INTRODUCTION

Introductory :

A new and an important feature of the 1961 Population Census is the introduction of the household schedule in addition to the individual enumeration slip. This schedule is primarily intended to collect data on cultivation and household industry of a household *i.e.*, as one identifiable socio-economic unit distinct from the individual on which the population census is generally based. It is well known that cultivation or household industry involves more of household effort than individual labour or supervision and, therefore, it was thought appropriate that the household should be reckoned as a unit of measurement. Also, in view of the land reforms undertaken in many parts of the country it was considered necessary to assess the extent of tenancy that was still prevalent. Another aspect which was covered in the household schedule was the input of labour provided by the family as well as by hire.

Another consideration that led to the introduction of the household schedule in the 1961 Census was that the concepts of earning for self-support wholly or partly in the 1951 Census had excluded a large number of family workers from the scope of "Workers" whereas actually the contribution of family workers particularly in the rural areas is substantial in cultivation and household industry. It is commonly noticed that plenty of women in the rural areas participate in some kind of work related to agriculture or household industry and do not just function as house-wives. These family workers were not treated as workers according to the 1951 definition and hence the participation rates in 1951 were considerably on the low side. Having regard to these facts, the definition of "worker" in the 1961 Census was framed in a more liberal way to give a realistic and reliable idea of people at work specially in the rural areas.

Also the four classes dependent on agriculture in 1951, viz, (1) land holders who did not cultivate, (2) owner cultivators, (3) tenants-at-will, and (4) agricultural labourers, were divided into only 3 categories in 1961 *i.e.*, (a) rentiers who did not work, (b) cultivators, and (c) agricultural labourers; rentiers who did not work were treated as non-workers because they did not participate in any productive work but are only rent-receivers.

The eight household economic tables printed in this volume are based on a 20% systematic sample of households for each district in all areas. It may also be mentioned that for the first time in the Indian Census history these data were processed mechanically and it may, therefore, be considered that these tables are free from personal errors of manual sorting and tabulation and are subject to only the quality of field data and stray errors in coding.

The definition of a household, a specimen of the household schedule and the explanation of the different terms used are given below :

Household

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

Household Schedule

The Household Schedule that was canvassed in the 1961 Census is reproduced on the next page.

CENSUS OF INDIA 1961

(To be filled up during Enumeration)

Is this an institution ?

PART I—HOUSEHOLD SCHEDULE

LOCATION CODE : _____

Full Name of Head of

Household	S.C.
	S.T.

S. P.

A. Cultivation		Local name of right on land	Area in acre's
1. Land under cultivation by Household			
(i) owned or held from Government			
(ii) held from private persons or institutions for payment in money, kind or share			
(iii) Total of items (i) and (ii)			
2. Land given to private persons for cultivation for payment in money, kind or share			

B. Household Industry	Nature of Industry	Number of months in the year during which conducted
Household industry (not on the scale of a registered factory) conducted by the Head of the household himself and/or mainly members of the household at home or within the village in rural areas and only at home in urban areas		
(a)		
(b)		

C. Workers at Cultivation or Household Industry					
Members including Head of family working and hired workers, if any, kept whole-time during current or last working season.	Members of family working :				Hired workers
	Head	Other males	Other females	Total	
1. Household Cultivation only					
2. Household Industry only					
3. Both in Household Cultivation & Household Industry					

Dated Signature of Supervisor

Dated Signature of Enumerator

Note : Part II—Census Population Record overleaf should be filled during the first round of enumeration (10 February to 28 February) from the enumeration slips relating to the household and brought up-to-date with corrections, if any, after the second visit during check period 1 March to 5 March, 1961.

PART II—CENSUS POPULATION RECORD

(To be compiled from individual Census Slips)

[illegible]

Dated Signature of Supervisor

Dated Signature of Enumerator

In Part I of the household schedule, information relating to the extent of land cultivated or held by a household, the nature of household industry and the number of workers engaged either in cultivation or in household industry or in both are furnished under Sub-Parts A, B and C respectively. In Part II the population of the household, with the particulars of age, sex, marital status, relationship to the head, of each member of the household and the description of work done by the working members are recorded.

Three categories of cultivated land based on the right on land are given in items 1 (i), 1 (ii) and 2 of Sub-Part A; land includes all land normally used for cultivation purposes including temporary fallows. Items 1 (i) and 1 (ii) relate to land actually cultivated by the households. Item 2 relates to land which is not cultivated by the household but has been given by it to private persons for cultivation for payment in money, kind or share. In each of these cases the total of separate plots or parcels of lands in different places, owned, held, taken or given was entered.

