

CENSUS OF INDIA 1961

VOLUME VI

JAMMU AND KASHMIR

PART VII-A(I)

HANDICRAFT TABLES (URBAN)

M. H. KAMILI

*Superintendent of Census Operations,
Jammu and Kashmir*

THE 1961 CENSUS PUBLICATIONS

Part	I	General Report on the Census
	IA	General Report including appendix to table A-IV giving the constitution of each urban area for 1961
	IB	Report on Vital Statistics of the decade
	IC	General Report (Subsidiary Tables)
Part	II	State Census Tables (including Union Tables for the State) on population
	II A	General Population Tables (A-Series) for the State and Primary Census Abstract, including appendix to table A-IV
	II B	Economic Tables (B-Series, Tables I-IX) for the State down to District and all Cities and Town-groups of and above 100,000 population
	II C	Cultural and Migration Tables (C and D Series) for the State down to District and all Cities and Town-groups of and above 100,000 population
Part	III	Household Economic Tables (based on Household Schedules)
Part	IV	Housing and Establishment Tables (E-Series) including Subsidiary Tables and Report on Housing and Establishment Tables
Part	V	Special Tables for Schedules Castes (SCT and SC Tables)
	VA	Special Tables on Scheduled Castes as well as reprints from old Census Reports on Castes and Tribes
	VB	Ethnographic notes on Scheduled Castes and backward classes
Part	VI	Village Survey Monographs (each monograph will carry a sub-number 1, 2, 3, etc.)
Part	VII	Survey of Handicrafts of the State consisting of Tables for the State, district, tehsil, monographs on individual crafts and general lists of location, mastercraftsmen, etc.
Part	VIII	Administration Report
	VIII A	Enumeration
	VIII B	Tabulation
		} Not for sale
Part	IX	Maps for Atlas Volume based on Census and Official Statistics
Part	X	Special Report on Srinagar City with a brief note on Jammu City

Note : In addition to Central Publications mentioned above, there will also be State Census publications, viz., one District Census Handbook for each of the nine districts.

CONTENTS

Foreword	Pages
Preface	1-3
Annexure : Village Schedule of Industries and Crafts	5-7
Brief notes on :	9-12
(1) Carpet Industry	i-v
(2) Papier mache	vi-ix
(3) Wood Carving	x-xiii
(4) Numdah Industry	xiv-xvi

TABLES

Table No. I—List of Urban Crafts and number of persons employed in production	1-41
Table No. II—Distribution of Artisan communities	42-78
Table No. III—Distribution of articles of Urban Crafts by material used	79-169
Table No. IV—Designs	170-259
Table No. V—Consumption and Sale	260-301
Table No. VI—Cost of production, sale price and earnings	302-413
Table No. VII—List of very skilled craftsmen of each community	414-489

PHOTOGRAPHS

1. Cotton bundles being untied for spinning purpose	Facing page ii
2. Warp being prepared according to the size of the carpet	—do—
3. Settling of warp for a carpet	—do—
4. A Kashmiri weaver working on the production of a modern-Persian design	On the back of Serial Nos. 1, 2 and 3
5. Antique-Turkish Shiraz	Facing Serial No. 4
6. Antique - Samarkand	Facing page iii
7. Modern Persian Kirman	—do—
8. Modern Persian Nain	Facing page iv
9. Old Tekke Turkman	—do—
10. Antique Mogul design	On the back of Serial No. 8 & 9
11. Old Turkman Sarok	—do—
12. Persian Qum (Tree of life)	Facing Serial Nos. 10 and 11
13. Antique—Kazak (cocassion)	—do—

	<i>Pages</i>
14. Modern Kerman	Facing page v
15. Rubbing with a file the rough surface of a papier mache pot	Facing page vi
16. Smoothing the surface with a stone	—do—
17. Pasting bits of fine tissue paper all over the surface	Facing page vi
18. Painting the design	—do—
19. Artisans at work	Facing page vii
20. Jewellery box	—do—
21. Fruit bowl	—do—
22. Toilet set	Facing page viii
23. Ash-trays and wall-plaque	Facing page ix
24. Artisans at work	Facing page x
25. Chest of drawers carved	On the back of Serial No. 24
26. Jewel box full carved	Facing Serial No. 25
27. Bowls in khel design with fork and spoon	Facing page xi
28. Nest set of four tables	Facing page xii
29. Dhone (bow) and Duss (beater)	Facing page xiv
30. Aari	On the back of Serial No. 29
31. Embroidering the Namdah	Facing Serial No. 30
32. Dhone and Duss in combined action	On the back of Serial No. 31
33. Disentangling the lumps of cotton	Facing Serial No. 32
34. Carding cotton	—do—
35. Spreading wool and cotton on a mat and pressing layers with sticks	—do—
36. The rolling of mat after being twisted and bound by ropes	—do—
37. Unrolling of Namdah	—do—
38. Rubbing of Namdah with soap	—do—
39. Drawing a design on a dried felt	Facing page xv
40. The finished product	—do—
41. A group of jolly Namdah workers enjoying their evening tea	—do—
42. Kule-dar	—do—
43. Chahar-bagh	Facing page xvi
44. Janwar Sehbarg Gul-dar	—do—
45. Sehberg Thara-dar	—do—
46. Stars and Lines and Chinar Leaf	On the back of Serial Nos. 43, 44 and 45
47. New Shawl	Facing Serial No. 46
48. Almond Blossom or "Badam-posh"	On the back of Serial No. 47
49. Batakh-dar or Duck pattern	Facing Serial No. 48

FOREWORD

One of the first steps to be taken in the First Five Year Plan was the establishment of six Boards for the promotion of handicrafts, village and small industries. (1) The Khadi and Village Industries Board; (2) The All-India Handicrafts Board; (3) The All-India Handloom Board; (4) The Central Silk Board; (5) The Coir Board; and (6) The Small Industries Board.

The rapid expansion of the activities of these Boards which concentrated not only on production and techniques, but also on organisation, extension, credit, marketing and export, consolidated and enlarged the position that the household industries sector had so long enjoyed in the nation's economic life. It was this fact that forced itself upon the preparations for the 1961 Census and demanded that household industry should be separately investigated for a proper accounting of the nation's manpower, resources and its specific contribution to the national income. The 1961 Census therefore asked a special series of questions on household industry, input of family and hired labour, and the periods over which household industry is conducted. It was felt, however, that an enumeration of the total number of establishments and their industrial classification would be incomplete without a proper description of what they produce and how they produce. It was important to make an assessment of the limits of rigidity within which traditional skill operates. This could be obtained by studying the caste, occupational, social and economic stratifications, the limitations of credit and marketing facilities, the dominance of custom over contract, the persistence of traditional tools and design forms, the physical limitations of transport, communication and mobility, the inability to adopt new lines or adapt the changing circumstances. It was important also to make an assessment of the limits of flexibility that traditional skill is capable of, because the transformation of traditional skills to modern skills is easier said than done and thorough study may well reveal that it is perhaps cheaper from the social point of view to develop industrial skills from scratch than to try to graft traditional skill on alien soil. A rather tragic case of failure to make what would on the face of it seem a minor adjustment

cast its heavy shadow on the nation when it was discovered that goldsmiths used to working on 22-carat gold all their lives felt sadly helpless when asked to work on 14-carat, so narrow and unadaptable were the limits of their skill and proficiency and so rudimentary the tools and equipment with which they and their forefathers had worked. This fiscal accident revealed that tools are even more important than skills.

An early opportunity was therefore taken in February 1960 to suggest to State Census Superintendents, that the Census provided a unique opportunity for conducting and documenting a survey of this kind. As such a survey was quite outside the usual terms of reference of Census work it was thought prudent cautiously to feel one's way with the thin end of the wedge of what would, it was hoped, prove to be an exciting pursuit. It was therefore considered the wiser course to wait until the State Census Offices felt so interested that they would no longer take the inquiry as an imposition but rather want to do it on their own and ask for the necessary staff and equipment. This office, too, in its turn, could make use of the interval to organise and elaborate the design of inquiry in order to feed the appetite that work in progress would serve to whet. Because it was a labour of love, sought to be unobtrusively thrust on one's colleagues and because the inquiry itself was so vast that normally it would demand in any country as big a set-up, if separately established, as the Census organisation itself and that over a much longer period, and because it was almost a pioneer venture, nothing like it having been undertaken since the 1880's, it was decided to move towards a build-up by stages, to let the inquiry unfold itself only as fast as my colleagues chose to ask for more.

Thus, in the first circular of 18 February 1960, it was suggested that the inquiry might be conducted through the agency of the Development Department, the State Director of Industries, the Director of Tribal Welfare, the Registrar Co-operative Societies and other organisations concerned with the promotion of household industry. A draft questionnaire containing 30 questions in three parts was recommended for canvassing. It was suggested that

information on this questionnaire, village by village and area by area, might either be obtained through the regular departmental channels of the State Government, or through the newly set up Census organisation, or through the hierarchy of the newly-created Panchayats. Stress was laid on the need of photographic documentation and illustration of designs, shapes and forms not only by photographs but with the help of line drawings or sketches together with a full description of the materials used.

Almost the whole of 1960 and the first half of 1961 were spent in organising and taking the census count, although several States even during this period had not allowed the grass to grow under their feet but made exploratory studies and decided in their minds how the inquiry should be organised. A series of regional conferences held in Trivandrum, Darjeeling and Srinagar in May and June 1961 revealed much enthusiasm among State Superintendents to proceed with the survey, but the need of separate staff and equipment was felt at the same time as the realization dawned that this was much too serious an inquiry to be treated casually and left to be achieved through the usual administrative channels and State Census Superintendents proceeded to augment their staff with qualified research and investigating officers, technical persons, photographers, artists, draughtsmen and other trained personnel.

This was followed by rapid progress in co-ordination between the Central and State Census offices in the matter of exchange and processing of information, documentation and investigation, of assisting each other with trained investigators and in editing and finalizing drafts, layouts, presentations.

Mention has been made of a questionnaire in three parts and thirty questions. The idea was to make a beginning with empirical, analytical studies based on a structured questionnaire which would replace general descriptive accounts that had obtained so far. The primary aim was to obtain a picture as much of the artisan himself as of his craft, to obtain a perspective of the artisan and his craft in his social and economic setting, the extent to which tradition bound him and the winds of change ruffled him, the extent of his mobility and immobility, the conditions of market, credit, new contacts and designs in which he operated, the frame of new as well as tradi-

tional producer-customer relationships in which he still worked, and how far he was ready to pierce his own caste-tribe socio-economic cocoon and make a break through to new opportunities promised by the Five Year Plans. The aim was to hold up the mirror to hereditary skills struggling with the dialectics of tradition and change.

Thus the first part of the questionnaire, purporting to be a village schedule sought to take account of the size and population of the village, its remoteness from or proximity to centres of trade and commerce, in short, the degree of isolation in which the artisan worked, and the relative strengths of various communities, in the village which would afford clues to social interdependence and the prevalence of the *jajmani* system. The second part was devoted to artisan communities in the village; the several castes of artisans, the number of families in each, the total number of workers, males and females, the extent of co-operative activity among them, the extent of dependence upon employers and of wage or contract labour. There were questions on the raw materials used, the means of their procurement, the possible extent of dependence on others for raw materials, the extent of the material that artisans can handle within the limits of their skill. There were other questions on the exchange and flow of designs, the use of colours, the ancientness of the craft and legends associated, the colonization of the craftsman, on patrons and customers and on social and economic contact with the world inside and outside the village. There were specific questions on the workshop itself and particularly the tools and the source of supply of these tools, because it was felt that tools decide everything and are the surest index of inertness or flexibility. Separate blocks of questions were designed to bring out the ramifications of artisan castes throughout the country and the ways they sustained themselves, the type of clientele they catered for, the extent to which they operated on money or barter or service, how specialized their craft was, how wide the market, how dependent they were on their socially preordained clientele and how restricted the latter was by the seemingly unalterable laws of social custom; the extent to which they could operate in the open market, the range of their wares and the sizes to which these were ordinarily restricted either by the limits of their own skill or the length of their customer's pursestrings. Inquiries

were to be made about the operation of middlemen and of co-operative societies, the people who gave new designs and demanded new products. Finally the several stages of production of the articles themselves were to be fully described including the final and finishing stage and a list of very skilled craftsmen of each community was to be furnished. The third part was devoted specially to tribal communities and designed to find out how self-sufficient or dependent they were on the production and supply of manufactured goods, the extent to which they produced themselves or depended on others, their contacts with other communities and the specific forms of production and commerce through which these contacts were maintained.

Particular emphasis was laid on the need of obtaining as full an account as possible of unique regional design differentiations as they reflect not only the very culture patterns of the country but the persistent inventive faculties of the craftsmen. The importance was emphasised of giving full attention to articles of domestic use as it is in their shapes, designs and forms that the culture patterns and traditional skills persist most tenaciously.

Simultaneously with the investigation of specific crafts, State Superintendents proceeded to compile a comprehensive list of all types of handicrafts obtaining in their State. As for the specific Crafts to be investigated several tables were devised from the structured questionnaire in order to guide investigators towards pointed observation and analysis, to enable them to write, not just general descriptions, but with their eye on the object and on facts.

