SCHEMATIC MAPS	

FOREWORD

Under the 1971 Census series publications, for the first time a state level town directory volume was brought out as a source of basic data in respect of all the towns in the state. The town directory volume of 1971 series proved useful to the planners, administrators, research workers, academicians and others and, therefore, the state level town directory based on the 1981 census is also proposed to be published. The basic frame of the town directory of the 1981 series remains more or less the same as in the case of the 1971 series. However, a few modifications and innovations have been made to make it more informative and useful. It is with this objective in view that besides a new statement, a detailed analytical note supported by a number of inset tables based on data on the primary census abstracts and infrastructure have been added.

2. The volume is divided into two sections. Section A presents an analytical note, the town directory covering 7 statements, town-wise primary census abstract and a few appendices. Section B contains a number of important maps, including maps on land use pattern. Statements I to VI of the town directory provide a wide range of demographic, economic, social and cultural data in respect of each town. These cover information on the location of towns, civic administration status, growth history, physical aspects, civic and other amenities, municipal finance, medical, educational, recreational and cultural amenities besides trade, commerce, industry and banking institutions, etc. These statements are broadly comparable to similar statements included in the town directory of the 1971 series and the data contained therein is amenable to a trend analysis. The statement VII of 1971 series of town directory relating to population by religion and scheduled castes and scheduled tribes has been dropped as its compilation is expected to take time. A new statement IV-A, however, endeavours to provide information on civic and other amenities in slums in Class I and Class II towns. It is hoped that this information will be useful for undertaking new or strengthening the existing basic civic services in the slums to meet one of the requirements of the Minimum Needs Programme.

3. The data for the town directory has been compiled in the Census Directorate by Shri S. Packiaraj Investigator under the direction of Shri A. P. Muthuswami, the Director of Census Operations, Tamil Nadu. His team of devoted workers led by S./Shri M. Thangaraju and M. Nagappan Deputy Directors of Census Operations worked painstakingly for compilation of the volume. The task of planning, designing and coordination of the project has been carried out by Dr. N. G. Nag, Deputy Registrar General (Social Studies) of my office. Dr. B. K. Roy, Deputy Registrar General (MAP), provided the technical guidance in the preparation of the maps. The draft manuscripts compiled in the Census Directorate have been scrutinised in the Social Studies Division at the headquarters by Shri S. P. Jain and Mrs. V. R. Khanna Investigator under the able guidance of Shri M. M. Dua, Senior Research Officer. I avail of this opportunity to thank all my colleagues who contributed to this project.

NEW DELHI
2 September, 1983.

P. PADMANABHA
Registrar General, India

PREFACE

The present volume viz. Part X-A brings together at one place all the data in respect of the cities and towns of Tamil Nadu, compiled and published in the various District Census Hand books.

This volume on Town Directory presents for each town of Tamil Nadu, its 1981 Primary Census Abstract along with a large variety of basic information such as civic status, growth history, density, sex ratio, Municipal finance, civic and other amenities, amenities in notified slums and trade and industry. To highlight the urbanisation and other trends, a number of inset tables with brief analysis on certain predominant characteristics are presented to enhance the utility of the publication.

It is hoped that the data and the brief write-ups which are given along with the tables will be of much use to individuals, Central and State Government departments, Local bodies and Educational and Commercial organisations. It is also hoped that the exhaustive data which contain important and useful information about all the towns will inspire research scholars to embark on studies that will be ultimately useful to the communities living in these urban centres.

The schematic maps included in this volume for Class I and II towns depicts such of the important features as business area, industrial area, educational area, residential area etc. of the towns. This is expected to provide adequate information to planners, local bodies and persons interested in urban development.

All credit in bringing out this volume go to Shri A.P. Muthuswami, Director of Census Operations, under whose guidance the entire operations were carried out successfully. He had to leave this organisation for taking up very important assignment in the State Government before this volume could be made ready for the press.

I am extremely grateful to Shri P. Padmanabha, I.A.S., Ex-Registrar General, India and Shri V. S. Verma, I.A.S., Registrar General, India, Dr. N. G. Nag, Deputy Registrar General (Social S udies) and Dr. B. K. Roy, Deputy Registrar General (Map) who have rendered spontaneous help and encouragement at all stages in the preparation of this volume.

I received assistance from S/Shri M. Nagappan, Deputy Director and R. Narayanan, Assistant Director in finalising this report. I have received unstinted assistance from Shri S. Packiaraj, Investigator who bore the arduous task of scrutiny of tables and drafting. Likewise Shri Jogeshdoss has shouldered the responsibility of preparing the various maps included in this volume.

MADRAS
July, 1986.

M. THANGARAJU
Deputy Director of Census Operations,

SECTION-A

ANALYTICAL NOTE

Introduction

In the 'Town Directory' published along with Village Directory in the District Census Handbooks, a variety of details relating to each town is given and this together with the basic census data on towns, help a reader in having a clearer idea on the development of a town, the amenities available, etc. Though, the information from the town directory that appears in different District Census Handbooks was very useful, a comparative picture of the growth and development of all the towns in the State could be had only by referring to the various District Census Handbooks. It is difficult to have an overall view on the urbanisation at the State level vis-a-vis development of individual cities and towns by referring to the District Census Handbooks. With a view to obviate this difficulty and to give an overall view on the urbanisation pattern of the State and the variations in the levels of development among the various cities/towns in the State as a whole as also on facilities available, in them, etc. the volume on State level Town Directory was brought out during 1971 for the first time. This was welcomed as a very useful compendium providing consolidated information in respect of all the towns in the State in one source covering their growth history, physical aspects, functional category civic and other amenities, medical, educational, recreational and cultural facilities, trade and commerce, industry and banking, etc. In the present volume of 1981, a few modifications have been made so as to increase the utility of census and non-census data presented here which will prove invaluable for administration, town planning, formulation of development plans, provisions of more civic amenities, slum improvement, etc. A number of useful maps including schem atic maps depicting the land use pattern in cities and big towns are added in the volume and this visual dipiction of the demographic and socio-economic correlates will enrich the utility of the book.

Urbanisation is considered often as an index of development. It is believed that more urbanised a country or a state is, the more developed it is. Urbanisation by itself cannot be considered as a welcome development unless it is accompanied by increased standard of living of the urban dwellers, provision of modern civic amenities good transport network, educational and medical facilities, employment oppotunities and recreation facilities and the like Urbanisation itself is an adjunct of rapid industrial and technological development.

Though urbanisation is taking place in India at a faster rate in recent decades, the percentage of urban population in our country i.e. population living in cities and towns is only 23 ·3 per cent as per the latest Census of 1981. The ratio is higher in Tamil Nadu and stands at 33 ·0 per cent. This is the second highest ratio while considering the other states and Maharashtra tops the list with 35 ·0 per cent. Apart from many rural units which gradually come into the fold of 'urban' the increasing urban population is due to the individual and collective influence of the following factors : (i) Natural increase of births over deaths, (ii) Migration—net urban-ward migration from rural areas; and(iii) Administrative changes in which new rural areas are annexed by the existing urban units consequent on expansion of urban influence and jurisdictional extension.

In Tamil Nadu, we have a very large number of towns, 434 in 1981. However, nearly two-thirds of the total urban population of 15 ·95 millions in the State are living only in 62 cities and towns of over 50,000. There are 21 cities of over one lakh population which account for nearly half of the State's urban inhabitants.

It is obvious from the available urban data that the urban problems and complexities are far more serious in bigger towns than in the smaller ones. The growth of bigger towns is rapid due to the facilities already available in them like industries, transport, marketing facilities, etc. The influx of more population, creates the need for provision of greater civic amenities and the latter again attracts more people from the rural areas, thus making it a vicious circle. Metropolitan development and town planning authorities have to plan out multidimensional programmes for the newly emerging towns and colonies on the one hand and to the old towns on the other for the provision of adequate amenities, infrastructure etc.

In the above context of provision of more modern amenities, statistics on the existing facilities and the current problems including the urban population growth and their characteristics assume great significance. The existing level of development has to be studied thoroughly before embarking on further urban development The Town Directory provides

details about every town like civic status, decadal rate of population growth since 1901, annual rainfall, temperature, nearest city, name of state/district/sub-divisional taluk headquarters, nearest railway station and bus routes, municipal finance (1978-79), civic and other amenities, like road length, system of sewerage/drainage, types of latrines, method of disposal of night soil, sources of protected water supply, availability of fire fighting services, medical, educational, recreational and cultural facilities, supply of electric power and the extent of trade and commerce, industrial base and banking facilities.

An important addition made in this 1981 publication is the inclusion of a statement on slums in the bigger towns and cities. This statement provides civic and other amenities in slums located in Class (one lakh and above population) and Class II (50,000-99,999 population) towns. This information is useful for undertaking or strengthening the basic civic services in the slum areas to meet the requirements of the 'Minimum Needs Programme.'

Due to the continuous urban ward migration the Government and the civic bodies of cities and towns face a never-ending problem in regard to housing, educational and medical amenities, water supply and sanitation and transport services. An objective assessment of the present state of the cities/towns is given in this volume with reference to the several statistical tables at the end of the analytical note. The features which are generally characteristic of urban areas and the deviations from the same are also analysed briefly by examining certain hypothesis. These are bound to be useful to the urban planners and Government agencies engaged in policy making and implementing development schemes for improving life in cities and towns.

Census Concept of Urban A

At a census it is customary to divide the population into two broad categories viz. rural and urban. Such a classification is helpful for assessing the differentials in the social, economic, cultural and demographic characteristics of the population. However there is no universally accepted definition of a town. The definitions adopted for the classification of these areas vary from country to country. Definition of 'urban' is decided in advance before every census in our country.

In the 1981 census, the definition of an urban unit is more or less the same as was adopted in the 1961 and 1971 censuses but for some minor variations. The urban areas of 1981 census are :

(a) All places with a Municipality, Corporation or Cantonment Board or notified town area.

(b) All other places which satisfied the following criteria :

(i) A minimum population of 5,000.

(ii) At least 75 per cent of the male working population engaged in non-agricultural (and allied) activity.

(iii) A population of at least 400 per km^2 (or one thousand per square mile).

In 1971 and earlier censuses, urban areas in Tamil Nadu included some places with population below 5,000 on the basis of certain considerations like density, social and historical importance etc. In 1981, however, the test was strictly applied and no area was included on local considerations alone. This procedure has been adopted with a view to present a correct perspective of urbanisation in Tamil Nadu.

The total number of urban units recognised in Tamil Nadu for 1981 census is 434. Of the 434 urban units or towns, two (viz., Madras and Madurai) are Municipal Corporations, 99 are Municipalities, 8 are Municipal Townships and 2 are Cantonments. The rest are town/village panchayats, other townships and units under railway administration. Of the 439 urban units recognised in 1971 census, some were derecognised as 'Rural' in 1981. While some towns got merged with the neighbouring cities/towns and thus lost their independent identity, a few places were recognised as urban units for the first time during 1981 Census.

The number of towns recognised for the first time in 1981 is 30 and the towns derecognised as rural in 1981 is 13. While one town got recognised as two towns in 1981, 23 other towns got merged with the neighbouring cities or towns consequent on the jurisdictional changes involving extension of territorial limits during 1971-81. The number of towns has thus fallen to 434 in 1981 from 439 in 1971.

All the places other than those recognised as 'Urban' in census fall under 'Rural' areas. These include revenue villages, forest units and parts of villages whose other parts are included in urban units.