If the household (a) cultivates land owned or held from Government or taken from private persons or institutions or (b) has given land to private persons for cultivation purposes, the local name of right on such land was ascertained and entered in the column "Local name of right on land". Category 1 (i) - Land owned or held from Government, includes the total of all pieces of land owned or held in owner-like possession, e.g., land held directly from Government under a grant, lease or assignment, (i) with right of permanent, heritable and transferable possession, (ii) with rights of permanent and heritable possession, but without the right of transfer and (iii) temporary or conditional lease of any kind with the Government. Category 1 (ii) - land taken from private persons or institutions for payment in money, kind or share, includes land (i) with rights of permanent, heritable and transferable possession; (ii) with rights of permanent and heritable possession but without right of transfer; (iii) held in a variety of tenancies or tenures which may be broadly classified as follows:

(a) Tenants holding land with permanent and heritable rights whose land cannot be resumed by the owner on grounds of personal cultivation. (Such tenants may in some cases have the right of transfer also);

(b) Tenants who have been given permanent rights subject to the right of resumption by the owner (in some cases the tenant has the right to acquire ownership of the non-resumable area. In other cases he does not possess the right);

(c) Tenants holding land in areas where interim measures have been enacted for stay of ejectment or for continuing the leases for specified period;

(d) Tenants holding land on temporary lease who are liable to ejectment; and

(e) Areas held on condition of rendering service either to village community or to Government (This also includes cases where labourers in plantations are given some land for cultivation with permanent rights); and the following:

- (i) Land taken for a fixed amount of money,
- (ii) Land taken for a fixed amount of produce,
- (iii) Land taken for a share of the produce,
- (iv) Land for which money is paid partly in one and partly in any other form mentioned above, and

(v) Land held free of consideration.

Category 2. Land given to private persons for cultivation for payment in money, kind or share includes the classification mentioned in category 1 (ii).

Categories 1 (i) and 1 (ii) will include only those plots or parcels of land which are cultivated by the household, that is lands which lie within the village, or in adjacent villages or within such distance as enables the household to work in the land or actively supervise the cultivation. They will not include land owned or held in distant places where distance itself is a bar to active cultivation, constant supervision or direction. Category 2 includes land in any part of the country whatsoever.

Sub-Part A of the Household Schedule does not apply to households which do not possess any land. It will not apply to households which consists of only agricultural labourers without any land.

Land under any of items in Sub-Part 'A' includes rent free land, lands enjoyed in permissive possession or gifts without encumbrances or consideration. In the case of a household which was a member of a co-operative farm, only that amount of land in the co-operative farm which had belonged to the household before, was recorded under the right on land 'co-operative farm'. Labour hired by such a co-operative farm was not entered for the household.

Sub-Part 'B' of the Household Schedule relates to Household Industry. This part was filled up only where there was a Household Industry conducted by the Head of the household himself and/or mainly by members of the household at home or within the village in rural areas and only at home in urban areas. The industry should not be on the scale of registered factory. The participation of Head of the Household and/or members of the household is an essential feature of the household industry. In the rural area the Household Industry can be located either at home or within the village. But in urban area the household industry or atleast the major parts of its work must be located only at home. A household industry relates to production, processing, servicing or repairing and includes makers and sellers of goods.

The test for household industry is mainly three fold.

(a) Household Industry should embrace, manufacturing, processing or servicing and may include sale but should not be confined simply to buying and selling. At least part of the goods offered for sale from the household should be manufactured or processed by members of the household.

(b) Household Industry should be on the household scale, where the workers mainly will be the Head of the household himself and members of the Household, the role of hired workers from outside being of secondary importance. Thus in any household industry, members of the household should be in a position to lend a hand in the industry whenever they find the time in the course of their daily chores. Household Industry cannot, therefore, be on the scale of registered factory but can use machinery and employ power like steam engine or oil engine or electricity to drive the machinery.

(c) Location is also important, for proximity decides participation by members of the household. In a village this participation is possible if the Household Industry is located at home within the village, because village organisation is such as to make it possible for members of the Household to move about in

in the village, to look after their work. In urban areas such a free movement is not possible and, therefore, for Household Industry in urban areas, only those industries which are located at home are considered. Where however part of the work was done outside the house, e.g., preparing and dyeing the yarn for weaving and winding into warp and woof, or cleaning metal surfaces before electroplating in baths, it was still considered a Household Industry even in urban areas, as the main operation of weaving or of electroplating is conducted within the house and only one or two operations are conducted outside.

