ACKNOWLEDGEMENT

This Report on the Housing and Establishment Tables is a unique feature of the 1961 Census. This volume contains the Tables E-I, E-II, E-III, E-IV and E-V and my comments on the significance of the figures contained in those Tables. The Tables subsidiary to the E-Series Tables will be published in an accompanying volume.

I have already acknowledged in the body of the Report, the contributions of my colleagues in preparing the E-Series Tables and I would accordingly like to place on record here my obligations to Shri Ram Chandra Bhar, Printing Inspector and his colleagues Shri Amiya Ranjan Kar, Shri Ajit Kumar Ganguly, Shri Satinath Chakraborty and Shri Sitangshu Bhattacharjee, for correcting the proofs.

My special thanks are due to Shri S. Sinha, W.B.C.S., who very kindly checked the calculations made by me and which I have used in the Report. I am grateful to Shri B. K. Roy, Manager, Government of India Press, Calcutta, for the care with which the Report has been printed. I would also like to place on record my obligation to Shri K. D. Ballal, I.A.S., Central Tabulation Officer, New Delhi, for getting the main E-Series Tables and the Tables subsidiary thereto checked in his office.

Calcutta,
24th December, 1963.

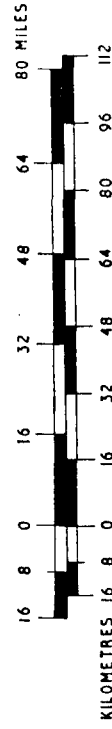

J. C. SEN GUPTA,
*Superintendent of Census Operations,
West Bengal & Sikkim.*

CHAPTER I

Introduction—It is probably for the first time in 1960, in the history of the Indian Census that the list of houses was prepared throughout India, using a standard form. The preparation of a list of houses before the actual Census is taken is not an innovation; as a matter of fact, no Census of the people can be taken without preparing a list of houses beforehand but the use of the same form throughout India for this purpose is the unique feature of the 1961 Census.

The Registrar General and *ex-officio* Census Commissioner, India, held a conference from the 25th to the 27th of September, 1958, with representatives of the Ministries of Commerce and Industry, Community Development, Education, Finance, Food and Agriculture, Health and Labour and representatives of the Planning Commission, the Central Statistical Organization, the Delhi School of Economics, the Indian Statistical Institute and the National Sample Survey; at which discussions were held on the Census Schedules including the form of the House-list. This was followed by a second conference held on the 9th and the 10th of October, 1958, which was attended by the Directors of the Statistical Bureaus of 13 States. The conclusions arrived at the previous conference were reviewed in this conference.

Out of these conferences emerged the first drafts of the House-list form and the Census Schedule. The first draft of the House-list form was put to a pre-test in March 1959 in West Bengal. It was also tested in the field in other parts of India. The Registrar General and *ex-officio* Census Commissioner, India, prepared a second draft of the House-list form in the light of the suggestions received from those who conducted the pre-test in various parts of India. The second draft of the House-list form was tested in the field in West Bengal in July 1959 and certain suggestions were offered for its improvement, in the light of the experience gained in the field. The House-list form was given the final shape at the first conference of the Superintendents of Census Operations of the constituent States and Union Territories of India, in September-October 1959. The two draft House-list forms and the House-list form that was actually used, in connection with the Census of 1961, are reproduced in the Appendix to this volume, along with the instructions for filling them up.

The House-list form contained 18 columns. The columns numbered 2, 3, 4, 11, 12, 15, 16 and 17 were meant to record the number of the building,

5 R. G. I./63.

the number of the Census-house along with the number of the building, the purpose for which the Census-house was used, the number assigned to the household occupying the Census-house along with the number of the Census-house and the number of the building, the name of the head of the household, the number of males, the number of females and the total number of members in the household respectively. These columns, therefore, are the conventional columns in a conventional House-list form. The columns which gave the 1961 House-list form its individuality were columns numbered 5, 6, 7 and 8 for recording respectively the name of the establishment or of the proprietor, the names of the products including details of repairs and servicings undertaken, the average number of persons employed daily during the preceding week and the kind of fuel or power used where machinery was used in respect of those Census-houses in which industrial establishments were located. Columns 9 and 10 were meant to record the material of walls and the material of the roof of the Census-house. Column No. 13 was meant for recording the number of rooms in the possession of a household and column No. 14 was used to record whether the household occupying the Census-house owned it or not. Column 1 was for recording the serial number of the line being used at the time and column No. 18 allowed an opportunity to the House-numberer, to record any other significant item of information. Each line in the House-list form was utilized for recording the particulars about each Census-house.

This House-list form, therefore, not only enabled the Superintendents of Census Operations to ascertain the number of buildings and Census-houses in the State together with the population inhabiting it, thereby fulfilling the primary function of a House-list but also provided valuable data about housing and the industrial sector of the economy. An industrial Census was conducted in 1911 and again in 1921 but the data were collected not in the House-list but through separate Industrial Census Returns which were filled up in respect of only some and not all categories of industrial establishments. In 1911, returns were called for from all owners of factories, mines etc., employing at least 20 persons. "The returns, which were filled in by the owners, agents or managers and not by the Census-staff, specified the character of the mill, factory, mine, etc., e.g., whether it was a jute mill, or jute press, or coal mine, the nature of the mechanical power employed

and the state of the trade or industry when the Census was taken. They further stated the castes or nationalities of owners and managers, and recorded the number of persons in superior employ, skilled workmen and unskilled workmen, those last mentioned divided into two classes, viz., persons over and under 14 years of age." In 1921, another industrial Census was held. The scope of this industrial Census was expanded so as to include all industrial concerns having as many as 10 employees. All the details asked for in 1911, were asked again in 1921 in respect of the industrial concerns and in addition information was collected on the sex, age, caste or race and birth-place of the employees of such industrial concerns. These details about the industries were collected through separate Industrial Census Returns. In 1931 and 1941, the industrial Census does not appear to have been conducted. In 1951 a Census of small industries was carried out in respect of industrial establishments which were smaller than factories as defined in the Factories Act. During that Census of small industries, information was collected on the (1) name of the establishment or proprietor, (2) nature of industry, (3) number of owners, (4) whether any hired persons were employed, (5) the duration of the industrial activity i.e., whether it was seasonal or perennial, (6) number of looms where it was a textile establishment and (7) the number of persons employed, their sexes and ages. But the coverage in any of the industrial Censuses of 1911, 1921 and 1951 could not have been complete because separate forms were used for collecting the data and because the returns were completed, except for the handloom industry in 1921, in respect of only those industrial concerns which were known to exist by the local officers. In respect of the handloom industry, the House-list form was used in 1921 to take a Census of that industry. During the process of preparing a House-list for the 1961 Census, all structures were numbered and appropriate entries made in columns 5 to 8 in the House-list whenever the structure or part of a structure was found to be used for industrial purposes. The coverage of industrial concerns has, therefore, been much better than in those previous Censuses, during which industrial Censuses were also conducted.

So far as collection of data about housing is concerned, it does not appear that any attempt was made to collect such data during any of the Censuses previous to the 1941 Census. On the occasion of the 1941 Census, information about the nature of the roofs and the nature of walls of Census-houses was collected through the House-list form along with information about the number of rooms in the house. Details about the composition of the household were also recorded in the House-list, children of either sex being shown

separately from the adults of that sex. It is however rather unfortunate that the data collected on the composition of the household and on housing were not tabulated after the 1941 Census. Again, in the 1941 Census, the materials of walls and roofs of houses were recorded either as *pucca* or *kutchra*, the actual materials not being mentioned. The Census of 1961 has utilized the House-list form for the collection of data on the composition of households, the state of housing and the industrial establishments and the present volume contains the results of the analyses of those data.

The object of every Census is to count all the persons in the country but as the number of persons is not known, it is not possible to make administrative arrangements for the taking of the Census unless some estimate can be made of the size of the population. For one thing, an adequate number of forms is required to be printed and unless the estimate of the population for whom the forms will be required, is made, there is the risk of the forms being printed either in excess of requirement or what is worse, short of the number actually required. Again, depending on the number of persons to be counted, a certain number of men has to be recruited to act as Census Officers to enumerate the population. It is on account of these reasons that it is customary to prepare a few months before the actual enumeration, a list of houses in the region to be covered by the Census, noting down at the same time, the number of persons residing in each house or living as members of one household. It is easy, once this list is prepared, to print an adequate number of forms; recruit the necessary number of Census Officers, train them up in Census concepts and procedure and supply each one of them with an adequate number of forms so that he may count the persons residing within the area assigned to him. The House-list gives a fairly accurate idea of the numbers of households and persons in so far as persons living in houses are concerned but it is of no help in forming an idea of the number of persons who have no fixed place of habitation or are houseless.

But before the work of preparing a list of houses is taken up, it is necessary to fix beforehand where the list should begin and where it should end. It is also necessary to determine how one house is going to be differentiated from the next one. The best and simplest way to differentiate one house from another is to assign a definite number to each house.

It is necessary at this stage to understand the meaning of some of the terms that will be encountered in this report and in the Tables appended thereto. A building was defined as an entire structure on the ground. But as the adoption of

this definition for the term "Building" in all cases, would have given a wrong idea of the number of buildings in the country, it was also laid down that if there were more than one structures within an enclosed or open compound, belonging to the same person, e.g., the main house, the servants' quarters, the garage etc., the entire collection of structures should be treated as one building. According to this definition, every compact structure on the ground which contained within it the kitchen, the servants' quarters and the garage etc., was treated as one building. In other cases, the alternative definition was employed, that is, the main house, the servants' quarters, the garage etc., taken together were considered as one building. In the rural areas of West Bengal, a man's home frequently consists of a number of structures situated around a courtyard. On the same principle, the number of huts which constituted the home of one family in rural areas was treated as one building. It may be pointed out that in such cases, each hut was a separate structure on the ground. Even in cases of non-residential structures these two definitions were adopted.

A Census-house was defined as a structure or part of a structure, inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school etc., with a separate entrance. If in a building, there were a number of flats or blocks which had separate entrances of their own and were independent of each other, giving on the road or a common staircase or a common courtyard leading to a main gate, then they were considered as separate Census-houses. If within an enclosed or open compound, there were separate buildings, then each such building was treated as a separate Census-house. If all the structures within a compound, were treated as one building, then each such structure was treated as a separate Census-house.

According to these definitions, a compact building, not divided into flats, was one Census-house. Each flat in a building divided into flats, was treated as a separate Census-house provided it gave access to a common staircase or a common courtyard leading to a main gate. If the servants' quarters were located in one or more separate structures, then the household concerned was deemed to be in occupation not only of the main Census-house but also of the Census-houses, occupied by the servants. If the kitchen was again in another structure, the number of Census-houses in the occupation of the household increased by one. In rural areas, the number of Census-houses in the possession of a household was equal to the number of huts which comprised his homestead.

The term "Household" was defined as a group of persons who commonly lived together and took

their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

It would thus be obvious, that a house or a Census-house could not have an existence independent of the building of which it either formed the whole or a part. It was therefore necessary to assign a definite number to each building; the Census-houses in each building being numbered serially, with reference to the building itself. All the buildings in West Bengal or in Sikkim could not be numbered in one series because the number of buildings in each case, was too many. It was clearly impossible to attempt to number all the buildings even in a district of the State, in one series. Even a town or a Police Station contained too many buildings to allow of all the buildings in a town or a Police Station being numbered in one series. It was therefore necessary to fix smaller well known territorial and administrative units which contained manageable numbers of buildings. In rural areas, the revenue survey *mauza* was selected as such a well known small geographical unit. In a town, all the buildings in one street was numbered in one series, provided the street was not too long and did not contain too many buildings. If a street was too long and it was intersected by other roads, then the part of it between two intersections with other roads, was treated as a separate street and the buildings on it were numbered in one series. All the revenue survey *mauzas* in a Police Station of West Bengal bear definite numbers assigned to them by the Director of Land Records and Surveys. These numbers are known as Jurisdiction List Numbers. In every district, a list of *mauzas* was prepared by Police Station by Police Station and since all the buildings in one *mauza* were numbered in one series, it was possible to compute the total numbers of buildings and Census-houses in a Police Station and ultimately in the rural areas of the entire district. So far as a town was concerned, all the streets and lanes in it were numbered in one series, so that a definite number was assigned to each street or lane. It was only in Calcutta where this was departed from and all the streets and lanes in a ward were numbered in one series. Since all the buildings in a street were numbered serially, it became possible to ascertain the numbers of buildings and Census-houses in every town. By adopting the *mauza* and the street in a town as the units, in rural and urban areas respectively, the entire area of West Bengal was accounted for. Not even forest areas were left out. Wherever there was a structure, it was numbered and entered in the House-list. In Sikkim, the collection blocks took the place of *mauzas* in rural areas.

But before the buildings and the Census-houses could be numbered, it was necessary to recruit and

train up a sufficient number of Census-officers called House-numberers. 51,489 persons were appointed as House-numberers in West Bengal. So many persons could not obviously be trained up by the Superintendent of Census Operations, West Bengal, personally. West Bengal is divided into 15 administrative districts, each of which is in charge of a District Magistrate. The District Magistrate accepted the administrative responsibility of seeing the Census through to a successful conclusion in his district but the legal responsibility lay with the District Census Officer, who was an officer of the State Civil Service (the senior or the junior branch), appointed by the District Magistrate u/s 4(4) of the Census Act of 1948, to help him discharge his responsibility in the matter of the Census. Similarly, although the Subdivisional Officer accepted the administrative responsibility for the successful taking of the Census within the Subdivision, he was assisted in the execution of his task by an officer of the State Civil Service (the senior or the junior branch) who was designated as the Subdivisional Census Officer. In a National Extension Service Block, the Block Development Officer was appointed as the Assistant Census Officer in charge of the Census of that Block. In areas not covered by National Extension Service Blocks, the Circle Officer or some other suitable officer was appointed as the Assistant Census Officer. In no case was an Assistant Census Officer asked to take charge of the Census of more than one National Extension Service Block or one Police Station. In municipal towns, the Chairman of the municipal Commissioners was appointed as the Census Officer in charge of the town. In non-municipal towns, some responsible Officers of the Government were placed in charge of the Census. So far as Calcutta was concerned, the Mayor could not be requested to assume charge of the Census. A Deputy and an Assistant Superintendent of Census Operations were accordingly appointed for taking the Census of Calcutta City. Both these Officers came on deputation to the Census Department, from the State Government.

Each Police Station was divided into a number of Charges, the boundaries of each Charge coinciding with the boundaries of a Union Board or an Anchal Panchayat, as the case might be. The President of the Union Board or the Pradhan of an Anchal Panchayat was appointed as Charge Officer and placed in charge of the Census of the Union Board or Anchal Panchayat. Over every five House-numberers on an average, there was a Circle Supervisor, the Circle comprising the areas of Blocks in charge of the House-numberers. In municipal towns, each ward was a Charge.

The Superintendent of Census Operations held training classes at every district and subdivisional headquarters, to explain to the District Magistrate, the District Census Officer, the Subdivisional Officers, the Subdivisional Census Officers, the Assistant Census Officers and the Census Officers in charge of towns, the meaning of each of the terms used in connection with the numbering of buildings and houses and the preparation of the House-lists. The District Census Officer attended all the classes that were held at the District and Subdivisional headquarters so that he could have a comprehensive grasp of the entire subject of house-numbering and house-listing. These officers in their turn held classes at various places within the police stations in the districts to train up the Charge Officers, Circle Supervisors and House-numberers. In Calcutta, the Deputy and the Assistant Superintendents of Census Operations had the opportunity of frequent consultations with the Superintendent of Census Operations, who himself held a training class at the Mahajati Sadan, which was attended by all the Charge Officers and the Circle Supervisors. For the purpose of the Census, Calcutta was divided into 5 districts, there being a District Census Officer in charge of each district. These District Census Officers also attended the training classes held by the Superintendent of Census Operations. The Deputy and the Assistant Superintendents of Census Operations and all the District Census Officers also held training classes for the Charge Officers, Circle Supervisors and House-numberers. There was thus uniformity in the interpretation of the terms used in connection with the Census and the procedure to be followed. In addition, every one connected with the taking of the Census, was supplied with a copy of the Instructional Booklet on House-numbering and House-listing which he could consult if any doubt arose on any point. This booklet was issued by the Registrar General and *ex-officio* Census Commissioner, India, and Bengali, Nepali and Hindi translations of it were supplied to the Census Officers in the different parts of the State. In Calcutta and in a few other places, forms and booklets in English were used. In the hill areas of the Darjeeling District and in Sikkim, forms and booklets in the Nepali language were used. In some parts of the Islampur subdivision in the district of West Dinajpur, forms and booklets in Hindi were used. In all other areas, forms and booklets in Bengali were used.

As the preparation of the House-list required that the House-numberer should have a clear idea of the many complicated terms used in connection with the process, a minimum standard of educational qualification was insisted upon for every House-numberer. In West Bengal, every House

numberer was at least a matriculate or had passed the School Final Examination. In the rural areas, they were drawn from the ranks of teachers in Primary, Special Cadre and Secondary Schools.

The numbering of buildings and Census-houses and the preparation of the House-list took place from the 6th to the 31st of October 1960 throughout West Bengal and Sikkim. House-numbering and House-listing were generally carried out simultaneously *i.e.*, the House-numberer, after he had painted the appropriate numbers on the buildings and Census-houses, filled up the appropriate line or lines on the House-list form and then moved on to the next building. In rural areas, all the buildings in one *mauza* were numbered in one series and where the *mauza* was large and contained more buildings and people than could be tackled by one man within the prescribed period, it was divided into a number of blocks. Each such block was put in charge of one House-numberer and all the House-numberers of that *mauza* had first to number the buildings under a relay system under the supervision of the Circle Supervisor. Thus the first House-numberer numbered, say, 150 buildings, beginning from a particular corner of the *mauza* and then handed over the job to his next man, who continued the numbering till the end of the next block containing an equal number of buildings, and so on, until all the buildings in that *mauza* were numbered in one series. The House-list form was then filled up by each House-numberer, in respect of all the buildings and Census-houses in his block.

The same procedure was followed in case of buildings situated on long roads in towns where the buildings did not already bear numbers.

Where the *mauzas* were very large, as in the Cooch Behar district, the house-numbering and house-listing had to be started on the 15th September 1960 but the work was completed by the 31st of October 1960. In some areas in the Chandernagore Subdivision in the Hooghly District the House-numberers in their enthusiasm began the work earlier than the 6th October but the work was completed by the 31st October. It was only in the area occupied by the Indian Institute of Technology, Kharagpur, that the house-numbering and house-listing were done in November 1960 as the whole area was almost deserted in October on account of the Durga Puja holidays.

One difficulty was frequently encountered in numbering buildings in towns. There were some buildings which were not situated on any road. In such cases, those buildings were deemed to be situated on the nearest road to which they had access and numbered accordingly. Calcutta posed some peculiar problems at the time of House-num-

bering. In slum areas, popularly known as *bustees* there is usually one number assigned to one *bustee* by the Corporation but the number of buildings on that holding is usually more than one. In such cases, each such building was separately numbered for the Census, the letter H being prefixed to the number so painted on the building. Thus if municipal premises No. 48 was a *bustee* and if there were a number of structures on it, then the number assigned to the 5th structure was written as 48-H/5. Where premises were found without numbers, Census numbers were assigned. Thus if a building adjacent to building No. 39B was found to be unnumbered, then it was assigned the number 39B/C1.

After the completion of the House-numbering and house-listing the filled up House-list forms were allowed to remain for a few months at the offices of the District Magistrates concerned, to enable him to finalize his arrangements for taking the final count. A letter was issued in January 1961 (letter No. 4A-1/3396, dated the 3rd January, 1961) requesting the District Magistrates to send those filled up House-list forms. For rural areas, the House-list forms of each block were sewn up together with the House-list Abstract on top. If there were more than one block in a *mauza*, then all the bundles relating to the blocks were tied up so as to form one big bundle. All the bundles for all the *mauzas* in a police station were then packed in one or more gunny bags and sent to the office of the Superintendent of Census Operations. In no case were House-list forms of two police stations sent in one gunny bag. A similar procedure was adopted in respect of the filled up House-list forms relating to towns. The forms of each block were sewn up together, with the House-list Abstract for the block on top. The House lists of all the blocks, of a town were packed in one or more gunny bags after all the papers of all the blocks in a ward had been grouped together and the forms were then sent to the office of the Superintendent of Census Operations.

For the purpose of the Census of 1961, every municipal town, every Cantonment and every town, the affairs of which are administered by a Town Committee or a Union Committee, was treated as a town regardless of all other considerations. For classifying other areas as urban, it was stipulated that (1) the total population of such an area should not be less than 5,000 (2) the density of population per square mile should be at least 1,000 and (3) 75 per cent of the adult male population should be engaged in pursuits other than agriculture. Unfortunately, all the places finally classified as towns could not be treated as such in the Housing Tables as the preliminary list of towns was revised later

on, 39 new places being added to it but which have been treated as rural for the purpose of the Housing Tables. The names of these 39 places are given in a list in the Appendix.

The preparation of the Housing Tables could not be taken up before the 1st May, 1961 as no accommodation for starting an office was available before that date. The full complement of staff could not be recruited all at once on account of shortage of space and the Housing Tabulation Office was opened with 1 Record Keeper, 6 Supervisors, 46 Compiler-Checkers and 6 grade IV staff. Shri S. N. Roy, W.B.C.S., the Deputy Superintendent of Census Operations, headquarters was placed in charge of that office and relieved of his other duties. Shri Nirmal Chandra Sarkar, a Statistical Inspector attached to the headquarters office, was similarly relieved of all other duties and posted to the Housing Tabulation Office, to assist Shri Roy in exercising proper supervision over the work of the Compiler-Checkers. As and when more space became available, the staff was expanded. Thus in June, there were 1 Record Keeper, 1 L.D. Assistant, 8 Supervisors, 59 Compiler-Checkers and 7 grade IV staff. In July, there were 1 U.D. Assistant-cum-Tabulator, 1 Record Keeper, 1 L.D. Assistant, 10 Supervisors, 57 Compiler-Checkers and 7 grade IV staff. The peak strength was reached in August, when there were 1 U.D. Assistant-cum-Tabulator, 1 Record Keeper, 1 L.D. Assistant, 13 Supervisors, 91 Compiler-Checkers and 7 grade IV staff. This strength of staff was maintained except for vacancies caused by resignations, till the end of October, 1961. By the end of October, the work neared completion and in November the staff was reduced to 1 U.D. Assistant-cum-Tabulator, 1 Record Keeper, 6 Supervisors, 42 Compiler-Checkers and 7 grade IV staff. The strength of the staff remained the same in December except for the reduction of the number of posts in grade IV to 6. The staff was disbanded by 31st December 1961.

Unfortunately, it was found later on, that the E-III Table had been prepared in a perfunctory manner by the Compiler-Checkers and it had to be done afresh. The preparation of the E-III Table afresh was taken up in August 1962 and the work was entrusted to Shri S. Sinha, W.B.C.S., another Deputy Superintendent of Census Operations. He was assisted by Shri Manindra Nath Sarkar, a Statistical Inspector attached to the headquarters office. There were 62 Compiler-Checkers who were called Tabulators this time, 10 Supervisors and 4 grade IV staff. This staff worked for two months and was disbanded on the 5th of October, 1962, after completion of the work. The preparation of the E-III Table afresh required consequential amendments to the E-I Table.

No person who had worked before as a Compiler-Checker or a Supervisor was appointed this time. Shri Sunil Kanti Bhattacharjee and Shri Satinath Chakraborty, Proof-Readers attached to the headquarters office were deputed to help Shri S. Sinha, W.B.C.S. and Shri Manindra Nath Sarkar, Statistical Inspector, in exercising effective supervision over the work of the Compiler-Checkers.

On receipt in the Tabulation Office, the House-lists of a Police Station were arranged *mauza*-wise in ascending order of Jurisdiction List Numbers. Similarly the House-lists of a town were arranged ward-wise and within a ward, block by block. The House-lists for a Police Station or for a town were then stitched together and bound, so as to form a number of volumes. The pages were numbered serially, for each Police Station or town. The House-lists were of course, scrutinized before binding, for ascertaining whether the House-lists from all the blocks in a Police Station had been received or not. Same scrutiny was applied in respect of the House-lists of a town.

The E-I Table was prepared with reference to the entries in column 4 of the House-list form. As the uses to which Census-houses are put are many and varied, the entries had first to be coded. The code letter A was applied to all Census-houses used as dwellings, including a parlour or sitting-room, a kitchen, a latrine, a bath, a study, etc., which were located in structures auxiliary to the main house. The code letter E was put against those Census-houses which were used as shops, including Census-houses used as hair-cutting or dressing saloons. The code letter K was applied to restaurants, sweetmeat shops and other eating places. The code letter F was applied to Census-houses used as offices including the Station Master's Office in Railway Stations. The code letter D was used for Census-houses used as hotels, hostels, boarding-houses and used by other institutional households. The code letter G was applied in respect of Census-houses used as Factories (registered or un-registered) including the office of the manager of the factory, godowns, factory canteen and other Census-houses under the control of the owners of the factory except the dwellings used by the factory staff. The code letter M was used for Census-houses used as hospitals, dispensaries, etc., and included the hospital Superintendent's office, the hospital-kitchen, etc., except dwelling houses of the staff attached to the hospital and the Census-houses used exclusively for imparting education in the medical science. The code letter L was used for Census-houses used as places of entertainment and community gathering, including club-houses etc. The code letter J was applied to Census-houses used as educational insti-

tutions. There were some Census-houses which were returned as "vacant". To such houses, the code letter O was applied. Some Census-houses were used both as shops and as dwellings and such shop-cum-dwellings were coded by using the letter B. Census-houses used as workshop-cum-dwellings were coded as C and Census-houses used as workshops and workshops (not factories) were coded by using the letter H. Census-houses used as (1) Temple (2) Mosque (3) Church (4) Garage (5) Cow-shed when as a structure auxiliary to the main house or as a separate structure (6) Railway cabin (7) Level crossing Goomty (8) State Transport Goomty (9) Record Room (10) Library (11) Office-cum-dwellings (12) Gaddi-cum-dwelling (13) Museum (14) Samaj-Kalyan Kendra or Social Welfare Centre (15) Crematorium (16) Bathing Ghat (17) Laboratory (18) Public Lavatory (19) Gola-ghar (20) Waiting-room at a Railway Station (21) Fowl pen (22) Pound and for other purposes which could not be classified into any other categories, were classified as "Others" and assigned the code letter N. For preparing the E-I Table, each and every entry in the House-lists was taken into account.

The E-II, E-IV and E-V Tables were prepared on a sample basis, using the same sample. The samples were drawn in respect of households. For the rural area of a Police Station the sample was drawn, with a random start, every 5th household being marked, including the household with which a beginning was made, with the letter S, until all the households entered in the House-lists of that Police Station were accounted for. In respect of towns, the sample households were marked off, treating all the households entered in the House-lists of that town, as the universe. A 20% sample of the households was thus obtained in respect of every Police Station and town. The Tables E-II, E-IV and E-V were prepared in respect of these sample households.

So far as the E-III Table is concerned, it was prepared for the second time by using the following procedure laid down by the Superintendent of Census Operations:

"Procedure for the preparation of Table E-III:

(1) This Table refers to factories and workshops. A factory or a workshop is a place where some articles are produced, processed or repaired and where machines are serviced. Establishments which sell the articles they produce or process are also factories or workshops. The Table is to be prepared in respect of all workshops and factories as might have been recorded in the House-lists of the tract concerned.

(2) The Table will have to be prepared tract by tract. A tract is an entire Police Station in rural areas and the ward of a city or an entire town of

population lying between 50,000 and 100,000. All towns situated in a Police Station and containing populations of less than 50,000 are to be treated as constituting one single tract.

(3) The House-lists of each tract have been bound in one or more volumes and the pages have already been numbered. A Tabulator will be given the House-lists of one tract at a time.

(4) On receipt of the House-lists, a Tabulator will have first to check whether the pages have been correctly numbered. The Record-keeper will see that complete House-lists of a tract are made over to a Tabulator, on the order of the Deputy Superintendent. The Deputy Superintendent will maintain a register, apart from the register to be maintained by the Record-keeper, to show which tract has been allotted to which Tabulator.

(5) A factory or workshop will have first to be coded by the Tabulator on the basis of the products. This he will do with the help of a list of codes which will be supplied to him. This code contains entries relating to Divisions 2 and 3 in the Standard Industrial Classification. An establishment to which one of the codes in Divisions 2 and 3 can not be applied, is not a factory or a workshop. It will be found that some workshops and factories entered in the House-lists have already been coded and a few left uncoded. In regard to the first category, the code numbers assigned are to be verified with the Standard Industrial Classification, and errors, if any, corrected. In regard to the second category of workshops and factories, appropriate code numbers will have to be written in column 6 of the House-list. Simultaneously, the previous classification of the Census-house or houses already made will have to be noted in the Abstract and then the correct classification recorded in column 4 of the House-list, in accordance with another list of codes supplied for that purpose.

(6) There may be some Census-houses recorded as workshops or factories in column 4 of the House-list but the names of products might be wanting in column 6. Such Census-houses might already have been classified as shops and should be allowed to remain as such, i.e., they are not to be treated as workshops or factories. But there may be other Census-houses, described in column 4 of the House-list as workshops or factories against which the types of products might be noted in column 6 of the House-list or in respect of which it might be possible to readily infer the types of products but the number of persons employed may be wanting. Such Census-houses are to be treated as factories or workshops, and coded, using the Standard Industrial Classification but classified as factories and workshops unclassifiable by size of employment.

(7) In case of any doubt about coding an entry or about the appropriateness of treating a particular Census-house as a workshop, the order of the Deputy Superintendent must invariably be obtained.

(8) Every factory or workshop will require to be coded four times, as follows: (1) The Census-house or houses in which the factory or workshop is located, will be assigned the appropriate code letter in column 4, (2) the three digit code according to the Standard Industrial Classification will have to be recorded in column 6 on the basis of the product, (3) an appropriate code will have to be assigned in column 7 on the basis of the number of persons employed and (4) a code assigned in column 8 on the basis of the fuel or power used.

(9) A factory or workshop may function from more than one Census-house. In such a case, it should be treated as one factory or one workshop.

(10) The number of Census-houses in which the factory or workshop is located will have to be noted in each case on the Abstract.

(11) The details of factories or workshops are to be entered on the Abstracts, as soon as a particular factory or workshop is coded. This will obviate repeated handling of the same page."

The Abstract referred to in the instructions reproduced above, is shown in the appendix.

The object of the E-III Table was to ascertain the number of industrial establishments but as the House-lists had once been handled already for preparing the E-III and other Tables, a distinction had all along to be made between the factory or workshop and the Census-houses occupied by it as otherwise the corrections to the E-I Table could not be made. If the E-I Table had been correctly made, then the procedure for the preparation of the E-III Table afresh would have been concerned solely with workshops and factories and not also with Census-houses used as such.

The E-I, E-II, E-IV and E-V Tables were also compiled from the entries in the House-list form, by preparing at first, abstracts. The forms of abstracts used for the E-I, E-II, E-IV and E-V Tables are reproduced in the appendix.

CHAPTER II

The E-I Table—The E-I Table represents the uses to which Census-houses are put. For preparing this Table, every Census-house recorded in the House-lists has been examined and the Census-house classified into one of the classes mentioned in the Table.

But before proceeding to a discussion of the implications of the E-I Table, it would be better to recapitulate once again, what is meant by the term Census-house. Now the term Census-house or house is not new but the meaning attached to it in the 1961 Census has not been the same as in previous Censuses.

Gait, who conducted the Census in Bengal in 1901, remarked "In 1872 and 1881, a house was defined as the dwelling place of one or more families having a separate independent entrance from the common way. In Bengal, this definition was open to several objections, from the point of view of the actual enumeration, and it was therefore abandoned in 1891, when a house was defined as the residence of a commensal family. The same definition was repeated at the present Census."

O'Malley, who conducted the Census of 1911, remarked, "In Bengal, the dwelling house, or as it may perhaps be more properly called, the homestead, is as a rule composed of four huts built round and facing a central courtyard, with detached cattle-sheds and out-houses. Two of the huts forming the house are used as living rooms—one for the male and the other for the female members of the household—another is a cookshed and the third is the "baitakkhana" or sitting room, where visitors are received and the men sit and smoke". At another place of his report, he remarked that for Census purposes the house was a social and not a structural unit and that it was defined as consisting of the buildings, one or many, inhabited by one family, i.e., by a number of persons living and eating together in one mess, with their resident dependants, such as mother, widowed sisters, younger brothers, etc., and their servants who resided in the house. In other words, the unit was the commensal family and not the homestead or enclosure.

In 1921, the habitation of a commensal family was used as the unit and adopted as the definition of a house.

In 1931, the definition of the word "House" was as follows:—"A 'house' is defined for Census purposes RGI/63

poses as consisting of the buildings, one or many inhabited by one family; that is by a number of persons living and eating together in one mess with their resident dependants such as mother, widowed sisters, younger brothers, etc., and their servants who reside in the house. In other words the unit is the commensal family and not the homestead or enclosure. Houses, however, at a distance from each other and entirely separate though belonging to the same commensal family should be treated as separate. Ordinarily, the unit will correspond to the unit commonly adopted for the Chaukidari tax." This definition was somewhat departed from in respect of institutional households.

In 1941, the same definition was used for the word "house".

In 1951, the then Superintendent of Census Operations observed "Occupied house refers to 'occupied Census house'. The Registrar General defined a Census house as a group of dwellings, a dwelling or part of a dwelling, with a separate main entrance. Owing to the state of housing, this definition was abandoned as impossible of application to West Bengal and an amended definition was adopted: 'A Census house is a dwelling or part of a dwelling with a separate main entrance where a social unit that is household lives. A household means a number of persons living and eating together in one mess with their resident dependants including servants.' This was a compromise between the Registrar General's pre-condition of a separate main entrance and the definition of the house in previous Censuses as a family living and eating together in one mess and transferred the emphasis from the former to the latter. In previous Censuses, the Census-house was synonymous with the kitchen, that is, the number of separate kitchens in a dwelling determined the number of Census-houses in that dwelling. But even this compromise was found unworkable when faced with (a) countless cases of two or more families found to live in one room, with an outlet through another apartment, yet eating in separate messes within the room, and (b) persons or families living in single rooms or apartments of messes, hostels, hotels, with only one main entrance for their building, living their separate lives, yet eating on the house together. The definition that was ultimately accepted, for the Census-house in the State ranged from the

minimum of one room in a dwelling, even if two or more families inhabited that room to the Registrar General's definition. Even if a room contained more than one family, it was called only one Census-house. The Census house, has, thus had a flexible application, especially in Calcutta, but outside of this city and the industrial cities and towns of 24-Parganas, Howrah and Hooghly, the amended definition of a household living in a place with a separate main entrance generally held good."