Urban Agglomeration

Urban Agglomeration, a new concept adopted in 1971 is being continued in 1981 also. Very often large railway colonies, university campuses, port areas, military camps, etc. come up outside the statutory limits of the city or town but adjoining it. Such areas may not by themselves qualify to be treated as towns but if they form a continuous spread with the town, they are outgrowths of the town and deserve to be treated as urban. Such towns together with their outgrowths have been treated as one urban unit and called "Urban Agglomeration". An Urban Agglomeration may constitute :

(a) A city with continuous outgrowth (the part of outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages),

(b) One town with similar outgrowth or two or more adjoining towns with their outgrowths as in (a) or

(c) A city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

In Tamil Nadu, 32 urban agglomerations were recognised in 1971. Two new urban agglomerations, (viz., Karur and Neyveli Urban Agglomerations) have been recognised in 1981. The 32 urban agglomerations recognised in 1971 are also being continued though there have been changes in the constituent units of some of these Urban Agglomerations. These changes are due to the recognition of new towns, jurisdictional changes resulting in expansion of some towns, etc. All the constituent units of the 34 urban agglomerations in the state, are also independent urban units. No rural parts or spill over of urban outgrowth outside the statutory towns etc., form as constituent units in the Urban Agglomerations recognised in the state. Thus, the urban agglomerations represent the continuous urban spread of some intense urban areas where the process of urbanisation has actually extended to continuous neighbouring units also and the entire area forms an integrated unit with necessary economic, commercial and transport link-up.

Of the 434 urban units recognised in 1981, 223 towns are included in the 34 urban agglomerations as their constituent units and the remaining 211 towns stand alone as separate units (i.e. without forming part of any urban agglomeration).

Scope of the State Town Directory

The Statelevel Town Directory gives important and useful information like civic and other amenities available in all the cities and towns of the state, both statutorily notified as well as non-municipal and census towns. The details relating to each of the towns have been presented in seven statements, viz., statements I to VI and IV-A. All the towns and Urban Agglomerations of the state are arranged in alphabetical order in these statements. The Town Directory does not cover strictly military areas. However, basic statistics of the cantonments as a whole have been provided. In this volume the codes adopted have been given in the beginning of the statements.

An urban agglomeration in Tamil Nadu includes two or more independent towns as its constituent units. The presentation of data for Urban Agglomeration and its constituent urban units is detailed below.

The names of both individual towns as well as Urban Agglomerations have been arranged in the alphabetical order. The particulars relating to a town, which is a constituent unit of an urban agglomeration are furnished below the name of the urban agglomeration under which it falls and not separately. In such cases, against the individual towns (which are constituent units of Urban Agglomeration), the following remarks have been given.

"See————————Urban Agglomeration"

By adoption of this method, the reader could get the particulars relating to the urban agglomeration as a whole as well as each of its constituent units at one place.

The details available in the various Town Directory statements are as below :

Statement 1 : Status and Growth History

This statement provides some population data based on the Primary Census Abstract. For analysing the State Town Directory data at the state and All India level, some new columns have been introduced in 1981. The new items are class of town, area of the town in sq. km. number of households, population and growth rate for each census year from 1901 to 1981. Population density per sq. km. as in 1981 and sex ratio during 1961, 1971 and 1981 censuses are also provided in the statement.

For size class of towns, the following population norms are followed.

Population	Class
1,00,000 and above	I
50,000—99,999	II
20,000—49,999	III
10,000—19,999	IV
5,000— 9,999	V
below— 5,000	VI

Location code number of towns

To distinguish the town from the village, the location code numbers for towns have been given in Roman numerals and these numbers have been assigned in a continuous order for all the towns of a district.

Statement II : Physical Aspects and Location of Towns, 1979

Under physical aspects, annual rainfall and temperature figures are furnished. These particulars have been obtained from the Commissioner of Statistics, Madras. If the information is not available for any individual town, particulars for the nearest town for which it is available are given. Under Col. (9), the nearest city with population of one lakh and more is furnished according to 1981 census. For the other columns on name and distance of State/District/Taluk headquarters, railway station, bus route, etc. data obtained from the Municipal Commissioners and Panchayat Union Commissioners are given. 'Zero' within brackets in cols. 10 & 11 denotes that the reference town itself is enjoying rail/road transport facilities.

Statement III : Municipal Finance, 1978-79

The civic administration status of the town, the receipt through tax, properties and powers, Government grants, loans, advances and other sources and the expenditure on general administration, public safety, public health, public works, public institutions and other public services are given in this statement. The sources of receipt and expenditure are furnished in terms of rupees in hundreds.

Statement IV : Civic and Other Amenities, 1979

The civic and other amenities existing in the towns as in 1979 are given in this statement. The data were obtained from the Municipal Commissioners and Panchayat Union Commissioners of the concerned towns. Col. 3 relating to civic administration status is a new column introduced in this statement to facilitate analysis. The total population as also that of Scheduled Castes and Scheduled Tribes have been newly added with a view to assess the extent of amenities available with reference to population and also know about the strength of the weaker sections of the community like Scheduled Castes and Scheduled Tribes.

Electrification

Particulars regarding the extent of electric connections for various uses have been collected from the Tamil Nadu Electricity Board through the Municipal Commissioners and Panchayat Union Commissioners.

(i) Domestic connections :

This indicates the number of services given to houses for domestic purposes like fans, lighting, water heating, etc.

(ii) Industrial connections :

This includes connections given to factories, workshops, flour mills, oil mills, grinding machines, cotton ginning, chemical and engineering industries, etc.

(iii) Commercial connections :

Services given to shops, business houses, public institutions like offices and schools and commercial establishments are included in this category.

(iv) Road lighting points :

This refers to the number of points of street lights which are maintained in the town and for which consumption charges are paid by the respective local bodies. For some town panchayats the number of services effected alone has been furnished under street lights and not the points.

(v) Other connections :

The number of services effected for agricultural purposes, huts, public water supply systems, cottage industries, etc. are covered in this group.

Statement IV A : Civic and Other Amenities in Notified Slums, 1979

This is a new statement added in 1981 giving information on civic and other amenities in notified or recognised slums of Class I and II towns. Generally, in cities or towns having slums, the local authority such as municipality or municipal corporation or even the development authority officially notifies such of those slum areas which are recognised by it. Such notification is linked up with the availability of funds from the State Government for Slum Clearance.

Name of the slum and other details such as area, population, length of paved roads, system of sewerage, number of different types of latrines, method of disposal of night soil, number of taps supplying drinking water and number of electricity connections of different types are given in this statement.

Statement V : Medical, Educational, Recreational and Cultural Facilities, 1979

In this statement medical, educational, recreational and cultural facilities of the towns as in 1979 are furnished. The data on educational and medical facilities have been gathered both from the Municipal Commissioners/Panchayat Union Commissioners of the concerned towns and also from the Director of Secondary Education and Director of Public Health.

'Recognised' shorthand typewriting and other vocational training institutions (given under column 10 of the statement) refers to institutes recognised by some statutory authorities like Education Department, Commerce Department, Labour Department, etc. of the Government or by Semi-Government or autonomous bodies, public sector projects, etc.

Cinemas refer only to permanent cinema theatres and do not include touring cinemas. Information on the number of working women's hostel with number of seats is a new addition made in this statement in 1981. Considering the increasing employment of women in urban areas, the housing needs of such working women in cities and towns assume importance.

Statement VI : Trade, Commerce, Industry and Banking, 1979

In this statement trade, commerce, industry and banking facilities in the town as in 1979 are furnished. Banking particulars have been obtained from the Reserve Bank of India. Information on the number of agricultural and non-agricultural credit societies were collected from the Registrar of Co-operative Societies through the Municipal Commissioners and Panchayat Union Commissioners of the concerned towns.

Scope of the State Primary Census Abstract

With a view to enable the data users to have the 1981 Census particulars of every town and urban agglomeration, in addition to the information given in the Town Directory the Primary Census Abstract, 1981 of these units are presented in this volume at the end of the Town Directory statements.

The Primary Census Abstract provides information regarding area for each town and Urban Agglomeration, number of occupied residential houses, number of households, and also total population, Scheduled Castes and Scheduled Tribes population, literates, main workers, division of main workers viz. cultivators, agricultural labourers, workers in household industry and other workers, marginal workers and non-workers in respect of each town and separately for males and females.

The procedure followed in the presentation of data in the Primary Census Abstract for Urban Agglomeration which includes two or more constituent units in Tamil Nadu is the same as in the Town Directory statements. This method enables the reader to get the particulars of an urban agglomeration as a whole as well as each of its individual constituent units separately at one and the same place.

The area figures of towns/urban agglomerations are given in square kilometres. These figures have been supplied by the local bodies and/or revenue authorities.

Description of concepts included in the Primary Census Abstract :

Occupied Residential Houses

A census house is defined as a building or part of building having a separate main entrance from the road or common courtyard or staircase etc., used or recognised as a separate unit. It may be occupied or vacant. It may be used for residential or non-residential purpose or both.

Households—Institutional—household and Houseless households.

A 'Household' is a group of person who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Examples of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, ashrams etc. These are called 'Institutional Households'. There may be one member households, two member households or multi-member households. For census purpose, each one of these types is regarded as a 'household'.

While the institutional households were enumerated as and when the enumerator came across such household in his area during the enumeration period, the houseless households were enumerated only on the night of February 28, 1981, the last day of the enumeration period.

Scheduled Castes and Scheduled Tribes

The population of Schedued Castes and Scheduled Tribes and their break-up by sex are given in the townwise Primary Census Abstract. To identify the Scheduled Castes and Scheduled Tribes the enumerator was furnished with a list of Scheduled Castes and Scheduled Tribes applicable to the State as per the Scheduled Castes and Scheduled Tribes Orders (Amendment) Act, 1976 (No. 108 of 1976).

Literate and Educated persons

The townwise Primary Census Abstract gives the sexwise break-up of literates for each town and urban agglomeration. A person who can both read and write with understanding in any language has been recorded as a literate in census. A person who can only read but cannot write, is not a literate. It is not necessary that a person who is literate should have received any formal education or should have passed any educational standard. All children aged 4 years and below were treated as illiterate even if the child was going to school and had picked up reading and writing a few words.

Classification of workers by industrial categor i

Workers : In the 1981 Census, the basic concept of worker is the same as in 1961 and 1971 Censuses, and it is opposed to the 'income' or 'economic independence' concept used in the censuses prior to 1961. Work is defined as 'participation in any economically productive activity. The criterion for classification of a worker has, however, been changed now. In the 1961 and 1971 censuses, different approaches, namely, usual status and current status were adopted with reference period of one year in both the censuses in the case of seasonal work and one week in 1971 and fifteen days in 1961 in the case of regular work. But, at the 1981 census, the usual status approach is adopted uniformly for all work.

In 1981 Census, for treating a person as a worker the period of reference was one year. If a person was engaged in any economic activity in any one of the days during the last one year prior to enumeration, then he was considered as a worker. The dichotomy of worker/non-worker of 1961 and 1971 censuses has been discarded at the 1981 census and instead of trichotomy as main workers, marginal workers and non-workers has been adopted. For main worker, the time criterion adopted is one's engagement in work for the major part of the year i.e. at least 183 days and those who had worked for some time during the last year but not for the major part of the year (i.e. less than 183 days or six months) are treated as marginal workers. The remaining population is classified as non-workers. This trichotomy partially permits a comparability of 1981 census economic data with that of 1971 as well as 1961. The main workers of 1981 census can be expected to correspond to the workers of 1971 and the main workers and marginal workers of 1981 together to correspond to the workers of 1961. In all these cases, work involved not only actual work, but also effective supervision or direction of work.

Cultivator

A person was treated as a cultivator if he/she was engaged either as employer, single worker or family worker in cultivation of land owned or held from Government or from private persons or institutions for payment in money, kind or share. Cultivation includes supervision or direction of cultivation.

A person who had given out his/her land to another person or persons for cultivation for money, kind or share of crop and who did not even supervise or direct cultivation of land was not considered as a cultivator. Similarly, a person working in another person's land for wages in cash or kind or a combination of both (agricultural labourers) was not treated as cultivator.