Activities such as the following were also reckoned as Household Industries; bidi-makers who either alone or with the help of members of the family roll bidis at home, for wages at piece rates, while the contractor supplies the materials; certain processes like buttoning and hand sewing of tailored clothes, dyeing and printing of cloth, when carried out at home by members of the household both at residence and at 'place of work'; or where women folk of the household fill in at home with lac gold ornaments, prepared at the shop by male members of the household.

The nature of household industry (ies) and the number of months in the year during which each industry is conducted were recorded in Sub-Part B under the relevant columns.

Sub-Part C of the Household Schedule relates to workers in cultivation and/or Household Industry and provides for recording the number of male and female family workers, and the number of hired workers, separately for households engaged (i) in cultivation only (ii) in industry only and (iii) both in cultivation and household industry. The hired workers should have been in whole time employment during the last working season or in whole time employment during the current working season. In the case of households engaged both in Household Cultivation and Household Industry the number of family members and the hired workers working both at household industry and cultivation were recorded in this part without ascertaining how many were engaged in household industry and cultivation separately.

The test for a worker was, whether a person was actually working in cultivation or household industry or supervising or directing work thereon.

The data contained in a 20% sample of the household schedules are tabulated and presented in the following eight Tables printed in this volume.

(i) TABLE B-X—Sample households (i) engaged neither in cultivation nor household industry, (ii) engaged either in

cultivation or household industry but not in both and (iii) engaged both in cultivation and household industry for all areas

(ii) TABLE B-XI—Sample households engaged in cultivation classified by interest in land and size of land cultivated in rural and urban areas separately

(iii) TABLE B-XII—Sample households engaged in cultivation only classified by size of land cultivated and number of family workers and hired workers in rural and urban areas separately

(iv) TABLE B-XIII—Sample households engaged both in cultivation and household industry showing size of land cultivated classified by principal household industry in rural and urban areas separately

(v) TABLE B-XIV—Sample households engaged only in household industry classified by principal household industry in all areas

Part A—Households classified by major groups of principal household industry and number of persons engaged

Part B—Households classified by minor groups of principal household industry

(vi) TABLE B-XV—Sample households engaged both in cultivation and household industry classified by size of land in rural and urban areas separately

(vii) TABLE B-XVI—Sample principal household industry classified by period of working and total number of workers engaged in household industry in all areas

(viii) TABLE B-XVII—Sample households classified by (i) number of male and female members by size of households and (ii) engagement (a) neither in cultivation nor in industry (b) in household industry only and (c) in cultivation sub-classified by size of land cultivated

These eight household economic tables give very useful data on the distribution of cultivated land according to the interest in land and different size classes of land cultivated, the relationship between size of a household and extent of land, between family and hired labour, relationship between the extent of land and in-put of labour and the inter-dependence of cultivation and industry. It is also possible to have a fairly good idea of the seasonality of rural industry, the ratio of in-put of labour in rural industry to that in cultivation, apart from the geographical distribution of various kinds of rural industry and the extent to which production in cultivation and rural industry is used for self-consumption or for sale.

TABLE B-X

SAMPLE HOUSEHOLDS(i) ENGAGED NEITHER IN CULTIVATION NOR HOUSEHOLD INDUSTRY,
(ii) ENGAGED EITHER IN CULTIVATION OR HOUSEHOLD INDUSTRY BUT NOT IN BOTH AND
(iii) ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY FOR *ALL AREAS*

TABLE B-X

SAMPLE HOUSEHOLDS (i) ENGAGED NEITHER IN CULTIVATION NOR HOUSEHOLD INDUSTRY,
(ii) ENGAGED EITHER IN CULTIVATION OR HOUSEHOLD INDUSTRY BUT NOT IN BOTH AND
(iii) ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY FOR ALL AREAS

This Table can be considered to be a summary table which gives the distribution of sample households according to (i) those engaged neither in cultivation nor household industry, (ii) engaged either in cultivation or household industry but not in both and (iii) engaged both in cultivation and household industry and thus gives the division of all households into four important sectors of economic activity. This table gives figures separately for total, rural and urban areas of the State and each district. The figures for the rural areas are given down to the taluk level.

The following statement gives the percentage distribution of households in Andhra Pradesh according to the type of economic activity.