Investigations conducted between September 1961 and May 1962, including a study group of all States and the Social Studies Division in December 1961 at Delhi, stimulated many of the States into going in for a much enlarged schedule. The revised village schedule itself, the counterpart of the first part of the February 1960 schedule, contained 19 large sections containing elaborate and probing questions. The Family Schedule for practising artisan families similarly contained 19 main questions each subdivided into many questions. The Family Schedule for non-practising artisan families contained 21 questions. There were sche-

dules for the study of co-operative societies, of production-cum-training centres, and of consumer's preference. This enlarged schedule of investigation, in the formulation of which the States themselves actively assisted, was greatly welcomed. The surveys that will appear in this series will therefore consist of two main types: (a) those based on the original short schedule and (b) those based on the much enlarged schedule. In some cases Census Superintendents felt enthused enough to scrap the work based on the original short schedule and do it over again on the enlarged schedule. In the meantime much experience was gained on the analysis of facts and figures to clothe each observation with plenty of authentic information so that the reader could make his own judgement instead of being expected to see all the time through another pair of eyes.

This programme of survey of handicrafts and household industries has been fortified by several ancillary surveys, each one of which would deserve major attention. Along with the survey a compilation has been made of all handicraft centres in each State and an inventory prepared of skilled craftsmen. Photographic and other documentation has been built up to constitute what may now be regarded as the most considerable repository in the country. Elaborate and accurate maps of craft centres in taluks, tehsils and districts are either ready or under preparation. A full census of all fairs and festivals, weekly hats and markets, throughout India, has been taken and is being published for the first time. Andhra Pradesh has embarked upon a project of chronicling the social and religious antiquity and uniqueness of every fair and festival. A separate volume will be devoted to each district which promises to be of the utmost value to sociologists and orientalists. A full and complete inventory, replete with sketches and measurements of every object, has been prepared of exhibits in museums of tribal crafts in India. There has been a fairly satisfactory survey of houses and buildings, indigenous architectural designs and use of local building material of the whole country. All this has been entirely a labour of love, patiently organised and executed under great strain and in disregard of health and comfort, for which I take this opportunity of expressing my appreciation and grateful thanks to my colleagues.

ASOK MITRA
Registrar General, India

New Delhi
July 30, 1964.

P R E F A C E

While the important role played by modern industries in building up the economy of developing countries needs no elucidation, the contribution made by indigenous arts and crafts which, besides relieving unemployment and increasing production, have been instrumental in reducing substantially over dependence on foreign imports, has by no means been small. Most of these arts and crafts have not, however, attained their full stature so far on account of a variety of reasons. The successive Five Year Plans which are being implemented since 1951, therefore, aim, among other things, to build up the small and cottage industries by providing financial, technical and other types of assistance but the achievement of this objective is dependent on the availability of comprehensive statistical data right from the source of raw material to the stage of producing finished products in respect of each craft. There is no denying the fact that surveys have been carried out in the past by various agencies and organisations on selected industries and in specific areas, but no serious attempt to collect, on an extensive basis, the data on rural crafts and cottage industries appears to have been ever made.

The 1961 Census will be remembered for a number of its distinguishing features. These include the collection of data on large, heavy, medium, small and cottage industries. The effort to probe into the industrial build up of the country was originally proposed to be confined to the information which was expected to be made available in response to the questionnaire canvassed through the Houselist and Household Schedule. The former was designed to collect, among other things, such of the data on our industries as the number of small and large workshops, the type of products manufactured or repaired, the average number of persons employed from day to day and the kind of fuel used. The Household Schedule was, however, confined to the collection of data relating to industries which are being run by the members of the family alone or when necessary assisted by outsiders.

It was, however, felt that the information thus obtained through these schedules would not, so far as our rural economy is concerned, yield

fruitful results unless a more elaborate study was undertaken to ascertain, as observed by the Registrar General in his foreword, the social and economic setting of the artisan and his craft. From the Census point of view, it is important to assess the magnitude of cottage industries and rural arts and crafts which, if related to livelihood and population, would provide a stable and sound basis for the implementation of schemes for the development of such industries.

With this end in view, it was decided to conduct an extensive survey so as to cover every village, block, ward and mohalla of all rural and urban areas of the country. A draft questionnaire consisting of three parts and comprising thirty questions was, therefore, formulated by the Registrar General, India and circulated among the State Census Offices. It was added that the inquiry may be conducted by an appropriate organisation of the State Government, such as the departments of Community Development, Industries, Co-operation, Panchayats etc. In the event, however, of these organisations being unable for one reason or the other to undertake the proposed survey, the Census offices were advised to utilise the services of the massive organisations which they had built up for conducting the Census of 1961. Enquiries made from the various departments of the State Government which are concerned with the promotion of household industry and development of arts and crafts, however, revealed that the staff placed at their disposal was earmarked for selected areas only and that there were parts of the State territory where they did not function at all. In the circumstances, it was felt that if this elaborate survey was at all to be conducted, there was no alternative but to assign it to the Census agency which alone covered every village and town of the State. There was, however, no knowing the fact whether the Census organisation which consisted of officials drawn from different Government departments would be able to do justice to such parts of the questionnaire which needed some broad technical background on the part of the surveyor concerned. The matter was, therefore, discussed with Shri S. L. Saraf, the then Minister for Industries and Commerce, who very kindly

agreed to place at our disposal the services of nineteen Extension Officers of the Industries Department for about two months. With the help of these officers, the field staff was given necessary training in advance and made to understand the implications of the questions proposed to be canvassed. Each Extension Officer was allotted a separate and well defined jurisdiction consisting of 30 to 40 blocks/mohallas/wards in which he set up training camps at four or five central places, each camp being attended by the enumerators and supervisors of 8 to 10 villages/mohallas/wards.

The questionnaire of which a copy has been appended as annexure to this Report was canvassed from 10th February 1961 to 1st March 1961 simultaneously along with the filling up of Census schedules. It was, however, noticed that there were certain villages where no industries nor any rural crafts existed at all and that there were a few others in which the enumerators, though trained, did not for one reason or the other collect the data envisaged in the questionnaire. In all, 4,794 villages or over 73% of the aggregate number of 6,559 inhabited villages in the State were surveyed. In addition, the survey was also conducted in 673 out of 755 blocks/mohallas/wards of 36 urban areas.

As we had already gone ahead with the collection of the data on the basis of the above questionnaire, we could not adopt the revised village schedule which though more elaborate and containing probing questions could not be filled up without instituting a fresh inquiry. Further by the time the new schedule was drafted, the Census organisation had been dissolved and was no longer available to conduct a fresh survey.

The data collected have been tabulated in seven tables listed below :

1. List of rural/urban crafts and number of persons employed in production
2. Distribution of artisan communities
3. Distribution of articles of rural/urban crafts by material used
4. Designs
5. Consumption and sale
6. Cost of production, sale price and earnings
7. List of very skilled craftsmen of each community.

As the material collected was found to be of a fairly voluminous size, it could not be incorporated in a single volume as the publication would have run to over 1,200 pages and would have become an unwieldy one. It was, therefore, deemed appropriate to publish the data in two parts, one containing the statistics of arts, crafts and household industries in rural areas and the other giving similar data in respect of the urban sector.

The present publication deals with the urban areas and contains not only the tables referred to in the foregoing paragraph but also brief notes on some of the important crafts dealing with their early history, the details of raw-materials used, the sources from which these are obtained, the processes involved in production, the tools employed, designs, wage structure, marketing and other ancillary matters. An effort has also been made to enrich the publication by providing photographic documentations depicting the artisans at work, their tools and implements, designs and the processes involved in the manufacture. It is hoped that the publication which is the first of its kind, will provide a long outstanding need and will prove of considerable help in formulating schemes for the development of arts and crafts under the Five Year Plans.

Before concluding, I gratefully acknowledge the assistance I received from the management of Messers Gulam Mohi-ud-Din & Sons who were good enough to supply me the photographs of a large number of designs, both traditional and modern, used in Kashmir carpets. My thanks are also due to Shri Mohammad Abdullah of Asian Crafts, Srinagar, for the assistance rendered by him by explaining in detail the various processes involved in the manufacture of papier mache goods. I would not also omit to mention the co-operation I received from the Principal, Government Design Centre, Srinagar.

I am in particular indebted to Dr. B. K. Roy Burman and his organisation who went through all the tables and besides giving valuable advice on their presentation also scrutinised the data and pointed out the discrepancies.

The tabulation work was conducted under the personal supervision of Shri S. P. Arora, Tabulation Officer. I am grateful to him for the keen interest he took in the compilation of data.

The contribution made by Shri Pir Bashir

Ahmed, Computer, who visited many factories and workshops to obtain clarifications on some of the entries made in schedules, has by no means been small. Other officials who were associated with the tabulation work consisted of Hakim Abdul Hamid and Shri G. A. Baigh. Both of them worked hard to make the compilation a success.

The proof reading was done by Shri J. K.

*Srinagar, the
28th July, 1966*

M. H. KAMILI

Nanda, Socio-economic Investigator and Shri Syed Kamal-ud-Din, Assistant Compiler. I appreciate the good work done by them. Shri Nanda has in addition taken considerable pains to collect the photographs of the crafts from a number of sources and has also been looking after the preparation of their blocks.

ANNEXURE

VILLAGE SCHEDULE OF INDUSTRIES AND CRAFTS

District
P.S./Taluk/Tehsil

Sub-Division
N.E.S. Block (If any)
No.

PART A

GENERAL DESCRIPTION OF VILLAGE

Describe briefly :—

- (i) Area of Village in acres

(ii) Population

(iii) Approximate number of families

(iv) Various sections in the village corresponding to communities and their names

(v) Distance from nearest railway station (miles)

(vi) Distance from nearest main road

(vii) Distance from P. S./Tehsil/Taluk headquarters
- (iii)

(iv)

(v)

(vi)

(vii)
- Name of community

(a)

(b)

(c)

(d)

(e)

(f)

(g)

(h)

PART B

ARTISAN COMMUNITIES IN THE VILLAGE (TRIBAL AND NON-TRIBAL)

1. Name of caste or community	2. Approximate number of families	3. Total number of Adult workers		4. Number of families working under co-operation	5. Number of families working in own houses or in workshops set up by their employers
		Males	Females		
1.					
2.					
3.					
4.					
5.					

VILLAGE SCHEDULE OF INDUSTRIES AND CRAFTS

6. Names of articles produced.
Describe the articles and mention
approximate sizes and heights

7. Main material
used

8. Subsidiary
material used

9. Whether raw material is
imported and if so, from where?
What are the main ingredients?

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

10. Who gives the designs

11. Give the names of the
designs

12. Describe colours used. How
are the colours obtained

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

13. Tools used (Describe tools.
Give pencil sketches and photographs
separately)

14. Who make these tools and
from where are they imported?

15. General description of
workshop (use separate sheet of
paper if necessary.)

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

VILLAGE SCHEDULE OF INDUSTRIES AND CRAFTS

16. When did the community come to this
village? Who were the patrons? How old is this
craft in this village?

17. Describe legends or myths current on
the origin of the community.

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

18. Are there any villages in the neighbourhood
where branches of these communities live?
If so, give name of village(s) and Community.

19. Do the communities produce for their own
use entirely? Describe whether for domestic
or ceremonial purposes.

20. Whether they produce entirely for others in
exchange for money or kind. If so, who
are the customers and to which communities
do they belong?

(i) Are they for domestic Use?

(ii) Are they for ceremonial or ritualistic
purposes? If so for which ceremony or
ritual.

21. Whether the communities produce for them-
selves and for sale?

(i) Describe types of objects for own domestic
or ceremonial use. Mention heights of
objects.

(ii) Describe types of objects for sale.
Mention heights of objects.

22. Do the communities produce for sale in open
markets, hats and melas? Mention the
markets, hats or melas and the occasions.

(i) Do they make to the order of middlemen
who advanced money and undertake market-
ing facilities?

23. If there is a co-operative society, are there
members in it who belong to different
castes?

VILLAGE SCHEDULE OF INDUSTRIES AND CRAFTS

24. Give the names of the designs and myths or stories behind the names, i. e. explanation of what the design stands for and the shape or decoration of objects.
25. Describe production.
(Please describe stage by stage and take photographs wherever possible. Photographs should be supplemented by pencil sketches, of surface forms, designs, shapes, colours and processes of paper if necessary for sketches of stages).
 - (i) First Stage
 - (ii) Second Stage
 - (iii) Third Stage
 - (iv) Final and finishing Stage
25. (A) Cost of production, sale price and earnings
 - (i) Price at which raw material is available ;
 - (ii) Cost of conversion into finished products ;
 - (iii) Usual sale price of finished goods, and
 - (iv) Wages earned.
26. Give a list of very skilled craftsmen of each community.

PART C VILLAGE SCHEDULE OF INDUSTRIES AND CRAFTS FOR TRIBAL COMMUNITIES SPECIALLY

27. Is this a tribe where every household produces things for its own use or the use of the community?
28. Is this a tribe of which only particular sections produce particular things? If so, which sections produce which things? Mention names.

	Name of Section of Tribe	Name of articles produced
--	--------------------------	---------------------------
29. Is this a semi-tribal community and does it produce articles for neighbouring tribes? If so, mention the names of the tribes for which they produce and the names of articles.

	Name of neighbouring Tribes	Name of articles produced for them
--	-----------------------------	------------------------------------
30. Does this tribe produce articles for non-tribal or advanced communities? If so, mention names of these communities and the names of articles.