Persons engaged in production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc. and other crops such as sugarcane, groundnut, tapioca etc., and pulses, raw jute and kindred fibre crop, cotton etc., were considered as cultivators while persons engaged in fruit growing, vegetable growing or keeping orchards or groves, plantation of tea, coffee, rubber, cinchona and other medicinal plantations were not treated as cultivators.

Agricultural Labourer

A person who worked in another person's land for wages without any risk in the cultivation was regarded as agricultural labourer. An agricultural labourer has no right of lease or contract on the land which he/she works.

Household Industry

It is defined as an industry, conducted by the head of the household himself/herself and/or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in a household industry should consists of members of the household including the head. The industry should not be run on a large scale which would qualify to be registered as a factory under the Indian Factories Act. That is, it should not be run with 10 or more persons when power is used or 20 or more persons where power is not used, even if they all belong to a large joint family. The main criterion of a household industry is the participation of one, or more members of household. Further, household industry should relate to production, processing, servicing, repairing or making and selling (but not merely selling) of goods such as handloom weaving, dyeing, carpentry, bidi rolling, pottery manufacture, bicycle repairing, blacksmithy, tailoring etc. It does not include professionals such as pleader, doctor, barber, musician, dancer, dhobi, astrologer etc., even if such professions, trade or services are run at home by the members of the household.

Other workers

All those who worked in any field of economic activity other than cultivator, agricultural labourer or household industry were 'Other Workers'. The types of worker that came under this category includes factory workers, plantation workers, those in trade, commerce, business, transport, mining, construction, political or social work, all Government servants, municipal employees, teachers, priests, entertainment artists etc.

Marginal worker

Marginal worker is a new category of workers introduced for the first time in 1981 Census. Though a person has been basically a worker in the last one year, if his participation in economic activity was less than 6 months or 183 days, the person concerned was treated as marginal worker. Besides, if one is basically a non-worker like student, rentier etc. engaged in economically active work for less than 183 days he is also classified as marginal worker In this case a further classification is made indicating the main activity.

A person who had not done any work at all in the reference period of one year and hence did not qualify for treatment as 'main worker' or 'marginal worker' was categorised as a non-worker. In case of such non-worker, details as to, how the person spent the time mostly was ascertained and such non-workers were categorised under the one of the following groups : (i) Household duties, (ii) Students, (iii) Dependents, (iv) Retired persons or rentiers, (v) Beggers, etc. (vi) Inmates of institutions and (vii) Other non-workers.

Appendices and Maps : Five Appendices are given at the end of the Primary Census Abstract and these give the information on (i) Alphabetical list of towns and the district/taluk in which they lie; (ii) Towns of the State in the descending order of their 1981 population strength (iii) Districtwise list of towns in descending order of 1981 population strength (iv) Towns showing their outgrowths with population and (v) Places of tourist importance in each town of the district

The schematic maps are given only for 20 Class-I and 20 Class-II towns. The maps present information on urban land use such as Educational area Business area, Residential area, Industrial area Public service area, Recreational area, Administrative area/Miscellaneous area and Open space/Arable area and Other areas.

TABLE—1

Growth of Population in Tamil Nadu in relation to the country

Census Year	Tamil Nadu						All India					
		Rural		Urban				Rural		Urban

* 1981 population of India includes projected figures of Assam where census could not be held.

A comparative picture of the decadal population growth of Tamil Nadu and India during 1901 to 1981 with break-up of rural-urban population is given in Table-1. The decadal percentage variation of the rural and urban population is also indicated in this table. It may be observed that the urban population growth has generally been higher during every decade when compared to the rural population growth both in the country and in Tamil Nadu. The highest decadal increase in urban population in Tamil Nadu has been recorded during 1941—51 (41·75%) and the second highest increase of 38·64% is observed during 1961—71. In the present decade (1971—81) the urban population increase in the state is lower at 27·98% as compared to all India urban population growth of 46·39% in the same period. The population living in towns in Tamil Nadu constitute nearly one-tenth of the total urban dwellers of the country as a whole.

TABLE—2

Proportion of Urban population in each State (arranged in descending order of percentage of Urban population)

+ Projected figures for 1981

Source : Paper 1 of 1982, Final population totals.

Considering the percentage of urban population to total population of India and all other States/Union Territories given in descending order of percentage in Table 2, one may notice that Tamil Nadu ranks quite high and is second only to Maharashtra in this regard. The All India ratio of urban population is quite low viz. 23·31%. The third highest percentage after Maharashtra and Tamil Nadu has been recorded by Gujarat (31·10%). There are five other States besides the above three, viz. Karnataka, Punjab, West Bengal, Manipur and Andhra Pradesh which have a higher urban population ratio over that of the national average of 23·31. The lowest percentage of 7·61 of urban inhabitants is seen in the mountainous State of Himachal Pradesh. We have not taken into account in the above analysis the urban population percentages among the Union Territories as most of these are either small in area or population and hence cannot be strictly compared to States. For example, the Union Territories of Delhi and Chandigarh, which are almost fully urban, as they have big cities within them, show a ratio of over 92 per cent of urban population. Union Territories like Dadra & Nagar Haveli and Arunachal Pradesh on the other hand are practically rural with hardly 7 per cent of urban dwellers.

Madurai	18. Vedasandur (NP)	6,382
Tiruchchirappalli	19. Inam Karur (NP)	21,118
	20. Navalpattu (GP)	4,715
	21. Tiruverambur (NP)	15,297
	22. Tuvagudi (NP)	24,720
Thanjavur	23. Tirubuvanam (NP)	10,584
Pudukkottai	24. Kiranur (NP)	6,626
Ramanathapuram	25. Anaiyur (GP)	11,016
	26. Chatrapatti (GP)	4,188
	27. Pallapatti (GP)	10,725
	28. Rosalpatti (GP)	8,362
	29. Viswanattam (GP)	8,825
Tirunelveli	30. Sivanthipuram (GP)	9,616

During 1981 Census 30 new areas were recognised for the first time as urban units in Tamil Nadu. Of these newly recognised towns, five each are in Periyar and Ramanathapuram districts, four each in Chengalpattu and Tiruchchirappalli districts, three each in South Arcot and Salem districts, two in North Arcot district and one each in the districts of Madurai, Thanjavur, Puddukkottai and Tirunelveli. Many of the new towns of 1981 have population of less than 10,000. The three new towns which have recorded over 20,000 inhabitants are Kattivakkam, Inam Karur and Tuvagudi.

TABLE—4

Towns declassified in 1981 Census

Name of the district	Name with status of the town	Population, 1981
1	2	3
Salem	1. Sankari (P)	18,972
	2. Velur (P)	18,507
Periyar	3. Morattupalaiyam (P)	3,389
	4. Punjai Uthukuli (P)	5,990
	5. Vellakoil (P)	18,023
Coimbatore	6. Sirumugai (P)	14,260
Nilgiri	7. Ithalar (P)	8,915
	8. Mulligoor (P)	4,056
Madurai	9. Highways (T.S.)	9,335
	10. T. Kallupatty (P)	5,513
Tiruchchirappalli	11. Sirugamani (P)	8,624
Ramanathapuram	12. Samsikapuram (P)	7,226
Tirunelveli	13. Manimuthar (T.S.)	13,144

On the eve of every census, cases of towns not satisfying the urban criteria are considered and on the basis of their present urban characteristics, they are also declassified and considered as 'rural'. During the 1981 Census, 13 existing towns (among the 439 towns recognised in 1971) were derecognised as rural. Of these declassified towns three belong to Periyar district, two each in Salem, Nilgiri and Madurai districts and one each in the districts of Coimbatore, Tiruchchirappalli, Ramanathapuram and Tirunelveli. It is significant to note that five of these derecognised towns had a population of over 10,000 in 1981, three among them even exceeding 15,000 persons.

TABLE—5

District-wise proportion of urban population in descending order

Sl. No. & Name of district	Total population	Urban population	Percentage of urban population to total population
1	2	3	4
1. Madras	3,276,622	3,276,622	100·00

14. South Arcot	4,201,869	659,623	15·70
15. Pudukkottai	1,156,813	153,668	13·28
16. Dharmapuri	1,997,060	187,184	9·37
TAMIL NADU	**48,408,077**	**15,951,875**	**32·95**

The ratio of urban population to total population is generally considered as an index of devel opment. The sixteen districts of the State arranged in descending order of their urban population percentage are presented in Table 5. Madras City is coterminous with Madras district and hence the population here is entirely urban (100 percent). The only other district with over half of its population living in towns or urban areas is the industrially advanced district of Coimbatore. The hill district of Nilgiri has also a good proportion of urban population (48·85%) six districts viz. Madras, Coimbatore, Nilgiri, Chengalpattu, Madurai and Tirunelveli have a percentage of urban population higher than that of the State average, and the remaining

ten districts fall below the state average ratio. Dharmapuri district has recorded the lowest ratio of 9·37% of urban population. The other districts with poor urban population concentration of less th 20% are Kanniyakumari, South Arcot and Pudul kottai districts.

TABLE—6

Distribution of towns by population size—1971 and 1981 Censuses

Size-class of town	Number of towns in 1971	1971 Urban population	Percentage of population of this category of towns to total urban population	Number of towns in 1981	1981 Urban population	Percentage o population c this category of towns to total urban population
1	2	3	4	5	6	7
I	17	5,459,942	43·80	21	7,831,844	49·10
II	27	1,717,651	13·78	41	2,747,071	17·22
III	79	2,600,185	20·86	89	2,757,964	17·29

V	97	717,820	5·76	90	645,126	4·04
VI	101	285,243	2·29	70	204,594	1·28
Total	**439**	**12,464,834**	**100·00**	**434**	**15,951,875**	**100·00**

In Census, towns with a population of one lakh persons and over are recognised as Cities. There are 21 cities in Tamil Nadu with a population of more than one lakh according to the 1981 Census. There are only 17 such cities in 1971. The percentage of urban population in Class I towns or cities to the State's urban population during 1981 Census is 49·10 and this was 43·80 in 1971. During 1971 Census, there were only 27 towns in Class II with a population ranging from 50,000 to 99,999 where as now in 1981 their number has swollen to 41. The percentage of people living in such Class II towns has also increased from 13·78 in 1971 to 17·22 in 1981. This signifies the increasing concentration of urban population in bigger towns of 50,000 persons and over including the cities. There were 79 Class III towns during 1971 Census, (with population of 20,000 to 49,999) and in 1981 Census this figure is 89 showing an addition of 10. The number of Class IV towns also has increased in 1981 to 123 from 118 in 1971, and these have a population of 10,000 to 19,999. Class V and VI towns have tumbled down in numbers during the decade from 97 and 101 in 1971 to 90 and 70 in 1981 respectively. While Class V represent towns of 5,000 to 9,999, Class VI indicates towns with less than 5,000 persons. The percentages of population living in the last four classes III to VI to the State's urban population have dwindled during 1971 to 1981.

TABLE—7(A)

Distribution of statutory and non-statutory towns by size-class

Size-class of town	Total number of towns	Number of towns having statutory bodies	Number non-muni pal, Censu and proje towns
1	2	3	4

Tirunelveli	795·9	33·7	24·9
Nagercoil	1,027·5	30·7	23·5

* Madurai is the headquarter town of both Madurai and Ramanathapuram districts.