It would thus be clear that at the Censuses of 1901, 1911, 1921, 1931 and 1941, no distinction was made between the structure or structures called a house or Census-house and the family or household which occupied it. This means that the term house actually meant household and the number of persons per house meant the number of persons per household. In 1951, some distinction was sought to be made between the house and the household but the definitions adopted for the term Census-house at that time were different from those used at the Census of 1961. Again, in all Censuses upto and including the one of 1951, only inhabited houses were considered *i.e.*, dwelling houses only were considered but other structures, used otherwise than as dwellings were not taken into account at all. At this Census, not only has a Census-house been identified with a structure or part of it having a separate main entrance, but the occupiers have been considered separately from the structure or structures occupied by them. Again Census-houses used otherwise than as dwellings, have also been numbered and entered in the House-lists. The type of house described by O'Malley in 1911, has ceased to be one Census-house in 1961 and instead, it has been treated as many Census-houses as there are independent and separate structures within the compound or round the courtyard. The same principle has been applied in respect of all kinds of structures. Thus in an industrial establishment, if there are more than one structures housing different sections of the plant, then the number of Census-houses in that industrial establishment has been taken as more than one.

In West Bengal, excluding the Cooch Behar enclaves, 10,891,376 Census-houses were found to exist in October 1960. 310,124 or 2.85 per cent of these Census-houses were found to be vacant, 8,557,607 or 78.57 per cent were being used exclusively as dwellings, 76,430 or 0.70 per cent were being used as shop-cum-dwellings, 35,749 or 0.33 per cent were workshop-cum-dwellings, 12,446 or 0.11 per cent were being used as hotels, *sarais*, *dharamsalas* etc., 210,744 or 1.93 per cent were being used as shops other than eating houses, 42,556 or 0.39 per cent as business houses and

offices, 18,103 or 0.17 per cent as big industrial establishments which could be called factories, 117,446 or 1.08 per cent as workshops and worksheds which were smaller than factories, 41,923 or 0.38 per cent as schools and other educational institutions, 13,190 or 0.12 per cent as restaurants and eating houses, 7,281 or 0.07 per cent as places of entertainments and community gatherings, 20,290 or 0.19 per cent as Public Health and medical institutions like hospitals, health centres, dispensaries etc., and 1,427,487 or 13.11 per cent were used as (1) Temple (2) Mosque (3) Church (4) Garage (5) Cow-shed when as a structure auxiliary to the main house or as a separate structure (6) Railway Cabin (7) Level Crossing Goomty (8) State Transport Goomty (9) Record Room (10) Library (11) Office-cum-dwelling (12) Gaddi-cum-dwelling (13) Museum (14) Samaj Kalyan Kendra or Social Welfare Centre (15) Crematorium (16) Bathing-ghat (17) Laboratory (18) Public Lavatory (19) Gola-ghar (20) Waiting room at railway station (21) Fowl pen (22) Pound or for purposes other than those mentioned at columns 4 to 16 of the E-I Table. These Census-houses were classified as "Others".

Census-houses found vacant at the time of preparing the House-list were either actually vacant or were under construction.

In the rural areas of West Bengal there were 8,763,587 Census-houses. 214,609 or 2.45 per cent of the Census-houses were vacant, 6,905,052 or 78.79 per cent were dwellings, 30,397 or 0.35 per cent were used as shop-cum-dwellings, 17,668 or 0.20 per cent were workshop-cum-dwellings, 5,081 or 0.06 per cent were being used as hotels, *sarais*, *dharamsalas*, Tourist houses and Inspection houses, 103,729 or 1.18 per cent were shops excluding eating houses, 13,029 or 0.15 per cent were being used as business houses and offices, 5,049 or 0.06 per cent were being used as large industrial establishments which could be classified as factories, 74,914 or 0.85 per cent as worksheds and workshops which were smaller than factories, 34,781 or 0.40 per cent as schools and other educational institutions, 4,008 or 0.04 per cent as restaurants and eating houses, 4,131 or 0.05 per cent as places of entertainments, etc., 10,640 or 0.12 per cent as public health and medical institutions etc., and 1,340,589 or 15.30 per cent as "Others".

In the urban areas of the State, there were 2,127,789 Census-houses. 95,515 or 4.49 per cent of these were vacant, 1,652,555 or 77.67 per cent were being used as dwellings, 46,123 or 2.17 per cent as shop-cum-dwellings, 18,081 or 0.85 per cent as workshop-cum-dwellings, 7,365 or 0.35 per cent as hotels, *sarais* etc., 107,015 or 5.03 per cent as shops excluding eating houses, 29,527 or 1.39 per cent as business houses and offices, 13,054

or 0.61 per cent as industrial establishments which were as large as factories, 42,532 or 2.00 per cent as workshops and worksheds which were smaller than factories, 7,142 or 0.33 per cent as schools and other educational institutions, 9,182 or 0.43 per cent as restaurants and eating houses, 3,150 or 0.15 per cent as places of entertainment etc., 9,650 or 0.45 per cent as public health and medical institutions etc., and 86,898 or 4.08 per cent as "Others".

As is to be expected, the major portion of the Census-houses are used as dwellings, both in the rural as well as in the urban areas. The pattern of use of the Census-houses, however, changes in so far as the uses specified in columns 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, and 17 are concerned, from the rural areas to the urban areas. The proportion of vacant houses is greater in the urban than in the rural areas, thereby indicating greater mobility of the population in urban areas than in rural areas as also higher pace of construction of buildings in the urban than in the rural areas. In the urban areas, proportionately more Census-houses used as shops are also used as dwellings than in rural areas. The same situation is found to obtain in case of Census-houses used as workshop-cum-dwellings also, but the difference in the proportions which Census-houses used for this purpose form of the total number of Census-houses in urban and rural areas respectively is not so great as in the case of the Census-houses used as shop-cum-dwellings. Proportionately more Census-houses are used as (1) hotels, *sarais* and *dharamsalas* etc., (2) shops excluding eating houses, (3) business houses and offices, (4) industrial establishments as large as factories, (5) worksheds and workshops which are smaller than factories (6) restaurants and eating houses, (7) places of entertainments etc., and (8) public health and medical institutions respectively, in urban areas than in the rural areas. As is to be expected, a far greater proportion of Census-houses belong to the category "Others" in rural areas than in urban areas. What appears to be paradoxical is the comparative preponderance of Census-houses used for schools and other educational institutions in the rural areas than in the urban areas but this paradox ceases to be one when it is remembered that although the numbers of high schools and higher educational institutions are lower in rural areas, the situation is reversed in the case of primary schools, of which the overwhelming majority are situated in the rural areas.

The distribution of Census-houses may also be considered from another angle. Of the total number of Census-houses found to be vacant at the time of preparing the House-list, 69.20 per cent were situated in the rural areas and 30.80 per

cent in urban areas. 80.69 per cent of the Census-houses used as dwellings were found in rural areas and 19.31 in urban areas. Of the Census-houses belonging to the category "Others", 93.91 per cent were found in the rural areas and only 6.09 per cent in urban areas. 60.35 per cent of the Census-houses used as shop-cum-dwellings were situated in urban areas, the remaining 39.65 per cent being found in the rural areas. Of the Census-houses used as workshop-cum-dwellings, 50.58 per cent were in urban areas and 49.42 per cent in the rural areas. 59.18 per cent of the Census-houses used as hotels, *sarais*, *dharamsalas* etc., were situated in urban areas and 40.82 per cent in rural areas. The Census-houses used as shops (excluding eating houses) were more evenly distributed, 50.78 per cent of them having been in the urban areas and 49.22 per cent in the rural areas. Of the Census-houses used as business houses and offices, 69.38 per cent were situated in urban areas while 30.62 per cent were in the rural areas. In regard to Census-houses used as industrial establishments which are as large as factories, the disparity is even greater. Against 72.11 per cent of such Census-houses, which were found in urban areas, only 27.89 per cent were in the rural areas. But 63.79 per cent of the Census-houses used as worksheds and workshops were in rural areas as compared to 36.21 per cent in urban areas. Most of the Census-houses used as schools and other educational institutions *i.e.*, 82.96 per cent were in the rural areas. 56.74 per cent of the Census-houses used as places of entertainments etc., were in rural areas. So far as Census-houses used as restaurants and eating houses are concerned, 69.61 per cent were situated in the urban areas. Of the Census-houses used as public health and medical institutions like hospitals, health centres etc., 52.44 per cent were situated in the rural areas.

For a correct appreciation of the rural-urban distribution of Census-houses, it is necessary to remember that for the purpose of the Housing Tables, 23.43 per cent of the 1961 population were urban.

West Bengal is divided into 15 administrative districts, namely, (1) Darjeeling (2) Jalpaiguri (3) Cooch Behar (4) West Dinajpur (5) Malda (6) Murshidabad (7) Nadia (8) 24-Parganas (9) Howrah (10) Hooghly (11) Burdwan (12) Birbhum (13) Bankura (14) Midnapore and (15) Purulia. For the purpose of the Census, the City of Calcutta was treated as the sixteenth district of West Bengal. The City of Calcutta is the area under the jurisdiction of the Corporation of Calcutta and the areas covered by the Fort, the Maidan and the Port. In October 1960, the 15 administrative districts were grouped into the Presidency and

the Burdwan Divisions. The districts of (1) Darjeeling (2) Jalpaiguri (3) Cooch Behar (4) West Dinajpur (5) Malda (6) Murshidabad (7) Nadia and (8) 24-Parganas constituted the Presidency Division. The districts of (1) Howrah (2) Hooghly (3) Burdwan (4) Birbhum (5) Bankura (6) Midnapore (7) Purulia constituted the Burdwan Division. For the purpose of the Census, Calcutta was treated as included in the Presidency Division.

The pattern of use of Census-houses has been examined for the State as a whole, and for the rural and urban areas of the State. Similar analysis has been made in respect of the two administrative Divisions and the 16 districts, in the Subsidiary Tables E-I.1 and E-I.2. It would be seen that in the rural areas of the Burdwan Division, the proportion of Census-houses in the category "Others" is somewhat greater than in the rural areas of the Presidency Division but, if vacant Census-houses, Census-houses used exclusively as dwellings and those in the category "Others" are considered together, then it is seen that the Census-houses put to these three uses form nearly the same proportion of the total number of Census-houses in the rural areas of both the Presidency and the Burdwan Divisions. The important point of difference in the pattern of uses to which Census-houses are put in the rural areas of the two Divisions lies in the proportionately greater number (1.41%) of Census-houses which are used as shops excluding eating houses in the Burdwan Division than in the Presidency Division (0.95%). In the urban areas of the two Divisions also this peculiarity is found to exist, 5.21 per cent of the Census-houses being used as shops excluding eating houses in the Burdwan Division as compared with 4.96 per cent in the Presidency Division. In respect of shop-cum-dwellings, however, the position is reversed, 2.37 per cent of the Census-houses in the urban areas of the Presidency Division being used in that manner as compared with 1.68 per cent in the urban areas of the Burdwan Division. If the three uses under "Vacant", "Dwellings" and "Others" are taken together, then it is seen that the proportion of Census-houses put to these uses in the urban areas of the Burdwan Division is greater than in the urban areas of the Presidency Division. In regard to business houses and offices, however, it is seen that relatively more Census-houses are put to these uses in the urban areas of the Presidency Division than in the urban areas of the Burdwan Division.

Similar comparisons may be made between the patterns of uses of Census-houses in the rural and urban areas of the various districts as also about the distribution of the various uses between the rural and the urban areas of individual districts,

by referring to the Subsidiary Tables but such comparisons, by themselves, cannot clearly indicate which area is predominantly residential, which predominantly industrial and which are predominantly distributing regions for commodities and which provide mainly services to the community because it will be found that in every district, whether it is the rural or the urban part, the Census-houses used for dwelling purposes, predominate. This is as it should be as people build houses primarily to live in them. Even in an industrial town like Titagarh, this preponderance of dwelling houses is not disturbed seriously because the Census-houses in big factories are usually very big and can accommodate disproportionately large numbers of workers. Again, a number of workers can work, in one Census-house used as a factory or workshop but in regard to residential accommodation, each worker is a member of a family which would require normally at least one Census-house for its accommodation. The proportion which Census-houses used as factories and workshops bear to the total number of Census-houses is thus apt to be deceptively low, so low as not to give any clear indication of the importance of the particular town or region as an industrial centre. Again, the number of petty shops in a town is usually considerable and the number of Census-houses used as shops thus forms a deceptively large proportion of the total number of Census-houses. But the differences in the rural and urban pattern of living are fairly clearly brought out in the differences in the patterns of uses to which Census-houses are put in the two parts, rural and urban of each district and each of the two Divisions and of the State. Thus, the proportion of Census-houses found vacant is always greater in urban than in the rural areas, except in the district of Howrah. A possible reason for this deviation from the common pattern in the district of Howrah may be the treating of as many as 21 towns as rural in this district for the purpose of the Housing Tables. As has already been remarked before, the relatively greater number of vacant Census-houses in urban areas may be due to (1) greater mobility of the urban population (2) higher pace of construction of buildings. Again, except for the district of Malda, Census-houses in the category "Others" form a greater proportion of the total number of Census-houses in the rural area than in the urban area, in each of the district of the State. A perusal of the list of Census-houses classified as "Others" would make it clear why it should be so. Census-houses used as (1) Shop-cum-dwellings (2) Hotels, Sarais, Dharamsalas, Tourist houses and Inspection-houses (3) Shops excluding eating houses (4) Business houses and offices (5) Restaurants and eating houses (6) Places of entertainment and (7)

Public Health and Medical Institutions like hospitals, health centres etc., are always to be found in relatively greater numbers in the urban areas than in the rural areas of each of the 15 districts. In regard to the Census-houses used as factories i.e., large industrial establishments classifiable as such, whether actually registered as a factory or not, it is seen that relatively greater numbers of them are found in the urban areas than in the rural areas of all the 15 districts, except in the districts of Darjeeling and Jalpaiguri. The relative preponderance of Census-houses used as factories in the rural areas of these two districts as compared to the urban areas of those districts is easily explained by the existence of large numbers of tea-estates in these districts. As is well known, there is usually a factory in each tea-estate and the tea-estates are generally situated in the rural areas of the districts of Darjeeling and Jalpaiguri. In regard to industrial establishments smaller than factories i.e., workshops and worksheds, the proportion of Census-houses used as workshops and worksheds is always found to be relatively greater in urban areas than in rural areas.

It should be clear from what have been stated before, that the figures in the different columns of the E-I Table give the numbers of Census-houses used for the purposes specified in those columns and not the total number of such institutions or establishments. Thus the numbers shown in column 5 refer to Census-houses used as dwellings and not to the households occupying those Census-houses. Similarly, the figures in columns 9 and 11 refer respectively to the Census-houses used as shops and as factories and not to shops and factories. In regard to Census-houses used as dwellings there is a further complication in that the structural designs of these houses are not the same everywhere. In the rural areas of some districts, the type of house described by O'Malley is found to exist while in other districts, the number of

separate structures constituting the home of a family tends to approach unity. No useful purpose would therefore be served by trying to ascertain what proportion of the total number of Census-houses used as dwellings are situated in which district and this subject of residential houses will be discussed in detail while explaining the implications of the Tables E-II, E-IV and E-V. The Table E-III relate to industrial establishments and not to Census-houses containing industrial establishments and an assessment of the role of a particular district in the industrialization of the State can properly be done with reference to that Table. But in the absence of similar Tables in respect of shops, business houses and offices, etc., an attempt may be made to assess the relative importance of the various districts from the point of view of Trade and Commerce, etc., by ascertaining what proportions of Census-houses used as shops, etc., in the State are located in the various districts. The conclusions that may be drawn from such an analysis will obviously be only approximate but as only percentages and not absolute numbers will be used, the conclusions so reached cannot be seriously in error. It is of course assumed, for the purpose of such an analysis, that the designs of the structures or parts of structures containing shops etc., are more or less the same everywhere. The Table below gives the results of such analysis in respect of Census-houses used as (1) Shop-cum-dwellings (2) Workshop-cum-dwellings (3) Hotels, Sarais etc. (4) Shops excluding eating houses (5) Business Houses and offices (6) Factories (7) Workshops and Worksheds (8) Restaurants and eating houses (9) Places of Entertainments and (10) Public Health and Medical Institutions. This analysis is being made also in respect of Census-houses used as factories and workshops for the purpose of comparing the results with those of similar analysis that will be made on the basis of the E-III Table.

PERCENTAGES OF CENSUS-HOUSES USED FOR VARIOUS PURPOSES, IN WEST BENGAL,
CONTAINED IN THE DIFFERENT DISTRICTS

State/Division/District/Region	Shop-cum-dwellings	Workshop-cum-dwellings	Hotels, Sarais, etc.	Shops excluding eating houses	Business houses and Offices	Factories	Workshops and Worksheds	Restaurants and eating houses	Places of Entertainment	Public Health & Medical Institutions
1	2	3	4	5	6	7	8	9	10	11
WEST BENGAL	100	100	100	100	100	100	100	100	100	100
Presidency Division	65.24	65.45	64.39	55.70	77.74	66.65	57.12	70.21	50.34	57.70

Burdwan	10.45	4.39	15.53	9.43	6.04	12.56	7.27	6.72	6.90	9.16
Birbhum	3.20	4.25	4.84	3.46	1.69	1.51	3.40	1.48	4.13	3.26
Bankura	1.83	3.33	3.66	3.74	2.44	1.81	6.02	2.17	4.60	4.54
Midnapore	5.82	11.53	9.06	7.99	4.89	2.57	8.85	3.51	16.69	8.52
Purulia	3.15	3.03	1.86	2.16	1.22	1.14	2.10	0.48	0.92	1.42
Calcutta-Howrah Industrial Region	49.02	44.52	33.70	38.49	57.90	62.36	27.23	63.48	37.89	36.32
The Northern Industrial Region	5.70	2.46	5.87	1.67	3.50	10.28	1.75	1.93	3.28	3.74
The Asansol Industrial Region	6.33	1.43	10.19	2.95	2.93	8.21	1.27	1.72	2.39	2.72

The Presidency Division contains 53.72 per cent of the population of West Bengal as at the sunrise of the 1st of March, 1961, but it contains more than its share of Census-houses used as (1) Shop-cum-dwellings (2) Workshop-cum-dwellings (3) Hotels, Sarais, etc., (4) Shops excluding eating houses (5) Business houses and offices (6) Factories (7) Workshops and worksheds (8) Restaurants and eating houses and (9) Public Health and medical institutions and it contains less than its share of Census-houses used as places of entertainment. The Burdwan Division, which contains 46.28 per cent of the population of West Bengal, is seriously short of its share of Census-houses used as (1) Shop-cum-

dwellings (2) Workshop-cum-dwellings (3) Business houses and offices (4) Factories and (5) Restaurants and eating houses. In regard to Census-houses put to other uses as mentioned in the preceding Table, it contains less than its share of each kind but in respect of Census-houses used as places of entertainment, it has got a little more than its share. The favourable position of the Presidency Division appears to be due mainly to the existence of the districts of (1) Calcutta and (2) 24-Parganas within it.

The district of Darjeeling, which contains 1.79 per cent of the population of West Bengal, has got more than its share of Census-houses used as

(1) Shop-cum-dwellings (2) Workshop-cum-dwellings (3) Hotels, Sarais, etc., (4) Business houses and offices (5) Factories (6) Places of entertainment and (7) Public Health and medical institutions while in regard to the other kinds of Census-houses mentioned in the preceding Table, it is deficient.

The district of 24 Parganas, which contains 17.98 per cent of the population of West Bengal, is seriously short of its share of Census-houses used as (1) Workshop-cum-dwellings and (2) Business houses and offices and in regard to Census-houses used as (1) Shop-cum-dwellings (2) Hotels, Sarais, etc., (3) Workshops and worksheds (4) Restaurants and eating houses (5) Places of entertainment and (6) Public Health and medical institutions, its position is not so bad, although it does not have its due share of these Census-houses. It contains more than its share of Census-houses used as (1) Shops excluding eating houses and (2) Factories.

The position of Calcutta among the districts appears to be unique inasmuch as it contains very much more than its share of the Census-houses used for the 10 purposes mentioned in the preceding Table.

In order that the reader may examine the position of other districts, the percentages of the population of West Bengal, contained in the various districts, have been given in the Table below.

Name of District	Percentage of the population of West Bengal contained in it
24-Parganas	17.98
Midnapore	12.43
Burdwan	8.83
Calcutta	8.38
Murshidabad	6.56
Hooghly	6.39
Howrah	5.84
Nadia	4.90
Bankura	4.77
Birbhum	4.14
Purulia	3.89
Jaipalguri	3.89
West Dinajpur	3.79
Malda	3.50
Cooch Behar	2.92
Darjeeling	1.79
West Bengal	100

The Table showing the percentages of Census-houses used for various purposes in West Bengal, contained in the various districts, contains three lines relating to (1) The Calcutta-Howrah Industrial Region (2) The Northern Industrial Region and (3) The Asansol Industrial Region. The Calcutta-Howrah Industrial Region consists of the Police Stations of (1) Bijpur (2) Naihati (3) Jagatdal (4) Noapara (5) Barrackpore (6) Titagarh (7) Khardah (8) Baranagar (9) Dum Dum (10) Tollygunge (11) Behala (12) Maheshtola (13) Metiabruz (14) Garden Reach (15) Budge Budge in the district of 24-Parganas, (16) Uluberia (17) Bawria (18) part of Bally outside Howrah City (19) Sankrail (20) Jagacha (21) Domejur in the district of Howrah and (22) Serampore (23) Bhadreswar (24) Chinsurah (25) Chandernagore (26) Uttarpara (27) Mogra in the district of Hooghly and the cities of Calcutta and Howrah. The northern Industrial Region consists of the Police Stations of (1) Sukhiapokri (2) Jore Bungalow (3) Darjeeling (4) Rangli Rangliot (5) Mirik (6) Kurseong (7) Siliguri (8) Naxalbari (9) Garubathan in the district of Darjeeling and (10) Mal (11) Mitiali (12) Dhubguri (13) Nagrakata (14) Madarihat and (15) Kalchini in the district of Jaipalguri. The Asansol Industrial Region consists of the Police Stations of (1) Chittaranjan (2) Kulti (3) Salanpur (4) Asansol (5) Hiranpur (6) Jamuria (7) Barabani (8) Raniganj (9) Ondal (10) Faridpur and (11) Durgapur in the district of Burdwan. The principle behind the formation of these three Industrial Regions is that each of the constituent units of such a Region contains a greater proportion of the non-agricultural workers (workers in Categories III-IX of the Primary Census Abstract) than the proportion of the population of West Bengal. Each of these Regions is a geographically compact area. The Calcutta-Howrah Industrial Region contains 19.6 per cent, the Northern Industrial Region, 2.95 per cent and the Asansol Industrial Region, 2.94 per cent of the population of West Bengal. It would be seen that the Calcutta-Howrah Industrial Region contains very much more than its share of Census-houses used as (1) Shop-cum-dwellings (2) Workshop-cum-dwellings (3) Hotels, Sarais, etc., (4) Shops excluding eating houses (5) Business houses and offices (6) Factories (7) Workshops and Worksheds (8) Restaurants and eating houses (9) Places of entertainment and (10) Public Health and medical institutions.

The State of Sikkim is situated to the immediate north of the district of Darjeeling in West Bengal and is comparable in area to the district of Burdwan. The terrain is hilly. The population at the sunrise of the 1st of March 1961 was 162,189 (one lakh sixtytwo thousand one hundred and eighty-nine). For administrative purposes, it is divided into the

Three Tehsils of Gangtok, Namchi and Magan. Gangtok, the capital of Sikkim, and the only town in the State, is situated in the Gangtok Tehsil. The Gangtok Tehsil contains 56,704 persons or 34.96 per cent of the population of Sikkim, the Namchi Tehsil contains 95,726 persons or 59.02 per cent of the population of Sikkim and the Magan Tehsil contains 9,759 persons or 6.02 per cent of the population of Sikkim.

In October 1960, there were 34,771 Census-houses in Sikkim of which 30,439 or 87.54 per cent were used as dwellings, 732 or 2.11 per cent were vacant at that time, 697 or 2.00 per cent were used as shop-cum-dwellings, 154 or 0.44 per cent were used as workshop-cum-dwellings, 88 or 0.25 per cent were used as Hotels, *Sarais*, *Dharamsalas*, Tourist Homes and Inspection Bungalows, 129 or 0.37 per cent were used as shops (excluding eating houses), 119 or 0.34 per cent were used as Business Houses and Offices, 93 or 0.27 per cent were used as Workshops and Workshops not registrable under the Factories Act, 181 or 0.52 per cent were used as Schools and other educational institutions, 16 or 0.05 per cent as Restaurants and eating houses, 8 or 0.02 per cent were used as Places of entertainments, 37 or 0.11 per cent as Public Health and medical institutions and 2,078 or 5.98 per cent were used for purposes classified as "Others". No Census-house was found to be used as a factory.

The town of Gangtok which contains 6,848 persons or 4.22 per cent of the population of Sikkim, contained 2,072 or 5.96 per cent of the total number of Census-houses in Sikkim. Of vacant Census-houses, it contained 211 or 28.83 per cent, thus demonstrating the greater mobility of the urban population as also the greater pace of construction of buildings in urban areas. It contained 5.05 per cent of the Census-houses used as dwellings, 22.53 per cent of the Census-houses used

as Shop-cum-dwellings, 16.88 per cent of the Census-houses used as Workshop-cum-dwellings, 13.64 per cent of the Census-houses used as Hotels, *Sarais*, etc. 21.71 per cent of the Census-houses used as Shops (excluding eating houses), 29.41 per cent of the Census-houses used as Business houses and offices, 3.60 per cent of the Census-houses used as workshops and workshops, 7.18 per cent of Census-houses used as Schools and other educational institutions, 12.50 per cent of the Census-houses used as Restaurants and eating houses, 25 per cent of the Census-houses used as places of entertainment, 18.92 per cent of the Census-houses used as Public Health and medical institutions and 1.59 per cent of the Census-houses classified as "Others".

If the subject of uses to which Census-houses are put is examined separately for the rural and urban areas, then the difference in the pattern of living in the two areas becomes at once apparent. The largest number of Census-houses is used as dwelling, both in the rural and in the urban areas but the number is relatively smaller in the urban area. Due to large numbers of buildings under construction in the urban area, the proportion of vacant Census-houses is very high (10.18 per cent) as compared with the proportion of such Census-houses in rural areas (1.59%). In regard to Census-houses classified as "Others", their proportion is higher in the rural than in the urban areas. The types of Census-houses classified as "Others" themselves furnish the explanation of the relative preponderance of such class of Census-houses in the rural area. In regard to all the other uses to which Census-houses are put, the proportions of such Census-houses are greater in the urban than in the rural area.

The Table below gives the percentage of each class of Census-houses of Sikkim contained in each of the Tehsils:

Name of Tehsil	Vacant Census-houses	Census-houses used as dwellings	Census-houses used as shop-cum-dwellings	Census-houses used as workshop-cum-dwellings	Census-houses used as hotels, <i>sarais</i> , etc.	Census-houses used as shops	Census-houses used as business houses and offices	Census-houses used as workshops and work-shops	Census-houses used as schools etc.	Census-houses used as Restaurants etc.	Census-houses used as Places of entertainments	Census-houses used as Public Health & Medical Institutions	Others
Gangtok	57.24	35.36	60.54	30.52	53.41	64.34	56.30	61.29	30.94	18.75	25.00	54.05	16.22
Namchi	42.49	57.46	34.58	68.83	32.95	34.11	33.61	37.63	53.04	81.25	25.00	27.03	81.04
Magan	0.27	7.18	4.83	0.65	13.64	1.55	10.09	1.03	16.02	..	50.00	18.92	2.74
Sikkim	100	100	100	100	100	100	100	100	100	100	100	100	100

For a correct appreciation of the significance of the figures in the above Table, they have to be viewed against the background of the percentages of the population of Sikkim contained in the three

Tehsils. The favourable position of the Gangtok Tehsil in regard to Census-houses appears to be due, to a great extent, to the existence of the town of Gangtok within it.

CHAPTER III

The E-II Table—The E-II Table has been prepared in respect of a 20 per cent sample households, in the manner already described. The Table depicts the results of the analysis of the answers recorded in Column 14 of the House-list against the sample household. Any household not residing in a house owned by it had been shown as living in a rented house, at the time of preparing the House-list. The households living in rented houses, thus, do not necessarily pay rent for those houses. Some of these households may be living in rent-free quarters provided by the concerns which employ some one among each such households. Among persons in enjoyment of such rent-free quarters, mention may be made of the workers in tea-gardens. Although these workers do not have to pay any rent for the houses which they occupy, they were recorded as residing in rented houses at the time of preparing the House-list. Again households, in wrongful occupation of either the houses or the lands on which the houses are situated, have been recorded as living in rented accommodation. "Rented accommodation" has thus got a peculiar meaning in so far as the E-II Table is concerned. What this Table actually reveals are the proportion of households which live in their own houses and the proportion of households which live in houses which do not belong to them.

After the sample households were marked off in the House-list, it was seen that some households lived in houses which were exclusively dwellings, some lived in houses from which they also ran shops, some lived in houses, which were used also as workshops and the rest lived in houses which were used for other purposes also. Thus a household living in garage or a cowshed has been shown in the E-II Table as living in a dwelling with other uses.

The figures in the E-II Table relate to the sample households and not to all the households and therefore, these figures by themselves do not have much significance. What is of significance is the ratio which the households living in a particular class of Census-house bears to the total number of sample households as it is reasonable to assume, on account of the large size (20%) of the sample, that this ratio obtained from the E-II Table will also hold good in respect of all the households of that class in the particular region. The Table below gives the percentages, which the households living in the four classes of Census-houses, form of the total number of sample households for West Bengal as a whole and each of the Divisions and districts of the State.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF CENSUS-HOUSES

State/Division/District/ Region	Dwellings	Shop-cum-dwellings	Workshop-cum-dwellings	Dwellings with other uses
WEST BENGAL	98.1	1.1	0.4	0.4
Presidency Division	97.6	1.4	0.5	0.5
Burdwan Division	98.6	0.7	0.3	0.4
Darjeeling	96.3	2.3	0.6	0.8
Jalpaiguri	98.8	0.8	0.1	0.3
Cooch Behar	97.7	0.6	0.3	1.4
West Dinajpur	99.0	0.5	0.2	0.3
Malda	98.0	0.5	1.1	0.4
Murshidabad	99.4	0.3	0.1	0.2
Nadia	99.3	0.3	0.2	0.2
24-Parganas	98.5	1.0	0.2	0.3
Calcutta	92.9	4.3	1.6	1.2
Howrah	97.9	1.3	0.4	0.4
Hooghly	99.1	0.5	0.3	0.1
Burdwan	97.8	1.3	0.2	0.7
Birbhum	98.9	0.6	0.3	0.2
Bankura	99.7	0.1	0.1	0.1
Midnapore	99.0	0.4	0.4	0.2
Purulia	97.6	0.7	0.2	1.3
Calcutta-Howrah Industrial Region	95.5	2.8	0.9	0.8
Asansol Industrial Region	96.5	2.3	0.2	1.0
The Northern Industrial Region	97.7	1.5	0.3	0.5
5 RGI/63				

The differences in the pattern of housing from one district to another will become clear on a careful study of the preceding Table. It will be seen that in West Bengal as a whole, a little more than one household in a hundred households, live in houses from which they either run shops either as owners or as employees. In the Presidency Division and in the districts of Darjeeling, 24-Parganas, Calcutta, Howrah and Burdwan and in each of the three Industrial Regions of Calcutta-Howrah, Asansol and the Northern, one or a little more households out of every hundred, lives in shop-cum-dwellings. The highest proportion of such house-

holds is found in Calcutta, where 4.3% of the households live in shop-cum-dwellings.

In regard to households living in workshop-cum-dwellings, it is found that they form 1% or more of the households in the districts of Malda and Calcutta. In the districts of Calcutta, Cooch Behar and Purulia and in the Asansol Industrial Region between 1 and 1.5 per cent of the households are found living in dwellings with other uses.

The picture changes somewhat if one looks first only at the rural areas and then at the urban areas of these districts.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF CENSUS-HOUSES IN RURAL AREAS

State/Division/District	Dwellings	Shop-cum-dwellings	Workshop-cum-dwellings	Dwellings with other uses
WEST BENGAL	99.0	0.5	0.2	0.3
Presidency Division	99.0	0.5	0.2	0.3
Burdwan Division	99.0	0.5	0.2	0.3
Darjeeling	98.0	1.3	0.4	0.3
Jalpaiguri	99.0	0.7	0.1	0.2
Cooch Behar	98.1	0.4	0.2	1.3
West Dinajpur	99.3	0.3	0.1	0.3
Malda	98.0	0.4	1.1	0.5
Murshidabad	99.6	0.2	0.1	0.1
Nadia	99.5	0.2	0.2	0.1
24-Parganas	99.1	0.6	0.1	0.2
Howrah	99.3	0.4	0.2	0.1
Hooghly	99.4	0.3	0.2	0.1
Burdwan	98.5	0.9	0.2	0.4
Birbhum	98.9	0.6	0.3	0.2
Bankura	99.8	0.1	0.1	..
Midnapore	99.2	0.3	0.4	0.1
Purulia	97.5	0.7	0.2	1.6

The Table for rural areas show that for West Bengal as a whole, the Presidency Division and the Burdwan Division, the proportions of households living in (1) Dwellings (2) Shop-cum-dwellings (3) Workshop-cum-dwellings and (4) Dwellings with other uses are the same for all of them. It also reflects the well-known fact that in the rural areas, people usually do not reside in the same house from where they run

shops or workshops. It is only in the district of Darjeeling that 1.3% of the households are found living in shop-cum-dwellings. Again, it is only in the district of Malda that 1.1% of the households are found living in Workshop-cum-dwellings. 1.3% and 1.6% of the households in the districts of Cooch Behar and Purulia respectively are found residing in dwellings with other uses, in the rural areas.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF CENSUS-HOUSES IN URBAN AREAS

State/Division/District	Dwellings	Shop-cum-dwellings	Workshop-cum-dwellings	Dwellings with other uses
WEST BENGAL	95.2	2.9	0.9	1.0
Presidency Division	94.8	3.2	1.0	1.0
Burdwan Division	96.4	2.1	0.6	0.9
Darjeeling	90.7	5.7	1.2	2.4
Jalpaiguri	93.4	3.4	1.0	2.2
Cooch Behar	92.5	3.5	1.5	2.5
West Dinajpur	94.0	4.3	0.8	0.9
Malda	98.0	1.3	0.5	0.2
Murshidabad	97.1	2.0	0.5	0.4
Nadia	98.6	0.4	0.5	0.5
24-Parganas	97.2	1.8	0.3	0.7
Calcutta	92.9	4.3	1.6	1.2
Howrah	95.3	2.8	0.9	1.0
Hooghly	98.5	0.9	0.4	0.2
Burdwan	94.4	3.2	0.5	1.9
Birbhum	97.1	1.6	0.5	0.8
Bankura	98.4	0.3	0.8	0.5
Midnapore	96.7	2.0	0.2	1.1
Purulia	99.2	0.5	0.1	0.2

If the urban areas of West Bengal are only considered, then it is seen that significant proportions of households reside also in Shop-cum-dwellings, Workshop-cum-dwellings and Dwellings with other uses. In fact, 4.8 per every hundred households do not reside in houses which are used as residential purposes exclusively. In the urban areas of the Darjeeling District, this proportion is the highest, being 9.3 per cent and it is the lowest in the urban areas of the Purulia District being only 0.8 per cent. Among households living in (1) Shop-cum-dwellings (2) Workshop-cum-dwellings and (3) Dwellings with other uses, the greatest proportion live in Shop-cum-dwellings in the urban areas of the districts of (1) Darjeeling (2) Jalpaiguri (3) Cooch Behar (4) West Dinajpur (5) Malda (6) Murshidabad (7) 24-Parganas (8) Howrah

(9) Hooghly (10) Burdwan (11) Birbhum and (12) Midnapore and in the City of Calcutta.