	Names of non-tribal or advanced communities	Name of articles produced for them
--	---	------------------------------------

CARPET INDUSTRY

Early history

Like papier mache, the carpet industry was also introduced in Kashmir by Sultan Zain-ul-Abidin alias Badshah who deputed his son Shahi Khan to Samarqand with the mission to ascertain the technique of carpet weaving and to import experts and specialists for the training of the local inhabitants. Shahi Khan spent quite some time in Samarqand and other parts of Central Asia and returned alongwith artisans specialised as saddlers, carpet manufacturers, stone cutters etc. During the regime of Badshah and for some time thereafter the carpet industry flourished and besides providing employment to many persons for the whole year round helped to improve the economy of the people. With the passage of time, however, the new rulers evinced little interest in the industrial development and carpet weaving received a severe set back and gradually became extinct. The artisans shifted to other occupations and a stage was reached when the industry was completely wiped out and was not survived even by a single artisan. Later, an eminent scholar and saint, Akhun Mulla Hussain Rahnuma, left Kashmir for Haj pilgrimage and while on his way home, he spent some time in Andijan in learning the art of carpet weaving. He brought with him carpet-weaving tools and on his reaching Kashmir, he sought the assistance of Ahmed Beg Khan, Emperor Jahangir's Governor in Kashmir (1614 A. D. to 1618 A. D.) for the re-introduction of the industry. The Governor welcomed the idea and with his help the industry was revived within a short space of time and a number of units were established. Since then, it has been permanently established and is being run both as cottage industry as also on factory scale.

Carpet weaving got a fresh impetus consequent upon the establishment of large factories in Srinagar which were organised and run by European entrepreneurs. Among these, mention may be made of East India Carpet Company and Messrs C. M. Hadow & Co, who not only made substantial contribution to improve the technique of the industry but also developed export markets for the sale of finished products in Canada, U.S.A., France, Britain and other European countries.

Localisation

The carpet weaving industry is conspicuous by its absence in every other part of the State except the city of Srinagar. Following are the main reasons which account for the industry having remained confined within the municipal bounds of Srinagar :—

1. No training school for carpet weaving was ever set up even in Srinagar. The technique and the know how of the industry passed on from father to the son or could at best be acquired by apprenticeship in well established factories which existed in Srinagar only.
2. Aristocracy and the richer sections who could afford to purchase the carpets were available in Srinagar alone.
3. The raw material needed for the industry could be easily imported into Srinagar, both from other parts of the country as also from abroad. Most areas of the State have been and many others being still difficult of access, the carriage of raw materials to these areas would increase the cost of production and make the finished goods uncompetitive.
4. Facilities for exporting the carpets abroad such as Banks and Post offices, were also available at Srinagar only.
5. During summer, Srinagar provides greater avenues for the marketing of finished products due to the large number of tourists visiting the city.
6. The immobility of the carpet weaving industry is also accounted for by the conservative outlook, poverty and indebtedness of the people inhabiting other parts of the State.

Raw-material

Wool, cotton and dyes are the principal raw-materials used in manufacturing carpets.

Wool constitutes the pile of the carpet and is comparatively the most important ingredient. The indigenous wool is qualitatively very inferior and is suitable for the production of coarser

products. During the earlier periods when most of the finished products were consumed locally, indigenous wool was generally used so that the price of the carpet may not exceed the purchasing capacity of the customer. This kind of wool is rarely used even for carpets manufactured on cottage industry scale. The wool employed for almost all carpets, whether those produced in factories or those manufactured by individual artisans on the private looms installed in their homes is of a superior quality and is imported from Australia, New Zealand, South America, England and other wool growing areas. It is manufactured in several counts and is used for different qualities of carpets.

Cotton is grown on a very small scale at a few places in Jammu province, and is hardly sufficient even for the manufacturing of cotton goods. All the cotton yarn needed for carpet industry is, therefore, imported from Rajasthan, Ahmedabad, Delhi, Amritsar etc., in bundles of 5 or 10 lbs. weight, it is spun on charkhas and is converted into yarn of a particular grade of fineness depending upon the quality of the carpet to be manufactured. The yarn is transformed into hanks which are later turned into large circular balls. The weaver fixes two iron rods in opposite directions, the intervening distance being equal to the length of the carpet to be manufactured. In this way the warp of the carpet is prepared which is then spread on the ground to ensure its width being uniform. After this, the warp is loaded on the loom. Two thin iron rods which are tied with the nails of the looms are passed through the warp at its two extreme ends. The warp is adjusted with the help of a central beam so that it intersects when the weft is passed on the knots. The knot itself is tied between two warp threads and is locked with two cotton wefts which pass over the row of knots and is pressed with the help of an iron comb.

Of late, silk carpets which were traditional in Kashmir but had become extinct due to depression of carpet industry have been revived. They are known as such because of the use of silk yarn both for warp and pile instead of cotton and wool.

The non-availability of adequate facilities for dyeing of the raw-material used in the carpets has been an outstanding deficiency in this industry right from the beginning. In the past, vegetable dyes

were used and the work was assigned to dyers who had not specialised themselves in this line. The result was that the dyeing was unevenly done and the finished product presented more often than not a somewhat shabby appearance. At present, imported and indigenous chrome dyes are used but there is no dye house, a lacuna which adversely affects not only the carpet industry but all other textiles manufactured in the State. The local dyers have no doubt acquired necessary proficiency through continued practical work, but they are not able, due to their limitations, to produce well dyed products. This is mainly because the dyeing apparatus with which they work is not catered by a boiler, which is so very necessary for good dyeing. It is, however, understood that the All India Handicraft Board have set up a laboratory where vegetable dyes capable of yielding fast colours are produced. A similar laboratory if installed in Kashmir would go a long way to improve the dyeing processes followed at present.

Kashmir carpets are in demand only because they are hand made and not produced on machines. If the production is mechanised, the industry will collapse as the beauty inherent in hand weaving will vanish and the goods manufactured will not be able to stand competition against machine made carpets produced abroad. This is obviously because most of the raw material is imported from outside and its landed cost which includes, among other things, high import duty, is much greater than the price paid for it by foreign manufacturers. There are, however, certain subsidiary operations which if conducted on machines would improve the quality of production considerably. These include of the provision of a dye house, referred to above, as also the installation of spinning mills. Very recently, two such mills have been set up, one in the public and the other in the private sector, but both suffer for want of adequate quantities of raw material, namely, lustrous wool imported from various countries in South East Asia.

Designs

The designs vary according to the quality of the carpet to be manufactured. The quality itself is determined by the number of knots per square inch. Thus a carpet is known of the quality of $4 \times 4\frac{1}{2}$ if it has 18 knots per square inch. Similarly, a 7×9 quality carpet is supposed to contain 63 knots. Sometimes, when it is intended to reduce

Antique—Samarkand

Modern Persian Kirman

the labour charges at the cost of quality of the carpet, four threads of warp instead of only two may be used, thus reducing the number of knots in a 7x9 quality to 32 only. This practice has now, more or less, died out due to demand for high quality carpets and the keen competition among the manufacturers.

The design is generally drawn on a graph paper and is divided according to the pattern. It is conceived on a mathematical basis by dividing the borders, strips and the central pattern in such a way that it may be accommodated within the available space without disturbing the symmetry. After the design is completed, it is marked with the codes of various shades proposed to be worked out in the pattern. The shades and the number of knots are then transformed into a series of hieroglyphics written on paper and known as 'talim'. This paper is handed over to the master artisan who reads it out for the guidance of his co-workers on the loom, all of whom prepare the knots and use the colours accordingly.

It may be stated here that the number of talim writers which cater various factories and workshops is fairly limited, mainly because the artisans are anxious to monopolise the technique of talim writing, so that their future employment as also of their children may be assured. No institution for imparting training in talim writing was ever set up in the State and this accounts for the dearth of technicians in this line. It is, however, understood that the Government are now contemplating to set up a school where new apprentices would be recruited and given the requisite training.

Before 1930, when the carpet industry flourished, the average standard quality used to have 120 to 170 knots per square inch. At present, the number of knots varies from 63 to 600 according to the quality of the carpet.

There has been no material change in the designs of carpets since the industry was first introduced in Kashmir. In the initial stages the designs were entirely Persian and of an elaborate character. Later 'Turkman' and 'Cocassion' designs were also introduced but they could not survive for long. These have also since been revived. A special feature of these carpets is that both the warp and the pile are made of wool.

Among other old designs, mention may be by

made of 'Shiraz' in which like Turkman and Cocassion designs, the warp and the pile are both made of wool. The design consists of geometrical figures like rectangles, triangles etc. as also animals, birds and the like.

About 40 years ago, a new design known as 'modern kirman pattern' was evolved. This is an imitation of a Persian design in which the field is plain with a central medallion and small bunches of flowers around it.

The traditional designs are over floral and include animals and hunting patterns and what is known as tree of life with different types of birds. Other traditional designs consist of 'Joshgan', 'Zuli sultan', 'Vase', floral and garden patterns as also those named after important cities and towns of Persia and Iraq etc. such as 'Kerman', 'Kashan', 'Ispahan', 'Meshad', 'Hamdan', 'Tabriz', 'Khorassan', etc.

It is not possible to set out a complete list of all the traditional and new designs. It may, however, be stated that the old Persian designs were of highly artistic character with a wide range of colours. The Kashmiri artisans have not been content with the adoption of foreign designs only, but have evolved new ones which they conceived from the natural sceneries in which Kashmir abounds. In these designs lakes, flowers, blossoms, mountains and hunting scenes are usually depicted.

Several new designs conceived by the western entrepreneurs have also been adopted. These consist of broad geometrical designs which are characterised by a harmony of colours of various big plain patches.

In silken carpets also, all the traditional designs have been incorporated. These include, among others, the old 'Barjasta' design which had disappeared altogether and has since been revived. In this design, the motifs are raised above the ground which is all made of silk.

Wages

Broadly speaking, the daily output of a weaver engaged on the production of a carpet measuring 9 feet in width and of the quality of 9 x 7 or 63 knots per square inch on which 5 weavers work simultaneously is estimated at 20 square feet per month. Enquiries made from the managements of some of the leading carpet weaving factories

have disclosed that a weaver does not put in more than 20 days work monthly and that he is paid at the rate of 46 paise per 1,000 knots or Rs 4.14 per day. In addition, he also receives bakhshish or bonus at different rates which vary from 25 Naya paise to Rs. 3/- per square foot, depending upon the design of the carpet. In the case of silk rugs, however, the artisan is paid his wages at 69 Naya paise per 1,000 knots or 50% more than the rate allowed to an ordinary weaver engaged in the production of carpets made of cotton and wool. In this case, however, no bonus is paid in addition.

These averages are, more or less, similar to those collected by the Census Department in connection with the survey of Arts and Crafts. According to this survey, the earnings of an adult worker for 25 days in a month range from Rs. 75/- to Rs. 90/- while a boy employed as an apprentice is paid about Rs 20/- to Rs. 25/- per month.

Looms used for carpet weaving vary in size and the dimensions of each are determined by the width of the carpet to be manufactured. Thus, a standard size carpet of 9 feet width is loaded on a loom of 11 feet width which is manipulated by 4 or 5 weavers or, say, one weaver for one and a half feet.

Government patronage

Before devaluation, the Government of India had introduced several incentives to promote the export trade in carpets. These included, among others, a 40% incentive on the F. O. B. value of the products exported. It was, however, obligatory for the manufacturers to utilise 35% of this incentive on the purchase of wool tops to be imported from abroad. The remaining 5% was, like-wise, required to be invested on the imported chemicals and dyes. After the devaluation, the subsidy has been reduced to 10% of the F. O. B. value only. As this is bound to impair the export trade, it has now been decided, to grant Import Licences for wool, chemicals and dyes etc. to the bonafide exporters.

It is important to mention here that Government patronage is absolutely necessary for the survival of this industry as otherwise it will not be able to compete with mechanised production. Cheap carpets of very inferior material and quality are

now being manufactured in many places in India, such as, Badohi, Mirzapur and Agra etc. Kashmir produces hand-made superior quality carpets which, though expensive, hold an unique position on account of their fineness and intricate and complex designs.

Production

The aggregate production in factories and small workshops run on cottage industry scale is at present estimated at about Rs. 20 lakhs a year, as against Rs. 26 lakhs before 1930. The volume of production can be appreciably increased if the weavers attend to their jobs regularly for all the working days in a month. This is not unfortunately so and an average worker does not devote more than 20 days in a month to the work assigned to him. It is possible that this may be due to his being content with the high wage rate now allowed and he may voluntarily be foregoing the increase in his monthly emoluments by suspending work for a few days. Another reason which is generally advanced is that the weaving operation affects the health of artisans and they, therefore, prefer to relax for short intervals.

The aggregate number of weavers, talim writers and other artisans including (part-time) dyers who are employed in factories or work at home, is reported to be at least 3,000, exclusive of the ministerial, supervisory and administrative staff engaged in large factories. According to the survey conducted at 1961 Census, the number of persons actually engaged in urban areas in the weaving of carpets stands at 2,425 who inhabit 38 different mohallas of Srinagar city. They belong to 715 families whose traditional occupation is 'Qalin-bafi', locally known as Qalbafi. Among these, weavers belonging to 145 families work in co-operative societies while others are employed by factories or run their private looms at their respective homes.

The detailed statistics of workers engaged in weaving of carpets on hand-loom in the urban areas has been published in Volume VI, Part VII-A (i) wherein also a list of very skilled craftsmen of different mohallas has been given.

