. 124 over the past few days, the increase in the dividend from 11.5 percent to 12 percent being below market expectations. At the current quotation, the shares offer a tax-free yield of about 6.8 percent.

Gujarat Financial Corporation

The Gujarat State Financial Corporation received 28 applications for Rs. 1.04 crores during the year ended March 1961, of which nine applications for Rs. 45.60 lakhs were transferred from the Bombay State Financial Corporation. Between October 1960 and March 1961, the former sanctioned 13 applications for a total loan of Rs. 37.75 lakhs. Twelve applications for Rs. 44.41 lakhs are pending with the Corporation. Of the 13 applications sanctioned by it, three were for small-scale industries, totalling Rs. 2.9 lakhs, seven for medium-sized industries totalling Rs 19.85 lakhs and three for big industries for an amount of Rs. 15 lakhs. The break-up figures for different industries are : solvent extraction units Rs. 21.50 lakhs, power-driven pumps Rs. 5 lakhs, cotton textiles Rs. 2.50 lakhs, iron and steel castings Rs 2.35 lakhs, glue and gelatine Rs. 2 lakhs, firebricks Rs. 1 lakh, semi-manufacturers and manufacturers Rs. 1 lakh, for the manufacture of leather goods Rs. 1.50 lakhs and for the production of sanitary wares and white wares Rs. 90,000. Under the agency agreement with the State Government to channel loans to small-scale industries, the Corporation received 151 loan applications during the year for a sum of Rs. 57.68 lakhs, of which only 45 applications for Rs. 14.48 were sanctioned. The Corporation made a small profit of Rs. 42,179 during the year. From this, Rs. 4,300 has been allocated to the statutory reserve fund and Rs. 19,000 has been provided for taxation. The Corporation will need Rs. 87,500 to pay a dividend of 3½ percent to the shareholders, for which the State Government will be requested to grant a subsidy of Rs. 69,220.

Afsons Share Offer Soon

Afsons Industrial Corporation Ltd, which has been licensed to set up a pulp and paper plant in Khapoli with an installed capacity of 2,400 tons a year, is likely to enter the market shortly to raise fresh capital for the project. The Company has an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each. Its issued capital is Rs. 25 lakhs, of which Rs. 3.41 lakhs have already been subscribed. The directors and their friends have agreed to take up shares worth Rs. 9.34 lakhs. The balance of Rs. 12.25 lakhs is to be offered to the public.

Afsons Industrial was incorported in September 1959 as a private limited Company to carry on the business of manufacturing pulp, paper, boards and allied products. It was converted into a public limited Company in February 1961. The project for making pulp and paper is estimated to cost Rs. 25 lakhs which will be met out of the capital issue The Company will initially manufacture high-rade printing and writing paper out of waste paper, hosiery and textile cuttings. Arrangements have been made to secure a steady supply of raw materials from industrial undertakings in the Bombay and Poona regions. Later on, Afsons Industrial will set up a plant for manufacturing machine-glazed tissue and coloured tissue paper, sulphite paper, plain and ribbed, and highly super-calendered papers within 18 months after the first plant goes into production. It is also proposed to set up a plant for producing pulp from rice straw and other cereal straws in 1962. After the plant starts production, the mill will use its own pulp for manufacturing paper. The paper plant is expected to go into production early in 1962 and during the first year of its production, the plant is expected to produce 1,000 tons of high-grade writing paper, 800 tons of quality printing paper and 600 tons of M.F. kraft paper.

Maiden from National Ecko

The directors of the National Ecko Radio and Engineering Co Ltd have recommended a maiden dividend of 15 percent, subject to tax, for the year ended December 1960. This is more than justified by the Company's impressive results. Sales have risen from Rs. 78.79 lakhs in 1959 to over Rs. 1 crore—an all-time record—in 1960. While the turnover has increased by 26.6 percent, the gross profit has risen by about 54 percent from Rs. 16.01 lakhs to Rs. 24.72 lakhs. Appropriations include Rs. 69,733 (against Rs. 70,300) for depreciation, Rs. 22 266 (against Rs. 5,986) for development rebate reserve and Rs. 8.15 lakhs (against nil) for taxation. Development expenditure written off amounts to Rs. 6.22 lakhs (against Rs. 45.804) and Rs. 3 lakhs (against nil) has been transferred to contingency reserve. The proposed maiden dividend absorbs Rs. 4.50 lakhs. After making various adjustments, a sum of Rs. 8,655 has been carried forward, against Rs. 1,404 brought in.

The directors state that the demand for the Company's receivers continued to increase, so it is gradually expanding its output to cope with the rising demand. The foreign exchange quota earmarked for the radio industry and the shortage of space in the Company's existing premises are the limiting factors. National Ecko is acquiring land in the north of Bombay for setting up a new factory and for constructing the administrative buildings. The directors add that the plastics division continued to work satisfactorily and is steadily satisfying a large part of the Company's requirements of bakelite cabinets and knobs for different radio models. Proposals are being considered for setting up a plant for the manufacture of radio components in technical collaboration with National Ecko's associates in the U.K. and some other British firms.

Kamani Engineering Profit Up

The working of the Kamani Engineering Corporation Ltd for the year ended September 1960 shows a satisfactory improvement over the previous year's performance. The production of galvanised and painted steel structures rose by about 30 percent from 10,190 metric tons to 13,485 metric tons—an all-time high. The Company secured new orders for the fabrication of 11,272 metric tons of structures and for the erection of 417 kilometres of transmission lines. The turnover in 1959-60 amounted to Rs. 2.37 crores. against Rs. 1.68 crores in the previous year. The gross profit is up by Rs. 1.41 lakhs at Rs. 20.89 lakhs. The results would have been still better but for the decline in commission earned from Rs. 15.62 lakhs to Rs. 4.30 lakhs. After providing Rs. 4.89 lakhs (against Rs. 4.40 lakhs) for depreciation and Rs. 6.70 lakhs (against Rs. 4.85 lakhs) for taxation, the net profit amounts to Rs. 7.68 lakhs, against Rs. 8.58 lakhs in 1958-59. After bringing in the excess provisions made in the previous year and making allowance for expenses incurred in previous years, the directors have transferred Rs. 22,772 to development rebate reserve and have used Rs. 2.88 lakhs to write off the balance of the Lahore assets. The ordinary dividend has been increased from 7¾ percent to 8 percent, both taxable. The dividends, both preference and ordinary, absorb Rs. 4.40 lakhs, against Rs. 4.14 lakhs. The directors state that the Company is the first Indian unit to get an order for railway electrification. Its export drive is beginning to bear fruit, since it has secured an order for supplying radio communication towers from the Thailand Government. It has also secured an order from the New Zealand Electricity Department for supplying 1,100 tons of transmission line towers. Negotiations are being curried on for several other export tenders. Kamani Engineering is also doing agency business. During the past year, it secured a direct order of a substantial value from the Neyveli Lignite Corporation for which it would receive an overriding commission. Recently, it got another order worth Rs. 87 lakhs for supplying the third generating set for the Barauni thermal power-station. The Company's shares (Rs. 10-paid) are currently quoted around Rs. 17, offering a tax-free yield of about 4.9 percent. The shares touched a high of Rs. 20.56 in 1960.

Arvind Maintains Dividend

The Arvind Boards and Paper Products Ltd, Bilimora, has reported encouraging results for 1960, with both sales and profit recording substantial improvement over the previous year's figures. Sales are up from Rs. 49.52 lakhs to Rs. 55.59 lakhs and the gross profit from Rs. 9.08 lakhs to Rs. 14.42 lakhs. This shows a marked improvement in the ratio of the gross profit to sales from 18.3 percent in 1959 to around 25.9 percent in 1960. The improvement in results is attributed to higher production on account of the modernisation of the press section and the installation of 24 new dryers on machine No. 2 and the abundant supplies of raw material at economic prices. After allowing Rs. 3.42 lakhs (against Rs. 2.39 lakhs) for depreciation and Rs. 4.50 lakhs (against Rs. 1,71 lakhs) for taxation, the net profit amounts to Rs. 5.46 lakhs, compared with Rs. 4.31 lakhs in 1959. Allocation to general reserve has been increased from Rs. 50,000 to Rs. 3 lakhs, but development rebate reserve gets Rs. 86,000, against Rs. 2.32 lakhs in 1959. The dividend has been maintained at 15 percent, subject to tax, absorbing Rs. 1.50 lakhs. A sum of Rs. 19,411 has been carried forward, against Rs. 7.955 brought in. The directors state that the Company's working during the current year has so far been satisfactory. The sales are encouraging, and the supply of raw materials is good, although prices have gone up to some extent. Machinery for the modernisation of the press section of another plant, 24 dryers and the gross cutting plant have been received and are awaiting installation.

Travancore Rubber and Tea Profits

The working of the Travancore Rubber and Tea Co. Ltd for the year ended December 1960, shows a gross profit of Rs. 14.51 lakhs, against Rs. 13.50 lakhs in 1959. After providing Rs. 1.43 lakhs (against Rs. 1.35 lakhs) for depreciation and Rs. 6.27 lakhs (against Rs. 5.36 lakhs) for taxation, the net profit amounts to Rs. 5.59 lakhs, compared with Rs. 5.78 lakhs in 1959. The directors have allocated Rs. 83·728 to rehabilitation reserve, against Rs. 47,268 in the previous year. The dividend has been raised from 7½ percent to 9 percent, both taxable. The preference and ordinary dividends absorb Rs. 4.67 lakhs. The rubber crop harvested during the year set a new record of 550,862 kilograms, against 482,969 kilograms in 1959. This was due both to favourable weather and high level tapping introduced during the latter part of the year. The cost of production of rubber was lower at 279.93nP a lb, against 293.44nP a lb in the previous year. The net profit increased from 39.72nP a kilogram to 50.69nP a kilogram. The 1961 rubber crop estimate is placed at 530,703 kilograms. A further small area of 19 acres of rubber was replanted during the year. The subsidy under the Rubber Board's rehabilitation scheme was enhanced from Rs. 250 an acre to Rs. 1,000 an acre in November 1960 in order to encourage replanting. The directors state that the Company intends playing its part in full, so a programme of increased replanting has now been set. It hopes to replant 385 acres over the three years, 1961 to 1963, compared with only 70 acres between 1958 and 1960. While the rubber crop harvested by the Company in 1960 recorded a substantial increase, the tea crop declined by 21,899 kilograms from 590,159 kilograms to 568,260 kilograms because of unfavourable weather. The all-in cost increased from 378.51nP a kilogram to 411.23nP a kilogram. The estimated tea crop for 1961 is placed at 605,545 kilograms. The improvement in tea prices noticeable in 1959 was maintained in 1960 while the price of rubber remained unchanged. The directors regret that the rubber price has not been raised in spite of higher production costs, but they are satisfied with the enhanced rubber rehabilitation subsidy. The Company's shares (Rs. 10-paid) are quoted around Rs. 9.85, offering a gross yield of about 9.5 percent.

Universal Fire Premium Income Down

The Universal Fire and General Insurance Co. Ltd earned a net premium income of Rs. 38.66 lakhs in 1960, against Rs. 39.05 lakhs in 1959. Although the premium income declined slightly, the profit recorded a modest rise from Rs. 2.84 lakhs to Rs. 3.13 lakhs. The directors have provided Rs. 1.10 lakhs (against Rs. 1.30 lakhs) for taxation, Rs. 80,000 (against nil) for general reserve and Rs. 7,000 (against nil) for doubtful debts reserve. The dividend has been maintained at Rs. 2 a share, subject to tax, absorbing Rs 1.31 lakhs. The total departmental and general reserves on 31st December, 1960, are placed at Rs. 21.34 lakhs. The net premium income from the fire department amounted to Rs. 24.48 lakhs, against Rs. 25.60 lakhs in 1959. Claims paid and outstandings are placed at Rs. 10.32 lakhs. The claims ratio of the fire department rose from 31.43 percent to 42.17 percent, which is attributed mainly to a substantial increase in the claims of the incoming treaty business abroad. The net profit of the fire department amounted to Rs. 2.75 lakhs. The working of the miscellaneous department resulted in a loss of Rs. 78,208, although the net premium income increased from Rs. 11.79 lakhs to Rs. 12.74 lakhs. Claims paid and outstandings amounted to Rs. 6.02 lakhs. Similarly, the marine department reported a loss of Rs. 20,632. Here the premium income declined from Rs. 1.64 lakhs to Rs. 1.43 lakhs and claims paid and outstandings amounted to Rs. 81,724 The loss ratio in the marine department rose from 48.98 percent to 57.08 percent. The claims ratio in the accident and miscellaneous departments, however, declined from 58 percent to 47.23 percent. At its current quotation of Rs. 20.08, the shares of the Company offer a gross yield of 9.96 percent.

Swastik Rubber Sales Up: Profit Rises

The working of Swastik Rubber Products Ltd for the year ended December 1960, shows a marked improvement over the previous year's performance. Sales have risen by about 41.50 percent from Rs. 64.39 lakhs in 1959 to Rs. 91.09 lakhs in 1960. The gross profit has recorded a rise of about 34 percent from Rs 7.79 lakhs to Rs. 10.48 lakhs. A sum of Rs. 4.23 lakhs (against Rs. 1.44 lakhs) has been provided for depreciation and Rs. 1.65 lakhs (against nil) for taxation. The dividend on ordinary shares has been raised from 8.6 percent to 9 percent, both taxable. The dividends, both ordinary and preference, absorb Rs. 2.35 lakhs, compared with Rs. 1.65 lakhs in 1959. The directors have allocated Rs. 1.78 lakhs (against Rs. 1.25 lakhs) to development rebate reserve and the provision for bad and doubtful debts has been maintained at Rs. 15.000. A sum of Rs. 247 is being carried forward, against Rs 975 brought in. Fixed and current assets at the end of 1960 totalled Rs. 1.19 crores, compared with Rs. 80.50 lakhs at the end of 1959. Since the close of the year, the company has issued 15,500 equity shares of Rs. 100 each, of which 8,412 shares have been subscribed. The shares have recently been listed on the Bombay Stock Exchange, and the latest quotation is around Rs. 102.

F. A. C. T. Shows Good Results

Although the dividend of the Fertilisers and Chemicals Travancore Ltd has been maintained at 6 percent, subject to tax, its working results for the year ended December 1960 are impressive. The production is said to have been the best so far since the inception of the Company. The output of ammonium sulphate increased from 29,412 metric tons to 39,813 metric tons, of superphosphate from 35,252 tons to 39,584 tons, of ammonium chloride from 5,348 tons to 6,064 tons, of ammonia from 10,103 tons to 13,537 tons, of sulphuric acid from 52,199 tons to 52,827 tons and of mixed manures from 3,046 tons to 7,039 tons. Besides, the Company also started producing sulphurdioxide, the total production amounting to 1,098 metric tons. The sales rose by about 29 percent from Rs. 2.40 crores to Rs. 3.09 crores. The gross profit at Rs. 78.37 lakhs show a rise of about 19 percent over the 1959 figure of Rs. 65.56 lakhs. After providing Rs. 25.10 lakhs (against Rs. 22.11 lakhs) for depreciation and Rs. 23.55 lakhs (against Rs. 3.36 lakhs) for development rebate, the net profit is down from Rs. 35.97 lakhs to Rs. 27.30 lakhs. The Company has no tax liability for 1960, and in view of the extra depreciation and development rebates allowed under the Income Tax Act, it has still to wipe off unabsorbed depreciation to the extent of Rs. 46 lakhs brought forward from the previous year. The dividend distribution amounts to Rs. 20.76 lakhs, leaving Rs. 26.13 lakhs to be carried forward, against Rs. 19.59 lakhs brought in.

The directors state in their report that the production from the electrolytic hydrogen plant continued at one-third of the capacity until 1st February, 1961, and 70 percent of the capacity has been attained thereafter. An additional 5,000 kilowatts of power is needed to operate the plant to full capacity. The ammonia synthesis plant is also operating at 70 percent of the installed capacity from mid-February. The installation of the ammonium sulphate plant is nearing completion, and the Company will be the first in India to manufacture ammonium sulphate from by-product gypsum within a few weeks. The second stage of the expansion programme involving the installation of the oil gassification plant is reported to be making rapid progress. The company is likely to start its trial production by the first quarter of 1962. The Government has approved the third stage of the expansion programme, and the details of the orders are expected to be finalised by September. The work on the third stage is expected to be completed by early 1964. The production capacity achieved will then be 70,000 tons in terms of fixed nitrogen and 35,000 tons of phosphorous penta-oxide. The third stage involves an expenditure of Rs. 8 crores or Rs. 10 crores. The shares of the Company (Rs. 10-paid) are still quoted around Rs. 10.40, and they look attractive in view of the huge expansion programme.

New City Makes Profit

Shareholders of the New City of Bombay Manufacturing Co. Ltd who have gone without a dividend for the third successive year, will get some comfort from the Company's working results for 1960. Against a loss of Rs. 11.64 lakhs in 1959, New City has made a gross profit of Rs. 5.60 lakhs in 1960, although sales are down from Rs. 1.40 crores to Rs. 1.25 crores. The mills' working has shown a slight improvement since the introduction of the rationalisation programme, but the directors state in their report that the position still remains far from satisfactory. The working of the mills in 1960 was affected by the closure for over three weeks as a result of the "opposition from labour to the introduction of the four-loom system in the weaving shed." Ultimately, however, the management succeeded. This, together with the working of the third shift since 1st June, 1960, is expected to bring good results in coming years. To rationalise further and effect economical working of the spinning department, the Company has placed orders for 13 double new modern ring-frames, the delivery of which is expected to commence in July 1961. From the gross profit of Rs. 5.60 lakhs in 1960, the directors have provided Rs. 40,000 for managing agents' commission, against nil in 1959. Development rebate gets Rs. 1.43 lakhs, against Rs. 35,132 in the previous year. After bringing in unclaimed wages amounting to Rs. 64,768, the directors have paid Rs. 74,800 as bonus to workers for 1958 and Rs. 1.24 lakhs as compensation for idle hours during 1951-52. The balance of Rs. 2.45 lakhs has been carried forward. The Rs. 100-paid shares of the Company are quoted around Rs. 150, compared with the previous year's high of Rs. 145. The book value of the share works out to around Rs. 142.

Manufacturing Carbon Black

Four Calcutta firms, namely, Kanoria General Dealers, Davenport Company, Messrs B. K. Jalan and Manjushree Industries and Technoequip Company of Bombay applied to the Government of India for licences for manufacturing furnace type carbon black Kanoria General Dealers proposed to set up a plant near Bombay with a production capacity of 8,000 tons a year in collaboration with Phillips Petroleum Company of the U.S.A. The latter is already collaborating with Duncan Brothers in installing a plant near Durgapur. The value of capital equipment was placed at Rs. 1.40 crores. Davenport Company wanted to establish a plant in Barauni, Bihar, with an annual capacity of 7,200 tons. Its capital equipment was valued at Rs. 1.50 crores. Messrs B. K. Jalan's scheme proposed the setting up of a plant with an annual capacity of 10,800 tons to be located somewhere in Gujarat. The cost of capital equipment was estimated at Rs. 1.20 crores. The firm had been trying to seek the collaboration of Vitro International of the U.S.A. Manjushree Industries asked for the Government's permission to establish a plant near Bombay with an annual production capacity of 16,800 tons. The cost of capital equipment was estimated around Rs. 1 crore and J. Huber Corporation of the U.S.A. was mentioned as the likely foreign collaborator. The Technoequip Company of Bombay wanted to set up a plant near Bombay with an annual production capacity of 10,000 tons. This firm has not indicated the name of any foreign collabarator. But the total cost of capital equipment has been placed at Rs. 60 lakhs.

According to official sources, there is scope for creating additional production capacity of about 10,000 tons. The current demand for all grades of carbon black required for manufacturing rubber products, which is of the order of 13,000 tons to 14,000 tons a year is expected to go up to 30.000 tons by 1965-66. To achieve this production,capacity to the extent of at least 35,000 tons will be needed. Against this, two units—one in Durgapur and another in Assam—have already been licensed with a combined capacity of about 24,000 tons a year. The rubber products manufacturing industry is largely located in and around Calcutta and Bombay. Some units are situated in Madras and Kerala States. The two units already licensed can meet the requirements of the industry near Calcutta. The Government thinks that there is scope for setting up one more unit somewhere in the western region which could cater to the requirements of rubber products manufacturing industry situated in Bombay and the adjoining areas. However, all the above five applications have been rejected by the Licensing Committee. Kanoria General Dealers, Davenport Company, Messrs B. K. Jalan and Technoequip, it is stated, are unable to fulfil the condition that the manufacture of furnace type carbon black should be based either on indigenously available natural gasses, refinery gasses and petroleum residues or coal tar residues. As for Manjushree Industries, the firm has not yet been able to obtain any suitable technical collaboration. It is reliably understood that Voltas Ltd, which is the distributor of Messrs Columbian Carbon Company of the U.S.A., has informed the Central Commerce Ministry that its parent Company is planning to submit a proposal for the manufacture of carbon black from indigenously available raw materials in collaboration with an Indian partner and with the participation of dollar capital. The firm has, however, yet to put in its application. Besides, Messrs G. L. Cabot of the U.S.A. have renewed their interest in the manufacture of carbon black in India. Mr. Kasturbhai Lalbhai, it is said, has secured the Government's approval for a scheme for manufacturing carbon black in collaboration with Messrs G. L. Cabot some time last year. But since the party did not proceed with the scheme, its application was treated as voluntarily withdrawn.

Industrial Investment Trust to Expand

Investors in shares of investment companies have benefited little from the boom in the Stock Exchange. Barring Tatas Investment Corporation, perhaps the shares of nearly all the investment corporations, including those of the Industrial Credit and Investment Corporation of India, are quoted at a substantial discount, although they have been doing reasonably well recently. The Rs. 100-paid shares of the Industrial Investment Trust is currently quoted around Rs. 79 *cum* dividend. The Company did well in 1960 and the prospects for 1961 are considered better. Mr. Maneklal Premchand, chairman, told the shareholders' annual meeting in Bombay recently that the Company's investment portfolio is well diversified and that investments are all in sound joint-stock companies. Barring a few, all of them paid regular dividends Considering the dividend receipts during the first five months of the current year, the chairman said, the results for 1961 are likely to be better than in 1960, provided conditions meanwhile do not worsen due to any unforeseen circumstances. Mr. Maneklal said that the Company would shortly open a "new issues and registrars and transfer agents" department. He expressed the hope that this would develop into a useful source of additional income to the Company. This service is usually done by investment trusts in the U.K., but in India the investment trusts have not offered any such service up to now. There are two Companies in Calcutta—Jardine Henderson and Andrew Yule—which offer more or less similar service, but with the difference that these two companies act only as registrars and do not undertake the management of new issues. Since new issue activity is fast growing, the new service will yield good results. The Company has already set up a nucleus staff for this purpose. The fees for such services will depend on the

nature of issues and the companies concerned, subject to a minimum levy. The Company is negotiating for participation in some important new industrial units to be set up in India with foreign collaboration, the chairman said. Applications for some of these are pending before the Government, while some applications are being drawn up for submission. The Industrial Investment Trust proposes to restrict its share participation to not more than 10 percent of its resources, but in case the figure exceeds 10 percent of the paid-up capital of the company in which the directors intend to invest, the approval of the shareholders as well as of the Government will be needed under Section 372 of the Companies Act. Investments of the Industrial Investment Trust on 31st December, 1960, exceeded Rs. 1.49 crores, showing a rise of Rs. 18.39 lakhs over the previous year's figure. The approximate market value of the company's investments as on 27th May, 1961, exceeded the book value by about 22 percent.

Anandam Rubber Pays the Same

The audited accounts of the Anandam Rubber Co. Ltd for the year ended 31st December, 1960, disclose a net profit of Rs. 55,049.28, after providing for taxes and depreciation, compared with a net profit of Rs. 65,423 for the previous year. With the amount of Rs. 30,921.80 brought in, the total comes to Rs. 85,971.08. The proposed dividend at 7.35 percent, subject to tax, on the preference shares will absorb Rs. 18,375. The directors have recommended a dividend of 15 percent, subject to tax, on the ordinary shares (same as last year). This ordinary dividend will absorb Rs. 37,500. The balance of Rs. 30,096.08 is carried forward. The rubber crop harvested during the year amounted to 58,230 kilograms. The estimated crop for 1961 is 65,000 kilograms. The average price realised was 157nP a lb. The tea crop amounted to 113,921 kilograms. The estimated tea crop for 1961 is 130,000 kilograms. The average price realised for tea was 189nP a lb.

Bangalore Printing Profits Fall

The Bangalore Printing and Publishing Co Ltd reports a fall in profits for the year ended December 1960. The directors have reduced the dividend to 5 percent from the previous year's 10 percent. (The net profit for the year amounts to Rs. 11,625.72, compared with Rs. 35,486 for the previous year.) With Rs. 6,987.42 brought forward, the amount available for distribution comes to Rs. 18,613.14. The proposed dividend at 5 percent, subject to tax, will absorb Rs. 17,345.50. The balance of Rs. 1,267.64 is carried forward. The directors observe that the result of the year's working may not be deemed satisfactory on account of the increase in the expense ratio, with no corresponding rise in printing revenue.

Mysore Chrome Tanning Loses

The directors of the Mysore Chrome Tanning Co. Ltd report that the working of the Company during the year ended June 1961, has resulted in a loss of Rs. 83,157.65, compared with a profit of Rs. 2,734 for the previous year. The Company received financial help of Rs. 7 lakhs from the Government of Mysore in April 1960. Out of this, Rs. 4.20 lakhs was received in the form of a loan, and Rs. 2.80 lakhs in the form of preference shares in the Company. The outstanding old loan of nearly Rs. 3,04,000 was repaid. The Company was left with nearly Rs. 3,96,000 towards working capital. At this juncture, the Company had to face the labour demand, for higher wages, expenses incumbent on the drawal of the loan from the Mysore Government, repairs and renewals to machinery, and these cost Rs. 33,000. A total loss of Rs. 83,157.65 has, therefore, been sustained. The directors observe that much spade-work had to be carried on before the Company could adjust itself to the new programme of increased production.

Gloomy Outlook for Ouchterlony Valley

The chairman of the Ouchterlony Valley Estates, Mr. J. N. A. Hobbs, addressing the recent annual general meeting of the Company, analysed the prospects for the coffee industry in India. It was refreshing to note that Mr. Hobbs did not only draw a realistic picture of the present position and the future outlook, but he suggested useful measures which could help the industry tide over its difficulties and be more competitive in the export markets. The chairman observed that the quality of the Indian coffee had fallen off in recent years and the main reason for this was the system of marketing which gave no encouragement to the growers to produce quality coffee. Mr. Hobbs was also of the opinion that more intensive cultivation and cropping might have had some good effect. Discussing the outlook for his Company, Mr. Hobbs said that the coffee crop for 1961-62 was going to be a poor one and it was not expected to be over 400 tonnes, compared with the 1960-61 crop of 850 tonnes. The chairman observed that he saw no point in concealing from the shareholders that the 1961-62 season would almost certainly result in a loss, and probably a substantial loss at that. But he assured the shareholders that drastic measures would be taken to meet the situation. The Company was paying 13 percent this year—a lower amount than the previous year—but this was possible largely because of profitable timber sales.

A thorough overhauling of the coffee marketing methods in India was suggested by Mr. Hobbs. While the world market is no doubt depressed by the weight of world stocks, it is imperative to do the best possible to obtain higher prices. The coffee industry has now to sell some 30,000 tons for export in a buyers' market and "the methods are precisely the same as when the country was selling 10,000 tons in a sellers' market." The only salvation for the Indian coffee, says Mr. Hobbs, is to adopt a system of sale, which gives some incentive to the growers to produce good quality coffee. So he has suggested the selling of coffee on estate marks with the grower getting some share of any better prices obtained, a system of export quotas to growers to enable them to market a part of their own produce, and a system of sale by public auction on much the same lines as tea auctions conducted in Cochin.

Travancore Rayons Pays the Same

According to advance information pending the release of the balance-sheet, the Travancore Rayons Ltd has made a profit of Rs. 61,61,699 for the year ended December 1960, after providing Rs. 15,70,000 for development rebate reserve and Rs. 1,50,000 for gratuity reserve (against Rs. 62,06,193 after providing Rs. 5,05,000 for development rebate reserve last year). With the amount of Rs. 2,29,084 brought in, the total available surplus for appropriation comes to Rs. 63,90,783. Out of this, the directors have transferred Rs 10 lakhs to general reserve and the provision for taxation comes to Rs. 27,30,000. The dividend is maintained at 20 percent, taxable.

New Board for B.I.C.

Partly allowing the application of the Life Insurance Corporation under Section 398 of the Companies Act, the Allahabad High Court has appointed a new board of directors for the British India Corporation. The term of the board will be four years. Five directors out of ten will be managing directors holding salaried posts, while the remaining five will be joint directors. Delivering the judgment, Mr. Justice Upadhyaya said that at first he was inclined to leave two seats to be filled by election, but he was later convinced that the time for it was not ripe yet. The composition of the board is as follows: chairman, Mr. H. S. Chaturvedi, a retired judge of the Allahabad High Court; deputy managing directors: Mr. S. N. M. Tripathi, a retired member of the U.P. Public Service Commission; Mr. K. M. Wilcox, Mr. Calloway, and Mr. T. N. Javeri; directors: Mr. C. C. Desai, a retired I.C.S. officer, Mr. K. L. Misra, Advocate-General, U.P., Sir Padampat Singhania; Dr. S. K. Rao of the Department of Company Law Administration, and Mr. Narendrajit Singh. According to Mr. Justice Upadhyaya, the new arrangement should give an opportunity to the shareholders to take an increasing interest in the management of the B.I.C. again. The High Court was invited to give a finding about the conduct of Mr. Mundhra, but Mr. Justice Upadhyaya said that the evidence on record was not sufficient to enable the Court to record definite findings. He, however, added that it was difficult to hold that all allegations were established. Referring to some of the allegations he said that the explanations offered by Mr. Mundhra could not be said to be entirely wrong. With reference to the claim for damages, he said that as the B.I.C. and other companies had filed about six suits for damages already, it was neither desirable nor necessary to enter into the question.

Limiting State Borrowing

The Public Accounts Committee of Uttar Pradesh has drawn attention to the need for laying down limits, under Article 293 of the Constitution, on the borrowing power of the State Government. A similar restriction by Parliament on the borrowing powers of the Central Government can also be imposed under Article 292. It may be recalled that when the Article was under discussion in the Constituent Assembly, the late Dr. Ambedkar observed: "If Parliament does not make a law, it is certainly the fault of Parliament and I should have thought it very difficult to imagine any future Parliament which will not pay sufficient or serious attention to this matter and enact a law." But the fact remains that two successive Parliaments have not found time to devote to the subject. Likewise, the State Legislatures too have refrained from exercising their power of setting limits to the borrowing power of the executive. Giving reasons about why it is imperative for the State Legislature to set such limits, the Public Accounts Committee observes in its report: "According to Article 202 of the Constitution, debt charges for which the State is liable shall be expenditure charged on the Consolidated Fund of the State. Keeping in view the observations made by Dr. Ambedkar, the Constitutional provisions in Article 293, and also considering that the expenditure charged is not submitted to the vote of the Legislative Assembly, the Committee recommends that it would be desirable for the State Government to consider the feasibility of imposing limits on the borrowing powers of the State by law."

Another reason, not mentioned by the Committee, also deserves to be considered. Besides limitations as may be imposed by the State Legislature, the Constitution provides that if the Central Government has guaranteed an outstanding loan of the State, no fresh loan can be raised by the State without the consent of the Central Government. Basu's *Commentary on the Constitution* points out that "there is no limitation on the above power of the Government of India to give its consent to State borrowing." This would mean that even if Parliament were to set limits on the Central Government's own borrowing power under Article 292, it cannot affect the latter's discretionary power to allow a State Government to go on raising loans. In the result, it would appear that the only effective agency for checking the borrowing powers of a State Government is the Legislature of that State.

Nenmeny Rubber Maintains

The Nenmeny Rubber and Produce Co. Ltd has earned a net profit of Rs. 1,04,610.70 for the year ended 31st December, 1960, after providing for taxes, depreciation and managing agents' remuneration. The previous year's net profit was only Rs. 82,768. With the amount of Rs. 46,474.63 brought in, the total comes to Rs. 1,51,085.33. The directors have recommended a dividend of 7.01 percent on the preference shares, which will absorb Rs 21,030. The dividend proposed on the ordinary shares is 15 percent (same as last year), and this will absorb Rs. 50,250. The balance of Rs. 79,805.33 is carried forward. Both the ordinary and preference dividends are taxable. The rubber crop amounted to 243,319 kilograms. The estimated crop for 1961 is placed at 241,000 kilograms.

AN IMPORTANT JUTE CASE

THE recent decision in the London Commercial Court in the case of Mess and James Logie, Junr. & Co. vs. Duffus & Co. clears up a point on which there existed a somewhat hazy notion in business circles. The plaintiffs, who carried on business in Dundee, sold, in June last, 2,000 bales of jute to the defendants, who are well-known Jute Merchants in London. The goods were to be shipped from Calcutta to Dundee. In October following, Logie & Co. issued circulars intimating that they had suspended payment and on November 6th, they executed a trust deed in favour of Mr. Mess, Accountant, Dundee, assigning to him, for the benefit of their creditors, the whole of their estate, including all their contracts, and in terms authorizing Mess to adopt and carry them out. Mr. Mess seeing that the contract in question was a favourable one for the estate, proceeded to carry it out, and tendered the necessary shipping documents to the defendants and asked for payment in accordance with the practice of the trade. After a brief space of silence, Duffs & Co. wrote to the plaintiffs saying that in consequence of the insolvency of Logie & Co., they considered the contracts cancelled, and hence they refuse acceptance of the declarations tendered. Mr. Mess, therefore, raised an action against the defendants to recover damages for their refusal to accept and pay for the jute under the contracts. The case was defended in his favour, the defendants having to pay the sum of £700 as damages. In giving his decision Mr Justice Bigham made it clear that a mere declaration of insolvency does not entitle the other party to put an end to the contract, unless a declaration is made in such circumsances to show that the insolvent cannot or does not intend to carry out the contract. But in this case all the circumstances tended to show that Logie & Co had both the intention and the ability to perform the contracts and Mr. Mess wrote specifically to the defendants saying: "I guarantee you that the contracts will be implemented, and that all claims for short weight (if any), quality, and condition will be paid by me."

CAPITAL

6th June, 1901

A Ditcher's Diary

YOU CAN MAKE ALL SORTS OF "INSTANT" THINGS—tea, coffee and what have you; and I understand the Japanese have gone crazy over the idea, while the Americans believe in everything ready-made and mechanical. All this is perhaps harmless; but when a powerful country extends this approach to international affairs, the world is in for trouble. President Kennedy, I was glad to note, did not go to Vienna for an "instant" solution of the East-West struggle; and he was wise to discourage in advance excessive optimism in others. The result is that the talks in Vienna achieved nothing at all and, for that very reason, are being hailed almost as a success. The meeting did not end in unpleasantness; and I suppose we have learned to be grateful for such small and negative mercies. On the subject of personal diplomacy Sir Harold Nicholson expressed himself again recently. He does not like it, as is to be expected from a former career diplomatist such as he is. My enthusiasm for "summitry" is limited too; but when those conferences in Geneva just go on and on I often wonder whether there is not something to be said for the kind of get-together Mr. Kennedy and Mr. Khrushchev recently had. After all, the ultimate decisions have to be taken by them; and it is good that they should know each other. Mr. Kennedy went to Vienna under several rather serious handicaps. He was definitely not the stronger party. Yet, I should be surprised if Mr. Khrushchev returned to Moscow with the impression that Washington is in a submissive mood simply because the Cuban misadventure went awry and the West is in some respects in disarray. It is important that Mr. Khrushchev should realise that, beyond a certain point which it is not necessary to define in detail, the West will stand up and fight. I would rate the Vienna talks a success if both Mr. Khrushchev and Mr. Kennedy have returned with a healthy respect for either's capacity to destroy the other. Fear is a better insurance against war than is usually conceded.

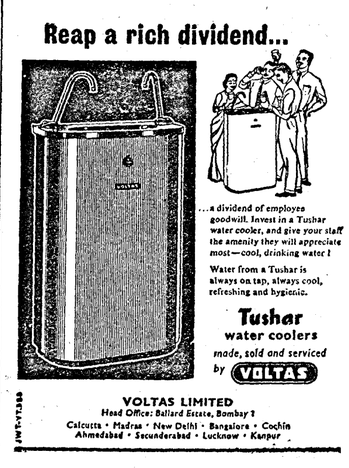
THE PRIME MINISTER, I ALWAYS THINK, IS AT HIS best when speaking on general topics such as national unity, the language issue, the need for hard work, world peace, and so on. That is why the part I admired most in his speech to last week's meeting of the National Development Council was where he condemned "static thinking" on progress, and pointed out the inadequacy of the "normal service attitude of doing competently the day's work". I could not agree more, although along with other employers of labour these days I would quite happily accept a day's competent work as something more than one has come to expect. But I wonder if Mr. Nehru realises how much the socialist policies of his own Government are to blame for the "service" outlook and the "static" nature of individual thinking. With every year that passes the situation becomes increasingly one where all initiative for progress is left to the Government and the private individual contents himself with being led along behind. He has little enthusiasm for the plan because what is in it for him is too long in materialising; he understands little of the broader aspects of development because his education is inadequate and has been neglected to conserve resources for building heavy industry; he is reluctant to use his initiative because he knows the frustrations of dealing with the bureaucracy; and he sees no point in personal service when corruption and nepotism thrive all around him. After studying what is so far known of the third five year plan I suspect that what made Mr. Nehru speak as he did was the vague suspicion that the main criticism of it is that it puts too much stress on building Government-owned heavy industry and too little on galvanising the people to work and think in terms of progress. The one point planning of this kind misses is that progress is made in the mind of man and not on the slide rules of statisticians.

SO THEY HAVE GOT HIM AT LAST—TRUJILLO, I MEAN. Life is tough in Latin America; and it is often a question of who gets whom first. It seems to me unlikely that many in the Dominican Republic are inconsolable at the loss of their ruler for 30 years; in Washington D.C. there may be more people to mourn his death. In the *Reporter* of New York I recently read an admirable article by Douglass Cater on the U.S.A.'s "sugar diplomacy"; and the Dominican Republic's rôle in it. Mr. Cater did not in so many words say that bribery and corruption are rampant in the sugar business in the U.S. capital; short of that he said just about everything. He showed how the various Latin American countries maintain a permanent "lobby" around the Congressional committee concerned; and how several Public Relations firms are doing themselves well representing the various puppet governments. In Latin America some of the woolly criticism of British and French imperialism sounds pretty hollow. U.S. anger at Castro's audacity must have seemed exaggerated to many; but the whole point is that no government in Latin America has a chance of survival without absolute subservience to the U.S.A. And it is a rather different kind of imperialism. There is not one Indian who is sorry that, after the Mutiny of 1857, the East India Company ceased to rule this country and the British Government took over. Imperialism may be good or bad; perhaps it is both; but imperialism by private enterprise, such as by the United Fruit Company, has nothing at all to commend itself. More than what it does to the people of the country it rules, what it does to the government of the ruling country is disturbing. It introduces corruption on a scale few outside Washington can imagine. One of the fascinating chapters of British history relates to the part the East India Company played in British politics in the 18th century; and I wish there were more exposures of what various American monopolies in Latin America are doing to the politics of Washington D.C. We might then have less high-minded talk from there on Asia and Africa.

ALTHOUGH NOT A FREQUENT USER OF TAXIS, I CAN well imagine why, as a class, their drivers should be so unpopular. They have no particular reputation for politeness, their driving is reckless, their taxis are rarely clean, and they are notorious for refusing passengers just when they are needed most. Criminal incidents are not rare either. Only a few months ago two unaccompanied European women on a visit to Calcutta took a taxi from a hotel at an unusually late hour. They were taken to the wrong place, robbed of their belongings and thrown into the road. Only recently another incident of a more sensational nature involved the trade representative of a communist country who was not only robbed of his jacket, wallet and identity card, but was badly assaulted by the driver and his companion for demanding the refund of Rs. 100 alleged to have been advanced for a certain purpose. What surprised me most about this affair was not the daring nature of the alleged crime, but the speed with which the police traced the people concerned. If they were to act as promptly on complaints from persons who are not members of a consular corps, and have neither influence nor connections, then we might have less trouble with Calcutta's taxis. I am, of course, referring to those who lodge complaints against drivers refusing to accept a fare. Some people argue that the most effective way of checking this practice would be to license more taxis. This is behind the State Government's scheme for sponsoring taxi drivers' co-operatives. It seems a good idea; but may I make the plea that before licences are issued and help given, trouble be taken to make sure members can drive properly. In the meantime, I believe it is a point of law that a passenger can insist on the driver's mate leaving a taxi engaged after a certain time in the evening. If this is a fact, then it is a pity more people do not know about it.

THE GENERAL LACK OF VALUE FOR MONEY IS ONE OF the things which, as a comparatively poor man, I most deplore in this country today. Too much profit is being made by too many people who have too little regard for the quality of what they are selling. If asked to suggest a remedy my answer would be that consumers should form themselves into some kind of protective organisation; it has been done in Britain recently with considerable success, and I cannot see any good reason why India should not follow suit. A letter which arrived on my desk the other day suggested that this might be just what is intended. It was from a body calling itself the Consumers' Association of India, and contained an appeal for membership. It also unburdened itself of some economic wisdom which it might have done better to conceal, but apart from that its aims seem admirable enough and I cannot help wishing it luck. I shall even make a suggestion: that it publishes a monthly magazine on the style of *Which*, the journal of the corresponding body in the U.K. Publicity is the essence of consumer protection, and *Which* is at present providing a service to consumers that no British manufacturer can afford to scorn. The same could be done here. All that is needed is a scrupulously honest editorial board; I am sure there is no need to explain how such a publication can support itself financially. The next step after that, of course, would be to provide a badge of acceptable quality that all consumers could recognise as being the Association's passport to respectability. But the real remedy for adulteration and poor quality, at least in manufactured goods, is neither consumer organisation nor publicity, but competition. While manufacturers are able to sell all they can produce without any threat from imports or other manufacturers, things are likely to go on as they are. Any consumers' organisation is better employed informing its members how to make a successful choice between alternatives rather than in warning them against products which they must either buy or go without.

THE DITCHER



THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

No subscriptions are invited on the basis of this announcement. Intending subscribers should obtain from the Registered Office or any one of the Bankers or Brokers referred to hereunder, copies of the PROSPECTUS, and the Forms of Application.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking at Kotah (Rajasthan) of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus, having attached to it, the documents required by Section 60 of the Companies Act, 1956, specified hereafter, has been delivered for registration to the Registrar of Companies, Uttar Pradesh, Kanpur.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 12TH JUNE, 1961 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 17TH JUNE, 1961 UNLESS CLOSED EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE 14TH JUNE, 1961.

J. K. SYNTHETICS LIMITED

(FORMERLY—J. K. INVESTMENT TRUST LIMITED)

BRIEF HISTORY AND DEVELOPMENT

The Company was incorporated in the year 1943 under the name of J. K. Investment Trust Limited and functioned primarily as an Investment Company. In the year 1957, the Directors of the Company decided to undertake industrial activities and accordingly the objects clause in the Memorandum of Association was altered with the approval of the Court. A licence under the Industries (Development and Regulation) Act 1951, for establishing a new Industrial undertaking at Kotah (Rajasthan) for the manufacture of synthetic yarn like Nylon/Perlon Filament Yarn was also obtained from the Central Government

The name of the Company was changed to its present name, i.e. "J. K Synthetics, Limited," with a view to make the name representative of the industrial activities now being undertaken by the Company.

OBJECT OF ISSUE

The object of the issue of these shares is to raise finance required for the purpose of the new Synthetic Yarn undertaking

SCOPE AND PROSPECTS OF SYNTHETIC YARN INDUSTRY IN INDIA

This is the first factory of its kind in India which will manufacture synthetic yarn like Nylon/Perlon. The use of Synthetic Yarn has become popular in this country and it is being used for various purposes viz., in the making of socks and other items of Ladies' and Gents' wear, Fishing Cord and also for diverse items required by or connected with the Defence Services. The total requirements of the country for the said material are, at present, met by imports. All these factors ensure that there is good possibility for profitable return to the investors in the Synthetic Yarn Industry of the country.

TECHNICAL COLLABORATION

The Company is getting technical "Know-how" from Messrs. Ing. A. Maurer, S. A. Dammweg 3, Berne/Switzerland under the agreement dated 2nd June, 1958 This firm is of International repute in the man-made fibre industry and has wide experience in designing such plants satisfactorily in different parts of the world

LOCATION

The plant is located at Kotah (Western Railway) in the State of Rajasthan

POWER

The Power for the plant will be available from Chambal Grid through Rajasthan State Electricity Board.

WATER

Adequate supplies of water are available from Kotah Barrage on River Chambal and Municipal water would also be supplied to the Company.

TRANSPORT FACILITIES

The factory is located at Kotah which is an important junction on the main Broad-gauge line of the Western Railways (Delhi-Bombay Sector). The place is also accessible by roads and as such provides adequate transport facilities.

J. K. SYNTHETICS LIMITED—*Cont'd.*

LAND AND BUILDINGS

A plot of land measuring about 70 acres has been taken on lease from the Government of Rajasthan. The buildings are now fast under construction and some of them have been completed in all respects.

PLANT AND MACHINERY

The Plant and Machinery required for the project (both local and imported) have been ordered out and shipments will start shortly. Some of the machines will come duly assembled and a team of foreign erectors and Engineers will be arriving to take up the erection work simultaneously. It is expected that plant will be commissioned for trial operations some time in October/November 1961.

RAW MATERIALS

The important raw materials for the manufacture of Synthetic Filament Yarn are caprolactum and some chemicals, etc., which shall have to be imported for some time There should however be no difficulty in getting import licence for raw materials as the entire requirements of the filament yarn at present are being covered by imports and the installation of indigenous capacity will give the country much of its valuable foreign exchange

PROFITS AND DIVIDENDS

The Directors have issued the invitation for subscription to the public when they have constructed a major part of the buildings taken up the erection of the plant and machinery so that the subscribers may not have to wait for long to get full advantage of their investments. Further the Company's present investments are likely to give much better yield than in the past.

INCOME TAX BENEFITS

The special benefits provided under the Indian Income Tax Act, 1922 with respect to Development Rebate and exemption from tax for the first five years of operations under Section 15C will be available to the Company in respect of the new undertaking.

CAPITAL OUTLAY AND FINANCIAL RESOURCES

(a) The Capital requirements for the new undertakings are estimated as under:—

1. Land and Buildings	Rs. 20,00,000
2. Plant and Machinery, including freight, insurance duty etc.	Rs. 1,33,50,000
3. Erection expenses and Technical fees	Rs. 6,10,000
4. Working Capital	Rs. 15,00,000
5. Miscellaneous Expenses including brokerage and other expenses on issue of shares	Rs. 4,00,000
	Rs. 1,78,60,000

(b) The above expenditure has been or will be financed as under:—

1. Loan obtained from the Government of Rajasthan (Secured by the pledge of shares of other Joint Stock Companies held by the Co.)	Rs. 30,00,000
2. Deferred payment facilities from suppliers of machinery (Guaranteed by the Bank of Tokyo Ltd., on the security of Plant & Machinery of the new Synthetic Factory)	Rs. 80,00,000
3. New issue of Capital	Rs. 52,37,500
4. Other sources	Rs. 16,22,500
	Rs. 1,78,60,000

FINANCIAL INFORMATION

The report of the Company's Auditors as required under Clause 24 of Part II of Schedule II to the Companies Act, 1956, is attached to and forms part of the Prospectus.

MINIMUM SUBSCRIPTION

In the opinion of the Directors it is not necessary to fix any minimum amount of subscription.

UNDERWRITING COMMISSION

Underwriting commission @ 2% of the nominal value of Equity Shares is payable to the Underwriters.

BROKERAGE

Brokerage will be paid by the Company to members of recognised Stock Exchanges and to Banks @ 1% on the nominal value of Shares allotted in respect of applications bearing their stamp.

EXPENSES OF THE ISSUE

The expenses of the issue including brokerage and underwriting commission are estimated not to exceed Rs. 3,00,000/- and are payable by the Company.

INSPECTION OF DOCUMENTS

Original and/or Copies of the Memorandum and Articles of Association of the Company, Balance Sheets and Profit & Loss Accounts Auditors' Report appended to this Prospectus, Consent order of the Controller of Capital Issues, Licences issued by the Government of India for establishing a new industrial undertaking for the manufacture of nylon Synthetic Yarn like Nylon/Perlon at Kotah (Rajasthan) and contracts and other agreements referred to in the Prospectus can be inspected at any time during Office hours at the Registered Office of the Company for a period of Fourteen days from the date of publication of the Prospectus or until the subscription list closes, whichever is earlier.

APPLICATION FOR AND ALLOTMENT OF SHARES:

Application must be in lots of 50 shares or multiples thereof.

