1. E-Series	
(i) E-I Census Houses and the uses to which they are put	2—23
(ii) E-II Tenure Status of Sample Census Households living in Census Houses used wholly or partly as dwelling	24—49
(iii) E-III Census houses used as factories and workshops classified by industry, power and no power used and size of employment	50—768
(iv) E-IV Distribution of Sample Households living in Census houses used wholly or partly as dwelling by predominant material of wall and predominant material of roof	769—789
(v) E-V Sample households classified by number of members and by number of rooms occupied	790—807
2. Subsidiary Tables to E-Series	
(i) E-I.1 Distribution of 1,000 Census Houses by vacant and different types of occupied Census Houses	809—880
(ii) E-I.2 Proportion of 1,000 houses in the rural/urban areas to 1,000 houses in the district/police station which are:	881—886
(iii) E-II.1 Distribution of 1,000 Census Households living in Census Houses used wholly or partly as Dwellings by types of Census Houses in rural areas	887—841
(iv) E-II.2 Distribution of 1,000 Census Households living in Census Houses used wholly or partly as Dwellings by types of Census Houses and Tenure Status in urban areas	842—846
(v) E-III.1 Proportion of workshops and factories according to Divisions, Major Groups and selected Minor Groups, to 1,000 workshops and factories	847—859
(vi) E-III.2 Distribution of 1,000 workshops and factories in each kind of fuel used by size of employment	860—862
(vii) E-III.3 Distribution of 1,000 workshops and factories in each Division, Major Groups and selected Minor Groups by kind of fuel or power used	863—903
(viii) E-IV.1 Distribution of 1,000 households living in Census Houses used wholly or partly as Dwellings by predominant material of wall	904—911
(ix) E-IV.2 Distribution of 1,000 households living in Census Houses used wholly or partly as Dwellings by predominant Material of roof	912—919
(x) E-V.1 Distribution of 1,000 Census Households according to number of rooms occupied	920—924
(xi) E-V.2 Number of Persons, Males and Females per room and persons per household in each category or Household (In two places of Decimals)	925—927
List of Agents	928—938

ACKNOWLEDGEMENTS

The success of the 1961 Census depends upon the thousands of people who worked very hard during the operations and in the compilation of its results. A great share of the credit goes to the Deputy Commissioners and Subdivisional Officers who, in their capacities as District Census Officers and Subdivisional Census Officers, had been largely responsible for the smooth taking of the Census in spite of the many difficulties that we encountered. The Deputy District Census Officers (who were all Additional Deputy Commissioners except in three districts), the Principal Census Officers (who were either Extra Assistant Commissioners or Election Officers) and a whole host of gazetted and non-gazetted officers in every district and subdivision have thrown in their whole weight to bring the Census Operations to a successful close. But the greatest share of the credit goes to the enumerators who had to go from door to door to beg of the informations required by the Census questionnaire. The Supervisors and Charge Superintendents did their best to instruct and inspire the enumerators to carry out their duties faithfully.

My sincere obligations are due to Shri S. K. Datta ICS, Chief Secretary to the Government of Assam, but for whose support the Census could not have been taken so smoothly. The Chief Secretary, the then Inspector General of Police (Shri Haidar Hussain IPS) and the District Magistrates rendered most valuable help in the maintenance of law and order before and during the operations.

I am greatly indebted to Shri Asok Mitra ICS, Registrar General, whose guidance and experienced handling of the 1961 Census Operations made our task much easier. Shri D. Natarajan, Deputy Registrar General, was always helpful in administrative and technical matters; while Shri K. D. Ballal greatly helped us by checking the accuracy of the tables.

My Tabulation Officers, Sarvashri J. C. Bhuyan and K. S. Dey, have been with me from the very beginning and greatly helped me during all phases of the Census Operations by imparting training to the field staff. During the tabulation and compilation of the results, they have been mainly responsible for all the tables. They also help me in the final analysis of the Census data, and I seldom could dictate my write-ups without their assistance in supplying me with the necessary materials. All my office staff have also worked round the clock to enable me to carry out the arduous task of the operations and the compilations. My two Stenographers, Sarvashri G. Raghuram and J. Ramsden, have greatly helped me to complete the publications because I found it rather difficult to write in my own hand, whereas by dictation, I could do three to four times the work which I could have done had the whole thing been written in my own hand.

E. H. PAKYNTIN

CHAPTER I

INTRODUCTION

This is the first time in the history of the Indian Census that a comprehensive Housing Census has been taken. The aim of the Census was to count every person only once and to leave out none. This aim naturally involved the building up of a counting organisation which had to be so perfect that there would be no likelihood of anyone being omitted from the count or anyone being counted twice. To achieve this end, it is necessary to divide the whole State of Assam into definite geographical entities. The smallest unit in this Census is the Block which is an area consisting of about 120 houses in Urban Areas and about 150 houses in the Rural Areas. Four to six Blocks constitute a Circle and about six to ten Circles constitute a Charge. The number of Charges coincide with the exact boundaries of an established Police Station which has been accepted as one of the basic units for this Census. A Block may coincide with a village; it may be part of a big village and it may be a conglomeration of two or more villages if they are small ones and are contiguous to each other. Within each Block, all the houses are serially numbered to ensure the complete coverage of the Census. If the Block coincides with one village, the numbering runs consecutively for the whole village. If the village is a big one and has two or more Blocks, then each house within the Block has been numbered serially giving the sub-number of the Block at the same time. If the Block consists of two or more villages, houses in each village have been numbered separately because the entity of the village has to be kept intact. In Urban Areas, the houses in each Block are numbered serially, giving the sub-number of the Block at the same time.

Enumeration at the residence of the individual has been universally recognised as the best procedure to ensure accuracy in a population Census. The numbering of houses within each Enumerator's Block and the preparation of the list of houses so numbered is, therefore, very essential. All buildings with the exception of such subsidiary structures as latrines, cowsheds and garages which are not meant for human habitation had been numbered irrespective of the use to which they are put. If a garage was used only for housing a car, it was not numbered; but if it was used partially as a human habitation, it was numbered.

The Houselist Form contains not only the number of each house and household but it also contains many other data which are very useful to the various Ministries of the Government of India and the State Governments, particularly the Ministry of Commerce and Industry and the Ministry of Works, Housing and Supply. The

first Houselist prepared by the Registrar General was pre-tested by the State Director of Statistics some time in January-February, 1959 and the second pre-testing was done by me in August, 1959. Thereafter, in the Conference of the Superintendents of Census Operations held between September 24 and October 1, 1959, the Houselist Form was finalised. The instructions how to do the housenumbering and how to fill the Houselist Form were also finalised in this Conference. The instructions for filling up the Houselist were translated into Assamese, Bengalee, Khasi, Garo and Lushai in Assam for the benefit of the Enumerators.

The Houselist gives us informations regarding the number of each house, the purposes for which it was used, the description of the materials of the roof and wall of each house; whether the house is owned or rented by the household and the number of persons who were found in each house on the day of the visit by the Enumerators. It gives us detailed informations whether each house was used as a dwelling, a shop, a shop-cum-dwelling, a place of business, a factory, a workshop, a school or any other institution, a jail, a hostel, a hotel, etc. If any Census House was used as a shop, workshop or factory, then detailed informations were also collected regarding the name of the establishment and its proprietor, the name of the product(s), repair or servicing undertaken, the average number of persons employed daily for one week prior to the date of visit by the Enumerators and what kinds of fuel or power were utilised if some kind of machinery was used in a workshop or factory. The number of rooms in each Census household was also recorded in order to check over-crowding. When the data have been tabulated for each State, complete lists of all kinds of establishments, factories and workshops together with the number of persons engaged will be available for each State and for the country as a whole. The list of factories and workshops ranges from such small things as household weaving or pot-making to modern large scale industries. Perhaps no other country has made such an attempt and the ECAFE have commended the effort.

The numbering of houses and the preparation of the Houselist was a combined operation in Assam. Giving a number to each house according to the well-defined system is a very important operation, but unless all the above data are also collected for each house in the Houselist, the housenumbering will not be of permanent value. In other words, the housenumbering and the houselisting are two distinct operations but they were taken as a combined operation because that is the most convenient method for

collecting the data. In some States, the house-numbering and houselisting have been done at two different times and by two different agencies, but in Assam, the two operations were carried out simultaneously by the same agency, namely the Enumerators. As this combined operation was one of the most important preliminary steps of the 1961 Census, it had to be done ahead of the Census. As a matter of fact, the final divisions of the State and the Districts into Charges, Circles and Blocks had to be finalised only when this operation was finished. In some States like Kerala, Mysore and Madras, the house-numbering and houselisting was done well before the monsoon. This was possible because they have permanent village officials who did this work. In Assam, the housenumbering and houselisting operation was done between September 15, 1960 and November 15, 1960 after the monsoon.

In Assam, the agency for housenumbering and houselisting were the same persons who also did the enumeration. In other words, the Enumerators did the housenumbering and houselisting under the Circle Supervisors and Charge Superintendents for each Subdivision of Assam. The number of Enumerators had to be greatly increased after the houselisting operation because it was immediately found out that the number of people had greatly increased in Assam and so many new Blocks had to be created immediately thereafter so that each Enumerator need not enumerate more than 750 persons in the Rural Areas or more than 600 persons in the Urban Areas in order to achieve maximum accuracy. The housenumbering was done by coal-tar and improvised sticks for which each Enumerator was given a sum of Rs. 2/- to purchase these numbering materials. The numbering was done only in Arabic numerals according to the decision of the Government of India.

To understand the housenumbering and houselisting operation, one should have a clear idea of the concepts of the words 'Building', 'House' and 'Household'.

A 'Building' refers to the entire structure on the ground. There are, however, high, large or long buildings along a street or lane which have been partitioned or portions of which have been sold, which have distinct, separate main exits on the road and which belong to separate owners or occupiers or alternatively there are a series of different houses joined each to each by common walls on either side to make the whole look like one building but parts of which have been built at different times and belong to separate owners. Such distinguishable structures, although not separate from each other, were regarded as separate buildings and given separate numbers. There are again certain compounds which have a main building and other subsidiary structures such as a kitchen, a garage, a latrine, a cowshed

etc., but which were all occupied only by one family. Although technically there are many structures in one such compound, they were regarded only as one building and given only one number.

A 'House' is a structure or part of a structure, inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place of business, workshop, school, etc., with a separate entrance.

A 'Household' is a group of persons who commonly live together and take their meals from a common mess or a common kitchen unless the exigencies of work prevent any of them from doing so.

A building may consist of one Census House and one Census Household only as most of the Census Houses in Assam are, or it may consist of more than one Census House and each Census House may again consist of more than one Census Household. For example, there may be a big structure of four flats and each flat may have two separate households living in them. The structure is a building, each flat is a Census House and each household is a Census Household. Such instances are however rare in Assam where in most cases, the Building, the Census House and the Census Household are one.