Houeholds engaged	Percentage distribution of households in		
	Total	Rural	Urban
1	2	3	4
1. Neither in Cultivation nor household industry	41.3	33.2	80.4
2. In cultivation only	44.6	51.8	9.7
3. In household industry only	6.9	6.6	8.5
4. Both in cultivation and house- hold industry	7.2	8.4	1.4

In the rural areas, households engaged in cultivation only are the most numerous constituting nearly 50% or more of the total number of households in almost all the districts; the next numerous category being that of households engaged neither in cultivation nor household industry. In the urban areas, however, households engaged neither in cultivation nor household industry constitute the largest category in all the districts. Also in a number of districts the proportion of households engaged in household industry only is higher in the urban areas than in the rural areas perhaps indicating the tendency on the part of the craftsmen and artisans to migrate to urban areas because household industry in the rural areas may not be paying adequate returns. Household industry such as handloom weaving is mostly concentrated in small urban units. Another important point noticed is that in Rayalaseema and Telangana districts the proportion of households engaged both in cultivation and household industry is considerably higher compared to the proportion in the coastal districts, probably suggesting that in these backward areas, organised household industry or large scale industry has not yet developed to the extent of meeting the requirements of the population. Further, the proportion of households engaged neither in cultivation nor household industry is relatively larger in the rural areas of the coastal districts compared to the proportion in the rural areas of Rayalaseema and Telangana districts which are backward and in which apparently the population still depends on the traditional family cultivation and rural crafts to a larger extent than in the more prosperous areas where the people were able to take to alternative occupations.

TABLE B-X

SAMPLE HOUSEHOLDS (i) ENGAGED NEITHER IN CULTIVATION NOR HOUSEHOLD INDUSTRY,
(ii) ENGAGED EITHER IN CULTIVATION OR HOUSEHOLD INDUSTRY BUT NOT IN BOTH AND
(iii) ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY FOR *ALL AREAS*

TABLE B-XI

**SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION CLASSIFIED BY INTEREST IN LAND AND
SIZE OF LAND CULTIVATED IN RURAL AND URBAN AREAS SEPARATELY**

TABLE B-XI

SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION CLASSIFIED BY INTEREST IN LAND AND SIZE OF LAND CULTIVATED IN RURAL AND URBAN AREAS SEPARATELY

This Table is prepared separately for rural and urban areas. The details for rural areas are given upto the taluk level. In this table, a more detailed examination of cultivating households which have been separated in the previous table, is made. Cultivating households are classified in this table according to 10 categories based on the size of land cultivated in acres, viz., (1) less than 1.0, (2) 1.0-2.4, (3) 2.5-4.9, (4) 5.0-7.4, (5) 7.5-9.9, (6) 10.0-12.4, (7) 12.5-14.9, (8) 15.0-29.9, (9) 30.0-49.9 and (10) 50+. In a few cases, the size of land cultivated was not recorded in the household schedules. Such cases are shown under column 13—'Unspecified' of the Table. These eleven

categories of households according to size of land cultivated are further cross tabulated by the interest in land, i.e., (1) owned or held from Government, (2) held from private persons or institutions for payment in money, kind or share and (3) partly held from Government and partly from private persons for payment in money, kind or share.

The following two statements show the distribution of 1,000 households engaged in cultivation by size of land cultivated and according to interest in land in the rural and urban areas of the State.

STATEMENT I

Interest in land cultivated	No of cultivating households	Households engaged in cultivation by size of land (in acres)											Un-specified
		Less than 1.0	1.0-2.4	2.5-4.9	5.0-7.4	7.5-9.9	10.0-12.4	12.5-14.9	15.0-29.9	30.0-49.9	50+

2. Held from private persons or institutions for payment in money, kind or share	R	63	78	90	64	53	44	52	24	30	18	12	66	
	U	97	116	133	109	81	63	72	47	41	23	9	...	
3. Partly held from Government and partly from private persons for payment in money, kind or share	R	147	35	83	167	187	227	176	309	236	213	166	38	
	U	114	25	62	144	151	191	138	325	188	147	120	...	