Applications should be made on the prescribed form accompanying this Prospectus and delivered before the date of closing of the subscription list. The application forms together with a remittance for the full amount payable should be sent to the Registered Office of the Company at Kamla Tower, Kanpur or to the Branches of the Company's Bankers indicated therein. Out-station drafts or cheques must include Bank charges @ 1/8% with a minimum of 75 nP. Cheques or drafts should be made payable to "J. K. Synthetics, Ltd. Share Application A/C" and for the protection of the applicants should be crossed, "ACCOUNT PAYEE ONLY". A separate cheque or draft must accompany each application.

BANKERS' NAMES

State Bank of India—Kanpur, Bombay, Calcutta, Madras, Delhi, New Delhi, Bangalore, Indore, Nagpur and Jaipur.

Hindustan Commercial Bank Ltd.—Kanpur, Bombay, Calcutta, Ahmedabad, Amritsar, Delhi, New Delhi and Jaipur.

Bank of Rajasthan Ltd.—Kotah and Jaipur.

Copies of the Prospectus and Application Forms may be obtained from the Company's Registered Office and the Bankers and Brokers named hereinabove.

Allotment will be notified by despatch of Allotment Letter. The Directors reserve the full and uncontrolled right of accepting or rejecting any application in full or in part without assigning any reason. Where no allotment is made the amount payable with the application will be returned in full, and where a partial allotment is made the unutilised balance will be returned within sixty days of the receipt thereof by the Company. In all cases the Bank Commission, if any, will be payable by the applicant.

Shares when issued will be subject to the terms of the Prospectus and the Memorandum and Articles of Association of the Company.

The Share Certificates will be available for issue in exchange for Letters of Allotment within six months of allotment.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT —

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

CO-OPERATION MAKES STEADY PROGRESS

THE statistical statements relating to the co-operative movement in India for 1959-60, just issued by the Reserve Bank, gives the latest detailed statistical data on the working of the various types of co-operative societies. Additional information has been provided in some of the existing tables and a few new tables have been introduced. The additional columns opened relate to information on (i) dormant societies, the number of borrowing members and the number of societies which advanced loans and undertook marketing and distribution activities in credit societies, (ii) *mandies* served, the purpose of loans advanced to individuals in marketing societies and security taken for them, (iii) recoveries of loans effected by marketing and processing societies on behalf of credit societies, (iv) financial and other particulars such as land use, various types of farming societies discussed separately, and (v) installed capacity of the processing units in the case of "cotton ginning and pressing" societies, sugar factories and other processing societies. The additional tables included in this issue relate to (i) audit of various types of societies—pending at the beginning of the year and audited during the year, (ii) the number of disputes under arbitration, (iii) suspension and restoration of managing committees of societies, (iv) embezzlement cases and (v) the administrative staff of the co-operative departments.

Continuing Progress

The all-round progress made by the co-operative movement in India since the partition of the country was maintained during the year. The number of co-operative societies of all types rose from 283,971 at the beginning of the year to 313,499 at the end of June 1960. Their owned funds increased from Rs. 220.16 crores to Rs. 267.32 crores and their working capital rose from Rs. 879.59 crores to Rs. 1,084.47 crores. The membership of all types of primary societies increased by 22.2 percent from 24.8 million to 30.3 million during the year; the increase was contributed largely by agricultural credit societies. It is estimated that, by the end of 1959-60, roughly 15.15 crores or a little more than 38 percent of the population was served by co-operatives, compared with 30 percent at the beginning of the year.

The number of apex banks at the end of 1959-60 continued to be 22. Their working capital amounted to Rs. 174.74 crores and showed an increase of 18.3 percent. Their advances during the year aggregated Rs. 196.92 crores, compared with Rs. 153.40 crores during the previous year. The programme of rationalisation of central co-operative banks and banking unions in various States continued during the year, reducing their number to 400, compared with 402 at the beginning. Their membership stood at 369,000 and the working capital at Rs. 247.40 crores at the end of 1959-60. Loans advanced during 1959-60 amounted to Rs. 297.14 crores, representing an increase of 41.4 percent over the previous year. The percentage of overdues to outstandings on 30th June, 1960, rose to 13.7 from 11.4 in the previous year.

Farming Credit Societies

Agricultural credit societies constituted the most important sector of the co-operative movement. At the end of 1959-60, there were 203,172 societies with a membership of 14.42 million and working capital of Rs. 223.70 crores, while deposits held by these societies stood at Rs. 11.86 crores. Loans advanced by them during the year amounted to Rs. 169.09 crores, against Rs. 125.50 crores in the preceding year, while loans outstanding at the end of the year stood at Rs. 177.71 crores, compared with Rs. 135.00 crores at the end of 1958-59. Overdues constituted about 21 percent of the outstandings on 30th June, 1960, against 20 percent in the preceding year. There were 8,023 large-sized societies at the end of 1959-60, with a membership of 30.25 lakhs and their owned funds and working capital stood at Rs. 21.48 crores and Rs. 73.85 crores, respectively. The loans advanced by them during the year aggregated Rs. 55.15 crores and the outstandings on this account at the end of the year stood at Rs. 56.92 crores.

The non-agricultural credit societies also showed progress, with their number rising from 11,084 to 11,371, and their membership rising by 209,000 to 4.23 million during 1959-60. Their working capital amounted to Rs. 137.40 crores at the end of 1959-60, and loans advanced by them during the year amounted to Rs. 117.40 crores, the corresponding figures for the last year being Rs. 121.47 crores and Rs. 110.18 crores, respectively. The percentage of overdues to outstandings was 7.3 on 30th June, 1960. There were 16 central land mortgage banks with paid-up share capital and reserves amounting to Rs. 3.49 crores and Rs. 1.01 crores, respectively. Their working capital rose from Rs. 31.35 crores as on 30th June, 1959, to Rs. 37.38 crores at the end of 1959-60. During the year, they floated debentures (on the guarantee of State Governments) of the value of Rs. 4.23 crores and the outstanding debentures stood at Rs. 27.07 crores at the end of June 1960. The loans advanced by the banks during the year amounted to Rs. 8.52 crores, compared with Rs. 6.01 crores during 1958-59. The number of primary land mortgage banks went up by 45 to 408, their membership by 110,000 to 550,000, and their paid-up capital from Rs. 1.25 crores to Rs. 1.55 crores. At the end of 1959-60, loans due by members stood at Rs. 19.22 crores, compared with Rs. 15.14 crores at the end of the previous year. There were 21 apex and 511 regional agricultural marketing societies with a membership of 4,719 and 193,820, *respectively, at the end of 1959-60.* Their working capital amounted to Rs. 8.10 crores and Rs. 13.07 crores, respectively. The primary marketing societies numbering 2,501 had a membership of 11.84 lakhs and working capital of Rs. 18.58 crores at the end of June 1960. They sold produce as owners and as agents valued at Rs. 46.64 crores, against Rs. 26.71 crores in the previous year.

Sugar Factories

Co-operatives have also made progress in processing, particularly in the production of sugar. The number of sugar factories was 57, of which 26 worked during the year. The working capital of all factories amounted to Rs. 47.39 crores at the end of 1959-60. They crushed sugarcane weighing 2.6 million tons during the year. The factories produced sugar weighing 284,000 tons and their sales were valued at Rs. 23.38 crores. Among other non-credit societies, sugarcane supply unions and societies numbering 8,774 stand out as the most important with a membership of 23.44 lakhs. Their sales of sugarcane amounted to Rs. 16.37 crores. There were 5.631 farming societies, of which 1,758 were joint farming societies and the area under cultivation of all farming societies was 728,000 acres. There were 11.215 weavers' societies with a total membership of 1.29 million and the output valued at Rs. 39.67 crores. The consumers' stores numbering 7,233 had a membership of 1.4 million and their sales during the year amounted to Rs. 46.29 crores.

Contributions of State Governments

At the end of June 1960, the total contribution of State Governments towards the share capital of co-operative societies of all types amounted to Rs. 32.71 crores. Of the total contribution of State Governments, Rs. 5.62 crores were accounted for by State co-operative banks, Rs. 8.77 crores by central co-operative banks, Rs. 5.18 crores by agricultural credit societies, Rs. 1.78 crores by central land mortgage banks and Rs. 3.40 crores by marketing societies.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASIER

Wednesday, 7th June.

THERE has been little appreciable change in the overall level of advances outstanding in the Calcutta money market during the past week. Demand for funds from the cotton mills has declined, as has that from the jute industry. The requirements of the sugar mills and against grains and seeds storage, however, have increased slightly. The largest source of increased demand this week is the engineering and the iron and steel industries. In the interbank market, conditions have again eased. The official call rate is now down to 4 percent at which level there are borrowers over.

The improvement in the supply of gunny bills has been maintained during the past week, but other bills have been scarce in the exchange market. Remittance demand has remained strong. In the London money market, the pound sterling has weakened further owing to the adverse balance of British trade during May. Closing quotations showed losses against all major currencies.

BULLION IMPROVED DUE TO THE SHORTAGE OF supplies. Silver advanced from the previous week's level of Rs. 231 to Rs. 235.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 235. The London and New York prices were 79⅞d and 91.375 cents.

The price of gold rose from Rs. 141.50 to Rs. 142. The sovereign at Rs. 95.50 showed a gain of 25nP.

DURING THE WEEK ENDED 2ND JUNE, GOVERNMENT of India Treasury bills for Rs. 30,32,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 6th June. The total amount offered was Rs. 2,03,00,000. Tenders at Rs. 99.315 percent and above were accepted in full and those at Rs. 99.310 percent allotted approximately 97 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 12th June.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 7th June to 10th June at Rs. 99.331 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 31st May to 3rd June amounted to Rs. 10 lakhs.

THE STATEMENT OF THE RESERVE BANK OF INDIA for the week ended 2nd June, 1961, shows declines of Rs. 80 lakhs to Rs. 1,990.76 crores in the total note issue and of Rs. 72 lakhs to Rs. 1,962.52 crores in active notes. In the Banking Department, deposits of the Government of India fell by Rs. 16.51 crores to Rs. 52.24 crores, but other Government accounts rose by Rs. 1.05 crores to Rs. 21.40 crores. Balances of commercial banks at Rs. 78.69 crores showed a rise of Rs. 1.67 crores. Balances held abroad declined by Rs. 7.35 crores to Rs. 15.76 crores and investments were Rs. 3.4 crores lower at Rs. 210.02 crores. Other loans and advances increased from Rs. 116.81 crores to Rs. 123.84 crores, of which advances to scheduled banks against usance bills totalled Rs. 13.06 crores (Rs. 12.65 crores). Ways and means advances stood at Rs. 73.09 crores, against Rs. 80.72 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 26th May, shows a rise of Rs. 1.07 crores to Rs. 530.68 crores in total deposits. Investments in Government securities are up by Rs. 7.07 crores to Rs. 224.30 crores, while other investments remain unchanged at Rs. 9.34 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs 3.44 crores to Rs. 263.38 crores. Cash and balances are, in consequence, shown at Rs. 28.48 crores or Rs. 4.15 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 26th May, shows Demand and Time liabilities at Rs. 838.88 crores (Rs. 36.85 crores on account of borrowings from banks) and Rs. 1,114.94 crores (Rs. 15.76 crores), compared with Rs. 838.77 crores (Rs. 31.96 crores) and Rs. 1,110.54 crores (Rs. 15.80 crores), respectively, in the previous week. Cash has declined by Rs. 75 lakhs to Rs. 47.25 crores, while balances with the Reserve Bank have risen by Rs. 2.86 crores to Rs. 73.94 crores. There is a rise of Rs. 6.52 crores to Rs. 549.83 crores in investments. Advances and bills discounted at Rs. 1,286.66 crores show a drop of Rs. 7.15 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.2 percent and 65.9 percent, against 6.1 percent and 66.4 percent.

TREASURY BILL MATURITIES

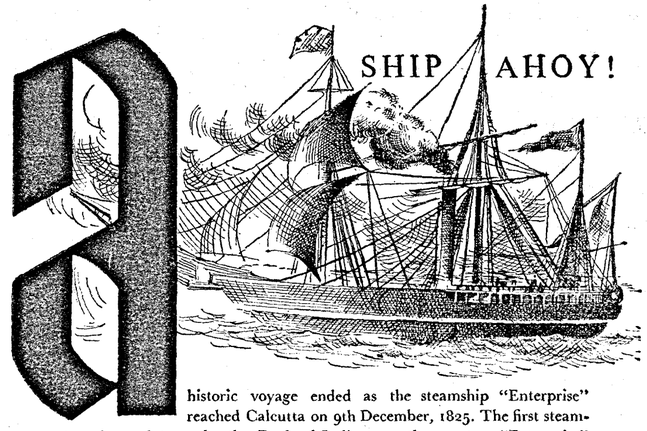
BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

THE PUNJAB NATIONAL BANK LTD.

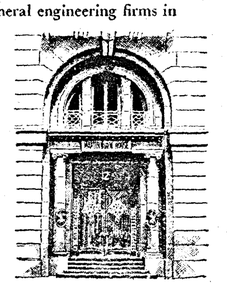
Established 1895
Head Office: New Delhi.



historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.



The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

"RESIDENCE" AND THE INCOME TAX BILL, 1961

By K. C. Khanna

THE Income-tax Act, 1922, like love, may well be described as "a many splendored thing" and the Income-tax Bill, 1961, is nothing but a manifestation of those splendours in a new form. That the Bill will correctly and clearly resolve taxation's tangles still remains doubtful; it becomes apparent from a reading of the Bill that some of the mysteries of the tax laws have yet to be unmasked. The extensive paraphrasing and schedulising of the statute will possibly assist young students of law or probationer income-tax officers to pass their examinations at the first attempt, but to those of us who have become endeared to the compactness of the present Act, in spite of its incongruities, the excessive subdivision and fragmentation of existing provisions, without removing the real doubts and difficulties, will, perhaps, at first sight seem somewhat clumsy and cumbersome. The Law Commission very wisely admitted that it was certainly not possible to make the Act simpler without encroaching on at least the fringe of the tax structure, and they concluded that there could be no real simplification of the income-tax law without a simplification of its framework.

As before, the question what is income, still remains the "dark cat in the bag of the income-tax code", notwithstanding an elaboration of the definition of "income", and problems will still arise as to where and when income accrues or arises, what is "a business connection", what is "expenditure wholly, necessarily and exclusively incurred for the purpose of business", what is "smallness of profits" and so on and so forth. The perennial battle of manoeuvre between the tax gatherer and the tax payer will continue to be waged; without it, of course, much of the romance of tax assessment and recovery will be lost and the tax consultants become jobless!

Residential Status

In the process of simplification of law certain changes have been made in the basis of taxation also, an important change being one made by the Bill in regard to the residential status of an individual assessee. It is this change that we propose to discuss briefly in this article.

Under the existing Act an individual may be:

(1) ordinary resident,

(2) not ordinarily resident and,

(3) non-resident.

The Bill proposes to delete item (2) and reclassifies an individual, for tax purposes, either as resident or non-resident in India. The change has been made pursuant to the recommendation of the Law Commission. Before we consider the reasons for the change, let us briefly examine the tax liability under the present law of the individual assessee depending upon his residential status. Broadly speaking, an individual who arrives in India for the first time remains "not ordinarily resident" for the first nine years of his residence in the country; later he becomes "ordinarily resident". An "ordinarily resident" individual is liable to tax on his world income wherever it accrues or arises or is deemed to accrue or arise. A "not ordinarily resident" individual, on the other hand, is liable to tax only on that part of his income which accrues or arises in India, or is received in India, or is derived from a business controlled in or a profession or vocation set up in India. In other words, his foreign income not received in India is exempt from tax. A "non-resident" individual is charged to tax only on income which accrues or arises in India, is deemed to accrue or arise in India, or is received in India. Further, the rate of tax applicable to a "not ordinarily resident" individual is determined on the basis of his Indian income, unlike the basis of global income for resident and non-resident individuals, assuming that the non-resident has opted for assessment on total world income basis.

Abolition of Category

Discussing the position of the three categories of individual assessees on the basis of their residential status in India, the Law Commission expressed full agreement with the views of the Taxation Enquiry Commission which had recommended that the category "not ordinarily resident" be abolished; they gave no other special reasons for the abolition. The Taxation Enquiry Commission in turn referred to the Income-Tax Investigation Commission which had suggested the abolition of the category of "not ordinarily resident" and stated itself in agreement with that suggestion. We are thus driven to the Report of the Income-Tax Investigation Commission for determining the exact reasons for the withdrawal of the category of "not ordinarily resident". The Report of that Commission was published as early as 1949 and in its discussion the Commission stated that the category of "not ordinarily resident" had been created primarily to give a tax concession to the European official or trader in the early years of his stay in India before it became established that his career was in India. "Under the conditions existing today, the class of officers who mainly constituted the first group has ceased to exist..... most of the replies to our questionnaire agree that this special category of 'not ordinarily resident' can be omitted. We recommend accordingly."

It follows from the above that the abolition of the category "not ordinarily resident" was suggested in 1949 mainly because the Income-Tax Investigation Commission then thought that the category of the European official or trader to whom it mostly applied had ceased to exist and that there was, therefore, no justification for retaining this special category. The Commissions that followed merely said "ditto" to the Investigation Commission's recommendation. Much has happened since 1949. The first two five year plans have been completed and we are now at the threshold of the third five year plan. The industrial and economic development of the country during the last 10 years has changed the character of the "petty European trader or official" into that of an important collaborator. We have today in our midst a large population of foreign management and other trained personnel engaged in vital industry who though not falling within the strict definition of "technician" as given in the Income-tax Act, are nevertheless playing an important part in industrial organisation and production.

Management Staff

The National Council of Applied Economic Research in its study *Taxation and Foreign Investment* (Second Edition, pages 10-12) considered in detail the rôle of foreign management staff in connection with foreign investment and stated that foreign investors preferred to entrust the operation and development of their overseas investments to management and staff of their own choice. It further observed: "There is today a severe shortage of trained management personnel in every industrial country in the world. This is attributable among other things to continuous industrial expansion, automation, and the increasing complexity of machines and products. All over the world the demand for the skills of management and of staff has outstripped the supply.....Such a demand in India can be met only through large gross salaries paid by companies in order to offset the comparatively high personal income taxes which India imposes. This adversely affects the attractiveness of investment in India because most other capital-importing countries do not tax personal incomes so heavily as our country does. India, moreover, provides no tax concessions to management staff; a special position is granted by India only to 'technicians'." The Council, therefore, recommended that the tax exemption for "technicians" should be broadened to include for each eligible enterprise a limited number of essential management personnel and staff.

In the context of the above, it seems paradoxical that while the Government has recently extended the tax exemption to "technicians", they should now seek to amend the law in such a manner as will act as a fiscal disincentive to the employment of foreign management staff and will hinder much-needed foreign investment. With the abolition of the category of "not ordinarily resident", the foreign income of such an assessee, which was hitherto exempt from Indian taxation, will become liable to assessment in India and an important exemption will stand withdrawn at an inopportune moment. It will perhaps be argued on behalf of Revenue that the removal of the category "not ordinarily resident" will not lead to the withdrawal of a tax concession in as much as the "resident" individual will be eligible for double taxation relief or unilateral relief, on his foreign income.

Double Taxation Avoidance

This argument suffers from certain flaws. Firstly, with the effective rates of personnal taxation in India being amongst the highest in the world, a certain amount of Indian tax liability on foreign income will be incurred even after the grant of tax relief as such relief is generally given at the lower of the tax rates prevailing in the two countries concerned. For instance, Indian tax rates are higher than British tax rates for personal incomes between £2,000 and £15,000; without taking into account the recent increase in surcharge rates in India and the decrease in sur-tax rates in Britain, and in the absence of a Double Taxation Avoidance Agreement between these two countries, the grant of relief in India is governed by the provisions of the existing section 49D (clause 91 of the Bill). This relief will be calculated at the British rates of taxation which are lower and the foreign income, which at present is completely free from Indian taxation in the hands of a "not ordinarily resident" individual unless it is derived from a business controlled in or a profession or vocation set up in India, will become liable to a part of such tax. Secondly, the administrative delays which will be inevitable in the making of assessments and grants of relief will impose unwarranted hardship on the individual. In the absence of the category "not ordinarily resident", all "resident" assessees will become liable to tax on their world income, that is, Indian income plus foreign income. Having made the assessment on the world income, the taxation authorities will be confronted with applications for double taxation relief or unilateral relief as the case may be. The harassment which will be caused to assessees in the preparation and submission of annual returns of their total world income, the production of necessary certificates and documents from foreign countries and verifications required by the local income tax authorities cannot at all be justified by the small amount of revenue involved.

If simplification be the objective, why not remove the cause of double taxation itself? Why not retain the category "not ordinarily resident" in the 1961 Bill? It is obvious that the proposed deletion of provisions of section 4B of the 1922 Act is ill-conceived, untimely and unjustified. The correct action should be to incorporate the amended definition of "not ordinarily resident" as given by the Law Commission, in the body of the 1961 Bill, with necessary clarification. Any other course will defeat the very object of the framers of the Bill and will add to the difficulties of an already overburdened assessee.

Officers' Discretion

Before conclusion, another change may be noted, namely, the proposed removal of the discretion given to an income-tax officer, by the existing section 4A(iv), to treat an assessee as "resident" in the first year of his arrival in India provided the income-tax officer is satisfied that such an individual having so arrived is likely to stay in the country for a period of not less than three years from the date of his arrival. The Law Commission felt that this provision gave the income-tax officer a vague discretion and should therefore be deleted. But what would be the fiscal loss even if the so-called vague discretion was indiscreetly exercised? If an individual is treated as not-resident he has the option of asking for assessment on the basis of a total world income rate. By treating him as a "resident" the income-tax officer is obviating the necessity of the exercise of an option and thus simplifying the process of an assessment. It is true that a resident assessee would be liable to tax on his world income even in the year of his arrival, assuming that the category of "not ordinarily resident" is withdrawn, whereas a non-resident assessee would be liable only on his Indian income at the world income rate, but then appropriate relief will have to be given to the "resident" assessee in respect of double taxation. It is not, therefore, understood why the discretion given to the income-tax officer should be withdrawn, as this will only lead to unnecessary complications in assessment procedure. In the circumstances, it is to be strongly urged that the provisions of section 4A(iv), along with those of section 4B, be retained for the sake of simplicity.

Stocks and Shares

PRICES AND SENTIMENT IMPROVE BUT TURNOVER REMAINS MODERATE

STEEL SHARES RISE ON RETENTION PRICE HOPES

Wednesday Evening.

THERE has been a substantial improvement in the price of Indian Iron shares this week. The bullishness has been promoted by two factors. Firstly, there is talk about the Government fixing new steel retention prices soon in order to help the steel companies to close their annual accounts in time. Needless to say the true accounts positions cannot be disclosed unless the new retention prices are known. Secondly, the dividends of the steel companies for the year ended March 1961 are expected to be declared soon. The stock market hopes there would be an improvement in the distribution considering that the good effects of expansion have begun to show.

As far as turnover in other shares is concerned, this has been on a small scale, and activities appear to have been restrained in view of today's settlement. Meanwhile, higher advices from Dalal Street have helped sentiment. In this centre, the new account has got off to a promising start. It is believed that the technical position has improved in Calcutta, as is evident from the moderate carry-forward charges. The decision of the "Aid-India Club" countries to give substantial loans to India in order to ensure a smooth working of the third plan during the next couple of years, has been welcomed. If the finance is used partly to encourage the flow of maintenance imports, the Indian economy is expected to gather further momentum in coming months.

The stock market also hopes for an increase in supplies of funds in the near future. Substantial funds will return from the Goodyear India issue in the course of the next few days. Whether these resources will be shifted into new share issues or into existing scrip, is difficult to estimate at the present time. The pressure on banking resources has also abated and more credit supplies might become available in coming weeks. An important feature is that investors appear to have become more discriminating than before. Attention has, therefore, been concentrated on companies which have adequate resources and scope for expansion. In spite of a general improvement in the working of the corporate sector, it is clear that the profitability of industry has been squeezed by rising production costs. So companies are not expected to compensate for the loss of income unless increased production costs are offset by bigger turnover.

The price of Indian Irons has closed at Rs. 28.35, after wide fluctuations due to alternate bouts of buying and selling. Support has declined in engineering shares on fears of power shortages. The working of some engineering units is also believed to have been hampered by shortages of coal and raw materials. Some wagon producing factories report that their working is being hampered because the railways do not care to supply the necessary raw materials in time. Texmaco have slipped back on reducing the ordinary dividend, but the directors expect an improvement in working during the current year. Guest, Keen, Williams and Jessop have become sluggish. Indian Standard Wagon have improved on maintaining the ordinary dividend, but Britannia Engineering are subdued on prospects of a further share issue. J. K. Steel have met with interested buying, but Braithwaite have attracted little interest.

Prices of selected coal shares have hardened. Companies having substantial financial resources are being fancied in the belief that they are likely to benefit greatly from foreign loans when these are granted. Bengal, Burrakur, New Beerbhoom and Amalgamated have been prominent.

Prices of miscellaneous shares have been maintained and the steadiness is largely due to a lack of selling pressure. Dunlop Rubbers are steady on prospects of a further capital issue. Metal Box have attracted attention on hopes of capitalisation of reserves. Indian Aluminium and Indian Cables have improved on replacement buying. Indian Coppers have become sluggish due to a fall in the international price of the commodity. Rohtas are steady and Hindustan Motors are being fancied on expectations of a good report. British India Corporation are quiet on selling pressure, but British Paints have been fancied on producing a good report. Britannia Biscuits are firm on hopes of a bonus share issue. Union Carbide have gained on replacement buying. Balmer Lawrie are steady on paying good dividends. Shaw Wallace have been bought on reports of good working. Interest has been subdued in electric company shares and routine business is being transacted in Calcutta Electric. Tobacco shares are quiet and National and Imperial Tobaccos have fallen. There is little interest in cement shares and fluctuations are narrow. Paper shares are quiet. Shri Gopal have, nevertheless, been steady on maintaining the ordinary dividend. Orient have recovered on short-covering. Routine business has been done in Titaghur and Sirpur.

Cotton mill shares have been buoyant on the view that production will improve further. Bigger supplies of raw cotton have been interpreted bullishly. Bharat Commerce, Dunbar and J. K. Rayon have gained.

The news that the U.S.A. has given a small quota for importing Indian sugar has had little effect. Sugar interests are inclined to think that the quota is too small to be of much use. Ramnugger Cane have attracted attention on good working reports. Carew have been sold at lower prices. S.K.G. and Belsund have been sluggish around previous rates.

Prices of selected tea shares have improved on optimism concerning the near-term outlook. In Assam gardens, interest has been taken in Bishnauth, Betjan, Baghmari, Dhelakhat, Tezpore and Basmatia. Among Dooars gardens, Hasimara, Banarhat and Hantapara have been fancied.

Banking shares are steady, and interest has been taken in good preference shares.

Government securities have produced mixed trends. Subscriptions for the re-issue of the 3½ percent loan 1967 in the form of conversion are encouraging and have amounted to Rs. 93.57 crores. The outstanding amounts of the three loans in which conversion facilities were offered total Rs. 138.89 crores. In the market, the 3 percent conversion loan 1986 has declined to Rs. 72.75 on pressure, but prices of dated loans have become

steadier. The Reserve Bank is believed to have increased its buying price for the 2½ percent loan 1961.

New Cinnatolliah Tea

The New Cinnatolliah Tea Co. Ltd has incurred a loss of Rs. 1,00,985 for the year ended December 1960, against a loss of Rs. 1,311 in the previous year. The dividend has again been passed. After making various adjustments, there is a balance of Rs. 99,883. After bringing in Rs. 35,282 from last year's accounts and transferring Rs. 20,000 from development rebate reserve, there remains a debit balance of Rs. 1.15 lakhs which is carried forward. The balance-sheet shows fixed assets, including buildings, machinery, electrical installations, etcetera, at Rs. 7.31 lakhs and current assets, loans and advances, including stock-in-trade, sundry debtors, cash and bank balances, etcetera, at Rs. 7.57 lakhs. The directors say in their report that an unprecedented early drought in the season, coupled with a strike by the union at the peak flushing period, caused a 25 percent shortfall in the originally estimated crop. This has made it impossible to achieve profitable working in spite of a higher average price at the Calcutta export auctions during the year. The crop amounted to 163,289 kilograms, compared with 217,837 kilograms in 1959. The average selling price realised was Rs. 6.84 a kilogram, against Rs. 5.84 a kilogram in the previous year. The 1961 estimate provides for a crop of 220,000 kilograms at an outlay of Rs. 12.64 lakhs. The Company's planted area is now 297.50 hectares.

Phaskowa Tea

The working of Phaskowa Tea Co. Ltd for the year ended December 1960 shows a profit of Rs. 634, against Rs. 2,636 during the previous year, after providing Rs. 14,806 (against Rs. 20,110) for depreciation. The dividend has again been passed. After making various adjustments, there is a credit balance of Rs. 17,432 which is carried forward, against Rs. 10,819 brought in. The balance-sheet shows reserves and surplus at Rs. 3.97 lakhs. Fixed assets amount to Rs. 4.08 lakhs and current assets, loans and advances, including stock-in-trade, to Rs. 2.34 lakhs. The directors say in their report that the tea crop amounted to 112,988 kilograms, compared with 116,337 kilograms in 1959, the reduced turnover being mainly attributable to drought. The average selling price realised was Rs. 4.99 a kilogram, against Rs. 4.48 a kilogram in the previous year. The 1961 estimates provide for a crop of 116,100 kilograms at an outlay of Rs. 5.61 lakhs. The Company's planted area remains at 347.62 acres.

Rydak Tea

The Rydak Tea Syndicate Ltd has earned a profit of Rs. 5.76 lakhs for the year ended December 1960, against a profit of Rs. 9.52 lakhs. The dividend has been reduced from 30 percent to 25 percent, subject to tax, and it absorbs Rs. 3.73 lakhs. Depreciation is allocated Rs. 2.41 lakhs (against Rs. 2.09 lakhs) and taxation absorbs Rs. 1.85 lakhs (against Rs. 3.96 lakhs). Bringing in Rs. 42,452 and making other adjustments, there remains a balance of Rs. 14,335 to be carried forward. The tea crop of Rydak amounted to 581,429 kilograms (against 640,814 kilograms), while that of Kartick was 272,986 kilograms (against 340,448 kilograms). The average sale price of the former was Rs 5.36 (Rs. 5.07) a kilogram, while that of the latter was Rs. 5.05 (against Rs. 4.83) a kilogram. Estimates for the current year have been provided for a combined total crop of 978,306 kilograms.

Baradighi Tea

The profit of Baradighi Tea Co. Ltd has increased from Rs. 7.79 lakhs to Rs. 9.71 lakhs for the year ended December 1960, after providing Rs. 1.61 lakhs (against Rs. 1.55 lakhs) for depreciation. The dividend has been raised from 25 percent to 30 percent, subject to tax, absorbing Rs. 3.60 lakhs. The allocation to provision for taxation amounts to Rs. 3.98 lakhs (against Rs. 3.14 lakhs). Making all necessary adjustments, there is a carry-forward of Rs. 75,258, against Rs. 68,917 brought in. The crop manufactured rose from 699,059 kilograms to 721,568 kilograms. The average sale price was Rs. 5.20 (against Rs. 4.83) a kilogram. Estimates for 1961 provide for a crop of 671,310 kilograms.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works at Jamshedpur during May 1961 was: pig iron 142,000 tons; steel ingots 136,800 tons; semi-finished for sale 34,900 tons and finished steel 70,900 tons.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for May 1961 are published below, the figures for April being given in brackets.

Production:	(In tons)	
Pig iron	100,815 (99,381)	
Steel ingots	70,912 (69,710)	
Salable Steel:		
(a) Semis	11,065 (10,898)	42,165 (51,144)
(b) Finished	31,100 (40,246)	
Despatches	39,812 (53,283)	

Bombay Market

SELECTED PRICES TOUCH PEAK LEVELS

NEW ACCOUNT OFF TO GOOD START

Wednesday Noon.

THE Bombay stock market closed the past week on a firm tone and prices of selected shares scaled new peaks. The new account got off to a very good start due to moderate carry-forward charges. Bulls were encouraged by higher *havala* rates of some shares. Prospects of easier money conditions helped improve sentiment. Rumours of buying by the Life Insurance Corporation also circulated. It was believed that there were shortages of scrip due to bigger deliveries.

Steel shares were buoyant on talk of an early rise in the retention price of steel. The stock market also hoped for an increase in the coming dividend of the Tata Iron and Steel Company. Tata Steel soared to Rs. 163.75, as did Indian Iron to Rs. 28.40. Prices of engineering shares also moved up in sympathy with steel scrip. Tata Locomotive were wanted up to Rs. 372 and Premier Construction were taken at Rs. 218. Mukand Iron rose to Rs. 30.25 and Larsen and Toubro gained at Rs. 47 on speculative support. Alcock Ashdown changed hands at Rs. 305. In motor shares, Hindustan Motors were steady at Rs. 22.23 on influential buying, but Premier Automobile were sluggish around As. 173.50.

The cotton mill section produced many bright features. Century were fancied up to Rs. 701 on prospects of expansion. Bombay Dyeing improved to Rs 69.30 on hopes of a rise in exports of piecegoods. Kohinoor were bought at Rs. 319 and Svadeshi came to hand at Rs. 276. Morarji were fancied at Rs. 449 on talk of a bonus share issue and Standard attracted support up to Rs. 1,555 on prospects of diversification of activities. Khatau were in demand at Rs. 602.50 and India United ordinaries were steady at Rs. 15.50. Apollo were transacted at Rs. 1.52 and Finlay were taken to Rs. 325.

Miscellaneous shares became steadier in sympathy with the general trend. In the sugar group, Belapur were dealt in at Rs. 290 and Phalton were transacted up to Rs 140.75. Walchandnagar Industries were bought at Rs. 175. In cement shares, Associated Cement were firm at Rs. 163.50 on talk of a rise in the price of the commodity. Digvijay were supported up to Rs. 157.50 by knowledgeable quarters. Mining shares were quiet, and Shivrajpur Syndicate were done at Rs. 78. Steamship company shares were quietly steady, and Scindia were transacted at Rs. 15.28. Business passed in Great Eastern Shipping around Rs. 15.08. Bombay Burmah improved to Rs. 664 on replacement buying. Rayon shares were fancied, and National Rayon gained at Rs. 586. Gwalior Rayon shot up to Rs. 55.50 due to shortages of scrip. Baroda Rayon met with support at Rs. 125.50. Chemical shares were steady, and business was done in Tata Chemical at Rs. 20.48. Polychem increased to Rs. 245 and Colour-Chem were higher at Rs. 387.50. Indian Dyestuff were transacted at Rs. 565. Ceat Tyre rose to Rs. 230 on replacement buying. Synthetics and Chemicals were steady at Rs. 172 on talk of a rights share issue in the ratio of one new share for every five held. Voltas were firm at Rs. 301 as were Tata Oil at Rs. 80.

Banking shares were steady, but turnover was limited. Bank of India were placed at Rs. 133.50 and Central Bank at Rs. 55.50. Insurance shares were steady, and New India Assurance were indicated at Rs. 64.30.

Prices of selected electric company shares improved on balance. Ahmedabad were done at Rs. 85 and Tata Power were placed at Rs. 1,055. Bombay Suburban came to hand at Rs. 90.

Madras Market

SENTIMENT IMPROVES ON FOREIGN AID NEWS

STATE LOANS ATTRACT ATTENTION

Tuesday Evening.

THE Madras stock market has been steady during the past week. Sentiment has improved on the news that India has obtained substantial loans from the "Aid-India Club" countries for the next couple of years. Operators were also encouraged by steadier advices from Bombay and Calcutta. Scattered business was done in Government securities, and attention was mainly confined to selected State loans. Sugar shares were bought selectively on reports of higher production. The planting group produced mixed trends. Rubber shares were steady on hopes of a better outlook for the commodity, but coffee shares were sold freely on reports of a decline in the price of the commodity. Tea shares were quietly steady and gardens' shares were bought according to crop reports. Cotton mill shares attracted interest on hopes of increased production. In the miscellaneous group, chemical shares were quiet, but shares of assorted industries were bought on good corporate reports.

In the banking group, business was done in Canara at Rs. 79.75 and in Indian at Rs. 170. Indian Overseas came to hand at Rs. 175 and Punjab National were transacted up to Rs. 21.60. Public utilities were quiet and routine business was transacted. Salem-Erode were traded at Rs. 12.25 and South Madras were done up to Rs. 9.80. Vellore came to hand at Rs. 13.35 and Cochin were sold down to Rs. 10.50.

In the sugar section, Deccan were transacted at Rs. 14.10 and E.I.D. slipped back to Rs. 43.75 on profit-taking. India were dealt in at Rs. 13.50 and Kirlampudi were bought up to Rs. 76.50 on producing a good report. Mysore were steady at Rs. 59, but United Breweries lost at Rs. 108 due to profit-taking.

Among planting shares, Blue Mountain were steady at Rs. 3.32, but Cochin Malabar reacted to Rs. 7.97 on pressure. Emerald Valley were transacted at Rs. 6 and Ouchterlony were sold down to Rs. 3.71. Business was done in Periakaramalai at Rs. 3.85 and Twyford were in demand up to Rs. 13 on paying a taxable ordinary dividend of 10 percent. Woodland changed hands at Rs. 8 on declaring a taxable ordinary dividend of 10 percent. Haileyburia were done at Rs. 14.35 on paying a taxable ordinary dividend of 15 percent. Business passed in Karikode at Rs. 8.50 on declaring a taxable ordinary dividend of 4 percent. Kil Kotagiri were steady at Rs. 4.92, as were Lucky Valley at Rs. 12.55. Mysore Coffee were quiet down to Rs. 5.45, but Nonsuch were wanted up to Rs. 28.10. Peermade were steady at Rs. 23.30, as were Peninsular up to Rs. 21.35. Coffee Lands were easier at Rs. 18.65 and sellers predominated in Devon down to Rs. 14.37.

In the textile group, Bangalore Woollen were supported up to Rs. 201.50 and Buckingham up to Rs. 215. Lakshmi improved to Rs. 167.50, as did Madura to Rs. 37.60. Mettur were in demand up to Rs. 400 on paying a taxable ordinary dividend of 30 percent. Cauvery Spinning were done at Rs. 13.25 on declaring a taxable ordinary dividend of 15 percent. Travancore Rayon were firm at Rs. 39.25 and South India Viscose gained at Rs. 187 on producing a good report. Tirupati were steady at Rs. 11.25 on paying a taxable ordinary dividend of 12 percent and Vijayeswari were wanted up to Rs. 139 on declaring a taxable ordinary dividend of 16 percent.

Among miscellaneous shares, Aluminium Industries were bought up to Rs. 23.85 and Ashok Leyland were steady at Rs. 9.35. India Cement were quiet at Rs. 6.25 and Brunton declined to Rs. 5.25 on passing the ordinary dividend. Kirloskar Electric were steady at Rs. 13.35, but Madras Cement were quiet at Rs. 91. Seshasayee Paper lost at Rs. 6.75, but Spencer attracted interest up to Rs. 23.25. Standard Motors were done at Rs. 16.75, but Mysore Paper lost at Rs. 22. Business passed in Textool at Rs. 181.50 and Tube Investment were in demand up to Rs. 280. Mysore Lamp were steady at Rs. 25.35 and F.A.C.T. were in demand up to Rs. 10.43. Enfield changed hands at Rs. 12.75 and Hindustan Lever were steady at Rs. 49.80.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. London Market

SHARP FALL IN STOCK VALUES

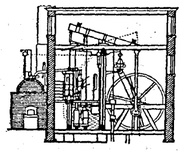
INDUSTRIALS AND GILT-EDGED MARKEDLY LOWER

London, 7th June.

THE stock market suffered the sharpest setback of the year and although some improvement was staged after the last week-end, prices showed widespread and substantial falls on the week. Prior to the week-end, profit-taking increased and buyers held off with the result that prices deteriorated sharply. The biggest influence in the market was the continuous stream of warnings by company chairmen that profit margins are being reduced. The volume of business contracted sharply and conditions were, and still are, much quieter than in recent weeks. All sections participated in the fall with industrial equities the hardest hit. Gilt-edged securities were out of favour and prices reached new lows in many cases. Foreign bonds were subdued, but Japanese and Greeks moved up. Dollar stocks improved after the week-end. Banking and insurance shares fell back with the rest of the market. Industrials fell sharply and in spite of the better trend which developed after the week-end, losses are often measured in shillings rather than pence. Many of the leaders are several shillings lower. Property shares lost ground. After a further improvement, gold shares fell back as interest subsided, and prices are lower on balance. Other mining shares moved within narrow limits. Oils are easier in most cases. Teas were mixed. Rubbers were idle.

Steam...

Inoustry's greatest power

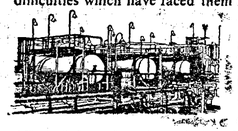


SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

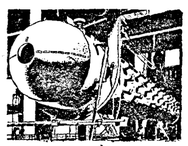
Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.



The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity. All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.



ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully *integrated* installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

LONDON INSURANCE LETTER

CLAIMS RISE MORE THAN PREMIUM INCOMES

THE British insurance market is resilient, and it would be an exaggeration to say that the market was disturbed by the growth of claims in the non-life categories; but the fact is not ignored, and the problems which it raises are seriously discussed. It is generally agreed that the proper approach to a solution is by way of reducing hazards rather than of raising premium rates. But raising rates may be an unavoidable alternative. It is a familiar complaint in the marine market, however, that competition keeps rates down even when a heavy aggregate of claims is weakening the basic position; and in other categories—notably in aviation insurance—an inevitable rise in rates may be long delayed. It is a disturbing fact that economic progress, while increasing the size and expanding the range of insurance, tends to increase claims more than premium incomes. The lay-out of an efficient modern factory, for instance, may involve a much greather fire hazard than is normal in an old-type factory of similar size, and the adverse trend of under-writing experience in the fire departments is partly a reflection of this change. The effect on the accident departments of the prosperity which has multiplied the number of motor-cars in advanced countries is notorious.

One of the major developments of the modern world is the St. Lawrence Seaway, but it has brought no joy to marine underwriters. The annual report of the Liverpool Underwriters Association, which was published last month, showed that among 1,068 transocean vessels which used the seaway in the 1959 season, there were as many as 854 casualties, estimated to cost $8.7 million. The 1960 season was much less disturbed, so it seems that many of the previous casualties were due to inexperience in new conditions. Nonetheless, a study group of the International Union of Marine Underwriters, which has been reviewing the problem of the seaway, has concluded that it has immensely increased the loss-potential in the area.

Mr. J. Gordon Stewart, chairman of the Association of Underwriters and Insurance Brokers in Glasgow, said at the annual meeting last month that the development of nuclear power and of new markets would lead to a general growth of marine business, considerably increasing premium incomes and vastly raising liabilities; yet in the meantime, the market is operating uneconomically, at rates too low to allow a proper margin to provide for a major loss.

New Organisations

The proportion of British insurance companies' marine, accident and fire premiums earned abroad is reckoned at about 70 percent. Through subsidiaries, branches or agencies, the companies operate in more than 100 countries. This pattern has been built up in many decades. A new arrangement between London and Continental centres may represent a new line of development. This arrangement is centred on the Northern Star Insurance Company, which was formed nine years ago by the Aequitas Swedish Reinsurance Company, of Malmo, to strengthen contacts between the British and Swedish insurance markets. Northern Star has now been acquired by a powerful group of British and Continental interests, headed on the British side by N. M. Rothschild, the merchant banking house. The purpose of the transaction, which divides the Company equally between the British and the Continental groups, is to develop "a bridge between the London and Continental insurance markets". Increasing the paid-up capital of the Company—from £150,000 to £250,000—is the next step; but, of course, the significance of such an enterprise cannot be measured in terms of paid-up capital. The Company will be a medium through which the groups will exchange business, mainly in the first place fire and casualty business, which Northern Star has been transacting in its old form.

Insuring Money

A risk which is attracting increasing attention—and for which the cost of cover is unavoidably increasing—is the theft of money. It is for sociologists to discuss why in an affluent society with full employment, the risk of theft of money in transit is much more serious than it was in less comfortable social conditions; insurance companies must simply note the fact of the moral deterioration and adjust their premium rates accordingly, while trying to reduce the hazard by suggesting sensible precautions.

Although the character of the risk is changed immediately when money is taken off the premises for another destination, the distinction between money on the premises and money in transit has become blurred; and usually now a single policy covers both, simply as insurance of money of a specified amount. The sums involved have tended to increase not only as a result of inflation but also because another modern characteristic of doubtful benefit to insurers—more labour is concentrated in big firms and the movement of money for wages corresponds.

UNDER 12 JUN 1961 PUBLIC DEPARTMENT

New Delhi

SUBSTANTIAL AID OFFERED BY CHIEF CREDITORS FOR THE THIRD PLAN

STATES DEMAND BIGGER PUBLIC SECTOR OUTLAY AT N.D.C. MEETING

(FROM OUR NEW DELHI CORRESPONDENT)

THE Washington meeting of the "aid India" consortium and the session of the National Development Council in New Delhi were the two outstanding economic events of the past week. It appears that the U.S.A. is assuming the same position in the consortium as the Central Government does in the Indian Union, as far as the financing of the plans is concerned. Five years ago, the late Pandit Shukla almost walked out of the Planning Commission because the latter would not agree to his plan outlay. Ten years of planning has shown that it is the Central Government which, in the ultimate analysis, has to finance the projects included in the plan on the specific assurance that money for them would be found by the States. An identical situation was created by some States during last week. They urged for a bigger plan outlay on a two-fold plea, namely, that the Planning Commission has underestimated resources and that they would raise their own resources to finance the additional outlay suggested by them. The warning by the Finance Minister that the revised outlay of Rs. 7,500 crores was based on straining almost every source of raising finances was apparently not appreciated. For over the past two years, a great deal of money has been spent on preparing estimates of this country's resources. Pandit Pitamber Pant worked out "projections" proving the availability of bigger resources than Rs. 7,500 crores. Ultimately, the sum of Rs. 7,500 crores was worked out, in which the real finances were placed at Rs. 550 crores, the rest being assumptions and speculations. Even the present sum was regarded as inadequate by the States, which demanded at least Rs. 8,000 crores. Employing his usual vague phraseology, the Prime Minister would not change the financial limit of Rs. 7,500 crores "for the present, but we should lay more stress on the fact that circumstances do indicate that these figures can be improved upon." Mr. Nehru emphasised that there was inadequate appreciation by the people that India was at the crossroads of her history. "It might not be easy to create a raging, flaming enthusiasm, but that was what was required." The State Ministers, in particular, applauded the Prime Minister's speech, knowing fully well that it was the Government of India, which would have to find the resources for the big, bigger and still bigger plan. It may be added that to escape a note of dissent by the then member of the Planning Commission, Mr. K. C. Negoy, the targets for agricultural production were raised five years ago, with what results, is well known by now. This is not the end of the story. The following table will show the production targets for 1960-61 and the actual performance:

	Unit	Production targets	Actual production
Nitrogenous fertilisers (in terms of nitrogen)	('000 tons)	290	110
Phosphatic fertilisers (in terms of P.O.)	('000 tons)	120	55
Textile machinery	(Rs. crores)	17.0	9.0
Cement machinery	(Rs. crores)	2.0	0.6
Paper machinery	(Rs. crores)	4.0	—
Aluminium	('000 tons)	25.0	18.5
Newsprint	('000 tons)	60.0	25.0
Chemical pulp	(tons)	30,000	—
Soda ash	('000 tons)	230	145
Caustic soda	('000 tons)	135	100
Dyestuffs	(million lbs)	22.0	11.5
Cement	(million tons)	13.0	8.0

Letter from Mr. Nehru

As a preleude to the Washington meeting, the Prime Minister himself addressed letters to the members of the "Aid India Club", urging them to loosen their purse strings. The Finance Minister also addressed a letter to the World Bank. On 2nd June, 1961, the consortium announced its commitment to contribute $2.25 billion to finance the first two years' outlay of the third plan. In April last, the U.S.A. made the proposal to provide $1,000 million, provided $1,000 million were raised by the other members of the Club. As the other members were unable to raise the required amount, the U.S.A. has increased its contribution from $1 billion to $1,045 million. After the U.S.A., comes West Germany with $225 million in the first year and $139 million in the second, besides refinancing the Rourkela loan of $61 million in 1963, thereby raising its committed assistance to $425 million. Britain's contribution in the first year will be $182 million and in the second, $68 million. The following is the detailed break-down of the assistance offered (in million dollars):

	1961-62	1962-63
World Bank and I.D.A.	225	150
U.S.A.		
West Germany	225	139
United Kingdom	182	68
Japan	60	20
Canada	28	28
France	15	15
	1,305	9,20

Another meeting of the Club is scheduled to be held in October, to bridge the gap of $220 million in aid funds needed for the last year of the second five year plan.