Owing to circumstances inherent in the nature of the thing, a system of housenumbering in the Rural Areas is slightly different from that in the Urban Areas. In some areas of Assam, villages may be too small to comprise an Enumerator's Block by themselves and so it was necessary to group two or more contiguous villages to form one Block. The houses in each such village were however numbered in one series because the entity of the village has to be kept intact. Thus, if there are three villages, A, B and C which have 28, 46 and 75 houses respectively but which are contiguous to each other, they were constituted into a single Enumerator's Block. But the houses in village A, B and C were given separate numbers 1-28, 1-46 and 1-75 respectively. If a village is too big and has to be divided into two or more Blocks, each Block was given a sub-number of the village and the houses in each Block were given a distinct series of house-numbers indicating the sub-number of the Block and the series of houses in each Block. Thus, if village A has 280 houses and it has to be divided into two Blocks of 145 and 135 houses, then each Block was given a sub-number 1 and 2 of the village and all the houses within each Block were numbered serially by each Enumerator within his allotted Block. Thus the houses in Block 1 of village A were numbered either 1-1, 1-2, 1-3, 1-145 or $1\frac{1}{2}$, $2\frac{1}{2}$, $3\frac{1}{2}$, $145\frac{1}{2}$. In Urban Areas, the entity of each Ward was kept intact. It is very desirable that the house-numbers in each Ward should have one continuous serial, but as the work had to be done by honorary Enumerators within a fixed time limit, the numbering of houses

in each Block of a Ward had to be confined to each Enumerator's Block only. The division of a Ward into Blocks had to be done according to certain well-defined streets or roads or lanes or ditches so that there could be no over-lapping. Within each such compact Block, the houses were numbered serially.

As far as possible, the numbering of houses was done street-wise in a village, beginning from one side of the street continuously and then cross over and continue the numbering on the other side of the street. But where the houses are scattered, the numbering was done either in the geographical order from the North-West to the South-East or clock-wise or anti-clock-wise according to the peculiar configuration of the village. In Urban Areas, the numbering followed the axis of a street and not such pre-conceived geographical order as from North-West to South-East. Numbering along a well-defined street, road or lane, was done by having the series of numbers running along one side of a street or road before crossing into the opposite side.

In cases where there are more than one household within one Census House, the number of each household was also painted against that household by giving sub-numbers. The house-number is generally a composite figure, the first number indicating the serial number of the building, the second number indicating the serial number of the Census House within that particular building and the third number being an alphabet such as A, B, C, etc., indicating the serial order of households within that Census House. For example, if building No. 15 has two Census Houses, the Census Houses were numbered 15 (1) and 15 (2). If within each Census House, there are respectively two and four households, then the households will bear the numbers 15 (1-A), 15 (1-B), 15 (2-A), 15 (2-B), 15 (2-C) and 15 (2-D). Where the building has only one Census House and only one Census Household, as most buildings in Assam are, then only the building number was given. Numbers were given not only to occupied houses but also to unoccupied houses such as schools, public offices, hospitals, namghars, temples, etc.

Numbering of houses and the preparation of the Houselists is a specialised thing and so elaborate instructions had to be issued to all the field staff to ensure that the concepts had been thoroughly understood and that the operation was roughly understood and that the operation was done strictly according to procedure. Apart from the written instructions at least two training classes were given to each Enumerator how to do the housenumbering and houselisting properly. Before the housenumbering was done, every Deputy Commissioner or Sub-divisional Officer had prepared tentative maps for each Block, Circle and Charge so that there could be no over-lapping. When the Enumerators were given their definite jurisdictions, the housenumbering

was done at first by chalk to ensure that it was done strictly according to procedure. After checking by the Supervisors and Charge Superintendents, the numbering was then done by coal-tar. Immediately thereafter, the Houselists were filled in by visiting each Census House.

Most of the Enumerators are school teachers or village officials of similar status whose educational qualifications are generally about Class VI only. Initially therefore, some of them had some difficulty in understanding the basic concepts of a Building, a Census House and a Census Household. But as most houses in Assam are really one building, one house and one household, such theoretical misunderstanding of the concepts did not affect the house census at all. It is only in Urban Areas that some difficulties arose, but due to intensive training, most of the difficulties were eliminated on the spot during the course of the housenumbering operation itself. Some difficulties were also experienced by the Enumerators in filling up the Houselist Forms, particularly in respect of properly writing up the nature of the establishments and their production. That the housenumbering and houselisting in general was done properly in respect of each household in Assam is proved by the fact that the total population of Assam as brought out by the Houselists is practically the same as that brought out by the enumeration which took place about 4 or 5 months later. In respect of filling in the forms regarding establishments, workshops and factories, there were some mistakes but as the same set of Enumerators had to be trained to do the final enumeration, the Houselists were not referred back to them for reconciling certain discrepancies or for filling in certain blank portions of the forms. But as the nature of establishments, workshops and industries in the villages are confined to such general industries as weaving, pot-making, etc. the defects are generally not very material.

Some typical defects noticed in the Houselist are that the Enumerators sometimes did not record the names of the proprietors of establishments, workshops or factories. In many such cases, however, the name of the proprietor can be found from the name of the workshop or factory itself because the small owners of such workshops and factories used to give their own names as the names of the firm. In some cases, exact descriptions of the products or the repair or servicing undertaken were not given in the Houselist. It was also found that in some cases, the number of workers was not given. The result of these mistakes is that in some cases, necessary details cannot be given in the Tables. Such mistakes are, however, not too many and so it may be taken that, on the whole, the Tables are fairly representative of the establishments, workshops and factories in Assam. Moreover, wherever possible the mistakes were corrected

at the time of tabulation from the Household Schedules and other data available in my Central Tabulation Office.

DETAILS OF TABULATION

The tabulation of the data collected in the Houselist was started in December, 1960 with a nucleus staff. The work started with one Statistical Assistant and ten Sorters. In the first part of the tabulation, all the Houselist Forms were arranged in racks according to the District Code numbers. All the Police Stations under each Subdivision and District were coded serially according to the Census Code numbers. The collection of the Village Notes also took place along with the houselisting operation and so the filled-in questionnaires of the Village Notes for each village were also kept and packed by the Deputy Commissioners and Sub-divisional Officers along with the Houselisting Forms for each Police Station. The Village Notes were, therefore, taken out and kept separately for future use by the staff engaged in the preparation of the District Census Handbooks. The Houselist Forms were also kept separately for Rural and Urban Areas within each Police Station.

There are five Housing Tables to be prepared. Two of them, Tables I and III, were prepared on a full count and the other three, Tables II, IV and V, were prepared on the basis of 20% Sample Households. The Tables were prepared separately for the Rural Areas of a Police Station, for every town with a population of 50,000 and over and for other Urban Areas of a Police Station. The Tables were prepared by the method of abstraction of entries in the Houselist. But before the data were abstracted from the Houselist, Coding was first done. The Coding was done in columns 4, 6, 7, 8, 9, 10 and 14. Columns 4, 7, 8, 9, 10 and 14 were coded according to the special instructions issued by the Registrar General, but column 6 has been coded according to the Industrial Classification. Simultaneously with the Coding, some consistency checking was also done as far as possible. Immediately after the Coding, Frequency Tables were made by the Sorting staff under the supervision of the Statistical Assistant and the Compiler-Checkers. After this operation, Table E-I was prepared. The process was repeated in respect of other Tables of the E-Series. Table E-III being the most complicated of all the Housing Tables was completed last of all.

In selecting the samples for Tables II, IV and V, the first Sample Household was chosen at random from among the first five households in the first Houselist. Thereafter every fifth house-

hold from the first random household was continuously marked with a bold red tick at the right hand side of column 11. Later when this process was continuing, it was found more convenient to give the bold red tick in column 4 of the Houselist. Where at the end of a particular Houselist some households were left over after marking the Sample Households, these remaining households were carried over to the next Houselist.

When the Main Tables had been completed, they were sent to the Registrar-General for checking by the Central Tabulation staff. At the same time, the checking was also done in my office. So both the Central Tabulation staff in Delhi and the Housing Branch of my office detected certain mistakes and these were corrected from time to time. Sometimes, revised instructions were also obtained from the Registrar-General in the light of experience gained in the course of checking the Tables received from the Superintendents of Census Operations. Whenever such revised instructions were received, the Tables were again recast in the light of the latest instructions. In the third Conference of the Superintendents of Census Operations, the form of Table E-III was materially changed and so this Table had to be done again after the Conference held in the first week of February, 1962.

In the Regional Conference of the Superintendents of Census Operations at Trivandrum held in May, 1961, it was decided to have subsidiary Tables to each Housing Table. Accordingly in July, 1961, the Registrar-General prescribed two Subsidiary Tables to Tables E-I, E-II, E-IV and E-V and three Subsidiary Tables for E-III. The Subsidiary Tables were thereafter prepared in my office from the Main Tables after further processing all the data obtained therein.

The first Housing Table or Table E-I shows the Census Houses and the uses to which they are put. The second Table or Table E-II shows the Census Households as classified by Tenure Status of Sample Houses used as dwellings; the third Table or Table E-III shows the Census Houses used as factories and workshops classified by industry, power and no power used and size of employment and Table E-IV shows the distribution of Sample Households living in Census Houses used wholly or partly as dwelling by predominant material of wall and predominant material of roof while Table E-V shows the Sample Households classified by number of members and by number of rooms occupied.

Photographs of typical houses, house sites and village sites together with some line drawings of the same are given in this Report to illustrate the types of houses found in Assam.

CHAPTER II

USES OF OCCUPIED CENSUS HOUSES

Table E-I shows the Census Houses and the uses to which they are put. This Table has 16 columns and some of the terms used in the different columns require some explanations to understand their concept. Column 1 indicates the name of the State, the District, the Police Station, the City and Town with a population of 50,000 or more, if there are any. Column 2 shows the Total and the break-up into Rural and Urban. In the Censuses, one of the most important factors for classification is that between the Urban Areas and the Rural Areas. In the 1961 Census, this classification has gained more importance because urbanisation is a special subject for study. Columns 3 and 4 are self-explanatory and do not require any explanation. In Column 5, 'Dwellings' means houses occupied by human beings, while columns 6 and 7 show human dwellings which are also used partly as shops or workshops. Column 8 shows different types of houses used for specific purposes by people on the move either for work or for pleasure. Hotels are houses where people can stay and also have their meals supplied by the keeper of the same, while sarais and dharmasalas are houses which can be temporarily occupied by poor people on the move. Tourist Homes are rather new institutions and have been specially constructed to accommodate internal tourists or external tourists of the lower income groups in some places of general interest. Inspection Houses are buildings generally meant for occupation by Government or other officials in the course of doing their duty outside their headquarters. Column 9 shows buildings which are occupied exclusively for trading purposes but excluding eating houses, while Column 10 shows only business houses and offices. Column 11 shows the buildings which are used as factories, shops or workshops whether registered or not. Column 12 shows the schools and other educational institutions including training classes, coaching and short classes while Column 13 shows different types of eating places without residence therein. Column 14 shows places of entertainment such as theatres, cinema houses and it also shows such places for community gathering as a club or a panchayat ghar. Column 15 shows public health and medical institutions including hospitals, health centres, doctors' clinics, dispensaries, etc. and Column 16 lumps up houses which cannot be classified under any of the foregoing categories.

Table E-I has two Subsidiary Tables, E-I.1 and E-I.2. Table E-I.1 shows the distribution of 1000 Census Houses by vacant and different types of Occupied Census Houses while Subsidiary Table E-I.2 shows the proportion of 1000 houses in the Rural/Urban Areas to 1000 houses in the

District/Subdivision/Police Station which are vacant, used as dwellings, used as shop-cum-dwellings and used as workshop-cum-dwellings. Table E-I.1 has 16 columns and Subsidiary Table E-I.2 has only 9 columns. The concepts in the columns of these two Subsidiary Tables are the same as those given in respect of Main Table E-I.

