Section (iii).

9 Census Abstract—[Information regarding area, number of occupied houses, literacy, distribution of population by livelihood classes, small-scale industrial establishments and incidence of leprosy in each municipal division (locality) of the city.] 31

PART II.

10	"C" Household and Age (Sample) Tables—	
	C-I—Household (size)	34
	C-II—Livelihood Classes by Age groups	35
	C-IV—Age and Literacy	36
11	"D" Social and Cultural Tables—	
	D-I—Languages—	
	(i) Mother-tongue	37
	(ii) Bi-lingualism	38
	D-II—Religion	39
	D-III—Scheduled Castes and Scheduled Tribes ..	40
	D-IV—Migrants—Tract where enumerated	40
	D-VI—Non-Indian Nationals	42
	D-VII—Livelihood classes by Educational Standards.	43
12	Occupational Abstract—(Abstract showing means of livelihood groups and sub-groups under non-agricultural occupations and the number of self-supporting persons engaged in them.)	44

P R E F A C E

The Government used to compile and publish District Manuals for each district prior to 1905. The manuals became obsolete within a few years of their publication, containing as they did not only matter of a more or less permanent character such as physical characteristics, history, religion and ethnography, as also statistical matters which soon became out of date. The Government decided to replace the District Manuals by another publication known as the District Gazetteer, consisting of two volumes, A and B. The A volume contained descriptive matter and such general figures, as might be necessary to explain the text, and the B volume contained detailed statistics. They also decided that the B volume should be brought out periodically, especially after each decennial census. Between 1905 and 1927 A volumes for thirteen districts were published. In 1927 they were discontinued. B volumes for all the districts were published between 1906 and 1915. They were continued to be published even after the 1931 census. They were not published after the 1941 census.

Village Statistics, containing the results of the census for every village in the State, were first compiled and published in 1872, at the instance of Mr. C. E. Gover, who was then the Census Officer in Madras. His successor, in 1882, considered that this publication led to needless expenditure and trouble in printing the tables village-wise, but the Government decided that the Village Statistics should continue to be published. The practice of issuing Village Statistics at every census was followed subsequently. The Village Statistics merely showed the number of occupied houses and population of each village and town by religions.

The idea of preparing the present volume, viz., the District Census Handbook for each district was put forward by Sri R. A. Gopalaswami, I.C.S., Registrar-General, India, and ex-officio Census Commissioner of India, as part of a plan intended to secure an effective method of preserving the census records prepared for areas below the District level. He proposed that all the district census tables and census abstracts prepared during the process of sorting and compilation should be bound together in a single manuscript volume, called the District Census Handbook, and suggested to the State Governments that the handbook (with or without the addition of other useful information relating to the district) should be printed and published, at their own cost, in the same manner as the Village Statistics in the past. In accepting this suggestion, the Government of Madras decided to print and publish the more important portion of statistical data relating to the district and to preserve the rest of the records in a manuscript volume for any future use, to which they may be put.

2. The statistical data embodied in the District Census Handbook have to be understood from the background of the changes introduced in the 1951 census. The most important and fundamental change introduced in the 1951 census consists in the substitution of an economic classification of the people for the classification based on Religion and Communities

adopted in the past. The people were divided into two broad livelihood categories, the Agricultural and the non-Agricultural. Four agricultural classes and four non-agricultural classes were prescribed as shown below :—

Agricultural classes—

- I. Cultivators of land, wholly or mainly owned, and their dependants.
- II. Cultivators of land, wholly or mainly unowned, and their dependants.
- III. Cultivating labourers and their dependants.
- IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

Non-Agricultural classes :—

Persons (including their dependants) who derive their principal means of livelihood from—

- V. Production other than cultivation,
 - VI. Commerce,
 - VII. Transport, and
 - VIII. Other services and miscellaneous sources.
- Each of the above eight livelihood classes were divided into three sub-classes with reference to their economic status as below :—
- (i) Self-supporting persons,
 - (ii) Non-earning dependants, and
 - (iii) Earning dependants.

These livelihood sub-classes have been defined in detail in the fly-leaf notes attached to Economic Table B-I included in this Handbook.

All non-earning dependants are economically passive, all earning dependants are economically semi-active. All self-supporting persons are ordinarily economically active, but the classes and groups specified below constitute an exception to this rule :—

- (1) Self-supporting persons of Agricultural Class IV,
 - (2) Self-supporting persons of Livelihood Class VIII, who derive their principal means of livelihood from any source other than through economic activity, viz.—
- (a) Non-working owners of non-agricultural property,
 - (b) Pensioners and remittance holders ;
 - (c) Persons living on charity and other persons with unproductive occupations ;
- and
- (d) Inmates of penal institutions and asylums.

Economically active persons engaged in cultivation are either cultivators or cultivating labourers. Economic Table B-I gives particulars of the population classified according to the eight livelihood classes and the three sub-classes mentioned above.

Economically active persons engaged in industries and services have been classified with reference to the nature of the commodity produced or service performed. They are further divided into three sections, viz., Employers, Employees and Independent Workers.

Economic Table B-III gives particulars of the economically active persons classified under the divisions and subdivisions of industries and services of the Indian Census Economic Classification Scheme.

Table C-I, included in this Handbook covers the population of sample households and Tables C-II and C-IV cover a ten per cent sample population. The method adopted for extracting these samples has been described in detail in the fly-leaf notes attached to the relevant tables.

3. *Scheme of the Census Handbook.*—The Handbook has been divided into two parts ; Part I consists of three sections, namely, Section (i) containing the general population tables (A series), the Economic Tables (B series), Summary figures for Taluks (Table E), Tables I, II and III relating to Small-scale Industrial establishments and Table L showing the incidence of leprosy, Section (ii) containing the Rural statistics, and Section (iii) containing the urban statistics, and Part II containing the Household (size) Table C-I and Tables showing Livelihood classes and literacy by age groups (C-II and C-IV), the Social and Cultural Tables (D-series) and an abstract of non-agricultural occupations in the district. Among the tables included in the Handbook, Table A-IV—Towns classified by population with variations since 1901, Economic Table B-II—Secondary means of livelihood under each livelihood class and Table C-II—Livelihood classes by age groups furnish information at the district level. The other population tables in the A-series, the summary figures for Taluks (Table E) and the infirmity Table L showing the incidence of leprosy furnish information for each taluk in the district with a district total. The rural statistics in Part I—Section (ii) furnish basic information in respect of every village and town arranged according to census tracts. In addition to the total population of the villages, and its distribution among the eight livelihood classes, information regarding the number of literates, the cultivated area, the number of small-scale industrial establishments under categories, textile and non-textile and the number of leprosy cases and doubtful cases has been included.

