INTRODUCTORY NOTE

FIGURES AT A GLANCE

(Census of India 1971—Provisional Population Totals— Tamil Nadu)

A. POPULATION OF TAMIL NADU	Total ...	41,103,125
	Males ...	20,772,549
	Females...	20,330,576
B. DECENNIAL POPULATION GROWTH RATE 1961-71		22.01%
C. DENSITY OF POPULATION		316 per sq. km.
D. SEX RATIO		979 females per 1,000 males
E. PROPORTION OF URBAN POPULATION TO TOTAL POPULATION	...	30.28
F. LITERACY RATE	Total ...	39.39%
	Males ...	51.68%
	Females...	26.83%
G. WORK PARTICIPATION RATE (i. e. PROPORTION OF ECONOMICALLY ACTIVE WORKERS)	Total ...	36.67%
	Males ...	55.96%
	Females...	16.96%

The figures presented in this booklet give some basic particulars of the population as on 1st April 1971 as recorded by the 1971 Census of India. These figures however are only the crude totals compiled from the abstracts furnished by the Census Enumerators themselves from the Census records. The figures so compiled from the abstract collected from thousands of Enumerators are bound to have their own limitations and are thus purely provisional which can be confirmed only after the Census schedules are fully processed in a series of Regional Tabulation Offices. After the final tabulation, apart from providing the Primary Census data down to every village and Enumerator's block of a town, a series of cross Tabulations of the Census data will be made to present the demographic, social and economic characteristics of the population in a meaningful way such as by sex, broad age-groups, educational levels, etc. It is our anxiety to make available to the Government and the people the provisional results of the 1971 Census count as quickly as possible after the completion of enumeration which has impelled us to compile and present this booklet of provisional population figures.

CS 9171
11-20

The outstanding feature of this Census of Tamil Nadu is that the Population of Tamil Nadu has increased from 33.7 million in 1961 to 41.1 million in 1971, an increase of 22.01% over this decade. To those who expected a fall in the growth rate of population, considering the steady efforts in the field of family planning, this increase in growth from 11.8% to 22.01% must have come as a surprise. The growth of Population in Tamil Nadu in the last decade was 11.8% as against the All India growth rate of 21.64% and it has now gone upto 22.01%, when the rate for the whole country is 24.57. The State has registered double the rate of growth during the decade 1961-71 compared to that of 1951-61. Excepting Jammu and Kashmir & Nagaland no other State has registered such an increase compared to the rate of growth of the previous decade. This is the highest growth rate in this century. It is interesting to observe that while the All India Population in 1961 exceeded the figure expected by the Planning Commission Expert Committee by 8 million, in Tamil Nadu State alone the Population in 1961 fell short by 2.3 million than that expected by the Planning Commission. But the picture has been reversed in 1971. Now while the All India Population has fallen short of the figure expected by the Planning Commission by 1.27 million the Population of Tamil Nadu has exceeded the figure expected by the Expert Committee by 1.07 million.

The Population of this State accounts for 7.51% of India's Population. In 1951 the Population amounted to 8.34% of India's Population but in 1961 it amounted to only 7.67% of population. Thus while it ranked 5th in 1951, 6th in 1961, it has ranked 7th in 1971.

The sex ratio has shown decrease throughout the Censuses of this century in Tamil Nadu and the trend is similar for the country as a whole. While the All India Sex-ratio has decreased by 9 per 1,000 this state has registered a decrease by 13 per 1,000. Except Nilgiris, Madras and Dharmapuri all other Districts have registered decrease in sex-ratio, the highest decrease being in Thanjavur and the lowest being in Tirunelveli.

This State ranks ^{Second} 8th in the literacy rate. The percentage of literacy has risen to 39.4% from that of 31.4%. The rate of increase among males and females is almost equal. While the country has registered a mere 5.32% rise in a decade since 1961, this State has registered an increase of 8%. The total number of literates in Tamil Nadu has gone up from 10,580,616 in 1961 to 16,189,712 in 1971. The increase in the number of literates is 5,609,096. This figure is significant in the context of the problem of the educated unemployed.