It is now necessary to examine what proportion of the households living in each type of house, own the houses in which they live. This analysis will be done first in respect of the total area of the State, of each of the Divisions and each of the districts and then the position in regard to rural and urban areas will be shown separately. But in examining these Tables, the relative importance of the households residing in the 4 types of houses, namely, (1) Dwellings (2) Shop-cum-dwellings (3) Workshop-cum-dwellings and (4) Dwellings with other uses; must not be lost sight of. Thus it should always be remembered that the households living in houses used exclusively as dwellings, form not less than 90 per cent of the total number of households in any district of the State.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN OWNED/RENTED ACCOMMODATION, FOR EACH TYPE OF ACCOMMODATION

State/Division/District/ Region	Dwellings		Shop-cum-dwellings		Workshop-cum-dwellings		Dwellings with other uses	
	Owned	Rented	Owned	Rented	Owned	Rented	Owned	Rented
WEST BENGAL	76.9	23.1	29.4	70.6	47.3	52.7	47.7	52.3

Purulia	94.9	5.1	85.7	14.3	97.2	2.8	95.9	4.1
Calcutta-Howrah Industrial Region	34.3	65.7	8.6	91.4	12.4	87.6	17.7	82.3
Asansol Industrial Region	51.2	48.8	38.1	61.9	24.4	75.6	19.2	80.8
The Northern Industrial Region	23.8	76.2	44.3	55.7	21.8	78.2	32.5	67.5

The figures in the Table are self-explanatory and require no explanation. The Table reveals that the condition of housing is very peculiar in Calcutta. Out of every hundred households living in houses used exclusively for residential purposes, only 18.2 own the houses in which they live. The position in respect of other types

of dwellings is also not better. Of the families living in shop-cum-dwellings, only 4 in a hundred, of the families living in Workshop-cum-dwellings, only 5.9 in a hundred and of the families living in dwellings with other uses, only 12.3 in a hundred own the houses in which they live.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN OWNED/RENTED ACCOMMODATION, FOR EACH TYPE OF ACCOMMODATION, IN RURAL AREAS

Purulia	57.1	42.9	50.0	50.0	75.0	25.0	40.0	60.0

It is seen that in the urban areas of the districts of (1) Darjeeling (2) 24-Parganas (3) Howrah (4) Hooghly and (5) Burdwan less than half the number of households living in houses used exclusively for residential purpose, own the houses in which they live. In Calcutta, they form only 18.2 per cent of the households of this category, as already pointed out. Even in the rural areas of the districts of (1) Darjeeling and (2) Jalpaiguri, less than half of the households living in houses used exclusively as dwellings, own the houses in which they live. As a general rule, it is found that more households living in dwellings live in rented houses in urban areas than in rural areas. There is an exception to this rule in the district of Jalpaiguri, where the reverse is the case.

Conditions in the districts of Darjeeling and Jalpaiguri appear to be rather peculiar as one would expect to find the majority of households living in their own houses, in the rural areas of the districts. Again, in the district of Jalpaiguri more than half the households living in dwellings own the houses in which they live but in the urban areas and not in the rural areas. These anomalies are explained by the existence of large numbers of tea-gardens in these two districts. As is well-known, workers in tea-gardens do not own the houses in which they live. The proportion of households living in rented accommodation, in dwellings, is therefore likely to be quite considerable in these two districts. As tea-gardens are mostly situated in rural areas, this phenomenon of predominance of families living in rented accommodation is observable in the rural areas of both the districts. The comparatively lower proportion of households owning the houses in which they live in the rural areas than in the urban areas of the district of Jalpaiguri also arises from the same cause.

It may, therefore, be accepted as the general rule that relatively, more households live in rented accommodation in urban areas than in rural areas. This is only to be expected as people congregate to towns primarily to earn a living. If the occupation in which a man is engaged be such as to require periodic changes in the place of work, then he will not have the incentive to build a house for himself in the town

where he may be temporarily working. Again, many men consider a town as a place to earn and amass a fortune but on the question of permanent residence, they have a preference for their native place. Some other persons are again provided with houses by their employers and they also do not feel the necessity of building houses at their places of work. The price of land and the cost of construction of a house are much higher in urban than in rural areas. All these causes operate against the owning of houses by the households, in urban areas, in considerable proportions. But one conclusion appears to be inescapable. In urban areas all the dwellings are owned by a minority of the population, the size of this minority varying from one town to another.

Another curious fact that has emerged from the analyses made so far is that even in the villages, all households do not own the houses in which they live. Apart from the special circumstance existing in the districts of Darjeeling and Jalpaiguri, which appears to be the reason for so great a proportion of the households living in rented houses in the rural areas of these districts, the factor or factors which are responsible for the existence of appreciable numbers of households which live in rented accommodation in the rural areas of all the districts, are not known. But during the course of a special survey conducted in a village in the Hooghly district, it has been found that some Agricultural Labourers are allowed to reside on other people's lands on the understanding that they would work in the fields of these people in the agricultural season, in preference to other employers. If this system be prevalent generally in the rural areas of West Bengal, then the fact that not all households living in rural areas own the houses in which they live would be explained. Again, refugees living in camps, are obviously living in rented accommodation for the purpose of the E-II Table. However, this subject requires special enquiries.

In the two Tables that follow, results of analyses, similar to the ones made in respect of the various districts, are given in respect of all the towns in West Bengal, having populations of 50,000 or more.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF HOUSES

The data presented in the E-II Table has so far been analysed in respect of West Bengal only. In the Tables that follow, analyses similar to those done in respect of West Bengal, have

been done in respect of the other States of India also, in so far as the E-II Table is concerned, for facilitating comparisons between West Bengal and the other States.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF HOUSES

Rajasthan	90.2	9.8	63.5	36.5	92.0	8.0	34.2	65.8
Uttar Pradesh	92.4	7.6	63.1	36.9	88.8	11.2	43.5	56.5
West Bengal	76.9	23.1	29.4	70.6	47.3	52.7	47.7	52.3

* The figures for Madras include the households shown as of unspecified tenure-status. Such households have been apportioned among the households living in owned and rented accommodation of a particular type on a proportionate basis.

5 R.G.I./63

It appears that, judging by the tenure-status of the households, the position of Maharashtra is the worst, only 72.4 per cent of the households living in purely residential accommodation owning the houses in which they live. The state of housing is more or less similar in West Bengal,

Gujarat and Mysore and is only slightly better than in Maharashtra. The condition is most favourable in Orissa where 95.9 per cent of the households living in purely residential accommodation, own the houses in which they live.

TABLE : PERCENTAGES OF HOUSEHOLDS LIVING IN DIFFERENT TYPES OF HOUSES, FOR RURAL AREAS

*The figures for Madras include the households shown as of unspecified tenure-status. Such households have been apportioned among the households living in owned and rented accommodation of a particular type on a proportionate basis.

In Sikkim, 96.4 per cent of the households live in purely residential houses, another 2.4 per cent live in shop-cum-dwellings, another 0.6 per cent in workshop-cum-dwellings and the remaining 0.6 per cent in dwellings with which other uses are combined. Of these 96.4 per cent of the households, 92.3 per cent own the houses in which they live. Among households living in shop-cum-dwellings, 41 per cent own the houses in which they live. 55.9 per cent of the households living in workshop-cum-dwellings own the houses in which they live. So far as households living in dwellings combined with other uses are concerned, 83.8 per cent of them own the houses in which they live.

If the solitary town of Gangtok is excluded, then it is seen that 96.9 per cent of the households live in houses which are used purely for residential purpose. 2 per cent live in shop-cum-dwellings, 0.5 per cent in workshop-cum-dwellings and the remaining 0.6 per cent in dwellings in which other uses are combined. 95.1 per cent of the households living in dwellings own the houses in which they live. Among households living in shop-cum-dwellings, 45.9 per cent own the houses in which they live. 65.5 per cent of the households living in workshop-cum-dwellings and 82.9 per cent of the households living in dwellings having other uses as well own the houses in which they live.

In the Tehsil of Namchi, 97.0 per cent of the households live in dwellings, another 1.5 per cent in shop-cum-dwellings, another 0.8 per cent in workshop-cum-dwellings and the remaining 0.7 per cent live in houses which are used partly for residential purposes and partly for purposes other than running a shop or a workshop. 97.6 per cent of the households living in dwellings own the houses in which they live and 38.0 per cent of the households living in shop-cum-dwellings own the houses in which they live. Among households living in workshop-cum-dwellings and dwellings with which other uses are combined, respectively, 65.4 per cent and 83.3 per cent own the houses in which they live.

In Magan Tehsil also, 97.0 per cent of the households live in houses used exclusively for residential purposes. Another 1.6 per cent live in shop-cum-dwellings and the remaining 1.4 per cent live in houses in which residential use is combined with other uses. No household lives in workshop-cum-dwellings. 97.8 per cent of the households living in dwellings own the houses in which they live and 85.7 per cent of the households living in shop-cum-dwellings, own the houses in which they live. Among families living in houses in which residential use is combined with other uses, 83.3 per cent, own the houses in which they live.

In the rural areas of the Gangtok Tehsil 96.6 per cent of the households live in dwellings, another 2.9 per cent in shop-cum-dwellings another 0.2 per cent in workshop-cum-dwellings and the remaining 0.3 per cent households reside in houses in which residential use is combined with other uses. Among the households living in dwellings, 89.8 per cent own the houses in which they live. Among households in shop-cum-dwellings, 48.1 per cent and among households in workshop-cum-dwellings, 66.7 per cent own the houses in which they live. 80 per cent of the families living in houses in which the residential use is combined with other uses, own the houses in which they live.

In the town of Gangtok, only 87.3 per cent of the households live in dwellings. 10.5 per cent of the households live in shop-cum-dwellings, 1.6 per cent in workshop-cum dwellings and the remaining 0.6 per cent in houses in which the residential use is combined with other uses. Only 37.6 per cent of the households living in dwellings own the houses in which they live. The corresponding percentages for households in shop-cum-dwellings, workshop-cum-dwellings and dwellings with other uses are respectively 24.2, Nil and 100.

CHAPTER IV

E-IV Table—Distribution of Census-houses used wholly or partly as Dwellings by Predominant Wall and Roof material.

For preparing this Table, the Census-houses in the possession of the same sample households in respect of which the E-II Table was prepared, were only taken into account. This means that all the Census-houses considered in this Table are used either wholly or partly, as dwellings. But one thing requires to be pointed out, and that is, that the Census-houses treated in this Table are not samples of the Census-houses used wholly or partly as dwellings but are the Census-houses which were in the possession of the sample households. In West Bengal, the structural composition of a house, especially in the rural areas in the northern districts, being what it is, it would not have been practicable to draw a sample of Census-houses used wholly or partly as dwellings because had that been done, it would have happened in most cases that only one out of the three or four separate structures (huts) which make up the building or dwelling place of a family, would have been included in the sample. For the same reason, it would not also have been possible to prepare this Table differently, using households in place of houses. In other words, it would not have been possible to prepare a Table to show how many families lived in mud-walled houses, how many in brick-walled houses and so on because all the structures which constitute the home of a family have not got walls of the same material. The same state of affairs prevails in regard to the material with which the roof is constructed. The roof of two huts may be of thatch, another may be of tiles and that of the fourth one may be of corrugated iron sheets. The procedure actually adopted for preparing this Table would, therefore, appear to be the only practicable one in the circumstances prevailing in West Bengal. The Table actually presents what it sets out to present, namely, the materials with which the walls and roofs of Census-houses, used wholly or partly as dwellings, are constructed and for such analysis, it utilises the Census-houses in actual occupation of a 20 per cent sample of the households resident in West Bengal in October 1960.

The Table, in addition to giving the numbers of Census-houses the walls and roofs of which are constructed of the materials mentioned in the Table, shows the total number of the sample

households and the total number of Census-houses in their possession. By showing the numbers of households and the Census-houses in their occupation, it makes it possible to measure the congestion in housing with the help of Census-houses. The obvious method of calculating the number of Census-houses per unit of area *i.e.*, a square mile or square kilometer is not of much use for measuring the congestion in housing unless the built-up area can be treated separately from the total area. Thus the area of a Police Station may be 100 square miles but as Census-houses are not evenly located throughout the territorial extent of the Police Station the mere division of the number of Census-houses in the Police Station by the total area of the Police Station would convey no idea of the congestion in housing. The number of Census-houses per square mile obtained in such manner would not reveal how close to one another the houses are situated as the houses are not spread out evenly throughout the Police Station. For obtaining a correct idea about the congestion in housing by this method, it is necessary first to ascertain the extent of the built-up area *i.e.*, the total area which is covered by the clusters of residential houses. Once the built-up area is ascertained, the number of Census houses per unit of built-up area, *i.e.*, a square mile or square kilometer, can be ascertained and this number gives an accurate idea of the congestion in housing. But because the extents of the built-up areas in various parts of the State, are not known, another method may be adopted to measure the congestion in housing.

Congestion in housing is obviously inversely proportional to the number of Census-houses in the possession of a household. This means that the greater the number of Census-houses in the possession of a household, the less is the congestion in housing.

If C_1 be the congestion in housing in region No. 1, then $C_1 \propto \frac{1}{H_1}$, where H_1 is the number of Census-houses per household in region No. 1.

Similarly $C_2 \propto \frac{1}{H_2}$, where C_2 is the congestion in housing in region No. 2 and H_2 is the number of Census-houses per household in region No. 2. Then we may put

$$\frac{C_1}{C_2} = \frac{H_2}{H_1} \text{ or } C_1 = C_2 \frac{H_2}{H_1}$$

If we assume that the congestion in housing is 100 where there is one Census-house per household and if we assume that such a state of affairs prevails in the region No. 2, then we have

$$C = \frac{100 \times 1}{H}$$

This formula will not only enable us to measure the congestion in housing but it will also reflect the structural patterns of the homes in the various parts of the State.

The Table below gives the congestion in housing in the various districts and in the towns containing populations of 50,000 or more of the State, calculated by means of the above formula.

State/Division/District			Congestion in housing
West Bengal	T	78.7	
	R	74.2

Burdwan			92.7
Asansol			99.4
Bankura			92.9
Midnapur			99.9
Kharagpur City			98.2

Similar analysis made in respect of the Calcutta-Howrah Industrial Region, shows that the congestion in housing is 99.3. In the Asansol Industrial Region, it is 99.4 and in the Northern Industrial Region it is 76.4. It would appear from the above Table that in all districts, except Bankura, the congestion in housing in urban areas is greater than that in the rural areas. In the Bankura District, the reverse is the case. Whenever the congestion in housing is less than one hundred, the number of Census-houses in the possession of a household is more than one. So far as the rural areas are concerned, the figures in the above Table thus reflect the pattern of housing described by O'Malley in 1911. The fact that the index of congestion of housing changes from the rural area of one district to another shows that the structural composition of homes varies from one part of West Bengal to another.

It might be supposed that in the urban areas and especially in the towns having populations of 50,000 and more, the index of congestion in housing would have been more than 100 because unlike in rural areas, in a town, sometimes more than one household shares one Census-house between them. But it must be remembered that the figures in the preceding Table relate only to the average household. Had a frequency Table been constructed, showing the numbers of households in possession of 0, 1, 2, 3, 4, etc. Census-houses respectively, then the true picture of housing would have been revealed. As it is, the households having no Census-houses ex-

clusively in their possession, have been neutralised by other households in occupation of more than one Census-house each. An average index of congestion of 95 or more would thus reflect a pretty high degree of congestion in housing.

If the rural areas are only considered, then it is seen that the state of housing is least congested in the district of West Dinajpur. The districts, arranged in terms of increasing congestion in housing, so far as rural areas are concerned, are (1) West Dinajpur (2) Cooch Behar (3) Jalpaiguri (4) Malda (5) Murshidabad (6) Hooghly (7) Purulia (8) Burdwan (9) Bankura (10) Darjeeling (11) Birbhum (12) Nadia (13) 24-Parganas (14) Midnapore and (15) Howrah.

The main purpose of the E-IV Table is to show the materials with which the walls and roofs of Census-houses used wholly or partly as dwellings are constructed. As all the Census-houses used wholly or partly as dwellings have not been taken into account in preparing the Table and as the Census-houses used in the Table are not samples of Census-houses used wholly or partly as dwellings but are the Census-houses in the possession of the same 20 per cent sample households in respect of which the E-II Table has been prepared, the figures given in the E-IV Table, in absolute terms, do not mean anything. It is the proportions of houses having different wall and roof materials that are important. The percentages of houses having different wall and roof materials, have, therefore, been given in the Tables that follow.

TABLE : PERCENTAGES OF CENSUS-HOUSES USED WHOLLY OR PARTLY AS DWELLINGS BY MATERIAL OF WALL

Purulia	100	74.02	20.08	2.04	0.69	1.52	1.61	0.04
Calcutta-Howrah Industrial Region	100	4.09	41.84	16.70	2.48	10.76	23.84	0.29
Asansol Industrial Region	100	33.63	20.17	11.37	3.54	13.40	17.80	0.09
The Northern Industrial Region	100	59.92	0.58	33.39	3.49	0.30	1.33	0.99

The above two Tables reveal that in West Bengal and in the Burdwan Division and in the districts of (1) Murshidabad, (2) 24-Parganas, (3) Howrah, (4) Hooghly, (5) Burdwan, (6) Birbhum, (7) Bankura, (8) Midnapore and (9) Purulia, more than 50 per cent of the houses in the possession of households have got walls of mud. Again, in the districts of (1) Darjeeling, (2) Jalpaiguri, (3) Cooch Behar and (4) West Dinajpur, the walls of more than 50 per cent of such houses are built of grass, leaves, reeds or bamboo. In the district of Malda (1) grass, leaves, reeds or bamboo and (2) mud form the material of walls of houses in about equal proportions, the next important material being burnt bricks, which account for the walls of 5.71 Census-houses. Burnt bricks figure as the material of walls in all the districts in varying proportions and in no district does the percentage of houses having walls of burnt bricks fall below 1. The highest percentage of houses with brick walls is found in Calcutta among the districts, where 74.73 per cent of the houses have walls made of burnt bricks. It might be supposed that in a city like Calcutta, all households should have been found living in houses having walls made of burnt bricks but the existence of a large number of *kutcha* premises or "bustees" within the city provides an adequate explanation of the proportion of houses with walls of burnt brick actually revealed in the Table. As is well known, these *kutcha* premises or "bustees" frequently contain huts, the

walls of which are made of materials other than burnt brick.

The proportion of houses having walls of cement concrete is not significant in any district except the districts of Darjeeling and Jalpaiguri. Houses having walls of timber are found in significant proportions only in the districts of Darjeeling, Jalpaiguri and Cooch Behar.

Grass, leaves, thatch, etc. form the materials of roofs of more than 50 per cent of the Census-houses in West Bengal as a whole, in the Presidency and Burdwan Divisions, in the districts of (1) Darjeeling, (2) Jalpaiguri, (3) Cooch Behar, (4) West Dinajpur, (5) Malda, (6) Murshidabad (7) Burdwan, (8) Birbhum, (9) Bankura, (10) Midnapore and (11) Purulia. Even in the districts of Nadia, 24-Parganas and Hooghly, 47.67, 45.87 and 41.81 per cent of the Census-houses have got roofs of grass, leaves, thatch, etc. In fact, no other material is used in more than 50 per cent of the houses for construction of roofs.

So far as tiles, slates, shingles are concerned, these provide the materials for roofs for 42.55 per cent of the houses in the Howrah District, 30.40 per cent of the houses in the Hooghly District, 30.09 per cent of the houses in Calcutta, 29.96 per cent of the houses in the district of 24-Parganas, 22.71 per cent of the houses in the Murshidabad District, 8.27 per cent of the houses in the Burdwan District and 7.59 per cent of the houses in the Nadia district.

Concrete and stone-slabs, in reality concrete, forms the material of roofs of 38.63 per cent of the Census-houses in Calcutta in the occupation of households. Curiously enough, brick and lime form the materials of roofs of 5 per cent or more houses in the districts of Murshidabad, Nadia, 24-Parganas, Calcutta, Howrah, Hooghly and Burdwan only.

In the two Tables that follow, the percentage of the Census-houses having wall or roof of a particular material in West Bengal, contained in each of the districts, has been given in the hope that the figures may help in forming an idea of the distribution of Census-houses by wall and roof material throughout the State.

TABLE : PERCENTAGES OF CENSUS-HOUSES USED WHOLLY OR PARTLY AS DWELLINGS
BY MATERIAL OF WALL

State/Division/ District/Region	Grass, leaves, reeds or bamboo	Timber	Mud	Unburnt bricks	Burnt bricks	C.I. sheets or other metal sheets	Stone	Cement concrete	All other material

Midnapore	14.76	3.35	3.89	5.43	2.88	3.15	5.51
Purulia	5.09	5.45	0.65	3.12	1.52	1.06	0.38
Calcutta-Howrah Industrial Region	1.15	46.54	21.72	46.15	44.09	64.41	11.43
Asansol Industrial Region	1.38	3.27	2.16	9.61	8.01	7.02	0.54
The Northern Industrial Region	3.40	0.13	8.74	13.09	0.24	0.72	7.91

These two Tables bring out some interesting facts. Thus, it is seen that out of the total number of Census-houses in the occupation of households, having walls built of grass, leaves, reeds or bamboo, the districts of Jalpaiguri, Cooch Behar and West Dinajpur between them account for 56.68 per cent. Similarly, it is found that the districts of Darjeeling and Jalpaiguri between them, account for 80.12 per cent of the houses having walls of timber. So far as mud-walled houses are concerned, the districts of (1) Murshidabad, (2) 24-Parganas, (3) Howrah, (4) Hooghly, (5) Burdwan, (6) Bir-

bhum, (7) Bankura, (8) Midnapore and (9) Purulia together contain 86.80 per cent of such houses. Calcutta alone contains 28.30 per cent of the houses having walls constructed of burnt bricks and the districts of (1) Nadia, (2) 24-Parganas, (3) Calcutta, (4) Howrah, (5) Hooghly and (6) Burdwan together contain 85.09 per cent of such houses.

Similar conclusions can be drawn in regard to the houses having different materials of roofs by examining the other Table carefully.

The houses in the occupation of households have been analysed by the materials with which their walls and roofs have been constructed, district by district or Administrative Division by Administrative Division, taking the total number of Census-houses in West Bengal, having walls or roofs of each kind of material as equal

to 100. In the four Tables that follow, such analyses have been made separately for the rural and urban areas of every district and administrative Division and for West Bengal. This means that the figures relating to one district are independent of the figures of any other district or of West Bengal.

It is now time to examine again the Table in which indices were given for congestion in housing in West Bengal, in the two administrative Divisions and in the different districts in the light of the figures given in the Tables showing the distribution of houses by materials of walls and roofs for a correct appreciation of the state of housing. Thus it will be seen that while in the rural areas of the districts of West Dinajpur and Cooch Behar the dwelling houses are more spread out, consisting as they do, of a number of separate huts; the walls of 97 per cent of such huts are made of grass, leaves, reeds or bamboo in the district of Cooch Behar and of 51·27 per cent of such huts in West Dinajpur. In regard to material of roof also, more than 80 per cent of the Census-houses used for dwelling purposes have roofs of grass, leaves, thatch, reed or bamboo in these two districts. Again, in Calcutta, where the index of average congestion in housing is 99·0, the walls of 74·73 per cent of the houses are of burnt brick. It is thus evident

that it would be necessary to assess the implications of three Tables simultaneously for obtaining a correct idea about the state of housing in the different regions of West Bengal. These three Tables are (1) the Table showing indices of congestion in housing, (2) the Table showing by percentages the distribution of Census-houses by wall material and (3) the Table showing by percentages the distribution of Census-houses by roof material.

The Table below has been arranged in such a manner that the index of congestion in housing is shown against the results of analyses of the Census-houses in the occupation of households by wall and roof materials. For this purpose, the important and basic materials with which the walls and roofs are constructed, have only been taken into account. The index of congestion, however, refers to the congestion in housing experienced by an average household, all the sample households and the Census-houses in their occupation being taken into account.

State/Division/ District	Material of Wall					Index of congestion	Material of Roof				
	Grass, leaves, reeds or bamboo	Timber	Mud	Burnt bricks	Stone		Grass, leaves, reeds, thatch, wood or bamboo	Tiles, slates, shingles	Corru- gated iron, zinc or other metal sheets	Brick and lime	Con- crete and stone slabs

The materials with which the walls and roofs of houses are constructed in the different regions of West Bengal very often reflects the availability of particular materials in particular regions. Thus, in the districts of Darjeeling and Jalpaiguri, a substantial proportion of the houses have walls of timber on account of the existence of a large area, in each of these districts, of reserved forests which yield good timber. The easy availability of stone in the hills of the Darjeeling district similarly makes it possible to use this material for building the walls of houses in that district. So far as the use of burnt brick is concerned, its use is confined largely to urban areas, where building space is limited and where comparatively well-to-do persons reside. Burnt brick is costly and it is not possible for every one to use it. It is also possible to build multi-storeyed buildings with burnt bricks with safety, thus making its use almost compulsory in urban areas where building-space is limited. But the use of different materials like bamboo and mud

for constructing walls of houses in different areas of the State requires some explanation. Earth is available almost everywhere in West Bengal and it appears to be rather strange that in some northern districts like Jalpaiguri or Cooch Behar, bamboo is preferred to earth or mud for constructing the walls of houses. The explanation for this preference for bamboo may lie in the abundance of superior varieties of bamboos in these districts but that may not be the complete explanation. It is possible that the choice of a material for constructing the walls or the roofs of houses may not be guided exclusively by the local availability of a particular material but may also be conditioned by the climate. If there be more rainfall in some areas than in others, then the mud-walled houses may be at a discount in such rainy areas. In the Table below, an analysis of the important materials with which the walls and roofs of houses are constructed in the different districts (except Calcutta) is given along with the average annual rainfall in inches.

District	Material of Wall					Average annual rainfall	Material of Roof				
	Grass, leaves, reeds or bamboo	Timber	Mud	Burnt bricks	Stone		Grass, leaves, reeds, thatch, wood or bamboo	Tiles, slates, shingles	Corru- gated iron, zinc or other metal sheets	Brick and lime	Con- crete and stone slabs
Darjeeling	51·94	24·16	2·79	5·56	5·71	128·14"	55·26	0·16	39·36	0·37	2·64

It would be seen that in the three districts of Darjeeling, Jalpaiguri and Cooch Behar, where the average annual rainfall is more than 125" inches, bamboo and timber are, preferred to earth in constructing walls of houses. In the other districts, where the annual rainfall varies from 50" to 66" inches mud-walled houses are more in evidence but wherever bamboo of suitable varieties are available in sufficient abundance, bamboo-walled houses are to be seen side by side with mud-walled houses. Thatch roofs are to be found in appreciable proportion everywhere but in the three rainy districts of Darjeeling, Jalpaiguri and Cooch Behar, corrugated iron sheets and other metal sheets are also used for construction of roofs in more than 1/5th of the houses. In the other districts, the use of corrugated iron sheets for construction of the roof appears to be conditioned by the ability of the people to obtain this material,

which is in short supply. C.I. sheets being costlier than straw, it is also not possible for every one to use it for constructing the roof of his house. After straw and C.I. sheets, tiles are the next important materials with which the roofs of houses are constructed in West Bengal. These tiles are flat tiles and are known as Raniganj tiles. In the three rainy districts, tiles are not much in use as material for the construction of roofs of houses. In the other districts, the suitability of the soil for the making of tiles would appear to be a factor governing the use of tiles for roof-materials.

In the two Tables that follow, the materials of the walls and roofs of houses used wholly or partly as dwellings have been shown in respect of the towns having populations of 50,000 or more. Assuming that there are 100 Census-houses, the number of houses having a particular kind of wall or roof material has been given.

§ RGI/63								7

In Sikkim, the Census-houses used wholly or partly as dwelling have walls mostly of grass, leaves, reeds or bamboo; 45.23 per cent. of the Census-houses used wholly or partly as dwellings having walls made of these materials. The next important material is stone, as many as 26.80 per cent. of the Census-houses used wholly or partly as dwellings having stone walls. Timber also plays an important part in the construction of walls of buildings, 16.75 per cent. of the houses having walls of timber. Mud occupies the next place, 9.50 per cent. of the houses having mud walls.

In the town of Gangtok, the situation is somewhat different. Here timber is the most frequently used material for the construction of the walls of houses, as many as 46.15 per cent. of the houses used wholly or partly as dwellings having walls of timber. Stone is used for building the walls in 10.35 per cent. of the houses, cement concrete accounting for another 7.99 per cent. The walls of as many as 28.70 per cent. of the houses have walls of grass, leaves, reeds or bamboo.

In the tehsil of Namchi, 49.73 per cent. of the Census-houses used wholly or partly as dwelling have got walls of grass, leaves, reeds or bamboo, 34.70 per cent. have got walls of stone and 12.05 per cent. have got walls of timber.

In the Tehsil of Magan, 43.57 per cent. of the houses have got walls of timber, 16.25 per cent.

of grass, leaves, reeds or bamboo and 11.29 per cent. of stone. 27.09 per cent. of the houses are mud-walled.

In the rural area of the Gangtok Tehsil, the walls of 46.50 per cent. of the Census-houses used wholly or partly as dwelling are constructed of grass, leaves, reeds or bamboo. The walls of 14.04 per cent. of the houses are made of timber, of 18.33 per cent. of mud and of 18.49 per cent. of stone.

In Sikkim as a whole, 84.70 per cent. of the Census-houses used wholly or partly as dwellings have got roofs of grass, leaves, wood, bamboo or thatch. The roofs of 14.66 per cent. houses are of corrugated iron sheets. In the town of Gangtok, 75.74 per cent. of the houses have roofs of C.I. sheets, 18.64 per cent. have roofs of grass, leaves, reeds, thatch etc., and 5.62 per cent. have concrete roofs. In the rural areas, the materials are grass, leaves, thatch, etc., and C.I. sheets. In the Magan Tehsil, the use of C.I. sheets for the roofs of houses is most widely prevalent, the roofs of as many as 24.15 per cent. of the houses being of C.I. sheets.

Strangely enough, the houses are more spread out in the town of Gangtok than in the rest of Sikkim, the index of congestion being 94.6 in rural areas and 92.9 in the town of Gangtok. In the Tables that follow, detailed analytical information about the state of housing in Sikkim has been given.

TABLE : PERCENTAGES OF CENSUS-HOUSES USED WHOLLY OR PARTLY AS DWELLING BY IMPORTANT
MATERIALS OF WALLS AND ROOFS, WITH INDEX OF CONGESTION IN HOUSING. THE INDEX OF
CONGESTION IN HOUSING HAS BEEN CALCULATED WITH REFERENCE TO THE AVERAGE HOUSEHOLD
TAKING ALL SAMPLE HOUSEHOLDS INTO CONSIDERATION

State/Tehsil		Material of Wall					Index of congestion	Material of Roof		
		Grass, leaves, reeds or bamboo	Timber	Mud	Stone	Cement concrete		Grass, leaves, reeds, thatch, wood or bamboo	Corru- gated iron, zinc or other metal sheets	Concrete and stone slabs
Sikkim	T	45.23	16.75	9.50	26.80	0.74	94.5	84.70	14.66	0.37
	R	46.18	15.06	9.92	27.74	0.32	94.6	88.49	11.15	0.07
	U	28.70	46.15	2.37	10.35	7.99	92.9	18.64	75.74	5.62
Namchi	R	49.73	12.05	3.32	34.70	0.06	96.5	94.61	5.28	0.03
Magan	R	16.25	43.57	27.09	11.29	..	93.3	73.14	24.15	..
Gangtok	R	46.50	14.04	18.33	18.49	0.90	97.1	80.56	19.17	0.16

Notes :—In the three Tables above, T—stands for the total area, R— for rural area and U—for urban area. As there is only one town in Sikkim, namely, Gangtok, the figures against U thus relate to the town of Gangtok.

CHAPTER V

Table E-V—This Table has been prepared in respect of the same sample households in respect of which the E-II and E-IV Tables have been prepared. In preparing this Table, the answers recorded in columns 13, 15, 16 and 17 of the House-list in respect of the sample households have been classified as shown in the Table. Where more than one household were found living in one room, each such household was classified as having no regular room. Similarly, if a household lived in a structure which did not fulfil the specifications of a room, then also it was recorded in the House-list as not in possession of a room. A room was to have four walls with a door way with a roof overhead and was to be long enough for a person to sleep in i.e., it had to be at least 6 ft. long. Unenclosed verandah, kitchen, store, garage, cattle-shed and latrine which are not ordinarily used for living, were not treated as rooms but if a kitchen or a store (*উড়িবা দ্বা*) was also used as a bed room at night, then it was counted as a room if it fulfilled the requirements of a room.

As this Table relates to sample households only, the absolute figures given in this Table are, by themselves, not important. What are important are the relative proportions of the various kinds of households, and the subsidiary Tables are thus important.

For West Bengal as a whole, among every 1,000 households, 5 do not have regular rooms, 648 have one room each, 218 have two rooms each, 67 have three rooms each, 38 have four rooms each and only 24 households have 5 rooms or more each. The situation is somewhat better in the rural areas of the State, where among every 1,000 households, 5 do not have regular rooms, 636 have one room each, 234 have two rooms each, 66, three rooms each, 39, four rooms each and 20 households have 5 rooms or more each. In the urban areas, out of every 1,000 households, 4 do not have regular rooms, 682 have one room each, 171 have two rooms each, 70 households have three rooms each, 36 have four rooms each and 37 have five rooms or more each.

But information given in the preceding paragraph does not, by itself convey a complete picture about the state of housing. For this, it is also necessary to know the average numbers of persons per room, in the households having 0, 1, 2, 3, 4 and 5 or more rooms. Where both the number of persons and the number of rooms

vary from house to house, a correct measure of congestion in housing, based on the number of persons, can be obtained only by ascertaining the number of persons per room. This will become clear from the following considerations, which, it is believed are being stated for the first time.

Congestion in housing is obviously directly proportional to the number of persons in the house, where all houses have the same number of rooms. Again, congestion in housing is inversely proportional to the number of rooms in a house, where the number of persons in every house is the same. The two facts may be stated as follows :

Congestion in housing varies directly as the number of persons in the house, when the number of rooms per house remains constant

and
Congestion in housing varies inversely as the number of rooms in the house, when the number of persons per house remains constant

∴ Congestion in housing $\propto \frac{N}{n}$, where N is the number of persons per house and n is the number of rooms per house, when both N and n vary.

This means that congestion in housing $\propto n^1$ where n^1 is the number of persons per room, when both the number of persons as also the number of rooms vary from house to house.

Neither the number of persons in the house nor the number of persons in the household has therefore got anything to do with the measurement of congestion in housing.

Applying the above considerations, it is seen that the congestion in housing is greatest among those families who have got no regular room, i.e., those who either share a room or do not have rooms as defined for the purpose of the House-list. In the next category are those families who have only one room each. In West Bengal as a whole, as has already been stated, 648 out of every 1,000 households have only one room each and the average number of persons in that one room is 4.34. In rural areas, this number is 4.50 and in the urban areas, it is 3.88. The position in regard to housing is thus better among this class of families in urban than in rural areas.

Among the households having two rooms each, there are 3.02 persons per room for West Bengal as a whole. The position is identical in the rural as well as the urban areas, the number of persons per room in each case being 3.02.

