CENSUS OF INDIA 1961

Central Government Publications

Census Report, Volume X—Maharashtra, is published in the following Parts

- I-A and B .. General Report
- I-C .. Subsidiary Tables
- II-A .. General Population Tables
- II-B (i) .. General Economic Tables
- II-B (ii) .. General Economic Tables (*Contd.*)
- II-C .. Cultural and Migration Tables
- III .. Household Economic Tables
- IV .. Report on Housing and Establishments [*the present volume*]
- V-A .. Scheduled Castes and Scheduled Tribes in Maharashtra—Tables
- V-B .. Scheduled Castes and Scheduled Tribes in Maharashtra—Ethnographic Notes
- VI (1—35) .. Village Surveys (35 monographs on 35 selected villages)
- VII-A .. Handicrafts in Maharashtra
- VII-B .. Fairs and Festivals in Maharashtra
- VIII-A .. Administration Report—Enumeration (For official use only)
- VIII-B .. Administration Report—Tabulation (For official use only)
- IX .. Census Atlas of Maharashtra
- X .. Cities of Maharashtra
(13 Volumes—Two volumes on Greater Bombay
and
One each on other eleven Cities)

State Government Publications

- 25 Volumes of District Census Handbooks in English
- 25 Volumes of District Census Handbooks in Marathi
- Alphabetical List of Villages in Maharashtra

ACKNOWLEDGEMENTS

We are thankful to Shri G. V. Badhe and Shri K. D. Ballal, Central Tabulation Officers, New Delhi, and their staff who very kindly checked not only the original tables but also the proofs for accuracy and made suggestions for improvement.

In the Maharashtra Census Office Shri G. S. Gokarn, Tabulation Officer and Shri D. G. Pansare and Shri R. N. Pongurlekar, Statistical Assistants, prepared the tables and checked proofs. Shri M. S. Mavinkurve, Cartographer and Shri S. Y. Pradhan, Draughtsman, prepared the maps and charts and Shri K. H. Shevade and Shri C. M. Kane looked after the printing of the volume. Shri D. V. Rangnekar, Deputy Superintendent of Census Operations and Shri G. M. Rajadhyaksha, Tabulation Officer, rendered valuable assistance in the compilation of the report and notes. I am indebted to them all.

I am also thankful to Shri B. W. Khadilkar, Manager, Government Central Press, Bombay and Shri J. D. Gandhi, Manager, Photozincographic Press, Poona, for the excellent printing.

BOMBAY :
26th January 1964

CHAPTER I INTRODUCTION

IT HAS always been the practice in Indian Censuses to number and list out all houses in order to ensure complete coverage of the Census count. The lists of houses were, however, mainly intended for use as controls or guides to the staff doing enumeration work. The contents of the houselists were moreover left to the discretion of the local officers and were never uniform for all States. Little information on housing conditions was collected in the previous Censuses and the decennial Census Reports only discussed the numbers of houses and households for different administrative areas.

2. Things changed in 1961 because the Five-Year Plans gave priority to the programmes for improvement of housing conditions, slum clearance, slum improvement, etc. Housing was recognised as a component factor of national development. The paucity of information on basic items of housing had been felt very acutely and the need for statistics on that topic was greater now than ever before.

3. Available statistical information on industrial establishments was similarly inadequate because the statistics furnished by the Chief Inspector of Factories only covered the factories registered under the Factories Act and did not include thousands of smaller establishments and workshops spread all over the country. Along with the programmes of rapid industrialisation the Five-Year Plans also adopted a policy of taking industries to the village and setting up nucleus towns in the heart of clusters of villages. A complete inventory of existing establishments, workshops and factories and basic statistics on their working were, therefore, essential for carrying out those programmes.

4. While drafting the Questionnaire for the 1961 Census, the National Buildings Organisation and the Ministry of Works, Housing and Supply were consulted in respect of housing and the Ministry of Commerce and Industry in respect of industrial establishments. The opportunity arising in connection with the 1961 Population Census at its housenumbering and houselisting stage was availed of and a Census of Housing and Establishments was taken during the year 1960 with a view to obtaining useful data both in respect of housing and industrial establishments.

The Scheme of the Volume

5. This volume presents the material collected at that Census for Maharashtra and its twenty-six districts for total, rural and urban areas separately and for twenty-six towns which have over 50,000 population. The Tables portion of the volume contains five main tables. Tables E-I, E-II, E-IV and E-V pertain to housing and Table E-III to industrial establishments. A brief note precedes each of these tables and explains its layout, concepts of terms used, the procedures

followed in the 1961 Census and the limitations of the material presented. Tables E-I, E-II, E-IV and E-V also present material for total, rural and urban areas of each taluka separately. None of the Tables included in this volume presents material for Talasari Mahal of Thana District separately as it was formed in the year 1961. This material is included in Dahanu Taluka of the same district. The present Chapter describes how the Census of Housing and Establishments was organised in Maharashtra. Instructions issued for Housenumbering and Houselisting and the Houselist Form are reproduced at the end of the Chapter as Appendix I. Appendix II contains a few extracts from old Census Reports and Gazetteers describing the layout of villages and types of houses for different regions in Maharashtra. Chapters II to V deal with the material on four aspects of housing and the last Chapter VI with that on "Industrial Establishments". A set of Subsidiary Tables prepared from one of the main tables concerned is presented at the end of each Chapter. Those Subsidiary Tables form the statistical basis of the analysis contained in the following Chapters.

The Census of Housing and Establishments

6. Before finalising the format of the 1961 Census Questionnaire the requirements of the various Ministries and State Governments were ascertained in a meeting held with representatives of the Ministries and the Planning Commission in September, 1958. Further discussions were held with the representatives of the State Bureaux of Statistics and Economics in another meeting in October, 1958. The first draft for the Houselist was prepared as a result of those discussions. The Directors of State Statistical Bureaux undertook a pre-test of the first draft. The form was revised on the basis of experience gained at that pre-test. The State Census Superintendents had by that time joined their posts and undertook another pre-test of the revised draft. The suggestions made by the State Census Superintendents were discussed in a meeting held in September, 1959, when the format for the Houselist and instructions for filling it were decided finally.

7. Forms and Instructions in English (Appendix I) were used in Greater Bombay and four cantonment areas. Their Marathi versions were used in all the remaining areas.

8. For the 1951 Census, the numbering of houses had been done in 1949, i.e., two years before the actual Census count. Moreover, only occupied (residential) houses were numbered and listed. In 1961, the numbering and houselisting work was undertaken as the first stage of the 1961 Census Operations. The period of numbering and listing of houses was kept close to the dates of Census count and all houses (whether residential or not) were numbered and listed in the same form all over India.

Existing Municipal or Panchayat Numbers

9. We first examined if it was at all necessary to do housenumbering afresh or if the existing house-numbers given by the Municipalities or Gram Panchayats could be used for the Census. It was found that those numbers were, in many cases, given to properties and not to tenements or households. Several new houses did not have any numbers at all.

10. In Bombay, the municipal numbers were given neither to the buildings nor to the houses or households but to the gates, doors or accesses opening on public roads, streets or lanes. A building having three entrances on three sides had three separate numbers for the three streets. Moreover, the numbers were not given continuously in a row. Odd and even numbers were given on the two opposite sides of each street or lane and both the series were not continuous as they were broken and intermediate numbers left out to secure consecutive odd and even numbers to two buildings facing each other.

11. The existing numbers were thus found to be of no use for the Census. In any case, the enumerators were to visit each house for preparing the houselists. It was, therefore, decided to do the housenumbering for all villages and towns afresh.

Period of Work

12. It had been suggested that housenumbering and houselisting should be done immediately after the monsoon in the year 1959-60. We did not agree and decided to do housenumbering and houselisting work neither too far in advance of actual enumeration nor too close to it so as to affect the training of enumerators adversely. There were two reasons for not undertaking the work too far in advance. One was that the numbers were likely to get washed. The other was that the preparation of houselists involved considerable intensive work on the field and required building of a good tempo of work in the district organisation. It was not possible to develop such a tempo once for housenumbering and houselisting in 1959-60 and again for enumeration in February-March, 1961. In effect, that would have amounted to organising two independent Censuses. It was, therefore, decided to do that work between April and November of 1960.

13. To begin with, we thought of starting housenumbering and houselisting work in all municipal areas from April, 1960, i.e. before the monsoon, thus giving them a few months more to complete it than the rural areas. In the meantime, the bifurcation of Bombay State was in the air and Officers were being transferred in anticipation of their allotment to either of the two new States (Maharashtra and Gujarat). It was, certainly, not a period to undertake any Census work. We, therefore, did not actually start work in any municipal area except Greater Bombay.

14. The work in Greater Bombay was of huge dimensions and the agency contemplated for doing it was also of a different type. A few well-trained men of the Municipal Health Department were to do it by

working over a longer period. Work was, therefore, started in Greater Bombay in April, and continued up to middle of October, 1960. In all other areas of the State, the work was completed between 16th September and 15th October, 1960.

Size of Housenumbering Blocks

15. For enumeration purposes the average population size of enumerator's block had been fixed as 600 in urban areas and 750 in rural areas. It was not, however, possible to have the same size of blocks at Stage I for housenumbering and houselisting, firstly, because it would have meant giving independent running series of house numbers for very small areas and, secondly, because it was not advisable to draw a large number of employees from other Government Departments to work for a short period and to add so much training load on the Charge Officers at the very first stage of Census work.

16. The Pre-test had shown that an average worker did housenumbering alone of 160 houses and listing alone of 50 to 60 houses per day. We decided that the Stage I work given to any enumerator should not make full-time work of more than 15 days. The enumerators were to be drawn from the employees of the State Government or Local Authorities and were to do that work in addition to their normal duties. Doing it part-time, each enumerator, we thought, should be able to complete his assignment within a month. The average size of the block for housenumbering and houselisting was, therefore, fixed at 600 houses or 3,000 population.

17. In Greater Bombay area, housenumbering blocks were called Circles and their sizes were larger with as much as 20,000 population in some cases.

Agency for Field Work

18. Early in 1960, the State Government issued general orders and a few notifications required under the Census Act. The prime responsibility of the Census rested with the Collector of the District. His Personal Assistant now designated as Resident Deputy Collector was designated as the District Census Officer. At the taluka level, the Mamlatdars, Tahsildars and in a few cases Mahalkaris or Naib-Tahsildars who were holding independent charge of tahsils or mahals were appointed as Charge Officers. For municipalities with a population of 20,000 or over in 1951, their Chief Officers (also known in some districts as Chief Executive Officers or Secretaries) were appointed as Charge Officers. For Greater Bombay area, the Executive Health Officer of the Municipal Corporation worked as the Charge Officer, while the Municipal Medical Officer of Health and Deputy Municipal Commissioner were appointed as such for Poona and Nagpur Municipal Corporation areas, respectively.

19. The work of housenumbering and houselisting was done mainly by the Revenue and Municipal staff. Employees of the other Departments were appointed only in exceptional cases. In rural areas, the talatis in charge of a group of villages for revenue purposes

Training

25. Training for housenumbering and houselisting was organised at the State, District and Charge Office levels. Each trainee had to undergo training in two classes and a field practice of numbering and listing of at least ten houses. A training class did not have more than 50 trainees at a time. In rural areas, the centres for training were fixed in such a manner that the enumerators did not have to travel long distances or to stay at those centres overnight. Copies of the instructions and background material on the Census were sent to the trainees in advance and they were asked to read them carefully before attending any training class.

26. At the State level, the Superintendent of Census Operations gave training to the District Census Officers and the District Statistical Officers in July, 1960, at Bombay. As the housenumbering and listing work was in progress then in Greater Bombay, the trainees were taken round to show how it was actually being carried out. One more training class was held in the first fortnight of August by the Superintendent or one of his colleagues from the Census Office at each district headquarters where the District Census Officer, District Statistical Officer and all Charge Officers, Section Officers and Instructors were trained. The Charge Office level training of enumerators and supervisors was conducted by the District Census Officers, the District Statistical Officers and the Charge Officers between 16th August and 15th September, 1960.

The Scheme of Numbering

27. Running serial numbers were given only to the buildings, and houses or households within a building were marked by sub-numbers written in brackets after the serial number of that building. The sub-numbers for houses were written in numerals like (1), (2), (3), etc., while those for two or more households living in the same house were written in alphabets as (A), (B), (C), etc. Thus, No. 144 (5) meant the House No. 5 in the building bearing the Serial No. 144. The No. 117 (4B) meant the second household living in House No. 4 in building No. 117. Where there was only one household in a house, the number of the house also represented that of the household. Similarly, where there was only one house in a building, the building number and the house number were identical.

28. In Greater Bombay, the administrative areas known as sections were adopted as units for the Census. Each such section was divided into four to eight Circles for the purpose of housenumbering. Each Circle had a separate continuous building number series. The number of the circle concerned was also painted and rounded by a circle as the first element of the building number, which was painted nearabout the main entrance of every building. The circle number was, however, not repeated while writing the numbers of houses or households within a building. To facilitate houselisting work, the total number of houses numbered within a building was also painted after the building number. Thus, a building number written as (5) 245(1-37) marked the building with Serial No. 245 in the fifth Circle of the section and having 37 houses

did the work for those villages except where the group made more than 3,000 population in which case a separate enumerator was appointed for the area in excess of the prescribed limit. Each small village or municipal ward was, however, made a separate block irrespective of its population and a separate set of houselists was prepared for it, though the same enumerator might have worked for two or more such blocks or villages. Only the villages or municipal wards having over 3,000 population were made into two or more Stage I blocks. In municipal areas, the clerks, bill collectors and sanitary or health department employees of the municipalities did the field work. Supervisory staff both in rural and urban areas had been drawn from inspecting or supervising cadres of Revenue Department or Municipal employees.

Enumeration Blocks

20. Each Stage I block had a separate series of house numbers. While preparing the houselists, however, we asked the enumerators to write separate sets for smaller units of about 600 and 750 population in urban and rural areas, respectively. Stage II (enumeration) blocks were thus carved out by the enumerators while writing the houselists in Stage I. They did not close a set of houselists and start another unless some natural boundary (street or lane) or any other important point was reached. Stage II blocks were thus made out, approximating the prescribed population size and having identifiable natural boundaries.

21. Blank sets of Houselists consisting of 4 to 5 houselist forms stitched with a thick brown paper cover and having a capacity for entries of 150 to 200 households were supplied to enumerators. Each such set prepared in Stage I, covered one Stage II block and each enumerator working on houselisting for a Stage I block prepared 4 to 6 such sets. Even in Greater Bombay, Stage II blocks were similarly delimited and separate houselist sets were prepared for each of them.

Enumerators and Supervisors

22. The ratio between enumerators and supervisors was fixed as 6 : 1. Supervisors were required to inspect at least 10 per cent. of each enumerator's work on the field. The enumerators were normally entrusted with blocks in which they were residing and of which they had good local knowledge.

23. In all, 3,414 Supervisors and 18,837 Enumerators worked on the Census of housing and establishments in Maharashtra.

Payment of Honorarium

24. Honorarium for housenumbering and houselisting work was paid to enumerators and supervisors at the following rates. The payment was made as Census work was done in addition to their normal duties. It was intended to meet their out-of-pocket expenses incurred on stationery and to and fro journeys to their blocks.

	Enumerators	Supervisors
Urban Areas	Re. 1 for 24 houses.	Re. 1 for 120 houses.
Rural Areas	Re. 1 for 30 houses.	Re. 1 for 150 houses.

numbered with sub-numbers ranging from (1) to (37). The direction in which the building numbers were proceeding along a street or lane was also shown by arrows painted at the corners of every street or lane. This was to enable enumerators to keep track of the house numbers and to follow, for houselisting or enumeration, the same sequence as far as possible. The back doors of the buildings opening on smaller lanes were painted with letters BK to show that they were back entrances of buildings for which serial numbers had already been painted on their front entrances.

29. To start with, the enumerators took a preliminary round to fix up the direction in which they would go on numbering the buildings and to get acquainted with the outer boundaries of their blocks. Then they completed the numbering of all the houses. They did not do housenumbering and houselisting simultaneously. While writing the houselists in the second round they gave new numbers to a house if they found any left without a number. The time-lag between housenumbering and houselisting was, however, never more than a week.

Houselisting Work

30. For every building numbered for Census purposes, the permanent number if any assigned to it by the Municipality or the Gram Panchayat was entered for identification in column 2 of the houselist. Column 4 showed the purpose for which a Census House was used. Columns 5 to 8 were filled in only where a house was used as an establishment, workshop or a factory. Information from columns 3 to 10 was with reference to each house while that in columns 11 to 17 was for each household. If there was only one household in a house, both the entries for the house and the household appeared on the same line. If there were two or more households in a house, the entries for the second and the third households were made in columns 11 to 17 on the following lines. If there was no household in any house, the entries in columns 11 to 17 for that line remained blank.

31. As has been stated earlier, the work of numbering and listing of houses was completed by 15th October, 1960. The enumerators sent the Census records to Charge Officers who in turn sent them to our office at Bombay. By the middle of November, 1960, we had received the entire Census record from all districts in Maharashtra.

32. Housenumbering and houselisting work was not done in strictly military areas though it was done in the civil areas of each Cantonment.

Contents of the Houselist

33. The information regarding houses and households obtained through the houselists included the following items :—

Houses

- (i) purpose for which the House was used, e.g., dwelling, shop, shop-cum-dwelling, business, factory, workshop, school or other institution, jail, hostel, etc.;
- (ii) material of walls;
- (iii) material of roof;

Households

- (iv) name of the head of the household;
- (v) number of rooms in use by the household;
- (vi) whether the household was living in an owned house or a rented house;
- (vii) persons living in the household—
(a) males, (b) females, (c) total.

Factory or Workshop

If a house was being used as a workshop or a factory the following additional information was obtained for that house :—

- (viii) name of the Firm or Proprietor;
- (ix) name of the product, repair or servicing undertaken;
- (x) average number of persons employed daily last week; and
- (xi) kind of fuel or power used.

34. It will be seen that the houselist did not include any topics regarding water supply, toilet and other sanitary or kitchen room fixtures or (structural) condition of the house. These concepts generally associated with housing in western countries do not obtain in rural and even in many urban areas in India. The houselist was not designed to measure them.

35. As for the characteristics of the households, only the number of persons by sex, i.e., the size of the household and its composition were included. No question on age or income of the head of the household was asked. Other aspects of household economy and individual work were included in the population Census and not in the Census of Housing and Establishments.

36. The purpose for which each house was used, the tenure of its occupancy, structural characteristics like the materials of walls and materials of roof and number of rooms occupied by each household are the aspects on which material has been collected in the Census. These will, together, throw new light on housing conditions in different parts of the country.

37. The complete inventory of establishments, workshops and factories with description of the type of goods produced, fuels used and the number of workers engaged is, however, the most valuable contribution of the 1961 Census. It presents for the first time, complete statistics of location and size of employment in both the organised and smaller categories of establishments working in different sectors of industry.

Definitions

38. The definitions of a "building", a "house", a "household" and an "establishment" used in the 1961 Census are as follows (Also see Appendix I to this Chapter for Standard Instructions) :—

- (i) "Building".—A building was defined as a structure having a roof. This included wooden sheds, thatched huts, etc.

(ii) "House".—A house was defined as a structure or part of a structure (inhabited or vacant or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc.) with a separate entrance whether that separate entrance led directly to the street or to a common staircase, courtyard or a gate.

(iii) "Household".—A household was defined as a group of persons living in a house and eating from the same kitchen unless the exigencies of work prevented any of them from doing so.

(iv) "Establishment".—An establishment, workshop or a factory was defined as a place where goods were produced, processed or repaired. The production, processing or repair work was, however, to be on a commercial scale. Places where goods were only purchased or sold or where they were not produced for sale, were not treated as establishments.

39. Changes in the definition of the "house" and "household" from Census to Census and definitions of other terms relating to structural characteristics like "material of wall", "material of roof", "rooms" and to industry statistics like "production", "fuel", "number of workers", etc., are described in the explanatory notes on the tables concerned as well as in the analysis of material on those topics in Chapters II to VI.

40. The 1961 concept of the "house" is more or less the same as suggested for the international concept of a "housing unit". It has the essential features of separateness and independence. Separateness implies walls, fences, etc., and a roof so that the occupants may isolate themselves for sleeping, preparing and taking meals or protecting themselves from hazards of climate. Independence implies that the occupants can come in or go out without passing through anybody else's premises.

41. The three terms, viz., the "building", the "house" and the "household" are quite different though they are dependent upon each other. The building and the house are structural units of accommodation while the household is a socio-economic unit of population. A building may have one or more houses and a house may be occupied by one or more households. In many cases, a building may have only one house and may be occupied by only one household. In others, as in Bombay, a building may have many houses and each of those houses may be occupied by one or more households. In a few cases, a house may not have any household and may be used for some non-residential purpose like shop, workshop, etc. On the other hand, there are a few cases where a household has two houses, one used as residence and the other as drawing room, etc.

Pre-Tabulation Scrutiny

42. Census records received in the Tabulation Office were first scrutinised for accuracy of coverage. The scrutiny also included checks for internal consistency

in the entries, selection of a 20 per cent. sample on a random basis and coding of entries in certain columns by alphabetical abbreviations. Two out of the five Tables presented in Section II, viz., Table E-I dealing with the purposes for which houses are used and Table E-III related to establishments classified by size of employment and fuel used were prepared on full count. The remaining three Tables, viz., E-II dealing with occupancy tenure, E-IV dealing with the material of walls and material of roof and E-V dealing with number of rooms and number of members of the households were prepared on a 20 per cent. sample. All the five Tables have been prepared for rural and urban areas of each district separately. Tables E-I, E-II, E-IV and E-V also present material for rural and urban areas of each taluka separately. Census records for towns with a population of 50,000 and over in 1951 were separated from other urban areas and Tables E-I, E-II, E-IV and E-V have been prepared and presented here separately for each of the 26 towns of that category. According to 1961 Census, one more town, viz., Kirkee Cantonment, falls in that size group. Housing Tables are not, however, presented separately for that town as it did not have over 50,000 population in 1951 and because much of the area of that town was military area for which houselists had not been prepared.

Compilation of Results

43. Sample households for compilation of Tables E-II, E-IV and E-V were selected systematically by taking every fifth household after a random start. For rural areas the process of selection of sample was continuous over the entire taluka while in the case of urban areas sample households were selected separately for each town with a population of 50,000 and over and for the rest of urban areas of the District.

44. Entries in columns 4, 6, 7, 8, 9, 10 and 14 of the houselist were coded by alphabetical abbreviations. The alphabets used were mostly the first letters of words representing the typical entries in those categories.

45. Each set of houselists covered about 150 entries. The small size of the houselist set and the pre-tabulation coding of entries of a few columns facilitated abstraction of data directly from the houselist sets to the sorter's sheets. For each page and each column the frequency distribution of each category was recorded and the abstract for the set was noted on the cover page. Those abstract entries were later on taken to sorter's sheets. Four sorter's sheets were used for the first four tables. Tally mark sheets were used for Table E-V.

46. The abstraction work for items relating to establishments was first restricted only to the establishments using power. Later, it was extended to cover the remaining (non-power) establishments also.

47. The work on housing Tables had been started in January, 1961 with 35 sorters. In April, 1961, 270 sorters were working on it. Entire tabulation work was done by hand and no machines were used. This work

was completed in 3½ months and 11,330 sorter days had been spent on it for eleven million houses in Maharashtra. Average performance per sorter per day thus came to 972 houses for all stages of tabulation work including sampling and coding for the required columns.

Rural and Urban Areas

48. For purposes of 1961 Population Census, a town is defined as a place which has—

- (i) a Municipality, a Cantonment or Civil Lines ; or
- (ii) (a) a population of 5,000 or over ; and
(b) a least 3/4th of male population dependent on non-agricultural pursuits.

All towns together make the urban area. The remaining is the rural area.

49. The above clauses of the definition of towns were applied to all places in Maharashtra according to 1951 population data and a list of towns was drawn up for purposes of tabulation of housing data. All the Housing Tables presented in this volume are based on that rural/urban classification done in the year 1960. That list of towns was later modified on the basis of the 1961 population figures and data on economic activity. Eighteen new towns were added and four towns were deleted from the 1960 list. Housing Tables have not, however, been adjusted for those subsequent changes and the rural/urban areas adopted in this volume are, therefore, slightly different from those adopted for other Parts of the Maharashtra Census Report. The proportion of urban population according to 1960 list is 27.5 per cent. while that on the 1961 list is 28.2 per cent. The difference is thus small and may be overlooked for comparisons.

Quality of Work

50. The work done for housenumbering and houselisting was of a high order in all the districts. Numbers had been painted neatly and lists were made in clean hand. A post-enumeration check undertaken in 1961 confirmed the high degree of accuracy of the Census. The error in coverage in the listing of houses was found to be as low as 2.2 per thousand in the State as a whole. It was slightly higher at 5 per thousand in urban areas and only one in one thousand in the rural areas of the State.

51. A comparison of the estimates of population obtained from the houselists with the population enumerated in March, 1961, also reflected the same high standard of houselisting work. Allowing for the difference of six months in the reference dates for the 1960 estimate and the 1961 Census, the two figures differ by less than 0.6 per cent. for the State and 20 out of its 26 districts. This small difference is negligible because the 1961 Census figure included houseless population and the population of military areas both of which were not included in the houselist

estimates. For the remaining six districts, the difference in the two figures is between 0.6 and 3 per cent. It is higher in those six districts because they have Cantonment areas whose military population had not been included in the houselist estimates. Four out of those six districts moreover have considerable volume of seasonal migration on sugarcane farms and sugar factories which has influenced their population as enumerated on 1st March, 1961.

52. The Charge Officers took adequate precautions for securing hundred per cent. coverage. In rural areas, each enumerator was asked not to restrict his work to the village site or gaon area but also to go round the *siwar* of each village to number and list the farmhouses, scattered huts, etc. In urban areas, where the town population overflowed beyond municipal limits, the Charge Officers brought the two groups of enumerators and supervisors from the rural and urban areas together and defined the boundaries of the two areas for which they were to work separately. Even where a village was shown as uninhabited in the Revenue records, the Charge Officers appointed an enumerator for that village, and made him go round the *siwar* and certify that there was no house both on the village site or in the fields. A blank set of houselists was prepared for each such village as it was likely to have some population at the time of enumeration.

53. The system of working with fewer persons for a longer period in Greater Bombay area did not lead to any better results. The work in Greater Bombay was more difficult than that in other districts. Working on such jobs for long periods made it monotonous and supervision did not remain uniformly effective throughout the long period. A large number of workers working for shorter periods should, in future, do better work even in Greater Bombay.

54. It was found that our instructions to number every structure standing on the ground were carried to extremes in a few districts. In urban areas of Ratnagiri District, where it was customary to have a separate structure in the backyard of a house as a lavatory, the enumerators gave separate housenumbers to those small structures. In rural areas similarly, many dilapidated monuments or temples scattered all-round in the village limits were similarly numbered. We had emphasised numbering of every structure to secure complete coverage. But carried to an extreme it involved that much extra effort. Such entries were, however, removed from the houselists at the time of pre-tabulation scrutiny and housing statistics have not been allowed to be vitiated by such inflating factors.

55. In Greater Bombay, and particularly in Upper Colaba section, scores of houses remained locked and in spite of repeated visits and enquiries with the neighbours, the enumerators could not find out the purpose for which they were used. Those houses appear in the group 'others' in the Housing Tables.

56. In a few cases, the enumerators could not decide whether a place was an establishment, factory or workshop for purposes of entries in columns 5 to 8 of the houselists. The words "production, processing or repairing of goods" used in the definition were interpreted by some of them to include tea-stalls or pan-shops. Others did not include them. Questions had been raised and answered in the training classes but we could not unfortunately secure uniformity of understanding over this matter in all the districts. This factor has not, however, been allowed to vitiate the establishment statistics as hotels, restaurants or shops were not taken into account while processing the houselists before tabulation.

57. A limitation of establishment statistics obtained through the houselists is that the manufacturing establishments are mixed up to a certain extent with servicing or repairing establishments.

58. Another deficiency in Maharashtra resulted from a confusion over the fuel used for manufacturing processes. In a few cases where steam was produced by burning coal or other solid fuels and used for generating electricity on which the machines actually worked, the enumerators wrongly entered electricity as the fuel or power used. The enumerators generally appear to have worked with a bias against coal and other solid fuels and the number of establishments returned as using those fuels is almost negligible, a finding which is not supported by facts. This matter is further discussed in Chapter VI.

APPENDIX I

CENSUS OF INDIA 1961

HOUSELIST

[Actual size of the form used—20 in. x 13 in.]

Name of District..... (Code No.)
 Name of Taluk/Tehsil/Thana/Anchal/Town..... (Code No.)
 Name of Village/Ward/Mohalla/(Enumerator's Block)..... (Code No.)

Line No.	Building Number (Municipal or local authority or Census Number, if any)	Building Number (Column 2) with sub-numbers for each census house	Purpose for which census house is used, e.g., dwelling, shop, business, workshop, school, or other institution, jail, hostel, hotel, etc.	If this census house is used as an establishment, workshop or factory				Description of census house		Sub-number of each census house with census number (Column 3)	Name of head of household	No. of rooms in census house-hold	Does the household live in own or rented house? (a) (O) (b) (R)	No. of persons residing in census household on day of visit			Remark
				Name of establishment or proprietor	Name of product (s), repair or servicing undertaken	Average No. of persons employed daily last week (including proprietor, or household members, if working)	Kind of fuel or power if machinery is used	Material of wall	Material of roof					Males	Females	Total

Certified that the information is correct to the best of my knowledge. Signature of Enumerator..... Date..... Total for page.....

APPENDIX I—contd.

INSTRUCTIONS FOR FILLING UP THE HOUSELIST

Column 1—Line Number.

Only one digit of the line number has been printed in this column. The line numbers should be continuous for your block. Where the line numbers exceed 9 write the earlier digit(s) yourself.

Column 2—Building Number (Municipal or Local Authority or Census Number, if any).

This refers to the entire structure on the ground. There are, however, high, large or long buildings along a street or lane which have been partitioned or portions of which have been sold, which have distinct, separate main exit on the road and which belong to separate owners or occupiers or alternatively there are a series of different houses joined each to each by common walls on either side to make the whole look like one building but parts of which have been built at different times and belong to separate owners. Such distinguishable structures, although not separate from each other, should be regarded as separate buildings and given separate numbers. Each building should have a separate number. If in big cities a large mansion or building containing several census houses has a well known name by which it is generally known then the name of the building should also be recorded for convenient reference. If there are more than one structure within an enclosed or open compound belonging to the same person, e.g., the main house, the servants' quarters, the garage, etc., only one building number should be given. If the locality consists of a number of streets in a village, the buildings in the various streets should be numbered continuously and the streets should be taken in uniform order, from North-West to South-East. Experience suggests that the best way of numbering is to continue with one consecutive serial on one side of the street and complete the numbering on that side before crossing over to the end of the other side of the street and continuing with the serial, stopping finally opposite to where the first numbering began. In a city enumeration block, the numbering will have to respect the axis of the street and not any preconceived geographical direction like North-West. A building under construction should also be given a number in the serial. If a new hut or building is constructed between the time when the house numbering and houselisting have been completed and the census count it should be given a new number beyond the last number of the serial for the village. Arabic numerals should be used for building numbers.

This will facilitate verification by supervisors. In areas, e.g., urban, where the buildings are already numbered by the municipal or other authorities, the enumerator may adopt the existing numbers in the houselist. In such cases, column 2 will carry the established municipal or local authority number which will facilitate identification. Where there are municipal or local authority numbers but there are reasons to believe that the number is incomplete or unsatisfactory, the municipal or local authority number may still be entered in column 2, but at the same time it will be necessary to serially number that building afresh for the purposes of census houselist. In that case, the new census serial for buildings will be entered in column 3 and the new census numbers for the buildings will have to be painted on the buildings themselves. In those cases where there are no municipal or local authority numbers in existence, all buildings will have to be serially numbered for the census and column 2 will contain entries of this census serial. This number will have to be repeated in column 3 with sub-numbers for census houses, if any.

Column 3—Building Number (Column 2) with sub-numbers for each Census House.

A census house is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc., with a separate entrance.