Next to Madras City, the highest percentage of literates to total population is in Kanyakumari District, 58% of the Population being literates. Considering the sex-wise percentage of literates also Kanyakumari District comes second. Not even 1/4th of the total Population of Salem District are literates. Both among males and females, the lowest percentage of literates have been recorded only in Salem District.

The percentage of urban population has increased from 26.7 in 1961 to 30.3 in 1971. Though the increase in the population is meagre it is higher than the increase compared to 1951-61. In 1961, the proportion of urban population was higher than that of 1951 by 2.3 whereas in 1971 the proportion is higher by 3.6.

81312

Among the districts, Chingleput has recorded the highest increase compared to that of 1961. While only 1/5th of the Chingleput District Population was urban in 1961 now more than 1/3rd of the Population of the District constitutes urban population. In Districts like North Arcot, South Arcot, Tiruchirapalli, Thanjavur, Madurai, Ramanathapuram, Tirunelveli and Kanyakumari, the increase in the percentage of urban population compared to that of 1961 is not high. The main reason for the large increase in the proportion of urban population in Chingleput District is the establishment of many industries in the District in the areas near Madras City.

The total number of towns has increased from 339 in 1961 to 443 in 1971. The increase is mostly in the Class VI towns (Population less than 5,000). The number of towns in this class has increased threefold. The number of Class I towns has doubled.