There are on an average, 2.56 persons per room among households having three rooms each. The congestion is thus less among households of this class than among households having one or two rooms each. The position among households of this class is slightly better in urban areas than in rural areas.

Among households in occupation of four rooms, there is practically no congestion, if we assume that 2 persons per room is normal. Among this class of families there are only 2.15 persons on an average per room, if viewed for the State as a whole, or the rural areas or the urban areas being taken as a whole. It may be recalled that such families do not number more than 38 per 1,000 in the whole of West Bengal, more than 39 in the rural areas and more than 36 in the urban areas.

As is to be expected, there is no congestion in housing among households in occupation of five or more rooms. In West Bengal as a whole, there are 1.79 persons per room among this class of households. In the rural areas, this number is 1.11 and in the urban areas, it is 1.74.

If the households having no regular rooms are only considered, then it is seen that the position of the Burdwan Division is better than that of the Presidency Division ; only 2 households per 1,000 having no regular rooms in the Burdwan Division as compared to 7 per 1,000 in the Presidency Division. The position of the district of Darjeeling is the best in this respect, the number of households in this class per 1,000 households being negligible. The marginal Table shows the relative positions of the Presidency and Burdwan Divisions and of the districts of West Bengal in regard to housing, viewed in respect of the households having only one room each. It would be seen that the position of Nadia is the worst, as many as 758 out of every 1,000 house-

holds living in one room each and the position of Darjeeling is the most favourable as only 494 out of every 1,000 households live in single rooms.

Division/District	No. of households having one room per 1,000 households	No. of persons per room
Presidency Division	674	4.36
Burdwan Division	617	4.20
Darjeeling	494	4.13
Jalpaiguri	651	4.23
Cooch Behar	559	3.95
West Dinajpur	629	4.37
Malda	560	4.40
Murshidabad	564	4.60
Nadia	758	4.74
24-Parganas	740	4.52
Calcutta	719	3.84
Howrah	632	3.92
Hooghly	585	3.97
Burdwan	593	4.20
Birbhum	626	4.48
Bankura	704	4.78
Midnapore	591	4.44
Purulia	665	4.56

But if the same situation is viewed from another angle, different conclusions are reached. Thus among households in occupation of only one room, the state of housing is least congested in Calcutta where there are only 3.84 persons per room and the congestion is worst in the district of Bankura where there are 4.78 persons per room. In the two Tables that follow, the state of housing in so far as it concerns the households in occupation of only one room each has been shown separately for the rural and urban areas of each of the Divisions and the districts.

RURAL AREA			URBAN AREA		
Division/District	No. of house-holds per 1,000 house-holds	No. of persons per room	Division/District	No. of house-holds per 1,000 house-holds	No. of persons per room
Presidency Division	66.3	4.57	Presidency Division	69.5	3.93
Burdwan Division	611	4.43	Burdwan Division	648	3.73
Darjeeling	482	4.20	Darjeeling	534	3.92
Jalpaiguri	653	4.21	Jalpaiguri	592	4.60
Cooch Behar	545	3.88	Cooch Behar	754	4.79
West Dinajpur	629	4.35	West Dinajpur	639	4.84
Malda	564	4.40	Malda	476	4.24
Murshidabad	566	4.63	Murshidabad	535	4.24
Nadia	790	4.78	Nadia	605	4.46
24-Parganas	759	4.82	24-Parganas	704	3.91
Howrah	567	4.17	Calcutta	719	3.84
Hooghly	552	4.20	Howrah	755	3.56
Burdwan	602	4.28	Hooghly	668	3.48
Birbhum	629	4.50	Burdwan	549	3.78
Bankura	710	4.80	Birbhum	566	4.14
Midnapore	592	4.46	Bankura	613	4.52
Purulia	673	4.59	Midnapore	582	4.23
			Purulia	540	4.14

There are 197 households per 1,000 households, in occupation of two rooms in the Presidency Division while in the Burdwan Division there are 243 such households per 1,000 households. Viewed from this angle, the position of housing in the Burdwan Division appears to be more favourable than in the Presidency Division. Judged by the number of persons per room also, this favourable position of the Burdwan Division is found to be maintained. Against 3.07 persons per room in households of this class in the Presidency Division, there are 2.97 persons per room in the households of this class in the Burdwan Division. Whether the state of housing is considered either for the rural areas or the urban areas separately, the favourable position of the Burdwan Division is maintained.

Among the districts, the largest proportion (290 households per 1,000 households) of households in occupation of two rooms is found in the district of Darjeeling while the lowest proportion (132 households per 1,000 households) is found in the City of Calcutta. Judged by the number of persons per room also, the state of housing among households of this class is most favourable in the district of Darjeeling and is the worst in the district of 24-Parganas, where there are 3.37 persons per room among households of this class. If two persons per room is taken as the norm, then it is seen that there is congestion in housing among the households of this class in all the districts of the State. The two Tables below illustrate the state of housing, in the rural and urban areas respectively, in each of the Divisions and districts, among households in occupation of two rooms each.

RURAL AREA			URBAN AREA		
Division/District	No. of house-holds per 1,000 house-holds	No. of persons per room	Division/District	No. of house-holds per 1,000 house-holds	No. of persons per room
Presidency Division	216	3.06	Presidency Division	159	3.10
Burdwan Division	250	2.98	Burdwan Division	201	2.87
Darjeeling	303	2.57	Darjeeling	252	2.64
Jalpaiguri	232	2.64	Jalpaiguri	203	3.49
Cooch Behar	275	2.68	Cooch Behar	165	3.51
West Dinajpur	266	3.13	West Dinajpur	234	3.65
Malda	275	3.12	Malda	264	3.16
Murshidabad	258	2.86	Murshidabad	237	2.96
Nadia	139	3.45	Nadia	218	3.04
24-Parganas	161	3.51	24-Parganas	172	3.12
Howrah	293	3.00	Calcutta	132	3.10
Hooghly	281	3.00	Howrah	122	2.97
Burdwan	241	2.89	Hooghly	185	2.92
Birbhum	242	2.94	Burdwan	279	2.74
Bankura	199	3.18	Birbhum	251	2.98
Midnapore	259	2.95	Bankura	229	2.96
Purulia	228	3.09	Midnapore	246	2.84
			Purulia	272	2.99

There are 68 households per 1,000 households in the Burdwan Division, in occupation of three rooms each as compared to 67 such households per 1,000 households in the Presidency Division. In the rural areas, against 67 such households in the Burdwan Division there are 66 households in occupation of three rooms each in the Presidency Division. There are 72 households in occupation of three rooms each per 1,000 households in the urban areas of the Burdwan Division as compared to 69 such households per 1,000 households in the urban areas of the Presidency Division. The state of housing is thus more favourable, if judged by the proportion of households in occupation of three rooms each, to the total number of households; in the Burdwan Division than in the Presidency Division. The number of persons per room in the households of this class is also lower in the Burdwan Division than in the Presidency Division, whether the situation is reviewed for the total, the rural or the urban areas. It would thus be correct to

say, that, generally, housing is less congested in the Burdwan than in the Presidency Division, among households of this class.

So far as the districts are concerned, the largest proportion of the households in this class is found in the district of Darjeeling (117 households per 1,000 households) and the smallest proportion (45 households per 1,000 households) in the Nadia district. The number of persons per room is the greatest among households of this class in the district of 24-Parganas (2.89) and the smallest number of persons per room is found, on an average, in the district of Darjeeling, where there are 2.08 persons per room. Among households of this class, housing is thus least congested in the district of Darjeeling. The details about the state of housing, in each of the Divisions and districts, for the rural and urban areas separately, for the households in occupation of three rooms each, are given in the two Tables that follow.

RURAL AREA			URBAN AREA		
Division/District	No. of households per 1,000 households	No. of persons per room	Division/District	No. of households per 1,000 households	No. of persons per room
Presidency Division	66	2.62	Presidency Division	69	2.53
Burdwan Division	67	2.52	Burdwan Division	72	2.47
Darjeeling	122	2.05	Darjeeling	99	2.21
Jalpaiguri	64	2.35	Jalpaiguri	96	2.94
Cooch Behar	115	2.33	Cooch Behar	57	3.26
West Dinajpur	75	2.82	West Dinajpur	72	3.13
Malda	99	2.76	Malda	139	2.52
Murshidabad	73	2.40	Murshidabad	98	2.31
Nadia	36	2.91	Nadia	84	2.44
24-Parganas	43	3.07	24-Parganas	63	2.55
Howrah	67	2.63	Calcutta	67	2.46
Hooghly	87	2.62	Howrah	58	2.56
Burdwan	78	2.44	Hooghly	70	2.62
Birbhum	69	2.34	Burdwan	87	2.31
Bankura	52	2.62	Birbhum	91	2.34
Midnapore	61	2.54	Bankura	81	2.54
Purulia	63	2.53	Midnapore	74	2.31
			Purulia	82	2.63

There are 32 households in occupation of four rooms, per 1,000 households, in the Presidency Division as compared to 45 such households per 1,000 households in the Burdwan Division. There are 2.18 persons on an average, per room, among households of this class in the Presidency Division as compared to 2.12 persons per room on an average in households of this class in the Burdwan Division. Judged whether by the proportion of households to total households or by the number of persons per room, housing is less congested among the households in occupation of 4 rooms in the Burdwan Division than in the Presidency Division.

Among the districts, the greatest proportion of households of this class (73 households per 1,000 households) is found in the district of Murshidabad and the smallest proportion (17 households per 1,000 households) is found in the district of Nadia. The largest number of persons per room on an average, is found among households of this class in the district of West Dinajpur (2.71) while the smallest average number of persons per room is found in the district of Darjeeling (1.67). The details about the state of housing among households in occupation of 4 rooms each, are given for each of the Divisions and the districts, separately, for the rural and urban areas, in the two Tables that follow.

RURAL AREA			URBAN AREA		
Division/District	No. of households per 1,000 households	No. of persons per room	Division/District	No. of households per 1,000 households	No. of persons per room

Purulia	11	2.00

In the marginal Table, the state of housing in respect of the households in occupation of 5 or more rooms each, has been presented in respect of each of the districts of the State, considered as a whole. It would be seen that the district of Darjeeling occupies the first place, whether the state of housing is judged by the proportion of the households occupying 5 or more rooms each to the total households or by the number of persons per room. The lowest position is similarly occupied by the district of West Dinajpur. The details about the state of housing among households occupying 5 or more rooms each have been given for each of the Divisions and districts for the rural and urban areas separately, in the two Tables that follow.

URBAN AREA

Division/District	No. of house- holds per 1,000 house- holds	No. of persons per room

Purulia	51	1.56

Hitherto, the state of housing has been analysed in detail, for each class of household and separately for the rural and urban areas of each district and Division but the results of such analysis are not of much help in drawing general conclusions about the state of housing in the various parts of the State. It would, of course, be futile to expect that the picture about the state of housing as may be revealed on an analysis of the proportions of the households in occupation of no regular room, one room, two rooms, three rooms, four rooms, and five rooms or more respectively to the total number of households would be the same as may be obtained by calculating the average number of persons per room as the subject of housing is viewed from two altogether different angles. Even so, considering each class of household separately cannot lead to any general conclusion as in such a manner of analysis the broad over-all view is lost. Again, it will be remembered that a number of places, later on declared as towns, have been treated as rural, for the purpose of the Housing Tables. It would be better, therefore, for obtaining a broad view of the state of housing in the different districts of the State, to take each district as a whole and also to reduce the number of the classes into which the households have been divided in this Table on the basis of the occupation of specified numbers of rooms.

It may be assumed, for the purpose of this broad analysis, that housing is more congested in that district where the households having no

District	No. of households having upto 2 rooms each per 1,000 households
Darjeeling	785
Jalpaiguri	901
Cooch Behar	836
West Dinajpur	895
Malda	836
Murshidabad	824
Nadia	924
24-Parganas	913
Calcutta	855
Howrah	868
Hooghly	841
Burdwan	842
Birbhum	869
Bankura	907
Midnapore	852
Purulia	899

regular rooms, one room, and two rooms, together form a greater proportion of the total number of households than in the other district, with which comparison is being made. The reason behind this assumption is that households in occupation of up to two rooms cannot be said to be living in comfort. Results of the analysis of the state of housing by making this assumption are shown in the marginal Table. On the basis of this Table, the districts may be arranged in increasing order of congestion in housing as follows :—(1) Darjeeling (2) Murshidabad, (3) Malda and Cooch Behar (4) Hooghly (5) Burdwan (6) Midnapore (7) Calcutta (8) Howrah (9) Birbhum (10) West Dinajpur (11) Purulia (12) Jalpaiguri (13) Bankura (14) 24-Parganas and (15) Nadia.

It may be recalled that in Chapter IV, the index of congestion in housing was calculated for every district on another principle. According to the calculations made in that Chapter, the districts in increasing order of congestion in housing could be arranged as follows :—(1) West Dinajpur (2) Cooch Behar (3) Jalpaiguri (4) Malda (5) Murshidabad (6) Bankura (7) Purulia (8) Hooghly (9) Burdwan (10) Birbhum (11) Darjeeling (12) Nadia (13) 24-Parganas (14) Midnapore (15) Calcutta and Howrah. The two different lines of analyses are thus seen to yield different results and the question may naturally arise as to which type of analysis yields the correct results and reflects accurately the state of housing as it exists in the different districts of the State. The answer to this question would become clear from the considerations outlined below.

In the method of analysis adopted in Chapter IV, the structural peculiarities of buildings were revealed. It also disclosed whether on an average, a household had one or more Census-houses in its possession. In the analysis made in this Chapter, the proportion of households in occupation of up to two rooms to the total number of households has been taken to be equal to the index of congestion; the greater the proportion of these types of households to the total number of households, the greater the congestion in housing. An index of congestion in housing was calculated in each case but as the facet of the subject measured was different in each case and as the unit of measure was also different, the results could perhaps be different. Suppose there are two households, each consisting of 5 persons. One household is in occupation of two huts which are structurally separate. One of the huts contains only one room and is used for living and the other hut is used as a kitchen. The other household lives in a compact structure having three rooms, the cooking being done not in a separate structure but in a corner of the verandah in front. According to the definitions of the terms "Census-

house" and "room", the first household is in occupation of two Census-houses but one room and the second household is in occupation of one Census-house but three rooms. According to the line of analysis adopted in Chapter IV, the first household is experiencing half the congestion in housing which the second household is experiencing; the index of congestion in housing in respect of the first household being 50 and that for the second household being 100. But if the congestion is measured by the number of rooms in the possession of a household, then the congestion in housing experienced by the first household is found to be three times that experienced by the second household. In making these comparisons, we are considering a Census-house, a household and a room as the units of measure and it has been assumed that there is the same number of persons in every household. But if the number of persons per room is adopted as an index of congestion in housing, then the relative position of two households in respect of congestion in housing will depend obviously on the number of persons in the household. Suppose the first household consists of 4 members and the second of 6 members. (1) Then by the line of analysis made in Chapter IV, the congestion in housing experienced by the first household will be 50 while that experienced by the second household will be 100. (2) If the number of rooms in the possession of the household is adopted as an index of congestion in housing, then the first household may be considered as living in conditions which are three times as congested as those under which the second household is living. (3) If again, the number of persons per room is adopted as an index of congestion in housing, then the first household may be considered to be living in conditions which are twice as congested as those under which the second household is living. It is obvious that the first and the third methods adopted for comparing the conditions under which the two households live are the correct ones but as under each method a different facet of the subject is measured, the results are bound to be different. As has already been pointed out, no idea about the state of housing can be obtained by ascertaining the number of rooms in the possession of a household, because the number of persons in the household and the rooms in its possession, vary from one household to another.

The results of the analysis made in Chapter IV merely demonstrate the facts that in districts like West Dinajpur and Jalpaiguri, the kitchen is very often located in a separate structure and that the hut or huts used for living are generally single-roomed. In other districts, where the index of congestion is high, the homes are located in more

compact structures which in some districts, contain more than one room. A typical example would be the City of Calcutta.

As has already been explained before, the number of persons per room gives the only reliable index of congestion in housing when the number of persons, either in the house or in the household, varies from one house to another or from one household to another simultaneously with the number of rooms in the house or in the possession of the household. The Table below gives the average number of persons per room, and

District	No. of persons per room	C
Darjeeling	2.57	128.5
Jalpaiguri	3.34	167.0
Cooch Behar	2.96	148.0
West Dinajpur	3.56	178.0
Malda	3.35	167.5
Murshidabad	3.02	151.0
Nadia	3.95	197.5
24-Parganas	3.79	189.5
Calcutta	3.03	151.5
Howrah	3.12	156.0
Hooghly	3.10	155.0
Burdwan	3.08	154.0
Birbhum	3.22	161.0
Bankura	3.76	188.0
Midnapore	3.17	158.5
Purulia	3.57	178.5

C—the index of congestion in housing calculated on that basis. The index of congestion in housing has been calculated as follows:—

$C_1 \propto n_1$, where C_1 is the index of congestion in housing in region No. 1 and n_1 is the number of persons per room, on an average in that region.

Similarly $C_2 \propto n_2$, where C_2 is the index of congestion in housing in region No. 2 and n_2 is the number of persons, per room on an average, in that region. Then

$$\frac{C_1}{C_2} = \frac{n_1}{n_2} \text{ or } C_1 = \frac{n_1}{n_2} \times C_2$$

Now, if it is assumed that in region No. 2, there are 2 persons per room on an average and if we equate the resulting index of congestion in housing in that region to 100, then $C_1 = n_1 \times 50$. If we further assume that 2 persons per room is normal and there is no congestion in housing in such case, then normalcy in housing conditions would be given by 100 as the index of congestion. Any figure higher than that would indicate the existence of congestion in housing, the amount by which the index exceeds 100 giving an indication of the

extent in overcrowding. On the basis of the figures given in the marginal Table, the districts in increasing order of congestion in housing are (1) Darjeeling (2) Cooch Behar (3) Murshidabad (4) Calcutta (5) Burdwan (6) Hooghly (7) Howrah (8) Midnapore (9) Birbhum (10) Jalpaiguri (11) Malda (12) West Dinajpur (13) Purulia (14) Bankura (15) 24-Parganas and (16) Nadia.

In the Table that follows, the state of housing in each district, has been reviewed for the rural and urban areas separately.

District	Rural Area		Urban Area	
	No. of persons per room	C or index of congestion in housing	No. of persons per room	C or index of congestion in housing
Darjeeling	2.56	128.0	2.60	130.0
Jalpaiguri	3.32	166.0	3.59	179.5
Cooch Behar	2.90	145.0	4.13	206.5
West Dinajpur	3.54	177.0	3.97	198.5
Malda	3.37	168.5	2.84	142.0
Murshidabad	3.05	152.5	2.72	136.0
Nadia	4.20	210.0	3.11	155.5
24-Parganas	4.12	206.0	3.22	161.0
Calcutta	..	..	3.03	151.5
Howrah	3.18	159.0	2.99	149.5
Hooghly	3.16	158.0	2.93	146.5
Burdwan	3.15	157.5	2.83	141.5
Birbhum	3.24	162.0	2.96	148.0
Bankura	3.81	190.5	3.21	160.5
Midnapore	3.19	159.5	2.94	147.0
Purulia	3.63	181.5	2.90	145.0

The index of congestion in housing, calculated on the basis of the average number of persons per room perhaps reflects the condition of housing in the average household in the area mentioned in the Table but the number of households living under conditions either better or worse than that

indicated by the average index of congestion in housing must be considerable. It would have been better, for an assessment of the state of housing if the E-V Table could have been prepared in the following form :

State/Division/District/ Police Station/Town with population of 50,000 or more	Total Rural Urban	Total number of house- holds	Total number of members		Total number of rooms	Households with no regular rooms		
			Males	Females		Number of house- holds	Number of members	
							Males	Females
1	2	3	4	5	6	7	8	9
Number of Households having up to 1 person per room			Number of room	Number of Households having between 1.01 and 2 persons per room			Number of room	
Number of households	Number of members			Number of households	Number of members			
	Males	Females		Males	Females			
10	11	12	13	14	15	16	17	
Number of Households having between 2.01 and 3 persons per room			Number of room	Number of Households having between 3.01 and 4 persons per room			Number of room	
Number of households	Number of members			Number of households	Number of members			
	Males	Females		Males	Females			
18	19	20	21	22	23	24	25	
Number of Households having between 4.01 and 5 persons per room			Number of room	Number of Households having more than 5 persons per room			Number of room	
Number of households	Number of members			Number of households	Number of members			
	Males	Females		Males	Females			
26	27	28	29	30	31	32	33	

If it had been possible to prepare the E-V Table in the above form, then a more detailed picture of the state of housing could have been obtained but the labour involved in the prepa-

ration of such a Table would have been stupendous. If such a Table had been prepared, then a Subsidiary Table could have been prepared as follows, for each district or region :

Total number of households	Number of households having no room	Number of persons per room among households having up to 1 person per room	Number of such households	Number of persons per room among households having between 1.01 and 2 persons per room	Number of such households
1	2	3	4	5	6
Number of persons per room among households having between 2.01 and 3 persons per room		Number of such households	Number of persons per room among households having between 3.01 and 4 persons per room		Number of such households
7		8	9		10
Number of persons per room among households having between 4.01 and 5 persons per room		Number of such households	Number of persons per room among households having more than 5 persons per room		Number of such households
11		12	13		14

From this Subsidiary Table, it would have been possible to measure the average congestion in housing more accurately and thus to ascertain how many households lived in what different degrees of congestion in housing.

The alternative is to calculate the average index of congestion in housing for areas smaller than districts. The index of congestion in housing has therefore been calculated in respect of those Police Stations which existed on the 1st of March, 1961, except for those situated in the district of 24-Parganas. In the district of 24-Parganas, however, those Police Stations which have come into existence by the Notification numbered 3490

PL dated the 25th August, 1962 will be considered as the Government of West Bengal having expressed the desire, long ago, to have the Census Tables, prepared on the basis of these Police Stations, they were prepared on that basis. In the housing Tables, the figures for the Police Stations of Metiabruz stand for the joint figures for the Police Stations of Garden Reach and Metiabruz.

In the Tables that follow, the change in the index of congestion in housing by 0.5 means a change in the number of persons per room by .01 persons. 100 for C indicates absence of congestion.

DARJEELING DISTRICT

Police Station	No. of persons per room	Index of congestion in housing C
Pulbazar	3.42	171.0
Darjeeling	2.52	126.0
Sukhiapokri	1.66	83.0
Jore Bungalow	2.72	136.0

Kharagpur City	3.21	160.5
Calcutta	3.03	151.5

The Registrar General desired that a special Table be prepared for slum areas in only one city in each State. Approximately 20,000—25,000 households were to be taken into account in preparing the Table. The Table was prescribed by the Registrar General. In West Bengal, the City of Calcutta was selected and it was decided to cover the entire population dwelling in the slums in the City. There was an initial difficulty about defining a slum area because the Corporation of Calcutta divided the premises into only two categories for the purpose of assessment; some premises were classified as *pucca* and some as *kutcha*. It was decided to treat all *kutcha* premises as situated in slum areas but here again, it was learnt that the Assessment Registers of *kutcha* premises were not up-to-date. The *pucca* premises were, therefore, first marked off in red pencil, in the House-lists, by referring to the Assessment Registers of *pucca* premises. Out of

the premises which remained, premises bearing hut numbers only were marked off on the House-lists with blue pencil. The Table for slum areas was prepared in respect of all such premises, as had been marked off in blue pencil, ward by ward. As there are no *kutcha* premises in ward Nos. 26, 37, 38, 39, 54, 76, 77, 78, 79 and 80, this special Table has been prepared for 70 wards. For Calcutta as a whole, this special Table covered 162,031 households of whom 236 were found without any regular rooms, 145,549 with only one room each, 10,908 households were found with 2 rooms each, 3,147 households were found with 3 rooms each, 1,293 households were found with 4 rooms each and 898 households were found in occupation of 5 or more rooms each. Further details about these households for Calcutta as a whole or for each of the wards where there are *kutcha* premises, will be available in the Table portion of this volume.

In Sikkim, there were only 2 households, both single-membered, without regular rooms. Both the persons concerned were males. On an average, there is 3.09 persons per room in Sikkim. The index of congestion in housing, calculated on the basis of the number of persons per room, is thus 154.5 on an average. In the rural areas, the average number of persons per room is 3.18, the average index of congestion being 159.0. In the town of Gangtok, there are on an average 1.84 persons per room, the index of congestion being consequently 92.0. In the rural areas of the Gangtok Tehsil, the average number of persons per room is 3.11 and the index of congestion is 155.5. In the Tehsil of Magan, there are on an average, 2.62 persons per room and in the Tehsil of Namchi, 3.32 persons per room. The indices of congestion in Magan and Namchi are respectively 131.0 and 166.0.

No analysis has been made so far on the basis of the ratio of males to females per room as in the opinion of the writer of this report, no useful purpose would be served by such analysis. He is of the opinion that the mere fact that males and females share a room does not prove lack of privacy or congestion in housing because there cannot be any objection if husband, wife and their two children, a boy and a girl, share a room, provided the children are young in age. Again, there cannot be any objection to brothers and sisters sharing a room so long as they are of tender age. Similarly a widowed woman can with propriety live in the same room with her two male children of tender age. As the mutual relationships of the persons sharing a room nor their ages can be ascertained from the E-V Table, no conclusion about the state of housing, has been sought to be drawn from the ratio of males to females, living in a room.

CHAPTER VI

The E-III Table—Census-houses used as factories and workshops classified by industry, power and no power used and size of employment.

This Table has been prepared in respect of all those establishments about which entries were recorded in columns 5, 6, 7 and 8 of the House-list. It is thus different from the E-II, E-IV and E-V Tables, which have been prepared in respect of samples and is similar to the E-I Table, which has been prepared in respect of all Census-houses entered in the House-lists. But while the E-I Table presents the different uses to which Census-houses are put, the E-III Table does not concern itself with Census-houses although the heading of the Table may lead to such an inference. In the E-III Table, even if a workshop or a factory was found spread over more than one Census-house, it was treated as one workshop or one factory. But in the E-I Table, which deals with Census-houses, the actual number of Census-houses used as workshops or factories has been shown in the appropriate columns. There is thus no scope for a comparison of the figures in the E-III Table with those in columns 7, 11 and 12 of the E-I Table. If Census-houses are containers, then workshops and factories are two of the things contained in them.

A factory or a workshop is an establishment where some kind of production, processing, repair or servicing is undertaken or where goods or articles are made and sold. The difference between a factory and a workshop consists mainly in the number of workers employed. In this Table, a factory has been treated as such whether it is registered as such under the Factories Act or not. It has been classified as a factory if it has been found to be registrable. A workshop employs a smaller number of persons than a factory. Alternatively, it may be said that this Table deals with all establishments to which any of the code numbers in Divisions 2 and 3 of the Standard Industrial Classification may be applied on the basis of the products. The Standard Industrial Classification, which is reproduced in the appendix to this report, has been prepared in the Directorate General of Employment and Training, Ministry of Labour and Employment, Government of India, New Delhi.

It is found from the E-III Table that there were 157,021 factories and workshops in West

Bengal in October 1960. In case of as many as 42,445 such establishments, the House-numberers either did not or could not record the number of persons employed daily. Out of 157,021 establishments, 15,777 were run with electricity, 7,150 with liquid fuel like petrol or diesel oil, 533 were run on coal, wood, bagasse etc. and 356 were run using other sources of power. 133,205 of the establishments were being run without using power-driven machinery. The establishments which use machines run on electricity, employed 746,083 persons, without taking into account the 1,202 establishments of this class for which employment statistics were not recorded. Establishments using machines run with liquid fuel employed 55,718 persons, excluding 1,121 establishments of this class for which no employment figures were recorded on the House-lists. Industries using coal, wood and bagasse employed 19,990 persons. In regard to 49 such industries, employment figures are not obtainable. Industries using other sources of power employed 5,507 persons. In regard to 21 such establishments, employment figures had not been recorded on the House-lists. Industries which used no power-driven machines, contained 40,052 establishments in respect of which employment figures were not recorded. Such non-power industries, excluding these 40,052 establishments, employed 391,559 persons.

Although exact figures of employment have been given in the preceding paragraph, it should be pointed out that it is not possible to obtain the exact figures of employment from the Table as it is prepared. The employment figures have been calculated on the assumption that the middle-point of the range of employment for each range multiplied by the number of establishments in that employment range will yield the total number of employees. This assumption rests on the assumption that establishments having different numbers of employees within a particular range are evenly distributed. To what extent this assumption holds good for establishments in each employment range is not known and it would be prudent, therefore, to accept the figures of total employment in each range as only approximate. As the number of employees in each class of industry, classified by the type of power used, has been calculated by adding together the number of employees in each employment-range worked out by the method mentioned in this paragraph, the total

figures of employment should also therefore be taken as only approximate. It is thus seen that approximately 1,218,407 persons were employed in industrial establishments in October 1960. This figure may be compared with the figures of workers employed in Divisions 2 and 3 as ascertained during the actual Census in March 1961. From the relevant Table prepared by processing the slips of the individuals enumerated during the Census, it is found that 1,760,736 persons were employed in Divisions 2 and 3 in West Bengal. The difference in the numbers of workers as ascertained during the Census of the population and the Census of industrial establishments is seen to be equal to 542,329. This difference is quite considerable and in the Table that follows, the numbers of workers in each minor group of the Standard Industrial Classification, according to the E-III and the

B-IV Part C Tables have been given with a view to locate precisely the regions of divergence between the two Tables. The B-IV Part C Table, it may be mentioned, has been prepared by processing the Enumeration Slips of all the persons enumerated in West Bengal during the 1961 Census. The total number of workers in industrial establishments, as obtained from the E-III Table, by adding together the number of workers in each minor-group of the Standard Industrial Classification, is found to be equal to 1,218,579, which is slightly in excess of the number stated earlier. The reason for the discrepancy lies in the rounding off up to the nearest integer, that had to be carried out on more occasions in the second method than in the first method adopted for ascertaining the total number of workers in Divisions 2 and 3 from the E-III Table.

				399	22,576	79,654	57,078

Very big differences are observed in the numbers of workers given in the E-III and B-IV Part C Tables in respect of the workers in minor groups 200, 206, 209, 220, 231, 232, 233, 235, 238, 240, 241, 271, 273, 281, 282, 288, 289, 314, 340, 341, 350, 360, 362, 381, 393 and 399. In respect of each of these minor groups, the number of workers given in Table B-IV Part C is more than that calculated from Table E-III. In respect of minor groups 213, 217, 252, 285, 286, 302, 321, 323, 343, 352, 354, 365, 369, 370, 373, 374, 378, 379, 380, 382, 384, 386 and 387; on the other hand, the numbers of workers calculated from E-III Table are found to be considerably in excess of those given in the Table B-IV Part C. Again, no establishments were recorded in the House-lists which could be assigned the minor group Nos. 211, 218, 221, 250 and 254. These are the principal points of divergence between the Tables E-III and B-IV Part C and it would be interesting to attempt to ascertain the causes of such divergences.

The minor group 200 is applicable to workers engaged in the production of rice, atta, flour etc., by milling, dehushing and processing of crops and food-grains. By the order of the Registrar-General, workers in the Households Industries, as detailed below, were assigned numbers subordinate to the minor group 200, for the purpose of the preparation of the B-IV Table (Parts A, B and C) :

- 200-1 Production of flour by village chakkis or flour mill by grinding wheat, maize, gram etc..
- 200-2 Hand pounding of rice by Dhenki or Ukhal.
- 200-3 Production of rice by milling, dehushing and processing of paddy by rice mill.
- 200-4 Grinding of chillis, turmeric etc.
- 200-5 Production of pulses.
- 200-6 Parching of grains.
- 200-7 Production and processing of other crops and foodgrains.

It is not possible to assess separately the number of workers in sub-minor groups 200-1, 200-2, 200-3, 200-4, 200-5, 200-6 and 200-7 at this stage but it would perhaps be conceded that the types of work described under 200-4, 200-5, 200-6 and 200-7 may not always require the use of a Census-house wholly or partly. Thus while such workers can not be expected to be accounted for in the E-III Table which has been prepared from the House-lists, they would be counted as workers during the population Census and placed in minor group 200 in the B-IV Table. Again it is in respect of establishments under this minor group that employment figures have not

been recorded in the House-lists in a large number of cases. Out of a total of 28,650 such establishments, employment figures have not been recorded in respect of as many as 20,317 establishments. Only 1,413 out of these 20,317 establishments use power-driven machinery and it may thus be assumed that the remaining (20,317-1,413) 18,904 establishments are mostly operating "Dhenkis". The difference in the numbers of workers belonging to the minor group 200 as given in the B-IV Part C Table and the E-III Table is thus explained.

Out of 278 establishments in minor group 206 (production of butter, ghee, cheese and other dairy products), numbers of workers were not available in respect of 21 establishments. This non-availability of employment statistics in respect of 21 establishments and the seasonal fluctuation in the volume of work in this field are responsible for the lesser number of workers in this minor group in the E-III Table than in the B-IV Table.

Employment statistics were not available in respect of 998 out of 9,128 establishments, producing other food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, cocoa, chocolate, toffee, lozenge etc. (minor group 209). The non-availability of the number of workers in respect of so many establishments resulted in the number of workers in this minor group being less in the E-III Table than what it is shown in the B-IV Table.

The minor group 220 relates to workers engaged in the manufacture of *biri*. Now, *biri*-making is an occupation which does not always require the use of a Census-house wholly or mainly. There are many workers who obtain the raw materials from others and prepare the *biris* at home in their spare-time. Such persons rarely use Census-houses wholly or mainly for *biri* making and consequently they would have been omitted from columns 5-8 of the House-list. Again out of 5,126 *biri*-making establishments, employment figures were not available in respect of 325 establishments.

The minor group 231 relates to cotton spinning (other than in mills). It is therefore not surprising to observe that only a small fraction of the number of such workers shown in B-IV Part C Table have been accounted for in the E-III Table. Only 60 establishments employing workers belonging to this minor group were encountered in the House-lists and out of that, no employment figures were available in respect of 12 establishments.

The minor group 232 relates to cotton spinning and weaving in mills. Here the extra number of workers shown in B-IV Table appears to be

nexplicable, as in the House-lists, the coverage of such establishments appears to have been fairly full and complete. Seasonal variation in the volume of employment in this sphere may account for some of the difference.

The minor group 233 relates to cotton dyeing and bleaching. Only 102 establishments were recorded in the House-lists as engaged in this work, the figures about employment being non-available in respect of only 14. Here also the discrepancy in the numbers of workers given in the two sets of Tables appears to be inexplicable unless it is assumed that most dyeing and bleaching work is carried on in the open and not inside rooms.

The minor group 235 relates to cotton weaving in handlooms. 21,836 such establishments were recorded in the House-lists out of which information about number of persons employed was not recorded in respect of 2,474 establishments. The difference in the numbers of workers of this minor group given in the two Tables (E-III and B-IV) is due partly to the non-availability of employment figures in respect of approximately 11.3 per cent of the establishments. Seasonal fluctuation in employment in handloom weaving may also account for the difference to some extent. Work associated with handloom weaving like reeling of thread etc., is sometimes done by person or persons other than those who actually weave the cloth. In the House-lists, such persons might have been omitted while counting the number of workers but for the purpose of the B-IV Table, they were classified into the minor group 235.