The urban statistics in Part I, Section (iii) furnish similar information except that relating to cultivated area in respect of every unit classified as city or census town in the district with ward-wise data. All other tables included in the Handbook provide information for units called census tracts with totals for the district.

4. *Census Tracts.*—A distinctive feature of the census statistics is its rural urban break-up designed with a view to compare the conditions and characteristics of the rural and urban population. The rural areas of each district were therefore kept distinct from the urban areas. For facilitating tabulation these areas were divided into a number of rural and urban tracts. As far as possible, the rural area in each taluk was constituted into a single rural tract. In a few cases however where the taluks were small in size with reference to their population, the rural areas of more than one taluk were taken together as a single rural tract. The urban tracts have been formed out of areas declared as cities and census towns in each district. Every city was treated as a separate tract. Towns other than cities were grouped together to form non-city urban tracts. Wherever possible, the towns in each taluk were constituted into a single non-city urban tract. In cases where the towns in a taluk had a population of less than 50,000 the towns in more than one taluk were grouped together to form a non-city urban tract. All the rural tracts in the State have been assigned

numbers in one series, the non-city urban tracts in another series and the city tracts in a third series. In all the tables where the data have been furnished for tracts, the tracts have been denoted by numbers that have been assigned to them. A list of tracts into which the district has been divided and the areas comprised in each is furnished in the fly-leaf note to economic Table B-I relating to the district.

The district, taluks and villages mentioned in the Tables and Abstracts have been shown along with the census location code numbers assigned to them for purposes of census operations.

The numbers given to the Tables in this publication correspond to those given in the State Census Report.

Elaborate notes explaining the scheme of each Table have been introduced in the fly-leaf attached to each with a view to enable the reader to get a precise idea of the data furnished in the Table.

5. *Tables relating to Small-scale Industries.*—In the year 1950 a census of Small scale Industries was instituted under the orders of the Government. The object was to get some idea about small industries, such as, cottage and home industries, small establishments, workshops, etc., where articles were produced, repaired or otherwise treated for sale, use or disposal and small mines. The enquiry was confined to establishments to which the Factories Act was not applicable. Individuals who worked on their own and did not employ other people were left out of account. From the data collected three Tables were prepared and they have been included in the Handbook. Information giving village-wise and ward-wise information for Small-scale Industries have been incorporated in the rural and urban statistics. The details collected and embodied in the Tables are not to be considered accurate or exhaustive, as the enumeration staff employed had not been trained for the purpose and some cases of under-enumeration were noticed. However, the figures given in the Tables may be sufficient to give an insight into the nature of the industries prevalent in the different parts of the district.

6. Opportunity has been taken to put in a short introductory note detailing the salient points connected with the district, such as the physical features, climate, rainfall, irrigation and drainage facilities, roads and other communications, crop statistics, education, industries and other matters of general interest. The information contained in the introductory note is based on the materials furnished by Collectors of districts and Departments of Government. The District Gazetteer was also freely referred to. The relevant paragraph of the 1951 Census Report discussing the growth of population in the district has also been incorporated in the proper place.

A district map showing taluk boundaries, physical features, important roads and places with a population exceeding 5,000 is also attached.

It is hoped that this Handbook will serve as a book of reference on matters relating to the district and that it will be found useful both by Departments of Government and the public.

J. I. ARPUTHANATHAN,
Superintendent of Census Operations, Madras.

11. MADRAS DISTRICT.

INTRODUCTION
TO
MADRAS DISTRICT.

I. (a) *Situation and physical characteristics.*—The City of Madras which is the Capital of the Madras State is a district for purposes of Revenue Administration. It lies on the coast of the Bay of Bengal between 13° and 13°9' of the northern latitude and 80°13' and 80°19' of the eastern longitude. The Bay of Bengal is its eastern boundary. Chingleput district surrounds it on all other sides. The district has grown from a small nucleus known as Madraspatnam, which consisted of the area now known as the Gorge town, the Fort area and the island grounds. As the nucleus developed the surrounding villages were absorbed into it from time to time. The villages so absorbed still retain their original names.

The district comprises two taluks—Madras North and Madras South—and the Sub-taluk of Madras. The area situated roughly to the north of the Poonamallee High road constitutes the Madras North taluk and the area to the south of that road up to the Adyar river, the Madras South taluk. The sub-taluk consists of an area of about 20 square miles comprising of 30 villages of Saidapet taluk recently included in the limits of the City. The total area of the district is about 50 square miles and consists almost entirely of areas used for residential, business, official and industrial purposes diversified with parks, gardens, open grounds and open house sites on which buildings are springing up. Cultivation is raised on negligible extents here and there. Almost the whole area of the district is nearly on a dead level, the highest point being about 22' above mean sea level.

(b) *Rivers.*—The Cooum river from the Chingleput district enters Madras and flows between Nungambakkam and Egmore. Beyond Chintadripet it splits itself into two branches which join again near the coast at the Iron Bridge, thereby creating an island which is called "The Island grounds."

The Adyar river flows to the south of Mylapore into the sea. The sea waters gain ingress into these rivers during high tides.

(c) *Forests.*—There are no forests in the district.

(d) *Climate and rainfall.*—Madras has a warm moist climate which can be classified as "the tropical maritime monsoon" type. The place is affected by both the south-west and the north-east monsoons, the latter giving the major part of the annual rainfall. The mean annual rainfall is 50" and the mean number of rainy days in a year is 57. About two thirds of the annual rainfall occurs during the north-east monsoon (October to January). The South-West Monsoon gives some thunder-showers from June to September. October and November are the rainy months. February and March are the least rainy. The coast about Madras is susceptible to occasional cyclonic storms and they usually occur either during April and May or during October and November, causing strong winds and heavy rains. During the period from April to October there is a well marked sea breeze in the afternoon which serves to mitigate the heat. From November the prevailing seasonal wind is from the North-East. May and June are the hottest months. Humidity is high throughout the year varying from 65 per cent in May-July to about 80 per cent in October-December.

A statement showing particulars of the monthly mean of daily maximum and daily minimum temperature the highest recorded and the lowest recorded temperature, humidity, mean monthly rainfall and mean monthly number of rainy days based on data for sixty years upto 1940 and daily maximum and daily minimum temperature, highest recorded and lowest recorded temperature and actual rainfall for 1951 as recorded at Nungambakkam Observatory is furnished below :—

Based on data for 60 years up to 1940.										1951.				Actual rainfall (inches).

(e) *Soils*.—Over a large part of the area the surface soil is alluvial. It is gravelly here and there in the western and southern ends. The coastal areas on the banks of the Cooum and the Adyar are saline and sandy. The sub-soil is generally black clay of varying stiffness at different depths.