Assam has 11 Districts and for each District one complete set of Housing Tables has been prepared separately. There are 2,364,647 Census Houses in Assam of which 2,151,615 are in the Rural Areas and 213,032 in the Urban Areas. There are 47,170 houses shown as vacant at the time of houselisting and one may be led to think that there is no housing problem in Assam. But this is not correct. Some houses may be temporarily vacant just at the period of houselisting, but by far, the majority of such vacant houses are really such buildings as separate kitchens, garages and some odd houses which are not really strictly vacant but which our Enumerators had classified as vacant due to some erroneous understanding of the concepts. The percentage of vacant Census Houses to the total number of Census Houses in Assam is only 2.00 whereas it is 11.04 in Gujarat, 10.46 in Jammu and Kashmir, 8.52 in Kerala, 4.86 in Madhya Pradesh, 7.21 in Maharashtra, 7.74 in Punjab, 7.40 in Rajasthan and 3.31 in Uttar Pradesh. From the above it is seen that Assam has got the lowest number of vacant houses and so it may be assumed that the housing problem is most acute in Assam.

The number of occupied residential houses according to the houselisting operation is 2,200,560 but the number of such occupied residential houses according to the Primary Census Abstracts is 2,186,749. The difference of 13,811 residential houses is due to the fact that at the time of houselisting, some Enumerators showed the households as Census Houses in column 4 of the Houselist. According to the houselisting operation, there were about 2,202,300 households but according to the PCA there were 2,214,747 households. The difference of 12,447 almost cancelled out the difference in the number of residential houses as thrown out by the houselisting operation and the PCA. The increase in the number of households between the houselisting operation and the final operation for which there is an intervening period of about four months may be due to the fact that many new houses, especially huts in the villages, might have been constructed during the cold season as usual and it may also be due to the fact that some houses which were actually vacant at the time of houselisting operation might have been occupied at the time of the final enumeration. In either

case, the difference is so slight, being much below 1 per cent, that no significance need be attached to this.

Subsidiary Table E-I.1 shows the distribution of 1000 Census Houses by vacant and different types of occupied Census Houses. From this Table it may be seen that out of 1000 houses in Assam, 981 are used as dwellings while 49 houses were used as shops, hotels, business houses, factories, etc. Twenty houses out of 1000 are vacant but as explained above, these houses are not really all vacant but have been mostly used for other purposes such as kitchen, granary, etc.

Table E-I.2 shows the population of 1000 houses in the Rural/Urban Areas to 1000 houses in the District/Subdivision/Police Station which are vacant, used as dwellings, used as shop-cum-dwellings and used as workshop-cum-dwellings. The Table shows that out of 1000 houses which are shown as vacant, 749 are situated in the Rural Areas while 251 are situated in the Urban Areas. This is quite natural because 92.3 per cent of the people of Assam live in the villages while only 7.7 per cent live in towns. Moreover, in the Plains of Assam, almost every house that has paddy fields also has a separate granary which might have been shown by the Enumerators as being vacant. Similarly, in all the houses used as dwellings, 925 out of every 1000 are in the Rural Areas and only 75 are in the Urban Areas. This picture is also continued in the case of houses used as shop-cum-dwellings as well as those used as workshop-cum-dwellings.

From Table E-I it is seen that the greatest number of houses, i.e., 385,951, can be found in the Kamrup District while the smallest number of houses can be found in the Mizo Hills District which has only 46,985 houses. This is quite natural because the number of houses has a definite bearing on the number of people living in each District.

From the data given in Table E-I and Subsidiary Tables E-I.1 and E-I.2, a comparison can be made of the number of houses and the use to which they are put, District by District. I will, however, bring out only a few outstanding features.

Rural-wise, the Goalpara District has 956 houses used as dwellings out of every 1000 houses in that District while in the Mizo Hills District only 918 Census Houses were used as dwellings out of every 1000. Similarly, in the Urban Areas of Assam, the Goalpara District has the distinction of having the biggest number of houses (i.e., 861) used as dwellings out of every 1000 houses. Even in the number of vacant houses, Goalpara District has the least. This would appear to suggest that almost every usable housing space has been used as human dwelling in the Goalpara District. As far as medical facili-

ties are concerned, Cachar has got the highest number of institutions with 822 for the whole District or 648 for the Rural Areas and 174 for the Urban Areas, whereas the Garo Hills District (which is more than twice the area of Cachar District) has only 69 health institutions for the whole District of which 60 are in the Rural Areas and 9 are in the Urban Areas. As far as educational institutions are concerned, Kamrup District has 3,208 in the Rural Areas and 222 in the Urban Areas while the United Mikir & North Cachar Hills District has only 574 educational institutions in the Rural Areas and 21 such institutions in the Urban Areas. In the sphere of education and health facilities, the number of people also is a great determining factor, but on the whole there appears to exist a glaring weightage in favour of the Plains Districts compared to the Hills Districts in such matters.

In the Goalpara District there are 13 Police Stations. There are no Urban Areas in the Gossaingaon, Sidli, Bijni, Golokganj, South Salmara, Lakhipur and Dudhna Police Stations. In the remaining Police Stations, namely, Kokrajhar, Bilasipara, Dhubri, Mankachar, North Salmara and Goalpara there are both Rural and Urban Areas. As far as the number of houses are concerned, the population figure is, as usual, the determinant factor. So we find the biggest number of houses in the North Salmara Police Station where the greatest number of people can be found.

In the Kamrup District there are 16 Police Stations and the number of houses quite naturally follows the number of people living in each Police Station. The biggest Police Station is Barpeta which has a total of 42,860 houses of which 37,171 are in the Rural Areas and 5,189 are in the Urban Areas. The smallest Police Station in area is Jhalukbari. But it has 13,048 houses because all the Railway Housing Colonies are within this Police Station. Tara-bari Police Station has the smallest number of houses, i.e., only 9,005. This Police Station has the smallest number of people because it is mostly a riverine and marshy area and is mostly occupied only by people of the immigrant type. The pattern for the number of houses and the uses to which they are put in the Plains Districts of Assam is more or less the same.

In the Hills District of Assam, the number of houses District-wise or Police Station-wise is much less than that in the Plains. The reason is that the Hills Districts are very sparsely populated and so the number of houses is also much less. When we come to the level of a Police Station, however, it may appear at first sight that the number of houses in the Hill Police Stations is more or less at par with that of the Police Stations in the Plains. For example, the Aijal Police Station has a total number of 82,849 houses

whereas the Rangia Police Station of the Kamrup District has a total number of 25,759 houses. This difference is, however, more apparent than real because the Aijal Police Station coincides with the Aijal Subdivision and has a total area of 4,861.0 sq. miles whereas the Rangia Police Station has an area of only 260.0 sq. miles.

The total number of factories, work-sheds and workshops District-wise are as follows :—

Goalpara	445
Kamrup	694
Darrang	442
Lakhipur	845
Garo Hills	86
United Khasi & Jaintia Hills	259
Nowgong	413
United Mikir & North Cachar Hills	81
Sibsagar	1071
Cachar	641
Mizo District	693

This will show that the number of factories, work-sheds and workshops is much more in the Plains than in the Hills excepting in the case of Mizo District. Here the number of factories, work-sheds and workshops is 693 which is about the same as that of the Kamrup District. On examination, it is however seen that 651 of the so-called work-sheds in the Mizo District are only blacksmith sheds. It also appears that many families in the Mizo District repair their own simple agricultural implements such as dao, hoe, etc. This repair simply means sharpening of a hoe or a dao by means of charcoal and a small bellows, and so each such simple operation in a simple hut converts the hut into a work-shed. The other so-called worksheds concern goldsmithy, cloth weaving and other unclassified works. The impression given by these figures of factories, work-sheds and workshops in the Mizo District is rather misleading because the above small industries in this District are really of the most primitive type and hardly worth the name. But as the Enumerators, apparently under a wrong notion of the real concept of factories, work-sheds and workshops, had recorded such huts as work-sheds in the Houselists, we were left with no other alternative but to classify them as such. Future Censuses may correct the imbalance where it has occurred.

Only three towns in Assam have a population of 50,000 and over. The towns are Gauhati, Shillong and Dibrugarh. Within the municipal limit of 5.5 sq. miles, Gauhati has a population of 100,707 and 24,259 houses. Within an area of just under 4 sq. miles, the Shillong Municipality has a population of 72,438 and 18,530 houses, while within an area of 3.52 sq. miles, the Dibrugarh Municipality has a total population of 58,480 and 12,181 houses. The above houses within each town have been put to different uses and I shall discuss about each use separately.

In Gauhati, 18,683 houses were used purely for residential purposes, while 1,470 were used as shop-cum-dwellings and 271 houses were used as workshop-cum-dwellings. In other words, 20,424 houses were used for occupation by households. In Shillong, 14,829 houses were used purely for residential purposes while 501 were used as shop-cum-dwellings and 16 houses were used as workshop-cum-dwellings making a total of 15,346 for occupation by households. Dibrugarh has 8,679 houses used purely for residential purposes, 1,097 used as shop-cum-dwellings and 99 houses used as workshop-cum-dwellings making a total of 9,875 houses for occupation by households. In every dwelling, there are 4.93 persons in Gauhati, 4.72 persons in Shillong and 5.92 persons in Dibrugarh showing that the congestion is most acute in Dibrugarh for the time being. With respect to hotels, sarais, dharmasalas, tourist homes and inspection bungalows, Gauhati has 291, Shillong has 96 and Dibrugarh has 52. The best hotels for foreign tourists can however be found only in Shillong. Regarding shops excluding eating houses, Gauhati has 917, Shillong has 1,465 while Dibrugarh has 557. As regards business houses and offices, Gauhati has 314, Shillong has 419 and Dibrugarh has 127. In respect of factories, work-sheds and workshops, Gauhati has 158, Shillong has 117 and Dibrugarh has 108. With respect to schools and other educational institutions including training classes, coaching and short classes, Gauhati has 99, Shillong has 102 and Dibrugarh has 50. Gauhati has 129 restaurants, sweetmeat shops and eating places. Shillong has 58 and Dibrugarh has 28 such places. With respect to places of entertainment and community gathering, Gauhati has 18, Shillong has 24 and Dibrugarh has 23. Gauhati has 101 public health and medical institutions including hospitals, health centres, doctors' clinics and dispensaries, etc., while Shillong has 99 and Dibrugarh has 28 such places. Each of these three towns of Assam can be classified only as residential because in Gauhati 84.2 per cent, in Shillong 82.8 per cent and in Dibrugarh 81.1 per cent of all the houses are used only for residential purposes. The same is also true of all the other towns in Assam.

The total number of factories, workshops and worksheds in the Rural Areas of Assam as shown in Table E-I is 3,802 including 611 tea factories. According to the PCAs., the total number of persons working in manufacturing other than household industries is 56,193 which excludes the workers engaged in tea factories as they have been classified under category III, i.e., in plantation. The average works out at 18 persons per factory, workshop or workshed. In the case of Urban Areas, the average is 25 persons per factory, the total number of factories and the persons engaged being 1,868 and 47,441 respectively.