It will be observed from these statements that nearly 80% of the cultivating households in the State have holdings of less than 10.0 acres and that in spite of the land reforms, tenancy and share cropping still exist to some extent in all sizes of holdings. Another important feature that is noticed is that in the case of pure tenancy, households with holdings of less than 7.5 acres constitute a higher proportion of more than 80% compared to the corresponding proportion of less than 60% for households under mixed tenancy; whereas the proportion of households under pure tenancy in each size of holdings above 7.5 acres is less than the corresponding proportion of households under mixed

tenancy. Considering the households under each size of holding separately, the proportion of pure tenancy is much lower than that of mixed tenancy in all sizes of holdings except in the first two categories of holdings below 2.5 acres. Thus this table gives very useful information on the size of holdings and about the working of land reforms which will be of interest to State Governments, to the Ministry of Food and Agriculture, and for planning purposes. It will also give an indication of the number of holdings likely to be deficit, self-sufficient and surplus for self-consumption.

TABLE B-XII

**SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION ONLY CLASSIFIED BY SIZE OF LAND
CULTIVATED AND NUMBER OF FAMILY WORKERS AND HIRED WORKERS
IN RURAL AND URBAN AREAS SEPARATELY**

•

TABLE B-XII
SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION ONLY CLASSIFIED BY SIZE OF LAND
CULTIVATED AND NUMBER OF FAMILY WORKERS AND HIRED WORKERS
IN RURAL AND URBAN AREAS SEPARATELY

This table also is prepared separately for rural and urban areas. The figures for rural areas are given down to the taluk level. In this table a further study of households that are engaged only in cultivation has been made. Each household having a particular size of holding mentioned in Table B-XI has been cross-tabulated with reference to the number of persons working in cultivation. In the case of households where more than one

person is working, the number of family workers and hired workers have been separated.

The following statement shows the distribution of 1,000 cultivating households, 1,000 family workers and 1,000 hired workers according to the number of persons engaged in cultivation.

		Cultivating households according to								
State		Total number of cultivating households			1 person			2 persons		
		No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers
		2	3	4	5	6	7	8	9	10
Andhra Pradesh	R	1,000	1,000	1,000	254	106	...	333	268	105
	U	1,000	1,000	1,000	412	223	...	278	271	113

		number of persons engaged in Cultivation—Concl.								
State		3-5 persons			6-10 persons			More than 10 persons		
		No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers
		11	12	13	14	15	16	17	18	19
Andhra Pradesh	R	357	492	500	53	126	277	3	8	118
	U	262	398	430	41	96	229	7	12	228

It is seen that the proportion of hired workers is naturally less in households with two workers engaged in cultivation as against the largest proportion of hired workers in households with 3-5 workers. It is also noticed that households with 3-5 workers constitute a large proportion of the cultivating households.

This table furnishes useful information about the variations

in the ratio between male and female family workers from district to district as also the incidence of family and hired workers. It will also enable us to know the relationship between the size of the household, the size of cultivated land and the incidence of hired workers. A rough idea about the extent of rural under-employment and the size and scale of agricultural enterprise can also be had from this table.

TABLE B-XIII

**SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY
SHOWING SIZE OF LAND CULTIVATED CLASSIFIED BY PRINCIPAL HOUSEHOLD
INDUSTRY IN *RURAL* AND *URBAN* AREAS SEPARATELY**

TABLE B-XIII
SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY
SHOWING SIZE OF LAND CULTIVATED CLASSIFIED BY PRINCIPAL HOUSEHOLD
INDUSTRY IN RURAL AND URBAN AREAS SEPARATELY

This table also is prepared separately for rural and urban areas. It makes a study of households engaged both in cultivation and household industry. The nature of industry in which cultivating households with a particular size of holding are engaged is available in terms of Divisions and Major Groups of the Indian Standard Industrial Classification* adopted for the 1961 Census. This table will throw light on household industries which are carried on as ancillary to cultivation in Andhra Pradesh.

hold industry with the help of this table. The nature of household industry in different regions gives an indication of the availability of raw material and the affinity between certain types of household industry and cultivation.

The following statement gives the distribution of 1,000 households engaged both in cultivation and household industry according to size of land cultivated in rural and urban areas of Andhra Pradesh.

It will be possible to have some idea about the relationship between size and scale of cultivation and size and scale of house-

No. of households engaged both in cultivation and household industry		Distribution of households by size of land cultivated (in acres)											
		Less than 1	1.0-2.4	2.5-4.9	5.0-7.4	7.5-9.9	10.0-12.4	12.5-14.9	15.0-29.9	30.0-49.9	50+	Un-specified	
		1	2	3	4	5	6	7	8	9	10	11	12
1,000	R	156	274	202	124	56	61	21	74	21	10	1	
1,000	U	156	320	195	113	51	54	18	65	16	11	1	

It is observed that households cultivating less than 7.5 acres of land for obvious reasons constitute a large majority of house-

holds engaged both in cultivation and household industry.