(f) *Irrigation and Drainage*.—The district is not an agricultural area, although the water available in the Vyasarpadi and Medavakkam tanks is utilized for some scattered cultivation.

The entire requirements in food stuffs for the City are imported from outside. The conditions in the adjoining districts therefore have a bearing on the conditions in the City.

(g) *Area cultivated with food and commercial crops*.—The negligible area under cultivation here and there is gradually under decline consequent on its being converted into building sites.

(h) *Communications*—(i) *Roads*.—There are 446 miles of roads and streets in the City of which a 3 mile length is maintained by the Public Works Department. The rest of the length covered by the categories mentioned below is maintained by the Corporation of Madras :—

	MILES.
(a) Water bound macadam ..	13.25
(b) Asphalt roads	363.82
(c) Cement concrete roads ..	7.78
(d) Asphalt concrete roads (cold mix).	34.79
(e) Asphalt concrete roads (hot mix).	19.18
(f) Set stone paving	0.43
(g) Conphalt	3.75
Total ..	443.00

The Corporation's aim is to make all roads, streets and lanes dust proof and to provide all the important thoroughfares with asphaltic concrete or cement surface to enable them to stand up to the high

density of traffic. With the help of loans received from the Government, superior surfacing of roads is being done gradually by the Corporation. Traffic islands have been constructed at important road junctions and pavements for the use of the pedestrians are being provided wherever possible.

There is a net work of bus routes connecting all important parts of the City district.

Most of the roads are maintained in a satisfactory condition.

(ii) *Railways*.—There are 14½ miles of broad gauge and 9½ miles of metre gauge railways of the Southern Railway within the limits of the City. The Madras Central Station is the starting point and the terminus of the broad gauge lines for passenger and parcel traffic. The Madras Beach Station is the terminus for the metre gauge section. The combined north-west, south-west and west coast lines from Arkonam and the north-east line from Calcutta converge at Basin Bridge before reaching the Madras Central Station. Another broad gauge line from Basin Bridge connects the Madras Central Station with the Beach Station, the terminus of the metre gauge section of the Southern Railway. Local Suburban service operates from Madras Central Station to Ponneri on the north-east line and to Tiruvallur on the Bombay, Bangalore and west coast line and to Madras Beach Station. Although the Beach Station is the terminus of the metre gauge section of the Southern Railway all the important passenger trains start from and arrive at the Egmore Railway Station. A suburban electric train service operates from Madras Beach Station to Tambaram in Chingleput district.

(iii) *Tramways*.—The Madras Electric Tramway Company is operating a tram service on some of the important roads of the City.

(iv) *Waterways*.—The Buckingham canal traverses the district from south to north connecting with the Adyar and Cooum rivers and is an inland

waterway along the coast traversing several districts in the north and south and is used for transporting merchandize to and from the City in boats.

(v) *Airways*.—Madras is connected by air with all the important air ports in the country. The air port is at Meenambakkam 10 miles from the City. There is regular air service for passengers, parcels and mail to Delhi, Nagpur, Hyderabad, Bangalore, Trivandrum and Colombo.

(vi) *Posts and Telegraphs*.—There are 19 branch post offices, 48 non-combined sub-post offices, one non-combined Head Office, 72 Post and Telegraph Sub-Offices and one departmental telegraph office in the district. All the parts of the district are well served.

II. (a) (i) *Growth of Population*.—The population of Madras City in 1941 was 881,485. The population in 1951 was 1,416,056.

The population of the City has increased by 60.6 per cent, the largest increase in any district in the State. This is the increase for the adjusted population of the City, i.e., for the population within its present limits. As already mentioned, these limits were extended during the decade by the addition of about 19 square miles, including Saidapet Municipality and some adjoining suburban areas on the south and west in Chingleput district. There is naturally a large immigrant population always in a place like Madras, which is the headquarters of one of the Major States of India. From 1942, there has been an abnormal flow of immigrants from other districts in the State, particularly from the adjoining districts of Chingleput, North Arcot and South Arcot, for educational facilities and the urban amenities available in the premier City of the State. Owing to the failure of the north-east monsoon for a number of years in succession from 1947 onwards, there has been a large immigration of labouring classes from the adjoining districts referred to above in search of work and food. The immigrants include also 3,902 displaced persons from Pakistan, who have settled down in the City. The elaborate and successful statutory rationing, which was in force in Madras City till recently, was definitely one of the reasons which attracted immigrant families who could afford the cost of living in the City and who found that, by living in Madras, they could secure regular and adequate supplies of consumer goods more easily than in any other part of the State. Apart from being the headquarters of the State Government, Madras is a great railway and trade centre and is served by a useful and important harbour. There has been some industrial development also.

(Extracted from Census report—Part I.)

(ii) *Vital Statistics*.—The registration of births and deaths is done by medical officers employed by the Corporation and they have their offices in 27 depots situated in different parts of the City.

Mad.—1A

A statement showing the number of births and deaths and deaths due to various causes for the decennium ending 1950 for Madras district according to the vital statistics is furnished in Annexure I.

Madras City is a separate unit by itself and is not comparable to districts which are largely rural. The City is not also strictly comparable to municipal towns, but they are the nearest approach to the urban characteristics of Madras City.

The average birth and death rates in Madras City during the decade 1941–50 are 41.4 and 32.7 per 1,000 of population, as compared with the average birth and death rates of 40.1 and 27.1 respectively in all municipal towns in the State. It is not possible to say how far the birth and death rates are real, as a good number of births and deaths occur among non-residents and floating population and are not registered in the City. Nevertheless, the birth and death rates during the decade given above indicate the trends. After a steep decline in birth and death rates in 1942 due to large scale exodus from the City owing to evacuation on account of World War No. II, the rates tended to increase gradually. The death rates from respiratory diseases including tuberculosis of lungs are very high and account for nearly a third of the total death rate. The maternal mortality rate has steadily decreased from 8.38 per 1,000 births (live and still) in 1941 to the very low figure of 2.09 in 1950. The infant mortality represents about 25 per cent of the total deaths and the rates are comparatively high.

(b) *Medical relief*.—The names of the medical institutions in the City with their bed strength are given below :—

1	Government General Hospital, Madras—894 beds.
2	Government Stanley Hospital, Royapuram, Madras—724 beds.
3	Government Hospital, Royapetta—234 beds.
4	Government Ophthalmic Hospital, Egmore, Madras—170 beds.
5	Government Tuberculosis Institute, Egmore, Madras.
6	Government Women and Children's Hospital, Egmore, Madras—346 beds.
7	Raja Sir Ramasamy Mudaliar Lying in Hospital, Rayapuram—100 beds.
8	Government Kasturba Gandhi Hospital, Triplicane—515 beds.
9	Government Mental Hospital, Kilpauk, Madras.
10	Corporation Tiruvateswarar Tuberculosis Hospital, Ottery (contains X-ray plant)—48 beds.
11	Corporation Infectious Diseases Hospital, Tondiarpet (Provided with 2 ambulance cars)—130 beds.
12	Corporation Dispensary, Rayapuram.
13	Do. Washermanpet.
14	Do. Vyasarpadi.
15	Do. Perambur.