This table gives the average annual rainfall in millimetres and maximum and minimum temperature in centigrade for all the district headquarter towns in Tamil Nadu. The data on rainfall and temperature have been collected from the State Department of Statistics. We observe that the average annual rainfall, (which represent the average of 30 years rainfall) is the highest, viz., 1,376·2 mm. in Ootacamund, a hill resort and headquarter town of the mountainous Nilgiri district. Of the 15 headquarter towns of districts which are presented in this table a high average annual rainfall exceeding 1000 mm. is recorded in five towns, viz., Madras, Kanchipuram, Cuddalore, Ootacamund and Nagercoil. Cuddalore (1,305·2 mm.) and Madras (1,285·6 mm.) occupy the second and third places among towns with high average rainfall. Coimbatore, Erode and Tirunelveli towns have low rainfall and the average in these places are below 800 mm. As regards temperature, we notice that the highest among the maximum temperature viz., 33·9°c is in Madurai, the district headquarter town for both Madurai and Ramanathapuram districts. The lowest in respect of maximum temperature is in Ooctacamund (19·5°c). The maximum temperature exceeds 33° c in eight headquarter towns. On the other hand the minimum temperature in these towns, indicate that Kanchipuram city has the highest viz. 28·8°c. while Ootacamund has the lowest of 9·1°c.

number of towns in each class with towns having statutory and non-statutory bodies is presented. Only 120 out of the 434 towns of 1981 Census are having statutory bodies and these include Municipal Corporations, Municipalities and Municipal townships, Cantonments and Panchayat Townships. The others are non-municipal and other census towns, which are either Village or Town Panchayats and includes an industrial township (Neyveli) and two towns administered by Southern Railway. It may be observed that most of the statutory towns belong to the towns of high population size, viz., Class I, II & III. Among the towns of less than 20,000 population (283) only 13 are statutory towns. All the cities (21) under Class I, and 40 out of 41 towns of Class II have statutory civic bodies. Under Class III (20,000 —49,999) 46 out of 89 towns have statutory bodies for their civic administration.

TABLE—7(B)

Towns by civic status

*'Neyveli Township Committee' administered by Neyveli Lignite Corporation Ltd.

This statement shows the split up of towns in each class classified by civic status. It may be seen from the table that out of the total of 434 towns in Tamil Nadu 2 cities viz., Madras and Madurai are Municipal Corporations, 99 are Municipalities governed by Municipal councils, 2 by Cantonment Boards, 18 by Township Committees, 199 by Town (Nagar) Panchayats, 112 by Village (Gram) Panchayats. 2 towns, Golden Rock Railway Colony and Muthugoundan Pudur Railway Colony are administered by Southern Railway administration. Most of the Municipalities are in towns of Class I to III.

During 1971 there were only 89 Municipalities in the state. Due to the recognition of new Municipalities (by upgrading of the existing Panchayats) by the Tamil Nadu Government during the period 1971—81, the total number of Municipalities has risen to 99. The decrease in civic status of Town and village Panchayats during the decade (1971—81) is mainly due to the merging of the adjoining town panchayats to Madras and Madurai Corporations and Coimbatore Municipality.

TABLE—8

Density by size-class of towns, 1981 Census

Class of towns	Number of towns	Density (Population per sq. km.)
1	2	3
I	21	7,346
II	41	4,379
III	89	1,747
IV	123	1,270
V	90	797
VI	70	527
Total	**434**	**2,722**

The bigger the city the greater the concentration of population. This is true in regard to Tamil Nadu. Table 8 reveals that the density of people (representing number of persons living per sq.km. of area) is highest in bigger cities belonging to Class I. In class II towns, the density is somewhat lower viz., 4,379. It is lower in the other classes of towns and is mere 527 in the last category of Class VI towns. The average density in all towns put together is 2,722 per sq. km.

Though the total density in the urban areas has increased from 2,115 persons per sq. km. in 1971 to 2,722 persons per sq. km. in 1981 these seems to be a decline in Class I towns from 12,601 to 7,346. Similar decline in density is also noticed in Classes III & V also. However the density in Classes II, IV & VI have shown considerable increase.

TABLE—9

Sex ratio by size-class of towns, 1981 Census

Class of towns	Number of towns	Sexratio (number of females per thousand males)
1	2	3
I	21	943
II	41	965
III	89	970
IV	123	976
V	90	981
VI	70	950
Total	**434**	**956**

It is generally known that the sex ratio i.e. ratio of females to 1,000 males is lower in big cities and towns compared to smaller ones. This is evident from the sex ratio of towns belonging to different population size classes. Due to more employment and educational opportunities available in bigger cities, there is sex-selective in-migration. Male migration in larger number to these places is therefore a common phenomenon. Similar trend in sex ratio was also noticed in all classes of towns except in Classes IVtoVI in 1971. The ratio in 1981 is 943 in big cities of Class I and 965 and 970 in the towns of Classes II and III respectively. The sex ratio is still higher in the other two classes of IV and V. In the smaller towns of Class VI (less than 5,000 population) however, the sex ratio is 950. Most of these smaller towns are suburbs of big cities and towns and therefore they reflect more or less the characteristic of the core city or town. The average urban sex ratio in all towns of the State is 956 females per 1,000 males.

TABLE—10

Average number of households per census house by size-class of towns, 1981 Census

Size-class of towns	Number of towns	Average number of households per census house
1	2	3
I	21	1·03
II	41	1·09
III	89	1·05
IV	123	1·03
V	90	1·03
VI	70	1·03
Total	**434**	**1·04**

The average number of households per census house in the towns of the six classes is shown in the above table. While the 'house' refers to the structure, the household represents a group of persons living together with a common kien, census house is defined as a building or part of a building with a separate entrance and used as a separate unit. Here we are taking into account houses used for residential purposes only. The ratio of households to houses does not vary much and is 1·03 households per census house in towns of Classes I, IV, V and VI. The ratio is the highest, viz., 1·09 in Class II towns while it is 1·05 in Class III towns. The average ratio in all towns put together is 1·04 households per census house. It is obvious from this that most of the houses in the towns have only one household and only a few houses have two or more households in them.

The average number of households has revealed a decreasing trend in 1981 when compared to 1971. The average number of households per census house in all towns was 1·21 in 1971 and it has fallen to 1·04 in 1981. The decrease in average number is observed in the towns of all the six classes. The decrease during 1971—81, in the average number, is comparitively more in the case of towns of Class I,II & III.

Information regarding the name of the nearest city (with population of one lakh and above) along with the distance in kilometres has been ascertained for each city/town in the State. Based on this information, a statement showing the different cities in Tamil Nadu and the neighbouring Kerala and Karnataka States and the Pondicherry Union Territory with the different towns under the six classes cross-classified by distance ranges from cities is presented here.

While Madras is the nearest city for 30 towns, there are 31 towns with Vellore as nearest city, 43 towns have Salem, 44 towns have Coimbatore, 55 towns have Madurai, 33 towns have Tiruchchirappalli and 35 towns have Tirunelveli as nearest cities In regard to other cities, fewer towns are located in the neighbouring areas. While 3 towns have Bangalore City (of Karnataka) near to them, one has Pondicherry (of the Pondicherry U.T.) and another town has Trivandrum (of Kerala State) as nearby cities.

Most of the towns have cities within a distance of 50 kms. Of the 434 towns in Tamil Nadu, only 21 towns are far away from cities, which are at a distance of 100 kms. and over. Cities within a distance of 51 to 100 kms. exist in the case of 113 towns. Three hundred of the towns have a nearby city within 50 kms. and 106 of these have the city within a distance of 10 kms.

TABLE—12 (B)

Distance of towns from the district headquarters

Name of district headquarters town	Number of towns within				
	10 kms.	11-25 kms.	26-50 kms.	51-100 kms.	100 kms. & above

Tirunelveli	10	1	15	26	..
Nagercoil	1	3	1	..	..

This table gives the distribution of towns in a district by distance in km. from the district headquarters by broad rang s. Out of 434 towns, in the State 82 towns are within 10 kms. from their respective district headquarter towns themselves. While 55 towns are with the distance range of 11—25 kms. from their district headquarters, 112 towns are in the range of 26—50 kms. The number of towns located beyond 50 kms. from their district headquarters but within 100 kms. is 161 and the towns which are away by over 100 kms. of the concerned district headquarter is 24. Only in the six big district of Chengalpattu, Coimbatore, Madurai, Tiruchchirappalli, Thanjavur and Ramanathapuram, one or more towns lie beyond 100 kms. from their district headquarters. In the rest of the districts, the towns are all within 100 kms. from the district headquarters. From the point of view of better administration and also development, the nearness of the headquarter, which in most cases is itself an important urban centre, is felt advantageous. Of the 30 new towns added in 1981, 4 towns are with a distance of 10 kms. from the headquarter, 4 towns are within the distance of 11-25 kms., 12 towns within the distance of 26—50 kms. and the remaining 10 towns, located more than 51 kms. away from their respective district headqukrters.

TABLE—13(A)

Towns not connected by rail

Distance from the nearest rail-heads	No. of towns
1	2
Upto 1 km.	13
2 to 5 kms.	101
6 to 10 kms.	63
11 to 15 kms.	26
16 to 25 kms.	29
26 kms. and above	44

A large number of towns in the State (276 out of 434) do not have rail connection. The number of such towns with distance range from the nearest Railway Station in Tamil Nadu is presented in Table 13(A). Of the towns not enjoying the facility of a railway station within its territory, 13 towns have a railway station within one km. distance while 101 towns without rail connection have a railway station within a radius of 2 to 5 kms. 63 other towns have it in the range of 6—10 kms. There are 26 towns which have railway stations quite away viz. between 11 to 15 kms. and 29 towns have them still further away at 16 to 25 kms. For the inhabitants of 44 towns,

the railway stations are very far off and lie at a distance of 26 kms. and over. Though proximity to railway stations enables more easier movement of passengers and goods and promotes the ecnomic development of towns, the lack of this facility in many towns has not hampered their further growth as they enjoy a very good net-work of roads system and also bus/lorry transport.

TABLE—13 (B)

Towns not connected by bus-route

Distance from the nearest bus-route	Name, status and population of the town (not connected by bus-route)	
1	2	
Upto 1 km.	Anaiyur (GP)	11,016
	Gengaikondan (GP)	7,338
2—5 kms.	Jagathala (NP)	12,916
	Putteri (GP)	2,960
	Nadukkuthagai (GP)	2,659
	Soranjeri (GP)	2,207
	Akkaraipettai (GP)	6,587
	Shenbakkam (NP)	9,500
	Veerakkalputtur (NP)	11,742
6—10 kms.	Berhatty (GP)	1,945
11—15 kms.	..	..
16—25 kms.	..	..
26 kms. and above	..	..

There are 10 towns in the state which unfortunately do not have even bus services passing through them. Seven of these are village panchayats. It is seen from the table that two of these towns have bus connection at less than a kilometre distance while seven towns have bus stops within 2—5 kms. distance. There is one town which has bus facility at a distance of only 6—10 kms. Lack of transport facility which is vital for development is indeed a great drawback for these towns. However, the bus-route facilities available to the towns has enormously increased in 1981 as compared to 1971.

TABLE—13(C)

Towns having navigable river/canal within 10 kms.