Appliances

Following are the important appliances used for the manufacturing of carpets :—

Modern Persian Nain

Old Tekke Turkman

Antique Mogul Design

Old Turkman Sarok

Persian Qum (tree of life)

Antique—KAZAK (cocassion)

Modern Kerman

1. Fixed rollers used first for rolling the warp and then the carpets.
2. One or two iron chains at the end of the wooden looms to ensure tension of the warp thread.
3. An iron rod for fixing the warp to the looms in the grooves provided for this purpose.
4. Two wooden vertical posts into which the horizontal looms are fitted.
5. A pair of horizontal poles for being threaded to the warps by which with the help of a bow the warp threads can be brought to the front or sent to the rear when the weft threads are passed back both across the width of the carpet and between the warps.
6. Iron hand-comb with wooden handle for compressing the pile.
7. Pair of scissors.
8. Pile measurer.
9. Weavers knife.

Marketing

Carpets are luxury articles and their selling prices are generally determined by their design, quality and size. They have not, however, been standardised so far and it is not unusual that two carpets of the same size and quality may be sold at different prices.

The Census data indicates that weavers of as many as 485 families dispose of their products to middlemen while those of the remaining 230 families negotiate the sale through others.

The cottage worker disposes of his products in two ways. He may either contact a customer directly and obtain a reasonable price, or, alternatively, negotiate the sale with a local dealer who procures finished products of different handicrafts and stocks them in his concern for sale to the visitors and tourists. In the latter case, the worker has more often than not to undersell his goods, sometimes even by sacrificing a part of his wages. On the other hand, the dealer employs extraordinary powers of persuasion with

his customer and strikes the bargain for the sale of the goods at a price by far higher than that invested by him. He also engages hawkers and agents who keep on moving about in boats in Dal-lake and other places of tourist resort where they contact the visitors and dispose of the goods to them at fabulous prices.

In factories, however, the methods of sale are different. The goods produced are generally manufactured against orders placed with them by the foreign commercial concerns and individuals who are supplied in advance samples of various qualities, designs and quotations. Occasionally when exhibitions are held in different parts of Europe and the two Americas, exhibits sent by the exporters are displayed to propagate the sales.

Important factories

Besides the large number of small workshops installed by weavers in their houses, there is a net-work of factories engaged in carpet weaving. Important among these are :—

1. East India Carpet Co., Ltd., Hazari Bazar, Rainawari, Srinagar.
2. Asian Carpet Factory, 3rd Bridge, Srinagar.
3. M/s C. M. Hadow, Sherinbagh, Srinagar.
4. Kashmir Carpet Factory, Chattabal, Srinagar.
5. Persian Carpet Factory, Kachgari Mohalla, Srinagar.
6. Paradise Carpet Factory, 3rd Bridge, Srinagar.
7. New Kashmir Carpet Weavers Industrial Society Ltd., 3rd Bridge, Srinagar.
8. Gulam Mohidin & Son, Residency Road, Srinagar.
9. Indo Kashmir Carpet Factory, Shah Mohalla, Srinagar.
10. Oriental Carpet Factory, Shrin Bagh, Srinagar.

PAPIER MACHE

Early history

The name of Sultan Zain-ul-Abdin, popularly known as Badshah, or the great king, who ruled Kashmir from 1420 to 1470 will never fade from the memory of Kashmiris, as it has not during the last 5 centuries. His profound solicitude for the welfare of his people which manifested itself in his unrelenting endeavours to raise their social, educational, cultural and industrial standards has no parallel among the rulers who preceded and succeeded him. The numerous buildings, bridges, villages and townships known after his name, such as, Zaina-gir, Zaina Kadal, Zaina Lank, Zainapur etc. bear adequate testimony of his passion for architecture and town planning. His secular outlook which transgressed the frontiers of caste, class, sect and creed attracted men of letters from many parts of the world. It was this outlook that prompted him to have Mahabharata and Rajtarangni translated into Persian and Kashmiri. Among the eminent learned persons of his court who were generously rewarded for their scholarship, mention may be made of Uttasom and Yodhabhatta. According to one version, Badshah was actually known as 'Batshah' on account of his patronage of the Pandits.

Among the various measures introduced by Badshah to improve the living standards and economy of his people, he conceived an elaborate plan of establishing new industries which could provide employment to thousands of people who were not engaged in any activity for the major part of the year. He imported skilled artisans and craftsmen from Central Asia and with their assistance, got the local inhabitants trained in a number of handicrafts till then altogether unknown to the people of the State.

Papier mache is one of the handicrafts which Badshah introduced in Kashmir with the help of experts imported by him from Samarqand. The craft is also known by the name 'kar-i-qalamdani' or pen-case work, because in the initial stages it was usually used for the ornamentation of pen cases and small boxes only.

Production technique: (i) 'Sakhta' making

The artisans engaged in manufacturing of finished products of papier mache may broadly be divided

into two sectors, namely, 'Sakhta' makers and painters. The former procure waste and scrap paper, cloth, rice starch and copper sulphate, which they grind together by handpounding method into pulp. It is then coated to a requisite thickness on wooden moulds of varying shapes and forms depending upon the requirements of the dealers and the painters. Kashmiri paper is again pasted on the mould, layer by layer, by repeated slow process of drying and applying till the pulp acquires the desired shape. The mould is then removed and the surface smoothened and made even by being rubbed with a file. This is followed by wrapping it with thin cloth and glue which is further covered by a coating of gypsum, the substance locally known as 'gutch'. The artisans generally prefer 'gutch' obtained from an old plastered wall of a room which is ground fine and mixed with glue and water. Further operation is suspended until the surface dries up. It is then smoothened by being rubbed gently with a piece of hard burnt brick called 'kurket' in Kashmiri. The next step is the application of a stain called 'astar' which is prepared by rubbing with water a kind of stone known as 'basvater' and usually found in a quarry at Manasbal, about 15 miles in the north of Srinagar. This is followed by the application on the stain of 'safeda kashgari' (white powder) mixed with glue and water. When dry, the 'zamin' or the base colour of the desired type is applied. The colour may be golden, white, black, red, blue, etc. etc. Further work is again postponed until the surface dries up.

(ii) 'Naqqashi' or Painting

It is at this stage that the article is handed over to the Naqqash or the painter artist who draws on it the outlines with 'zarda' or yellow colour delineating the space for floral work etc. which is stained with 'astar' and white paint. The real art which makes the papier mache articles so charming now comes into play. It is an interesting sight to see the artist elaborating from memory and without the aid of any geometrical instruments, intricate and complex patterns of different artistic designs in rich and subdued colours.

The first phase of his operation starts with what is known as 'partaz' which is done in any appropriate colour. If it is proposed that the

Rubbing with a file the rough surface of a papier mache pot made of paper pulp pressed together in a wooden mould of the required shape

Artisans at work

Jewellery box

Fruit bowl

floral work should be done in gold or silver, a preparation known as 'dor' which is made of 'zarda' mixed with glue and sugar is applied on the space earmarked for the floral work. Gold or silver leaves are then applied on it and these stick only to those parts of the surface which have been coated with 'dor'. The opening work on gold or silver is done with 'soot' dissolved in water with glue or with purple or crimson colours. The next operation is not taken up until the article is thoroughly set. It is then varnished with 'kahrubā' (amber) or 'sandirus' (copal) dissolved in spirit. When dry, the surface is washed clean by being rubbed with a wet grass rope. Final touches are then given with gold or silver leaves dissolved in glue and salt after which the finished product is polished by rubbing its surface with a piece of 'yasham' stone (jade) or with a piece of 'mohar-plat' (agate stone). Last of all, it is polished with a coat of varnish which is dried in the sun. It is at this stage that the article leaves the manufacturers premises and finds its way to the market.

Change of pattern

It is important to note here that papier mache goods made in the earlier stages were of such superb quality that they could even hold hot liquids without suffering any damages. With the passage of time these superfine varieties have disappeared and most of the present day work consists actually of painted wood. In certain articles brass linings are also used.

Of late, there has been considerable qualitative deterioration in papier mache products. The goods produced in the past were marked for their colourings, such as subdued, subtle and those full of gradations of tone and shape. The preparation of a pigment required many days hard labour for pounding its ingredients with the help of pestle and mortar, which had the effect of giving a permanent and unfading glow to the finished product. The colours used were invariably obtained from stones which had their own advantage in that they did not wither for ages in spite of climatic action and other reasons. Besides colours, gold was an equally important ingredient which was laid on the designs in the form of beaten leaves. The artisans took care to employ pure gold as this alone ensured perpetual shine and glow.

The constituents have now been replaced by

ready made earth colours and German gold dust mixed with glue, sugar and water and copal varnish with turpentine or spirit of wine which are incapable of producing unfading colours.

Yet another deviation in the quality of art is the change-over to cheaper and easy floral designs which are conspicuous by the absence of the intricate free-hand scrolls of the old artist. The new customer lacks the aesthetic sense which was so prominent and well developed among the lovers of arts and crafts in the past. This is not exclusively due to a change of taste but is attributable more to a tendency to go in for cheaper products which have bright and showy appearances, though not of a durable character. For the while the Gold Control Order remained operative, the industry received a set back due to the non-availability of pure gold. The difficulty faced by the artisan on this score has, however, been considerably removed consequent upon the arrangements made by the Government to make the gold available.

Old patterns

The most important among the old patterns was what was known as 'hazara' (thousand flower-not literally a thousand but indicating a very large number). The flowers depicted in this design consisted mostly of rose, 'rana', apple flower, 'lala' (tulip), lotus, hyacinth, iris, narcissus etc. The design was sometimes done in a single colour by painting all flowers in one colour over a black background with linear drawings and shadings in gold. The colours usually employed consisted of blue, green and mauve and the patterns thus produced were known as 'shirik hazara', 'sabaz-posh hazara' and 'gunafchi hazara' respectively.

Among other old important designs mention may be made of 'gul-i-Willayat', 'gondar', 'gul-ander-gul' etc. 'Gul-i-Willayat' pattern has much in common with 'hazara' with the difference that while the latter is an abstract pattern, the former has stems of 'rana', apple, rose, 'zeba' which are shown joined together in a single stem at the bottom of the pattern. 'Gul-ander-gul' is a shrubbery of flowers shown in 'hazara' design. 'Gondar' is always done on black base with gold lines and white dots used on borders and edges of the articles.

Old products

Important among the old papier mache

products are 'sanzwaru' (cosmetic box), kalamdan (pen case), spectacle cases, scroll cases, book cases, mirror backs with handles etc. The craft was also used for ornamentation of ceilings of which beautiful samples which retain to this day their glamour, can still be seen in the hall of State Legislature and many old shrines of Srinagar city. Other articles on which papier mache work was done included Palanquins, howdas and fire-places of well-to-do households.

New patterns

After Independence, papier mache, like many other handicrafts of Kashmir, received a temporary set back due to the change in the taste of new customers. The artisans were, however, quick to fall in line with the new concepts and they immediately started blending the oriental and the modern motifs in the products manufactured by them. The most favourite design of the present day customer is the floral pattern which consist generally of iris, lotus, tulip, hyacinth, almond and the kilip. Besides floral design, bird forms, particularly those of king-fisher and the bulbul (nightingale) have also been introduced. Shawl and chinar leaf designs are also very much in demand, but it is doubtful whether they really represent the modern pattern.

New products

The articles on which papier mache work is now being done consist generally of powder boxes, screens, table lamps, tables, trays, vases, handkerchieves, cards, cigarette and stamp cases, candle stands and writing sets etc.

Localisation of Papier mache

Papier mache handicraft is concentrated in the city of Srinagar and is monopolised by a small section of Shia community, although it has been now in existence in the State for the last over 500 years. Reasons why the handicraft has not been able to take root in other parts of the State are not far to seek. The raw-material needed by the artisans can mostly be had in Srinagar city only and is not readily available elsewhere. Further, the finished products are easily marketable at Srinagar which is a tourist resort and is crowded with visitors during the summer. An equally important reason is that the artisan is generally a worker in a well established factory or produces goods at his home against orders given to him by the proprietors of large commercial

concerns. In other parts of the State, this facility is not available.

As stated earlier, the handicraft was set up in Srinagar by experts imported from Samarqand and other parts of Persia, which is mostly inhabited by Shia community. The local Shias had, therefore, closer association with these experts and they wholeheartedly devoted themselves to the learning of this art. As the production yielded handsome returns, the artisans were reluctant to dissipate the technique and the know how of the industry with the result that it remained confined to a few families only. No institution for the training of new artisans was even established and this contributed in no small measure to prevent the expansion of the handicraft which became, more or less, hereditary and passed on from father to the son. Even now the latter starts taking practical training from his father just when he is hardly of the age of ten years. By the time he attains majority, he acquires high proficiency about the technique of the designs from his own imagination and without any guidance.

All India Handicraft Board

The Government of India have, however, recently established a School of Designs at Srinagar where new designs and patterns of papier mache and a few other handicrafts are being evolved and distributed among the various producing centres for adoption. The All-India Handicrafts Board, under whose auspices the School has been set up, also grants stipends to new hands so that the art may not become extinct in course of time and the production may increase adequately to meet the demand from within and outside the country.

Castes of Artisans

The data relating to papier mache handicraft given in the various tables published in this volume will show that 128 families belonging to 17 different mohallas of Srinagar city are engaged in this industry. The number of castes which these families belong is still smaller and is limited to only three. The majority of the families numbering 73 come from Naqqash caste. Of the remaining 55, thirty are known as Mirzas and twentyfive as Bankas. The aggregate number of artisans is estimated at 330, though the total population dependent on the handicraft has been placed at about 2,000.

Toilet Set

In the fore-front there is a set of three ash-trays with brass-linings and in the rear a wall-plaque

Induscos

The large majority of the artisans work either in factories or run the handicraft as a cottage industry. Table II will, however, show that there are 33 families which provide artisans to industrial co-operatives engaged in the production of papier mache goods.