- 16 Corporation Dispensary, Mint Street.
- 17 Do. Harbour.
- 18 Do. Mafuz Khan Garden.
- 19 Do. Trevelyan basin.
- 20 Corporation Baliah Naidu Dispensary, Rottery Street.
- 21 Corporation Dispensary, Sembiam.
- 22 Do. Ayanavaram.
- 23 Do. Kilpauk.
- 24 Do. Kosapet.
- 25 Do. Chintadripet.
- 26 Do. Egmore.
- 27 Do. Nungambakkam.
- 28 Do. Kodambakkam.
- 29 Do. Pudupakkam.
- 30 Do. Triplicane.
- 31 Do. Krishnampet.
- 32 Do. Mylapore.
- 33 Do. Teynampet.
- 34 Do. Thiagaraya Nagar.
- 35 Do. Adyar.
- 36 Do. Saidapet.
- 37 Corporation Ayurvedic Dispensary, Thousand Lights.
- 38 Corporation Unani Dispensary, Mannady.
- 39 Do. Pulianthope.
- 40 Do. Pudupet.
- 41 Do. Tiruvateswaranpet.
- 42 Corporation Siddha Dispensary, Rayapuram.
- 43 Do. Choolai.
- 44 Do. Otteri.
- 45 Corporation Skin and Leprosy Clinic, Besant Road.
- 46 Do. Vyasarpadi.
- 47 Corporation Venereal Clinic, Strahan's Road, Perambur.
- 48 Corporation Tuberculosis Clinic, Pulianthope High Road.
- 49 Mission Rainy Hospital for Women and Children, Tondiarpet.
- 50 The Government Silver Jubilee Leprosy Clinic, Saidapet.

The Corporation maintains a laboratory behind the Ripon Buildings for the examination of blood, sputum, urine, faeces, etc.

There are 25 child welfare centres, one maternity home with 32 beds and 4 sub-centres and 15 maternity wards with beds ranging from 4 to 12 in different parts of the City maintained by the Corporation.

Free milk is supplied to expectant mothers, nursing mothers, toddlers and infants at the Corporation Child Welfare Centres.

There are five diagnostic X-Ray sets and five Therapeutic X-Ray sets in the Government General Hospital, Madras. There is a major X-Ray set in

the Government Royapetta Hospital and there are two X-Ray sets in the Government T.B. Institute, Egmore, Madras.

Facilities for radium treatment are available at the Barnard Institute of Radiology, Government General Hospital, with 32 beds. There are also facilities for radium treatment at the Government Ophthalmic Hospital, Egmore and the Government Hospital for Women and Children, Egmore.

Besides the facilities afforded by the Corporation, there is facility for treatment of leprosy at the Kasturba Gandhi Hospital for Women and Children, Triplicane, Stanley Hospital, General Hospital and Royapettah Hospital. There are 6 beds for the purpose at the Stanley Hospital and 4 beds at the General Hospital.

(c) *Water supply and drainage arrangements.*—The water-supply for the city is obtained from the Kortalayar river by means of a masonry weir built across the river at Tamaraippakkam, 17 miles north-west of Madras. Its flood waters are diverted through a leading channel called the upper supply channel into the Cholavaram tank and thence through the lower supply channel into the Red Hills lake 8 miles north-west of Madras, from which the supply to the City is drawn. Both these lakes get considerable supply also from their own catchment areas covering 140 sq. miles. The water is drawn through a tunnel and filtered initially at Red Hills. It is taken by gravity to the Kilpauk water Works where it is filtered, chlorinated and pumped into City distribution system.

The supply to the Red Hills lake has been augmented recently by a reservoir formed by damming up the Kortalayar at Poondi, 12 miles above Tamaraippakkam. The reservoir has been named Satyamurthisagar. The reservoir impounds the surplus waters of the river which were going to waste over the Tamaraippakkam weir.

There are 29.5 miles of trunk mains and submains and 365 miles of distributaries and street mains.

At Sembiam and Saidapet which were included in the City limits recently a protected water-supply system has already been working.

Wells in private dwellings are resorted to for washing purposes in times of low supply in the Red Hills Lake. The water of the wells in Madras is generally of indifferent quality and brackish.

Drainage.—The Corporation has constructed 62½ miles of storm water drains. The rainwater from road surface and the excess rainwater from the house drains flow through the road side ditches and masonry drains into the nearest water course such as the Otteri Nullah, the Cooum river, the Buckingham canal and the Adyar river.

(d) *Sanitation.*—The sanitation is entirely in charge of the Health staff of the Madras Corporation. There are a Health Officer and five Assistant Health Officers. There are 34 sanitary inspectors and 54 conservancy inspectors. Sub-assistant surgeons are in charge of vaccination and are assisted by trained vaccinators. There are five food inspectors employed in analysing and testing samples of dairy products, coffee powder, etc. It is the business of the Health staff to see that the public and private markets and slaughter-houses are kept clean.

There are about 406 public flushout and dry latrines. One hundred-seventy-seven new superior public conveniences have been constructed by the Corporation. Twenty-one public bath-rooms have also been constructed. Over a large part of the city, underground sewers have been constructed for draining away the sewage of houses. There are 18 sewage pumping stations and 4 more are under construction. The sewage is pumped into the sea at the north-eastern part of the City. There are about 354 miles of sewers and 29,163 house connections. Rain water is excluded from the sewage system as far as possible. The sub-soil consists of sand in the eastern part of the City and sub-sil water is encountered within a few feet of the ground level making the construction of sewers a costly proposition. Pumping is necessitated on account of the flatness of the level. The underground sewer system has been completed for most of the area and is being undertaken for the remaining areas.

The City Improvement Trust.—The Madras City Improvement Trust Act enacted for the purpose of concerting measures for the improvement and expansion of the City, by opening up congested areas, laying out streets, providing open spaces for purposes of ventilation and recreation, etc., came into force in 1915. The Trust thus created has taken up the execution of Coxcheri Scheme, Sylvan Lodge Scheme and the Mansion Scheme for the improvement of slums in the City. The Trust has also framed schemes like the Mandavalli Street Scheme, Mowbray's Road Scheme, Mambalam South Area Improvement Scheme, the Barber's Bridge Road Area Improvement Scheme and the Kilpauk Garden Area Improvement Scheme for improving the areas to provide house-sites to the lower middle class people and to relieve congestion in the city. The Government have also given 126 grounds of houses-sites in Government Farm village near Chingleput Collector's office for

providing accommodation to Government and quasi-Government servants. The Shenoyanagar at Aminjikarai, the Gandhi Nagar at Adyar and the Venkatesapuram at Ayanavaram are the fruits of the activities of the Trust. An extent of 116 grounds of land in Tondiarpet division near Cochrane Basin road was given to the Corporation of Madras for housing the pavement dwellers.

