TABLE E-1

CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

TABLE E-I

CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

This Table gives details of Census houses according to their use. It is based on full count figures relating to different territorial units viz., State, districts, subdivisions, taluks (where they exist) and police stations, with rural and urban break up. Figures in respect of towns each having a population of 50,000 and over have also been furnished.

Census houses which did not contain any household during house-listing operation have been shown as vacant in this Table. Occupied Census houses have been classified into various categories as furnished in the Table, such as, dwellings, shop-cum-dwellings, workshop-cum-dwellings, etc.

To facilitate study of the Table, it is necessary to understand the significance of terms occurring therein. The definitions furnished below explain such terms.

Census house

A Census house means a structure or a part of a structure inhabited or vacant or a dwelling, a shop-cum-dwelling or a place of business, workshop, school, etc., with a separate main entrance.

Shop and shop-cum-dwelling

A shop is a place where articles are sold for cash or for credit

When a part of the Census house is used as shop and the other part as dwelling it is termed as Shop-cum-dwelling

Workshop, factory and workshop-cum-dwelling

A Census house is considered to be a factory or a workshop if some kind of production, processing, repair or servicing is undertaken therein or if goods or articles are made and sold. The definition is broad enough to cover all kinds of work premises beginning from a big factory to a petty workshop where activities connected with production, processing, etc., are undertaken, howsoever meager the scale might be.

When a part of the workshop is used as residence the Census house is treated as workshop-cum-dwelling

Business houses

Business houses are those that are meant for transactions in money or commercial commodities, e.g., bank exchange, etc.

TABLE E-II

**TENURE STATUS OF SAMPLE CENSUS HOUSEHOLDS LIVING IN CENSUS HOUSES USED
WHOLLY OR PARTLY AS DWELLING**

This Table furnishes details in respect of tenure status of households living in Census Houses used wholly or partly as dwelling. It has been prepared on the basis of 20 per cent sample. Figures in respect of different territorial units such as State, districts, subdivisions, taluks and police stations with rural and urban break up have been furnished. Statistics in respect of towns with population of 50,000 and over have also been exhibited in the Table. The total, rural and urban break up have been further sub-classified according to the tenure status of Census Households.

The term "Census Household" occurring in this Table means a group of persons who commonly live together and take their meals from a common kitchen, unless the exigencies of work prevent any of them from doing so.

"Shop-cum-dwelling" and "Workshop-cum-dwelling" have been explained in the fly-leaf to Table E-I.

TABLE E-III

**CENSUS HOUSES USED AS FACTORIES AND WORKSHOPS
CLASSIFIED BY INDUSTRY, POWER AND
NO POWER USED AND SIZE OF EMPLOYMENT**

TABLE E-III
CENSUS HOUSES USED AS FACTORIES AND WORKSHOPS CLASSIFIED BY INDUSTRY,
POWER AND NO POWER USED AND SIZE OF EMPLOYMENT

This Table gives the distribution of workshops and factories in the State as well as in each district with rural and urban break up and towns with population of 50,000 and above by different kinds of fuels used. Factories and workshops are divided into five categories according to the fuel used, viz., factories and workshops run by—

- (i) Electricity,
- (ii) Liquid fuel,
- (iii) Coal, wood and bagasse,
- (iv) Other power
- and
- (v) No power.

Factories and workshops classified by different kinds of fuels as above, have further been subdivided by size of employment, viz., factories employing—

- 1 person
- 2—5 persons
- 6—9 persons
- 10—19 persons
- 20—49 persons
- 50—99 persons
- and 100 persons and above

Size of employment has been determined on the basis of average number of persons employed per day in a factory or workshop. The average number of persons working per day has been worked out from the total number of workers including apprentices, either paid or unpaid employed in the factory or workshop including the owner or proprietor and any of his family members (if working) who were employed during the week preceding the date of enumerator's visit.

Figures furnished in col. 1 of this Table relate to industries coded under the Indian Standard Industrial Classification Scheme. The system of notation adopted in the scheme of classification of Industries has been explained in detail in paragraphs 75,76,77 and 78 of Chapter IV of the Report on Housing and Establishments. A list of code numbers showing against each the name of industry to which it relates has been furnished hereafter for convenience of reference during study of the Table.

Display of list of industries police-stationwise would have been too bulky. Hence only districtwise figures have been furnished. A separate list containing the villagewise details of industries is intended to be given in the District Census Handbooks of respective districts.

TABLE E-IV
DISTRIBUTION OF SAMPLE HOUSEHOLDS LIVING IN CENSUS HOUSES USED WHOLLY OR PARTLY AS DWELLING BY PREDOMINANT MATERIAL OF WALL AND PREDOMINANT MATERIAL OF ROOF

Like Table E-II, this Table has also been prepared on 20 per cent sample. The number of sample households living in Census Houses used wholly or partly as dwelling has been furnished in this Table separately for each type of predominant material of wall and predominant material of roof. The figures shown relate to State, districts, subdivisions, taluks, police stations and towns with population of 50,000 and above. The Table classifies various types of predominantly used wall materials into nine categories, viz. :—

- (1) Grass, leaves, reeds or bamboo
- (2) Timber
- (3) Mud
- (4) Unburnt bricks
- (5) Burnt bricks
- (6) C. I. sheets or other metal sheets
- (7) Stone
- (8) Cement concrete
- (9) Other materials

Likewise, the materials which predominantly compose the roof have been shown under seven different classes, viz. :—

- (1) Grass, leaves, reeds, thatch, wood or bamboo
- (2) Tiles, slate or shingle
- (3) Corrugated iron, zinc or other metal sheets
- (4) Asbestos cement sheets

**SAMPLE HOUSEHOLDS CLASSIFIED BY NUMBER OF MEMBERS AND
BY NUMBER OF ROOMS OCCUPIED**

This Table, which has been prepared on 20 per cent sample relates to households classified by number of members by males and females separately and by number of rooms occupied. It gives the break up of the total sampled households into households either having no regular room or each having one room, two rooms, three rooms, four rooms or five rooms or more. The figures furnished in the Table are in respect of different territorial units such as, State, districts, subdivisions, taluks, police stations and towns with population of 50,000 or more.

A room is defined as a structure which usually has four walls with one door-way at least and with roof overhead and is wide and long enough for a person to sleep in, i.e., it should be at least 6 ft. long. Unenclosed verandah, kitchen, store, garage, cattleshed and latrine are not treated as rooms.