The average in the case of Rural Areas as shown above may not be taken as absolutely correct because a good number of the workshops and worksheds are used for the purpose of household industries and the persons engaged therein have been classified under category IV. In Urban Areas also, this may happen on a smaller scale within the scope of the definition of household industry.

In the Plains Districts of Assam, the average number of persons per factory or workshop is much higher than in the Hills Districts for obvious reasons but it is curious to note that in the Rural Areas of the Mizo Hills District the workshops or worksheds outnumber the persons engaged, the total number of workshops or worksheds and the persons being 681 and 315 respectively. The Houselists of this District reveal that most of the worksheds are used for repairing agricultural tools seasonally. It is quite likely that the activities of the persons who do this repairing work in those worksheds have been returned as secondary or tertiary work. But in the PCA only the principal works are recorded.

In Aijal town as many as 669 persons are

engaged in manufacturing other than household industries and the total number of factories, etc., is only 12. It is seen that most of the workers in this category are not attached to any established factory or workshop or workshed.

The total number of Census Houses used as shop-cum-dwellings and shops excluding eating houses exclusively treated for the purpose of trade and commerce in Rural and Urban Areas is 45,368 and 24,089 respectively. According to the PCAs, the number of persons engaged in trade and commerce is 115,386 in Rural Areas and 69,319 in Urban Areas. It is futile to make an attempt for any ratio between the number of persons and the shops as both in the case of Rural and Urban Areas, many persons conduct their business without any shop or establishment such as hawkers, migratory shop-keepers in hats and bazars, brokers, etc.

In addition to these two categories of houses a fraction of business houses and offices and restaurants, sweetmeat shops and eating places are also used for the purpose of trade and commerce.

CHAPTER III

TENURE STATUS OF CENSUS HOUSES

Table E-II shows the Tenure Status of the Sample Census residential houses used as dwellings and it has been prepared on the basis of 20 per cent sample. This Table has only 8 columns of which some explanation is necessary only of the terms 'Owned' and 'Rented' under column 3. 'Owned' means that the occupant of a Census House is the owner of that particular Census House and 'Rented' means that the occupant of that Census House is not the owner of that house and that he has simply taken it on rent from some other owner.

Tenure Status is of significance mainly in the Urban Areas and Suburban Areas because almost all the houses in the villages are owned by the occupants. In Assam, all the employees of tea gardens enjoy their quarters rent-free, but the Registrar General has decided that these houses should be classified as 'Rented' because the employees may be taken as paying rents indirectly in the shape of services. In Urban Areas or Suburban Areas, many people do not own houses and live only in houses or part of houses on rent. This Table will therefore enable us to show the impact of urbanisation on the ownership of houses. On the basis of this 20% sample, Table E-II shows a total number of 440,460 households of which 352,181 are owned and 88,279 are rented. It is again seen that out of the total number of 440,460 Census Households, 430,616 have been used as dwellings, 8,245 have been used as shop-cum-dwellings, 963 have been used as workshop-cum-dwellings and 636 have been used as dwellings with some other uses. It is also seen that out of 430,616 households used as dwellings, 346,330 are owned and 84,086 are rented. While a good number of such rented households are in the Urban Areas, in Assam the figure of rented houses is also inflated by the rent-free quarters which have been given by the owners of the tea gardens to their employees. Otherwise the number of rented houses in Assam would be much less than those shown by the figures. This conclusion is supported by the fact that out of 88,279 rented houses of the Sample, only 19,561 are in the Urban Areas, while 68,718 are in the Rural Areas. It would not be wrong to assume that most of the houses shown as 'rented' in the Rural Areas of Assam are rent-free quarters given by the employers to their employees in the tea gardens, etc. Similarly, of the 8,245 households used as shop-cum-dwellings, 4,893 are owned and 3,352 are rented. Out of 963 houses used as workshop-cum-dwelling, 497 are owned and 466 are rented; while out of 636 houses used as dwellings with other uses, 261 are owned and 375 are rented. These figures show that as far as dwellings are concerned, by far the majority of households are owned. In the case of shop-

cum-dwellings, the number of rented houses is not far below those which are owned and that appears to suggest that many shop-keepers in Urban Areas do not own the houses. The number of houses used as workshop-cum-dwellings shows that the rented houses are almost equal to the houses which are owned by the occupants of such workshops. This also shows that about half of all the houses used as workshop-cum-dwellings are rented. The number of rented houses used as dwellings with other uses exceeds the number which are owned by the occupants. Such houses are hotels, hostels, sarais, dharamsalas, tourist homes and inspection houses. As most of the shop-cum-dwellings and dwellings with other uses are situated almost entirely in the Urban Areas only, these figures do not fail to show that the occupation of houses in the Urban and Suburban Areas is not confined to the owners only in Assam.

The total number of Sample Houses in the Rural Areas of Assam is 404,829 out of which, 336,111 are owned and 68,718 are rented. As already stated above, most of the so-called rented houses in the Rural Areas are actually rent-free quarters in the tea gardens. The total number of the Sample Houses in the Urban Areas of Assam is 35,631 out of which 16,070 are owned and 19,561 are rented. The last figure shows that most of the houses in the Urban Areas are not owned by the occupants. In the Urban Areas, it is also seen that for 922 Sample Houses which are owned by the occupants of the shop-cum-dwellings, 1,625 houses are rented by the occupants. This figure does not fail to show that the ownership of houses in the Urban Areas is gradually going into fewer hands.

There are two Subsidiary Tables to Table E-II.—Table E-II.1 which shows the distribution of 1000 Census Households by types of Census Houses in Rural Areas and Table E-II.2 which shows the distribution of 1000 Census Households by types of Census Households and Tenure Status in Urban Areas.

Table E-II.1 shows that 98.3 per cent of the houses in the Rural Areas of Assam are used purely as dwellings, while only 1.4 per cent, 0.2 per cent and 0.1 per cent are used as shop-cum-dwellings, workshop-cum-dwellings and dwellings with other uses respectively. These figures show that in the Rural Areas of Assam, there are very few shops and an insignificant number of workshops and other types of dwellings. The figures of Table E-II.2 shows that 81.9 per cent of the houses in the Urban Areas are used purely as dwellings, while only 0.1 per cent, 16.4 per cent and 0.1 per cent are used as shop-cum-dwellings, workshop-cum-dwellings and dwellings

with other uses respectively. These figures also do not fail to show that most of the houses in Assam even in the Urban Areas are used for residential purposes only and that trade and industries are still very backward in Assam.

Out of the 20 per cent Samples for the State of Assam, it is seen that in the Rural Areas, only 611 houses have been used as workshop-cum-dwellings of which 364 are owned and 247 are rented. These figures show that even in the Rural Areas, many of the workshops are in rented houses. These figures also suggest that the house-numbering agency might have taken into consideration only workshops other than hand-looms when making the Houselists.

As the data in respect of 'Owned' and 'Rented' houses are of much significance in respect of Urban Areas only, a District-wise comparison in Urban Areas of dwellings, shop-cum-dwellings and workshop-cum-dwellings may be of some interest. In the Urban Areas of Goalpara District, the number of 'Owned' dwellings per 1000 Census Households is 615. The figures for the Kamrup, Darrang, Lakhimpur, Garo Hills, United Khasi & Jaintia Hills, Nowgong, United Mikir & North Cachar Hills, Sibsagar, Cachar and Mizo Districts are 439, 567, 333, 479, 211, 415, 270, 478, 437 and 583 respectively. These figures show that in the Urban Areas of the United Khasi & Jaintia Hills District, only 211 dwellings are owned and 753 houses are rented out of 1000 houses. The figures for the other Districts can be similarly compared by looking at Subsidiary Table E-II.2. The figures for shop-cum-dwellings and workshop-cum-dwellings can also be easily made out by a mere look at Subsidiary Table E-II.2. Similarly, a comparison can also be made out between 'owned' and 'rented' houses separately for dwellings, shop-cum-dwellings and work-

shop-cum-dwellings in the Urban Areas of each District and all the Police Stations in the same District because the figures in the Subsidiary Tables E-II.2 speak for themselves.

The following Inset Table will indicate the distribution of 1000 Census Households by type of Census Houses and Tenure Status in respect of three towns of Assam which have a population of over 50,000 :

	Gauhati	Shillong	Dibrugarh
1. Dwellings			
(a) Owned	360	192	419
(b) Rented	535	773	460
2. Shop-cum-dwellings			
(a) Owned	20	5	37
(b) Rented	63	24	74
3. Workshop-cum-dwellings			
(a) Owned	3	...	1
(b) Rented	10	1	5

It is said that a large proportion of workshops and shops under the category 'owned' may be indicative of the prosperity of the Industrial and Commercial Concerns in big towns. If so, these proportions in respect of the above three towns of Assam will show that none of them has prosperous Industrial or Commercial Concerns. However, as among themselves, Dibrugarh has the largest number of 'owned' shops per 1000 households followed by Gauhati.

CHAPTER IV WORKSHOPS AND FACTORIES

Table E-III gives the number of Census Houses used as factories and workshops classified by industry, power and no power used and size of employment. Such data have never been collected before. The Table gives a comprehensive list of workshops and factories in each Police Station, Rural-wise and Urban-wise, and for each town with a population of 50,000 and over according to the Minor Groups of Industry based on the Indian Standard Industrial Classification.

This Table has three Subsidiary Tables, namely E-III.1, E-III.2 and E-III.3. Subsidiary Table E-III.1 gives the proportion of workshops and factories according to Divisions, Major Groups and selected Minor Groups to 1000 workshops and factories; Subsidiary Table E-III.2 gives the distribution of 1000 workshops and factories in each kind of fuel used by size of employment and Subsidiary Table E-III.3 gives the distribution of 1000 workshops and factories in each Division, Major Groups and selected Minor Groups by kind of fuel or power used. In the whole of Assam, there are 11,023 workshops, workshops and factories of which 7,100 are in the Rural Areas and 3,923 are in the Urban Areas. 4,328 of these workshops, workshops and factories have been lumped as unclassified because the details regarding the kind of fuel or power used and the number of persons employed, etc. were not given in the Houselists. These are mostly places used as dwelling-cum-workshops and so it may be assumed that generally no power is used and that they are household industries only. We are thus left with 6,695 workshops, workshops and factories which use some kind of fuel. Again as stated before, a workshop or workshop in Assam may really mean only a very primitive form of working place such as a simple hut used by certain families to sharpen their simple agricultural implements such as daos, hoes, etc. So within the figure of 6,695 are included 2,286 workshops and workshops which are simply blacksmithy, goldsmithy and repairing of bicycles. These 2,286 working places employed only about 7,300 persons. It is also easy to find out how many of these so-called workshops, workshops and factories are really factories where some kind of industry is done by examining the kind of fuel or power used to run such a workshop or factory and by the number of persons employed. Thus, in the whole of Assam only 107 factories in the Rural Areas and 367 factories in the Urban Areas use electricity as a source of power; 983 factories in the Rural Areas and 336 factories in the Urban Areas use liquid fuel as a source of power and 1,763 factories in the Rural Areas and 637 factories in the Urban Areas use coal, wood and baggasse as source of power. Similarly, only 23 factories in the Rural Areas and 27 in the

Urban Areas use some other power in factories. The term 'other power' in Assam means that some factories use liquid fuel as well as coal or wood as a source of power and the Enumerators wrote the words liquid fuel, coal, wood, etc. in the appropriate column of the Houselists and so it was not possible for the Housing Tabulation Office to properly classify them and so they were lumped up together under the heading 'other power'. Only 4,243 factories use some kind of fuel to generate power in their factories and so only these workshops can be really called factories in Assam. The remaining 6,780 workshops and workshops require only manpower to do the simple works necessary for having the servicing done or the product made. For example, a tailor will only move his legs to make the sewing machine stitch the clothes and a carpenter will only use his hands and legs to make furniture. If a farmer-blacksmith use crude improvised bellows to blow fire over his charcoal for the purpose of sharpening his agricultural implements, some power is used according to the definitions although it is power of the crudest form.