(e) *Fairs and festivals.*—*Fairs.*—The annual Park Fair and Exhibition that is conducted by a private agency for the past forty years and more at the Stadium grounds, Peoples Park, attracts large crowds. The sports items and the display of fireworks during nights are some of the special features of the fair.

Festivals.—One of the important festivals is the Arupathimuvar festival conducted in March-April at Sri Kapaleswarar temple at Mylapore. The day is commemorated in memory of sixty-three Saivite Saints of South India. The images of the sixty-three Sivanadiyars are taken out in procession along with the main deity of the temple.

Another important festival is the annual Masi-makham in February-March when the deities of most of the temples in the City are taken to the beach on the full moon day in the Tamil month of Masi.

The Vasantha Uthsavam of Shri Kandaswami temple is another important festival running for over ten days.

The Vaikunta Ekadasi festival is celebrated at Shri Parthasarathy Swamy Temple, Triplicane in the months of December-January. Worship is offered throughout the night and the festival attracts large crowds of devotees.

The Muslims of the Shiah sect attach great importance to the annual Chest-beating ceremony in Triplicane during the Moharam month.

The annual festival at the Little Mount, Saidapet, is another important festival for the Catholic Christians.

The monthly Karthigai festival in the Palani-andavar temple at Kodambakkam attracts a very large crowd of devotees.

III. *Educational institutions.*—A statement showing the number and strength of the various kinds of educational institutions in the district as on 31st March 1951 is furnished below :—

Type of institution.	Number of institutions under				Strength.		
	Government.	Corporation.	Aided.	Total.	Boys.	Girls.	Total.

Foundries	52	1,209
Light metal industries	51	1,493
Footwear and other weaving apparel	48	601
Paper and paper products	1	242
Jewellery manufacture	28	808
Recreation service, cinema studios	3	129

V. Items of general importance.—The city which is the capital of one of the largest States in India abounds in buildings of historical and architectural interest and in institutions devoted to social, religious and cultural activities. It is not possible to give an exhaustive and descriptive list of items of interest in the city in a short introduction to the District Census Hand Book. A few of the more outstanding objects of general interest cannot but be touched upon :—

(1) *The Harbour.*—The Madras Harbour which is a monumental construction is an artificial harbour formed by two arms projecting from the sandy coast.

The harbour has a waterspread of approximately 200 acres. The harbour handles most of the foreign trade of the State. Vessels from all parts of the world regularly call at the Port. There are 7 general cargo berths and 2 collier berths at the port. Moorings are provided for 8 vessels and more can be accommodated when necessary. There are 10 warehouses which are leased to the importers and exporters for storage of goods pending shipment or final clearance as the case may be. The quays and warehouses are served by a mixed gauge (broad and metre) railway and 8 of the quay berths are accessible to road vehicles. Railway goods for all stations in India (both metre and broad gauge) are received at the port. The quays are all flood lit and all roads and tracks are adequately lighted.

(2) *The Catholic Centre*.—This is another huge pile of buildings in the Armenian Street, Georgetown. The Institution was founded by the Archbishop of Madras to serve as a centre for spiritual, social, cultural and recreational activities. Membership is open to all classes.

(3) *The Madras High Court*.—It consists of a grand pile of buildings with the Madras lighthouse erected on the Central Cupola. The High Court buildings were completed in 1892 and are considered to be a specimen of Hindu Saracenic style of architecture.

(4) *The Light House*.—The lighthouse is on top of one of the towers of Madras High Court and is 160 feet above sea level. A visitor who cares to climb up the winding stair case can get an interesting panorama of the city and the neighbourhood from the top of the tower.

(5) *Fort St. George*.—The building of the Fort St. George was planned and begun by Francis Day, one of the earliest English settlers in the year 1640 and was finished in 1653. Improvements to the Fort's defences were completed by the end of the 18th Century. The Fort houses, the Secretariat Buildings and a substantial portion of the Accountant-General's Office besides the Garrison quarters. St. Mary's Church, one of the oldest churches in India, was built in the year 1680 within the walls of the Fort. The Flag Staff in the Fort is said to be the highest in India and stands on the massive redan of the sea gates.

(6) *The Fort Museum*.—The Fort Museum inside Fort St. George, was organized by the Department of Archaeology (Government of India) in 1948 as a historical-cum-site museum, with the European period in the history of South India as its principal scope. It is the first museum to be opened after Indian Independence. This Museum is most appropriately housed in an ancient building constructed about 1790, as the 'Exchange' where the Company officers and local merchants could exchange their commodities.

The 'Armoury Section of' the Museum is located in the ground floor. It contains, among other weapons of war, pikes, grape-shots, chain-shots, mortars, etc. reminiscent of the Company period. In the 'Long Hall' (first floor) are exhibited a collection of silver communion vessels of St. Mary's Church (oldest Anglican Church east of Suez) and other Churches in South India, including the 'Yale Plate' presented to St. Mary's Church, by Elihu Yale, Governor of Madras, (1687—1692) after whom the now world-famous Yale University of America, is named. A model of Fort St. George (between 1820 and 1865), some original letters of Robert Clive, Arthur Wellesley, Lord Cornwallis and others; 'steel etchings' of Thomas Daniell, East India Company and contemporary coins, medals, chinaware, Regimental colours, and paintings are among the other notable exhibits in the Fort Museum.

(7) *The Zoological Gardens* maintained by the Corporation of Madras contain a large collection of wild animals, birds and fishes and a lake in which boating recreation is provided.

(8) *Asoka Vihar*.—This is a health and recreation centre situated behind the Moore Market. Modelled on the Peckham Health Centre, London, the Centre is the first of its kind in India and was opened in May 1948. It is maintained by the Corporation of Madras. The Centre has as its aim the raising of the health, social and educational standards of the families residing in the slums. There is a creche run for the benefit of children under 6 years of working mothers (among members) and canteen for supplying snacks and tea at cost price to members.

(9) The Ripon buildings house the offices of the various departments of the City Corporation. The buildings surmounted by a huge clock tower are all in white plaster and stand out as a relief to the red colour of adjacent V. P. Hall, Moore Market and Madras Central Station buildings.