Finances for Public Sector

The following table will show the source of finances for the public sector in the third plan:

	(Rs. crores)
Balance from current revenues (excluding additional taxation)	550
Contribution of the railways	100
Surpluses of other public enterprises	450
Loans from the public (net)	800
Small savings (net)	600
Provident funds (net)	285
Steel equalisation fund (net)	105
Balance of miscellaneous capital receipts over non-plan disbursements	170
Total of 1 to 8	3,040
Additional taxation including measures to increase the surpluses of public enterprises	1,710
Budgetary receipts corresponding to external assistance	2,200
Deficit financing	550
Total	7,500

The following table will show the financing of foreign exchange requirements for the third plan:

	1961-62	(Rs. crores) Total third plan
A. Receipts		
(i) Exports	667	3,700
(ii) Invisible (net) excluding official donations)	22	Nil
(iii) Capital transactions (net) (excluding receipts of official loans and private foreign investment)	—133	= 550
(iv) External assistance	575	2,600
(v) Draft on foreign exchange reserves	—	—
Total (1 to 5)	1,131	5,750
B. Payments		
(i) Imports of machinery and equipment for plan projects	325	1,900
(ii) Components, intermediate products, etcetera, for raising production of capital goods	60	200
(iii) Maintenance imports	746	3,650
Total (1 to 3)	1,131	5,750

It will be seen that the overall estimate of external assistance to be drawn remains unchanged at Rs. 2,600 crores—apart from P.L. 480 assistance.

Third Plan Programmes of Development

The salient features of the development programmes of major industries in the third plan are as follows:

METALLURGICAL INDUSTRIES

Iron and steel: The overall targets proposed for this industry are 10.2 million tons of steel ingot capacity and 1.5 million tons of pig iron for sale. The estimates of requirements of pig iron and of finished steel by 1965-66, which have provided the background for the planning of this industry, are indicated below along with the figures of the installed capacity available at the start of the third plan. A basic assumption made in connection with the demand forecast is that the current selling price of steel will hold good for the third plan period.

CATEGORYWISE BREAK-UP OF DEMAND FOR IRON AND STEEL

End-product of steel	Estimated demand by 1965-66	Capacity in existence in early 1961
	(Figures in '000 tons)	
Heavy rails and fishplates	400	345
Heavy structurals and broad-flanged beam	550	445
Sleepers and crossing sleepers	200	180
Medium and light structurals		
Rounds and flats including rounds for nuts, bolts and screws	1,300	1,305
Tinplates	300	150
Plates 3/16in. and up	650	300
Wires including wire ropes	400	220
Hoops and box strapping	50	45
Sheets	1,200	740
Strips and skelp for tubes	400	188
Forging blooms and billets	300	132
Wheels, tyres and axles	100	30
Total	7,300	4,760
Pig iron for sale	1,500	660-870

The share of the private sector in the steel target is 3.2 million tons of ingots. The existing installed capacity of the Tata Iron and Steel Company and the Indian Iron and Steel Company is 3 million tons. The expansion of capacity for steel in the private sector is expected to come from the installation of scrap-based electric furnaces which will augment the supplies of billets to re-rollers. The supply of billets to re-rolling mills from the main producers of steel is visualised at 1 million tons by the end of the third plan. As for saleable pig iron, the output from the private sector is provisionaly placed at about 300,000 tons—to be achieved through the expansion of iron making capacity based on low shaft blast furnaces and/or electric smelting of iron ores. The levels of capacity to be reached under these programmes in the public sector are as follows:

Scheme:	Target capacity Steel ingots (million tons)	Pig iron (million tons)
(a) Expansion of:		
Bhilai	2.5	0.3
Rourkela	1.8	—
Durgapur	1.6	0.3
Mysore Iron and Steel Works	0.1	—
(b) Bokaro steel project	1.0	0.26
(c) Neyveli pig iron project	—	Capacity to be still decided

The Neyveli pig iron project on which considerable preliminary investigations have still to be conducted concerning the process as well as the raw materials intended to be used, represents an intermediate stage towards the establishment of a steel plant of about 500,000 tons in the southern region. The financial provision included for this scheme in the third plan covers mainly the requirements of a high temperature carbonisation plant for the production of lignite coke.

The expansion programme of the Mysore Iron and Steel Works comprises mainly the spill-over expenditure on the ferro-silicon plant and provision for steel-making by the L.D. process and for a light structural mill.

The Bokaro Project

The layout of the new steel plant in Bokaro is being planned for a capacity of 2 million tons of steel ingots, but as the first phase of development, it is proposed to install facilities for the production of 1 million tons. This plant, it is expected, will specialise in the production of different types of flat products. The exact types to be produced in the first phase and the nature of the finishing facilities to be provided, therefore, are currently being examined. On the completion of these development programmes, the capacity for mild steel of the public sector steel works will be raised from 3 million tons to 7 million tons, making, along with the capacity of the private sector, a total of 10.2 million tons of ingots.

The overall investment required for the public sector steel development programmes included in the third plan is estimated at Rs. 525 crores. This is inclusive of the investments required for increasing the production of limestone in Nandini and iron ore in Dalli Rajara and Barsua in the case of the expansion programmes. It also includes the investments required for the additional production of coal and iron ore for the Bokaro steel plant and the expenditure on townships at all the four steel works. The total production of finished steel in the country during the third plan period is tentatively estimated to be of the order of 24.1 million tons inclusive of an output of 300,000 tons from the Bokaro steel plant in 1965-66. The annual break-up of production is visualised as follows:

ESTIMATE OF FINISHED STEEL PRODUCTION

Year	(Million tons)
1961-62	3.5
1962-63	4.0
1963-64	4.3
1964-65	5.5
1965-66	6.8
Total	24.1

On the basis of the above forecast of production and of the tonnages of different end-products likely to be available, shortages are expected to be significant, particularly in the initial years of the plan period, in the case of flat products, that is, tinplate, sheets, skelp and plate. This will call for the formulation of a scheme of priorities for determining the allocation of flat products to different classes of consumers. *Prima facie*, it should be possible to narrow down the margin between the demand and the indigenous supply of steel products in short supply by free inter-change of steel ingots between the public sector plants, so as to achieve the most intensive use of the rolling

mill facilities for flat products. This possibility should receive attention in production planning in the light of the situation which may obtain from year to year.

The output of the main producers of steel will include electrical steel sheets produced by T.I.S.C.O. and at the Rourkela works. Similarly, finished steels turned out by the producers operating on electric-furnace billets and by the ordnance factories will include spring steels and free-cutting steels. The level of production of these special varieties of mild steel will be related to the demand estimate for 1965-66 placed at 75,000 tons for spring and free-cutting steels and 70,000 tons for electrical steel sheets.

Tool, alloy and stainless steels: The second five year plan visualised the establishment of an alloy, tool and special steels plant in the public sector. Preliminary project reports for a plant of 25,000 tons annual output in terms of different finished products were received in 1958 from some of the leading producers abroad. Action on the implementation of this scheme was delayed as a result of the decision taken to get a more detailed project report, the scope of which was modified in the course of its preparation to facilitate the establishment of a more viable unit in line with the higher levels of demand for alloy steels visualised under the third plan. After the receipt of the report from the consultants in July 1960, it was decided in November 1960 to establish in Durgapur an alloy and tool steels plant of 48,000 tons annual output, with built-in capacity in certain primary units so that it could be rapidly expanded to 100,000 tons. The current heavy demand for imports of these high priced but essential raw materials of the engineering industries is a serious problem on maintenance account. The manufacture of tool, alloy and stainless steels has, therefore, to be assigned very high priority in the third plan from the point of view both of the requirements over the five-year period and of the probable long-term growth of demand for these products. The demand estimates for 1965 and 1970, which have been kept in view as a guide for planning in this field, are indicated below along with the end-product pattern of the public sector project to be established in Durgapur.

PROJECTION OF DEMAND FOR ALLOY, TOOL AND SPECIAL STEELS

(Tons of finished steel exclusive of electrical steel sheets, spring steels, and free cutting steels)

	1965	1970	Output capacity of the Durgapur alloy steel project
Tool steels	42,000	70,000	13,000
Constructional sheets	100,000	241,000	17,500
Stainless steels	50,000	68,000	17,000
Die and other alloy steel	8,000	10,000	500
Total	200,000	389,000	48,000

The projected Durgapur alloy steel plant will incorporate some of the latest equipment and processes for the manufacture of these products developed recently in advanced countries. Thus, it is proposed to install electric soaking pits in preference to gas-fired pits. The desirability of using sponge iron instead of scrap as the starting raw material and of introducing continuous casting facilities is expected to be kept in view in connection with the further expansion of this plant. In the current phase of development, it is planned that the plant should draw supplies of pedigree scrap from the adjoining Durgapur steel works. The outlay on the project is estimated at Rs. 50 crores in all, of which Rs. 20 crores would be the foreign exchange element.

The ordnance factories of the Ministry of Defence are expected to function as a second source of supply of alloy steel in the public sector. The combined output of the Ishapur and Kanpur ordnance factories, mainly in the category of constructional steels but including some output of spring steels as well, is estimated at 50,000 tons. The rest of the development in this industry are visualised in the private sector, where additional production facilities will be planned considering the deficits in different categories of these products still outstanding.

Aluminium: In the field of non-ferrous metals, aluminium is expected to continue to retain its dominant position. The target of 87,500 tons set for 1965-66 is expected to be achieved as a result of the following projects in the private sector which have already been cleared for implementation:

(1) Expansion of the Indian Aluminium Company's plant in Hirakud by 10,000 tons a year and the Alwaye plant, by 5,000 tons a year;

(2) Establishment of a smelter in Rihand of 20,000 tons annual capacity;

(3) Establishment of a smelter in Koyna of 20,000 tons annual capacity;

(4) Establishment of a smelter near Salem of 10,000 tons annual capacity; and

(5) Expansion of the plant of the Aluminium Corporation of India by 5,000 tons a year.

In the context of the rising demand for electrolytic copper and the relatively meagre possibilities of substantially increasing its domestic production during the third plan, further expansion of capacity for aluminium production appears *prima facie* desirable. The amount of such expansion would mainly have to be determined by the pace at which it is considered feasible from the technological angle to substitute aluminium for copper over the next five years, although the possibility of exporting aluminium would also be a relevant consideration. The additional foreign exchange needed for developing further capacity would be quite considerable if, as seems almost certain, arrangements would also have to be made for the connected power facilities. The attractiveness of new proposals for further expansion of aluminium production would depend largely on the extent which they can provide for these additional foreign exchange requirements.

Copper: The production of the electrolytic copper will begin in the early years of the third plan with the commissioning of the unit in Ghatsila by the Indian Copper Corporation. A firm time schedule for the installation of the copper smelter associated with the scheme for the exploitation of the Khetri and Daribo copper deposits is still to be worked out. The likely contribution from it in the third plan period cannot, therefore, be accurately forecast at this stage.

Zinc: The production of zinc for the first time in India is expected to be achieved by the middle of the third plan period with the commissioning of the zinc smelter based on zinc concentrates from the Zawar mines in Rajasthan. It is also being equipped to operate a by-product sulphuric acid plant based on the smelter gases which will be used for the manufacture of phosphatic fertilisers. The annual capacity of the plant will be 15,000 tons.

ENGINEERING INDUSTRIES—HEAVY AND LIGHT

Large-scale developments are proposed in this sector in view of the prospects of increased supplies of pig iron and steel, the emphasis on machinery manufacture and the scope in many instances for wide employment opportunities in relation to investment. The public sector will mainly concentrate on projects for the production of heavy machinery and heavy machine building. Apart from this, targets have been proposed within this field—to be achieved mainly by private enterprise—for an extensive range of manufactured items, that is, agricultural machinery and constructional equipment like tractors, diesel engines, road rollers, dumpers and shovels; power distribution and measuring equipment like transformers (below 33 kV), electric cables and wires, and house-service meters; rail and road transport items like locomotives, wagons, passenger coaches, commercial vehicles (buses and lorries); complete plants for the setting up of new units for the sugar, paper, cement and textile industries and certain chemical industries, steam-raising equipment (boilers) and machine tools, consumable stores like welding electrodes and durable consumer goods like passenger cars, sewing machines, bicycles and electric fans. These targets do not, however, cover all lines of expansion.

The production of new items in this field, of which various types of machinery are the most important, is expected to be developed both in independent plants specially established for the purpose like the A.V.B. (Associated Cement-Vickers-Babcock Wilcox) plant in Durgapur for the manufacture of equipment for the cement industry and high pressure boilers, and also by the diversification of the output of engineering workshops already in operation or currently under establishment. In the latter case, the investment required for developing the production of new items of machinery will be substantially lower than would otherwise be the case. This is the explanation for the apparently low estimates of investments as opposed to estimates of output in certain industries. In some of the manufacturing programmes, there is also the practice of entrusting the production of certain components to ancillaries or even major establishments with surplus capacities. In the circumstances, the normal relationship between output and investment cannot be applied. In the following paragraphs, the programmes in the principal sectors of the engineering industries are briefly outlined:

Foundry and Forge Shops

Foundry-forge capacity is of crucial importance for the machinery manufacturing programmes. Within the overall targets set for this field in the third plan—1.2 million tons of grey iron casting, 200,000 tons each of steel casting and forgings—the accent in the public sector programmes is largely on production in the higher tonnage ranges for heavy machinery manufacture. The facilities which are being planned in the public sector projects are as follows: capacity for 45,000 tons of steel castings, 38,000 tons of grey iron castings and about 70,000 tons of steel forgings will be created in the foundry-forge which is being set up in Ranchi. Further capacity will become available from foundries attached to the steel plants in Durgapur, Bhilai and Rourkela, to the heavy electrical project, Bhopal, to the mining machinery project, Durgapur and to Hindustan Machine Tools. A steel foundry is under construction at the Chittaranjan Locomotive Works. The total capacity expected to be created in the public sector as a result of these schemes is as follows:

CAPACITY FOR CASTINGS AND FORGINGS IN THE PUBLIC SECTOR

(figures in tons)

	Grey iron castings	Steel castings	Steel forgings
Foundry-forge project Ranchi (third stage)	38,000	45,000	69,700
Durgapur mining machinery plant (30,000 tons capacity for mining machinery)	11,000	6,000	7,000
Hindustan Machine Tools, Bangalore	6,000	—	—
Steel plants: Durgapur Bhilai Rourkela	75,000	15,000	
Chittaranjan Locomotive Works, Chittaranjan	3,000	7,000	
Others (including foundries attached to railway workshops)	6,000		
Total	139,000	73,000	76,700

Casting and forging will also be required by several other machinery projects in the public sector included in the third plan, but a clear picture of these requirements and the best arrangements for meeting them, that is, whether through captive foundry-forges or through independent units, or a combination of both will only emerge when the project reports are received. A substantial part of the new capacity in the private sector is expected to come up as the result of demand stemming from the expansion of the motor-vehicle industry and the manufacture of machinery for textiles, cement, sugar, paper and similar capital goods industries.

Industrial Machinery

The principal projects of the public sector in this field are the heavy machinery plant near Ranchi; the mining machinery project, Durgapur; the heavy electrical equipment plant, Bhopal, and two other heavy electrical projects for which locations are currently under study by an expert committee. The heavy machinery plant, which is being set up near Ranchi, on its expansion to 80,000 tons output a year will be able to supply the bulk of the equipment required for adding to steel-making capacity at the rate of about 2 million tons annually. The expanded mining machinery project in Durgapur is being designed for an annual output of 45,000 tons of equipment. The three heavy electrical equipment projects are designed to ensure from indigenous sources a wide range of electrical equipment sufficient to enable power generation to be increased at an annual rate of 2 million kW a year from 1971 onwards. They will also produce heavy motors, rectifiers and control equipment. The manufacture of high pressure boilers for thermal power plants with an annual capacity of about 28,000 tons (2,500 tons of steam an hour) forms part of the heavy electrical equipment project tied with assistance from Czechoslovakia. The targets set for the production in the private sector of complete plants to meet the demands of cement, paper, sugar and cotton textile mills and the levels of indigenous content visualised under each are as follows:

PRODUCTION TARGETS FOR SELECTED ITEMS OF INDUSTRIAL MACHINERY

Item	Standard size of plant (tons a day)	No. of plants	Value of plants excluding auxiliaries (Rs. crores)	Indigenous content
Cement mill machinery	500	6 to 7	4.0 to 5.0	90
Paper mill machinery				
(a) large plant	50	4	6.5 to 7.0	70
(b) small plant	10	4		
Sugar mill machinery	1,000 to 1,200 of sugarcane	14	10.0	85
Cotton textile mill machinery				
(a) spinning mill	12,000 spindles		20.00	85
(b) composite mill	12,000 spindles and 300 looms			
Sulphuric acid plant	50	10	1.3	80

It is highly desirable that the targets set for 1965-66 for machinery items should be achieved and on the basis of the indigenous content specified in each case. The consortium approach for the manufacture and supply of complete plants for factories by groups of firms in association—which has been adopted for the manufacture of sugar mill machinery—may facilitate a speedy advance in other fields also.

Railway Rolling Stock

In this field, the most important development in the public sector will be the diversification of the Chittaranjan Locomotive Works so as to include the production of electric locomotives. The traction motors for these electric locomotives, it is proposed, will be manufactured at the heavy electrical works, Bhopal. The project for the manufacture of diesel electric and diesel hydraulic locomotives included in the railway plan will make a major contribution towards the achievement of self-sufficiency in railway equipment. The Rs. 12-crore diesel loco project will have an annual capacity of 140 units with a turnover value of Rs. 10 crores. The diesel hydraulic engines will make use of the Suri transmission, an improved design developed recently by an engineer of the Indian railways which has been licensed for exploitation in West Germany. The private sector will continue to manufacture electric multiple coaches, wagons and M.G. steam locomotives.

Shipbuilding

The programmes under shipbuilding include the expansion of Hindustan Shipyard Ltd and the construction of a drydock in Visakhapatnam. With the completion of these developments, the Visakhapatnam shipyard will be capable of producing ships of a total tonnage of 50,000 to 60,000 d.w.t. a year. A second shipyard in Cochin and a scheme for the manufacture of marine diesel engines form part of the public sector programme. The former is estimated to cost Rs. 20 crores and the latter Rs. 5 crores. The manufacture of smaller vessels for coastal and river traffic, tugs and boats and propelling machinery for them will continue in the private sector. Construction activity will be mainly on a jobbing basis and no specific targets have, therefore, been fixed for these "Custom-built" items.

Sulphuric Acid

As a major barometer of industrial activity, the target of 1.5 million tons set for sulphuric acid provides an indication of the tempo of all-round expansion planned The growth of sulphuric acid production in the public sector is visualised in conjunction with fertiliser production, by-products recovery and pickling operations at the steel plants, petroleum refining and manufacture of organic intermediates and drugs, and uranium extraction from the ores. The overall demand for the acid in the public sector by 1965-66 is expected to be about 450,000 tons, compared with a capacity of about 150,000 tons in existence in the public sector at the end of the second plan. The break-up of the estimated consumption of this acid in 1960-61 and the requirements in 1965-66 are assessed as follows:

	Estimated consumption in 1960-61 ('000 tons of sulphuric acid)	Estimated requirements in 1965-66
Fertilisers ...	210	890
Steelworks ...	26	90
Rayon and staple fibre	59	135
Sulphates and other inorganic salts ...	24	40
Petroleum refining ...	8	20
Miscellaneous ...	33	185
Total ...	360	1,300

Whereas the production of sulphuric acid has so far been based on sulphur, a part of the capacity proposed to be set up in the third plan period will be linked with by-product smelter gases (zinc and copper smelters) and with pyrites from the Amjor deposits in Bihar. The pyrites-sulphuric acid plants, if established in conjunction with large-scale fertiliser plants near the steelworks in Durgapur and Bokaro, could find a profitable outlet for the "spent oxide" for use in the sintering of iron ore.

Organic Chemicals

Large-scale developments are visualised in the fields of organic chemicals almost for the first time. These may be said to have followed the build-up in the demand for many items as a result of the development of allied chemical industries over the last decade, that is, plastics, dyestuffs, and drugs. New industries visualised in the third plan like nylon and terylene and further expansion in the existing lines over the next five years have been taken into account in fixing the levels of development appropriate in this field. The under-mentioned targets for the three major items have to be regarded as provisional, since it is not yet clear at what pace the industries, which would be important customers for the products and are to be established in the country for the first time, are likely to develop.

	Capacity target for 1965-66
Phthalic anhydride ...	15,000 tons
Phenol ...	15,000 tons
Methanol ...	40,000 tons

The manufacture of plastic monomers, vinyl chloride and styrene, butadiene, carbon black and rubber chemicals, butyl alcohol and its esters, citric acid and oxalic acid, which are proposed to be undertaken for the first time in the private sector, deserves mention in this connection. Major developments are also visualised in the public sector through the basic chemicals and intermediate plant (B.C.I.) near Panvel in Maharashtra State. The B.C.I. project as the supplier of intermediate chemicals is firmly linked with the synthetic drugs project, proposed for establishment in Sanatnagar near Hyderabad. As a result of these two projects, valuable technical know-how in a virgin field is expected to become available during the third plan period. The manufacturing programme under the B.C.I. project covers the manufacture of 40 organic intermediates with an aggregate output of 25,160 tons. Provision is also being made for further expansion in due course by about 15,000 tons. Several basic inorganic chemicals are consumed in the manufacturing operations which include, among others, chlorination, sulphonation, alkalino, fusion, nitration, reduction and oxidation. The manufacture of some of these inorganic chemicals is also visualised in captive plants within the project.

Expert Report on Haldia

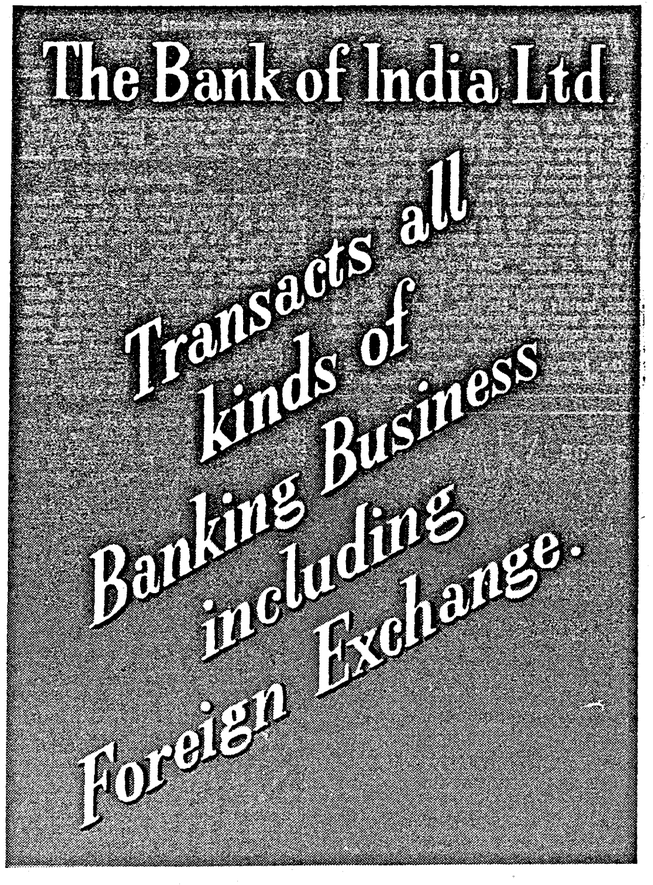
The U.N. expert from Rotterdam, Mr. Posthuma, has cautioned the Central Government against rushing through with the Haldia port project without adequate hydraulic and other data. In his report which he has submitted to the Government, Mr. Posthuma, it is understood, has expressed doubts about some of the premises on which the Haldia project is based. The report has great significance because the World Bank is likely to be influenced by Mr. Posthuma's views on the project in considering a loan for the Haldia project. In his report the Dutch expert says that for an outlay of between Rs. 25 and 30 crores, Haldia port should have an assured traffic of four million tons, whereas the Government of India's estimates place the traffic at 1.5 million tons. This he believes will be far short of the minimum to justify so much expenditure on the development of the port. Analysing the nature of the cargo likely to be handled at the proposed Haldia port, Mr. Posthuma doubts whether adequate provision is really necessary at Haldia to handle foodgrains and oil which will be the main items of import into the proposed port. He has pointed out that foodgrains are a temporary item of import which could not be relied upon for any calculations of assured tonnage for the port. As for the storage facilities for foodgrains at Haldia, he has rejected the suggestion of the Food and Agriculture Ministry that a silo should be constructed at the port for the purpose. He says that even if the silo as suggested by the Food Ministry were to be built, it would be on the shore and away from the railhead or the road which would connect the port with the hinterland. He considers the laying of a pipeline from Haldia to Budge Budge as too vague a proposal to be relied on for any realistic consideration of the project. It would be wrong, he says, to take the suggestion seriously as long as no concrete proposal was made by any oil firm as to how and when the pipeline would be laid. Mr. Posthuma furthermore has stressed the importance of detailed hydraulic research. Silting of the Hooghly near Haldia which makes the depth of the stream variable, would pose the biggest problem to Haldia port. A U.N. expert is already making hydraulic studies of the area. Mr. Posthuma has asked the Government to pay serious attention to whatever recommendations this expert makes because his findings, he thinks, would be crucial to any plan for developing Haldia. Drinking water will be another problem in the proposed Haldia port township. The water of the river Haldia which passes by the port is saline and, therefore, not drinkable. Tubewells 700 feet deep would have to be dug to secure drinking water for the Haldia township, Mr. Posthuma is reported to have said.

Trade Delegation from North Korea

A trade delegation from North Korea led by the Vice-Premier, Mr. Li Joo Yun visited India from 18th May to 2nd June. The delegation had discussions with the officials of the Central Government for the promotion of trade relations between the two countries. On the conclusion of these talks, letters were exchanged in New Delhi between Mr. K. R. F. Khilnani, Joint Secretary, Ministry of Commerce and Industry of the Government of India and Mr. Kei Eung Tai, the visiting Deputy Minister of Foreign Trade, setting out arrangements for the development of trade. The arrangements are for a period of one year beginning from 1st june, 1930. Under the arrangements, trade between the two countries will be in terms of non-convertible rupees and on a balanced basis. Available exports from India include ferro-manganese, leather goods, cotton textiles, handicrafts, vegetable oils, mica and shellac. Available imports from North Korea are chemical fertilisers, electrolytic zinc, high speed and special steels, anthracite and various types of equipment. It is expected that trade between the two countries will be diversified and increased in volume as a result of the discussions. Agreement has also been reached on the question of establishing offices of trade representatives in both the countries for the promotion of trade relations.

U.K. Collaboration in Coal Industry

The British National Coal Board expert, Mr. Elliot, is expected here in July in connection with Indo-British collaboration for the development of deep coal mines. He will be accompanied by four others including the chief geologist, the head of the production and development section and a shaft sinking expert.



T. D. KANSARA, GENERAL MANAGER.

London

INCREASE IN U.K. INDUSTRIAL PRODUCTION FORECAST

CONSUMER DEMAND AND FIXED INVESTMENT EXPECTED TO RISE

(FROM OUR LONDON CORRESPONDENT)

AFTER a year of level industrial production, a decided swing towards expansion is about to begin, according to the *Economic Review* issued by the National Institute of Economic and Social Research. The forecast runs as follows: allowing for some rise in exports and for moderate stock accumulation, the total real demand seems likely to rise by about 3½ percent between the beginning and end of 1961. As only a small rise in imports seems likely, the total output will probably go up by rather more than this over the year. As there was no sign of increased production in the first quarter, the rate of growth in the second half of the year is likely to be at an annual rate of well above 3½ percent. Consumer expenditure, the *Review* suggests, probably went up by over 2½ percent in the first quarter, largely because of the recovery in motor-car sales. As the output did not rise, the first effect seems to have been on stocks. From now on the output should expand fairly fast. Fixed investment looks like rising steeply to the end of the year, although factory building plans suggest some slowing down in 1962. Consumer expenditure in real terms should also rise further, although more slowly than in the first quarter; not many more wage increases are expected before the autumn, and prices may continue to go up faster this year than in the last.

The Institute writers wisely add that this forecast of expansion will only come true if there is no Government intervention. They do not think that capacity will be strained this year by the rate of expansion they expect, and they doubt whether there will be any real need for restricting demand. The balance of payments deficit is now decreasing and may swing into surplus for a time, but by the end of the year the current account is expected to be once again in the red. This is admitted to be the main problem this year, but fiscal regulators designed to influence the internal demand cannot (the writers argue) provide a satisfactory solution to the problem. Next year, if demand continued to grow faster than capacity, the economy would become overstrained and the new fiscal powers might have to be used.

Exports not Rising Yet

The full analysis of the April trade figures, now issued by the U.K. Board of Trade statisticians, contains one good and one bad piece of news. First, the London dock strike which started on 22nd April is now considered to have had no effect on the April export figures and only a very small effect on the import figures. This means that the reduction of the monthly trade gap to the lowest figure for two years was more genuine than first comments suggested. On the other hand, the Board says that "the course of the export figures so far this year does not suggest any marked increase after the end of 1960." Considerable increase in exports of machinery, chemicals, commercial road vehicles and ships were offset by lower exports of motor-cars, metals and textiles. During the last three months, western Europe continued to be the most buoyant market, with exports to Italy, France, and Holland rising particluarly strongly.

But the improvement in the trade balance, which will of course turn out much better in the balance of payments figures, is still mainly due to a fall in imports. The greatest reduction here is in arrivals of food, beverages, and tobacco, which were particularly high late last year. Industrial materials were also down, and imports of finished manufactures increased only a little further this year.

Car Production Down: Exports Up

Britain's total motor-car production for April was 77,404, the U.K. Board of Trade has announced. The weekly average of 19,351 was 205 down on the previous month, although 4,245 up on the February figure. Exports, however, rose to 31,784, compared with 26,359 in March and 27,119 in February. The production of commercial vehicles totalled 37,634, a weekly average of 9,409, compared with the weekly averages of 9,272 for March and 10,032 for February. April exports were 13,596, compared with 16,447 and 16,689 for March and February, respectively. For the first quarter of this year, the total motor-car production of 218,003 represents a weekly average of 16,769. In the corresponding quarter of last year Britain made 392,644 motor-cars —a weekly average of 30,205.

Record Bank Advances

It is clear from the May statements of the London clearing banks that the demand for bank loans is still increasing. Advances excluding transit items, rose between 14th April and 17th May by £22.4 million to a new record total of £3,570.9 million. The latest increase follows an expansion of £69.7 million in the preceding period of five weeks. It may also be compared with an increase of £39.7 million in the corresponding period of last year. Since clearing bank loans to the nationalised industries during the four weeks up to mid-May fell from £64.1 million to £61.6 million, it follows that lending to the private sector of the economy has increased by about £25 million. The banks have obviously responded to the continuing keen demand.

The latest statements show only a trifling change in investment holdings, which are down by £6.4 million to £1,106 million. The inference is that the pressure to sell gilt-edged has now definitely subsided. This is implicit in the latest evidence on the liquidity position. From 32.04 percent in mid-April, the average liquidity ratio of the clearing banks has fallen, but only slightly, to 31.48 percent. A year ago, the ratio was 31.61 percent.

Sterling Outflow

Figures released by the U.K. Treasury show that in the first quarter of the current year, £168 million of sterling balances were withdrawn from London. This is more than twice the amount of £75 million by which the gold reserve declined during the three months. The distribution of the withdrawals is rather surprising: countries of the overseas sterling area reduced their balances by £37 million, those of the dollar area by £160 million, "other western hemisphere countries" by £17 million, and other non-sterling countries by £2 million. On the other hand, member-countries of O.E.E.C. increased their sterling holdings £48 million, no doubt partly through the basic agreement between central banks which began to operate early in March.

Even after the heavy drain of the first quarter, total sterling balances held by overseas non-sterling countries were still £454 million larger than a year earlier. But the rest of the sterling area, which has been running heavy payments deficits, reduced the London balances by £227 million Sterling held by O.E.E.C. countries was still no less than £339 million higher than a year ago. Since the end of March, to which these figures refer, the outflow is known to have continued on a moderate scale. As the overseas sterling countries still held £2,443 million and non-sterling countries £1,276 million of balances there is obviously still large scope for further withdrawals from both sides.

The Labour Market

Unemployment fell by over 40,000 during the five weeks ended 15th May. On that date, just under 300,000 persons were registered as unemployed—only 1.3 percent of the employed population. Of the total, 282,233 were wholly unemployed and 17,039 were temporarily stopped. During the past three months, the number of people wholly unemployed has fallen by 86,000, which is no more than the normal seasonal decrease at this time of year. Unemployment was, however, already unusually low during the last winter. For the first time since the last summer, there are now more jobs on offer than people to apply for them. The number of vacancies notified to the labour exchanges and remaining unfilled on 10th May was 353,519. This was 16,500 more than in April and—what is more important—over 50,000 more than the total number of persons registered as unemployed five days later. The "manpower gap" has not only been closed but reversed. In practice, the two sets of figures do not match, as notified vacancies are mostly for skilled or semi-skilled workers, while unemployment at this low rate must consist mainly of unskilled labourers or of people in localities with special employment problems.

Ever since the second World War, the relative movement of unemployment and vacancies has been watched by economists and other observers —including the U.K. Chancellor or the Exchequer —as an indicator of trouble. Whenever Britain had more vacancies than unemployed a financial crisis followed not long afterwards. For the past week or two, Mr. Selwyn Lloyd has been reminding the public of the "regulators" he introduced in the April Budget to restrain the demand for goods and services if there should be overstrain in the economy. He will not have the power to impose either of these regulators—a surcharge on all indirect taxes or a payroll tax collected through the National Insurance contributions—until the Finance Bill becomes law. The employment figures announced bring the day of some restraining Government intervention a good deal nearer.

Common Market Campaign

A Common Market campaign was launched in London last week on a non-party basis to persuade the British Government formally and explicitly to declare its readiness in principle to join the European Economic Community and to accept the institutions of the Treaty of Rome—after necessary consultation with the Commonwealth and the European Free Trade Association. The campaign committee, of which Lord Gladwyn is the chairman, stated that three main, admittedly difficult problems, had to be solved before Britain could be associated with the community of the "Six". They were the U.K.'s special relationship with the Commonwealth, its system of agricultural supports, and its relationship with its partners in the European Free Trade Association, especially those who were politically neutral. All these problems could be solved in negotiations. But negotiations will only be possible if Britain first declares her willingness, subject to their successful outcome, to join the European Economic Community—a community in which no one nation will ultimately have the power of veto.

Lord Gladwyn told a Press conference that the committee's statement had been sent to about 280 people, of whom 130 had so far signed it and not more than ten had disapproved. Replies were awaited from less than one-third of those to whom the statement was sent. The object of the campaign, as set out in the statement, is "to give the Government the assurance that if they decide to act as suggested they will enjoy widespread and influential support in the nation." The campaign committee did not suggest that Britain should enter E.E.C. on any terms that would materially injure the interests of the Commonwealth, or of E.F.T.A. partners who were not prepared themselves to sign.

Aid for India

Just before the current Washington meeting on aid to India, which opened last week, Mr. Nehru wrote to the heads of Governments in Britain, the United States, West Germany, Canada and Japan, asking for some commitment on the amount of economic assistance India may count on for the next five years so that her development plan can be completed. At the April meeting of the "Aid India Club," organised by the World Bank, the United States seems to have offered to put up $1,000 million for the first two years if the other countries concerned would together advance a similar sum. Offers from West Germany ($330 million), the United Kingdom ($200 million), Canada ($36 million) and Japan ($80 million) added up to $646 million, leaving a gap of $354 million to be filled. Considerable American pressure has been brought to bear not only on West Germany but on Britain, to increase their contributions. Unless the four countries together can get near to bridging the gap, the Kennedy administration will find it hard, if not impossible, to get Congress to agree to a foreign aid commitment for longer than a single year. The United States has already promised to help India with food shipments estimated at $1,200 million over the five years against rupee payments.

The British Government is believed to have given some assurance to India that something like £25 million a year will be available for the whole plan period. Whether the United States can possibly make promises for such a long period is doubtful. But if the consortium were to reach an agreement on $2,000 million and a further $1,000 million was assured from the World Bank, the International Development Association, and various other sources, India could be reasonably certain that the plan would be financed. Some loans would certainly come from Russia and other communist countries. The overall estimate of $5,500 million aid requirements includes around $1,000 million for debt repayments and a considerable part of this is likely to be postponed. A painful decision will soon have to be taken in London. With the balance of payments out of order, the U.K. Treasury will want to reduce overseas commitments rather than increase them. But aid to India is one commitment which can be kept down only at a great risk.

Lebong Tea Share Offer

Lebong Tea's offer for the shares of British Darjeeling Tea has been accepted by the holders of more than 90 percent of the shares. The offer is unconditional.

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

Enquiries may be made through your own bankers or direct to

GUNNIES SLUMP DESPITE ANNOUNCEMENT ON BLOCK CLOSURE OF MILLS

PAKISTAN UNDERQUOTING INDIA IN OVERSEAS MARKETS

THE past two weeks have seen a reversal of trends in both the raw jute and gunny markets. This has taken most people by surprise. In fact, the collapse of the goods section has upset the calculations of the whole industry. Operators in general have tended to hold off pending some decision concerning a block closure of the mills. It came as no surprise when the official announcement was made on Friday that the Government had given sanction for a block closure for two weeks, the first week commencing from 26th June and the second, from 24th July. It was confidently expected that once sanction had been granted for a closure, goods prices would rise. Operators were not disappointed in this, but the rise was so short-lived that very few were able to take advantage of it. Instead, prices plunged rapidly down to new low levels, and with heavy selling pressure from the mills, nervous conditions prevailed. The position now is that because the mills had been delaying sales in the hope of better prices, stocks have been built up and many of them are forced to sell at whatever price they can get.

Events in Pakistan have played no small part in bringing down prices in India. For some time past, Pakistan has been underquoting India on all counts for foreign enquiries, and there has been price-cutting to such an extent that there would appear to be very little profit in it for that country. The anxiety of Pakistani mills to capture business, however, springs from the fact that the export bonus scheme will be reduced to 10 percent from 20 percent for marketing purposes from 1st July. Thus any business done before the end of June will earn bonus awards, the gains of which are apparently far more attractive than manufacturing profits. Therefore, the new low levels of the Indian markets are indirectly a result of the sell-at-any-price policy in vogue in Pakistan, and the selling pressure from local manufacturers.

Is this an opportune moment to open the futures market? It has always been admitted that a well-run and regulated futures market should be an asset to the industry, but in India, it has too often proved a hindrance. There is always a tendency, especially in this country where the markets are so dominated by speculative influences, for price movements to be pushed too far in either direction. A few months ago, one saw prices raised to levels not touched for a considerable time. One has now seen the reaction, and it seems probable, considering the supply and demand, that it has been carried too far. It can be argued that these violent fluctuations have taken place without the aid of a futures market, but how much further might they have been carried if that market had been in operation? Some argue that the opening of the futures market will have a steadying influence in the long run, although the initial impact on the market will undoubtedly be bearish. Whatever the reaction, strict control must be kept by the East India Jute and Hessian Exchange Ltd, as constant chopping and changing does not create confidence in foreign markets.

Effect of Closure on Mill Output

The closure of the jute mills for two weeks will cut production by something like 38,000 to 40,000 tons. In view of the current poor demand, this should not prove too much of a burden on the industry, as stocks with the mills at the end of April were the highest since July 1959. Shipping during the current month has not been heavy, so there has been no drain on stocks, although the mills have sold fair quantities of ready shipment goods. Much of this, however, has been taken up by the bazaar as p.d.o.'s, so stocks are not expected to show any large change. The effect may be felt at a later date however, if any large-scale enquiries are received. Then the industry may not be in a position effectively to meet the demand. The I.J.M.A. however has given an assurance that the position will be watched carefully in the light of the raw jute position.

Recent events in the fibre section have caused a great deal of comment. Since maximum prices were reduced to Rs. 56, raw jute rates have fallen Rs. 10 a maund or Rs. 270 a ton. This was far from expected in view of the mills' reported shortage of jute. As a result of the I.J.M.A. quota system, mills' stocks have now been levelled out, and the position is such that once again no general quota has been issued during the current period. A few weeks ago, the position was that the mills could not find sellers at the prices they wanted to buy. Today, with unused quotas in hand, they are not keen to buy even at discount prices. Sellers are generally keen for business, although the majority of offers are small, but there are no buyers.

The closure of the mills for two weeks over the months of June and July, it is estimated, will save approximately 200,000 maunds of jute. The mills' actual godown stock position is reported to be about 12 weeks' consumption, which takes them up to the end of August, by which time new crop arrivals should be fairly heavy. It must be many years since the new crop prospects were as bright as they are today. Weather conditions in nearly all districts for the past two months have been well-nigh perfect. Sowing reports indicate an increase of from 20 percent to 50 percent over last year. All of this points to a bumper crop. Weeding has taken place in most areas, and already some very small parcels of weedings have arrived in various centres. It is not anticipated, however, that proper new crop arrivals will take place until July, although there may be a trickle by the end of June if current conditions continue. Similar conditions exist in Pakistan, but, of course, arrivals there will be much earlier than in India.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening last week, following due date considerations. Overseas interest was nil and operators tended to pause while waiting the outcome of the meetings concerning the closure of mills. Opening B Twill quotations were based on Rs. 157.50 for June shipment, and 40in. 10oz. stood at Rs. 51.50. Immediately the announcement concerning the closure of mills was made, prices reacted, and by Friday, B. Twills had risen by about Rs. 4 and hessians by Re. 1. The rise was very short-lived however, and contrary to expectations, prices began to fall under heavy selling pressure from the mills. Weaker advices from the raw jute section also helped depress the market and by Saturday, the gains had been discounted. Over the week-end, prices continued to fall rapidly, and opening B. Twill quotations on Monday were down to Rs. 151.50. Hessians also showed a weak tendency and 11 porter hessians dropped to Rs. 49. The mill selling pressure relaxed at this stage, and prices fluctuated narrowly, but when covering business began, prices again reacted and advanced Rs. 2 to Rs. 3 in sacking and Re. 1 in hessian. Selling pressure again developed on the rise, and once again had the effect of forcing prices down, and during Tuesday, rates in the heavy goods section dropped Rs. 5. Thus during the week, B. Twill rates fluctuated over a range of Rs. 10, and hessians Rs. 4. Opening quotations on Wednesday morning were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 7½oz.	37.00	37.00	37.00	33.75
40in. 8oz.	40.00	39.75	39.50	36.25
40in. 10oz.	49.00	49.15	49.00	45.00
B Twills	150.00	148.50	145.00	131.00
Heavy Cees (Plain)	150.50	148.50	145.00	131.00
A Twills	187.00	182.00	179.00	160.00
Liverpools	170.00	169.00	165.00	150.00
Cornsacks	154.00	152.50	149.00	134.00

Raw Jute: The market was very quiet at the opening, and prices were nominally quoted at Rs. 49.50 for Assam Bottoms. There were sellers below the rate and small business was reported at a discount. This caused prices to be reduced still further, and sellers became keen for business, but there were buyers for only limited quantities. Only a very small quota was issued by the I.J.M.A. during the week, and as most mills had adjustments to make against jute delivered on a price-to-fix basis, very little business was put on the market. The favourable crop reports, and the confirmation of the closing of the mills for two weeks, caused a very weak undertone to develop, and fibre rates dropped by Rs. 2 over the week-end to Rs. 47. The market steadied for a short period at the lower levels, but in the absence of any buyers prices continued to fall, with sellers eager for business. Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a 100 kilos	Rs. a md.	Shipment
Assam	123.25	46.00	June-July
Northern	120.50	45.00	"
Purnea Desal	118.00	44.00	"
Daissee Selected	128.75	48.00	"
Assam Tossa	124.50	46.50	"
Mesta:			
Assam-Northern	116.50	43.50	"
Desal	116.50	43.50	"
Daissee	115.25	43.00	"
Jungli	112.50	42.00	"
Indian Cuttings	213.00 a bale		"
Pakistani Cuttings	220.00 a bale		"

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL STEADILY

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS in the Dundee jute market remained restricted during the past week in spite of the steadily declining tendency in raw jute prices. The market was, therefore, quieter than ever before. Buyers show the inclination to refrain from purchasing until they see values fall to a much more reasonable level. There seems little doubt that they will come down substantially in future. Jute is said to be dear when it rules at over £100 a ton for Mill Lightnings, so spinners do not care to pay that price for it.

Old crop jute prices are now practically ignored and any rates mentioned for new crop fibre for early shipment are far too high. Sellers are now quoting £171 for Mill Firsts, £166 for Mill Lightnings and £161 for Mill Hearts for June-July, c.i.f. U.K.-Continent. For a month further ahead, however, July-August shipment, there is a wide difference, with Mill Lightnings being quoted at £149, and Mill Hearts at £144, August-September at £137 and £132 and September-October at £132 and £127 for the respective grades, c.i.f. Business was done at £130 for Mill Lightnings earlier last week for September-October, c.i.f.

Meanwhile, very few spinners in Dundee require to pay such a high price for jute this year. Fortunately, many spinners have been working a good deal of short time during the past few months in order to save their raw material. It is estimated that the average cost of raw jute in spinners' hands is low enough to allow them to sell at less than the current prices for yarns and cloth. The selling prices for imported goods in the U.K. are ridiculously cheap in comparison with the rates the Dundee manufacturers have to charge. There is a difference of about 6d a yard for 40in. 10oz. hessians in the "depressed range", yet pleas are being put forward for a further reduction in the mark-up prices.

Calcutta hessians for shipment are at 78s for 40in. 10oz. and 59s 6d for 7½oz., June, 77s 9d and 59s July-September and 71s 6d and 53s 3d October-December, with B Twills at 241s 6d, 233s 3d and 205s 3d for the respective positions of shipment, all f.o.b., Calcutta. There has been occasional buying by traders in Dundee. Some consumers are being compelled to purchase and pay the quoted rates. Spinners and manufacturers are fairly steadily employed, but on reduced working hours.

Plantation Topics

RAISING SOUTH INDIAN TEA OUTPUT IN THIRD PLAN

NEED TO PAY MORE ATTENTION TO QUALITY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

AS far as south India is concerned, it does not look as if there will be any serious difficulty in reaching the increase in the tea production target of 20 percent laid down for the industry in the third plan. Major planting districts like the Kanan Devans were able to increase output by more than 20 percent during the second plan period. Manuring has just begun to show full effect. Mr. W. C. Roy, chairman of the Kanan Devan Planters Association, does not, therefore, anticipate any serious difficulty in reaching the third plan target. Speaking at the annual general meeting he, however, warned producers that increased production would be of no avail if it is accompanied by the slightest deterioration in quality. The processing of a bigger crop requires additional factory capacity and new machinery. It is up to *the Government, Mr. Roy said, not only to ensure* that machinery itself is made readily available but also to build up confidence necessary for expansion by a more liberal taxation policy.

Mr. Roy drew attention to the fact that Indian teas were losing ground in the U.K. market. The consumption of tea in Britain in the past four years had scarcely risen in spite of a buoyant economy and rising living standards, so planters are faced with a more or less static demand for which a steadily increasing number of producers are competing. Under the circumstances, adequate arrangements for promoting the sale of Indian teas would appear to be an obvious need, especially in view of the strong and effective propaganda which is conducted on behalf of Ceylon tea and the steadily increasing popularity of the African grades. In the U.S.A., Australia and the Middle East, there are now sales promotion arrangements, but the U.K must continue to absorb the great bulk of Indian teas for many years to come. Mr. Roy said therefore, India should not be complacent about the U.K. market. He did not approve of the suggestion that the internal consumption of tea should be reduced for increasing export earnings. A flourishing internal market will be required to absorb a share of the increased production, and nothing should be done to hinder the development of the market, the chairman said.

Record Tea Crop

The Kanan Devan planting district had a record tea crop during the year ended March 1961, in spite of the adverse weather in the autumn of 1960. The output amounted to 27,052,991 lbs which exceeded the previous record by about 2 million lbs. The average yield an acre was 842 lbs. This was no mean achievement considering the high elevation of the plantations in the district.

Rise in Excise Duty

Commenting on taxation, Mr. Roy said that in the latest Central Budget, the excise duty on loose tea in Group 11—in which all the estates of the Kanan Devan planting district lie—was increased from 9nP to 15nP a lb. This will add to the cost of production, since it is a direct charge on expenditure in estate accounts and cannot be passed on to the consumer. The decrease in export duty from 53nP to 44nP a lb is a "short but welcome step in the right direction of increasing exports but much more is required to make our teas really attractive to overseas buyers, and only the total abolition of the duty can really meet the case". Referring to Kerala taxes, Mr. Roy said that almost immediately after the last general meeting of the Association, the Kerala Government introduced the plantation tax levying an additional impost of Rs. 8 an acre on all producing areas; and in the recent State Budget, further levies have been imposed on the industry in the form of the additional tax on land and the building tax. The former levies an additional tax of Rs. 2 an acre on all land with an actual or potential income of not less than Rs. 20 an acre which embraces a considerable proportion of the unoccupied land in the Kanan Devan district while the building tax is applicable to all new buildings having a floor area exceeding 1,000 square feet. All these taxes add to the already high cost of production but the latter in particular would appear to be an extraordinary levy at this time when the need is for better housing, more hospitals and new factories. Against these tax increases, the State Budget gave some "welcome relief" by the reduction in the higher slab of supertax on agricultural income tax from 37nP to 31nP in the rupee, Mr. Roy said.