If a building has a number of flats or blocks which have separate entrances of their own and are independent of each other giving on the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within an enclosed or open compound there are separate buildings then each such building will also be a separate census house. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

The order in which census houses within a building should be numbered should be continuous, preferably clockwise, or in any convenient manner if it is at all difficult to do it clockwise. If a building itself is a census house, then it will have only one number, namely, that of the building. If within a building there are a number of census houses, then each census house will have two sets of numbers, e.g., the number of the building and the sub-number of the census house. The census house number should be written after the building number in Arabic numerals in brackets such as 2(2), 3(2), etc. A census house may contain more than one household, in which case, each household will have to be denoted by a separate alphabetical sub-number (see instructions for column 11 below).

Column 4—Purpose for which census house used, e.g., dwelling, shop, shop-cum-dwelling, business, factory, workshop, school or other institution, jail, hostel, hotel, etc.

The actual use to which a census house is put should be written here.

In the case of a factory or workshop 'Factory' should be written for a large factory if registered under the Indian Factories Act and 'Workshop' for a small unregistered workshop. A workshop is a place where some kind of production, repair or servicing goes on or where goods or articles are made and sold. Similarly, a shop is a place where articles are sold for cash or for credit. Business houses are those where transactions in money or other articles are taking place, e.g., bank, etc. But rooms or apartments where professional consultations are held such as by doctors, *hakims*, pleaders, etc., should be described as 'professional consultation rooms' and not workshops. In the case, however, of a dispensary where, in addition to consultation by a doctor, medicines are prepared and sold, the house should be described as a dispensary. Write also if used for place of worship or congregation or if unoccupied, 'vacant'. If the census house is a shop, business house, bank, etc., but is not a factory or workshop as defined above, the name of the proprietor, manager or director should be entered in column 18.

Columns 5 to 8—"If this census house is used as an establishment, workshop or factory".

These columns apply only in cases where the census house is a factory or a workshop, i.e. where some kind of production, processing, repair or servicing is undertaken or where goods or articles are made and sold. If the census house is not used for purposes of a factory or workshop write 'X' in each of the columns 5 to 8.

Column 5—Name of establishment or proprietor.

Write the name of the establishment in the case of factories or large manufacturing concerns and write the name of the proprietor in the case of small workshops and establishments like confectioneries where no distinct name has been given to them like *Halwai* shop, etc. If the census house is not used for the purpose of a factory or workshop put 'X' in each of the columns 5 to 8.

Column 6—Name of product(s), repair or servicing undertaken.

In this column enter the actual work that is being done in the establishment, factory or workshop, like paper making, shoe making, cycle repairing, motor servicing, etc.

Column 7—Average number of persons employed daily last week (including proprietor or household members, if any).

The total number of workers including apprentices, either paid or unpaid, employed in the factory or workshop, including the owner or proprietor and any of his family members (if working), should be entered. The average number of persons working per day during the week preceding the date of your visit should be entered.

In case more than one product is produced it is not necessary to enquire the number of persons employed in the production of each product. It may not be possible to get this information in cases where the operations may be composite.

Column 8—Kind of fuel or power, if machinery is used.

If the factory or workshop uses steam or diesel engine or fuel, e.g., kerosene, soft coke, electricity, water-mill, etc., for running the machinery used for production, servicing or repairs, write what fuel or power is actually used.

shops that form the market place, each house stands in a separate fenced garden. A main road from end to end of the village, with side lanes, runs through the palm groves, the trees meeting above and casting an unbroken shade. Owing to the dampness of the climate the houses are built on plinths from two to three feet high. The richer rice land villages are usually built on the skirts of one of the hill ranges which fringe the rice lands. They are fairly shaded with large mango and *pipal* trees and here and there an isolated clump of bamboos. The houses are much like the coast houses, except that they are grouped together not separate and that the plinths are lower and less regular. The hill hamlets are clusters of low huts in spaces in the forests cleared of brush wood; some have plinths and some have no plinths. All are built of rough poles cut from the forests with no attempt at dressing, and with walls of mud and stone or of wattle and daub."

THE BOMBAY PRESIDENCY—KOLHAPUR, 1886

"The Kolhapur villages are of two classes, walled and open. Some of the village walls are of burnt brick and mud and some are of stone and mud. Some old villages have stately gates and ruined fortifications. Though proud of their old walls and gates, the villagers seldom take any steps to keep them in repair. In most villages houses are not built in rows but are scattered all over the village site. Kunbis or husbandmen, Marathas, Jains and Lingayats form the bulk of the village population. Dhangars or shepherds and other herdsmen live with their herds on the hills. In the skirts of the villages are the quarters of the Mhars, Mangs, Chambhars or shoe-makers, and Dhors or tanners whom most villagers hold impure."

BULDANA DISTRICT GAZETTEER, 1910

"Many of the names of villages have a meaning. Some have a religious origin as Dattapur (City of Datt), Hanuwantkhed (from god Hanuwant), Kamajapur (from goddess Kamalja) and Parashrampur (from god Parasuram). Among villages named after trees or plants may be mentioned Sagwan from the teak (*sag*) tree, Palaskhed from the *palas* tree (*Butea frondosa*), Chinchkhed and Chinchpur from *Chinch* (tamarind), Pimpalpur from *pipal* tree, Babulkhed from *babul* tree, Umarkhed from *umar* tree, Kusamba from *kusum* plant, Jamthi from *Jam* (guava), Wadali from *wad* (banyan tree). Some are named after animals as Asola from *asol* (bear), Undri from *undir* (mouse), Waghapur from *wagh* (tiger), Nagapur from *nag* (serpent). Those bearing personal names are usually of Musalman origin, for instance Ibrahimpur, the village founded by Ibrahim, Muradpur, Afzalpur and so on. Among miscellaneous names may be mentioned Loni (butter), Bhalegaon from *bhala*, a spear, Buldana from *Bhulthana*, an abode of Bhils, Tapowan, a forest of penance."

AKOLA DISTRICT GAZETTEER, 1910

"Occasional villages are notable for having an unusual proportion of some particular caste. Marwaris, Wanis, Wanjaris, Kolis, and so on, but the local division of castes is not very pronounced. The more aboriginal castes are more common in hilly parts, and Muhammadans are especially numerous in places of ancient importance. Within a village, again, the distinction of locality is scarcely applied except in regard to the lowest castes; Mahars and Mangs almost always occupy quarters on the outskirts, distinct both from the general population and from each other. Banjaras, who are common in the south, also live separately; their quarters are called *tandas* and used to be at some distance from the village-site. The village-site, *gaathan*, is sometimes called *pandhari*, white, because the ground within it approxi-

mates to that colour with the accumulations of long habitation. The depth of this soil would give some indication of the age of the village. Sometimes, but rarely, a quarter within the village is practically given up to some other caste, to Muhammadans for instance. Even when Muhammadans are scattered among all parts of a large village they divide the area for their own purposes into separate *muhallas*; each of these has its hereditary *jamadar*, its *bangala* or common house, and perhaps its separate procession in Muharram. Similarly a very slight degree of localisation has developed in regard to occupation. In a large village one or two definite streets are known as the daily bazar, both permanent shops and stalls for vegetables being chiefly gathered there; the ancient crafts of turban and carpet-making have been located in definite parts of Balapur; the recent metalled roads have busy cartwrights' shops beside them; and cotton factories, just outside the village, often grow up side by side."

CENTRAL PROVINCES GAZETTEERS, 1908— YEOTMAL DISTRICT

"Members of each caste usually occupy a quarter of their own, and that of the Mahars and of Pardhans is at a little distance from the rest of the village. The shrines of Maroti or Hanuman, the tutelary deity of the village, and of Marhai, the goddess of small-pox and cholera, are found everywhere. Very many villages have an old fort with earthen or brick walls known as a *garhi*, and this is commonly the residence of the patel. The fort is square and has walls about 10 to 15 feet high and 150 feet long. These are relics of the period of the Pindari raids, when on the approach of the marauders all the villagers hastened within the fort. In some villages there is a *chauri* or common house which serves as an office for the patel and also as a rest-house for subordinate Government officials. This is maintained by the District Board. The blacksmith's and carpenter's shops are places of common resort for the cultivators. Hither they went in the morning and evening, often taking with them some implement which has to be mended, and stay to talk. In the evening the elders generally meet at Maroti's temple and pay their respects to the deity, bowing or prostrating themselves before him. They sit and talk for a while and come away. A lamp before the temple is fed by contributions of oil from the women, and is kept burning usually up to midnight. In some villages there are two or three *baithaks* or places of meeting in the evening, and each cultivator frequents one of these. The *baithak* usually consists of a large banyan or *pipal* tree with a platform of stone or earth built round it to serve as a seat."

BHANDARA DISTRICT GAZETTEER, 1908

"The typical Bhandara village is situated on the highest ground available. If possible, the site is chosen with a view to constructing a tank hard by, to be used for irrigation, for washing and for watering cattle. The embankment of the tank is planted with mangoes, and frequently there is also a grove of mangoes close to the village, in the shade of which travellers may rest. Within the village site, tamarinds are usually found; and there are one or two *bargat* or *pipal* trees, underneath which will be placed a rude Mahadeo, with or without a protective roof. The lanes in the village are flanked by custard-apple trees and gourds creep over the less pretentious houses. The *malguzar* and tenants have large yards, walled in, which contain a number of buildings and if possible, a well; the buildings are occasionally of brick but commonly of clay and are tiled. The larger yards are bare and clean. Poor tenants utilise any spare space for Indian corn or *juar* and this, joined to the common indifference about clean roads, does much to give the village an untidy appearance. Outside the village site the most notable object is the tank. On this the prosperity of the village depends, and a glance at its size and condition enables one to guess the state of the inhabitants."

(ii) HOUSES

BOMBAY CENSUS REPORT, 1911

"Just as the villages vary according to local condition so do the houses of which they are composed. In the regions of heavy rainfall the houses are built with gables, generally thatched, but, in the case of the comparatively wealthy, tiled. It is a significant fact marking progress that tiled houses are on the increase due partly to the improvement in economic conditions but also to the fear of fire, which was of frequent occurrence with low thatched caves and cooking done on the verandah. In the dry country the houses are generally built of mud with flat roofs, the well-to-do using stone for their walls. The border line of flat roofs coincides pretty fairly with the line of 25 inch rainfall."

HYDERABAD CENSUS REPORT, 1951

"Houses in this part of the country probably cover a greater variety of structures than in most areas of comparable dimensions in the world. There is considerable difference between the average type of a house in the villages and in the towns of the State, in its black cotton and in its granitic regions and in its forest areas and in its plains, as well as from tract to tract within each of these areas depending upon the kind of building material easily procurable locally. Again, there is appreciable dissimilarity between the average type of a dwelling as built by the Muslims and the non-Muslims and sometimes even by members of different castes or tribes. This diversity is further amplified in respect of sizes and embellishments (or lack of embellishments) by extremes of riches and poverty and backwardness and enlightenment among the people. In the construction of houses, some Hindus take as much care to see that the house-wife working in the kitchen can keep an eye on the main entrance of the house and the street or the lane beyond it, as some Muslims do to screen the interior rooms from the most prying of the passers-by. It is neither possible nor necessary to describe in this report the numerous distinctive types of dwellings found in the State. But what is really pertinent is the fact that in this State it is difficult in thousands of cases to draw a line between a permanent dwelling and a makeshift encampment—the value and type of the material used as well as the space covered being identical in both the cases."

KOLABA AND JANJIRA GAZETTEER, 1883

Kolaba.—"In 1850 there were 140 tiled and 1,087 thatched houses with an average household of three members. Most of the houses facing the roads were well built and tiled. In 1881 there were 966 tiled and 180 thatched houses. The houses of the rich are usually tiled, with walls at least six feet high and not very pointed roofs. There is frequently an upper storey and inside, on both stories, rooms are partitioned off and sometimes matted. The houses of the poor have low walls of *Karvi* or bamboo, high pointed thatched roofs and floors of hardened mud. They have usually but one room."

Janjira.—"In 1872 there were 13,769 houses or 5·16 persons to each house. Of the whole number 689 were of a superior and 13,080 of an inferior class, the proportion of inferior to superior being as ninety-four to six. According to the 1881 Census there were 15,926 houses, including huts. Many Musalmans, Bhandaris and some Prabhus own good houses. Except the row of small dwellings and shops that form the market place, each house, especially along the coast, stands in a separate garden. Owing to the dampness of the climate the houses are all built on plinths from two to three feet high. The plinths are of stone rubble and mortar faced with dressed trap or laterite. The walls are a frame work of wood filled with baked or sun-dried bricks, with a coating of mud or whitewash. These better class houses are oblong, and have tiled roofs. They are two storeys high, and have two rooms and a central hall on each floor, with necessary and bathing rooms attached. Their value varies from Rs. 2,000—Rs. 3,000. The middle class house has walls of wattle and daub and a roof thatched with rice straw. They are square and have two rooms, and part of the veranda is enclosed with a daub and wattle wall and used as a cook-room. A house of this kind costs to build from Rs. 60—Rs. 75. The huts of the poorer classes cost from Rs. 3—Rs. 5."

"Rich Sidi gentry, Syed landlords and Konkani timber and other merchants own good one or two storied houses of brick or stone with strong timber and tiled roofs. The houses of middle class and poor Musalmans, except in some of the larger towns where they have tiled roofs, are built of bamboos and rafters, thatched with rice straw or grass. Their houses are oblong and are peculiar in having the front door at one end. The better class of house costs to build from Rs. 200—Rs. 300 and the poorer house from Rs. 30—Rs. 50. The articles generally found in a house are a few Indian carpets and quilts, some cots and copper, brass and earthen vessels. The Sidis deck their walls with swords, shields, lances, muskets, guns, knives and daggers."

RATNAGIRI DISTRICT GAZETTEER, 1962

"The houses, mostly built of mud-walls and some of dressed laterite stone, are usually detached from one another each house having a small compound or courtyard of its own containing a few fruit and flower trees and some open space. During the fair weather, a part of the open space is often covered by a small pandal erected in front of the house. A noticeable feature found in the south except in Kankavli Mahal and the extreme south of Sawantwadi is that a number of houses have in their compounds a few cocoanut trees and in coastal villages almost every house except in the bazar areas is built in a cocoanut garden."

"The types of houses built in the district vary with the locality and the stage of development and culture of the community to which the inhabitant belongs. The Kunbi generally lives in a small house with mud and gravel walls and a thatched roof held up by wooden posts let in at the corners and the gables. The rafters are generally bamboos, and the thatch of bundles of rice straw and coarse grass. In the south, the rafters may be of cocoanut palm and the roofing of cocoanut leaves plaited or loose. The inside is generally divided into two rooms, a larger where the family cooks and lives in the day time, and smaller the sleeping and store room. At the gable end is usually a lean-to shed in which cattle and field tools are kept and grass and wood stored. A Maratha house is generally better and much neater than a Kunbi's, with sun-dried brick walls, a tiled roof, a front verandah and in the fair season an outer booth with a flat roof of plaited palm leaves, the floor every-day carefully smoothed and cow-dunged. Most Brahmans, Bhandaris and Musalmans, live in well-built houses raised on stone plinths. The walls are masonry or burnt brick work and roofs are tiled. The wood work in the roof is generally substantial and well built and the door and window frames neatly put together. Wooden shutters are generally used, though glazed windows are sometimes seen in Ratnagiri, Malvan, Vengurla and other towns. The village Mahar usually lives in a small shapeless roughly-built thatched mud hut. But pensioners and other high class Mahars generally, like the Marathas, build a better style house."

"Except in large towns, houses are very seldom built as a speculation. Well-to-do traders, retired Government servants and pleaders build for their own use substantial and comfortable dwellings but seldom let them to tenants. All large trading towns and villages have a good number of substantial stone tile-roofed buildings housing nearly five per cent. of the population. The better sort of house, square built, with an open central or front courtyard, has, round the courtyard, an eight feet deep verandah-like dais or platform raised about three feet from the ground; its walls covered with cement or *chunam* plaster, oil painted, and its cornices hung with frames of bright coloured lithoprint pictures of gods, saints and mythological subjects. From this verandah, the common family resort, doors lead into back rooms, mostly dark and windowless or out into a cattle yard with offices in the rear. Shopkeepers live in dark rooms behind their stalls, with a backyard for cattle, and offices in the rear, entered through a back door. The hovels of the poor, a few feet square with one doorway, generally the sole opening for light or smoke, are divided by bamboo or *palas* lath partitions into three or four small rooms into which a family of eight or ten are often crowded. The houses of the richer classes, one, two or three stories high, have walls of laterite or black stone, bricks, either with cement or *chunam* plaster or pointing and tiled roofs. According to the means and size of the owner's family, they contain from eight to fifteen rooms. In front there

is a porch *ota*, and settle, and a verandah behind. Inside are central room *majkar*, god-room, store-room, kitchen, bed-rooms and several other rooms according to the necessity of the family. These houses have some open space in the rear containing a well, a privy and a cattle-house or an outhouse."

POONA DISTRICT GAZETTEER, 1954

"The types of Dwellings found in the district as a whole may be classified under two divisions, movable and immovable.

"The movable ones belong to wandering tribes or labourers who move from place to place. They are of two kinds; small tents or *pals*, either of coarse cotton or woollen fabric, and small huts of bamboo or date-matting. The dwellers in tents and mat huts suffer much from heat and cold and still more from rain. To escape the wet many of them stop, during the monsoon, near some village and build small huts of grass and leaves and branches of trees.

"The immovable houses may be divided into five classes, according to the cost of building and the type of material used in construction. There are the first class houses, known as large *vadas* (mansions) now rarely built and becoming fewer and obsolete. These *vadas* are seldom found except in towns and large villages and are generally *dumajli* (two storied). They are built round *cowks* (quadrangles or central plot or yard) with stone or fire-baked brick walls, tiled roofs and verandas. Entry into them is through a gateway or passage in one of the outer faces of the building. From the inner court a few steps lead to the *oti* or veranda, for the house is always raised on a *fote* (plinth) three or four feet high. In the veranda, strangers are received, children play or the women of the house swing and talk. The ground floor has four to seven rooms, a central hall, a back veranda; and the second storey has four rooms or two halls. At places, such types of houses have two open squares surrounded by rooms and verandas, the first where the men live and the back set apart for women. In the rear of the house are a cattle shed and a bathing room. A privy is attached to a distant corner either in the front or at the back of the building according to convenience. There may be a rear yard with flower and plantain trees and a *tulas* (holy basil) in a masonry pillar pot. Buildings like these are owned by *inamdars* (holders of public grants), *jagirdars* (big landed proprietors) and wealthy merchants.

"From the architectural point of view these *vadas* have little beauty or ornamentation; even the finest are plain, massive and monotonous. The plinth is of close-joined blocks of polished stone. The posts and beams are massive but short. The ceilings are made of smaller closely fitted beams, sometimes ornamented with variegated geometrical figures and flowers made of small chips or slits of gaily painted wood or ivory. If width is wanted, it is secured by two or three rows of wooden pillars joined together by ornamental ogee-shaped cusped and fluted wooden false arches. The pillars, which generally spring from a carved stone or wooden pedestal, have shafts carved in the cypress or *suru* style and lotus-shaped capitals. The eaves are generally ornamented with carved plank facing and project boldly from the walls. The roofs are either terraced or covered with flat tiles. The staircases are in the walls, and are narrow and dark.

"These *vadas* are being replaced in their class by modern houses, i.e., mansions or big bungalows.

"Houses of the second class are generally two-storied, with walls constructed of dressed or unworked stone and burnt or sun-dried bricks and tiled or flat roofs. They occur both in towns and villages. A house of this class consists of an *osari* (front veranda) which is used as an office or place of business, *majghar* (a central room for dining and sitting), *devghar* (a room for worshipping gods), a kitchen and a room to spare. There is generally also a cattle shed either in the front or at the back.

"Houses of the third class, though smaller than the first two when occupied by husbandmen, are roomy, and they have large cattle sheds attached. They are one-storied and the walls are built of unburnt bricks or mud and stone. They have two rooms and tiled or thatched roofs.

"Houses of the fourth and fifth classes are single-roomed thatched huts with walls of mud or mud and wattle reed, millet or cotton stalk, and roofed by a bamboo frame and covered by grass or even leaves. Houses of this class are found chiefly in villages and hilly parts of the district and are owned and inhabited by poorer landholders and field labourers and people of the backward and depressed classes. Except when the number of the cattle is small and a part of the house can be set apart for them, the poorer husbandman's cattle live in sheds or pens separate from the dwelling. In the eastern part of the district, where rain is scanty, houses, known as *dhabis*, with flat earth-roofs, are sometimes found. Owing to the weight of the earthen roof, they seldom have an upper storey.

"Within the last fifty years urban housing in the Poona District has changed a great deal. As knowledge of sanitary principles has advanced, houses of the modern type have come into existence, which are in style and accommodation, superior to those they have replaced.

"As security of life and property is more assured under modern conditions, the necessity to group houses close to one another and minimise the number of windows in houses has disappeared, and the prevailing trend is also towards formation of garden suburbs. Simultaneous with this trend there has been a change in taste. Perhaps the easy availability of building materials like reinforced concrete has led to new ideas in architectural design. People now prefer simplicity of form and structure to the massive and ornate style. While the old houses ensured more privacy in the household of a joint family by their dark and labyrinthine rooms, the houses which are now built only for individual families allow more light, ventilation and accessibility. Self-contained cottages, or at least blocks, consistent with economy of space, are the modern aim. The kitchen, and bath and toilet rooms are attached to the main structure and made accessible from every other room."

SATARA DISTRICT GAZETTEER, 1885

"Satara houses may be arranged under two divisions, immovable and movable. The immovable houses may be divided into four classes: Those with tiled roofs and walls of fire-baked bricks; those with tiled or thatched roofs and walls of sun-burnt bricks or mud; those with thatched roofs and wattle or grass walls; and those with flat earth roofs and generally walls of unburnt brick. The movable dwellings belong to the wandering tribes who carry them with them. They are of two chief kinds small tents or *pals* either of coarse cotton or of wool and small huts of bamboo or date matting. The dwellers in tents and mat huts suffer much from the heat and cold and still more from the rain. To escape the wet many of them stop during the whole rains near some village and build small huts of grass, leaves and branches. First class houses are seldom found except in towns and large villages. A first class house consists of one or two open squares surrounded by rooms or verandas and one or two storeys high. Of the two open squares the first is where the men live, and the back is set apart for women. The rooms in the inner square are used for sleeping, sitting, cooking, dining, and as store-rooms. The rooms in the outer square are generally used as sitting rooms. The front room in the ground floor and in the upper storey, if there is an upper storey, are used as guest halls. In front of some houses is a veranda where servants wait and behind are bathing rooms and cattle sheds. Buildings like these are owned only by *inamdars* or holders of public grants, *jagirdars* or land proprietors, and wealthy merchants. Almost all of them date from the times of Maratha rule. Houses of the second class, with tiled or thatched roofs and walls of fire-baked bricks, occur both in towns and in villages. The house consists of a front veranda and a central room with three or four other rooms, one of which is always set apart for cooking. If there is room in the veranda, the owner of the house makes it his office and place of business. As a rule the central room is used for dining and worshipping the house gods. Houses of this class have generally a cattle-shed either in front or behind them. Houses of the third class, with thatched roofs and wattle walls, are found chiefly in villages and in the hilly parts of the district inhabited by the poorer landholders and field labourers, and by the

depressed or impure castes. The inside of a wattled hut is generally divided into two or three spaces by bamboo matting or by branches. Except when the number of the cattle is small and part of the house can be given to them, the poorer husbandman's cattle live in sheds or pens separate from the dwelling. The fourth class of flat earth-roofed houses called *dhabis*, are chiefly found in the east of the district. Owing to the weight of the earth roof they seldom have an upper storey."

KOLHAPUR DISTRICT GAZETTEER, 1886.

"Except tile-roofed mansions owned by rich men in towns and large villages, most Kolhapur houses are thatched in the rainy west and flat-roofed in the dry east. Most houses in the Gadinglaj and Shircl sub-divisions and in the petty divisions of Katkol and Raybag (now in Belgaum district of Mysore State) are flat-roofed and in the Ajra, Bavda, Bhudargad and Vishalgad sub-divisions which are close to the wet Sahyadris are thatched. Town houses are generally built with burnt brick; most rural houses are built of stone or sun-dried brick and mud, mortar-pointed mud, or mortar. Window and door frames, door panels and window shutters are generally made of *babhul*, mango, or *jambhul*, sometimes of *umbar*, and in the houses of the rich of teak. Bamboo and teak rafters are largely used.

"Kolhapur houses may be arranged under four classes. Houses of the first class, which are generally two-storied or *dumajli*, are built round quadrangles with stone or burnt brick walls, tiled roofs, and verandas. These houses contain *osris* or halls used for large dinner parties and office room, three or more sleeping-rooms, rooms for keeping clothes and ornaments, a central store-room, a cook-room, and god-room. In the rear of the house are a cattle shed and a bathing room. A privy is attached to a distant corner either in front or behind according to convenience of the building. In the rear yard, where there is a rear yard, are flower and plantain trees with a *tulas* or holy basil bush in a masonry pillar pot. The houses have room for fifty to eighty retainers, but are close and badly aired. The fronts are ornamented with carved wood, and on the front walls in gaudy colours are drawn pictures of gods, goddesses, heroes, and wild beasts with alternate bands of white and red to scare the cholera spirit. Houses of the second class are generally one-storied with burnt or unburnt brick walls and tiled or flat roofs; they contain three or four rooms. In towns the second class houses are roomy and showy and when held by shopkeepers and craftsmen the verandas are made into shops or work rooms. Houses of the third class though smaller than first or second class houses, when occupied by husbandmen are roomy and have large cattle sheds. They are one-storied with unburnt brick walls and two rooms. Houses of the fourth class are single-roomed thatched huts with mud or mud wattled reed, millet, or cotton stalk walls, roofed by a bamboo frame covered with grass and *palas* leaves. Houses of this class are generally owned by labourers."

BULDANA DISTRICT GAZETTEER, 1910

"At the time of digging the foundation of a house, Ganpati and Prithvi are worshipped by the offer of coconuts, and betel-leaves. When posts are erected the *kham puja* is performed. A wooden post is worshipped, and *ghi* is poured at its top so as to flow down to the bottom. A bundle of grass is then tied to the top so that crows and other inauspicious birds may not perch on it. When the beams are posted the owners place a few pieces of turmeric and betel-nut, and a little quantity of *juari* grain dyed yellow in a piece of yellow cloth and tie it to the first beam. When the house is complete they perform the *vastu puja*, i.e., a *ghara* containing a small image of a serpent made of copper, a pearl and small pieces of silver and copper is buried in the east corner of the house. Brahmans are fed, and a feast is given to the caste fellows. The house is adorned with flags and buntings, and a turban of white or yellow colour is also tied round it.

"The front of a house should face to the east. It may also face to the north or the west, but not to the south, which is an inauspicious direction. A house should be *gaimukhi* (cow-faced),

i.e., its front should be narrower than the back; it should not be *wyaghra mukhi* (tiger-faced) for that would bring misfortune to the owner.

"The proverb '*moho, koho, mokha; ani ghar gele lawkar*' is common in the mouth of every villager, and it means that the wood of *moho*, *koho* and *mokha* trees should not be used in the construction of a house, otherwise it will soon change hands. *pipal*, *umar* and *palas* trees are considered Brahmans, the *sagwan* (teak wood) a Kshatriya, and these trees can be planted in the courtyard of a house. The *hiwar* tree is supposed to be a Mang, and it is natural that it should not grow in the yard of a Hindu. The *wad* tree is the abode of an evil spirit called *Hadal*, which destroys children, and hence it is not safe to have this tree close to a house. The thorny *babul* and *ber* trees, if grown in the neighbourhood of a house, are apt at times to catch the owner's turban at a time when he is going out on some important business. The falling of a turban from one's head on such occasions is a bad omen, and therefore these trees cannot be planted in the yard. As regards *pipal*, which is a very sacred tree, it is said that as far as possible this tree should not be allowed to grow in the yard of a house. The superstition is that if its roots ever reach the cooking place, extinction of the family is inevitable. If by oversight such a tree is grown and it has not got over a hundred leaves upon it, it should at once be cut down; but in case the number of leaves is above one hundred there is no other remedy but to rear it very carefully. As the *pipal* is a Brahman, its thread ceremony must also be performed in the same way as that of a Brahman boy."

AKOLA DISTRICT GAZETTEER, 1910

"The houses of an old village are crowded together and open on narrow winding lanes. People like to have a sacred *tulsi* plant growing in their little *awar*, yard, and a parrot may be hung up in a metal cage; the main door of a house must not face the south. The larger houses have within one enclosure a dwelling-house, with separate places for cooking and for bathing, a yard, and buildings for cattle, agricultural implements, and perhaps grain. *Berar* is practically a land of peasant proprietors, though on the one hand there are a few large landholders and on the other there is a technical limitation which makes the tenure of land not strictly proprietary. Each petty cultivator needs something in the way of a farmyard but makes the little walled space within and about his dwelling-house answer the purpose. All the manure of the establishment used to be collected in a large pit in the midst, and this may still occur, but the practice is now commonly understood to be illegal; people say little about the sanitary considerations involved but complain of the present waste of their manure. In villages with a good water-supply houses have often their own wells within the same enclosure. The walls are commonly built of *mati*, earth, clay, or of a mixture of stones and *mati*; but brick walls are by no means uncommon, and dressed stone is used sometimes. Wealthy people often have attractive wood-carving on the fronts of their houses, Telhara in Akot taluk being especially distinguished in this way; Marwaris and Cutchis perhaps most frequently use this means of ornament. Strongly-built houses are owned by men of the poorest castes as well as by people of wealthier communities, though sometimes a poor man's house is made of a kind of a basket-work daubed with *mati*. Large metal sheets are often made of kerosene oil tins flattened out and soldered together; these are commonly used to shade, the fronts of shops (which are always open) but sometimes for other kinds of roofing or even for the whole of a small building—such as the solitary, ill-situated hut occupied by the sweeper of a village. Houses occasionally have a flat top of *mati*, called *dhaba*, but more frequently they have sloping roofs of tiles, corrugated iron—called *tin* or grass thatch; red chillies are spread out on these to dry. It is only the poorest, generally living at the sides of a village, who use thatch, because it causes great danger of fire. Tiles are more common in the north of the District and tin in the south; a little village in Basim or Mangrul taluk, especially if close to a main road, may appear almost wholly roofed with tin. Tin is said to have the advantages of being easy to apply and seldom needing repair; it has the defects of being expensive, cold in winter, hot in summer, and noisy in the rains, along with a possibility of blowing off and hurting someone; a ceiling is rarely added to reduce the heat. Old men say that 60 years ago houses were almost always covered with thatch and were frequently huts of cotton stalks."

YEOTMAL DISTRICT GAZETTEER, 1908

"In Wun, where there are very few forts, the patel's house does not differ from that of the cultivators. The houses of the tenants have one to three rooms with an *angan* or small yard in front, and a little space for a garden behind in which vegetables are grown during the rains. In Wun taluk the houses are usually thatched, but elsewhere they are often tiled; and *dhaba* houses with flat mud roofs are common. The walls are of mud, plastered over bamboo matting. The Kunbis have a *kotha* or shed by the side of the house in which they keep their carts and agricultural implements. The houses of the Mahars are little one-roomed huts or *jhopras* with a small yard in front."

BHANDARA DISTRICT GAZETTEER, 1908

"In Tirora tahsil houses are usually tiled, in Bhandara both tiled and thatched, and in Sakoli usually thatched. Large pro-

prietors and a few tenants have *dhabedar* or terraced houses. Subordinate Government officials and guests are lodged in the *parchhi* or enclosed room beside the gateway of the *malguzar's* house. Private latrines do not exist in villages and the country people greatly dislike them. The cattle are tied in a shed near the main dwelling or in the verandah behind the house, as they must be always under the owner's eye. Grain is kept in round bamboo receptacles called *dholas* supported on wooden posts with thatched covers. Those for seed-grain are often outside the house and are only opened when sowing-time comes, while those for food are kept inside the house, and the requisite amount of grain is allowed to run out daily from a hole in the side. Among the most essential articles of furniture are a roller and slab of stone for pounding spices, and a stone mortar and pestle; these articles are worshipped by several castes at marriages. All households also have the *bothris* or mattresses made of old clothes and rags sewn together. If struck with one of these by a Hindu, a *Mang* is temporarily put out of caste. The ordinary tenant sleeps on straw and covers himself with one of these mattresses."