***INDIAN STANDARD INDUSTRIAL CLASSIFICATION**
 (Divisions and Major Groups of the Household Industry with their Code Numbers)

DIVISION 0—AGRICULTURE, LIVESTOCK, FORESTRY			Major Group 25	Textile—Wool
FISHING AND HUNTING			" 26	Textile—Silk
Major Group 00	Field Produce and Plantation Crops		" 27	Textile—Miscellaneous
" 01	Plantation Crops		" 28	Manufacture of Wood and Wooden Products
" 02	Forestry and Logging		" 29	Paper and Paper Products
" 03	Fishing		" 30	Printing and Publishing
" 04	Livestock and Hunting		" 31	Leather and Leather Products
			" 32	Rubber, Petroleum and Coal Products
			" 33	Chemicals and Chemical Products
DIVISION 1—MINING AND QUARRYING			" 34-35	Non-Metallic Mineral Products other than Petroleum and Coal
Major Group 10	Mining and Quarrying		" 36	Basic Metals and their Products except Machinery and Transport equipment
DIVISION 2 & 3—MANUFACTURING			" 37	Machinery (all kinds other than Transport) and Electrical equipment
Major Group 20	Foodstuffs		" 38	Transport Equipment
" 21	Beverages		" 39	Miscellaneous Manufacturing Industries
" 22	Tobacco Products			
" 23	Textile—Cotton			
" 24	Textile—Jute

TABLE B-XIV Part A and Part B

**SAMPLE HOUSEHOLDS ENGAGED ONLY IN HOUSEHOLD INDUSTRY CLASSIFIED BY
PRINCIPAL HOUSEHOLD INDUSTRY IN *ALL AREAS***

TABLE B-XIV Part A and Part B

SAMPLE HOUSEHOLDS ENGAGED ONLY IN HOUSEHOLD INDUSTRY CLASSIFIED BY
PRINCIPAL HOUSEHOLD INDUSTRY IN ALL AREAS

This table, prepared for total, rural and urban areas separately, relates to households engaged only in household industry. The households are classified by the nature of the principal household industry given in terms of the Divisions and Major Groups of the Indian Standard Industrial Classification and the number of persons engaged according to five groups viz., 1, 2, 3-5, 6-10 and more than 10 persons. It is possible to have a rough idea about the extent of under-employment by a comparison of the nature of the industry and the number of persons employed. Assuming that households with more than two workers produce not only for self consumption but for sale also, this table may indicate the approximate scale of household industry, i.e., how much is produced for self consumption and how much for the market.

The following statement gives the distribution of 1,000 households engaged only in household industry according to the number of persons engaged, for the total, rural and urban areas of Andhra Pradesh.

Households engaged in household industry only according to number of persons engaged						
	1	2	3-5	6-10	More than	
Total	Person	Persons	Persons	Persons	10 Persons	
1	2	3	4	5	6	
All Industries						
Total	1,000	464	304	210	21	1
Rural	1,000	468	306	206	20	N
Urban	1,000	450	296	225	27	2

It is observed that household industry is concentrated mostly in the smaller households. Households with more than 5 workers constitute only about 2% of the households engaged only in household industry. Table B-XIV Part A also indicates that in almost all the industries, single worker households constitute the largest number followed by households with two workers and 3-5 workers. However, in the case of households engaged in manufacture of cotton, woollen and jute textiles, households

with two workers form the most numerous category. Another interesting point noticed is that in the case of manufacture of leather and leather products, the number of single worker households is disproportionately large compared to the number of households with two workers, unlike in any other industry.

The percentage distribution of households engaged in household industry only, according to the nature of household industry is given below for the State :

Nature of household industry	Percentage of households
1	2
Textile—Cotton	29.24
Wood and wooden products	15.26
Leather and leather products	10.48
Livestock and hunting	9.43
Textile—Miscellaneous	8.01
Miscellaneous manufacturing industries	5.48
Food stuffs	5.02
Non-metallic mineral products	4.33
Tobacco products	3.19
Textile—Jute	2.72
Basic metals and their products	2.41
Textile—Wool	1.42
Fishing	0.54
Chemicals and Chemical products	0.53
Transport equipment	0.44
Other industries	1.50

An examination of the available resources of raw materials etc., in each district and the distribution of households engaged in household industry according to the nature of industry given in Table B-XIV may also indicate the districts in which the existing household industries can be expanded or where new household industries can be developed with profit.