Marketing

The marketing of products is conducted both through middlemen as also by open sales in shops, factories and industrial co-operatives. The number of families which dispose of their goods through intermediaries is, however, limited to 45 only.

Raw-material

In so far as the sources from which the

raw-material is obtained are concerned, a reference to Table III will show that the paper pulp and wood are locally available. Colours, varnish, gold and silver beaten leaves as also glue etc. are imported from Amritsar and Delhi.

Master Craftsmen

The list of highly skilled craftsmen has been given in Table VII at the appropriate place.

Output

Due to the keen interest evinced by the Handicraft Board in promoting growth of papier mache handicraft, the goods manufactured annually are estimated to cost Rs. 10 lakhs. This is remarkable in view of the fact that the total output of the industry in 1958-59 did not exceed Rs. 4 lakhs a year.

WOOD CARVING

Early History

Like other important crafts of Kashmir, the origin of wood carving also dates back to the reign of Sultan Zain-ul-Abidin, popularly known as Badshah (1420 A. D. to 1470 A. D.). Dr. R. K. Bhan has, however, observed that the craft is an ancient one and that it only received a stimulus during the time of Badshah. There is, however, little evidence available to corroborate the contention that the craft is an invention of the local artisans and that it was only rejuvenated under the patronage of Sultan Zain-ul-Abidin. None of the chronicles and other compilations dealing with the traditional arts and crafts of Kashmir make any mention of the existence of wood carving before 15th century. The oldest samples of wood carving work which have been preserved to this day are seen in the ceilings and doors etc. of religious institutions and Government buildings now in a dilapidated condition. These carvings do not date back to more than 600 years, as is evident by the inscriptions engraved on them.

Be it as it may, the fact remains that wood carving flourished and gained wide publicity during the time of Badshah. Subsequently, it witnessed many ups and downs, thriving in one regime and declining in other. The artisans, however, courageously faced the adverse conditions in which they had to work and maintained the high standards of their artistic productions. Eventually they produced the wood carved gate and frontage for the Coronation Durbar of King George V at Delhi, which were presented to His Majesty by Maharaja Pratap Singh and proved instrumental in publicising wood carved products of Kashmir, both among the Indian and foreign aristocracy.

Broadly speaking, the carving work is a profound expression of flora and fauna in which Kashmir abounds and which have an abiding effect on the minds of the artists who produce these with admirable precision in various articles manufactured by them. The goods manufactured consist both of articles of day to day use as also of others which are either exclusively of decorative nature or which serve the dual purpose of utility and

decorative articles. The table nest, wood screen, cabinets jewellery boxes, fruit bowls, tray-stands, table-lamps etc. are some of the instances of this kind.

Raw-material

Walnut wood is the principal raw-material employed in producing wood carving articles. The wood is available in plenty at all places with an elevation of 5,500 to 7,500 feet above the sea level, and is grown either on private lands or in wild form in the demarcated forests. Due to its durability and natural colour, it is regarded as most suitable for carving work.

The other raw-material employed consist of sandpaper, mansion furniture polish, khaka powder, hinges, nails, screws etc. All these are imported from Amritsar or Delhi and are marketed in the city of Srinagar by wholesale and retail dealers.

Tools

The tools employed are mostly those used by ordinary carpenters and include straight and carved chisels (locally known as 'Vatith Narivol', 'Much-rith Narivol', 'Partuj Vol' and 'Zulni'), a plane and a hand-saw. Among more elaborate equipment, mention may be made of lathe, freight saw drilling machines etc., which are, however, to be found in only a few of the well organised establishments.

Method of production

In order to avoid warping and cracking of the finished products, it is necessary that walnut wood, the principal raw-material, should first be seasoned, so that it may not retain any moisture. Seasoning is done by most of the artisans by exposing the wood to sun and allowing thereby its sap to dry. As this method does not eliminate the possibility of the finished products developing cracks and getting warped in hot dry climate, a Walnut Wood Seasoning Plant has been installed by the State Government in Srinagar city with an annual seasoning capacity of 20,000 cubic feet. The artisans do not, however, favour the idea of getting the raw-material seasoned with the help of the seasoning plant, both because it involves extra cost as also for the reason that the wood seasoned in this kiln offers greater resistance to carving. In order, therefore, to popularise the

Artisans at work

Chest of drawers carved

Jewel Box Full Carved

Bowls in Khel design with Fork and Spoon

scientific method of seasoning, the State Government now charge a subsidised rate of Rs. 1/8/- per cubic feet.

In either case, after the wood is seasoned, it is cut into planks or pieces of desired sizes with the help of ordinary carpentary tools. The master-craftsman, popularly known as 'Vastakar', then draws a design of the article to be carved on each plank and hands it over to the carver. In distributing the planks bearing the designs, he takes care to assign complicated designs to more skilled carvers and to pass on planks containing simple designs to less efficient artisans. Some of the dexterous and imaginative carvers straightaway proceed with the engraving work without getting a pencil drawing of the designs from the 'Vastakar'.

After the carving operation is over, the article is smoothened with sand paper, care being taken that the natural colour of walnut wood is not distorted. Some of the artisans occasionally employ polish for imparting additional glow or rub it with agate stone to add to its lustre and natural colour.

It may be remarked here that every workshop or factory engaged in wood carving is of a composite character and is equipped with arrangements necessary for various operations, such as shaping, carving and polishing etc.

Designs

The traditional designs consist mostly of beauties of nature in which the valley of Kashmir abounds. Though most of the workers are illiterate, they are gifted with an artistic sense and are able to transform the beauties of nature alongwith their minutest details into exquisite works of art. Of late, they have also started the introduction of designs published in foreign catalogues and have succeeded in reproducing these with admirable precision.

Among the more important traditional designs, mention may be made of the following :—

1. Lotus, dragon or cobra-shape design
2. Shawl design
3. Designs of birds and animals, such as, nightingale, stag etc.
4. Fruits and tree designs
5. Chinari and grape leaf designs
6. Flower designs, such as rose, lotus, lilly, iris etc.

7. Rezkar

The survey conducted by the Census Department has disclosed that the following additional designs have of late been introduced :—

1. Motor shape
2. Monogram
3. Pan leaf shape
4. Diamond
5. Crest

The Government of India have set up a Design Centre in Srinagar city which produces modern and new designs in a few crafts, such as, wood carving, papier mache, turquoise etc. These designs have not, except in very few cases, been adopted by the artisans partly because of their apathy and partly due to the apprehension of non-marketability of the products thus manufactured by them.

The data given in Table IV on wood carving industry will show that, besides traditional designs which are favoured by a small number of families, there are other sources also which produce designs and pass them on to the artisans for execution. These include middle-men, Government Design Centre, Co-operative Societies and very senior artisans themselves who also invent new designs from time to time. The number of families which obtain the designs from middle-men is the largest and is estimated at 85. Co-operative Societies cater as many as 60 artisan families. Families preferring to use designs evolved by the Government Design Centre, however, number 10 only. On the other hand, there are 39 families which do not depend on any of these sources and introduce designs invented by themselves.

Cost of production

It is difficult to give any analysis of the cost of raw-materials and of over-head charges as the same vary from article to article, depending upon its size and quality of engraving work. It goes, however, without saying that the raw-materials employed cost a much smaller proportion of the cost of finished product than the labour charges and over-heads, whatever the size of the article produced. The seasoned walnut wood sells at Rs. 10/- to Rs. 12/- per cft. and while one cft. may yield the desired number of planks and pieces for manufacturing a nest of tables, the carpentary and carving charges

and cost of finishing and other expenses is not less than Rs. 25/-. Likewise, a small shikara may consume seasoned walnut wood worth Re. 1/- only but the charges of its carving and finishing etc. may exceed even Rs. 2.50.

Localisation

It is an irony of fate that although the principal raw-material of wood carving industry, namely, walnut wood, is available only in the rural areas of Kashmir valley, the artisans are concentrated in the city of Srinagar and its suburbs. There are several reasons which account for the inability of the rural inhabitants to augment their income by adopting wood carving as a subsidiary occupation. Some of these are briefly discussed below :—

1. Walnut wood is exported, in huge quantities, from the rural areas to the city of Srinagar every year for being consumed as wood fuel. As this timber is in great demand for furniture, gunstocks, spinning wheels etc. the cutting down of green walnut trees is prohibited under the orders of the State Government. While many villagers are anxious to preserve the trees which yield them some income annually in the shape of the sale proceeds of walnuts, others who are economically backward, usually negotiate with the owners of fuel depots in Srinagar and with their connivance manage to cut down the branches of the trees after the walnut crop has been harvested and obtain permission for their felling on the plea that the trees are dry and do not yield any fruits. In either case, the growers are content with the sale proceeds of the walnut crop or the money obtained by the outright sale of the trees and do not, therefore, care to take to wood carving.
2. There are no marketing facilities in the rural areas for the disposal of finished wood carving products. In Srinagar, artisans, industrialists and dealers, manage to dispose of the products to the tourists and visitors by sales conducted in large commercial establishments or through hawkers in the hotels and in the house-boats, as may be feasible. Factories and well organised establishments export the products to foreign countries.

3. The ancillary raw-materials, namely, sand-paper, furniture polish, screws, nails, colours and varnish etc. are not also available in the rural areas.
4. No attempt has ever been made so far by the State Government to popularise the craft in the rural areas by granting incentives and other concessions.
5. There is no school or institution even in Srinagar where apprentices could receive necessary training and learn the art of wood carving.

Wages

The statistics collected during the course of the survey conducted by the Census Department disclose that wood carving industry is monopolised by two castes only, namely, najars (carpenters) and naqashgirs (wood carvers). The average wages of a carpenter, as obtaining in 1960, varied from Rs. 120/- to Rs. 150/- per month. A naqashgir or wood carver earned Rs. 80/- to Rs. 100/- per month, depending upon the skill acquired by him. Children employed as paid apprentices were being paid different rates ranging from 50 naya paise to 75 naya paise per day.

It may, however, be remarked here that these averages hold good for only such parts of the year when there is a great demand for wood carving products and the artisans have to work for 8 to 10 hours a day. During the slack season, the off-take is comparatively small and the rates are reduced by about 25% in each case.

Out put

The questionnaire canvassed by the Census organisation did not envisage collection of data indicating the aggregate value of wood carving articles produced in the State. Enquiries made from various departments and principal industrial concerns indicate that the annual production is estimated to value about Rs. 22.00 lakhs. No reliance can, however, be placed on these figures.

Marketing

According to the Census data, the number of families engaged in wood carving industry stands at 212 and these are concentrated in 46 different mohallas of Srinagar city. It may be remarked here, however, that the survey was conducted in only 347 mohallas out of 392 mohallas, which are

Nest set of four tables

included in the city of Srinagar. In any case, 85 of these families produce goods against orders placed with them by middlemen who advance money and undertake the marketing of the products. The remaining 127 families negotiate the sale either direct with the visitors and tourists or dispose of the goods to the dealers who run large commercial concerns of Kashmir handicrafts. In the latter case, the dealers exploit the pecuniary distress of the artisans and make purchases at prices which hardly cover the cost of production. Some relief has, of late, been provided to the artisans by the Kashmir Government Arts Emporium and the Induscos who maintain their own production centres and pay appropriate wages to the workers.

The total number of workers is estimated at 905, all of whom are males. As stated above, they belong to 212 families indicating thereby that the average number of artisans contributed by each family stands at about 4.3. A few workers belonging to about 60 of these families are members of the solitary industrial co-operative society which has been established in the city during the last decade.

No statistics are available to indicate the cost of wood carving products consumed locally and of those exported to foreign countries. The survey conducted by the Ministry of Commerce and Industry, Government of India, in 1959, however, shows that the bulk of the products valued at Rs. 5,38,000/- were exported in 1959 to foreign countries. Important among the countries which make imports of wood carving articles from Kashmir are Canada, U.S.A., U.K., France, West Germany etc. etc.

Organisation

Except for a few important industrial concerns, wood carving is carried on mostly on the scale of cottage industry. The master-artisan sets up his workshop in one of the rooms of the residential

house, his co-workers being mainly the members of his own family. He also engages occasionally artisans paid on piece-wage basis who are required to work in the workshop under the personal supervision of the master-artisan.

The master-artisan enrolls the male children of his family at an early age of 10 or so, as apprentices. Sometimes, children of other families are also recruited and given necessary training. Not before the children grasp the broad outlines of the art and are able to handle rudimentary work, any remuneration is paid to them. Their wages do not initially exceed 50 naya paise to Re. 1/- per day, depending upon their proficiency. After about 2 to 3 years, the wage rate is enhanced and fixed at Rs. 1.50 per day. If the apprentices evince sufficient interest in the work and if their performance is upto the mark, they are paid at the rate of Rs. 3/- per day, when they are only 16 or 17 years old.

Working season

The most brisk season for the production and sale of wood carved objects is summer and extends from April to September. During this period, majority of the workshops and factories provide employment to their workers for 20 to 25 days a month. In autumn and winter, however, when wood carving objects are not very much in demand due to the absence of tourists, the size of employment is reduced and the number of working days is limited to 15 to 20 per month. There are very few establishments, however, in which the artisans work for more than 25 days around the year.

Skilled craftsmen

As indicated above, Table VII gives the list of very skilled craftsmen in each territorial unit. The total number of wood carvers who are reputed for their high skill and proficiency is estimated at 73 who belong to 44 different mohallas of Srinagar city.