CHAPTER II

USES OF OCCUPIED HOUSES

Definition of the "House"

THE DEFINITION of the "house" from the Census of 1891 to that of 1951 swung between what are called the 'structural' and the 'social' aspects. "Where a structural criterion is taken", says the Census Commissioner for 1921, "a house is ordinarily defined as the residence of one or more families having a separate independent entrance from the common way. Where the social aspect is looked into, it is defined as the home of a commensal family with its residents, dependents and servants". The structural definition had been used in all States in 1891 but was gradually superseded by the other definition which had the advantage of simplicity and ease of application and also provided some clue to the average size of the individual family.

2. In the Bombay Presidency, the structural definition had been followed in 1891 and 1901. It was changed to the commensal family basis in 1911 and continued in that way in 1921, 1931 and 1941. The concept as applied to Bombay City and other urban areas was, however, different from the general definition. It made comparison from area to area difficult. In Bombay City and other urban areas until 1951 the Census house was "a whole building under one undivided roof separately assessed to municipal tax". Individual flats or blocks contained in those buildings were not separately numbered.

3. Enthoven in his 1901 Census Report complained not only of the changes made in the definition of the house by the State Superintendents but also of the different applications of the State Superintendents' rulings by the Census Officers in the districts. He said that the basis of the (housing) statistics was uncertain and it was, therefore, undesirable to poise conclusions on so shifting a foundation.

4. In the Central Provinces, the structural aspect of the definition had been consistently followed in the Censuses up to 1941. Roughton in his 1921 Census Report said that the effect of the structural definition was to increase slightly the number of houses and that must be borne in mind while comparing statistics of houses in the Central Provinces with those of other parts of India.

5. In Hyderabad, the structural definition was followed in 1891 and 1901. It was changed to the commensal family basis in 1911 and continued as such in 1921. It was again changed over to structural basis in 1931 and continued in that form in 1941. Gulam Ahmed Khan in his 1931 Census Report said that with such varying definitions from decade to decade the number of houses would not admit any useful comparison.

Y 3168-3

6. The three erstwhile States, with whose former statistics we are concerned for studying the conditions in Maharashtra in earlier decades, have thus had different definitions of houses in different Censuses. In the Bombay Presidency, different concepts had been used for different local areas even at the same Census.

7. All the three States had, however, followed the same definition of the "house" in 1951. A "house" in 1951 was defined as "a dwelling with a separate main entrance".

8. In the 1961 Census, a "house" was defined as "a structure or part of a structure (inhabited or vacant or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc.) with a separate entrance whether that separate entrance led directly to the street or to a common staircase, courtyard or a gate".

9. It will be seen that the 1961 concept of a "house" is an enlargement of the 1951 structural definition intended to include non-residential and vacant houses also. This enlargement of the definition has extended the coverage of the 1961 Census considerably. One-third of the total number of houses censused in 1961 were found to be used for other than residential purposes. They would not have been covered under the 1951 definition Statistics for dwellings, i.e., the houses wholly or partly used for residential purposes have, however, been compiled separately and should, in spite of the enlargement of the definition of the house in 1961, bear comparison with those of the houses of 1951. Because of the differences in concepts, the 1961 material is, however, not strictly comparable with that of earlier Censuses prior to 1951.

Number of Houses per square mile and Persons per dwelling

10. It will be seen from Table E-I in Section II that there are 11,129,636 houses in the State out of which 7,499,074 are used as dwellings. Out of those dwellings, 5,448,158 or 72.6 per cent. are in rural areas and 2,050,916 or 27.4 per cent. in urban areas. Maharashtra has a density of 334 persons per square mile. It has 63.4 dwellings per square mile which makes 5.3 persons per dwelling against the 1951 figures of 5.6, 4.8 and 5.5 persons per occupied residential house for erstwhile Bombay, Madhya Pradesh and Hyderabad State, respectively.

11. The Statement on page 26 shows the number of houses per square mile and the number of persons per house available from the 1951 and earlier Censuses for Bombay State, Central Provinces and Hyderabad and two districts transferred to Maharashtra from each of those former States. Corresponding 1961 figures (of dwellings) for Maharashtra and those six districts are also shown for comparison.

Number of persons per house and Number of houses per square mile from 1901 to 1961

State/District	Number of persons per house							Number of houses per square mile

12. Allowing for the effect of changes in the definition of the house and operational differences for a while, it will be seen that the number of houses per square mile has been increasing from Census to Census and the 1961 number of dwellings for Maharashtra is higher than that of 1951 for all the three former States, from which its constituent districts have been transferred. All the six districts included in the statement show the same trend and their 1961 figures are higher than those of 1951 and other previous Censuses. The number of houses per square mile appears to be strictly in proportion to the density of population and as a result the number of persons per house has from district to district (and even from Census to Census) varied within a very narrow range.

13. The following Statement shows 1961 population density, number of dwellings per square mile and number of persons per dwelling for Maharashtra and five other States :—

Density, Number of dwellings per square mile and Number of persons per dwelling

State	Density of Population	No. of dwellings per sq. mile	No. of persons per dwelling
Maharashtra	334	63.40	5.27
Andhra Pradesh	339	66.07	5.12
Gujarat	290	53.58	5.33
Kerala	1,127	183.59	6.14
Madhya Pradesh	192	37.26	5.07
Mysore	319	56.24	5.65

14. It will be seen that the number of dwellings per square mile is proportional to the density of population. The number of persons per dwelling does not differ much from State to State. At least the difference is not proportionate to the difference in population densities. Mysore with a density of 319 per square mile has 5.65 persons per dwelling against 5.27 in Maharashtra with a density of 334 and 5.12 in Andhra Pradesh with a density of 339. Kerala has 6.14 persons per house for a very high density of 1,127 persons per square mile.

15. The Statement on page 27 shows for the State, its four divisions and 26 districts, the density of population, the number of dwellings per square mile and the number of persons per dwelling in 1961 compared with the corresponding figures for 1951.

16. There are 5.3 persons per dwelling in Maharashtra in 1961 against 5.6 in 1951 for erstwhile Bombay State. Presuming that the differences between the definition of dwellings in 1961 and the occupied residential houses in 1951 do not seriously undermine comparability of figures, the increase in the number of dwellings in the decade appears to have been faster than the rate of growth of population. The same trend is noticed in all the districts of the State excepting Poona, Buldhana, Akola, Amravati and Yeotmal which have 5.68, 4.89, 4.71, 4.71 and 4.69 persons per dwelling in 1961 against 5.44, 4.77, 4.65, 4.67 and 4.62 respectively in 1951. By definition, the dwelling includes thatched huts and other temporary structures or small portions of old buildings used as separate dwellings by providing independent entrances. The smaller number of persons per dwelling may not thus necessarily indicate an increase in the number of newly constructed

houses. Structural improvements to provide independent access to resident households might more than keep pace with the growth of population. The increased mobility of population also inflates the number of households or dwellings and consequently reduces the number of persons per dwelling.

17. The number of persons per dwelling in the districts of Maharashtra does not change in proportion to the density of population. The highest index (5.82) no doubt obtains in Kolhapur which also has the highest (excluding Greater Bombay) density of population (501) but Greater Bombay with a very high density of 24,568 persons per square mile has a smaller number of persons per dwelling (5.67) and Dhulia District with a density of only 279 persons

per square mile has the second highest number (5.68) of persons per dwelling. The number of dwellings per square mile increases in proportion to the density of population and the number of persons per dwelling varies within a narrow range. In fact, it appears to depend upon the relative agricultural productivity of the soil and the age structure of the population of the area concerned. The age structure is in turn dependent upon the rates of growth of population.

18. In spite of the difference in the concepts of the house and the household, the statistics closely follow one dwelling=one household equation. The number of persons per dwelling is, therefore, an index of the average size of the household. This latter topic is discussed further in Chapter V.

Density of population, Number of dwellings per square mile and Number of persons per dwelling in 1951 and 1961 Censuses

State/Division/District	1961 Census			1951 Census

Chanda	123	25.4	4.84	104	16.9	6.16

Note.—1951 figures are adjusted to the jurisdiction of 1961.

Purposes for which houses are used

19. For each house, the 1961 Census has recorded the purpose for which it was used at that time. The classification is first in vacant and occupied houses and then of the occupied houses by their uses such as dwelling, shop, workshop, etc. The word "occupied" in 1961 is, however, different from that used in earlier Censuses when it meant occupation only for residential purposes. In 1961, it means use for residence, shop, workshop or any other purpose.

20. For some houses, the occupation is combined for two purposes. For example, a shop is run in a "house" which is also used by the family for residence. In such cases, the use is called "shop-cum-dwelling". Similarly, where a workshop is run in a house which is also used as a dwelling, the house is supposed to be used as a "workshop-cum-dwelling". This concept of such combined use however stops with shops and workshops and is not extended to include cases where a few servants or chowkidars also reside in houses mainly used as factories, schools, hospitals or other institutions. In those cases, the respective houses have been treated as factories, schools, hospitals or other institutions and not as factory-cum-dwelling or school-cum-dwelling, etc.

21. The classification of uses is in the following categories :—

- (i) dwellings ;
- (ii) shop-cum-dwellings ;
- (iii) workshop-cum-dwellings ;
- (iv) hotels, sarais, dharamshalas, tourist homes and rest houses ;
- (v) shops excluding eating houses ;
- (vi) business houses and offices ;
- (vii) factories, workshops and worksheds ;
- (viii) schools and other educational institutions including training, coaching and tuition classes ;
- (ix) restaurants, sweetmeat shops and eating places ;
- (x) places of entertainment and community gathering (Panchayat Ghar) ;
- (xi) public health and medical institutions, hospitals, health centres, doctors' clinics, dispensaries etc, and
- (xii) others.

22. These different uses may be briefly defined as follows :—

- (i) *Dwellings*.—Used exclusively for residence.
- (ii) *Shop-cum-dwellings*.—Used partly for residence and partly for sale of goods, both portions having one common main entrance.
- (iii) *Workshop-cum-dwellings*.—Used partly for residence and partly for manufacture of articles, both portions having one common main entrance.
- (iv) *Hotels, Sarais, Dharamshalas, Tourist Homes and Rest Houses*.—Used as places of halt or temporary stay by travellers and pilgrims.
- (v) *Shops excluding Eating Houses*.—Places where goods are bought or sold (but not manufactured) excluding restaurants, cafes, tea-shops, etc.

(vi) *Business Houses and Offices*.—Offices of Government, local bodies, institutions, commercial firms, etc.

(vii) *Factories, Workshops and Worksheds*.—Places where some kind of production, processing, fabrication, servicing or repairing is undertaken on a commercial scale. Places where goods are merely bought or sold and are not manufactured are not included in this category.

(viii) *Schools and other Educational Institutions*.—Places where any kind of teaching or instruction is given, whether recognised or unrecognised, technical or non-technical ;

(ix) *Restaurants, Sweetmeat Shops and Eating Places*.—Places where food is sold or served. *Halwai* shops where sweetmeats are prepared are included in workshops and factories.

(x) *Places of Entertainment and Community Gathering*.—These include cinemas, theatres, circuses, temples, mosques, churches and other places of entertainment and also places of assembly such as Panchayat Ghar ;

(xi) *Public Health and Medical Institutions*.—These include public health centres, hospitals and dispensaries of all kinds, clinics and consulting rooms of doctors, homoeopaths, vaidas and hakims ;

(xii) *Others*.—This last category includes houses used as garages, cattle-sheds, godowns, stores, etc. and houses which cannot be classified in any other category. (Also see paragraph 82 below.)

23. The word "dwelling" is, however, generally used in this volume (not in the table headings) to include houses used only for residence as well as those used as shop-cum-dwellings and workshop-cum-dwellings.

24. Table E-I shows the actual figures for different uses of the houses in 1961 for total, rural and urban areas of the State, twenty-six districts and 228 talukas separately as well as for 26 towns having over 50,000 population. The Subsidiary Table E-I.1 shows the distribution of 1,000 houses by different uses for each of the above administrative units separately. The Subsidiary Table E-I.2 shows the distribution of 1,000 houses which are vacant or used as dwellings, shop-cum-dwellings or workshop-cum-dwellings in rural and urban areas of the State, divisions, districts and talukas separately.

Dwellings

25. Figure 2 on page 29 shows the distribution of houses by types of uses for rural and urban areas of Maharashtra.

26. The dwellings (including combined uses) constitute 674 per thousand for the total, 652 per thousand for rural and 740 per thousand for urban areas. The difference in the proportion of dwellings in rural and urban areas is mainly due to the category of other uses (column 16 of Table E-I) which includes cattle-sheds, garages, godowns and such other places making as much as 224 per thousand in rural areas against only

FIG. 2
PURPOSES FOR WHICH HOUSES ARE USED IN MAHARASHTRA STATE
(PER THOUSAND CENSUS HOUSES)

85 per thousand in urban areas. The proportion of 'others' in rural areas is so widely different from that of the urban areas, because, the classification in Table E-1 included almost all uses found in urban areas but left out a few common types obtained in rural areas. (Also see paragraph 82 below).

27. Figures 3 and 4 on page 31 show the districtwise distribution of 1,000 houses by different uses in rural and urban areas. The proportion of dwellings ranges from 552 per thousand in Chanda District to 791 per thousand in Thana District. For rural areas, the range is from 542 per thousand in Chanda to 793 per thousand in Thana. For urban areas, the proportion of dwellings is lowest with 613 per thousand in Buldhana District. It is highest with 786 per thousand in Greater Bombay.

28. Incidentally, Chanda District which has the lowest percentage of houses used as dwellings both for the total and rural areas also happens to be an area of lowest density (123) in the State. The proportion of houses used as dwellings is, however, a complementary factor to the proportion of houses used for

other purposes. In hilly or tribal areas, some households have one cottage for residence and another for cattle. The proportion of dwellings there is, therefore, reduced considerably. Opposite influence will be working in urban areas because of the shortage of accommodation. Thana District which has a large percentage of both tribal and urban population has the highest (791) proportion of houses used as dwellings. It may be added that Thana tribes do not usually have separate sheds for their cattle at least not as many as would set off the effect of the large percentage of urban population in the district. The other districts having a high percentage of houses used as dwellings are Greater Bombay, Dhulia, Sholapur and Osmanabad. The higher proportions in Greater Bombay and Sholapur are due to their large urban populations. No specific reasons can, however, be attributed for the high figures for Dhulia and Osmanabad districts.

29. Figure 5 below shows the distribution of 1,000 houses by their uses for 12 cities (over a lakh of population) and 14 towns having over fifty thousand population.

PURPOSES FOR WHICH HOUSES ARE USED (DISTRICTWISE)
(PER THOUSAND CENSUS HOUSES)

30. The following Statement shows the proportion of houses used as dwellings for Maharashtra and six other States for total, rural and urban areas separately. Population density is also shown for comparison.

Proportion of Houses used as Dwellings for Maharashtra and six other States

State	Population per square m l. (Total)	Percentage of houses used as dwellings		
		Total	Rural	Urban
1	2	3	4	5
Maharashtra ..	334	67.40	65.20	74.00
Andhra Pradesh ..	339	80.17	80.52	78.30
Gujarat ..	286	71.24	71.79	69.74
Madhya Pradesh ..	189	71.09	70.22	76.52
Mysore ..	318	73.79	74.68	70.69
Uttar Pradesh ..	649	64.15	63.17	72.07
Kerala ..	1,127	81.47	83.01	72.80

31. Andhra Pradesh with a lower density of population has 80.2 per cent. houses used as dwellings against 64 per cent. for Uttar Pradesh with a density of 649. Kerala with a high density of 1,127 also has a high percentage 81.5 per cent. for houses used as dwellings. The proportion of houses used for 'other' purposes shown in the last column of Table E-I (or Subsidiary Table E-I.1) differs so much from State to State that it is difficult to draw conclusions about the differences in proportion of houses used as dwellings. The proportion of houses used for 'other' uses may itself be a measure of the extent to which the Census procedures adopted for housenumbering and houselisting in different States covered places used for unclassified non-residential purposes.

32. The proportion of houses used for 'other' purposes in Maharashtra is very high particularly in the rural areas. To eliminate the influence of such unclassified houses in the districtwise comparisons the proportion of shops, workshops and schools, etc., are worked out and compared in the following paragraphs with 1,000 dwellings instead of 1,000 houses shown in the Subsidiary Table E-I.1.

Shop-cum-Dwellings

33. A few houses are used both as shops and dwellings. Numbers of such shop-cum-dwellings may be seen in column 6 of Table E-I and their proportions in column 6 of Subsidiary Table E-I.1. It will be seen that out of 674 dwellings in the State 7 are used as shop-cum-dwellings. The proportion of shop-cum-dwellings is comparatively higher in urban areas, viz. 11 out of 714 dwellings. But it is so because of the larger proportion of shops in urban areas and not because the practice of using shops also for residence is more prevalent in urban than in rural areas. On the contrary, looking from the total number of shops, 30 per cent. of all shops in rural areas are also used as dwellings while the corresponding proportion for urban areas is only 15.7 per cent. In Greater Bombay, the

proportion of shops also used as dwellings is 17 per cent. of the total number of shops. The proportion for Thana City is 24 per cent., for Poona City 15.5 per cent., for Nagpur City 12 per cent. and for Sholapur City 11 per cent. This may indicate that the pressure of population in Thana is heavier than the average for Greater Bombay. That is because of the vast extended suburban areas now included in Greater Bombay.

Workshop-cum-Dwellings

34. It will be seen from columns 7 and 11 of Table E-I and Subsidiary Table E-I.1 that 2.9 per cent. of the houses in Maharashtra are used as workshops, factories or worksheds. More than one-half of this category are, however, also used as dwellings. The proportion of workshop-cum-dwellings to total workshops, etc., in rural areas is 60 per cent. while that for urban areas is 35 per cent. The use of houses as workshop-cum-dwelling is thus more common in rural than in urban areas. That is because of the many household industries in rural areas which are conducted at home. The carpenters, potters, tailors, weavers or oil pressers in rural areas usually work at home. Their dwellings have, therefore, been returned as workshop-cum-dwellings. The highest proportion (86 per cent.) of workshop-cum-dwellings to total workshops, etc., is found in Bhandara District. Nagpur with 60 per cent. is second in the list. Bhandara and Nagpur show high proportions both for rural and urban areas. It is because of the weaving and bidi-making industries in those districts which are mostly conducted as household industries at home.

35. The proportion of workshop-cum-dwellings is further discussed along with the number of industrial establishments in paragraphs 49 to 58 below as well as in Chapter VI.

Shops

36. Columns 6 and 9 of Table E-I and of Subsidiary Table E-I.1 will together show the number and proportion of houses used as shops. A shop is a place where articles are sold for cash or credit. It does not here include business houses, offices, restaurants, sweetmeat shops and eating places but includes houses used partly as shops and partly as residence. It also excludes places where personal services are rendered such as laundries, hair cutting saloons, photo studios. In all, there are 273,238 houses wholly or partly used as shops. 120,816 or 44 per cent. of the total number of shops are in rural areas and the remaining 152,422 or 56 per cent. are in urban areas. The proportion of houses used as shops in the State is 2.4 per cent. In rural areas, it is 1.4 per cent. while in urban areas it is as high as 5.5 per cent. Compared with the number of dwellings, there are 22 shops per thousand dwellings in rural areas and 74 shops per thousand dwellings in urban areas. It will be seen that even by bare numbers of shops the commercial activity in urban areas of Maharashtra is 3½ times more than that of rural areas.

37. The following Statement will show for Maharashtra and six other States the proportion of houses used as shops and the number of shops per thousand

dwellings for total, rural and urban areas separately. Percentages of workers engaged in trade and commerce to total workers are also shown for comparison. The number of shops includes shop-cum-dwellings.

Proportion of Houses used as Shops and Number of Shops per 1,000 dwellings for Maharashtra and six other States

State	Total Rural Urban	Percentage of houses used as shops	Number of shops per 1,000 dwellings	Percentage of workers in Trade and Commerce to total workers
1	2	3	4	5
Maharashtra ..	T	2.4	36.4	4.51
	R	1.4	22.1	1.44
	U	5.5	74.3	15.76
Andhra Pradesh ..	T	1.7	20.8	4.26
	R	1.0	12.4	2.81
	U	5.3	67.7	14.86
Gujarat ..	T	3.6	50.8	4.85
	R	2.4	32.8	2.21
	U	7.0	100.8	16.27
Madhya Pradesh ..	T	1.8	25.3	2.38
	R	1.0	14.7	1.03
	U	6.6	86.6	15.12
Kerala ..	T	4.5	55.2	5.71
	R	3.9	47.4	4.53
	U	7.7	105.8	13.34
Mysore ..	T	12.8	38.2	3.64
	R	1.8	24.5	1.74
	U	6.2	88.8	13.09
Uttar Pradesh ..	T	2.4	37.9	3.68
	R	1.5	23.2	1.95
	U	10.1	141.3	18.93

38. It will be seen that among the seven States presented in the statement, Gujarat, Kerala, Mysore and Uttar Pradesh have larger proportions of shops per thousand dwellings and only two States, viz., Andhra Pradesh and Madhya Pradesh have lower proportions than Maharashtra. The comparison shows the same pattern for total, rural and urban areas except the urban area of Madhya Pradesh which has a larger proportion than the urban area of Maharashtra. It is significant that the percentages of workers in Trade and Commerce to total workers in Mysore (3.64) and Uttar Pradesh (3.68) are lower than that (4.51) for Maharashtra. Gujarat (4.85) and Kerala (5.71) however have larger proportions of workers engaged in Trade and Commerce than Maharashtra. It will indicate that an average shop in Maharashtra employs more workers than that in Mysore or Uttar Pradesh.

39. It will be seen that on the whole a shop in Maharashtra serves 27 dwellings or households. In rural areas, a shop serves as many as 45 dwellings while in urban areas it serves only 13 dwellings. The difference between rural and urban areas is firstly

because most of the urban shops also serve rural areas and secondly because the rural areas are also served by shops operating in numerous weekly markets which are not included in the shops shown in column 6 of Table E-I.

40. Among the districts in Maharashtra, Greater Bombay alone has 56,260 shops or 20.6 per cent. of the total number of shops in the State. The percentage proportion of houses used as shops is the highest (i.e. 6.1 per cent.) in Greater Bombay. In the four predominantly commercial sections in Greater Bombay, viz., Khara Talav, Chakla, Mandvi and Esplanade that proportion is as high as 26.7 per cent., 19.8 per cent., 13.00 per cent. and 12.7 per cent., respectively.

41. The Statement on page 34 shows for the State, four divisions and 26 districts and separately for total, rural and urban areas of each unit the percentage of houses wholly or partly used as shops and the number of shops per thousand dwellings. The percentage of workers in Trade and Commerce to total workers is also shown for each unit for facility of comparison. The number of shops includes shop-cum-dwellings also.

42. It will be seen that for total areas the variation of the proportion of shops per thousand dwellings is between 77.6 for Greater Bombay and 16.3 for Chanda District. For rural areas, it is between 41.9 for Osmanabad District and 12.9 for Chanda District. For urban areas, its variation is between 52.5 for Chanda District and 99.6 for Osmanabad District. The distribution of districts and talukas for rural and urban areas by the number of shops to one thousand dwellings is as follows :—

Number of shops to one thousand dwellings	Rural		Urban	
	Districts	Talukas	Districts	Talukas
1	2	3	4	5
1—10 ..	..	12	..	..
11—20 ..	11	102	..	..
21—30 ..	14	112	..	22
31—40 ..				
41—50 ..				
51—60 ..	..	1	2	24
61—70 ..	..	..	18	66
71—80 ..				
81 and above ..	..	..	6	54
Total ..	25	227	26	166

It will be seen that all the districts and as many as 214 talukas appear in the range 11 to 50 for rural areas while for urban areas the concentration is in the last two ranges, viz., 61 to 80 and 81 above.

43. Among rural areas, Udgir taluka in Osmanabad District shows the highest proportion of shops, viz., 59 per thousand dwellings. Even for urban areas, Udgir taluka (with 145) shows the highest proportion of shops in Maharashtra. The only plausible reasons which can be attributed are the lack of communications and the existence of larger numbers of the traditionally trading community of Lingayats in the region. The highest proportion of shops for Udgir cannot be attributed

Proportion of Houses used as Shops and Number of Shops per 1,000 dwellings

to any operational mistake in the Census. The distribution pattern appears to be consistent and the proportion of shops gradually increases towards Udgir which has the highest proportion. Neighbouring talukas of Umarga, Nilanga and Ahmadpur of Osmanabad District and Kandhar and Mukhed of Nanded District together make a semi-circle with proportions of the next lower range. This is followed by another periphery of proportions in the third range and consisting of about 20 talukas from Sholapur, Osmanabad, Bhir, Parbhani and Nanded districts.

44. The following Statement shows the same information as in the Statement on page 34 for each of the 12 cities and 14 other towns having over 50,000 population. Totals for all cities, all towns of over 50,000 population and for all the remaining urban areas are also presented for comparison.

Proportion of Houses used as Shops and Number of Shops per 1,000 dwellings

City/Town	Percentage of houses used as shops	Number of shops per 1,000 dwellings	Percentage of workers in Trade and Commerce to total workers
Greater Bombay	5.1	77.6	18.0
Poona City (M. Corp.)	4.9	64.2	17.3
Nagpur	4.8	65.2	14.7
Sholapur	5.7	73.2	12.7
Kolhapur	6.0	85.8	15.3
Amravati	6.2	89.3	18.6
Nasik	5.2	71.9	17.7
Malegaon	6.6	89.4	10.0
Ahmadnagar (including Cantonment)	6.0	80.7	15.1
Akola	6.0	83.9	20.1
Ulhasnagar	7.8	100.1	28.8
Thana	4.4	62.8	13.5
Total for 12 Cities	5.8	75.1	17.3
Dhulia	6.0	76.9	13.0
Aurangabad	5.2	68.8	13.8
Nanded	6.2	81.5	16.9
Jalgaon	6.3	91.2	19.3
Sangli	6.3	85.2	17.3
Kalyan	6.1	75.1	16.5
Bhusawal	5.0	68.9	11.7
Jalna	5.7	78.9	18.1
Gondia	5.4	74.0	17.0
Miraj	5.3	74.9	14.6
Chanda	4.6	64.6	16.5
Ichalkaranji	3.8	53.6	6.4
Barsi	6.2	84.4	19.3
Poona Cantonment	7.1	101.6	11.5
Total for 14 Towns	5.7	77.8	15.1
Total for 12 Cities and 14 Towns	5.8	75.5	17.0
Remaining Urban areas of Maharashtra	5.0	71.7	12.9

45. By the number of shops alone or by percentage of workers in Trade and Commerce to total workers, the 12 cities of one lakh and more population together have 75 shops per thousand dwellings and 17.3 per cent. workers in Trade and Commerce as against 77.8 shops per thousand dwellings and 15.1 per cent. workers in Trade and Commerce for the total of 14 Class II towns

and 71.7 shops per thousand dwellings and 12.9 per cent. of workers in Trade for the remaining urban areas (Classes III, IV, V and VI of towns combined). By both the criteria of the proportion of shops and workers in Trade and Commerce, Ulhasnagar appears to be more commercial than any other city or town. The next in order is Jalgaon town. The lowest figure among the cities for proportion of shops is for Thana, viz., 62.8 per thousand dwellings. The second lowest is Poona City with 64.2 shops per thousand dwellings.

Business Houses and Offices

46. Column 10 of Table E-I will show that 59,109 houses in Maharashtra are used as business houses and offices. Business houses are places where transactions in money or other articles take place, e.g., banks, etc. 20,540 or 35 per cent. of the total number of business houses and offices are in rural areas and the remaining 38,569 or 65 per cent. are in urban areas. Greater Bombay alone has 19,852 or 33.5 per cent. of the total number of business houses and offices in the State, which again is more than half of the total number in urban areas. This figure is inclusive of offices of Government, Local bodies, Gram Panchayats and Co-operative Societies. The figure for rural areas represents all such offices while the figure for urban areas and particularly the one in Greater Bombay mainly represents Banks and offices of trading or manufacturing firms, etc.

47. The Statement below will show the number of business houses and offices for total, rural and urban areas of Maharashtra and six other States :—

Proportion of Houses used as Business Houses and Offices and their number per 1,000 dwellings

State	Total Rural Urban	Percentage of houses used as Business Houses and Offices	Number of Business Houses and Offices per 1,000 dwellings
Maharashtra	..	T 0.53 R 0.24 U 1.39	8 4 19
Andhra Pradesh	..	T 0.24 R 0.14 U 0.79	3 2 10
Gujarat	..	T 0.47 R 0.20 U 1.19	7 3 17
Kerala	..	T 0.63 R 0.44 U 1.67	8 5 23
Uttar Pradesh	..	T 0.15 R 0.08 U 0.70	2 1 10
Mysore	..	T 0.51 R 0.38 U 0.98	7 5 14
Madhya Pradesh	..	T 0.17 R 0.08 U 0.76	2 1 10

48. Among the seven States shown in the statement, only Kerala has higher proportions for total, rural and urban areas than those in Maharashtra. All the other five States have lower proportions both in rural and urban areas. Higher proportion of business houses in urban areas of Maharashtra is due to the concentration of head offices of numerous banks and trading or manufacturing firms at Bombay. The reasons why Kerala shows higher rates both in rural and urban areas are not known to us.

Factories, Workshops and Worksheds

49. Columns 7 and 11 of Table E-I will show that 320,842 houses in Maharashtra are wholly or partly used as factories, workshops or worksheds. 202,600 or 63 per cent. of the total number of factories, workshops or worksheds are in rural areas and the remaining 118,242 or 37 per cent. are in urban areas. The percentage of houses used as factories, workshops or worksheds for the State is 2.9. It is 2.4 per cent. for rural areas and 4.2 per cent. for urban areas. Factories are those which are registered under the Indian Factories Act. Workshops or worksheds are small unregistered places where some kind of production, repair or servicing goes on or where goods or articles are made for sale. The definition includes houses which are partly used as factories, workshops, etc., and partly as residences but does not include hotels, restaurants, tea stalls, etc., where eatables are served. It does include bakeries or other places where sweetmeats are manufactured. Factories, workshops or worksheds do not appear, from Table E-I, to be concentrated in urban areas. It is so because small workshops of the village carpenters, potters, weavers, oilmen, etc., are included in the rural figure. There is certainly a concentration of manufacturing establishments particularly of those of the larger types in urban areas. This aspect is further discussed in Chapter VI along with the topics of location and size of industrial establishments.

50. The Statement in the next column will show the comparative position of houses used as factories, workshops or worksheds in Maharashtra and six other States for total, rural and urban areas separately. The percentage of workers in household industry and manufacturing is also shown for each State for comparison.

51. Among the seven States presented in the statement only Madhya Pradesh has a higher ratio (63) of factories, workshops or worksheds than Maharashtra (43). It has a larger number of factories and worksheds per thousand dwellings both in rural and urban areas. All other States have smaller numbers both for rural and urban areas. The percentage of workers engaged in manufacturing industry is however lower in Madhya Pradesh than in Maharashtra. It is significant that the percentage of workers engaged in household industry and manufacturing is very high (17.13) in Kerala rural areas than (5.15) in Maharashtra.

52. The Statement on page 37 will show the number of factories, workshops or worksheds for the State, four divisions and 26 districts for total, rural and urban areas separately.