Sl. No.	Name of navigable river/canal	Name of town
1	2	3
1.	Tambraparni (R)	Kallidaikurichchi
2.	Cauvery (R)	Kumarapalaiyam
3.	Cauvery (R)	Urachchikkottai
4.	Cauvery (R)	Kasipalaiyam
5.	Amaravathi (R)	Inam Karur
6.	Cauvery (R)	Kattupputtur
7.	Palar (R)	Kaveripakkam
8.	Cauvery (R)	Kulittalai
9.	Cauvery (R)	Kuttalam (Thanjavur)
10.	Buckingham C)	Kattivakkam
11.	Buckingham (C)	Madras
12.	Vaigai (R)	Avaniapuram
13.	Vaigai (R)	Thiagarajar Colony
14.	Cauvery (R)	Mayuram
15.	Cauvery (R)	Musiri
16.	Vaigai (R), Periyar (C)	Nilakkottai
17.	P. A. P. (R) (Parambikulam Aliyar Project)	Palladam
18.	Palar (R)	Pallikondai
19.	Vaigai (R)	Paramakkudi
20.	Buckingham (C)	Pulicat
21.	Tambraparni (R)	Srivaikuntam
22.	Tambraparni (R)	Arumuganeri
23.	Cauvery (R)	Ponmalai
24.	Cauvery (R)	Srirangam
25.	Cauvery (R)	Tiruchchirappalli
26.	Tambraparni (R)	Naranammalpuram
27.	Tambraparni (R)	Palayankottai (M)
28.	Tambraparni (R)	Palayankottai
29.	Vaigai (R)	Tiruppuvanam
30.	Tambraparni (R)	Palayakayal
31.	Palar (R)	Allapuram
32.	Palar (R)	Konavattam

Palar, Cauvery, Amaravathi, Vaigai, Tambaraparani are the major rivers in this State. A list giving names of the towns having navigable rivers/canals within 10 kms. distance is furnished. There are 32 towns having rivers/canals within a distance of 10 kms. and 11 of these are near 'Cauvery' which is the most important perennial river flowing across Tamil Nadu. 7 towns are near "Tambaraparani' river and 5 are near "Vaigai" river.

TABLE—14

Per capita receipt and expenditure for size-class of towns by civic status

Size-class of town	Civic status	No. of towns	Per capita								
			Receipt(Rs.)			Expenditure (Rs.)

*Since the information for Aravankad town was not available, the per capita figures have been worked out only for 2 towns (Annamalai Nagar (TC) and Harveypatti (TC).

It is well known that the local bodies, whether they be Corporations, Municipalities or Panchayats or any other constituted body are responsible for providing several basic amenities to the inhabitants. They look after public health and sanitation, education, laying and maintenance of roads, provision of street lighting etc. An idea on the per capita revenue and expenditure of such bodies, worked out with reference to the receipt and expenditure of the local authorities of the towns during 1979 taking their 1981 population into account will be of great interest in this context. The per capita receipt and expenditure details for the civic bodies falling under the six classes of towns are given in this table. Apart from the average figure for town under each class, per capita receipt and expenditure for each type of civic body under every class like Corporation, Municipality, Township Committee, Nagar Panchayat, Gram Panchayat, Cantonment Board, etc. are also individually given in this table. The average for each type of civic body, taking all the six classes of towns, is also given at the end of the table.

The average annual per capita total receipt for a town in the State works out to Rs. 64·17. More than half of it (Rs. 41·74) is received from "Other sources" that is, other than tax receipts and the per capita receipt through taxes is only Rs. 22·43.

The per capita total expenditure for a town slightly exceeds the per capita receipt. It is Rs. 65·13 against the per capita receipt of Rs. 64·17.

A higher per capita expenditure over and above the receipt is noticed in Class I & II urban centres, which are populous and where there is always a constant need for increasing the provision of several amenities both to the local inhabitants and the large floating population. In the rest of the categories of towns, viz. Class III to VI the average per capita receipt is more than the per capita expenditure. The per capita expenditure on public health and conveniences in all the towns taken together is Rs. 16·45 and on 'General Administration' it is Rs. 8·85. The per capita expenditure on 'Other aspects' is the highest viz. Rs. 27·06.

It would be seen from the above table that the per capita total receipt is maximum being Rs. 85·03 in towns having population of more than one lakh whereas it is minimum in Class V towns being only Rs. 14·86. The per capita receipt declines with the decrease in the population size of the towns, the only exception being the smallest sized towns, i.e. belonging to class VI. In all the categories of towns the per capita receipt from, "all other sources" is higher than receipt from 'Taxes'.

The per capita total expenditure for Class I towns is Rs. 86·02, which is highest among all classes of towns. The minimum per capita expenditure is in Class V towns where it is as low as Rs. 13·94 only. The per capita total expenditure diminishes with the decrease in the population size of towns with the exception of Class VI towns. The per capita expenditure on general administration, public health and conveniences also reveals a similar trend. These are naturally higher in the bigger towns.

Considering the different civic bodies, we find that the average receipt is more in the case of Municipal Corporations, Municipalities, Cantonment Boards and Neyveli Lignite Corporation Administration, as compared to the average for all the towns (Rs. 64·17). The per capita expenditure among the civic bodies is observed to be the highest, viz. Rs. 314·15 in the Neyveli Township where the Neyveli Lignite Corporation Administration is the civic body. Here, the per capita receipt is only Rs. 79·13. The per capita expenditure exceeds per capita receipts in Municipal Corporations, Gram Panchayats, Cantonment Boards and Southern Railway administration areas.

Of the different types of per capita expenditure, the expenditure on all other aspects is the highest and most predominant in all the civic bodies, the only exception being the two Southern Railway administered units. The second most important item of expenditure is found to be as 'Public Health and Convenience' in all the civic bodies.

TABLE—15

Road length by area and population

Size-class of town	Per 100 sq. km.			Per 1000 population		
	Pucca road length	Kutcha road length	Total road length	Pucca road length	Kutcha road length	Total road length
1	2	3	4	5	6	7
I	339·57	51·64	391·21	0·46	0·07	0·53
II	346·49	58·46	404·95	0·79	0·13	0·92
III	103·19	60·58	163·77	0·59	0·35	0·94

TABLE—15 (Contd.)

1	2	3	4	5	6	7
IV	84·94	75·95	160·89	0·67	0·60	1·27
V	69·01	67·31	137·76	0·87	0·85	1·73
VI	66·42	79·95	147·78	1·26	1·52	2·80
Total	**160·75**	**64·61**	**225·63**	**0·59**	**0·24**	**0·83**

The extent of roads in cities and towns is an index giving an idea about the facility for easy and quick movement of men and materials.

Table 15 gives the ratio of road length in cities and towns of Classes I to VI to 100 sq.km. of area and 1,000 of population respectively. The data indicate that the average road length in all the urban areas of state per 100 sq.km. is 225·63 km. the average length of pucca and kutcha roads being 160·75 km. and 64·61 km. respectively. The ratios indicated in the table reveal that the ratio of road length is generally higher in the bigger cities with some exceptions. In cities, the ratio of total road length to area of 100 sq.km. is 391·21 km. This ratio is 404·95 km. for Class II towns. A further decrease in the ratio is noticeable, for towns belonging to smaller population size. A comparison of the ratio of pucca and kutcha roads shows that the extent of pucca roads to total area is on the high side in the case of bigger towns and cities of Classes I, II and III than in the towns of the other classes. It is apparent from this statistics that the pucca roads have been laid for longer distances in the major cities and towns than in the smaller ones.

When the ratio of road length is worked with reference to 1,000 population, we notice lower ratios in the bigger cities and towns. For example, in cities (Class I), the ratio of road length to 1,000 persons is a mere 0·53 km. of which 0·46 km. is accounted for by pucca roads. This ratio exceeds one km. in the case of Class IV and V towns and is nearly 3 kms. in the case of Class VI towns. The higher ratio of pucca and kutcha roads is also observed here in the case of Class I to III towns while kutcha road ratios are more in the case of smaller towns of Classes IV to VI.

TABLE—16(A)

Distribution of towns by type of sewerage and size-class of towns

Type of sewerage/drainage	Size-class of towns						
	I	II	III	IV	V	VI	Total
1	2	3	4	5	6	7	8
BSD	2	1	..	2	1	..	6

OSD	15	38	71	93	70	58	345
CD	6	6	23	27	16	9	87
S	5	2	3	6	5	1	22
No facility	..	..	..	..	2	1	3

The details regarding the number of towns by types of sewerage/drainage systems, shows clearly that 'Open surface drains' are the commonly used ones among the towns of Tamil Nadu.. Of the 434 cities and towns in the State, 345 have this system of drainage. The 'sewerage', representing the use of underground conduit pipes for conveying the waste waters to the point of disposal is considered as the most modern and by far the hygienic method. This method is in use only in 22 towns in the state of which five are cities of over one lakh population and another two are big towns of 50,000—99,999 population. It is significant to note that 12 towns of less than 20,000 population i.e. (Classes IV to VI) have adopted this system. Among the 21 Class I cities 15 have the open surface drainage while 38 among the 41 Class II towns have this system of sewerage.

The cess pool method is in use in 87 towns in Tamil Nadu. Of this, a large majority of the towns, viz. 50 towns are middle level towns, that is, in the population range of 10,000—49,999 (Class III and IV). The two systems, viz., 'Box surface drains' and 'pit' system are also the means of disposal in 6 and 21 towns respectively.

No drainage facility exists in three small towns of less than 10,000 population in the Sate.

A number of towns have reported the usage of two or three types of sewerage/drainage in use. In these cases the towns concerned have been included under all the two or three types, shown in the table.

TABLE—16 (B)

Latrines by type and size-class of towns

Size-class of towns	Total number of towns	Percentage distribution of		
		Water borne latrines	Service latrines	Others
1	2	3	4	5
I	21	41·85	53·34	4·81

VI	70	55·09	11·72	33·19
Total	**434**	**32·58**	**57·39**	**10·03**

The percentage distribution of latrines of three types for each of the six classes of towns is given in this table and it is seen from this table that service latrines constitute nearly 57 per cent of the latrines in all the towns of the S tate. The service latrines form the highest proportion of 70·06 per cent in class III towns while this type of latrines constitute 60·44 per cent in class II towns and 53·34 per cent in class I cities. A high ratio of water borne latrines is found in the last class of towns (VI) where it is 55·09. In cities, in many of which underground sewerage systems exist, only 41·85% of the latrine are water borne. Class V towns also have a somewhat similar ratio of 40·60% of water-borne latrines. The lowest percentage viz. 20·28% of water-borne latrines is observed to be in the medium towns under class III. The third category 'others' has a high percentage in the smaller towns of class VI (33·19%). It is very obvious from this that we have a very long way to go in the replacement of service type latrines by the more modern and hygienic system of water/flush borne latrines.

TABLE—16(C)

Distribution of towns by method of disposal of night soil and size-class of towns

Method of disposal of night soil	Size-class of towns						Total
	I	II	III	IV	V	VI	
1	2	3	4	5	6	7	8
B	1	4	9	14	15	14	57
S	2	2	2	5	3	2	16
HL	1	..	3	3	7	8	22
ST	14	22	34	30	26	14	140
WB	18	38	78	96	48	23	301
No facility	..	..	..	5	13	25	43

The mode of disposal of night soil in the towns of Tamil Nadu is indicated in this table. In a large number of towns viz. 301 wheel barrows form the means of disposal of night soil. Septic tank is the next prominent method and is found to be in use in 140 towns. Removal of night soil by baskets is in vogue in 57 towns while in 22 towns it is carried by persons in head loads, which is the most despicable way. There are 16 towns with pucca sewer systems in the State. The number of towns which do not have

any specific method of disposal of night soil is quite large viz. 43, 25 of these belong to the last category of towns, i.e. Class VI (towns of less than 5,000 population) and another 13 to class V.

In the case of some towns two or more methods of disposal are being combinedly used and in these cases the towns concerned have been included under each of the methods reported.

TABLE—17 (A)

Protected water supply by size-class of towns

Size-class of towns	Total No. of towns	Distribution of towns by the most common source of protected water supply			
		TW	T	W	TK
1	2	3	4	5	6
I	21	..	18	3	..
II	41	..	40	1	..
III	89	4	80	5	..
IV	123	4	104	13	1
V	90	1	68	20	..
VI	70	..	40	25	1
Total	**434**	**9**	**350**	**67**	**2**

In Tamil Nadu almost all the towns are served by protected water supply system. As many as 428 towns out of the total of 434 towns constituting 98·6% of urban units have this facility. Only six towns do not have any source of protected water supply.