The manufacture of cotton nets (minor group 238) includes the making of fishing nets. Fishing nets are usually made in the open and consequently the E-III Table is not likely to include persons engaged in the making of fishing nets. This fact and the fact that there are seasonal fluctuations in this field of work (minor group 238) as in other fields would appear to explain the different numbers of workers in minor group 238 shown in the E-III and the B-IV Part C Tables.

The minor group 240 relates to jute pressing and baling and the minor group 241 relates to jute spinning and weaving. The coverage of such establishments appears to have been fairly satisfactory in the House-lists and the difference in respect of each of these two minor groups would appear to be due mainly to seasonal fluctuations in volumes of employment in these two sectors.

The minor group 271 relates to manufacture of hosiery and other knitted fabrics and garments. The number of establishments of this type in

respect of which employment figures were not available, is only 32 out of a total of 989 such establishments. The difference in the numbers of workers given in the Tables B-IV Part C and E-III may be due partly to the non-availability of employment figures in respect of 32 establishments, partly to seasonal fluctuations in the volume of employment in this sector and which appears to be rather unlikely, partly to the omission of the House-numberers to record some establishments of this class.

The making of textile garments including raincoats and headgear (minor group 273) does not always require the use of a Census-house wholly or mainly by a worker. Quite a large number of workers who make textile garments, obtain the lengths of cloth from others and prepare the garment with their sewing machines at home. A sewing machine does not occupy a great deal of space and hence houses where garments are made might not have been recorded as workshops or workshop-cum-dwellings at the time of preparing the houselist. During the enumeration, however, a maker of garments was recorded and classified as such. This accounts for the large difference in the number of this type of workers in the two Tables.

The minor groups 281 and 282 relate respectively to the manufacture of wooden furniture and fixtures and to the manufacture of structural wooden goods such as beams, posts, doors, windows. Employment statistics in respect of 461 out of 2,517 establishments belonging to the minor group 281 were not available. Similarly, employment statistics were not available in respect of 24 out of 455 establishments belonging to the minor group 282. It is also well-known that the number of journey-men Carpenters is not inconsiderable. In an appreciable number of cases, doors, windows etc. are constructed at the places where the buildings are constructed. These facts and the seasonal fluctuation satisfactorily explain the difference in the numbers of workers belonging to these two minor groups; as shown in the E-III and the B-IV Table.

The difference in the numbers of workers of minor group 288 as given in the B-IV and E-III Tables is only to be expected as the manufacture of articles from cork, bamboo, cane, leaves etc. seldom requires the use of a structure, wholly or partly. A basket-maker usually sits in the courtyard of his home while making baskets from cane or bamboo. Similar remarks are applicable in respect of workers who manufacture miscellaneous wood and allied products (minor group 289). Moreover, for 23 out of 864 establishments in minor group 288 and 155 out of 914

establishments in minor group 289, figures of employment were not available.

The minor group 314 relates to the repair of shoes and other leather footwear. It is true that employment statistics were not available in respect of 141 out of the total number of 495 establishments recorded in the House-lists but the real reason for the excess in the number of workers belonging to the minor group 314 found in the B-IV Table over the number of such workers given in the E-III Table lies in the fact that most cobblers ply their trade, not inside structures or parts of structures but on pavements or by the road side, in the open air. Such persons were automatically excluded from the House-list as workers and, therefore, the E-III Table rightly shows a lesser number of cobblers than the B-IV Table.

The minor group 340 relates to manufacture of structural clay products such as bricks, tiles. As is well known, bricks are made usually in winter and not in any structure. Bricks are made in the open, dried in the sun in the open and in most cases, fired in the open. The House-lists were prepared in October, when brick-making had just started or was about to commence and the Census of the population was taken in February-March, when the brick-making season was in full swing. The number of workers engaged in brick-making was bound to be much lower in October than in February-March. Almost for identical reasons, the number of workers engaged in tile making would be less in October than in the winter months. Employment statistics in respect of 360 out of 1,757 establishments in the minor group 340 were not available.

The difference in the numbers of workers employed in minor group 341 (manufacture of cement and cement products) appears to be entirely due to seasonal fluctuations as employment figures in respect of all the establishments of this class, were available.

The minor group 350 relates to the manufacture of earthenware and earthen pottery. Employment statistics in respect of 626 out of 4,909 such establishments, were not available. This fact, coupled with the seasonal fluctuations in the volume of employment in this sector, offers adequate explanation for the difference observed in the figures of workers belonging to the minor group 350, as given in the B-IV and the E-III Tables.

The different numbers of workers given in the B-IV and E-III Tables for the minor group 360 (manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods) appear

to be due partly to seasonal fluctuations in the volume of work in this sector and partly to the different principles adopted for classification of workers in the two Tables. In the E-III Table, it is likely that only the number of actual workers in the plants were recorded while for the purpose of the B-IV Table, clerks and other similar workers employed in the iron works, were also classified into the minor group 360.

The discrepancy in the number of workers in the minor group 362 (manufacture of armaments) is the result of the deliberate omission to record the number of workers in the armament factories, in the interest of the security of the country.

The minor group 381 relates to the manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by minor group No. 363. The different figures of workers appearing against the minor group in the B-IV and E-III Tables are due to seasonal fluctuations in the volume of work in this sector and the different principles adopted for the classification of the workers, for preparing the two Tables.

The discrepancy in the number of workers in the minor group 393 (manufacture of jewellery, silverware and wares using gold and other precious metals) appears to be due mainly to the non-availability of employment statistics in respect of 2,701 out of 10,044 establishments of this minor group. The effect of seasonal fluctuations on the number of workers in this field is however, not ruled out.

The minor group 399 relates to the manufacture and repair work of goods not assignable to any other group. Out of 2,766 establishments recorded in the house-list falling into this class, employment statistics were not available in respect of as many as 410 establishments. This non-availability of employment statistics in respect of so many of the establishments partly accounts for the difference noticed in the number of workers in this minor group, as given in the E-III and B-IV Tables. Seasonal fluctuations are also not ruled out as a factor affecting the number of workers in this field. Lack of sufficient care in coding at the time of preparing the B-IV Table may also account for a part of the difference in the number of workers of this class given in the two Tables.

The greater number of workers in minor group 213 (production of other liquors not covered by other codes) shown in the E-III Table is almost exactly counter-balanced by the number of workers shown in minor group 211 (production of country liquor) in the B-IV Table while no establishments have been assigned this code No. (211) in the E-III Table.

The code No. 217 relates to the processing of tea in factories and it is probable that while preparing the B-IV Table, no distinction was made in most cases between workers in tea-plantations and workers in tea-factories. It may be that while preparing the B-IV Table, a large number of workers engaged in the tea-factories located in tea-plantations, have been classified by mistake as plantation workers. There is however, another reason for the greater number of workers in minor group 217 shown in the E-III Table. As winter is not the proper season for the manufacture of tea, it is likely that the two different figures about the number of workers employed in tea-factories given in the E-III and B-IV Tables reflect a real seasonal variation in the volume of employment in this field.

The greater number of workers in the E-III Table in the minor group 252 is probably due to seasonal fluctuations in the volume of work in this field. The minor group 252 relates to wool spinning and weaving in mill.

The minor group 285 relates to the manufacture of veneer and plywood. Out of a total of 34 establishments belonging to this minor group, employment statistics were not available in respect of only 2. Seasonal variation in the field of employment in this sector thus appears to be the main reason for the divergence in the number of workers shown in the Tables E-III and B-IV.

The manufacture of plywood products such as tea chests (minor group 286) employs 1,769 persons according to the E-III Table and 753 persons according to the B-IV Table. The manufacture of plywood tea chests is linked up with the production of tea. Tea, as is well known, is not produced in very great quantity during the winter. In fact, the plucking of leaves is not carried on during winter in most tea-estates. The demand for tea-chests should therefore be less in winter (February-March) when the population Census was conducted than in October when all the tea-factories work in full swing. The difference in the number of workers in the two Tables is thus easily accounted for by the seasonal variation in the volume of work in this sector.

In regard to the minor group 302 (all other types of printing including lithography, engraving, etching, block-making and other work connected with the printing industry), the greater number of workers in the E-III Table is partly due to misclassification of such workers while preparing the B-IV Table and partly to seasonal fluctuations in the volume of work in this field.

The very nature of the activities described by minor group 369 (Manufacture of sundry

hardwares such as G.I. pipes, wire net, bolt screw, bucket, cutlery) explains why there should be a difference in the number of workers in the E-III and B-IV Tables. The same remark would be applicable to the minor group 370 (manufacture and assembling of machinery other than electrical except textile machinery). The excess in the number of workers found in the minor group 380 (manufacture, assembly and repairing of locomotives) in the E-III Table over that found in the B-IV Table appears to be due mainly to misclassification of the workers of this minor group into other groups at the time of preparing the B-IV Table. In regard to other minor groups in respect of which this phenomenon of an excess in the number of workers is found in the E-III Table, it may be said that the discrepancies in the numbers of workers are partly due to seasonal fluctuations in the volumes of work and partly due to the misclassification of workers while preparing the B-IV Table.

It would be clear, from the considerations outlined above, that it would be futile to expect exact correspondence between the figures in the two Tables B-IV and E-III because seasonal fluctuations in the different sectors of employment would make such correspondence, in most cases, impossible. Again, the definition of the term "worker" was not the same while preparing the House-lists and at the Population Census. The House-numberer was instructed to record the total number of workers, including apprentices, either paid or unpaid, employed in the factory or workshop, including the owner or proprietor and any of his family members if working, in column 7 of the House-list. The average number of persons working per day was to be calculated on the basis of the number of workers during the week preceding the date of the visit of the House-numberer to the establishment. During the Population Census, on the other hand, no one was enumerated at his place of work but at his residence. During the Census, the basis of work was satisfied in case of seasonal work like cultivation, livestock, dairying, household industry etc., if the person concerned had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service business or commerce, the basis of work was satisfied if the person concerned was employed during any of the fifteen days preceding the day on which the enumerator visited the household. Persons who could not work during this period due to illness or other causes and consequently were on leave, were to be treated as workers. Thirdly, chances of misclassification at the time of preparing the B-IV Table can not be ruled

out. Fourthly, in some cases, employment statistics could not be recorded by the House-numberers. And lastly, not all the workers in some of the minor groups required the use of a structure, wholly or partly, for making the articles covered by those minor groups. It is certainly a matter of regret that employment statistics were not recorded in respect of all the establishments entered in the House-lists. In some cases, the omission to record the employment statistics might have resulted from the lack of co-operation on the part of the owners of those establishments and in some cases, the blame for the omission must rest with the House-numberers.

District	Percentage of establishments contained in the districts
Darjeeling	1.52
Jalpaiguri	2.32
Cooch Behar	2.35
West Dinajpur	5.01
Malda	3.41
Murshidabad	5.67
Nadia	4.61
24-Parganas	13.60
Calcutta	20.98
Howrah	6.97
Hooghly	6.80
Burdwan	6.42
Birbhum	3.54
Bankura	5.23
Midnapore	2.25
Purulia	2.32
West Bengal	100

The above Table shows the distribution of the industrial establishments in West Bengal by districts. For preparing this Table, the total number of industrial establishments in West Bengal has been taken to be equal to 100. It would be seen that the City of Calcutta contains a little more than 20th of all the industrial establishments in the State. The district of 24-Parganas comes next with 13.60 per cent of all the industrial establishments in the State and the district of Darjeeling comes last, with only 1.52 per cent of the industrial establishments

of the State. The districts of 24-Parganas, Howrah, Hooghly and the City of Calcutta, between them, contain 48.35 per cent of all the industrial establishments of West Bengal. The Northern Industrial Region accounts for 1.98 per cent, the Calcutta-Howrah Industrial Region 32.83 per cent and the Asansol Industrial Region 1.34 per cent of the total industrial establishments of West Bengal.

It would have been of interest to find out what proportion of the total number of workers in industrial establishments are employed in which district but as the employment statistics about a large number of establishments, are not available from the E-III Table, this type of analysis can not be done. We may, however, ascertain what proportion of a particular type of industrial establishment is contained in what district but before doing that, we may first calculate what proportion of establishments using power-driven machinery run with a particular source of power, are contained in which district.

Only 15,777 or 10.05 per cent of all the industrial establishments in West Bengal use machinery run with electricity. The district of Darjeeling contains 1.33 per cent of such electricity using establishments, the district of Jalpaiguri, 0.40 per cent, the district of Cooch Behar, 0.36 per cent, the district of West Dinajpur, 0.23 per cent, the district of Malda, 0.20 per cent, the district of Murshidabad, 0.91 per cent, the district of Nadia, 1.76 per cent, the district of 24-Parganas 13.08 per cent, the City of Calcutta, 56.36 per cent, the district of Howrah, 14.12 per cent, the district of Hooghly, 3.71 per cent, the district of Burdwan 4.54 per cent, the district of Birbhum, 0.82 per cent, the district of Bankura, 0.76 per cent, the district of Midnapore, 1.00 per cent and the district of Purulia, 0.42 per cent of all establishments that use machinery run on electricity. The Calcutta-Howrah Industrial Region contains 85.33 per cent of such establishments, the Asansol Industrial Region, 2.45 per cent and the Northern Industrial Region, 1.24 per cent.

There are only 8,039 establishments which use machinery for running which they utilize sources of power other than electricity. The district of Darjeeling contains 1.59 per cent of such establishments, the district of Jalpaiguri, 4.01 per cent, the district of Cooch Behar, 1.18 per cent, the district of West Dinajpur, 1.82 per cent, the district of Malda, 0.99 per cent, the district of Murshidabad, 3.30 per cent, the district of Nadia 2.13 per cent, the district of 24-Parganas, 12.60 per cent, the City of Calcutta, 5.85 per cent, the district of Howrah, 9.48 per cent, the district of Hooghly, 9.39 per cent, the district of

Burdwan, 8.89 per cent, the district of Birbhum, 3.26 per cent, the district of Bankura, 3.68 per cent, the district of Midnapore, 30.94 per cent and the district of Purulia, 0.89 per cent. 3.89 per cent of such establishments are contained in the Northern Industrial Region, 11.61 per cent in the Calcutta-Howrah Industrial Region and 1.08 per cent in the Asansol Industrial Region.

Those industrial establishments, which do not use any power-driven machinery, are 133,205 in number. They form 84.83 per cent of all the industrial establishments in West Bengal. They are distributed throughout West Bengal, as follows : (1) 1.54 per cent in the district of Darjeeling, (2) 2.45 per cent in the district of Jalpaiguri, (3) 2.65 per cent in the district of Cooch Behar, (4) 5.77 per cent in the district of West Dinajpur, (5) 3.94 per cent in the district of Malda, (6) 6.37 per cent in the district of Murshidabad, (7) 5.09 per cent in the district of Nadia, (8) 13.72 per cent in the district of 24-Parganas, (9) 17.70 per cent in the City of Calcutta, (10) 5.97 per cent in the district of Howrah, (11) 7.01 per cent in the district of Hooghly, (12) 6.50 per cent in the district of Burdwan, (13) 3.88 per cent in the district of Birbhum, (14) 5.85 per cent in the district of Bankura, (15) 8.92 per cent in the district of Midnapore and (16) 2.64 per cent in the district of Purulia. The Northern Industrial Region contains 1.95 per cent of these establishments, the Calcutta-Howrah Industrial Region, another 27.89 per cent and the Asansol Industrial Region 1.26 per cent. The Table below gives the distribution of industrial establishments using power-driven machinery and of industrial establishments which do not utilize any power-driven machinery, for West Bengal and for each of the districts, for rural and urban areas separately.

State/District	Power	No power
WEST BENGAL	8.57 24.66	91.43 75.34
Darjeeling	11.98 17.13	88.02 82.87
Jalpaiguri	11.43 7.12	88.57 92.88
Cooch Behar	2.99 8.17	97.01 91.83
West Dinajpur	1.87 7.35	98.13 92.65
Malda	1.43 9.21	98.57 90.79
Murshidabad	3.51 13.43	96.49 86.57

State/District	Power	No power
Nadia	5.24 7.61	94.76 92.39
24-Parganas	8.54 24.19	91.46 75.81
Calcutta	28.42	71.58
Howrah	14.16 42.53	85.84 57.47
Hooghly	10.00 19.60	90.00 80.40
Burdwan	11.18 22.14	88.82 77.86
Birbhum	6.24 16.78	93.76 83.22
Bankura	4.88 5.57	95.12 94.43
Midnapore	19.40 11.27	80.60 88.73
Purulia	1.78 15.00	98.22 85.00

Thus it is seen that only 8.57 per cent of all industrial establishments in the rural areas of West Bengal utilize power-driven machinery, 91.43 per cent of the industrial establishments in the rural areas of the State being run without power-driven machinery of any kind. In the urban areas, the situation is somewhat different, 24.66 per cent of the industrial establishments using power-driven machinery. For urban areas, this proportion can not certainly be called very high but only in the City of Calcutta and in the urban areas of the district of Howrah are the proportions of establishments using power-driven machinery greater than this. In the Northern Industrial Region, 16.36 per cent of the establishments use power-driven machinery, in the Calcutta-Howrah Industrial Region, 27.92 per cent and in the Asansol Industrial Region, 22.07 per cent of the establishments utilize power-driven machinery. There is, therefore, much scope for the introduction of power-driven machinery in the industrial establishments.

It would be instructive to ascertain what proportion of establishments in each minor group of the Standard Industrial Classification use power-driven machinery and what proportions are run without power as such an analysis may reveal to what extent the introduction of power-driven machinery is necessary and feasible in which sector of the industry. In the Table that follows, the results of such analysis have been shown, for West Bengal as a whole.

Minor Group	Percentage of establishments using		Minor Group	Percentage of establishments using	
	Power	No power		Power	No power
200	32.82	67.18	240	8.26	91.74
201	100	..	241	81.82	18.18
202	8.70	91.30	242	100	..
203	50.00	50.00	243	..	100
204	0.37	99.63	244	10.69	89.31
205	9.00	91.00	251	..	100
206	3.96	96.04	252	100	..
207	6.97	93.03	253	100	..
208	100	..	255	..	100
209	1.19	98.81	256	..	100
210	100	..	260	100	..
212	..	100	261	..	100
213	..	100	262	..	100

In order to appreciate fully the significance of the above Table, it is necessary to consider the figures in this Table in conjunction with the figures in another Table in which the percentage of the total establishment contained in each minor group should be given. Such a

Table is given below but as 0.01 per cent of the total number of establishments in West Bengal is approximately equal to 16, no calculation will be made in respect of industrial establishment in any minor group, in which the number of establishments is less than 16.

TABLE : PERCENTAGE OF THE TOTAL INDUSTRIAL ESTABLISHMENTS IN WEST BENGAL, CONTAINED IN EACH MINOR GROUP OF THE STANDARD INDUSTRIAL CLASSIFICATION

389	0.34		

Out of 157 minor groups, in each of which there are some industrial establishments, 16 or more establishments are to be found in only 119 minor groups mentioned in the above Table. The largest proportion of industrial establishments are found in minor group 200 which relates to the production of rice, *atta*, flour, etc., by milling, dehusking and processing of crops and foodgrains. Out of the establishments in this minor group, 32.82 per cent use power-driven machinery. The next most numerous industrial establishments are those belonging to the minor group 235. Minor group 235 stands for cotton weaving in handlooms. Quite naturally, no power-driven machine is used in this industry. The next important industry in West Bengal, from the point of view of the number of establishments, is that belonging to the minor group 369. Minor group 369 stands for manufacture of sundry hardwares such as G. I. pipe, wire-net, bolt, screw, bucket, cutlery including miscellaneous articles of iron or steel produced by jobbing engineering concerns which can not be classified elsewhere. Only 16.78 per cent of such establishments use power-driven machines.

The next most numerous establishments belong to the minor group 273 and manufacture textile garments including raincoats and head-gear. These establishments are tailoring establishments and do not practically use power-driven machines.

The next numerous establishments belong to the minor group 393 and manufacture jewellery, silverware and wares using gold and other precious metals and in only 1.77 per cent of such establishment, power-driven machines of some kind or other is used.

The minor group 209 relating to the production of food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, cocoa, chocolate,

toffee, lozenge accounts for the next most numerous establishments. Some kind of power-driven machines are used in 1.19 per cent of such establishments.

The minor group 207 follows the minor group 209, so far as the number of establishments is concerned. The minor group 207 relates to the production of edible fats and oils (other than hydrogenated oil) and in West Bengal, is concerned almost entirely with the production of mustard oil. Only 6.97 per cent of such establishments use power-driven machines.

Almost equally numerous as the establishments in the minor group 207 are the establishments in minor groups 220 and 350. The minor group 220 relates to the manufacture of *biri* and the minor group 350 relates to the manufacture of earthenware and earthen pottery.

Any one interested in this subject may classify the remaining industries by their numerical importance, with reference to the preceding Table.

In the Table that follows, the number of persons employed in the establishments belonging to each minor group, has been given, for different sizes of establishments. It has already been seen that the employment statistics are rather defective, the necessary data not having been recorded in the House-lists, in respect of all the establishments but it is hoped that as in one column of the Table, the percentage of establishments, belonging to each minor group in respect of which employment statistics were not available, has been given, it would be possible for the reader to assess the relative importance of the various types of industries from the point of view of employment. He would also be able to form some idea about the relative importance of the establishments of various sizes in a minor group.

Minor Group	Percentage of establishments for which employment statistics were not available	Total number of persons employed in establishments employing							Total workers

Except for one brief paragraph, the E-III Table has been discussed for West Bengal as a whole till now. As a first step towards the detailed study of the E-III Table, district by district, an analysis will be made to ascertain, for each class of industry, its distribution in various parts of the State. But such an analysis for each of the minor groups into which the industries have been divided would be rather cumbersome and would not be of much use for each and every minor group; for there are quite a number of minor groups, the industrial establishments in which are not im-

portant either when judged by the numbers of such establishments or by their employment capacities. The analysis will therefore be done after grouping the industries together into the major groups of the Standard Industrial Classification. The analytical Table, which follows, will show what percentage of the establishments belonging to a particular major group is contained in each of the districts of the State. It should be possible from this Table to form an idea of the geographical distribution of industries in West Bengal.

District	Establishments in Major Groups

The number of establishments in the major group 20 (Food-stuffs—processing of) in West Bengal is 44,861. 1 per cent of the establishments in this major group thus means approximately 449 establishments. About 1/4th of the establishments in this major group are to be found in the district of 24-Parganas. The next considerable concentration of this type of establishments is to be found in the district of West Dinajpur which acts as the granary to the other districts of West Bengal situated to the north of the Ganges. The district of Midnapore comes next with 10.91 per cent of such establishments, closely followed by the district of Murshidabad. As many as 12.87 per cent of the establishments in the major group 20 are situated in the Calcutta-Howrah Industrial Region.

There are 1,553 establishments in the major group 21. 1 per cent in respect of this major group would thus mean 15 establishments approximately. This major group also contains the minor group 217 relating to the processing of tea in factories but as there are other industries like the production of indigenous liquor such as toddy and the production of other beverages, the importance of the districts of Darjeeling and Jalpaiguri in the production of tea has been almost masked. Thus there are 17.64 per cent of the establishments belonging to this major group, in the Burdwan District, another 11.59 per cent in the Midnapore District, another 11.33 per cent in the Birbhum District as compared with only 10.82 per cent such establishments in the Jalpaiguri district and 8.82 per cent such establishments in the district of Darjeeling. In the Northern Industrial Region, however, there are 15.71 per cent of the establishments belonging to this major group, thereby indicating that the importance of this Region is linked with the production of tea.

The major group 22 relates to tobacco products and there are 5,210 establishments in West Bengal belonging to this major group. The City of Calcutta contains 20.02 per cent of all the establishments in this major group. The district of 24-Parganas accounts for another 17.77 per cent, that of Midnapore, 11.02 per cent and that of Murshidabad, 8.90 per cent. The Calcutta-Howrah Industrial Region contains 30.84 per cent of such establishments.

The major group 23 relates to cotton textiles and includes weaving, in power-looms and hand-looms and in mills. The important regions for the industries in this major group are the districts of Hooghly, Nadia, Midnapore, Malda and Bankura. The Calcutta-Howrah Industrial Region contains only 5.72 per cent of all such establishments. The total number of establishments belonging to the major group 23 is 22,553.

The major group 24 relates to jute textiles and includes jute pressing and baling and the manufacture of products like rope, cordage etc., from jute and similar fibres, in addition to jute spinning and weaving, the dyeing and bleaching of jute, and the printing of jute textiles. The number of establishments in this major group is only 345. The important districts are Hooghly, 24-Parganas and Howrah so far as industries in this major group are concerned. The Calcutta-Howrah Industrial Region accounts for 57.97 per cent of such industries.

The number of establishments in the major group 25 which relates to textile—wool, is only 150. The City of Calcutta alone contains 64.67 per cent of such establishments. In the districts of Jalpaiguri, West Dinajpur, Birbhum and Purulia, no establishment was found in this major group while the other districts contained small percentages of the total number of such

establishments. The Calcutta-Howrah Industrial Region accounts for 73.33 per cent of such establishments.

The major group 26 relates to silk textiles. The total number of establishments in this major group is 1,151. No establishments belonging to this major group are found in the districts of Darjeeling, Jalpaiguri, West Dinajpur, Nadia and Howrah. The important districts in so far as this major group is concerned, are the districts of Murshidabad, Birbhum and Bankura. As the weaving of cloths with fibres similar to silk, such as the production of Tassar has also been included in this major group, a few establishments are found to exist in some other districts like Purulia also.

The number of establishments in the major group 27 is 14,139. This major group relates to the manufacture of miscellaneous textiles. The important districts, so far as establishments in this major group are concerned, are Calcutta, 24-Parganas and Howrah. The Calcutta-Howrah Industrial Region accounts for 62.00 per cent of all such establishments in West Bengal.

The major group 28 relates to the manufacture of wood and wooden products, including the sawing and planing of wood. There are 6,522 such establishments in West Bengal. 44.44 per cent of such establishments are located in the City of Calcutta, the remaining establishments being spread over the remaining areas of the State. The Calcutta-Howrah Industrial Region accounts for 59.83 per cent of such establishments.

The major group 29 relates to the manufacture of paper and paper products but includes the manufacture of paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp. The geographical distribution of the establishments belonging to this major group will not therefore enable us to obtain an idea of the distribution of those establishments which only manufacture paper. Most of the establishments belonging to this major group 29 are found in the Calcutta-Howrah Industrial Region. There are only 467 establishments belonging to this major group in West Bengal.

The major group 30 relates to printing and publishing and includes all types of binding, stitching, sizing and other allied work connected with the binding industry. There are 3,152 such establishments in West Bengal, 84.34 per cent of which are located in the Calcutta-Howrah Industrial Region. The City of Calcutta alone accounts for 77.12 per cent of such establishments.

The major group 31 relates to leather and leather products. There are 3,897 such estab-

lishments, of which 55.58 per cent are located in the City of Calcutta. The Calcutta-Howrah Industrial Region accounts for 65.87 per cent of such establishments.

The major group 32 relates to rubber, petroleum and coal products. There are only 384 such establishments. The majority of the establishments in this major group are located in the Calcutta-Howrah Industrial Region, 84.38 per cent of the establishments being located in this Region. If districts are considered, then the lion's share, (66.67 per cent.) is seen to fall to the City of Calcutta.

The major group 33 relates to the manufacture of chemicals and chemical products. The total number of establishments in this major group is only 2,042. In this major group also, the majority of the establishments (74.53 per cent) are situated in the Calcutta-Howrah Industrial Region. Among districts, the lion's share (55.93 per cent) goes to the City of Calcutta.

The major group 34 relates to the manufacture of non-metallic mineral products other than petroleum and coal. The number of establishments in this major group is 1,901. The important districts are the districts of 24-Parganas, Howrah and Hooghly. The Calcutta-Howrah Industrial Region accounts for 35.25 per cent of all the establishments in this major group.

The major group 35 includes the industries in the following minor groups: (1) manufacture of earthenware and earthen pottery, (2) manufacture of chinaware and crockery, (3) manufacture of porcelain and its products, (4) manufacture of glass bangles and beads, (5) manufacture of glass apparatus, (6) manufacture of earthen image, busts and statues, (7) manufacture of earthen toys and artwares, (8) manufacture of glass and glass products except optical and photographic lenses and glass products already covered by other codes and (9) manufacture of other non-metallic mineral products not elsewhere specified. The industries covered by this major group are thus rather heterogeneous in character. There are 5,730 establishments in this major group. The Calcutta-Howrah Industrial Region accounts for 22.08 per cent of all such establishments. For industries in this major group; the districts of Midnapore, the City of Calcutta and the districts of Burdwan, Howrah and Hooghly are important.

The major group 36 relates to basic metals and their products except machinery and transport equipment. This major group no doubt includes the manufacture of iron and steel but among other industries, also includes the manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., and thus includes the workshops of all village blacksmiths. The number

of establishments in this group is thus fairly large, being 18,531. The Calcutta-Howrah Industrial Region contains 34.93 per cent of all the establishments belonging to this major group in West Bengal. In the City of Calcutta alone there are 17.22 per cent of such establishments.

The major group 37 relates to machinery (all kinds other than transport) and electrical equipment. The total number of establishments in this major group is 2,811. The City of Calcutta contains 73.82 per cent of these establishments. The Calcutta-Howrah Industrial Region contains 89.79 per cent of all the establishments in this group.

The major group 38 relates to transport equipment and includes the manufacture of animal drawn and hand drawn transport vehicles and equipments in addition to the more modern type of transport equipments like locomotives, motor vehicles and ships and boats and aeroplanes. The establishments manufacturing transport equipments like animal drawn and hand drawn vehicles naturally outnumber the establishments making locomotives etc., and therefore the distribution of the establishments belonging to this major group does not truly reflect the importance of a particular region as the manufacturing centre of the transport equipments like locomotives. There are 6,440 establishments in this major group, 25.16 per cent of which are located in the City of Calcutta. The Calcutta-Howrah Industrial Region contains 41.74 per cent of such establishments.

The major group 39 relates to all miscellaneous manufacturing industries not elsewhere classified. There are 15,182 establishments in this major group. 40.94 per cent of the establishments are located in the City of Calcutta and 55.85 per cent in the Calcutta-Howrah Industrial Region.

Of the 157,021 establishments entered in the House-lists in October 1960, 28.57 per cent belong to the major group 20, 0.99 per cent to the major group 21, 3.32 per cent to the major group 22, 14.36 per cent to the major group 23, 0.22 per cent to the major group 24, 0.10 per cent to the major group 25, 0.73 per cent to the major group 26, 9.01 per cent to the major group 27, 4.15 per cent to the major group 28, 0.30 per cent to the major group 29, 2.01 per cent to the major group 30, 2.48 per cent to the major group 31, 0.24 per cent to the major group 32, 1.30 per cent to the major group 33, 1.21 per cent to the major group 34, 3.65 per cent to the major group 35, 11.80 per cent to the major group 36, 1.79 per cent to the major group 37, 4.10 per cent to the major group 38 and 9.67 per cent of the establishments belong to the major group 39. It would certainly have been interesting to calculate similar percentage

in respect of each of the major groups with reference to the persons employed but as the employment statistics are not unfortunately, full and comprehensive, such analysis would serve no useful purpose. Such analysis has, therefore, got to be postponed for the General Report on the Census, in which the B-Series Tables will be discussed.

It is now time to examine the nature of the industrial establishments in each of the districts separately. The district of Darjeeling contains 2,387 establishments of which 338 use power-driven machinery of some kind. 210 of the 338 establishments using power-driven machinery, use machinery run on electricity, liquid fuel provides the source of energy in 109 establishments, in 15, coal, wood or bagasse works the machines and 4 establishments use machinery which is moved by agents other than electricity, coal, wood or bagasse or liquid fuel. The number of establishments run on human or animal power is 2,049. The major group 20 contains the largest number (868) of establishments although the tea-industry acts as the mainspring of all other industrial activities. The number of establishments in the major group 21 which includes the processing of tea is only 137 but it must be remembered that the tea-industry employs many times the number of persons in the plantations than in the factories. Moreover, a tea-factory employs many more men than an average establishment in the major group 20. It is however not possible to institute a comparison between the industries in the two major groups 20 and 21 because statistics about employment are not available in respect of quite a number of the establishments in each of these major groups. Other important industries in the district are those belonging to the major groups 27, 28, 31, 36, 38 and 39. There are 454 establishments in major group 27, 70 establishments in major group 28, 145 establishments in major group 31, 259 establishments in major group 36, 123 establishments in major group 38 and there are 191 establishments in major group 39. The major groups 20, 21, 27, 28, 31, 36, 38 & 39 between them, account for 94.13 per cent of all the industrial establishments in the district. The important minor groups in these major groups are 200, 209, 217, 273, 280, 281, 311, 369, 384, 388 and 393.

There are 3,648 establishments in the district of Jalpaiguri of which 63 utilize machinery run on electricity, 314 use machinery run on liquid fuel, 4 use machinery run on coal, wood or bagasse, 4 use machinery run on other sources of energy and in 3,263 establishments, no power-driven machinery of any kind are used. There are 1,715 establishments in the major group 20, 163, establishments in the major group 21, 79 establishments

in the major group 22, 483 establishments in the major group 27, 137 establishments in the major group 28, 140 establishments in the major group 36, 310 establishments in the major group 38 and 322 establishments in the major group 39. These eight major groups jointly account for 91.94 per cent of all the industrial establishments in the district. In the major group 20, the largest number of establishments is in the minor group 200 which relates to the production of rice, *atta*, flour etc., by milling, dehussing or processing. There are 1,243 establishments in this minor group. In the major group 21, the minor group 217 relating to the processing of tea in factories accounts for 151 establishments. In the major group 27, the tailoring establishments accounts for 481 out of the 483 establishments. Industries belonging to the minor group 369 account for 97 out of the 140 establishments in the major group 36. In the major group 38, the repairing of bicycles and tricycles account for 230 establishments. The manufacture of jewellery, silverware and wares using gold and other precious metals similarly accounts for 234 of the establishments in the major group 39.

The district of Cooch Behar contains 3,684 establishments of which 57 use machinery run with electricity, 93 use machinery run on liquid fuel, 2 use machinery run on coal, wood or bagasse and in 3,532 establishments, there are no power-driven machinery. 2,038 establishments belong to the major group 20, 72 establishments belong to the major group 22, 335 establishments belong to the major group 23, 258 establishments belong to the major group 27, 102 establishments belong to the major group 28, 117 establishments belong to the major group 35, 186 establishments belong to the major group 36, 192 establishments belong to the major group 38 and 291 establishments belong to the major group 39. These nine major groups, between them, account for 97.48 per cent of all the industrial establishments in the district. The important minor groups are 200, 207, 209, 220, 235, 273, 288, 350, 369, 388 and 393.

There are 7,863 establishments in West Dinajpur of which machinery run on electricity are used in 37 establishments, those run on liquid fuel are used in 126 establishments, those run on coal, wood or bagasse are used in 20 establishments and in 7,680 establishments no power-driven machinery of any kind are used. 6,063 establishments belong to the major group 20, 98 establishments belong to the major group 22, 268 establishments belong to the major group 23, 283 establishments belong to the major group 27, 81 establishments to the major group 28, 218 establishments to the major group 35, 269 establishments belong to the major group 36, 178 establishments belong to the major group 38 and 265 establish-

ments belong to the major group 39. These nine major groups between them account for 98.22 per cent of the establishments. The important industries are those belonging to the minor groups 200, 207, 209, 220, 235, 273, 281, 350, 369, 388 and 393. There is one tea-estate in the district.