(10) *St. Andrew's Kirk, Egmore* which is situated to the north of the Egmore Railway Station strikes the eye with its perfect proportions and graceful spire. The Kirk is a solid masonry structure with no timber except that used for doors and windows. The interior is a fine circular hall surmounted by a dome. The entrance to the church which is on the west is supported by colonnade with fine pillars.

(11) *The Government Museum* at Egmore established in 1854 contains prehistoric antiquities, arms, weapons, statues, etc. The most important part of the museum is the Department of Archaeology. The museum is open from 7 a.m. to 5 p.m. every day except on Fridays. Attached to the museum is the Connemera Public Library and the museum theatre. The library contains a large number of published records of the Government and books on various subjects.

The National Art Gallery opened by Prime Minister Nehru is housed in a building next to the museum buildings. It contains a large collections of old paintings, products of indigenous arts and crafts such as muslins, embroideries, jewellery, woodwork, carpets, rugs, copper, brass and ivory engravings, etc.

(12) *Sri Palaniandavar temple* at Vadapalani a small shrine dedicated to God Subramania, is situated in Kodambakkam. The temple, which was in a dilapidated condition, was renovated some time ago and attracts large crowds of worshippers on Krithiga days.

(13) *The St. George's Cathedral*, built at the beginning of the 19th Century, is situated at the junction of the Mount Road and the Cathedral Road. The Church is an impressive building with a spire 140 feet in height. The nave and the aisles are supported by fine conic columns of brick and chunam.

(14) *The Horticultural gardens* at Teynampet contain fine flower beds, tanks with lotuses of different colours, glass houses, lawns and groves containing a variety of fruit-bearing and other trees.

(15) *Rajaji Hall* (formerly known as the *Banqueting Hall*) is situated in the Government House Estate, Mount Road. The Hall was opened in 1802 in commemoration of the British Victory at Seringapatam. After the attainment of Independence, the hall was renamed after the great Madras Statesman, Sri C. Rajagopalachari (affectionately called Rajaji), the last Governor-General of India.

(16) *The Big Mosque* in Triplicane is the biggest mosque in the city with an open space to which all muslims come to pray on all important religious occasions.

(17) *Kalas Mahal* on the South Beach Road was the palace of the Carnatic Nawab. It contains the offices of the Board of Revenue, the Public Works Department and some other offices. The portion occupied by the Board of Revenue contains the Durbar Hall of the Nawabs and is considered the finest building in Madras.

(18) *The Marina* at Madras with a long sandy beach free from rock or promontories, is said to be one of the most beautiful promenades in the world. The drive along the Beach Road with the sandy beach on one side and a number of imposing buildings such as the Queen Mary's College, the Lady Willingdon Training College, the Examination Hall, the Presidency College, the Chepauk Palace, Senate House, University buildings and Victory Memorial on the other is exhilarating.

Mad.—2

(19) *Sri Parthasarathiswamy temple*.—Triplicane owes its popularity to its ancient Sri Parthasarathiswamy temple. The temple has a tank in front of it with a stone mantapam in its centre. The temple contains some fine carvings and images. The most notable among them is the representation of Lord Sri Krishna with his consort Rukmini.

(20) *The Santhome Cathedral* on the Santhome High Road was built in 1893. But a nucleus of a church is said to have existed on the spot from very remote times. The Portuguese, while rebuilding the old chapel, stumbled upon the grave of Apostle Thomas. A small church was built in the place of the old chapel and it became a Cathedral on the creation of a separate Bishopric for Mylapore by the Pope in 1606.

(21) *Sri Kapaleswarar temple* at Mylapore is an important Hindu temple. There are fine bronze statues of the 63 traditional Saiva Nainars in whose honour a grand festival is conducted annually. Mylapore is said to be the birth place of the Tamil Literary saint Tiruvalluvar, the author of the famous 'Kural.' A few yards to the north of the Kapaleswarar temple is a shrine dedicated to Tiruvalluvar. The Kapaleswarar temple contains an image of Tiruvalluvar and one of Avvaiyar, the great Tamil Poetess noted for her pithy sayings of wisdom. To the rear of the temple, there is a big rectangular tank with a stone mantapam in the centre. The steps on all the four sides of the tank are built of cut stones.

(22) *Raj Bhavan, Guindy*. The Raj Bhavan at Guindy is the official residence of the Governor of Madras. It is situated a little way off the pleasantly shaded main road leading to Saint Thomas Mount. The building is an imposing and dignified one, surrounded by carefully tended lawns and well-planned gardens and parklands where deer roam about free from fear of hunters.

The property which was known as the 'Guindy Lodge' originally belonged to one Mr. Gilbert Ricketts of Madras and contained three single-storeyed bungalows. This property was purchased by Sir Thomas Munro, Governor of Madras, about the year 1821 for use as a country residence for the Governor. Between 1830 and 1840, various alterations and improvements were carried out and an upper story added. The numerous outbuildings came into existence subsequently and by 1863 it had acquired something of its present pleasing shape. The building of the wings which buttress three corners of the main block was done in 1937 and the final alterations, including the addition of a porch, were carried out in 1946, when the 'Guindy Lodge' became the official family residence of the Governor. With the advent of freedom, the residence has been renamed Raj Bhavan. The whole estate is now within the extended limits of the

City. The original residence of the Governor on the Mount Road, and other adjuncts forming the Government House estate were handed over to the Government of Madras in 1947 and they are now used for housing certain offices, the legislators and some of the ministers and parliamentary secretaries.

(23) *The Little Mount Church*.—The Little Mount situated at the southern end of the Marmalong bridge at Saidapet contains a cave to which St. Thomas is said to have fled when he was pursued by his persecutors. There is a church at this place built in 1551 A.D. A spring on the hillock is said to have healing properties. The church is dedicated to our Lady of Health (Arokyamatha).

(24) *The Race Course* at Guindy maintained by the Madras Race Club lies within the limits of the City. Meetings are held during the racing season (November–April). The most important event is

the Governor's Cup Race run on the New Year's Day every year when the Governor arrives in State drive and distributes prizes to the owner of the winning horse. The Race Course situated near the Guindy Railway Station is reputed to be one of the loveliest racing turfs in India. Racing has become a favourite sport of many thousands in and around the City.

(25) *The Theosophical Society Estate* situated on the southern side of the Adyar River is the International Headquarters of the Theosophical Society and covers an extent of 266 acres. There are more than 60 buildings in the premises and the gardens contain many rare imported trees and plants, pleasant walks and fine views making the area a beautiful spot in South India. A banyan tree measuring 200 feet by 160 feet is said to be one of the three largest in the world. The shrines of the various religions built on the grounds of the estate and the famous Adyar Library attract thousands of visitors all the year round.

ANNEXURE I.

11. MADRAS DISTRICT.

PART I.

Section (i).

A.—GENERAL POPULATION TABLES.

A-I—Area, Houses and Population.