Supply of water through taps is the most prominent source of protected water supply prevalent in 350 towns, and this includes many of the towns in all the six classes. Water from well is used as protected water in 67 towns and 25 of such towns belong to Class VI (below 5,000 population) and another 20 to Class V. There are nine towns in the state having tube well as a source of water supply. Two towns depend on tanks for protected water supply.

TABLE—17 (B)

System of storage of water supply by size-class of towns

Size-class of towns	Total number of towns	Distribution of towns as per the most common storage system of protected water supply					
		OHT	SR	BWP	IG	GLR	PT
1	2	3	4	5	6	7	8
I	21	6	9	..	5	..	..
II	41	14	19	1	6	..	..
III	89	57	22	1	7	..	..
IV	123	106	6	..	3	..	1
V	90	73	2	1	..	1	1
VI	70	39	2	3	1	..	1
Total	**434**	**295**	**60**	**6**	**22**	**1**	**3**

The most common methods of water storage towards supply of protected water to the inhabitants of towns, prevailing in Tamil Nadu, is 'overhead tank'. Of the 434 towns 295 have 'overhead tanks' as storage points of water supply and 106 of these belong to Class IV, 73 to Class V and 57 to Class III. Six of the 21 cities and 14 out of 41 Class II towns of the State have overhead tank facility. Service Reservoirs are the storage points in 60 towns, 50 of which belong to the Class I to III i.e. larger towns of 20,000 and above population. 'Infiltration gallery' in river beds is the system in vogue in 22 towns five of which are Cities (Class I), six are Class II towns and 7 Class III towns. No storage system exists in 49 towns.

TABLE—18(A)

Fire fighting services by size-class of towns

Size-class of towns	Total number of towns	Number of towns where service is	
		available	not available
1	2	3	4
I	21	19	2
II	41	35	6
III	89	26	63
IV	123	7	116
V	90	..	90
VI	70	2	68
Total	**434**	**89**	**345**

Only 89 towns out of a total of 434 in the State i.e. hardly one-fifth of towns possess fire fighting services within their territorial limits. There are 345 towns which do not have this essential facility and they depend for such services on to the fire fighting units located in the neighbouring towns. Since most of the fire fighting units are located in cities and bigger towns, many of the smaller towns (of less than 20,000 population) do not have them. It is seen that only 9 out of the 283 towns belonging to the size Classes IV to VI have fire fighting services. Most of the cities however (19 out of 21) have these units. Among Class II towns also, 35 out of the 41 have fire fighting units and only six towns do not have them. Nearly a fourth of towns under Class III possess these units.

TABLE—18(B)

Availability of fire fighting service at other places by towns not having it

Size-class of towns	Total number of towns	Number of towns where fire fighting service is not available and available at distance of				
		—5 kms.	5-10 kms.	10-20 kms.	20+kms.	Tota (Cols. 3-6
1	2	3	4	5	6	7
I	21	..	1	..	1	2
II	41	3	2	..	1	6
III	89	8	13	15	27	63
IV	123	13	28	35	40	116
V	90	20	30	20	20	90
VI	70	16	33	13	6	68
Total	434	60	107	83	95	345

We have earlier seen that a large majority of the towns (345) do not have fire fighting services in them. The distances within which such fire fighting services are available to these towns is presented in this table. There are 60 towns having the fire fighting services within five kilometres. 107 towns have them within 5-10 kms., the rest of the towns (178) not having the fire fighting units in them, have them at a distance of over 10 kms. Ninety five among these 178 have the services even beyond, viz., 20 kms. which is quite distant. Quite a number of towns under Classes III to V have the fire services at a distance, over 20 kms. There are 27 such towns under Class III, 40 under Class IV and 20 under Class V. All the 90 towns of Class V and 68 out of 70 under Class VI do not have any fire fighting unit within their limits and over half the number of these towns can summon the services, available within 10 kms. In case of Class III and Class IV towns, more than 50 percent of towns not having the fire fighting units in them have this facility at a far away place i.e. beyond 10 kms.

TABLE—19

Towns not providing electricity for domestic consumption

Sl. No.	District	Name and status of the town	Population
1	2	3	4
1.	Salem	Seppaiyapuram (GP)	785

Thanks to the stress made on power development in the five year plans, Tamil Nadu is generally considered as quite advanced in regard to power connection facilities. Barring very few places, all the villages/towns including interior regions now enjoy electricity connection. One would therefore expect all the towns in the State to have power connection facility. But we find that there is a lone exception of a

TABLE—20(C)

Availability of civic services in slum areas

Class of towns	No. of towns having slums	No. of slums	No. of slums having: Paved roads	Community latrines*	Tap points and public hydrants*	Road lighting points*
1	2	3	4	5	6	7
I	13	1,114	561	298(2,104)	672(3,821)	815(8,741)
II	18	108	91	34(45)	84(232)	97(1,675)
Total	**31**	**1,222**	**652**	**332(2,149)**	**756(4,053)**	**912(10,416)**

*The total No. of community latrines, tap points and public hydrants and road lighting points in the slums are indicated in brackets.

Due to high congestion, the civic services are generally meagre in the slums and fall far short of the desired level. We observe from the data gathered in this regard that only about half the slums in Class I cities (561 out of 1,114) have paved roads in them. While 815 slums out of this number have road lighting points, 672 have water supply sources like taps and public hydrants and 298 slums alone have community latrines in them. These facilities are provided in a greater proportion among the 108 slums in Class II towns. While 97 of the 108 slums in these towns have road lighting facilities, 91 have paved roads, 84 have tap points and 34 of them community latrines.

Of the total of 1,222 slums in the 31 Class I and II towns (where they are found), about 652 slums have paved roads and three-fourths (912) have road lighting points. Tap points exist in 756 slums, that is about 62% of the total recognised slums. It is obvious from these figures that much remains to be done in furthering the civic services and provision of basic amenities adequately in the slum areas.

TABLE—20(D)

Types of sewerage in slum areas

Class of towns	No. of towns having slums	Total No. of slums	No. of slums having: S	OSD	BSD	SD	CD	PT
1	2	3	4	5	6	7	8	9
I	13	1,114	401	334	1	..	1	3
II	18	108	..	89	..	..	8	6
Total	**31**	**1,222**	**401**	**423**	**1**	**..**	**9**	**9**

Of the many types of sewerage/drainage systems provided in the slums, we find that sewers and open surface drains are widely prevalent.

The sewer system implies the conveyance of the sewerage and/or storm water to the point of disposal by underground pipes and all the 401 slums in Class I cities have 'sewer' facility. Besides, 334 slums in Class I cities have open surface drainage facilities. Nearly two-thirds of the recognised slums in Class I cities have one of these two sewerage systems and the rest do not have any provision for sewerage disposal. Among the 108 slums in Class II towns none has sewer facility. Eighty-nine slums belonging to Class II towns have the 'Open surface drainage' and 14 others have other systems like 'Cess Pool' and 'Pit'. Thus, fewer slums in Class II towns are left without any system. Altogether, considering the slums in both the classes, we find that nearly two-thirds of the slums have provision for sewerage disposal and the rest have none.

TABLE—20(E)

Types of methods of disposal of night soil in slum areas

Class of towns	No. of towns having slums	Total No. of slums	Slums classified by the methods of disposal of night soil: HL	B	WB	ST	S
1	2	3	4	5	6	7	8
I	13	1,114	..	30	210	113	210
II	18	108	..	4	77	15	..
Total	**31**	**1,222**	**..**	**34**	**287**	**128**	**210**

The methods of disposal of night soil in the slums is classified in the above table. 'Sewer', the most hygienic and the desirable system is available in 210 of the 1,222 recognised slums in the 31 Class I and II towns and all these slums are in Class I cities and none is in Class II towns. Out of the 1,114 slums in Class I cities, besides the above slums with sewer, another 210 slums have wheel barrows and 113 possess septic tank latrines. The system of carrying night soil in baskets is a crude and old-time method and it is still being followed in some slums. Thirty four slums (30 in Class I towns and 4 in Class II towns) fall under this group. Seventy seven of the 108 slums of Class II towns use wheel barrows while another 15 of these slums have septic tank facilities. On the whole, we find that only a little over half of the recognised slums have some arrangement for the disposal of night soil. The rest do not seem to have any such arrangement.

TABLE—21(A)

Type of medical facilities by size-class of towns

Size-class of towns	No. of towns	Population of towns in each size-class	No. of institutions: Hospital	Dispensary	Health centre	Family Planning centre	TB Clinic	Nursing Home	Others
1	2	3	4	5	6	7	8	9	10
I	21	7,831,844	64	232	15	32	9	61	101
II	41	2,747,071	66	65	10	8	11	16	29
III	89	2,757,964	103	75	12	10	6	23	28
IV	123	1,765,276	72	51	23	5	5	11	13
V	90	645,126	26	22	10	6	..	3	4
VI	70	204,594	6	4	2	2	1	..	1
Total	**434**	**15,951,875**	**337**	**449**	**72**	**63**	**32**	**114**	**276**

The number of medical institutions like hospitals, dispensaries, health centres, family planning centres, T.B. clinics and nursing homes that exist in the cities and towns of the six size-classes are given in this table. All these are Government institutions. Those run by local bodies, as also by charitable institutions and private medical institutions are excluded from the purview of this statement. Of the 337 hospitals in the state 103 are in medium populated towns of Class III (20,000-49,999), 72 are in Class IV towns and 66 and 64 are in bigger towns of Class II & I respectively. More than half of total number (449) of dispensaries in the state is found in the cities. Nearly 80% of them are functioning in 151 cities and towns with 20,000 and above population. The bigger towns have a greater share of the number of institutions of other types also while towns belonging to IV to VI classes have fewer medical facilities as may be seen from this table. Due to greater concentration of population in the bigger cities and towns, the need for medical facilities is also meagre there.

mall town with no electric connection for domestic consumption purposes. Seppaiyapuram of Tiruchengodu Taluk in Salem district, with a population of 785, is still without this facility.

TABLE-20(—A)

Towns having slums

Class of towns	Total No. of towns	No. of towns having slums	No. of slums
1	2	3	4
I . .	21	13	1,114
II . .	41	18	108
Total . .	62	31	1,222

'Slums' represent certain pockets of high concentration of people with a number of huts or houses, built with kutcha materials, located in unhygienic surroundings and these are generally poor in basic amenities. They naturally come up in larger numbers in big cities and towns, where there is large scale immigration in search of employment opportunities and other ways of eking out a livelihood. We have gathered information on recognised slums in Class I and Class II towns only as these are more vulnerable to the growth of 'slum' regions as a consequence of high congestion. There are slums in 13 out of the 21 Class I cities and 18 out of 41 Class II towns. The number of slums however is disproportionately high in Class I cities only where there are 1,114 slums. The major contribution for this is the Metropolitan City of Madras where nearly one-fifth of the population reside in recognised slums. There are 108 recognised slums in 18 Class II towns. It must be borne in mind that in the above cities and towns, there may also be a number of other areas, similar to slums, but actually not recognised as such by the concerned authorities. Details of slums in other smaller towns of less than 50,000 population have not been gathered and presented as these are not of of much significance.

TABLE—20(B)

(..) No recognised slums N.A.—Not available.

This table gives for each of Class I and II towns, the proportion of slum population to total population and population density in slums. The total population in all the recognised slums of these two classes of towns adds up to a sizable figure, viz., 11·97 lakhs and over half of this figure is contributed by Madras city where 6·34 lakhs of persons are slum-dwellers (of recognised slums above). Madurai with 1·64 lakh of persons in slums stands second in regard to slum population. The other important towns with considerable slum population are Tiruvottiyur (91,300), Tiruchchirappalli (68,306), Vellore (30,092), Dindigul (20,500) and Coimbatore (16,765). Seven other towns, it may be observed from the statement have each slum population in the range of 10,000 to 15,000.