Coffee Marketing Policy Criticised

The chairman of another planting district of Kerala, Nelliampathy, recently criticised the marketing policy of the Coffee Board. At the recent export auctions, Plantation "A" variety was sold at about Rs. 75 (that is, around Rs. 170 a cwt.) below last year's prices and Robusta around Rs. 70 or 75 a cwt. less. These prices are uneconomic, so they may not be sufficient to provide a minimum return to the grower. The industry has to depend mainly on the internal market although the Government is asking the producers to increase exports. "What benefit will be derived by selling a good portion of our crop in foreign markets below our cost is beyond anybody's reason. It is defenitely in our country's interest to earn foreign exchange, but certainly not by ruining our industry. The Coffee Board should bring in more realism in its marketing policy." Mr. Stephen continued: "Things are drifting from bad to worse. To add to our calamities, the excise duty on coffee has been increased by one-third. Of course, the Central Finance Minister was kind enough to bring the duty to the old level for Robusta, and we are grateful for the same. But this is an indication that the Board has not succeeded in keeping the Government well informed about the crisis the coffee industry is facing". Mr. Stephen thinks that the grower-members of the Coffee Board are out-numbered by non-growers, so it can achieve very little. The raising of growers' representation is the only solution for improving the efficiency of the Board, the chairman said.

Closure of Cardamom Auction

The cardamom auction for the current season was closed last week in Cochin. There were 12 sales during this season. The average price realised was Rs. 7.89 a lb, compared with Rs. 9.88 a lb during the previous season. This fall cannot be considered a serious one in view of the increased crop harvested in south India during the 1960-61 season.

COCHIN TEA SALES

At Sale No. 23, 678,000 kilograms of tea were on offer. There was a fair demand at lower rates. Plain and low mediums were 10nP to 20nP lower. Nilgiris were generally easier.

NAMES AND DATES

Mr. G. V. Swaika has been re-elected a member of the Indian Central Oilseeds Committee in the Central Ministry of Food and Agriculture.

The fourth annual general meeting of the East India Oil Millers Association will be held on Saturday, 17th June, 1961, at 1 p.m. in the premises of the Bharat Chamber of Commerce, 195 Mahatma Gandhi Road, Calcutta.

Books

INVESTMENT IN SHARES: HEDGE AGAINST INFLATION

Investment and Speculation. By P. U. Patel. (Published by the author from 13, Napean Sea Road, Bombay. Price Rs. 10.)

Mr. Patel is the chairman and managing director of Universal Fire and General Insurance Co. Ltd, so he could use his wide experience of the share market to write his very readable book on investment and speculation. As the author points out in the preface, it is a critical, rather than a descriptive, study and deals primarily with the problems facing an individual investor. The main thesis which the author has tried to establish in the book is that from the point of view of the individual investor, any investment in fixed interest-bearing securities is self-defeating. He stresses the fact that capital appreciation rather than a steady income ought to be the primary objective of an ordinary investor and comes to the conclusion that ordinary shares, which merit A-1 investment rating, are the best long-term hedge against inflation. In establishing his theory, Mr. Patel has made a careful study of different kinds of securities. Besides, he has given a number of concrete examples to make his study interesting. While the present reviewer generally agrees with his views, he is inclined to feel that the author has been a little too emphatic and has tried to overstate his case. Although his contentions would appear to be valid under inflationary conditions or when prices show a tendency to go up, it is doubtful whether the principles ennunciated by him can be applied with equal force at a time of depression, such as the one the world witnessed in the 'thirties, or even during the slump which followed the boom in 1946.

GUIDE TO COMPANIES ACT

A Handbook on the Companies Act. (Published by Oxford Book and Stationery Co., 17 Park Street, Calcutta 16 for the Indian Chamber of Commerce, India Exchange Place, Calcutta 1. Price Rs. 12.50, pages 337.)

This book is one of the series of the useful and informative publications issued by the Indian Chamber of Commerce, Calcutta, on diverse subjects. It came out for the first time in 1955, and has gone through three impressions and three editions. That alone proves its demand. The present edition has not deviated from its original object, namely, to give an idea of the important provisions of the Companies Act of 1956 to the business community as well as to enable those who want to have a bird's eye-view of the Act to gain from its reading. Chapter 49 rapidly surveys the main changes brought about by the Amending Act of 1960; the alterations have been incorporated in various chapters, giving a well-integrated picture of the different topics. Chapter 50 clearly states what the existing companies will have to do under the Amending Act of 1960. There are brief annotations on the important provisions of the Act, but they are far from adequate—possibly they are not meant to be. The seven appendices, however, contain some additional information.

The book is by no means a complete work on the subject. It is only a handbook which gives some information—useful though that may be, it is scarcely adequate. It is really a guide to a branch of law which has always been, and is increasingly becoming, technical. Admittedly, the oversimplification of a technical subject has its obvious limitations. But that does not detract altogether from the utility of the book which weeds out many details for which the business man may have to turn to a professional adviser. It is too early to gauge the effect of the Amending Act of 1960; for the present, the business man would like to know —and the handbook tells him—what to do in his business or company under the Amending Act of 1960. It would be no surprise if another edition of the book were to come out in the near future.

LAW ON SALE OF GOODS

The Indian Sale of Goods Act. By P. Ramanatha Aiyar. (Published by the University Book Agency, Elgin Road, Allahabad. Price Rs. 12.50, pages 312.)

Three decades ago, the Indian Legislature, borrowing heavily from the mother statute—the English Sale of Goods Act—passed the Indian Sale of Goods Act of 1930. Passed in 1872, the English Act—barring a few amendments—has survived the scraping axe of Parliament. Thirty-four legislatures in the world, both within and outside the Commonwealth, have adopted the English statute and consequently the English decisions on it. That is a tribute to the skill of the draftsmen of the English Act. The first edition of Mr. Aiyar's work came out shortly after the Indian Act was passed. Since then, both the Legislature and the judiciary have tried to cope with the changing conditions, so various Acts have been passed and numerous decisions have been made. This called for another edition of the book.

Mr. Aiyar's monograph is a full commentary on one of the most controversial pieces of legislation. The similarities and the differences from the English Act have been clearly brought out. Besides, the basic principles and the interpretation of the various sections have been given by the author in his own language and where necessary from the recognised authorities and judicial pronouncements from all over the world. Like the classical work of Mulla on the subject, illustrations have been added to explain the sections. The judicial decisions referred to in the publication are quite up-to-date. Cross-reference to the other sections of the Act, which is so essential for the interpretation of such a closely-integrated statute, is however missing. There is an extremely useful but brief discussion of f.o.b., c.i.f. and ex-ship contracts at pages 224 to 231. The appendices contain a list of important statutes dealing with the sale of goods, which have considerably affected the main Act of 1930. The subject index is well arranged. The reader has been spared lengthy quotations from judgments. A busy practitioner and an enquiring student will find Mr. Aiyar's book really useful.

TAX SYSTEM: DEFECTS AND REMEDIES

Taxation and Private Investment. (Compiled by National Council of Applied Economic Research, New Delhi. Review copy received from Asia Publishing House, Bombay. Price Rs. 10.50, pages 120.)

In the context of India's mixed economy in which private enterprise is expected to play an important rôle, the impact of taxation on the growth of private investment deserves careful study. While the aim of the tax policy to gather larger revenues for the Government has to be appreciated, the broader objective of the tax system to increase the rate of aggregate savings and investments should not be relegated to a secondary place. The study undertaken by the National Council examines the economic effects of the Indian tax system against the setting of the accepted goals of economic policy and recommends improvements to enable the economy to function more efficiently. The report includes a review of the tax laws and regulations which impinge on investment as a background to the discussion. Wherever necessary, international comparisons of tax rates are provided and the experience of other countries is drawn on extensively. Besides, in order to assess the climate for investment, an analysis of the trends in investment is made and the attitude of investors examined.

The study brings out far-reaching implications of a peculiar feature of the Indian tax system which has resulted from the cumulative impact of personal taxes, particularly income and wealth taxes. Corporate taxes have a direct bearing on the growth of certain strategic sources of equity capital, and their long-term effects have been examined in detail. The Council's conclusions are valuable, but they need not be repeated since they are almost similar to the views expressed in *Capital* on these matters. There are 30 useful tables in the report.

Taxation and Foreign Trade. (Published by the Council for Economic Education, D-1, Corinthian, Bombay 5. Price Rs. 7.50, pages 106.)

The contributions in this volume are reprints of articles which have appeared in the Indian Press during the past four years. Mr. Dandekar has contributed six articles, Mr. Natarajan seven, Mr. Zinkin five while three have been written by others. Many of the opinions expressed in the book —whether ceiling on land or the profit of State undertakings—seem to have become much too hackneyed today. But it is necessary to remember that at the time the articles were written, they were extremely topical because of the controversy among experts.

AMENDMENT TO COMPANIES ACT

Changes in Company Law. By Mahitosh Choudhury. (Published by Eastern Law House Private Ltd, 54 Ganesh Chandra Avenue, Calcutta 13. Price Rs. 4, pages 67.)

This is one of those few books which came out shortly after the Companies (Amendment) Act of 1960 came into force. The book is written by a qualified person with a limited object and within a short compass. The short introduction gives the main changes on the different aspects of company law, followed by a discussion in somewhat greater detail and useful comments in the form of brief annotations. One could get from this book only the summary of the changes brought about by the Amending Act of 1960, not the actual words of the amending sections nor the sections as amended which are important, and for which the reader will require a larger work on the subject. The emphasis has been on how to comply with the law, not on how to pay penalty and evade it, if that course proves to be cheaper and is possible. The adviser can still advise on this point. But the penalties imposed by the Legislature should have been stated, for they have a deterrent value. There is some useful information in the appendices for the auditor. The price of the book is only Rs. 4, so it suits every pocket.

70,00,000 FIRESTONE TYRES!

The Firestone factory in Bombay has now passed another landmark in its 21-year existence. The production of Firestone tyres in India has topped the figure of 70 lakhs. From a small beginning, through successive expansions, production has now reached around 2,000 tyres daily, covering a vast array of different sizes, ranging from 3.50-10 for Motor Scooters to 21.00-25 28 Ply Rating for Heavy Earthmoving Vehicles.

But the overall demand for tyres of all types is still so far in excess of output in India that, in spite of equitable distribution arrangements, there is a severe shortage which is felt throughout the country. Expansion schemes are afoot, but it will be some time before supply catches up with demand.

WE BELIEVE that the ill-effects of this prolonged scarcity can be kept within limits if every truck tyre user does what he can to extend the life of his tyres. Follow the 3-Point Programme —

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

DUST PRICES IRREGULAR

At the Internal Sale, there was a good general demand for the 23,052 chests of Dusts on offer. Medium C.T.C.s were irregular with the clean leaf teas being readily absorbed around last rates, while the fibrous descriptions met with better support than in recent weeks. Good C.T.C.s were irregular and generally easier. Orthodox Dusts were extremely irregular with the fibrous kinds showing a decline. The few clean Leaf descriptions on offer were firm and sometimes dearer. Legg-cut teas met with good demand at generally lower rates.

Quotations

	1961 Rs. a kilo
Plain Orthodox Dust	... 3.80 to 4.20
Medium Assam Dust	... 4.05 to 4.50
Legg-cut Dust	... 4.10 to 4.80
Medium Assam C.T.C. Dust	... 5.40 to 5.90
Good Assam C.T.C. Dust	... 6.20 to 6.80

(All quotations are nominal, and are inclusive of excise duty.

The 55 chests of Leaf on offer met with a fair demand.

LINSEED FIRM

The market was firm in the past week. Arrivals of seeds slackened and upcountry prices were higher. Millers showed great interest for ready and forward deliveries, but sellers were reluctant to do business at current prices. The oil market was firm and stocks low. Buyers showed a keen interest for ready and forward deliveries in sympathy with other oil markets, notably groundnut and mustard oil, but small business was done. Sellers were not inclined to do much at current prices, especially for forward deliveries. The oilcake market was fairly steady. Local offtake was small, but stocks were limited. The latest quotation is as follows: Ready-September delivery Rs. 27 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 30th May and 5th June, 1961)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 8.50 to Rs. 12.50; wet salted (Slaughtered) 19,300 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 28.

Goatskins: Wet salted (Daissee) 29,800 pcs. on the basis of Rs. 325 to Rs. 340; wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam-Dinajpur 11,300 pcs. on the basis of Rs. 280 to Rs. 300 and Rs. 320 to Rs. 350; Purneah-Kissenganj 4,000 pcs. on the basis of Rs 315 to Rs. 330.

Bazaar Stocks

(5th June, 1961)

Cowhides: Wet salted 121,000 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 32,100 pcs; Assam-Dinajpur 69,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 349,500 pcs.

SHELLAC QUIET

During the week ended 6th June, the market was quiet. The range of quotations was as follows:

Superior Lemon	Rs. 176, 174 sellers.
Light Pure Buttonlac	Rs. 176, 174 sellers.
Standard Pure Buttonlac	Rs. 164, 162 sellers.
Lemon No. 1 Shellac	Rs. 164, 162 sellers.
Lemon No. 2 Shellac	Rs. 154, 152 sellers.
F.O. Superfine Shellac	Rs. 144, 142 sellers.
Standard One Shellac	Rs. 140, 138 sellers.
TN Pure Shellac	Rs. 122, 120 sellers.
ITN 3% Shellac	Rs. 110, 108 sellers.
ITN 4% Shellac	Rs. 100, 98 sellers.
Golden Kusmi Seedlac	Rs. 160, 158 sellers.
Kusmi Seedlac No. 1	Rs. 150, 148 sellers.
Kusmi Seedlac No. 2	Rs. 140, 138 sellers.
Golden Bysacky Seedlac	Rs. 138, 136 sellers.
One B Seedlac	Rs. 130, 128 sellers.
Two B Seedlac	Rs. 110, 108 sellers.
Manbhum Fine Seedlac	Rs. 124, 122 sellers.
Fine Bysacky Seedlac	Rs. 116, 114 sellers.
Genuine Bysacky Seedlac	Rs. 106, 104 sellers.

Shipments during May were 14,484 packages.

COMPANY AND PUBLIC NOTICES

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI FIRECLAY & SILICA WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 29th June, 1961, at 10 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of the retiring Directors.
4. To appoint Auditors and fix their remuneration

The Share Transfer Registers of the Company will be closed from 15th June, 1961 to 29th June, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 31st May, 1961.

NOTE:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 5th July, 1961 to those Shareholders so entitled whose names appear in the Company's books on the 29th June, 1961 or to their mandatees. No application for Dividend Warrants will be necessary.

KUMARDHUBI FIRECLAY & SILICA WORKS LTD.

THE Directors of the above Company have decided to recommend the payment of Dividends for the year ended 31st December, 1960 subject to deduction of Tax as under:—

(1) On Redeemable Preference Shares @ 4.88%.

(2) On Ordinary Shares @ Rs. 1/80 nP. per share.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

LODNA COLLIERY COMPANY (1920), LTD.

NOTICE is hereby given that the fortieth Annual General Meeting of the Members of Lodna Colliery Company (1920), Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Thursday the 29th Day of June, 1961, at 3 P.M. for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.
2. To consider and declare a dividend in respect of the year ended 31st December, 1960.
3. To appoint Auditors and to fix their remuneration.

As Special Business

4. To appoint a Director in place of Mr. C. N. Rodewald who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution:—

"That Mr. C. N. Rodewald, a Director and Manager of Turner, Morrison & Co., Ltd., the Managing Agents of the Company, and as such Director and Manager, an associate, officer and employee thereof, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

(Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co., Ltd. are the Managing Agents of the Company and Mr. C. N. Rodewald, a Director and Manager of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act, (2) the Managing Agents are a Company and as such Managing Agents hold an office or place of profit under the Company and Mr. C. N. Rodewald is an officer and employee of the Managing Agents as aforesaid in terms of Section 261 (1) (c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. C. N. Rodewald is an officer and employee thereof in terms of Section 261 (1) (d) of the Act).

5. To appoint a Director in place of Mr. A. J. Hormasji who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution:—

"That Mr. A. J. Hormasji, Secretary of Turner, Morrison & Co., Ltd., the Managing Agents of the Company, and as such Secretary, and associate, officer and employee thereof, be and is hereby re appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation"

(Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co., Ltd. are the Managing Agents of the Company and Mr. A. J. Hormasji, Secretary of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act. (2) The Managing Agents are a company and as such Managing Agents hold an office or place of profit under the Company and Mr. A. J. Hormasji is an officer and employee of the Managing Agents as aforesaid in terms of Section 261 (1) (c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. A. J. Hormasji is an officer and employee thereof in terms of Section 261 (1) (d) of the Act).

The Share Transfer Register of the Company will be closed from the 20th to the 29th June 1961 both days inclusive.

Warrants for the dividend, when declared, will be forwarded, in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
For and on behalf of
LODNA COLLIERY COMPANY (1920), LIMITED,
D. M. JAFFRAY,
Director.

Calcutta, 6th June, 1961.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

An explanatory note as required under Section 173 of the Companies Act, 1956 has been sent to each shareholder entitled to notice of the meeting.

BRIDGE & ROOF CO. (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-seventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 29th June, 1961 at noon, to consider the Accounts of the Company for the year ended 31st December, 1960, to transact other ordinary business and the undernoted special business.

Special Business

NOTICE is also hereby given of the following Resolution which will be proposed as an Ordinary Resolution:—

"That pursuant to the provisions of Section 342 of the Companies Act, 1956, the resignation of Balmer Lawrie & Co. Ltd. of its office of Managing Agents of the Company with effect from 31st December, 1960, be and is hereby accepted."

P4, Mission Row Extension
Calcutta-1.
6th June, 1961.

DUNCAN BROTHERS & COMPANY LIMITED

NOTICE is hereby given that the 62nd Annual General Meeting of shareholders of DUNCAN BROTHERS & CO., LD. will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Thursday, 29th June, 1961 at 10-30 A.M. for the following purposes :—

1. To consider and adopt the audited Accounts for the year ended 31st December, 1960 and the reports of the Board of Directors and the Auditors.
2. To declare dividends on the preference and ordinary shares.
3. To elect a Director.
4. To appoint auditors for the current year and fix their remuneration.

As Special Business.

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an ordinary resolution :—

"Resolved that a 'Rights' issue of 10,000 equity shares of the Company be made, to be offered to equity shareholders of the Company in the ratio of one equity share for every nine equity shares held by them, the date of such issue to be fixed by the Board of Directors of the Company."

The register of members and share transfer books of the Company will be closed from 20th to 29th June, 1961, both days inclusive.

By Order of the Board,
S. K. MITRA,
Secretary.

Calcutta, 31st May, 1961.

NOTE : A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, vote on his behalf. The proxy need not also be a member of the Company.

Explanatory Statement

This resolution is necessary under Section 94 of the Companies Act, 1956. With the continued expansion of the Company's business as referred to in the Directors' Report forwarded to each shareholder of the Company, it is desirable and necessary to increase the equity share capital of the Company. It is considered that a 'Rights' issue of equity shares in terms of resolution No. 5 above will meet the present needs of the Company for further capital. The date of the 'Rights' issue has been left at the discretion of the directors of the Company to be determined as may be necessary.

TEA PLANTERS BENEVOLENT INSTITUTION

NOTICE is hereby given that the Annual General Meeting of the Tea Planters Benevolent Institution will be held at the Royal Exchange, 6, Netaji Subhas Road, Calcutta, on Tuesday, 20th June, 1961 at 10-30 a.m.

SPOTLIGHT ON THE STATE TRADING CORPORATION

THE State Trading Corporation has come remarkably well out of the report on its activities recently published by the Council of Economic Education. How many of those who have been shouldered out of lucrative business by the S.T.C. or have been forced into uneconomic dealings with it, will subscribe to the general tone of this report, is, of course, another matter; but the fact must be faced that there is, apparently, a good deal to be said in the Corporation's favour. The main claim is that it has promoted the bulk export of iron ore in a way which could not have been achieved by private enterprise. Others are that it has been able to handle, in a way which no other form of trading management could do, the growing trade between India and communist countries, and that it has served a useful purpose in exploring hitherto unexploited markets for exports. Against these must be set its mismanagement of the manganese ore trade, its promotion of an undesirable form of barter dealing with non-communist countries, its general dilatoriness, lack of initiative and technical expertise, and its frustrating addiction to bureaucratic methods of procedure. The overall verdict, that the Corporation has "probably increased the total value and volume of Indian exports by its handling of iron ore exports and trade with communist countries", is, therefore, one which would seem to require serious qualification. It is not known, for instance, what the trade would have been in the absence of the Corporation, and this applies equally to manganese as to iron ore. It must be admitted that, as the report brings out most carefully, the Corporation's activities have been circumscribed by the same set of limitations as suffered by India's export trading as a whole. But it is difficult to accept a favourable judgement based chiefly on a performance in iron ore exporting for which no circumstances are available for comparison, and on a record with communist countries in a field which is exclusive to State trading anyway.

There are many points to weigh against these two advantages. The Corporation has, for instance, concerned itself only with established trade, which it has taken over as a going concern; there has been little attempt to promote completely new exports in strange markets. The disturbance to established trade channels is something of which the cost is difficult to calculate; if the Corporation had been forced to compete with existing traders openly, without the power of the Government behind it, there is every reason to believe it could not have survived at all. Even the business of manganese exporting, in which, remarkably enough, the report practically exonerates the Corporation, is one where it is difficult to pass a reliable verdict because no picture exists of the probable position had private enterprise remained in control. There might not, for instance, have been such a serious fall in sales to the United States, a country which traditionally distrusts State trading. Indeed, all the Corporation's accomplishments can be traced to its privileged status, its monopoly position in the trade it handles, and the large initial size with which it was able to begin business, while all the criticisms levelled at it stem from a general inefficiency which would put any private trader out of business. Except in the case of its trading with communist countries, it is difficult to understand the report's complacent attitude towards the Corporation.

If we accept from the beginning that State trading was introduced chiefly to make profits which might otherwise have accrued to private traders, and that the function of trading with the communists, although important, was probably only an excuse for the establishment of an S.T.C., then it is still possible to believe that every effort ought to be made to ensure that the business of the Corporation, now it does exist, is carried out as efficiently as possible. It is on this point that the report, which, incidentally, was prepared by the Economist Intelligence Unit, an entirely independent body, has some valuable advice to offer. There will be few to contest its point that the S.T.C. should concentrate on those items of trade for which its size and particular organisation make it most suitable. Iron ore, of course, is the case in point. As a corollary to this one could say that the present policy of muscling into any profitable field of trading, irrespective of whether the Corporation's particular talents are suited to it or not, ought to be abandoned. The disincentive to established traders represented by this policy may have cost India more in terms of trade expansion than is in fact realised. As things are, a trader may be discouraged from spending the time and resources required to build up a profitable market for fear the Corporation will move in on his efforts without compensation or even a by-your-leave. It is in handling large purchasers, or communist monopoly traders, that the form of organisation represented by the S.T.C. is at its best, and it is to those fields that it should be permanently confined.

There is one other function which the Corporation may be fitted to carry out, and that is promotion. There have already been half-hearted attempts to investigate new export possibilities, but these have probably been restricted by the Corporation's determination to enter only profitable lines of business. Yet a State agency, and one that does not have to pay much attention to profits, is in a particularly good position to probe new markets, which it can afterwards hand over to private enterprise. This has not so far been in accord with the spirit in which the Corporation was established and has up to now been run; there has been too much anxiety to do down the private trader and prove the superiority of State trading as an institution. If this could be outgrown, and especially if the above advice about concentrating on lines for which it is particularly suited, were taken, then the S.T.C. could enter on a new and more useful phase of its existence. This would be even more so if attention could be paid to one of the report's other main points of criticism, the Corporation's bureaucratic approach to its activities. The civil service attitude is not by any means the most appropriate for the adventure of trading; it is too rigid, too slow-moving and too addicted to restricting the use of initiative. A solution might be to hand the Corporation over to non-official trading experts, or to train recruits in the business with a view to a permanent career. Either way, there would have to be a considerable revision of ideas about salaries and functions. A trading organisation run by civil servants will always be at a disadvantage in most fields compared with private commercial interests, and any attempt to offset this by using legislative and monopoly power will only result in loss to the country.

The report has some pointed things to say about the prospects of improving India's export trade generally. This, according to the report, has languished because prices are too high, quality too poor, and trading habits too slack. The remedy is: "A positive, regular and consistent effort... to make available goods of the type and price which will sell in world markets." This is a problem which is now occupying the minds of the planners, but it is doubtful whether its true dimensions have so far been realised. It is useless, for instance, to urge private interests to export when this means a loss to themselves. If they are prepared to do this at all, it only means that the rupee is being selectively devalued and that the exporter is guilty of dumping. Except where such trade is intended to build up a market which will become profitable later, it is in no sense a solution to the problem. That lies elsewhere, and it is doubtful whether it can be found at all while India clings to the present form of planned development. Export prices will go on rising along with inflation and politically-inspired wage settlements; productivity has *no meaning in an economy* where equipment and raw materials are scarce, competition is negligible and all output can be sold irrespective of price or quality. The fact is that for the kind of goods which India is trying to promote new markets, the rupee is ridiculously over-valued. This is not to say that devaluation should be undertaken now; if it were, the third plan calculations would have to be revised drastically and ambitions scaled down all round. But it does mean that before India can establish herself in new markets on a large scale, devaluation will have to be accepted. The inference from this is that any serious hope of expanding export markets will have to be abandoned until planning is over; all efforts will have to be concentrated on holding what markets already exist and fighting the competition which will inevitably increase in future years as Indian prices continue to rise. Even to achieve this limited object the Government is, among other things, going to have to revise its present rigid attitude towards export incentives.

Thus, the subject of State trading must be viewed against the background of India's exporting problem as a whole, as well as in the narrower field of its own operations and their impact abroad and at home. Whatever else the State Trading Corporation has turned out to be, it has not shown itself any more capable of solving the overall problem of export decay than has any other form of trading. It would be wrong to consider that it is so capable, either now or in the future, and this is probably the main lesson the Government can learn from this report.

PRIVATE FOREIGN CAPITAL: A SURVEY

THE draft outline of the third five year plan has set fairly ambitious output targets for the private sector. In order to reach these, a considerable amount of foreign exchange will be required. The decision of the "Aid-India Club" countries to give financial assistance for development during the first two years of the third plan is not of much relevance as far as the private sector is concerned, because it is not yet known whether any portion of these funds will be made available for private industry. Anyway, even if a portion were diverted to that use, it would probably be quite insignificant. In the circumstances, the private sector has to arrange for the necessary foreign exchange by using its own initiative and efforts. Although the "Aid-India Club" donation is encouraging in the sense that it shows how foreign countries, at least officially, take a fairly optimistic view of India's economic development, the flow of private foreign capital into this country is generally governed more by strictly economic considerations. Foreign investors will be encouraged to enlarge their investments in India provided they feel that these are secure and remunerative; but it is still questionable whether investment here is as attractive as in other parts of the world.

There is no denying that measures have been recently taken to promote foreign investments. The Indian Investment Centre set up in June 1960, with T.C.M. aid, and charged with the promotion of foreign private investments, is expected to disseminate information on the economic, financial and industrial policies of the Government, survey foreign investment possibilities, advise Indian business men about attracting foreign capital, and help foreign business men to invest in this country. In order to assist Indian industry in obtaining technical collaboration more easily, the rate inclusive of income tax and super-tax on royalties received from Indian enterprises by foreign companies has been cut from 63 per-cent to 50 percent. The tax exemptions given to foreign technicians have been liberalised. There has also been a modification in the tax payable by companies on dividends received by them, as

a result of which the rate of super-tax on dividends paid on inter-corporate investments, whether Indian or foreign, and whether on a majority or a minority basis, has been fixed at a uniform level. Prior to this, there was a concessional rate of super-tax on dividends received by a parent company from its subsidiary, while inter-corporate investments on a minority basis were taxed at a higher rate. Also, the tax on a minority shareholding by a foreign company was substantially higher than on an Indian company with a minority holding. Although these concessions are only marginal in character, they are likely to be of considerable help in attracting foreign investment.

To-date, the flow of foreign investment has been more or less steadily maintained. In the May issue of the *Reserve Bank of India Bulletin* an interesting survey has been made of foreign investments in India during 1959 and 1960. The survey refers mainly to the investment of long-term foreign capital in the private sector other than banking. In the absence of fuller details, only a rough indication has been given about the likely trends in foreign investment during 1960. Net foreign investments in the private sector, after allowing for repatriation of capital, totalled Rs. 38 crores in 1959, and so were about Rs. 10 crores higher than in 1958. Outstanding foreign investments in the private sector amounted to Rs. 610.7 crores in June 1959, to which private sources contributed Rs. 511.2 crores and official ones Rs. 99.5 crores. Contributions from private sources increased considerably in 1959, but the inflow of foreign capital from official sources has considerably exceeded the private capital inflow during recent years. Apart from the World Bank, the private sector received loans from other official agencies such as the U.S. Export-Import Bank and the Development Loan Fund. Besides, there were drawings of Rs. 1 crore each from the British loan for the Nahorkatiya oilfields pipeline project and from the Japanese yen credit, making a total receipt of Rs. 27 crores of official capital during 1959.

The gross capital inflow from private sources amounted to Rs. 25.6 crores in 1959, against Rs. 26.8 crores in 1958. Fresh capital receipts from abroad, as distinct from retained earnings, for the establishment of new units and for the expansion of the existing undertakings, were lower at Rs. 10.5 crores in 1959 against Rs. 17.1 crores in 1958. A striking feature of foreign investments in 1959 was a sharp rise in retained earnings; these increased to Rs. 15.1 crores in 1959 from Rs. 9.8 crores in 1958 and from Rs. 9.5 crores in 1957. Total earnings of foreign controlled enterprises accruing to non-residents amounted to Rs. 38.4 crores in 1959 against Rs. 35.2 crores in 1958. The rise in earnings was accounted for mostly by the manufacturing group, which have recently enjoyed a sheltered market in India because of heavy import restrictions. The improvement in net foreign investments was almost entirely due to a substantial decline, from Rs. 24.4 crores in 1958 to Rs. 14.8 crores in 1959, in the level of capital repatriation. During 1959, the U.S.A. was the principal investing country, as was the case in the preceding two years. The net inflow of capital from this source amounted to as much as Rs. 22 crores in 1959 out of a total of Rs. 38 crores. But the U.K. is still the predominant investor in India. Of the total outstanding of Rs. 610.7 crores at the end of 1959, an amount of Rs. 401 crores was from the U.K.; the U.S. share was Rs. 82 crores.

Tentative estimates given in the survey show that the net inflow of foreign investments in the private sector during 1960, is expected to be slightly higher than in 1959. Approvals for the issue of shares by rupee companies to non-residents amounted to Rs. 19 crores during 1960—the same figure was achieved in 1959. The fresh inflow of capital into foreign-controlled rupee companies is likely to be higher in 1960 than in 1959. Retained earnings also may be as large as in 1959, because corporate profits are expected to be maintained around the 1959 level. Receipts of official capital during 1960 may be around the 1959 figure of Rs. 27 crores. The survey, therefore, estimates that the flow of foreign capital into the private sector during the five-year period (1956-60) may be around Rs. 200 crores. In view of the need for larger foreign capital to finance the third-plan developments in the private sector, it is time serious consideration was given to providing for greater incentives. As India enjoys the advantage of a stable Government, foreign capital could be secured in a much larger measure if investment attractions were increased by reducing taxation. Foreign business men might be encouraged to take greater interest if the precedural formalities for establishing new industries were simplified.

BRITAIN REASSESSES GROWTH

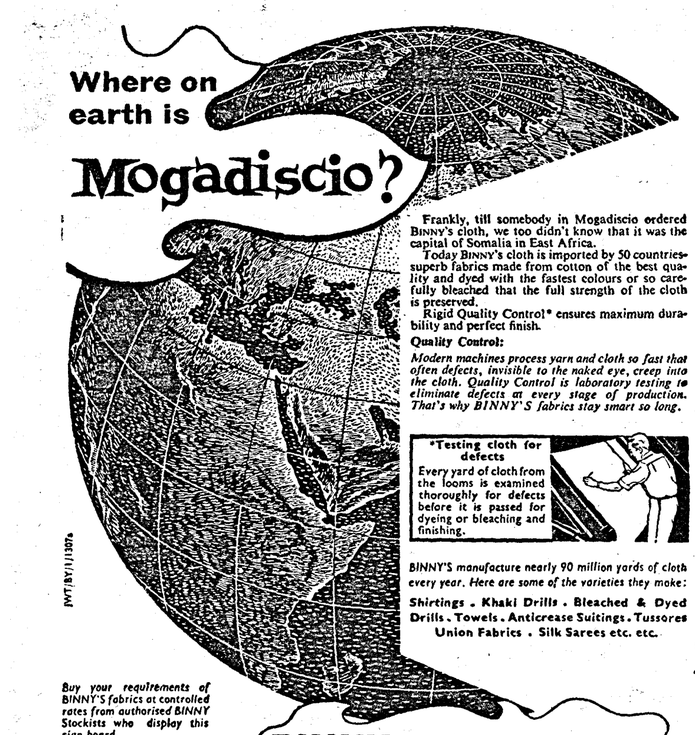
ON the London Stock Exchange a significant change of mood has been perceptible towards mid-year. The business community had congratulated itself on its escape from an incipient recession last year, and in the earlier months of this year prices of industrial shares went from strength to strength. If Britain's industrial production was more or less steady despite the forces of recession in the American economy and in the commodity markets, it should expand when the American economy was recovering and commodity prices were rising. If prices of shares had receded only slightly in the period of hesitancy, they must surely move vigorously upward in a period of growth. So prices moved vigorously upward in anticipation of that growth. Then the mood changed. This change has presumably not reversed the stock market's basic trend, but it represents serious doubts that have arisen in the process of "rethinking". Growth itself is in doubt —at least, in the medium term. Many companies, even those that increased their sales, have reported disappointing profits for 1960; so it seems that growth of trade, whenever it may develop, will not correspondingly increase profits. British industry's competing power seems to be weakening. The balance of payments is unsatisfactory and could become critical.

The main facts in the position are familiar, but the prospect seems to have become more austere. The "stagnation" of industry was intelligible last year, when economic growth had ceased in many countries. This year it has more disturbing implications: the number of workers in employment has increased, but the labour force is apparently unable to produce more. It was known last year that profit-margins had been slimmed in many trades; but it has only recently been revealed that the process has extended over most of the industrial range. That Britain's share of world trade in manufactured goods was diminishing had been known for years; but it is disappointing to observe that the serious efforts of many firms to expand their exports has not yet reversed this trend. The deficit in the external account will presumably be reduced this year; but it will still apparently be substantial unless the Government applies drastic measures to correct it, and such measures might make industrial growth more difficult. British observers are, therefore, reconsidering the whole philosophy of growth. Comparing the 1960s with the 1950s, they are inclining to the view that expansion will be slower and profits more difficult to earn. They are reminded of the forebodings of a few years ago, when expansion was checked and the era of post-war readjustment seemed to have ended. The major recession that the pessimists foresaw then did not occur, but it has since been proved that the former rate of growth could not be maintained when the accumulated demands of the war and immediate post-war eras had been satisfied.

The importance of the technological changes of the last two decades was certainly not exaggerated, but the financial implications of those changes—in mundane terms of profits—were perhaps not so profound as industrialists and investors imagined. New industrial processes, new forms of industrial and commercial organisation, new methods of selling, have emerged in all developed countries, and they have rather weakened than strengthened the relative position of Britain. In the 1950s, partly as a result of miscalculations of future demands during the Korean war, materials and foods and fuel and shipping became abundant —in some cases superabundant. In the 1960s a general excess of manufactured goods can be foreseen. The world has evidently too much capacity for producing not only such consumer goods as textiles but also such capital goods as heavy electrical equipment. Sufficiency and surplus are relative, of course, not to basic needs but to effective demands. A world-scale plan to finance more rapid development in the under-developed countries could change the whole situation. But at present incentives to expand productive capacity are diminishing, and the emphasis of demand for capital equipment is on devices that save labour and reduce costs rather than on plant for new factories.

While some of the capacity of the capital industries is surplus to immediate requirements, the industries that install capital equipment must expect diminishing returns on the capital invested in it. There is no reason to suppose that the narrowing of profit margins on manufactured goods is temporary: as competition is intensified the most efficient producers will presumably reduce their prices, or at least hold them while costs rise —and one must assume that costs will go on rising. A surplus of productive capacity implies, too, that some capacity will often be idle, so that capital will be less intensively employed. It is in this changed climate of trade that barriers against trade are being gradually taken down. Imports are already challenging many British industries in their home market, and if Britain eventually joins the European Common Market the challenge will be strengthened In export markets not only the developed countries but also, over a widening range, the "young" industrial countries are encroaching on Britain's trade.

On the financial plane, therefore, the problem of the U.K.'s balance of payments will become chronic unless British industry asserts itself more vigorously—and this compulsion implies, again, that no profit margins can be sacrosanct. A thorough investigation into the circumstances that have reduced the productivity of British labour, and Britain's proportion of world trade, is an urgent necessity. Such thoughts, which are gradually forming in investors' minds, cannot sustain the more extravagant ideas of growth that were prevalent earlier this year. Some radical "rethinking" is required—it may be necessary to emphasise, for instance, the transfer of consumers' spending from goods to services, the effects of which have not yet been fully appreciated. But it would be wrong to imply that the mood had changed from optimism to pessimism. It is more realistic, but still aware that the world's development did not end in the 1950s.



Current News and Comment

Rubber Factory for Bombay

The Indian Rubber Regenerating Co. Ltd proposes to set up a factory in Thana in greater Bombay for producing various grades of reclaimed rubber. In order to raise finance for the project, Indian Rubber Regenerating is offering 35,000 ordinary shares of Rs. 100 each for subscription at par. The directors and their friends have subscribed for 17,850 shares and the remaining 17,150 shares are being offered for public subscription. The subscription list opens on 26th June, 1961. (Further details are published elsewhere in this issue of *Capital*.) The directors think the demand for reclaimed rubber will rise steadily in future. In view of the fact that the consumption of raw rubber by tyre factories may soon increase to 60,000 tons a year, there should be no difficulty in obtaining adequate supplies of scrap rubber for the new factory. The cost of the project is estimated at Rs. 52 lakhs, to which the Industrial Credit and Investment Corporation is expected to contribute Rs. 17 lakhs in the form of a foreign exchange loan. The prospects are viewed optimistically by the directors who hope to pay reasonable dividends in the course of time.

No Bonus Yet from G.K.W.

The statement of Sir Henry Williams, Managing Director of Guest, Keen, Williams, Ltd, was read by Mr. W. Morrice at the annual general meeting of the Company held in Calcutta last Tuesday in the absence on leave of Sir Henry. (A full text of the statement is printed on a later page of this week's *Capital*.) On the prospect for a bonus share issue, Sir Henry mentioned the tax of 12½ percent which has to be paid on the issue of such shares. The directors of Guest, Keen, Williams, therefore, think that it is in the best interests of the Company that the recent expansion projects be allowed to reach a stage where they can become greater revenue earners in order to service the increased ordinary share capital of Rs. 4 crores before incurring additional taxation liabilities by issuing bonus shares. The various expansion projects have started to work satisfactorily. With the completion of the rolling mill project at the Calcutta works, it is now possible to produce many items which were formerly imported. The bright bar plant is expected to start production soon.

Sir Henry points out how the working of the Company has been hampered by cuts in power supplies. He therefore says: "Given sufficient power, and as I have mentioned earlier an adequacy of proper steel supplies, I feel certain that this Company has a good future and will be able to justify the confidence you as shareholders have placed in it". In spite of increased competition, the demand for products made by Guest, Keen, Williams has increased steadily because the Company concentrates on quality production. The Calcutta and Bhandup works have made sizable contributions to exports during the 52 weeks ended December 1960, but the export prices have had to be heavily subsidised. The trend is not likely to change until steel prices are reduced substantially.

During the year ended December 1960, sales increased by Rs. 5.67 lakhs to Rs. 9.67 crores. The gross income of Rs. 9.95 crores includes a sum of Rs. 15.60 lakhs received as dividends from Sankey Electrical Stampings Ltd. which is now a subsidiary of Guest, Keen, Williams. An interim ordinary dividend of 80nP, taxable, a share, was paid on the former share capital of Rs. 2 crores and a final ordinary dividend of 80nP, taxable, a share, has been declared on the increased share capital of Rs. 4 crores. The ordinary share capital has been doubled by issuing rights shares at a premium of Rs. 18.50 a share. As a result, there has been a net increase of Rs. 3.68 crores in the share premium account which now stands at Rs. 4.27 crores.

Rajgarh Tea Bonus and Rights

The price of the shares of the Rajgarh Tea Co. Ltd (an Assam garden) has increased to Rs. 51 on the decision to issue bonus and rights ordinary shares. It has been decided to make the bonus issue by capitalising reserves in the ratio of one new share for every one at present held and to issue rights ordinary shares at par in the ratio of one new share for every one held. The proceeds of the rights shares will be used for financing capital expenditure, which amounted to Rs. 2.25 lakhs during the year ended December 1960. For the year 1960, the ordinary taxable dividend has been increased from 35 percent to 40 percent to absorb Rs. 80,000. It gives a yield of 78 percent at the present price. The profit has risen from Rs. 1.11 lakhs in 1959 to Rs. 2.18 lakhs in 1960. Taxation provision receives Rs. 90,000 (against Rs. 45,000) and general reserve Rs. 45,000. The carry-forward is Rs. 47,707, against Rs. 45,190 brought in. Rajgarh produced a crop of 1,871 quintals in 1960 and the average sale price was Rs. 6 a kg. The 1959 crop was 1,946 quintals sold at an average price of Rs. 5.45 a kg. Estimates for 1961 have been framed for a crop of 2,200 quintals.

No Dividend from Hooghly Docking

The Hooghly Docking and Engineering Co. Ltd has passed the ordinary dividend for the year ended December 1960 due to unfavourable trading conditions. The value of work billed was Rs. 60.17 lakhs in 1960, against Rs. 98.18 lakhs in 1959. This unsatisfactory result was due to shortages of ship repair work and supplies of proper shipbuilding quality steel. The directors mention the keen competition from foreign shipbuilders and from Garden Reach Workshop, Calcutta, and Mazagon Dock, Bombay—these two shipyards have recently been acquired by the Government of India. Not only do these Government shipyards quote prices which are considered unremunerative by private sector shipyards, but the Government has also given their newly acquired yards work for which Hooghly Docking's tenders have been lower, and have involved the least expenditure of foreign exchange. The directors have represented this matter to the Government for redress.

The profit of Hooghly Docking has declined from Rs. 2.51 lakhs in 1959 to Rs. 77,101 in 1960, after reducing depreciation from Rs. 1.34 lakhs to Rs. 91,018. An amount of Rs 6,352 has been transferred back from general reserve, so the carry-forward is nil, against Rs. 7,047 brought in. As for the future outlook, work in progress was valued at Rs. 1.09 crores at the end of December 1960, compared with Rs. 81.10 lakhs at the end of 1959. The Company has orders for five vessels for the Calcutta Port Trust and a similar number of dredgers for various Government and local authorities. In addition, orders for two large dredgers and a survey launch are in the final stages of negotiation, and for which formal orders are expected to be placed with the Company.

The directors have made some interesting observations concerning the depreciation provision. Before the passing of the Companies Amendment Act, 1960, the Companies Act did not indicate what would be considered as reasonable depreciation to be provided for by companies. Hooghly Docking has been providing depreciation at certain rates which have remained unchanged for many years. The amended Section 205 now provides that before the ascertainment of profits for purposes of dividends, depreciation must be provided in accordance with one of the various methods stipulated in that Section. The directors concluded that if any of these amounts were considered adequate for the purpose of arriving at profits for the payment of dividends, these should also be considered adequate for charging in the Company's profit and loss account, even if it had been the practice of the Company to charge a higher depreciation in the past. Depreciation in the accounts now published has accordingly been charged in the manner provided under Section 205 (2) (b) of the Companies Act, 1956 as amended by the Amendment Act of 1960. The calculation of depreciation under this subsection is based on the original cost of each item of depreciable asset, which is interpreted as meaning only those assets which have not already been fully depreciated in the books. Otherwise, if depreciation has also to be provided on assets which have been written down to nil or a nominal figure of Re. 1, it would mean providing more than 100 percent depreciation on these assets. The directors do not think this is the intention of the Act. The wording of the Section itself appears to show that this is not the intention.

Bird-Heilgers Colliery Results

The Bird-Heilgers group of collieries has done well during the year ended December 1960, in spite of many difficulties facing the industry at present. Raisings of the Borrea Coal Co. Ltd increased from 168,490 tons in 1959 to 201,253 tons in 1960 and despatches from 166,715 tons to 200,239

tons. Production was, however, affected by an illegal strike in 1959. The profit of Borrea has amounted to Rs. 1.66 lakhs (against Rs. 1.01 lakhs), after providing Rs. 2.01 lakhs (against Rs. 99,499) for taxation, Rs. 89,058 (against Rs. 80,381) for depreciation, Rs. 44,610 (against (Rs. 12,725) for statutory development rebate reserve and Rs. 1 lakh (against Rs. 58,129) for general reserve. The ordinary taxable dividend has been increased from 10 percent to 15 percent. It is covered four times over and works out to a yield of 6 percent at the present price of Rs. 25 a share. The carry-forward is Rs. 31,361, against Rs. 19,830 brought in. The directors state that it was hoped to drive new surface inclines to 18 seam in Aralgoria, but this was not possible due to difficulties experienced over land acquisition. Wagon supplies were irregular and the number of covered wagon supplies prevented full use being made of the mechanical screening arrangements. As a result, stocks rose by 1,014 tons during the period under report.

The Ondal Coal Co. Ltd has reduced the ordinary taxable dividend from 7 percent to 6 percent. It is covered more than two-and-a-half times and works out to a yield of 3.6 percent at the present price of Rs. 16.75 a share. The profit is Rs. 59,609 (against Rs. 64,566), after providing Rs. 90,628 (against Rs. 29,710) for taxation and Rs. 8,400 for depreciation. There is a carry-forward of Rs. 35,298, against Rs. 41,489 brought in. The market value of investments held by Ondal for which quotations are available amounts to Rs. 13.31 lakhs.

The Churulia Coal Co. Ltd has maintained the taxable ordinary dividend at 3 percent. It is covered more than three times and offers a yield of 4 percent at the present price of Rs. 3 a share. Taxation is allocated Rs. 39,663 (against Rs. 83,403). The carry-forward is 7,043, against Rs. 941 brought in. The scheme of amalgamation of Churulia with the Sendra Coal Co. Ltd is being referred to the Calcutta High Court and the Central Government for approval.

British Paints Prosper

The ordinary shares of British Paints (India) Ltd have been steady around Rs. 24.44, after having touched a peak of Rs. 28 some weeks ago. Interest is likely to be reinforced by the latest report concerning the working results for the year ended December 1960. In spite of more competition, the demand for products made by British Paints has been well maintained. Sales increased from Rs. 1.67 crores in 1959 to Rs. 1.88 crores in 1960. The resin factory increased sales by nearly Rs. 14 lakhs. British Paints has made considerable progress in negotiating with a foreign Company to establish a factory in India for manufacturing a special type of protective coating which is at present largely imported. The project is expected to be worked by forming a new company in which British Paints will hold 51 percent of the share capital. The sanction of the Government of India to the project is now awaited.

The profit is Rs. 6.76 lakhs for 1960 (against Rs. 6.72 lakhs) in 1959, after transferring Rs. 6.82 lakhs (against Rs. 6.57 lakhs) to taxation and Rs. 3.09 lakhs (against Rs. 2.56 lakhs) to depreciation. An ordinary dividend of 12½ percent, including an interim of 2½ percent, taxable, has been declared. It is covered more than four times and offers a yield of 5.1 percent at the present price. The dividends are payable on the old share capital of Rs. 28.37 lakhs only. Meanwhile, the ordinary share capital has been increased by issuing 216,346 new shares of Rs. 10 each at a premium of Rs. 5 a share. These shares will start participating in the dividend from the current year. General reserve receives Rs. 3.33 lakhs (against Rs. 17.27 lakhs) and development rebate reserve Rs. 30,000 (against Rs. 1.10 lakhs). There is a carry-forward of Rs. 20,721, compared with Rs. 19,706 brought in. The ordinary share capital is now Rs. 50 lakhs and reserves are more than Rs. 40 lakhs.

Less Profit for Shree Gopal Paper

The latest report of Shree Gopal Paper Mills Ltd for the year ended December 1960, shows how the adverse effects of price cuts in paper have been partly overcome by increased operational efficiency and production of superior commodities. The factories have also produced high-class stationery. The *vanaspati* factory produced 1,707 tons, against 1,659 tons, but the profitability was effected by the high prices of oil. Steam boilers, the soda recovery boiler and turbo-alternator set have been commissioned, so the directors expect to reach a production capacity of 110 tons a day with larger power and pulp supplies. The directors state that the new paper machine no. 4 could not be run to its full capacity during the year under report due to power shortages. They also report that the difficulties of the new pulp mill have now been overcome, so higher production is expected. The profit has declined from Rs. 89.33 lakhs in 1959 to Rs. 56.21 lakhs for the year ended December 1960, after increasing depreciation from Rs. 12.54 lakhs to Rs. 34.63 lakhs. The ordinary taxable dividend has been maintained at 17-6/7 percent. It is covered more than twice and works out to a yield of 6.8 percent at the present price of Rs. 26.12 a share. Taxation is allocated Rs. 2.58 lakhs (against Rs. 25.20 lakhs) and development rebate reserve Rs. 49.50 lakhs (against Rs. 24.75 lakhs). Amounts of Rs. 5 lakhs have been transferred back from general reserve and of Rs. 19.50 lakhs from dividend equilisation reserve. There is a carry-forward of Rs. 30,54,465, against Rs. 32,13,301 brought in.