In Assam, the most important factories are those relating to the refining of oil, manufacture of tea, the milling of paddy, wheat and oil-seeds, the baling of jute, the manufacture of matches and the manufacture of iron materials. As oil has been found in Assam before the beginning of the twentieth century, a refinery has been set up by the Assam Oil Company at Digboi Town of Digboi Police Station of the Lakhimpur District where about 2,500 people were engaged (only in the refinery itself). Since oil has been found extensively in the Nahorkatiya and Moran region, another refinery has been set up at Nunmati in the suburbs of Gauhati. During the house-listing operation, the Nunmati Refinery was in the process of being set up and so only 300 people were then employed according to the Houselist. Assam is most famous for its production of tea and so we have 611 factories where tea is manufactured and processed in different parts of Assam, but mostly in the Lakhimpur, Sibsagar, Darrang, Cachar and Nowgong Districts. The Tea Estates are scattered in almost all the Police Stations of these Districts. Paddy is grown in great quantities in Assam and so there are 869 rice mills scattered mostly all over the plains of Assam. Many of these rice mills have also machineries where mustard seeds are pressed. The combination of rice and oil mill is generally resorted to by the millers because it is more productive and more profitable for the owners. In the Hojai Town of the Nowgong District, there are 11 big rice mills and so Hojai has become a town only because of the existence of these big rice mills. Wheat is not grown in

XVIII

Assam in any appreciable quantity and it is imported from other parts of India and so there are only three modern flour mills in Assam two of which are located in the suburbs of Gauhati and one is at Sibsagar. Assam also produces a great quantity of jute, but there is as yet no jute mill. However, raw jute is baled before being exported to Calcutta and there are 27 factories where jute is being pressed and baled. There is one big match factory in Assam and it is situated in Dhubri Town, capital of the Goalpara District. Simul trees which are used for making match sticks are found in great quantities in Assam. These big trees are felled down near river banks and then taken to Dhubri through the Brahmaputra and its various tributaries. Wax which is another very important material for the manufacture of match is available in great quantities in the Assam Oil Company as a by-product of the petroleum industry. That is why the match factory was established in Dhubri many years ago despite the fact that Assam was very backward industrially. There is a great demand for iron materials such as fencing materials by the tea estates in Assam and so the iron industry by the name of Steelworth has been set up in Tinsukia town of the Tinsukia Police Station of Lakhimpur District. Recently this company has established one factory in Tezpur Town and another in the vicinity of Gauhati. There is also a steel re-rolling mill near Gauhati which has been recently established due to the demand of iron materials in Assam. A cycle factory has also recently been established in Gauhati and it is reported to be now capable of producing about 100 cycles per day.

In the three towns of Assam which have a

population of over 50,000, almost all the factories are small ones involving such manufactures as tailoring, furniture-making, motor repairing and servicing, etc. However, in Gauhati and Dibrugarh there are some big rice mills which produce rice and oil out of paddy and mustard seeds in big quantities. In Gauhati, there are houses showing 45 different categories of workshops and factories, whereas in Dibrugarh and Shillong there are only 24 and 22 such categories respectively.

In the whole of Assam, there are only 4,243 workshops and factories which use some kind of fuel and out of these only 474 or 11.2% use electricity, 1,319 or 31.1% use some kind of liquid fuel, 2,400 or 56.3% use coal, wood, baggasse, etc. and 50 or 1.4% use some kind of mixed fuel. Among the more important factories in Assam are the tea factories which mostly use coal, wood, baggasse, etc. Some tea factories however use diesel oil, while only very few use electricity. The rice and oil mills mostly use diesel oil.

As regards the relationship between industry and power used, it is found that 11.8% of the total labour force in the factories are engaged in industries using electricity, 36.4% are engaged in industries using liquid fuel, 40.7% are engaged in industries using coal, etc., 9.7% are using no power and 1.4% are engaged in industries using 'Other Power' or mixed fuels.

The following Table shows an analysis of Major Industries by order of number of men employed with type of power used. The Table shows the analysis for the State as a whole as well as for each District in Assam and for the three towns having a population of over 50,000.

ASSAM

I.S.I.C. Minor Group	No. of units in State/ District	No. of persons employed	Power used				
			Electricity	Liquid fuel	Coal, Wood & Baggasse	Other power	No Power
1	2	3	4	5	6	7	8
200	816	8,299	1,239	6,039	885	...	136

Code Numbers mentioned in Columns 1 & 2 of the above Tables have the following meanings according to the

STANDARD INDUSTRIAL CLASSIFICATION

- 200 Production of rice, atta, flour, etc., by milling, dehusking and processing of crops and foodgrains
- 205 Production of bread, biscuits, cake and other bakery products
- 211 Production of country liquor
- 217 Processing of tea in factories
- 235 Cotton weaving in handlooms
- 240 Jute pressing and baling
- 264 Weaving of silk textile by handloom
- 280 Sawing and planing of wood
- 281 Manufacture of wooden furniture and fixtures
- 285 Manufacture of veneer and plywood
- 302 All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry
- 324 Production of petroleum, kerosene and other petroleum products in petroleum refineries
- 334 Manufacture of matches
- 336 Manufacture of soap and other washing and cleaning compounds
- 340 Manufacture of structural clay products such as brick, tile
- 342 Manufacture of lime
- 350 Manufacture of earthenware and earthen pottery
- 365 Manufacture of brass and bell metal products
- 369 Manufacture of sundry hardware such as G.I. pipe, wire net, bolt, screw, bucket, cutlery (this will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38 and 39)
- 370 Manufacture and assembling of machinery other than electrical, except textile machinery
- 380 Manufacture, assembly and repairing of locomotives
- 384 Repairing and servicing of motor vehicles
- 388 Manufacture of other transport equipments such as animal-drawn and hand-drawn vehicles
- 393 Manufacture of jewellery, silverware and wares using gold and other precious metal

CHAPTER V

MATERIALS OF WALL AND ROOF

At the instance of the National Buildings Organisation, Ministry of Works, Housing and Supply, a description of each Census House is collected in columns 9 and 10 of the Houselist showing the material of wall and the material of roof. The data so collected are coded in the Housing Tabulation Office and Table E-IV was made. This Table shows the distribution of Sample Households living in Census Houses used wholly or partly as dwellings by predominant material of wall and predominant material of roof. As already stated, the preparation of this Table is based only on 20% Sample Households. Two Subsidiary Tables—E-IV.1 and E-IV.2—were also prepared to facilitate the comparison of the data. Table E-IV.1 shows the distribution of 1000 Census Houses used wholly or partly as dwellings by material of wall and Subsidiary Table E-IV.2 shows the distribution of 1000 Census Houses used wholly or partly as dwellings by material of roof. The same Sample Households were used for Housing Tables E-II, E-IV and E-V. The total number of such Sample Households is 440,460 of which 404,829 are in the Rural Areas and 35,631 are in the Urban Areas. I will discuss the material of wall and the material of roof as far as the housing material pattern in Assam is concerned.

MATERIALS OF WALL

The first part of Table E-IV and Subsidiary Table E-IV.1 show the material of wall. Out of the materials shown in the above two Tables, grass, leaves, reeds or bamboo are the materials mostly used for walls of houses in Assam because out of the 440,460 Sample Households, 374,849 houses use only these materials. The other materials also used for walls in Assam are burnt bricks for 12,764 Sample Houses, timber for 11,264, mud for 11,983, unburnt bricks for 1,071, corrugated iron sheets for 4,943, stones for 547, cement concrete for 10,395 and other materials for 12,644 Sample Houses. There are no mud walls in Assam of the type that are found in Uttar Pradesh or other parts of India. The frame of a wall is generally either of bamboo or ekra (which is a kind of small bamboo and/or reed). This frame is covered either with lime plaster (which is a mixture of lime and sand) or with mud. When it is plastered with mud, some Enumerators called it a mud-wall during houselisting due to some erroneous concept of the term. During houselisting, it was also found that many houses in Assam have mixed materials for wall—such as half-brick and half-lime plaster, half corrugated iron sheets and half-thatch etc. and so such mixtures have also been classified as 'other materials'.

What has been said of the materials for walls in Assam as described above is also applicable to all the Districts and Police Stations in Assam in general. In the towns of Assam, the most used materials for walls are ekra walls plastered with lime plaster. In the Rural Areas, the most used materials are bamboos, reeds and grass with or without plaster of any kind.

In the three towns of Assam which have a population of over 50,000, Gauhati has a total of 4,121, Shillong has 3,084 and Dibrugarh has 1,975 Sample Houses. In Gauhati, 544 houses out of every 1000 houses use reeds or bamboo as materials for their walls; in Dibrugarh town 707 houses out of 1000 houses use the same materials as Gauhati whereas in Shillong, 610 houses out of every 1000 use such materials. However, as already stated above, the so-called walls made of reeds or bamboo really mean ekra walls with or without lime plaster or mud plaster. In Shillong, there are no houses without plaster probably because of the extreme cold in winter. In Gauhati, the next material used for walls is cement concrete inasmuch as 171 houses out of every 1000 houses use this material. Next in order of importance for materials of walls in Gauhati are mud, burnt bricks, timber and corrugated iron sheets. In respect of Dibrugarh town, the other wall materials in order of importance are burnt bricks, cement concrete, timber, corrugated iron sheets and mud. In Shillong, the other materials in order of importance are timber, corrugated iron sheets, mud, cement concrete, unburnt bricks and stones. As already commented above, the so-called mud walls in these three towns also are really only ekra walls plastered with mud. From the above statement, it appears that usage of timber and corrugated iron sheets as wall materials is greatest in Shillong; the use of cement concrete is greatest in Gauhati and the use of burnt bricks is greatest in Dibrugarh.

It need not perhaps be over-emphasised that the locally available materials mostly determine the nature of the walls of houses. In Shillong, a small type of bamboo locally known as 'kdait' or 'ekra' is available in large quantities and so by far the majority of houses in Shillong have this type of ekra as the main material for walls of houses. This ekra is about the size of a pencil and is about 4 ft. to 8 ft. long and is very tough and long-lasting especially when it is fully mature. If cut during the proper time and properly dried, it will last more than a life time. This type of ekra is available only in the highland portions of the United Khasi & Jaintia Hills District. With this 'ekra' as frame, the walls of houses in Shillong are mostly plastered with a

mixture of lime and sand to which another coating of lime is added together with three or four coats of white-washing. In the houses of very poor people, the same 'ekra' is used as frame, but instead of the lime plaster, mud mixed with cowdung is used as plaster. In the case of Gauhati, Dibrugarh and other towns of Assam, the frame of walls is generally made of split bamboo to which lime or mud plaster is used. Bamboo is available in great quantities in the plains of Assam and that is the reason why it is mainly used as the main material for walls. What is true of the towns in the plains of Assam is also true of all the villages in the plains of Assam with the only difference that in the Rural Areas, mud mixed with cowdung is mostly used as plastering material, wherever plaster is used. In many cases, however, no plaster is used in the Rural Areas of the plains because the climate is hot and so they can do without plaster. In the interior of the Hills Districts of Assam, bamboo is also used as a material for walls because of its local availability.