Number of Factories, Workshops and Worksheds per 1,000 dwellings and Percentage of workers in Manufacturing Industries including Household Industries to total workers

State	Total Rural Urban	Number of Factories, workshops and worksheds per 1,000 dwellings	Percentage of workers in Manufacturing Industries including Household Industries to total workers
Maharashtra	T R U	43 37 58	11.28 5.15 33.68
Andhra Pradesh	T R U	21 19 33	12.27 10.61 24.34
Gujarat	T R U	21 12 45	12.88 8.03 33.90
Kerala	T R U	21 16 52	18.08 17.13 24.25
Uttar Pradesh	T R U	19 14 52	9.02 6.94 27.39
Mysore	T R U	24 16 50	10.54 7.10 27.66
Madhya Pradesh	T R U	63 62 72	6.96 4.75 27.88

53. The distribution of 26 districts, 26 Class I and II towns and 227 talukas in the six ranges of the number of factories, workshops, etc., to 1,000 dwellings is as follows :—

		Number of Factories, Workshops, etc. to 1,000 dwellings					
		Total	1—10	11—20	21—30	31—40	41—101+
Districts	R	25	1	5	9	4	5
	U	26	..	..	..	3	19
Talukas	R	227	27	59	54	46	38
	U	166	..	5	17	23	101
Class I and II Towns.	U	26	..	..	3	1	17

It will be seen that for rural areas most of the talukas fall in the ranges with less than 40 factories, workshops, etc., to one thousand dwellings but for urban areas the concentration is in the range 41 to 100. The highest numbers in rural areas are for Gondia and Bhandara talukas in Bhandara District. The only district falling in the lowest range for rural area is Thana.

Number of Factories, Workshops and Worksheds per 1,000 dwellings and Percentage of Workers in Manufacturing Industries including Household Industries to total workers

State/Division/District	Total Rural Urban	Number of Factories, Workshops and Worksheds per 1,000 dwellings	Percentage of workers in Manufacturing Industries including Household Industries to total workers	State/Division/District	Total Rural Urban	Number of Factories, Workshops and Worksheds per 1,000 dwellings	Percentage of workers in Manufacturing Industries including Household Industries to total workers

54. The following Statement will show the number of factories, workshops or worksheds for 12 cities and 14 other towns above 50,000 population. Totals have been presented for facility of comparison for the 12 cities, the 14 towns in Class II, for the group of the above 26 towns together and for the remaining urban areas.

Number of Factories, Workshops and Worksheds per 1,000 dwellings and Percentage of Workers in Manufacturing Industries including Household Industries to total workers

City/Town	No. of Factories, Workshops and Worksheds per 1,000 dwellings	Percentage of workers in Manufacturing Industries including Household Industries to total workers
Greater Bombay	36	41
Poona	48	29
Nagpur	93	39
Sholapur	76	62
Kolhapur	84	31
Amravati	43	20
Nasik	41	29

Ichalkaranji	193	68
Barsi	50	32
Poona Cantonment	63	20
Total for 14 Class II Towns	77	30
Total for 12 Cities and 14 Class II Towns	53	39
Remaining Urban areas in Maharashtra	68	22

55. Among the 12 cities, Malegaon in Nasik District stands out mainly as a manufacturing centre. It has the highest ratio (133) of factories and workshops to one thousand dwellings as well as the highest proportion (71 per cent.) of workers in household and manufacturing industries. Nagpur (93) and Ahmadnagar (94) also have high ratios of factories, etc., to dwellings but the proportions of workers engaged in industry are comparatively lower (39 per cent. and 30 per cent. respectively) than Malegaon (71 per cent.). This will show that Malegaon is exclusively a manufacturing centre while Nagpur and Ahmadnagar have other characteristics as well.

56. Among the Class II towns, Ichalkaranji has the highest ratio (193) of factories, etc., per thousand dwellings as well as the highest (68 per cent.) proportion of workers in household and manufacturing industries. Malegaon and Ichalkaranji are both well known centres of handloom and powerloom textile industry.

57. Twenty-six Class I and II towns together have lower (53) ratio of factories and workshops to dwellings than that (68) for the remaining towns of Class III, IV, V and VI combined. On the other hand, the proportion of workers in household and manufacturing industry for Class I and II towns is higher (39 per cent.) than that of the remaining urban areas (22). This is the result of concentration of bigger industries in larger towns.

58. More of this in Chapter VI.

Hotels, Sarais, Dharamshalas, Tourist Homes and Rest Houses

59. Column 8 of Table E-I will show that 11,830 houses are used as hotels, sarais, dharamshalas, etc., in Maharashtra. 6,196 or 52.4 per cent. are in rural areas and 5,634 or 47.6 per cent. are in urban areas. This item includes houses used as hotels or lodging houses, etc. Their proportion in rural areas is only 0.1 per cent. of the total number of houses while it is 0.2 per cent. in urban areas.

Restaurants, Sweetmeat shops and Eating places

60. Column 13 of Table E-I will show that 27,639 houses are used as restaurants, sweetmeat shops and eating places. 11,933 or 43 per cent. are in rural areas and 15,706 or 57 per cent. in urban areas. It is significant to note that the number of restaurants, sweetmeat shops and eating places where eatables are sold or served is about 10 per cent. of the total number of all other shops. In other words, for every 10 other shops there is one restaurant, sweetmeat shop or eating place. The ratio, moreover, does not much differ for rural and urban areas.

61. The following Statement will show the comparative position of Maharashtra and six other States. The number of restaurants, etc., to one thousand other shops is also shown for comparison.

Proportion of Restaurants, Sweetmeat shops and Eating places and their number per 1,000 dwellings and per 1,000 shops

State	Total Rural Urban	Percentage of houses used as Restaurants, Sweetmeat shops and Eating places to total Census Houses	Number of Restaurants, Sweetmeat shops and Eating places to 1,000 dwellings	Number of Restaurants, Sweetmeat shops and Eating places to 1,000 other shops

N = Negligible

62. Gujarat has the same number of restaurants, sweetmeat shops and eating places per thousand dwellings as Maharashtra. Andhra Pradesh and Uttar Pradesh have lower figures. The number of restaurants, sweetmeat shops and eating places to one thousand other shops is lower in Madhya Pradesh and Uttar Pradesh. It is significant that the number of restaurants, sweetmeat shops and eating places in Maharashtra for one thousand dwellings is four times higher than that in Uttar Pradesh. Kerala has the highest figures for the numbers of restaurants, etc., both to 1,000 dwellings and to 1,000 other shops. Those ratios are four to five times higher than those for Maharashtra.

63. The Statement on page 40 will show the proportion of restaurants, sweetmeat shops and eating places per 1,000 dwellings and 1,000 shops for the State, divisions and districts for total, rural and urban areas separately.

64. Generally, the urban areas have larger numbers of restaurants, sweetmeat shops and eating places to one thousand dwellings. The urban areas in Aurangabad Division particularly have larger numbers of restaurants, sweetmeat shops and eating places than all other districts.

65. The following Statement will show the proportion of restaurants, sweetmeat shops and eating places for 12 cities and 14 other towns above 50,000 population :—

Proportion of Restaurants, Sweetmeat shops and Eating places and their number per 1,000 dwellings and per 1,000 shops for cities and towns

66. It will be seen that the total of 14 Class II towns has a higher ratio (8.4) of restaurants, sweetmeat shops and eating places than that (7.0) of all the 12 Class I towns. The ratio to all other shops is also higher (108.2) for Class II towns than (93.7) for Class I towns. Other smaller urban areas similarly have higher ratios both for restaurants, sweetmeat shops and eating places to dwellings and restaurants, sweetmeat shops and eating places to all other shops than the total of 26 towns in Classes I and II.

Schools and other Educational Institutions

67. Column 12 of Table E-I will show that 51,411 houses are used in the State as schools or educational institutions. Of these, 40,190 or 78 per cent. are in rural areas and 11,221 or 22 per cent. are in urban areas.

68. The following Statement will show the comparative position of Maharashtra, and six other States :—

Proportion of Houses used as Schools and their number per 1,000 dwellings

State	Total Rural Urban	Percentage of Census Houses used as Schools	Number of Schools per 1,000 dwellings
Maharashtra	T R U	0.74 0.77 0.54	7.41 7.61 5.40
Andhra Pradesh	T R U	0.36 0.35 0.42	4.50 4.35 5.31
Gujarat	T R U	0.47 0.51 0.38	6.63 7.04 5.48
Kerala	T R U	0.46 0.45 0.47	5.59 5.45 6.50
Uttar Pradesh	T R U	0.23 0.21 0.38	3.64 3.40 5.34
Mysore	T R U	0.46 0.46 0.45	6.19 6.15 6.34
Madhya Pradesh	T R U	0.30 0.30 0.32	4.28 4.30 4.13

69. It will be seen that Maharashtra has a higher ratio (7.41) of schools to one thousand dwellings than Gujarat (6.63), Mysore (6.19), Kerala (5.59), Madhya Pradesh (4.28) and Uttar Pradesh (3.64). The ratio for rural areas of Maharashtra is similarly higher than all the six States shown in the statement. As for urban areas, the ratio for Maharashtra (5.40) is lower than that for Kerala (6.50), Mysore (6.34) and Gujarat (5.48). Kerala has the highest literacy in India but it is significant that the number of schools and other educational institutions to one thousand dwellings there is lower than in Maharashtra.

Y 3168—4

70. The Statement on page 42 will show the proportion of houses used as schools for Maharashtra, its divisions and districts for total, rural and urban areas separately. The number of schools per thousand dwellings and the proportion of full-time students to total population are also shown for comparison.

71. It will be seen that by the number of schools per thousand dwellings the districts of Aurangabad Division have much lower ratios, viz., between 4.3 and 6 against the average of 7.4 for the State. The percentage of full-time students to total population is also considerably lower for those districts. It is between 6.7 and 8 against the average of 11.9 for the State.

72. The distribution of 26 districts and 228 talukas by ranges of number of schools to one thousand dwellings is as follows :—

		Number of schools to 1,000 dwellings											and above
		Total	3	4	5	6	7	8	9	10	11		
Districts	Rural	25	4	..	2	5	..	9	..	..	..	5	
	Urban	26	2	..	12	4	..	6	..	..	..	2	
Talukas	Rural	227	28	..	32	31	..	76	..	..	..	60	
	Urban	166	35	..	33	34	..	37	..	..	..	27	
12 Cities and 14 Towns	Urban	26	7	..	8	4	..	5	..	..	..	2	

73. For rural areas, the four districts with the lowest range of schools are Aurangabad, Parbhani, Bhir and Osmanabad. For urban areas the two districts in the lowest range are Greater Bombay and Parbhani.

74. The Statement on page 43 will show the proportion of houses used as schools and the percentage of full-time students to total population for 12 cities and 14 other towns having more than 50,000 population.

75. Among the cities, Kolhapur has the highest ratio (9.43) of schools to 1,000 dwellings. Second highest is Thana (7.43). By percentage of full-time students to total population Kolhapur City is highest with 24.80 per cent. and Poona is second high with 23.47 per cent.

76. By the numbers of houses used as schools to 1,000 dwellings the Class II towns as a group fare better with 6.36 than Class I towns as a group with 4.59. In fact, Greater Bombay has the lowest ratio (3.76) of schools to 1,000 dwellings among all the 26 towns of Classes I and II. The lower proportion of population in school-going age, the larger size of schools and their working in two or more shifts may account for this significantly low ratio for Greater Bombay.

Proportion of Houses used as Schools, their number per 1,000 dwellings and Percentage of Students to total population

Public Health and Medical Institutions, Hospitals, etc.

77. Column 15 of Table E-I and Subsidiary Table E-I-1. will show the number and the proportion of houses used as Public Health and Medical Institutions. This category includes hospitals, clinics, dispensaries, health centres, family planning centres, maternity homes, etc. The proportions are numerically very

insignificant and no comparison can be made between district and district or State and State. Out of 16,537 houses used for this purpose in Maharashtra, the urban areas have 10,725 or 65 per cent. and are thus served five times better than the rural areas in this respect. Greater Bombay alone has about one-fourth of the total number of such institutions in the State.

Places of Entertainment and Community Gathering

78. This category includes cinemas, theatres, Panchayat Ghars, libraries, reading rooms, village chavdis gymnasiums, akhadas, museums, art galleries, temples, mosques, churches, Mangal Karyalayas, town halls, etc. The proportion of houses used for this purpose in Maharashtra is 18 per thousand for total, 20 per thousand for rural and 11 per thousand for urban areas. Proportions in rural areas are higher because of the inclusion of temples, mosques, churches, akhadas and bhajan mandals which are usually found in each village. Urban areas certainly have more recreational or entertainment services but by bare numbers which include religious institutions the rural areas appear in the table to be better served in this respect than the urban areas.

Vacant Houses and Houses used for other purposes

79. Column 4 of Table E-I shows the number of vacant houses while the last column 16 shows the number of houses used for 'other' purposes not classified in any of the uses shown in columns 5 to 15.

80. The proportion of vacant houses is 7.5 per cent. for rural areas and 6.2 per cent. for urban areas. These are houses which at the time of the Census were not used for residence or for any other purpose. The number also includes houses which were then under construction. In spite of that the proportion of vacant houses appears to be large especially in urban areas.

81. The number of houses used for 'other' purposes is shown in column 16 of Table E-I and their proportion in column 16 of Subsidiary Table E-I-1. The proportion of this category for the districts in Maharashtra is also shown in Figures 3 and 4 on page 31.

82. In rural areas for the State, the proportion of the unclassified category is as high as 224. In urban areas, it is only 85. The following are the types of uses grouped in this category :—

- (1) Garage, car-shed ;
- (2) Cattle-shed, cattle pound ;
- (3) Godown, store-room ;
- (4) Oil engine shed, electric pump room, meter room ;
- (5) Kitchen, outhouse ;
- (6) Places where personal services are rendered but which are not included in shops, e.g.; laundries, hair cutting saloons, photo studios, and
- (7) Cemeteries.

TABLE E-II shows the numbers of owned and rented houses used as dwellings. Subsidiary Table E-II.1 shows the distribution of one thousand households using different types of dwellings, shop-cum-dwellings and workshop-cum-dwellings. That Subsidiary Table deals only with rural areas. Subsidiary Table E-II.2 shows the distribution of one thousand households using dwellings by owned and rented categories as well as by different purposes for which they are used. That Subsidiary Table deals only with urban areas. The main Table E-II is prepared from a 20 per cent. sample of households drawn from the houselists.

2. Occupancy tenure, i.e., the nature of right on which a household is occupying the house is classified here only in two categories of "owned" and "rented". Dwellings which are not owned are treated as rented. Rent-free or caretaker occupancies are also included in the rented category. It will be seen that Table E-II does not show the tenures of occupation of non-residential houses such as shops, factories, schools, hospitals, etc.

3. In Maharashtra, out of a total number of 1,518,048 sample households 1,096,366 households (72 per cent.) reside in owned dwellings while 421,682 (28 per cent.) reside in rented dwellings. The distribution of owned and rented dwellings is, however, widely different for rural and urban areas. Figure 6 below will show that in rural

FIG. 6
PROPORTION OF OWNED & RENTED DWELLINGS
RURAL & URBAN

CHAPTER III

OCCUPANCY TENURES

areas, 88 per cent. households reside in owned dwellings and only 12 per cent. in rented dwellings while in urban areas, only 30 per cent. reside in owned dwellings and 70 per cent. reside in rented dwellings.

4. The proportion of rented dwellings in rural areas (in India) had been observed in the First Agricultural Labour Enquiry to be 1.7 per cent. It is reported as 5.7 per cent. for old Bombay State, 7.4 per cent. for old Madhya Pradesh and 4.5 per cent. for Hyderabad State. These figures are much lower than the 1961 Census figures for the corresponding regions of Maharashtra. Rural areas of Bombay and Poona Divisions now have 11 per cent. and 14 per cent. of rented dwellings while those in Nagpur and Aurangabad Divisions have 12 per cent. and 11 per cent., respectively.

5. The coverage and the concepts used in the First Agricultural Labour Enquiry differed widely from those of the 1961 Census and no inferences on trends of change can, therefore, be drawn by comparing the two sets of figures. No other statistics on home ownership are available for Maharashtra and in fact for any other State in India. One cannot, therefore, say if there has been any shifting of rented dwellings to owned dwellings or vice versa during the decade 1951-61.

6. The following Statement will show the comparative position of Maharashtra and six other States by proportion of owned and rented dwellings separately for total, rural and urban areas:—

Proportion of owned and rented dwellings

State	1	Total		Rural		Urban	
		Owned	Rented	Owned	Rented	Owned	Rented

Uttar Pradesh	..	92	8	98	2	52	48

7. Out of the seven States shown in the statement, Maharashtra has the highest proportion (28 per cent.) of rented dwellings. It may be due to the very high proportion of urban areas in Maharashtra. For urban areas, Maharashtra has the highest proportion (70 per cent.) of rented dwellings. For rural areas, it is (with 12 per cent.) second only to Mysore (with 15 per cent.).

8. The bulk of the households occupying rented dwellings in rural Maharashtra is made up of agricultural labourers migrating for work and Government employees posted outside their native places. The sizeable proportion of rented houses in the rural areas should also indicate that house properties still attract capital investment even in the rural areas.

9. The following Statement will show the proportion of owned and rented dwellings for total, rural and urban areas of Maharashtra, its four divisions and 26 districts :-

Proportion of owned and rented dwellings

10. Figure 7 on page 69 shows the comparative position in respect of owned and rented dwellings for urban areas of all the districts. The proportion of urban population is also shown there for comparison.

11. By and large, rented houses appear to be an urban feature. The districts having larger proportion of urban population also have larger proportion of rented houses. Poona (41), Sholapur (32) and Nagpur (34) are examples of this type. As for the rural areas, Ratnagiri has the lowest proportion (5 per cent.) of rented houses. A comparatively low figure (12 per cent.) for Thana District rural and a higher figure of (65) for Thana urban may indicate that the overflow of Bombay City population is restricted only to the urban centres in Thana District and to the rural areas in Kalyan and Thana talukas which have 32 per cent. and 19 per cent. of rented houses, respectively.

12. The difference between Poona and Nagpur Districts is also very significant. Poona District urban area has 81 per cent. rented houses against only 55 per cent. in the urban area of Nagpur District. Barring the two extreme cases of Greater Bombay on the higher side and Nagpur on the lower side, the proportion of rented dwellings appears to be following the proportion of urban population in the district.

13. In the rural areas, the regions which attract agricultural or other labourers from outside show a higher percentage of rented houses. Srirampur (44),

Kopargaon (35) and Rahuri (24) in Ahmadnagar District and Malsiras (30) of Sholapur District are good examples. They have large areas irrigated by canals and growing sugarcane. Coastal talukas in Konkan districts and hilly talukas in other districts generally have a small (less than 10 per cent.) percentage of rented houses. Talukas on the plains have comparatively higher proportions ranging between 10 and 20.

14. The frequency distribution of districts and talukas by proportion of rented dwellings for rural and urban areas is as follows :-

Percentage of rented dwellings	Rural		Urban	
	Districts	Talukas	Districts	Talukas
1	2	3	4	5
1 to 10	..	10	99	..
11 to 30	..	15	125	33

FIG. 7
PROPORTION OF RENTED DWELLINGS—URBAN
(DISTRICTWISE)

FIG. 8
PROPORTION OF RENTED DWELLINGS
(CLASS I & II TOWNS)

16. Figure 8 on page 69 also shows the proportion of owned and rented dwellings for all towns in Classes I and II. It will be seen that more than 80 per cent. of the households in the cities are residing in rented dwellings. Greater Bombay tops the list with 90 per cent. households in that category. Poona stands second with 86 per cent. Nagpur has a comparatively lower proportion with only 61 per cent. It may be said that Nagpur (61 per cent.), Kolhapur (59 per cent.), Amravati (61 per cent.) and Akola (69 per cent.) are cities which comparatively have more people who not only find jobs but also take up their owned dwellings there. Malegaon with 61 per cent. is another exception. It has a large number of migrants residing in improvised huts which have been classified as owned. The low figure (30 per cent.) for rented dwellings for Ulhasnagar is due to the displaced persons who have been granted ownership rights to tenements in the camps now allotted to them. Average for all the 12 cities is 81 per cent. The average goes so high only because of the overwhelming numbers for Bombay and Poona cities.

17. Among the Class II towns, Kalyan with 89 per cent. tops the list with Poona Cantonment a close second with 88 per cent. Bhusawal is third in the list. Kalyan is a busy centre of railways and Bhusawal is the headquarters of a railway division. All the railway employees reside in the Railway Colonies and hence the very high percentage of rented dwellings in those two towns.

Owned and rented shop-cum-dwellings and workshop-cum-dwellings.

18. It may have been interesting to see how the proportions of owned and rented shop-cum-dwellings or workshop-cum-dwellings varied between rural and urban areas. But the proportions for owned and rented shop-cum-dwellings and workshop-cum-dwellings have not been drawn up for rural areas in Subsidiary Table E-II.1. Moreover, the proportion of such shop-cum-dwellings or workshop-cum-dwellings to total number of shops or workshops itself changes from district to district. It may not, therefore, be correct to draw inferences on the prosperity of commercial or industrial concerns in different localities, simply from the proportion of owned and rented shop-cum-dwellings or workshop-cum-dwellings available only for urban areas.

19. As regards shop-cum-dwellings, the position of owned and rented is more or less the same in rural and urban areas. The proportions of owned shop-cum-dwellings in both rural and urban areas (76 and 26 respectively) are lower than the proportions of owned dwellings to total dwellings. In the case of workshop-cum-dwellings, the proportion of owned is the same as for total dwellings in rural areas but it is higher (53.4 per cent.) in urban areas than (30 per cent.) for total dwellings. In other words, the proportion of workshop ownership is better in urban areas than that for owned dwellings.

CHAPTER IV

MATERIALS OF WALLS AND ROOF

TABLE E-IV presents the distribution of sample households living in census houses used wholly or partly as dwellings by materials of wall and materials of roof for the State, four divisions, 26 districts and 26 towns of Classes I and II which have over 50,000 population. Subsidiary Table E-IV.1 shows the distribution of 1,000 dwellings by materials of wall. Subsidiary Table E-IV.2 shows the distribution of 1,000 dwellings by materials of roof. According to the instructions issued to enumerators for writing the houselists, the material of walls for a dwelling is the material out of which most of its walls are constructed. Where a dwelling has separate portions each of a different material, the material of walls is the one out of which the walls of the main bed-rooms are constructed. Similarly, the material of roof is the one out of which most of the roof exposed to weather is constructed. In the case of multi-storeyed buildings, the intermediate floor is treated as the roof of the storey.

2. Table E-IV has been prepared on a 20 per cent. sample drawn from the houselists. It will be seen that material is presented in the table only for dwellings and houses which are not used either wholly or partly for residential purposes are not included there.

3. Materials of walls are classified into the following nine categories :—

- grass, leaves, reeds or bamboo;
- timber;
- mud;
- unburnt bricks;
- burnt bricks;
- corrugated iron sheets or other metal sheets;
- stone;
- cement concrete; and
- all other materials.

4. Materials of roof are classified as :—

- grass, leaves, reeds, thatch, wood or bamboo;
- tiles, slate, shingle;
- corrugated iron, zinc or other metal sheets;
- asbestos cement sheets;
- brick and lime;
- concrete and stone slabs ; and
- all other materials.

Materials of Walls

5. Figure 9 below shows the distribution of dwellings by materials of walls for rural and urban areas of Maharashtra. It will be seen that mud and stone with 35.7 per cent. and 31.2 per cent. are the two predominant materials of walls in rural Maharashtra. Grass, leaves, bamboo, etc., with 15.8 per cent. is the third category while unburnt bricks are only 8.1 per cent. and burnt bricks 7.3 per cent. In urban areas, the proportions of grass, leaves etc., mud, unburnt bricks and stone walls are lower and burnt bricks predominate with 50.6 per cent.

FIG. 9
PROPORTION OF DIFFERENT MATERIALS OF WALL
(MAHARASHTRA STATE)
(PER THOUSAND DWELLINGS)

6. It will be seen that walls of mud and stone are mostly a feature of the rural areas. Walls of grass, leaves, etc., and unburnt bricks also follow the same pattern but to a lesser extent. Walls of cement concrete and corrugated iron sheets are, on the other hand, mostly an urban feature. Walls of burnt bricks and timber follow the same pattern but on a reduced scale.

7. The Statement on the next page will show the comparative position in respect of materials of walls for Maharashtra, as compared with six other States, for rural and urban areas separately.

8. The proportion of dwellings with walls of grass, leaves, reeds or bamboo in Maharashtra rural areas (15.8 per cent.) is higher than that for Andhra Pradesh (7.8 per cent.), Madhya Pradesh (7.5 per cent.), Mysore (7.4 per cent.) and Uttar Pradesh (1.8 per cent.). It is lower than Gujarat (17.2 per cent.) and Kerala (16.1 per cent.). For urban areas, Maharashtra has 8.9 per cent. of such dwellings which is higher than that for Andhra Pradesh (6.9 per cent.), Gujarat (3.2 per cent.), Madhya Pradesh (3.8 per cent.), Mysore (7.2 per cent.), and Uttar Pradesh (0.6 per cent.). Only Kerala urban area has a higher proportion (14.4 per cent.) of dwellings

N=Negligible.

with walls of grass, leaves, etc. than that for Maharashtra urban area. The proportion of dwellings with stone walls is 31.2 per cent. in rural areas of Maharashtra. It is higher than that for rural areas of all States shown in the statement except Mysore with 35.4 per cent. The proportion of stone walled houses in urban areas is only 9.8 per cent. in Maharashtra which is lower than that for Andhra Pradesh (14.3 per cent.), Gujarat (21.4 per cent.), Madhya Pradesh (11.8 per cent.), Mysore (22.2 per cent.) and Kerala (43.6 per cent.). The place of stone walls in urban areas of Maharashtra is taken by burnt bricks for which the Maharashtra figure (50.6 per cent.) is higher than that for Andhra Pradesh (38.3 per cent.), Madhya Pradesh (36.2 per cent.), Mysore (33.1 per cent.) and Kerala (6.4 per cent.). It is lower than that for urban areas of Gujarat (62 per cent.) and Uttar Pradesh (70.9 per cent.).

9. The distribution of 1,000 dwellings by materials of walls for the State, divisions and districts and for 26 towns of Classes I and II is given in Subsidiary Table E-IV.1 on page 86.

10. The proportions of each category of materials of walls in rural and urban areas are separately discussed in the following paragraphs.

(i) Grass, Leaves, Reeds or Bamboo, etc.

11. Walls of grass, leaves, reeds, etc., would denote a hut or cottage type of dwelling. Such dwellings are usually associated with poverty, backwardness or tribal ways of living.

12. Out of all the dwellings with walls of grass, leaves, etc., in the State, 82.42 per cent. (against 72 per cent. of population) are in rural areas and the remaining 17.58 per cent. in urban areas. Walls of grass, leaves, etc., are thus more a rural feature. 15.8 per cent. of all dwellings in rural areas and 8.9 per cent. of all dwellings in urban areas have walls of such material. The proportion of dwellings of such walls in rural areas ranges from 2.1 per cent. for Ratnagiri District to 76.5 per cent. for Thana District. Rural areas of four districts of Thana, Kolaba, Yeotmal and Chanda have over 35 per cent. of their dwellings with walls of grass, leaves, etc. and together make 50 per cent. of the total number of dwellings of that type in rural areas of the State. Rural areas of Nasik and Dhulia are of the second order having about 20 per cent. dwellings with walls of grass, leaves, etc. These six districts have considerable areas under forests and large percentages of tribal population. Thana rural area with 76.5 per cent. dwellings with grass, leaves, etc., has 42 per cent. of its geographical area under forests and 41.85 per cent. of its total rural population belonging to Scheduled Tribes. Kolaba has a high proportion (45.9 per cent.) of dwellings with grass, leaves, etc. 24.1 per cent. of its geographical area is under forests and 9.83 per cent. of its total population is of Scheduled Tribes.

13. It may be seen that even cities with over one lakh population have their share of houses with walls of grass, leaves, etc. Greater Bombay has 6.5 per cent. of all the dwellings with walls of such type. It means

that one household in every 16 households in Greater Bombay is residing in a dwelling with walls of grass, leaves, etc.

14. The distribution of 227 talukas by proportion of dwellings with grass, leaves, etc., in rural areas is as follows :—

Proportion per thousand of dwellings with walls of grass, leaves, etc.	No. of Talukas
0—50	83
51—100	58
101—250	43
251—500	15
501—750	13
751—1,000	15
Total	227

15. The fifteen talukas showing the highest proportion (751 to 1,000) of dwellings with walls of grass, leaves, etc., are Melghat in Amravati District; Akrani, Akalkuva and Nawapur in Dhulia District; Peint and Surgana in Nasik District; Dahanu, Jawhar, Vada, Mokhada, Bhivandi, Shahapur and Murbad in Thana District; and Karjat and Sudhagad in Kolaba District. All these talukas are well-known hilly habitats of Scheduled Tribes and have large areas under forests. The second highest proportion is in the eastern talukas of Chanda District and the southern talukas of Yeotmal District.

16. The regions where dwellings with walls of grass, leaves, etc., predominate are also shown in the map facing this page. All those regions are inhabited by Scheduled Tribes and abound in grass, leaves, etc. because of their large areas under forests. Photos on pages 20 to 24 will show a few types of dwellings with walls of grass, leaves, etc.

(ii) Timber

17. Timber is scarcely used in Maharashtra as a material of wall. There are only 0·4 per cent. dwellings with timber walls in rural areas and 2·1 per cent. in urban areas. Out of all dwellings with timber walls 34·4 per cent. are in rural areas and 65·6 per cent. in urban areas. Over 40 per cent. of this type of dwellings are in Greater Bombay alone. This category includes small apartments made out of big halls with wooden partitions and temporarily raised cubicles used as shops during the day and as dwellings at night. Timber is not generally available in rural areas in Maharashtra. It is not, therefore, used for walls except where walls of other material would take more space or add heavier load than the ground floor can bear.

(iii) Mud

18. Column 5 of Table E-IV shows the number of sample dwellings with mud walls while their proportion is shown in column 4 of Subsidiary Table E-IV.1.

19. Generally speaking, even stone walls in Maharashtra are built with stone in mud. This category, however, covers walls of mud alone with no other material in it. It excludes walls of unburnt bricks which are discussed as an independent category separately.

20. Dwellings with mud walls are 35·7 per cent. of the total in rural areas and 11·3 per cent. in urban areas. Out of all the dwellings with mud walls, 89·3 per cent. are in rural areas and 10·7 per cent. in urban areas. Mud walls are thus, more a rural feature. Proportions of dwellings with mud walls vary considerably both for rural and urban areas from district to district. For rural areas, the range of variation is between 1·5 per cent. for Satara District and 87·3 per cent. for Bhandara District. For urban areas, the variation is between 0·1 per cent. for Kolaba District and 43·4 per cent. for Chanda District.

21. The distribution of 227 talukas for rural areas by proportion of dwellings with mud walls is as follows :—

Proportion per thousand of dwellings with mud walls	No. of Talukas
0—50	76
51—100	14
101—250	28
251—500	48
501—750	36
751—1,000	25
Total	227

22. The map facing this page will show the talukawise distribution. Broadly speaking, the dwellings with mud walls predominate in the whole of the Tapi river basin and out of the Godavari basin in areas lying to the north of Godavari river. Ratnagiri District in the extreme south-west is another region of predominance of dwellings with walls of mud. Except for Ratnagiri District all the other talukas having over 50 per cent. dwellings with mud walls are situated to the north of Godavari river. The proportion of mud walls increases as one proceeds from Godavari river towards the north, more so towards north-east. Nagpur Division (rural areas) in fact have the highest proportion 66 per cent. of mud walls. Walls of grass, leaves, etc., and walls of mud together make more than 85 per cent. dwellings in the districts of Nagpur Division. Buldhana situated to the west is an exception where the two together make only 51 per cent.

23. The pattern in Ratnagiri District is different from that in Kolaba and Thana districts. Here too, the proportion of mud walls gradually increases from 25 per cent. in Khed taluka in the north to 92 per cent. in Savantvadi taluka in the south.

24. The age-old practice of using mud for walls in certain regions in preference to other materials is on account of its suitability for the purpose in those regions. In Ratnagiri District, e.g., soil gets very hard on drying and mud walls are as hard as those of stones. The mud walls in Ratnagiri are, however, either yellowish brown or brown as against their dull white appearance in Jalgaon, Amravati or Wardha District.