Part B of Table B-XIV gives the distribution of households engaged in household industry only according to the minor groups of the Indian Standard Industrial Classification for the total, rural and urban areas of the State and each district.

TABLE B-XV

**SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY
CLASSIFIED BY SIZE OF LAND IN RURAL AND URBAN AREAS SEPARATELY**

TABLE B-XV

SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY
CLASSIFIED BY SIZE OF LAND IN RURAL AND URBAN AREAS SEPARATELY

This table relates to households engaged both in cultivation and household industry and is prepared separately for the rural and urban areas. The figures for rural areas are given down to the taluk level. In Table B-XIII, which also relates to these households, a cross-tabulation was made between the size of the holding and the nature of household industry in which the household is engaged as a support to cultivation. In this table an analysis is made of persons working in these households with reference to sizes of holdings. In the case of households with more than one worker the number of family workers and hired workers are given separately. Similar data in respect of households engaged in cultivation only is available in Table B-XII.

A comparison between Table B-XV and Table B-XII will show how the combination of household industry with cultivation affects the employment position. This table also shows the relationship between the scale of household industry and the scale of cultivation.

The following statement shows the distribution of 1,000 households which are engaged both in cultivation and household industry, 1,000 family workers and 1,000 hired workers in these households according to the number of workers engaged, in the rural and urban areas of Andhra Pradesh :

State		Total cultivating households which are also engaged in household industry			Distribution of households according					
					1 Person			2 Persons		
		No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers
1		2	3	4	5	6	7	8	9	10
Andhra Pradesh	R	1,000	1,000	1,000	127	42	...	300	196	48
	U	1,000	1,000	1,000	146	54	...	344	247	47

to number of persons engaged—Concl'd.

State		3-5 Persons			6-10 Persons			More than 10 Persons		
		No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers	No. of house-holds	No. of family workers	No. of hired workers
		11	12	13	14	15	16	17	18	19
Andhra Pradesh	R	479	560	468	89	187	338	5	15	146
	U	435	535	478	70	149	295	5	15	180

It is seen that the proportion of hired workers in households with two workers is less than the proportion of hired workers in households with 3-5 workers and 6-10 workers, as was the case with households engaged in cultivation only (vide fly leaf to Table B-XII). However the incidence of hired labour in the households engaged both in cultivation and household industry is

somewhat less than in the households engaged in cultivation only. As was seen from Table B-XIII, households cultivating smaller holdings form the largest proportion of those engaged in household industry also and these naturally depend on hired labour to a lesser extent.

TABLE B-XV

TABLE B-XVI

**SAMPLE PRINCIPAL HOUSEHOLD INDUSTRY CLASSIFIED BY THE PERIOD OF WORKING AND
TOTAL NUMBER OF WORKERS ENGAGED IN HOUSEHOLD INDUSTRY IN ALL AREAS**

This table is confined only to principal household industry and is prepared for total, rural and urban households. Data in respect of households engaged in household industry only or both in household industry and cultivation are given separately. The principal household industry of households is classified according to the period of working of the industry grouped under four categories viz., (i) 1-3 months, (ii) 4-6 months, (iii) 7-9 months and (iv) 10 months to 1 year, and under each category the number of households, the number of family workers and the number of hired workers are given. The principal household industry is tabulated by Divisions and Major Groups of the Indian Standard Industrial Classification. This table gives important data on the

seasonality of various household industries and may yield inferences on the relationship between seasonality of household industry and seasonality of cultivation. Data obtained from this table for households engaged both in household industry and cultivation and for households engaged only in household industry without cultivation may also throw some light on relative employment and under-employment especially in the rural areas.

The following statement shows the distribution of 1,000 households engaged in household industry, with and without cultivation according to the duration of household industry for the rural and urban areas of Andhra Pradesh :

Principal Household Industry	Distribution according to duration of industry												
	Total No. of households			1-3 months		4-6 months		7-9 months		10 months to 1 year		Unspecified	
	Total	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban
1	2	3	4	5	6	7	8	9	10	11	12	13	14
1. Agriculture, Livestock, Forestry, Fishing and Hunting													
(a)	1,000	983	17	6	N	29	1	32	N	852	15	64	1
(b)	1,000	936	64	4	N	26	2	35	N	796	58	75	4
2. Mining and Quarrying

(b)	1,000	866	134	11	...	59	...	108	11	629	113	59	10
3. Manufacturing													
(a)	1,000	960	40	54	1	182	4	105	3	569	30	50	2
(b)	1,000	774	226	14	1	67	8	48	6	605	200	40	11

(a)—Households with cultivation. (b)—Households without cultivation.