Better Prospects for Texmaco

The ordinary shares of the Textile Machinery Corporation Ltd have declined from Rs. 20.65 to Rs 20.50 during the past month or so because of the unsatisfactory results achieved during the year ended December 1960. The carding engine division could not do well due to shortages of imported parts. The steel foundry division was affected by labour troubles. The wagon workshop could not work according to schedule because raw materials were in short supply and workers caused trouble. The production of boilers also suffered from shortages of raw materials.

On current prospects, the directors take a cautious view; they say that "if no further unforeseen difficulties crop up, the Company will be able to show better results for the current year". Texmaco has been given a licence for producing cast iron pipes, and steps are being taken to install the necessary plant. The working of the carding engine division has improved. The production of capstan lathes is likely to start soon. The equipment for producing jute machinery has been switched over to producing other goods because the demand for such machinery has been reported to be extremely small. The sugar mill machinery department is working well. The manufacture of gates for the Rihand dam has started. After reducing depreciation from Rs. 25.05 lakhs in 1959 to Rs. 21.84 lakhs in 1960, the profit has declined from Rs. 61.85 lakhs to Rs. 36.37 lakhs. The ordinary taxable dividend has been halved to 10 percent. It is covered twice over and offers a yield of 4.9 percent at the present price. Taxation provision is reduced from Rs. 25.25 lakhs to Rs. 9.35 lakhs and development reserve receives Rs. 3.75 lakhs (against Rs. 3.50 lakhs). The carry-forward is Rs. 56,787, against 37,204 brought in.

Duncan Brothers' Rights Issue

Duncan Brothers and Co. Ltd has decided to issue 10,000 rights ordinary shares in the ratio of one new share for every nine held in the course of the current year. The proceeds will be used to finance expansion. Two new Companies have been set up—Phillips Carbon Black Ltd and Isaac Holdens (India) Ltd. Progress has been made in setting up the plant of the former and in the latter Company production has started. Steps have been taken to bring the capacity of Isaac Holdens to 10 million lbs a year. Duncan Brothers has also sponsored the establishment of Schrader-Scovill Duncan Ltd in collaboration with Scovill Manufacturing Co. of Waterbury, U.S.A. for producing tyre tube valves for motor-cars. It has also arranged with Amcel Co., Inc. of the U.S.A. to become selling agents for the products of the Celanese Corporation of America in India. The directors are investigating the possibility of extending activities further.

During the year ended December 1960, the managed tea and jute Companies have contributed substantially to the revenues of Duncan Brothers. The tea warehouse and buying departments have done well. But the directors do not expect that the working of their managed tea and jute Companies will be as good in 1961 as it was in 1960. The profit of Duncan Brothers has improved from Rs. 34.11 lakhs in 1959 to Rs. 40.87 lakhs in 1960, after providing Rs. 64,815 (against Rs. 1.19 lakhs) for depreciation. The taxable ordinary dividend has been maintained at 14 percent. It is covered three times over and offers a yield of 10.4 percent at the present price of Rs. 134 a share. General reserve receives Rs. 4 lakhs (against Rs. 3.50 lakhs) and investment reserve Rs. 5 lakhs. There is a carry-forward of Rs. 4,25,721, compared with Rs. 3,08,187 brought in.

Travancore Rayons Fares Well

The shares of Travancore Rayons Ltd which could be had around Rs. 32.25 early this year are now quoted around Rs. 40.50—well above the 1960 high of Rs. 36.25. The marked strength in these shares reflects the Company's highly encouraging results for 1960 and the prospects of still better results in the future because of the huge expansion plans Travancore Rayons fared well in 1960, with sales of rayon yarn, cellulose film and other products recording an improvement from Rs. 3.38 crores to Rs. 3.77 crores. The gross profit was up from Rs. 1.16 crores to Rs. 1.23 crores. Although there was a small setback in the profit margin, the ratio of the gross profit to sales at 32.5 percent is quite encouraging. After providing Rs. 36.47 lakhs (against Rs. 40.36 lakhs) for depreciation and Rs. 27.30 lakhs (against Rs. 37.75 lakhs) for taxation, the net profit amounts to Rs. 51.52 lakhs, compared with Rs. 29.36 lakhs in 1959. In spite of the impressive increase in the net profit, the dividend has been maintained at 20 percent, less tax, because of the urgent need to conserve resources for the expansion schemes. The directors have raised the allocation to development rebate reserve from Rs. 5.05 lakhs to Rs. 15.70 lakhs and Rs. 10 lakhs (against nil) has been transferred to general reserve. The provision for gratuity has been maintained at Rs. 1.50 lakhs. The dividends for 1960, both preference and ordinary, and an additional preference dividend of 1.5 percent for 1959 absorb Rs. 24 lakhs, against Rs 22.50 lakhs in 1959. A sum of Rs. 2.61 lakhs is being carried forward, against Rs. 2.29 lakhs brought in.

The directors state that the production of both plain and moisture-proof cellulose film came up to expectations. With the commissioning of the latest high-speed third cellulose film plant in October 1960, the production capacity has gone up to 10 tons a day. The full benefits of the additional production from cellulose machine will accrue only in 1961. The production of rayon fell short of the full capacity due to unexpected problems encountered in production and also difficulties and delays in obtaining spare parts—in many cases due to the foreign exchange difficulties. The sulphuric acid plant, which was started a year ago, has enabled the Company to become self-sufficient in sulphuric acid as well as leave a surplus for sale outside. Total sales recorded a rise of 11 percent over that of the previous year. Travancore Rayons has been granted a licence for manufacturing rayon-grade pulp for cotton linters and blow-room cotton waste. With the launching of the scheme, the Company will again be the pioneers of rayon-grade pulp in India. The cotton linter plant is scheduled to go into production in the second half of 1962, producing about 10 tons of linter pulp a day. Provision is being made to increase the output to 20 tons a day. The project will reduce the Company's dependence on imports. Travancore Rayons has also been permitted to install six more Butterworth rayon spinning machines at an estimated cost of Rs. 35 lakhs. This will enable the installed capacity to be maintained around 8.6 tons a day in terms of deniers. The Company has approached the Industrial Finance Corporation for the required foreign exchange. Orders for machinery will be placed after it sets the latter. Another licence for increasing the rayon output from 8.6 tons to 13.6 tons a day has also been received, and negotiations are in progress for implementing the scheme. This increase in capacity is expected to take effect only from the end of 1962 or early in 1963.

Bleak Prospects for Bharat Line

The Rs. 10-paid shares of the Bharat Line Ltd go abegging around Rs. 6.28, which is hardly surprising in view of the Company's disappointing performance over the past two years. Bharat Line has not paid any dividend for 1959 and 1960, and there seems little hope of the share returning to the dividend list in the near future. The Company's working for 1960 shows a loss of Rs. 30.99 lakhs, against Rs 10.28 lakhs in 1959 after providing Rs. 28.40 lakhs (against Rs. 27.68 lakhs) for depreciation. Freight earnings are down from Rs. 1.73 crores to Rs. 1.68 crores. After taking into account the loss of Rs. 7.11 lakhs brought forward from the previous year, the debit balance amounts to Rs. 38.11 lakhs. This has been written off from general reserve which has been reduced to Rs. 30.15 lakhs. Bharat Line's disappointing performance is attributed to unfavourable trade conditions and the mounting operational costs. The directors state that there has been a gradual decline in the quantity of coal carried a steamer from Calcutta from 6,440 tons in 1957 to 5,589 tons in 1960, against the capacity of steamers varying between 7,000 and 9,500 tons. In addition the Company had to face deteriorating envirmonents at the discharging ports. The directors complain that the freight rates sanctioned by the Government are not only uneconomic but result in loss. While they hope that trading conditions on the coast will improve during the current year and the Government will favourably consider the shipowners' request for more economic freight rates not only for the coastal but also for the overseas trade, they add that the Company's funds have been so distressingly depleted that it may not be possible for it to shoulder any further losses. In case the Government does not reorientate its policy on freight rates during the current year, the directors apprehend that they may be compelled to seek the wishes of the shareholders at the next annual general meeting, if not earlier, concerning the operations of the Company and its future. Bharat Line has acquired during the year 4,933 g.r.t. and 8,890 d.w.t., raising the strength of the fleet to 12 units. Since the close of the year, the Company has obtained a further loan of Rs. 48 lakhs from the Shipping Development Fund Committee. This has been used in purchasing a motor-vessel of 8,678 g.r.t. and 12,750 d.w.t. The borrowings of Bharat Line as on 31st December, 1960, amounted to Rs. 1.6 crores. The Company's paid-up capital is Rs. 1 crore and its reserves and surplus total Rs. 62.96 lakhs. The gross block of Rs. 4.36 crores has been written down to Rs. 2.02 crores.

Polychem to Set up Distillery

Presiding over the recent extraordinary general meeting of Polychem Ltd, the chairman, Mr. Ramdas Kilachand, announced that the Company had decided to set up a distillery for supplying alcohol to the proposed styrene monomer plant. The cost of the alcohol plant, which will be located in Nira, is estimated at about Rs. 30 lakhs. The styrene monomer plant will be located in Trombay and will cost about Rs. 2.10 crores. Both the plants are capable of expansion. The styrene monomer plant will go into operation in 1962. Polychem Ltd might consider at a later stage the manufacture of monomer from refinery gases instead of alcohol. The extraordinary general meeting was convened to seek the shareholders' approval to the various resolutions concerning the issue of additional capital, an increase in the authorised capital and further borrowings. Many shareholders severely criticised the Government's directive to Polychem Ltd to issue additional capital at a premium of Rs. 75 a share. Even so, the resolution about the additional capital in the ratio of two shares for every five held at a premium of Rs. 75 a share was unanimously passed. The shareholders, however, requested the management to allow sufficient time for the payment of money for rights shares or permit payment in instalments. The chairman assured the shareholders that the Company would consider their suggestions. The meeting decided to raise Polychem's authorised capital from Rs. 1.50 crores to Rs. 5 crores consisting of 80,000 7½ percent taxable redeemable cumulative first preference shares of Rs. 50 each, 500,000 equity shares and 420,000 unclassified shares of Rs. 50 each. It also authorised the Company to borrow any amount up to Rs. 5 crores. The chairman said that the Industrial Finance Corporation had agreed to arrange a dollar loan equivalent to Rs. 1 crore and that the Company proposed to borrow Rs. 75 lakhs from banks and financial institutions for meeting the rupee requirements of the new projects. The shares of Polychem (Rs. 50-paid) are currently quoted around Rs. 235. In 1960, they had been bid up to Rs. 320.

Scrap Exports Improve

Shipments of ferrous scrap from India in May totalled 39,302 metric tons, compared with 25,415 metric tons in April and 30,294 metric tons in May 1960. The break-up of May shipments consisted of 23,604 tons from Calcutta, 10,685 tons from Bombay and 5,013 tons from Madras. The May figure raises the total of shipments during the first five months of the year to 151,000 metric tons, against 144,000 metric tons in January-May 1960. Of the 151,000 metric tons shipped this year, about 100,000 tons are likely to be adjusted against the 1961-62 scrap barters. The export trade is critical of the increase in freight rates for scrap by the Japan-Persian Gulf-Japan-Conference lines. The freight from Bombay to Japan has been raised from the level of 65s or 80s a metric ton to 70s or 85s. The trade points out that since there is no dearth of freight space to Japan, the rise in the freight is quite unjustified. Besides, arbitrary changes in the rates are likely to affect exports adversely. Exporters say that in view of the delayed announcement of the 1961-62 barter scrap export policy, they are keen on improving scrap shipments. It would be unfortunate if exports were to be hit by freight uncertainties and high rates, they point out.

South India Viscose Forges Ahead

The shares of South India Viscose Ltd, which have always been popular with investors, have recorded a substantial improvement from Rs. 162 to Rs. 173 since the release of the Company's annual report for 1960. The directors state that the civil constructions are nearing completion and that the erection of the plant is making satisfactory progress. The Italian collaborators are trying hard to complete the project as early as possible. About 60 technicians and production experts from Italy are working to complete the factory. The bulk of machinery shipments have been received at the site, and a few more shipments are expected to arrive within a few months. The directors hope that the entire staple fibre and rayon plants will go into full production during the course of the current year. The carbon di-sulphide plant commenced production in December 1960. The staple fibre plant had a successful trial run and has started normal production. The viscose preparation room for the rayon plant has also been completed. The sulphuric acid plant is about to start production. The rayon spinning machinery is being erected, and will go into production soon. The directors add that the Company has secured a licence to manufacture wood pulp from blue gum and wattle which are available in adequate quantities in the Nilgiri and Kodaikanal hills. As soon as the Company commences commercial production of rayon and staple-fibre yarn, the directors propose to enter into an agreement with the Italian collaborators for manufacturing wood pulp. South India Viscose's working in 1960 showed an excess of income over expenditure amounting to Rs. 2.07 lakhs, which has been transferred to development rebate reserve. The fixed capital expenditure has risen from Rs. 21.35 lakhs to Rs. 4.44 crores, mainly due to the arrival and installation of machinery during the year. Currents, loans and advances are placed at Rs. 87 lakhs.

India Reinsurance Shows Good Results

The India Reinsurance Corporation Ltd has done well in 1960. Apparently, the steps taken by the directors over the past two or three years to improve the profitability of its portfolios have begun to yield results. The gross premium income of all the departments has increased from Rs. 3.55 crores in 1959 to Rs. 3.80 crores in 1960; the net income is up from Rs. 1.82 crores to Rs. 1.90 crores. The total net claims paid and outstanding amounted to Rs. 96.16 lakhs, against Rs. 98.41 lakhs in the previous year. The claims experience was favourable, with the loss ratio down from 53.94 percent to 50.51 percent. The year's trading resulted in a net profit of Rs. 6.54 lakhs, against Rs. 5.23 lakhs in 1959. The directors have recommended an increase in the dividend from 5 percent to 6 percent. The gross premium income of the fire department amounted to Rs. 2.13 crores. The net premium income declined by Rs. 7.80 lakhs from Rs. 90.01 lakhs to Rs. 83.21 lakhs, mainly due to the non-receipt of accounts of many overseas fire treaties, and the books were closed two-and-a-half months earlier than usual due to the change in the Companies Act as also because of the reduction in fire tariff rates operative from 1960. The claims paid and outstanding have declined from Rs. 41.54 lakhs to Rs. 37.68 lakhs. The gross premium income of the marine department amounted to Rs. 93.52 lakhs and the net premium was up from Rs. 39.43 lakhs to Rs. 41.58 lakhs. The net claims paid and outstanding totalled Rs. 30.77 lakhs, against Rs. 29.77 lakhs. The gross premium income of the miscellaneous department amounted to Rs. 73.49 lakhs and the net premium income increased appreciably from Rs. 51.99 lakhs to Rs. 65.59 lakhs. Net claims paid and outstanding worked out to Rs. 27.72 lakhs, against Rs. 27.10 lakhs in the previous year. In four years since the commencement of its operations, the Corporation has built up 100 percent reserves in the marine department and 50 percent in the fire and miscellaneous departments. The book value and the market value of its investments amounted to Rs. 1.66 crores and Rs. 1.71 crores, respectively. As a result of the year's trading, the Corporation's total funds have risen from Rs. 1.86 crores to Rs. 2.15 crores.

In his statement to the Corporation's members, Mr. A. D. Shroff, chairman, says that the general insurance business in India in 1960 was as favourable as in the previous year. The experience in the fire section was in keeping with the encouraging record of the past few years. However, the claims experience so far this year appears to be much more heavy than in the past few years, especially as a result of a number of fires in cotton ginneries and medium-sized losses on other risks. In the marine section, the loss of the s.s. *India Navigator* was the largest single loss experienced by the Indian market, extending to more than Rs. 65 lakhs for the hull and Rs. 50 lakhs for the cargo. In spite of this huge loss, the overall results for 1960 of the Indian hull business appear to show a reasonable profit because of the welcome growth of the hull premium income in the country. The chairman says that there has been an all-round improvement in the overall miscellaneous business and the adverse trend in the experience of motor-car insurance business also seems to have been arrested for the time being because of the higher rates since 1959. The Corporation's reinsurance exchange is said to be working satisfactorily. Mr. Shroff urges the members of the Corporation, particularly non-Indian members, to support the exchange by making full use of its facilities, in the interests of increasing profits in India with a corresponding decrease in the drain on overseas reinsurance. The marine department premium income has increased more from overseas treaties, and this portfolio is likely to grow further in the future. The Corporation has written a fair volume of business in hire-purchase transactions in motor-vehicles. According to the chairman, there has not been a single claim so far, and the entire balance of premium—after commission, expenses and reserves—has been used to strengthen the profit of the miscellaneous department. Encouraged by this trend, the Corporation has increased its underwriting facilities in this branch of business by obtaining adequate reinsurance facilities. A good portion of the reinsurance business has been placed with companies in India, thereby increasing the capacity of the Indian market to absorb this business.

Shell Refineries Profit Down

The Burmah-Shell Refineries Ltd has reported a setback in the profit for 1960 in spite of a substantial increase in the output. The throughput of the refinery at 2,843,000 metric tons was 366,000 metric tons more than in 1959. The throughput resulted in a yield of 2,768,000 metric tions of finished products including the consumption within the refinery. Motor spirit and motor spirit components exported during the year amounted to 29,100 metric tons. The income from refining amounted to Rs. 12.32 crores, against Rs. 10.91 crores in the previous year. But the gross profit was down from Rs. 7.21 crores to Rs. 6.95 crores. The fall in the profit is due to higher operating expenses as well as the loss of income from the duty differential on account of the voluntary surrender of duty protection from 1st July, 1959. The income from the duty differential in 1959 was as much as Rs. 1.86 crores. The Company had also to pay more by way of tax because of the expiry of tax benefits under Section 15C of the Indian Income Tax Act. Allocations include Rs. 171.54 crores (against Rs. 171.67 lakhs) for depreciation, Rs. 2.61 crores (against Rs. 1.90 crores) for taxation and Rs 4.12 lakhs (against Rs. 9.12 lakhs) for development rebate. After transferring Rs. 76 lakhs from tax equalisation reserve and bringing in a surplus of Rs. 1.56 crores from the previous year, the directors have transferred Rs. 1 crore (against nil) to general reserve. The dividend has been raised from 18 percent to 20 percent, both taxable, which absorbs Rs. 2.76 crores (against Rs. 2.48 crores). A sum of Rs. 1.14 crores is being carried forward. The Company's subscribed capital is Rs. 13.82 crores, and its reserves and surplus total Rs. 12.17 crores. Borrowings are unchanged at Rs. 8.72 crores while current liabilities and provisions show a rise of Rs. 1.04 crores from Rs. 3.55 crores to Rs. 4.59 crores. Borrowings and current liabilities are more than covered by current assets which total Rs. 21.91 crores. The fixed assets amounting to Rs. 26.60 crores have been written down to Rs. 17.14 crores.

Polson to Make Cheese and Chicory

Polson Ltd fared well in 1960, with the sales up from Rs. 1.23 crores to Rs. 1.38 crores and the gross profit rising from Rs. 14.39 lakhs to Rs. 16.04 lakhs. The results would have been still better but for the Company's difficulty in exporting French coffee because of the difference of opinion between the Government of India and the importing countries on the mode of financial settlement. Although the dividend has been maintained at 15 percent, less tax, the shareholders can view the future with optimism because the speech of Mr. P. E. Polson, chairman, at the annual general meeting contains encouraging news about the progress in the Company's plans for making cheese and chicory. The board is seriously considering the report submitted after a study tour abroad by a senior officer of the Company on the cultivation and processing of chicory. The chairman says that "the suppliers of our chicory in France have been most co-operative with us in this connection and have kindly offered us all assistance." The Company, it is hoped, will soon be in a position to set up the industry in India which will not only prove beneficial to itself but also to the country. Experiments on the manufacture of cheese at Polson's Digha Ghat factory are still in progress. The chairman added that "as soon we are able to satisfy ourselves that the product we intend to put on the market is of the high standard for which Polson products are known, we shall do so." But all this will take a little time because the production of cheese from the type of milk available in India is not easy as one would imagine. Mr. J. D. Kothawala who read the chairman's statement said that the Patna factory is working satisfactorily and that labour trouble is over. He regretted that he could not concede the demand made by some shareholders at the meeting that the dividend be raised from Rs. 15

to Rs. 17 a share. The board would consider the suggestion next year if things kept on improving. The shares of the Company which were quoted around Rs. 152 early this year recently rose to Rs. 183 and are currently quoted a little lower around Rs. 179, which is substantially higher than the 1960 high of Rs. 165.

India Sugar Earns Less: Pays More

The working of India Sugars and Refineries Ltd for the year ended September 1960 shows a modest setback in the gross profit from Rs. 23.15 lakhs to Rs. 22.50 lakhs, although sales are up by about Rs. 8 lakhs from Rs. 1.96 crores to Rs. 2.04 crores. But in spite of the slightly lower profit, the directors have proposed a dividend of 14 percent, less tax, against 12½ percent, taxable, in the previous year. After providing Rs. 5.70 lakhs (against Rs. 4.65 lakhs) for depreciation and Rs. 2.92 lakhs (against Rs. 50,000) for taxation, the net profit works out to Rs. 12.38 lakhs, compared with Rs. 16.32 lakhs in 1958-59. From this, the directors have allocated Rs. 42,000 (against Rs. 70,000) to development rebate reserve. General reserve gets Rs. 5 lakhs (against nil). After providing for the proposed dividends and making various adjustments, a sum of Rs. 3.10 lakhs has been carried forward, against Rs. 5.62 lakhs brought in. During the year, 153,000 tons of sugarcane were crushed and 16,006 tons of sugar were produced, compared with 185,000 tons of sugarcane and 17,647 tons of sugar in the previous year. The distillery produced 86,740 gallons during the year, against 57,036 gallons in the previous year. The sale of spirit was also higher than in the previous year. The contract for the supply of *arrack* to Government depôts in the Hyderabad-Karnatak areas was continued during the year. It is expected that a record crush of 200,000 tons of sugarcane will be achieved during the current season. India Sugars are currently quoted around Rs. 13.50, offering a gross yield of about 11.5 percent. The highest rate recorded in 1960 was Rs. 13.65.

Cable Corporation Shows Loss

The Cable Corporation of India Ltd has reported a net loss of Rs. 8 lakhs for 1960. This is only to be expected since it was the first year of its commercial woking. The loss has been arrived at after providing Rs. 21 lakhs for development rebate reserve, Rs. 11.17 lakhs for statutory depreciation and Rs. 6,020 for reserve against bad and doubtful debts. Adding the deficit of the previous period and the under-provision for taxation earlier, less development rebate on vehicles previously provided and written back, the total debit balance comes to Rs. 8.05 lakhs, which has been carried forward. The Corporation started commercial production late in February last year and concentrated on the manufacture of thermoplastic insulated cables and wires. The manufacture of paper-insulated cables has been started this year. Sales during the year totalled Rs. 78.86 lakhs and closing stocks Rs. 32.41 lakhs which implies that the total value of production during the year amounted to Rs. 1.09 crores. The sales of the Corporation's products are said to be satisfactory. As aluminium is likely to be available in India in sufficient quantities in the future, the Corporation is actively considering the question of changing over from copper to aluminium. It, therefore, proposes to make a beginning in this direction at an early date. The arrears of preference dividend on the 20,000 8 percent cumulative participating preference shares of Rs. 100 each amounting to Rs. 3,90,720 is an outstanding liability. The Corporation's fixed assets amount to Rs. 2.03 crores. Current assets, loans and advances amount to Rs. 1.48 crores. The secured loans total Rs. 1.47 crores and unsecured loans Rs. 77.58 lakhs. The share capital amounts to Rs. 1 crore.

New Pulp and Paper Mill for U.P.

Uttar Pradesh Pulp and Paper Mills Ltd is a new enterprise which has been promoted by Messrs Swarup Brothers to set up an integrated pulp and paper mill in Mansurpur, Muzaffarnagar, U.P. The plant will have a production capacity of 70 tons of printing, writing and wrapping paper a day. Parsons and Whittemore, which is collaborating in the venture, will provide capital machinery and equipment and the technical know-how. Bagasse which will be the main raw material is to be secured under a long-term agreement from Sir Shadilal Sugar Mills. A major part of machinery and equipment, it is said, will be procured in India. The promoters propose to install an electrolytic plant for manufacturing chlorine and caustic soda in order to make the paper mill self-sufficient in its requirements of secondary raw materials. The Company will also produce power for its own requirements. Its authorised capital will be Rs. 5 crores, made up of Rs. 4 crores in equity shares of Rs. 10 each and Rs. 1 crore in 6½ percent redeemable cumulative preference shares of Rs. 100 each. The issued capital will be Rs. 2.75 crores. Swarup Brothers and the foreign collaborating firm are likely to take up equity shares worth Rs. 50 lakhs. The U.P. Government and institutional investors are likely to take up preference shares worth Rs. 50 lakhs. The balance is to be offered to the public. Negotiations are said to be progressing for obtaining a loan for $7.56 million from the U.S. Development Loan Fund.

New Standard Dividend Down

The directors of the New Standard Engineering Co. Ltd have recommended a dividend of 9 percent, subject to tax, on its fully-paid equity shares and a proportionate distribution at the same rate on the new equity shares for the year ended March 1961. The Company paid a dividend of 12 percent, taxable, in the previous year. The dividend on the 6.3 percent tax-free preference shares has been recommended at the rate of 9 percent, subject to deduction of tax. If Company's shares have continued to hold firm around Rs. 186—the highest level recorded this year is Rs. 192—in spite of the dividend cut, it is because the preliminary figures about New Standard's working during the year released along with the dividend announcement show an improvement over the previous year's results. Sales have risen by about 28 percent from Rs. 92.83 lakhs to Rs. 1.19 crores. The gross profit is up by about 54 percent from Rs. 11.67 lakhs to Rs. 18.05 lakhs Depreciation provision has been raised from Rs. 2.23 lakhs to Rs. 5.92 lakhs and development rebate gets Rs. 4.50 lakhs, against Rs. 1.34 lakhs in the previous year. Taxation provision is, however, lower at Rs. 3.10 lakhs (against Rs. 3.90 lakhs). The net profit shows only a modest increase from Rs. 4.20 lakhs to Rs. 4.53 lakhs. After providing the proposed dividends, there remains Rs. 17,933 to be carried forward, against Rs. 92,426 brought in. Substantially higher allocations had to be made for depreciation and development rebate because of the large increase in fixed assets. This explains why the Company has not been able to maintain the dividend on the increased capital. The additions to fixed assets made during the year amounted to Rs. 46.09 lakhs, against Rs. 8.22 lakhs in the previous year, out of which Rs. 23.92 lakhs represent the cost of new machinery purchased. The Company is reported to be considering a huge expansion programme, which is why its shares are quite popular with investors.

Edward Textiles Profit Trebled

The working of Edward Textiles Ltd for the year ended December 1960 shows an impressive rise over the previous year's performance. The sales are up from Rs. 2.17 crores to Rs. 2.32 crores and closing stocks from Rs. 21.93 lakhs to Rs. 49.85 lakhs. The gross profit has been more than trebled from Rs. 7.17 lakhs to Rs. 23.21 lakhs. The ratio of the gross profit to sales has improved from only 3.3 percent to 10 percent in spite of the increase in the prices of raw cotton and stores and the enhanced wage bill in accordance with the recommendations of the Textile Wage Board. After providing Rs. 3.58 lakhs (against Rs. 1.93 lakhs) for depreciation, Rs. 2.32 lakhs (against Rs. 29,254) for development rebate reserve and Rs. 90,000 (against nil) for taxation, the net profit amounts to Rs. 15.57 lakhs, compared with Rs. 4.59 lakhs in 1959. The dividend has been maintained at 9 percent, taxable—Rs. 18 a share of Rs. 200—absorbing Rs. 3.06 lakhs. After taking into account the debit balance of Rs. 14.81 lakhs brought forward from the previous year, there remains a debit balance of Rs. 2.29 lakhs which is being carried forward.

The Company has on hand a modernisation and rehabilitation scheme which is being financed partly by its own resources and partly by a loan of Rs. 40 lakhs from the National Industrial Development Corporation. The directors state that orders for machinery worth Rs. 38.57 lakhs have so far been placed. In view of the increased demand for processed cloth, a separate processing department under the name of "Calico Textiles" has been started during the year. The Company's shares have gradually improved from Rs. 262 to Rs. 305 since the beginning of the year. In 1960, they were quoted at Rs. 330. At the current price, the share offers a gross yield of about 6 percent. Against the capital of Rs. 34 lakhs, the Company has reserves totalling Rs. 35.28 lakhs.

Bombay Financial Corporation

The Bombay State Financial Corporation has reported satisfactory progress during the year ended March 1961. The Corporation will be able to pay the guaranteed dividend of 3½ percent without seeking any assistance from the State Government. In 1960, it sanctioned 126 applications for loans amounting to Rs. 1.76 crores. The total amount disbursed was only Rs. 82.95 lakhs—a little less than half the amount sanctioned. The gross income of the Corporation recorded only a modest increase from Rs. 16.37 lakhs to Rs. 16.61 lakhs. The income from loans and advances rose from Rs. 9.19 lakhs to Rs. 10.29 lakhs, but the income from investments and deposits declined from Rs. 6.43 lakhs to Rs. 5.34 lakhs. The income from debentures was unchanged at Rs. 22,500. The total resources of the Corporation at the end of March 1961 amounted to Rs. 3.16 crores Loans and advances at Rs. 1.96 crores were up by Rs. 56 lakhs over the year. Investments in Government securities increased from Rs. 65.36 lakhs to Rs. 77.54 lakhs while deposits with banks dropped from Rs. 1.10 crores to Rs. 42.15 lakhs. Nearly a third of the Corporation's resources were idle at the end of March 1961. Its working during the year resulted in a profit of Rs. 8.88 lakhs. After providing Rs. 2.07 lakhs (against Rs. 3.99 lakhs) for taxation, the net profit amounts to Rs. 6.82 lakhs. With Rs. 69,000 drawn from the reserve fund, the amount available for appropriations is Rs. 7.51 lakhs. The guaranteed dividend absorbs Rs. 7 lakhs, leaving Rs. 51,000 to be carried to the special reserve.

Mettur Industries: Sales Up, Profit Down

In spite of an increase of about 12 percent in sales from Rs. 1.64 crores to Rs. 1.76 crores, the gross profit of Mettur Industries for the year ended March 1961, is down from Rs. 43.95 lakhs to Rs. 40.35 lakhs. The setback in profit is attributed to the high prices of cotton and an enhanced wage bill. The cost of cotton consumed rose from Rs. 59.32 lakhs in 1959-60 to Rs. 65.94 lakhs in 1960-61, and salaries, wages and bonus amounted to Rs. 38.89 lakhs against Rs. 34.15 lakhs in the preceding year. The increase in wages is the result of the implementation of the Wage Board's recommendations from 1st January, 1960. After providing Rs. 2.04 lakhs (Rs. 2.03 lakhs) for depreciation, Rs. 3.59 lakhs (against Rs. 4.06 lakhs) for managing agents' commission and Rs. 13.46 lakhs (against Rs. 16.30 lakhs) for taxation, the net profit comes to Rs. 21.25 lakhs, compared with Rs. 21.55 lakhs in 1959-60. With Rs. 1.57 lakhs brought in from the previous year, the total available for appropriations is Rs. 22.82 lakhs. From this, the directors have transferred Rs. 2,175 (Rs. 21,000) to the development rebate reserve, and taxation relating to the previous year amounts to Rs. 26,827 against Rs. 10,074. A sum of Rs. 2,99,713 has been set aside as additional bonus for 1959-60, against Rs. 2.60 lakhs provided in the previous year. Dividend has been maintained at 30 percent, less tax, absorbing Rs. 18 lakhs. The balance of Rs. 1.53 lakhs has been carried forward. Around its current cum-dividend quotation of about Rs. 400, the share of the Company offers a gross yield of about 8 percent. The directors state that there was no power cut during the year, but since the first week of May this year, power cuts have been imposed and have reached up to 50 percent. But since the Company's own generator has been put into operation, no loss of production is anticipated unless the power cuts are prolonged or increased.

Share Offer by Acme Pig Iron

Acme Pig Iron and Centrifugal Pipe Works Ltd, Bombay, will enter the market to raise Rs. 10 lakhs by public subscription on 19th June. The subscription list will remain open up to 24th June. A sum of Rs. 25 a share is payable on application and another Rs. 25 on allotment and the balance in two calls of Rs. 25 each. The Company has an authorised capital of Rs. 50 lakhs, consisting of Rs. 30,000 equity shares of Rs. 100 each and 20,000 unclassified shares of Rs. 100 each. Of this, Rs. 20 lakhs in equity shares is being issued for the present. The directors and their friends have already taken up shares of the value of Rs. 10 lakhs; the balance of 20,000 shares are now being offered to the public at par. The Company proposes to set up in Khapoli (Maharashtra) a plant for manufacturing special and refined grades of low phospher and low sulphur pig iron from scrap for the motor-vehicle, machine tool, railways and other industries. The Company has already purchased and imported hot blast cupola plant from Scotland and has acquired the technical services of the Belgian manufacturers of the plant—Messrs Compaigne General Des Conduites D'Ea. The cost of the plant including the fees for technical services and other incidental charges is placed at Rs. 8 lakhs. The Company has been licensed at present to manufacture 15,000 tons of pig iron a year, but it has already applied to the Government to raise the licensed capacity to 30,000 tons a year, and to undertake the manufacture of medium and heavy steel castings and steel billets during the second phase of its production programme. Messrs Acme Steel Private Limited will, subject to the Central Government's sanction, act as the managing agents of the Company.

Spinning Mill in Punjab to Issue Shares

A new Company known as Usha Spinning and Weaving Mills Ltd, which has been licensed to set up a spinning mill with 12,000 spindles in the vicinity of Faridabad (Punjab), is likely to enter the market to raise capital some time in July. The authorised capital of the Company is Rs. 1 crore. The issued capital will be Rs. 35 lakhs, made up of Rs. 28 lakhs in equity shares of Rs. 10 each and Rs. 7 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The promoters, directors and their friends propose to take up equity shares of the value of Rs. 14.28 lakhs. The balance of the issue is to be offered to the public. The entire preference issue, it is understood, has been underwritten by the Punjab Government. The Industrial Finance Corporation, it is learnt, has agreed to advance a loan of Rs. 30 lakhs. The promoters of the venture, Messrs Ram Krishan Kulwant Rai, are also planning to put up two plants in the vicinity of the spinning mill—one for manufacturing electric rectifiers and the other for drop forged tools. Separate Companies, it is proposed, will be formed to undertake these projects. One of them will be called Semi Conductor Corporation (India) Ltd. The International Rectifier Corporation of the U.S.A. will collaborate in the venture. Besides providing technical assistance, the U.S. firm will take up 50 percent of the capital. For the production of forged drop tools, Technoexport of Czechoslovakia is said to have agreed to give technical assistance and supply capital equipment worth Rs. 14 lakhs on a deferred payment basis.

Project for Reduction Gears

The Essential Engineering Company of Bombay has secured an industrial licence for the manufacture of reduction gears. The project is estimated to cost nearly Rs. 50 lakhs, of which Rs. 15 lakhs is likely to be spent on plant and machinery. The plant, which is expected to go into production about the middle of next year, will have an initial capacity of 1,000 units of worm reduction gears, 500 units of geared motors and 500 units of spur reduction gears annually. The promoters have planned to increase the production when the plant goes into operation. The world-famous firm of Moss Gears Company Ltd, Birmingham, will provide the technical know-how and train the personnel of the Company. The technical collaborators have agreed to participate in the venture on a royalty basis.

Vidarbha Paper Mills

Vidarbha Paper Mills Ltd is a new Company, which has been formed to undertake the manufacture of writing and printing paper and pulp. The project has been sponsored by Mr. Ratanlal G. Agarwal of Nagpur and the licence has been obtained in the name of Hindustan Paper Mills. The factory will be located in Kanhan near Nagpur. The paper plant and pulp plant will each have a capacity of 5 tons a day. The production of writing and printing paper will be taken up in the beginning and the manufacture of pulp will be taken up later. In the first stage, paper will be manufactured from waste paper and rags while in the second stage, pulp will be produced from agricultural residues like rice-straw, waste cotton, etcetera. The complete pulp and paper plant, valued around Rs. 11.30 lakhs, is being supplied by Rohtas Industries on a deferred payment basis in collaboration with the Japanese firm of Okamoto Tekko Company which will supply the component parts. The plant is expected to go into production about the middle of next year. The project is estimated to cost nearly Rs. 20 lakhs. The Company will have an authorised capital of Rs. 25 lakhs, consisting of Rs. 20 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 7½ percent tax-free cumulative preference shares of Rs. 100 each.

Seshasayee Industries Declares Loss

The working results of Seshasayee Industries Ltd for the year ended December 1960, shows a loss of Rs 5,26,174, after providing for Rs. 1,97,010 for depreciation. The loss is attributed to the fact that the Company went into production in its different sections only by the middle of 1960, so commercial targets could not be achieved. The directors point out that this is in the nature of "teething troubles" which are incidental to all new industries. They however hope that with the production now fairly stabilised, "the year 1961 will produce commercial results, although the profits earned may not be adequate to cover the losses, depreciation and development rebate provisions." The Company is now well on the way to stabilising the production in the ceramic section and it is expected that these lines will be well established during the current year. The directors add that the demand and enquiries for the varied requirements of electricity supply undertakings, equipment manufacturers and the railways continue to be heavy The Central Government has granted an expansion licence to the Company to step up production capacity considerably.

Ramalinga Choodambikai Pays Again

The net profit of Sri Ramalinga Choodambikai Mills for the year ended December 1960, comes to Rs. 83,354.79, after meeting all expenses and after providing Rs 7,84,731 for depreciation. The directors have recommended a dividend of 7½ percent, subject to tax; it was nil in the previous year. With the amount of Rs. 37,296 transferred from machinery replacement reserve and with a sum of Rs. 22,061 being the recovery out of some misappropriated funds from employees, the total comes to Rs. 1,42,712 This amount is used for the payment of the 7½ percent dividend proposed by the directors.

Highland Produce Maintains

The Highland Produce Co. Ltd has earned a higher profit of Rs. 8,54,422.83 for the year ended December 1960, compared with Rs. 7,68,236 for the previous year. With the amount of Rs. 24,693.71 brought in, the total available for appropriation amounts to Rs. 8,79,116.54. Out of this, the provision for taxation comes to Rs. 4,25,000, compared with Rs 3,75,000 in the previous year. A sum of Rs. 1,19,457.50 is transferred to general reserve (against nil). The development rebate reserve gets Rs. 4,500. The directors have decided to revise the rate of preference dividend to 6.76 percent, in keeping with the Preference Shares (Regulation of Dividends) Act, 1960. The preference dividend accounts for Rs. 22,560. The proposed ordinary dividend of 15 percent, subject to tax (same as last year), will absorb Rs. 2,70,000. The balance of Rs. 37,599.04 is carried forward to the next year. The total tea crop for the year amounted to 604,257 kilograms, compared with 525,121 kilograms in the previous year. The average cost of production was Rs. 3.47 a kilogram, compared with last year's figure of Rs. 3.48. The net average price realised was Rs. 4.53 a kilogram, compared with Rs. 4.58 a kilogram for the previous year. The cardamom crop was also higher during the year.

Sarada Mills Pass a Dividend

The working of Sri Sarada Mills Ltd for the year ended December 1960, has resulted in a net profit of Rs. 3,33,537, after providing for depreciation. This net profit is adjusted against the loss of Rs. 15,56,948 brought forward from the previous accounts. Thus, the net loss now carried to the balance-sheet is Rs. 12,23,411. The dividend for the year has been passed. The Central Government has approved the appointment of Messrs Thiagaraja Chetty and Sons Private Ltd, as managing agents of the Company for five years from 19th April, 1961. They will not be eligible for any remuneration unless the Company declares a dividend of at least 3 percent on the ordinary shares.

Kothari Fertiliser Venture

Kothari and Sons has come forward to establish a large fertiliser plant near Tuticorin in the south. To undertake the project, a new Company Kothari Fertilisers and Chemicals Ltd, will be floated with a capital of Rs. 10 crores. This capital will be found from domestic and foreign equity investment, apart from loan capital. Out of this Rs. 10 crores, domestic equity capital will account for Rs. 4 crores and the foreign equity investment will be Rs. 1 crore. Foreign loans are expected to account for the balance of Rs. 5 crores. Of the total outlay, 60 percent will be in foreign currency. An application has already been made for the necessary industrial licence. The State Government of Madras has promised its full support to the venture. The proposed location in Tuticorin will be economically advantageous, it is claimed. It is proposed to install a 240-ton-a-day ammonia plant in two stages. To start with a 120-ton-a-day plant will be established, and this will be later stepped up to 240 tons a day by additions or duplications. In order to meet the targets of fertiliser consumption in Madras State, it is necessary to install additional nitrogenous fertiliser capacity. As ammonium phosphate contains both ammoniacal nitrogen and water soluble phosphoric acid, and as this is much liked by the south Indian cultivators, the Company proposes to manufacture ammonium phosphate of the 16-20 grade. The present installed capacity will only meet 45 percent of the State's requirements by 1965-1966.

Cambodia Mills Modernisation

The working of Cambodia Mills Ltd during the year ended December 1960 shows a net profit of Rs. 7.56 lakhs, after providing Rs. 1.88 lakhs for depreciation. After setting off the previous years' carried-forward loss of Rs. 2.79 lakhs against the net profit, there is a balance of Rs. 4.77 lakhs. Out of this, the proposed dividend on 7 percent cumulative preference shares for the years 1958, 1959 and 1960, subject to tax, accounts for Rs. 27,300. The proposed dividend on equity shares at 9 percent, subject to deduction of tax, will absorb Rs. 1.80 lakhs. A sum of Rs. 2.27 lakhs is provided for depreciation for 1958. The balance of Rs. 42,420 has been carried forward.

During the year, additions to the buildings were made at a cost of Rs. 90,000. In the blow-room, the entire group drive was converted into individual drive. In the spinning department also, the last batch of frames on group drive was converted into individual drive at a cost of Rs. 68,000. It is proposed to purchase in the current year one set of blow-room machinery to replace the present set which is old and one set of combing equipment at an estimated cost of about Rs. 8 lakhs. In order to meet the cost of the above machinery and to meet other liabilities, a loan of Rs. 12 lakhs has been arranged from the Madras Industrial Investment Corporation Ltd.

Devashola (Nilgiri) Tea Earns More

During the year ended December 1960, the Devashola (Nilgiri) Tea Estates Co. Ltd has earned a net profit of Rs. 1.22 lakhs, against Rs. 125,313 for the previous year. With Rs. 1,259 brought in, the total comes to Rs. 1.23 lakhs. To this is added Rs. 9,000 transferred from dividend equalisation reserve, so the available surplus amounts to Rs. 1.32 lakhs. The interim dividend of 10 percent, subject to deduction of tax, paid already has absorbed Rs. 60,000. The additional provision for taxation for the previous years comes to Rs. 3,200. A sum of Rs. 8,160 has been transferred to Development Rebate Reserve. The proposed final dividend of 10 percent, subject to deduction of tax, is to absorb Rs. 60,000. The balance of Rs. 656 has been carried forward. The total dividend for the year is 20 percent, against 25 percent for the previous year.

The crop for the year was a record one amounting to 174,371 kilograms of made tea, against 147,558 kilograms in the previous year. The all-in cost of production was Rs. 4.40 a kilogram, against Rs. 5.02 a kilogram. The income a kilogram of tea was Rs. 5.10, against Rs. 5.85 a kilogram. Although the crop during the year was a record one, the Company's teas did not yield the anticipated results due to the fall in auction prices. Moreover, the installation of the high-power motors, transformers, etcetera, to suit pressure rolling which has enabled many Nilgiri estates to obtain better prices, could be completed only by the end of the accounting period. Besides, the final settlement of bonus to staff from 1956 to 1959 and to workers for 1959 was effected during the year. Provision had also to be made for Rs. 16,000 for excise duty on the increased crop and the short provision made concerning the Madras and Kerala sales tax for the previous year. The estimated tea crop for 1961 is 160,000 kilograms. —

Radhakrishna Mills Profit Up

Radhakrishna Mills Ltd has reported a higher profit for the year ended December 1960. The net profit for the year amounts to Rs. 19.19 lakhs, against Rs. 10.34 lakhs for the previous year, after providing Rs. 5.54 lakhs, against Rs. 3.79 lakhs for depreciation. With Rs. 2,661 brought in, the total comes to Rs. 19.22 lakhs. Out of this, the directors have transferred Rs. 10.90 lakhs (against Rs. 3.60 lakhs) to contingency reserve and Rs. 72,879 (against Rs. 1.04 lakhs) to development rebate reserve. The proposed dividend of 12 percent (against 9 percent), subject to deduction of tax, will absorb Rs. 7.57 lakhs. The balance of Rs. 2,429 is carried forward.

The directors say that the trading conditions which were not satisfactory till the middle of the year, improved later and this enabled the Company to earn better profits. The mill was able to obtain its requirements of cotton. The Company exported yarn and cloth during the first half of the year, and this enabled it to obtain adequate foreign cotton without payment of any premium.

As Radhakrishna Mills implemented the recommendations of the Textile Wage Board, wages and salaries increased by Rs. 4,03,372 over the previous year. The directors, however, note with satisfaction that the Company's efforts in exporting cotton textiles goods have been successful. Orders have been placed for machineries worth about Rs. 5.25 lakhs. The Company has invested Rs. 10 lakhs in purchasing the shares of South India Viscose at a premium of Rs. 5 a share. The directors say that the benefit of this investment will be considerable as the South India Viscose Ltd will soon be in full production.

Forward Trading in Jute: Past Lessons

The chairman of the East India Jute and Hessian Exchange Ltd, Mr. A. I. Murison, devoted the best part of his address to the annual general meeting, held last week, to analysing the lessons learnt in the past concerning the working of the Exchange, which is to reopen shortly. In the first place, the chairman dealt with the harmful effects of official price controls, especially when these are designed to interfere with the free play of the market forces of supply and demand. For example, the prices of jute goods as quoted in India or anywhere else, he stressed, were world prices resulting from the interplay of the same forces. Consequently, the measures introduced by the Forward Markets Commission in conjunction with the Jute Commissioner to suppress jute goods prices "against the force of world pressure" were at one time responsible for the loss of Rs. 6 crores a month in foreign exchange. The goods prices are also determined by the rates which have to be paid for the raw material. A reasonable parity between the prices of the goods and fibre is never automatically obtained. Therefore, any attempt to suppress the rates for manufactures or to support the price of raw jute without an effective complementary control of the other commodity, "will have the most unfortunate consequences on the main supporters of the industry, the mills", he said.

Discussing the part which the Exchange should be expected to play in the determination of the forward fibre and goods prices, Mr. Murison said that it is there to see that the prices at which trade is being conducted within its jurisdiction are a true reflection of "the interplay of the forces of supply and demand". To control or fix prices is none of its functions. Nor is this the proper function of the Forward Markets Commission, although this body as well as those in charge of the market should make sure that no one is manipulating prices purely for his own benefit—that is, no one is unduly depressing or raising one side of the scales against the other. Such people are better called "fiddlers" and "manipulators," and not speculators as they are mistakenly called now. Mr. Murison said that the illegal "katni" markets are a happy hunting ground for such elements, but these markets can exist only when properly regulated facilities are not readily available to provide an outlet for the requirements of "this type of business community."

Discussing regulatory measures, Mr. Murison suggested these should be comprehensive when applied. A disparity was allowed to develop between hedge prices and spot and/or T.S.D.C. only because the authorities then erroneously decided to control prices in the hedge market only. Any effort to control prices in this market is doomed to failure in any case, but to put limits on hedge contracts without doing the same on other forward transferable contracts "is merely to invite disaster". The Forward Markets Commission could have avoided this mistake if it had listened to the impartial advice of the trade, and when eventually it extended regulatory measures to other sections of the market, it was already too late to be of much use. "If it is the intention of the Forward Markets Commission and the Jute Commissioner to have it all their own way all the time, regardless of all the experienced and impartial advice that is always available to them, they must accept the full responsibility for all their actions."