In the United Khasi & Jaintia Hills, timber is also used in great quantities even in the interior because pine trees are available in great quantities and they can easily be cut into planks and the cost is also comparatively cheap. In the towns in the plains of Assam, bricks are available locally and so many well-to-do people now-a-days use

bricks as material for walls. The materials that are not locally available are corrugated iron sheets and cement. These are imported from the factories outside Assam.

The climate and rainfall of a place are great factors in determining the materials of walls. In the United Khasi & Jaintia Hills, where the rainfall is the greatest in the world, many people who can afford it would prefer corrugated iron sheets as material for walls to protect their houses from the rain. Other who can afford it use wire-crete or plain sheets in the lower portions of the walls and 'ekra' with lime plaster in the upper portions of the walls to protect their houses from the rain. Similarly, in the Plains, those who can afford it, use brick walls upto about 2½ ft. or 3ft. from the plinth and 'ekra' walls in the upper portions. This system is locally termed as 'half-walling'. In the highland portions of the United Khasi & Jaintia Hills District, plastering or walling with timber or corrugated iron sheets is common to protect the people from the severe cold in winter. As already stated above, due to the hot climate in the plains, many people in the interior do not use any plastering at all because they prefer some breeze inside their houses to keep off the heat.

I give below the average rainfall per District in Assam to show the effect of rain on the materials of walls in Assam.

District	Centres	Yearly average rainfall of the centres in m.m.	Average rainfall in the district for as many years during the last decade as are available
1. Cachar	(1) Silchar	3,062.01 m.m.	3,079.27 m.m.
	(2) Kumbhirgram	3,122.4 m.m.	(121.23")

	(2) Gauhati A P	1,819.80 m.m.	(70.41")
	(3) Rangla	1,960.00 m.m.	1,753.08 m.m.
			(69.02")

MATERIAL OF ROOF

As already stated, Subsidiary Table E-IV.2 shows the distribution of 1000 Census Houses used wholly or partly as dwellings by roof material. In the Rural Areas of Assam, the following materials are used for roofing per 1000 houses; grass, leaves, reeds, thatch, wood or bamboo—847, tiles, slate or shingle—negligible; corrugated iron, zinc or other metal sheets—119, asbestos cement sheets—9; brick and lime—1; concrete stone slabs—1 and all other materials—23. It is thus seen that most of the houses in rural Assam use thatch or grass as a roofing material. The main reason for this usage is because thatch and grass are the most easily available roofing materials in the Rural Areas of Assam. Corrugated iron sheets and asbestos cement sheets are used by well-to-do persons in the Rural Areas of Assam because these materials give sufficient protection from the heavy rainfall of Assam and they are also not easily combustible. The 'other materials' mentioned in column 8 of this Subsidiary Table are a mixture of thatch and some other materials like kerosene oil tins, bamboo, etc. and as they cannot be classified under any of the previous headings, they have been lumped up as 'other materials' under column 8. In the Urban Areas of Assam the distribution of 1000 Census Houses by roofing material is as follows—grass, leaves, reeds, thatch, wood or bamboo—373; tiles, slate and shingle—16; corrugated iron or other metal sheets—561; asbestos cement sheet—15; brick and lime—12; concrete and stone slabs—3 and all other materials—18. It is thus seen that in the Urban Areas of Assam, corrugated iron sheets are mostly used as roofing material while the proportion of materials other than thatch or bamboo is also comparatively much higher. The reason for this is that corrugated iron sheets and other materials give better protection from rain and they are also not easily combustible. Many Municipalities do not also allow the use of thatch or other combustible materials for new houses for roofing purposes. However the proportion of thatch roofing is also very big, but that is mostly in the small Urban Areas in the interior of the State. What is true of Assam is also true of the Districts and the Police Stations as can be seen from this Subsidiary Table. There is, however, one glaring point in respect of the usage of corrugated iron sheets. In the Urban Areas of the United Khasi & Jaintia Hills District, as many as 896 houses out of every 1000 use only corrugated iron sheets. The Urban Areas of this District comprises of Shillong and its satellite towns and Jowai. In the United Mikir & North Cachar Hills, 809 out of every 1,000 use corrugated iron sheets for roofing material, but this figure is rather misleading because the only Urban Area in the United Mikir & North Cachar Hills District is Haflong which has a total population of only

3,265. Even in Rural Areas, the United Khasi & Jaintia Hills use the greatest amount of corrugated iron sheets inasmuch as 388 houses out of every 1000 use this material for roofing purposes. The rainfall is heaviest in this District and the people also appear to be comparatively better off than those of the other Hill areas of Assam and so corrugated iron sheets are used in great quantities here.

As far as the three towns of Assam which have a population of over 50,000 are concerned, Shillong has 927 houses out of every 1000 using corrugated iron sheets as roofing material whereas Dibrugarh has only 661 and Gauhati only 444 such houses. The main reason is that in Shillong no new houses are allowed to be built of thatch or other combustible materials. In Gauhati, 483 houses out of every 1000 still use thatch, bamboo and other combustible substance as roofing materials whereas in Dibrugarh only 314 houses out of every 1000 use such materials and in Shillong, only 54 out of every 1000 use such materials. The use of asbestos cement sheets is also greatest in Shillong but the use of brick and lime is greatest in Gauhati followed by Dibrugarh.

Corrugated iron sheets and asbestos cement sheets are materials imported from Calcutta or other places where these materials are manufactured. All the other roofing materials are available locally in Assam. Corrugated iron sheets are the most favoured roofing material in Assam and much more houses would have had these materials for their roofing had it not been for their non-availability. The obvious reason is because corrugated iron sheets give the best protection from rain.

Roofs of houses in Assam are almost entirely of the sloping type and not flat. The reason is that flat-roofed houses cannot drain away the rain water quickly and will therefore cause leakages. Sloping roofs have a definite advantage in speedily draining away rain water.

Thatch or 'sawn' grass is a kind of grass that is mostly used as roofing material in Assam. This grass is tough and long (about 3 ft. to 6 ft.) and is very suitable as a roofing material. That is why in many areas in Assam including the tea gardens, certain patches of land are left only for the growth of this type of grass. It is not only plentiful but it grows quite naturally in many places of Assam. However, as more and more land is put under cultivation, the availability of this type of grass is gradually diminishing in Assam. It has also become very costly and has to be replaced every three or four years and so people would much prefer the use of corrugated iron sheet if it is available. For walling material, I have already discussed that in the highland portions of the United Khasi & Jaintia Hills District, ekra or 'kdait' is the best material. This type of small bamboo grows quite naturally in

the highland valleys of this District ; but many people also grow it in their gardens. It is also very beautiful and so many bungalows grow it for the sake of beautifying their gardens and also for the purpose of supporting the tendrils of many creeping flowers, like sweet pea, etc. In the Rural Areas of Assam, whether in the Hills or in the Plains, bamboo almost grows wild. In the Plains, however, it used to be planted around each homestead. Actually no Assamese village can be seen from a distance. All villages in the Plains of Assam look like a bamboo grove from a distance but when one goes near it, then he will

see a group of houses among the bamboos, betelnuts and other fruit trees. Bamboo which is thus plentifully available can easily be used as walling material. Some skilled workers from the Surma Valley can also split bamboo in such a way and by cleverly weaving it into a 'torza', the bamboo can also be used as roofing material which is leak-proof. Many temporary Railway quarters have such bamboo 'torza' as their roofs.

Photographs and Sketches of typical houses in Assam are given elsewhere in this Publication.

CHAPTER VI HOUSEHOLD TABULATION

The data regarding the Household Tabulation has been collected in Table E-V which shows the Sample Households classified by number of members and by number of rooms occupied. The Sample Households have been based on 20 % of the total number of houses in Assam as was done in the cases of Tables E-II and E-IV. The main purpose of this Table is to find out the extent of congestion in the households of Assam whether in Urban Areas or in the Rural Areas. This Table shows the households with no regular room and households with one room, two rooms, three rooms, four rooms and five rooms and more. In other words, the extent of congestion is sought to be found out by the number of people occupying a room or rooms. The Table does not give the size of rooms in terms of sq. ft. or cu. ft. of space per person because such data were not collected in our questionnaire during the house-listing operation for the 1961 Census. There are some people in Assam, like the Miris and the Mizos, who may construct very long houses with one room only, so that even if their houses have only one room but that room may be very big and so congestion only on the basis of their rooms may not apply to their cases. But by and large, the congestion in respect of most of the population of the State can be more or less gauged only by the number of persons occupying each room. Normally the size of rooms in Assam varies from about 100 sq. ft. to about 300 sq. ft. only.

Table E-V has two Subsidiary Tables—E-V.1 and E-V.2. Table E-V.1 shows the distribution of 1000 Census Households according to the number of rooms occupied, while E-V.2 shows the number of persons, males and females, per room and persons per household in each category of household up to two places of decimals. Columns 7, 8 and 9 of Table E-V shows the number of households with no regular room. This can happen when a Census House consists of a number of households and more than one household occupies a single room, or shares more than one room, in such a way that it is not possible to say the number of rooms occupied by each household. Again, according to the definition of a room in the 1961 Census it is stipulated that it should usually have four walls with a doorway, with a roof overhead and should be wide and long enough for a person to sleep in it. During the house-listing operation, some Enumerators in the Hill areas of Assam did not give the number of rooms occupied by each household. The Houselists were received by us during the final enumeration and even after it, and so there was no more time to check such non-entries. So during tabulation we have been confronted with great difficulty and so wherever Enumerators have left these columns blank, we have had to lump them under the cate-

gory of households with no regular room. This is the main reason why such data appear to be rather biggish in Assam. The biggest number of such data occurs in the Mizo Hills.

In the State of Assam, a distribution of 1000 Census Households according to the number of rooms occupied is as follows :—

(a) No regular room ...	...	2
(b) One room ...	...	366
(c) Two rooms ...	...	348
(d) Three rooms ...	...	150
(e) Four rooms ...	...	70
(f) Five rooms and more ...	...	64
Total ...	...	1000

From the above statement, it is seen that the biggest category in Assam as a household is the number of households occupying only one room followed by the category of households occupying two rooms. However, the number of households in Assam occupying three rooms or more is also fairly big. As already stated above, the number of households occupying only one room is the biggest in the Mizo District where 716 households out of every 1000 occupy only one room, but this room may really be very big because the Mizos generally construct one-roomed houses which may be about 10 to 15 ft. wide and anything from 30 to 60 ft. long. Next to Mizo Hills, the Cachar District has 607 households out of every 1000 occupying only one room. This suggests that the congestion in Cachar District is very great because big rooms are not generally found in this District. The Garo Hills District has 579 out of every 1000 households occupying only one room. But here also it may be noted that the Garos, like the Mizos, used to make elongated houses of one room only. The number of households occupying only one room appears to be the smallest in the Sibsagar District where only 163 households out of every 1000 occupy only one room. The proportion of the households occupying different categories of houses based on the number of rooms can easily be visualised from Subsidiary Table E-V.1 and so it is perhaps needless for me to recapitulate here what can be easily seen from the Subsidiary Table itself. What is true of each District is also more or less true in respect of each Police Station within the District as far as this kind of categorisation is concerned.