It is seen that quite a large proportion of households work on household industry, either with cultivation or without cultivation, from 10 months to 12 months in a year. In the case of 'Manufacturing' the number of households engaged both in cultivation and household industry working for 4-6 months or 7-9 months only in a year is also considerable. Households engaged in 'Mining and Quarrying' present a somewhat different picture. The proportion of households which work for 10 months to 12 months is significantly higher in the case of households

without cultivation compared to households with cultivation. It is very common to find families of stone-cutters and quarrymen—"Vaddaras", moving from one quarry or pit to another almost throughout the year and naturally they do not work in cultivation also. In urban areas obviously the proportion of households engaged in Household Industry only will be much higher than those engaged in cultivation also and most of them have work throughout the year.

TABLE B-XVII

**SAMPLE HOUSEHOLDS CLASSIFIED BY (i) NUMBER OF MALE AND FEMALE MEMBERS BY
SIZE OF HOUSEHOLDS AND (ii) ENGAGEMENT (a) NEITHER IN CULTIVATION NOR
IN INDUSTRY (b) IN HOUSEHOLD INDUSTRY ONLY AND (c) IN CULTIVATION
SUB-CLASSIFIED BY SIZE OF LAND CULTIVATED**

TABLE B-XVII

SAMPLE HOUSEHOLDS CLASSIFIED BY (i) NUMBER OF MALE AND FEMALE MEMBERS BY SIZE OF HOUSEHOLDS AND (ii) ENGAGEMENT (a) NEITHER IN CULTIVATION NOR IN INDUSTRY (b) IN HOUSEHOLD INDUSTRY ONLY AND (c) IN CULTIVATION SUB-CLASSIFIED BY SIZE OF LAND CULTIVATED

This table, prepared for total, rural and urban areas, gives the distribution of sample households according to size of households, under the five categories viz., (i) single member households, (ii) small households with 2-3 members, (iii) medium households with 4-6 members, (iv) large households with 7-9 members and (v) very large households with 10 members or more. Households under each of these categories in the rural areas are cross tabulated by (a) households engaged neither in cultivation nor household industry, (b) households engaged in household industry and (c) households engaged in cultivation. The last category is further divided according to the several ranges of size of holding adopted in Table B-XI.

By definition, a 'Census Household' is not the same as a 'Family'. The household includes persons who are not members of the family but are residing with the family during the Census period. All the same, the table will give a general idea of the family sizes as in the majority of families outsiders are not likely to be present.

The following statement gives the distribution of 1,000 households in the total, rural and urban areas of Andhra Pradesh according to size of households :

Number of households according to size						
State	All house-holds	Single Mem-ber	Small (2-3 Mem-bers)	Medium (4-6 Mem-bers)	Large (7-9 Mem-bers)	Very large (10 Mem-bers or more)
1	2	3	4	5	6	7
T	1,000	69	281	445	161	44
R	1,000	67	278	453	160	42
U	1,000	78	293	407	167	55

Medium sized households represent the modal group both in the rural and urban areas. The slightly higher proportion of

single member households and very large households in the urban areas (compared to the rural areas) is understandable because of a considerable number of students in schools and colleges and unmarried employees or married employees living singly leaving their families in nearby villages in the former case and a larger number of dependants for educational purposes, cooks, domestic servants etc., in the latter case.

The distribution of 1,000 households engaged (i) neither in cultivation nor household industry, (ii) in household industry only, and (iii) in cultivation, according to size of households, for the rural areas of Andhra Pradesh is given below :

Category of House-holds*	Total house-holds	Number of households according to size				
		Single Member	Small	Medium	Large	Very large
1	2	3	4	5	6	7
(a)	1,000	138	357	397	94	14
(b)	1,000	49	289	479	154	29
(c)	1,000	29	234	480	198	59

* (a) Engaged neither in cultivation nor household industry; (b) Engaged in household industry only; (c) Engaged in cultivation.

The markedly higher proportion of large and very large households among those engaged in cultivation compared to the other two categories of households probably indicates either the quantum of reserve man-power that is required for cultivation purposes or the necessity to divert a part of the excess population accounted in the cultivating households to other sectors of economic activity. Sociologically, the traditional joint family system has apparently more hold on the settled cultivating households than among those that have neither cultivation nor household industry.