NAMDAH INDUSTRY

Origin

The namdah industry in Kashmir dates back to the days of emperor Akbar who is said to have imported some artisans from Kabul to manufacture 'Julie', an underwear used beneath the saddle of a horse. Till the first quarter of the twentieth century, the local artisans engaged themselves in the manufacture of Julie-felts only which were made exclusively of Pashmina wool. Namdhas were then imported from Yarkand, a Central Asian Territory now forming part of U.S.S.R. The principal constituents of the imported namdahs were wool and cotton which were employed in fixed proportions. In 1918, the manufacturing of namdahs was taken up for the first time at Nawab-bazar, Srinagar, by a well-known firm named Khwaja Garib Shah Ahad Bhat after its proprietors. This was followed by the establishment of two well organised commercial concerns, Achemby Trading Corporation and Modern Felt Co., which started the export of namdahs to foreign countries and to other States in India. After the occupation of Yarkand by U.S.S.R. namdahs of Yarkandi pattern began to be manufactured in the State. Unlike Julie-felts, the new product was not made exclusively of wool but contained both wool and cotton in the proportion of 3 to 1.

Growth

Consequent upon the stoppage of imports from Yarkand, Kashmiri artisans started the manufacturing of felts on the scale of a cottage industry. The price of raw wool began to rise and went up from Rs. 20/- a maund of 1919 to Rs. 60/- in 1931. The previous proportion of 3 to 1 was no longer maintained and the quantum of wool was steadily reduced to bring down the costs and to ensure marketability.

During the Second World War, the demand for namdahs in foreign countries, particularly in United States, increased enormously. As a result, many people who had no knowledge of the technique of the industry started the production of namdah rugs with the result that the quality deteriorated and most of the orders received from abroad were cancelled. The Achemby Trading Corporation and Modern Felt Co., however, maintained their quality standards and by 1947

were transacting business worth Rs. 25 lakhs a month, although in the meanwhile the price of wool per maund had soared to Rs. 120/-.

Following the tribal raids of 1947, a number of supplying centres of raw material, namely, Rawalpindi, Mirpur, Peshawar and Mardan, discontinued to feed the industry. Abdul Aziz Khan, a pioneer in the line, explored Kulu and Kangra and managed to procure wool in sufficient quantity. The Government of India also extended their patronage to develop the industry and organised the sale of cotton on permit system to the manufacturers.

The cumulative effect of all these events was a progressive reduction in the proportion of wool used in the manufacturing of namdahs. By 1952 when the price of wool reached the peak figure of Rs. 400/- a maund, the felts manufactured contained only 30% wool and 70% cotton. This was regarded as a second grade namdah, the first which was manufactured very seldom contained wool and cotton in equal proportion.

During the last few years, the qualitative production has further deteriorated and the wool content in a namdah has been reduced to 22% only as against 78% cotton.

Technique

The following processes are involved in the manufacturing of a namdah :—

1. The wool is first cleaned of crude foreign matter by women and then disentangled by a machine.
2. Seeds are removed from cotton by machine after which it is ginned by the cotton scutcher.
3. Three layers of ginned wool and cotton are spread on a grass mat one above the other. The first consists of wool weighing 11% of the total weight of the namdah. The second which is the thickest layer contains cotton only which accounts for 78% of the material used. The top most layer also consists of wool equal to 11% of the total weight or the same as employed in the first layer.

When the cleaned and sorted raw wool fibres are ready for carding two essentially indigenous Indian implements, called a *dhone* (bow) and a *duss* (beater) respectively, combined to accomplish this craft process.

The *dhone*, made of Himalaya pine and here seen in an upright position, consists of a round, smooth tapering shaft terminating in a centrally groove scroll resembling that of a violin only much larger. The gut-string of a goat having been wound 'round and round' the lower central area of the shaft to serve as a reserve supply in case the string should break during the beating operation, spirals up and over a groove in the scroll at the apex of the shaft. From there it slants precipitantly down to fit into a groove on the outer curve of a piece of Himalaya pine shaped something like a ship's rudder at which point the gut-string turns tautly into a groove in the latter's base and is finally pegged down close to where this so-called rudder shape is attached to the thick, round base of the shaft.

The *duss* (beater) consists of a smooth polished form carved in the shape of a dumb-bell out of a solid piece of tamarind wood. Its performance consists of beating the gut-string when carding the raw wool fibres takes place.

AARI—(Steel chainstitch embroidery needle set in a wooden handle which is used in embroidering the Namdah : Length : 9")

From a ball of the dyed woollen yarn held in the chainstitch embroidery craftsman's left hand underneath the *Namda*, and holding in his right hand the wooden handle of the *aari* in which is set a long steel shaft ending in a crochet hook, he plunges the hook through the felt into the waiting ball of embroidery yarn underneath and brings up just enough of it to throw in front of the hook of the *aari* into the felted fabric to bring up in order to form a narrow loop of the yarn. Again the needle is plunged down just behind the end of the first loop to bring up another from the concealed ball of yarn which, when surfaced, is, as before, thrown forward to form another long narrow loop and thus anchor the first loop down. This process goes on until all the variously coloured patterned areas of the *Namda* are solidly filled with close-fitting parallel lines of chainstitch embroidery.

When the *dbone* and the *duss* go into combined action it is to be noted that the *dbone* is put in balance by a suspended cord that bisects a wooden bow attached by a nail to the ceiling. The proximal end of this cord is connected by means of a double steel hook to a folding string and wooden harness permanently attached to the rudder-shaped form. It is this mechanism that supplies the *dbone* with its initial movement and subsequent momentum when the raw wool fibres are beaten into fluffy masses of them by the vibrations of the gut-string.

Disentangling the lumps of cotton

Carding Cotton

Spreading wool and cotton on a mat in three layers alternatively of wool and cotton. Each layer is pressed with the help of sticks

The mat on which the layers have been laid is rolled on the open ground after being twisted and bound by ropes

The Namdah is rubbed with soap while still on the mat and is afterwards transferred to a specialist for washing

Unrolling of the Namdah

When the felt is dried, the pattern maker or the "Naqash" draws a design on it

The finished product after the "Jalakdooz" has embroidered the design in yarn of different colours

A group of jolly Namdah workers enjoying their evening tea

KULE-DAR

4. Each layer is pressed hard by a stick and by hand before the next layer is placed on it.
5. The mat is then firmly twisted and folded. It is bound by ropes and rolled in open space by two persons for about an hour.
6. It is again unfolded and rubbed with soap while still on the mat.
7. After this, the rug is transferred for washing to a washerman who is specialised in this line.
8. When the felt dries up, it is returned to the manufacturer who either puts it up straightaway for sale or transfers it to the pattern maker who draws a design on it.
9. It is then handed over to the embroiderer called jalakdooz for the execution of the design in yarns of different colours. Normally, only ten colours are used but in special cases, the number of colours may run even upto thirty.
10. After the embroiderer finishes his job, the rug is sent to an ordinary washerman for washing.

Localisation

The survey conducted at the Census of 1961 has disclosed that namdah industry is confined to Srinagar city only and is not found in any other part of the State. According to the data collected at the Census, namdah manufacturers, who number 506 males, are concentrated in fifteen mohallas and belong to 185 families. Of these, 48 families are members of co-operative societies and the remaining 137 either work in their own houses or in the industrial establishments set up by their employers.

Namdah embroiderers do not belong to the same localities in which the manufacturers reside though incidentally they also inhabit 15 different mohallas. As the embroidery work takes longer time than that involved in the manufacturing process of namdah, the total number of embroidery workers stands at 565 who belong to 273 families. Of these, 80 families work in co-operative societies and 193 are employed by others and work either in their own houses or in the workshops of their proprietors.

Sizes

Namdahs are manufactured in different sizes

and varying designs. The most common namdahs are rectangular measuring (1) 3' x 2', (2) 4' x 3', (3) 5' x 2½', (4) 6' x 4', (5) 6' x 9', (6) 8' x 5', (7) 9' x 12' and (8) 18' x 15'. The standard size in which the bulk of namdahs is manufactured is 6' x 4'.

Round or circular namdahs have usually a radius of 1' only. Oval shaped namdahs are manufactured in two sizes, viz. 5' x 3' and 6' x 4'.

Raw Material

The local production of wool being very deficient, 120 families out of the total number of 185 depend on imported wool from Punjab, Himachal Pradesh and Rajasthan. Cotton is not at all produced locally and the entire quantity required for the industry is imported from Amritsar, Jullunder, Moga, Ambala and Delhi.

Soap which is the main subsidiary material used is manufactured locally.

In so far as the materials used in embroidery work are concerned, both woollen yarn and cotton mill yarn are imported from Amritsar, Ludhiana and Delhi. Even the colours of the yarns are not available locally and are imported.

Designs

The data given in Table IV shows that 62 families of namdah manufacturers living in three of the fifteen mohallas still follow the traditional designs. There are, however, 75 families belonging to 8 different mohallas which conceive designs of their own to meet the changing tastes of the prospective customers. The Co-operative Sales Societies also evolve new designs and cater 48 families.

It may be mentioned here that the Government of India have also set up a School of Designs in Srinagar which produces new designs and circulates the same among the manufacturers for adoption. The school is doing good work and is making a substantial contribution to the development of the industry.

The traditional designs of embroidery work on namdahs are tending to disappear. Only 35 families still follow the old pattern. There are 58 families which adopt designs invented by them. Middlemen who usually undertake the marketing of embroidered namdahs also introduce their own designs which are executed by 75 families.

There are, however, 15 families only which carry out the embroidery work according to the pattern supplied by the design centres. Co-operative Sales Societies also produce their own designs and furnish the same to 80 families. The remaining 10 families receive the designs from other sources.

Following are the most popular designs which are executed by the largest number of embroiderers :—

- (1) Tree and flower
- (2) Chinar leaf
- (3) Birds and animals
- (4) Nursery
- (5) Chain stitch.

The colours used mostly consist of red, green, blue, yellow, black and violet. Among these, red is the most popular colour. Green ranks next followed by violet.

Marketing

Of the 185 families engaged in the industry, 153 manufacture namdahs against orders placed with them by middlemen who advance them money and undertake the marketing. The remaining 32 families make their own investment and dispose of the namdahs either to the dealers or visitors. Similarly, 155 families of embroiderers are engaged by middlemen. Others work on their own initiative.

Cost of production and wages

Table VI gives the statistics of the cost of raw material and of its conversion into finished

product per pound, the average sales price and the wages of a worker.

On the basis of this data, it is not possible to determine the margin of profit either in the case of namdahs or in respect of the embroidery work. Evidently, the extent of profit can be worked out only if the weight of a namdah of a particular size is known. In actual practice, however, the weight of the raw material used varies for namdahs of the same size. At any rate, the wages of a worker appear to be quite meagre when compared with the difference between the cost of production and the sale price.

In the case of embroidery work, the assessment of profit is even more difficult. The cost of conversion of raw material into finished product varies according to the design and quality of embroidery work. By and large, however, a sizable proportion of the profits is appropriated by the middlemen and the exporter.

Quality Control

The State Government have enacted a Namdah Quality Control Act in terms of which every exporter is required to manufacture namdahs containing prescribed proportions of wool and cotton. The finished goods are to be inspected and approved by an Officer specially appointed for the purpose by the State Government before which permission for export is not granted. A strict application of this law is expected to have a salutary effect on the qualitative production of namdahs and to result in the elimination of unscrupulous exporters.

Spinning of wool	13(205)	Rs. 2.50 to Rs. 3.50 per lb. of wool	Rs. 0.06 to Rs. 0.10 per lb.
Woollen blankets, pattus, tweeds, etc. (powerloom)	4(290)	Rs. 10.00 to Rs. 12.00 per lb. of woollen yarn (superior quality) Rs. 15.00 to Rs. 20.00 per lb. of imported woollen yarn	Rs. 0.75 to Rs. 1.50 per yard
Pashmina	15(155)	Rs. 20.00 to Rs. 75.00 per lb. of raw pashmina depending upon its quality and admixture of hair	Rs. 8.00 to Rs. 12.00 per yard
Woollen blankets, loies, pattus etc. (handloom)	40(295)	Rs. 4.00 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 per lb. of cotton yarn	Rs. 22.50 to Rs. 29.00 for a blanket of double width of 6 yards Rs. 4.00 to Rs. 5.00 per pattu (weight 2 seers) Rs. 15.00 to Rs. 20.00 for a loie of 12 yards
Namdas	15(185)	Rs. 2.50 to Rs. 3.50 per lb. of coarse wool Rs. 1.00 per lb. of cotton	Average cost for a namda of 6'x4' is as under :- Rs. 10.00 for a namda of all wool (special quality) Rs. 6.00 to Rs. 7.00 for a namda of all wool (inferior quality) Rs. 4.00 to Rs. 4.50 for a namda comprising of 60% wool and 40% cotton Rs. 3.00 to Rs. 3.50 for a namda comprising of 50% wool and 50% cotton Rs. 2.50 to Rs. 2.75 for a namda comprising of 40% wool and 60% cotton
Carpets	38(715)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn (handspun) Rs. 10.00 to Rs. 12.50 per lb. of mill spun woollen yarn Rs. 17.25 to Rs. 20.00 per lb. of worsted yarn Rs. 2.00 per lb. of cotton yarn	Rs. 4.00 to Rs. 12.00 per sq. foot depending upon quality, design and size of the carpet