U. P. Demands More Looms

The U.P. Government has finalised a scheme for the establishment of 51 industrial estates during the third plan. Out of a sum of about Rs. 3.16 crores to be spent on the establishment of the estates, the allocation for the acquisition of land will be spent this year. The construction of buildings to house the factories will be undertaken next year. Four big estates covering an area of 30 acres each and costing over Rs. 25 lakhs will be established in Lucknow, Aligarh, Banaras and Meerut. Five merium-sized industrial estates covering ten acres and costing a little over Rs. 10 lakhs will be established in Gorakhpur, Mirzapur, Bareilly, Roorkee and Dehra Dun. The estate in Agra will be set apart exclusively for the development of the leather industry. Ten industrial estates would be developed and handed over to prospective entrepreneurs for putting up their own factory buildings. These sites would be developed at Firozabad in an area of 40 acres, Hathras in 35 acres, Faizabad in 30 acres, and the rest in 20 acres each in Rampur, Bara Banki, Mathura and other districts. Thirty-six industrial estates will be established in the rural areas. The Government of India has allotted only six co-operative industrial estates for U.P. but eight have already been registered. Ten Harijan industrial estates are to be established by the Harijan Welfare Department. Special attention is to be given to the hill areas and to other backward pockets in the State's economy.

U.P. Opposes Sugar Expansion

The Chief Minister of Uttar Pradesh, Mr. C. B. Gupta, has publicly expressed his opposition to the Government of India's policy of licensing new sugar mills in the rest of the country. Addressing the annual meeting of the U.P. branch of the Indian Sugar Mills Association recently, Mr. Gupta said: "I do not favour the issue of several licences in the south when the north has been supplying sugar to the whole country, and particularly when the new licences have created overproduction in the country What is required is to protect the industries of the various regions and to make them self-sufficient without disturbing the economy of these regions." At the same time, he conceded that "the Centre has to consider the regional consciousness of the various areas." The president of the I.S.M.A.'s U.P. branch, Mr. Bhawasinghka, however, seemed to see an immediate solution to the problem in the lifting of all controls. But Mr. C. B. Gupta, like the Central Food Minister, Mr. S. K. Patil, was frankly opposed to this demand on the ground that removal of the controls would bring about cut-throat competition and do irreparable damage to the industry. According to Mr. Bhawasinghka's review of the situation, the industry produced 2.70 million tons of sugar up to the end of April 1961, compared with 2.32 million tons in the corresponding period of the previous season. The share of Uttar Pradesh was 1.27 million tons, against 1.16 million tons in the previous year. The total closing stocks with the mills in U.P. at the end of April were 1,075.000 tons, compared with 932,000 tons a year ago. The sugar output in the State for the current season is estimated at 1.40 million tons, indicating an increase of 180,000 tons over the 1959-60 figure. The accumulation of stocks, Mr. Bhawasinghka said, has created serious difficulties as bank advances are strictly limited. In many cases this has resulted in not paying the cane price; purchase tax and other dues. He pleaded that the system of issuing distribution quotas should be liberalised for the northern region where the industry is controlled.

Progress of Synthetics and Chemicals

In their first annual report covering the period from 21st January, 1960 to 31st March, 1961, the directors of Synthetics and Chemicals Ltd state that the overall progress of the Company's project has been satisfactory. Land measuring 1,381 acres has been acquired in Bareilly. The railway siding has been completed and is open for traffic. Orders for the principal plant and machinery have been placed. Machinery valued at about Rs. 1 crore has been received at site, and other machinery is being shipped. The construction of the housing colony is progressing satisfactorily. The Company has made a profit of Rs. 10.66 lakhs during the period under review. The directors have provided Rs. 31,717 for depreciation and 6.47 lakhs for taxation, and the balance of Rs. 3.87 lakhs is being carried forward. A sum of Rs. 8.93 lakhs has been deducted as expenditure during construction period and transferred to expenditure under construction account. The miscellaneous expenditure which has not been written off or adjusted, amounts to Rs. 22.39 lakhs out of which Rs. 5.75 lakhs are by way of preliminary expenses, Rs. 1.63 lakhs by way of brokerage and Rs. 15 lakhs by way of payment to promoters. The Rs. 100-paid share of the Company is currently quoted around Rs. 173.

Coffee Prices and Marketing

World coffee prices have fallen this year, and this fact has had its repercussions on the Indian export prices. The average price for the Indian Plantation A is, however, steady around Rs. 165 for 50 kilos. Besides, the internal prices have remained fairly steady. But the impact of low export prices is bound to react on the return to the grower. Speaking at the Coffee Board's meeting in Bangalore last week, Mr. H. Sitarama Reddy, chairman, said that the planting community should be prepared for a much lower return which might be around Rs. 2.23 a point. Growers are now confronted with a buyers' market, so efforts should be made to produce only quality coffee. Mr. Reddy said that Indian coffee has hitherto stood competition on the basis of quality alone. But reports reaching here from foreign countries point out that the quality of Indian coffee has considerably deteriorated this year. Mr. Reddy said that this might be due to the increased production of the commodity. "To maintain our standards in the world market, greater attention should be bestowed on the improvement of quality. Planters and curers may bear this observation in mind and adopt all measures to achieve this end." The chairman said that the problem facing the industry this year and in years to come is the disposal of Robusta. Export prices for this variety are uneconomical, yet a certain percentage of the output has to be exported not only to earn foreign exchange but also to stabilise internal prices. Mr. Reddy said that the internal consumption of Robusta has to be increased. It has to be made quite attractive to Indian consumers, so steps in the field of both prices and propaganda have to be taken immediately.

Restrictions on Aviation

The restriction on freedom in the air in commercial aviation is criticised in the 1960 annual report of K.L.M. Royal Dutch Airlines. It states that during the post-war years the gradually increasing liberalisation of the exchange of commodities, services and capital has clearly been conducive to more widespread prosperity. In civil aviation, however, the trend towards economic freedom had found little response, to the detriment of the development of this most modern form of transportation. "For centuries past the Netherlands has acted as an intermediary and performed a service function in international trade, so that these activities yield a large proportion of the gross national product," states the report. "Restriction of freedom in the air"—as reflected in the still widely fostered principle of *quid pro quo*, with all its inherent discriminatory elements—must, therefore, be considered totally inadmissible. After all, such a principle amounts to bilateralism applied exclusively to air policy questions with complete disregard of other economic considerations. "A striking illustration in this connection is the repeated, and as yet ungranted, request addressed to the Government of the U.S.A. by the Netherlands Government for permission to extend our route network with a service to the West Coast. We trust that the reasonableness of this request—in the light of the flow of traffic between California and the Netherlands and the exceptional economic position of the Netherlands as formulated above—will soon be acknowledged by the U.S. authorities."

Industrial Activity Index

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 4.4 points during October 1960. There were rises in sugar, tea, cement, coal, pig iron, paper, bicycles, electricity and railway ton-miles, but jute, cotton yarn and cloth, finished steel, tyres and motor-cars decreased.

THE CALCUTTA STRIKES

WE have had two strikes in the City this week, one by the gharri-wallahs, which presumably is over, and the other by the carters which proves of a more stubborn nature. There is little use in blinking the state of affairs which has led these men to take this step to call attention to their alleged grievances when all other means had failed. The right thing now to do is for our Lieutenant-Governor to nominate a Commission of three to make a searching enquiry into the causes which led up to the strike and to report their conclusions and suggestions. The Commission must be a non-official one, consisting say of two of the most level-headed men our Chamber of Commerce can produce, along with a first rate Barrister, who would keep them right on the laws of evidence. The carters may be right or wrong in their statements regarding the continual persecutions they allege at the hands of the police and others, but they have a right to receive fairplay, and to have their complaints investigated. We trust, therefore, the Commission will be appointed without delay, and that it will set to work at once. If the carters are assured that their grievances will be investigated at the instance of the Government, they will resume work at once. The sudden strike of these humble workers and their bullocks, whom in ordinary times no one thinks very much about, brings very forcibly home to all, how very dependent our commercial machine is upon all its several parts being harmoniously geared together.

A Ditcher's Diary

IF ANYTHING, THIS YEAR'S BIRTHDAY HONOURS contain even less of interest for the British community in India than usual And that is saying a good deal, because among the galaxy of names representing such important, exacting and underremunerated nation-serving activities as riding race horses, acting, kicking a football, wielding a cricket bat, or simply being employed in the Royal household, it is becoming increasingly difficult as the years go by to find one belonging to an expatriate business man, especially if he is living in India. No doubt to be out of sight is to be out of mind, and perhaps the Commonwealth and its economic affairs do not count for as much in London as they used to do when the empire was larger and the Common Market unheard of. But the fact must be faced that the most promising compensation for a working life full of service to British business and the community in torrid and trying climates, is these days not an honour but an air-conditioner. I am glad to see that there is still one post of service which is not yet ignored, however, that being the President of the Associated Chambers of Commerce, otherwise an exhausting and thankless chore if ever there was one. Last year's President, Mr. H. M. L. Williams, has been awarded a knighthood. It seems to me it is richly deserved; Mr. Williams must have been the first head of Assocham who faced his task without the breadth of experience which comes of having a managing-agency background. One might, in fact, say he was the first among a new race of business men—the modern, more specialised kind —who will no doubt enjoy an increasing say in Indian economic affairs in future years. Sir Henry can be congratulated on a job well done, and both he and his wife on their new, and well-deserved, designations.

I HAVE NOW COME TO THE CONCLUSION THAT India has no language problem at all—except one; and that is Hindi. If the militant champions of this singularly unsubtle language had not so crudely and impatiently tried to ram it down the throat of every Indian, it seems to me more than probable that the other languages would not have been so morbidly zealous about their rights. But the die, I fear, has been cast; and Hindi is determined to march ahead regardless of all opposition. Dr. Roy's formula has not the slightest chance of being accepted by the Congress for, apart from not insurmountable administrative difficulties, the Hindiwallahs are quite right in seeing in the multilingual formula some sort of rearguard action on the part of the other languages to delay the advent and unrivalled installation of Hindi in India. Hindi enthusiasts know very well that not until every other language has been suppressed and supplanted is there the slightest possibility of the majority of Indians swallowing Hindi. Hence the deliberate decline in the standard of English teaching in the country, so that bad English may soon be discarded in favour of bad Hindi. Hindi is, of course, part of the struggle for power; but it must already be clear to the Congress that the search for a national language as a unifying factor has already created more dissensions in the country than almost any other factor. If at the time of drafting the Constitution Dr. Rajendra Prasad and some others had not insisted on the replacement of English by Hindi, English would have continued as the official language; and neither Assamese nor Tamil nor any other language would have claimed to be an official language. Would it have amounted to any diminution of India's sovereignty because English is a "foreign" language? Nonsense. Would it have meant any neglect of India's 14 languages? Just the contrary. All the modern Indian languages, especially their prose, flourished most and rejuvenated themselves when the impact of English came; and at least in Bengal this is gratefully acknowledged by most intellectuals. Even Hindi has profited from its contact with English. But then all this, like Dr. Roy's formula, is sense; and it is a long time ago when I believed that rationalism has a rôle in politics.

ONE COULD ALMOST HEAR THE SIGH OF RELIEF THAT went up from New Delhi when the electorate in Orissa gave a decisive verdict in favour of the Congress. If Congressmen now consider this a good omen for the coming general elections, they can scarcely be blamed, although one wonders whether they would have had the same cause for rejoicing if the contest had been held in West Bengal at the present time. I could never understand why the Ganatantra Parishad could have made the foolish mistake of coalescing with the Congress when it was itself growing so steadily in popularity through the ineptitude and ineffectiveness of its rival. The former Congress Chief Minister had said openly that the motive behind the coalition was the ultimate merger of the two Parties, but perhaps the Ganatantra Parishad leaders calculated otherwise and hoped to subvert the partner from within. At least, this was the fear of Mr. Bijoyanand Patnaik, the new Congress leader, and this factor apparently weighed heavily with the High Command in ordering the State Congress to withdraw from the coalition. I am inclined to think that it was this miscalculation of the Ganatantra Parishad which has cost it the election. That, of course, was not the only reason. The Congress organisation as a whole threw its resources into a single State election: even Mr. Nehru found time to address meetings in a month as hot as May, and such veteran election strategists as Messrs Ghosh, Shastri and Kanungo were all despatched to the aid of the local Party. Very impressive, and I hope that Orissa will benefit from the victory in the form of greater stability and increased scope for economic progress. But I cannot help wondering how long the Congress in the States can go on relying for its victories on the weight of the Centre and the mistakes of its rivals.

WHILE ON THE SUBJECT OF ELECTIONS, I CAN only say how shocked I was that in the recent election for the graduates' constituency of Calcutta University, more than 4.000 ballot papers were returned than were originally issued. This was not, of course, a magician's trick, much less a miracle: it was just plain hanky-panky on the part of some mischievous elements bent on gaining a large enough majority to rule the Senate according to their own whims. I am unable to understand why the University authorities should have been in such a hurry to hold another election on 27th June when the tenure of the Senate had already been extended by one year. Surely the more reasonable course would have been to bring to book those responsible for the fraud and forgery, debar them from participating in future elections and then hold the polling in a fair and impartial manner. Nor can I understand why the Chancellor or the Vice-Chancellor should not have insisted on amending the University Act in order to secure the personal presence of voters when casting their votes, as in a general election. But nothing of the sort has happened. Instead, despite the expense—in sending the ballot papers to voters by post, the University, I am told, incurred an expenditure in excess of Rs. 20,000—and before the enquiry by the Detective Department is complete, another election is being held in unbecoming haste and with goodness knows what results. When a university becomes the hotbed of politics, as Calcutta's has in recent years, it obviously cannot effectively pursue the lofty ideal of advancing learning. Furthermore, it becomes a public disgrace, and I for one would support an impartial enquiry into whether or not Calcutta University should be deprived of public support until its house is put in order. But such scandals are too readily accepted in West Bengal these days; whether the trouble is in the Corporation, the University or the Health Service, the same defeatist attitude is taken.

NOW THAT MR. KENNEDY, SINCE HIS VIENNA TRIP, is convinced that the struggle between East and West will be decided according to the success each enjoys in developing under-developed countries—in my opinion a highly questionable thesis—more money will no doubt be spent in international aid schemes. I only hope that in his enthusiasm, America's bright young man will not lose sight of the fact that every bit as important as the amount of aid given is the value obtained for it. The risk, as I see it, is that in his eagerness to give his —and his allies'—money away, President Kennedy will not stop to think what effect it is really having. Perhaps the most important thing is that he should have his motives sorted out. What, in fact, is he trying to achieve? If the idea is to buy friendship, and this is a traditional and characteristic American error, then I suggest he is wasting valuable resources which might be better employed in, say, catching up with the Russians in the space race; people are at least impressed by *sputniks* whereas they are only antagonised by bribery. And if the U.S.A. still believes that pleasing local politicians is worth the money it costs, then I would refer it to its own experiences in China. Should the promotion of U.S. trade be the object, or western trade as a whole for that matter, then there is a great deal to be said for expanding aid to the maximum that can be spared. But if the aim is to increase the standards of living of people in under-developed countries so as to strengthen them against subversion backed by communist threats and promises, then it seems to me the U.S.A. ought to reconsider its entire attitude towards foreign aid. The fact has to be faced that so far western aid has done very little to raise living standards. In India, for instance, these have increased by only about 10 percent in the past decade, a performance which, in my opinion, spells misery and frustration. It puzzles me why the U.S.A., which is such a firm believer in free enterprise as the quickest way of raising living standards, should be so eager to support socialism in any country other than its own. It shows a lack of strength in one's own convictions if you ask me. One does not find the Russians supporting free enterprise.

OBJECTS OF THE COMPANY

The Company was incorporated on 20th December. 1960 with the main object of undertaking manufacture of various grades and types of Reclaim Rubber and for the other objects particularly mentioned in the Memorandum of Association of the Company.

PROSPECTS OF RECLAIM RUBBER

The present consumption of raw rubber by the existing tyre factories alone is about 35,000 tons per annum, out of which about 15,000 tons of scrap rubber will normally be available. However, with the enormous increase in the production of Tyres, the consumption of raw rubber by Tyre factories is expected to go up to 60,000 tons per annum before the end of the third plan period. This will increase the availability of scrap rubber to about 23,600 tons per annum. As such the necessary scrap rubber required by the industry will be sufficiently available within the country.

At present almost the entire requirement of the country for reclaim rubber is being imported. The consumption figures of the reclaim rubber for the past three years are as under:

1958 — 4,051 tons
1959 — 4,500 „
1960 — 4,800 „

The main users of the reclaim rubber are Battery containers. Tyre manufacturers and all other rubber factories also use reclaim rubber to certain extent. Some rubber articles can wholly be made from reclaim rubber in more economical way and it is a good filler for many other articles. The Development Wing (Rubber) of the Government of India estimates that the consumption of reclaim rubber will rise to about 10,000 tons per annum in the near future. The policy of the Government of India is to encourage the indigenous industry particularly if it is going to save the foreign exchange. The Company hopes to save foreign exchange of about Rs. 50 lacs every year as soon as its maximum production is reached. Moreover there is no fear of any wasteful competition because there is still a wide gap between the country's requirement and the Company's proposed production.

It is, therefore, clear that the industry has bright future.

LAND FOR FACTORY

Keeping in view the availability of power, water, raw materials skilled labour, transport facilities, etc., it is proposed to acquire by way of purchase a site approximating 6 acres round about Thana in Greater Bombay for erection of the Company's factory Negotiations for the purchase of the said land are in progress and the Company does not at present anticipate any difficulty in acquiring the same.

PAYMENT TO PROMOTERS — PRELIMINARY EXPENSES

No payment is made or proposed to be made to the promoters of the Company Messrs. Kamani Brothers Private Limited except for reimbursement of actual preliminary expenses incurred by them and no profits or benefits have been given or are proposed to be given to any other person as promoter of the Company.

Preliminary expenses will amount to Rs. 1,00,000/-

PROFITS

On the basis of the existing prices and after allowing costs, overheads, depreciation and other foreseeable contingencies, in so far as these items can be at present estimated the Directors are of the opinion, that in the absence of any unforeseen circumstances the Company should be in a position to pay reasonable dividend on the issued equity shares.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certificate of Commencement of Business dated the 9th March. 1961 from the Registered of Companies. Maharashtra.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per paragraph 5 of the Schedule II to the Companies Act, 1956 and upon which the Directors will proceed to allot shares in respect of the public issue, is Rs. 17,15,000/-

RESOURCES AND DISBURSEMENTS

The total funds available with the Company will be as follows:

Share capital subscribed by the Directors, Promoters, their friends and associates ..	Rs. 17,85,000
Capital to be raised by this issue ..	Rs. 17,15,000
Foreign Exchange: Loan to be obtained from the Industrial Credit & Investment Corpn. of India Ltd. ..	Rs. 17,00,000
(The Industrial Credit & Investment Corpn. of India Ltd. have agreed in principle to grant this loan to the Company)	
	Rs. 52,00,000

This amount of Rs. 52,00,000/- will be utilised approximately as under:

(i) Cost of land, site development, construction of roads, etc. ..	Rs. 4,75,000
(ii) Construction of Factory Building ..	Rs. 2,50,000
(iii) Cost of imported plant and machinery ..	Rs. 17,00,000
(iv) Insurance, Import Duty, clearing charges, etc on imported plants ..	Rs. 3,30,000
(v) Cost of indigenous plant and equipments including erection charges electrical installation	Rs. 4,00,000
(vi) Cost of laboratory equipments, furniture, fixtures and vehicles, workshop equipments, etc. ..	Rs. 1,50,000
(vii) Preliminary expenses, brokerage advertising charges, etc.	Rs. 1,00,000
(viii) Pre-operating expenses ..	Rs. 3,50,000
(ix) Working Capital ..	Rs. 12,45,000
(x) Contingencies ..	Rs. 2,00,000
	Rs. 52,00,000

Additional finance, if any, required for working capital when the factory goes into production, will be obtained by way of loans from the Bank and other sources.

EXPENSES OF THE ISSUE

The preliminary expenses and expenses of the issue which are payable by the Company out of the capital now being issued are·

(a) Preliminary expenses and expenses of the issue .. Rs. 74,275

(b) Brokerage and commission .. Rs. 25,725

No payment is to be made to promoters of the Company except for re-imbursement of actual preliminary expenses which are payable to Kamani Brothers Private Ltd., the promoters of the Company.

BROKERAGE AND COMMISSION

Brokerage at the rate of 1% will be paid by the Company on all allotments made in respect of applications bearing stamps of banks or certified brokers.

Commission at the rate of 0.5% will be paid to the Managing Brokers, Messrs. Dhirajlal Maganlal Purshotamdas on 17,150 shares offered for public subscription.

APPLICATION AND ALLOTMENTS

Application must be for 5 shares or a multiple thereof.

All applications must be in the Form accompanying the Prospectus which can be obtained from the Company's Office and the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with the Company's following Bankers namely :—

1. **The Chartered Bank,** Mahatma Gandhi Road. Bombay-1
2. **The Devkaran Nanjee Banking Co. Ltd.,** Horniman Circle, Fort, Bombay-1
3. **The Bank of Baroda Ltd.,** Apollo Street, Bombay-1

or with any of the Branches of the said Bankers at Ahmedabad, Bangalore, Baroda, Bombay, Calcutta, Delhi, New Delhi, Madras, Rajkot and Surat.

All cheques and drafts drawn on Banks situated at places other than mentioned above should include a sum at the rate of 25 nP. per cent (minimum 62 nP.) of the amount remitted to cover all commission and Bank charges; otherwise the application is liable to be rejected.

The cheques or drafts should be made payable either to "The Chartered Bank A/c. Indian Rubber Regenerating Co Ltd.", "The Devkaran Nanjee Banking Co. Ltd. A/c. Indian Rubber Regenerating Co. Ltd." or "The Bank of Baroda Ltd. A/c. Indian Rubber Regenerating Co. Ltd" and should for the applicants' protection be crossed "A/c. Payee only". A separate cheque or draft must accompany each application form.

The allotment will be indicated by the despatch of an allotment letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or part without assigning any reason. Where the application is rejected or not accepted in full, the whole or any balance of the application money received as the case may be, will be refunded without any interest to the applicant (in which event, the Bank's commission, if any, will be payable by the applicant) within 2 months from the date of closing the subscription list.

ISSUE OF SHARE CERTIFICATES

Share certificates will be available for issue in exchange for letters of allotment within 4 months of allotment.

GUEST, KEEN, WILLIAMS, LIMITED

STATEMENT OF MANAGING DIRECTOR TO SHAREHOLDERS

Managing Director's Statement to the Shareholders on the occasion of the 31st Annual General Meeting held in Calcutta on 6th June, 1961.

In the absence on leave of Mr. H. M. L. Williams, Managing Director, the Statement was read by Mr. W. Morrice, the Chairman of the Meeting.

Mr. R. Catlow, the Chairman of the Board of Directors since 1953, has tendered his resignation of this appointment to take effect from the close of this meeting but I am pleased to inform you that he will remain a member of the Board. Mr. Catlow has been at the helm of your Company all through a most intensive period of expansion; to all employees, and especially to me personally, his guidance and assistance have been a great encouragement. The Company has been most fortunate in having him to represent its problems to our associates in Britain, and this service I am happy to tell you he will continue to perform. Sir Raghavan Pillai, at present an additional Director, I am pleased to tell you is willing to accept the Chairmanship of the Board in place of Mr R. Catlow; his appointment as a Director is a matter of a resolution later at today's meeting. Sir Raghavan Pillai has a vast fund of administrative experience and I consider the Company is most fortunate in securing his services.

It is with regret that I report the retirement of Mr. E. J. Evans, a former Director, from the post of London Office Manager, who by his loyal service and keen interest has contributed much to your Company's development for many years.

Increased Competition

The year 1960 as regards trading followed very much along the trend of its predecessor. Increased competition was encountered in a number of what have been your Company's traditional lines of manufacture; items which this Company has pioneered and developed to international standards of quality are increasingly being marketed by competitors at unremunerative prices and of a quality which leaves a great deal to be desired. In many of the production departments the output suffered due to an insufficiency of proper quality raw materials. In particular the supply position to your Company's Works of tested specification steel billets has been very difficult throughout the year, as also has the supply of steel crossing sleeper bar. The final stage of the rolling mill development project to which I referred in my Report last year was completed only towards the end of 1960 when commissioning commenced; this project has not therefore been able to influence the past year's earnings.

Turning now to the Accounts themselves, the total sales for the 52 weeks ended 31st December, 1960 amounted to Rs. 9,66,62,652 which showed an increase of Rs. 5,66,836 for the same period on the previous year. The total income is Rs. 9,95,36,373 and includes this year an amount of Rs. 15,60,000 received as dividend from Sankey Electrical Stampings Limited, which became a subsidiary of your Company during 1960 when Guest, Keen & Nettlefolds, Limited, the principal shareholders in your Company, subscribed for part of their Rights entitlement by transferring their shareholding in Sankey Electrical Stampings Limited (formerly Sankey Electrical Stampings Private Limited). The surplus after taxation for the period under review is Rs. 61,66,715 as compared with Rs. 32,17,623 for the previous period, but in comparing these figures I must point out to you that during 1960 the depreciation charge at Rs. 45,43,022 (1959—Rs. 30,62,135) was substantially higher as a result of the completion of Capital Projects. You will appreciate as with all major expansions and new developments a certain time has to elapse before revenue earning momentum can be attained sufficient to absorb the initial heavy depreciation and the relatively high costs of the early operating stages. Mention must also be made of the statutory amount of Rs. 24,57,232 (1959—Rs. 33,01,000) which had to be provided in 1960 for Development Rebate Reserve. These substantial transfers during the last two years all go towards strengthening the reserves of your Company.

Rights Share Issue

During the year by reason of the Rights Share issue of 20,00,000 Equity Shares of Rs. 10/- each at a premium of Rs. 14.50 per share, the Issued Capital has been raised from Rs. 2 crores to Rs. 4 crores and there has been a net increase of Rs. 3,68,11,726 to the Share Premium Account which now stands at Rs. 4,27,05,728.

For the 52 weeks ended 31st December, 1960 an Interim Dividend of 80 nP per share has already been paid out on the former Issued Capital of Rs. 2 crores. Your Directors now recommend a Final Dividend for the same period of 80 nP per share on the currently issued Capital of Rs. 4 crores, transferring from General Revenue an amount of Rs. 6,03,673 which transfer they consider appropriate taking into consideration the very substantial statutory transfer to Development Rebate Reserve I have already mentioned.

Capital Projects completed during the year and reflected in the additions to Fixed Assets amounted to Rs. 1,55,24,647. During the years 1959 and 1960 no less than Rs. 3,86,47,026 worth of new buildings, plant and machinery was added, which will undoubtedly improve the future revenue earning capacity of your Company. The cash intake from the Rights Share Issue has enabled the Bank borrowings to be substantially reduced, at the same time to utilise liquid resources to best advantage a loan of Rs. 1 crore was given to Sankey Electrical Stampings Limited; since the end of the year Rs. 30 lakhs of this loan has been repaid.

Generally the past year has for your Company developed very much on the lines I indicated in my Report to you a year ago. The greatest difficulty has undoubtedly been an insufficiency of specification and quality steel billets which has prevented most of the Calcutta Works production sections from satisfying their customers' needs. The position started to improve in the early months of 1961, but it is most unfortunate and indeed embarrassing that in spite of unflagging efforts of your employees we are not yet in a position to satisfy our customers' needs with the efficient service to which we consider they are entitled. The difficulty arises due to steel making capacity and quality even in the mild steel ranges from the country's steel Works not yet being able to satisfy the demand of the more selective users who are manufacturing their products to specification. Last year I said except for a limited quantity of special steels the Company's raw material problem would be substantially solved. I regret that I cannot yet report that this position has been reached, but it is now recovering from its setback and we are receiving more steel than we were a year ago.

Growing Demand

As regards the demand for your Company's products, this continues to grow and there is an increasing call from customers particularly in the newer precision engineering industries for a greater variety of specialised manufactures to good quality standards. This I consider is a most welcome development for industry in India and is a sure sign that the country's industry is expanding properly and is prepared to take the extra trouble associated with quality manufacture to internationally acceptable standards. I mentioned earlier increasing competition was being experienced in traditional lines of manufacture, this will no doubt continue to grow as others gain manufacturing knowledge. Your Directors are well aware that the Company can only retain sales for such items by being more efficient, and this means increasing output and reducing manufacturing costs. During the past year careful study continued to be given by the management to increasing efficiencies and the benefit of this work (which is a continual process) together with the various development projects are, I am pleased to say, consolidating the Company's position.

On the export front both Calcutta Works and Bhandup Works have now made sizeable contributions, but although they have been able to supply overseas customers with fastenings and railway fittings fully up to standards of international quality the prices have to be heavily subsidised and this will continue to be necessary until steel prices can be very substantially reduced. Your Company's experience of the actual working of the Government's subsidy drawback schemes has been excellent, claims being expeditiously and efficiently handled, which is of course essential to create confidence in the minds of potential exporters of engineering goods.

Medical Benefit Schemes

The medical benefit schemes which were introduced over a year ago so that all employees enjoy free medical aid have been operating satisfactorily and the expansion of improved preventive treatment is now being studied both at Calcutta and Bhandup. An additional canteen building at Calcutta Works has been erected during the past twelve months and at Bhandup recreational facilities and further improvements to the sports ground have been made. Relations with labour have on the whole been satisfactory throughout 1960, and have generally followed constitutional methods of conduct and negotiation. However there is still room for improvement whereby the Trades Unions and the Company Management work in closer unison for the best interests of the Company, and its employees.

The Company's consultants and associates Guest, Keen & Nettlefolds, Limited continue to render a great deal of technical assistance which is of immense benefit to our development and indeed without which the very rapid expansion of the past few years would not have been possible. Guest, Keen & Nettlefolds, Limited besides injecting a large foreign exchange element for the Rights Issue have in the past year brought to your Company the business of Sankey Electrical Stampings Limited, which diversifies and broadens the base of your investment with an interest in the country's growing electrical industry.

In my Report to you last year I mentioned the subject of a bonus share issue, saying that in view of the high rate of taxation on such issues and the need to conserve liquid resources the Directors did not consider such an issue at that time to be in the best interests of the Company. Since then there has been a reduction in taxation on bonus share issues which is to be welcomed although an issue even from the Share Premium Account which the shareholders themselves have subscribed still requires 12½% to be paid as additional taxation. Your Directors therefore consider that before incurring additional taxa-

INDIAN RUBBER REGENERATING CO., LTD.—*Cont'd.*

tion liabilities which can otherwise be avoided, it is in the best interests of the Company that the recent expansion projects be allowed to reach a stage where they become greater revenue earners to service the currently issued capital of Rs. 4 crores which is now double the figure it was in the previous year's accounts. The commissioning of the various development projects has generally proceeded satisfactorily, and with the rod train of the Calcutta Works new rolling mills now in operation we are now in a position subject to a sufficiency of steel billets to supply both the woodscrew works and the bolt works with the smaller sizes of their raw material which previously had to be imported. The wheel plant continues to increase its variety of trailer and car wheels. The bright bar plant at present under installation is expected to be in production well before the end of 1961.

Power Shortage

It would I think be only right for me to sound a word of warning concerning the present inadequacy of electric power supplies to your Company. Plant at Calcutta Works has had for some months now to be operated on a load shedding and staggered hours basis and, whilst in some departments it has been possible to maintain production on different working hour schedules, the electric steel making furnaces had to accept a cut of approximately 35 per cent, and previously being on a 24 hour schedule there is no chance of recouping this lost output; however this is not a difficulty peculiar to this Company. Given sufficient power, and as I have mentioned earlier an adequacy of proper steel supplies, I feel certain that this Company has a good future and will be able to justify the confidence you as shareholders have placed in it.

Finally I would like to thank on your behalf the staff and all employees who have during the past year worked loyally and keenly in your interests, they have encountered most of the problems associated with industry today but with resolution and determination have done their best to overcome them.

H. M. L. WILLIAMS,
Managing Director.

Money

THE CALCUTTA MONEY MARKET

IMPROVED SUPPLY OF BILLS

Wednesday, 14th June.

ONCE again there has been very little change in the level of advances outstanding in the Calcutta money market, although on balance it would seem that non-seasonal factors are now predominating over seasonal ones and credit requirements are tending to increase. The main sources of demand—the cotton mills and the jute industry—have both reduced their offtake, but the requirements of the sugar mills and against grains and seeds storage have remained about the same. The entire increase in the total of advances is due to the larger requirements of the engineering and the iron and steel industries. In the interbank market, conditions are now very easy. The official call rate is down to 3½ percent, but business has been reported at 3¼ percent.

There has been another substantial improvement in the supply of bills of exchange during the past week, both on account of tea and gunny shipments. Remittance demand has remained keen. In the London money market, the pound showed a weak tendency throughout the week, but at the close staged a smart rally and touched its highest level for the past four months. This sudden strength is due to an authoritative announcement from the I.M.F that no currency changes are in prospect in the near future. At the close, the pound showed gains against all major currencies.

BULLION WAS STEADY DURING THE PAST WEEK DUE to short-covering. Silver advanced from the past week's level of Rs. 235.50 to Rs. 236.00, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 235.50. The London and New York prices were 79⅞d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 142 to Rs. 143. The sovereign gained 25nP at Rs. 90.75.

DURING THE WEEK ENDED 9TH JUNE, GOVERNMENT of India Treasury bills for Rs. 22,47,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 13th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.750 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 19th June.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 14th June to 17 June at Rs. 99.331 percent, subject to the conditions that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 7th June to 10th June amounted to Rs. 1,97,25,000.

RISES OF RS. 20.78 CRORES TO RS. 1,983.30 CRORES in active notes and of Rs. 3.61 crores to Rs. 1,994.37 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 9th June, 1961. The currency expansion was adjusted by reducing foreign securities by Rs. 5 crores to Rs. 108.01 crores and by increasing rupee securities by Rs. 9.96 crores to Rs. 1,651.90 crores in the paper currency reserve. These securities were changed by transfers from and to the Banking Department in which balances held abroad rose by Rs. 1.71 crores to Rs. 17.47 crores only, and investments declined by Rs. 6.17 crores to Rs. 203.85 crores. Deposits of the Government of India fell by Rs. 2.15 crores to Rs. 50.09 crores, as did other Government accounts by Rs. 10.33 crores to Rs. 11.07 crores, but balances of commercial banks at Rs. 83.33 crores showed a rise of Rs. 4.64 crores. Other loans and advances declined from Rs. 123.84 crores to Rs. 118.50 crores, of which advances to scheduled banks against usance bills amounted to Rs. 14.03 crores (Rs. 13.06 crores). Ways and means advances stood at Rs. 77.01 crores, against Rs 73.09 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 2nd June, 1961, shows a rise of Rs. 1.99 crores to Rs. 532.67 crores in total deposits. Investments in Government securities are up by Rs. 2.04 crores to Rs. 226.34 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 9.30 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 27.75 crores to Rs. 235.63 crores. Cash and balances are, in consequence, shown at Rs. 20.41 crores or Rs. 8.07 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 2nd June, shows Demand and Time liabilities at Rs. 827.09 crores (Rs. 26.22 crores on account of borrowings from banks) and Rs. 1,120.61 crores (Rs. 15.55 crores), compared with Rs. 838.88 crores (Rs. 36.85 crores) and Rs. 1,114.94 crores (Rs. 15.76 crores) in the previous week. Cash has declined by Rs. 65 lakhs to Rs. 46.60 crores, while balances with the Reserve Bank have increased by Rs. 5.02 crores to Rs. 78.96 crores. There is a rise of Rs. 62 lakhs to Rs. 550.45 crores in investments. Advances and bills discounted at Rs. 1,288.56 crores show an increase of Rs. 1.90 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.4 percent and 66.2 percent, against 6.2 percent and 65.9 percent.

TREASURY BILL MATURITIES

ADVENTURES INTO TUBELESS TIMES

I, Time Master Tubophile...that's my name... Chairman, Tube Time Inc., am venturing into the tubeless times on my tubular time machine. Journey fraught with some danger but more hardships...hardships unimagined even by the imaginative Wells (he with the Martian mania)...for Wells, a scientific man, couldn't conceive of a time without tubes. But tubeless times there have been (I, Time Master Tubophile, Chairman, Tube Time Inc., should know) and 'tis to these unhappy tubeless times I go in my time machine, so I can tell you of the hardships of a life without tubes.

Look for the next instalment.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Industrial Activity (Base: 1953) has now been brought up to October 1960. Compared with the preceding month, there were increases in sugar 21.18 points, tea 15.18 points, cement 32.98 points, coal 4.25 points, pig iron 21.35 points, paper 17.75 points, bicycles 35.45 points, electricity 10.28 points and railway ton-miles 3.07 points, while decreases occurred in jute 6.77 points, yarn 3.19 points, cloth 3.96 points, finished steel 3.63 points, tyres 21.68 points and motor-cars 1.21 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity increased by 4.4 points during October 1960.

Stocks and Shares

SELECTED SPECULATIVES ACTIVE IN OTHERWISE DULL MARKET

OPERATORS OPTIMISTIC ABOUT STEEL RETENTION PRICES

Wednesday Evening.

TRADING has been largely concentrated on two speculative shares—Indian Irons and Hindustan Motors—in the Calcutta stock market this week. Operators appear to have manipulated the prices of these two scrip, on a small turnover, very much according to their whims. Steel shares have been boosted on various rumours. The speculative fraternity is inclined to think that the new steel retention prices will be declared soon. There is no doubt that the steel companies will find it difficult to close their accounts for the year ended March 1961 unless these prices are published in time. But judging from past experience, it is doubtful whether the Government will care to announce the new prices as quickly as the market seems to expect. Besides, optimism about these prices may have been exaggerated because the best that can be hoped for is that the new retention prices will just compensate steel producers for recent rises in production costs. So there is no particular reason why the retention prices should be considered such an important bull factor.

Hindustan Motors have also benefited from favourable rumours : Lyons Range has ignored the possibility of bigger floating stocks of this scrip in view of the fact that the preference shares of the Company will begin to be converted into ordinary ones from the beginning of next month. Discriminating investors, meanwhile, continue to consider the possible impact on the working of motor-car companies should the public sector begin the production of small cars.

Speculators have been generally encouraged by two factors. Firstly, the foreign financial assistance India will receive from the "Aid-India Club" countries during the first two years of the third plan, is expected to ensure the smooth working of the economy. A Press report that a portion of the D.L.F. funds will be used for obtaining maintenance imports may help India to overcome existing payments difficulties.

Secondly, the stock market expects greater supplies of funds for investment in stocks and shares in the coming weeks. The refunds from the Goodyear India issue have started to come in. If the funds released from various new share issues are put back into existing scrip, the trend could be upwards. Although the pressure on banking resources has declined and is likely to do so in greater measure in the near future, it is doubtful whether any substantial portion of these funds will be channelled into share investments.

In their bullish frame of mind, operators appear to have ignored some adverse developments. The power shortage in and around Calcutta shows little sign of improvement. Whether adequate supplies of electric power can be ensured during the monsoon is questionable. The publication of recent company reports shows how profitability has been squeezed by rising production costs. New Delhi seems to be worried about the growing concentration of economic power, so rumours are circulating that steps may be taken to restrain further expansion in some existing industries. It is also feared that the flow of institutional credit may be regulated in order to prevent the concentration of economic power. Some industries are reported to have suffered from shortages of transport, coal and raw materials.

In view of such a background of mixed developments, investors proceed cautiously, so the speculative shares have lacked follow-up support. Business has been done on a limited scale in all sections of the market. There has been a reaction today, however, and profit-taking has reduced top gains. Indian Irons have fallen back to Rs. 28.26 Prices of engineering shares have declined on balance. Guest, Keen, Williams have improved fractionally on replacement buying. Jessop, J. K. Steel, Britannia Engineering and Texmaco are quotably lower. Indian Standard Wagons are steady on maintaining the ordinary dividend.

Turnover has declined in coal shares and attention is concentrated on selected scrip. Equitable have improved on a higher ordinary dividend being paid. Prices of Bengal, Burrakur, Amalgamated, Central India and Western Bengal have lost on balance.

The miscellaneous section has produced mixed trends. Metal Box have become steadier on maintaining the ordinary dividend. National Insulated Cable and Electric Construction have gained on replacement buying. Hindustan Aluminium have enjoyed support on prospects of expansion. Angelo Brothers are steady on a report that the current lac crop is substantially lower than that of 1960, so lac prices will improve. In managing agency shares, Balmer Lawrie and Duncan Brothers have attracted support on good reports. Rohtas, Indian Copper and Indian Aluminium have reacted on profit-taking. Paper shares are quiet and Orient have lost further ground.

There has been increased support for cotton mill shares on the view that production will improve due to more abundant supplies of raw cotton Prominent scrip are Bharat Commerce, J. K. Rayon and Dunbar. Kesoram have gained on increasing the ordinary dividend.

Sellers predominate in jute shares on the apprehension that mills will make losses at present prices of raw jute and goods. Scattered interest has been taken in Birla, New Central and Anglo-India.

Interest has been maintained in selected Assam and Dooars gardens on good crop prospects. The north Indian output has again increased to 30.69 million lbs in May 1961 from 20.95 million lbs in May 1960. so total production is 49.77 million lbs up to the end of May 1961, compared with 37.52 million lbs for the corresponding period of 1960. Interest has been taken in Bishnauth. Baghmari, Basmatia, Jay Shree, Hasimara, Hantapara, Huldibari and Rajgarh.

Business has increased in selected preference shares, but sellers are not easy to locate Banking shares are quietly steady in narrow fluctuations.

In Government securities, the 3 percent conversion loan 1986 has declined further on pressure. Prices of short-dated stocks have been generally steady. The Reserve Bank is believed to have turned a seller in 3½ percent loan 1967.

Mim Tea

The working of the Mim Tea Co. Ltd for the year ended December 1960 shows a profit of

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

FOR SERVICE & SECURITY

Chairman

THE BANK OF BARODA LIMITED
(Estd: 1908)
Head Office: Baroda
JWT-BB 1977

Rs. 91,784, against Rs. 23,040 during the previous year, after providing Rs. 18,073 (against Rs. 16,471) for depreciation. The directors have recommended a gross dividend of 22½ percent a share, against 10 percent, taxable, in the previous year. This absorbs Rs. 35,775, and is covered two-and-a-half times. At the current price of Rs. 214 a share, it offers a yield of 10.5 percent. Taxation provision is allocated Rs. 32,000 (against nil), development rebate reserve Rs. 857 (against Rs. 372) and general reserve Rs. 20,000 (against nil). After making various adjustments, a sum of Rs. 15,577 has been carried forward, against Rs 12,425 brought in. The balance-sheet shows reserves and surplus at Rs. 3.88 lakhs and fixed assets at Rs. 3.39 lakhs. Liquid assets amount to Rs. 2,094 and current assets, loans and advances, including cash and bank balances, to Rs. 4.13 lakhs. The directors say in their report that the Company produced a record crop of 994 quintals, against 905 quintals in the previous year. Since the market price for Darjeeling tea was satisfactory, the crop was sold at an average price of Rs. 8.33 a kilogram, against Rs. 7.63 a kilogram in the previous year. The estimate for the current season provides for a crop of 900 quintals. The directors add that labour costs showed a substantial increase over the previous year, mainly due to the increase in the minimum wage which came into force in the latter half of 1959. Capital expenditure amounting to Rs. 49,032 largely represents the cost of implementing statutory welfare requirements concerning labour housing and for purchasing motor-vehicles for the garden.

Samla Collieries

After providing Rs. 4.23 lakhs (against Rs. 7.86 lakhs) for depreciation, the profit of Samla Collieries Ltd for the year ended December 1960 has increased from Rs. 1.07 lakhs to Rs. 12.38 lakhs. The directors have recommended a taxable dividend of 10 percent, against nil in the previous year. This absorbs Rs. 3.75 lakhs and is covered three times over. At the current price of Rs. 9.75 a share, it offers a yield of 10.3 percent. Development rebate reserve is allocated Rs. 78,500 (against 1.10 lakhs), taxation provision Rs. 6.50 lakhs (against Rs. 70,000) and general reserve Rs. 1 lakh (against nil). After making the necessary adjustments, a sum of Rs. 26,993 has been carried forward, against a debit balance of Rs. 6,560 brought in. The balance-sheet shows reserves and surplus at Rs. 74.38 lakhs, 38.88 lakhs and fixed assets at Rs. 74.38 lakhs. Investments amount to Rs. 1.63 lakhs. The directors say in their report that total raisings amounted to 413,365 tons, against 361,435 tons in the previous year. Total despatches are placed at 409,232 tons (against 343,871 tons) and stocks at 5,768 tons (against 11,549 tons).

Kyang Tea Seed

The profit of the Kyang Tea Seed Co. Ltd for the year ended December 1960 amounts to Rs. 5,158, against a loss of Rs. 13,607 in the previous year, after providing Rs. 122 (against Rs 172) for rates and taxes. The dividend has again been passed. Taxation provision is allocated Rs. 2,559 (against Rs. 1,290). After making the necessary adjustments, a sum of Rs. 2,745 has been carried forward, against Rs. 146 brought in. The balance-sheet shows reserves and surplus at Rs. 23,745, fixed assets at Rs. 1.81 lakhs and current assets, loans and advances, including cash and bank balances, at Rs. 38,164. The directors say in their report that due to severe drought conditions during the year, a total crop of only 99 maunds of seed was harvested, and the crop was sold in full. The Company's holdings comprise 334.50 acres while the which the land is held were due to expire on 31st March, 1961, but they have been renewed for a further term of 30 years. The periodic leases on planted area is 71 acres.

Central Cachar Tea

The Central Cachar Tea Co. Ltd has earned a profit of Rs. 1.42 lakhs for the year ended December 1960, against a profit of Rs. 4.06 lakhs, after providing Rs. 82,248 (against Rs. 72,051) for depreciation. The dividend, subject to tax, has been maintained at 5 percent. Taxation is allocated Rs. 53,000 (against Rs. 32,000) and general reserve absorbs Rs. 50,000 (against Rs. 30,000). Bringing in Rs. 61,799 and making other adjustments, there is a carry-forward of Rs. 63,690. The tea crop of Burnie Braes amounted to 127,647 kilograms (against 185,733 kilograms), while that of Serispore was 253,105 kilograms (against 323,989 kilograms). The average sale price of the former was Rs. 5 (against Rs. 4.54) a kilogram, while that of the latter was Rs. 4.98 (against Rs. 4.70) a kilogram. Estimates for the current season provide for a combined total tea crop of 495,527 kilograms.

Dessai and Purbattia Tea

The Dessai and Purbattia Tea Co. Ltd has incurred a loss of Rs. 1,96,175 for the year ended December 1960. The dividend has been again passed. After making the necessary adjustments, there is a debit balance of Rs. 4,38,935 to be carried forward. The tea crop totalled 378,082 kilograms (against 479,261 kilograms) and the average sale price was Rs. 4.29 (against Rs. 5.45) a kilogram. Estimates for the current season provide for a crop of 493,509 kilograms.

Bombay Market

SHARP REACTION FOLLOWS EARLIER OPTIMISM

PRICES FALL ON PROFIT TAKING

Wednesday Evening.

THERE was a reaction in the Bombay stock market at the close of the past week due to profit-taking. Earlier, share prices scaled new peaks and near-boom conditions prevailed. Bullishness was promoted by lower carry-forward charges and moderate *havala* rates at the turn of the last settlement. Good corporate news, combined with shortages of scrip as a result of heavier deliveries, stimulated sentiment. Operators thought that the working of the economy would improve because the necessary foreign exchange has now been assured by the "Aid-India Club" countries for the first two years of the third plan. Easier money conditions were also foreseen.

But operators turned cautious towards the close and were inclined to book profits. It was feared that the Stock Exchange authorities might again adopt stern measures in order to restrain speculation. Tata Steel closed at Rs. 162.75 and talk circulated that the Company might pay a higher dividend for the year ended March 1961. Indian Iron were quoted at Rs. 28.35. Engineering shares were steady, and Tata Locomotive were transacted at Rs. 375. Larsen and Toubro rose to Rs. 45.50. Business was done in Premier Construction at Rs. 210 and Alcock Ashdown came to hand at Rs. 301. Mukand Iron were in demand up to Rs. 30. In motor shares, Hindustan Motors were firm at Rs. 23.36 on support from Lyons Range, but Premier Automobile were sluggish around Rs. 174.

Prices of selected cotton mill shares shot up considerably, although top gains were partly pared at the close on profit-taking. Bombay Dyeing were wanted up to Rs. 70.70 on talk that the shareholders might be permitted to participate in the share capital of new chemical projects sponsored by the Wadia group. Century improved to Rs. 719 on expansion hopes. Khatau met with support up to Rs. 600 and Kohinoor were bought at Rs. 318. Morarji were favoured at Rs. 402 on prospects of a bonus share issue, but Standard reacted to Rs. 1,475 due to the uncertainty about whether the shareholders would be permitted to participate in the share capital of the chemical project likely to be sponsored soon. Simplex were bought at Rs. 210 and India United ordinaries were taken at Rs. 15.16. Apollo were quoted at Rs. 1.52.