There are 5,354 industrial establishments in the district of Malda of which 32 use machinery run on electricity, 77 use machinery run on liquid fuel, 3 use machinery run on coal, wood or bagasse and in 5,242 establishments, there are no power-driven machinery of any kind. 1,017 establishments belong to the major group 20, 153 establishments belong to the major group 22, 2,499 establishments belong to the major group 23, 104 establishments belong to the major group 26, 135 establishments belong to the major group 27, 267 establishments belong to the major group 28, 133 establishments belong to the major group 31, 183 establishments belong to the major group 35, 395 establishments belong to the major group 36, 123 establishments belong to the major group 38 and 247 establishments belong to the major group 39. These eleven major groups between them account for 98.17 per cent of all the industrial establishments in the district. The important industries in these major groups are those belonging to the minor groups 200, 207, 209, 220, 235, 262, 273, 281, 288, 311, 314, 350, 369, 388, 389 and 393.

There are 8,897 industrial establishments in the district of Murshidabad. 143 of these establishments utilize machines run on electricity, 243 utilize machines run on liquid fuel, 1 utilizes a machine run on coal, wood or bagasse, 2 utilize machines run on other fuels and in 8,489 establishments, there are no power-driven machines of any kind. There are 4,583 establishments in the major group 20, 464 establishments in the major group 22, 936 establishments in the major group 23, 351 establishments in the major group 26, 251 establishments in the major group 27, 166 establishments in the major group 28, 136 establishments in the major group 34, 391 establishments in the major group 35, 719 establishments in the major group 36, 246 establishments in the major group 38 and 492 establishments in the major group 39. These eleven major groups jointly account for 98.18 per cent of all the industrial establishments in the district. The important industries, numerically, are those in the minor groups 200, 207, 209, 220, 235, 264, 273, 281, 282, 289, 340, 350, 369, 388, 389, 393 and 399.

There are 7,234 industrial establishments in the district of Nadia. In 277 establishments machines run on electricity are used, in 171 establishments machines run on liquid fuel are used and in 6,786 establishments, no power-driven machines are used. There are 1,182 establishments in the

major group 20, 170 establishments in the major group 22, 3,199 establishments in major group 23, 286 establishments in major group 27, 146 establishments in major group 28, 252 establishments in major group 35, 976 establishments in major group 36, 283 establishments in major group 38 and 503 establishments in major group 39. These nine major groups jointly account for 96.72 per cent of all the industrial establishments in the district. The numerically important industries are those belonging to the minor groups 200, 207, 209, 220, 235, 273, 281, 340, 350, 355, 365, 369, 388, 389, 393, and 399.

There are 21,357 industrial establishments in the district of 24-Parganas. In 2,063 establishments, machines run on electricity are used, in 949 establishments, the machines used are run on liquid fuel, in 45 establishments, the machines run on coal, wood or bagasse and in 19 establishments something other than electricity coal, wood or bagasse and liquid fuel provide the power for driving the machines. In this district, 13.08 per cent of the total establishments in West Bengal using electrically driven machines and 13.27 per cent of the total establishments using liquid fuel driven are situated.

There are 8,999 establishments in the major group 20, 118 establishments in the major group 21, 926 establishments in the major group 22, 1,353 establishments in the major group 23, 73 establishments in the major group 24, 2,831 establishments in the major group 27, 561 establishments in the major group 28, 118 establishments in the major group 30, 286 establishments in the major group 31, 220 establishments in the major group 33, 519 establishments in the major group 34, 453 establishments in the major group 35, 1,876 establishments in the major group 36, 278 establishments in the major group 37, 842 establishments in the major group 38 and 1,840 establishments in the major group 39. Thus there are significant numbers of establishments in 16 out of the 20 major groups. This shows the diversity in the industrial sector as may be expected in an industrially advanced district like 24-Parganas. These sixteen major groups jointly account for 99.70 per cent of all the industrial establishments in the district. The numerically important industries are those in the minor groups 200, 205, 207, 209, 212, 216, 220, 234, 235, 241, 271, 273, 280, 281, 282, 302, 310, 311, 314, 335, 336, 337, 340, 350, 355, 365, 367, 368, 369, 370, 372, 373, 375, 377, 378, 379, 384, 388, 389, 390, 391, 392, 393, 394, 395, 396 and 399.

There are 32,937 industrial establishments in the City of Calcutta. 8,892 establishments use machines run on electricity, 48 establishments use machines run on liquid fuel, 146 establishments use machines run on coal, wood or bagasse and 276 establishments use machines which

are driven by sources of power other than electricity, liquid fuel and coal, wood or bagasse. In 23,575 establishments, no power-driven machines are used. Of the total number of industrial establishments in West Bengal using machines run on electricity, Calcutta contains 56.36 per cent. There are 2,991 establishments in major group 20, 114 establishments in major group 21, 1,043 establishments in major group 22, 330 establishments in major group 23, 97 establishments in major group 25, 5,068 establishments in major group 27, 2,898 establishments in major group 28, 425 establishments in major group 29, 2,431 establishments in major group 30, 2,166 establishments in major group 31, 256 establishments in major group 32, 1,142 establishments in the major group 33, 121 establishments in major group 34, 728 establishments in major group 35, 3,190 establishments in major group 36, 2,075 establishments in major group 37, 1,620 establishments in major group 38, and 6,216 establishments in major group 39. There are thus appreciable numbers of establishments in 18 out of the 20 major groups. This clearly demonstrates the pre-eminence of Calcutta in the industrial sector, among all the districts of the State. These eighteen major groups between them account for 99.92 per cent of all the industrial establishments in the City. The numerically important industries are those in the minor groups 200, 205, 207, 209, 214, 216, 220, 237, 255, 271, 272, 273, 274, 277, 278, 279, 280, 281, 282, 284, 286, 287, 288, 289, 292, 301, 302, 303, 310, 311, 313, 314, 320, 323, 330, 331, 335, 336, 337, 339, 340, 343, 350, 354, 355, 357, 364, 365, 367, 368, 369, 370, 372, 373, 375, 377, 378, 379, 384, 388, 389, 390, 391, 392, 393, 394, 395, 396 and 399.

There are 10,941 industrial establishments in the district of Howrah. Electrically driven machines are used in 2,228 establishments. 687 establishments use machines run on liquid fuel, 55 establishments use machines run on coal, wood or bagasse and in 20 establishments, the source of power is provided by something other than electricity, liquid fuel or coal, wood or bagasse. In 7,951 establishments, no power-driven machines are used. In this district, are situated 14.12 per cent of all establishments which use electrically driven machines.

There are 1,714 establishments in the major group 20, 355 establishments in the major group 22, 651 establishments in the major group 23, 1,579 establishments in the major group 27, 555 establishments in the major group 28, 119 establishments in the major group 30, 264 establishments in the major group 31, 168 establishments in the major group 33, 379 establishments in the major group 34, 489 establishments in the major group 35,

2,879 establishments in the major group 36, 173 establishments in the major group 37, 463 establishments in the major group 38 and 993 establishments in the major group 39. There are, thus, appreciable numbers of establishments in 14 out of the 20 major groups. These fourteen major groups, between them, account for 98.54 per cent of all the industrial establishments in the district. The important industries are those in the minor groups 200, 205, 207, 209, 220, 235, 241, 272, 273, 280, 281, 282, 288, 289, 302, 311, 311, 331, 337, 340, 350, 364, 365, 366, 367, 368, 369, 379, 381, 384, 388, 392, 393 and 399.

There are 10,679 industrial establishments in the district of Hooghly. In 585 establishments, electrically driven machines are used. Machines run on liquid fuel are used in 708 establishments, those run on coal, wood or bagasse are used in 44 establishments. In 3 establishments machines are driven by sources of energy other than electricity, liquid fuel, or coal, wood or bagasse. In 9,339 establishments, no power-driven machines are used.

The major group 20 contains 2,049 establishments, the major group 22 contains 206 establishments, the major group 23 contains 3,822 establishments, the major group 27 contains 516 establishments, the major group 28 contains 353 establishments, the major group 31 contains 180 establishments, the major group 34 contains 216 establishments, the major group 35 contains 464 establishments, the major group 36 contains 1,195 establishments, the major group 38 contains 513 establishments and the major group 39 contains 814 establishments. These eleven major groups jointly account for 96.71 per cent of all the industrial establishments in the district.

The important industries are in the minor groups 200, 205, 207, 209, 220, 235, 241, 244, 273, 280, 281, 282, 302, 311, 340, 350, 365, 368, 369, 384, 388, 393, and 399. The factory of the Hind Motor Company which manufactures the Hindusthan Ambassador motor cars, is situated in this district.

There are 10,088 industrial establishments in the district of Burdwan. In 716 establishments, electrically driven machines are used. 619 establishments use machines run on liquid fuel, 71 use machines run on coal, wood or bagasse and in 25 establishments, the machines are run on something other than electricity, liquid fuel or coal, wood or bagasse. In 8,657 establishments, no power-driven machines are used.

There are 2,875 establishments in the major group 20, 274 establishments in the major group 21, 363 establishments in the major group 22, 1,667 establishments in the major group 23, 669 estab-

lishments in the major group 27, 167 establishments in the major group 28, 79 establishments in the major group 30, 133 establishments in the major group 31, 62 establishments in the major group 33, 114 establishments in the major group 34, 596 establishments in the major group 35, 1,196 establishments in the major group 36, 80 establishments in the major group 37, 580 establishments in the major group 38 and 801 establishments in the major group 39. There are industrial establishments in appreciable numbers in 15 out of the 20 major groups. The 15 major groups jointly account for 95.72 per cent of all the industrial establishments in the district.

The important industries are those in the minor groups 200, 204, 205, 207, 209, 213, 220, 235, 273, 280, 281, 288, 289, 302, 311, 336, 340, 350, 365, 368, 369, 378, 384, 388, 389, 392, 393, and 399. This list, however, is not quite revealing because the manufacture of iron and steel (360), the manufacture including smelting, refining of non-ferrous metals and alloys in basic forms (361), the manufacture, assembly and repairing of locomotives (380) and the manufacture of wagons, coaches etc. (381) do not occur in it although the famous Iron and Steel Works of the Indian Iron and Steel Co., the factory of the Indian Aluminium Co., the Chittaranjan Locomotives Works and the factory of the Indian Standard Wagon Co., are all situated in the district. But as numerically *i.e.*, by the number of establishments, these industries did not qualify for inclusion in the list, they were omitted. The list of industries by minor groups should obviously be amended so as to include the minor groups 360, 361, 380 and 381 so as to be truly representative.

There are 5,554 industrial establishments in the district of Birbhum. 130 of the 5,554 establishments use electrically driven machines. In 206 establishments machines run on liquid fuel are used and in 55 establishments coal, wood or bagasse provide the source of energy. In 1 establishment, a machine is used which is run on something other than electricity, liquid fuel, coal, wood or bagasse. In 5,162 establishments no power-driven machine is used.

There are 1,347 establishments in the major group 20, 176 establishments in the major group 21, 239 establishments in the major group 22, 1,315 establishments in the major group 23, 334 establishments in the major group 26, 90 establishments in the major group 27, 231 establishments in the major group 28, 328, establishments in the major group 35, 866 establishments in the major group 36, 162 establishments in the major group 38, and 360 establishments in the major group 39. There are appreciable numbers of establishments in these eleven major groups, which between

them, account for 98.09 per cent of all the industrial establishments in the district.

The important minor groups are 200, 205, 207, 209, 213, 220, 235, 264, 273, 281, 282, 288, 289, 302, 350, 365, 369, 388, 389, 393, and 399.

There are 8,215 industrial establishments in the district of Bankura. In 119 establishments, electrically driven machines are used. 281 establishments use machines run on liquid fuel and 15 use machines run on coal, wood or bagasse. In 7,800 establishments no power-driven machines are used.

There are 1,767 establishments in the major group 20, 134 establishments in the major group 21, 128 establishments in the major group 22, 2,258 establishments in the major group 23, 294 establishments in the major group 26, 301 establishments in the major group 27, 132 establishments in the major group 28, 123 establishments in the major group 31, 491 establishments in the major group 35, 1,688 establishments in the major group 36, 201 establishments in the major group 38 and 621 establishments in the major group 39. There is an appreciable number of establishments in each of these twelve major groups. These major groups jointly account for 99.06 per cent of all the industrial establishments in the district. The important minor groups are 200, 206, 207, 209, 220, 235, 264, 273, 281, 288, 311, 350, 365, 369, 388, 393 and 399.

There are 14,531 industrial establishments in the district of Midnapore. Out of these, only 158 establishments utilize electrically driven machines. Another 2,431 establishments use machines run on liquid fuel. In 54 establishments coal, wood or bagasse provides the source of energy and in 2 other establishments the machines are run on something other than electricity, liquid fuel, coal, wood or bagasse. In 11,886 establishments no power-driven machines are used.

There are 4,895 establishments in the major group 20, 180 establishments in the major group 21, 574 establishments in the major group 22, 3,027 establishments in the major group 23, 800 establishments in the major group 27, 343 establishments in the major group 28, 94 establishments in the major group 30, 182 establishments in the major group 31, 221 establishments in the major group 33, 147 establishments in the major group 34, 764 establishments in the major group 35, 1,792 establishments in the major group 36, 517 establishments in the major group 38 and 918 establishments in the major group 39. There are appreciable numbers of establishments in these fourteen major groups and between them, they account for 99.47 per cent of all the industrial establishments in the district. The impor-

5 RGI/63

tant minor groups are 200, 204, 205, 207, 209, 213, 220, 235, 273, 281, 288, 289, 302, 311, 333, 337, 340, 350, 365, 369, 384, 388, 393, 394 and 399.

There are 3,652 industrial establishments in the district of Purulia. In only 67 establishments, electrically driven machines are used. 69 establishments use liquid fuel to run their machines and only in 3 establishments, the machines are run on coal, wood or bagasse. There are no power-driven machines in 3,513 establishments.

There are 758 establishments in the major group 20, 323 establishments in the major group 22, 792 establishments in the major group 23, 135 establishments in the major group 27, 115 establishments in the major group 28, 63 establishments in the major group 31, 65 establishments in the major group 34, 193 establishments in the major group 35, 703 establishments in the major group 36, 87 establishments in the major group 38 and 308 establishments in the major group 39. There are appreciable numbers of establishments in these eleven major groups and these major groups, between them, account for 96.99 per cent of all the industrial establishments in the district. The important industry in the district is concerned with the manufacture of seed-lac and button-lac but in the absence of a suitable code for this industry in the Standard Industrial Classification, it was assigned the code 399 which relates to the manufacture and repair work of goods not assignable to any other group. It is understood that in Bihar also this code 399 has been assigned to the seed-lac and button-lac manufacturing industry.

The important minor groups are 200, 207, 209, 213, 220, 235, 264, 273, 288, 311, 340, 350, 365, 369, 388, 393 and 399. For Purulia, the minor group 264 stands for Tussar Weaving in handlooms.

The Northern Industrial Region contains 3,106 industrial establishments. In 195 of these establishments, electrically driven machines are used. In 292 establishments, the machines are run on liquid fuel and in 17 establishments, coal, etc., provide the source of energy. In 4 establishments, the machines are run on something other than electricity, liquid fuel or coal etc. There are no power driven machines in 2,598 establishments.

There are 1,265 establishments in the major group 20, 244 establishments in the major group 21, 35 establishments in the major group 22, 499 establishments in the major group 27, 126 establishments in the major group 28, 24 establishments in the major group 30, 136 establishments in the major group 31, 26

establishments in the major group 33, 195 establishments in the major group 36, 33 establishments in the major group 37, 221 establishments in the major group 38 and 241 establishments in the major group 39. These twelve major groups account for 98.04 per cent of all the industrial establishments in this Region.

The most important industry of this Region is tea but the number of establishments manufacturing tea does not indicate sufficiently the importance of this industry. The reason for this apparent anomaly lies in the fact that the number of persons employed in each tea-factory is rather large. Moreover, many more men are employed in the tea-plantations than in the tea-factories. All the other industries may be said to be ancillary to or dependent on the tea-industry in this Region. This Region also contains the town of Siliguri which is an important centre of trade and commerce linking West Bengal with Bihar and Uttar Pradesh on the one side and Assam, Sikkim and Bhutan on the other.

The important minor groups are 200, 204, 205, 209, 217, 220, 273, 280, 281, 288, 302, 311, 369, 384, 388, 392, 393 and 399.

There are 2,148 establishments in the Asansol Industrial Region. The number is deceptive because although the most important economic activity of this Region is the mining of coal, the coal mines could not be taken into account in counting the industrial establishments as coal mining is not an industry in the narrow sense of the term used in the E-III Table. It should be remembered that any economic activity to which any of the codes in Divisions 2 and 3 can not be assigned, is not an industrial activity for the purpose of the E-III Table. As coal mining has been assigned the code 100 in the Standard Industrial Classification, coal mines naturally had to be left out while counting the industrial establishments.

In 387 out of the 2,148 establishments, electrically driven machines are used. 69 establishments use machines run on liquid fuel and 13 establishments use machines run on coal, wood or bagasse. In 5 establishments, machines run on something other than electricity, liquid fuel coal, wood or bagasse, are used.

The major group 20 accounts for 532 establishments, the major group 21, 103 establishments, the major group 22, 125 establishments, the major group 27, 322 establishments, the major group 28, 121 establishments, the major group 30, 39 establishments, the major group 31, 57 establishments, the major group 33, 43 establishments, the major group 34, 41 establishments, the major group 35, 39 establishments, the major group

36, 227 establishments, the major group 37, 45 establishments, the major group 38, 269 establishments and the major group 39 accounts for 147 establishments. These fourteen major groups account for 98.23 per cent of all the industrial establishments in this Region.

The important minor groups are 200, 204, 205, 209, 213, 220, 232 (only one cotton mill), 273, 280, 281, 302, 311, 336, 340, 350, 360, 361 (one aluminium factory), 363, 368, 369, 380, 381 (Indian Standard Wagon Co.), 384, 388, 392, 393 and 399.

The Calcutta-Howrah Industrial Region is the most important industrial region in West Bengal. An examination of the Table at pages 82 and 83 in which the percentage of the industrial establishments in West Bengal, belonging to each major group, that is contained in each of the districts and in each of the three industrial regions, has been shown, should convince any one of the truth of this remark. This region is deficient only in respect of the industries in major groups 20, 21, 23 and 26 and in respect of industries in other major groups, it contains very much more than its proper share.

There are 51,549 industrial establishments in this Region of which electrically driven machines are used in 13,462 establishments. In another 410 establishments liquid fuel is used to drive the machines and in 230 other establishments, coal, wood or bagasse provides the source of energy. 293 establishments were returned as using something other than electricity, liquid fuel and coal, wood or bagasse for driving the machinery. In 37,154 establishments, no power-driven machines of any kind are used. This Region contains 85.33 per cent of all the industrial establishments in West Bengal that use machines run on electricity.

There are 5,772 establishments in the major group 20, 1,607 establishments in the major group 22, 1,291 establishments in the major group 23, 8,766 establishments in the major group 27, 3,902 establishments in the major group 28, 454 establishments in the major group 29, 2,659 establishments in the major group 30, 2,567 establishments in the major group 31, 324 establishments in the major group 32, 1,522 establishments in the major group 33, 670 establishments in the major group 34, 1,265 establishments in the major group 35, 6,472 establishments in the major group 36, 2,524 establishments in the major group 37, 2,688 establishments in the major group 38 and 8,479 establishments in the major group 39. It is thus seen that there is a substantial number of establishments in every major group except major groups 21, 24, 25 and 26. The industries in the

sixteen major groups just enumerated account for 98.86 per cent of all the industrial establishments in the Region.

The important minor groups are 200, 205, 207, 209, 214, 215, 216, 220, 234, 235, 237, 239, 241, 244, 255, 271, 272, 273, 274, 275, 277, 278, 279, 280, 281, 282, 284, 286, 287, 288, 289, 292, 300, 301, 302, 303, 310, 311, 313, 314, 320, 321, 322, 323, 330, 331, 334, 335, 336, 337, 339, 340, 350, 354, 355, 357, 363, 364, 365, 366, 367, 368, 369, 370, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 388, 390, 391, 392, 393, 394, 395 and 399.

Out of the 157,021 industrial establishments in West Bengal only 15.17 per cent use power-driven machinery of some kind or another; the remaining 84.83 per cent of the establishment do not use any power-driven machinery. The products of the latter establishments are the results of human or animal labour. The dehusking of rice in "dhenkis" or the weaving of cloth, cotton or silk on handlooms may be cited as examples of industries run by the labour of man and the production of mustard oil in "ghanis" may be cited as an example of industries run on animal power.

Of the 23,816 industrial establishments which use power-driven machinery of some kind, 42.13 per cent belong to the major group 20 and the remaining 57.87 per cent are distributed as follow among the remaining major groups:—2.01 per cent to the major group 21, 0.03 per cent to the major group 22, 1.23 per cent to the major group 23, 0.42 per cent to the major group 24, 0.03 per cent to the major group 25, 0.03 per cent to the major group 26, 3.05 per cent to the major group 27, 3.90 per cent to the major group 28, 0.34 per cent to the major group 29, 5.80 per cent to the major group 30, 0.74 per cent to the major group 31, 0.81 per cent to the major group 32, 3.75 per cent to the major group 33, 0.88 per cent to the major group 34, 1.09 per cent to the major group 35, 14.31 per cent to the major group 36, 8.52 per cent to the major group 37, 4.71 per cent to the major group 38 and 6.22 per cent of the establishments using power-driven machinery belong to the major group 39.

It must be remembered in this connection that the above analysis can not be expected to throw any light on the proportion of the total power consumed in the industrial establishments by the industries belonging to a particular major group because the consumption of energy by the different machines used in the different types of industrial establishments is bound to vary widely from one establishment to another. Even in case of the establishments belonging to the same

minor group, the consumption of energy will depend on the sizes and number of the machines used. But one thing emerges clearly out of this analysis, which is that in West Bengal, the use of power-driven machinery has spread to the greatest extent among the food processing industries in the major group 20.

The position in regard to the individual districts can not be very different but for the sake of completeness, similar analysis has been done in respect of each of the districts in the paragraphs that follow.

Of the 2,387 industrial establishments in the district of Darjeeling, only 14.16 per cent use power-driven machinery. Out of the 338 establishments using power-driven machinery, 25.74 per cent belong to the major group 20, 37.87 per cent belong to the major group 21, 5.03 per cent to the major group 28, 3.25 per cent to the major group 30, 2.96 per cent to the major group 36, 7.69 per cent to the major group 37, 12.72 per cent to the major group 38 and 2.37 per cent of the establishments using power-driven machines, belong to the major group 39. There are no establishments using power-driven machines in the major groups 22, 23, 24, 31, 34 and 35 and there are no industrial establishments in the major groups 26 and 29. The numbers of establishments in the other major groups, using power-driven machines, are negligible.

In the district of Jalpaiguri, 385 out of the total number of 3,648 industrial establishments, use power-driven machinery of some kind. This means that the establishments using power-driven machinery form 10.55 per cent of the total number of industrial establishments. The establishments in the major group 20 account for 33.51 per cent of all the establishments using power-driven machinery. The major group 21 claims another 41.04 per cent, the major group 28 another 10.91 per cent, the major group 37 another 3.38 per cent, the major group 38 another 6.23 per cent and the major group 39 accounts for another 2.34 per cent of the establishments using power-driven machines. There are no establishments using power-driven machines in the major groups 22, 23, 24, 27, 29, 31, 33 and 34 and there are no industrial establishments in the major groups 25 and 26. The numbers of establishments using power-driven machines in the other major groups are not significant.

There are 3,684 industrial establishments in the district of Cooch Behar. Out of these, in 152 or only 4.13 per cent of the total number of establishments are power-driven machines used. Out of these 152 establishments, 81.56 per cent belong to the major group 20, 1.97 per cent to

the major group 21, another 1.97 per cent to the major group 24, another 2.63 per cent to the major group 28, another 3.29 per cent to the major group 37 and another 5.92 per cent to the major group 38. There are no establishments in the major group 29 and there are no establishments using power-driven machines in major groups 22, 25, 26, 27, 31, 32, 33, 34, 35 and 36.

In 183 or 2.33 per cent of the industrial establishments in the district of West Dinajpur are power-driven machines used. The major group 20 alone claims 92.35 per cent of such establishments. Of the remaining establishments using power-driven machines, 3 are in the major group 21, 2 are in the major group 28, 1 is in the major group 30, 2 are in the major group 37, 3 are in the major group 38 and 3 are in the major group 39.

In the district of Malda, 112 or 2.09 per cent of the industrial establishments only, use power-driven machines. 67 or 59.82 per cent of such establishments belong to the major group 20, 5 or 4.46 per cent belong to the major group 21, another 5 or 4.46 per cent belong to the major group 28, 3 or 2.68 per cent belong to the major group 30, 1 belongs to the major group 34, 6 or 5.36 per cent belong to the major group 38 and 2 belong to the major group 39.

There are 8,897 establishments in the district of Murshidabad. Out of these, 408 or 4.59 per cent use power-driven machines of some kind. The major group 20 alone accounts for 368 or 90.20 per cent of such establishments. The major group 21 accounts for 8 such establishments; the major group 23, 2 such establishments; the major group 28, 6 such establishments; the major group 30, 5 such establishments; the major group 32, 1 such establishment; the major group 36, 3 such establishments; the major group 37, 3 such establishments; the major group 38, 7 such establishments; and the major group 39 accounts for 5 such establishments.

In 448 or 6.19 per cent of all the industrial establishments in Nadia, are power-driven machines used. The major group 20 alone accounts for 74.11 per cent of such establishments. The major group 21 contains 1.34 per cent of all establishments using power-driven machines, the major group 23 contains 7.14 per cent; the major group 24 contains 0.22 per cent; the major group 27 contains 1.12 per cent; the major group 28 contains 2.68 per cent; the major group 29 contains 0.45 per cent; the major group 30 contains 1.56 per cent; the major group 33 contains 0.89 per cent; the major group 34 contains 0.45 per cent; the major group 36 contains 4.46 per cent;

the major group 37 contains 1.34 per cent; the major group 38 contains another 1.34 per cent and the major group 39 contains 2.90 per cent of the establishments using power-driven machines.

In the district of 24-Parganas, power-driven machines are used in 3,076 industrial establishments. This means that in 14.40 per cent of all the industrial establishments in the district, power-driven machines are used. There are 50.32 per cent of the establishments using power-driven machines in the major group 20; 1.24 per cent in the major group 21; 0.07 per cent in the major group 22, 3.67 per cent in the major group 23; 1.30 per cent in the major group 24; 0.13 per cent in the major group 25; 0.07 per cent in the major group 26; 0.72 per cent in the major group 27; 2.76 per cent in the major group 28; 0.52 per cent in the major group 29; 1.17 per cent in the major group 30; 1.76 per cent in the major group 31; 0.46 per cent in the major group 32; 4.06 per cent in the major group 33; 1.95 per cent in the major group 34; 1.04 per cent in the major group 35; 9.85 per cent in the major group 36; 7.05 per cent in the major group 37; 2.63 per cent in the major group 38 and there are 9.23 per cent of the establishments in which power-driven machines are used, in the major group 39.

In the City of Calcutta, there are 9,362 industrial establishments in which power-driven machines are used. These establishments form 28.42 per cent of all the industrial establishments in the City. Out of these 9,362 establishments, 10.53 per cent are in the major group 20; 0.76 per cent are in the major group 21; 0.03 per cent are in the major group 22; 0.71 per cent are in the major group 23; 0.11 per cent are in the major group 24; 0.04 per cent are in the major group 26; 6.95 per cent are in the major group 27; 5.67 per cent are in the major group 28; 0.61 per cent are in the major group 29; 13.01 per cent are in the major group 30; 1.24 per cent are in the major group 31; 1.25 per cent are in the major group 32; 6.75 per cent are in the major group 33; 0.75 per cent are in the major group 34; 2.14 per cent are in the major group 35; 15.95 per cent are in the major group 36; 16.59 per cent are in the major group 37; 7.64 per cent are in the major group 38 and 9.27 per cent are in the major group 39.

Power-driven machines are used in 2,990 industrial establishments in the district of Howrah. These 2,990 establishments form 27.33 per cent of all the industrial establishments in the district. 29.26 per cent of these 2,990 establishments are in the major group 20; 0.27 per cent are in the major group 21; 0.03 per cent are in the major group 22; 1.37 per cent are in the major group

23; 0.94 per cent are in the major group 24; 0.03 per cent are in the major group 25; 1.14 per cent are in the major group 27; 2.01 per cent are in the major group 28; 0.07 per cent are in the major group 29; 1.40 per cent are in the major group 30; 0.13 per cent are in the major group 31; 0.70 per cent are in the major group 32; 2.91 per cent are in the major group 33; 0.54 per cent are in the major group 34; 0.57 per cent are in the major group 35; 47.33 per cent are in the major group 36; 3.48 per cent are in the major group 37; 4.11 per cent are in the major group 38 and 3.71 per cent are in the major group 39.

There are 1,340 industrial establishments in the district of Hooghly in which power-driven machinery is used. These 1,340 establishments form 12.55 per cent of all the industrial establishments in the district. 71.42 per cent of these 1,340 establishments are in the major group 20; 0.90 per cent are in the major group 21; 2.39 per cent are in the major group 23; 1.27 per cent are in the major group 24; 0.07 per cent are in the major group 25; 0.15 per cent are in the major group 26; 0.60 per cent are in the major group 27; 2.46 per cent are in the major group 28; 0.15 per cent are in the major group 29; 1.49 per cent are in the major group 30; 0.07 per cent are in the major group 31; 0.60 per cent are in the major group 32; 1.87 per cent are in the major group 33; 2.98 per cent are in the major group 34; 0.30 per cent are in the major group 35; 3.58 per cent are in the major group 36; 1.87 per cent are in the major group 37; 2.16 per cent are in the major group 38 and 5.67 per cent are in the major group 39.

Power-driven machines are used in 1,431 industrial establishments in the district of Burdwan. These establishments form 14.19 per cent of all the industrial establishments in the district. 72.61 per cent of these 1,431 establishments are in the major group 20. One thing, however, requires to be pointed out in this connection. Although power-driven lifts, pumps, etc., have to be used in coal-mining, which is the principal industry in the district, the collieries could not be taken into account while enumerating the industrial establishments for the E-III Table because the code number assignable to coal-mining is not within Division 2 or 3 of the Standard Industrial Classification. In going through this paragraph, this aspect of the subject should never be lost sight of. 1.61 per cent of the establishments using power-driven machines are in the major group 21; 0.07 per cent are in the major group 23; another 0.07 per cent are in the major group 24; another 0.07 per cent are in the major group 27; 5.66 per cent are in the major group 28; 0.14 per cent are in the major group 29; 0.98 per cent are in the major group

30; 1.40 per cent are in the major group 32; 0.56 per cent are in the major group 33; 0.84 per cent are in the major group 34; 0.35 per cent are in the major group 35; 5.31 per cent are in the major group 36; 3.56 per cent are in the major group 37; 3.63 per cent are in the major group 38 and 3.14 per cent are in the major group 39.

Industrial establishments using power-driven machines form 7.06 per cent of the total number of industrial establishments in the district of Birbhum. There are 392 such establishments. The major group 20 alone accounts for 91.58 per cent of all the establishments in which power-driven machines are used. 2.81 per cent of such establishments are in the major group 28; 1.53 per cent are in the major group 30 and 2.04 per cent are in the major group 36. There is only 1 establishment using power-driven machines in the major group 21, 1 in the major group 33, 3 in the major group 34, 1 in the major group 37 and 2 in the major group 39. There are no establishments using power-driven machines in any other major group.

There are 415 industrial establishments in the district of Bankura in which power-driven machines are used. These 415 establishments form 5.05 per cent of all the industrial establishments in the district. 91.81 per cent of these 415 establishments are in the major group 20; 1.45 per cent are in the major group 28; 1.93 per cent are in the major group 36 and 1.45 per cent are in the major group 39. There is only 1 establishment using power-driven machinery in the major group 21; 3 in the major group 23; 1 in the major group 27; 5 in the major group 30 and 1 in the major group 37. There are no establishments using power-driven machinery in the other major groups.

In 2,645 industrial establishments in the district of Midnapore, power-driven machines are used. The 2,645 establishments form 18.20 per cent of all the industrial establishments in the district. 95.27 per cent of these 2,645 establishments are in the major group 20. There are 14 of these establishments in the major group 21, 2 in the major group 23, 1 in the major group 27, 24 in the major group 28, 9 in the major group 30, 7 in the major group 32, 5 in the major group 33, 3 in the major group 34, 7 in the major group 36, 20 in the major group 37, 11 in the major group 38 and 22 in the major group 39. There are no establishments using power-driven machines in the other major groups.

There are 139 industrial establishments in the district of Purulia in which power-driven machines are used. These form 3.81 per cent of all the industrial establishments in the district. Out

of the 139 establishments in which power-driven machines are used 49.64 per cent are in the major group 20. Another 19.42 per cent are in the major group 39 into which the lac-factories have been classified and the major groups 28 and 36 account for another 7.19 per cent each. There are 2 establishments using power-driven machines in the major group 30, 1 in the major group 31, 2 in the major group 32, 2 in the major group 33, 3 in the major group 34, 1 in the major group 35, 3 in the major group 37 and 9 in the major group 38. There are no establishments using power-driven machines in the other major groups.

In the Northern Industrial Region, there are 508 industrial establishments in which power-driven machines are used. These form 16.36 per cent of all the industrial establishments in this Region. The major groups 20, 21, 28, 36, 37, 38 and 39 contain most of the establishments using power-driven machines. 22.64 per cent of the 508 are in the major group 20, 44.88 per cent in the major group 21, 10.04 per cent in the major group 28, 2.36 per cent in the major group 36, 5.51 per cent in the major group 37, 9.06 per cent in the major group 38 and 2.56 per cent in the major group 39. There are 2 establishments using power-driven machines in the major group 27, 8 in the major group 30, 2 in the major group 32 and 3 in the major group 33. There are no establishments using power-driven machines in the other major groups.

The basic industry in the Asansol Industrial Region is coal mining but on account of reasons stated elsewhere, the collieries could not be counted as industrial establishments for preparing the E-III Table. The figures in respect of the Asansol Industrial Region have to be viewed against this background.

There are 474 industrial establishments using power-driven machines in this Region. These 474 establishments form 22.07 per cent of all the industrial establishments in this Region. The major groups 20, 28, 30, 32, 34, 36, 37, 38 and 39 account for most of these establishments in which power-driven machines are used. The major group 20 accounts for 42.41 per cent of these establishments; the major group 28 accounts for 11.60 per cent; the major group 30 accounts for 2.53 per cent; the major group 32 accounts for 3.80 per cent; the major group 34 accounts for 2.11 per cent; the major group 36 accounts for 10.76 per cent; the major group 37 accounts for 7.17 per cent; the major group 38 accounts for 7.17 per cent and the major group 39 accounts for 7.38 per cent of such establishments. There are 9 establishments in the major group 21, in which power-driven machines are used, 1 establishment in the major group 23, 1 establishment

in the major group 24, 1 establishment in the major group 29, 7 establishments in the major group 33 and 5 establishments in the major group 35. There are no establishments using power-driven machines in the other major groups.