25. The region in which mud walls predominate has a rainfall variation between 25 and 60 inches. Southern Ratnagiri has 80 to 100 inches rainfall. The Nagpur Division where mud walls predominate also has extreme temperatures in summer, while South Ratnagiri has low

temperatures in summer but very high humidity during monsoons. It will thus be seen that mud walls can bear all climatic conditions—rainfall, summer temperatures or humidity. The choice appears to depend upon the availability of suitable type of earth (clay) which would stand up to those climatic variations.

26. It may be added that outer mud walls always have a stone foundation up to ground level and very often also a stone plinth from 6" to 2½' height. Photos on pages 20 to 24 will show a few types of dwellings with walls of mud.

(iv) Unburnt Bricks

27. Unburnt bricks are a middle stage between mud and burnt bricks. In fact, this category should be grouped with mud walls as even for building mud walls in many cases some sort of crude blocks are first prepared of mud, allowed to dry and then used. There are numerous forms of making such blocks of mud for walls and the most refined of them all is the making of bricks of measured size by using wooden frames. The difference is more of a degree in refining the earth used and of neatly cut and measured dimensions.

28. The region where unburnt bricks predominate as material of walls consists of the five coastal talukas of Kolaba District, Junnar taluka in Poona District and Radhanagari taluka in Kolhapur District. The other regions where its proportions are high (over 30 per cent.) are the northern talukas of Ratnagiri District, western talukas of Kolhapur District, Karad taluka in Satara District and Ambegaon taluka in Poona District.

29. The distribution of talukas by proportion of unburnt bricks in rural areas is as follows :—

Proportion per thousand of dwellings with unburnt bricks	No. of Talukas
0—50	128
51—100	34
101—200	33
201—300	13
301—400	9
401—600	7
601—800	3
Total ..	227

The distribution of dwellings by walls of unburnt bricks in the rural and urban areas is identical though the proportion is somewhat reduced in the case of urban areas. It is significant that the districts of Nagpur Division which have very high proportions of dwellings with mud walls have negligible proportions of dwellings with unburnt bricks (less than 5 per cent. in all talukas). Unburnt bricks appear on the other hand to be complementary to mud walls in the north of Ratnagiri District. Unburnt bricks are also more a rural feature as 85 per cent. of all dwellings with unburnt brick walls are in rural areas and only 15 per cent in urban areas.

30. Out of the cities and towns of Classes I and II, only Kolhapur, Aurangabad, Nanded, Jalna, Miraj and Barsi have a small proportion of dwellings with walls of unburnt bricks. In all other cities and towns unburnt bricks are in negligible proportions.

(v) Burnt Bricks

31. Burnt bricks are more or less an urban feature. Only 27·82 per cent. of all the dwellings with walls of burnt bricks are in rural areas and 72·18 per cent. are in urban areas. In rural areas, the proportion of dwellings with burnt bricks out of all dwellings is only 7·3 per cent. while it is 50·6 per cent. in urban areas.

32. The proportions of burnt bricks in the rural areas of Poona, Aurangabad and Nagpur Divisions are negligible. In the rural area of Bombay Division, the proportion is 13·6 per cent. The region where the proportion is above 30 per cent. in rural areas consists of five eastern talukas of Jalgaon District, Niphad and Nasik talukas of Nasik District, and Pen and Murud talukas and Uran Mahal of Kolaba District.

33. In the urban areas also burnt bricks are more predominant in cities and large towns. In Greater Bombay, they make 59·1 per cent. of all dwellings. Nasik, Kalyan and Ulhasnagar have still higher proportions, viz., 75·8 per cent., 71·9 per cent. and 87·7 per cent. respectively. The twelve cities of Maharashtra together have 57·2 per cent. dwellings with walls of burnt bricks, the 14 towns of Class II together have 54·8 per cent. and the remaining urban areas of Classes III, IV, V and VI together have only 36·5 per cent. of their dwellings with walls of burnt bricks.

(vi) Corrugated Iron Sheets

34. Corrugated Iron sheets or other metal sheets are used for walls of dwellings very rarely. At the most, they are used as temporary cover where walls are under construction or as partitions. They are, however, used for temporary sheds, farmhouses or labour camps. In Maharashtra, the dwellings with walls of corrugated iron sheets, etc., make only 1·8 per cent. of the total number of dwellings. In rural areas, they are only 0·3 per cent. and in urban areas 6 per cent. Only 10·2 per cent. of all such dwellings in the State are in rural areas while 81 per cent. are in cities. Greater Bombay alone accounting for 70 per cent. Use of corrugated iron sheets for walls is thus more or less restricted to cities and particularly to Greater Bombay where they are used for partitions or improvised shelters in the slum areas.

(vii) Stone

35. The region where dwellings with stone walls predominate is a compact area consisting of the entire Krishna river basin and southern portion of Godavari basin which may also be called Manjra river basin. This latter is a plateau with an elevation of over 2,000 ft. lying between the two branches of Balaghat. Krishna river basin spreads between Sahyadri and the southern branch of Balaghat.

36. The rainfall of this region varies between 25 and 35 inches and mean maximum summer temperatures between 35° and 42·5° C.

37. Walls of stone are more a feature of rural areas. 89·4 per cent. of all dwellings with stone walls are in rural areas and only 10·6 per cent. in urban

areas. Their proportion in rural areas is 31.2 per cent. while in urban areas it is only 9.8 per cent. Even in Poona Division where dwellings with walls of stone predominate their proportion is 65 per cent. in rural areas and only 26 per cent. in urban areas.

38. The twelve cities have negligible proportions of dwellings with stone walls. Kolhapur City is, however, an exception with as much as 63.7 per cent. of dwellings with walls of stone. Out of the 14 Class II towns Sangli, Miraj and Ichalkaranji (all in the neighbourhood of Kolhapur) are similar exceptions. In spite of these exceptions the 26 towns of Classes I and II together have only 5 per cent. of dwellings with walls of stone as against 20 per cent. for all other smaller towns combined.

39. The distribution of talukas in rural areas by proportion of stone-walled dwellings is as follows:—

Proportion per thousand of dwellings with walls of stone	No. of Talukas
Negligible	8
1—50	65
51—100	15
101—300	38
301—500	29
501—700	27
701—1,000	45
Total	227

40. The last two ranges together make the stone wall region which may also be roughly described as the area lying in a triangle made by Poona and Kolhapur cities and Nanded town.

41. It is significant that 8 talukas do not have a single stone-walled house in rural areas. They are Gondia and Sakoli in Bhandara District, Gadchiroli in Chanda District, Achalpur and Daryapur in Amravati District, Hinganghat in Wardha District, Akalkuva in Dhulia District and Vada in Thana District.

(viii) Cement Concrete

42. Dwellings with walls of cement concrete are also an urban feature. In rural areas, they make only 0.3 per cent. of the total number of dwellings while that proportion is 6.7 per cent. for urban areas. Out of all the dwellings with cement concrete walls, 88 per cent. are in urban areas and only 12 per cent. in rural areas. Even in urban areas, cement concrete walls are more a feature of cities as all the twelve cities put together make 79 per cent. of all such dwellings in the State. Greater Bombay alone accounts for 68.3 per cent. of the total cement concrete walled dwellings of the State.

(ix) All other materials

43. This includes materials which could not be classified in any other category. The proportion of this unclassified category for the State is less than 1 per cent. for both rural and urban areas. Even in Greater Bombay which has such wide variety of materials of

walls the unclassified category makes only 1 per cent. We may, therefore, say that the scheme of classifying the materials of walls worked well.

Materials of Roof

44. Figure 11 below shows the distribution of dwellings by materials of roof for the State rural and urban areas. It will be seen that in rural areas roofs with tiles predominate with 38.8 per cent., roofs with grass, leaves, thatch, wood, etc. are second with 32.2 per cent. and roofs with corrugated iron sheets are third in rank with 18 per cent.

FIG. 11
PROPORTION OF DIFFERENT MATERIALS OF ROOF
RURAL & URBAN
(PER THOUSAND DWELLINGS)

45. In urban areas, the proportion of roofs with tiles is 38.7 per cent. which is almost the same as in rural areas. The proportion of roofs with grass, leaves, thatch, wood, etc. is 11.7 per cent. which is one-third of that for the rural areas. The second highest position in urban areas is occupied by corrugated iron sheets with 24.4 per cent. and the third by concrete and stone slabs with 16.7 per cent.

46. The regional distribution of dwellings by materials of roof is shown in the map facing this page. It will be seen that tiled roofs predominate in the western and north-eastern areas in Maharashtra, where annual rainfall averages are over 40 inches. Grass, leaves and thatch roofs are predominant in forest or tribal areas of Thana, Nasik, Dhulia, Amravati and Chanda Districts. Corrugated iron sheet roofs dominate in the western talukas of Osmanabad, northern talukas of Parbhani and southern talukas of Akola and Yeotmal Districts. It will be seen that asbestos cement sheets, brick and lime and concrete or stone slab roofs are mostly an urban feature.

N=Negligible.

47. The above Statement will show the position of Maharashtra and six other States for distribution of dwellings by materials of roof, for total, rural and urban areas separately.

48. It will be seen that for proportion of dwellings with roofs of grass, leaves, thatch, wood, etc., the Maharashtra average figure 322 for rural areas is lower than Andhra Pradesh (627) and Kerala (770). It is higher than Gujarat (104), Madhya Pradesh (213), Mysore (294) and Uttar Pradesh (206). The State average proportion (117) of dwellings with roofs of grass, leaves, etc. in urban areas is lower than Andhra Pradesh (372), Mysore (123) and Kerala (567) but is higher than Gujarat (92), Madhya Pradesh (60) and Uttar Pradesh (66).

49. For the proportion of dwellings with roofs of tiles which is the most predominant material in Maharashtra, the State average for rural areas (388) is lower than Gujarat (735) and Madhya Pradesh (800) but is higher than Andhra Pradesh (201), Mysore (321), Uttar Pradesh (370) and Kerala (219). For urban areas, the State average (387) is lower than Gujarat (430), Madhya Pradesh (564), Mysore (489) and Kerala (427). It is higher than Andhra Pradesh (336) and Uttar Pradesh (209). For the proportion of dwellings with roofs of corrugated iron sheets which is the third highest proportion in Maharashtra, the State average

for rural areas (180) is higher than the corresponding proportions for all the States shown in the statement. The State average for urban areas (244) is similarly higher than the proportions for urban areas of all the States shown in the statement except Gujarat (299).

50. The comparative distribution of 1,000 dwellings by materials of roof for the State, divisions and districts for total, rural and urban areas separately and for 26 towns of Class I and II is given in the Subsidiary Table E-IV.2 on page 99.

51. The proportion of each category of materials of roof is separately discussed in the following paragraphs.

(i) Grass, Leaves, Reeds, Thatch, Wood or Bamboo

52. This category also includes the permanent type of flat roofs called 'Malvad', 'Dhaba' or 'Dhiba' made of wooden beams and rafters covered with 9" to 18" thick layers of mud. The wooden beams rest on walls or vertical wooden posts standing on stone basements. These roofs are a common type in the plains in Godavari, Krishna and Tapi river basins, more so in areas which have less than 30 inches of annual rainfall. Such roofs are very costly to build and once made last for three generations. They are, therefore, naturally treated as symbols of prosperity in rural areas. This type of roof has been grouped in this category with roofs made of grass, leaves, reeds, thatch or bamboo

which are generally associated with poor, backward or tribal ways of living in the State. The two types combined here make the two extremes in rural housing not only by social status or cost but also by durability and the protection provided against climatic hazards. No separate analysis of the two types is, however, possible as it is difficult to estimate the proportions of the two types separately in areas where both the types are found mixed. This deficiency resulting from the classification of materials of roof as far as its application in Maharashtra was concerned was unfortunately noticed very late, long after the tabulation work had been completed. It was not possible to re-sort entries from the original houselist sets to find out the distribution of the two types separately. Material for two talukas, Indapur in Poona District and Paithan in Aurangabad District, was since re-sorted. It revealed that the proportions of dwellings with wooden flat roofs to total dwellings reported in this category were 44.80 per cent. and 81 per cent. respectively.

53. As at present classified, the category of grass, leaves, etc. predominates in (i) Thana, Kolaba and Chanda Districts; and (ii) Aurangabad and Bhira Districts and portions of Jalgaon, Ahmadnagar, Poona, Sholapur, Nanded and Osmanabad Districts. The three districts Thana, Kolaba and Chanda from the first group are in heavy rainfall zone. By materials of walls also the predominant type in those districts is of grass, leaves, etc. We may, therefore, safely presume that in those three districts at least this category is entirely made up of grass, leaves, thatch, etc. and does not include any dwellings with pucca wooden flat roofs with covering layers of mud. The same thing may be said of Shahada, Nandurbar and Sakri talukas of Dhulia District, Melghat in Amravati District and Kinwat taluka of Nanded District which are all in above 35 inches rainfall zone and are well known as tribal habitats.

54. In the second group of areas which are situated in the low rainfall zone, this category, however, includes a large number of dwellings with pucca flat wooden roofs along with the dwellings with roofs of grass, leaves, etc. It is difficult to guess the extent to which each of the two types are found in this region. We will, therefore, not discuss the distribution as far as this second group is concerned. It is, however, significant that this region includes the entire area of Maharashtra having less than 30 inches of annual rainfall. It is also significant that the proportions are higher in talukas which have the least rainfall. Indapur (743) from Poona District, Man (634) from Satara District, Jath (674) from Sangli District and Mangalvedha (719) from Sholapur District are good examples of this type.

55. Out of the first group of districts, Thana has 54 per cent. dwellings in rural areas with roofs of grass, leaves, etc., Kolaba has 50 per cent. and Chanda District 49 per cent.

56. The proportions in urban areas are comparatively lower than in rural areas. Thana urban has 6.6 per cent. Kolaba urban 12.4 per cent. and Chanda urban 8.6 per cent.

57. It is significant that Greater Bombay has as many as 7.3 per cent. dwellings with roofs of grass, leaves, etc. It means that one resident in every fourteen is residing in a dwelling with roof of grass, leaves, etc.

(ii) Tiles

58. Roofs of tiles are sloping roofs. Their inclination depends upon the amount of rainfall. In a majority of the cases, tiles are locally made though now a days Mangalore tiles are being used more and more.

59. As has been said above, roofs with tiles are the most predominant type in Maharashtra. Their proportions in rural and urban areas are almost the same. They are equally common in cities, towns and villages. Their proportions however vary in a wide range between 1 per cent. for Bhira District and 93.2 per cent. for Bhandara District.

60. For rural areas, the distribution of talukas by proportions of dwellings with tiled roofs is as follows:—

Proportion per thousand of dwellings with tiled roofs	No. of Talukas
Negligible	..
1—50	..
51—100	..
101—300	..
301—500	..
501—700	..
701—1,000	..
Total	..

61. The regions where tiled roofs predominate, together, cover all the areas of Maharashtra which have more than 35 inches annual rainfall. Exceptions are only of the forest or tribal areas where roofs of grass, leaves, thatch, etc. predominate. The tiled roof region markedly coincides with the rainfall isohyet of 35 inches as will be seen from the line passing from Akrani in Dhulia District in the north through western portions of Nasik, Ahmadnagar, Poona and Satara Districts to Kolhapur in the south. The other two such regions are: (i) the south-eastern portion of Nanded District, and (ii) the central and eastern portions of Nagpur Division. These regions are very distinctly marked and may also be seen in the maps facing pages 81 and 85. The latter also shows rainfall isohyets.

62. It is significant that the proportions of tiled roof dwellings are higher in areas of higher rainfall. The southern talukas of Ratnagiri and Kolhapur Districts and Gondia in Bhandara District are good examples of this phenomenon.

(iii) Corrugated Iron Sheets

63. Corrugated iron sheets are used generally to make a flat roof in regions of low rainfall and moderate summer temperatures. The roof is usually of a medium height and corrugated iron sheets rest on transverse wooden or angle iron rafters. They are often fixed under the top cornice wall. Majority

of second floor roofs in rural areas of Poona and Aurangabad Divisions are of corrugated iron sheets. They are in a few cases fixed in position by nut-bolt rivets but are usually not so well fixed at all and often get blown up in stormy winds.

64. Dwellings with roofs of corrugated iron sheets make 18 per cent. of the total dwellings in rural areas and 24.4 per cent. in urban areas. Out of all such dwellings 66.2 per cent. are in rural areas and 33.8 per cent. in urban areas.

65. For rural areas, the distribution of talukas by the proportion of dwellings with corrugated iron sheet roofs is as follows :—

Proportion per thousand of dwellings with corrugated iron sheet roofs	No. of Talukas
Negligible ..	6
1—50 ..	83
51—100 ..	27
101—300 ..	61
301—500 ..	32
501—700 ..	16
701—900 ..	2
Total ..	227

The two talukas having the highest proportions are Washim and Mangrulpir in Akola District. The predominance of corrugated iron sheets in this southern part of Akola District has also been reported in the 1910 District Gazetteer (see page 15). Out of the 16 talukas in the second highest range, eight are in Osmanabad, two in Parbhani, two in Sholapur, one in Bhir, two in Yeotmal and one in Buldhana. These 18 talukas together make two compact regions, one in the south of Aurangabad Division on a plateau with more than 2,000 ft. elevation and the other in the south of Nagpur Division also on a plateau with more than 1,000 ft. elevation above the sea level. The intervening talukas from Aurangabad Division also have high proportions and fall in the third highest range. The entire area in which all the talukas of the first three highest ranges fall has a rainfall average of 25" to 40" per annum.

66. In the urban areas, the towns situated in the above region also have high proportions of corrugated iron sheet roofs. Sholapur City (56 per cent.) and Barsi (84 per cent.) are examples of this type. Out of the four Divisions, Aurangabad has the highest proportion of corrugated iron sheet roofs both for rural and urban areas, Osmanabad District having the highest proportion among the districts of Maharashtra.

67. Osmanabad District used to be a centre of plague epidemic and year to year the people used to leave the village or town sites and shift temporarily to plague camps in the fields. Up to 1930, it used to be almost an annual affair. It was perhaps because of such shifts that the people took to corrugated iron sheet roofs as they could in the event of an epidemic be easily removed and used for making temporary shelters in the camps. Corrugated iron sheets gradually became

popular and are at present used for roof by all middle class people who cannot afford pucca roofs with wooden beams and rafters covered with thick layers of mud.

(iv) Asbestos Cement Sheets

68. Asbestos cement sheets are rarely used for roofs of dwellings in Maharashtra. This category makes only 0.5 per cent. of all dwellings in the State. It makes only 1.6 per cent. in urban areas and its proportion 0.1 per cent. is almost negligible in rural areas. 81.5 per cent. of all asbestos-roofed dwellings are in urban areas. Greater Bombay alone accounts for about half of their total number in the State. Most of these dwellings in Greater Bombay are in Aarey, Ghatkopar, Vikhroli and Mulund.

(v) Bricks and Lime

69. This category includes Jack arch and Madras terrace roofs. This material is also used exclusively in urban areas. 84.3 per cent. of all dwellings with bricks and lime are in urban areas and only 15.7 per cent. in rural areas. Dwellings with bricks and lime roof, however, make only 1 per cent. of the total number of dwellings in the State, 2.9 per cent. in urban areas and only 0.2 per cent. in rural areas. In Greater Bombay, the proportion of such dwellings is 6.9 per cent. and the Greater Bombay total makes 71 per cent. of all such dwellings in the State. This type of roof was common in urban areas before the R.C.C. had replaced it.

(vi) Concrete and Stone Slabs

70. This category covers R.C.C. roofs, which are now-a-days the most common type in cities like Bombay. It also includes stone slab or arch roofs called "Ladni" and found in well-to-do houses in rural areas.

71. Concrete and stone slab roofs are naturally an urban feature. 74.8 per cent. of all dwellings with such roofs are in urban areas and only 25.2 per cent. in rural areas. They make only 2.1 per cent. of the total number of dwellings in rural areas while their proportion in urban areas is 16.7 per cent. Even in urban areas, such dwellings are found more in the cities. The twelve cities put together have 25 per cent. of their dwellings with roofs of concrete or stone slabs while fourteen towns of Class II together have only 7 per cent. and all the remaining towns of Classes III, IV, V and VI combined have only 4 per cent. It is significant that Greater Bombay alone has 58 per cent. of all the dwellings with concrete roofs in the State.

72. In rural areas, concrete and stone slab roofs predominate in Baglan, Malegaon and Nandgaon talukas of Nasik District. The proportion for Niphad taluka in the same district is also as high as 37.3 per cent. The first three talukas are situated on the east of Chandor hills whose ridge makes the water shed between Tapi river basin in the north and Godavari river basin in the south. Niphad is situated in the west of that range. The roofs reported in this category from these four talukas are stone slab roofs and not concrete roofs. The three talukas together with Niphad make about 50 per cent. of this category of roofs in the entire rural area of the State. The concentration may be due more to the availability of

stone and does not reflect a high degree of prosperity in those talukas as such a high proportion of concrete or stone slab roofed houses would naturally suggest. Baglan and Malegaon talukas no doubt have canal irrigated sugarcane areas. Nandgaon taluka is however an arid scarcity area with a low density of population (281 per square mile). It is surprising that Yeola, Chandor and Kalwan rural areas which are situated between Baglan, Malegaon and Nandgaon on one side and Niphad on the other have reported negligible numbers of dwellings with roofs of stone slabs. The predominance of stone slabs in this region therefore needs further investigation.

(vii) All other materials

73. This category includes all types of materials which could not be classified in any of the above six categories. The proportions of this category for Maharashtra total, rural and urban areas are 7.3 per cent., 8.6 per cent. and 4 per cent., respectively. These proportions are much higher than the corresponding category of all other materials of walls. In rural areas, the dwellings with unclassified material of roof make about 8.5 per cent.; in urban areas their proportion is 4 per cent. The classification of materials of roof has thus not worked well as that of the materials of walls. We have also described earlier how the first category of materials of roof includes pucca flat wooden roofs with roofs of grass, leaves, thatch, etc.

Combination of Materials of Walls and Roof

74. We have so far discussed the classification of dwellings by materials of walls and roof separately. Table E-IV or its two subsidiary tables do not show how the different materials of walls and roof are actually used in combination with each other. That sort of cross tabulation had not been attempted at all.

75. We may classify both the materials of walls and roof in two broad categories of 'kaccha' and 'pucca' types.

76. As for the materials of walls, the kaccha type should include—

- (i) grass, leaves, reeds or bamboo ;
- (ii) timber ;
- (iii) mud ;
- (iv) unburnt bricks ; and
- (v) corrugated iron sheets or other metal sheets.

The pucca type should include—

- (i) burnt bricks ;
- (ii) stone ; and
- (iii) cement concrete or stone slabs.

As far as the materials of roof are concerned, the kaccha type should include—

- (i) grass, reeds, thatch, wood or bamboo ;
- (ii) corrugated iron sheets ; and
- (iii) asbestos cement sheets.

The pucca type should include—

- (i) tiles ;
- (ii) bricks and lime ; and
- (iii) concrete and stone.

77. Dwellings with walls of grass, leaves, etc., in a majority of cases have roofs of grass, leaves, etc. Dwellings with mud walls may have roofs of grass, thatch, wood, corrugated iron sheets or tiles. Pucca type of roofs are used in combination with only pucca materials of wall. The proportions of kaccha and pucca materials of walls and roof are as follows :—

			KACCHA		PUCCA		OTHERS	
			Walls	Roof	Walls	Roof	Walls	Roof
Maharashtra—								
Total	..	100	52	47	47	46	1	7

Urban	..	100	32	38	67	58	1	4

78. Combination of predominant materials of walls and roof making typical dwellings from taluka to taluka is shown in the map facing page 85. The map, however, shows the type of materials for walls and roof which are statistically predominant in each taluka. It may not necessarily indicate that the predominant material shown for walls and the other shown for roofs are always used in combination for the same dwellings.

79. A few extracts from earlier Census Reports, Gazetteers and other authorities, describing (i) the layout of villages and (ii) house types and materials of dwellings in Maharashtra are included in Appendix II to Chapter I. It will be seen from those extracts as well as from the maps facing pages 79, 81 and 85 that in spite of the predominance of certain materials of walls and roof the general pattern of using them is mixed in all regions. There is no city or town which has absolutely zero figures for any material of walls or roof. To find out the sociological groupings of dwellings within a city or town it is necessary to analyse these statistics for each ward or locality of the city or town. Wardwise housing tables have, therefore, been prepared separately for Greater Bombay and other eleven cities. They are presented in the concerned monographs in Part X of the Maharashtra Census Report.

Material of roof related to crop-pattern

80. Out of the materials used for roof, the supporting rafters or beams are in majority of cases of wood. Except for the dwellings of the rich, who can afford teakwood brought from outside, the wood used for support is ordinarily of trees growing locally. Neem, Babbul and Bamboo appear to be the most common varieties. The taboos and preferences in the selection of trees have been fully described in the extracts from old Census Reports and Gazetteers which may be seen in Appendix II to Chapter I. The material used for covering the roof depends on the crop-pattern only in the case of paddy growing areas where paddy straw is often used as a cover independently or combined with grass or cocoanut, palm or date leaves. There are also taboos against the use of date leaves, which is never used by higher castes for roofs of their dwellings and only rarely for roofs of cattle sheds.

E-IV.1—DISTRIBUTION OF 1,000 HOUSEHOLDS LIVING IN CENSUS HOUSES USED WHOLLY OR PARTLY AS DWELLINGS BY PREDOMINANT MATERIAL OF WALL

(Based on 20 per cent. Sample)

CHAPTER V

NUMBER OF ROOMS AND HOUSEHOLD POPULATION

TABLE E-V at page 564 shows the distribution of sample households classified by the number of rooms occupied. For each category the number of households and the number of males and females are shown separately. Material presented here relates only to the family type of households. Institutional households like hostels, boarding houses, prisons, etc., are not included. No data on the size or dimensions of rooms have been collected in the Census. No comparison is, therefore, possible of square feet area or cubic feet volume of accommodation available for an average household in different areas of the State. The number of rooms available to households and the number of persons per room for different classes of households will, however, give a good picture of housing conditions. This Chapter deals mainly with those aspects.

2. A room has four walls with a door and a roof overhead. Minimum size adopted in the Census for a room is 6' x 6'. Unenclosed verandahs, kitchen, store, garage, cattle shed or places of less than 6' x 6' dimensions though used for residential purposes have not been treated as rooms. Households residing in such places are shown in columns 7 to 9 as having no regular room. This category also includes hotel boys who reside or sleep at night in rooms which are also used as hotels by day time.

3. Subsidiary Table E-V.1 at page 124 shows the distribution of 1,000 sample households classified by the number of rooms occupied. Subsidiary Table E-V.2 at page 132 shows the number of persons, males and females per room and persons per household in each category of households classified by the number of rooms occupied.

Number of Rooms

4. Figure 14 below will show the proportions of households by number of rooms occupied for rural and urban areas of Maharashtra.

5. The Statement on page 115 will show the distribution of 1,000 households by the number of rooms occupied for total, rural and urban areas of Maharashtra and six other States.

6. It will be seen that the proportion of households occupying dwellings with no regular room is higher in Maharashtra both for rural and urban areas than Gujarat, Kerala, Uttar Pradesh and Madhya Pradesh. Only Mysore has a higher proportion than Maharashtra. The figure for Andhra Pradesh is perhaps included in households with one room.

7. As for the proportions of households occupying one room, the Maharashtra figure for rural areas is higher than that for Gujarat, Kerala, Uttar Pradesh, Mysore and Madhya Pradesh. Only Andhra Pradesh has a slightly higher proportion, that too may perhaps be due to the inclusion of households with no regular

room. Similarly, the proportion of households occupying one room in urban areas for Maharashtra is higher than that for all other States shown in the statement. It is significant that the Maharashtra proportions are more than twice as big as those for Kerala. Correspondingly, the proportions of households occupying two, three, four and five and more rooms both for rural and urban areas in Maharashtra are lower than those of all the States shown in the statement. Only exception is the proportion (21.5 per cent.) of households occupying two rooms for rural areas in Andhra Pradesh which is slightly lower than that (22.9 per cent.) in Maharashtra.

FIG. 14
PROPORTION OF HOUSEHOLDS BY NUMBER OF
ROOMS OCCUPIED
(MAHARASHTRA STATE)
(PER THOUSAND DWELLINGS)

8. The distribution of households by number of rooms in Maharashtra is thus different from that in Gujarat, Kerala, Uttar Pradesh, Mysore and Madhya Pradesh, which have larger proportions for households occupying two or more rooms. It is significant that the proportions of households with five and more rooms in rural areas of Kerala and Uttar Pradesh are respectively seven and eleven times higher than that in rural areas of Maharashtra. That difference is somewhat

State			Total Rural Urban	No Regular Room	1 Room	2 Rooms	3 Rooms	4 Rooms	5 Rooms and above

reduced in the case of urban areas. Still the proportion in urban areas of Kerala is over four times higher and that in urban areas of Uttar Pradesh 2.5 times higher than that in Maharashtra. House types are a part of regional culture and the differences in the proportions of households occupying one, two or more rooms may not necessarily reflect conditions of relative poverty or affluence accurately. The number of households having three or more rooms however can be related to prosperity and on the basis of their proportions we may say that the proportion of rich or prosperous households is lower both in rural and urban areas of Maharashtra than that in all the neighbouring States and Uttar Pradesh or Kerala as well. Maharashtra's ryotwari system of land tenure may be one of the causes of this phenomenon.

9. The distribution of 1,000 Census Households by the number of rooms occupied for Maharashtra, its divisions and districts for total, rural and urban areas separately is given in Subsidiary Table E-V.1 on page 124. Figures 15 and 16 at pages 112 and 113 will also show the same distribution for rural and urban areas separately.

10. It will be seen that the proportion of households with two and more rooms is higher in urban areas than that of the rural areas. It is so for all the districts in Maharashtra. This should indicate that at least by the number of rooms occupied the

housing conditions are slightly better in urban areas or that the middle and upper classes of households reside more in urban areas. The following are the proportions of different classes of households residing in rural and urban areas :—

Households with—	Total	Rural	Urban
One room or less	100	74.19	25.81
Two rooms ..	100	73.22	26.78
Three rooms ..	100	64.64	35.36
Four rooms ..	100	59.21	40.79
Five rooms or more	100	49.43	50.57

11. It will be seen that the households having larger number of rooms are concentrated more and more in urban areas.

12. For rural areas, the proportion of households with one room varies between 51 per cent. for Ratnagiri District and 73 per cent. for Poona District. Chanda District which has a large proportion of Scheduled Tribes population has a lower proportion of one-room households. It is because an average hut of a Gond in that district has two rooms. Satara and Ratnagiri are the other two districts having lower values for households with one room. They are the two districts sending large number of people to Greater Bombay. Workers returning from Bombay or even while they are working there build or improve their dwellings at home. The house types may have thus been influenced

by the close contacts with Bombay. These influences appear more prominently in urban areas of Ratnagiri, Kolaba and Satara Districts. The proportion of one-room households in urban areas is as low as 31 per cent. in Ratnagiri District, 35 per cent. in Kolaba District and 47 per cent. in Satara District.

13. The variation in the distribution of households by the number of rooms occupied from district to district follows the same pattern for rural and urban areas. The only difference, as has been already said, being that the proportion of households occupying two or more rooms is much higher in urban areas of all districts than their rural areas.

14. In rural areas the distribution of talukas by proportion of one-room households is as follows :-

Proportion per thousand of households with one room	No. of Talukas
200-300	1
300-400	10
400-500	18
500-600	30
600-700	65
700-800	75
800-900	28
Total	227

15. It will be seen that more than two-thirds area of the State has 64 per cent. or more households with one room. Javli taluka in Satara District has the least (28 per cent.) proportion of one-room households. The region having stone as predominant material of wall has predominance of one-room households. The house type in this region would not have many rooms. One or more longish verandahs covered only on three sides make the major portion of an average well-to-do house. Such verandahs have not, however, been treated as rooms.

16. The distribution of 1,000 Census Households by the number of rooms occupied for 26 towns of Classes I and II is given in Subsidiary Table E-V.1. Figure 17 on page 114 will show the same distribution for each city and town separately.

17. The proportion of households with no regular room is highest (3.7 per cent.) for Sholapur City. For Greater Bombay, it is 2.4 per cent. Over 56 per cent. of all households with no regular room from urban areas in the State are in Greater Bombay.