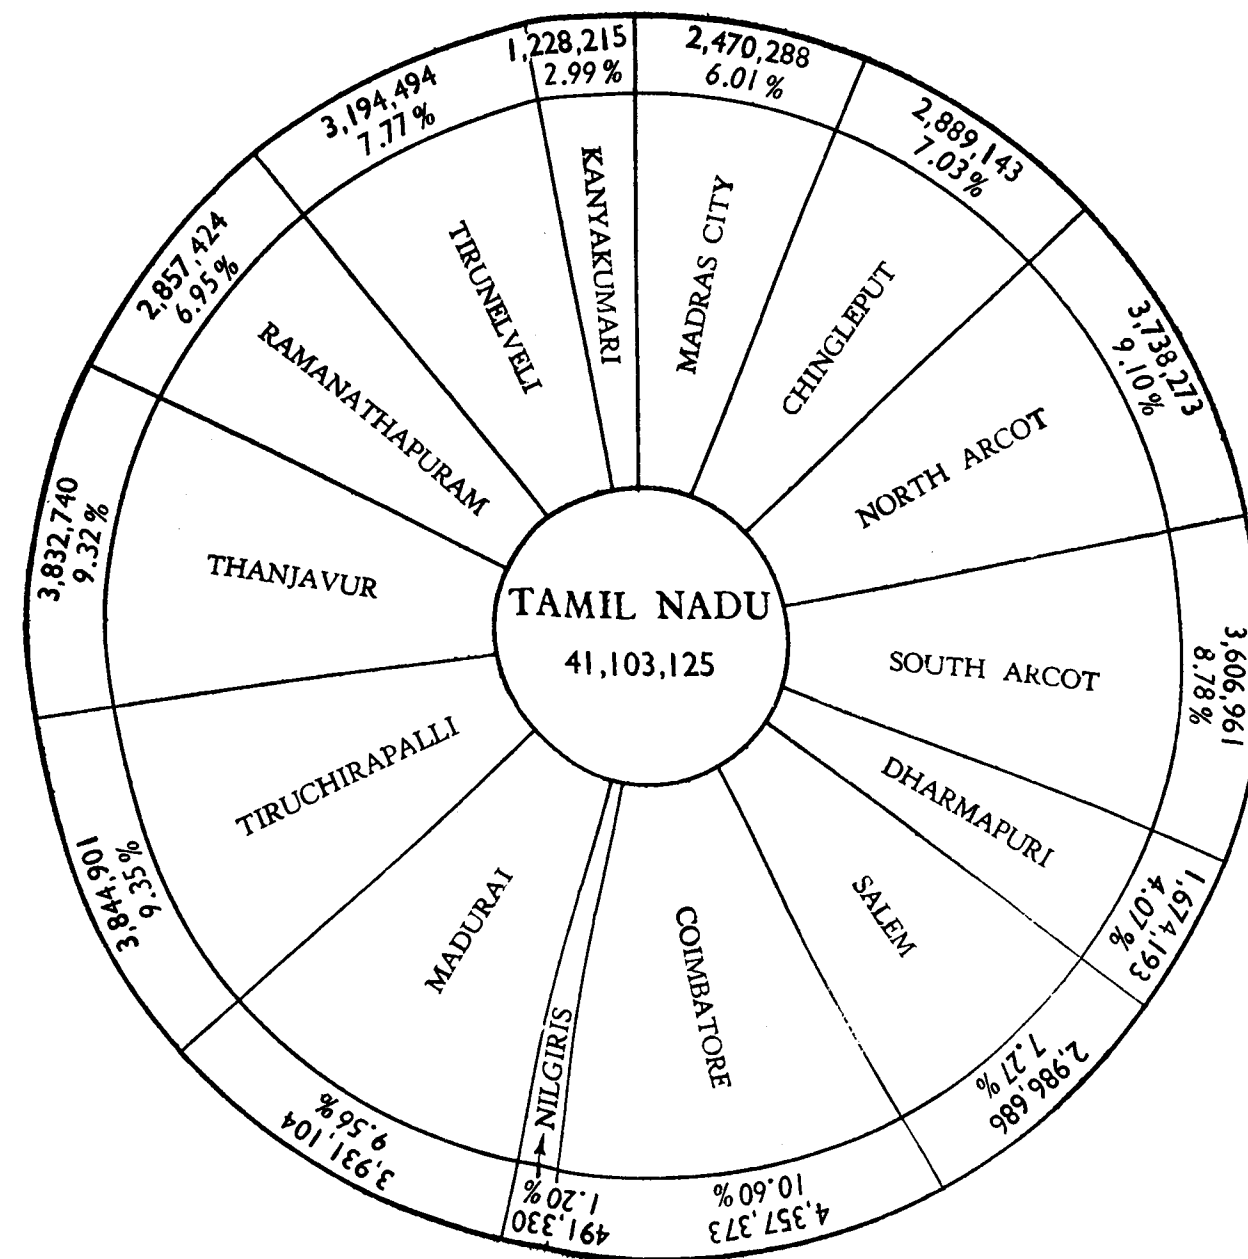

The percentage of workers has declined from 45.6 to 36.7. The decline is marked in the case of female workers. While 31.3% of females have been recorded as workers in 1961 only 17% have been recorded as workers in 1971. This pattern of decline is noticed in all districts. Only in Madras the proportion of female workers has increased. In every other District the proportion of female workers is just half of the proportion recorded in 1961. The main reason for this decline is the change in the definition of worker adopted in 1971 from that of 1961. According to the definition of 1961 in the case of seasonal workers, any person who has had some regular work of *more than one hour a day* throughout the greater part of the season has to be treated as a worker. Whereas in this Census, if a person is or has been working in the current or last working season for the greater part of the season, the person has been treated as a worker. The elastic definition of 1961 gave scope to include most of the housewives who rendered some assistance or the other in the work like cultivation and household industries done by the other family members for a little time more than an hour a day, as worker. This is the main reason for the abnormal increase in the percentage of workers particularly that of females in 1961 compared to the previous decades. In this census it was specifically mentioned that a man or woman who is engaged primarily in household duties such as cooking for own household or performing one's own household duties or a boy a girl who is primarily a student attending institution, even if such a person helps in the family economic activity but not as a full time worker, should be treated as non-worker in respect of main activity and the economic activity in which he or she was casually engaged was asked to be recorded as secondary work. This is the main reason for the decline in the proportion of workers particularly in the case of females. Since in Madras City the number of workers recorded as Cultivators is almost insignificant, the City being entirely an urban area, there has been no inflation in the proportion of workers in respect of Madras City even in 1961. Hence, in Madras City alone the proportion of women workers has increased from 6.3 in 1961 to 6.7 in 1971. But in every other District, the proportion of female workers has shrunk to half of the figures of 1961. The view that the number of workers in 1961 was an inflated one due to the definition can be further confirmed by looking at the proportion of Cultivators in 1961 and 1971. Without exception in every District the proportion of Cultivators has declined considerably in 1971 from that of 1961 and in the case of female workers it has steeply declined. Even in 1961 many had pointed out that the very high percentage,