In the miscellaneous section, cement shares were steady on expectations of a rise in the price of the commodity. Associated Cement were fancied up to Rs. 163 on hopes of a bonus share issue and Digvijay were quoted at Rs. 157. Mining shares were steady, and business was done in Shivrajpur Syndicate at Rs. 77.50. Sugar shares showed mixed trends. Belapur were steady at Rs. 287, as were Phalton at Rs. 137, but sellers predominated in Walchandnagar Industries down to Rs. 172. Steamship company shares were quiet, and Scindia Steam were sold down to Rs. 14.40. Great Eastern Shipping were quoted at Rs. 15.08. Bombay Burmah improved to Rs. 655, as did National Rayon to Rs. 574. Gwalior Rayon were bought up to Rs. 55 and Baroda Rayon were done at Rs. 124.50. Chemical shares were steady, and business passed in Tata Chemical at Rs. 20.40. Colour-Chem reacted to Rs. 385 after an earlier improvement on the news of a rights share issue. Indian Dyestuff were transacted at Rs. 550 and Polychem came to hand at Rs. 230. Voltas were firm at Rs. 303 due to shortages of scrip and Tata Oil were supported up to Rs. 73.50. Ceat Tyre reacted sharply to Rs. 205 after an earlier rise. Synthetics and Chemicals were steady at Rs. 173 on talk of a rights share issue.

Banking shares were quietly steady and business was limited. Bank of India were indicated at Rs. 123.50 and Central Bank came to hand at Rs. 57. Insurance shares were quiet, and New India Assurance slipped back to Rs. 6350.

There was scattered support for electric company shares, and Ahmedabad were placed at Rs. 85.20. Tata Hydro were done at Rs. 108.50 and Bombay Suburban were quoted at Rs. 89.

Madras Market

PRICES RULE STEADY ON PROFESSIONAL SUPPORT

GOOD DEMAND FOR SELECTED SCRIP

Tuesday Evening.

THE Madras stock market has been steady during the past week, but support was mainly professional in character. Higher advices from Bombay helped improve sentiment. Cautious investment buying was forthcoming for selected shares on the view that the Indian economy would benefit from the foreign loans given by the "Aid India Club" countries. The stock market also hopes that more funds will be available for investment into stocks and shares as soon as refunds from many new share issues are obtained.

Government securities were dull and prices of long-dated loans lost on balance. In spite of scattered interest in short-dated stocks, business was small in the absence of declared sellers. Public utilities were neglected and routine business was transacted. Cochin came to hand at Rs. 10.50 and Salem-Erode were done at Rs. 12.25.

In the banking group, business was done in Indian at Rs. 171 and in Indian Overseas at Rs. 177. Punjab National came to hand at Rs. 21.60 and Canara Banking were quoted at Rs. 74.75.

Selected sugar shares were bought on the view that the U.S. quota for the Indian commodity might be increased. Deccan were transacted at Rs. 14.05 and E.I.D. were done at Rs. 43.50. Mysore met with support up to Rs. 56.90, but United Breweries were quiet at Rs. 108 on profit-taking. Kothari were taken at Rs. 9 and K.C.P. were done at Rs. 23.57.

Among planting shares, Blue Mountain were transacted at Rs. 3.36 and Cochin Malabar were quoted at Rs. 7.95. Consolidated Coffee declined to Rs. 21.40, and Coffee Lands to Rs. 18.75. Ouchterlony were placed at Rs. 3.85 and Periakaramalai were sold down to Rs. 3.95. Kil Kotagiri were steady at Rs. 4.92 and Lucky Valley came to hand at Rs. 12.55. Midland were in demand up to Rs. 11.80, but Mysore Coffee were offered down to Rs. 5.45. Nilgiri were dealt in at Rs. 8.45 and Nonsuch were transacted at Rs. 28.10. Peermade were supported up to Rs. 23.43 and Peninsular were in demand up to Rs. 21.35. Swinton were freely offered at Rs. 3.12, but Teekoy were steady at Rs. 5.

Sentiment improved in cotton textile shares on prospects of expansion. Travancore Rayon shot up to Rs. 41 on hectic support and South India Viscose improved to Rs. 177. Lakshmi were steady at Rs. 175, as were Madura at Rs. 38.55. Mettur attracted support up to Rs. 400 and Premier were done at Rs. 269.50. Bangalore Woollen were placed at Rs. 202 and Buckingham rose to Rs. 221. Dhanalakshmi were steady at Rs. 220 and Ramakrishna improved to Rs. 224. Anglo-French were supported up to Rs. 134, but Balarama Varma were sold down to Rs. 87.70. There was support for selected miscellaneous shares at higher prices. Aluminium Industries hardened to Rs. 23.95 and Ashok Leyland were in demand up to Rs. 9.33. India Cement were quotably higher at Rs. 6.40 and Binny were bought up to Rs. 213. Enfield were steady at Rs. 13 and F.A.C.T. were dealt in at Rs. 10.50. Hindustan Lever were firm at Rs. 49.80 and Jeewanlal improved to Rs. 8.08. Parry's Confectionery were transacted at Rs. 5.05, but Seshasayee Paper declined to Rs. 6.40. Business passed in Spencer at Rs. 23.25 and in Standard Motors at Rs. 16.75. Textool were steady at Rs. 181.50 and Tube Investment were supported up to Rs. 264.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

London Market

STOCK MARKET RELAPSES AFTER BRIEF RECOVERY

COMPANY REPORTS DISAPPOINT

14th June, London.

THE recovery in the stock market, which followed the previous week's sharp setback, did not last long and on balance, further losses were recorded in the next week in most sections. The further deterioration in the market was due to several factors. The most important was the renewed weakness in gilt-edged, which reflected the fall in sterling in foreign exchanges on nervousness over the balance of payments position. Other factors included a stream of disappointing company news, some of it from major companies, the unsettled state of Wall Street, and the continued references by company chairmen to falling profit margins. Business was down to a comparatively low level and although selling was by no means heavy, buyers were cautious and highly selective. Gilt-edged developed a better tendency from time to time, but the general trend was downwards and widespread losses were recorded. The feature of foreign bonds was the decline in sympathy with Wall Street. Banking shares mostly fell back, while insurance shares receded on a broad front. Industrial recorded further extensive falls and many of the leading issues were 1s or more lower. Property shares were irregular. Gold shares were extremely quiet and prices fluctuated within narrow limits in line with movements in Johannesburg. Coppers inclined higher and tin shares moved up in many cases. Apart from firmness in Shell, there was little interest in oils. Rubbers and teas were featureless.

GENERAL MANAGER.

LONDON INSURANCE LETTER

CAPITAL APPRECIATION IN SHARES

AFTER the British insurance companies had published their reports for 1960, the price of their shares had risen, on average, by approximately a half since the year-end. The appreciation was more than double that of the industrial average, and it reduced the yields on a few insurance shares—significantly, life companies', not composite companies'—to the region of 1 percent. An average of yields on composite companies' shares would be nearer 3 percent. Even so, the status accorded to insurance shares, in general, is remarkably high, when the average yield on good ordinary shares is about 4½ percent. The high prestige of insurance companies, as financial institutions, cannot be an important factor in investors' calculations, and underwriting results—well known to be adverse in some sectors—cannot account for the yield-rating. Investors have a clear idea that British insurance is still growing fast; and their interest is not so much in the underwriting function as in the investment function. They regard insurance companies almost as investment trusts, with steadily increasing resources and special skill in investing these resources. The tone of the chairmen's reports this year has certainly been hopeful, but some people in the business emphasise that there are setbacks as well as advances. Operations in the United States have involved some heavy losses. The trend of accident business, almost everywhere, is disturbing. Fire losses at home were at virtually the same abnormal level in 1960 as in 1959, and it seems that the much-raised figures must now be regarded as normal. Hurricanes such as last year's "Donna" are comparatively frequent occurrences. Big aircraft are comparatively frequently involved in disastrous crashes. The pressures raising premium rates are irresistible, but when some sectors of insurance are so much less profitable than others—if not absolutely unprofitable—it is questioned whether rates are properly adjusted.

The Problem of Fire

Particularly, however, in the case of fire, it is recognised that raising rates, although it may be necessary, is not the solution of the problem. The only effective treatment is prevention. The difficulty of ensuring proper precautions in millions of individual homes and workplaces is understandable. But these small buildings and their contents are not the main problem. In Britain last year a tenth of the whole year's estimated fire losses was attributable to a single fire, and that one and two others together accounted for a fifth of the total. The problem can never be solved unless such huge fires can be prevented. In an economy that grows bigger in scale and more complex in organisation, there can be no simple explanation of the increase in fire damage—unless the size and complexity are themselves the explanation. An obvious fact is that the contents of factories and warehouses increase in value as more elaborate machinery is installed in them. Broadly speaking, expansion of trade involves expansion of stocks—although improved methods of stock control have moderated this element. When trade is in recession, stocks of finished goods tend to accumulate—as happened in some trades last year. For large-scale production large open-plan factories are usually most efficient, and fires in them are particularly difficult to control. New *legislation is imposing* stricter precautions in factories, offices, and shops, and fire-research teams are investigating the hazards scientifically and in detail. Some important discoveries are changing conventional practice—for instance, that free ventilation can help the fire-fighters more than the fire. (The "classic" General Motors fire in 1953 could, it is believed, have been localised if the plant had been better ventilated.) Automatic detectors, automatic alarms, automatic sprinklers, are being installed in increasing numbers, and enthusiasts believe that by such means, ultimately, any potentially big fire can be, so to speak, strangled at birth. But the stark fact remain that, in spite of all the preventive measures of recent years, the cost of fire has greatly increased. It is a worldwide problem, and it ought, perhaps, to be tackled on a worldwide scale.

Minor Earthquake Hazards

In recent years, the occurrence of serious flooding in Britain has made property owners' aware that hazards that are normally associated with turbulent regions exist also in more placid ones. More recently, the occurrence of earthquake in Australia has taught the same lesson in a different hazard. Even in areas where a major distster by earthquake is geologically almost impossible, property is sometimes damaged by tremors—they occur in Britain, for instance, more often than is generally realised. Some policyholders are, therefore, reconsidering their cover from this aspect. In certain circumstances, an earthquake is a potent cause of fire; but not all policyholders are aware that the appropriate cover for this hazard is an earthquake policy, not an ordinary fire policy, which does not cover any kind of earthquake hazard. Similarly, an earthquake can put a building or equipment out of action for a time, with consequent loss of profits; but an ordinary loss-of-profits policy does not cover the hazard. In countries where such risks are slight it is easy to ignore the insurance facilities available, but when there are chinks in the protective armour, the cover is not totally efficient. If the risk is slight the premium is small, and conscientious insurers believe that the small additional cost should be undertaken as a matter of routine.

Money for Export Credits

The increasing resources of life assurance companies are being used partly to finance construction and production, but they are not, in the opinion of Mr. A. W. Tuke, chairman of Barclays Bank, being used sufficiently to facilitate trade. Addressing the Norwich Chamber of Commerce recently, he suggested that these traditional long-term investors might be persuaded to apply funds, on a really substantial scale, to finance export credits. The problem is more acute now than it was a few years ago, because periods of credit for "big" exports, such as long-distance airliners and ships and heavy capital installations, have been lengthened by Britain's competitors. Cover for export credit has been to some extent adjusted accordingly, but the money itself cannot suitably be provided by the banks: they think in terms of a five-year limit, whereas insurance funds are more appropriately invested long-term. A seven-year period, which some of this business requires, is not immediately attractive to insurance companies; but Mr. Tuke suggested that the finance could be channelled through a new organisation to which insurance companies could provide finance on 20- or 25-year terms.

INVESTORS' GUIDE

The 1961 Edition of the Calcutta Stock Exchange Official Year Book is just now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to the securities of all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this Edition (1) Information relating to all Bombay Companies and (2) List of Companies which accept vernacular signatures on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta; at a price of Rs. 12.50nP per copy. Postage Rs. 2/- extra.

FREE with each copy "Trading in Cleared Securities".

JET AIRLINERS TOTAL TREBLED

Although the number of jet airliners in service trebled during 1960, there were still more *DC-3s*, or *Dakota* piston-engined aircraft than any other type. This is stated in the annual report on the International Civil Aviation Organisation. The number of jet airliners increased from 130 at the start of the year to 388 at the end. A total of 1,296 *DC-3s* were in service. Although the jets amounted to only 7.7 percent of the total of airliners in service, they provided about 30 percent of the total capacity. Turbo-propeller aircraft were 14.4 percent of the total number and provided 20 percent of the capacity. Piston-engined airliners represented 77.9 percent of all airliners, but provided only half the total of seats available. The total number of airliners in service at the end of the year was 5,014. This was made up as follows: jets 388, turbo-propeller aircraft 723, piston-engined aircraft (four engines) 1,621, two engines 2,282.

New Delhi

STAGNANT LEVEL OF EXPORT EARNINGS WORRIES PLANNERS

THE NEED TO STUDY COST STRUCTURE OF INDIAN INDUSTRY

(FROM OUR NEW DELHI CORRESPONDENT)

ACCORDING to the Planning Commission, India's exports over the past decade have been "stagnant". The first plan average of Rs. 609 crores might have been smaller but for the exceptionally high level of exports in 1951-52 on account of the war in Korea, while the second plan average of Rs. 614 crores would have been higher but for the recession in 1958 in the U.S.A. and Europe. In volume, exports were higher in the second plan by 9 percent but, on account of less favourable unit values, this increase was not reflected in larger export earnings. The trends during the period 1951-52 to 1960-61 may be seen from the table below:

Year	Exports (Rs. crores)
1951-52	733
1952-53	577
1953-54	531
1954-55	593
1955-56	609
Total	3,043
Average for the first plan	609
1956-57	620
1957-58	591
1958-59	559
1960-61	645
Total	3,069
Average for the second plan	614

In the pattern of the export trade over the past decade, two main trends are observed. Firstly, among commodities which are directly or largely based on agricultural production (which still account for the bulk of India's exports) such as tea, cotton textiles, jute manufactures, hides and skins, spices and tobacco, exports on the whole did not improve. However, significant increases were achieved in the export of new manufactures and of products like iron ore, but these were not sufficient to offset the decline in the traditional exports. These trends may be seen from the following table:

Pattern of exports—1951-60.

(Rs. crores)

	1950-51	1955-56	1958-59	1959-60
Agricultural commodities and related manufactures	496.5	489.3	453.5	473.6
Cotton and jute manufactures ...	250.5	181.7	153.4	180.5
Other manufactures	58.4	61.0	53.3	105.0
New manufactured products ...	8.9	8.6	12.5	25.0
Minerals	23.4	34.4	46.2	53.0
Total	578.3	584.7	553.0	631.6

The following table brings out changes in the direction of India's foreign trade during the first and second plan periods:

Direction of India's foreign trade (percent shares)

	Exports			Imports		
	1952	1956	1960	1952	1956	1960
E.C.A.F.E. countries	25.7	16.3	17.0	13.6	12.4	13.1
Japan	4.1	4.9	5.5	2.4	5.2	5.4
West Asia	5.7	5.8	6.5	7.7	10.8	7.5
Africa	3.6	3.9	2.5	3.8	4.0	4.4
Western Europe	29.6	39.8	38.5	30.1	50.1	40.4
U.K.	20.5	29.8	27.5	18.5	25.0	20.0

Total	100.0	100.0	100.0	100.0	100.0	100.0

At present, western Europe accounts for nearly 39 percent of India's export trade, the U.K. taking 28 percent of the exports. The U.K.'s share has remained more or less constant at this level for a number of year. That of north America declined from 21 percent in 1952 to 17 percent in 1956, but increased in 1960 to 19 percent. Exports to E.C.A.F.E countries have been relatively static in recent years. The increased exports to Japan are accounted for largely by iron ore sales. The European Economic Community's share has fluctuated between 6.3 percent and 9.5 percent over the past ten years. The share of Russia and countries in eastern Europe has increased from about 1 percent during the first half of the first plan to more than 8 percent towards the end of the second.

Imports from western Europe increased during the first plan from 30 percent to 50 percent; the region accounted for nearly 40 percent of India's imports at the end of the second plan. Imports from eastern Europe increased from 2.2 percent in 1952 to 4.6 percent in 1956, but declined to 3.7 percent in 1960. Imports from north America, which accounted for 37 percent of the total in 1952 declined to 12.4 percent in 1956, but increased again to 25.7 percent in 1960, the variation being due merely to food imports. Imports from E.C.A.F.E. countries have fluctuated between 12 percent and 14 percent during this period. If a substantial increase in exports is to be achieved, action has to be taken along several directions, in particular the following:

(a) domestic consumption must be held within reasonable limits with a view to creating the surpluses for exports;

(b) in view of the increasing profits which can be earned in the domestic market once an economy begins to develop, steps to increase the comparative profitability of exports are essential;

(c) in their cost structure and productivity, the principal industries and, in particular, the export industries must become competitive as early as possible, and a systematic programme to this end has to be pursued within each industry. This is an essential condition for diversifying exports and for steadily increasing the share of new manufactures and minerals in the export trade. The industrial licensing policies should also be oriented towards export promotion;

(d) steps must be taken to mobilise public opinion in favour of exports and acceptance of the burdens involved, to enlist the co-operation of industry and trade in the national effort, to improve the Government's own organisation for market research and intelligence and commercial representation abroad, and to enlarge facilities for credit, insurance, etcetera.

Need to Increase Exports

It is explained that if exports over the third plan period do not increase significantly beyond the figure of Rs. 3,450 crores indicated in the draft outline, even if the external aid which has been assumed is fully available, there would be quite serious shortfalls in the plan. Accordingly, on the basis of studies which have been undertaken, and assuming a large-scale effort to increase exports and reasonable conditions of demand abroad, exports over the third plan period have been taken at Rs. 3,700 crores. The effort must indeed be on a larger scale. An important reason for stressing measures for increasing exports during the third plan is that this is the period in which exports should be built up in order to meet the much larger requirements anticipated for the fourth plan. Considering the requirements on account of repayment obligations abroad and maintenance and development imports, it is estimated that by the end of the fourth plan, the level of exports would have to rise to about Rs. 1,300 crores to Rs. 1,400 crores, that is, to at least twice the present level. This is itself one of the essential conditions for ensuring that India's economy becomes self-reliant and self-sustained by the fifth plan.

It is against this background that the objective of achieving export earnings of not less than Rs. 3,700 to Rs. 3,800 crores over the third plan has been set. If exports rise to the extent visualised, the annual level of exports over the third plan period should rise by about Rs. 200 crores by the end of it, and the average exports for this current quinquennium should be about Rs. 150 crores above the average of the second plan.

Creating Export Surpluses

For achieving the export targets, it is necessary not only to create the surpluses for exports, but also to ensure that the surpluses become available at prices competitive with those of other suppliers in the markets abroad. Competitive export capacity depends largely on internal prices. From this point of view, it is important that inflationary pressures associated with development should be held in check. For developing the export effort, it is essential that a considerable part of India's industry should become much more competitive than it is at present. It is true that over a significant range of products, Indian industry is capable of competing in export markets or, at any rate, of becoming competitive. However, the scope of these industries is not wide enough at present. Study groups have been recently set up to consider ways of reducing costs of industries such as cement, jute, bicycles, electric motors and transformers and rayon. It is proposed to review the more important cost studies undertaken for different industries in recent years with the object of working out the lines along which programmes for cost reduction could be pursued systematically in a number of selected industries. It is visualised that in industries which are significant for developing exports, licensing policies should take due account of the economies of scale. This factor should also be given weight in determining the location of individual units. In these industries, the level of costs has overriding importance and national interest requires that this consideration should receive precedence over certain other considerations which have normally to be kept in view in any scheme of planned development.

Rapidly growing internal demands have the effect of making sales in the domestic market relatively more profitable than in foreign markets. Within limits and over a short period, it may be necessary to consider fiscal measures designed to correct this trend. Naturally, details of these measures have to be considered from time to time in the light of the actual situation in different industries.

Agreements on Electrical Plant Equipment

Agreements were signed last week between the Heavy Electricals (India) Ltd and Messrs Technoexport of Czechoslovakia for the preparation of detailed project reports for the heavy power equipment plant and the high pressure boiler plant to be set up in this country. In the first phase of development, the heavy power equipment plant will manufacture 12,000 kW and 25,000 kW steam turbines and generators, aggregating to an annual output of 620,000 kW. The high pressure boiler plant will turn out every year 12 boilers to suit 50,000 kW turbines, *i.e.*, an annual output of boilers aggregating to 600,000 kW. The projects will also cover the production of various types of ancillary equipment. According to rough estimates, the two plants together are likely to cost between Rs. 35 crores and Rs. 37 crores excluding the townships. The value of the products to be turned out annually from both plants in the first stage is likely to be of the order of Rs. 20 crores.

These two projects are covered by the economic collaboration agreement signed between India and Czechoslovakia on 24th November, 1959, under which the Czech Government agreed to give a credit of Rs. 23.1 crores. Preliminary discussions on the projects began in April 1960. A team of Indian technical experts visited Prague towards the end of September 1960 to discuss details with Technoexport. A preliminary project report was submitted in November 1960. This was followed by talks with a team of Czech experts at which decisions were taken about the equipment to be manufactured in the first phase of the two projects.

Rourkela Plant Expansion

The project report on the expansion of the Rourkela steel plant has now been finalised, and scrutinised by the Government's consultants, the International Construction Company. Tenders are expected to be called shortly. The bulk of the equipment will come from West Germany and Austria, the latter supplying L.D. process equipment. On account of difficulties in the delivery of certain items of equipment, such items are likely to be obtained from the U.K. or the U.S.A. As far as the Durgapur steel plant is concerned, the project report for its expansion is in the final stage, after which tenders will be invited. Rourkela's capacity is being expanded by 800,000 tons a year and that of Durgapur by 600,000 tons a year.

Stanvac Petroleum Naphtha Venture

The Government of India has approved the Standard Vacuum's petroleum naphtha project to manufacture light gas, ethylene, propylene, butylene, butadiene, benzene and other liquid products in a factory adjacent to its Bombay refinery. Standard Vacuum proposes to float a new company to undertake this project, offering 40 percent of the equity capital to Indians.

Public Sector Aluminium Project

The Government of India is negotiating with Yugoslavia to set up a 25,000-ton aluminium plant in Madhya Pradesh and with East Germany to set up a phosphorus plant on the west coast port of Mangalore. Agreement is expected shortly. The agreement with Davy Ashmore to set up a plant to manufacture vessel plate and heavy

structurals has also been reached and, it is expected, will be signed shortly.

Some Reactions to Aid Offer

Some of New Delhi's reactions to the latest western aid offer to India to finance her third plan seem to be born out of a complacency. It is felt here that the western nations are showing a greater understanding of the needs of the underdeveloped or undeveloped countries, because they have developed a kind of "social conscience". So they have begun putting aside part of their resources for the development of Asian and African countries, especially India. A particular satisfaction is expressed at the fact that the aid-giving nations now realise that aid should be complementary to trade and the western countries should allow a bigger inflow of imports. The aid may, therefore, change the pattern of foreign trade for this country. The Russian bloc is increasing its trade through the medium of barter deals or accepting payment in rupees. The U.S.A., the U.K., Canada, France and Japan have given tied loans, which could also be used for purchases from these countries. Only the World Bank and West Germany have granted credits. Having exhausted her sterling balances and there being payments difficulties on account of shortfalls in exports, India is not likely to purchase even her maintenance imports, much less to talk of importing capital goods from non-aid giving countries. The countries named are Italy, the Netherlands, Norway, Sweden and Denmark. The issue is whether the same yardstick will be applied to the Middle East countries, such as Iran, Qatar and Saudi Arabia. It may be added that for the third time recently, Iran has declined to sell oil to India against rupee payment. There is yet another aspect of this aid problem. The Indian Government has not yet disclosed what has been the increase in India's import bill due to non-plan projects during the second plan period, nor is it clear whether non-plan projects, increasing India's import bill, will be taken up during the third plan period. It is paradoxical that it is the Chinese aggression against India which has strengthened the Congress as against the communists, mainly due to the latter's allegiance to international communism. Similarly, it is the Russian support for the third plan which appears to have brought in the massive financial aid from the West. The Russian competition has created some embarrassment for the British too. Although terms of the Russian credit still remain undisclosed, indications are that it would be for about 40 years, carrying 2.5 percent interest. There will be no repayments during the first five years. Britain cannot advance loans at such a low rate of interest, and, if it did, it cannot adopt a similar policy to a number of institutions in Britain itself.

Government Alloy and Special Steels Project

Some details are now available of the alloy steel project, to be located in Durgapur. The consumption of alloy steels in India in recent years—under conditions of restricted imports—has been about 40,000 tons of finished steel (excluding electrical sheets, spring and free-cutting steels), constituting about 1.5 percent of the total steel consumption. On the other hand, in industrially advanced countries such as the U.S.A., the U.K. and Japan, alloy steel consumption in the above categories is 4 percent to 6 percent of the total steel absorbed. Estimates place the alloy steel requirements in 1965 at 215,000 tons of finished steel, constituting about 2.9 percent of the total steel requirements. This is expected to rise to about 300,000 tons of finished alloy steel a year by 1970. The Central Government, it will be recalled, has placed the initial capacity of the Durgapur alloy steel plant at 80,000 ingot tons with the ultimate capacity of 300,000 tons. Based on the analysis of the 1965 requirements, the project report has recommended the following initial production:

	SMS-1 Ingot tons a year		SMS-2 Ingot tons a year
Stainless	32,500	High-speed	3,500
Constructional	26,500	Alloy tool and die	5,500
Carbon tool	11,000	Carbon tool	1,500
Total	70,000	Total	10,000

The Forge Shop

The forge shop has been designed for a throughput of 12,000 tons a year of which about 4,000 tons will be for finished forgings. The equipment provided includes one 1,500-ton high-speed air hydraulic press, four hammers (one each of 3,000 kilograms, 1,000 kilograms, 500 kilograms and 200 kilograms), manipulators, furnace chargers, heating and annealing furnaces, etcetera. Initially, it is proposed to press or hammer cog all high-speed steel ingots. Later, with experience, smaller ingots may be roll-cogged for which provision has been made. The two primary rolling mills of the plant—the blooming mill and the sheet-bar and billet mill—are designed to handle the ultimate desired annual production of 300,000 tons of ingots. The initial production of 80,000 tons a year would be obtained by operating the mills for one eight-hour shift a day, six days a week. It is customary to design the primary mills with excess capacity as these high-cost units cannot be economically duplicated as the plant expands. The bar and the sheet mills, however, have been designed for the initial production only as they are economic unit sizes. The bar and the sheet mills would operate on a three-shift-a-day basis. The quantities of materials to be processed through the mills are approximately as follows:

	Rounds squares and flats	Thick sheets (0.5 to 12 millimeter	Total
High-speed	1,450	200	1,650
Carbon tool	6,000	2,055	8,050
Alloy and die	2,650	50	2,700
Constructional	15,000	1,000	16,000
Stainless	3,000	14,000	17,000
Total	28,100	17,300	45,400

Elpits

Four banks of double three-resistor electric soaking pits (elpits) have been proposed which makes this one of the largest installations using this new technique. Electric soaking pits are particularly suited for heating alloy steel ingots especially where ingots are being charged hot direct from the steel-melting shop and where they have to be held for 16 hours in the pits, while the blooming mill is not working. The scaling losses under the above conditions are expected to be under ½ percent, while this loss would be as high as 2.5 percent with conventional fuel-fired pits. The cost of operating the elpits (including the higher depreciation and also considering the scaling losses) are expected to save about Rs. 30 a ton, compared with gas-fired pits. The capacity of the pits would be 30 to 40 tons an hour, calculated on the basis of cold ingots, depending on the size of the ingots heated. Two banks of fuel-fired soaking pits have also been provided so that, when rolling from cold ingots, they may be preheated to about 900° C before being charged into the elpits. This is an economical arrangement which considerably reduces the electrical power requirement for heating the ingots.

Two steelmelting shops are proposed—a large two-level shop (S.M.S.-1) with two 40-ton swing-roof top-charged electric arc furnaces, and a single-bay shop (S.M.S.-2) with a 10-ton swing-roof top-charged arc furnace together with two high-frequency induction furnaces (2,000-kilogram and 500-kilogram crucibles). The allocation of production from these two shops is as follows:

Initial product-mix
(Tons a year—finished steel)

Steel	Sections	Billets	Sheets	Forgings	Total
Tool	8,000	2,100	2,300	600	13,000
Constructional	12,000	3,000	1,000	1,500	17,500
Stainless and heat-resisting	2,500	500	14,000	—	17,000
Die blocks	—	—	—	500	500
Total	22,500	5,600	17,300	2,600	48,000

Plant Site

The selected plant site is about midway between the Durgapur steel project and the West Bengal Government coke-oven plant. The principal utilities—power, water, coke oven gas and oxygen—will enter the site from the west. A system of road and rail tracks has been provided to enable the smooth flow of all materials within the plant. Provision has been made in the plant lay-out for expansion of the operating and ancillary departments to a capacity of 300,000 tons a year or more. Primary (blooming and sheet-bar and billet) mills have extra capacity to handle the future expanded production. Provision has also been made for additional steel-making facilities, bar mills, sheet mills, and for continuous strip production. New technological developments such as continuous casting, vacuum degassing, consumable electrode furnace, etcetera, have been deferred because they are not considered essential for the initial operation; moreover, they would add appreciably to the initial cost and increase the difficulties of running in the plant. Provision has been made for their future adoption when required.

A 900-millimeter two-high reversing blooming mill driven by two 2,000 kW 0-50-100 r.p.m. D.C. motors has been provided. The average rolling rate of this mill would initially be about 35 tons an hour. However, the mill drive and auxiliaries have been designed to take heavier ingots (say, five tons or more) to give a production rate of up to 100 tons an hour. The mill is of sturdy design with a 2,300 millimeter barrel length and high lift to roll slabs up to 1,200 millimeter wide in future. The main motors have a combined peak torque cut-out capacity of 240 metre-tons. The mill auxiliaries include a 1,200-ton shear and "take-off" for slabs which could then be sent to a future strip mill.

Versatile Installation

The sheet-bar and billet mill provided is a two-high two-stand 650 millimeter reversing mill driven by a 2,400 kW 0-80-160 r.p.m. D.C. motor. The motor has a cut-out peak torque capacity of 85 metre-tons. This makes it a very versatile and flexible installation. Provision has been made for a third non-reversing stand with edger rolls which could be used for rolling precision rounds. The sheet-bar and billet mill has the same rolling capacity as the blooming mill to roll hot blooms coming from the blooming mill to billets and bars directly without re-heating. A 25 tons an hour walking-hearth furnace is provided to heat blooms after conditioning when required. One 500-ton hot shear and two hot saws are provided to handle the products of the mill.

The 15-stand bar mill proposed has the flexibility to produce about 23,000 tons a year of bars eight to 60 millimeter, round or equivalent section in different grades of steels. This can also directly roll small ingots of high-speed steels, as well as hard materials such as titanium and super alloys. The bar mills are provided with roller bearings for precision rolling of speciality steels. The intermediate and finishing stands of the mill are driven by D.C. variable voltage motors with rectifier controls. The re-heating facilities provided at the bar mills include one combined walking-beam notched-hearth furnace of about 10 tons an hour capacity and two batch furnaces each of about five tons an hour capacity. These furnaces would be designed for using oil with provision for coke-oven gas as alternate fuel.

The heat treating and bar finishing department is designed initially to process about 28,000 tons of bars and about 500 tons of die blocks by operating the heat-treatment section for three shifts a day and the bar finishing section for two shifts a day, 300 days a year. The facilities provided include furnaces for annealing, normalising, hardening and tempering of bars and die blocks, bar straighteners and cutt-off machines. Space and facilities for visual inspection and hardness testing also are provided. Provision has been made for expansion of the heat treatment and bar finishing operations whenever desired. Sheet can be rolled on conventional mechanised (hand) sheet mills and then annealed-pickled in batch operations, or alternatively, it may be produced in strip form on some type of strip mill (Steckel, hot Sendzimir, etcetera) and then processed in continuous anneal-pickle lines. A third alternative would be to roll sheets on hand mills, weld the sheets into coils, and do the further processing in continuous lines.

Conventional mechanised (hand) sheet mills are proposed for the initial requirement of about 17,000 tons a year of flat products. One three-high roughing stand driven by a 1,500 kW A.C. motor, and two two-high finishing stands driven by one 1,500 kW A.C. motor have been provided for the required production. One 1,200 millimeter four-high cold mill driven by a 500 kW A.C. motor has been provided to produce cold-rolled sheets. One 1,200 millimeter two-high temper mill driven by a 300 kW A.C. motor, has been provided to give the required skin pass on hot-rolled and cold-rolled sheets after annealing and pickling. One 500-ton hydraulic stretcher, one roller leveller, one combined grinding and polishing machine and a polishing and buffing machine have been provided to give the required finish.

Capital Cost

The total capital cost of establishing the alloy steels plant at the recommended Durgapur site is estimated at Rs. 38.4 crores, based on current international prices and Indian construction costs. This excludes the cost of engineering and Customs duties. Also not included are all facilities outside the plant boundary, cost of land, construction equipment and facilities, escalation of prices, and all taxes and duties. The total capital cost provides for a number of special features which in the long run would improve the efficiency of the plant and lower the production costs, as well as investment required for expansion. As customary in the modern steel plant design, considerable excess capacity has been provided in the high cost primary mills so that their throughput may be raised to 300,000 tons of ingot by operating additional shifts when required in the future. Similarly, the area of land to be developed and design of utilities and road and rail networks would enable rapid expansion of the plant and diversification of its activities. The first phase expansion of the plant to 160,000 tons would require an additional investment of only about Rs. 15 crores. Foreign exchange requirement for the initial alloy steels plant is estimated at about Rs. 19 crores. Preliminary estimates for production costs have been made for nine typical steels. The works production cost (excluding fixed charges) ranges from Rs. 1,200 a ton for constructional steel bars to Rs. 4,000 a ton for stainless sheets and Rs. 8,000 a ton for high-speed steel bars.

R.A.F. AIRCRAFT REDESIGNED AS FREIGHTER-AIRLINER

The civil version of the Royal Air Force's long-range freighter, the *Belfast*, is being redesigned to carry passengers or freight on a top floor while carrying freight on the bottom. Mr. H. G. Conway, the deputy managing director of Short Brothers and Harland Ltd, disclosed in London recently that they had decided to split the aircraft in half both to provide a place for passengers and to eliminate pallets of freight which were too high to handle easily at loading centres. The new design could carry 138 passengers on the upper floor and 55,000 lbs of freight below. "Exceptionally low cargo rates and passenger fares could be offered with this aircraft", he said. "It seems possible to offer a one-way passage across the north Atlantic for as little as £30 while carrying 55,000 lbs of freight." A conversion of the upper floor from all-passenger could be effected in well under an hour. Substantial effort is now going into this project.

London

U.K. INDUSTRIAL PRODUCTION BEGINS TO RISE

DEMAND FOR CONSUMER DURABLES IMPROVES: BOOM IN AUTUMN EXPECTED

(FROM OUR LONDON CORRESPONDENT)

EVIDENCE is growing that industrial production—after remaining steady for a long period—is at last beginning to rise. The last official index figure was for March, and since then a good deal has happened. Most important of all, perhaps, is the revival in demand for motor-cars and other consumer durables. Once these industries get into top gear, the national total of industrial output would rise quite suddenly. The more knowledgeable expect a boom by the autumn, for the capital goods industries are already working at a high level and still expanding. Simultaneously, it is argued, industrial profits may recover, for existing labour and production capacity would be more fully used and the rising aggregate demand would allow the passing on of higher costs and prices. Before "taking a view" the effect of the three factors needs to be assessed. First, would a substantial rise in demand bring into play the U.K. Chancellor's threatened restraints? Secondly, to what extent would duty reduction in the European Free Trade Association and the General Agreement on Tariffs and Trade, let alone participation in the Common Market, sharpen competition? Thirdly, if the recent change in stocks of both materials and finished goods goes much further, it might well damp down the rise in total demand. By itself that might not persuade the Government to believe that inflation need not be feared, but it will also lead to a fall in imports. In considering the outlook for production and profits, one has to remember that a large-scale outflow of funds from London could depress bank deposits and act as an automatic brake on bank advances. In the end, however, the deciding vote is with the Government. If it permits the expansion to continue throughout 1961, industrial production may well be 5 percent higher by the end of the year than it was until March. In that case, competitive companies should be able to regain satisfactory profit margins.

It is against this background that the latest issue of the influential *London and Cambridge Economic Bulletin* urges an economic policy of sustained growth rather than "one of stop-and-start." The call is made in an article which also strongly criticises the proposed payroll tax, in which, it says, it is "difficult to find any merits." The article says that the merits of any regulator can only be judged against its object. In a stop-start policy, it can only be an extra method of stopping and starting. It then goes on to say: "Within a policy of sustained growth, regulators will be necessary to intercept movements into demand-inflation and to revivify demand when it begins to flag. But it is possible thus to operate them only if there are clear guide-lines to the course and pattern of growth which the economy should follow. These, at the moment, are the missing components in the new regulated steadily growing economy towards which Mr. Selwyn Lloyd and his colleagues appear, stumblingly and with hesitations, to be moving. From a policy which gave priority to solving the problems of the balance of payments and inflation, with growth trailing third in the list, they are turning towards one which puts the primary emphasis on growth, not only as something desirable in itself, but also as a means of dealing with the balance of payments and inflation."

Pressure on Gold Reserves Eased

The fall of £16 million in the gold reserves during May shows some improvement, compared with the drain of £26 million in April and £62 million in March. These figures no longer truly reflect the position of the sterling area during the month, but the May figure may understate the real loss rather than those of the two previous months. The withdrawal of short-term money from London slowed down considerably during May, but still amounted to a substantial sum, while the current balance of payments is almost certainly still showing a deficit. No further assistance was given to sterling by the Continental central banks under the Basle Agreement of 10th March; on the contrary, a small part of this money is believed to have been repaid during May. Even so, the published drop of £16 million in the reserves gives no ground for feeling reassured. Australia drew £62 million last month from the International Monetary Fund, and while £11 million of this was in sterling and some of the balance was probably required at once, a portion of the drawing was sold to the London reserve. In view of the continued weakness of Australia's external accounts, this foreign exchange deposit will almost certainly be withdrawn again in the coming months.

The monthly reserve figures have never been a very good guide to the true position of sterling, but they have become almost useless since the Basle Agreement, which is designed particularly to level out month-to-month fluctuations so that any sudden or heavy movement will not immediately be reflected either in the published reserves or in the exchange rates over short periods. The only sensible comment one can make on the May reserve figures is that any loss of reserves at this time of year, which is normally favourable to sterling, reflects a weakness which cannot be allowed to continue for very long. The current trend can be tolerated only if the balance of payments is steadily improving, with a real chance of a true balance or surplus later in the year. As the visible trade balance was the largest element in last year's deterioration, the evidence of improvement will be found much more dependable in the monthly foreign trade figures than in the movement of the gold reserve. Any sign of solid expansion in British exports would be worth all the central bank aid and I. M. F. drawings put together.

Retail Trade Changes

Retail sales in April continued at the record level of the previous month but, according to figures just issued by the U. K. Board of Trade, the pattern of business showed some signs of changing. The demand for clothing and footwear, which had for months been very buoyant, fell back a little, but at the same time durable goods sales made further progress towards recovery.

Allowing for seasonal adjustment, the index figure of total shop sales in April, as in March, was 115 (1957=100). The changing date of Easter, which is not allowed for in the adjustments and which this year fell in early April, does, however, leave the exact trend over the two months in some uncertainty. In January and February, the index level had been 112, while during 1960 it had risen from 110 to 112. The rate of gain against the previous year continues to be about 4 percent. Prices generally in April were about 2 percent higher than a year before.

Hire-purchase Trends

The recovery in demand for consumer durables is also apparent in the hire-purchase business. The index of credit sales by household goods shops in the month was 102 (1957=100), against 99 in March. 95 in February and 124 a year before. The index of credit extended directly by finance houses fell back, however, from 207 in March to 190 in April, reflecting the rather lower sales of motor-cars in the latter month. Here again, however, it is difficult to discern a trend, for the early Easter and warm March weather may have prompted exceptional motor-car purchases in that month. The net effect of new business and the flow of repayments was to raise the total hire-purchase debt by a modest £5 million to £939 million in the month to the end of April. This total is £22 million below the record £961 million reached nine months earlier.

Hire-purchase Motor-vehicle Contracts

The number of hire-purchase contracts for motor-vehicles took a seasonal upward swing in May. They totalled 164,504, compared with 154,056 in April and 155,046 in May last year. Rising sales of new motor-cars are reflected in the hire-purchase figures, 20,471, against 18,647 in April and 16,857 in May last year, while second-hand motor-car contracts were also up—78,530, against 71,742 and 67,324. Hire-purchase sales of both new and used motor-cycles, although better than in April, are markedly down on last year's figures. Contracts for new machines have dropped from 17,335 to 13,439 (against 12,220 in April) and for used, from 26,412 to 23,205 (against 22,882 in April). New commercial vehicle contracts in May totalled 8,170 (7,701 in April and 6,106 in May 1960) and second-hand motor-vehicle contracts, 12,493 (against 12,646 and 12,819).

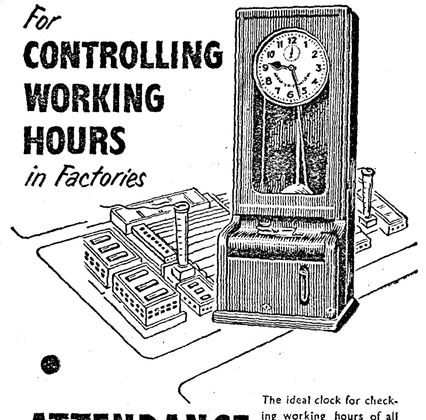
Recovery in Machine Tool Orders

The flow of net new orders for machine tools recovered in March after a sharp drop in February. It was still not up to the January figure and was 32 percent less than in March last year. Deliveries continued to go up and were 19 percent higher than in March last year. Net new orders, which were worth £11,669,000 in March, exceeded deliveries (against £10,652,000) so that the order-book rose. It stood at £110,360,000 at the end of the month, of which £24,867,000 was for export. In 12 months, the odrer-book has risen from £72,393,000 (against £18,388,000 for export), the great bulk of the rise being accounted for by home orders. In the first quarter of this year, net new orders were 16 percent less than in the first quarter of 1960 when ordering was exceptionally heavy.

Commonwealth Development Finance Co.

In 1960-61, the Commonwealth Development Finance Company had its most active year since its inception eight years ago. The Company committed £3.68 million to nine new projects, which had a total capital cost of over £20 million. The total number of serious propositions actually considered was 23 and the bulk of those not accepted by the C.D.F.C. have been placed with other bodies. Commenting on the report, Mr. Hoar, the managing director, said that the Company had quite a lot going through the pipeline, although he was pleased with the outlook. It has established itself and was now attracting a steady flow of applications.

In the coming year, the C.D.F.C. is unlikely to be prevented from providing development finance through the lack of long-term capital. It is unfortunate that interest rates are high, but for a well-planned industrial enterprise this should not be a deterrent. Last year, a considerable part of the new investment was met from proceeds of sales and repayments from the Company's present portfolio. The countries in which new projects were taken up in 1960-61 include Nigeria, Sierra Leone, India, Malaya, Pakistan, New Zealand and Jamaica.



ATTENDANCE RECORDER

The ideal clock for checking working hours of all staff in offices, factories, workshops, garages, banks etc. Simple to operate, self-winding, precision time recording equipment ensuring maximum accuracy. Guaranteed for 3 years.

NORTH INDIAN TEA OUTPUT RISES

HOME DEMAND FOR C.T.C. GRADES IMPROVING

(BY A SPECIAL CORRESPONDENT)

THE new tea plucking season in north India has opened under favourable conditions, and the output from Assam and the Dooars is above average. But first-flush teas from Darjeeling are disappointing in quality. The crop up to the end of May 1961 was 22.57 million kilograms or 49.76 million lbs. In 1960, it was 17.01 million kilograms or 37.51 million lbs. In the past three years, the average output was 22.10 million kilograms or 48.86 million lbs. The production in May was up by 46 percent at 30.7 million lbs, compared with 20.9 million lbs in the same month of last year. The serious drought last year was the cause for a shortfall in the crop.

Messrs W. S. Cresswell and Company, the old-established tea brokers, write in their annual report: "There has been a considerable switch, particularly in north India, from orthodox manufacture to the C.T.C. variety and the internal market is showing an increasing preference for the latter, particularly in the case of dusts. The reason for this is that considerably more cups can be obtained from a lb of C.T.C. tea than from a similar quantity of orthodox manufacture. It, therefore, follows that, calculated by cups, the increase in consumption in India has been much faster than is indicated by the extra poundage lifted from the market..... There may come a time when the grower will be unable, simply by altering his manufacturing methods, to produce an increased cup crop and in this event, the annual offtake by weight may rise sharply."

C.T.C. Manufacture

C.T.C. manufacture means crushing, tearing and curling, and the process entails some departure from orthodox manufacture of black tea. C.T.C. teas are suitable for internal consumption as well as for some export markets. The appearance of the leaf is spoilt but the brewing or cup quality is enhanced through C.T.C. manufacture. The C.T.C. types can also be used by blenders to reduce the cost of their tea packets but as one lb of C.T.C. makes more cups of tea than a like amount of orthodox tea, there would appear to be scope for propaganda by the Tea Board. The housewives should be informed of this scope for economy, although it does not appear to have been brought to their attention so far.

Third Plan Target

On 1st June, The Planning Commission is reported to have accepted the third plan tea production target at 900 million lbs with an export target of 610 million lbs, leaving for internal use 290 million lbs. India now produces about 700 million or 715 million lbs of tea a year. An official note, issued by the Commission, says: "Loans for new planting or replanting can be negotiated through the Tea Board and foreign exchange for the import of fertilisers and machinery should also be made available." (The notice read should, not would.) From the above figures, it will be seen that it is doubtful whether the output of 900 million lbs can be secured within five years. India now produces about 700 million lbs of tea. For the past three years, home consumption has been estimated at: 1957 232 million lbs, 1958 249 million lbs, and for 1959 265 million lbs. During 1958-59, the increase has been over 15 million lbs. With a steady improvement in the living standards of the masses, this rate of increase is likely to be accelerated but allowing for only 15 million lbs extra a year, in six years it will amount to 90 million lbs. Adding the 1959 demand at 265 million lbs, the possible internal requirements by 1965 will amount to 355 million lbs.

Long-term Outlook

Total production of good tea is not likely to increase to 900 million lbs within five years, but accepting that figure and deducting 355 million lbs for home consumption, there will be left only 545 million lbs for export, against the planners' estimate of 610 million lbs. On these estimates, the long-term outlook seems rather more favourable than some "experts" consider likely. An idea of the potential demand in India can also be obtained by a reference to Pakistan whose total production for the current season is estimated at 57 million lbs, of which 45 million lbs have been earmarked for supply to the local market. In pre-partition days, 90 percent of the Pakistani crop was sold for export. If Pakistan absorbs 80 percent of her output, there will be that much less available for the world markets. This confirms the impression that the long-term outlook is not bad.

RISE IN THE COFFEE CROP ESTIMATED

POOL RECEIPTS REACH RECORD LEVELS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE latest Indian coffee crop estimate for the 1960-61 season is 66,000 tons—10,500 tons more than the blossom estimate. Actual receipts in the Coffee Board's pool depôts up to the middle of last month amounted to 63,899 tons—the largest on record. Reports from the planting districts say that the blossom showers this year have been timely and widespread, so the prospects for the 1961-62 crop appear to be bright. The present estimate is that the new crop will be of the order of 57,610 tons. The Coffee Board earmarked for export 32,500 tons out of the current season's crop for export. The chairman of the Board, Mr. H. Sitarama Reddy, said recently that the Board had sold to-date 55 percent of this quantity. According to him, if a larger quantity of Robusta could not be sold by now, it was due to the fact that it was not made available by curers who, faced with an unprecedented crop, had been endeavouring to cure Plantation first. The break-up of the quantity sold so far is Plantation 13,844 tons, Arabica Cherry 753 tons and Robusta 1,138 tons, excluding the 2,264 tons covered by tenders which fell due on 8th June. There is not only a greater demand for washed Robustas but the prices offered, compared with Cherry prices in the export market, are quite favourable. "We must give an incentive to the planters by refixing suitable points in the price differential scale to produce as much washed Robustas as possible," the chairman said at the recent meeting of the Board.

Improving Quality

Mr. Reddy requested the planters and curers to adopt all measures to improve the quality of Indian coffee. The Coffee Board has not been able to obtain the services of a cup taster. The absence of the latter is said to be the main reason for the Board's difficulty in switching over to open auctions. On expert advice from abroad, the chairman now favours the starting of open auctions even without the services of a cup taster. It is said that except India all other producers are selling coffee by open auctions. The latter are an improvement over the system of closed tenders now followed by India. They would attract enterprising traders from home and abroad, as well as secure better prices for coffees of high quality. Although Indian production forms only 2 percent of the world output, the prosperity of Indian coffee is closely associated with the world prosperity in the industry. India cannot, therefore, work in isolation. The chairman of the Coffee Board thought it desirable for India to join the International Coffee Agreement.