18. The proportion of households with one room, in the twelve cities combined is 64 per cent. as against 54 per cent. in all the towns of Class II combined. Manufacturing towns have larger proportions of households with one room. Malegaon City (76 per cent.), Ichalkaranji (71.3 per cent.) and Sholapur City (67 per cent.) are examples of this type. Ulhasnagar City has the highest proportion of two-room households. This is because of the tenements allotted to displaced persons. Other residential towns like Dhulia, Aurangabad,

Nanded, Jalgaon, Sangli and Kalyan also have high proportions of two-room households. The proportion of households with three and more rooms is highest in Kolhapur City (34.32 per cent.). Chanda and Bhusawal follow with 28.14 per cent. and 26.24 per cent., respectively. Bhusawal is a railway divisional headquarters and the proportion is high because of the railway housing colonies. But Kolhapur and Chanda proportions indicate concentration of prosperous households.

Number of persons per room

19. The proportions of households residing in dwellings with one room, two rooms, etc. give broad indication of crowding or congestion in different classes of dwellings. But for an exact comparison of housing conditions it is necessary to examine not only the variation in the size of households from taluka to taluka but also the size of household and the number of persons per room in each class of households classified by number of rooms occupied.

20. The Statement at page 117 will show for Maharashtra and six other States for total, rural and urban areas separately the number of persons, males and females, per room and persons per household in each category of households classified by the number of rooms occupied.

21. It will be seen that the Maharashtra figure for number of persons per room (as well as number of persons per household) in the case of households with one room for rural areas (4.69) is higher than the corresponding figures for rural areas of Andhra Pradesh (4.42), Uttar Pradesh (3.99) and Madhya Pradesh (4.15). It is lower than the corresponding figures for rural areas of Gujarat (5.04), Kerala (4.90) and Mysore (4.74). For urban areas, the figure for Maharashtra (4.61) is higher than those for urban areas of Andhra Pradesh (4.24), Gujarat (4.49), Uttar Pradesh (3.99), Mysore (4.39) and Madhya Pradesh (3.64). It is lower than the figure (4.97) for urban areas in Kerala alone.

22. It should indicate that in spite of the differences in densities of population, one-room dwellings in Maharashtra are more crowded in rural areas than those in Andhra Pradesh, Uttar Pradesh and Madhya Pradesh and in urban areas than those in all the States shown in the statement except Kerala.

23. Similarly, the dwellings with two rooms in Maharashtra are more crowded both in rural and urban areas than in Andhra Pradesh, Uttar Pradesh, Mysore and Madhya Pradesh. Only exception is Kerala whose figures are higher than Maharashtra both for rural and urban areas. The figure for Gujarat is higher than Maharashtra only in rural areas.

24. As has been said, the households with one room and two rooms together make 87.6 per cent. of all the households in Maharashtra. This combined proportion is itself higher in Maharashtra than that for all the States shown in the statement. As a result,

Number of Persons, Males and Females per Room and Average Number of Persons per Household classified by Number of Rooms occupied

the number of persons per room in Maharashtra shown in column 2 of the statement (on page 117) is higher than the corresponding figures both for rural and urban areas of all the six States shown in that statement.

25. The number of persons per room and number of persons per household for Maharashtra, its four divisions and 26 districts for total, rural and urban areas separately for each class of households is given in Subsidiary Table E-V.2 on page 132. The map facing this page will show talukawise number of persons per household for rural areas.

26. As has been said before, all rural and urban areas in Maharashtra have preponderance of households with one room. The maximum crowding is, therefore, naturally in the one-room dwellings. The dwellings with more rooms are occupied by larger households as will be seen from entries for Maharashtra total, rural and urban areas in columns 7, 11, 15, 19 and 23 of Subsidiary Table E-V.2 on page 132. Yet, the increase in the average size of the households is in no case proportionate to the additional number of rooms and the number of persons per room is naturally lower for households having more rooms. The number of persons per room is thus the highest for households with one room.

27. With the distribution of households by the number of rooms occupied, obtained in Maharashtra, entries in column 3 of Subsidiary Table E-V.2 on page 132 present a true picture of congestion or crowding both for rural and urban areas. It will be seen that an average household in urban areas is slightly larger (5.15) than that of rural areas (5.11). It will also be seen from columns 7, 11, 15, 19 and 23 that the household size in urban areas is actually smaller than that for rural areas for all categories of households classified by number of rooms excepting the last category with five rooms and more. The proportion of the households in this last category is 3 per cent. of the total in urban areas against only 1.1 per cent. in rural areas. As a result, the average size of the household in urban areas for all classes combined gets inflated and is larger than that in the rural areas. It will, however, be seen that the number of persons per room in the first four categories of households is smaller in urban areas than in the rural areas. In other words, the urban areas are better off by the criterion of number of persons per room occupied. This phenomenon is due to the large numbers of thatched huts and the customary housebuilding practices because of which even well-to-do people in rural areas do not have more rooms in their dwellings. Huge stone-walled or two-storeyed dwellings do not often have rooms within their enclosing walls and instead have long open verandahs (called 'Osaries') which by the 1961 Census definition are not treated as rooms.

28. The same differences in the number of persons per room between rural and urban areas can be seen in all districts.

29. In rural areas, the number of persons per room is lowest in Nagpur District. Ratnagiri, Chanda, and Wardha Districts follow in rank. The number of

persons per room is the highest in Dhulia District. That may be due to the large tribal population residing in (one-room) thatched huts. Sholapur and Ahmadnagar follow in rank. These two districts attract seasonal immigration on sugar farms and in sugar factories.

30. For urban areas, the number of persons per room is the highest in Greater Bombay and second highest is in Sholapur District. Generally the districts which have had smaller growth of population during the decade 1951-61 have smaller size of households and correspondingly smaller number of persons per room. Ratnagiri, Akola, Amravati, Yeotmal and Wardha Districts are examples of this type.

31. The Subsidiary Table E-V.2 on page 132 will also show for each class of households the number of persons per room and the number of persons per household separately for each of the twelve cities and fourteen towns having 50,000 or more population.

32. It will be seen that for all the 26 towns shown in the Subsidiary Table E-V.2 the number of persons per room and the number of persons per household follow the same pattern. Kolhapur, Ahmadnagar and Ulhasnagar are exceptions. Manufacturing centres have more crowding than other towns. Malegaon City has the largest number (4.12) of persons per room. It also has the largest number of persons per household. Next is Greater Bombay with 3.72. Sholapur follows closely with 3.70. Sholapur City has the second highest and Kolhapur City has the third highest number of persons per household, but the number of persons per room is comparatively very low for Kolhapur.

33. Ahmadnagar, Amravati and Ulhasnagar cities similarly have larger number of persons per household, viz., 5.17, 5.11 and 5.01, respectively, but comparatively smaller number of persons per room, viz., 2.70, 2.87 and 2.71, respectively. Same is the case with Chanda town which has 4.83 persons per household but only 2.24 persons per room. Nagpur City for its huge population of over seven lakhs appears to have comparatively a smaller number (2.51) of persons per room.

34. If we draw a line with two persons per room as an index of overcrowding both the rural and urban areas of all the districts in Maharashtra would appear as overcrowded. With 2.5 persons per room as an index, the urban areas of Kolaba, Ratnagiri, Wardha and Chanda Districts only will appear below the line and urban areas of the remaining districts and rural areas of all the districts will appear as overcrowded. If we draw a line with three persons per room as an index of overcrowding in the State, Greater Bombay, Sholapur and Malegaon out of the cities and Dhulia, Aurangabad, Nanded, Jalgaon, Jalna and Ichalkaranji out of the Class II towns fall above the line or have more than the average crowding. While Poona, Nagpur, Kolhapur, Amravati, Nasik, Ahmadnagar, Akola, Ulhasnagar and Thana out of the cities and Sangli, Kalyan, Bhusawal, Gondia, Miraj, Chanda, Barsi and Poona Cantonment out of the Class II towns fall below the line. It is significant that even with

this index of three persons per room the rural areas of all the districts in Maharashtra appear as over-crowded with only three exceptions of Ratnagiri, Nagpur and Chanda Districts. The urban areas of Greater Bombay, Nasik, Dhulia, Jalgaon, Sholapur, Aurangabad, Parbhani, Bhir, Nanded, Osmanabad and Buldhana Districts fall above the line, i.e., they have more than three persons per room and the urban areas of the remaining districts have less than three persons per room. It is significant that the average number of persons per room for the State is higher than three both for rural and urban areas.

Persons per room in Greater Bombay

35. Analysis of wardwise Census material including that on housing conditions for Greater Bombay

and other eleven cities is reserved for Part X of the Maharashtra Census Report. Yet it may be useful here to broadly compare the 1961 Census material on housing with that of earlier Censuses. No statistics on rooms had been collected in 1941 and 1951 Censuses and comparison is, therefore, restricted to the 1931 and earlier Censuses. Apart from the slight differences in the definition of a "room" we should also keep in view the limitation in this comparison arising from the extension of the Municipal boundaries of Bombay to cover an area of 169 square miles in 1961 against 24 square miles in 1931.

36. The percentage of different classes of tenements (approximating to households of 1961) and number of persons per room for each class for Greater Bombay have varied from 1901 to 1961 as follows :—

Classes of Tenements	Percentage of tenements (households in 1961)					Number of persons per room				
	1901	1911	1921	1931	1961	1901	1911	1921	1931	1961
	2	3	4	5	6	7	8	9	10	11
One room	87	83	70	81	72.3 +2.4*	4.2	4.47	4.03	4.01	4.97
Two rooms	7	10	14	11	16.5	2.54	2.38	2.11	2.51	2.85
Three rooms	2	3	7	3	5.0	2.06	1.80	1.60	2.01	2.12
Four rooms	1	2	4	2	2.1	1.76	1.54	1.30	1.70	1.74
Five rooms	1	1	3	1	1.7	1.58	1.43	1.06	1.50	1.63
Six or more rooms	2	1	2	2						

* For households with no regular room separately classified in 1961.

37. It will be seen that the proportion of one room households has gone down in 1961 and that the proportions of households with two and more rooms have improved. This may be due partly to the extension of Municipal boundaries and inclusion of suburban areas and partly to the immense post-World War-II construction activities in the entire area undertaken both by Private and Public Sectors. Comparison of number of persons per room, however, shows that all that increase in the number of tenements or improvement in the proportions of tenements with two and more rooms has not kept pace with the growth of population and the net result is greater overcrowding in tenements up to three rooms. The average number of persons per room in 1961 is the highest in the last sixty years for each of the first three classes of households. Comparison of the material for the Island portion corresponding to the 1931 limits might show much more worsening of the situation. But that should be reserved for the Report Volume on Bombay City.

38. In order to have a clearer picture of overcrowding in some of the so-called slum areas of Greater Bombay, we have prepared special Tables on three of them, viz., Kamathipura, Dharavi and Golibar at

Santa Cruz. These tables are prehsented as an Appendix at the end of this Chapter. Tey show the number of households for each class of households by the number of rooms occupied further classified by the degree of congestion as measured by the number of persons per room. The areas covered by the tables are described by the names of streets in the footnotes. Proportions of households, males and females residing in each category of households classified by the number of rooms are shown by figures in brackets below the actual figures in the Tables. The degree of congestion is clearly established in the special table. About 10 per cent. of the total households in Dharavi for example live in dwellings which make more than ten persons per room.

Size of Household

39. Much more material on size and composition of households has been collected in the 1961 Cersus through the Household Schedules canvassed at the time of actual enumeration. That material is presented in Table B-XVII. Discussion on the size of the household should, therefore, appropriately appear in Part III of the Maharashtra Census Report which includes Table B-XVII along with other household economic

tables. Here we will restrict to a brief review of the material presented in Table E-V and Subsidiary Table E-V.2.

40. It will be seen from column 3 of Subsidiary Table E-V.2 that for rural areas the average size of the household varies from 4.38 in Wardha District to 5.64 in Dhulia District. For urban areas, it varies between 4.55 for Wardha District and 5.4 for Sholapur District. For the cities and towns of Classes I and II it varies between 4.36 for Gondia Town and 5.73 for Malegaon City.

41. For rural areas, the distribution of talukas by the average size of households is as follows:—

Size of the Household	Number of Talukas
4.00 to 4.49	16
4.50 to 4.99	57
5.00 to 5.49	105
5.50 to 5.99	48
6.00 to 6.49	1
Total	227

42. The only one taluka falling in the highest range is Chandor in Nasik District. Even in 1951, it had comparatively a high value (5.8) for the size of the households. It has not had a very high rate of growth of population during the decade 1951-61. But situated at the watershed between Godavari and Tapi basins, it enjoys a healthier climate than the neighbouring talukas. This is reflected in the proportion of persons aged 60 and above which is higher for this taluka than any other in Nasik District. But the reasons why it has the largest size of household cannot be explained without further investigation.

43. Out of the sixteen talukas falling in the lowest range the first group consists of four talukas of Mandangad, Dapoli, Khed and Guhagar in Ratnagiri District and the fifth taluka Mahad in Kolaba District. These five talukas together make the region from which a large number of migrants go to Bombay. The second group of the remaining areas consists of two talukas in Buldhana District, one in Akola District, three in Amravati District, one in Yeotmal District, two in Wardha District and two in Nagpur District. These eleven talukas do not, however, stand out with any unreasonably low figures and are only a shade lower than their neighbouring talukas of Nagpur Division which generally have a smaller size of the household.

44. Comparing the average size of the household with the 1951-61 decade rates of growth of population we see that the two may be dependent upon each other but there are other variables like past demographic history and migration which influence both. Malvan taluka in Ratnagiri District has had a net decrease in population during the decade 1951-61. Yet, the average size of the household there is 4.86 which though

lower than its neighbouring talukas is much higher than that of Mandangad, Dapoli and other talukas which had a higher growth rate of population during 1951-61. Nagpur taluka is another example of the same type which in spite of a decrease in the population between 1951 to 1961 has an average size of the household at 4.54 which is higher than 4.31 of Katol which in turn had a decade increase of 13.7 per cent. in population. Chandor is another extreme case of the opposite type. Its average household size is 6.16 which is the highest in Maharashtra but its growth rate is 27.7 per cent. which falls in the third highest range. Rural areas in Akrani Mahal in Dhulia District and Soegaon in Aurangabad District have had decade growths of over 55 per cent. but they have an average size of households of 5.57 and 4.87, respectively. It will thus be seen that for an individual area the average size of the household may certainly vary in proportion to the decade growth of population and it may be possible to compare the sizes of households for the same area over a period with the corresponding decennial growth rates. But area to area comparisons for the sizes of households in the present Census do not show that the regional differences in size correspond in any way to the differences in the rates of variation in their population during the decade 1951-61.

45. It will be seen from Subsidiary Table E-V.2 that the average size of households in rural areas is higher than 5 in all the districts of Bombay, Poona and Aurangabad Divisions with Kolaba and Ratnagiri as the only two exceptions. On the other hand, the rural areas in the districts of Nagpur Division have a lower size of household than five. Buldhana District is the only exception with the size at 5.2. The remaining districts of Nagpur Division also happen to be areas of lower density of population as well as lower population growth rates in 1951-61 or 1901-61.

46. Urban areas of all districts in Bombay, Poona and Aurangabad Divisions have average size of the household above five. Thana District is the only exception here. Urban areas of all the districts in Nagpur Division have sizes of less than five. Buldhana District is an exception again.

47. The patterns of rural urban differences in the districts of Aurangabad and Nagpur Divisions are generally reverse of what they are in the districts of Bombay and Poona Divisions. In the districts of Bombay and Poona Divisions, the size of the household is generally smaller in urban areas than that of rural areas. Kolaba, Ratnagiri and Jalgaon Districts are exceptions to this general statement. On the other hand, the size of the household in urban areas of the districts from Aurangabad and Nagpur Divisions is larger than that of rural areas. Bhandara and Chanda Districts are the only two exceptions to this general statement. The districts of Bombay and Poona Divisions comparatively have larger numbers of big towns which bring down the average size of the household in urban areas. On the other hand, the urban areas in Aurangabad and Nagpur

Divisions comparatively have fewer numbers of such large urban centres and even those which are there have somewhat larger sizes of households than the surrounding rural areas. Nagpur City is a good example of this type. It has a population of over seven lakhs but it has an average size of household of 4.90 which is higher than that (4.54) for the rural areas of Nagpur District.

48. Subsidiary Table E-V.2 and Table B-XVII relating to the size of sample households from Maharashtra Census Report Part III will show the rural and urban differences in the size of households as well as the differences in these sizes as observed through the houselists in September-October of 1960 and through the household schedule in February-March of 1961.

49. It will be seen that the difference in the sizes of households from the two enquiries are negligible

in rural areas and may partly be accounted for by the sampling errors for the two different sample enquiries. For urban areas, however, the differences are quite perceptible. It is significant that generally the March 1961 Census figures are lower than those of September-October of 1960. It may indicate considerable volume of seasonal migration from rural to urban areas in the fair season, i.e., after the monsoon crops are harvested. Such a migration should, however, reduce the average size of household both in the rural and urban areas. The lowering of the size will, however, be less in rural areas not only because of the larger size of the base population but also because a migrant from a rural area reduces the size of a household say from 5 to 4 there but at the same time he adds one new single member household in the urban area to which he has migrated. The volume and areas of such internal seasonal migration are discussed in Part I-A of the Maharashtra Census Report.

APPENDIX

Special Table for Slum Areas of Greater Bombay showing Households by number of rooms occupied and number of males and females

Note :—Figures in brackets show the respective distribution out of one hundred households, males and females.

Number of Rooms			Number of Households according to Number of Persons (Males and Females) in the Household

CHAPTER VI

FACTORIES AND WORKSHOPS

WE have described in Chapter I that after recording the purpose for which each house was used in column 4 of the Houselist, the enumerators, in the case of every house used as a factory or a workshop, recorded the following additional information for each factory or workshop in the houselists :—

- Name of establishment or proprietor (in column 5) ;
- Name of product(s), repair or servicing undertaken (in column 6) ;
- Average number of persons employed daily last week including proprietor or household members if working (in column 7) ; and
- Kind of fuel or power, if machinery is used (in column 8).

This brought forth a complete

of motor vehicles of all types 382 or 383. Repairing of bicycles and tricycles is classified as 388 against their manufacture classified as 385. In a few other cases, repairing or servicing establishments are combined with manufacturing establishments under the same major or minor group.

11. The word "factory" denotes a manufacturing establishment of a size or kind which should be registered under the Indian Factories Act. The word "workshop", on the other hand, denotes a smaller establishment which because of its type or smaller size may not be registered under that Act. The word "establishment" is used to include both the factory and the workshop. While preparing the houselists, we, however, advised the enumerators not to indulge in enquiries to ascertain whether an establishment was a registered factory or not and the two words may, therefore, have been used by the enumerators in their own discretion and without any distinctive meaning. It did not make difference as the establishment statistics have also not been compiled or presented separately for factories and workshops and the entire presentation in Table E-III is combined for the two categories.

12. Registration of an establishment under the Factories Act is obligatory if it employs 20 or more persons without using power or employs ten or more persons with the use of power. By applying these two conditions it is possible to compare the E-III material with the statistics available from the Chief Inspector of Factories.

13. We had difficulty in translating the word "establishment" in Marathi. For purposes of columns 5 to 8 of the Houselist it implied nothing more than a factory or workshop. For the word establishment we, therefore, used the word "karkhana" (कारखाना) which was also the Marathi equivalent of the word "factory". It was similarly difficult to translate the word "workshop" in Marathi. The English word is understood generally and we did not, therefore, try to render it in Marathi and instead used it even in the Marathi houselist form and instructions.

14. The industry major groups 20 and 21 include production of foodstuffs, beverages, sweetmeats, condiments and bakeries. Establishments making beverages or biscuits and sweetmeat-making halwai shops are, therefore, included as workshops. Some enumerators had also mixed up tea-stalls and pan-shops in this category. Those entries were, however, removed from the houselists during the pre-tabulation scrutiny and are, therefore, not included in Table E-III.

15. It has been described in Chapter I that the houselisting operation did not extend to strictly military areas. Table E-III does not, therefore, include any statistics regarding manufacturing or servicing establishments in those areas.

16. As for the workers employed, it will be seen that Table E-III deals only with the seven size groups or ranges of employment and does not present the total number of workers for any area or any major or minor group of industry. We had, however, compiled from the houselists, statistics regarding the actual number

of establishments and workers for each major and minor group of industry. Those are presented for each village, taluka and district separately in the respective volumes of the 1961 District Census Handbooks. A table presenting them separately for total, rural and urban areas of Maharashtra is included as Appendix II to this Chapter.

17. Wherever the number of workers in manufacturing for any area or any industry is referred to in this Chapter, unless specifically stated otherwise, the reference is to the figures from Appendix II.

18. The proportions of factories and workshops in rural and urban areas of the State, districts and towns of Classes I and II have been discussed in paragraphs 49 to 58 in Chapter II in the context of the purposes for which houses are used. Statements on pages 36-38 included in that Chapter reveal the comparative position of Maharashtra and six other States, as well as that of the districts and 26 towns of Classes I and II. It may, however, be worthwhile to refer to some salient observations again.

19. By the number of factories and workshops to one thousand dwellings only Madhya Pradesh ranks higher than Maharashtra for total, rural and urban areas. All the other States shown in the Statement on page 36 have lower proportions than those of Maharashtra both for rural and urban areas.

20. By the proportion of workers in manufacturing to total workers Maharashtra's average for all areas (11.28) is lower than Andhra Pradesh (12.27), Gujarat (12.88) and Kerala (18.08). It is higher than Uttar Pradesh (9.02), Mysore (10.54) and Madhya Pradesh (6.96). It may also be seen that Maharashtra's higher average is due to the high proportion (33.68 per cent.) in its urban areas and its rural average (5.15 per cent.) is lower than that for Andhra Pradesh (10.61), Gujarat (8.03), Kerala (17.13), Uttar Pradesh (6.94) and even Mysore (7.10). Maharashtra rural average is higher only than Madhya Pradesh (4.75) which also appears to have a similar concentration of industries in urban areas. The average for urban areas in Maharashtra (33.68) is higher than all the States shown in the statement, except that of Gujarat (33.90). By bare numbers of factories and workshops Maharashtra stands as the second highest in India with 320,460, the highest being Madhya Pradesh with 405,028. But by the ratio between the number of factories and workshops and one lakh of population, Maharashtra ranks fourth in India with 811. Orissa is first with 1,292, Madhya Pradesh is second with 1,251 and Jammu and Kashmir is third with 1,176.

21. By the proportion of workers in registered factories to total population, Maharashtra ranks as the second highest in India with 19.1 per thousand. West Bengal is the highest with 19.9 (*Indian Labour Journal*, 1960). As has been observed, in paragraph 20 above, this second place of Maharashtra is not sustained if workers of all the factories and workshops are considered together and even Andhra Pradesh, Gujarat and Kerala have larger proportions of workers engaged in manufacturing than Maharashtra.

22. Out of 320,460 factories and workshops, 202,508 or 63.19 per cent. are in rural areas and the remaining 117,952 or 36.81 per cent. are in urban areas. By the number of workers working in those factories and workshops the rural urban proportions are, however, almost reversed. Out of a total of 1,212,210 workers engaged in manufacturing, only 376,508 or 31.06 per cent. are in rural areas and the remaining 835,702 or 68.94 per cent. are in urban areas. This reversal of rural urban proportions for workers is the result of concentration of large factories in urban areas. Even among the urban areas, the concentration is more in the 12 cities which together have 51.97 per cent. of the total workers engaged in the State in manufacturing. The highest concentration of large establishments is in Greater Bombay which alone has 468,101 or 38.62 per cent. of the total workers but only 26,023 or 8.12 per cent. of the total establishments in the State. After

Greater Bombay, the second position both by the number of establishments and the number of workers is held by Bhandara District and the third by Nagpur District. These two districts respectively have 16.03 per cent. and 8.01 per cent. of the total number of factories and workshops and 10.65 per cent. and 6.69 per cent. of the total workers in the State engaged in Industry Division 2 & 3. Bhandara is typical as it has the highest proportion of factories and workshops (89.30 per cent.) as well as of workers (84.65 per cent.) in its rural areas. The other districts which can be ranked higher both by the number of factories and workshops as well as by the number of workers are Poona, Sholapur, Kolhapur, Nasik, Thana, Jalgaon and Chanda. Figure 21 below will show the comparative position of the districts both by the number of establishments and the number of workers.

23. By the ratio between the number of factories and workshops and one thousand dwellings the urban areas lead by 58 against 37 for rural areas. But by the proportion of workers engaged in manufacturing to total workers, the urban areas lead with 33.7 per cent. against only 5.2 per cent. for rural areas. Among the districts, the proportion of workers engaged in manufacturing in rural areas ranges from 2.7 per cent. for Akola District to 14.9 per cent. for Bhandara District. The rural areas having this proportion lower than 5 per cent. are in Kolaba, Ratnagiri, Nasik, Dhulia, Jalgaon, Aurangabad, Parbhani, Bhir, Nanded, Osmanabad, Buldhana, Akola, Amravati, Yeotmal, Wardha and Chanda districts. Rural areas having that proportion above 5 per cent. are in Thana, Ahmadnagar, Poona, Satara, Sangli, Sholapur, Kolhapur, Nagpur and Bhandara districts.

24. For urban areas, the proportion of workers engaged in Industry Division 2 & 3 to total workers ranges from 0.21 per cent. for Bhir District to 56.01 per cent. for Greater Bombay District. The urban areas having that proportion lower than 3 per cent. are in Thana, Kolaba, Ratnagiri, Dhulia, Jalgaon, Ahmadnagar, Satara, Sangli, Kolhapur, Aurangabad, Parbhani, Bhir, Nanded, Osmanabad, Buldhana, Akola, Amravati, Yeotmal, Wardha, Bhandara and Chanda. Those having it above 3 per cent. are Greater Bombay, Nasik, Poona, Sholapur and Nagpur districts.

25. The ratio between the number of factories and workshops and one thousand dwellings in rural areas ranges from 9 in Thana District to 201 for Bhandara District. The rural areas of Thana, Kolaba, Ratnagiri, Nasik, Dhulia, Jalgaon, Poona, Sholapur, Aurangabad, Parbhani, Bhir, Nanded, Osmanabad, Buldhana, Akola, Amravati, Yeotmal and Wardha districts have ratio lower than the State average while those having it above the State average are in Ahmadnagar, Satara, Sangli, Kolhapur, Nagpur, Bhandara and Chanda districts. The same ratio in urban areas

ranges from 36 in Wardha District to 189 in Bhandarn District. The urban areas having that ratio lower than the State average are in Greater Bombay, Thana, Kolaba, Jalgaon, Poona, Aurangabad, Parbhani, Bhir, Nanded, Osmanabad, Akola, Amravati, Yeotmal and Wardha districts while those having it above the State average are in Ratnagiri, Nasik, Dhulia, Ahmadnagar, Satara, Sangli, Sholapur, Kolhapur, Buldhana, Nagpur, Bhandara and Chanda districts.

26. As for the 12 cities and 14 other towns of Class II, it has been observed in paragraphs 55 and 56 in Chapter II that Malegaon city in Nasik District and Ichalkaranji town in Kolhapur District have the highest and the second highest position in respect of the number of factories and workshops to one thousand dwellings (13.3 per cent. and 19.3 per cent., respectively) as well as in respect of the proportion of workers engaged in manufacturing to total workers (71 per cent. and 68 per cent., respectively).

Size of Employment

27. The Statement below shows the comparative position of Maharashtra and five other States by the proportion of establishments in each size group for rural and urban areas respectively.

28. The proportion of large size establishments (50-99 and 100+) is larger in Maharashtra urban areas than all the States shown in the statement. The proportions of establishments of 6-9, 10-19 and 20-49 size-groups are also higher than the corresponding proportions of other States except for urban areas of Gujarat for 6-9 size-group, and urban areas of Andhra Pradesh for 20-49 size-group. The proportion of 2-5 size-group establishments in urban areas of Maharashtra on the other hand is lower than those of all the other States shown here. The proportion of single worker establishments is again higher for urban areas in Maharashtra than that of the other States excepting the urban areas of Madhya Pradesh.

Distribution of 1,000 Establishments by Size of Employment

State		All Sizes	Size of Employment (number of persons)						
			1 person	2-5 persons	6-9 persons	10-19 persons	20-49 persons	50-99 persons	100 persons and above
1		2	3	4	5	6	7	8	9
MAHARASHTRA	Rural	1,000	643	335	10	5	5	1	1
	Urban	1,000	417	432	77	41	18	7	8
Andhra Pradesh	Rural	1,000	713	262	13	6	5	1	N
	Urban	1,000	394	476	65	35	20	6	4
Gujarat	Rural	1,000	536	416	21	16	8	2	1
	Urban	1,000	341	520	79	36	16	3	5
Uttar Pradesh	Rural	1,000	589	351	41	12	4	2	1
	Urban	1,000	410	481	66	27	10	3	3
Mysore	Rural	1,000	466	492	27	11	4	N	N
	Urban	1,000	347	535	65	30	15	4	4
Madhya Pradesh	Rural	1,000	655	336	5	3	1	N	N
	Urban	1,000	443	498	30	16	9	2	2

N=Negligible

Distribution of Establishments by Size of Employment for Maharashtra

Size of Employment	Total		Rural		Urban		Proportions in Rural/Urban areas for each size			Ratio between the number of establishments and one lakh population	
	No. of Establishments	Percentage	No. of establishments	Percentage	No. of establishments	Percentage	Total	Rural	Urban	Rural	Urban
1	2	3	4	5	6	7	8	9	10	11	12
1 person	179,574	56.04	130,278	64.33	49,296	41.79	100	72.55	27.45	458.87	441.62
2-5 persons	118,811	37.08	67,823	33.49	50,988	43.23	100	57.08	42.92	238.89	456.78
6-9 persons	11,135	3.47	2,057	1.02	9,078	7.70	100	18.47	81.53	7.25	81.33
10-19 persons	5,834	1.82	1,041	0.51	4,793	4.06	100	17.84	82.16	3.67	42.94
20-49 persons	3,123	0.97	978	0.48	2,145	1.82	100	31.32	68.68	3.44	19.22
50-99 persons	991	0.31	221	0.11	770	0.65	100	22.30	77.70	0.78	6.90
100 persons and above	992	0.31	110	0.06	882	0.75	100	11.09	88.91	0.39	7.90
Total	320,460	100	202,508	100	117,952	100	100	63.19	36.81	511.98	1,056.68

29. The position of rural areas in Maharashtra is the reverse of that of the urban areas. Smaller establishments predominate here more and more. Rural areas of Andhra Pradesh, Gujarat, Uttar Pradesh and Mysore have larger proportions of establishments in 6-9 and 10-19 size-groups. Rural areas of Gujarat also have higher proportions for 20-49 and 50-99 size groups.

30. The break-up of manufacturing establishments by the seven sizes of employment is shown in Subsidiary Table E-III.2. The above Statement shows the same proportions for the State. Columns 2, 4 and 6 show the actual number of establishments for total, rural and urban areas while columns 3, 5 and 7 show the respective proportions. Columns 9 and 10 show the rural and urban proportions for establishments of each size-group separately. Figure 19 on the next page will show the distribution of establishments with rural and urban break-up for each size-group. A line shows the proportion for each size-group in the 12 cities of Maharashtra combined.

31. The two smallest size-groups together make 93 per cent. of all the establishments in the State. For urban areas, their combined proportion is 85 per cent. of the total but for rural areas it is as much as 97.82 per cent. The third size-group employing between 6 to 9 workers makes 3.47 per cent. of the total in the State, only 1.02 per cent. in rural areas but 7.7 per cent. in urban areas.

Estimate of Registrable Factories

32. The establishments falling in the three smallest size-groups need not be registered under the Factories Act irrespective of any power used or not. Together they make 96.59 per cent. of the total number of

manufacturing establishments in the State, 98.84 per cent. in rural areas and 92.7 per cent. in urban areas.