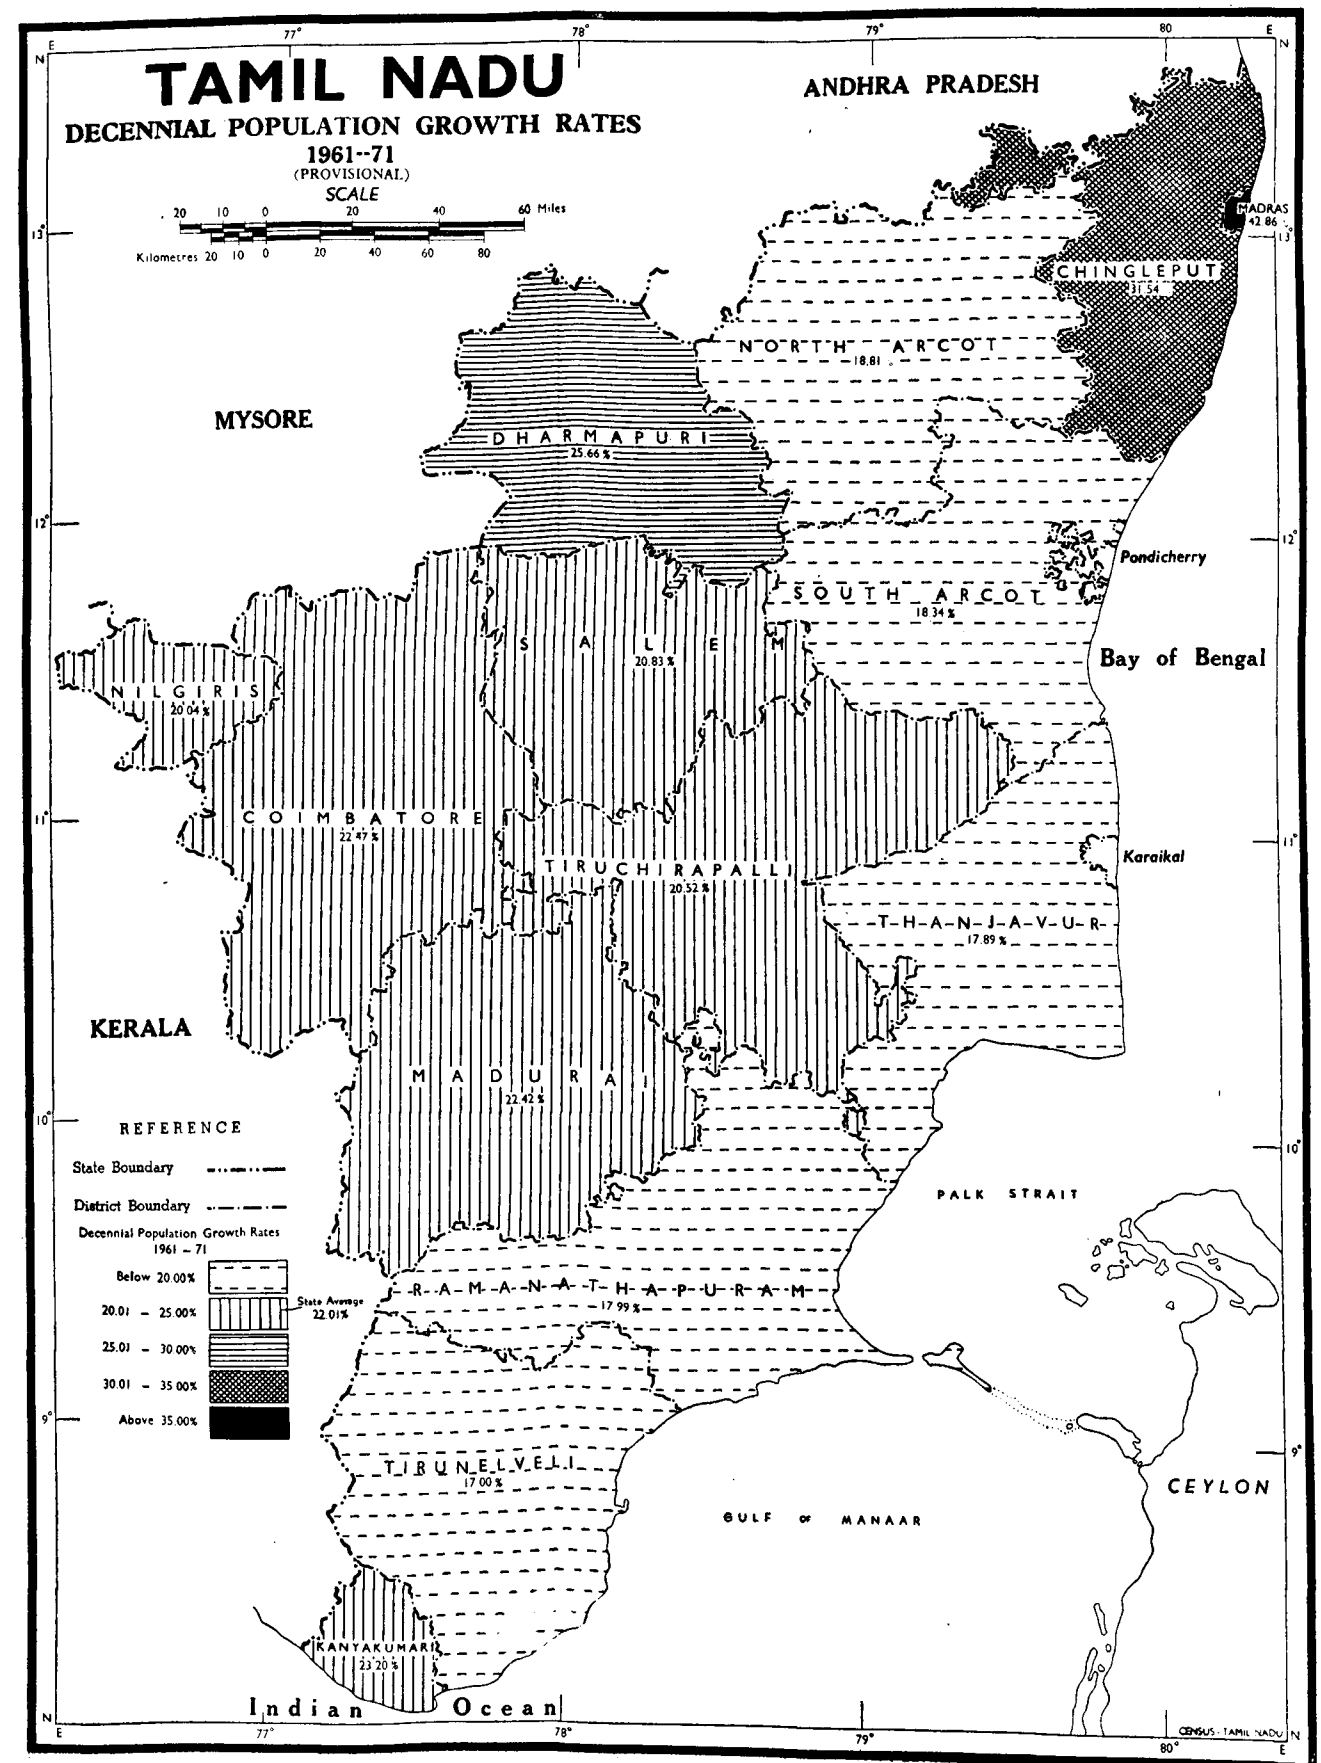

particularly in respect of females is merely or mostly due to the elastic definition of worker adopted in 1961. The present figure of workers confirms that view.

The proportion of Agricultural Labourers to the total workers has increased considerably in respect of all districts except Nilgiris and the increase is marked in the case of female workers. Since the proportion has been worked out to the total workers and since the inflation in the workers figures has been eliminated the proportion in the case of Agricultural Labourer has increased.