The percentage of slum population is very high, viz., 68·13 per cent in Tiruvottiyur. This is an industrial city and a large number of poor factory labourers besides numerous fishermen are its inhabitants. It lies just a few kilometres north of Madras city. While the percentage of slum dwellers is 19·94 in Madurai city, it is 19·34 in Madras city. The other towns with over 15 per cent of slum population are Tiruchchirappalli, Vellore, Arakkonam, Attur, Gudiyattam, Tambaram (near Madras) and Vaniyambadi. In six other towns, the percentage of slum population to total population is above ten per cent but below 15 per cent. The density of population in slums is the highest, (viz. 279,468 per sq. km.) in Tambaram and there are two other towns, viz., Dindigul (263,158) and Teni Allinagaram (230,444) where the density exceeds 2 lakhs per sq. km. In six other towns, the density in slums ranges between one and two lakhs and these are Madras, Nagercoil, Arakkonam, Aruppukkottai, Pallavaram and Vaniyambadi.

Taking all the 1,222 recognised slums in the 62 Class I and II towns, we find that the proportion of slum population to total population on the average works to 11·32 per cent and the average density in slums is 53,889.

TABLE—21(B)

Use of medical facilities at other places by towns not having these facilities

Even though medical facilities are not available within the limits of certain towns, they exist at a neighbouring city or town, which are at some distance. This table gives information about such towns lacking this facility along with the distance-range in kilometres within which the facility is available. While all the 21 Class I cities have medical facilities within their area itself there is one Class II town (out of 41 towns) which does not enjoy this facility within the town limits, but has it within 5-10 kms. distance. Three out of 89 Class III towns do not have the medical facilities. But these are available to the people of these three towns at less than 5 kms. distance. Among the 123 Class IV towns, 19 lack medical facilities and most of them (17) have these within 10 kms. distance, while two towns have it at a distance of 11-20 kms. Lack of medical facilities is more pronounced in smaller towns of less than 10,000 population when compared to bigger towns. It may be seen that out of 90 Class V towns, 39 towns do not have medical facilities. However, 36 of them have these facilities within 10 kms. and the rest at 11-20 kms. distance. Most of the Class VI towns (57 out of 70) do not have medical facilities; but most of them, viz. 25 and 28 towns have them within the distance ranges of less than 5 kms., 5-10 kms. respectively. Similraly out of 434 as many as 119 towns do not have medical facilities within them, that 53 have the facility within 5 kms. while the remaining 57 have within 5-10 kms.

TABLE—21(C)

No. of beds in medical institutions

Size-class of towns	No. of towns	No. of beds per 1,000 population
1	2	3
I	21	3·03
II	41	2·17
III	89	2·00
IV	123	1·63
V	90	0·85
VI	70	0·45
Total	**434**	**2·43**

The ratio of number of beds to population is an index showing the availability of medical facility. As bigger cities with greater concentration of population have more hospitals and nursing homes located within their area, the ratio of beds to population can be expected to be higher in such towns. This table reveals that the ratio of beds per 1,000 persons is the highest (3·03) in cities and 2·17 and 2·00 in the towns of Class II (50,000—99,999) and III (20,000—49,999). In the smaller towns the ratio is small, even less than one in towns of less than 10,000 population.

TABLE—22(A)

Schools per 1,000 population

Size-class of towns	No. of towns	Number per 1,000 population			
		Higher Secondary/ Inter/PUC/ Junior College	Secondary/ Matriculation	Junior Secondary and Middle	Primary
1	2	3	4	5	6
I	21	0·04	0·05	0·10	0·17
II	41	0·05	0·07	0·12	0·24
III	89	0·06	0·08	0·15	0·34
IV	123	0·06	0·09	0·16	0·35
V	90	0·06	0·11	0·20	0·40
VI	70	0·03	0·11	0·25	0·55
Total	**434**	**0·05**	**0·07**	**0·12**	**0·24**

For the six classes of towns an index on the number of available schools of various categories like higher secondary, secondary, junior secondary/middle and primary per 1,000 of population is given in this Table. The high index in the medium and smaller classes of towns of less than 50,000 population indicate that the educational facilities are available more in these places than in the bigger towns and cities. Taking all the towns together, we notice that there are only 0·05 higher secondary schools (per 1,000 population) and 0·07 secondary schools. There are more primary schools viz. 0·24 per 1,000 persons (or 24 per lakh of population) and the rate of junior secondary/ middle school is 0·12 per 1,000 person. The ratio of school to population in Class I and II towns is either equal to or lower than the ratio for all towns in Tamil Nadu. Their ratio increase with the increase in the Class of towns, and it shows that the smaller towns enjoy better educational opportunities at lower level. But no conclusion regarding the sufficiency of schools could be made as the number of students admitted in them vary and the size of the schools is not known. However, the data give glimpses of the schooling facility in towns.

Table—22(B)

Adult literacy centres

Size-class of towns	No. of towns	No. of towns having adult literacy centres
1	2	3
I	21	4
II	41	4
III	89	7
IV	123	20
V	90	15
VI	70	9
Total	**434**	**59**

There are 59 towns having Adult Literacy Centres in the urban areas of Tamil Nadu. Their location in regard to the size of population of towns is given in this Table. Nearly one third of these (20 towns are Class IV towns having 10,000 to 19,999 population. There are 15 and 9 adult literacy centres respectively under Classes V. and VI. Most of the centres are found in the smaller towns than in the cities and major towns and the reasons for this are quite obvious. In the smaller towns, many of which are

away from the big urban complex, the extent of literacy is high and the need for such centres is felt more. Not many people in big cities seek to learn through adult literacy centres and therefore there are very few towns (4 each) in Class I and II towns.

TABLE—23

Distribution of women's hostels, stadia, cinema, auditoria/drama/community halls and public libraries by size-class of towns

Size-class of towns	Total No. of towns	No. of towns having				
		Working Women's Hostels	Stadia	Cinema	Auditoria, etc.	Public Libraries
1	2	3	4	5	6	7
I	21	8(23)	13(21)	21(274)	17(276)	21(211)
II	41	7(7)	8(13)	41(144)	18(46)	41(77)
III	89	10(10)	4(5)	82(195)	19(28)	84(102)
IV	123	10(11)	6(6)	100(148)	22(23)	98(109)
V	90	1(1)	4(4)	40(47)	11(14)	46(50)
VI	70	1(1)	1(1)	12(13)	2(2)	11(12)
Total	**434**	**37(53)**	**36(50)**	**296(821)**	**89(389)**	**301(561)**

Note : The figures furnished in brackets denote the No. of public places.

The availability of many of the recreational facilities like stadia, auditoria, cinemas, libraries etc. and the No. of working women's hostels is indicated for each class of towns in this Table.

There are 53 working women's hostels spread over 37 cities and towns. Many of the bigger towns and cities, where working women are more in number, have this facility. Forty hostels out of 53 are in cities and towns of population of 20,000 and above.

Stadia are also found to be more in bigger cities and towns. While there are 21 stadia in cities, there are 13 stadia in Class II towns. Cinemas are found in most of the towns. While the 62 Class I & II towns (50,000 and above population) have in them a little over 50% of the total cinemas in the state. Only 52 out of the 160 smaller towns (population below 10,000) have cinemas. As regards Auditoria it is seen that a large majority are in cities, viz. 276 out of 389 in all towns.

There are 133 towns in Tamil Nadu which do not have Libraries and 128 of these towns belong to the Classes IV to VI having less than 20,000 population. There are 211 Public Libraries in the 21 cities of the State. There are a little over 100 libraries in each of the two classes of towns III & IV.

Minor Group	387	Pins	1	..	1	..	..	..	..

Tables 24(A), 24(B) and 24(C) present information on the number of towns by size class, which produce three most important commodities, arranged in order of their importance. The number of towns manufacturing the products are given upto the minor-group level (three digit level) of the National Industrial Classification, 1970. Table 24(A) gives the details of town with reference to the first important commodity, manufactured within them. In 76 out of 434 towns, the most important commodity manufactured is cotton textiles. Manufacture of food products comes next with a large number of towns and it is manufactured in 65 towns as first important commodity, Chemicals, Chemical products except products of Petroleum and Coal is reported to be produced in 35 towns as the first important commodity. Manufacture of Wool, Silk and Synthetic Fibre textiles etc. is reported in 13 towns. In 12 other towns, Tobacco & Tobacco products, Wool & Wool products, Metal products and parts except Machinery and Transport equipment constitute the first important commodity manufactured. In the case of 158 towns no commodity has been reported to be manufactured.

As regards the second important commodity manufactured in towns an almost similar trend is noticed [vide table 24(B)]. Manufacture of cotton textiles is shown as the second most important commodity manufactured in 46 towns. There are 34 towns which have reported the second important commodity manufactured in them as food products. While 31 towns produce chemical and chemical products, 15 towns have metal products and parts except machinery and transport equipment as the second most important commodity manufactured. The remaining 253 towns do not have any manufacturing items.

In the case of third important commodity manufactured, [Table 24(C)] food products is reported in more number of towns (20) compared to other products. Next to food products, Cotton textiles is reportedly manufactured in 16 towns as the third important commodity. Next in order comes manufacture of chemical & chemical products, reported in 15 towns. Other item in order of manufactur re wood & wooden products and metal product.

parts (except machinery and transport equipment) (13) etc. In all, 323 towns have not reported any product under the third most important manufacturing commodity.

The details given in the tables 24(A), 24(B), and 24(C) clearly bring out the industrial backwardness of a large number of towns and these mostly belong to smaller size class. It is observed that the important commodities manufactured mostly pertain to textile and food & food products. Quite a large number of towns have no important items of manufacture and this clearly shows that though these places are treated as 'Urban' areas, the secondary sector of the economy which represents large scale manufacture, has not made much headway.

TABLE—25 (A)

Important commodities imported by size-class of towns and industrial categories

(*First important commodity*)

Industrial category		Name of commodity	All Towns	Size-class of Towns I	II	III	IV	V	VI

The details regarding three important commodities imported into each town are covered in the Town Directory. These have been tabulated giving number of towns in each commodity classified according to the minor group (three digit code) of National Industrial Classification, 1970 (NIC). The above data are given in Tables No. 25(A), 25(B) and 25(C). In the majority of towns of the State, the most important first, second and third commodities imported relate to food, textiles, beverages and intoxicants. These goods are reported as first important imported commodity in 134 towns, as second important commodity in 107 towns and as third important commodity in 81 other towns. This shows that most of the items imported are essential and basic consumption goods. Fuel, Light, Chemicals, Perfumary, Ceramics and Glass are reported as first important imported commodity in 21 towns; as second important commodity in 24 towns; and as third important commodity in 16 towns. Wood, paper, other fabrics, inedible oils have been reported as first and second important imported commodity in 10 towns; and as third important imported commodity in 5 towns. In the rest of the cateogries, fewer towns are seen. It is obvious from this table that the commodities imported into the towns of Tamil Nadu are mostly basic in nature and are consumption articles. Non-consumption goods are imported only in very few towns. Machinery, equipments etc., are also reported to be imported only by a few towns.

Data relating to three most important commodities exported from each of the towns have been collected for presentation in the Town Directory. The tabulation of the same showing the number of towns under each exported commodity, classified according to the minor group of National Industrial Classification, 1970 (i.e. three digit code) is presented in Tables 26(A), 26(B) and 26(C). It can be seen from these tables that most of the commodities exported as the first important commodity or even as second or third important commodities pertain to the major group 60 of the NIC relating to Food, Textiles, Beverages & Intoxicants. The number of towns which have reported these commodities as the first important goods exported is 202. There are 159 towns which have reported the commodities under this group as second important exported goods while 108 towns have reported it as the third important tone. The above figures clearly bring out the fact that the items exported from the towns of Tamil Nadu mostly belong to the primary sector of economy i.e. mainly agricultural products. This proves beyond doubt the preponderance of agriculture in the state's economy. The export of fuel, light, chemicals, perfumary, ceramics and glass etc., have been noticed as first important exported commodity in 17 towns, wood, paper, other fabrics hides and skin and inedible oils are exported in 14 towns and machinery and related equipment in 8 other towns. There is also indications to the effect that the export of items of the secondary sector is found only in a limited number of towns. The details on the specific exported goods from each town could be seen from the tables.