This table shows the area, the number of occupied houses and the total population of the district with distribution by sex. Office, Madras, and intimated to the Surveyor-General of India.

2. The district area shown in column (2) of this table is that furnished by the Central Survey

3. "House".—Every dwelling with a separate main entrance has been treated as a house for census purposes.

	(1)	Area in square miles.	(3)	Town.	Occupied houses.		
					Total.	Rural.	Urban.

A-II—Variation in population during fifty years.

This table compares the population of the district as ascertained at the Census of 1951 with the corresponding figures of the five previous censuses. The figures recorded at the previous Censuses have been adjusted for subsequent territorial changes in order to afford a correct basis of comparison. The adjusted figures show the population of the district as constituted at present.

2. The main territorial change that occurred during the decade is the absorption of the following villages from Saidapet taluk, Chingleput district into this district:—

- (1) Sembiam. (4) Chinna Sembarambakkam. (5) Ayanavaram.

- (6) Puliur. (18) Arumbakkam. (19) Agaram (Vada). (20) Velacheri (Part). (21) Urur. (22) Kottur. (23) Pallipattu. (24) Kalikundram. (25) Guindy Park. (26) Ikkattuthangal. (27) Alandur. (28) Tirumangalam (Part).

11. MADRAS DISTRICT.

A-III—Towns and Villages classified by Population.

		Population.	
		Males.	Females.
The Madras City itself is the district. It falls under the group "100,000 and above"		737,013	679,043

A-IV—Cities and Towns classified by Population with variations since 1901.

This table shows the population and distribution of sex of the City of Madras at each of the last six enumerations.

Town.	District.	Persons.	Variation.	Net variation, 1901-1951.	Males.	Variation.	Females.	Variation.
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Madras City	Madras ..	1901	509,343	..	256,730	..	252,616	..
		1911	518,660	9,314	266,465	9,735	252,195	— 421
		1921	526,911	8,251	276,107	9,642	250,804	— 1,391
		1931	647,230	120,319	341,223	65,116	306,007	55,203
		1941	777,481	130,251	407,502	66,279	369,979	63,972
		1951	1,416,056	638,575	906,710	737,013	679,043	309,064

This table shows the analysis of the population of the Madras City by livelihood classes, instead of by communities as in the previous censuses.

2. Under the Indian Census Economic Classification Scheme, the people have been divided into two broad livelihood categories, viz., the agricultural classes and the non-agricultural classes. There are four agricultural classes and four non-agricultural classes as shown below:—

(i) *Agricultural classes:*

- I. Cultivators of land wholly or mainly owned and their dependants.
- II. Cultivators of land wholly or mainly unowned and their dependants.

(ii) *Agricultural classes—cont.*

- III. Cultivating labourers and their dependants.
- IV. Non-cultivating owners of land; agricultural rent receivers and their dependants.

(ii) *Non-agricultural classes:*

- Persons (including dependants) who derive their principal means of livelihood from—
- V. Production (other than cultivation).
- VI. Commerce.
- VII. Transport.
- VIII. Other services and miscellaneous sources.

3. In this table the figures for the agricultural livelihood classes I to III are not given separately but have been clubbed together.

11. MADRAS DISTRICT.

B.—ECONOMIC TABLES.

B-I—Livelihood Classes and Sub-classes.

This table shows the distribution of population, sex-wise, among the eight livelihood classes and the three sub-classes, viz., self-supporting persons, non-earning dependants and earning dependants under each livelihood class into which the economic characteristics of the people have been classified under the I.C.E.C. Scheme—vide fly-leaf to Table A-V.

2. The district of Madras has been treated as a single tract (No. 14 City) for the purpose of Census Tabulation.

3. The livelihood classification is based on the principal means of livelihood of the self-supporting persons, the principal means of livelihood for earning and non earning dependants being the same as that of the self-supporting persons on whom they are dependant.

4. "The principal means of livelihood" is the means of livelihood which provides the largest or the major part of the income in the case of self-supporting persons who have more than one means of livelihood. In the case of other self-supporting persons, it is the only means of livelihood.

5. A person has been regarded as "Self-supporting" if the income secured by the person is sufficient at least for his (or her) own maintenance at the level of living and adopted by him (or her) at the time of the Census. The income secured may be in each or kind. Anyone who is not a "Self-supporting" person in this sense has been regarded as a dependant. An 'earning' dependant is

a person who secures an income which is not sufficient to support him (or her). A person who does not secure any income either in cash or kind, is a 'non-earning dependant'.

6. The non-earning dependants include persons performing housework or other domestic or personal services for other members of the same family household, but do not include "unpaid family workers" or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise. These latter persons have been classed as either self-supporting or earning dependants according to the share of income attributable to them.

7. The self-supporting persons shown in Livelihood Class VIII include also persons who derive their income otherwise than through productive activity, i.e., persons coming under the following groups, details for which are given in the fly-leaf to Economic Table B-III:—

(1) Persons living principally on income from non-agricultural property;

(2) persons living principally on pensions, remittances, scholarships and funds;

(3) inmates of jails, asylums, alms houses and recipients of doles;

(4) beggars and vagrants and

(5) all other persons living principally on income derived from non-productive activity.

11. MADRAS DISTRICT.

B-II—Secondary means of livelihood.

This table gives for the district the number of persons in each of the eight livelihood classes mentioned in Economic Table B-I, who possess a secondary means of livelihood; and cross classifies them (according to the nature of such means of livelihood) under the same eight livelihood classes.

2. The secondary means of livelihood shown for self-supporting persons is the means of livelihood next in

importance to their principal means of livelihood. In respect of earning dependants, it is the means of livelihood which provides the earning, or the largest part of their income if they have more than one source of income.

3. Non-earning dependants and self-supporting persons who have no secondary means of livelihood are excluded from this table.

11. MADRAS DISTRICT.

B-III—Employers, Employees and Independent Workers in Industries and Services by Divisions and Subdivisions.

In this table, the self-supporting persons in the four non-agricultural classes given in Economic table B-I are distributed in the various divisions and subdivisions of Industries and Services under the Indian Census Economic Classification Scheme, according to their Secondary Economic Status, namely, Employer, Employee and Independent worker.

2. (An) Employer (is) a person who employs other persons in order to carry on the business from which he secures his livelihood and pays them a salary or wage in cash or kind.

3. (An) Employee (is) a person who ordinarily works for some other person for a salary or a wage, whether in cash or in kind in order to earn his livelihood.

4. (An) Independent worker (is) a person who works on his own without being employed by anyone for a salary or wage and who does not also employ anyone else in order to earn his livelihood.