Power-driven machines are used in 14,395 industrial establishments in the Calcutta-Howrah Industrial Region. These 14,395 establishments form 27.92 per cent of all the industrial establishments located in this Region. These 14,395 establishments are found spread over all the 20 major groups but in the major groups 22, 25 and 26, the numbers of the establishments using power-driven machines are very small; almost negligible. Most of these 14,395 establishments are accounted for by the other 17 major groups. These industrial establishments are distributed as follows among the 17 major groups, excluding the major groups 22, 25 and 26:—15.42 per cent in the major group 20; 0.75 per cent in the major group 21; 1.68 per cent in the major group 23; 0.66 per cent in the major group 24; 4.91 per cent in the major group 27; 4.77 per cent in the major group 28; 0.53 per cent in the major group 29; 9.09 per cent in the major group 30; 1.22 per cent in the major group 31; 1.09 per cent in the major group 32; 5.88 per cent in the major group 33; 1.16 per cent in the major group 34; 1.72 per cent in the major group 35; 22.25 per cent in the major group 36; 13.06 per cent in the major group 37; 6.56 per cent in the major group 38 and 9.12 per cent in the major group 39.

Excluding the police stations that are situated within the cities of Calcutta and Howrah and counting those parts of the police stations of Tollygunge and Garden Reach which are situated outside the City of Calcutta and those parts of the police stations of Bally and Sibpur which are situated outside Howrah City, as separate police stations, it is seen that there are 284 police stations in West Bengal. The police stations are those that actually existed on the 1st March 1961 except for the district of 24-Parganas. Boundaries of several police stations in the district of 24-Parganas were changed by the Notification numbered 3490 P1 dated the 25th August 1962 of the Government of West Bengal. So far as the district of 24-Parganas are concerned, these new police stations have been taken into account. It may be pointed out however, that the boundaries of all the police stations are not affected by this Notification. The number of police stations being so many, it would not be profitable to discuss the E-III Table in respect of each one of them. While analysing the Primary Census Abstract for each police station, it was found that in each of 66 of the 284 police stations, the number of non-agricultural workers was pro-

portionately greater than in the remaining police stations. In each of these 66 police stations, it was also found that the non-agricultural workers formed at least 50 per cent of the total number of workers. 27 of these police stations, together with the cities of Calcutta and Howrah, constitute the Calcutta-Howrah Industrial Region. 15 other police stations among these 66, form the Northern Industrial Region. 11 other police stations form the Asansol Industrial Region, leaving 13 police stations in which there are proportionately more non-agricultural workers. These 13 police stations are (1) English Bazar and (2) Kaliachak in the district of Malda, (3) Farrakka, (4) Shamshirganj, (5) Suti, (6) Raghunathganj and (7) Jiaganj in the district of Murshidabad, (8) Nabadwip and (9) Santipur in the district of Nadia, (10) Burdwan in the district of Burdwan, (11) Kharagpur Town in the district of Midnapore, (12) Purulia Town in the district of Purulia and (13) part of Sibpur Police Station outside Howrah City.

As the E-III Table relates to manufacturing industries, no useful purpose will be served by discussing it for those police stations which are mainly agricultural, i.e., in which the agricultural workers form more than 50 per cent of the total workers. Out of the police stations in which the non-agricultural workers form 50 or more of the total number of workers, it is only in 66 that the percentages of the non-agricultural workers of West Bengal contained in them are more than the percentages of the population of West Bengal contained in them. The characteristics of 53 of these 66 police stations have already been analysed with reference to the E-III Table while discussing the E-III Table in respect of the three industrial regions; namely (1) The Northern Industrial Region, (2) The Calcutta-Howrah Industrial Region and (3) The Asansol Industrial Region. It would be sufficient therefore, to analyse the E-III Table in respect of the remaining 13 police stations.

It is necessary before proceeding further, to point out that the predominance of non-agricultural workers does not necessarily indicate that the police stations concerned is a manufacturing region. The E-III Table relates only to the Divisions 2 and 3 of the Standard Industrial Classification but the workers in Divisions 4, 5, 6, 7, 8 and 9, although they are non-agricultural, do not work in establishments in respect of which the E-III Table has been prepared.

There are 900 establishments in the police station of English Bazar in the district of Malda. 140 of the establishments are in the major group 20, 8 are in the major group 21, 49 are in the

major group 22, 279 are in the major group 23, 1 is in the major group 24, 1 is in the major group 25, 18 are in the major group 26, 31 are in the major group 27, 62 are in the major group 28, 11 are in the major group 30, 10 are in the major group 31, 2 are in the major group 32, 17 are in the major group 34, 20 are in the major group 35, 88 are in the major group 36, 5 are in the major group 37, 69 are in the major group 38 and 89 are in the major group 39. Judging by the number of establishments, the industries in the major groups 23, 20, 31, 36, 38, 28 and 22 would appear to be of importance as revealing the character of the industrial activities in this police station. Cotton weaving in handloom accounts for 275 out of the 279 establishments in the major group 23. In the major group 20, the production of other food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, cocoa, chocolate, toffee, lozenge accounts for 54 establishments closely followed by the production of edible fats and oils (other than hydrogenated oil), which accounts for 45 establishments. The minor group 200 accounts for 20 establishments. The manufacture of jewellery, silverware and wares using gold and other precious metals in major group 39 accounts for 69 establishments. The manufacture of brass and bell metal products and the manufacture of sundry hardwares account for 35 establishments each. The repairing and servicing of bicycles and tricycles and the manufacture and repairing of animal drawn and hand drawn vehicles are important industries in the major group 38. The manufacture of wooden furniture and fixture is the important industry in the major group 28 and the manufacture of *biri* in the major group 22. There are 17 establishments engaged in the manufacture of earthenware and earthen pottery in the major group 35 and 31 establishments engaged in the making of textile garments in the major group 27.

There are 2,329 establishments in the police stations of Kaliachak in the district of Malda. Cotton weaving in handlooms accounts for 1,797 out of the 2,329 establishments. This appears to be the predominant industry in this police station as in the police station of English Bazar. The other important industries are (1) the production of rice, *atta*, flour, etc., by milling, dehusking etc., (21 establishments), (2) the production of edible fats and oils other than hydrogenated oil (35 establishments), (3) the production of food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, chocolate, toffee, lozenge (20 establishments), (4) the manufacture of *biri* (68 establishments), (5) the spinning of silk other than in mills (86 establishments), (6) the making of textile garments (20 establishments), (7) the

manufacture of wooden furniture and fixture (17 establishments), (8) the manufacture of shoes and other leather footwear (16 establishments), (9) the manufacture of bricks and tiles (25 establishments), (10) the manufacture of earthenware and earthen pottery (19 establishments) and (11) the manufacture of sundry hardwares (75 establishments).

There are only 206 establishments in the police station of Farrakka in the district of Murshidabad and so it may not be proper to treat this as a manufacturing region. *Biri* making accounts for 35 establishments, the manufacture of bricks and tiles accounts for another 35 establishments and the manufacture of earthenware and earthen pottery accounts for 90 establishments.

The police station of Shamshirganj in the Murshidabad district contains only 393 establishments. There are 107 establishments engaged in the production of rice, *atta*, flour etc. by milling and dehusking, 73 establishments engaged in the manufacture of *biri*, 128 establishments engaged in the weaving of cotton in handlooms and 31 establishments engaged in the manufacture of sundry hardwares.

There are 284 establishments in the police station of Suti in the Murshidabad district. 94 of these establishments are engaged in the production of rice, *atta*, flour etc. by milling and dehusking, 63 are engaged in the manufacture of *biri*, 18 are engaged in cotton weaving in handlooms, 18 establishments are engaged in the manufacture of earthenware and earthen pottery and 24 establishments are engaged in the manufacture and repair of animal drawn and hand-drawn vehicles.

There are 962 establishments in the police station of Raghunathganj in the Murshidabad district. As many as 504 of them are engaged in the production of rice, *atta*, flour etc., by milling, dehusking. 30 establishments are engaged in the production of food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, cocoa, chocolate, toffee, lozenge, 43 establishments are engaged in the manufacture of *biri*, 37 establishments are engaged in the manufacture of handloom cotton textiles, 152 establishments are engaged in the weaving of silk textile by handloom, 21 establishments are engaged in the manufacture of earthenware and earthen pottery, 49 establishments are engaged in the manufacture of sundry hardwares and 22 establishments are engaged in the manufacture of jewellery and articles from gold and silver.

There are only 120 establishments in the police station of Jiaganj in the Murshidabad district and so it may not be proper to classify it as a manufacturing region. There are 20 establish-

ments engaged in the production of rice, *atta*, flour etc., 27 establishments are engaged in the production of silk textiles in handlooms and 16 establishments are engaged in the manufacture of jewellery and articles from gold and silver.

In the police station of Nabadwip in the district of Nadia, there are 1,207 establishments. The predominant industry is the weaving of cotton textiles in handlooms which accounts for 662 establishments. Other important industries are (1) the production of rice, *atta*, flour etc. (28 establishments), (2) the production of food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi*, cocoa, chocolate, toffee, lozenge (43 establishments), (3) the manufacture of *biri* (20 establishments), (4) the making of textile garments (33 establishments), (5) the manufacture of earthenware and earthen pottery (24 establishments), (6) the manufacture of earthen image, busts and statues (17 establishments), (7) the manufacture of brass and bell metal products (96 establishments), (8) the manufacture of sundry hardwares (28 establishments), (9) the repairing of bicycles and tricycles (22 establishments) and (10) the making of jewellery and articles of gold and silver (115 establishments).

There are 1,468 establishments in the police station of Santipur in the Nadia district. The predominant industry is the manufacture of cotton textile in handloom which accounts for 1,152 establishments. There are 27 establishments engaged in the production of rice, *atta*, flour etc., 36 establishments engaged in the production of food products like sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi* etc., 28 establishments engaged in the making of textile garments, 20 establishments engaged in the manufacture of earthenware and earthen pottery, 33 establishments engaged in the manufacture of sundry hardwares, 22 establishments engaged in the repairing of bicycles and tricycles and 29 establishments engaged in the making of jewellery and articles of gold and silver.

In the police station of Burdwan, in the Burdwan district, there are 1,199 establishments. The industries are varied and it would be rather risky to select any industry as the predominant one. The names of industries having 20 or more establishments will, therefore, merely be given together with the number of establishments. There are 166 establishments engaged in the production of rice, *atta*, flour etc.; 184 establishments engaged in the production of food products like sweetmeat and condiments, *muri*, *murki*, *chira*, *khoi* etc., 52 establishments engaged in the manufacture of *biri*, 29 establishments engaged in the production of cotton textile in handloom, 79 establishments engaged in making textile garments, 20 establish-

ments engaged in printing other than the printing of books, 24 establishments engaged in the manufacture of bricks and tiles, 28 establishments engaged in the manufacture of earthenware and earthen pottery, 102 establishments in the manufacture of sundry hardwares, 22 establishments engaged in the repairing and servicing of motor vehicles, 69 establishments engaged in the repairing of bicycles and tricycles and 194 establishments engaged in the manufacture of jewellery and articles of gold and silver.

The police station of Kharagpur Town in the district of Midnapore is coterminous with the City of Kharagpur and, therefore, the discussion of the E-III Table of this police station is reserved for the section on towns and cities. Again, that part of the police station of Sibpur in the district of Howrah which is outside the city of Howrah, is geographically the same as the area covered by the Indian Botanic Garden and the Bengal Engineering College. It is, therefore, unnecessary to discuss the E-III Table of this police station.

The police station of Purulia Town in the district of Purulia is coterminous with the town of Purulia. As there are only 171 industrial establishments in this town, it would not be proper to classify it as a manufacturing centre.

There are 30 towns including cities, in West Bengal, in which there are 50,000 or more persons. Calcutta City is one such town but as the E-III Table of Calcutta has already been discussed, it will not be discussed again at this place. The discussion of the E-III Table in respect of towns having populations of 50,000 or more will, therefore, be confined to 29 towns.

There are 464 industrial establishments in the town of Siliguri. 31 establishments are engaged in the production of rice, *atta*, flour etc., 23 establishments produce bread, biscuits, cake and other bakery products, 50 establishments produce food products like sweetmeats and condiments, *muri*, *murki*, etc., 23 establishments produce sundry hardwares, 31 establishments are engaged in the repairing and servicing of motor vehicles, another 31 establishments are engaged in the repairing of bicycles and tricycles, and 45 establishments manufacture jewellery and articles of gold and silver. The population of the town is 65,471 according to the Census of 1961.

There are 400 industrial establishments in the town of Baharampur, the population of which is 62,317 according to the 1961 Census. 24 establishments are engaged in the production of rice, *atta*, flour etc., 56 establishments are engaged in the making of textile garments, 15 establishments engaged in printing other than books, 19 establishments are engaged in the manufacture of articles of brass and bell-metal, 14 establishments

produce sundry hardwares, 10 establishments are engaged in the repairing and servicing of motor vehicles, 38 establishments are engaged in repairing of bicycles and tricycles, 16 establishments are engaged in the assembling and repairing of watches and clocks and 112 establishments produce jewellery and articles of gold and silver.

There are 361 establishments in the town of Krishnanagar. In 18 establishments, rice, *atta*, flour etc., are produced, in 33 establishments are produced sweetmeats and condiments, *muri*, *murki* etc. There are 22 establishments manufacturing *biri*, 17 establishments produce hosiery and other knitted fabrics and garments, 33 establishments are engaged in the making of textile garments; 10 establishments are engaged in printing excluding books and in 16 establishments earthen images, busts and statues are produced. Sundry hardwares are made in 15 establishments, motor vehicles are repaired and serviced in 11 establishments, bicycles and tricycles are repaired in 42 establishments and jewellery and gold and silver articles are made in 53 establishments. The population of the town is 70,440 according to the 1961 Census.

There are 823 establishments in the town of Nabadwip, which has a population of 72,861 according to the 1961 Census. In 22 establishments, rice, *atta*, flour etc., are produced, 38 establishments produce food products like sweetmeats and condiments, *muri*, *murki* etc. Cotton weaving in handloom is the most important industry, as many as 343 establishments being engaged in it. The other important industries are (1) making of textile garments (32 establishments), (2) manufacture of earthenware and earthen pottery (17 establishments), (3) manufacture of earthen images busts and statues (13 establishments), (4) manufacture of brass and bell metal products (88 establishments), (5) manufacture of sundry hardwares (20 establishments), (6) repairing of bicycles and tricycles (20 establishments) and (7) manufacture of jewellery and articles of gold and silver (111 establishments).

There are 1,042 establishments in the town of Santipur which has a population of 51,190 according to the Census of 1961. The predominant industry is the weaving of cotton textile in handloom, there being 812 establishments. The other important industries are (1) production of rice, *atta*, flour etc. (21 establishments), (2) production of food products such as sweetmeat and condiments, *muri*, *murki*, etc. (31 establishments), (3) the making of textile garments (21 establishments), (4) the repairing of bicycles and tricycles (17 establishments), and (5) the manufacture of jewellery and articles of gold and silver (24 establishments).

The town of Basirhat which contains a population of 53,943 according to the 1961 Census, does not appear to be a manufacturing centre. There are only 238 establishments, 41 of which are engaged in the production of rice, *atta*, flour etc. and 27 are engaged in the production of food products like sweetmeat and condiments, *muri*, *murki*, etc. The most numerous establishments are those engaged in the production of cotton textile in handloom; there being 108 such establishments.

The town of Barrackpur, with a population of 63,778 also does not appear to be a manufacturing centre. There are only 295 industrial establishments. Among the important industries are (1) production of rice, *atta*, flour etc. (20 establishments), (2) production of sweetmeat and condiments, *muri*, *murki* etc. (34 establishments), (3) manufacture of *biri* (12 establishments), (4) the making of textile garments (75 establishments), (5) the repairing and servicing of motor vehicles (17 establishments), (6) the repairing of bicycles and tricycles (14 establishments) and (7) the manufacture of jewellery and articles of gold and silver (21 establishments).

The town of Kanchrapara with a population of 68,966 is an industrial town. The principal industry is the repair of locomotives. 9,883 persons are employed in the locomotive repairing workshops in this town. The other important industries are (1) the production of rice, *atta*, flour etc. (45 establishments), (2) the making of textile garments (67 establishments), (3) repairing and servicing of motor vehicles (10 establishments), (4) the repairing of bicycles and tricycles (26 establishments) and (5) the making of jewellery and articles of gold and silver (45 establishments).

The most important industry in the town of Halisahar with a population of 51,423 persons, appears to be the spinning and weaving of jute. As many as 10,488 persons are employed in this industry. The other industry employing a considerable number of persons is the manufacture of pulp from wood, rags, waste paper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill. There is one establishment engaged in this industry, employing 2,598 persons. The other important industries are (1) the production of rice, *atta*, flour etc. (34 establishments), (2) the manufacture of food products such as sweetmeat and condiments, *muri*, *murki* etc. (23 establishments), (3) manufacture of *biri* (17 establishments), (4) the making of textile garments (32 establishments) and (5) the making of jewellery and articles of gold and silver (18 establishments).

The town of Naihati contains 364 industrial establishments. Its population is 58,457 according to the 1961 Census. The most important industry

is the spinning and weaving of jute which employs 7,420 persons. There is also a factory which manufactures dyes, paints, colours and varnishes and which employs 470 persons. The other important industries are (1) the production of rice, *atta*, flour etc. (33 establishments), (2) the production of food-stuffs like sweetmeat and condiments, *muri*, *murki*, etc. (25 establishments), (3) the manufacture of *biri* (18 establishments), (4) the making of textile garments (69 establishments), (5) the repairing and servicing of motor vehicles (8 establishments), (6) the repairing of bicycles and tricycles (17 establishments) and (7) the manufacture of jewellery and articles of gold and silver (69 establishments).

The city of Bhatpara (population 147,630) contains 515 establishments. The most important industry is the spinning and weaving of jute. 18,781 persons are employed in this industry alone. The other important industries are (1) the manufacture of sundry hardware such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (2) the manufacture of machine tools, (3) the manufacture of insulated wires and cables, (4) the manufacture of all kinds of battery, (5) the production of rice, *atta*, flour etc., (6) the production of food-stuffs such as sweetmeat and condiments *muri*, *murki* etc., (7) the manufacture of *biri*, (8) the making of textile garments, (9) the repairing of bicycles and tricycles, (10) the manufacture of jewellery and articles of gold and silver and (11) miscellaneous manufacturing repairing industries.

The town of North Barrackpur, which has a population of 56,638 does not appear to be an important manufacturing centre. There is one cotton textile mill and a factory producing aluminium products. There are only 215 industrial establishments in all, in this town. Some of the important industries, besides the two already mentioned, are (1) the production of rice, *atta*, flour etc. (21 establishments), (2) the production of food-stuffs such as sweetmeat and condiments, *muri*, *murki*, etc. (21 establishments), (3) cotton weaving in handloom (41 establishments), (4) the making of textile garments (45 establishments) and (5) the manufacture of jewellery and articles of gold and silver (16 establishments).

The town of Titagar (population 76,429 persons) contains 228 industrial establishments. The important industries are the spinning and weaving of jute and the manufacture of pulp from wood, rags, waste paper and other fibres and the conversion of such pulp into paper and paper boards in mill. The former industry employs 20,912 persons and the latter industry employs 6,281 persons. Some of the other industries are (1) the production of rice, *atta*, flour etc. (30 establishments), (2) the making of textile garments (51 establishments)

and (3) the manufacture of jewellery and articles of gold and silver (28 establishments).

There are 421 establishments in the town of Panihati (population 93,749 persons). The important industries are (1) the manufacture of cigarette and cigarette tobacco, (2) cotton spinning and weaving in mills, (3) manufacture of products other than tyres and tubes, rubber footwear and rubber goods used for industrial purposes but including raincoat, (4) the manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (5) the manufacture of earthenware and earthen pottery, (6) manufacture of brass and bell-metal products, (7) manufacture of sundry hardware such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (8) the manufacture and assembling of machinery other than textile machinery and (9) the manufacture of pencil, pen-holder etc. There are of course other industries also, such as (1) the production of rice, *atta*, flour etc. (24 establishments), (2) the production of food-stuffs like sweetmeat etc. (28 establishments), (3) the making of textile garments (80 establishments), (4) the repairing of bicycles and tricycles (23 establishments) and (5) the manufacture of jewellery and articles of gold and silver (25 establishments).

There are 575 establishments in the city of Kamarhati, which has a population of 125,457 souls. The important industries are (1) the spinning and weaving of jute, (2) cotton spinning and weaving in mills, (3) manufacture of matches, (4) manufacture of porcelain and its products, (5) manufacture of glass apparatus, (6) Enamelling, galvanising plating, polishing and welding of metal products, (7) manufacture of sundry hardware such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (8) manufacture of machine tools, (9) manufacture of textile machinery and accessories and (10) manufacture of miscellaneous electric machinery and apparatus. Other industries worth mentioning are (1) the production of rice, *atta*, flour etc. (24 establishments), (2) production of fruit products, such as jam, jelly, sauce and canning and preservation of fruits, (3) production of Vanaspati, (4) wool spinning and weaving in mill, (5) making of textile garments (102 establishments), (6) printing excluding the printing of books and (7) manufacture of turpentine, synthetic, resin and plastic products.

There are 657 establishments in the city of Baranagar which has a population of 107,837 persons. The important industries are (1) jute spinning and weaving, (2) manufacture of pulp from wood, rags, waste paper and other fibres and the conversion of such pulp into paper and paper board in mill, (3) manufacture of pulp from wood, rags, waste paper and other fibres, and the

conversion of such pulp into paper and paper board by hand, (4) manufacture of products such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp, (5) manufacture of all kinds of rubber goods excluding tyres and tubes, rubber footwear and rubber goods used for industrial purposes but including raincoat, (6) manufacture of dyes, paints, colours and varnishes, (7) manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (8) manufacture of glass apparatus, (9) manufacture of structural steel products such as joist, rail, sheet, plate, (10) manufacture of metal products (other than of iron, brass, bell-metal and aluminium) such as tin can, (11) manufacture of sundry hardware such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc. and (12) manufacture of heavy electrical machinery and equipment. Some of the other industries are (1) production of food-stuffs such as sweetmeat and condiments, *muri*, *murki* etc. (39 establishments), (2) the making of textile garments (49 establishments) and (3) the manufacture of jewellery and articles of gold and silver (124 establishments).

There are 415 establishments in South DumDum. The important industries are (1) Cotton weaving in power-looms, (2) manufacture of boxes and packing cases other than plywood, (3) manufacture of handmade paper and paper board from pulp of wood, rags, waste paper etc., (4) manufacture of all kinds of rubber products, including raincoats but excluding tyres and tubes, rubber footwear and rubber goods used for industrial purposes, (5) manufacture of matches, (6) manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (7) manufacture of turpentine, synthetic resin and plastic products, (8) manufacture of structural stone goods, stone-dressing and stone-crushing, (9) manufacture of miscellaneous glass products, (10) manufacture of aluminium products, (11) manufacture of sundry hardware such as G.I. pipe, wire net etc. and (12) manufacture of motor vehicle engine parts and accessories. The population is 111,284.

There are 508 establishments in Garden Reach. The population of this city is 130,770 according to the 1961 Census. The important industries are (1) cotton spinning and weaving in mills, (2) jute spinning and weaving, (3) manufacture of soap and other washing and cleaning compounds, (4) building and repairing of water transport equipment such as ships, boats and manufacture of marine engines. The making of textile garments is another important industry, there being 342 establishments engaged in this industry.

The South Suburban municipal town contains a population of 185,811 persons. There are 622

establishments in the town. The important industries are (1) the production of rice, *atta*, flour etc., (2) production of butter, ghee, cheese and other dairy products, (3) wool spinning and weaving in mill, (4) manufacture of miscellaneous articles from wood, (5) manufacture of pulp from wood, rags, waste paper and other fibres and the conversion of such pulp into paper and paper board by hand, (6) printing excluding the printing of books, (7) manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (8) manufacture of structural steel products such as joists, rail, sheet, plate, (9) manufacture of iron and steel furniture, (10) manufacture of brass and bell metal products, (11) manufacture of metal products such as tin can, (12) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw etc., (13) manufacture of electric lamps and fans and (14) the repairing of bicycles and tricycles. There are also 56 establishments engaged in the making of textile garments.

The City of Howrah contains 4,323 industrial establishments. Its population is 512,598 according to the 1961 Census. The important industries are (1) the production of rice, *atta*, flour etc., (2) the production of food-stuffs such as sweetmeat and condiments, *muri*, *murki* etc., (3) the manufacture of *biri*, (4) cotton spinning and weaving in mills, (5) the spinning and weaving of jute, (6) the manufacture of rope, cordage from jute and similar fibre such as hemp, mesta, (7) the making of textile garments, (9) sawing and planing of wood, (10) the manufacture of wooden furniture and fixtures, (11) the manufacture of structural wooden goods such as beams, posts, doors, windows, (12) the manufacture of miscellaneous wooden products, (13) all kinds of printing except the printing of books, (14) manufacture of shoes and other leather footwear, (15) manufacture of dyes, paints and varnishes, (16) manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (17) manufacture of miscellaneous glass products, (18) manufacture including smelting, refining of non-ferrous metals and alloys in basic forms, (19) manufacture of structural steel products such as joist, rail, sheet, plate, (20) manufacture of iron and steel furniture, (21) Enamelling, galvanising, plating, (including electroplating), polishing and welding of metal products, (22) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (23) manufacture and assembling of machinery (other than electrical) except textile machinery, (24) manufacture of miscellaneous electric machinery and apparatus, (25) manufacture, assembly and repairing of locomotives, (26) manufacture of wagons, coaches, tramways and other rail road equipment, (27) the repairing

and servicing of motor vehicles, (28) building and repairing of water transport equipment such as ships, boats and manufacture of marine engines and (29) the manufacture of jewellery and articles of gold and silver.

There are 689 establishments in the municipal town of Baly. The population consists of 101,159 persons. The important industries are (1) production of edible fats and oils (other than hydrogenated oil), (2) production of hydrogenated oil (Vanaspati), (3) cotton spinning and weaving in mill, (4) the spinning and weaving of jute, (5) wool spinning and weaving in mill, (6) manufacture of hosiery and other knitted fabrics and garments, (7) manufacture of umbrellas, (8) manufacture of rubber goods, used for industrial purposes, (9) manufacture of turpentine, synthetic resin and plastic products, (10) manufacture of glass apparatus, (11) manufacture of miscellaneous articles from glass, (12) manufacture of aluminium products, (13) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (14) manufacture, assembly and repairing of locomotives, (15) manufacture of wagons, coaches etc. and (16) building and repairing of water transport equipment such as ships, boats and manufacture of marine engines.

The population of the town of Serampore is 91,521 according to the 1961 Census. There are 637 establishments in the town. The important industries are (1) cotton spinning and weaving in mills, (2) manufacture of cotton cordage, rope and twine, (3) jute spinning and weaving, (4) manufacture of leather upholstery, suitcase, pocket books, cigarette and key cases, purses, saddlery, whip and other articles, (5) manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations, (6) manufacture of structural clay products such as bricks, tiles, (7) manufacture of miscellaneous articles of glass and (8) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc.

There are 384 industrial establishments in the town of Chandannagar. The important industries are (1) jute spinning and weaving and (2) the manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket etc. Another important industry is the weaving of cotton textile in handloom in which there are 42 establishments. Other industries worth mentioning are (1) production of food products such as sweetmeat and condiments, *muri*, *murki*, *chira*, etc., (2) manufacture of earthenware and earthen pottery, (3) the repairing of bicycles and tricycles and (4) the manufacture of jewellery and articles of gold and silver. The town, therefore, can not be classified as a manufacturing centre. The population of the town is 67,105.

The town of Hooghly-Chinsura, which has a population of 83,104 contains 253 industrial establishments. There is no big industrial concern in the town. Industries having at least 20 establishments are (1) the making of textile garments, (2) the repairing of bicycles and tricycles and (3) the making of jewellery and gold and silver articles.

The City of Burdwan, with a population of 108,224 contains 889 industrial establishments. The important industries are (1) production of rice, *atta*, flour etc., (2) production of food products such as sweetmeat, condiments, *muri*, *murki*, etc., (3) the manufacture of *biri*, (4) the making of textile garments, (5) all types of printing, lithography and engraving except the printing of books, (6) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc., (7) manufacture, assembly and repairing of locomotives and (8) the manufacture of jewellery and articles of gold and silver.

The City of Asansol contains 103,405 persons according to the Census of 1961 but the number of industrial establishments situated in it, is only 498. The only big establishment is the loco-shed where locomotives are repaired. The industries having at least 20 establishments are (1) the production of rice, *atta*, flour etc., (2) the production of food products such as sweetmeat and condiments etc., (3) the manufacture of *biri*, (4) the making of textile garments, (5) sawing and planing of wood, (6) manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery etc. and (7) the repair and servicing of motor vehicles.

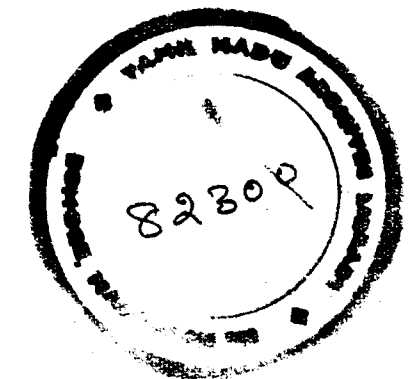

The town of Bankura, with a population of 62,833 contains 863 industrial establishments. The industries worth mentioning are (1) the production of rice, *atta*, flour etc., (2) production of food pro-

ducts such as sweetmeat, condiments, *muri*, *murki* etc., (3) the manufacture of *biri*, (4) cotton spinning and weaving in mills, (5) cotton weaving in handloom, (6) the making of textile garments, (7) manufacture of brass and bell-metal products, (8) the manufacture of sundry hardwares, (9) the repairing of bicycles and tricycles and (10) the manufacture of jewellery and articles of gold and silver.

The town of Midnapur contains a population of 59,532 according to the 1961 Census. There are 440 industrial establishments in the town, none of which employs more than 50 persons. The industries worth mentioning are (1) production of rice, *atta*, flour etc., (2) production of food products such as sweetmeat etc., (3) the manufacture of *biri*, (4) the making of textile garments, (5) the repairing of bicycles and tricycles and (6) the manufacture of jewellery and articles of gold and silver.

The principal industry in the City of Kharagpur, which has a population of 147,253, is the manufacture, assembly and repairing of locomotives. The City has grown up round that industry. The other industries worth mentioning are (1) the production of rice, *atta*, flour etc., (2) the production of food products such as sweetmeat, *muri*, *murki* etc., (3) the making of textile garments, (4) manufacture of shoes and other leather footwear, (5) manufacture of sundry hardware such as G.I. pipe, wire net, bolts etc., (6) manufacture of miscellaneous electric machinery and apparatus and (7) manufacture and repair of miscellaneous goods.

It is now time to compare the state of affairs in West Bengal with that prevailing in the other States of India. For facilitating such comparisons, the following Table is given, in which the details of establishments, in the Divisions 2 and 3, have been given in a summarised form.

92
7.25 N61

N61.164 11

TABLES : DETAILS OF ESTABLISHMENTS IN DIVISIONS 2 AND 3 OF THE
STANDARD INDUSTRIAL CLASSIFICATION BY STATES

State	Fuel or Power	No. of Factories and Workshops by size of employment									No. of per- sons not stated
		Total	1 person	2-5 persons	6-9 persons	10-19 persons	20-49 persons	50-99 persons	100 persons and above

For a correct appreciation of the figures in the preceding Table, the population of each State is given below:

State	1961 Population
Andhra Pradesh	35,983,447
Assam	11,872,772
Bihar	46,455,610
Gujarat	20,633,350
Jammu & Kashmir	3,560,976
Kerala	16,903,715
Madhya Pradesh	32,372,408
Madras	33,686,953
Maharashtra	39,553,718
Mysore	23,586,772
Orissa	17,548,846
Punjab	20,306,812
Rajasthan	20,155,602
Uttar Pradesh	73,746,401
West Bengal	34,926,279

There are only 244 industrial establishments in the State of Sikkim, out of which only 5 use power-driven machinery. The remaining 239 establishments produce articles by human or animal power.

The town of Gangtok, which constitutes the total urban area in the State, contains 34 establishments. In 10 of these establishments jewellery and articles of gold and silver are produced. Shoes and other leather footwear are manufactured in 7 establishments and textile garments are made in another 7 establishments. There is 1 printing press where books are printed and published and 3 other presses where other types of printing, excluding the printing of books, are carried on. It is rather strange that there is no establishment in the major group 20.

The remaining 210 industrial establishments are situated in the rural areas of Sikkim. The important industries are (1) production of rice, *atta*, flour etc. (70 establishments), (2) the production of indigenous liquor such as toddy, liquor from *mahua*, palm juice (19 establishments), (3) production of other types of liquor (29 establishments), (4) the making of textile garments (61 establishments), (5) manufacture of sundry hardwares (16 establishments) and (6) manufacture of jewellery and articles of gold and silver (6 establishments). There is also one brewery and one establishment where orange-squash is made.

The State appears to be rather backward industrially.

CHAPTER VII

Conclusion—As has already been pointed out, this is the first time in the history of the Indian Census that comprehensive data were sought to be collected on the state of housing and the industrial sector of the economy. Like all first ventures, this attempt to collect comprehensive data on the state of housing and the number and type of industrial establishments has also not met with complete success. The number of persons employed was found not to have been recorded in respect of a substantial number of establishments.

The Tables have been prepared from the entries in the House-lists with the utmost care and vigilance but here again, the insistent pressure from the office of the Registrar General, India to finish the preparation of the Tables quickly necessitated the appointment of a comparatively large number of Compiler-Checkers or Tabulators, thereby making it difficult to ensure the same effective supervision over the work of all of them. The work of preparing the Tables was rather complicated and it would have probably been better to have appointed a smaller number of Compiler-Checkers or Tabulators. As it was, the work of the Compiler-Checkers or Tabulators was checked at random as frequently as possible and the scrutiny was continued even after the Tables had been prepared. Thus, while writing this report, it was decided to check the accuracy of the E-IV Table in respect of the towns of Bhatpara, Howrah, Serampore, Chandannagar and Hooghly-Chinsura, the urban areas of the district of Bankura and the police station of Kumarganj with reference to the House-lists and it was only in respect of the town of Bhatpara that mistakes were detected and necessary corrections had to be effected in the E-IV Table. Again, while scrutinizing the E-I Table of the town of Titagar, it was suspected that the Census-houses in respect of certain industrial establishments had not been correctly recorded, and the omissions were repaired by local enquiries.

While preparing the E-III Table afresh, Shri S. Sinha, the Deputy Superintendent and Shri Manindra Nath Sarkar, the Statistical Inspector had to undertake a number of journeys to make good the omissions of the House-numberers either to record Census-houses used as industrial

establishments or the number of persons employed in such establishments. Naturally, they could correct the House-lists in respect of comparatively well-known industrial establishments only.

Certain decisions had to be taken in regard to the applicability of some codes to some industries. *Pachai mad* or rice-beer is made by fermenting boiled rice and therefore the establishments in which *Pachai mad* was made, were assigned the code No. 213, the code No. 211 being assigned to the production of country liquor only. Country liquor is rectified spirit with which the prescribed proportion of water has been mixed.

In Calcutta and Howrah, slaughter houses are managed and supervised by municipal authorities. Meat shops are required to get the goats, etc., slaughtered in the municipal slaughter houses. But in towns other than Calcutta and Howrah, the animals are slaughtered in the meat shops. Accordingly, code No. 204 was applied to all meat shops outside Calcutta and Howrah.