33. The fourth size group employing 10-19 persons has 5,834 establishments. In this size group, the establishments using power have to be registered under the Factories Act. Others need not. Table E-III shows that out of the 5,834 establishments in this group, 2,356 or 40.38 per cent use power and the remaining 3,478 or 59.62 per cent. do not use power. The establishments of the three highest sizes have to be registered under the Act irrespective of their using power or not. Table E-III shows their total number as 5,106. The total number of establishments which have to be registered under the Act is thus 7,462 or only 2.33 per cent. of all the manufacturing establishments in the State. The statistics furnished by the Chief Inspector of Factories for Maharashtra for the year 1959 show that there are 7,819 registered factories though only 6,292 of them are shown as reporting. The net difference of 357 between the number of factories actually registered (7,819) and those estimated from the houselists as registrable (7,462) may be due to the following reasons:—

(i) Many registered factories like cotton gins, presses, rice mills or sugar factories do not work off season and the number of workers reported in the houselist for them is much less than their normal seasonal working strength. Because of such smaller number of workers working during September/October 1960 they may have been classed in smaller size-groups and consequently excluded from the estimate of registrable factories prepared from Table E-III. This will be obvious as for the minor code 230 cotton ginning and baling 210 establishments using power are reported in the three smallest size-groups.

(ii) The houselisting operations did not cover strictly military areas and the registered factories working in those areas are not, therefore, included in Table E-III.

(iii) The Chief Inspector of Factories reports some factories as not working. The number of such non-working factories is not available for the year 1959 for Maharashtra but it may be estimated as 782 at the end of the year 1960. Such factories may have, therefore, been classified in one of the three smallest size groups.

(iv) A large number of new factories are licensed and registered every year. Their number is estimated as 769 for the year 1960. They may have been included in smaller size-groups according to the different stages of their installation.

34. The number of registrable establishments estimated from Table E-III may, therefore, not tally exactly with the figures furnished by the Chief Inspector of Factories. The net difference of 357 in the two figures may, in fact, be considered very low in such circumstances.

35. Excluding the 7,462 establishments, estimated as registrable under the Factories Act, the remaining 312,998 establishments fall in the unregistrable category. Separate statistics for the number of workers working in each size group have not been worked out. But from the arithmetical averages the estimate for the total workers in the unregistrable category comes to 729,357. It will thus be seen that the so-called small or unorganised sector of industry for which Table E-III presents some data for the first time consists of 97.67 per cent. of all the manufacturing establishments and employs 53.57 per cent. of the total workers engaged in manufacturing in the State.

36. Columns 9 and 10 of the Statement on page 155 will show that the proportion of manufacturing establishments for rural areas gradually declines over the increasing sizes of employment. For the smallest size, the rural-urban proportions are more or less the same as of their respective populations. That is how the ratios between the number of single worker establishments and one lakh population shown in columns 11 and 12 are not widely different for rural and urban areas. The proportion for rural areas gradually drops down from establishments in the second size-group to the largest. The same proportion for urban areas, on the other hand, increases over the increasing size of establishments. Only 25 per cent. of establishments of the three largest size-groups are in rural areas and the remaining 75 per cent. are in urban areas. Out of the largest size-group employing over one hundred workers as many as 88.9 per cent. are in urban areas.

37. Table E-III shows 992 establishments as employing over one hundred workers in 1960. The factory statistics show 828 factories as reporting in that size-group for 1959. The break-up of those reporting factories in still higher size groups is as follows :—

Size of Employment	Total number of Factories in the State	Total number of Factories in Greater Bombay	Percentage in Greater Bombay
100 and over	828	505	61.0
100—500	641	383	59.7
501—1,000	77	45	58.4
1,001—5,000	98	65	66.3
5,000 +	12	12	100.0

This will show the degree of concentration of large establishments generally in urban areas and particularly in Greater Bombay. The following comparison by the

total number of workers engaged in manufacturing will show the same pattern very pointedly :—

	Number of workers engaged in manufacturing	Percentage of workers engaged in manufacturing to total workers in the State	Number of workers engaged in manufacturing to 1,000 population
MAHARASHTRA—			
Total	1,212,210	100.00	31
Rural	376,508	31.06	13
Urban	835,702	68.94	74
GREATER BOMBAY	468,101	38.62	113

Urban areas which have only 28 per cent. of the total population have 68.94 per cent. of the total workers engaged in manufacturing. Greater Bombay which represents 10.5 per cent. of the total population has 38.62 per cent. of the total number of workers engaged in manufacturing in the State. The number of workers engaged in manufacturing to 1,000 population is 113 for Greater Bombay as against an average of 31 for the State, 74 for all urban areas and 13 for all rural areas. Further analysis of industries by their types obtaining in rural and urban areas will, later, show that their concentration in Greater Bombay is much more than that seen through either the number of establishments or the number of workers engaged in manufacturing.

Power and Fuel

38. The following Statement shows the comparative position of Maharashtra and six other States by the proportion of establishments using each kind of power or fuel :—

Distribution of 1,000 Establishments by Type of Power used for Maharashtra and six other States.

State	All Fuels	Electricity	Liquid Fuel	Solid Fuel (Coal, Gas, etc.)	No Power
1	2	3	4	5	6
MAHARASHTRA					
Rural	1,000	7	67	N	926
Urban	1,000	145	26		829
Andhra Pradesh					
Rural	1,000	11	25	9	955
Urban	1,000	110	13	12	865
Gujarat					
Rural	1,000	36	136	91	737
Urban	1,000	269	28	78	625
Kerala					
Rural	1,000	61	16	N	923
Urban	1,000	112	3	1	884
Uttar Pradesh					
Rural	1,000	16	64	249	671
Urban	1,000	99	33	211	657
Mysore					
Rural	1,000	34	55	10	901
Urban	1,000	136	19	9	836
Madhya Pradesh					
Rural	1,000	1	19	N	980
Urban	1,000	84	24	1	891

N = Negligible.

39. The proportion of establishments using no-power is 926 per thousand in rural areas of Maharashtra which is lower than Andhra Pradesh (955) and Madhya Pradesh (980). It is higher than Gujarat (737), Kerala (923), Uttar Pradesh (671) and Mysore (931). The proportion of establishments in Maharashtra using no-power in urban areas (829) is lower than Andhra Pradesh (865), Kerala (884), Mysore (836) and Madhya Pradesh (891). It is higher than Gujarat (625) and Uttar Pradesh (657).

40. As for liquid fuels, the Maharashtra proportion for rural areas (67) is lower only than that of Gujarat (136) and is higher than the corresponding proportions of rural areas in all the States shown in the statement. The proportion for urban areas in Maharashtra (26) is lower than Gujarat and Uttar Pradesh and higher than all the other four States. Thus, liquid fuels are used for comparatively more establishments both in rural and urban areas of Uttar Pradesh. In all the other States, their use is comparatively lesser than in Maharashtra.

41. The proportion of establishments using electricity in rural areas of Maharashtra is extremely low, viz., 7 per thousand. Only Madhya Pradesh rural areas have a still lower proportion (1), and rural areas of all the other States shown in the statement have higher proportions. Mysore and Gujarat rural areas have their proportions five times higher than Maharashtra while Kerala rural areas have it nine times higher. The proportion of establishments using electricity in urban areas in Maharashtra is very high (145). It is lower than urban areas of Gujarat (269) only and is higher than urban areas of all the other States shown in the statement. It is significant that the proportion for urban areas in Gujarat is almost twice as high as in Maharashtra.

42. The number of establishments using electricity in Maharashtra is increasing rapidly. The progress in rural electrification has been recently speeded up. Transmission lines are being laid and different electricity stations are getting inter-connected to form suitable grids. During 1961-62, 1,200 miles of low tension transmission lines were laid in the State as against 600 miles in 1960-61. Eighty per cent. of the total energy consumed in Maharashtra is used for industrial purposes including traction. The corresponding percentage for India is 74.

43. In spite of the restrictions on connections for new power loads in the Bombay-Poona region, the amount of electricity consumed in industry increased as follows:—

1951	..	816	Million K.W.H. (Estimated)
1956	..	1,235	"
1959-60	..	1,620	Million K.W.H.
1960-61	..	1,853	"
1961-62	..	2,148	"

It is also significant that out of the total electricity consumed in industry in the State in the year 1957-58 69 per cent. had been consumed in Greater Bombay alone.

Distribution of Establishments by Size of Employment and Type of Fuel used for Maharashtra

Size-groups	Size of employment by type of fuel used					Type of fuel used by size of employment				
	All fuels	Electricity	Liquid fuel	Coal, Wood, Bagasse	No power	All fuels	Electricity	Liquid fuel	Coal, Wood, Bagasse	No power
1	2	3	4	5	6	7	8	9	10	11
All Sizes	100	5.79	5.16	N	89.05	100	100	100	100	100
1 person	100	2.30	5.17	N	92.53	56.04	22.28	56.18	37.50	58.22
2-5 persons	100	5.91	4.99	N	89.10	37.08	37.84	35.83	25.00	37.10
6-9 persons	100	27.20	5.08	0.01	67.71	3.47	16.32	3.42	12.50	2.64
10-19 persons	100	32.57	7.78	0.03	59.62	1.82	10.24	2.75	25.00	1.22
20-49 persons	100	40.22	7.49	..	52.29	0.97	6.77	1.42	..	0.57
50-99 persons	100	51.67	4.84	..	43.49	0.31	2.76	0.29	..	0.15
100 persons and above	100	70.87	1.91	..	27.22	0.31	3.79	0.11	..	0.10

N = Negligible.

44. The above Statement shows the distribution of establishments classified by seven size-groups and four categories of power and fuel. Columns 2 to 6 show the distribution by power and fuel for each size-group while columns 7 to 11 show the distribution by size-groups for each kind of power and fuel. Figure 20 will show the distribution of establishments for each size-group by power or fuel used, as well as size-group-wise break-up for type of power or fuel used.

45. It will be seen that 89 per cent. of all the establishments do not use power, 5.79 per cent. use electricity and 5.16 per cent. use liquid fuel. The proportion of establishments using solid fuels like wood, coal, etc., is reported negligible because of a mistake described in paragraph 58 of Chapter I. Such establishments may have been partly classified under electricity and partly under liquid fuel.

46. The proportion of establishments using no-power declines from 92.5 per cent. for the smallest size to 27.2 per cent. for the largest size. It is, however, significant that more than one-fourth of the establishments employing over 100 workers do not use power. For the second highest size-group (50-99) as many as

43.5 per cent. do not use power. We will, later, describe the sectors of industry in which such large establishments not using power are engaged.

47. The proportion of establishments using liquid fuels is 5.16 per cent. for all sizes and is more or less the same for the three smallest size-groups. It goes up to 7.78 per cent. and 7.49 per cent. for the fourth and fifth size-groups, drops down to near 5 for the sixth and to a very low figure of 1.9 per cent. for the largest size-group.

48. The proportion of establishments using electricity on the other hand is extremely low (2.30 per cent.) for the smallest size-group and increases gradually over the increasing size of employment. It is as much as 70.87 per cent. for the largest size-group. It is significant that out of the total number of (5,106) establishments of the three highest size-groups (i.e. employing 20+) in the State, 2,471 or 48.39 per cent. use electricity, 301 or 5.9 per cent. use liquid fuels and 2,334 or 45.71 per cent. do not use any power.

49. The following Statement will show the rural-urban distribution of establishments by power and fuel used:—

Distribution of Establishments by Type of Fuels used for Maharashtra

Fuel or power used	Proportion in					
	Total	Rural	Urban	Total	Rural areas	Urban areas
1	2	3	4	5	6	7
All Fuels	100	100	100	100	63.19	36.81
Electricity	5.79	0.74	14.47	100	8.04	91.96
Liquid Fuel	5.16	6.66	2.58	100	81.61	18.39
Coal, Wood, Bagasse	N	..	N	100	..	100.00
No power	89.05	92.60	82.95	100	65.71	34.29

N = Negligible

50. Out of all the establishments using electricity, only 8 per cent. are in rural areas and 92 per cent. are in urban areas. On the other hand, out of all the establishments using liquid fuels as many as 81.6 per cent. are in rural areas and only 18.4 per cent. are in urban areas. For establishments using no power, the rural proportion is 65.7 per cent. which is lower than its population proportion (72 per cent.). Electricity

is thus used mostly in urban areas while liquid fuels seem to prevail in rural areas.

Industry Major Groups

51. The following Statement will show the comparative position of Maharashtra and six other States by the proportions of establishments in each industry major group :-

Distribution of 1,000 Establishments by Major Groups of Industries

State	Industry Divisions 2 & 3	Major Group of Industry																			
		20	21	22	23	24	25	26	27	28	29	30	31	32	33	34 & 35	36	37	38	39

52. Subsidiary Table E-III.1 shows for Maharashtra and its districts the distribution of one thousand establishments by industry major groups and a few selected minor groups.

53. The Statement on page 162 will show the distribution of manufacturing establishments and workers engaged in them in the State by major groups of industries. Columns 2 and 4 show the actual number of establishments and workers for each industry major group while columns 3 and 5 show their respective proportions out of one thousand of the State totals. Columns 6 to 9 of the statement show the rural and urban proportions for each major group both for the number of establishments and number of workers separately. Figure 22 on page 161 will show the comparative position of each major group by the two criteria and also their rural-urban proportions.

54. Major groups 20 foodstuffs, 22 tobacco products, 23 textile cotton, 27 textile miscellaneous and 28 manufacture of wood and wooden products are important industries in the State each accounting for more than 10 per cent. of the total establishments. The highest proportion is of 27 textile miscellaneous (181.2) and the second highest is of 20 foodstuffs (131.5). Major groups 21 beverages, 24 jute textile, 26 silk

textile, 29 paper and paper products and 32 rubber and petroleum, account for less than 4 per thousand establishments each in the State.

55. By the proportion of workers engaged, major group 23 cotton textile is the largest industry with 273.7, 22 tobacco products is the second largest with 113.3 and 36 basic metals and their products is the third largest with 93.2.

56. Industry major groups 21 beverages, 24 jute textile, 25 wool textile, 29 paper and paper products and 32 rubber, petroleum and coal products employ less than one per cent. of the total workers of the State each.

57. There is a marked difference between the two proportions for the number of establishments and the number of workers engaged for the following major groups :-

	Establishments	Workers
23 Cotton Textile ..	118.7	273.7
26 Silk Textile ..	1.7	15.0
32 Rubber, petroleum and coal.	1.1	9.1
37 Machinery, etc. ..	6.5	28.1

The establishments are fewer but of larger sizes and therefore by the number of workers engaged these industries get a much higher place in the industrial economy of Maharashtra. On the contrary, the number of establishments is larger comparatively for major groups 20 foodstuffs, 25 woollen textile, 27 miscellaneous textile and 28 manufacture of wood and wooden products but they are smaller in size. The number of establishments is, however, so large for them that in spite of their smaller size their importance in the economy of the State is not reduced much.

58. The following Statement shows the average size of establishments for each major group :-

	Average number of workers per establishment	Average number of workers per establishment
Division 2 & 3	3.8	Major Group 30 .. 11.8
Major Group 20 ..	2.4	31 .. 1.6
21 ..	3.5	32 .. 32.3

34 & 35 Non-metallic mineral products other than petroleum and coal.	12,241	38.20	39,919	32.93	79.72	52.44	20.28	47.56
36 Basic metals and their products except machinery equipment.	24,055	75.06	112,950	93.18	64.19	23.31	35.81	76.69
37 Machinery (all kinds other than Transport) and Electrical equipment.	2,066	6.45	34,063	28.10	11.13	8.90	88.87	91.10
38 Transport equipment ..	10,536	32.88	66,085	54.52	35.44	10.31	64.56	89.69
39 Miscellaneous Manufacturing Industries.	25,586	79.84	65,836	54.31	52.50	30.42	47.50	69.58

Rural-Urban Distribution of Industry by Major Groups

59. It will be seen that establishments under major groups 26 silk & textiles, 29 paper and paper products, 30 printing and publishing, 32 rubber, petroleum and coal, and 37 machinery and electrical equipment are comparatively larger in size. Average size for cotton textile is reduced to 8.7 because of the large number of small establishments though there are 217 establishments employing over 100 persons. Figure 23 below will show the distribution of establishments by size group for each industry major group:—

INDUSTRIAL MAJOR GROUPS OF ESTABLISHMENTS BY SIZE OF EMPLOYMENT

60. Columns 6 to 9 of the Statement on page 162 will show rural-urban proportions for each major group both by the number of establishments and workers engaged. Compared with the respective population proportions the following major groups appear to be evenly distributed by the number of establishments: 20 foodstuffs, 22 tobacco products, 24 jute textile, 25 wool textile, 27 textile miscellaneous, 28 wood and wooden products, 31 leather and leather products and 34-35 non-metallic mineral products. In each of the above major groups, the rural proportion by the number of workers is, however, lower than the proportion of population. The following major groups are concentrated in urban areas both by the criteria of the number of establishments and number of workers engaged more so by the latter: 21 beverages, 23 cotton textile, 26 silk textile, 29 paper and paper products, 30 printing and publishing, 32 rubber, petroleum and coal, 33 chemicals and chemical products, 37 basic metals and their products and 38 transport equipment.

Industry Major Groups by Power or Fuels

61. The Statement on page 164 shows the distribution of 1,000 establishments for each major group of industry by power or fuel used. Columns 3 to 6 show the distribution by power or fuel used and columns 7 to 14 show the rural-urban break-up for each major group and each fuel type.

62. A large percentage of establishments from each industry major group is working without using any power or fuel. It should indicate either that many of them are small simple units engaged in servicing or repairs of goods and that where they are producing goods they are generally doing so on a small scale and with age old techniques. This may be illustrated by major group 38 transport equipment. 92.6 per cent. of the establishments in this industry are working without power. Minor groups 384 and 388 which represent establishments engaged in repairing or servicing motor vehicles and bicycles in Maharashtra together make 9,382 out of the total of 10,536 establishments under that major group. The remaining 1,154 or only 11 per cent. of the establishments are engaged in production or assembly of transport equipment parts and accessories.

63. All establishments under major group 22 tobacco products, work without using any power. A large majority of them consists of bidi-making units in Bhandara District. It is only in major group 20 foodstuffs that the proportions of establishments using electricity and liquid fuels are comparatively higher. Minor group 200 representing flour mills and rice mills alone accounts for 95 per cent. of establishments under major group 20 reported as using electricity or liquid fuels. The other major group having considerable proportions of both electricity and liquid fuels is 23 cotton textile.

Distribution of Establishments by Major Groups of Industries and by Type of Fuel used, for Maharashtra

Major Group	TYPE OF FUEL USED					PROPORTION OF WORKSHOPS AND FACTORIES IN RURAL/URBAN AREAS BY TYPE OF FUEL USED							
	All Fuels	Electricity	Liquid Fuel	Coal, Wood and Bagasse	No Power	Electricity		Liquid Fuel		Coal, Wood and Bagasse		No Power

N = Negligible.

Districtwise Distribution of Industries by Major Groups

64. The Statement on pages 165-166 will show the districtwise distribution of one thousand establishments and one thousand workers in Maharashtra for each major group of industry.

65. The cotton textile industry is concentrated in three districts. Greater Bombay alone contributes more than 50 per cent. of its total employment. Nagpur and Sholapur together account for over 20 per cent. Nagpur's share is made up more of handlooms as by the number of textile establishments also it alone makes 29 per cent. as against Greater Bombay's share of 2.5 per cent. and Sholapur's share of 11 per cent. Other handloom centres are in Thana, Nasik and Kolhapur Districts. It is significant that the three most important textile centres are situated outside the cotton growing region.

66. Concentration of major group 22 tobacco products in Bhandara District is very conspicuous by the number of establishments Bhandara District

alone accounts for 86.6 per cent. of the industry while its share by the volume of employment is 70.7 per cent. of the State. The reason for this concentration is the availability of Tendu leaves used for making bides though tobacco, the other raw material, is not produced locally and is brought from outside the district. The other districts having a share in this industry are Sholapur, Nasik, Greater Bombay, Ratnagiri and Sangli. Tobacco growing areas in Maharashtra are concentrated in southern talukas of Kolhapur District.

67. Major group 24 jute textile is concentrated in Sangli District which alone makes 43 per cent. and 36.8 per cent. of the State total by number of establishments and number of workers respectively.

68. Major group 25 wool spinning and weaving is concentrated in Satara, Sholapur, Kolhapur, Nasik and Nagpur Districts. Greater Bombay has 11.8 per cent. of the total employment in this industry.

Districtwise Distribution of Establishments and workers by Major Groups of Industries for Maharashtra

State/Division/ District	MAJOR GROUP															
	DIVISION 2 & 3		20 Foodstuffs		21 Beverages		22 Tobacco Products		23 Textile Cotton		24 Textile Jute		25 Textile Wool		26 Textile Silk

Chanda	73.95	24.16	8.71	4.55	18.51	5.20	57.96	30.09

69. Major group 26 silk textiles is concentrated in Greater Bombay and Nasik Districts. Greater Bombay alone makes 74 per cent. of total employment in the industry while Nasik makes 32.9 per cent. by number of establishments but only 2.6 per cent. by employment. Bhandara District also has 8.3 per cent. establishments though its share by employed workers is only 0.58 per cent. of the State total.

70. Industry major group 27 miscellaneous textiles is distributed fairly over all the districts.

71. Industry major group 29 paper and paper products is concentrated only in three districts—Greater Bombay, Poona and Nagpur. Major group 30 printing and publishing is similarly concentrated in those three districts.

72. Industry major group 31 leather and leather products is fairly spread out over all the districts.

73. Major groups 32 rubber, petroleum and coal and 33 chemicals are highly concentrated in Greater Bombay. Poona and Nagpur have the second and third positions for both.

74. Major group 34-35 includes potteries. This industry is evenly spread out over all the districts. Kolhapur District, however, has the largest proportion by the number of establishments

75. Major group 36 basic metals and their products are concentrated in Greater Bombay, Poona,

Kolhapur, Nagpur and Chanda Districts. Greater Bombay alone accounts for over 60 per cent. employment in this industry.

76. Major group 37 machinery and electrical equipment is highly concentrated in Greater Bombay, Kolhapur and Poona Districts. Together, the three districts make 84 per cent. of the total volume of employment in this industry in Maharashtra. By number of establishments, Kolhapur is higher than Poona but the volume of employment is larger in Poona than that of Kolhapur.

77. Major group 38 transport equipment is concentrated in Bombay, Poona, Kolhapur and Nagpur Districts. Greater Bombay has more than 54 per cent. of the total employment in this industry. Poona is the second highest both by the number of establishments and workers.

78. The total picture thus is that of a high concentration of large size establishments in Greater Bombay which provide 38.6 per cent. of the total employment in manufacturing industries in Maharashtra. Reasons are facilities of trade and transport and availability of cheap power. The other districts which are high up on the industry map of the State are Bhandara, Nagpur, Sholapur, Poona, Kolhapur and Nasik. The remaining districts have very small proportions of manufacturing industries and those which exist appear more to be of servicing types.

APPENDIX I

THE SCHEME OF STANDARD INDUSTRIAL CLASSIFICATION

Explanatory Note

In order that information regarding employment and unemployment in various sectors of the economy may be more specifically known, an industrial classification of all economic activity has been prepared by the Government of India for being used by its various fact finding agencies. This classification is called the "Standard Industrial Classification". An extract from this classification used in Table E-III of this Report to the extent of Division 2 & 3 is reproduced below.

2. Code numbers have been devised for each industrial group on what is known as the 'digit' system. The system is closely related to international usage as recommended by the I. L. O.

3. It is important that the concept of "industry" should not be confused with that of "occupation". 'Industry' means that sector of economic activity in which the earner is engaged, e.g., tile industry, automobile industry, etc., whereas the 'occupation' describes the exact function that an individual performs in that sector, e.g., fitter, carpenter, etc.

Construction of Industrial Classification Code

4. The following system of notation has been adopted in the classification of Industries:—

Divisions.—The whole range of economic activity is divided into nine "Divisions", and a 'code number' given to each. Any code number together represents the "Division" under which that activity is classified, e.g., the number given to the Manufacturing Division and manufacturing activity of any kind will have code numbers beginning with '2' or '3'.

Major Groups.—Each 'Division' is then divided into a number of "Major Groups" not exceeding ten. The first two digits of any code number together represent the 'Division' and the 'Major Group' under which that activity is classified. Thus the number '20' has been given to the 'Production of Foodstuffs' (Major Group) under 'Manufacturing' (Division).

Minor Groups.—Each Major Group is again sub-divided into a number of "Minor Groups" not exceeding ten. The Minor Group "is represented by a third digit added to the 'Major Group' code number, e.g., '5' under Major Group 20 relates to production of bread, biscuits, cake, etc. Thus, if we find Code No. 205 we know that it means production of bread, biscuits, cakes, etc. (Minor Group) in the 'Foodstuffs Industry' (Major Group) in 'Manufacturing' (Division). Again if we find No. 701, we know that it means 'Transporting by tramway, and bus service' (Minor Group) in the 'Transport Industry' (Major Group) in the 'Transport, Storage and Communication, (Division).

Thus, a one-digit code number represents a division, a two-digit code number represents a major group of industries and a three-digit code number represents a minor group of industries. A classification more detailed than the minor groups (3-digit level) has not been made.

5. The code number allotted for economic activity connected with repairing or servicing is the same as the code number provided for manufacturing of the article or product in that branch of industry (for example, repairing of electric lamps and fans is classified under 375 and repairing of radios under 378), unless a code number is specially provided for repairs or servicing under the 'Minor Group' (for example repairing of bicycles and tricycles has been classified under 388 and repairing and servicing of motor vehicles under 384).

Standard Industrial Classification

This classification groups the industries into—

9 Divisions,
45 Major Groups,
343 Minor Groups.

The divisions and major groups with their Code numbers are listed below:—

DIVISIONS

- 0 Agriculture, livestock, forestry, fishing and hunting.
- 1 Mining and Quarrying.
- 2 & 3 Manufacturing.
- 4 Construction.
- 5 Electricity, Gas, Water and Sanitary services.
- 6 Trade and Commerce.
- 7 Transport, Storage and Communication.
- 8 Services.
- 9 Activities not adequately described.

EXTRACTS FOR DIVISION 2 & 3—MANUFACTURING

(Industry Major Group 20)

FOODSTUFFS

**Minor Group
(Code)**

- 200 Production of rice, atta, flour, etc. by milling, dehusking and processing of crops and foodgrains.
- 201 Production of sugar and syrup from sugarcane in mills.
- 202 Production of indigenous sugar, gur from Sugarcane or palm juice and production of candy.
- 203 Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits.
- 204 Slaughtering, preservation of meat and fish and canning of fish.
- 205 Production of bread, biscuits, cake and other bakery products.
- 206 Production of butter, ghee, cheese and other dairy products.
- 207 Production of edible fats and oils (other than hydrogenated oil).
- 208 Production of hydrogenated oils (vanaspati).
- 209 Production of other food products such as sweetmeat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge.

(Industry Major Group 21)

BEVERAGES

- 210 Production of distilled spirits, wines, liquor from alcoholic malt, fruits and malts in distillery and brewery.
- 211 Production of country liquor.
- 212 Production of indigenous liquor such as toddy, liquor from mahua, palm juice.
- 213 Production of other liquors not covered above.
- 214 Production of aerated and mineral water.
- 215 Production of ice.
- 216 Production of ice cream.
- 217 Processing of tea in factories.
- 218 Processing of coffee in curing works.
- 219 Production of other beverages.

(Industry Major Group 22)

TOBACCO PRODUCTS

- 220 Manufacture of bidi.
- 221 Manufacture of cigars and cheroots.
- 222 Manufacture of cigarette and cigarette tobacco.
- 223 Manufacture of hookah tobacco.
- 224 Manufacture of snuff.
- 225 Manufacture of jerda and other chewing tobacco.
- 226 Manufacture of other tobacco products.

(Industry Major Group 23)

TEXTILE COTTON

Minor Group
(Code)

- 230 Cotton ginning, cleaning, pressing and baling.
- 231 Cotton spinning (other than in mills).
- 232 Cotton spinning and weaving in mills.
- 233 Cotton dyeing, bleaching.
- 234 Cotton weaving in powerlooms.
- 235 Cotton weaving in handlooms.
- 236 Manufacturing of khadi textile in handlooms.
- 237 Printing of cotton textile.
- 238 Manufacturing of cotton nets.
- 239 Manufacturing of cotton, cordage, rope and twine.

(Industry Major Group 24)

TEXTILE JUTE

- 240 Jute pressing and baling.
- 241 Jute spinning and weaving.
- 242 Dyeing and bleaching of jute
- 243 Printing of jute textile.
- 244 Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta.

(Industry Major Group 25)

TEXTILE WOOL

- 250 Wool baling and pressing.
- 251 Wool cleaning and processing (scouring).
- 252 Wool spinning and weaving in mill.
- 253 Wool spinning other than in mills.
- 254 Wool weaving in powerloom.
- 255 Wool weaving in handloom.
- 256 Embroidery and art work in woollen textile.

(Industry Major Group 26)

TEXTILE SILK

- 260 Spinning and weaving of silk textile in mill.
- 261 Dyeing and bleaching of silk.
- 262 Spinning of silk other than in mills.
- 263 Weaving of silk textile by powerloom.
- 264 Weaving of silk textile by handloom.
- 265 Printing of silk textile.
- 266 Manufacture of silk cordage, rope and twine.

(Industry Major Group 27)

TEXTILE MISCELLANEOUS

- 270 Manufacture of carpet and all other similar type of textile products.
- 271 Manufacture of hosiery and other knitted fabrics and garments.
- 272 Embroidery and making of crepe lace and fringes.
- 273 Making of textile garments including raincoats and headgear.
- 274 Manufacture of made up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags.
- 275 Manufacture of waterproof textile products such as oil cloth, tarpaulin.
- 276 Manufacture and recovery of all types of fibres for purposes of padding, wadding and upholstery filling.
- 277 Manufacture of coir and coir products.
- 278 Manufacture of umbrellas.
- 279 Processing and manufacture of textile products not covered above.

(Industry Major Group 28)

MANUFACTURE OF WOOD AND WOODEN PRODUCTS

Minor Group
(Code)

- 280 Sawing and planing of wood.
- 281 Manufacture of wooden furniture and fixtures.
- 282 Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows.
- 283 Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures.
- 284 Manufacture of other wooden products such as utensils, toys, artwares.
- 285 Manufacture of veneer and plywood.
- 286 Manufacture of plywood products such as tea chest.
- 287 Manufacture of boxes and packing cases other than plywood.
- 288 Manufacture of materials from cork, bamboo, cane, leaves and other allied products.
- 289 Manufacture of other wood and allied products not covered above.

(Industry Major Group 29)

PAPER AND PAPER PRODUCTS

- 290 Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill.
- 291 Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board handmade.
- 292 Manufacture of products, such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp.

(Industry Major Group 30)

PRINTING AND PUBLISHING

- 300 Printing and publishing of newspapers and periodicals.
- 301 Printing and publishing of books.
- 302 All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry.
- 303 All types of binding, stitching, sizing and other allied work connected with binding industry.

(Industry Major Group 31)

LEATHER AND LEATHER PRODUCTS

- 310 Currying, tanning and finishing of hides and skins and preparation of finished leather.
- 311 Manufacture of shoes and other leather footwear.
- 312 Manufacture of clothing and wearing apparel (except footwear) made of leather and fur.
- 313 Manufacture of leather products (except those covered by code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles.
- 314 Repair of shoes and other leather footwear.
- 315 Repair of all other leather products except footwear.

(Industry Major Group 32)

RUBBER, PETROLEUM AND COAL PRODUCT

- 320 Manufacture of tyres and tubes.
- 321 Manufacture of rubber footwear.
- 322 Manufacture of rubber goods used for industrial purpose.
- 323 Manufacture of all kinds of other rubber products from natural or synthetic rubber including rubber raincoat.
- 324 Production of petroleum, kerosene and other petroleum products in petroleum refineries.
- 325 Production of coal tar and coke in coke oven.
- 326 Manufacture of other coal and coal tar products not covered elsewhere.

(Industry Major Group 33)

CHEMICALS AND CHEMICAL PRODUCTS

Minor Group
(Code)

- 330 Manufacture of basic industrial chemicals such as acids, alkalis and their salts not elsewhere specified.
- 331 Manufacture of dyes, paints, colours and varnishes.
- 332 Manufacture of fertilizers.
- 333 Manufacture of ammunition, explosives and fire works.
- 334 Manufacture of matches.
- 335 Manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations except soap.
- 336 Manufacture of soap and other washing and cleaning compounds.
- 337 Manufacture of turpentine, synthetic, resin and plastic products and materials (including synthetic rubber).
- 338 Manufacture of common salt.
- 339 Manufacture of other chemicals and chemical products not covered above (including inedible oils and fats).