Out of 440,460 Sample Households in Assam, 404,829 are in the Rural Areas and only 35,631 are in the Urban Areas. Out of the above Sample

XXVI

Households, the number of households occupying a certain number of rooms is as follows :—

	Rural	Urban
(a) One room ...	145,424	15,787
(b) Two rooms ...	143,110	10,245
(c) Three rooms ...	61,689	4,443
(d) Four rooms ...	28,149	2,411
(e) Five rooms and more.	25,661	2,644

From the above statement, it may be seen that by far the households in Assam occupy houses with one or two rooms whether in the Rural Areas or in the Urban Areas. It may also be seen that in the Urban Areas, the greatest number of households live in houses of one room only whereas in the Rural Areas the number of households occupying two rooms is almost the same as those occupying only one room. What is true of the State of Assam is also more or less true of the different Districts with the difference that the District which has more urban areas also has more households living in the Urban Areas. For example, 3,923 Sample Households live in the Urban Areas of the Kamrup District in houses of one room whereas only 269 households live in houses of one room in the Urban Areas of the Mizo District because Gauhati has 13 towns whereas the Mizo Hills District has only 1 town.

The following is a Table showing the distribution of 1000 Census Households according to the number of rooms occupied in Gauhati, Shillong and Dibrugarh towns which have a population of over 50,000 in Assam :—

	Gauhati	Shillong	Dibrugarh
(a) One room ...	532	406	389
(b) Two rooms ...	236	263	274
(c) Three rooms ...	108	117	150
(d) Four rooms ...	55	109	88
(e) Five rooms and more	69	105	99

The above table shows that as far as one room occupation by households is concerned, the number is the greatest in Gauhati followed by Shillong and then by Dibrugarh, but as far as the number of households occupying two rooms and three rooms the order is reversed—236 in Gauhati, 263 in Shillong and 274 in Dibrugarh and 108 in Gauhati, 117 in Shillong and 150 in Dibrugarh respectively. As far as the number of households occupying four rooms is concerned, Shillong tops the list with 109 households out of every 1000 followed by Dibrugarh with 88 and then by Gauhati with 55. Similarly, as far as the number of households occupying houses with five rooms and more, Shillong tops the list with

105 out of every 1000 followed by Dibrugarh with 99 and Gauhati with 69.

Subsidiary Table E-V.2 shows the number of persons per room and the number of persons per household in each category of household up to two places of decimals. In Assam, the number of persons per room works out at 2.42 and the number of persons per household works out at 5.34. In the Rural Areas of Assam, the number of persons per room is 2.43 and the number of persons per household is 5.36 whereas in the Urban Areas the number of persons per room is 2.37 and the number of persons per household is 5.11.

The following Table shows the total number of persons per room and the total number of persons per household in the 11 Districts of Assam :—

District	No. of persons per room	No. of persons per household
1. Goalpara	2.64	5.49
2. Kamurp	2.59	5.64
3. Darrang	2.41	5.27
4. Lakhimpur	2.16	5.07
5. Garo Hills	2.85	4.61
6. United Khasi & Jaintia Hills	1.83	4.66
7. Nowgong	2.45	5.73
8. United Mikir & North Cachar Hills	2.50	5.20
9. Sibsagar	1.82	5.27
10. Cachar	3.36	5.26
11. Mizo Hills	4.91	6.18

From the above table, it appears that the congestion is the greatest in the Mizo Hills District because each room is occupied by 4.91 persons, but as stated earlier, the congestion may be more apparent than real because the Mizos used to construct biggish houses of one room only. In the Cachar District the number of persons per room is 3.36 and here there must be real congestion because the rooms in the houses of Cachar District are only of the average sizes of the Assam Plains. It is only in the District of United Khasi & Jaintia Hills and Sibsagar that the number of persons per room is 1.83 and 1.82 respectively showing that congestion is least in these two Districts. As far as the number of persons per household is concerned, Mizo Hills also tops the list with 6.18 persons per household followed by Nowgong with 5.73 persons per household. The only Districts which have less than five persons per household are the Garo Hills and the United Khasi & Jaintia Hills where the number of persons per household is 4.61 and 4.66 respectively.

The following is the table showing the number of persons per room and the number of persons per household in the three towns of Assam which have a population of over 50,000 :—

Town	No. of persons per room	No. of persons per household
1. Gauhati	2.34	4.72
2. Shillong	1.97	4.85
3. Dibrugarh	2.14	5.14

From the above table, it appears that the congestion is the greatest in Gauhati because the number of persons per room is 2.34 followed by Dibrugarh with 2.14. Shillong appears to have the least congestion. The number of persons per household is the greatest in Dibrugarh with 5.14 persons per household followed by Shillong with 4.85 and Gauhati with 4.72.

Normally, there should be about two persons per room and any figure more than two per-

sons per room shows over-crowding. Judged by this standard, Assam itself is over-crowded because there are 2.42 persons per room in Assam. Similarly, there is over-crowding in all the Districts of Assam excepting in the United Khasi & Jaintia Hills and the Sibsagar Districts. Over-crowding in Assam may have been a little less acute had it not been for the acute scarcity of such building materials as corrugated iron sheets, cement, nails, iron rods, etc. The difficulty to procure these building materials has been persistent ever since 1942 when the Second World War affected Assam very badly. After Independence, Assam suffers very badly in respect of communications due to the Partition and so the building materials could be brought to Assam with great difficulty and at very great cost. Corrugated iron sheets are the materials most in demand in Assam especially for roofing purposes, but these are very scarce in Assam because the supply in the whole of India is very limited and Assam's share out of the available quota appears to be very small because the distribution appears to have been made only on the basis of population.

CHAPTER VII

PHOTOGRAPHS AND LINE DRAWINGS OF
HOUSE TYPES IN ASSAM

This Chapter gives the illustrations of the various house types found in Assam mostly in the shape of photographs and in some cases in the shape of line drawings by our Artist-Draughtsman. Each photograph or line drawing has a caption immediately below it. These captions are generally self-explanatory, but for the sake of greater elucidation, I give below short explanations about each illustration:—

Fig. 1 shows a bird's eye view of the various types of houses which are generally found in modern Assam. These houses have become known as 'Assam type' of houses. The basic features of these Assam type of houses are that they have a masonry plinth on which wooden frames are built. The frames of the walls are of 'ekra' which are plastered with a mortar of lime and sand and then white-washed. The roofs are generally of corrugated iron sheets or asbestos sheets in the urban areas and of thatch or of the above materials in the rural areas. Assam is in a seismic region with plenty of rainfall. The houses must therefore be light but durable. The Assam type of houses can withstand earthquakes better. Corrugated iron sheets are most favoured for roofing because they give the best protection from the heavy rainfall of Assam.

The captions to figs. 2, 3 and 5 speak for themselves. The original Khasi houses are oval-shaped, low, thatch-roofed and dark. Most of such houses have disappeared in the United Khasi & Jaintia Hills. Fig. 4 shows a modernised oval-shaped Khasi house with walls of stones, roof of corrugated iron sheets and with windows and a chimney to let out smoke. This house is in Cherrapunji where plenty of coal is found and is used in the chimney.

Fig. 6 shows a Bodo house in the Brahmaputra valley while fig. 9 shows a granary which can be found in almost every house in the plains of Assam. The granary used to be built on stout stilts of wood and planked in such a way that rats cannot go to destroy the paddy. The walls are either of wood or of 'ekra' plastered with mud with practically no window. In the top portion of the front part there is a door through which people can get in to store or take out the paddy. Namghars or prayer houses can be found in every village in the Brahmaputra Valley. Simple types are of wooden posts with bamboo walls and thatch roof but fig. 8 shows a modernised Namghar. The shapes of all types of Namghars are, however, similar irrespective of the materials of which they are constructed. Fig. 7 shows a Garo house in the plains of Assam while fig. 12 shows a Garo house in the hills of Assam. Garo houses are generally built on stilts with bamboo floors. In the Hills areas, one part of the house

may be on the level of the ground but the other part may be high up above the ground due to the terrain. The Garos, the Mikirs and Mizos used to keep cattle, goats, fowls, etc. beneath the plinth. Fig. 21 shows a Garo housing colony. Some Garos and Mikirs who live in the plains may have mud plinths like other houses in the plains. Fig. 10 shows a typical Hmar house while fig. 11 shows a Jaintia house which can generally be found in the rural areas of the Jaintia Hills. Fig. 13 shows a house whose walls are of planks and the roof is of tiles. Houses with roofs of tiles were not formerly found in Assam, but recently many houses in Lower Assam in particular have roofs of this material. The advantage of tiles is that they can be manufactured locally out of clay and can withstand sun and rain with good effect. Manufacture of tiles can also give sufficient scope for a small scale industry within the State itself.

Figs. 14, 15, 16 and 17 show houses which can be built out of timber and bamboo which are found locally in Assam. Fig. 14 shows a housing colony in the Railway quarters at Pandu. Fig. 17 shows a close-up of 'torza' skilfully woven to make it waterproof for the purpose of roofing. Fig. 16 shows a roof-frame made of wood and bamboos ready for being used with 'torzas' while fig. 15 shows a finished house with these materials. The roofs made of 'torzas' have steep inclines of about 60 degrees so as to make them leak-proof. Fig. 18 shows a typical house with a roof made of kerosene oil tins while fig. 19 shows a 'torza' house with half of its walls made of bricks to withstand heavy rainfall.

Fig. 22 shows a modern concrete building which can be found in Assam as well as anywhere else in India, while fig. 23 shows one of the three or four modern flour mills built in Assam. Fig. 24 shows the Legislative Assembly building of Assam the roof of which is made entirely of galvanised plain sheets. In this type of roofing, plank is first used for roofing and on top of the planks, plain galvanised sheets are put ending in rolled-up lines to prevent leaking. The dome-shaped library of this building has concrete rafters with tiles for roofing. Fig. 25 shows a house with walls of bricks.

The captions of figs. 26 and 27 speak for themselves. Fig. 28 shows a Mikir house found in the plains of Assam with mud plinth. A distinctive feature of this house is that there is a loin loom in front of the house. Fig. 29 shows the type of quarters made for tea-garden labourers by the management in Assam. Fig. 30 is a line drawing of a typical Miri house which is built on stout wooden stilts and is generally of great length, anything from about 80 ft. to as much as 250 ft.