The code No. 209 was assigned to those sweetmeat shops only in which sweetmeats were also produced and not merely sold.

In consultation with the Watchmakers' and the Radio Dealers' Associations, it was decided to treat all watch and radio shops as repairing establishments also.

The code No. 399 was assigned to the making of seed-lac, button-lac or lac products, in consultation with the Superintendent of Census Operations, Bihar.

Shri S. Sinha, Deputy Superintendent and Shri Manindra Nath Sarkar, Statistical Inspector, spared no pains to make the E-I and E-III Tables as accurate as possible. They were ably assisted by Shri Satinath Chakraborty and Shri Sunil Kanti Bhattacharyya. Shri Rishin Mitra discharged his duties as the Record Keeper, very efficiently. Shri Samarendra Nath Roy, Deputy Superintendent and Shri Nirmal Sarkar, Statistical Inspector prepared the E-II, E-IV and E-V Tables quite accurately. Commendable work was done by Shri Ratan Bahadur, Shri Sange Lama, Shri Parimal Dutta and Shri Md. Sahidul Haq, Tabulators.

APPENDIX II

INSTRUCTIONS FOR FILLING UP THE HOUSELIST

*First Draft***Col. 1. Building number.**

This refers to the entire structure on the ground. Each building should have a separate number. If the locality chosen for pretest consists of a number of streets, the buildings in the various streets should be numbered continuously and the streets should be taken in an order, from north to south or east to west. Within a street, there are two alternatives: either the houses can be numbered in one continuous series clockwise or odd numbers may be given to houses on one side and even numbers to those on the other side. The latter method is preferable in cases where more than one street is taken for pretest. The enumerator may write the number on the building for the pretest operations in chalk or other material which can be erased easily later.

This will facilitate the checking by the supervisors. In areas, *e.g.*, urban, where the houses are already numbered by the municipal or other authorities, the enumerator may adopt the existing numbers in the Houselist.

Col. 2. Continuous serial number of the building with sub-numbers for separate census houses.

A census house is a dwelling with a separate main entrance. If a building has a number of flats or blocks which have separate entrances of their own, they will be considered as separate census houses. If in a big compound there are distinct structures, quite apart from each other, then each will be considered a building and not as a separate house. A census house should structurally belong to a building but each house should have a separate main entrance to the street or road or a common passage.

The order in which houses within a building should be numbered, should be continuous, preferably clockwise, or in any convenient manner if it is at all difficult to do it clockwise. If a building itself is a house, then it will have only one number. If within a building there are a number of houses, then each house will have two numbers, *e.g.*, the number of the building and the sub-number of the house.

Col. 3. Purpose for which used, *e.g.*, dwelling house, etc.

The actual use to which a census house is put should be written here.

Col. 4. Name of the product or products which the factory or workshop undertakes.

In the case of a factory or workshop, the name of the main products produced by the factory or

workshop should be written distinctly and separately.

Col. 5. State the total number of persons employed in it.

The total number of persons employed in the factory or workshop should be entered. It is not necessary to enquire the number of persons employed in the different productions. It may not be possible to get this information in cases where the operations may be combined.

Col. 6. State whether fuel or electric power is used for production.

If fuel or electric power *is used* for production, 'Yes' should be written. If fuel or electric power *is not used*, 'No' should be written.

Col. 7. Type of wall.

Under this column the material out of which most of the walls of the house are made *i.e.*, grass, leaves, reeds, bamboo, unburnt bricks, mud, burnt bricks, stone, cement concrete or timber, should be written.

Col. 8. Type of roof.

The material out of which most of the roof is made, *i.e.*, tiles, thatch, corrugated iron, zinc or asbestos cement sheets, or concrete should be written.

Col. 9. Number of rooms in the census houses.

A room should usually have four walls with a doorway with a roof overhead and should be wide enough for a person to sleep in *i.e.*, it should be at least 6 ft. long. Kitchen, stores, garage, cattle shed and latrine which are not meant for sleeping should not be treated as rooms.

Col. 10. Is this house wholly occupied by the owner, partly occupied by the owner and partly rented or wholly rented?

If a census house is occupied entirely by the owner, then 'FO' should be written.

If a portion of the house is occupied by the owner and a portion is occupied by a tenant on rent, then 'PR' should be written.

If a house is occupied entirely by a tenant or tenants, then 'FR' should be written.

Col. 11. Sub-number of each household in the census house.

A household is a group of people who live together and take their meals from a common kitchen.

There may be one or more households in a census house. The number of households will

Col. 12. Name of Head of household.

The name of the Head of each household given in Column 11 should be written here. The Head of a household, for census purposes, is the person on whom falls the chief responsibility for the maintenance of the household. The name of the person who is actually acknowledged as Head of household should be recorded.

Cols. 13—16. Number of persons ordinarily resident in the census household.

The number of persons in each household under the different categories should be written in the respective columns.

depend on the number of kitchens that are used in a house. Each household should be separately numbered. This can be done by using the alphabets as (A), (B), (C), etc. For example, if building No. 2 is also a census house and has three households, the household numbers will be 2-(A), 2-(B) and 2-(C). If building No. 4 has two census houses, the houses will be numbered as 4-I, and 4-II. If within each house there are respectively 3 and 2 households, then they will be numbered as:

4-I-(A), 4-I-(B), 4-I-(C); and 4-II-(A), and 4-II-(B).

Col. 1. Line Number : These line numbers have been printed in the column itself.

Every fifth line has been printed thick in order to facilitate the taking out of samples, etc., during compilation. There is no other purpose.

Col. 2. Municipal or Local Building number.

This refers to the entire structure on the ground. Each building should have a separate number. If the locality chosen for pretest consists of a number of streets in a village, the buildings in the various streets should be numbered continuously and the streets should be taken in uniform order, from North West to South East. Experience suggests that the best way of numbering houses on a street is to continue with one consecutive serial on one side of the street and complete the numbering on that side before crossing over to the end of the other side of the street and continuing with the serial, stopping finally opposite to where the first numbering began. In a city enumeration block the numbering will have to respect the axis of the street and not any preconceived geographical direction like N. W. The enumerator may write the number on the building for the pretest operations in chalk or other material which can be erased easily later.

This will facilitate verification by supervisors. In areas, e.g., urban, where the buildings are already numbered by the municipal or other authorities, the enumerator may adopt the existing numbers in the Houselist, if they are in conformity with the definition of a building.

Col. 3. Continuous serial number of building with sub-numbers for separate census houses.

A census house is a structure or part of a structure or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school etc., with a separate main entrance. If a building has a number of flats or blocks which have separate entrances of their own giving on the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within an enclosed compound there are separate structures or buildings each inhabited by a separate family then each such building will have a separate number for a census house. If in any of such buildings there are more than one family then such a building will bear sub-numbers denoted by letters (A), (B) etc., each letter standing for a separate census household.

If, however, within an enclosed compound there is only one family enjoying separate structures like a sitting room, a living place, a kitchen and/or a

cowshed then each such structure will bear a sub-number like I, II, III etc., to the main number for the census household contained in the compound.

The order in which census houses within a building should be numbered, should be continuous, preferably clockwise, or in any convenient manner if it is at all difficult to do it clockwise. If a building itself is a census house, then it will have only one number. If within a building there are a number of census houses, then each census house will have two sets of numbers, e.g., the number of the building and the sub-number of the census house.

Col. 4. Is this census house (a) wholly occupied by the owner, (b) partly occupied by owner and partly rented or (c) wholly rented to one or more households ?

If a census house is occupied entirely by the owner, then 'FO' should be written.

If a portion of the census house is occupied by the owner and a portion is occupied by a tenant on rent, then 'PR' should be written.

If a census house is occupied entirely by a tenant or tenants, then 'FR' should be written, even if occupation is rent-free or just permissive.

Col. 5. Purpose for which census house used, e.g., dwelling, etc.

The actual use to which a census house is put should be written here.

In the case of a factory or workshop 'Factory' should be written for a large factory if registered under the Indian Factories Act and 'Workshop' for a small unregistered workshop.

Col. 6. Name of Firm or Proprietor.

Write the name of the firm in the case of big and registered companies or large manufacturing concerns and write the name of the proprietor in the case of small shops where no distinct name has been given to the shop, like *Halwai* shop, etc.

Col. 7. Name of product(s), repair or servicing undertaken.

In this column enter the actual work that is being done in the factory or workshop, like paper making, cycle repairing, motor servicing, etc.

Col. 8. The total number of workers employed.

The total number of workers employed in the factory or workshop, including the owner or proprietor (if working) should be entered. The average number of persons working per day during the week preceding the date of your visit should be entered.

In case more than one product is produced, it is not necessary to enquire the number of persons employed in the production of that product. It may not be possible to get this information in cases where the operations may be combined.

Col. 9. Kind of fuel or power used.

Whether the factory or workshop uses steam or diesel engine or fuel, e.g., kerosene, soft coke, electricity, water-mill etc. If any of the above is used, write what is actually used.

Col. 10. Type of wall.

Under this column the material out of which most of the walls of the house are made i.e., grass, leaves, reeds, bamboo, unburnt bricks, mud, burnt bricks, stone, cement concrete or timber, should be written.

Col. 11. Type of roof.

The material out of which most of the roof and not the ceiling is made, i.e., tiles, thatch, corrugated iron, zinc or asbestos cement sheets, or concrete etc. should be written.

Col. 12. Sub-number of each census household in the census house.

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

There may be one or more households in a census house. Each household should be separately numbered. This can be done by using the alphabets as (A), (B), (C), etc. For example, if building No. 2 is also a census house and has three households, the household numbers will be 2-(A), 2-(B) and 2-(C). If building No. 4 has two census houses, the houses will be numbered as 4-I, and

4-II. If within each house there are respective 3 and 2 households, then they will be numbered as 4-I-(A), 4-I-(B), 4-I-(C), : and 4-II-(A), 4-II-(B).

Col. 13. Name of Head of household.

The name of the Head of each household given in Column 11 should be written here. The Head of a household, for census purposes, is the person on whom falls the chief responsibility for the maintenance of the household. The name of the person who is actually acknowledged as Head of household should be recorded.

If the census house is used as a sitting place, cattle shed, etc., write the use to it is put (and add the name of the owner).

Col. 14. Number of room in the census household.

If a building is occupied by one household the enumeration of rooms should be simple.

If a census house consists of a number of households the number of rooms occupied by each household should be entered on each line against the name of the head of the household.

A room should usually have four walls with a doorway with a roof overhead and should be wide and long enough for a person to sleep in i.e., it should be at least 6 ft. long. Kitchen, stores, garage, cattle shed and latrine which are not meant for living and sleeping should not be treated as rooms.

Cols. 15-19. Number of persons residing in census household on day of visit.

The number of persons in each household under the different categories should be written in the respective columns.

Certified that the information is correct to the best of my knowledge, Signature of Enumerator_____

CENSUS OF INDIA 1961

Instructions for Filling up the Houselist

(Final)

Column 1.—Line Number.

Only one digit of the line number has been printed in this column. The line numbers should be continuous for your block. Where the line numbers exceed 9 write the earlier digit(s) yourself.

Column 2.—Building Number (Municipal or Local Authority or Census Number, if any).

This refers to the entire structure on the ground. There are, however, high, large or long buildings along a street or lane which have been partitioned or portions of which have been sold, which have distinct, separate main exit on the road and which belong to separate owners or occupiers or alternatively there are a series of different houses joined each to each by common walls on either side to make the whole look like one building but parts of which have been built at different times and belong to separate owners. Such distinguishable structures, although not separate from each other should be regarded as separate buildings and given separate numbers. Each building should have a separate number. If in big cities a large mansion or building containing several census houses has a well known name by which it is generally known then the name of the building should also be recorded for convenient reference. If there are more than one structure within an enclosed or open compound belonging to the same person, e.g., the main house, the servants' quarters, the garage, etc., only one building number should be given. If the locality consists of a number of streets in a village, the buildings in the various streets should be numbered continuously and the streets should be taken in uniform order, from North-West to South-East. Experience suggests that the best way of numbering is to continue with one consecutive serial on one side of the street and complete the numbering on that side before crossing over to the end of the other side of the street and continuing with the serial, stopping finally opposite to where the first numbering began. In a city enumeration block, the numbering will have to respect the axis of the street and not any preconceived geographical direction like North-West. A building under construction should also be given a number in the serial. If a new hut or building is constructed between the time when the house-numbering and houselisting have been completed and the census count it should be given a new number beyond the last number of the serial for the village. Arabic numerals should be used for building numbers.

This will facilitate verification by supervisors. In areas, e.g., urban, where the buildings are already numbered by the municipal or other authorities, the enumerator may adopt the existing numbers in the Houselist. In such cases, column 2 will carry the established municipal or local authority number which will facilitate identification. Where there are municipal or local authority numbers but there are reasons to believe that the number is incomplete or unsatisfactory, the municipal or local authority number may still be entered in column 2, but at the same time it will be necessary to serially number the buildings afresh for the purposes of census houselist. In that case, the new census serial for buildings will be entered in column 3 and the new census numbers for the buildings will have to be painted on the buildings themselves. In those cases where there are no municipal or local authority numbers in existence, all buildings will have to be serially numbered for the census and column 2 will contain entries of this census serial. This number will have to be repeated in column 3 with sub-numbers for census houses, if any.

Column 3.—Building Number (Column 2) with sub-numbers for each Census House.

A census house is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc., with a separate entrance.

If a building has a number of flats or blocks which have separate entrances of their own and are independent of each other giving on the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within an enclosed or open compound there are separate buildings then each such building will also be a separate census house. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

The order in which census houses within a building should be numbered should be continuous, preferably clockwise, or in any convenient manner if it is at all difficult to do it clockwise. If a building itself is a census house, then it will have only one number, namely, that of the building. If within a building there are a number of census houses, then each census house will have two sets of numbers, e.g., the number of the building and the sub-number of the census house. The census house number should be written after the building

number in arabic numerals in brackets such as 2(2), 3(2), etc. A census house may contain more than one household in which case, each household will have to be denoted by a separate alphabetical sub-number (see instructions for column 11 below).

Column 4.—Purpose for which census house used, e.g., dwelling, shop, shop-cum-dwelling, business, factory, workshop, school or other institution, jail, hostel, hotel, etc.

The actual use to which a census house is put should be written here.

In the case of a factory or workshop 'Factory' should be written for a large factory if registered under the Indian Factories Act and 'Workshop' for a small unregistered workshop. A workshop is a place where some kind of production, repair or servicing goes on or where goods or articles are made and sold. Similarly, a shop is a place where articles are sold for cash or for credit. Business houses are those where transactions in money or other articles are taking place, e.g., bank, etc. But rooms or apartments where professional consultations are held such as by doctors, *hakims*, pleaders, etc., should be described as 'professional consultation rooms' and not workshops. In the case, however, of a dispensary where, in addition to consultation by a doctor, medicines are prepared and sold, the house should be described as a dispensary. Write also if used for place of worship or congregation or if unoccupied, 'vacant'. If the census house is a shop, business house, bank, etc., but is not a factory or workshop as defined above, the name of the proprietor, manager or director should be entered in column 18.

Columns 5 to 8.—"If this census house is used as an establishment, workshop or factory".

These columns apply only in cases where the census house is a factory or a workshop, i.e., where some kind of production, processing, repair or servicing is undertaken or where goods or articles are made and sold. If the census house is not used for purposes of a factory or workshop write 'X' in each of the columns 5 to 8.

Column 5.—Name of establishment or proprietor.

Write the name of the establishment in the case of factories or large manufacturing concerns and write the name of the proprietor in the case of small workshops and establishments like confectioneries where no distinct name has been given to them like *Halwai* shop, etc. If the census house is not used for the purpose of a factory or workshop put 'X' in each of the columns 5 to 8.

Column 6.—Name of product (s), repair or servicing undertaken.

In this column enter the actual work that is being done in the establishment, factory or work-

shop, like paper making, shoe making, cycle repairing, motor servicing, etc.

Column 7.—Average number of persons employed daily last week (including proprietor or household members, if any).

The total number of workers including apprentices, either paid or unpaid, employed in the factory or workshop, including the owner or proprietor and any of his family members (if working), should be entered. The average number of persons working per day during the week preceding the date of your visit should be entered.

In case more than one product is produced it is not necessary to enquire the number of persons employed in the production of each product. It may not be possible to get this information in cases where the operations may be composite.

Column 8.—Kind of fuel or power, if machinery is used.

If the factory or workshop uses steam or diesel engine or fuel, e.g., kerosene, soft coke, electricity, water-mill, etc., for running the machinery used for production, servicing or repairs, write what fuel or power is actually used.

Columns 9 & 10.—Description of Census House.**Column 9.—Material of wall.**

Under this column the material out of which most of the walls of the house are made i.e., grass, leaves, reeds, bamboo, unburnt bricks, mud, burnt bricks, stone, cement concrete or timber should be written. Where a house consists of separate structures each of different materials, the material out of which the walls of the main bedrooms are made are to be recorded.

Column 10.—Material of roof.

The material out of which most of the outer roof exposed to the weather and not the ceiling is made, i.e., tiles, thatch, corrugated iron, zinc or asbestos cement sheets or concrete, etc., should be written. In the case of a multi-storeyed building the intermediate floor or floors will be the roof of the lower floor.

Column 11.—Sub-number of each Census Household with Census House number (Column 3).

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

There may be one or more households in a census house. Each household should be separately numbered. This can be done by using the alphabets as (A), (B), (C), etc. For example, if building No. 2 is also a census house and has three households, the household numbers will be 2(A), 2(B) and 2(C). If building No. 4 has two census

houses, the houses will be numbered as 4(1) and 4(2). If within each house there are respectively 3 and 2 households, then they will be numbered as 4(1A), 4(1B), 4(1C) and 4(2A) and 4(2B).

Column 12.—Name of Head of Household.

The name of the Head of each household given in column 11 should be written here. The Head of a household, for census purposes, is the person on whom falls the chief responsibility for the maintenance of the household. The name of the person who is actually acknowledged as Head of the household should be recorded. In the case of places like messes, boarding houses, chummeries, etc., where people live together with no ties of relationship, the manager or superintendent or the person who by common consent is regarded as the Head should be recorded as Head of the household.

If the census house is used as a sitting place, cattle shed, etc., write the use to which it is put (and add the name of the owner).

Column 13.—Number of rooms in Census Household

If a census house is occupied by one household the enumeration of rooms should be simple.

If a census house consists of a number of households the number of rooms occupied by each household should be entered on each line against the name of the Head of the household. In cases where more than one household occupy a single room or share more than one room in such a way that it is not possible to say the number of rooms occupied by each household, the number of rooms should be given together within brackets as common to both the households.

A room should usually have four walls with a doorway with a roof overhead and should be wide and long enough for a person to sleep in, i.e., it should be at least 6 ft. long. Unenclosed verandah, kitchen, store, garage, cattle shed and latrine which are not ordinarily used for living and

sleeping should not be treated as rooms. An enclosed room, however, which is used for living, dining, storing and cooking should be regarded as a room.

Column 14.—Does the household live in own or rented house ?

If the household lives in own house write 'O'. If the household lives in a rented house write 'R'.

In the case of public buildings like schools, hospitals, etc., or places of worship, put 'X' in this column.

Columns 15 to 17.—Number of persons residing in census household on day of visit.

Write the number of males residing in the household in column 15, the number of females residing in the household in column 16 and the total number of persons in column 17.

Column 18.—Remarks.

In this column should be entered any useful or significant information about the building or the census house or the census household that has not been entered in any other column. For example, if the census house is a shop the name of the proprietor or owner should be recorded in this column. If a census house is vacant at the time of houselisting but there is reason to believe that the house will be occupied in the course of the next few days and almost certainly before the census enumeration period, then the word 'Vacant' should be entered in column 4 and a remark should be entered in column 18 to the effect 'likely to be occupied shortly'. Thus, the Remarks column should be utilised for recording all significant information relating to the building or census house or census household.

If the members of the household living in the Census house belong to a Scheduled Caste or Scheduled Tribe then write SC or ST, as the case may be, in this column.

EXPLANATORY NOTE ON THE USE OF INDUSTRIAL CLASSIFICATION

(b) The term 'establishment' means the whole of the premises under the same orga-

nisation or management at a particular address, for example, a factory, a mine, a firm, or a shop.

- (c) The establishment should be classified under the code number which best describes the products made or the services provided by that establishment. Where a firm has, at the same address, two or more separate departments manufacturing different products, thereby justifying classification under two or more code numbers, the industrial classification to be allotted is the one which best describes the major activity of the firm in terms of employment.

- (d) Ancillary departments within the establishment, e.g., a department engaged in carrying out repairs, or making containers for the firm's products, or warehousing, transporting, accounting, selling etc. are to be regarded as a part of the firm and should be given the code number allotted to the establishment's principal activity. For example, a firm manufacturing medicinal products etc., is classified as "335". If that firm makes its own packages or distributes its own products by road, the activity of the department manufacturing the packages as well as the road transport department should be classified as "335".

8. The Industrial Classification Code with reference to vacancies notified, filled/cancelled and outstanding at Employment Exchanges should be the same as the classification number allotted to the order card.

Classification of Employers/Establishments

9. The Industrial Classification Code appropriate to the economic activity of employers included in the employers' register (on form EM-1) should be entered against the item 'I.C.I.' at the top right hand corner on the front page of EM-1 cards. The industrial classification code as entered on EM-1 should also be entered on the EM-returns received from the employer against the dotted portion of item 1 of the return which refers to the principal activity of the employer. In allotting the industrial classification code on EM-1 cards or on EM-returns received from employers, the same principles as laid down in para 7 above should be observed.

Classification of Persons Registering for work

10. In addition to the occupational Code number allotted to an applicant an industrial classification code number should also be recorded

at the time of registration. The applicant should, therefore, be carefully questioned to ascertain the industrial field of activity in which he was last engaged. An Industrial Classification Code Number of that activity should then be entered against item 'I.C.I.' at the top right hand corner on the front page of Index Card (X-1). In cases where an applicant is re-registered, care should be taken to review the Industrial Classification Code Number previously allotted.

11. The following principles should be observed in classifying applicants registering at Exchanges :—

- (a) The applicant should be carefully questioned in order to ascertain the industrial activity in which he was last engaged. For this purpose the record of employment of the applicant should be completely obtained in chronological order in each case. The record of previous employment will help to ascertain the industrial classification of the applicant. It is, therefore, essential that industrial classification should invariably be reviewed at the time of re-registration. In deciding the industrial classification, the applicant's oral statement may be relied upon and it should not be necessary to verify it by certificates or other documents. At the same time, the economic activity on the basis of which the Industrial Classification Code has been given should be supported by details on the Index Card in the 'record of employment' column. The main aim of industrial classification should be to determine the economic activity which the registrant has just left or was last engaged in.

- (b) An applicant who was in employment should be classified according to what his employer or he himself was making or doing. An applicant who has been working on his own account, i.e. self-employed and who is now seeking wage earning or salaried employment should be classified in accordance with the industry in which he was self-employed. For example, if a man who was working on his own account as a fisherman registers at an Employment Exchange, he should be allotted No. 03 (Fishing).

- (c) A person who was engaged in more than one industry should be classified in the industry from which he derived the major part of his earnings. Where

the person appears to be in receipt of equal income from two or more jobs, he should be classified under the Code Number of that industry to which he devotes the greater part of his time.

- (d) Where the activity, in which the applicant has been engaged is not provided for in the Standard List, he should be classified under 900 (Activities not specified elsewhere). Any person who has clearly been identified as gainfully employed either as an employee or on his own account, but cannot provide sufficient information about his industrial affiliation, should also be given the same Code No. 900.

- (e) Applicants who are new entrants to the labour market i.e. persons who have not so far worked for livelihood as either employees or on their own account should be industrially classified as 999. This classification number should not be given merely because the applicant is a 'fresher' in the occupation for which he is registered. A 'fresher' who has been engaged in some economic activity (e.g., a 'fresher' clerk who has been a school teacher) should be given the Code number appropriate to his former means of livelihood.

- (f) The economic activity of such persons as wiremen, carpenters and painters who are self-employed (engaged on job-work) should be classified under the code number appropriate to the industry to which their activity can be assigned. For example, a wireman who was engaged in electric installations in buildings, etc. will be classified under 40 (Construction); a wireman who was engaged in repair of heavy electrical machinery will be

classified under 374 (Manufacture of heavy electrical machinery and equipment such as motors, generators and transformers). There may be other persons who are casual workers, who change industry at quick intervals or there may be persons who fail to provide sufficient information about their industrial affiliations to enable them to be classified. Such persons should be classified under 900. These should, however, be few and far between. The Code number 900 should be used sparingly and only in case of activities that cannot be specified and included in one or another industry group.

- (g) Code No. 804, 805 and 809 should be allotted if the economic activity concerned is only administrative in nature, and should not be allotted if a more specific code number can be used (see note against Division 8—Public Services). For example, a carpenter, who has worked in the public owned Sindri Fertilizer Factory will be classified under 332 (Manufacture of fertilisers) and not 805. Similarly, a teacher who has worked in a Government High School will be classified under 811 (Educational Services) and not 804 or 809.

12. It should be made quite clear to applicants at the time of registration that the allocation of an industrial code number will have no effect on their submission against suitable employment which will continue to be based on their occupational suitability.

*Note :—*Reproduced from the booklet 'A Standard Industrial Classification' Adopted by the Government of India issued by the Director of Employment Exchanges in December 1960, Directorate General of Employment and Training, Ministry of Labour & Employment, Government of India, New Delhi.

DIVISION 2 & 3—MANUFACTURING

Major Group (Code)	Description	Minor Group (Code)
20 Foodstuffs—		
	Production of rice, atta, flour, etc. by milling dehusking and processing of crops and foodgrains.	200
	Production of sugar and syrup from sugarcane in mills	201
	Production of indigenous sugar, gur from sugarcane or palm juice and production of candy.	202
	Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits.	203
	Slaughtering, preservation of meat and fish and canning of fish	204
	Production of bread, biscuits, cake and other bakery products	205
	Production of butter, ghee, cheese and other dairy products	206
	Production of edible fats and oils (other than hydrogenated oil)	207
	Production of hydrogenated oils (Vanaspati)	208
	Production of other food products such as sweetmeat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge.	209
21 Beverages—		
	Production of distilled spirits, wines, liquor from alcoholic malt, fruits and malts in distillery and brewery.	210
	Production of country liquor	211
	Production of indigenous liquor such as toddy, liquor from mahua, plam juice.	212
	Production of other liquors not covered above	213
	Production of aerated and mineral water	214
	Production of ice	215
	Production of ice cream	216
	Processing of tea in factories	217
	Processing of coffee in curing works	218
	Production of other beverages	219
22 Tobacco Products—		
	Manufacture of bidi	220
	Manufacture of cigars and cheroots	221
	Manufacture of cigarette and cigarette tobacco	222
	Manufacture of hookah tobacco	223
	Manufacture of snuff	224
	Manufacture of jerda and other chewing tobacco	225
	Manufacture of other tobacco products	226
23 Textile—Cotton—		
	Cotton ginning, cleaning, pressing and baling	230
	Cotton spinning (other than in mills)	231
	Cotton spinning and weaving in mills	232
	Cotton dyeing, bleaching	233
	Cotton weaving in power looms.	234
	Cotton weaving in handlooms	235
	Manufacturing of khadi textile in handlooms	236
	Printing of cotton textile	237
	Manufacturing of cotton nets	238
	Manufacturing of cotton, cordage, rope and twine	239
24 Textile—Jute—		
	Jute pressing and baling	240
	Jute spinning and weaving	241

DIVISION 2 & 3—MANUFACTURING—*contd.*

Major Group (Code)	Description	Minor Group (Code)
24 Textile—Jute—<i>contd.</i>		
	Dyeing and bleaching of jute	242
	Printing of jute textile	243
	Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta.	244
25 Textile—Wool—		
	Wool baling and pressing	250
	Wool cleaning and processing (scouring)	251
	Wool spinning and weaving in mill	252
	Wool spinning other than in mills	253
	Wool weaving in power loom	254
	Wool weaving in handloom	255
	Embroidery and art work in woollen textile	256
26 Textile—Silk—		
	Spinning and weaving of silk textile in mill	260
	Dyeing and bleaching of silk	261
	Spinning of silk other than in mills	262
	Weaving of silk textile by power loom	263
	Weaving of silk textile by handloom	264
	Printing of silk textile	265
	Manufacture of silk cordage, rope and twine	266
27 Textile—Miscellaneous—		
	Manufacture of carpet and all other similar type of textile products	270
	Manufacture of hosiery and other knitted fabrics and garments	271
	Embroidery and making of crepe lace and fringes	272
	Making of textile garments including raincoats and headgear	273
	Manufacture of made up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags.	274
	Manufacture of waterproof textile products such as oil cloth, tarpaulin	275
	Manufacture and recovery of all types of fibres for purposes of padding, wadding and upholstery filling.	276
	Manufacture of coir and coir products	277
	Manufacture of umbrellas	278
	Processing and manufacture of textile products not covered above	279
28 Manufacture of wood and wooden products—		
	Sawing and planing of wood	280
	Manufacture of wooden furniture and fixtures	281
	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows.	282
	Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures.	283
	Manufacture of other wooden products such as utensils, toys artwares	284
	Manufacture of veneer and plywood	285
	Manufacture of plywood products such as tea chest	286
	Manufacture of boxes and packing cases other than plywood	287
	Manufacture of materials from cork, bamboo, cane ; leaves and other allied products.	288
	Manufacture of other wood and allied products not covered above	289

DIVISION 2 & 3—MANUFACTURING—*contd.*

Major Group (Code)	Description	Minor Group (Code)
29 Paper and Paper Products—		
	Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill.	290
	Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board handmade.	291
	Manufacture of products, such as paper, bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp.	292
30 Printing and Publishing—		
	Printing and publishing of newspapers and periodicals	300
	Printing and publishing of books	301
	All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry.	302
	All types of binding, stitching, sizing and other allied work connected with binding industry.	303
31 Leather and Leather Products—		
	Currying, tanning and finishing of hides and skins and preparation of finished leather.	310
	Manufacture of shoes and other leather footwear	311
	Manufacture of clothing and wearing apparel (except footwear) made of leather and fur.	312
	Manufacture of leather products (except those covered by code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles.	313
	Repair of shoes and other leather footwear	314
	Repair of all other leather products except footwear	315
32 Rubber, Petroleum and Coal Products—		
	Manufacture of tyres and tubes	320
	Manufacture of rubber footwear	321
	Manufacture of rubber goods used for industrial purpose	322
	Manufacture of all kinds of other rubber products from natural or synthetic rubber including rubber raincoat.	323
	Productions of petroleum, kerosene and other petroleum products in petroleum refineries.	324
	Production of coaltar and coke in coke oven	325
	Manufacture of other coal and coaltar products not covered elsewhere .	326
33 Chemicals and Chemical Products—		
	Manufacture of basic industrial chemicals such as acids, alkalis and their salts not elsewhere specified.	330
	Manufacture of dyes, paints, colours and varnishes	331
	Manufacture of fertilizers	332
	Manufacture of ammunition, explosives and fire works	333
	Manufacture of matches	334
	Manufacture of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations except soap.	335
	Manufacture of soap and other washing and cleaning compounds .	336
	Manufacture of turpentine, synthetic, resin, and plastic products and materials (including synthetic rubber).	337

DIVISION 2 & 3—MANUFACTURING—*contd.*

Major Group (Code)	Description	Minor Group (Code)
33 Chemicals and Chemical Products—<i>contd.</i>		
	Manufacture of common salt	338
	Manufacture of other chemicals and chemical products not covered above (including inedible oils and fats).	339
34 Non-metallic Mineral Products other than Petroleum and Coal—		
	Manufacture of structural clay products such as bricks, tiles	340
	Manufacture of cement and cement products	341
	Manufacture of lime	342
	Manufacture of structural stone goods, stone dressing and stone crushing	343
	Manufacture of stonewares, other than images	344
	Manufacture of stone images	345
	Manufacture of plaster of paris and its products	346
	Manufacture of asbestos products	347
	Manufacture of mica products	348
35	Manufacture of earthenware and earthen pottery	350
	Manufacture of chinaware and crockery	351
	Manufacture of porcelain and its products	352
	Manufacture of glass bangles and beads	353
	Manufacture of glass apparatus	354
	Manufacture of earthen image, busts and statues	355
	Manufacture of earthen toys and artwares except those covered by code No. 355.	356
	Manufacture of glass and glass products except optical and photographic lenses and glass products covered above.	357
	Manufacture of other non-metallic mineral products not elsewhere specified.	359
36 Basic Metals and their Products except Machinery and Transport Equipment—		
	Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods.	360
	Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms.	361
	Manufacture of armaments	362
	Manufacture of structural steel products such as joist, rail, sheet, plate	363
	Manufacture of iron and steel furniture	364
	Manufacture of brass and bell metal products	365
	Manufacture of aluminium products	366
	Manufacture of metal products (other than of iron brass, bell metal and aluminium) such as tin can.	367
	Enamelling, galvanising, plating (including electroplating) polishing and welding of metal products.	368
	Manufacture of sundry hardwares such as G. I. pipe, wire net, bolt, screw, bucket, cutlery (This will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38 and 39).	369
37 Machinery (All kinds other than Transport) and Electrical Equipment—		
	Manufacture and assembling of machinery (other than electrical) except textile machinery.	370

DIVISION 2 & 3—MANUFACTURING—*concl'd.*

Major Group (Code)	Description	Minor Group (Code)
37	Machinery (All kinds other than Transport) and Electrical Equipment—<i>concl'd.</i>	
	Manufacture and assembling of prime mover and boilers, other than electrical equipment, such as diesel engines, road rollers, tractors.	371
	Manufacture of machine tools	372
	Manufacture of textile machinery and accessories	373
	Manufacture of heavy electrical machinery and equipment such as motors, generators, transformers.	374
	Manufacture of electric lamps and fans	375
	Manufacture of insulated wires and cables	376
	Manufacture of all kinds of battery	377
	Manufacture of electronic equipment such as radio, microphone	378
	Manufacture of electric machinery and apparatus, appliances not specified above.	379
38	Transport Equipment—	
	Manufacture, assembly and repairing of locomotives	380
	Manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by code No. 363.	381
	Manufacture and assembling of motor vehicles of all types (excepting motor engines).	382
	Manufacture of motor vehicles engines parts and accessories	383
	Repairing and servicing of motor vehicles	384
	Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear.	385
	Building and repairing of water transport equipment such as ships, boats and manufacture of marine engines.	386
	Manufacture and repair of air transport equipment including aeroplanes, aeroengines.	387
	Repairing of bicycles and tricycles	388
	Manufacture of other transport equipment not covered above such as animal drawn and handdrawn vehicles.	389
39	Miscellaneous Manufacturing Industries—	
	Manufacture of optical instruments and lenses, opthalmic goods and photographic equipment and supplies.	390
	Manufacture of scientific, medical and surgical instruments and equipment supplies.	391
	Assembling and repairing of watches and clocks	392
	Manufacture of jewellery, silverware and wares using gold and other precious metals.	393
	Manufacture and tuning of musical instruments	394
	Manufacture of stationery articles not covered elsewhere such as pencil, penholder, fountain pen.	395
	Manufacture of sports goods	396
	Manufacture and repair work of goods not assignable to any other group	399