URBAN

SALE PRICE AND EARNINGS

Average sale price of finished goods	Average earning per worker	Remarks
5	6	7
KASHMIR STATE—contd.		
Rs. 1.25 to Rs. 2.75 per yard	Rs. 75.00 to Rs. 90.00 per month	A worker in this industry on an average weaves 6 to 8 yards of cotton cloth per day of 8 working hours.
Rs. 1.00 to Rs. 2.00 per yard	Rs. 60.00 to Rs. 75.00 per month	A worker on an average weaves 5 to 6 yards of khader in a day.
Rs. 0.75 to Rs. 1.50 per yard	Rs. 90.00 to Rs. 100.00 per month	A worker on an average prints 20 to 30 yards of cloth in a day.
Rs. 4.50 to Rs. 6.00 per lb.	Rs. 45.00 to Rs. 60.00 per month	On an average a worker can spin $\frac{1}{2}$ lb. to 1 lb. of wool in a day.
Rs. 12.00 to Rs. 30.00 per yard	Rs. 75.00 to Rs. 90.00 per month	The output in this industry is 10 to 12 yards per powerloom per day of 8 working hours.
Rs. 35.00 to Rs. 40.00 per yard	Weaving wages are given according to piece rate system. For a doshala measuring $12 \times \frac{1}{2}$ yds. a weaver gets about Rs. 75.00 to Rs. 90.00 and for a shawl measuring $12 \times \frac{1}{2}$ yds. about Rs. 150.00. The monthly earning of a weaver range between Rs. 70.00 to Rs. 80.00	The units engaged in pashmina weaving purchase raw pashmina and have it spun from women who are paid about Rs. 0.60 to Rs. 1.00 for 3 to 4 hours of spinning. The daily output of a worker engaged in pashmina weaving comes to about $\frac{1}{2}$ yard.
Rs. 45.00 to Rs. 55.00 for a blanket of double width of 6 yards Rs. 20.00 to Rs. 25.00 for a pattu (weight 2 seers) Rs. 35.00 to Rs. 50.00 for a loie of 12 yards	Rs. 75.00 to Rs. 90.00 per month	Blankets, pattus, loies etc. manufactured are rough and are poor in finish as the method adopted is very crude. A worker on an average weaves 2 to 3 yards of blankets etc. in a day.
Prices of felts depend on their quality which in turn depend on wool content in the felt. Average sale price for a namda of 6'x4' is as under :- Rs. 25.00 to Rs. 30.00 for a namda of all wool (special quality) Rs. 18.00 to Rs. 22.00 for a namda of all wool (inferior quality) Rs. 14.00 to Rs. 16.00 for a namda comprising of 60% wool and 40% cotton Rs. 9.00 to Rs. 12.00 for a namda comprising of 50% wool and 50% cotton Rs. 7.50 to Rs. 8.50 for a namda comprising of 40% wool and 60% cotton	Rs. 60.00 to Rs. 75.00 per month in case of an adult and Rs. 30.00 for a semi-skilled worker	A worker on an average makes one namda measuring 6'x4' in about 2 days. Other sizes usually manufactured are 9'x6' and $7\frac{1}{2}' \times 4\frac{1}{2}'$.
There is a wide range in the prices of carpets depending upon quality, design and size. Though the prices of carpets vary widely yet Rs. 10.00 to Rs. 30.00 may be taken as the average sale price per sq. foot	Average earnings of an adult worker range between Rs. 75.00 Rs. 90.00 while a boy acting as an apprentice earns about Rs. 20.00 to Rs. 25.00 per month.	A worker on an average manufactures $\frac{1}{2}$ to $\frac{1}{3}$ sq. foot of carpet in a day. Sizes mostly manufactured are 3'x6', 4'x7', 6'x9' and 9'x12'.

JAMMU AND			
Gabba and gabba embroidery	23(223)	Usually old and worn-out loies and blankets are purchased at Rs. 7.00 to Rs. 10.00 per piece	Rs. 15.00 to Rs. 17.00 in case of superior quality gabba measuring 3x1½ yds. Rs. 8.00 to Rs. 10.00 in case of inferior quality gabba measuring 3x1½ yds
Namda embroidery	15(273)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 to Rs. 2.50 per lb. of cotton mill yarn	It depends upon the design and quality of embroidery done
Shawls	44(325)	Rs. 7.00 to Rs. 12.00 per yard of ruffle cloth Rs. 30.00 to Rs. 40.00 per yard of pashmina cloth Rs. 18.00 to Rs. 20.00 per lb. of ruffle	It depends upon the weight and embroidery of the shawl
Silk cloth (powerloom)	10(870)	Rs. 38.00 to Rs. 40.00 per lb. of raw silk yarn	Rs. 0.50 to Rs. 0.75 per yard
Silk cloth (handloom)	37(163)	Rs. 38.00 to Rs. 40.00 per lb. of raw silk yarn	Rs. 0.75 to Rs. 1.00 per yard
Durries	4(11)	Rs. 1.50 to Rs. 2.00 per lb. of coarse cotton yarn	Rs. 1.00 to Rs. 2.00 per sq. foot
Sweaters, socks, mufflers etc.	8(13)	Rs. 2.55 to Rs. 7.50 per lb. of woollen yarn Rs. 2.00 per lb. of cotton yarn Rs. 7.00 per lb. of silken yarn	Rs. 0.75 to Rs. 2.00 per pair of woollen socks Rs. 0.15 to Rs. 0.75 per pair of cotton socks Rs. 1.00 to Rs. 3.00 per woollen muffler Rs. 5.00 to Rs. 12.00 per woollen sweater Rs. 1.00 to Rs. 2.00 per pair of woollen gloves
Nalas and azarbands	7(18)	Rs. 2.00 per lb. of cotton thread Rs. 7.00 per lb. of silken thread	Rs. 1.00 to Rs. 2.00 per lb. of finished nalas
Silk sarees and other embroidery works	11(210)	Rs. 4.00 to Rs. 5.50 per yard of silk cloth	Rs. 5.00 to Rs. 20.00 per saree depending upon the size, design and embroidery
Embroidery in jari thread	6(66)	Rs. 2.50 to Rs. 3.50 per tola of tilla	Rs. 2.00 per tola
Caps etc.	18(87)	Rs. 1.25 to Rs. 2.00 per yard of cotton cloth Rs. 2.50 per tola of tilla	Rs. 0.30 to Rs. 0.50 per cap

URBAN

SALE PRICE AND EARNINGS

Average sale price of finished goods	Average earning per worker	Remarks
5	6	7
KASHMIR STATE—contd.		
Rs. 32.00 to Rs. 36.00 for a superior quality gabba measuring 3x1½ yds. Rs. 16.00 to Rs. 22.00 for an inferior quality gabba measuring 3x1½ yds.	The workers are paid on the basis of piece work so that their incomes depend on their activity and speed. A worker on an average gets Rs. 60.00 to Rs. 75.00 per month depending upon the quality of work	A worker on an average makes one gabba measuring 3x1½ yards in 2 to 3 days. One gabba of 3x1½ yards requires 2 to 2½ lbs. of woollen yarn to cover its embroidery.
Prices vary between Rs. 5.00 to Rs. 12.00 per piece depending upon the design and raw material used	Rs. 75.00 to Rs. 80.00 per month depending upon the design and quality of work	One namda of 6'x4' requires ½ to 1 lb. of woollen yarn to cover its embroidery.
The ruffle and pashmina shawls are available in various price ranges according to their weight and embroidery. The cheapest ruffle shawl costs about Rs. 15.00 to Rs. 20.00 while the costlier is priced at Rs. 100.00 to Rs. 175.00. Pashmina shawls are still costlier because their prices are about 5 to 6 times more than ruffle	Rs. 75.00 to Rs. 90.00 for ruffle shawl and Rs. 90.00 to Rs. 120.00 for pashmina shawl worker	The output of a worker engaged in this industry depends upon the design and the quality of embroidery done.
Rs. 4.12 to Rs. 5.00 per yard	Rs. 80.00 to Rs. 100.00 per month	The output in this industry is about 18 yards of silk cloth per powerloom per day of 8 working hours.
Rs. 4.50 to Rs. 5.50 per yard	Rs. 75.00 to Rs. 90.00 per month	A skilled worker on an average weaves 5 to 6 yards of silk cloth in a day of 8 working hours.
Rs. 3.00 to Rs. 4.50 per sq. foot	Rs. 90.00 to Rs. 100.00 per month	
Rs. 2.00 to Rs. 5.50 per pair of woollen socks Rs. 0.60 to Rs. 2.00 per pair of cotton socks Rs. 3.00 to Rs. 7.00 per woollen muffler Rs. 14.00 to Rs. 25.00 per woollen sweater Rs. 5.00 per pair of woollen gloves	A skilled worker earns Rs. 120.00 to Rs. 160.00 while a semi-skilled worker gets between Rs. 60.00 to Rs. 80.00 per month	A worker in this industry manufactures 2 to 3 pairs of socks or one muffler or one pair of gloves in a day. It takes him about 3 days to prepare a woollen sweater.
Rs. 4.00 to Rs. 5.50 per lb. of finished nalas	Rs. 30.00 to Rs. 45.00 per month	
Rs. 30.00 to Rs. 80.00 per saree depending upon the size, design and embroidery	A skilled worker earns Rs. 90.00 to Rs. 120.00 while a minor or semi-skilled worker gets from Rs. 20.00 to Rs. 30.00 per month	
Rs. 6.00 to Rs. 7.00 per tola	Rs. 75.00 to Rs. 90.00 per month	A skilled craftsman's output in this industry is about ½ tola of tilla work in a day. One tola of tilla work requires ½ tola of silken thread.
Rs. 1.00 to Rs. 2.50 per cap	Rs. 75.00 to Rs. 90.00 per month	A worker on an average makes 6 to 8 caps in a day.

Woollen blankets, pattus, tweeds etc. (powerloom)	4(290)	Rs. 10.00 to Rs. 12.00 per lb. of woollen yarn (superior quality) Rs. 15.00 to Rs. 20.00 per lb. of imported woollen yarn	Rs. 0.75 to Rs. 1.50 per yard
Pashmina	15(155)	Rs. 20.00 to Rs. 75.00 per lb. of raw pashmina depending upon its quality and admixture of hair	Rs. 8.00 to Rs. 12.00 per yard
Woollen blankets, loies etc. (handloom)	12(165)	Rs. 5.00 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 per lb. of cotton yarn	Rs. 24.00 to Rs. 29.00 for a blanket of double width of 6 yards Rs. 4.50 to Rs. 5.00 per pattu (weight 2 seers) Rs. 16.00 to Rs. 20.00 for a loie of 12 yards
Namdass	15(185)	Rs. 2.50 to Rs. 3.50 per lb. of coarse wool Rs. 1.00 per lb. of cotton	Average cost for a namda of 6'x4' is as under :- Rs. 10.00 for a namda of all wool (special quality) Rs. 6.00 to Rs. 7.00 for a namda of all wool (inferior quality) Rs. 4.00 to Rs. 4.50 for a namda comprising of 60% wool and 40% cotton Rs. 3.00 to Rs. 3.50 for a namda comprising of 50% wool and 50% cotton Rs. 2.50 to Rs. 2.75 for a namda comprising of 40% wool and 60% cotton
Carpets	38(715)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn (handspun) Rs. 10.00 to Rs. 12.50 per lb. of mill spun woollen yarn Rs. 17.25 to Rs. 20.00 per lb. of worsted yarn Rs. 2.00 per lb. of cotton yarn	Rs. 4.00 to Rs. 12.00 per sq. foot depending upon quality, design and size of the carpet
Gabba embroidery	7(80)	Usually old and worn-out loies and blankets are purchased at Rs. 8.00 to Rs. 10.00 per piece	Rs. 16.00 to Rs. 17.00 in case of superior quality gabba measuring 3x1½ yards Rs. 8.75 to Rs. 10.00 in case of inferior quality gabba measuring 3x1½ yards
Namda embroidery	15(273)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 to Rs. 2.50 per lb. of cotton mill yarn	It depends upon the design and quality of embroidery done