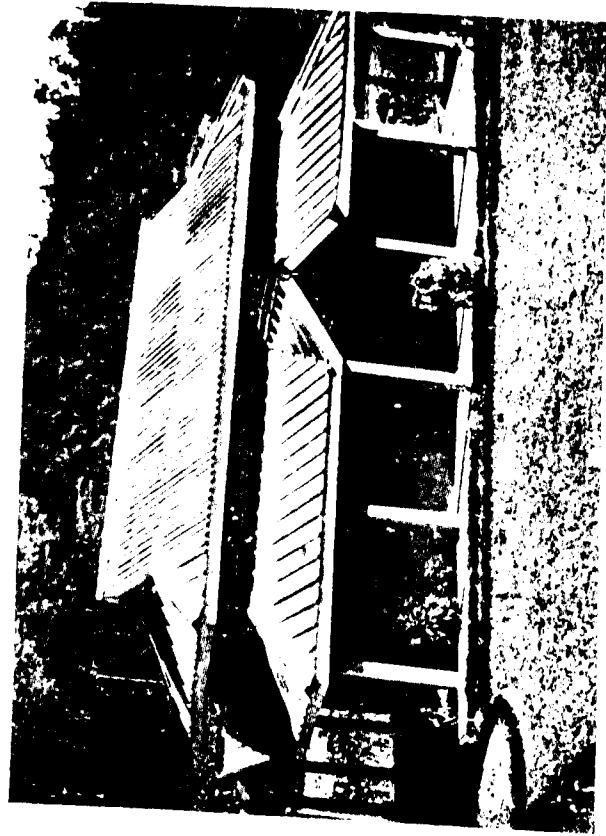

immigrants from East Bengal.

Fig. 37 shows a section of a modern building in Assam having stone masonry plinth plastered with cement and walls upto 2½ ft. or 3 ft. with wire-crete. Instead of the ordinary 'ekra', these types of walls are covered with wire-netting of about ½ inch mesh and then plastered with cement. This gives them the much needed protection from the heavy rainfall of Assam.

Fig. 35 is a line drawing of a typical Mizo house while fig. 36 shows a typical house of

TABLE E-I

CENSUS HOUSES AND THE USES TO WHICH THEY ARE PUT

This table prepared for all census houses gives figures separately for total, rural and urban areas of the state, districts and police stations classified into different categories according to the uses to which they are put. In case of urban areas, it furnishes separate figures for each city, town group and town with a population of 50,000 and over. In the earlier Censuses, a 'Census House' was defined as a dwelling with a separate main entrance, but in the 1961 Census, a 'Census House' is not only a dwelling but also a structure or part of a structure with a separate entrance, whatever the uses to which it is put.

The various purposes of use for Census houses are spelled out below :—

Vacant houses.

Bazar sheds and houses which remain vacant all through except on bazar days, vacant military camps, houses just completed or nearing completion.

Dwellings.

Residence, temporary military camps, border outposts, railway gang huts, etc.

Shop-cum-dwellings.

Shops with dwellings in the same houses.

Workshop-cum-dwellings.

Dwelling-cum-brass and metal works, bakery, tailoring, dairy, gold and silversmithy, bicycle repairing, blacksmithy etc.

Hotels, Sarais etc.

Hotels, hostels, dharamshalas, dak and inspection bungalows, circuit houses etc.

Shops excluding eating houses.

Shops other than eating houses.

Business houses and offices.

Banks, Government offices, private companies' offices, Offices of chambers of commerce, bus associations' offices, etc.

Factories, workshops and worksheds.

Tailoring, bakery, motor workshops, watch repairing, shoe repairing, gun repairing, furniture workshops, ply-wood factories, rice and oil mills, production of bidis etc.

Schools etc.

Primary and secondary schools, high and higher secondary schools, colleges, carpentry, weaving and music schools, agricultural training centres etc.

Restaurant, Sweetmeat shops etc.

The names explain.

Place of entertainments etc.

Cinema halls, theatre halls, recreation clubs etc.

Public health and medical institutions etc.

Hospitals, dispensaries, doctors' clinics, veterinary hospitals etc.

Others.

Temples, churches, mosques, godowns, ashrams, garages, petrol stations, store houses etc.

Code Numbers mentioned in Column 2 of the Table E-III and in the appropriate Columns of the Subsidiary Tables to E-III have the following meanings according to the

STANDARD INDUSTRIAL CLASSIFICATION

DIVISIONS

0—Agriculture, livestock, forestry, fishing and hunting

2 & 3—Manufacturing

MAJOR GROUPS

04—Livestock and hunting.

20—Food stuffs.

21—Beverages.

22—Tobacco products.

23—Textiles-cotton.

24—Textile-jute.

25—Textile-wool.

26—Textile-silk.

27—Textile-miscellaneous.

28—Manufacture of wood and wooden products.

29—Paper and paper products.

30—Printing and publishing.

31—Leather and leather products.

32—Rubber, petroleum and coal products.

33—Chemicals and chemical products.

34—35—Non-metallic Mineral Products other than petroleum and coal.

36—Basic Metals and their products except machinery and transport equipment.

37—Machinery (all kinds other than Transport and Electrical equipment).

38—Transport Equipment.

39—Miscellaneous Manufacturing Industries.

MINOR GROUPS

043—Production of ducks, hens and other small birds, eggs by rearing and poultry farming.

045—Rearing of silk-worms and production of cocoon and raw silk.

048—Production of other animal husbandry products such as skin, bone, ivory and teeth.

MINOR GROUPS—(contd.)

200—Production of rice, atta, flour, etc., by milling, dehusking and processing of crops and food-grains.

202—Production of indigenous sugar, gur from sugarcane or palm juice and production of candy.

203—Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits.

205—Production of bread, biscuits, cake and other bakery products.

206—Production of butter, ghee, cheese and other dairy products.

207—Production of edible fats and oil (other than hydrogenated oil).

209—Production of other food products such as sweetmeat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge.

211—Production of country liquor.

214—Production of aerated and mineral water.

215—Production of ice.

216—Production of ice-cream.

217—Processing of tea in factories.

219—Production of other beverages.

220—Manufacture of bidi.

223—Manufacture of hookah tobacco.

230—Cotton ginning, cleaning, pressing and baling.

231—Cotton spinning (other than in mills).

233—Cotton dyeing, bleaching.

234—Cotton weaving in power looms.

235—Cotton weaving in handlooms.

236—Manufacturing of khadi textile in handlooms.

240—Jute pressing and baling.

241—Jute spinning and weaving.

244—Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta.

253—Wool spinning other than in mills.

262—Spinning of silk other than in mills.

264—Weaving of silk textile by handloom.

271—Manufacture of hosiery and other knitted fabrics and garments.

278—Making of textile garments including rain coats and headgear.

MINOR GROUPS—(contd.)

- 274—Manufacture of made-up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags.
- 276—Manufacture and recovery of all types of fibres for purposes of padding, wadding and upholstery filling.
- 277—Manufacture of coir and coir products.
- 278—Manufacture of umbrellas.
- 280—Sawing and planing of wood.
- 281—Manufacture of wooden furniture and fixtures.
- 282—Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows.
- 283—Manufacture of wooden industrial goods other than transport equipment such as bobbing and similar equipment and fixtures.
- 284—Manufacture of other wooden products such as utensils, toys, artwares.
- 285—Manufacture of veneer and plywood.
- 287—Manufacture of boxes and packing cases other than plywood.
- 288—Manufacture of materials from cork, bamboo, cane, leaves and other allied products.
- 289—Manufacture of other wood and allied products not covered above.
- 290—Manufacture of pulp from wood, rags, waste paper and other fibres and the conversion of such pulp into any kind of paper & paper board in mill.
- 291— do. do. do. handmade.
- 292—Manufacture of products, such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp.
- 300—Printing and publishing of newspapers and periodicals.
- 301—Printing and publishing of books.
- 302—All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry.
- 303—All types of binding, stitching, sizing and other allied work connected with binding industry.
- 310—Currying, tanning and finishing of hides and skins and preparation of finished leather.
- 311—Manufacture of shoes and other leather footwear.
- 312—Manufacture of clothing and wearing apparel (except footwear) made of leather and fur.
- 313—Manufacture of leather products (except those covered by code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles.
- 314—Repair of shoes & other leather footwear.

MINOR GROUPS—(contd.)

- 324—Production of petroleum, kerosene and other petroleum products in petroleum refineries.
- 325—Production of coaltar and coke oven.
- 326—Manufacture of other coal and coaltar products not covered elsewhere.
- 332—Manufacture of fertilizers.
- 333—Manufacture of ammunition, explosive and fire works.
- 334—Manufacture of matches.
- 335—Manufacture of medicines, pharmaceutical preparation, perfumes, cosmetics and other toilet preparations, except soap.
- 336—Manufacture of soap and other washing and cleaning compounds.
- 339—Manufacture of other chemical and chemical products not covered above (including inedible oils and fats).
- 340—Manufacture of structural clay products such as brick, tile.
- 341—Manufacture of cement and cement products.
- 342—Manufacture of lime.
- 343—Manufacture of structural stone goods, stone dressing and stone crushing.
- 347—Manufacture of asbestos products.
- 350—Manufacture of earthenware and earthen pottery.
- 352—Manufacture of porcelain and its products.
- 355—Manufacture of earthen image, busts and statues.
- 356—Manufacture of earthen toys and artwares (except those covered by code No. 355).
- 359—Manufacture of other non-metallic mineral products not elsewhere specified.
- 361—Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms.
- 363—Manufacture of structural steel products such as joist, rail, sheet, plate.
- 364—Manufacture of iron and steel furniture.
- 365—Manufacture of brass and bell metal products.
- 366—Manufacture of aluminium products.
- 367—Manufacture of metal products (other than of iron, brass, bell metal and aluminium) such as tin can.
- 368—Enamelling, galvanising, plating (including electroplating) polishing and welding of metal products.
- 369—Manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery (this will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerned which cannot be classified in major groups 36, 37, 38 and 39).

MINOR GROUPS—(concl.)

- 370—Manufacture and assembling of machinery other than electrical, except textile machinery.
- 379—Manufacture of electric machinery and apparatus, appliances not specified above.
- 380—Manufacture, assembly and repairing of locomotives.
- 381—Manufacture of wagons, coaches, tramway and other rail road equipment (other than that covered by code No. 363).
- 384—Repairing and servicing of motor vehicles.
- 385—Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear.
- 386—Building and repairing of water transport equipment such as ships, boats and manufacture of marine engines.
- 388—Repairing of bicycles and tricycles.
- 389—Manufacture of other transport equipment such as animal drawn and hand drawn vehicles.
- 390—Manufacture of optical instruments and lenses, opthalmic goods and photographic equipment and supplies.
- 392—Assembling and repairing of watches and clocks.
- 393—Manufacture of jewellery, silverware and wares using gold and other precious metal.
- 394—Manufacture and tuning of musical instruments.
- 395—Manufacture of stationery articles not covered elsewhere such as pencil, penholder, fountain pen.
- 396—Manufacture of sports goods.
- 399—Manufacture and repair work of goods not assignable to any other group.

TABLE E-IV

**DISTRIBUTION OF SAMPLE HOUSEHOLDS LIVING IN CENSUS HOUSES
USED WHOLLY OR PARTLY AS DWELLING BY PREDOMINANT
MATERIAL OF WALL AND PREDOMINANT MATERIAL OF ROOF**

This table has been prepared on the basis of 20% sample and for the same units as Table E-I. Census Households used as dwellings, shop-cum-dwellings, workshop-cum-dwellings and dwellings with other uses have been taken into account for the purpose of marking the sample. The table furnishes structural conditions of the houses namely, type of wall and type of roof.

E-IV—DISTRIBUTION OF SAMPLE HOUSEHOLDS LIVING IN CENSUS MATERIAL OF WALL AND PREDOMINANT

Sl. No.	State/District/Subdivision/ Police Station/Town with population of 50,000 or more	Total Rural Urban	Total No. of Households	Material