(Industry Major Groups 34-35)

NON-METALLIC MINERAL PRODUCTS OTHER THAN PETROLEUM AND COAL

(Major Group 34)

- 340 Manufacture of structural clay products such as bricks, tiles.
- 341 Manufacture of cement and cement products.
- 342 Manufacture of lime.
- 343 Manufacture of structural stone goods, stone dressing and stone crushing.
- 344 Manufacture of stonewares, other than images.
- 345 Manufacture of stone images.
- 346 Manufacture of plaster of paris and its products.
- 347 Manufacture of asbestos products.
- 348 Manufacture of mica products.

(Major Group 35)

- 350 Manufacture of earthenware and earthen pottery.
- 351 Manufacture of chinaware and crockery.
- 352 Manufacture of porcelain and its products.
- 353 Manufacture of glass bangles and beads.
- 354 Manufacture of glass apparatus.
- 355 Manufacture of earthen image, busts and statues.
- 356 Manufacture of earthen toys and artwares except those covered by Code No. 355.
- 357 Manufacture of glass and glass products except optical and photographic lenses and glass products covered above.
- 359 Manufacture of other non-metallic mineral products not elsewhere specified.

(Industry Major Group 36)

BASIC METALS AND THEIR PRODUCTS EXCEPT MACHINERY AND TRANSPORT EQUIPMENT

- 360 Manufacture of iron and steel including smeltings, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods.
- 361 Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms.
- 362 Manufacture of armaments.
- 363 Manufacture of structural steel products such as joist, rail, sheet, plate.
- 364 Manufacture of iron and steel furniture.
- 365 Manufacture of brass and bell metal products.
- 366 Manufacture of aluminium products.

Minor Group
(Code)

- 367 Manufacture of metal products (other than of iron, brass, bell metal and aluminium) such as tin can.
- 368 Enamelling, galvanising, plating (including electroplating) polishing and welding of metal products.
- 369 Manufacture of sundry hardware such as G. I. pipe, wire net, bolt, screw, bucket, cutlery (This will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38 and 39).

(Industry Major Group 37)

MACHINERY (ALL KINDS OTHER THAN TRANSPORT) AND ELECTRICAL EQUIPMENT

- 370 Manufacture and assembling of machinery (other than electrical) except textile machinery.
- 371 Manufacture and assembling of prime mover and boilers, other than electrical equipment, such as diesel engines, road rollers, tractors.
- 372 Manufacture of machine tools.
- 373 Manufacture of textile machinery and accessories.
- 374 Manufacture of heavy electrical machinery and equipment such as motors, generators, transformers.
- 375 Manufacture of electric lamps and fans.
- 376 Manufacture of insulated wires and cables.
- 377 Manufacture of all kinds of battery.
- 378 Manufacture of electronic equipment such as radio, microphone.
- 379 Manufacture of electric machinery and apparatus, appliances not specified above.

(Industry Major Group 38)

TRANSPORT EQUIPMENT

- 380 Manufacture, assembly and repairing of locomotives.
- 381 Manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by Code No. 363.
- 382 Manufacture and assembling of motor vehicles of all types (excepting motor engines).
- 383 Manufacture of motor vehicles engines parts and accessories.
- 384 Repairing and servicing of motor vehicles.
- 385 Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear.
- 386 Building and repairing of water transport equipment such as ships, boats and manufacture of marine engines.
- 387 Manufacture and repair of air transport equipment including aeroplanes, aeroplanes.
- 388 Repairing of bicycles and tricycles.
- 389 Manufacture of other transport equipment not covered above such as animal-drawn and hand-drawn vehicles.

(Industry Major Group 39)

MISCELLANEOUS MANUFACTURING INDUSTRIES

- 390 Manufacture of optical instruments and lenses, ophthalmic goods and photographic equipment and supplies.
- 391 Manufacture of scientific, medical and surgical instruments and equipment and supplies.
- 392 Assembling and repairing of watches and clocks.
- 393 Manufacture of jewellery, silverware and wares using gold and other precious metals.
- 394 Manufacture and tuning of musical instruments.
- 395 Manufacture of stationery articles not covered elsewhere such as pencil, pen holder, fountain pen.
- 396 Manufacture of sports goods.
- 399 Manufacture and repair work of goods not assignable to any other group.

APPENDIX II

(See Paragraph 16)

NUMBER OF ESTABLISHMENTS AND NUMBER OF WORKERS IN EACH INDUSTRY
MAJOR GROUP AND MINOR GROUP

Note.—The first figure in the bracket appearing against any Industry Division, Major group or Minor group denotes its number of Establishments and the second figure denotes the number of Workers.

MAHARASHTRA STATE—TOTAL

INDUSTRY DIVISION—2 & 3 (320,460—1,212,210)

Major Group—20 (42,154—101,787)

200 (19,432—36,787), 201 (22—1,410), 202 (477—3,856),
203 (82—765), 204 (389—820), 205 (1,591—8,221),
206 (1,017—2,649), 207 (6,255—15,983), 208 (145—1,246),
209 (12,744—30,050)

Major Group—21 (1,127—3,944)

210 (2—4), 211 (1—3), 213 (35—90), 214 (849—2,427),
215 (93—612), 216 (133—707), 218 (11—91), 219 (3—10)

Major Group—22 (39,518—137,324)

220 (39,047—133,488), 221 (1—668), 222 (58—1,204),
223 (5—45), 224 (131—509), 225 (60—308), 226—(216—1,102)

Major Group—23 (38,043—331,803)

230 (961—11,664), 231 (451—5,880), 232 (1,592—168,214),
233 (675—15,698), 234 (2,804—22,314), 235 (28,825—95,078),
236 (128—451), 237 (846—6,887), 238 (19—37), 239 (1,742—5,580)

Major Group—24 (812—2,077)

240 (29—48), 241 (129—299), 242 (9—62), 243 (6—147),
244 (639—1,521)

Major Group—25 (3,205—7,154)

250 (15—92), 251 (65—95), 252 (16—519), 253 (224—359),
254 (3—339), 255 (2,867—5,537), 256 (15—213)

Major Group—26 (553—18,210)

260 (157—12,889), 261 (5—253), 262 (84—285), 263 (22—804),
264 (218—717), 265 (18—357), 266 (49—2,905)

Major Group—27 (58,053—94,081)

270 (183—534), 271 (182—2,189), 272 (140—809), 273
(54,731—83,071), 274 (231—822), 275 (23—50), 276 (15—66),
277 (2,115—4,442), 278 (153—1,060), 279 (280—1,038)

Major Group—28 (32,814—73,089)

280 (1,182—6,413), 281 (8,969—18,447), 282 (1,172—2,042),
283 (128—470), 284 (1,604—7,654), 285 (56—240), 286
(6—30), 287 (494—3,689), 288 (6,300—12,635), 289 (12,903—21,469)

Major Group—29 (406—6,015)

290 (19—2,215), 291 (73—1,088), 292 (314—2,712)

MAHARASHTRA STATE—RURAL

INDUSTRY DIVISION—2 & 3 (202,508—376,508)

Major Group—20 (26,917—47,561)

200 (13,870—23,235), 201 (12—762), 202 (277—2,567),
203 (15—22), 204 (135—247), 205 (243—553), 206 (722—937),
207 (4,501—7,397), 208 (31—77), 209 (7,111—11,764)

Major Group—21 (272—478)

210 (2—4), 211 (1—3), 213 (33—67), 214 (225—375),
215 (5—13), 216 (6—16)

Major Group—22 (32,909—92,370)

220 (32,681—91,947), 222 (51—54), 223 (1—1), 224 (57—160),
225 (17—28), 226 (102—180)

Major Group—23 (13,267—32,717)

230 (179—1,281), 231 (164—443), 232 (23—152), 233
(88—323), 234 (165—999), 235 (10,988—26,006), 236
(93—229), 237 (192—430), 238 (11—22), 239 (1,364—2,832)

Major Group—24 (635—1,464)

240 (29—48), 241 (108—221), 242 (3—28), 243 (3—130),
244 (492—1,037)

Major Group—30 (2,389—28,140)

300 (39—1,977), 301 (110—1,639), 302 (1,828—22,986),
303 (412—1,538)

Major Group—31 (24,270—39,038)

310 (1,538—3,748), 311 (15,561—23,941), 312 (110—189),
313 (4,276—7,140), 314 (2,682—3,866), 315 (103—154)

Major Group—32 (342—11,062)

320 (176—3,209), 321 (2—19), 322 (33—874), 323 (75—2,564),
324 (5—2,152), 325 (17—178), 326 (34—2,066)

Major Group—33 (2,290—39,633)

330 (72—1,389), 331 (373—5,294), 332 (27—484), 333
(270—1,246), 334 (4—59), 335 (576—15,930), 336 (393—7,310),
337 (389—5,336), 338 (9—84), 339 (177—2,501)

Major Group—34 + 35 (12,241—39,919)

340 (382—2,804), 341 (44—1,008), 342 (152—927), 343
(294—5,128), 344 (132—516), 345 (34—87), 346 (12—116),
347 (2—1,967), 348 (2—52), 350 (10,258—18,283), 351
(28—433), 352 (2—15), 353 (178—887), 354 (27—344),
355 (336—671), 356 (147—463), 357 (126—5,666),
359 (85—552)

Major Group—36 (24,055—112,950)

360 (610—7,416), 361 (22—1,321), 362 (12—84), 363
(116—7,656), 364 (364—14,807), 365 (1,521—7,040),
366 (51—1,035), 367 (1,238—10,395), 368 (2,184—9,604),
369 (17,937—53,592)

Major Group—37 (2,066—34,063)

370 (319—4,082), 371 (248—3,607), 372 (116—4,623),
373 (164—932), 374 (108—2,430), 375 (58—2,331),
376 (62—2,069), 377 (216—2,088), 378 (255—2,456),
379 (520—9,445)

Major Group—38 (10,536—66,085)

380 (31—6,791), 381 (85—14,365), 382 (57—855),
383 (126—7,938), 384 (1,955—14,135), 385 (29—1,788),
386 (29—5,590), 387 (4—111), 388 (7,396—12,636),
389 (824—1,876)

Major Group—39 (25,586—65,836)

390 (197—1,559), 391 (49—940), 392 (1,304—2,718),
393 (16,146—27,225), 394 (236—629), 395 (182—5,313),
396 (48—249), 399 (7,424—27,203)

Major Group—25 (2,826—5,265)

250 (12—16), 251 (64—94), 252 (1—1), 253 (217—334),
254 (1—10), 255 (2,528—4,803), 256 (3—7)

Major Group—26 (113—2,870)

260 (1—100), 262 (45—101), 264 (38—99), 265 (4—4),
266 (25—2,566)

Major Group—27 (37,810—47,836)

270 (169—496), 271 (81—250), 272 (5—6), 273 (35,377—
42,427), 274 (58—180), 275 (6—6), 276 (4—15), 277
(2,041—4,288), 278 (37—80), 279 (32—88)

Major Group—28 (25,438—39,593)

280 (285—847), 281 (6,594—9,515), 282 (915—1,184),
283 (73—119), 284 (889—1,295), 285 (6—8), 286 (2—3),
287 (139—438), 288 (5,179—9,687), 289 (11,356—16,497)

Major Group—29 (40—379)

290 (5—116), 291 (7—83), 292 (28—180)

Major Group—30 (71—358)

301 (2—8), 302 (50—302), 303 (19—48)

MAHARASHTRA STATE—RURAL—contd.

Major Group 31 (19,235—26,351)

310 (1,158—1,798), 311 (12,174—16,562), 312 (76—133),
313 (3,582—4,806), 314 (2,155—2,948), 315 (90—104)

Major Group 32 (9—19)

320 (8—18), 326 (1—1)

Major Group 33 (368—2,107)

330 (17—389), 331 (21—169), 332 (12—35), 333 (133—410),
335 (90—433), 336 (29—208), 337 (46—355), 339 (20—108)

Major Group 34 + 35 (9,759—20,933)

SECTION II

TABLES

NOTE

All the Tables except Table E-III present the Census material for 31 units, *i.e.* the State, its four divisions and 26 districts. Table E-III presents material for 27 units, *i.e.* the State and the 26 districts. For purposes of the 1961 Census, the districts had been given a Serial (Location Code) number running from north-west to south-east. The order of presentation uniformly followed in the tables is based on those Code numbers and is shown below :—

MAHARASHTRA STATE

BOMBAY DIVISION

- (1) Greater Bombay
- (2) Thana
- (3) Kolaba
- (4) Ratnagiri
- (5) Nasik
- (6) Dhulia
- (7) Jalgaon

POONA DIVISION

- (8) Ahmadnagar
- (9) Poona
- (10) Satara
- (11) Sangli
- (12) Sholapur
- (13) Kolhapur

AURANGABAD DIVISION

- (14) Aurangabad
- (15) Parbhani
- (16) Bhir
- (17) Nanded
- (18) Osmanabad

NAGPUR DIVISION

- (19) Buldhana
- (20) Akola
- (21) Amravati
- (22) Yeotmal
- (23) Wardha
- (24) Nagpur
- (25) Bhandara
- (26) Chanda

TABLE E-I

Census Houses and
the Uses to which
they are put

EXPLANATORY NOTE

Table E-I shows the number of houses classified by the uses to which they are put for total, rural and urban areas of the State, 26 districts and 228 (out of 229) talukas separately as well as for each of the 26 towns with 50,000 or more population. The table has been compiled on a full count (not a sample) from the houselist and is based on the material obtained through its column 4.

2. A "house" is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc., with a separate entrance whether that entrance leads directly to the street or to a common staircase, courtyard or a gate.

3. For each house, the 1961 Census has recorded the purpose for which it was used at that time. The classification is first in vacant and occupied houses and then of the occupied houses by their uses such as dwelling, shop, workshop, etc. The word "occupied" in 1961 is, however, different from that used in earlier Censuses when it meant occupation only for residential purposes. In 1961, it means use for residence, shop, workshop or any other purpose.

4. For some houses, the occupation is combined for two purposes. For example, a shop is run in a "house" which is also used by the family for residence. In such cases, the use is called 'shop-cum-dwelling'. Similarly, where a workshop is run in a house which is also used as a dwelling, the house is supposed to be used as a 'workshop-cum-dwelling'. This concept of combined use however stops with shops and workshops and is not extended to include cases where a few servants or chowkidars also reside in houses mainly used as factories, schools, hospitals or other institutions. In those cases, the respective houses have been treated as factories, schools, hospitals or other institutions and not as factory-cum-dwelling or school-cum-dwelling, etc.

5. Column 4 of the table shows vacant houses. These are houses which at the time of Census were not used for residence or any other purpose. Their number also includes houses which were then under construction.

6. The classification of uses of occupied houses is in the following twelve groups :—

(i) *Dwellings (Column 5 of the Table).*—Houses used exclusively for residential purposes.

(ii) *Shop-cum-dwellings (Column 6 of the Table).*—Houses used partly for residential purposes and partly for sale of goods—both portions having a common main entrance. Examples : grocery shop-cum-dwelling, stationery shop-cum-dwelling, pan-bidi shop-cum-dwelling, vegetable stall-cum-dwelling, etc.

(iii) *Workshop-cum-dwellings (Column 7 of the Table).*—Houses used partly for residential purposes and partly for manufacture of articles and repair work or servicing—both portions having a common

main entrance. Examples : goldsmithy-cum-dwelling, tailoring establishment-cum-dwelling, weaving-cum-dwelling, carpenter's-establishment-cum-dwelling, shoemaking-cum-dwelling, etc.

(iv) *Hotels, Sarais, Dharamshalas, Tourist Homes and Inspection Houses (Column 8 of the Table).*—Houses used as places of halt or temporary stay by travellers and pilgrims. Examples : Dharamshalas, lodging houses, rest houses, etc.

(v) *Shops excluding Eating Houses (Column 9 of the Table).*—Houses used exclusively for purchasing and selling of goods, without any manufacturing process being carried on in them. This category excludes restaurants, cafes, teashops, sweetmeat shops and eating places which have been classified separately. It includes grocers' shops, coal and fuel depots, cloth shops, stationery stores, newspaper stalls, fruit and vegetable stalls, etc. A few shops are also shown in column 6 because of the combined use of those houses.

(vi) *Business houses and Offices (Column 10 of the Table).*—Places used for housing offices of Government or quasi-Government institutions, commercial establishments, etc. Examples : Banks, Solicitors' firms, Offices of political parties, any office of a Government official, Railway Station, Police Station, Fire Brigade Station, etc.

(vii) *Factories, Workshops and Worksheds (Column 11 of the Table).*—Houses where one or more kinds of goods are produced or manufactured for being put on the market or where some kind of processing, servicing or repairing is undertaken. Places where goods are merely bought and sold and are not manufactured or processed have been classified as shops and are excluded from this category. The term "workshop" or "workshed" applies to a small unregistered manufacturing establishment. Manufacturing establishments registered under the Indian Factories Act are termed "Factories". "Workshops" cover flour mills, rice mills, blacksmith's establishment, carpenter's establishment, printing press, furniture mart, etc. Under "Factories" are included textile mills, Railway or State Transport Workshops and all registered factories. Material is presented for factories and workshops combined and no distinctive line need be drawn between the two either for Table E-I or Table E-III. Total of columns 7 and 11 should give the total number of factories and workshops except in cases where a factory or workshop is spread over two or more separate houses.

(viii) *Schools and other Educational Institutions including Training Classes, Coaching Classes, etc. (Column 12 of the Table).*—Houses where any type of instruction is imparted, whether recognised or unrecognised, technical or non-technical. This category covers all types of schools, colleges, tutorial classes, typewriting institutes, commercial diploma institutes, music and dance classes and other educational institutions.

(ix) *Restaurants, Sweetmeat shops and Eating Places (Column 13 of the Table).*—Places where foods and/or beverages are sold or served. Canteens, milk-bars, tea-stalls, etc., fall in this category. Places where food articles (biscuits, beverages, etc.) are produced and sold are included in the category "workshops". Halwai shops where sweetmeats are prepared for sale are also included under "workshops".

(x) *Places of Entertainment and Community Gathering (Column 14 of the Table).*—This category includes theatres, libraries, reading rooms, gymnasia, akhadas, museums, art galleries, temples, mosques, churches, marriage halls, town halls, etc.

(xi) *Public Health and Medical Institutions (Column 15 of the Table).*—Houses where medical facilities are provided or consulting rooms where medical advice is given fall under this category. These include public health centres, hospitals, dispensaries of all kinds, clinics and consulting chambers of doctors, vaidas, hakims, homoeopaths, family planning centres, maternity homes, leper asylums, mental hospitals, etc.

(xii) *Others (Column 16 of the Table).*—This is the residual group which includes types of uses other than those mentioned above. The types of uses included in this category are garage, car-shed,

cattle-shed, electric pump room, meter room, out-house, cemeteries, places where personal services are provided, e.g., laundries, hair cutting saloons, photo studio, etc. Houses found locked during the stage of housenumbering have been included in this category after getting it confirmed that they were used by some person or the other for purposes which could not be classified for want of further information.

7. Similar tables with wardwise details have been prepared for Greater Bombay and other eleven cities of Maharashtra. They are presented in Part X of the Maharashtra Census Report.

8. Two Subsidiary Tables have been prepared from Table E-I to facilitate analysis of its material. They are presented at the end of Chapter II. Subsidiary Table E-I.1 (pages 44-63) shows the distribution of one thousand houses by different uses for total, rural and urban areas of the State, districts and talukas separately and for each of the 26 towns of 50,000 or more population. Subsidiary Table E-I.2 (pages 64-66) shows the distribution of one thousand houses which are vacant or used as dwellings, shop-cum-dwellings or workshop-cum-dwellings between rural and urban areas of the State, districts and talukas separately.

9. Chapter II of the report contains a brief analysis of the voluminous material presented here.

TABLE E-1

E-1-CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT
NOTE.—The limits of Greater Bombay District being identical with those of Greater Bombay Municipal Corporation, separate figures for the latter are not presented.

State/Division/District/ Taluka/Town with population of 50,000 or more	Total Rural Urban	Total No. of Census Houses	Census Houses vacant at the time of House- listing	Occupied Census Houses used as										Public health and medical institutions, hospitals, clinics, dispensaries, etc.	Others

TABLE E-1

TABLE E-II

Tenure Status of Sample Census
Households living in Census
Houses used Wholly or Partly
as Dwelling

EXPLANATORY NOTE

Table E-II shows the number of houses used wholly or partly as dwellings classified by their occupancy tenures. This table has been prepared from a 20 per cent. sample of households listed in the houselists. It has been compiled from the information contained in columns 11 and 14 of the houselist. The procedures followed in drawing the sample and compilation of the material have been described in Chapter I.

2. Column 8 of the table shows houses partly used as dwellings and partly for purposes other than shops and workshops, e.g., a factory, school, hotel or an institution. Such houses are not included in the category of dwellings in Table E-I which shows combined uses, only in the case of shop-cum-dwellings and workshop-cum-dwellings.

3. Occupancy tenure, i.e., the nature of the right on which a house is occupied by a household has been shown only under two broad categories, viz., "Owned" and "Rented". All dwellings which are not "Owned" have been treated as rented, and thus, rent-free and caretaker occupancies are also included in the rented category.

4. The material presented here is limited only to dwellings and the table does not show occupancy tenures of non-residential houses such as shops, factories, schools, hospitals, etc.

5. Material is presented for total, rural and urban areas of the State, 26 districts and 228 (out of 229) talukas separately and for 26 towns having 50,000 or more population. These towns are presented immediately after the entries for total, rural and urban areas of the talukas in which they are situated.

6. Similar Tables with break-up of the data separately for each ward have been prepared for Greater Bombay and other eleven cities of Maharashtra. They will be found in Part X of the Maharashtra Census Report.

7. Two Subsidiary Tables have been prepared from Table E-II to facilitate analysis of its material. Subsidiary Table E-II.1 (pages 71-73) shows the distribution of 1,000 households by types of houses in rural areas. Subsidiary Table E-II.2 (pages 74-76) shows the distribution of 1,000 households by types of houses and tenure status for urban areas.

8. Chapter III of the report contains a brief analysis of the material presented in this Table.

E-II—TENURE STATUS OF SAMPLE CENSUS HOUSEHOLDS LIVING IN CENSUS HOUSES USED WHOLLY OR PARTLY AS DWELLING
(Based on 20 per cent. Sample)

NOTE.—The limits of Greater Bombay District being identical with those of Greater Bombay Municipal Corporation, separate figures for the latter are not presented.

TABLE E-III

Census Houses used as Factories and
Workshops classified by Industry,
Power and No Power used
and Size of Employment

EXPLANATORY NOTE

Table E-III shows the distribution of houses used as factories and workshops classified by Industry, Power and Fuel used and Size of Employment. The Table has been compiled on a total count (not a sample) from the material collected through columns 5 to 8 of the houselist.

2. Industries are classified according to the Standard Industrial Classification Scheme adopted by the Government of India in major groups (two digits) and minor groups (three digits). An extract from the classification scheme pertaining to manufacturing Industry Division 2 & 3 is reproduced as Appendix II to Chapter VI (page 170).

3. The classification by power or fuels used is first by power or no-power used and then for those using power or fuels by three categories of power or fuels, viz., (a) electricity; (b) liquid fuel; and (c) coal, wood or bagasse.

4. The classification by size of employment is in seven groups, viz., (i) one person; (ii) 2-5 persons; (iii) 6-9 persons; (iv) 10-19 persons; (v) 20-49 persons; (vi) 50-99 persons; and (vii) 100 persons and more.

5. The number of workers used for this classification is the figure reported by the employers or responsible persons on their behalf as average per day working during the week preceding the date of enumerator's visit. The material thus very nearly relates to conditions as obtaining on 1st October 1960. The number of workers reported here is inclusive of persons working in the industry as their secondary work, i.e., in addition to their primary or principal work in some other industrial sector.

6. The words "factory" and "workshop" together denote places where some kind of production, processing, repair or servicing is undertaken on a commercial scale, i.e., where goods are produced and sold or are processed, repaired or serviced for payment.

7. Material presented in this table is limited only to Industry Division 2 & 3 which together covers all manufacturing industries. Processes of agriculture, livestock, forestry, fishing, hunting, mining and quarrying and of generation of gas, kerosene, or petrol and operations of cold or other kinds of storage are not included here.

8. In a few cases, servicing and repairing establishments have been shown separated from the manufacturing establishments through the three-digit classification

in minor groups (see 384 against 382 and 383 or 388 against 385). But, in some other cases, such separate classification has not been made and the presentation is combined for the two types of establishments.

9. In cases where two or more articles are manufactured, the classification of the industry is by the main product. In cases where an establishment is manufacturing and also repairing or servicing the same goods, the classification is on the basis of its manufacturing processes. Paragraph 58 in Chapter I describes the deficiencies in the returns of use of coal, wood and other solid fuels and how the break-up for that category of fuels presented here was not very reliable.

10. Material is presented in the table for total, rural and urban areas of the State and each of the 26 districts separately. Similar Tables have been prepared for each City separately and are included in Part X of the Maharashtra Census Report.

11. Three Subsidiary Tables have been prepared from Table E-III to facilitate the analysis of its material and are presented at the end of Chapter VI. Subsidiary Table E-III.1 (pages 172-187) shows the distribution of 1,000 factories and workshops according to Industry Divisions, Major Groups and selected Minor Groups. Subsidiary Table E-III.2 (pages 188-191) shows the distribution of one thousand establishments by size of employment for each category of power or fuel used. Subsidiary Table E-III.3 (pages 192-237) shows the distribution of 1,000 factories and workshops by kind of power or fuel used for each Industry, Major Group and selected Minor Groups.

12. While presenting the data in Table E-III or in the three Subsidiary Tables, lines for power or fuels or for minor groups for which the columns have only *nil* entries for the administrative unit, have been altogether omitted from the table.

13. Table E-III shows only the size of employment of establishments in seven ranges. Another table showing actual number of establishments and number of workers for each industry major group and minor group has been compiled from the houselists and is presented as Appendix II to Chapter VI. Similar Tables showing districtwise, talukawise and even villagewise material are presented in the 1961 District Census Handbook volumes concerned.

14. Chapter VI of the report contains a brief analysis of the voluminous material presented here.

E-III—CENSUS HOUSES USED AS FACTORIES AND WORKSHOPS CLASSIFIED BY INDUSTRY, POWER AND NO POWER USED AND SIZE OF EMPLOYMENT

TABLE E-IV

Distribution of Sample Households
living in Census Houses used
Wholly or Partly as Dwelling
by Predominant material of Wall
and Predominant material of Roof

EXPLANATORY NOTE

Table E-IV presents the numbers of sample houses occupied wholly or partly as dwellings classified by materials of wall and materials of roof. The material is presented for total, rural and urban areas of the State, 26 districts and 228 (out of 229) talukas separately and for 26 towns having 50,000 or more population. Those towns are presented immediately after the entries of total, rural and urban areas of the talukas in which they are situated.

2. Similar Tables with break-up of the data separately for each ward, have been prepared for Greater Bombay and eleven other Cities in Maharashtra. They will be found in Part X of the Maharashtra Census Report.

3. Materials of wall have been classified into nine categories, viz., (i) grass, leaves, reeds or bamboo ; (ii) timber ; (iii) mud ; (iv) unburnt bricks ; (v) burnt bricks ; (vi) corrugated iron or other metal sheets ; (vii) stone ; (viii) cement concrete ; and (ix) all other material.

4. Materials of roof have been classified into seven categories, viz., (i) grass, leaves, reeds, thatch, wood or bamboo ; (ii) tiles, slate, shingle ; (iii) corrugated iron, zinc or other metal sheets ; (iv) asbestos cement sheets ; (v) brick and lime ; (vi) concrete and stone ; and (vii) all other material.

5. The material of wall of a dwelling is the material out of which most of the walls of the house are made. Where a house consists of two or more rooms whose

walls are made of different materials, the material of wall is the one out of which the walls of the main bed-room are constructed. Similarly, the material of roof is the one out of which most of the roof exposed to weather is constructed.

6. In the case of a multi-storeyed building, the intermediate floor or floors have been considered as the roof of the storey.

7. The number of houses classified by materials of wall and roof is the same as that of Table E-II which includes houses used exclusively as dwellings, shop-cum-dwellings, workshop-cum-dwellings and dwellings with other uses.

8. The classification of houses in this table is limited to dwellings and does not extend to houses used as shops, workshops or any other uses.

9. The Table has been prepared from a 20 per cent. sample of households occupying dwellings listed in the houselists. The procedures followed in drawing the sample and compilation of materials, have been described in Chapter I. Two Subsidiary Tables have been prepared from Table E-IV to facilitate analysis of its material. Subsidiary Table E-IV. 1 (pages 86-98 shows the distribution of 1,000 dwellings by materials of wall. Subsidiary Table E-IV.2 p. 99-110) shows similar distribution of 1,000 dwellings by materials of roof.

10. Chapter IV of the report contains an analysis of the material presented in the table.

E-IV—DISTRIBUTION OF SAMPLE HOUSEHOLDS LIVING IN CENSUS HOUSES USED WHOLLY OR PARTLY AS DWELLING
BY PREDOMINANT MATERIAL OF WALL AND PREDOMINANT MATERIAL OF ROOF

TABLE E-IV

(Based on 20 per cent. Sample)

Note.—The limits of Greater Bombay District being identical with those of Greater Bombay Municipal Corporation, separate figures for the latter are not presented.

State/Division/District/ Taluka/Town with population of 50,000 or more	1	2	Total No. of House- holds	Predominant Material of Wall						Predominant Material of Roof									
				Grass, Leaves, Reeds or Bamboo	Timber	Mud	Unburnt bricks	Burnt bricks	C.L.sheets or other metal sheets	Stone	Cement concrete	All other material	Grass, Leaves, Reeds, Thatch, Wood or Bamboo	Shingle, Slate, Tiles, iron, zinc or metal sheets	Corrugated iron, zinc or metal sheets	Asbestos cement and lime sheets	Brick and lime	Concrete and stone	All other material

TABLE E-V

**Sample Households classified by
Number of Members and by
Number of Rooms occupied**

EXPLANATORY NOTE

Table E-V presents the number of sample households classified by the number of rooms occupied. For each class the number of households and the number of males and females are shown separately. Material is presented for total, rural and urban areas of the State, 26 districts and 228 (out of 229) talukas separately and for the 26 towns having 50,000 or more population. Such towns are presented in the table immediately after the total, rural and urban entries for the talukas in which they are situated.

2. Similar Tables with break-up of the materials separately for each ward have been prepared for Greater Bombay and other eleven Cities in Maharashtra. They will be found in Part X of the Maharashtra Census Report.

3. A "household" is a group of persons who commonly live together in the same house and take their meals from a common mess unless exigencies of work prevent any of them from doing so. Material presented here is restricted only to the family type of households. Institutional households, i.e. groups of persons residing in hostels, boardings, prisons, hospitals, etc., who otherwise satisfy the definition of household, are not included here.

4. A room has been defined as a place usually enclosed by four walls with a doorway and a roof overhead and of at least 6'x6' dimensions. Unenclosed verandah, kitchen, store, garage, and cattle-shed or places of sizes smaller than 6'x6' are not treated as rooms. Households residing in any one of such places are treated as having no regular rooms and are shown in columns 7 to 9 of the Table.

5. Table E-V has been prepared from a 20 per cent. sample of the households listed in the houselist. The procedures followed in drawing the sample and compilation of the material have been described in Chapter I.

6. Two Subsidiary Tables have been prepared from Table E-V to facilitate analysis of its material. Subsidiary Table E-V.1 (pages 124-131) shows the distribution of 1,000 sample households classified by the number of rooms occupied. Subsidiary Table E-V.2 (pages 132-150) shows the number of persons, males and females per room and persons per household in each category of household classified by the number of rooms.

7. Chapter V of the report contains an analysis of the material presented in this Table.

TABLE E-V