Tax Burden on Planters

In spite of a recent reduction in supertax rates, the planters in Kerala have still a feeling that they are subjected to "crippling taxation" by the Central and State Governments. Some of the State levies of the past two years have increased the burden on the industry to almost the breaking point. The plantation tax which has added Rs. 8 to the cost of every yielding acre and the building tax have thrown a heavy burden on planters. The chairman of the Central Travancore Planters Association, Mr. G. Annesley-Cooke, gave some figures recently to show how little the investor gets after paying the taxes and meeting labour charges. A major planting interest in his district, whose production last year was 164 percent of what it was ten years ago and which sold 81 percent of its produce in India and exported the balance to the U.K., paid in all Rs. 582 an acre to the State and Central Governments in the form of taxes. Of this, Rs. 326 went to the State Government and Rs. 256 to the Centre. Labour benefits and bonus absorbed Rs. 211 an acre and this was exclusive of the usual wages, medical expenses, the value of rent-free accommodation and the cost of educational and recreational facilities. The net balance which was available for distribution among investors was Rs. 58 an acre.

The planting industry has been called upon to produce more and make larger contributions to the nation's wealth. But increased production has to be achieved by improved methods of cultivation, intensive manuring and vigorous control of pests and diseases. These require that a substantial portion of the profits be plouged back. It is an irony of fate that the Government should stress the need for more production on the one hand and should be unwilling to forgo its revenue from the industry on the other.

PAKISTAN ANNOUNCES LATEST TEA POLICY

RISE IN OUTPUT EXPECTED

(FROM A CORRESPONDENT IN PAKISTAN)

The long-awaited tea policy for 1961-62 has now been announced by the Pakistani Government. It is said that the expected production for the year would amount to about 57 million lbs. Out of this, 45 million lbs would be earmarked for internal consumption; the supplies to the internal market, it is stated, will be regulated in order to ensure that there is no shortage of the commodity. From the balance, liberal export quotas will be fixed. Last year, restrictions were imposed on the export of tea due to the small crop of 41,822,094 lbs. The export of tea was later completely banned. In spite of this, the prices in the internal market rose steeply. This year's production is likely to improve the situation. The latest policy announcement of 9th June retains the quotas of the respective buyers at the auctions so that the supply of tea is equitably distributed and not concentrated in the hands of a few. Although the prices of the various grades and qualities of tea have been fixed by the Government, the producers have a right to withdraw from an auction if they consider prices as unreasonable. The producers are also permitted to sell direct to purchasers up to a maximum of 10 percent of their production or 10,000 lbs, whichever is less.

The latest policy announcement says that the present rates of excise duty and export duty should continue at Re. 0.62 and Re. 0.37 a lb, respectively. The Government has also announced its decision to set up a committee to look into the question of increasing tea production as expeditiously as possible.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for May 1961:

Upper Assam: Weather seasonable; good rain has fallen; crop prospects are generally favourable, except in Tingri where rainfall is much above normal and prospects unfavourable; outturn normal to good; immediate prospects fair to good.

Central Assam: Weather conditions favourable; good rain has fallen; outturn good; immediate prospects fair; red spider decreasing.

Lower Assam: Weather abnormally wet; rainfall is much above normal for the season to-date; crop prospects fair to good; outturn about normal but poor in Mangaldai; red spider is present in some districts; immediate prospects fair.

North Cachar: Weather favourable; outturn poor; severe hailstorms are reported, so considerable damage has resulted; immediate prospects fair; red spider lifting.

South Cachar: Weather seasonable; good rain has fallen, and crop prospects are now brighter; outturn normal to good; outturn to-date is substantially more than in last year; immediate prospects good; red spider blight prevalent.

Eastern Dooars: Weather favourable; outturn about normal; crop prospects unfavourable in Kalchini but fair in Jaintí; red spider blight reported.

Central Dooars: Weather favourable; good rain has fallen and crop prospects are brighter; outturn normal to good; in Binnaguri, outturn to-date is substantially more than last year; hailstorms are reported but little damage has resulted; red spider blight prevalent.

Western Dooars: Weather conditions in most districts are normal for this time of year; outturn good but poor in Dam Dim; immediate prospects good red spider reported in Chalsa.

Darjeeling: Weather seasonable; outturn about normal; red spider prevalent; thrips are prevalent generally.

Terai: Outturn about normal; immediate prospects fair; weather seasonable; red spider blight severe.

COCHIN TEA SALES

At Dust Sale 23, 300,000 kilograms of tea were on offer. There was a fall in general demand. The market was generally easier by 20nP to 30nP. C.T.C. grades declined by 10nP or 15nP.

At Sale No. 24, 700,000 kilograms of tea were on offer. There was an active demand. Plain and low mediums declined by 5nP or 10nP while mediums and good mediums were about 10nP easier. Nilgiris were irregular following quality.

Jute

SHIPPER AND LOCAL COVERING RAISES GUNNY RATES

OVERSESAS BUYERS KEEP OUT EXPECTING PRICE FALLS

THE price of raw jute is inevitably closely linked with the size of the crop. With bumper crops predicted for both India and Pakistan, it is anticipated that Calcutta mills may soon be able to draw on plentiful supplies of cheap jute, and that, therefore, the prices of jute manufactures will fall to low levels. Foreign buyers appear to be taking that view, and this would appear to be one of the principal reasons why they are content to sit out and await developments. The U.S.A., for instance, has reduced her consumption, compared with former years, and fallen back on stocks rather than make fresh purchases. In spite of digging deeply into her stocks, she still has nearly a full two months' supply available at home, and a further six weeks' transit, based on the present low rate of average consumption. Add to this a possible two or three weeks' consumption purchased but not shipped, and the result clearly shows why she is not buying.

This attitude may prove to be mistaken however, as it ignores two important factors. One is that the availability of Pakistani jute to India will be limited, as their imports will be strictly controlled. India will, therefore, have to depend on home-grown jute for the bulk of her supplies. This brings one to the second point which is that the industry will have to guard against allowing jute prices to fall to such a low level that the growing of jute next season is discouraged. The whole problem is a delicate one, but it is essential for both manufacturers and consumers to realise that uneconomic prices are as dangerous to the future of the industry as excessively high ones.

Effect of Jute Export Programme

It is true that nature took a hand in the fall in the last crop, and many are pinning their faith on the old adage of a poor year being followed by a bumper year. Prices of raw jute still bear no relationship to manufacturing costs. The mills complain, with justification, that the fibre price is too high, and the users of jute manufactures are also complaining that the price of the goods is too high for them. Could anything have prevented the raw jute shortage which pushed prices up and brought about controls which no one likes? For the answer one has to go back two years and place the blame squarely on the shoulders of the Government, which went ahead with a jute export programme, much against the advice of the industry.

This was principally for the prestige effect, to show how quickly India had reached self-sufficiency in jute in advance of estimates. If the Government had itself purchased that jute to use as a buffer stock, then the crisis from which the industry is slowly emerging would never have come about. It is to be hoped that if any jute becomes surplus during the coming season, it will be stocked to prevent any future emergency, and at the same time act as a price support scheme to prevent fibre prices falling to uneconomic levels for the farmers. Overseas buyers continue to show only limited interest in the local markets. As long as there is a possibility of a fall, consumers postpone their buying in the hope of still lower prices. In spite of this, however, over the past week, the goods markets have shown a surprising tendency to rise. This has been mainly due to the local operators and shippers covering against commitments contracted at much higher rates. There has been no shortage of sellers at the lower rates—although mill selling pressure is not so strong now as it was ten days ago. In spite of the big disparity between the fibre and gunny prices, the mills have large stocks to unload, which is clearly indicated by the rise in gunny stocks in May.

At the meeting of the newly elected board of directors of the East India Jute and Hessian Exchange, it was decided to remove the margin deposits payable on futures trading transactions which are being resumed today. Although this was generally considered to be good news, the initial reaction was downwards, and goods prices received a mild setback. It is inevitable that at the opening of the futures market, everybody will be a seller, and nobody a buyer; thus prices will tend to fall, and some time must elapse before this market can become a reliable guide.

Jute Goods Production

Production of the mills reporting to the I.J.M.A. for May amounted to 78,300 tons, made up of 28,500 tons of hessian (36.4 percent), 38,200 tons of sacking (48.8 percent), and 11,600 tons of other goods (14.8 percent). This was accomplished in 178.5 working hours, but in spite of this being 8.5 hours more than the previous month, the total production was down by 900 tons. This was mainly due to a drop of 2,200 tons in sacking, which was partially offset by a rise of 1,000 tons in hessian and 300 tons in other goods. The lower production suggests a change over from the heavier fabrics to lighter ones, but this is not obvious from the percentage of hessian which is practically unaltered from the previous month. "Other goods," however, the break-down fabricwise of which is never given, shows an increase of over 4 percent to the detriment of sacking, so it is in the other goods section that the tonnage has been lost. As a result of this, the average production an hour during the month dropped by about 27 tons to 438.6 tons Total production for the period July 1960-May 1961 now amounts to 341,700 tons of hessian (36.5 percent), 493,600 tons of sacking (52.5 percent) and 104,800 tons of other goods (11.0 percent) making a grand total of 940,100 tons in 2,145 hours, which gives an average tonnage an hour of 444.4 tons.

New Crop Prospects

Most districts have had rather a heavy amount of rain, particularly in West Bengal and Bihar, and a spell of dry weather and sunshine would be good for the plants, but there is no reason to suppose that any damage has been done. The sowing of Daissee has been interrupted where it has not yet been completed, and the weeding of the highland crop has been stopped in several districts, but the growth of the plants will not suffer unless the rain continues to be heavy and there is no sunshine. Harvesting has taken place in many lowland areas, and samples are reported to be very good. Rumours of flooding have been circulated, but there is actually no danger of heavy flooding at present because the rivers are still only a little above their dry-season level. Had the same rainfall occurred with the rivers at the July-August levels, then flooding would have been inevitable, but with empty *jheels* and low rivers, there is plenty of drainage to take away the water.

THE JUTE MARKETS

Manufactured Goods: The market opened on a very quiet note as a result of the publication of the mill gunny stock figures for May. These showed a rise of 1,200 tons, and this, combind with a heavy selling pressure from the mills, caused prices to collapse, and B Twills opened Rs. 5 lower at Rs. 144 for June, and Rs. 130.50 for October-December. Very little foreign interest was reported, but some buying interest developed from local shorts, and during the day, prices fluctuated narrowly with a rising tendency, and closed Re. 1 higher. Local shippers now began to take an interest and rates rose rapidly and during the day rose to Rs. 152 before closing on Saturday at Rs. 150. Meanwhile, hessians had followed the fortunes of sacking, and from an opening on Thursday of Rs. 47, 40in. 10oz. hessians moved up slowly under limited buying interest to Rs. 48.75 by the week-end. At this stage, the premium of near goods over forward shipment was between Rs. 15 and Rs. 16, and in hessians, between Rs. 3 and Rs. 4. About this time rumours of a Government tender tended to keep prices high, but a slight reaction set in on Monday, and heavy goods were quoted at Rs. 148 and 11-porter hessians at Rs. 48.25. The market remained steady in heavy goods, however, in anticipation of business, but hessians declined slightly. In the absence of any confirmation of business and the complete disinterest of foreign buyers, the market weakened on Tuesday, sacking rates falling about Rs. 2 and hessian Re. 1. The market was quiet on Wednesday morning, and opening quotations were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 7loz.	36.00	33.75	35.50	33.25
40in. 8oz.	39.00	38.50	38.25	35.75
40in. 10oz.	47.00	47.00	47.00	44.25
B Twills	147.00	144.00	141.00	128.50
Heavy Cees (Plain)	148.00	144.50	141.00	128.50
A Twills	161.00	.....	.....	—
Liverpools	164.00	161.00	159.00	146.00
Cornsacks	151.00	148.00	145.00	132.00

Raw Jute: The market was very quiet at the opening last Thursday, partly in sympathy with the goods market, and partly due to favourable crop reports. Assam jute dropped Rs. 3 to be quoted at Rs. 43—or Rs. 13 below the maximum rates. Some mill interest developed, but sellers were not keen to do business at the lower rates There was a slight improvement after this and prices advanced Re. 1. Again, mill interest developed over Friday and Saturday, small business was conducted at rising prices. By Monday Assam rates had moved up to Rs. 46, and increased activity in the Cossipore markets caused many sellers to withdraw. Many sellers indicated above the quoted rates, but mills withdrew at the higher levels. The market remained steady over the next two days, not being influenced by the weaker goods market. Activity in Cossipore again increased, and with imports getting smaller, the undertone of the market was steady. Wagon arrivals in Cossipore numbered 212 which was about average for the time of year. Small samples of new crop jute from Assam have been received by some mills, and these have been favourably commented on. Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. p 100 kilos	Rs. a md.	Shipment
Assam	122.00	45.50	June-July
Northern	119.25	44.50	"
Purnea-Desai	116.50	43.50	"
Daissee Selected	127.25	47.50	"

Mesta:			
Assam-Northern	115.25	43.00	"
Desai	115.25	43.00	"
Daissee	113.75	42.50	"
Pakistani Cuttings	195.00 a bale		

I. J. M. A. PRODUCTION FIGURES FOR MAY

The Indian Jute Mills Association reports the total production of jute goods for May as follows:

Description	Quantity	
1. Gunny Bags		
(a) Hessian	4,602 tons	(4,879 metric tons)
	1,43,08 lakh yds.	(1,31,50 thousand metres)
	73.9 lakh nos.	
(b) Sacking	37,125 tons	(37,721 metric tons),
	8,77.0 lakh yds.	(8,01.92 thousand metres)
	3,89.8 lakh nos.	
2. Gunny Cloth		
(a) Hessian	23,650 tons	(24,030 metric tons)
	9,10.0 lakh yds.	(8,32.08 thousand metres)
(b) Sacking	1,075 tons	(1,092 metric tons)
	23.4 lakh yds.	(21,36 thousand metres)
3. Other Manufactures	11,659 tons	(11,846 metric tons)
4. Total Production (All kinds)	78,311 tons	(79,568 metric tons)

Summary

	(00,000 yds. and 000 metres) May 1961	Apl. 1961	May 1960	(000 tons and metric tons) May 1961	Apl. 1961	May 1960
Hessian	10.54	10.20	13.97	28.5	27.5	37.7
	(9,63.58)	(9,32.36)	(12,77.56)	(28.9)	(27.9)	(38.3)
Sacking	9.00	9.55	10.32	38.2	40.4	44.5
	(8,23.28)	(8,73.55)	(9,43.62)	(38.8)	(41.1)	(45.2)
				11.6	11.3	9.5
				(11.9)	(11.5)	(9.6)
	Grand Total			78.3	79.2	91.7
				(79.6)	(80.5)	(93.1)
	Hours worked			178.5	170.0	208.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

DEALERS in the Dundee jute market are glad to see prices declining, although it will take the trade a long time to get over the misfortunes of the past 12 months. Many customers will have been lost by the high prices for jute goods, and

I.J.M.A. STOCK FIGURES FOR MAY

The Indian Jute Mills Association reports stocks of jute goods at the end of May as follows:

Description	31st May, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	30th April, 1961 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st May, 1960 (000 Metres	000 Tons (000 Metric Tons)
Hessian cloth and bag	12,21	34.5	9.82	27.9	+2.39	+6.6	12.63	34.5
	(11,16.21)	(35.1)	(8,98.11)	(28.4)	(+2,18.10)	(+6.7)	(11,54.54)	(35.1)

producers of yarns and cloth will have to intensify their efforts again to entice them back. But jute goods are still the best form of packaging material in the world. If stability could be restored in the industry, yarn and cloth producers would have no difficulty in fixing their terms which would suit customers. What is needed now is a spell of reasonable prices which prevailed prior to the advance which took place last year and culminated in the disastrous rise that has almost stopped all business. For many months buyers of jute have been placing orders for trifling lots or using substitutes, but they will gladly return to jute if suitable prices are quoted.

The Indian jute mills have been experiencing an extremely quiet spell of business in hessians and sackings. They complain about competition from the Pakistani and Continental mills who are under-cutting them in prices.

Raw jute has been steadily declining in Dundee, with the business in old crop fibre being more or less nominal. Dealers are trying to secure jute at lower prices than sellers are quoting. New crop fibre has been of little interest at £150 for Mill Lightnings and £145 for Mill Hearts, June-July £140 and £135, respectively, July-August, £130 and £125, August-September and £125 and £120 September-October, with Grade Tossa-2/3 £136, fours £127 and Continental Tossa-4 at £123, c.i.f. U.K.-Continent. So far, very little business has been done in new crop fibre in Dundee.

Calcutta goods are steadier at 71s for 40in. 10oz. and 54s 6d for 7½oz., June, 71s 3d and 54s 9d July-September and 67s and 51s 6d October-December, with B Twills at 219s 3d, 213s 6d and 197s 9d for the respective positions of shipment, all f.o.b., Calcutta. Jute yarn and cloth prices were reduced recently by £15 to £20 a ton. Hessian yarns came down to 22.31d from 24.60d a lb for 8 lbs C.H.W. cops and to 23.46d from 25.75d for 8 lbs warp (J.C.H.), while hessian rates were down from 19.81d a yard for 40in. 10oz. and 16.55d for 8oz. to 18.29d and 15.33d, respectively. Business is still quiet as even lower terms are expected.

Books

MONETARY POLICY OF THE RESERVE BANK

Operations of the Reserve Bank of India (1935-54). By Nalinkumar I. Almaula. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 12.75, pages 211.)

Central banking techniques are changing constantly, so the habit of modelling central banks according to some established pattern leads to pitfalls. The growth of the Reserve Bank of India, in particular, was retarded since it was established on conventional patterns. This fact has been noticed before, since a large volume of literature —good, bad and indifferent—exists on central banking in India. The distinction of the present work is that its conclusions are the result of painstaking research and are based on a sound collection of facts. The first part is descriptive and does not cover new ground. Old wine has been presented in a new bottle, although the section on commercial banking is instructive. The last four chapters form the body of the thesis. Statistics are a tricky weapon, but an intelligent use of the data has been made to trace the evolution of monetary policy and to indicate the rigidities—legal and otherwise—which have hampered the Reserve Bank's activities. In one aspect at least, the need for using the weapons of selective credit control that is, the author's views have been amply justified. The discussion would have been more stimulating if the main conclusions were gathered towards the end of each chapter. Since the book was published in 1960, more up-to-date data and an appendix indicating the later developments in the relevant fields would have been welcome. These are, of course, minor defects, and Dr. Almaula's book has to be regarded as an authoritative work on monetary policy in India.

MANAGING MONEY

Lectures on Monetary Management. By C. R. Whittlesey. (Published by the Registrar, University of Bombay, Fort, Bombay. Review copy received from Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 5, pages 89.)

The lectures delivered at Bombay University by Professor Whittlesey, when he was acting as a visiting professor under a scheme jointly sponsored by the Reserve Bank and the Ford Foundation, have been brought together in this book. It describes briefly but lucidly central banking as it was and as it now is, and presents the professor's own views on monetary policy. The discussion is based on experience in the United States, but Professor Whittlesey's major conclusions are of much wider application and interest. The first two chapters deal with the basic objectives of central banks, the last three with the impact of the Bank rate policy, the scope for discussion in monetary management, and the prospect for the 'sixties. They emphasise two basic facts. First, the monetary policy in the wider sense and in combination with the fiscal policy is of great use and importance; and secondly, to apply this policy to the central bank, the authorities must be given a wide field of discretion. Chapter III contains an illuminating discussion of the "liquidity effect" of the Bank rate policy. The impact on liquidity is great and often unexpected, with grave implications for debt management. Incidentally, this shows that monetary management is not necessarily easier in a developed money market This conclusion is important for the student of banking in India. Professor Whittlesey's book is a fine example of a practical approach based on sound theory, and his conversational style makes for easy and pleasant reading.

CENTRAL BANKING IN INDIA

Evolution of Central Banking in India. By B. Rama Rau. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 4, pages 94.)

The book is an enlarged version of the three lectures on central banking in India delivered by Sir B. Rama Rau at Madras University in April 1960. Written by a person who was at the helm of the Reserve Bank during an eventful period, it gives an idea of the inner policy considerations, and what is more interesting, a view of the personal opinions of the former Governor himself. The evolution of the policy for developing a sound commercial banking structure is discussed in the first lecture and the credit control policy against the background of the general economic situation in the second. The last lecture describes the policy on agricultural and industrial finance. The progress achieved in all the fields is impressive, and the methods adopted are bold and pragmatic, designed to support the planned development of the economy. The support, however, has not been uncritical, particularly concerning the policy for co-operative farming and deficit financing. Whether this conservative approach will help maintain balance or will hamper planned growth, is an important and intricate problem for the policy-makers. Altogether, the book makes an interesting study, but a more analytical approach would have vastly enhanced its value.

Water, water everywhere— all the family in despair

Certainly there is no need for them to be so. In fact, why live or work under damp, miserable conditions—why allow your property to deteriorate around you? Have it protected from dampness of ceiling, walls and floors, from acid and alkali action, by Shalimar Tar Stp bituminous based protective materials.

BRITISH TEXTILE REVIEW

GROWING COMPETITION FROM ASIA

THE recent discussions in Osaka on international competition in textile trade, and the firm intervention of north America in the dispute on the export of cotton goods from Hongkong, have finally convinced Lancashire that its problem is not unique. The various artificial aids to exports (or some of them) that were discussed disapprovingly at the annual meeting of the International Federation of Cotton and Allied Textile Industries in Osaka have been (more or less) familiar to Lancashire exporters for many years. The massive competition of Asian textiles in Lancashire's home market is a more recent development. The U.K. industry has been aware, of course, that north American and other cotton manufacturers have been complaining with growing urgency against the Asian influx; but the problem has seemed, and presumably is, much more acute in Britain because of the tariff structure that admits Commonwealth countries' manufactures duty free. The problem is fundamental. The millowners of Hongkong may be compelled to restrict their exports for a time; in some textile-manufacturing countries low-cost imports (whether the low costs are genuine or artificial) may be restricted by higher tariffs. But there remains the essential fact that "emergent" countries tend to develop first those manufactures, such as textiles, that can be mass-produced and sold cheaply in more prosperous countries. It is argued on the one hand that the "emergent" countries will never be able to develop unless they are allowed to sell their low-cost goods in countries that can afford to pay for them, and on the other hand that the developed countries cannot be used as dumping-grounds for these cheap exports, to the detriment of their established industries. For the present, both north America and Britain feel that they are required to accept more than a reasonable proposition of cheap goods, because other countries protect their textile industries more effectively. Lancashire reacted favourably to President Kennedy's proposal for an international conference on textile trade, and to a statement in London by Mr. George Ball, U.S. Under Secretary of State for Economic Affairs, that the necessary development of the under-developed countries' trade should not be so rapid that it would disrupt the developed countries' markets. But Lancashire must plan on the basis of a long-term concept of trade. The U.K. cotton industry has reached the re-equipment stage of its reorganisation, and there is abundant evidence that re-equipment needed to strengthen the industry is being deferred until the permanent shape of the market can be foreseen.

Eyes on Europe

It will be recalled that at a textile conference in Montreal earlier this year, Mr. J. F. Simpson, chairman of Simpson and Godlee, suggested that the problem of low-cost imports might be solved if continental Europe took a bigger share of them —and if the developing countries themselves recognised the danger of investing indiscriminately in the textile industry. A similar idea has been considered recently in discussions on Britain's possible membership of the European Common Market. It is no secret that the Lancashire industry is inclining towards this alignment of Britain's trade, not primarily because it visualises a big increase in its exports to "the Six" if Britain were inside the tariff wall but rather because it assumes that the overseas Commonwealth's goods could not be admitted freely into Britain if she were part of the Common Market; but the rearrangement might involve some compromise whereby the low-cost producers were recompensed by increased sales to the Continent.

The U.K. textile industry is, anyway, turning its attention towards Europe, because Asian exporters have taken a substantial part of its trade with the poorer countries and its trade with the richer countries—the dominions as well as the U.S.A.—is restricted by protective tariffs. Accordingly, British textiles will be forcefully promoted through a British Textile Exhibition in Copenhagen in October next year. The Danish capital seems a good choice for such an exhibition, not only because the Scandinavian countries are good markets, but also because Denmark, like Britain, is at present inclining towards the Common Market. The success of textile exhibitors at the British Trade Fair in Moscow in May-June this year—contracts negotiated in the first few days, for delivery this year, exceeded by far the modest total of the U.K.'s exports of textiles to Russia last year—has convinced the British industry that the Russian market has big potentialities. Scottish tweed firms, particularly, are organising themselves to expand trade there; following a report by Mr J. Douglas Hood, chairman of Wilson and Glenny, to the National Association of Scottish Woollen Manufacturers after a sponsored visit to Russia last year, seven of these firms have combined to handle Russian orders co-operatively—having in advance designed specially for the Russian market cloths that they can all make.

MEASURES TO PROMOTE WOOL SALES

Dominion wool growers are contributing £2.6 million to which wool textile industrialists have added £1.2 million to provide funds for the prpmotion measures which the International Wool Secretariat is to undertake this year. It is intended to establish trade promotion zones in Europe, Asia, and the Americas, and there is to be a long-term campaign for new markets in communist countries. A worldwide technical advisory service is also to be established. At the first meeting of the new board of the I.W.S. in Melbourne recently, it was stated that the sum available, although the largest so far obtained, was small, compared with the amounts spent on publicity for the man-made fibres. Dr. J. G. van der Wath, the retiring chairman, said that according to estimates, the consumption of synthetics in competition with wool went up by nearly 30 percent in non-communist countries during 1960. Prospects for wool are considered to be brighter with the improvement in the world economic situation. "Incomes should continue to rise in most west European countries and in Japan," Dr. van der Wath said. "There is, therefore, likely to be a further rise in demand for clothing during 1961. We must do all we can to ensure that it is wool, and not the competitive fibres, that benefits . . . ."

Mr. R. G. Lund, the new chairman, said that plans would be considered for an international quality symbol for wool. This, he thought, is a good idea, but it will be necessary to ensure that the quality and wool content are maintained. One of the most impressive sections of Mr. Lund's statement mentioned several instances where the I.W.S. had taken part in promotion schemes for durable creasing, shrink resisting, moth proofing, and other finishing processes for woollens and

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that.. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

OUTLOOK FOR TIN SUPPLY AND DEMAND

Any hopes that the recent meeting of the International Tin Council would provide a lead to the market concerning future supplies of the metal have not been fulfilled. The statement subsequently issued by the Council was strictly non-committal. The latter had surveyed the statistical position of tin for 1961 and 1962 and considered the steps which might be taken to deal with the situation indicated by the survey. The Council will meet next in London on 27th June, preparatory to the coming into force of the new international tin agreement on 1st July. The first meeting of the new Council will be held in the first week of July, and this will no doubt provide an opportunity for discussions on policy questions, such as a possible raising of the ceiling price for buffer stock sales. Under the present regulations, the buffer stock manager is obliged to sell when the spot price reaches £880 a ton. The spot price is now poised at just over the £870 mark, with three months tin quoted at about £875 a ton. If the demand for tin rises on a substantial scale, the £880 level could soon be reached.

THE MARVEL OF THE MULTI-PURPOSE POLICY

HE PAID Rs. 288 ONCE
TO LEAVE
FOR HIS FAMILY Rs. 1,01,880

When a breadwinner dies, so does the family income. But when a breadwinner with a Multi-Purpose Policy dies, a new income STARTS for his family. Here is a true-life example of this amazing Policy:

• A young chemist took a Multi-Purpose Policy for Rs. 20,000 with Double Accident Benefit. Shortly afterwards his family lost him in an accident. From his Policy they receive:

- A lump sum of Rs. 20,000 (Double Accident Benefit)
- Plus Rs. 2,000 to meet the funeral, legal and other expenses
- Plus Rs. 400 a month for 2 years
- Plus Rs. 200 a month for over 21 years
- Plus bonuses due
- Plus Rs. 18,000 at the end of the Policy term.

The young man had paid just Rs. 288 in premiums. In return, his family receive a total of Rs. 1,01,880 wisely spaced out as an income for over 23 years! Had he lived he would of course have received Rs. 20,000 plus bonuses at the end of the Policy period.

Take a Multi-Purpose Policy without delay. It means unmatched security for your family.

There is no substitute for
LIFE INSURANCE

Calcutta Market

SELECTIVE DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 3, held on 12th June, the offerings at the Export auction consisted of 28,673 chests. Darjeelings were the weakest feature of the sale, but there was a good demand for teas from the other districts. The few invoices of flavoury Darjeelings sold well, but quality from this district was generally rather poor and interest was very limited with a large number of withdrawals without a bid. Orthodox descriptions from the other districts sold well, particularly the better sorts with the medium and plainer descriptions selling at about last rates and more interest was shown for Fannings. C.T.C. descriptions met with good enquiry and the better liquoring kinds sold well. Medium sorts, however, were a little irregular, but the poorer and lower priced teas usually sold at dearer rates. Whole leaf grades met with fair support, but prices were a little irregular and often easier.

Quotations

	1961 Rs. a kilo	1960 Rs. a kilo
Clean Plain Pekoe	5.05	4.80 to 4.90
Plain B. P.	4.70 to 4.75	4.24 to 4.44
Plain Fannings	4.55 to 4.60	4.20 to 4.30

(Quotations are inclusive of excise duty.)

At the Internal Sale, a total of 25,079 packages of Dusts were on offer, of which 12,277 chests were of new season's manufacture. There was a good general demand for the new season's teas with the exception of Legg-cut types which opened well below brokers' expectations with some withdrawals. Medium C.T.C.s were irregular and generally sold up to 30nP below valuations, although the smaller types met with better support. The few brighter lines on offer sold well. Orthodox teas were readily absorbed at lower rates. Darjeelings were keenly competed for and were taken up at much enhanced prices. The old season's Dusts came to a fairly good market, although both Orthodox and C.T.C. teas were irregular and generally easier. As few quotable teas were on offer, no quotations have been given. The 125 chests of internal Leaf teas on offer sold at irregular rates.

FREIGHT MARKETS ACTIVE

BUSINESS was active in most sections of the freight markets during the past week, and an interesting feature was the number of fixtures made to and from India. Two vessels have been fixed for fertilisers from Bremerhaven to one port West Coast India at 70s f.i.o. and stowed with 1,000 metric tons load and 600 tons discharge. The same rate and conditions were considered for a similar cargo, Bremerhaven-one port East Coast India. These fixtures are for June-July loading. Three fixtures for wheat in bulk from British Columbia-Northern Pacific coast to East Coast India were reported at 67s 6d with the usual options of West Coast India or two ports' discharge at 2s 6d extra. From India, ore from Bombay to Northern range was fixed at $(U.S.)8.50 and Visakhapatnam to the same destination at $(U.S.)8.65 both for 9,500 tons, 10 percent more or less An interesting enquiry on the London market is for a passenger vessel to carry 460 students from Bombay to London-New York in August 1962. The time-charter market was active, but rates on the whole remained steady.

LINSEED FIRM

The market was firm during the past week. Arrivals from the centres declined and may continue to do so during the monsoon. Business was done on a small scale as sellers were reluctant to do forward business. The oil market was firm in sympathy with seeds. Stocks in the hands of millers were low. Business was restricted to small quantities only. The oilcake market was steady and the offtake was better. The latest quotation is as follows: Ready-June delivery, Rs. 28.25 a maund.

HIDES AND SKINS

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 6th June and 12th June, 1961)

Cowhides: Wet salted (slaughtered) 15,100 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 39,600 pcs. on the basis of Rs. 260 to Rs. 270, Rs. 285 to Rs. 315 and Rs. 340 to Rs. 360; wet salted (he-killed) on the basis Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 42,200 pcs. on the basis of Rs. 240 and Rs. 300 to Rs. 315; Purneah-Kissenganj 1,000 pcs. on the basis of Rs. 300 to Rs. 315.

Bazaar Stocks

(12th June, 1961)

Cowhides: Wet salted 120,000 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killed) 27,500 pcs.; Assam-Dinajpur 57,000 pcs.; Muzaffer-pore-Patna-Pakur-Purneah-Kissenganj 361,500 pcs.

COMPANY AND PUBLIC NOTICES

STATE BANK OF INDIA

NOTICE

IN pursuance of Regulation 40 (1) of the State Bank of India General Regulations, 1955, it is hereby notified that Shri Harishna Kumar Birla of 17, Gurusaday Road, Ballygunge, Calcutta 19, being the only person validly nominated for election shall be deemed to be elected as a Member of the Calcutta Local Board of the State Bank of India on 21st June 1961, with effect on and from the 1st July 1961, and that the Local Meeting of Shareholders which was to be held on Wednesday, the 21st June 1961, in terms of the Bank's Notice of the 26th April 1961, solely for the purpose of the aforesaid election, stands cancelled.

B. K. KACKER,
Secretary,
Calcutta Local Board.

Calcutta, 7th June 1961.

NATIONAL COMPANY LIMITED

AT a meeting of the Board of Directors held on the 2nd June, 1961, the following dividends were recommended to be paid subject to deduction of tax under Section 18(3D) of the Income Tax Act.

1. **Dividend for the year ended the 31st October, 1960.**
   (a) On 7% Cumulative Preference Shares in terms of Preference Shares (Regulation of Dividends) Act, 1960 ... @ Rs. 9.10 nP. per share.
   (b) On equity shares @ Re. 0.75 nP. per share.
2. **Additional Dividends in accordance with the provision of the Preference Shares (Regulation of Dividends) Act, 1960, for the year ended the 31st October, 1959.**
   (a) On 7% Cumulative Preference Shares ... @ Rs. 2.10 nP. per share.

The dividends if approved will be paid to those shareholders (or their mandatees) whose names appear in the Company's register of shareholders as on the 27th July, 1961.

The Share Transfer Registers of the Company shall be closed from the 7th to the 27th July, 1961, inclusive.

By Order of the Board,
D. P. SONTHALIA,
Acting Secretary.

18A, Brabourne Road,
Calcutta-1.
June 5, 1961.

THE MEGNA MILLS COMPANY, LIMITED

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at its Registered Office on Friday the 7th day of July, 1961, at 3 o'clock in the afternoon to consider and if thought fit to pass either with or without modification the following resolution which will be proposed as a special resolution, namely:

"That the Articles of Association of the Company be altered in manner following:—

The following new Article shall be added and numbered Article No. 122A.

"The company shall not, so long as any money remains due and owing by the Company to the National Industrial Development Corporation Ltd. under or by virtue of the mortgage dated the 16th day of January, 1958, and/or any further charge or mortgage to be executed by the Company in favour of the said Corporation, lend monies without security to any person or persons without the consent in writing of the said Corporation first had and obtained. Such consent in writing may be of a general or special nature."

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

6, Strand Road,
Calcutta,
Dated, 9th June, 1961.

NOTE:—1. A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on his behalf.

A proxy need not be a member of the Company.

2. Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all shareholders along with the Notice convening the Meeting.

THE BENGAL PAPER MILL CO. LTD

AT a meeting of the Board of Directors held on Saturday the 10th June, 1961, the following dividends were recommended to be paid subject to deduction of tax for the year ended 31st December, 1960.

On Cumulative Preference Shares.	Final dividend @ 4.1 per cent per annum.
On "A" Cumulative Preference Shares.	Final dividend @ 4.1 per cent per annum.
On "B" Cumulative Redeemable Preference Shares.	Final dividend 2.528 per Share (being the dividend at the rate of Rs. 3.16 nP per Share less Income Tax at the Company's rate of 20%).
On Ordinary Shares.	Rs. 32 per cent per annum. (Rs. 8/- per Share)

By Order of the Board,
H. P. DHANUKA,
Director.

Regd. Office: 14, Netaji Subhas Road,
Calcutta, 10th June, 1961.

TEA COMPANIES

O., Po. and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FRENCH, JAPANESE AND INDIAN PLANNING

THE Government of Japan is currently engaged in re-thinking its economic policies in the light of a ten-year plan submitted by the Economic Council, which proposes the objective of doubling the national revenue by 1970-71. On the other side of the earth, the French planners are busy writing their fourth four-year plan which is to be published in October and launched on the first of next year with more pomp and publicity than attended earlier plans. If our doctrinaires of the planned socialist economy imagine that these two very dissimilar but equally prosperous nations have suddenly been converted to the system where the government takes over and runs the country's economic life, they could not be more mistaken. Japan and France, in their different ways, are free-enterprise economies and they are all the more determined to remain so because in the past decade they have demonstrated astonishing vitality, raising their living standards to far above pre-war levels. Japan's recovery from extensive war damage coincided with the Korean war of 1950-51 and since then the national revenue has been multiplied by 2.25. The new ten-year plan proposes to do no more between now and 1971—in fact slightly less—so obviously no radical revision of economic policies is contemplated. France's rapid expansion may be dated from M. Pinay's 1951 price stabilisation, and it continued vigorously in the following decade hidden from external view by the political troubles and payments crises of the Fourth Republic—until General de Gaulle brought M. Pinay back again in 1958 to effect a revaluation of the currency which revealed, but did not create, France's industrial progress.

Thus both these countries find themselves in 1961 in the full flight of economic advance, and when they speak of planning their future they do not dream of breaking with the free-enterprise system on which that advance is based, nor of calling upon the State to do things at present left to individual initiative. For them, a plan does not mean giving over the business of further development to some central agency that hands down a programme for others to fulfil . . or else. It means creating a forum where all the manifold activities of a free economy can be coordinated voluntarily. The agents of those various activities write the plan themselves simply by seeking to fit their individual plans together. Naturally, their separate private programmes do not fit together at once, by magic; it requires discussion and a lengthy exchange of information before each party sees how he can, to his best advantage, adjust his activities to the rest. The use of indirect compulsion, in the shape of special incentives and fiscal discouragements issued by the government, is then only a residual affair and is generally of little importance. Obviously, if an entrepreneur has taken part, in person or through his industrial association, in a year-long debate where it emerges that in five years' time there will be no market for one thing he could manufacture but a big market for another thing he could equally well produce, he does not need guidance or coercion from the State to adjust his activities to those of his colleagues.

To be honest, one must admit that this procedure is a departure from the classic theory of the free-enterprise economy. In that theory, the fitting together of individual plans was accomplished by the anonymous forces of the market and there was no need of face-to-face meeting and long debate. The capitalist countries discovered a generation ago that, left entirely to itself, the free market would not guarantee full employment. Some of them now go further and admit that, even when modified to safeguard full employment, it will not necessarily show that steady rate of expansion that democracies, rightly or wrongly, expect. To achieve that, some concerted collaboration between all the factors and agents involved is needed. We might take the U.S.A. and Canada as free-enterprise economies that are not yet prepared to take the steps required to maintain perpetual full employment; Britain as a free-enterprise economy that is prepared to do that, but not yet ready to make consistent expansion a national objective: and France and Japan, finally, as economies that are experimenting with ways to attain steady annual growth without abandoning free enterprise.

To the extent that they succeed, they are doing something extremely important. On the one hand, they could prove that a free economy that relies on private initiative is not doomed to irregular drift or stagnation but can set itself development targets worthy of comparison with those of totalitarian economies. On the other hand, they could break down the prejudice that any such regular growth calls for unbridled State intervention, proliferating public enterprise and dictatorial planning. Of course, there exists a fairly substantial public sector both in the Japanese and French economies, in one case the fruit of the occupation and in the other of the post-war nationalisations, and its existence is useful for their planning. But it does not exceed the size of the public sector in Britain, and it does not grow as planning proceeds. Planning, that is, makes use of the existing public sector, but is not synonymous with its extension. Before making any comparison with India one would have to notice that the public sector in other countries is much more independent of the Government and Parliament than in this country; much of it behaves, and is expected to behave, as though it were in the private sector, with the sole difference that it does not have to pay dividends to shareholders. Signor Enrico Mattei, king of Italy's State oil monopoly, is as independent as the president of Standard Oil, while it used to be said that the man appointed by Paris to run the nationalised Renault concern was in many ways a freer agent than M. Citroen in all his private glory. Nationalised business abroad is business first and foremost; the success of planning in such countries has nothing to do with the subservience of the public sector to governmental planners—which is the idea behind the Delhi doctrine of State control of "strategic points" of the economy.

The present Japanese plan was written, in the course of 12 months' discussion, by 200 people drawn from private business, the trade unions, the Press, the universities and the civil service, assisted by a large staff of functionaries. They compared numerous piecemeal programmes, decided what was feasible and how various plans could be fitted together, working all the time on the assumption that the private sector would continue to dominate the economy. The plan approved, the Government decided that its rôle would be to create the climate propitious for the realisation of a plan of just that sort. French procedure is no different, except that it draws on a wider range of private opinion and is currently being even further "democratised"; over 3,000 people have their say, and there are numerous subcommittees (all composed of honorary delegates nominated by sectional interests) working on particular plans which are co-ordinated at a higher level—but still by private citizens, not by superior planners settling differences by ukase.

No doubt, to authoritarian planners accustomed to decreeing targets *ex cathedra* this procedure will appear not only scandalously democratic but probably unworkable as well. In reality, given time and the material for calculating the consequences of alternative suggestions, agreement emerges fairly smoothly. Every participant knows that the plan has to be coherent, that uses have to match resources, or else there will be no plan, and so there is little tendency to go on shouting for more this and more the other when all his colleagues prove that, granted the other objectives agreed to, there is no scope for more of those things. There is one reservation however, and that concerns the rate of growth that is taken as desirable for the economy as a whole. Things that would not be possible on an assumed annual expansion rate of 4 percent might become so if 9 percent were taken as the feasible figure. Thus there might be a tendency to placate everybody by constantly raising the projected growth rate. That is where the Government (usually the Finance Ministry) has to intervene, in its proper rôle as national authority. The planners draw up alternative plans, taking growth rates of 2, 4.5 and 6 percent (or 7.2 percent in Japan, where ambitions are higher today) and they show what can be done on each of those assumptions. It is for the Government to choose which rate is best.

How does it choose? This is a point which is frequently misunderstood, even by those involved. One hears learned discussions about the comparative merits of growth rates of 5 percent and 5.5 percent, as though there existed an occult science of planning that enabled wise men to make such fine distinctions on rational grounds. Nothing of the sort; the choice of a growth rate, which is in a sense fundamental to a national plan, is never itself a planned decision but a decree of authority. Moreover, it is the perfectly familiar choice that governments have had to make ever since credit was invented, the choice between inflation and sound money. No one can calculate the effects of 0.5 percent differences in expansion rates, but one can predict the results of an extra 2 percent a year when that clearly entails inflation. In deciding whether to go fast and court inflation or to go

duction capacity of 15 million lbs will be over Rs. 12 crores. The Company's present spinning capacity is 16.8 million lbs. It has 76 frames in operation at present; another 12 frames are scheduled to be commissioned before the end of June, raising the capacity by 2.4 million lbs. National Rayon has been permitted to install 12 more spinning machines which are likely to go into operation by this time next year. This will raise the total complement to 100 frames and the production capacity to 21.6 million lbs of yarn. The chairman said that some progress has been made as far as the rayon-grade pulp project is concerned. A suitable site in Nanjangud in Mysore has been selected for locating the plant. The Mysore Government is considering a proposal to reserve certain forest areas for the Company's exclusive exploitation of soft wood resources required for manufacturing pulp. Mr. Rasiklal J. Chinai, one of National Rayon's directors, is in the U.S.A. exploring possibilities of raising a dollar loan to cover the foreign exchange needs on a deferred payment basis. The rayon-grade pulp project is estimated to cost between Rs. 8 crores and Rs. 10 crores. The plant, which will have a production capacity of 100 tons a day, is expected to be commissioned in 1965. Answering shareholders' questions, the chairman said that the income-tax liabilities up to 1959 had been settled and that depreciation was in arrears to the tune of Rs. 1.33 crores. The Company had also to make provision for development rebate reserve amounting to Rs. 1.08 crores. The increase in the excise duty has imposed an extra burden of about Rs. 27 lakhs on the Company. The sales for the five months of the current year have been maintained around the level of the corresponding period of last year.

A Profit for Panyam Cement

The Panyam Cement and Mineral Industries Ltd has made a profit of Rs. 8.08 lakhs for the year ended August 1960, against a loss of Rs. 15.59 lakhs in the previous year, after providing Rs. 9.33 lakhs (against Rs. 6.05 lakhs) for depreciation. The debit balance is, therefore, reduced to Rs. 7,50,906, which is being carried forward. The dividend has again been passed.

The production of cement has been higher than the rated capacity of the factory and 76,526 tons of the commodity were sold. The decline in the production of clinker was due to the shortage of coal. At present, the installed capacity is for 200 tons of cement a day, but the Company has been given a licence to increase the production by a further 134,095 tons a year. The Controller of Capital Issues has permitted the Company to obtain the necessary capital. The directors state that orders for the necessary equipment have been placed and the new plant is expected to begin production at the beginning of 1962.

New Lines for Andamans Timber

The Andamans Timber Industries Ltd has produced good results during the year ended December 1960. The Calcutta factory has started producing tea chest shooks. The Port Blair factory has been completed and it has met all requirements for tea chest veneers. The directors hope to produce better results during the current year. Andamans Timber is now building another factory in Behala near Calcutta in order to produce commercial plywood, decorative plywood and flush doors. Production is expected to begin by the end of 1961. It is also proposed to erect a factory for producing chip-board and the Industrial Finance Corporation has agreed to give a dollar loan of Rs. 7.92 lakhs for this project.

Williamson Magor and Co. Ltd has acted as sole selling agents for tea chests made by Andamans Timber, which hopes to build a sales organisation network throughout India for selling its various products. The profit of Andamans Timber has amounted to Rs. 74,518, after providing Rs. 80,026 for depreciation. The dividend has been passed after providing Rs. 12,000 for taxation. The carry-forward is Rs. 21,662.

New Victoria Mills Make Profit

Although the working of New Victoria Mills Co. Ltd, Kanpur, shows distinct improvement over the previous year's performance, there is little chance of the shares of the Company returning to the dividend list in the near future. This is because apart from the debit balance of Rs. 63.55 lakhs at the end of the year's profitable working, New Victoria Mills have accumulated arrears of preference dividend amounting to Rs. 24.39 lakhs. After providing Rs. 7.16 lakhs for depreciation, the Company incurred a loss of Rs. 31.40 lakhs in 1959; but in 1960, it has made a profit of Rs. 12.73 lakhs after providing Rs. 6.70 lakhs for depreciation. Sales were down from Rs. 3.14 crores to Rs. 2.93 crores but closing stocks substantially higher at Rs. 1.03 crores, against Rs. 57.52 lakhs at the end of 1959. Development rebate claims Rs. 3.97 lakhs. After taking into account the debit balance of Rs. 71.79 lakhs brought forward and making various adjustments, a debit balance of Rs. 63.55 lakhs has been carried forward. The directors say that production during the last two months of the year was adversely affected by the uneven supply of power. The reorganisation and modernisation programme of the mills is being implemented according to schedule, and the improvement in the working of the mills will be maintained in 1961. The Rs. 2.50 paid shares of the Company are currently quoted around Rs. 1.50.

Shree Vallabh Glass Share Offer

Shree Vallabh Glass Works Ltd has been converted into a public limited Company to set up a factory for manufacturing sheet glass and wired glass. The project is estimated to cost about Rs. 1.15 crores. The Company is already a well-known manufacturer of "Tufex" toughened safety glass. The plant now contemplated is said to be the first of its kind in India. The factory will be located near Anand in Gujarat State. Arrangements have been made to secure 100,000 square yards of land. A technical collaboration agreement with a well-known West German firm has been finalised. The Company has obtained a foreign exchange loan equivalent to Rs. 37.19 lakhs from the Industrial Credit and Investment Corporation of India. Now that the foreign exchange loan has been secured, Shree Vallabh Glass will soon enter the market for raising capital. Out of the issued capital of Rs. 72 lakhs in equity shares of Rs. 100 each, shares of the value of Rs. 37,25,500 are to be offered for public subscription.

Cannanore Makes Record Profit

The increase in the dividend of the Cannanore Spinning and Weaving Mills Ltd from 17 percent to 20 percent, both taxable, is fully justified by the Company's excellent working results for the year ended March 1961. The sales of yarn and waste are up from Rs. 78.27 lakhs to Rs. 96.02 lakhs, and the gross profit of Rs. 15.72 lakhs—an all-time record—is Rs. 4.86 lakhs higher than the previous year's figure of Rs. 10.86 lakhs. The ratio of the gross profit to sales has risen from 13.8 percent to 16.3 percent. After providing Rs. 2.26 lakhs (against Rs. 2.28 lakhs) for depreciation and Rs. 5 lakhs (against Rs. 3.60 lakhs) for taxation, the net profit amounts to Rs. 7.60 lakhs, against Rs 4.47 lakhs in 1959-60. Appropriations include Rs. 1.94 lakhs as bonus for 1956-57 to 1959-60 and Rs. 85,777 (against Rs. 12,414) for development rebate reserve. After providing for the proposed dividend, Rs. 1.99 lakhs has been carried forward, against Rs. 19,328 brought in. The shares of the Company have risen above their 1960 high of Rs. 165 and are currently quoted around Rs. 172, at which price they offer a gross yield of about 11.6 percent. The directors state in their report that the blow-room machinery imported from Switzerland has been erected and has started working. An application has been made to the Government for permission to install additional 6,000 spindles to strengthen the mill economically. The sanction is awaited. Appeals against income-tax demand for the years 1954-55 and 1955-56 on the disputed items have been decided in favour of Cannanore Spinning and the total benefit on this account amounts to Rs. 1.90 lakhs.

Cut in Sugar Costs Urged