5. Under the New Indian Census Economic Classification Scheme, all Employers and Independent workers have been classified with reference to the commodity produced or services performed by them individually. As regards employees, all persons engaged in Production, Commerce, or Transport (and not being Domestic servants) have been classified with reference to their own activity and without reference to that of their Employer. Domestic servants have been classified in one subdivision without reference to the nature of their work. All other employees (including all managerial and supervisory employees, clerical services, messengers, watchmen and unskilled labour of every description) have been classified with reference to the commodity produced or services rendered by their Employers.

6. The non-agricultural classes classified in Economic Table B-I. correspond to the divisions and subdivisions

into which they are distributed in this table as follows:—

Livelihood class.	Division and Subdivisions of the Indian Census Economic Classification Scheme.
Class V—Production other than cultivation.	Division 0.—Primary Industries not elsewhere specified. Division 1.—Mining and Quarrying. Division 2.—Processing and Manufacture of Foodstuffs, Textiles, Leather and products thereof. Division 3.—Processing and Manufacture—Metals, Chemicals and Products thereof. Division 4.—Processing and Manufacture—Not elsewhere specified.
Class VI.—Commerce ..	Division 6.—Commerce.
Class VII.—Transport ..	Subdivisions 7-0 to 7-4 of Division 7.—Transport, Storage and Communications.
Class VIII.—Other Services and Miscellaneous sources.	Division 5.—Construction and Utilities. Division 7.—Transport, Storage and Communications with the exception of subdivisions 7-0 to 7-4. Division 8.—Health, Education and Public Administration. Division 9.—Services not elsewhere specified.

Class VIII also includes persons who derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity), e.g., income from investments, pensions and family remittances, proceeds of begging and other un-productive activities. These are not, however, included in this table as it is limited to Industries and Services. Hence there will be a difference to this extent between the total self-supporting persons of the non-agricultural class in Economic Table B-I and the total of this table. The reconciliation will be effected by adding the figures given in the next paragraph.

7. Details of persons who derive their principal means of livelihood otherwise than through productive activity and who are included under livelihood Class VIII mentioned in the Fly-leaf to Economic Table B-I are given below:—

Tract.	Details for persons who derive their income from non-productive activities.													
	Total.			Income from non-agricultural property.		Income from pensions and remittances.		Inmates of jails and asylums.		Beggars and vagrants.		Income from other non-productive activities.		
	Persons.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.

SMALL-SCALE INDUSTRIES.

I.—Distribution of small-scale industrial establishments by localities.

This table gives the number of small-scale industrial establishments under categories, non-textile and textile, with details for perennial and seasonal establishments. activities, where articles are produced, repaired or otherwise treated for sale, use or for disposal. Small mines not covered by the Indian Mines Act have also been included. The table does not include plantation industries of any kind.

2. The table covers only those establishments, to which the Factories Act does not apply. It relates, therefore, to all associate

Locality number.	Total number of establishments.		Number of non-textile establishments.				Number of textile establishments.			
	Total.	Non-textile.	Perennial (nine months and over).	Six months and over but less than nine months.	Three months and over but less than six months.	Less than three months.	Perennial (nine months and over).	Six months and over but less than nine months.	Three months and over but less than six months.	Less than three months.

Section (ii).
Rural Statistics—Nil.

11. MADRAS DISTRICT.

Section (iii).

Census Abstract.

This is an abstract giving sex-wise distribution of population in each livelihood class in the City. Among the other items of statistical information furnished, those relating to occupied houses, households, inmates of institutions and houseless persons and literates, were obtained from the National Register of Citizens prepared for each street from the information recorded in the enumeration

slips. Statistics of textile and non-textile establishments collected in the course of the census of Small-scale Industries and the number of Leprosy cases and doubtful cases are also given in the abstract.

2. For detailed explanation of the livelihood classes I to VIII see note prefixed to General population Table A-V.

Agricultural classes.													
Number of Ward (house numbering locality or block).	Area in square miles.	Number of houses.	Number of house- holds.	Total number of persons enumerated (including inmates of Institutions and houseless persons).			Inmates of Institutions and houseless people.		Literates.		I. Cultivators of land wholly or mainly owned and their dependants.		
				Persons.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.

PART II.

C.—HOUSEHOLD AND AGE (SAMPLE) TABLES.

C-I—Household (Size).

This table has been prepared in respect of a population covering the members of sample households selected from the entries in the National Register of Citizens on the basis of one household for every one thousand households. The sample households selected include roughly every fiftieth household in every twentieth house-numbering block or locality in the city of Madras.

2. The agricultural and the non-agricultural classes refer to the four agricultural and the four non-agricultural

classes given in Table A-V. The backward classes include the scheduled castes, the scheduled tribes and other classes not treated as non-backward by the State Government for the purpose of 1951 census. Anglo-Indians are included among the non-backward classes.

3. Columns (2) to (5) of the table relate to all the households and household population in the entire district while columns (6) to (17) relate to the sample households selected.

C-II—Livelihood Classes by Age Groups.

This table shows the livelihood distribution by age-groups in respect of a sample population based on a ten per cent sample taken out when the enumeration slips relating to the district were initially sorted. The ten per cent sample was taken out as follows:—

Each enumeration pad which consisted generally of 100 enumeration slips was broken and the slips relating to displaced persons which had been noticed during the process of the preliminary scrutiny were removed from the pack of slips for being dealt with separately. The pack was then "cut" as in a card game. The lower portion was placed above the upper portion and the slips were dealt into two pigeon-holes one marked "G" and the other marked "S" as follows:—

The first five slips were placed in the pigeon hole "G", then one slip was placed in the pigeon hole "S". Thereafter for every nine slips placed in the pigeon hole "G", one slip was placed in the pigeon hole "S" until the total number of slips left was less than 9 and these residuary slips were all put into hole "G". All the slips contained in the pigeon hole marked "S" were taken out, counted and marked as 'Sample' slips.

2. No smoothing formula has been adopted in preparing the table as in previous Censuses and the figures have been tabulated as actually returned in suitable age groups.

3. The figures under age "O" represent infants below one year.

Age group.	Livelihood classes.									
	Agricultural classes.

11. MADRAS DISTRICT.

C-IV—Age and Literacy.

This is yet another table prepared in respect of the ten per cent samples of the general population. (Vide fly-leaf to Table C-II).

2. Age groups 0 and 1 to 4 given in Table C-II have been combined into one age group, and the age group 5 to 14 has been split into two sub-groups 5 to 9 and 10 to 14. Persons of age group 0 to 4 are treated as illiterate.

3. 'Literates' are those who are able to read and write any simple letter in any language.

4. Persons who are partly literate, i.e., persons who are able to read only have been included among the illiterates. Details for such persons are given below :—

Age Group. (1)	Able to read only.		
	Total. (2)	Males. (3)	Females. (4)