TABLE—27

Distribution of banking services, agricultural and non-agricultural credit societies by size-class of towns

Size-class of towns	Total No. of towns	No. of towns having		
		Banks	Agricultural credit societies	Non-agricultural credit societies
1	2	3	4	5
I	21	21(657)	12(31)	19(740)
II	41	41(390)	31(60)	33(201)
III	89	85(419)	62(114)	58(192)
IV	123	113(292)	86(136)	61(132)
V	90	55(82)	55(58)	26(63)
VI	70	22(25)	21(21)	15(16)
Total	434	337(1,865)	267(420)	212(1,344)

Note : The No. of Banks, Agricultural credit societies and Non-agricultural credit societies are given in brackets.

The number of towns, in each of the six size-classes, having banking services as also agricultural and non-agricultural credit societies is shown in Table-27. Apart from the number of towns having these facilities, the exact number of bank branches and agricultural and non-agricultural credit societies functioning in them are also presented in brackets in the table.

It is observed from the table that many of the towns in the state enjoy in facility of banking as also agricultural and non-agricultural credit societies. The number of towns lacking these facilities is small. Out of 434 towns, 337 towns have banks in them and there are 1,865 branches available in these towns. There, 267 towns having 420 agricultural credit societies and 212 towns have 1,344 non-agricultural credit societies in them. Non-agricultural societies are found in less than half the number of towns of the state (212) while agricultural societies are found in more towns (267). The number of non-agricultural societies in towns is more, particularly in big cities and towns, and they constitute more than three times (1,344) the number of agricultural credit societies in towns, (viz. 420) in the state.

Considering the distribution of banking facilities by size-class of towns it will be seen that the 147 towns belonging to classes I, II and III have in them over 1,466 banks out of 1,865 available in the urban area of the state. This is to be expected as industrial and commercial activities are more in bigger cities and towns than in the smaller ones. A good number of bank branches are available in the towns of class IV also, while fewer branches are located in the smaller towns of classes V and VI.

Agricultural credit societies are also functioning in many bigger towns, i.e. those belonging to classes I to IV than in the smaller ones of less than 10,000 population. Most of the agricultural credit societies in towns (250 out of 420) are found in the middle level towns of class III and IV with population of 10,000 to 19,999 and 20,000 to 49,999.

It is significant to note that 740 out of the 1,344 non-agricultural societies in the towns of the state are in big cities with population of one lakh and over. That such societies are more in other bigger and populous towns also is obvious from the higher number seen in such bigger towns. There are 201 of them in 33 class II towns and 192 in 58 class III towns. Just half the number of towns of class IV viz. 61 out of 123 have this facilities. Fewer towns enjoy this facility under the last two classes and there are also fewer, number of non-agricultural credit societies in them.

TABLE—28

Average household size by size-class of towns

Size-class of towns	Average household size
1	2
I	5·04
II	4·92
III	4·82
IV	4·73
V	4·67
VI	4·64
Total	4·92

The average household size in the urban areas of the State as per 1981 Census works to 4·92 persons per household. Considering the average household size in each of the six size-classes of towns (vide table No. 28), we observe that the household size diminishes with the decrease in the population size of the towns. It is 5·04 persons per household in cities having population of one lakh and above and it declines gradually in the subsequent lower size classes and reaches the minimum figure of 4·64 persons per household in class VI towns (i.e. below 5,000 population). This is contrary to the general expectation that the family size in the larger cities is less than that in smaller towns. Similar trend was also noticed in 1971 too. Due to problems of accommodation, split of the old joint family system, wider adoption of family planning methods, etc. one generally feels that the families in big cities and medium towns are small and simple and should have fewer members. Families are generally known to be bigger in size in the rural areas and this should also be true for smaller towns. But the census data reveals a different picture. It could be that more persons, particularly relatives stay in the families closer to them living in cities and towns either for persuing higher education or seeking employment or for prolonged medical treatment etc. Another plausible reason for bigger family size in big towns and cities is the presence of a large number of economically weaker sections of people living in slum areas here. The average family size in slums is believed to be somewhat more and it generally consists of more members than in the enlightened middle class families.

TABLE—29

Proportion of literates by sex and size-class of towns

Size-class of towns	Population			Literates			Percentage of literates to total population		
	Total	Males	Females	Total	Males	Females	Total	Males	Females
1	2	3	4	5	6	7	8	9	10
I	7,831,844	4,030,870	3,800,974	5,268,276	3,033,352	2,234,924	67·27	75·25	58·80
II	2,747,071	1,398,173	1,348,898	1,747,584	1,020,968	726,616	63·62	73·02	53·85
III	2,757,964	1,400,209	1,357,755	1,632,050	971,401	660,649	59·18	69·38	48·66
IV	1,765,276	893,564	871,712	1,019,175	608,198	410,977	57·73	68·06	47·13
V	645,126	325,682	319,444	350,311	211,636	138,675	54·30	64·98	43·41
VI	204,594	104,895	99,699	104,040	65,322	38,718	50·85	62·27	38·83
Total	**15,951,875**	**8,153,393**	**7,798,482**	**10,121,436**	**5,910,877**	**4,210,559**	**63·45**	**72·50**	**53·99**

An idea on the extent of literacy among the people living in the towns belonging to the six classes is presented in this table. Literacy rate among males is quite high (72·50 per cent) than among females (53·99 per cent) considering the entire urban population of the state.

It is apparent from this statement that literacy percentages are higher in bigger cities and towns belonging to the higher size-classes and there is a gradual fall in the rates in regard to towns of lower size-classes. This is probably be due to the availability of greater educational opportunities in the bigger cities /towns compared to smaller towns. While little over two-thirds of the total population of class-I cities are literate, only half the population of the last category of class VI towns (population below 5,000) are literate. The male literacy rates are consistently higher than the female literacy rates in all the six classes of towns, the disparity in the rates among sexes being somewhat less in class I cities. The literacy percentages are higher in class I and II towns than the state average rate for urban areas, (viz. 63·45 per cent) and the towns of the other classes have lesser percentages. It is significant to note that the male literacy percentage exceeds 60 per cent in all the six classes and even goes beyond 70 per cent in top two classes of towns where as the female literacy rates are less than 50 per cent in classes III to VI and between 50 and 60 per cent in class I and II towns

TABLE—30

Proportion of Scheduled Castes and Scheduled Tribes population by size-class of towns

Size-class of towns	Total Population	Scheduled caste population	Percentage of Scheduled Caste population to total population	Scheduled Tribe population	Percentage of Scheduled Tribe population to total population

NOTE EXPLAINING THE CODES USED IN THE TOWN DIRECTORY

Statement I and III

Class of towns by population

Population	Class
100,000 and above	I
50,000—99,999	II
20,000—49,999	III
10,000—19,999	IV
5,000—9,999	V
Below 5,000	VI

Civic administration status of the town

M. Corp.	Municipal Corporation/Corporation
M	Municipality
NP	Nagar Panchayat/Town Panchayat
GP	Gram Panchayat/Village Panchayat
TC	Town Committee/Town Area
CB	Cantonment Board/Contonment

Statement IV and IVA

SC	Scheduled Castes
ST	Scheduled Tribes

Type of Road

PR	Pacca Road
KR	Kutcha Road

System of sewerage

S	Sewer
OSD	Open surface drains
BSD	Box surface drains
SD	Sylk drains
CD	Cesspool method
Pt	Pit system

Method of disposal of night soil

HL	Head loads
B	Baskets
WB	Wheel barrows
ST	Septic tank latrines
S	Sewerage

System of storage of water

OHT	Overhead tank
SR	Service reservoir
IG	River infiltration gallery
BWP	Borewell pumping system
PT	Pressure tank
GLR	Ground level reservoir

Source of drinking water

TW	Tubewell water/hand-pump
T	Tap water
W	Well water
TK	Tank water

Statement V

Medical facilities

H	Hospital
D	Dispensary
HC	Health centre
FC	Family planning centre
TB	T.B. Clinic
NH	Nursing home
O	Others
A	Ayurvedic
U	Unani
Hom	Homoeopathic

Educational facilities

A	Arts only
S	Science only
AS	Arts and Science only
C	Commerce only
AC	Arts and Commerce only
ASC	Combined for all categories Arts, Science and Commerce
L	Law

Recognised shorthand, typewriting and other vocational Institutions

SH	Shorthand
Type	Typewriting
SH. Type	Shorthand & Typewriting
O	Others

Public libraries and reading rooms

PL	Public Libraries
RR	Reading Rooms

Scheduled castes living in urban areas of Tamil Nadu account for 11·23 per cent of the urban population. This table gives the proportion of Scheduled Castes to population for each size-class of towns. The ratio of Scheduled Castes among population is the highest, viz. 23·19 per cent in the last class (VI) of towns, with less than 5,000 population. Two of the 70 towns of class VI do not have any Scheduled Caste population. All the towns in other classes have Scheduled Caste. In class V towns the Scheduled Castes form 14·96 per cent. While in class I cities the Scheduled Castes constitute 10·55 per cent, the percentage is still lower (10·12%) in the class II towns.

Scheduled Tribes are generally fewer in towns and they constitute only a small fraction of 0·32 per cent among the urban population of the state. There are 50,416 Scheduled Tribe population in cities and towns, nearly one-third of them are in cities (i.e. Class-I). Three-fourths of the total Scheduled Tribes population living in urban areas are found in the bigger towns of 20,000 and above population.

TABLE—31

Percentage distribution of main workers by size-class of towns

Industrial category of main workers	Size-class of towns					
	I	II	III	IV	V	VI
1	2	3	4	5	6	7
I	0·94	3·52	6·23	9·23	8·88	11·66
II	1·74	8·24	12·90	17·89	17·35	22·40
V(a)	5·25	9·40	6·56	10·39	13·53	10·40
III+IV+V(b)+VI to IX .	92·07	78·84	74·31	62·49	60·24	55·54
Total . . .	100·00	100·00	100·00	100·00	100·00	100·00

The percentage distribution of main workers under the four categories of (i) Cultivators (ii) Agricultural labourers (iii) Household Industry workers and (iv) Other workers is given in Table 31 for the towns of each class.

Industrial categories I and II indicate respectively Cultivators and Agricultural labourers. It is important to note that the extent of Cultivators and Agricultural labourers among the main workers is more in the smaller sized towns of Class III to VI. The percentages of Cultivators and Agricultural labourers gradually decrease with the increase in the population size class of towns. After all, the smaller towns are often considered as just overgrown villages and this is obvious from a high percentage (i.e. over 25%) of main workers depending on agriculture as cultivators and agricultural labourers for their livelihood in towns of Class IV, V and VI. The cultivators among main workers in Class I cities form a little less than one per cent, while agricultural labourers form just 1·74 per cent. In regard to household industry [category V(a)] the highest among main workers is observed in Class V towns (13·53 per cent) while the percentage is just above ten under their industrial category in Class IV & VI towns.

Activities like trade and commerce manufacturing industry (of the factory sector) transport storage and communications, construction and services are more in big cities and towns, and this is reflected in the high percentage of 92·07 of main workers under the last category in Class I towns. The percentage gradually declines in this category from 78·84 for Class II towns to 74·31 for Class III towns and to 55·54 in the last class of towns viz. VI.