SALE PRICE AND EARNINGS

Average sale price of finished goods 5	Average earning per worker 6	Remarks 7
DISTRICT—contd.		
Rs. 12.00 to Rs. 30.00 per yard	Rs. 75.00 to Rs. 90.00 per month	The output in this industry is 10 to 12 yards per powerloom per day of 8 working hours.
Rs. 35.00 to Rs. 40.00 per yard	Weaving wages are given according to piece rate system. For a doshala measuring 12x½ yards a weaver gets about Rs. 75.00 to Rs. 90.00 and for a shawl measuring 12x½ yards about Rs. 150.00. The monthly earning of a weaver range between Rs. 70.00 to Rs. 80.00	The units engaged in pashmina weaving purchase raw pashmina and have it spun from women who are paid about Rs. 0.60 to Rs. 1.00 for 3 to 4 hours of spinning. The daily output of a worker engaged in pashmina weaving comes to about ½ yard.
Rs. 48.00 to Rs. 55.00 for a blanket of double width of 6 yards Rs. 20.00 to Rs. 25.00 for a pattu (weight 2 seers) Rs. 42.00 to Rs. 50.00 for a loie of 12 yards	Rs. 80.00 to Rs. 90.00 per month	Blankets, pattus, loies etc. manufactured are rough and are poor in finish as the method adopted is very crude. A worker on an average weaves 2 to 3 yards of blankets etc. in a day.
Prices of felts depend on their quality which in turn depend on wool content in the felt. Average sale price for a namda of 6'x4' is as under :- Rs. 25.00 to Rs. 30.00 for a namda of all wool (special quality) Rs. 18.00 to Rs. 22.00 for a namda of all wool (inferior quality) Rs. 14.00 to Rs. 16.00 for a namda comprising of 60% wool and 40% cotton Rs. 9.00 to Rs. 12.00 for a namda comprising of 50% of wool and 50% cotton Rs. 7.50 to Rs. 8.50 for a namda comprising of 40% wool and 60% cotton	Rs. 60.00 to Rs. 75.00 per month in case of an adult and Rs. 30.00 for a semi-skilled worker	A worker on an average makes one namda measuring 6'x4' in about 2 days. Other sizes usually manufactured are 9'x6' and 7½'x4½'.
There is a wide range in the prices of carpets, depending upon quality, design and size. Though the prices of carpets vary widely yet Rs. 10.00 to Rs. 30.00 may be taken as the average sale price per sq. foot	Average earnings of an adult worker range between Rs. 75.00 to Rs. 90.00 while a boy acting as an apprentice earns about Rs. 20.00 to Rs. 25.00 per month	A worker on an average manufactures ½ to 1 sq. foot of carpet in a day. Sizes mostly manufactured are 3'x6', 4'x7', 6'x9' and 9'x12'.
Rs. 33.50 to Rs. 36.00 for a superior quality gabba measuring 3x1½ yards Rs. 18.00 to Rs. 22.00 for an inferior quality gabba measuring 3x1½ yards	The workers are paid on the basis of piece work so that their income depend on their activity and speed. A worker on an average gets Rs. 60.00 to Rs. 75.00 per month depending upon the quality of work	A worker on an average makes one gabba measuring 3x1½ yards in 2 to 3 days. One gabba of 3x1½ yards requires 2 to 2½ lbs. of woollen yarn to cover its embroidery.
Prices vary between Rs. 5.00 to Rs. 12.00 per piece depending upon the design and raw material used	Rs. 75.00 to Rs. 80.00 per month depending upon the design and quality of work	One namda of 6'x4' requires ½ to 1 lb. of woollen yarn to cover its embroidery.

Woollen blankets, pattus, tweeds etc. (powerloom)	4(290)	Rs. 10.00 to Rs. 12.00 per lb. of woollen yarn (superior quality) Rs. 15.00 to Rs. 20.00 per lb. of imported woollen yarn	Rs. 0.75 to Rs. 1.50 per yard
Pashmina	15(155)	Rs. 20.00 to Rs. 75.00 per lb. of raw pashmina depending upon its quality and admixture of hair	Rs. 8.00 to Rs. 12.00 per yard
Woollen blankets, loies etc. (handloom)	12(165)	Rs. 5.00 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 per lb. of cotton yarn	Rs. 24.00 to Rs. 29.00 for a blanket of double width of 6 yards Rs. 4.50 to Rs. 5.00 per pattu (weight 2 seers) Rs. 16.00 to Rs. 20.00 for a loie of 12 yards
Namdaz	15(185)	Rs. 2.50 to Rs. 3.50 per lb. of coarse wool Rs. 1.00 per lb. of cotton	Average cost for a namda of 6'x4' is as under :- Rs. 10.00 for a namda of all wool (special quality) Rs. 6.00 to Rs. 7.00 for a namda of all wool (inferior quality) Rs. 4.00 to Rs. 4.50 for a namda comprising of 60% wool and 40% cotton Rs. 3.00 to Rs. 3.50 for a namda comprising of 50% wool and 50% cotton Rs. 2.50 to Rs. 2.75 for a namda comprising of 40% wool and 60% cotton
Carpets	38(715)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn (handspun) Rs. 10.00 to Rs. 12.50 per lb. of mill spun woollen yarn Rs. 17.25 to Rs. 20.00 per lb. of worsted yarn Rs. 2.00 per lb. of cotton yarn	Rs. 4.00 to Rs. 12.00 per sq. foot depending upon quality, design and size of the carpet
Gabba embroidery	7(80)	Usually old and worn-out loies and blankets are purchased at Rs. 8.00 to Rs. 10.00 per piece	Rs. 16.00 to Rs. 17.00 in case of superior quality gabba measuring 3x1½ yards Rs. 8.75 to Rs. 10.00 in case of inferior quality gabba measuring 3x1½ yards
Namda embroidery	15(273)	Rs. 4.50 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 to Rs. 2.50 per lb. of cotton mill yarn	It depends upon the design and quality of embroidery done

URBAN

SALE PRICE AND EARNINGS

Average sale price of finished goods	Average earning per worker	Remarks
5	6	7
MUNICIPALITY—contd.		
Rs. 12.00 to Rs. 30.00 per yard	Rs. 75.00 to Rs. 90.00 per month	The output in this industry is 10 to 12 yards per powerloom per day of 8 working hours.
Rs. 35.00 to Rs. 40.00 per yard	Weaving wages are given according to piece rate system. For a doshala measuring 12x½ yards a weaver gets about Rs. 75.00 to Rs. 90.00 and for a shawl measuring 12x½ yards about Rs. 150.00. The monthly earning of a weaver range between Rs. 70.00 to Rs. 80.00	The units engaged in pashmina weaving purchase raw pashmina and have it spun from women who are paid about Rs. 0.60 to Rs. 1.00 for 3 to 4 hours of spinning. The daily output of a worker engaged in pashmina weaving comes to about ½ yard.
Rs. 48.00 to Rs. 55.00 for a blanket of double width of 6 yards Rs. 20.00 to Rs. 25.00 for a pattu (weight 2 seers) Rs. 42.00 to Rs. 50.00 for a loie of 12 yards	Rs. 80.00 to Rs. 90.00 per month	Blankets, pattus, loies etc. manufactured are rough and are poor in finish as the method adopted is very crude. A worker on an average weaves 2 to 3 yards of blankets etc. in a day.
Prices of felts depend on their quality which in turn depend on wool content in the felt. Average sale price for a namda of 6'x4' is as under :- Rs. 25.00 to Rs. 30.00 for a namda of all wool (special quality) Rs. 18.00 to Rs. 22.00 for a namda of all wool (inferior quality) Rs. 14.00 to Rs. 16.00 for a namda comprising of 60% wool and 40% cotton Rs. 9.00 to Rs. 12.00 for a namda comprising of 50% of wool and 50% cotton Rs. 7.50 to Rs. 8.50 for a namda comprising of 40% wool and 60% cotton	Rs. 60.00 to Rs. 75.00 per month in case of an adult and Rs. 30.00 for a semi-skilled worker	A worker on an average makes one namda measuring 6'x4' in about 2 days. Other sizes usually manufactured are 9'x6' and 7½'x4½'.
There is a wide range in the prices of carpets, depending upon quality, design and size. Though the prices of carpets vary widely yet Rs. 10.00 to Rs. 30.00 may be taken as the average sale price per sq. foot	Average earnings of an adult worker range between Rs. 75.00 to Rs. 90.00 while a boy acting as an apprentice earns about Rs. 20.00 to Rs. 25.00 per month	A worker on an average manufactures ¼ to ½ sq. foot of carpet in a day. Sizes mostly manufactured are 3'x6', 4'x7', 6'x9' and 9'x12'.
Rs. 33.50 to Rs. 36.00 for a superior quality gabba measuring 3x1½ yards Rs. 18.00 to Rs. 22.00 for an inferior quality gabba measuring 3x1½ yards	The workers are paid on the basis of piece work so that their income depend on their activity and speed. A worker on an average gets Rs. 60.00 to Rs. 75.00 per month depending upon the quality of work	A worker on an average makes one gabba measuring 3x1½ yards in 2 to 3 days. One gabba of 3x1½ yards requires 2 to 2½ lbs. of woollen yarn to cover its embroidery.
Prices vary between Rs. 5.00 to Rs. 12.00 per piece depending upon the design and raw material used	Rs. 75.00 to Rs. 80.00 per month depending upon the design and quality of work	One namda of 6'x4' requires ¼ to 1 lb. of woollen yarn to cover its embroidery.

1	2	3	4
BARAMULLA			
Earthen pitchers, plates, cups etc.	1(23)	Clay is obtained free of any cost	Rs. 7.50 to Rs. 9.00 for 100 earthen pots of different sizes
Tinning	1(1)	Rs. 15.00 to Rs. 17.00 per lb. of tin Rs. 0.75 per lb. of Ammonium chloride Rs. 1.25 per lb. of cotton Rs. 0.19 per lb. of charcoal	Rs. 1.00 to Rs. 1.25 for 20 utensils of different sizes
Iron sickle, axes, ploughshare etc.	2(6)	Rs. 0.69 per lb. of iron	Rs. 0.30 per lb.
Repair of watches	1(1)	The spare parts used in the repair of watches are obtained from the dealers' shops at different rates	
Rings, bangles etc.	3(41)	Rs. 142.00 per tola of gold Rs. 2.00 to Rs. 2.25 per tola of silver	Rs. 4.00 per tola of gold Rs. 0.60 per tola of silver
Silver artware	4(11)	Rs. 2.00 to Rs. 2.25 per tola of silver	Rs. 0.56 to Rs. 0.60 per tola of silver
SOPORE			
Bread, biscuit, cake etc.	1(1)	Rs. 0.37 per lb. of maida Rs. 0.60 per lb. of sugar Rs. 0.15 per lb. of salt	Rs. 0.40 to Rs. 0.50 per lb. of breads, biscuits etc. Rs. 1.00 to Rs. 1.25 per lb. of cakes
Oil	5(43)	Rs. 25.00 per maund of oil seeds	Rs. 3.50 per maund
Woollen blankets, pattus and loies	5(25)	Rs. 5.25 to Rs. 6.00 per lb. of woollen yarn Rs. 2.00 per lb. of cotton yarn	Rs. 25.00 for a blanket of double width of 6 yards Rs. 4.00 per pattu (weight 2 seers) Rs. 17.00 for a loie of 12 yards
Gabba embroidery	1(2)	Usually old and worn-out loies and blankets are purchased at Rs. 7.50 to Rs. 10.00 per piece	Rs. 15.50 to Rs. 17.00 in case of superior quality gabba measuring 3x1½ yards Rs. 8.00 to Rs. 9.00 in case of inferior quality gabba measuring 3x1½ yards
BANDIPORA			
Flour	2(2)	Rs. 16.00 to Rs. 18.00 per maund of wheat	Rs. 1.00 per maund of wheat

SALE PRICE AND EARNINGS

URBAN

Average sale price of finished goods	Average earning per worker	Remarks
5	6	7
TOWN AREA—concl'd.		
Rs. 45.00 to Rs. 75.00 for 100 earthen pots of different sizes. The average sale price of a pitcher ranges between Rs. 0.58 to Rs. 0.75, of a cup from Rs. 0.06 to Rs. 0.09 and for a plate from Rs. 0.25 to Rs. 0.37	Rs. 60.00 per month	Pottery is a seasonal industry providing employment for a period of about 8 months in a year. Moulding of earthen pots and other articles is done on an ordinary potter's wheel and later on baked in the furnaces. A worker in this industry on an average makes 20 to 30 earthen pots of different sizes in a day.
Rs. 4.00 to Rs. 4.25 for 20 utensils of different sizes	Rs. 75.00 per month	
Rs. 1.25 per lb.	Rs. 120.00 per month	The cost of fixed assets of blacksmithy varies from Rs. 50.00 to Rs. 90.00 depending upon the nature and quantum of work.
	Rs. 120.00 to Rs. 135.00 per month	The workers engaged in this industry are paid for the repairs undertaken.
Rs. 150.00 per tola of gold Rs. 4.00 per tola of silver	Rs. 125.00 per month	
Prices of the products vary from item to item depending upon the content of silver, engravings and designs. On an average the sale price ranges between Rs. 3.50 to Rs. 4.25 per tola of finished silver products	The artisans are paid according to the quantum of work done. On an average an artisan earns about Rs. 100.00 to Rs. 125.00 per month	
TOWN AREA		
Rs. 1.50 to Rs. 1.75 per lb. of breads, biscuits etc. Rs. 2.75 to Rs. 3.00 per lb. of cakes	Rs. 90.00 per month	
Rs. 85.00 per maund	Rs. 60.00 to Rs. 85.00 per month	The recovery of oil from expellers is about 33 to 35% while from kolhus it is about 30%.
Rs. 50.00 to Rs. 55.00 for a blanket of double width of 6 yards Rs. 23.00 per pattu (weight 2 seers) Rs. 45.00 for a loie of 12 yards	Rs. 75.00 to Rs. 90.00 per month	Blankets, pattus, loies etc. manufactured are rough and are poor in finish as the method adopted is very crude. A worker on an average weaves 2 to 3 yards of blankets etc. in a day.
Rs. 32.50 to Rs. 36.00 for a superior quality gabba measuring 3x1½ yards Rs. 18.00 to Rs. 20.00 for an inferior quality gabba measuring 3x1½ yards	The workers are paid on the basis of piece work so that their incomes depend on their activity and speed. A worker on an average gets Rs. 60.00 to Rs. 75.00 per month depending upon the quality of work	A worker on an average makes one gabba measuring 3x1½ yards in 2 to 3 days. One gabba of 3x1½ yards requires 2 to 2½ lb. of woollen yarn to cover its embroidery.
TOWN AREA		
Rs. 25.00 per maund of atta	Rs. 75.00 per month	The customer usually pays Rs. 1.00 per maund of wheat as grinding charges and takes 39 seers 8 chattaks of atta against one maund of wheat given for grinding.
